## BRANCH BANK SUSPENSION STATISTICS, 1921-1935

Sheet #1

Name of bank	Date of suspension	Class
	1921-34 incl.	National non-member State member
City or town	Population <u>1/</u>	County State

Disposition of suspended bank by December 31, 1935:

(Show date in the column to the right, where available; otherwise indicate by check mark)

Reopened

Succeeded by new bank

Taken over by another bank

In process of liquidation

Disposition not recorded

Completely liquidated

Type of bank operating branches:

(Check mark the type of bank below, and show the number of branches on appropriate lines in the column to the right)

Number of branches at time of suspension

<u>160</u>	Confined to head office city	<u>699</u>
	Outside head office city --	
<u>123</u>	Confined to head office county <u>2/</u>	<u>221</u>
<u>30</u>	Beyond head office county in contiguous counties <u>3/</u>	<u>89</u>
<u>18</u>	Beyond head office county in non-contiguous counties <u>4/</u>	<u>166</u>
Amount of loans and investments <u>1/</u>		<u>\$2,937,290,000</u>
Amount of deposits <u>1/</u>		<u>2,528,682,000</u>
Amount of capital stock <u>1/</u>		<u>273,203,000</u>
Number of cities (including head office town or city) in which branches were operated at time of suspension <u>5/</u>		<u>59</u> ✓
Number of counties (including head-office county) in which branches were operated at time of suspension <u>5/</u>		<u>459</u>

- 1/ Use the same basis as in the case of general bank suspension statistics.
- 2/ Include bank here if it operated a branch (or branches) outside the head office city but within the confines of the head office county (whether or not it also had a branch in the head office city).
- 3/ Include bank here if it operated a branch (or branches) within the confines of a county or counties contiguous to the head office county (whether or not it also had a branch or branches in the head office city or county).
- 4/ Include bank here if it operated a branch (or branches) in a county or counties not contiguous to the head office county (whether or not it also had a branch in the head office city, the head office county, or a county contiguous to the head office county).
- 5/ List on page 2, by counties, each town or city in which branches were operated and the number of branches in each town or city.

## CHAPTER V

### EXPERIENCE WITH BANKS OPERATING BRANCHES

Experience with branch banking on an important scale in the United States covers only the 15 years since 1920, one of the most difficult periods in American banking history. Wide-spread bank failures occurred throughout the period and finally in 1933 the entire banking structure collapsed. Abroad these years were likewise difficult and banking encountered its most serious problems in modern history. The period is relatively short in terms of banking history but the results of the operation of banks with branches when examined in the light of events of this period compare favorably with those of independent unit banks. It is the purpose of this chapter to analyze the results of the operations of branches in the United States from 1921 to 1935 on the basis of the record of suspensions of banks with branches and such other information as is available.

#### Suspensions of Banks Operating Branches, 1921-1935

A total of 331 banks operating 1,175 branches suspended between 1921 and 1934. There were no suspensions in 1935. Most of the suspensions for the period as a whole occurred after 1930. From 1921 to 1929 only 45 banks with 86 branches suspended as compared with 286 banks with 1,089 branches from 1930 to 1934. Moreover, the banks that suspended after 1930 were larger than those prior to that time. The average number of branches per bank in 1930-1934 was approximately four as compared with

983

331  
57  
383

1,175  
115  
1,290

less than two in 1921-1929. Loans and investments of banks in 1930-1934 averaged \$10,000,000 and \$1,800,000 in 1921-1929. Table 23 shows suspensions by years from 1921 to 1935.

The table also shows that total loans and investments of all banks operating branches which suspended in 1921-1935 were \$2,937,000,000 and that the deposits of these banks were \$2,529,000,000. This excess of loans and investments over deposits represents the condition of over-extension which has been typical of almost all bank suspensions as is pointed out in the memorandum on bank suspensions in this study.

- (1) Mutual savings and private banks not included in this tabulation. Mutual savings banks thus excluded that failed in 1921-1935 numbered 3 and had 3 branches. One of these banks suspended in 1928, one in 1932 and one in 1933; private banks numbered 2 and had 4 branches. One of these banks suspended in 1921 and the other in 1930.
- (2) Comprises 13 banks that suspended from January 1 to March 15, 1933; 13 licensed banks that suspended between March 16 and December 31, 1933; and 93 banks not licensed following the banking holiday which have since been placed in liquidation or receivership. Does not include 74 banks which were not licensed by April 12, 1933, but which were subsequently granted licenses by December 31, 1935. Does not include 2 banks operating 15 branches which were not licensed following the banking holiday but which suspended in 1936.

State and National Banks

Of the 331 banks operating branches which suspended between 1921 and 1935, as shown in Table 24, 283 were State banks and 48 were national banks. No national bank operating branches suspended prior to 1930. Loans and investments of the State banks operating branches which suspended amounted to \$1,995,000,000 and those of national banks amounted to \$942,000,000. Most of the suspensions of national banks operating branches are recorded for 1933 and represent banks which failed to open following the banking holiday.

### Location of branches

Of the total of 1,175 branches operated by the suspended banks, 753 or 64 percent of the total were head office city branches. Less than one-fifth of the total branches were outside the city of the head office in the head office county, and about one-sixth of them were in contiguous and noncontiguous counties. Branches of banks that suspended were more concentrated in the city of the head office than the present active branches and branches in the head office county that suspended were in about the same proportion as active branches to total branches. The proportion of branches in contiguous and noncontiguous counties was considerably smaller than the proportion of present active branches in these counties. Table 25 presents these figures in detail.

Table 25. Branch Offices of Banks, Suspended 1921-1935,  
and of All Banks Operating Branches, December 31, 1935,  
By Location

<u>Location</u>	<u>Branch-Operating Banks Suspended 1921-1935</u>		<u>All Branch-Operating Banks December 31, 1935</u>	
	<u>Number</u>	<u>Percent of total</u>	<u>Number</u>	<u>Percent of total</u>
Head office city	753	64.1	1,617	51.9
Outside head office city				
Head office county	219	18.6	617	19.8
Contiguous counties	90	7.7	348	11.2
Noncontiguous counties	113	9.6	532	17.1
Total	1,175	100.0	3,114	100.0

Table 26 presents a distribution of branch offices of suspended banks by the size of city or town in which such branch offices were located. Of the total of 1,175 branches of suspended banks during 1921-1935,

716 were located in towns of 50,000 population or more, and 708 of these branches were head office branches. The disproportionately large share of head office city branches in large towns in suspended banks as thus indicated reflects the several very large failures of metropolitan banks.

Table 26. Branch Offices of Banks, Suspended 1921-1935,  
by the Size of Town in which the Branches  
were Operated (1)

50,000 and Over	716	708	6	-	2
Total	1,175	753	219	90	113

#### Types of branch systems

Most of the suspended branch-operating banks had branches in only one city or county, as shown in Table 27. Of the 331 suspended banks 262 operated branches in only one city and 299 had branches in only one county. Of the 1,175 branches operated by the suspended banks, 801 were attached to banks operating branches in only one city and 936 were attached to banks operating branches in only one county.

(1) Appendix IV gives the statistics in detail on which this table is based.

Table 27. Branch-Operating Banks, Suspended 1921-1935,  
by Number of Towns or Cities in which  
Branches were operated at date of  
Suspension (1)

Number of towns or cities	Number of banks		Branches operated

Total	804	331	3,114	1,175
<u>Number of counties</u>				
1	704	299	1,895	936
2 - 5	79	26	371	112
6 and over	21	6	848	127
Total	804	331	3,114	1,175

Size of suspended banks operating branches

Branch-operating banks which suspended 1921-1935, averaged about the same in size as all branch-operating banks on December 31, 1935, except for the banks with more than \$50,000,000 of loans and investments. The average amount of loans and investments of all branch-operating banks with less than \$50,000,000 of loans and investments on that date was \$5,900,000, whereas the average amount for the same group of suspended banks was \$5,400,000. Contrary to the experience in other bank suspensions the proportion of suspended branch-operating banks to all such banks increased progressively in the groups up to \$10,000,000, as shown in Table 28. Further, a greater proportion of branch-operating banks having between \$10,000,000 and \$50,000,000 of loans and investments suspended than branch-operating banks having less than \$250,000 of loans and investments.

(1) Appendix IV gives the statistics in detail on which this table is based.

Table 28. Banks Operating Branches, Active December 31, 1935, and Suspended 1921-1935, by Size of Loans and Investments (1)

(Dollar amounts in thousands)

Size of Loans and Investments	Banks operating branches				Ratio of suspended to active banks	
	Active Dec. 31, 1935		Suspended 1921-1935		Number	Loans and investments
	Number	Loans and investments	Number	Loans and investments

Total	804	18,573,754	331	2,937,290	41.2	15.8

#### Individual Branch-Operating Bank Suspensions

In Table 29 the twenty banks operating more than 10 branches each which have suspended since 1921 are listed. The Georgia State Bank was the only one with more than 10 branches that suspended prior to 1930, and it was a part of the Witham-Manly chain which operated banks in both Georgia and Florida. Two banks with more than 10 branches failed in 1930, 4 in 1931, 1 in 1932; and the remainder were banks which were not licensed following the banking holiday. Of the total of 543 branches operated by these banks, 388, or 71 percent, were head office city branches. These banks held \$1,370,000,-000 of the total of \$2,940,000,000 of loans and investments of all branch-operating banks that suspended.

(1) Table of Appendix gives statistics in detail on which this table is based.

Table 29. Suspensions of Banks with more than ten Branches Each, 1921-1935

Total - 20 banks		388	26	37	92	543	1,369,939	1,261,824	

Bank of the United States, which was the largest bank that had ever failed in this country up to the banking holiday, had 58 branches. They were all located in the one city and after its failure several of the principal officials of the bank were charged and convicted of illegal acts.

The Bankers Trust Company of Philadelphia, all the branches of which were in one city, was closed by action of the directors after a long period of declining deposits. It had previously been developed in the late 1920's mainly by consolidating or merging with several banks in different sections of the city that were not always in good condition.

Suspension of the three banks in Toledo in 1931 was due to a local crisis, in which four leading banks closed in one day, another having closed two months earlier. One of the five banks had no branches, and all the branches of the others were within the city of Toledo.

All of the six banks that suspended in 1930 and 1931 were banks whose size and situation made their branch operations of comparatively minor significance. The bulk of their business belonged to their main office. They were city banks and their branches were confined to the city in every case.

The Central Trust Company of Maryland, however, was more distinctively a branch organization. Frederick, where its main office was situated, is a town of about 15,000 people, and the bank, which had loans and investments of more than \$16,500,000 at the end of 1930, or 45 percent of the loans and investments of all the banks in town, appears to have owed a substantial part of its business to its branches, which

were situated in eleven other towns. The bank was not a member of the Federal Reserve System. According to the State Commissioner of Maryland, its difficulties arose mainly from "various large commitments accumulated in real estate holdings.....a majority of which were located outside the State, and of course, the conditions existing nationally at that time contributed in no small degree to the shrinkage in the asset value of this class of commitment". (1)

Of all the banks with branches that failed prior to 1933 the Peoples State Bank of South Carolina was most distinctively a branch organization. It had a total of 45 offices in 43 different cities, towns, and villages situated throughout the State. Its business was derived to a large extent from its branches and externally it would appear to have been one of the chief exemplars in structure of State-wide branch banking in this country, outside of California. It was not a member of the Federal Reserve System and its branch organization had been developed almost entirely after the passage of the McFadden Act in 1927.

The report of the Federal Reserve Committee on Branch, Group, and Chain Banking (1931) states that the bank's failure, "according to reports, 'was caused by poor judgment, poor management, and an excess of ambition. The branches contributed to the failure of course, but if the institution had possessed good ability and good judgment it would not have failed just because it had a string of branches.' Before converting to a State charter and beginning its career as a branch organization it had already been 'continuously subject to criticism from national examiners..... The

part which the branches played in the failure was played not because they

(1) Twenty-Second Annual Report of the Bank Commission of the State of Maryland, February 1, 1932 - p.7.

were branches but because of the manner in which they were established. A large proportion of the branches were formed by taking over unit banks which were practically "busted" when they were taken over. These operations filled the group with highly unliquid, and in many cases, worthless assets, and when public confidence began to weaken in South Carolina, the Peoples State Bank had absolutely no margin of safety... The whole thing was recklessly and inexpertly done, and therein lies the real cause of the failure.'" On the basis of the information of one of the members of the staff of the Board of Governors, who was familiar with the situation in South Carolina at the time that this bank was developing through his investigation of banks and later connection with a bank operating in much of the same territory, the causes of failure may be summarized as follows:

1. The management was not only weak minded but inexperienced in branch banking, or, for that matter, any other kind of banking of any considerable size;
2. Rapid and competitive expansion, the key bank having bought up most of the 44 branches within the course of about 3 years around the peak of inflation in its territory, such purchases being based upon cursory investigations and analyses by incompetent examiners on the staff of the bank;
3. But little or no restraint on the part of the State supervisory authorities (it was a nonmember bank) who, by the exercise of common sense judgment, could have foreseen the dangers of the too rapid expansion and the expansion into small communities which could not support even a branch and in some cases a money depot;
4. Gross overpayment for the stock of the independent banks bought up and converted into branches, the purchases usually being made on an exchange of stock basis wherever possible, although in a number of cases cash was demanded by some stockholders; in a large number of cases the basis was far in excess of real values which resulted in loading the institutions with large quantities of slow, doubtful and worthless assets.

All of the other banks with more than 10 branches which suspended were those that did not secure licenses following the banking holiday. The six largest of these banks included two each in Detroit and Cleveland and one each in New Orleans and Baltimore.

The First National Bank-Detroit was not only the largest suspension in our banking history but also had the largest branch system involved in a suspension. The management of this bank was identical with the management of the Detroit Bankers Company, a large group organization, and the many malpractices of this holding company were responsible in large measure for the difficulties of the bank. Dividends were maintained long after substantial losses had been suffered in order to maintain dividends on the group company stock. In addition, this bank made many loans on the collateral of the holding company and conducted improper operations in the maintenance of the market prices of the stock. The proportion of real estate investment by the bank was excessive and large loans were made to officers, directors, and their interests. (2)

The history of the Guardian National Bank of Commerce of Detroit was very similar to that of the First National Bank-Detroit. Its holding company organization, however, had expanded beyond the Detroit area and included banks throughout southern Michigan. (3)

The two large Cleveland banks, The Guardian Trust Company and the Union Trust Company, operating together 39 branches in the greater Cleveland area, had been linked with a large number of nonbanking affiliates and were engaged in a number of lines of business quite foreign to banking, many of them involving real estate promotion. The Guardian Trust Company conducted extensive real estate operations and supported the enterprises of several of its officers and directors. (4) The Union Trust Company was heavily involved in the enterprises of the Van Sweringens. (5)

(2) Report of the Committee on Banking and Currency of the Senate on "Stock Exchange Practices". S. Res. 84-72nd Cong. and S. Res. 56 and 97-73rd Cong. p. 237.  
(3) Ibid. p. 232. (4) Ibid. p. 295. (5) Ibid. p. 318.

The Baltimore Trust Company, according to examination reports, was conducted in an unsafe manner, making improvident loans to local enterprises and individuals, several of which resulted in heavy losses. In addition, the Company engaged in security operations through affiliates and made commitments which were not consistent with good commercial banking practice. Owners of a security issue successfully prosecuted a claim against the Trust Company for an improper discharge of trust and this not only caused a loss but resulted in reduced confidence and considerable withdrawal of outside money. Although the bank survived some time after this incident, its losses were so substantial that it could not be reorganized for license following the banking holiday.

The Canal Bank and Trust of New Orleans incurred heavy losses through unwise loan policies, poor collection methods, and poor investment practices, and its weak condition was recognized very early in the depression. The bank was reorganized, new capital was subscribed and officers, recruited from The Chase National Bank, were installed in an effort to "clean up" the bank. The bank's earning power, however, was reduced because of the losses and it was too weak to open following the holiday.

Suspensions of Banks by States Classified According  
to Legal Status of Branch Banking

When the experience with bank suspensions over the fifteen-year period in States permitting branch banking is compared with that in States prohibiting the operation of branches, the record for States where branches were allowed is in general better. Table 30 shows that a slightly smaller proportion of the total of all banks and of the amount of deposits in 1921 in States permitting branch banking suspended in the following fifteen

years, 1921-1935, than in States that prohibited branch banking. About 37 percent of the banks in 1921 suspended during 1921-1935 in States where branches were permitted as compared with 49 percent in States prohibiting them. The proportion of deposits in suspended banks averaged about 17 percent in States permitting branches and 27 percent in those prohibiting them. In individual States the experience with suspensions varied widely but the States that appear to have had the best records for the entire period were with a few exceptions those that permitted branch banking and the poorest records with a few exceptions were in States that prohibited the operation of branches. Indeed, only one of the ten States with the greatest number of suspensions in 1921-1935 permitted branch banking throughout the period.

Table 30. Ratio of All Suspended Banks During 1921-1935  
to All Banks on June 30, 1921,  
by Groups of States

States classified according to law regarding branch banking <sup>1/</sup>	Number of banks (percent)	Deposits (percent)
State-wide branch banking permitted	37.4	16.3
Branches limited as to location	37.2	17.8
Establishment of branches prohibited	49.3	26.9
UNITED STATES	44.4	20.3

<sup>1/</sup> The general rule has been followed here of classifying the State in the category in which it was for the greater part of the period.

Experiences With Branch Banking in Canada and England

The ability of the Canadian and English branch banking systems to withstand the post-war international financial developments and the problems of the recent depression almost without loss is a monument to the strength of their respective structures. The only failure in either system was the Home Bank of Canada which failed in 1923. (6) The strength, however, of banking in England and Canada is not wholly due to the branch structures of these countries. Smaller departure from classical commercial banking and the greater traditions of banking conservatism, professionalism, and integrity are undoubtedly factors. The fact remains, nevertheless, that the banks in these countries have had the opportunity for wider diversification even though their national diversification has in each case been smaller than that which is possible in the United States. (7) In addition, the flexibility of these systems, particularly in adjusting to receding and unprofitable territories, has avoided the scourge of failure in such areas, as experienced in the United States.

Another experience of the Canadian banking system that is significant in comparison with that in the United States has been the greater stability of bank earnings over the past ten years than in the United States. Table 31 shows that the earnings of the Canadian banks on either loans and investments or capital funds have moved within a much narrower margin than in this country. The minimum return per \$100 of loans and investments

between 1925 and 1934 was \$0.81 and the maximum return was \$1.09, whereas

- (6) It has been variously claimed that suspensions underrate the true losses in the Canadian system since many banks known to be weak have been absorbed by the stronger banks to avoid the consequences of a failure. Stockholders may have lost thereby, but the fact remains that the interests of depositors have been safeguarded--something that heretofore was not done effectively for depositors in the United States.

(7) Crick, W.F., & Wadsworth, J.E., op.cit. p. 345. (continued on p. 95)

in four States (Illinois, Minnesota, North Dakota, and Montana) not permitting branch banking, and with areas and banking resources similar to those in Canada, the range of fluctuation was from a loss of \$4.28 to \$1.67 of profits. Similar fluctuations are apparent in the ratio of net profits to capital funds. The apparently large return on capital funds throughout the greater part of the period for Canadian banks is due to the proportionately smaller proprietary equities of these banks. It is reported, however, that the retention of hidden reserves is greater in Canadian banks than in non-metropolitan banks in the United States. This does not explain, however, the wide differences in the fluctuations of the rates of return in the two countries.

Table 31. Net Profits Per \$100 of Loans and Investments and of Capital and Surplus for All Canadian Banks and for National Banks in Selected States<sup>1</sup>/which Prohibited Branch Banking, 1925-1934

Year	Net profits per \$100 of loans and investments		Net profits per \$100 of capital and surplus	
	Selected States	Canada	Selected States	Canada
1925	\$ 1.12	\$0.91	\$ 7.76	\$ 8.11
1926	1.13	.96	7.68	8.73
1927	1.01	.92	7.03	8.95
1928	1.26	.93	9.21	9.52
1929	1.67	1.07	11.65	9.41
1930	.89	1.09	6.02	8.72
1931	-.08	1.00	-.51	7.69
1932	-1.75	.94	-10.79	6.86
1933	-4.28	.82	-26.03	6.65
1934	-.47	.81	-2.95	6.64

<sup>1</sup>/ Illinois, Minnesota, North Dakota and Montana.

(7)(Continued)"Consider, for example, the consequences that might have followed in England during that time from the existence of numerous small local banks concerned disproportionately with the activities of a single industry--The Bradford bank absorbed in wool; The Oldham bank in cotton; The Sheffield bank in steel; The Lincoln bank in agriculture; The London banks in the financing of international trade and investment....."

Operation of Branches not a Cause of Suspension

Analysis of the suspensions of branch banks in this country suggests that such suspensions were not caused by the operation of branches but by many of the same factors that characterized unit banking. Indeed, the report of the Committee on Banking and Currency of the Senate on "Stock Exchange Practices" endeavored to distinguish clearly between branch and group banking so as to avoid the criticism of branch banking in their analysis of failure of the Detroit and Cleveland bank groups. (8) The one way in which branch banking may have contributed to failure in these and other instances was the incentive given to ambitious promoters to achieve bigness by acquiring banks and converting them to branches when such acquired banks were unsound or were purchased at excessively high prices. In a great many cases the branches were undoubtedly purchased during the inflation of the 1920's and on the basis of the immediately past earning record. Such cases were largely a fault of the individuals who wanted to expand rapidly rather than the fault of the type of the system.

---

(8) Supra, p. 232.

Also supra, p. 294-5

"The group banking system failure,....is a caveat in evaluating any systems of banking predicated upon the maintenance of unit banks."
