**ECONOMIC CHARACTERISTICS**  
**of the Sixth Federal Reserve District**

For Selected Years

*Revised July 1963*

In analyzing the mutual relationship between economic developments and monetary and credit policy, the Research Department of the Federal Reserve Bank of Atlanta must continuously depend upon economic information drawn from all parts of the Sixth Federal Reserve District. Local economic changes that are reflected in this flow of data can be better understood, however, if we have a knowledge of the basic economic structure of those local areas. The following statistics, which are intended to depict local-area economic structures, arise, therefore, as a by-product of the normal activity of the Research Department and are presented in answer to many inquiries for such information.

The Sixth Federal Reserve District includes Alabama, Florida, and Georgia and parts of Louisiana, Mississippi, and Tennessee. Unless otherwise indicated, data cover the entire state. The trade and banking areas by which data are classified are areas having homogeneous characteristics, economic and otherwise, and consisting of counties surrounding major cities.

Grateful acknowledgment is made to the many persons and organizations listed in the section on sources beginning on page 42. Special acknowledgment is given to the following Bureaus of Business Research:

<sup>1</sup> December 31.

<sup>2</sup> Time and demand deposits of individuals, partnerships, and corporations. December 31, 1941 and 1950; June 30, 1956; and June 15, 1960.

<sup>3</sup> City totals are for reporting banks; state totals are estimates for all insured banks.

<sup>4</sup> Beginning with 1952, series revised to exclude debits to time deposits and U. S. Government accounts.

<sup>5</sup> Area totals do not add to District part of Tennessee totals because nine counties in other states are included with trade and banking areas in Tennessee.
