## LET'TER OF TRANSMITTAL

Boston, Mass., February 9, 1922.
SIR :
I have the honor to submit herewith the Seventh Annual Report of the Federal Reserve Bank of Boston covering the operations of that bank for the period from January 1, 1921, to December 31, 1921.

Respectfully yours,

Frederic H. Curtiss,<br>Chairman and Federal Reserve Agent.

Hon. W. P. G. Harding,
Governor, Federal Reserve Board,
Washington, D. C.

## SEVENTH ANNUAL REPORT OF THE FEDERAL RESERVE BANK OF BOSTON

## INTRODUCTION

It is probably true that a change in the trend of the business cycle is usually felt in the field of manufacturing some months before business and trade as a whole are affected. New England is essentially dependent upon manufactures for its commercial life. As New England therefore was apparently the first section of the country in the spring of 1920 to reflect the beginnings of the general recession of the industrial tide which was to leave in its wake many wrecks of business prestige and fortunes, resulting from a lifetime of endeavor, so it was but natural that this district should respond sooner than other parts of the United States to those influences which make for a quickening of activity.

New England accordingly experienced in 1921 a steady revival from the depressing conditions which prevailed during the latter part of the previous year; this was felt in almost all lines of industry,--the machinery and metal trades being notable exceptions,- the improvement in the textile industry being especially marked. Margins of profit, it is true, have not been particularly satisfactory, for fluctuations in the cost of raw materials and the high cost of labor, fuel, and transportation have continued to present many difficult problems to the manufacturer; nevertheless the volume of production has, for the most part, shown a tendency to increase since the beginning of the year and business has, on the whole, been fairly good throughout the twelve months, being reflected both in the volume and value of retail trade transactions which register the extent of actual distribution of finished goods to the ultimate consumer. Mercantile and industrial buying at the close of the year was, nevertheless, still cautious in comparison with former normal tendencies and with but few commitments of a size and duration such as has been customary in past periods of business activity. The general credit situation in the Boston district improved materially during most of 1921, and member banks on the whole were able to do business with a steadily decreasing degree of recourse to the Reserve Bank for rediscounts. This condition was due in part to lower commodity prices and a smaller volume of business in the aggregate than during 1920. Member
banks were borrowing an average of $\$ 66,000,000^{1}$ from the Federal Reserve Bank of Boston in December, as contrasted with $\$ 144,000,000$ in January, borrowings at the close of the year being less than for any period since 1918. This liquidation was due to reductions in loans by the Boston banks, which with one or two exceptions, have at times entirely gone out of debt with the Reserve Bank. The country banks, ${ }^{2}$ on the other hand, only slightly reduced the volume of their indebtedness during the year to the Reserve Bank, a fact partly due to the continued purchase of United States securities for investments. The general situation had become such in this district by the first part of April that the directors of the Federal Reserve Bank of Boston decided on the 14th of that month to reduce discount rates ${ }^{3}$ from 7 per cent. to 6 per cent. on all classes of loans, and rates were further reduced from time to time to $4 \mathrm{~T} / 2$ per cent., which was the established rate as the year ended.

During the year the reserve position of the Boston Bank was almost continuously the highest in the System, and it was, therefore, enabled to assist other sections of the country through rediscounts for and purchases from, other Federal Reserve Banks. Indeed, rediscounts ${ }^{4}$ were carried during the entire year, except in March, for other Federal Reserve Banks, the most part for those in the agricultural districts where liquidation had proceeded slowly. It is interesting to note that, while during this period of unusual liquidation, commercial failures ${ }^{5}$ have been many,-more in fact than any year on record with the one exception of 1915,-there have been no failures of member banks in this district. The general credit situation has been such as to warrant the closest scrutiny of all paper offered for rediscount, as well as to call for the closest co-operation between the officials of the member banks and those of the Reserve Bank.

Discount operations ${ }^{1}$ during the year, while decreasing in volume as the year advanced, were sufficient to pay all operating expenses ${ }^{6}$ and six per cent. dividends to member banks, to enable the setting aside of $\$ 489,000$ for depreciation and of $\$ 772,324.46$ to surplus, leaving the sum of $\$ 3,035,920.15$ for payment to the United States Government as a franchise tax.

The reduced volume of commercial business in the district has brought about an accumulation of surplus funds seeking investment in shorttime securities. This has made a very active demand for bankers' acceptances and certificates of indebtedness. In the case of the former this outside demand was reflected in the rather small volume of these securities carried during the year by the Federal Reserve Bank ${ }^{2}$ while the demand for Treasury certificates resulted in a large over-subscription of

[^0]every issue of these securities as they have been offered from time to time by the government.

The operating expenses ${ }^{1}$ of the bank, while increased by the bank's absorption of practically the entire expense of the fiscal agency operations after the first of July, have not materially increased over the previous year. On the other hand, the volume of earnings ${ }^{1}$ has steadily grown less because of decreasing loans, until as the year ended, daily operations showed but a small margin of profit.

## REVIEW OF INDUSTRIAL CONDITIONS

New England was one of the first sections of the country to feel the downward trend of business which started in 1920. During the closing part of that year and the first of 1921, the leading industries in this district,-woolen and cotton textiles, boots, shoes and leather products,were operating at a fraction of their maximum capacity. New England woolen mills were running at approximately 25 per cent. of capacity during December, 1920, cotton mills at 45 per cent. and boot and shoe factories at 35 per cent., while the production of paper had declined to substantially two-thirds of the monthly output of the earlier months of 1920. Building construction was at its lowest ebb during January, 1921, due to the combined influences of normal winter slackness and business depression. Retail trade was the only bright spot in the situation. The volume of goods sold by merchants during the Christmas season of 1920 was larger than in any previous month of that year and larger even than during the holiday season in 1919. Nevertheless unemployment was large,-in fact, probably more people were unemployed during the winter of 1920-1921 than during the depression in 1914 and 1915, following the beginning of the war.

A considerable change in the business situation took place in this district in the spring of 1921 . The boot and shoe industry, which had been one of the first to curtail production during 1920, was also one of the first to improve; almost simultaneously both woolen and cotton mills increased their output. The closing months of 1920 proved to be the poorest for each of these three industries and the spring and summer months of 1921 were months of marked improvement, except for the paper industry, which continued to feel the effects of the depression until June. Meantime, building operations experienced the customary normal increase in the spring and summer; although the volume of building was not large the trend was upward. Retail trade reports from Boston department stores showed that not only was the physical volume of merchandise being sold during the spring months larger than during the same period of either of the two preceding years, but the dollar value

[^1]of the net sales was also larger; stores situated in other New England cities did not show quite as good results on the whole. The dollar values of their sales during the spring months of 1921 were generally less than for the corresponding months of 1920, although, considering the decline in retail prices in the interim, there is no doubt that country stores also sold more goods during the spring of this past year than during $1920 .{ }^{1}$ Coincident with the improvement in New England's leading industries during the spring and summer of 1921, the total amount of unemployment in the district became less. There was one notable exception to the general trend in this respect; namely, in the metal and machinery industry.

During the early summer months a distinct change occurred in one of the most important phases of the business situation. Commodity prices, not only in this district, but throughout the United States and many of the most important foreign nations, were declining throughout the latter part of 1920 and the early part of 1921 . This movement ended, at least for the time being, almost simultaneously throughout the world at the beginning of the summer. Though the period of falling prices had lasted slightly over a year, the decline was the most drastic that this country had ever experienced either in peace or war time. The index of the United States Department of Labor, which combines the wholesale prices of over 300 commodities, had declined 45 per cent. from its peak by July, 1921. It was at that time, however, still 48 per cent. above the 1913 average level. The cost of living in Massachusetts likewise ceased declining at approximately the same time. It did not rise as much as wholesale prices, and consequently the decline was not as severe. The Massachusetts Commission on the Necessaries of Life reported that the cost of living in Massachusetts during the summer of 1921 was approximately 20 per cent. less than the year before and 60 per cent. above that of 1913. The turn in the trend of commodity prices has since proved to have practically coincided with the change in the trend of industrial activity throughout the United States.

Business and industrial conditions in New England at the close of 1921 were decidedly better than at the beginning. Textile mills were running at approximately 80 per cent. of capacity, having nearly twice the output of the corresponding months a year earlier. Boot and shoe factories were somewhat quiet, but this was largely accounted for by the usual seasonal slackening which occurs when the bulk of the run of spring shoes has been completed and before the run of fall shoes has been started. Nevertheless, operations in the shoe industry during December, 1921, were considerably larger than during December, 1920. New England shoe factories were not running at as high a degree of maximum capacity at the close of the year as were factories in New

[^2]York State and the Middle West. One of the main reasons for the curtailment in New England was the difficulty arising from lack of wage adjustments. Although several strikes were in progress in this industry in New England, no general reduction was made before the first of 1922. The lowest period of paper production occurred in the summer. There was a very marked improvement during the fall, and operations were at a rate of between 70 and 80 per cent. of capacity at the close of the year. Metal trades continued to be more depressed than any of the large New England industries, and in fact it was not until early autumn that even a slight improvement occurred. Even at the close of the year, the immediate prospects were not bright for the metal trades. The amount of building under way during the closing months of the year did not show the usual seasonal decline in 1921, indicating that probably the change in the trend of volume of building had occurred and that 1922 may witness larger operations.

Christmas trade in the department stores during December was larger than in the corresponding months of the two preceding years and undoubtedly made new records for many stores, despite the fact that retail prices were substantially lower than during the Christmas season of 1920 .

The volume of failures ${ }^{1}$ continued large throughout 1921 and in New England, according to R. G. Dun \& Company, the number during December was the largest for any month of the year. The amount of unemployment, which had been decreasing throughout the spring, summer and fall, naturally showed a slight increase during the closing months of the year. It is doubtful, however, if this was more than normal.

When New England's leading industries were curtailing operations in 1920, business throughout the country was generally good and showed no alarming signs of an oncoming depression; but on the other hand, during the first half of 1921, while the more important industries in this district were rapidly increasing their output, business generally was curtailing. At the close of the year, business and industrial conditions in New England were generally good. ${ }^{2}$

## REVIEW OF BANKING CONDITIONS

The banking situation has materially improved during the past twelve months. With such a severe readjustment of business conditions as local industries have experienced during the past two years, it is greatly to the credit of the member banks of the New England district that they have been able to handle themselves through the crisis without

[^3]a single failure among them. The losses from mercantile embarrassments during the period have been heavy and there are still many slow credits in bank loan accounts on which losses will ultimately have to be taken; on the other hand bank earnings have been exceptionally good and increasing values in securities accounts have helped out considerably. Generally speaking, slow loans, the so-called frozen credits, have shown steady improvement during the year, and in many cases bank loans have been funded into long-time securities which have found a ready market with investors. Apparently, the Boston banks had to bear the brunt of the credit readjustment inasmuch as frozen or slow credits existed to a far less extent in the banks outside of Boston, except in some agricultural sections. There are several reasons for this. The business of the large Boston banks is naturally more national in scope than is that of the country banks,-indeed in several cases it is international,and therefore these banks have been affected not merely by local credit conditions but by those which have prevailed elsewhere in the country, and even abroad. Besides, Boston banks frequently increased loans to their commercial customers,-loans used to pay off obligations placed through brokers with outside banks.

The resources of member banks as of January 4, 1922, as compared with those of the corresponding date a year ago (January 7, 1921), show, in the case of Boston banks, a decrease of some 103 millions in commercial loans and investments other than government securities, a decrease of 35 millions in loans secured by United States government obligations, an increase of some 13 millions in loans secured by stocks and bonds, and an increase of some 5 millions in United States obligations owned, A somewhat similar trend is found in a comparison of resources of reporting banks in the larger New England cities; on the other hand, the demand deposits of the reporting banks outside of Boston have shown relatively greater shrinkage than those of Boston banks, although both groups show a decline. Savings and time deposits have steadily increased both in Boston banks and those outside.

Savings deposits both in mutual savings banks and trust companies in December, 1921, showed a satisfactory increase over December, 1920, -a rather surprising result when all conditions are taken into consideration. The improvement in the bond market has been of material benefit in strengthening the financial position of savings institutions. On July 31 a run was started on the Boston Five Cent Savings Bank, through the circulation of false rumors in certain sections of the city populated largely by foreign born. This institution was fortunately one of the strongest savings banks in New England and although the run continued for three days and assumed large proportions, the bank, because of its heavy cash resources, was able to pay off every demand made upon it without invoking the provision of its by-laws allowed by the statutes of the

State, whereby 90 days' notice of an intended withdrawal of deposits may be required. There was marked evidence that a substantial volume of the deposits withdrawn were reinvested in postal savings.

## STATEMENT OF CONDITION ${ }^{1}$

A comparison of the balance sheets for December 31, 1920, and December 31, 1921, shows the results of liquidation that have occurred during the year. Earning assets, it will be seen, have been reduced from 216 millions to 84 millions; Federal Reserve Notes from 289 millions to 203 millions, and the cash reserves have been correspondingly increased from 218 millions to 252 millions, the increase being almost entirely in gold. During the year member banks' reserve deposits have fallen from 115 millions to 111 millions.

## INCOME AND DISBURSEMENTS ${ }^{2}$

The earnings for the year 1921 reflect the heavy decrease in discount operations and the reduction of rediscount rates. While total earnings in 1920 were 12 millions the total earnings for 1921 were reduced to about one-half, amounting to 7 millions. On the other hand, operating expenses have slightly increased, due in part to the bank's absorbing on July 1 the expenses of the United States Treasury fiscal operations and to an increase in the amount of transactions handled in most of the operating departments of the bank.

It should be recognized that the volume of operations,--number of items,- handled by such departments as the check, time collection and currency departments have little or no bearing on the discount or investment operations of the bank. These departments, as well as the departments associated with Fiscal Agency functions, not only yield no income but have been increasing in expense of operation as member banks avail themselves of the facilities which are offered by the Reserve Bank.

Semi-annual dividends were paid on June 30, 1921, and December 31, 1921, at the rate of 6 per cent. per annum to stockholding member banks. After setting aside $\$ 489,000$ for depreciation and transferring $\$ 772,000$ to surplus account, a balance of 3 millions were paid to the United States Government as a franchise tax. The ratio of net earnings for the year to average paid-in capital was 54.13 per cent., to average paid-in capital and surplus 17.92 per cent., and to average paid-in capital, surplus and member banks' reserve deposits 3.20 per cent.

## DISCOUNT AND LOCAL MONEY RATES ${ }^{3}$

Early in the year liquidation had gone so far in this district and the reserve percentage of the bank had become so high that the directors

[^4]discussed the advisability of a reduction in the discount rate. It was felt that the discount rate of 7 per cent. was regarded as an emergency rate, and that business was entitled to be told that the crisis had passed. Therefore, on April 14, the discount rate on all classes of loans was reduced to 6 per cent. This was the first reduction in discount rates by any of the Federal Reserve Banks since 1918. Beginning early in 1920, discount rates of the Federal Reserve Banks had been continuously increased until June, 1920, when the discount rates of four of the Federal Reserve Banks reached 7 per cent. and the other Federal Reserve Banks, 6 per cent. This action had been necessary in order to try to stem the tide of inflation which was running with such force, and also to prevent the reserve position of the Federal Reserve Banks from going below the legal minimum of 40 per cent. of cash reserves against combined deposit and Federal Reserve note liability. These high rates of 6 per cent. and 7 per cent. had been maintained since June, 1920, and the reduction in the discount rate of the Federal Reserve Bank of Boston from 7 per cent. to 6 per cent. was the first indication given to the business community by the Federal Reserve Banks that the crisis was passed and that easier conditions of credit had come about. Reductions in discount rates after this time in first one bank and then another were almost continuous until on November 4, 1921, discount rates were established in this bank at $41 / 2$ per cent. and in all the Federal Reserve Banks from $41 / 2$ per cent. to $51 / 2$ per cent. The reduction of discount rates had little or no effect on the amounts of loans of Federal Reserve Banks and liquidation continued without interruption. It did, however, cause, very gradually, lower rates on commercial loans and was a great relief to the business community.

The reduction in the discount rate charged customers by member banks on commercial loans, while steadily tending downward, has been very gradual, owing to the amount of slow or frozen credits, which, while decreasing in volume, are still comparatively large.

Commercial loans in Boston at the beginning of the year averaged from 7 to 8 per cent., and as the year ended 5 to $51 / 2$ per cent. were the going rates. Although, with but one or two exceptions, the large Boston banks have at times been out of debt to the Reserve Bank, they have been buying outside paper only to a limited extent. The country banks, as funds have accumulated, have invested them for the most part in Government securities, and here again the buying of outside paper has been in small volume. The purchase rates on bankers' acceptances have been changed from time to time, the policy having been continued of maintaining a purchase rate about $1 / 8$ per cent. above the open market in order to protect dealers and investors and at the same time to discourage offerings of bills in any volume to the Federal Reserve Bank. Preferential rates have been maintained at times for bills of shorter
maturities. Open market rates for acceptances have fluctuated from $61 / 4$ in January to $41 / 8$ in December, rates to dealers on advances being at the dealer's purchase rate.

## LOAN AND DISCOUNT OPERATIONS ${ }^{1}$

Loans and discounts during the year have been materially reduced, the reduction in rediscount rates having had little or no influence on the volume of rediscounts offered by member banks. The character of the bank's loan has changed very little, the reduction in commercial loans being proportionate to the reduction in loans secured by United States governmentobligations. The Boston bankshave reduced steadily theirloans and rediscounts, and all, with but one or two exceptions, have at times gone out of debt to the bank during the year. On the other hand, the borrowings of the banks outside of Boston have shown relatively little change during the same period. On December 31, 1920, the bank held ${ }^{2} 95$ millions of commercial loans and 78 millions of notes secured by government obligations. On December 31, 1921, it held 38 millions of commercial loans and 22 millions of notes secured by government obligations. The daily average loan ${ }^{3}$ for the year 1921 was 100 million as against 170 million in 1920. Apart from 11 millions of bankers' acceptances purchased from the Federal Reserve Bank of New York in January, ${ }^{4}$ practically no bankers' acceptances have been rediscounted, but have been purchased in open market operations. On the other hand rediscounts of member bank notes have been made by this Bank almost continuously throughout the year for Federal Reserve Banks in agricultural sections of the country.

## OPEN MARKET OPERATIONS ${ }^{5}$

During the past year, open market operations of this bank, that is, loans or investment operations other than discounts for member banks or other Federal Reserve Banks, have been almost exclusively for the purpose of assisting in broadening the discount market for bankers' acceptances, and United States certificates of indebtedness, and not for the purpose of increasing the bank's earnings. Toward the end of the year, however, with the rapid drop in its earning assets, this bank did enter the market and purchased Victory notes and certificates of indebtedness to a limited extent for its own investment account. The average daily holding of bills in 1921 was something over 9 millions as against almost 28 millions in 1920.

During the year there has been a steadily increasing volume of shorttime investment money which has made a good demand for bankers'
${ }^{1}$ See Schedules Nos. 4, 5, 7, 23 and Charts B, F, G and H. ${ }^{2}$ See Schedule No. 1.
${ }^{3}$ See Schedule No. $6 . \quad{ }^{4}$ See Schedule No. 8.
${ }^{5}$ See Schedules Nos. 4, 5, 6 and 9 and Charts B and G.
acceptances and United States Treasury certificates of indebtedness. In previous years the bank has had to support the acceptance market to quite an extent by going into the market and buying acceptances for its own account, while this year its investment has been largely limited to assisting dealers through short advances, in carrying their bill portfolios, these advances being made at the rate at which bills were purchased by them. It is hoped that ultimately there will be developed in Boston a call market similar to that existing in New York, which will assist in carrying acceptances and Treasury certificates for these bill brokers.

The dealers' selling rate ${ }^{1}$ for bankers' acceptances has fallen from $61 / 4$ for prime bills in January to $41 / 8$ as the year ends. Savings banks, country banks, insurance companies, trustees, corporations and individuals have sought investment for their short-time funds in bankers' acceptances and certificates of indebtedness, and this has had a tendency to broaden the market and create a demand so steady that more dealers are entering the Boston market. The demand for Treasury certificates has also been very great, each new offering of the Treasury Department being largely over-subscribed. In past years the banks have carried allotments made them until the market could absorb the Treasury offerings, whereas this year these Government securities have gone direct to the investor and the Reserve Bank has been called upon to carry certificates on repurchase agreements for dealers rather than on rediscounts for banks. Demand for these certificates has been so keen that they have been selling most of the time at a slight premium.

The ruling of the Board that six months bills drawn in connection with foreign transactions are eligible for purchase by the Federal Reserve Banks has brought some of this paper onto the market, but to no great volume, investors apparently preferring bills of shorter maturity.

## BANKERS' ACCEPTANCES ${ }^{2}$

The volume of acceptances originating in the Boston district, while less than in other recent years, has kept up unusually well, especially so when the lower prices for commodities and general trade recession are taken into consideration. The bulk of acceptances made, so far as can be judged by the record of acceptances handled by the Reserve Bank was in connection with foreign trade. ${ }^{3}$ The purchases of acceptances by the bank for investment during the past year were very limited. ${ }^{4}$ With the exception of acceptances bought from the Federal Reserve Bank of New York in January, most of the holdings of the bank were on repurchase agreements from dealers.

[^5]
## UNITED STATES SEGURITIES ${ }^{1}$

The bank's investment in United States Government securities was reduced from 22 millions on December 31, 1920, to 11 millions on December 31, 1921.2 This reduction was due to the retiring by the government of 13 millions of Treasury certificates issued under the Pittman Act. Purchases of $\$ 900,000$ of Victory notes and $\$ 1,300,000$ of short-term Treasury certificates were made by the bank in December for investment.

## RESERVES ${ }^{3}$

The reserve ratio of the Boston bank was for most of the year higher than any of the other reserve banks, averaging for the last three months of the year close to 80 per cent. This was brought about through the reduction in the loan and in Federal Reserve Notes outstanding. The net increase in gold ${ }^{4}$ from December 31, 1920, to December 31, 1921, was $\$ 31,000,000$, the highest point reached being in August when it amounted to $\$ 266,000,000$.

## CURRENCY TRANSACTIONS ${ }^{5}$

The operations of the Currency Department while smaller in volume than last year have been large. The demand for currency, with the letdown in general business, has been less, but the work of counting, sorting and handling Federal Reserve notes as they have been retired from circulation has been unusually heavy. The clerical force of the Money Department therefore has been only slightly reduced.' The volume of Federal Reserve notes in actual circulation ${ }^{7}$ has steadily decreased from 289 millions on December 31, 1920, to 203 millions on December 31, 1921. During the holiday season although the decline in the volume of Federal Reserve notes in circulation was not so marked, it still continued, the demand for currency for that period being largely met by paying out silver certificates and United States notes of small denominations, furnished by the Treasury Department, the government desiring again to place in circulation silver certificates withdrawn under the Pittman Act. Federal Reserve Bank notes; bank bills secured by United States Government securities have been reduced from 20 millions on December 31, 1920, to 6 millions on December 31, 1921, ${ }^{3}$ the Government having paid off and retired 13 millions of special 2 per cent. certificates issued in connection with the silver transactions of 1918, against which these bank notes had been issued.

[^6]
## GHEGK TRANSACTIONS ${ }^{1}$

The operations of the transit department steadily increase in volume each year regardless of general business conditions. While the total amount in dollars of the checks handled has been somewhat less than last year, the physical number is considerably larger. In 1921 this department handled $50,829,717$ checks of an aggregate amount of $\$ 11,651,344,832.08$ as compared with $43,821,535$ items in 1920 with an aggregate of $\$ 14,727,346,341.28$. The total clerical force was increased from 204 to 209. The per item cost was reduced from .0085 in 1920 to .0076 in 1921. There are 133 banks in New England sending their checks direct to this bank for collection as against 126 in 1920, while 203 member banks in other Federal Reserve districts are sending checks direct to the bank under the direct routing system against 118 in 1920.

## TIME COLLECTIONS ${ }^{2}$

The collection department, that is the department handling time collections such as notes, drafts, acceptances, coupons, etc., has had a much greater growth than any other department in the bank, the total number of items increasing from 134,787 in 1920 to 319,163 in 1921, the largest increase being in coupons on industrial and railroad bonds. The number of member banks which utilized the collection facilities of the bank was 195 as compared with 131 banks in 1920. About 75 per cent. of the items handled were collected at par for the depositing banks. The clerical force in this department has increased from 24 in 1920 to 48 in 1921.

## FISCAL AGENGY OPERATIONS ${ }^{3}$

The total volume of Treasury securities allotted during the year through the Reserve Bank of Boston was 281 millions, an amount approximately the same as in 1920. Periodical offerings of securities were made by the Secretary of the Treasury as in past years, but whereas in 1920 only loan and tax certificates of short maturities were put out, in 1921 there were two offerings of three-year notes. A much larger proportion of payments for securities was made by banks through credits on their books instead of cash than heretofore, and the average time was longer before these deposits were withdrawn into the Reserve Bank by the Treasury Department. The character of collateral deposited by banks against these government deposits varied little over previous years, the only material change being a smaller amount of commercial notes. Whereas in 1920 certificates did not have a ready market in this district and banks had been urged to subscribe, and several times allotments made to this bank were not filled, the investment demand in 1921 was

[^7]so great and certificate rates so attractive that every offering brought heavy over-subscriptions, and it has been a problem to make allotments fairly and impartially. During the year government certificates and notes have been selling at a premium and the market has been so steady and broad that dealers have traded in them.

The sales of Treasury Savings Stamps have fallen off considerably, the total for the year being about $\$ 1,300,000$,- less than one-half the sales of 1920 .

The Bond Department, which handles deliveries, exchanges, transfers, coupons, etc., of government securities, has been called upon to handle a volume of items about one-third less than last year, and its operating staff has been reduced therefore by 73 clerks. ${ }^{1}$ On the other hand, while in past years the bank has been reimbursed by the government for the expenses of fiscal agency operations, since July 1, 1921, it has been obliged to absorb them.

## INTERNAL ORGANIZATION ${ }^{1}$

During the year there has been no change in the official staff or the Board of Directors; the officers and directors whose terms expired having been re-appointed and re-elected, including the member of the Advisory Council. On the other hand the number of officers and employees as a whole was reduced from 776 on December 31, 1920, to 734 on December 31, 1921. This reduction was made possible by a decrease in the volume of operations as well as by increased efficiency.

## THE NEW BANK BUILDING

It was originally expected that the new bank building on Pearl, Franklin and Oliver Streets would be finished and ready for occupancy in September, 1921. On December 31, 1921, although certain portions of the building had been completed and certain departments of the bank had been transferred into it, there was still much to be done before the building would be entirely ready for occupancy, but it is expected that unless something unforeseen occurs the entire organization will be moved and settled in the new quarters by April 1, 1922. The delay in finishing the new building was due largely to labor conditions. In January, 1921, all the mechanics and laborers, failing to agree on a wage adjustment with a local employers' association, an association with which the supervising contractor was affiliated, stopped work and left the building. This strike continued until March 22 and from then on for several months it was impossible to obtain competent or adequate labor to carry on construction operations. But, on December 17, 1921,

$$
{ }^{1} \text { See Schedule No. } 48 .
$$

the auditing, bookkeeping and supply departments were transferred into the new building, the quarters formerly occupied by them at 20 Kilby Street being abandoned.

## CONCLUSION

Unless there should occur a marked increase in general commercial business activity, evidence of which does not appear at the present time, the demand by member banks for rediscounts for commercial needs should continue to be very small, both on account of the reduced volume in general business and the lower range of commodity prices. On the other hand, if the United States Treasury decided to enter into heavy long-term refunding operations it is probable that, pending the distribution of such securities, the member banks would look to the Reserve Bank to assist them in carrying the new government obligations. Unless loans of this latter class develop, the problem of earnings sufficient to meet current operating expenses, regardless of dividends to member banks on their stock holdings, must be faced by the Board of Directors. The general credit situation, while gradually improving, is nevertheless, in many cases, such as to warrant careful supervision of member banks. The volume of slow credits, while decreasing, continues very large and there are still heavy loans that will ultimately have to be charged off.

${ }^{1}$ Prior to March 18, net deposits as given below were used in calculating reserve percentages:

|  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Jan. 7 | $\$ 102,825,000$ | Feb. 4 | $\$ 109,186,000$ | 1100 |  |
| Jan. 14 | $103,843,000$ | Feb. 11 | $110,277,000$ | Mar. 4 | $\$ 105,136,000$ |
| Jan. 21 | $110,364,000$ | Feb. 18 | $111,798,000$ |  |  |
| Jan. 28 | $108,842,000$ | Feb. 25 | $113,753,000$ |  |  |

${ }^{2}$ Adjusted percentages are calculated after increasing or reducing reserves held by the amount of accommodation extended to or received from other F. R. Banks. A blank ( - ) in this column indicates that no accommodation was extended to or received from other F. R. Banks.

SCHEDULE 43.-Banks authorized to exercise fiduciary powers under the Federal Reserve Act.
[As of Dec. 31, 1921.]

NOTE.-The Federal Reserve Board has authorized the National banks of this district listed below to exercise one or more fiduciary powers as follows:
(1) Trustee
(2) Executor
(3) Administrator
(4) Registrar of Stocks and Bonds
(5) Guardian of Estates
(6) Assignee
(7) Receiver
(8) Committee of Estates of Lunatics
(9) Any other fiduciary capacity in which State banks, trust companies or other corporations which come into competition with National banks are permitted to act under the laws of the State in which the National bank is located
The numerals opposite the name of each bank, which refer to the list given above, indicate the power or powers it is authorized to exercise.
