Mr. Ottley. Certainly. Mr. Strong. Now, let us get back to this proposition of having two or three or four or five great banks having branches within the Federal reserve district: Would there be any security against the Cashier of the head bank absconding with the money of the bank? There would not be any protection against that, would there?

Mr. Ottley. In this day and time, all well-regulated banks carry

insurance policies against that.

Mr. Strong. But if you were president of any insurance company how would you like to insure a bank spreading over six States and having 400 or 500 branches that one man dominates and controls

would you like to carry that insurance?
Mr. Ottley. Mr. Chairman, you are getting out of my territory

when you get into the insurance field.

Mr. Strong. Well, I know, but you are a pretty reasonable man and I imagine a pretty good banker and a pretty good business man. I just wonder if you would not want a pretty good premium to insure a big group of banks. For instance, here was the chain of banks of which you were receiver, with 100 banks that failed. An insurance company that carried insurance on those banks would be in a pretty bad way, would it not?

Mr. OTTLEY. The cause of the failure of those banks is entirely separate and apart from what you are discussing now-that is,

abscounding.

Mr. Strong. Yes; I know they said that that failure was due to very bad investments. But it would be a pretty serious thing for this country for a bank having several hundred branches, dominating six States, to fail?

Mr. Ottley. Yes. Mr. Strong. If the Government should permit the building up of financial institutions of that kind-you suggested they are semipublic institutions—we should enact some pretty close regulations of those banks?

Mr. OTTLEY. Yes, sir.

Mr. Strong. Should we permit them to buy and sell securities?

Mr. Ottley. The banks themselves? Mr. Strong. Certainly.

Mr. OTTLEY. Under the present law-

Mr. Strong. You think the regulations should be pretty strict? Mr. OTTLEY. I think regulations all along the line should be strict. Mr. Strong. Of course, the temptation now is to underwrite of float great bond issues or great stock issues. You think that should

be prohibited?

Mr. OTTLEY. No, sir. Mr. Strong. You would not let one of these big banking groups, in a position to dominate and control the business—the money and credit-of five or six States, have free rein to buy and sell securities?

Mr. Ottley. What you contemplate right now would have no bearing whatever on the domination of business or finance—the

purchase and sale of securities.

To illustrate that exactly, you take the major banks in New York and Chicago and in Boston: They all have offices in the city of Atlanta right now for the purchase and sale directly of securities. So, if there was only one bank in Atlanta and only one bank in the territory, they would have no monopoly.

Mr. Strong. I am not talking about competition; I am asking if

they should have the right to do that?

Mr. OTTLEY. I think if banks can not be depended upon to distribute securities, then I do not know whom you can depend upon to do it. Mr. Strong. You think group banks or banks with many branches

should be allowed to buy securities?

Mr. OTTLEY. I do.

Mr. Strong. And you think they should be regulated by the Government as to the interest they should charge the people?

Mr. Ottley. The various States have that.

Mr. Strong. But if the Government is going to permit trade areas nation-wide branch banking-

Mr. Ottley. Yes, sir; that is all right. Mr. Strong. You think it is all right for the Government to limit the amount of interest to be charged?

f

if

38

Mr. OTTLEY. Yes, sir. Mr. STRONG. What should that be? Mr. OTTLEY. How low or how high?

Mr. STRONG. How high. I do not think you need protect the bank-

ers against lending it too low.

Mr. Ottley. If you were in the banking business to-day you might

have a different view of that.

Mr. Strong. I do not think I would make it too low. What do You think should be the rate in a national usury law to protect the People? If we are going to turn the banking over to groups in Federal reserve districts, should we have a national usury law, and if so, how high should it go?

Mr. OTTLEY. Why, I would have no hestitation in saying that

8 per cent should be the maximum.

Mr. Brand. If they did have one, it should be 8 per cent?

Mr. Ottley. I mean if the Government permits branch banking for national banks, I think it is perfectly all right for them, along

With the other regulations, to have a usury law.

Mr. Strong. Do you think there should be a limit to the amount of loans these great banking institutions could make? You must remember that there is going to be an immense capital and lending any certain percentage of their capital would not be any protection.

If you had a branch bank in Atlanta covering six States with 100 branches in each State, that would be 600 branches. You would have an immense capital. Do you think you should have a limitation on the amount you can loan to any one individual or corporation?

Mr. Ottley. In order to fully understand the question, do you

mean the greatest amount they could lend?

Mr. Strong. Yes; to any individual or corporation.

Mr. OTTLEY. Absolutely.

Mr. Strong. In other words your idea is—and it is mine—that if we must permit a bank to have branches throughout a trade area in, say, six States, like your Federal reserve district, we should pass laws to regulate them in the protection of the public as we do other publicservice corporations?

Mr. OTTLEY. Yes, sir.

Now to illustrate that point: You have a national bank now that is regulated to the extent that they can only lend 10 per cent of their

capital and surplus to any one corporation or individual.

Mr. Strong. But you might have a billion dollar surplus, and if You run a banking institution with branch banks in six States and Were allowed to lend 10 per cent of the bank's capital to any one corporation, it would be a rather dangerous loan. My proposition ls this: We have permitted monopolies in public service corporations. myself had an interest in a small power company and a couple of telephone companies. When I sold them they merged into a very

large concern where they cover 15 or 25 counties in my State and 75 to 100 towns. Now the State, when it permits such public service corporations a monopoly, is very careful in guarding the public interest, what they shall charge the public, how much stock they shall issue, what surplus shall be set aside, what amount shall be set aside for reconstruction and depreciation and it lowers the rate, if the corporation is making too much money.

I am just wondering, if we are going to allow the money and credit of the Nation to be controlled by monopolies, divided up into 12 Federal reserve districts or 20, with a strict law prohibiting them from overlapping, whether or not, in the interests of the public, we should not pass laws governing their operations to protect the

Mr. Ottley. I think laws governing the operations of banks should

be passed and they should be very strict. Mr. Strong. In the interests of the public?

Mr. Ottley. In the interest of the public; yes, sir.

Mr. Strong. That is all.
Mr. Ottley. Now, when it comes to the question of regulation, I think that your usury law would really protect you. If you had a general usury law it would protect the public and it is my opinion that the old law of supply and demand, plus keen competition, would really take care of it, and one very material difference between banking and the general utilities companies or public utilities, to which you referred, is this, that in the utility company and telephone company to which you referred, that you sold and were merged into other companies, the people in those areas could not get telephone service from anybody but that company and could not get power from anybody but that company, but as a matter of information I should like to say to you that even in this large bank of which I am president in Atlanta, we are in constant competition with New York and with Philadelphia and with Boston and with other cities, and particularly the commercial note brokers, so that when a man comes in and wants \$100,000 or \$200,000 he asks, "What is your rate?" and you have to quote the rate and if that rate suits him, yes; if not, he sells his note to a note broker and that note broker, in turn, may sell it to a bank in California.

Mr. Strong. I understand the large borrower can protect himself, but in the small towns, where there would not be competition in such towns, unless we have a usury law, the people would have no protect tion. So I think we should have laws defining how the bank shall invest its money, how much it shall lend to each borrower, what interest it shall charge, what surplus it shall have and all the regulations you can put around the banks-if you turn over the money and credits of the Nation to two or three groups in each Federal reserve district, I think we are facing a grave danger and I just wanted to get your views, and you have been very fair and I thank you very much.

Mr. LETTS. Mr. Ottley, did I understand you to say that under your State system branches are permitted?

Mr. Ottley. Yes, sir; and have been for many years. Mr. Letts. With any restriction in that regard?

Mr. Ottley. Up until a few years ago, and for many years past, branch banking in Georgia has been wide open. A few years ago an antibranch banking bill was passed.

These branches that were established many years ago are still in

As I say, several years ago they passed an antibranch banking bill. Nobody had any notice of it. It was attached onto some bill after 12 o'clock at night. That bill prevented the establishment of additional branches in Georgia. At the last session of the legislature, which was a little less than a year ago last summer, they passed a repeal of that to an extent which practically conformed to the McFadden Act.

Mr. Letts. How long did that restriction operate in the State-

how long was it in operation before it was repealed?

Mr. Ottley. Just two or three years.

Mr. Letts. I understood you to say that you favored branch banking as the best way of rendering service.

Mr. Ottley. Yes. Mr. Letts. You think it is better than group and better than chain banking? Mr. OTTLEY. Yes, sir.

Mr. Letts. Feeling that way about it, how does it come you did not reorganize and go into the State system rather than stand by the national system, and thereby enable yourselves to pursue the Policy that you regard as the best for the organization and maintenance of branches throughout your trade area?

Mr. Ottley. I am very pleased to answer that question and to say that I am a very strong advocate of the national banking system.

Mr. Letts. What particular advantage do you find in that system? Mr. OTTLEY. In the first place, a national bank in Georgia is a national bank in California. You have the same laws governing that and a great many corporations doing a national business prefer to deal with a national bank.

In the second place, I think the regulation and supervision of national banks is better than that of State banks. With the head comptroller at Washington being a national official, he is not sub-Ject to what you might say is the close intimate touch that the various superintendents of the State banks have.

Mr. Letts. How long have you been an advocate of the branch

banking system?

Mr. Ottley. Well, personally, for a great many years.

Mr. Letts. For a long time?

Mr. OTTLEY. Yes.

Mr. Letts. I was interested in one part of your formal statement, because it relates to a situation which I am interested in. I come from Iowa, which is a rural State where we have many small towns.

Your statement is this, that for outlying communities where a small branch could be placed and kept open two or three days a week, service might be rendered by providing a place for the deposit of money and the paying of checks and deposits of valuables for safekeeping and then you state: "Perhaps making a few small loans."

Does that hold out the right and the necessary opportunity for

rural communities? I notice you minimize the idea of leans? Mr. Ottley. I should like to amplify that statement and I am glad of the opportunity of doing it. I tried to be conservative in my statement and I think that is a very conservative statement about the loans.

I do not know whether you gentlemen will agree with me, but when it comes to banking I think that the primary and first function of a bank is a safe place for people in which to deposit money, and you take in a lot of these communities that have suffered by small bank failures, the depositors who have not owed the bank any money have been really the greatest sufferers. My suggestion is that if you can primarily put a place in which people can deposit their money safely and take care of their valuables, and such other functions and to make such loans-I mean to be very conservative in that statement make such loans as might present themselves as safe and sound-

Mr. Letts. Primarily I imagine there are a great many places all over the country where animals are raised and feed is produced. It is often necessary for farmers to borrow money at seasonal times to hold over their crops and feed it out to the growing animals and they need accommodation. Would it be your notion that in cases of that kind these borrowers should be prepared to go to the central bank for their accommodation?

Mr. Ottley. No, sir. That, as I outlined, would be handled right

there.

Mr. Letts. You think that should be handled locally?

Mr. Ottley. Yes, sir.

Mr. Letts. A great many men out my way raise corn in abundance and find that the best market for it is by feeding cattle and hogs. Many of the hogs are raised in my State and many of the cattle are brought in from Texas, New Mexico, and Colorado and other States and they are held in Iowa for a few months, fed up and sent on into Chicago.

Now, many farmers that have raised the corn necessary for those operations, find that they must borrow the money with which to buy the cattle and they must have that money until the cattle reach

Under your suggestion, could those men be accommodated?

Mr. Ottley. I should think that would be very desirable.
Mr. Letts. When you say perhaps making a few small loans, you rather overemphasize the idea of being conservative, do you not?

Mr. OTTLEY. I think I can make that plain.

Mr. Strong. Let me suggest that we are right by 1 o'clock now-

Mr. Letts. I have just one other question.

Mr. Strong. All right; proceed.

Mr. Ottley. When I wrote that statement, I had primarily in mind the sixth Federal reserve district, and I did not have a picture of the State of Iowa which I know does a lot of business such as you have in mind. The mere fact I stated a few small loans, was a conservative statement and what I really thought would develop in the small communities, but the branch of a bank, regardless of the size of the town, would be capable of handling just as large a loan, if the opportunity and necessity presented, as they would be at the head office.

Mr. Letts. The answer to it would be that in each trade area the central bank would through these branches, furnish the service which

the community demands?

Mr. OTTLEY. Yes.

Mr. Letts. And, in justice, requires?

Mr. OTTLEY. Yes.

Mr. Strong. Mr. Seiberling wants to ask just one question.

Mr. Seiberling. How many cities are there in the sixth Federal reserve district of 100,000 population or more?

Mr. OTTLEY. Atlanta is one. Of course, we start with New

Orleans, that being the largest.

So, New Orleans is one. I have not the census before me, but I will just approximate it. Atlanta is two, and Birmingham, say, three. Nashville would be four and Chattanooga five, and I suspect Savannah would be sixth.

Mr. Seiberling. How about Macon?

Mr. Ottley. I think Macon has less than 100,000, but it might be around in that neighborhood. They would be the largest cities in the district.

New Orleans, Atlanta, Birmingham, Nashville, Chattanooga,

Savannah, and Macon—those would be the largest cities.

Mr. Strong. I think we had better adjourn now until to-morrow morning. You will be here to-morrow morning?

Mr. Ottley. I am at your service.

Mr. Strong. If there is no objection, we will adjourn until 10.30 o'clock to-morrow morning.

Mr. Seiberling. And I will continue, Mr. Ottley, in the morning. (Whereupon, at 1 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m., Wednesday, April 30, 1930.)

The state of the s

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, APRIL 30, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 11.10 a. m., in the committee room, Capitol,

Hon. Robert Luce, presiding.
Mr. Luce. The committee will come to order and we will resume the hearings.

STATEMENT OF JOHN K. OTTLEY-Resumed

Mr. Luce. Mr. Seiberling, I believe you were questioning the witness when we adjourned yesterday.

Mr. Seiberling. Mr. Ottley, I asked you yesterday about the cities in your district that had a population of 100,000 or more and You gave me a list of seven of them. I notice among the cities you gave me Nashville was one of them?

Mr. OTTLEY. Yes, sir.

Mr. Seiberling. I notice you do not have a bank in Nashville?

Mr. Ottley. No, sir; we do not.
Mr. Seiberling. Now, has Nashville financial institutions large enough and capable of taking care of the needs of that community?
Mr. Ottley. Yes, sir; they have several very strong banks in Nashville and an amount of fact they have gone out in their terms.

Nashville and, as a matter of fact, they have gone out in their territory in some of the smaller towns around in the surrounding territory of Nashville. There is one bank in Nashville—at least one banking firm in Nashville—that has gone as far as Memphis.

Mr. Seiberling. I suppose they have a large banking building in

which they have made an investment?

Mr. Ottley. Yes, sir; in Nashville?

Mr. Seiberling. Yes, sir.

Mr. Ottley. Yes, sir.

There is one very large bank there that I think owns its own building and then there is another large national beat the control of the co bank that I think leases their building.

Mr. Seiberling. And what is true of Nashville is true also of these other cities of 100,000 or more?

Mr. Ottley. Yes, sir. And, in fact, I might say along that line, that certainly two banking groups in Nashville are doing group banking now. One has gone as far as Memphis.

Mr. Seiberling. Now, assuming that we should legislate to provide for branch banking in Federal reserve districts or some other

trade area, what regulation, if any, do you think should be put into this legislation in reference to permitting banks to put branches in cities, say, of 100,000 or more where they have ample financial facilities?

Mr. Ottley. In answer to that question, I would not think that it would be necessary to have any legislation along that line.

Now, it has been brought out by this committee that you do not want a monopoly, in which I thoroughly concur. Now, if you go and say that a bank in Atlanta should not go to Nashville or a bank in Nashville should not go to Atlanta, right then you are beginning to restrict the number of groups that could formulate and operate within these districts.

Now, what I would think is that common sense and good judgment would more or less take care of that and in the interest of the public you would not want to put that restriction in the legislation.

Mr. Seiberling. You would at least have five or six groups in your

district because you have five or six centers of population's

Mr. OTTLEY. Yes, sir—as I outlined, Atlanta, Nashville, New Orleans, and certainly Birmingham and maybe one or two other cities are capable of organizing and operating groups.

Mr. Seiberling. Well, do you think it would be right to let your large bank, with its large resources and its long history, go into Nashville and, with a very small investment, put a bank in next door to a bank in Nashville that had made a large investment for the benefit of Nashville and had spent a great deal of money in advertising its business and had established a fine good will—permit you to come

in with practically no investment at all and without any capital subscribed there and open a bank next door and advertise for deposits and do business? Do you think that would be fair to let other centers do the same thing in Atlanta next to your bank?

Mr. Ottley. Yes, sir; I think so, because those things take care of themselves. I would say this to you: Assuming you had branch banking to-day, I would certainly be very slow to advocate it-just what you are suggesting—for the reason that, for instance, we have valuable accounts from those banks in Nashville. The minute we do what you suggest, we will lose something that we already had.

Mr. Seiberling. You think we should at least make the establishment of branches in cities of that size subject to the approval of the

Comptroller of the Currency?

Mr. Ottley. Oh, yes. In other words, I think if you take to-day, under the McFadden Act, national banks may establish branches in their cities in which the parent bank is located, but the establishment of those branches is subject to the comptroller's approval. I should like to compliment him on what he has done. The First National Bank made an application for a branch at a little place called Buck-There was a unit bank there that was doing business there for several years, just a little hole in the wall. It was not doing so well, but with the idea of being fair we offered to buy them, and another bank came along and offered to buy them. We had our application in for a straight-out branch, but one of our neighbors, pretty smart, offered more than we did and they got the bank and the comptroller denied our application for a branch in that community on the ground that this other bank had gone and bought that little bank and they were entitled to something. I just said, "I think you are all right," and let it go at that.

While no agreement or suggestion has ever been had between the banks in Atlanta that town is pretty well plastered with branches, but they are distributed, and they have not set down branches right alongside of each other.

Mr. Seiberling. If you had branch banking authorized, you would undoubtedly extend banking facilities to many small communities where they do not now have banking facilities—is that correct?

Mr. Ottley. Yes, sir.
Mr. Seiberling. That could be done possibly by having banking days in these communities where you would not have to keep an

organization there all the time?

Mr. Ottley. Yes. At the present time, with the group banking, We have gone to the principal cities in the State of Georgia so far and all those cities have banking business enough to operate these Institutions at a profit and certainly we do not feel under the present law any obligation to go to any particular town that will not pay a Profit and, as I outlined in my paper, probably a million dollars has been employed in establishing separate unit banks, with their own Presidents, cashers, and boards of directors with separate capital surplus and undivided profits and all.

You could take a branch, I say roughly about a million dollars. such as you have outlined there and, if necessary, keep it open one day, two days, or three days a week and if it was a branch, you would not have to have all the machinery necessary to operate a separate bank. So you could go into smaller towns on a very much more eco-

nomical basis.

Mr. Seiberling. It would be possible in these western districts, where the distances are greater and even put a bank on a motor vehicle and run it into a small village and have a banking day or do banking for half a day and go on to the next village for half a day. I assume such a scheme as that would be feasible?

Mr. Ottley. If they worked at all, they would work for a day,

but I can conceive it can be done very easily.

Mr. Seiberling. If you had a run on that bank, you could travel faster than the depositors, anyway?

Mr. OTTLEY. Yes, sir.

Alstr. Seiberling. You stated yesterday you thought there ought to be more than one group in a Federal reserve district. I would like

to have you briefly state your reasons for that.

Mr. Ottley. My reason for stating I thought there should be more than one group is that I suppose we are all human. I am certainly willing to admit I am human, and I think that banking is a semipublic business and that individual banks are semipublic institutions. When you have two banks or two groups you have got competition. I have had experience and very large acquaintance in country towns. Some one said something about belonging to the same church and belonging to the same club. Why, you go to a country bank and the general custom is that you find one bank on this corner and one on the other corner. One banker you will find 18 the leader of the Baptist Church and the other banker is the leader of the Methodist Church, and when it comes to politics, one group is in one political line-up and the other in the other and there is competition right straight through. I was brought up and born in that kind of atmosphere in Columbus, Miss., and it is my idea

when you have two groups you do have competition. I think you ought to have competition.

Mr. Seiberling. But if you go out into a small community where it will only support one bank and maybe only a half-time bank-a one day a week bank-you do have a monopoly in that community.

Mr. Ottley. I am glad you brought that up. I think that you gentlemen might be of the opinion that if you had branch banking and it happened that a community would be so small that you could only have a bank in there that operated one or two days a week-well, I think that would indicate that there was not enough business in that particular town to have two banks go in there, even though you had a dozen groups. I think it is sound business, just like all the banks in Atlanta have branches; they do not have branches at the same spot, but what is true in Atlanta in regard to those branches and I am going to try to give you my idea about it—the same thing would be true in the country towns. That is to say, if there is a bank on this corner in Atlanta and a man likes to do business with either that bank or that branch manager, why, he is going to do it. If he does not like that bank or does not like that branch, even though he is next door to that, he can walk two or three blocks and do business with another bank.

Mr. Seiberling. That would not be true in the country town.

Mr. Ottley. All right. What I am going to say about the country is that I think it is entirely likely and probable. This sheet [exhibitingl represents a county and here are four or five small towns. For instance, if a group went in and set down a bank, with the approval of the comptroller, at this place [indicating] certainly I would not want to go and set down a bank in that same town. What I would like to do is to be represented inthat county, probably at this point or that point [indicating]. So, with the roads you have to-day, you would still not have a monopoly because I think that the same thing would apply in the country that applies in the city; that you are likely to be represented in these neighborhoods and if they do not like this bank [indicating] they could go to that bank [indicating].

Mr. Seiberling. All these difficulties that we are speaking about could be entirely taken care of if we had proper and reasonable reons tions?

Mr. Ottley. Yes, sir. And I would like to say about your regulations now at the present time, that a lot of those communities have not got anything, and as time goes on the number of these communities will increase.

I should like to put this thought across to you: That under the present situation, under unit banking, a great many places do not have any banks at all and under the unit system of banking they will not have anything and as time goes on they will have less and so, in my opinion, about your regulation, all the regulation I think you need about where these banks shall go and shall not go is the restriction as to trade areas and then make it necessary to get the approval of the Comptroller of the Currency, if it is a national bank, to establish branches.

Mr. Seiberling. And possibly regulation as to the maximum they can charge for the use of money?

Mr. Ottley. Yes; but I think you would want to let them go any where they wanted to go.

Mr. Seiberling. Your branch-banking scheme would make all

deposits absolutely secure?

Mr. Ottley. Yes, sir. In other words, the man in the country town would have the same protection as the man in the city, and that has not been true under the unit system.

Mr. Seiberling. The only thing the man who does business with a bank is interested in is what you pay him on his deposits and the

interest you charge on loans.

Mr. Ottley. The first interest is safety of his deposits.

Mr. Seiberling. Yes; that his deposits are safe.

Mr. OTTLEY. Yes, sir.

Mr. Seiberling. The next interest is the amount you charge for the loans and the amount you pay on the deposits?

Mr. Ottley. Yes, sir.
Mr. Seiberling. The amount you charge him for the loans is really one of the most important things?

Mr. OTTLEY. Yes, sir.

Mr. Seiberling. What is your opinion as to whether there should be a limit on the interest you charge, if you are going to make a man a loan at all? What would be your idea as to the maximum of interest he should have to pay?

Mr. Ottley. I think 8 per cent.

Mr. Seiberling. What effect, if any, do the high call money rates in New York have with respect to the withdrawal of funds from your district to New York, if you know?

Mr. Brand. You mean the sixth Federal reserve district? Mr. Seiberling. The sixth Federal reserve district; yes.

Mr. Ottley. I can only speak from personal observation. Take the case of the First National Bank, why it is our policy to accommodate our customers first and then, if necessary for us to invest our money, secondly to make it earn something-it is a question of secondary reserve in the form of bonds, principally United States bonds, commercial paper or the call money market in New York.

Mr. Seiberling. Would you venture an estimate as to the amount of money that was withdrawn from banks in Atlanta and sent to New York during the high call money rate that would not other-

wise have gone? Give us your best estimate, if you have one? Mr. OTTLEY. I would not be able to make an intelligent estimate. For instance, we had a few customers, very limited in number, that carried large balances with us-larger than we could really expect or logically require under any form of what you might term the 20 per cent balance against lines, and so forth—that were not borrowing any money and had large surplus funds on hand and they asked us to lend some of their money. But that was very limited in numbers.

Mr. Seiberling. Now, I just want to ask one more question and

Mr. Ottley. Might I just say something further?

Mr. Seiberling. Yes.

Mr. Ottley. There is one question that I should like to amplify You asked about the rate of interest that should be charged.

Mr. Seiberling. The maximum rate.

Mr. OTTLEY. Yes; and I said 8 per cent. When you asked that Question you asked it in connection with what the First National Bank would want to charge at home or in its branches. I said 8 per cent and I still repeat that.

But when it comes to the question of call money, I think that the question of the rate of interest on what are termed "street loans on call," on stock exchange collateral-when it comes to the rate on that, I think that is subject to great consideration, in that it is the theory of a great many people that the rate of interest has a tendency to curb the volume of trading and so-called speculation.

Now, that is a field in which I am not experienced, and I merely throw that out for your information; namely, that my 8 per cent rate

of interest is for the class of business in which we deal.

Mr. Seiberling. Since you volunteer that statement, which is all right, I will have to ask you a few more questions.

Mr. OTTLEY. All right.

Mr. Seiberling. You were a former director of the Federal reserve bank?

Mr. Ottley. Yes, sir; I was a class A, group, 1 director for six

vears.

Mr. Seiberling. Of course, I suppose you know that the committee that fixes the call-money rate is connected with the New York Stock Exchange and is not responsible to anybody. Now, if we are going to have somebody fix the call-money rate, and if it is necessary to take that at higher than 8 per cent at times, do you not think that the power to do that should be put into the Federal Reserve Board or some responsible organization; responsible to someone?

Mr. Ottley. I think that is reasonable.

Mr. Seiberling. You do not consider it fair to the people of the country that four or five men should get together at 10 o'clock in the morning at the stock exchange at New York and raise the rate of interest they have to pay all over the United States without any

responsibility to anybody, do you?

Mr. OTTLEY. Now, Judge, when you get into New York, as I said before, you are getting out of my territory, and the only thing I would like to say on that is that the question as to the rate of interest on that class of transaction is worthy of very careful considera; tion, and I would certainly be modest enough to think that you would be able to find people that are going to appear before you that have made a closer study along that line than I have and will make you a better witness.

Mr. Seiberling. There are two theories. One is that the high call-money rate retards speculation and another theory is that it brings a lot of money into New York and stimulates speculation.

There are two theories, are there not?

Mr. Ottley. Yes, sir. Mr. Seiberling. We have tried one, have we not?

Mr. OTTLEY. Yes.

Mr. Seiberling. And it has not been very satisfactory. It has been very disastrous. Do you not think it would be well for us to try the other to see how that works?

Mr. Ottley. Well, I come back and tell you that I am a commercial banker, and I do not consider myself a specialist, if I may say

so, along that line.

Mr. Seiberling. Now, one more question—the one I intended to ask you awhile ago: The Comptroller of the Currency and Governor Young-I think I am putting it correctly-stated that the stockmarket crash was a substantial element which resulted in the industiral depression and unemployment and business chaos we have experienced since last October in this country. Secretary Lamont and Mr. Barnes last night at the meeting of the United States Chamber of Commerce blamed a great many of our troubles upon the stock-

Now, if a manipulation of that kind results in such great disaster to our country, then will you agree with me that we should find some

solution and some remedy to stop it?

Mr. Ottley. I think that would be very desirable. Mr. Seiberling. Have you a solution or a remedy?

Mr. OTTLEY. You ask me have I one?

Mr. Seiberling. Yes.

Mr. Ottley. I am certainly frank enough to tell you I have not. As a matter of fact, being a commercial banker and having been so all my life, I have always proceeded upon the theory that there were two things that were certain and only two things certain; one is death and the other is taxes and, holding that view, when it comes to speculation I am just not there. Of course my idea about securities is that they are for investment and not as a basis of speculation.

But you take the American people, for instance, among whom I have lived for some time; they ran to Florida and they started in Florida and they just pyramided up and people made fortunes on paper every day and all at once it was all over and, in their desire for excitement, the next thing you heard was people talking about the stock market. The stock market started up and then went down. It seems to me that must go on on the theory that some people advance that there is a sucker born every minute.

Mr. Seiberling. I understand that you agree with some of the theories that have been advanced here that the banking business is more of a quasi-public nature than any other business in the country?

Mr. Ottley. I do, sir.
Mr. Seiberling. More so than transportation or communication, telephone or telegraph, or any of those other quasi-public businesses? Mr. Ottley. I think all of the companies you mentioned are semipublic.

Mr. Seiberling. You think the banking business is more of a

quasi-public character than any of these businesses?

Mr. Ottley. Yes, sir; I do.

Mr. Seiberling. I take it your reason for that is that the people as a whole, down to the last individual, are vitally interested in the circulating medium of the country and that the banking business shall have that circulating medium available wherever they are entitled to it?

Mr. Ottley. Yes, sir.

Mr. Seiberling. Does that express it?

Mr. Ottley. Yes, sir.

Mr. Seiberling. I think that is all.

Mr. Brand. May I go ahead? I want to be in the House at 12 O'clock if I can?

Mr. Luce. Mrs. Pratt is next on the list.

Mrs. Pratt. I shall be glad to yield to Judge Brand.
Mr. Brand. Mr. Ottley, how long were you a member of the rederal Reserve Board, in the Atlanta bank?

100136-30-VOL 2 PT 10-4

Mr. Ottley. I was six years a member of the Federal Reserve Bank of Atlanta.

Mr. Brand. Did not you have any connection with the Govern-

ment relative to the War Finance Corporation?

Mr. OTTLEY. Yes, sir; I was the chairman of the War Finance Corporation Agency for Georgia and Florida and organized that agency.

Mr. Brand. How long have you been in the banking business? Mr. Ottley. I have been in the banking business in Atlanta 40

Mr. Brand. And then practically the whole of your adult life, taking into consideration your banking connection in Missouri, has been in the banking business?

Mr. Ottley. Yes, sir. Mr. Brand. Until the Committee on Banking and Currency has the opportunity to formulate legislation seeking to remedy existing evils in the banking laws, what recommendation or suggestion, if any, would you make in view of the constant taking over of new banks by group systems such as adopted by you and being adopted all over the United States?

Mr. Ottley. Judge, I would appreciate it if you would read that

question again.

Mr. Brand. Until this committee has an opportunity to formulate legislation-

Mr. OTTLEY. I get it now.

Mr. Brand. In other words, should the Comptroller of the Currency be given authority to approve or disapprove taking over any other banks by its various systems of the country in the future?

Mr. Ottley. I see. I think that it is very important that some emergency legislation should be adopted or enacted to give the Comp, troller of the Currency the opportunity to approve or disapprove of banks going into those groups until Congress has enacted some real

0

C C

01

Co

Or

de to

60

form of legislation.

My reason for making that statement is that we are certainly going there and I imagine the majority of this committee, if not all of them, appreciate the evils and dangers of the unit system, particularly in the rural districts, existing at the present time and we are going without any legislation. In fact, have already made a long step from unit banking to group banking. I think it is important that, until definite and permanent legislation has been enacted, there should be strict supervision and that the consent and approval of the Comptroller of the Currency must be obtained by banks entering groups until that time.

Mr. Brand. Before these groups take over any other bank?

Mr. Ottley. Yes, sir.
Mr. Letts. Will you pardon me a minute, because I think there is something that should be cleared up right in that connection.

Mr. Brand. Yes.

Mr. Letts. Since the holding companies are not banking institution tions and not subject to control, how can that be accomplished?

Mr. Brand. Suggest emergency legislation for the present to enact some legislation now until we can formulate and pass permanent legislation.

Mr. Letts. But that is in respect of corporations not banking

Mr. Brand. If it is in the business of banking—taking over banks Into groups—Congress has this authority, I should think.

Mr. Letts. It is not a bank but a holding company to hold the

stock of banks.

Mr. Brand. That is one way of getting around seeking the approval or disapproval of the Comptroller of the Currency, if Congress can give him such authority.

Mr. Letts. I do not want to take your time, but I think that is an

important element.

Mr. Brand. What is your criticism of the suggestion?

Mr. Ottley. My answer was based on the thought that that was desirable, but not being a lawyer, I do not know whether that can be done or not. But I do think it is desirable.

Mr. Brand. I can not understand, Judge Letts, why Congress can

not pass any legislation upon the subject it wants to pass.

Mr. Letts. With respect to corporations holding stocks of banks, doing business in various States?

Mr. Brand. Yes; if it is a banking institution.

Mr. Letts. But you could not legislate for and control a Delaware

Mr. Brand. If it is a banking institution, taking over one bank after another in different areas, I should think Congress would have lurisdiction over the question as to how many shall be taken over, where located, and when they shall terminate taking over. Otherwise, if you leave it to these groups, in 10 years the group-banking system will practically control the banking institutions of the United

Mr. Letts. The point I have in mind is this, that when the stock of a national bank is held by individuals scattered throughout the country the Comptroller of the Currency nor anyone else has any control over its sale. An individual holder of that stock can transfer his shares to a holding company as freely as he might to an indi-

That is the thought I have in mind.

Mr. Brand. I see.

Mr. Letts. But I do not want to take up your time, Judge.

Mr. Brand. I have no objection to it, except I do want to get to the House before it goes into the Committee of the Whole.

I will ask you this question: Do you think that the Comptroller of the Currency should have any authority over the constant mergers of these great banks going on throughout the United States at the Present time?

Mr. OTTLEY. I do; in fact I understand he has that authority now. Mr. Brand. He can approve or disapprove, but the question is, should he be given authority, if he approves, to place some limitations in regard to the mergers of these big corporations or holding

companies?

Mr. Ottley. As I understand it now, he has authority to approve or disapprove and if he does not approve, it can not be done.

Mr. Brand. Of course not, but suppose he wants to approve and does not want to disapprove, but he thinks some limitation ought to be conditional upon his approval or that the approval should be conditioned upon certain reservations or limitations. Do you not think it advisable that Congress should vest him with that additional authority?

Mr. Ottley. If that is needed, I see no objection to that. was of the opinion that he had all the necessary authority needed.

Mr. Brand. You answered, I understood, that some emergency legislation should be enacted by Congress giving him authority to prevent these groups taking over any other banks until permanent legislation may be enacted?

Mr. Ottley. Yes, sir. Mr. Brand. You still adhere to that opinion?

Mr. OTTLEY. I do.

Mr. Brand. Now, I want to ask you in regard to this part of your statement made vesterday:

If, in view of the present situation, national banks in Atlanta were permitted, for example, with the approval of the Comptroller of the Currency, to put branches in the small towns in the agricultural sections, the First National Bank of Atlanta could, in my opinion, effectively establish a safe and sound system of banking for those people.

How can you do that in Georgia where they have no State branch banking law?

Mr. OTTLEY. You could not until that law was changed.

Mr. Brand. I did not think so.

Mr. Ottley. Absolutely, but it is my opinion that the situation in Georgia has very materially changed in the last year or two; certainly a straw showing which way the wind blows occurred when, at the last session of the legislature, they modified the Georgia law in regard to branches and made it practically in line with the Mc-Fadded Act.

Mr. Brand. But they repealed the Georgia law authorizing branch

banking. Mr. Ottley. That was done several years ago. Then, until the last session of the legislature, for the last three or four years, you have not been able to establish a branch even in the city in which the bank was located.

Mr. Brand. Why did they repeal the State branch banking law? Mr. OTTLEY. Judge, that is something I am not able to tell you.

As a matter of fact I sat up there until-well, all night the last night listening to what was going on and after practically everybody had gone home to bed, they hitched that change on to some bill, and it went through.

Mr. Brand. Nobody knew anything about it?

Mr. OTTLEY. No, sir.

Mr. Brand. A member of the legislature from my county and the State senator did not know anything about it and I have never been able to find out who was the author of it.

Mr. Ottley. Personally, I was never able to learn who it was done

by, or what the motive was.

Mr. Brand. I always thought it was some of the banks in Atlanta that brought that about.

Mr. OTTLEY. I do not know that.

Mr. Wingo. Does my friend from Georgia cite that as an unusual legislative experience?

Mr. BRAND. No.

Mr. Ottley. In regard to the repeal by the legislature last year, the question was duly considered and I was approached last session In regard to branch banking and it was my advice and opinion that no action be taken on it at the last session of the legislature for the reason that no bank could be a national bank or a member of the Federal reserve system and establish branches. I felt that the main or larger banks that were in business and qualified and able to establish branches, such as we are discussing here, would not and could not afford to retire from the national banking system or from the Federal reserve system; so that it meant at that time, if anybody went into the branch-banking business in Georgia, it would have to be some concern outside of the national banking system or outside of the Federal reserve system. As I stated, I do not know of any public Prejudice in Georgia against branch banking and if Congress should change this law, authorizing branch banking, I do not apprehend there would be any trouble about Georgia following.

Mr. Brand. In the formation of your group, did the Comptroller of the Currency have to give his approval to your bank to take over the member banks?

Mr. OTTLEY. He did not.

Mr. Brand. He had nothing to do with it, as you construed your

Mr. OTTLEY. No, sir.

Mr. Brand. Do you not think he ought to have something to do with that some authority?

Mr. Ottley. I think it is quite in order.

Mr. Brand. I want to ask you relative to another portion of your statement, appearing on page 2, which has been quoted in the Washington Post and United States Daily. These papers said that John C. Ottley of Atlanta appeared before the Banking and Currency Committee nad stated "that the system of banking with which the rural population had to deal has failed," referring to the State of Georgia.

This is what you said:

Public confidence in the small independent bank has been greatly shaken in our section of the country. The system of banking with which the rural popula-tion had to deal has failed. This has added greatly to the burden of the farmer and the small business man.

Now, do you stand by that statement, that public confidence has been destroyed, as a rule, in all small independent banks in Georgia? Mr. Ottley. Not all. I say that as a system, the public condence has been shaken, due to the large number of failures.

Mr. Brand. I agree with you that due to so many bank failures confidence in banks has been shaken. But you do not mean to charge or assert that there is no small independent bank doing business in Georgia in which the public has confidence?

Mr. Ottley. No, sir; I do not. Mr. Brand. There are many of them, are there not?

Mr. OTTLEY. Yes, sir.

Mr. Brand. And many of them solvent?

Mr. Ottley. Yes, sir.

Mr. Brand. And many of them solvent notwithstanding all the trouble we have had during the lean and hard years since the deflation Policy of 1920?

Mr. Ottley. Yes, sir.

Mr. Brand. You say that "The system of banking with which the rural population had to deal has failed." I do not agree with you about that altogether.

Mr. Ottley. I would like to say this: Of course, there are exceptions to the rule, but as a system, I think that public confidence has been shaken and I guess you and I agree on that—I mean as a system.

Mr. Brand. Do you mean to include in your answer the independent unit system?

Mr. Ottley. Yes, sir.

Mr. Brand. I know what you say is true as to the Witham's bank system and the banks included in the Manley system, who was sentenced to the penitentiary a short time ago.

Mr. OTTLEY. Yes.

Mr. Brand. I will state why I do not agree with your sentence that "The system of banking with which the rural population has had to deal has failed." I know of some sections in Georgia where, if it were not for these independent unit banks, the farmers could not borrow money to make crops with. You know that, do you not?

Mr. OTTLEY. At the present time, yes.

Mr. Brand. Do any of your member banks loan money to farmers on real estate?

Mr. OTTLEY. I do not think so.

Mr. Brand. Is there a single bank in Atlanta that lends any money to farmers in order to make crops?

Mr. Ottley. I think there are some loans; very few, but there are some to farmers.

Mr. Brand. I am talking about loans to make crops with.

Mr. Ottley. They make them seasonal loans, yes. Mr. Brand. Do your banks make them in Atlanta?

Mr. OTTLEY. Make some.

Mr. Brand. What sort of security do you require?

Mr. Ottley. It depends altogether on the man. In other words, with the majority of loans that we make of that character, and we make very few of them, we lend the money to the man on his note, plain note.

Mr. Brand. Take a farmer who owns no land and no property except livestock to pledge as security and he wants to borrow money

to make a crop; have you any of that class of loans?

Mr. OTTLEY. No, sir; we have not.

Mr. Brand. You would not make them, would you?

Mr. OTTLEY. We would not make them to-day. Mr. Brand. Do you know of any bank in Atlanta, including your banks, that would make a loan to a farmer and take as security \$\mathbb{B}\$

mortgage on the crop? Mr. Ottley. You are asking a hypothetical question. Mr. Brand. No; a very practical question.

Here is what I want to know: I am very much interested in finding out whether your bank in Atlanta, or any other Atlanta bank, loans money to farmers to make crops with and takes a mortgage on their crops to secure it, with only that security?

Mr. Ottley. No. Mr. Brand. You do not do it, do you?

Mr. OTTLEY. No.

Mr. Brand. Do you know of any bank in Macon that does it?

Mr. Ottley. I can not answer that.

Mr. Brand. Does your bank in Macon do it?

Mr. OTTLEY. I would say no.

Mr. Brand. Do you know of any bank in Athens that does it?

Mr. OTTLEY. I could not tell you. Mr. Brand. I know that they do not.

Now, what is going to become of the farmers of the country who have no means of borrowing money except through these small independent unit banks on crop mortgages? Athens does not do it, Atlanta does not, and your bank in Macon does not. How can they make a crop without getting money on that sort of security?

Mr. Ottley. Well, I would not attempt in this hearing to answer

that question, Judge.

the

ons

en

de-

nk

785

at

to

re

W

TE

39

9,

B

Mr. Brand. You are not making that sort of loan?

Mr. Ottley. As a matter of fact, at the present time we are not doing business directly in those smaller communities, except through

the banks themselves.

Mr. Brand. Yes, I know. Suppose, though, that a bank in a small town or city does not want to borrow any money from you or from any other bank, and the directors of such a bank are willing to lend to farmers money with which to make their crops and to accept a crop mortgage as security, do you regard that sort of bank as "a failure," having in mind your statement that "The system of banking with which the rural population had to do has failed"?

Mr. Ottley. Simply because they do that does not go to their discredit, and, as a matter of fact, the First National Bank lends to country banks on collateral—I mean that frequently that constitutes

a good part of the collateral.

Mr. Brand. What benefit is your bank and the banks in Macon and Athens to a farmer in Gwinnett County, for instance, if these banks decline to loan money to him for the purpose of making a crop with crop mortgages as security?

Mr. Ottley. I will tell you, none, at the present time.

Mr. Brand. If a bank in Gwinnett County, for instance, does make loans like that to farmers in order to enable them to make a crop, with only crop mortgages as security, is not the Gwinnett bank rendering a valuable service to the farmer?

Mr. Ottley. Yes, sir.
Mr. Brand. Then that kind of a bank has not failed to serve the

rural community, has it?

Mr. Ottley. I still say this: Suppose that a bank does lend on crop mortgages; my thought is that the first requisite of a bank is to be a safe place in which people may deposit money.

Mr. Brand. I agree with you about that.

Mr. Ottley. All right. Now, I say, to come back to the point in that, that public confidence, in my opinion, has been shaken in the Small unit bank by the failure of so large a number of them.

Mr. Brand. I agree with you about that. Mr. Ottley. All right. When I say that I think that the system has failed, here is what I mean by that, and we can either agree or disagree on a conclusion, that so many banks, particularly in our own State, bank after bank have failed in the small rural communities, and no banks have stepped in there to take their place, and you know that both in number and in assets they have from year to year de-When I see any system that is on the decline, I call that a failure, when it does not stay level or go up.

Mr. Brand. You stated a while ago, and I agree with you about that, that a banking institution is somewhat of a public-service institution. Suppose that none of the banks in a great county like Gwinnett-and I use this city only as an illustration-should lend to farm; ers who have nothing to pledge except a crop mortgage, what would

become of the people of that county?

Mr. OTTLEY. The predicament of the farmer, in my humble judgment, on what little I know about it, is not due to the inability to borrow money. In the first place, he has been able to borrow money on his land from these land banks; he has been able to borrow money from the intermediate credit banks; and he has been able to borrow money from the country banks. The question of borrowing it is one thing, but paying it back is something else.

Mr. Brand. You know that the Federal joint-stock land bank in Atlanta does not lend any money to farmers in order to make &

crop?

Mr. OTTLEY. I said on their land.

Mr. Brand. They are not now making any loans on land, are they? I refer to your joint-stock land bank in Atlanta. They have practically quit business.

Mr. OTTLEY. I think at the moment they have.

Mr. Brand. Is it not true that the intermediate credit bank at Columbia, S. C., has practically quit making loans to farmers on land?

Mr. Ottley. I have no information to that effect.

Mr. Brand. I can state to the witness that that is the fact so far as my section of the State is concerned.

Have you any agricultural credit corporation in the city of Atlanta?

Mr. OTTLEY. No. Mr. Brand. There is none that I know of within 100 miles of Athens except the one in Athens, and it failed at one time at least because I personally lost \$400 in cash on account of its failure in trying to help its farms to obtain money through it. Many of the farmers in my section of the State are unable to cultivate lands and make crops unless they can borrow money on their stock and crop mortgages, and I have been wondering and worrying about what is going to become of the farmers of the country who are in that condition.

I do not mean by what I have said or asked that I am criticizing

p

h

8.

the policy of your banks in Atlanta or anywhere else.

Mr. Ottley. I understand that.

Mr. Brand. I know that we are forced to lend money over in Gwinnett County on crop mortgages. We loaned over \$30,000 there last year, and during the five weeks of continuous rain last fall I slept but little at night worrying over the situation. But in the end we collected it all except around \$300. Our directors have been considering the proposition to quit making this class of loans, but when we do quit, what in the name of common sense is going to become of that class of people? Did you ever think about a situation like that?

Mr. Ottley. Yes, sir; that is a question.

Mr. Brand. That is the real situation in my old home county. Mr. OTTLEY. I have great confidence in your judgment and experience, and in your knowledge of the banking business, as well as a very high opinion of you personally, as you know, and therefore take the liberty of asking this question, whether or not in your opinion it is to the best interests of the public generally and of the business interests of the country at large that these big banks in all large centers, including Atlanta, should continue to merge and consolidate with each other?

Mr. Ottley, I think that, with business growing larger all the time-and banks are but the servants of business-that mergers and

consolidations have been all right.

Mr. Brand. But suppose that all of them are doing like the Atlanta banks do, decline to lend to farmers throughout the different sections of the country, who are unable to borrow upon any security except

hens upon their livestock and crops?

Mr. Ottley. I do not think the question of consolidations has any bearing on that whatever. In other words, if you take the banks in Atlanta, they are too far removed to deal with the farmer in the location of their main offices, and if you have a large number of banks or a small number of banks, that has no bearing on the question, in my opinion, that you propound.

Mr. Brand. Do you not think that the merger or consolidation of the large banks of the great centers is calculated to create, or tends to create, a monopoly of capital and credit throughout the country?

Mr. Ottley. No, sir; I do not. Mr. Brand. You do not think it is likely to have that effect?

Mr. Ottley. I do not think so, because you do not have a monopoly as long as you have competition, and if there is competition anywhere to-day, believe me, it is in banking.

Mr. Brand. Let us come to that competition for a minute. said you were not in favor of one group in each of the Federal bank

areas, but that there ought to be at least two?

Mr. Ottley. Yes, sir. Mr. Brand. Well, now, suppose that those two should get together and agree upon a rate of interest that they will pay on daily balances, for instance, which might have the effect of reducing the rate from 3% to 2% per cent; would not that be against the interests of the

People generally, the rank and file of the public?

Mr. Ottley. You are asking me that question as to the future?

Mr. Brand. Yes. Suppose that these two groups should get together and agree that they would not pay 3½ per cent any longer,

but reduce the rate to 2½ per cent.

Mr. Offley. In the past to a large extent, the question of interest Paid on deposits, savings or otherwise, has been influenced more or less by the demand for money. You take, for instance, at the Present time; the rates that banks can obtain on loans to-day and the spread between that and 31/2 per cent leaves very little profit. Now, if the rate should go down with or without any agreement, you would have this situation, that the people that have money to deposit would go elsewhere, and that applies also to the people who may want to borrow money. They are not compelled to do business with any Particular bank in any particular town; they are not compelled to do business with any particular bank in any particular State, and to illustrate that point, there are banks all the way from New York to and through the surrounding States that are canvassing Georgia for business right now, particularly for deposits as well as loans.

Mr. Brand. Mr. Ottley, the question I asked is: If there is not a probability that if there were only two groups in the sixth Federal reserve district, that the big bankers would get together and agree that they are losing money in paying 3½ per cent on daily balances and that they will put it down to 2 or 2½ per cent?

Mr. Ottley. In answer to that question, I would say that if they are losing money, they ought to do it, and what I would like to say to you, and I do not mean to say it in a selfish point of view, is this

Mr. Brand. Then they would do it if they were losing money?
Mr. Ottley. Yes, sir; and I would just like to say this, that the Federal Reserve Board has very valuable statistics on file that it would be greatly to the advantage of this committee to see, if you have not already done so, that show the gross profits of the banks in all the 12 Federal reserve districts that are members of the Federal reserve system, and which also shows what happens to those profits. A bank is, as you say, a semipublic institution, and it ought to make money.

Mr. Brand. But as long as there is severe competition between two banks or two large groups there wont be any reduction in the rate of interest on daily balances, and I come back to my first question, which is this: What would prevent them from getting together and agreeing that they will increase the rate of interest charged to their customer bank.

Mr. Ottley. Nothing would prevent it any more than if they did

it now where you have two banks in Atlanta.

Mr. Brand. Let us suppose that there were only two groups in the sixth Federal reserve district. Could not the head men, the master minds of the two institutions, get together and say that instead of lending money to their correspondents at 6 per cent, they

Mr. Ottley. Do you know what would happen if they did it, if they were foolish enough to do that when it was not worth it? There are banks in Nashville and Chattanooga and Birmingham, and immediately surrounding us, that are ready to lend money, and there are banks in New York, Boston, and Chicago that have representatives that are continually traveling this whole district over, so that if a bank had a rate that was not in line with the market, the customer would borrow from somebody else and that bank would perhaps lose a customer, and what you have to do in the end is to credit banks and bankers with the same desire to please their customers as

exists in other lines of business.

For example, if a country merchant, when a man came in there who had been paying 10 cents for an article, attempted arbitrarily to charge that customer 20 cents, what would happen?

Mr. Brand. But suppose all the merchants agreed to charge 20 cents?

Mr. Ottley. Then he would go somewhere else and get it.

Mr. Brand. He might not have any credit somewhere else. I do not say that would happen if you had two big groups in the sixth Federal reserve district, but I do say that I do not see any reason why they could not get together and agree on the rate of interest they would pay on daily balances and the rate they would charge their correspondents who want to borrow money.

Mr. Ottley, My whole point is that I am against one group, and I think that in the interests of the public as well as of the banks concerned they should have a minimum of two.

Mr Brand. I agree with you fully.

Mr. Ottley. But I do not think it would ever get down to two. Mr. Brand. What difference is there in the matter of practice and Procedure in organizing the group banks in your system and in organizing the systems in Buffalo, Detroit, Minneapolis, and St.

Paul, for instance? Is it practically the same?

Mr. OTTLEY. I think it is more or less the same. Now, in the Northwest Bancorporation, as I understand it, they have a master holding company. You have had their testimony; but, as I understand it, they exchanged stock in their company for the stocks in the banks. As I have stated in my opening statement, the stocks that we have acquired in the various banks we have, have been bought for

Mr. Brand. But you have a controlling interest in all of those

banks?

Mr. Ottley. Yes, sir.
Mr. Brand. And you elect all of the directors, or there is none elected except by the approval of your parent bank?

Mr. Ottley. As a matter of fact we have a controlling interest, but so far as the actual practice is concerned, from the time that we acquired an interest in these banks until the annual meeting, we never added a director and we never substracted a director, and the only change we have ever made has been the addition of one officer from the First National Bank—just added one officer to their board.

Mr. Brand. In other words, you have the authority to say who shall be elected or not elected, if you see fit to exercise that authority? Mr. Ottley. Well, we have the authority; and when it comes to

a question of sound business, we have gone into these towns and we have done everything to maintain that as a separate unit to go right ahead simply to supplement the management that was already there. Mr. Brand. What was the real reason that caused you and your

people to form this group that you have there in Georgia?

Mr. Ottley. Our reason was, in a sense, following the trend of

Mr. Brand. The same reasoning has moved you that is moving these other great groups throughout the country?

Mr. Ottley. Yes, sir. Mr. Brand. Is it your purpose to continue to buy up or to take in other banks which are good banks and making money in the future as you have done in the past?

Mr. Ottley. I should think so. Mr. Brand. How many stockholders did the Fourth National Bank have before you merged it with the First National Bank? Do you recall?

Mr. Ottley. Not identically. In round numbers, about 500.

Mr. Brand. How many did the Atlanta-Lowrey have?

Mr. Ottley. Something over 700. Mr. Brand. Have you increased the number of stockholders over what you had and the Lowrey crowd had before the merger?

Mr. Ottley. Some; yes.

Mr. Brand. I wish you would just explain briefly—and this is about the only question I want to ask-the history of that branch bank at Decatur. Decatur is about 6 miles from Atlanta. was that established?

Mr. Ottley. Between eight and nine years ago.

Mr. Brand. Was that established under the State branch banking law at that time?

Mr. Ottley. Yes, sir. Mr. Brand. It was in existence at that time?

Mr. Ottley. Yes; there was a little struggling bank down there at Decatur. Decatur, as you gentlemen know, is about 6 or 7 miles from Atlanta, in a separate county and a separately incorporated town. The bank at that time had about \$150,000 of deposits, and when we started to establish these branches we wanted a branch down at Decatur. We thought that it offered an opportunity, in the first place, and, second, we wanted to do it for the benefit of the experience that we would get in the establishment of a branch there. So we went down to Decatur and negotiated with the president and the board of directors about the purchase of that bank, and we bought it at a price that was agreeable both to ourselves as well as to the people who owned the stock, and we converted that into a branch.

As I say, it had \$150,000 in deposits, and was a little hole in the wall, not as big as this room, but within a short time it outgrew that and we bought a suitable lot on the square there and put up a first

class building.

Mr. Brand. A fine building.

Mr. Ottley. And that has gradually developed from \$150,000 in deposits to where they have now more than \$1,000,000.

Mr. Brand. That is what I wanted to know about.

Mr. OTTLEY. That is, as you know, right on the edge of the country. Mr. Brand. What would you advise in reference to Oglethorpe County, in Georgia, just as an illustration, which has not a bank in it? Would you advise the people to go into branch banking or group banking or chain banking?

Mr. Ottley. I would not advise chain banking, certainly. Mr. Brand. Well, between group banking and branch banking, we had a branch banking law in Georgia, and it probably will be enacted later, which would be to their best interest, to join your

group or to establish a branch bank?

Mr. Ottley. I think the answer would be that they would be best served and they would come nearer getting a branch of a bank than they would become a member of some group. I would have to really know more about it than I know now, but it would have to offer sufficient profit to warrant a bank putting an independent member of a group in.

Mr. Brand. In other words, under existing circumstances you

would prefer the branch bank if it could be established?

Mr. Ottley. I think they would come nearer getting a branch than they would a bank in any other way.

Mr. Brand. That is the next question I wanted to ask you.

The CHAIRMAN. Judge Brand, will you yield?

Mr. Brand. Yes.

The Chairman. Mrs. Pratt wants to ask two or three questions, as she has to leave.

Mrs. Pratt. Mr. Chairman and Mr. Ottley, I just want to ask a question in connection with the questions that Judge Brand was asking you.

You would have no objection to handling the farmers' business or

to giving loans to farmers, would you?

Mr. OTTLEY. Certainly have no prejudice against dealing with the farmers, where they were on the same basis that we deal with the merchant.

Mrs. Pratt. If they had sufficiently good credit, they would be

entitled to the same consideration as anybody else?

Mr. OTTLEY. Yes.

Mrs. Pratt. It has been brought out here in nearly all of these hearings, Mr. Ottley—and I do not know whether the people who made the statements felt that the condition was not normal or was not exactly the right thing—that large sums of money are invested in New York by the bankers, or that credit is drawn from the local banks to the New York market, but is it not true that all solvent banks must have and should have a large amount of easily available credit against their deposits, and is it not normal and natural that they should go to the largest market, where there is a more diversified type of credit? Do you see anywhere any disadvantage in that?

Mr. Ottley. In answer to your question, I will say that I think there are distinctly two sides to that question. When it comes to what might be termed the interior bank, and speaking for the First National Bank, of which I am president, we have found that a very great convenience. Our first service is to our customers, but in view of the fact that the Federal reserve bank does not pay any interest, either on our reserve or any surplus over and above our reserve, it then becomes a question, after we have first served our own customers, as to what we are going to do with that money to make it, first, safe, and, second, easily available, and, to add one more consideration, to carn the best return, and if it is commercial paper, we buy commercial Paper; if it is Government bonds, we buy Government bonds. Money seeks its level just the same as water, and if the call money market pays us better than to purchase commercial paper, that is where we go. Under the practice of the First National Bank for a number of

years, we have divided, and our reports will show it, our surplus money in practically three ways; that is to say, practically one-third on the call market, practically one-third in Government bonds and certain stocks, possibly, and practically one-third in commercial paper. Mrs. PRATT. You feel that the day of the small unit bank is really

passing, do you?

Mr. Ottley. Yes; and I so stated in my statement yesterday. If more unit banks are going out than coming in, I think that shows the way the wind is blowing.

Mrs. Pratt. Do you feel that if a system of branch banking should be authorized, there should be any means provided to prevent a branch bank being established in a community where that would come th competition with an existing unit bank that was giving fair service?

Mr. OTTLEY. Personally I do not.

Mr. PRATT. You think that there should not be a branch bank established?

Mr. Ottley. No; you asked me if there should be legislation to Prevent that.

Mrs. Pratt. Yes.

Mr. OTTLEY. The whole idea that has been prevalent in this committee is that you do not want8

Mrs. Pratt. Monopoly.

Mr. Ottley. Monopoly. You can not eat your cake and have it, too, and if you go ahead and say that there should be branch banking and then legislate that you can not do this, or that, or put a bank here, the result will be that you will be giving that local bank the the very thing you have tried to legislate against, a monpoly.

Mrs. Pratt. Would it not be true that a branch bank, with its larger resources back of it, could drive a unit bank out of existence even though that unit bank had been giving a fair service? Is it not pretty hard for the unit bank to stand up under the competition of a

branch bank?

Mr. Ottley. Mrs. Pratt, I would like to say that probably there is no business that is more dependent on public favor than banking, and if a bank from the outside went in and it did not meet with popular favor, or did not have the indorsement of the community, it

could not do business.

I can illustrate that point right now by referring to the question that Judge Brand asked me about Decatur. There was another bank in Decatur at the time we bought this little struggling bank down there, and that bank has gone along and while this branch started with about \$150,000 in deposits and has increased those deposits to \$1,000,000, the other bank at that time had in round figures \$1,000,000 and in round figures it has \$1,000,000 now. is to say, we have brought business into the town that was not there before, not that we have taken it away from that bank.

That is a practical illustration of what we were discussing.

Mrs. Pratt. The point I was leading up to is this: Would you be in favor of restraining large metropolitan banks in establishing branches in the smaller communities?

Mr. OTTLEY. The point about it is that I think that you would be giving the smaller communities something that they do not have now

and it is in their interest.

Mrs. Pratt. Just one more question, and that is with regard to the holding company. In your opinion, would it be wise or desirable to have those holding companies subject to the same supervision and examination that the national and State banks have?

Mr. OTTLEY. It would.

Mrs. Pratt. I think that is all, Mr. Chairman.

Mr. Brand. I will finish. I have only one or two other questions to propound, Mr. Chairman.

Mr. Ottley, in your smaller banks, what is the average salary you

pay your clerical force?

Mr. Ottley. You mean those banks outside of Atlanta?

Mr. Brand, Yes.

Mr. Ottley. We have not any that small.

Mr. Brand. What is the smallest?

Mr. Ottley. Well, the smallest in capital and surplus I think is \$362,000. That is the smallest one we have.

Mr. Brand. You have one here at Columbus, about \$2,000,000. Mr. OTTLEY. Yes; that is the smallest one, and that is about \$2,000,000.

Mr. Brand. Mr. Luce, you asked a question yesterday, I believe, and I want to come back to it while you are present.

In Mr. Ottley's statement, this occurs:

The question may be raised whether, since branch banking beyond city limits is prohibited by the McFadden Act, the First National Bank is not doing indirectly what is unlawful to be done directly. My answer is that the law permits us to do exactly what we are doing. It is done under the sanction of the law.

I think that he discussed that question with you, but there is one thing I did not understand, and I am only asking for information. Under what law was it, State or Federal, that you have formed your group of banks down there?

Mr. Ottley. Under State law. Mr. Brand. Were all of these banks State banks, or were some of

them national banks, that you took over?
Mr. Ottley. No, sir. The holding company is organized under the laws of the State of Georgia, and the charter was granted by the superior court.

Mr. Brand. The courts have no jurisdiction over national banks.

And I can understand how you could take State banks over.

Mr. Ottley. All in the world that that company has done is what any member sitting around this table could do; that is to say, they have just simply gone out and bought a certain amount of stock from the individual shareholders that wanted to sell it.

Mr. Brand. I wanted you to amplify your statement, because I

did not really understand it.

Mr. Ottley. Yes. I would like to say this in connection with our buying of this stock, that first in each case we went to the presidents of the banks and said, "You have a bank of which we think well"and I will tell you another thing, that all these banks had been correspondents, corresponding banks for years, and were good friends, like you and I are, and we went to the presidents of those banks and said, "We think this is the trend of the times and we would like to buy a majority of your stock. We are not looking for any jobs; all that we are interested in and expect to make out of it is a fair return and we want to buy your stock and pay what it is worth, and with our system and cooperation we think that we can make it a better and larger bank and help you to make more money than you are making at the present time.

Mr. Brand. I think that is very fine. What per cent, as a rule, does your parent bank own in these banks which you have taken

over-what per cent of the stock?

Mr. Ottley. We own in excess of 50 per cent.

Mr. Brand. I know you do. You have a majority control, but

how much over 50 per cent, as a rule?

Mr. Ottley. We own from 50.16 per cent to as high as 78 per cent. What we have done is this: We have gone to the president and to the board of directors and said, "Now, gentlemen, we want a minimum of 50 per cent and we are willing to buy as much more as anybody wants to sell," and in each case we made an offer to the shareholders to sell any portion of the stock that they wanted to sell, and, as I say, the smallest one is 50.16 per cent; the other is 78.21 per cent, as I remember it.

Mr. Brand. I just want to state, for the benefit of those present, that when I said "We" a while ago in referring to the practice of our

bank lending to farmers on crop mortgages, I was referring to the Brand Banking Co., which has been a correspondent of Mr. Ottley's bank ever since it was organized. We have kept more deposits in his bank than in any other bank in Atlanta or elsewhere.

You know that to be a fact.

Mr. Ottley. That is a relationship, I would just like to take the opportunity to say, that we have enjoyed through these many years.

Mr. Brand. I am much obliged; it has been mutual.

The Chairman. In connection with the questions that Mrs. Pratt asked you a few moments ago as to the concentration of banking resources in the city of New York, I want to ask you one or two questions. Some money is deposited, according to the custom of country banks, with their correspondent banks; but during the last year or two an accumulation of the country's credit has gone into brokers' loans and has been invested in the maket. It has been the practice of these banks to loan money for their customers, through the rules of the stock exchange, by letting them invest in brokers loans, and this also may be a part of the clearing-house rules. In acting for their correspondents in that respect, the New York banks have been making a charge of one-half of 1 per cent when they loaned money for their customers in the market.

I would like to ask you if in your opinion and with your knowledge of the national banking laws, this is a legal procedure? Have the New York national banks the legal right to act in that capacity?

Mr. Ottley. Mr. McFadden, I am not able to answer that

question.

The CHAIRMAN. Inasmuch as the comptroller happens to be here, I am going to ask him if he will tell us whether it is legal under the national banking law, for the New York national banks, as agents for country banks as lenders, to act in that capacity in regard to financing brokers' loans?

Mr. Pole. I have heard of no legal objection to it, Mr. Chairman.

I would hardly be qualified to answer that question, however.

The CHAIRMAN. The matter has been called to my attention by an ex-national bank examiner, and he makes the definite statement that the national banking law does not permit national banks to act in that capacity. It is an interesting question.

Mr. Pole. Yes.

The CHAIRMAN. And I wanted to raise it.
Mr. Pole. It is an interesting question.

The Chairman. It is a matter that should be definitely known, particularly by your office.

Mr. Pole. Yes, indeed; very interesting.

The Chairman. I am going to ask you, Mr. Pole, if you will give some deliberation to that question and write me what the opinion of your office is as regards national banks acting in that capacity.

Mr. Pole. I shall be very glad to do that.

The Chairman. We only have 10 minutes now until our adjourning time, and I am wondering whether you will be back this afternoon. Mr. Ottley.

Mr. Bussy. I just have a few questions, and I can finish in 10

minutes

The CHAIRMAN. Very well.

Mr. Busby, Mr. Seiberling has a question which he asked me to

ask, and I would yield to him.

S

e

0

Mr. Seiberling. The question was this: If you had branch banking in the sixth Federal reserve district, do you think that that would increase the financial importance of the centers of that district to such an extent that in all probability the district would do substantially all of the financing required by industry and corporations in that district?

Mr. Ottley. I think it would very largely increase and enhance the ability of the district to do its own financing. In short, my conception of it is that it would have a tendency along the lines that followed the establishment of the Federal reserve system; that is to say, that when reserves were required by law to be carried there instead of being carried somewhere else, it made those districts, particularly the sixth Federal district, very much more self-contained from a financial point of view than it ever was before, and I think along the same line-

Mr. Seiberling. You think it would have the effect of decentralizing to some extent money and credits and distributing them to

the various Federal reserve districts?

Mr. Ottley. Yes, sir. Mr. Seiberling. That is all.

Mr. Bushy. Business throughout the country is combining and coming together in larger units in all of the several spheres of business activity, is it not?

Mr. OTTLEY. It is, sir.

Mr. Busby. In other words, take a corporation such as the one known as General Foods. That is a holding company that deals with all types and kinds of business activities that are in line with the supplying of food to the people of the Nation. There is the Steel Cor-Poration, General Motors, and many other like business activities, many other holding companies, that control the business activities in the several fields, and they are getting together in larger and larger units all the time, are they not?

Mr. OTTLEY. Correct.

Mr. Busby. Now, following Mr. Seiberling's question, it would be impossible to keep the headquarters for those institutions from going to the larger money centers in our country, would it not?

Mr. Ottley. Yes, sir; it would be impossible.
Mr. Busby. You had one institution that grew to very great proportions in Atlanta, the coca cola business. Do you know where the coca cola business headquarters are at the present time, whether in Atlanta or New York?

Mr. Ottley. Atlanta. Mr. Bushy. Now, while business is growing bigger, banks will have to grow bigger to take care of the business of these growing institutions, will they not?

Mr. Ottley. That is correct. Mr. Busby. And do you not think that that is largely the reason why banks are being put to the test in trying to get together as quickly as possible in larger units?

Mr. Ottley. Undoubtedly so, sir. In other words, the banks are but servants of business, and in order to serve bigger business, they

must be larger themselves.

Mr. Busby. Now, you spoke of a great many banking failures in Georgia. I know that North Carolina, South Carolina, Georgia, and Florida had a very unusual percentage of bank failures during the last nine years. Do you not think that that was due largely to speculation in lands and in land values during that period of time?

Mr. Ottley. Well, I would not think it was necessarily due to

land speculation.

Mr. Busby. That was largely true in Florida, was it not? Mr. Ottley. Yes, sir.

Mr. Bussy. Was it true to any extent in Georgia?

Mr. Ottley. We have had, I would say, very little land speculation

in Georgia.

Mr. Bushy. The result of the Florida boom, however, was to siphon the money out of your territory, it being close by, into the Florida operations, was it not?

Mr. OTTLEY. A great deal of money went there; ves, sir.

Mr. Busby. And that was also true of other States such as those just north of Florida, North Carolina, and South Carolina?

Mr. OTTLEY. Yes.

Mr. Bushy. Do you not think that those States were ultimately affected in a financial way by reason of the fact that the people took available money and went to Florida and tried to make fortunes

with it and then lost much of it when the crash came?

Mr. Ottley. I think that had some effect, but within a very short time this system that has been discussed here, the Manley system, produced a very large number of banks which failed immediately of within a very short period of time, and then the other bank failures in Florida, that have continued following that, have been due to the depression as an after result of land speculation. Now, in Georgia, primarily, I would think, and as far as I would express an opinion, in South Carolina, it is mainly due to the depressed condition of agriculture, and, as I have endeavored to point out, the foundation for the average country bank is banking, and if the farmer makes money, the banks make money, and if he does not, then they are out of luck.

Mr. Busby. Now, agriculture was boosted and developed considerably in response to the appeal of the Government during the war and shortly after the war, to grow foods and supply the Nation

and the Army, do you not think?

Mr. Ottley. I think so. Mr. Busby. Do you remember the days of 1918 and 1919, when we were appealing to people to even plant gardens in their back yards?

Mr. Ottley. Yes. Mr. Busby. During those days wheat stood at \$2.20 a bushel all through the Northwest. I notice another great stretch of territory, in the central Northwest, in the wheat-growing district, where bank failures were tremendous during the last nine years. Do you not think that that was due largely to the appeal that caused us to overdevelop our agricultural activities?

fe

th

tl

Co

Mr. Ottley. Well, I see what you mean. At any rate, there was an overproduction at high prices, and it was the deflation from the high prices to the low prices that resulted in these bank failures.

Mr. Busby. The banks that were doing business in those sections of the country could not help but go down when the country went down.

Mr. Ottley. That is correct; and when the community fails, the

little bank fails under that system.

Mr. Bushy. Now, the present method of handling finances in this country has the tendency to overdevelop commercial activities, es-Pecially with regard to stocks and bonds, has it not?

Mr. Ottley. Mr. Busby, that is a question I believe to be a little

out of my line.

Mr. Bussy. You know this, however, that financing trading on the on it as well as some other exchanges, has drawn considerable money out of all parts of the country into those centers, and this action has left a dearth of money in the outlying sections of the country, so much so that business has been stifled considerably for lack of money on which to operate; is not that true?

Mr. Ottley. According to my observation, that is not correct.

Mr. Busby. It is not correct?

Mr. Ottley. I might just say this, that a great many corporations heretofore have financed their business by borrowing money on the notes of the corporation, but in later years those corporations have taken advantage of the money market to sell preferred stock, to sell debentures, and to sell bonds which would finance their business for a number of years, and those securities have been sold throughout the country, and that has taken them out of the banks to a large extent and relieved them of the necessity of borrowing from banks; and right at that point I might say that under the Federal reserve system one of the most difficult things that banks have to deal with to-day is to keep their funds invested in loans that are eligible for rediscount with the Federal reserve bank.

Mr. Bushy. What do you think about the law being broadened so as to make more classes of paper subject to rediscount at the

Federal reserve banks?

Mr. Ottley. I think that is worthy of this committee's most

earnest consideration.

Mr. Bushy. Is it not quite an effort to try to find enough eligible Paper to invest the assets of the banks that must be kept liquid?

Mr. Ottley. That is correct. Mr. Bushy. Formerly corporations and business institutions borrowed their money from banks, did they not?

Mr. Ottley. Yes, sir.

Mr. Busby. And under the present system those same business activities or institutions or corporations issue their stocks, bonds, and debentures and sell them through the stock exchange, getting their money directly from the people who purchase these stocks, bonds, and securities?

Mr. Ottley. That is correct.

Mr. Bussy. And it has reversed the entire system within the last few years?

Mr. Ottley. Yes, sir; and might I just add one word along that line?

Mr. Busby. Yes.

Mr. Ottley. And that is this, that up to the period of the war, the large majority of loans that were offered to banks were without collateral; that is, they were plain notes, based on indorsements or a statement, as the case might be. The agitation that went through the country about buying United States bonds was a wonderful step toward thrift, so that now in the majority of instances when people come in for a loan, they have invested in Liberty bonds, started that way, and then bought these securities to which you referred, and they come in from time to time with collateral, and the number of borrowers who voluntarily offer collateral listed on the stock exchange has multiplied very, very greatly.

Mr. Bussy. That is all, Mr. Chairman.

The Chairman. We will recess until 2.30 o'clock this afternoon. (Thereupon, at 1 o'clock p. m., a recess was taken until 2.30 o'clock p. m.)

AFTER RECESS

The hearing was resumed at 2.30 o'clock p. m., at the conclusion of the recess.

STATEMENT OF JOHN K. OTTLEY-Resumed

The Chairman. Mr. Ottley, I should like to ask you—and my question does not apply particularly to your own situation but to the development generally throughout the country—about the consolidation of banking groups which results in chain, group, and the extension of branch banking. How much of this development do you think is a desire of the moving spirits to become big, because bigness means financial power; in other words, is that prompted by a desire to get big or prompted by other motives?

Mr. Ottley. Mr. Chairman, it is my belief that it is prompted by

the economic trend of the business.

The CHAIRMAN. In that connection, some people make the argument that great banking consolidations are not needed to accommodate great industrial combinations and point out that it is fallacious. They point to the fact that most of these corporations do not need banking help.

This morning Mr. Busby asked you some questions pertaining to the change in the method of financing business; that whereas it was heretofore done largely through banks, now the corporations and big industries are getting their money through the issuance of com-

mon stocks and modern vehicles of investment securities.

In that connection I recall the other day when Mr. George F. Rand, of Buffalo, was before the committee, he cited, off the record, case after case of large accounts, in and around Buffalo, or within the area of their banks, which because of consolidations with larger corporations, with their main offices in New York City, had been lost.

If you will look over the annual statements—look over the September 29 clearing-house banks of New York City—you will find where those banks were acting as brokers for these industrial corporations and lending large amounts of money which at that time was running up into the billions of dollars. I think you will find that we have an entirely different situation. Would you care to comment on that particular angle of the thing?

II

n b

er tl

of

in

of

Mr. Ottley. As to the angle of these New York banks acting as

brokers for those concerns in lending money?

The Chairman. Not particularly that, but I was attempting to show how that was piling up in New York on account of these changed

methods of financing. You say that this is necessary to accommodate these large groups that are being formed, whereas, as a matter of fact, most of them are being financed independently of the banks.

Mr. OTTLEY. I shall be glad to give you my idea on that.

The CHAIRMAN. It is a factor in this whole situation and we would

be glad to get your thought on it.

Mr. Ottley. Just as I stated this morning, a large number of these corporations, instead of borrowing, as they formerly did, you might say, in a small continuous or seasonal demand, that is not now so true because of their particular financing. On the other hand, from time to time these big corporations for a short period—maybe one time this one and another time that one and at intervals—want sums of money that, on account of their size were formerly accepted as being worth while, do not now mean anything when they want to borrow money.

The CHAIRMAN. So that in order to take care of their casual demands, you feel it is necessary to grow big in order to hold that

business?

Mr. Ottley. I should like to make a statement that I would prefer not to go in the record, if it is agreeable to you.

The CHAIRMAN. We will be glad to have you do that.

(Discussion off the record.)

The Chairman. I understood you to say this morning that, in your judgment, these many small bank failures throughout Georgia, Florida, and other sections of the country were due largely to the deflation which took place in the price of products raised in those sections. Was that a complete answer, do you think?

Mr. Ottley. I said that and I repeat that, and I might just simply say to the general depression in which agriculture finds itself in our

territory.

The CHATRMAN. Would you attribute management as any factor in that situation?

Mr. Ottley. Management, I think, is always a factor.

The Charrman. Would you go so far as to say that these little banks located in the isolated farming communities, as a general thing, were not competently managed?

Mr. Ottley. No, sir; I would not-

The Chairman. I am not intending that as a reflection on them, but I am prompted to ask that question to elicit the information because of the fact in some of these localities there are good banks existing to-day who have been making loans to that class of people whereas other banks in that community or territory have failed.

I am trying to ascertain what is the real cause for that. During this distressed condition, I happened to address a group of bankers in New Hampshire when banks were failing in the Northwestern and Middle sections of the country and I was impressed by the type of men who attended that meeting. There have been practically no bank failures up there, but here was a conservative type of men entirely different from the type that existed in the localities where the failures occurred, where oftentimes they were the sons or brothers of the farmers of the community or the people engaged in vocations in that community, where their money was received from that class of people and loans made to that class of people where, if crops were bad they were liable to be involved.

I wondered how much management entered into that situation.

Mr. Ottley. I think management enters very materially into the success or failure of any line of business and it is no different in banks. Along that line, you will find in a community these several banks and one or sometimes two will be successful and continue to be successful, whereas the other bank in the community will limp along for a while and then fail. Now, broadly speaking, they have the same opposituality.

opportunity.

But I think that general conditions also have a great bearing. Now when the base on which a bank rests is very much restricted, it makes it very different. When it comes to the question of management you will find in communities, particularly here and there, men of property and who have grown up with the community and have had experience and all, for reasons satisfactory to themselves, will stay on in those communities. But you take the younger men that are coming along, the opportunities apparently are so small in those communities and in those small banks, that the best minds are sought, I will put it, by the larger communities, giving them the larger opportunity.

So, based upon my knowledge and information and experience, it is growing increasingly difficult for the owners of those banks to continue to have the management go along as it should in any organization. Based on that, we have constant inquiries from the large owners—sometimes from the directors and sometimes from the presidents—to assist them in finding young men who are willing to

come on as cashier and take over the work.

The Chairman. So, after all, management is a factor in those situations?

Mr. Ottley. Yes, sir; it is a great factor.

The Charrman. My familiarity with that period of time from 1893 up until 1923 comes from the fact that I grew up in a country bank of the type we are now discussing and I knew personally of the different changes that were run in on us from time to time and many times thoughts of those experiences have come to me since we got into these studies. Many of the causes most of us were not able to understand at the time.

One of the most important changes that took place was in 1913 and 1914, when the Federal reserve act was created. I am wondering whether the putting into operation of the Federal reserve act and the classifications of loans, as to eligibility for rediscount in the Federal reserve, and perhaps the adoption of a different set of rules in regard to country banks, and the fact that subsequently the opportunity for many of these banks to make money was taken away from them—whether or not that has not had considerable bearing and influence in connection with this readjustment.

vttt nt gtilEb

t

87

la b

D.

te

Would you care to say whether or not that is a factor in this situation? In other words, years ago the country bank was an entirely different shop from what it is to-day. It has been modernized and is more up to date and along the lines of a city bank. Are we not trying to make something of the country bank that is impossible?

Mr. Ottley. Mr. McFadden, I came up here prepared to come before the committee and tell everything I know and everything I think.

The CHAIRMAN. I know this is a subject, Mr. Ottley, that you have given some thought to.

Mr. OTTLEY. Yes, sir.

The Chairman. Any banker who has been in the business as long as you have and situated as you have been, in a position to observe the small country bank and the city bank, certainly possesses valuable information for this committee in this study, and I am asking the questions to get your views.

Mr. Ottley. And I am glad to give it to you. In the first place, I should like to say that I am a great advocate of the Federal reserve system, and I have been since its inception an ardent supporter of

that system.

The CHAIRMAN. I was not casting any reflection on it, you under-

stand.

Mr. Ottley. I understand, but I would like to preface what I am going to say by the statement I have made, because there are some things that I may say which, if I have not made that statement in the opening, you might, or someone else might, think I was inclined to criticize the Federal reserve system.

So, I want to open my statement by that.

I think that the establishment of the Federal reserve system has been a great thing for the United States as a whole. I think that it has been a great thing for the banking industry as a whole. I do feel that, with regard to the small country bank, the Federal reserve system might be liberalized; in fact, I think there are certain things I will be glad to mention that I feel the Federal reserve system might be liberalized in regard to, in regard to all banks, but particularly to the small country bank.

The question of exchange on collection of checks which, if they are a member of the Federal reserve system they must remit without any charge, has taken from the country bank a source of revenue. In addition to that, the requirement that they shall keep their reserve with the Federal reserve bank without interest, whereas they could before keep their reserve with a correspondent and draw

interest, has been another thing.

I have been such an advocate of the Federal reserve system that when country banks have asked me my advice as to whether to join the system, I have unhesitatingly recommended them to be a member of the Federal reserve system with the idea of giving their indorsement and their support and of really paying their part of the burden of the Federal reserve system. Now, when they get right down to the question of dollars and cents, from the standpoint of income, due to the fact that, say, the First National Bank of Atlanta—this is purely impersonal—is a member of that system and gets the benefits of the Federal reserve system, these country banks, of course, can get the benefit of the stabilization that the Federal reserve system offers to the banking industry really through us without paying the expense, in a sense, that they would have to pay if they are a member of the system.

So I think, in view of the difficulties that country banks, particularly, are having in making money—and no bank can be safe or other business be safe unless it does make money—I think along that line probably, due to certain questions asked by members of this committee, they may be under the impression that the banking business as

a whole is a very profitable and very lucrative business, but I think as an offset to that, a study of the bank failures of this country, particularly in the rural districts, might make them take a second thought on that—

The CHAIRMAN. You would also recommend a study of the earnings

of small banks throughout the country?

Mr. Ottley. Yes, sir.

The Chairman. And the amount of interest they pay on deposits? Mr. Ottley. Yes, sir. Along the line that we were discussing, it has occurred to me that the Federal reserve system might, to the advantage of the banking fraternity, as well as to the advantage of the Federal reserve system itself, liberalize its policy in two particulars. One is to the country bank in the possibility of paying or allowing them some form of exchange. For example, when the Federal reserve system was organized it said that a check in one place is immediately available, without cost, in a different place in the country. That was passed on to the public, but as a matter of fact, the Federal reserve bank—and you know better than anybody else when you put a check in, the bank has to carry that float.

The Chairman. I am sure you will recall the fact that I led the fight for the country banks when the so-called Hardwick amendment was up. I felt then and feel now there should be some way to recompense the small country banker for that service. I think the Federal reserve system has since recognized that and I think they agree there

was a grave mistake made.

Mr. Ottley. I believe that because of this par clearance that they at one time outlined they would enforce rigorously, but they have not continued.

The Chairman. The Federal reserve itself has adopted a service charge on certain collections?

Mr. OTTLEY. No. sir.

The CHAIRMAN. They have not?

Mr. Ottley. No, sir. So, I would think they could well afford to consider a modification of the Federal reserve system in allowing compensation for the collection and remittance of checks and collections—checks particularly, because they may allow it under collections—checks particularly.

tions: but checks in towns of small population.

Second, I feel that the earnings of a Federal reserve bank could well afford to have what I would term a more even distribution than they have at the present time in that the banks make a contribution of the capital which was originally the thing which was put at risk, on which they get 6 per cent, but in addition to the capital, then the banks furnish the reserve on which they are not allowed any interest. The Government, on the other hand, gives them the franchise for using Federal reserve notes.

Now, I feel the Government and the banks are really partners in the operation of the Federal reserve system, whereas the only compensation or only return that the banks ever receive is the interest or dividends on the amount of capital stock which they have actually paid in. All of the profits and all the reserves belong to the Government over and above the actual capital paid in and I believe I am correct in saying that the Federal Reserve Bank of Atlanta, for illustration, for the last year, paid a franchise tax to the Government of approximately \$900,000.

Now, roughly speaking, the member banks made an equal contribution along with the Government. Now, if the exchange was given consideration to the banks in the smaller communities, that would help them and be an incentive to them to join the Federal reserve system.

The Chairman. You recognize, of course, that the Federal reserve system is of more value to the banks that are located in close proximity to the Federal reserve centers, than to the little banks off in the field?

Mr. Ottley. Yes.

The CHAIRMAN. If I understand you correctly, you would like to do something out of the Federal reserve earnings for the fellow in the sticks-do more for him than for the fellow who gets a more direct benefit from the Federal reserve bank?
Mr. Ottley. Yes, sir.

The CHAIRMAN. You make a distinction between the two?

Mr. Ottley. Yes, sir.

The Chairman. I think there is a demarcation there where some

additional relief could be extended from the system.

Mr. Ottley. In short, I am suggesting that the question of consideration in the matter of exchange for the collection of checks be allowed in towns of small population which would automatically cut out places like Atlanta, New Orleans, and cities of that kind.

The CHAIRMAN. Have you any other suggestion as to how the small country bank might be put into a stronger position to have more

earning power?

Mr. Ottley. Yes, sir. The question of exchange, I think should be an exclusive proposition with reference to towns of small population.

Now, then, I think that it would be a great mistake for the Federal reserve system to increase its fixed charges, but I do believe that the expenses should be paid and losses should be charged, the dividends on the small capital stock should be paid and that the residue of earnings should be on a basis of a fair division between the Government and the shareholders; that is to say, that the country bank then would not be guaranteed a given percentage of interest on its reserve or any member bank so far as that is concerned, so as to create a fixed charge on the Federal reserve system, but when the year's business was done and finished and wound up, that both the Government and the member banks would participate in the earnings.

The CHAIRMAN. In the distribution?

Mr. Ottley. Yes, sir; in the distribution of earnings.

Now, that would help the country bank in addition to its exchange.

It also would help the member bank, whether large or small.

The Chairman. I introduced a bill in the present session of Congress attempting to deal with that particular thing. In it I attempted to distinguish between the bank located near the Federal reserve bank as against the smaller country bank, giving the country bank a larger Percentage of the earnings. It is a difficult thing to work out, but I was trying to do it, basing it on their capital and legal reserve deposited with the banks.

Mr. OTTLEY. Another thing I think should be allowed and that is that participation in the division of earnings should apply only up to the required legal reserve; that is to say, I am not suggesting that they should pay it on the amount of money that a bank might keep there, but on what they are required by law to keep there. I am of the opinion that that would really not cost the government a lot of money to do that, for this reason: When people have money invested and they have an opportunity to get a return on it, they take an active and direct interest in the management of that concern and in the amount that it makes.

Under present conditions, why member banks, under the existing law, can only get 6 per cent on the amount of the capital stock they pay in. There is no incentive for the member banks to take an active interest in a Federal reserve bank. They do not have any stockholders' meetings, such as are ordinarily held. The election of the directors is conducted by mail under the various classes, and so forth, whereas I believe that if the member banks had a chance to participate in the earnings it would be first an incentive to increase the membership in these banks and, second, it would create an active interest in the Federal reserve system which now does not exist.

The Chairman. There is another angle to this, Mr. Ottley, that I want to direct your attention to, from my own observation, from the period between 1893 to 1924, in the country banks.

Mr. Brand. May I ask a question there without interrupting you? The Chairman. Yes.

Mr. Brand. You mean, as I understand you, after ascertaining the amount of the franchise tax to be paid in the Treasury of the United States and before the 12 banks pay the same to take a part of it and give it back to the country bank?

Mr. OTTLEY. That is the point I am trying to make. Do you know

what the franchise tax is now?

Mr. Brand. Total amount paid by all the Federal reserve banks since organization is \$147,109,574. The Atlanta bank paid for 1929, \$803,790.

Mr. Ottley. Well, they call it a franchise tax, but, as a matter of

The Charman. During the period I have referred to the method of conducting these country banks has entirely changed. For long periods during that time there were comparatively few failures of country banks, and I wonder whether the question of supervision or the introduction of new methods has had anything to do with these more recent failures; in other words, this distinction: Were we, during those periods of no failures, more lenient in regard to the class of securities these banks held, or have we adopted more drastic methods of examination and criticism now, that bring about these failures?

I wish to bring out another point that has a bearing on this. In most of these country banks it is very difficult to have any market values on the loans that are in there—that is, the security that is back of them. It is a slow and different class of security, as contrasted with the security in city banks where there is a ready market for it. I wonder whether our later rules and classifications and our examinations have not proved too drastic. In other words, as contrasted with the old rules which are as familiar to you, as a banker, as the A B C's are to a boy, we have not recently applied more drastic rules.

I should like to go a step further in that connection, as to the method of arriving at the real value of these assets. If we set up a gage, as we have in the New York Stock Exchange, of securities, of

supply and demand for securities, as a daily average, which is represented in the quotation of securities, I wonder whether that is an accurate criterion or whether the judgment of the men in the locality where the country bank is located as to the value of those securities might not be just as good. For instance, there was a time when certain stock on the New York stock market, in the last few years, was selling as high as \$400 a share, whereas an accountant who examined the assets of the company would find the liquidating value of those shares was under \$1. Do I make myself clear to you?

Mr. Ottley. Yes, sir; absolutely.

The CHAIRMAN. Has the question of arriving at the value of securities back of loans in banks had anything to do with the drying

up of these country banks?

Mr. Ottley. I think I understand what is back of your mind. I would say, based on very accurate—I do not say accurate, but very intimate—knowledge of the conditions of these country banks, both national and State and their method of examination both in and out of the Federal reserve and in and out of the national banking system, I do not attribute the failures that we have had, to any change of the form of examination or any change in the form of requirement or to applying new rules as to the market value of the assets of these banks.

I am of the opinion that the national-bank examiners have been intelligent but considerate. I am of opinion that the superintendents of State banks have been very considerate—extremely so—and I believe that the same applies to the examinations made by the Federal reserve system; that they have been intelligent but have been considerate.

I think I can give you an illustration that will bring out the point you have in mind, but I should like to make it off the record if it is agreeable to you.

The CHAIRMAN. That may be done.

(Discussion off the record.)

The Chairman. You do not see any possibility, in the building up of these groups that there might be a concentration of power which would restrict and tend to dry up the rural districts of this country?

would restrict and tend to dry up the rural districts of this country?

Mr. Ottley. Mr. McFadden, I do not. So far as the groups are concerned, I think the real difficulty will be to get good groups to go into the country.

go into the country.

The Chairman. You think they would be better served? You may have answered this question as to group and branch banking. You think the group plan would be preferable to chain or branch

banking?

Mr. Ottley. I have answered that at length, but you were not here, and I will be glad to answer it again, and I wish to say that, in my opinion, the group system is superior to unit banking and that, on the other hand, branch banking is superior to group banking in that it can be made very much more flexible and can be operated at very much less expense than can the group system. I have outlined in my statement—I have just made a rough estimate of it and it will answer what you have in mind—just a rough estimate on my part is that it would take a bank of approximately \$1,000,000 to warrant a group in wanting to take over the control of it; in other words, it would take about \$1,000,000 under the group plan, to interest

the group in going into any particular bank, whereas, as a matter of fact, a branch could be operated and make money on very much less

deposits.

The Chairman. Under the present predicament that we are in, with this movement in progress to the extent it is, supposing that Congress fails to act on the subject of branch banking: Will the development in these various forms continue under the impetus already given them; in other words, that this thing will go on and go on and go on until we develop the group and chain banking idea to the "nth" degree, probably?

Mr. Ottley. I would like to speak about group or branch banking, but the chain idea I am not in favor of. But I think, in the absence

of legislation, the group method will continue to progress.

The Chairman. Well, would you think it advisable, in view of the possible tendency of weak groups to get into that particular kind of business now—the danger that exists, for instance, in building up such a group as was known as the Manley Group in your country? I mean by that—and I stated this the other day—they are formulating groups by promoters who are proposing to take over a large number of small banks in various States and operate them through holding-company management. They are going into stock promotions and getting the money to buy up control of these banks and use them in the way that holding-company promoters might use them first, to gain control of the assets and preempt the business of the particular vicinity in which they are operating and use it in the exploitation and sale of securities.

They are a different type of people than you and the Guardian Trust people in Detroit and the Marine Group in Buffalo and these other groups. There is no check on those people doing that; in other words, any one can go out to-day and buy a bank anywhere without asking any superintendent of banks or the Comptroller of the Currency or the Federal Reserve Board whether or not it is the right

h

fr

2:

hi

fo

101

Sti

tin

yo

per

thr

pre

the

pe

thing to do.

Would you think, in the circumstances—and I think you know what is in the air at the present time—while this discussion is on and we are studying this situation and getting ready, perhaps, to legislate to cover the requirements, it might be advisable to put in some restrictive legislation to provide, for instance, that no bank could be taken over into a group, either a national or State member bank of the Federal Reserve System, without getting the consent of the Comptroller or the Federal Reserve Board or both?

Mr. OTTLEY. Mr. Chairman, I think that would be highly

desirable.

The Chairman. The thought has been growing, while we are considering this particular legislation and the agitation is on, that the mere discussion of this subject has enlarged and magnified the opportunity in the minds of clever people that here was a chance to proceed while there was no check, so that there might be built up in this country bank groups that might be in entirely wrong hands, and that perhaps we should, pending the outcome, put some check on it.

Mr. Ottley. I am very much impressed with the question and the way you have put it, and I would say this, that, first, the First National as a group would welcome any check that you might put;

in other words, if the Comptroller of the Currency, or the Federal Reserve Board, or both, objected to our annexing or acquiring any other bank, I would think that we ought not to do it; we might agree with it and we might not, but I mean by that that in the interest of this system as a whole I think it is desirable, particularly desirable, to insure the right kind of people going in it and on a proper basis, and, so far as I am concerned, and so far as the interests represent are concerned, I would welcome it.

The CHAIRMAN. Of course, the only way the Congress could reach

that would be through national banks and State member banks of the Federal reserve system. That would leave unprotected, however, unless the State banking departments of the various States promulgated special rules and regulations, or the States provided similar laws the State banks which are not members of the Federal reserve system. However, it would confine the operations of promoters attempting to do this thing to that particular class of nonmember State banks.

Mr. Ottley. I catch your point.

The CHAIRMAN. I have before me a draft of bill to cover that, and I would like to have your opinion on it. The bill proposes to authorize the Comptroller of the Currency and/or the Federal Reserve Board, or both, to approve or disapprove the entry of any member bank in the Federal reserve system into group or chain banking. The bill would read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the approval of this act it shall be america in Congress assembled, That after the approval of this act it shall be unlawful for any corporation, copartnership, individual or trustee to purchase or otherwise to acquire more than 25 per cent of the shares of the capital stock of more than one member-bank of the Federal reserve system, whether State or national bank member, except after first having the approval of the Comptroller of the Currency and/or Federal Reserve Board, or both.

Any person or corporation violating this act shall be deemed guilty of a misdemeanor and shall wear gravitation thereof in any District Court of the Heaville of the control of the court of the Heaville of the court of the Court of the Heaville of the Court of the Heaville of the Court of

demeanor and shall upon conviction thereof in any District Court of the United

States be fined not more than \$10,000.

9

3

0

9

ø

Would you think that such a provision as that would cover this situation?

Mr. Ottley. Yes, sir. The only suggestion I would make, just from hearing you read it over, is with respect to the question of the 25 per cent. I would think, if I may make a suggestion-

The CHAIRMAN. I want your suggestion.

Mr. OTTLEY. I would think something along that line would be highly desirable, for this reason, that in my judgment group banking for the country is better than unit banking, and I do not know how long it is going to be, but I feel that that is going to be the real sub-

stitute for branch banking. You gentlemen have a hard task before you, and it may take some time; nobody knows how long it is going to take for you to reach Your final conclusion in this committee, and then in Congress, but Pending that I feel that any restrictions or supervision that you can throw around group banking are desirable, with the idea of protecting the public and not having a disrepute on what is going on at the

The only suggestion that I would make about what you have read there, as far as I can see it, is that I think that 25 per cent should be reduced. What I mean by that is not that 25 per cent is controlling, but I think that at the same time it would be undesirable for a bad group to buy as much as 25 per cent.

The CHAIRMAN. Would you say 10 per cent?

Mr. Ottley. I would not want as much as 25 per cent.

The CHAIRMAN. Just what is your suggestion?

Mr. Ottley. In other words, I would say 10 per cent instead of 25 per cent. That would be my suggestion, because that 25 per cent in one block would be too much influence if it was not the right

I may be wrong about it, but that is just a suggestion, and if you are going to do it, you can do it with 10 per cent as well as 25 per

cent, and it will be that much safer.

The CHAIRMAN. In the formation of these groups it has come to our attention that some of them, and rather strong groups, have been taking over some banks that were not solvent. Some of the men who are engaged in this group form of banking have suggested to us that they would not take over a bank that was insolvent.

In your particular instance, have you confined your operations in the South entirely to the soundness of the institution, or have you taken over some banks where you wanted to preempt the business of

that locality and have taken them over at a possible loss?

Mr. Ottley. Mr. Chairman, I am very glad to be asked that ques-

ther

tion and to be given an opportunity to answer.

I will say that our line of procedure has been first that we have dealt only with banks for whom we had served as correspondents for a long number of years, and by virtue of that we knew the management and we were well acquainted with the banks, and all of our negotiations have been directly with the management; that is to say, I have dealt right with the president of the institution and not gone on the outside and bought up any stock. In addition to that, we have made our negotiations based on an actual examination and appraisal of the assets, and we have not bought any bank, first, that did not have good management, second, that was not sound and clean—and I do not know whether you have before you the names of the banks and the dates on which they were organized. You will note that not a single new institution is in there, not a single one that is an old bank. with a fine reputation, well deserved.

I might add to that that the First National Bank is sufficiently jealous of its reputation that we would not be willing to buy a bank that was not of the same character in its neighborhood that we were

The Chairman. In your operations, have you an affiliated investment company?

Mr. Ottley. Yes, sir, we have; the First National Co. The CHAIRMAN. Do you deal in investment securities?

Mr. OTTLEY. Yes, sir.

The Chairman. Are your activities in your investment company confined to your particular area or do you seek business outside?

Mr. Ottley. Of course, we do seek business. We do seek business.

outside, but it primarily is confined to the sixth Federal reserve district;

The CHAIRMAN. Do you intend to confine your operations to what you might call a trade area, or to the State of Georgia, or just what is the fixed area that you have in mind?

Mr. Ottley. Our operations up to the present time have been confined, so far as the affiliated banks are concerned, to the State of Georgia, but I do not have any hesitation in saying that I do not feel that State lines mean anything, and, with regard to laws that may be enacted, it is my suggestion, or rather my opinion, for I do not mean to suggest, that it would be advisable to limit branch banking, if you saw fit in your wisdom to permit it, to what might be called trade areas, and when you come to the question of what should be a trade area, I think that is probably the most difficult nut that you are going to have to crack, and it is more or less difficult for me to answer the question as to what I term a trade area, but I would answer that by saving that the country as a whole should be limited to the Federal reserve districts as a basis. Various corporations have made studies to determine what those trade areas were from a financial standpoint and the trend of business in the different sections of the country, and a great deal of time and study were put in on that, but I think that, as far as I have been able to observe, great wisdom was exhibited in the establishment of those Federal reserve districts.

The Chairman. You would not go so far as to say that we should confine the banking business to be done in your district to that dis-

trict, would you?

Mr. Ottley. I would not suggest that you confine the banking business to the district, because, of course, there are banks that do business all over the United States; and I think that the idea of avoiding monopolies is a fine thing, and I think that will stop the possibility of monopoly.

The Chairman. My question was whether we should provide that all banking business originating in a certain Federal reserve district shall be done in that district, and with banks in that district only?

Mr. OTTLEY. No, sir.

The CHAIRMAN. You would no go that far?

Mr. Ottley. I would not even touch that, because I think that the public should have all the leeway that they can; but what I do have in mind is this, that if you are going to grant branch banking, I would suggest the Federal reserve districts as a basis, and in certain cases I take it you would find it desirable to go outside of the district, but I think that the Federal reserve district should be the basis for the branches of a bank, that you should confine the branches to the Federal reserve districts in which the banks are located, and then, as to anything outside of that, it should be the exception rather than the rule.

To illustrate what I mean more clearly from a personal standpoint than otherwise, I said in my original statement that, just roughly speaking, I would suggest that in the case of Atlanta the sixth Federal reserve district be the basis, plus a portion of South Carolina

and North Carolina.

The Chairman. In the formation and operation of your group, have you made any change in your lending policy from the policy

that the units followed in dealing with local business men?

Mr. Ottley. Yes, sir. We have made changes. The principal changes that we have made in that respect have been to increase the lines of credit to worthy customers in those cities; that is to say, you take the cities into which we have gone; we have strong corporations there that used or were likely to use lines of credit that were incon-

sistent with what those local banks could either legally or comfortably furnish. To illustrate what I mean, suppose that a concern was getting a \$100,000 line of credit from one of those local banks with which we affiliated ourselves, and that those people had use for \$200,000, \$300,000, or \$400,000. We have granted those increased loans where we were satisfied as to their soundness, and so forth, and we have said to the local bank, "Go ahead and tell him he can get so much," and to help that local bank we have just let them pass the paper in payable to their order, and when they got it up to their limit, they just charged it to our account and sent it to us, and we bought it without any recourse the same as we would buy commercial paper.

The Chairman. So you do make available, in the communities where you are taking over these banks, funds from these other banks?

Mr. OTTLEY. Yes, sir.

The Chairman. From your observations up to date, would you say that you have probably sent in more money to those localities than

you have taken out, or is that a difficult thing to state?

Mr. Ottley. I would say that we have sent more money in than we have taken out, and, as a matter of fact, that was one of the things that really appealed to the first national group, the fact that we have a very large deposit account from a class of customers that are not continuous borrowers, and for that reason we have large sums of money for investment at all times, and we are seeking commercial paper and other investments, and we felt that instead of just buying commercial paper through a broker, somebody in San Francisco or Boston or some place else, if we could invest that money in the South, in our own district, that that would be of benefit to that customer as well as of benefit to ourselves.

The CHAIRMAN. Have you been able to determine the effect that the establishment of these members of your group has had on the rates of interest paid by borrowers? In other words, has it changed

the rate of interest, or do you charge the current rates?

Mr. Ottley. Mr. Chairman, I could not answer that question specifically, as to what effect, if any, it has had on the community, but the loans with which I have come in contact have been based on current going rates.

Mr. Brand. May I ask a question right there?

The CHAIRMAN. Yes.

Mr. Brand. Suppose Congress should establish nation-wide branch banking; what would become of your group of banks? Would they

continue to exist, or adapt themselves to the new law?

Mr. Ottley. Judge Brand, that is more or less a difficult question to answer, because that is in the future. In the first place, I do not believe that this country is ready for nation-wide branch banking, but regardless of whether it is or not, and regardless of whether Congress should enact it, those of us in the First National Bank felt that group banking is here and on its way and that that was but a step to branch banking, and we felt, first by the merger of the Atlanta-Lowrey and the Fourth National into the First National, that we created an institution that was able to take care of big business and that was in line with the trend of the times, and that it strengthened our position and, second, in creating this group, we felt that it put us in an independent position so that if there was nation-wide branch banking we would be in a position that we would have a place

in the sun and it would put us in an independent position so that we would not be and could not be forced to do something that did not commend itself to us.

Is that clear? Mr. Brand. Yes.

The Chairman. Mr. Ottley, in connection with the operation of your group and your investment houses, do any of your affiliated companies deal in the stocks of your own banks?

Mr. Ottley. I do not understand.

The CHAIRMAN. Do any of your banks or holding companies or investment companies deal in the stocks of your own bank; or do you make a market for them, buy and sell them actively?

Mr. Ottley. The First National Co. deals in securities, and they buy if somebody comes along and has a few shares of stock that he wants to sell in the First National Bank, and they will sell it the same as they will buy the stock in any other bank.

The CHAIRMAN. But you do not do it for the purpose of maintaining control, or anything like that, or to make a market for your

securities or maintain a market?

It was brought to the attention of the committee that in one instance a holding company was created by a dividend out of the surplus earnings of the bank and that that holding company is now holding 70 per cent of the stock of the bank. Would you think that was good policy for a holding company, affiliated with and owned by the same stockholders, to carry on?

Mr. OTTLEY. No, sir.

I might say, roughly speaking, that the First National Bank stock is owned by around 1,250 shareholders, and if the First National Co. has any of the stock of the First National Bank, it would be merely a nominal amount.

The CHAIRMAN. In connection with the securities which your securities company handles, either by underwriting them or otherwise, does the central control use the units of the group as a market? In other words, do you originate securities and sell them to your banks, as a general thing?

Mr. Ottley. Those banks, if you would like to know exactly what our relationship is—

The CHAIRMAN. Yes.

Mr. Ottley. The First National Co. has an office in Savannah for the distribution of securities. Our affiliated organization there has a bond department of its own, so that the operations, while friendly, are entirely separate, and that bank, having a bond department, has certain participations from time to time offered to them on their own account.

The First National Co. also has an office at Macon, and they operate

their own bond department.

t

Ó

H

ø

t

At Augusta the First National Co. has an office, and in view of the fact that they are housed in the affiliated bank there, and furnished certain clerical help and light, and so forth, a percentage of the Profits made through that office is given to them, and they assume no responsibility whatever. They have no money invested, and if there should be any loss, it is a loss of the First National Co.

Then there is one at Columbus on the same basis.

At Rome the First National Co. has no office, and the First National

Bank at Rome has no bond department.

The Chairman. Is it your observation that you are distributing a larger amount of investment securities in that area than you did previously through the individual banks? In other words, has this evolution of this group tended to increase or decrease your sales of investment securities?

Mr. Ottley. Mr. Chairman, of course you know the trend of the security business at the present time. I would answer your question by saying that I think the evolution of these institutions would give the company a greater prestige in those several localities than they had theretofore enjoyed, and in the end that it would have a tendency to increase the distribution.

The CHAIRMAN. Then there is something to the thought that in the building up of institutions like this within a trade area there is apt to be a preemption of that territory in the distribution of securi-

ties?

Mr. Ottley. Yes, sir.

The Chairman. I can presume that you look forward to the sale of the major portion of the investment securities in that territory?

Mr. Ottley. Not necessarily so. I mean that I think it has a potential value, but the competition for the sale of securities is very strong, due to the fact, as I stated some time in this hearing, that the principal distributors of securities, mainly the affiliated companies in the case of these larger banks in New York, Boston, and Chicago, maintain offices in Atlanta, and some of them have a larger number of men traveling out from Atlanta.

The CHAIRMAN. But this kind of an association strengthens your

opportunity to compete with that very class of business?

Mr. Ottley. Yes. I can tell you one other thing, that along with that, in this group, we have an institution, the Atlanta Savings Bank, which is purely a real-estate mortgage institution, and they lend money on their own account and they also represent clients, both individually, and as correspondents of insurance companies, and we are gradually working out a basis to offer those facilities to the people in these communities.

The Chairman. I assume that you would raise no objection to throwing open for examination by the comptroller or the State banking department these affiliated companies of yours, would you?

Mr. OTTLEY. No, sir.

The CHAIRMAN. On the contrary, you would advise it?

Mr. OTTLEY. Yes, sir; advise it and welcome it.

The CHAIRMAN. I thought you would.

I think that is about all that I can think of this afternoon.

Have you any further statement you would like to make to the committee that would be helpful to us? After all, we are studying this subject.

Mr. Ottley. Well, I made a suggestion about the Federal reserve system, and you brought out your suggestion about immediate

legislation.

The Chairman. I am drafting that bill in proper form, and if it is completed before the House adjourns to-day, it will be introduced. If not, it will be introduced to-morrow morning.

Mr. Ottley. I heartily commend that.

I think your committee is to be very highly commended for the patience and all that they are putting in on this, because it is a very important subject.

The Chairman. We are very grateful to you for coming up here, and if there is any other thought that comes to you, we will be glad to have you send it along to us.

After all, we are trying to do a constructive job here; we are trying to get the facts and to find out just what is going on as well as what legislation is necessary to follow as a matter of course. It is a tremendous undertaking to try to concentrate into these hearings all of the information that we ought to have, and the questions that have been asked of you around the table have been asked principally for the purpose of eliciting information, for it does not always mean that when I ask a question that I believe a certain thing; it merely means that I am trying, and that is true of the other members of the committee, to bring out information, and you have been very frank with the committee, as I knew you would be and as you are always.

So we are deeply appreciative, and I am sure that I express the sentiment of all of the members of the committee to you for having taken the time to come up here and appear before us.

Mr. Ottley. I am very glad that I came, and I would like to thank you and the other members of your committee for the very great consideration and courtesy which I consider they have all shown me.

(Whereupon, at 4 o'clock p. m., the committee adjourned until Thursday, May 1, 1930, at 10.30 o'clock a. m.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, MAY 6, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met in the committee room, Capitol, at 10.50 o'clock

8. m., Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. Gentlemen of the committee, we have before us Mr. James A. Bacigalupi, president of the Transamerica Corporation. Mr. Bacigalupi. No, sir; I have not that honor. The Chairman. What is your title?

Mr. Bacigalupi. I am vice chairman of the advisory committee of the Transamerica Corporation.

The CHAIRMAN. If you will take a seat opposite the reporter there, we will be glad to hear from you. I presume you would like to proceed with your statement without interruption until you have completed it?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. All right; you may proceed.

STATEMENT OF JAMES A. BACIGALUPI, VICE CHAIRMAN OF ADVISORY COMMITTEE, TRANSAMERICA CORPORATION

Mr. Bacigalupi, Mr. Chairman and members of the Committee on Banking and Currency of the House of Representatives, at the very Outset, we of the so-called Transamerica group wish to assure you of our readiness and eagerness to fully cooperate with your committee in the matter of this important and timely investigation and study of branch and group or chain banking in the United States, by placing before you whatever experience or information we may have gained during the past quarter of a century in this type of banking.

In our endeavor to lay a proper foundation for an intelligent inquiry into our experience and to convey an adequate idea of the organization we here represent, we have deemed it advisable to prepare a formal introductory statement that might prove to be as explanatory of our many and varied activities as might be consistent with conciseness

and comprehensiveness.

As an aid to you in properly visualizing the present status of our organization, we have prepared two wall charts and a number of smaller photostatic copies of them so that each committee member may be possessed of a set and thus more easily follow the origin and the development of our many institutions over the past 25

Our activities begin with the establishment of the Bank of Italy and, inasmuch as its origin, policies, trials, and triumphs constitute the foundation and furnish the explanation of the present enlarged structure of our interests, we ask your indulgence while we dwell a little upon its humble beginning and phenomenal progress.

The Bank of Italy was incorporated under the laws of California, August 10, 1904, by a small group of San Francisco men, mainly

Italians and Americans of Italian origin.

It frequently has been said that an institution is but the lengthened shadow of a man. Certainly any consideration of the ideals, the purposes, the growth, and progress of the Bank of Italy, unmistakably reflects the peerless ability and forceful individualism of its founder—a man who has been aptly referred to as "stout-hearted, long-headed, keen-visioned, enthusiastic American and Californian—A. P. Giannini."

In the fall of 1904, with scarcely a ripple to mark its appearance in the financial pool of western America, the Bank of Italy, with the modest capital investment of \$150,000, was launched in the great

city by the Golden Gate.

Mr. Giannini, excepting for a short previous association as a director of the Columbus Savings and Loan Society, a small bank in San Francisco which catered largely to an Italian and Italian-American clientile, was not an experienced banker when the Bank of Italy was organized. He was then about 34 years of age and had but recently retired from the firm of L. Scatena & Co., wholesale commission dealers in California fruits and other food products, which he had helped to build up to become the leading house of its kind in that State. He was not a rich man, neither were the other men who joined him in the organization of the Bank of Italy.

During his busy and successful years in the commission business he had formed a wide acquaintance with men of all races and stations as well as with agricultural, horticultural, and general business and banking conditions; he was quick to sense the need of rural California for a more democratic and helpful banking service, and he dreamed his dream of a state-wide banking system that would in due course bring to even the remotest corners of his native State the boon of a more resourceful and adequate metropolitan bank. There was nothing original in this thought, because San Francisco even then possessed several successful branches of Canadian branch banks and his reading and reasoning had convinced him that there must have been sound merit in the fact that practically all other civilized nations, much older in banking experience than our own, after trying out every form and type of banking system, had uniformly adopted nation-wide branch banking. He must be given full credit, however, for having realized at the very start that the temperament of the American people would not tolerate a condition of absentee "banklordism." This obstacle he foresaw could easily be overcome if the people of each locality entered were given a local management of their acquaintance and confidence, a voice in the conduct of the local branch and the opportunity of acquiring a financial interest in the parent institution itself.

Having as a result of the skillful guidance and dynamic energy of its founder most successfully survived the terrific quake and conflagration which laid San Francisco in ruins in 1906, when the bank was but a little more than a year old, and having creditably come through the national financial panic of 1907 with the distinction of having been the only bank in California which paid exclusively in gold coin throughout that distressful period, the Bank of Italy in 1909 first availed itself of the permissive extra-city branch banking statute of California by establishing its first out-of-town office. This branch represented the absorption of the business and assets of the Commercial Savings Bank of San Jose, situated 50 miles south of San Francisco.

The method used in the establishment of the San Jose branch has been consistently employed in every other community entered, with but one exception, namely, Sacramento, the State capital, where it was found impossible to purchase a bank and, as a result of popular petition, led by the chamber of commerce of that city, the then superintendent of banks granted the Bank of Italy a permit to open

a brand new office, a so-called de novo branch.

With the single exception of Sacramento then, the uniform policy of the Bank of Italy has been to enter outside communities only through the acquisition of an established local bank; to convert it into a branch office; to retain its management and directorate, thenceforth acting in the capacity of an advisory board, exercising a similar supervision over the loans and business of the branch as it had theretofore when acting as a board of directors, excepting that its decisions became recommendations rather than edicts; and, while not obligatory, to interest as many of the old stockholders as possible and, in addition, others of the community, in Bank of Italy stock.

When San Jose was entered, it was reasoned that the prudent way to enter an outside community was to purchase an established bank, because otherwise it could only be hoped, at the outset, to attract a few disgruntled depositors and before sufficient good business could be worked into, principally that which theretofore could find no accommodation there on account of the smaller capital and limited resources of the local banks, it would be years. Then, again, the bank would inevitably be confronted with the necessity of building a brand new local staff for the branch office—not the easiest thing in

modern banking.

Subsequent experience of the bank of Italy has amply demonstrated the soundness of this reasoning. By purchasing a good bank—and, almost without exception, such have been the banks which it has purchased—it acquired a staff, an advisory board, and local stockholders who were interested in the locality and familiar with local people, values, and conditions. If the staff was found deficient, in any given case, it was always a simple matter to straighten it where needed. It started at once with an established and, in most cases, a paying business. It was able, because of the elimination of the capital of the acquired bank and because also of its method of operation, the guidance of experts at headquarters, wholesale purchases, etc., to cut down the overhead prevailing at the time of the take-over, and because of the bank's greater resources it was immediately able to bid for and to receive a great deal of local business which theretofore had to look to larger centers for accommodation.

The general policies which have uniformly characterized and distinguished the Bank of Italy from its very foundation may be briefly

stated as follows:

It has always been a truly democratic institution, a bank owned by the people, conducted by men and women chosen from among the rank and the file of the people and dedicated to the uniformly courteous

and considerate service of all deserving people, regardless of social standing or the size or importance of their business or patronage. All of its officers and employees, from the president down, have been stationed "out in the open" and are readily accessible during business hours either by telephone or personal call, without the necessity of breaking through a cordon of uniformed guards or officious underlings to reach them. One of its inflexible rules has been to rigidly require in its service a full 100 per cent of the time, thought and energy of its officers and employees, without distinction. No entangling or conflicting outside interests on the part of its officers and employees has ever been countenanced. Demonstrated merit and not seniority or "pull" has ever determined promotions within the bank. Total abstinence in politics and all controversial questions, that do not directly affect the weal of the bank, has always been the rule. It has always been operated for the benefit of its customers and stockholders and not for the personal prestige or enrichment of its officers. It has been progressive and dedicated to the demonstration of the correctness and superiority of the branch-banking system as pursued by it. It has never willingly permitted precedent to shape its course. when once it has been convinced that a different method was equally lawful and sounder and safer in principle and effect. And finally, while "exceptional service" has always been its slogan, "Safety above every other consideration" has been its constant admonition and inviolable requirement.

The growth of the Bank of Italy and the expansion of its branch system was gradual and extremely conservative in the first years of its development. It was the pioneer in state-wide branch banking in the United States and as such, without precedent or personal experience to guide it, deemed it prudent to "make haste slowly" and to build carefully and soundly. Up to the beginning of 1919, its record of branch establishments was as follows: One in 1909, one in 1910, one in 1912, two in 1913, one in 1915, five in 1916, seven in

1917 and five in 1918.

The only parts of the bank act of the State of California effective July 1, 1909, under which authority the Bank of Italy developed its branch system, which gives the right to every State bank to establish branch offices anywhere in the State upon obtaining the required permission of the superintendent of banks, are as follows:

Sec. 127. No bank shall transact any business in this State without the written approval of the superintendent of banks * * *.

SEC. 9. No bank in this State, or any officer or director thereof, shall hereafter open or keep an office other than its principal place of business, without first having obtained the written approval of the superintendent of banks to the opening of such branch office, which written approval may be given or withheld in his discretion, and shall not be given by him until he has ascertained to his satisfaction that the public convenience and advantage will be promoted by the opening of such a branch office

These provisions as originally enacted remain unchanged.

It will be readily appreciated that so brief though sweeping a statute practically vests the superintendent of banks with almost absolute and arbitrary power to grant or withhold permission for the establishment of a branch. In other words, all depends, in any given case, upon whether or not he is satisfied "that the public convenience and advantage will be promoted by the opening of such branch office." With such a law and with little or no precedent in this country to

serve as a guide, coupled with the fact that it was a comparatively new and unimportant factor in the financial field, the earlier branch banking years of the Bank of Italy were replete with interesintg, not to say difficult, situations. At first its competitors gave it little, if any, serious thought. It was pitied or mildly ridiculed for its foolhardiness by the old line or othordox bankers, in whose eyes it was but a "fool rushing in where angels fear to tread." Free from outside pressure, the then superintendent of banks administered the law, as he found it, to the best of his ability, and the bank enjoyed the full and free opportunity of blazing its novel though lawful trail in strict accordance with its bent and business judgment. About 1914, however, some of the influential bankers of the State began to notice with manifest uneasiness the rapid growth of the Bank of Italy and suddenly, one by one, all of the objections, which subsequently became stock phrases in the mouths of opponents to the system, began to be aired. A few of these objections were: That it was monopolistic; that it was a means of getting the money from the rural areas to be fed out to speculators in the large cities; that being spread out it could not be properly examined; that it was more vulnerable to attack; that it was in its very nature cold-blooded; that it functioned pursuant to the dictates of one man or, at best, of a small group of men, in a central and far removed location, almost wholly lacking in knoweldge of and sympathy with outside people and industries, etc. By this time, however, the bank was able to demonstrate by its actual experience and performance that these objections were imaginary and not real. Needless to add, all examinations of the bank were most searching and complete, and because of this unfailing scrutiny-which frequently was conducted by prejudiced or antagonistic officials—every effort was constantly exerted from within to keep the bank exceptionally strong, clean, and

Briefly told, the method used by the Bank of Italy in acquiring the stock of a bank prior to the early part of 1917 was as follows: California law forbade and still forbids a bank to purchase the stock of another bank. Section 31 of the bank act provides only for the Purchase of the assets of another bank, while section 31a provides for consolidation. The Bank of Italy's practice was to follow section 31, as it never made it a rule to compel the exchange of stock. selling stockholders were always left free to take all cash or part Bank of Italy stock and part cash in exchange. As a practical thing, therefore, it was never practicable to negotiate for the purchase of the assets of a bank and arrange for the conversion of that bank's business into a branch of the Bank of Italy until after a satisfactory sale of the stock had been consummated. The selling stockholder naturally wanted his cash or Bank of Italy stock in hand before he consented to a transfer of the assets to another bank. As a consequence, one or several of the principal officers of the Bank of Italy gave his or their personal notes, secured by the shares of the bank being acquired, to the Crocker National Bank; paid the selling stockholders; perfected the procedure under section 31 of the bank act and, after consolidation, liquidated the shell of the selling banking corporation, in which was always left in cash and such assets as could not lawfully be taken over by the purchasing bank an amount equal to the capital, surplus, and profits of the selling bank plus such

bonus as had been paid, if any, which was just sufficient to pay off the Crocker National Bank. In other words, a few men pledged their personal credit and the stock thus acquired for the benefit of all of the stockholders of the Bank of Italy without charging them anything for whatever personal risk might have been involved in the transaction. In the beginning this procedure, when the number of banks purchased was small, was not burdensome or inconvenient,

but later the hardship became heavy and irksome.

This fact, in addition to several other inconveniences encountered in operation, because of the restriction of the bank act-such as being forced to write off any and all real estate which had been carried on the bank's books for a period of five years, irrespective of its real value, and thereafter likely to become nobody's business in a profitand-loss account, and so forth, it was decided to incorporate a general corporation under California laws, the beneficial interest in the stock of which corporation would be entirely owned by the Bank of Italy stockholders in exactly the same proportion as their Bank of Italy holdings. In this way this auxiliary could do many legitimate things which the bank could not do, and whatever profit or loss ensued would be enjoyed or borne by the identical stockholders in the exact proportion of their holdings. This auxiliary company was also intended to keep the bank cleaner. Whenever an asset of the bank became doubtful or an apparent loss it could be transferred for a nominal consideration to this auxiliary, where it would become some one's special duty to look after it, and thus the probability of its collection or realization be materially improved. This corporation could also engage in one or another of the several legitimate businesses which are incidental to an established banking business. It could, for illustration, act as an insurance broker or agent, and in this way take full advantage of placing the bank's own large lines of insurance and such other insurance business as naturally come to a bank through its mortgage and kindred departments; the commissions accruing therefrom going to all of the stockholders, instead of to the president or cashier personally, as so frequently happens, even to-day, particularly in the smaller banks of the country. This company, first known as Stockholders Auxiliary Corporation, was incorporated under the laws of the State of California, June 20, 1917, with an original capital of \$500,000. Subsequent to said date Stockholders Auxiliary Corporation became the purchaser of the banks intended to be converted into the Bank of Italy system.

Pursuant to its progressive policy, particularly in matters calculated to better serve the agricultural needs of the people, the California Joint-Stock Land Bank was incorporated by the Bank of Italy in 1919 under the provisions of the Federal farm loan act, with a capital of \$916,000. This was the first joint-stock land bank to be incorporated in the West and it has ever since operated most successfully and helpfully in the States of California and Oregon. In fact, and without any vainglory, I might add that it has functioned as one of the most successful joint-stock land banks in the United States. Its

total outstanding loans to-day are \$14,511,167.92.

The year 1919 also marked another significant event in the life of the Bank of Italy, for it was in that year that it again demonstrated its progressive spirit by being the first California State bank to join the Federal reserve system. It joined primarily because it believed it to be its patriotic duty to do so, and also because it desired to expose itself to the scrutiny and supervision of still another governmental

authority.

In 1921, the Bank of Italy moved its head office from Clay and Montgomery Streets to No. 1 Powell Street, an entirely different section of San Francisco, just one block removed from its long established and flourishing branch at Market and Mason Streets. It was considered ill-advised to operate two important offices of the same bank within one block of each other, and yet the good will which has been built up in that location was far too valuable to be abandoned. As a result of these considerations, a new State bank was organized by Stockholders Auxiliary Corporation under the name of Liberty Bank, and its headquarters was established in the vacated banking room formerly occupied by the Market and Mason office of the Bank of Italy.

In 1923 Stockholders Auxiliary Corporation acquired the Com-

mercial National Bank of Los Angeles.

In 1924 Americommercial Corporation was formed by Stockholders Auxiliary Corporation and certain stockholders of the Bank of America of Los Angeles to serve as a holding company to control the Bank of America of Los Angeles and the Liberty Bank of San Francisco.

In due course the entire ownership of Americommercial Corporation passed to Stockholders Auxiliary Corporation. Later in 1924, Americommercial Corporation also acquired direct control of the Commercial National Bank of Los Angeles.

The Liberty Bank of America was formed January, 1927, by a merger of the Liberty Bank of San Francisco and the Bank of America

of Los Angeles.

In March, 1927, the Bank of Italy absorbed the Liberty Bank of America and the Commercial National Bank of Los Angeles and within the same month converted to a national charter. This absorption represented an increase, overnight and without a hitch, of \$172,260,087.25 in the deposits of the Bank of Italy and the addition of 178 branches throughout California to the 98 offices theretofore conducted by it. Mention of this is made to direct special attention to the splendid organization of the Bank of Italy which thus proved its ability to perform so huge a task with such ease, speed, and accuracy.

The name of Stockholders Auxiliary Corporation was changed to

National Bankitaly Co. early in 1927.

Soon after the nationalization of the Bank of Italy it was deemed desirable by National Bankitaly Co. to organize a mortgage company and an agricultural credit corporation; the former to further serve borrowers, seeking loans upon the security of mortgages on real estate situated in towns and cities of Californie having a population in excess of 10,000, whose legitimate needs might be greater than could be met by a national bank; and the latter to render a more adequate service to California farmers. Accordingly Bankitaly Mortgage Co. and Bankitaly Agricultural Corporation were incorporated under the laws of California, the former in 1927 and the latter in 1928.

Believing that you may be interested in the methods by which control of the Bank of Italy is maintained, we respectfully submit

the following summary:

At the head, as is required by law, is the board of directors, the members of which are to a very large degree senior officers of the institution and actually engage in administrative and executive duties. Apart from the board itself, we have an advisory committee, acting as the name implies, in an advisory capacity. All of the members of the advisory committee are directors of the bank, but not active officers.

Under the board of directors, the organization has been separated

for all operating purposes into two large divisions.

The Los Angeles division embraces all branches situated south of the northern boundary line of Santa Barbara County, and the San Francisco division takes in all branches lying north of that line. Each of said divisions is under the immediate charge of a board of management, made up of all senior officers and heads of important general departments, resident within the division. The boards of management meet weekly, and oftener if necessary, and have original and direct jurisdiction in all matters of operation and minor investments

within their respective divisions.

In addition to these boards of management, there has been created a regional board in Los Angeles, the membership of which has been recruited from among the advisory boards of the branches in the Los Angeles division. The function of this regional board is to keep in touch with the conduct and progress of the bank's affairs within the division, to take such action with reference to the promotion of the bank's business in the Los Angeles division and to make such recommendations to the general executive committee and the board of directors as may from time to time be deemed proper for the best interests of the bank in southern California.

Boards exercising similar functions within their respective counties have been set up in Oakland and San Diego. The one in Oakland is known as the East Bay district board, and the one in San Diego

County is known as the San Diego district board.

The general executive committee is made up of the members of both boards of management who are also directors of the bank. The general executive committee meets at least once a month in San Francisco and under the board of directors is the general managing

body of the bank.

In order to more closely knit the branches to head office it has been thought expedient to further subdivide the system into districts and to place each under the care of a seasoned officer, generally a vice president, resident within the district, who acts in the capacity of a supervisor. These supervisors are charged with the duty of regularly visiting the branches within their respective districts; to keep in close touch with these branches; to counsel with them and to make sure that the bank's policies are being adhered to; to attend all advisory board meetings within the district and to act as mediators between head office and the branches intrusted to their supervision.

Each of the principal functions of the bank is managed by a special committee, the composition of which includes those who are engaged in the particular operation with which the committee is concerned. The chairman of the various committees are members of the executive committee of the bank, and since all members of the executive committee are also members of the board of directors, each of the special committees is presided over by a director. The committees include: General finance, business extension, purchasing, building, bank properties, personnel, agricultural credits, advertising, and

suggestion.

In addition to these special committees, there has been instituted an auditing committee of the board of directors itself. The personnel of the auditing committee is drawn from the members of the board who do not have active duties with the bank. They are required to hold monthly meetings and to carry on a constant and independent audit of the institution. The work they initiate is dictated by their own members, and the reports which they prepare are made to the board of directors as a whole.

The individual operating and administrative departments are, of course, to a large extent identical with those found in any large institution. Each has its appropriate representation in the special and standing committees. This method of coordination insures a more perfect understanding of general policies and at the same time permits adequate opportunity for a thorough discussion of important subjects whose ramifications affect more than one department.

As has already been pointed out, every branch outside of San Francisco has a local advisory board. The advisory boards meet at stated intervals, consider loan applications, lend their knowledge of local conditions to the solution of problems that arise in the administration of branch affairs, and constitute a group to which the manager may refer for guidance in any specific action. The important conscientious service rendered by the bank's approximately 1,700 advisory board members is regarded as a most valuable asset.

The actual control of the institution is maintained by properly synchronizing the functions of each of these interrelated bodies. The problem is one to which a great deal of attention has been given

during the bank's quarter of a century of operation.

The bank's policy has been to allow as much latitude as possible to the several branches in the matter of their operation. Different communities have different problems and the bank must take into consideration those identifying characters. In consequence each branch makes up its own daily financial statement on standard forms, in so far as individual accounts are concerned. The bank does not maintain a supergeneral ledger at head office, but simply consolidates the daily financial statements, adding to them such items as capital, investments, etc., not carried by the branches. This reduces to a minimum the clerical effort required to keep the records complete, and at the same time it gives to each branch an identity that could be secured in no other way.

In addition to the records and books kept at the 292 branches, the bank has a set of books known as administration, where are carried the capital accounts referred to, and with which the branch statements are consolidated. No portion of the capital is assigned to individual branches, but each one has the benefit of the great lending power of the entire sum, as well as the added security which this

affords depositors.

Loans are made direct by the branches, except in instances where the amount is unusually large or the branch manager wishes to secure the advice of the head office credit department. The customers of the branch deal with the local officers, and only in extraordinary circumstances are they brought into contact with the head office departments. Each branch has a general lending limit fixed by the bank's finance committee. Within this limit each branch may lend and report without previous consultation of head office. These limits vary with the proven credit capacity of the various branchloaning officers. Experience has demonstrated that the limits thus fixed are usually sufficient to take immediate care of the ordinary requirements of the branches. In other cases lines are established for the larger borrowing accounts, in advance of the time when these firms or individuals require the accommodation for their seasonable operations. As a matter of fact, after a branch has been in operation for a year or more, experience shows that easily 80 per cent of the annual commercial credits extended by the branches are renewals under established lines. All applications for unfixed lines of credit in excess of the lending limit of a given branch are promptly considered and acted upon by the proper central credit department and proper advice and instructions issued. The branch makes daily reports of all loans, and as these are received the credit department reviews them. Pertinent comments or suggestions are then forwarded to the branch manager, so that the loan may be properly followed and collection insured at The broad fundamental policies respecting credits are outlined by the general executive committee and interpretation and application is then made by the credit department.

This system permits the smallest branch in the organization to secure the benefits of the best obtainable advice and counsel on every loan that is made, and it also insures uniformity of policy, based on a thorough knowledge of conditions throughout the entire organiza-

tion and the country as well.

As an auxiliary to the credit department, and yet distinctly an entity in itself, there is a central real-estate loan department, synchronizing all of the loan operations in urban and rural property, and providing a uniform system of appraisal throughout the State.

Under the direction of the auditing committee a constant check and examination of the business at the various branches is maintained. A trained staff of inspectors is engaged in the work, appearing without advance notice at the office to be examined, and spending as much time as is necessary to see that the task is completed.

Not only do they follow the usual channels of examination pursued by State or Federal authorities, but also check into the observance of operating practices required by the bank's rules and regulations. The report of the examination, with any and all irregularities noted, is filed with the auditing committee, and subsequently the items that have to do with other departments of the bank are referred to those who are directly concerned. Upon their next visit to the branch the inspectors verify the fact that matters have been corrected.

Responsibility for the operation of the bank rests with the cashier's department, subordinate to which are the comptroller's and accounting departments. All operating instructions for the branches are cleared through the cashier in the process of transmission. The introduction of new standards of practice and preparation of improved

forms find their way into general use by appropriate action of the cashier.

It is this adherence to definitely established procedure in all matters, large or small, that makes possible the absolute control of the institution. Each department has a fixed place in the scheme of organization, and the necessary machinery for coordinated action has been supplied. The actual control is simple because of the care that has been exercised in laying the foundation.

While we do not believe that we have achieved perfection in the practices we have adopted, at the same time we know that they are fundamentally sound, and by following the rules that have been worked out we have been and are able to successfully direct the affairs

of the large institutions.

The Bank of Italy conducts through appropriate and well-organized departments all of the financial activities and functions which are now performed, almost without exception, by all large modern banks in the United States, viz: Commercial, savings, safe deposit, securities, international or foreign trade and exchange, trust and travel departments. In addition to these departments, the Bank of Italy has since 1911 devoted much time and expended considerable money in the encouragement of thrift among the school children of California. Through its school savings department, the bank is to-day in contact with 1,671 schools throughout the State having an attendance of

285,000 children.

These schools are visited every week without fail on a certain day and hour by 20 young bank employees, who travel approximately 8,000 miles in order to accomplish the task of collecting the amounts which the participating pupils desire to save. Even 1 cent is accepted as a deposit from individual pupils, who are shown just as much consideration by the visiting bank men as are any other clients of the bank. Two hundred and twelve thousand children throughout California from the Oregon line down to the Mexican border now have on deposit in the school savings department of the Bank of Italy nearly \$3,000,000, an average of about \$15 each. In the accumulation of this vast sum, who will question the incalculable importance of the lessons incidental to thrift that have been learned by children, such as self-denial, patience, industry, and independence, all of which insure a better appreciation of the nobler ends of life and of the rights of others.

The Bank of Italy, because of its branches, leads the world in this very progressive economic movement, which has always meant more to the child than to any bank that has ever undertaken it. Then, too, in helping children to save regularly, in a systematic manner, a bank unquestionably assists all other depositaries by creating a demand for banks. And, in the last analysis, by teaching children to save during their school years, a bank gives aid to the family—the very foundation of society—whose youthful members are encour-

aged to persevere in a course of providential living.

Your attention is now directed to a number of exhibits which we have caused to be prepared for your committee and which we believe will prove both instructive and interesting.

The CHAIRMAN. Before you start on Exhibit A, I want to insert, at this point, without objection, the two charts which you have been referring to. We will designate them as "Charts of organization, Nos. 1 and 2."

Mr. Bacigalupi. No. 1 will be headed the "Bank of Italy" on the upper left-hand corner, and No. 2 will be the Transamerica chart.

(The charts referred to are printed below, as follows:) The CHAIRMAN. You are about to insert other exhibits?

Mr. Bacigalupi. Yes, sir; they are prepared to be left with the secretary of your committee.

The CHAIRMAN. They should also be inserted in this record?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. In the order in which they appear?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. I understand that one of them is confidential? Mr. BACIGALUPI. There is one that is confidential. It contains the

names of certain borrowers.

The CHAIRMAN. Without objection, then, all of these exhibits which you are referring to as part of your testimony, with the exception of those which you will designate as confidential, will be placed in the record in the order in which they appear in your statement.

Mr. Bacigalupi. I might state in reference to the one that is confidential, it might be well to file it with you to be kept privately,

so that the members of the committee may refer to it.

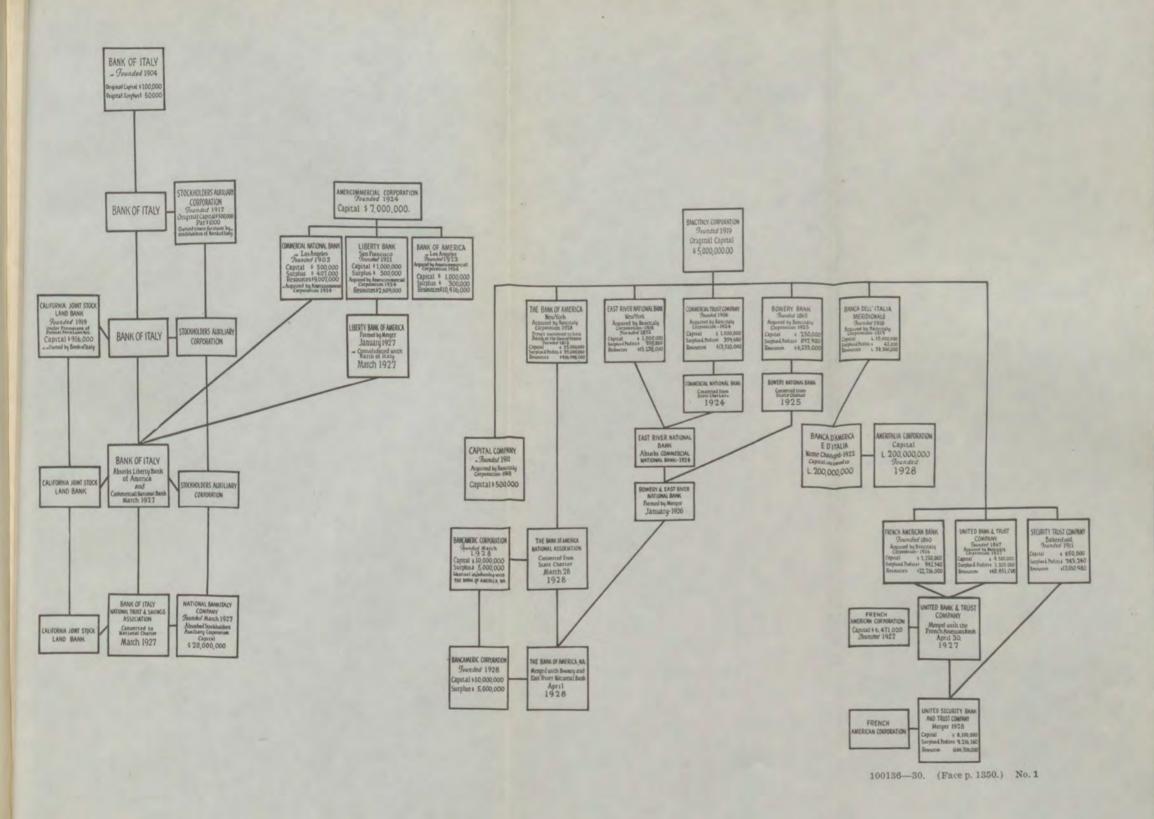

The CHAIRMAN. It will remain available in the hands of the secretary of the committee for the members that want to see it.

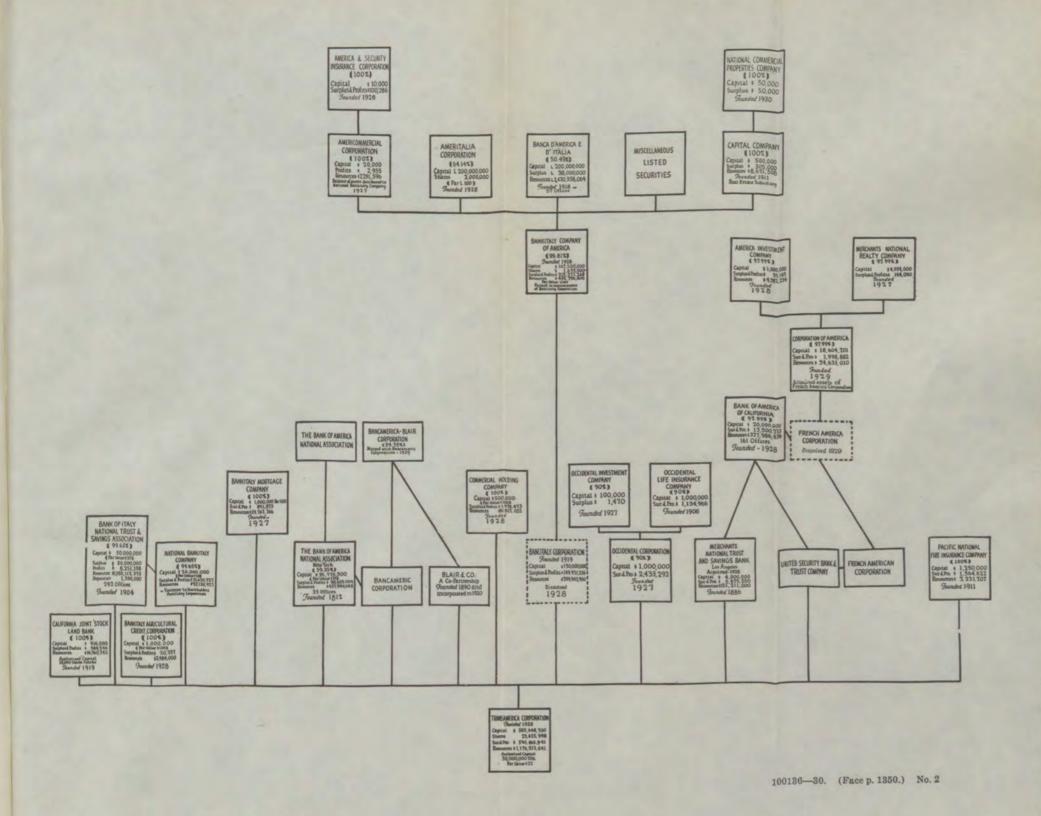

Mr. Bacigalupi. Exhibit A shows the care which has been consistently exercised by the management to keep the capital structure of the bank in proper relationship to the constantly increasing resources of the institution. On December 31, 1929, the capital, surplus and profits of the bank were \$108,251,158.52, while that of its affiliate, National Bankitaly Co. (owned share for share by the same stockholders and evidenced by the same certificate) was \$91,620,-927—a combined working capital of approximately \$200,000,000. Total resources of the bank at the end of the year were \$1,055,113,-373.09. This exhibit further discloses every capital increase and its allocation and shows the capital, surplus, and profits of all absorbed banks to have totaled \$56,066,000.

Mr. Brand. Are those exhibits in this pamphlet [exhibiting]?

Mr. BACIGALUPI. No, sir; this is Exhibit A [exhibiting] which gives chronologically the date of the capital issue, how it was distributed, as to capital and surplus, whether the bank or auxiliary and also gives here a tabulation of the increase in resources from year to year of the bank and also gives the name of every bank acquired together with the capital of that bank at the time of its acquisition.

(Exhibit A referred to is here printed in full, as follows:)

7 Bank of America, 1-40 division.

BRANCH, CHAIN,

AND GROUP BANKING

Mr. Bacigalupi. Exhibit B shows the steady phenomenal growth of the bank's deposits. At the beginning of this year total deposits were \$893,892,732.87, and the total number of accounts exceeded 1,500,000—believed to be the largest number of depositors enjoyed by any other bank in the country.

(Exhibit B referred to is here printed in full, as follows:)

More than 1,500,000 depositors.

Mr. Bacigalupi. Exhibit C shows the record of growth of the bank's normal deposits, both natural and by absorption. Also a chart which discloses the very interesting fact that \$381,462,000, about one-half of the total normal deposits, have been accumulated through natural growth, while \$382,783,000 are due to absorptions, while only 50 branches were established de novo and 242 were established through the purchase of banks.

This I think will prove an interesting chart. We have very often been questioned as to whether our institution is the representation of putting together of a lot of resources that we have bought here and there-just how much of the growth is due to acquisition and how much was due to natural growth. This chart shows, from year to year, for instance, the growth by the two processes. The green, for instance, on this chart-

The Chairman. We will not be able to show those in colors in the printed hearings. I mention that here so those who read the record may understand.

Mr. Bacigalupi. They may show that in black and white.

Mr. Fort. Or by heavy and thin lines.
The Chairman. You might designate for the record, how they should be shown, for the benefit of the printer, so that the reader of the record will know just what you are talking about:

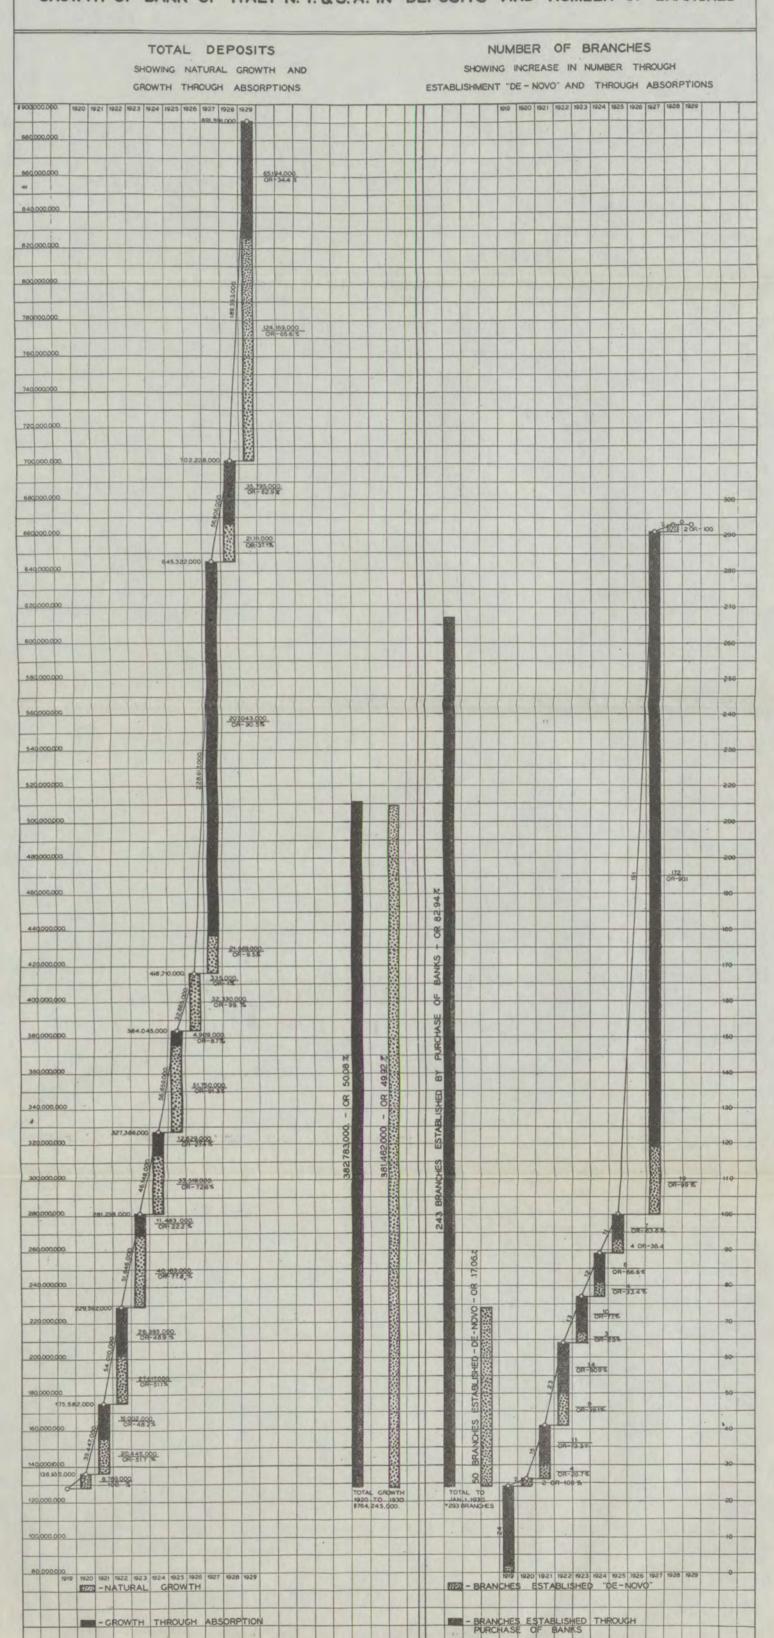

Mr. Bacigalupi. I suggest that broken and heavy lines be used. This chart shows the normal deposits of the bank, the green repre-

senting natural growth and the red the absorptions.

Mr. Fenn. Those colors might be represented by solid black lines and broken lines, and by broken lines, I mean a dash and then a

The Chairman. In the correction of the galley proof, I suggest that some notation be made so as to effect the distinction.

GROWTH OF BANK OF ITALY N. T. & S. A. IN DEPOSITS AND NUMBER OF BRANCHES

Mr. BACIGALUPI. You will notice how these red and green lines

compare as to growth.

The de novo, or brand new branches established out of San Francisco would be easily less than one-half a dozen. Most of these de novo branches were new branches established in the cities of San Francisco and Los Angeles, cities in which we were already operating, but in which we extended additional windows in the business areas as they were organized. You will note, however, even charging ourselves with every de novo branch, the differentiation between the branches started brand new and those that were established only as the result of the acquisition of established institutions in the State, and how they compare.

(Exhibit C referred to is here printed in full, as follows:)

Mr. Bacigalupi. Exhibit E is a statement which has been set up to show at a glance the bank's liquidity during the past two years. The uniform policy of the Bank of Italy has been not only to maintain a strong ratio of working capital to deposits but in addition to keep its assets more than 50 per cent liquid or in a character readily convertible into cash should occasion require it. You will note from the exhibit, for instance, that on December 31, 1929, total demand deposits were \$308,597,812.95 and time deposits \$582,992,370.03, or total deposits of \$891,590,182.98. Available to readily meet these deposits-without having to call a single loan-there was due from banks \$81,995,019.14: loans eligible and available for rediscount with the Federal reserve bank, \$42,120,006.27 (and in passing it may be of interest to note that the privilege of rediscount has never once been exercised by the Bank of Italy); miscellaneous marketable securities, \$68,644,707.21; exchanges for clearing and other checks in process of collection, \$90,574,597.35; cash on hand \$9,304,797.08; and United States Government bonds, \$168,893,673.43, or a total of liquid assets of \$461,532,800.48, representing 51.77 per cent of total deposits. Considering that almost two-thirds of the bank's total deposits are time, or savings deposits, this percentage is comparatively high.

(Exhibit E referred to is here printed in full, as follows:)

Mr. Bacigalupi. Exhibit F is a tabulation of loans and deposits by communities.

So that the committee members may understand exactly what is the situation at each of the branches in reference to deposits and loans at those branches—

Mr. Fort. Does that show by branches or communities?

Mr. Bacigalupi. This is by communities. I also have it by branches, though.

(Exhibit F referred to is here printed in full, as follows:)

Mr. Bacigalupi. Exhibit G is a compilation which discloses the very interesting fact that in 100 branches of the Bank of Italy over 70 per cent of the local deposits are lent in the local community. In many of these instances more than 100 per cent of the local deposits are lent in the neighborhood. In these 100 branches the deposits total \$279,176,200, and the loans aggregate \$277,177,000. (Exhibit G referred to is here printed in full, as follows:)

EXHIBIT G

Report showing that 100 of our branches have a ratio of 70 per cent or more, loans to deposits:

The ratio of loans to deposits for the entire Bank of Italy system is 6195 per cent.

Mr. Bacigalupi. Exhibit H is an itemized list of loans made by branches in excess of the limits of the predecessor banks. Such loans total \$43,867,229.56. This exhibit we request be treated as confidential, inasmuch as it contains the names of the borrowers and their business should naturally be considered as a private matter.

81

di

It

And this is the exhibit, Mr. Chairman, which we have decided should be filed with you for ready reference by the members of the committee. The exhibit shows the community. It shows the loaning limit of the banks we acquired. It shows the name of the borrower, the purpose for which the loan is made—for instance, cattle, lumber, department stores, and so forth; it shows the amount of the accommodation he is now enjoying from the Bank of Italy and the total for that community of excess loans.

Mr. Fort. Would it not be possible to have that printed in some form with the names left out?

Mr. Bacigalupi. I think so. I think it may be easy to leave the name of the borrower out.

Mr. Fort. And possibly the line of business.

Mr. Bacigalupi. And just show the amount of the loan?

Mr. Fort. The amount would not make any difference if you did not have the name.

Mr. BACIGALUPI. That is true.

Mr. Forr. It might be an interesting exhibit not only to this committee, but to the great number of bankers and others who are studying this proposition.

Mr. Strong. Suppose you leave out just such information as will prevent disclosing the borrower and put the rest of the information

into the record?

The Chairman. Might I suggest here that it is going to be a very difficult thing to do that. If you show this by towns, in the hands of some one who wants to gain knowledge in regard to these loans, they could very easily pick out the individuals. It seems to me the only way to do it is to have it printed and circulated privately to the members of the committee.

Mr. Bacigalupi. For the purposes of general enlightenment of

the members of the committee.

Mr. Fenn. Since it is a confidential communication, why not treat

it as a confidential communication?

Mr. Fort. You can take the name of the man, the town and the business out and it will still carry very interesting information; for instance, it might show that in town A a certain individual has a borrowing limit of \$5,100, and so forth.

The mere reference to the contrast between the former borrowing limit and the present loans is a thing that I think is extremely valuable information, without any reference to the town or the

name of the individual.

The CHAIRMAN. Mr. Bacigalupi, would there be any objection if we designate these towns by numbers and designate the lines of business? They could go in just the same; that is, as cattle, lumber, and so forth.

Mr. Bacigalupi. Yes; they would not need know the town. The Chairman. And designate the borrowers by letters?

Mr. BACIGALUPI. Yes.

The CHAIRMAN. There would be no objection to that going into the record?

Mr. Bacigalupi. Not at all, so far as we are concerned.

The Chairman. I am going to suggest, then, that this information should be reported as to the towns by numbers and as to the borrowers by letters, giving the number of accounts in each community and the balance of the information be inserted in the record, so as not to disclose confidential references here as to the names of borrowers. It is very valuable information which should go into these hearings.

(Exhibit H, as redrafted, is here printed in full, as follows:)

Mr. Bacigalupi. Exhibit J is a comparison, over a period of the last five years, of the course of deposits of the Bank of Italy National Trust & Savings Association in various communities as against those of competing banks. This comparison is offered in support of our contention that our competition has not hurt our smaller competitors, and that to the extent of their capacity to serve they have grown proportionately.

I think, gentlemen, that this chart also will prove most interesting. The exhibit has, for instance, Bakersfield First National Bank. Its deposits on December 31, 1924, were \$1,075,000 and its deposits on

December 31, 1929, were \$2,035,000.

The Bank of Italy, National Trust & Savings Association, at the end of December 31, 1924, was \$6,800,000. In December, 1929, they were \$8,500,000. The percentage of increase of the First National of Bakersfield was 89.30 per cent while that of the Bank of Italy was 24.88 per cent. That same ratio does not prevail all the way through, but we have given it for the leading communities and many of the rural communities of California. That is Exhibit J.

Mr. Bacigalupi. Exhibit K and Exhibit L comprise specimens of accounting department reports and report forms in use by the Bank of Italy.

Now, these are technical and I put them in for good measure, feeling that if the committee should desire to press into service some expert who would want to make a summary of the accounting forms and system used, he would find the bulk of that here.

(Exhibits K and L are not printed but held in the committee room

for reference.)

Mr. Bacigalupi. Exhibit M is an authentic copy of the bank's usual semiannual supplemental report of earnings, operating ratios, and so forth, prepared for the information of the bank's chief executives. The particular point which we desire to stress here is that several of the smaller country branches will be noted as operating at a loss and yet no branch of the Bank of Italy has ever been closed because it was not operating at a profit. It has felt that it could very conveniently stand these small losses and offer them as a willing contribution to the residents of these smaller communities, who otherwise would be forced at no little inconvenience to go to neighboring towns for their banking accommodations.

That is this report, gentlemen [exhibit], and this will answer your question, sir [exhibit to Mr. Fort]. Starting with about page 6 or 7, we begin to itemize the various districts and branches. This has to do with the earnings of branches and also covers loans, too, I

think. Exhibit K would give you the deposits.

(Exhibit M is not printed but held in committee room for reference.)

Mr. Bacigalupi. Exhibit N contains two articles on the trust department of a branch bank and should prove of interest. (Exhibit N referred to is here printed in full as follows:)

DEVELOPING AND ADMINISTERING TRUST BUSINESS IN A BRANCH BANKING SYSTEM

(By W. J. Kieferdorf, Vice President, Bank of Italy, National Trust and Savings Association, San Francisco, Calif.)

Branch banking is now regarded as the boldest forward step in American finance, but it would fail of its true destiny if it did not include in every instance a complete program of fiduciary service.

There must be no subordination of fiduciary service to commercial and savings banking, or relegation of it to the background as a secondary activity, declares Mr. Kieferdorf. Every community where a branch is located, not matter how small nor how far-removed from the head office of the bank, should be given the benefits of metropolitan trust service.

Mr. Kieferdorf describes the methods adopted in California by his institution to initiate and develop trust service in the branch banking system of that State-Every trust, whether private or court, is administered at the branch where it originates. The head office, through the district supervisors, maintains control by requiring a system of reports and strict adherence to given policies. The record system used in estate settlement, custodian service, the system of tickler cards, the filing of trust agreements, the supervision of escrows, and the method of reviewing securities and investments are fully explained.

A state-wide educational program was begun by the Bank of Italy nearly 10 years ago, and intensified during the past four years, to the end that all employees, advisory board members and stockholders, individually and collectively, should be made "trust-minded" and "will-conscious." The fine team work which resulted accounts in large measure for the growing number of nominations of the bank under wills—now upwards of 5,000 a year—and for the fact that the trust earnings of some of the smaller branches exceed the earnings of their respective banking departments.

One of the most satisfactory results of the campaign has been the highly satisfactory relations with lawyers. Past antagonisms have been largely dispelled by the frequently reiterated policy of the bank scrupulously to respect the rights of attorneys and their relations with their clients.

The introduction of branch banking into American finance is now almost

The introduction of branch banking into American finance is now almost universally regarded as the boldest, if not, indeed, the greatest forward step in the financial progress of our country.

Those of us who hail from the great West, who have witnessed the birth and growth of this new, yet very old, idea of banking, whose imaginations have been fired by its immense possibilities for public service, recognize that it had its inspiration in the same spirit of daring, the same spirit of self-sacrificing adventure that led our forefathers—the hardy pioneers of California—nearly 100 years ago, to brave the pathless prairies, the trackless deserts and the snow-capped, towering mountains to reach the promised land.

Whether it be confined to the limits of a city and thus becomes merely local in its operations, or whether it be extended to include a group of cities more or less contiguous, or whether, indeed, it embraces under one central management, banking service to the several hundred cities and towns and villages of a great State, complete branch banking, based as it is upon sound and enduring principles, must find a permanent abode in our country. The time is not far distant, if I may hazard a prophecy, when the public of the States that do not now permit branch banking, viewing this safer, more complete, more varied, more democratic, more widely extended metropolitan banking service, will demand appropriate legislation so that this proven type of banking may be permitted in their own States; and then, only, will small communities, now generally denied adequate banking facilities and corporate trust service, enjoy the ministrations of the corporate fiduciary and the trained trust officer, and be able to command for their development the great capital concentrated at the head office of the bank, as and when they require it.

NO BRANCH BANK COMPLETE WITHOUT FIDUCIARY SERVICE

But branch banking would fail of its true destiny, however, if it did not include in every instance in its far-reaching program complete fiduciary service, for it is axiomatic that complete banking service connotes complete fiduciary service.

There must, even in a branch banking system, be no subordinating of fiduciary service to commercial and savings banking; there must be no relegating it to the background as a secondary activity; there must be no dodging the duty of giving every community where a branch is located, no matter how small nor how far removed from the head office of the bank, the benefits of metropolitan trust

The criticism occasionally imputed to branch banking institutions—that the branch managers and perhaps the branch trust officers are mere machines in a fine network of automatons, that their sole guide is the ubiquitous and omniscient rule book, and that they have no independent judgment or discretion—is refuted by the service given, by the appreciation of thousands of satisfied depositors and stockholders, and best of all by the results obtained. No other instrumentality of finance was ever dedicated to a higher ideal of service than branch trust service in a branch banking system.

It is scarcely possible for me, in the limited time at my disposal for the preparation of this paper, to discuss, except superficially, trust service in "city-wide" institutions, or in institutions having branches in a few more or less contiguous

I welcome the suggestion of your program committee that I may limit this discussion to trust service more or less state-wide in scope, and describe the progress that has so far been made and some of the methods adopted in California by the institution that I am honored to represent, in its attempts to initiate and effectuate this service in our great State.

PROGRAM FOR STATE-WIDE SERVICE

At the outset may I say that while highly satisfactory progress, both from the At the outset may I say that while lightly satisfactory progress, such a standpoint of service and of net profits, has been made, particularly during the last few years, in extending trust service to practically every one of the 293 branches in the 166 cities in which the bank operates, much additional work must yet be done to perfect our administrative processes, and much additional personnel must be trained at the head office, where in fact all of our trust men are brained. The results so far obtained encourage us to continue the plan as originally laid out for the development of "State-wide trust service." It would, however, be erroneous to conclude that we have achieved perfection in this wide, new

field of trust endeavor, and that we may now rest on our laurels.

The trust service of our bank in the beginning was confined to the metro-Politan areas of San Francisco and Los Angeles, and localized at the main office in each city. The branches contiguous to the main offices in these two cities were limited in their fiduciary service, with few exceptions, to escrows handled by part-time or full-time escrow men or assistant trust officers, who, though familiar with trust work, referred all prospects for trust business to the main office. To-day, after 10 years of successful experimentation, this is still the case in all of the large cities where more than one branch is located—except that, attached to each main office, are highly-trained trust men who call at the branches regularly to interview the prospects that the branch managers have interested in a trust or a will; the assistant trust officers at the main office, too, are always at the call of the branch managers for special appointments. It is a vital part of our system, and the key note of our success, that there must be intimate and constant cooperation between the branch manager on the one hand who, himself, is well versed in the practical phases of trust management by reason of head office training, and on the other hand the trust officer, who supplies the technical knowledge This combination works perfectly, and is of the greatest importance in the rural districts. Our intracity trust service, therefore, is not, at this stage of our development, a serious problem. The key cities of the trust districts, as explained later, are district centers; the trust officers in charge of the offices in these key cities are district trust supervisors as well.

As new branches were added in the rural communities, new centers of trust activity were established—first in the cities of the Santa Clara Valley and in the great valley of San Joaquin; then in the coast counties and the great valley of the Sacramento River; and finally in the extreme northern and extreme southern sections of the State, all this expansion taking place while the institution was a

State bank.

BANK OF ITALY UNDER NATIONAL CHARTER

With already existing trust offices in many of the most important cities, subordinated in policy and operation to the head office in San Francisco, it was but natural that the district plan of organization for the administration of trusts should be adopted; and, accordingly, the State of California, with respect to Bank of Italy state-wide trust administration and development, was divided into 14 trust districts, covering geographically the entire State, each district, with one exception, having its supervising trust officer and staff.

While this plan was in the making, the bank was nationalized, and we found ourselves for the first time with a definitely fixed number of branches, now numbering, as before stated, 293 in all, offering banking services in 166 cities, with no further increase possible under the limitations imposed by the present national banking laws.

Each district is, in a sense, a complete unit subordinated to the head office only with respect to policy, accounting, supervision of investments, compliance with established procedure, and control of the personnel. The size of any district depends on density of population and geographical location; in several districts there are four or more counties with as many as a dozen banking branches, all within easy reach of the district trust officer's headquarters in a central branch, which is usually located in the most important city or town of the group.

THE IDEAL DISTRICT STAFF

The ideal district staff consists of the district trust officer, assistant trust officer, trust examiner, and the usual clerical and stenographic help. In addition to his local duties, the district trust officer keeps in constant touch with the branches in his jurisdiction, has a definite visiting day for each of them, and endeavors to adhere as closely as possible to a regular schedule of visits so that the branch manager can make definite appointments with the clients of his branch. He is also subject to call at any time if a special emergency or special business requires his presence. His whereabouts is known at all times at the trust headquarters so that he can be reached whenever he is needed. Thoroughly trained at the head office in trust administration, probate matters, living trusts, agencies, escrows, securities management, and tax questions, and having a basic legal, and often a liberal classical, education, possessing sufficient maturity to impress his clientele and justify their confidence, the district trust officer is the keystone of the arch in the finely-knit-together fiduciary structure. Attendance at periodic meetings of district trust officers at the head office and constant touch with the trust executives of the bank, assure uniformity of operation throughout the system and faithful adherence to established policies.

The branch managers, on the other hand, have acquired, with very few exceptions, a fine practical knowledge of trust functions and know how the trust department can serve their clientele. Each branch maintains its own trust records, handles the receipts and disbursements required by the trusts, and diarizes the specific duties in the administration of estates, thus assuring local administration of estates and trusts, as against absentee administration. In fact, in most districts the closest possible cooperation exists between the branch banking staff and the district trust officer. Due to comparatively few changes among managers of branches, many of whom have had legal training, the educational efforts that are constantly expended to educate the rank and file of the entire banking system of the bank in trust matters and the resultant efficiency of operation and intelligent attention to duty account for the success so far attained. Under this arrangement, the branch manager is the business manager of the trusts handled at his branch; the district trust officer is the consultant, supplying legal and technical skill; while the trust examiner audits and keeps in order the accounting detail so that proper reports may be made to district headquarters and the head office, as required by the rules of the bank.

CARRYING TRUST SERVICE TO RURAL COMMUNITIES

Before the advent of the branch bank giving trust service, rural communities in our State were without trust service. The unit banks located there could not efficiently and profitably give such service. Grouped into districts under the district plan of administration, the clientele of contiguous rural communities and towns can now be as effectively served as if the trust departments were established in each community, and profitably, too; for estates of decedents must be

probated and the affairs of the living must be administered in the country as well as in the city; and wealthy agriculturists and prosperous small-town merchants have need of trust service as well as their brethren in the big cities. In fact, the district plan of trust administration, under the branch banking idea, is so elastic that possible mergers with other branch-banking institutions in the State that have trust departments can readily be consummated. Indeed, if by new legislation national banks shall be permitted to extend their service to border States within their respective Federal reserve districts, the program of administration and control of trust business, if desirable, could readily be adapted even to this new condition, subject, of course, to the varying laws of the other States within the Federal reserve district.

It requires no great stretch of the imagination to picture a gradual unification of probate law, procedure and practice, and uniformity of inheritance-tax laws in such States, if this drastic change in our banking laws affecting branch banking

in the national system should come to pass.

EDUCATIONAL PROGRAM FOR TRUST OFFICIALS

The problem of supplying trust executives and supervising trust officers has been practically solved by our educational program started nearly 10 years ago and intensified during the past 4 years. To-day it is a regular part of our routine at the head office under the leadership of veteran trust men who understand branch banking and branch psychology and who, in addition to the burdens of their ordinary duties, are giving generously of their own time and talents as

professors in the great school of fiduciary science.

We realized early in the game that education was the basic necessity; education of the higher officers, of the general banking staffs, of the advisory board members of each branch; also education of the public in the communities where Our branches are located; and finally, to some extent, of lawyers by frank disclosure of our plan of operations, to the end that all of our employes, advisory board members and stockholders, individually and collectively, should be made "trust minded" and "will-conscious." Commercial bankers in the past have 8ide-stepped trust business because they did not understand it; and some declined to lend a willing ear because to familiarize themselves with fiduciary service meant study and too much attention to technical details and legal matters that were not to their liking. The objective of our great State-wide campaign of education is to make the far-flung personnel familiar with the fundamentals of trust service—to impart to them the basic principles of fiduciary service by various educational devices, such as "question and answer" courses, talks by trust officers and trust examiners, trust literature, perennial classes at the head office leatures and community meetings; this program is succeeding beyond our office, lectures, and community meetings; this program is succeeding beyond our expectations. While this is being written, there are at our head office 25 representatives of various branches, some of whom have had legal training, undergoing an intensive two-weeks' study of trust functions. Only a few of these men are in the trust department of the bank; the majority of them are in the banking department. When they return to their respective branches, they will not only be better fitted by reason of their training to appreciate trust service, but they will also have absorbed some of the enthusiasm of the big city bank. The remarkalso have absorbed some of the enthusiasm of the big city bank. ably small turnover among our branch executive officers, and the promotions from within the organization if there be changes, make this educational effort well worth while. It is no reflection on the intelligence and enthusiasm and good will of the general personnel of our bank, now numbering 7,200 men and women, including advisory board members, that the job of "selling the trust department" to the rank and file of the bank must still go on, no matter how satisfactory our progress is, nor how thoroughly the trust department is appreciated.

No small rôle in this educational effort is played by the district supervising trust officer; he is the leader and teacher as well as the trust expert, aided and abetted by the branch manager who is the originator of trust business at his branch, and the efficient trust administrator when it has been placed on our books.

FINE TEAM WORK BRINGS BUSINESS

It is this fine team work that accounts for the ever-increasing record of nominations of our bank under wills, now numbering upwards of 5,000 a year; it accounts, too, for the fact that the trust earnings of some of our smaller branches exceed the earnings of their banking departments. What better encouragement can a branch manager have?

As already stated, every trust, whether private or court, is administered at the branch where it originates. This is in accordance with our desire to give metropolitan trust service to every community where a branch of our bank is located.

The head office, through the district trust supervisors, maintains an indirect control by requiring a system of reports and strict adherence to well-defined policies. For example, Circular A-247 directs that on the last day of each month, each branch shall prepare a "fiduciary financial statement" which must be forwarded to the district trust supervisor who, in turn, examines it and immediately sends it to the head office. This fiduciary financial statement is a transcript of the "trust general ledger" as of the close of the last day of the month, showing the control accounts of all trusts handled at the branch.

Circular A-260, to cite another example, sets forth in detail the documents that must be sent to the head office and to the district of subdistrict headquarters.

RECORD SYSTEM IN ESTATE SETTLEMENT

Whenever any of our depositors dies leaving a will in which our bank is named executor two copies of the following documents are sent in due course to the district or subdistrict headquarters, where they are carefully checked, after which one copy is forwarded to the head office for additional checking before being permanently filed: Copies of will, petition for probate, letters testamentary, notice to creditors, statement of publication of first notice to creditors, affidavit of publication of notice to creditors, inventory and appraisement, all petitions for sale of real or personal property, all orders confirming sales, order for family allowance, income, inheritance, and federal estate tax returns, all accounts rendered, petition for distribution, order settling final account and decree of distribution, final discharge.

Likewise, when the bank acts as administrator with the will annexed, or administrator without a will, copies of the principal documents similar to those above must be sent to the head office and district or subdistrict headquarters in the same manner except, of course, that a copy of renunciation of the one entitled to act must accompany the petition for letters of administration.

When the bank acts in other fiduciary capacities under court trusts, such as special administrator, trustee under wills, guardian of minors or incompetents, the relative documents must be similarly supplied to the district headquarters and head office.

RECORDS IN CUSTODIAN SERVICE

The service offered by trust departments of banks to act as depositary of custodian of the personal property of decedents for personal executors, administrators, trustees and guardians, thus effecting a reduction in the bond that may be required of such executors and administrators, trustees and guardians, is being appreciated now more generally than heretofore by the legal profession. In these cases, the branches are required, pursuant to the requirements of Circular A-260, to file in due course at the district office and at head office copies of (a) order of court designating the bank depositary of such personal property, (b) receipt for securities deposited, (c) order terminating depositaryship, (d) receipt of executors, administrators, trustees, or guardians.

of executors, administrators, trustees, or guardians.

In foreclosure matters under deeds of trust securing loans, in cases where the bank is not the beneficiary, copies of (a) the deed of trust and note, (b) notice of breach and election to sell, (c) notice to trustee, (d) notice of sale, (e) affidavit of publication, (f) affidavit of posting notice of sale, (g) copy of trustee's deed must likewise be filed at the district offices and the head office at the proper

Most attorneys comply graciously with our requests for duplicates of all necessary documents required by our plan of district and head office control, thus eliminating much copy work in our own offices.

SYSTEM OF TICKLER CARDS

In order to assure our receiving copies at appropriate times, and to maintain a check on the various necessary steps in probate and other procedure, so that there shall be no failure on our part to comply with the laws governing the administration of court trusts or our duties in other respects, a system of tickler cards has been set up at the head office and at district or subdistrict offices, on which are printed (a) trust number, (b) name of depositor, (c) capacity in which

We are acting, (d) the list of important documents described above, and (e) two blank columns to the right of each card, respectively, headed "Date due" and "Date received."

For example, when the district office (or head office) receives notice of the death of one of its clients, leaving a will in which our bank is named executor, the card headed "executor" is immediately filled in by inserting the trust number, the name of the decedent, and the approximate dates when the various documents

should be filed.

The opening record card and a copy of the will should be received almost immediately after receiving notice of death of testator; a copy of the petition for probate of will, within 30 days; letters testamentary, within 30 days; request for income tax determination should be submitted to the internal revenue collector immediately upon receipt of letters testamentary; notice to creditors should be published immediately upon issuance of letters testamentary; statement of publication of notice to creditors should be filed within 30 days after date of issuance of letters testamentary; preliminary report for Federal estate tax (where necessary) must be filed within 60 days from date of death; inventory and appraisement should be filed within 90 days from date of issuance of letters testamentary report of inheritance tax appraiser and determination of inheritance tax should be filed within six months from date of death so that the tax may be paid and the 5 per cent discount taken advantage of; Federal estate tax returns should be filed within one year from date of death; final account and petition for distribution of the control of the c tion should, ordinarily, be filed immediately after time for notice to creditors has expired; decree of distribution should be received within a reasonable time thereafter, and decree of final discharge should be received shortly after that.

All dates are, therefore, listed in the first column under "Date due," and the

card is placed in the tickler file and will automatically show up on the date first appearing thereon. In each instance, the dates are far enough in advance so as to enable us to write to the branch that a certain document should be filed on a certain date. This is followed up if necessary until a copy of such document 18 received by the district office and the head office. When such document is received the date of such receipt is entered in the second column under "Date received," and the card is immediately placed in the tickler file under the next

following date and so on until all documents have been received.

It is conceivable that there may be documents filed in connection with any estate, the titles of which do not appear on these cards, such as petitions and orders for sale of property; any extraordinary proceedings, etc. In these cases, it is usually easy to obtain a copy of the respective documents without delay and without the necessity of a follow-up.

FILING OF TRUST AGREEMENTS

This same official circular (A-260) requires the filing of copies of all private trust agreements and declarations of trust. Practically all private trust agreements and declarations of trust are prepared at our head office, although many such documents, especially subdivision trust agreements or declarations, are drafted at our Los Angeles main office; but whether prepared by us from data sent us by the district offices or elsewhere, all such agreements and declarations are reviewed at the head office, where one copy, after execution of the trust, must be filed. The original executed copy remains at the branch where the setlor transacts his business, the duplicate original is handed to the customer. Notarial acknowledgments of the signatures of all parties to such documents

must be affixed to original and duplicate copies.

Advances to trusts, both private and court, are charged to a specific fund of \$100,000 of the bank's capital set aside for this purpose. Branches are authorized to draw against this fund up to the amount allocated to them by the head office, and are required (Circular A-256) to send, each night, to the head office or to the district or subdistrict headquarters, as applicable a report of any change in the title of "Advances to private trusts" or "Advances to court trusts." including full particulars. Should it become necessary for any branch to make an advance to either a court or private trust in excess of the authorization for that Particular branch, head office, upon application, increases the allocation to this branch and reduces the allocation of some branch not requiring advances for the time being, thus obviating the necessity of increasing the total fund in excess of \$100,000. Under no circumstances are our branches permitted to carry any lunds in these accounts beyond the total amount authorized for the branch, nor must any loans to beneficiaries or setlors of such trusts be carried under these titles.

SUPERVISION OF ESCROWS

Supervision of escrows is committed to district and subdistrict headquarters where copies of (a) escrow agreements, (b) any amendments thereto, (c) assignments thereof, must be filed.

All stocks and bonds beld by branches in their court and private trusts must be reported to the head office trust department through district or sub-district headquartes on a special form provided for the purpose, on the fifteenth of each month from the "Asset ledgers." If there has been no change since the last report, the form must nevertheless be returned, marked "No change" (Circular A-272).

All uninvested cash held by branches in court and private trusts must be reported at close of business on Friday of each week from trust cash ledger sheet. to the head office through district or subdistrict headquarters, as applicable.

REVIEW OF SECURITIES AND INVESTMENTS

The review of securities and the investment of cash requiring investment are undertaken at present by three subsidiary committees, composed of executive trust officers and other branch executives, operating, respectively, at San Diego for the San Diego district, which includes the extreme southern section of the State; at Los Angeles for the metropolitan district of Los Angeles, including such cities as Long Beach and Pasadena; and at head office trust department for the balance of the State. The proceedings of these meetings are set forth in formal minutes, forwarded immediately to head office in San Francisco for final action of the director's committee. Additional investment committees for the investment of trust funds and the audit of securities will be appointed for other sections

of the State as conditions may require.

When it is found that there are uninvested cash funds available for investment in any trust, the branch, at which the trust is administered, reports such fact to the district trust supervisor, who forwards such request to the office where the trust investment committee functions, together with a statement of facts concerning the particular trust, accompanied by his recommendation as to the nature of investment which he deems appropriate. This matter is then submitted to the proper subsidiary investment committee, which meets as often as This committee decides upon the nature of the security to be is necessary. purchased as an investment for the trust, taking into consideration the purpose of the trust, the existing assets, the ages and other sources of income of the beneficiaries, the date of termination, and other pertinent facts. Thereafter, the action of this committee is reviewed by the directors' investment committee of the bank for final disposition. In practice, the directors' committee rarely reverses the judgment of the subsidiary investment committees, as the bank's policy with reference to investment of trust funds and the kind of securities to be selected is well know and established. So there is no undue delay in promptly investing cash funds in suitable securities.

ALLOCATION OF PROFITS

The question of allocation of profits, when business originating in one branch is administered at another, is generally settled by inquiry into the merits of each case separately. However, as a general rule, when a will is obtained by one branch and later probated at another branch, because of change of residence of the testator, or for some other reason, the originating branch receives 25 per cent of the fee collected by the administering branch.

Time will not permit further detailed description of the operation of trusts at branches and the supervision exercised by district headquarters and the control maintained by the head office at San Francisco, to assure faithful and accu-

rate service.

Besides the examinations and audits made by the trust examiners of the trust districts and the periodic examinations made by the national-bank examiners and by the office of the superintendent of banks of the State of California which has jurisdiction over the operation of trust departments of all State and National banks in our State, the general auditors of the bank conduct rigorous audits of all trust department records at the head office and the branches. Under such rigid supervision it is not likely that deliberate neglect in administrative service is

It is plain that the trust operations at our branches are safeguarded in every possible way. In fact, our bank may be visualized as operating unit trust departments in every branch where court and private trusts are being administered; yet the units themselves are grouped together in districts under the direction and supervision of the district trust officers, who must look to the head

office in San Francisco for general policies and practice.

There is no dearth of potential trust business in the rural districts of our State. Our out-of-town branches, under capable trust district administration, will serve the public in rural districts satisfactorily and profitably, and will do much to make our State thoroughly "trust minded," thus stimulating trust business for the other large banks of our State that conduct trust departments.

COOPERATION WITH LAWYERS

Our relations with lawyers for the most part have been highly satisfactory. Antagonisms of the past have been largely dispelled because the members of the bar are now thoroughly aware of our desire to work whole-heartedly with them, rather than against them. Our former president and now chairman of our advisory committee, James A. Bacigalupi, himself an outstanding attorney, personally assured the lawyers of our State, in his many eloquent public utter-

personally assured the lawyers of our State, in his many eloquent public utterances, that our institution will always scrupulously respect the rights of attorneys and their relations with their clients, and will retain the services of any reputable attorney who refers any business to out bank.

In conclusion, may I refer to the report of the public trust officer of New Zealand for the year ending March 31, 1929, which recently reached me? It discloses the fact that the office "has branches and agencies in 110 cities and towns throughout the country," where trusts are handled in much the same manner as in our bank; that "the value of estates and funds under administration on March 31, 1929, was 48,334,790 pounds sterling" (nearly \$250,000,000); that "during the year wills numbering 6,053 were deposited with the public trustee"; that on March 31, 1929, "62,841 wills of living persons were held in safe custody"; and that during the year "3,508 new estates and funds of a total value of 7,091,350 pounds sterling (nearly \$35,000,000) were accepted for administration." The report also showed that "the wills on deposit represent prospective business worth over 250,000,000 pounds sterling" (over \$1,250,000,000).

I look forward to the time, even though perhaps comparatively few years may

I look forward to the time, even though perhaps comparatively few years may Yet be allotted to me, when the great branch banking institutions yet to come, of which the few now in existence are but the forerunners, located in every strategic financial center of our country, will not only disclose records as monumental as those that I have just quoted but what is more important will give to have a contractive effecting to every community in our finance a new dignity and a nobler objective, offering to every community in our country, near and remote, the safe and dependable service of the corporate trustee and the ministrations of trust-minded bankers and sympathetic trust officers.

Mr. Chairman, ladies and gentlemen, I have been asked to address myself this morning to a brief consideration of the growing importance of the trust depart-

ment in the modern bank.

My only warrant to speak to you with any degree of authority upon this subject must be found in the fact that I began my banking career, a little more than a decade ago, as the organizer and manager of the trust department of my institu-tion, having been chiefly attracted to the work by a keen appreciation of the immense potentialities of trust company service. While it was not my good ortune to remain in intimate association with this newer phase of the banking business for more than a few years, I have never relinquished my warm initial interest in its development, and have consequently followed its progress with ever-increasing conviction and delight.

The outstanding and unmistakable impression that even the most casual Observer receives to-day when contemplating the ever-broadening opportunities for genuine and helpful corporate trust service to the public, is that of marvelous

growth.

I shall not burden you by a long recital of statistics, but I deem it opportune to cite just a few pertinent facts in support of the proposition that trust business in the United States to-day—both potential and actual—is increasing at a tremendous rate.

A nation-wide survey conducted by this the trust company division of the American Bankers Association has disclosed the fact that there are to-day

approximately 3,500 qualified trust departments of banks in our country as against only 14 in 1870; that the majority of the trust companies or active trust departments of banks in this country in operation to-day have been established since 1915; that over 20,000 officers and employees of banks in the United States are to-day devoting their full time to the handling of trust work, and that fully 45,000 Americans chose a corporate executor or trustee during the past year alone.

From the recent report of the Comptroller of the Currency, in which trust findings from the bank call of June 29, 1929, are summarized, we are struck by

the following significant figures:

There are to-day in operation in the United States 1,734 trust departments of national banks alone, managing 75,988 individual trusts, representing assets in excess of \$5,237,000,000—a gain of 359 per cent in such assets and of 191 per cent in the number of such trusts since 1926. The assets under corporate trusteeships in national banks aggregate more than \$7,370,000,000—a gain of approximately 200 per cent over similar assets in 1926. This is indeed a remarkable showing, particularly when cognizance is take of the fact that until the comparatively recent enactment of the Federal reserve act national banks were not permitted to exercise trust power.

In a recent address the Hon. Joseph S. McCoy, United States Government actuary attached to the Treasury Department at Washington, D. C., revealed the significant fact that approximately 400,000 estates, representing assets of over \$5,000,000,000, are now probated annually, and that about 60 per cent of this vast sum, or over three billions for the year ending December 31, 1927. belonged to estates administered in only five States of the Union, namely, New

York, Pennsylvania, Illinois, Massachusetts, and California.

Statistics recently released in the States of Massachusetts and Pennsylvania the only two States in the Union which publish consolidated statements of trust funds held in all trust companies or trust departments of banks, both State and national-show that the total trust funds administered by banks in the State of Massachusetts in 1900 amounted to about \$14,000,000, and that in 1929 this volume has grown to the imposing figure of \$600,000,000, while in the State of Pennsylvania the total funds held in all banks in 1900 approximated \$500,000,000, and that in 1929 this volume has increased to the staggering figure of more than \$4,000,000,000.

And now, for your greater edification, permit me to conclude these citations with a passing reference to just one type of corporate fiduciary service which has only lately sprung into being, but which promises, if intelligently and diligently cultivated, almost unlimited possibilities-I allude to the life insurance trust.

Life insurance, like a great giant that has but lately found his stride, increasing by leaps and bounds because of the realization that insurance of human lives must be viewed as to its objects in terms of income rather than of principal, now looks to the corporate fiduciary as the complementary medium for the complete fruition of its purpose, because life insurance without a concomitant conservation plan—so that the beneficiaries may be the better protected and their comforts

and independence the better assured-fails of its essential destiny.

It is of immense significance, therefore, that in the United States to-day there are in force nearly \$100,000,000,000 of life insurance; that this is now increasing at the rate of \$10,000,000,000 a year, and that life insurance companies, during 1928, paid out in cash total claims calculated to be in excess of \$700,000,000. estimated that of this huge sum of life insurance in force to-day, only \$2,000,000-000, or 2 per cent of it, has as yet been lodged with American trust companies under agreements of trust; yet more than five hundred millions so held or in excess of 25 per cent of this total was trusteed during the past year alone.

Impressive as these figures are—in my humble opinion—they do not begin to reflect the true measure of the immense resources awaiting trust company

management in America.

At this juncture, however, it behooves us to pause a moment to seek and to firmly establish in our minds the real reasons for this recent phenomenal popu-

larity, throughout the country, of corporate trust service.

In the first place, the wealth of the American people has grown apace during the past 15 years with the ever-increasing prosperity of our great country. This unprecedented rapid enrichment of so large and widely scattered a proportion of our people—theretofore almost total strangers to the intricate science of safe investment, conservation, and transmission of so much newly acquired wealthrendered it not only advisable but most necessary that they should seek the guidance and the cooperation of some trusted, wiser, and better qualified friend or acquaintance.

In the second place, be it said to the enduring credit of our banks engaged in the field of fiduciary service, the American people have been gradually and are now being more rapidly, led to understand and to appreciate the overwhelming superiority of corporate trust service. Our people are coming more and more to realize that whether the qualified bank act as custodian of securities, or as escrow holder; or as the executor or trustee under the will of a decedent; or administrator of his estate; or guardian of the estate of a minor or incompetent; or trustee of a living trust with all the wide ramifications of custody and investment management that modern finance implies; or trustee under corporate hypothecations for the protection of bondholders; or registrar of stock to safeguard the shareholders against overissues; or transfer agent to facilitate the issuance of stock in conformity with the rigid rules of our stock exchanges—in fine, that in all of its wide range of endeavors, the underlying principle of corporate trust activity is conservation, protection, painstaking, and efficient service, cordially, conscientiously, and constantly supplied. Schooled in the practice of probate law; expert in financial matters; familiar with the handling of stocks, bonds, real estate, and life insurance; functioning at times as an investment committee for the speedy and safe investment of trust funds; auditing and revising at other times the securities left by a testator or subsequently acquired and held in trust; using the bank's superior credit information, always ready at hand, to pass judgment on questionable notes and other evidences of debt; having at instant command the combined experience of seasoned bankers to solve the ever new and intricate problems of modern taxation and finance; available at all times during business hours; never incapacited by illness or absence, and enduringly strong as to financial responsibility—the qualified bank as executor, trustee, guardian, or depositary stands commanding and paramount in the field of fiduciary service. Verily, in this new era of massive industrial and commercial structures; in this day of our complicated and highly specialized civilization, departmental financial emporiums are inevitable, and the one big opportunity of banks for

further profitable development and of public benefaction lies in the field of trust

Having established the growing recognition of, and the ever-increasing demand for, corporate fiduciary service, it would seem to follow that every bank of any size or importance in our country should seek to equip itself to handle trusts. It should do so not only because of the material profit to be directly derived from a trust department when once well organized and properly developed, but also because such a department will insure the retention of a bank's depositors who might otherwise be attracted to a competitor in their search for this service. It is not only advisable, but important, therefore, to regard the trust department as a most effective cementer of a bank's general business. It operates at once to retain present depositors, and the likelihood of retaining the patronage of their succeeding generations is not only a reasonable expectation but almost an absolute certainty.

This leads us to a brief consideration of what should be the proper attitude of a

bank's general management toward the trust department.

In the first place, as I view it, the trust department should be regarded neither as an "ornament" nor as a "side show." The modern bank should see to it that its trust department is placed at least on a par, both as to prominence and with its general banking departments; it should exercise great diligence and care in the selection of its trust officer; it should not relinquish Its initial interest in the department or cease its cooperation with its trust executive after his selection; it should not leave the development work to the department alone, but every general officer and employee, under the guidance of the trust officer, should at once undertake to learn enough about the broad functions of the department and the superiority of its service so as to be able to recognize and to intelligently direct a prospective piece of trust business as soon as it appears; and above all, its general management should be patient and tolerant in its expectations of huge profits.

It frequently happens that trust departments are tucked away in the basement or in some other remote and inconspicuous place in the bank, and that little or no effort whatever is exerted on the part of the institution's general officers or contacting personnel to feature or to build up the new department. Dissatisfaction or disappointment is then later expressed because of the slowness of the progress made, and erroneous appraisements are indulged in regarding its worth and Potentialities. In this day of hurry and scurry the uninitiated public must be 80ld on everything new, and the only way to get over the message that a new service has been added by a bank is to feature it strongly, both in the prominence,

propriety, and attractiveness of its quarters and in the bank's campaign of publicity and advertising.

A bank, therefore, should not elect to enter the trust field unless it intends to make the trust end of its business a major department of the institution. In the establishment of a trust department, a bank's first concern should be to so equip and develop it as to be prepared to render a type of service that will insure the highest degree of safety and satisfaction to its customers and thereby reflect credit not only upon itself but likewise upon every other trust company and trust department in the country.

And in this connection, I am pleased to proclaim—to the enduring credit and honor of this country's banks which have already entered this fertile field—that no charge of negligence or loss has ever been successfully prosecuted against any bank engaged in the administration of a trust. This is, indeed, an envisible record and one which we must jealously maintain.

As to the selection of a suitable trust officer, too much emphasis can not be laid upon the essential qualities which he should possess. He should be, above all, a man of recognized sterling character, and in addition should possess executive ability, initiative, sound judgment, a fair knowledge of banking, investments and law, and be blessed with some imagination and plenty of soul. The quest for such a man may, on first thought, seem almost hopeless, and in candor it must be admitted that it is no easy task to find one—not already a trust company employee—who will at once measure up to all of these exacting requirements.

think that the experience of my institution in this particular is eminently pertinent, and I therefore make bold to cite it. We are to-day exercising trust functions through every one of our 292 offices, spread over 166 cities of California, and, with but a scant half dozen exceptions, every one of our trust men and women have been developed within our own organization. Our trust department is only 12 years old and the major part of its development, both as to business and personnel, has taken place within the last six or seven years. first chose intelligent men and women who possessed the natural qualities set down among the requirements I have here enumerated, and then we set to work building them up in the qualities or essentials which they lacked but which are readily attainable and acquired through application and study. We have made lawyers out of bankers and bankers out of lawyers, and in not a few instances we have made both bankers and lawyers our of just plain good men and women. My successor as the head of our trust department, was neither a banker nor a lawyer when he first joined our institution in 1918 and entered the trust department in 1920. I had, however, known him at college and had long admired him for his excellent qualities of mind and heart. By dint of appplication and observation he has proven himself a master in the science of fiduciary service, having served as chairman of the trust section of the California Bankers Association and delegated to represent it at this convention as vice president for California. He has gradually developed an exceptional personnel, ever keeping his organization in step with the growth of our trust business, so that while the department did not begin to show material profits until about seven years ago, he nevertheless kept it "in the black" practically from the very beginning of his administration. He has also, in the interim, personally supervised a systematic campaign of education in the matter of trust company functions, among our directors, advisory board members, general officers and employees throughout the States, and stands ready to-day to intelligently, safely, and efficiently care for, through his splendid department, the ever growing volume of trust business which is being influenced to our institution.

It has been my observation that while some uninitiated bankers are inclined to underestimate the importance of the trust department, more of them are prope to expect too much from it, too soon.

The trust department is in truth a potential gold mine which offers almost inexhaustible possibilities as a profit maker, but it requires much intelligent, painstaking and constructive effort and plenty of patience and cooperation before pay dirt is struck. I offer this out of sympathetic regard for such unfortunate trust officers as there may be in the country to-day whose superior general officers may be a little too restive and unreasonable at times in their expectations of immediate fabulous profits. I have known some managers of trust departments who have been driven, because of this unwarranted clamor for immediate and larger profits, to knowingly accept trusts fraught with the probability of most disastrous liability to the bank. This of course should not be. A bank's first concern in the operation of a trust department should be

to maintain the highest and safest standard of trust service, and this can only be done by carefully scrutinizing every bit of trust business before accepting it, and by careful and expert handling after it has been undertaken.

As to what would be reasonable to expect by way of profits from a trust department, I believe it to be the consensus of men qualified to voice an opinion that normally no profit should be expected for at least the first five years of operation, and that in cases where such a department has been established over a period of years and has succeeded in building up a volume of business, it should attain an operating ratio of at least 50 per cent, so that of every dollar taken in at least 50 cents should represent the net profit to the institution. The potentialities for profit from this source, over the years, may therefore be

Said to be most encouraging and practically unlimited.

In this day of keener banking competition and the insatiate demand of the public for more and varied gratuitous personal service, it is not only advisable but almost necessary that banks turn to this newly cultivated field of the trust department as a certain and most effective means of restoring narrowing

banking profits.

Another intriguing feature of corporate trust service, in addition to the most appealing human side of the business, lies in the fact that the idea of competition is supplanted by the idea of cooperation and that in the trust business there is no competition in the real sense of the term. In other words, every success achieved and work well done in this field by one bank inevitably inures to the benefit and profit of all. This great service needs only to be understood to be appreciated, so that the sooner its message can be spread among our bankers and the public generally, the greater and the more enduring will its importance

become.

Let us, therefore, acknowledge the ever-growing importance of the trust department in the modern bank; let us strive to give it its proper place of importance in our institutions. Let us be unfailing in our efforts to hold high the type of our trust personnel and to keep excellent the character of the service rendered; let us resolve to ever put quality above quantity and safety above profits in our pursuit of this most interesting and helpful humanitarian feature of our banking service; let us never fail in our willingness and eagerness to sympathetically cooperate with our trust officers in the discharge of their trying and most important responsibilities; let us not be niggardly in our educational efforts to make the great American people "will conscious" and to bend the public attitude toward trust mindedness"; and then, and only then, may we hope and confidently expect to reap our reward a thousandfold, a reward not only in dollars and cents, but—what should be of infinitely greater satisfaction to us as the favored recipients of such boundless confidence—in the abiding appreciation and undying gratitude of generations yet unborn.

Mr. Bacigalupi. Exhibit O comprises two tabulations showing, among other things, that an original investor in one share of Bank of Italy stock in 1904 who exercised all of his rights to purchase additional shares when issued, would have invested, up to and including January 25, 1930, \$54,510 and would now own 3,469 shares of Transamerica Corporation stock (provided he has exercised his privilege to exchange his Bank of Italy stock for Transamerica stock). Figured at the present market value of \$44 per share, his shares would have a Value of \$152,636, equivalent to an average cost of \$16 per share, and representing an unbooked profit of \$98,126, or an average profit of \$28 per share. He would further have received dividend payments of The combined profit from appreciation in market value of Shares held with dividends received totals \$120,689. This amounts to an average total profit of \$35 per share purchased, equivalent to 219 per cent return for the period on the actual investment, or an average profit of about 9 per cent per year.

(Exhibit O referred to is here printed in full, as follows:)

1 100 per cent increase in capital. Sold 90,000 shares in odd lots to stockholders over varying periods at prices averaging \$115 per share of new stock for each share formerly held.

2 Dividend changed to quarterly basis.

3 Christmas dividend \$3.

4 I new share for each 7 held to stockholders of record this date.

4 This dividend voted on 3,463 shares to stock of record Sept. 15, 1927.

8 Transamerica conversion, 1 for 1.

1 Stock dividend 1-40, 1 share of Bank of America for 40 shares Bancitaly Corporation. Later converted into Transamerica stock on basis of 1 share of Bank of America for 136 shares Transamerica Corporation. Dividend amount changed to \$1 and date forwarded to Apr. 25, 1929. First Transamerica dividend.

8 Stock dividend 1-100.

10 Stock dividend 1-100.

11 Intercoast warrants issued on basis of 1 for 9 (rights to subscribe to 463 shares on basis of 4.174 shares.)

18 Stock dividend 1-100.

19 Intercoast warrants issued on basis of 1 for 9 (rights to subscribe to 463 shares on basis of 4,174 shares as of July 25, 1929). Selling price of rights, \$11.

19 150 per cent stock dividend on stock of record July 25, 1929. (4,174 shares).

10 1 per cent stock dividend on stock as of record Oct. 5, 1929. (10,435 shares).

11 1 per cent stock dividend on basis of 40 cents per quarter. On stock as of record Oct. 5, 1929.

12 25 per cent stock dividend and par reduced to \$25.

13 40 per cent stock dividend.

14 17 tans-America conversion.

u Trans-America conversion.

Table showing the status on January 25, 1930, of an investor who purchased 100 shares of stock in the Bancitaly Corporation on the date of organization and exercised all his rights to purchase additional shares—Continued

	Total shares			Shares purchased with rights exercised			Total cash	Dividends		
	Num- ber	Approxi- mate market price	Approxi- mate market value	Num- ber	Rate	Cost	invest- ment	Rate	Amount	Total
Nov. 5, 1929 Jan. 25, 1930 Do			712,400,00			*******	\$135, 070. 00 135, 070. 00 17 135,070.00	\$0,40	\$4, 384, 00	\$44, 494, 5 48, 878, 5 48, 878, 5

¹¹ Rights to purchase additional shares of new Transamerica stock to be issued Nov. 20, 1929 to stock-holders on record Nov. 5, 1929. Basis of rights 1-25; rate \$55. The value of the stock acquired through exercising these rights is shown as the price prevailing on Sept. 24, 1929.

¹² Stock dividend (1-100).

¹³ Average cost per share, \$12.20.

Eleven thousand and sixty-nine shares of Transamerica Stock worth \$487,036 have been secured for \$135,070 equivalent to an average cost of \$12 per share, and represents a profit of \$351,966 at the market price of \$44 a share, or an average profit of \$32 per share. Including the dividend payments of \$48,878.50, the combined profit from appreciation in market value of shares held, with dividends received totals \$400,844.50. This amounts to an average total profit per share purchased of \$36, or 300 per cent for the period. This would average approximately 27 per cent a year.

SUMMARY

Three thousand four hundred and sixty-nine shares of stock having a value of \$152,636 at the present market price of \$44 a share have been secured for \$54,510, equivalent to an average cost per share of \$16, and representing a profit of \$98,126, or an average profit of \$28 per share.

Including the dividend payments of \$22,683, the combined profit from appreciation in market value of shares held with dividends received totals \$120,689. This amounts to an average total profit of \$35 per share purchased, equivalent to 219 per cent returned for the period on the actual investment, or an average profit of short 9 per cent pre year. of about 9 per cent per year.

Mr. Bacigalupi. Exhibit P is a booklet which fully describes the bank's employes' compensation and benefit plans. These plans have had the effect of materially quickening the interest of the bank's employees and have resulted in materially lowering labor turnover, in increased efficiency, and in more general and telling participation in new business activities, and in insuring a more cordial, courteous, and efficient service to the public.

(Exhibit P, referred to, is here printed in full, as follows:)

EXHIBIT P

EMPLOYEES COMPENSATION AND BENEFIT PLANS OF THE BANK OF ITALY, NATIONAL TRUST & SAVINGS ASSOCIATION, CALIFORNIA

INTRODUCTION

When the Bank of Italy opened its doors for business in 1904, it began a banking career which has proved to be one of the most noteworthy in the history

of American finance.

ď

Guided by the principles so clearly laid down by its founder, A. P. Giannini, the bank has avoided "entangling alliances"; and its officers and employees, refraining from all outside interests, have "kept clean, kept clear, and attended solely to the business of banking." It is only fitting, therefore, that on the twentieth anniversary of its founding, the bank should add to its previous plans for the advancement of its employees' interests, a plan designed to perpetuate and still further to encourage and reward that whole-souled loyalty to the welfare. fare of the bank upon which its success has been founded.

With the remarkable results of these policies, as evidenced by the growth of the bank and reflected in the character of its service, every one has long since become familiar. Very little is known, however, of what the bank is doing to Perpetuate and encourage these policies and at the same time give to employees the widest possible opportunities and privileges. One of the most important aspects of this phase of the bank's activities is found in the development of the various plans for employees printed in this booklet.

In the development of these plans the board of directors has been mindful not only in the development of these plans it has been mindful of the welfare of the

only of the welfare of its employees—it has been mindful of the welfare of the stockholders and of the public as well. It has been the experience of the board that whatever benefits and rewards employees stimulates a desire on their part to effect economies in operation, to increase efficiency, and to give better service to the public. It is, therefore, not as an act of philanthropy but rather as a Sound economic move for the benefit of all concerned that the bank has inaugurated its various plans for employees. More particularly are these purposes served by the last of these plans, which adds to the employee's normal compensation. Sation, a share in the capital stock of the bank, the size of which depends upon the faithfulness with which he serves the bank, his frugality, and his effort, (combined with those of his fellows) in increasing the net receipts of the bank or in decreasing its cost of operation.

For this reason, the plan is put forward not as profit-sharing, but rather as a plan of employee compensation—over and above normal salaries—to be used by employees in acquiring an ever-increasing share in the ownership and control of the bank. Employees are thus put in a position to capitalize their efforts in behalf of the bank and build themselves up to a position it would otherwise be

impossible for them to attain.

That in the working out of this plan stockholders would be benefited has been frankly granted. That is only fair and that the stock they acquire shall have an increasing value is as important to the employe stockholder as to any other. this reason, it was decided that after deducting from the net receipts of the bank all operating expenses, all normal dividends, and all proper reserves for depreciation, taxes, and insurance, 40 per cent of the remaining net receipts should be used as a fund to purchase stock for employes, and to meet the expense of administration

istering this and other plans for employees.

In considering the way in which the above sum could be distributed most fairly, it was suggested by employees who were consulted on the plan, that it should be in proportion to such contributions as employes themselves wished to make for the purchase of stock. It was felt that employes would acquire stock more rapidly if they added their own savings, and that it would be quite appropriate for the bank to distribute the fund in proportion to these savings. This, however, did not meet all the requirements of the board of directors who wished to bring everyone into the plan irrespective of what he could afford to contribute. It was therefore decided that while employees would be allowed to contribute a Percentage of their salaries as savings for the purchase of stock, and would have such savings increased by proportionate contributions of the bank from the fund, the bank would also pay to every employee who received less than \$6,000 a year, a sum based upon his salary and length of service, called "extra compensation,"

8

which would operate as the employee's minimum contribution, must as if made by the employee himself. The bank's contribution of extra compensation could then be increased by the employee up to a maximum amount determined by his salary and length of service. Since those with a small salary and with dependents would find it harder than others to exercise this latter privilege, it was further decided that, in the case of a married employee with children who receives less than \$2,400 per year, the bank will add to such employee's extra compensation for each dependent child, an amount equal to 15 per cent of the sum of his extra compensation and such additional contribution as he has made himself. There is a maximum limit in this provision of 45 per cent of the sum of such extra compensation and additional employee contribution.

The fund remaining after deducting extra compensation is termed "Special Compensation" and is to be prorated among employees in proportion to their contributions to the savings provision of the plan, no matter whether such contributions are the result of extra compensation contributed by the bank, percentage of salary contributed by the employee, or the sum of these two

contributions.

Thus arose the three main features of the plan: Extra compensation, savings provision, and special compensation. These features are the essence of the plan. For the rules concerning their administration, the percentages paid as extra compensation, the amount employees may contribute, the methods of prorating special compensation, the manner in which stock is held and acquired, and for other necessary provisions, the plan itself must be consulted.

From the combination of these three features comes the incentive of the employee to find in the development of the bank his own best development. Through the operation of the plan, the employee acquires stock by doing what every other person does who builds a business for himself—that is, by devoting his time to it, by increasing the value of his services, by contributing his money, and finally by helping increase the profits of the bank; for it is by doing all of these things that he is enabled, under the plan, to acquire an ever-increasing share in the ownership and control of the bank.

The plans for employees, other than the compensation plan, have been in operation for some time, and employees are familiar with them. The full text of these plans is also published in this booklet, in order that employees may have a complete knowledge of the opportunities and advantages available to them. All the plans express the settled policy of the bank to build the organization by and for its own employees—a policy that has resulted in rapid advancement from within, and which means the development of employees to positions of ownership and financial independence as fast as circumstances make possible.

EMPLOYEES COMPENSATION PLAN

(Adopted October 14, 1924; effective January 1, 1925; amended to January 1, 1927)

The uniform practice of the bank has been to require employees to devote all of their time and energy exclusively to the welfare and advancement of the interests of the bank, without emoluments or fees other than the regular compensation paid by the bank. To insure the perpetuation of this practice, to provide a method of compensation for employees which will stimulate a desire on their part to effect economies in operation and to increase efficiency, to encourage employees to become part owners in the bank, and to reward saving by employees, the bank has adopted the following plan of compensation.

This plan has three provisions: (1) Extra compensation; (2) savings provision; (3) special compensation.

I. Extra compensation.—Each employee now or hereafter in the continuous employ of the bank, and receiving a total fixed salary of less than \$6,000 for the calendar year, shall be entitled to extra compensation consisting of a percentage of his salary based upon length of service, as follows:

The minimum percentage shall be 5 per cent, and shall apply to the employed up to and until the end of the first full calendar year of continuous employment. Thereafter, the percentage of extra compensation shall be increased by 1 per cent for and during each full calendar year after the completion of the first full calendar year of continuous employment, until a maximum of 10 per cent of the current year's salary is received. After that, it shall continue at the rate of 10 per cent. Any employee who shall not remain in the continuous employ of the bank for

Any employee who shall not remain in the continuous employ of the bank for at least one full calendar year shall not be entitled to extra compensation. Employees who do so remain in the employ of the bank shall be credited on Janu-

ary 1 following the first full calendar year of continuous employment with extra compensation equal to 5 per cent of the salary theretofore paid to the employee,

and extra compensation shall not be credited prior thereto.

After the first full calendar year of employment, the extra compensation shall be credited to the salary of the employee semiannually on January 1 and July 1, but shall be retained by the bank and paid out only through the operation of the savings provision hereinafter mentioned, provided that an employee after becoming entitled to credit of extra compensation at the rate of 10 per cent for One year may receive such portion of the extra compensation in excess of 3 per cent of his average semiannual salary as he shall in writing direct. Said sums shall be paid to him semiannually.

For the purpose of fixing extra compensation, continuous service with an institution absorbed by the bank shall be considered as employment with the bank.

II. Savings provision.—The bank shall deduct from the salary of every emplayee as often as his salary is payable, not less than 3 per cent nor more than 10 per cent of the salary, plus 1 per cent of the salary additional for and during each full calendar year after the completion of the first full year of continuous employment, but in no event in excess of 30 per cent. The sums so deducted thall be paid forthwith to the trustee hereinafter mentioned.

The percentage to be deducted from the salary shall be fixed as follows:

(a) In the case of employees who are credited with extra compensation (i. e. those who receive a salary of less than \$6,000 per annum), the minimum percentage to be deducted shall be the amount of such extra compensation, and said minimum deduction shall be made from the extra compensation at the time it is ⁰redited; provided, that in the case of employees who have been entitled to oredit of extra compensation at the rate of 10 per cent for one year, the minimum to be so deducted thereafter may be reduced at the option of the employee to not less than 3 per cent of the salary. The maximum which may be deducted at the control of the salary plus 1 per cent of the salary plus 1 per cent. at the option of any employee shall be 10 per cent of the salary plus 1 per cent of the salary additional for and during each full calendar year after the completion of the first full calendar year of continuous employment, but any amount so deducted in excess of the extra compensation prior to the end of the first full calendar year of continuous employment shall be paid to the employee if his employment is terminated prior to said date. The extra compensation percentage shall be counted as part of the maximum which may be deducted.

(i. e., those who receive a salary of \$6,000 or more per annum), the minimum percentage to be deducted shall be 3 per cent of the salary, and the maximum which may be deducted at the option of the employee shall be 10 per cent of the salary plus 1 per cent of the salary additional for and during each full calendar year after the completion of the first full year of continuous employment. Any sums deducted prior to the end of the first full calendar year of continuous employment shall be paid to the employee if his employment is terminated prior to said

T

For the purpose of fixing the percentages under the savings provision, the employment of an employee shall date from the time of entering the employ of the bank; or in the case of employees of institutions absorbed by the bank (including purchase of a majority of the capital stock of such institutions for the benefit of the bank), employment shall date from the date of acquisition of such institutions.

On request, employees must demonstrate to the bank their financial ability

to pay the amount of the optional deduction from their salary.

In the case of a married employee with children, who is receiving a salary of less than \$2,400 per year, the bank, after application to it through its executive committee and investigation of the merits of the case, will increase the amount of such employee's extra compensation, as follows: For each dependent child under 18 years of age there shall be added 15 per cent of the extra compensation and optional deduction paid to the trustee under the savings provision; but this sum is not to exceed a maximum of 45 per cent of the extra compensation and Optional deduction paid to the trustee under the savings provision. The additional sum so provided shall be paid to the trustee under the extra compensation provision.

III. Special compensation.—The bank will pay to the trustee semiannually, on or about January 1 and July 1 of each year, beginning July 1, 1925, as special compensation to employees, upon the terms herein provided, a sum equal to 40 per cent of the current net receipts of the bank of Italy National Trust & Savings Association and National Bankitaly Co., (estimated separately), for the semiannual period then ended, less the sums provided for employees' benefits.

The current net receipts for the purpose of this plan shall be determined as follows:

From the receipts for the semiannual period then ended, there shall be deducted:

1. All operating expenses, interest, taxes, commissions, and charges of every kind and character during said period.

80

i

t

U

hooki

Deductions for reserve or contingent funds, or for any other purpose which
the board of directors or executive committee may direct.

3. The regular or special dividends declared or paid during said period.

4. Any profits realized during said period upon any assets owned on December 31, 1924, which at said date were not carried upon the books, or which were carried upon the books at substantially less than their actual value.

There shall be charged to this 40 per cent of said current net receipts all sums paid or set aside during said period for employees' benefits now or hereafter in operation either under this plan (excepting fixed and special compensation), or

otherwise.

The balance shall be paid to the trustee, and all except such reserves as the trustee may deem it necessary to set up to cover extra and special compensation of employees not entitled to credit for said extra and special compensation (i. e., employees not having completed their first full calendar year of service) shall be prorated to the credit of the respective employees having one full calendar year or more of service, in proportion to the respective sums paid to the trustee for the credit of said employees under the provisions of the extra compensation and sayings provision during said period.

Upon the completion of the first full calendar year each employee shall receive credit for extra compensation as hereinbefore provided, and a prorata of special compensation on the total savings deduction and extra compensation then standing to his credit at the average rate that has prevailed during the preceding three semiannual periods for the distribution of special compensation. In

figuring such average rate, amounts smaller than 1 per cent shall be dropped.

Each employee shall also receive, as his prorata of the profit or loss arising from the increase or decrease in the value of the stock purchased with funds reserved for credit to him upon the completion of his first full calendar year, a credit or a debit equal to the average increase or decrease in the value of the stock purchased with the funds in the hands of the trustee during the three preceding semiannual periods. This credit for debit shall be figured as a percentage of the total amount before posting interest, standing to his credit upon the completion of his first full calendar year.

Amounts smaller than 1 per cent shall be dropped.

calendar year. Amounts smaller than 1 per cent shall be dropped.

IV. Application of funds by trustee.—All sums paid to the trustee shall be applied by the trustee semiannually (following the receipt of the payment of extra and special compensation), in the acquisition of capital stock of the Bank of Italy National Trust & Savings Association (together with such beneficial interest in the stock of National Bankitaly Co. as shall be appurtenant thereto) at a price which shall be fixed semiannually by the board of directors and the trustee, said price to be substantially the market price. In the event of a disagreement, the price shall be fixed by a majority of a board consisting of a representative of the board of drectors, a representative of the trustee, and a third

person, selected by the two.

Each employee shall be credited on the books of the trustee with the nearest number of full shares which can be purchased for him at the price set. Any excess over the sum required for the purchase of the nearest number of full shares shall be used by the trustee, together with similar excesses as to other employees, in the acquisition of capital stock of the Bank of Italy National Trust & Savings Association, and upon the receipt of the succeeding semiannual payment of extra and special compensation, the trustee shall credit to or deduct from each employee as to whom there has been any such excess, a sum equal to his pro rata participation in the profit or loss arising from the purchase of said stock. The profit or loss arising from the purchase of said stock shall be deemed to be the difference between the price then fixed for stock as provided in the preceding paragraph and the price fixed for stock at the succeeding semiannual date. All dividends on said stock shall be credited to employees in proportion to their interest therein. In prorating profit and loss and dividends no account shall be taken of fractions of less than 1 per cent.

The dividends (except stock dividends) accruing upon stock purchased by the trustee shall be paid by the trustee to the respective employees in accordance with their respective interests therein. Stock dividends shall be held by the

trustee and carried to the account of the respective employees.

In the event stockholders of the bank are given the right to subscribe to additional shares of its capital stock, the employee shall have the right to purchase

said shares in proportion to the number of shares then held by the trustee to his account (not including shares represented by trust certificates) by delivering to the trustee, 20 days prior to the termination of said right to subscribe, a sum sufficient to purchase said shares, and said shares so purchased shall be delivered to said employee. Upon a failure of an employee to exercise said right to subscribe, the trustee shall have the right in its individual capacity to subscribe for and purchase said shares and upon said purchase the said shares shall be the individual separate property of the trustee.

The employees shall not be entitled to receive any of the sums paid to the

trustee except upon the terms provided in this plan, but the same, and the stock purchased thereby, shall be carried upon the books of the trustee to the account of the respective employees, subject only to application and disposal as herein

provided for.

The full and complete voting power on all stock acquired and held by the trustee

under this plan shall be vested in the trustee.

V. Delivery of trust certificates and certificates of stock.—After January 1, 1925, apon the termination of 10 calendar years of employment, net stock which has been acquired by the trustee for the account of an employee under the provisions of this plan, shall forthwith be held by the trustee under a trust, the provisions of which are found in that certain agreement of trust, dated as of October 14, 1924, between the bank, the trustee, and employees of the bank, which agreement is incorporated in this plan and is a part hereof. A duplicate original of said agreement is on file in the office of the trustee and is open to inspection at any time. The trustee shall forthwith deliver to the employee a trust certificate evidencing his ownership in said shares of stock, subject to the provisions of said agreement. Said agreement provides that the voting power of said stock is vested in the trustee under said agreement, and that at the termination of 10 years after the issuance of the trust certificate the trust as to the shares represented thereby shall terminate, and the shares shall be delivered to the holder of said trust certificate the shares shall be delivered to the holder of said trust certificate the shares shall be delivered to the holder of said trust certificate the shares shall be delivered to the holder of said trust certificate the shares shall be delivered to the holder of said trust certificate the shares represented thereby tificate. The certificates held or delivered under the trust shall not be sold or transferred without 10 days' prior written notice thereof being given to the trustee, during which period the trustee shall have the option of purchasing said certificate and the shares represented thereby, at the average price per share at which the trustee has acquired shares under the provisions of the plan during the preceding semiannual period, or in the event no shares have been so acquired, then at a Price determined by a board appointed in the manner provided in section IV hereof.

Employees who have been on January 1, 1925, for 10 calendar years or more in the employ of the bank, or who thereafter attain such length of service, shall be entitled (after January 1, 1925, or after attaining such length of service, as the case may be), on the termination of each semiannual period, to the trust certificate herein provided for, for the stock which has been purchased for the account of said employee under the provisions hereof; and the date upon which the trust as to such certificate shall terminate, shall be 20 years from the first of the calendar year following the date upon which such employee entered the employ

of the bank, as determined under the savings provision.

Employees who have been on January 1, 1925, for 20 calendar years or more in the employ of the bank, or who thereafter attain such length of service, shall be entitled (after January 1, 1925, or after attaining such length of service, as the case may be), on the termination of each semiannual period, to a certificate of stock covering the shares which have been purchased during said period for the stock covering the shares which have been purchased during said period for the provisions bereaf free and alear of any the account of said employee under the provisions hereof, free and clear of any trust.

VI. Termination of rights.—The rights of the employee under the plan shall terminate as follows: (A) Discharge for cause; (B) discharge without cause,

employee coming under pension plan, death; (C) resignation.

A) Discharge for cause. In such event, the trustee shall pay to the employee in full and complete discharge of all of his rights under this plan, and in the Property in the hands of the trustee, the sums actually contributed by the employee out of his salary, which are still in the hands of the trustee (i. e., for which no trust or stock certificates have been issued), with interest thereon at the rate of 4 per cent per annum up to the last semiannual period on any amounts paid prior thereto upon which no dividend has been paid, and such employee shall receive nothing on account of extra and special compensation; provided, that if the bank has suffered a loss on account of any dishonest or negligent act of the employee, then so much of the sum to which the employee would otherwise be entitled shall be paid to the bank as is necessary to make good such loss. The extra and special compensation or the proceeds thereof to which the discharged

employee would otherwise be entitled at the time of severance, shall be held by the trustee, and prorated among the other employees in the same manner as the succeeding credit of special compensation is prorated. Discharge for cause shall include discharge by reason of disloyalty, dishonesty, immorality, insub-

ordination, negligence, or any similar cause.

(B) Discharge without cause, employee coming under pension plan, death.—In any such event, there shall be delivered to the employee, or his nominee, or the beneficiaries under his will, or his heirs, in full and complete discharge of all his rights under this plan and in the property in the hands of the trustee, the stock which has been purchased for the account of said employee under the provisions of this plan, plus any unexpended sums for his account in the hands of the trustee, and less all sums or stock or trust certificates theretofore paid or delivered to the employee by the trustee; provided, that the trustee at its option may in lieu thereof pay to the employee or his nominee or the beneficiaries under his will or his heirs, the value of said stock based on the price per share last fixed for the purchase of stock under this plan, whereupon all rights of the employee (or his nominee, or the beneficiaries under his will, or his heirs) under this plan and in the property in the hands of the trustee shall terminate; provided further, that special and extra compensation benefits shall cease to accrue from the first of the

t

pnJ psainf pot

semiannual period of the severance.

In no case shall an employee who is discharged from the service of the bank, i. 6. leaves the service for some cause other than voluntary resignation, have any right to be considered under the classification, "Discharge without cause," except in the event of death, availability for pension under this pension plan, or disability acquired while in the service of the bank as a permanent employee in good stand; ing. In all other cases where an employee is discharged and where the cause of reason for such discharge is not of such a nature as to warrant forfeiture of the employee's extra and special compensation, as provided in VI-A, "Discharge for cause," the executive committee may, at its discretion, fix the terms of payment and the amounts due each employee under this plan. Payments to employees may be made immediately or at some time subsequent to the date of discharge, but not to exceed one year, at the discretion of the executive committee. ment may not be, except in cases judged by the executive committee to be for some special reason worthy of it, in amounts or stock exceeding what would be The payable or deliverable to the employee in case of voluntary resignation. decision of the executive committee shall be final in all cases of discharge, and upon receipt of the cash or stock, as authorized by the executive committee, the interest of the discharged employee in the plan and in the property in the hands of the trustee shall terminate.

(C) Resignation.—In such event, there shall be paid or delivered to the employee 12 months after the resignation becomes effective, in full and complete discharge of all of his rights under this plan and in the property in the hands of the trustee, a sum equal to the amounts theretofore paid to the trustee by or for the benefit of said employee on account of extra compensation, savings, and special compensation, less all sums and stock and trust certificates theretofore paid or delivered to the employee by the trustee; or in lieu thereof, at the trustee's option, the said stock and unexpended sums held for his account may be delivered to him, provided that extra and special compensation shall cease to accrue from

the first of the semiannual period in which the employee resigns.

If the employee shall resign prior to the completion of his first full calendar year of employment, then the sums deducted from his salary under the savings provision hereof shall be paid to him when his resignation becomes effective.

VII. General provisions—(A) Those entitled to benefits of plan.—All employees of the Bank of Italy National Trust & Savings Association and Stockholders Auxiliary Corporation, and of such other corporations, associations, firms, and businesses as the boards of directors of these corporations shall determine to be associated institutions (which are herein collectively referred to as the "Bank"), who remain in the employ thereof for at least a full calendar year are entitled to the benefits of this plan with the exception of:

(1) Employees excepted by resolution of the executive committee; (2) part-

Employees excepted by resolution of the executive committee; (2) partime employees; (3) employees eligible to or receiving pension benefits; (4)
 Mr. A. P. Giannini, the author of the plan and for that reason, at his request.

excluded from participation in its benefits.

Employment for the purpose of this plan shall be computed from the first day of the first month of continuous employment, if the first day of actual service is on or before the fifth day of the month, otherwise it shall date from the first of the calendar month next succeeding.

Absence on military service in the World War shall not be deemed an interruption in employment.

The term "employee" shall include the officers of the bank.
(B) Not assignable.—The interest of the employee under this plan shall not be grantable, transferable, or otherwise assignable by the voluntary or involuntary act of the employee, or by operation of law, nor be liable or taken for any debt,

liability, or contract of any employee, except as herein otherwise provided.

(C) Termination.—This plan may be modified, amended, or terminated at any time by resolution of the board of directors, which shall also have power to interpret and apply the provisions hereof and supply any deficiencies therein. No employee participating hereunder shall have any vested right or interest in

the continuance of the said plan.

(D) The trustee.—The trustee shall be the Bancitaly Corporation, or such Successor as the board of directors may hereafter from time to time appoint. The trustee shall not be responsible for anything save its gross negligence or willful neglect. It shall not be under any duty to segregate or keep separate the moneys or properties held hereunder, and its investment of said moneys and Properties shall not be limited to those ordinarily approved for trust investment, nor shall it pay any interest upon the same save as herein specifically provided. Up until such time as a trust certificate for the shares is delivered under the Provisions of Section V of the plan, the trustee shall be the absolute owner of all shares of stock acquired by it under the plan, with all the rights incident to absolute ownership; and up to the delivery of said trust certificate the right and interest of the employee shall be that of a party to a contract only, which, when fully performed and completed, and not before, will entitle said employee to the payment or delivery herein provided for. It is contemplated that the trustee will will use under this plan, shares of stock in its possession at the time of the adoption of this plan, and also shares which it may acquire in the future before funds are in its hands available for the purchase of additional stock under this plan. In every such case, the trustee shall be entitled to use the said shares under this plan and shall thereupon be credited in its individual capacity with the value of said shares so used, as said value is fixed in accordance with the provisions of this plan.

(E) Loans.—In the absolute discretion of the trustee, a loan or loans may be made to an employee in cases of necessity, to be secured by the interest of the employee under this plan, but so long as such employee is indebted to the trustee he shall not be entitled to any special compensation, except to the extent that his optional deduction from salary and extra compensation for the then current

Period shall exceed the amount of any loan made by the trustee.

(F) Miscellaneous.-Length of service and date of employment, for all purposes of this plan, except for fixing the rate of extra compensation, shall be com-

Duted in accordance with the definitions contained in the savings provision hereof.

The terms "Boards of Directors" and "Executive Committee" as used herein shall mean the board of directors and the executive committee of the Bank of Italy National Trust & Savings Association.

SICKNESS DISABILITY BENEFITS

All employees of the bank, after four months of continuous service, shall be entitled to receive sickness disability benefits during periods of physical inability to work by reason of sickness or accidental injury, except when due to illegal cause, immoralities, or unprovoked encounter, under the following plan:

Each employee absent because of illness as defined above, will continue to receive his full salary during the continuation of said absence, provided the Period of such absence does not exceed one-sixteenth of the entire period of pre-Vious continuous employment, and is justified by the submission of a doctor's tertificate. In cases of absences of not more than two days, the personnel department may waive the requirement of a doctor's certificate. If the term of absence under this plan shall exceed a period of 30 days, the provisions of this plan become hoperative, except that in justifiable cases the executive committee may allow benefits.

If between any two periods of sickness or disability there is not a lapse of at least four months, the second said sickness shall, for the purpose of this plan,

be considered a continuance of the first.

In computing the period of such service at any time, the term of any previous absence will be deducted from the full term of employment; however, absence on account of military service incident to the World War shall, for the purposes of this plan, not be considered as an interruption in employment.

SERVICE DEFINED

Service with any bank heretofore or hereafter acquired by the Bank of Italy National Trust & Savings Association shall, for the purposes of this plan, be considered as employment in the service of the Bank of Italy National Trust & Savings Association.

This bank reserves the right to alter, amend, or suspend any of the provisions of this plan in part or in their entirety at any time without notice in so far as they apply to any specific employee or group of employees.

This plan, in its application to any particular employee, will automatically cease to operate immediately upon his death.

VACATIONS

The vacation period for the employees of the Bank of Italy National Trust & Savings Association is from March 15 to September 15 of each year, and all employees whose term of service falling within this period is one year or more are allowed two week's vacation.

To those whose term of service within this period is six months or more, but not

one year, one week's vacation is allowed.

Otherwise, no vacations are permitted, except by special arrangement with the personnel director.

Mr. Bacigalupi. Exhibit Q is Neal's California banking chart as of December 31, 1929, which discloses the name and location of all banks open in California on that date. This is supplied so that your committee may form a clearer concept of the competitive banking situation which prevails in California to-day.

(Exhibit Q is not printed but held in committee room for re-

ference.)

Mr. Bacigalupi. Exhibit R is a collection of testimonials commendatory of branch banking gathered by the bank's supervisors throughout California. They are respectfully submitted for what value or importance you may deem to attribute to them. The name and address of the person interviewed is given in each instance and we have felt that perhaps some of the statements made may contain at least the germ of a new thought or point of view.

(Exhibit R is not printed but held in committee room for refer-

ences.)

Mr. Bacigalupi. Exhibit S shows the earnings of Bank of Italy and National Bankitaly Co. from 1921 to 1929, inclusive. (Exhibit S, referred to, is here printed in full, as follows:)

Mr. Bacigalupi. We pass now to a hurried reference to and general description of Bankitaly Corporation, which is the second

column of Chart 1 (printed at p. 1350).

In 1918, as will be noted on the right of Chart No. 1, Bankitaly Corporation was incorporated under the laws of the State of New York, with an original authorized capital of \$5,000,000. This company was organized pursuant to repeated requests of Mr. A. P. Giannini by many Italians and Americans of Italian origin residing in New York, who were desirous of duplicating in that great financial metropolis of the nation, the success of a bank operated—in so far as might be permitted by the laws of that State—along the general lines and pursuant to the general policies of the Bank of Italy in California. Mr. A. P. Giannini was president of Bankitaly Corporation from the date of its incorporation to the day of its dissolution in 1928. Shortly after its incorporation it acquired the control of the East River National Bank of New York.

In 1924 Bankitaly Corporation acquired the Commercial Trust Co. of New York, which institution, after having been concerted into a hational bank was, in the same year, merged with the East River

National Bank.

1,756, 600.00 1,750,000.00 2,000,000.00 15,000,000.00

1,000,000.00 1,500,000.00 1,500,000.00

In 1925 the Bowery Bank of New York was similarly acquired and similarly merged under the name of Bowery and East River National Bank. The East River National Bank was presided over by Dr. A. H. Giannini—brother of Mr. A. P. Giannini who went from California to New York for that purpose—from the date of its purchase by Bankitaly Corporation to the time when it merged with the Bank of America National Association of New York.

The Bank of America of New York was acquired by Bankitaly Corporation in 1928, immediately converted from a State to a national charter in March of 1928, and merged with the Bowery and East River National Bank during the following month, Dr. A. H. Giannini becoming chairman of the board and Edward C. Delafield its president.

A security affiliate of the Bank of America National Association under the name of Bankamerica Corporation was immediately formed

With a capital of \$10,000,000 and a surplus of \$5,000,000.

America, New York, is a direct successor of the First Bank of the United States, founded in 1812. The capital, surplus, and profits of the Bank of America National Association on December 31, 1929, totaled \$74,428,309.59; its deposits \$305,904,586.25, and its total resources \$437,940,048.82. It is now operating 35 offices in New York City.

The other banks and corporations acquired by Bankitaly Corporation—given in the chronological order of their acquisition—were

the following:

Practically all of the assets of this company consist of business properties in California and elsewhere. Its principal function, therefore, is to acquire, hold title to, manage, and otherwise deal in desirable city real estate.

Banca Dell Italia Meridionale, a controlling interest in which was acquired in 1919. Its head office was then situated in Naples, Italy, and it operated two branches, one in Naples and the other in Pozzuoli. In 1922 its capital was increased from 100,000,000 lire (approximately

\$5,000,000) to 200,000,000 lire (approximately \$10,000,000) and its name was changed to Banca d'America ed'Italia. Its head office moved to Rome and later to Milan—the leading industrial and commercial city of Italy. This bank is to-day operating 37 branches and agencies scattered throughout the Italian peninsula; its working capital is 238,000,000 lire (approximately \$12,000,000), and its total resources approximately 1,021,091,986.29 lire (approximately \$51,054,599.35); it is recognized as one of the most liquid banks in Italy and ranks, in size, among the five largest banks in that nation. The entire present investment of our group in this bank amounts to \$6,340,309.47.

Ameritalia is an auxiliary corporation to Banca d'America e d'Italia, organized in 1928 under the laws of Italy, with a paid up capital of 200,000,000 lire. It is an investment company and deals in both United States and European securities.

In 1926 Bancitaly Corporation acquired the French American Bank, and in 1927 the United Bank & Trust Co., both of the city of San Francisco, These banks were consolidated April 30, 1927, and the French American Corporation was established as the security affiliate of the consolidated bank. In 1928 the Security Trust Co., of Bakersfield was acquired and immediately consolidated with the United Bank & Trust Co., the name of the consolidated bank being changed to United Security Bank & Trust Co.

In addition to its ownership of these operating properties, Bancitaly Corporation invested a very large portion of its working capital in prime securities listed on the New York Stock Exchange.

The capital stock of Bancitaly Corporation was issued entirely in the form of common stock.

Exhibit O, heretofore submitted, contains a table which shows the status on January 23, 1930, of an investor who purchased 100 shares of stock in Bancitaly Corporation on the date of its organization and exercised all his rights to purchase additional shares. Such an investor—having exchanged his Bancitaly Corporation stock for Transamerica—would now own 11,069 shares of Transamerica having a present market value of approximately \$487,036, at a total cost to him of \$135,070, equivalent to an average cost of \$12 per share. This would represent an unbooked profit of \$351,966, at the market price of \$44 a share, or an average profit of \$32 per share. Including the dividend payment of \$48,878.50, the combined gain from appreciation in market value of shares so held, with dividends received, the total would be \$400,844.50. This would average 300 per cent on the investment for the period or 27 per cent per year.

Up to about the middle of 1928, the bulk of the stockholders of

Up to about the middle of 1928, the bulk of the stockholders of both the Bank of Italy and Bancitaly Corporation—about 125,000 in number—were residents of California. Both stocks were listed on the San Francisco Stock Exchange and traded in on the New York Curb. So enthusiastic were these stockholders over the results actually accomplished and realized, that many of them became greedy and borrowed funds wherewith to increase their holdings, while others, encouraged by their example and also desirous of realizing great and certain profits immediately, did likewise. The market values of these stocks under this unprecedented demand naturally increased in leaps and bounds. Outside money began to pour into California and so

called finance companies began to spring up throughout the State advertising their readiness to lend liberally on the security of these These companies and individuals lent money freely, charging as high as 12 per cent per annum and, in some instances, a commission besides. Through our legal department, one of these concerns was arrested and prosecuted for a violation of the California law and a conviction obtained, to which wide publicity was given. These loans and the collateral supporting them were held in escrow by competing banks and by title companies. The terms of these escrows called for a selling of the stock on the market, should the market at any time reach a certain lower level. Mr. Giannini repeatedly warned the Public, through the press, against this excess and cautioned the people to refrain from purchasing the stocks of these institutions unless they bought them for cash and for an investment. As the then president of the Bank of Italy, I, in my annual report to the stockholders, held January 10, 1928 (a copy of which report was mailed to every stockholder and widely commented upon by the press), had the following to say upon the subject:

In the last analysis the sustained market value of any stock is generally reflective of the popular appraisement of present worth and future probabilities of enhancement, and while we prefer to remain silent as to what our thoughts may be upon the subject of justifiable market values, we do wish to voice the belief that with our unusual capitalization and resources, our well-distributed, well-appointed, enthusiastic, and experienced organization, our large number of seasoned, loyal, helpful, and satisfied shareholders distributed throughout the State (most of whom have come from banks acquired and now incorporated in our system); and, finally, with the cooperation of our powerful and resourceful affiliations and the prestige accruing from present position and past performances, no financial institution in California promises to share in greater measure in the lucreased prosperity that inevitably is in store for the West, than does the Bank of Italy.

This optimistic comment, however, should not be accepted by any shareholder, who may be indebted to any source for any portion of his or her holding of bank stock, as an inducement to carry on in expectation of immediate increment or dighter returns, nor should it be taken by others as an encouragement to go into debt for the purpose of increasing their holdings. Those who owe, we would arge to sell enough to clear them, and those who can not pay for what they buy, we would most strongly counsel to strictly refrain.

Despite these warnings, the market values of our stocks during the ensuing February, March, April, and May were run up to ever increasing highs. Bank of Italy passed \$300 and Bancitaly Corporation passed \$200 per share. Suddenly, in the first part of June, 1928, the fire of enthusiasm died out. On a limited market with many sellers and no purchasers, it was not long before the market brices were depressed to levels which in turn set off tier after tier of the above-mentioned escrows, thereby bringing about, with each new low, a new flood of selling orders. Naturally, this abnormal situation caused the stocks to descend to ridiculous lows for a short while and the unpleasant experience dampened speculative and even investment ardor for some time thereafter. The loyalty of practically all of the investing stockholders throughout the ordeal was admirable, and, as far as our banks were concerned, not the slightest evil result occurred. In fact the Bank of Italy showed a very material gain in its deposits as of June 30, 1928, over December 31, 1927.

This occurrence led to the formation of Transamerica Corporation. The reasons underlying its organization are best expressed in the

letter which Mr. A. P. Giannini addressed to the stockholders of Bank of Italy and Bancitaly Corporation on October 24, 1928, and 1 take the liberty of quoting its pertinent portions here:

Pursuant to these deliberations, Transamerica Corporation was incorporated under the laws of Delaware, early this month, and the basis of exchange for Bank of Italy stock has been fixed at one and three-quarters shares of the new corporation for each share of Bank of Italy and the country of Bank of Italy and I tion for each share of Bank of Italy, and on the basis of share for share as between Bancitaly Corporation and Transamerica Corporation.

We firmly believe that the proposed plan will have the following beneficial advantageous, and desirable results: First, consolidation, with resulting saving in operation, into one organization of the control of not only Bank of Italy and Bancitaly Corporation, but of their affiliations as well, namely, National Bankitaly Co. California Joint Stock Land Bank, Parkitaly Co. italy Co., California Joint Stock Land Bank, Bankitaly Agricultural Credit Corporation, Bankitaly Mortgage Co., Americommercial Corporation, Pacific National Fire Insurance Co., and Capital Co.; second, advantages of operation under the favorable corporations laws of Delaware; third, removal of the stock of the Bank of Italy and Bankitaly Corporation. of the Bank of Italy and Bancitaly Corporation from the various exchanges, leaving Transamerica Corporation stock alone to be dealt in on the open market. thus eliminating from the operation of the controlled institutions themselves any concern regarding stock-market fluctuations; fourth, a wide listing of Trans america Corporation stock on the various stock exchanges, thus insuring a broader and more stable market.

As a result of this one communication practically all stockholders of both Bank of Italy and Bancitaly Corporation exchanged their holdings for Transamerica Corporation stock on the basis fixed.

In due course Transamerica Corporation acquired varying interests in the following corporations. They are all set out on Chart No. 2, with "Transamerica" at the bottom (printed at p. 1350):

	Lot con

BANKING DEPARTMENT

Commercial banking: The Bank of America National Association is essentially a commercial bank and the deposit accounts of business organizations, individuals and banks are solicited. Liberal credit facilities are extended to industrial and

commercial houses. Loans are also made on approved collateral.

Thrift department: This department accepts deposits at a higher rate of interest than that which applies to checking accounts. It is primarily intended for the small depositor who is interested in accumulating a fund which can remain undisturbed.

Collections: Collection of notes, drafts, foreign checks, and bills of exchange the function of this department. With world-wide connections, this institution is the function of this department. With world-wide con renders a collection service which is direct and efficient.

Transfers of funds: The Bank of America National Association is enabled through its membership in the Federal reserve system and its correspondents to arrange for transfers of funds to out-of-town points by wire and executes telegraphic orders from out-of-town depositors to make payments in New York

Credit department: The credit facilities of The Bank of America National Association are made available through a carefully organized and efficient credit department. Information as to trade conditions, markets, and industrial conditions helpful to the bank's customers is also furnished by this department.

BRANCHES

Branch office system: Through the advantageous location of branch offices in strategic business centers of greater New York we are in a position to augment our national and international banking service by a system of community banks.

Main office, 44 Wall Street; 8 Broadway, Produce Exchange Building; 257
Broadway, opposite City Hall; 105 Hudson Street, corner Franklin Street; 399 Broadway; 680 Broadway; 124 Bowery, corner Grand Street; 387 Broome Street; 28 Mulberry Street; 282 Seventh Avenue; 1451 Broadway; Madison Avenue, corner Fortieth Street; Seventieth Street Avenue, corner Fortieth Street; Seventieth Street, corner Madison Avenue, 2018 First Avenue, corner One hundred and fourth Street; One hundred and sixteenth Street, corner First Avenue; 363 East One hundred and forty-ninth Street; 4547 Third Avenue; Westchester and Castle Hill Avenues; 3556 White Plains Avenue.

Mr. Backenture, Each of those germonetics is apported a particle.

Mr. Bacigalupi. Each of these corporations is operated entirely independent of the others and managed—in so far as the ordinary conduct of their business is concerned—exclusively by its own competent body of officers and directors. Naturally, Transamerica Corporation exercises its legitimate prerogatives as the principal owner and keeps in constant touch with the activities of its various properties through regular reports that are issued within the organizations for the information and guidance of their own officers. Practically all of the policies of these various institutions were established before Transamerica Corporation was formed, and are still pursued. Any radical departure from any of these policies or abnormal expenditures, however, would call for prior consultation and consent of the management of Transamerica Corporation. The sole concerns of Transamerica Corporation are to select and maintain competent boards of directors and managements for its holdings and to cooperate with them in promoting the efficiency and profitableness of their operations. The financial dealings between Transamerica Corporation and its

The financial dealings between Transamerica Corporation and its controlled banks are purely those of depositor and depositary.

As between the subsidiaries themselves, all financial transactions are kept wholly within the law and the dictates of sound business judgment. Borrowings by subsidiary companies from any of the subsidiary banks have been and are exceptional and entirely upon a well secured basis (listed stocks and bonds with an ample margin).

As between the subsidiary banks in the matter of bank deposits and exchange, all other things being equal, preference is given by one to the other, but as regards new business, where they chance to operate in the same territory, keenest legitimate competition is the rule. Each subsidiary possessing a competent management and being held responsible for the safe and profitable conduct of its own affairs, no other attitude could reasonably be expected.

Exhibit U contains a copy of the articles of incorporation, a copy of the by-laws, and a list of the directors and principal officers of Transamerica Corporation.

(Exhibit U, referred to is here printed in full, as follows:)

1. The principal office shall be in the city of Wilmington, county of New Castle, State of Delaware, and the name of the resident agent in charge thereof is the Corporation Trust Co. of America.

The corporation may also have offices at such other places as the board of directors may from time to time appoint or the business of the corporation may

require.

SEAL

2. The corporate seal shall have inscribed thereon the name of the corporation, the words "Incorporated October 11, 1928, Delaware." Said seal may be used by causing it or a facsimile thereof to be impressed or affixed or reproduced or otherwise. The secretary may have duplicate seals made and deposited for use with such officers as the board of directors may designate.

STOCKHOLDERS' MEETINGS

3. The first or organization meeting of the stockholders shall be held at 460 Montgomery Street, San Francisco, Calif. All other meetings of the stockholders shall be held at the office of the corporation in the city of Wilmington, county of No. 10 Provided housever. That the board of directors New Castle, State of Delaware: Provided, however, That the board of directors may hold said meetings in such other office or place as the said board may designate.

4. An annual meeting of the stockholders, after the year 1928, shall be held on the second Saturday of February in each year, if not a legal holiday, and if a legal holiday, then on the next Saturday following, at 10 o'clock a. m., when they shall elect by a plurality vote, by ballot, a board of directors, and transact such other business as may properly be brought before the meeting.

5. The holders of a majority of the stock issued and outstanding, and entitled to vote thereat, present in persons, or represented by proxy, shall be requisite and shall constitute a quorum at all meetings of the stockholders for the transaction of business except as otherwise provided by law, by the certificate of incorporation or by these by-laws. If, however, such majority shall not be present or represented at any meeting of the stockholders, the stockholders entitled to vote thereat, present in person, or by proxy, shall have power to adjourn the meeting from time to time, without notice other than announcement at the meeting until the required proxy. ing, until the requisite amount of voting stock shall be present. At such adjourned meeting at which the requisite amount of voting stock shall be represented any business may be transacted which might have been transacted at the meeting

as originally notified.

6. At each meeting of the stockholders every stockholder having the right to vote shall be entitled to vote in persons, or by proxy appointed by an instrument in writing subscribed by such stockholder or by his duly authorized attorney and submitted to the secretary at or before such meeting and bearing a date not more than three yaers prior to said meeting, unless said instrument provides for a longer period. Each stockholder shall have 1 vote for each share of stock having voting power, registered in his name on the books of the corporation, except that no share of stock shall be voted on at any election for directors which has been transferred on the books of the corporation within 20 days next preceding such election: Provided, however, That the board of directors shall have power to close the stock transfer books of the stock transfer books of the stock transfer books. the stock transfer books of the corporation for a period not exceeding 40 days preceding the date of any meeting of stockholders, or the date for payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect: Provided, however That also in lieu of closing the stock transfer books as aforesaid, the board of directors shall have authority to fix, in advance, a date not exceeding 40 days preceding the date of any meeting of stockholders, or the date for any payment of dividend, or the date for the allotment of rights of the date when any change of conversion or exchange of capital stock shall go into effect as a record date for the determination of the stockholders entitled to notice of and to yote at an such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights, or to exercise the rights in respect of any change, conversion or exchange of capital stock, and in such case only such stockholders as shall be tookholders as shall be stockholders of record on the date so fixed shall be so entitled to such notice of and to vote at such meeting or to receive payment of such dividend, or to receive such allotment of right, or to exercise such rights as the case may be, notwith standing any transfer of any stock on the books of the corporation after any such record date fixed as aforesaid. The vote for directors, and, upon the demands of any stockholder, the vote upon any question before the meeting, shall be by ballot. All actions shall be had and all questions decided by a plurality vote.

7. Written notice of the annual meeting shall be mailed to each stockholder entitled to vote thereat at such address as appears on the stock book of the

corporation, at least 10 days prior to the meeting.

8. Special meetings of the stockholders, for any purpose, or purposes, unless otherwise prescribed by statute, may be called by the president, and shall be called by the president or secretary at the request in writing of a majority of the board of directors, or at the request in writing of a majority of the board of directors. the board of directors, or at the request in writing of stockholders owning a major ity in amount of the entire capital stock of the corporation issued and outstanding, and entitled to vote. Such request shall state the purpose or purposes of the proposed meeting.

9. Business transacted at all special meetings shall be confined to the objects

stated in the call.

10. Written notice of a special meeting of stockholders, stating the time and place and object thereof, shall be mailed, postage prepaid, at least 10 days before such meeting, to each stockholder entitled to vote thereat at such address as appears on the books of the corporation.

THE TREASURER AND ASSISTANT TREASURERS

31. (a) The treasurer shall have the custody of the corporate funds and securities and shall keep full and accurate accounts of receipts and disbursements in books belonging to the corporation and shall deposit all moneys and other Valuable effects in the name and to the credit of the corporation, in such depositories as may be designated by the board of directors.

(b) He shall disburse the funds of the corporation as may be ordered by the board, taking proper vouchers for such disbursements, and shall render to the president and directors, at the regular meetings of the board, or whenever they

may require it, an account of all his transactions as treasurer and of the financial condition of the corporation. (c) He shall give the corporation a bond if required by the board of directors in a sum, and with one or more sureties, satisfactory to the board, for the faithful Performance of the duties of his office, and for the restoration to the corporation, in case of his death, resignation, retirement, or removal from office, of all books, papers, vouchers, money, and other property of whatever kind in his possession or under his control belonging to the corporation; but the board of directors

may, if they see fit, dispense with such bond.

(d) The assistant treasurers in the order of their seniority shall, in the absence or disability of the treasurer, preform the duties and exercise the powers of the treasurer, and shall perform such other duties as the board of directors shall

prescribe.

SIGNATURES

32. (a) All checks, drafts, notes, acceptances, bills of exchange and all other obligations of the corporation shall be signed by the following officers, to wit, President, or executive vice president, any vice president, any assistant to president, any vice president, the treasurer or assistant treasurer and secretary or assistant secretary, or by any person or persons thereunto authorized by the board of directors. The president or executive vice president, or any vice president dent, or any assistant to the president, or any assistant vice president, or the treasurer or any assistant treasurer, secretary or any assistant secretary, is authorized to indorse on behalf of the corporation, any checks, drafts, acceptances, bills of exchange, notes or other negotiable instruments, and to accept any bills of exchange, drafts or acceptances.

100136-30-vol 2 pt 11-8

(b) All indorsements, assignments, transfers, stock powers or other instruments of transfer of securities standing in the name of the corporation shall be executed for and in the name of the corporation by any of the following officers, to wit, the president, or executive vice president, or any vice president, or any assistant to the president, or any assistant vice president, or the treasurer or any assistant treasurer, or the secretary or any assistant secretary, or by any other person or persons thereunto authorized by the board of diectors.

(b) The president, the executive vice president, any vice president, any assistant to the president, any assistant vice president, the treasurer, any assistant treasurer, or the secretary or any assistant secretary, may execute a proxy to

vote any stock standing in the name of this corporation.

(d) General signing powers shall be vested in the president, the executive vice president, any vice president, any assistant to the president or any assistant vice president, the treasurer, any assistant treasurer, acting with the secretary or any assistant secretary, and said officers are authorized to execute all contracts, deeds, conveyances, mortgages, pledge agreements, negotiable instruments of all kinds and all other written instruments or documents affecting the business or the property of this corporation, and no resolution of any kind or character of the board of directors shall be necessary in order to evidence said authority.

(e) It shall not be necessary to the validity of any instrument executed by any authorized officer of this corporation that the execution of such instrument be evidenced by the corporate seal, and all documents, instruments, contracts, and writings of all kinds signed on behalf of the corporation by any authorized officer thereof shall be as effectual and binding on the corporation without the corporate seal as if the execution of the same had been evidenced by the affixing of the

corporate seal.

VACANCIES

33. If the office of any director or directors becomes vacant by reason of death, resignation, retirement, disqualification, removal from office, or otherwise, the remaining directors, though less than a quorum, shall choose a successor or successors, who shall hold office until the next annual election and until a successor or successors have been duly elected, unless sooner displaced.

DUTIES OF OFFICERS MAY BE DELEGATED

34. In the case of the absence of any officer of the corporation, or for any other reason that the board may deem sufficient, the board may delegate, for the time being, the powers or duties, or any of them, of such officer to any other officer, or to any director: *Provided*, a majority of the entire board concur therein.

REMOVAL

35. Any person elected to office by the board of directors may be removed at any time upon vote of the majority of directors in office at any meeting specifically called for the consideration of such removal.

CERTIFICATES OF STOCK

36. The certificates of stock of the corporation shall be numbered and shall be entered in the books of the corporation as they are issued. They shall exhibit the holder's name and number of shares and shall be signed by the president, or one of the executive vice presidents, or a vice president or any assistant vice president, and the treasurer or an assistant treasurer, and the secretary or an asistant secretary: Provided, That when the law of Delaware shall permit, the board of directors may have the certificates of stock signed by the lithographed or printed signatures of the president, secretary, or other officer; such certificate to be in the form approved by the board of directors.

TRANSFERS OF STOCK

37. Transfers of stock shall be made on the books of the corporation only by the person named in the certificate or by attorney, lawfully constituted in writing, and upon surrender of the certificate therefor.

38. The board of directors shall have power to close the stock transfer books of the corporation for a period not exceeding 40 days preceding the date of any meeting of stockholders, or the date for payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect: Provided however, That in lieu of closing the stock transfer books as aforesaid, the board of directors may fix in advance a date, not exceeding 40 days preceding the date of any meeting of stockholders or the date for the payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect, as a record date for the determination of the stockholders entitled to notice of, and to vote at, any such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights, or to exercise the rights in respect of any such change, conversion, or exchange of capital stock, and in such case only such stockholders as shall be stockholders of record on the date so fixed shall be entitled to such notice of, and to vote at, such meeting or to receive payment of such dividend, or to receive such allotment of rights, or to exercise such rights, as the case may be, notwithstanding any transfer of any stock on the books of the corporation after any such record date fixed as aforesaid.

REGISTERED STOCKHOLDERS

39. The corporation shall be entitled to treat the holder of record of any share or shares of stock as the holder in fact thereof and accordingly shall not be bound to recognize any equitable or other claim to or interest in such share on the part of any other person, whether or not it shall have express or other notice thereof, save as expressly provided by the laws of Delaware.

LOST CERTIFICATE

40. Any person claiming a certificate of stock to be lost or destroyed, shall make an affidavit or affirmation of that fact and advertise the same in such manner as the board of directors may require, and the board of directors may, in their discretion, require the owner of the lost or destroyed certificate, or his legal representative, to give the corporation a bond, in such sum as they may direct, not exceeding double the value of the stock, to indemnify the corporation against any claim that may be made against it on account of the alleged loss of any such certificate; a new certificate of the same tenor and for the same number of shares as the one alleged to be lost or destroyed, may be issued without requiring any bond when, in the judgment of the directors, it is proper so to do.

INSPECTION OF BOOKS

41. The directors shall determine from time to time whether, and, if allowed, when and under what conditions and regulations the accounts and books of the corporation (except such as may by statute be specifically open to inspection) or any of them shall be open to the inspection of the stockholders, and the stockholders' rights in this respect are and shall be restricted and limited accordingly.

CHECKS

42. All checks or demands for money and notes of the corporation shall be signed by such officer or officers as the board of directors may from time to time designate.

FISCAL YEAR

43. The fiscal year shall begin the 1st day of January in each year.

DIVIDENDS

44. Dividends upon the capital stock of the corporation, subject to the provisions of the certificate of incorporation, if any, may be declared by the board of directors at any regular or special meeting, pursuant to law. Dividends may be paid in cash, in property, or in shares of the capital stock.

Before payment of any dividend there may be set aside out of any funds of the corporation will be for dividends such sum or sums as the directors from time.

Before payment of any dividend there may be set aside out of any funds of the corporation available for dividends such sum or sums as the directors from time to time, in their absolute discretion, think proper as a reserve fund to meet contingencies, or for equalizing dividends, or for repairing or maintaining any

property of the corporation, or for such other purpose as the directors shall think conducive to the interests of the corporation.

45. The board of directors shall present at each annual meeting, and when called for by vote of the stockholders, at any special meeting of the stockholders, a full and clear statement of the business and condition of the corporation.

NOTICES

46. Whenever under the provisions of these by-laws notice is required to be given to any director, officer, or stockholder it shall not be construed to mean personal notice, but such notice may be given in writing, by mail, by depositing the same in the post office or letter box, in a post-paid sealed wrapper, addressed to such stockholder, officer, or director at such address as appears on the books of the corporation, or, in default of other address, to such director, officer, or stockholder at the general post office in the city of Wilmington, Del., and such notice shall be deemed to be given at the time when the same shall be thus mailed.

Any stockholder, director, or officer may waive any notice required to be given under these by-laws.

AMENDMENTS

47. These by-laws may be altered or amended by the affirmative vote of a majority of the stock issued and outstanding and entitled to vote thereat, at any regular or special meeting of stockholders if notice of the proposed alteration or amendment be contained in the notice of the meeting, or by the affirmative vote of a majority of the board of directors if the alteration or amendment be proposed at a regular or special meeting of the board and adopted at a subsequent regular meeting: Provided, however, That no change of the time or place for the election of directors shall be made within 60 days next before the day on which such election is to be held, and that in case of any change of such time or place notice thereof shall be given to each stockholder in person or by letter mailed to his last known post-office address, at least 20 days before the election is held.

WAIVER OF NOTICE

48. Whenever, under the provisions of these by-laws or of any law, the stock-holders, directors, or committees are authorized to hold any meeting after notice or after the lapse of any prescribed period of time, such meeting may be held without notice or without such lapse of time by the written waiver of such notice signed by every person entitled to such notice.

AMENDMENT TO SECTION 12 OF BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Californ January 8, 1929, at 2 p. m., section 12 of the by-laws of Transamerica Corporation was amended so as to read as follows, to wit:

"12. The property and business of this corporation shall be managed by its corporation shall be manage

"12. The property and business of this corporation shall be managed by its board of directors, 19 in number. Directors need not be stockholders. They shall be elected at the annual meeting of the stockholders and each director shall be elected to serve until his successor shall be elected and shall qualify."

AMENDMENT TO SECTION 22 OF BY-LAWS

At the same meeting section 22 of the by-laws of Transamerica Corporation was amended so as to read as follows, to wit:

"22. At all meetings of the board seven directors shall be necessary and sufficient to constitute a quorum for the transaction of business, and the act of a majority of the directors present at any such meeting at which there is a quorum shall be the act of the board of directors, except as may be otherwise specifically provided by statute or by the certificate of incorporation or by these by-laws."

AMENDMENT TO SECTION 12 OF BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Calif., on May 29, 1929, at 10.30 o'clock a. m., section 12 of the by-laws of Transamerica Corporation was amended so as to read as follows, to wit:

"12. The property and business of this corporation shall be managed by its board of directors, 22 in number. Directors need not be stockholders. They shall be elected at the annual meeting of the stockholders and each director shall be elected to serve until his successors shall be elected and shall qualify.

AMENDMENT TO SECTION 22 OF BY-LAWS

At the same meeting section 22 of the by-laws of Transamerica Corporation

was amended so as to read as follows, to-wit:

"22. At all meetings of the board eight directors shall be necessary and suffi-cient to constitute a quorum for the transaction of business, and the act of a majority of the directors present at any meeting at which there is a quorum shall be the act of directors, except as may be otherwise specifically provided by statute or by the certificate of incorporation or by these by-laws.

AMENDMENT TO SECTION 16 OF BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Calif., on May 29, 1929, at 10.30 o'clock a. m., section 16 of the by-laws of Transamerica

Corporation was amended so as to read as follows, to wit:

"16. The secretary or a member of the executive committee shall keep minutes of all its proceedings and all proceedings shall, from time to time, be reported to the board of directors and shall be subject to revision or alteration by the board directors provided no rights of third parties shall be affected by such revision or alteration. The presence of four members of the executive committee shall constitute a quorum for the transaction of business. The executive committee may take action without a meeting on the written approval of such action by a majority of the committee. A majority of the directors may fill vacancies in the executive committee. The board of directors shall appoint the chairman of the executive committee and a vice chairman or such number of vice chairmen as the board may determine. The board of directors may appoint other committees, each committee to consist of two or more of the directors which, to the extent provided in the resolution appointing the committee or in these by-laws, shall have and may exercise the powers of the board of directors and the management of the business and affairs of the corporation and may have power to authorize the seal of the corporation to be affixed to all papers which may require it. Such committee or committees shall have such name or names as may be stated in these by-laws or as may be determined from time to time by resolution adopted by the board of directors. Every committee shall keep regular minutes of its proceedings and report the same to the board when required,"

AMENDMENT TO SECTION 32 OF BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Calif., on August 19, 1929, at 4 o'clock p. m., section 32 of the by-laws of Transamerica Corporation was amended so as to read as follows, to wit:

"SIGNATURES

"32. (a) One signature. The president, or the chairman of the executive committee, or any executive vice president, or any vice president, or the treasurer or any assistant treasurer, or the secretary or any assistant secretary, or any other Person or persons authorized by the board of directors, are and each of them is hereby authorized to indorse on behalf of this corporation any checks, drafts, acceptances, bills of exchange, notes, or other negotiable instruments, and to accept on behalf of this corporation any bills of exchange, drafts, or acceptances; to execute for and in the name of this corporation all indorsements, assignments, transfers, stock powers, or other instruments of transfer of stock, bonds, and other securities standing in the name of or owned by this corporation; to execute proxies and to vote any stock standing in the name of this corporation.

AMENDMENT TO SECTION 8 OF THE BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Califon January 20, 1930, at the hour of 10 o'clock a.m., section 8 of the by-laws of Transamerica Corporation was amended so as to read as follows, to wit:

"8. Special meetings of the stockholders for any purpose or purposes, unless otherwise prescribed by statute, may be called by the chairman of the board, and shall be called by the chairman of the board, or vice chairman of the board or president or secretary, at the request in writing of a majority of the board of directors, or at the request in writing of stockholders owning a majority in amount of the entire capital stock of the corporation issued and outstanding, and entitled to vote. Such request shall state the purpose or purposes of the proposed meeting.

AMENDMENT TO SECTIONS 12 AND 14 OF THE BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation held at the office of the company, 460 Montgomery Street, San Francisco, Califon January 20, 1930, at the hour of 10 o'clock a.m., sections 12 and 14 of the by laws of Transamerica Corporation were amended so as to read as follows, to wit:

"DIRECTORS

"12. The property and business of this corporation shall be managed by its board of directors, 28 in number. Directors need not be stockholders. They shall be elected at the annual meeting of stockholders and each director shall be elected to serve until his successor shall be elected and shall qualify.

"14. In addition to the powers and authorities by these by-laws expressly conferred upon the, the board may exercise all such powers of the corporation and do all such lawful acts and things as are not by statute or by the certificate of incorporation or by these by-laws directed or required to be exercised or done by the stockholders: Provided, however, That the board of directors may not, and no officer or committee shall sell the holdings of the corporation in any wholly owned and/or affiliated and/or practically controlled banks or company without the approval of at least two-thirds of the entire membership of the board of directors either expressed at a meeting by resolution concurred in by two-thirds

of the entire board of directors or by a written consent executed by at least two-thirds of the members of the board."

AMENDMENT TO SECTIONS 15 AND 16 OF THE BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Calif., on January 20, 1930, at the hour of 10 o'clock a. m., sections 15 and 16 of the bylaws of Transamerica Corporation were amended to read as follows, to wit:

"COMMITTEES

"16. (a) There shall be an advisory committee of such number as the board of directors may determine appointed by the board of directors and all of whom shall be members of the board of directors, which will meet at such times as it may desire, and which shall have available to it upon its request any information concerning any phase of the activities of the corporation or its affiliated or sub-sidiary companies. It shall be consulted in matters of major importance and matters involving policy, and shall serve in an advisory capacity to the board of directors and the management, and may submit its recommendations or reports to the board of directors, the executive committee, or management. The board of directors shall also elect a chairman of the advisory committee and two vice chairmen thereof, The members of said committee shall hold office for one year

or until their respective successors are elected and qualify.

"(b) There shall be an executive committee of such number as the board of directors may determine, appointed by the board of directors, all of whom shall be members of the board of directors. Regular meetings of the executive committee shall be held in the city of New York at such times and on such notice as shall be fixed by resolution of the executive committee. Special meetings of the executive committee may be held in the city of New York or the city and county of San Francisco, Calif., and may be called by the chairman of the board or vice chairman of the board or the president upon such notice as the executive committee shall fix. The members of the executive committee shall hold office for one year and until their respective successors shall be appointed. The executive committee shall, between sessions of the board, have all the powers of the board of directors in the management of the business and affairs of the corporation, and shall have the power to authorize the seal of the corporation to be affixed to all papers which may require it. The taking of any action by the executive committee shall be conclusive evidence that the board of directors was not at the time of such action in session. The secretary or a member of the executive committee shall keep minutes of all its proceedings and all proceedings shall, from time to time, be reported to the board of directors and shall be subject to revision or alteration by the board of directors provided no rights of third parties shall be affected by such revision or alteration. The presence of four members of the executive committee shall constitute a quorum for the transaction of business. A majority of the directors may fill vacancies in the executive committee. chairman of the board shall be the chairman of the executive committee.

"16. The board of directors may appoint other committees, each committee to consist of two or more of the directors which, to the extent provided in the resolution appointing the committee or in these by-laws shall have and may exercise the powers of the board of directors in the management of the business and affairs of the corporation and may have power to authorize the seal of the corporation to be affixed to all papers which may require it. Such committee or committees shall have such name or names as may be stated in these by-laws or as may be determined from time to time by resolution adopted by the board of directors. Every committee shall keep regular minutes of its proceedings and report same to the board when required."

AMENDMENT TO SECTIONS 20, 21, AND 22 OF THE' BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street, San Francisco, Calif., on January 20, 1930, at the hour of 10 o'clock a.m., sections 20, 21, and 22 of the by-laws of Transamerica Corporation were amended so as to read as follows: follows, to wit:

"20. Regular meetings of the board of directors shall be held without call and without notice at 460 Montgomery Street in the city and county of San Francisco, State of California, on the second Wednesday of each month commencing with the month of March, 1930, at the hour of 3 o'clock p. m. At least two special meetings each year shall be called and held in the city of New York

"21. Special meetings of the board may be called by the chairman of the board on five days' notice to each director, either personally or by telegram; special meetings shall be called by the chairman of the board, the vice chairman of the board, the president or secretary, in like manner and on like notice, at the written request of two directors.

"22. At all meetings of the board one-third of the total number of directors shall be necessary and sufficient to constitute a quorum for the transaction of business, and the act of a majority of the directors present at any meeting at which there is a quorum shall be the act of the board of directors, except as may be otherwise specifically provided by statute or by the certificate of incorporation or by these by-laws."

AMENDMENT TO SECTIONS 23, 24, 27, 28, 29, 30, AND 31 OF THE BY-LAWS

At a special meeting of the board of directors of Transamerica Corporation, held at the office of the company, 460 Montgomery Street. San Fancisco, Calif., on January 20, 1930, at the hour of 10 o'clock a. m., sections 23, 24, 27, 28, 29, 30, and 31 of the by-laws of Transamerica Corporation were amended so as to read as follows, to wit:

"OFFICERS

"23. The officers of the corporation shall be chosen by the directors and shall be a chairman of the board, a vice chairman of the board, a president, two executive vice presidents, vice presidents, a treasurer, a secretary, assistant vice presidents and assistant treasurers, and assistant secretaries. The board of directors may also choose additional executive vice presidents, vice presidents, assistant vice presidents, assistant secretaries, and assistant treasurers, and such other officers as they may determine. The secretary and treasurer may be the same person, and any assistant treasurer may also be an assistant secretary and any vice president may hold at the same time the office of secretary or treasurer.

"24. The board of directors, at its first meeting after each annual meeting of stockholders, shall choose a chairman of the board, a vice chairman of the board, a president, the executive vice president, the vice presidents, the secretary and the treasurer, and such other officers as they may determine, none of whom except the chairman of the board, the vice chairman of the board, and the president read he members of the board.

dent need be members of the board.

"27. The officers of the corporation shall hold office until their successors are chosen and qualify in their stead. Any officer elected or appointed by the board of directors may be removed at any time by the affirmative vote of a majority of the whole board of directors. If the office of any officer or officers or a committee member becomes vacant for any reason, the vacancy shall be filled by the affirmative vote of a majority of the whole board of directors.

"28. (a) The chairman of the board shall be the chief executive officer of the corporation; he shall preside at all meetings of the stockholders and directors; he shall have general and active management of the business, affairs and property of the corporation, and shall see that all orders and resolutions of the board are carried into effect. He shall execute bonds, mortgages, and other contracts requiring a seal, under the seal of the corporation. He shall be ex officio a member of all standing committees, and shall have the general powers and duties of supervision and management usually vested in the chief executive officer of a corporation.

"(b) The vice chairman of the board shall perform such duties as from time to time shall be assigned to him by the board of directors or the chairman of the board. He shall be ex officio a member of all standing committees, and in the absence or disability of the chairman of the board the vice chairman of the board shall perform the duties of the chairman of the board, and, while so acting, shall be subject to all the restrictions upon the chairman of the board.

"29. (a) The president shall perform such executive duties in connection with the general management of the affairs of the corporation as the board of directors

shall prescribe. He shall be ex officio a member of all standing committees; and he shall, in the absence or disability of the chairman of the board and the vice chairman of the board, perform all of the duties of the chairman of the board and, while so acting, shall be subject to all the restrictions upon the chairman of the board. The president in the Pacific coast territory, subject to the direction of the board of directors and the supervision and authority of the chairman of the board shall be the chief executive officer.

(b) The executive vice presidents and the vice presidents, in the order of their seniority, shall, in the absence or disability of the president, perform the duties and exercise the powers of the president, and shall perform such other duties as

the board of directors may prescribe.

(c) Each executive vice president shall have the same powers as the president, and, while subject to the authority of the president, may exercise such powers notwithstanding the fact that the president is not absent or disabled. Any action taken by a vice president in the performance of the duties of the president, or either executive vice president, shall be conclusive evidence of the absence or inclusive. hability to act of the president and the executive vice presidents at the time such action was taken. The vice presidents shall also have such other and further duties as may be assigned to them respectively by the board of directors.

"30. (a) The secretary shall attend all sessions of the board and all meetings of the stockholders and record all votes and the minutes of all proceedings in a book to be kept for that purpose; and shall perform like duties for the standing committees when required. He shall give, or cause to be given, notice of all meetings of the stockholders, and of the board of directors, and shall perform the standing of the stockholders. such other duties as may be prescribed by the board of directors, the chairman of the board, the vice chairman of the board, the president, or the executive vice presidents, under whose supervision he shall be. He shall keep in safe that the presidents of these countries are the presidents. custody the seal of the corporation, and when authorized by the board of these by-laws, affix the same to any instrument requiring it, and when so affixed it shall be attested by his signature or by the signature of the treasurer. He shall be be sworn to the faithful discharge of his duty

absence or disability of the secretary, perform the duties and exercise the powers of the secretary, and shall perform such other duties as the board of directors

The private property of the stockholders shall not be subject to the payment of the debts of the corporation, but shall be exempt from corporate liability.

ARTICLE IX

The number of directors of this corporation shall be fixed and may be altered from time to time as may be provided in the by-laws. In case of any increase in the number of directors, the additional directors may be elected by the board of directors to hold office until the next annual meeting of the stockholders and until their successors are elected and qualified. In case of vacancies in the board of directors a majority of the remaining members of the board may elect directors to fill such vacancies. Any director may, by vote of a majority of the directors, for any cause deemed by them sufficient, be removed as such director, and any director may also be removed by a majority vote of the stockholders entitled to vote at any annual or special meeting thereof, for any cause deemed sufficient by the directors present at such meeting. The officers of this corporation need not be stockholders therein.

ARTICLE X

In furtherance and not in limitation of the powers conferred by statute, the board of directors is expressly authorized:

(a) To make and alter the by-laws of this corporation, without any action on the part of the stockholders; but the by-laws made by the directors and the powers so conferred may be altered or repealed by the stockholders.

(b) To fix, determine, and vary the amount to be maintained as surplus, and subject to the other provisions and requirements of this certificate of incorporation the amount or amounts to be set apart or reserved as working capital.

(c) By resolution passed by a majority of the whole board, to designate three or more of their number to constitute an executive committee, which committee, to the extent provided in said resolution or in the by-laws of this corporation, shall have and exercise (except when the board of directors shall be in session any and all of the powers of the board of directors in the management of the business and affairs of this corporation and have power to authorize the seal of this corporation to be affixed to all papers which may require it.

(d) To authorize and cause to be executed mortgages and liens, without limit as to amount, on the real and personal property of this corporation.

as to amount, on the real and personal property of this corporation.

(e) To sell, exchange, assign, convey, or otherwise dispose of a part of the property (whether real or personal), assets and effects of this corporation less than the whole or less than substantially the whole thereof, on such terms and conditions as they shall deem advisable without the assent of the stockholders

in writing or otherwise.

(f) With the consent in writing of or pursuant to a vote of, the holders of a majority of the number of shares of capital stock issued and outstanding to sell, exchange, assign, transfer, and convey or otherwise dispose of the whole or substantially the whole of the property (whether real or personal), assets, effects and good will of this corporation (including the corporate franchise and other intangible property of this corporation) upon such terms and conditions as the board of directors shall deem expedient and for the best interests of this corporation.

(g) From time to time to determine whether and to what extent and at what time and place and under what conditions and regulations the accounts and books of this corporation, or any of them, shall be open to the inspection of any stockholder; and no stockholder shall have any right to inspect any account, book or document of this corporation except as conferred by statute or the by-laws of as authorized by resolution of the stockholders or board of directors.

ARTICLE XI

This corporation may in its by-laws confer powers upon its board of directors in addition to the foregoing and in addition to the powers and authorities expressly conferred upon them by the laws of the State of Delaware.

ARTICLE XII

The stockholders and board of directors shall have power, if the by-laws so provide, to hold their meetings and to keep the books of this corporation (except such as are required by the law of the State of Delaware to be kept in Delaware) and documents and papers of this corporation outside the State of Delaware and to have one or more offices within or without the State of Delaware at such places as may be designated from time to time by the board of directors.

ARTICLE XIII

All of the powers of this corporation, in so far as the same may be lawfully vested by this certificate of incorporation in the board of directors, are hereby conferred upon the board of directors of this corporation.

ARTICLE XIV

This corporation reserves the right to amend, alter, change, add to, or repeal any provision contained in this certificate of incorporation in the manner now or hereafter prescribed by statute, and all rights and powers conferred by this certific prescribed by statute, and all rights and powers and officers are granted certificate of incorporation on stockholders, directors, and officers are granted

subject to this reservation.

Transamerica Corporation, a corporation organized and existing under and by virtue of the provisions of an act of the General Assembly of the State of Delaware, entitled "an act providing a general corporation law, approved March 10, 1899," and the acts amendatory thereof and supplemental thereto, the certificate of incorporation of which was filed in the office of the secretary of state of Delaware on October 11, 1928, and William H. Snyder, vice president of said Transamerica Corporation, and George E. Hoyer, secretary of Transamerica Corporation, hereby certify:

First. That at a meeting of the board of directors of said Transamerica Corporation, duly held and convened, a resolution was duly adopted, setting forth an amendment proposed to the certificate of incorporation of said corporation, a conv of which resolution is as follows: to wit:

a copy of which resolution is as follows, to wit:

"Resolved, That it is advisable that Article IV of the certificate of incorporation of Transamerica Corporation be and it is hereby amended so as to read as follows:

"ART. IV. The total authorized capital of the corporation is \$1,250,000,000 and the total number of shares authorized of the corporation's capital stock is

50,000,000 and the par value of said shares is \$25 each.

"The shares of capital stock of this corporation may be issued by this corporation from time to time for such consideration as from time to time may be fixed by the board of directors of this corporation; and all issued shares of the capital stock of this corporation shall be deemed fully paid and nonassessable and the holders of such shares shall not be liable thereunder to this corporation or its creditors. No stockholder of this corporation shall have any preemptive or preferential right of subscription to any shares of any stock of this corporation or to any obligations convertible into stock of this corporation, issued, or sold, nor any right of subscription to any thereof other than such, if any, as the board of directors of this corporation in its discretion from time to time may determine, and at such price as the board of directors from time to time may fix, pursuant to the authority thereby conferred by the certificate of incorporation of this corporation, and the board of directors may issue stock of this corporation, or obligations convertible into stock, without offering such issue of stock, either in whole or in part, to the stockholders of this corporation. The acceptance of stock in this corporation shall be a waiver of any such preemptive or preferential right which in the absence of this provision might otherwise be asserted by stockholders of this corporation or any of them.

"This corporation shall be entitled to treat the person in whose name any share is registered as the owner thereof, for all purposes, and shall not be bound to recognize any equitable or other claim to, or interest in, such share on the part of any other person, whether or not the corporation shall have notice thereof

save as expressly provided by the laws of the State of Delaware.'

"Be it further resolved, That a special meeting of the stockholders of Transamerica Corporation be and it is hereby called to be held on the 9th day of February, 1929, at 9.30 a. m. of said day, at the office of the company, Du Pont Building, in the city of Wilmington, State of Delaware, for the consideration of such amendment and for the purpose of voting upon said recommendation made by the directors to amend the certificate of incorporation of Transamerica Corporation by increasing the authorized capital stock of the company from \$250,000,000, evidenced by 10,000,000 shares of a par value of \$25 each, and for the transaction of any and all business in connection therewith that may properly come before such meeting; and further

"Resolved, That written notice of such special meeting, signed by the president

"Resolved, That written notice of such special meeting, signed by the president and the secretary of the company, be either delivered to each stockholder entitled to vote in respect of said proposed amendment or entitled to attend said meeting or mailed to him at his post-office address, if known, at least 10 days before the date fixed for said meeting, said notice to set forth a brief summary of the changes to be effected by said amendment, and said directors deem it advisable that said notice shall contain a brief summary of said changes to be effected by said amendment instead of containing a copy of said amendment in full."

ment instead of containing a copy of said amendment in full."

Which resolution declared said amendment advisable and called a meeting of the stockholders of said corporation for consideration thereof.

the stockholders of said corporation for consideration thereof.

Second. That thereafter, pursuant to the aforesaid resolution of its board of directors, a special meeting of the stockholders of said Transamerica Corporation

was duly called and held in accordance with law and the by-laws of the corporation, at the office of the corporation in the city of Wilmington, State of Delaware, on the 9th day of February, 1929, at 9.30 o'clock in the forenoon, at which meeting more than a majority of the voting stockholders of said corporation were bresent in person or by proxy. That at said meeting a vote of the stockholders by ballot in person or by proxy was taken for and against said proposed amendment, which vote was conducted by Alfred Jarvis and L. H. Herman, two judges appointed for that purpose by said meeting; and that at said meeting by vote conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid, said amendment was adopted pursuant to section 26 of the conducted as aforesaid and the conducted as a conducted as aforesaid and the conducted as a conducte the general corporation law of Delaware, as amended, the persons or bodies corporate holding the majority of the issued and outstanding voting stock of shares were voted against the same, as appears by the certificate made by said judges.

In witness whereof said Transamerica Corporation has caused its corporate withess whereor said Transander to be signed by its vice president

and its secretary, this 9th day of February, 1929.

WILLIAM H. SNYDER, Vice president. GEO. E. HOYER, Secretary.

STATE OF DELAWARE, County of New Castle, 88:

Be it remembered, that on this 9th day of February, 1929, personally came before me Herbert E. Latter, a notary public in and for the county and State storesaid, William H. Snyder vice president of Transamerica Corporation, a corporation described in and which corporation of the State of Delaware, the corporation described in and which recuted the foregoing certificate, known to me personally to be such, and he, the said William H. Snyder as such vice president, duly executed said certificate before me and acknowledged the said certificate to be his act and deed, and the said the said vice president. act and deed of said corporation; that the signatures of the said vice president and deed of said corporation to said foregoing certificate are in the handwriting of the said vice president and secretary of said company, respectively, and that the seal affixed to said certificate is the common or corporate seal of said corporation, and that his act of sealing, executing, acknowledging, and that his act of said corporation, and that his act of sealing, executing, acknowledging, and that his act of said corporation, and that his act of sealing, executing, acknowledging, and that his act of said corporation, and that his act of said corporation. delivering the said certificate was duly authorized by the board of directors and stockholders of said corporation.

In witness whereof I have hereunto set my hand and seal of office the day and

Year aforesaid.

HERBERT E. LATTER, Notary Public.

Appointed February 24, 1927; State of Delaware; term two years.

STATE OF DELAWARE,

Office of Secretary of State: Charles H. Grantland, Secretary of State of the State of Delaware, do hereby certify that the above and foregoing is a true and correct copy of certificate of amendment of certificate of incorporation of the Transamerica Corporation, as have described in the correct copy of certificate of amendment of certificate of incorporation of the Transamerica Corporation, as beceived and filed in this office the 11th day of February, A. D. 1929, at 1 o'clock

In testimony whereof I have hereunto set my hand and official seal, at Dover, his 11th day of February in the year of our Lord one thousand nine hundred and wenty-nine.

[SEAL.]

CHARLES H. GRANTLAND, Secretary of State.

Mr. BACICALUPI. This preliminary statement, owing to the ground be covered and explained, has necessarily become very long.

I ask your indulgence, however, if I prolong it a little, because I feel that it would be incomplete were it not to include a brief announcehent of at least a few of the opinions we hold with reference to the Subject matter of this timely investigation, formed as a result of our

We see nothing wrong with well-organized and well-managed group banking as it exists in the United States to-day, excepting that it is not as resourceful, flexible, efficient, or economical as branch banking. We believe that group banking is a great improvement over the individual or unit form, however, and a decided step in the right direction;

We firmly believe that large-scale branch banking over wide and diversified areas has demonstrated its decided superiority, in the following particulars, wherever it has been tried:

1. It is more economical because:

(a) Operating expenses should be less, due to the efficiencies and economies which large-scale organization, purchasing, and so forth, make possible.

(b) Overhead should be less, due to the centralization of administrative functions and elimination of unnecessary duplication of

facilities.

(c) Credit losses are less, due to intelligent credit supervision by picked men, which only a large and highly profitable institution can afford to employ, and due also to the inherent soundness that comes from loans spread over a wide area and competent officers close at hand to watch them, as against loans all placed in one community of lent at a distance without any one connected with the lending bank to constantly follow them up.

(d) Assets enjoy a higher earning rate, due to the increased facilities for investment and greater experience in investment that naturally comes with the handling of large amounts of money.

2. Local communities receive a safer and more adequate banking

service because:

(a) They enjoy a sound depositary for funds that presents an equal and undivided responsibility to all its patrons, and is capable of easily weathering the complete or partial agricultural or industrial failure in any given section during one or more years.

(b) No financial need is too large or too small to be supplied; and such banks are in a far better position to finance the sound and legitimate growth of a community than would be possible through the

employment of local capital alone.

(c) An opportunity is offered residents of every community served to share, through stock ownership, in the profits not alone arising from the branch within their own locality, but those that accrue from the entire system as well.

3. Branch banking is a financial bulwark making generally for greater soundness and progress and is destined to become, as we see

it, one of the Nation's most invaluable assets.

We have for several years been, in principle, favorably disposed to branch banking without any territorial limitations. It is our view that the ideal system of banking should permit parent banks to establish branches in any part of the world. This privilege is now possessed by all of the leading foreign banks and has been of great value to for eign countries in building up and holding their foreign trade. We have become a great commercial nation and our prosperity is dependent upon the efficient development of our foreign trade in all sections of the globe. Congress has recognized in the Federal reserve act the principle that banking should follow this trade by giving to national

banks the right, with the approval of the Federal Reserve Board, to establish branches in foreign countries. Recently the Bank of Italy National Trust and Savings Association was given permission to open

a London branch.

While we recognize that our country is not now prepared by experience or education to engage in nation-wide branch banking we are hevertheless of the theory that this type of branch banking under Proper regulation and control would give, in conjunction with foreign branches, the widest possible diversification of business and the greatest soundness. Such a system of branch banking would not, however, be expected to proceed entirely from New York City. In our great country the future will witness many strong commercial centers with banks fully able to exist independently of New York. There would be branch banking systems with head offices in Minneapolis, San Francisco, Detroit, Chicago, Buffalo, St. Louis, Atlanta, New Orleans, and so on.

For the present we are engaged in branch banking in the State of California upon a State-wide scale. Our branches are operated under great variety of conditions of soil, climate, industry, and business. While we are not advocating or supporting any particular legislative suggestions at this time we are nevertheless in a position, by virtue of our experience in every aspect of branch banking, to avail ourselves of any enlargement of the territory in which national banks may be

Permitted to engage in branch banking.

I wish to thank the committee for its patience and consideration and I shall be glad to answer to the best of my ability any questions

which you may propound.

The CHAIRMAN. I am going to suggest, Mr. Bacigalupi, that the committee recess now until 2.30 this afternoon, when we shall be Pleased to have you back. I am supposing, now, that you have completed your formal statement.

Mr. Bacigalupi. Yes, sir.
The Chairman. The members of the committee will want to Ruestion you on different phases of your statement at the afternoon Without objection, then, the committee will stand in recess until 2.30 this afternoon.

Whereupon, at 12.25 o'clock, p. m., the committee recessed until

2,30 o'clock, p. m.)

AFTER RECESS

Upon the expiration of a recess, the committee resumed its hearing.

The CHAIRMAN. The committee will please come to order.

My attention has been directed to a matter that I want to call to the attention of the committee, to the effect that a concern in New York City, calling themselves "patent law reporters," 154 Nassau Street, headed by Herbert B. Sanson, is apparently taking these proceedings held before our committee on the subject of branch, chain, and group banking and is reprinting them and apparently selling them to the public.

From the information which comes to me from a reliable source, they are conducting a campaign for the sale of these public hearings, which are available to everyone in the country without cost so long

as the supply furnished the committee lasts.

It would seem unfortunate that anyone should be attempting to exploit the distribution of these hearings for the purpose of making money.

The circular or card of some sort which these people are apparently

sending out is as follows:

BRANCH, CHAIN, AND GROUP BANKING

Every phase of this important subject is being investigated by House Committee on Banking and Currency

Not since the creation of the Federal reserve system has anything so vitally affected American banking.

Send your order to-day so we will know how many copies to prepare of the proceedings.

HOUSE RESOLUTION NO. 141

PATENT LAW REPORTERS, 154 Nassau Street, New York.

Please prepare and send me ____ copies of the proceedings of above committee, for which I agree to pay at the rate of 25 cents per page.

Signature Title City

The CHAIRMAN. One banker, without stopping to think and being interested in the hearings, signed one of these cards, and a few days later was presented with a bill for \$1,200, and he is now resisting the payment of this bill and these people are evidently attempting to collect.

I simply wanted to call this to the attention of the committee 50 that you would know what is taking place. It would seem to me that it is a matter that ought to be stopped. I do not know that it is within the juridisction of the committee to stop it.

Great numbers of these hearings have been asked for and mailed

out. They are undoubtedly getting them from these printed hearings. I simply want the committee to know that some people were at tempting to exploit the banks in regard to these hearings. I am sure that if any bank wants copies of these hearings, they can be made available through the usual channels here without going to to this great expense, but it is apparent that some banks are innocently being mulcted in this manner.

Mr. Wingo. As I understand it, this concern made inquiries beforehand, and, of course, the clerk properly told them he knew of no law against it, and there is no reflection whatever on the clerk;

he did the proper thing.

I imagine that these people, by payment of the fixed charges provided by law and the regulations of the Government Printing Office, could get copies of the hearings, but the viciousness of it was that, while it was perfectly lawful, they sent out notices and took advantage of what they know is an obvious fact, that the busy banker possibly would get the impression that he has to pay that much in order to get the official reports of this committee, when there has never been any disposition upon the part of the House to decline to allow us to have printed whatever was necessary to meet the legitimate demands of those interested in any of our hearings.

I think it would be unfortunate if any bank should be required to pay for a copy of these hearings, and I think it is a part of a proper charge upon the Public Treasury for this committee to have whatever copies printed that may be necessary to meet the demands of any banker or of any other citizen who is interested in this subject, having them follow the customary course of writing to the committee or to

their own Congressman or Senator in order to get copies.

I think the chairman ought to consider how he can make public such a suggestion, even though it may result in greater demand being made upon us than ordinarily would be made, for I do not like the idea of a bank, like the one you mentioned, having to pay \$1,200 and then perhaps having to pay five, six, or ten times that much before they get through, and I think something ought to be done to warn the bankers that they do not have to buy these hearings, that if any bank is interested the committee will furnish copies to them, either through request made directly to the committee or on their Congressman or Senator.

Mr. Fort. Of course, we can not furnish them without limit, with-

out exhausting the appropriation.

Mr. Wingo. What we ought to do is to meet every legitimate demand without the bankers having to pay some private source a profit

for these hearings.

Mr. Fenn. In connection with Mr. Strong's very valuable testimony before the committee a year or two ago, the chairman informed me that they had an authorization to print 5,000 extra copies, and the demand for these hearings is going to be as great.

The CHAIRMAN. Greater.

Mr. Fenn. The time will come when we will have to ask for that

authorization.

Mr. Wingo. But if the point as to demand should be reached that Mr. Fort refers to, that we would have exhausted our appropriation, we could then merely do what we frequently have to do, tell them that certain documents are exhausted but that they can procure them from the Public Printer at a certain price, and to find out and tell

them what that price is.

It might be wise, in order to prevent a terrific and unnecessary demand, to let the committee simply take care of requests through the members, and then if some man should write me where I did not think he was entitled to it, where it was mere idle curiosity on his Part, I could do with him as I do sometimes with others, tell him that, of course, I have not an available copy to send him but that it can be procured by purchasing it from the Public Printer for so much.

Mr. Fenn. I do not recall of these hearings ever having been in

the Public Printer's hands.

Mr. Wingo. I think we should arrange for additional copies to be

distributed at cost.

The Chairman. I think that, so far as additional copies are concerned, we probably will find it necessary to get authority to print them, and later on, perhaps at the conclusion of this study, it may be possible to print them in one or two volumes instead of in the smaller pamphlets as now.

I brought this matter up so that it would be a notice to the country generally that this thing was taking place, and that it was not the view of the committee that anyone should be permitted to exploit

the banks.

I want to quote a little further— Mr. Goodwin. May I ask a question? The CHAIRMAN. Yes.

Mr. Goodwin. Do I understand that any private individual or organization may print a copy of the hearings before this committee and include on the cover, "House of Representatives, United States Congress, Public Document Number so and so"?

The CHAIRMAN. I understand that can be done.

Mr. Wingo. I do not know how far they could go. I suggest, Mr. Chairman, that you look into what the law is, and the precedents, and what the rulings have been with respect to copying a public document by way of private printing.

The CHAIRMAN. I will be very glad to do that.

So that the members of the committee may know what is happening, I would like to finish this statement. This gentleman writes that an officer in his bank glanced over this card, a copy of which I have inserted in the record, and concluded from the reading of the contract that he was ordering four copies of a pamphlet that would cost 25 cents each. Then the letter goes on-

He thought-

The officer of that bank-

it would be worth that much to have these reports here in our files—not that we had any particular use for them. To our great astonishment we find that a set of these proceedings consisted of more than two volumes and enough names so that the four conics would be the pages so that the four copies would make an aggregate cost of something like

\$1,200.

The thing is a fraud on its face, of course, and we canceled the order immediate the thing is a fraud on its face, of course, and we canceled the order immediate the course of diately as soon as we discovered the error, April 23, explaining that we had

misread his contract.

We are to-day in receipt of the following letter from this man Sansom: "We were very much surprised to receive your letter of April 23 stating that you were returning the proceedings of branch, chain, and group-banking investigations." tigation after all the hard work we did in filling your signed order which we

accepted as bona fide. "When the packages arrive we shall naturally be compelled to refuse to accept the same, because we feel that we have fulfilled our part of the specific performance contract called for in your signed order, a photostatic copy of which is inclosed herewith. We tried to make it so simple and plain that a child could understand it child could understand it.

"We must therefore insist that you O. K. our statement for payment as soon as possible. Will you kindly advise your decision in the matter?

"Yours very truly,

"PATENT LAW REPORTERS. "SANSOM."

Mr. Brand. What city was that letter sent from? The Chairman. New York City.

Mr. Dunbar. Mr. Chairman, some of the bankers would like to read the proceedings as they occur, during the time we are in session. Now, we can not receive enough copies to send them to all the banks in our district, and possibly to supply that kind of a want when the proceedings are over. As I understand it, we will then receive enough copies so that we can send one to each bank in our districts.

Mr. Wingo. No.

Mr. Dunbar. We can not?

Mr. Wingo. Do not let that suggestion get "orated" around.

Mr. Dunbar. Does not this fill a want?

Mr. Chairman, may I ask Mr. Wingo if this does not fill a want? Mr. Wingo. No; there are some bankesr in my district and yours that would not read them even if we sent them to them.

Mr. Brand. Some of them have not time.

Mr. Wingo. I move this, that the chairman be directed to investigate this matter fully and take such steps as he deems proper to properly protect the banks against exploitation and the hearings of this committee from being used in an improper way, and that he then advise the committee subsequently what he has done and found out.

The CHAIRMAN. Is there a second to that motion?

Mr. Fenn. I second the motion. The Chairman. It is so ordered.

Now, Mr. Bacigalupi, Mr. Fort has to be away from here a little later on, and I am going to break the regular program to let Mr. Fort proceed with you at this time.

STATEMENT OF JAMES A. BACIGALUPI-Resumed

Mr. Fort. Let me say, Mr. Chairman, that if there is anyone else

In the same boat, I should be glad to have him proceed.

In your various set-ups, Mr. Bacigalupi, have you any rules and regulations which render it certain that there is no cross ownership of each other's securities by your corporations?

Mr. Bacigalupi. Yes, sir.

Mr. Fort. In other words, to take a concrete illustration from the chart, would it be possible, in the way you are operating, for the Bank of Italy, to be the owner of stock of the Transamerica Corporation?

Mr. BACIGALUPI. No, sir.

Mr. Fort. Would it be possible for the Bank of Italy National Trust and Savings Association to have loans on the stock as collateral of the Transamerica Corporation?

Mr. BACIGALUPI. Yes, sir.

Mr. Fort. Generally speaking, Mr. Bacigalupi, is it not possible for a considerable duplication of resources to occur in any like organization if the subsidiary corporations of a major holding company either own the stock of the parent company or loan on it?

Mr. Bacigalupi. I would say no. I have not the exact terms of the law that is applicable to that particular point clearly in mind, but the national bank act prescribes very clearly the percentage of the capital of a bank that may be loaned to any individual borrower or the char-

acter of security to be given.

Mr. Fort. I think you have got my question a little confused. I do not refer so much to the loan by the Bank of Italy to the Transamerica Corporation. The national banking act does regulate the amount of loans that could be made to one borrower, but it does not regulate the amount of loans that can be made on one type of collateral. For example, we can loan 10 per cent, we will say, of the resources to an individual borrower, but there is nothing in the law as it stands at the present time to prevent a bank lending 100 per cent of its total resources on the identical collateral, whether Government bonds or any other security.

Mr. Bacigaluri. I do not have that clearly in mind. My impression was that the law was full on that subject and that it did limit it as to the quality or kind of security. Our policy, however, has been that we have been very careful in our loans on any collateral to see to it that not more than a certain percentage was loaned on any type

of security, and then, also, that that particular loan should not exceed a certain percentage of the value that was fixed on that security by the finance committee of the bank.

0

t

Mr. Fort. That interests me very much parenthetically, because we have had that question up here, as to whether or not there should be a limitation of the percentage of a bank's resources which should be loaned on an identical collateral. You say that you have such rules?

Mr. BACIGALUPI. We have such a rule, and we apply that.

Mr. Fort. What is that rule, as to the maximum limit of your resources that can be loaned on a certain collateral?

Mr. Bacigalupi. My recollection of the rule is that they shall not lend more than 50 per cent.

Mr. Strong. There are just one or two things that I wanted to

In your statement to the committee, you said:

Briefly told, the method used by the Bank of Italy in acquiring the stock of a bank prior to the early part of 1917 was as follows: California forbaded and still forbids the bank to purchase the stock of another bank.

Then you went ahead and described how you organized the corporation, first using individuals to buy that stock for the corporation.

Mr. Bacigalupi. Possibly you misunderstood me or I did not make

myself plain.

Section 31 of the bank act, which is the only provision of the California bank act which has to do with the purchase of another bank, deals only with the purchase of assets of the other bank, namely, mortgages, notes, bonds, and the other assets that make up the going concern. Now, naturally, if you were the owner of a bank that was about to be sold, the preliminary negotiations would have reference not to the assets but would have reference to how much you were going to get for your stock in that bank, and you naturally would not consent to the transfer of the assets of your bank, to be incorporated into the assets of the Bank of Italy until you knew definitely how much you were going to get, and in most instances you would want to have the money in hand or the consideration in hand for your stock, which represented your interest in that business.

Inasmuch as the law forbids one bank from buying the stock of another bank, we had to resort to individuals buying the stock, who were friendly to the bank, and then proceeding under section 31 of the bank act to sell, get the two-thirds consent of the stock of the selling bank, get the two-thirds consent of the stock of the purchasing bank, and the resolution of authorization from the boards of directors of the purchasing bank and of the selling bank, and then come to an agreement as to the purchase and sale of those assets pursuant to section 31, and when that operation was completed there was left in the shell of the selling bank in assets and cash, or convertible assets, capital, surplus, and undivided profits, sufficient to retire or to reimburse the individuals for the stock they purchased.

Mr. Strong. Then, when these friends of the bank bought the stock they bought it for the bank?

Mr. Bacigalupi. Yes, sir.

Mr. STRONG. And turned it over to the bank?

Mr. Bacigalupi. Yes, sir.

Mr. Strong. That was done to avoid the law.

Mr. Bacigalupi. No, not to avoid the law. It was done to comply with the law.

Mr. Strong. No. The law forbade a bank from buying the stock of another bank, so the friends of the bank bought the stock and turned it over to the bank, and that gets around the law.

Mr. Bacigalupi. The bank did not buy the stock; it bought the assets in strict compliance with section 31.

Mr. Atrong. What becomes of the stock?

Mr. Bacigalupi. It bought the assets from the then stockholders of the bank, who were the friends of our institution.

Mr. STRONG. But what became of the stock finally?

Mr. Bacigalupi. It was liquidated; the bank was liquidated and

those who purchased it repaid.

Mr. Strong. To get around the law, which says that one bank can not buy the stock of another, your bank has its friends buy the stock, and then from its friends it buys the assets, and there is nothing left for the institution but to liquidate.

Mr. Bacigalupi. It was all done legally.

Mr. Strong. It was done legally to avoid that statute.

Mr. Bacigalupi. There was not any avoidance of a statute. was done openly, and with the full acquiesence of the supervisory authorities.

Mr. Strong. It might be, but it got around the California law. In the purchase of these banks, was any money made, any increased amount of stock issued? To be frank about it, was any water put into it?

Mr. Bacigalupi. I do not know exactly what you mean by water.

Mr. Strong. Oh, yes, you do.
Mr. Bacigaluri. No; in this connection I do not, because the capitalization of the bank was increased from time to time, as was referred to in my opening statement of this morning, and the dates of the increase of the capital of the bank and the prices at which the Various issues were sold for are all tabulated in Exhibit A that is before this committee.

Mr. Strong. When a bank was bought by friends of your bank and

then the assets turned over, was any money made?

Mr. Bacigalupi. No, sir; not a nickel.

Mr. Strong. Was any money made or any stock watered, any Paper profits made in the building of these subsidiary corporations, or the corporations to take over these various organizations or banks?

Mr. Bacigalupi. I do not understand your question.

Mr. Strong. Well, let us take the purchase of these various banks. The Commercial National Bank, the Liberty Bank, and the Bank of America were consolidated into the Liberty Bank of America, and that turned over to the Bank of Italy.

Mr. Bacigalupi. Yes, sir.

Mr. Strong. Were any paper profits made in those transactions? Mr. Bacigalupi. No, sir. If there were any profits resulting from any of these transactions, they were shared by all of the stockholders of the institution.

Mr. Strong. Was there any profit?

Mr. Bacigalupi. I am positive there was not any profit, because they were sold at their actual appraised value.

Mr. Strong. If the Bank of Italy takes over a bank or organizes a bank or has its friends buy a bank and then buy the assets and that is converted into the Bank of Italy, is there any stock issued in excess of the amount of stock of the original bank?

Mr. Bacigalupi. No. If the Bank of Italy, for instance, were to buy a bank to-day, its capital is more than ample to accommodate a bank or several banks of rather large structure, and there would be no

occasion to issue any additional capital.

Mr. Strong. I also noticed that in your statement you said that one of the principles you insist upon is total abstinence from politics and all controversial questions.

Mr. Bacigalupi. Yes, sir; that do not directly affect the weal of the

Mr. Strong. That is what I wanted to know. If you thought that the good weal of the institution was to be served by getting into politics, would the Bank of Italy get into politics?

Mr. BACIGALUPI. No, sir; not as such.

Mr. Wingo. What is that? Mr. Bacigalupi. Not as such.

Mr. Strong. Not as such. Would its officers get into politics? Mr. Bacigalupi. No. I pointed out this morning that there were 125,000 people who owned an interest in these institutions. Natur rally they would not take kindly to a deal that they did not consider fair and just.

Mr. Strong. Have you taken any interest in State politics in

California?

Mr. Bacigalupi. The bank has never done anything of the kind. As far as the last governor's campaign was concerned, I have not any doubt that a number of our stockholders in California voted for the present governor as against Governor Richardson, whose administration was openly and avowedly antagonistic to our institution. In fact, the existence or the further growth of our institution was practically one of the issues of the campaign.

Mr. Strong. Then the bank does get into politics.

Mr. Bacigalupi. No; the bank does not get into politics.

Mr. Strong. Of course, the charter itself does not get into politics. Mr. Bacigalupi. I do not even mean to be technical or facetious, Mr. Congressman, in what I am saying.

Mr. Strong. You say you have 100,000 employees, and, of couse, they have relatives and friends and families, and you say that they

got into this governor's fight?

Mr. Bacigalupi. I did not say we had 100,000 employees. I said we had 125,000 stockholders in the Bank of Italy and in the Bancitaly Corporation-

Mr. Strong. And they have friends?

Mr. Bacigalupi (continuing). Who have money invested in these institutions, and it was a most natural thing for them to resent any arbitrary position or any unawful and unjust position in their estimation and contrary to their interests.

Mr. Strong. Of course, they would be advised by somebody that

their interest was affected.

Mr. Bacigalupi. I do not think there was anybody in the State of California that did not know it was going on. In fact, there was pending at that particular time, and prior to the campaign, a suit in

the supreme court entitled "Bank of Italy v. John Franklin Johnson as superintendent of banks of the State of California," which had to

Mr. Strong. Now, let me ask you this—Mr. Bacigaluri. Pardon me, but I would like to explain this, because I think that in fairness to the people whom I represent here We should have the facts, since you opened that up.

Mr. Strong. Go right ahead.

Mr. Bacigalupi. I read to you purposely this morning the only Sections in the California banking act which deal with the right of a State bank to establish branches. That power is vested exclusively In the superintendent of banks, and it is made entirely dependent upon his finding as to whether or not the public advantage and convenience of the locality is to be promoted by the establishment of such a branch. It leaves him practically the czar of the situation.

Now, the Bank of Italy had been operating in the city of Los Angeles since 1912. It entered Los Angeles not brand new, but through the acquisition not of one but of several banks which it

Operates in the manner I outlined this morning.

the great city that it is to-day. Within the last six or eight years, los Angeles has grown to double, triple, or even quadruple its former

population.

Mr. Giannini was one of the first to sense the need or the opporunity of a bank operating in Los Angeles that was not originally designed for a large town, with its narrow streets and the rest of it, and with the outlying area becoming rapidly populated by this influx of people from all parts of the United States, and that it was the opportune thing for a bank to bring itself to the people in these outying business districts that were rapidly springing up throughout the city.

It was then about 1921 when our competitors in California began to encourage, following the example of the Bank of Italy, the establishment of branches, and they began to work on the superintendent of banks and they got him to enunciate what is known as the de novo fule—in other words, he made a law which we felt was absolutely llegal—to the effect that a bank might establish branches only in the locality where it had its principal place of business, and that was done the face of a statute which was plain and which made no dis-

crimination between any State banks in California.

So that they began to get permits for all of these branches, and the Superintendent of banks found that the public interest and convenience would be promoted in the event that they asked for the privilege of establishing a branch, but to us he would say, "Because you have Your head office in San Francisco, under the de novo rule I can not grant you that permission."

In the flyleaf of this brief, which I filed with this committee, our attorney tabulated the branches that were granted to the various banks in Los Angeles territory, and I will read here merely the

lootnote.

Between June 20, 1921, and June 18, 1925, the date this proceeding was committeed (four years) Superintendents Dodge and Johnson together granted permits for 122 de novo branches in Los Angeles, 2 to the petitioner, 3 to the Bank of America, and 117 to the above-named 5 favored Los Angeles banks.

Now, I wish to present that, Mr. Chairman, and to have it marked the next exhibit letter. (Exhibit V.)

The CHAIRMAN. Without objection, the part referred to will be printed in the record at this point.

Between June 20, 1921, and June 18, 1925, the date this proceeding was commenced (four years), Superior tendents Dodge and Johnson together granted permits for 122 de novo branches in Los Angeles, 2 to the petitioner, 3 to the Bank of America, and 117 to the above-named 5 favored Los Angeles banks.

The history of the petitioner's 6 branches in Los Angeles (4 purchased and 2 de novo) appears infra P. I. The history of the 15 branches acquired through merger by California Bank appears in Exhibit 114 (Appendix, p. 6).

Mr. Strong. Then, I understand from what you said that the fact that the banks that were your competitors seemed to get more consideration from the superintendent of banks forced the stockholders of your bank to take an interest in politics?

Mr. Bacigalupi. It forced them to a decision as to what candidate

who was running for office they would vote for; yes.

Mr. Strong. And when that candidate was elected, was the man who was then appointed superintendent of banks satisfactory to your stockholders?

Mr. BACIGALUPI. Neither the stockholdings nor any of our instilutions had absolutely anything to do with the naming of the superintendent of banks.

Mr. Strong. I understand that, but I am asking you if the super-Intendent of banks that the new governor appointed following this

contest was satisfactory to your stockholders?

Mr. Bacigalupi. He was just as satisfactory to our stockholders as he was to the stockholders of every other bank.

Mr. STRONG. Since he has been in office, have you been getting

as square a deal as you did before?

Mr. Bacigalupi. The Bank of Italy, within a very few days after he was named by the governor, became a national bank, and thus put itself out of the jurisdiction of the superintendent of banks of the State of California.

Mr. Strong. Have you any State banks in your group?

Mr. Bacigalupi. We have now the Bank of American of California.

Mr. Strong. And are they getting a square deal? Mr. Bacigalupi. They are getting a square deal.

Mr. Strong. But before they did not?

Mr. BACIGALUPI. No, sir.

Mr. Strong. The incentive, then, is to get into politics, for these

big institutions?

ked

be

561

Y

1

N

111313888 151

n-

4.

Mr. Bacigalupi. I deny that the Bank of Italy or any of its stockholders as such is in politics, and I deny that the Bank of Italy has ever asked for or ever received political favor from any California official.

Mr. Strong. The proposition I am trying to get at is this: I wery huch fear, as a citizen, that great banking institutions such as you are building up in California and such others that are being built up will get into politics. The second national bank in the United States did get into politics.

Mr. Bacigalupi. I do not think you need have any apprehensions

on that score.

Mr. Strong. No, because
Mr. Bacigalupi. May I say this? Just to illustrate, there would Not have been a chance for the Bank of Italy or any of its affiliations doing anything in politics unless the people themselves who had an Interest in this institution felt that they were absolutely being discriminated against.

Mr. STRONG. Certainly.

Mr. Bacigalupi. All right. The average holding of the 125,000 Stockholders of our institution, as I recall it, was about nine shares each. Now, you can not conceive that on any political issue or on any political candidate that there would be any unanimity or that there would be any consensus of opinion, or that there would be any power resting in the hands of the administration of an institution of that type to get Jews and Gentile, Catholic and Protestant, wet and dry stockholders, such as our institutions possess, to agree, unless it was something that was absolutely raw and scandalous and that by its own weight and momentum would force them to assert their nghts.

Mr. Strong. Certainly; unless those 125,000 stockholders thought that their rights were being invaded, they practically would not take

any interest, but if they thought that their rights were being invaded, they would get into politics and help elect a governor that would appoint a superintendent of banks favorable to them.

Mr. Bacigalupi. That is not a fair statement, Mr. Congressman-

Mr. Strong. I say they would.

Mr. BACIGALUPI. No; I do not think so.

Mr. Strong. I was invited to a moving-picture show not long ago, and the man who invited me told me that he would like to go to a certain place because, as he said, "I just bought some stock in that corporation."

So, men are persuaded in what they do by what they think is their

personal interest.

Mr. Bacigalupi. Whether you are a stockholder of an institution or not, you as an American citizen resent arbitarary acts and unfairness, and as an individual you will stand up for what you consider to

be your rights as an American citizen.

Mr. Strong. Yes, sir, and if I had been a stockholder in your corporations and I thought that the superintendent of banks out there was not treating the institution in which I held stock fairly, and there was a contest over the governorship, I would vote for the governor that would appoint a superintendent of banks that would treat my institution fairly, and that is just what I think everybody else would do.

For that reason, I am wondering if there is not a danger in building up these large holding companies, that own thousands of shares of

stock.

Mr. Bacigalupi. Well, I do not see any danger in it at all.

Mr. STRONG. I have in mind the history of the second United States

bank, and I am looking ahead to what might come.

Mr. Bacigalupi. I defy any of our bitterest competitors, and we have some, to cite a single instance wherein the Bank of Italy or any one directly or indirectly connected with it has ever sought to exercise any political power in the State of California.

Mr. Strong. That may be true, but, nevertheless, whereas the former superintendent of banks seemed to have leaned toward your

competitors, he is no longer in office.

Mr. Bacigalupi. I will say this, that if to-morrow a similar situation arose, I have not any doubt that the stockholders of our institution would react in exactly the same manner.

Mr. Strong. That is just what I think; it is just what I am trying

to come to.

Mr. Wingo. I believe that you gentlemen are going to agree directly.

Mr. Strong. I think most anybody would agree to that proposi-

Mr. Bacigalupi. I know that I can see a very clear distinction in this transaction. I think that as American citizens it is our right to resent abuse and injustice—

Mr. STRONG. Certainly.

Mr. Bacigalupi (continuing). And to fight for the right—not to use our power illegitimately and to try to force our will upon everyone else.

Your proposition seems to beg the question to this extent, that you are presuming or assuming that in consideration for the political

support that he may have received from our stockholders, the present governor made an agreement with reference to the naming of a super-intendent of banks that would be favorable to our institution, which I deny.

Mr. Strong. No; I only think you got rid of a superintendent of

banks who was not favorable.

Mr. Bacigaluri. He was not; he was decidedly and openly unfavorable, and the governor himself went on record as stating he was doing exactly what the other banks of the State of California wanted him to do, and, as far as he was concerned, they had more

votes than the Bank of Italy.

Mr. Strong. I see. I am not disputing that proposition at all, and I have no doubt that the stockholders and officers of the second United States bank thought that Andrew Jackson was very unfair, and I do not doubt that the superintendent of banks was unfair to you, but I am just pointing out that in the building up of a great financial institution there can be established a great power which might be used in politics.

Mr. Bacigalupi. The vice of the United States bank was that it was not trying to run its own business, but the other fellow's business—that is where the vice was, and there is no parity between the

Mr. Strong. I have no doubt that if the persent managers of the Bank of Italy were to continue for all time, they would always do just and right toward the people and in their politics, but what I fear is that after you build up a nation-wide institution, with hundreds of thousands of stockholders, there might be officers of the bank in the next generation that might use that power in politics.

Mr. Bacigalupi. I know, and may I say this, Mr. Congressman: I do not know what your politics is, but say that you were a stock-

holder and owned nine shares in our bank-

Mr. Strong. That is a violent assumption, from my standpoint. Mr. Bacigalupi. And the management of that bank asked you to vote for a candidate of an opposite party: Do you think that your interest in the nine shares in the banking institution would be strong enough of an inducement to warrant your abandoning your party principles?

Mr. Strong. Probably not, but I might be human enough, if you came along and said, "Don't you know that the governor will appoint a superintendent of banking that is working against us and your interests," and I will say, "Very well, I will not vote for him."

Mr. Bacigalupi. I do not think your small interest in the institution would prompt you to do it and I do not think any reasonable,

sensible business man would be influenced.

You should realize in these days we have no longer institutions dominated by one man. You take the financial interests in our institutions, beginning with any one interest, beginning with Mr. Giannini and going on down, his control is insignificant. Our claim to our right to a tenure in office is that we run our bank and do not meddle with politics or get interested in any business except our own.

Mr. Strong. I want to say that while the average shareholdings in your institution may be only nine shares, there are a great many of them that have a much larger interest, that are devoting their

lives to the institution.

or

Mr. Bacigalupi. But they have only one vote.

Mr. Strong. But they are devoting their lives to it and when they come to a matter of voting for a governor that will appoint a super-intendent of banks that will be favorable or unfavorable to that institute, nobody will have any doubt as to whom they will vote for.

Mr. Bacigalupi. I deny our stockholders had any assurance as

to who would be appointed superintendent of banks.

Mr. Strong. Certainly not. They knew one governor was appointing an unfavorable man and the other might appoint another kind.

Mr. Bacigalupi. Well, he could not be any worse.

Mr. Strong. Just another question or two. Are all of your many banks and branch banks and corporations now controlled by the Transamerica Corporation?

Mr. Bacigalupi. To the extent that I outlined them and as shown

by the chart.

Mr. Strong. How many banks and branch banks does that number?

Mr. Bacigalupi. I can not tell you offhand. The records will show that, Mr. Strong.

Mr. STRONG. Five hundred?

Mr. Bacigalupi. Well, we have 292 in the Bank of Italy, 161 in the Bank of America, and I think 35 in the Bank of America of New York. That makes 488 in California and New York.

Mr. Strong. Have you any in any other city besides New York?

Mr. Bacigalupi. No, sir.

Mr. STRONG. None on Chicago?

Mr. Bacigalupi. No, sir.

Mr. Strong. This bank you have in Italy-

Mr. Bacigalupi. Yes, sir.

Mr. Strong. Does the Transamerica Corporation control that? Mr. Bacigalupi. I think it has about a little more than control about 50.49 per cent; not quite 51 per cent. It has a little over 50 per cent and its total investment is some \$6,000,000 in American

Mr. Strong. But they have control?

Mr. Bacigalupi. Yes, sir. Mr. Strong. How many banks are there in that group in Italy?

Mr. Bacigalupi. Thirty-seven offices.

Mr. Strong. Any other banks in which you have any stock at all? Mr. Bacigalupi. Oh, yes; we have shares in a number of banks in the United States, as investments.

Mr. Strong. In about how many States? Mr. Bacigalupi. I could not answer that.

Mr. Strong. A dozen?

Mr. Bacigalupi. I would be guessing if I said that.

Mr. Strong. Have you any interest in other banks in countries besides Italy?

Mr. BACIGALUPI. No, sir.

The Chairman. Would you furnish for the committee, Mr. Bacigalupi, a list of stockholdings in other banks in the United States that you or any of your affiliated companies own?

Mr. Bacigalupi. Yes, sir.

Mr. Strong. I want to clear the atmosphere by making plain my Purpose in asking these questions. I am one member of this committee who absolutely fears that the building up of nation-wide branch banking is a dangerous thing. You have been operating just a few years and yet you have almost 500 banks. I am wondering whether or not, in 25 years, we will not have money and credit in the United States so monopolized in a few groups that it will really constitute a menace and whether or not, when you get that position, some One will not get into control and seek to dominate and control the national politics.

Mr. Bacigalupi. I do not think you need fear a monopoly of meney What will result, in my opinion, if anything, would be a battle between giants, rather than a battle between a number of—may 1 say it—pygmies, and I think the competition will be just as keen, and I think the financial structure of this country will be very much better controlled and the credit situation very much better organized

than it is to-day.

By

T-

at

ľ.

88

18

BL

10

n

Mr. Strong. But what I am afraid is that it will be a battle of giants against the pygmies.

Mr. BACIGALUPI. The institutions will be controlled by the people

who own the institutions.

Mr. Strong. And there will be a great mass of the people not

represented at all.

Mr. Fenn. With the permission of the committee and the assent of the chairman, inasmuch as the gentleman from New Jersey (Mr. Fort) has an important engagement, I ask unanimous consent that The CHAIRMAN. Mr. Fort.

Mr. FORT. Mr. Bacigalupi, we were discussing here a few moments ago the question of duplication of resources in these holding organiations. I have had occasion to see it myself, occasionally, in insurance companies where one has owned the stock in another and the second has owned stock in the first, the net result being that the Published statement of the capital and resources contained duplication and is capable of great deception. I know of one notable case where, when they got through, the two insurance companies had Nothing left—each owning the other.

That is possible, of course, to the extent that the management permits it in any of these organizations, which contain more than one corporation not in the banking line. That is correct, is it not?

Mr. Bacigalupi. Yes, sir.

Mr. Fort. We have asked other witnesses who have appeared before the committee from group and branch banking systems if they would be willing to furnish us with their suggestions, based upon their experience, as to the form, if any, that regulatory legislation should Mr. BACIGALUPI. I would be glad to.

Mr. FORT. And in doing it, would you consider this question as to whether cross ownership should be permitted or whether one of the subsidiary corporations in such a group, being a banking corporation, hould be permitted to loan on the stock of the holding corporation or of other corporations in the group?

100136-30-vol 2 pt 11-10

Mr. Bacigalupi. I shall be glad to do that, and, incidentally, say that our policy has always been very strongly against indulging in that practice.

Mr. Fort. I have not a doubt it has been, but we would like your judgment as to a way in which we could perhaps avoid it in a manage-

ment that perhaps did not possess the same judgment. I also notice your reasons for setting up what is now the National Bankitaly Co. and originally the Stockholders Auxiliary Corporation?

Mr. Bacigaulpi. Yes, sir.

Mr. Fort. I take it that that parallels what is generally called the Security affiliate?

Mr. Bacigalupi. Yes, sir.

Mr. Fort. And you have, by some legal device, arranged it so that the stock of the National Bankitaly Co. can only be trans-

ferred with share by share of the Bank of Italy?

Mr. Bacigalupi. Yes, sir; all shares of the National Bankitaly Co. are owned by Mr. Giannini, Mr. P. C. Hale, and myself as trustees for the Bank of Italy and the evidence of the beneficial interest of each stockholder is indorsed on the back of the Bank of Italy's certificate, so that the transfer of the Bank of Italy's certificate transfers also the beneficial interest in the National Bankitaly Co.

Mr. Fort. And that is a practice that you thoroughly approve of—that business of tying up nonbanking stock with banking stocks.

Mr. Bacigalupi. Yes, sir; we have had no occasion to regret it. Mr. Fort. The functions of such a corporation are not banking functions, are they?

8

S

1

Mr. Bacigalupi. No; not necessarily.

Mr. Fort. Is your management the same in the National Bankitaly Co. and in the Bank of Italy?

Mr. Bacigalupi. No, sir; except it naturally came under Mr.

Giannini's general jurisdiction.

Mr. Fort. Is the directorate the same?

Mr. Bacigalupi. No, sir.

Mr. Forr. Do you believe that such organizations should have the same directorate and management?

Mr. Bacigalupi. No, sir.

Mr. FORT. Under the laws of California, is your bank—of course, it is now a national bank—but under the laws of California are such banks allowed to buy and sell stocks for their own account?

Mr. Bacigalupi. No, sir.

Mr. Fort. Do you believe they should be allowed to do that? Mr. BACIGALUPI. No, sir. That is the reason we took it out of the bank and put it into the bank affiliate.

Mr. Fort. And your reason for so believing is what?

Mr. BACIGALUPI. Our real reason was that we did not consider

it strictly a banking function.

Mr. Fort. But you do believe it is proper—and I know a great many who agree with you—to tie up the control and ownership and operation, in effect, of a company doing business which is not properly a banking function, with a bank?

Mr. Bacigalupi. Yes, sir; and we predicate that opinion upon our experience. We have builded a big organization. We have upwards of 5,000 men and women in the Bank of Italy alone. There are a number of legitimate functions not strictly banking that can be availed of by our group for the benefit of stockholders. These functions we have found in many instances to be taken advantage of in many banks by the men who are the paid trustees of the stockholders who convert these otherwise legitimate opportunities to their

own personal advantage.

It was always Mr. Giannini's idea that we were to serve our stockholders 100 per cent and to avail ourselves of this instrumentality In every legitimate way for the benefit of the stockholders and we have found that the auxiliary or security affiliate is that type of institution. It helps to keep the bank cleaner for the benefit of the depositors of our bank; it makes it somebody else's specific business to take care these assets that are placed there; it permits us, through our affiliate, to take over such assets as are objected to by the examining authorities or are objected to by our own examiners. Real estate that has been on the books for more than five years must, arbitrarily, be written off and we take care of that through that auxiliary. We have come to believe that our banking structures are becoming more and more the financial emporiums of the country, and that we should departmentalize anything relating or incidental to the banking business, and anything that can not be handled through the bank, can be handled through the affiliate, and handled through that affiliate without additional expense.

We believe the affiliate furnishes an additional backing to the bank

and it is for benefit of the depositors of the bank.

Mr. Fort. I notice you use yours for the purpose of taking bad assets out of the bank—and I appreciate any bank like yours must get some bad ones with the best of management—taking them out and putting them in the affiliate so that the eventual loss or possible salvage will go to the bank's affiliate stockholders?

Mr. BACIGALUPI. Who are identical and whose ownership is in the

same proportion.

Mr. Fort. Do you think there is any hazard where you have a combined management of the two institutions that the thing might work the other way?

Mr. BACIGALUPI. I do not follow you.

Mr. Fort. That the bank may take over from the securities affiliate very slow moving frozen bonds that it might have gotten loaded with on syndicate operations—is there any danger of that?

Mr. BACIGALUPI. I do not think so.

Mr. Fort. It has never happened with yours?

Mr. Bacigalupi. No sir; the bank is under examination-

Mr. FORT. The assets might be good, but slow.

Mr. BACIGALUPI. It would soon be detected if that was the policy

of the management and a halt would be called.

Mr. Fort. In the operation of your trust department, do you buy for the account of the trusts which are operated by your banks—any of them—do you buy securities from your own securities affiliate?

Mr. Bacigalupi. Our policy has been unalterably against that. The only securities that we have ever bought from our affiliated

onal

and should be perhaps enforced?

Mr. Bacigalupi. Yes sir; that is sound. I think that a trustee should get one fee and one fee alone and that is the fee provided for in the private trust agreement by the express terms of the agreement and, in the case of a court trust, by the award of the court, and he or it should not make any other profit from his position.

Mr. Fort. Do you bank trust funds with your own banks?

M.r. Bacigalupi. If we do, we do it pursuant to the Federal reserve requirement and the State banking requirement.

Mr. Fort. And what has been the rate of interest allowed trust

funds?

Mr. Bacigalupi. Nothing on commercial deposits, but the law does require that such deposits in the commercial department shall be secured in the manner provided by law.

Mr. Fort. Is there any reason, Mr. Bacigalupi, generally, why a bank should be allowed to make a profit in its banking department out of the funds which they deposit with itself from the trust department?

Mr. Bacigalupi. I do not see that it is gaining any advantage there because if it gets a deposit from that source, there is no difference from getting it from any other source. If it is deposited in its commercial department, it is putting up securities which it is rendering inactive for other purposes.

Mr. Fort. I have not the law before me, but I understand in the State of Kentucky the law requires a bank which banks any trust funds, with which it is entrusted, with itself, to pay 5 per cent interest, while those funds remain uninvested, to the trust, on the theory that you have just so well and properly stated, that it should make nothing out of the trust except the legal fees and, therefore, to get no benefit from lending that trust fund while it is in its bank.

Mr. Bacigalupi. I do not know about the laws of Kentucky.
Mr. Fort. Would you feel that some such law requiring the bank
to account to the cestui qui trust for funds banked with itself is bad

legislation?

Mr. Bacigaluri. I do not see that it will serve any particular purpose. I do not see why a corporate trustee should be penalized over an individual trustee. An individual trustee has the right to deposit where he cares to. He does not have to give security in many instances.

Mr. Fort. He has to give a surety bond.

Mr. Bacigalupi. He may be liberated many times from doing that by the terms of the will.

Mr. Fort. If he mingles those funds with his own funds, he would have to account for all losses as well as any profits.

Mr. Bacigalupi. If he has any left; yes, sir.

Mr. Fort. And would have to account for it if he mixes it with a mortgage fund, for the rate of interest he received on the mortgage?

Mr. Bacigalupi. Yes, sir; but there is no intermingling of trust

funds by the corporate trustee.

Mr. Fort. But when they are deposited and become a part of the general resources of the bank and the bank lends them with other funds, for their own account—

Mr. Bacigalupi. But they are secured deposits.

Mr. Fort. The law of Minnesota, I will say for your information, we have learned in these hearings, forbids a corporate trustee from banking with itself uninvested trust funds. Do you feel that that is improper legislation?

Mr. BACIGALUPI. I think the law that is incorporated in the Fed-

eral reserve act is sufficient.

U

n

Mr. Fort. You have spoken very well in your statement and pointed out the very unusually liquid condition of your institution. Now do you feel there is any difference in the need of liquidity in a branch system from the need of liquidity in a unit bank in proportion of the total deposits?

Mr. Bacigalupi. I would say that possibly we have been a little overconservative because of the fact that we were blazing a trail and we were on trial, if you please, and that it behooved us to maintain a position that was more liquid than we felt was conservative.

Mr. Fort. But I ask you specifically, do you feel that the spread of deposits coming from many communities, as they do in such a branch system as yours, makes it necessary that a branch banking system like yours should have greater or less liquidity than a unit bank with all deposits in one spot?

Mr. Bacigalupi. We have come to believe that it would be less necessary for us to maintain as high a liquid position than would be

required of a unit bank.

Mr. Fort. I notice in your statement that you set up one of your corporations here in part for the purpose of acting as an insurance agent?

Mr. Bacigalupi. Yes, sir.

Mr. Fort. You also own your own fire insurance company?

Mr. Bacigalupi. Yes, sir; the Transamerica does

Mr. Fort. Is it a part of your practice to require borrowers or to suggest to borrowers that they should insure with your own company?

Mr. Bacigalupi. No, sir; and I should like to explain that.

Mr. FORT. I should like to have you do that.

Mr. Bacigalupi. When we first started to buy country banks, we invariably found that the president or cashier of the bank was the agent of a number of different insurance companies in his own personal capacity and that when Mary Brown or Jim Smith came into the bank to borrow money from the bank this individual agent always made it his business to say to the individual, "I am an insurance agent and I will grant this loan if I am given the privilege of writing this insurance," and he would write it and put the commission in his own pocket.

Now, that was contrary to the spirit of our organization which, as I tried to point out, was always designed to act for the benefit of the stockholders, and what we would do in those instances was to say to the former president or cashier, predicated upon his personal income from that particular source over a period of three to five years, "How much do you think your business is worth?" And he would fix a price on it and we would pay him in cash, and then we would say to him, "Hereafter you continue to do as you have done before, except you are not to force the service upon anybody. Try to place it if you can, and if you do, whatever profit accrues from that source, goes

into the common treasury to be divided among the stockholders of the institution."

That led to a great deal of opposition on the part of the insurance fraternity of California. It led to legislation in the State which prohibited or sought to prohibit-it never became a law-a corpora-

tion from acting in that capacity.

That, however, never became a law, as I say, and through our branches, we place insurance not only on our own properties but when ever the people who deal with us request it. If our representatives find the insurance has already been placed by a customer of the bank, the bank does not seek to interfere with it. If it is something that comes logically, without importuning, it is written and the profit distributed among the stockholders of our institution.

When we bought the Farmers & Merchants Bank of Sacramente, there was in that combination an insurance company, which was purchased along with the bank. It was a small company, but has been built up to about three times its former size; in the last year

and a half.

Mr. Fort. And that has not been built up then, by any insistence or suggestion on the part of your bank or any agents that the people should use the Pacific National Fire Insurance Co., if they were placing insurance on mortgages taken by any of your side corporations?

Mr. Bacigalupi. No, sir; we have never importuned anybody. We believe it would be a very unwise policy to force our services

upon the public.

Mr. FORT. But pretty generally they insure that way?

Mr. Bacigalupi. Where an individual officer has nothing to gail personally, his interest is not going to be as keen as if the money were to go to him.

Mr. Fort. I noticed, in looking at the figures for your company, they indicate that the capital and surplus are very small in respect

to resources. Do you reinsure as you go along?

Mr. Bacigalupi. It reinsures liberally.

Mr. Fort. The chairman of this committee has introduced a bill in the House recently, the effect of which is to stop any further development of group banking systems in this country, pending really, I take it, a decision by Congress on what it wants to do about it. Have you any views on the wisdom or unwisdom of that legislation?

The CHAIRMAN. Just a moment: That is a somewhat drastic

statement of what the bill proposes.

Mr. FORT. I can read the act. It is very short:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the approval of this act it shall be unlawful for any corporation, copartnership, individual, or trustee to purchase or otherwise to acquire more than 10 per cent of the shares of the capital stock of more than one member bank of the Federal reserve system, whether State or national bank member are of the federal reserve system, whether State or national bank member, except after first obtaining the approval of the Comp troller of the Currency with respect to national banks and of the Federal Reserve Board with respect to State member banks. Any person or corporation violating this act shall be deemed guilty of a misdemeanor and shall upon conviction thereof in any district court of the United States, be fined not more than \$10,000.

I have had sympathy with the viewpoint expressed in this bill that we have gone pretty fast in this business, and we might do well to stop and digest what we have done. Have you any view as to whether such legislation would interfere with the legitimate banking

Practices in this country now?

Mr. BACIGALUPI. I would not be true to the position that I have heretofore enunciated, were I to say, with all due respect to the proponent of the bill, that I favor it. As I stated this morning, I do 40t see anything wrong with group banking as it exists in the country to-day, and I do not think it presents any occasion for alarm.

The CHAIRMAN. May I say something there?

Mr. Bacigalupi. Yes.
The Chairman. I do not think you caught the intent and purpose of this bill. It does not impede it, except as to irresponsible people who are attempting to get hold of groups of banks and build up larger banks, who would first have to get the consent of the Comptroller of the Federal reserve before they can take over a bank, whereas, now they can go out and take over banks without asking anyone's consent.

Mr. BACIGALUPI. But that bank is under the direct jurisdiction of either the comptroller or the superintendent of banks, and subject to

t

-

The CHAIRMAN. That is true, but the comptroller has no authority to stop the acquisition of control of stock in a bank by anyone.

Mr. Bacigalupi. I understand that. I am not aware that there has been any abuse in the country of that. Possibly you are in possession of information that I do not know anything about, but I personally have been in the mill so long that I am never in favor of interposing a lot of hurdles in the natural trend of things; in other words, if the thing is not wrong in principle, it is unnecessary, in my humble opinion, arbitrarily to set up 10 per cent or 20 per cent Interest in another institution, as a limit.

Mr. Chairman. Mr. Bacigalupi, if I may interject here, I have stated many times that this chain or group idea is perhaps all right When in strong hands and properly managed, but history shows that group banking in the past, where it was in weak hands, was very

dangerous and usually resulted in failures. Mr. Bacigalupi. I can appreciate what you have in mind, Mr. Chairman, but my only objection was to the point that it is necessary by your proposed bill, in the pursuit of what I consider a perfectly legitimate function, to run to an official and obtain his consent. As understand the bill, there is not any standard; there is not any Procedure fixed, excepting an application must be made for permission, irrespective of whether the group that seeks to acquire the 10 Per cent in the other bank may be the strongest or the weakest. atrongest one may be refused and the weakest one granted. I say that with all due deference to the comptroller, whom I see in the room.

You must make a showing and make an argument every time the thing comes up, and you meet one official who has one view, and run up against his successor, who may have altogether a different view of and this makes an additional prohibition that I do not think is

hecessary.

Mr. FORT. If, however, in the judgment of the committee, our choice was between stopping this thing for a while until we could thoroughly settle what regulatory legislation ought to be adopted, ^{or} going ahead on regulatory legislation, without more study, it would

probably be wiser, would it not, for us to stop it than to pass regulatory legislation without really sufficient investigation?

2,

Mr. BACIGALUPI. I think that is true.

Mr. Forr. That is my view of the wisdom of this legislation, that it relieves us from the necessity, perhaps, of doing something that otherwise we might not have the time thoroughly to investigate and study. I think that was somewhat in the chairman's mind.

The Chairman. Yes. From your own past experience, Mr. Bacigalupi, I can understand your objection to the enlargement of the

supervisory provisions over such matters.

Mr. FORT. That is all.

Mr. Fenn. I have only one or two questions to ask Mr. Bacigalupi. You say that you got into all the places you wished to in California, with the exception of Sacramento, and I believe you say in your statement that you could not buy a bank in Sacramento. Have you

succeeded in getting into Sacramento?

Mr. Bacigalupi. I stated in my statement of this morning that, pursuant to a popular petition, led by the chamber of commerce, a de novo bank was established there. Subsequently to that time we have purchased in that city the Peoples Bank and the Farmers & Merchants National, with which the insurance company was connected.

Mr. Fenn. When you acquired a foothold in Sacramento, what was the effect on the other banking interests in Sacramento?

Mr. BACIGALUPI. I think that will be snown in Exhibit J.

Mr. FENN. You could not tell offhand?

Mr. Bacigaluri. I am quite certain that it did not perceptibly hurt anyone.

Mr. FENN. It did not? Mr. BACIGALUPI. No. sir.

Mr. Fenn. What effect did it have on the original banking situation—and when I say original banking situation, I mean the banks in existence before you go into a place what effect has your setting up banking institutions in places where you were not before—had on the original banking institutions, as to driving them out of business, or causing their business to fall down, or have you absorbed their business?

Mr. Bacigaluri. The result is evidenced by one of the exhibits, which shows that in may of the communities a well run unit banking competitor has thrived rather than been hurt by the competition; in other words, to the full extent of their capacity to serve, our competition made them a little more courteous and a little more vigilant and injected some new life into them, and in other instances, through no fault of ours, some of our competitors have gone out of business.

Mr. Fenn. I understood in some place you maintain you branches where it is not profitable, in order to serve the public, as a public convenience and necessity?

Mr. Bacigalupi. Yes, sir.

Mr. Fenn. Have you other competitors in California in systems similar to yours?

Mr. Bacigalupi. Yes, sir; we have none excatly like ours, in that there is no other state-wide branch banking system, but in the Los Angeles area, for instance, we have plenty of competition, and in

the San Francisco area we have the American Bank & Trust Co. that operates all the way from Los Banos up to Oakland. Then up in the Sacramento district we are in competition with another institution that operates a chain of banks in the upper end of the State. Mr. Fenn. And that competition has not been detrimental to

ğ

Mr. Bacigalupi. Not that I have noticed, no, sir.

Mr. Fenn. I take it it has been what we call fair competition?

Mr. Bacigalupi. Yes, sir.

Mr. Fenn. Supposing that the Bank of Italy, or whatever you may call it, should acquire these other institutions in California—those of which you have just spoken, your competitors at the present timeis it your opinion that that would destroy competition in California?

Mr. Bacigalupi. No, sir.

Mr. Fenn. The result would be that there would be other competi-

tion that would arise?

Mr. Bacigalupi. Yes, sir. I figure there are people in California who would not do business with us on a bet, and as long as there is a Profitable field, there will always be other banks spring up to take care of the business that they feel they might command.

Mr. Dunbar. You are distinctly a branch banking institution?

Mr. Bacigalupi. Yes, sir; the Bank of Italy is.

Mr. Dunbar. I understood you to say you had become a national bank?

Mr. Bacigalupi. Yes, sir.

Mr. Dunbar. The Bank of Italy is now a national bank?
Mr. Bacigalupi. The Bank of Italy National Trust & Savings

Association; yes, sir.

Mr. Dunbar. We have heard it stated here that the advantages of branch banking are that it affords a convenient method to promote business or to run business in any part of the country. In small communities it gives the advantages of large banking facilities.

Mr. Bacigalupi. Yes, sir. Mr. DUNBAR. That is the idea?

Mr. Bacigalupi. Yes, sir.

Mr. Dunbar. My experience has been, although I have never borlowed any money, when a man was in business and had sufficient assets, he could borrow money almost anywhere.

Mr. Bacigalupi. I do not understand that, Mr. Dunbar.

the reporter please read the question?

(The reporter read the question.) Mr. Bacigalupi. That is true. He could borrow it where he could Set it. If the bank in the locality was too small, he would have to go elsewhere. You know, Mr. Dunbar, the law regulates the amount that any bank can lend, and limits it to generally 10 per cent of the capital of that bank. If your note was \$20,000 and the lending limit of that bank was only \$10,000, of course, you would have to go to another community to be accommodated.

Mr. Dunbar. Statements have been made respecting competition. You find plenty of competition with the branch bankers?

Mr. Bacigalupi. Yes, sir; we have plenty.

Mr. Dunbar. A large bank in New York has a bureau for, say, or 3 or 4 States, and they canvass those 2 or 3 or 4 States with a view to obtaining good loans. If that is the case, where is the advan-

tage of that system of yours?

Mr. Bacigalupi. Our advantage lies in this, Mr. Dunbar; take, for instance, our head office being in San Francisco, we operate in one hundred and sixty odd localities in California. If we haven't the opportunity of lending our money in San Francisco, there is always a demand for that money somewhere along the lines, and in each one of those points we have competent officers who are part of our own organization who know the local people and know the local values. We do not have to take the opinion of any local real-estate man, or

any promoter, to place our money.

The money is placed through our own organization and watched by our own men, and it makes for greater service to the public and it makes for greater safety to the institution that does the lending.

Mr. DUNBAR. Then your advantage is that where there is a want to be supplied, you can go in through your branch banks and supply that want?

Mr. BACIGALUPI. Yes, sir.

Mr. Dunbar. I have heard a great deal said about the scarcity of credits. I come from a country neighborhood and my observation has been that a great many of those people in that community have had too much credit. The people have gone to farm-loan banks and borrowed money on their farms when they did not need the money, in the hope of branching out and putting in improvements and they have done so very unwisely and now they find themselves confronted with this loan from which no real advantage or profit has been obtained.

co

de

St

W

fu

or

C

ur 12

al

On the other hand, if they had not borrowed the money they

would have been far better off.

Mr. Bacigalupi. There is no question about it. That has been

our experience.

Mr. DUNBAR. I know a bank that is being liquidated and its president thought it a good idea to borrow money from the farm land bank where he could get it at a smaller rate of interest and put it into mortgages on farms at a higher rate. That man lent money into channels that have become frozen and now he is liquidating his bank.

I have never been able to understand fully how you are supplying a want, although your success in California is evidence you are supplying a want.

The few questions I asked you were for personal information.

have nothing else. The Chairman. I suggest we now adjourn until 10.30 tomorrow

morning. (Whereupon, at 4.15 o'clock p. m., the committee adjourned to meet at 10.30 o'clock Wednesday, May 7, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, MAY 7, 1930

HOUSE OF REPRESENTATIVES, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 10.30 a. m. in the committee room, Capitol, Hon. Louis T. McFadden (chairman), presiding.

The CHAIRMAN. The committee will come to order. Mr. Busby, are you ready to proceed?

Mr. Bushy. When it comes my time. The CHAIRMAN. It is your time now.

STATEMENT OF JAMES A. BACIGALUPI-Resumed

Mr. Busby. Mr. Bacigalupi, the resources of your institutions, combined, are about \$2,000,000,000, are they not? Mr. Bacigalupi. Of Transamerica Corporation?

Mr. Busby. Yes.

18n-

Mr. Bacigalupi. I think the statement will show, as filed yesterday, \$1,176,000,000.

Mr. Busby. Has the Transamerica Corporation issued all of the

Stock that it is authorized to issue under its charter?

Mr. Bacigalupi. No, sir.

Mr. Busby. What amount is issued and what amount remains to

be issued when you deem it advisable to use it in the future?

Mr. Bacigalupi. My recollection is that the total authorized issue was 50,000,000 shares and of that 50,000,000, about twenty-three million-odd shares have been issued.

Mr. Busby. That leaves you about 27,000,000 shares of Transamerica Corporation to be utilized in the future when you need it for

further expansion?

Mr. Bacigalupi. Yes, sir—about, in round numbers.

Mr. Busby. Transamerica Corporation stock stands at 44 or 45 on the curb market?

Mr. BACIGALUPI. Between 40 and 45; yes, sir.

Mr Bushy. In other words, your holdings, under the Transamerica Corporation have not, up to this time, reached half of its possibilities under the present market value of the Transamerica stock as author-Mr. BACIGALUPI. I do not believe I understand your question.

Mr. Busby. Will you read it, Mr. Reporter?

(The reporter read the question.)

Mr. Bacigalupi. If you mean by your question it has not issued all of its shares yet, I would say yes.

Mr. Bushy. What else could I mean by the question?

Mr. Bacigalupi. I do not know.

Mr. Busby. In other words, you have 50,000,000 shares of Transamerica to be sold on the market and you have issued 23,000,000 shares of stock, leaving 27,000,000 shares to be issued when you deem it advisable, as a business proposition, to issue it and expand your business with the proceeds of that 27,000,000 shares?

Mr. Bacigalupi. The 50,000,000 which represents its present authorized capital may, if the occasion require, be increased again-I do not understand your question when you say that we have not

reached half of our possibilities.

Mr. Bussy. Have you, at the present time, any definite idea of the ultimate goal to be reached in the activities of your different business institutions, controlled and operated under the management of the Transamerica Corporation?

Mr. Bacigalupi, No, sir.

Mr. Busby. What would you say is your objective to be reached as business stands now?

Mr. Bacigalupi. To take full advantage of situations as they present themselves in the future along the lines of our general activities.

Mr. Bussy. In other words, your intention is to follow up consolidations and absorptions of other business institutions, as the economic advantage appears to your holding company in the future?

Mr. Bacigalupi. That is correct.

Mr. Busby. Is that confined to the United States?

Mr. BACIGALUPI. I think I made it plain yesterday that our view

is that it should go beyond the bounds of the United States.

Mr. Bussy. Do you not think that European countries, at the present time, and possibly other countries in the future, will be just as fertile fields for the activities of your business institution as the United States?

Mr. Bacigalupi. Well, it is hard to say. Other large banks in this

country are operating profitably in foreign countries.

Mr. Bussy. Of course, the main objective in your expansion, is profitable operation?

Mr. BACIGALUPI. That is the idea.

Mr. Bushy. And you see no limitation or recognize no limitations in the way of national boundaries or anything like that?

Mr. Bacigalupi. No, sir.

Mr. Bussy. The Bank of Italy is what you might term, with many other like institutions, professional bankers, are they not?

Mr. Bacigalupi. It is a national bank.

Mr. Bussy. I notice on page 6 of your statement you say "That one of the inflexible rules has been to rigidly require in its (the Bank of Italy) service a full 100 per cent of time, thought, and energy of its officers and employees, without distinction.'

Mr. Bacigalupi. Yes, sir.

Mr. Bussy. And so far as you are able to do, you make every individual that is connected with your institution bank-minded and very thorough in that particular line?

Mr. Bacigalupi. Yes, sir.

Mr. Bushy. You are not interested in your employees developing into other lines other than that in which the duties prescribed by the employment require, are you?

Mr. Bacigalupi. No, sir; and as an inducement to that, we have adopted our special compensation plan which gives every one of our employees, from the janitor up, an interest in the profits of the

Institution itself.

Mr. Busby. Did it ever occur to you that a situation might arise where, through one element of the population of our country or of any country, becoming professional bankers, that the social status of the country might be thrown out of line by that element working at the problems of organization and getting credits together and wealth together, all the time, while the other people are going out and creating wealth by labor on the farms, in the factories and mills?

Mr. Bacigalupi. I am sorry, Mr. Busby, that that question I do 40t understand either; in other words, do I understand that by men devoting 100 per cent of their time in the discharge of duties assigned them that a situation would develop detrimentally to the other elements of society in which they live? Is that what you mean?

Mr. Bushy. Yes; I will say that and ask another question. Mr. Bacigalupi. I do not think any man discharging any legiti-

mate duty will injure anyone else.

Mr. Busby. I am not talking about discharging legitimate duties, but I am talking about one element of the population of our country who are engaged in banking, contriving, legally scheming, and putling together plans and interlocking activities in a banking and fiscal held of operation, to go so far as to affect the general status of the 80cial fabric of the Nation.

Mr. Bacigalupi. No; I do not think the workings of any group along lines that are lawful is going to militate against any other

citizens of the country.

Mr. Bushy. Well, the wealth of the Nation-political economy tells Is that that comes from about three sources, the principal of which labor and, of course, the mines and soil. You agree with that,

do you not?

Mr. Bacigalupi. I am always reminded, when I hear that assertion made, of the fact that the Italian laborers had that view not many Jears ago and they dispossessed all of the managements of the industies in Italy, and the managements surrendered the factories over to them and said, "All right; if you can run them better than we can, so ahead and run them," but they found, without capital, labor did not get very far, and I think in three days they welcomed the old managements back again.

Mr. Busby. I am not talking about any socialistic scheme.

Mr. BACIGALUPI. You say-

Mr. Busby. Do you disagree, for instance, with Henry George, and the best economists in the country? Do you disagree with

Mr. BACIGALUPI. I have never read them.

Mr. Busby. I am not just simply quoting Henry George. I am alking about this economic situation.

Mr. BACILGALUPI. I say that capital and labor must go hand in

hand.

Mr. Bushy. To make myself plainer, as to one element being Professional bankers and others going about their daily activities, We have in this country a military organization. That military

organization is trained in warfare and military tactics and in the art of organizing and applying force; so much so that it has become very efficient, and if it should go out and attack the great masses of our people throughout the Nation, it could, in a sense, exterminate them, until they rose up and met them. I want to say this, that the armed strength is drawn from the people, notwithstanding its proficiency in its line. Its recruits must come from the masses, yet because of the superior training of that element in their line, they can overwhelm millions.

Now, do you see any similarity between the banking fraternity

of this country and the example I have drawn to your mind?

Mr. Bacigalupi. None at all.

Mr. Busby. You do not see any at all?

Mr. Bacigalupi. No, sir.

Mr. Bussy. Notwithstanding the farmer and merchant and all are daily engaged in applying methods to produce and you folks are apply ing methods to gather in and developing most improved methods of reaching that result and perfecting that result, still you do not see any danger ultimately to the social fabric of our Nation from that source?

Mr. Bacigalupi. None whatever, Mr. Busby, because I think with

out the people, these institutions will not get anywhere.

Mr. Busby. And without the people, the Army could not be raised. Is not that true?

Mr. Bacigalupi. Well, without the people, you could not have

these forces that are running these institutions, either.

Mr. Bushy. Surely, but I call your attention to a statement by Mr. Mellon. According to the Treasury Department's statistics, they show that there are 290 Americans with incomes of over \$1,000,000 each; 11 Americans with incomes above \$5,000,000 each; several men have \$50,000,000 a year each, and one, at least, has an income of \$100,000,000 a year.

Does it not seem to you that the wealth and the advantages that come from wealth in our country, are getting very unequally dis-

tributed?

Mr. Bacigalupi. I do not think there has ever been a time in the history of the United States when wealth has been more generally distributed than within the last 10 years, and I further see no connec tion between that and the matter we are speaking of; namely, group and branch banking.

Mr. Bussy. All right. I am sure you do not. But do you not think that the systems of banking are of more concern to the people of the Nation, from an economic standpoint than from the banking

standpoint?

Mr. Bacigalupi. I think the people are surely interested in the

banking structures of the country.

Mr. Bussy. Surely they are—and those that are doing the business. But if the banking institutions of the country build up a system that oppresses the people, do you not think the primary purpose of the investigation of this committee should be with respect to the economic situation rather than with your bank as a private institution? Mr. Bacigalupi. Perhaps so.

Mr. Busby. Do you think our concern should be primarily with Your banking institution as a private institution?

Mr. BACIGALUPI. Oh, not at all.

Mr. Busby. Is not our interest from the economic standpoint than from the standpoint of the prosperity or lack of prosperity of your institution?

Mr. Bacigalupi. I think it should be from both points that

you should view the question and not from one alone.

Mr. Busby. Now, Mr. Fisher says, in an article recently written, that 97.8 per cent of the people do not pay income taxes and that only 2.2 per cent of the people pay income taxes. Do you call that equal distribution of wealth and incomes?

Mr. Bacigalupi. No; I think that our system of assessing income

lax is susceptible of improvement.

Mr. Busby. Are you not sure, from the official records that you are familiar with, that the trend is toward larger accumulations of wealth in the hands of fewer individuals in this country?

Mr. BACIGALUPI. No; I do not think so. That has not been my

experience.

Mr. Bushy. Have you not noticed the income-tax returns have indicated that very clearly in the last two or three years?

Mr. BACIGALUPI. I think that a lot of people are paying income

tax to-day that were not paying it two or three years ago.

Mr. Busby. What I am getting at is the last report shows there returns, were 70,000 less returns made by those making income-tax returns, and with these great increases in the few income-tax returns—you say you are not familiar with that?

Mr. BACIGALUPI. No; I am not.

Mr. Bushy. You say that you send your representatives among the school children of your State periodically to gather up the pennies and whatever deposits they care to make in your bank?

Mr. BACIGALUPI. Yes, sir.

Mr. Busby. What do you assign as your reason for doing that? Mr. Bacigalupi. Well, the primary purpose, as I tried to allege, was the encouragement of thrift among the children.

Mr. Bushy. Is not the primary purpose to get them tied into the Bank of Italy as customers from their infancy, so as to hold them

through old age?

Mr. Bacigalupi. That may be one of the results, but we have not een very much evidence of that and we have been operating the school-saving system since 1911. While some of them, when they Attain majority, come to us as a natural thing, many of them have hever been heard of, and naturally we have not made any profit from be venture up to date and it is very unlikely there will be any for some time.

Mr. Bushy. Do you lose those deposits when they get big enough know more about the banking business, or what do you mean by

Mr. Bacigalupi. That is hardly a fair question. I do not know the motives.

Mr. Bushy. I do not mean they leave you because they suspect you or anything like that, but as they get older, do they pull their accounts out? You say you lose many of them.

Mr. Bacigalupi. Sometimes we lose them when they leave school and we never hear of them again.

Mr. Bussy. You think that is a proper function for a bank to

exercise in the make-up of our social fabric?

Mr. Bacigalupi. The State banking authorities in California and elsewhere in the United States have been very loud in their praise of the system and logically it can teach them nothing but good and, in fact, in order to qualify as a collector of school savings, there must first come the official appointment by the board of education of the community sanctioning the practice and approving the bank and, in addition to that, there must also be obtained the permit of the State superintendent of banks to the solicitation, so it has the cooperation, in California at least, of the State banking department and of the various boards of education.

Mr. Bussy. Well, that may be true, but do you regard that as a

proper function to be exercised by a bank?

Mr. Bacigalupi. I surely do.

Mr. Bushy. It is not a banking function, is it?

Mr. Bacigalupi. It is.

Mr. Bushy. Now, that is what I referred to awhile ago. But do you call this helping to educate the people into the right way of thinking financially and supplying a deficiency that the school does not afford?

Mr. Bacigalupi. Yes; because we feel that if we ourselves are not the direct beneficiaries of that training, that the banking structure of the country is going to receive the benefit of it. Naturally, habits formed in infancy are the ones generally persevered in.

Mr. Bushy. Do you think this county is overbanked at the present

ime?

Mr. BACIGALUPI. I think we have a lot more banks than we should

have of the type that many are; yes, sir.

Mr. Bushy. Do you not think they should be consolidated into systems like yours and others of the leading group and branch systems?

Mr. Bacigalupi. I certainly do; yes, sir. That is what we have

been the exponents of during these many years.

Mr. Bussy. What service would be rendered to the people that they can not have out of their own organization and arrangement, by that kind of consolidation?

Mr. Bacigalupi. I have endeavored to outline the advantages.

Mr. Busby. Then you need not go into that again.

Mr. Bacigalupi. I have endeavored to outline those advantages

in my opening statement.

Mr. Bushy. What lines of business does the Bank of America Corporation enter, through its subsidiaries and affiliates and various institutions?

Mr. BACIGALUPI. Will you please read that question again?

(The reporter read the question).

Mr. Bushy. Banking is one of its functions, is it not?

Mr. Bacigalupi. First of all, let us understand what company you are referring to—the Bank of America?

Mr. Busby. The Transamerica Corporation and its institutions, affiliates and subsidiaries. What lines of business—in other words,

what business activities does it enter into with some one or another of these institutions under its control? Banking, of course, is one.

Mr. Bacigalupi. The leading lines are indicated on the chart-

banking, security investment business, fire insurance, and life insur-

Mr. Busby. I noticed a few days ago that the Bancamerica-Blair Corporation bought 7 per cent of General Foods (Inc.), and you put a director on the board of the corporation.

Mr. Bacigalupi. That was the Bancamerica-Blair.

Mr. Busby. That is your institution?

Mr. Bacigalupi. Transamerica owns 59 per cent of that company. Mr. Busby. And consequently controls the policies of Bancamer-

1ca-Blair Corporation?

Mr. Bacigalupi. Oh, I would not say that it controls the policies. It controls the situation as to who shall be its officers and it is up to them to run a profitable institution along the general lines laid down.

Mr. Bushy. Is it a holding institution? Mr. Bacigalupi. Not that I know of.

Mr. Busby. You outline what it is in your statement, do you not?

Mr. Bacigalupi. Yes, sir.

Mr. Busby. Do you know what the activities of General Foods

(Inc.), are—what field it enters?

Mr. Bacigalupi. No; that matter was handled entirely by the New York office of Bancamerica-Blair. It is their business to act as underwriters of certain issues and to enter into certain participations and that is done in the ordinary course of their business.

Mr. Busby. Where you put a director on a board; you are not

merely underwriting for that institution, are you?

Mr. Bacigalupi. Well, that all depends on the terms of the under-Writing. It may be that if you were to invest in a million shares of a corporation, you would want to have some representation on the board to find out what the policies of that board are going to be and have a voice in the management.

Mr. Busby, I am speaking specifically of this purchase. Do you

know anything about that happening?

Mr. Bacigalupi. About which? Mr. Busby. The Bancamerica-Blair purchasing 7 per cent of the stock of General Foods (Inc.), and securing representation on the board of directors of General Foods (Inc.).

Mr. Bacigalupi. The source of my information in that respect,

Mr. Busby, is exactly yours—I saw it in the newspapers.

Mr. Busby. Is there any end in any field of commercial activity or industry that the Transamerica Corporation would turn down if It saw good business and a profit in the business?

Mr. Bacigalupi. Generally speaking, I would say that, pursuant to its powers, it would naturally bestir itself in every legitimate

avenue to make a legitimate profit for its stockholders.

Mr. Busby. It is organized under the Delaware law, is it not?

Mr. Bacigalupi. Yes, sir.

Mr. Busby. Its powers are coextensive with the explorations that have been made from pole to pole, under that kind of charter.

100136-30-VOL 2 PT 11-11

Mr. Bacigalupi. Its powers are defined in the articles of incorporation, which are on file with the committee, and we sought to make them as broad as we could, naturally.

Mr. Busby. So you holding corporation, with its possibilities, as alluded to, and its policies as just outlined by you, may go into any field of business—grocery chains, dry-goods stores, 5-and-10-cent stores, and so forth; in fact, it is in all of those now as a stockholder?

Mr. Bacigalupi. Naturally, as an individual may become a stockholder in these concerns, but it is not within the purview of Transamerica to engage in the business of chain stores or in the grocery business or tea business or any other businesses than those of banking or akin to banking.

Mr. Busby. Not as supervising the individual stores, but as owning the stock; it finances those institutions, and directs the policies of those institutions?

Mr. Bacigalupi. I would not say that. It would naturally endeavor to direct the policy in so far as it could, but what one director can do on a board of directors of General Foods, for instance, you I do not know just how much influence one know as well as I do. director has on a board of directors.

Mr. Busby. Do you think the building up of that kind of system in this country among the people of the country is for the greatest good of the masses in the outlying districts and sections that can not have a voice in the management of any such gigantic scheme of banks?

Mr. Bacigalupi. In the last analysis, Mr. Busby, the success of a banking system or the success of a grocery business is dependent upon public patronage, and if they do not get the public patronage they can not survive.

Mr. Bushy. I recognize that, and all are dependent on having a source of credit.

Mr. Bacigalupi. Yes, sir.

Mr. Busby. If you can control and furnish the source of credit, you do not worry about what will be done by the individual institution, because you know you can dictate how it shall approach the public and almost how the public shall come to it.

Mr. Bacigalupi. If we were the controllers of the credit of the United States, your conclusion would be correct, but I think our organization is a very small factor in that.

Mr. Bussy. Well, the banking credit runs around \$72,000,000 and you are getting up to where you have a nice percentage of that.

Mr. Bacigalupi. There is a lot of competition in our line of business—in all lines of business in which we are engaged.

Mr. Bushy. Taking your records from 1928, since the organiza; tion of the Transamerica Corporation, you have been combining and bringing together assets in a very rapid manner, have you not?

Mr. Bacigalupi. Yes, sir.

Mr. Busby. And you are still at that.

Mr. Bacigalupi. We are still active; yes, sir.

Mr. Busby. Still active at that?

Mr. Bacigalupi. Yes, sir.

Mr. Bushy. You see no end to your activity along that line?

Mr. Bacigalupi. I have already stated, Mr. Busby, that we are in the business and we intend to continue in the legitimate pursuit of it;

The Chairman. Mr. Bacigalupi, in your statement to the committee yesterday, you gave practically an unlimited indorsement to

not only nation-wide but to international branch banking?

Mr. Bacigalupi. Yes, sir. The Chairman. That is correct?

Mr. Bacigalupi. Yes, sir.
The Chairman. You made practically no limitation, did you, with that, except as to proper management?

Mr. Bacigalupi. And sufficient capitalization. The Chairman. Sufficient capitalization?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. I infer that that was probably your scope. Am

I correct in that?

Mr. Bacigalupi. It is our scope if it can be accomplished legally. The Chairman. I rather inferred, from my own knowledge of the development of your institution, which was confirmed yesterday by your very complete statement of accomplishments, that practically from the very beginning, you had a definite plan and your accomplishments to date have been in fulfillment of that original plan of development. Is that correct?

Mr. Bacigalupi. If I created that impression, it was unintentional. No one connected with our institution visualized at the outset just what the ultimate picture would be. We did set out along lines that we felt were calculated to lead in the right direction and our present accomplishments have been realized in the pursuit

of the original plan or the original lines laid down.

The CHAIRMAN. Then am I correct in inferring if now there were ho limitations as regards branch banking in the United States, your plan is so developed that you could and probably would establish

branches in every State in the Union?

Mr. BACIGALUPI. I would not say in every State, but I would say that we feel that our organization, as now set up, is competent and would be disposed to avail itself of the opportunity of establishing itself through the acquisition of banks in the leading centers of the Nation; yes, sir.

The CHAIRMAN. And if you, as a matter of business policy, decided the go into every State, you would feel that it was good business

that you should do so?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. And in that connection I also infer that if the Possibilities were favorable, and, in connection with your interests the interests of your customers, it was found necessary to estabadditional branches abroad for your customers, you feel you hould do that to render proper service to your customers?

Mr. Bacigalupi. Yes, sir. That, however, Mr. Chairman, is a privilege that every national bank in the United States enjoys to-day. The Chairman. Yes; you so stated yesterday. You stated, in Answer to Mr. Busby's question, that the authorized capital stock in

Transamerica Corporation is 50,000,000 shares?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. And you have issued and sold 23,000,000?

Mr. Bacigalupi. Yes, sir; twenty-three million odd. The CHAIRMAN. At what price was that stock sold?

Mr. Bacigalupi. Well, most of it was issued in exchange for the stocks of existing corporations, Mr. McFadden, in the various proportions fixed for each trade. For instance, the first two holdings that were incorporated into Transamerica were those of the Bank of Italy, N. T. & S. A., in which one and three-quarters shares of Transamerica were given in exchange for one share of the stock of the bank and share for share of the Bancitaly Corporation, and if my recollection serves me correctly, the rate of exchange between Transamerica and the Bank of America of New York was one and one

The CHAIRMAN. When Transamerica was formed, how much of that stock was used in exchange for existing companies and how

much new capital went into Transmerica? Mr. Bacigalupi. Well, my recollection is that practically all of the capital of Transamerica has been made up in this exchange of stocks for existing corporations.

The CHAIRMAN. No new stock has been sold?

Mr. Bacigalupi. There was one issue authorized at \$55 a share.

The CHAIRMAN. How many shares?

Mr. Bacigalupi. That was when the market for the stock was around \$65. But before those rights were availed of, there was drop in the market October last, together with other market stocks. which brought it below the \$55 and, as a consequence, I do not think that much of that issue has been subscribed.

The CHAIRMAN. What was the authorized issue for sale at that time? Mr. Bacigalupi. I think a million shares. That is my recollec-

The CHAIRMAN. Your plan contemplates the sale of these additional shares from time to time as they think advisable?

Mr. BACIGALUPI. We have no plan on that.

The CHAIRMAN. For capital needs?

Mr. Bacigalupi. Yes, sir; and our plan contemplates really the exchange of Transamerica shares for the shares of going concerns that are desirable acquisitions on a basis that will be agreed upon.

The Chairman. By going concerns, you mean by that financial

institutions, banks, and investment companies or business concerns engaged in manufacture and distribution of commerce?

Mr. Bacigalupi. No; banks.

The CHAIRMAN. Are you engaged now in the sale of your stocks, In other words, I noticed some time ago that Mr. Giannini issued statement that it was his purpose to extend the stock ownership of the group to all of the States of the Union and, as I recall it, the stock to be held by 500,000 separate individuals?

Mr. Bacigalupi. Yes, sir.

The Chairman. Is that program proceeding? Is there an active program for the sale of Transamerica stock and if so, on what basis Mr. Bacigalupi. I think that through a corporation known as the Intercoast Trading Co., which is not controlled by Transamerica-

The CHAIRMAN. Are they interested financially in the company?

Mr. Bacigalupi, Transamerica? The Chairman, Yes.

Mr. Bacigalupi. I think it owns about 30 per cent of the stock. There is a campaign on looking to the placement of this stock in Various States.

The CHAIRMAN. Are actual sales being made and, if so, at what

price?

Mr. BACIGALUPI. At the market, at the close of the curb the day Previous.

The CHAIRMAN. So that you have an organization of which you own 30 per cent actively engaged in selling the stock of the Trans-Inerica Corporation at the present market

Mr. Bacigalupi. Prepared to. I would not say it was under

way. I am not familiar with that phase of it.

The CHAIRMAN. Is that directed from California or from New York?

Mr. BACIGALUPI. From New York.

The CHAIRMAN. That is a New York house that has charge of that particular work?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. So that the announced program of sometime ago increasing the number of shareholders and securing a wider distribution, is in process?

Mr. Bacigalupi. As I understand it; yes, sir.

The CHAIRMAN. What is the usual commission to be paid on the Sale of the stock?

Mr. BACIGALUPI. I do not know as to the details of that, Mr. Chairman.

The CHAIRMAN. And you do not know where it is being sold?

Mr. Bacigalupi. No, sir.
The Chairman. Mr. Busby, in his questions to you, referred to Your taking a position in the stock of General Foods?

Mr. Bacigalupi. Yes, sir.

The Chairman. Which is one of the large groups controlling produce and foodstuffs. When you take a position in securities of the large include a voice in the managethy company like that, does it also include a voice in the management?

Mr. Bacigalupi. Not necessarily.

The CHAIRMAN. Does that investment indicate to you that you are going to take an active participation in the operation of General Foods?

Mr. Bacigalupi. As I stated, in answer to Mr. Busby's question, that matter was a bit of financing by the Bancamerica-Blair of New ork, concerning which I know nothing more than what I saw in the Paper. As I understand and know of the general custom of underwriting, when there is a material underwriting by any financial house, t does generally require that it have a voice in the directorate of that company, and it seems to me that is what occurred in this particular

The CHAIRMAN. In the colloquy between Mr. Busby and yourself, you referred to the question of directing through a director. hink you stated—one or both of you—that there was a director on the board representing that group?

Mr. Bacigalupi. I think the newspaper article to which Mr. Busby referred did state there was to be a representative of Bancamerica-Bair to go on the board of General Foods.

The CHAIRMAN. You will agree that, if a director representing your entire group is on that board, he would have quite some influence, backed by the influence of your entire group?

Mr. Bacigalupi. I think he would be a factor and have considerable

to say; yes, sir.

The Chairman. In the information which you furnished the committee yesterday you included a list of loans made to large groups in California. I notice among those groups that there was a large volume of loans granted to certain concerns, showing that you are intensely interested in concerns which do a produce business; at least; they do the same kind of business General Foods do. I rather gained the impression that you might have more than a passing interest in entering General Foods, by putting yourself in a more favorable posttion for influencing possible consolidations or the taking over of many of these concerns doing a business similar to that of General Foods.

this investment? Mr. Bacigalupi. I would say that you are incorrect, Mr. Chairman. There is absolutely no connection between any loans made by the Bank of Italy to any of its customers and any group that might be financed by the Bancamerica-Blair. I do not know which concerns you mean. However, if you mean any California food concerns engaged in business in California, I would say that each account stands on its own individual basis. It is a reciprocal basis. They carry deposits with us and we agree to take care of their seasonal demands up to a certain extent.

Am I correct in assuming that possible that might be your interest in

The CHAIRMAN. Perhaps my inquiry was inspired by the fact that some of your associates in the Blair Co. are interested in the food

8

O

0

86

h

stuffs corporations in California?

Mr. Bacigalupi. There is absolutely no connection in that. If you will trace back far enough in the history of those accounts, you will see that we are doing no differently with reference to them to-day than we have done over long years past. The accommodations they get from us they get from a number of eastern banks and other banks in California.

The CHAIRMAN. Then as to General Foods—and I am only citing that as one instance, that was brought out this morning in connection with other concerns of similar nature—your only thought is to make an investment and procure for your group its proportionate share of the banking business that would come from a transaction of that kind?

Mr. Bacigalupi. Yes, sir.

The Chairman. Now you are a director, are you not, of Transamerica?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. And you are a director of the Bank of America of New York?

Mr. Bacigalupi. No, sir.

The CHAIRMAN. You are not?

Mr. Bacigalupi. No, sir.

The CHAIRMAN. What are your directorships in connection with the affiliated companies now?

Mr. Bacigalupi. I am past president and chairman of the advisory committee of the bank of Italy, also a director of the bank of Italy; I am vice chairman of the advisory committee of Transamerica, its general counsel with reference to its western interests, and a director of Transamerica.

I have certain directorships in some of the subsidiary companies that are more or less nominal and I do not recall them offhand. But I shall be glad to furnish you a list, if you desire it.

The CHAIRMAN. Well, I do not think that is material. It identifies

you as a leading factor in all of these?

Mr. Bacigalupi. I have been a sergeant in the ranks from the

beginning and have been in all of the wars since 1904.

The CHAIRMAN. Referring to these charts, which have been placed In the record showing the different organizations from the beginning, starting with the bank of Italy down to the final consummation of the Transamerica Corporation, the Transamerica Corporation is purely a holding company?
Mr. Bacigalupi. Yes, sir; it is not an operating company.

The CHAIRMAN. It has investments outside, of course, of your own group?

Mr. Bacigalupi. Those that are outlined on the chart which you

have.

The CHAIRMAN. Its investments, then, are confined entirely to its Investments in the affiliated companies of the Transamerica group?

Mr. Bacigalupi. Yes, sir.
The Chairman. It does not go out and buy other securities?

Mr. Bacigalupi. No, sir.

The Chairman. Purely a holding company in every respect?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. Each one of those companies listed on the chart, as affiliated companies, or controlled companies, are operating now as individual units under their their own management?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. And is it in contemplation that you might merge the whole into one composite group and operate under the name of Transamerica?

Mr. Bacigalupi. No, sir; it could not be possible.

The CHAIRMAN. But you have not reached the full scope of your Possible development in that direction; in other words, you may take over other groups and operate them in particular parts of the country or in other lines of industry?

Mr. Bacigalupi. That is our hope. I would not say other lines

of industry, unless they are akin to banking.

The CHAIRMAN. Your investments in companies like General Foods would be simply listed among the investment funds of your different groups?

Mr. Bacigalupi. As an investment of Bancamerica-Blair, the security affiliate of the Bank of America of New York, which is, in turn, owned about 59 per cent, I think, by the Transamerica.

The CHAIRMAN. In your affiliation there, through the Blair concern,

have you a membership on the stock exchange?

Mr. BACIGALUPI. No, sir.

The CHAIRMAN. On any of the stock exchanges?

Mr. Bacigalupi. No, sir.
The Chairman. You do not own any seats?

Mr. Bacigalupi. We have an associate membership in the San Francisco Exchange, which was an inheritance from the old stockholders Auxiliary.

The CHAIRMAN. Do any of the directors of your company own,

or any company you control have, seats on any exchanges?

Mr. Bacigalupi. No, sir.

The Chairman. So that whatever stock exchange transactions they have with the different exchanges, they do through regularly constituted stock exchange houses?

Mr. BACIGALUPI. Yes, sir.

The Chairman. And in that respect they are no different from an individual dealer who may want to buy and sell on the stock exchange?

Mr. Bacigalupi. That is right, with the exception of the San Francisco Exchange. The affiliated company has an associate membership, like other large banks have, that entitles them to a voice but

not a vote, and, I think, to half commissions.

When the San Francisco Stock Exchange was first established, as I recall it, they needed the assistance of the banks in getting the thing started and each of the banks put in \$1,200 or \$2,500—I forget which. For that, they got an associate membership. But outside of that, there is no connection whatsoever.

The CHAIRMAN. The Bank of America of New York has member-

ship in the clearing house?

Mr. BACIGALUPI. I have no doubt of it.

The Chairman. Through that institution you can handle for your affiliated companies or your member banks which do business with the New York banks, brokers' loans?

Mr. Bacigalupi. I am not sure that they do.

The Chairman. And receive the commissions that are permitted to be paid on that class of loans?

Mr. Bacigalupi. I do not know anything about the commissions.

I am not familiar with the New York practice.

Mr. Wingo. In order that I may understand this, you say, "clearing house"?

Mr. Bacigalupi. Yes.

The CHAIRMAN. I was asking him whether the New York bank was a member of the New York Clearing House Association.

Mr. Bacigalupi. And my answer is that I think it is,

The Chairman. And if, in that capacity, acting as the depositary of country banks or members of your own group, it was not in a position to place brokers' loans on the stock market under the rules and regulations promulgated by the stock exchange?

Mr. Bacigalupi. I imagine if it is a member of the clearing house and that is one of its privileges—it would enjoy it, but I am not

familiar with what those privileges are.

The Chairman. You are not active in the management of the Bank of America of New York?

Mr. Bacigalupi. I have nothing to do with it whatsoever.

The Chairman. Now, Mr. Bacigalupi, permit me to ask you-Mr. Wingo. Just a moment, Mr. Chairman. Your question might leave the impression to a person reading the record, that that is the only available source of participating in brokers' loans in New York City. I think that is the impression the reader of the record

would get.

The CHAIRMAN. I did not mean that of course. Mr. Bacigalupi, you referred in your testimony yesterday to the question of segregation of assets. Of course that is provided for under the laws of the State of California.

Do you favor generally—I am asking you now for information in connection with possible legislation here before this committee—the segregation of assets for better protection of depositors who do busi-

ness with the banks?

Mr. Bacigalupi. My opinion is that as long as a bank is sufficiently capitalized that the provisions of the McFadden Act or the national banking act, as amended, are adequate in that respect.

The CHAIRMAN. Yesterday, when Mr. Fort was questioning you, referring to the bill which I introduced the other day, certain things were said, and I want to repeat his question to you and see if you are of the same mind now as you were yesterday.

Mr. Bacigalupi. I have already read the record and I may say

that I must have misunderstood him.

You have reference, Mr. Chairman, to the question that he asked with reference to what my opinion would be-

The CHAIRMAN. Let me read his question. I have the minutes

right before me:

Mr. Fort. The chairman of this committee has introduced a bill in the House recently, the effect of which is to stop any further development of group banking systems in this country pending, really, I take it, a decision by Congress on what it wants to do about it. Have you any views on the wisdom or unwisdom of that legislation?

Then the chairman said:

Just a moment. That is a somewhat drastic statement of what the bill proposes.

Then Mr. Fort read the bill, which is as follows:

Be it enacted by the Senate and House of Representatives of the United States of Merica in Congress assembled, That after the approval of this act it shall be unlawful for any corporation, copartnership, individual, or trustee to purchase or otherwise acquire more than 10 per cent of the shares of the capital stock of more than one member bank of the Federal Reserve System, whether State or national bank member, except after first obtaining the approval of the Comptroller of the Currency with respect of national bnaks and of the Federal Reserve Board with respect to State member banks. Any person or corporation violating this Act shall be deemed guilty of a misdemeanor and shall upon conviction thereof, in any district court of the United States, be fined not more than \$10,000.

Mr. Fort further said:

I have had sympathy with the view point expressed in this bill, that we have gone pretty fast in this business, and it might be well to stop and digest what we have done. Have you any view as to whether such legislation would interfere with the legitimate banking practices in this country now?

Mr. Fort, of course, was putting a more drastic thought to that

bill than was contemplated in the bill.

Now, in view of what you said yesterday, I should like to have you restate your position or correct the misunderstanding of the question. Mr. Bacigalupi. What you have read so far is all right, as far as I can see. The only point I wish to make had reference to Mr. Fort's following question:

If, however, in the judgment of the committee, our choice was between stopping this thing for a while until we could thoroughly settle what regulatory legislation ought to be adopted, or going ahead on regulatory legislation, without more study, it would probably be wiser, would it not, for us to stop it than to pass regulatory legislation without really sufficient investigation?

My answer was, I think that is true.

I should like the privilege of amending the answer to this effect; that I surely think that the bill as proposed should not be enacted at this time because I feel it will have the effect of placing in the hands of certain officials an arbitrary power, namely, of saying yes or no, without any standard or norm being fixed in the bill itself, upon which these officials are to predicate their consent. But if it came to an election before this committee or before Congress, to pass a bill of this kind or to kill further progress in group banking, which I consider perfectly legitimate and most timely, I surely would favor a bill along the lines as has been prepared; in other words, I favor the status quo until Congress has made its study and is ready to make a comprehensive enactment, but if it feels that something must be done in the interim, then I think that the election should be in favor of permitting the thing to go along in strong hands, leaving it within the jurisdiction of certain constituted Government authorities to regulate.

The Chairman. In connection with the maintenance of the status quo, some of us are fearful lest, during the continuance of that status quo, developments may proceed to such an extent that it may be fraught with much danger; in other words, weak groups or a weaker group, might acquire a large number of banks and the public might be exploited in the sale of stocks and it might be purely a promotion proposition, not in strong hands.

Of course we, in Congress, must recognize that there are strong

groups and weak groups.

Mr. Wingo. Is that the object of the bill? I have not found out

yet.

The Chairman. The object of the bill is to require, before this procedure goes any further, that they consult the Comptroller of the Currency and the Federal Reserve Board before they acquire more than 10 per cent holding in any bank.

Mr. Bacigalupi. My point, Mr. Chairman, is that if that is the purpose of the bill, it would be a very easy matter, it seems to me, to set up in the bill a standard; in other words, groups possessing less capitalization than an amount which you gentlemen feel adequate or

strong, would have to get consent.

The Chairman. I tried to make clear to you what we are trying to cover here—the possibility of exploitation in weak hands—and you have differed with the methods which have been suggested by me in the form of this bill. I would like very much, if I have conveyed to you my thought, to have your suggestion as to how to meet that situation.

Mr. Bacigalupi. That would be rather presumptuous on my part. I would not deign to do that. I must confine myself to the statement of my opinion and the resaons as the basis on which I predicate it, that it vests an individual or a group of individuals with too much arbi-

trary power. It would give the impression to the general public that Congress is against this thing and, for that reason, it requires that the acquisition of more than 10 per cent of another bank by any group, irrespective of how strongly capitalized and well managed it is, shall

not be permitted.

15

n

ė

0

a

0

1

Mr. Wingo. So that I may follow you, gentlemen, I want to state that I do not yet catch the purport of the bill. When you say "weak hands"—that the object of the bill is to enable the comptroller to see that no group should engage in the further development of group banking except those who are strong financially—is that what you mean?

Mr. Chairman. In an extreme degree, it would indicate or tend to

get to that point; yes.

Mr. Wingo. I am trying to find out what you have in mind.

The Chairman. That these people who are engaged in consolidating groups of banks in the country must have financial responsibility and integrity and have sufficient knowledge of what they are doing and make that known to the Federal reserve and to the comptroller to justify them in granting them permission in taking over these banks.

Mr. Wingo. The 10 per cent provision is not intended to be similar

to the monopoly provision contained in the antitrust law?

The CHAIRMAN. It was to prevent this until they got the approval of the comptroller or the Federal Reserve Board. There are instances where some banks have been taken over or attempted to be taken over by what looks to be totally irresponsible people.

I have in mind one instance where the institution itself is pretty well known to be insolvent, and it seems to me there should be something requiring the submission of situations or developments of that kind, to some supervision. It may be an impossible thing to do.

Now, Mr. Bacigalupi, you referred to your trials and tribulations, more particularly in the earlier days, with authorities in California, in regard to proceeding with your development. I wish you would, for our benefit, elucidate a little upon your difficulties there, and, in that connection, I would like you to go into the matter in quite some detail as to just what your problem was, because in previous hearings before this committee, pretty general reference was made to the alleged fact that you had gone into politics in California and elected a governor, and it was indicated it was done for the purpose of securing your own appointee as superintendent of banks, so that you could get away from the embarrassment you were laboring under in building your picture. An explanation of the difficulties which you were experiencing at that time would be of material benefit to us in the study that is now before us.

From my own knowledge, you were being held up in obtaining branches and taking over institutions that were a part of your program. It not only applies to the State institutions, but you were impeded in Washington in getting branches which you deemed desirable. It seems to me that is exceedingly pertinent to the study we are making here. I wish you would give us the benefit of the troubles you were

experiencing at that time.

Mr. Bacigalupi. I should like very much to do it, Mr. Chairman and gentlemen, but it is a narration of a very long history and just how pertinent it can be, I have my doubts. I tried to explain it in my opening statement, as generally as I could.

Mr. Wingo. May I suggest to the chairman that you made a statement there that was not clear, that he was impeded in Washington. What did you have in mind?

The CHAIRMAN. There were many times when they wanted to open

branches and they could not get permission to open them.
Mr. Wingo. From whom?

The CHAIRMAN. The comptroller in Washington, and the Federal reserve people.

Mr. Wingo. In other words, he was impeded in his efforts to get action from the Federal Reserve Board and the Comptroller of the Currency?

The CHAIRMAN. Yes, and I should like to have him explain whether that "impeding" came from the banking officials in California or in Washington. That has a bearing on the study we are making.

Mr. Bacigalupi. In a very general way, we start with the statements made in my preliminary or introductory report, that, beginning about 1921, other banks in California, principally in Los Angeles, began to emulate the example of the Bank of Italy by establishing branches throughout the southern portion of the State.

Los Angeles, as I stated yesterday, was then undergoing a tremendous development. It was a city on wheels. Thousands of people were coming in from all parts of the country, principally from the Middle West of the United States, and as I stated also yesterday, Los Angeles was never built for a metropolis. Its streets were narrow and traffic was terribly congested in the downtown area. It threatened the life and limb of anyone who came downtown to do much shopping. As a consequence, neighborhood business settlements began to rise up and Mr. Giannini was among the very first to sense the necessity of going to the people and, as I recall it, made a request of the then superintendent of banks for permission to establish a number of branches in and about the outskirts of Los Angeles.

Our competitors got together and caused the superintendent of banks to enunciate what is called the De Novo Rule.

As pointed out yesterday, there are only two sections of the banking code that are applicable to State banks establishing branches in California, which are section 127, which provides that—

No bank shall transact any business in this State without the written approval of the superintendent of banks

And section 9 which states that—

No bank in this State, or any officer or director thereof, shall hereafter open or keep an office other than its principal place of business, without first having obtained the written approval of the superintendent of banks to the opening of such branch office—

And so forth.

In the light of that authority, the superintendent of banks enunciated a rule that no bank in the State could establish a branch outside of the city wherein it had its principal place of business unless the public advantage and convenience required it. In other words, he changed the words "promotion of public advantage and convenience to a mandatory thing—"requiring" advantage and convenience.

Pursuant to that edict, we were forbidden, because of the fact we were the only bank operating in Los Angeles which had its head office outside of Los Angeles, from making an application because, as

he told us on a number of occasions, "It is useless for you to file your

application; I can not grant it."

The flyleaf of the brief, which is an exhibit before your committee, which I presented yesterday, indicates that, in the four years, 122 findings of local advantage and conveniences were made by the superintendent of banks in favor of our competitors and but two to the Bank of Italy during those four years, but the two of them had been already committed for by the superintendent of banks before the enunciation or promulgation of the rule.

It happened, however, that we had our International branch, which was the result of the purchase of the old International Savings Bank of Los Angeles. We had been operating in a certain quarter of Los Angeles for a number of years and it developed that the city desired to condemn a stip of land which included that building, the strip of land to be used as a boulevard. That was the center of a continuous area, but by putting in that wide boulevard to provide for fast-moving vehicles through the center of it, it necessitated our election as to whether we would go on this side of the boulevard with our established business or whether we should go on the other. If we went on this side [indicating] we would lose the patronage which

We had built up that come from the other side of the circle.

Just about that time, as I was debating the necessity of going to him and saying, "Here is a vested interest and right that we have; Your de novo rule is illegal; if you do not accommodate us at any other place, give us an additional license here to accommodate the Patrons we have that hail from this side [indicating] and another one to accommodate the business we have already built up that emanates from this other side; it is certain that we shall lose business if this is not permitted. When our manager, a Miss Grace Stormer, manager of our women's banking department, in Los Angeles, who knew the superintendent of banks from former days, when she was secretary of the State senate and he was a deputy in the State treasurer's office, came to me and asked for permission to establish a branch for the women's department in the Women's Athletic Club situated several blocks away on the ground that it would promote the convenience and advantage of the hundreds of women members of that club, I said to her: "It is useless for us to try. The minute we go to the superintendent, he will pull this de novo rule and we are barred before we start; we are prejudged."

She said: "I have already had an informal talk with him and he assures me that the permission will be granted and an exception

will be made in this case."

So I then, at the very next meeting of the board of directors, had a resolution passed authorizing the establishment of a branch of the Bank of Italy in the Women's Athletic Club and also a resolution authorizing application for an additional license to operate an additional branch in the divided International branch already established. Applications were made pursuant to that authorization and the denial came back in each instance predicated solely upon the de novo rule; in other words, the letters recognized that public advantage and convenience would be promoted in substance, but because of the existence of this de novo rule, he regretted that he would have to deny the application.

For the first time did those letters present us with an absolute denial predicated upon the de novo rule. Theretofore he was in the habit of finding that public advantage and convenience would not be promoted and that barred us and because we were sure the supreme court would not interfere with the exercise of his sound discretion, we really had nothing upon which we could base a legal action. But these letters, predicated exclusively upon the de novo rule, gave us an excellent opportunity and we decided to make a test case before the supreme court and to mandamus the superintendent of banks to issue the permits feeling that here was a clear-cut issue of law and not of fact, predicated upon two letters that could not be plainer, where the legality of the de novo rule could be determined.

Instead of his coming in and admitting that he had denied them on the ground of the de novo rule; that his attorney had advised him he was acting strictly within his rights, and leaving the matter up to the court to determine whether he had acted within the purview of his powers in enunciating that rule, they insisted on a commissioner being appointed and taking depositions and during the taking of the depositions, which lasted for three months, the superintendent of banks denied he wrote the letters. He admitted he signed them but they were dictated by someone in his office.

The Chairman. I rather gained the impression from you yesterday that the superintendent, in all of these matters of resistance to the development of your plan, was not acting on his own initiative?

Mr. Bacigalupi. No; he had as his attorney a man who had been the attorney for his predecessor, who was then the leading factor in the development of a competing branch bank system in Los Angeles, and this ex-superintendent of banks continued to be the de facto superintendent of banks through this attorney of the succeeding superintendent and, in the course of these depositions, it developed that he had made a very thorough study; in fact, he brought in clock counts of pedestrian traffic passing these two given locations, and after very much deliberation, he stated in his testimony that he had been forced to conclude that the public advantage and convenience would not be promoted by the establishment of those branches, changing his tune and making his position in conformity with section 9 rather than the terms of this de novo rule.

Well, the upshot of the whole thing was that the matter went before the supreme court and was argued and the supreme court side-stepped the issue, by first finding that the superintendent had committed perjury when he said he did not sign the letter, but it further stated that, in the course of the depositions taken in the course of the proceedings, he testified that he made a thorough study and found that public advantage and convenience would not be promoted and that that was in strict conformity with the terms of section 9 of the banking act and that, having found that they were unable to interfere with the discretion which the law vested in him, declined to

Mr. Brand. In other words, they passed upon the facts instead of the law of the case or the facts and the law of the case?

Mr. Bacigalupi. The facts as developed in the testimony after the proceedings had commenced.

Mr. Wingo. They permitted him to amend his own record of findings of fact, as set out in the official letter.

Mr. Bacigalupi. It would take me a month to cover all of the facts, but during all the time of this sparring for position, we had, in

the interim, come into the Federal reserve system.

The Federal Reserve Board, listening to the rumblings that were going on in California, not between unit and branch banks, but latecoming branch banks then in the field, sent out a commission to in-Vestigate these things and we had hearings such as your committee is having, investigating these things and the economics of the

The CHAIRMAN. All of this indicates that your progress was being

fought by established large groups in California?

Mr. Bacigalupi. They were being established and were sparring for place and they were seeking to catch up by working on the State banking department and also the Federal Reserve Board in Washington to hold us in check while they came along. That is plain language and that is what occurred.

Mr. Wingo. It was not group banks as much as branch banks?

Mr. Bacigalupi. No, sir; these were branch banks.

Mr. Wingo. In other words, there were two other large branchbanking systems being developed in competition with yours?

Mr. BACIGALUPI. Yes, sir.

The CHAIRMAN. In other words, there was a determined effort to keep your group out of southern California?

Mr. BACIGALUPI. Yes, sir; and we had, in 1923, a hearing here in Washington before the Federal Reserve Board on this general question

of branch banking.

Present at this hearing was this former antagonistic superintendent of banks then the leading factor in the building up of a competing branch-banking system in the southern portion of the State, and we had representatives of the California League of Independent Bankers and quite a delegation of Cook County bankers and it developed into a debate between the virtues and merits of unit banking as against branch banking.

During all this time, being dependent on either the superintendent of banks or upon the Federal Reserve Board for permission to establish new branches, there were times when we got the consent of the Superintendent of banks of California and were denied or delayed by the

Federal Reserve Board in Washington.

But the final outcome-

Mr. Brand. That is what I want to hear. I have to go. What did they finally decide?

Mr. Bacigalupi. The final decision was that all the applications we made were eventually granted.

Mr. Brand. By the Federal Reserve Board?

Mr. BACIGALUPI. By the Federal Reserve Board at Washington and, in this connection, I wish to state this, that this record, as it has been built up before this committee, has an unsavory reference the one and only case of alleged arbitrariness on the part of our Institution in the establishment of branches in California, and that the celebrated or notorious Santa Maria case, and I want to clear the atmosphere on that.

The first place wherein that was mentioned, was at the hearing before the Federal Reserve Board in 1923. The charge was that the Bank of Italy, in its arrogance, went down to Santa Maria;

that Mr. Giannini went to Mr. Teetsen, the president of the Bank of Santa Maria, who was on his sick bed and endeavored to force him to sell his bank to the Bank of Italy, threatening that if he did not sell the bank, he would start a brand new bank and run him out of business.

That accusation was made by a man who is now in one of our subsidiaries and I believe that he believed it when he said it, but the facts are contained in this brief which I prepared and sent to Hon. M. C. Elliott who was, as I understand it, the original attorney of the Federal Reserve Board and who was then representing us.

I laid the facts of the Santa Maria case out very explicitly in this brief. In that case we had the consent of the superintendent of banks to establish a branch, but were being held up by the Federal Reserve Board and after the filing of this brief and an investigation made by the Federal Reserve Board, through the officials of the Twelfth Federal Reserve District in California, the permission of the Federal Reserve Board of Washington was granted the Bank of Italy to establish a new branch there.

Now, I wish to file this brief in the record.

The CHAIRMAN. Without objection, it will be placed in the record. Mr. Wingo. What is it? What has it to do with the proposition here?

Mr. Bacigalupi. It has this to do, Mr. Wingo, that as I recall it, in some proceedings held before this committee, some reference was made to a hearing had two years ago before a similar committee or before this committee, in connection with the McFadden bill and some statement was made that both sides or all sides were represented before that committee. As a matter of fact we were not represented, and as I recall it, some reference was made to this Santa Maria case.

Mr. Wingo. You are referring to the colloquy before this committee in either 1924 or 1925 between Mr. Drum and some witness,

referring to the Santa Maria case?

Mr. Bacigalupi. Yes.

Mr. Wingo. In other words, you contend that you were not represented and Mr. Drum did not present your side as you thought it should be?

Mr. Bacigalupi. He did not and only our opponents were here.

Mr. Wingo. This is your brief presented when?

Mr. Bacigalupi. My letter to Hon. M. C. Elliott, under date of January 8, 1924, that fully explains the Santa Maria incident that has been so liberally referred to in discussions of this kind dealing with the alleged tactics of our institution in the establishment of branches in California.

Mr. Wingo. In other words, you contend it is relevant here because the claim is made that branch banks may indulge in driving out unit

competitors from business by the same tactics alleged?

Mr. Bacigalupi. Exactly.

Mr. Wingo. I think it is germane because the Bank of Italy was not represented, and Drum and someone else was engaged in a colloquy in this matter.

Mr. FENN. Is not this a fair statement, that the statement has been frequently made that systems such as this have gone in and

driven out unit banks?

I dres end con a ye

hav not Fed conc Mr. Bacigalupi. Absolutely, and it is the only case that has been

cited by the opposition against us.

Mr. Bussy. I should like to say about these briefs and unsolicited letters gathered promiscuously from the public—of course this is not as technical a proceeding as a court proceeding, but there is no relevancy between letters such as presented yesterday, gathered from the public promiscuously, and briefs filed on one side of a proposition before a committee such as this one. Of course it may be relevent, but I do not see the relevancy of bringing briefs into questions that deal with the hearings here unless both sides of the issue can be briefed, in order that we may have an opportunity to understand it.

(Discussion off the record.)
Mr. Fenn. In accordance with the averments that have been made here, that associations of the character of this one go into com-

munities and drive out unit bankers-

Mr. Bacigalupi. Not only that, we have been accused of certain things that were not true and this is the first time I have had a chance

to answer them and I ask that this go in.

The Chairman. The accusation is frequently made that groups similar to yours, in taking over a bank, in some community where it seems in your judgment it is desirable to take them over, where you meet with obstacles in the taking over of the bank, it has been the common practice—and this refers to others—to make some definite or side agreement with the officers of those banks whereby you might gain control of the institution and, in doing so, you make a contract with the officers of the bank for a long period of time to stay with you, frequently at good salaries. What is the common practice?

Mr. Bacigalupi. The common practice is, in the acquisition of an institutition, where we find that one or more individuals in that institution are desirable men, for us to retain them in order to insure our retention of their good offices, and we have entered into contracts

of employment with them.

Mr. Fenn. Is not that the common practice in the consolidation of two national banks, to combine the officers of the two banks? I know of several instances where that has happened in my own State where two national banks or member banks have combined, where the officers of the combining banks were retained, one being the chairman of the board of directors and the other the president of the bank. It is not an uncommon thing where I live.

(The brief referred to by Mr. Bacigalupi is here printed in full, as

follows:)

EXHIBIT W

SAN FRANCISCO, CALIF., January 8, 1924.

Hon. M. C. Elliott, Southern Building, Washington, D. C.

Dear Mr. Elliott: Ever since the copy of your letter of December 20, addressed to our general counsel, Mr. W. G. McAdoo, came to my notice, I have endeavored to find sufficient time to dictate a memorandum of the true facts concerning the so-called Santa Maria case. The wind up and the beginning of a year are generally busy periods in a bank's activities and as a consequence I have been delayed in dictating such a statement. I trust, however, that it is not too late and that the following recital will have the effect of convincing the Federal Reserve Board at Washington that there was positively nothing in the conduct of the Bank of Italy in its efforts to enter the Santa Maria field, pursuant

100136-30-yol 2 pt 11-12

to repeated urgent invitations of the people of that community, that was in any way unethical or censurable.

The accusations made at the open hearing at Washington in September of last year by the president of the California Unit Bankers, and his colleagues were wholly unjustifiable, came as a complete surprise, and had absolutely no place at said hearing.

In substance, they charged that in 1921 the president of the Bank of Santa Maria was lying ill at a hospital in San Francisco; that his bank was in a frozen condition and in sore straits; that our president, Mr. A. P. Giannini, realizing the precarious condition of both the president and the Bank of Santa Maria, went or sent word to him "demanding" that he sell out his bank to the Bank of Italy on terms arbitrarily imposed by Mr. Giannini, and that in the event of his refusal to comply the Bank of Italy would enter the field by the establishment of a new branch and run him out of business. One of the speakers, as I recall his remarks, stated that when the Santa Maria banker refused to be browbeaten into selling on the impossible terms sought to be imposed by Mr. Giannini, the Bank of Italy employed certain officers of the Bank of Santa Maria and sent them out through the Santa Maria country "buying up the pass books on that bank," and that on one occasion these men, agents of the Bank of Italy, had saved up some \$5 of such pass books and took them into the Bank of Santa Maria in a lump, "laid them down on the counter and demanded the money." That on the following day Mr. L. M. MacDonald, then our vice president, called in to see the cashier of the Bank of Santa Maria, and asked him how he "liked" the "wallop" he had gotten the day before from the Bank of Italy, concluding his jeering interview with the flat though positive statement that if the Bank of Santa Maria did not capitulate to the Bank of Italy, the Bank of Italy had many more such "wallops" to administer. It was further charged that because of this harassment the Bank of Santa Maria could no longer operate as a unit bank and that it was immediately thereafter forced to sell out to another institution, the Pacific Southwest Trust & Savings Bank, of which it became a branch.

Now, for the real facts: When, in the early part of 1921, the Bank of Italy entered the field at San Luis Obispo, a county seat situated about 28 or 30 miles from Santa Maria, it did so through the acquisition and merger of the Union National Bank. The former officers of that institution organized an independent State bank in San Luis Obispo and took with them practically all of the employees of our predecessor, it became necessary for us to immediately recruit a working staff for our San Luis Obispo branch. In selecting such officers we naturally looked to men with banking experience who were familiar with men and conditions in that part of the State. For the position of manager of that office, we selected a previously assistant cashier of the Bank of Santa Maria, but who at that time was the retiring president of the California Bean Growers Association; and for the positions of assistant cashiers, we chose and employed two young men previously employed by the Bank of Santa Maria. One came with the Bank of Italy on April 15 of the same year.

on April 15, of the same year.

There was absolutely nothing ulterior in the employment of these men. In fact, before employing one of them, I personally took a trip to Santa Maria and interviewed the cashier of the Bank of Santa Maria for the purpose of getting a line on his character and ability. The cashier was most enthusiastic and generous in his statements concerning him and it was largely upon the cashier's recommendation that we employed him.

In the latter part of April or the first part of May, word came to us through our San Luis Obispo manager, that the president and cashier of the Bank of Santa Maria were disposed to sell their institution to the Bank of Italy, and he was told that if such was the case we would be glad to have the president call upon us here in San Francisco on the occasion of his next visit. In due course, both he and the cashier visited our head office and our conference took place in my private office on the sixth floor of the old Bank of Italy Building, situated at Clay and Montgomery Streets. The interview was most pleasant and satisfactory in every way. The president represented to us that he was getting along in years and was desirous of getting out of the banking business; that his private interests were sufficiently large to engage the attention of his son, who had no ambition to become actively engaged in the banking business, and that as long as the cashier and the other employees of the bank would be taken care of in the new order of things he was anxious to quit. I personally drafted the agreement and escrow instructions, pursuant to the verbal understandings there reached, and in due course they were executed by the president and cashier of the Bank of Santa Maria

On the one side, and our president, Mr. A. P. Giannini, on the other. I am inclosing the original agreement and escrow instructions so that you may see the fairness of them, and particularly so that you may notice from the firmness of the president's signature that he was not, as some of our accusers would have the board believe, a poor helpless sick man, languishing on a bed of pain, at the time this

agreement was entered into.

N. g

Mr. C. B. Wingate, who, as you will observe from a reading of the inclosed agreement, was chosen by both sides to act as the umpire, was then a deputy in the office of Mr. C. F. Stern (now vice president of the Pacific Southwest Trust & Savings Bank, of which institution the Bank of Santa Maria is to-day a branch), and was decided upon after informal assurance had been given us by a former associate of his that he would act in that capacity if called upon. This same Sentleman had theretofore acted in a similar capacity, while a deputy under a previous superintendent of banks, on the occasion of our purchase of the First National Bank of Merced and our attempted purchase of the Pioneer Bank of Porterville, so that we had no occasion to doubt for a moment but that he would act in this case if called upon.

I here quote from an original memorandum recently submitted to me by Mr. W. H. Snyder, our chief examiner, who in the last part of May and the beginning of June, 1921, conducted an examination for the Bank of Santa Maria pursuant to the terms of the attached agreement. You will notice that his examination and investigation was not confined alone to the Bank of Santa Maria, but extended, with the consent of the latter, to the affairs of the Valley Savings Bank of Santa Maria and, to a certain extent, the First National Bank. I invite your attention to this, particularly because it is evidence of the fact that the three lastic. institutions were then practically under one control. As a matter of fact, even to-day, the Bank of Santa Maria crowd practically dominate the banking situation in Santa Maria. This is what Snyder has to say on the subject of his examination:

Examination of the Valley Savings Bank of Santa Maria and the Bank of Santa Maria were made by me on a holiday—which I believe was May 30, 1921. On that same occasion I met with the officers of the First National Bank of Santa Maria. It was understood at that time that we were negotiating for the purchase of the Valley Savings Bank and the Bank of Santa Maria with the understanding that we were to have a working agreement with the First National Bank owned by

the same stockholders as controlled the other two banks.
"According to my examination of the Valley Savings Bank, I found it in firstclass condition. The Bank of Santa Maria, however, I felt was in very poor condition. In that bank there were assets amounting to something over a million dollars, which I did not consider proper banking assets. On these loans I estimated a loss of from \$300,000 to \$400,000.

"The cashier of the Bank of Santa Maria admitted to me in my room at the Santa Maria Inn that my analysis of the assets was substantially correct but that he could not face the president with conditions as they were. He made an offer to me of a new Cadillac automobile if I would put through on behalf of the Bank of Italy a tentative proposition which was then under their consideration. the five minutes after this offer had been made to me, I met Dr. L. R. Sevier, a member of the advisory board at Los Angeles, in the lobby of the hotel and made the cashier admit to Doctor Sevier the offer which had been made to me."

It soon became evident after Snyder's examination, early in June, 1921, that We could not get together, so we called upon Mr. Wingate to come in and settle the dispute. Mr. Wingate then advised us that he could not act without permission from his chief, Mr. C. F. Stern, who was in Los Angeles. He reached Mr. Stern over the long-distance wire and Mr. Stern flatly refused to permit the dispute.

Wingate to act.

Mr. Stern was evidently in Los Angeles at the time closing his negotiations with the First National Bank and the Los Angeles Trust & Savings Bank (now the Pacific Southwest Trust & Savings Bank) to enter the employ of the Los Angeles Trust & Savings Bank in the capacity of vice president, for on June 20, 1921, Mr. C. F. Stern resigned from the bank superintendency and became vice president of the Los Angeles Trust & Savings Bank.

Wingate's refusal to act as umpire entirely upset and terminated our negotiations for the acquisition of the Bank of Santa Maria and its affiliated bank,

the Valley Savings Bank of Santa Maria.

The moment it became known in Santa Maria that said negotiations had fallen to the ground, a large percentage of the residents and business people of the community, particularly the farmers who were looking to the entry of our institution

for relief in the matter of loan accommodations, which because of local frozenconditions, were not being met by the local banks, a great deal of dissatisfaction
ensued, and Jesse, young Rice and Brown, former Santa Maria men and at that
time our representatives in the neighboring town of San Luis Obispo, were made
the recipients of urgent appeals to do something toward relieving the distressing
situation. I have since interviewed our representatives Messrs. Rice and Brown
and have their positive and unqualified assurance that there was nothing in
their conduct at that critical time which could in any way be construed as
unethical by the Santa Maria banks.

As you will note, our negotiations terminated in the beginning of June, 1921, just as the first six months' period was drawing to a close. Many of the disgruntied Santa Maria people, particularly those who were looking for new or additional loans, naturally began to prepare, even at great discomfort to themselves, to transact their banking business and receive their banking accommodations through our San Luis Obispo office, 28 or 30 miles away.

We inclose statement of Santa Maria accounts opened at our San Luis Obispo office, all practically opened during the first seven months of 1921, just furnished me by our representatives Messrs. Rice and Brown. You will observe from the dates thereof that it was an impossibility, at any one time, to present anywhere near "85" pass books. Rice and Brown positively deny ever having "bought up" a single pass book, and as positively deny that they, or either of them, or anyone connected with our institution, ever went into the bank and demanded payment of a single pass book "over the counter." They positively deleare that every pass book which was transferred by Santa Maria depositors was sent through the regular course.

It does appear that at the end of the six months' period, namely, during the month of July, 1921 (a time when deposits are usually transferred so as not to suffer any loss in interest) that the pass books transferred from Santa Maria to our branch at San Luis Obispo did aggregate some \$50,000 but no special point can be made of this fact when, as you will observe from the inclosed machine list, the total loan accommodations extended to the same Santa Maria depositors aggregated \$335,752. In other words, if the deposits obtained from the Santa Maria territory in 1921 amounted to \$113,863.28, we benefited rather than hurt the Santa Maria institutions when we assumed \$335,752 in loans from that territory. We submit that a showing such as this, namely, a ratio of loans to deposits of 3 to 1, can only establish the fact that we very materially and substantially helped rather than hurt the situation.

stantially helped rather than hurt the situation.

Now, a word as to MacDonald's jeering statements: The following are quotations from a recent written statement submitted by him to me at my request:

"Referring to your request for information regarding the Bank of Italy's application for a branch at Santa Maria, although it is quite a long time since I had a conversation with the cashier of the bank of Santa Maria, I will say without hesitation that the statement which was attributed to me at the Washington conference, is entirely untrue.

conference, is entirely untrue.

"It may be possible that he mentioned our having taken a number of accounts away from him to our San Luis Obispo branch, but I am wholly unable to recall any such conversation. If it were mentioned at all, I would have assured him that it was quite natural for these former officers of his institution to have friends in his district who would look to them for relief. A number of loans made through our savings department resulted in the distinct benefit of the Bank of Santa Maria, which was at that time unable to supply its clients with sufficient funds to take care of their required mortgage loans."

There can be no question, considering the difficult situation in which the Bank of Santa Maria found itself in 1921, but that if we had even intimated to outsiders what our examination disclosed or had done anything to hurt rather than to help, nothing in the world would have saved them, for there was no large bank in California at that time, other than our own, engaged in State-wide branch banking which would have taken them over.

As a matter of fact, the Bank of Santa Maria continued to operate independently for a full year after July 7, 1921 (during which month we are accused of "buying up" their pass books), and it was not until July of 1922 that the Pacific Southwest commenced its branch-banking operations on a wide scale (under the leadership of the former superintendent of banks, Mr. C. F. Stern) by absorbing this very bank, among the very first of its acquisitions outside of the Metropolitan area of Los Angeles. If the Santa Maria forces were—as charged—forced, because of our harassment and unethical tactics, to unwillingly retreat into the arms of a big branch bank, I sumbit that the retreat was quite leisurely and orderly-

Many of the people of Santa Maria would not accept the situation forced upon them. They insisted in pointing out that all banking facilities in the town were controlled by one group, depriving the residents of any competition; and that for years they had been anxious to get the benefit of the competition and facilities of the Bank of Italy, but monopoly was always strong enough to prevent it.

Acting upon such appeals and a lengthy petition bearing the signatures of hundreds of residents and business men of Santa Maria, we filed a petition for a new branch there on September 7, 1921, with Mr. Dodge, the then superintendent of banks. This was followed by a visitation upon him by a large delegation of Santa Maria's leading citizens, urging that the application be granted. Many of these men took a decided risk in so coming, for they realized what the attitude of the local banking group toward them would be if our application were denied. Their coming, notwithstanding the inevitable result, must demonstrate clearly the seriousness and the urgency of the situation.

Strate clearly the seriousness and the urgency of the situation.

Mr. Dodge held the application from September 7 to November 23, 1921, when,

88 will be noted from the copy of his letter, hereto attached, he dismisses the

8ubject in the following very general and stereotyped language: "I have found
that the public convenience and advnatage of the city of Santa Maria, County of
Santa Barbara, State of California, will not be promoted by the licensing of the
branch office desired by you. I am therefore refusing your application."

We have no means of possessing exact information on the subject, but my

We have no means of possessing exact information on the subject, but my personal opinion of the matter is, based entirely on my observations and varied conferences with Mr. Dodge on the Santa Maria situation, that his real motive in denying our application was a desire to maintain a friendship of long standing between himself and the attorney for the Tietzen interests in Santa Maria. Dodge was chairman of the Los Angeles board of supervisors at the time he was made State superintendent of banks, and this attorney was, prior to and during Dodge's incumbency as superintendent, the chairman of the Santa Barbara County board of supervisors, and had occasion to meet Dodge frequently in the State organization of county supervisors, and was generally very aggressive in a Political way in his county. He was very active in his opposition to our entry, and Dodge, on several occasions, went out of his way to tell me and others of our bank what a great friend of his this attorney was. I mention this solely because one of the members of the board asked me "why" Mr. Dodge had denied our application, and not wishing to confuse the issue by any undue prolongation of the Santa Maria controversy at the hearing—which controversy was wholly out of order there—I simply replied that I didn't know.

When Mr. Johnson, the present superintendent of banks, succeeded Mr. Dodge, the old appeal was again renewed by many of the people of Santa Maria, who were not satisfied, even though the Pacific Southwest has since entered the field. They argued that the same old interests still controlled the local banking situation, and argued for the real competition which would flow from our establishment.

lishment there.

Ø.

g

Accordingly, on June 22, 1923, we renewed our application, and on July 13, 1923, Mr. Johnson granted our application. A copy of Mr. Johnson's letter is

also here attached.

Fortunately, Superintendent Johnson has since expressed himself more fully on the Santa Maria situation in his letter to the Federal Reserve Board at Washington, under date of October 30, 1923, dealing with the question of branch banking generally, reference to which letter is here made. I desire, however, to here quote fully the principal paragraph in said letter which treats specifically with the reasons underlying his granting of our Santa Maria application:

"So far as I am aware, and judging from the reports of the Washington hearing that have come to me, the only instance where the propriety of a branch charter granted by me has been seriously questioned is that granted to the Bank of Italy for a branch de novo at Santa Maria. The Santa Maria situation has been an acute one for a considerable time, far antedating my incumbency as superintendent of banks. No profit can come from my entering into a discussion here of the merits of the Santa Maria situation. I accept the responsibility for the decision and wish to say that it was my own independent decision; that I knew at the time a former superintendent of banks had refused permission and I was well aware of the fact that there would be considerable criticism and a great deal of misunderstanding of my motives in the event that I did grant permission to the Bank of Italy to enter Santa Maria de novo. I felt, however, that they had a right to apply and that I could not escape the responsibility of decision on the ground that some one else had acted or because the situation was very obscure in some particulars or because my motives might be misunderstood. Besides

reviewing a full and voluminous record containing many letters and petitions setting forth the necessity for another bank in Santa Maria, there were many hearings held by me, and I believe that I heard all that there was to be heard on both sides of the santa and the santa a both sides of the controversy before making my decision. The decision was made solely on the grounds of public convenience and necessity and I wish to say here that formed that the people of Santa Maria were entitled to additional banking facilities. facilities.

"I do not intend to enter into a defense of my position in this matter any further than this and to state that so far as the conference agreement with reference to branch banking is concerned, the decision in the Santa Maria case was made with that agreement entirely before my mind and that the decision was made, not in violation of that agreement, but rather as coming within the exception laid down in that agreement which had been very carefully placed therein at the suggestion of my attorney at the time the agreement was entered into. He pointed out the fact that to permit the agreement to be made hard and fast so that no banks de novo should be granted to branch banks in communities where there were other banks would be to abdicate the authoroty granted me in the bank act, and rould be in violation and round round be in violation and round round round be in violation and round and would be in violation of my oath to accept the duties and responsibilities of that act, i. e., to refuse to determine for myself in obedience to the mandate of that act in each and every instance where application is made, whether the public convenience and advantage would be promoted by the granting of the charter to the applicant. More than that, it was then pointed out and the logic apparently appealed to all the conferees that discretion should reside in the superintendent to deal with those instances where through failure to keep Pace with the demands of the community the local banks had failed to meet the requirements of local service. Instead of incorporating the language of the statute into the exception, the language was changed from the 'public convenience and advantage by proported thereby' to 'public convenience and advantage by proported thereby the public convenience and advantage by proported thereby the public convenience and advantage by proported the public convenience and advantage by p advantage be promoted thereby' to 'public convenience and advantage require it'; in other words, the shade of difference runs from the rather mild word 'promoted' to the somewhat positive word 'require,' and in my finding after a personal investigation of conditions at Santa Maria I so found and have advised the Renk of Italy that I would not be the Italy that I would not be th the Bank of Italy that I would give them permission to enter the town of Santa Maria upon the ground that I found the conditions to come within the exception laid down in this limitation, to wit, that the public convenience and advantage of Santa Maria required further banking facilities. The Santa Maria case is the only instance where the contraction of the only instance where any question has been raised in all the many cases where charters have been granted since the conference. The very fact that this is the lone instance shows that it is the exception and not the rule.'

The foregoing frank statement of the superintendent's findings and conclusions should suffice to lay at rest any and all of the unfounded and wild accusations which have been made by selfish interests. It is not alone a safe assumption; but the fact, that if ever pressure was brought to bear upon any State official to swerve him from his plain duty, that pressure was exercised on Mr. Johnson in this case; and be it said, to his enduring credit, that he fearlessly stood by his findings and hopest convictions. his findings and honest convictions, regardless of consequences.

We submit that the establishment of a branch of the Bank of Italy in Santa Maria will not injure the Pacific Southwest Trust & Savings Bank or the other banks there and that the introduction of our competition will of necessity insure to the convenience and advantage of that community.

We therefore authorize you to present this statement to the Federal Reserve Board and to petition for a rehearing of our Santa Maria application.

Very truly yours,

JAMES A. BACIGALUPI, Vice President.

This agreement, made and entered into this 19th day of May, 1921, by and between Paul O. Tietzen, of the city of Berkeley, County of Alameda, State of California, first party, and stockholders auxiliary corporation, a corporation organized and existing under and by sixting of the law corporation. organized and existing under and by virtue of the laws of the State of Califorin a second party, witnesseth:

That for and in consideration of the sum of \$10, in lawful money of the United States of America, this day paid to first party, the receipt of which is hereby acknowledged, first party hereby promises and agrees to sell to second party, and second party, and second party hereby promises and agrees to sell to second party. and second party hereby promises and agrees to purchase from first party, 3,001 shares of the capital stock of the Bank of Santa Maria, a corporation, of Santa Maria, Calif., for the sum of \$425,000, subject to the following terms and conditions:

It is hereby further understood and agreed by and between the parties hereto that first party shall on or before the 24th day of May, 1921, deposit the certificates evidencing 3,001 shares of the capital stock of said Bank of Santa Maria, properly indorsed in blank, in escrow with the Crocker National Bank of San rancisco under and subject to escrow instructions in substantially the following

The CROCKER NATIONAL BANK, San Francisco, Calif.

S

Gentlemen: I herewith hand you certificates, properly indorsed in blank, evidencing 3,001 shares of the capital stock of the Bank of Santa Maria, and request and instruct you to deliver said stock to the Stockholders Auxiliary Cor-Joration upon payment by it to you for my account of the sum of \$425,000, awful money of the United States of America, or such lesser sum as you may be advised in writing is due me for said stock by W. H. Rice, James E. Fickett, or W. H. Snyder, and C. B. Wingate, or his nominee, or a majority of them on or before the 1st day of June, 1921, or the same shall be delivered unto said Stockholders Auxiliary Corporation upon my written order.

In the angula last as graph payment is made on or before said 1st day of June.

In the event that no such payment is made on or before said 1st day of June, 1921, then you are to return said stock to me upon my demand therefor.

Very respectfully yours,

PAUL O. TIETZEN.

It is also further understood and agreed by and between the parties hereto that immediately after the deposit of said stock in escrow as aforesaid, the loans of said Bank of Santa Maria shall be examined and appraised by W. H. Rice, acting for first party, and James E. Fickett or W. H. Snyder, acting for second party and in the event that they are unable to agree upon the value of any or all of said loans, then C. B. Wingate, or his nominee, shall be forthwith called in to decide the value of any and all such disputed loans, and his decision shall be final and binding upon both of the parties hereto. Should the said appraised value of the loans be so found to be not more than \$50,000 less than the present book value thereof, then the consideration hereinabove fixed for said shares of stock shall stand and first party shall not be made to suffer any reduction in said purchase Price because of said condition; should the said appraised value of the loans, lowever, be found to be more than \$50,000 and not more than \$100,000 less than the present book value thereof, then the consideration or price hereinabove fixed for said shares of stock shall be reduced by a sum equal to one-half the amount of and shares of scores share of depreciation over and above said first \$50,000 thereof; and should the appraised value of the loans be so found to be more than \$100,000 less than the present book value thereof, then first party may not be called upon to stand a greater reduction in said purchase price than a sum equal to one-half of the amount of said appraised shrinkage or depreciation over and above the first \$50,000 and up to the first \$100,000 thereof, but in such event it than, the first \$50,000 and up to the first \$100,000 thereof, but in such event it than the first \$50,000 and up to the first \$100,000 thereof, but in such event it than the first \$50,000 and up to the first \$100,000 thereof, but in such event it than the first \$50,000 and up to the first \$100,000 thereof, but in such event it than the first \$100,000 thereof. shall be optional with second party to go through with said purchase on the basis of such reduced consideration or to wholly withdraw and declare this sale voided and canceled, unless first party shall immediately declare his readiness and willingness to accept a reduction in said purchase price equal to one, half of the willingness to accept a reduction of the such as a property the total amount of such appraised shrinkage or depreciation over and above the first \$50,000 thereof.

Payment for said stock in the sum so found to be due pursuant to the method ayment for said stock in the said escrow holder in the manner toresaid shall be made by second party to said escrow holder in the manner and at such time or times after said appraisement as first party may direct.

It is further understood and agreed between said parties, as a further consideration and condition of this sale and purchase, that in the event of the consumhation of said sale and purchase said first party will remain with said bank in his present official capacity and at his present salary until January 1, 1923, or business and assets of said bank shall be purchased by and merged into the bank of Italy before said 1st day of January, 1923; it being understood that that party shall be required only during said time to lend his good will to said lastifier that the bank of January shall be required only during said time to lend his good will to said lastifier. Institution and to attend meetings of the board, whenever convenient to him, with full right to absent himself from the State for any purpose whenever he may desire to do so.

Time is hereby made and declared to be of the essence of this agreement. This agreement shall bind the heirs, executors, successors, and assigns of the Parties hereto.

In witness whereof, the first party has hereunto set his hand and seal, and the second party has caused this agreement to be executed by its president, thereunto duly authorized, and its corporate seal to be hereunto affixed, the day and year first above written.

SEAL.

PAUL O. TIETZEN. STOCKHOLDERS AUXILIARY CORPORATION, By A. P. GIANNINI, President.

This agreement, made and entered into this 19th day of May, 1921, by and tween Paul O. Tietzen and L. P. Scaroni, first parties, and Stockholders between Paul O. Auxiliary Corporation, a corporation organized and existing under and by virtue

of the laws of the State of California, second party, witnesseth:

That for and in consideration of the sum of \$10 this day in hand paid to each of said first parties, the receipt of which is hereby acknowledged by each of them, first parties hereby promise and agree to sell to second party, and second party hereby promises and agrees to purchase from first parties 126 shares of the capital stock of the Valley Savings Bank of Santa Maria, for the price and on the

terms and conditions following:

It is hereby understood and agreed by and between the parties hereto that first parties shall, on or before the 24th day of May, 1921, deposit the certificates evidencing said 126 shares of the capital stock of said Valley Savings Bank of Santa Maria and the capital stock of said Valley Savings Bank of Santa Maria and the capital stock of said Valley Savings Bank of Santa Maria and Santa Maria a Santa Maria, properly indorsed in blank, in escrow with the Crocker National Bank of San Francisco, under and subject to escrow instructions in substantially the following form:

The CROCKER NATIONAL BANK, San Francisco, Calif.

Gentlemen: We herewith hand you certificates, properly indersed in blanks evidencing 126 shares of the capital stock of the Valley Savings Bank of Santa Maria, and research the capital stock of the Valley Savings Bank of Santa Maria, and request and instruct you to deliver said stock to the Stockholders Auxiliary Corporation upon payment by it to you, for our account, of such sum as you may be advised in writing as you may be advised in writing is due us for said stock by W. H. Rice, James E. Fickett or W. H. Snyder, and C. B. Wingate, or his nominee, or a majority of them, on or before the latt day. them, on or before the 1st day of June, 1921, or the same shall be delivered unto

In the event that no such payment is made on or before said 1st day of June, 1921, then you are to return said stock to us upon our demand therefor.

Respectfully yours,

PAUL O. TIETZEN. L. P. SCARONI.

It is further understood and agreed by and between the parties hereto that immediately after the deposit of said stock in escrow, as aforesaid, all of the assets of said Valley Savings Bank of Santa Maria shall be examined, and the actual value thereof shall be appraised by W. H. Rice, acting for first parties, and James E. Fickett or W. H. Snyder, acting for second party, and in the event that they are unable to account that they are unable to account the second party. that they are unable to agree upon the actual value of any or all of said assets then C. B. Wingate or his nominee, shall be forthwith called in to decide the actual value of any and all such disputed assets, and his decision shall be final and binding upon all of the parties hereto. The price for said shares of stock shall be fixed by said sparses of stock shall be fixed by said sparses. be fixed by said appraisers, and shall be based wholly upon the appraised actual value of the assets of said bank, nothing to be allowed for the good will of the business of said bank business of said bank.

Payment for said stock in the sum so found to be due, pursuant to the method aforesaid, shall be made by second party to said escrow holder, or in the manner and at such time or times after said appraisement as first parties may direct-

Time is hereby made and declared to be of the essence of this contract. This agreement shall bind the heirs, executors, successors, and assigns of the

parties hereto.

In witness whereof said first parties have hereunto set their hands, and second party has hereunto caused its corporate name to be subscribed, and its corporate seal to be affixed by its provident the seal to be affixed by its president thereunto duly authorized, the day and your first hereinabove written.

PAUL TIETZEN, L. P. SCARONI, First Parties. STOCKHOLDERS AUXILIARY CORPORATION, By A. P. GIANNINI, President.

STATE BANKING DEPARTMENT, San Francisco, Calif., July 13, 1923.

BANK OF ITALY, San Francisco, Calif.

GENTLEMEN: This is in reference to your application of June 23, 1923, for permission to establish a branch office in the city of Santa Maria. Calif. After due invescigation I have concluded that the public convenience and advantage requires the establishment of additional banking facilities in this city. Accordingly, your application to establish this branch office is granted subject to the usual permission of the Federal Reserve Board. We have previously acknowledged receipt of the necessary resolution of your board of directors and the license fee of \$50. When you have received the permission of the Federal Reserve Board and have determined upon the date of opening, please advise and our license will be issued as of the dated determined upon mined upon. Yours very truly,

J. F. JOHNSON, Superintendent of Banks.

Mr. Wingo. I think, Mr. Chairman, before the witness leaves, that we should have an explanation of the obstruction they had here in Washington. The statement was made originally that they were impeded by the comptroller as well as the Federal Reserve Board. I think the record ought to show that, in that proceeding at that time, you were not a national bank. That was before you had joined the national system, and the comptroller did not pass upon that, and the comptroller was not a party to what they contend was a discrimination against you on account of these influences and pressure brought to bear by your competitors here at Washington.

That was simply a hearing before the Federal Reserve Board, because you were a member of the Federal reserve system and the rules that had been made at that time requiring you to get the per mission of the comptroller were not involved there?

Mr. Bacigalupi. That is true. The comptroller had no jurisdiction over our institution at that time.

Mr. Seiberling. How are we operating here—on general questions?

The CHAIRMAN. I am asking the questions but I am willing to yield to you.

Mr. Seiberling. I want to ask a question at this point.

The CHAIRMAN. Then I yield to you.

Mr. Seiberling. Do you contract with these officers prior to take ing over the bank or afterwards?

Mr. Bacigalupi. That is understood in the general transaction.

Mr. Seiberling. You would not take over the stock of the bank unless-

Mr. Bacigalupi. Unless we had the key men to carry on with.

Mr. Seiberling. And you assist them to get the stock occasionally? Mr. Bacigalupi. They are naturally desirous of consummating the sale, and it is up to them to deliver the 51 per cent or two-thirds of the stock, as the case may be; yes, sir.

Mr. Seiberling. In how many instances have you increased their

salaries?

he

Mr. Bacigalupi. I could not say that.

Mr. Seiberling. Could you look up your records and tell us? Mr. Bacigalupi. I would say in some instances we have increased their salaries.

Mr. Seiberling. Substantially?

Mr. Bacigalupi. Well, I would say that, in some instances, yes, we have increased the salaries substantially.

Mr. Seiberling. The salary is always fixed in the agreement before

You take over the bank?

Mr. Bacigalupi. Not necessarily before. We have had an understanding and the agreement has been consummated in a few cases.

Mr. Seiberling. That is all.
The Chairman. These different groups, Mr. Bacigalupi, that have been appearing before the committee, have voluntarily furnished us with a little more in detail information as regards how and where their stock is held; for instance, the Marine Midland group gave us a list of the distribution of 4,986,000 shares of their stock, indicating that so many shares were held by a certain number of stockholders In Buffalo, so many in New York City, and then they gave the number of stockholders and the total holdings by States. Do you have Your stockholders list made up in that manner so you could give the committee the benefit of that same information?

Mr. Bacigalupi. Yes, sir; you want the list of stockholders?

The CHAIRMAN. A list of stockholders showing-

Mr. Bacigalupi. The number of stockholders of Transamerica with respect to their residence—is that the idea?

The CHAIRMAN. By States.

Mr. Bacigalupi. Segregated by States.

The CHAIRMAN. And we should like to know how much is held in New York City and how much in California.

Mr. Bacigalupi. We can get that and will be glad to furnish it. The Chairman. This acquisition by your group of the eastern part of your banking operations—that was done entirely in the Bancitaly Corporation, was it not?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. And Bancitaly was then your holding company

for your California interests?

Mr. Bacigalupi. It was not a holding company of our California Interests. The stockholdings of the Bancitaly Corporation were not identical with those of the Bank of Italy.

The CHAIRMAN. The Bancitaly Corporation was not, in the strict

sense that the Bank of America is, a holding company?

Mr. Bacigalupi. No, sir; a holding and operating company.

The CHAIRMAN. Bit it did not have the same stockholding interests? Mr. BACIGALUPI. No, sir.

The CHAIRMAN. Now, there is a unification in the general stockholding interests, through Transamerica so that every stockholder has an interest in all of your companies—the affiliated interests?

Mr. Bacigalupi. To the extent that Transamerica has.

The CHAIRMAN. In the taking over of these banks, one of the reasons, of course, is concentration of management and elimination of waste, effort and expenses. What has been your experience in that connection? Have you considerably reduced your operating expenses?

Mr. Bacigalupi. Yes, sir.
The Chairman. Through the introduction of your own centralized management of these institutions?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. To what extent would you say that is possible in

Mr. Bacigalupi. I have never worked it out or had it worked out.

I venture to say we have cut down 25 or 30 per cent.

The CHAIRMAN. How do you effect that?

Mr. Bacigalupi. We effect it by concentration of activities, by standardization in forms, cutting down on advertising, that is, working under more favorable advertising contracts than prevailed in the case of the individual operators when they were operating as individual units. There is also a saving in operating with our general capitalization, which is generally stronger or bigger than is necessary, we can accommodate and handle very many more deposits. We can, through our widespread organization, avail ourselves of a number of opportunities of getting a profit that could not be availed of by scattered units and then our savings on the purchase of supplies, alone, for the system is tremendous; in fact, we are cutting down on that to a great extent even now.

The Chairman. I understand in your official family, there is no

duplication of salaries?

Mr. Bacigalupi. No, sir.

The Chairman. One man in your organization draws but one salary from one of the institutions—one of your affiliations?

Mr. Bacigalupi. That is true, with the possible exception of myself. Within the last few months I was placed on a retainer from the Bank of Italy and one from the Transamerica Corporation.

The CHAIRMAN. And as attorney for the bank?

Mr. Bacigalupi. In my capacity as chairman of the advisory committee; in other words, the Bank of Italy is run by its regular organization. Under the by-laws of the Bank of Italy, however, there is set up an advisory committee. The function of the advisory committee is to see to it that the established policies of the institution are adhered to and being made up of men who have gone through the ranks, holds itself available for consultation and advice in any matter of importance that may arise.

The CHAIRMAN. Now, as to the board of directors and the officers of the Transamerica Corporation, do they draw salaries from the Transamerica Corporation, or do they draw their salaries, remunera-

tion, from their respective institutions?

Mr. Bacigalupi. Generally from their respective institutions. The CHAIRMAN. And all are identified with one or another of your affiliates?

Mr. Bacigalupi. Yes, that is substantially correct.

The CHAIRMAN. Is this particular board and staff of officers actively engaged in the direction of your affiliated companies?

Mr. Bacigalupi. The board of directors of Transamerica?

The CHAIRMAN. Yes.

Mr. BACIGALUPI. It has nothing to do with them.

The Chairman. Simply acts in the capacity of a holding company?

Mr. Bacigalupi. Yes, sir.
The Chairman. Whose activities are of a modest nature?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. Now, after the advisory board, which is the next step down from the board of the Transamerica?

Mr. BACIGALUPI. Well, as outlined-

The CHAIRMAN. Is that the advisory board?

Mr. Bacigalupi. No: the advisory board—there is an advisory board connected with each of the branches of the Bank of Italy situated outside of San Francisco that serves in the same capacity as the old board of directors. With reference to the business of that particular branch.

The CHAIRMAN. But those are all tied in one advisory committee.

are they not?

Mr. Bacigalupi. No, sir. The Chairman. They are not?

Mr. Bacigalupi. No, sir.

The CHAIRMAN. So that the members of the advisory committee draw their salaries from the affiliates in which they are directly con-

Mr. Bacicalupi. They draw no salary, but receive a fee for attendance at the meetings of the advisory board, as they did when they were directors of the unit bank, when it was so operated.

The CHAIRMAN. There is no general advisory board?

Mr. Bacigalupi. There is an advisory committee of the bank. made up of-

The CHAIRMAN. What do you mean by "the bank"?

Mr. BACIGALUPI. The Bank of Italy.

Mr. Fenn. Is there a general advisory board over all? Is there a general advisory board over the Bank of Italy, the Transamerica Corporation, and all the subsidiaries, that gives advice to all the subsidiaries?

Mr. Bacigalupi. No. There is an advisory committee of the Transamerica Corporation, which is made up of Mr. Giannini, chairman; Mr. P. C. Hale, vice chairman; and myself, vice chairman. We act in an advisory capacity to the management of the Transamerica Corporation. Then there is an advisory committee of the Bank of Italy, made up of Mr. P. C. Hale, Mr. L. M. Giannini, Mr. Giannini's son, and myself as chairman.

The CHAIRMAN. Of course, you have a number of affiliated companies here. There has come into this discussion the question of whether or not the supervising authorities should not have the right to examine the financial affairs of all the affiliated companies-for instance, the Comptroller of the Currency to examine the national banks, and the State examining board to examine the State banks.

What is your opinion in regard to that?

Mr. Bacigalupi. I believe that the Comptroller of the Currency, wherever it is a national bank, or the State superintendent of banking. wherever it is a State bank, under existing law has the right to trace through any transaction that he finds in the banks that leads either to an individual or to a corporation, and that he has the right, if he finds anything that looks out of order or on which he desires further information, to pursue that matter into the holding company if he chooses.

As to whether he should be vested with the right to go in and investigate the affairs of a holding company that have no direct bearing upon any transaction that he finds in his examination of the bank, I seriously doubt the wisdom or the justice of it.

The CHAIRMAN. Where there is a common stockholding ownership,

would that same view prevail?

Mr. Bacigaluri. Yes, sir. I do not see that that would make any more difference than if it were an individual who owned all the stock of an institution. It would not necessarily vest the supervisor with the authority to go in and investigate the private affairs of an individual owner if, in his examination of the bank, he did not run across any item that indicated any abuse or any transaction that was out of order or that needed explanation.

The CHAIRMAN. Then it is your thought that in cases like that, the

supervising authorities now have sufficient authority-

Mr. Bacigalupi. I think they do. The Chairman (continuing). To go into the examination of affiliated companies where those transactions indicate that the affiliated

company is participating with the bank-

Mr. Bacigalupi. In fact, Mr. Chairman, I will say that in actual practice, whenever the Comptroller of the Currency, the Federal Reserve Board, the Federal reserve bank, or a State superintendent of banks has desired to trace through any item, or has demanded any explanation or any statement with reference to a particular transaction that he found in the bank, he has always been given the information and has been given access to the books and the records of the corporation with reference to that particular item.

The Chairman. With reference to the present method of examination by the comptroller's office-for instance, of a group like yoursyou probably have observed that a plan has been worked out, not of simultaneous operation but of asking your branches to report on a certain date, under oath, I believe, the condition of your bank, so that the examining force spends a great deal of time in the head offices

of groups like yours.

Do you feel that that is a proper examination of these banks?

Have you any suggestion to make as to any improvement?

Mr. Bacigalupi. Our experience is, and I am glad to say it, that our bank has never received a more thorough or a more satisfactory examination that it has received at the hands of the Comptroller of the Currency pursuant to the method now in force. The examinations we have found most comprehensive and thorough, and satisfactory in every respect.

The CHAIRMAN. Do the Federal reserve people examine your banks

separately?

Mr. Bacigalupi. They have not since we have become a national Prior to our nationalization, we used to be examined jointly by the State superintendent's office and by the Federal reserve bankof th the 8 M M Four M M M

The CHAIRMAN. Some of your banks, of course, are not members of the Federal reserve system and they are under the supervision of the State banking department, are they not?

Mr. Bacigalupi. Yes, sir; the State superintendent of banks. Mr. Wingo. I understand that you put a list of the directors of

Your institutions in the record yesterday?

Mr. Bacigalupi. Yes, sir.

Mr. Wingo. Does that list cover the Transamerica Corporation? Mr. Bacigalupi. Yes, sir. It covers the Transamerica and all of the important subsidiareis.

Mr. Wingo. Does that undertake to show the business connections

the industrial world of these directors?

To show you what I have in mind, when Mr. Decker and Mr. Wakefeld, representing group banks, were here, they furnished lists which would show for example, that a certain director was president or ice president of a certain railroad, and another director of their anking corporation was president of a power company.

The point I am getting at is this, that I would like to have the record show the connection of these men who are directors in the Transamerica Corporation and its subsidiary corporations with the business world, such as railroad, power, wholesale, manufacturing, notor interests, and such as that.

Mr. BACIGALUPI. I do not think, Mr. Wingo, that the list as pre-Pared would in all instances show that, but if it is the desire of this

committee that it should, we shall undertake to do it.

Mr. Wingo. That would aid, because you will catch the drift of ome of the questions of the chairman this morning. We want to ee what tie-up there is between some of these banks and the business World. For instance, indicate whether a certain director is president a railroad company, or of a power company. Edsel Ford, just give an illustration, was shown to be a director in one of these

coups, and we would like to have such illustrations as that.

Mr. BACIGALUPI. I understand. I think the exhibits with reference the directors of the banks are printed, and I believe that one, of Bank of America of New York, does set them up with a descripon of their principal outside connection; and if it is found that that not the case with respect to the others, we shall undertake to do that. Mr. WINGO. We would not care for all their business connections, just the principal ones. For instance, Edsel Ford might be a rector in half a dozen corporations, but his principal business onnection is with the Ford Motor Co., and, in the case of the presient of a power company, that might also be the case. You catch he point?

Mr. BACIGALUPI. Yes.

Mr. Wingo. When you took over a unit bank in California and rned it into a branch of your Bank of Italy, what changes, if any, the interest rate took place in that particular community?

Mr. Bacigalupi. Our uniform practice has been to adopt a maxim rate of 7 per cent. For instance, when we entered the San aquin Valley, where we found on entry that the prevailing rate of derest on loans was 8, 9, and in some instances 10 per cent, we mediately brought every one of the loans then in the pouch down a maximum of 7 per cent, and enunciated a rule that interest on ch loans should thereafter be at the rate of 7 per cent.

Mr. Wingo. That is on the loans made. Do you have a varying rate at the same time on different loans in these branches?

Mr. Bacigalupi. Our rates vary all the way from, generally speak

ing, 6 to 7 per cent.

Mr. Wingo. That is at the same time?

Mr. Bacigalupi. Yes.

Mr. Wingo. The same date. You might make a loan to-day to one customer at 6 per cent and on the same day make another loan at 6 per cent-is that true?

Mr. Bacigalupi. Yes, sir. The general rule is 7 per cent. There are exceptions made at 6 per cent, and those exceptions are predicated upon the volume of patronage or the volume of business that we get from the particular individual.

Mr. Wingo. The customary exceptions, that are made in large

Mr. Bacigalupi. In the ordinary course of business.

Mr. Wingo. Let us take the situation with reference to the seasons, that is, a variation in rate at the particular time. Is there a fluctuation of rates in these smaller towns?

Mr. Bacigalupi. No, sir.

Mr. Wingo. The same throughout the year?

Mr. Bacigalupi. Yes.

Mr. Wingo. On deposits, what has been the effect when you took over a unit bank, on the rate of interest paid on their balances

Mr. Bacigalupi. Our prevailing rate on savings deposits is 4 per cent. In Los Angeles, for instance, where we have very keen competition, where they have restalled, where we have very keen competition. tition, where they have several kinds of such accounts, we naturally seek to meet the competition of seek to meet the competition there; but 4 per cent, generally speaking is the prevailing rate on savings accounts.

Mr. Wingo. The point I was getting at is the effect on interest rates in these smaller communities where your branches supplanted the unit banks. Does it have any appreciable effect one way or the

other, within your knowledge?

Mr. BACIGALUPI. No. My experience is that the prevailing rate paid to depositors has been generally maintained.

Mr. Seiberling. May I ask a question there?

Mr. Wingo. Yes.

Mr. Seiberling. I suppose you have the very best of accountants? Mr. Bacigalupi, I think so. We have a couple of them with right here, so that I would not dare to say anything to the contrary.

Mr. Seiberling. And they get up comparative operating state

Mr. Bacigalupi. Yes, sir.

Mr. Seiberling. Do those comparative statements show the open tions of the banks prior to acquisition by you, as well as subsequently!

Mr. Bacigalupi. No; I do not think we tabulate that.

Mr. Seiberling. You do not go back into your old operations? Mr. Bacigalupi. No.

Mr. Seiberling. Well, has the interest rate on deposits, as shown by your operating statements, showed a decrease or an increase? Mr. Bacigaluri. I think they would show about the same; in other

Mr. Seiberling. How about your interest rate on loans? What words, no material variation one way or the other.

would they show as to that?

Mr. Bacigalupi. They would show less in many instances, particularly when we started. Of course, after we were in business for a considerable time, other banks who were charging more than 7 per cent had to meet our rate.

Mr. Seiberling. That is all.

Mr. Wingo. Under the law of California, when you are operating a branch banking system under the State law, and before you converted into a national bank, whenever you established a branch you had to increase your capital stock, your minimum amount representing that particular branch, did you not?

Mr. Bacigalupi. Not necessarily.

Mr. Wingo. Does not the law of California require it?

Mr. Bacigalufi. No. The law of California requires that your general capital shall be so much for a bank operating in a city of a certain size, and that it shall be so much more for every additional branch taken on. If your capital at the time you absorb 1, 2, or 10 units is more than that general requirement, there is no necessity for increasing your capital. For instance, to-day if we were operating as a State bank, we could take on about \$800,000,000 more in deposits without increasing our capital.

Mr. Wingo. I read some time ago a complaint of the State Bank Commissioner of California and it was stated that there were no such restrictions in the national bank act as there were in the State banking law of California, and that the tendency was to put a premium upon having national charters.

Did you read that statement?

Mr. BACIGALUPI. I did not pay any attention to that.

Mr. Wingo. Since you have become a national bank, you can create as many branches as you please without a requirement as to additional capital to represent those particular branches?

Mr. BACIGALUPI. Yes; I think that is so.

Mr. Wingo. The point I am getting at is this, that I understand that the State law of California does have a statute governing the matter of minimum capital for additional branches, and where the bank already has utilized its capital base, if it wants to increase its operations in the way of establishing additional branches, it has to enlarge its capital structure, and the minimum, I think, is not less than \$25,000 for each branch in California. On the other hand, under the national banking act there is no such provision, but if the comptroller approves of the establishment of that branch he may, as a condition precedent, if he so desires, say that you shall have so much additional capital. Do you know of any instance in which that was done?

Mr. Bacigalupi. No, I do not.

Mr. Wingo. At the time you had this hearing before the Federal Reserve Board in Washington, either in 1923 or 1924, to which you have referred, Judge Elliott represented you as attorney at that time, did he not?

Mr. Bacigalupi. Yes, sir.

Mr. Wingo. And he was the same attorney that was formerly attorney for the Federal Reserve Board, and I believe he is dead now?

Mr. Bacigalupi. I did not know he was.

100136-30-vol 2 pt 11-13

Mr. Wingo. Mr. McAdoo, late Secretary of the Treasury, was attorney for your bank at the same time, was he not?

Mr. Bacigalupi. Not at that particular time.

Mr. Wingo. I thought he was your general counsel?

Mr. Bacigalupi. Not at that particular time; he was then no longer acting in that capacity. On the occasion of this hearing at

Washington, I appeared personally.

Mr. Wingo. Now, just a few questions about the McFadden proposal in this late bill that he has introduced. I do not understand it, and I do not understand his explanation. I say that with all kindness to the chairman.

As I understand that bill, if it were enacted into law and I were to buy, after the passage of that act, 15 per cent of a State bank in Arkansas that belonged to the Federal reserve system, if I already owned more than 10 per cent of the stock of another member bank I could be fined \$10,000 in a Federal court.

Mr. Bacigalupi. Yes, sir.

Mr. Wingo. Even though the State law of Arkansas, governing that corporation, had no such penalty?

Mr. BACIGALUPI. Yes, sir; as I understand it.

Mr. Wingo. As a lawyer, do you believe that that would stand up?

Mr. Bacigalupi. I do not know. I doubt it.

Mr. Wingo. Suppose that it did stand up, and Mr. McFadden seems to want this formation of the group banking business to be in the hands of "strong men." I believe is his expression. Suppose that some "strong man" did want to violate that law and get control of a string of large banks involving millions of dollars, say like Mr. Decker's group. He could do so if he suffered a maximum penalty of \$10,000 for the privilege of getting that monopolistic control.

Mr. Bacigalupi. If that is the only penalty provided.
Mr. Wingo. Yes; if that is the only penalty provided, but the other penalties now written in the statutes seem, under the present administration, to have subsided into a state of innocuous desuctude, and so I presume that this is an attempt to revive the statute against monopolies. That is what I thought when the chairman introduced the bill, but he says now that it is to guarantee strength against weakness, but I suggest that no one need be alarmed, for it will not

be enacted into law at this session of Congress.

Now, at the time that you were talking about that struggle that you had with two other group bankers that were trying to engage in the branch banking business in competition with you, that were trying to profit by the experience of the Bank of Italy as a pioneer in the branch banking field, I do not think it will hurt anything to refer

to the fact that one of those companies was the Pacific—Mr. Bacigalupi. Pacific Southwest Bank and Trust Co.

Mr. Wingo. And the other group was called the Security, I think.

Mr. Bacigalupi. They are now consolidated.

Mr. Wingo. They are now consolidated, but you had more trouble with the Pacific at that time than you had with the Security, did you not?

Mr. Bacigalupi. Yes, sir. Mr. Stern, who became the executive vice president of the Pacific, had for 18 months, between 1918 and 1920, been the superintendent of banks of California. During his entire tenure of office, we were absolutely denied, by the use, as he

boasted, of his "strong arm," a single permit. He justified himself on the ground that branch banking was obnoxious, was everything un-American and evertyhing wrong, and he could not, as the savior of the State of California, grant us any permission whatever, and then immediately upon his retirement from office he became executive vice president and hired our chief assistant accountant and one of our vice presidents, and proceeded to duplicate the system of the Bank of Italy in southern California.

The Chairman. The executive vice president of what?

Mr. Bacigalupi. Of the Pacific Southwest Bank & Trust Co. of

Mr. Wingo. Your answer to my question was a more complete response than I had hoped for, and it saves my asking some follow-up

What is the name of the man who is the head now of the merged

institution?

Mr. Bacigalupi. Mr. Sartori.

Mr. Wingo. That friction has for the most part been removed, has it?

Mr. Bacigalupi. Yes, sir.

Mr. Wingo. And there is peace now in the branch banking field in California?

Mr. Bacigalupi. Peace ever since we have nationalized.

Mr. Wingo. Maybe this "savior" that was so alarmed at branch banking has seen the error of his ways since he has gotten into the game.

Mr. Bacigalupi. I think he is no longer connected with the Pacific.

Mr. Wingo. And possibly we have been relieved of his connection.

Mr. Bacigalupi. I am referring to Mr. Stern.

Mr. Wingo. Of course, not to Mr. Sartori. I had Stern in mind. too.

That is all.

The CHAIRMAN. In the discussion that has been taking place here, reference has been made to the control of these groups. Is there in lorce in your particular organization any plan for the perpetuation and control of management?

Mr. Bacigalupi. No, sir. The Chairman. Is there a control vested in the stock in any

Mr. Bacigalupi. No, sir; no pool, no agreement of any kind. It is up to the stockholders of the Transamerica to clean out if not

The CHAIRMAN. And, so long as successful management prevails,

the present management will probably continue?

Mr. Bacigalupi. We hope so. That has been Mr. Giannini's consistent policy from the very beginning. There never have been any pooling arrangements of any kind, and the stock has been scattered and the control at no time has been vested in any limited group.

The CHAIRMAN. Do you maintain a market through any one of your

Affiliated companies on your stock?

Mr. Bacigalupi. What do you mean by that?

The CHAIRMAN. Do you support the market on your stock, by Purchase or sale?

Mr. Bacigalupi. Generally speaking, I would say no.

The CHAIRMAN. It was quite necessary in the earlier days of your organization, was it not?

in ;

Mr. Bacigalupi. Mr. Giannini personally took an interest in doing what he could to regulate it indirectly through watching the thing, but beyond that he was powerless to go.

The CHAIRMAN. There was included in the record of these hearings reference to a case where an affiliated holding company whose stock was owned 100 per cent by the stockholders of a national bank owned 77 per cent of the stock of its bank, whereas the national bank law prohibits the ownership by a bank of its own stock.

In that connection, do any of your affiliated companies hold stocks

of the Transamerica Co. for investment? Mr. Bacigalupi. I think one of the subsidiaries owns some shares of Transamerica.

The CHAIRMAN. Which subsidiary?

Mr. Bacigalupi. I think it is the Bankitaly Co. of America. The Chairman. Is that for the purpose of maintaining stabiliza-

tion in the market price of that particular issue?

Mr. BACIGALUPI. No.

The CHAIRMAN. It is just held for a specific purpose, as a matter of investment?

Mr. Bacigalupi. Yes; to have it on hand in event of any prospective consolidation.

The CHAIRMAN. Do you loan on your own stocks to any of your affiliated companies?

Mr. Bacigalupi. No. The Chairman. Do your banks loan to borrowers, with Transamerica stock as collateral?

Mr. Bacigalupi. Not on Transamerica alone, as a rule. have been certain instances where there has been some Transamerica added to other assets in order to make the loan better, and there may be some loans on Transamerica alone, but wholly within the law.

The CHAIRMAN. Do any of your banks loan on the stock of any of your affiliated companies exclusively?

Mr. Bacigalupi. No, sir. There is a general rule against the doing of that where the borrower has no independent financial responsibility.

The CHAIRMAN. But they do permit the stocks to be pledged

along with other securities? Mr. Bacigalupi. Once in a while when it is deemed necessary to make a loan better, we make them put up whatever Transamerica stock they have, but no loans are ever made to assist anyone in the purchase of Transamerica stock.

The Chairman. You spoke yesterday of certain pools that were operating in Bank of Italy stock.

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. A couple of years ago?

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. Were any of your affiliated companies members of any of those pools?

Mr. Bacigalupi. I should say not; no, sir.

The CHAIRMAN. And none of the officers or directors of your bank engaged in any pooling arrangement in connection with those stock operations?

Mr. Bacigalupi. No, sir; and, furthermore, we refused to accept even an escrow that involved the purchase of our stock on margin.

The CHAIRMAN. Do your banks made it a practice to loan to your officers and directors?

Mr. Bacigalupi. No sir; long before there was any law against it

for State banks.

ľ

The CHAIRMAN. So that none of your officers and directors borrow

from the banks with which they are connected?

Mr. Bacigalupi. Whether there has been an exception made since the bank has become a national bank, I am not familiar, but prior tothat time there never was.

The Chairman. But, as far as your State banks are concerned,

none of them loan to your officers and directors?

Mr. Bacigalupi. No, sir.
The Chairman. Nor to any of their companies in which they are interested?

Mr. BACIGALUPI. No.

The CHAIRMAN. Are there any other questions?

Mr. Wingo. Just one other question on this proposed bill of Mr.

McFadden's.

This has been suggested, that we enacted that into law, and assuming that the courts should hold that you could not thus control the purchase or sale of stock in State corporations by an individual, then there would be two things that would appeal to those who would feel that there was nothing inherently wrong in the act that is being penalized. We frequently run up against business men who sincerely and honestly believe that certain restrictive and regulatory statutes are unwise and vicious, and such a man would feel that he had two courses, one to adopt one of several obvious expedients to get around it, and the other would be to say, if it were a national bank, that they will convert into a State bank and will not put it in the Federal reserve system or, if it is a State bank and in the Federal reserve system, they will withdraw it from the Federal reserve system and then they get out from under this proposed \$10,000 fine. That is, assuming that a gentleman wanted to buy more than 10 per cent for the obvious purpose of control and you want to prevent that so-called monopolistic control, then it would be the tendency to take the banking business of the country out of the national system or out of the Federal reserve system, when the expressed desire of most people is to bring them in and find ways and means of getting them into the Federal reserve system.

That is one of the chief fears that have been expressed to me with reference to Mr. McFadden's bill. However commendable may be his purpose for checking monopoly, which is always very objectionable

here, it is feared by some that it will have the opposite effect.

Has that occurred to you?

Mr. BACIGALUPI. It had not occurred to me specifically, but I fol-

Mr. Wingo. Is there some possibility of that being the result, in your judgment?

Mr. Bacigalupi. Since you mentioned it, I think so; I think that it is very likely that that would be the result. As I understand the bill, it penalizes the member State bank or the national bank, does it not?

The Chairman. It applies to member State banks of the Federal reserve system and to national banks exclusively. It could not reach, of course, nonmember State banks.

Mr. BACIGALUPI. It would not reach the individual who did the

purchasing, would it?
Mr. Wingo. Yes; it would.

Mr. Bacigalupi. Would it?

Mr. Wingo. Yes. The language is that:

After the approval of this act, it shall be unlawful for any corporation, copartnership, individual, or trustee to purchase or otherwise acquire—

even by inheritance-

more than 10 per cent of the shares of stock in the capital stock of more than one member bank of the Federal reserve system.

and so forth.

Mr. Bacigalupi. That is true, but if this member State bank withdraws from the Federal reserve system prior to the sale or the acquisition by the individual, or converts from a national to a State bank, then that individual is not buying 10 per cent of the stock of a

member bank or of a national bank, is he?

Mr. Wingo. That is the very point I had in mind. It would have a tendency to drive national banks out of the national bank system and State banks out of the Federal reserve system. Then, if he did own more than 10 per cent in one, and he wanted to buy more than 10 per cent in another, and he came to you or to me as lawyers and said that he wanted to do that and that it would help the banking situation to do it but that he did not want to pay \$10,000 penalty, we might say:

Oh, well, take one of these banks out of the Federal reserve system and let the other one act as the sewer through which you will drain the benefits of the system into it.

That is what I am afraid of. I am afraid that, instead of bringing the banks under the control of the Federal reserve act, this legislation would have a tendency to drive them out.

I may be in error, but I just wanted to suggest that as a possibility.
Mr. Seiberling. I would like to ask one or two questions.

I am very much interested in the interest rate that we were discussing, and I am wondering if you would be willing to submit to this committee, but not to be printed in the record, the detailed operating accounts of your banks, together with the comments of the auditor submitted to your board of directors each year since

f

ti

your organization?

Mr. Bacigalupi. I think we have in that consolidated report done that. It contains everything for the last three years. There is an Exhibit M, Mr. Congressman, which is an authentic copy of the bank's usual semiannual supplemental report of earnings, operating ratios, and so forth, prepared for the information of the bank's chief executives. Mr. Vincent, our cashier, tells me that that covers it.

Mr. Vincent. For comparative purposes, there are three semiannual periods.

Mr. Seiberling. From the first, since you organized the Bank of

Italy?

Mr. Bacigalupi. We nationalized in 1927, so that you would have it from the time we were a national bank, and that is already in the record.

Mr. Seiberling. That is all.

The CHAIRMAN. In view of the discussion which has taken place here in regard to my bill recently introduced, I would like to say this. that this bill was introduced at the time for the purpose of bringing to light particularly this situation that had come about because of the discussion of this particular phase of this subject before this committee, which has tended to point out to the public at large the opportunity for irresponsible people to acquire a group of banks and attempt to build up in this country an independent organization.

Now, of course, in the framing of this bill, which was done hurriedly. I did not cover every angle of the thing. I was trying to point out the possible danger of a development of that kind. In the present state of the national banking law and of any other statutes that may be applicable, this exploitation is permitted to continue, and, so far as I am personally concerned, I would like to see the situation protected in some manner. It may be that it is impossible to do it by legislation. Congress is shortly going to adjourn and, before Congress convenes again, if the pace that has been continuing for some time past goes on, when this committee or the Congress again takes up this subject in the fall it is going to find a very different situation to deal with than at present.

Now, whether it is wisdom on the part of the members of this committee and of the members of Congress to leave this thing wide open and go back to our homes and let these groups proceed uninterruptedly and change the whole trend of our banking situation or not is still yet to be determined. My own thought has been that the introduction of this bill would bring forth discussion which might result in some proper solution, if there was danger of that situation, and

correct it.

I think that is about all I care to say about that particular subject at this time.

I think now, Mr. Bacigalupi, that we have finished with you, at least for the time being.

Mr. Bacigalupi. Thank you.
The Chairman. And we appreciate greatly your appearance here and the frank way in which you have presented your case, and I extend to you the committee's thanks.

Mr. Bacigalupi. I wish, in return, to thank you and the committee for your patience, and to reassure you that I have made every effort to be full and frank in everything I have presented to the committee.

The CHAIRMAN. The committee stands adjourned.

(Thereupon, at 1 o'clock p. m., the committee adjourned until Thursday morning, May 8, 1930, at 10.30 o'clock.)

BRANCH, CHAIN, AND GROUP BANKING

THURSDAY, MAY 8, 1930

House of Representatives,
Committee on Currency and Banking,
Washington, D. C.

The committee met in the committee room, Capitol, at 10.42 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Mr. A. P. Giannini, the head of the development of what is now the Transamerica Corporation, originally the Bank of Italy, is present.

Mr. Giannini, your associate and technician, Mr. Bacigalupi, has presented to the committee the details of the development of your banking operations up to the present time very lucidly and very completely. However, we recognize you as the directing head of this development from which you have so recently retired as the active head, and at different times in the past, pertaining to the subject of the development of your banking operations, particularly with reference to the novelty of the plan and the development of chain banking and group banking in its various aspects as affecting the national banking situation and the Federal reserve system, your activities have frequently been brought to the attention of this committee, but this is the first time that we have had the pleasure of your presence.

We are very glad indeed to have you here, and because of the importance of your organizations there is much that you can give us relative to the study on which we are now engaged, on the subject of branch, chain, and group banking, a development which at this time is proceeding rapidly and which tends to indicate a possible

change in the whole make-up of our financial system.

We want you to feel at ease and hope that you will give us the benefit of your observations as regards this particular development which is so important to our whole financial problem in the United

States, if not throughout the world.

I hope you will be perfectly frank with the committee, and if there is anything you feel you would rather say to us off the record, we have permitted other witnesses who have appeared before the committee to make statements off the record, and if in the discussion that you are going to participate in here to-day you feel that there is something which should be said for the benefit of the committee behind closed doors, I will be glad to present that to the committee for action.

STATEMENT OF A. P. GIANNINI

Mr. Giannini. Thank you, Mr. Chairman.

There is not anything that I can add to what Mr. Bacigalupi has told you in so far as the Transamerica Corporation and the Bank of

Italy are concerned. If you want me to talk about my experience with them, all right; but in so far as the Transamerica Corporation, the Bank of Italy, and the Bank of America of New York are concerned, I do not want to be considered as representing them at this meeting, but as representing myself only.

The Chairman. I might say that if it is your wish to be permitted to make an uninterrupted statement as to which the members of the committee may want to ask you certain questions, you may do so if you desire, and I might add at the outset that there are one or two phases of this development of yours which will be of particular interest to the committee.

Mr. Bacigalupi referred quite briefly both in his prepared statement and in response to questioning yesterday to the difficulties which you encountered particularly with reference to the banking department of the State of California and the Federal reserve system here in your earlier days. Since then, however, many of those difficulties have been overcome, but you have largely extended your operations by the acquisition of your interests in New York and the concentration of your control in the Transamerica Corporation, where you have centered in a holding company practically the control of all of your various operations, which were so lucidly set out in the statement made by Mr. Bacigalupi.

We would like, I think, as a committee to have you explain any details of your plan in taking the New York interests into your operation, what effect that had on the Federal reserve system, and what your contacts and connections with that have resulted in.

I am just giving you that as a brief outline of what I think will be of particular interest to us at this time.

Mr. Giannini. As I said before, I do not want to be talking for the Transamerica Corporation, the Bank of Italy, or the Bank of America of New York.

I will say that in 1918 we entered New York through the purchase of the East River National Bank, so that the acquisition of the Bank of America in 1928 was not anything new in so far as the Transamerica Corporation was concerned and was merely for the purpose of facilitating and enlarging our existing operations there.

The CHAIRMAN. Would you care to make an introductory state-

Mr. Giannini. I have not any statement to make. I am just here to answer questions. If you want to ask me as to my experience, as to what I may think of branch banking, all right; but so far as the corporations are concerned, I have retired, as you know, and I do not want to speak for them to-day or at any other time.

The Chairman. Mr. Bacigalupi referred yesterday to the scope of your original plan and the carrying out of that plan as being rather broad—

Mr. GIANNINI. Whatever he says I will back up.

The Chairman. He made the statement that you were prepared, if the law permitted it, to establish branches not only throughout the United States, but that you saw no reason why, in caring for the needs and requirements of your customers, you should not have branches throughout the world, not necessarily centered in New York, but wherever outside of New York you saw fit to continue.

Mr. GIANNINI, I might say this, Mr. Chairman, that if you want to compete successfully in this business, as is the case in any other business, you have to have a bank in New York. If you will look up the standing of the Bank of Italy you will find that it ranks sixth, seventh, eighth, or ninth in commercial bills and acceptances. We would have difficulty in getting that business unless we had a New York connection, and we never could have secured that business as a unit bank. In the Bank of Italy to-day, as you know, we have nearly 300 branches, and we would not have anywhere near the business that we have if it had not been that the Bank of Italy was big enough to handle it. We to-day rank near the top, along with the big New York banks, because of the manner in which we are doing business, and we are keeping that business on the coast and to that extent lessening the importance of New York.

The CHAIRMAN. I would like to ask you whether, in view of your retirement as the head of the Transamerica Corporation, this change of leadership, by the election of Mr. Walker, will mean that your head office will be in the city of New York?

Mr. GIANNINI. No, sir; the office of the president is in California. Mr. Walker is chairman of the board of directors, Mr. Monnet is vice chairman, and Mr. L. M. Giannini president of the Transamerica Corporation. Mr. Monnet is in charge of the European operations.

The CHAIRMAN. So that the directing head of the Transamerica Corporation is still in California?

Mr. GIANNINI. Yes, and Mr. Bacigalupi is a vice chairman of the Transamerica executive committee, and he has been in close touch with its affairs from the very beginning.

The Chairman. Mr. Fenn, have you any questions that you

would like to ask?

Mr. Fenn. Very few. Mr. Giannini, you and the Bank of Italy are pioneers, are you not, in branch banking in this country?

Mr. GIANNINI. I think in state-wide branch banking, yes; that is, the Bank of Italy is the pioneer.

Mr. Fenn. And you have extended that system now to New York?

Mr. GIANNINI. Yes, in 1918.

Mr. Fenn. And, of course, you would not be in it unless you were thoroughly satisfied that it is a proper banking system, and the only question I care to ask in relation to that is this: This system, I assume, has worked satisfactorily to your customers, to your de-Positors, to your stockholders, and to the public in the course of the Years in which you have had charge of that great enterprise, and I Want to ask whether, in your opinion, that system should be extended to parts of the country which do not at the present time admit that branch banking is a proper system of banking? In other words, would you endeavor to put it into certain parts of New England?

Mr. GIANNINI, I would make it nation-wide and world-wide. It is coming, gentlemen, and you can not stop it, and you are bucking up against a stone wall if you try. You can not buck natural economic forces. You can not keep village blacksmiths, stage drivers, and wagon makers in the game. The wholesale grocery house and the investment banking house have to make way for better methods.

Mr. Fenn. You would impose, if you had the power to do it, your system on the State of Connecticut, which is a very rich State, although small in area, and which has very strong banks and which has had very few failures of banks? The numerous failures which seem to have occurred throughout the country have not occurred, generally speaking, in Connecticut, and perhaps not in New England and the East.

Would you impose, if you could, your system on the State of

Connecticut?

Mr. Giannini. Well, I do not know what you mean when you say "impose," but if Congress permits banks to have nation-wide branch banking, it is up to the banks to do it.

Mr. Fenn. Do you think that it would be a good thing for Con-

necticut, using that small State as an illustration?

Mr. Giannini. I think it would be a good thing for Connecticut

to have a branch banking system; yes.

Mr. Fenn. Despite the opinion of the State of Connecticut that it would not be a good thing—and there are very experienced bankers in Connecticut.

Mr. GIANNINI. There are very good bankers in New England.

Mr. Fenn. And strong banks.

Mr. Giannini. And strong banks.
Mr. Fenn. And the percentage of failures has been very small.

Mr. Giannini. But New England would have been very much better off in the last few years if it had had nation-wide branch banking.

Mr. Fenn. In what respect?

Mr. Giannini. Your textile business and leather business would

have been better.

Mr. Fenn. Very few things have been bad in New England. Our textiles have been bad, but that has been universal throughout the country.

Mr. Giannini. I am only expressing my opinion.

Mr. Fenn. I want your opinion, and I am not arguing with you at all.

Mr. GIANNINI. I understand that.

Mr. Fenn. Then you are thoroughly committed to the idea of the

branch banking system as being the best for the country?

Mr. Giannini. No question about it; absolutely no question, especially in these days of rapid communication and rapid transportation, when your small towns are drying up and there is going to be less and less need for these small banks.

Mr. Fenn. Why is it that in Connecticut in the last five years a

great may small banks have been instituted and organized?

Mr. Giannini. Perhaps you have suburban towns in Connecticut that are growing, and in growing towns that is all right.

Mr. Fenn. As a matter of fact, to-day there are very few suburban

communities there.

Mr. Giannini. Are these towns that you spoke of growing towns?

Mr. Fenn. They are growing as the Nation has been growing in population, but these towns that I speak of practically are adjacent to the city of Hartford, right within the limits.

Mr. Giannini. Do those banks give a complete banking service?

Mr. Fenn. I know of two excellent banks there, one in the town in which I live and one in West Hartford, and each one is as strong as it can be within its limitations, and when the stock of those banks

is put out, the capital may be at \$50 a share but it is put out at \$125, or, if the capital is at \$100 a share it is put out at \$225. In other words, they start as strong banks.

Mr. Giannini. They are making money?

Mr. Fenn. They are making money despite the large banks adjacent. I am wondering whether you think your system would be of advantage to a community such as the one of which I speak.

Mr. GIANNINI. I think so. You would give those communities Immediately banks with metropolitan facilities; you would give them trust departments, securities departments, and so on, and they would be able to give a service that small banks can not give. I do not know how small these banks are—\$20,000 or \$25,000?

Mr. FENN. No; \$150,000.

Mr. Giannini. But there are some \$20,000 banks in the country with capital of less than \$100,000.

Mr. FENN. I am speaking particularly of New England. I do not

think that we have any banks with as small a capital as that.

Mr. GIANNINI. In this country to-day there are many banks with \$5,000, \$10,000, \$15,000, or \$20,000 in capital, and I can not see how a small bank, especially in a town that is not growing and that has facilities of communication with nearby and larger cities, can make any money in these days of high costs of operation. Your banks are paying just as much interest to-day as before the war and

are getting no more interest on loans to-day than before the war.

Mr. Fenn. Your premise, upon which you make that statement, is
outside of New England, is it not? Are you familiar with conditions

in New England?

Mr. GIANNINI. I am not at all familiar with New England; I admit that. I say this, that if you have nation-wide branch banking, you will get away from this Wall Street influence that we hear so much about. Let us say that we had nation-wide branch banking; you would have on the boards of directors of those institutions men in sympathy with agriculture, oil, livestock, and so forth, because naturally if those directors came from banks in the tenth and eleventh districts they would have representation on the New York boards and you would then have men in New York in sympathy with the rest of the country, and they would see that the rest of the country got what it deserved.

Mr. Fenn. Have you looked into Mr. Pole's proposition as to

trade areas?

Mr. GIANNINI. No, sir. There is only one way to do this business. If you are going to let the banks do branch banking, give them the

same privilege that other businesses have.

Mr. Fenn. Your reference to San Francisco and to the branch banks meeting the necessities of the coast in the way of banking was . somewhat in line with Mr. Pole's proposition for trade areas. Other trade areas might be, for example, St. Louis, Chicago, and so forth.

Mr. GIANNINI. That might be a good beginning, but I see noreason why you folks should not start right in and permit banks to do what other businesses are doing. For example, the automobile business is on a nation-wide scale; the accessory business is on a nation-wide scale, and to-day a farmer goes to town to buy goods from Sears, Roebuck & Co. or Montgomery Ward & Co.; or he goes there to see a moving-picture show. All of these businesses are on a

nation-wide scale, and why in the world should not banking be on the same basis? If you do that, you can have experts at the heads of the various departments and give a better service to the public.

Mr. Fenn. And the small communities will be taken care of by the branches?

Mr. Giannini. The small banks in the small communities to-day are drying up. A man goes to the larger town, driving in over the good roads we now have, to transact his business and do his marketing, and perhaps see a picture show, and he does his banking while he is there.

Mr. Fenn. But up in New England they carry the moving pictures to the small towns.

Mr. Giannini. All right. But even your moving-picture business is on a nation-wide basis. In the old days a farmer or a merchant who had a bank was competing with another farmer or merchant running a bank; but to-day he is competing with experts, and the bank having the experts gets the good stuff and the other bank the poor stuff. Likewise, in the old days your power company, your gas company, and your street railroad company would want a franchise, and the bank had a hand in everything that happened; but to-day those perquisites are gone. The public-service corporations are now You can not do to-day what you did in those days, nation-wide. when banks were used more or less to feather some one's nest. In the old days a man with a family could live well on \$250 a month. I do not see how in the world you can make a decent living out of a small bank and pay salaries large enough to keep good men in those small banks, to meet the competition they have to face. How can you expect a farmer to run a bank successfully against the trend of the times? I can not see it.

Mr. Fenn. Along the same line, do you think that the same doc-

trine would apply to insurance companies, life and fire?
Mr. Giannini. They are nation-wide; world-wide.

Mr. FENN. They are nation-wide.

Mr. Giannini. To-day you have farm troubles. I dare say that you would come nearer a solution of your farm troubles if you had 15 or 20 large banks that cooperated with the Government. For instance to-day the Farm Board is trying to do a lot of things that call for the cooperation of the banks. If you had large banks you might be able to go to these banks and say; "Cooperate with us; don't lend on land that is not fit to grow prunes, that is not fit to grow peaches, and so forth," or "Don't lend over so much on this, or that," and things of that kind, and you might be able in that way to kill over production

Mr. Fenn. Do you think it would be wise for the Government, or proper or useful, that there should be a control of these holding companies?

Mr. Giannini. I do not believe the holding companies are the best solution, but the holding company is a better proposition than the unit bank. There is only one way to do banking, and that is on a branch basis, with one capitalization, one charter, and one responsible organization. I do not know what you really mean when you talk about 'chain' banks.

Mr. Fenn. Group or chain.

Mr. Giannini. They are supposed to be the same thing, are they not? Chain banks are not the same as chain stores.

Mr. FENN. Or chain hotels.

Mr. Giannini. Chain stores or chain newspapers are in reality branch organizations. The Hearst papers are probably owned by one corporation, and the chain stores, like Woolworth's, have one organization, one head, one board of directors. But when you talk about chain banking, you mean something of a different character. As a matter of fact, I do not think there is such a thing as chain banking. Group banking is probably what you have in mind; holding company banking. Chain banking—if you use the word "chain" to mean what it does in chain stores is nothing more nor less than branch banking. Chain stores are branch stores, such as the Atlantic & Pacific and Woolworth's, and Liggett's drug stores. You can not get away from the necessity for the same thing in the banking business. The automobile is here and with the congestion in the bigger cities, you have to have neighborhood banks you have neighborhood moving-picture houses, or neighborhood stores and so on down the line. Why in the world should we not have banks, and strong banks, where good banking service is needed?

To-day in California we have in the State something like 4,000,000 population. Yet because of our branch banking system we are able to do things out there that they are doing elsewhere only in cities of 5,000,000, 6,000,000, and 7,000,000. The city of San Francisco, had a \$41,000,000 bond issue for its water system, and the Bank of Italy handled the whole thing. I think you will find that Mr. Rand, at Buffalo, can do the same thing. And let me say here that I think in what these large banking systems in cities such as San Francisco, Buffalo, and so on, can do, you have the answer to the question raised by those who fear that Wall Street is going to control all the money. Mr. Rand has probably \$400,000,000 at his command, and why in the world should he want to go to Wall Street and put himself under one of these New York bankers? He is going to handle his

own affairs and keep all the business he can in Buffalo.

Mr. Fenn. Make their own trade area?

Mr. Giannini. Absolutely, and he is going to do things for the district that never could have been done before.

The Chairman. In that connection, Mr. Giannini, Mr. Rand was

before us here and he explained the scope of his business.

Mr. Giannini. Mr. Decker, at Minnespolis, has an organization with \$400,000,000 or \$500,000,000, and I do not know why he should want to go to New York to float securities. He is a bigger man at the head of his own business than he would be as vice president of a bank in New York.

The Chairman. Practically all of the representatives of these groups that are being built up now have admitted their existence to be due to the legislative restrictions now existing. I think without exception that every man who has testified before this committee and who is engaged in group banking has told the committee that it was a makeshift and that he would prefer to do a branch banking business to a group banking business.

Mr. GIANNINI. Of course, it is a makeshift, but it is a mighty good thing that they did what they did, because as a result of it you

have a healthier banking situation to-day.

The Chairman. In other words, you approve of the development of groups?

Mr. Giannini. Absolutely, and there is only one way to control it, and that is to give the Comptroller of the Currency the right to examine a holding company. If he says that it is all right then it ought to continue to buy banks until such time as you have branch banking. If you have a good strong holding company, it is much better than to have small, weak, banks in the hands of small, weak stockholders.

The CHAIRMAN. In other words, you would give the Comptroller

Mr. Giannini. I would give

Mr. Giannini. I would give him the right to examine them. That was the law in California before we became a national bank. Whenever the Bank of Italy was examined, the affiliates were examined, too, and I think that that is one of the things that should be done. But when you do that, perhaps you should say that the holding companies should have a capital investment no smaller than \$2,000,000 or \$3,000,000 and that for each new bank that they take on they must have additional capitalization, according to the deposits that they take over, in order to protect the public. By such regulation you are then giving the public better security than you do under the present unit system.

The Chairman. Mr. Lord testified before this committee to the effect that he did not think it was possible for a unit bank to exist successfully in towns of less than 10,000 population. Would you concur in that?

Mr. Giannini. Well, I do not know. I have not looked into that. I am not a very good man at figures, but I do know this, that branches might exist in towns of perhaps 2,000 or 3,000 population, or even less, because they will sell securities, do a trust business, and so on. I do not see how any bank with simply a good commercial and savings business can make a go of it in towns with less than 5,000 population,

The Chairman. In other words, your thought is that if we had nation-wide branch banking in this country, these small towns and hamlets scattered all over the country, which are now served in many instances by banks unsuccessfully operated and failing, could and would be served by branches?

Mr. GIANNINI. I should say in all growing towns, yes. As to towns that are drying up and that will eventually disappear, they might be served with the idea that when the time comes that the business is no longer profitable it would then be transferred to the nearest branch. They could in that way afford to keep offices in those small towns where the independent bank could not, because, if the branch did not turn out to be a profitable venture, the branch bank could move those deposits over into the next branch.

The Chairman. If branch banking on a nation-wide basis were permitted, do you visualize a development of them from one center, or would you see this development in groups throughout the country?

Mr. Giannini. In groups throughout the country. I am sure you

would have large banks in several sections of the country.

The Chairman. Do you see any possibility there of a centralized control of various groups?

Mr. Giannini. I do not know; I do not think so. You have three or four enormous banks in New York, and they could not take in all

of the banks of the country. There are probably in Chicago 75 or 100 banks. I do not know how many a single one might take in, but I do not see how they could absorb everything.

The Chairman. You would think that certain classes of banking, even though branch banking were permitted on a nation-wide basis,

would continue to exist?

Mr. Giannini. No doubt about it. First of all, we must get rid of the idea that there is going to be a money trust. There is not a money trust in Europe, and yet they have had branch banking there for years. You can get money cheaper in France to-day and it always was cheaper in England since the war than it is here. You have a tariff on farm products and other things, but you have no tariff against money. In the event money should get too high in this country it would come into the United States from all over the world. It is ridiculous to say that this country could have a money trust. You might have it through international arrangement, but never could you have a money trust otherwise.

Let us say that somebody has a good loan in Lincoln, Neb., and it would cost 8 per cent to get it from the bank there; Chicago or New York could make the loan for 5 per cent. A man does not have to do banking in a particular town in these days of good roads and good telephone service. There can not be any such thing as a money trust in these days in so far as controlling rates is concerned.

The CHAIRMAN. Do you see any possibility of that coming about

through the Bank for International Settlements?

Mr. Giannini. I have not had a chance to study that; I would rather not go into it. I have certain ideas, but I do not think I would want to express them at this time because I have not gone into that question as thoroughly as I might. I am going over to Europe and will look into things a little bit, and if I get any information, I will impart it when I get back.

The Chairman. The Comptroller of the Currency has outlined, as You know, a plan proposing the extension of branch banking to trade areas. I infer from what you have said here that you would prefer to see it nation-wide rather than limited to trade areas. Do you see any difficulties confronting the establishment of nation-wide branch

banking now?

Mr. Giannini. None at all. To be consistent, you certainly should permit banks in this country to have branches here, as well as to have them in Europe and China and Japan. This country is allowing branches of its national banks to be established in every part of the world except our own. Why should not New York banks have branches in New Jersey or Connecticut or anywhere around through there just as logically as in some foreign country?

The CHAIRMAN. That is all.

Mr. Wingo. As I gather, Mr. Giannini, you feel that the changed conditions in the United States by reason of improved means of communication and transportation have enlarged the field of activity of the bank just like it has of the store and every other business, and that that has increased the competition between communities as well, and that in the sharp clash of that competition the larger and the best equipped and more economically run unit is going to take the business?

Mr. Giannini. No question about that; absolutely no question. Mr. Wingo. You have not discovered anyone who feels that there is any reason why a banker should maintain his capital in the banking business after it becomes unprofitable, any more than a man should keep it in the automobile or steel business or anything else? In the last analysis, if a bank in a town does not pay its stockholders, somer or later they are going to liquidate, unless local pride or some local necessity causes the business men to maintain the institution that is unprofitable—is not that true?

Mr. Giannini. Lots of them would liquidate today if they could, but they have loans that they can not cash in on. That is why they stay in business. They have to wait until such time as they can get in shape to liquidate. That is the situation as it is, particularly in the farming sections.

But if you had branch banking, then these little town banks could become part of a big bank and turn over their paper and get cash for it, which they can not do now.

Mr. Wingo. I do not know whether you mentioned this, but a great many people who appeared here have referred to the failures in recent years of so many small banks in small towns. In my study of that question, I have learned to have a great deal of respect for the conclusion of one gentleman who appeared before the committee and who said that in many instances it was the towns that failed before the bank failed.

Mr. GIANNINI. That is true.

Mr. Wingo. In other words, that business had dried up, and it is the same as the situation where the business of the local merchant has gone to the larger store in a larger community. The system of highways we have today and the automobile have caused many a small merchant to go out of business, and that same cause is responsible for many of the local banks going out of business.

Now, something was said about the size of a town in which a bank could be profitably maintained. While as a general proposition it is true that there is some direct relation between the size of the community and the size of its banking activities, yet there are exceptions, and I suspect you will admit that there are small towns where their banking resources and their natural wealth are a great deal larger than in other communities having a larger population. That is true, is it not?

Mr. GIANNINI. Yes.

Mr. Wingo. For illustration, we will take a town that is located in a very rich farming community. In addition to being located in a rich farming community, there may not be many competing towns nearby, so that its trade territory is larger, and it may have larger banking resources and the banking business would be more profitable in that town than maybe in some other town of possibly eight or ten times the population, but which latter town has a larger number of other towns surrounding it, the people in which are maintaining their local merchants. Then, too, it may be that the farming business runs a great deal poorer in the territory surrounding the larger town, because it might be in a hilly country where farming is not so productive.

But it is your opinion, is it, that the main reason why the country bank is failing is because the business is leaving and going to the larger centers, and naturally the banking business has got to follow the other business?

Mr. Giannini. Yes, and because of poor methods.

Mr. Wingo. Poor management?

Mr. Giannini. First of all, this is what is happening in what you call the chain-store business or the branch-store business. In the old days, the corner grocer had both the cash and the credit customers, did he not? To-day what has he left but the credit customer? In order to make money, he has to charge that credit customer enough to offset his losses, but the chain store has only the cash customer, buys in larger quantities, and has a lower overhead. So I do not see how the corner grocer can compete against the chain store, for the corner grocer has left, as I said, only the credit customer. The same is true with respect to drug stores and shoe stores, for they can not compete with the merchant who gets the cash business. How can they buck against that? I do not see how they can do it, and in the same measure I do not see how the small unit banker can justify his position economically, as against branch banking. I believe branch banking should be extended on a nation-wide and world-wide basis, for if you do not have direct branch banking you are going to have it indirectly through holding companies.

Mr. Wingo. In other words, whether wise or unwise, you feel that the economic trend, the trend of business and of the industrial world, is toward this concentration into larger units, with the alleged resulting economy, more efficiency, and the contended ability to secure more capable executives? You feel that that is a natural trend that is bound to assert itself, and that that business structure will naturally be attracted to a credit structure which serves it and

on which it may depend?

Mr. Giannini. No question about that; you are going to have in banking something along the line of the department store; you are going to have banks that can give in the financial field just what the

department store gives in its line. That is bound to come.

Mr. Wingo. We understand that you have retired from the active management of the organization of which you are the builder, and one reason why we ask you questions is that we realize that you are a man that has succeeded in this business; you are the pioneer in branch banking and if anybody knows it, you ought to.

Based upon that experience and your observation, can you conceive of any practical reason why you should confine banking operations to the arbitrary political line of a State any more than you would confine the automobile business or the grocery business to those political lines?

Mr. Giannini. No. The more diversification you can have, the better. The trade area perhaps would be a good start to try it out—just a beginning—but it would seem to me that if you are going to do this thing, it would be better to do it right. You have laws on the books passed 50 years ago that do not meet the conditions of the times at all; that do not meet the new conditions, and I see no reason why, after you have studied this question thoroughly, you should not take whatever action is necessary to give banking the same privileges that other businesses have. So long as a bank has the required capital, I see no reason why it should not be permitted to expand.

Remember this, that a large bank, a bank with \$100,000,000 capital, or \$125,000,000 or \$150,000,000 capital, with many branches, has many eyes, and long before its business goes bad the management will hear about it. You have clearing houses, the Federal reserve and national and State examiners likely to call a halt before its affairs become too tangled. On the other hand, there are no eyes at all on the small bank except the examiner, and (in a one-man institution, with no department heads) everything that man running the small bank does is under his hat.

With a large bank you have it departmentalized with many eyes and many people with their fingers on the pulse, so that really it is difficult to do the things that you can do when one man is the whole works, as used to be the caes before there were any large banks, in the old days.

Mr. Wingo. In other words you subscribe to the theory that some men in business and in banking hold, that in a branch banking system that is unlimited as to its territory, by the very nature of things within that organization there are certain self-protective interests that are self-corrective against abuses and that they are really more efficient than any regulatory or prohibitory statutes passed by legislative bodies?

Mr. Giannini. You are right. Let me point out to you one advantage that we have over some of the foreign branch banking systems. I remember years ago going up on the Soo Line to Medicine Hat, which was just opening up. There was a Canadian bank on the ground, with no local officers, no local directors, no local people connected with it. That same system has been in effect elsewhere. But in California we go out and purchase an established institution with local officers and a local board of directors who see to it when they come into the system that their section of the country gets a square deal and who are on the job to see when things go wrong. They are not men sent down there to run that bank, but the old president or vice president of the bank continuing on and with their money invested in the business, of which they have become a part.

In this case of Medicine Hat, they may have had no stockholders in that section at all, but when we went down, as an illustration, and took over an institution like the First National Bank of Fresno, a roll of honor bank, of which O. J. Woodward was president we could not tell Mr. Woodward to do things that he though were unsound. The same thing was true when we took over Mr. Foster's bank in Ventura and Mr. Teefy's bank in Stockton and in the various other cities where branches were established. Mr. Woodward and Mr. Teefy and Mr. Foster became a part of our institution when they saw how we did our business, they became so enthusiastic about it that they got other people in the neighborhood to become interested in our bank as stockholders.

Mr. Wingo. Based upon your experience, you know that one of the

Mr. GIANNINI. May I interrupt?

Mr. Wingo. Yes.
Mr. Giannini. That reminds me that when we took over the First National Bank of Fresno, I think they were charging from 9 per cent to 12 per cent interest for loans, and we announced in the newspapers

that all loans that were then out at from 9 to 12 per cent would be reduced to 7 per cent, and we did reduce them to 7 per cent. We did that also in many other cases.

Mr. WINGO. That is one point that I was going to ask you about

later, but I will take it up now.

Based upon your experience and actual practice in developing a branch banking system in California, what was the effect upon

interest rates, first on interest rates on loans?

Mr. Giannini. A reduction nearly everywhere. A country banker—and there are a lot of good country bankers and some poor ones; I do not want anybody to get the idea that there are no good country bankers—

Mr. Wingo. This committee has found out that there are really more banks in the country than bankers, and you can proceed on

that theory.

18

d

S

n

S

e

0

a.

S.

0

Mr. Giannini. As I started to say, a country banker has a hard time making a profit in his limited field. Expenses run up and the banks are put to it to show earnings. Naturally the tendency is to charge as high a rate as possible on loans—10, 11, and 12 per cent, and in some cases they even charged commissions. We are tickled to death to get good loans at 7 or 6 per cent, and in the big cities at

4% or 5 per cent.

Mr. Wingo. This contention has been made, and I want to get your answer to it. You reduced the rate for either of two reasons; either you wanted to help the community by giving a lower rate, or you had surplus funds that you wanted to put out and by making a bargain rate you were able to do it. But the contention has been made that you did that for the purpose of stifling the competition of a

unit bank left in that territory.

Mr. Giannini. No unit bank in California can accuse us of that; that is not so. It is our position, and has been from the first, that high-priced loans, or high rates of interest on loans, are not desirable, for you are putting the borrower out of business if you charge 10 or 12 per cent, which he can not stand. We contend always that a man who has to pay 10 or 12 per cent is usually a poor risk. The man that will fight hard to get cheaper interest rates is the one that we want to loan money to, and if he is willing to pay any old price, look out. It is these high-priced loans throughout the country in small banks that are eausing trouble.

Take the big banks; the sounder bank in the community will take the 6 per cent loan, and the small bank that is not wise takes the 10 or 12 per cent loan because it has to do it to make a showing on the Drofit end—without considering the losses that will wipe out the

difference in the interest rate.

Mr. Wingo. Is not this true, that some of these communities that you are operating in are possibly more highly developed than in some of the other States; that in some of these smaller communities in the agricultural States they have not yet developed their industrial possibilities and that a scarcity of capital and the high cost of doing business are both factors that determine the rate, independent of the risk itself? For illustration, there are some communities where they charge 10 per cent or 8 per cent without regard to the risk. In other words, if you went into the bank to get \$500 and put up a \$1,000 Government bond, they would charge you their current rate for all

loans, and in most of these smaller country towns in my district they have a fixed rate to all customers at all times of the year. They contend that they have a scarcity of capital in that community

and that they can not exist except upon that rate.

Mr. Giannini. It is not sound banking when they do it because and Mr. McFadden will bear me out—these men who borrow have varying accounts; you will have one man who will keep a good balance—he may have a savings account, and he may bring in his friends and employees to do business with your bank, thus increasing your business. He is naturally entitled to a better rate, and I can not see why any bank should indiscriminately charge 10 per cent to good and bad. You ought to discriminate just as you do in commercial paper or in commercial bills—prime commercial bills, so much, and the next grade so much. It should be the same as with notes, as with commercial paper.

Mr. Wingo. In connection with the other phase of interest, interest paid on deposits, particularly on checking accounts or on savings accounts, what effect was there upon that interest rate when you took over a town bak or a unit bank and in its place established a branch of your bank? What effect did that have upon the rate of interest that was paid on daily balances or on checking accounts?

Mr. Giannini. You seldom pay interest on daily balances, particularly on small accounts; in fact, we have not been doing that as they do in New York or elsewhere. But the savings account interest was continued; we continued to pay the same rate of interest. Some time after the big fire in 1907, we did pay less than 4 per cent on savings accounts, but it has been 4 per cent nearly all the way through, and while country banks paid three per cent or three and a half, we paid

per cent

Mr. Wingo. Let us take another charge that has been made against your branch banking business, and I am using your bank out there as an illustration of branch banking; I am not referring to a personal charge made against you or your bank, but it is a charge that goes against all branch banking and it represents the fear of those who are opposed to branch banking, and that is that instead of increasing the available capital for a community, by substituting your branch for the unit bank it has a tendency to drain the capital out of the community. What is your answer to that?

Mr. Giannini. Mr. Bacigalupi made that clear to you yesterday.

Did he not have figures on that?

Mr. Wingo. Possibly he did.
Mr. Bacigalupi. There is one exhibit that covers that very fully and I think it shows that in 100 branches out of the 292 that have total deposits of \$279,000,000, we have loaned through those branches \$277,000,000

Mr. Wingo. Very well; I will not puruse the question.

Mr. Giannini. The head office carries the investment in bank buildings and in bonds, and remember that we have one of the largest holding of Liberty bonds in the United States. In California to-day the Bank of Italy is buying not only Liberty bonds perhaps to a greater extent than any other bank in the United States, but I dare say that we probably buy as many, if not more, Treasury certificates than any other bank in the United States. If you wish, you can check that through the Federal reserve, but I think you will find that by

resin cer the

the cle ent wh ma ban

sta car an; he or bra

op

that the bar interest tell

fina our ago

inspin N the in I

a \$ Das cas:

reason of our branch-banking system, with 4,000,000 people out there in California, the Bank of Italy has probably bought more Treasury certificates and certificates of indebtedness than any other bank in the country.

Mr. Wingo. I was interested in that general proposition, so far as

am concerned

Mr. Giannini. I just want to show you what the Bank of Italy has done in California. It has humanized banking, and has kept in close personal touch with the customer, encouraging small business.

I see that the National City Bank is doing the same thing now; they are making loans on security of \$500 and so on. In all businesses they have learned the value of the individual of limited means, the clerk and so on, just as to-day they have learned to treat labor differently than formerly. Big business has changed. Things are not what they used to be, for the poor man of to-day becomes the rich man of to-morrow. The "little fellow" is the best customer that a bank can have, because he is with you; he starts in with you and stays to the end, whereas the big fellow is only with you so long as he can get something out of you; and when he can not, he is not for you any more. The "little fellow" will save \$6,000 or \$10,000 and then he will build a home, and then come back and save another \$6,000 or \$8,000 and buy another home.

You know that.

Mr. Wingo. There is another objection that has been urged against branch or group banking, and that is that if you drive the unit banker out of business with the branch banks, there will not be any more opportunity for advancement in the banking world for young men who want to engage in the banking business.

What is your answer to that?

Mr. Giannini. I do not know but that Mr. Bacigalupi can cover that better than I, but I will say this, that there are a lot of people in the Bank of Italy to-day who would have still, been small salaried bankers if it had not been for the Bank of Italy taking their bank into the system. The moment that was done they had the opportunity to grow up from a managership or assistant cashiership or teller in that branch to a teller or official in a bigger branch, and finally to the head office.

I can illustrate one case right here. Mr. Vincent, for instance, is our cashier now. We bought a bank in Stockton some 8 or 10 years

ago, was it not?

Mr. VINCENT. 1917.

Mr. Giannini. What were you then? Bookkeeper?

Mr. VINCENT. Bookkeeper.

Mr. GIANNINI. And I think we brought you to the head office inspection department?

Mr. VINCENT. Yes.

Mr. Giannini. And so on down the line. To-day Mr. Vincent is the cashier, near the top, at the head office; then one of our officials in Los Angeles was formerly the manager of a small Livermore Bank, a \$1,500,000 bank—Mr. McFadden knows him—and to-day he has bassed the million dollar mark; he says that he wants to take things easy. That man was getting \$18,000 and an interest in the profits at the time he retired.

Take the former \$300 men, and we have many men like that. Mr. Mount, who is now president of the Bank of Italy, and Mr. Blauer, chairman of the general finance committee and the head of the credit department, and so down the line. In fact, we built up our organization mostly through the employees who came into the Bank of Italy in connection with these banks that we have taken over. The moment we take over an institution the bookkeeper, say, there, is aroused to new hopes for the future. We have promoted many of our executives from the branches, and they have developed. We have unquestionably one banking organization that can do nation-wide or world-wide branch banking, because of the fact that we have these men.

Mr. Wingo. In other words, you contend that branch banking opens a wider door because of the opportunities for advancement than is the case with the individual unit bank?

Mr. Giannini. Absolutely. To-day there is a dearth of good banking material, but you develop men in branch banking through your departments in a way that you can not develop them in a one-man bank. First of all, the president of a one-man bank, if he controls that institution, does not want anybody around him who amounts to much; he usually wants to run it with "yes" men; whereas in a bank such as ours or in any other big business you have to have men around you who can make their own decisions. If the head of a department wants to surround himself with "yes" men, the general executive committee, representing the stockholders, will see to it that the condition is changed. There are men in our various departments who will be able to take the place of the department head when he goes out. In all big businesses today they see to it that there are men in line to take the place of those above them. That situation can not obtain in the small institution, and in consequence the one-man business is rapidly disappearing.

Mr. Wingo. Some one has suggested that the great danger in the banking business is just like the great danger in the automobile business or the steel business, or in any other great business organization, that these large units are built up by pioneers like yourself, but that when you and men like you pass out we are going to have a dearth of material that will have the capacity to handle these large units, these large organizations, these large systems.

You do not think that is so?

Mr. Giannini. They will have better material because they will get it from our ranks, because those who are in the ranks will know that they have a chance and prepare for it, whereas in these small businesses they usually feel that they have to wait until the man ahead dies. In big business today, if a man is in the way, he goes out.

Take my own case: I think I still have a "punch" left in me to-day, but maybe four, five, or six years from now I will be just as some other people who are at the head of institutions; the boys will make believe that they are listening, but it will go in one ear and out of the other. That happens in many institutions, but I did not give them that chance. I retired to make way for others to advance.

Mr. Wingo. Mr. Chairman, that is all.

The CHAIRMAN. Mr. Strong.

Mr. Strong. Mr. Giannini, I would like to ask you what objection

you see to area-wide branch banking?

Mr. Giannini. Well, the wider the diversification, the better the thing is. I do not know how you divided your Federal reserve districts, but I certainly would not have branch banking confined solely to the textile business or leather or solely to the cotton or the grain or the wheat business. The wider the diversification, the better. So I say that nation-wide and world-wide branch banking is more desirable. That is the ideal way to do business. To start with, trade areas might be all right, but I can not see any advantages in that over nation-wide branch banking.

Mr. Strong. It has been suggested that we should have branch banking limited to trade areas. While we have never been able to get a good definition of the term "trade area," except that it should be that area comprising large cities or commercial centers that attract business, it was suggested that perhaps we might have 37

trade areas in the United States.

Mr. Giannini. If you had 37 districts it would be too many. That would not be the right way to start off with branch banking. If you started off with 12 districts, or 15, or 6 or 7, it would be much better. I think half a dozen better than 37.

Mr. Strong. Outside of limiting the opportunity to build a great institution like yours, what objection would you see to limiting branch

banking?

Mr. GIANNINI. It might be all right to start out limiting the area. That would simply be a compromise; a halfway measure. We can see no reason why the condition that exists with respect to the tendency toward the elimination of the small unit bank, in the small town should not be recognized. Branch banking is coming ultimately, for things continue to a great extent to take care of themselves, automatically. Take to-day the lumber industry; that has been a great thing in this country, yet to-day the inroads made on the lumber industry through steel have been tremendous. Where they used to have wooden frames for concrete work in building you will find that they are now using steel and cement and things of that kind, and it is the same with the wholesale grocer—the middleman. I noticed yesterday that three wholesale dry goods houses merged—one at St. Louis, one in West Virginia, and one in San Francisco. They had to do it. Business is drying up. The Penney Co., the Butler Co., nation-wide stores, can buy goods cheaper than whole-Sale firms can in San Francisco. Tillman and Bendel and the Cluff Co. have retired from business. There are houses in New York that are in business to-day, but we know that they are not doing the business they used to do, and so on down the line.

Mr. Strong. As I understand you, it is your thought that limiting branch banking to trade areas simply retards its scope, which prevents the building up of that great system of banking which you think is

desirable and would be most successful?

Mr. Giannini. Exactly. You want to get into every community that is available. For instance, American bankers have gone into South America and have won their share of business. I think American business is in strong there, and the credit for getting in there, to the extent we have, is due to the American banks, which have bioneered down there in great shape. If it had not been for our banks

we could not have developed that business. If you want to help all sections of the country, you must give them big banks. In my opinion, the day of the \$25,000 bank has passed. How many banks have we now with less than \$50,000 capital—probably 20,000?

Mr. Wingo. Possibly 20,000 with capital less than \$100,000.

Mr. GIANNINI. First of all you must remember in the olden days, the little banks had all of the prosperous little independent stores in these towns that were doing both a cash and credit business. to-day the chain store is going in those towns and the chain store keeps its account in a distant city. Of course they still have their little stores, and those stores keep their little accounts in the local bank, but those stores really do not pay the bank because they are not making the money. They have only the credit business now. The cash business that it used to have has gone to the chain stores. In the olden days that little store had both cash and credit. Any store that does business only on a credit basis can not possibly compete with a store doing a cash-basis business.

Mr. Strong. I think those who are advocating to the committee trade area branch banking do it upon the theory they can have a big bank in the commercial centers and branches all over the trade

area and that would be sufficient.

Mr. GIANNINI. I think that is a good beginning, but in that trade area you would have to make changes from time to time, because conditions change. As I said awhile ago, the condition of the little bank is bad and it is going to be still worse.

Mr. Strong. Is it not your opinion, if we start this trade area branch banking, we must come to nation-wide branch banking soon!

Mr. Giannini. I do not know about soon. My own opinion is that if the trade area branch banking should prove better-which I do not think it would—or meet the conditions, naturally you would not want to change.

Mr. Strong. In your judgment it will extend to nation-wide

branch banking?

Mr. GIANNINI. I do not know about that. It may work out very much better with trade area branch banking than I think, and you

might not want to change.
You gentlemen, I think, know more about that than I do.

Mr. Strong. You would not want this committee to limit branch banking to branches within the trade area and have San Francisco the trade area for your particular institution?

Mr. GIANNINI. Oh, we now have already branches in all of Califor nia. Limiting the area to San Francisco would not be the right idea. You would want to give us at least California, and you would want to give us probably the twelfth Federal reserve district.

Mr. STRONG. That would be satisfactory?

Mr. GIANNINI. As far as I am concerned, I think nation-wide branch banking is the ideal way of doing it, as well as for any other

Mr. Strong. Now, as to the matter or examination: Is it not true, in the management of your bank, you depend largely upon your own examiners?

Mr. GIANNINI. You mean on credits?

Mr. Strong. As to the condition of the bank.

Mr. Giannini. Well, I would not say largely, and then again perhaps I might say largely. We do have examiners come in there, but we have our own men, who we think are as good if not better than the examiners appointed by the examining authorities.

Mr. Strong. Your men are probably more experienced and you

pay higher salaries?

Mr. Giannini. Exactly. I dare say the Government has some good men who work for them, but I think it is with the idea of that job leading to a better job.

Mr. Strong. When they come to examine such a large system of branch banks as yours, do they not have to depend largely on your

examiners?

Mr. Giannini. No, sir; because every loan above \$500 is scheduled at the head office. They could come into our head office to-morrow and check up every loan above \$500 throughout our system, without sending a single man to the branches. But they always do send

men to the branches to check each of them.

Mr. Strong. You have in the neighborhood of 500 banks and branches, we found out day before yesterday. Of course a Government bank examiner's office could not very well send a man to all of the branches at once; they would have to depend largely upon the condition they found in your main bank and as reported by your examiners.

Mr. Giannini. They do send a man to every one of the branches. Probably the country has 25,000 banks to-day and they send those examiners to those 25,000 banks and it is much more difficult to handle them than if they were all parts of one big branch banking

system.

Mr. Strong. But when they go into half a dozen of those banks, they can go in on any one day and examine them. They could not

do that with your banks.

Mr. Giannini. Well, if they were separate and independent banks, things could be done—switching of money could be done. They could not do that in a branch banking institution, but it can be done in separate institutions.

Mr. Strong. In group banking it could be done?

Mr. Giannini. I am not going to say that. Mr. Strong. I know you are very generous.

Mr. GIANNINI. I am certain that it would not be done by the gentlemen who are in group banking to-day.

Mr. Strong. I know that the men in the banking business to-day

are all right.

Mr. Giannini. You are fortunate in having, in the group banking systems, good bankers. You have, in the First National, the North-Western, the Marine Group and those others, the very best men in the business.

Mr. Strong. I agree with you, but I am talking about examinations.
Mr. Giannini. It is simpler to examine branch banks than independent banks, who have no system, and often with no credit files and no statements.

Mr. Strong. Why is it easier?

Mr. Giannini. Because the unit banks have no uniform system, When they come to us, we have everything laid out so the examiners

can see everything quickly. The examiner, in a country bank, often has to go there and show the country banker how to run it. Everything with us is right out where it can be seen. The examiners can read our records and take our layout, and can make a confirmation of everything by checking each and every item, if they so desire.

Mr. Strong. You think a Government organization, having 30 or

40 examiners could check 500 branches very properly?

Mr. Giannini. They can check them at different times. They can go into the head office and have the complete picture and go to the branch later and find out whether the head office reflected the true condition.

Mr. Strong. Of course you have your system organized, and all we can learn is that it is an unusually good and perfect one, but suppose you were charged with the examination of your system and only had 40 examiners, do you think you could send those 40 men out and, in the course of a few months, get an accurate examination?

Mr. Giannini. Outside of the several bigger offices, we could do it in a week. Remember, the Government is rich enough, and the branch banks would be rich enough, to give the comptroller a sufficient force of efficient examiners to do it. Also remember, that the banks are paying the bills for these examinations. The men who are employed in the work, however, are paid too little, I think. They ought to pay enough to compete with the men the banks have.

Mr. Strong. You agree with the proposition that the Government ought to employ as good examiners as the banks do themselves, and

charge that expense to the banks?

Mr. Giannini. Absolutely; that should be done. I say positively you have to have good examiners and if you do not pay them enough, the Government can not attract good help in that direction, except when a man takes a position with the Government with the view of getting a better job after he has gained experience.

The CHAIRMAN. In your advocacy of nation-wide branch banking, if developed, what effect in your judgment, would that have on the

Federal reserve system?

Mr. GIANNINI. The effect would be this: You would bring in the banks that you now do not have in the system. They would all be part of the Federal reserve system. No big commercial bank would want to stay out of the Federal reserve system.

The CHAIRMAN. Do you think changes would be necessary in the

Federal reserve system to meet that situation?

Mr. GIANNINI. No, sir. Something was called to my attention with respect to a question asked by come member of your committee. He asked: If a bank capitalized at \$10,000,000 should take over a bank with \$1,000,000 capital what difference would that make? Do your remember that question?

The CHAIRMAN. Yes.

Mr. Giannini. When you take over a bank with a million dollars, you are in the same position as before. If you are taking it over on a consolidation basis, you have \$11,000,000 instead of \$10,000,000 as before. There is another advantage to the Federal reserve which I think is unfair, and should be corrected. The moment the bank with \$1,000,000 capital—to which I just referred—becomes a part of the metropolitan bank, for instance, we are required to put in 2 or 3 per cent more reserve than before. Take the case of the First National Bank in Fresno. When we took it over, the reserve was 7 per cent, but now we are required to keep 10 per cent. So, the Federal reserve is getting an additional 3 per cent of our money.

When the First National Bank of Fresno was independent, it was required to keep 7 per cent reserve, but after the Bank of Italy took it over, the Bank of Italy is required to keep 10 per cent. I say it is unfair. Of course I understand how it happened. You did not foresee branch banking coming along and that is the reason for that situation. However, it is a thing that should be corrected because it is not fair. Every time we take over a bank in a country town, if the reserve is around 4, 5, 6, or 7 per cent, we are required to raise it to 10 per cent. So, we are strengthening banking to that extent anyhow.

The Chairman. Of course the question of mobilization of reserves is largely an arbitrary matter anyway, and the distribution of the

requirements between the central reserve city-

Mr. GIANNINI. Did you get what I just said, Mr. Strong?

Mr. STRONG. No.

n

r

n

1

t

t

t

8

-

t

d

,

0

e

Mr. Giannini. I said that when we took over the First National Bank of Fresno, that bank was required to keep 7 per cent reserve, but the moment it became a part of the Bank of Italy, we had to keep 10 per cent. Any time we take over a country bank that was required to keep 7 per cent or 5 per cent before, we have to raise it to 10. So, I say, we are strengthening the banking system to the extent of increasing the reserves, at any rate. I think that thing should be corrected. We ought not to be compelled to carry any more reserve than the banks are required to carry before we take them over.

Mr. Brand. Mr. Chairman, will you yield to me?

The CHAIRMAN. Yes.

Mr. Brand. Now, Mr. Giannini, my questions are going to be short.

Mr. GIANNINI. All right, Mr. Brand.

Mr. Brand. And what I want from you is, if you please, answers to my questions as short as possible. It is now nearly 12 o'clock.

Mr. GIANNINI. I will not guarantee that, because nobody can tell

what I will do.

Mr. Brand. I am convinced of that already, though I do not say

that offensively.

I want to know from you, in the first place, for the benefit of the committee, what evil, if any, exists in the present banking laws of this Nation?

Mr. GIANNINI. What evil?

Mr. Brand. What evil exists, if any?

Mr. GIANNINI. That is one that I just spoke about—7 per cent reserve requirement increased to 10 per cent.

Mr. Brand. Is there any other evil, in your judgment, in the

present banking system?

Mr. Giannini. I think another evil is the small capitalization at which you allow banks to open. It seems to me no bank should have less than \$100,000 capitalization. I think that five, ten, fifteen, twenty, and twenty-five thousand dollars is too little.

Mr. Brand. What remedy do you suggest to this committee to

correct these evils to which you have referred?

Mr. Giannini. Branch banking, nation-wide and world-wide.

Mr. Brand. Nation-wide and world-wide?

Mr. Giannini. Yes, sir, to meet changed conditions.

Mr. Brand. You said something about a money trust awhile ago, and that you did not think a money trust could be formed. I want to ask you if the character of branch banking which you stand for is set up all over the country and the group branch adherents also continue to take over banks throughout the country, don't you think this is calculated to create a monopoly of money and credit?

Mr. GIANNINI. No.

Mr. Brand. That is the way I want my questions answered. Mr. Wingo. That was short enough, too, was it not, judge?

Mr. Brand. Yes. What is your objection to the present group

banking system in your State?

Mr. Giannini. The only objection is I consider branch banking better than group banking, but group banking is better than the present unit bank. I have no objection to group banking. I think that is a step in the right direction, preparatory to the other.

Mr. Brand. You think the independent unit bank ought to be

destroyed?

Mr. Giannini. No. Now, lets get back to this question you asked about monopoly, just awhile ago.

Mr. Brand. Briefly now.

Mr. Giannini. Do you not realize that if a bank is charging too much interest, there is nothing to prevent banking charters being issued in Chicago or New York, which will enable banks to spring right up and take care of the business, if the other banks charge too much?

Mr. Brand. What rate of interest do you charge borrowers?

Mr. Giannini. Mr. Bacigalupi can answer that better than I, but probably all the way from 5 to 7 per cent.

Mr. Bacigalupi. The average is 6½ per cent.

Mr. Brand. What do you charge the farmers?

Mr. Giannini. I should say not more than 6 or 7 per cent—6 or 7 per cent generally.

Mr. Brand. What do you pay on savings deposits?

Mr. GIANNINI. Four per cent. Mr. Brand. In all your banks?

Mr. Giannini. In Los Angeles they have what they call a special savings account against which you can draw checks. I think they pay 3 per cent on that, but on the real savings deposits it is 4 per cent—term savings.

Mr. Brand. How many banks in your system out of the State of

California have you in the United States?

Mr. Giannini. I do not know. Mr. Bacigalupi answered that probably yesterday. You mean outside of the United States?

Mr. Brand. No; in States outside of California.

Mr. Giannini. The only bank we have outside of California is the Bank of America in New York.

Mr. Brand. In what countries in the Old World have you branches?

Mr. Giannini. Just the bank in Italy. Mr. Brand. What countries are they in?

Mr. GIANNINI. In Italy.

Mr. Brand. Just one in Italy?

Mr. GIANNINI. Yes, sir.

Mr. Brand. I though you said something awhile ago about one

being in South America?

Mr. Giannini. No; I was talking about the other New York banks. The development of American trade down there has been hostly through the advent into that continent of New York banks.

Mr. Brand. What percentage do you loan to farmers in the

country towns?

Mr. Giannini. Mr Bacigalupi probably gave that yesterday. Have you any idea on that, Mr. Bacigalupi? In the country towns, Practically all of it goes to the farmers.

Mr. Brand. Do you loan farmers on real estate? Mr. Giannini. Yes, sir.

Mr. Brand. What do you charge them for loans on real estate? Mr. GIANNINI. Not over 7 per cent, I think. You must remember that I retired over five years ago from the active management of the Bank of Italy.

Mr. Brand. But you have not forgotten what went on while you

Were there?

Mr. GIANNINI. I have a pretty good idea. However, I have not been at the head office of the Bank of Italy over three or four times the last five years.

Mr. Brand. What is the average size of the loans that you make

to farmers?

Mr. GIANNINI. No good credit risk is ever turned down.

Mr. Brand. Do you loan on lands?

Mr. GIANNINI. Yes; and loan upon open note. We do not lend, 48 a rule, on crop mortgages. That is bad banking.

Mr. Brand. I agree with you.

Mr. GIANNINI. Except with the signature of the landlord.

Mr. Brand. Do you lend on personal property? Mr. Giannini. The greatest trouble with the country banker to-day the crop mortgage end of it. You can not get away with that. Mr. Brand. I agree with you on that. Do you loan on personal ecurity outside of crop mortgages, to farmers?

Mr. Giannini. Yes, sir. Mr. Brand. Then, your system supplies all the money the farmers

your country have occasion to borrow?

Mr. GIANNINI. Absolutely. I think the record will show that, think the Federal Reserve will testify to that and the authorities in California can.

Mr. Brand. Suppose you had a bank in the State of Georgia, there I come from: Would you continue that policy down there and

apply the farmers all the money they needed?

Mr. GIANNINI. No question about that. Do not overlook one hing, that you usually get half a per cent to 1 per cent more on those ans. Now, of course, you will say, "Why?" You naturally ask, Why do you get more from him than from a business man?" Well, business man will come in and pay off and the business man will ten carry as much again with you as he owes you. The farmer will ave nothing with you for nine months and most of that will be equired to pay off the debt.

Mr. Brand. For how long do you loan to the farmers?

Mr. GIANNINI. Until the harvest, and usually, if he has bad luck, we will carry him over untill the next year. We do not like to have to carry over paper, but we do it sometimes.

The CHAIRMAN. I am inclined to think, from the testimony which you have not heard, Mr. Giannini, and the questions Mr. Brand 18 asking now, that he is going to extend an invitation to you to come down into Georgia.

Mr. Brand. In a way, I wish he would establish branches in counties down there where at present they do not have banking facilities.

Mr. GIANNINI. You have some goods banks in Georgia, and I think you would have no difficulty in getting all you wanted for the farmers in Georiga if you had farmers on your boards. When we took over the Fresno Bank, for instance, we immediately put men on the board who were interested in agriculture. The same thing was true in Hollister where we put Mr. Hawkins on the board, and so on down the line.

Mr. Brand. Take a country bank in your State, for instance, one located in an agricultural country, do any of the citizens of that town where the bank is located, own any of the stock?

Mr. GIANNINI. Yes, sir.

Mr. Brand. About what percentage?

Mr. Giannini. In most cases, a great deal more than what the acquired bank had in the way of capital.

Mr. Brand. But as a rule, you have the controlling stock—you have the majority of the stock?
Mr. Giannini. Who has?

Mr. Brand. Your system.

Mr. Giannini. But, Judge, we have 171,000 stockholders. Mr. Brand. That is not an answer to the question. Suppose you were to establish a branch, as suggested by Mr. McFadden, in Georgia, and you elect your board of directors. Where do you select those directors?

Mr. Giannini. When we take over a bank—say in a country or farming town—we put two or three men from that bank on our board in Atlanta, for instance, representing the stockholders of that bank who have converted their holdings from the stock of a country town bank to the Atlanta bank stock.

Mr. Brand. What percentage of the stock would you own in that bank?

Mr. GIANNINI. Who would own?

Mr. Brand. Your system? Mr. Giannini. Well-

Mr. Brand. Of the bank which you took over.

Mr. Giannini. The bank we took over, if it had a capital of \$150,000-

Mr. Brand. Do you get the majority of the stock?

Mr. Giannini. We get it all. That bank is liquidated.
Mr. Brand. But you give the community the opportunity of selecting some of the directors?

Mr. Giannini. I think Mr. Bacigalupi should give you the process.

Mr. Bacigalupi. It is all outlined in the record.

Mr. Giannini. When we take over a bank that bank goes out of existence and becomes a part of our institution and its whole capitalization is converted into our stock.

Mr. Brand. But as I understand you, you let some of the people

in that community serve as directors of the bank?

Mr. Giannini. Yes sir; but if they are not directors, the advisory board still runs the bank under our supervision.

Mr. Brand. What is the smallest city or town in which you have a

35.

Mr. Giannini. We have some small ones, perhaps Tipton and San Miguel-

Mr. Brand. Just give me the population.

Mr. GIANNINI. I do not know what they have in population.

Mr. Bacigalupi. About four or five hundred people. We have banks in many towns under 500, I should say.

Mr. Brand. That answers the question to my satisfaction. Mr. GIANNINI. But if this thing continues, and the people continue

to leave the small country towns, it will affect our business and we may have to merge them with other banks.

Mr. Brand. What dividends do you pay your stockholders, as a

rule?

Mr. GIANNINI. The Bank of Italy is paying \$6 a share.

Mr. Brand. What is the value of a share?

Mr. Giannini. \$25 par.

Mr. Brand. Do you go into a town or city and take over a bank into your system where there is already a bank established in that town?

Mr. Giannini. Yes; and in every town we have ever entered the Other bankers have become better bankers.

Mr. Brand. But you do that?

Mr. Giannini. Yes, sir. We take over an existing institution. We do not go in there new. We do not add to the banks of that town. We simply enter the town through the acquisition of an established institution. That is one thing that you folks should do, it seems to me—and pardon me for saying so—to restrict a bank to entering a territory through the acquisition of an existing institution.

Mr. Brand. Instead of forming a new bank?

Mr. Giannini. Yes; except in the big cities. In the country town, you should restrict it, as we do in California, to taking over an established institution—no de novo institutions—and in that way you Protect the banker, because he gets more for his bank than he could have before. That will protect the 20,000 bankers in this country.

Mr. Brand. I think that is a wise policy. In other words, you would not go to Broad Street in one town and establish a new bank when there was one across the street established for many years?

Mr. GIANNINI. That is right.

Mr. Brand. Although you would be willing to take over that bank?

Mr. Giannini. Yes, sir. Only once have we entered a town by establishing a new bank, and that was in Sacramento.

Mr. Brand. Mr. Bacigalupi referred yesterday to something in which I was very much interested—something about the policy which Your bank had toward children depositing money in the banks. I

100136-30-vol 2 pt 11--15

agree with him fully on what he said upon that subject and the reason you do so. My question is, what rate of interest do you pay the children?

Mr. Giannini. Four per cent.

Mr. Brand. What is the statute in your State as to majority?

Mr. Giannini. 21 years.

Mr. Brand. You take money from children under 21 years of age?

Mr. GIANNINI. Yes, sir.

Mr. Brand. Suppose they want to take out any deposits?

Mr. Giannini. They can draw them out any time. Mr. Brand. You pay the money back to minors?

Mr. Giannini. Through their parents or guardians; yes.

Mr. Brand. Do you pay it back to the children or to the natural guardian?

Mr. GIANNINI. Pay it back to the guardian.

Mr. BACIGALUPI. They come in with the parents or their legally

constituted guardians.

Mr. Brand. You seem to be following the law pretty well all around. As I understood Mr. Bacigalupi, he said, in reply to a question from some member of the committee, that he thought the status quo, as it exists now, should not be interfered with in regard to any proposed legislation by Congress in regard to the banking systems of the country. Do you entertain the same opinion?

Mr. GIANNINI. In regard to the Federal reserve, and so forth?

Mr. Bacigalupi. In regard to this legislation.

Mr. Brand. In reference to this legislation which we are now discussing.

Mr. Giannini. Not to make any changes at this time?

Mr. Brand. His answer was that there are group banking, unit banking, branch banking and chain banking and, as I understood him, he was not in favor of changing the status quo. You agree with that now?

Mr. GIANNINI. Yes, sir; I think you are doing the right thing to

study the matter before you take any action.

Mr. Brand. You do not want us to do anything to interfere with

your system?

Mr. Giannini. Which system do you mean? You can not interfere with our system because if you did, I imagine we would then have to go back to the State system because the State permits State-wide branch banking.

Mr. Brand. How many national banks have you?

Mr. Giannini. Only one bank, and while we have 292 branches we are only one bank. That is all we are.

Mr. Brand. All of your banks belong to the Federal Reserve system?

Mr. Giannini. Yes sir; except one bank. We brought the banks into the Federal reserve, because many of the banks we took over were not members of the Federal reserve, and when they came into our system, they became members of the Federal reserve. There is one bank out there that your McFadden Act will not permit to come in; that will come in the moment the law will perimt it. At the present time, it has to remain outside the Federal reserve system,

because it has taken on branches since the McFadden act was passed.

Mr. Brand. I will ask you this question, as an experienced banker: What benefit is it to a State bank, for instance, or any unit bank, to belong to the Federal reserve system when it has no occasion to borrow any money from the Federal reserve banks or from any correspond-

ent bank in New York or elsewhere.

Mr. Giannini. Only for the prestige it will gain and perhaps added business. I think it ought to get business through membership in the Federal reseve that it otherwise would not get. There are people who will not do business with a bank unless it is a member of the Federal reserve system.

Mr. Brand. You think there are advantages besides the ones I

mentioned?

Mr. Giannini. Yes, sir. I think a big bank can not do without the Federal reserve. You have to transfer money, for instance, from Boston to Chicago or to Baltimore or other places, and you can do it

in a couple of minutes through the Federal reserve.

Mr. Brand. Referring to Georgia, I wish you would establish some branches in Georgia, in the counties of the State in which there are now no banking institutions. I want to know if you have any branches in Georgia now?

Mr. GIANNINI. No, sir. But Mr. Young, Mr. Maddox, and

Mr. Ottley down there are very good bankers.
Mr. Brand. You have no banks there now?

Mr. GIANNINI. No, sir.

Mr. Brand. Have you any stocks in banks down there?

Mr. Giannini. I would not want to say. We did have stocks in banks all over the country.

Mr. Brand. I am talking about Georgia. Have you any stocks in

banks in Georgia?

Mr. Giannini. I think not. If we have a holding there it is very small.

Mr. Brand. In one bank or more than one?

Mr. Giannini. We would not have more than 50 or 100 shares, if we did have. I know we did have 100 shares in a bank in North Carolina.

Mr. Brand. How came you to invest in stocks in a bank down

there?

Mr. Giannini. Because we thought good bank stocks three or four years ago a good investment, and it turned out so. We have sold most of them.

Mr. Brand. How old are you?

Mr. Giannini. I am 60 years of age and have retired. Mr. Wingo. Now, Mr. Giannini, ask him how old he is.

Mr. GIANNINI. He is about 55.

Mr. Brand I am 69.

The CHAIRMAN. Mr. Giannini, in connection with this concentration, of course, of banking business which would come through the establishment of branches nation-wide, under the Federal reserve plan of operation, we have the country divided up into 12 districts. The banks in each one of those districts are compelled by law to keep their legal reserve requirements with the Federal reserve bank in that Particular district?

Mr. GIANNINI. Yes.

The Chairman. Under this plan of permitting branch banking to extend nation-wide, of course, there would be a concentration of banking assets other than in each of the Federal reserve districts. That would bring about a change, would it not, in the character of business of the Federal reserve system? It would affect the mobilization of the reserves for each Federal reserve district within that district. It would cause the transfer of some of those funds into other districts.

Mr. Giannini. You would have to enact legislation to make those banks have divisonal offices or district offices. In fact, under the right kind of nation-wide branch banking would have (just as the railroads or the telephone companies or other concerns)—they would probably have a supervising office in each district.

The Chairman. If the law permitted nation-wide branch banking, and it should so develop that your institution, with its headquarters in San Francisco, would have branches in every State in the Union—

Mr. GIANNINI. Yes.

The Chairman. The Federal reserve under the present law would require the legal amount of the reserves to be kept in the twelfth district in San Francisco?

i

p

p

b

a

tl

Mr. GIANNINI. Yes, sir.

The Chairman. In other words, what you are suggesting is, if such a condition as that came about, it would be necessary to figure up the amount of business from each district and keep the necessary balance in each district?

Mr. GIANNINI. Yes, sir.

The Chairman. There would have to be an amendment to the law in that respect?

Mr. GIANNINI. Yes, sir.

The CHAIRMAN. That would cover it?

Mr. Giannini. Yes, sir.

The Chairman. Such a plan as that would obviate the possibility of the concentration in any one or perhaps three districts, if there were three systems doing business over the country—the concentration of reserve in any one district?

Mr. GIANNINI. Exactly.

Mr. Wingo. What would follow? If you wanted to retain the 12 districts, and if you wanted to divide it up equally between the 12 different banks, you would have to give some of the banks larger territory than they now have or reduce some of them.

The Chairman. Such a plan would either require redistricting the federal reserve system or some fund to protect the funds originating in the 12 districts, so as to keep them in the districts in which they

originate.

Mr. Giannini. I think you would find, with nation-wide branch banking, we would have, naturally, an office in St. Louis, and if St. Louis was the main town in that district, we would have a head office or main office watching the business or supervising the business in that district.

The Chairman. In other words, you would have a suboffice in each of the districts?

Mr. Giannini. Yes, sir.

Mr. Goodwin. If branch banking were permitted nation-wide by legislation, what, in your opinion, would be the effect on the inde-

pendent unit banks?

Mr. Giannini. The effect would be that those who would have enough business to warrant going into branch banking would profit largely because their banks would net them probably three times what they do to-day.

Mr. Goodwin. Do you think it could exist side by side against a

powerful branch bank?

Mr. Giannini. I do not see what chance a small independent bank has against a branch bank having the best talent passing on things. The stronger bank will discover weak paper long before the little bank will know about it and in many cases will get rid of it to the little bank.

Mr. Goodwin. Is not the inevitable result that the little bank will either be required to liquidate or be absorbed by the branch banking

institution?

Mr. Giannini. I would not want to say liquidate. The little bank would be foolish to continue on when it could sell out and merge with the bigger bank and receive stock in exchange worth two or three times as much as that of the little bank previous to the merger.

Mr. Goodwin. But the branch banking system would not take in

a weak-unit bank.

Mr. Giannini. If it has business enough to justify it it would. It may be that a bank has not deposits large enough to enable it to run profitably, because it is known to the people in the community that the bank is weak; but if it were a strong bank, it would get the business and, in that way, the bank would be getting back all of the deposits in that town.

Mr. Goodwin. You have one branch of your institution in Italy? Mr. Giannini. That is a separate institution and not a branch.

Mr. Goodwin. Is that institution self-sustaining by the capital

provided in Italy?

Mr. Giannini. Yes, sir. The National City Bank has branches there and London banks have branches. However, we have not.

We have a separate institution.

Mr. Goodwin. So that the bank in Italy has no connection with your institution in the United States except that it is owned partly by your own interests here?

Mr. Giannini. About 50 or 60 per cent.

Mr. Goodwin. Are the profits in that bank proportionate to the

profits that you make in this country?

Mr. Giannini. I would not say so up to this time, but they have been paying dividends. I think they have done perhaps as well as any other bank there.

Mr. Brand. What is the average salary of your clerical force in

these banks in these small communities?

Mr. Giannini.—About \$220, so Mr. Vincent advises.

Mr. Brand. Is that the average?

Mr. VINCENT. Yes.

Mr. Brand. What do you pay your stenographers?

Mr. Vincent. Their compensation varies.

Mr. Brand. What do you pay your stenographers and tellers in these small banks?

Mr. Vincent. We have a more or less extended salary rate for each step. Stenographers range from \$90 to \$135 and savings tellers range from \$115 to \$150 and commercial tellers range from \$125 to \$190 or \$200.

01

Mr. Brand. What do you pay your cashiers?

Mr. VINCENT. The small community banks have no cashier. The

assistant cashiers range by gradual steps up.

Mr. Giannini. But all participate in the profits and in many cases, it is equal to their salary. All employees interested in the business from the president down, and that is the big thing.

The Chairman. I should like to ask a question of Mr. Bacigalupi. In Exhibit G I notice you say in 100 branches over 70 per cent of the

local deposits are loaned in the local communities.

Mr. Bacigalupi. Yes, sir.

The CHAIRMAN. Where are they located?

Mr. Bacigalupi. Those places are specified in the exhibit.

The Chairman. I got the impression that these branches are mainly located in Los Angles and San Francisco. Am I correct in that?

Mr. BACIGALUPI. I do not think so.

The Chairman. If it is not made clear, will you not clarify it by an explanation?

Mr. Bacigalupi. It is clear. The name of the branch is given.

It is given in detail.

Mr. Giannini. There is one observation I should like to make and that is when you have a bank of one hundred or two hundred million capital, it becomes a public institution. The Government is interested in it. You can not have anything happen to that. Even the other banks will come to its rescue unless it is too bad. But they are not interested in the little bank.

Mr. Brand. Did any of your banks or customers make any call

loans last fall when the interest got so high?

Mr. GIANNINI. We may have made some, but not to any extent.

Mr. Bacigalupi. No; very little, about three days in all.

Mr. Dunbar. Are you incorporated under the laws of the State of Delaware?

Mr. Giannini. The Bank of Italy is not. The Bank of Italy is a national bank now. You mean the Transamerica Corporation?

Mr. Dunbar. Yes.

Mr. Giannini. That is a Delaware corporation.

Mr. Dunbar. And that relieves you from double liability?

Mr. Giannini. Yes; except in California. I think in California the law applies there. In California they hold that in so far as business is done in California, there is an unlimited liability.

Mr. Dunbar. If every State in the Union should have extablished branch banking systems, and you ran your systems according to the

charter of the State of Delaware

Mr. Giannini. You could own them through stock ownership, but you could not run them in the various States except by conforming to the State laws.

Mr. Dunbar. The banking laws of Delaware do not apply when

you operate your institution in the State of California?

Mr. Giannini. Our bank really operates under the Federal law. It is a national bank. Previously to that it was a State bank.

Mr. Dunbar. The national law gives a bank the right to have

branches in its own territory.

Mr. GIANNINI. Yes, sir. You can buy a bank in existence provided it has its head office in our city, which is San Francisco. In other words, we could buy another bank in San Francisco and merge it into the Bank of Italy.

Mr. Bacigalupi. That is, if its branches were operating at the

time of the passage of the McFadden Act.

Mr. GIANNINI. Yes, sir. Mr. Dunbar. Under the McFadden bill, you said one of your banks was not a member of the Federal reserve system?

Mr. Giannini. Because it had acquired branches afterwards.

Mr. Dunbar. I do not understand how you can operate branches; I do not understand how you have 200 branch banks in the State of

California under the existing law.

Mr. Wingo. Possibly you overlook one provision, Mr. Dunbar. Under the McFadden Act the Bank of Italy which was at that time a State bank, could come into the national system bringing with it all the branches that were in existence at the time the McFadden Act was enacted into law.

Mr. Dunbar. No other State bank could duplicate that now? Mr. Wingo. In a State where a State bank has now branches, it can go into the national system and retain any branch it had in existence at the time the McFadden law was enacted.

Mr. Dunbar. Any State can enact a law which will permit branch

banking within that State?

Mr. Wingo. Certainly. Mr. Dunbar. What you want the Federal Government to do-Mr. Giannini. I do not want them to do anything. I am only

talking as an outsider. I am no longer in the banking business.

Mr. Dunbar. Oh; you are only talking?

Mr. GIANNINI. I do not want you to do anything. I am out of

the game, as far as I am concerned. I have retired.

Mr. DUNBAR. Your idea would be if you were in the banking business that it would be best for the banks of the United States to have branch banking authorized by the Congress of the United States all over the United States?

Mr. GIANNINI. Yes; the same as any other business.

Mr. Dunbar. Have you any idea about how many banks we would

have of the size of the Bank of Italy in the United States?

Mr. GIANNINI. It would depend upon whether they would be able to buy the banks. There might be so much competition they could not get any.

Mr. Dunbar. There would be competition?

Mr. GIANNINI. Yes, sir; and the little banks would profit by it. Therefore I say that the little bank who opposes us is a darn chump. Mr. Dunbar. What is the advantage of having a Federal law on

the subject when a State now can authorize branch banking?

Mr. GIANNINI. The State can authorize it within the State, but nation-wide branch banking would permit it to be established throughout the country.

Mr. Dunbar. How did you get into the bank in New York City?

Mr. Giannini. Through the Transamerica Corporation. Mr. Dunbar. You could not take over a bank like that now?

Mr. GIANNINI. Yes, by purchasing the stock through the Transamerica Corporation.

1

Iw

br

me

Mr. Dunbar. The Bank of America of New York is not a part of the Bank of Italy, except through the holding company?
Mr. Giannini. That is right.
Mr. Dunbar. You can do that with any bank?

Mr. GIANNINI. Yes, sir; but it is not an ideal way of doing business. Now, let me point out another advantage in this branch banking: The moment we entered Santa Clara, for instance (which happens to be the town that Mr. Bacigalupi comes from), when we bought that bank the lending limit was \$10,000. There happens to be a large business there which has seasonal requirements running up to \$200,000 or \$250,000. Before we took over the bank in Santa Clara, it was impossible for that business to satisfy its needs in the local field, because the bank there could not legally lend so large a sum. In consequence, the business had to get its accommodation in some The moment we took that bank over we were able to handle that business locally, and to extend the same lending facilities there as obtained everywhere else throughout our system. So, when we establish branches in the farming communities, we are bringing into the farming sections banks with metropolitan facilities. And if we had nation-wide branch banking in the farming sections we would have the same banking facilities as obtained in New York City, so far as loans are concerned. The moment a branch of the Bank of Italy enters a town it could lend \$10,000,000 in that town unsecured, if it wanted to.

Mr. Dunbar. Just one or two more questions: From what you have said, I judge that anybody, unless he is a hermit who lives out in the woods and is unknown, who has credit, can borrow money, and does not have to depend upon the local bank. For instance, you said that New York banks were lending money all over the lot.

Mr. GIANNINI. Only in New York. They have no branches out-

side of New York, except in Europe.

Mr. Dunbar. But, instead of having branches, do they not have a department that deals with the making of loans in every State in the Union?

Mr. GIANNINI. They have customers in every State in the Union. To-day all the big firms of the country borrow in New York because the local banks can not take care of them. However, we have concerns to-day in San Francisco that used to go to New York but now get all their accommodations in San Francisco. Perhaps I can cite the prune growers, without mentioning names and, I think, for instance, the raisin growers and others who used to go to New York but now they get all they want at home.

Mr. Dunbar. I know that the representatives of the large banks going over the country looking for loans, number almost as many as the commercial travelers. My experience out in my country is that a man can borrow money as easily as he wants to.

Mr. GIANNINI. That is what I have said.

Mr. Dunbar. Therefore, branch banking would not affect that region except in this way, that they would be making their business transactions closer at home.

Mr. Giannini. Yes, sir; and with people in the banks familiar with local conditions. The loans would be made out there locally and not in New York.

Mr. Bacigalupi. In other words, the branch bank has a local interest whereas the outsiders who come in lend when money is plentiful, but when they need it they have no hesitancy in calling it in.

Mr. GIANNINI. Yes. But your branches will take care of your

customers all of the time.

f

Ó

B

Mr. Wingo. My attention has been directed to the fact that this thing takes the cream of the business from the independent banks.

Mr. Giannini. Certainly. When money is plentiful the outsiders go out and seek these loans from New York, but when money is not plentiful, they expect the little fellows in the local places to take care of the localities' needs. It is much safer for any one to do business in his own territory than through New York. Some banks have gotten into trouble in California, because, when they had too much money, they went out into other sections of the State and were bitten. They took up loans the other banks would not take.

Mr. Dunabr. The trouble in my district is that it has been too easy to borrow money and they have borrowed money to get richer

and have gotten into trouble.

Now, Mr. Chairman, I should like to ask Mr. Bacigalupi a question. I want to know, in your system, if you can go into a State which has no branch banking law and establish a bank?

Mr. Bacigalupi. No, sir. (Discussion off the record.)

The CHAIRMAN. I suggest that the committee adjourn.

(Whereupon, at 12.45 o'clock, p. m., the committee adjourned to meet at 10.30 o'clock a. m., Tuesday, May 13, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, MAY 13, 1930

House of Representatives,
Committee on Banking and Currency,
Washington, D. C.

The committee met in the committee room, Capitol, at 10.45 o'clock a. m., Hon. James G. Strong, presiding.

Mr. Strong. The committee will come to order.

We have with us this morning Mr. C. G. Shull, the commissioner of banking of the State of Oklahoma, who will speak to us on this question of branch, chain, and group banking.

Would you care to proceed without interruption until you have finished? If so, the members of the committee will then want you to answer some questions.

STATEMENT OF C. G. SHULL, COMMISSIONER ON BANKING, STATE OF OKLAHOMA

Mr. Shull. I might say that if you care to interrupt me, it will be

entirely satisfactory.

As a prelude to the few remarks I shall make, I want to state that no effort was made by me to be called as a witness before the committee and when I received the notice I was likely to be called it was quite a

surprise to me.

The question under investigation is naturally a matter of much interest and one to which I have given a great deal of thought. However, I have not had access to statistics from which I could do much research work. I have read, rather hurriedly, with a great deal of interest, that part of the proceedings heretofore had by your committee, which was furnished me, and as I view the trend of this investigation it narrows itself down to whether Congress shall extend or

enlarge branch banking privileges to national banks.

Comptroller Pole has laid the foundation of the argument favoring further extending the privileges of branch banking to national banks and as the remarks I shall make will be against that viewpoint, favoring unit banking, I shall necessarily refer quite often to Comptroller Pole's remarks and the statistics which he has furnished, but I desire the committee to understand that the references I do make are for the sole purposes of throwing light on the merits of the subject under investigation and not for the purpose of being argumentative. I think further, in order to simplify matters, we may as well realize that we are investigating a question as to whether the banking business of the United States shall be carried on under the system of branch banking or unit banking, for I believe that the discussion so far must have convinced the committee that if branch banking privileges are enlarged or extended that ultimately all banking will be of

that nature and will be nation-wide in scope. History of other nations clearly demonstrates that fact. Canada, England, and other branch-banking countries do not have unit banks.

The two basic reasons advanced by Comptroller Pole in advocating branch banking are: First, that it is necessary to preserve the national system; second, that it is necessary in order to furnish the country banking communities, especially in agricultural sections, with

adequate banking facilities.

I disagree with him on both these points. It is true that during the last 10 years the resources of State banks have increased more rapidly than the resources of national banks. A large per cent of this increase has been brought about during the last few years by reason of several large banks in New York and Chicago merging and surrendering their national charters and taking out State charters. This increase has been rather spasmodic and there is no reason to expect this movement Naturally to one in a supervisory capacity this action on the part of those national banks was a matter of some concern, but I hardly think anyone views with alarm the safe position and the future growth of the national banking system in this country. I have talked with a number of national bankers about this very point and none of them is uneasy about the fate of the system to which they belong, and let it be remembered that the Federal reserve system has not lost in its membership by reason of these conversions and in spite of these losses of banks the system itself shows a very healthy growth indeed and considering the enormous volume of international business which is being transacted through our national banks I am sure they are handling their share of banking business in this country.

Great stress is being laid by the comptroller that the national banks are the fiscal agencies of the National Government and that the Government can only rely on national banks in times of Nation stress

or war. I quote from a recent paper of the comptroller:

It is not criticism of the State banks and trust companies to say that the National Government can not rely upon them to serve as instrumentalities in the enforcement of a Federal fiscal policy. Banking, like other business enterprises, is entered into by stockholders for the purpose of realizing a return upon their investment.

The same can be said of national banks. The control of national banks is in the board of directors and aside from the supervision allowed the Comptroller of the Currency, the National Government can no more dictate the affairs of the national banks than they can of State banks, corporations, or individual citizens.
Since the establishment of the Federal reserve system, the Federal

reserve banks are in fact the real fiscal agency of the Government.

The idea that the Government can not depend on the officers and directors of State banks to respond to needs of their Government in times of need is nt well founded, as was demonstrated during the late State and national bankers, business corporations, and our entire citizenship responded horoically to meet the needs and demands of the Government. I think we will all agree to that. No power is in the National Government to compel a contribution of service or money of national banks or national bankers other than the power which could be enforced against State banks and bankers, business corporations, and provate individuals. I can see no reason for

changing our banking system on the theory that national banks are Instrumentalities of the National Government.

I feel sure some people feel that one system of banking, and that the national system, would be preferable to the two systems which We now have. Possibly some people may think our system of government would be better if we had simply a National Government and no independent State governments, but the great majority of our people are in favor of two systems of banking. This is evidenced our people are in favor of two systems of banking. by the great volume of business handled by the State institutions.

I have no prejudice against the national system and most of my active banking experience has been as a national banker, and to my mind, to say the least of it, the merits of the national system and its advantages are equal to those of the various State systems. There are advantages inherent to each system and these advantages can not and should not be destroyed by law as they are for the best interests and welfare of the banking public. The closer personal, sympathetic, and more understanding supervision of the State banks is a very decided advantage to both the bank and the customers of the bank. On the other hand, the unity of the national system and the stability and uniformity of the laws and the supervisory powers are inherent advantages to the national system.

The two systems working side by side with healthy competition have created a banking condition in this country which has contributed largely to the prosperity of this country and the development of its virgin resources to the distinct advantage of the people of this country and an unparalleled progress and rapid development of the resources of our country has been the result. Banking policies and practices which have emanated from the comptroller's office, and especially many rules and regulations of the Federal reserve banks have done much to raise the standard of banking in this country. The State banks have been benefited along with the national banks as they have had to raise their standards and meet this healthy competition. On the other hand, the fact that national banks have had State banks as competitors has had the salutary effect of keeping the banking business closer to the people and more responsive to the people's needs.

The two systems working side by side have demonstrated that commercial transactions growing out of production, manufacturing, and transportation of goods and commodities from one section of the Nation to the other are not now hampered but can and are now being

handled satisfactorily by banks in each system.

The two systems of banking are in keeping with our form of govern-One system is a check on the other, and having the State banking system prevents the banking bysiness from becoming too autocratic and the national system prevents the State banks from becoming too loose and lax in their practices and have done much to unify and standardize banking methods and policies in the several States.

Our country has prospered well indeed under the two systems. Certainly our national progress and national wealth compare favor-

ably with other nations having but one system.

Branch banking, when permitted to extend beyond State lines, will result in but one form of banking. We have but to look to Canada, England, and other countries to see that this will be the result.

The second point urged against the present system of unit banking system is that the unit banking system has broken down and is not furnishing adequate banking facilities to smaller banking communities, expecially in the agricultural sections. I do not subscribe to this view of the situation. Our unit banking system has not failed and is not breaking down but is making vast strides keeping pace with the rapid development of the country in general and with other business organizations. As proof of the failure of the unit system the Comptroller has submitted figures showing 5,640 bank failures in the United States since 1920, the deposits in these failed banks amounting to \$1,700,000,000 and the number of depositors suffering losses in these institutions numbering 7,264,957. These are large and imposing figures and are likely to create the impression that unit banking is more hazardous than it really is. As a matter of fact the banking business in this country is the safest business, for the safety of the creditors, that we have, and as a matter of fact it should be the safest business we have.

Mr. Pole further states that the recovery to depositors of failed national banks equals 80 per cent; in other words, the loss was 20 per

One billion seven hundred million, the amount of all deposits in all the banks that failed during the last nine years divided by 7,264,957, the number of depositors, equals \$234 as the average deposit of each customer in all of these failed banks. Each depositor recovered 80 per cent of this \$234, which is \$187.20, which subtracted from \$234 leaves a loss to each depositor of \$46.80. Not a bad loss to the banking public during the 9-year period following the deflation beginning in 1920.

Risk can not be eliminated from business, and banking is no exception to that rule. Please do not misunderstand that I look lightly upon bank failures and their results. I deplore them as much as any member of this committee and as much as the comptroller himself, but I do know the bad results have been greatly exaggerated and I do know the people of this country lost many times as much money by reason of investments in land and in stocks of various kinds, and while I do not have the figures and do not know that they are available, I am inclined to think that very comparable losses were occasioned by investments in Liberty bonds, direct obligations of our great country, by reason of having paid par for these bonds and having to sell them as low as 82 and 83 cents on the dollar. The loss to many purchasers of Liberty bonds amounted to \$18 for each \$100 invested and the depositors in the failed banks of this country during the last nine years have lost \$20 for each \$100 of deposits in those banks.

We must not lose sight of the fact that for several years prior to 1920 we were operating under an unusual and unprecedented period of inflation. Beginning in 1920 and thereafter we were operating during a period of unusual and unprecedented deflation and great losses were inevitable in all lines of business. As stated above, we know that many, many purchasers of Liberty bonds, the obligations of this great Government of ours, lost a great deal of money, yet I have heard no one suggest that we change our form of government to correspond to that of Canada, England, France, or other countries.

Mr. Brand. I did not get that.

Mr. FENN. Will you say that over again?

Mr. Shull. I had previously brought out the fact that the people had lost money in the purchase of Liberty bonds, but that has not been given as a reason why we should change our form of government.

The fact that seven and one-quarter millions of people, or 18 per cent of our population—and I am just approximating those figures—incurred a loss of \$20 per head by reason of their deposits in failed banks is not so alarming as we might think, and creates no banking situation demanding a change. These losses were inevitable and small indeed compared with the losses in other classes of investments. The losses in land, in cattle, in wheat, in corn, in horses and mules, in every conceivable form of investment in each community, even losses in Liberty bonds, were reflected to a greater or less extent in each bank serving each community.

I have heard much said depreciating the ability of the small-town banker. This opinion of his ability or lack of ability has arisen since 1920. Before that he was considered a respectable and fairly average capable citizen and good banker, but his bank has failed and they are still failing. I want to make this statement, that I am fully convinced that better than 95 per cent of the bank failures since 1920 were caused, and are really traceable to the abnormal inflation

and abnormal deflation caused by our late war conditions.

In Oklahoma—and you will pardon me for referring to Oklahoma for naturally my sources of information come mostly from that State—only five State banks which were organized since January 1, 1920, have failed up to this time. All other State banks which have failed in Oklahoma during this 9-year period were those chartered prior to that date and of course those affected by the conditions existing during the inflation and deflation period. One hundred and seventy-four State banks failed during this period and only five failures of banks chartered after that period of deflation began have failed, showing 98 per cent of the failures were caused as a result of conditions brought about by the war and 2 per cent which you could say were not caused by this same reason.

Lately we had 12 banks to fail in one day, each one of these in better shape the day they failed than they had been any time during the last 10 years, and each failure caused by the result of war conditions.

Lately a national bank failed in our State, the continued condition of which during the last 10 years I happened to be acquainted with and I am sure it was in better shape the day it failed than it had been for 10 years, but it had lots of losses in its assets dating back to the war period which simply could not be eliminated. War conditions brought about losses, abnormal and unprecedented and inevitable losses, and a great per cent of the bank failures are directly traceable thereto.

Much has been said about the earning ability of small banks, especially in agricultural sections. Of course, my source of information comes solely from my knowledge of State banks in Oklahoma.

I have had prepared an analysis of the earnings of Oklahoma State banks for the year 1929. We have 325 State banks in Oklahoma at this time; 199 of these banks paid dividends during the year 1929; 126 did not. Sixty per cent of the banks did pay dividends. The average net earnings of the State banks in Oklahoma on their capital stock for 1929 was 16.6 per cent. The net earnings figured against the capital and surplus was 12.6 per cent. Dividends paid figured against the entire capital stock of all the banks equaled 11.2 per cent;

Those percentages were figured counting all the capital stock of all the banks in the State, whether they paid dividends or not, and the

average was 11.2 per cent.

Group 1. I have had analyzed the net earning capacity of banks according to size of capital stock. Banks having a capital of less than \$25,000 earned 17.9 per cent on the capital stock and 14 per cent on the capital and surplus. Dividends paid last year by these small banks equaled 111/2 per cent on the capital stock of all banks in this group. Of this class of banks, 221 in number, 131 paid dividends; 90 did not; or 60 per cent paid dividends.

Group 2. Banks having capital of \$25,000 up to and including \$50,000, number 89, 64 of which paid dividends; 25 did not, or 70 per cent of which paid dividends. Net earnings on the capital stock of these banks equaled 17.7 per cent. Net earnings on the capital and surplus equaled 13½ per cent. Dividends paid last year equaled

11% per cent on the capital stock of all banks in this class.

Group 3. Capital stock in excess of \$50,000. Number, 15. Four paid dividends, 11 did not, which equals 26.6 per cent paying dividends. Net earnings on capital stock 12.6 per cent. Net earnings on capital and surplus 9½ per cent. Dividends paid equal 10½ per

cent on the capital stock of all banks in this class.

Remember, we have 325 State banks in Oklahoma; 199 paid dividends; 126 did not. Out of the 126 banks which did not pay dividents, only 8 were chartered since 1920 and 3 of these 8 were chartered during 1929 and 1 during 1928, and these 4 banks would not be expected to pay dividends so soon after their organization, thus leaving only 4 State banks in Oklahoma organized since 1920 which did not pay dividends. This all goes to show that the failures in our State banking system in Oklahoma and the present dividendpaying ability or earning ability are directly chargeable to war conditions rather than to banking ability or local conditions.

You can not, in my opinion, get away from the fact that war conditions are still causing the trouble we are having to-day in our banking situation; not 100 per cent, but very nearly that per cent. The failures we will have for the next few years or so will be traceable

to the same cause.

There is no need to change our system of banking. What we should do is to improve the present system where possible, and in my opinion the bankers of this country are doing that very thing themselves. Our country bankers are able to meet the present day local demands of banking. They are wide-awake business men and have revised their business methods to meet the changes which have occurred in economic conditions.

Our records show that out of 151 State banks organized in Oklahoma since January 1, 1920, 5 have failed during this 10-year period.

Not perfect, but, to my mind, a very good record.

Branch banking will not stop the failures of banks which are yet to come, because of war conditions. These large branch banks will not acquire these particular banks on account of the condition of their assets. In my opinion, it will cause the failure of some of these banks still carrying on and still having losses in their assets chargeable to war conditions and which in many instances may be able to pull through. My reason for this is that if branch banking is permitted, there will be many instances where a branch office will be opened in the community where these banks are now operating and thus deduct from their volume and lessen their possibility of working out of their trouble.

My thought is this, that there will be a great many points where it would not be possible to get another bank chartered there, but it would be possible to get a branch; in other words, it might justify a branch office of some large bank, but it would not justify two unit banks there, and my thought is that this branch office will finally get

established in such points as that.

Canada has had some bank failures. I understand a bank there having about 80 branches failed. I further understand there are about 12 or 13 banks operating in Canada. This would show 1 bank out of every 13 failing. I further understand another large branch bank with between 300 and 400 branches was on the point of failing and the Canadian Government donated \$15,000,000 to enable another banking institution to take it over. I further understand that three banks in Canada do a very large per cent of the banking business of that country. Statistics will show the per cent.

I have seen the percentages, but they were not available to me at

the time I secured these figures.

In 1885 Canada had 41 banks. They now have 12 or 13, with 3 doing a very large per cent of the business.

England has, I understand, 20 banks, with 5 doing a very large per

cent of the banking business of that great nation.

How can we imagine that branch banking will decentralize banking business in this country? Admit, for the sake of argument, that branch banking is safer than unit banking. I am not admitting this and would like to see a comparison of the failures in Canada on a percentage basis, compared with the failures in this country. I would like to have the committeemen get those figures; it is not possible for

me to get them.

But, admitting there is some greater degree of safety in branch banking, there are other advantages to unit banking which offset the additional risk, if any. There is no doubt that the unit bank is more responsive to the needs of its customers in the smaller community, both to the borrowers and the depositors. There is no question that the people who live in the very communities which Comptroller Pole states has need of branch banking facilities do not want branch banks and are, in fact, opposed to them and are decidedly in favor of unit banking. These people realize that even if not as safe, the small risk incurred in the unit bank is worth the money and that the extra safety, if any, is offset by the local independence and self-development which the unit bank encourages and makes possible. This idea is deeply ingrained in the minds of the American people. These people realize that they will not receive the banking accommodations to which they are entitled and can obtain from the local banker who knows them intimately, who knows their integrity and ability. I have reference, especially, to the average citizen in the smaller communities. They know that the result will be that branch banking will gladly take their deposits and in many, many instances will not

loan the small borrower the money to which he is entitled, especially the small farmer and the small merchant.

We know, further, that the independence of hundreds of country bankers will be lost under this system and I firmly believe that if branch banking is once adopted on the plan outlined, that we have committed ourselves and this Nation to a policy which will bring about centralization of wealth in the hands of fewer people and will be the greatest stride this Nation has ever taken toward the elimination of the greatest asset to the middle class, the small and worthy individual comprising the great and large per cent of the citizenship of this country.

From the standpoint of safety alone, nation-wide branch banking is preferable to trade area branch banking. More diversity in investment would follow in nation-wide branch banking. I amfirmly convinced that if we had, during the war period, branch banking in trade areas, and if these banks had served their communities with banking facilities as was necessary during the war period, many of these banks would have failed also.

The greatest reason for greater safety to branch banking on a nation-wide scale, is the fact that the few banks we would have under this system would be so large that the results of their failure would be so great and so nation-wide that the National Government would have to step in and save them, as was done in Canada, and I understand, in other countries. This, of course, is paternalism, and around the corner is socialism.

Branch banking is all right for the people who are accustomed more or less to a monarchial form of government, but the people of this country are not ready for it and the business conditions of this country do not demand it.

The Canadian Government guarantees bonds issued by some of the railroad companies and some of the bonds issued by municipalities. Great centralization of banking with branch banking fits into their scheme of government, but not ours.

1 t t t t c f

N

n

b

Group banking has been in vogue in this country for years and many failures have occurred in operating groups and chains. The recent enthusiasm for group banking has, in my opinion, been occasioned by the thought of the possibility of branch banking. Many enterprising and ambitious people are entering the group banking field, with a view to selling out to larger branch banking organizations which will be in operation, if permitted.

In submitting figures showing the growth of branch banking in this country, these figures are, to my mind, misleading. For instance, since the passage of the McFadden act the large national banks in New York and other cities have established branches in other points in the city. The resources of this large bank have been transferred from the unit-banking column to the branch-banking column. This character of branch banking is not the kind of branch banking now under consideration. These so-called branches in the same city as the parent bank are no more than offices. The parent bank is no more doing a branch banking business than it was before. It is still serving the same community and the same customers that it was serving before. That is not the kind of branch banking we are talking about now.

Judging from the figures given for Oklahoma, chain and group banking have not made the inroads into our banking that the figures Would indicate. We do have one group-banking organization, and only one, and I think it has probably 20 banks, in quite a number of Which they are not owners of a majority of the stock; in other words, the majority of the stock is not owned by the holding company, and quite a few of these banks that are now in the group were in a chain system before.

I notice listed 15 chain banks under the Thurman Bros. in Oklahoma. As a matter of fact, there are three or four of those brothers that own a control of those banks, but those banks are operated absolutely as unit banks. I would not class them as chain banks.

Technically they might be, but in operation they are not.

Mr. Douglas, of Shawnee, owns nine banks which can be classified from every standpoint as chain banks, and R. A. Vose is interested In three, but does not have a controlling interest in all of them, the

banks being absolutely operated as unit banks.

Gentlemen, this is about all that I am prepared to say on this subject. I did not have as much time to devote to the preparation of my remarks as I would have liked to have had, for I did not get the notice to come until a short time ago, and meanwhile had other duties to perform.

Mr. Strong. I would like to ask you with respect to the amount of money involved in State and national-bank failures prior to 1920. We have had a good deal of testimony regarding bank failures from 1920 to date, but what do you say about the situation prior to that

time?

Mr. Shull. The only information I have on that is that I noticed In Comptroller Pole's figures that he furnished to the committee that there had been a great many more State banks that failed than national banks, and that is true. Somebody on the committee asked him to furnish the amount involved in dollars and cents in the failures of banks under these two systems, and if that information was ever furnished, I was not able to find it in the proceedings that were furnished to me. I would really like to see that information furnished.

Mr. Strong. Mr. Awalt, do you know whether that information has been furnished or not?

Mr. Awalt. The comptroller did not have the information from State banks.

Mr. Strong. And he can not get it?

Mr. Awalt. As far as I remember it, we did not have the figures for State banks, nor did the Federal Reserve Board have them.

Mr. Strong. Did not the comptroller furnish that from 1920 to

Mr. AWALT. The number of failures, but I do not think he furnished the amounts.

Mr. Wingo. What I think Mr. Shull has in mind is this, that the comptroller furnished the numbers and pointed out the fact that, measured by numbers, there had been more failures in the State banking system than the national, and Mr. Shull suggests that if we will procure information showing the volume of banking assets, and not simply the number of banks, there would be a different comparison.

I presume that the inference you want us to draw is that, measured by assets, there was not a greater volume of banking assets involved in the State bank failures during that period than in the national bank failures, though the number of units was greater.

Mr. Shull. Yes. I would just like to know. I do not know. Mr. Wingo. That would be interesting.

Mr. Chairman. I am wondering if Mr. Awalt could not procure from the State bank commissioners the figures on that, so as to make that comparison.

Mr. Strong. I hope that, if he can, Mr. Awalt will do that. Mr. Awalt. I understand that the Federal Reserve Board is in the process of getting that now and it will be furnished to the com-

mittee, but it will take some time.

Mr. Wingo. I wish, if you would, that you would get for us that information. However, I understand that the information that they are preparing is for the Senate committee and that they do not intend to complete it before the expiration of this Congress. It ought to be furnished at this Congress.

Mr. Strong. It would not take very long to write to each one of

the banking commissioners of the States for that information. Mr. Wingo. My point is that they would include it with a whole

lot of other information that they expected to procure, but we ought to have this information right away.

Mr. Strong. Yes; we ought to see what the loss to the Nation was in money, not in number of banks, by reason of failures.

Mr. Wingo. I do not know what it would be worth, but we ought to have that point of comparison.

Mr. AWALT. We will try to get it.

Mr. Strong. All right.

Mr. Shull, I would like to have you give us your comment on the condition in which a community finds itself when a bank fails, whether the failure of a bank robs the community of much of its assets, or what the situation is, in your opinion, in a community when a unit bank fails.

Mr. Shull. I see. Well, I should say this: Of course, we do not like to figure on a system on the basis of taking care of failed banks as much as we do in keeping them going, but I would like to say this, that if you do have a failure of a big branch bank the damage to the scattered communities would be worse than the failure of a unit bank operating in a community, because of the fact that in a unit bank operating in a community, naturally the larger percentages of the loans are made to the citizens of that community and the money is still there in that community somewhere. It may have changed hands from one fellow to another, but still the money is in that community, and my idea is that the individual community would be hurt less by that.

Mr. Strong. By the failure of a unit bank than by the failure of a

branch bank?

Mr. SHULL. I think so.

Mr. Strong. We have had a good deal of information here about Will you give us your idea upon that proposition?

Mr. Shull. Well, I think Comptroller Pole has probably given about the best description of what a trade area is that you have had-I think I made a note of it somewhere. He said that "A trade area is that geographical territory which embraces any city's flow of trade.'

I think that it has been demonstrated by the number of questions asked on that point that it is pretty hard to tell what a trade area is. and I think unquestionably that granting branch banking privileges on that basis would cause a great deal of conflict of territory. seems to me that it would be very easy to point out that the entire United States is in the trade area of New York City, because our little merchants in the little country towns in Oklahoma and in that Western country come to New York regularly to do their trading.

Mr. Strong. They come about once a year?

Mr. Shull. Once or twice a year. Mr. Strong. To buy their stocks?

Mr. Shull. Yes, sir.

Mr. Strong. And they also go to Chicago.

Mr. Shull. Chicago and St. Louis.

Mr. Strong. And in the meantime they go to Kansas City. Mr. Shull. Yes; a few of them down there do.

Mr. Strong. So that the proposition of trade area, followed to its logical conclusion, would simply mean nation-wide branch banking?

Mr. SHULL. I think so.

Mr. Strong. In your opinion, will branch banking tend to decentralize, either nation-wide branch banking or trade-area branch banking?

Mr. Shull. I certainly think it will not. We only have to look to other countries which have branch banking privileges to see that the number of banks operating is becoming smaller and smaller each

day and covering a wider territory.

As I said before, Canada has three banks doing a very large percentage of the business. I wish I had the figures, but I am sure it was better than 75 per cent of the business of the country, and five banks in England are doing the same thing.

I think the Fedearl reserve system of this country has done much

toward decentralization.

have noted with a good deal of interest the gain in total resources of banks at different points as brought out in somebody's testimony here before the committee; I think Comptroller Pole's-for instance, Detroit had gained 46 per cent; Dallas, 437 per cent; Atlanta, 234 Per cent; Cleveland, 225 per cent; Chicago, 210 per cent; and Minneapolis, 284 per cent. It seems to me that our present Federal reserve system has done much along that line.

Mr. Strong. What do you think will become of the Federal reserve

System if we have nation-wide branch banking?

Mr. Shull. Well, I do not know. My personal opinion is that in the course of years-I do not know how long, for we do things pretty fast nowadays—we would have a few large banks in this country and would not have the need for the Federal reserve system that we have to-day.

Mr. Strong. And they would rather dominate and overpower? Mr. Shull. I understand that in Canada—and, of course, the things I am giving I would like to have checked up, because my Information is not definite information, but I have read it from reliable Sources that they virtually have no supervision of the banking business In Canada, that the Government does not. If I am not mistaken, they just make a report about once a year, and they have virtually no supervision as we understand it in this country.

ad. res 0.

Mr. Goldsborough. Mr. Chairman, I would like to ask one question there.

Isn't that because, instead of the Government being able to control

the banks, the banks largely control the Government?

Mr. Shull. Yes; they are just in absolute partnership.

Mr. Goldsborough. Assuming that it is conceded that branch banking is becoming more and more necessary, with which proposition I do not agree, do you not believe it would be better for metropolitan banks to be allowed to establish branches within their areas, and then have the rural districts conduct their own branch systems, disconnected from any metropolitan banks?

Mr. Shull. Well, I have thought about that a great deal. I think that unquestionably there are some advantages to branch banking, and I think branch banking in large cities is good, but I do not think branch banking should ever be permitted to cross State lines. That

is my idea.

Mr. Goldsborough. But if you allow branch banking to be on a state-wide basis, is there not bound to be some legislation which will allow it to cross the State lines?

Mr. Shull. It is pretty apt to come.

Mr. Goldsborough. Now, with respect to the definition of the term "trade area" which you referred to a moment ago as involving the city's flow of trade, the necessary implication being that Mr. Pole's idea of a branch banking system is a system which has its inception in the cities, do you think that is necessary at all? Do you not think that sufficiently strong branch systems could be set up in the rural districts without having a parent bank in a city?

Mr. Shull. Yes, sir; I do.

Mr. Strong. I want to ask you now about that supervision. You have charge of the supervision of banks in your State. What is your opinion as to the ability of a superintendent of banks to examine large systems, when they have 1, 2, 3, or 100 banks?

Mr. Shull. Well, I attended the supervisors' convention of all the State bank commissioners of the United States held in San Francisco this last summer, and while there I had occasion to talk with, I think, the chief auditor of the State banking department of California, and he told me that in the examination of chains in that country, of branches, that they paid very little attention to the actual audit of the bank. You understand that an examination of a bank by a State department comes under two heads, one an audit and the other more of an analysis of its solvency, and he said that it was absolutely impossible for them to go very far into the auditing part of branch banking, that they left that principally to the auditing department of the parent institution.

Mr. Strong. Of the branch bank itself? Mr. Shull. Yes, sir.

I would like to state further along that line, since you brought it up, that I noticed in Mr. Pole's discussion of that that he admitted that it would virtually be necessary for his office to be examining those banks all the time, almost a continuous examination, which to my mind suggests that you just have that department helping to operate those banks, and you are getting the Government right in the banking business.

Mr. Strong. Have you any suggestion as to what policy might be

used to strengthen the banks of the country?

Mr. Shull. Well, I do not know whether I have anything that is practicable or not. I have one pet theory that I have thought about.

Mr. Strong. The committee would like to have it.

Mr. Shull. I have often wondered, in the organization of a bank, if it would not be possible to provide that each stockholder, in addition to paying in the capital and surplus required, should purchase an equal amount of good bonds, of a class to be determined, of course, to be deposited by a national bank with the Comptroller of the Currency and by a State institution with the banking department of that State, as a guarantee to taking up losses as they occurred. Now, banks do not fail over night; it is a trend that a certain bank gets into, usually, that causes failure. I am talking now about normal banking conditions, and eliminating the war period. It is a trend that a bank gets into, and many times in my department, and I am sure in others, we realize that we should levy assessments before we do, but for various reasons we do not do it; the banker thinks it will ruin his business, break him, and we do not do it, and the trend of his business, instead of getting better, gradually gets worse, and the first thing that happens, we wake up and his capital is lost.

Now, if these bonds were pledged with the banking department, the loss in that bank could be taken care of gradually out of the sale of those bonds, and then whenever those bonds got down to a point, say, of 50 per cent of the amount originally deposited, you could

require them to replenish.

I do not know whether that is a practical idea or not. As I said

before, you can not eliminte risk from business altogether.

Mr. Strong. It would tend to bring the stockholders to the important realization of the fact that losses were occurring and cause them to take more interest in the affairs of the bank, would it not?

Mr. Shull. Yes, and one of the biggest things about it that I did not mention was the fact that it would assure you of a better class of stockholders than you now have. There are a great many people that in the organization of a bank have become interested in it through stock ownership that have no interest in the banking business at all, and this would tend to prevent that kind of a citizen from becoming interested in the organization of a bank.

Mr. Strong. We have had a good deal of controversy before this committee regarding the taxation of banks. I would like to ask you

if you have any views in that regard.

Mr. Shull. I have been bank commissioner about two years and a half, I think, in Oklahoma, and I have advocated how I think banks should be taxed. I think it would be right and equitable for banks to be taxed at about 60 cents on \$100 of their capital stock; that is about in line with other taxable property on an ad valorem basis. Then I think that the surplus of a bank should be exempt from taxation, or certainly only a very small amount of tax levied on it, perhaps as much as is levied against money in the different States, which in our State is two-fifths of 1 per cent, I think, provided the bank carries a certain per cent of its earnings to the capital each year until it got equal to the surplus.

In our State our court has just lately rendered a decision that is favorable to the State banks, because we have a law to the effect that you can not tax a State bank greater than a national bank; that

100136-30-vol 2 pt 12-2

you can only tax bank stock on a basis equal to money in banks, deposits in banks, which is two-fifths of 1 per cent, which virtually means we do not have any taxation against bank stock.

Mr. Strong. You do not think that the capital of banks should be put in a preferred class, do you? You think that it ought to pay

the same rate as other property?

Mr. Shull. I do; and I want to say this in fairness to the bankers, and, as I said before, I am giving you more or less the localized viewpoint, because that is all I have, but the bankers of my State are very much in favor of paying a just and equitable tax. They think they have too much relief now. They felt until this court decision that they had been taxed too much, and they know that we have gone too much in the other direction now and they want to pay an equitable tax, and I think the bankers in other States feel the same about it.

Mr. STRONG. What do you think of applying Gresham's law to the

banking proposition?

Mr. Shull. Well, I noticed that something was said about Gresham's law in these hearings. I believe the idea of Gresham's law is that the baser metal drives out the good, and I was rather surprised to see it applied to banking. However, I think it was brought out later in the controversy that it did not apply to business but simply to metals, and certainly banking is not metals; its chief business is not to deal in metals but in credits. It is a business like any other business, and I think it was brought out in the hearings here that that theory worked adversely in business, and I think it would have no application.

Mr. Wingo. If I may say this, others referred to that, and I think I referred to it in this connection, that a superior service and better quality of goods had a tendency to drive out of existence the competitor who dealt in the inferior service and the inferior quality of goods, and I think I incidentally remarked that was just the reverse of Gresham's law, that, in so far as metal and money are concerned, the baser drives out the superior, whereas in business service and qual-

ity of goods, the superior drives out the baser.

Mr. Shull. Yes, sir. I do not know who brought it out, but I know some one did, but my point is that I do not think it has any reference to the banking business. I may be mistaken about that, but that is my idea.

Mr. Wingo. I still seem to be enable to make myself understood.

I did not say that.

Mr. Strong. I know you did not.

Mr. Wingo. The point I made was this, that it was just the opposite applied to business, that in business the superior drove out the inferior, whereas in currency the baser drove out the superior.

Mr. SHULL. I agree with you on that; yes, sir.

Mr. Wingo. It is just the reverse of Gresham's law.

Mr. SHULL. Yes.

Mr. Strong. What do you think the States will do if Congress acts

favorably on a law to permit nation-wide branch banking?

Mr. Shull. Well, I think unquestionably the States would follow suit in allowing branch banking within their States, and possibly there would be some attempts made to allow banks in different States to reciprocate with each other across State lines.

Mr. Strong. And it would eventually result in nation-wide branch banking?

Mr. Shull. Yes; a bad condition, I think.

Mr. STRONG. You have pointed out that in England they only have five banks with 8,000 branches, and in Canada, only three large banks with numerous branches, and that they exist in countries where they have practically two classes of people; that the middle class in these countries is largely eliminated. Do you think the establishment of nation-wide branch banking in this country would tend to eliminate the middle class here?

Mr. Shull. I think it would be the biggest step this country has ever taken toward decentralization and toward making it impossible to insure that the smaller business interests in this country would get

the line of credit that they are entitled to.

Mr. Strong. The trend now is toward mergers and chain stores big organizations. Do you think that if we permitted a banking system that would eventually result in a few banks having control of all the money and credit that the outcome would eventually be that the middle class of people in this country would be eliminated as they are in other countries? Is that your idea?

Mr. Shull. I think it would be the biggest step we have ever

taken in that direction.

Mr. Strong. Mr. Wingo wishes to question now.

Mr. Wingo. I just desire to ask a few questions. Just take the question you have just left, that of banks having branches established beyond the State line; that is, by State charter: You said something about reciprocity between the States. What did you mean by that?

Mr. Shull. I meant it would be possible—at least I think it would be possible for the State of Arkansas, as I believe you are from Arkansas, to allow a bank in Oklahoma City, we will say, to establish branches in your State provided the State of Oklahoma would allow a big bank in your State to do a branch banking business in

Mr. Wingo. You are not a lawyer, are you?

Mr. Shull. Well, I graduated from a law school and I practiced

some, but I do not claim to be much of a lawyer.

Mr. Wingo. I was under the impression you were not a lawyer and I was prepared to ask some questions that you would not appreciate if you were not a lawyer. If branch banking is a blessing and

a good thing, why confine it to geographical limitations?

Mr. Shull. I tried to bring that idea out in my talk at the start. I think we might as well face the proposition and look at it as a nationwide branch banking, because you will remember that Mr. Young's testimony virtually admitted it would come to that. He said that it would take 50 years, but it is a matter of opinion whether it would be 25 or 50 years.

Mr. Wingo. Well, take as a practical proposition, two towns in my district-two largest ones-Texarkana and Fort Smith: If branch banking is a good thing, why say to the banks of the city of Fort Smith that "You can not cross the river to a town on the other side

of the river in Oklahoma and establish branches there?"

Mr. Shull. As a matter of fact, they do own several banks in Oklahoma.

Mr. Wingo. You mean gentlemen connected with them-

Mr. Shull. It is a chain proposition; I mean the head officers. For instance, the First National Bank of Fort Smith owns the controlling stock in several banks of Oklahoma.

Mr. Wingo. You do not mean the bank itself owns that con-

trolling stock?

Mr. SHULL. No-

Mr. Wingo. You mean the dominant persons in those banks in Fort Smith are also stockholders in smaller banks in your State?

Mr. Shull. Yes, sir.

Mr. Wingo, You say the First National. Mr. Nakdimen, of the City National also owns some, does he not?

Mr. Shull. Yes, sir.

Mr. Wingo. You do not call them chain or group banks either?
Mr. Shull. I have not thought about what I call them.

Mr. Wingo. What they set up is this, that they are separate corporations, of course-

Mr. Shull. Yes, sir.

Mr. Wingo. Some National and some State banks? Mr. Shull. Yes, sir.

Mr. Wingo. And the same man who is an officer or lage stockholder in one of these Fort Smith banks is also an officer and, in some instances, a director in these State banks and National banks in your State?

Mr. Shull. Yes, sir.

Mr. Wingo. But to get back to the proposition I started on, if it is a good thing, and aside from that barrier, I have not found out what is the argument in favor of confining the blessings of this system of branch banking to any given geographical area. I can not catch the point. Have you heard of any reason for it? You suggested you thought it should be confined to State boundaries. I wondered what reason you had in mind for that?

Mr. Shull. Well, there are communities, in my State, and I am sure in other States, that have no banking connections or facilities. Some have them, but they are, in reality not supported, and I wonder some times if it would not be all right to permit a bank at a county seat to establish offices out in other towns in the county, to say the least.

I do not know how much further it should go than that.

Mr. Wingo. In other words I think the though that is back in your mind is that you would maintain more of an intimate connection and intimate knowledge of conditions to be met and the services to be rendered, by confining it closer to the parent bank?

Mr. Shull. Yes, sir; a more localized community.

Mr. WINGO. What is there in the present decisions of the courts that would prevent a bank in Oklahoma or in Delaware from establishing branches in States whose corporate laws authorize the domestic banks to establish branches?

Mr. Shull. I could not tell you.

Mr. Wingo. It is all governed by the decisions of the courts in reference to foreign corporations coming into the States and doing business, is it not?

Mr. Shull. Yes, sir, but there is a special statute on banking, you know. It does not come under the general corporation statute—the banking privilege of our State.

Mr. Wingo. Suppose they tie up, like the telephone and telegraph companies did. Take the Western Union: The Western Union is the one that tested what is known as the Wingo Corporation Act, of which I was author, when I was State Senator, governing corporations coming into the State and doing business. Suppose some Oklahoma banking corporation got control of some banks in my district, in Arkansas, and subsequently they wanted to make them branches and went into the court and showed they had established their business there and made the same plea that the telephone companies did—set up that they are engaged in interstate business: Have you any reason in your mind, as a lawyer, why the modern trend of the Supreme Court would not hold that the State laws could not discriminate against them by classification of business?

Mr. Shull. Well, of course, you have asked me quite a legal question and my thought is this, that the only right to establish banks in the several States is purely a statutory right and there is a special statute on banking in my State and in most of the States, I presume.

and that statute would govern the organization of a bank.

Mr. Wingo. It is true we used to have the idea that a State could determine whether or not a foreign corporation could come into the State and do business, but we have had to modify that to some extent, have we not?

Mr. Shull. I think so.

Mr. Wingo. Well, take the trade area. You have read the definition of the trade area that Mr. Pole gave. Under his definition and the rule he lays down, Oklahoma would be included in the trade area of Kansas City, would it not?

Mr. Shull. Oh, no; I would probably say more so in St. Louis. St. Louis does a great deal of business in Dallas and a great deal of

business in Wichita, Kans.

Mr. Wingo. Kansas City merchants-

Mr. Shull. The western parts of the State would deal with Kansas

City and the eastern parts of the State with St. Louis.

Mr. Wingo. In the eastern part of the State, Kansas City merchants have a big business in Oklahoma and as far south as Grannis on the Kansas City Southern—Grannis, in Arkansas, and as far down as DeQueen. They call that their trade territory. Their business is done there. I mention that to get your view on this, that if you undertake to say the trade area shall be the rule, necessarily that would be a fluctuatig rule, would it not; that the boundaries would have to be changed to meet the fluctuating trend or course of trade and commerce?

Mr. Shull. Yes, sir; and there would be a very great overlapping

of territory

Mr. Wingo. Could you conceive of a legislative rule to be laid down? Would it not be necessary to leave that to a bureau to define, and, in the last analysis, would it not practically mean nation-wide branch banking?

Mr. Shull. Yes, sir; I think the only way you could define it would

be just an arbitrarily defined area.

Mr. Wingo. I was interested in two of your suggestions, and I want to see if I understood you correctly. One was that you had studied your banks and that the failures that had been taking place

in recent years were not in the banks that had been recently organized—that is, the abnormal percentage of bank failures—and that this abnormal rate had been confined to those banks in existence prior to 1920?

Mr. Shull. Yes, sir. Mr. Wingo. And that the failure of those banks that were organized and in existence prior to 1920 was occasioned not by any new business so much as it was by the continued hangover of paper and credits that they had extended or acquired prior to 1920?

Mr. Shull. There is no doubt about that in my mind.

Mr. Wingo. I had been told that it was true in my State and I was interested in your suggestion that, as a matter of fact, banks failing in your State and in my district are not failing on account of any mismanagement or misjudgment of extension of credit in recent years, but because ever since 1920 they have been hoping against hope, renewing paper and getting interest whenever they could in driblets on the principal, but finally they had to face the fact that it was hopeless and that they could never, however long they might carry some people, get cleaned out and they might as well clean house and acknowledge they were broke?

Mr. Shull. I think you are right.

Mr. Wingo. You contention is that, and you draw from that, that the cause of the abnormal bank failures in the small country banks throughout the agricultural sections of the country is not the failure of your present banking system to meet changed economic conditions, but that it was attributable mainly to the reasons you give, namely, the hangover, first of the inflation and then the drastic deflation?

Mr. Shull. Yes, sir.

Mr. Wango. I notice you grouped your banks into about three different groups. I think I gathered from your analysis that instead of the smaller banks being the less profitable, as we have been led to believe, in your State they seem to be more profitable?

Mr. Shull. That is true; yes, sir; but I will find out for sure.

Mr. Wingo. In other words, you undertook to show how many had paid dividends. As I recall, there was a larger percentage of the smaller banks paying dividends than there was of the larger banks.

Mr. Shull. The largest percentage of banks paying dividends was

Group No. 2-\$25,000 to \$50,000 capital.

Mr. Wingo. In that group was there a smaller number than there

was in Group No. 1?

Mr. Shull. There is a slightly larger number paying dividends. In other words, 70 per cent to 60 per cent of banks less than \$25,000. Mr. Wingo. The point I was trying to get at is this: Measured by

total number of banks in groups, which was the greater, No. 1 or No. 2?

Mr. Shull. No. 1, but I would hate to put that into the record without having the paper before me.

Mr. Fenn. I think the reporter has it.

Mr. Wingo. The percentage you gave there was the percentage of the dividends on the whole system; you did not give the percentage measured by the capital of the banks that simply paid the dividends? You just took all the banks, did you not?

Mr. Shull. I took all the banks, for instance, in Group 1, and figured the earnings against the capital stock in all of the banks in that group, and it averaged so much. If I figured just against the capital of a few of them, of course the figure would be very much different. The dividends were figured against the capital of all the banks in the particular group.

Mr. Wingo. Measured by the future stability of your banking system in Oklahoma, this abnormal number of failures in the last few years is attributable to the major causes which you describedthe hangover of bad paper in 1920-and the fact you have finally cleaned house tends to give more stability in the future and promises

fewer bank failures in the future, does it not?

Mr. Shull. Yes, sir; but I will state this: We have not fully cleaned

house 100 per cent yet.

S

e

1

e

Ó

e

ė

r

d

e

Mr. Wingo. I realize that. You have still some that you think will have to face the inevitable. I will not say a lot, but several, as they have in all States, that are still trying to clean up. However, you have one abnormal condition that some of the members of this committee not acquainted with the conditions in our section, do not realize, that in four years in Arkansas and Oklahoma, you have faced a complete failure due to the failure of the cotton crop either quantity or price, and to floods and the depressed price of the cotton crop, and if you had had one good cotton crop in the last four years a large number of the banks that are failing would have cleaned up and gotten back on their feet?

Mr. Shull. I think so; yes, sir.

Mr. Wingo. And the floods and the evil effect, first, of the inflation and then of the deflation, are more responsible in your judgment for the numerous failures in your State than any deterioration or failure of the banking system to adjust itself to changed economic conditions?

Mr. Shull. Yes, sir.

Mr. Wingo. Now, you suggested, or named some chain banking systems in your State and I was struck by your failure to list some that I understood were chain banks and I will ask you to give your definition of the distinction between a chain and group system of banks. First, what do you call a chain bank? Let us get that first.

Mr. Shull. Well, a chain bank, as I understand it and think of it, is a bank where one or probably several people own the control

or exercise the control over a number of unit banks.

Mr. Wingo. Before you go to your definition of the group system of banks, will you state whether that is on the increase or decrease in Oklahoma?

Mr. Shull. Chain banking?

Mr. Wingo. Yes.

Mr. Shull. I do not think there is as much chain banking as there was 12 or 15 years ago in our State. I do not think there is.

Mr. Wingo. What do you define as a group bank? Mr. Shull. Well, a group bank is where a company owns stock in a number of different unit banking organizations.

Mr. Wingo. In other words, a holding company?

Mr. Shull. Yes, sir.

Mr. Wingo. That has different unit corporations?

Mr. Shull. Yes, sir.

Mr. Wingo. Is that on the increase or on the decrease in Oklahoma?

Mr. Shull. We have one company of that kind in Oklahoma that has come into existence right lately. Probably 10 or 12 years ago there were several groups of banks in our State, but during the last four or five years, group banking has almost entirely disappeared in the State up until the late group was organized.

Mr. Wingo. Speaking about your tax proposition—and I will not pursue the matter any further-I was interested in the decision of your Supreme Court, under which your banks were relieved from State taxation. That was a decision some time last fall, as I recall?

Mr. Shull. Yes, sir.

Mr. Wingo. It was furnished me by a gentleman who was interested in the exemption of national banks in my State from their new tax bill that passed the State Legislature. The real test should be. in your opinion, should it not, not so much the rate as the burden? It is possible for a bank or any other taxpayer to have the same rate applied to them yet, measured by the actual burden, the burden may be greater or less, may it not?

Mr. Shull. I think the rate should be the same and the assessment should be the same as against other property taxed on that basis. That has been the trouble. Banks heretofore have been overassessed,

compared with other property.

Mr. Wingo. To show you what I had in mind, I found, in examining some tables the other day, that the general counsel for the American Bankers' Association furnished us that whereas the national banks will not have to pay one species of taxation the State banks will in Arkansas, yet, measured by their earnings and possibly on one other basis, the percentage taken from their earnings by the State of Arkansas in taxes was greater on the national banks than on the State banks, whereas the popular impression is down there that national banks, by reason of developments, are bearing a smaller taxation than the State banks.

The point I have in my mind is that it is possible to have an apparent equality of treatment measured by rates, but when you come to measure the actual tax burden sometimes there would be a discrimination that would not be apparent upon the face of it; and in the last analysis, in Oklahoma and other States, is not this true, that the insufficiency and discrimination that takes place in the assessment is frequently a thing more to be condemned than any lack of uniformity or any discrimination that may exist in the law itself?

Mr. SHULL. Well-

Mr. Wingo. Take the other circumstance you cited, that you have been overassessing your banks measured by the way other properties have been assessed.

Mr. Shull. Yes, sir; but all banks in both systems have been assessed alike.

Mr. Wingo. I am taking banking as a business and not distinguishing between banks, either State or national, because in your State you have a law that is different from the law in my State. Whereas in your State the very moment the court decides that the tax levied against a national bank can not exceed a certain amountthat is, a very small tax applicable to money and intangibles-under your State, the moment the national banks defeat the collection of that tax under another statute, the State banks get the benefit of that; whereas in Arkansas when the new statute conflicts with section 5219, as far as national banks are concerned, the State banks

do not get the benefit, but the State banks have to bear the burden and have to pay that tax. There is a discrimination and a distinction in the two States?

Mr. Shull. Yes, sir.

Mr. Luce. Bearing upon the situation of the depositors in these matters, will you tell us what reason you find in your community for the prevalence of a higher rate of interest at large than we have in the east. We understand the prevailing rates for money in the West and South are higher than in the East, and we were given to understand that if we had the Federal reserve system it would tend to equalize the rates of interest all over the country.

Mr. Shull. Yes, sir. Mr. Luce. Why has it not been done?

Mr. Shull. Simply for the reason that there is more money in the East and more demand in the West in proportion to the amount of

money available than in the East.

Mr. Luce. We were told when the Federal reserve system was established, that it would facilitate the flow of money back and forth over the country and that its transfer by telegraph and by the devices the Federal reserve system has followed, would make it as easy to

borrow \$10,000 in Oklahoma as it is in Buffalo.

Mr. Shull. I do not think you could expect the Federal reserve system to bring about just that result. I think the Federal reserve system has assisted in lowering the rates in the West and making the money in the East more available in the West, but the actual money owned in the West is less, in proportion to the demand than it is in the East. Individuals loaning money individually can simply get more for their money there, and it affects banking to some extent. too.

Mr. Luce. The next question is: Do you share the apprehension that the creation of branch banking systems will result in bringing still more money into the East away from the West and, if so, how do you reconcile it with the higher earning power of money in the

West?

Mr. Shull. On account of the reason you have a greater risk there. especially for an organization in the East lending that money in the West. Unquestionably a local banker in a local community can lend money and be satisfied with it and do it more safely, whereas, when lending money away out of the territory, that can not be done. is one reason why the money is cheaper in the East. The people have the money and they would rather lend it in the East than in the West, I think if you take it individully, you would rather do it. You would take the loan closer at home to people you know personally and intimately rather than lend it in the West at even a greater rate of interest.

Mr. Luce. I find it hard to reconcile that with the recent era of stock speculation. Great quantities of money were pulled out of the West and out of the South into the New York market.

Mr. Shull. Of course that was not an average condition; it was

an abnormal condition.

Mr. Luce. What opportunity does the man with a little money in Oklahoma have to share in the larger profits that are made by banks that charge higher rates of interest? To put it concretely, in my own neighborhood, in Massachusetts, the depositors in savings accounts, get now from 4 to 5 per cent income on their money. How do you explain the fact we do not find that apparently in any of the smaller

communities of the West?

Mr. Shull. They do. That is the rate they get in our State-4 per cent. Our law provides that the banking commissioner shall fix the rate and that has been fixed at 4 per cent. The State bank is not supposed to pay more than that. However, some of them do do it where they have competition that makes them do it. But 4 per cent is the general rate over the State.

Mr. Luce. To depositors? Mr. Shull. Yes, sir.

Mr. Luce. Does your State give any particular protection to savings or time deposits by requiring their segregation?

Mr. Shull. No, sir; they do not.

Mr. Luce. We have thought, in the East, that there was a particularly sacred character, shall I say?-that is hardly the wordbut that it was more important to safeguard the savings of the people than the money that is used for commercial purposes?

Mr. Shull. I think there is good room for thought along that line. I think the losses to that class of depositors cause a great deal more

harm than the same losses in the commercial department.

Mr. Luce. Do you think that it would be probable or improbable that the development of either branch or chain banking would in-

crease the safety of such depositors?

Mr. Shull Well, as I brought out in my talk, I think this: I think eventually the banking business of this country will be done by a very few parent institutions and I think the size and the result of a failure would be so big that probably the Government would step into the picture and, on that theory, make it safer. It would be so big you could not allow it to fail. I think that is the biggest element of safety that there is in it.

Mr. Luce. It has been brought to my attention, outside of these hearings, that where branch banking is developing, there seems to be a tendency to cut out the little fellow as much as possible—I mean the small depositor. Do you think that is a probability, that when aggregations of banks become prevalent, they will make it harder for the

man with a little money to do business with them?

Mr. Shull. I think it will be a little more expensive for them to do it. I think they will always take their money, but as the large banks in the country are doing now, they will probably charge for taking their money. I think that will be enlarged upon. I think the greatest element involved is the borrower under our unit system, who is entitled to make loans. I think that privilege, to make small loans, will be taken from him.

Mr. Luce. Your statement leads up to something that I wanted There is growing dissatisfaction with the tendency of banks to slough off, so to speak, the small business; to refuse to carry accounts having small balances, or to impose something in the nature of a fee for the privilege of checking accounts for household purposes and other similar purposes of daily life. Is that noticeable in Oklahoma?

Mr. Shull. Yes, sir.

Mr. Luce. You think it is a good policy on the part of the banks?

Mr. Shull. Yes, sir; I think it is worth the money.

Mr. Luce. In other lines of quasi-public utility—for example, electric lighting, and the telephone as well as the purely public Postal Service—it has come to be recognized that it is just, wise, and profitable to maintain certain services at less than cost for the sake of the whole structure. Might that not also apply in banking?

Mr. Shull. Well, I do not know. I do not think the condition of affairs in our State justify it. Personally, I have been advocating the Putting on of a reasonable service charge, because the earning capacity

of banks in our State is not as large as I would like to see it.

Mr. Luce. But the little fellow is the fellow that becomes a big

fellow in course of time.

Mr. Shull. I had a man who came into my office recently to organize a bank and his thought was to run a bank without a service charge and I asked him what he would do if he was a merchant—would he sell his goods to a customer at a loss for a period of time on the theory that, after a while, the customer would buy from him on a profitable basis. I think that principle applies to banking. I think they are entitled to a legitimate profit on the service they render.

Mr. Luce. Are they not, in their nature, quasi public? The argument has been advanced from time to time, that the public interest is greatly concerned with the present tendencies in banking and that

they are not purely private institutions.

Mr. Shull. I have never been able to conceive how you could consider them anything else. They get their charters from the State, it is true, but their busines is really private.

Mr. Luce. But have you any official charged with the supervi-

sion, for instance, of grocery stores?

Mr. Shull. No, sir.

Mr. Luce. Does not your very existence, as an official, show that the State is taking the ground that banking is quasipublic in its

nature?

Mr. Shull. I did not mean to convey the idea that it was not somewhat quasipublic in its nature. I did not mean to go that strong, but I think it is really over-emphasized on the other side too and that it is not as much so as some people think. I think banking is entered into by stockholders rightfully from the standpoint of legitimate profit. I think legitimate profits is one of the greatest safeguards that a bank can have.

Mr. Luce. Did I correctly gather from something you said, that you are apprehensive that the development of branch and chain banking might result in more difficulty in the matter of getting credit

by the small merchant or the rancher or farmer?

Mr. Shull. Yes, sir; I think it will.

Mr. Luce. I do not quite follow your logic there. You have led me to understand that the interest rate will be higher, or is naturally higher in Oklahoma than it is, say, in Pennsylvania.

Mr. Shull. Yes, sir.

Mr. Luce. Why would not a branch-banking system send its

money where it could get the most profit on it?

Mr. Shull. There is an element of risk and the knowledge of the risk that they are assuming, that would enter into that. The loans they would make in the territory, I am sure, would be made at as low a rate of interest or probably lower, but there are a great many loans

in the territory that a unit bank can safely make and that a parent or branch bank would not make.

Mr. Luce. Gentlemen who have represented the present group systems have insisted that they would be just as liberal and anxious to do business in the small places as the unit banker has been.

Mr. Shull. Well, I am giving you my opinion and I have talked to some bankers in California that verified my statement. At least that is their opinion about what is going on out there. I know from the very nature of things that the small merchant or small farmer—lots of farmers in our State want to borrow \$100 or \$200 or \$300, and in making that loan the question of interest is not, by any means, the only charge that could be made against that loan. It takes a great deal of time to wait on that customer. It is not a profitable loan, even if the interest rate is large. If I was in a bank away off somewhere I would not approve of such business because I do not think I could do it safely. If I was in close touch with it and had personal knowledge of that class of customer that I was doing business with, it could be done safely.

Mr. Luce. That is all.

Mr. Fenn. I have only one or two questions to ask. Under your State law, there can be no branch banking—I mean branch banking in Oklahoma?

Mr. Shull. No, sir.

Mr. Fenn. The State law forbids it?

Mr. Shull. The State law does not forbid it. It is silent on the subject, but the attorney general of our State has ruled that it can not be done.

Mr. Fenn. Group banking has started in your State?

Mr. Shull. Yes, sir; one group of banks.

Mr. Fenn. Of course, by group banking, you refer to several banks held by a holding company?

Mr. Shull. Yes, sir.

Mr. Fenn. Do you think there should be a control of that holding company by authority?

Mr. Shull. Yes, sir; I think so.

Mr. Fenn. I think the mention was made here either by Mr. Wingo or by yourself, in regard to foreign corporations coming into a State. Now, we will presume that your holding company for one of your groups in Oklahoma, is chartered in Delaware or in Connecticut or in some State that gives favorable charters for associations of that character.

Mr. Shull. Yes, sir.

Mr. Fenn. How would your State be able to control that Delaware corporation—to use that expression as an illustration—control the operations of this out-of-your-State corporation, which controls, to a large extent, the banking facilities in your State?

Mr. Shull. I could not answer that. I do not know how they would do it. I said I thought they ought to have some control.

Mr. Fenn. If the branch banking association is made up entirely of national banks, that control might be taken by the Government, but it has occurred to me, under this system of group banking, the holding of a chain of banks by an out-of-the-State, ultra-State corporation, the State was losing control of that unit, and that some

system should be devised by which control could be given over the controlling corporation.

Mr. Shull. I think so, too.

3,

Mr. Fenn. What do you think of that? Mr. Shull. I think there should be.

Mr. Fenn. In regard to direct branch banking, you say—and we have always known it—that interest rates are higher in States like Oklahoma and in some other midwestern States and southwestern States, than it is in other States. How is it in California where branch banking has been developed to the highest degree—I mean the charges to the borrower?

Mr. Shull. I do not know.

Mr. Fenn. I do not know whether Mr. Giannini brought that out the other day or not.

Mr. Shull. Personally, I do not know.

Mr. Fenn. I am curious to know what the rates in California, just west of you—and that is a remote State from the east, as remote as anything can be in the United States to-day—are. I believe the rates in California are not very much higher, if any, with branch banking, than they are here.

Mr. Shull. I do not know.

Mr. Fenn. Do your people look with favor upon the proposition of this group banking in Oklahoma, as far as you are able to ascertain?

Mr. Shull. They do not.

Mr. Fenn. They are fearful that the present banking system would not be able to furnish as good facilities to your people under the group system as under the existing system—is that the idea?

Mr. Shull. Yes, sir; you will find that the people—and I am not referring to the bankers, but to the people themselves in these agri-

cultural towns—are not in favor of branch banking.

Mr. Fenn. I just want to say, in passing, in regard to Mr. Luce's statement about charging for carrying small accounts, I know of a bank—the fourth oldest bank in the United States—where, years ago, the president of an insurance company gave up his presidency of that company to organize a bank, which is now a part of this big bank of which I speak. Three or four banks were consolidated, and that bank this man had organized is one of the units of that consolidated bank. One day one of the tellers said, "We ought to get rid of a lot of these small accounts; some do not carry over \$12," and this very successful insurance president said to his teller, "Don't you let one of them go." He said, "Some day they may be the largest depositors in this bank." That happened; some of them turned out to be the largest depositors in that bank.

Mrs. Pratt. The first question I have is on a subject which was very strongly brought out here both by the Comptroller and by the Governor of the Federal Reserve Board, and that was that the purpose of branch banking was the mobilization of credit in a great many different centers, for the purpose of decentralizing it. Would you be in sympathy with that purpose? Their idea was that that could be

done more easily through a branch-banking system.

Mr. Shull. My idea is that it will not be done through the branch banking system.

Mrs. Pratt. But you think it would be a good thing to bring about? Mr. Shull. Yes.

Mrs. Pratt. How would you suggest it could be done without

branch banking?

Mr. Shull. I think it is done with the Federal reserve system, as far as you can do it. I think any country, in the nature of things, will have one financial capital, and I do not think you can eliminate it. I do not know that it is necessary.

Mrs. Pratt. You think the decentralization is done sufficiently

through the Federal reserve system as it now stands?

Mr. SHULL. I do.

Mrs. Pratt. Another point that has been brought out is the advantage of the branch banking system as a diversifier of credits. Would you think, in the situation about which you were talking with Mr. Wingo, where the failures were due to loans on cotton crops, that had your banks been members of a branch system they would have had greater diversity of credits and they would not have depended on loans on one type of security? Is it not a fact that if their loans had been diversified, they might have been able to pull through, but, having all of their loans in one type of security, when that was wiped out they had nothing to fall back upon?

Mr. Shull. I think possibly there would be somewhat more diversification. However, if you will attend a bankers' convention at any point of the country, you will find that diversification is the one thing

preached and practiced by the banks to-day.

Mrs. Pratt. You think the small unit bankers could do that?
Mr. Shull. Yes; they are doing that to-day—diversifying their investments by purchasing bonds to an extent that was unheard of 10 years ago.

Mrs. Pratt. That is a recent development?

Mr. Shull. Yes; for the country bankers. But you will hardly find a country banker now who has not substantial holdings in securities of various kinds.

Mrs. Pratt. I think that is all.

Mr. Strong. Without objection, we will take a recess until half past 2.

(Whereupon, at 12.30 o'clock p. m., a recess was taken until 2.30

o'clock p. m.)

AFTER RECESS

Upon the expiration of the recess, the hearing was resumed, Hon. Robert Luce presiding.

Mr. Luce. The committee will come to order.

Mr. Brand, I understand you want to ask some questions?

Mr. Brand. A few questions only.

How long have you been Banking Commissioner of the State of Oklahoma?

Mr. Shull. About two and a half years; since October, 1927.

Mr. Brand. Were you connected with a bank at the time you were appointed to that position?

Mr. Shull. No, sir; not at that time.

Mr. Brand. I am interested in an independent unit bank, and therefore I was very much interested in your statement and your attitude toward the different systems of banking, branch, chain, and group.

Did I understand you to say that, as an experienced banker, your preferred the unit banking system either to chain banking or branch banking?

Mr. Shull. Yes, sir, I do.

Mr. Brand. How much experience have you had tin the banking

Mr. Shull. I was in the banking business for about 15 years.

Mr. Brand. As an active banker? Mr. Shull. Yes, sir.

nd

Mr. Brand. What positions did you hold?

Mr. Shull. Cashier and president in one, and vice president in another.

Mr. Brand. And you were actively engaged in banking during those 15 years in the State of Okalahoma?

Mr. Shull. Yes, sir.

Mr. Brand. President of one, you say, and vice president of another, and then cashier?

Mr. Shull. Yes, sir.

Mr. Brand. During these years that you were engaged in the banking business, were you connected with unit banks exclusively? Mr. Shull. Yes, sir. At one time I did have some stock in other banks at close-by points, but not a controlling interest.

Mr. Brand. What were the figures you gave us this morning, as to the number of failures of banks in Oklahoma, from the beginning of the deflation period in 1920 down to 1929?

Mr. Shull. There were 174 State banks that failed during that time.

Mr. Dunbar. What time is that? Mr. Shull. From 1920 to 1929.

Mr. Brand. What character of banks were they? Were they State banks exclusively, or some national banks?

Mr. Shull. Well, those were the State banks that failed. I think there were only about 53 national banks that failed during that time, Mr. Brand. Do you recall how many banks you had in 1920?

Mr. Shull. Not for sure, but Oklahoma at that time had in the neighborhood of 600 State banks.

Mr. Brand. Beside the national banks?

Mr. Shull. Yes, sir.

Mr. Brand. Do you recall about how many you have now? Mr. Shull. They have about 325 State banks now.

Mr. Brand. And you had 600 State banks in 1920?

Mr. Shull. Yes.

Mr. Brand. Do you recall how many national banks you had in

Mr. Shull. No, I do not know, but quite a number; more than they have now.

Mr. Brand. The figures you gave were very significant to me, in regard to the amount each depositor lost in these failed banks. I felt that they had made a very good showing. What per cent was it that you gave us?

Mr. Shull. There were 5,640 failures which occurred during the 9-year period, and the average deposits were \$234. I am taking the comptroller's figures to arrive as to the number of depositors involved

in the failed banks.

Mr. Brand. What per cent did you say that was?

Mr. Shull. The recovery in national banks was 80 per cent, just a fraction under that, and I am using that figure all the way through. That made the net average loss \$46.80. Mr. Brand. The net loss?

Mr. Shull. Yes, sir.

Mr. Brand. To each depositor?
Mr. Shull. To each depositor—the average loss to each depositor, you understand. Of course, some lost more and some less, but that is the average loss.

Mr. Brand. You spoke once or twice about the deflation period. I take it, then, that you recognize that the inflation period was succeeded by a deflation period.

Mr. Shull. It certainly was.

Mr. Brand. How long did it last in your State?

Mr. Shull. The deflation period is still there, really. Land values in our State have never anything like recovered to the normal values before the war.

Mr. Brand. You stated, as I recall, that these failures were largely due to the war period and the deflation period.

M

Mr. Shull. Yes, sir.

Mr. Brand. Which one of these periods caused the greater number

of failures of banks?

Mr. Shull. Well, I would say that both periods were the cause of it. During the period of inflation, the banks were doing business on the basis of values at that time, and then, of course, the period of deflation, which came about, as I remember it, about the middle of 1920, found us with values that were very materially decreased.

Mr. Brand. I asked that question because we had bank failures in

Georgia, but none failed during the inflation period.

Mr. Shull. They did not fail during the inflation period, but they were laying the foundation for failure during that period.

Mr. Brand. They were becoming shaky during the period in

your State?

Mr. Shull. They were not exactly shaky during that period, but the loans that they were making during that period were being made on a basis that ultimately did result in the losses.

Mr. Brand. All of our failures, as I said, occurred during what we

call the deflation period, after the war.

Mr. Shull. Ours did, too.

Mr. Brand. Did any of the banks with which you were connected fail during that deflation period?

Mr. Shull. Yes, sir.

Mr. Brand. I believe you stated your connection was only with State banks.

Mr. Shull. My official connection now?

Mr. Brand. No; but at that time; during the 15 years that you were connected with the banking business.

Mr. Shull. Only about a year was I with a State bank. I was

with a national bank at that time.

Mr. Brand. During that 15 years experience in the banking business, how many of those institutions that you were connected with, if any, became insolvent?

Mr. Shull. I think they have all since failed. Practically every bank in our county failed, except one.

Mr. Brand. In the county in which you live, you mean? Mr. Shull. Yes, sir.

Mr. Brand. Do you mean during that period, or since then? Mr. Shull. Since the deflation period; 1924, 1925, and 1926.

Mr. Brand. Including and since the deflation period?
Mr. Shull. Yes, sir.
Mr. Brand. How many banks have you in your county?

Mr. Shull. We have three.

Mr. Brand. We have a few counties in Georgia where all the banks have failed and where they have no bank now. That is true, understand, in some sections of Alabama and in some sections of South Carolina.

When a bank fails in your State, Mr. Shull, a State bank, for instance, does the State superintendent of banking take charge of

the bank?

h.

at

is

A

Mr. Shull. Yes, sir; the bank commissioner, under the statute, is made the liquidating agent of the bank.

Mr. Brand. Just the same as a receiver for national banks?

Mr. Shull. Yes, sir. Then he appoints some man to act for him in liquidating the bank. We call him a liquidating agent.

Mr. Brand. Who was the commissioner of banking at the time of the failure of the banks in your county? Who was in office, then? Mr. Shull. You understand, I was in the national banking business at that time, but I think a man by the name of Walcott was

State commissioner at that time.

Mr. Brand. Was he a banker? Mr. Shull. I do not know anything about him. I do not know enough about him that I would like to answer that.

Mr. Brand. Have you lived in that county all your life? Mr. Shull. Since 1902.

Mr. Brand. Where were you born?

Mr. Shull. In Missouri.

Mr. Brand. I thought you made a good showing this morning in regard to the small amount of losses sustained by the individual

Mr. Shull. I just took the figures themselves and analyzed them. Mr. Brand. And I am not questioning them, but in our State the

losses were much heavier.

What do your agricultural people grow in your county?

Mr. Shull. Cotton is the principal commodity, and wheat. of our State, in the northwestern and western sections, is quite a Wheat section.

Mr. Brand. Did you make loans to farmers on lands?

Mr. Shull. No. I would not say it was never done. It was done in some instances, but it was not a practice to do it. Most of the land loans you find in failed banks were not originally made as such, but they were taken as additional security on a line that had become enlarged, you know.

Mr. Brand. If you did not loan on land, then, you would not loan

to farmers on crop mortgages as the only security, would you?

100136-30-vol 2 pt 12-

Mr. Shull. We do not have as much share-cropping in our State as they have in your State. We have more of tenant farming. do loan a good deal of money on tenant-farms and take mortgages on the cattle, horses, or mules to secure the loan, but very seldom would the loan itself be secured just by the crop.

Mr. Brand. As I understood you to say this morning, the banks that did fail usually were in a better condition at the time they failed

than they were prior thereto? Mr. SHULL. That is right.

Mr. Brand. I do not exactly understand that. Mr. Shull. They had generally improved; in other words, they had been able to collect a lot of paper that looked a few years ago as if it would be a loss, but by keeping the bank open they were able to realize on a good deal of that paper.

Mr. Brand. Could you not get assistance that would help to put

them in a better condition?

Mr. Shull. They could be in a better condition and still be in &

bad condition as a matter of fact.

Mr. Brand. I will tell you why I asked that. We had in Athens, Ga., my home town, a national bank called the Georgia National Bank. I was a director in it, and we were in a better condition than we had been at any time during the preceding five years, gradually discharging the obligations of the bank to the satisfaction of the Federal reserve bank, to whom we owed a good deal of money, with collateral notes as security. Governor Wellborn, of the Atlanta Federal Reserve Bank, wanted to afford us more assistance and let the bank go on, but some member of the Federal Reserve Board here in Washington would not let him do it-so it was reported to me: 1 do not know whether that is true or not. But, in any event, the Federal reserve bank refused to loan the Georgia National Bank any more money, when the bank was compelled to close its doors, at which time the bank was in better condition than it had been in five years.

I was wondering if the same situation existed with you at the time

your banks failed, and other banks in the same class as yours. Mr. Shull. Well, as a matter of fact, the bank I was with failed

c ti

ne

ce

ex

ou the

Mr. Brand. 1925? Mr. SHULL. 1925.

Mr. Brand. That is the same year ours failed.

Mr. Shull. In our particular bank, the directors just closed up, because of a deal that had been made in taking over another institution. Mr. Brand. You were not refused help by the Federal Reserve Bank?

Mr. Shull. We were refused help, all right; but that was not the only thing that did it.

Mr. Brand. I think the refusal of the Atlanta Federal Bank to help our bank is the chief reason why the Georgia National failed.

Now, I want to ask you this question: As I understand it, you said that if you established a branch bank in a given community or town where an independent unit bank, was then located, one or the other would have to fail, and it was your judgment, as I understood you to say, that the unit bank would likely go under?

Mr. Shull. No, you misunderstood me.

Mr. Brand. Then clarify that.

Mr. Shull. What I said was this, that we have banks which were chartered, we will say, prior to 1920 which have many losses in them and that are still operating and which, under favorable circumstances, will pull through, but there is not room enough in the towns where some of those banks are located for two unit banks, and I am very much afraid that if we had branch banking there would be a possibility of some larger institution—and you know there is no getting away from the fact that larger institutions do have some power in the way of getting done what they want to get done-putting a branch in that Particular town, which would make it a good deal harder for this unit bank to work itself out of its present condition than it would be if it did not have that competition.

Mr. Brand. And it would be the unit bank that would go down? Mr. Shull. Yes, but I am assuming that it is a unit bank that is how in first-class condition. We have some banks yet that are not

in 100 per cent perfect condition.

Mr. Brand. You are opposed, as I understand your statement, to the plan of branch banking as outlined by Mr. Pole, the Comptroller of the Currency?

Mr. Shull. Yes, sir.
Mr. Brand. Do you mind briefly giving your reasons for this conviction of yours? I not only want to know on account of being a member of this committee, but I want to also know as a citizen interested in the banking situation in Georgia.

Mr. Shull. In the first place, I think it is rather unworkable to define and determine what is a trade area. I think you will have to fix the areas in a more or less arbitrary fashion, or do a great deal of

overlapping.

In the second place, I do not think there has been the demonstration of any need for branch banking in this country. The unit banks are handling the banking business of this country on a satisfactory basis. We financed the Great War, and we are financing to a very large degree the world itself to-day, and the unit banks are doing it, and the failures which have occurred have been, in a very large percentage, 95 per cent at least, caused by the deflation which followed the war, and branch banking is not going to correct the failures that come from that source.

Mr. Brand. Are you of the opinion that if these branch banking systems continue to pursue their present policy, and the group banking systems continue their present policy of taking over in one way or another different banks into their respective systems, it will in the end become nationwide and that it will create a monopoly of the

capital and credit?

Mr. Shull. I think it will very largely tend to monopoly. I do not know that it will be an absolute monopoly of it, but it will certainly be in fewer hands than it is to-day.

Mr. Brand. It will, in your opinion, either create to a certain

extent a monopoly of money and credit or tend to do so?

Mr. Shull. Yes, sir.

Mr. Brand. That is your firm judgment about it?

Mr. Shull. Yes, sir.

Mr. Brand. I believe you are the only witness that has been before Our committee who would admit unconditionally that that would be the result; and that is the way I feel about it myself.

What is the average salary you paid for your clerical force in your unit banks?

Mr. Shull. You mean, among the banks themselves?

Mr. Brand. Yes, sir; the clerical force in the country unit banks. Mr. Shull. Well, of course, they vary in size, but I would say the average salary for a cashier in a bank of \$25,000 capital in our State would be about \$200 a month.

Mr. Brand. What would be the average salary of the bookkeepers, stenographers, and so forth?

Mr. Shull. From \$100 to \$150.

Mr. Brand. You are paying them pretty good salaries for \$25,000

Mr. Shull. I do not think that is a very high salary for them. Mr. Brand. Are the agricultural classes in your country now prosperous?

Mr. Shull. No; not very prosperous.

Mr. Brand. Are they in debt?

Mr. Shull. Yes, sir. Mr. Brand. In what size town in your State, as a rule, is a bank of not over \$25,000 capital located?

Mr. Shull. The law provides that a town with 6,000 people shall

i

fi

di

6

tha

inv

have a bank of \$25,000 capital, as I remember it now.

Mr. Brand. What rate of interest do you charge your tenant farmers, as you call them, where you lend money to them in order to make crops?

Mr. Shull. Pretty universally 10 per cent.

Mr. Brand. What is the legal rate in your State?

Mr. Shull. Contract rate, 10 per cent. Legal rate, 6 per cent. Mr. Brand. As I understand you, you prefer independent unit banking to chain banking, branch banking, and group banking?

Mr. Shull. Yes, sir.

Mr. Brand. Mr. Chairman, I do not believe I care to ask any more questions.

Mr. Goodwin (presiding). Mr. Dunbar is next.

Mr. Dunbar. Mr Shull, you said, if I understood you correctly, that if branch banking becomes nation-wide and they operate under national charter, that in time three large banks will control all the branch banks in the United States.

Mr. Shull. No; I did not make that statement. Mr. Dunbar. What statement did you make?

Mr. Shull. I made the statement that in Canada three large banks

control a very large percentage of the business there.

Mr. DUNBAR. Then I understood you to say, after you had made that statement, that three large banks in the United States with many branches would drive the Federal reserve system out of existence.

Mr. Shull. I did not make that statement exactly as you have it.

Mr. Dunbar. Please state it as you said it.

Mr. Shull. I did state that in my opinion, in the course of years, you would have only a few large banking concerns in the United States. Just what number, of course, would be hard to guess, but I say very few, comparatively, and that when you do have just those few banking concerns I was very doubtful if this country would have \$ Federal reserve system any more than England and Canada and other countries have, which have reached that degree of concentration.

Mr. Dunbar. That is what impressed me this morning, your statement to that effect. Suppose that our Federal reserve system were forced out of existence by a few large banking institutions that controlled all of our national banks, how would we get our circulating medium?

Mr. Shull, Well, of course, we had a circulating medium prior.

Mr. Shull. Well, of course, we had a circulating medium prior

to the inauguration of the Federal reserve system.

Mr. Dunbar. That consisted of national bank and Federal notes only to the extent of \$500,000,000 in circulation, so that it would make our circulating medium possibly only one-third of what it is now.

Has it cocurred to the gentlemen what would be the alternative if such a thing occurred? I know that you are opposed to branch banking, but is it one of the evils that you would predict would come about as a result of a nationally authorized branch banking system?

Mr. Shull. Yes, sir.

Mr. Dunbar. Have you any idea as to how the circulating medium

would then become restored to its necessary amount?

Mr. Shull. No; I do not feel competent to make suggestions along hat line.

Mr. Dunbar. Yet you do realize it would be necessary to do something?

Mr. Shull. Yes, sir.

Mr. Dunbar. Now, when Mr. Strong asked you what the effect in a community was when a bank failed, your reply was that all of the property, all of the money, remained there, and that the effect from a money standpoint did not in any way add to the disaster because of the failure.

Mr. Shull. No; I did not make it that strong. Mr. Dunbar. How strong did you make it?

Mr. Shull. I said that I did not think that failure would be as disastrous to the community as if that community had a branch bank there that failed.

Mr. Dunbar. But it would be practically impossible for a branch

bank to fail, would it not? Is not that your idea?

Mr. Shull. No; that was not my idea. Mr. Dunbar. What was your idea?

Mr. Shull. I tried to bring out this idea: We are going to suppose that everyone of the banks there failed, whether unit or branch banks. My idea is that the community situated maybe 200 miles or 500 miles from the parent organization will be hurt worse by the failure of a bank operating under the branch banking system than it would be with the unit bank, because with the unit bank a larger percentage of its loans is loaned locally and that money would still be in the community.

Mr. Dunbar. I have been led to believe that it is almost impossible

for a branch bank to fail.

Mr. Shull. Well, I do not think that is true, because we had failures in Canada.

Mr. Dunbar. I mean in the United States.

Mr. Shull. I think upon investigation that you will probably find that a branch bank failed in California. I would suggest that you investigate that.

Mr. Dunbar. Was that connected with a parent bank which itself was solvent?

Mr. Shull. Well, that condition could not exist under branch

Mr. Dunbar. What condition?

Mr. Shull. A parent bank would have to fail if any branch of it failed.

Mr. Dunbar. That is what I thought.

Mr. Shull. My information is—and I am suggesting this for your investigation, because I may be mistaken—that there was a bank in California that was a branch bank that did fail. I would suggest

that you investigate that.

Mr. Dunbar. I have no doubt that, with a small bank having a small number of branches, such a thing would be possible, but their safety, as I understand it, is based on the fact that they have such an immense amount of capital and surplus that they are able to finance any emergency arising in any of the branch banks under their jurisdiction, and then this morning you added another reason why they might be made secure, which was that when only a few branch banking systems operated our banks in the United States, in event of their failure our Government would have to come to their assistance in order to save chaos.

Mr. Shull. I think that is the biggest element of safety in branch

banking.

Mr. Dunbar. The prospective help of the Federal Government in the event of a threatened failure?

Mr. Shull. Yes, sir; I think that is right.

Mr. Dunbar. Now, a few questions along the line asked you by Judge Brand and Mr. Wingo, respecting the number of failures of banks since 1920. You stated, as I remember it, that of the banks organized in Oklahoma since 1920, but eight of them failed?

Mr. Shull. I think that is right. It is either five or eight.

Mr. Dunbar. That is near enough; whereas about 150 failed altogether.

Mr. Shull. Yes, sir.

Mr. DUNBAR. And Mr. Wingo brought out the point that the failure of these 150 banks was due to obligations that they had assumed during the inflation period, and the deflation period caused them to have to suspend payments.

Mr. Shull. Yes, sir.

Mr. Dunbar. And that the banks which had been organized since then had been organized under new fundamental conditions then existing and that they had been able to go along and take care of their customers and operate successfully.

Mr. Shull. Yes, sir; that is the history of our State. Mr. Dunbar. Now, I remember, in corroboration of what Mr. Wingo said this morning, that when I was on the Committee on Banking and Currency some years ago, we had private, confidential information that in one of our prosperous Western States—of coure, ! will not name it-if all the banks there had to liquidate in two years' time, 95 per cent of them would not succeed in doing so.

That is in accord with your theory that the banks that have been failing since have been among that 95 per cent and that it was the actual result of the inflation before 1920, and that that could not be used as an argument against the continuance of unit banking?

Mr. Shull. Yes, sir.

Mr. Dunbar. So, your judgment is that if these unit banks were going into business now and were not overburdened, as they would not be, with past obligations, there is no reason why they should not prosper and succeed—is that your idea?

Mr. Shull. Yes, sir.

Mr. Dunbar. And that a unit bank would be better able to serve the public than a branch bank?

Mr. Shull. Yes, sir.

I think one other point is worthy of consideration I understand that in the State of Iowa which is probably the most typical agricultural State in the Union, more banks failed with a capital stock of over \$50,000 than under \$50,000. In other words, more large banks failed in that State than small banks.

Mr. Dunbar. Now, your contention is, as I understand it, that branch banking will not stop the failures of smaller banks in these

various communities?

Mr. Shull. I think they certainly will not

Mr. Dunbar. On the other hand, you think that branch banking would have a tendency to hasten the failure of these small banks, because of the competition?

Mr. Shull. Yes, sir.

Mr. Dunbar. How much interest do you pay on deposits?

Mr. Shull. Four per cent is the present rate.

Mr. Dunbar. How much do you lend your money for?

Mr. Shull. It is from 6 to 10 per cent.

Mr. Dunbar. The 10 per cent loans being the risky loans, if I understood you correctly?

Mr. Shull. There is more risk involved in them.

Mr. Dunbar. How do banks in some communities pay 4 per cent interest on savings and lend that out at 6 per cent?

Mr. Shull. That occurs in the larger banking points. A small

bank with a small volume of business could not loan out money at 6 Per cent and at the same time pay 4 per cent on deposits.

Mr. Dunbar. You brought out this morning a thought on a subject that I spoke to you previously about, and that is that if we were to have Federally authorized branch banks, they would drive out the Federal reserve system, and, if they drove out the Federal reserve system, there would have to be some solution of the problem arising in connection with our currency. You are firmly of the conviction that unit banks organized now and properly managed can be a success in the communities in which they exist, are you?

Mr. Shull. Yes, sir.

Mr. Dunbar. What size community would you think would be the

smallest in which that situation could come about?

Mr. Shull. We have some banks that are as good banks as we have in the State in very small communities, of 300 or 400 population, and some of the safest banks and the best earning banks that we have are in those small communities.

Mr. Dunbar. And they draw their business for miles around?

Mr. Shull. Yes, sir.

Mr. DUNBAR. Have you much branch banking in Oklahoma?

Mr. Shull. We have none.

Mr. Dunbar. The law of your State does not permit it?

Mr. Shull. No; the attorney general has ruled that it does not, but the statute is silent on that question.

Mr. DUNBAR. That is all.

Mr. Goodwin. If branch banking becomes legalized on a nation-wide basis, or within certain defined trade areas, what effect would the branch banks have upon the independent unit banks that are now existing?

In other words, do you believe that an independent bank and a branch belonging to a large system can exist side by side, or must one

inevitably go under?

Mr. Shull. Well, I am looking up the histories of the countries that have had branch banking for quite a while, and the result in those countries is that there is just one system of banking now, branch banking.

In California there are some good unit banks in operation to-day

that are competing successfully with branch banks.

Mr. Goodwin. But the branch banking system in California has been of comparatively short duration?

Mr. Shull. Yes, sir.

Mr. Goodwin. This group has been increasing tremendously within the last few years?

Si Sf osb

'n

fo

in

W

H

CE

th

lo

h

Mr. Shull. Yes, sir.

Mr. Goodwin. Well, I want to get your own opinion as to whether an independent unit bank can exist for any length of time with the increased competition that a branch bank would give to the unit bank?

Mr. Shull. I did not catch the question.

Mr. Goodwin. What I am anxious to know is if, in your opinion, an independent unit bank—even a strong one—can exist against the competition of a strong branch bank with a vigorous management and powerful influence that it carries with it?

Mr. Shull. Well, there might be exceptions in the cases where

they could, but I would say generally they could not.

Mr. Goodwin. We have been told in this committee repeatedly that there is nothing quite so fluid as money; that wherever there is a demand for money, money will be available. Do you have any apprehension that if there is established legally a branch banking system, nation-wide, or within a trade area, there will be any restriction of credit in different localities?

Mr. Shull. I think there will be. You will have to interpret what that demand is. There would not be a restriction of credit even in any section of the United States, to certain classes of enterprises, but there would be to others. I think unquestionably these large banks would not make loans to the small farmer and certain classes of people—small merchants—because they would simply prefer a larger line of business and a large line of business which they could take a little more time and get more information about.

Mr. Goodwin. In other words, the little fellow who may want to borrow a small amount for the development of his business would not have the same opportunity to obtain credit from a large branch banking system that he would from an independent unit bank where he

was known by the officers of the bank and trusted and relied upon for his integrity?

Mr. Shull. I do not think so.

Mr. Goodwin. Have you given any thought to the taxation of branches of a branch bank in the different communities where

branches would be located?

not,

to ot

k-

he

Mr. Shull. Well, I do not know whether there would be any way to correct it or not. Under the present law of taxation all the taxes would be paid where the charter was taken out by the parent bank. There might be a way to get around that, but I do not know what it is. That would have to be changed to provide to smaller communities where the branches are the benefit of that taxation.

Mr. Goodwin. On the basis of money used by that particular

bank in the community? Mr. Shull. Yes, sir.

Mr. Goodwin. In your State, Mr. Shull, where have the bank failures been most pronounced—in the agricultural sections or industrial sections or in the oil fields?

Mr. Shull. Of course, the entire State of Oklahoma is more or less an agricultural State, even in the oil districts. The number of failures in our States have been pretty well distributed. The southeastern section of the State, which is strictly the cotton section, had their failures first. The northeastern section, which is the oil section, is getting their failures now. However, there was more financial strength in that section and they have been able to carry on longer, but in the last year and a half the most failures have been there.

Mr. Goodwin. As I understood you, you charged the deflation that followed the war as being the cause of many of these failures?

Mr. Shull. Yes, sir.

Mr. Goodwin. Do you have in mind anything in reference to the War Finance Corporation activities and the policy it pursued in calling loans it had made to banks to carry agriculture?

Mr. Shull. Yes, sir.

Mr. Goodwin. What do you think of that policy they pursued at that time? Was it either necessary or justified?

Mr. Shull. I had wondered what the losses were to the Government under that policy. Of course I had no way of finding out. Mr. Goodwin. I understand the Government lost nothing, but

had a substantial profit.

Mr. Shull. They may have; I do not know.

Mr. Goodwin. But losses were sustained by agriculture, mostly, 1 understand?

Mr. Shull. I know some good that was done by that system.

Mr. Goodwin. If that money had been made available continuing for some length of time, so as to permit the farmers to recover entirely, in your opinion, would many of these bank failures have followed or

would many of them have been saved?

Mr. Shull. Those failures might have been lessened somewhat. However, in speaking of bank failures, the men in a supervisory capacity like to speak of frozen loans. As a matter of fact, most of those loans were just losses. We just had losses that happened, and the bank failure in a community itself is not the bad thing. These losses that they had that caused that bank failure are the things that hurt so much. It is the losses.

Mr. Goodwin. Those are all the qusetions I have to ask. Is there any other member of the committee who wishes to ask Mr.

Shull any further questions?

Mr. Wingo. I think I will take the liberty of thanking Mr. Shull on behalf of the committee for coming here. I understand, Mr. Shull you are one of the outstanding banking commissioners in the country and we appreciate very much your coming here and giving us your views.

Mr. Goodwin. The committee thanks you very much.

(Whereupon, at 3.25 o'clock, p. m., the committee adjourned to meet at 10.30 o'clock, Wednesday, May 14, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, MAY 14, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY. Washington, D. C.

The committee met in the committee room, Capitol, at 10.45 o'clock

a. m., Hon. Robert Luce presiding.

Mr. hull hull itry

our

to

Mr. Luce. The committee will come to order. Mr. Reichert, will You please give your name, address, and official position to the reporter.

STATEMENT OF RUDOLPH E. REICHERT, COMMISSIONER OF BANKING, STATE OF MICHIGAN, LANSING, MICH.

Mr. Reichert. My name is R. E. Reichert, State banking com-

missioner of Michigan, Lansing, Mich.

Mr. Luce. Mr. Reichert, you understand we are here to learn what We can about branch, chain, and group banking. We shall be glad to have you tell us what you know about it and what you think about it.

Mr. Reichert. Would you like to have me make a statement?

Mr. Luce. If you will, please.
Mr. Reichert. Mr. Chairman and members of the Banking and Currency Committee of the House of Representatives, I greatly appreciate the courtesy of being invited to appear before your committee and take part in this very interesting discussion, which is of such vital importance to the banking world. You are seeking a solution of a very perplexing problem, and both the bankers and the Public should appreciate the time and labor that you are giving in Your efforts toward finding its solution. I shall be very happy if I can assist you and possibly contribute something to your study of this question as a result of my observations and experiences in connection with the duties as commissioner of banking for Michigan. I must of necessity confine my statements principally to the operations of banks in Michigan.

A report from the Comptroller of the Currency, advising your committee that under the present State and national banking systems there have been 5,641 bank suspensions in the last nine years should, of course, call for an investigation and study of our present systems. It should, however, be definitely kept in mind that the comptroller referred to suspensions when giving these statistics and not failures.

I have read all the testimony available to me, and with particular interest that of the Comptroller of the Currency and the governor of the Federal Reserve Board. I shall endeavor to make my statement as brief as possible, and in it will attempt to anticipate as many of the questions as I think you might ask, judging from your previous hearings. I shall also refrain in the main from using statistics that have already been furnished to you, except in so far as they pertain to my own State.

Michigan has had three banking laws during its existence. In 1837 the first act was passed. The banks chartered under this act immediately went into land speculations and the issuing of what was known as wildcat currency. It was the dismal failure of these corporate banks that brought about private banking, and with the exception of those corporate banks which went into liquidation, they were succeeded by private institutions. Private banks still exist in Michigan.

In 1857 the second act was passed and was amended in 1871. This did not prove successful and wildcat banking continued, and along with it bank failures. This condition brought about a demand for a complete revision of our banking laws, placing definite powers in the commissioner of banking, including discretionary power for the granting of charters. It is the latter provision, so wisely administered by previous commissioners, that has contributed more to the success of our banking system than any one other thing. In 1887 the present act was passed, and in 1889 the department of banking was organized. This act was recodified in 1929 by the department with the assistance of a committee from the Michigan Bankers Association, and this act was passed by the legislature in that year.

e

u:

02

h

in

in

ch

th

In our State at the present time there are 581 State banks, 8 industrial banks, 23 trust companies operating under State law. These institutions have total deposits of \$1,419,488,000. The number of national banks operating in the State is 130, and their deposits are \$536,147,000. According to the latest statistics available to me, the average ratio of banks to population in the United States is one bank to every 4,554 people. Michigan has one bank to 5,371 of population. In some States this runs as high as one bank to 1,150 of population. The principal difficulties have arisen in States where the ratio of banks to population is high.

As far as the operation of our banks under our act since 1889 is concerned, we do not feel that we have had an unusual number of bank failures. Since 1889 we have actually had 24 chartered State bank failures. The amount of money involved in these receiverships amounted to \$13,141,355.24. The amount that has been paid to creditors up to date is \$5,110,505.81. We have at present four active receiverships, the amount involved in these being \$1,187,815.34. the last nine years, which is the time covered by the comptroller's report, we have had six chartered State bank failures. The amount involved in these six banks is \$2,964,702.45. Four of these are still active receiverships. Up to date there has been returned to creditors \$703,853.53. This covers the period of the last nine years. Comparing this amount with the total assets of our chartered State banks and trust companies on March 27, 1930, which amounted to \$1,780,698,856.96, you will find that the losses to creditors approximate \$6,000,000 in these banks for a period of over 40 years, and after the present receiverships are closed, a loss of approximately

\$1,500,000 to \$1,700,000 in the receiverships for the last nine years; this in banks with assets aggregating \$1,780,698,856.96. The percentage of loss on this basis would be approximately one-tenth of

I per cent.

tely

The question which naturally comes to your minds after comparing this statement with that made by the comptroller, reporting 66 banks suspensions in Michigan for the last nine years, is concerning the nature of the other 60 suspensions. As previously stated, six banks of the 66 were State banks that are now or have been in receivership. One of these is listed twice in his report because it suspended business in 1924, was reopened, and finally closed in 1925. Four were State banks that were temporarily closed and reopened after regoranization took place under a new management. Three were State banks that were closed while sales were being effected with other institutions so that in these instances the deposit liability was cared for. Two Were national banks, and the balance of 50 in number were private banks which now must, under act 284, P. A. 1925, go into liquidation or organize under the State or national banking law should the Individual or partners die. Under this act, private banks can no longer be established, nor can the private banks in existence at the present time be sold. In the last three years we have taken over 11 private banks. During this period, 33 banks have given up their charters by virtue of consolidations. In some instances these latter banks did not have sufficient earning power.

The matter of earnings is one item in the reports which we watch very closely. We consider earning power one of the most important factors in a bank. In order to have earning power, the bank must have a clientele and management. The best managed bank in the world without customers can not be successful. In connection with the subject of earnings, I might state that we have prepared with the cooperation of the Federal Reserve Bank of Chicago, a chart showing the distribution of gross earnings of Michigan banks according to their

relative sizes.

I have those charts with me and if you should like to see them, I shall be glad to present them to you. They are charts that the examiners use to fit the banks into the group to which they belong, using these charts to acquaint the board of directors with the average experience of institutions of like size.

Mr. Hooper. Did you intend to place one of them in the record?
Mr. Reichert. If you so desire; yes. I though possibly you might have had those charts furnished you by the Federal reserve bank.

Mr. HOOPER. Do you not think it is proper to have those charts inserted in the record at this place?

Mr. Luce. Yes. It is not a diagram chart, is it?

Mr. HOOPER. We might look at them first, before inserting them.
Mr. Luce. I do not feel that I want to take the responsibility of inserting this type of chart into the printed record.

Mr. HOOPER. Perhaps it would be better for us to examine the

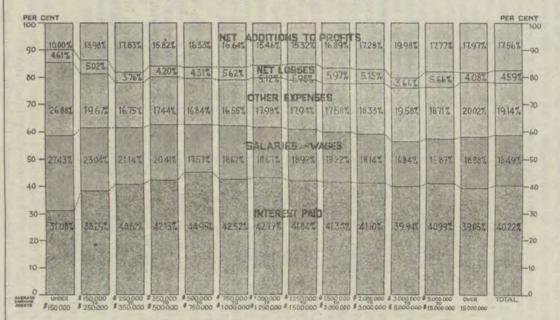

charts first.

Mr. Luce. However, after consultation with the clerk, I find that the chart can be inserted.

(The charts referred to are reproduced on following pages.)

DISTRIBUTION OF GROSS EARNINGS OF 673 MICHIGAN BANKS IN 1928

INCLUDING STATE BANKS + TRUST COMPANIES, AND NATIONAL BANKS IN PORTION OF STATE WITHIN SEVENTH FEDERAL RESERVE DISTRICT.

Mr. Reichert. In this manner we felt that we could assist our banks in determining whether or not they conformed with the average in their group. There are many things which enhance or impair earning power. The forcing of the discontinuation of exchange charges by banks and the resultant free use of checks has contributed quite largely to the expense of handling commercial business. Banks are making analyses of costs covering these floats which are very enlightening, and as a result are installing systems to take care of these costs. These systems, however, are quite complicated and would not only be costly but difficult to operate in country banks. There is some argument for the old system of exchange charges and passing it back to the customer. As I go on in my work, I find that these old bankers have thought of a lot of things that we apparently again have to learn from experience.

Whenever some one had authority to restrict the organization of banks to cases of necessity and had the courage to carry it out, the result has not been so unsatisfactory. There is, of course, one factor of which we must not be unmindful, and that is that we have come through an economic readjustment after the World War, which has, of course, along with everything else, upset our financial system. During the war we played an important part in world banking, and we did become the principal producer of food. We virtually had the whole world for our customer. Following the cessation of hostilities, foreign countries again looked to their former sources of supply, which, of course, greatly interfered with our production program; and in view of this it is not at all surprising that we have had some very definite disturbances in attempting to readjust our selves to existing conditions.

On January 21, 1927, at the time of my appointment, there were 581 State banks. Eleven charters have been issued to acquire private banks, and 30 consolidations have been effected. On March 27, 1930, we had 581 State banks, so it must be quite evident to you that we have not been very liberal in the granting of charters. We have insisted that no charter be granted in a community unless a bank is absolutely necessary. I have thought that it was better to err upon the side of conservatism, feeling that there would be less harm in not having a bank in a certain community if it was not apparent tht sufficient business was available to make it a success, than in granting a charter.

Since January 21, 1927, a period of a little over three years, we have had one State bank failure. The total amount involved in this bank was \$723,097.76. This failure occurred in May, 1929. We have already paid a dividend of \$146,309.60, and permission has just been granted to pay another dividend of 10 per cent. This failure was caused by forgeries, both in notes and mortgages on the part of a father and son who were president and cashier respectively.

The question naturally arises in your minds just where the private bank suspensions which were included in the comptroller's report should be charged. Certainly they can not be included with chartered state banks or national banks, and a claim made that because of the failure of these private banks, these systems are inoperative. As stated before, it was not until 1925 that the act prohibiting the establishment of private banks was enacted in this State. Private

banks are neither under the supervision of the banking department

nor under any other department.

Our State allows branch banking in municipalities. This has worked out very satisfactorily. The bank can absorb the expense of the operation of these branches until they begin to pay. These branches, as operated by our banks, are purely a convenience to their customers. The bank is limited in the extension of branches to an investment of 50 per cent of its capital and surplus in banking house.

In 1929, our act was amended to give banks the right to establish industrial loan departments for the purpose of taking care of the small borrower. Our law also provides for the segregation of savings assets to cover savings deposits, and designates the class of securities that these deposits must be invested in. Our statute also provides for trust powers to be given banks when they have the combined capital required for a trust company and a bank in a given locality. Trust companies may also have banking powers under certain circumstances.

During the past year, group banking came into prominence in this State. Upon the affiliation of the first State bank with one of these groups, an opinion from the attorney general was asked for. He was

asked to rule upon the following questions:

(1) Is there any difference between the purchase or ownership of one share of stock and the purchase or ownership of two-thirds or all of the stock of a bank or trust company by a holding company?

(2) Do these holding companies, by the ownership of two-thirds or all of the stock, by the absolute power vested under our statute to

such owner, constitute operation of such institution?

(3) Banks and trust companies receive their charters from the State to have offices in a city or village for the purpose of doing a banking or trust business. Such corporations can not be organized under the general corporation statute. Does the organization of a holding company, organized under the general corporation statute, owning two-thirds or all of the stock of such corporation, do by indirection

that which can not be done under either statute?

There are other points at issue such as the voting of stock, the stockholders' liability in each of the institutions so owned by the holding company, directors' qualifying shares, machinery to be set up to collect assessments should one be necessary. In fact, the whole question involved seems to be, Can all the statutory provisions pertaining to the organization and operation of banks and trust companies as set forth by the legislature in these two statutes, be complied with by this method of organizing holding companies to own and control banks and trust companies?

To the above he replied that all the provisions of our statute could be complied with by the organization of a corporation under one statute and owning all the stock but directors' qualifying shares of a corporation organized under another statute, provided the holding company did not attempt to operate under the statute governing the corporation whose stock it holds. I can furnish you with a copy

of his opinion if you so desire.

Mr. Seiberling. That is an opinion from your attorney general? Mr. Reichert. Yes.

Mr. KEICHERT. Yes. Mr. Luce. Is it long?

Mr. Reichert. Seventeen typewritten pages.

Mr. Luce. Do you desire it put into the record?

Mr. Seiberling. I do not know that I want it to go into the record. but I should like to see it. Have you printed copies of the opinion?

Mr. Reichert. No, sir; only the one copy.

Mr. Luce. I think this had better be inserted in the record at this point.

(The opinion of the attorney general is printed in full, as follows:)

OCTOBER 9, 1929.

Hon. R. E. REICHERT,

State Commissioner of Banking, Lansing, Mich.

DEAR SIR: You have asked the following questions with reference to the Purchase of stock in State banks;

"(1) Is there any difference between the purchase or ownership of one share of stock and the purchase or ownership of two-thirds or all of the stock of a bank or trust company by a holding company?

"(2) Do these holding companies, by the ownership of two-thirds or all of the stock, by the absolute power vested under our statute to such owner, constitute

operation of such institution?

"(3) Banks and trust companies receive their charters from the state to have offices in a city or village for the purpose of doing a banking or trust business. Such corporations can not be organized under the general corporation statute. Does the organization of a holding company, organized under the general corporation statute, owning two-thirds or all of the stock of such corporation, do by

indirection that which can not be done under either statute?

"There are other points at issue such as the voting of stock, the stockholders' liability in each of the institutions so owned by the holding company, directors' qualifying shares, machinery to be set up to collect assessments should one be necessary. In fact, the whole question involved seems to be, Can all the statutory necessary. provisions pertaining to the organization and operation of banks and trust companies, as set forth by the legislature in these two statutes, be complied with by this method of organizing holding companies to own and control banks and trust companies?

A discussion of the issues involved depends upon the structure as well as the relation of the holding company and the individual banks. It must be remembered at the outset that State banks can be organized and chartered only under the banking act of Michigan. The holding company has been organized under the general corporation law of the State and is, of course, not chartered for bank-ing purposes. The plan, is, however, to exchange shares of bank stock for shares of stock in the holding company so that the shareholders of holding company

stock may indulge in what is termed "group banking."

The holding company's chartered purpose is stated to be as follows: "To acquire, own, hold, dispose of and deal in stocks, bonds and other eyidences of indebtedness and securities including those issued by any corporation, domestic or foreign, and to possess and exercise in respect thereto all the rights, powers, and privileges of individual owners thereof including the right to vote the

same and to execute proxies therefor."

The first consideration therefore is whether the holding company may legally carry out these purposes with reference particularly to the ownership of bank

stock in banks located in the several cities of the State.

Section 1, part 1, chapter 1 of Act 84 (Pub. acts of 1921), provides:

"Any number of persons * * * may incorporate for the purpose of carrying on any lawful business for pecuniary gain.'

The general corporation law of Michigan previous to the amendment of 1929 was in part as follows (sec. 8, pt. 1, ch. 3):

"Subject to the limitations of the laws of this State and the United States with respect to monopolies and illegal restraints of trade, any corporation organized for pecuniary profit shall have power, in furtherance of the objects of its existence, to purchase and hold shares of stock of other corporations organized under the laws of this or any other State for purposes similar to those of such corporation.'

Under this previous act the purchase and holding of corporate shares by a corporation was strictly limited to the purchase, etc., of those shares of another corporation organized for similar purposes. (See opinions Attorney General

 Kuhn, 1911, p. 332; Attorney General Fellows, 1916, p. 277; Attorney General Wiley, 1921-22, p. 239.)
 However, the 1929 legislature, recognizing the trend of modern economic change, has seen fit to change the corporation act in this respect (Act 267, Public Acts 1929) by eliminating the limitation upon the right of a corporation to purchase the shares of other corporations, and to give unlimited authority to incorporate for the purpose of purchasing and owning stock in other corporations. Section 8, pt. 1, ch. 3, Act 84 (Public Acts 1921), as amended by Act 267 (Public Acts 1929), reads as follows:

"Subject to the limitations of the laws of this State and of the United States with respect to monopolies and illegal restraints of trade, any corporation organized for pecuniary profit, or organized on a stock share of nonstock basis not for pecuniary profit, shall have power in furtherance of the objects of its existence, to purchase and hold shares of stock or memberships of its own or other corporations organized under the laws of this or any other State (jurisdiction

or sovereignty).

Since the legislature has seen fit to give this broad power, the following language is significant:

"A corporation therefore may take and own stock in another corporation whenever it is expressly authorized to do so." (2 Fletcher on Corporations, 2075.) I am therefore of the opinion that a corporation, organized under the general corporation laws of the State, may legally buy and own shares of stock in State banks if the scope of its charter is broad enough to include these purposes.

Granting then the right to purchase and own stock in banks by a holding company, the second consideration is whether this power conflicts with the banking law by permitting a corporation organized under the general corporation laws of the State, and not under the banking laws, to do a banking business.

The banking laws (Act 66, Public Acts of 1929) clearly contemplate the localizing of the business of banking in Michigan by the conducting of such business within the city or village where such bank is located, thus negativing branch

banking outside the municipality of a chartered situs. (See sees. I and 70, Act 66, Public Acts 1929, Op. Atty. Gen. Dougherty, 1925–26, p. 90.)

But, is the owning, holding, and voting of stock by a holding company the conducting of a banking business in law? I think not. There is a distinct legal difference in the corporate entities of the bank and the holding company. There is also a legal difference between the ownership of the shares of a bank and the management of the bank itself. The shares of stock do not legally constitute the bank itself, nor the conducting of the business of the bank while the corporate entity is maintained. The chartered powers of the holding company are limited solely to the ownership of shares and the privileges incident thereto. This is the entire scope of the holding company's business under its charter. If it transcends this power, it acts ultra vires, and if it remains within this power and the bank's corporate entity is maintained, there can be no legal objection.

This question has been foreclosed it seems to me, by decisions of our courts that the ownership of stock in a holding company with its attendant incidents, does not in and of itself imply that the holding company is carrying on the business of the company whose stock it may own. In the case of Peterson v. Chicago, Rock Island & Pacific Ry. (205 U. S. 364) at page 391, Mr. Justice Day said:

"It is true that the Pacific Co. practically owns the controlling stock in the Gulf Co., and that both companies constitute elements of the Rock Island system. But the holding of the majority interest in the stock does not mean the control of the active officers and agents of the local company doing business in Texas. That fact gave the Pacific Co. the power to control the road by the election of the directors of the Gulf Co., who could in turn elect officers or remove them from the places already held; but this power does not make it the company transacting the local business.

"This record discloses that the officers and agents of the Gulf Co. control its management. The fact that the Pacific Co. owns the controlling amounts of the stock of the Gulf Co. and has thus the power to change the management does not give it present control of the corporate property and business. Pullman Palace Car Co. v. Missouri Pacific Co. (115 U. S. 587, 597)."

In Cannon Manufacturing Co. v. Cudahy Packing Co. (267 U. S. 333; 69 Law

Ed. 634), Mr. Justice Brandeis said:

"The main question for decision is whether, at the time of the service of process, defendant was doing business within the State in such a manner and to such an extent as to warrant the inference that it was present here.

"Through ownership of the entire capital stock and otherwise, the defendant dominates the Alabama corporation, immediately and completely; and exerts its control both commercially and financially in substantially the same way, and mainly through the same individuals, as it does over those selling branches or departments of its business not separately incorporated which are established to market the Cudahy products in other States. The existence of the Alabama company as a distinct corporate entity is, however, in all respects, observed. Its books are kept separate. All transactions between the two corporations are represented by appropriate entries in their respective books in the same way as if the two were wholly independent corporations. This corporate separation from the general Cudahy business was doubtless adopted solely to secure to the defendant some advantage under the local laws."

The court then held that the holding company was not in anywise transact-

ing the business of the subsidiary in the State of Alabama.

In Monongahela Co. v. Pittsburgh & Birmingham Traction Co. (196 Pa. St.

25), the court said:
It does not follow, however, that the city is the owner of the property of the comwe know of none, that asserts the doctrine that the purchaser of all the shares of the capital stock of a corporation thereby becomes the owner of its property. On the contrary, the principle is well established that the shares of the capital stock of a corporation are essentially distinct and different from the corporate property, and that the owner of all the stock of a corporation does not own the corporate prop-

erty or become entitled to manage or control it."

As long as each company maintains its full, separate corporate identity, and the individual bank is managed and operated in fact by its own respective officers and board of directors, and the conducting of the business of such bank is real and not a sham, then, in my opinion, the holding company would not, although owning all except the qualifying shares, be conducting a banking business in a legal sense. It is only when the practices or activities becomes such that the local banking power, control, and management are usurped by the holding company, and abdicated by the local bank that the holding company may be said to be conducting a banking business under the guise of operating as a holding company. It is only in such a case that the State would be justified in exercising its right to file an action in quo warranto against either the bank, the holding company, or both. The mere domination of the bank by the holding company having a controlling interest in its stock is not a wrong, nor does it affect the legal existence of the bank, nor the relationship of these two companies. But what the company and the bank do might affect this relationship. It is the practice or activity that governs. In short, it is only when a holding company, organized under the general corporation laws, attempts to do by indirection the business of banking, which it can not do by direction, that the practice might be said to become unlawful and subject to restraint.

"Where a corporation is so organized and controlled and its affairs so conducted as to make it a mere instrumentality or agent or adjunct of another corporation, its separate existence as a distinct corporate entity will be ignored and the two corporations will be regarded in legal contemplation as one unit. In re Muncie Pulp Co. (139 Fed. 546); Interstate Telegraph Co. v. B. & O. Telegraph Co. (51 Fed. 49); Wormser on Disregard of the Corporation Fiction, 54. When a corporation of the Corporation Fiction, 54. ration exists as a device to evade legal obligations, the courts, without regard to actual fraud, will disregard the entity theory. Higgins v. Cal. (Pet. & Asp. Co., 147 Cal. 363; 81 Pac. 1070); Brundred v. Rice (49 Ohio St. 640; 32 N. E. 169, 34 Am. St. Rep. 589); Donovan v. Purtell (216 Ill. 629; 75 N. E. 334; 1 L. R. A. (N. S.) 176)." (Peoples v. Mich. Bell Tel. Co., 246 Mich. 198, at p. 204.)

As banking commissioner, it would be your duty to continue to deal directly with the individual banks, to conduct examinations and exact compliance just as though no change had occurred in the ownership of the shares of stock in any bank, but it would also be your duty to scrutinize the practices of each local bank concerned from time to time, to determine whether in fact its business continues to be done by such bank as a local unit just as the law contemplates.

The next consideration would perhaps be the matter of stockholders' liability, Assuming that the holding company owns all of the stock of the bank, the question then arises, how can the statutory liability be enforced? This liability is

found in section 48, Act 66, Public Acts 1929, as follows

"The stockholders of every bank shall be individually liable, equally and ratably, and not one for another, to satisfy the obligation of said bank to the amount of their stock at the par value thereof, in addition to the said stock; * * * Such liability may be enforced in a suit at law or in equity by any such bank in

process of liquidation, or by any receiver, or other officer succeeding to the legal rights of said bank.

In addition to this section 44, act 66, Public Acts of 1929, provides for the making of an assessment upon shares of stock to repair deficiencies and other remedies against the stock

The charter of the holding company, I am informed, contains the following clause in this regard:

"The holders of the stock of this corporation shall be individually and severally liable (in proportion to the number of shares of its stock held by them respectively) for any statutory liability imposed upon this corporation by reason of its ownership of shares of the capital stock of any bank or trust company.

With this express provision in the charter, the question narrows itself to whether the stockholders liability, if expressed in the charter (which is declaratory of the statute) can be enforced against the stockholders of the holding company.

Fletcher on Corporations (vol. 1, p. 1077), after discussing the effect of such a provision in by-laws, says:

"Thus, in the absence of a charter or valid statutory provision therefor or an express agreement, a by-law can not render a dissenting member or stockholder liable to assessment by the corporation beyond the amount which he is required to pay by his contract of membership.

This would, therefore, imply that if the provision was found in the charter,

the same would be enforceable.

Fletcher on Corporations (vol. 6, p. 7148), says:

"It is not within the power of a corporation, unless it is authorized by the charter or by some other statute, to bind the stockholders to personal liability for its debts, without their consent, by agreement with its creditors, by resolution or otherwise. A bank, for example, can not make its stockholders liable on its notes or bills by printing thereon a notice that they are so liable; and, in the absence of charter or statutory authority therefor, a corporation can not make a valid by-law imposing upon stockholders personal liability for its debts, unless they consent."

At page 7149 it is said:
"Stockholders, of course, may render themselves personally liable for debts of the corporation by express agreement or consent, provided their promise has a consideration to support it, and is in writing, when this is necessary under the statute of frauds, but their liability in such case is not as stockholders, but as individuals.

The general rule will be found in 3 R. C. L., page 410, where it is said:

"Though the liability is imposed by statute it is regarded as contractual in its nature, rather than penal. The undertaking is as if one subscribing for stock expressly agreed to take and hold it under a previously prepared contract in writing that all who should become holders of the stock should pay the amount of their subscriptions to the corporation when needed, and should pay the additional sum to create a fund for creditors if the corporation should become insolvent,

In Duncan v. Freeman (110 S. E. (Ga.) p. 5), the court says:

"The liability of the stockholder of a national bank, though statutory, rests at last on the stockholder's subscription or on his receipt and acceptance of his

A general discussion of the question will be found in Western National Bank v. Lawrence (117 Mich. 669), wherein the bank brought an action in assumpsit against defendant Lawrence to enforce his individual liability as a stockholder in a Kansas corporation. The court, at page 672, said:

"While the liability is statutory, it is one which arises on the contract of bscription to the capital stock, * * *.

subscription to the capital stock, * * *.

"If the company's charter provides that the shareholders shall be subject to a special individual liability to creditors, persons becoming shareholders agree to become liable, both in a corporate capacity and individually, to all persons who shall give credit to the corporation.'

In this case, the defendant was a stockholder in an ordinary corporation, not a banking corporation, and while such liability was sanctioned by the constitution of Kansas, the domicil of the corporation, the court held that the liability is one of contract.

It is, therefore, my opinion that shareholders may be bound to an added liability when the same is properly expressed in the charter of the company, and this liability may be enforced as provided by law.

Under section 44, the sale of stock provides a definite means of collection if the stock has any value, but in case of insolvency such remedy is inadequate, because

the stock is without value.

The question arises as to how this liability can be enforced when the stock is owned by a holding company. If the stock has sufficient value so that its sale will produce enough to satisfy the assessment, it makes no difference whether the stock is owned by an individual or a holding company. If the stock has no value (as in the case of insolvency) recourse must be had to the personal assets of the individual, or in case of holding company ownership, to the assets of that com-

pany.

If the company is uncollectible, the court would probably look through the company to its stockholders and enforce the liability against them. Particularly company to its stockholders assumed liability as here expressed in would this be true where the stockholders assumed liability as here expressed in

the charters of the holding company.

In 3 R. C. L., 400, it is said: "In some instances the courts have gone beyond the registered stockholders. This is upon the principle that the parties who by reason of being the actual Owners of the stock are entitled to the profits and benefits of the business carried on by the bank, must respond to the burdens and debts up to the statutory limit. In the enforcement of this liability against stockholders it is well established that the actual owners of the stock can not shield themselves against such liability by putting the title of the stock in the name of some irresponsible third party. Creditors have the right to call upon the actual stockholders for contribution; and this right can not be defeated by a merely colorable transfer of the legal title to some third party, who in fact holds the same for the benefit of the real owner of the stock. * * * The object of the statute is not to be defeated by the mere forms of transactions between shareholders and their

In Chicago, Milwaukee & St. Paul Railway Co. v. Minneapolis Association (247 U. S. 490), the court said:

"In such a case the courts will not permit themselves to be blinded or deceived by mere forms of law, but regardless of fictions, will deal with the substance of the transaction involved as if the corporate agency did not exist and as the justice of the case may require."

I therefore answer your first three questions in the negative and your last question in the affirmative and reach the following conclusions:

First. A holding company may organize under the general corporation laws of Michigan and may, if its charter is broad enough, purchase, own, and hold shares of stock in State banks.

Second. The ownership and exercise of incidents of ownership of stock in a holding company owning all but qualifying shares in several banks is not legally

doing a banking business in the State, in violation of law.

Third. It is only when the practices of a holding company become such as to usurp the functions of the bank in fact and in reality, so that a banking business is being done by the holding company, that intervention can be sustained.

Fourth. A holding company can, by expression in its charter, meet the double

indemnity of statutory liability under the banking act.

Fifth. It is the banking department's duty to continue to treat individual banks concerned in stock purchased by a holding company in all respects as individual units for examination and all other purposes; and also to scrutinize the operation of such banks in their factual relationship with the holding company

Very respectfully yours,

f

ø

WILBER M. BRUCKER, Attorney General.

Mr. Reichert. The proposition which we felt confronted us from a supervisory standpoint was that we could see in this program the combination of investment companies, trust companies, joint-stock land banks, national banks, and State banks all under one head and virtually the same directorate, but under different supervisory authorities. In other words we felt that by the organization of these groups under present law, it would be possible to defeat the principal restrictive provisions in banking and trust laws, both National and State, should these holding companies be organized by individuals who were not sufficiently conservative. In Michigan we have been very fortunate that the two groups which have organized holding companies have voluntarily thrown around their organizations, through their by-laws and articles of association, all possible protective provisions that have been suggested by the comptoller's office or our office, and have provided further that these provisions are subject to change only with the consent of the supervising authorities. They have also made available to our examiners the records of all of their affiliated corporations. If group banking could be confined to groups such as these, no anxiety should be felt either by the public or the supervising authorities.

One of these groups has confined itself in its ownership of bank stock to banks in the metropolitan area where its main office is located. The other, in addition to that, has gone out into the industrial centers of the State. From the standpoint of our securities commission, we have now made a ruling that no more stock of holding companies will be approved for sale in Michigan, or for exchange for Michigan bank or trust company stocks, unless it has similar provisions as are incorporated in the articles of association and by-laws of these corporations.

Whatever argument may be advanced against our unit banking system, one thing must be admitted—that it has developed our progressive United States. Through it, initiative has been permitted to develop local communities in which the banker and other individuals had a community interest. I doubt whether this could have been accomplished under any other system. Whether we now have arrived at a time when this sytem should be abandoned due to bank failures in certain sections, and some other system adopted—be it group or branch banking—is a question for careful consideration. There is also some force to the argument that banking units must be established to be able to take care of credit requirements of large business units.

Difficulties will be experienced in enacting laws to provide for protective and restrictive provisions governing groups, the units of which are operated under National and State laws with different supervisory authorities. This difficulty would not arise in a branch banking system.

When considering the high mortality of banks which has principally occurred in territories where the issuing of charters was very freely done, you should not lose sight of the fact that there is some argument for the soundness and serviceability of a system that has had but one bank failure during the last 3 years and six during the last 15 years, which is the record of our State for State-chartered banks. The record for national-chartered banks in this State is equally satisfactory. If, however, it is determined to establish a branch banking system, due consideration should be given to the unit banks already in existence in the establishment of branches. Any changes should have as their prime consideration the safety of the depositor. Provision must be made to avoid ruinous competition with existing unit banks, as such a procedure tends to impair the position of the depositor.

If State lines are disregarded as suggested in the comptroller's plan of establishing branch banking for trade areas, I would feel that the matter of taxation as it pertains to the States would be quite a problem. If branch banking is to be extended, limited to States, or established trade areas, the question of capital structure should have

your consideration. As branches are extended, capital should be increased, otherwise you would be liable to approach mutual banking rather than banking supported by stock capitalization. I am

sure that these matters have all had your consideration.

The Federal reserve system should also be given consideration because I feel that the enactment of that law was the greatest piece of progressive financial legislation that Congress has ever passed. In this connection I would, however, like to make one observation. and that is that with changes that have taken place in financing, less and less paper becomes eligible for borrowing and rediscount, and in order this system to be of real service to banks, changes should be made looking toward the liberalization of loaning restrictions. Especially is this true as it pertains to State member banks.

Governor Young, in his testimony, referred to the earnings of the Federal reserve banks. In this testimony he pointed out that \$147,109,573 had been paid over to the Government in franchise taxes by these institutions, and \$276,934,000 had been added to surplus, and that their capital at the present time is \$170,975,500. These earnings have accrued largely as a result of the free balances of the member banks, and I am entirely in accord with his plan for the distribution of a portion of these earnings based upon deposits, but there should be no definite rate set up in the form of interest on deposits. In other words, I think there should be a distribution of earnings at the end of the period to member banks either on capital

or deposits, but preferably on deposits, in lieu of interest.

There are other phases of this subject that I feel have been adequately covered by previous testimony, and in order to save time, I will refrain from making any further statements other than to say that we in our State are watching with interest the developments in this exhaustive study that your committee is making of this subject. Your recommendations to Congress will be given consideration by every legislature which will convene next year, because your recommendations will be based upon a more thorough study than andividual States could make and upon information which would not be available to them except through your committee. On this information and your recommendations the various supervising authorities will largely base their recommendations to the legislative bodies in their States. I want to assure you of our interest in the work that your committee is doing and offer you the facilities of our office, if we can be of service to you.

Mr. Luce. Mr. Reichert, in giving the number of your State banks and the number of national banks, you do not go to the point of telling us what the tendency is in this particular. It would appear that your national-bank deposits are a little more than one-third of those companies operating under your State law. Is the tendency, in your State, for capital to turn to the State form of organization

rather than the national form?

ð

t

0

1

S

e

t

Mr. REICHERT. I do not think that is the case to an unusual degree. In Detroit we have had some consolidations where State banks have been taken over by national banks and then again some national banks which have been taken over by State banks, and that is true throughout the State. I would not say that the increase in assets in the two systems have been showing any tendency particularly one way or the other. I should say that the ratio of assets in the two systems have been going along as they have been for some time.

Mr. Hooper. It seems that the locality governs considerably; for instance, in the locality in which I live, there were 3 national banks and 1 State bank and they have become 3 national banks. On the other hand, in other communities, the tendency seems to be the other way, so it about strikes a balance.

Mr. Reichert. Yes, sir; there are some cities where there are only State banks and others where there are only national banks repre-

sented.

Mr. Luce. We are watching these two systems competing with each other and interested in knowing which system is forging ahead

and which is dropping behind, if that thing is happening.

Mr. Reichert. As far as our State is concerned there has been no competition with the comptroller's office in the granting of charters. Wherever a group in a city has applied for a State charter, we have only granted it where the situation seemed to warrant it, and in case of national charters, the comptroller's office seems to have reciprocated in that respect very well.

Mr. Luce. How many national banks are there in Detroit?

Mr. REICHERT. Two national banks.

Mr. Luce. Two national banks in Detroit out of how many banks?
Mr. Reichert. There are eight State banks and two national banks in Detroit. I should like to check that figure a little later, but

I am sure that is correct.

Mr. Luce. You pointed out that the comptroller, in his figures, had referred to suspensions and not failures. I have not caught that distinction and have been accustomed to speak of these totals as failures. You referred, later on, to suspensions but did not bring out, with definiteness, what you had in mind in drawing the line between

suspensions and failures.

Mr. Reichert. In his statement he refers to suspensions and that includes banks that were temporarily closed and then reopened and also banks sold to other institutions and their deposit liabilities cared for, and one bank is in his figures twice. What actually happened, as far as State banks' charters are concerned, we have had six failures and there are 50 private banks that have either gone into voluntary liquidation or are actually in receivership for the 9-year period.

Mr. Luce. Have you any idea that should modify his statement as to the 5,641 bank suspensions in the last nine years in the country; would the point that you bring out make any serious difference in

the alarming feature of the situation?

Mr. Reichert. I think it possibly would, because I presume that the experience in other States has been similar to ours; that is, in many cases, banks have suspended and they have reopened either by sale to other institutions or have opened up under new management. I do not know how far-reaching it would be, but I know it makes a very definite difference so far as Michigan is concerned.

Mr. Luce. In these cases that you referred to, of reorganization, and so forth, has there been material loss, nevertheless, to depositors?

Mr. Reichert. Not to depositors, in any instance. There was no loss to depositors in those reorganizations or where they were taken over by another bank.

Mr. Luce. You referred to your act of 1925, preventing the organization of further private banks. Does that extend to prohibiting individuals from engaging in the banking business?

Mr. Reichert. Unless they have a State or national charter; yes.

Mr. Luce. Do you know of other States that have adopted that

type of law?

on

Mr. Reichert. I do not. The act was passed to prevent the continuation of private banking and also to provide for orderly liquidation. We have a number of private banks, however, that still exist in the State.

Mr. Luce. The matter has become of considerable interest to the committee in its efforts to straighten out the tangle of taxation produced by private and other banks and incorporated banks. Is

it your judgment that that law has been a useful one?

Mr. REICHERT. Yes; I think it has been. It has prevented anyone else going into the private banking business and has had a tendency toward the elimination of private banks.

Mr. Luce. Does it go to the extent of preventing the individual

from loaning money while engaged in business as a broker?

Mr. Reichert. Oh, no; not as a broker. Would you like to have me read the act? It is very short.

Mr. Luce. I think it is well worth while to have it in the record.

Mr. Reichert (reading):

The people of Michigan enact:

Section 1. Private banks—when unlawful to organize.—On and after the effective date of this act, it shall be unlawful for any individual, person, or unincorporated association of individual persons, to engage in the business of banking as defined in Act No. 205 of the Public Acts of 1887 as amended and other laws of this State relating to banks and banking: Provided, That this act shall not apply to any individual person or unincorporated association of individual persons engaged in the business of banking at the time of the passage of this act.

Then there is the penalty for the violation.

Mr. Luce. Would that prevent partnerships similar to Morgan & Co., Kuhn, Loeb & Co., and other big banking houses of New

York City from engaging in business in your State?

Mr. REICHERT. I should think so, if they took deposits or engaged in the banking business such as is provided under the general banking law of the State of Michigan. They can only engage in the banking business under that law or the national act in the State at the present time.

Mr. Luce. You have told us of provisions for the segregation of savings assets to cover savings deposits. That is, of course, not the

case with national banks?

Mr. Reichert. No.
Mr. Luce. Does any uneasiness result from the fact that your
State banks are compelled to give protection to savings deposits while
the national banks are not?

Mr. REICHERT. That would be rather difficult for me to answer. I

have never heard the subject brought up, however.

May I go back to your former question in reference to Kuhn, Loeb & Co. and Morgan & Co.?

Mr. Luce. Yes.

Mr. Reichert. If they took deposits, I think it would prevent them from doing business in Michigan. It would not prevent their engaging in the sale of securities. Was that the point you wanted to bring out? Mr. Luce. Yes. This matter of savings deposits interests me particularly, because in my own State of Massachusetts, we have the same requirements in the matter of trust companies and we find our national banks, within a few rods of a trust company, enabled to mix all their money at the close of the day, without any particular protection to the savings deposits.

In your national bank failures in Michigan, have depositors suffered

notably by the failure of segregation?

Mr. Reichert. I would not be qualified to answer that because I do not know what the outcome of national bank failures has been. There have been two over the period of nine years, that the comptroller speaks of. I think that probably one reason that State banks have had large deposits, especially savings deposits, than national banks is because they have had branches in the municipalities and the national banks did not have them. Consequently, State banks have more savings deposits in proportion to national banks.

Mr. Luce. What is the customary rate of interest now being paid

on savings deposits by your State banks?

Mr. Reichert. Three and 4 per cent—3 in the larger centers, and in some sections they are paying 4 per cent.

Mr. HOOPER. In my neighborhood they pay 4 per cent-largely in

the south central portion.

Mr. Luce. You tell us there are two groups that have organized holding companies in your State?

Mr. REICHERT. Yes, sir.

Mr. Luce. Has that been done recently?

Mr. Reichert. I would say that has been done within the last tenmonths.

Mr. Luce. Are they apparently at work to add to their groups?
Mr. Reichert. No; I do not think so. I think they have purchased all the banks that they desired and I do not know of their engaging or negotiating for any banks at the present time.

Mr. Luce. Do you know of any other movement on foot to create

other groups?

Mr. REICHERT. Not at the present time.

Mr. Luce. You have told us of a ruling that you will approve no more stock issued by holding companies for exchange of Michigan bank or trust company stocks, unless there are provisions incorporated in the articles of incorporation or the by-laws of these associations similar to those you apply to your State banks. It is not clear to me whether that results in what I might call a quadruple liability. Tell us about that.

Mr. Reichert. In the organization of these holding companies, after the Attorney General's ruling, the holding companies agreed—they possibly agreed to this prior to the ruling—agreed to incorporate the provisions that were in the banking law, and carry that on the certificate of stock in the holding company, which carried the liability through to the holder of a certificate. They also provided for various other requirements that are in the statute. Those were Michigan corporations. When foreign corporations came in to ask for their stock to be approved, as holding companies, we felt that it would be unfair to hold our Michigan corporations to certain regulations and conditions, and approve the stock of a foreign corporation without the same provisions, so that after this opinion of the Attorney General,

we passed a ruling of the securities commission that we would not approve any more stock of foreign holding companies unless they had similar provisions as the holding companies organized in Michigan.

Mr. Luce. What I am driving at is to find whether the mathematical result is that in the case of, say, the Farmers Trust Co., the stockholders of the Farmers Trust Co., have, in addition to the double liability, further accompanied by a double liability on the part of the stockholders in the holding company, making twice the score—the mathematics of it are all I am after.

Mr. Reichert. The holding company owns the stock of the bank-

all except the qualifying shares.

Mr. Luce. Yes.

Mr. Reichert. The individual owns the stock of the holding company and, in accepting that certificate of the holding company, he assumes the stock liability that the holding company has in these respective banks—his proportionate share of the stock liability. That is according to the certificate.

Mr. Luce. And there is no increase in his security?

Mr. REICHERT. No.

Mr. Luce. You referred to the matter of taxation as perhaps presenting difficulties. Would there be any difference in that matter from the situation brought about by foreign corporations doing business in your State, as well as in other States, where the taxation is measured by the amount of capital employed in the State?

Mr. Reichert. Well, you have got to consider the deposit liability and its ratio to capital. It could possibly be worked out, but I think there would be more of a difficulty in working it out as a banking

matter than it would be in other corporations.

Mr. Luce. It is only the taxation feature as to which I inquire.
Mr. Reichert. Yes. The question of taxation of bank stocks is
up before the special committee of our State at the present time—the
special committee on all taxation.

Mr. Luce. You point out the fact that less and less paper is becoming eligible for borrowing and rediscounting and think that changes should be made looking toward the liberalization of the loaning restrictions. Will you specify just what you have in mind in that regard?

Mr. Reichert. The changes in refinancing of corporations which are going into financing themselves through stock issues. There is less and less paper now coming into the banks from that source, but banks have a large number of municipal bonds. Not having this rediscountable paper, they might have several million dollars of municipals and, being a member of the Federal Reserve System, they could not go to the Federal Reserve and borrow on that, but would have to go to their other correspondents for that service, in case of definite withdrawals.

Mr. Seiberling. You think that the law should be amended so as

to permit them to borrow on municipal bonds?

Mr. Reichert. Municipal bonds of a certain type, based on population of communities and ratio of indebtedness to assessment.

Mr. Seiberling. And the total value of the tax duplicate?

Mr. REICHERT. I do not know what you mean.

Mr. Seiberling. The total value of the taxable property in the district?

Mr. REICHERT. Yes, sir. I would not want to advocate that all

municipal bonds should become eligible as collateral.

Mr. Hooper. I should like to ask one or two questions of Mr. Reichert. In Michigan, Mr. Reichert, the limit of branch banking to State banks is the boundary of the municipality, is it not?

Mr. Reichert. Yes.

Mr. HOOPER. And how is that working out around through the State outside of the large cities? Is branch banking being used in the small towns and cities, say, of 25,000 to 100,000, considerably?

Mr. REICHERT. Possibly these tables [exhibiting] will give you the

best idea.

Mr. Seiberling. Have you placed the totals in the record?

Mr. Reichert. No; I did not know whether you would call for them. There are 52 State banks having a total of 354 branch banks. Eight banks in Detroit have 259 of these branches. Two banks in Grand Rapids have 27 of these branches, and that leaves a total of 68 branches for the balance of the State.

Mr. Hooper. Has there been any consideration given in Michigan to the extension of branch banking beyond the limits of the munici-

pality at all?

Mr. REICHERT. No.

Mr. HOOPER. Then branch banking, as it exists in our State, corresponds, in a general way, with national branch banking as defined by the McFadden bill? Mr. REICHERT. Yes, sir.

Mr. Hooper. Now, Mr. Reichert, we have been hearing here some men from all over the United States on this question, including the Comptroller of the Currency and some very distinguished men. Many of them at least attributed the decline of the banking business in small towns throughout the country, for instance, to the lack of diversification of business in the small country towns. What has been your observation about that in Michigan among the small banks? Has that played much part in the banking business there? tended to injure the banking business of the small towns?

Mr. Reichert. The banks in the small towns are not increasing their deposits. I think that is generally conceded, that the automobile, of course, has made some difference in regard to where a man can

do his banking conveniently.

We still have a great many banks in small towns that are being operated at a profit and are soundly operated. The difficulty, of course, in operating a bank in a small town is to secure management at the price that you can afford to pay.

Mr. HOOPER. And then retain them after you secure them? Mr. Reichert. Yes: retain them after you secure them.

Mr. Hooper. I suppose the same situation prevails in Michigan as in other States—that there is a lure from the big city banks for the small bank man?

Mr. REICHERT. Yes, sir.

Mr. Hooper. Generally the small bank in Michigan, in the small villages throughout the State, has the same sort of competition as it would have in Georgia or Iowa or other states?

Mr. Reichert. I would say so.

Mr. Hooper. But you have shown us to-day that the small bank in Michigan has been a fairly successful bank and there have been

very few failures; that while similar conditions have prevailed there, it has not militated against the small bank in Michigan. That is

what you have been showing?
Mr. Reichert. Yes, sir. This chart [exhibiting] will answer your question as quickly as anything. It will show the net profits in banks under \$150,000 or from \$150,000 to \$250,000.

Mr. HOOPER. I think that is all.

Mr. Seiberling. You referred, awhile ago, to the Comptroller of the Currency confusing the terms "failures" and "suspensions."

I notice on page 12 of volume 1, part 1 of the hearings, the comptroller states he is using the term "failure" as synonymous with the term "suspension," although these two terms are not always so used. He further states, "The statistics of the Federal Reserve Board for bank failures are based upon suspensions," but that the comptroller has not counted such a bank as a failure that suspends and reopens

and continues to do business. I wanted to clear that up.

Mr. Reichert. Yes, sir. The reason I mentioned this is also to clear it up because I found in later testimony that you were referring to that being the number of bank failures in Michigan, especially in

the testimony that Mr. Lord gave here.

Mr. Seiberling. When you incorporate or permit a chain banking company, incorporated in another State, to do business in your State, how does it qualify?

Mr. Reichert. It has to qualify before the securities commission.

which only pertains to the sale of stock.

Mr. Seiberling. What does it state its business is when it qualifies? Mr. Reichert. I would think that would probably depend upon the individual application. I have no recollection of any specific application, but I would think that their application would be a request to sell stock in Michigan, collaterally supported by bank stocks as assets in our State or other States.

Mr. Seiberling. You do compel these chain companies to qualify

in order to do business?

Mr. Reichert. All stock in Michigan must be qualified before the securities commission, with the exception of bank stock chartered under Michigan law or the national bank act.

Mr. Seiberling. The company has to qualify too? Mr. Reichert. Yes, sir.

Mr. Seiberling. When one of these foreign companies qualifies to do business, they must state that they are going to acquire bank stocks; they can not state they are going into the banking business?

Mr. REICHERT. No, sir.

Mr. Seiberling. Do you think there is any difference between a chain company owning the capital stock of a great many banks and managing them and a company doing a banking business?

Mr. REICHERT. That was the purpose of my inquiry of the Attorney General and he said under our law it was possible for them to own as

long as they did not operate.

Mr. Seiberling. I am asking you what you think about it. Mr. Reichert. Of course I concur with our Attorney General. Mr. Seiberling. As a matter of law that might be true under your statutes, but do you not think-

Mr. Reichert. I think, as an economic matter-

Mr. Seiberling. They are in the banking business, are they not?

Mr. REICHERT. I would not want to accuse them of it, but-Mr. Seiberling. Now, you have six State banks, I believe, in Detroit and two national banks.

Mr. REICHERT. No; we have eight State banks. Mr. Seiberling. And two national banks?

Mr. Reichert. Yes, sir. Mr. Seiberling. You have other large banks in Michigan—Flint, Grand Rapids, and I guess over where you live, possibly. If we had a law permitting branch banking in trade areas and these banks found it convenient to take advantage of the law, you can not see any reason why your entire State should not be furnished with banking facilities and why it would not be of great assistance to your cities to have a concentration of credit and capital in your large cities, instead of having that concentration going somewhere else through chain or group banks?

Mr. Reichert. Do you refer now to the benefit to the small com-

Mr. Seiberling. To your whole trade area, the small and large

community as well?

Mr. Reichert. I would think there would be a tendency, of course, under a branch banking system, to concentrate capital in the locality where the main office is located. That would be quite natural.

Mr. Seiberling. That would be in Grand Rapids or Flint or Detroit and you would still have plenty of competition and if your industries wanted to finance temselves they could be financed in the State of Michigan, could they not? Mr. Reichert. Yes, sir.

Mr. Seiberling. Do you not think it would be a great advantage to the country to have trade areas of that kind where people could finance close at home where they knew the people and there was a personal interest in the community rather than go to the large metropolitan center far away?

Mr. REICHERT. I think that would be preferable, and I think if you are going to establish branch banking, it would be preferable to

establish it on State lines.

Mr. Seiberling. Branch banking would be more economical?

Mr. REICHERT. I will grant you that.

Mr. Seiberling. And even under your group system, you would have to have some plan of branch banking because, as a number of bankers have stated here, group or chain banking can not take care of these small centers that need banking facilities.

Mr. Reichert. I do not think that groups would be interested in

the small centers.

Mr. Seiberling. Or chain banks either?

Mr. REICHERT. No, sir.

Mr. Seiberling. Under those two systems, you do not take care of the small communities with those facilities, do you?

Mr. Reichert. No.

Mr. Seiberling. Of course these eight State banks that you have in Detroit have branches all over the city of Detroit?

Mr. REICHERT. Yes, sir; all over the city of Detroit.

Mr. Seiberling. But they do not extend outside of the county? Mr. Reichert. Not outside of the city—outside of the municipality.

Mr. Seiberling. Do you not think it would be of great advantage if a general banking law could be passed by Congress which would permit more banks to come into the national banking system under

the branch-bank plan?

Mr. Reichert. As I read the law, there is very little difference between our State law and your national law at the present time, and to take care of most communities I think, as the law is now You can do it as well under one system as under the other. Of course, if you are going to disregard State lines in the matter of branch banking then it would necessarily have to come through a national banking system.

Mr. Seiberling. Do you not feel it is unfortunate to have a Government such as ours lose its national banks and get entirely

out of contact with the banking business of the country?

Mr. Reichert. Yes; that would be true. I do not feel that that

is happening in our State, however.

Mr. Seiberling. You have only two national banks in Detroit. Mr. Reichert. Well, of course, one of those came out of a consolidation of two national banks.

Mr. Seiberling. You have large cities in Michigan where you have no national banks, have you not?

Mr. REICHERT. Large cities?

Mr. Seiberling. Yes.

Mr. Reichert. No; I do not think we would class those as large cities that have no national banks. I would think that the largest city that I recall now that has no national bank is Owosso.

Mr. Hooper. That has no more than 20,000 population.

Mr. Reichert. Probably not more than ten or twelve thousand.

Mr. Hooper. Twelve thousand, perhaps?

Mr. REICHERT. Yes, sir.

Mr. Seiberling. What percentage of your failures has been due to mismanagement? Have you any idea?

Mr. REICHERT. The only receivership that we have had that has

been due to mismanagement has been due to forgery.

Mr. Seiberling. And you have had no difficulties in Michigan in the depreciation of lands which were security for loans with failures following, due to that?

Mr. Reichert. We have had some depreciation, but not failures. We have had depreciation of the lands, but not failures of banks. Mr. Seiberling. The depreciation has not been so rapid the banks

could not protect themselves? Mr. REICHERT. No, sir.

Mr. Seiberling. That has not been true in the agricultural districts of the Middle West and Northwest?

Mr. Reichert. I could not say as to that, but I understand that

Your testimony here bears that out.

Mr. Wingo. Mr. Reichert you come to us with the reputation of being one of the most capable State bank commissioners we have. For that reason you were selected as one of three to come down here. should like to get your judgment on some things. You say you favor branch banking?

Mr. Reichert, I should like to keep an open mind on that until You have concluded your study, because I know I will be called upon

to make recommendations to the State legislature, no doubt, and should I change my mind between now and then, due to your investigation, Iwould not like to be definitely committed to one program or the other. I think there is some argument for and against branch banking. So far as our State is concerned, the same necessity at present does not exist as in some other States you refer to.

Our unit banking system has served our communities well. It has been free from failures; that is, I am speaking of the corporate banks, both national and State, and with few exceptions, the banks have had an earning power sufficient to take care of losses and wherever they have had them we have advocated consolidations or reorganizations, and we do not feel that banking institutions in Michigan have any unusual problem at this time.

Mr. Wingo. You feel, then, that your present unit banking system has proved successful, but naturally you are open to such convictions as may come to you from the further study that you

think the present investigations will afford?

Mr. Reichert. Correct.

Mr. Wingo. I suspect that you are not alone in the view that you are willing to consider whatever may develop in the way of changed conditions, and you naturally do not want, as a public official, to be embarrassed by some statement that may be predicated upon your past conclusions. In other words, after taking into consideration some changes that might be brought to your attention, you might feel that you wanted to reform your judgment?

Mr. Reichert. That is correct.

Mr. Wingo. I have no desire to embarrass you. I appreciate that that is a very proper position for a public official who is to be called

il de li

ti

W

SI

ye

We

th

or ar

tiv

it ,

ind

on for recommendations to take.

Suppose that it should be decided to amend the national bank act so as to permit a greater extension of branch banking privileges for national banks. Based on your experience and on your observation, would you advise that that extension be limited either to State lines or to trade areas, or nation-wide? What is your judgment on that or have you matured your judgment?

Mr. Reichert. I have not matured my judgment on that. I would, however, feel that to confine it to State lines would be much easer to operate from a legislative standpoint when you come in competition with the State banks. Of course I appreciate that

business does not recognize State lines.

Mr. Wingo. Of course, if you are thinking about it from the standpoint of your State banks, it would be easier, possibly, from a regulatory standpoint to confine the branches of a State bank to your State lines, but possibly you have overlooked the fact that you could still thoroughly inspect any branch bank that your State bank might establish, say in one of your adjoining States or anywhere else; you could still have supervisory control over the parent corporation, could you not?

Mr. Reichert. Over the parent corporation?

Mr. Wingo. Yes.

Mr. Reichert. I would not be qualified to pass upon the point whether we could go into another State and examine a branch there.

Mr. Wingo. You are not a lawyer? Mr. Reichert. No, I am not. Mr. Wingo. Then I will avoid some of those questions that might

be purely legal.

But we will take the trade and economic situation. There are other illustrations that can be used, but I will use one that is in my district. Texarkana, Ark., is in my district. Texarkana, Tex., and Texarkana, Ark., are in reality but one city, the dividing line being nothing but an imaginary line between the two States running down the center of one street. Banks on both sides of the line have business connections. For illustration, some gentlemen may live on the Texas side, may be officers in a Texas bank, and yet have business on the Arkansas side, or just the opposite. So that in a case of that kind there would be a practical necessity, assuming now that branch banking is right and that it is wise and good for the public, that would somewhat handicap providing for any geographical limitation or branches, would there not?

Do you see what I have in mind?

Mr. Reichert. I see what you have in mind.

Mr. Wingo. But that is a matter, I presume, that you think you had better leave to the lawyers when they come to figuring on the legal requirements and the legal right of a State bank commissioner to go outside of his jurisdiction?

Mr. REICHERT. I think so.

Mr. Wingo. I will suggest that you had better go into that study, and I suspect you will find that, as a matter of fact, there would be no legal difficulties in having branches beyond State boundaries. The question of permission of foreign corporations to do business in Michigan is one that your law would control, but the real law is a line of decisions that the Federal courts have built up passing upon the State laws that undertake to restrict and govern that.

I was interested in one suggestion that you made—and I believe it was an answer to a question by Mr. Seiberling—that you did not think that a group or chain bank would be interested in banks in small centers. I believe you used the term "small centers," and you

said that they would not be interested in them.

Will you explain to the committee what you mean by that-why

You think they would not be interested?

Mr. Reichert. Did I answer that they would not be? Possibly, might qualify that in our State they do not seem interested, and I would question whether they would be interested in small centers.

Mr. Wingo. That is your experience in Michigan, is it? That is the reason I was interested. I happen to know that there are groups or chains that are made up entirely of banks in small towns. Those are chain banks, and, I believe, group banks.

Mr. Reichert. What I tried to convey to you is that this activity in our State has been confined to large institutions in industrial

centers.

Mr. Wingo. Your State has reached that point where I suspect classes itself and is as a matter of fact an industrial State?

Mr. REICHERT. Yes.

Mr. Wingo. That is its major business? Mr. Reichert. That is its major business.

Mr. Wingo. And the major bulk of your capital is invested in industrial enterprises?

Mr. REICHERT. I would say so.

Mr. Wingo. Your State has been fortunate in its business activities in the last 10 years, and you have not been troubled so much with bank difficulties, have you?

Mr. REICHERT. No.

Mr. Wingo. I believe you said that you have only had one receivership of a State bank, and that that was caused by forgeries and misconduct, and not by any economic condition or any bad judgment in making loans and things of that kind, but purely misconduct upon the part of the managing officers?

Mr. Reichert. Yes. That is over a period of three years.

Mr. Wingo. How many State banks did you say you have in the State, approximately?

Mr. REICHERT. Five hundred and eighty-one.

Mr. Wingo. How many of those are in your larger cities? If you do not have it definitely, just approximate it. What proportion of them is in the larger cities? You have 8 or 10 cities there that might be called industrial cities, have you not?

Mr. Reichert. Yes; there would be a small proportion in num-

ber, but a large proportion in assets.

Mr. Wingo. The great bulk of your banking capital—and I am talking now about capital invested in State banks in the State of Michigan—is in the cities of your State, is it?

Mr. Reichert. Yes.

Mr. Wingo. The bulk of it would be limited, I suspect, to possibly five cities?

Mr. Reichert. There would be Detroit, Saginaw, Kalamazoo, Battle Creek, Jackson-

Mr. Hooper. And Lansing.

Mr. Reichert. I would say about 8 or 10 cities.

Mr. Wingo. You have several cities or industrial centers with over 100,000 population, have you not?

Mr. Reichert. Yes.

Mr. Wingo. What is the population of the largest city? Mr. Reichert. That would be Detroit-1,600,000.

Mr. Wingo. And you have another city there that has over a million in population, or near it, have you not?

n

ir 11 a

u

n

by

th

yo

th

Mr. Hooper. Grand Rapids has 250,000, perhaps. Mr. Wingo. Now, how many banks did you say that you have in the city of Detroit?

Mr. REICHERT. Ten.

Mr. Wingo. How many of them are State banks?

Mr. REICHERT. Eight.

Mr. Wingo. Do you recall offhand the percentage of the banking capital of the State banks that is in the city of Detroit?

Mr. Reichert. I have not any figures on the national banks. Mr. Wingo. I am talking about State banks, Mr. Reichert Unless I specifically say so in any question, I am limiting the question to the banks under your jurisdiction.

Do you have that information at hand?

Mr. REICHERT. Could I send that on to you?

Mr. Wingo. No; we will just abandon it now for the present Suppose that you do this: It might be worth while if you will give us the total banking capital in your State in State banks.

Mr. Reichert. I can give you that. The total capital is \$78,960,-

924; surplus, \$72,145,598.25; and undivided profits, \$19,961,786.

Mr. Wingo. Now, if you will give us a statement when you get back and send it to us, or possibly you can make it before you leave here, showing the total banking capital in your State, State banking capital, then the total banking capital in the city of Detroit, and then the total banking capital in cities of your State over 100,000 Population, we will appreciate it.

Do you recall whether or not you have very many State banks in

towns under, say, 2,500 population?
Mr. Reichert. Yes, we have quite a few.

Mr. Wingo. Most of the banks in towns having less than 2,500 Population in the State of Michigan are State banks, are they not?

Mr. Reichert. Yes.

Mr. Wingo. Very few small national banks?

Mr. Reichert. Yes.

Mr. Wingo. You have no tabulation there available showing the number of your banks that have a capital stock of less than \$100,000.

Mr. Reichert. No, I have not. I have on the basis of assets, but

not on the basis of capital stock.

Mr. Wingo. And, of course, you have not the same information or the number of banks that you have with less than \$50,000 capital, have you?

Mr. Reichert. No, I have not.

Mr. Wingo. And the assets of those banks?

Mr. Reichert. I will be very pleased to get that for you.

Mr. Wingo. It will not be necessary. We can get that in another tabulation that will be condensed. Just let that go.

Here is one statement that I read in your prepared statement:

The bank is limited in the extension of branches to an investment of 50 per cent of its capital and surplus in banking house.

Now, that, of course, is clear to you, but it is not to me, and I do not mean that as a criticism. But that does not mean anything to

Just what do you mean by that?

Mr. Reichert. We have a State law that prohibits a bank from investing more than 50 per cent of its capital and surplus in a banking house; consequently the extension of branches, which would also be its banking houses, must be limited to that investment, unless they should lease the property, then, of course, they would not have any of their capital funds invested in the branch site.

Mr. Wingo. In other words, you say one of the limitations on branch banking in your State is that restriction on the banks as to the amount of their capital that may be invested in banking houses?

Mr. REICHERT. That is right.

Mr. Wingo. That does not include furniture and fixtures, does it?

Mr. REICHERT. No.

Mr. Wingo. Do you authorize branches beyond the city limits in Your State?

Mr. REICHERT. No; we do not.

Mr. Wingo. It is confined to the city?

Mr. REICHERT. Yes.

Mr. Wingo. The great number of the branches that there are in the State are in the city of Detroit, are they not?

Mr. REICHERT. Yes.

Mr. Wingo. And most of them are branches of State banks, are

Mr. REICHERT. Yes.

Mr. Wingo. The national banks only having about 8 or 10 branches?

Mr. REICHERT. No, they have more than that. Mr. Wingo. I mean in the city of Detroit.

Mr. Reichert. Yes. This is purely an approximation, but I would say that the two national banks had about 50 branches in the

city of Detroit.

Mr. Wingo. Will you do this? Will you prepare for the record a statement limited to the city of Detroit and confining it to those banks that have intracity branches, and give the number of the State banks that have branches and the number of branches of each?

Mr. Reichert. Of each bank?

Mr. Wingo. And the resources of each of these banks. In other words, separate it both by national and State, giving the number and giving the resources of each one of these banks that have branches.

Mr. Reichert. Yes, I will be gland to do that. In previously giving you the number of banks in Detroit I did not take into consideration the banks located in territories recently annexed to Detroit. There are 12 State banks in Detroit as follows:

Name of bank	Number of branches	Resources	Name of bank	Number of branches	Resources
Detroit Savings Bank	26 152 27 None. 22	\$50, 651, 619, 96 449, 564, 027, 07 52, 928, 115, 49 63, 433, 944, 06 23, 125, 047, 88	Bank of Detroit Michigan State Bank Northwestern State. Redford State Savings Peoples State Redford United Savings. Union Savings.	20 5 2 None. None. None. None.	50, 760, 690, 20 3, 254, 500, 10 2, 257, 820, 62 2, 326, 531, 98 3, 253, 799, 12 19, 467, 965, 90 537, 833, 05

f

n b tl C 6 W

th in

There are two national banks in Detroit as follows:

Name of bank	Number of branches	Resources
First National Bank National Bank of Commerce	34 20	\$173, 817, 387. 9 108, 704, 024. 9

Total number of branches. \$282, 521, 412. 90

Mr. Wingo. Have you any restriction in your law comparable to that in the State of California with reference to the amount of capital stock as to branches? For illustration, if you wish to establish # branch in the State of California, as I recall, the minimum additional capital required is \$25,000. Have you any such provision in the statutes of Michigan?

Mr. Reichert. No; the only provision as to capital is the provision that carries the capital up to \$400,000, based upon \$5,000,000 of deposits. From there on there is no provision as to deposits, but the capital is also based upon population. For instance, in the city of Detroit the capital is \$500,000.

Mr. Wingo. In other words, that is the minimum capital for a

bank?

Mr. REICHERT. Yes.

Mr. Wingo. Let me take an illustration. Suppose that you have a State bank now that has a minimum capital of \$500,000, and it has no branches. It applies to you for permission to establish 10 intracity branches in the city of Detroit, and you find that those branches should be established. Is there any requirement that you contemplate with reference to an increase of capital by reason of the establishment of these branches?

Mr. Reichert. No. The only restriction there would be would be one that was previously given, and that is that their investment

could not exceed 50 per cent of their capital and surplus.

Mr. Wingo. I am not talking about what your law is; I am talking about your judgment, for which I have a great deal of respect. Would you not think it would be wise, if you do not have it in the law, to have some provision that would require an increase of capital whenever you established a branch?

Mr. REICHERT. Yes; I absolutely agree with you.

Mr. Wingo. Am I in error when I assume that that is one question upon which all bankers agree, and that is that the capital base must bear a proper proportion or a proper relation in size to deposits, loans, and discounts?

Mr. REICHERT. Yes.

Mr. Wingo. In other words, the volume of business that a bank is transacting must have a sufficiently large capital base, measured by the experience of bankers, to support that structure that is resting on that capital base?

Mr. REICHERT. Correct.

Mr. Wingo. The bankers agree that that is a practical necessity?

Mr. REICHERT. Yes, sir.

Mr. Wingo. So, if we should authorize or if we should not authorize further extension, in your judgment would it be wise for us to make some requirement with reference to the establishment of branches by national banks that would insure the necessary increase in the capital base? That requirement ought to take into consideration the fact that it might be that the bank at the time already has a sufficient capital base to support a given number of branches, but there should be some standard there like there is a standard of population, because we have found by experience, although there are some exceptions, that there is a direct relation between the volume of banking business in a community and its population.

Mr. REICHERT. Undoubtedly.

Mr. Wingo. Of course, there are some exceptions. Now, there should be the same assumption that there is some relation between capital requirements and the number of branches that the parent institution has, should there not, and do you think that that would be wise to have appear in the statutes?

Mr. Reichert. Yes, I think that could be done in two ways, either based upon branches or based upon the ratio of deposits to

capital.

Mr. Wingo. In other words, this thought has come to me, and I wanted to get your judgment, with the thought not of laying down so much an iron-clad rule such as, for example, that so much population shall have so much minimum capital, but the point is this, that if we use any fixed standard at all, it should be the volume of business, and that the Comptroller of the Currency should take that into consideration and that in enlarging a business by having additional branches, while there might be a nominal requirement for additional branches, yet the major requirement and the determining factor should be the volume of business which those branches and the parent bank is engaged in, and require the capital base to be sufficiently large to safely support that volume of business.

Mr. REICHERT. Yes, I quite agree with you.

Mr. Wingo. I understand from the Deputy Comptroller, who is present, that while there is no requirement in the National Bank act now, the Comptroller's office does take into consideration the capital base and will refuse to grant the establishment of a branch if the capital base is not sufficient to justify the enlargement of the business that is supposed to flow from the establishment of the additional branch.

There would be nothing whatever wrong in confirming that judgment by proper limitations and definitions in the statute itself, would

I V S B I t

00.1

le

tl

W

en

le

as

re

Git

to

tha or pro

cor

there be, in your judgment?

Mr. Reichert. I think that is a proper way to arrive at it, because if you are having branch banks outside of municipalities, you must of necessity get away from population as your basis and go to the ratio of deposits to capital base.

Mr. Wingo. There is another statement in your prepared statement that I have marked, that I do not exactly understand. I will read it.

Difficulties will be experienced in enacting laws to provide for protective and restrictive provisions governing groups, the units of which are operated under national and State laws with different supervisory authorities. This difficulty would not arise in a branch banking system.

What do you mean by that?

Mr. REICHERT. I mean by that-

Mr. Wingo. I am not asking that in an argumentative sense. I have respect for your judgment, and I want to see if there is something there that I have not thought about before.

Just what do you mean by that statement?

Mr. Reichert. With branch banking it would either have to be a national bank or a State bank; there would be no two supervising authorities, while in group banking you might have a State bank of several State banks, you might have several national banks, you might have an investment company organized under the general incorporation law or under our finance act, which is under the supervision of the State Treasurer, and you might have joint stock land banks, all under different supervisory authorities, and if those institutions were operated by people that were not as conservative as they might be, they could transfer assets, and it would be difficult unless you arranged to have all of these agencies go in there and make their examinations simultaneously—

Mr. Wingo. I see what you are driving at. Your point is that with a double character in a group, both State and National, there would occur a confusion of regulation and examination.

Mr. Reichert. Yes.

or

you

eral

per.

and

sti-

ult,

Mr. Wingo. Now, if we undertake to meet the formation of groups and chains by such regulatory measures as will guard against abuses such as the one you mentioned and some others, do you think, then, that it would be proper to have some requirement that would make the different units that have a State charter submit to the regulation or investigation or examination of the comptroller's office?

Mr. REICHERT. I think so.

Mr. Wingo. In other words, the banking business breaks over State lines?

Mr. REICHERT. Yes.

Mr. Wingo. A great many of our banks now are just as much engaged in interstate commerce as the Steel Trust or General Motors?

Mr. Reichert. Without question.

Mr. Wingo. So that if any banking operation is being carried on by a corporation, whether it be a national bank or whether it be a holding company organized in Delaware or Michigan, you feel that lodged in the Comptroller's office there should be proper authority which would enable the Comptroller to protect the public along the same lines that the Comptroller protects the public and the depositors and the stockholders in national banks now? In other words, so that he can have a proper investigation and examination of this tie-up that is multiple in its character, that would be proper?

Mr. Reichert. I would think that the records of these corporations that are a part of the holding company should be open to the different supervising authorities, in order to make a thorough investigation of their affairs. I think that that would almost have to follow in both directions, whether they were institutions of a State or

National character.

Mr. Wingo. Can you conceive of any other way that we can protect the public interest and at the same time protect legitimate banking activities? It is just as necessary to protect men engaged in legitimate banking and doing it through group formation, because some very capable and able men, just as sincere as you and I, believe that group banking is ideal—

Mr. REICHERT. Yes, I understand that.

Mr. Wingo. And that under present conditions it is an admirable way to meet certain conditions, and you feel that those who are engaged legitimately, honestly, and fairly in trying to conduct legitimate banking business through the group system should, as well as the public, be protected along the line you suggest, by having the records open to the supervising authorities so that they can detect either mismanagement or maladministration?

Mr. REICHERT. Yes.

Mr. Wingo. There is another phase of that subject that you touched on here in your statement. You said:

From the standpoint of our securities commission, we have now made a ruling that no more stock of holding companies will be approved for sale in Michigan, or for exchange for Michigan bank or trust company stocks, unless it has similar provisions as are incorporated in the articles of association and by-laws of these corporations.

Of course, your blue sky law and your securities commission can, under a State statute, control the question of sales even of these holding companies organized under the laws of Delaware, but suppose that a citizen of Delaware sought to sell his stock in a Michigan bank to a holding corporation that is incorporated in Delaware; you might have some difficulty.

Mr. REICHERT. Oh, yes.

Mr. Wingo. So that is one of the reasons why I see no escape from not only the right but the duty of Congress to supplement what you are trying to do in Michigan, and very properly, not only in connection with the question of sale of securities but in connection with the general tie-up and control of the banking business, by the Federal Government having restrictions and regulations with reference to these purchases and transfers. I do not mean by that to either approve or disapprove the suggestion of the chairman of this committee in his famous 10 per cent bill that he has introduced; I am not committing myself to that until I know more about it.

I believe that is all.

Mr. Luce. Judge Brand is next.

Mr. Brand. As I understand your testimony, you have no state-wide branch banking law in Michigan?

Mr. REICHERT. We have not.

Mr. Brand. And I also take it that you have no law authorizing chain banking systems?

Mr. REICHERT. No; we have not.

Mr. Brand. You have a law, however, that allows branches to be established in municipalities, as I understand your statement.

Mr. Reichert. There is no specific mention in our statute of it, but branches have been established in municipalities for a good many years. The law is silent on the matter of branches.

Mr. Brand. But you said that your State allows branch banking in

municipalities.

Mr. Reichert. Yes. There is no mention of it in the statute, but for 40 years, by consent, branch banking has been permitted in municipalities.

Mr. Brand. Does that custom limit the capitalization to any

i

0

t

b

h

Bi

81

b

a

h

b

b

particular population?

Mr. Reichert. The bank capital is based upon population in the rest instance, and then the capital must grow with the increase in deposits up to \$400,000 of capital, and from there on there is no provision for increase.

Mr. Brand. I confess that I do not understand the following part

of your statement, taken in connection with your evidence:

Under this act-

Referring to the act of 1925-

private banks can no longer be established, nor can the private banks in existence at the present time be sold.

I understand that that is the kind of banks that you now have in Michigan, private banks.

Mr. Reichert. I beg your pardon?

Mr. Brand. As I understand your testimony, that is practically the only kind of banks that you have in your State, private banks.

Mr. REICHERT. No; we have very few private banks.

Mr. Brand. Do you draw a distinction between a unit bank and a private bank?

Mr. Reichert. Yes. Unit banks are corporate banks organized

under the statute, while private banks-

Mr. Brand. Practically all of your banks are the independent unit banks, are they?

Mr. REICHERT. Yes.

Mr. BRAND. Then you said:

It was not until 1925 that the act prohibiting the establishment of private banks was enacted in this State. Private banks are neither under the supervision of the banking department no under any other department.

Do you mean by that to say that there are now private banks in

Your State that have no supervisory regulation?
Mr. REICHERT. That is correct. There always have been, but they are getting smaller in number, and they are mostly banks in very small communities.

Mr. Brand. Are they supplying the needs and the demands of the

communities, as a rule?

Mr. Reichert. It would be rather difficult for me to say, because

I am not very familiar with their operations.

Mr. Brand. Are you in accord with or opposed to Mr. Pole's proposition as to authorizing branch banking, as outlined by him in his statement?

Mr. REICHERT. As previously stated, I would like to keep an open mind on the question of branch banking until the conclusion of your committee is reached, because I might possibly be placed in the position of being asked to make recommendations, which might not be In accord with the way I feel now.

Mr. Brand. I did not catch that part of your testimony before. Then you made a statement that is very significant and interesting

to me, which reads:

If, however, it is determined to establish a branch banking system, due consideration should be given to the unit banks already in existence in the establishment of branches. * * * Provision must be made to avoid ruinous competition with existing unit banks, as such a procedure tends to impair the position of the depositor.

I am in full accord with that proposition. Now, my question is, if we authorize branch banking as recommended by the Comptroller of the Currency, what suggestion have you to make in order to protect

these unit, independent banks?

Mr. Reichert. It would almost have to be cooperative, I would think, between the State department and the Federal department, because they certainly ought to recognize a State bank in a community that is going along and is prosperous, and not without some con-

sideration put a branch bank in there.

Mr. Brand. I do not think they should, either, and I feel very strongly about that. The State of Georgia at present has no branch banking law, and if this branch banking system should be authorized as outlined by the Comptroller of the Currency, how could the State have anything to do with it? In other words, if we should pass a branch banking law in the United States, this Federal law would become operative and effective in a State like Georgia.

Mr. Reichert. No question about it.

Mr. Brand. And the suggestion that I want from you, and I think it would be valuable, is, what manner of legislation or what suggestion can you make which would protect the unit bank against a branch bank establishing itself there?

Mr. REICHERT. It would necessarily, I think, have to be put in your

Federal legislation, to recognize-

Mr. Brand. I realize that it should be put there, but what would

you suggest that we put there?

Mr. REICHERT. I would like to have a little further thought on that matter. My thought now would be that it would almost have to be cooperative with State departments-I would not say it would be necessary to get their approval, but there would certainly have to be cooperation there.

Mr. Brand. I know, but there could not be any cooperation in the

case of a State where they have no branch banking law.

Mr. Reichert. Don't you think the State would pass a law to meet

that contingency?

Mr. Brand. They might do so, but suppose that they did not? If you are not ready to give a matured opinion on that, as one of the members of this committee I would like to have you think over my question and, when you are ready to submit your recommenda-

tion or opinion, let us have it. Mr. REICHERT. I will be very glad to do that.

Mr. Brand. You are willing to do that, are you?

Mr. REICHERT. Yes, sir.

Mr. Brand. I think that is a very important matter, Mr. Reichert, in States where they have no branch banking law, to see that, if we establish a nation-wide branch banking law, the present existing unit banks which are prosperous and making money and serving the people are not destroyed or their capital structure not impaired.

Mr. Reichert. I agree with you absolutely.

Mr. Brand. I am much obliged. That is all, Mr. Chairman.

Mr. Luce. Mrs. Pratt, have you any questions?

Mrs. Pratt. I am sorry I was not here to hear his statement. 1 presume that many of the questions have been covered.

Mr. Seiberling. I would like to ask him a few questions.

How do the earnings of your Michigan banks in 1929 compare with other years?

te

ar th

OD

M

Mr. Reichert. Without looking it up, I would say the earnings are probably at a greater per cent than they were the previous years.

Mr. Seiberling. How do you account for that? Mr. Reichert. The call loan rate, for one thing.

Mr. Seiberling. Do you mean the call money rate in New York?
Mr. Reichert. Yes, on the short-time investments.

Mr. Seiberling. Have you any estimate as to how much Michigan money was sent to New York, or Chicago, or Philadelphia, on account of the high call-money rate?

Mr. REICHERT. From banks?

Mr. Seiberling. Banks and individuals; taken out of banks, of course, by individuals, and sent down there.

Mr. Reichert. No; I would not want to attempt to estimate it.

Mr. Seiberling. Was it a large amount?

Mr. Reichert. Yes; a fair sized amount. Some large corporations and also many individuals sent money to these centers for investment in call loans.

Mr. Seiberling. Do you think it would amount to a good many

millions of dollars?

Mr. REICHERT. Yes, sir.

Mr. Seiberling. Do you think that the withdrawal of this money from the banks there and sending it to the stock exchange had any effect upon your commercial and industrial business, or your agricultural business?

Mr. Reichert. Well, that would be rather difficult to say.

would not think so.

Mr. Seiberling. Do you think that there was just as much money available as was needed?

Mr. Reichert. I think there was plenty of money available.

Mr. Seiberling. Did not some banks send their money on call to

Mr. Reichert. Some. Not many, however.

Mr. Seiberling. In the cases where these individuals withdrew their money and sent it to New York, or these corporations, did the banks have to go to the Federal reserve banks to borrow?

Mr. Reichert. Not to an unusual extent; no. I think our borrowings were not exceptionally high until the close of the year. They were rather high then.

Mr. Seiberling. That was what month? Have you the figures

Mr. REICHERT. Yes; I have the figures.

Bills payable on December 31, 1929, \$45,487,000; rediscounts, \$10,503,000.

That is for all the banks in the State.

Mr. Seiberling. Can you give the total amount borrowed from .the Federal reserve?

Mr. Reichert. No, I could not do that. I haven't it segregated. Mr. Seiberling. How did those figures you gave compare with July 1, 1929?

Mr. Reichert. On July 1, the total notes and bills rediscounted

amounted to \$3,723,000; bills payable, \$34,233,000.

Mr. Seiberling. What is the difference between those two totals?

Mr. REICHERT. About \$17,000,000.

Mr. Seiberling. Did the rates of interest to borrowers in Michigan go up during the high call-money rate?

Mr. Reichert. Possibly in the large centers. Our rates in banks

are quite stationary, especially in the smaller banks.

Mr. Seiberling. You do not think that the small banks said to their borrowers that they would have to charge them 1 per cent more on account of the high call-money rate?

Mr. REICHERT. I do not think so; no.

Mr. Seiberling. But you do think that that was done in the cities?

Mr. Reichert. I think their rates went up; yes.

Mr. Seiberling. What are the rates under your usury law in Michigan?

Mr. REICHERT. The legal rate is 5 per cent; the amount you can charge is 7 per cent. The limit is 7 per cent.

Mr. Seiberling. That has been very satisfactory; has it?

Mr. REICHERT. Yes.

Mr. Seiberling. That is all.

Mr. Luce. Unless there are other questions, the committee will thank Mr. Reichert for coming before it, and adjourn until to-morrow

(Thereupon, at 12.30 o'clock p. m., an adjournment was taken until

Thursday morning, May 15, 1930, at 10.30 o'clock.)

BRANCH, CHAIN, AND GROUP BANKING

THURSDAY, MAY 15, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY. Washington, D. C.

The committee met in the committee room, Capitol, at 10.45

o'clock a. m., Hon. Robert Luce presiding.

Mr. Luce. In view of the memorial exercises to-day at 12 o'clock, if the committee should be in session at a quarter of 12, and I am in the chair, I will declare a recesss in case we have not finished with the witness, and then we will resume this afternoon. It is possible, however, that we may finish with the questioning by a quarter of 12, and that will give us an hour.

Mr. Hovey, the bank commissioner of Massachusetts, is here to-day. Mr Hovey, we shall be glad to be informed by you of your views on branch, chain, and group banking, and on any other features

of the banking situation that you care to discuss.

STATEMENT OF ROY A. HOVEY, COMMISSIONER OF BANKS, STATE OF MASSACHUSETTS

Mr. Hovey. Mr. Chairman and gentlemen of the committee. Perhaps I can best approach my views on branch, chain, and group banking by a résumé of the history of such forms of banking in

Massachusetts.

can

will row

ntil

Branch banking made its first appearance in Massachusetts in 1902, when the legislature by a general law authorized trust companies, Our only State chartered commercial banks, to establish branch offices subject to the approval of the supervising board. That act limited to one the number of branches that a trust company might have and confined its location to the same town or city in which the main office was located and with the restrictions that it be operated solely for the purpose of receiving deposits, cashing checks, and maintaining a safe-deposit business. At that time there were 37 trust companies having total assets of \$164,000,000. To-day there are 101, with assets of \$777,000,000. Their distribution in cities and towns classified as to population is indicated by a table which I am submitting. The figures are as of March 27, 1930.

(The table referred to is as follows:)

		Number					
Population	Cities	Trust com- panies 1	Branches	Per cent of banks	Assets	Per cent of assets	
(1) 100,000 or more (2) 50,000 to 100,000 (3) 25,000 or 50,000 (4) 10,000 to 25,000 (5) Less than 10,000	8 7 13 42 285	37 13 12 20 19	25 14 7 9 5	36.64 12,87 11.88 19.80 18,81	\$477, 580, 801 110, 591, 459 76, 702, 271 69, 605, 957 42, 777, 964	61, 44 14, 23 9, 87 8, 96 5, 56	
Total	355	101	60	100.00	777, 258, 452	100.00	

¹ Members of the Federal reserve system: (1), 14; (2), 4; (3), 2; (4), 5; (5), none; total, 25.

Mr. Hovey. Only four of our 101 trust companies have a capital of less than \$100,000, the minimum statutory requirement being \$50,000, and then only in towns of less than 10,000 inhabitants. The smallest town in which a trust company is located has a population of approximately 1,800.

In spite of the fact that there are many towns within which there are no banking facilities, there is no town in all the State which is not within approximately 15 miles of the main office of a trust company or national bank.

Under our statutes the authority for the establishment of branch offices of a trust company is granted by the board of bank incorporation, which consists of the commissioner of banks, commissioner of corporations and taxation, and the treasurer and receiver general, and only after a public hearing has been held and it has been shown that the public convenience will be served by the establishment of the In 1914 the policy was also adopted through legislation to allow consolidating banks to maintain the offices of the consolidating bank as branches provided both banks were located in the same city of town and that the commissioner of banks was satisfied that the public convenience would be served thereby. In 1920 we had our first instance of a branch being established outside of the town in which the main office is located. This was accomplished by a special act of the legislature. Similar privileges have been similarly granted four times since then, but only for the purpose of establishing a branch where no other bank existed. Three of these branches are located in communities which adjoin the town in which the main office is located, the others being in towns within 12 miles of the main office.

In view of the number of special bills which were being introduced in the legislature seeking branch privileges for trust companies not authorized under the general laws and which appeared reasonable and desirable for the extension of banking facilities to our citizens, the banking department was convinced that general legislation should be passed and in 1926 made such a recommendation. This sought to remove the restriction on the number of branches in the town in which the main office was located and also sought to allow the establishment of a branch office in an adjoining city or town provided no other trust company was located therein. The recommendation, which was intended mainly to extend banking facilities to communities where such facilities were lacking, also carried provisions which

a

6

a

O

te

it

th

al

W

el

would prevent the consolidation of trust companies which were not located in the same town or city. At that time we were opposed to a policy of state-wide branch banking and the most that the bill would have accomplished would have been to provide additional banking facilities within the same or adjoining towns in which the main office of the trust company was located. While the operation of such a law would not have permitted any of the trust companies located in Boston to establish branches in neighboring cities and towns it would have been of advantage to some of the smaller communities in other Parts of the State which are unable to support a bank of their own. However, attempts to obtain such a change in 1926 and in 1927 were unsuccessful. Misunderstandings and the opposition of the national banks undoubtedly prevented the adoption of such a measure.

In 1928 an amendment was passed which removed entirely the numerical restriction of branches in cities of more than 100,000 population, and restricted to two the number permitted in cities of 50,000 to 100,000, and to not more than one in cities and towns under 50,000; thus bringing our law more in line with the McFadden Act of February, 1927. These are the restrictions which are in force

to-day.

The total number of trust companies having branches is 42. Thirty have one branch, 8 have two, 3 have three, and one has 5; 60 in all. In 1908 the legislature granted a similar privilege to our mutual savings banks but the conditions under which they were allowed to establish branches varied from those of trust companies at that time In that they might establish one or more branches in the same town Where the banking house was located or in towns not more than 15 miles distant, where no savings bank existed at the time. The branches of savings banks were not established for competitive pur-Poses but for the encouragement of thrift and to furnish facilities

for savings in communities not sufficiently large to support or maintain a bank of their own. Among the 196 mutual savings banks only 30 have branches: 22 have 1, six have 2, and two have 3; forty in all. Ten of these

banks have branches outside of the town in which the main office 18 located.

We have never been in sympathy with a state-wide branch policy for Massachusetts, but recognize, however, that conditions in other

sections of the country might warrant its adoption.

Concerning chain banking, our experience has been limited to two or three cases several years ago in which one or two persons were the dominating influence. These were made up of trust companies and banks located in Boston and suburbs. These chains were, however, eventually terminated, local interests taking over the control and management in each instance. One resulted in the suspension of the parent bank which caused losses to stockholders and directors to an amount exceeding \$4,100,000. Failures among our banks are, it should be noted, few and except for the situation in 1920 and 1921 the record of Massachusetts among its trust companies is exceptionally clear, there being to date but 11 failures since trust companies were first organized in 1869. Among the national banks in Massachusetts there have been but 15 failures.

Group banking in Massachusetts has developed within the last two years, although not as widespread as in other sections of the country. At the present time there are six groups, all but one of which include both national banks and trust companies. The schedule which I will submit exhibits these groups as constituted at the present time, their assets comprising 45.5 per cent of the aggregate assets of national banks and trust companies in Massachusetts. The trust companies involved aggregate 14.4 per cent of the banking assets of all trust companies, while the national banks represent 59.1 per cent of the assets of all national banks in Massachusetts. At the present time all of these groups are controlled by national-bank interests and include

the largest of our national banks.

The success of chain or group banking of course depends upon the character of management the same as in individual banks. Group banking may have its advantages and benefits and much can be offered in its favor as your committee knows. I have no quarrel with the system in theory and would not object to it if proper operation could be guaranteed, but, granting that there are advantages, in actual practice it can too easily be subjected to improper use and when composed of banks operated under more than one code of laws and more than one supervising authority the opportunity for misuse is enlarged. For this reason and from the standpoint of a supervisor, I am forced to look with disfavor on such a system. I much prefer to see local management of a unit bank if the locality can furnish proper support, and believe a community is better served thereby than by the branch of a distant bank. If, however, I were to choose between group and branch banking, I should prefer to see the branch system, with all the difficulties it carries in examining, but I question whether permitting the establishment of branches will of itself stop or even check the growth of the group method. It is realized that regulations governing national banks must necessarily be national in scope but it must also be recognized that conditions differ widely in various parts of the country and policies and methods which may be beneficial in one section may be detrimental in another. Each State should know its own needs best and for this reason it appears to me that if a change is made in national bank branch regulations, the privileges granted thereby should not exceed those granted to statecharactered institutions. This would, of course, necessarily limit branch banking in its widest latitude to the State in which the bank is located.

In Massachusetts more than one-half of the banking assets are made up of savings or time deposits. In the smaller or suburban centers the ratio of savings is greater than in the large cities. Outside of the larger cities banking resolves itself more or less into an investment service. This raises the question of whether the centering of control and management of a group of banks of this type may not open a way for unwise or unscrupulous investment of savings deposits, which deposits we in New England for more than a century have given the greatest possible protection. In so far as Massachusetts State chartered banks are concerned, I feel that they are well protected by the statutory requirement that such savings be segregated from commercial deposits and invested only as savings bank funds may be invested, savings depositors being protected by an elaborate statutory

system regulating the investment and management of their funds. Our experience has demonstrated that such segregation and investment is of great advantage to the savings depositor, who has always been given the utmost protection. Therefore, in considering this subject, it would seem to me that some form of segregation and regulation of assets representing savings deposits should also have attention, if it is within the scope of this investigation.

When a large proportion of the deposits consist of time or savings accounts I do not see how any better service can be rendered by banks in a group than could be worked out by a unit bank under an arrangement with a larger city bank as correspondent or investment

counsel.

In view of the limited experience of Massachusetts in these different forms of banking it is difficult at this time to arrive at a definite conclusion. I appreciate that my views have offered no solution of the problem confronting you, but only reflect my opinion as a supervisor and that of may others in my State, namely, that there appears to be no real or immediate necessity for group banking nor wide extension of branch banking privileges in Massachusetts.

I shall be glad to have you call upon me if I can be of any further

assistance.

I am submitting herewith the table I previously referred to, showing the group banks in Massachusetts.

(The table referred to is as follows:)

Group banks in Massachusetts

[Hundreds omitted except in columns showing number of banks]

Group	National banks					Trust companies					All banks				
	Num- ber	Capital	Surplus	Undi- vided earnings	Assets	Num- ber	Capital	Surplus	Undi- vided earnings	Assets	Num- ber	Capital	Surplus	Undi- vided earnings	Assets

Mr. Luce. Mr. Hovey, am I right in my understanding that what we in Massachusetts call trust companies are in all practical aspects the same as State banks in other parts of the country?

Mr. HOVEY. That is right. They are our only State chartered

commercial banks.

Mr. Luce. We in Massachusetts seem to have a monopoly of the use of that term for State banks, and I thought the record would

Mr. Hovey. We have no State banks; none as such.

Mr. Luce. About 20 years ago there was a tendency in Boston toward the amalgamation of banks, and, as I recall it, after 5 or 10 Years of experience therewith, there came a revival of demand for charters for smaller banks, the allegation being made that the big banks did not give that personal service and attention which a small bank would.

Am I right in that?

Mr. Hovey. I think you are; yes. Mr. Luce. Now there seems to be a return to the idea of amalgamation. What do you think the tendency is going to be in Massachusetts in the immediate future—toward more amalgamation?

Mr. Hovey. I think the record shows that in the last few years there has been a lessening tendency in that direction. In 1922 and 1923 we had quite a little activity among the banks toward consolidations, but since that time it has been falling off.

Mr. Luce. Is one warranted in the inference that if these consolidations fail to give as much service as might be desired, the result

will be competition from new, independent units?

Mr. Hovey. I think that would follow.
Mr. Luce. That has a rather important bearing upon what we are considering, because of the apprehension in many quarters that consolidation means monopoly and a prevention of the benefits of competition.

In the matter of these consolidations of trust companies, will you set forth, for illustration, the story of the Newton Trust Co.? Tell

us what happened to the Newton Trust Co.

Mr. Hovey. The Newton Trust Co. consolidated with the Newtonville Trust Co. located in the same city. Then there was a new trust company formed under the name of the City Trust Co., which had a branch, and then consolidated with the Newton Trust Co. The Newton Trust Co. had a branch de novo authorized by the Board of Banking Incorporation. So that, after the consolidation it had Practically, I should say, five or six offices in Newton. Then there was a trust company organized in Needham, an adjoining town, and think the directors of the Newton Trust Co. owned the controlling Interest. Then, the Newton Trust Co. itself owned the control of the Dedham National Bank, which was located in an adjoining town, and also a national bank located in Westwood, so that they had Several offices right in Newton and the adjoining towns, all practically under the same control and management. Then, when the Old Colony Associates began forming their group, the Newton Trust Co. was one of the banks taken, the control of which was taken over by the Old Colony Associates.

Mr. Luce. This has a bearing, of course, upon one of the more Serious problems before the committee at the present time. Evidently this amalgamation has taken place because the persons concerned thought it more profitable. We, of course, are here to guard the welfare of the public, the depositors and borrowers as well as that of the owners of the banks.

Do you hear any criticism of this series of transactions in their bearing on the convenience and business prosperity of the commu-

nities affected?

Mr. Hovey. Not as much at the present time as when the idea first took shape.

Mr. Luce. The criticism then was one of expectation?

Mr. Hovey. Yes.

Mr. Luce. In actual results, does anything indicate to you that this has worked any injury to the public?

Mr. Hovey. Not in this instance; not in the instance you speak of.
Mr. Luce. You expressed, however, some apprehension that the
system, generally applied, might have unfortunate results.

Mr. Hovey. It all depends upon the character of the group, that

is, of those managing the affairs of the group.

Mr. Luce. It is easy to understand how the disposition of funds might be fortunate or unfortunate, according to the temper of the management, but it is not so easy to understand, assuming honest management, how an injury will result to the depositors and borrowers, and if there be such injury, it is important that we should know it. For example, we are told by some witnesses that consolidations of this sort injure the borrower because of less generous treatment than would be received from the management of an individual unit, and injures the depositor because of giving him less interest and also exposing him to the new practice of restricting deposits to the larger accounts.

What have you to say on that?

Mr. Hovey. I have not seen any evidence of that occurring, of having a tendency to act to the disadvantage of the depositor or the borrower, so far as our experience in Massachusetts has gone.

Mr. Luce. Then, assuming honest management, what is the basis

BCVtdTt

h

b

0

ti

A

0

38

18

bi

01

for your own disposition to object to branch banking?

Mr. Hovey. From the use that may be made of it, where a group contains banks having both Federal and State supervision, from the standpoint of the supervising examiner.

Mr. Luce. The mechanical phase of it?

Mr. Hovey. Yes.

Mr. Luce. Am I right, then, in thinking that in principle you see no objection to branch banking?

Mr. Hovey. You are speaking of branch banking?

Mr. Luce. Yes, branch, or any other form of consolidation—in principle.

Mr. Hovey. No; I can not see any disadvantage to the group system, if that is what you are speaking about just now.

Mr. Luce. I am speaking of the broader question of the consolida-

tion of banking capital in one form or another.

Mr. Hovey. I imagine that it could be carried to excess, but so far as our experience has gone I have not seen anything that would lead me to believe that it has worked an injustice yet to the depositor or borrower.

Mr. Luce. Turning to another aspect of the general subject, of course you and I are familiar with the mutual savings banks and their growth and value, but many of the members of Congress are not so familiar with them, coming as they do from States where mutual savings banks are few or there are none at all, and I think it would be serviceable if between us we brought into there cord something more about the mutual savings bank system.

How many States now enjoy the blessings of that system?

Mr. Hovey. I think there are 17 States in which there are mutual savings banks. The majority of them are located in New England and New York.

Mr. Luce. What is the prevailing rate of interest being paid now

by the Massachusetts savings banks on deposits?

Mr. Hovey. Practically one-half of our banks are paying 5 per cent per annum on savings deposits, and the rest of them are paying

between 41/2 and 5 per cent.

Mr. Luce. I have inquired of various witnesses in the course of these hearings, and have yet learned of no State where the mutual savings banks do not exist where depositors of savings are getting more than 4 per cent, and they are running from that down to 3 per cent.

Does your general knowledge of the situation lead you to think that this difference is due to the fact that where the mutual savings bank is found, it profits by the unpaid or the little paid services of men who are engaged in it partly through philanthropic motives, or is it due to the fact that where there are no mutual savings banks the banks are not paying as much on their savings deposits as they

could pay?

or

Mr. Hovey. No. I think it is because the expense of operation of a savings bank is very small compared with that it costs to operate a commercial bank, and in a savings bank after the statutory amounts which are required to be set aside for surplus and all expenses are taken into consideration, the remaining earnings belong to the depositors, and I think that has a great effect on the increased dividend Then, again, the investments of savings banks are so regulated that they are not subject to the same risks and hazards as are the investments of the assets of commercial banks, so that the losses in savings banks are very small.

Mr. Luce. Let me inquire further about the matter of comparative expense. My observation would not lead me to think that the employees of savings banks are paid on a greatly different scale from

those of national banks.

Mr. Hovey. No; I think they compare about the same.

Mr. Luce. And the rent, apparently, is not essentially different. As you and I know, there are several savings banks in Boston that occupy some of the most costly real estate in the city.

Mr. Hovey. That is right.

Mr. Luce. Then just what is the item of greater expense in the savings department of a national or State bank?

Mr. Hovey. Well, the number of employees in a commercial bank

is much greater.

Mr. Luce. It is greater, of course, because of the diversified business, but I mean just confining ourselves to the comparative cost of running a savings bank and the savings department in a national

bank, exclusive of the other national bank business. You will see that I am trying to find out, if I can, any excuse for the payment in a place like the District of Columbia, for example, of only 3 per cent or 3½ per cent on deposits of poor people, when in Massachusetts they can get 4½ per cent to 5 per cent. Nobody has ever given me an adequate explanation, and I wanted to know if there is a reason for it.

Mr. Hovey. Our savings banks' assets are made up more than 50 per cent of real estate loans, on which the uniform rate practically is 6 per cent, and that forms the bulk of the investment, and the rest is in bonds which are legal for investment and which may not return more than between four and a half and five per cent, but the expense of management is so small that the surplus funds which have been accumulating over a period of years produce an income which carries the overhead, so that it allows the investment of income realized from the investment of deposits to be paid in dividends.

Mr. Seiberling. Will you have him put into the record what commissions or other charges are paid in connection with real-estate loans outside of the 6 per cent interest, if any?

Mr. Luce. Yes. Will you answer Mr. Seiberling's question on that?

Mr. Hovey. The borrower, you mean?

Mr. Seiberling. What the borrower has to pay in addition to 6 per cent when he gets the loan.

Mr. Hovey. There is nothing paid to the bank outside of the interest.

Mr. Seiberling. What does he have to pay?

Mr. Hovey. He does not have to pay anything unless he goes to a broker to get a loan for him.

Mr. Fenn. The borrower can go directly to the bank.

Mr. Hovey. The borrower can go directly to the bank and make an application for a mortgage loan, and there is no expense entailed in connection with that.

Mr. Fenn. There may be a slight expense for examination of title.

Mr. Hovey. Of course, the borrower pays the title expense.

Mr. Seiberling. That is very unusual.

Mr. Fenn. Not in New England, even with an insurance company or a bank.

Mr. Luce. If we should put into the banking law requirements for segregation and stipulations about investments corresponding to those in Massachusetts and of the other mutual savings bank States would it be reasonable to expect or would there be ground for hope that throughout the rest of the country the savings of the poor might be safeguarded and that those savings might bring a rate of return comparable to what they bring in the mutual savings banks States?

Mr. Hovey. I would think that would depend upon whether conditions would be comparable to those in our States.

Mr. Luce. What particular conditions?

Mr. Hovey. In regard to real estate. Practically all of our realestate loans are on improved property, what we call improved property. Now, that might not be possible for banks in other sections of the country to loan such a proportion of their assets in that manner and thus bring them the income that we get for the same amount of security. Mr. Luce. When we passed the McFadden Act, you may remember that we increased the amount that national banks might lend on real estate. This was done in response to the averments from various parts of the country that if the banks were given this privilege they could easily find the mortgages; that they wanted the power to take advantage of the opportunities which they said existed. So I should doubt if the consideration you suggest would greatly affect the situation.

I am asking these questions because I am so anxious to acquaint the rest of the country, as far as I can, with the blessings of our mutual

savings bank system.

Now, in the matter of the segregation of deposits, would there be anything unfair, anything in the nature of hardship, if we should make it a part of the national banking act that savings deposits everywhere shall be segregated?

Mr. Hovey. I should think not.

Mr. Luce. Turning to another aspect of the savings bank question, it has been brought to my notice recently that persons interested in the present movement toward bank consolidation are seeking to get control of certain Massachusetts mutual savings banks; is that correct?

Mr. Hovey. There have been attempts made to do that very

thing.

Mr. Luce. I do not understand how it can be done under our laws. Mr. Hovey. Only under the guise, you might say, of liquidation of the savings banks, but that is only possible with the approval of the banking department or the commissioner, and I have withheld any such approval.

Mr. Luce. What advantage would the trustees of a savings bank get out of liquidating? Is this thing done by offering some money

gain to them if they will liquidate?

Mr. Hovey. Well, I do not know just what the consideration has been, but a great many of the savings banks have on their boards men connected with either trust companies or national banks, and it can be readily seen, where only a two-thirds vote of the board of trustees is required to liquidate a savings bank, that it would be easy to have that proportion predominate to the interest of a commercial bank.

Mr. Luce. I would like to put it on the record, sir, that for one I strongly approve your course. I think it would be a calamity if commercial interests were allowed to invade the mutual savings bank

field in that way.

Mr. Hovey. There is a bill pending in the legislature—I think it is probably in its final stages of passage—that will make it much more difficult for the savings banks to liquidate, and before they can liquidate they will have to try to make arrangements with a neighboring mutual savings bank for consolidation.

Mr. Luce. I am glad to hear that, and I hope the bill may become

law.

Mr. Hovey, to myself at least it seems that in the study we are making here we are confronted by a condition rather than by a theory. We see in every direction a tendency of consolidation making headway in the banking field. Some of the committee are reluctant to approve or support that tendency, but how are we going to stop it? Assuming that it would be desirable to protect and preserve the unit bank, what can we do about it? There are very few,

if any, witnesses who have told us how to stop it if we want to do it. Have you any idea on that?

Mr. Hovey. I have not any solution of that question.

Mr. Luce. We seem to be in the dark as to what can be done

Mr. Hovey. I may add that the only statutory regulation we have in Massachusetts is that two trust companies can not consolidate without the approval of the commissioner, and I know of one instance where such consolidation was contemplated and the approval was denied.

Mr. Luce. We have nothing to prevent John Jones from owning

the majority control of the stock in two trust companies?

Mr. Hovey. No.

Mr. Luce. Has there been any suggestion in Massachusetts that

it ought to be prevented?

Mr. Hovey. The only regulation regarding stock ownership is that a trust company may not own more than 10 per cent of the stock of another trust company. Of course, that does not prevent individuals from holding the stock of another trust company for the benefit of another bank.

Mr. Luce. Is there any marked tendency in our State or in New England, so far as you know, for national banks to turn to the State

banking system?

Mr. Hovey. No. There has been no indication of that, lately at least. I think in the past 10 years there were three trust companies that converted into national banks at the time of consolidation, and three that converted from national banks to trust companies, so that it has been even as far as that is concerned. There were several that converted into national banks for the purpose of consolidation, however, within the last five or six years.

Mr. Luce. Mr. Fenn, do you desire to ask any questions?

Mr. Fenn. I just wanted to ask a few questions, sir. I am very much interested in what you have said about the savings banks, for that same system prevails in my State, Connecticut, as in Massachusetts

Have you found that this privilege, if I may term it such, granted to your State banks or your trust companies to carry on savings departments, has diminished the interest in mutual savings banks? In other words, has it reduced the number of depositors in mutual savings banks? Has there been competition between the savings departments of your trust companies and the purely mutual savings banks?

Mr. Hovey, All the competition that there has been has been bene

ficial, I should say.

Mr. Fenn. Been beneficial to the mutual savings banks?

Mr. Hovey. It helped the mutual savings banks as well as the trust

Mr. Fenn. In relation to these dividends or this interest money which is paid to depositors in savings banks—and in Connecticut the same rate is paid, practically, as in Massachusetts, 4½ or 5 per cent—it occurs to me that this difference in interest rates between that paid in Massachusetts and Connecticut and in other parts of the country is due in a measure to the long existence of those banks and to the fact that during that time they have accumulated a surplus

and I do not know at the present time whether or no the investments Prescribed for savings banks and trust funds are the same in Massachusetts as they are in Connecticut. I take it they are very much the same, but in Connecticut the savings banks are allowed to purchase stocks in national banks, and investments have been made by mutual savings banks in Connecticut for a long term of years in those bank stocks, some in New York and some in Massachusetts, as well as some in Connecticut, and by reason of the increased value of those bank stocks which has come about because of the prosperity of the country, the banks have built up a considerable surplus in addition to the surplus by actual accretion in the purely mutual savings banks, and I want to ask you if that has not had a great deal to do, or considerable to do, with this high rate of interest paid to our depositors, and I use the term "high rate of interest" in comparison with the interest Paid in other sections of the country.

Mr. Hovey. I agree that it has helped to build up a surplus.

Mr. Fenn. And that surplus has had its effect in the amount distributed to the depositors?

Mr. Hovey. Yes.

Mr. Fenn. In regard to the question raised by Mr. Luce of the difference in expense between a savings bank and a commercial bank, in an ordinary commercial bank in a large city, that has a large capital, surplus and undivided profits as well as a large amount of money, there are several more executive officers, are there not, than in a savings bank?

Mr. Hovey. Yes.

Mr. Fenn. Does not that add largely to the salary expense, if I may term it such of the commercial bank?

Mr. Hovey. I think there is no question about it.

Mr. Fenn. I have in mind one of the largest savings banks in New England where the affairs of that bank are administered practically by the treasurer, one executive officer, and while they have a large number of employees, necessarily so in a bank of that size, with six or Seven millions of deposits, on the other hand a commercial bank with, we will say, \$20,000,000 in deposits, which would be a good sized commercial bank anywhere outside of these great aggregations of capital in New York City, would reqire several more executive officers for instance, there is the chairman of the board of directors, there is the president of the bank, and there are several vice presidents, men who on account of their knowledge of banking draw considerable salaries in comparison with the salaries received by one or two men in a savings bank of the kind I am referring to.

Has that not been your experience, Mr. Luce? Mr. Luce. Yes. Mr. Fenn, I was trying to bring out, if I could, the fact that the expense of handling the savings department of a national bank ought to be no larger than the expense of handling the same

amount of money in a savings bank. Mr. Fenn. I see. Of course, we are very much interested in his Savings matter, and our mutual savings banks in New England are a matter of pride with us.

I inferred from what you said here that attempts had been made by some commercial banks to take over mutual savings banks and

make them a part of their banks? Mr. Hovey. That is right.

Mr. Fenn. Under the Massachusetts law, that would entail a supervision of the savings department, to see that the savings department complied with the law in regard to investments?

Mr. Hovey. In a trust company?

Mr. Fenn. Yes. I am speaking purely of a trust company.

Mr. Hovey. Yes.

Mr. Fenn. Do you think it would be wise to allow the combination of the commercial department and the savings department under the same roof and practically under the same management?

Mr. Hovey. You mean, the investments mingled?

Mr. Fenn. No; I do not mean mingled; I mean the carrying on of the business. In other words, would a man who is thoroughly versed in commercial banking be as competent to manage a savings department as a man thoroughly versed in mutual savings banking?

Mr. Hovey. Possibly I can illustrate that by our experience with trust companies that we closed in 1920 and 1921. They all had quite sizable savings departments. In liquidating those 4 trust companies, 3 of them paid 100 per cent to their savings depositors and 1 paid 92.04 per cent. In the commercial department, the most that was paid was 66 per cent, and one paid only 38.07 per cent.

Mr. Fenn. In other words, the savings department was the most

profitable; that is, dollar for dollar?

Mr. Hovey. To the depositor, yes.

Mr. Fenn. Well, the bank must have had it or it could not have

e

W

0

8

8

de

al

di

ar

88

Pa

or

th

- de

given it to the depositors.

Mr. Luce. I think it was due to the segregation of deposits in the trust companies, to the fact that the savings deposits were invested in accordance with the laws covering savings funds. They were more safely invested. Am I right on that?

Mr. Hovey. That is right, and the capital stock liability first goes

to help to make up any deficiency in the savings department.

Mr. Fenn. Of course, those were well-managed banks?

Mr. Hovey. No, they were not.

Mr. FENN. Why did they liquidate?

Mr. Hovey. Because of their poor management and bad condition.
Mr. Fenn. Despite that poor management, it did not particularly affect the savings department? In other words, that savings department was controlled absolutely by the law of Massachusetts?

Mr. Hovey. The same law that controls our mutual savings banks. Mr. Fenn. As I asked before, have you found any ill effects from this competition of the savings departments of the commercial banks with the mutual savings banks? In other words, has it been detrimental at all to the mutual savings banks?

Mr. Hovey. That would be hard to prove.

Mr. Fenn. Do not the people of Massachusetts turn to the old mutual savings banks for the safeguarding of their savings?

Mr. Hovey. I think they do.

Mr. Fenn. It is more or less traditional and historic with them?

Mr. Hovey. Yes.

Mr. Fenn. And it is the same with us in Connecticut.

As Mr. Luce said, we scarcely know what to do in regard to this question of branch, group, and chain banking; it is a very troublesome problem. Has chain banking prevailed to any great extent in Massachusetts?

Mr. Hovey. No.

Mr. Fenn. Is there not a large bank in Boston that has a group of banks?

Mr. Hovey. You are speaking of chain banking and group banking as being the same?

Mr. Fenn. I speak of them as practically the same. Branch

banking we would consider different.

Mr. Hovey. We have one large group—probably not large compared with some others, but I submitted a table which shows 21 banks in that group.

Mr. Fenn. Are those banks trust companies or national banks?

Mr. Hovey. Both.

Mr. Fenn. I was very much interested in what you said in regard to the supervision of an organization of that character, that the State examiner could not supervise the national banks, and, contra, the national bank examiner would have nothing to do with the State banks. What solution could you give to rectify or cure that defect? How can we get a national act that will provide for the supervision of both classes of banks, when they are combined in a group?

Mr. Hovey. I do not know that legislation would be necessary. Full cooperation between the Comptroller's department and the

State banking departments would accomplish it.

Mr. Fenn. Of course, the only thing I can see that could be done—and I do not advocate it, because I have not studied it enough—would be for the Government to say that in an organization of that kind State and national banks should not be mixed. We certainly could pass an act of some sort to prevent consolidations of State banks with national banks, or their control by holding companies. We have already given that some thought, and will continue to do so.

Mr. Hovey. That would be the only way.

Mr. Fenn. I do not know that that should be done. While it may be practicable, I doubt if it can be done, because, as you suggested, of the two classes of supervision, of the State banks in a group by the State examining authority and of the national banks in that same group by the national authorities, and it would be rather difficult to determine the exact condition of that group. Of course, if they were all national banks in the group, or all State banks, it would not be so difficult.

I think that is all.

Mr. Luce. Mr. Seiberling, have you any questions?

Mr. Seiberling. Outside of real estate loans, what other securities

are your mutual savings banks investing money in?

Mr. Hovey. Government and municipal bonds, certain bonds of gas and electric companies that meet the statutory requirements, and railroad bonds.

Mr. Seiberling. Bank stocks?

Mr. Hovey. Yes, bank stocks of national banks in New England, or trust companies in Massachusetts.

Mr. Seiberling. But not outside?

Mr. Hovey. No; and then there are certain classes of personal loans that they are allowed to make.

Mr. Šeiberling. Have your mutual savings banks made a good deal of money out of investments in bank stocks?

Mr. Hovey. I should say yes.

Mr. Seiberling. And those stocks generally carry a double liability?

Mr. Hovey. Yes.

Mr. Seiberling. Then their profits may have come from other sources beside that 1 per cent differential between the interest paid on deposits and the interest received on real estate loans—is that true?

Mr. Hovey. Some of that surplus is made up of profits made in the

sale of securities.

Mr. Seiberling. They are allowed to speculate to a certain de-

Mr. Hovey. If you want to term it that. It is the purchase of

bonds.

Mr. Seiberling. This segregation of deposits has worked a hardship on the commercial depositor, has it not?

Mr. Hovey. I do not know what you have in mind.

Mr. Sieberling. In your trust companies and State banks, where you segregate the savings deposits and commercial deposits, it has worked a hardship on your commercial deposits, has it not?

Mr. Hovey. No; I would not say it has worked a hardship on them. Mr. Seiberling. They did not get so much on their deposits as the other people got.

Mr. Hovey. That was because of the difference in the nature of

the assets of the savings department and the commercial department. Mr. Seiberling. If they had all been together and the money had all been mingled, and the loans and securities combined, they would all have received the same percentage.

Mr. Hovey. It would have worked a hardship against the savings

d

n

S

d

W

m

St

re

m

to

yo he

IY

th

re

depositor.

Mr. Seiberling. But they got their money in full.

Mr. Hovey. Yes; because the investment of their deposits is

regulated by law.

Mr. Seiberling. I understand, but I say that it has worked a hardship on your commercial depositors, who did not get 100 cents on the dollar.

Mr. Hovey. That is right.

Mr. Seiberling. They had the security of double liability, too. Mr. Hovey. The capital stock liability first went to take care of the savings depositor, who received the greatest protection.

Mr. Seiberling. Irrespective of what your law may be up there, do you think that one depositor in a bank is entitled to any more

security than any other depositor?

Mr. Hovey. We treat the savings depositor the same as a bene-

ficiary under a trust. Those are trust funds.

Mr. Seiberling. But I am asking you for your opinion about that. Do you think that one depositor is entitled to more security than any other depositor in a bank?

Mr. Hovey. I think so, yes.

Mr. Seiberling. And your reason for that, I suppose, is because

he can not draw it out right away—is that the reason?

Mr. Hovey. Not necessarily. The deposit is made under different conditions. The savings deposit is something that may be a person's entire investment; it often is the entire investment of a small wage earner or a man of small means, whereas in the commercial depart-

Mr. Seiberling. You put it entirely on a philanthropic basis?

Mr. Hovey. Two different bases altogether.

Mr. Seiberling. That is all.

Mr. Luce. It is a quarter of 12, and I presume that members of the committee will want to be on the floor of the House. So we will adjourn to 2.30 o'clock.

Thereupon, at 11.45 o'clock a. m., a recess was taken until 2.30

o'clock p. m.)

AFTER RECESS

The hearing was resumed at 2.30 p. m., at the conclusion of the

Mr. Luce. The committee will come to order.

STATEMENT OF ROY A. HOVEY-Resumed

Mr. Luce. Mr. Wingo, do you desire to address some questions to

Mr. Hovey?

Mr. Wingo. Unfortunately I had to be at another meeting this morning and I did not hear his original statement; so I am hardly in a position to question him.

Mr. Luce. Judge Brand.

Mr. Brand. In answer to one of Mr. Luce's questions, and in discussing group bank systems, you stated that you had not seen any deleterious effect and had not had discord or any trouble up to date due to existing group banking system, but it did afford means to affect the standing of depositors and borrowers in the banks; that it might become injurious to depositors and borrowers in one of your savings banks, referring to State banks.

Now, did you mean to exclude stockholders or was your failure to do so due to inadvertence. As I understood your statement, it is your opinion that this group banking system might arrive at a point where it would interfere with the banking system of Massachusettsmight injure depositors and borrowers, but you did not include

stockholders.

Mr. Hovey. Well, if it was the result of poor management which resulted in loss, of course it would affect the stockholders. It might become necessary to levy an assessment to make good any losses that might be incurred.

Mr. Brand. The stockholders would be affected first, it would seem

to me. What is the liability in the banks in your State?

Mr. Hovey. One hundred per cent. Mr. Brand. Now, in another part of that statement, Mr. Witness, you stated that the time might come when the group system would have a bad effect on banks generally up there. That is the part that had marked in your statement and which I wanted to read to you. You used the word "trouble" or it would be productive of trouble to the other banks now doing business successfully in your State. Do you recall that part of your statement?

Mr. Hovey. I do not recall just what you have reference to.

Mr. Brand. I refer to page 7 of your statement and this portion thereof:

fre

I have no quarrel with the system in theory and would not object to it if proper operation could be guaranteed, but, granting that there are advantages in actual practice it can too easily be subjected to improper use and when a company of banks operated under more than one code of laws and more than one superseding authority the opportunity for misuse is enlarged.

Mr. Hovey. It might bring trouble.

Mr. Brand. Well, now, amplify that statement. In what way would it bring trouble to the other banks? You have in mind what I am trying to call your attention to?

Mr. Hovey. Well, I do not know as I could answer that in just the way you are looking for. Other than that portion of my State

quoted by you.

Mr. Brand. Will the time ever arrive if this group system of banking gets a foothold in your State and continues to take over banks and go into other States where other unit banks are established,

would it be injurious to the banks now in existence?

Mr. Hovey. That would reflect back on the character of the management of the group. Some groups might be managed very ably which would be beneficial for the smaller bank and also the reverse might be true if the character of the management was not looking toward the proper conduct of its various group members, but rather to its own profits.

Mr. Brand. If it is bad management on the part of the group

bank, how would the other banks be hurt?

Mr. Hovey. The management of the individual bank as well as of the parent bank—

Mr. Luce. I think the judge has in mind not the bank in the group

but an independent unit bank in the same community.

Mr. Hovey. You mean a competitor?

Mr. Brand. Yes. It is not material to my inquiry whether group banks are successfully managed or not. I am more interested at the present in the competitors of the group systems, the independent unit banks. The chairman has the right idea about it. What effect would bad or good management or group banking have on competitors?

Mr. Hovey. A group bank, in a large group of banks, might furnish more facilities than a smaller bank could alone which might

draw business away from the other banks.

Mr. Brand. Would it not have that effect?

Mr. Hovey. It is quite apt to—that is, a properly managed group bank would.

Mr. Brand. Ultimately, is it not possible that it could drive out a

competitor?

Mr. Hovey. I have in mind also another effect. A group bank might offer a higher rate of interest than it could afford to pay to get business from the other banks and thus jeopard its own depositors.

Mr. Brand. And would it not also hurt the competitors?

Mr. Hovey. It would hurt both.

Mr. Brand. I am not now interested in the group bank. I am making my inquiry relative to the independent unit bank.

Mr. HOVEY. Undoubtedly it would feel the effect.

Mr. Brand. Would it not have the effect of taking depositors away from the competing bank?

Mr. Hovey. I think so. Mr. Brand. Suppose, for instance, this branch of a group system offers to pay 51/2 per cent to savings depositors, the other banks not Paying over 4 per cent: Would not that hurt?

Mr. Hovey. Yes.

Mr. Brand. Suppose the old independent unit bank is lending money at 8 per cent, and the branch of a group bank comes in and says, "We will lend money at 6 per cent:" Will not that hurt them?

Mr. Hovey. Yes, sir.

Mr. Brand. Is not there a possibility of a number of group banks or of branch banks setting up this institution in a county where how only unit banks exist of breaking down the unit and independent banks.

Mr. Hovey, Quite possible.

Mr. Brand. Would you say that there would be a probability that such would be the effect?

Mr. Hovey. I do not know that I would want to go as strong as

that. The chances are it would.

Mr. Brand. These group banks would not hesitate to do that if they wanted to?

Mr. Hovey. They might go to any length to get business.

Mr. LUCE. Is that all?

Mrs. Pratt. I have looked through your statement very briefly but I judge it is largely based upon condition in Massachusetts. think you stated that almost any village of any size is within 15 miles of a bank?

Mr. Hovey, Almost any; yes.

Mrs. Pratt. I know Massachusetts very well. That means there is not a rural, or very little rural, community in Massachusetts. Almost all of those little towns flow one into the other. Of course the Problem before us is not applicable to an old grown-up State like Massachusetts where I judge you are opposed to anything but the unit bank; that is, you feel that the unit bank-

Mr. Hovey. It is favored in our State. Mrs. Pratt. It is favored in your State?

Mr. Hovey. Yes.

Mrs. Pratt. How would you meet the situation where you have great expanses of country and very scattered communities at long distances from central banks? You could not have, perhaps, a unit bank; it could not exist, and yet those people are entitled to banking facilities and that is the situation I think we will have to meet. assume from your statement that possibly it will have to be done by each State.

Mr. Hovey. That is what I mean when I said while we are opposed to a State-wide policy, we realized conditions in other states might

Warrant its adoption.

Mrs. Pratt. You think it should be confined to state branch banking and not national branch banking?

Mr. Hovey. That is the way I feel.

Mrs. Pratt. You would be opposed to the suggestion brought

100136-30-vol 2 pt 12-7

forward here of trade areas or areas coterminous with Federal reserve districts? You think that is too wide?

Mr. Hovey. I think for the present such changes as come should come gradually. That may eventually be a desirable plan, but I do not think any wide extension should be granted all at once.

Mrs. Pratt. Along the line that Judge Brand has been speaking, about the possibility of a branch bank or a bank belonging to a group coming into a locality where there was a unit bank: After all, the banking business is not altruistic any more than any other business. Do not banks have to meet competition as much as any business?

Have you not a perfect right to go in and establish—
Mr. Hovey. Yes, to some extent, but in Massachusetts we would not approve the establishment of a branch in a community that was already served, unless we thought there was a field there for another successful bank.

Mrs. Pratt. Even though it offered the possibility of giving the people better service and higher rates of interest?

Mr. Hovey. We would not allow the establishment of a bank just for competitive purposes.

Mrs. Pratt. Do you believe that is perfectly fair to a community? Mr. Hovey. If they are receiving ample facilities already, yes; because if you overbank a community you will probably have weak banks instead of strong banks. The trouble is, in many places, there

are too many banks. Mrs. Pratt. I think it has been brought out in the hearings, especially in the Western States, that the various agencies set up during the war, together with the banks already in existence, provided too many You would not be in sympathy at all with the idea banking facilities. of branch banking?

Mr. Hovey. In my statement I said I would favor branch banking over group banking, but I was not ready to see it become too widespread—that is, the privilege become too liberal.

Mrs. Pratt. You are opposed to such mergers as have taken place in New York? You call those mergers group banking, such as the Bank of Manhattan and the Chase National? That is what you call group banking, is it not?

Mr. Hovey. When I had reference to group banks, I had reference to a number of banks under the same control; not where they have been consolidated into one bank.

Mrs. Pratt. You are not opposed to these consolidations or mergers but only to group banks or branch banks?

Mr. Hovey. I have not taken any definite stand.

Mrs. Pratt. You do not wish to? Mr. Hovey. No.

Mr. Luce. Mr. Wingo, has anything else occurred to you?

Mr. Wingo. Nothing else, thank you.

Mr. Luce. There is one other matter I should like to inquire about for the purposes of the record, and that is in the matter of trust companies that failed, of which you spoke this morning. Am I correct in my impression that the underlying cause for these failures was the advancing of money for promoting?

Mr. Hovey. I do not know just which ones you refer to. Mr. Luce. The Tremont and others?

Mr. Hover. There was quite a little evidence of that, but I think the real cause was poor management and poor judgment in making their loans.

Mr. Luce. Was it in any considerable measure due to making loans

on real estate?

Mr. Hovey. No; I do not think it could be laid to that. Possibly the report of the commissioner in 1922 will give the reason a little clearer. I quote from that report:

A small group of Boston trust companies, controlled by men who lacked the ability, the training, and, in some cases, the moral character requisite to the proper administration of a bank, were so glaringly mismanaged and in such an unsound condition that the most drastic of actions became necessary in order to quickly avert a situation which was inviting a financial crisis in the city of Boston.

Mr. Luce. We have had some reference in the hearings to what seems a change in the character of banking which has marked the last 10 or 20 years—the lessening of discount of commercial paper and the increase in the investment in securities and the financing of corporate enterprises. Another phase of this question arose when the McFadden bill was under consideration, the testimony at that time showing a marked desire, on the part particularly of the western banks, to have larger opportunities to place their funds upon mortgages.

Do you look without any apprehension on the increasing part that

the banks are playing in the matter of securities?

Mr. Hovey. I do not know as I have given any particular attention to that phase of it. Some of our trust companies have organized corporations for that purpose which have been controlled by banks. The prime purpose was for the purpose of buying and selling of securities, which previously had been carried on by the banks them-

selves; that is, they separated the two businesses.

Mr. Luce. The allegation is made that this development of which you are speaking, has tempted some financial institutions to unload on trust funds the less safe securities which the bank may undertake to handle in an allotment for placing securities throughout the country, and that affiliated investing institution finds it almost impossible to exercise independent judgment as to the value of the security when the possibility of a profit on the part of the bank is a factor in the situation. Have we been troubled with that in Massachusetts?

Mr. Hovey. No. I think I can say quite definitely that the trust companies have been very careful in the investment of trust funds in their keeping and they have not taken advantage of any issues in which they may have been interested in selling. Some of them have even gone so far in their trust department as not to purchase any

securities from their investment corporation.

Mr. Luce. Would it be desirable to enforce that rightesous principle by law or can it be safely left to the consciences of the banks of

we country?

Mr. Hovey. Speaking for Massachusetts only, from our experience I think it can be left to our own banks. As you know, we have no statutes that regulate the investment of trust funds. I think the record has been exceptionally clear in that matter and the losses have been very rare.

Mr. Luce. I think, sir, that concludes our inquiry unless you think

of something else you would like to volunteer.

Mr. Hovey. I do not think of anything just now, but I shall be glad-

Mr. Luce. If any further suggestions occur to you or anything you wish to cover, I am sure that Chairman McFadden will be very glad to insert them following your statement in the record, for all the information and advice you can give will be very much desired.

Mr. Brand. I have one more question I would like to ask.

Mr. Luce. Very well.

Mr. Brand. Do your banks belong to the Federal reserve system? Mr. Hovey. Twenty-five out of one hundred and one trust companies are members of the Federal reserve system.

Mr. Brand. Of the regular commercial banks?

Mr. Hovey. Yes, sir; but none of the mutual savings banks are members. Twenty-five of the trust companies are members.

Mr. Brand. What percentage of all banks in the State belong to

the Federal reserve system—approximately?

Mr. Hovey. When you say "all of the banks," do you want to include the savings banks or trust companies?

Mr. Brand. No, just the commercial banks, including, if the words include trust companies, in your State. What percentage?

Mr. Hovey. Twenty-five per cent, approximately.
Mr. Brand. I am very much obliged to you, Mr. Witness.
Mr. Luce. The committee will stand adjourned until to-morrow morning at 10.30.

(Whereupon, at 3 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m., Friday, May 16, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, MAY 21, 1930

House of Representatives,
Committees on Banking and Currency,
Washington, D. C.

The committee met in the committee room, Capitol, at 11 o'clock a. m., Hon. Robert Luce presiding.

Mr. Luce. The committee will come to order.

Mr. Nahm, we are sitting for the purpose of getting such information and judgment as we can in the matter of branch, chain, and group banking, and we shall be grateful to hear your views in the matter.

STATEMENT OF MAX B. NAHM, VICE PRESIDENT, CITIZENS NATIONAL BANK AND BOWLING GREEN TRUST CO., BOWLING GREEN, KY.

Mr. Nahm. Banking is a business, the people's business. It has common law rights. It deals in credits which grow out of commerce and agriculture, in the production and exchange of the needs of human life.

In a nation where over 90 per cent of the business transactions are settled by check, where the humblest worker carries a bank account, where the bank and its facilities are indispensable instruments to sustain modern life and enterprise, any profound structural change should arrest attention and invite study.

The individual in the banking business is the genius of the American people in financial action. The history and development of the individual began only with our Declaration of Independence, that all linen are born free and equal. All history before that time was the story of the overlord.

Right into the beginning of banking went the evolution of the individual, the unit banker. His history has run parallel with our changing fortunes: Under his financial administrations this country has grown great and rich.

In the last decade business in general has tended toward larger perating units with huge capital funds, more efficient and trained hanagement, grinding out mass production. Banking is following the heels of this movement.

The depositing public must be protected but there should be no perimenting about it. Theories should be well considered, but only slowly adopted. Changes are needed to adjust the banking business to new conditions but only such changes as will accomplish that, and no more.

It is too early to arrive at definite conclusions or to make positive etermination upon the various systems of banking that are now

1665

em?

1 be

ning

the

are g to

t to

row

being put into operation. However, there seems to be a feeling in some minds that the unit system has broken down. To this I desire to address myself.

The total number of all banks in the United States at the end of 1929 was 24,645 head offices; adding branches numbering 3,547 gives a complete total of 28,192.

To

Of these, 21,839 were unit banks; that is, banks having no branches and belonging to no group or chain, or about 70 per cent

The loans and investments of all banks were \$58,461,000,000; of

unit banks \$28,445,000,000, about 48 per cent.

This large proportion of banks with a business so great is too vast to rest under the imputation of failure. Is it not incumbent upon us, while we are studying branch, chain, and group banking, to analyze all statistics concerning unit banks and attempt to arrive at definite means to protect them by laws and by well thought-out conclusions? If the unit banks need adjustment to the changing conditions of to-day, and no doubt they do, is not this our first duty before we convert ourselves to some new theory of banking, perhaps not germane to our theory of life?

Fortunately, the recent hearings before the House Committee of Banking and Currency furnish us with ample statistics for complete

analysis as to bank failures.

Let us separate banks according to capital into three groups, banks of \$1,000,000 and over, banks of \$100,000 and over, and banks of

less than \$100,000.

In the last 10 years, no banks with \$2,000,000 capital and over failed, and only four banks, one national and three State, failed with capital of \$1,000,000 and over. So this first class is practically eliminated.

In the 8-year period ending in 1927, out of a total of 4,513 bank failures, only 12 per cent had a capital of \$100,000 and over.

Eighty-eight per cent of failed banks fell in the third group, under

\$100,000 capital.

Now in the 9-year period, 1921-1929, 4,985 banks failed, 91.6 per

cent in towns of 10,000 inhabitants or less.

Therefore, the great middle class of banks, the typical American unit banks, in towns of over 10,000 inhabitants, were responsible for only 8.4 per cent of the failures, and the banks of \$100,000 capital and over up to \$1,000,000 capital were responsible for only 12 per cent of the failures. These banks which we may class closely together have a fair record, and may well demand study with a view to the They are not great sinners in the failed class, and need only to be adjusted to the changing conditions of our generation. They are surprisingly clear of trouble.

Then let us consider the third class of banks where really all the trouble lies. The banks in towns of less than 10,000 inhabitants are responsible for 91.6 per cent of bank failures, and the banks of less

than \$100,000 capital for 88 per cent of the failures.

The last decade that we have selected for study has been subjected to the severest of all tests, inflation and deflation following a great war The agricultural States have borne the brunt of this. We find—and I got this from Mr. Busby—that four agricultural States on the Atlantic coast, North and South Carolina, Georgia, and Florida, with a population in 1920 of 7% per cent of the population of the United States, had 729 or 15% per cent of the bank failures. In the Northwest, nine agricultural States, Minnesota, Iowa, Missouri, Oklahoma, North and South Dakota, Nebraska, Kansas, and Montana, with 14% per cent of the population, had 2,768 or 56% per cent of the bank failures.

So these 13 States with 22 per cent of the population had 71.6 per cent of the bank failures, while the remaining 35 States with 78 per cent of the population had only 28.4 per cent of the bank failures.

This outline does not complete the picture. Not all of these banks failed. The communities failed. There was a pioneer need for banks at crossroads and in villages. Many were speculations started to sell safes, fixtures and jobs. Their service and clientele passed on to the larger cities when hard sense operating on hard roads with cheap automobiles and trucks came. With these disappearing banks went the country store, the country doctor, the preacher, and the inhabitants. They all went together. These banks would have closed their doors, had they been branch, chain or group. This is an economic, not an eleemosynary development, and do not imagine that remote city branches would remain open under such pressure. This is a fundamental change. To stay on the map a town must locate factories or colleges, or become a center of a network of roads and draw from other towns. Sixty per cent of failures were in towns of 1,000 or less; 63 per cent had \$25,000 capital or less.

This analysis reveals the strength and also the weakness of unit banks. This weakness in some small banks in some small towns can not be entirely eradicated. It does not require branch banking to eliminate this trouble, for it is self eliminating by the eventual disappearance of these banks. Were they branches, or groups, or chains, they would disappear in the long run for the business on which they should subsist is passing away. Parent banks might be able to stand the loss, but in the long run common sense would close such branches.

It can not be the purpose of government to create size to satisfy the ambitions of bankers, but to protect the depositing public. Even the frozen real estate loans that have closed many small banks are not indicate of small bank frozen brains, for the large institutions, the Federal farm loan banks and the great insurance companies have suffered severely from the same cause, and some joint stock farm loan banks have fallen into receivership from the same cause. This is a matter of judgment, not size. This landslide to bigness, mass production, creation of enormous units, and ambition for great profits a natural development, but it does not reach our problem.

Our free and independent unit banks standing on their own foundations have the resources within themselves to meet these emergencies. A small unit bank in a growing community can be properly conducted, and can make good loans intelligently. Local credit can thrive best in a unit bank, and local capital there has its widest scope and opportunity. The president and board of directors are residents and prominent in all local affairs. Its business is germane to that community alone.

To have our problem well before us we must recognize the fact that within the last 20 years small banks have experienced losses of sources of profit peculiar to themselves. Wisely or unwisely, they lost their

exchange on checks, charges on growing float, loans to and deposits of small merchants driven out by chain stores, and these chain stores seldom carry worth-while deposits and never borrow from small banks. Taxes, insurance, rents, salaries, and incidental charges have grown out of proportion to increased business.

What are the remedies?

Broadly, better banking, where there is a filed for a bank to thrive in, and there must be a scientific revision of banking laws and banking practices in unit banks.

The generic difficulty with small banks is that they have no proper diversification of business or assets. The trust business is more permanent than the banking business, and in the long run more profitable. The investment business is growing and calls for a securities department. To include these departments means consolidations and mergers of banks of which there are far too many, 20,000 in towns of 10,000 inhabitants or less. This is only possible in fair-sized

Diversified assets mean a proper secondary reserve and balanced investments that all banks should have to render them immune from crop failures or neighborhood collapses. Such a reserve consists of good bonds and marketable commercial paper.

Branches and groups do shift funds to locations where they are needed, but so does membership in the Federal reserve system. The small unit bank in any community can maintain its independence in competition with any multiple system of banking by becoming a member of this system. It can hold its traditional relation with its city correspondent and besides secure a guaranty against tight conditions by the protection which the Federal reserve system has afforded for 16 years. With this anchor to windward, it can serve its patrons in comfort under any conditions that may arise in good banking. It is the one guarantee that the unit bank can continue to exist.

May we suggest a few preventive laws to afford protection to depositors?

No new bank should be chartered with less than \$50,000 capital. Seventy-one per cent of all such banks have failed in the last 10 years. Mr. Dunbar. Seventy-one per cent of all banks with less than \$50,000 capital have failed in the last 10 years?

Mr. Nahm. Yes; 71 per cent of all banks chartered with less than \$50,000 capital have failed in the last 10 years.

Now, continuing:

No bank should be chartered where the banking needs are supplied and the field is properly served.

No bank should be chartered unless its personnel includes men trained in banking.

No fees collected from banks by States should be used for any other purpose than to secure highly trained examiners.

Then banks should charge for unprofitable services and recoup their lost profits by proper service charges on unprofitable accounts, charges upon float that is paid by them, charges for expense incurred by issue of bad checks. This requires some backbone in a country banker, but no other business man suffers so greatly for unpaid services.

The human element enters largely into our problems. The psychology of the human being must be considered.

It takes time to train men to operate the huge aggregations of capital now gathering into the banking business. It requires health, brains, and experience. Many men in these great financial mills are breaking under the strain. They frankly declare that they can not see through it all, that it is too big.

Most country banks are 1-man banks, men who, from a banking standpoint, though perhaps not in organizing ability, are abler men

than the men developing the multiple metropolitan banks.

Reduce this man to a managing clerk, take away from him his full authority and autonomy, give him his daily instructions and a complex set of rules to abide by and you will in time make of him a mere cog in a great machine, instead of an individualistic, resourceful American.

It is a melancholy experience to be thrown with men whose originality and initiative have been crushed out of them by the weight

of authority. That is paternalism in its deadliest form.

The young man will not seek the branch-banking business, nor will those who are employed be tempted to remain memorizing a set of rules, with little opportunity to develop initiative, with no ambition left to become the president of a bank, but only a manager at a smaller salary. The honor and the stability of the job is gone, and local understudies will not be found.

Multiple banks naturally seek the best banks in the towns, and buy and control them. If they retrograde, the one man gone, and fail to pay, as many will, the bank will be closed. What then is left? Those banks not so good are left, and the result may be, if

not disastrous, worse than it was before.

The country banker knows men and localities. The manager knows rules and collaterals. Within his special sphere of activity, the coun-

try man is just as keen as his city brother.

At best, the local manager can be only advisory and must refer back to the head office all great problems. Men of high type will leave this nature of employment and the substitute may be a robot, bound by rigid instruction, enforced in a mechanical way.

The enterprises of a town will interest a unit banker, and not appeal to a branch of a distant city. The one man has knowledge of the individuals, their character and ambitions, and sympathizes with their

Ideas of developing the city.

The other, being under foreign sway, can not enter into that intimate relatino and would refuse such loans. It takes a high order of talent to estimate and make such a loan correctly, but on such decisions the growth of the country commercially has largely been predicated. Destroy the power and disposition to foster this growth and you have broken the main-spring of American resource. The history of many of our greatest enterprises began in such loans.

So, if we find that the unit system of banking has not broken down as a whole, but only in part, and only in definite sections, in only some small banks, in some small towns, is it not then worth while to protect,

develop and foster the remaining unit banks?

Let us realize that unit banking is a profession, and that multiple

banking is a large-sized business.

Let us adhere to unit banking and depart from it only so far as developments make it necessary to do so. Let us abandon it only

to the extent Tthat we must to eliminate its defects, and restore it

to its former efficiency.

Mr. Luce. Mr. Nahm, you have just suggested some laws that would afford protection to depositors. Is it not a fact that a considerable number of these banks that have failed were chartered by the States?

Mr. NAHM. Yes, sir; more of them, sir, than national banks.

Mr. Luce. Then your remedy would not be sufficient unless the States cooperated?

Mr. NAHM. No, sir; these would mainly be in the States.

Mr. Luce. Would you think it advisable to try to find any way in which we could coerce the States or control the States in that regard? I might say that for a long time I have been of the opinion that one of the fundamental factors in this situation is the maintenance in this country of two different systems of banks, one national and the other State, and I have feared that sometime it would lead to much more important trouble than now exists. Your suggestion here, however, brings it right to the surface. How can we do anything in the direction of controlling or coercing States in this regard?

Mr. Nahm. Well, sir, in the first place, with reference to these suggestions I think the national bank law allows banks of \$25,000 in small towns, of 3,000, I think, or less. I would suggest, if I may, that that should be increased at least to \$50,000, if not to \$100,000, provided that the States themselves would also go to \$50,000 or \$100,000. Even if the States did not, I might suggest that it should

go at least to \$50,000.

Mr. Seiberling. May I interrupt for just a minute?

Mr. Luce. Yes.

Mr. Seiberling. In connection with that 71 per cent of failures, did you give us the percentage of national bank failures and State bank failures? You did not give us that, did you?

Mr. Nahm. No, sir, I did not, but I think I have it here. Mr. Seiberling. It would be interesting to know that.

Mr. Nahm. In nine years, the failures of national banks numbered 763; of State banks, 4877.

Mr. Seiberling. What would that percentage be?

Mr. Nahm. If you want the failures in small towns, I think that I have that also.

Mr. Seiberling. Can you give us those percentages with respect to the banks having less than \$50,000 capital?

Mr. Nahm. As to those that failed and that had less than \$50,000 capital?

Mr. Seiberling. Yes.

Mr. Nahm. Those that have failed with a capital of below \$25,000 are 63 per cent.

Mr. Seiberling. What perentage of those were national banks and

what percentage State banks?

Mr. Nahm. I can not tell you that, but I will go into that in an other way in a minute.

Those that have failed with a capital below \$50,000 constitute 71 per cent, and that comes from Mr. Pole's testimony, in book 1, page 11. Mr. Seiberling. What I am after is what percentage of those

constituted national banks and what percentage State banks?

Mr. NAHM. Well, the failures have been for the most part in the relation of 6 or 7 State banks to one national bank.

Mr. Seiberling. How is that?

Mr. NAHM. The percentage of banks that have failed has been in the relation, acutal numerical relation, of 6 or 7 State banks to one national bank; but, counting the number of State and national banks, the relation has been about 3 to 1.

Mr. Seiberling. That is all.

Mr. Luce. If it should prove impracticable to coerce these States nto adopting a wiser banking system, would we not then be justified in attempting to meet the situation in the way Mr. Pole suggests?

Mr. NAHM. Yes, sir.

Mr. Luce. What is your judgment of Mr. Pole's attitude in this

Mr. NAHM. I would be in favor of Mr. Pole's proposition of having branches in limited trade areas under the following restructions:

First, that these branches be extended only to cities of 10,000 or less inhabitants, because that is where, as I attempted to show, the trouble

Second, that banks acquiring such branches must be of a high type, well officered and well conducted, with a successful business of its own, and to be under the control of the Comptroller of the Currency;

Third, that the territory invaded be one not already completely served by existing banks, this to be left to the judgment of the Comp-

troller of the Currency;

Fourth, that no branch be placed in a territory where there is no need for a bank, and where the population and business have passed to a larger city, such matters to be determined by the Comptroller of the Currency.

With restrictions of this nature, Mr. Pole's proposition would probably be one of the solutions of the banking troubles of small towns

and small banks.

Mr. Luce. We observe that wherever there is an attempt, either National or State, to interfere with the tendency toward consolidations, apparently we simply drive the men who see profit in consolidation to other recourse. For example, within the last two or three days the newspapers have carried the announcement that 50 banks in ennsylvania are in process of being amalgamated in a group system. it would seem that if there is to be Federal legislation, we shall have to anticipate, if we can, the effect of restrictions that do not go any further than what you suggest.

What are we going to do about a situation like that in Pennsylvania,

or should we do anything?

Mr. NAHM. Mr. Luce, I would say that any system of banking with an ideal set-up of capital and surplus and secondary reserve, with diversified investments in a territory where such a group can rofitably operate, is all right; but the trouble will come, if it comes, then the men and the conditions are not so ideal.

Now, what I fear and what I tried to bring out in my statement is condition when it arises of having set-ups and men to run them not

Now, as to what to do, as far as I have been able to observe from leading all the testimony and thinking over the matter, Mr. Pole's proposition, with the restrictions that I have tried to bring out, would be, I believe, a very valuable set-up.
Mr. Luce. Mr. Hooper, have you any questions?

Mr. Hooper. I came in after Mr. Nahm had started his statement, and so I have not any questions to ask, but I do want to say that from what I have heard of his statement I think it is one of the most valuable and most instructive that we have had in this series of hearings.

Mr. Brand. Mr. Witness, I did not get your last answer to the chairman's question. What was it you said about Mr. Pole's propost

tion?

Mr. NAHM. I believe that, with the restrictions that I have stated did you hear those restrictions?

Mr. Brand. Yes.

Mr. Nahm. I think it would be as valuable a means of reaching the proposition as any I know of.

Mr. Brand. I am much obliged. I did not hear your answer.

Mr. Luce. Mr. Seiberling, you are next.

Mr. Seiberling. I take it from hearing your statement that you think the unit banker would be more interested in a new enterprise in a small city than the branch manager,

Mr. NAHM. Yes, sir.

Mr. Seiberling. And the small enterprises grow into large enter prises in a community?

Mr. NAHM. Yes, sir.

Mr. Seiberling. And the banker not only has to loan this small enterprise money and nurse it along, but he has to give a lot of his personal time and attention to it?

Mr. NAHM. Yes, sir.

Mr. Seiberling. He has to do that for nothing, does he not?

Mr. NAHM. Yes, sir.

Mr. Seiberling. And it is that personal interest and business judgment that the unit banker gives to the small enterprise that you think would be lost in branch banking?

Mr. NAHM. Yes, sir.

Mr. Seiberling. You say you do not believe that a bank should do anything that is not profitable?

Mr. Nahm. Yes, sir; that is what I said.

Mr. Seiberling. But you do think that it is justified in giving its time and loaning its money, and maybe permitting over drafts at times to a new industry, to help build it up?

Mr. NAHM. What I tried to bring out-

Mr. Seiberling. I know, but if you will just get that question. I think you can answer it.

Mr. NAHM. What was the question?

(Question repeated by the reporter as above recorded.)

Mr. NAHM. Yes, sir.

Mr. Seiberling. Now, you are familiar, I suppose, with the custon of charging \$1 a month to individuals where they do not have \$ balance of so much in their accounts?

Mr. NAHM. Yes, sir.

Mr. Seiberling. Do you do that in your bank?

Mr. Nahm. No, sir. We are just beginning now to put in the service charge of 50 cents a month, where an account does not average as much as \$50 during the month.

Mr. Seiberling. You do that on the theory that you should not carry on account at a loss?

Mr. NAHM. Yes, sir.

Mr. Seiberling. You do not think the principle that applies to a Small industry in your town should apply to the individual, then?

Mr. Nahm. I can not say that I do.

Mr. Seiberling. Is not the individual likely to become a big

depositor also?

the

age

Mr. NAHM. Yes, sir. The purpose of the service charge is not to collect, but to bring the individual to have a worth-while bank account, for his own good as well as for the good of the bank.

Mr. Seiberling. By the way, who invented the idea of making

this charge? It is rather a new thing, just a few years old.

Mr. NAHM. I do not know, sir.

Mr. Seiberling. Who is putting it in your bank?

Mr. NAHM. We are, ourselves.

Mr. Seiberling. Who is furnishing the scheme, and what are you Paying for it?

Mr. NAHM. Nothing.

Mr. Seiberling. There is some institution in this country that has been doing that and charging the banks for it.

Mr. NAHM. I think so, but the American Bankers Association will

furnish all the information you want without charge.

Mr. Seiberling. But, in the beginning, it was simply somebody's scheme to make money for himself, to get the banks to put this in operation.

Mr. NAHM. I do not know, sir.

Mr. Seiberling. How do you think a young married man feels when he is telling his wife that he has been unable to carry a balance In the bank of \$100 and the bank has closed his account, and he can hot any longer write checks on the bank, but they must carry their money around in their stockings and pay their bills in cash?

Mr. NAHM. Well, sir, I do not think the banks close his account. he does not carry \$100 in the bank, they charge him 50 cents in our

beighborhood.

Mr. Seiberling. They charge him a dollar in many banks, do they

Mr. NAHM. Yes, sir.

Mr. Seiberling. Are you going to pay any interest to your deposfor who carries more than a balance of \$100?

Mr. NAHM. No, sir.

Mr. Seiberling. What kind of a proposition is it that only works he way? Do you not think that when an account becomes profitable, ou should then pay some interest on that account?

Mr. NAHM. No, sir.

Mr. Seiberling. Why not?

Mr. NAHM. For the reason that banking includes many more things han merely carrying their accounts. It includes taking care of a han's money so that when he calls for it, it will be there for him, thich he can not do for himself. It includes paying his check, no Natter where he goes in the United States or Canada, or, sometimes, corope.

Mr. Seiberling. Let us put it another way. You think, then, hat a bank should be paid for any service that it renders at a loss?

Mr. NAHM. Yes, sir.

Mr. Seiberling. But it is under no obligation to pay for a service

it renders at a profit?

Mr. Nahm. It does pay for a service that it renders at a profit. Mr. Seiberling, in the service itself. In other words, if there were no bank in the community, and some communities have none, one would have to carry his money in his pocket or in some secret place at home and probably have it stolen, putting a premium upon \$ robber coming in and maybe killing him or his family. A bank renders a service when it carries money for a man and is ready to pay it at any and all times when the check is presented.

Mr. Seiberling. There are many banks that put on campaigns

to get accounts. You have heard of that, have you not?

Mr. NAHM. Yes, sir.

Mr. Seiberling. They spend two or three weeks putting on their campaigns, and they go around to back doors and get servant girls and chauffeurs and everybody else to open accounts with them, and then a year or two later they come around, after these people have opened these accounts, and after proclaiming how many new accounts they have got, and then they say to these people, "Now, you are not carry," ing enough balance here, and you have to close your account and get out of the bank.

What do you think of that?

Mr. NAHN. That they have to close their accounts and get out of the bank?

Mr. Seiberling. Or pay \$1 a month.

Mr. NAHM. Of the banks with a capital below \$50,000, 71 per cent as I stated, have failed. Now, the reason that those banks have failed is because a bank does more for nothing than any other character of business.

Mr. Seiberling. But you are not answering my question.

Mr. Nahm. I am going to answer it.

Mr. Seiberling. I asked you whether you thought it was right

Mr. NAHM. Yes, sir; I do think it is right.

Mr. Seiberling. To solicit an account and at the time impose no condition upon it, and then come around later and tell them that they have to carry a certain balance or pay \$1 a month or get out do you think that is all right?

Mr. NAHM. Yes, sir.

Mr. Seiberling. You do not think that the lawyer, for instance does a lot of work for nothing, do you?

Mr. Nahm. Of course he does, but not as much as the banks. Mr. Seiberling. You do not think the doctor does, do you?

Mr. NAHM. Yes, sir; but not as much as the banks. Mr. Seiberling. What makes you think that a bank is a charitable institution?

Mr. Nahm. A man steps into a bank, say in Baltimore, with check on one of the banks in Washington, and they give him money, and it is three or four days before they get that money back That is a service for nothing.

Mr. Seiberling. They do not do that for a man who has not good credit at the bank. They will cash his check for him if he has good

credit, but he must furnish a good indorser for the bank.

Mr. Nahm. Our bank would do it for you, sir, although we do not know you, provided that you satisfied us as to who you were.

Mr. Seiberling. With a good indorser in your town.

Mr. NAHM. No, sir; you would not need any indorser in that town. Mr. Seiberling. Where is the place where your bank is?

Mr. Nahm. Bowling Green, Ky. Our banks do that, Mr Seiberling.

Mr. Seiberling. I have pursued that subject far enough, and I will ask you another question. You are the head of a national bank? Mr. NAHM. I am vice president of a national bank and also of a State bank.

Mr. Seiberling. What real service do you get out of the Federal reserve system?

Mr. Nahm. In order that you may know, I am a Federal reserve director at St. Louis. Mr. Seiberling. That is all right, but what real service do you

get?

Mr. NAHM. I think the greatest service that any bank can possibly

Mr. Seiberling. My question is, what does your bank get out of the Federal reserve system?

Mr. NAHM. In the first place, we have gotton out of the service an elastic currency; we have gotten an absence of panics-

Mr. Seiberling. Yes; I understand that, but, confining yourself-

Mr. Nahm. We do not have money panics.

Mr. Seiberling. But what I am aiming at is this, the rediscounting of paper, and so forth.

Mr. NAHM. We get the rediscounting of paper when we need it. Mr. Seiberling. Do you think that the law should be liberalized somewhat in that respect so that member banks can rediscount some forms of paper that they can not discount now-for instance, that paper secured by approved municipal bonds, or something of that kind?

Mr. NAHM. Well, they can rediscount municipal warrants, with short maturities.

Mr. Seiberling. I am talking about municipal bonds, good municipal bonds.

Mr. NAHM. At the present time there is in eligible paper about \$7,600,000,000.

Mr. Seiberling. But that has been reduced. The corporations do not have these acceptances to the extent that they used to have them.

Mr. NAHM. Commercial paper is coming back slowly. I dare say that within a year or two the amount of commercial paper will be very nearly as big as it used to be, and as this financing that the corporations have done becomes absorbed into their plants they then go back to the banks.

Mr. Seiberling. You see no reason why paper secured by good municipal bonds, or paper secured by good commercial bonds, should be subject to rediscount in the Federal reserve, do you?

Mr. NAHM. Well, provided they are exceedingly good municipal bonds.

Mr. Seiberling. If the law provided certain limitations, where the tax duplicate was so and so and the limit of indebtedness was such? They would have to put in a limitation in the law in order that they might be good.

Mr. NAHM. If they are absolutely high-class municipal bonds; yes,

SIT.

Mr. Seiberling. It would help, in a stringent money market, to have municipal bonds eligible?

Mr. Nahm. Yes, sir; but with restrictions on the type of municipal

Mr. Seiberling. That is all.

Mr. Luce. Mr. Dunbar, do you desire to question the witness now? Mr. Dunbar. Mr. Busby is so many times left out because he is the last on the list, I should like to yield to him now and give him a chance, and take up my questions after a while.

Mr. Busby. I am not particular at all about proceeding at this time.

Mr. Brand. May I ask one question?

Mr. Seiberling. As far as I am concerned.

Mr. Brand. I do not think you answered Mr. Seiberling's question in regard to the benefit a Federal reserve bank is to an individual bank that has no occasion to borrow money from the banks or discount any eligible paper.

Mr. NAHM. The absence of money panics, the insurance against

what we had in 1873 and in 1907-

Mr. Brand. We did not have the Federal reserve system in those

Mr. NAHM. No, sir.

Mr. Brand. What benefit does a member bank which has no occasion to discount eligible paper with a Federal reserve bank recieve by reason of it being a member of the system?

Mr. NAHM. The only loss that a unit bank sustains in joining the Federal reserve is the interest on its 7 per cent reserve—on the deposit that it must place with the Federal reserve bank.

Mr. Brand. And may I interrupt you?

Mr. NAHM. Yes.

Mr. Brand. Another character of loss is the charges on checks. It loses that, does it not?

Mr. NAHM. Yes, sir; it also has that loss.

Mr. Brand. Now, considering those losses, when the bank has no occasion to discount paper with the bank, what benefit is this system to that class of banks?

Mr. Nahm. Well, sooner or later such bank most likely have to rediscount somewhere. It can usually, if not all the time, rediscount with the Federal reserve a little cheaper than it can with its correspondents.

Mr. Brand. Well, suppose it has no money to borrow from its correspondent or from the Federal reserve bank either. What benefit does it get out of its being a member of the system? That was part of the question Mr. Seiberling asked.

(1)

0

Mr. NAHM. I would say two; first, insurance against panics; and second, a reservoir to draw from would be there if it needed it, and those are two great propositions to a man running a bank.

Mr. Brand. That is your answer to the question? Mr. Nahm. Yes, sir.

Mr. Brand. Don't you think that the Federal reserve system ought to do something more than is now being done for the member banks?

Mr. Nahm. Yes, sir; I do. Mr. Brand. I am glad to hear you say that. Don't you think, to put it in another form, there ought to be some benefit in a monetary way to the banks, more than they have now?

Mr. NAHM. Yes, sir.

Mr. Brand. What way would you suggest that be done?

Mr. Nahm. I would suggest that the net earnings should be redistributed so as to give a member bank from 8 to 10 per cent instead of 6 per cent on his stock.

Mr. Brand. On his paid capital stock? Mr. Nahm. Yes, sir. Mr. Brand. From 8 to 10 per cent?

Mr. NAHM. Yes, sir.

Mr. Brand. You are the first witness who has appeared before us up to date that I have heard of, outside of Mr. Ottley, of Atlanta, who has made that concrete admission. And you are a member of the Federal reserve or on the directorate of the Federal reserve bank?

Mr. NAHM. Yes, sir; at St. Louis.

Mr. Brand. Do you know whether or not they contemplate or are considering doing anything like that?

Mr. NAHM. No, sir; I have no knowledge of that.

Mr. Luce. Mr. Busby, do you care to question the witness now? Mr. Bushy. Following up the thought that Mr. Brand was trying to make clear, a bank that is eligible for membership in the Federal reserve system receives an indirect benefit, whether it is a member or

not a member of the Federal reserve system, because of the existence of the Federal reserve system, does it not?

Mr. Nahm. Yes, sir. Mr. Busby. I have observed that in the agricultural field of operations the cooperative agricultural organizations benefited greatly the farmers who were not in those cooperative organizations, by reason of the fact they took off the market, in a sense, or controlled in a way. the price of those commodities through the larger method of consuming or handling element that came in contact with the different commodities; so, in the banking field, the bank that is eligible for membership in the Federal reserve system or even if it is not eligible for membership, has the same type of assurance back of its operation, that this source of relief is in existence and can be called upon by its correspondents, if not by it?

Mr. NAHM. Yes, sir.

Mr. Bushy. And in that way it is a bulwark to the small bank as well as the State banks that are members and the national banks that are required to be members?

Mr. NAHM. Yes, sir.

Mr. Bussy. And that is your idea of the benefits to be received by the banking fraternity, if you term it that, even though they are not members of the system?

Mr. NAHM. Yes, sir; absolutely.

Mr. Busby. Some one has suggested, in regard to the great number of bank failures duirng the last nine years, that many of those banks were organized prior to 1920 and were loaded up with types of loans

100136-30-vol 2 pt 12-8

about 1920 and prior to that time, which loans they were never able to realize on or, in other words, these loans have remained in a frozen state and ultimately the banks had to go out of business when they could not realize on the old loans. What is your idea in regard to that thought?

Mr. NAHM. That is quite true, sir.

Mr. Busby. The suggestion has been made that few of the bank failures have come to banks organized since the deflation period was over in 1921; that the bank failures are not among recently organized

banks. Have you given any thought to that question?

Mr. Nahm. I would say that that is not entirely true. I think, in the first place, there are too many banks in small places. In the second place, there are a great many small places that are shown, even by our census that is going on, where reports have been given out, to be getting smaller.

Mr. Busby. Yes.

Mr. Nahm. And the business is simply going away and is not there and the banks located in such territory must, necessarily, eventually close if that condition continues. Therefore, it makes no difference, Mr. Busby, whether such banks were organized before 1920 or since; it is a question of the territory being a profitable territory to operate in.

Mr. Busby. With automobiles and transportation facilities that bring business in contact with remote places, do you think that a branch-banking system would maintain the old status of things much better than a unit-bank system would maintain it?

Mr. NAHM. With the restrictions that I pointed out-did you hear

i

an

ide Mi

app

to :

of of

them?

Mr. Busby. Yes.

Mr. Nahm. With the restrictions I pointed out, I think it would.
Mr. Busby. Following out the last thought on the subject, it
would not be feasible for an independent bank or branch bank to
try to remain in a territory that did not need either one of them,

from a business standpoint? Mr. Nahm. Absolutely.

Mr. Busby. And where formerly need was felt for banking activities in a community, that need has passed away, largely?

Mr. NAHM. Yes, sir.

Mr. Busby. In many communities?

Mr. NAHM. Yes, sir.

Mr. Busby. We are becoming more concentered in our commercial and industrial and banking activities as well—much more so than we were a few years ago?

Mr. NAHM. Yes, sir.

Mr. Busby. Because of transportation, largely?

Mr. NAHM. Yes, sir.

Mr. Brand. Do you have overdrafts in your bank?

Mr. NAHM. No, sir. Mr. Brand. None?

Mr. Nahm. Not in the city of Bowling Green, Ky. Please let me qualify that. We do not allow overdrafts, but in case a very good patron should accidentally, or without knowledge of his own, overdraw his account slightly, we have two ways of paying that; first, there is a small fund set aside of perhaps \$4,000, out of which, when

the cashier or president thinks it advisable, they will pay that man's check to keep him from getting into trouble and having his check protested, and immediately notify him and he comes right over and settles that. I myself have given the cashier a written instrument authorizing him to sign my note for an overdraft, if I should make one while I am away from home, so as to prevent that. With those two exceptions, we have no overdrafts.

Mr. Brand. Do you charge any interest on overdrafts of that

character?

Mr. NAHM. No, sir.

Mr. Brand. Do you know of any banks that take care of these overdrafts, that have a policy of rule to charge interest on the overdraft during the period of the overdraft?

Mr. NAHM. I think in England that is the rule. I think they do business on an arranged overdraft basis and charge interest on

them.

Mr. Brand. Suppose I sent a check to the bank and have overdrawn \$500, and it is 10 days before I get the money to the bank to take care of it; should I not pay a reasonable rate of interest on that overdraft for that time?

Mr. NAHM. Certainly.

Mr. Brand. Is such a charge as that made by any banks in the United States?

Mr. NAHM. Yes, sir.

Mr. Brand. It is a proper charge, is it not?

Mr. NAHM. I think so.

Mr. Bushy. You spoke of the idea of Mr. Pole establishing branches in certain restricted trade areas. Have you a definite notion as to a Proper trade area in which those branches ought to be established?

Mr. NAHM. No sir; I have not.

Mr. Busby. Do you form a correct or accurate conception of

what Mr. Pole means by trade areas?

Mr. NAHM. I think so. I think his idea is that such trade areasit is a very indefinite proposition—that such trade areas are not to go beyond Federal reserve districts and to be in such territory as the ebb and flow of business of a given city exists in-ebb and flow of trade. I should say.

Mr. Bushy. What is your conception of the effect of holding companies owning and controlling stocks in State banks, national banks, investment companies and all types of business activities, under the management of the holding company, with regard to its effect on the unit bank and on business generally; in other words. I am asking about a holding company of a very extensive nature?

Mr. NAHM. Well, I think the danger lies in their getting so big and so multiform that the average man at the head of it will not be able to see through it all and run it. As long as you have these ideal men who now seem to be organizing those companies, such as Mr. Giannini, Mr. Decker, and Mr. Wakefield, I do not feel any apprehension, but men die and their successors might not be able to see through it.

Mr. Busby. Taking into consideration the unit bank and type of credit extension that has developed our country to its present state of development, does it not seem to you that this holding company

orgy we are entering into is a little beside the spirit of the business of this Nation?

Mr. NAHM. Yes, sir.

Mr. Busby. Do you not think our problem is more in determining what to do regarding the holding company than it is what to do with the individual or unit bank? There are two or three angles to be considered, are there not, just now?

Mr. NAHM. I would not say that it is more, for I think that the unit bank—the small unit bank in a small town—has been your greatest sufferer and they need attention. But both are problems

to be considered.

Mr. Bushy. At the present time, does it not seem to you that legislation in regard to controlling, defining or dealing with holding companies would be just as much in order as legislation to deal with branch and chain banking? The holding companies are over the branch and chain banking in most instances?

Mr. NAHM. Yes, sir.

Mr. Busby. And we could not deal with branch and chain banking unless we dealt with its creator, the holding company?

Mr. NAHM. Yes, sir.

Mr. Busby. Now, in the great number of failures in very small communities, of many very small banks, the idea of the survival of the fittest will largely control that situation and put the men who ought not to have established banks into other lines of business, largely's

Mr. Nahm. Yes sir; but that is hard medicine. Mr. Busby. I know it is.

Mr. NAHM. It should be corrected by not adding to the difficulty with too small banks with too small capital in too small territories.

Mr. Busby. The most effective antidote would be to require an adequate capitalization before a charter was given to them to open a bank. Would not that be the better way?

Mr. NAHM. Were you in when I read these points?

Mr. Busby. Yes; I heard your statement, but coming to the remedy, does it not seem that that would be the most adequate remedy and the simplest to apply?

Mr. NAHM. That is one of the remedies.

Mr. Busby. If all State and national banks had a requirement of \$50,000 capitalization before a charter to do business was given them, that would correct most of the evils we have from small bank failures, would it not?

Mr. Nahm. It would help, but there are other conditions just as

important.

Mr. Bushy. It would insure two things—first, more capital to protect the depositing public and it would insure a better type of management, because it would enable them to bid for better qualified men to operate the institution?

Mr. Nahm. In that sense; yes sir.

Mr. Busby. I will not take any more time.

Mr. Luce. Mrs. Pratt?

Mrs. Pratt. Mr. Chairman, I regret that I was detained in 8 hearing before the Rules Committee and I was not here to hear Mr.

8

Nahm's statement, but I assume, Mr. Nahm, you are a proponent of the unit banking system?

Mr. NAHM. Yes.

Mrs. Pratt. In line with the statement you made a few minutes ago, that men die, we are dealing with theories as well as practice here?

Mr. NAHM. Yes.

Mrs. Pratt. And that would apply to the head of the unit bank as well as the head of a chain system or branch system. Would you, in theory, feel that a branch system was the only way to take care of the banking question in very small communities? Mr. Busby brought out the point just now that perhaps one remedy was the requirement of larger capital and surplus before a bank should be allowed to have a charter. Would not that cut out from the very small communities the possibility of even a small unit bank, and would not that community have to be taken care of in another way? I am talking about the small rural community that has been very much discussed here and where many bank failures have occurred?

Mr. Nahm. I think that would; yes. Mrs. Pratt. You feel, in that case, a branch system would be the necessary system?

Mr. Nahm. May I answer that in my own way, Mrs. Pratt? Mrs. Pratt. Yes. Perhaps the question was not well put.

Mr. NAHM. It was splendidly put. With the good roads that are being built everywhere and the opportunity of reaching, in a very short time, a center of population large enough to sustain a bank, I do not think it would be any great hardship on very small communities, if they did not have a small bank for the reason that the statistics show that such a large percentage of those banks eventually fail, carrying with them a great loss to that community, that it would be better if such communities were taken care of in their largest near-by center and therefore I, for one, would be in favor of no new banks being chartered with less capital than would make a bank that is able to go though trouble.

Mrs. Pratt. When Mr. Decker and Mr. Wakefield were here before this committee, I think I am right in stating that their purpose was to stimulate the local communities. They rather encouraged a local board and local officers, but with a possibility of their getting help from the large parent bank in the central city. Am I right in

that statement?

Mr. Luce. I so understood it.

Mrs. Pratt. Would you feel that that was a better plan, possibly, than where the parent bank would have immediate control over these

smaller banks?

Mr. NAHM. Group banking is only two years old—less than that. It is rather early to answer that question. I happen to be a member of the economic policy commission of the American Bankers Association and I have been studying that and our opinion is that so far, we are not prepared to express a definite opinion on that subject; we would rather see it work out awhile.

Mrs. Pratt. I think that is all, Mr. Chairman.

Mr. Luce. To make it clear that we understand just what your Proposal is, in regard to a limit, am I correct in taking it that your Proposal is that branches might well be established in places of less

than 10,000 inhabitants by parent banks in places of more than 10,000 inhabitants and that you are not prepared to approve branches of banks in places of more than 10,000 inhabitants?

Mr. NAHM. Yes, sir.

Mr. Luce. Branches of parent banks in other larger places in that same area?

Mr. NAHM. Yes, sir:

Mr. Luce. Mr. Dunbar, have any questions occurred to you since you yielded to Mr. Busby?

Mr. Dunbar. You stated the Federal reserve system, in your opinion should pay member banks from 8 to 10 per cent on their stock?

Mr. NAHM. Yes, sir.

Mr. Dunbar. Governor Young was here and also Mr. Pole, to give expression to thought along that line. Would it not be better to maintain the 6 per cent interest on the stock and give the member banks interest on their daily deposits?

Mr. NAHM. The earnings of the Federal reserve are not such as to

make that possible.

Mr. Dunbar. Judge Brand, in his speech the other day showed you diverted a great deal of your earnings to the purpose of buying increased stock in the Federal reserve system. If that is so, why could not that be used? Why should they be doing that?

Mr. NAHM. I do not understand that question.

Mr. Dunbar. Sir?

Mr. NAHM. I do not understand that question.

Mr. Dunbar. A branch member of the Federal reserve bank wishes to purchase more stock in the Federal reserve system and they do it and use their earnings to pay for the stock.

Mr. NAHM. A branch Federal reserve bank?

Mr. Dunbar. Yes. You are a member of the St. Louis Branch?

Mr. NAHM. Yes, sir.

Mr. Dunbar. Have you any stock in the Federal reserve system?

Mr. NAHM. An individual can not own stock.

Mr. Dunbar. I mean your bank?

Mr. NAHM. Yes, sir.

Mr. Dunbar. Suppose you wanted to increase the amount of that stock?

Mr. NAHM. Yes, sir.

Mr. Dunbar. Could you not do that?

Mr. Nahm. Yes, sir, by having more capital or more surplus.

Mr. Dunbar. And then you use your money from your earnings to buy that additional stock—is that no correct?

b

b

W

tl

di

F

m

re

ab

Mr. NAHM. Yes, sir.

Mr. Dunbar. Why can not that money be used to pay interest on daily deposits?

Mr. NAHM. There is not enough of it.

Mr. Dunbar. How much money has been diverted each year on an average for the last five years, by the various banks in America?

Mr. Nahm. I do not know.

Mr. Dunbar. How much are your deposits in the Federal reserve system?

Mr. NAHM. The reserve is \$2,300,000,000.

Mr. Dunbar. That represents 7 per cent on one kind of deposits and 3 per cent on another, does it not?

Mr. Nahm. Yes, sir; but that is an accumulation since the organization of the Federal reserve, since 1914.

Mr. Dunbar. Then you say it would not be possible to pay 6 per

cent?

Mr. Nahm. I think your testimony here, given either by Mr. Pole or by Governor Young, shows that there is about 1½ per cent on deposit earned.

Mr. Dunbar. Yes.

Mr. NAHM. That would be immaterial to the small bank.

Mr. Dunbar. I do not think it would be immaterial because of the complaints I have heard about it.

Mr. NAHM. I know that.

Mr. Dunbar. Why would it not be a good thing to pay 1 per cent on deposits?

Mr. NAHM. May I answer that in my own way?

Mr. Dunbar. Of course.

Mr. Nahm. Last year, in the Federal reserve bank in St. Louis, which has a paid in capital of \$5,000,000 and a surplus of \$10,000,000, making \$15,000,000 in all, the city of Louisville, alone, owed the Federal reserve at one time \$29,000,000. Now, what, in my opinion the Federal reserve banks need, since, for the future they must bank for America and, almost, I might say, for the world, is a larger surplus, so that they can accommodate the various cities in the United States in times of stress.

Mr. Dunbar. Of course I am in favor of the Federal reserve system, but what I am interested in is trying to make the Federal reserve system more popular, so that we may have in it a greater number of banks who own stocks. Now, I think that if you can pay 1 per cent interest on the daily balances—and you thought that was nothing—I believe if you would pay 1 per cent interest, they would feel like they

were getting something.

Mr. NAHM. I did not hear that last.

Mr. Dunbar. If you could pay 1 per cent interest, they would feel that they were getting something and it would appease them to a large extent. Everywhere you go in the country they have an objection to the Federal reserve system because they do not get interest on daily deposits. I believe it would be better to give them 2 per cent on daily deposits than give them 5 per cent on their stock. That is just an opinion. You do not think so?

Mr. NAHM. No, sir.

Ù

Mr. Dunbar. I just want to tell you one thing: The banks all over my section of the country are cursing the Federal reserve system because they do not get interest on daily deposits. I think we should work out a plan of that kind rather than increase dividends and pay them 8 or 10 per cent on their stock.

Another thing: I am favorable to the unit banking system and I deplore the obstacles which present themselves to it. How is the Federal Government going to regulate that, when the State govern-

ments have a right to grant branch banking?

Mr. NAHM. It is very difficult for the Federal Government to reach that proposition.

Mr. Dunbar. It is almost impossible to reach it?

Mr. NAHM. The American Bankers Association have brought about some uniform legislation throughout the 48 States and would

be of great assistance to that, but a large part of the trouble is in the States.

Mr. Dunbar. Do you not think there is so much trouble in the States, it looks like we will not be able to do very much in controlling the banking situation except so far as we have an influence through the Federal reserve system?

Mr. NAHM. I would not say that.

Mr. Dunbar. Well, what is your opinion?

Mr. Nahm. I would say, under the restrictions I have named, Mr. Pole's proposition would be of help.

Mr. Dunbar. What was his proposition that does not interfere

with the States?

Mr. Nahm. To allow branches in trade areas.

Mr. Dunbar. I know, but that would interfere with the States. Mr. NAHM. Yes; it would. That is true, Mr. Dunbar. I first wrote, among the restrictions that I put here, that there should be no branches in the 22 States that themselves forbid branches.

Mr. Busby. Twenty-eight, is it not? Mr. Nанм. No, sir, 22. There are 7 that have no legislation; 22 prohibit it. But I scratched that out, under this idea. The States can meet that, if they choose, by passing laws, allowing branches. Secondly, all of those 22 States have branches or chains or groups now except 6, in the way of holding companies which defeat their laws.

Mr. Dunbar. That is what I have observed, and I think the prac-

tice is going to grow.

Mr. NAHM. It is growing.

Mr. Dunbar. It may be impossible to work out a plan and possibly it would be unwise to do it, but I think you can get at the problem by paying interest on daily deposits that would help the Federal reserve system more than anything I know of.

Mr. Luce. Mr. Seiberling, have you any further questions?

Mr. Seiberling. I have just a few more questions. Our whole purpose should be to arrange a system, I take it, to furnish banking facilities, as far as possible, to remote parts of the country—to agriculture and to everybody that has occasion to use banking facilities. Do you agree with that—as far as possible, I say?

Mr. Nahm. As far as possible; yes sir.

Mr. Seiberling. I take it that you have a very profitable banking institution with which you are connected?

Mr. NAHM. Fairly so.

Mr. Seiberling. How long have you been organized?

Mr. NAHM. Since 1901.

Mr. Seiberling. I take it you have increased your surplus and undivided profirs each year?

Mr. NAHM. Yes, sir.

Mr. Seiberling. And you paid substantial dividends on your stock?

ri

in

st

m

Si

DE

ar

Mr. NAHM. Yes, sir.

Mr. Seiberling. And your stock has a good market price?

Mr. NAHM. Yes, sir.

Mr. Seiberling. Now, in the face of all that—and the reason I am asking this question again is because you start your statement by saying "Banking is a business, the people's business"-

Mr. NAHM. Yes, sir.

Mr. Seiberling. And on page 4, at the bottom of the page, you say:

Then banks should charge for unprofitable services and recoup their lost profits by proper service charges on unprofitable accounts.

In view of what you said about increasing your surplus and paying good dividends and further, that banking facilities should be furnished to remote parts of the country, as far as possible, so that everybody could enjoy banking facilities, you still think that a service charge is proper where that service charge automatically, of necessity, deprives some people in your community of banking facilities?

Mr. NAHM. May I answer that in my own way?

Mr. Seiberling. Certainly. Mr. Nahm. Yes sir; I do. With a large number of small banks, it is a fight for existence.

Mr. Seiberling. Yes; but you are making a lot of money and your bank is prosperous.

Mr. NAHM. That particular bank is prosperous.

Mr. Seiberling. Why should you do it?

Mr. NAHM. But 71 per cent of the banks with capital of less than \$50,000 are broke. Now, they have got to get back somehow or other, in a legitimate way, what they have lost.

Mr. Seiberling. But if this is the people's business, then why

should you adopt a policy which deprives a lot of people of the facilities of banking?

Mc. NAHM. Because the greatest blow to the people's business is a broke in a community and that is the thing you want to avoid and you can only avoid it by allowing banks to charge for unprofitable business, just as a department store charges for everything they sell except the wrapping paper and twine.

Mr. Seiberling. The gas company that furnishes gas to the people in a community has a great number of accounts they do not make any money on, have they not-small accounts where they only get-

Mr. NAHM. Yes, sir and they put on a service charge.

Mr. Seiberling. Well, a street railroad company carries some people for a short haul and makes money on them and carries other people for a long haul and does not make any money on them. Is not that correct?

Mr. NAHM. Yes sir, but a great many street railroads in the United States are broke.

Mr. Seiberling. Well, do power companies make a charge where the monthly fee is below a certain amount?

Mr. Nahm. Yes, sir; a service charge.

Mr. Seiberling. Everywhere in the country?

Mr. NAHM. Those that I know of do. We are granting a franchise

right now in our city which embraces a service charge.

Mr. Seiberling. You still think that a prosperous bank that is increasing its surplus and paying good substantial dividends to its stockholders and its stock is selling at a good high price, that has made money for 10 years, should take action which they know will, of necessity, deprive some people of the privilege of banking facilities in its bank?

Mr. NAHM. The general rules apply to banks not so prosperous who are fighting for existence.

Mr. Seiberling. You are doing this to protect the other banks in

your community?

Mr. Nahm. Doing it because, in the first place, people do not value service they get for nothing. They only realize the value of it when they pay for it and that very service charge may mean the absolute existence of some of the banks.

Mr. Seiberling. Is it not worth something to a bank to train people in the community to methods of doing banking business and

get them accustomed to coming to the bank?

Mr. Nahm. That is the purpose of the service charge.

Mr. Seiberling. Is not that worth something to the bank?

Mr. NAHM. Naturally.

Mr. Seiberling. Do not the small depositors become large depositors after awhile?

Mr. NAHM. Yes, sir; and you can help them with the service

charge.

Mr. Seiberling. You think so? Mr. Nahm. Yes, sir; absolutely.

Mr. Bushy. In my district we have no town of 5,000 people. It embraces more than 5,200 square miles. What would you say in regard to our securing banking facilities under your idea of a parent bank in a town of 10,000 people or more with branches in smaller places?

Mr. NAHM. May I ask a question?

Mr. Busby. Yes.

Mr. NAHM. Have you any successful bankers in that district?

Mr. Bussy. We have only had 34 bank failures in the entire State in the last 10 years. We declare as much as 33 per cent dividends in towns of 1,500 inhabitants.

Mr. Nahm. Those people are very high-class bankers, and I should hope that nothing would occur to discontinue that service to your

community.

Mr. Busby. But that seems to run so counter to the theories of you larger bankers, that I am getting uneasy about the folks down home and I want to break the sad news to them.

Mr. NAHM. My fear has been in regard to new banks and I think no new banks should be chartered, but it is not expost facto and

would not affect the people you are talking about.

Mr. Busby. Do you not think your theories and the theories of these other extensive banking institutions would apply more to a section where you had very large cities, where you had suburbs of four, five, six, seven, or eight thousand people, rather than a section like mine, where the larger cowns are not more than four or five thousand inhabitants?

Mr. Nahm. I would think that even in your towns that banks that are now being run profitably with a smaller capital, would better protect your people if they had \$50,000 capital. It might mean some consolidations and mergers, but I believe, in the end, it would

protect your people better.

Mr. Busby. You might be right in some respects. What is true of banks, however, as I see it, is true of merchants, that the little fellows are not so well prepared to compete, in a business way, with the big institutions.

Mr. NAHM. That is true.

Mr. Busby. And they ought to go out of business if your theory is correct, in order to bring about a more efficient unit management of that type of business?

Mr. NAHM. Well-

Mr. Busby. But following all of that, I am wondering what is going to become of the small merchants and bankers and small operators in every way-what they are going to do.

Mr. NAHM. For a living?

Mr. Busby. Yes; and I think it is beginning to bother them, too. Mr. Nahm. That is one of the emergencies of life. We wondered what would become of the saloon keeper when the eighteenth amendment was passed.

Mr. Busby. I never did bother about him. I knew he would be

better off when he got in some productive business,

Mr. NAHM. Well, the same thing occurred when the women bobbed

their hair and stopped using hair nets.

Mr. Busby. I think perhaps we are getting away from the subject. Mr. NAHM. Nothing I have said goes to put your successful banker out of business, no matter how small his capital. I am only looking towards the future in saying that new banks should not be chartered with a less capital than-

Mr. Bushy. But when I listen to all these statements, I look back to my district and I see not a single town or city in it large enough to have a bank and I seriously question the theories expounded by

you experts.

Mr. NAHM. You have a bank in most places?

Mr. Busby. Yes. Mr. Nahm. If it is successful, I hope that nothing I have said would

Put it out of business.

Mr. Bussy. Really, I do not think it will, but it condemns the theory so strongly that I can not be impressed much with the idea you gentlemen present here, which is gathered solely from the larger center viewpoint.

Mr. NAHM. No, sir; I know of a bank with \$15,000 capital and

\$50,000 surplus that has over a million depositors.

Mr. Busby. Yes.

Mr. NAHM. What security have those depositors in the way of capital and surplus to protect them in case of trouble?

Mr. Busby. Well, of course, I do not know the surrounding facts

and can not answer.

Mr. NAHM. There are a great many just such cases. The proper relation, it is said, is 10 to 1, but I am simply talking about the future and not the past.

Mr. Busby. Different types of territory demand different types of

banking

Mr. NAHM. That is quite true. Mr. Busby. Still our bankers in Mississippi, in the smaller towns, know their business and know their field for business and know their methods of operating and can operate successfully and pay overhead and salaries and from 10 to 30 per cent dividends, yet they might not be able to do the same thing in New York or in another territory.

Mr. NAHM. I would not put them out of business at all with even

the plan I have suggested here.

Mr. Busby. So, when it comes to expounding a banking theory, you have to know what sort of field you have to expound it in, in order to have it stand up in all lines.

Mr. Nahm. Yes, sir. Mr. Luce. I will adjourn the meeting with the statement that the witness invited to appear before the committee to-morrow, has asked

to be excused and there will be no meeting to-morrow.

Mr. E. B. Green has been asked to appear before the committee Tuesday morning, at 10.30, and Mr. Robert Fleming, president of the Riggs National Bank, will be before the committee next Tuesday at 2.30 o'clock.

(Whereupon, at 12.35 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m., Tuesday, May 27, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, MAY 27, 1930

House of Representatives. COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 10.30 o'clock, a. m., in the committee room, Capitol, Hon. Louis T. McFadden (chairman), presiding.

The CHAIRMAN. The committee will come to order. There is present this morning, Mr. E. B. Greene, chairman of the executive committee of the Cleveland Trust Co., of Cleveland, Ohio, who will make a statement to the committee.

Proceed, Mr. Greene, in your own way and tell us the situation with respect to branch, chain, and group banking as you have found it.

STATEMENT OF E. B. GREENE, CHAIRMAN OF THE EXECUTIVE COMMITTEE OF THE CLEVELAND TRUST CO., CLEVELAND,

Mr. Greene. Mr. Chairman, and members of the committee, I think the bankers of the country who know of the study which you are making, are exceedingly pleased, because they feel confident that out of your work and observations, will come some legislation that will be a big help in the situation in which the banking business finds

itself at the present time.

I was glad to accept the invitation to come here for two reasons; first, thinking the committee would be interested in the experience of a bank that has been a pioneer in the branch banking business. We have been operating branches for nearly 30 years. Those are not all city branches, and therefore we have had experience with branches located in the city limits and in the suburbs and contiguous territory; also with branches located outside of even the contiguous territory. Our branches located farthest from the city are separated by 58 miles in a straight line. So, we cover a larger territory, perhaps, than branch banking is ordinarily done in, in the north central part of the country.

The second reason is I am glad to appear before this committee because I should like an opportunity to express our view of the comparative merits of branch banking as compared with group and chain

Possibly the best way to show our situation would be to make a short statement regarding the method used by the Cleveland Trust Co. in acquiring branches and in operating those branches as a branch banking system.

The Cleveland Trust Co. acquired its first branch late in 1902, but previous to that time the Garfield Savings Bank, which has since been acquired by the Cleveland Trust Co., established a branch in 1901.

Strangely enough, the first branch bank established in our part of the country was a downtown office owned by a suburban bank.

Having adopted the policy of branch banking, the Cleveland Trust Co. proceeded vigorously to acquire branches as far as opportunity presented itself; some by merger, some by purchase of stock and others by buying the assets. The list I have before me shows the name and date of acquiring of the 57 branches of our bank now being operated.

I hardly think you will be interested in my reading that complete

The CHAIRMAN. Without objection it will be inserted in the record at this point.

(The list referred to is printed in full, as follows:)

Windermere office, acquired, January 1, 1903. Euclid, Fifty-seventh, acquired October 1, 1903.

St. Clair, Fortieth, acquired October 1, 1903. Perry, acquired January 11, 1904. Bedford, acquired January 4, 1904. Newburgh, acquired January 29, 1910.

Newburgh, acquired January 29, 1910.
Euclid, One hundred and fifth, acquired December 27, 1904.
Collinwood, acquired December 27, 1904.
Willoughby, acquired December 27, 1904.
Lorain, acquired May 15, 1905.
Lakewood, acquired May 15, 1905.
Denison, Twenty-fifth, established April 23, 1906.
Liberty, established April 10, 1906.
Paineseville, acquired July 1, 1906.
West End, established October 2, 1916.
Kinsman, Ninety-third, established September 6, 1919.
Waterloo, established January 2, 1920.
Peoples, acquired October 24, 1919.
Edgewater acquired October 24, 1919.
Lorain Clark, acquired October 24, 1919.
Lorain, Sixty-fifth, established May 17, 1920.
Hough, acquired March 29, 1920.
Mayfield Lee, established July 12, 1920.
Lorain, One hundred and seventeenth, established November

West Park, acquired June 26, 1920.
West Park, acquired June 26, 1920.
Forest City, acquired August 27, 1920.
South Side, established December 1, 1920. South Brooklyn, established January 2, 1921. London Road, established March 1, 1921. Fulton Road, established April 2, 1921.

East Fifty-fifth and Payne, established August 1, 1921.

Nela Park, established June 7, 1921. St. Clair, Fifty-fifth, merged February 11, 1922. Kinsman Lee, established March 20, 1926. Addison Road, merged February 11, 1922.

St. Clair, One hundred and twenty-fifth, merged February 11, 1922.

Superior, One hundred and twenty-fitti, merged February 11, 1922. Euclid Ivanhoe, merged February 11, 1922. Euclid, Seventy-ninth, merged February 11, 1922. Union, Ninety-third, merged February 11, 1922. Madieon Heights, established Avenue 4, 1924. Madison Heights, established August 4, 1924. Euclid Mayfield, merged February 11, 1922. Superior One hundred and fifth, merged February 11, 1922. Gordon Park, merged February 11, 1922.

Glenville, merged February 11, 1922.

Hayden, merged February 11, 1922.

Madison, Ninty-seventh, established December 1, 1922.
Madison, Ninty-seventh, established December 1, 1922.
Madison, One hundred and twenty-fourth, established January 2, 1923.
Woodland, Fifty-fifth, established April 3, 1925.
Miles, One hundred and thirty-third, established May 1, 1923.
Cedar Lee established July 2, 1923.

Cedar Lee, established July 2, 1923. Terminal, established November 1, 1929.

Pearl Street, merged October 26, 1929 Clark, Fiftieth, merged October 26, Broadview, merged October 26, 1929. Lorain Triskett, merged October 26, 1929.

Mr. Greene. These branches are located as follows: Forty-eight offices in the city of Cleveland; eight offices in municipalities contiguous to the city of Cleveland; and four offices located in outlying

territory.

02,

ice ch art

ist

ty

nd

he

ng

te

In explanation of the last two items, I would state that all offices located outside of the city of Cleveland were established prior to the restriction in the Federal reserve regulations and that the four offices outside of contiguous territory were established prior to the enactment of the present Ohio banking code. That was enacted in 1908 and became enforceable in 1910. These outside branches were in operation many years before that.

I have a table before me showing the growth of the bank in the number of accounts and deposits, indicating that pioneering in the

branch-bank field met with general approval and confidence.

Again, I do not think you care are to have me read the complete figures of this larger table.

The CHAIRMAN. Without objection that table will be inserted in the record at this point.

(The table referred to is printed in full as follows:)

The Cleveland Trust Co., incorporated September 19, 1894-Yearly growth in deposits and accounts from 1895 to 1929

* Peoples, Edgewater, and Lorain-Clark offices acquired.

† Hough office acquired; West Park acquired; Forest City acquired.

† St. Clair (fifty-fifth), Addison, St. Clair (one hundred and twenty-fifth), Superior (one hundred and twenty-third), Euclid, Ivanhoe, Euclid (seventy-ninth) and Union (ninety-third), offices acquired in merger with the Lake Shore Banking & Trust Co. Euclid Mayfield, Superior (one hundred and fifth). Gordon Park, Glenville, Hayden, and Buckeye offices acquired in merger with the Garfield Savings Bank.

Pearl Street, Clark (fiftieth), Broadylew, and Lorain Triskett offices acquired in merger with the Pearl Street Savings & Trust Co.

Mr. Greene. I should like to say that when we organized in 1895 the deposits, at the close of the first year, were \$430,000; at the close of the year 1929 the Cleveland Trust Co. had 537,232 depositors, with total deposits of \$298,227,820.

Two principles governed its policy in opening branches—never to invade the territory of a smaller bank and not to establish a branch if an existing institution could be acquired. In fact, the bank did not establish a de novo branch until 1907. As a result of a policy of forbearance toward the smaller banks, these institutions were kindly disposed toward the Cleveland Trust Co., and we were oftentimes given the opportunity of acquiring them later on.

Without fear of contradiction, I can state that our bank has never been accused but in one instance of having invaded the territory of a smaller bank, and in that particular case we placed our branch in a location which we did not consider an invasion of their territory. Since our principal competitors entered the branch-banking business this has not held true. So much for the policy which has governed concerning the establishment of branches.

Regarding the handling of the routine of branches, our board of directors has been increased from time to time to make room for directors formerly connected with banks which we have acquired. In this way they have not been eliminated from the banking business, but have exercised their authority in a broader field.

We might consider the making of loans under subdivisions of discounts, collateral, and real estate. Every manager of our 57 branches has authority to grant discount loans in varying amounts, depending entirely upon the manager's ability and experience, the authority ranging from \$250 to \$5,000.

As regards collateral loans, every branch office is furnished with an approved list of collateral loan rates and lines enabling it to take care of customers promptly in case they can offer any of the securities included in these lists. These collateral loaning rates and lines are established by a committee of board, offices and managers who revise the rates from time to time and reestablish them every six months.

Managers of all branches take real estate loan applications, which are forwarded at once to the Appraisal Bureau at the main office. They are then brought up at a meeting of the branch managers at which the manager who took the application may present his comments and reasons for desiring to make the loan. If approved at this managers' meeting, they are forwarded for final approval of the board.

I might add that for years the Cleveland Trust Co. has granted more loans than any institution in northern Ohio. I think I could, without fear of contradiction, say that that covers the State of Ohio because, of course, Cleveland is the largest city by far in Ohio.

It is our firm belief that taking care of the application of the small borrower is our greatest aid in building up our branches. This statement can be made regarding the other classes of loans besides real

272

in k.

e

0

In regard to the supervision of branches, this important duty is Placed in the hands of a department of branches under the control of a vice president. General management figures are forwarded daily from each branch to this department and these figures are assembled into a consolidated statement by 10 o'clock the following morning. Reports on all subjects are rendered the main office. A close system of branch inspection, entirely separate from audit, is also maintained by the branch management department. It is our purpose to give our managers every opportunity of handling the business of branches with the same facility and the same knowledge as if they were serving at the main office. In fact our branch managers have no more trouble consulting the various officers and department heads of the bank than the junior officers themselves in our main office which occupies four adjoining buildings in the downtown financial center. Our system not only gives them very desirable experience and knowledge, but it also permits them to speak on behalf of the lines of credit and loans which originate in their territory.

am bringing that up to show the personal contact of the managers with the business. It is sometimes thought branch banking means impersonal service for the borrower. That is not true, at least in our case, and it can be obviated in every case by giving the men who request loans an opportunity to present their views and their ideas

respecting the loans requested.

In order to familarize our branch managers with the work of the banks, certain ones of them are always present at the meetings of our committees. I mean the main meetings at which the executive

officers of the bank handle the business of the bank.

As to the audit, the audit department maintains special auditors at large branches, and all other branches are visited at frequent intervals by traveling auditors. Copies of all branch loan records are maintained by this department and all movements of cash or collateral

The department is operated entirely free and independently from all other departments, and is responsible solely and directly to the

The early criticism of branch banks was that it was dangerous as it permitted of the withdrawing of funds at too many paying windows. With the growth of banks to their present size, this criticism loses all its force as the payment of money over the teller's window can not reach proportions to embarrass big city banks. Their withdrawals through clearance are of much greater importance and, of course, the Federal reserve system affords security which has done away with the fear of runs.

A criticism harder to refute is that branch banks established in small communities are glad to receive the deposits but are unable or unwilling to take care of the loans of those particular communities. This criticism, in our opinion, is unfounded. Such a policy would be extremely detrimental to the growth of the branches of such a bank. Self-interest prevents any well-managed bank adopting such a policy. The following figures representing the deposits and laons of the branches of the Cleveland Trust Co. most remote from the main office, prove conclusively that the Cleveland Trust Co. is placing at the disposal of its remotest branches loanable funds way beyond their deposits.

Mr. Seiberling. Will you read those figures? They are short, are

they not?

Mr. Greene. Yes. I was going to comment on them, but I will read the figures in full. This is as of May 22, just a few days ago.

The total deposits of the Willoughby branch, were \$1,955,259.77; the total loans, \$2,890,305.90; the borrowing from the main office was \$938,976.70, showing that they were loaning approximately 50 per cent more than the total deposits.

I made no attempt to select branches which would make any particular showing. I simply telegraphed Sunday afternoon to bring me those figures and these are the figures supplied. I said, "Give me the figures of the three branches farthest away, as to deposits and loans."

The Lorain branch, which is 30 miles from the center of Cleveland had total deposits of \$3,510,329.67; total loans of \$5,465,617.54; borrowing from main office \$1,973,498.52, showing that they were loaning approximately 65 per cent more than total deposits.

The branch at Painesville had total deposits of \$3,224,344.33 total loans of \$3,965,243.45; borrowing from main office, \$762,041.34, showing loans of approximately 25 per cent more than total deposits.

It is our experience that when a branch bank fails to grant loans and credit which the depositor is justified in requesting, that it builds up the business of its competitor and in case it is the only bank, it brings about the organization of a new institution. No well-managed branch bank neglects the reasonable needs of the locality in which its branches are located.

I should like to lay special emphasis on our experience in that regard. There seems to be in the minds of those who are opposed to branch banking the idea that a branch is put in—especially in a small locality—with the idea of accepting and then withdrawing deposits and then telling the people their loans are not up to standard. If you establish a branch in a locality, you are expecting to get their business and good will, and if you start a policy of that kind, it simply means that you will not get their good will. Banks are founded on good will and unless their service corresponds to the desires and needs of the locality in which they are established, they do not get the good will, and without the good will you have very little in the banking business.

To-day there are but 16 banks of all kinds serving Cleveland and its suburbs with a population of possibly 1,250,000 people. I mean by that the metropolitan district in the narrower sense. I do not mean by going outside of Cleveland. I mean Cleveland proper, plus the municipalities immediately connected with it and into which you pass from Cleveland without realizing that you are outside of Cleveland.

Mr. Letts. You mean 16 banks and branches?

Mr. Greene. No, sir; 16 banks. That will be explained. That is the total number of corporations.

Mr. Letts. I see.

Mr. Greene. Ten years ago they were double that number, or 35 banks. Twenty years ago there were 34 banks and in 1900, or 30 years ago, there were 53 banks. The writer firmly believes that the 16 banks with their hundred or more branches are affording all classes of depositors, rich and poor, better service than the 53 banks served Cleveland 30 years ago when the population was possibly one-third what is to-day. Furthermore, that during the last decade when banking has been largely in the big institutions with branches, there has been but one loss to stockholders, that of 15 per cent, and no loss to depositors. In the decade from 1900 to 1910, however, there were 15 losses to stockholders of from 15 per cent to 100 per cent; seven total losses to stockholders and five losses to depositors, one of which was a loss to depositors of 80 per cent. This improvement in the solvency of banks is due in large measure to branches of strong well established banks taking the place of the small-unit bank scattered throughout the city. The attached table gives in detail these figures.

The CHAIRMAN. Without objection, that will be inserted in the

record at this point.

(The table referred to is printed in full as follows:)

Mr. Greene. There are a few further comments I should like to

make on branch banking.

It has been our experience that our branches have grown at a faster rate than our main office. It is a little hard to determine just the basis for that statement or to give convincing figures. But I would say that maybe 20 years ago our ratio would have been 75 per cent at the main office and 25 per cent at the branches. To-day it would be possibly 30 per cent for the main office and 70 per cent for the branches.

Undoubtedly that change is due to several causes. The two main factors are convenience to the depositor and the desire to bank nearest the home or place of business, and that desire is augmented by the

congestion which exists in all big cities.

In taking over branches, we found a great deal of desire on the part of neighborhood banks to be absorbed. They had probably been useful in the very beginning in helping to sell real estate and in building up the little community. When it was built up, they felt their duty was done and were glad to have the business carried on and a continued banking service located in their community; so they were entirely willing to have a big bank come in and take over the business.

I have never found any great desire on the part of a bank, provided you paid them a fair price and provided you were in a position to afford their community or locality and their depositors the right kind of service, to object to be acquired by a bank. It has in every case been entirely a friendly negotiation between two parties, feeling they both got an advantage out of the transaction. I am saying that because I think there is, in certain parts of the country, the thought that the big bank in acquiring branches uses its power to acquire smaller banks through threats. As I say, if that has been done, it has not been done by us or by any institutions in our territory. When you do that, you destroy the good will and the purchase, no matter what you paid for it, in my opinion is a poor one.

I think that local representation on the board, where the board of a smaller bank contains men who are familiar with large financial transactions and who qualify for big city banks is distinctly helpful

to the bank, and of course makes this matter easier.

I have spoken about the good will of a bank. I have personally carried on a great many of these transactions, as I was assigned to that duty of endeavoring to increase our branch banks for a number of years, by our late president, Mr. Goff, and I know, from the very beginning of every one of those negotiations, the question of buying with the assets, the good will, was regarded as essential, and I know, from personal knowledge, in the beginning of those operations, that statement was made, that unless the good will of the stockholders and the board of that bank went with the purchase, it was not wanted. If they felt there was any compulsion or threat in it, we asked them to state it and the negotiations would be discontinued, because we would not want the purchase under those conditions.

Possibly the committee would be interested in the basis on which we used to figure a smaller bank would be worth to a larger institu-

tion desiring to operate that bank, if acquired as a branch.

In every case we made our own appraisal of their assets, and you can readily imagine that unless we are regarded in a friendly light and with the utmost confidence, they would not have opened their books to us, as they invariably did. We used to figure to give them credit, if they had, we will say, unusually good earnings; we used to take into consideration, in the case of any premium paid, the cost to us of acquiring new business. You can see how foolish it is for a bank to spend hundreds of thousands of dollars in its advertising and in its new accounts department, and then in service that they render in one way or another, and which they more or less charge to good will—the effort to build up their business all the time—and then turn around and adopt policies that will drive away good business. A bank does not do that.

I am speaking of this because I have read a great deal of the testimony before this committee and I find there is, in the minds of many People, the idea that banks do not consider good will. That is not the case. Good will is as essential to them, or more essential, than to any other lines of business that I have knowledge of.

As I say, they figure that in the acquirement of a bank. The alternative is the cost of acquiring a like amount of new business.

That can be acquired in two ways: You can establish a new branch in another district and figure until you reach a certain point, the establishment of that branch will cost so much money, or you can buy an existing institution, and that premium you pay will have a direct relation to the cost of building up new business corresponding to that of the acquired bank.

Another factor we consider is whether the location has especially good opportunity for future growth; in other words, we acquire a bank not so much for what it has done in the way of earnings in the Past, but for what it will do in the future as a branch under our

management.

would like to say further something about the feeling of a small community where we have established a branch. I think it was in 1904 or 1905 that we acquired a branch in the city of Lorain. As some of you may know, Lorain is a mill town, located about 30 miles from Cleveland. I will give you the population of that town in a moment. The banks already located there of course made the most of our big bank coming into their community. That was 25 years ago, when branch banking was not as well known as now. result of that criticism, and as a result of our policy of conservative banking, we lost about 30 or 40 per cent of our accounts. When we took that bank over 20 years ago, it had about \$300,000 in deposits.

It went down about 30 per cent. Gradually they saw we wanted to accommodate our customers and the growth of the bank has been steady and we have now in excess of \$3,500,000 in that branch. Our manager is chairman of the clearing house committee and is on the friendliest terms with all the other Three years ago Lorain was struck with a cyclone. if a bank in Lorain failed to come to us and say how pleased they were to know that the Cleveland Trust Co. had a branch in that city. They were pleased to know that a strong bank like the Cleveland Trust Co. was located there and enabled to lend money to the city. We made a great many loans to the city and on real estate, to put them on their feet. There is a little town that learned that a big, strong bank in their community was a distinct asset and I think to-day we have the friensdhip of every unit bank in the city of Lorain.

So much for the question of the operation of branch banks by our institution. I want to say frankly I do not think it differs very much from the policies of other banks. They permitted us to preempt the branch banking business for about 15 years before any of

the others came into it.

To-day I think, generally speaking, they operate their branches on much the same lines, with almost the same detail, as we do. say that because I am not appearing before you as the representative of an institution at all. I am trying to express just my personal views on the branch banking situation as our institution sees it, as the result of 30 years of operation.

The other matter that I wanted to speak on briefly is the question of the relative merits of branch banking, group banking, and chain

banking.

The CHAIRMAN. In that connection, I wish you would also give us your views on the areas to which branch banking can proceed. The comptroller, for instance, as you may know, has recommended to this committee that branch banking be permitted within trade areas, without designating just what that trade area should be.

Mr. Greene. I was coming to that.

The Chairman. Include that in your analysis, if you please. Mr. Greene. Thank you; I shall.

If I were trying to select a textbook on branch banking conditions at the present time, I believe I would select the records of the hearings before this committee. Frankly, I have been interested in branch banking, as you see, for 25 or 30 years. I tried to bring myself up to date. I tried to find books on it and I visited schools of business administration. I have talked to head professors of universities and professors teaching finance and banking, and when I got all through, I found I got more information and meat out of the hearings you have held in the last few months than anywhere else, and I came down here feeling it was hardly necessary for me to talk about units, branch, group, and chain banking. I have a feeling of great modesty on that point after poring over the hundreds of pages of your hearings.

I believe that branch banking is far superior to group and chain banking, for these reasons, without attempting to go into detail.

Branch banking affords greater safety. By that I mean it naturally covers a great area and it affords a greater spread in your loans-more localities and more industries. That is rather obvious. It is the same principle that affects fire and life insurance companies. They desire as wide a range and diversity as they can get, knowing that brings them safety. It is not a guess or an opinion. In their instance it is founded on the most careful actuarial figures.

The other reason it affords greater safety is that the depositor of a large branch bank located in his community has back of the branch the capital, surplus and undivided profits of a very much larger institution and with the double liability, also, of course, the protection

obviously is very much greater.

For instance, take in the city of Lorain I have spoken of: We would have a loaning ability of \$4,600,000, according to the State regulations and according to Federal reserve regulations, as a member of that system, a loaning ability of \$2,300,000. That is the rate we voluntarily run by. That is our own individual rule as well as the regulation governing rediscounts.

The second reason is the greater ability to care for loans. I have just taken care of that. I jumped ahead and stated that that is a a reason for the branch banking system affording greater service to a

community than the unit banking system.

It is much easier to audit. Without going into that, we all know it would be a most difficult operation completely and simultaneously to audit some of these larger chain systems of banks. I do not know how you could do it successfully. Of course, it could be done, but I should think it would cost a great deal and require a great deal of checking up of different corporate records, and in some cases they

are so far separated as to be, in my opinion, pretty nearly impossible for a good and tight audit. The individual banks of some of the chains extend 2,000 miles.

The CHAIRMAN. You think it would be necessary for the examining authorities to have access to all holding company records as well as

of the different institutions?

Mr. Greene. Yes, sir; and I think it would have to be simultane-

The CHAIRMAN. I agree with you on that.

Mr. Greene. And when you jump into a bank, it is just as important to check authorizations as the figures. That means the checking of all figures of all the institutions.

Mr. Letts. May I ask a question right there, Mr. Chairman?

The CHAIRMAN. You may.

Mr. Letts. The holding companies, though, hold many other kinds of stock than bank stock. So, how would you manage about that?

Mr. Greene. Let me see if I understand your question. referring more particularly to the holding companies of these big

groups of banks.

Mr. Letts. And that is what I am thinking of. Some of them hold not only the stocks of banks but stocks of insurance companies, mortgage companies, abstract companies, and I think quite a variety of stocks, and you have suggested, in answer to the chairman's question, that there ought to be a supervision over the holding com-Panies; that they ought to be examined and that their holdings ought to be examined simultaneously.

I am wondering how we are going to create the authority which would give an examiner power to inquire into the affairs of a corporation which is existing under the laws of Delaware and not a Federal

entity?

Mr. Greene. I think I should have qualified my statement to the chairman; that my remarks cover the banking business only-that is, not insurance, abstract and other companies.

Mr. Letts. In other, words, you mean that-

Mr. GREENE. That is what I had in mind. Mr. Letts. The comptroller should have power to simulatneously examine the units that compose the group—the banking units?

Mr. Greene. Yes, sir.

Mr. Letts. That are controlled or partially owned?

Mr. Greene. Yes, sir.

Mr. Letts. Now, let us see what you mean by that. The holding company might have the control of the stock or very much less than control of the stock of a banking institution; in other words, I am simply asking these questions to see if you do not agree that there would be practical difficulties in respect to that.

Mr. Greene. Yes, sir; but if we are permanently-

Mr. Letts. And if those difficulties are insurmountable, it is a very good argument in favor of branch banking.

Mr. GREENE. That is it.

Mr. Letts. As against the group idea.

Mr. Greene. I do not mean that it would be impossible properly to audit or check these banks. I do state that the auditing of a group or chain system is not one nearly as simple as to audit a big bank operating a number of branches.

The Chairman. But you do think there should be a simultaneous examination of all the units?

Mr. Greene. Generally speaking. The examination need not, to the last degree, be simultaneous, but it has to be as of a fixed date. You know that auditing backward or auditing as of an arbitrary date in the past, makes your auditing very difficult because you have to go through all the transactions of the period since that date to see if there has been any change in assets or bad accounts from that date on. I am speaking technically of auditing. When you say "simultaneously," it ought to be as of a certain date, and if you do not do it simultaneously, you make the job enormously difficult. It can be done theoretically, however, either way.

The Chairman. You agree if it is actually simultaneously done, it will be more correct than if it was as of a certain date but actually on different days? In other words, if there was an examiner or auditor in each one of the units on the same date checking up the assets as of that date, it would be a better examination than if there was an auditor at the head office and then the checking up subsequently of the records of the units as of that date, in the other units?

Mr. Greene. Yes, sir. Mr. Letts. If you do not do that, would there be danger of kiting of securities and funds from one institution around to another?

Mr. Greene. In my opinion it would be unfair for me, not having any experience with a group or chain bank, to speak on that subject. The Chairman. On the examination of your institutions, is there

a simultaneous examination; or how is it conducted?

Mr. Greene. I would like to supply that exactly later, if I may. I should like to speak to Mr. Houghton about that. I should like to describe that for you in the record at a later date.

The CHAIRMAN. Without objection, you can place it in the record

at this point.

(The information requested is printed in full, as follows:)

The State examinations are conducted simultaneously at all branches and main office. These examinations, conducted by the State banking department are made twice a year at unannounced periods. The Federal reserve examinaare made twice a year at unannounced periods. The Federal reserve examination is made at infrequent intervals—approximately once a year—and as a rule covers inspections of loans and investments, and is liable to occur simultaneously with a State examination, in which they accept the State examiner's count of cash at all offices.

In addition to the above our offices are examined by the Cleveland clearinghouse examiner about every three or four years, and this is a most thorough and

exhaustive examination, particularly as it relates to loans.

The CHAIRMAN. Now, in regard to Mr. Letts's question about the examination of affiliated companies with the banks-

Mr. Greene. Yes.

The CHAIRMAN. Take, for instance, the control of a national bank, where it is held by an affiliated company, a securities company or trust company or what not, either under the laws of Delaware or of the State in which it is operating: Do you not think that it is necessary for the examining force, if it be a national bank, to have knowledge of the assets of those affiliated companies, whether they be insurance companies, securities companies, finance companies, or trust companies?

Mr. Seiberling. Or investment companies.

The CHAIRMAN. Yes; or investment companies; in other words, how can the Comptroller of the Currency properly examine a national bank when the control of that bank is vested in a company which is

doing any one of the classes of business that I referred to?

Mr. Greene. I should think that the answer to that question would be that the comptroller or any examining body of a financial institution, would have to see that the shares of stock in any of this type of corporations that you named, was at least equal to the book value at which they are carried on the records of that particular bank. To do that, he would have a number of ways of doing it. It might have a ready market value to indicate its value. He might do it by an examination of that company; but at least he should assure himself that the assets which are represented on the books are at least worth the value set opposite them. That would involve just what you say.

The Chairman. It would involve an examination of the assets of

these institutions, would it not?

Mr. Greene. Unless there was some other way of determining that value. I take it that a stock that has a ready sale in the open market might be accepted, as undoubtedly the comptroller does not investigate such values now. He accepts the market quotation as

The CHAIRMAN. Do you not think there is some question as to

values established even in the market?

Mr. Greene. I think if you will disregard values determined by the open markets you would take upon yourself a burden that the

banks and the examining force could not handle.

The Chairman. I have been wondering, Mr. Greene, after observing the situation during the past year, as to whether or not we are Justified in assuming that market quotations are in all instances a proper value. For example, when bank stocks drop from \$600 a share to \$185 a share in a day, it is developed that in certain leading securities the so-called market value is very changeable. There have been times during the past year when there was no market for some of our best securities when normally there was an active trading day

In that connection I point particularly to bank stocks. There is a very slow market generally for bank stocks. It is nothing unusual for bank stocks to fluctuate from 50 to 100 points between trans-

e

è

ĕ

-

The same thing applies to insurance stocks. It is a question, therefore, I think, in the determination of real values whether we should accept the market quotations, because of these very wide

fluctuations.

Mr. Greene. I would answer your question, Mr. Chairman, frankly, this way: That in the course of industrial banking history abnormal times occur periodically and at long intervals and that the laws of regulations can not be established on a basis of those abnormal times. When abnormal times appear a conservative banker has to exercise an unusual precaution and care, but I think, over a reasonable period of time, if you were to attempt to disregard market values and if you were to make it a duty to analyze everything down to the bottom, as you would have to do if you disregarded

market values, you would incur an expense that would be impossible to bear.

The Chairman. I realize that, but there is uncertainty in the so-called market quotations in the open market, and there are many

Mr. Greene. Let me say how I think that has been cared for by well managed banks. For years the value of listed stocks—and we are not a Wall Street bank; we are a Mid Western city institution—the prevailing margin on listed securities was 20 per cent, so that a man who brought in a high-grade well-known security expected to borrow up to that amount. When those unusual market conditions occurred, the banks first lowered their rates to 75 per cent, then to 66%, and so on, and when the peak of that arrived most banks were lending on a 50 per cent basis. You would not want, in normal times, to have the 50 per cent rule apply. That is why I think the regulations should be based on normal conditions and not on very

abnormal conditions.

The Chairman. The reason I raised this question was because of its importance in connection with the very study we are making here. The trend of the times indicate that the public generally, including the country banker and the people who are running financial institutions, are turning more and more to market values and stock-exchange quotations. It has gotten alomst to the point where it is a discrimnain the banking business because of the fact that a bank is more and more looking to a listed value and to a growing extent governs the the granting or refusal of loans on that basis.

Now, we are in the position where the banks of the country are being utilized by those people who have money, and we are getting away from the original idea that the poor man could go in, where he did not have capital, and develop his business. It is a part of the whole concentration of business and industry in the United States. I am wondering how much effect the preaching of that thought has had in the concentration of loans on stock-exchange collaterals.

Mr. Greene. I can not agree with you. I think we overlook the fact we are only six months away from a very unusual period. In the history of England and France, before us, there have been periods of intense speculation which produced abnormal conditions, and we are just coming out of one of them, and the thought that Wall Strret is drawing the money from the country and especially into listed securities, which is absolutely true up to the middle of last October or the first of November, but is is not so true of 1930. In my opinion, we will get bank into the oridnary and normal conditions, except with the condition that you must bear in mind, that at the beginning of the war we sold Liberty bonds to the ordinary person, and that opened his eyes to the investing of his funds and to other things than his home and in savings accounts, and he began to invest from 1916 on, and we have had a great many-some say millions and others say less than that-investors in this country in securities that never owned anything but real estate before that.

As the country gets older and we have more capital, you will have a gradually increasing supply of funds for investment, both in people and numbers of dollars, just as they have had abroad, but I do not see any bad sign in that. I certainly would rather buy securities listed on the market that affords a ready sale than to buy securities just as

good that do not have that, because many a man wants to convert his investment into cash, and investing in securities on the stock exchange is valuable to him. An exchange well run is an asset to the Whole country. Of course I am alluding to the higher class of business.

Mr. Beedy. Mr. Chairman, are we following the rule that each

one of us shall have an opportunity to question the witness?

The CHAIRMAN. I was simply picking up a loose end which I should not have done. I would like, Mr. Greene, to have you complete your statement.

Mr. Beedy. Before you do that, I should like to ask you to tell us Whether the examinations of your bank and branches are simultaneous

or not. I did not understand why you failed to answer that.

Mr. Greene. I wanted to be sure.

Mr. BEEDY. Of what?

Mr. Greene. Of the exact process employed, and I wanted to be sure for this reason: The Cleveland Trust Co. is examined under the authority of three different authorities; it is examined by the State examiner regularly at unknown periods; examined by the Federal reserve bank examiner, but even more than those two, Cleveland is one of those cities that employs its own clearing house examiner and that is the most drastic and most careful audit and analysis that We have. It is no easy matter to examine 58 offices. I wanted to be accurate in my statement.

Mr. Beedy. You have been with them for quite a number of years and unless you have had a change in the last year or two, I thought you could tell us whether they put examiners simultaneously in the

branches as well as the head office.

Mr. Greene. It has been four years since I have been in the active

banking business. Up to that time I could tell you right off.

Mr. Beedy. Do they put in examiners in the branches on the same day they start in the head office?

Mr. HOUGHTON. The State examination is done simultaneously. The others are more infrequent and I am not so sure about them.

Mr. Beedy. When the State examiner shows up at the head office, there are also at least 58 examiners put, on the same day, in the branches?

Mr. Houghton. They close their business on the same day and

all appear at the branches.

e

Mr. Greene. I can answer as to the clearing house examiner. He counts the cash simultaneously. He does not audit all the other accounts simultaneously. He can not do it. That is the most minute examination, of every asset and of every loan. It takes months to complete it. He does it by going back and taking figures as of a given period and going through the changes thereafter. May I proceed, now?

The CHAIRMAN, Yes.

Mr. Greene. I was giving reasons why we considered branch banking far superior to group and chain banking. I have said the first reason was greater safety, greater ability to care for the needs of People for loanable funds and then we came to the question of greater ease in auditing.

My fourth reason would be greater fluidity of credit. I do not know that that is the correct expression, but it permits us to take the Surplus funds of one community and loan it in another locality. It is true we are not separated by many miles, but our branches are in different localities, while, as I pointed out, Loraine, Painesville, and Willoughby need more funds than their total deposits. We supply There are, undoubtedly, other branches where it is the reverse.

The ability to let your loanable funds flow from one place to another so they can be available where most needed, is, in my opinion, much greater in branch banking than in group and chain banking.

The fact it is more economic I do not think I need go into because one who has appeared before you, at least to the extent I have read the testimony, admits that. It is obvious that the overhead is greatly cut down; it is obvious you can put branches in communities that can not support unit banks; it is obvious that things like advertising, statistical information and many departments of service which a big bank must maintain, can be supplied to branches with hardly any additional cost. For instance, our statistical and credit department and travel department and steamship department, among other things—we have just one at the head office that issues steamship tickets, and the overhead is very greatly reduced.

You may say being more economic to operate is not an advantage to the public. That is not true. To the extent that business or individuals require loans or borrowed credit, anything in our system of banking that reduces the cost, inures to the advantage of everybody, because it makes the cost of articles less. The general public are just as much interested in seeing that the banking system is the most economic that can be adopted, precisely as the bankers themselves, and if branch banking is more economical than other forms of banking in my opinion, that does not inure to the selfish advantage of the bank stockholders alone. That is an advantage that is shared not alone by the banks, but by business generally and the investors and people generally.

The last reason is that it is much easier to regulate and control. I think this committee has questioned some of the group and chain bankers and found it was rather difficult-I found it was difficultto determine who granted the loan, whether the board of directors of the holding company or the advistory committee or the board of directors of the bank or whatnot. Perhaps it would be unwise for me to say any more than the control and regulation of a bank operating branches is far easier than the regulation of a group or chain system.

Now, the only criticism that seems to be universally advanced in favor of group or chain banking as compared with branch banking is the fact they say group and chain banking increases local pride, local interest, and local good will.

I do not believe that is true, and I think our experience proves it is not true, but if it were true, for the sake of local pride and interest, are you going to say that group or chain banking is preferable to branch banking when branch banking is more economical, has greater safety, affords greater service—in other words, it seems to me that the advantage is very great indeed as compared with the disadvantage of branch banking, if that is true, which I do not believe. The disadvantage is very small indeed in comparison to the advantages which you get.

One reason for my statement to that effect is this: There are few, if any, of group bank advocates who are not themselves using branch banking, that I think they would use it universally, if permitted, and I believe that branch banking would be the one to survive if the two

were put on an equal footing.

If we are correct in saying branch banking is superior, why is it not more generally used? The answer is, as we all know, because the national bank regulations limit their branches to the city limits where

their home office is located.

The State banks, for the most part, are either restricted in their brenches to the city, and second, to the city and the immediately contiguous territory—but that is not so important because, without exception, almost all the big banks of the country are members of the the Federal reserve system and if you are members of the Federal reserve system, you have the same restriction as the national banks, and you can not go outside of the city.

Mr. Letts. You can talk about the desirability of changing that

law, though.

Mr. Greene. I was hoping to come to that, I believe it is originally due to a peculiar tenet in American political history that favors unit banking and possibly makes a big financial institution a matter of unpopularity or suspicion. The fact that banks have been unpopular since before the American Revolution is absoultely true. Our colonial banks were put out of business—some of them—because it was said their loaning powers were not applied justly. Two of the largest banks in the country at the time of the close of the American Revolution, the Bank of North America—its recharter was refused although it got another charter in another State and then Pennsylvania woke up and gave them a charter—that bank is still in existence, and the Bank of New York was refused a charter for six years, operating in the meantime without a charter, and is in business still. It began business in 1785.

The first United States bank was regarded as unconstitutional and was so reported to Washington and Jefferson. Hamilton, however, came to the rescue and gave them an opinion that made it wise for Washington to believe he should go ahead. The first United States bank was put out of business because of criticism largely due to

what they said was favoritism.

The second United States bank, of course, got into politics and its

charter was not renewed for similar reasons.

Then came the Civil War and, in order to sell bonds, the Congress and the Secretary of the Treasury got up a system that forbid branches and it was largely to permit the selling of bonds. So, we have a background that is opposed to banks operating in large areas and we have a background that favors the unit bank. Those are the reasons which are insistent, but it seems to me that is not the big rule that governs that. It is because we are a new nation and up to the time of the great war, the desire for loanable funds has always exceeded the supply of funds, and when that condition exists, the unsupplied borrower naturally objects.

In the development of this country within so short a time—we were a borrower of foreign capital just before the war—there has been a great change in business and banking conditions, and when business men get together now, it is found they have gotten away from the idea that it is un-American to have big banks and big business. When the railroads were taken over by the Government, they were put into bigger units and we have now almost everywhere, bigger chain stores.

and so forth, and we have to have them to provide more economical

production.

Why are we more prosperous than England? It is because we have learned mass production, and we can produce goods, by mass production, cheaper than they can. If you could see an article produced in this country and in England, you would not be surprised to understand why we can make money and they can not.

The antipathy against branch banking is disappearing, in my opinion, and we are on the verge of putting banking on a bigger and stronger basis. I do not see any disadvantage of going along with that same tendency in banking as in other lines. If we do not do it, our banking business will not keep step with the growth of our indus-

trial institutions.

The greater you restrict banks in this wise growth of branch banking, the more you will centralize it in one or more cities. I think you should give the banks a chance to develop along those lines, if you believe, as I do, and we do, that branch banking is safer and more economical.

There has been some talk of bigger units and the fear of monopoly. I think a monopoly in the banking business would be extremely undesirable. I can not conceive of anything worse. However, I do not

think there would be any chance of that occurring.

You have a splendid example of that in the big country just to the north of us. In Canada, branch banking control is a Dominion matter. In Canada to-day, with nation-wide branch banking, which I am not at all advocating at this time, there are 13 chartered banks, as they say, and that does not include trust companies. So, with nation-wide branch banking, in a country less developed than ours, we have 13 banks and a number of trust companies which are doing a savings banking business and time banking business, and, of course, we know Newfoundland is not a part of the Dominion, and that 13 banks does not include that colony.

Mr. Fenn. The Bank of Montreal is the fiscal agent for that Province. The Bank of Montreal has a branch at St. Johns and one

at Curly.

Mr. Ğreene. What I meant to say was that, in counting Canada, we had to except Newfoundland, which is not a part of Canada.

Mr. Fenn. I go there every year and know the conditions there. Mr. Greene. The last matter I wanted to speak of was simply the matter of what steps, if you did favor the extension of branch banking, you should take. It seems to me to answer that question—and I know of no harder one, the time element comes in. At the present time the country is rushing into group and chain banking so fast that if any of us should present figures to-day, to-morrow they would be out of date and we would have to correct our statement. I started studying this in trying to find out the number of branches of groups and chains in this country. I gave it up. It could not be done. I found I was wrong every day I started to check up.

It seems to me we ought to take immediate steps to release branch

a

a

W

banking from the present restricted condition.

What has been generally advocated is permitting them—I am speaking of the immediate development—to operate in the metropolitan areas. We all know what that means.

I have, in my own city, heard it described as the region in which the people in the central city live and are thoroughly familiar. It might be described as the city and its subsidiary territory in a business or economic way, the place where the commercial and financial activities center.

But the trouble of applying that sort of description in a legal way is that it is too indefinite, and I believe you have got to come to a description by metes and bounds, and that is very difficult to do, or by

political subdivisions.

My suggestion would be a county and contiguous counties. That would give you an area considerably beyond the present situation. It would not be an extension which would involve any greater restrictions of banking business or any very great change. Why do I say it is important? We all know that the unit banker is having a harder

and harder time to exist.

0"

At the present time there are many growing communities outside of the city which have no banking connections and are not likely to Those are the communities that are growing vastly. If you examine the census of any great city, you will find that the central portion is standing still and the suburbs are jumping up say 500 per cent. I was amazed to see the figures of communities around Cleveland. Cleveland. They are not getting any banking facilities. There is no small bank being organized to-day. That has stopped.

Branch banks are not allowed to go there. So, there they are. They are simply adding to the difficulties of congestion and holding

back the economic growth of those communities.

Mr. Beedy. You may know this, but your suggestion is not an untried idea of branches in a county and contiguous counties. That is the law in my own State of Maine and it has worked very, very satisfactorily.

Mr. Greene. I doubt, then, if I could suggest anything new to this committee. I think you have had everything suggested to you.

I know that is not a new situation, but I know that is something that is required now. I do not think that would be adequate for 3, 4, or 5 years from now because, by that time, the group and chain banking systems will have grown to tremendous proportions and branch banking will not be able to keep up with them, and you will have adopted a system less safe and less economical and less desirable.

Now, the next problem is one to which I feel no one would feel he had a safe and wise solution. I think we should gradually step up to state-wide branch banking. I think that ought to come within three to five years. I think it ought to come within that time.

The next step, I think, would be what we have heard so much about—the trade or economic area branch banking. I believe there is greater difficulty in defining that than the metropolitan area. What a trade area is, no two men describe exactly alike, and the practical problem that involves this banking business, it seems to me, is this:

The underlying principle is to provide an area in which there is sufficient diversity to insure safety to the banking business. That area in New York State, Pennsylvania, and Ohio is one matter and another matter in Nevada, Montana, Idaho, and so forth; in other words, any law that you might devise which would provide sufficient territory for diversity in the far West or Northwest might be a very large territory in the congested East. When that time comes, I believe you might form a committee—this is not a personal suggestion; I have heard it from others—but supposing you had a law authorizing a committee composed of the Secretary of the Treasury, the Comptroller of the Currency and the Governor of the Federal Reserve Board, with authority to widen the scope of branch banking, based on the principle that a wider field was necessary, in my opinion, that would be one effective way of handling that situation.

The only other thought that I have in this matter is this—and this is a big problem: The minute you cross the State line in branch banking, you bring at once into question whether the country is better off with one system of banks or two systems. I am alluding

to our present two systems of banking.

The Chairman. You mean State and national?
Mr. Greene. Yes, sir. When the Federal reserve system was formulated, you will remember that Professor Willis spoke at great length on whether or not it meant banks would be gathered together in one system. At that time there was a distinct difference between the two sets. Generally speaking, the national banks took care of demand deposits and took care of temporary borrowers, and the State banks generally speaking did the savings business of the country and took care of long-time borrowers.

Now most long-time borrowing is generally considered a real estate proposition, together with bond buying or fractional parts of mort-There was a marked distinction between the scope of business

transacted by those two great systems.

What happened? Since the Federal reserve system was inaugurated, and more especially since the national banking system began to suffer inroads, the differences between the two systems had practically disappeared, except for the fundamental difference that national banks get their charters from the national Government and are examined by it. You have, one by one, given to national banks the right to operate savings departments and loan on real estate. and an indefinite charter instead of a limited charter, and there have been other changes which have made the two plans so similar to-day that it is hard to distinguish their business and scope except, as I say, the source of their charter and their examination.

Undoubtedly, when you get to branch banking, as I firmly believe you will, and cross State lines, it seems to me the natural tendency would be to pass over into the national system and you will have one system of banking business instead of two. I think that is worthy of consideration as one of the results of what is likely to happen when

you cross over.

Of course, the other way would be still to maintain these holding

companies which would be, in my opinion, superbanks.

Now, I want to say I do not believe there is any advocate for branch banking that has anything but an utmost repugnance to the idea that a monopoly of the banking business should exist. That fear, I think, lies in the minds of some people who are opposed to branch banking.

I think, Mr. Chairman, that is all I care to say on those two subjects. I shall be glad now to endeavor to answer any questions.

Mr. Luce. Mr. Greene, I should like to express my personal appreciation of your particularly clear, thoughtful, and helpful

statement. Possibly you can take us still further in a matter that

has not received much attention in these hearings.

Last evening I was reading an article on investment trusts in which the writer made the prediction that within no long time, individual holdings of bank stocks would disappear; that all the stocks—at any rate of the important institutions—would be held by a new form of ownership known as investment trusts. That prompts me to inquire or to make some inquiry about the stockholders in the banking institutions. As a matter of practical banking experience, do you find it makes any difference to you who owns the stock?

Mr. Greene, I think I do. I believe the ownership of bank stocks by individuals, if not necessary, is extremely advisable. would look askance at a future situation that placed the control of our great banking institutions in any hands except in the hands of men of-I mean personal holdings-of men of the highest personal experience. I do not believe there will come a time when the bank stocks of great banks would all fall into the hands of investment

Mr. Luce. In the daily conduct of your bank, how often do you hear anything from your stockholders? What part do they play in the conduct of your bank? We have been told much about the relation of directors and officers on this subject. It has been urged by those who defend group banking that the personality of the president and the directors and other officers is of importance to the smaller communities. I do not recall that anybody has dicsussed the practical relation of the stockholder, and my observation has been, scanty to be sure, that the personality of the stockholder did not cut much

figure in the conduct of a bank. Mr. Greene. I should like to answer that question in this way, that if by that you mean the individual stockholder attempts, by calling on the officers at the office and urging any particular course or criticism of any particular transaction, I think there is practically little or none of that. But the good will of that stockholder is something that is very essential and if that stockholder ceases to hold that bank in the highest estimation, the bank will know it very quickly. So, it is the indirect influence of that stockholder that is more essential, I think, than any other element. You are dealing with a business that is unquestionably the most sensitive to good will of any in the country.

If the stockholders become critical or suspicious, what will the Public do? He is interested in an impersonal way. He can go across the street and do his business with another bank. So, although the stockholder may not take any direct personal interest in the bank,

indirectly, he is doing it all the time. Mr. Luce. What possible way would there be to prevent this process of which I have spoken—the absorption of bank stock by

investment trusts?

Mr. Greene. That is one of the problems of investment trusts. I would say that, as far as I know, whenever a bank has had any ulterior motive other than the profitable transaction of the banking business, it has failed, and when the banking business gets involved as an unimportant part of any other business, in my opinion, it will be a dark day for the banking business; in other words, I think it should always be a business by itself.

There is a way which used to be recognized—it was recognized, I think, in the first United States Bank-of lessening the voting power as the size of the holding increases. I do not know whether that is

practical or not.

We are just talking about theories. I have no definite thought, but I am saying that I think there is something to be said about the fear you express, and I am wondering if the restriction in the ownership of a bank might do some harm. You have an absolute restriction of corporation beyond certain extent. You might lessen the voting power.

Thirdly, I think a bank should not have any other motive except to conduct its own business for profit, for if it is not conducted for

profit, it is not well run.

Mr. Luce. Are there any indications that, in your own institu-

tions, investment trusts are already effective?

Mr. Greene. I am pleased to say that two or three times I read in the press we were being bought up, but when we came to investigate it, we found it was infinitesimal.

Mr. Luce. Is the stock of your bank listed on the local exchange?

Mr. Greene. Yes, sir.

Mr. Luce. Then, as fast as it is offered, it can be taken up by investment trusts?

Mr. Greene. It can, but I have no fear—I do not say it could not be done, but it has not been done—but I would say that we would

view it with concern if it had happened.

Mr. Luce. We have had, in the last two or three years, an exceptional amount of propaganda in favor of the ownership of bank stocks. In fact, books have been written to show how far they exceed any other forms of investment, in their promises and I see no obstacle myself in the way of your individual holdings in your bank disappearing sooner or later.

Mr. Greene. I believe when they do, sir, there will be other banks

I think you failed to appreciate—and I do not say it inviduously this powerful influence of good will.

Mr. Fenn. You are familiar with the Canadian system, I take it,

from your reference here to the 13 banks of Canada?

Mr. Greene. Generally speaking.

Mr. Fenn. Perhaps you can inform us in regard to this: Have the investment trust systems grown to any extent in Canada; in other words, are the holdings of these great branch banks—the Bank of Nova Scotia, the Bank of Commerce and the Bank of Montreal, for instance—held to any extent by investment trusts, that you know of?

Mr. Greene. I have personal knowledge of one holding only. could not answer that accurately. I would say that my general impression is that it is probably done in some instances, but on a smaller scale than here, but probably, I presume, they will follow us 9 little slower and to a little less extent.

Mr. Fenn. Do you inow whether or not the Bank of Montreal still pursues its old practice of requiring that the purchaser of stock in that bank must meet the approval of the Board of Governors?

Mr. GREENE. No, sir; I do not.

Mr. Fenn. They had that system some years ago and in the transfers of shares of their stock held by estates, it involved difficul-

ties at times. I know of an estate in my own city where they had to go through considerable red tape as they call it, in order to get that transfer of the stock in the estate; where they had to ascertain whether the people who were to receive the stock were agreeable to the Board of Governors of the bank.

Mr. Letts. Was that an effort to keep it a closed situation?

Mr. Fenn. I am not passing on that. It may have been to keep control of the bank where they wanted it. They may have abrogated that rule. If they have not, that would prevent an investment trust getting the stock of that particular bank.

Mr. GREENE. I could not answer that. I presume their custom is

much as our own.

Mr. Fenn. The Canadian system allows branches outside of The Bank of Nova Scotia has a branch in New foundland and also through the West Indies, and of course our own national banks are authorized to have branches in foreign countries and I presume that has grown to a considerable extent, but we have no branches in Canada, as I understand it. That is all I have, and I thank you very much.

Mr. Beedy. I understand your thought is that as long as you can keep the ownership of bank stocks in the hands of individuals and your stockholders are satisfied, they are active agents for the well being of your bank at all times. That is, of course, true. I know that works

from personal experience.

But your fear—and I just want to get a step further—how will the fear of the ownership of your bank stocks by investment trusts work in that respect? Let us assume that an investment trust buys a large block of stock in your bank: There are a great many stockholders in that investment trust. A great many of us own shares in investment trusts to-day. We are familiar, to a greater or less extent, with the holdings of that investment trust. Now, it has holdings in a big local bank. We want to see that bank thrive and as long as that bank is carrying on a legitimate banking business and meeting the needs of the community, why are we not assets to that bank and to the community through our holdings of the stock of that investment trust?

Mr. GREENE. Mr. Chairman, is it possible to answer that question

without it being made a matter of record? The Chairman. Unless the committee objects, we will be glad to hear you off the record. The newspaper men are present, however. The ears of the world are listening. However, these are good boys, and if you ask them not to mention it, I am sure they will not publish

(Discussion off the record.)

Mr. Beedy. You think there is a greater danger that flows from the control or ownership of the stock of a bank by an investment trust

than by individuals or groups of individuals? Mr. GREENE. Of course it may be only an economic step in our development. I am inclined to think we have had too little experience with investment trusts to pass on them. After they have operated 10 or 20 years we will get a fair view of the results of their

When you say "investment trust," that is quite a general term. They differ considerably in their nature and it is pretty hard to generalize about them and be fair to them. There are some that are

admirable and some not so admirable.

Mr. Beedy. You have foreshadowed what your answer will be to this question, but assuming that a bank administers trust estates, would you consider it a wholesome or wise policy for your bank to be also engaged in the underwriting of securities.

Mr. Greene. I see nothing that is improper in the underwriting

of securities, provided they are carefully chosen.

Mr. Beedy. In other words, you think it is a perfectly wise policy for a bank to put itself in a position to underwrite securities when it handles trust estates and is an agent to buy securities for those trust estates?

Mr. Greene. No. You spoke of a different thing. If you mean to sell to the trust securities at a profit to themselves, of course, that is improper and illegal and it is not done by good institutions.

Mr. Beedy. That is being done, of course, somewhat generally now. A bank will set up an affiliated investment trust company and buy and sell securities and at the same time, although it is a separate legal entity from the bank itself, it is selling and buying through its securities affiliate.

Mr. Greene. I do not think that practice is carried on by the

highest type of institutions.

Mr. BEEDY. If you have read these hearings, you will see that it is

being done.

Mr. Seiberling. I have just three questions I want to ask. I wanted to know if you will discuss, for a minute, the need of corporations for acceptable paper for rediscount in the Federal reserve banks—whether the right to rediscount should be liberalized and broadened out.

Mr. Greene. I think, Mr. Seiberling is referring to the comments made that the corporations are not, at the present time, desirous of borrowing, and consequently, the banks find themselves short of

paper discountable at the Federal reserve banks.

The Chairman. I do not know what is in Mr. Seiberling's mind, but there is presented to us here the problem of making eligible for rediscount installment paper, investment banker's paper, dealers in municipal securities and mortgage bond people, who are seeking to make mortgage bonds eligible for rediscount. There is a movement

also to make other bonds eligible for rediscount.

Mr. Greene. I think the question divides itself into two parts in the first place, the scarcity of that paper is due to a factor of the same high prices for stocks and the speculation we had last year, and that is, these corporations found it possible to put out their stock to their stockholders at a rate which was considerably lower than their dividend rate and they were wise enough to seize the opportunity. The stockholder was glad to buy the stock and the companies improved their statement and sold hundreds of thousands of stock to stockholders through rights, which stockholders either used the rights or some one took his place, and that strengthened the position of a great many of our big corporations. It was a wise thing for them to do, but it took them out of the borrowing column. That is a temporary situation that will not happen again.

I think the scarcity of paper that is eligible is again due to abnormal conditions. We will assume, for instance, that there is a \$2,000,000 corporation. Its stock is selling at 120 and paying 4 per cent divi-

81

in

W

in

dends. There were many stocks selling on as high a basis as that last Year. Such a condition enabled corporations to sell new stock to their own stockholders, at, say, 80 and greatly improve their statement. If they had bonds outstanding bearing 51/2 or 6 per cent, they could retire such bonds or preferred stock, or if no such bonds or stock were outstanding they could make additions with their new capital furnished by stockholders on a basis of 5 per cent for the new money (a 4 per cent stock costing 80). They could even afford to take up their temporary borrowings with the proceeds of stock on this basis. Everybody was happy and it was a good thing because along came the depression and our big corporations were probably in as good shape as they had ever been. At any rate it helped the corporations.

Now, I believe we will go back to a condition of normalcy and banks

will again have more paper than they have had lately.

The CHAIRMAN. You think the corporate interests of the country are going to surrender their snug position that they occupy now?

Mr. GREENE. The corporations might be unwilling to give up their snug position, but it depends on the willingness of stockholders to pay for new stock on a basis of return very unattractive under normal conditions.

I speak of that very feelingly because I participated in some of those rights at prices that were not as favorable as I thought they

Vi-

The other principle involved, Mr. Seiberling, is this: It cost a small bank a great deal to join the Federal reserve. If that bank does not have the class of paper to offer, his benefit is not as great as it should bank there were a way properly to broaden a little the ability of the average bank to borrow from the Federal reserve, I am inclined to think it would be a desirable thing.

That involves four things. He only gets 6 per cent on his capital and no interest on his deposits. If he does not have the notes and securities to offer as collateral, he does not get the benefit for which he is paying, and in the meantime he has given up what he used to

make in the collection of checks. That is their situation. I am inclined to think there ought to be Possibly a little relief, especially if you are trying to get the smaller banks into the Federal reserve system.

Mr. Seiberling. What is your judgment as to the influence of New York banks on outside banks as to whether it has increased or diminished?

Mr. Greene. The Federal reserve banks, in my opinion, have Pretty nearly completely changed the situation. In former times, before the Federal reserve, a bank feared two things; one, a run on itself and it feared a general panic or depression. It felt it had to be fortified against that condition. Any bank in an ordinary city felt it must have a very good friend in the banking world in a reserve city, and if it was in a reserve city, it wanted to be in contact with a bank in a central reserve city; so it pyramided up to New York; in other words, you felt you must be on the utmost good terms with a bank in

That situation has changed. You still carry a handsome balance in New York, but the bank in New York is the recipient of your favor instead of your being a possible solicitor of loans from it.

To-day the banks of New York call on their correspondents throughout the country, whereas formerly it used to be the banks throughout the country that called very humbly on their New York correspondent.

Mr. Seiberling. There has been a great deal of discussion in regard to segregating assets and having certain secured deposits, time

deposits, and giving them a preference.

Mr. Greene. I think the time for segregation of assets has passed. With the bigger banking units, it is not necessary and there is no fundamental difference between the different classes of depositors. They are all loaning their money to the banks. One is lending it on a time contract at a higher rate of interest and the other is lending it at either no interest or at a low rate, payable on demand. I feel that the segregation of assets which might have been desirable in some States and under some conditions, has ceased to be desirable. I do

not think they need that protection.

If you throw that protection around savings, you tend to lower the rates the banks can pay. I think it is far better to let all depositors come in on the same basis.

Mr. Seiberling. I understand you have had a policy in your bank to charge 6 per cent on your loans, and that has held good in bad times and good times for a great many years?

Mr. Greene. That is true; that is, we went through the war without raising our rate above 6 per cent.

The CHAIRMAN. Which war do you mean?

Mr. Greene. The Great War. [Laughter.] Mr. Seiberling. That is all I have, Mr. Chairman.

Mrs. Pratt. I assume you think the day of the unit bank has passed?

Mr. GREENE. I do.

Mrs. Pratt. In speaking of areas in which branch banks might be established, you apparently would be in favor of having a flexible provision in any legislation, by which those areas could be changed from time to time. Do you think it is possible to lay down a definite area at this time?

Mr. Greene. I believe there ought to be a general rule, but if that rule or restriction did not permit of banks getting the proper diversity of business, that then the exception should be permitted in order to make our banks of the whole country—put them in the safest and highest position possible.

Mrs. Pratt. That would require a provision in the original law-

You could not legislate on individual cases each time.

Mr. Greene. I think you are coming to nation-wide banking. That is going to be a long ways off, but every argument for branch banking, if it is sound, is sound for a larger and larger territory; in other words, you are going to come some day to the most economical and safest system of banking that you can obtain, and I believe that that is ultimately branch banking on a nation-wide scale.

ti

ir

W

h

8

88

Mrs. Pratt. I think you spoke of the good will of the stockholder as being of such value to the banks in connection with the success of banking in a community. Is it not true that the stockholder pays very little attention to the conduct of the bank? Is it not true that they sign their voting proxies almost unthinkingly, and is it not also true they take very little interest until after something has happened to the bank?

Mr. Greene, I think that is true except I think when anything happens which in any way lessens the prestige of the bank, they become active. When you become active you do not go to the office and protest, but you are indirectly contributing to the good will of that bank and the reputation of that bank. That bank is extremely sensitive to what its stockholders think; in other words, if a man says, "I am a considerable stockholder of that bank and I am dissatisfied with their policy and the credits they have extended," that has a serious effect on that bank and the bank knows it and it so conducts

itself that it will avoid that criticism.

Mrs. Pratt. Theoretically that is true, but it is not true of an investment company or a holding company that they make a greater business of following the conduct of a bank than the individual stockholder? I know of very few stockholders who, it seems to me, Pay the slightest attention to the conduct of a bank. I mean by that the average lay individual, and there are lots of us. I can not see that those people would look into the management of a bank until there was a rumor that something was wrong with the bank, while the investment trust makes it its daily business to watch the conduct of the bank.

Mr. Greene. Of course we have different ideas of just what we

mean by "investment trusts."

Mrs. Pratt. I was speaking more of holding companies.
Mr. Greene. You mean the big holding companies?

Mrs. Pratt. Yes.

Mr. Greene. You are speaking of group banking.
Mrs. Pratt. Yes.

Mr. Greene. I misunderstood your question. Of course that stock is just the same as the bank stock. I do not think there is any difference. Assume that a holding company got into the hands of an unscrupulous crowd and they controlled the management of those banks; it is no different than if the management of a bank got into that condition; in other words, public opinion will deal with the two situations exactly alike. I do not believe there is very much difference; in other words, the stockholder of a holding company would be no more active than the stockholder of a bank. It would make no difference.

Supposing you were to take, say, the five leading banks in New York City—for example, the Chase, the National City, the Guaranty, and so forth, and you put them all together and exchanged the stock of those companies: I do not think it will increase or decrease your activities. I think the good will and reputation will affect the

bank business exactly alike in either case.

Mrs. PRATT. We have had considerable testimony here to the effect, think, that these holding companies which buy these little unit banks or rather get the stock of little unit banks, feel their system is the ideal system in that they are preserving in the community the independent interest of the people and the good will of the people as well as preserving the local management of those banks, and yet the holding company has a supervising interest and is always on its guard to watch those banks and advise and criticize them. I think that was Mr. Wakefield's testimony. You feel that that is less Satisfactory than the branch system?

Mr. Greene. I certainly do, for two reasons: In the first place, 1 do not think that question of good will would be so recognized if it was known it was done at the expense of safety and service. They do not know that.

Mrs. Pratt. They would not grant that.

Mr. Greene. In the second place, they do not know what the advantages of branch banking would give them. There enters into this, this fact: You get a narrowing profit in the banking business. Your expenses are greatly increased. Now, which one will survive? It is bound to be the one that is the most economcial. You can not get the service in the unit bank that you can render through the branch bank. For instance, take the statistical service, advertising and many other services: I think in those parts of the country where there is a rabid antipathy to any kind of banking, whether unit, group, or what not, it is because they do not appreciate thoroughly the qualities of the other system.

Mr. Busby. You say you are pretty sure we are coming to nation

wide branch banking?

Mr. Greene. In the far future. Mr. Busby. You suggested that we would be to the trade area

period within three or four years?

Mr. Greene. I think my steps were the county and contiguous counties and then the trade area and then nation-wide branch branch banking.

Mr. Busby. Why do you come to the conclusion we will have

nation-wide branch banking within a relatively short time?

Mr. Greene. Because the entire trend of the country is to bigger, units in industry as well as everything else; because of this rule of letting your credit flow from a place where there are surplus funds to a place where it is needed most; because of the economy you are giving and, in the end, where a system is the safest and the most economical and renders the greatest service—which I thoroughly believe branch banking would do—you are bound to come to it. think that the extension of branch banking to the limits of the country in the last analysis is bound to come.

Mr. Busby. Have you given any thought to the possible number of systems that will be in operation at the time we reach nation

wide branch banking?

Mr. Greene. I think that will hasten the privilege to do branch banking because the group system, if they take another jump or two as they have already done, will be across the country. One group is across the country already.

Mr. Busby. I was speaking about the limited number of systems

in operation when you reached nation-wide branch banking.

Mr. Greene. If Canada had 13 banking systems, not counting trust companies, with 8,000,000 people, I think we will have many times that number for a country of 120,000 people.

Mr. Bushy. But practically five of the Canadian banks do most of

the business done there. Is not that true?

Mr. GREENE. Yes.

Mr. Busby We do not have the system of chains that they have They go out into the country ahead of the railroads and operate that office for two or three or four years at a loss. That is not the experience we have had in establishing branches in this country.

Mr. Greene. I think it is. We do not expect to have a branch make money for us for two or three years.

Mr. Busby. Do you not make an examination of that community

from the standpoint of a paying banking business?

Mr. Greene. Well, we build for the future.

Mr. Busby. And do you not select an independent bank when you go to take it over as a branch, that is really on a sound basis?

Mr. Greene. We would not acquire a bank as a unit bank for operation as a branch, unless it was on a sound basis, naturally.

Mr. Busby. And you would not acquire that bank unless it was in

a good territory for banking development?

Mr. GREENE. That is correct.

Mr. Bushy. That puts you in the attitude of the oil companies that go into proven fields and invest and put their holdings into oil wells where the field has been proven by the wild cat, does it not? Mr. GREENE. I think-

Mr. Busby. I think there is the same similarity between taking over established banks and the oil companies taking over oil wells in a proven field. You are getting the benefit of what has been proven.

Mr. Greene. I do not think there is a similarity between banking and the oil business for this reason: The oil man takes a great risk with a chance for a great profit. In the banking business there should not be any chance for great profit. When you compare the banking business there is banking business with the driving of oil wells, I do not feel there is any similarity.

Mr. Bushy. If you pioneer in the banking business, you can not hope for much except the development of the community and a

small return on the capital investment

Mr. GREENE. I think you have gotten the idea that the banking business is too cold-blooded in that matter. A banker is watching the growth of his city and community all the time. You see a crossroads as the beginning of a neighborhood center. You will say, This is a community that is going to be populated by working men. You should bear in mind that the poor man is a better business pros-Pect for a bank than the rich man. We would rather be a banker for poor men than for very rich men. If you feel that that territory is going to be built up by average wage earnings, you will be willing to go in there and take a loss for two or three years. We have done Many of our branches that you call de novo branches have to be built up to the point where they will make money. We plan also in the banking business.

Mr. Bushy. Most all of the systems that have been presented here Went into good fields in proven territory and took over the best banks. Mr. GREENE. That is rather different. You are not talking about

branch banking; you are talking about group banking. Mr. Busby. I am talking about both. I have not seen many hunting around for doubtful places.

Mr. Greene. We simple ask for an opportunity to develop-Mr. Bussy. But your ultimate object is to make money.

Mr. GREENE. Yes, sir. Mr. Bushy. Do you think the country would have developed in the rapid manner it has if it had to depend on group or branch banking to establish contacts?

¹⁰⁰¹³⁶⁻³⁰⁻vol 2 PT 13-

Mr. Greene. I think it would have developed faster.

Mr. Bushy. I wish you would tell me why, when your system gives no ear to anything except absolutely sound security for every loan that it puts out. It takes nothing of the towns that is incident to developing a community or property.

Mr. Greene. Mr. Busby, I do not think you understand that we have loaned millions on unsecured paper, where we have nothing

but the character of the borrower back of it.

Mr. Busby. I do not know what character of paper you take.

Mr. Greene. We have made loans which take page after page to record at each meeting. I called once upon a New York banker who showed me all their maturing notes for one month. They were all on one page of that sort (indicating). We have a discount committee that goes over our maturing unsecured loans once a week. It is # closely typewritten report and runs from 24 to 35 pages of loans each week, some notes being as small as \$25. We have 525,000 depositors most of them people of small means. I do not think you understand our situation.

Mr. Busby. Coming back to the idea that the banking situation would become nation-wide and be consolidated into larger and larger groups and that that is in line with all the other business activities in the country at the present time, can you visualize the situation in regard to the mass of the people when control of banking credits and business has gone into the hands of gigantic holding corporations and into the hands of extensive groups of bank credits and chain store operators and all those things? What will be the situation of the

masses at that time?

Mr. Greene. I think it will be better than it is now.
Mr. Busby. Now, coming to the size of a town in which an independent bank could be operated successfully—

A

b

BI

g

is

田の田

W

W

In

an

th Sec

the

Mr. Greene. An independent bank?

Mr. Busby. Yes.

Mr. Greene. You are getting down to the smallest community where you could put a bank? Remember, I am sympathetic with your idea.

Mr. Busby. I have not expressed my idea. I am trying to get

yours along certain lines.

Mr. Greene. I think that the system that could afford to go into the smaller community is the branch-banking system and not the group or unit system.

Mr. Bussy. Do you think that a town of four or five thousand

people could operate an independent bank successfully?

Mr. Greene. Not an independent bank.

Mr. Busby. Do you not think the metropolitan center is especial! adapted to your type of banking, whereas the more sparsely settled communities are more adapted to unit banks?

Mr. GREENE. No; I do not think so. I think the branch is likely to excel the unit bank by less margin in the congested district that

Mr. Busby. In my district, there is not a town with 5,000 people in it and yet we have dozens of banks that pay more than 25 per cent on their stock. What kind of argument is this you gentlemen are presenting from the metropolitan centers, when you tell us we can not operate those banks?

Mr. Greene. For instance, what would the relation of capital and surplus of the bank to its deposits be? You say 25 per cent on the

capital. That depends on how much surplus there is.

Mr. Bushy. I can only answer that by saying we have had but 34 bank failures in the last 10 years out of some three hundred odd banks in Mississippi. The relation is such that they appear to be thoroughly sound and that is all that can be required.

Mr. Greene. I think that is a splendid record.

Mr. Bushy. And yet the argument you make coming from metropolitan centers, would put every bank in my district into a branch. I see the physical facts that refute your statements and I do not believe them for that reason. I am bringing you concrete instances so you may get my point of view.

Mr. Greene. I never want to see them in one banking system, but assume the banks became the branches of five branch banking systems, operated from the head office in the largest metropolis in Your State. I say this, that given those same banks and putting

them into competing branch systems and then operating-

Mr. Busby. Would they develop the communities in small towns with the same sympathy and feeling that they have built those towns to their present situation?

Mr. Greene. I think more so. Why, in Lorain, are we lending ple cent more than our total deposits? It is because we have other

places where the reverse is true.

Mr. Bushy. I can answer that by saying I imagine you are lending it to well-established individuals with well-established lines of credit, and you are not developing any new lines of credit ab initio.

Mr. GREENE. We would not lend to anybody without proper

security

Mr. Bussy. Now, I want to read to you from an ad that is in the American Bankers' Journal on page 1080. It reads as follows:

If there is one inspiring element more noticeable than another in present-day business, which lifts it to a more human plane, it is the element of sport. Not sport as a recreation, diversion, or pastime, but sport as a game. The human game of building men and things to the service of man.

Ask

Ask any successful business man the game he likes best. Invariably the answer is, "My business." He is playing the game. No little white ball holds his eye so intently; no gun or rod, blue water or trackless sky, call to him so deeply, nentally, or physically. The records he breaks are those set by his budget: Costs, sales, inventory, turnover; his medals, profits, and the knowledge that he last played the game well.

It's a great game, business. Some weaken, but the game goes on.

It's a great game, business. Some weaken, but the game goes on.

Now, that is the position of the big banker, is it not?

Mr. Seiberling. You might tell him the story of what you did

with Lorain after the cyclone. Mr. Bushy. I want to reach these gentlemen who believe that the whole banking business of the country should be tied in systems reaching from coast to coast.

Mr. Greene. I am opposed to that strongly. Mr. Bussy. You intimated that at the crossroads workmen settle and place their money in the banks and kept it there for awhile and the rich man spends his money. One is holding on to his finances securely and the other is playing this game.

Mr. GREENE. Let me tell you exactly what I meant. We make thousands of real-estate loans, mostly to poor people on their homes,

em ery ant

not

every year. Now, which is the better loan—\$25,000 loaned on a \$75,000 home to the rich man, or five loans of \$5,000 each to working men on their homes?

Mr. Busby. There is less margin, perhaps, taking the hazard into consideration, comparing one with the other, to make the large one instead of the smaller ones. That is not the answer you expected, is it?

Mr. GREENE. No; it is not.

Mr. Bushy. I think I am reasonable in giving it. I have had enough experience in farm loans to know that it was a mistake to increase the loaning limit of the farm loan boards to \$25,000 because, instead of loaning \$500 or \$1,000 to men who wanted to invest it in homes, they turned around and began lending \$25,000 to real-estate promoters who represented they had property valued at \$60,000 when as a matter of fact, the value was not there.

Mr. Greene. I do not think we see, ultimately, the same-Mr. Bussy. I am not quarrelling with the big institutions, but I know this, that there is not a town in my district nor in anybody else's district that was not made a town except by the efforts of independent merchants going into business there and other merchants coming in when the center grew to be more attractive to trade, and all of them operating together and offering places for trade and places where people could supply their wants in a mercantile way and by these folks paying taxes and building up the community, with local banks joining them at the proper period of development and supplying credit to those that needed credit and were worthy of credit, and I know when you syphon the life out of those places through chain stores or any other system that removes the management of those stores or banks or whatever they may be from that community, you are going to take the life out of that place. I am not speaking about the banks only, but about anything involved in the economic situation. I can not see the necessity for a two billion banking corporation to develop the country for the use and happiness of the mass of people that makes the country.

Mr. Greene. Of course, there are territories where \$2,000,000,000

banks would be absolutely too big.

Mr. Bushy. I am for the \$2,000,000,000-bank, provided it keeps its hands off the places that are properly supplied in a credit way by local investments in banking.

Mr. Greene. That is what we do. In a town where there are half a dozen banks and branches of our bank, why do they choose to do

business with us?

Mr. Bussy. There are two things. The taxing power is the power to destroy and money certainly does receive the call in places where you place it. People do not stop to analyze the effect that is going to be brought about in their community or any place else. When the larger amount of money is available from any source, they go to the money. Ten years may point us to what was the right way back in 1930. We can not tell now. That is all I have, Mr. Chairman.

The Chairman. Are you placing in the record a statement of the condition of your bank with its officers, also the geographical location

of your shareholders?

Mr. Greene. I have not, but will be glad to do so now.

The CHAIRMAN. The statements referred to will be inserted at this point.

tl

0

u

branch managers have in agricultural loans?

Mr. Greene. I am glad you asked me that question. Our branch managers are all rated according to their experience and ability and are given authority, according to our standard, to lend anywhere from \$250 to \$5,000 on their own authority. They are all connected by phone with our branch managing offices and if they want to go above that, they get approval by telephone or in writing to go above that.

Now, on collateral loans, of course, years ago we did not get much demand for collateral loans from the branches. That has been increasing. We furnish every office with a list of the collateral they are likely to be offered with out rate per share on that collateral and with our indication as to how we grade it; in other words, whether it is to be accepted freely in lagre amounts or whether it should be held down. It is according to the intrinsic value of the security and described, in my statement, the real estate loans.

The CHAIRMAN. I recognize in the development of your branches, in building up the Cleveland Trust Co., that you have done quite an unusual thing; I recognize Cleveland is quite an unusual city, independent almost of the rest of the United States; in other words, Cleveland has been built up by its own people industrially and the banks have been a great factor in building up Cleveland independently

of New York and other big cities.

I recognize in many years past you have taken care of the market and sold all your own securities and they have been known as Cleveland securities. In that respect I recognize the fact that your institution has been built up as a service institution. I also recognize the fact that other communities and other people handling our branch institutions might not take the same interest in building up the immediate locality that you have. You recognize that, of course, yourself, do you not?

Mr. GREENE. I do, except I have seen banks that did not have that Policy adopt ours because it means getting the good will of the community. If you have 525,000 depositors in a community of a million

and a quarter, you have the good will of that community.

The CHAIRMAN. In other words, there is a spirit of cooperation and pride in Cleveland that exists in your banking institution that probably does not exist in many other places in the United States.

Mr. Greene. I would not be competent to say that. It is a semi-

Public institution.

The CHAIRMAN. I think you are too modest to say that, but I think it is generally recognized that that is true. The same incention tive might not exist in other institutions to do that; in other words, they might be more mercenary and take funds originating in a community and transfer them to other sections of the country where they can obtain higher interest rates.

You see no possibility, then, in the development of branch banking

in the United States, of a centralized control from New York. Mr. Greene. Now, we are talking about the ultimate?

The CHAIRMAN. Yes.
Mr. GREENE. I think you will have branches that will have home offices in other cities. I think you will have systems with their headquarters in Chicago, San Francisco, New Orleans and Atlanta as well as other places; in other words, they might have their offices in New York, but I would hope that their home or principal offices would not all be in one city of the country. I am sure in Canada

there are some that have more offices in Toronto than in Montreal. The CHAIRMAN. Practically all of the heads of groups that have appeared before the committee have recognized that if they were permitted to do a branch banking business they would change overhight and get into branch banking. I recall Mr. Rand of Buffalo testifying that he recognized the fact that his head office, as far as he was concerned, would remain in Buffalo; that they would take over or had taken over an institution in New York City to take care of the customers that they might lose by reason of consolidations and moving the customers that they might lose by reason of consolidations and moving the customers that they might lose by reason of consolidations and moving the customers that they might lose by reason of consolidations and moving the customers. hoving to New York. His idea was that, independently of the groups the banks in the country could be managed just as well from outside of New York City as in New York City. Do you think that is possible under the branch system?

Mr. Greene. Yes, sir,

L. A. ing

held id 1

The CHAIRMAN. You do not see any danger of the control of your banks, once built up into a very large system, getting into the hands of New York—that New York might want to gain control of your institution?

Mr. Greene. I think as long as there are competing branch systems that if a bad policy is inaugurated in one system, it will lead to the lessening of business in that institution and the building up of another. You are going to have the same control by good will that you have now, whether they are larger units or smaller. However, I think some of them will make a specialty of the Middle West or the far West of the South and maintain their offices there and there will be that same

Spirit of the locality, except the locality will be bigger.

The Chairman. You suggested a moment ago something about the impossibility of the acquisition by a group such as I have described and the maintaining of their hold on the banking business of a community; that if they did not serve the interests of that community a new institution would spring up. Take, for instance, your own situation in Cleveland: Suppose the control of your institution was acquired by a group outside of Cleveland that did not have the same interest in Cleveland that you and your associates have, and you started out to build up an independent unit. You would have some difficulty in meeting the competition of that group, would you not?

Mr. GREENE. You would have for a time, but would it not be more likely that you would go over to a competitive group who would have a policy of developing the Cleveland district where you knew that would be enforced? The fear that exists, it seems to me, is the fear of monopoly. It is not the fear of bigger groups. It is the fear of monopoly. There should never be a monopoly. I think it would be

impossible and very unlikely to happen.

The CHAIRMAN. I think that is all, and we thank you very much Mr. GREENE.

(Whereupon, at 1.15 o'clock p. m., the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS

The hearing was resumed at 2.30 o'clock, p. m., at the conclusion

of the recess.

The CHAIRMAN. The committee will come to order. We have with us this afternoon Mr. Robert V. Fleming, president of the Riggs National Bank of Washington. We will be very glad to hear from you Mr. Fleming, on the subject of branch, chain, and group banking

STATEMENT OF ROBERT V. FLEMING, PRESIDENT OF THE RIGGS NATIONAL BANK OF WASHINGTON, D. C.

Mr. Fleming. Mr. Chairman and gentlemen of the committee I should like, first, to present to the committee a brief statement which pertains mostly to our own experience within the District of Columbia and then I shall touch a little beyond that.

The Chairman. Proceed in your own way.
Mr. Fleming. The Riggs National Bank had, as of the call March 27, 1930, capital of \$3,000,000, surplus and undivided profit of \$3,796,300, and total resources of \$57,011,200. It has in operation six branches within the District of Columbia,

Prior to the Millspaugh Act of 1922, there were no restrictions upon the opening of banks and the establishment of branches within the District of Columbia. The Comptroller of the Currency was charged with the duty of supervision over all banks here, including those chartered under State law, those under the laws of the District of Columbia, as well as those under the national-banking laws. Banks were chartered in Arizona, Virginia, West Virginia, and other States and opened up for business in the District of Columbia. Some of these banks, under the authority of their charter and without reference to the Comptroller of the Currency, established branches in the District of Columbia. In this manner there grew up an unsatisfactory banking condition in the District on account of a large number of small banks operating without having been compelled to submit to the condition precedent to Government investigation and approval, as is customary in the organization of banking institutions.

In order to prevent the further development of this undesirable situation, Congress enacted the so-called Millspaugh Act in 1922, which provided that no corporation could engage in the banking business in the District of Columbia or establish a branch therein without first having the approval and consent of the Comptroller of the Currency. This gave to the Government of the United States the veto power over the establishment of any banking institutions and hew branches in the District of Columbia, as well as the power to permit the operation of such new banks and branches as might meet

his approval.

There are 40 banks now operating in the District of Columbia, 12 of which have one or more branches in operation. The aggregate deposits of all of these banks are \$256,871,000 as of March 27, 1930, \$48,664,000 of which are in the Riggs National Bank, or about 19 per cent. There is attached hereto, and marked "Exhibit A," a Statistical statement comparing the growth of bank deposits in the District of Columbia during the past five years, distinguishing banks with branches from those without. It will be observed that branch banking in the District of Columbia has developed very slowly and conservatively, there being only 24 branches in the entire District and no bank having in excess of six branches—the Riggs National Bank operating the latter number.

Mr. Chairman and gentlemen of the committee, if you will turn to the first page of the exhibit, taking the comptroller's call of March 27, 1930, it will be observed that the percentage of the Riggs Bank's deposits compared to the deposits of the national banks' deposits was 35.2 per cent and the percentage of the Riggs deposits to deposits of

banks was 18.9 per cent, or practically 19 per cent. Taking the comptroller's call of five years ago—April 6, 1925—the total deposits of all banks in the District of Columbia were \$232,-677,447.17. At that time the Riggs deposits were 28.6 per cent of the deposits of national banks, and the percentage of the Riggs deposits to all banks was 15.1 per cent. The gain in deposits over the period of five years between the two calls for all banks was \$24,-193 472 776. 193,473.76, of which the Riggs gained \$13,624,301.29 and the national banks \$15,767,555.96.

Mr. Wingo. Did you give the percentage of gain there?

Mr. FLEMING. The percentage of gain of the Riggs National Bank was 38.9 per cent; the percentage of gain of the national banks was 12.8 per cent and the percentage of gain of all banks was 10.4 per cent.

Mr. Wingo. I see that now. I was looking at the wrong sheet. Mr. Fleming. Turning to the next sheet, you will find, as of the call of April 6, 1925, there were 10 banks having branches as of that date. They had 20 branches and their deposits were \$113,484.613.15.

Between April 6, 1925, and March 27, 1930, two additional banks took out branches or acquired branches in one way or another, and to these I have added the deposits of banks with branches in existence April 6, 1925, and later were consolidated with banks in the above group and became branches.

As of March 27, 1930, there were 12 banks having 24 branches with total deposits of \$146,213,468, a gain for the banks having branches

for the 5-year period of \$13,606,363.70.

There were 28 banks not having branches, with total deposits as of April 6, 1925, of \$100,070,342.87, and with total deposits as of March 27, 1930, of \$110,657,452.93, representing a gain of banks not having branches during the five years of \$10,587,100.06.

We will observe that the percentage of gain of banks with branches to all banks was 56.2 per cent and the percentage of gain of banks

without branches to all banks was 43.8 per cent.

(The figures referred to are printed in full at the end of Mr. Fleming's opening statement.)

METHODS OF ESTABLISHMENT OF THE RIGGS NATIONAL BANK BRANCHES

All of the branches of the Riggs National Bank are what are known as statutory branches, that is to say, branches which have been established under specific statutory authority under the national banking laws. The first three branches acquired by the Riggs National Bank in 1922 were the result of consolidation with the Hamilton National Bank. The Hamilton National Bank had three branches, one at Dupont Circle, one at Fourteenth Street and Park Road, and the other at Seventh and Eye Streets, N. W., which branches had been established prior to its conversion into a national bank, the Hamilton Savings Bank having been originally chartered under the laws of Arizona. At the time of its conversion into a national bank, it elected, under the authority of the act of 1865, to retain these three branches, and they became branches of the Riggs National Bank under terms of the consolidation act of 1918. I may add that the Riggs National Bank took over the Hamilton bank in order to assist in clearing up the bad banking situation in the District of Columbia.

The branch at Eighteenth Street and Columbia Road, known as the Northwest Branch, was acquired in 1925, through a consolidation with the Northwest National Bank, which at the time had one branch at that place, established when it was a State bank, known as the Northwest Savings Bank, organized under the laws of Arizona, and which it elected to retain under the act of 1865, upon being converted into a national bank. This branch thereafter became a branch of the Riggs National Bank by virtue of proceedings under the consolidation act of 1918.

The two remaining branches were acquired through the consolidation of the Riggs National Bank and the Farmers & Mechanics National Bank of Georgetown. The latter bank had one branch at Wisconsin Avenue and Warren Street, established under the authority of the McFadden Act of 1927, and upon the consolidation, this branch was acquired by the Riggs National Bank under the authority of the same act. Simultaneously with the act of consolidation with the Farmers & Mechanics National Bank, the Comptroller of the Currency authorized the Riggs National Bank, under authority of the McFadden Act, to establish a branch at Wisconsin Avenue and M Street, the same being the former head office of the Farmers & Mechanics National Bank. It is seen, therefore, that the Riggs National Bank acquired all of its branches, so far as their legal status is concerned, either by virtue of the national bank consolidation act of 1918 or under the McFadden Act, only one branch coming into the latter category.

BRANCH OPERATIONS

The Riggs National Bank conducts a metropolitan banking service, that is to say, it carries on all of the departments of banking ordinarily found in large city banks. It has a commercial banking department, a savings department, a foreign department, a credit department, a trust department, and a safe-deposit department. With the exception of the trust department, which is maintained at the main office, 1503 Pennsylvania Avenue NW., all of these departments are maintained at both the main office and the branches, with the further exception of our Seventh Street branch, where we do not conduct a safe-deposit department.

Although the Riggs National Bank is engaged in what may be called city branch banking, as contrasted with the extension of branches into outlying cities, it has nevertheless maintained the local contact which existed in the bank taken over at the time it became a branch. The one exception is that of the Hamilton bank, the management of which had lost the local confidence necessary to maintain it. This local contact we regard as of the greatest importance to the success of branch banking, and good business practice

alone is a sufficient reason to preserve it.

T

t

8

Ø

e

e

h

S

3

The Riggs National Bank has an advisory board of the branches, and upon this board are the principal members of the boards of directors of the banks which were converted into branches, all of those serving being shareholders of the bank. In the case of the Farmers Mechanics branches, the entire board of directors of the bank became members of the advisory board. This board has 33 members, five of whom are officers of the Riggs National Bank and it meets once each quarter at the main office of the bank, at which time all of the operations of the bank, which includes the operations of each branch, are carefully reviewed. Respective executive committees of the advisory board meet weekly at the branches, and, in addition, that part of the advisory board constituting the former directors of the Farmers & Mechanics National Bank meets monthly at that branch. The advisory board performs the same functions With respect to the branches that it performed with respect to the Pre-existing banks, except that it recommends policies and pro-cedure, instead of initiating them. Its members are keenly interested in the work of the branches, attend meetings regularly, and their counsel and advice are of invaluable assistance to the bank in dealing with the multitude of local questions which arise.

It has been our policy to carefully select our branch managers, and to give them rather wide discretion in the operation of the branch. Only matters of importance are referred to the main office, minor matters being handled by two liaison officers from the main office, who are in daily contact with each branch. In the making of loans, branch managers are authorized to make loans up to \$25,000 to a single customer upon listed collateral, and in some cases up to \$5,000 on an unsecured note. This latter authority varies from \$1,000 to \$5,000 according to the branch and the needs of the community which it serves. In connection with applications for loans beyond these amounts, the branch manager appears before the loan committee at the main office and presents the case to that committee for determination. Each branch manager is required to maintain his own credit files and is charged with the responsibility of following the loans made at his branch. We have found that the discretion and authority granted have been sufficient to take care of the ordinary operations at our branches which are, in the main, showing steady increases in deposits and in the number of customers served. This method of making loans applies, in the main, to loans of new customers, as we have numerous lines of credit extended to the old customers of the bank, in some cases for large sums, which have been approved by our loan committee and which come up from time to time for redetermination of the line of credit. In some instances, the line of credit is reconfirmed without reference to the customer; in others it may be reduced or withdrawn. This system enables us to give prompt loan service to many of our larger customers who find it more convenient to deal at one of our branches.

Our branch in Georgetown, at Wisconsin Avenue and M Streets, formerly the location of the Farmers & Mechanics National Bank, has many aspects of an out-of-town branch. This branch was origin-nally established in 1812 and was in continuous operation in George-

town up to the time we took it over.

Georgetown still maintains its separate and local individuality due to the fact that for more than 120 years it was a separate municipality. In order to indicate the success of our operations there, the net profits of the bank for the last full year of its operation as an independent bank—that is, the year ending December 31, 1927, were \$28,825.34, whereas for the year ended December 31, 1929, the first year of operation as branches, analysis of the earnings discloses net profits of \$58,371.77, which included many expenses incident to consolidation, such as the cost of departmental adjustments, stationery, and new forms, and so forth. In other words, we are enlarging the banking business at that point without losing the local contact, and we have been able to cut down considerable expense in overhead.

We have found in our experience that branch banking is economically sound and successful as a business operation. It has also met with popular approval, the Riggs National Bank having to-day 46,251 accounts, commercial and savings, 24,748 of which are in the branches; while as of December 31, 1922, the close of the first year we began operations as a branch banking institution, we had on our books a total of 21,915 accounts, of which 5,687 were in the branches.

I have purposely confined my remarks to the operations and experience of the Riggs National Bank in order to bring before your committee a concrete example of branch banking operating in a geographical territory solely under the political jurisdiction of the Congress of the United States. The District of Columbia is the smallest political unit in the country by virtue of the lines which were established when the Federal Government was first set up. As the seat of the Capitol of the Nation, a large metropolitan city has grown up within it and has overflowed into the surrounding area of Maryland and Virginia. Under similar circumstances in the various States, cities of corresponding and lesser size have from time to time enlarged their political limits to embrace suburban districts. can not be done by the city of Washington. As a consequence, we seem destined to have a great business center in the city of Washington, supported by many residents in nearby suburbs outside of the District.

This all might be called the metropolitan area of the city of Washington, or Greater Washington, and its banking business would normally flow into Washington. Without therefore bring up for the moment the question of trade-area branch banking in the sense suggested by the Comptroller of the Currency, but looking at the situation from the standpoint of the Riggs National Bank and other banks similarly situated in the District of Columbia, under any amendment extending the power of national banks to have branches beyond the city in which they may be situated, it would be a natural and easy Progressive development to extend branches from banks in the Dis-

trict of Columbia into these suburban communities.

For example, in Maryland there are Bethesda, Bowie, Hyattsville, Kensington, Rockville, Mt. Rainier, Seat Pleasant, Silver Spring, Takoma Park, and Sandy Spring; and in Virginia there are Alexandria, Arlington, Ballston, Cherrydale, Clarendon, Falls Church, Rosslyn, Fairfax, and Herndon. These aggregate a total of 19 places around the District of Columbia doing their principal business in Washington, and which could be served with branches of Washington banks with the same facility of operation as those branches now situated in the District of Columbia. This extension I would not call trade area branch banking, but rather the same type of branch banking which exists in a number of metropolitan cities like New Orleans, Atlanta, Cleveland, Detroit, Cincinnati, Los Angeles, and so on, where national banks now have branches.

Coming now to the larger question which has been so ably discussed before this committee, that of a wider extension of branches into the rural districts, it is my opinion that a sound system of branch banking could operate from Washington within an area of some 50 miles, which would take in (in Maryland) Frederick, Gaithersburg, La Plata, Laurel, and Upper Marlboro, and (in Virginia) Fredericksburg, Leesburg, Manassas, and Warrenton. It must be recognized, however, that in each of these towns there would be some overlapping of trade areas between Washington and Baltimore, on the one hand, and between Washington and Richmond on the other, because the business of those

places is somewhat divided between the cities mentioned.

I may say, in conclusion, that the Riggs National Bank does not now contemplate an entry into group banking, and I know of no instance of group banking operation from the District of Columbia. In this connection, however, I wish to direct the attention of the committee to the existence of a large number of small local banks situated in the 19 little towns mentioned, making a fringe around the city of Washington. There exists the possibility in the modern development of group banking that some group operating outside of Washington might begin to pick up these banks, thus bringing into the metropolitan area of Washington the competition of outside banking. In such a case it would no doubt be necessary for their own protection for Washington banks to resort also to group banking. I have no criticism to make of group banking as a business proposition, but having been an officer of a very conservative banking institution for the past 14 years, during the last 8 of which we have operated branches, I should prefer to see banking in the District of Columbia develop under a more liberal branch banking law than be compelled to resort for self-protection to the new and less-known field of group banking.

This concludes my formal statement to the committee, and I shall be glad now to respond to the best of my ability to any questions which you may desire to ask.

(The figures referred to previously in Mr. Fleming's statement are printed in full, as follows:)

The CHAIRMAN. As you know, Mr. Fleming, the committee has been engaged in the study of the banking situation and various suggestions and recommendations have been made, the most pertinent of which is that recommendation made by the Comptroller of the Currency in which he recommends the extension of branch banking to trade areas. What do you think of that plan?

Mr. Fleming. I think it is a very logical development. I think we have a situation in this country generally where conditions very similar to those outlined at the close of my formal statement obtain, and if banks are not permitted to go further with branches they will form groups in self-protection on account of the additional service the public demands.

The Chairman. You appreciate the difficulties in defining trade areas?

Mr. Fleming. Yes, sir.

The CHAIRMAN. There has been some suggestion that this be left to a committee composed of the Secretary of the Treasury, the Governor of the Federal Reserve Board and the Comptroller of the Currency, to fix these areas from time to time. Other suggestions have been made that Congress fix by law these areas and there have been other more indefinite suggestions. Which of those plans do you think would be advisable in case a trade-area plan is adopted?

Mr. Fleming. Following the results of the divisions of the Federal-reserve districts, it would seem to me that a committee would probably be able to fix those areas more readily than if Congress attempted

to do that.

ot 10 8. 10 KS nd rn of to de eir g. sitive of be vn all ns re

93

96

76

8. 9

The Chairman. Members of groups and representatives of branch-banking institutions that have appeared before us have intimated that the day of the unit bank has passed. Do you agree with that?

Mr. Fleming. I do. I do not think there is any question about

The Charrman. You think there is a new condition arising where the small country and suburban towns, such as you have enumerated, could be best served by a branch system?

Mr. Fleming. I do, without question.

The CHAIRMAN. I infer, from what you said, that you prefer a system of branch banking rather than group banking?

Mr. Fleming. Yes, sir. I think it is preferable and adds better

service as well as greater strength.

The CHAIRMAN. Would you be in favor of nation-wide branch banking?

Mr. Fleming. Not to start with.

The Chairman. But ultimately, you feel, with the others who have so expressed themselves, that we will have nation-wide banking?

Mr. Fleming. I think that is something that has to develop. We see nation-wide chain stores and nation-wide organizations now operating throughout the country. It is perfectly possible it will develop in banking the same way. However, I think it is always better to crawl before we attempt to walk.

The Chairman. What in your judgment has caused this change? Mr. Fleming. It costs more to-day to operate a bank than it did a great many years ago. There are many features that enter into that and it has been pretty difficult for the small bank to operate at a profit from direct banking operations.

In addition to that, we have a great many chain stores coming in and absorbing the corner grocery and drug store, etc., and deposits of

the smaller banks have dwindled.

The Chairman. The concentration in industry, as well, has

affected the situation?

Mr. Fleming. Yes, sir; and it has gone into the larger centers, and I think that has made the situation more difficult for the small-unit bank, particularly, to operate, as indicated by the number of failures; and I think the fact you can operate a branch so much more economically than you can a single small-unit bank has had a tendency to make the stockholders of those small banks glad to become members of a group, or to become a branch of a larger organization.

The Chairman. Do you think there is any danger in this development of nation-wide branch banking producing a concentration of ownership in New York City of the banking assets of the country?

Mr. Fleming. I do not believe it will develop that way. I rather look for it to develop into separate areas.

The Chairman. You recognize, along with stability, the change in the type of holders of banking stocks, do you not?

8

p

t

Mr. Fleming. In just what particular do you mean?

The CHAIRMAN. I mean by that, more and more of late there is a different class of people buying bank stocks and they are dealt in more on the market. They are purchased without any thought in mind that the buyers are going to be a part of the institution in the direction of the management?

Mr. Fleming. I think there has been a tendency in that direction

in the larger banks.

The CHAIRMAN. Do you think that it is a dangerous tendency that bank stocks should be dealt in in that way, to the extent they are?

Mr. Fleming. Only if the shares should get into the hands of a few.

The CHAIRMAN. Do you think it is possible?

Mr. Fleming. It is possible where they are listed on exchanges. For instance, group stocks are listed and dealt in. There is a tendency to buy them purely for speculation rather than because of any interest in the community.

The Chairman. What is your experience in regard to the percentage of deposits and loans in the different localities where you have your branches? Do your loans in those localities exceed your

deposits?

Mr. Fleming. No; in practically every case the loans do not take

up the loanable funds of the branch.

The Chairman. Of course you have a different situation than prevails anywhere else in the country because of the lack of industry in this community?

Mr. Fleming. That is correct. It is true in every branch—in every one except one—we have had healthy increases in deposits and also in the number of customers. In most every case, however, the branch

has money on deposit with the main office.

Mr. Luce. I would call your attention, Mr. Fleming, to a matter on which I asked the judgment of the witness who was here this morning, in line with what the chairman has just inquired about, as embodied in a prediction I read only last evening in an article on investment trusts, the writer believing that no long period would elapse before individual holdings in the stock of national banks would disappear and

that they would practically be held by investment trusts.

These opportunities in banking have been particularly brought to the attention of the public within the last few years, notably by one or more books, showing what profits have been made. Of course you are more familiar than I am with the very rapid growth of joint investment forms; and I would ask of you, as I did of the gentleman this morning, to tell me, from your practical experience, something about the relation of stock ownership in the conduct of banks, whether the operation of your bank is in any way affected by the ownership of the stock?

Mr. Fleming. Well, I think all bankers, Mr. Luce, try to get a wide distribution of their stock. They like to get as many people as possible interested in the bank. That seems to be more an

Intangible than a direct result, as far as benefit is concerned.

Now, as to the activity in the purchase of bank stocks, of course, you realize there was a boom period when everybody was buying securities and where banks were making quite large profits on account of high interest rates, and there was an era of consolidations, and the public took kindly to it, and there was usually a profit on the bank stocks. If we are in what looks now like a low interest period for some time, I doubt if there will be the same activity in buying bank stocks. There has been a decided falling off in consolidations, which had a tendency to boost bank stocks. In our bank, have had no trouble with that. We have had a rather wide distribution of our stock. We have an average holding of 45 or 50 shares per shareholder.

Mr. Luce. Yet it would seem that the investment trust has come to stay. Hardly a week goes by that I do not receive some solicitation

to put some money in this or the other investment trust.

n

Mr. Fleming. I do not think they are as popular as they were before the decline of the market in October.

Mr. Luce. Well, I do not know about that. We expected everything connected with the stock market to become unpopular but within three months the mania for speculation revived.

You used the word "speculation" in this connection. The legitimate investment trusts are not engaged in speculation, but in joint investment and I rather doubt if banking was proportionately less popular than other forms of investment when the crash came.

Mr. Fleming. Before the decline, banks had passed through two or three years in which they enjoyed large earnings, numerous consolidations took place, and in many cases extra dividends were declared, making these stocks rather attractive for investment. Now the condition is different. The earnings of banks in this low-interest period are not as great as they were during the years preceding the market decline, the yield on bank stocks is low, and I think we have very nearly reached the saturation point in consolidations, particularly large ones. Therefore, I do not think banks stocks will be as attractive in the next two or three years as they were during the preceding three years.

Mr. Luce. You do not include the formation of groups under your

word "consolidation," I take it? Mr. Fleming. No, I do not.

Mr. Luce. That apparently is attracting a great amount of interest and money. I read, within a few days, of 50 Pennsylvania banks going into a chain, and the well-informed witness this morning said he had abandoned any attempt to get figures as to the total number of banks in chains and groups, because the next day he found it was not accurate.

Mr. Fleming. I think that may be true as far as the formation of groups is concerned, but I do not believe the general public are buying group stocks as actively as they did. We do not get the inqui-

ries we did some four or five months ago.

Mr. Luce. Have you any knowledge of any attempt to buy your

stocks by investment trusts?

Mr. Fleming. None that I know of. Oh, there may be two of three hundred shares held by little separate investment trusts of local origin, but none by national investment trusts or groups. There has been no attempt so far that I know of.

Mr. Luce. It was brought out in the course of the inquiry this morning that in Canada at least one bank has—I am anticipating Mr. Fenn's inquiry; it was his contribution, for which I am gratefulone of the large banks has the power to pick and choose those who

would be stockholders.

Mr. Fenn. I made inquiry as to whether that custom has been given up. The Bank of Montreal has a provision whereby the directors reserve the right, on the transfer of stock, to approve of the transferee. I made the inquiry as to whether that practice had been abandoned, and I do not think any of us knew. That was the practice at one time.

Mr. Fleming. I do not know what that practice is, but I do know they have a very peculiar system of transferring their stock.

Mr. Fenn. A very difficult system.

Mr. Fleming. Yes, sir; particularly if the stockholder wishes to use the stock as collateral. It makes it a very difficult operation.

Mr. Luce. That brought to our attention one of the very few suggestions that have been made as to how we can handle group banking if we want to assume that it would be constitutional to do it, as to which I am far from being certain. Could we give national banks the power to select their stockholders? Would it be a wise thing to do in anticipation of possible inroads by investment trusts

and all sorts of holding companies, and so forth?

Mr. Fleming. I think I can answer that question best by expressing my belief that the best-run bank is the bank where the management must hold office by efficiency and not through the domination of one or two interests, and if the bank's officials or directors themselves were to pick the shareholders, you might run into a situation where a group that was not efficient would take control and perpetuate Itself through that stock ownership.

Mr. Luce. It seems every rose has its thorn.

Mr. Fleming. I mention that because I can see that possibility. Mr. Luce. Can you see any other possibility? We have been holding hearings for many days and we would like to get something

tangible to operate on.

Mr. Fleming. I think, as a general proposition, that bankers do not like to see their stocks held either by trust estates or by investment trusts. I think the bankers themselves would like to stay away from them. So, you have a natural resistance on the part of the administration of the bank to start with. I do not know of any method that would be legal by which you could control the stock ownership of a bank.

Mr. Luce. Then, if this tendency for amalgamation goes on and does go right through the banking field, your fight is going to be like

all other enterprises, is it not?

Mr. Fleming. I do not believe that condition would exist if we could have an enlargement of the branch banking privilege right now. think that would be the offset. I do not think that any bank, for Instance, in a city like Baltimore or Washington would care to be linked in with a national chain of banks or group of banks. I think the large banks themselves would rather be the center or the heart of a branch banking system that could spread out in their own areas, where they could serve their own communities.

Mr. Luce. Have you read Mr. Anderson's recent discussion of

this subject?

Mr. Fleming. No, sir.

Mr. Luce. Mr. B. M. Anderson, of the Chase National Bank, within two or three weeks, has come out with a reasoned argument against branch banking by city banks, apparently outside of the city limits, although I am not certain about that. I am curious to get some suggestion as to what is behind the apparently growing

Opposition of New York banks to branch banking.

Mr. Fleming. Of course the deposits of the New York banks the larger ones—are made up to a great extent by deposits of out-oftown correspondents. Possibly there would be a loss in deposits if

there should be a decentralization.

Mr. Luce. If they owned the bank they would have a strangle hold on all the money.

Normally you would think the Chase National Bank would rather own a bank, say, at Flushing—just by way of illustration—than hold the somewhat precarious position of its correspondent.

Mr. Fleming. Branch banking has been pretty successful within the city limits of New York and I do not see any reason why it would

not be just as successful outside of it.

Mr. Luce. Possibly some of us feel the same way and we wondered why the Chase National Bank should pronounce the other way.

Mr. Fleming. They have been very successful in their branch operations and I might say, in that connection, that I was very much interested in the report of Mr. Wiggin to his stockholders in 1928, in connection with the merger of the Garfield National Bank. While we did not know it at that time, their branch operations and advisory committees and interlocking of contact men are almost identical with our own system.

Mr. Wingo. I did not catch that.

Mr. Fleming. I said I was very much interested in the report of Mr. Wiggin made to his shareholders in 1928 where he touched on the merger of the Garfield National Bank with the Chase. It is interesting to observe that their system of advisory committees was very similar to the system that we have in effect at our branches, although we did not know that that was their method at that time.

The Chairman. Might I suggest to you, Mr. Luce, the fact that one of the subsidiaries of the Chase National Bank in New York owns the American Express Co., which has offices all over the world comparable to the tellers windows that are proposed to be established

by the system of nation-wide branch banking?

Mr. Luce. That adds to my apprehension of their inconsistency.

I do not understand it.

Turning for a moment to one other phase of the local situation, I see that after taking out your banks from the figures in your statement, there remain 39 banks in Washington with an average deposit of \$5,300,000. Of course some of the others are sizeable banks, so I take it there must be here in Washington a considerable number of small banks.

Mr. Fleming. Yes; I thought that might be a natural inquiry. There are 40 banks in the District. There are 8 savings banks where the deposits are under \$1,000,000. There are 18 banks (1 trust company, 4 national banks, and 13 savings banks) where the deposits are over a million and under \$5,000,000.

There are seven banks (4 national banks, 2 trust companies, and 1 savings bank) where the deposits are over \$5,000,000 and under

ei

ho

\$10,000,000.

There are 7 banks (4 national banks, 3 trust companies, and no savings banks) where the deposits are over \$10,000,000.

Mr. Luce. Are these savings banks doing purely a savings bank business or also a commercial banking business?

Mr. Fleming. They are doing a general savings and commercial business, both.

Mr. Luce. Then the word "savings" has no significance? Mr. Fleming. I should say the lines are all broken.

Mr. Luce. In that part of the country from which I come, where mutual savings banks flourish, we have found it expedient to insist upon the segregation of deposits in the matter of our State banks, which

We call trust companies, putting them under the same restrictions that the savings banks are under in the matter of the character of investments they may make. We have felt that this was of a vital nature. The witness this morning argued that he saw no reason for any dif-

ferent treatment for different classes of depositors in banks.

Looking at it from the point of view of the depositors, up my way we think the deposits of the poor have a peculiarly sacred nature, if I may use that word, and we try to protect them. Of course, in an institution as large as yours and so well established and so solid, if I may so call it, the need for segregation is not evident, but do you share my apprehension that trouble will come here some time from the failure of following that system we have of giving the savings deposits of the poor a particular protection?

Mr. Fleming. I think it all comes down to a question of management of the bank. I think practically all good bankers have an eye

to the protection of the savings depositors in their banks.

Mr. Luce. But in the case of failure they do not get any preference. Mr. Fleming. Well, I think when a bank is poorly managed and gets in that condition, you have an institution that ought to be closed up and not allowed to go on.

Mr. Luce. We had in Boston four such trust companies that were closed up, but when they were closed up, the little depositors had the

first chance at what assets remained.

Mr. Fleming. Well, I think it would work an amount of hardship on the larger and stronger institutions if you put some restrictions as to the type of investment in which they have to invest savings. I think good bankers do that anyway. In the savings accounts, you Pay a higher rate of interest on the deposits.

Mr. Luce. But we pass laws not for good banks, but for bad banks. Mr. Fleming. I think we should have fewer of these little banks

that can not stand the strain.

Mr. Fenn. The branches, so-called, of the Riggs Bank are all

established under the act of 1922 and the McFadden Act?

Mr. Fleming. Yes; and in connection with the act of 1865 and the act of 1918 also. Mr. Fenn. That has worked very successfully in the District of

Columbia?

Mr. FLEMING. For us; yes.

Mr. Fenn. It is rather evident that the McFadden Act was successful in its functioning as far as Washington is concerned and other cities?

Mr. Fleming. I think that is unquestionably true. Mr. Fenn. Now, you set up or suggested a metropolitan district here, mentioning this town. Why did you eliminate Alexandria?

Mr. Fleming. I included Alexandria.

Mr. Fenn. As I read it here, I thought it was omitted. I wondered why it should be.

Mr. Fleming. As a matter of fact, Alexandria would be one of the cities that could very proprly be served.

Mr. Fenn. You said Fredericksburg-

Mr. Fleming. I was using Fredericksburg in a secondary sense as a larger trade area.

Mr. Fenn. That is all, if Alexandria is included.

Mr. Fleming. It might be of interest to the committee to know that there are about thirty millions of resources in those 19 little towns.

Mr. Fenn. In the extension as you suggest here to these surrounding towns—in fact, you have suggested to us a metropolitan area rather than a trade area; in other words, you would not deem it advisable—and I am not putting words in your mouth—you would not deem it advisable to extend the area of Washington to interfere with Richmond or Baltimore?

Mr. Fleming. I think-

Mr. Fenn. To overlap into them?

Mr. Fleming. I think there should be some determination there as to which could be better served. I mention in the statement that there would be some overlapping at Fredericksburg and at Frederick.

Md., in the Maryland district.

Mr. Fenn. I think your suggestion very appropriate both in regard to the working of the McFadden Act in the District of Columbia and your added suggestion in regard to the metropolitan area, that you deem advisable, and it seems to me as if, if we should draw an act, trade area is very difficult to define, whereas metropolitan areas are

not so difficult as you stated.

Now, Mr. Luce made the suggestion or made the inquiry as to the stock ownership in banks. I know that you are very well acquainted with bank officers, particularly in the East, in the South, and in the Northeast, as far up probably into New England—perhaps not as much in New England as elsewhere. Do you find that the executive officers of those banks, the men in charge, the men who run the banks, are large owners of the stock?

the

Mr. Fleming. In the main, I would say they are not, under present

conditions.

Mr. Fenn. Are they not employed, and their high salaries of commensurate salaries, paid in accordance with their ability as banking men?

Mr. Fleming, Yes. I think, of course, all of those gentlemen en-

deavor to have a substantial holding in their own institutions.

Mr. Fenn. Of course.

Mr. Fleming. But the present heads of the larger institutions are, in the main, men who have come from other sections of the country and have been picked for their ability rather than their ownership of stock.

Mr. Fenn. In the city in which I live, Hartford, which has large financial institutions, particularly insurance companies, it is very seldom that the officers of the large insurance companies are large owners of stock. In many instances, in the banks, men come up from the ranks and acquire their stock ownership. Of course it is their own business and they will get all the stock they can, but not enough to control or keep them in their position if they are unfit.

Mr. Fleming. Of course, I am an advocate of a banker being a trained banker from the start. I think the history of banking has proven that with the intricacies of banking to-day, a man has to be a trained banker in order to head a bank and in order to be

successful.

Mr. Fenn. But it is not necessary that he control the stock except with the approval of the stockholders and the directors, in order to hold his position?

Mr. Fleming. No.

Mr. Goodwin. I have just one or two questions. If I understand your statement correctly, Mr. Fleming, the branches operated and owned by the Riggs National Bank, are the result of consolidations with other banks except one branch bank. So, in the acquirement of these banks, there were no other banks forced out of business?

Mr. Fleming. No; there was no bank forced out of business. There were two banks where we purchased the entire stock ownership before the consolidation; that is in the case of the Hamilton Savings Bank and the Northwest Savings Bank. They went out of existence and became branches of the Riggs Bank through the subsequent consolidation, under the acts of 1865 and 1922.

Mr. Goodwin. The banks taken over are maintained as branches

thereof?

Mr. Fleming. Yes, sir.

Mr. Goodwin. There is just as much competition in the banking business to-day as there was before the consolidations took place? Mr. Fleming. I think there is very much better competition than

there used to be.

Mr. Goodwin. Any individual or corporation entitled to and worthy of credit, can obtain credit as easily now as before these consolidations took place and the branches were established?

Mr. Fleming. I think they can obtain credit more easily and more

Mr. Seiberling. In legislating for the banks of the country, of course, we have to take into consideration the country as a whole.

Mr. Fleming. Certainly.

Mr. Seiberling. And while your plan is admirable for Washington and the vicinity, the metropolitan idea would not serve the territory around St. Paul and Minneapolis, in Wisconsin, Minnesota, or the Dakotas. I understand the principal purpose of the investigation We are making is to devise some scheme by which banking facilities can be given to agricultural States, where so many banks have failed. What plan as to trade areas would you have to suggest as to areas of that kind?

Mr. Fleming. I do not think I am familiar enough with the terri-

tory around Minneapolis to give you an answer.

Mr. Seiberling. You can readily see your plan would not serve

that territory.

Mr. Fleming. I see no reason, as a general proposition, why enlarged branch banking authority, allowing banks to go into these different territories to operate branches, would not work as successfully within a certain radius as the group banking which is going on

Mr. Seiberling. Your thought is that this committee that you referred to would have discretion to limit you here in Washington to metropolitan district and then expand that district around St. Paul and Minneapolis to take in the agricultural sections?

Mr. Fleming. Within their discretion-whatever conclusions they

arrived at after an investigation.

Mr. Seiberling. I believe that is all.

The Chairman. There is just one more question I want to ask It has to do with some things that have been happening in the last year in regard to our whole financial situation and has

perhaps some reference to the concentration of funds available for speculation, as evidenced last summer, on the New York market.

Do you think the mixing of short-time funds with long-time funds has anything to do with the furnishing of easy accessibility to funds with which to speculate in the market? In other words, is there a misuse of long-time and short-time funds in banks or in institutions that furnish credit?

Mr. Fleming. You have an entirely different structure now of your commercial houses throughout the country than we had 10 or 15 years ago. You now have most of the large concerns that furnish the eligible paper throughout the country that have changed their capital structure into preferred and common stock that may be listed on stock exchanges, and naturally there are more collateral loans in banks now and less purely commercial loans than existed 10

The Chairman. Is not that due somewhat to the operation of the Federal reserve where we drew in funds from the byways and hedges and made them immediately available and liquid, through its operations, and the fact we have time deposits and demand deposits mixed, the whole tending to make liquid all classes of bank funds, so they can be moved into the stock market or into land speculation or any other kind of speculation with greater alacrity than ever before?

Mr. Fleming. I think the bank conferences held over the country by the different groups of bankers are safeguarding that situation There has been an educational campaign carried on.

The CHAIRMAN. They are dealing with this subject?

Mr. Fleming. With the liquidity of the banks. We know that \$

collateral loan is not liquid.

The CHAIRMAN. The annual reports of the Secretary of the Treasury and the Comptroller of Currency indicate an increasing amount of investment securities in commercial banks throughout the country. It is due to the fact that more of that class of securities is being emitted than heretofore and industry is changing its method of financing from what it previously pursued.

Mr. Fleming. I think so. One of the difficulties of banks that are members of the Federal reserve system, is to get eligible commercial paper. I know one bank that has gone over the country soliciting purely commercial accounts in order to have paper that is eligible

for rediscount.

The Chairman. You think there is a dearth of eligible paper? Mr. Fleming. There is no question about it. In my own bank we carry a very large, what is known as, secondary reserve. In my opinion it should be the first line of reserve. We carry a very large amount of Government bonds just so we can be liquid. We were very fortunate in that policy when the decline came. We were able to take care of our customers and all the banks dealing with us.

The Chairman. It has been brought out in these hearings, and seems to be the fact, that the larger national banks, particularly in the larger cities, are resorting to larger Government loans for that particular purpose. They can use that for rediscounting in the Federal reserve and enter into sale and repurchase through the Federal reserve for instant relief. In your opinion, does that have any particular

effect on Federal reserve operations? Might not it provide a method of inflation-

Mr. Fleming. Of course-

The CHAIRMAN. By the continued use of Government bonds as a basis for the issuance of credit?

Mr. Fleming. I do not think they are used in that sense at all. I think they are used as a safeguard, like an elastic band to stretch on. The CHAIRMAN. In times of emergency, the big bankers are using

them to a great extent?

Mr. Fleming. Yes. The CHAIRMAN. Is not that getting back to almost the old national bank circulation medium, which was secured by Government bonds?

Mr. Fleming. Of course the rediscount rate, with reference to the rate the bonds bear, does not make it very profitable to borrow on Government securities. It is not a profitable operation.

The CHAIRMAN. You do not see any danger in the continued use of

Government bonds for the relief of Federal reserve credit?

Mr. Fleming. On the contrary, I think there is a great deal of concern in the minds of bankers with respect to the fact that Government securities will gradually disappear if we continue our amortization of the public debt, which I understand is at about \$900,000,000 a year.

The CHAIRMAN. I have heard some bankers advance that idea in criticism of the policy of the Treasury in reducing the public debt, because it was taking out of the market an increasing number of Government securities, thereby decreasing their availability for sound collateral.

Mr. Fleming. That, coupled with the decrease of commercial paper, gives very little we can pledge with the Federal reserve banks.

The Chairman. Decreasing our debt at approximately one billion a year will eventually take away this public debt which is now being utilized by the banks for the purpose of substituting in lieu of eligible

Paper to secure the release of credit,

In view of that possibility and the present dearth of eligible paper, would you think it advisable that we increase the scope of eligible Paper by permitting the rediscounting of notes representing brokers' loans, similar to the Lombard loans which were advocated by the late Governor Harding of the Federal reserve bank of Boston, or would You think we should make eligible installment paper or notes secured on an acceptable percentage of municipal bonds or notes secured by hilroad bonds or even making the railroad bonds themselves eligible?

Mr. Fleming. I would favor consideration being given to making eligible bonds that are accepted as security for Government deposits. I think the fact they were accepted would make a greater market for those securities. We have to find some substitute for the disappearance of commercial paper on which Federal reserve rediscount system

was founded.

Mr. Wingo. In other words, without undertaking to define what the change should be, you feel that developments have made it neces-

Sary to recast the standard of eligible paper?

Mr. Fleming. I think we have a very difficult problem ahead of to find some substitute and at the same time have some collateral that is liquid.

Mr. Wingo. You and the chairman proceed upon the theory that the difficulty is in the big city banks. I have been interested in two

ank my arge were able

and y in that ders

serve cular banks that you would probably designate as country banks, where they were carrying considerable Government bonds but occasionally borrowing from the Federal reserve banks. They were carrying them for two reasons: One was the natural shortage and the decreasing available of sufficient volume of eligible paper and the other was the difficulty of making their paper eligible even though that paper, from their own viewpoint, was perfectly gilt-edged and sound, and for that reason to avoid the technical requirements as to eligibility, they were carrying Government bonds, and in answer to the question that I propounded to each of the gentlemen and the chairman propounded to you, about the danger of getting back to the old bondsecured Government circulation medium, they suggested that they simply used it as purely a very easy convenience to get funds that are necessary to meet commercial demands and therefore, in effect, they were really not doing anything more than meeting the spirit of the Federal reserve act.

Mr. Fleming. Government securities are not very profitable to hold from a banking standpoint, as far as the return is concerned. Of course, where you hold a very large block of Government securities for that purpose, to keep yourself liquid and meet withdrawals and take care of unusual demands for loans and in times of stress to take care of everybody that has to be taken care of, you have to gear your bank, as far as expenses are concerned, to be able to carry them

Mr. Wingo. The whole thing comes back to this, that I think all three can agree on, that with the developments that have taken place there is evidently a necessity for an effort to recast the eligibility requirements of paper, maintaining safety and yet meeting the changed conditions and additional requirements.

Put

fron

Mr. Fleming. I do not think there is any question of the wisdom

The Chairman. This policy of the use of Government bonds is of particular advantage to large city banks acting as reserve agents for country banks in that these banks, through the use of securities, can, at a moment's notice, secure cash from the Federal reserve whereas if they did not have Government securities, they would probably have to hold the cash. So there is some advantage to certain institutions in the use of these Government bonds in that particular, and also in this respect, that it permits them to lend up closer to their assets, because they can go in at the close of the day with their Government bonds and make up their deficiency in reserve and then take them out again in the morning when the clearances come in

Mr. Fleming. It is of very great value, as you state, to any bank that has a number of other banks dealing with it. In the main, those banks are mostly State banks and they have not a large eligible reserve. They may have a lot of real estate loans or loans of individuals, perfectly good, but not the type that the bank itself could take and rehypothecate with the Federal reserve bank. So, the bank carrying those accounts, must have them. The service that the Federal reserve banks have rendered in that connection has been excellent.

Mr. Wingo. It has been suggested by some one that there is this possibility, and to a certain extent, a very great probability, that the

Volume of eligible paper which has decreased perceptibly and to which you have directed attention—that that volume is apt to come back as we go through changed conditions and the changing conditions we have been going through.

What is your thought on that? Do you think there is a permanent change, that this is a permanent shortage of eligible paper or that

there will be a resumption of volume?

Mr. Fleming. It is my opinion that it is practically a permanent change. I believe people have been taught diversity of investment and that has been so pounded home that where we had two or three men as a partnership operating a commercial house, having all their wealth tied up in that one industry or business, they would prefer to have a preferred and common stock issue, owning the control and yet being able to take part of their accumulations and keep them in other investments. I do not believe they will go back to the old form.

Mr. Wingo. In other words, there seems to be a unanimity of opinion that the appetite of the American people for stock investments has been whitted and temporary burnings in the market like they suffered last year are not going to keep them away from it; that they are still inclined to trust their capacity to go into the stock market not only for sound investment but for reasonable

speculative activities?

Mr. Fleming. I do not think we will see the general public in quite as deeply as they were in November, because I think there are a great many people who will never again buy a security unless they can buy it outright and put it away. Of course, 10 or 15 years from now there will be another generation growing up and they will forget the lessons that have been learned by the present generation.

Mr. Wingo. You do not know of any philosophy that justifies the Government in saying that you can not buy an A B C oil stock or that you can not buy a Victrola that is beyond your means? Therefore, we can not prohibit their buying for speculative purposes, and the only thing we can do is to see that there is no fraudulent repre-

sentation in the sales.

Mr. Fleming. I do not think there is any question about that, and I think anything else would tend to injure the investment of

capital in legitimate industry.

Mr. Wingo. Of course you understand that this interest we display in people burned in the stock market is a biennial affair; that with the approaching elections, as happens every two years, we become considerably interested in what happens to these people?

The CHAIRMAN. You say the economic laws have so changed that

a burned child has not any dread of the fire?

Mr. Wingo. I have never been entirely satisfied with these old maxims that I learned not so much at my mother's knees as at the knees of some one else.

The CHAIRMAN. Mrs. Pratt, have you any questions?

Mrs. Pratt. I think most of the questions I wanted to ask have

been asked already.

Mr. Seiberling. To the extent that we have unnecessary restrictions on the paper we rediscount with the Federal reserve, we are putting on an additional burden on the public that buys the service from the bank, are we not?

Mr. Fleming. I do not know that I caught that question.
Mr. Seiberling. Will the reporter please read the question?

(The question was read by the reporter.)

Mr. Seiberling. In other words, if you have got to carry Government bonds on which you can not make much profit, you could have other securities on which you could have made a profit and the public

must pay the bill?

Mr. Fleming. If we could purchase a large volume of commercial paper we would, of course, make a great deal more money than by holding a big block of Government securities as a reserve. That might have a tendency to make the interest rates we charge to customers on loans a little lower. It might have that tendency. I think this point ought to be brought out, that practically every other industry or business in the United States is charging now a considerably higher profit than they did 10 or 15 years ago except the banks. The bankers have had to become, through restrictions on the amount of interest they can charge—and I am not advocating higher interest rates—but they have had to become better bankers to take care of their business, to meet the increasing service the public are asking for and yet to build up proper reserves to meet unexpected losses and in addition, to pay fair dividends on their stock.

The Chairman. In view of the agitation among the members of the Federal reserve system for a larger distribution of earnings, I should

like to ask you whether or not you think that is a good thing?

Mr. Fleming. I would be opposed to seeing the Federal reserve banks pay interest on their accounts. I think they are giving us excellent service in the transit system, absorbing all the expenses. I do not feel there should be, over the nominal franchise tax to cover any expenses the Government may incur, a better distribution of any surplus earnings, either going back into betterments of the Federal reserve system or in distribution in extra dividends to members of the system who are stockholders.

The Chairman. Do you see any danger in making a distribution to the banks of surplus earnings, through the encouragement of the demand for the Federal reserve to make more money to make the

distribution possible?

Mr. Fleming. I think with the restrictions thrown around the paper that the Federal reserve banks can buy and the fact that the rates should be what business justifies. I do not see any way by

which they can be drawn into competition.

The Chairman. Of course the Federal reserve rates are arbitrary amounts. I understand it takes the investment of a billion dollars in their assets to meet the burdens of the system. Do you think there might be a possibility of tying up the liquidity of the Federal reserve system if it were compelled to earn more money in order to pay banks an additional amount?

Mr. Fleming. I think that a very large percentage of whatever the surplus earnings are should be covered back into the surplus of the

Federal reserve banks.

The Chairman. You do not think the further distribution of these earnings would affect the fundamental purpose of the system as a nonprofit-making system?

Mr. Fleming. In my judgment the large profits of the Federal re-

serve system were made in two or three years.

The Chairman. Inasmuch as there is something over \$250,000,000 surplus and only 50 per cent of the Federal reserve stock paid in, do you not think the banks could be better served by returning all but a nominal amount of their capital to them to invest as they see fit?

Mr. Fleming. I would want to give very careful consideration to the return of any part of the capital or surplus of the Federal reserve

The Chairman. I am not speaking of the return of the surplus, but the return of all but a nominal amount of the capital to the Federal reserve banks and let them invest it as they see fit.

Mr. Fleming. A bank makes more on capital funds then it does on deposits and if you return a large portion of the Federal reserve capital

it would have a tendency to lower their earnings, I believe.

The CHAIRMAN. Well, the Federal reserve is somewhat differently constituted than a commercial organization. I know there is a big agitation on for a further distribution of surplus earnings. I am fearful if that is granted it may be an incentive to place the Federal reserve system in competition with other banking and that it might tend to make nonliquid the assets of the Federal reserve system.

Mr. Wingo. You assume that the bank's stockholders have no

control over their institutions.

The CHAIRMAN. The law regulates the amount that shall be paid

to them.

Mr. Fleming. The stockholders have not so much to say in the mangement of the Federal reserve banks.

Mr. Wingo. They are going to have more and more to say, are

Mr. Fleming. I think, as a general proposition, that most of the member banks feel that the Federal reserve banks have given great service. I do not believe there is any feeling of antagonism between

the members and the Federal reserve banks.

Mr. Wingo. What I have in mind is they will have more and more to say as to the question of competition; in other words, if the Federal reserve banks started out, and it became obvious they were pursuing a policy to become competitors of member banks where it was not becessary in the original function-

Mr. Fleming. I think the member banks would take that question

up very vigorously.

Mr. Busby. In your statement you name 19 little towns surfounding Washington in Maryland and in Virginia in which I understand you suggest it might be well to have authority for the Washington banks to go into this territory and do a banking business. Is that right?

Mr. FLEMING. Yes.

Mr. Bushy. What would be the nature of the business that the Washington banks would do in that territory—group or branch or

Mr. Fleming. Well, I believe that the natural tendency of the growth of the city banks will be to enter the suburban districts toward hese smaller towns.

Mr. Busby. With branches or-

Mr. Fleming. I would favor authority by law to have branches there.

Mr. Busby, Now, do you know anything about the dividends of earnings of these specific institutions at the places you mentioned?

Mr. Fleming. No; I have no direct knowledge as to what each one is earning, but I do know, as a general proposition, operated as a branch, as I have illustrated in this written statement, many economies can be effected.

Mr. Busby. But that is theory altogether. You do not know anything specifically about the operation of the bank at Cherrydale, for instance, do you?

Mr. Fleming. No; but in connection with the other branches we

Mr. Busby. Have these banks importuned your bank or any other to come out and take them over?

Mr. Fleming. No; but I can see that if group banking develops, these banks may be picked up.

Mr. Busby. If the communities are getting along well with the

banks and they are prosperous and pleased with them, don't you think Congress should keep you gentlemen out?

Mr. Fleming. I have not stated that we wanted to go out there. Mr. Busby. You observe it as a fruitful field in which the banks of Washington might operate?

Mr. Fleming. No; but I do take this position, that if more and more of our residents should go into those places-

Mr. Busby. You should follow them with your bank?

Mr. Fleming. No.

Mr. Bushy. What do you mean by the insinuations in your state

ban but

ment, then?

Mr. Fleming. I mean just what I say. We believe, rather than have a group, possibly, coming in and pick up these banks around Washington, that it would be preferable for those communities, for the general good of all of these communities here and for us, for us or other banks in Washington to have branches in those sections rather than have those banks owned by groups, which is the present tendency.

Mr. Busby. Yet none of these 19 places have expressed any desire in the world to have you folks come out there and take then

over as branches or any other Washington bank?

Mr. Fleming. None have approached us. Mr. Busby. Do you not know that the life and death fight in those places-not only with respect to banks but respect to chain stores, and so forth—is to keep you out of those communities? Do you not hear the radio programs every night or two preaching against

the things you suggest here?

Mr. Fleming. I can only say wherever we have established \$ branch we have found, in a very short time, that the number of customers that they have had dealing with that branch have increased the deposits have increased, and we have received general commender tion from the community.

I see no reason in the world why we should nor receive the same commendation if we should establish a bank in one of these places that would give greater service to the community, a quicker service and cheaper service-I can not see why anything that happened in community like Georgetown would not happen beyond the city limits

Mr. Busby. Each one of these 19 small towns grew up by reason of the merchants that went there and established independent banks and the other banks that went there because it was a good trade center.

Now, the independent banks that are there now went there and established business there because the promoters thought it was a good field for them to establish their size of business in and they have evidently prospered, because they have remained in business. Do you think it would be for the best interests of that community to spread the idea out generally and the country at large, to permit institutions like yours to go out there and sap the spirit out of the People who have put their money into these banks out there and bring the management of the branch you establish into the city of Washington instead of letting it alone and letting it proceed in the way it was established by the people who bought the place and wanted it

there because they have settled there?

Mr. Fleming. We have never pursued any such policy, and I know of no bank that operates branches that has not the interest

of the community

Mr. Busby. Why do you not go to some other place where there

is no bank established?

Mr. Fleming. It has been our policy and the policy of other banks to select the principal men in the community as directors and members of the advisory board of the branch. You can not conduct a business without the good will of the community, and you of necessity must also employ the management to run that bank that is a part of the community.

Mr. Busby. That is from the good-will point of view.

Mr. Fleming. It is the common-sense and good-judgment point

Mr. Bushy. Tell me this: Why do you figure that they need you?

Mr. Fleming. I have not said that.

Mr. Busby. Why did you suggest that in your letter here?

Mr. Fleming. Because I have a feeling that if group banking continues, the banks in this fringe of small towns around Washington will be absorbed by some group.

Mr. Bushy. That will be no different from other like situations in

Other metropolitan centers?

Mr. Fleming. We have a different condition in Washington than You have in other cities. If we were not restricted by the 10-mile quare, a great many of the city limits would be extended and take in these towns, and there is no question they would be a part of the city of Washington; but, as you gentlemen know, the city limits can not be extended.

Mr. Busby. I believe you said a while ago that you thought it was not far distant when the chain stores and chain banks-in fact,

chain industry of every kind—would be the order of the day.

Mr. Fleming. No; I do not believe I said that. I did not mean to convey that idea. There is a growing tendency toward that. Mr. Busby. What is your opinion in regard to its coming about? Mr. Fleming. Well, it seems to me to be steadily growing. It used to be only the grocery stores, but it has spread so that it covers

a great many other lines of business. Mr. Bushy. There are about 22 States that do not permit branch banking at all and 14 or 15 others like Mississippi, which permit it, but you would never know they permitted it from the fact that there

are only operating one or two little institutions that were started up prior to the time of the law prohibiting further extension, making in round numbers, about 40 States that do not permit branch banking and yet the statement from every one of you gentlemen coming in here, heading large banking institutions, is that we are right at the point where branch banking is imperative. Where did you get that idea when the States are not-

Mr. Fleming. I guess I am not familiar with the situation in your

Mr. Busby. I am talking about your general knowledge of the

banking conditions over the country. Mr. Fleming. To begin with, a large institution with strong resources can extend the benefit, through a branch to a community center that a small independent bank can not give. There are all sorts of service that can be performed. The public gets better service

through a branch than through a small independent bank.

Mr. Busby. If the independent operator in a mercantile establishment or a banking institution or any other kind of institution 18 not protected by law from these larger units, they can force themselves into a community and force the small entity out of business because it can not compete with the different types of service that can be extended by the larger institution and the different kinds of pressure that can be brought to bear. That is the actual situation in regard to that.

Mr. Fleming. Well, if a branch of a large institution does not give

service, the public will not deal with it.

Mr. Bushy. That is not it. When you put two or three million dollars or \$57,000,000 in the hands of an organization, they can go out and in one way or another circumvent or put out of business an organization prospering and serving the situation well and handling the situation admirably for the people there if it has but a million or two of assets.

Mr. Fleming. That is not my observation of a bank. If a bank pursues that kind of policy it will not be successful in that situation

Mr. Busby, Have you ever talked with anyone where the Bank of Italy, for instance, determined to establish a branch at its own figures'

Mr. Fleming. I have no knowledge as to the various prices that the Bank of Italy or any bank paid for any bank it took over, but I assume it must have paid a price that was satisfactory to the stock

holders or they would not have sold their stock.

Mr. Busby. The policy of securing banks by that type of practice. ought to be noted in the record. I have it on reliable authority that on one occasion the Bank of Italy representative went to a certain bank in California and offered to buy their stock. They said, "We do not want to sell, but want to remain a unit bank." The representative of the Bank of Italy said, "I will be back next year and will buy your bank of Italy said, "I will be back next year and it is the said of Italy said." will buy your bank and will not pay you near as much as I offered I will make conditions so you will sell to me."

I find that is not a foreign spirit to large institutions whenevel they determine to enter a territory and take over an established That is what I object to about this method of banking business.

growing, by the larger banking organizations.

Mr. Fleming. Of course a bank is a semipublic institution. The are there to serve the public and, after all is said and done, the public will demand the best service. Whatever type gives the best service

Mr. Busby. I do not agree with you if you have the money avail-

able to bring the other elements into play.

Mr. Fleming. If a bank pursues that policy it will not long have

the money to survive.

Mr. Seiberling. I think this record leaves the witness in an entirely wrong attitude. As I understood you to say, you wanted the right to extend the branch banks into these communities because You did not want to be forced into taking over those banks by a group or chain—that if you did not take them over some one else would, and you would be deprived of a banking territory that primarily belongs to Washington.

Mr. Fleming. It is my opinion if Washington was not so peculiarly situated with respect to its city limits, a lot of these outlying territories would be within the city limits now and rather than have a group come in from an outside source and pick up the banks and take the money away from Washington, it would be far better for us to have enlarged branch banking privilege and enable us to establish branch

Mr. Seiberling. You think Washington has a primary right to the banking business around this fringe around the District of Columbia?

Mr. Fleming. Yes, sir.

Mr. Bushy. You say, "Take the money away from Washington." We have been taught to believe, by the group and branch bankers that they put more money into the community than they took away. You do not believe that is the natural result should they tie into the outlying territory with their branches?

Mr. FLEMING. I doubt very much if the demand for loans in that territory takes up all the loanable funds for those banks; consequently, the surplus funds unloaned would naturally go into the parent bank,

wherever that parent bank might be situated.

Mr. Bushy. You do not consider that you have any inherent right to the banking advantages that exist out in Virginia or Maryland and the towns mentioned by you, do you?

Mr. Fleming. No; I do not think there is any inherent right to

anything in banking.

Mr. Busby. That overthrows your argument in answer to Mr. Seiberling's question.

Mr. Fleming. I do not think so, sir. I am simply pointing out that this section, if it was in a city like Los Angeles or Atlanta, would be within the city limits and therefore would be a part and parcel of the city of Washington.

Mr. Busby. I must take issue with you there. I do not see how You can get Gaithersburg and Leesburg and a lot of these places 20

miles away. It looks like begging the question. Mr. Fleming. I said a possible enlargement of the trade area hight go that far and I pointed out that there might be possibly an overlapping in some places with Baltimore and Richmond.

Mr. Busby. That is all.

The CHAIRMAN. We will adjourn until 10.30 o'clock to-morrow horning, when we will hear Mr. Henry M. Dawes.

Whereupon, at 4.15 o'clock, p. m., the committee adjourned to heet at 10.30 o'clock, a. m., Wednesday, May 28, 1930.)

The state of the s r d b 8 19 9 to b n it ir re C a In in al

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, MAY 28, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met at 10.45 o'clock, a. m., in the committee room,

Capitol, Hon. Louis T. McFadden (chairman), presiding.

The CHAIRMAN. The committee will come to order. I desire to call to the attention of the committee the fact that the chairman invited Mr. George W. Davison, president of the Central Hanover Bank & Trust Co., of 70 Broadway, New York, under date of May 8, to appear before this committee. Under date of May 9, Mr. Davison replied as follows:

I have your very courteous telegram of the 8th instant inviting me to appear before you committee on branch, chain, and group banking. I have said already all that I have to say on that subject and it would irk me considerably to have to repeat it. I am inclosing you a copy of what I had to say in the event that you have not seen it. I hope under these circumstances you will be willing to excuse me from attending on the committee.

Under date of May 12 a reply was made to that communication in which it was further urged that he appear before the committee and the dates of May 20, 22, 27, and 29 were suggested. Up to this time

no reply has been made to that further communication.

I want to suggest to the committee that Mr. Davison is one of the important bankers in the United States who has given utterance to definite views in regard to the subject that is under consideration before this committee. His testimony is valuable to this committee, and because of the fact that the committee has made the rule not to insert statements by anyone unless they appear themselves for questioning before the committee I deem it of sufficient importance that we have the testimony of Mr. Davison, and I call the matter to the attention of the committee with the request that the chairman be authorized to subpœna Mr. Davison to appear before this committee. I will not bring it up at this time for action, but I present it merely as a matter of information.

Mr. Brand. Where does he reside? The Chairman. New York City.

Mr. Brand. He should be able to get here very conveniently.

The Chairman. We are fortunate in having before us this morning Mr. Henry M. Dawes, of Chicago, a private business man, rep-

resenting the depositor's view, and from his experience as a banker in Chicago and later as Comptroller of the Currency, who has frequently appeared before this committee in connection with matters pertaining to banking in the United States, we will be very much interested in hearing his statement this morning on the subject of branch, chain, and group banking.

STATEMENT OF HENRY M. DAWES, OF CHICAGO, ILL.

Mr. Dawes. Mr. Chairman and gentlemen of the committee, I

feel rather apologetic about the length of my statement.

A casual scrutiny of the testimony which has been given before this committee gives one the impression that centralized banking is being advocated solely because of an altruistic desire to serve that portion of our citizenship which makes up the population of our small towns and villages. Strange as it may seem, the pressure for this service does not seem to come from the people who are to be served, but from certain ministers of grace who are competing violently for the opportunity to exercise their benevolence. The question of self-interest or adequate return is touched upon very lightly, but in my opinion may be safely assumed.

It is necessary in considering arguments submitted to this committee to bear in mind the possibility of unavoidable prejudice, and your hearings will not be complete with the testimony of bankers, as theirs will always be, to a certain extent, ex parte statements. There is more involved in the issue than the technique which is the province of the banker. The requirements of industry, commerce, and society are a concern of government and banking is important only as it

serves them.

There are two sources of advice and information whose frank expression would be very valuable to anyone making a study of this question. They are the managers of the very large city unit banks and the investment bankers. It would be extremely difficult to get such an expression from either. In the case of the very large institution, which has no ambitions along syndicate lines, the banker would be asked to comment upon the operations of his largest depositors. No matter how bitterly he may feel he will hesitate to say anything which might result in the withdrawal of deposits. The investment banker is in an even more difficult position. He must realize that this movement spells the doom of his business. With the absorption of unit banks by centralized groups, he will obviously lose them as outlets. With the building up of these outlets these centralized groups will, of course, go into the origination of securities, so that the investment banker, by their operation, is deprived at once of his source of supply and his outlet. In the meantime, however, these groups are very fine customers and he has to face the dilemma of losing a good present customer or submitting, without protest, to the development of a movement which will result in his extinction. Without in any way implying that deliberate and improper pressure will be brought on anybody, the embarrassments of these two groups of the large independent banker and the investment banker suggest that similar inhibitions will be put upon a large proportion of those to whom you will turn for information and opinion.

The duties of bankers are those of trustees of other people's funds and a recognition of this has always characterized them in the past. They have recognized that this imposes upon them certain limitations which do not apply with equal force to other activities. When bankers begin to apply some of the methods of other commercial enterprises and some of their systems of finance, they are straying away from the straight and narrow path that they have followed in the past.

Responsibility is essential to trusteeship, and responsibility can not be discharged by the trustee who does not have freedom of control. The manner under which this control is acquired and the place where this control rests will modify the whole course of a banker's operations. Before going into a discussion of the principles of centralization it would be appropriate to discuss the new banking from the stand-point of responsibility and control.

There are three manifestations of centralization in the United States. Up to a few years ago the chain was the most widespread; then in certain States branch banking developed, and recently the organization of holding companies has combined the two principles

and extended them.

The term chain banking is usually applied to banks in which there is an interlocking ownership, although frequently this ownership constitutes a minority interest, but always a practical control, due to the personality of the head of the chain. The argument for this type of operation is that it increases cooperation, imposes management, and secures diversification. Many sound chains have been established, and are in operation, I believe, however, that the general trend of

banking thought is distinctly unfavorable to them.

When banks are associated for the purpose of the exchange of securities it is not usually the prime securities which are under consideration, and while it must be conceded that a certain diversification of collateral is brought about no very important good is accomplished as good collateral can always be used by correspondents or discounted at the Federal reserve banks. The practical result, therefore, as a rule, is the rapid circulation of bad notes throughout the system.

The dominant personaltity in the chain usually sees that those member banks in which he owns the least stock are the ones which

get the worst collateral.

The collapse, about two years ago, of what was, so far as the number of its members was concerned, probably the largest chain that has ever developed in this country, developed a situation which would be amusing if it were not tragic. Certain members of this organization paid to the managing control a large sum of money for instruction in those practical aspects of banking in which the small banker is generally considered to be inexpert. They acquired both knowledge and experience, and in some cases enough bad securities to bankrupt the banks.

The device of transferring assets of local origination to different sections by this method results in an exceedingly difficult task for the supervising authorities. When small loans on real estate are switched from Florida to New York, the New York bank examiner has an almost impossible task in ascertaining their value. The responsibility and the control in chains is often hard to locate, and when located is, as a rule, more distinguished for its control that it is for any financial

responsibility.

Branch banking is concentration carried to the nth degree. It may be said for it that the location of responsibility and control is much more definitely ascertainable than is the case with either of the other forms of syndicate operation. Branch banking in this country has not yet passed State lines. If it does an interesting problem will develop as between State and National control. Any system of branch

banking offers great difficulties in the matter of examination, either private or governmental. The possibility of switching assets from branch to branch can only be definitely prevented by having an examiner in each branch at the time of examination. I do not know of a case where this has been done up to the present time, but branch banking is in its infancy. It would be utterly impracticable to have examiners in every branch of an institution that, for example, had 1,000 branches. If absentee banking is to be approved, and if centralization is desired, much is to be said for the advantages of this form as compared with the others that involve the same principle.

The recent development of holding company control of unit banking operations is probably the tendency that has precipitated the present unrest. To recall the manner in which these holding companies are formed in many cases is alone sufficient to emphasize the possibility for abuse under irresponsible management. The usual procedure is to issue stock of the holding company in exchange for stock of the unit. Sometimes a majority of the stock is secured in this way, and sometimes a minority, but it must either be assumed that the stock is acquired for the purpose of speculation or for the purpose of practical control. The substitution of the holding company's assets for the financial responsibility of the previous stockholders of course results. This financial responsibility, which must be depended upon in case of trouble and which must pay the double liability on the stock of any unit which fails is nothing more nor less than the stock of other banks.

Since all of the constituent banks, both a bank in trouble and the others whose stocks represent the assets of the holding company, are under the same management and are presumably operating in much the same territory, they will, as a general thing, prosper or suffer at the same time. When an emergency call is made by a subsidiary it will be at a time when the other subsidiaries are in the poorest position to support it and when the stock of the banks not directly involved is the least valuable as an asset. It is rather interesting to hear the advocates of this system of banking contend vigorously that they will always be in position to support a weak unit, particularly to one who is conscious of the relationship between fundamental conditions The epidemic which in a district and the condition of the banks. occurred a few years ago in the small banks of the Northwest and which occurred more recently in Florida was not due to bad banking. It was due to bad crops, low prices, hurricanes, and conditions beyond human control. The banking was not bad. It was simply not good enough to combat the laws of nature.

The prices at which these stocks in unit banks are purchased by exchange for stock of the holding company to a very considerable extent must determine the responsibility and the ability of the holding company to support its units. It is very rarely that the stock of a good and well organized bank sells at as low a price as its book value. Anything above book value is, in its last analysis, of course, an estimate of future earning capacity except possibly some speculative value in trading. It is very rarely that bank stocks are acquired by holding companies on their asset or book-value basis. They are absorbed rather on the basis of what it is hoped that they will be able to earn in the future, the extent to which they will strengthen the general organization, and the fear that some competitor may absorb them.

This has resulted in a tremendous speculation in bank stocks, and this advance and speculation has produced a dilution in the real asset values of the holding companies. It introduces definitely the promotional theory and stimulates speculation. It is altogether a sad departure from the stability and the dignity which has always been a tradition of the banking profession, and it is thoroughly inconsistent with the trustee relationship. To cite instances of the organizations which are sound and well officered and constructive in their operation that have been organized by this system of trading for stocks in holding companies by no means justifies a procedure which is certain to result in bad practices on a large scale.

Up to last fall anything could be consolidated through the holding-company route, if not directly, and almost any profit, evidenced by stock in the holding company, could be realized by the promoter. In the feverish search to find earnings to capitalize the fruitful field of bank stocks was exploited with other stock. It was not legislation

but economic law which closed this cycle.

The successful operation of a number of large, well organized com-Panies of this kind is freely conceded, although whether the individual good banks which compose them have been bettered is debatable, but if this principle of indefinite centralization and consolidation by trading stocks is carried to its logical and obvious conclusion, the outcome will be that the banking system of the United States will be in the control of a few organizations which have contributed little if anything in the way of capital and which owe their origin to the dexterity and skill of their officers as traders. Undoubtedly a great many bankers located in our large interior cities have visions of developing holding companies which control the banking situations in their sections, and the ambition eventually to become overlords of feudal principalities, coextensive with the Federal reserve districts. They can draw a most alluring picture and appeal most strongly to Provincial and sectional prejudice. Personally, I have never been able to locate Wall Street very definitely, except in a geographical sense, but whatever Wall Street may be they expect in this way to become emancipated from it. If it is feasible to concentrate the banking of a Federal reserve district in one control in 12 districts, does it require any very great stretch of the imagination to conceive of a combination of these 12 districts and a new and real Wall Street? Call it by any name you will, the concentrated control of banking in a few hands is involved, and in spite of the size and resources of our country the number of hands will be very few.

There is an economic argument and a social excuse for industrial and commercial consolidations, which, on account of the quantity theory of production, can better supply the needs of the public, but credit is not a commodity. No legitimate parallel can be drawn between the large industrial unit, covering a great territory, and the large banking unit with distant ramifications. Your industrialist is dealing with a commodity which he has bought and paid for; the bank-

er is dealing with other people's money.

In those cases where the problem of the small, unsound bank can not be solved, and their elimination has been brought about, the central organization claims a great public service in offering to set up branches. The extent to which it is feasible to establish branches where units can not be profitably operated is debatable, but the

communities which will support a branch and not a unit are in a small minority, and in a very large proportion of those cases there is no great public convenience and no public need taken care of. The farmer who, in the old days, had a practical radius of perhaps 12 miles with his horse and buggy, to-day with his automobile can cover 100 miles. If he is deprived of a crossroads banks he can go to the county seat. Conditions which, 30 years ago, justified the establishment of a branch in rural districts, have changed entirely to-day, and the district which can be reached from a county seat bank with convenience to its customers is, in most Eastern States at least,

practically the limits of the county.

There is at the present time much discussion of the principle of the chain store, but the parallel between the chain store and branch bank is in one respect only applicable. This is in the matter of the substitution of employee for owner operation. Chain stores may or may not be an evidence of progress, but the fact that they are dealing with commodities and not with credit makes a comparison pointless. If a chain store is able to deliver its wares to its customers more satisfactorily than the local merchant, it is because of an advantage over their small competitor which the group banker does not have over the small banker. If the chain store can sell more cheaply than its competitor, it is because it can buy more cheaply because it buys in large quantities. Paying less for its raw material it is in position to sell its product at a lower price. This is the only advantage it has over the local merchant because its other operating expenses are as great or greater. The product with which a banker deals is money.

The price that he pays for money is interest, plus losses on bay loans. As far as the depositor is concerned, the small banker usualld pays less interest on deposits than does the big banker. The general price of money, however, is reflected by the Federal reserve rate and Federal reserve funds are available at the same rates and on the same terms for big and little bankers. The big banker, therefore, does not get his stock in trade any cheaper than the little banker. The remaining factor in the cost of this raw material—money— is the extent of losses in bad loans. Bad loans are due to either incompetence on the part of the banker or a disposition on his part to render service to his clients and to his community even though it involves a certain

recognized risk.

Let us analyze this question of incompetence. The complacent arrogance of size and wealth asserts that the big operator, whether in banking or any other commercial pursuit, is a better man than the little operator, allowing for no fortuitous circumstances by which the big man may have achieved his greatness. Assuming then that the big banker is a better man than the little banker, he is handicapped in his operation becase he knows less about his credit risk than does the little banker, especially if the big banker is a chain banker and the little banker is a unit banker. The unit banker, particularly in the smaller communities, is the personal acquaintance and friend of the man who makes the loan. He is familiar not only with the details of his business, but he knows his character, experience, and ability. He has every advantage over the man who must form his conclusion as the result of the recommendations of a minor employee in a distant city. The owner of a bank will make less bad loans than an employee

d

100

fi

0

0

whose superior may be a thousand miles away. If, however, banks are to be conducted as pawn shops, where standard collateral is the only basis for loans, it makes no difference whether loans are made by financiers or clerks. Anyone can apply the simple formulas.

If banking is not considered as a social responsibility, there is no excuse for any bad loans. This is not the case, and certain risk must be taken in the interests of progress and in response to the public interest. Remembering that the banker is a trustee for the community's funds, he has no more right to withhold them unreasonably than he has to disburse them carelessly. As a member and a product of the community in which he operates, the unit banker is in a position to appraise the public needs and to administer them more sympathetically and more intelligently than the absentee banker. In doing so it is not impossible that he may, at times, incur losses which the absentee banker would not, but these losses which are made in the exercise of public responsibility will not, in the main, offset the saving he effects over the operations of the chain institution because of the Intimate personal acquaintance with the creditor. In considering such losses of the unit banker as may be the result of too great liberality to local enterprise, it must be remembered that the money which is lost to the bank is not lost to the community, that the brick and mortar upon which these funds may have been expended are still in the community, whereas if the funds are loaned by absentees to absentees the loss registered on the balance sheet is a loss to the community. The big bank and the little bank, therefore, start with the same base in the cost of raw material. Their additions to this in the way of losses are not widely different, and the only advantage, therefore, of one over the other must be economy in mechanical operation. Economy in mechanical operations is a thing which can reasonably

Economy in mechanical operations is a thing which can reasonably be assumed for both the branch and unit system. Such advantages as there are, however, in my opinion, rest entirely with the unit system. The overhead of a central organization and the red tape which is involved in its operation, the delays in decision, the division of responsibility, and so forth, ad infinitum, are inherent in size, and are a deadweight which the injection of specialists does not offset.

The availability of money is as important as the price thereof. It is conceivable that in the city of the central bank, on account of drawing funds from the smaller communities, more money would be available, but it hardly is in accordance with nature for the central office communities to pump its funds out to the smaller branches. The inevitable results of centralization will be to restrict the activities of smaller centers, and to accelerate the concentration of population

in the larger cities.

Under the unit system of recent years, the percentage of loss to depositors in large banks has been so small that it is practically negligible. The extent to which failures have been confined to smaller institutions is demonstrated by the fact that in the eight years ended December, 1928, 63 per cent of the total number of failures was confined to banks with a capital of \$25,000 or less and that 88 per cent of the total was in banks of less than \$100,000. Further, as showing the extent to which the trouble was confined to small municipalities, 40 per cent of the total failures occurred in towns of 500 population or less (and it is a very unusual situation where a bank is justified in a town of less than 500), 60 per cent in towns of 1,000 or less, and 80

per cent in towns of 2,500 or less. The problem of safety is therefore largely a small-bank problem. The group banker suggests that he will solve this by extending his branches or chains to the communities in which these little banks are located. How does he intend to do this? Does he intend to buy up the good banks of the community and incorporate them in his chain? If so, he hasn't improved the situation. Does he intend to buy the bad banks? I have not heard of them suggesting this. Does he intend to compete with the good banks? This would not be desirable, as it would substitute absentee control with no compensating advantages. His answer would hardly be that he would want to compete with the poor banks, as obviously that would quickly cause their failure and injure the community. It seems to me that the only claim must be, and it may be a fair and reasonable one, that his objective is to eventually supply branch or chain banks to every community that needs banking facilities, and to the complete exclusion of the unit bank. If he can operate as economically and serve the community as well as the

unit bank he will soon eliminate the unit banks.

Unit banks can not survive the competition of chain or branch banks. They serve the community better, but it is at a serious disadvantage in two respects. In the one case certain clients who are very profitable to a bank are compelled to patronize the chain of branch institution in all matters because they can serve them in some. The management of a concern which operates in a number of different cities is very often associated in business enterprises with the men who are conducting central institutions, and will, as a matter of course, patronize their branches at the expense of the unit banks. When he is not associated with them either socially or in a business way he frequently has to meet them in connection with the issuance of securities. When he does this he incurs, either directly or indirectly, an obligation to patronize their branches. Whether he wants to or not, he is in a position where he feels that his interests require him to throw his business to the big chain rather than to his friend and neigh-This class of patron usually constitutes a large portion of the cream that is now coming to the unit bank. Furthermore, entirely outside of the banking relations, the operators of small commercial and business enterprises are very much handicapped in meeting their larger competitors if those competitors have the ear and the approach to the avenues of credit that can only be reached in central cities after the unit system has been discarded. This situation can not be ignored by the assertion that the chain bank can offer facilities that the unit bank can not, because there has never been a time in the history of this country that, through the operation of the correspondent system and the use of various methods of syndicating loans in financing, it has not been possible for the small banker to accommodate his clents who are entitled to credit. The difference is that in the one case the client is dealing with a friend and a neighbor, and in the other he is dealing with a stranger in a distant city, and as every unit bank becomes attached to a chain the opportunity for syndicating cooperative arrangements between others is narrowed. It can not, I think, be contended with justice, that when the country is eventually under the centralized system these banking arrangements can be made with more celerity, if at all. There are few business men who are not familiar with the red tape which is essential to safety in the operation of a very large organization.

Whatever the fundamental reasons, the fact remains, nevertheless, that few localities can be shown where unit and chain banks or branches have existed for a very long period in competition, and it is the centralized group that is the survivor; but it is not, in my opinion, a case of the survival of the fittest, unless the social aspects are disregarded. The issue is one of survival, and it is hopeless to

attempt to compromise.

In spite of general claims to the contrary, these new syndicates have done little, if anything, to solve the difficulties of the unsound small bank, whose failure is being enlarged upon as an argument for the inauguration of a new economic era. They can not solve this question, and it never will be met except by the inexorable operation of natural laws. Just as truly as there is a point at which too great size destroys efficiency, there is a point below which the unit can not survive. There are hundreds of banks of less than \$100,000 capital that are sound and strong and have every element of vitality Inherent in them, but the measure of such banks' ability to survive is not the size of their capital but the extent of the resources which the community can put into them. Generally speaking, however, the banks with very small capital may be assumed to have very small deposits, and the overhead cost of such an operation is such as to prevent their thriving, and the principal reason for their failure is the fact that they can not afford the expense involved in securing the service of competent officers. To expect to secure a very high class of talent for a salary of \$2,500 to \$3,000 a year, which is all that a very small bank can pay, is unreasonable.

The responsibility for this rests primarily with Congress and the State legislatures in permitting the chartering of too small institutions, and secondarily with the authorities, both State and national, to the extent that they should have exercised discretion in refusing charters where communities did not require them. The discontinuance of the issuance of further charters below a reasonable limit would be constructive. The only thing that can be done for the unsound banks which are now in existence is for the supervising authorities, State and national, to help them to bring about liquidation in a way that will occasion the least loss and to supervise the sound banks as carefully as possible and stop chartering too small institutions for which there is no need. The injection of the branch

and the chain system will only exaggerate a bad condition.

The Federal reserve has been in successful operation for a matter of some twelve years and it is natural to fall into the habit of thinking of it as though it were an independent unit rather than as it actually is, a coordinating agent. It is merely the composite of the members of the system and automatically changes with any change of its constituents. To recall this obvious fact centers attention on the effect of changes which private banking innovations will have on the Federal reserve system. The operations of State and national banks and the Treasury Department and the Federal reserve are inextricably interwoven and it is impossible to legislate in any matter affecting one independently of the other. The Federal reserve was organized because of the ability of the Federal Government to enforce the more or less unwilling and certainly unenthusiastic cooperation of the national banks. This was later followed by the timid and tentative approach of the State banks, so that its membership at

the present time is partly compulsory and partly voluntary. It is the final evolution of a century of finance and the solution of the conflict of the years between the centralization theory and the independent unit theory. In a sentence, it consists in the application of

coordination to independent units.

With the development of chain, branch, and syndicate banks the membership is being changed from that of independent, locally operated units to centralized groups under absentee control. Every group which is organized along these lines decreases the number of persons who, in its last analysis, would control the operations of the system. In the case of holding companies, the holding companies themselves are under the jurisdiction of State officials. The State banks are under the supervision of 48 different superintendents, and the national banks are the only private institutions engaged in banks

ing over which the Government has direct control.

This brief statement of fact makes clear that with the decline of the national banks, the direct influence of the Government on banking operations is decreased, and the further fact that with the organization of groups, the democracy which has characterized the operation of the Federal reserve system is being undermined. It seems to me desirable, therefore, that the Government should do every possible thing that it can, in justice to the State banks and the Federal reserve, to strengthen and develop the national banks, through which it financed the Civil War and organized the Federal reserve system. The other matter of the centralization of the control of independent units involves a control of the Federal reserve system. When in the logical development of this tendency, the control of banking in the United States gets into a very few hands, control of the Federal reserve system will go with it into the same hands. In discussing chain, group, and syndicate banking you are, therefore, discussing the whole fiscal system of the country, both private and governmental.

It seems to me that there is no room for compromise on this subject and that a determination should be reached as to whether the United States wishes to embrace a national system of branch banks or to preserve its coordinated independent units. It can not do both.

When the greatest exponent of branch banking, both in practice and in theory, states that in his opinion the development of chain and syndicate banking is a step toward national and international branch banking, it bears the weight of logic, as well as of his prestige. Rather than to temporize and to attempt to compromise a fundamental issue, the interests of the public would in my opinion be better served by determination as to whether or not branch banking is desirable. Compromise and permissive legislation would have the effect of strengthening the movement to such an extent that when at some later time, the public rebelled against monopolistic tendencies, it would bring about a convulsion which would hurt everyone.

The Charman. Mr. Dawes, it is the custom that the members of the committee interrogate the witness. I suppose you are prepared to back up your statements and to answer questions.

Mr. Dawes. I may not be prepared, but I shall try.

The Chairman. Mr. Dawes, would you recommend that the law be changed as regards the capital of national banks, so as to make a minimum of \$100,000?

Mr. Dawes, Yes; I would. But I hesitate to name an exact minimum. If the comptroller were left with pretty wide discretion as to the chartering-which is a job I think he would not particularly crave—it might be safe to make a smaller amount, but my offhand opinion is that \$100,000 would be about the right amount.

The CHAIRMAN. I rather gained the impression that if you favored branch banking at all, it would be county-seat branch banking?

Mr. Dawes. I do not favor branch banking at all. My idea is with the elimination of the small and uneconomic bank that the county seat bank-the large bank in the community-would be strengthened to such an extent that it would carry on all the banking that is necessary to meet the economic requirements of the community

The CHAIRMAN. What bearing on this development has the Federal reserve had—the starting and putting into operation of the Federal reserve system? In other words, prior to its establishment, we had the unit system in the United States. The organization of the Federal reserve system joined together the national banks in a compulsory manner and permitted the State banks to join voluntarily. all, it is a form of branch banking. Do you think that the development which has subsequently taken place in the operation of the Federal reserve system has been a factor in this driving out of the unit system?

Mr. Dawes. I do not think it is a form of branch banking. I draw a wide distinction between coordination and control and ownership. The Federal reserve system, in my opinion, is simply a coordinating agent for the banks. The Federal reserve has no control of the

operation of the banks.

The CHAIRMAN. It has a very dominant influence in the operation of every bank that is a member of the Federal reserve system.

Mr. Dawes. My own personal feeling is it is not so dominant as a great many people seem to think. I think it simply offers facilities which the banks can use. But further than acting in an advisory capacity, I do not think it dominates the operation of the banks.

The CHAIRMAN. Through the classification of eligible paper and the administration of policies laid down, do you not think they have a very dominant influence over the operation of independent banks? Mr. Dawes. Well, it depends on the way you use that word dominating." I think it is very powerful, but I think their duties in operation are merely one of coordination and of giving the banks an opportunity to cooperate. It is almost in the nature of a clearing

The CHAIRMAN. Do you think that the methods of operation of the office of the Comptroller of Currency have been a factor in this

situation?

Mr. Dawes. Well, I think it would have been an impossible situation without the efforts of some one to supervise the banks. think he can do a great deal. However, I think the powers of the comptroller, if anything, should be extended. They should be made a little more direct, perhaps.

But I do not think that the Comptroller, or any other official, would be able to exercise power of saying to whom or what corporations or individuals they should lend money, which, of course occurs

in branch banking.

The Chairman. I have a letter here from a small country banker down in Georgia, received this morning, which is very pertinent to this study. Of course I recognize the fact that the committee has forbidden the introduction of letters of this nature into these hearings unless the witness is present to be questioned.

This man makes a very complete statement, however. He does not leave very many questions to be answered from this statement. Among other things, he says in here that unit banking must be pro-

tected.

"Yet this constant parade of big group, chain and branch bankers before the Committee on Banking and Currency, who proclaim that the unit system has broken down, might conceivably cause it to break down. Is it not time that this murderous procession stop?"

There is one suggestion that comes from this independent banker who feels that a great injury is being done to unit banks of the United States by the presentation of arguments on the question of group,

branch and chain banking before this committee.

Of course, in that connection, we are beginning now to hear some of the unit bankers and those who are opposed to branch, chain and group banking.

Mr. Bushy. Did we not finally leave that rule so that we would pass on the individual matters when they presented themselves for our consideration, such, for instance, as you hold in your hand?

The Chairman. I am presenting it to the committee because this letter contains many facts relating to this subject that ought to be made a part of the hearing. I am reluctant to put it in because of the previous action of the committee.

Mr. Bushy. I did not understand it absolutely to bar that type of information where the committee might determine that it was proper

to be included in the hearing.

The Chairman. I should like to read this letter to the committee. After it has been read, the committee can decide whether or not it should go into the record. Without objection, I am going to read it. It is from the Citizens Bank & Trust Co. of Bainbridge, Ga., and is addressed to the chairman of the committee.

We

do

(The chairman read the letter referred to.)

Mr. Seiberling. I do not see, Mr. Chairman, why we should make an exception of this man's letter and put it in the record. If we do that, there are other men who can make just as strong an argument for group, chain or branch banking.

The Chairman. Very well, we will not insert it in the record.

Mr. Luce. Mr. Dawes, various persons who are communicating with us in this matter appear to lay a shaky foundation for their arguments. A communication that I hold in my hand says:

It is true that occasionally a small bank fails, but there are things that are far worse. Perchance, if it were not for our unit banks, the people who occasionally lose a few dollars in our small country banks, would not have had them to lose in the first place.

These hearings began with a statement by the present Comptroller of the Currency, in which he laid the foundation for his argument by informing us that in the last nine years, between five and six thousand banks had failed, involving a total that I will put in the record as soon as I can lay my hands on the figures.

Now, he represented to us—and I think it means on its face that the figures do not correspond with statements to the effect "that occasionally a small bank fails" and the further reference in this letter to "a few dollars"—it would seem evident that between five and six thousand bank failures constitute a sizeable situation and

not deserving of treatment after this fashion.

Now I take it, sir, that these five or six thousand banks that failed were established in the expectation that they would prove of service to the community where they were placed, and that the bankers would get a legitimate profit out of rendering that service. It follows, therefore, that between five and six thousand communities in the United States—assuming that there was but one bank in a place; and of course I do not know how often another bank was left—but let us suppose that five or six thousand places in the United States have lost the convenience of a local bank in the last five or six years: What I have not observed in your statement is how you would suggest meeting the needs that these banks were meant to serve.

Your tangible proposal is that we lift the minimum capitalization of national banks, the effect of which would be to deprive still other communities of the convenience of banking facilities. Is it your judgment that we might sit by and ignore or suppress or destroy the facili-

ties in the smaller communities of the country?

The Chairman. Before you answer that, Mr. Dawes, may I supplement what you said, Mr. Luce, by some additional facts?

Mr. Luce. If you will, please.

The CHAIRMAN. During the first four months of 1929, there were 194 failures. Up to the present time in 1930 there have been 389 failures—42 national banks and 347 State banks.

In 1929, for the 4-month period, there were 26 national banks and

168 State banks.

Mr. Luce. These figures add to what I have said showing the steady lessening of banking conveniences for the fellows in the smaller communities throughout our land. How would you suggest meeting that

need, if it be a need?

Mr. Dawes. In the first place, in connection with the bank failures, I think they afford an economic index of conditions in the various districts. I think the failures in the northwestern section, which were confined largely to the smaller banks, were not due to bad banking, but due to conditions that did not exist in New York and Massachusetts. So, I do not attribute that condition to the conduct of the banks.

When you speak of five or six thousand communities being deprived of banking service because five or six thousand banks have failed, I think you are in error. You will find, in quite a large proportion of the communities, the failures were due to too many banks being established in any one community. Perhaps they should not have had over one bank, and if one bank is left they are not deprived of adequate banking facilities where, as a matter of fact, they are left with a better situation.

I am not attempting to offer a solution for the question, but I would make the general observation that it would be better to have a few scattered unit banks go, than to have a whole chain fail. Size

does not necessarily mean safety.

While I think the banking system has been faulty in certain respect, nevertheless I would rather continue to see a few banks fail than see the economic independence of five or six thousand communities entirely destroyed, as would be the case with the establishment of these

large chains.

The chief answer I would make to your question is that it seems to me that the clamor for this complete change in banking which is taking place now does not originate in the communities which are supposed to be the sufferers. It is rather on the part of those who are anxious to extend a practice in order that they might make money out of it. It is a perfectly laudable and proper thing to do if it is hedged around with reasonable safeguards and that protection which should be given to the public which is served by trustees.

Principles that may be properly applicable to industrial enter-

prises, in my opinion, should not be applied to banking.

I would say that 90 per cent of the population of small towns who have bank accounts own or have access to automobiles. These banks, or the greater bulk of them, were founded when people did not have automobiles, but when they used horses and buggies to get to the small towns. The farmer does not have to go to the bank every day. I think he would be willing to go 50 or 60 miles to the county seat bank, thereby eliminating the need for the cross-roads bank. Ample facilities can be afforded in unit banks in county At any rate, I should rather wait until there is a great demand on the part of the public to be served before I changed our general banking system.

It is an exceedingly difficult thing for your committee to get testimony on this subject. The average man-and even the average business man-does not know much about banking, and yet the average man is, after all, the one who puts the funds in the banks on which they operate, and it is to the banks that he must go for support at times of stress when he needs money. However, he does not know anything about how they are carried on, and almost all the discussion I have read about the subject has been on the part of

bankers. It would be natural to ask the so-called Wall Street banker what he thinks about chains. He may privately tell you he does not like them, but he does not like to say anything publicly, because he is accepting the deposits of these same chains. Ask the stockholder in the small bank what he thinks about syndicate banking. He dislikes it but if he thinks he sees a chance to sell his stock in his bank to them, at inflated prices, naturally he feels reluctant to incur their ill will.

th

Take your bond man: The independent bond houses all over the United States have been going out of business because of the absorption of the outlets by the chains. He does not want to say anything because he is likely to lose an existing customer, if he opposes a potential destructive competitor.

Take the ordinary business man, and he hesitates to criticize any system of banking because he has to go to the banks to get credit.

I sympathize with the committee a great deal in their endeavors to

get impartial testimony. It is a very difficult thing.

Mr. Luce. Now, let us center our attention upon the question of the convenience of the customer. You said it was difficult to get testimony from the customer. That may warrant me in testifying as a customer. I shall relate one or two experiences I have had as a

customer, and ask your judgment.

Four years ago I had occasion to pass some time with a relative in a town in California 15 or 20 miles out of San Francisco and I had occasion to cash a draft. I went to the center of the village and found an attractive, commodious banking office where I quickly completed my business. It was not a branch of the Bank of Italy, but of a San Francisco bank. It is true that I could have traveled some miles to a larger community, but it was a convenience to me, as it was a convenience to all the people of that town, to have at hand a teller's window-I presume it was not much more-and had it not been for the fact that that office furnished the convenience and therefore made a profit, benefiting both sides of the bargain—and every business transaction that is economically sound benefits both parties—that would not have been kept open. That is an illustration of the benefit received by the customer in a small town in California. Now, let me testify as to the benefit to the customer in a small town in Maine, Where I pass as much of the year as Congress will permit. I am 12 miles from the nearest sizable business center, and even that is a town of not more than, I suppose, 1,500 or 2,000 population, and it has two banks. It is important to me to have access, once a week, at least, to a bank. I get there in half an hour. If those small banks should disappear, I would have to travel 32 miles to a large town and It would take me the best part of the forenoon to go and come.

I should like to testify there as to the convenience of banking

facilities in small places.

Now, it has been shown by your view of the matter and by the views of Mr. Pole, and by the figures set forth, that unit banking in the small places is dangerous and likely to bring loss. In my own case every summer it may expose me to the loss of what deposits I may keep there in the place I occupy.

Is it quite sufficient to say, under those circumstances, "Shut up

Your small banks and travel farther?"

Mr. Dawes. There is an expression which is used very largely in Public service matters, and I notice it in some of these discussions—the Public convenience and necessity. I think you are emphasizing more

the question of public convenience than public necessity.

However, assume you are a small business man in a small town and need occasional loans: You need the money and you need it badly. Your credit is good and your background is good and you are willing to work and the bank is willing to lend you the money even perhaps if your collateral is not strictly conventional. When a bank serves you in making a loan without which you would go into bankruptcy it is performing what is to you a necessary service. When the banks which can do this are replaced by branches or tellers' windows those facilities may give you as convenient service as the unit bank but they will not minister to your dire necessity. In my opinion the introduction of the branch banks will destroy the unit banks, and when this is done the community will have bartered necessary service for a superficial convenience.

Mr. Luce. I want to be very courteous, Mr. Dawes, but I do not think you are answering my question. I want to know whether you

want to cut me off from the use of banking facilities during every

month I pass in the State of Maine.

Mr. Dawes. Well, Mr. Luce, if I may speak plainly, I do not care particularly about the convenience to you at the expense, perhaps, of robbing the people, who put their money into these banks, of the privilege of borrowing their own money.

Mr. Luce. Were you not a little strong in the use of the word "robbing"? I do not think, sir, that the Old Colony Trust Co. in

Boston has robbed anybody by acquiring branch banks.

Mr. Dawes. My obvious meaning was that they had deprived the

public of their control of their own funds.

Mr. Luce. I still fail to see any loss that will come to anybody from allowing banking facilities in the towns of which I spoke. I do see the desirability of making them more safe and of protecting depositors and customers and everybody, as might come if it was a branch of a larger bank, but for the life of me, I can not see the economic desirability of depriving small communities of the country

of banking facilities.

Mr. Dawes. I think the small communities of the country that require banking facilities can support them, and the only reason why there has been an unreasonable—if there has been—number of failures (and you can not say they have been unreasonable until you study the economic conditions that exist in any particular area) is that there has been overcompetition. I admit, franky, that banks have been established in too small communities to be economically supported.

You have the same thing in the gasoline business, in the service stations. I do not believe any part of the public would be seriously

hurt if you had a few less service stations.

Mr. Luce. Evidently our views can not be reconciled in that

particular.

Now, let me inquire on another phase of the subject, to which the attention of recent witnesses has been called. A recent writer on the subject of investment trusts, who seems to have given the subject full and thorough study, predicted that within a very not long time all the stock of the substantial banks of the country would pass out of individual ownership into corporate ownership. Does that strike you as an ominous prospect?

Mr. Dawes. You say all the stock of all the banks of the United

States?

Mr. Luce. The stocks of the important banks of the United States.

Mr. Dawes. Yes, I think that would be unfortunate.

Mr. Luce. Would you think that the seriousness of that situation is great enough to require action on our part?

Mr. Dawes. I do not know exactly to what you are leading, Mr.

e

î

n

k

Luce. Mr. Luce. We have been informed, within a week, that 50 banks in Pennsylvania are in process of being taken over by a chain, and there seemed to be two ways that what I referred to may come about; one is where all the stock of a bank, or the controlling stock of a bank is secured by a holding company, and the other, which seems to me ought to be distinguished therefrom, is the process whereby a consolidation of investment in investment trusts will result in their taking

up bank stocks whenever they are offered for sale, so that ultimately, in view of the attractiveness of investment in the larger banks, the ownership of banks will be in the hands of the trustees of the invest-

ment trusts.

It is the second of those things that I am particularly interested in and not the holding company. I am particularly interested in the process of individual stockholders dwelling in the communities concerned, through the ordinary processes of the stock exchange, presently disappearing, with the stock holdings in the large banks, as is already the case, I fear, in respect to the largest of these banks, to a considerable extent, if not to a dominating extent, falling into the hands of trustees dwelling in the big centers.

Mr. Dawes. I think I have expressed myself about it as well as I can on that subject. I think that is about the most unfortunate

thing that could be developed in banking.

Mr. Luce. What can or should we do about that?

Mr. Dawes. I do not know. The only point I would particularly stress is that I would suggest precipitating the issue as between the unit system of banking and centralized banking. The solution I do not know. My feeling is that if you temporize with the principle and compromise with it, the solution will not come as quickly as if you face the issue frankly as to whether something should be done to prevent extreme centralization. I am a little at a loss, when it comes to suggesting a solution to that, but I think that is the issue you should face.

The Chairman. In that connection, we are facing a practical situation. We have this chain and group banking here in our midst to a very great extent and it is daily increasing. We also have branch

banking.

8

ė

t

10

t

10

ıt

(8

d

n

r.

nd

t;

ık

ne

n-

What is the practical way, in your judgment, for Congress to deal with this subject? Would you prohibit branch banking or an extension of it—forbid any further extension? We have it to the State limits so far as State banks are concerned and city limits for national banks, but the advocates for this system say that we should extend it to trade areas, nation-wide and permit it internationally. That is

for branch banking.

Now, for holding company banking, which is the substitution of the group for the individual holding of bank stocks, which is proceeding under State laws, and over which Congress has no power, apparently—and as you know, while you were Comptroller of the Currency, although we tried, we never could get language to cover it—have you any suggestion as to how we can control chain banking or group banking? That is what the committee wants to know.

Mr. Dawes. No; I would rather not try to express myself on that, because my ideas are not clear enough, naturally. But I do not think there should be any further extension of the principle you embody in the McFadden bill. My belief was that the purpose of the McFadden bill was to restrict branch banking and not to extend it. However, the argument was made frequently before the committee that the establishment of offices in one city was the first step in the direction of Nation-wide branch banking.

When it comes to a definition of economic areas, you run into all kinds of difficulties, but I am convinced that once you admit the

principle, it is extended indefinitely.

I have always contended that the principal office with branches within the limits of a single city did not in any way impinge on the principle of absentee ownership. But when you come to trade areas, that is entirely different. I remember when I was on the Federal Reserve Board we spent much of our time arguing as to what was a trade area, and the definitions extended from contiguous counties to all over the State and from coast to coast.

The Chairman. The confining of branch banking to city limits does not restrict a customer from doing business wherever he wants. For instance, a man living in the city of San Francisco can do his banking business in New York City, as many of them do. There is no control over the customer as to where he shall do his banking business. That restriction is as to additional facilities of the banks

to serve their customers.

It has been pointed out here that these hearings are accelerating the activities of these various groups in picking up banks all over the United States. It presents quite a problem to this committee. In attempting to deal with that question while this study is going on and while Congress is trying to find out what it is all about, and with the idea of determining whether legislation is necessary and, if necessary, how such legislation shall be framed—all of which takes time—I introduced, on April 30, 1930, a bill, and I should like to have your thought and judgment on the wisdom of it. The bill reads:

1

Isi

b

ti

d

W

P

uis ye

in

in

ar

co

th

811

on

ev

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the approval of this act it shall be unlawful for any corporation, copartnership, or trustee, to purchase or otherwise to acquire more than 10 per centum of the shares of the capital stock of more than one member bank of the Federal reserve system, whether State or national bank member, except after first obtaining the approval of the Comptroller of the Currency with respect to national banks, and of the Federal Reserve Board with respect to State member banks. Any person or corporation violating this act shall be deemed guilty of a misdemeanor and shall upon conviction thereof in any district court of the United States, be fined not more than \$10,000.

What I was there trying to do was to check this apparent activity until Congress has had an opportunity to decide what should be done. Of course I realize that is a crude bill, but it was placing the authority in the comptroller and the Federal Reserve Board, which would reach national banks and State banks of the Federal reserve system. This would not, of course, reach State banks which are not members of the Federal reserve system.

Mr. Dawes. I would very heartily favor something of that kind if it is practical and legal. I presume it is, or you would not have drawn it. Of course, it offers the objection that a bank can withdraw from the Federal reserve system, and as these chains become larger they are gradually becoming independent of the Federal

reserve system.

As Mr. Luce suggests, these groups, through trustee ownership, may create a situation where they can overthrow the whole Federal reserve system. It seems to me—although I am frank to say I am incompetent to advise—that it might be possible to strengthen the Federal reserve system. I do not mean so much by punitive measures, as by the constructive service they might give to its member banks, so that any bank, in order to prosper, would want to join, and would have to join, the Federal reserve system.

I feel very strongly that this situation, the danger of which is so generally recognized by students, may possibly be solved through building up the Federal reserve system to such a point that membership in it is necessary for successful operation by either State or national banks. If this is done conditions of membership in the Federal reserve of such nature could be imposed that they would put a stop to any form of controlled banking which was either irresponsible or subject to monopolistic development. The difficulty in the past in getting constructive legislation for the benefit of the Federal reserve and its members has been that it was attacked as class legislation for the benefit of bankers. If the Federal reserve system should be presented to the public and to the Congress as the instrumentality through which efficiency and democracy in banking could be preserved I believe that constructive legislation could be If it could be made clear that syndicated banking is essentially opposed to independent banking, and that the Federal reserve system is the bulwark of coordinated independent banking this prejudice could be overcome. Unfortunately and unjustly constructive Federal reserve legislation has been attacked as class legislation. Certainly the preservation of independent banking is not class legislation.

The Chairman. This development is proceeding under the direction of bank officers who are practically the trustees of the people's money, as it is intrusted to their care and management. These people who control the assets of banks are very much concerned about this particular development. You very aptly described the ignorance of depositors so far as practical banking methods are concerned, as to safety and risk, and it is a problem in which the public is tremendously interested, and the difficulty of this committee is to get an expression—a correct expression—from the public who are most

interested in this whole undertaking.

We are hearing these trustees who are managing the banking business of the country, and it seems to me that some action should be taken here while this study is proceeding, and while it will take time to consummate something definite in regard to what should be done to guard the public's interests, I think some kind of legislation, whether this bill or something else, should be passed to maintain the present status quo.

Mr. Dawes. Do you not think one of the chief dangers of the situation is that the public will suddenly wake up to the fact that the issue is concentrated control or monopoly, and when they break loose

You will have another Andrew Jackson attack on banking?

The CHAIRMAN. I am fearful of a subsequent reaction such as you

indicate. How far it will go no one can foresee.

Mr. Wingo. I have listened with a great deal of appreciation and interest to this discussion which has just taken place between you and the chairman with reference to his so-called 10 per cent bill. I congratulate him on getting someone to approve his bill. You are the first one that I have heard who has.

The CHAIRMAN. Do you not remember Mr. Ottley, of Atlanta, who

suggested it?

a

Mr. Wingo. I do not think he suggested this. I noticed that in one of your statements just now you said you thought we should do everything we can to build up the Federal reserve system. Did I understand you correctly?

Mr. Dawes. Yes. Mr. Wingo. Now, we will take this bill, which makes it unlawful for anyone, either corporation, copartnership, individual, or trustee, to purchase or otherwise to acquire-and, of course, that might include an inheritance-more than 10 per cent of the capital stock of more than one member bank of the Federal reserve system, whether State or national bank member.

I presume you favor that because you think that will check

monopoly?

Mr. Dawes. I favor the general principle expressed in the bill. I have not even read it, and I do not think Mr. McFadden read it all.

The CHAIRMAN. I stated frankly I did not know whether this would reach the thing we are after, or not, but that I think some bill should be passed that would deal with this subject and maintain the status

Mr. Wingo. I want to drive home and direct the attention of the witness to the difficulties of the situation, and that is the chief object I had in attempting to analyze the bill with the witness and getting his opinion on it—as much for my information as the chairman's.

Suppose that I and some other gentleman or gentlemen belonging to a group wanted to build up a chain of banks in the Federal reserve system and wanted to get a monopoly, which you and the chairman oppose. Under this bill we would have to do one of three things. If we could get the blessing of the Comptroller of the Currency-if he would pronounce his blessing on the monopoly-that would be all right under the bill. That would relieve us from any further

8

me

Co.

trouble if he said it was all right.

However, if the comptroller would not give his blessing, then we would be confronted with two practical propositions. We would have to do one of two things; either we have to keep just one of the banks in the Federal reserve system and let it act as a syphon to get the benefits of the system for the chain, and get the others out of the system; that is, if they are national banks, turn them into State banks and not have them members, or, if they are State banks, have them withdraw from membership in the Federal reserve system. In that way they would escape from the scope of the bill.

So, there would be two tendencies—one, to take national banks out of the system, and the other to take State member banks out of

the system. You would not favor either, would you?

Mr. Dawes. No; I would not. Mr. Wingo. The other alternative that the lawyers will tell you about, is this: If the game is worth the price, and you want to build up this monopoly, you can go in and pay a little \$10,000 fine and get control.

Now, you have had some dealings with lawyers. Do you think they would have very much difficulty in getting around this provision? Mr. DAWES. I think it I were committed to that principle, the first thing I would do would be to ask a lawyer, to draw the bill.

Mr. WINGO. I think that is the wisest thing you have said this

morning. Mr. Dawes. The point, however, I should like to make, is that if you introduce some such bill as this, you will precipitate sentiment and you would discover whether the public wanted branch banking.

It seems to me it is the most important issue we have before the public and I am hopeful it will be solved before it becomes a political

issue.

If you can get at it while it may be appreached in a judicial, reasonable and constructive way, I think something may be accomplished, but I am frankly frightened at what will occur if this trend is per-

mitted to go much further.

Mr. Wingo. I agree with you. My criticism and analysis of the bill are not directed towards ridiculing the effort. It is to drive home the difficulties that confront this committee in undertaking, by piecemeal, to cover a major question like this, which is, after all, a monopoly of credit. I do not think anybody will defend a monopoly of credit, in the abstract.

All of these men come in and insist their chain banks will protect us against a monopoly of credit. The group bankers make the same plea, and the branch bankers make the same plea. So, it is not the question of what you are driving at; it is a question of how you are

going to do it.

I notice in your prepared statement you state:

It seems to me desirable, therefore, that the Government do every possible thing that it can, in justice to the State banks and the Federal reserve, to strengthen and develop the national banks, through which it financed the Civil War and organized the Federal reserve system.

With that abstract statement I think we all agree. We agree with what the chairman is driving at in this bill. When you say you approve the bill, you mean you approve the idea expressed; that is, a check on monopoly of credit through branch, chain, or group banking?

Mr. Dawes. Yes.

Mr. Wingo. Appreciating the difficulties, as you must, from your experience as Comptroller of the Currency, and from your experience in the business world, have you not some suggestion to make how we can maintain, in a practical way, the freedom of credit in the country and the freedom of the machinery of credit from what you call bureaucratic control? Have you not some practical suggestion you can make?

Mr. Dawes. That suggestion of Mr. McFadden's strikes directly

at that-control. That is what you are after.

The CHAIRMAN. My thought is a temporary check to this thing until we see what it is all about and then deal with it in some per-

nanent way

al

Mr. Wingo. I am simply thinking out loud. It is the practical thing that is disturbing me. It is easy enough for me to pick up a bill that Mr. McFadden introduces and criticize it. I recognize that, but when I possibly appear to be captious, it is simply for the purpose of driving home the difficulties that confront us. You will admit there is almost as much difficulty that confronts us in the business world as in the banking world, or more?

Mr. Dawes. No; I think the industrial combinations have gone about as far as they can on account of the laws. I can not see that there is any law which at the present time would prevent a clever manipulator with enough cash, from legally getting control of all the

banks in the country.

Mr. Wingo. But is not that true also in the automobile business?

Mr. Dawes. I know that is not true in the oil business.

Mr. Wingo. Have you any assurance that we will have a Department of Justice that will repeat the dissolution of the old Standard Oil Co.? Is there any tendency now to check combinations? The

thought I have is this: Is there not a growing thought, and is it not hammered home to us each day, through financial papers and leading economists who want to preserve the freedom of opportunity in the country—are they not constantly preaching the economies of these great amalgamations and the efficiencies that will result from the wonderful reduction in cost flowing from mass production? Is not the whole psychological pressure operating not toward checking consolidations but toward encouraging consolidations, telling the people they will get a finer product and greater volume and greater prosperity and greater wage scales and higher standards of living? Is that not the whole psychological trend?

Mr. Dawes. Yes, sir; but the quantity-production theory has nothing to do with banking and that is the thing that makes it particularly difficult for me to understand the analogy. It costs the big bank as much as the little bank to operate. In fact, in many ways it is less efficient.

Mr. Wingo. Last night I ran across a statement that Mr. Hoover made a few years ago, while he was Secretary of Commerce, and the thought he expressed is that you reach a point in your consolidation where efficiency is lost and inefficiency creeps in on account of the cumbersomeness of the machinery. I read that in one of Mr. Hoover's utterances, and I was delighted to see it.

I had entertained the same thought but was fearful of expressing it around the table here for fear I would be suspected of injecting politics and being out of touch with the times, but with such a high economic authority as Mr. Hoover, I am not now afraid to express the thought. Do you feel that way about that?

Mr. Dawes, Yes, I do. Mr. Wingo. Here is another thought that has occurred to me, on which I have been told my fears are unfounded: As I look around and study these men who have been handling these combinations men like Judge Gary and others-I find that they have practically grown up with the development of these great machines and developed along with them. Now, as these men pass off, I am wondering if you will have enough practical and capably trained executives strong enough to carry forward these great activities, so as to maintain an efficient and sound business structure?

Mr. Dawes. I do not think the men who follow and carry on these

business enterprises are as able as the men who founded them.

Mr. Wingo. That is practically another way of stating the old theory that there are only three generations separating shirt sleeves from shirt sleeves?

Mr. Dawes. Yes; you might put it that way.

Mr. Wingo. You do not think there will be men efficient enough to carry on these great operations?

Mr. Dawes. I do not think they will have the training and execu-

tive ability to carry on as the former generation.

Mr. Wingo, I mean having the acute executive comprehension necessary in handling these great organizations. In other words, you can not send them to a training school like you can an accountant and develop them; it is something that has to develop, and that is the reason you believe in the individual unit banking system?

Mr. Dawes. Yes.

Mr. Seiberling. I have just a few questions. Mr. Dawes, the objective of your statement is that you want to avoid monopoly of money and credit on the one hand and you want to get sympathetic and human consideration for the small depositor and borrower on the other hand?

Mr. DAWES. Yes. Mr. Seiberling. You do not think that that can be reached through chain or group systems of banking and you even go so far as to say branch banking also?
Mr. Dawes. No; I do not think so.

Mr. Seiberling. Now, let us assume that you have 10 large banking institutions in Chicago and they are permitted to go into branch banking in the area around Chicago, and they succeed in taking over most of the unit banks: The stock of these banks is listed on the Chicago Stock Exchange and all individuals in that territory would have the opportunity of acquiring the stock in the various banks.

Mr. Dawes. Well, I think so.

Mr. Seiberling. They would have the opportunity of acquiring the stock in the various banks, would they not?

Mr. Dawes. Yes.

Mr. Seiberling. And as far as being stockholders is concerned, then, the local unit branch would be just as much a stockholder as if they were unit banks in their communities?

Mr. DAWES. Yes.

Mr. Seiberling. They would have greater safety for their depositors?

Mr. Dawes. I think that is more or less debatable.

Mr. Seiberling. We had a witness here yesterday who testified that they loaned more money in the territory where some of their branches were located than their total deposits. In one case it was 50 per cent. So, if branch banks were conducted in that way, the objection they would withdraw money from the outlying districts into the center would not be correct, would it?

Mr. Dawes. Well, I would rather, instead of answering your ques-

tions one at a time, answer more comprehensively-

Mr. Seiberling. You may answer them any way you want to.

Mr. Dawes. I grew up in a small town, and if the banks were owned in Chicago, Cleveland, or Cincinnati, I do not believe I would receive as much sympathetic attention from them as from people who lived in that same small town. I have had enough opportunity to observe the operations of the railroads to know what sympathy is extended by the railway agent-

Mr. Seiberling. The railroad situation is not like the banking situation at all. If you do not like the railroad, you can not build another railroad. But a branch bank that continued for any length of time mistreating its local customers, would soon have local com-

Petition?

Mr. Dawes. I do not think they would eventually. I think after branch bank systems had been developed up to the point where there are only three or four of them in a State the inefficient banks would be eliminated and competition destroyed.

Mr. Seiberling. But a bank must deal with its borrowers and

depositors in the right way in order to grow.

Mr. Dawes. The unit bank; yes, sir. Mr. Seiberling. And also the large mother bank of the system, if I may describe it as that-

he

the - 01 Mr. Dawes. As long as they had competition; yes.

Mr. Seiberling. And even though it did not have competition, the fear of competition would compel them to do that, would it not? Mr. Dawes. Well, as I say, as long as they have actual or potential.

tial competition.

Mr. Seiberling. Of course, as a matter of fact, from the witnesses we have had here, they do not operate in the manner in which you have itimated. They leave the local managements in the branches who have always lived in the communities.

Mr. Dawes. Well, the branch banking game is very new in this country and I think if you will investigate the branch banks in other countries you will learn a better lesson than by examining the bank-

ers here.

I remember a friend of mine, an Englishman, who came to this country from Canada, and he heard my argument about this branch banking. He said, "That is the reason I am an American." He said, "I came to a western Canadian town and did not have any money and I wanted to go into business. I went to a branch banker but he could not loan me it. So, I came to one of the western towns of the United States and went to the head of the bank there and got the money and I have stayed here ever since." He said, "Perhaps from the strict banking standpoint I was a pretty poor risk," but he eventually developed into a valued customer.

Mr. Seiberling. Showing that bankers sometimes make mistakes. In view of the fact that something must be done, is it not a fact that branch banking, limited as you think right, would be a much better

step than permitting group and chain banking?

Mr. Dawes. I prefer branch banking to any other form of group banking, but I think the fundamental principle is the same. The mechanical application is different.

Mr. Seiberling. But if you have to make the step, then the better step is to go to branch banking with such restrictions as you want to put around it, than to permit chain and group banking to go on?

Mr. Dawes. I do not think the issue is between branch and chain banking, but between coordinated unit banking and branch banking.

I think I agree with Mr. Giannini, in that feeling.

Mr. Seiberling. Do you consider a holding company that owns the capital stock of 15 or 20 or more banks as being in the banking business?

Mr. Dawes. If it owns control of them?

Mr. Seiberling. If they own control of 15 or 20 banks and are running them. Do you consider that company in the banking business?

Mr. Dawes. I am not a lawyer, Mr. Seiberling. I can only make the obvious answer to that. I really do not understand just what

you mean.

Mr. Seiberling. If you had a company that owned the stock of a dozen different banks and you were running them through that stock control, would you consider that you were running a banking business or some other business?

Mr. Dawes. I think it is perfectly obvious you are in the banking

business.

Mr. Seiberling. If we passed a law that any corporation owning more than so much stock and owning more than one bank would be considered in the banking business and would have to have its charter state it was in the banking business and comply with the banking laws of the country, would you not think we would be taking a long step toward stopping chain and group banking?

Mr. Dawes. Yes, sir.

Mr. Seiberling. We would at least have the double liability in the holding company stock?

Mr. Dawes. Yes, sir.

Mr. Seiberling. If we had branch banking extending beyond State lines, that would tend to bring these State banks into the national banking system, would it not?

Mr. DAWES. I think it would.

Mr. Seiberling. Is it not desirable to have the Federal Government, that has the only power to coin money and issue circulating medium, have those banks under its control rather than under the control of a group of men off somewhere, whose responsibility we do not know and whose motives we do not know?

Mr. Dawes. I have developed the argument many times on the desirability of the maintenance of the national banking system on

account of its governmental connection.

Mr. Seiberling. I just want to ask you one more question. Why did the Legislature of Illinois repeal the usury law on call money, if you know?

Mr. Dawes. I do not know. I did not know that they had any.

Mr. Seiberling. Could you venture any reason for it? Mr. Dawes. No; I do not know anything about it.

Mr. Goldsborough. Mr. Dawes, I was not here when you made your statement. However, I gather your view is that this branch banking will first become extremely powerful and then monopolistic and then inefficient and there will be a public revolution against it. Is that what you have in mind?

Mr. Dawes. Yes, but I would rather you would not put as strong

terms as that in my mouth.

Mr. Goldsborough. I want you to modify them, then, any way you see fit.

Mr. Dawes. I think those inferences may be drawn within reasonable limits.

Mr. Goldsborough. Now, Mr. Dawes-

Mr. Dawes. Mr. Goldsborough, I do not know how you keep these records. I do not want to be put on the record as having made just that statement.

Mr. Golsdborough. The reporter is taking down what you are

now saying.

Mr. Dawes. Then I will modify what I have said by saying that my paper speaks for itself. I do not want to place myself in the position of having made an unqualified and extreme statement on

anything.

Mr. Goldsborough. Now, the argument has been made here in this committee and on the floor of the House ever since I have been in Congress that we had to extend the privileges of national banks in the matter of branches because that was the only way to give them a proper competitive basis with the State banks. The argument has recently been made very strongly that we must extend the branch banking privilege of national banks in order to stop chain banking and group banking. As far as I have been able to visualize it, those

are the only two major arguments that have been made with the exception of the failures of the unit banks mentioned here to-day.

Now, on January 9, with those condition in mind, I introduced a bill which would amend section 5144 in the matter of the election of directors, or at least one section would. It reads:

In all elections of directors, and in deciding all questions at meetings of shareholders, each shareholder shall be entitled to one vote on each share of stock held by him: *Provided*, That where a corporation is a shareholder, neither such corporation nor any other person, firm, corporation, or association shall be entitled to any vote or votes on the share of stock held by such corporation.

The purpose of that was to do away with the holding company. Then, in another section, this bill says:

No State bank which is a member of the Federal reserve system and which owns shares of stock in any other bank shall vote such shares of stock, or cause or permit such share of stock to be voted, at any election or meeting of the shareholders of such other bank.

Then a question arose as to how to control the State banks not members of the Federal reserve system. A section was added like this:

P

Bank checks: On each check drawn upon any bank, banking association, trust company, or savings bank (a) which establishes any branch after the passage of this act, or (b) more than 25 per cent of the stock of which is owned by any corporation, a tax of 2 cents on each dollar or fractional part thereof of the amount for which such check is drawn.

Now, what comment if any can you make on that bill?

Mr. Dawes. I do not think I can make any intelligent comment on it until I have studied it throroughly. I do not know the points of law involved.

Mr. Goldsborough. I am not discussing with you the legality of it. I have to be responsible for its being legal. But assuming it is legal, what do you think of the bill?

Mr. Dawes. Frankly, I would not want to express an opinion.

It would require too much study.

Mr. Goldsborough. The bill, as it stands, would absolutely stop where it is group banking as it now exists, chain banking as it now exists, and branch banking as it now exists.

Mr. Dawes. Well, you know where my heart is on that subject. If that is the best way to do it, I am for it. I am not trying to dodge answering the question. Frankly, I just can not understand it. Mr. Goldsborough. It is perfectly obvious if the holding company

Mr. Goldsborough. It is perfectly obvious if the holding company can not buy the stock of a bank, it would automatically dissolve itself.

That is the purpose of the first provision.

It is also obvious that if banks had to pay 2 cents on each dollar or fractional part thereof of every check that it issued, it could not afford to establish any branches in the future, nor could it afford to act as a holding company and own more than 25 per cent of the stock in the other banking institutions.

Now, I am not committed to the bill, but the purpose of that bill is to answer the two arguments that we had to have branch banking in order to stop holding companies and these chain banks from growing and the other argument that we had no way to stop the establishment of branch banks within the States. This bill will do both of those things, assuming it is legal.

Now, would you be in favor of legislation that wide in scope?

Mr. Dawes. My opinion, Mr. Goldsborough, would not be worth

anything on that.

Mr. Goldsborough. Well, then—I will ask you this question and you may answer it if you fell like answering it. It does not make any difference to me whether you answer it or bot—but are you or are you not in favor of stopping group, chain, and branch banking right where it is?

Mr. Dawes. Yes.

Mr. Goldsborough. That is what this bill does.

Mr. Dawes. That clears me of any apparent disposition to evade. Mr. Goldsborough. And your theory is that inefficiency in the branch banking system does not necessarily immediately mean resumption of competition?

Mr. Dawes. I think after the chains are thoroughly established and unit banks are eliminated to a certain extent, at least, the chains

can go along and be pretty inefficient.

Mr. Goldsborough. If they acquire that much strength and power, it will require a very great inefficiency before there is sufficient public mental revolution to create competition for them?

Mr. Dawes. Yes; I agree with you and, by inefficiency, you are not referring to the mechanical operation. You are referring to the

service to the public?

ė

t

T

t

0

0

g

)-

h

Mr. Goldsborough. The technical part and mechanical part, as far as I am concerned, will take care of themselves, if we estab-

lish correct principles. That is the way I feel about that.

When I speak about "inefficiency," I mean inefficiency in the sense that the public which should be served by institutions are not served with the same amount of personal interest as they would be served under the unit system. That is what I mean by "inefficiency."

Mr. DAWES. Having in mind the fact that the banks are given

money which already belongs to the community?

Mr. Goldsborough. Yes. That is all, Mr. Chairman.

Mrs. Pratt. Several witnesses who have appeared before this committee have been, I think, exponents of the idea that credit was Perhaps too much centralized in New York and that it was desirable to establish centers of credit throughout the country. I think there is some feeling that branch banking would do that in a certain degree. Are you in facor of decentralizing credit more than it is now? Do you feel that the concentration of credit is too great, perhaps, in one

or two places, primarily in New York City?

Mr. Dawes. I do not think that their suggestion was that the decentralization would come through the branch banks. I think the idea was that the decentralization would be brought about through the Federal reserve banks. I do not think they could accomplish very much in that direction by branch banks. If they do succeed in establishing nation-wide branch banking, I think it will lay the way open for immediate further centralization, and whether that centralization will be controlled from New York, St. Louis, or San Francisco will be immaterial. I think that will be the eventual outcome, and I do not think there is any difficulty in getting credit over the country generally for people who are entitled to it. When they say they go to New York for money, they really do not go to New York for the money. They go to the technical organization there, which secures it from the banks of the whole United States.

I think there has been a great deal more buncombe about that than

anything I know of.

Mrs. Pratt. In a small community, where they have a unit bank and the community is perhaps too small to support a successful bank, nevertheless that community is entitled to banking service of some sort. How would you suggest meeting that situation?

Mr. Dawes. I do not know of any community that can not afford

to support a bank that is entitled to it.

Mrs. Pratt. Do you not think they are entitled to it?

Mr. Dawes. If they are entitled to it, they can furnish it themselves. I think any community entitled to a bank will eventually get it. The unfortunate thing is that they have been supplied not with one bank but with five or six banks.

Mrs. Pratt. Banks fall somewhat, do they not, into the category

of public utilities?

Mr. Dawes. They will if they build up the chain, group, and branch systems.

Mrs. Pratt. In other words, then, you would keep them out?

Mr. Dawes. They are quasi-public institutions.

Mrs. Pratt. The object is to give service of that type to everyone in so far as it is possible. I am wondering if people who need banking facilities can always afford to motor to the centers.

Mr. Dawes. I think the average person who has not an automobile

keeps his money in his sock.

Mrs. Pratt. I notice on the last page of your statement that you say you feel that everything should be done to strengthen the national banking system. I do not see that you make any suggestion to that end. How would you suggest that that be done, specifically?

Mr. Dawes. You have got me there. I do not know. I think that all the help should be given the national system which can be

done fairly without penalizing the State institutions.

Mrs. Pratt. You could not be a little more specific, could you, as

bo

to how you think the system could be strengthened?

Mr. Dawes. You may refer to some of my old reports, but I do not think they are particularly valuable now.

Mrs. Pratt. You have no present suggestion along that line?

Mr. Dawes. Not now.

Mrs. Pratt. I notice you said a while ago that you feel the Federal reserve system should be made more attractive. Have you any

specific suggestions as to how that could be done?

Mr. Dawes. I have not. I think that matter should be approached with such care that I would not want to make any offhand statement. I think there is a very unfair provision affecting member banks. They get 6 per cent on their money, it is true, but I think they should participate to a larger extent in the additional earnings.

Mrs. Pragg. I think you are very sympathetic with the troubles.

Mrs. Pratt. I think you are very sympathetic with the troubles

that face this committee. That is all, Mr. Chairman.

Mr. Bushy. I should like to ask you this question: If chain, group, and branch banking is not entirely a new adventure with respect to its nation-wide activities—

Mr. Dawes. You do not mean in the United States? Mr. Busby. In the larger sense in which we find it.

Mr. Dawes. I think chain banking has always been—Mr. Busby. Oh, I understand back with the first United States Bank and the second one and all like that but not under the holding company method.

Mr. Dawes. I think that is a new development. That is my opinion.

Mr. Busby. Most all of the leading groups and the leading holding companies that own groups and chains are of recent development.

Mr. Dawes. That is my impression; yes.

Mr. Busby. Do you not think that is one reason why you can present such glowing pictures of their future—the promises they can make to the financial world-because they are new and have not had time to have any of their weaker places or many of their weaker

places tested by the trials of time?

Mr. Dawes. I should like to say this, that as far as my observation and knowledge are concerned, most of these companies that have been organized under the holding company system are under the control and direction of very competent bankers and I think they will succeed, but the principle of getting banks together in that way, by the exchange of stock is, I think, one of the most dangerous things ever introduced into banking.

Mr. Busby. Suppose there were really watered places in the stock of the holding company exchanging its stock for properties that were established banks that were solvent and going in the surrounding section of the country, that would not likely appear up to the

Present time, even if they were not entirely sound?

Mr. Dawes. I presume that is so. Mr. Busby. I notice in the hearings held before this committee, Mr. Wakefield, vice president of the First National Bancorporation of Minneapolis and St. Paul, stated, in answer to this question:

If I remember correctly, you stated you had \$22,000,000 in assets and you exchanged that for \$30,000,000 for stocks in the holding company.

The reply was:

Yes, sir.

g

d

T

k

g,

35

Э,

0

And then he answered on page 1001 that the \$8,000,000 difference between the assets and the amount of the holding company stock received by his banks, represented the good will and earning power of the banks. He also said, "That is a sound basis."

I called attention to the fact that it looked to me like water that went into the stock, but he denied that persistently and said it was good will and earning power of the properties that were put into the

holding company.

Mr. Dawes. These are the banks that they are going to make safe? Mr. Busby. All of that being new, of course, we can not tell what the general effect of such differentials as \$8,000,000 on \$22,000,000 is

going to amount to to the people of the country.

Now, I believe it was the State Banking Commissioner of Oklahoma that very forcibly suggested that most all of the bank failures that had come upon us in the last 8 or 10 years were banks which had been organized prior to the period of 1920 and 1921 when we had the deflation which left so many frozen assets in their hands and they had been trying to work out from under the conditions that they acquired during the inflated prices and ultimately found themselves unable to do so.

Do you have any thought along that line?

Mr. Dawes. I think it is undoubtedly true. I do not think anybody will dispute that.

Mr. Busby. Have there come to your attention the failures of any banks that have been organized within recent months or within the last three of four years—that is, since the holding comapnies and the groups have been so active in getting together—I speak of unit bank failures?

Mr. Dawes. No; I do not know. But that is not of any significance, because I do not follow that closely. You mean unit banks?

Mr. Busby. Organized in the last few years.

Mr. Dawes. That have failed?

Mr. Busby. Yes.

Mr. Dawes. I do not think there have been any. I think the best illustration you can get of the extent to which basic conditions are responsible for bank failures would be to contrast, for instance, the Northwest during this period of depression and some of the States in the East. I do not hold there is very much difference in the ability of bankers in one section as contrasted with another. They are all

human beings.

Mr. Busby. You think the northwest territory, in which we have had so many bank failures, was largely inflated in land values during the war, and soon after the war period, when agricultural products were at a good price, banks made loans on mortgages and paper based on those lands and that when the deflation came and the land values shrank, then the banks found themselves unable to meet their obligations or to realize on their loans and that that was largely the cause of the bank failures in the agricultural sections?

Mr. Dawes. I can not see that that is a subject for debate. I confess I used to get very impatient when I was here in Washington with the contrasts made between the Northwest and the Florida banker and the eastern and the southern banker. I think the difference is

largely imaginary.

Mr. Busby. In my section of the country, we have small cities and towns with unit banks. They seem to be thriving and paying good dividends and getting along in their several communities in a first class sort of way. Some of the experts who have been before the committee tell us that a unit bank can not operate profitably in a city of less than from six to ten thousand people.

Mr. Dawes. I can answer that readily. Look at the statements of the banks operating in the towns under that size. Almost all are operating profitably. I have not the statistics before me, but I

have no hesitancy in saying that.

Pardon me, however, I want to say that you should draw your dead line. When you speak of towns under 5,000, I do not think you should mix in with those towns the towns of 500 or less. Of

course that is not what I mean.

Mr. Busby. I understand that. I am very much of the opinion that you can over bank any territory and perhaps there are sections of my State and other States, when we did not have transportation facilities and communications such as we have now, where we established too many banks and some are going out of business, from the fact they are not being patronized sufficiently to keep them going.

I believe that is all.

The Chairman. Are there any further questions? If not, the committee will stand adjourned, with thanks to Mr. Dawes.

(Whereupon, at 1.00 o'clock p. m., the committee adjourned.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, JUNE 3, 1930

House of Representatives,
Committee on Banking and Currency
Washington, D. C.

The committee met at 10.30 o'clock a. m., in the committee room,

Capitol, Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order. Mr. George W. Davison, of the Central Hanover Bank & Trust Co. of New York, is present this morning, and we will be very glad to hear any statement Mr. Davison cares to make.

Our usual procedure, Mr. Davison, is that the witness make such statement as he desires, after which members of the committee may

want to ask some questions.

STATEMENT OF GEORGE W, DAVISON, PRESIDENT, CENTRAL HANOVER BANK & TRUST CO.

Mr. Davison. Mr. Chairman, I think the most succinct form in in which I could say anything is to give you this pamphlet containing an address I made in San Francisco last October, before the bankers' convention. I am sure you do not want me to burden you by reading it, but I will summarize what I said there, in a few words.

The Chairman. Have you given expression to any other opinions in regard to this subject, in addition to those contained in the pam-

Phlet?

Mr. Davison. I think I was interviewed by a man from Printers Ink, who printed what I stated to him at the time of the interview, which was along about the same lines. If anybody desires me to, I can amplify what I have stated in that address.

The traditions of our country are wholly against any concentration of any power of any kind; particularly against the concentration of

banking or money power.

You have only to recall the days of Andrew Jackson and the changes made before the Pujo committee made any report. It only requires a statement of the conditions that then existed to realize

how sensitive the people are to conditions of that kind.

I further feel very strongly that the unit bank, the independent banker, in the community, locally owned and locally responsive, has been a tremendous force in the development of our country and one of the essential elements that makes our people different from those in other countires.

I do not think that any comparison can be drawn between the continental countries, with their branch systems, and America, for they have all been brought up to a different manner of thought and are quite accustomed to part of their people being the underdog,

being subservient, and, of course, all of them are, compared to the stretch of the American Continent, comparatively small and cover a very narrow, localized area.

For example, in England the total area of the five great banks is no

greater than New York and New Jersey.

I think also you will find that the experiences of some of the large banks abroad have not been such as to justify any of the claims made for branch banking—that it prevents failures and crises. The experience of the large bank in Denmark, even with Government help, was most unfortunate. Probably the economic crises in Japan were very much extended and the development of the country retarded for a long period by the fact you had great banks with Government help which stayed liquidation in 1922, which we had in 1920 and 1921, and it was not until 1927 that the thing broke loose there, but, in the meantime, for five years you had a position of stalemate, with business practically at a standstill.

In Canada there are at least two instances of great banks becoming

involved in extreme difficulty.

The suggestion that branch banking is going to take care of the small community—the community too small to support a local bank—I do not feel has any great merit. None of these chains formed thus far have ever been known to take over poor banks. It is not the weak bank they buy, and the change in our own methods of transportation and communication has probably rendered unnecessary the

existence of banks in very small communities.

When you come to consider that the failures in American banks have been confined largely to localities in the South and the territory from Minnesota south, you can find a cause quite apart from the general banking situation that gave rise to these results. Both of them were undoubtedly the result of the high prices of certain agricultural commodities during the war, with a consequent increase in the value of the price of real estate, and, of course, the Florida boom was the same thing.

I think some of you must be alarmed by the change that is taking place in the character of some of our communities with the vast extension of chain stores, for they are replacing merchants and men of responsibility with clerks on a small salary who can not advise, and certainly can not support, local charities and public institutions.

Banks are one of the very few corporations which advertise their debts. You see a bank speaks of its total resources, which include all deposits. Of course, their deposits are debts to some one esle. Four-fifths, at least, of a bank's money is money deposited with it by other people and the primary duty, I think, of every bank, is to its depositors rather than to its stockholders. Experience shows that when that duty is well done, it is profitable to its stockholders.

But the first aim of every banker is to know that he is going to be able to pay his debts. There is no doubt chain banking has come because branch banking is still illegal and it started, beyond any question in my mind, as a speculation and promotion matter. It has stopped generally because of the debacle that took place last fall in the price of securities, and except in local communities it is going on now in smaller areas and largely because of fear.

There have been a great many people in talking with me and talking with some of our officers, who are afraid because of the source from

which the suggestion for wider branch banking was made, that branch banking is going to come, and they do not want to be taken over by some foreign and remote group, and they are combining, as a measure of defense and not from any desire or belief in an extension of branch banking.

I think I have summarized pretty well the things that were in my mind. I have been very brief, and I shall be glad to elaborate my views if the committee desires on this subject, and, if you desire, I will send a copy of this pamphlet to every member of the committee.

I have some natural modesty about—

The Chairman. I am going to suggest that, without objection, this statement of Mr. Davison, which is the speech he delivered in the American Bankers' Association convention at San Francisco, be made a part of the record at this point.

(The statement referred to is printed in full as follows:)

In the case of Georgia, you had an instance of chain banking, and when the Bankers Trust Co., of Atlanta, failed, some 80 banks, supposedly independent, went down within 40 hours. Our history of chain banking has been been that when one goes bad the others go.

I do not believe that there is anything that chain banking can do for banking members of its group that can not be done, and is not now being done, by correspondent banks. It was thought when the Federal reserve act was passed that the need for correspondent banks had ceased to exist. The national bank used to carry part of its reserve with its correspondent in a reserve city, but there are many needs that the Federal reserve does not meet for the bank in outlying districts. It has collateral that is not available and I do not think should be available at the Federal reserve bank, and it can send that to its correspondent and can secure funds on that, if needed. It can get and does get advice as to securities, and when it has a surplus of funds it can send them to its correspondent, either to be invested in commercial paper or in loans on call and, in the same way, it has been known and does call on its correspondent for aid when the financial needs of that community are great.

The great difference in that, to my mind, is this, that the local bank sends its funds to its correspondent because it wants to, and not because some one in a reserve city tells them to. It is a transaction between principals and not a transaction between a head of a system

and a clerk or employee.

BANKING EVOLUTION IN AMERICA

A DISCUSSION OF MERGERS, BRANCH BANKING, CHAIN BANKING, AND THE UNIT BANK

(By George W. Davison, President, Central Hanover Bank & Trust Co., San Francisco, October 3, 1929)

The privilege of addressing you to-day is deeply appreciated. It is as the head of an institution which has been intimately associated for more than a half century with the work and problems of bankers all over the country that I am venturing to talk to you, and the subject which I shall discuss concerns every one of us. I propose to talk to you about current portents for our American banking future.

What is happening to our American banking system in this era of accelerated speed, innovation, and change? When the dust of the era has cleared away will our American banking system be radically different from the banking system

with which America faced the new conditions at the end of the Great War a little more than a decade ago? What is denoted by the rapid progress of the merger movement for larger and larger banking institutions? By the persistent movement for the expansion of branch banking beyond municipal confines? By the movement for what is called chain banking, obviously an endeavor to establish a compromise with National and State statutory limitations on branch banking? Are all these movements to go on with gathering force and widening sweep until we have a few hundred or even a few score mammoth banking institutions with myriads of branches? Or are we going to preserve our banking system essentially unchanged in form, organization, and control?

These are only some of the questions which we, who are engaged in what is not too accurately called the banking business, are all asking ourselves and one another. The very questions give concern. The implications of an answer in favor of an intense concentration of control in the banking field must give us still more concern because of the basic characteristics of American banking in its historic past and because of the contribution of our banking to the exploitation of American economic resources and the prosperous growth of American enterprise.

The general reason for addressing you on the subject chosen is the common interest we all have in whatever adaptations we should make to fit our activities to the needs of the time and the future. The particular reason for addressing you on this subject is the special interest I have in the work and problems of a great many separate banks. The bank and trust company which I have the honor to direct is the depository and correspondent of a large number of banks. Their interests are our interests. We are the possessors of a pioneer tradition in the establishment of correspondent bank relations, and all the thinking I have been able to do on questions affecting our banking future has centered around some of the most valid conclusions which are to be drawn from the contacts and experiences of a correspondent bank with its depositing banks. When we recall, and recall we can with pride, the encouragement and assistance which the freedom of independent initiative in our highly individualized banking system has given to the constructive achievements of American history and trade and the enhancement of the popular welfare, I am satisfied that all these questions can receive an answer affirming that there is no necessity in our banking, past or present, for a revolutionary change in our banking system in the near or further future.

So that I shall not be misunderstood, I wish to make it clear that I believe in bank mergers, up to the point where they are not restrictive of interbank competition and up to the point where independence can be retained and relations with customers do not become mechanical or stereotyped. I believe in branch banking in limited local areas where the closest kind of contact can be kept with the main office and, of much greater importance, where the main office has a close and exact knowledge of local business conditions and the local people. Regarding it solely as an experimental form of branch banking I shall not argue here against the endeavor to weld banks into chains moored to holding companies which are in turn subsidiary to or allied with institutional banks. One of our great advantages as Americans has been the opportunity offered by our vast geographical extent, by the different qualities of our population, and the different resources of our far-flung land to engage in experiments, political, social, and In our laboratories of such experimentation we have made helpful discoveries. One of the discoveries which we have been continually making is that what was often supposed to be new has not necessarily been new, and, far more often, what was thought to be desirable because it was new has turned out not to be good. It might be asked, in passing, if you go in for buying banks in order to make a chain or to set up branches, or if you go in for mergers for the sake of size, where are you going to stop? These are awkward questions to answer, but at long last I do not argue against experiments in branch-banking expansion, because I believe that we have something else which is better; which argues for itself.

AMERICA HAS THE BEST BANKING SYSTEM IN THE WORLD

What is there about American banking which would indicate that it is in the way of a great change in organization, form, and control? Is there anything fundamentally wrong in the present organization, form, and control? I think not. I believe that to-day America has the best banking system in the world; the most flexible; better adapted than the banking system of any other country to the enhancement of the economic welfare of all its people. What other country can show anything like our highly developed check system for facilitating the

exchanges of its domestic trade? What a tribute to our banking system is our

check system which gives such currency to confidence.

Undoubtedly this was not always so. It was not so prior to 15 years ago, when the Federal reserve system was set up. Nevertheless, our banking in our whole history has matched the requirements of American opportunity and contributed invaluably to its realization. Every lesson that experience set for our banks was learned and the teaching was put into effect; whether the lessons taught by the destruction of the first and second Banks of the United States; the lessons of the periods of free banking and wildcat bank note issues; the lessons of the battles for sound money; the long lesson of our panics which finally enabled our banks to convince themselves and so convince the people that our banking system must have some centralized direction, some centralized ability to render solvency liquid, and give fluidity to credit, some coordinating factor of banking power through mobilized reserves; or the further lessons learned in the recent war years as the result of which our bankers, instead of being chiefly brokers in loans, have become dealers in credit for the Nation and the world.

FREEDOM OF INITIATIVE AND COMPETITION SHOULD BE RETAINED

Through all the decades and generations of banking mistake and banking failure the periods of disordered currency, the cycles of boom, panic, and depression, American banking has persistently gone forward and, taught by experience, has suited itself to the demands of each new day. What is there about the record which is to account for this, and why is it that America has, as I believe firmly it has, the best banking system at present for its needs? The answer is to be found in the one universal fact which stands out in our banking history; that our banking has been done by individual banks, locally owned and headed by responsible individuals who were free to make their own decisions and accomplish their own successes, who were intimately associated with the activities of their local communities, thoroughly acquainted with local conditions and local people, and, because the ramifications and contacts of banking are endless, more or less in touch with industrial, trade, and financial conditions elsewhere. I believe that it has been vital to the interests of America that our bankers have had the individual freedom of initiative and competitive action which they have enjoyed (subject to such statutory restrictions and governmental supervision as the popular will has demanded and time has shown to be wise and desirable), and I believe that it is going to be equally vital to the interests of America in the future that the largest possible amount of individual freedom of initiative and competitive action should be retained by our bankers.

The prime characteristic of American banking has been its intense individualism. This used to be true also of American enterprise in trade and industry where it is becoming less true. Reasoning by analogy is always dangerous and never more so than in the attempts to draw analogies between the economic movement toward concentration in manufacturing and merchandising and a movement toward a similar concentration in banking. The character of the

service is fundamentally and essentially different.

HOW BANKING DIFFERS FROM BUSINESS

Earlier in these remarks I said that it was inaccurate to speak of the banking business. We know how unlike banking is to the business to which it ministers. The vocations of the banker are far more akin to the vocations of the professions than they are akin to the activities of business. In the case of banking institutions directly or indirectly engaged in merchandising securities there is a resemblance between banking and business, but in my view the merchandising of securities is not an essential of deposit banking. True, the banker deals in money, but very little in real money which is a commodity, and very much in promises and orders to pay money which are not commodities. Real banking is dealing in credit, and credit can hardly be regarded as a commodity. The banker is all the time engaged in exchanging his better-known credit for the lesser-known credit of his customers; or if you like, engaged in giving a circulating quality and a buying and debt-paying power to the credit of his customers on his judgment of their character and resources. Basically, banking is engaged with character, and in this engagement a bank renders service to its many customers. Its earnings are more of the nature of the fees received by a physician or a lawyer than they are of the nature of the money price obtained by a manufacturer or merchant for the goods which he sells. I might add further that the difference between banking and business is indicated strikingly by the fact that the competi-

tion between banks is in quality of service; that there is seldom a question of

price; that there is no real problem of cheaper banking for us to solve.

It has often been said that the great fault with American banking has been that there were too many banks. The criticism is important and has its veracity. It there were too many banks. The test sample of particularly there may have been a too liberal chartering of national and State banking institutions. With some 24,000 State and national banks and trust companies, we have, it seems to me, a sufficient assurance of banking competition. Because we have had so many separate banks, competition between them has too often conduced to excesses of departure from sound banking principle and wise banking policy. It has also conduced to an excessive amount of uncompensated service by banks generally in the effort to gain or retain deposits. Because of the very multiplication of banks there has been on occasion an undue amount of bank failures. retiring president, Mr. Hazelwood, has recently contributed an article to one of the magazines pointing out that the multiplication of banks in communities successfully maintaining one bank, a too liberal chartering by both State and Federal authorities has been the primary cause of bank failures. The remedy for this lies in administration, not in legislation nor revolutionary changes. for these reasons among others that I believe in bank mergers—up to a point. as I have already said, and in localized branch banking. Nevertheless, I think that all which our multiplicity of individual banks has cost the banking com-munity and the American people has been a triffing price to pay for the values inherent in and the benefits derived from our individualistic banking and from the maintenance of banking freedom of initiative and competitive action. In no phase of our American life has our individualistic tradition maintained so thoroughly the free play of competition as among our banks. It is that which is primarily responsible for the adaptability shown by the American bank and the American banker to all the changing needs of new conditions and the promise of new opportunity.

BETTER BANKING AND RUGE CONSOLIDATIONS ARE NOT NECESSARILY SYNONYMOUS

One thing we must grant; that as in other economic fields all institutions, organizations, methods, practices, and controls must justify themselves by persistent progress to the best results, so must our banking system justify itself. This is only another way of saying that while we believe we have now the best banking system in the world for our needs we have not attained perfection and never shall; that we must work for still better banking. That the way to better banking lies along the road of a banking system intensively concentrated to the last degree I am not prepared to admit; indeed I am disposed to deny that better banking and huge banking consolidations which tend to reduce materially the individualism of American banking are at all synonymous. Good banking is good banking, whether in the large or in the small, and it is my firm conviction that the best possible banking can be done just as well by the banks in the sparsely settled agricultural regions as by the larger banks of the towns and the much larger banks in the cities. I believe that it is only possible for better banking to be done by banks which are individually free to improve their services as their situation permits; banks which have independent freedom of individual initiative basing their action on their own knowledge of local conditions and their own judgment of local character and credit worth and are at liberty to make their own choice of cooperative affiliations.

It is my conviction that a study of our banking history and of our banking system as it is to-day reveals the lines along which our banking individualism can be preserved. Have we need of importing the organization and practices of other lands, even if they are lands of a much older banking history than ours?

I doubt it.

We have come to have a great deal to do with foreign countries and shall have more. We have learned a great deal from abroad and shall continue to learn more from countries and peoples with older experience. Yet what we appropriate from abroad we are most apt to apply in terms of our own experience and tradition and transform it to the requirements of our own more fluid and dynamic life. When our financial education had been carried so far that we were prepared for the legislation which took shape in the Federal reserve act we did not set up a central bank. We provided for a centralized banking system which should be a coordinating factor of cooperation between all of the banks of our entire banking community.

FOREIGN BANKING SYSTEMS AND THE UNITED STATES

The statement, often heard, that we should take lessons from European banking systems and concentrate into a relatively few large banks through the country at large with manifold branches is not well founded. True, it may be wise to strengthen through consolidation and consequent stronger capital accounts within prescribed geographical limits and within localities where kindred interests assure a mutual and related benefit; but the vastness of our country with its great geographical distances and varying sectional interests, pride, and prejudice, presents a problem wholly different from that of any European nation.

The branch manager of the English banks would be unacceptable to the American citizen who wishes always to deal in banking with one whom he regards as having greater special knowledge but his equal in other respects. Small deposits can not here be fed directly to the great urban centers. Tribute and the feudalistic overlord have no place in American banking when the hearts of the people are consulted, and any banking system not approved in the hearts of our People has no place in our present nor in our future. Great changes in system in this country rarely take place by creations at the top; they come from a determined wish in the hearts of the great body of citizenship which eventually expresses itself. We have been too long nurtured on independent doctrines to permit a final concentration of that which in its essence belongs to countless individuals, namely, the deposit account.

Nor can the French system, which centers in Paris, be presented as desirable for us. The leadership of the great banks in France is blindly followed, but where is there a French farmer or local merchant akin to our farmer or local merchant, and where is our small manufacturer or investor akin to the Frenchman of equal rating who relies on Paris and unhesitatingly and unquestioningly follows its

banking dictates.

And in Germany another wholly different picture offers. The paternal industrial bank flourishes there, a creation unknown to America until the last few years, when some of our great banks have established adjuncts whereby they have taken a leading part in creating and fostering industrial enterprises. This business is one which must be done, but whether by banks of deposit or their adjuncts or by private entrepreneurs is for the future to determine. It seem certain that the banking institution which is prejudiced by its own creations can not be the choice of the independent local banker as a depository of his reserves or his surplus funds and that the accumulations of capital represented by deposit accounts in all sections of the country which should be maintained in as liquid a form as possible will not, without the independent local banker's consent, be used extensively in promoting industrial undertakings.

BANKING INDEPENDENCE SHOULD BE MAINTAINED

So it would seem that no European system has any real part in our banking life as a whole, although we may select from it whatever may be suited to aid or to balance our own devices or ideas. We have worked our over a long period our own banking development. It has been steadily improved and there is encouraging room for further improvement; but it has always maintained the independence of its individual parts, be they large or small, and we are not ready to surrender our independence. The larger will become larger and, we hope, stronger. The smaller will become larger and, we hope, also stronger, but independence in the best meaning of the word and within proper local areas should be cherished and maintained. Strengthen the smaller bank, unify and consolidate within localities, foster direct dealings between clients and those bankers stronger. who have their own money at stake and take just pride in the prosperity of their surrounding territory. That plus a close and friendly association with a reserve city bank earned by years of affiliation is the ideal situation.

THE HOLDING COMPANY

What shall we say of the development of the holding company for the ownership of bank stocks if its avowed purpose is only to control banks throughout the country and direct their policy? Even as an interim step toward a branch banking expansion which may be legalized I believe it to be a development without promise. The banker far and wide throughout the United States can not take kindly to the ideas which it embodies. Is it to be carried out to the point where our bankers are asked to divide themselves; on the one side those who wish to control the vast power of much money for purposes of their own and on

the other side those who cherish independence of thought and action joined to close relationships more intensified even than in older days with correspondents bound together as partners in aims and ideals who have their own money and reputations at risk and who believe in the independence of their territory and depositors? If so it is with this latter class that we wish to align ourselves and to serve them to our utmost ability in fraternal partnership. Do we want to see banking become so monopolized that a given section shall be visualized as a source of tribute only with its industries and merchants not regarded as individuals and with a remote control able to lay its heavy hand on local industry and trade?

Trusteeship is becoming a common and much overworked word. It is to be feared sometimes the part it occupies and must ever occupy in our relations to our customers and depositors, if not overlooked, is not sufficiently emphasized. Our primary responsibility as bankers is to our depositors who have intrusted us with the care of their funds. Experience has shown that this responsibility when well exercised can be profitable to stockholders. Possibly at times the profit side of the matter is too much in mind. We are among the few corporations who boast of their debts, the loans to us by our depositors, called deposits. The strength of the capital structure and its relation to deposits is apt to be submerged in the grand figure of "total resources." The duties and responsibilities owed by us to our depositors are very real and our care should be how best we can serve those who have become our customers. That it is a trusteeship in a very real sense with all the implications of the word can not be stated too strongly.

I have been surprised since reaching San Francisco to learn how great a part the price of bank stocks is playing among the group and chain people. Time was—and will be again, I am confident—when it was not considered becoming in a banker to be concerned in the selling price of his bank stock, much less to be

active in the market for it.

Almost on my arrival a man came to me and asked if I remembered his offering me control of a bank within a year. I did and he gleefully told me he had sold it for two and a half times that price to a well-known group. He had hardly left when another told me of the difficulty a recent group had had in maintaining the price of their stock and how much stock they had to take in doing so. Another sale at twice its market value was then reported.

Have we here some explanation of the purpose of group and chain activity—immediate market appreciation—and little, if any, regard for intrinsic values, earning capacity, and the customers of the bank on whom with good management

the future must depend?

WE NOW HAVE MORE THAN THE EQUIVALENT OF FOREIGN BANKING

I contend that we already have in our banking system what I believe to be more than an equivalent of foreign branch banking and its development will be consistent with our traditions. Long prior to the creation of the Federal reserve system banks throughout the country established relations with banks in the principal cities as depositories for portions of their funds; as correspondents who could be consulted about all kinds of problems and to which the depositing banks could turn for cooperation in meeting the credit requirements (and for many decades the currency requirements) of their vicinities. While the establishment and development of these correspondent bank relations began with the national banks as a direct result of the provisions of the national bank act for the deposit of certain percentages of reserves with banks in reserve and central reserve cities, the need for these correspondent bank relations grew far beyond the needs for reserve depositories alone. Proof of what purpose these correspondent bank relations served was furnished by the action of State banking institutions which also established their position with strong correspondents and this proof has been emphasized by the experience we have had since the Federal reserve system began to function. One of the contemplated purposes of the framers of the Federal reserve act was to do away with the deposit of reserves in correspondent banks and to "keep bank funds at home." Have correspondent bank relations ended? Most certainly they have not. And why? Because correspondent banking has grown to meet needs and requirements of our banking community which have cemented correspondent and depositing bank relations almost indestructibly.

CORRESPONDENT BANKING VERSUS BRANCH BANKING

It is to correspondent banking, if I may be allowed to use a phrase which carries its own definition to all bankers, that, in studying our banking history and our banking system as it exists, my thought turns for the assurances that

will safeguard and preserve the individualism of American banking which, I believe, we all regard as indispensable to the health of the American economic future if we as bankers are to serve our people as well in the future as we and our predecessors have served them in the past. The growth of correspondent bank relations is a normal economic evolution of the individualism of our bank-I think that the line of advance to still better banking and the provision of a complete service suited at all times to make its contribution to the realiza-tion of American opportunity and the diffusion of increasing prosperity lies in

the normal evolutionary development of correspondent banking.

Branch banking, should it become legalized, may possibly give us better mechanical banking. Nobody knows better than we do that banking is not an enterprise of formulas and machinery. It is profoundly involved with the human side of life, with people engaged in the business of making a living. Let us have all of the better banking machinery that our ingenuity can devise and our judgment approve, but let us not place our confidence in the perfection of banking mechanism, for if we should our banking system would become increasingly rigid and lose the flexibility which is indispensable to the service that banks have to perform. For the preservation of that essential flexibility I believe our

correspondent banking to be most admirably adapted.

Our correspondent banking safeguards the individual initiative and the independence of banks everywhere. It is questionable if extensive branch banking is compatible with the preservation of the values which our individualistic banking system has fostered. Correspondent banking certainly is compatible with the preservation of these values precisely because it has fostered them. I think it almost not too much to say that close relations formed by the independent banks themselves with strong institutions of their own choosing in the financial centers of the country, now more than ever, can contribute to the protection of those popular liberties which are associated with our American tradition of the independence of the individual and the right of every individual citizen to equality of opportunity. It seems to me that in these days of economic concentration and consolidation our banking system, with its continuing achievement of in-creasing cooperation by thousands and thousands of independent banks, exemplifies more than does any other form of our economic institutions the basic American idea. That idea has been illustrated in our national attitude toward other nations, governmentally interpreted and expressed. Our position in the world to-day is not one of isolation and aloofness; it is a position of entire independence of entanglements of formal alliance but of a readiness to cooperate for the advance of every essential interest of the world. This, it seems to me, has been the relation which our banks hold toward each other and toward the American public, and I believe that the development of this sort of banking can go on to make the position of our banking system still more effective as an exhibition of cooperative independence.

I am sparing you statistics. There is little significance in the total number of banks that can now be counted in an extension of branch banking beyond strictly I am sparing you statistics. limited localities. The figures of branch banking expansion which are frequently cited are small when set against the thousands of banks grouped together in relations with correspondent banks. Statistically stated the branch banking movement to date is very limited. Its import is all that I am considering here. The point which I seek to make is that we have not perceived the potentialities of correspondent bank relations and that it is imperative to perceive them and to take steps to realize them. All the separate banks in our correspondent bank groups have perhaps only a little less in the way of active relations with each other than have the branches of any one of the great banks abroad where the principal relation of the branch is, after all, to the head office. Precisely the principal relation of our depositing banks is to their correspondent banks; but is there. there any reason why relations can not be cultivated between the depositing banks in a group headed up by the leadership of correspondent banks in reserve and central reserve cities? I would like to have you direct your thought to the appropriate the street of the str answer which should be returned to this question and in thinking of it I am sure that many things will occur to you which can be done to extend and improve correspondent bank relations so that if I may paraphrase in part and in part quote the language of the constitution of the New York Clearing House Association, the interests of the correspondent banking groups may be promoted and so that all banks associated in correspondent bank relations may assure the maintain the parameters of the correspondent bank relations may assure the maintain the parameters of the correspondent bank relations may assure the maintain the parameters of the correspondent bank relations may assure the maintain the parameters of the correspondent bank relations may assure the maintain the parameters and intelligent cooperation. maintenance of conservative banking through wise and intelligent cooperation.

WIDENING THE SCOPE OF CORRESPONDENT RELATIONS

Tell us how we may all work together for such a purpose and what we, as correspondent banks, may do to help you give a more complete service to your communities. In what new ways may we cooperate with you to strengthen your own independent position? If you are adding to your service and building up trust departments, for example, can we help you out of our long and large trust experience? Can we help you to make sound loans which are the real guarantee of bank deposits? Can we help you to make sound investments and keep your investments liquid? Should there be conventions of depositing banks under the leadership of the correspondent banks with which they are associated so that out of such conventions may come closer affiliations between the depositing banks themselves? Should there be some form of conference committee in each such correspondent banking group which can act as a clearing house for the ideas and problems of members of the group? Customarily the banks which are members of the Federal reserve system call public notice to this membership in their letterheads, their literature, and their advertising. Do you or should you, as depositing banks, in the same way set forth the names of your correspondent banking institutions?

The service which correspondent banks render to their depositing banks is well known. There is ample room and a beckoning opportunity to build up stronger and closer relations of mutual helpfulness to better service by our entire banking system. Good banking has had to be done in the local communities by the banks which have established good relations with correspondents in reserve and central reserve cities. The nature of the balances maintained by the depositing banks, the quality of the loans and discounts offered to the correspondent banks as excess lines or rediscounts, the way in which loans are handled by the depositing banks; all that goes to constitute the record of correspondent relationships makes for good banking everywhere. It certainly makes for as good banking all around as could possibly be the result of destroying the individual integrity of banks by absorbing them as branches under a distant control. So far as concerns the solidarity of the banking community, the historical relationships of correspondent banks are cemented by strong, invisible ties of loyalties and business friendship arising out of years of fair and honorable dealing and mutual confidence. What ties of branch banking can be as strong as these? What can we do to make stronger the ties which bind together men proud of their independence, their individual integrity, and their freedom of action?

The relations of depositing banks to their correspondents have been a normal, astrong even the requirement of the positing banks to their correspondents have been a normal, astrong even the requirement of the positing banks to their correspondents have been a normal, astrong even the requirement of the positing banks to their correspondents have been a normal, astrong even the requirement of the positing banks to their correspondents have been a normal, astrong even the requirement of the positing banks to their or the positing laws and the positing laws and the position of their positions and the position of the position of the position

The relations of depositing banks to their correspondents have been a normal, natural evolution encouraged by the spirit of our banking laws and the political and economic traditions of our country. These relations have fostered the initiative and independence of our banks everywhere. The independently owned and controlled bank can do far more in serving its particular community than a bank owned by distant interests. All the knowledge and confidence derived from local contacts can not be translated into terms understandable by some controlling authority at a remote point. I propose a resolute endeavor to make the largest possible and most effective use of correspondent bank relations and in making such an endeavor we can rest our confidence in an expectation of success on the sturdiest of foundations.

THE INDEPENDENT LOCAL BANKER CAN NOT BE REPLACED

In banking nothing can take the place of the man on the ground who knows local conditions and the men with whom he is dealing and has the power to make his own decisions under a responsibility owed only to resident ownership control. Also, and I would like to stress this, we American people have a deep-scated distrust of concentrated power, especially concentrated financial power, money power. This distrust has often been latent for long periods; but however dormant, it has been there. It was that which made it possible to destroy the first and second banks of the United States. It was that which less than two decades ago threw the country into the turmoil of the "Money Trust" investigation. Let us not forget that in the statute books of the Nation and of the States we have laws against excessive concentration of economic power. They have been invoked in the past and can be invoked again. They can be amplified and be equipped with more iron teeth. Our annals show that the invariable accompaniment of any protracted period of economic depression is a fresh political lurch in the direction of just such legislation and a fresh invocation of its enforcement. Just now there are no signs of an impending period of economic depression but it

is reasonable to expect that some day it will come. If we as the men charged with the wise administration of our banking system, because we are charged with the wise administration of our own banking institutions, should allow ourselves to be guided into courses alien to American traditions we may reckon upon hearing in such a period of depression the voice of the specious political agitator calling

for "more socialized banking.

We as a people, have, in the long run, and will always, in the long run, interpret equality of opportunity not as meaning a chance for everybody to be a hired man but as a chance for every American who has the ambition, will, and ability, to become the owner of his own business, run his own show, be his own boss. I know of nothing in our national economy which seems to me to stand so signally for the preservation of equality of opportunity as our individual banking system. Individualism is being submerged in other economic fields, as it is in politics. Our banking system is the stronghold of individualism. Economically, it may yet be the last citadel.

Preservation of the individualism of American banking rests, in the last analysis, in the individual banker. He can save his individual freedom of independent initiative only by furnishing the most complete and best possible banking service to his to his community in accordance with sound banking principles and wise banking policies. He can help himself to this end by availing himself of all the possibilities which correspondent banking offers, and I pledge my institution to your

assistance in such a cause.

The CHAIRMAN. Mr. Davison, your summary here this morning is a very complete statement.

Mr. Davison. Thank you.

The CHAIRMAN. You call it a summary, but I think it is one of the most intelligent summaries that has been presented to this committee, and we appreciate your coming before the committee.

Mr. Davison. You know how sorry I am that there was any mis-

understanding about my appearance here.

The CHAIRMAN. We are having some difficulty in getting men who represent the viewpoint you represent to appear before the committee and present the difficulties and the views of that class of banks, and I am sure you can recognize the reasons for that.

Mr. Davison. I think you will find it a much larger element than is thought. A great many are really anxious and fear they have to

do something.

The CHAIRMAN. Realizing the importance of this study to banking in the country at this time, we are trying to do the job and we are trying to get all the information we can. We have only a few more days, because our authority ceases with this session of Congress. However, we are trying to get all the information we can during the session so that if legislation is necessary it can follow at the next session of Congress.

In view of your statement and in view of the fact also that you are the head of one of the larger banks in New York City, your statement is particularly interesting. It is interesting in this respect to me, at least, because there has been a fear throughout the country, in years gone by, of the possible centralization of banking in New York, and You, representing one of the largest institutions in New York, rather

confirm that view.

It is evident to those of us who have been hearing statements from the heads of the large group or chain banks that have been developed that they are building up a condition in trade areas throughout the United States which is taking from New York some of the business which otherwise would naturally come to New York as the money In view of your stated opposition and your well-known attitude on this subject, I should like to have you tell us about the Central Hanover Bank & Trust Co. of New York. Will you put into the record, if you have it, a statement of the bank? If you do not have it

with you, will you insert it in the record?

Mr. Davison. Our bank has a capital of \$21,000,000, a surplus of \$69,000,000, and undivided profits of about \$25,000,000, the deposits running from four to five hundred million. We have a number of correspondents throughout the country and we do a general banking business. We do a great deal of foreign business with most of the countries of Europe, except Russia.

The CHAIRMAN. Have you any branches or any affiliated com-

panies?

Mr. Davison. We have no affiliated companies. We have branches within the Borough of Manhattan only. We have a very large trust business, bot corporate and personal, and safe-keeping.

The Chairman. You see a distinction between branches within the city limits and branches within the trade area or the Federal reserve

district, or nation-wide, do you not?

Mr. Davison. I certainly do. I think that experience has shown that branch banking within a locality is a service to the community. We have shown that we know how to do it and do it well. The head of the bank must be in constant touch with all conditions, and you are not so remote that it is not a matter of policy that is determined by the head from actual knowledge rather than based on reports made from remote or far-distance districts that guide him in making policies.

We do not issue or sell securities, nor have we any affiliated com-

panies that do anything of that kind.

The Chairman. Your relationship with any and all banks is that of correspondent?

Mr. Davison. Absolutely.

The CHAIRMAN. Is there any more connection between the Central Trust Co. of Chicago and your institution?

Mr. Davison. None at all.

The CHAIRMAN. Than with any other?

Mr. Davison. Not at all.

The CHAIRMAN. There is no connection there?

Mr. Davison. No, sir; none at all. I am afraid we are not principal correspondents.

The Chairman. I know there has been a suggestion made in the

past that the two institutions were connected.

Mr. Davison. Not at all. General Dawes has been a great per-

sonal friend of both myself and my predecessor.

The Chairman. It will be interesting to the committee, in view of the fact that so many banks throughout the country have affiliated companies, to know why your institution has not gone into that branch of the business.

Mr. Davison. The affiliated company, in the first place, I think, started because national banks were unable to buy stocks. We do a very large personal trust business, probably larger or as large as any bank in the country. I have always believed that the way to avoid sin is to avoid temptation, and I am better able to serve those trusts which have been committed to our care by not having anything to sell.

I have always been afraid of the ability of a man running a bond or securities department to sell them to our people as well as to outsiders, in case things get sticky or slow, and I have avoided any possibility of being in the business or having something to turn over to people who have intrusted us to make the best decision without

any self-interest.

The Chairman. There is pending before the committee, and of course it is a matter that has been referred to frequently in the hearings, a question of giving the examining authority, the Federal reserve system or the Comptroller of the Currency, the power to examine affiliated companies connected with national banks. I gather from what you have said you also think that that would be necessary.

Mr. Davison. I do not see where there could be any objection to

that.

The Chairman. Of course it would be very difficult to examine a national bank unless they examined the affiliated company.

Mr. Davison. Beyond question.

The Chairman. In connection with this study, Mr. Davison, it is quite important to the committee to know who controls these large banks. Will you have any objection to furnishing us, as was furnished to the Pujo committee during that examination, a list of your largest stockholders?

Mr. DAVISON. No.

The CHAIRMAN. If you will furnish that to the committee, it will

be for the committee's confidential use only.

Mr. Davison. I do not think there is any stockholder in the Central Hanover Bank & Trust Co. who owns over 2½ per cent of the stock. The Chairman. Then, control in the bank is not vested in the officers and directors of the bank?

Mr. DAVISON. No, SIr.

The CHAIRMAN. It is a free and open control?
Mr. Davison. Absolutely, and always has been.

The CHAIRMAN. How do you conduct your foreign business? Have you your own agencies abroad? Are they correspondent agencies, or

do you have your own officers abroad?

Mr. Davison. We have representatives in Berlin, Paris, and London. They are merely agents, and we are correspondents of many of the principal banks abroad and do a great deal of business with them.

The office in Paris, I would say, is merely a service station for those who use our credit when they go abroad. We have found it necessary to open an extra office in London for that purpose. We have a business office in the city that is able to get credit information,

and so forth, for us.

The Chairman. Suggestions have been made from time to time and are pending here now in regard to increasing the line of eligible paper for rediscount in the Federal reserve system. In that connection, we are confronted with requests that we make eligible for rediscount paper growing out of partial payments and to make mortgages, railroad bonds, and good municipal bonds eligible, under certain set out provisions, and so forth.

Is there a dearth of eligible paper to secure the release of the proper

amount of Federal reserve credit at the present time?

Mr. Davison. Not at the present time.

100136-31-vol 2 pt 14-2

The CHAIRMAN. Would you favor enlarging the scope to include those lines that I have referred to?

Mr. Davison. I would not.

The CHAIRMAN. My analysis has been rather general, but do you

agree with that?

Mr. Davison. I think that our experience with installment paper is rather meager. I think, after our experience with that type of paper is greater, we may consider that, but I do not know. I think it is still too unknown, although the record of the experience we have

had with it has been surprisingly good.

Certainly bonds would simply be opening the door for securities of all kinds, and I do not see that that should be done. There has not been, up to the last few years or the last three or four months, as much commercial paper in the market as we were accustomed to having. I think it has been due to several reasons: One, primarily, corporations have taken advantage of the situation since 1921. A great many were caught in 1921 with large debts, and they were compelled to raise additional capital, but the price of their securities has furnished an opportunity to raise capital without taking on a fixed debt, and most of our great corporations have had money to lend rather than having to borrow, which they ordinarily do, at a bank.

The CHAIRMAN. Do you see any harm in the use of Government securities, short or long term, as practiced now by the banks, in securing Federal reserve credit?

Mr. Davison. I think it is invaluable to the bank.

The CHAIRMAN. You approve, then, of the plan now in operation in connection with the release of Federal reserve credit, particularly by banks in New York and other large cities?

Mr. DAVISON. I do.

The CHAIRMAN. You do not think that that makes easier access to the release of that credit than should be?

Mr. Davison. No; I do not think so.

The CHAIRMAN. You do not think it leads to any abuse whatsoever?

Mr. Davison. I have not seen it. I think it has worked wonderfully well and shown a flexibility that has been remarkable.

The CHAIRMAN. You do not think that that releases credit to stock market speculative operations, through the absorption of brokers'

loans by the banks?

Mr. Davison. I do not. You can easily see what would happen, however, with a money market such as we had last summer, if the deposits of the whole country, or the outlying sections, were available and the New York banks simply drew them in to loan at the rates money commanded in New York last year.

The CHAIRMAN. I think it was the clearing house rule that permitted

banks to make brokers' loans on the market.

Mr. Davison, No; the clearing house rules made a charge and recognized a condition that actually existed.

The CHAIRMAN. Was that a stock exchange ruling, that one-half

of 1 per cent charge?

Mr. Davison. No; a clearing-house rule. The situation grew up from what I told you. Corporations had raised money from their securities for their necessary capital, and under the clearing-house

rules they were getting a low rate of interest, and there was a higher rate available by asking the bank to lend it. I remember eight or nine years ago I refused to do it, but I found I was losing deposits and everybody had to do it, and the clearing house made a uniform charge

The CHAIRMAN. The question was asked some weeks ago, when the Comptroller of the Currency was present, as to whether or not there was any legal authority for them to permit a bank to make these loans and make a charge. The comptroller suggested that he would furnish the committee with the information with regard to that, but he has not done so as yet.

Mr. Davison. I do not see what more you need. A bank can act as agent for its correspondent, whether a corporation or an individual, and perform any service that the man asks it to do. That is all they are doing. I do not see what limitation there would be on our doing that.

The CHAIRMAN. The suggestion has also been made to this committee that one of the main causes of this great suction of money into New York from the country during speculative periods is due to the fact that the big banks in New York offered to their customers to place so much of their funds in the market, provided they would keep certain balances with them, and that that has been a method of securing this business from the country which has finally resulted in plaguing the big New York banks.

Mr. Davison. I do not think there is anything in that. What I am trying to emphasize is that at the present time the action of the correspondent bank is the action of the bank in the locality. It is not the action of the New York banks or what the New York banks Would like. It is what they wanted to do. They are independent, and to sacrifice that I think would be a great sacrifice and would be

a menace to our general welfare.

The CHAIRMAN. The Comptroller of the Currency has recommended to this committee, as you know, an extension of branch banking over its present limitations—within the city limits—to a larger undefined area known as the trade area. Would you think it advisable to extend branch banking as he suggests?

Mr. Davison. No; I would not.

The CHAIRMAN. Would you extend it beyond the present limitations?

Mr. Davison. I think your national bank act has got to provide that the national banks can have branches wherever the State legislation permits State banks to have branches. You have got to do that, probably.

I can see no reason for the extension, and I think if the comptroller's suggestion were followed, you would find a wild orgy of speculation in bank stocks by the bigger banks and by big outlying banks that

would make last year's affair pale.

Mr. Strong. Mr. Davison, I apologize for being late and not having heard your statement, but from what questions you have answered, I understand you are opposed to an extension of branch banking?

Mr. Davison. Yes. Mr. Strong. The comptroller is advocating branch banking in trade areas, which he says is that circle of territory around the large moneyed or commercial centers that controls the trade of that terri-

tory. In the examination of the Governor of the Federal Reserve Board he intimated that they were trying to work out a system of trade areas in the United States which might amount to 37. He also said that he thought that trade areas would be broken down or at least he said this, that within 50 years, and it might be sooner, we would have nation-wide branch banking. He was followed on the stand by Mr. Giannini, of the Bank of Italy, who favored world-wide branch banking.

We had before us group bankers from Minneapolis, Detroit, St. Paul, Buffalo, and Atlanta. They seemed to think they had reached a proper system of banking and insisted they had improved financial conditions in their territories and they were in a sound condition. I remember that the group banks of Minneapolis and St. Paul had, within the year, gotten together over 100 banks each and insisted

that it was a proper and permanent system of banking.

I have just been out to Tulsa, Okla., and Wichita, Kans., addressing the State bankers of those States, and a reliable banker, a man whose word can be accepted, stated he had visited St. Paul and Minneapolis and asked those groups up there what will be the ultimate result. They said, "Oh, well, eventually we will have nation-wide branch banking and we will sell out to New York interests and make several million dollars."

Mr. Davison. I think you have put your finger on the main spur to chain banking thus far, and chain banking is simply something they can do when they can not do branch banking. I think there are

now groups of chains forming out of fear.

Mr. Strong. I mention this because I believe the desire for group banking is eventually to make money by selling out to branch bank-

ing systems in the great money center, which is New York.

Mr. Davison. I have called attention in the memorandum I submitted-I did not put it in the paper which I took out to San Francisco because, while I had it in the back of my head, I did not have enough concrete instances to speak about it, but when I got out there I injected a little memorandum that is contained in the paper which is typewritten here [exhibiting]. The thing that amazed me was the way everybody was talking about the price of bank stocks and the price of group shares and the effort every member was making to maintain the prices. That was all I heard, and there is no question in the world, and I am very firm in what I stated before you came in, that the primary purpose of chain and group banking has been stock promotion and speculation; and if you open the door, you will see some more.

Mr. Strong. Another thought that comes to me in connection with this whole development, and which these hearings evidence will eventually lead to nation-wide, if not international branch banking, is the proposition you suggest, namely, that the head bank's control of the branch banks destroys the independence of individuals in the community where unit banks previously existed. If we had nationwide branch banking, that can result in but one proposition; that is, driving out the middle class of people, as it has driven them out in every country of the world where they have had branch banking, and that will destroy the independence of the American citizen which this Government was built to maintain. Do you agree with that

statement?

Mr. Davison. I do.

e.

B

a

Mr. Strong. I thank you. That is all.

Mr. Davison. There was a suggestion, I do not know how true it was, that a premium was being offered to the branch manager or the manager of an outlying branch who could send money to the local center. That is a natural development of that idea, beyond any

question, whether it actually happened or not.

The Chairman. Some of the members of the committee are in quite a quandary as to just what this committee or Congress should do. We are in the midst of this study, and the disclosure of the fact that there is an opportunity for business or for making money has undoubtedly accelerated the development of this movement to chains and groups; and almost daily we are advised through the press of new groups being started, combinations which are attempting to build up stronger positions in this particular line. We know perfectly well that this committee can not act, in a legislative way, until we have completed this study. None of us knows what should be done. We will be very glad, in view of this situation, if you have any suggestion in regard to what we should do, to have you make those suggestions.

I introduced on the spur of the moment, a few weeks ago, when Mr. Ottley was on the stand and somewhat at his suggestion and others, a bill which would tend to limit the acquisition by groups of national banks and member banks of the Federal reserve system, these being the only banks over which we have authority. This bill provided that before any banks or groups can acquire member banks, they should have the approval of the comptroller's office or of the Federal reserve. This was intended as a possible check on improper associations being built up, as there is a limitation in the bill to 10 per cent ownership of the stocks in such banks. Any acquisition beyond that must first be submitted to the Federal Reserve Board or to the Comptroller of the Currency. There has been strenuous opposition to that. It was simply an attempt to obtain some control over such matters until we could decide what should be done in a legislative way, for the best interests of the country. It has been very difficult to find any language which could be introduced into law that would regulate chain banking because, in the final analysis, it comes down to the question of who is fit to own bank stock. Can You give any help along this line?

Mr. Davison. I can prepare something and submit it to you. Of course I have not touched on the matter of who is responsible. We have made much of the double liability, and if I form a holding company that holds the stocks of a chain of banks—and the history of chain banking shows that when one goes the others go—you lose

your double liability.

The Chairman. We shall be glad to receive it. If you send it, it will be inserted in the record following your remarks here. I should like to say in addition, that we hope you will be very free in your suggestions to the committee.

Mr. Strong. And I should like to point out further that while we are engaged in these hearings these banking groups are being

formed and being developed.

Mr. Davison. Undoubtedly.

Mr. Strong. In fact, the chairman, in whose opinion I have a great deal of confidence, has stated that within two years we will have branch banking in every State in the Union.

The CHAIRMAN. Here is a clipping from the New York Tribune

of May 31, 1930, in which it states:

MARINE MIDLAND GAINS STRENGTH IN UTILITY FIELDS

At the outset Marine Midland consisted of the Marine Trust Co., of Buffalo, Union Trust Co. of Rochester, and 13 others. The total of 15 has been subsequently increased to 18. The Fidelity Trust Co. of New York, recently acquired, gave the Marine Midland banking chain a footbold in New York City, where it is also planned to form the Marine Trust Co. of New York with initial capital of \$25,000,000.

That is an enlargement of the scope over that indicated by Mr. Rand when he was before the committee a couple of weeks ago.

The press also carried yesterday a statement covering the formation of the Caldwell group in Tennessee, embracing \$600,000,000 of assets, and there are indications around that other situations are developing, especially in western Pennsylvania, where it is indicated a New York group, the August Belmont group, are organizing a \$50,000,000 chain of banks in western Pennsylvania. There is also an indication in Pittsburgh that such a thing is happening, and in other sections, this is rapidly developing.

Mr. Strong. I would suggest, if I had control, that we conduct these hearings for another year, and that we pass legislation that

would prevent this development in the meantime.

The Chairman. This has a very great influence on the Federal reserve, as now constituted.

Mr. Davison. I think Mr. Dawes pointed that out very well in his

statement.

Mr. Strong. Mr. Davison, if this control of the credits of banks and of banks, extends throughout large trade areas and throughout Federal reserve districts, so that the banks are united in control, through group banking, what effect do you think that will have on the Federal reserve banks? Would they not control the Federal reserve banks very largely?

Mr. Davison. It is quite possible.

Mr. Luce. Mr. Davison, I gather from the name of the banking institution you represent, yours is not a national bank?

Mr. Davison. No.

Mr. Luce. Why do you continue as a State bank?

Mr. Davison. Possibly inertia, because we started that way. The foundation of the company was two trust companies, the Central Trust Co. and the Union Trust Co. At that time national banks could not do a trust service. The main portion of our business was corporate and personal trust business for a long while.

Mr. Luce. Yours is an amalgamation of a trust company and a

national bank?

Mr. Davison. Yes. We merged with the Hanover National Bank last year. Mr. Luce. You had at that time the opportunity to continue either

as a national bank or as a State bank?

Mr. Davison. Yes.

Mr. Luce. What were the reasons that impelled you to choose the State bank form?

Mr. Davison, I think largely our history.

Mr. Luce. And I infer that you see no practical advantages that either system has over the other?

Mr. DAVISON, Practically none to-day.

Mr. Luce. We are in this situation: We are now considering this and many other problems that come before this committee and we find ourselves hampered by the existence in this country of one system that seems to be quite beyond our control. Do you expect that the memorandum you contemplate submitting will show us any way in which this committee or this Congress can interfere with your opera-

Mr. Davison. As a matter of fact, most of the banks of the country now belong to the Federal reserve system-75 per cent, at least.

Mr. Luce. Not in number.

Mr. Davison. Certainly in assets. We are a member of the Federal reserve system; so that you do control our operations.

Mr. Luce. So long as you choose to stay in the system, but you

can, at any minute, leave the system.

Mr. Davison. No State bank has gone out of the system.

Mr. Luce. I thought our information was quite to the contrary in reference to some Ohio banks.

Mr. Davison. I was not familiar with that.

Mr. Luce. I am informed by the chairman that I was in error about the Ohio banks, but there still remains the fact that, excepting indirectly and with no complete power, we, in this room and in Congress, may not issue orders to you.

Mr. DAVISON. No.

Mr. Luce. Now, if you and I were building a new banking system in this country, might not that embarrassing situation be one of the first we would face?

Mr. Davison. I do not know. I do not know that it is as acute as

you suggest.

Mr. Luce. Let me continue the line further. I understand that the measure of temporary restraint which the chairman has introduced applies to national banks. Is there any way in which we could compel Your bank to refuse ownership of more than 10 per cent of its stock to any other person?

Mr. Davison. As long as we remain a member of the Federal

reserve system, yes. Mr. Luce. But if you found it to your advantage to leave the

Mr. Davison. I can not conceive finding it to my advantage.

Mr. Luce. But there are scores of banks in the country that seem to find it to their advantage to leave and to join a group, see more advantage in joining a group than staying in the Federal reserve

system, perhaps.

Mr. Davison. I can not conceive of that situation arising with respect to our bank or to any bank of our character. As I stated do not know whether you were here—I think since the stock market debacle, the principal formation of chain and group banks has been influenced by fear, fear inspired by the pronouncement made that Washington favored an extension of branch banking, and groups in

localities are getting together so that they will not be easy prey to anyone who wants to buy them.

The CHAIRMAN. Will you explain just what you mean by "favored

by Washington"?

Mr. Davison. The statement came out that the comptroller's office favored it. When I was in San Francisco I heard that the Treasury Department favored it. I do not think that has been borne out by the facts, and everybody was in a tremor that this thing was coming and it was a situation they had to meet. That is why I repeat what I said, whatever opinion your committee has and Congress has, the sooner it is determined, the better I think for the whole situation

Mr. Luce. We observe in every important line of activity in this country to-day a marked tendency toward consolidation. We observe that the important lines of retail trade and of wholesale trade and of important industries are all responding to what looks like an economic urge. In none of those fields that I have observed, has any element of fear entered. It has apparently been wholly due to the belief of men that more profit is to be made through the economies that result from consolidations. Why do you think that in banking this move-

ment has some unique cause?

Mr. Davison. I do not say that it has any unique cause. I do say that the analogy between chain stores and other consolidations in no sense exists in banking. Banking has always been regarded as a public service and regulated, and should be regulated, because of its public character. As I stated before you came in, four-fifths of all the bank's money is depositors' money. It is not the bank's money; and I think the obligation of the bank—and I am repeating what I said before you came here—is primarily to the depositors and secondarily

to the stockholders. Mr. Luce. I am greatly interested, of course, in your line of thought but to my mind, to use a threadbare quotation, "it is not a theory but a condition that confronts us"; and, at the moment, it strikes me that it is our duty to face a condition and not a theory of banking; not the wisdom or prudence of it primarily, but the palpable fact that in every path of human endeavor consolidation is the order of the day. and you still do not make it clear to me why, on the sole line of profil through consolidation, banks should be considered in a class by themselves and somehow different in respect to the motives that are urging men to act.

Mr. Davison. I certainly have tried to make it clear that I think you should regulate branch banking and you should regulate chain and group banking so as to prevent any one central community controlling and dominating the banking interests and banking powers of smaller communities. I made that very emphatic. I do not know whether you were in the room or not.

Mr. Luce. At this time in the session of Congress every Member of the House is greatly burdened with duties, and it is not possible to

B

n

r

til

A

81

8]

be here for every minute.

Mr. Davison. I do not-

Mr. Luce. I am simply saying that in apology for not being pres

ent when you made your opening statement.

Mr. Davison. It is not necessary to apologize, but I simply repeat that in this memorandum I go quite fully into the reasons why bank ing is different from selling groceries.

Mr. Luce. Certainly we all appreciate that fact, but that is not the question I am driving at. I am leading up in the endeavor to find a concrete basis for action. I am leading up to an inquiry as to how it is possible, viewing all the methods of evasion that are open, to prevent one man owning the stock of two banks.

Mr. Davison. I know of no way.

Mr. Luce. If there is no way to prevent it how is it going to be

Possible to check group banking?

Mr. Davison. The chairman suggested one method that certainly membership in the Federal reserve bank will enable you to make effective, that no one should be permitted, or that no outside group should be permitted to own more than a certain percentage of the

stock of a bank of that kind.

Mr. Luce. Granting that a law could be passed that would prevent Jones from holding stock in a greater amount than 10 per cent in your bank or any other bank, how can you prevent Jones from owning more than 10 per cent in one bank and Mrs. Jones more than 10 per cent in another bank, or how can you escape the ordinary recourse to straw men? How can you prevent a group of men from dividing up amongst themselves, the stock of the banks? It is the possibility of evasion, at any time, of legislation that is one of the factors we must consider, and if we, so far, have been shown no way to do these things, I think we must accept the condition and face it.

We have this same problem before us in other fields. There is a committee now engaged in studying the question of joint holdings of railroads. The members of that committee look upon it as even more important than our problem. There are measures that are being urged upon us to prevent the joint holdings of chain stores. Our mail contains many appeals to stop this, but no one tells us how, as-

suming it should be done.

Now, after that little speech, let me ask you this question: If it should prove beyond the powers of legislative bodies to stem the tide of consolidation, and we had open to us only the power of regularity lating and directing, would you prefer that we direct the carrying of bank consolidation into the branch field rather than the group field?

Mr. DAVISON. I would.

Mr. Luce. That answer meets one very important problem before Now, if we are going to direct it into the branch field, will you give me a reason why your bank ought not to have a branch in Jersey City?

Mr. Davison. Well, of course, Jersey City is not very remote from New York.

Mr. Luce. Well, make it Newark.

Mr. Davison. Well, Newark has its own problems. It has credit Situations and public situations that we, in New York, probably could not be fully familiar with. We would have to get a second-hand report from someone else and I think it would be altogether wrong that New York should be dictating the credit and banking policy of a locality in another city and one in which we were really foreigners and strangers.

Mr. Luce. You feel more at home in Harlem than in Newark? Mr. Davison. Naturally we would; yes, sir. But the situation is altogether different. Harlem is a place of small businesses and homes and the banking situation there would not involve big industries.

It would not involve the city or the county or a great number of local different activities like a city of the importance and character of Newark or Jersey City.

Mr. Luce. Does the New York law permit you to open a branch

in Poughkeepsie?

Mr. DAVISON, No.

Mr. Luce. In many States, state-wide branch banking is permissi-

Mr. Davison. Yes, sir.

Mr. Luce. Of course you know a great deal more about the situation there than I do, but I live in a suburb of Boston, 10 miles out Newark is about 10 miles from New York, is it not?

Mr. Davison. Ten or fifteen miles, something like that.

Mr. Luce. As a suburbanite, all my business life. I have a reason; able belief that the business men in Boston are pretty well informed about the district within a radius of 15 miles. Most of them live there; Mr. Davison. Newark would resent being called a suburb of New York.

Mr. Luce. Resent it or not, the fact is, geographically, it is in

propinguity to New York.

Mr. Davison. I do not think economically, socially, or in any other way, it is a suburb of New York. As a matter of fact, you call up Poughkeepsie. In discussing this paper last August with one of my officers, in clarifying one point, he happened to ask me, "What would you say about a branch in Bridgeport?" I said that "That would probably involve a great many of the elements we have here, but if you go to Poughkeepsie, you will find a great many elements that do not exist here, especially with respect to farming conditions.

Mr. Luce. If you have your office in Poughkeepsie, the observation we have had here of the workings of branches wherever they have been established, has led us to think that in all the ordinary, every; day transactions, the authority rests with the local representatives of

the central banks.

However, that is all, and I thank you.

The CHAIRMAN. Mr. Davison, before turning you over to another member of the committee, in view of what you have said, I should like to ask you whether or not promoters and officers of banks engaged in organizing chains and groups, and also the extension of branch banks beyond the present limits, are not forgetting the fact that four-fifths of the banks' assets belong to the public and that the off; cers are, in a sense, only trustees, and rightfully subject to State and governmental supervision, and under these circumstances, whether we should not be even more careful in supervision to protect against possible exploitation by aggressive and greedy operators who are doing this for a profit. Should not the public have the assurance that these operations are being scrutinized more than heretofore?

Mr. Davison. I agree with that.

Mr. Goldsborough. Mr. Davison, in discussions on the floor of the House in the last nine years and in this committee, as far as 1 can tell, the three major reasons given by the proponents of branch banking have been first, the number of failures that has taken place in banks in the last 9 or 10 years; second, the fact that branch banks ing would stop group banking and chain banking; and third, that branch banking in the national system is necessarily in order to enable national banks to compete with State banks in States that grant the

right to State banks to establish branches.

Now, my theory has always been that none of these three reasons had anything to do with the real reasons behind this movement for branch banking and, in order to try to clarify that situation, on January 9, 1930, I introduced a bill which, if enacted into law, would do three things: It would compel dissolution of group banks and chain banks and it would prevent any further extension of branch banking among State banks.

Now, assuming that that legislation, in its entirety, is constitutional

and could be done, do you think you would favor it?

Mr. DAVISON. I think so.

Mr. Goldsborough. With your permission, I should like to send you a copy of this bill, and a copy of a statement that I made in support of the constitutionality of it, and when you communicate with the committee I would appreciate it if you would comment on this bill.

Mr. Davison. I would be very happy to do that.

Mr. Goldsborough. Now, these banks that have failed, especially in the Northwest, in the last nine years, in your judgment, in the case of most of those failures, have they not occurred because of credit conditions arising out of the war?

Mr. Davison. I think so. I made that statement.

Mr. Goldsborough. I am very sorry I could not be here to hear it. You think, do you, that the unit system, which has built up the country, is as valid now, under normal conditions, as it ever was?

Mr. Davison. I certainly do.

Mr. Goldsborough. Now, do you not think that the pressure which is coming for branch banking, is coming not from the districts which would have branches, but from interests in metropolitan areas who would like to acquire credit control over those districts? Putting it in another way, do you think that the rural districts of the country are making any demand for branch banking?

Mr. Davison. I do not. I think the thing started in the oppor-

tunity for speculative and commercial profits.

Mr. Goldbsorough. I think that is all.
Mr. Letts. Mr. Davison, I have only one question. I was impressed with your statement as to the talk which you encountered at San Francisco. I understood you to say that you found the conversation out there to be with respect to the price of bank stocks and of group holdings.

Mr. DAVISON. I did.

Mr. Letts. And that, I take it, arises from the fact there have been many consolidations, more than anything else?

Mr. DAVISON. Yes.

Mr. Letts. And that implies speculation?

Mr. Davison. It does.

Mr. Letts. In your judgment, would it be advisable, if possible, stop speculation in bank stocks?

Mr. DAVISON. No.

Mr. Letts. We think we should have speculation there the same as in other stocks?

Mr. Davison. I do not think you can help it. Anything that is ever sold, you can not escape people buying in the hope it will go up.

Of course, the history of bank stocks in New York City has been over a long period of years, that they are very profitable.

Mr. Letts. Assuming it were possible, do you think it would be

advisable to prevent speculation in bank stocks?

Mr. Davison. I do not like legislation that restricts normal activities.

Mr. Goldsborough. It is a restriction of trade, is it not?

Mr. Davison. Absolutely.

Mr. Letts. I have often noted, where there is a consolidation of two banks, that when the prospect or plan for consolidation is announced, the stocks of each bank go up.

Mr. Davison. That is frequently bound to be the case, because one bank is getting a little more in price than it heretofore commanded

in the market.

Mr. Letts. Do you not frequently see where stocks of both banks go up?

Mr. Davison. Frequently, like last year, where you had a specula-

tive furor; yes.

Mr. Letts. But is it not a fact that when you get a better price for the stock of one bank, you decrease the assets of the other?

Mr. Davison. I do not think so always. There may be an actual

gain to both in the consolidation.

Mr. Letts. That is what I want to get at. How can there be

profit in the mere combination of two banking houses?

Mr. Davison. Well, now, take the merger of the Hanover Bank and the Central Union Trust Co.: We had a commercial business in modest proportions, and a very large trust business and had a large number of correspondents and a large number of commercial customers. Instead of doing business in two offices, we do it in one. It happens to be the one we have just moved in. We can handle the whole of the commercial business and the trust business much more economically than we could handle separately the two types of business. The contact we have had in years past with the number of new customers has awakened them to the possibilities in the line of our trust service that the bank can offer that customer now that the Hanover did not handle. I think there has been a decided gain to both companies, the two services supplementing one another. It is well rounded and complete.

Mr. Letts. Is it not a fact that in these consolidations, the personnel of the two banks are retained, perhaps going in one house, with

the result that the bank is overmanned?

Mr. Davison. I think that will correct itself if it is true.

Mr. Letts. Is it not often seen that the agreement for the consolidation resolves itself finally to a case of taking care of the personnel of the two institutions?

Mr. Davison. I have seen but two such agreements in my life and

personnel has not been mentioned in either.

Mr. Letts. You think, then, that the profit which arises out of such a situation is due to the economies which are effected?

Mr. Davison. Yes; and the increased contacts and business that

goes with it.

Mr. Letts. Does it give you increased contacts or simply combine the contacts of the two institutions?

Mr. Davison. I explained to you a moment ago that the Hanover had very little trust business. We call to the attention of all Hanover customers what we could do in taking care of securities and trust business. It has given us a contact with people that we ordinarily would not have had. That is merely one instance.

Mr. Letts. I have seen bank stocks sell very much above their

book value.

Mr. Davison. They always do and there is a reason why they should.

Mr. Letts. Will you please explain that reason?

Mr. Davison. Take our situation here: I explained that our capital surplus, and undivided profits aggregate \$105,000,000. It represents an investment of \$7,000,000 by the stockholders; in other words, the book values of our stocks and the dividends paid have never measured their earnings because we have always, over a long series of years, put back part of our earnings into surplus and built it up.

Mr. Letts. Does not that reflect itself in the book value?

Mr. Davison. Possibly, but it also means-

Mr. Letts. The book value-

Mr. Davison. It also means you are storing up always for the

Mr. Letts. But all of that is represented in book value?

Mr. Davison. It is not in book value. The earnings in our trust department are in no way represented by any asset on my books.

Mr. Letts. How is book value determined?

Mr. Davison. The book value is the value of your securities and assets over the amount that you owe your depositors.

Mr. Letts. Yes, and that would include the reserve, of course? Mr. Davison, Includes everything that we have that we do not have to pay out, but it does not measure in any way the vast business that we have built up where I am acting as trustee or executor or taking care of other people's properties or acting as registrar in the transfer of corporate trusteeships.

Mr. Letts. Is that spoken of as good will?

Mr. Davison. Yes; but it is a very tangible asset.
Mr. Letts. How is it tangible? Is it not intangible?

Mr. Davison. No, it has a regular earning.

Mr. Letts. It is not anything you can take hold of.

Mr. Davison. I take hold of it every year.

Mr. Letts. How?

Mr. Davison. The money that comes in from the service I render. Mr. Letts. As soon as you have earned it, it becomes quite tangible. Mr. Davison. Yes, but I am going to earn it the next year too.

Mr. Letts. You are talking about good will?

Mr. Davison. No.

Mr. Letts. Good will is what you will earn in the next year and the Year following. That is not tangible.

Mr. Davison. Where the business is fixed, in my opinion it is. Mr. Letts. Can it be said that you are a fixed part of that institution?

Mr. Davison. I do not mean me.

Mr. Letts. Can it be said that any part of your personnel is fixed and definite?

Mr. Davison. It is not a question of personnel. For example, you have named me as trustee of a trust for which I make an annual

Mr. Letts. Can it be assumed that this potential earning power is

something that may not be destroyed?

Mr. DAVISON. I think so; yes.

Mr. Letts. It can not be destroyed?

Mr. Davison. That is right.

Mr. Letts. I am not speaking of possibilities in your bank, but in other banks, have we not seen men, by their own dishonesty, destroy those earnings?

Mr. Davison. You are not bringing in such elements-

Mr. Letts. Why not?

Mr. Davison. Because I am assuming you are going to have

capable management.

Mr. Letts. How can we avoid it when we are talking about potential earnings which I prefer to call good will and which you do

not accept under that name?

Mr. Davison. No; now just a moment. I say some of the early ings of the future are not in what we would call ordinarily good will Good will, as I figure it, means an earning which it is assumed will go on because you have been earning in the past that sort of money.

Mr. Letts. And because you have the confidence of the community

that you serve.

Mr. Davison. We have the confidence of the community that we serve, yes. Now, any increase in my trust company I would say would go to your form of good will, but what is already on the books and which I retain as long as I remain honest, is not good will. So, we only differ as to part, anyway.

Mr. Letts. I went a little further into this than I intended to because you resisted the idea there was an intangible character

Mr. Davison. And I was probably wrong.

Mr. Letts. And you seemed to think it was something that is tangible.

Mr. Davison. I was trying to separate your good will into two

elements. It is purely technical however.

Mr. Letts. I would like to get that into the record-just what those two elements are. A part of it, I assume, would be the faith that the community has in the personnel.

Mr. Davison. Yes.

Mr. Letts. And a part of it would rest upon the success of the institution in the past and its ability-

Mr. Davison. I think that is good will.

Mr. Letts. And its ability to serve the community in its needs?

Mr. Davison. Yes.

Mr. Letts. What other elements are involved? Mr. Davison. In good will, I should say none.

Mr. Letts. Then, in this potential earning power that you speak

of, would there be anything else?

Mr. Davison. What I was trying to make clear and I do not think I got across to you, is that, for example, we have been created a joint trustee in a number of estates or by a number of individuals and those trusts run on for an indefinite period of years. They are terminable only for misconduct, say. Now, I say that the earnings You make from that are a measurable quantity and do not constitute an element usually known as good will which depends on your continuing to have the confidence of the community and to get new business and make earnings. That is the distinction I was trying to

Mr. Letts. That relates to the trust activities of the institution?

Mr. Davison. Yes.

Mr. Letts. And not what we regard as banking, technically?

Mr. DAVISON. No.

Mr. Letts. Well, the thing I was primarily interested in, was in knowing whether it is a good thing that we should have speculation in bank stocks.

Mr. Davison. I think most speculation is unfortunate, but it has some advantages in some cases, and I do not know how you can stop

it without restraining unduly freedom of activity.

The CHAIRMAN. May I ask a question right there, Mr. Letts?

Mr. Letts. Certainly.

The CHAIRMAN. In connection with speculation in bank stocks, do your increased facilities for trading accelerate trading in bank stocks?

Mr. Davison. I think the facilities have come because of the desire to trade. They are not quoted on any exchange. It is all over-the-counter market.

The CHAIRMAN. Of course the general public does not always recognize it is a slower market and subject to more fluctuations than in the listed stocks.

Mr. Davison. Beyond peradventure.

Mr. Letts. Can book values be accurately determined from bank statements?

Mr. Davison. I should say so, generally; yes.

Mr. Letts. How close does that come to actuality?

Mr. Davison. As far as the physical assets are concerned, I think,

Mr. Letts. Then, some of these elements that we have been talking about would induce any prudent investor in going to a higher value?

Mr. Davison. Absolutely.

The CHAIRMAN. Referring to your colloquy with Mr. Letts in regard to good will, that asset might be entirely depreciated, might it not, by a change of management, where an inefficient management would come in?

Mr. Davison. I think so; yes.

Mr. Seiberling. I understand from your San Francisco speech and from your statement here to-day that you believe that correspond-

ence banking is a solution of many of our difficulties?

Mr. Davison. No, I say that correspondent banking offers all the advantages that are claimed for branch banking, and that the correspondent banking has been a slow growth which some thought would be terminated by the Federal reserve system, but still persists because of the service it renders.

Mr. Seiberling. But you think it is very much the better system? Mr. Davison. Yes, sir: leaving principal dealing with principal and

not employee with employee.

Mr. Seiberling. Approximately how many correspondents has the Central Hanover Bank & Trust Co.?

Mr. Davison. Approximately 3,000.

Mr. Seiberling. What I want to get at is what your relationship is and what you really do. You loan these correspondents funds from time to time, I take it?

Mr. Davison, Yes.

Mr. Seiberling. And do you require collateral?

Mr. Davison. In some cases we have collateral and in other cases we do not have collateral.

Mr. Seiberling. In most cases you have collateral?

Mr. Davison. I would not presume to say which is which.

Mr. Seiberling. If you loan a country bank in Ohio or in Illinoisone of your correspondents—you would have collateral?

Mr. Davison. Sometimes yes and sometimes no.

Mr. Seiberling. You charge interest on those loans?

Mr. Davison. Certainly.

Mr. Seiberling. Would you consider it good business to loan money to a correspondent out in the country if you did not have good collateral for your loan?

Mr. Davison. We have done it.

Mr. Seiberling. But there are not very many instances of that? I have been connected with the banking business, and as a rule when banks borrow money from New York they put up collateral, do they not?

Mr. Davison. I should say, generally, yes.

Mr. Seiberling. Then, that part of it is a business arrangement; in other words, your correspondent carries a balance with you and draws drafts on you and you pay interest on those daily balances?

Mr. Davison. Yes.

Mr. Seiberling. And when they get into trouble and need money,

you go out and look them over-

Mr. Davison. It is not only when they are in truoble they need money. In the normal course of business, they frequently need money. They have collateral or receipts which they can not discount with the Federal reserve bank.

Mr. Seiberling. If, for any reason, they need money, they have to bring satisfactory collateral to New York and pay a satisfactory rate of interest, and then you lend them money?

Mr. Davison. Yes.

Mr. Seiberling. Now, you have heard some talk about the number of banks that have failed. I think it is somewhere around 10,000, since 1920. These have been unit banks and it is the failure of these unit banks that gives rise to this investigation and to an endeavor to find some method of rectifying these great losses, which has occurred to sections of our country.

Mr. Davison. There have been no failures in New Jersey-

Mr. Seiberling. I find I should have said between five and six thousand bank failures. You are opposed to chain and group banking, of course?

Mr. Davison. I think it is unfortunate.

Mr. Seiberling. You believe in the unit bank?

Mr. Davison. I do.

Mr. Seiberling. If we had to make some change you would prefer to go to limited branch banking rather than chain and group banking? Mr. Davison. I would, because of the responsibility.

Mr. Seiberling. How many of your correspondent banks fail during the period from 1920 to 1930?

Mr. Davison. I could not tell you.

Mr. Seiberling. Some of them have failed, have they not?

Mr. Davison. Yes.

Mr. Seiberling. Now, what did your bank do as correspondent In New York, to keep these banks from failing?

Mr. Davison. Well, in many cases, we loaned them money in

Mr. Seiberling. But not without giving collateral, and you had a Prior claim on the assets of the bank when it failed?

Mr. Davison. On some of the assets. It has not always been a

fortunate loan.

Mr. Seiberling. You got your money before the depositors?

Mr. Davison. We did not always get it.

Mr. Seiberling. You loaned some of those banks?

Mr. Davison. Yes.

Mr. Seiberling. But not many where you did not get it back? Mr. Davison. Not too many or I would not be in business.

Mr. Seiberling. But you have loaned them money?

Mr. Davison. Yes; that is the reason they have us as correspondents.

Mr. Seiberling. A bank that is in bad financial condition—you could not do anything to protect the depositors of that bank, could you?

Mr. Davison. Unless the loan I make him carries him over.

Mr. Seiberling. If you take any collateral out of the bank, that does not help the depositor at all? Mr. Davison. It frequently does.

Mr. Seiberling. Yes, if you save the bank.

Mr. Davison. We have frequently saved the bank.

Mr. Seiberling. The fact the bank was your correspondent, in some of these cases, did not keep them from failing?

Mr. Davison. They did not avail themselves of our advice.

Mr. Seiberling. You say Newark is too far away to give advice to from New York, yet you stress the point you can give advice to correspondents all over the United States which is valuable. I do not see how you can reconcile those two statements.

Mr. Seiberling. I wish you would do it. Mr. Davison. I can give advice to a banker on the trend of the money market. If he has a lot of bonds and I am of the opinion that money is going to get dear, which necessarily means bonds will necessarily go down, I might save him many dollars by telling him when to sell, and I can investigate the securities and know more about them with a large organization, than he can with a small organization and being remote.

We are helping now correspondent banks that are sending young men on and staying six or seven weeks and learning about the trust

business.

Mr. Seiberling. You do not think it would inure to the benefit of your Newark correspondent bank?

100136—31—vol 2, pr 14—3

Mr. Davison. Yes; but the ordinary business of this bank is living from day to day and using the funds in loaning them in that community. That is the main business of a bank, and the country has been built up on character loans made by small bankers in small communities that knew the men they were lending money to, loans that would not pass muster if studied from the purely statistical viewpoint.

Mr. Seiberling. Your correspondent bank usually maintain balances in your bank?

Mr. DAVISON, Yes.

Mr. Seiberling. What rate of interest do you pay?

Mr. Davison. I do not know whether it is 1% or 2 per cent.

Mr. Seiberling. You pay them a rate that enables you to realize a profit out of the loaning of it?

Mr. Davison, Yes.

Mr. Seiberling. They can purchase securities from your bank?

Mr. Davison. We do not sell securities.

Mr. Seiberling. You do not sell securities at all?

Mr. Davison. No, sir.

Mr. Seiberling. They can loan on call through your bank, can they not?

Mr. Davison. Yes.

Mr. Seiberling. And of course you get a certain percentage of Mr. Davison. We have recently; yes.

Mr. Seiberling. Now the questions I have asked you bring about the relationship between the correspondent bank and your bank, do

Mr. Davison. Well, I think the questions and answers do. I think it is a much wider service than you apprehended when you started to

ask me.

Mr. Seiberling. These 3,000 correspondent banks, maintaining balances in your bank, greatly increase your deposits and the money you loan on the street means a profit to your institution?

Mr. Davison, Yes.

Mr. Seiberling. Now, if there should be adopted trade area branch banking, and we had 35 different areas with large parent banks, many of the banks now correspondent branches of your bank

would be lost to you, would they not?

Mr. Davison. I do not know. Some of these groups that have been formed maintain deposits with us.

Mr. Seiberling. If two or three big Chicago banks organized branches in trade areas and took over the unit banks in their trade areas that were correspondents of yours, you would lose them?

Mr. Davison. Unless the Chicago bank maintained a larger balance

Mr. Seiberling. You would not have as many unit correspondents?

Mr. Davison. But I might have more money.
Mr. Seiberling. Now, the branch-banking plan that you were criticizing would really be detrimental to the interests of the New York banks, would it not?

Mr. Davison. I do not know-not necessarily.

Mr. Seiberling. Would not these large branch banks be independent, more or less, of New York?

thing I want to maintain—that they should remain independent.

Mr. Davison. They are quite independent now. That is the one

Mr. Seiberling. Would they not be more independent of New

ring

ize

an of

ut lo

g y 2 t

omhas nall ans ical

sal-

ik

to

K 0

ø

York? Mr. Davison. They would not. New York ultimately would probably dominate them. Mr. Seiberling. In what way?

Mr. Davison. The ownership would get to New York.

Mr. Seiberling. You mean they would go out and buy the stock of these parent banks?

Mr. Davison. I think that is a natural thing.

Mr. Sieberling. This domination of money and credit is a valuable thing to New York?

Mr. DAVISON. No.

Mr. Seiberling. Why should they go out and buy the stocks? Mr. Davison. To have the domination they do not now have. Mr. Seiberling. If it is not valuable to them why would they buy them?

Mr. Davison. We are probably talking about different things. I did not say the New York banks, but I said the domination and control would probably end in New York, which is the money center.

Mr. Seiberling. Now, is not the main reason for your opposition to branch banking that you are sitting very prettily in New York now and you do not like to have any change made that would affect you?

Mr. DAVISON. Not at all.

Mr. Seiberling. You think that would have nothing to do with you at all?

Mr. Davison. I know it has not in my case.

Mr. Seiberling. I think in your San Francisco speech you said you believed that a small country bank, say in a 1-crop community, can diversify by placing part of its resources with a correspondent bank in a great city and through that bank purchase open-market commercial paper, readily marketable bonds, and acceptances, and make call loans.

Mr. Davison. I do not think I said it that way. I said that the correspondent bank would perform those services for the country

Mr. Seiberling. Would not that practice result in a restriction of banking services to the local community in which the small bank is situated and throw the bulk of the business to a great metropolitan bank, by means of which the metropolitan bank makes a profit on every transaction?

Mr. Davison. It has not so far and would not do it near as much as if the bank in the community was a branch of a New York bank and then it would take money, if it was guided solely by the desire for profit, and place it where it would make the most money. At present the local bank decides where the money is to be placed, if It is available and not needed for the community—decide it, as a principle.

Mr. Seiberling. They are free to select their metropolitan bank? Mr. Davison. Yes, sir; and use as much or as little as they care to in the community. If they were a branch, that matter would be decided for them by the parent bank.

Mr. Seiberling. Some of these local banks have several New York correspondents, do they not?

Mr. DAVISON. Yes.

Mr. Seiberling. Now, if a city bank in New York should endeavor to force its policy upon a correspondent bank or dictate to it what it should do, it could easily switch its account to another bank?

Mr. Davison. Yes; under the present system, which gives them entire freedom of action.

Mr. Seiberling. Now, then, if that is true and that switching of deposits or accounts to another New York bank is possible, and would be done if interference distasteful to the local bank is indulged incan't prevent the New York bank from establishing or enforcing any given policy of banking in the country?

Mr. Davison. We can only offer advice. We can not compel

acceptance of it.

Mr. Seiberling. And you have to be very careful about that? Mr. Davison. I do not know. We have a rather nice relation with the bulk of them.

Mr. Seiberling. You have to be very careful about your advice

because they may change to another correspondent bank?

Mr. Davison. It is built up in mutual confidence, on the same basis on which you maintain an account in your bank-because you like the people.

Mr. Seiberling. The banking business, above all other businesses

in the country, is based on confidence?

Mr. Davison. Absolutely.

Mr. Seiberling. No bank can pay all of its depositors in one day and have to depend on the regular course of business and rely on that to conduct its business and I assume that is one of the reasons you are opposed to group and chain banking, because if one bank fails, confidence in the whole group is destroyed?

Mr. Davison. That is the experience.

Mr. Seiberling. And that is so with branch banking?

Mr. Davison. Well, a branch bank can not fail unless the parent bank fails.

You have the case in Georgia where 84 banks fail when one member

of the chain fails.

Mr. Seiberling. I want to ask this question because nobody has yet satisfactorily answered the question here. Can you tell me how the call-money rate is fixed in New York?

Mr. Davison. As a rule by the demand for money and the supply. Mr. Seiberling. And is it true the higher the stock market goes

the more demand there is for money?

Mr. Davison. It happens that way because the higher the stock market goes, as a rule, the more speculation there is and the more people borrow on stocks, who do not own them, and naturally the greater the demand for money.

Mr. Seiberling. And when you have a large list of customers at your bank to borrow money on listed stocks, and the banks of New York are short and they have to have more money, the call rate goes

Mr. Davison. We do not have a list of customers at our bank borrowing on securities.

Mr. Seiberling. I do not mean little customers through the window, but if you have a lot of demand for money on good securities on the proper margin, you like to supply the money?

Mr. Davison. If we have it.

t

Mr. Seiberling. If it is not available in New York, they can put the call-money rate up and get the money?

Mr. Davison. Yes; it usually brings in more money. Mr. Seiberling. Where did that money come from?

Mr. Davison. Part of it comes from out in the country. During the last year a great deal came from abroad.

Mr. Seiberling. What do you mean by "out in the country"?

Mr. Davison. In the United States.

Mr. Seiberling. Can you make any estimate as to the amount of outside money that was drawn into New York during the abnormal call-money period last year?

Mr. Davison. I can not.

Mr. Seiberling. Can anybody make an estimate?

Mr. Busby. I can give it to you if you want the percentage.

Mr. Seiberling. Can you figure that out for us?

Mr. Davison. If the statistics are available.

Mr. Seiberling. If you had the statistics, could you make a computation of it and give us a guess?

Mr. Davison. I think it could be done.

Mr. Davison. I think it could be done.
Mr. Seiberling. Would you mind doing it? Mr. Davison. I will see what can be done.

Mr. Seiberling. I should like to have you put in it the record and show how much money came to New York during the high callmoney rate period. Do you think the experience New York had last Year in October was a good thing for the country?

Mr. Davison. Well, New York was the center of a disturbance

Which was the creation of a situation that was country wide.

Mr. Seiberling. I know, but— Mr. Davison. And New York handled it wonderfully.

Mr. Seiberling. Do you think that the inflation and the stockmarket collapse were good things for the country?

Mr. Davison. Of course not.

Mr. Davison. Of course not.
Mr. Seiberling. How bad a thing was it? Mr. Davison. We have not yet found out. Mr. Seiberling. It was very widespread?

Mr. Davison. Of course it was.

Mr. Seiberling. Have you any solution, not perhaps to stop it, but restrict it so it can not happen again?

Mr. Davison. I do not think you can stop it.

Mr. Seiberling. We are in a position where the Government that coins the money and is responsible for the circulating medium of this country, is without power to rectify a situation that produces disastrous results, which can not be remedied and can not be estimated?

Mr. Davison. Yes. Mrs. Pratt. I think my ingenuity will be taxed to find new questions. However, I should like to get one point clear. Mr. Davison, You believe in the unit bank, not only in the large centers, but in the small towns, and I was wondering if you feel that this correspondent System—a system of having correspondents throughout the country,

large banks in the metropolitan centers having correspondents—takes care of the trouble better than any branch banking would?

Mr. Davison. I think it does, and I think it is truer to our traditions and prevents what you have been talking about, a money denomination or control.

Mrs. Pratt. Does it, in your mind, take the place of branch banking?

Mr. Davison. I think so.

Mrs. Pratt. It has been brought out here this morning that you have somewhat the relationship, with your correspondents, that a parent bank would have with its branches; that you are willing to give advice. In this instance you are in the central money market of the world and you are willing to help them out of difficulties?

Mr. Davison. I think we do everything that tends to benefit the community served by our correspondents, by lending money and giving advice, and so forth.

Mrs. Pratt. You think the trouble arises, largely, due to this

country really being overbanked?

Mr. Davison. Yes. The statistics show that they had one bank for every 750 people in North Dakota and you have had more failures in North Dakota than anywhere else.

Mrs. Pratt. And it is adjusting itself and you would not be in

favor of legislation to promote a new system?

Mr. DAVISON. I would not. I think the system that has grown up in our country is infinitely better than any branch system that is in existence in any foreign country, even in Canada, which is more like us than any European country could be. Their experience has been that it has not worked to the advantage of the people in the smaller communities as the unit system has worked here.

Speaking of speculation, I think you ought to stop the Florida

speculation.

Mr. Seiberling. But the Florida speculation did not center around any organization in Florida that you know of, did it?

Mr. DAVISON. No.

Mr. Seiberling. But the stock speculation centers around the New York Stock Exchange.

Mr. Davison. Oh, there are three or four exchanges.

Mr. Seiberling. But the stock exchange in New York-

Mr. Davison. That is the largest exchange.

Mr. Seiberling. There is the center where this speculation is carried on.

Mr. Davison. I think the speculation in San Francisco is just as

wide. Of course New York is the ultimate place.

Mr. Seiberling. That is not comparable with the Florida specula-There was no center where it was carried on there. Individuals went down there and invested their money-

Mr. Davison. The brokerage offices in San Francisco were more crowded than the brokerage offices in New York, from what I have

Mr. Seiberling. The stock exchanges are centers to encourage speculation.

Mr. Davison. Not to encourage it.

Mr. Seiberling. That is the way they live. You can not maintain an exchange unless there is speculation.

Mr. Davison. Oh, yes. Mr. Seiberling. I do not think your illustration of the Florida speculation is comparable, myself.

Mr. Davison. All right.

Mrs. Pratt. I think it has been brought out here several times during the course of the hearings that there is a feeling possibly that New York is responsible for the money that comes into New York. Now, is not that really human nature? I think New York is blamed continuously that so much money is drawn there. The pressure does not come from New York to bring in the money, does it? Is not the anxiety of people outside of New York to get in responsible for its getting there?

Mr. Davison. I think you have expressed it very well.

The CHAIRMAN. In view of Mrs. Pratt's previous questions to you and your answers, in which you state you would not recommend any change in banking laws-

Mr. Davison. I mean revolutionary change, such as branch bank-

ing.

o

t

The CHAIRMAN. You realize since this development has taken place, that the unit bank is being succeeded by these other forms, and it is in a struggle—you might call it a death struggle. Many of the men who testified here, who are in favor of group and chain banking, have said that unit banking could exist along with it. Do you think that

Mr. Davison. I do not know. I read, coming down, what Mr. Dawes said about that, and I do not think I fully indorse his con-

clusions.

happened to be speaking, last week, with a man in a rather sizable city who has a bank there, where the larger bank in that town had been purchased by a group or chain and his opinion was that his bank was growing while the other bank is not growing. His bank is growing for reasons of local pride and because it was locally managed and he thought the other was shrinking a little. That can only happen in a community that will support more than one bank. In a community that would support only one bank, I presume it would not be a unit bank.

The CHAIRMAN. Earlier this morning I referred to the scarcity of eligible paper. What effect on the amount of eligible paper for rediscount does the absorption of bankers' acceptances and prime bills by banks acting for foreign correspondents or foreign countries have on the eligible paper available for release of credit by the Federal

reserve banks? Is that one of the reasons for the shortage?

Mr. Davison. I do not think so.

The CHAIRMAN. Would it not be logical, if eligible paper is absorbed by those banks to cover investments here, to be one of the reasons?

Mr. Davison. It might be. (Discussion off the record.)

The CHAIRMAN. I think this completes the hearing before the committee, and the committee appreciates very greatly your appearance here, Mr. Davison.

(Whereupon, at 12.40 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m. Wednesday, June 4, 1930.)

Man Developed Oil remains think your illustration of the Plotter

tendation is comparable, model by

Migdly Mason All willing

Mrs. Prarr. I think it has been brought out here greened liquid being the localized partial production of the localized has the localized partial being the localized partial for the money that comes into New York of New York is responsible for the money that comes into New York is blanced your is not that really human nature? I think New York is blanced to continuously that so much money is drawn there. The presence does not come from New York to bring in the money does not like that the training papalator taked of New York has get in responsible for its

Mr. Davison I think you have convessed it very well.

The Charaman, in view of Mrs. Pratt's previous questions to you and your answers, in which you state you would not recommend any thange in banking laws.

Mr. Davison, I mean revolutioners change, such as branch name-

The Charmany You malize since this development has taken place.

That the unit bank is being succeeded by these other forms and it is
the struggle—you might call it a death struggle. Many of the men
the restrict here, who are in favor of group and chain banking, larve
aid that unit banking could exist along with its. Do you think that

Alt. Dayson, I do not know. I read, coming down, what Mr. Dayers and about their and I do not think I fully indores his con-

ohennes/6

I happened to be speaking, last week, with a man in a at her size able oily who has a bank there where the larger hank in that lowed had been purchased by a group or chain and his coince was that his bank was growing while the other bank is not growing. This bank is growing for reasons of local pride and hences it was locally unanged and he thought the other was shrinking a little. That can halve happen in a community that will support more than one bank. In a community that will support more than one bank.

The Charmann Earlier this morning I referred to the scarcity of eligible paper. Whet effect on the amount of clicible paper for or discount does the absorption of backers! acceptances and prime bills by banks auting for foreign correspondents on foreign countries have on the eligible paper available for release of credit by the Federal

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, JUNE 4 1930 House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 10.30 o'clock a. m. in the committee room,

Capitol; Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. In pursuance with an invitation extended by the committee, we have here this morning Mr. Albert H. Wiggin, head of the Chase National Bank in New York. Mr. Wiggin, will you please give the reporter your title, and so forth?

STATEMENT OF ALBERT H. WIGGIN, CHAIRMAN OF THE GOVERN-ING BOARD OF THE CHASE NATIONAL BANK OF NEW YORK

Mr. Wiggin, My name is Albert H. Wiggin, chairman of the gov-

erning board of the Chase National Bank of New York.

The Chairman. Mr. Wiggin, as you know, the committee are engaged in the study of branch, chain, and group banking, under the authority of House Resolution 141. We are attempting to complete that study, under the authority of the resolution, at this session of Congress. Realizing the important position that you occupy as the head of one of the largest banks and banking groups in the country, if not in the world, the committee will value very highly any Statement that you can make which may enlighten us or be helpful

We realize a great change in our whole banking situation in the country is under way, and the committee are desirous of getting all the light we can in case Federal legislation should be necessary. Therefore, we shall be very glad to hear any statement you may care

to make.

Mr. Wiggin. You should understand, Mr. Chairman, any statement I may make, or any questions I answer, are my own opinion. I am not here under instructions from our board or from the stock-

holders, or after any official consideration of the subject.

I have not prepared a statement for this occasion, my preference being to answer any questions that are asked, but I might, for the benefit of the record, to bring the subject up, read a statement I made at the time of the merger with the Mechanics and Metals National Bank.

The CHAIRMAN. Without objection, that will be placed in the

record—or do you want to read it?

Mr. Wiggin. It will be satisfactory simply to place it in the record. The CHAIRMAN. Without objection it will be placed in the record at this point.

(The statement referred to is as follows:)

This merger, together with similar steps on the part of other institutions in the last two or three years, has been made the occasion of comments to the effect that mergers are the order of the day and that the line of logical development is toward fewer and much bigger banks. I am not prepared to subscribe to this doctrine without qualification, and I would not have our merger with the Mechanics and Metals National Bank judged on that basis alone. It is significant that while bank mergers are taking place, new banks of moderate size are also coming into existence and doing well. A merger may bring together organizations which can not work harmoniously and may combine interests which are not compatible. Each case must be judged on its own merits. Haphazard mergers merely for the sake of large figures do not assure good banking. In the case of the merger of the Chase National Bank and the Mechanics and Metals National Bank a great deal of careful thought and planning preceded the decision. responsible officials of both institutions knew one another well before the merger, and were sure that they could cooperate in a friendly and efficient way. The merger has been accomplished with entire good will and with a minimum of frietion and disturbance.

It may be observed that the Chase National Bank reached the position of the second largest national bank in the country in volume of net deposits without any mergers at all. Attaining great size through growth alone, it was able to develop a body of traditions, ideals, and practices which give it a distinctive character. The mergers which have since taken place have made it possible for us to give larger lines of credit to great business organizations, have made possible the more economical handling of many functions, and have broadened the range of our activities, but they have not destroyed the distinctive character of the Chase National Bank.

The CHAIRMAN. Have you any further statement?

Mr. Wiggin. No; I would rather answer questions.

The Chairman. The other witnesses who have appeared have given us information pertaining to the institutions with which they are connected. If you have not with you this morning that information, I am going to suggest that you furnish for the record a statement of the Chase National Bank of New York.

Mr. Wiggin. I shall be very glad to do that. The CHAIRMAN. And affiliated companies.

Mr. Wiggin. You mean a list of the affiliated companies or \$ statement of all of the affiliated companies?

The CHAIRMAN. We would like to have a statement of each com-

pany.

Mr. Wiggin. We can do that very readily, and I will start it with the bank statement that was published this morning which is right up to date, and then give you the other statements.

The CHAIRMAN. I have a statement which appears in the New York Times under date of June 2, which gives a list of your branches,

and so forth. I presume it is the same-

Mr. Wiggin. This is a statement of the bank.

The CHAIRMAN. The two probably cover the picture and, without objection, they will both be placed in the record at this point, to be followed by other detailed data as regards your various affiliated companies.

Mr. Wiggin. I shall be glad to furnish it.

(The statements referred to are printed in full, as follows:)

[New York Herald Tribune, Wednesday, June 4, 1930]

On June 2, 1930, The Chase National Bank, The Equitable Trust Co. and Interstate Trust Co. were formally merged as The Chase National Bank of the city of New York.

¹ This statement does not include the statements of any of the affiliated organizations mentioned below.

Affiliated organizations: Chase Securities Corporation, American Express Co., Equitable Eastern Banking Corporation, American Express Bank & Trust Co., the Chase Safe Deposit Co., and the Chase Bank (Paris and Mexico City).

[The New York Times, Monday, June 2, 1930]

To-day the Chase National Bank, the Equitable Trust Co., and the Interstate Trust Co. are formally merged as the Chase National Bank of the City of New York.

The consolidated institution is controlled by a directorate of recognized leaders in American finance, industry, law, transportation, insurance, and public utilities.

Outstanding executives, chosen for their wide experience and ability in banking, investment, and trust service are available for personal consultation to clients of the consolidated bank.

Head office, Pine Street, corner of Nassau.

The merger gives the Chase National Bank 46 branch offices, in prominent residential and business districts of Greater New York.

Equitable Trust Branch, 11 Broad Street (formerly head office, The Equitable

Trust Co.).

Produce Exchange Branch, 25 Broadway. Mercantile Branch, 115 Broadway.

Maiden Lane Branch, 75 Maiden Lane.
National Park Branch, 214 Broadway.

Affiliated organizations: Corporation, American Express Bank & Trust Co., Equitable Eastern Banking Corporation, American Express Bank & Trust Co., The Chase Safe Deposit Co., and the Chase Bank (Paris and Mexico City).

The CHAIRMAN. We should like also to have a list of your stock-

Mr. Wiggin. The list of stockholders would be rather long. are some 70,000 stockholders.

The CHAIRMAN. Could you do as was done in the Pujo Committee, furnish is a list of the stockholders owning over 500 shares of stock?

Mr. Wiggin. We will furnish whatever limit you would like to put on. You understand that list of stockholders does not necessarily give the correct picture. They are frequently in broker's names or in the names of clerks; so, it does not necessarily give you what you are driving at, but we can give you whatever you want.

The CHAIRMAN. The question of double liability has been before this committee on various occasions. Where bank shares are held in the name of a dummy or in the name of brokers, or what you might call street names, the double liability goes against the name to whom the certificate is issued?

Mr. Wiggin. The man in whose name it is, is liable to collect

from the real owner. It usually carries through.

The CHAIRMAN. There is no getting away from that double liability when the stock is held in that manner? In some instances, it has been called to the attention of the committee that there was an increasing amount of stock being held by dummies who were not responsible and, by that method, they are getting away from the enforcement of the double liability.

Mr. Wiggin. That might be true. The fact that the number of stockholders increases so rapidly, from year to year, does bring in a great many names that are not the actual owners and, of course, it would be very much more difficult to collect from the actual owners.

The CHAIRMAN. It is rather difficult to follow the ownership of the bank, particularly during these days of active markets on bank stocks?

Mr. Wiggin. Correct.

The CHAIRMAN, And it raises practically a new issue as regards ownership of banks?

Mr. Wiggin. Of course, the trading is apt to be in good banks and

there is not very much danger of that liability.

The CHAIRMAN. I suppose that is so. We have pending here before the committee, Mr. Wiggin, a bill in connection with the regulation or supervision, more particularly, of affiliated companies by the supervising authority, the Comptroller of the Currency. You recognize, do you not, the necessity for such an examination to be made of affiliated companies with a national bank, when the comptroller makes his examination?

Mr. Wiggin. Each unit would be under supervision. I assume that the purpose in auditing the holding company would be to prevent

abuse in the use or the substitution of units.

The CHAIRMAN. To avoid a mixing of the assets; in other words,

unless the supervisory force has access-

Mr. Wiggin. I do not know that it is necessary, but it certainly would not do any harm. Each unit is going to have its own bank

officers. They take an oath of office and are bound to run that bank in an honest way, but I can see no harm in auditing the holding companies.

The CHAIRMAN. Take, for instance, your affiliated or holding com-

panies, they are organized under the State of New York?

Mr. Wiggin. We have no holding companies in the sense that they are bank holding companies. We have nothing of that kind. We do have the Chase Securities Co., but it was not organized to buy bank stocks, or anything of that kind.

The CHAIRMAN. The Chase Securities Co. originates and sells

securities?

Mr. Wiggin. Yes.

The Chairman. What other affiliated companies have you in your group?

Mr. Wiggin. We own the American Express Co.; that is, we own

98 per cent of it.

The CHAIRMAN. What does the American Express Co. do now?

Mr. Wiggin. The American Express Co. is a travel bureau, selling steamship tickets and transportation; it sells travelers' checks and, in Europe, a subsidiary company of the American Express, called the American Express (Inc.), does a banking business in various cities.

The CHAIRMAN. And that is owned entirely by the American

Express Co. here?

Mr. Wiggin. Owned entirely by the American Express Co. here; yes, sir.

The CHAIRMAN. Do you carry on a banking businesss through the

offices of the American Express Co.?

Mr. Wiggin. Not in this country. The American Express Co. is the principal owner of a bank called the American Express Bank & Trust Co., which has an office in their building in New York and does a purely banking business in that one office.

The CHAIRMAN. It has a great many offices throughout the world?

Mr. Wiggin. Yes; I can get the exact number.

The Chairman. Will you please put that in the record, together with its offices in the United States—both the bank and the express company?

Mr. Wiggin. The bank has but one office. If you will give me a

minute, I will give you that information.

The American Express Co. has 34 offices in the United States and

66 in the rest of the world.

The CHAIRMAN. Does the Chase National Bank, or any of its affiliates, other than the American Express Co., have foreign branches?

Mr. Wiggin. The Chase National Bank has to-day 4 foreign branches; it has 1 in Havana; it has 1 in Panama, and 1 in Crisotal, and, since Saturday last, has 1 in London.

The Chase Securities Co., for its distribution of securities, has—without refreshing my memory I can not give the exact number—some 15 or 20 branch offices throughout this country; also 1 in London.

The Chairman. The London office is the only one abroad which the

Chase Securities Co. has?

Mr. Wiggin. We have our sign on the door in the Paris bank as

well, I think you can count the Paris office also.

The recent merger, which took in the Equitable Trust, made necessary the formation of a new bank under the Edge Act, known

as the Chase Bank, which is organized to take over the Paris branches of the Equitable Trust Co. It seemed wiser to do it through the subsidiary, under the Edge Act, rather than have a branch of the main

office. A tax question was one of the matters involved.

Mexico City has a branch of this Chase Bank, which is a subsidiary of the corporation organized under the Edge Act. There are other affiliations, but owing to this recent merger and the rapidity with which things are happening it is a little difficult to keep all of those things straight in my mind. However, the Equitable Corporation, a subsidiary company of the Equitable Trust, is now merged with the Chase Securities Corporation. The Equitable Trust Co. had an affiliated company called the Equitable Eastern Banking Corporation, with offices in Shanghai and other cities. That remains intact.

There is in process of organization a new Equitable Trust Co. The formation of the Equitable Trust Co. has the advantage of protecting that name and, so that it can be possible, will do a certain amount of trust and banking business. That is in process of organ-

Ization.

I think that is the complete picture of the affiliations.

The CHAIRMAN. If it is not, if you will supply the committee with

the further information, we will be very much pleased.

Mr. Wiggin. There is one more affiliation. That is the Chase Safe Deposit Co. That has nothing to do with the banking business, however.

The Chairman. The proposal has been made to this committee that branch banking be permitted to extend beyond its present limits to trade areas whose limits are still undefined. There is some question in the minds of the committee as to whether or not trade area limits can be properly defined. Other suggestions have been made to the committee that branch banking be extended state-wide in those States where branch banking is permitted to State banks.

Other suggestions have been made that branch banking be extended to Federal reserve districts; other suggestions have been made that branch banking be permitted nation-wide, while still further reference has been made to the fact that the Federal reserve act permits international branch banking

national branch banking.

The committee would be glad to know the limits, if any, to which extensions should be granted under the national law, to branch banking.

Mr. Wiggin. I do not know what trade areas are. While my preference would be not to have branch banking, New York is in the situation of being the banking center of the country. We have some 7,000 correspondent banks throughout the country. The New York banks render the same service to towns in the mid-west or towns on the Pacific slope as they do to towns in Connecticut and New Jersey. There is just as much reason for a New York bank having a branch in a Pennsylvania town or an Ohio town or an Indiana town or a Kansas town as there is for having one in Connecticut or New Jersey and our own preference would be not to see an extension of branch banking.

The CHAIRMAN. Beyond its present limits?

Mr. Wiggin. Yes, sir. We think that a national bank should have the same privileges of branch banking in one city as in another. We think if State banks can have branches in any city, a national bank should have the same right and, vice versa, if the national banks are allowed to have a branch bank in a city, a State bank should have that privilege. I am speaking of the limitations on branch banks confined to the city.

The CHAIRMAN. If the State law premits branches within the confines of the State to the State banks, you think the national banks

be given the same privilege?

Mr. Wiggin. Yes, sir.

The CHAIRMAN. You can see difficulties, however, in the way of conflict over Federal reserve lines and State lines?

Mr. Wiggin. Great difficulties; yes.

The Chairman. As you know, we have had before this committee the heads of various groups who engaged in this comparatively new form of group and chain banking. The committee would be glad to

have your views on this new development which is proceeding under the authority of State laws, many of the corporations being organized under the laws of the State of Delaware, taking over both national and State banks and State bank members of the Federal reserve as well as nonmembers, with particular reference to its effect on the banking development of the United States and its possible effect on the continued development of the Federal reserve system.

Mr. Wiggin. My own opinion is that we, of the Chase National Bank, do not want to do it, but we have not the slightest objection to other men doing it. We feel that in certain districts—and there are many cases, as you know, of these holding companies—such a district as the one that centers on St. Paul and Minneapolis, where they go into the towns which they know and the business they know and own the banks—we have not the slightest objection to their doing it and we believe does strengthen the banks of those towns.

But we do not want to do it ourselves because if we start, there will be no limit to it. There is just as much reason for doing it in one State as another.

Mr. Luce. The astonishing growth of the investment trusts in recent years—almost within recent months—has brought into consideration a wholly new factor that has not yet been widely discussed in connection with banking.

A recent writer, however, publishing a series of articles on the subject that indicate familiarity with it, hazards the prediction that within a comparatively short number of years no individual stockholders will remain in the important banks. This suggests a novel form of holding and not, on its face, the usual kind of holding company that appears, for instance, in the public service field, but still one that threatens or promises, according to how you look at it, a new relation between a bank and those who operate it. Does your observation indicate that this process is making rapid headway in New York?

Mr. Wiggin. A number of the investment trusts that are located in New York have made investments in bank stocks. Now, as to the amount of percentage, I would not say, but there are substantial ownerships of bank stocks in investment trusts.

Mr. Luce. Do you have any apprehension that this may furnish you a new problem?

Mr. Wiggin. No, sir. The successful bank, or the standing of the bank, goes hand in hand with the reputation of the management and the ownership of the stock, if the property is not properly run would not help or hurt it. It is the management that makes the reputation of the bank.

Mr. Luce. You are speaking, of course, from the point of view of one who could properly be called a big banker. We had before us one witness who was more concerned with the banks in the smaller cities and he expressed the opinion that the personality of the stock holders was of prime importance to the banks in the matter of bringing business and good will. In a large bank, such as your, does that count for anything?

Mr. Wiggin. Yes; the stockholders bring business. We enlist their cooperation the moment they become stockholders and ask then to bring us business.

Mr. Luce. Any advantage accruing in that direction would disappear under the investment trust holdings?

Mr. Wiggin. Not necessarily. In New York, some of these investment trusts are very good customers.

Mr. Luce. But the holdings or the holders in the investment trust

are not reached by you?

Mr. Wiggin. No.
Mr. Luce. That leads me to point out to you that the champions of group banking before us have permitted us to understand or secure the impression that the group-banking principle leads to a combination of the solid and substantial banks; that the head of a group system makes no endeavor to salvage the weaker banks that are on the Point of failing and avoids bringing in anything but the clearly profitable institutions.

Our hearings started off on the premise presented by the comptroller that there was great need to face the situation presented by the alarming number of failures of small banks, and he urged branch banking upon us as a remedy, or at least a help, in the critical situation prevailing especially in the Northwest and in some of the Southern

States.

Apparently group banking promises no benefit in that connection and, as far as witnesses have enlightened us, it would seem as if branch banking was the only recourse in the case of a great many of the smaller communities which would be completely deprived of banking facilities if the present tendency to close the little banks continues and nothing is put in their places.

You have branches in various parts of New York City?

Mr. Wiggin. We have 46.

Mr. Luce. And that serves a public convenience to the customers?

Mr. Wiggin. Yes, sir.

Mr. Luce. Do you see any objection, in principle, to furnishing the same convenience to customers in places more remote? Why should

this affect the principle involved?

Mr. Wiggin. It may not affect the principle involved, but it certainly makes management a very much more difficult problem. The only branches we have in New York City are run from the head office. There are no loans made without being passed on by the head office. That is not practicable in far-distant offices.

Mr. Luce. Yet, in the upper end of Harlem, there would appear to be no more occasion for a teller's window than in the outskirts of

Jersey City, would there?

Mr. Wiggin. There would be no more occasion for a teller's

window?

Mr. Luce. I speak of a teller's window as simply a convenient way of compressing in one phrase all the routine facilities that may be furnished by some type of banking in a small suburb or in a rural community.

Mr. Wiggin. Yes; there is just as much reason for a bank in one

section as another.

Mr. Luce. Is there any reason, in principle, why you should not allowed to open a branch?

Mr. Wiggin. No; the principle is the same. In Jersey City we could run a branch just as well as in Harlem. You are right.

Mr. Luce. Then, to some extent, at any rate, the State lines have no logical relation?

Mr. Wiggin. Jersey City is really a suburb of New York City, as you know. The fact the State line is there does not make any difference. I agree with you entirely that it is just as practicable to run a branch in Jersey City as in Harlem.

Mr. Luce. That brings us to the proposal of the comptroller that we consider trade areas. It is a difficult thing to determine, of course, but still the most practical thing, perhaps, that has been suggested

to us.

Would you find objection to accepting his proposal with reference to extending branch banking to trade areas?

Mr. Wiggin. I do not know what a trade area is. If you will tell

me what a trade area is, I will try to give you an answer.

Мг. Goldsborough. You are asking for something that can not be done.

Mr. Wiggin. How can I answer it, then?

Mr. Luce. In the Federal reserve districts, we approximate big trade areas, and there has been no great complaint—some friction, it is true—but no great complaint as to the mapping out of these great trade areas; those that feed the big cities. Would it be essentially more difficult to subdivide those 12 big areas we have already determined?

Mr. Wiggin. Of course, we do not want to see a system of branch banking established that means that the banks in the cities of the country are going out in competition to buy up the banks in the small towns. We hope that it would not come. We do not think it is the way to build up a banking business—to go in on the basis of competition to buy up other banks, and that is exactly what will

happen if you establish that system.

Mr. Luce. As I said to Mr. Davison yesterday, quoting the that very trite saying that it is a condition and not a theory that confronts us—that while we are talking about principles in this room the practice is, with leaps and bounds, proceeding to the contrary. Holding companies are growing every day, and group systems are growing every day, and we are faced not with putting into effect theories, where we might be in perfect accord but with the problem presented by the fact that these holding companies are growing and are doing this very thing.

Mr. Wiggin. We feel if there were a branch banking system started, we would be compelled, for the protection of our stockholders' interests, to establish branches through the country and in the various towns. We do not want to do it. We are not under that compulsion under the present system. If anybody wants to do it, God bless them; let them do it; but we do not want to do it. However, we have no reason for stopping other men, if they want to invest their money

that way.

I do think the holding company, in a great many ways, adds to the strength of a bank in a small place. Naturally, no bank in Minneapolis or St. Paul is going to buy a bank in Stillwater, or somewhere else in Minnesota, unless it is a good bank when it is bought but if conditions change and conditions in the surrounding districts are such that the bank loses money, the ownership of that bank is a great addition to its strength, if it is the right holding company.

Mr. Luce. Let me get a little clearer idea of why you discriminate between the effect of branch banking and group banking in that

matter of business compulsion upon you. Suppose that somebody in control of one of the New York banks goes and buys a bank in Orange, N. J., or any place in New Jersey, or anywhere else: The same man controls the two banks, but they continue under separate names. You, I gather, bid that man Godspeed and do not worry about it.

Mr. Wiggin. That is right.

Mr. Luce. But if, instead of keeping the same name, the man in control changes the name of the Orange bank to the same name as used by the New York bank and calls it a branch, you then feel you would be compelled to do the same thing. Why?

Mr. Wiggin. Competition.

Mr. Luce. Is not the group bank bringing you the same competition?

Mr. Wiggin. No. It may some day, but it has not yet affected us and we do not believe it will.

Mr. Luce. In Massachusetts, my understanding is it is already

doing it.

Mr. Wiggin. I think the situation in Massachusetts is perhaps different from the one in New York; or rather, I will put it differently: Boston is the New England banking center, but I do not think Boston serves the entire country as New York does.

Mr. Luce. No.

Mr. Wiggin. I think there is a natural geographic limit in that

branch banking that does not exist in the case of New York.

Mr. Luce. That does not affect the puzzle before us of this question of favoring or discouraging branch banking or group banking or both of them or neither of them. That is the problem we are up againsta practical problem—and I wanted to clear, in my own mind, if I could, why branch banking would have a more pronounced effect than group banks upon big city banks.

Mr. Wiggin. We feel that there is a marked difference.

Mr. Luce. One other aspect of the situation. We have had some Witnesses who have testified in the case of banks in which they are Interested, that have affiliated companies—securities companies and we have been assured that the securities companies are not permitted to buy any securities in which the bank is interested. Is that the case with your bank?

Mr. Wiggin. Our bank does not have any securities, practically, 80 that question does not come up. We do make it a rule not to have any of our trusts buy from the bank or from an affiliated company.

Mr. Luce. But that rule is not universal?

Mr. Wiggin, No, sir.

Mr. Luce. Would you think it desirable, by legislation, to insure

something of that sort?

Mr. Wiggin. I do not think so. No laws under the sun would

cover it if there was a desire to evade it.

Mr. Luce. You, of course, are perfectly familiar with the fact that, in Massachusetts, we have embodied the idea, which I am bringing out, in our laws, requiring State banks, known as trust companies With us, to comply with the restrictions imposed on mutual savings banks for the segregation of deposits and that we so strongly believe In drawing special safeguards around the savings of the masses for the same reasons, with reference to trust holdings, that we insist

ate nat upon a particularly safe type of investment and we are quite complacent and self-satisfied in the effect of that legislation.

Does your experience in New York lead you to think that that is an

unnecessarily cautious policy?

Mr. Wiggin. I do not know that it is unnecessarily cautious, but it gets back to what we think is the essential question of banking. You would not select any institution on the basis of laws, but on the basis of its standing and credit.

Mr. Luce. That is true in some of the larger places, but in some of the smaller places, that would impose the necessity upon the depositor of traveling some 20 or 50 miles to such a State institution,

instead of using the institution next door.

Mr. Wiggin. That is true.

Mr. Luce. We have had it impressed on us, that due to the failures of these small banks in the last 10 years, there has been great suffering to the salaried man and wage earner through this failure to make savings a preferred account. I think that is all.

The CHAIRMAN. I should like to ask you whether your bank is affiliated with, or sny of your companies associated with, any other banking house in New York or elsewhere which might be construed

as one of the major institutions?

Mr. Wiggin. Only those I have mentioned.

The CHAIRMAN. Those are all, then, your own affiliations?

Mr. Wiggin. Yes, sir.

The CHAIRMAN. The suggestion has been made that your group owns and controls the Transamerica Corporation.

Mr. Wiggin. We have not the slightest interest in it.

The CHAIRMAN. Or the Transamerica Corporation embraces the

controlling stockholders in your group.

Mr. Wiggin. The bank has not the slightest interest in the Transamerica Corporation. There may be some stockholders in the Transamerica Corporation that own stock in the Chase National Bank. That we have no way of checking, but there is nothing of the slightest importance or significance in it.

The CHAIRMAN. Of course the size of your institution and the activities of late indicate the growth of a very powerful institution which is doing business that is not only nation-wide but international in its scope. Would you care to express what the scope of the Chase

National Bank is?

Mr. Wiggin. The Chast National Bank is a large institution with tremendous capital. It has a very large commercial business. It has by far, the greatest number of bank accounts in the United States. It has built up a very large trust department under a committee of unusually high reputation. It does a world business—not in every country, but in most of the countries in Europe. We have correspondents and connections and receive business from many of those countries.

The CHAIRMAN. And you undoubtedly do business with some of the

foreign countries?

Mr. Wiggin. Yes; we have business with the countries and with the Government banks of the countries. Does that cover it, Mr. Chairman?

The CHAIRMAN. Well, in further elucidation, it is a frequent comment throughout the country in this development and concentration of bank resources that ultimately we will have in New York City from two to six banks patterned somewhat after the system of the two banks in London, with branches scattered all over. Do you contemplate future development in New York to that extent?

Mr. Wiggin. No, sir; I think there will always be the middle-sized

bank and the little bank.

The CHAIRMAN. I should like to ask further, in connection with Your bank and your affiliated companies—who originate securities and who, of course, are interested in seeing that the securities in which you are interested move properly and are properly recognized whether you protect the market on the securities which your com-Panies originate and whether you protect the stocks of your own bank and affiliated companies?

Mr. Wiggin. The securities business and the origination of securities issues is usually done by the formation of a syndicate. Usually there is, in conjunction with the formation of the syndicate, a synditate formed for the purpose of what you allude to as the protection

of the market in the buying and selling of securities.

The CHAIRMAN. Mr. Brand, have you any questions?

Mr. Brand. I yield to Mr. Seiberling.

Mr. Seiberling. I have no questions at this time.

Mr. Brand. I yield to Mr. Busby.

Mr. Busby. I have no questions to ask at present.

The CHAIRMAN. Mr. Steagall?

Mr. Steagall. I yield to Mr. Seiberling.

The CHAIRMAN. I will call on Mrs. Pratt first.

Mrs. Pratt. Is everybody frightened? [Laughter.] I have not

Very many questions to ask Mr. Wiggin.

This whole situation and these hearings have arisen from the fact that it seems desirable to make some change in the laws and enact some provision by which the small communities will have proper banking facilities without facing the fiasco some have faced during the last 9 or 10 years. So this question of branch banking has been presented.

I judge from what you say, Mr. Wiggin, that you are utterly

opposed to branch banking.

Mr. Wiggin. I would prefer not to see it.

Mrs. Pratt. When Mr. Davison was here yesterday, he stated that he felt that through the system of having correspondent banks that situation would be covered and eventually it would adjust itself; that the real trouble that was being faced in this country was due to the country being top-heavy, more or less, with banks, owing to emergencies that occurred during the war. You would agree with him that this can be taken care of by existing banks strengthening their correspondents?

Mr. Wiggin. That is what has been going on, but there have been failures in certain districts regardless of that. We have this great number of what are known as country bank accounts, but we do not leel justified in loaning those country banks money unless they are

Solvent.

Mrs. Pratt. But if they got into trouble, as your correspondent bank, you would help them out?

Mr. Wiggin. We are doing it all the time, as long as they are solvent.

Mrs. Pratt. What would you have in mind as proposed legislation necessary to be adopted, or do you think none should be adopted?

Mr. Wiggin. I would leave the situation as it is.

Mrs. Pratt. I think that is all.

Mr. Brand. With reference to questions the present chairman of the committee (Mr. Luce) propounded to you in regard to the situa-tion in the Northwestern States and Southern States, what would you suggest to remedy this situation in the agricultural sections referred to by Mr. Luce-in regard to the character of banks that ought to be established to accommodate the borrowers in these sections of the country?

Mr. Wiggin. You are referring to losses suffered by depositors and

not losses made by the stockholders?

Mr. Brand. I am referring to those sections of the country where banks have failed to such an extent they have no banking facilities at present and therefore borrowers, generally, have no opportunity to secure loans.

We have been discussing chain banking and branch banking and group banking. I should like to get your opinion as to what character of banks or what banking system should be established to accommodate the people in those sections of the country.

Mr. Wiggin. There is no reason, under the present law, why they

can not organize their own banks and go ahead as always.

Mr. Brand. Take Georgia, for instance: The State has repealed its branch banking law and there are several sections of the State and, I think in Alabama also-although Mr. Steagall can speak for that State—and in South Carolina and several other States which are in the same situation, which is a serious one.

Mr. Wiggin. Serious in the point that they have no place to deposit

money?

Mr. Brand. I mean no banking facilities. It is true they can go to Macon or Savannah or Atlanta, but those places are 75 or 100

Mr. Steagall. The difficulty is not in finding a place to deposit,

but a place at which they can borrow.

Mr. Wiggin. I thought so. Mr. Brand. Many people in different sections of the country have money but they are keeping it at home and putting it in no banks. They have lost confidence in the banks because they have failed so much but I am asking about people who want to borrow money and have no bank to loan the money.

Mr. Steagall. There is some of that, of course.

Mr. Brand. I myself have not the same confidence in the banks that I used to have. However, the question I am propounding is Should this Congress authorize a branch banking system to accommodate such people or group banking or unit banking?

Mr. Wiggin. I do not suppose a change in the law permitting branch banking in that section or in a more comprehensive section; would justify banks in opening branches in communities that would not support banks.

Mr. Brand. Well-

Mr. Wiggin. Why should a bank put a branch in a place that is not going to be profitable and their records indicate it would not be profitable?

Mr. Brand. I am not taking such a position. You appear to be willing to let the situation remain as it is in all these great agricultural

sections of the country?

is,

ng

n, ld Mr. Wiggin. Your banks have failed in certain sections, and there are no banking facilities left. The cause of it was too much credit. The farmers borrowed too much money. You made it too easy for him, and that has caused the banks to fail.

Mr. Brand. I am talking about the situation as it exists and as

I have tried to picture to you.

Mr. Wiggin. I am talking about what will justify another bank organizing or in putting a branch there if that is the situation.

Mr. Brand. Capital is willing to go anywhere and put its money in operation where the field is open and vacant if it is profitable for a bank to do so. Of course, it is assumed they will not lend to anybody who will not give good security. I am assuming a situation exists where there are no banking facilities, on account of the failure of banks, and where people want to borrow money and make loans to carry on their farms and operate their businesses, and where they can give satisfactory security.

Mr. Wiggin. Yet the previous bank had failed.

Mr. BRAND. Yes.

Mr. Wiggin. It is not a very encouraging situation in opening a bank.

Mr. Brand. Do you think that chain or group or branch banking

would be preferable?

Mr. Wiggin. I do not think either one would be attracted by that opportunity. I think an independent bank could be established as well as a group or chain or branch bank started. However, the

opportunity is not very attractive.

Mr. Brand. Suppose you, as a banker, should reach the conclusion to go into any section of Georgia, Alabama, or any other southern State and establish a branch which you think would be profitable to you—and that is all the banks are in business for, to make money; they are not in it for patriotism; what system would you suggest, as a banker, at the head of one of the biggest banks in the world, to take care of that situation?

Mr. Wiggin. In a district that has a bad record?

Mr. Brand. You would let them go?

Mr. Wiggin. I would answer that this way-

Mr. Brand. Up to date, you have not given me any answer to that question.

Mr. Wiggin. I think I have given one or two answers. I think

this is the answer to that

Mr. Brand. You are satisfied with the situation in your territory, but we are not in ours. New York is not the only State in this Union. There are other parts of the country that are willing to contribute to its general welfare if given an opportunity. You have customers, I suppose, in Georgia?

Mr. Wiggin. A great many of them.

Mr. Brand. Naturally, you would be interested in the State.

Mr. Wiggin. Very much. We have done a great deal for the State. as you know.

Mr. Brand. I know that.

Mr. Wiggin. Now, if you will tell me the questions, I will see if

can answer them.

Mr. Brand. Conceding, or assuming say, there are half a dozen great agricultural communities in South Carolina, Georgia, North Carolina, and so forth, that have no banking facilities; the people being engaged in agricultural pursuits and all sorts of business in the little towns and cities, and also assuming that if a bank was put up in some of those sections, it would make money; in your judgment, what character of banking system would you recommend to those sections of the country?

Mr. Wiggin. I think if the community will support a bank, the

community would start a bank.

Mr. Brand. How can they start a bank if there is no capital there

b

ta

ti

0

d

ti

T

Ċ

B

h

Mr. Wiggin. Then, there is no occasion for a bank.

Mr. Brand. You can not sell any stock in any bank in Georgia that I know of, outside of Atlanta and Savannah, to people who have got money.

Mr. Wiggin. If they have money, they ought to start the bank

themselves.

Mr. Brand. I am talking about people without money, but who have good and satisfactory security and who want to borrow mone! to do business with, say, as a farmer or merchant.

Mr. Wiggin. That is the best answer I can give.

Mr. Brand. Which, I respectfully submit, is not an answer to my

Mr. Seiberling. Mr. Wiggin, I take it you have made quite 8

study of this problem we have before us here.

Mr. Wiggin. I do not claim to have done that; no, sir.

Mr. Seiberling. You have studied it sufficiently to make up you mind that you are not in favor of group, chain, or branch banking?

Mr. Wiggin. I did not say that. I said we did not want to do ourselves.

Mr. Seiberling. If it was a good thing, you would want to gol into it, would you not? Mr. Wiggin. It may be good for the other fellow, but we do not

want to get in it.

Mr. Seiberling. Between group, chain, and branch banking, which one would you prefer?

Mr. Wiggin. I do not think it is possible to answer that question until you know what the branch-banking plan would be-how far-

Mr. Seiberling. I mean in limited areas. Mr. Wiggin. I would just as soon have chain banking, from my

personal interest, rather than branch banking. Mr. Seiberling. I am talking from the standpoint of the interest

of the country.

Mr. Wiggin. I think chain banking would be as safe as branch banking. If you have branch banking, it is one risk for the whole system, just as it is for the chain. If the parent bank is not well

managed, the whole thing goes.

Mr. Seiberling. Now, I understand that you are at the head the largest bank in the world, with a capital of \$148,000,000 and

total resources of \$2,400,000,000, approximately.

Mr. Wiggin. I am the head of the Chase National Bank, but I never know whether it is the largest until I see the figures of the other

Mr. Seiberling. Well, it was yesterday.

Mr. Wiggin. I do not know until I see the figures for the Midland.

Mr. Seiberling. Well, it is one of the largest.

Mr. Wiggin. Yes.

Mr. Seiberling. Have you given us the number of branches?

Mr. Wiggin. Forty-six in New York city and four foreign branches. Mr. Seiberling. How large is the Chase Securities Co., in total resources?

Mr. Wiggin. About \$130,000,000.

Mr. Seiberling. Where does it have offices and branches?

Mr. Wiggin. Its main office is in New York City, and it has offices in Boston, Albany, Cleveland, Chicago, Philadelphia, Washington, St. Louis, San Francisco, and Los Angeles.

Mr. Seiberling. Has the Chase Securities Co. also foreign

branches?

Well

d of and Mr. Wiggin. They have an office in London and also in Paris. Mr. Seiberling. In what manner is the Chase Securities Co. con-

trolled by the Chase National Bank—stock control, I mean.

Mr. Wiggin. The stockholders are exactly the same. Neither corporation owns the other. When you buy a share of what is listed on the Street as Chase National Bank, what you really get is a certificate of deposit saying that you are the owner of one share, or whatever it may be, of the Chase National Bank, and also one share of the Chase Securities Co.

Mr. Seiberling. The number of shares is exactly alike?

Mr. Wiggin. Yes; and they can not be separated.
Mr. Seiberling. Then, the Chase Securities Co. stock is all deposited with the Chase National Bank and you issue one certification. tificate for both?

Mr. Wiggin. For years it has been deposited with the Bankers

Mr. Seiberling. Have you given us a complete list of the principal corporations in which the Chase Securities Co. owns the majority of the stock or is in any manner tied up with the Chase National Bank or the Chase Securities Co., through stock control?

Mr. Wiggin. I have tried to. Have you anything in mind that may assist me?

Mr. Seiberling. I was thinking of the American Express Co.

Mr. Seiberling. How much do you own?
Mr. Wiggin. Ninety-eight per cent.
Mr. Seiberling. When

Mr. Seiberling. Where are their branches located?

Mr. Wiggin. Thirty-four of them are in this country and 66 in other countries.

Mr. Seiberling. Do you count in such an office as we have in Columbus Ohio, and Cincinnati, where the American Express Co. does business?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. Does not the American Express Co. have offices

in almost every town and hamlet in the country?

Mr. Wiggin. In every office they issue checks, the American Express Co. does not own the office.

Mr. Seiberling. Do they not handle express business?

Mr. Wiggin. No, sir; they are not in the express business. They are in the steamship ticket business and the selling of transportation; handling of a traveling bureau and so forth, and sell checks, but do not receive deposits.

Mr. Seiberling. Are not these 66 offices of the American Express

hi

n

Co. in foreign countries in reality branches?

Mr. Wiggin. In Europe?

Mr. Seiberling. In this country.

Mr. Wiggin. There are only 34 in this country. Mr. Seiberling. Yes, those in this country.

Mr. Wiggin. Not at all. They do no banking business. They simply sell tickets and are run as a travel bureau.

Mr. Seiberling. It would be readily possible to operate them as

branches?

Mr. Wiggin. Yes.

Mr. Seiberling. And in a profitable manner?

Mr. Wiggin. I do not know.

Mr. Seiberling. You have not tried that?

Mr. Wiggin. No.

Mr. Seiberling. I have before me the bulletin called the "Chase Economic Bulletin," dated May 8, 1930, which I assume is an official publication of the Chase National Bank. This bulletin contains an article headed "Branch Banking Throughout the Federal Reserve Districts," by Benjamin M. Anderson, economist of the Chase National Bank of the city of New York. Am I correct in my assumption Mr. Wiggin, that this represents the position of the Chase National Bank of New York with respect to branch banking?

Mr. Wiggin. When you ask if it correctly states the position of the Chase National Bank, you must remember that the Chase National Bank stockholders or board of directors have not given any definite consideration nor have they come to any formal decision in this matter. That is Doctor Anderson's report and what he be-

lieves to be the best thing.

Mr. Seiberling. But put out by your bank?

Mr. Wiggin. Yes.

Mr. Seiberling. And headed "A Revolutionary Proposal." I do not know whether that is intended to be complimentary or not. George Washington had a perfectly good revolutionary proposal.

Mr. Wiggin. If it would suit you, Doctor Anderson is here and Doctor Anderson will testify to-morrow and you can put it up to him-Mr. Seiberling. Do you say that this represents the sentiment of the Chase National Bank of the city of New York or does not represent it? You are at the head of the bank.

Mr. Wiggin. I will not say it either does or does not. I will repeat what I said a moment ago, that the stockholders have not considered the matter and instructed us nor have the directors considered the matter and instructed us. That is the opinion of our economist.

Mr. Seiberling. In reference to the opinion of the comptroller and the governor of the Federal reserve, representing the Government, from an entirely unselfish viewpoint for the benefit of the people of the country. You, of course, have put out this circular from B purely selfish business viewpoint.

Mr. Wiggin. I do not think so. You can ask the doctor about it himself.

Mr. Seiberling. You have already stated you did not approve of

branch banking.

Mr. Wiggin. I have stated we would rather not see branch banking. I have great respect for the people who suggest it and great confidence in them, but we would prefer not to see it.

Mr. Seiberling. I understand you have testified that your bank

has 7,000 correspondents—the Chase National Bank?

Mr. Wiggin. Something like 7,000 bank correspondents; yes, sir. Mr. Seiberling. Are these banks located all over the United States, or in any particular section?

Mr. Wiggin. All over the United States.

Mr. Seiberling. You have correspondent banks in Southern States, such as Florida, Georgia, South Carolina, Alabama, and also in Western States?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. You lend your correspondent banks when they need funds, I take it?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. And you require collateral?

Mr. Wiggin. We do.

Mr. Seiberling. You never make an exception in that?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. What are those exceptions?

Mr. Wiggin. They are very, very rare.

Mr. Seiberling. And of course the bank pays interest on the loan?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. It would not be good business for you to lend correspondent banks unless you had good collateral for your loan?
Mr. Wiggin. We would not be justified in lending the money unless

we thought it was a good loan.

Mr. Seiberling. Then this correspondent system which you have is purely a business arrangement for profit to your bank? Is that correct?

Mr. Wiggin. It is a business arrangement expected to be profitable to the bank and expected to be of benefit to the correspondent.

Mr. Seiberling. You are trying to increase your correspondents all the time?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. How many of your correspondent banks failed during the period 1920 to 1930?

Mr. Wiggin. I can not answer that offhand—quite a number.

Mr. Seiberling. And they were mostly unit banks situated throughout the country?

Mr. Wiggin. Yes.

Mr. Seiberling. What did your bank do to keep these correspondent banks from failing?

Mr. Wiggin. A bank that we believe to be solvent can borrow whatever it needs.

Mr. Seiberling. Well, who determines the solvency of the bank?

Mr. Wiggin. The officer that is passing on the loans.
Mr. Seiberling. You are making the loan and you determine whether it is solvent?

Mr. Wiggin. Only on the collateral.

Mr. Seiberling. If the bank fails later, you get your money before the depositors get theirs?

Mr. Wiggin. If we have the collateral.

Mr. Seiberling. You stated you do not lend except on collateral Now, your system of correspondent banks does not reach the root of our trouble here; that is, namely, to try and prevent the failure of banks throughout the country-does it?

Mr. Wiggin. No. You always have bank failures.

Mr. Seiberling. But your system of correspondent banks which you indorse and engage in and want to extend, does not reach the root of the trouble that the comptroller of the currency and the governor of the Federal reserve board have to deal with here.

Mr. Wiggin. It does not prevent bank failures?

Mr. Seiberling. Yes.

Mr. Wiggin. No; and nothing else will.
Mr. Seiberling. What is your idea of the diversification as used in connection with loans made by banks? In this connection do you not distinguish between diversification of loans made by a bank in 8 given community and the explanation of diversification as made by Mr. Anderson in the article with respect to which is, as I understand it, the purchasing of securities through the correspondent city banks, the loaning of call money to the city bank, the purchase of open market commercial paper, readily marketable bonds and acceptances.

Mr. Wiggin. What is that question again?

Mr. Seiberling. What is your idea of diversification? I will ask that first and then you can explain the others.

Mr. Wiggin. I think a brief definition of diversification would be

a variety of loans—a variety of kinds of loans. Mr. Seiberling. Now, you purchase commercial paper, bonds and acceptances and lend money on call for these correspondent banks?

Mr. Wiggin. Yes, sir. Mr. Seiberling. And out of them you, of course, make a profit of

every transaction, of some kind? Mr. Wiggin. Not out of every transaction.

Mr. Seiberling. What transaction would you not make a profit on

Mr. Wiggin. Read them off and I will tell you.

Mr. Seiberling. Loaning of call money.

Mr. Wiggin. Yes, there is a charge for that. Mr. Seiberling. The purchase of open market commercial paper.

Mr. Wiggin. There is no charge on that.

Mr. Seiberling. Of course if you pay par for that paper, it has to have an interest rate higher than the New York rate, or you would not pay par for it.

Mr. Wiggin. I do not understand that question.

Mr. Seiberling. If you purchase for par it has to carry an interest rate higher than the New York prevailing rate.

Mr. Wiggin. It does not necessarily.

Mr. Seiberling. What is the call money rate to-day?

Mr. Wiggin. Three per cent.

Mr. Seiberling. Are you buying commercial paper on 3 per cent? Mr. Wiggin. I see what you mean. The commercial paper is usually higher than the call rate. Sometimes it is higher and sometimes lower.

Mr. Seiberling. As a usual thing, you make money out of that

Mr. Wiggin. No, sir.

Mr. Seiberling. Now, if we had branches in these localities throughout the country, under Mr. Anderson's set-up here, in his address, his plan takes money from the rural community and throws it into the metropolitan center, does it not?

Mr. Wiggin. I wish you would ask Doctor Anderson that question. Mr. Seiberling. If money is sent down to be put on call, it takes it out of the local community and puts it in the metropolitan center?

Mr. Wiggin. Yes.

Mr. Seiberling. Your correspondent banks maintain balances with you?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. They can purchase securities from your bank or upon your advice—take your advice on that?

Mr. Wiggin. Yes.

Mr. Seiberling. Is that about a description of the relationship between your bank and the correspondent bank?

Mr. Wiggin. I did not realize we were making a description of all

the relations.

Mr. Seiberling. Well, will you make one, briefly?

Mr. Wiggin. The correspondent bank finds it desirable to keep an account in New York-

Mr. Seiberling. It is required by you, is it not?
Mr. Wiggin. No; I wish we could require it.
Mr. Seiberling. To some extent?

Mr. Wiggin. We can not require it. We are glad to get them. Mr. Seiberling. You mean to say you let a correspondent bank draw a draft on you that does not have a deposit in your bank?

Mr. Wiggin. We would not pay it.

Mr. Seiberling. The business necessities require that they main-

tain a balance with you?

Mr. Wiggin. Most of the banks keep an account with us and we are very glad to have them, and we handle the accounts and pay their checks and receive their deposits and follow their instructions with reference to the payment of papers and delivery of securities. It is a regular banking business.

Mr. Seiberling. Can you estimate the deposits that come to

your bank from the 7,000 correspondent banks?

Mr. Wiggin. I am sorry I can not give you that figure.

Mr. Seiberling. It is a large amount? Mr. Wiggin. Several hundred millions.

Mr. Seiberling. And with the call money rate high, like it was last year, you would make a lot of money on those deposits?

Mr. Wiggin. As a matter of fact, they lend the money themselves. We get our charge, of course, for lending the money.

Mr. Seiberling. They could not draw their balances down very close?

C

Mr. Wiggin. It depends on the banks. As a matter of fact, we do not have much opportunity to put out call money for ourselves at those rates, as you can readily understand. The customers were loaning their own money.

Mr. Seiberling. This system that you want to stick to and are indorsing, is very profitable to the New York banks in all their relationships?

Mr. Wiggin. We regard our business from the out-of-town banks as good business.

Mr. Seiberling. Of course you do not want to lose that business?

Mr. Wiggin. No.
Mr. Seiberling. Now, if Congress were to adopt the trade area
plan of branch banking and there were, say, 35 different areas with
large parent banks and many of the banks now correspondents
became branches of these banks, you and the New York banks would

lose a great many correspondents, would you not?

Mr. Wiggin. I think so. We might have to go into the business.

Mr. Seiberling. And you would lose a profitable business and prestige?

Mr. Wiggin. Yes, sir; possibly. We might have to go into the

business ourselves.

Mr. Seiberling. Would not these large independent parent banks be much more independent of New York, which is now the money center, as you state, than they are at the present time?

Mr. Wiggin. Possibly.

Mr. Seiberling. In other words, many of them would be large enough to stand on their own feet and finance industries in their own sections?

Mr. Wiggin. They do now.

Mr. Seiberling. But they would be much more able to do so?

Mr. Wiggin. Possibly.

Mr. Seiberling. Now, Mr. Wiggin, I just want to ask this question: Is not that the main reason why the Chase National Bank, according to this bulletin and yourself, are opposing the comptroller's and the Federal reserve's proposal about branch banking?

Mr. Wiggin. Not at all. If we were confident it was to the best

interests of the country, we would not object to it.

Mr. Seiberling. Now, country banks can choose their own correspondents in New York?

Mr. Wiggin. Yes, sir.

Mr. Seiberling. And some have several correspondents?

Mr. Wiggin. Yes.

Mr. Seiberling. So that you are not able, in the slightest degree, to dictate to the country bank how it shall run its business?

Mr. Wiggin. That is true.

Mr. Seiberling. You are therefore not in a position to assist the country in encouraging and carrying on a proper banking policy?

Mr. Wiggin. Well, if they want assistance from us, they must keep their bank in shape.

Mr. Seiberling. If they want assistance from you, but as long as they merely carry a balance with you, you have no influence with hem in that regard and can not exercise any?

Mr. Wiggin. Absolutely not.

Mr. Seiberling. Now, as a matter of fact, this correspondent bank system means a profit to the city correspondent, but does not keep the correspondent banks from failing?

Mr. Wiggin. That is right; nothing will keep some banks from

failing.

Mr. Seiberling. If you had a large branch banking system with a big metropolitan bank back of the system, there would not be any danger of the small bank failing?

Mr. Wiggin. It would depend on the metropolitan bank. We have

had failures in big cities.

Mr. Seiberling. But not very often?

Mr. Wiggin. No.

Mr. Seiberling. It would be less likely to fail? Mr. Wiggin. It would be a larger bank, of course.

Mr. Seiberling. You have testified that you operate your branches abroad successfully and that the branches of the securities companies are operated successfully and those of the express company. Why can you not operate branches of the bank successfully in a more limited trade area?

Mr. Wiggin. I have not so testified. Perhaps we can. Mr. Seiberling. But you are a successful banker.

Mr. Wiggin. I think so, but we have had two of the branches only two days.

Mr. Seiberling. But the branches you have had have been successful?

Mr. Wiggin. Habana has not been successful.

Mr. Seiberling. As a whole, they have been successful or else

Your bank would not be successful.

Mr. Wiggin. But I do not think that bears on the question. As a matter of fact, they have not been successful. I am perfectly willing

to grant that some branches would be successful.

Mr. Seiberling. Well, now, your bank is the largest in the world—think it is—with branches in New York City and abroad and affiliated with the Chase Securities Co., doing business all over the world, With the recent acquisition of the American Express Co., and the ⁰rganization of the American Express Trust Co., with branches in every important city in the civilized world, and you are hardly in a Position as has Doctor Anderson that it is "The creation of giant branch banking systems, with enormous capital, ranging over 'trade areas' which may equal Federal reserve districts in size"?

Mr. Wiggin. We have no national branch banking system at all. Mr. Seiberling. You have branches in Europe and in this country? Mr. Wiggin. We have a branch in London, a branch in Habana,

and two branches at the Isthmus.

Mr. Seiberling. Do you not think that Doctor Anderson is the last person in the world that should arouse fear on account of the concentration of enormous banking capital, and so forth?

Mr. Wiggin. Well, you will have to ask the doctor that question,

but I do not think he has aroused very much fear.

Mr. Seiberling. I think that is all.

Mr. Busby. I will ask this one question, if I may: Mr. Davison, Who was with us yesterday, said that the correspondent bank was Performing every function that the branch bank could perform to the outlying section of the country, he having in mind particularly

the New York banks of a type like his and yours and others.

The branch bank established in some outlying section would naturally have the cooperation of the parent bank to this extent, over the correspondent bank, if I understand it, that the parent bank would stay by the branch bank even when the branch bank was losing money in operating, especially if bad crops or some local condition caused a disastrous situation to present itself from the standpoint of the bank; whereas your bank would not feel called on to go far enough to suffer any unforeseen losses in standing by your correspondents.

Mr. Wiggin. Let me see if I understand it: If a bank had a branch in a town it would keep on lending money even though they did not

think it was good?

Mr. Busby. That is part of it. But a branch in a town would be protected even when it was losing money by the parent bank.

Mr. Wiggin. If the whole bank is solvent and good, that branch

is perfectly protected. There is no question about that.

Mr. Busby. If it was apparent that its trouble was temporary in the locality where the branch was located, the parent bank would not hesitate to hang on and continue to continue to carry the branch along for months and months?

Mr. Wiggin. Of course we do not know what they would do, but

they would have to pay the debts of that office.

Mr. Busby. But the correspondent system would not have any obligation along that line.

Mr. Wiggin. It would not have any legal obligation, but it is

Mr. Busby. It is not done to the extent that the parent bank would be called upon to protect its branch.

Mr. Wiggin. There would be no legal obligation.

Mr. Busby. The correspondent bank would not feel and, in actuality, does not stay on with the correspondent in distress as a parent bank does with its branches?

Mr. Wiggin. It frequently does. Mr. Busby. I do not get an answer to my question, but by comparison, one with the other, the correspondent bank does not stay on as long as the parent bank would with its branches?

Mr. Wiggin. Of course you are asking a very general question. Mr. Busby. I am asking a general question to get through.

Mr. Wiggin. I agree with you entirely that if a bank had a branch, legally responsible for the deposits, it would have to stay with it and see it through.

Mr. Bushy. If it had a legal responsibility it would naturally have to stay with it and see it through further than a bank that had

no legal obligations to the correspondent.

Mr. Goldsborough. I just want to ask one question. Mr. Wiggin, Mr. Seiberling asked you if you were not benefited by the business you received from correspondent banks and whether that was or not the reason you did business with them, now, is it not 8 necessary incident to any trade that there is a benefit to both parties; that the deal would not take place unless it was a benefit to both

Mr. Wiggin. I agree with that.

Mr. Goldsborough. And do you not think a bank, in a rural district, can be relied upon not to send money to New York to be loaned on call that is needed for the business purposes of the community in which the bank is doing business? Do you not think it would be bad business for the bank to send money to New York to be used on call that was needed for the local business?

Mr. Wiggin. I think it is a bad business.

Mr. Seiberling. You asked whether it was done. He admitted it is bad business, but he did not answer the question as to whether it was done.

Mr. Wiggin. I do not know whether it is done or not. I do not

know about the needs of the local communities.

Mr. Goldsborough. Now, is it not a fact that rural banks now have access to improved banking methods away beyond what they did when the country was being built up on the unit system?

Mr. Wiggin. There is no question about it.

Mr. Goldsborough. And under normal conditions, when we get away from the collpase of the war, do you not think that the unit system is just as valid as it was during the formative period of this country?

Mr. WIGGIN. I do.

Mr. Goldsborough. Do you believe, Mr. Wiggin, that a rural community, which is supplied by a branch bank, will receive for its industries the same sympathetic help that it would from a unit bank?

Mr. Wiggin. I think it depends entirely on the management. I do not see how you can come to a conclusion on that in general. I

think it must be in specific cases.

Mr. Goldsborough. Of course, that is so in anything, but as a rule—that is what I mean—would a branch bank of a metropolitan bank be as much interested in the local welfare as the unit bank, located in the section, would be.

Mr. Wiggin. I think there may be a community feeling where the bank is owned in the community and is a local bank both in the way of deposits and loans. It would be perhaps a little more enthusiastic

than if it were a branch of a distant bank.

Mr. Goldsborough. Do you believe that the value of the moral risk would be considered as sympathetically by a branch bank as a unit bank?

Mr. Wiggin. What kind of a risk?

Mr. Goldsborough. The moral risk or the character risk? Mr. Wiggin. I think it would give consideration to that.

Mr. Goldsborough. Are they in a position to do it when the loans are really considered by the metropolitan institution rather than by the branch?

Mr. Wiggin. I think so. But you must remember that the bank is not going to lend its money, if it is a well-run institution, whether a unit or branch bank, unless they think it is good.

Mr. Goldsborough. Of course not.

Mr. Wiggin. They might be a little more liberal in a local unit bank than in the other, but I do not think you can answer that

question except in specific cases.

Mr. Goldsborough. The moral risk is really the principal thing to consider in a loan, in my opinion. I believe that the country banker, the unit banker, has a better conception of that part of the risk than the metropolitan bank would have.

Mr. Wiggin. It may be. I do not believe you can answer those questions generally. You must remember that even if it is a branch,

it must have a local man running it.

Mr. Goldsborough. That is true, but he is circumscribed. He can only go so far, as a rule. You believe that local industries can be built up as well under a branch system as under the unit system? Mr. Wiggin. It depends on the management of the particular

bank. There is no reason why they should not.

Mr. Goldsborough. Then why do you object to the branch system? I object to the branch system for the reasons I have indicated, but you do not consider them valid. Why do you object to the branch

system?

Mr. Wiggin. I object to it because I do not believe we could run the business properly. Now, it depends on how far it goes. I do not want to see it start. There is just as much reason for the Chase National Bank having a branch in Wichita, Kans., as Hartford, Conn., and perhaps more, and we do not believe it is possible to run it at that distance. Perhaps I am a little inconsistent in my answers.

Mr. Goldsborough. From a banking standpoint, you prefer the

unit system?

Mr. Wiggin. Yes.

Mr. Goldsborough. From the public standpoint, you have no preference?

Mr. Wiggin. From the public standpoint, I would prefer the unit

system.

Mr. Goldsborough. That is all.

Mr. Goodwin. There is nothing complex or intricate about the correspondent system of banks?

Mr. Wiggin. None at all.

Mr. Goodwin. Are not the fundamental principles involved pretty much the same as between an individual depositor in a bank and the bank except you furnish some additional service in the way of advice and taking care of the business of the correspondent bank?

Mr. Wiggin. It is very much the same.

Mr. Goodwin. I live in Minnesota, in a State where we have had a great many bank failures, as you know. In studying this question 1 have come to the conclusion it is not the fault of the independent unit system that has caused the failures, but it is due to the mighty poor judgment on the part of the officers of the banks that failed, in loading themselves up with assets that were not liquid, but were frozen and remained so.

Mr. Wiggin. I think in many cases the troubles have come from

natural conditions.

Mr. Goodwin. I have in mind several banks in my district—a small bank, in particular, with a capital of \$30,000 and a surplus of \$200,000 and total deposits of almost \$2,000,000, situated in a section that is no different from other sections in my district. There are several such banks there—perhaps not as large as the one I speak of in volume of deposits or assets-but that indicated to me, with good prudent judgment in the matter of making loans and taking care of the bank's business, the unit bank can serve the public as faithfully now as in the

You are opposed to branch banking?

Mr, Wiggin. I would prefer it as is. I do not say I am opposed to it, but I prefer the system as is.

Mr. Goodwin. You think the present system of independent unit banks, with the branch banking in certain limited areas, can serve the country as faithfully in the future as it has in the past?

Mr. Wiggin. I do.

Mr. Busby. I noted that at the peak of the loans on the stock market, when they loaned close to \$7,000,000,000 a day, the New York banks furnished from their own funds about 16 per cent of those loans; that New York banks loaned, for the account of other banks outside, about 28 per cent of those loans, and that about 56 per cent of the loans were made by the New York banks for the account of others.

Now, undoubtedly the proportion of money loaned by the New York banks—16 per cent—was out of proportion to their assets com-

pared with the assets of banks in other sections.

Mr. Wiggin. Sixteen per cent was a greater portion-

Mr. Busby. A less proportion of their assets than the 28 per cent loaned for banks outside of New York, which had funds in New York I do not mean their total assets, but that had funds in New

Mr. Wiggin. I do not believe I get that question.

Mr. Busby. The New York banks had all their assets in the city and they had assets from correspondents in their hands.

Mr. Wiggin. Yes. Mr. Busby. The New York City banks, taking this as an arbitrary figure—but I think it is practically correct—loaned 16 per cent of the funds that were loaned on the New York Stock Exchange, most of which, or 90 per cent of which, was call money, and 28 per cent was loaned by New York banks for the account of outside banks. Was there not a disproportionate amount of funds loaned for outside banks than loaned by New York banks out of their own funds?

Mr. Wiggin. That money from outside banks came from all over the country, and until you know what the total is it will be pretty hard

to answer the question.

Mr. Busby. What do you get for loaning funds for other banks?

Mr. Wiggin. One-half of 1 per cent interest.

Mr. Busby. If the funds loaned reached \$7,000,000,000 average, that would be, I believe, \$35,000,000 a year that all the banks in New York that were loaning money on the Stock Exchange would receive as their fee. That would amount to-

Mr. Wiggin. Give me the question again and I will see if I can

answer it.

Mr. Busby. If the money loaned on the New York Stock Exchange by the New York banks for which these banks received a fee of one-half of 1 per cent for making the loans, averaged \$7,-000,000,000, the average amount paid to New York banks for handling the loans would amount to \$35,000,000 a year, and if they had 300 banking days in the year, that would give the New York banks a fee for handling that business, only a small percentage of which was their own funds, of something like \$120,000 a day. Do you agree with that?

Mr. Wiggin. I would have to figure it, but I would assume you

are correct.

Mr. Busby. I just wanted to point out the source from which the Profit came to the New York banks by having correspondents outside. I am not blaming them for having them or blaming the depositors for putting their money out on call.

Mr. Winnin. Of course there was not any \$70,000,000,000 loaned.

C BY

Mr. Busby. I said \$7,000,000,000. Mr. Wiggin. Oh! The charge for loaning money on the Street one-half of 1 per cent-was based as a low banking charge for the service rendered. The cost of handling it is enormous. The risk of handling it is enormous.

Mr. Busby. I might ask you to amplify that risk slightly.

Mr. Wiggin. The risk of seeing that the collateral is not stolen from us and seeing that the collateral always covers the loan. There is a real risk in the business and there is a tremendous volume of detail. It is what we believe a just and a low charge for the service rendered.

Mr. Busby. Yet, withall, a very profitable business, when it

amounts to \$120,000 to the banks every day.

Mr. Wiggin. You are figuring on gross figures. The CHAIRMAN. Are you now a member of the clearing house committee?

Mr. Wiggin. No, sir.

The CHAIRMAN. You have been a member of the clearing house committee?

Mr. Wiggin. At various times.

The CHAIRMAN. We should have in this hearing an amplification of the functions of the New York Clearing House. I wonder if you could furnish us with the information.

Mr. Wiggin. I had better not. I am not up to date. I would

suggest the chairman of the clearing house committee.

The CHAIRMAN. Who is chairman now—do you recall?

Mr. Wiggin. I think it may be Mr. Potter of the Guaranty Trust

Co. I am not sure.

Mrs. Pratt. Perhaps I was stupid, but I did not quite understand Mr. Wiggin. These branches in Albany and other cities are branches of the Chase Securities Co.?

Mr. Wiggin. Yes; they sell securities. Mrs. Pratt. And you have branches abroad?

Mr. Wiggin. Yes.

Mrs. Pratt. But through your securities company do you have

what is practically a branch banking system?

Mr. Wiggin. Not at all. They do not loan money or receive deposits. They simply try to distribute securities. They are a sort

of selling agency.

The CHAIRMAN. Statements have been made to the committee as to the effect the building up of these trade area banks throughout the country would have on the distribution of securities from organizations like yours in New York; that is, the combining together of all banks in a certain area would preempt largely the securities business in those localities. Would you view that as a restriction on your ability to sell securities?

Mr. Wiggins. I do not think so. I think their personal judgment on what is the best to buy governs in the matter of securities pur-

chases. The CHAIRMAN. You do not think the building up of these big groups would affect the ability of New York banks to sell securities in their territory?

Mr. Wiggins. I do not think so.

The Chairman. My attention has been called to a recent sale of Treasury notes. For the first time it appears those notes were successfully bid in by a group; namely, the Marine Midland group of Buffalo, they successfully bidding them in in competition with New York bidders. Have you any fear that they may take unto themselves exclusively the securities business in their trade area?

Mr. Wiggin. I do not think so.

The Chairman. In other words, you do not feel, in the management of the securities business—in originating and distributing securities you would lose out selling direct to customers in this particular area but that you would have to do business with the head of such an institution, who would, in turn, distribute the securities to the people in this trade area?

Mr. Wiggin. I think the distribution of securities is governed by the taste of the individual buyer, and that is governed largely by the

return.

The Chairman. As far as the banks that formed that group are concerned, in the purchase and sale of securities, they would be directed by the head officers of the group?

Mr. Wiggin. Yes; but in buying any quantity of securities they

have to buy in the open market.

The Chairman. I should like to ask you how many branches you have in New York?

Mr. Wiggin. Forty-six.

The Chairman. With respect to the examination of your parent institution, is there a simultaneous examination of these branches? Mr. Wiggin. Yes, sir; they count the cash in every place simultaneously. Mr. Pole can answer that question better than I.

Mr. Seiberling. Can you tell us what is the average rate of interest

You pay on daily balances of your correspondent banks?

Mr. Wiggin. Two per cent, I think it is now.

The Chairman. We are very grateful to you for your statement, Mr. Wiggin.

Mr. Wiggin. I hope I have been of some use to you. I doubt whether I have.

The CHAIRMAN. The committee will stand adjourned until 10.30

to-morrow morning.

(Whereupon, at 12.25 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m. Thursday, June 5, 1930.)

0

H

BRANCH, CHAIN, AND GROUP BANKING

THURSDAY, JUNE 5, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 10.30 o'clock a. m., in the committee room, Capitol, Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order. before the committee this morning Dr. Benjamin M. Anderson, jr., economist of the Chase National Bank of New York. Mr. Anderson was present yesterday during the testimony of Mr. Albert H. Wiggin, chairman of the governing board of the Chase National Bank. We will be very glad to hear any statement which Mr. Anderson cares to make at this time.

STATEMENT OF BENJAMIN M. ANDERSON, JR., ECONOMIST, CHASE NATIONAL BANK, NEW YORK CITY

The Chairman. I am presuming, Mr. Anderson, you would like to make a brief statement?

Mr. Anderson. Yes, sir.

The CHAIRMAN. And then submit yourself to questioning later on? Mr. Anderson. Any procedure the committee wishes to follow.

The CHAIRMAN. I think it will be best if you will proceed with Your statement and the members of the committee will question you pertaining to anything you may say or to things that are pertinent to this study.

Mr. Anderson. My opinions, set forth in the two documents which I am going to submit for the record, are opinions of long

standing.

For the record, I want to submit a speech that I made in New Hampshire on October 12, 1929, called Bank Consolidations in a Period of Speculation; and a speech which I made in North Carolina on May 8, 1930, called Branch Banking Throughout Federal Reserve Districts.

(The speeches referred to are here printed in full, as follows:)

BANK CONSOLIDATIONS IN A PERIOD OF SPECULATION 1

(By Benjamin M. Anderson, jr., Ph. D., economist of the Chase National Bank of the City of New York, October 12, 1929)

REVOLUTIONARY CHANGE TO BE AVOIDED

The question of the comparative merits of the European system under which a country has a few great banks with numerous branches, and the American

 $h_{\rm ampshire}^{1}$ Bankers Association and the New Mampshire Bankers Association and the New Mampshire Bankers Association, at Whitefield, N. H., on the evening of Saturday, Oct. 12, 1929.

system of 26,000 independent unit banks, is not one to be settled offhand. There are countries where country-wide branch banking works admirably; and, by and large, our system of unit banks has worked admirably. Either system can work well if the country is adjusted to it, if the bankers of the country are trained in handling it, if the banking laws of the country are adapted to it, and if the standards of banking and commercial morality in the country are high. Neither system could work well if suddenly adopted in a country which had long been accustomed to the other system. Revolutionary changes in the banking system of a great country are to be avoided. Changes which may be desirable if they come slowly as an evolutionary process, with a careful study of the problems involved, with experimentation and the correction of mistakes in the light of experimentation, may easily be unfortunate if put through wholesale on a country-wide scale. It would be particularly unfortunate if our American system should suddenly be transformed as an incidental by-product of a competition between the State banking system and the National banking system, or as an incident of a period of excited stock market speculation, or as a result of a competitive struggle for great size and large figures.

competitive struggle for great size and large figures.

Branch banking confined to the city of the head office is not the point at issue. We have learned how to do this well in many American cities. The problem before us to-day is one of consolidations running far beyond a single city, and, in many cases, consolidation by means of holding companies, rather than by mergers with branch banking.

We should move slowly in the readjustment of our banking system. It is not

We should move slowly in the readjustment of our banking system. It is not enough to study the matter from the standpoint merely of the prices of bank shares or of holding corporation shares. It is not enough to study the matter only from the standpoint of the much more important question of the profits of banking. We must consider the problem also from the standpoint of the services which banks perform for the country.

But, in general, under a competitive system, the prosperity of the banks and the prosperity of the country move together. In general, that banking system which, preserving competition, makes most profits is serving the country best. A prosperous bank, strengthening its capital structure by accumulating a large surplus out of earnings, can serve the country better than a bank which is not making money. In general, a bank prospers as its customers prosper, and under a system of competitive banking a bank makes money with its customers, instead of out of them.

It is, therefore, fair argument for the proponents of a change in our banking system to make the case that the change will increase banking profits. A carefully analyzed consolidation plan which does not destroy competition, which takes adequately into account the problems of management, control, and responsibility, which prices properly the various elements taken into the consolidation, and which definitely accomplishes economies in operation, is thoroughly justifiable. On the other hand, movements toward consolidation in every field are intensified during periods of active speculation in securities and are greatly facilitated by the ease with which new securities can be issued and marketed in such periods. Abuses and mistakes easily occur in such periods, and movements which are economically justified may easily be carried to uneconomic extremes.

MR. WIGGIN'S VIEW

an tiffb an

a

n

Dunce

In his annual report as chairman of the board of directors of the Chase National Bank in January, 1927, speaking of the merger of the Chase National Bank with the Mechanics & Metals National Bank, Mr. A. H. Wiggin said:

"This merger, together with similar steps on the part of other institutions in the last two or three years, has been made the occasion of comments to the effect that mergers are the order of the day and that the line of logical development is toward fewer and much bigger banks. I am not prepared to subscribe to this doctrine without qualification, and I would not have our merger with the Mechanics & Metals National Bank judged on that basis alone. It is significant that while bank mergers are taking place new banks of moderate size are also coming into existence and doing well. A merger may bring together organizations which can not work harmoniously and may combine interests which are not compatible. Each case must be judged on its own merits. Haphazard mergers merely for the sake of large figures do not assure good banking. In the case of the merger of the Chase National Bank and the Mechanics & Metals National Bank a great deal of careful thought and planning preceded the decision. The responsible officials of both institutions knew one another well before the merger, and were sure that they could cooperate in a friendly and efficient way.

merger has been accomplished with entire good will and with a minimum of

friction and disturbance.

"It may be observed that the Chase National Bank reached the position of the second largest national bank in the country in volume of net deposits without any mergers at all. Attaining great size through growth alone, it was able to develop a body of traditions, ideals, and practices which give it a distinctive character. The mergers which have since taken place have made it possible for us to give larger lines of credit to great business organizations, have made possible the more economical handling of many functions, and have broadened the range of our activities, but they have not destroyed the distinctive character of the Chase National Bank."

BIGGER CUSTOMERS AND BIGGER BANKS

One of the important considerations making for the consolidation of banks has been the recent great growth in size of American business corporations, customers of the banks. The banks must be big enough to meet the needs of their customers. But this argument can not be applied throughout without careful consideration of the individual case. Just how big do the banks need to be to take care of their customers? Precisely how much have their customers grown? An answer can not be given for the country at large. It must rest on a study of individual cases, and individual communities and regions.

Undoubtedly unit banking has been carried to unconomic extremes in a good

Undoubtedly unit banking has been carried to uneconomic extremes in a good many rural regions. Undoubtedly there are too many small banks struggling along with such small earnings that they can not pay the salaries required for adequately trained bankers. Undoubtedly many rural communities would be better served by fewer and bigger banks. Undoubtedly, too, the development of the automobile and hard roads has made unnecessary the existence of a good many very small banks which formerly were quite necessary for a local community.

THE HOLDING COMPANY IN STRICKEN RURAL REGIONS

Further, there are great regions where, as a consequence of the unfortunate Position of agriculture since 1920, so many small banks have gone under that Public confidence in banks has been undermined. A well managed holding Company, organized by powerful city banks, owning the stock of rural banks in such a region, may restore the impaired prestige of the country banks, lead their local customers to trust them fully and use them freely and build up their deposits once more, and restore sound credit to a distressed agricultural region. But the problem is not one for sweeping generalization. It is a problem that requires the careful study of individual cases.

HOLDING COMPANIES VERSUS MERGERS

I think that the propositions involved in Mr. Wiggin's discussion of mergers apply with even greater force to chain banking and bank holding companies. The merger, with branch banking, is a much more satisfactory form of consolidation from the standpoint of the problems of personnel and control and the centering of responsibility, than holding companies and chains of banks. The latter forms of consolidation, however, are often possible where merger with branch banking is impossible for legal reasons, and it is this less satisfactory form of consolidation that is being most widely employed of late, the supposition being in many cases that it is in anticipation of a change in the law which will make real mergers, with branch banking, possible at a later data. A real question arises as to the desirability of putting American banking into a halfway house awaiting a change in the law which may not come.

THE ARGUMENT FROM BANK FAILURES

One of the most used arguments offered for consolidation movements in rural regions is the large number of failures of rural banks since the crisis of 1920. A good many rural banks have gone under simply because the local community as a whole went under in the great collapse of land values and agricultural commodity prices. The figures were swollen, moreover, by the failure of a large number of very inadequately capitalized banks, the laws of certain States permitting banks to be organized with a capital of \$10,000 in small places. There is need for reform in the banking laws to make sure that all banks have adequate capital, and that all banks are large enough so that they can afford to employ men with real banking training.

Commenting on these failures, Mr. Rudolph S. Hecht, president of the Hibernia

Bank & Trust Co. of New Orleans, very properly remarks:
"However, neither chain nor branch banking is necessarily a panacea for such Overexpansion and frozen credits can occur under one system as well This is best illustrated by the fact that within the same period covered by the above statistics we had failures such as the Bankers Trust Co. chain of Atlanta, which a few years ago caused 83 apparently independent banks in two States to close their doors within 48 hours, the failure of the Home Bank of Canada with 78 branches, and the practical failure and forced absorption of the Merchants Bank of Canada with 400 branches."

To Mr. Hecht's American and Canadian illustrations it would be easy to add

illustrations from Europe, including the failure of a great bank with branches in Denmark (mitigated by the action of the Danish Government in guaranteeing its future obligations and continuing its activities), and the very disastrous collapse of the Banca di Sconto in Italy, with its numerous branches scattered throughout that country. We have seen also the failure of the great Banque Industrielle de Chine in China, and of several great banks with numerous branches in Japan, the latter mitigated by the Government's powerful aid. I agree thoroughly with Mr. Hecht's further proposition that:

"After all, good banking is not a matter of size. A properly conducted small country bank can be as safe as a large city institution with many branches. Success in the banking field depends on good management, whether the unit be large or small. It can not be denied, of course, that larger institutions can and usually do employ more capable men with greater experience and sounder judgment than can the average small unit bank. They also have on the whole better facilities for standardizing their business, keeping themselves properly informed, and thus escaping many losses resulting from actual operations as well as from poor credits.
"However, we have reached a point in our profession where most of the de-

ficiencies of the small town bankers can be supplied, not necessarily by making any fundamental changes in our banking system or by giving up any of the unit bankers' independence, but merely by bringing about a better spirit of coopera-

tion and mutual helpfulness.'

BRANCH BANKING VERSUS CORRESPONDENT RELATIONS

A central point in this cooperation and mutual helpfulness to which Mr. Hecht refers is, of course, the relations between the small banks in interior places and their great city correspondent banks. The small bank can not afford a great credit department, but from its city correspondent it can and does get abundant and adequate credit information. The small bank may not trust its own judgment in the purchase of securities, but the full resources of its city correspondent are at its disposal in this connection. Through its city correspondent it can and does disposal in this connection. does diversify its assets, purchasing safe open market commercial paper or bankers

acceptances or obtaining other liquid assets.

One of the supposed advantages of country-wide branch banking is the facility with which funds can flow from regions where they are excessive to regions where they are needed. The head office, finding funds piling up in excess of local need in one part of the country, can transfer them to other parts of the country where borrowing demand is heavy. But it is an old story in American banking that precisely this same flow of funds takes place through our system of correspondent banking. Rural banks send excess funds to the money centers during their dull seasons, and during the period of their peak need for funds they borrow in the money centers.

BRANCH BANKING AND LOCAL INTERESTS

One difference, however, between the foreign practice of country-wide branch banking and the American system of unit banking is that the decision as to when and where funds shall flow is not made merely in the head office in the financial center, but rather is a matter of negotiation between principals in which an authoritative voice speaks for the interests of the local community. Very much is to be said for the argument of the country banker in opposition to the consolidation movement that he, the man on the ground, with his heart and his interests in the local community, can consider the interests of the local community more zealously and more expertly than a branch of an institution with headquarters in a distant great city could do. This is not always true. The local branch might be manned by abler bankers than those who man the inde-

Pendent local bank. A capable branch manager might persuade the head office to send larger funds than the head office would lend to the local independent

The experience of various foreign countries with respect to this matter gives us no universal answer to the question of how well branch banking serves local communities. In some cases country-wide branch banking has drawn in funds from the Provinces to be employed primarily in the financial center, or to be used in making foreign loans. In other countries country-wide branch banking has increased the funds at the disposal of the local communities. But the desire for local independence in financial matters is one that appeals strongly to the American public, and the desire to be the head of an independent bank is one cherished by many thousands of American bankers. It is not certain that the banking profession would draw to itself as high a percentage of our capable men as it now does if we made a revolutionary change in our system.

THE AMERICAN SYSTEM OF DIFFUSION OF RISKS

One further point with respect to the difference between American and foreign Systems is to be considered in connection with the question of how big American banks need to be to take adequate care of American businesses. The American system of commercial banking emphasizes the diffusion of risks. Commercial loans, including loans to manufacturers, are normally short loans, and "lines of credit" are normally reviewed once a year. It is a general practice, moreover, for businesses of any size to carry accounts with several banks and even with bank. banks in several cities, and to have lines of credit and borrowing relations with several banks. This makes for diffusion of risks, and for greater liquidity of banks assets. It makes business freer from bank domination, and banks freer from business domination. The tendency in foreign countries, on the other hand, where a few large banks with branches control the banking field, is for most businesses, excluding sometimes the very largest, to have only one bank, and for the bank and the business to be tied together very closely. The business is not like independent of the bank and very often the bank is not independent of the busi-The American banking practice of "cleaning up once a year," under which the borrower is expected to be out of debt to each bank for at least a part of the time, does not obtain to anything like the same extent in these foreign countries. The bank very often can not be paid in full without bringing the business to a close. Is it desired by those who urge that banks must be very much larger in order to take adequate care of their customers, that we shall abandon the American practice of short loans and diffusion of risks and go over to the practice of each business dealing only with one bank? The matter merits consideration before a decision is made.

BANKING CONCENTRATION AND ECONOMIC FLEXIBILITY

There is a further related point upon which my own mind is quite clear. It is definitely not desirable that consolidations should go so far in the United States as to make it possible for concerted action by the banks to stop a necessary liquidation and to carry over stale positions for protracted periods. In the crisis of 1920–21, our many thousands of independent banks, by cooperative effort and by resort to the aid of the Federal reserve banks, were able to prevent the crisis from degenerating into a panic, and were able to go through the liquidation in an orderly manner. But they were quite unable to prevent the necessary liquidation. In a surprisingly short time we "cleaned up" the weak spots, readjusted prices and costs, absorbed our losses, brought liabilities into reasonable relation to assets, and got ready for the next upward move in business. The business tide turned in the third quarter of 1921, and the year 1922 was a year of strong recovery. In Japan, on the other hand, concerted action by a few great banks, a few great industries, and the Japanese Government, choked off the crisis and the liquidation early in 1920, and the stale position, unliquidated, was carried over over, despite a partial liquidation at the time of the earthquake in 1923, until the great crisis in 1927, when some great banks went under. Japan endured seven years of business stagnation in the vain effort to avert losses which our system of banking compelled us to take in 1920 and 1921. And Japan is not the only country where banking concentration has unduly delayed necessary liquidation. When many thousands of independent banks must independently meet their obligations at the clearing house every day, it is impossible to carry economic mistakes anything like so far as is possible when only a few great banks dominate

t

s

the picture. In the interest of the flexibility of our economic life, we must preserve vigorous competition both in banking and in business, and we must have a large number of independent units in order to assure this.

In conclusion, it has not been my purpose in this discussion to arrive at a definite verdict as to what is desirable in the future of American banking. It is my purpose rather to urge that the matter be not hastily settled. Each individual case must be studied on its merits. The distinction must be made between consolidations which are called for by the technical banking situation, and those that occur because it happens to be "the fashion of the day," or because it is easy to market new securities in a period of speculation. Obviously, too, the character and the caliber of the men who are making the consolidations are of crucial importance, and in this connection it is important to remember that the brilliant, able, and upright promoter is not necessarily a capable administrator.

BRANCH BANKING THROUGHOUT FEDERAL RESERVE DISTRICTS 1

(By Benjamin M. Anderson, jr., Ph.D., economist of The Chase National Bank of the city of New York, May 8, 1930)

A REVOLUTIONARY PROPOSAL

The Committee on Banking and Currency of the House of Representatives at Washington has been holding a highly important set of hearings on the subject of group, chain, and branch banking. It is giving very special consideration to a proposal that the national bank act be amended so that national banks may have the power to extend branches throughout "trade areas" which may overlap State lines, which may be as wide as Federal reserve districts, and which may even overlap Federal reserve districts in cases where a city's "trade area" runs beyond a Federal reserve district. National banks, under this plan, would be empowered to do this whether the States consent or not. National banks located in one State could invade another State whose laws prohibit branches of banks chartered elsewhere. The primary purpose of this proposal is to arrest the failures among small banks in country districts. A secondary purpose is to give the national bank charter such an advantage over State bank charters that the national banks of the country districts in the particle of the country districts. tional banking system will grow at the expense of State banking systems. theory of "parity" between State and national banks is definitely abandoned, and the purpose is to give national banks a definite and great advantage over State banks.

The main emphasis is placed upon the arrest of bank failures. During the 9-year period June 30, 1920, to July 1, 1929, about 5,000 banks, nearly all of them in agricultural communities, closed their doors and tied up deposits of approximately \$1,500,000,000. (The average of deposits is thus very small for these failed banks, being only \$300,000.) The figures for the year 1929 show no

decline in the rate of failures among these small banks.

The proponents of this widespread extension of branch banking outside the city of the head office apparently intend to make use of the recent rapid develop ments of group and chain banking, by adopting legislation to permit the groups

and chains to transform themselves into branch systems.

With much sympathy for the main purpose which lies behind these proposals, sincere proposals made by able men who undoubtedly have the good of the country bank at heart and who undoubtedly have a great deal of knowledge of country bank conditions, I am, none the less, obliged to disagree radically both as to their diagnosis and as to their prescription. The causes of the failures of small country bank, are to be found in special circumstances which have little to do with the general question of chain, group, and branch banking versus unit banking. And the remedy proposed would touch and nelp very few of the existing country banks which are in a weakend condition.

We do not need to make a revolution in the general banking system of the United States because of conditions in small banks in stricken agricultural regions. Other, much more moderate, proposals may be made which would be much more effective from the standpoint of the goal aimed at.

¹ An address delivered before the North Carolina Bankers' Association at Pinehurst, N. C., on the more ing of Thursday, May 8, 1930.

THE EXISTING CHAIN, GROUP, AND BRANCH BANKING MOVEMENT LEAVES OUT THE SMALL BANK

At the end of 1929 there were in the United States 24,645 banks and 3,547 branches, or a total of 28,192 banking offices. Of this total of banking offices there were 6,353 banks and branches that belonged to branch banking systems and chain or group banking systems or to both. This leaves 21,839 banking institutions that are definitely "independent unit banks." The overwhelming number of our banks is thus outside of chain-bank, group-bank or branch-bank systems. On the other hand, on the same date, the branch, chain, and group banking systems had total loans and investments of approximately \$30,000,000-000, leaving \$28,500,000,000 of loans and investments for the 22,000 independent

unit banks.

This figure, \$30,000,000,000, however, gives a very exaggerated picture of the extent to which the movement has gone. From the standpoint of the question in hand, we may take out the many billions represented by the great New York banks whose branches are all within the city of New York or else in foreign countries, and the bulk of whose loans and investments are in any case not in branches but in the head offices. A similar reduction can be made for a number of other important cities. Of the banks that belong to chains or groups, but operate no branches, there were on this date 1,984, with total loans and investments of \$4,913,000,000, the average of loans and investments being about \$2,500,000. In addition there were 119 banks, belonging to chains or groups, that operate branches, with total loans and investments of \$6,264,000,000, or an average of

\$52,600,000 per bank.

These figures show the immense disparity in average size between the banks that have gone into chains and groups, and the small country banks that have been failing, with average deposits of \$300,000. The existing chain and group bank movement is primarily a movement which is bringing relatively large banks together. In exceptional cases, it is including some of the small banks which the legislative proposals are designed to help. Even in these cases, it is not taking in those that are weak and failing. I should not know how to draw a constitutional legislative proposal which would compel good bankers to absorb weak and failing banks. Further, from the standpoint of what is administratively possible, the managers of a great group-bank system can contemplate with some equanimity the absorption of \$60,000,000 of banking resources in a dozen well organized banks in sizeable cities, when they would very properly shrink from the task of taking over sixty millions of banking resources scattered among 200 banks in very small towns.

THE SIZE OF THE FAILED BANKS

Over 40 per cent of the failed banks were situated in towns and villages having a population of less than 500 persons. Over 60 per cent were in towns of 1,000 people or less; 80 per cent were in towns of 2,500 people or less; 92 per cent of the failures were in places having less than 10,000 people. Of the remaining 8 per cent of the failures, a high percentage was in very small banks in larger places.

From the standpoint of capitalization, 63 per cent of the failure were among banks having \$25,000 capital or less; 71 per cent were in banks having less than \$50,000 capital, and 88 per cent among banks having less than \$100,000 capital. During the past nine years there were no failures at all of banks having capital of two millions or more, and there were only four failure among banks having over

one million capital.²
Practically, it may be said that for cities of 10,000 or more people, and that for banks with \$100,000 capital or more, there has been no problem of sufficient magnitude to justify extraordinary concern, or to call for more than local atten-

tion

Certainly there is nothing in the experience of the past nine years, as revealed in the foregoing figures, to justify a legislative revolution in our banking situation, or to justify the creation of giant branch-banking systems, with enormous capital, ranging over "trade areas" which may equal or even exceed Federal reserve districts in size. Much more moderate measures would apparently be indicated.

THE CAUSES OF BANK FAILURES IN THE PAST NINE YEARS

The first and foremost cause of the large number of bank failures since 1920 is the great boom in agricultural prices and land values before 1920, the collapse

Branch, Chain and Group Banking, hearings before the Committee on Banking and Currency, H. R., 1930, Vol. 1, pt. 1, pp. 11-12.

of agricultural prices and land values following 1920, and the adverse conditions in agricultural communities which have since continued. The second great cause is real estate speculation in the period since 1920, in certain important sections of the country, notably Florida and some adjacent States.

This is strikingly evidenced by the geographical distribution of the failures, which are largely centered in four Southeastern States, namely, Florida (123 failures), Georgia (305 failures), South Carolina (191 failures), North Carolina (110 failures), Georgia (305 failures), South Carolina (191 failures), North Carolina (110 failures), and in a second group of agricultural States, namely, Minnesota (378 failures), Iowa (467 failures), Missouri (246 failures), North Dakota (444 failures), South Dakota (315 failures), Nebraska (307 failures), Kansas (194 failures), Montana (191 failures), Oklahoma (227 failures), Texas (217 failures). During this same period, all of New England had only 26 failures. New York had only 12 failures, and Ohio had only 36. New Jersey had none at all. The

failures were concentrated, in other words, in the regions which had been most affected by the agricultural boom and collapse, and by the real-estate speculation in Florida and adjacent States. This concentration of the problem in special areas again would raise the question as to whether Federal legislation, affecting banks all over the country, is called for, or whether-in so far as the matter calls for banking legislation at all-it is not a matter for the States most concerned, with such concurrent legislation on the part of the Federal Government as would permit national banks to have the same branch-banking rights that State institutions have in these States.

From the standpoint of the contrast between our unit-banking system and the system of branch banking, it may be observed that the same grave sequence of events, namely, the war, the boom of 1919-20 and the collapse of 1920-21, which undetermined so many of our small agricultural banks, also undermined great branch-banking systems in many parts of the world. These include a great bank in Denmark, a great bank in Canada with 400 branches, the Banque Indus-trielle de Chine in China, with its widespread branches and its power of note issue, and the Banca di Sconto in Italy, with branches spread all over that country. More recent troubles of the same sort, deferred consequences of the same causes, have occurred in Japan and Austria. An incomplete record shows, also, for the United States, that 226 banks, with deposits of \$102,000,000, belonging to chain systems, failed during the period we are considering.³ And it is further to be observed that in all these American agricultural States the great bulk of the unit banks, measured in resources, survived the shock, and that in every State the majority of the unit banks in number stood intact.

The situation was very greatly aggravated in many of these States by the excessive number of very small banks. "No community can possibly provide adequate resources, competent officers, and experienced directors for one bank to every 750 of its inhabitants as in North Dakota, or to 1,400 as in Iowa. And the situation in these States was not exceptional; on the contrary, an excessive number of banks have been established throughout those sections of the country that are mainly devoted to agriculture."

New Jersey's total immunity from bank failures in the past nine years is probably due in part to the fact that New Jersey's banking authorities are not over-ready to grant charters to new banks, unless there is real evidence that a new bank is needed, and that the Federal Comptroller is influenced by the State policy when granting national bank charters in that State.

The situation was complicated further for many small country banks by the withdrawal of an important source of revenue which they had formerly enjoyed, namely, the making of exchange charges on checks drawn against them for which remittance was expected in another place. Their checks, when presented over their counters, they paid at par. But when they were expected to make remittance to other places, they very generally made a liberal (and often excessive) "exchange charge," which was an important source of revenue. The Federal reserve system of par collection of checks has largely wiped out this source of revenue for very small banks.

Again, the institutions chartered by the Federal Government for making mortgage loans reduced an important source of revenue which many of these small banks had, in acting as intermediary in the making of mortgage loans.

At the same time these Federal farm loan agencies brought into the agricultural communities an unaccustomed volume of funds which were deposited with the local banks at high rates of interest, and which the local banker felt obliged to

Hearings, Vol. I, pt. 4, p. 457.
 Recent Economic Changes, Vol. II, p. 695.

reemploy at high rates of interest. Many a small-town banker, who was a good banker when his loanable resources were somewhat less than the borrowing demands of his good customers, and who could make good loans when he could discriminate among competing borrowers, found himself to be a very poor banker when he faced the unaccustomed problem of employing surplus funds. He was not trained for that.

It may be added that the well-meant efforts of the Federal Government to improve the condition of agriculture by multiplying the facilities of agricultural credit have had as their main result a great and excessive increase in the mortgage debt of agriculture, without a commensurate increase in the productiveness of agriculture, and with a consequent narrowing of the margin of free income and the percentage margin of equity in land, on the basis of which the farmer could

ask his banker for credit.

á

ĕ

3 8

Very especially has the position of the very small bank in villages been weakened by the coming of hard roads and automobiles, which, in many places, have largely destroyed the usefulness of the small local village, doing away with the local merchant, the local mill, and the local church, as well as the local banker, making it possible for the people to do their business and seek their social life in the county seat and nearby larger cities. Industrial consolidations, moreover, even where leaving local factories in small places, have very often taken away the banking business which the local factory gave to the local banker, and concentrated it in larger places. The growth of chain stores has had a similar effect. The very small bank has had a difficult time in recent years, and the marvelous thing is, not that so many have gone under, but rather that such an enormous number have stood, and have even prospered, despite these adverse tendencies.

DIVERSIFICATION OF RESOURCES THROUGH CORRESPONDENT BANKS

One cause assigned for the failures of many small banks is that they have been unable to diversify their resources because located in a 1-crop district, whereas a great bank with branches stretching over a whole Federal-reserve district could accomplish this diversification. It is true that many small banks have failed through lack of diversification of their resources, but it is also true that the majority of small banks in the same communities have survived because they have diversified their resources. They have accomplished this diversification by means of their correspondent relations with great banks in great cities. They have refrained from putting all of their resources into local loans, and have placed part of them, through their correspondent bank, into open market commercial paper, or readily marketable bonds, or call loans on the stock exchange, or acceptances, and deposit balances with their correspondent bank to build up a "borrowing equity." When times of stress have come, they have thus had secondary reserves, and they have been able to borrow from their correspondent banks sums needed to tide them over seasonal needs and emergencies. Good banking and diversification of banking resources is perfectly possible for a small bank in a 1-crop community. We do not need branch banking either for the purpose of securing diversification or for the purpose of bringing about a seasonal flow of funds from region to region. The system of correspondent banking relations has accomplished this for many decades, and good bankers everywhere know how to do it.

THE REMEDIES

I see nothing in all of this to call for a radical change in Federal laws regarding branch banking. The problems do not extend throughout the United States. They are centered in particular States. The problems do not relate to institutions of sufficient size to be beyond the power of each State to deal with for itself.

Radical changes in the banking legislation of a good many States are undoubtedly indicated. The minimum capital required for banking in many States is far too small. There ought to be sweeping consolidation movements among the smallest banks in many States. Many villages which now have two or three struggling banks would be much better served by one strong bank State legislation giving the State banking authorities power to guide, and even to compel this in their discretion, would be very desirable in certain States.

A limited extension of branch banking by State law would probably help the situation in a good many States. The national bank act should be amended so as to permit National banks to do in this connection what the different States

allow their State banks to do.

County-wide branch banking, branch banking in groups of counties, even, in some cases, State-wide branch banking, or branch banking centering about three or four main cities of the State, ought, in certain States, to be permitted and encouraged. There may even be one or two cases where a State will feel itself so much in need of outside banking capital that it will welcome the branches of powerful banks whose head offices are in other States.

Mr. Platt, of the Federal Reserve Board, has made moderate proposals along the line of county-wide branch banking, having especially in mind the very small country banks, which deserve very careful study. Ambassador Charles G. Dawes. when Comptroller of the Currency, in his annual report for the year 1898, recommended that branch banking be authorized in communities of less than two thousand inhabitants, since many of such communities were not able to support independent banks. Many such villages would undoubtedly be better served by inexpensive offices of strong banks, whose head offices are in nearby county seats than they are by their local independent unit banks which are not making profits and which must charge very high rates for the limited local loans they are able to make.

It is probable that legislation along this line, authorizing banks in larger cities to establish branches in outside communities with ten thousand or less inhabitants. or even with five thousand or less, would accomplish virtually everything, with respect to the prevention of small bank failures, that branch banking could in any case accomplish. At the same time it would avoid the grave evils that would come from the sudden revolution in our general banking system, and from the destruction of local financial independence, that the larger program now under consideration would involve.

st dis CO

Further, such a limitation would concentrate upon the communities most in need of help the attention of the bankers who are in favor of such developments, but who would be hunting bigger game in larger cities if the whole field were thrown open. Such legislation ought to be drawn in such terms as will encourage the organizers of branch-bank systems to take over the existing banks, and to discourage the starting of new branch offices in places where such action would merely increase the difficulties of existing small banks. Permission to establish such new branches, competing with existing banks, ought not to be automatic, but should involve some "certificate of convenience and necessity," to be issued by the authorities only after hearings.

But the problem differs greatly in different States. The different State bankers' associations should take it up and they should carry their proposed legislation to their State capitals, rather than to Washington. The one piece of legislation needed at Washington would seem to be that the national banks be allowed to have branches in a given State on the same terms that the State banks and trust

companies in that State are allowed to have them.

STATE LINES AND LOCAL FINANCIAL INDEPENDENCE

We are moving much too fast and too far in the direction of centralization. an evil arises, we rush to Washington for a remedy which, even if a good remedy for part of the country, is often ill adapted to the special needs of other parts of the country, and which, if a bad remedy, makes another nationwide evil. It is far better that we should use the machinery of our 48 States for social and economic experiments. If they work well, other States may adopt them. If they work well in part, other States may modify them in adopting them. If the new measures are good for some States and bad for others, those that find them good may use them. If the remedies are definitely bad, as guaranty of bank deposits proved to be, we develop the fact by a relatively small scale experiment, and the country as a whole is saved. There is, for example, little danger of Federal legislation for the guaranty of bank deposits, but I should not feel so sure of this if experience in Oklahoma and Nebraska and elsewhere had not already given us an object lesson upon the point.

I should strongly oppose Federal legislation which would force upon a State which was unwilling to accept it the branch-bank system, and, above all, Federal legislation which would compel a State to admit the branch of a bank chartered in another State against its will and against its laws. Specialiats in every field, eager to bring about widespread adoption of their remedies and reforms, are continually going to Congress to secure congressional legislation covering matters which are properly matters of State concern. Congress is continually giving attention to matters which ought to be handled piecemeal among the 48 States. Congress is overburdened with measures of this kind, and Washington has grown

topheavy with bureaus for administering such legislation.

We need the States. They are a vital part of our political machinery. And We must be content to see them make mistakes occasionally, as part of the price which we must pay for a proper balance between centralization and local self-government. If the choice were between an infallible Congress and fallible State legislatures, the issue might not be so clear, but Congress can also make mistakes, and such mistakes are more serious than those made in a single State. banker is not merely a banker. He is also, and first of all, a citizen. As a citizen, he may be permitted to attach a higher importance to the preservation of the fundamentals of our Federal system of government than to technical points in banking legislation.

LOCAL INDEPENDENCE AND CORRESPONDENT RELATIONS

I believe in the general system of local financial independence. I am opposed to having the bankers of one city dominate the banking of another city. believe that this country ought to have in every city several strong, independent financial institutions interested in the local community, and dealing as principals with the banks of other cities, rather than acting merely as their agents. I believe that our system of correspondent banks gives us, in general, all the financial interdependence that we need, and that the services which the correspondent bank in a great city performs for the banker in a smaller place make it unnecessary for him to have the elaborate facilities which a great bank has. The unit-banking system has gone to extremes with us in many States. There are too many very small banks. But correcting this excess of the system will leave Our American banking system, I believe, far better adapted to our needs than the European system of a few great banks with a multitude of branches, with all power centered in a few great financial centers.⁵

PARITY OF STATE AND NATIONAL BANKS

I can not sympathize with the view that it is necessary to pass unsound legislation for the purpose of giving such supremacy to the national banking system over the State banking systems that banks would be compelled to drop their State charters and take out national charters. It is now well demonstrated that the Federal reserve system does not depend for its success and growth upon the growth of the national banking system. Virtually all of the great State banks are members of the Federal reserve system. Seventy-five per cent of the commercial banks of the country, measured in volume of loans and investments, are members of the Federal reserve system. The Federal reserve system can at any time dominate the money market, which is dependent on Federal reserve credit for a high percentage of its cash reserves. Through the Federal reserve system, Federal supervision extends to the great bulk of the banking resources of the country at present.

The original purpose of the national banking system was to supply a uniform bank note issue throughout the country, and to make a market for the Civil War Government bond issues. With the Federal reserve act and the Federal reserve note, the national bank note has become a matter of relatively minor importance. There is no need for artificial support of the Government bond market. The national banking system is important, and it is desirable to maintain it. It has helped set good banking standards throughout the country. The Federal comptroller's supervision and inspection of banks is better than State supervision and inspection of banks in many States—not in all. But the State banking systems are also good systems, by and large. It is thoroughly undesirable that great issues of banking policy should be settled as a mere incident to a competition

between the State and national banking systems.

A GRAVE PRACTICAL DANGER

The adoption of the proposed Federal legislation authorizing national banks to establish branches throughout great "trade areas" which may be as wide as Federal reserve districts or even, in certain cases, wider, would be like the firing of the starter's pistol at a race. It would initiate one of the fiercest competitive struggles the country has ever seen among the powerful banks in each of the districts for supremacy throughout the district. Many hasty and ill considered consolidations would be put through. Efficiency would suffer. A great read-lustment in the relations of banks and businesses would be necessary. It would

The Chase Economic Bulletin, Vol. IX, No. 5, Bank Consolidations in a Period of Speculation, discusses the comparative merits of the American and European systems.

mean competitive bidding for the stocks of the banks which would be absorbed into the great branch-bank systems. It would mean an orgy of speculation in bank stocks. It would bring into play the vigorous activity of promoters, not necessarily bankers or men with capacity in bank administration, who would buy up or obtain options upon large numbers of banks with a view to selling them to the competing great banks.

Those of us who believe that the primary business of a banker is banking rather than bank-stock jobbing would not welcome a situation of this sort. Within recent months a great many conservative bankers have been saying that they would dislike very much a competition of this sort, that they hope it will not be forced upon them, but that if it is forced upon them, they will, of course, act to protect their positions. I should think that legislative restraint, rather than legislative encouragement, would be called for by tendencies like these.

Mr. Anderson. Let me say that I speak as an individual citizen and as a professional economist. What I say will have no reference to what Mr. Wiggin said yesterday. I had just a word with him before he left. I asked him if he had any suggestions to make regarding my testimony to-day, knowing very well what he would say, and what he said was, "Simply tell them what you think without any reference to what I said."

In 1918 I was asked, while I was still a professor at Harvard University, by the Carnegie Endowment for International Peace, to make a study of the effects of the war on money, credit and banking in France and the United States; a study published by the Carnegie Endowment for International Peace in 1919, The Effects of the War on Money, Credit and Banking in France and the United States.

In that book, written 12 years ago and published 11 years ago based on my study of branch banking in France primarily, I expressed the same opinions regarding the undesirability of branch banking in this country that I shall express before you to-day.

this country that I shall express before you to-day.

Mr. Goldsborough. That was before you were connected with any
New York financial institution?

Mr. Anderson. It was written before I was connected with a New York financial institution. I went to the National Bank of Commerce in the autumn of 1918. The preface to the book, when I turned the manuscript over to the Carnegie Endowment, was dated November, 1918, shortly after I went to the Bank of Commerce, but the bank had nothing to do with it. The book was not published until 1919. The Carnegie Endowment was slow in publishing. I am sorry I have not a copy of that book here. It is out of print and I have only my personal copy. It will be in the Library of Congress and the Carnegie Endowment library in the city and will be available to the committee.

The Chairman. Would you care to make any reference to it, just briefly?

Mr. Anderson. I want to say some things about foreign branch banking, because I have had occasion to study branch banking in a number of foreign countries, without finding any foreign branch banking system that I want to recommend to the United States. There are many good systems, many systems well adapted to the foreign countries. Almost any system will work well if your bankers are used to it, if the laws of the land are adjusted to it, if your bankers are able men, and business habits are adjusted to it.

No system is going to work well if you suddenly transplant it from one place to another. Banking is a part of the organic life of the community and it has got to fit the rest of the scheme.

I want to speak about several possibilities. In France before the war, branch banking meant very largely that the branch offices out

side of Paris were bond houses, collecting the deposits of people and then when the deposits got up to rather a good size, the central office would put out a bond issue or a security issue and the people would take those. They lent very little to the local communities. They collected funds from local communities for the purchase of securities.

The situation has changed a good deal in France since the war. Many of the statements made in this study would not be true of France to-day. The securities that they sold then were not very good securities as it turned out; Russian loans, Bulgarian loans, Turkish loans. Quite a tragedy for France came out of that.

Branch banking can work that way; instead of putting money into

the local communities, it can take it out.

In Canada they tell me it works the other way, and that the maritime provinces, the eastern provinces complain that too much money is taken away from the east to put into the west. There is no general rule about it.

But the assumption that branch banking will bring more money to the local community is not borne out by the facts of foreign branch

banking. It has done so and it has not done so.

Now, I want to say something about another problem that grows out of branch banking away from the head office, away from the city of the head office, or branch banking systems in general.

How are you going to adapt the banking facilities to the needs of

the community?

Mr. Goldsborough. Before you go into that, have you any information you can give us of how it works in England?

Mr. Anderson. I am coming to that with reference to this point.

Mr. Goldsborough. I beg your pardon.

Mr. Anderson. How are you going to adapt the number of offices, the number of paying tellers' windows, and so forth, the facilities, to

the needs of the community?

When the thing is done locally it is at least locally studied and decisions made locally. Sometimes they overdo it. They have overdone it in North Dakota and they have overdone it in Iowa and a great many rural communities in this country; too many little banks where fewer and bigger banks would have been more useful and would have survived. But I think we have done it better in this country, judging it from an American angle, than many foreign countries have done it.

In Holland there was, in 1919–20, competition between two great banking institutions that filled the villages with branches, unprofitable branches. They had to pull up, close them out, in a good many

cases.

Here is the picture in England. In London, you go about the streets; there is a bank office on every corner, almost. You go into a branch. You are often the only man there, the only customer there. You go in to cash a check under a letter of credit and the officer of the bank has got lots of time to talk to you. He is glad to see you. He is a little bored. I do not mean that that is true of all of them, but of a lot of them. I think they have too many there. I think it is not profitable. I think it involves needless overhead.

What about it in the provinces? I will give you some illustrations

In the provinces.

For your records, Mr. Chairman, I will give you an unsatisfactory document as to form, but fairly satisfactory as to the information; Having to prepare this in great haste, I simply had sheets torn out of the British Bankers Almanac and Year Book (published by Thomas Skinner & Co., London), giving the locations of the banks throughout Great Britain and Ireland. Then I had some clerks get me the popu. lations of the cities and towns as far as possible. They worked rapidly and their population figures may not be exactly right in some places. The population figures are written on the margin and in

I have not gone through it all myself, but here are some samples. Abbots Langley, a town of 3,400 people. Here are the complete banking accommodations of Abbots Langley: Barclays Bank, (Ltd.) open on Thursday, Lloyds Bank (Ltd.), open on Thursday.

are the banking accommodations of this town of 3,400 people.

Mr. Strong. Open one day in the week?

Mr. Anderson. One day in the week; yes, sir.

Mr. Strong. If anybody wants to do any business with the bank on any other day, he finds on the door, "We have gone fishing."

Mr. Anderson. They have not gone fishing.

Mr. Strong. But there are no accommodations?

Mr. Anderson. They have gone to another town. There is a crew of bankers. They work six days in the week; sometimes in one town, sometimes in another town.

Mr. Strong. They go around from one town to the other?

Mr. Anderson. Yes, sir. Mr. Strong. If a man wants banking accommodations, he waits until they get back?

Mr. Anderson. Yes. Mr. Strong. Fine!

Mr. Anderson. Almondsbury; this is in Gloucester. Twenty-two hundred people. The National Provincial Bank is open on Friday.

Abertillery, 22,000 people. That is what the figures on my margin show and I raise a question as to whether that figure is right, because it looks incredible. I should like to have your committee, if you are interested in this, have an independent check made of these population figures. They were hastily got by clerks, working under time pressure. [A later checking with Hammond's World Atlas shows the population of Abertillery to be 38,805. It is in Monmouthshire, England, near the border of Wales.]

Mr. Sieberling. I would like to have you give us the proximity to larger towns where they can get banking facilities all the time.

Anstrey, 2,600 people; National Provincial and Westminster Banks, Monday, Wednesday, and Friday. It has good facilities, three days a week.

Arlesey, 2,300 people; Barclays on Thursday.

Bradninch, 2,000 people; Lloyds on Thursday, Midland on Thursday.

Here is an Irish town, Carrick Fergus, 4,208 people; Tuesdays and

fair days, the Belfast Banking Co.

Chalford, 2,980 people; Lloyds on Thursday.

Chasetown, 5,188; Midland on Tuesday, Thursday, and Saturday. I have just gone down through my "C's." I will not go through the alphabet with you.

Mr. STRONG. That will be in the record?

Mr. Anderson. Here is the alphabetical list, which I have already submitted for the record, with the towns of England, Ireland, and

Scotland, with the population indicated in some cases.

Before I leave that, let me say another thing. Here are some very little places that have something. Here is Allonby, 450; the Midland Bank (Ltd.), Tuesday, October to June, and Tuesday and Thursday, July to September.

There are some very small ones that have something that probably would not have anything if it were not for the branch banking system.

I think we may learn something from that.

I think that branch banking perhaps centered about a county seat, with little offices in small places that could not afford independent

banks, is worth studying.

Mr. Strong. But the main benefit there would be those little window stations, to collect the accumulations of the people and take them to the main bank. They could not do much of any other kind of banking business for the people.

Mr. Anderson. They make loans there.

Mr. Strong. But a man who wanted to make a loan would have

to wait until the next week or the next season.

Mr. Anderson. Well, an Englishman can do that. An Englishman works methodically and looks ahead and plans a long time and probably talks over the question whether he wants that loan, for a month before he applies for it. Our rapid-fire methods they do not use.

Mr. Strong. Anybody in this country who wants to borrow money for a specific purpose does not want to wait until next week or next month to know whether or not he can get the accommodation.

Mr. Anderson. I do not question the goodness of this system for

England. I ask you if you want it here; that is all.

In Germany, at the present moment, as a result of the merger of two great banks with nation-wide branches—every community practically in Germany is being affected—they are closing down, consolidating these branches, reducing the number. It is making a difference all over Germany. It is making merchants shift their banking connections all over Germany. Customers are changing

connections all over Germany. Customers are changing.

The effects of a merger in New York are in New York, in the institutions affected. The effects of a merger, if you have a great branch banking system, run all over the country. Anything of that

sort has wide ramifications.

I believe in the banking profession from a good many points of view. I have known bankers in many countries. I have known them in many parts of the United States. The banker, by virtue of his education in his business, the education that comes just from the work he does, tends to take a broader point of view than the man in most other lines of business, not because he is a better man, but just because his work educates him. He has got to look at all the interests in the community. Everybody deals with him. His prosperity depends upon the prosperity of the community as a whole. He does not want feverish development here at the expense of some other part of the situation. He gets to be a very good adviser. As he talks with people and customers come in and tell him things and talk over things with him, he gets a generalized picture of business, not knowing as much about business A as the man in business A knows, but knowing the philosophy of business. A man in the textile trade comes in who has a problem; well, somebody else in steel had a similar problem and the banker knows about that, knows how it was solved and he has an idea to pass over to the textile man.

I do not want to see good bankers disappear from the smaller communities. I think that it is a good thing to have strong, trained, independent bankers, interested in the local community, stay in the local community. As I have traveled about meeting bankers in this country, meeting bankers in Europe—there are extraordinarily able bankers in the financial centers of Europe, but you go into the branches away from the head office, and you do not find bankers of the caliber that you find in cities of the same size in the United States, where they are independent men handling their problems as masters

of their own banks.

I believe that the country would lose a very important influence making for good business, for initiative, for business education, not right away but in the course of time, if we change from the general system of unit banking to the general system of branch banking away from the city of your head office.

Mr. Chairman, I do no twant to take very much time in making my statement. I would rather have the committee have all the time it wants to ask questions. May I ask how many members of the committee have read this speech that I made in North Carolina?

The CHAIRMAN. I think a number of them have seen it.

Mr. Anderson. Perhaps I had better make a summary of some of the main points. For the benefit of my friend, Mr. Seiberling—

in

N

V

n

8j

r

Mr. Brand. I think he has read your speech. He stepped out

just for a moment.

Mr. Anderson. He has evidently read it. He raised the question about my first heading, "A Revolutionary Proposal." That is a short way of saying, "A proposal of fundamental change." I did

not mean it as an epithet.

I have a great admiration for the comptroller, a great admiration and affection for Governor Young. I have not known the comptroller long; I had not had the pleasure of meeting him personally until yesterday. But my feeling about the thing is this: The governor, the comptroller, and others who have presented the proposal for branch banking here have done it sincerely, based on knowledge, based on study, in the interests of the country.

I think that I have some ideas which also in the interest of the

country ought to be presented on the other side.

The question of personal opposition is not there at all. They are our friends; we are their friends. But in the controversy, in the presentation by fair men of opposing points of view, the truth comes out, and it is just in that spirit that I have taken a citizen's right to oppose their position.

Mr. Seiberling. Were you explaining, while I was away, your

statement with reference to a revolutionary change?

Mr. Anderson. I am going to give it a new phrase that I think you will not object to. I will withdraw "revolutionary proposal." I will call it, "A proposal of fundamental change," and I will make the same point with reference to it, that a proposal of fundamental change calls for much stronger argument that a proposal for minor amendment, and it ought to be much more carefully considered.

I was just explaining that I had no disposition to say anything offensive to my good friend, Governor Young, or to the comptroller,

for whom I have great admiration.

I make the point here that the existing movement toward group banking and branch banking leaves out the little banks, the microscopic bank almost, the bank of \$300,000 deposits on the average, which has been failing. That is the average size of the failed banks in the last nine years. These group banking and branch banking plans handled by able and intelligent bankers, who must take care of their stockholders' and depositors' money, call for good banks.

Mr. Busby. You said something about the average size. Is that

from the standpoint of deposits or number?

Mr. Anderson. Deposits. The average size was \$300,000 of deposits.

Mr. Busby. You were not speaking from the standpoint of the

number of banks that failed?

Mr. Anderson. The figure of failed banks is about 5,000, and the deposits of those banks is \$1,500,000,000, and the average is \$300,000. The average size of banks going into the group and chain systems is

very much larger.

These figures I have taken from your own record. I want to say, Mr. Chairman, you are doing an admirable service here in publishing this record and the facts that the comptroller presented and the facts that Governor Young presented, especially, are valuable, significant facts.

Mr. Seiberling. I understood that you were about to say when you were interrupted that the chain groups only wanted good banks.

Mr. Anderson. In general.

Mr. Seiberling. You made that statement, did you not?

Mr. Anderson. In general. As good bankers they are not going to pick out a failing bank that is going to cost them more money than it is worth. It might happen in individual cases that something would be done along that line. In a great emergency, good bankers will sacrifice money to save the general situation.

We all pitched in, you may remember in, in the rescue party for the Northwest that Mr. Jaffray conducted, put up money that we did not know whether we would get back or not, to meet an emergency situation. But that is not usual banking practice and no banker responsible to his stockholders, responsible to his depositors, has any

right to make a move that is going to cost his bank money, except in

some such emergency.

As to the size of the towns where these failed banks were situated, 40 per cent were in towns of less than 500 people; 80 per cent in towns of 2,500 people or less; 92 per cent in places having less than 10,000; There were no failures at all of banks having \$2,000,000 or more of capital. There were only four failures among banks having over \$1,000,000 of capital. And I conclude that it may be said that for cities of 10,000 or more people and that for banks of \$100,000 or more, there has been no problem of sufficient magnitude to justify extraordinary concern or to call for more than local attention.

The causes of these failures I do not find in things that have any particular concern with the question of branch banking on the one th

hand or unit banking on the other.

The first and foremost cause was the great boom of agricultural prices and land values before 1920, the collapse of agricultural prices and land values following 1920, and the adverse conditions in agriculture that have since continued.

The second great cause is real-estate speculation in the period since 1920 in certain important sections of the country, notably

Florida and some adjacent States.

Mr. Strong. Would you mind an interruption there? The bank commissioner of the State of Oklahoma in a statement before the committee presented this condition. He said that a very small per cent of the banks organized since 1920 in the rural communities have failed, giving evidence of the fact that the failures were caused by the hangover of frozen loans during the war and the boom and the deflation period that followed.

Mr. Anderson. Yes, sir.

The CHAIRMAN. Since you speak of bank superintendents, I would like to introduce Mr. Nelson, the auditor of the State of Illinois, who is present with the committee this morning. Mr. Nelson is the superintendent of banks of the State of Illinois who is visiting

Washington and has just dropped in at our hearings.
Will you proceed, Mr. Anderson?
Mr. Anderson. I have figures here taken from your records show. ing the geographical distribution of these failures that bears out this proposition. During that same period all of New England had only 26 failures, that is, during that 9-year period. New York had only 12 failures and Ohio only 36. New Jersey had none at all; not \$ 10.00 lb. failure. New Jersey was not lacking, by the way, in some agricultural difficulties. Monmouth County had a bad period with her potatoes and there were certain other sections where small country banks had to struggle along. But not one went under.

What about branch banking during that same period, and exposed to these same causes? You had in Georgia, and running into Florida, as I remember, a chain, which went down, which would have gone down if it had been a group, which would have gone down if it had

been a branch banking system.

In Canada, the Home Bank, and the Merchants Bank, with 400 branches, went under from these same causes.

In Denmark, a great bank with branches widespread, went under The Banque Industrielle de Chine in China collapsed with its bank notes out, bringing disaster all over that great country.

The Banca di Sconto in Italy, with a great head office and big branches in the big cities, with little branches in the smaller cities, all went down together at one time. That is a fearful thing.

Mr. FENN. What about South Africa? Mr. Anderson. I have not the facts there.

In Japan, they held it off. I am going to make another point about Japan and about banking concentration. In Japan, in 1919, a crisis started. Silks broke violently. A crisis started. A few great banks and the Government and a few great industries got together. The thing was so concentrated that they could choke the crisis off, just held it without getting in liquidation, without getting a break in commodity prices on a great scale. They carried it over, unliquidated, frozen for seven years. For a time, they even paid out wages to idle labor, borrowed at the banks to get some money for it. They paid out dividends out of corporate reserves when the corporations were not earning any money, trying to hold it, trying to prevent the crisis. Then in 1927, after enduring seven years of stagnation to avert losses on one year's inventory, a greater and more disastrous crash came and not only did the industries go down, but some great banks went down; great banks with branches, gigantic systems affecting the whole country.

In the meanwhile, we in this country with 25,000 banks, when the crisis hit us in 1920, could not stop it. Each bank had to meet its Obligations at the clearing house every day. We could not hold frozen positions. We had to liquidate. Calling on the Federal reserve banks, we could steady it, make it steady, keep it from turning into a Panic, but a liquidation, a readjustment, we had to have. And so we cleaned up the weak spots, got prices down and got costs down. Cases of necessary failures, we took care of. There were no unnecessary failures. We got clean and got ready for the net upward move, and by the third quarter of 1921 business began to improve in this country. The year 1922 was a good strong year. I like the flexibility of our competitive American system. I do not want to see banking concentration or any kind of concentration go so far that a few men can get together and say, as these bankers and government officials In Japan did, in the interest of the country, believing that it was a good thing to do, "Let us stop the liquidation; let us hold it."

No; I do not want anybody to be powerful enough to do that. want the automatic economic forces to work. I want the competitive play of the markets to work so that readjustments will come, as they have to come, and we will get through with them and start up again.

Austria had a break last year, a great branch banking difficulty growing out of the same deferred causes, trying to carry things over. If they had been separate banks, some of them would have gone Inder and some of them would have survived years ago. As it was, It all hung together until it all went down.

Now, as to remedies. I see nothing in this situation regarding banking failures that we have been having, to call for radical changes in iaws regarding branch banking. The problems do not extend throughout the United States. They are centered in particular They do not relate to institutions of such size as to be beyond the power of the States to deal with for themselves.

think the main legislation should be State legislation; that the chief legislation which would be called for here would be such modification of the laws as to let the national banks in a given State do what the State banks may do in the matter of branch banking, in the

interests of parity between State and National banks.

That is a conclusion, Mr. McFadden, that I have come to rather reluctantly, because I liked your idea about it when you were dealing with the matter two or three years ago. But I am inclined to think you have to make a further concession of that point in the interest of parity between State and national banks. And maybe you will not have to go that far; maybe something less than that would meet the situation.

The CHAIRMAN. You like the confining of the operation to State

put

Wher

Wha

lines rather than trade areas?

Mr. Anderson. The State line, by all means. I should strongly oppose forcing upon an American State that was opposed to branch banking, by Federal law, a branch of an outside institution. And I think, Mr. Chairman, that the specialist is always in danger of forgetting that he is a citizen and in his zeal to do a thing that seems good from the standpoint say of banking or from the standpoint say of health or from the standpoint of this or that, he is too cheerfully willing to destroy the Federal system of Government of the United States. I believe in the States. I believe that Washington already has too many things under its control; that it makes too many decisions for the country. I believe that problems differ in different parts of the country and ought to be handled locally as far as possible.

I find on the other side of the water—in England, for example—a movement toward devolution, that Wales and England and Scotland separately may do more things for themselves rather than have them all done by general law. Centralization has gone too far in many places and I do not want to see the State destroyed or the

State's power destroyed in these matters.

I like very much some of the moderate ideas of Mr. Platt, of the Federal Reserve Board, with reference to local branch banking, in order to give something to the little village that can not afford a real bank. A bank in the county seat, a good bank in a good county seat, with small inexpensive offices out in the villages might serve them much better than they can be served by independent banks in the villages.

Sometimes these little banks are awfully good. I have a prize, in a tiny village in Missouri, which is about 30 miles from the railroad. I am a Missourian and for my sins I own some land down near there

that I have had for about 21 years and can not sell.

Mr. Seiberling. How long are you going to keep it?

Mr. Anderson. I wish I knew, sir. I will sell it to you very cheaply, if you will take it. But here is a bank, capital \$10,000, surplus \$3,000, undivided profits \$784 and 6 bits, deposits \$78,000. It is a good bank. It has an able man running it, and he is mighty useful in that little place. There are about 250 people. He is remote from the railroads, and the automobile roads are not good through there. In general, however, a village of that size can not support a bank. It might have an office open Tuesdays and Thursdays to advantage, might it not, from the near-by county seat? That is better than no bank at all.

Now, legislation along this line, State legislation, simply supplementary legislation here, such as to enable the national banks to

the same thing, authorizing banks in the larger cities to establish branches in outside communities with 10,000 or less inhabitants, or even 5,000 or less inhabitants, would accomplish virtually everything with respect to the prevention of small-bank failures that branch banking could in any case accomplish. Furthermore, such a limitation would concentrate upon the communities most in need of it the attention of the bankers who are in favor of such developments but who would be hunting bigger game in larger cities if the whole field were thrown open.

I said something at the end about a very grave practical danger that I shoul apprehend if the legislation that has been proposed here

were put through.

If you authorize banks of the country to establish branches throughout great districts, wide as Federal reserve districts, or wider—

Mr. STRONG. Trade areas?

Mr. Anderson. I am not talking about trade areas. I have not got a definition here yet. It is clear that it can be for a big city bigger than the Federal reserve district in some cases, and if it is going to be an economic trade area, then for New York it is going to be a very big district indeed and for Chicago it is going to be a very big district indeed, with overlapping. And St. Louis had a big trade area. You can not limit it to the Federal reserve district if you are talking economics. If you are talking about the natural course of trade, it runs wide. Even if it is just Federal reserve district wide, you are going to start a competition among the big banks, buying up other banks; all over that I should shudder at. I do not want to see it. I do not want to see that orgy of bank-stock speculation. I do not want to see promoters running in there to get options on banks to sell to big banks.

do not want a revolutionary change. I want evolutionary changes. I want an experiment here, an experiment there. We are adopting things generally to our present system. If we are going to change it, it should grow, it should be modified. But let us do it gradually. Let us not start a thing in Washington sweeping all over the country that will make this revolutionary change or this funda-

mental change.

think I will not talk longer, Mr. Chairman.

The Chairman. The committee will not go into executive session a few moments, and we will resume this hearing a bit later.

(Whereupon the committee went into executive session.)

(The hearing was resumed, following the executive session, Hon. James G. Strong, presiding.)

Mr. Strong. You may proceed, Mr. Anderson.

Mr. Anderson. I want to make one statement, in addition to

what I have said, if you will permit me.

There are exceptions to the general statement I made that the groups are not taking an interest in the small banks. In one case there was a bank of \$410,000 deposits taken into a group. There may be others; the average size is very much larger.

I am informed also that one of the groups in the Northwest, although it started out taking in only the strong banks, has lately but four or five million dollars of new money into some communities where the banking situation was very bad, to give them banks.

That is exceptional, but I want to put into the record the fact that

the exceptions really exist.

Mr. Strong. Doctor Anderson is now ready to answer questions. Heretofore we have proceeded to permit the members to cross, examine a witness according to seniority. Some of us have taken so long a time in our cross-examination that when we got down to the end of the table some members have been deprived of their opportunity to ask questions.

I want to suggest that in the first round of questions we limit each member to five minutes; and if that has the approval of the committee

we will proceed in that way.

Mr. Strong. Doctor Anderson, your statement I think has been very valuable to the committee in many ways. One of them was in showing to this committee the fact that in countries that have long had established branch banking the small towns have finally been reduced to the banking privileges of perhaps one day a week.

Mr. Anderson. I would not generalize from England. These are

the facts about England.

Mr. Strong. Is not that because of the practical elimination of the middle-class people in England?

Mr. Anderson. I would not say so.

Mr. Strong. There is a wealthy class and then the employees in England. Individual business has pretty well been eliminated.

Mr. Anderson. There is a large employee class and a lot of shop-keepers.

Mr. Strong. Small ones?

Mr. Anderson. Yes.

Mr. Strong. We are starting upon a system in this country of mergers, mass production, and chain stores of all kinds, clothing stores, grocery stores, drug stores, and cigar stores; and if we adopt the system of branch banking it means the elimination of the small bankmaking it simply a teller's window, with that responsibility only, and the head bank will be in some other place, and tending to further eliminate the individual man in business.

Mr. Anderson. I think the local bank is more likely to help the smaller business man, to help the growth of the smaller communities

than a branch would, and yet there are exceptions to that.

Mr. Strong. Certainly.

Mr. Anderson. In some countries they tell me the thing has often

worked the other way.

Mr. Strong. In small-sized cities and small communities the privately owned bank, owned by the community, is generally operated, practically always operated, in the interests of the community. Is not that banker generally the backbone of that small community.

Mr. Anderson. I believe he is very important.

Mr. Strong. The Comptroller of the Currency in suggesting trade areas for branch banking was not able at that time to give us a picture of what the trade areas would be when applied to the United States.

but he said they were working it out.

When the governor of the Federal reserve system was before us he stated, I think, that they were working out a plan that probably would embrace about 35 trade areas in the United States, which would mean not necessarily following the lines of the Federal reserve districts, some of them, perhaps, overlapping.

Then the governor of the Federal Reserve Board suggested that he thought within 50 years we would have nation-wide branch banking.

I did not cross-examine him as to what his conclusions were, but to my mind if we are now going to go from branch banking controlled by cities to trade areas of 35 units in this immense country, some of them overlapping, undoubtedly that overlapping will enforce an enlargement of the trade areas, which will finally mean nation-wide branch banking. Would not that be your conclusion?

Mr. Anderson. I think if you sanction the movement it might go

very much farther.

Mr. Strong. If we are to expand branch banking to 35 trade areas In the United States, which you feel and I feel will gradually become reduced to a lesser number and finally produce nation-wide banks, these branch banks and groups would naturally be controlled in the larger moneyed centers.

Mr. Anderson. Yes.

Mr. Strong. They themselves would have a tendency toward combinations?

Mr. Anderson. A tendency to combination with the springing up of new banks. Perhaps you have noticed the growth of Mr. H. P. Howell's new bank in New York in the last three or four years. I am not sure that the growth of banks in the big cities has been out of line with the growth of customers in the big cities, great corporations,

Mr. Strong. I am putting that as a final conclusion. Then that would lead to a few great groups not only controlling the money but

the credit of the Nation.

Mr. Anderson. The tendency would be there.

Mr. Strong. Would not that put the entire Nation under the

domination and control of those groups?

Mr. Anderson. To the extent that competition was eliminated; yes. But if the groups remained numerous enough so they competed

vigourously, I think that would not be true.

Mr. Fenn. I did not have the opportunity to be here when you began your statement. In your long experience and your intimate experience, do you think the system of branch banking would be beneficial or detrimental to the Federal reserve system? Have you given that consideration?

Mr. Anderson. I had not given it special consideration. Offhand can not see how it would affect the Federal reserve system greatly if the branch banks are in the Federal reserve system. It works in

This system works along with central banking.

Mr. Fenn. And works well?

Mr. Anderson. The central bank can control the money market lust as well in Europe as it can here.

Mr. Fenn. I am speaking of the relationship of the member banks

to the Federal reserve system.

Would you extend the provisions of the McFadden Act in regard to branch banking; and if so, would it be beneficial or detrimental? Mr. Anderson. You mean allow the national banks to do what

the State banks do in a given State? My suggestion would be that the only legislation this committee heed to recommend so far as branch banking is concerned, would be that national banks may do in a given State what State banks and lrust companies may do in that State.

Mr. Fenn. In other words, you would extend the provisions of the McFadden Act?

Mr. Anderson. Under the McFadden Act they are limited to the large cities.

Mr. Fenn. You would extend the McFadden Act?

Mr. Anderson. I think it may be necessary. It is a conclusion I come to reluctantly, but it may be necessary in the interest of parity between the national system and the State systems to allow national banks to do in a given State what the State laws allow State banks to do.

Mr. Goldsborough. Doctor Anderson, I understand your view to be that even though you do not approve state-wide branch banking you think that in the interest of the national system as a system, it should be allowed the same branch-banking privileges as State banks are allowed?

Now, I think I am correct in saying that recently at least in two States laws have been passed which prevent any extension of branch banking in State banks.

The pressure which has done that, in my judgment, is the pressure of the national banks which were not allowed to indulge in branch banking in those States.

Would it not be better to allow the condition to remain as it is, so we would still have in the States which allow branch banking the pressure of the national banking system against branch banking in an endeavor to eliminate branch banking in States which now allow it, my thought being that if you have in a State not only state-wide branch banks of State banks, but state-wide branch banks of National banks it would almost take an economic revolution in the State to get rid of that system, however bad it might be found to be.

Mr. Anderson. You are raising a question which I do not feel very competent to answer. It is not a question of economics; it is a question of politics. It is a question of what is the best way to control the legislative policy of a State.

In general, I do not like to consider an argument of that kind; had rather have the case up for its merits as an economic question in the State, trusting to the good sense of the State to work it out.

I am not so absolutely sure that I am right about these matters not to be willing to see the State experiment along different lines if the good sense of that State wants to experiment along that line and to learn something.

Mr. Goldsborough. In a speech I made in the House some time ago I presented the argument that we should allow States like California, for instance, to work this thing out and find just what the final reaction was before we extended the national system.

But what I am afraid of is that if we extend the national system in States like California, for instance, branch banking among national banks would become so widespread it would develop itself, whether it is sound in principle or not, and that the best way to handle the matter is to attempt to stop branch banking in State banks rather than to extend branch banking in the National banks, provided we are right in principle that the unit bank is the better system for a country like ours.

Mr. Anderson. When you say "a country like ours," we have every variety of situation in this great country of ours. I am not sure that any one practice is best for the whole of 48 States.

Mr. Goldsborough. You do not think, then, that there is a basic principle involved. You do not think there is a principle which says it is better, even at the expense of what appears to be efficiency for the moment, for the communities in the country to develop as individual entities, so they will have their own institutions, their own banks, and their own businesses fostered by these banks?

Mr. Anderson. That is a principle which I believe in; but I

believe in some other principles which might oppose it.

I think you have a number of factors to take into account, and you have to work out an adjustment among the different factors. Suppose you have a State with only one city of any size, the rest being small communities, and they have not a great deal of banking capital anyway. Might it not be better centered about that one city in the State and have it aggregated there?

Mr. Goldsborough. If you could control it. But after it starts, can you control it? After a while does not the bank, get so much control over legislation that the system will develop itself and get out

of control? That is the difficulty I see.

Mr. Anderson. I do not believe in inevitable economic tendencies. I think that law is a powerful instrumentality that can change

Conomic tendencies.

Toward the end of the eighteenth century England and France both had immense concentration of land in a few hands. But England and France are widely different in that respect now. The land is widely broken up into very small holdings in France, while in England it remains as it was.

Mr. Goldsborough. But France had to have a terrible revolution

to arrive at that result.

Mr. Anderson. It did not need to have, Mr. Goldsborough. But it did have.

Mr. Anderson. France changed the law of inheritance. The English law gives all the land to the oldest son, while the French law provides for equal distribution among all the children. Within a century you had this immense change.

Mr. Goldsborough. So this change in France took place—Mr. Anderson (interposing). As the result of the revolution—Mr. Goldsborough. As the result of the revolution, of course.

Mr. Anderson. But the change could have taken place by simple

legislation in a democratic country.

I believe in democracy; I do not think democracy is powerless against capital or against economic interests of other kinds. I would rather see the States left with a good deal of freedom to experi-

ment, and make mistakes if they want to.
Mr. Goldsborough. I agree with that. But the question which arises in my mind is whether we ought to sacrifice a principle we believe in because it will be more expedient or more profitable for the national system to do so.

Mr. Anderson. I would hate to see such things settled just as a matter of competition between the States and the national system.

Mr. Goldsborough. That is your present position?

Mr. Anderson. Yes: I am making this as a reluctant concession. Maybe you do not need to go so far. It is a concession I am making the comptroller's views.

Two or three years ago, when the McFadden bill was up, I thought he had gone far enough. I am making this concession after reading the comptroller's testimony.

Mr. Goldsborogh. I want to state the condition in Caroline County, Md., which is typical of conditions throughout Maryland,

and as I understand it, pretty well throughout the East.

Caroline County has a population of about 18,000 and it has 9

banks. All those banks are prosperous.

The Hillsboro Bank was started in a place of 150 inhabitants in about 1909 with capital stock of \$12,000. That stock is now worth 7 to 1.

The Goldsboro Bank was started in a place of about 100 inhabitants in 1909, and that stock is now worth about 5 to 1, with \$12,000 capital;

We have found that having these local institutions scattered around the county has helped the inhabitants of the local communities a great deal and has secured a much better government for the county than when everything was centered in the county seat.

Mr. Strong. The same thing applies to the Government.

Mr. Anderson. What are your sources of income in the community? Mr. Goldsborough. Principally, general farming, truck farming and the canning industry.

Mr. Anderson. Have you some retired capitalists there who have

securities?

Mr. Goldsborough. No.

Mr. Anderson. I like to see the little bank survive in the little village. I have an affection for it.

Mr. Goldsborough. Is it not more than a question of sentiment?

Is there not a question of solidarity involved?

Mr. Anderson. I think it is good for the country to have them,

exactly.

In a lot of places they are being eliminated by the new economic developments and in those cases probably we had better have branch banks. If the banking business is dininishing we had better have one strong bank than a lot of weak ones. But if you have a good, strong situation there with several local banks, the more competition the better, if it is good competition.

Mr. Goldsborough. I was talking the situation over with the president of one of the leading banks on the eastern shore of Maryland the other day, and I said, "What would happen if some bank came from New York or Baltimore and offered your stockholders one and one-half for one of the real value of the stock?" He said, "They would sell." The unit bank would be wiped out whether it was good or bad.

There are a good many of us, and I am one of them, who feel that what Congress should do is to act as a restraining influence rather than a liberalizing one, certainly until we find what the secondary reaction is going to be in States like California and in these group systems.

It does seem to me that any encouragement on our part of the development of branches in States which already have that system would tend to go in the very direction which the unit banker, that is, the citizen who believes in unit banking does not approve of.

You still feel that we ought to let the national banks do what the

State banks are doing?

Mr. Anderson. It might not be necessary to go as far as to authorize state-wide branch banking, but I think there are some States where this system of rural branch banking, along the lines that Mr. Platt of the Federal Reserve Board favors, would still help the situation.

I am thinking of our friend from Georgia, Judge Brand, and of his

problem, for example.

You might say the national banks could go so far as to put branches into towns of five or ten thousand or less. Then that would not ex-

pose you to what you do not want.

Mr. Goldsborough. My experience of nearly 30 years in politics is that when you abandon a principle, if it is fundamental, pretty soon you lose control of the situation created by that abandonment. For instance, in connection with this matter we are discussing—when you control the credit of a community you control its political life and its business life; you control practically everything in it from an economic standpoint. You can not get away from it.

Mr. Anderson. I do not want to see banking monopoly any-

where: I want competition preserved.

Mr. Bushy. In regard to extending branch banking by national banks to States having a general branch banking system, do you not see that as an effort to correct what is admitted by you to be an evil situation by acceding to it?

Mr. Anderson. I do not think that is the comptroller's purpose.
Mr. Busby. If I understand you, you are against a national law extending branch banking to all the States?

Mr. Anderson. Yes, sir.

Mr. Bushy. If that is sound as a general principle, why would it not be sound as to the States that have a branch banking system,

Such as California?

Mr. Anderson. There are two principles involved here; one is whether with a Federal system like ours, with our system of States, with a Federal Government of limited powers, whether under that system the States have a right to say a great deal about what they want.

Mr. Busby, Yes.

Mr. Anderson. Now, then, here is a banking principle which

seems to conflict with that in some measure.

I am willing to concede to the States that want to do a thing I do not approve of, the right to do it, but I do not want the Federal Government, by law, to do the thing we do not want.

Mr. Bushy. You want to prevent them from doing that thing in

order to protect the national banking system in those States?

Mr. Anderson. Yes.

Mr. Bussy. Yet you will concede that it is an error for the State, as it would be an error for the National Government, to place branch

banking-

Mr. Anderson (interposing). No, sir; that would not necessarily follow. It might be the best thing for a State to establish, say, county-wide branch banking, or branch banking in groups of counties. I would even concede the possibility in some States that state-wide branch banking might be desirable.

branch banking might be desirable.

Mr. Busby. You understand that most of the laws enacted by

Congress apply to all States alike.

Mr. Anderson. Therefore, I do not want this act passed by Congress. Mr. Busby. That is the general policy that national legislation applies to the entire country alike.

Mr. Anderson. Exactly.

Mr. Busby. While to extend branch banking for national banks in States that provide branch banking systems, you would be willing to make that exception to the general method of enacting national legislation?

Mr. Anderson. I think Congress might be even wise in erecting a principle of national legislation that where you have to deal with

local matters, Congress would follow the State law.

Mr. Bushy. It strikes me you are conceding the point for the sake of expediency rather than carrying out your economic theory and standing on such questions on what you feel and know to be sound. That is my comment on your answer. Have you any reply to that?

Mr. Anderson. Yes, sir; and I would like to refer you to some

decisions of Mr. Justice Holmes.

Mr. Busby, I only have five minutes.

Mr. Anderson. Let me say that there are principles of economics and there are principles of constitutional law and there are principles of morality, there are principles of banking technique and you have to harmonize them all. You can not erect one and say this is the principle you have to take, if you want anything.

Mr. Busby. Whether involved in this or not.

Now, with regard to controlling established branch banking system. tems, or coordinating the systems of banks, what is your view with regard to the holding company, or the part it plays in that field just now? How are we going to get by its interest, if we are going to carry out the policy you have indicated?

Mr. Anderson. I have not said anything about that.

Mr. Bussy. I noticed you had not, but it seems to me as fruitful a field for legislation just now as the banking field. It is the thing that is absorbing the banking system throughout the country, by putting into effect its own uncontrolled and unmanageable plan in regard to banking, from one end of the country to the other.

Mr. Anderson. I am not enough of a lawyer to know what sort of legislation, if any, should be drawn with respect to that. there should be supervision; I believe in the general American practice of public supervision of banking institutions.

Mr. Busby. We have had instances where not only two, but a number of national banks were owned and controlled by holding companies, with not one share of the stock in the hands of individuals,

Is it not getting beyond our national banking system of control when a State-chartered institution comes in and takes control of all the stock and all the capital of the national banks that are chartered under the laws of the United States?

Mr. Anderson. There is nothing in that, as far as I know, that

violates the law.

Mr. Busby. That is our problem now, more than anything else with regard to banking, it seems to me.

Mr. Anderson. The comptroller is making some studies, is he not,

with respect to that?

Mr. Bussy. We have heard some views, and I thought maybe you had some additional ones.

Mr. Anderson. I have thought about it, but I had not thought it through, and I have not a definite suggestion to make with regard

o it.

rou

Mrs. Pratt. Doctor Anderson, in looking over your report again I notice you make the statement that many of those small banks failed because of a lack of diversification of their credits, while many others, because of diversification, continued to exist. Does it not come right down to this, in your opinion, that it is a lack of good management? You state in your report that banks have continued to operate because of their diversification of credits and because of the connections they have made by which they could exist, outside of their own State, and that it has been to their advantage to do that.

It is your opinion, is it not, that the small banks perhaps were founded with too small capital and were without good business management, and that it had been the result of their own mismanage-

ment and lack of foresight?

Mr. Anderson. Poor management in a difficult and unusual situation. There were a great many of those bankers who were good bankers in the days when they did not have quite enough money to lend and had to discriminate among their customers, and then came the great expansion of money, and the question of what should they do with their money. They tied up too much in local mortgages. That was the worst element; and when the crash came—

Mrs. Pratt (interposing). Do you not feel that because there were many of those banks some of them were bound to fail, no matter if

all of them had a diversity of credit?

Mr. Anderson. There are parts of the country where there were too many very small banks, and some places where there was one bank to six or seven hundred people, or one bank to 1,200 people, and it was not possible for them to get along. There were too many of them and they could not get adequate management for them. If they could have had one bank to 2,500 or 3,000 people they might have got along Pretty well. The very tiny bank has been overdone, and we need to correct the system with respect to that.

Mrs. Pratt. In some States where they have the State banking system and where they have branch banks throughout the entire State they have withdrawn from the Federal reserve system in order

to do so.

You say you have reluctantly come to the conclusion that national

banks should have the same privileges?

Mr. Anderson. I think it is better to have them in the Federal reserve system.

Mrs. Pratt. If they do not have that same system, is it not a

necessity in those States?

Mr. Anderson. To let the national banks do it?

Mrs. Pratt. Yes; because they will then not withdraw and go into the State systems.

Mr. Anderson. How many of the State banks have withdrawn? Mrs. Pratt. I could not state that. That was brought out here. Mr. Goldsborough. Only some very small banks, I think.

Mr. Anderson. I do not believe a great bank can get along any more in this country without staying in the Federal reserve system. I think they need the Federal reserve system, and the bigger they are the more they need it. The smaller ones can look to the bigger to be

a reserve bank for them, but the great bank must wither carry a tremendous lot of idle vault cash or else it must be in the Federal

reserve system.

Mr. Strong. Do you not think a local bank, an independent bank, a bank locally owned, where the officers are interested locally outside the bank would be a better bank for the community and be as good a

judge of loans as a manager sent in from the outside, whose appointment was subject to the approval of the parent bank?

Mr. Anderson. He would know the local community, he would know the people there. His heart would be there. He might not be very well trained as a banker. He might be overenthusiastic about the local community. I think, in general, the proposition is right, but I think there are enough exception so that we must listen to the branch bank side of it.

Mr. Strong. Do you think that the parent bank would be able to employ a manager in a little town who would be a better banker than a man who grew up in that little town and had his money tied up in

it and knew the people?

In other words, they will employ a man with ability in the little town, but he will be a small salaried man. Do you think that on the average the chance would be that by putting in a manager from the outside in that way that you would get the ability in a bank that you would get in a town where a man owned his own bank?

Mr. Anderson. I think the presumption is in favor of the local

bank.

Mr. Strong. Did I understand you to take this position, that you are opposed to branch banking, opposed to trade area branch banking, but would consent, as an experiment, to state-wide branch banking?

Mr. Anderson. If the State wants it.

Mr. Strong. Then if you will permit one State to have State-wide branch banking, then the bankers in other States and the people who want the proposition will immediately get busy on the legislature so as to have their States have State-wide branch banking.

Mr. Anderson. If the rest of the people of that State do not object

and go along with it.

Mr. Strong. But the rest of the people do not study the question

Mr. Anderson. If it should be demonstrated—

Mr. Strong (interposing). We have had the case of California already with over 300 banks, and we have had several other States.

Mr. Anderson. Yes, I know.

Mr. Strong. We have the example of California which has developed branch banking to an extent where one bank has over 300 branches, and we have other States that have branch banking, dominating and monopolizing the banking of those States. We have the experiment there.

Mr. Anderson. My thought would be that the Federal Government should do nothing to push that along, that the Federal Government should do nothing to encourage it, but that to the extent that it is necessary to protect the national banking system we might go

along with it in those States.

Mr. Strong. Then we would have to go along with it in every State because the State banks will get a state-wide branch bank law passed, with the assistance of the national bankers, and they will have to join it.

Mr. Anderson. I do not insist upon my point there, but I was dis-

Posed to make that concession to the comptroller's views.

Mr. Strong. Do you not think we have gone along far enough in branch, group, and chain banking in the United States where Congress should do one thing or the other, do something about it?

Mr. Anderson. I feel Congress should not do anything to push it

further.

Will

Mr. Strong. Then it will go a lot further. The advocates of branch banking are putting up this argument, that most group and chain banks are not desirable, but within three years group banks will be established in every State of the United States. If we wait until that time, the only remedy is nation-wide branch banking.

Mr. Anderson. I think this, that if it is definitely understood that Congress is not going to sanction transforming existing groups into branch bank systems, if that fact is made clear, then a great many

People will lose interest in it.

Mr. Strong. We have the instance of Minneapolis and St. Paul, where within a year they have organized more than 100 banks each and say they are going to control even the Federal reserve district, going to take in every good bank in that district. We have Buffalo and Detroit and Atlanta that have formed these groups. If we do not do something to stop them, they will form groups in every State, and the only outlet for the protection of the State is this system of nation-wide branch banking.

Mr. Goldsborough. A very prominent Member of Congress from the Northwest came to me the other day. Heretofore he had been strongly in favor of unit banking, and he said that this group banking had gone so far in his territory he could not back unit banking any

longer, that it would put him out of business to do it.

Mr. Strong. There is a persistent drive on to force group banking, with the ultimate outlook to branch banking throughout the United States. That has been made very plain in these hearings.

Mr. Anderson. You are satisfied that the ultimate purpose is

is to transform groups into branch systems?

Mr. STRONG. Certainly.

Mr. Anderson. Then suppose you make it very clear that you are not going to approve of that, what about the motives of the banks for

going any further?

Mr. Strong. They will go ahead and establish group banks and say just as the gentleman who came before us representing Minneapolis and St. Paul said, "We have an ideal situation; we have

Improved the financial condition in our district."

Mr. Anderson. That is what I have heard from them, that they feel that the group banking system is better and that they have improved conditions. When that is true, then the question as to being transformed into branches subsequently will not be so important. But I think there are many cases where group systems have been organized simply on the theory that Congress will say yes to them after a while.

Mr. Strong. I may say in support of your theory that I was told by a very reliable banker, whose word you and I would take, that in a conversation he had with one of these group bankers in Minneapolis and St. Paul, he said to him, "What will the ultimate result be? Is this a permanent thing?" "Oh," he said, "we are going to have

branch banking, and we will sell out to a New York branch banking

group and make several million dollars.'

There is another question I want to ask you, and that is whether or not giving permission for the continuance of the extending of group, branch, and chain banking will hurt the Federal reserve system? You talk about confining it to States. The Comptroller of the Currency talks about confining it to trade areas which he thought might mean 35 trade areas in the United States, which, of course, would mean one, two, or three cities in a group.

Mr. Anderson. The difference between his view and mine is this. He speaks about doing it by positive legislation. I am simply respecting State's rights and suggesting that the experiment be made

under the State law.

Mr. Strong. You think it is safe to do that, but some of us do not think so, in view of the development that is going on now in the banks in Minneapolis and St. Paul, where the bankers in those cities think it should be confined to the Federal reserve district, and that is also true in Atlanta. Do you not think that the Federal reserve district, dominated and controlled by two groups, as they are going to do in Minneapolis and St. Paul, two groups in friendly relation to each other, will dominate and control the Federal reserve banks of that

Mr. Anderson. If they have all the votes, of course they can elect the directors, in so far as the banks elect them. But there are a great

many independent banks in that region.

Mr. Strong. There will be very few when they get through.

Mr. Anderson. There is the further question of the control of the Federal reserve bank. You have control here from Washington. Mr. Strong. But they say they will take over every big bank in that district, which means practically every bank in the Federal reserve system. They have now over a hundred in each group.

Mr. Anderson. I am not familiar enough with the facts.

Mr. Strong. If it is true that in the Federal reserve system two groups can dominate and control the great majority of the Federal reserve banks, would they not dominate and control the Federal reserve bank in that district?

Mr. Anderson. To the extent that the stockholders can control it-Mr. Strong. That being true, if we have nation-wide branch banks controlled by a few big banks, with headquarters in Chicago, San Francisco, and New York, principally in New York, will they not dominate and control the Federal reserve system in the United States?

Mr. Anderson. Yes, to the extent that the stockholders can do it. But I must say at the present time, in the past history of the Federal reserve system, the stockholding banks have not had much influence on Federal reserve policy.

Mr. Strong. The Federal Reserve Bank of New York has had a great deal; they pretty nearly dominate and control the system now.

Mr. Anderson. Not as stockholders.

Mr. Strong. As a bank.

Mr. Anderson. That is another thing.

Mr. Strong. If the stockholders control the bank, the bank will control the system.

Mr. Anderson. At the moment, the biggest stockholder in New York is the Chase National Bank, I suppose, and it would amuse my friend Governor Harrison if we should go over and tell him what to do. Mr. Strong. But suppose you were in quite friendly relationship

with the fellows in the group that controlled all of them.

Mr. Anderson. They would have to deal with the Federal reserve agent in Washington. The Federal Reserve Board passes on the discount rate and passes on the open market policy, the latter being formulated by a committee of governors. That would not get very far.

Mr. Strong. In the hearings a few years ago it was developed that when the president of the Federal Reserve Bank of Boston came down to have its rate changed that was delayed for several weeks, but when Governor Strong of the Federal Reserve Bank of New York asked them to change the rate it only took them 15 minutes to do it.

Mr. Anderson. That was not because of the influence of the stock-

holders.

Mr. Strong. That was the influence of the Federal Reserve Bank

of New York.

Mr. Anderson. It was the influence of a dominating personality.
Mr. Strong. If you have nation-wide branch banking, as declared by the Governor of the Federal Reserve Board, would not that mean a few groups in the United States dominating and controlling the banks of the United States?

Mr. Anderson. I do not want it.

Mr. Strong. I know; but If it comes, do you doubt that those groups will not dominate and control the Federal reserve system? Do you imagine the Federal Reserve Board in Washington standing up against them?

Mr. Anderson. It is a question of whether the Government is stronger than private interests; I believe the Government should be stronger than private interests. It is a question of the courage of the

citizenship and the courage of the officials.

Mr. Strong. When a few groups in the United States control the money and credit of the United States, will they not be stronger than the Government?

Mr. Anderson. It would be a dangerous situation that I should not

my

do.

Mr. Strong. But the second National Bank became so strong—Mr. Andrew Jackson had to break up.

Mr. Strong. It was broken up, but the bank was strong enough to

force the charter through Congress.

Mr. Anderson. Which he killed by his veto.

Mr. Strong. But for his backbone and stamina it would have become a law.

I am speaking of the power of control over the money and credits of

the Nation, of the most powerful government on earth.

Mr. Anderson. I see many powers and many forces, but I do not often see a situation where any one of them runs away with things all the time. There is action and reaction, back and forth play.

I see one other thing, too, that you must know, and that is that

bankers are citizens, too.

Mr. Strong. But we are going to eliminate the bankers as citizens in the communities of the United States, and the control is going to be in the great centers.

Mr. Anderson. I do not want it there, but the standard of citi-

zenship is very high there.

Mr. Strong. As to the influence and control of money over Government, there is now being advocated by representatives of the men who want this system of banking we are involved in to continue, this proposition, that while the branch banking can not be indulged in in the States under the McFadden Act, they have now found a way to do indirectly what the law prohibits them doing directly by establishing group banks, and they are going to proceed by establishing them in every State in the Union, and before Congress will act they will have these branch banks and get rid of the less desirable group and chain banks.

Can you not see there is an instance of a group, through the control of money, attempting to dominate and control the Government, and if it is successful they will have nation-wide branch banking, as the governor of the Federal Reserve Board says, while they will dominate a few groups in the United States, they will dominate the Government.

Mr. Anderson. I think there are very many bankers in the country who have figured out, as a matter of profitableness, that they do not see how they can make more money as a group-banking system than with the unit banks. But if you pass legislation of this sort you will force them into it.

Mr. Goldsborough. That is the idea.

Mr. Anderson. If you do that, a good many of them will simply

say, what is the use?

Mr. Strong. I can see you are very much afraid of the passage of this legislation. But let me say to you it will not pass, but if they can have group banking established in the States, or they have branch banking established, then they will put it over. We have got to act now to stop this attack, to stop them trying to do indirectly what the law prohibits them doing directly, and to get control of the situation, because if we do not they will have nation-wide branch banking and control of the Government, through control of money and credits of the country and the elimination of the middle-class people.

Mr. Anderson. Might I make a suggestion as to what I can be helpful on here? I am professionally an economist, and in these political matters I am an amateur. You are a much better judge than I am of the ways of guiding the business of the Government and passing laws to accomplish such a result. I can not enlighten you on

that

If the questions could be limited to economic questions it might be better.

Mr. Strong. I am not a politician; I am only a plain servant of the people, and have been for many years the servant of an agricultural group. I am not looked upon as compentent to be a politician.

I only want to point out this. Here we have branch banking starting in California and in several other States of the Union. An appeal was made to Congress that unless we widened the scope of the law to permit national banks to have branches where the States had branches we would hamper the national banking system upon which the Federal reserve system is based. So we passed the McFadden Act. Now it is said we will protect the national system by opening up the flap of the tent to the extent that they can have branch banks in the States that permit branch banks, but only in the cities where the parent

bank is located. That was apparently satisfactory at the time. But you can see it was not satisfactory to the men who want to put this system on the country.

Then they got chain banks and then this group banking system, thereby attempting to force branch banking, nation-wide, upon the

Mr. Pole, the Comptroller of the Currency, assures us that if he can put over this trade area proposition, just as we imagined when we passed the McFadden bill, he can satisfy all factions and hold them. Mr. Goldsborough. Say "I" and not "we."

Mr. Strong. As I and the majority of the committee imagined, and the President of the United States imagined. He has that idea that he can hold them.

But the governor of the Federal Reserve Board said it means the ultimate success of the nation-wide branch banking system perhaps

in 50 years.

So you can see what the trend is. We are now engaged in a stock gambling proposition among the banking systems. That is what this system is to be, to make money out of the manipulation of the joining of banks and groups, where it may aid this nation-wide branch banking. Do you agree with that?

Mr. Anderson. I do not think that is their aim. I know some of

the men.

Mr. Strong. I thought that until I saw the gentlemen from Minneapolis and St. Paul and until I got the word of a reliable banker that they expect to sell out to a New York group.

Mr. Anderson. I do not know about that.

Mr. Strong. I will tell you personally who that man is, and you

will believe his statement is true.

Mr. Seiberling. You know the position of the Comptroller of the Currency and the governor of the Federal Reserve Bank on this specific question of branch banking?

Mr. Anderson. Yes, sir.

Mr. Seiberling. We assume they represent the people of the entire country by reason of the positions that they hold, and you think we are correct in that assumption?

Mr. Anderson. They are officers of the Government.

Mr. Seiberling. You have been resisting their plan of branch banking in trade areas. Since we know the status of these men, without intending any offense of any kind, I would like to know your status.

Mr. Anderson. First, a citizen of the United States; second, a

Professional economist with knowledge of these matters.

Mr. Seiberling. I know that, but by whom are you employed? Mr. Anderson. By the Chase National Bank of the city of New

Mr. Seiberling. This address of yours was put out in the bulletin of May 8, I take it, with the full knowledge and consent of the Chase

National Bank.

Mr. Anderson. It was put out with the knowledge and consent of the Chase National Bank-let me say of certain officers of the Chase National Bank who knew I was putting it out. The directors knew nothing about it. There was no official action taken upon it.

Mr. Seiberling. You would not call a meeting of the stockholders of the Chase National Bank to give you the authority to put out a bulletin like this. From whom did you get the authority?

Mr. Anderson. I have a general authority from Mr. Wiggin to

publish such a bulletin.

Mr. Seiberling. Then this view you express, while it is your personal view, is also the view of the bank?

Mr. Anderson. Mr. Wiggin answered that question yesterday.

Mr. Seiberling. Mr. Wiggin saw the address before you delivered

it before the North Carolina Bankers' Association?

Mr. Anderson. Mr. Wiggin and other senior officers of the bank all had an opportunity to see it before that, but I doubt very much if he did see it.

Mr. Seiberling. Now, Mr. Anderson, did you not discuss with the officers of the Chase National Bank the policy you would pursue in reference to this proposition of the Comptroller of the Currency

and the governor of the Federal Reserve Board?

Mr. Anderson. It is my regular practice in connection with bulletins of this sort to ask one of the senior officers of the bank, sometimes a vice president, sometimes the chairman of the executive committee, and on rare occasions, Mr. Wiggin, to look over the manuscript with me.

Mr. Seiberling. Did you do that in this particular case?

Mr. Anderson. In this particular case I did, but not with Mr. Wiggin.

Mr. Seiberling. I notice in the first paragraph of your article, in speaking of trade areas, you said, "National banks located in one State could invade another State whose laws prohibit branches."

Mr. Anderson. That I understand to be the proposition.

Mr. Seiberling. As a student of banking, do you not know that from a constitutional standpoint the establishment in a State of a national bank by the Federal authorities is just as much an "invasion" of the State as would be the establishment of a branch bank there by Federal authority?

Mr. Anderson. Not in a practical sense, because it is a local man who organizes it, whereas the branch of a bank chartered in another State would be controlled by men in another State outside of the

community.

Mr. Seiberling. You know, do you not, that the Supreme Court has held for more than a century that Congress was the sole judge of the wisdom with respect to the States in the United States where banking facilities should be set up under national authority and that no consent from the State was necessary or required?

U

a

V

aj

81

to

pi

Mr. Anderson. The question of congressional power I was not raising. I was raising the question of policy. I am not enough of a constitutional lawyer in the modern sense to know just what the courts have held there. I have read the statements that the comptroller made about that.

Mr. Seiberling. You said you believed in preserving State rights.

Mr. Anderson. I do.

Mr. Seiberling. That may apply to prohibition and a lot of other things; but do you not know that the Constitution of the United

States makes the Federal Government responsible for the coining of money and for the circulating medium, and expressly takes that right away from the State?

Mr. Anderson. For the coining of money, yes. On the question of bank notes, no. You have done that by congressional act by taxing

State bank notes.

Mr. Seiberling. But the Constitution provides that no State can coin money.

Mr. Anderson. Yes.

Mr. Seiberling. And no State can counterfeit money. Do you not think that the banking business should be differentiated from these other things, when it comes to talking about State control?

Mr. Anderson. I would make a very sharp distinction between the coining of money and the running of a bank. I would regard the coining of money as a Government function, and the running of a bank as a private function.

Mr. Seiberling. Do you think, or do you mean by that that whenever the Federal Government, in the banking business, invades

a State that is running counter to State rights?

Mr. Anderson. The term invasion there relates not to what the Federal Government itself is doing, but to what an institution chartered outside of the State is doing. That word invasion is perhaps ill chosen; but if a bank outside a State can come in against the will of a State and put a branch there, that is what I characterize as invasion.

But for the Federal Government, on the other hand, to authorize citizens of that State to charter a bank in a given town is not an

invasion in the same sense.

Mr. Seiberling. Do you think the State should conduct the bank-

ing business of the country?

Mr. Anderson. No, I think private individuals, chartered by the States or by the Federal Government, should do that.

Mr. Seiberling. Not the States?

Mr. Anderson. No.

Mr. Seiberling. You do not think there should be a national

banking system?

g

n

T

0

e

d

at B

16

9-

er

30

Mr. Anderson. I have expressed the opinion in this bulletin that the national banking system has been useful, that it has helped establish good banking standards throughout the country, and that it is desirable to preserve it.

Mr. Seiberling. On page 4 of your speech you state that "We do not need to make a revolution in the general banking system of the United States because of the conditions in small banks in stricken agricultural regions." Do you not think that the question goes deeper than that and should be approached from the larger point of view which has been expressed before the committee that the primary aim should be to extend to the general public, regardless of whether it is urban or rural, the same type of banking facilities?

Mr. Anderson. I am in favor of giving good banking facilities to every place, but I do not believe it is necessary to pass this legislation to do that. I do not think this legislation would touch that in general, but that local legislation and local remedies should be relied upon

primarily for that purpose.

100136-31-vol 2 pt 14-8

Mr. Seiberling. You do not think the branch banking system proposed by the comptroller in trade areas would reach these smaller regions?

Mr. Anderson. No, sir.

Mr. Seiberling. You do not think that group and chain banking would reach them either?

Mr. Anderson. I do not think it is doing it, with certain minor

exceptions.

Mr. Seiberling. So you think there is no way of reaching them? Mr. Anderson. I have indicated in the section on remedies in that

bulletin ways of doing it.

Mr. Seiberling. Yesterday you heard Mr. Wiggin in answer to various questions asked by me, testify that the Chase National Bank had 7,000 correspondent banks; that many of these banks had failed in the last 10 years; that the relationship between these banks and the Chase National Bank was purely a business one; that it meant profit to the Chase National Bank; that they could do nothing through such a system to actually prevent failures. Do you agree with Mr. Wiggin in this respect?

Mr. Anderson. I do not think you have correctly got the full

spirit of Mr. Wiggin's statement.

Mr. Goldsborough. I understood Mr. Wiggin to say it was

mutually advantageous.

Mr. Anderson. Will you allow me to answer that question about

correspondent relations in my own way?

Let me say that Mr. Wiggin said to me, "Don't bother about what I said. Tell them what you think." I will tell you what I think about the correspondent bank relations.

Mr. Seiberling. I want your opinion.

Mr. Anderson. I am not giving Mr. Wiggin's opinion about it.
Mr. Goldsborough. I do not think the economist ought to be asked to comment on what Mr. Wiggin said.

t

8

8

B

M

W

mi

Mr. Strong. He says he is going to give his own opinion.

Mr. Anderson. I hope you will not try to put me in opposition to my chief on any point. I have an affection for him, and he has for the 10 years that I have been in the Chase Bank stood with absolute loyalty to the original agreement with me, which was that he would never ask me to say anything I did not believe.

Mr. Seiberling. I am here representing the people of the United States, and you are here as a witness. What I want is your opinion

and judgment.

Mr. Anderson. You shall have it. I just ask you as an act of courtesy to me not to put side by side what I say and what Mr. Wiggin says.

Mr. Seiberling. I have no desire to put you in conflict.

Mr. Anderson. Let me tell you what I think about correspondent

relationship with respect to country banks.

In a Missouri town a few years ago there was a run on a bank in a town of about 30,000 people. A telegram was sent to the Chase National Bank notifying us of the run and asking for help. We knew the bank; we knew they were good; we knew the people.

Four minutes later a telegram went back to that bank saying, "We stand squarely behind you; we will lend you what you need. We are sending cash from a near-by correspondent bank." That was

signed "Albert H. Wiggin, president; Samuel H. Miller, senior vice president."

They put that telegram in the window of the bank and it stopped

the run.

In a very few minutes from a near-by town an automobile came in with the cash. We made an arrangement with a Kansas City bank to send them more down. That kind of thing we have done many

What do we do to keep them from failing? What do we do to avert the causes of failures? Almost every time we make them a loan we put questions to them. We ask, in substance, "What are you going to use this money for," not always, but in many cases. We do not ask such questions of strong banks, which borrow infrequently and moderately, but we ask many questions when we think it necessary. "What other facilities have you?" We study their whole picture. We help them to figure out their problem, holding them back sometimes when they are going too far.

Mr. Seiberling. You do not say anything about collateral.

Mr. Anderson. I will tell you about the collateral. Mr. Seiberling. I did not want you to forget it.

Mr. Anderson. I will get to the matter of collateral. They constantly ask us for credit information, and our whole credit department is at their service every day. We tell them, "You can safely let this man have money," or, "Your customer can safely take this credit,"

or "In this case be cautious."

We watch the details of their business in many ways. A correspondent bank in San Francisco was sending us remittances which got to us too late for us to give them interest credit. We have to get to the clearing house at 10 o'clock in the morning. They lost interest for 24 hours. If they had got there a couple of hours earlier they would have got that interest.

So we studied the mail train schedules, and wrote them and told them if they put these items into the mails 2 hours earlier we could give them interest credit 24 hours earlier. We render innumerable

services of that kind.

Now, as to the collateral. Here is an actual case. There was a note for \$104, signed by John Wilhite-that is a fictitious nameand Lizzie, his wife, secured by chattel mortgage on Molly, Molly being a mare mule, 16 hands high, and broken to single and double harness. That was part of a stack of collateral about that high [indicating], the biggest note being for \$3,000, the next for \$700, and all the rest under \$300.

Mr. Seiberling. What was the equity? Mr. Anderson. This was several years ago, this particular loan. But we have similar paper frequently.

Mr. Seiberling. I know; you have gone into the details about

Molly. Tell us what the equity was.

Mr. Anderson. The loan was \$100,000 and the stack of collateral Was \$125,000.

Mr. Goldsborough. You mean the face of the collateral?

Mr. Anderson. Yes.

0

W

18

Mr. Seiberling. You consider that kind of collateral from a great many debtors the very best kind of collateral, do you not?

Mr. Anderson. The loan would have been more easily manageable and the collateral would have been better collateral in bonds of the United States Steel Corporation.

Mr. Seiberling. There may be some inconvenience in collecting it, but you consider that very good security, where you get a large number

of small loans?

Mr. Anderson. We would have had a lot of trouble collecting those small loans.

Mr. Seiberling. I note you state in substance in your address that small banks in rural communities can accomplish diversification by means of their correspondent relations with great banks in great cities.

You go on to say:

They have refrained from putting all of their resources into local loans and they place part of them through their correspondent banks into open market commercial paper or readily marketable bonds, or call loans on the stock exchange, or acceptances, or deposit balances, with their correspondent bank, to build up

That system of banking takes money from the localities and puts

it in the metropolitan centers, does it not?

Mr. Anderson. It takes money from the locality in ordinary times when they have an excess and it gives them back a greater amount in time of seasonal need or in time of crisis. I will give you some figures which I collected, and, with the permission of the committee, I will put this in the record.

I asked one of the officers of the bank to get me figures for small banks, picked at random, with reference to what happened in 1920 and 1921 in the relationship between our loans to those banks and

their balances with us.

He went across the country, on the southern end, from ocean to ocean, and then he went up in the western part of the country from Mexico to Canada, and he left out all the big places.

He took at random 59 State and national banks—there were a few. in Ohio and Indiana; but most of them were west of the Mississippl

or in the South.

In January of 1920 the country banks were pretty flush, their loans were small, and these banks had \$1,426,400 in balances with us and they were borrowing from us only \$459,200.

Mr. Seiberling. That was in January, 1920? Mr. Anderson. That was in January, 1920. By October of 1920 the crisis came on; the loans had gone up \$1,200,000 and the deposits had gone down \$200,000. So they were now borrowing \$450,000 more than their deposits amounted to. And by the following January the loans were \$951,300 and the deposits amounted to \$759,200;

The change in the year was that the deposits were cut in two and the loans were more than doubled, and they got out of us at the time they needed it a lot more money than they originally put in there.

Mr. Seiberling. What rate did you get for that money?

Mr. Anderson. We gave them—at that time the rates were very

high, but the country bank gets a lower rate as compared with some other borrowers. I can not answer that question definitely as to the rate.

Mr. Strong. About what was it?

Mr. Anderson. I would say some of them, at the time we were charging some nonbank customers 8 per cent, I think some of them

10

D:

of

M the to

COL

ges for

Th

may have paid 7 and more paid 6. In general a bank gets a good rate from another bank. I am not sure about the rates, because it was a long time ago.

(The statement above referred to is as follows:)

An examination of credit balances kept with us by 59 State and National banks situated in the South from coast to coast and in the West from Mexico to canada (as far east as the Mississippi Valley ') reveals the following:

	Balances	Loans
January, 1920	\$1, 426, 400	\$459, 200
September, 1920		1, 057, 500
October, 1920		1, 677, 800
November, 1920		1, 346, 400
December, 1920		801, 500
January, 1921	759, 200	951, 300

The statistics do not include credit balances and borrowings of banks in the larger centers. Otherwise, the banks were picked at random.

Mr. Seiberling. You heard Mr. Wiggin say yesterday they

always got collateral?

Mr. Anderson. Almost always. May I express the opinion as an economist that the only man who ought not to put up collateral, apart, perhaps, from very small personal loans—the only man who ought not to put up collateral, is the man who is in business, who has stocks of goods and "work in process." He can not put them up as collateral, because that would interfere with his operations; but the man who has the kind of collateral that he can put up, ought to do it.

Might I, in further answer to the question about 1921 say that Mr. Sidney Anderson's joint committee of agricultural inquiry brought out some very interesting facts about that, one of them being this, that in the period from January 1920 to July, 1921 New York

lost to the outside country, \$1,735,000,000, net. Mr. Seiberling. What was the last date?

Mr. Anderson. That was from January, 1920 to July, 1921.

Mr. Seiberling. How much did you get back last summer? Mr. Anderson. When I say "lost" I do not mean it was a money loss. I mean more went out of New York than came in. New York Paid out to the rest of the country \$1,735,000,000.

(Thereupon, the committee took a recess until 2 o'clock p. m.)

AFTER RECESS

The hearing was resumed at 2.30 o'clock p. m., at the conclusion of the recess.

STATEMENT OF BENJAMIN M. ANDERSON, JR.—Resumed

The CHAIRMAN. The committee will come to order. When the committee recessed, I believe you were questioning Mr. Anderson, Mr. Seiberling.

Mr. Seiberling. I have a few more questions here. Mr. Anderson, there has been a great deal of talk before the committee with reference

to diversity of loans.

e

e

0

Mr. Anderson. Yes, sir.

Mr. Seiberling. Now, if you had a branch system such as suggested by the comptroller, you would have much greater opportunity for diversification of your loans than you have in the unit banks?

¹ Including a few in Ohio and Indiana.

Mr. Anderson. Not if the unit bank is run properly. You would have in a community, with diversified interests, plenty of opportunity, of course, even for a local bank; and you can have adequate diversification, through your big city correspondent, if you can not get local diversification.

Mr. Seiberling. That is not the question. Would there not be more opportunity for diversification of loans under the comptroller's suggestion for branch banking in trade areas than under the unit system?

Mr. Anderson. Not if the unit bank makes use of the facilities

offered by its correspondent.

Mr. Seiberling. What do you mean by that? Mr. Anderson. I mean the unit bank can diversify its loans through buying outside commercial paper, acceptances, making loans on call, buying bonds, plus the local loans it makes.

Mr. Seiberling. Your contention is that the chief means of getting diversification of loans would be through the correspondent in

the metropolitan center?

Mr. Anderson. If it was a 1-crop town; yes. There are some towns where the banks can get all the diversity of activities right at home. Even in those 1-crop towns or small cities, they can get it through the correspondent.

Mr. Seiberling. It is necessary to have diversification of loans: 18

Mr. Anderson. Yes, sir; absolutely.

Mr. Seiberling. Therefore, if they have a community where there is no diversification of paper offered, the only means of getting it 18 through the correspondent bank in the metropolitan center?

Mr. Anderson. That is the best means.

Mr. Seiberling. That would not be true if it was a branch of a parent bank located in a metropolitan center, closer to the community, in a trade area, for instance, like the headquarters of the different Federal reserve banks in the country?

Mr. Anderson. In most cases that is true, and yet there are some

h

it.

811

en

act

Federa! reserve districts that can not sufficiently diversify.

Mr. Seiberling. Name one.

Mr. Anderson. In 1921 the Dallas district, as a whole, had it been self-contained, would have gone under. The Dallas Federal Reserve Bank was down to within 2 per cent of its own gold reserve-It had to lean on the rest of the country for liquidity.

Mr. Seiberling. What relation has that to the subject we are

talking about?

Mr. Anderson. Well, the district was caught by cotton and other things that were frozen, and it has to lean on the outside for temporary help and diversification.

Mr. Seiberling. Then the southern bank that is in territory where cotton is the chief commodity, in order to be safe, under your theory of banking, would have to make a great many loans through its

correspondent in the metropolitan center?

Mr. Anderson. Yes, sir. I want to say that, in general, agriculture needs to learn one thing which business has learned. The weakest point in agricultural financial technique comes from this matter of lack of liquidity or lack of something they can turn into cash. The farmer and country banker, to a too great extent, look to land as the basis of credit.

If you will contrast the policy, say, of the United States Steel Corporation and the Utah Copper Co. with the policy of agriculture in 1920, the thing becomes striking. Steel and copper went high in price during the war and the post war boom, and broke violently in the period immediately following, the same as agricultural commodi-But whereas the farmer used all of his profits in the boom period to buy more land, the two great business corporations used their profits in paying off debts and building up reserves in marketable securities and cash, so that when the crisis came both the United States Steel and the Utah Copper Co. kept on paying dividends and were perfectly tranquil through that whole trouble and on a basis far better than before the boom, while agriculture was deeper in debt than before the boom.

Mr. Brand. I think you have sized that up correctly as far as

Georgia is concerned.

Mr. Seiberling. Mr. Anderson, you can answer these questions in a much shorter way if you desire to do so. However, I do not want to tell you what you must do. It is a fact, then, that a unit bank, in a territory where there is no diversification, must do a large amount of business in the way of securing loans and making customers through the correspondent metropolitan bank?

Mr. Anderson. Yes, sir. During the season when it has surplus funds, it sends them to the city, and when the season comes when it

needs the funds for local accommodation it brings them back.

Mr. Seiberling. Do you not think the Dallas district, if you take the Dallas Federal reserve district, has sufficient diversification? Do you not think or do you not know that they have a great many public utilities and manufacturing institutions there?

Mr. Anderson. The experience of 1920 did not indicate it.

Mr. Seiberling. Have you any statistics to show there is not great diversification in the Dallas Federal reserve district?

Mr. Anderson. No, sir. I would recognize there is diversification

there, but I know the situation that existed in 1921.

Mr. Seiberling. There would be much more diversification if you had a parent bank with branches in that trade area than for the indi-Vidual local bank?

Mr. Anderson. I do not think so. I do not see any reason why

it should be.

Ś

e

Mr. Seiberling. You think the individual—

Mr. Anderson. I see what you mean. A bank covering the whole district could diversify more than a bank in one town?

Mr. Seiberling. Yes.

Mr. Anderson. Quite true.

Mr. Seiberling. In that respect the branch bank would be much superior to the unit bank?

Mr. Anderson. Yes; to the unit bank without a city correspondent, but not to a unit bank with a city correspondent.

The CHAIRMAN. In other words, Mr. Anderson, if Mr. Seiberling will yield-

Mr. Seiberling. Certainly.
The Chairman. You would have us infer that a country bank Would be as well or better served under the correspondent system than acting as a branch?

Mr. Anderson. I believe that.

The CHAIRMAN. You believe it could give the territory in which it is located better service?

Mr. Anderson. Assuming a good bank and a good banker.

The Chairman. If a correspondent banker situated there relies on the city correspondent to advise him in regard to his investments, he can be a mediocre man if he will consult his correspondent city bank?

Mr. Anderson. Yes; and there is a constant consultation about all kinds of banking policies. It would amaze you the questions put up by bank correspondents and the number of things they ask us to do for them, things which, by the way, do not always relate to banking, strictly.

The CHAIRMAN. Do you think the country banker understands that relationship is open entirely to him? Is he not reluctant to put these various determinations before his city correspondent bank, these decisions he has to make frequently on a moment's notice? Is he not rather handicapped on account of distance?

Mr. Anderson. He does not usually consult us about local loans.

He runs his own bank.

The CHAIRMAN. You are dealing with surplus funds whereby he can secure diversification in his loans?

Mr. Anderson. Yes, sir, and he will very commonly consult us. He will ask us to pick out paper for him and advise him what bonds

to buy, etc. Mr. Seiberling. Since he has done that a great deal, the local bank's money is invested in paper you recommend and which the correspondent bank knows about and the local bank does not. Does

not that greatly increase the domination and control of money and credit by the correspondent bank in the metropolitan center?

Mr. Anderson. No, sir; if we do not treat them right the Central Hanover will and the Guaranty Trust will, and there is constant competition for these correspondent bank accounts.

Mr. Seiberling. But they can not leave your bank until they get their paper liquidated that they purchase through you; they are

dependent on you to liquidate the paper?

Mr. Anderson. The paper is the obligation of some corporation; It has a national market. It is sold through note brokers of national standing. We do not have to collect it for them. We will do it for them if they ask.

Mr. Seiberling. But you know about the paper and they do not. Mr. Anderson. But the matter of collecting on the paper is a

Mr. Seiberling. It is collected through your bank?
Mr. Anderson. Yes; but they could change to another correspond-

ent over night.

Mr. Seiberling. Now, Mr. Anderson, will you not admit that a realtionship of that kind does give you to a greater or less extent, domination over that community bank?

Mr. Anderson. No, sir; I will emphatically deny that it gives us

domination over any correspondent bank.

Mr. Seiberling. I note your statement, "I can not sympathize with the view"-

The CHAIRMAN. Before you get to that, may I ask this question? Mr. Seiberling. Yes.

The Chairman. In connection with this relationship which you suggest enables the city banks to advise the country banks, which advice you say is freely given—and I know it is and quite freely sought after by particular banks—I recall some few years ago where a New York publishing house—Harper & Bro., for instance—were issuing large amounts of commercial paper which was sold through a reputable note house in New York, Charles Hathaway & Co.—and country banks were advised by the city correspondent banks to buy that paper

freely and many of them did buy that paper freely.

It turned out subsequently that Harper & Bro. were financially embarrassed and they went through a reorganization. It developed afterwards, I think, in the information that came out, that the New York bankers had known a year previous, that Harper & Bro. were in a condition where they were not strong financially and they were called upon to liquidate and they liquidated through the process of selling the paper through these commercial houses, and the result was that the failure really occurred a year before it was announced, and these local banks purchased this paper wholly in ignorance of that situation.

This is what happened: Very much to the surprise of the country banks that held that paper, there was an old mortgage of \$850,000 that everyone had lost sight of, which was held by J. P. Morgan & Co.

I mention that as one of the relationships that exist between city correspondent banks and country banks. Might it not be that the city correspondent banks might use country banks in that manner again for the purpose of unloading? Of course, I realize it would be

subject to great censure.

Mr. Anderson. I do not know the facts about that case, but I know how the thing has been done in two institutions. I watched it for a couple of years in the Bank of Commerce when Mr. Christensen handled the commercial paper. He handled for that bank and its correspondents several hundred millions of commercial paper in one year without loss to himself of anyone else. I know how it is handled

in the Chase. We are scrupulously careful about that.

I do not know the facts about the case you mentioned, Mr. Chairman, but I do not think it is in any way a representative case. I came to Wall Street 12 years ago with the background of a countryman—a Missourian, first from the bluegrass region and then from university work—with a great deal of distrust, and taking a great deal of precaution as I went along to guard myself so that I would be free to retain my academic liberty. As I have seen bankers and brokers in the street dealing with one another and with their customers, my confidence in those men has gone up and up. Most of the business goes on over the phone on the stock market and on the foreign exchange market. They could not do it if there was not good faith. I have seen them hold to their word and take their licking without a whimper. The same man might beat his wife that night. That I do not know. But he keeps his word.

In the relationship between the city and country banks that same situation applies. Let me give you an instance. The Bank of Bermuda has been a correspondent with the Chase for 50 years. When I was with the Commerce, I tried to get them away from the Chase. They said, "They have been so good to us for 40 years that if we left them now you would not want us." They are scrupulously honest

in their dealings.

That relation lasts because it is handled right.

Mr. Brand. Was that \$850,000 mortgage on real estate?

The Chairman. It was a first mortgage on the property of Harper & Bro.

Mr. Brand. Supposing a country bank tells you to buy \$100,000 worth of acceptances or some sort of security or commercial paper; how could there be any mortgage on that character of investment without your knowing it?

Mr. Anderson. The credit department that passed on that paper

ought to know about any mortgage on the property.

Mr. Brand. Have you any laws in the State of New York that permit you to have a mortgage on that class of paper?

Mr. Anderson. It was not a mortgage on the paper. That is an unsecured note. It was a mortgage on the property of the maker.

Mr. Brand. Is there any law in New York that would give a lien on acceptances or commercial paper or securities that you might recommend to country banks to buy?

N

di

ar

be

pr

the

mis

do

bec

Mr. Anderson. Not on the paper; no. It was simply that there

was a prior obligation on the real estate of the company.

Mr. Brand. The case mentioned by the chairman was?

Mr. Anderson. In that case the negotiable paper is clear.

Mr. Brand. One other question. How could your bank dominate a country bank, though it had placed money with you to buy differ

ent securities, unless that bank owed you something?

Mr. Anderson. We could not. If they owed us something and were handling themselves well, we could not. The only case in which the city bank could dominate a country bank is where a note of that country bank matures and it can not be paid. Then a creditor can make terms.

Mr. Brand. If he does not owe you anything-

Mr. Anderson. He can not be dominated. The great difference between the system of correspondent banks and branch banks is this: Under the branch bank system all decisions as to the flow of funds between the head office and the local branches are made at the head office. Under the correspondent system all such decisions are made by negotiations between principals, one of whom represents the local people.

Mr. Seiberling. You say they seek advice from you continuously?
Mr. Anderson. Yes; and if we give them good advice, they ask

for more

Mr. Seiberling. You have taken occasion to step aside—

Mr. Anderson. We ask them for advice often, also.

Mr. Seiberling. You have taken occasion to step aside and eulogize Wall Street. Why is it that the country has a prejudice

against Wall Street if all these things you say are true?

Mr. Anderson. Well, I must say that I was brought up with that prejudice myself. Wall Street has done some things that deserve reprobation. There have been, at times, bucaneers on Wall Street; there have been times when Wall Street really deserved severe censure. I think the country, as a whole, does not know Wall Street as well as I do. If it did, I think it would have more respect for Wall Street.

Mr. Seiberling. Well, we have not time to go into that. You are working with Wall Street and you are not asking any favors from

Wall Street. I note in your statement you say:

I can not sympathize with the view that it is necessary to pass unsound legislation for the purpose of giving supremacy to the national banking system over the State banking systems, that banks would be compelled to drop their State charter and take out national charters.

In the problem before us, it is not a question of whether the national banks should be paramount over the state banks, but rather does not the public welfare demand that Congress under its unquestionable constitutional powers and responsibilities should not at this time step in and take charge of the entire banking situation, not with a view of driving the state banks out of business, but with a view of giving the Public a sounder and safer system of banking? Is not that the main consideration?

Mr. Anderson. The thing I referred to there was the suggestion brought out in the comptroller's statement in which he indicated he was surrendering the theory of parity of State and national systems and wanted to establish the superiority of the Federal system. I was

referring to that particular proposition.

Mr. Seiberling. Do you not think in a Government as big and strong as ours, that the National Government should have a supremacy

In the banking business of the country?

Mr. Anderson. No, sir; I think any country as big and diversified as ours should have as much local banking as is consistent with hanging together.

Mr. Seiberling. The national banking system gives local banking,

does it not?

0

思

Mr. Anderson. It would not if you made it spread over State

lines and cover great trade areas through branch banking.

Mr. Seiberling. I note that you attempt to show that branch banking systems are subject to the same failures as that of unit banks and subject to adverse economic conditions. You gave us examples of the failures of 1 bank in Denmark, 1 in China, and 1 in Italy

Mr. Anderson. Several in Japan, and one in Austria.

been others-in Canada, for instance.

Mr. Seiberling. You did not give the name of the Canadian bank. Mr. Anderson. The Home Bank was one. Mr. Seiberling. You know, of course, that this bank failed solely by reason of the criminal mismanagement of its officers and that Practically the entire board of directors were convicted and sent to the penitentiary. You also know, do you not, that this bank had no government supervision, such as we have?
Mr. Anderson. I did not know that it was due to criminal mis-

I know it was greatly aggravated by economic conditions.

Mr. Seiberling. If this situation be true you would change your opinion as to the Home Bank of Canada?

Mr. Anderson. I would have to know the facts.

Mr. Seiberling. Assuming what I say is true, would you adhere to your opinion?

Mr. Anderson. If it is true that it failed solely because of crime,

then it did not fail because of any other reason.

Mr. Seiberling. You do not put the failure of a bank for criminal mismanagement in the class of banks that fail for economic reasons, do you?

Mr. Anderson. No, sir. I did not list that as one of the causes, because I think the testimony, as brought out by Governor Young, put that as a minor influence. Did not Governor Young list that as a minor reason for failures?

Mr. Brand. It is lower down the list.

Mr. Seiberling. I also note that you refer to the failures of 236 banks which belonged to the chain system. Do you know that chain banking has met with almost universal condemnation from witnesses appearing before this committee and can not be placed in the same class as branch banking?

Mr. Anderson. I do not believe the difference is anything like as great as many people suppose. I believe the Florida and Georgia chain would have failed if there had been a holding company holding the stock, and would have failed if there had been a central office

with branches.

Mr. Seiberling. What is your opinion of the economic future of rural banking if carried on indefinitely under present conditions?

Mr. Anderson. I think many of the small banks in the small villages will dry up and go under: that the more sizable banks in the substantial towns of four and five thousand people will survive and do well

Mr. Seiberling. Do you not know, Doctor, that there are hundreds and hundreds of small banks in the United States in rural communities that are organized by the people in those communities just to furnish banking facilities and these banks are a constant source of worry to the stockholders and directors and that they would be glad to have a large bank in a metropolitan center take those banks over as branches and relieve them from the responsibility of maintaining banking facilities in the community?

Mr. Anderson. And taking cognizance of that, I recommend that

certain States pass legislation to take care of that.

Mr. Seiberling. That the States should do that, and not the Federal Government?

Mr. Anderson. I believe the States should do it. It would simply bring about a great disturbance and a great shifting—

Mr. Seiberling. You advocate the Federal Government going

entirely out of the banking business?

Mr. Anderson. I recommend that the Federal Government pass a law permitting national banks to have the same branch banking powers that State banks have, and that in each State the States take

it up as a local problem.

Mr. Seiberling. How can you justify the statement that you are afraid of giant branch banking systems with enormous capital ranging over trade areas which may equal Federal reserve districts in size, when the Chase National Bank, with its tremendous size, being probably the largest in the world, has its branches in New York and abroad, its securities companies with their branches throughout the United States and abroad, and its American Trust Co., with 34 offices in this country and 66 abroad, together with the American Express Trust Co. You cover the world—

Express Trust Co. You cover the world—
Mr. Anderson. No. sir; we do not cover the world with branches.
I am not afraid of giants, but I want the giants confined to giant

places.

Mr. Seiberling. You state that in your statement.

Mr. Anderson. I said giant branch banking systems ranging over Federal reserve districts. I want the big fish to stay in the rivers

le se ti k p ii

0

8

in

di Ca

al ma ma replaced are like

dis of the cor bus

der tak tim

sun

and the oceans and keep out of the creeks. The Chase National Bank has branches only in the city of New York and a few out in the

world outside of the United States.

Mr. Seiberling. It is inconceivable to me that the Chase National Bank, which unquestionably operates successfully these various branches of the bank and the affiliated companies all over the United States and abroad, could not operate successfully branches in trade

Mr. Anderson. Well, we would not like the job; the difficulty increases very greatly with distance. In New York we had no branches until 1921, and then only eight in the city. We worked a long time on that, studying how to deal with them, where we could see the men every day and sit with them in committees two or three times a week and with easy telephone communication. You can know them personally and you can get the feel for them. But the proposition of administering branches at a great distance is exceed-

ingly difficult.

In the West Indies, in 1920, I was talking with the branch manager of one of the Canadian banks. This was early in 1920, in February. He said, "I made a loan of \$50,000 on sugar a little while ago. My Instructions are that on a loan over \$2,000 I have to refer it to the home office." He said, "That is not the way to do business. The head office protested and I wired back and offered my resignation. The head office stood for it." At the time the loan was made sugar was selling at 25 cents and the sugar was 2 cents in the autumn following. I do not know whether they wired for his resignation in the autumn or not. The problem of keeping the proper balance between local initiative and head office responsibility is terrific.

Mr. Seiberling. That would not be true of the Federal reserve

Mr. Anderson. They cover considerable distances. One of the California bankers—I hope you will not ask for names-

Mr. Seiberling. I will not.

Mr. Anderson. One of the California bankers told me that he had a branch in a city some distance away, that was in charge of an excellent man to whom he gave a free hand. He said, "What I will do if that" man dies, I do not know. How I can get a satisfactory man to replace him, I do not know."

Mr. Seiberling. You will concede that branch banking in trade areas, such as the comptroller suggested, would be injurious to a bank

like the Chase National Bank?

Mr. Anderson. I am unable to say that. If we went out in these districts and put our branches out there we would probably lose a lot of correspondents, but the fact that they consolidate does not make the necessity of correspondents any less.

Mr. Seiberling. The main bank would have to have a New York correspondent, but you would not have all these unit banks to do

business with.

Mr. Anderson. We might have less correspondents and more deposits-bigger deposits-and probably less detailed business to take care of.

Mr. Seiberling. Now you appreciate the fact that at the present time any industrial company or utility company that wants a large

sum of money has got to go to New York to get it?

Mr. A.NDERSON. No. sir.

Mr. Seiberling. I am talking about a large sum of money-\$25,000,000.

Mr. Anderson. Chicago can swing that easily, and St. Louis could, probably.

Mr. Seiberling. They go to New York, do they not?

Mr. Anderson. We try to get them to come to New York, but Chicago has a lot to say about that:

Mr. Seiberling. The printers of New York print all the docu-

ments?

Mr. Anderson. You mean the American Bank Note Co.?

Mr. Seiberling. Yes. Mr. Anderson. They do a lot of it.

Mr. Seiberling. And when a trust company registers the stock, an engraver in New York engraves the bonds?

Mr. Anderson. But that is done also in other places.

Mr. Seiberling. But you know the reorganizations handled in New York all took place that way—a New York lawyer handles all of that business there in New York.

Mr. Adnderson. That situation—
Mr. Seiberling. You can answer my question, can you not?
Mr. Anderson. That is so much less true than it was 20 years ago.

Mr. Seiberling. It is true to-day.

Mr Anderson. I do not think it is so true to-day; no, sir.

Mr. Seiberling. In the reorganizations at New York, New York lawyers handle those reorganizations?

Mr. Anderson. In a New York reorganization, yes; but suppose it

is handled at Chicago?

Mr. Seiberling. Then a Chicago lawyer will handle it.

Mr. Anderson. Yes.

Mr. Seiberling. Now, if you had the concentration of capital in the chief cities of the Federal reserve districts, those lawyers, those printers, those engravers, and other people engaged in that business, in those Federal reserve districts, would have an opportunity to do some of this business?

Mr. Anderson. There might be more of that. This matter of

engraving and printing I do not know about.

Mr. Seiberling. Well, I could mention half a dozen more things that are contolled by reason of the location of the reorganization in the financial center. I have been through it and know all about it, and you know all about it.

Mr. Anderson. When you are talking about reorganizations, you are not talking about commercial banking. You are talking about

investment banking. That is a separate line of business.

Mr. Seiberling. You will admit that the branch banking system as recommended by the Comptroller of the Currency, would decentralize money and make probably 20 or 30 large centers? You believe that, do you not?

Mr. Anderson. I do not think so. I can see some change, possibly. Mr. Seiberling. What is your objection to it, if you do not see

any of these things?

Mr. Anderson. My objection is I do not think it would be good for the country. I am not speaking for the Chase National Bank-I am speaking as an economist and as a citizen.

Mr. Seiberling. And the fact you are an employee of the Chase National Bank has no influence upon your position?

Mr. Anderson. No influence upon my statement here. I am expressing an opinion I expressed 11 years ago, before I entered the

employ of the Chase National Bank.

The CHAIRMAN. You said that this system that Mr. Seiberling is referring to is not pertinent to the subject of this study. Do you not think it is pertinent to the subject of group banking, when the Chase National Bank has a group of subsidiary operations in which they originate and distribute securities and do an investment banking business? Practically all the large New York banks now have affiliated with them groups to handle the various kinds of banking and underwriting such as Mr. Seiberling refers to, and the sale of securities.

Mr. Anderson. Now, the question is whether more or less of that would be done in New York if you have these groups or if you have branch banking. I would say that the amount of it that any section of the country can do must depend upon the final consumer, and has to depend on the volume of savings in that community, generally. How You can build up a big securities business in a rural section, where the farmer, instead of being an investor, is frequently a borrower. I do not know. At the present time the securities business is a country-wide business. Any issue of any sort might originate in New York or Chicago or St. Louis, or other financial center, and a syndicate to dispose of it might be formed in any great city. If it is a big issue bankers all over the country are interested.

Mr. Seiberling. But all they make out of it is a little rake-off

or commission.

Mr. Anderson. It depends on whether they are in it in the beginning or simply as distributors. There are groups in the syndicate in almost all important centers, when big issues are involved.

The Chairman. We can recognize that New York is organized to do the kind of business that Mr. Seiberling referred to. They are equipped in their particular line to do that business. They do originate and do reorganize and do bring out original issues and do distribute. They make these bankers' agreements and act as managers and frequently associate with them, in some capacity, banks from all over the country. But New York is particularly rigged up to do that particular business and it is a big part of New York's banking, and a synchronization of New York banks with the outlying district banks is a part of that, and a little part of that is the stock exchange rules and regulations, and the places in which they have to be printed. For instance, the stock exchange have to conform to a certain regulation that the printers in New York can understand, and so the general trend of reorganizations, which are concentrated in New York, is to accept all the facilities in New York. Does not that, in itself, tend to bring this business to New York, as a center?

Mr. Anderson. We do more of it than anybody else. However, we do not originate all of the things. Many times things originate in Chicago and are offered to us and we are invited to come in.

Mr. Seiberling. Under the branch banking system, St. Louis and Chicago would become greater financial centers, and you would get

less of that than you do now?

Mr. Anderson. I do not see that. At present the St. Louis banks have a great deal of distribution. They have the local things, and we sell to them things for distribution.

Mr. Seiberling. I have just one more question that arises out of a newspaper article I read last night. The Postmaster General is recommending, according to the paper I read, an increase in the limit of deposits in the postal savings from \$2,500 to \$25,000. In view of that, I ask you, as an economist and speaking as an expert, in view of the fact you have no scheme or plan by which banking facilities can be extended to the remote parts of the country if you will not agree that all people are entitled to some banking facilities, according to their necessities?

Mr. Anderson. It is desirable to have them.

Mr. Seiberling. In view of that fact, do you think it would be advisable to expand the powers of the postal savings system slightly so as to give limited banking facilities in these remote rural districts?

Mr. Anderson. You have addressed to me a complex question. You say "In view of the fact that I have no plan." I venture to suggest I have a plan that I have offered in my section on "Remedies."

In reference to the Postal Savings System, I do not know enough of its actual workings to express an opinion. I do not know, for example, what the present limit is. I would say, in general, I would prefer to have the thing worked out by private enterprise rather than have the Government do any more than imperatively necessary.

The Chairman. You referred to the statement of the Comptroller of the Currency here a few moments ago in which you analyzed his suggestion as more favorable to the national system than to State banks. I am referring to his recommendation of the extension of branch banking to trade areas which might, if carried out, place State banks at a disadvantage in competition with national banks. You recall the statement?

Mr. Anderson. Yes, sir.

The Chairman. And you indicated that the State system is probably as good and should be given at least an equal chance.

Mi

Mr. Anderson. I admit the superiority of the national system as a whole. In some of the States, I think the State system is enquly

good.

The Charrman. In that connection, I should like to call your attention to some evidence presented the other day. These figures are approximately correct. Since the 1st of January, 394 banks have failed in the United States, of which 36 were national banks and 358 were State banks.

There might be reasons for that, but on the face of it, it would seem to indicate that more State banks were failing than national banks. I recognize the fact, however, that there are fewer national

banks than State banks.

Mr. Anderson. The deposits of the national banks average much larger.

The Chairman. Whether that is an indication that national banks are better operated or better supervised or more to be entrusted with

the people's money I do not know.

Mr. Anderson. I think it means that national banks are larger than the banks that have been failing. The bulk of the banks that have been failing have been very small banks, not large enough in capital to get a national charter. The States that have been hit hardest are the States with the very small banks.

The Chairman. Inasmuch as the banks that are failing are largely State banks, would you think that that was a dangerous situation in the country, or perfectly normal?

Mr. Anderson. I am afraid it is a situation that is water under

the mill.

The CHAIRMAN. In other words, you think it is a cleaning-up process of the conditions after the war?

Mr. Anderson. Yes, sir.
The Chairman. And that it will result in a good condition?
Mr. Anderson. Yes, sir; but it is terribly painful while it is going on. One thing again: The disappearance of the village—and think the figures of the census so far available show the small village is going at an alarming rate-

The CHAIRMAN. I think the full census reports when they are available will give us a clearer understanding of that. There is a general indication from the figures thus far available, that that is the case.

Mr. Anderson. I think the microscopic bank-perhaps I should not use that expression—the very small bank, which is always a State bank not large enough to get a national charter, will experience some further trouble.

The Chairman. Judge Brand referred yesterday to the conditions in Georgia where whole counties were without banking facilities, producing a distressed condition, where banks have either gone out of business or failed, and the people in that immediate community

are not in possession of banking facilities.

You recited this morning, quite in some detail, the situation as regards branch banking in England, indicating that in towns of several thousand population, these branch banks are only open from one to three days a week. I wonder whether it indicates in this country, which is a newer country than England, that because of the fact that small communities are being eliminated due to good highways, mass production, consolidation of energy, etc., we are getting to that point in the United States where those districts may have to be served in the same manner as in England. Would you think that would be the condition we are approaching here?

Mr. Anderson. There might be localities where that would be the best that could be done. Certainly the unit bank in a very small and dwindling village is a needlessly expensive thing. If they could get something more economical and give the people some banking facilities that would be safe; it would be better. However, I think it has got to be worked out not by a general rule, but locally by the

local interests.

Mr. Brand. When did you leave Missouri and go to New York? Mr. Anderson. I first went to New York from Missouri in 1910 to go to Columbia University, where I was first a fellow and then a teacher, and then I spent five years as a teacher in Harvard University, and came back to New York in 1918.

Mr. Brand. Were you connected with the banking business in

Missouri?

Mr. Anderson. No, sir; I was a teacher until 1918.

Mr. Luce. Mr. Anderson, you are the economist of the Chase National Bank?

Mr. Anderson. Yes, sir.

100136-31-vol 2 pt 1!---9

Mr. Luce. And are the author of the material that appears in the Chase Economic Bulletin?

Mr. Anderson. Yes.

Mr. Luce. The bank is good enough to keep my address on its mailing list, and I may show the value I place upon this bulletin by saying that it is one of the few publications of which I keep a file for the purposes of reference. You have a high standing in the conomic world and your words carry weight. May I ask you how many copies are circulated of the Chase Economic Bulletin?

Mr. Anderson. I think of that edition between fifty and sixty

thousand.

Mr. Luce. And what is the general nature of the mailing list?
Mr. Anderson. It goes to stockholders and depositors and to

Mr. Anderson. It goes to stockholders and depositors and to others who are interested who ask to be put upon the list, and some others we pick out that we want to have on the list.

Mr. Luce. It goes also, I imagine, to editors of financial publica-

tions?

Mr. Anderson. Advance copies; yes, sir.

Mr. Luce. And to financial writers generally?

Mr. Anderson. When they ask for it.

Mr. Luce. But it has a considerable circulation, I have no doubt, among financial writers?

Mr. Anderson. Yes, sir.

Mr. Luce. Therefore it may fairly be said to have an important influence upon the financial thought of the country?

Mr. Anderson. I hope so.

Mr. Luce. I think you will admit it. At least I shall admit it for you. In those circumstances, if by chance you have misunderstood any features of the situation and upon mature reflection should see fit to modify any of the views expressed in the copy I have before me of the issue of May 8, of which you have furnished copies to each member of the committee, is there a possible way in which a subsequent modification could be laid before these readers?

Mr. Anderson. Well, I could consider that.

Mr. Luce. I ask that question because, frankly, it seems to me the repetition of certain language here muddles the water to some extent. You this morning, withdrew the headline, "A Revolutionary Proposal," but I find on page 4, "We do not need to make a revolution in the general banking system of the United States"; on page 6 you say "Certainly there is nothing in the experience of the past nine years, as revealed in the foregoing figures to justify a legislative resolution in our banking situation;"

On page 11 you say:

"At the same time it would avoid the grave evils that would come from the sudden revolution in our general banking system."

To one who has been present at most of these hearings during the last few months, these phrases are not in harmony with what has actually gone on in this room or with what has been said, and possibly before I have finished the inquiry, I may be able to sustain that contention.

Mr. Anderson. May I say that I wished to offer a substitute expression because that phrase seemed to offend one member of the committee, but that I did not mean to withdraw the expression? I used the word "revolutionary" there in its literal and technical

sense, and, in that sense, it does not mean a revolution in the popular sense.

Mr. Luce. We will consider, as we go along, whether there is warrant for my view of the matter. As the things I have marked make it difficult to take these up except in consecutive order, possibly I shall repeat somewhat.

I observe you say, on page 4:

The proponents of this widespread extension of branch banking outside the city of the head office apparently intend to make use of the recent rapid development of group and chain banking, by adopting legislation to permit the groups and chains to transform themselves into branch systems.

This is not in accordance with the impression I have received from the various witnesses who have been before us. I do not recall in any instance anybody connected with a group or chain system who has intimated any desire to substitute therefor the branch system. My memory may be incorrect, but certainly the great bulk of the testimony before us has not furnished warrant for thinking that the proponents of branch banking have this in mind. On the contrary, they have distinctly given me the impression that they preferred to be let alone and to continue as they are.

Mr. Anderson. My statement related not to testimony of the group and chain bankers. My statement was based on impressions I received from reading the first five parts of volume 1 of the testimony which did not include any testimony of any of the group or

chain bankers.

Mr. Luce. While it is possible, of course, that some ulterior motive has been at work behind the public utterances of the proponents of branch banking, nothing has appeared here to indicate that such is the case.

Mr. Anderson. The disposition was not to ascribe ulterior motives. It was simply that those advocating the system seemed to have in mind especially the group developments that have taken place as something that would fit into the picture and would naturally lend

Itself to trade area branch banking.

Mr. Luce. I thought it fair to witnesses who have appeared, and to the committee itself, to bring out as distinctly as I can, the fact that we have had before us the picutre of two competing systems with no inter-relation of purpose, thought, or hope, and the testimony we have received has indicated to me that if we take action, it is to be expected that we shall face the question of which of these two systems is the better system and not the question of whether one would lead to the other if left alone.

Mr. Anderson. I had no reason to ascribe ulterior motives to

anybody.

Mr. Luce. When I use the word "ulterior" I mean in its cold sense.

Mr. Anderson. Hidden motives? Mr. Luce. Undisclosed motives.

Mr. Anderson. I do not mean that. I got the impression from the testimony of the comptroller and of Governor Young that they thought these groups are naturally in line with the next step in the development and I said "apparently" because I was not absolutely sure I could put my finger upon a passage in their testimony that would justify the statement in full and it was not

Mr. Luce. I did not receive from either of them, on my own part, any impression that they desired to intimate approval of either group or chain banking.

Mr. Anderson. No.

Mr. Luce. The next passage to which I would call attention is this:

I should not know how to draw a constitutional legislative proposal which would compel good bankers to absorb weak and failing banks.

Therein, sir, your view is undoubtedly that of all of us, but may it not beg the question? It was clearly brought out by the testimony of those representing group and chain banks that they had no intention of taking over weak and failing banks. Clearly it would be inconsistent with the business motives that prompted them to organize their groups and chains. I speak of it as begging the question because that is not the issue before us. What we want to find out is whether it is wise, by the branch-banking system, to secure routine banking facilities for small communities where a unit bank does not now exist, and if it ever did exist where it failed, and while the tenor of the bulletin before me at the start seems hostile to such a purpose, I find that later on you actually commend that purpose.

Mr. Anderson. I commend it from the beginning. I am in sympathy with the purpose from the beginning, but I understood the initial purpose was to arrest the failure of these banks. I think it might even precipitate the failure of small banks if you started

rival banks in the communities.

Mr. Luce. I should differ with you as to the emphasis to be placed upon the purposes of this legislation. While the failure of these banks gives a dramatic color to the problem, yet the heart of the problem is how to serve all the people of the United States. That is our primary function, and that is emphasized or rather supported by the fact that these failures are, for the most part, State banks, over which we, here, have no direct control and which we could, with difficulty, reach.

While the failures of these State banks, of course, greatly concern us as citizens of a country where we would lessen suffering as much as we can, our basic duty, as a committee of the National House is to shape legislation of a national character, the prime purpose of

which is to serve all of the people.

I think there must have been a misprint of possibly there was, in the last two or three lines of the paragraph which I am quoting where you say that the managers of a great group-bank system "would very properly shrink from the task of taking over sixty millions of banking resources scattered among 200 banks in very small towns."

Mr. Anderson. I was dividing \$60,000,000 by \$300,000. Does not that give 200? Three hundred thousand dollars was the average

size of the failed banks.

Mr. Luce. You mean to confine our attention, then, to the smallest? Mr. Anderson. To the average bank that is failing. You have your 5,000 banks fail with a billion and a half deposits, the average of the deposits being \$300,000. That is the typical bank that has failed, and I say this group-banking plan is irrelevant to that. It is like threading a needle without letting the thread meet the eye

Mr. Luce. As a matter of fact, 5,000 banks have failed in the

last 10 years?

Mr. Anderson. Yes, sir, and the average deposits were \$300,000. Mr. Luce. I do not see why, if 5,000 banks have failed, with an average of \$300,000 deposits, you should restrict our attention to 200 banks.

Mr. Anderson. It is an illustration of the problem the group banks are undertaking, and the problem they would have to undertake if they were going to stop the failures of the small banks. They are not taking in \$300,000 banks. This was merely an illustration. I could make it 10 times as big or half as big.

Mr. Luce. Well, it sufficies for my purpose to point out it is not

the 200 that have agitated us but the 5,000.

Mr. Anderson. I will reply, to meet your figure, it would be a very difficult undertaking to try to administer 5,000 banking offices averaging \$300,000 deposits each, and that any group would properly shrink

from doing it.

Mr. Luce. Let us go to the sixth page, where you say, after using the word "Revolution," as I referred to a while ago—you go on to aver there is nothing in the experience of the past nine years "to justify the creation of giant branch-banking systems, with enormous capital, ranging over 'trade areas' which may equal or even exceed

Federal reserve districts in size."

It seems to me, sir, that throughout this bulletin you have given the impression that there are a considerable number of persons, some of them in official position, possibly, who have been urging nation-wide branch banking. The only witness that I recall who has come out squarely for that was Mr. Gianinni. Possibly there were one or two others who have approved it. But the nearly unanimous sentiment of the witnesses before us, and certainly the declarations of the comptroller, have not led us to believe that there is any considerable body of opinion anywhere in the land favoring legislation to-day which would permit nation-wide branch banking.

Mr. Anderson. There is nothing-

Mr. Luce. Let me finish the basis for your comment by saying that to one who has been confronted with the discussion of this subject now for several years the problem presents itself as wholly one of degree. I may have been the first member of this committee, nearly 10 years ago, to point out what I thought was the inequity of the situation in a town like the one from which I come, where a State bank—we call them trust companies—was allowed to have a branch bank on the other side of the river which splits the town, while the national bank was not. I was several years ahead of my time in suggesting that this situation ought to be remedied. Possibly it was five or six years ago—

Mr. Anderson. May I correct one point here?

Mr. Luce. Yes.

f

e

12

e

10

95

is

he

Mr. Anderson. There is nothing in my paragraph that you quoted

that says anything about nation-wide branch banking.

Mr. Luce. No. I am showing you, as it often happens, that the atmosphere of a document is sometimes conceived by the reader differently from that which the writer intended. My reading of this document gave me the idea that you thought some one was trying to institute nation-wide branch banking. On more careful study, I discovered further on that you were hedging.

Mr. Anderson. I used language that corresponded to the language of the testimony in the hearings. I refer to page 6, volume 1, part 1, of the comptroller's own testimony as to what a trade area should be.

Mr. Luce. I shall not go further than to say that I think you have

misunderstood the atmosphere of these hearings.

Mr. Anderson. That is possible; yes, sir.
Mr. Luce. But to go on with the point I wanted to bring out, for
it is fitting, in connection with your testimony, that the many readers
of the reports of these hearings should understand just where we stand
in this matter, I would say it was five or six years ago when the committee and the public began to take seriously the proposal that there
should be some opportunity for branch banking, and we had here long
discussions of how far it should extend, and we made serious attempts
from time to time to lay down a proper limitation. It was made difficult by the fact that a considerable number of large cities are located
on the boundary between the State in which they are located and
another State. Noticeable cases were those of Cincinnati, across
from Covington; St. Louis, across from East St. Louis; Kansas City,
Mo., and Kansas City, Kans.—and these were not the only ones that
puzzled us.

I doubt if we ever did reach a satisfactory conclusion or whether, if an attempt to put a universal rule into words were made, it would be practicable. Yesterday, the witness told us he saw no reason why a New York City bank should not have a branch in Jersey City. I think it was the day before a witness said just the opposite thing. He said he did not see any reason why New York banks should have

branches in Jersey City.

As a matter of fact, one wholly free from any prejudices in the matter, would say that there is no logic in a downtown New York bank having a branch in Harlem being refused one in Jersey City or Newark.

However, I speak of that merely to finish my picture, to show you

n

h

a

le

Po

ha

ha

ex:

its

int

pic

Fee

tha

tion

where we stand in this matter.

There came along the McFadden bill which, in spite of strong opposition, made it possible for national banks to have branches in the cities where they were located, if State banks could. This has not proved a conclusion of the argument. You suggest in here, in one place, the use of counties. Now, you are confronted there by the fact that counties differ greatly in different parts of the country. Middlesex County, in my own State, at one end, could be reached by a fairly good rifle, from the city hall in Suffolk County, while, on the other hand it extends up to the border of New Hampshire and has in it, at that end, the city of Lowell of 100,000 people.

Our own counties in New England are of different sizes and different population and do not correspond in any way with the natural divisions of commerce and industry. The western counties were apparently laid off on the map with a foot rule, regardless of the county seats or other considerations. You will find a whole State with nearly every county of the same number of square miles. In every State counties have no commercial or industrial significance. If you attempt to make it counties, you would be confronted with serious

obstacles.

Mr. Anderson. I therefore propose no general Federal legislation.

Mr. Luce. But in your statement you go further and suggest States. Here again are ludicrous differences. Here, for instance, is the State of Delaware that an automobile can traverse perhaps between noon and sunset, while Mr. Garner, of Texas, has just proposed that we divide Texas into five States, each one of which would be larger in population and greatly larger in size than many of the States now existing. To run from one end of California to the other is a great deal more than a Sabbath day's journey. So, State lines have

really no banking logic whatever.

Mr. Anderson. State lines have this tremendous significance: The States are the constitutional units. They are not subject to change, whereas your county lines could be changed within the State at its own pleasure. If you are going to have local autonomy the State is the unit that must have it. The question comes up whether the mere question of banking expediency shall upset the Federal system. I believe, as a citizen, in preserving the Federal system and the State is the line where the lines must be drawn, because there is no other line that means anything.

Mr. Luce. There is no other political line, but the lines of politics

and government and the lines of business ignore each other.

Mr. Anderson. Yes, but legislation can not ignore political lines. Probably also very often we can make accommodations. New York and New Jersey divide the harbor of New York and they have worked out an arrangement. The Port Authority of New York Harbor has been worked out by the two States. We have other things by which New York and New Jersey cooperate by treaty in local problems. In this matter of banking arrangements, it is perfectly possible, under the general remedies I offer, for a State to pass legislation which would admit the banks of another State and permit them to have branches. There is no objection to concurrent Federal legislation to allow national banks to do the same thing.

Mr. Luce. If your experience in State legislatures and Congress had been equal to that of yours in banking, you would probably accept the word of one whose experience has been more largely in legislative bodies and in Congress, who would tell you that such a possibility can not, within the limits of possibility, even become a

possibility. The thing can not and will not be done.

Mr. Anderson. But the thing has happened. A bank in California has branches in Seattle and Portland. A national bank in California

has branches in Seattle and Portland.

Mr. Luce. I am unfamiliar with the circumstances by which that came about, but when I watched a State, like the State of Maine, for example, by a popular vote, refuse even to sell its water power beyond its boundaries, I should not expect the State of Maine to accept the intrusion within its boundaries of the branches of any Boston bank.

However, let us return to the subject of the examination. You pictured these trade areas as such as might equal or even exceed Federal reserve districts in size. Now, the smallest number of areas that has been importantly suggested to this committee, is 35, which would give an average population of 3,500,000.

Now, what is the size of the population of New York—9,000,000? Mr. Anderson. We have a very big State and a very big popula-

tion.

1

5

d

d

1-

I-

ty

ly

te

115

m.

Mr. Luce. I mean New York City.

Mr. Anderson. My recollection is the 1920 census shows 9,000,000 for the State.

Mr. Luce. Well, we will call it 7,000,000.

Mr. Anderson. Yes.

Mr. Luce. Then, New York City has a population twice as large as would be the average population in one of these districts, if they were 35 in number.

Mr. Anderson. Not in size.

Mr. Luce. I am talking about size measured by population. Yet you find nothing unwise in permitting branch banking in the city of

New York with its 7,000,000 people.

Mr. Anderson. It is all compact. The branch and head office can be in daily communication. The officers of the branch and the officers of the head office can know one another personally and sit at luncheons together and serve on the same committees once or twice a week. They are right there and accessible.

Mr. Luce. That, of course, is an advantage not to be ignored, but in these days of the telephone, I suppose there is no thirty-fifth of the population of the United States where there is no possibility of prac-

tically instantaneous consultation.

Mr. Anderson. Telephone consultation is easy when you know the man. To work over a telephone with a man you do not know is a different situation. After all, you have to have documents before you. The head office man has to have the documents and see the whole picture.

Mr. Luce. This of course involves that part of the bank which

concerns itself with the giving of credit.

Mr. Anderson. There are many other things besides that.

Mr. Luce. Where important consultations are necessary we may assume that credit is the important thing. We have been told that in other localities where branch or even group banking prevails the managers of the branch banks have only limited powers; that they can make only loans about which no question would arise, and that all important loans have to be referred to the head office; in fact, that is one of the criticisms made of the system. But what particular injury do you conceive that would work?

Mr. Anderson. One of the most important things is that a customer who wants the loan very often wants to see the man who passes upon it or the head office official who passes on it wants to see the customer and size up the man. We can do it in the city where you can not do it when he is off at another place. The question of personal knowledge

of the borrower remains very important.

Mr. Luce. But we have been given to understand that the errors in judgment of comparatively inexperienced men in smaller communities have been largely responsible for the failures of those banks. Is there not something to be said for the wider experience and the more trained capacity of the men who would be handling the credit department of a branch banking system?

Mr. Anderson. The personnel in the branch is not likely to be superior. On the average I think it would not be superior to the

personnel of the independent unit that is displaced.

Mr. Luce. That is true. I am talking about sizable loans. I am taking, for instance, the question raised by a stock raiser who might want a loan of, say, \$30,000. Is it clear that the judgment of the

as in

W

in

d

of pu wh ba loc cor

fere I the nation

cha

are

small—and I do not use the word invidiously—banker in a small community would, in those circumstances, be better than that of a

banker in a large center like Denver?

Mr. Anderson, His judgment would be better in regard to the character of the borrower because he knows him and his judgment would be better as to the quality of the eattle and whether they are there.

As to the cattle market and the future of the prices of cattle, if he uses his own judgment, it would not be as good, perhaps, as that of the correspondent banker in Chicago, but if this banker is a good banker, he is getting opinions from Chicago all the time about the cattle market in Chicago.

Mr. Luce. Does it stand to reason that the individual you would characterize as a good banker will stay very long in a small town

running a bank with less than \$300,000 deposits?

Mr. Anderson. He will stay longer if he is the president of the bank than he will stay if he is an employee of an outside institution. He will, in the first case, be interested in staying. He is proud of his institution and wants it to grow and, in the second case, he will be anxious to get away to a bigger office of the bigger bank.

My judgment with reference to the European banker is that there is no question of the superiority of the American local banker over the brach officer in the European town of the same size. On the other hand, when it comes to the head offices, there is immense bank-

ing ability in Europe. But it is in the head offices.

Mr. Luce. I would not demur, but would qualify that by saying that no branch system contemplates giving the local manager that degree of authority which is exercised by the unit banker.

Mr. Anderson. That is very true. Mr. Luce. At page 7 you refer to:

Concurrent legislation on the part of the Federal Government * * * such as would permit national banks to have the same branch-banking rights that State institutions have in these States.

In addition to the doubt I have raised as to the business expediency of adopting political lines for business regulations, I would ask you what is the logic of restricting the judgment of Congress to expression in only those parts of the country which chance to agree with us?

Mr. Anderson. I had thought of it the other way. I had thought of it as being desirable that Congress should hold back rather than push forward in this matter of branch banking outside of the city in which the head office is located, and it was my idea that national banks should have no branches outside of the city in which they were located, but I was agreeable to going along with the wish of the comptroller to prevent national banks surrendering their national charters and thus maintaining parity with the State systems.

Mr. Luce. Perhaps more than most members of Congress, I am in hearty sympathy with what you have said in favor of noninterference with local affairs by the Federal Government. My votes, I think, have been invariably cast against avoidable extension of national powers. Perhaps I should modify that "invariably" by confining it to matters like contributions to schools, roads, etc. But are we not confronted with the fact that, through the exigencies of war indeed, but nevertheless with what on the whole have been thought

admirable results, we did create a national banking system which you, yourself, hope may prove a model for the States?

Mr. Anderson. I would say has proved a model for the States.

Mr. Luce. This national banking system has developed, in the direction of securing adequate banking facilities with adequate protection all over the land. If we, in our wisdom—and of course we are falliable, but once in a while we have spasms of wisdom-if in one of those spasms of wisdom, we decide it is a useful thing to put banking facilities within the reach of small communities of the country, what logic is there in saying we will do it only with the permission an approval and blessing of the State that happens to look at it in the same way?

Mr. Anderson. Well, sir, I should think that the experience of recent years with Federal institutions that have been created to give additional credit facilities to agriculture would tend to make you go very slow about creating new banking institutions. It is much better to let them grow out of private enterprise and it is better to let private enterprise themselves take the initiative. Some of the institutions were, it is true, left to private enterprise, but encouraged by the Gov-

ernment.

The result has been a tremendous increase in the debt of agriculture, without any increase in the production of agriculture and the condition of the country banks has been due in part to just that thing, that the equity left in the farmer's hands was so small after he paid interest on this easily incurred debt, the institution found itself in difficulties, and I hope you will not feel you have to supply additional banking facilities.

Mr. Luce. We people who come from States where agriculture does not predominate inevitably think rather about our own con-

Let me illustrate.

I live in the city of Waltham, Massachusetts. It has 35,000 people or more. Adjoining this is the town of Weston, with a few thousand people, and a trust company in my city has deemed it profitable to open a banking office in that town. Next is the town of Wayland, with about the same population. What is the logic in saying we shall stop at the boundary between Weston and Wayland?

Mr. Anderson. Your State law stops you there?

Mr. Luce. As I recollect, all extensions of State banks have to be with the approval of the State Banking Commissioner, but suppose

a condition where the present national law would prevent it.

Mr. Anderson. Let me say, as far as I can gather, your banking situation in New England, under State regulation, is excellent. Your failures have been few and I do not think that New England has to come to Washington to get help on banking matters.

Mr. Luce. I will anticipate another part of the interrogatory and express my wish that we might, in these hearings, pay more attention

to the convenience and benefit of depositors in banks.

The tendency is to think of nobody but the borrower. There are a great many persons who use banks who do not borrow. I am one of them, and when you put in that list of English banks that were open only one day in the week, do you know what my reaction was?

Mr. Anderson. What was it?

Mr. Luce. I wished we had the same thing here. Mr. And And only deposit once a week?

Mr. Luce. I have occasion for three or four months a year to keep a deposit in a country bank in another town a dozen miles away. Every week or two I must go over there to get cash, whether I want to or not, to get the money for current needs. If there was, as we talk about here, a teller's window that was open once a week in the central part of the town of perhaps a thousand persons, in which I have occasion to stay, it would be a real convenience. So instead of your array of English banks that are open part of the time discouraging me, it encouraged my hope that we might some time have the same thing here. To carry it further, it seems to me that if, out of more than 5,000 banks that have failed, there were, at a guess, 3,000 of them in communities without other banking facilities, it would be justifiable and admirable to replace those facilities that have been lost, by what would come from a banking office open only once or twice a week. I want to get that in the record to show there is another side of the picture.

Mr. Anderson. I tried to get the other side into the record by saying there are some places in England that would not have any

banking facilities at all if those did not exist.

Mr. Luce. On page 9 you state:

The very small bank has had a difficult time in recent years, and the marvelous thing is not that so many have gone under, but rather, that such an enormous number have stood, and have even prospered, despite these adverse tendencies.

Reference to the census figures, as well as our common knowledge of what is going on all over the land, indicates that many of these towns which still have sound banking institutions, are likely to meet the same fate as the towns that have already dwindled. It looks as if the automobile had sounded the death-knell of the small American town.

That being the case, if what we have seen is only a precursor of what will follow, and there is nothing to indicate to the contrary, why should we not anticipate that danger and avoid the failure of 5,000 more bank by permitting them at once to become branches if they so desire?

Mr. Anderson. I think that in many States state legislation to permit that, and state legislation to compel consolidation among the tiny banks would be desirable.

Mr. Luce. Why should we wait for the States to act to prevent a

calamity to hundreds of communities?

ø

Mr. Anderson. The legislation proposed here—this trade area branch banking for national banks—would not touch this situation. You do not compel the banks to consolidate, nor do you compel banks that may establish branches to go into these States after those banks that may desire to become branches. You even permit branch banks to come in competition with banks already established and, by that, you may precipitate the failure of the little ones by permitting this competition. If you provided branch banking and limited it to towns of five or ten thousand population, you would concentrate the interests of the bankers and branch bankers upon this problem.

Mr. Luce. If the nation should take some precautions through its

comptroller, that possibility of injury would be removed?

Mr. Anderson. I think it would be better than opening the whole field, and making States that did not want it have to submit to it. There are any number of excellently organized State systems that do

not need it at all. I am sure New Jersey does not need it, and I am sure that New England does not.

Mr. Luce. I am still loathe to concede that it is not the business of

the Federal Government to-

Mr. Anderson. I will not argue the matter with you further because you are a constitutional lawyer and a lifelong student of political

science and my opinion is not as good as yours.

Mr. Luce. I thank you for your unduly generous comment. I should be more ready to accept your view were it not for the fact that we find ourselves with the national system on our hands and we are confronted with the problem of what we shall do. For one I am inclined to let the States handle their affairs without here paying

much attention to what they do.

I think my questions have covered the important points I wanted to bring out. From the answers I should conclude, that our difference is a matter of degree. Be assured, sir, that there is no wish on the part of at least one member of the committee to start a revolution, or accomplish anything radical. He is simply interested in trying to see if a moderate extension of a practice already established and justified by results may not help in averting what he feels are the dangers of group and chain banking.

I thank you.

Mr. Anderson. I thank you and through you, the committee, for the courtesy you have shown me.

(Whereupon, at 4.20 o'clock p. m., the committee adjourned.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, JUNE 10, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met at 10.30 o'clock a. m. in the committee room,

Capitol, Hon. Louis T. McFadden (chairman), presiding.

The Chairman. The committee will come to order. We have before the committee this morning Mr. Elmer E. Adams, president of the First National Bank of Fergus Falls, Minn. I understand Mr. Adams has a statement to make and I am going to suggest to the committee that he be permitted to make the statement without interruption, after which he will be glad to answer questions.

STATEMENT OF ELMER E. ADAMS, PRESIDENT OF THE FIRST NATIONAL BANK OF FERGUS FALLS, MINN.

Mr. Adams. I have been asked to speak for those bankers who still control their own banks and hope to be able to do so. We are opposed to the establishment of branch banks outside of the metropolitan districts. Group banks have probably become established to such an extent that it is impossible to undo what has been done. However, the individual banks which are on their feet have no fear of being unable to compete successfully with group banks unless unfavorable legislation is passed.

We do not want to have new group banks established in communities which are already amply supplied with banking facilities but we are not opposed to group banks acquiring banks now established. We do not like to see the propaganda put out which has been put out so generally, that the individual or unit banking system has broken down and has failed to meet the responsibilities and obligations which

the public could expect from it.

Many statements have been made which are detrimental to the unit banking system which are partially or wholly untrue and which leave an erroneous impression among the public and patrons of banks. A difficult situation has been made worse for a good many banks which were not in proper condition by advertising the vast resources which the group banks make available to the communities which they were anxious to serve. The unthinking depositor does not realize when he reads of the tremendous resources that the liabilities increase correspondingly and that the smaller bank is just as safe as a larger one if the same ratio of capital, assets, and liabilities is maintained and it has the same efficiency of management.

The unfortunate situation which has developed in the Northwest and in some other parts of the country is not in our opinion due to the failure of the present system of banking but because Congress and legislatures have permitted the establishment of banks with too small capital and in communities which were unable to support them.

It seems to have been the custom of those who have appeared before this committee to give the history and development of the institutions which they have represented and if I may be permitted to give a brief sketch of the situation with which I am connected I think it will afford a good illustration of what many country banks throughout the entire Northwest, have done and are now doing.

The First National Bank of Fergus Falls, Minn., is the oldest national bank between the Twin Cities and the Pacific coast. It has been in operation 58 years. During that time more than 50 banks have been established in the territory which it used to serve. Some of these banks have failed, others have been consolidated, but there are now about 35 banks in the territory which it once occupied alone.

In some of the small villages in this territory there have been three banks operating at the same time and there are several villages with less than 500 people which have two banks. We feel that a serious error was committed when the National Government reduced the necessary capital from fifty to twenty-five thousand dollars for a national bank. Until recently State banks have been permitted with a capital of \$10,000 which has hardly been enough to provide a building, a safe, and an adequate sign. An attempt was made in the Minnesota Legislature to reduce the necessary capital to \$5,000, but this legislation did not pass.

This great expansion in banking institutions in the Northwest occurred from 1900 to 1910 and followed what is sometimes known as the "Iowa invasion," which refers to that period when the land boom which has resulted so disastrously was in its period of inflation.

It has been stated before this committee that the breakdown in agriculture was due to the lack of adequate banking facilities. do not think this is any more true than it would be to say that the recent collapse in the stock market was due to the unwillingness of the metropolitan banks to advance the necessary funds to put up the margins. The inflation in land values and the widespread speculation in land resulted in the establishment of many banks which were in the nature of land offices and an important part of their business and a large part of their income while it lasted was a result of the active dealings in farm lands.

It is difficult for one who has not examined the assets to know why a bank failed but there is not the slightest doubt but many of the banks which failed, failed because they were used to carry the undesirable securities which grew out of the land deals of those who operated the banks and if the supervising banking departments, State and National, had aggressively taken the situation in hand when these banks were found to contain such securities the failures in many,

many cases would have been averted.

After these banks had become involved and should have been closed they were permitted to continue in the hope that there would be a recovery in land values and that they would be able to work out of the position in which they found themselves. Some may have succeeded in working out, but the majority did not, and depositors, not knowing the conditions, were permitted to put their money into such banks and lost it, thus bringing discredit on the system and on the banks which were being operated in a safe and successful manner. There is not the slightest doubt that if banks had not been permitted in locations where it was impossible for them to succeed and had not been undercapitalized many failures would have been averted. Notwithstanding the large number of failures which have occurred there are more than sufficient banks now to meet the requirements of the territory and there are sufficient sound institutions to properly handle all of the business.

There is a large amount of surplus money in banks in our section. By this I mean banks which are not only able to take care of all the legitimate borrowings but are in the market for outside investments such as commercial paper, Government and corporations bonds.

During the 58 years that our bank has been in existence I have been unable to find that it has ever borrowed or rediscounted either with the Federal reserve bank or any of its correspondent banks and there are doubtless many other institutions which have had the same record.

It is conceded that when the group-banking idea was taken up with so much vigor about 18 months ago that many banks were deeply concerned as to what it might do to them. The intense rivalry of the groups to secure the best banks in the various "key points" and the aggressive work of their outfielders in proclaiming that there was nothing for individual banks to do but to become a member of a group while there was an opportunity naturally caused some consternation among bankers. This feeling, however, has gradually passed away and they are confident that if the legislation which is enacted by the State legislatures and by Congress gives them an equal opportunity they will survive and serve their communities.

It has been claimed that a large number of villages which have enjoyed banking facilities are now without them and that it is desirable to have branches established in such places. We do not believe that such is the case and under present conditions of travel farmers and business men who were accustomed only a few years ago to drive with their teams to trade or to a bank, now cover a distance of 50 miles as easily as they did 10 or 12 under former conditions. I venture the opinion that these branch offices would never justify the expense. People like to come to the larger towns when the roads are good.

There have been two classes of bankers who have appreciated the establishment of the group systems. The first is those bankers who have entertained some doubt as to their success in the future and who have suffered somewhat from the fear that on account of the weaker institutions in near-by communities they might be involved in trouble. The second is a class of very good bankers who were glad to be relieved of the responsibility and to place their institutions in safe hands as has been done by turning their banks into the group systems.

If overbanking and undercapitalization is the cause of the banking troubles, and it is generally conceded the banks in the large cities are

responsible for their full share of the trouble.

r.

When the period of bank expansion began, 20 or 25 years ago, every large bank in the terminal cities was anxious to get the business of the country banks. They sought their accounts. Frequently they enabled them to raise the capital by taking the notes of stockholders who did not have the money to pay for the stock for which they subscribed. These banks, starting out weak, and in territory oftentimes still undeveloped, soon needed additional funds and they naturally went to the correspondent bank which had their account

for that assistance. The starting of these hundreds of banks in a short period resulted in their being placed in the hands of young, inexperienced, and untried men. Their idea was to get all the business possible and to make their bank grow and to boast of its growth in comparison with rival institutions. They seemed to have the idea that the more they could borrow and the more they could draw deposits from outside their territory, the more successful they were. This kind of growth was all right just as along as values were being inflated.

I recall an interview with a young banker who came to see me just as the trouble was beginning to break in hundreds of little banks throughout the Northwest. This young man said that he had not scalded his stockholders worse than he had, as he had gone into the banking business when times were good and values were tending upward rapidly. He said that he had never heard of rust and hail and hog cholera and drought and the various weed pests which quickly destroyed values and left the borrower unable to pay.

Practically every one of these little banks was in the farm-land game. They were either the outpost of a bank in Iowa or Illinois or else they made such a connection, the plan being that after the Iowa banker had lent an Iowa farmer money with which to buy cheap land in the Northwest, he was steered into the hands of a Minnesota or Dakota banker who sold him the land and took his profit in a second or third mortgage. These second and third mortgages soon drifted into the bank and when they once had this proposition on their hands it was necessary for them to continue to make advances to help the occupant of the land carry on. Sometimes he needed more money to pay his interest, at other times to buy additional machinery or perhaps the twine with which to bind the grain when it ripened. One crop failure or an improper diversion of the proceeds of the crop put loans of this character into the frozen class.

For a while relief was available through the Federal farm loan bank and through the joint-stock land banks and through the Minne-

sota or North Dakota rural credit associations.

The local banks loaded these overmortgaged farms onto these governmental agencies by the hundreds, in some instances relieving themselves temporarily and helping out insurance companies, trust companies, and others who were alert and on the ground looking for their money. These small banks not only borrowed when it ought not to have been done, but they had no reserve of any kind which could be cashed when people wanted their deposits, and the result was that they became frozen to such an extent that it was impossible to thaw them out.

If their stockholders had been substantial men of the community who had any funds with which to engage in the banking business, there would have been some chance of relief, but about the first intimation that the directors and stockholders had of the conditions of their banks was when they were called upon to mortgage their own property and raise funds in the hopes that the bank might be saved. I do not believe it is an exaggeration to say that in 90 per cent of the country banks the directors had no knowledge of the condition of their institutions. Recently there have been many law suits in which directors have been sued, not only for receiving funds in their institutions after they were insolvent, but for their failure to use proper diligence in guarding the funds which were attracted to the

institutions through their good names.

One of the most important problems now affecting the banking situation is the liquidation of many banks which are not able to extricate themselves from their distressed situation. In many cases their capital, their surplus, and undivided profits are tied up in assets which they can not sell for what they are carried on their books, and under present earning conditions are unable to earn sufficient to charge off these losses.

The banking departments are doubtless in hopes that conditions will so change that banks thus involved may be saved, but it is a grave question whether they ought to be allowed to continue to take

the money of innocent and unwary depositors.

The chain or group bank idea is not new, although it has had a fresh start on a larger scale in the last year or two, with a slightly modified plan. These chain systems have almost always been controlled and operated from the large cities. Sometimes an interest in a local bank was acquired, but in most cases new banks were established as new towns sprang up with the building of railroads. Some of these chains have been quite successful, but many met with disaster. The plan of operation from the large city included the selling of farm mortgages which the frontier bank was expected to obtain and send in to headquarters. The commissions were so good that there was intense rivalry in securing these loans, and they constantly grew larger, faster than the land increased in value. loans were disposed of through the head office, and so long as values went up and the farmers were able to pay, business was good; but instead of using the profits to build up a surplus and undivided Profits to put the bank in a position to take care of the set backs which Were sure to come and which have come, the profits were drawn out by the controlling head, used to establish other banks, or diverted into other channels, with the inevitable result that there was nothing on hand to take care of losses when they came.

In conversing with young men who have been operating these chain banks and trying to ascertain why they failed, I find that the split loan which was fed into the banks from the head office was one of the major factors. These young men operating the banks had to take the loans which were sent to them if they desired to hold their positions, and frequently funds in a community, which was fairly Prosperous, under this plan were diverted into other regions where

rates were higher and the certainty of pay not as great.

It is a matter of regret that in the Northwest, when a bank has failed, a post-mortem could not have been held, so that the public, or at least the bankers, might know what had brought about the disaster; but when a bank fails, the depositors take what they can get.

They never learn what became of their money.

Some of those who have lived here in the Northwest have known all these years what chain systems have been doing to the country districts and the country villages. The first chains to be established were the country elevators. It was possibly the result of necessity. When the St. Paul, Minneapolis & Manitoba Railroad, later known as the Great Northern, was being extended from the Twin Cities north Into the wheat fields of Minnesota and Dakota, it was necessary to have elevators to take care of the grain; and so Mr. James J. Hill gave to Pillsbury and Hulburt the exclusive right to build and operate elevators on his railroad. In those days farmers and local dealers were not allowed to build an elevator on the right of way, to get a spur track to elevators on private property, to have a loading platform, or to obtain cars in which to ship their grain. This was the cause of the organization of the Farmers' Alliance between 1880 and 1890, which later developed into the People's or Populist Party. That was in the days of bleeding Kansas, when Senator Peffer, Sockless Simpson, and Mary Allen Lease were in their prime. At that time the chain elevator fixed the price to be paid for wheat, graded it, weighed it, docked it, and there was nothing for the farmer to do but sell his grain under those conditions or take it home again. As a result of the Farmers' Alliance, that marketing situation was remedied and cooperative elevators were built and cars could be obtained in rotation, but as a result of these chain elevators the profits from handling the grain, which was the great business of the country, did not remain in the local communities but went to the terminal cities just as the profits of the chain banks will go there in the future.

The chain elevators were followed by the chain lumber yards and in the saloon days by chain saloons operated from the big brewery by an irresponsible bartender who was moved whenever he got into trouble and another equally good man put in his place. There are four banks in the city in which I live: Two national and two State. One is owned by one of the newly formed bank groups. Nine hundred and two shares of the stock of that bank are owned in the Twin Cities and the balance of the capital stock is either owned here or is perhaps lent to qualify directors. The stock of the other banks is owned in the community and if there are any profits, they are kept at home for home purposes. There is no doubt which system is the most desirable

for the local community.

The success of the banking business in the agricultural community is so interwoven with the success of agriculture that possibly I may be pardoned if I digress briefly to give a little picture of the agricultural

development as I have seen it.

Otter Tail County, of which, Fergus Falls, where I live, is the county seat, is perhaps one of the most highly diversified counties in Minnesota. It is in a lake region, and a very large portion of the land was covered with timber. The pioneers came there because there were two essential necessities—wood and water. This country was opened up before the prairies on this account. The timber not only furnished them fuel but logs with which to build their buildings even before the sawmill had arrived. The soil is excellent, and those fields which the pioneer grubbed and put under cultivation have never failed to yield a good return. As a result there are some of the finest little banks in this county that are to be found anywhere in the United States. I am a stockholder in four banks in this county: One National, three State.

In the 58 years in which the First National of Fergus Falls has been operating it has increased its capital from \$50,000 to \$100,000 and built up a surplus of \$150,000; during that time it has distributed \$538,000 in dividends to its stockholders, and at no recent examination have the examiners asked to have anything charged off or charged down. We have the First State Bank at Underwood which started with \$10,000 capital and \$2,000 surplus. It now has a capital of

\$10,000, a surplus of \$20,000, undivided profits of about \$10,000, and a depreciation fund of \$6,000 set up to take care of bonds which are not worth as much as they were when we bought them, but none

of which have as yet defaulted their interest.

We have a bank at Dalton, a near-by village, with \$10,000 capital, \$10,000 surplus, and \$4,000 undivided profits and at the last examination of these banks the examiners did not ask to have anything charged off or charged down. We have another State bank at Erhard which started with a capital of \$10,000 and \$2,000 surplus and has built up

a surplus of \$7,000 and we believe is clean.

During this period when these surpluses have been built up, these banks have paid a good rate on the capital. None of these three villages have over 300 inhabitants, yet charters were granted to start so-called farmers' banks in two of these villages, which naturally have interfered somewhat with the success of the bank already started; but this is evidence to my mind that if banks are only fairly decently managed, independent banks are able to survive and serve the community. The banks have been operated at low cost, but their earnings have practically all come from interest and not from the side lines which have injured so many banks. It is true that in the territory which can possibly be called the treat area of Fergus Falls, eight State banks have failed. They were all banks with small capital, and out of these eight banks, nine men went to the penitentiary, some for forgery, some for arson, and some for embezzle-Those banks were in equally good territory as those in which I have been a stockholder, and if the authorities had checked them early, some of those failures could undoubtedly have been avoided.

At the beginning of my statement I said that the individual banks which were on their feet felt that they were able to cope with chain banks under remote control. One of the groups has a splendid bank in my own city, but the other banks owned at home are not conscious of having lost anything to it on account of its being in a group, and we are unable to discover that we have gained anything on account

of our banks being owned at home and controlled at home.

Mr. Strong. Just a moment. You say there has been no gain in

your business.

Mr. Adams. I mean there has been no change in the banking business in the community. There has been practically no new business in the community and those who were in the chain bank

stayed there and those in our bank remained with us.

We stand an equal show in getting local business. The chain banks have a better chance to get business which is controlled elsewhere. There are something like 20 chain institutions in our city, which has a population of 9,370 according to the recent census, but of which more than 1,500 are in a State institution. The county seat with good roads and rapid transportation has absorbed the outlying villages, and our local business has been absorbed largely by the chain institutions which have crowded into it and which are now in each other's way. The banking business of these chain stores and institutions is controlled from the headquarters' office and the chain banks through their head office have a better opportunity to get it. It is not considered very valuable, however, as the funds are transferred almost as soon as they are deposited. We are confident that banks locally owned can be operated at much less expense than those

which are owned elsewhere and have to carry the overhead charge of the parent company. Those who operate locally owned institutions are touching elbows with the people of modest means, and are influenced in their expenses accordingly, while those who own or are employed by the large chain institutions are surrounded by vast capital and resources, and expenditures of every line are correspond-

ingly increased.

We all concede that as a result of the purchase of local banks by the groups or chains, banking conditions are improved. They must of necessity tighten up and require their links to comply with certain fixed standards and rules in which the local bankers have doubtless been remiss and careless. This is particularly true in the requiring of finanancial statements, in the insistence that a note be paid or attended to when due, and the maintaining of a proper deposit or paying a fee for failure to do so. Competition is vigorous between the group banks and those locally owned. The group banks must make dividends or the management will be changed and the local banks are eager to make money as the stockholders need the dividends.

I do not think that the group banks are entitled to too much credit for being engaged in an unselfish game. Some of the groups went into it reluctantly but felt that it was necessary in order to protect the business which they had built up, as the country banks which carried good accounts with them were being purchased by rival institutions. When this group movement started, they did not seek out communities which needed additional banking facilities, but they picked the strong institutions at the key points so as to control the good business in the outlying districts and while they have availed themselves of the opportunity to get into some communities which have lost their banks, I know of no place where they have gone into a community to clean up a situation unless it was with the expectation of profit which is entirely proper and which policy I heartily indorse.

The crying need, however, is for banks which will take care of the poor borrowers. By the poor borrowers I mean the men who never want to pay a note when it is due and who too often want to add the interest to the principal. These men need help and must be helped if they are going to function. They have to have seed when spring comes. They have to have feed for their stock if there is a shortage, and they are quite liable to need machinery and twine when it is time to harvest. They mean to pay their notes but every now and then some disaster comes and they are unable to do what they agreed to do; and so these banks, which have been carrying this class of business, have been involved in situations from which it was impossible to extricate themselves. Neither a group bank nor a branch bank will ever take care of this class of trade. The local banks have done their share of it. In former days the general merchant and the implement They not only gave them credit for goods, but it was dealer aided. not an uncommon thing for the farmer who was trading at a store to borrow small sums until he could harvest, sell an animal, or raise the funds in some other way. The old-time storekeepers were generous in this way and the banks carried them, but you can imagine a farmer who suddenly needs a little money going to Mr. Woolworth's manager, or Mr. Montgomery Ward's manager, or Mr. Sears-Roebuck's manager and getting the accommodation which he used to get from the oldtime merchant. This situation of the poor borrower is constantly getting worse as the number of farms acquired by mortgages increases. The tenants on these farms are very seldom in financial condition so that they can provide an equipment of machinery, their one-half of the stock, and get along from harvest to harvest.

There is a crying need for institutions to take care of this class of business, but I am unable to determine how it can be done, and I have lived among them for many years. We do what we can along these lines and while the losses have not been very large, it is because

we have been very discriminating in accepting them.

The installment buying has increased the difficulties of the local banks very much. Ten years ago chattel mortgages were not 10 per cent as many as there are at the present time, and these mortgages are almost always given to pay for the automobile which has become a necessity and which every farmer and every citizen must have in order to carry on and enjoy any of the pleasures of modern life. The banks have taken very little of this installment paper. It has gone into hands sometimes local but very generally foreign; and they have insisted on the prompt payments of the installments when due. This has resulted in those who have borrowed at the banks taking care of these installments instead of paying the banks. The family will give

up everything before it will let go of the automobile.

Some of the heads of group banks who have appeared before this committee have dwelt upon the marketability of the stocks of the holding companies, and the lack of it so far as home-owned banks are concerned. I have always maintained that the stock of a bank should be owned locally by the substantial men of the community whose money was in it and whose wealth was behind it. I have believed that it was the most desirable that there should be a permanency of ownership, and have protested against the splitting up of shares with a view of democratizing an institution. There was a time when the advertising of bank stocks for sale aroused suspicion, and banks did not like to have their capital floating about, for if the bank was good It was closely held. The quoting of group stocks on the local stock exchange in my opinion has had a detrimental effect. Many without capital bought small quantities of the stock, not for the purpose of furnishing banking capital, but for the increase in the value of the stock as reflected by the figures on the board. The wide fluctuations In the market quotations of these group holdings have seriously affected them, and the fact that the market prices of the stocks have dropped far below the prices at which they were passed on to the Public has made it much easier for the individual banks to meet their competition in the banking business.

I have never observed a shortage of funds in our territory to take care of good loans. A very large proportion of the banks which have been taken into the groups and a goodly portion of those which are now individually owned are excess money banks and have always been looking for commercial paper and other outside investments, because there was not an opportunity to loan it at home under conditions which would insure its repayment. This surplus money has resulted in many of the banks buying bonds. We have not used as good judgment as we ought. We were inexperienced in the bond purchasing business, as we had never carried bonds in our banks until the Liberty loans were made. In purchasing of these bonds we have relied very largely upon the good names of the banks which had

bond departments selling us bonds which were of a proper character. Some errors have been made. It is claimed that one of the services of the group banks will be to advise their members as to what kind of securities to purchase, but unless they are more infallible than they have been in the past, they are liable to make some errors. If there are any impending losses, in the country banks at the present time, they will come from the bonds and not from the local loans.

Country banking is so closely related to agriculture and farm development that I want to refer to certain developments which I have seen during the 50 years which I have lived in the Northwest.

There have been three distinct periods in the development of the Northwest—the ox age, the horse age, and the gas age. If the building up of the farm and the liquidation of debts was the test, the ox age was the most successful of the three. When the settlers came into the country they brought oxen for motive power. They were cheap to buy, easy to keep, and valuable for food when no longer able to work. For years I saw long trains of ox teams coming in from the country bringing in wood, the results of the clearing of the land, or bringing the grain to the elevator. It was tedious work, but when they returned home they remained there until it was necessary to come to town for similar purposes.

Then the horse traders arrived and the debts began to increase and the first hard times began. The horse traders generally cooperated with the local bank which took the paper and got part of the profits on the sale of the horses. When the farmers swapped their oxen for the horses, it was necessary to purchase harnesses, wagons, and buggies, with the result that both debts and interest increased. It also resulted in more frequent visits to town and consequently

increases in expenditures.

When the gas age arrived with good roads the situation was entirely changed. The tendency to leave the farm at every excuse was greatly increased and efficiency lessened. In passing through one of the neighboring villages a short time ago, I saw coal sheds where the wood yards for shipping out the wood used to be, and on the site of the grain elevators there were the gas tanks. This change tells why banking conditions have changed. No one should stand in the way of progress, but the results of this change have been to increase the nonliquidated obligations in the banks which have been easy in granting credit.

In previous sessions of this committee the question of a monopoly of credit has been under discussion. We do not think a monopoly could easily be created and do not suppose that any of the heads of the banking groups would try to attempt it. The unit bankers, however, are naturally concerned about their city correspondents and when one of the groups which not only had a mother bank proceeded to gather into its fold the next two largest banks in the Twin Cities there was some wondering when the movement would cease. These fears are being alleviated by the assurance on the part of the mother banks of the groups that they are going to give unit banks the same attention that they do the links in their own chains.

There has also been a discussion as to whether the building up of great groups or the establishment of branch banks would not do away with the value of the Federal reserve bank. The relations of the small country bankers with the Federal reserve bank are not intimate.

When they need to borrow it is generally easier to go to their correspondent banks.

One of the chief services rendered to some of the member banks is the storage of their securities without a fee which would have to be

paid to a correspondent bank.

It would doubtless be difficult for the group banks through their vote to obtain control of the Federal reserve bank if the unit bankers were interested. The unit banks, however, have been very neglectful of their voting privileges and many of them have not even cast their vote. The control of the Federal reserve bank is self-perpetuating. Those in command know whose terms will expire and before any interest is taken they have secured enough nominating votes to

control the election.

There has been some discussion as to whether a majority of the directors in the Federal reserve bank should be directors in the group holding companies but I have never heard of any complaint of the treatment which the unit banks have received. Of course, the information which the group bankers receive through being in charge of the Federal Reserve is useful but it would doubtless be available to any one else who asked for it. Member banks would like very much to share more of the profits instead of seeing so much of them used for expenses which seem lavish to an impoverished country banker

when he seeks a loan.

The independent banks are organizing for mutual protection. They are trying not to admit any which are not sound and which might close, for if an independent bank closes now, it can be used as a reason why a group bank would take its place. Some of the independent banks have been somewhat concerned over their connection with correspondent banks in the city which are the head of the group. There have been suggestions that they ought to try and form a clearing-house bank which should handle their business at the terminal point, but the most intelligent bankers realize that this proposition is futile, and that they will undoubtedly receive proper service from the banks which have served as their correspondents even though they are now members of groups and are in competition with them.

Mr. Adams. I made a statement when the big groups were first started in the Northwest which outlined our policy and ideal. It had a very wide circulation, and did much to hearten the bankers who did not want to give up their banks. It was as follows:

The merging, consolidating, affiliating, and purchasing of banks throughout the mid-west has aroused widespread interest and no little concern among people who wonder what this great concentration of banking capital and control of the people's deposits means.

Under these circumstances it is not surprising that patrons and the public in general are inquiring what is going to happen to the First National Bank of

Fergus Falls.

Fifty-seven years ago the men who founded Fergus Falls, founded this bank—George B. Wright, Henry C. Page, and James Compton. Their purpose was to provide banking facilities which were owned, controlled, and operated in Fergus Falls. It was the first national bank organized between the Twin Cities and the Pacific coast. For more than half a century it has been controlled and operated by men living in Fergus Falls and to-day all but four shares of its stock are owned by residents of Fergus Falls.

During this long period it has enjoyed the confidence and patronage of the people of Otter Tail County whether times were hard or money was plentiful. To turn the control of these funds over to some great aggregation of capital, remote from Fergus Falls and Otter Tail County would seem disloyal.

We, therefore, wish to state that so long as the First National Bank of Fergus

Falls continues to enjoy the confidence and patronage of the people in its territory and it is able to give satisfactory service, its ownership and management will remain in Fergus Falls. This statement is made with authority. Its capital is owned by men whose interests are interwoven in the business affairs of Fergus Falls and Otter Tail County and every share of stock is in the safety deposit box of its owner.

We belive that the interests of the community can be better served if the bank is managed by those who are a part of the community rather than by foreign

interests.

A vest amount of propaganda has been set affoat about the value of a nationwide hookup of banks but we are unable to see why banks owned and controlled in the community which enjoy the confidence of depositors and have ample funds for their borrowers, which understand and sympathize with local conditions, can not give as good service as those under remote control.

We are confident that the people of Otter Tail County will show their apprecia-

tion of our stand by continuing to give this bank their patronage so long as it is

worthy of it.

The Chairman. Mr. Adams, I was particularly interested in your reference to your investment in bonds, and I was further impressed by your reference later on, where you referred to the fact that you sought and received, as do other banks, the advice of correspondent banks in regard to the purchase of bonds and investments.

Banks, for the last five or six years, have been losers, to quite some

extent, in their bond accounts?

Mr. Adams. Yes, sir; we have had to charge off a few. They have not been serious yet.

The CHAIRMAN. What class of bonds, in your section, do you buy?

Mr. Adams. The bonds, up to this time, have been too frequently sold by salesmen who come around representing one of the large banks with which we are familiar in Chicago, and particularly the Twin Cities banks. In our banks we have foreign bonds which are above the price we paid for them. We have quite a number of industrials and some railroads, but not so many municipals, because the rates they pay are somewhat lower than we can afford to buy them at, and so we have bought Governments.

The CHAIRMAN. But you have some municipals?

Mr. Adams. Some, but not many.

The CHAIRMAN. What do your records show in the past few years-

an appreciation or depreciation?

Mr. Adams. In May, 1929, we had, I think, \$23,000 appreciation. In the October examination—after the New York trouble— we had dropped so that we are either \$3,000 below or just above. I have not the figures here. In the meantime, I think we charged off \$2,000 of coal bonds and we have lost \$2,000 in timber bonds.

The Chairman. It seems to me, as I analyze the situation now of the money market, the bond market, and the stock market, there is some reason why bonds have not reacted favorably. Have you analyzed the situation to know why, with the very cheap money we apparently have, bonds have not appreciated more than they have?

Mr. Adams. I live in the country and we have not very much information about that. We are not buying many bonds now. We were one of the early buying banks and we got stocked up. Of course the country is still stock-minded and while we do not have any loans on stock, there are always a great many men whom we know who

buy stocks instead of bonds.

The Chairman. You rely very largely in the purchase of bonds,

on the advice of correspondent banks?

Mr. Adams. We rely very largely on the good name of the banks. I recall that I went to see Mr. Traylor, of the First National Bank of Chicago, whom I know very well, and with whom we have carried an account for over 40 years, and I asked him to put me in touch with somebody who had some good bonds to sell that would be worthy of being in our bank. He referred me as requested and they helped me to select some \$75,000 worth of bonds and none of them have defaulted. We rely on the good name of the institution.

If the First National Bank of Minneapolis or of Chicago puts out an issue, we generally buy them. We have to rely on the large

institutions, and we have found it a wise policy.

The CHAIRMAN. What class of foreign bonds do you buy?

Mr. Adams. We have a very diversified list. We have some Belgian bonds, some few in Germany, some very few in Italy, and quite a few French bonds.

The CHAIRMAN. I suppose you buy those because of the large

interest returns you get?

Mr. Adams. I suppose we bought those bonds because they were

sold to us. [Laughter.] We think that is our weakness now.

The Chairman. You are about to have another opportunity to buy some German reparation bonds. Mr. Traylor has had more or less to do with the issuance of those, but I do not know whether he is recommending them or not.

Mr. Strong. Mr. Adams, you spoke about having stock in three other banks. Do you own control?

Mr. Adams. No, sir; we are simply a stockholder.

Mr. Strong. It is not in the nature of a chain bank, then?

Mr. Adams. Absolutely not.

Mr. Strong. You also spoke of a general selling of stocks by banks—that is, trying to sell stocks generally to the public. I should like to have your opinion as to whether or not that is indulged in from the standpoint of creating friends in a community or as a moneymaking proposition.

Mr. Adams. Selling listed stocks?

Mr. Strong. The stocks of banks, generally. You spoke of the fact that bank stocks are being more generally sold than they used to. Mr. Adams. The groups have been selling their stocks. The local

banks never sell their stocks.

Mr. Strong. I am not concerned what bank it is. Are they selling for the purpose of making friends, or for the purpose of raising money?

Mr. Adams. They wanted to raise capital and they naturally want to get a wide distribution on the theory that the more customers they

have the more they are democratizing their banks.

Mr. Strong. Is there anything in this thought, that it would be easier to sell stocks in a bank that is diversified than to ask some good

investor to take the entire output?

Mr. Adams. At the time the stocks were underwritten in the Northwest by one of the banks there, their idea was that it was going over big and so they made arrangements to have it underwritten. I think Mr. Pillsbury is the one who insisted that the issue be underwritten, and the way it turned out it was very desirable to have it done. Our bank has never sold any bonds or stocks to anyone.

Mr. Strong. What I wanted to develop was whether or not, in that combination of these banks, whether they are group or chain, there is not an amount of stock sold beyond the regular book value of the banks. Is there not a little stock watering in the proposition?

Mr. Adams. The testimony here shows that they paid for going business; but the distribution which some of them made by selling those stocks to their depositors and some bond buyers, was unfortunate, because they put it out at a price very much higher than the market is now.

Mr. Strong. Well, it is not a process that if it was done in connection with some stock in a gold mine it would be called watered stock?

Mr. Adams. I do not know that it is watered.

Mr. Strong. I know you hesitate to say so.
Mr. Adams. No; I do not hesitate to say so. I know the stock of the group holding company is very much larger than the assets they own, but they claim that that is for going business.

Mr. Strong. Well, water in the stock? Mr. Adams. Well, I would not want to concede that.

Mr. Strong. I know you hate to do that, but if you issue stock in any institution-I do not care whether it is a bank or what it is beyond the value of the business, claiming it is good will, that is, in a sense, watering the stock, is it not?

Mr. Adams. I should say so. Up to the time this new movement started, stocks in the Twin Cities banks were selling at less than their assets, but the Bank of Italy came in there and started things moving up by buying 400 shares of the First National Bank of Minneapolis at a higher price than that at which they were previously sold, and at that time, with the inflation over the country and groups coming into the situation, the stocks rose rapidly.

Mr. Strong. The argument has been made to me by gentlemen along the line that these group banks were wholly organized for the purpose of stability and the development of the community, but some of them, it seems to me, have been organized as a money-making

proposition.

Mr. Adams. I do not think there is any doubt that those groups were organized with a view of increasing their business and increasing their power, the same as any other merger is made.

Mr. Strong. The Bank of Italy came in and bought some of the

stock?

Mr. Adams. The Bank of Italy came in and bought 400 shares of the First National Bank of Minneapolis. Up to that time the stock was selling at from \$280 up to \$300. The officers and directors wanted to keep it there, but the Bank of Italy came in and bought 400 shares at \$400 a share and quite a lot of publicity was given to it and it aroused quite an amount of interest, and from that time on the stock began to go up.

Mr. Strong. Has the Bank of Italy still an interest in that bank?

Mr. Adams. I could not say.

Mr. Strong. Did they buy any other stock that you have heard of?

Mr. Adams. I do not know.

Mr. Strong. Did they secure any representation on the board of directors?

Mr. Adams. I think not.

Mr. Strong. You do not know the purpose of their buying that

Stock?

Mr. Adams. If you are familiar with the Bank of Italy Corporation, which, to my mind, was the first investment trust to be organized, it was organized about 15 years ago with a capital of \$50,000,000. You may recall Mr. Giannini proceeded to buy large blocks of stock in the finest banks in this country. He also bought large blocks of stock in General Motors, General Electric, and United States Steel. The result was, inasmuch as he bought that stock before the inflation, the Bank of Italy Corporation made a tremendous profit. I do not know whether he still holds their holding in the First National, the National City of New York, the Shawmut of Boston, the First of St. Louis and the First of New Orleans, or not.

Mr. Strong. I will ask you for your opinion on this proposition: Do you think, as a general proposition, the organization of group banks is for the purpose permanently of maintaining the groups or

of eventually selling them out to branch banking groups?

Mr. Adams. I think they are organizing with the view to centralizing the power there in the Twin Cities. There was a difference of opinion about going into the group when the Northwestern started. The First National first announced they were not going in and so advised me, but later on, as they found the Northwestern gathering up the fine banks around the country, they found it advisable to follow their example.

Mr. Strong. Now, to your knowledge, has there ever been any pressure or strong influence used to get these good banks to sell out

to the groups?

Mr. Adams. No; I do not think they have been coerced. There has been persuasion. As I have stated—men from the cities visited the banks and asked if the banks were for sale, and would tell them the group banks were here to stay and the only thing to do was to get in while salvation was available.

Mr. Strong. Would they offer stock in the parent bank or holding company in excess of what their stock was worth from a book value

standpoint or from what its marketable value was worth?

Mr. Adams. I think they have paid very good prices in exchange, but that information is not available. Some of the banks have gotten a very good price and some not so good.

Of course at the time they were exchanging their bank stocks, group holdings were very much higher than now, so they thought

they were getting more.

Mr. Strong. The stock is not as valuable now as when it started?

Mr. Adams. There has been quite a depreciation. The Northwestern group started at \$50.35 and went to \$100 but is now back to

The First National group stock started at \$47.50 and went to \$64

and is now at \$28.

Mr. Strong. So the investment in those bank stocks has not been

so good? You do not need to answer that.

Mr. Adams. It has been like some other things that have gone down. I think, however, those stocks will come back. Of course, 1929 was a very good banking year and there were not so many losses and there were good rates of interest and a great many banks picked up profits in the increase in bonds. The situation will not be so good this year.

Mr. Strong. A great deal has been said about the future of the individual bank from a depreciation of its assets, but from your statement it is very evident that the group bank stocks depreciated in

value.

Mr. Adams. That stock has gone down because it is on the board. The stocks in the local banks have not gone down because there are

no quotations of their stock.

Mr. Strong. Let me ask you in regard to very small banks that are not accepted and taken in by these group banks. Gentlemen representing one of the group banks before this committee, said they expected to serve, such community, if permitted to do so, through branches. What is becoming of those small banks?

Mr. Adams. They are gradually being absorbed. Within 90 days three banks in an adjoining county were moved into county-seat banks. At Fargo I noticed the other day the Merchants National Bank had moved in three skimming stations, as we call them.

Mr. Strong. And there are no banks left in those places?

Mr. Adams. No, sir; they do not need them and they would not succeed if they remained.

Mr. Strong. It is simply where small banks were placed where

there was no demand?

Mr. Adams. They were put out during the period of expansion and their earnings have been cut down because there are no profitable

side lines now.

Mr. Strong. If the large banks in the money centers continue to send out men to sell bonds to banks throughout the country as you described, what will be the result if those large banks in the money centers have teller windows all over the country?

Mr. Adams. They can not maintain them unless they maintain them at a loss. They are not worth maintaining under present

conditions.

ë

Mr. Strong. What will be the result with respect to the selling of bonds?

Mr. Adams. Those small banks, of course, do not buy so many bonds.

Mr. Strong. I mean with respect to using them as distributing agencies for the big banks that underwrite the bonds and get a good commission and sell them to individuals through their branches. Would not these branches be used as a kind of distributing agency?

Mr. Adams. I think the business would be so thin especially in

the Northwestern States, it would not pay them.

Mr. Strong. If there was any money to invest up there, they would

be used for that purpose?

Mr. Adams. There is a great deal of money in our section that has gone into local utilities. We have, in our town, a local utility that lights about 15 towns. A very large proportion of its \$15,000,000 capital was raised in our territory. For a long time it was financed at home. Their bonds have been popular and that is one of the reasons why the deposits have not increased in the banks.

Mr. Strong. Is that locally controlled, still?

Mr. Adams. Yes, sir.

Mr. Strong. What I was trying to get at was the argument that is being made here that, through branch banking, either trade-area branch banking or branch banking within the States or within Federal reserve districts, they will be able to take care of the local communities where, at present, no banking can be successful.

Mr. Adams. They will not be able to take care of them, I believe, because, first of all, there is a type of borrowers they will not take and

the good borrowers will, naturally, go into the centers.

Mr. Strong. This teller window proposition will be practically

what you call skimming stations?

Mr. Adams. Yes, sir. In our county there are probably seven towns that can maintain banks, and in those seven towns they will Probably survive. If those seven communities in Otter Tail County are given good banking facilities, I think they can maintain them.

Mr. Strong. In your opinion those banks could maintain and carry

on without fear of loss?

Mr. Adams. Yes, sir; and make a fair return.

Mr. Strong. Did you put the statement of your bank into the

Mr. Fenn. Here it is, right here.

Mr. Strong. In view of the very fine statement that has been made here this morning, I think that the statement of the bank with which this gentleman is connected ought to go into the record.

The CHAIRMAN. Without objection, the reporter will place in the record the statement referred to following the statement of the

(The bank statement referred to is printed in full at the conclusion

of Mr. Adams's opening statement.)
Mr. Strong. The argument has been made here that the independent bank has been demonstrated to be a failure because of the fact so many banks have failed in the last 10 years. However, the bank commissioner of Oklahoma has made the statement that, as the result of his investigation, he finds that a very small percentage of the banks organized since 1920 have failed; that the failures have been due to the carrying over of frozen loans which are the aftermath of the war.

Mr. Adams. I think there is no doubt but that is correct.

Mr. Strong. You agree with that statement?

Mr. Adams. Yes, sir. There is one point I should like to make at Mr. Lord testified that he did not think it was possible for a unit bank to exist successfully in towns of less than 10,000 population Now, it seems to me that the history of the banks in which I am interested—and there are many others that have survived and are doing well and are carrying on-demonstrates that that statement of Mr. Lord is not correct.

Mr. Strong. You can have my testimony that I am sure it is not

The CHAIRMAN. I might say for the information of the gentleman that practically all the heads of groups who have appeared before the committee have contended they could not succeed with a population of less than 5,000 or 6,000.

Mr. Adams. The history of our banks and some others has shown

N

8

NYO

fi

n

B

y

h

be

that it is not correct.

Mr. Strong. I do not think, in my district, there is more than one city with over 10,000 and in the nine county seats with towns of less than 10,000, there are some very substantial and sound banks serving

their communities and in no danger of failing.

Mr. Adams. There is another interesting situation, and that is there has been no lack of confidence in our community as the result of bank failures. A bank might fail on one side of the street, and the bank on the other side of the street has kept right on functioning. It may have closed later, but the trouble was that it died of malnutrition or something else.

The CHAIRMAN. Mr. Adams, this committee is proceeding with this study in the midst of an important evolution or revolution or change in banking in the United States. We are trying to ascertain whether the unit banking system is a thing of the past and whether it is right and proper that banking shall continue along the lines of the modern innovation of the chain, group, or branch banking. It is

a practical situation that confronts this committee.

You are at the head, and have been for a number of years, of a country unit bank which has demonstrated its ability to exist and prosper, which seems to contradict the views of the heads of these new developments, that have appeared before the committee. have made a very interesting statement here showing that you are keeping pace with the trend of the times in regard to banking development.

I am wondering whether you have any suggestion to make to this committee as to what we should do. The committee would very much appreciate your reaction on that as to whether the National

Congress should act, and, if so, in what manner.

Mr. Adams. I can really see no good reason why we should have State and national banks. State banks have generally been started because they could be started with lower capital and it has been claimed they have been allowed to do certain things which they could not do under a national charter. The supervision of State banks has not been as thorough and as exacting as it has been in the national banking system.

Mr. Dunbar. Could I ask a few questions right there?

The CHAIRMAN, Yes.

Mr. Dunbar. I understood the gentleman to say there should not be both national banks and State banks. How are we to prevent that?

Mr. Adams. I did not say that, Mr. Dunbar.

Mr. Dunbar. What did you say?

Mr. Adams. I said I could see no reason why we should keep the two systems. I was going to say that you people who maintain State rights are loathe to give up that power, but I can see no reason for having the two systems.

Mr. Dunbar. There is no way to prevent it in the world, is there? Mr. Adams. I understand your contention, but I do not know

There is no doubt but that the unit banks will continue and can function and do their work and serve the communities and give the Public a safe place to put their funds and give ample borrowing facilities, but I do think that they ought to stop licensing banks in places where they can not survive, and if they do, they should have adequate capital. It is perfectly apparent that a bank can not start with \$10,000 capital, build a building, get its equipment, and have anything with which to do business. They go into the red ink the very first If they will stop granting permits, it will help the situation. Generally the banks have not been started on account of the necessity Some one wants to get into the banking business and he goes around and gets people to take stock and takes a note for it and the bank starts without adequate capital and can not possibly survive.

The CHAIRMAN. Take your own instance: Can you continue to

meet the competition of chains or groups?

Mr. Adams. I have no doubt of it.

The CHAIRMAN. You feel in your own city that if the Northwest Banking Corporation or the First Bancorporation operates a bank in Your city, you can continue to prosper and it will not interfere with your operations in the least?

Mr. Adams. We will have to keep on our toes all the time. They could possibly, if they were so minded, come in and make conditions hard by cutting rates and doing things of that kind, but I do not

believe that that is probable.

The CHAIRMAN. Has it been your observation they are doing that anywhere?

Mr. Adams. No, sir.

Mr. Goldsborough. Could I ask the witness just one or two questions?

The CHAIRMAN. Yes.

Mr. Goldsborough. Mr. Adams, in the community in which I live in Maryland, the county of Caroline, on the eastern side of the bay there are nine very prosperous banks in the county, with a population of 18,000. I am a director in several of them and in two of them the capital stock is \$12,000 each. They were both organized in 1909 and the stock in one is worth now about 7 to 1 and the other is worth about 5 to 1. We did not build a building to start with, but rented an office in an office building and waited until they get the money with which to building a building.

I notice in your written statement and in your oral statement that you seem to think it is necessary to build a building and put up a sign and that it is necessary to spend a lot of money before you go

into the business.

Mr. Adams. It is not necessary, but it seems to me it is generally done. You have to have a vault and a safe in which to place your funds.

Mr. Goldsborough. One of these banks, the Hillsboro-Queen Anne Bank—I give the name because I want to substantiate my statement—is located in a town of just a few hundred inhabitants and the Goldsborough bank is located in a town of 150 inhabitants. I said the stock in one was worth about 7 to 1 and in the other 5 to 1. They have both been paying dividends of 20 per cent since 1915. Do you think it is fair to the smaller communities to take the position that you must have a capital of \$100,000?

Mr. Adams. It all depends on the management. If you get off on the right foot, and if you have men such as I have described, men of wealth in the community, whose money is in it and whose brains are available to the bank, they can succeed under those circumstances, and your banks over in Maryland have undoubtedly succeeded and made the large earnings which they have, because there was some

e tot

fa

body with brains and conservatism running them.

May I ask how you made those large earnings? Was it by dis-

tributing bonds as a side line?

Mr. Goldsborough. No, indeed. Those earnings have been made from strictly banking business and both banks have been exceedingly liberal in providing for the needs of their communities. But they have watched their loans very closely.

Mr. Adams. But you have not answered my question. Have your

large profits been obtained from interest?

Mr. Goldsborough. Almost entirely. In the last two or three years each one of them may have made five or six thousand dollars out of stocks.

Mr. Adams. Well, that would be 40 per cent made out of the one

nein,

Mr. Goldsborough. But that is in only one instance.

Mr. Brand. Are these banks located in agricultural communities!

Mr. Goldsborough. Yes, sir.

Mr. Brand. Off of whom have you made your interest—off of farmers?

Mr. Golsborough. Yes, sir; and some minor business.

Mr. Adams. What rate do you pay on savings?

Mr. Goldsborough. Four per cent.

Mr. Adams. What rate do you charge over there?

Mr. Goldsborough. Six per cent.

Mr. Adams. You mean to say on your deposits with a 2 per cent spread, you can make those earnings?

Mr. Goldsborough. I certainly do mean it. It has been done. Mr. Adams. But you say you made 40 per cent in one bank off of

the sale of stock.

Mr. Goldsborough. I said \$5,000. I said that was one instance

Mr. Adams. How much are the resources of the banks—how much

are the deposits?

Mr. Goldsborough. The resources and deposits of the Hillsboro Bank are nearly \$800,000. The deposits in the Goldsborough Bank are \$550,000.

Mr. Adams. Those are very large deposits for a community as Small as that. In the little bank I have mentioned here, we have had

\$500,000 deposits.

Mr. Golsdborough. Practically all the witnesses who have testified from the standpoint of the independent banks, have accented the necessity of increased capital stock—you among the number. It has always seemed to me, Mr. Adams, that the management of the institution had a great deal to do with it-more than the capital

Mr. Adams. There is no question about that.

Mr. Goldsborough. Let me finish my statement—it seems to me that the capital stock should be kept small enough to permit large

enough earnings to keep the people happy.

Mr. Adams. You have described the situation accurately as fits the three little banks I have spoken about. But if you have a careless management, you must have capital to take care of it, and that occurs everywhere except possibly in Maryland. I dare say You have not paid all you have earned, but have put some in reserve to take care of those conditions.

Mr. Goldsborough. Well, in one bank the capital is \$12,000, the surplus is \$75,000, and the undivided profits seven or eight thousand. Mr. Adams. When you make large dividends, you are not making

the dividends on the capital alone, but on the surplus. We can all

build up a good bank if we start out on the right foot. Mr. Goldsborough. I think if you are going to have good banking service on the unit system, you must have a small capital. It does not make any difference what kind of business you start, whether a hotel or what not, you must keep the capital down, because if they do not earn fairly large dividends, the people will lose enthusiasm for it and it will go to pieces.

That is all, Mr. Chairman.

Mr. Dunbar. The first paragraph in your very admirable statement of your ideas concerning banks states that a local bank well managed has no fear of being unable to compete successfully with the group banks unless unfavorable legislation is passed. Now, suppose a group bank was to hold the stock of a bank in your city, what unfavorable legislation do you have in mind that could be passed that would be detrimental to your bank?

Mr. Adams. I have not anything special in mind.

Mr. Dunbar. Nothing special?

Mr. Adams. No, sir.

Mr. Dunbar. I thought you had, or you would not mention it.
That is all.

(At this point the committee went into executive session, at the conclusion of which the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS

Upon the expiration of the recess, the hearing was resumed.

The Chairman. The committee will come to order. Mr. Seiberling, you will now question the witness.

Mr. Seiberling. I only have a few questions.

In the first place, I enjoyed your statement very much; I think it

was a very admirable statement.

Assuming that something would have to be done with reference to the banking situation on account of the organization of the chain and group banks threatening the existence of unit banks, would you prefer to let that condition continue, or to go to branch banking within trade areas?

Mr. Adams. I think it would be better to have group banking but if the groups are going to continue to buy the best banks, think they ought to have the permission of the State banking supervisor or the Comptroller of the Currency before they can obtain control of the banks and take the ownership out of the community.

In Minnesota now we have a commission which grants the applications to start banks, and they can prevent wrong people from starting a bank, but when that bank has once started and has received the deposits of the public, then an outsider can come in and buy that bank and take it out of the original hands regardless of that outsider's character.

Mr. Seiberling. Coming back to my question, I understand you to say, then, that you favor group and chain banking in preference

to branch banking in limited areas?

Mr. Adams. I think group banking is fairer to the community, because the institution is localized to some extent, and it would also pay taxes in the community, which the branch bank would not do.

0

p

ij

u

n

h c

81

Mr. Seiberling. If branch banking were permitted by Congress, would you make branches out of your affiliated banks, or would you

leave them as they are?

Mr. Adams. It would be cheaper and more profitable for the bank at the county seat to put in a branch office than to maintain a bank with capital, and within a small area the bank at the county seat has ample capital to give it stability and, as I said, it would be more economical for us to operate those little banks as branches, but you take the taxation out of the community.

Mr. Seiberling. Then I understand that if you to-day had the right to make branches out of the affiliated banks you own, you would make them branches of your parent bank there in Fergus Falls?

Mr. Adams. No; I do not think I would. I think they have been successful in their careers, and the right thing would be to allow them to continue. But banking in the small places is not going to be sufficiently profitable in the future so that in instances it might be better

to establish branches which can be operated more economically if the community is to be served.

Mr. Seiberling. I suppose you will agree that you can operate a branch bank much more economically than you can a unit bank?

Mr. Adams. Yes; that is true.

Mr. Seiberling. Therefore, if we want to extend banking facilities to the smaller communities, branch banking would be much more feasible than unit or chain or group banking?

Mr. Adams. I would not want to concede that.

Mr. Seiberling. I am asking you which would be more feasible than the other.

Mr. Adams. A branch can get along without capital and it might be able to handle the business, but if there is enough business there

they can operate a small unit bank.

Mr. Seiberling. You might have a community that is too small for a unit bank and yet you could maintain a branch bank there, as they do in England, for instance, and operate maybe for two days a week

Mr. Adams. That is a new proposition to me, although in Vermont, where I was raised, there were certain banks that would go down to little villages and pay out money on cream days, and take in their deposits. Of course in these modern days, when everybody comes into the larger towns two or three times a week, conditions are different.

Mr. Seiberling. Do you think that the remote districts in your

territory have all the banking facilities that they need?

Mr. Adams. I think they are more than ample at the present time. In the ninth congressional district—and that is where I live—115 banks have closed.

Mr. Seiberling. Do you still have enough left?

Mr. Adams. I have not the slightest doubt about that.

Mr. Seiberling. Are they so distributed that the people in your

district can have adequate banking facilities?

Mr. Adams. I think that with the exception of one county that is the case. In Kittson County they had 17 banks, and I understand that there are only two left. It might be that they could stand one or two more there, but if you will notice this table which has been put into the record on page 354, you will notice that in some little villages three banks have closed, and there is no doubt that it was absolutely unwise to have ever permitted those banks to start there.

Mr. Seiberling. As I understand you statement, you think that if we let economic laws take their course, in due time things will so adjust themselves that these communities that we are worrying about

will have such banking facilities as the necessities require?

Mr. Adams. That is my opinion. Mr. Seiberling. That is all.

Mr. Adams. There are one or two things more I would like to bring up here, if I may.

The CHAIRMAN. I wish you would.

Mr. Adams. One of the reasons why closed banks have not paid more to the depositors has been that they have been kept open, or have been allowed to remain open, long after they should have been closed, and one of the ways of keeping them open has been for the superintendent of banks to take the funds which belong to a closed

nin

bank and put them into a weak bank. Under the law which is on the statute books there, that makes a preferred claim for the State, and that has permitted banks to pay out funds longer than it should. Then, when the bank has closed, that preferred claim takes the bulk of the assets.

The CHAIRMAN. Do you think the same thing applies to national banks?

Mr. Adams. I am not familiar with that. No national bank has failed in our immediate neighborhood, and I do not know.

The CHAIRMAN. Of course, all that you said there could not apply to a national bank.

Mr. Adams. No.

The Chairman. But I meant more particularly the question of easing a bank along after it had become insolvent, in the hope that it would recoup itself.

Mr. Adams. I have never heard of the comptroller puting funds

into such a bank.

The Chairman. I am not referring to that, but to the policy of closing a bank long after it had really failed, and I am asking you whether under your observation the comptroller of the currency has pursued that policy to the detriment of the bank.

Mr. Adams. Not very generally. There are only one or two instances in our territory where I thought a bank should have been closed before it was. Sometimes a bank will borrow, and the wise ones will draw the money out before the rest of the depositors.

The Chairman. My statement was prompted by reason of the fact that the statement has been frequently made here, as it was this morning, that these banks that are failing so rapidly now, really failed several years ago because of the conditions immediately following the war, and the question naturally came to my mind as to whether or not it might have been wiser to have closed those banks when the real failure occurred, 5, 6, or 10 years ago, than to have strung them along during this period?

Mr. Adams. That would have been much fairer, because it has allowed certain people to draw out 100 cents on the dollar, while

those whose money was remaining got very much less.

The CHAIRMAN. It has tended practically to give a preference to

certain people who withdraw their money.

Mr. Adams. It has given a preference. One bank which closed in our territory, was being supported to some extent by borrowed money from the corresponding banks. The correspondent banks finally took the position that they were willing to help keep the bank open, but not willing to lend any more money to enable the bank to make preferences.

The CHAIRMAN. What is your analysis of the reasons for the failure of these country banks? I would be glad if you could enumerate the

major reasons for those failures?

Mr. Adams. In the first place, they were established when there was no occasion for their establishment. In the second place, they had insufficient capital, and the capital was never paid into the bank which was supposed to be paid in. The banks were put into the hands of young, inexperienced and untried men, and their idea was to make the bank grow as fast as possible, as a result they gathered into those banks a lot of money which did not normally belong in the com-

munity. They offered high rates of interest, and they advertised in national papers, especially in religious papers, and they drew a large amount of money from the East, which went to those banks because they would pay 6 per cent interest on deposits.

The CHAIRMAN. You are speaking of banks in your particular

territory?

Mr. Adams. Yes; all of my remarks apply to the territory where I live, because that is the only place with which I am familiar. But, after a while, money became tighter in the East; it was not because they had begun to lose faith in the western banks, but they needed the money at home, and when they started to draw out that money, the banks out there did not have any cashable paper so that they could collect at the time when their deposits were being pulled out.

The CHAIRMAN. What period are you speaking of?

Mr. Adams. From 1918 to 1925—that is the time when they

began to lose money and the trouble began to occur.

wish Mr. Goldsborough were here, because he made a point in lavor of little banks of \$10,000 or \$12,000 capital, but in looking at the directory I find that those banks have a surplus of \$75,000, so that they have ample capital to take care of ordinary losses. More than that, if a bank is going to be established, the owners of the bank ought to furnish some of the capital and not expect the depositors to furnish it all. Where we have had those weak banks, if a person wanted to use his money to buy a bond or property, they disliked to give up those deposits and they urged depositors to let the money remain and they would perhaps give them an extra per cent.

The CHAIRMAN. What rate of interest have the banks been paying

in your section on deposits?

Mr. Adams. Four per cent is the general rate. The CHAIRMAN. On these eastern deposits?

Mr. Adams. I think they paid as high as 6 per cent. One year We had surplus money and we sent it out to Dakota and a little into Montana. I picked out about 40 banks and sent \$1,000 apiece to those banks on certificates of deposit running about four months, and made them due just about when they began threshing. Many banks came right back and wanted to know if we did not have more to send them, which made me more or less suspicious. There was always a disposition with those little banks to get funds any way they could to increase their loans, not realizing that the funds would have to go

The CHAIRMAN. Has it been a general practice in the East and through your section for the larger banks to send money to those small

banks during flush seasons?

Mr. Adams. There has been some. One of the reasons for some banks failing has been that the funds were taken out of prosperous communities and sent to Dakota and Montana in order to get the higher rates. A good many of those banks were in charge of young men who went out from our territory and they drew from the home country a lot of money which was lost-when their banks closed.

Mr. Seiberling. I would be very much interested, Mr. Chairman, if you would ask him what the average rate is that they charge on

loans.

The Chairman. What is the rate of interest charged on loans?

Mr. Adams. In Minnesota the legal rate is 6 per cent: the maximum rate is 8 per cent. I notice that the record here states it is 10 per cent, but it is 8 per cent, and the law of usury is that if you charge a usurious rate, you lose the principal and interest. In our territory a great deal of money is loaned at 6 per cent to the good concerns that carry an account. We do not require a compensating balance as they do in a good many places. Seven per cent is as much as any one is willing to pay, and we charge 8 per cent only on the small \$50 and \$100 loans. There ought to be a provision allowing a higher rate on those small loans, for you can not loan \$50 and put it on the books and send two or three notices and make any profit at 8 per cent. On those small loans, there should be a provision permitting the charging of a higher rate.

The CHAIRMAN. Some banks do make a minimum charge of 25

cents or 50 cents-

Mr. Adams. It is usurious; we have always had to take 19 cents when we should have had 25 cents. At a recent meeting at Fergus Falls, a district bank meeting, one of the bankers said that he charged 50 cents for making out the note, and then he charged interest in addition to that. I think that would be usurious.

The CHAIRMAN. Do you make a service charge to your depositors

keeping small accounts?

Mr. Adams. We charge 50 cents a month if they do not carry a balance of \$50. The result of that was to eliminate some small accounts which should not be in the bank, and it induces the others to carry an adequate balance.

The CHAIRMAN. Is your bank making a collection charge on either checks or drafts or bills sent in for collection by other banks or indi-

viduals?

Mr. Adams. We have to clear all checks under the Federal reserve law without exchange, and we sell very few drafts.

The CHAIRMAN. But, on the collection of drafts sent to your bank,

you are permitted to make a charge.

Mr. Adams. Yes; we charge 10 cents a hundred for making remittance. The chain stores get a 5-cent rate from a good many banks.

The CHAIRMAN. You were referring this morning to the loanable funds of your bank. Is it the general practice of the banks in your territory to buy bonds?

Mr. Adams. They have been buying some bonds lately, for they

have realized the necessity of having something-

The CHAIRMAN. As a secondary reserve?

Mr. Adams. As a secondary reserve. Of course, they slipped somewhat, and they have not bought sufficient high-class bonds.

The Chairman. What percentage of the assets of the banks in

your section of the State would you say is in bonds?

Mr. Adams. I do not believe there is 10 per cent of the deposits in

The CHAIRMAN. Do the banks buy commercial paper through the

large city markets?

Mr. Adams. We used to buy it, but the rate has been so low since the refinancing by those large concerns which put out preferred stocks and bonds, that we switched over to bonds, instead of buying commercial paper.

The CHAIRMAN. Do your banks make collateral loans on listed stocks?

Mr. Adams. The examiner has told me that we have more collateral loans in our bank than there are in any of the other banks that he examined, but that is due to the fact that a good many people in our town have bought securities in the local utility companies and we have educated them to bringing in some security when they want to borrow.

The Chairman. What are the principal reasons for the success of the management of your bank in your locality when so many other

banks have failed in that same locality?

I hope you will not be modest in answering it.

Mr. Adams. The bank has been owned by the directors and controlled by the directors, and the directors are always around; they always come in and visit and gossip every day. We have been lending their money, and we tried to be careful about it, and we have kept down the operating expense and have had a pretty good class of business. As the new banks came into the country, they were eager to get business, and if we were a little bit stiff in trying to do what was right, the customers would drift into those new banks and they took punishment.

The CHAIRMAN. It is largely management? Mr. Adams. I feel it is entirely management.

The CHAIRMAN. And with good management, of course, comes diversification of loans and assets, and not putting all of your loans in one class of paper. Would you say that that was a factor?

Mr. Adams. Yes; we try to diversify, and in buying bonds we

always buy in small amounts and diversify them.

The CHAIRMAN. Approximately, what is your average amount of

reserve carried against deposits?

Mr. Adams. We have some large customers who hit us very hard, and we always try to have \$200,000 or \$300,000 above the necessary reserve to take care of those heavy drafts.

The CHAIRMAN. Do you ever borrow from the Federal reserve

system?

Mr. Adams. We never borrowed in the 58 years from either the Federal reserve bank or a correspondent. I have never been in the Federal reserve bank but twice. The main advantage that we get from the Federal reserve bank is that they bought our Government bonds for us and they stored them without compensation, whereas the correspondent banks charge \$1 a thousand for storage and clipping the coupons.

The Chairman. Of course, you realize that we have a very active market, not only in the industrial and railroad stocks but in recent years in bank stocks. Are bank stocks in your locality dealt with

pretty generously now?

Mr. Adams. None at all except in the group banks.

The CHAIRMAN. Do the rank and file of the people buy and sell

those stocks?

Mr. Adams. No; they took those stocks when they were offered. I think a large amount of stock which has come out from the group holding companies was the stock which the country bankers got in exchange for stock of their own banks. It was stated here that they would not sell out for money, but that they wanted to get into the

group holding company. That might have been the case in the beginning, but later on a good many of the bankers perhaps were in debt and when they exchanged their bank stock for the stock in the group banks they needed to raise money and they offered some of their stock for sale. It seems to be the practice now where a group takes over an individual bank to have an agreement not to put that stock on the market for six months.

The Chairman. There has been a pretty wide circulation of bank stocks coming from the large centers throughout the country. I know that in my section of the country, farmers and individuals of small means have recently been buying New York City bank stock. Does that same practice prevail in your section of the country?

Mr. Adams. To a very limited extent. The National City has got some stockholders in our locality, and we have one loan in our bank secured by National City. We took that when it was about 400—

The CHAIRMAN. That is, the price of the stock was \$400?

Mr. Adams. Yes.

The CHAIRMAN. On what basis did you make the loan?

Mr. Adams. About \$300, and yesterday the stock was at 157. So the loan is below the margin, but we hope the party is going to

The Chairman. How does National City stock happen to be held in Minnesota? Is there a campaign out there through salesmen to sell that stock, or did the individual who, for instance, sought the loan that you refer to, buy it of his own volition, or was he persuaded to buy it?

Mr. Adams. All of the large banks have security companies and their agents are traveling through the country selling their securities, and, of course, those securities which are put out by these subsidiary companies really travel on the good name of the banks, so that the average person, in buying a stock from a subsidiary of a New York bank thinks he is really buying it of the bank—that is, they do not separate the subsidiary from the bank.

The Chairman. Take this particular case that you referred to: Was that stock sold by the National City Co. to your customer, as far as you know?

Mr. Adams. It was probably sold by one of their representatives. The Chairman. A representative of the National City Co.?

Mr. Adams. Yes.

The CHAIRMAN. Which is an affiliated company of the National City Bank.

Mr. Adams. Yes.

Mr. Goodwin. The National City Co. has an office in Minneapolis,

have they not?

Mr. Adams. Yes. I was tipped a while ago to buy Chase. Their representative called on me a while ago and said they were going to take on a big company, and suggested that I ought to have some stock in the Chase National.

The CHAIRMAN. That is, the representative of the Chase Securities

Co. suggested that to you?

Mr. Adams. Yes; the representative of the Chase Securities Co., that I ought to have some of the stock of the Chase National.

The CHAIRMAN. But under this plan that is developing in the country of building up banks in trade areas under the group or chain plan, for instance, like the First Bank Stock Corporation and the Northwest Bancorporation, and similar organizations in Buffalo and other points, their representatives have indicated to us that they were preempting their territory, that they reserved the right to do all kinds of banking business, and it has been suggested that the building up of those concentrated units would deprive New York of the opportunity to sell its securities within that territory. The other day, when Mr. Wiggin was here, the chairman of the board of governors of the Chase Bank, he rather was of the opinion that it would not interfere with their opportunity to sell securities. It has been argued here to the committee that the reason that these groups have paid what looked like excessive prices for the stock has been due to the value they saw of an opportunity of preempting territory in which to sell for all time investment securities, on the theory that there would be more money for these groups in the distribution of securities and the profits derived from them, than there was in the legitimate banking business of those localities.

Being located in one of those districts, what would be your observation in regard to that? In other words, would you be more inclined to buy your securities, through Minneapolis and St. Paul, from one of those groups or would you continue to do business with your cor-

respondent banks in Chicago or New York?

Mr. Adams. We have always bought through the Twin City banks whenever we could, but we would not buy a bond of them if we could buy a better bond from an eastern bank. We would naturally give the banks in our own section the preference, but there are a good many issues that they might not have.

The Chairman. So you do not think that the building up of these big groups in any given area would preempt exclusively to them the right to sell the bulk of the securities in their particular area?

Mr. Adams. I do not believe the New York banks are going to

abandon the territory.

The Chairman. Is it the practice of the country banks like yours, for instance, in that territory, to make loans with these chain or group

bank stocks as collateral?

Mr. Adams. I do not think we have a loan of that kind in our bank. There may be one or two employees who got an allotment of that stock and are paying for it on the installment plan. When these stocks came out, there was quite a wide distribution and a good many employees in banks throughout the State wanted to get a few shares, and it may be that in one or two cases we are carrying some of that in our bank, but very little.

The Chairman. As I understood your testimony this morning, and I was out part of the time, you believe that the unit banking system can, when properly managed, continue to exist in competition with

these other institutions?

Mr. Adams. I have no doubt about it.

The Chairman. Do you care to express yourself on the question of extending branch banking to trade areas, as suggested by the Comptroller of the Currency?

Mr. Adams. The independent banks of Minnesota are very much opposed to it and are very much opposed to having branches come into a territory which is already filled. If they were permitted to come in, they would perhaps skim the better business; they might pick up some of the larger borrowers of the highest type, and we feel now that we have all the banking institutions there that the community needs, and that if we are let alone we can take care of all the needs of the country.

The CHAIRMAN. That raises a very pertinent question—if let alone.

What do you mean by that?

Mr. Adams. Well, we have wondered whether there was legislation here which would give the group bank a preference. We have not supposed that would be the case.

The Chairman. You mean legislation in Washington?

Mr. Adams. Yes.

The Chairman. But this group plan is already proceeding under State authority.

Mr. Adams. Of course, but they are looking for national legislation.

The CHAIRMAN. What kind of national legislation?

Mr. Adams. I mean legislation governing the national banks. Perhaps I do not make myself clear. They apparently have the purpose of getting legislation which will legitimatize the group idea or the branch idea.

The Chairman. Pretty nearly all of these men have suggested to us that the group or chain idea was just a step and that if branch banking were permitted, either nation-wide or under Federal reserve districts, or state-wide or trade areas, that they would overnight convert their chains or groups into branches.

Is that the kind of legislation you think that they are looking for, the extension of the radius in which they can do branch banking?

Mr. Adams. I do not think the holders of group banking want that. I think they feel sure of their territory under the present system, because if branch banking became general, the New York banks, Chicago banks, and other banks, including St. Louis banks, would naturally come into the territory if there was a good opening.

The Chairman. Do you not think that there is danger of New York or Chicago groups coming in and seizing control of these existing groups? Do you not think it is just as easy to do that as it would be

d

C

a

W

0

bs

bi

th

to get control through branch banking?

Mr. Adams. There is a general belief that there is danger that eventually the large banks in New York will pick up the groups; I

think the groups are afraid of that, to some extent.

The Chairman. When Mr. Wiggin was asked what a trade area is, he could not tell the committee, but he indicated that the trade area of the Chase National Bank was the United States, and perhaps the world.

Mr. Adams. The trade area of the First National Bank of Fergus Falls is Otter Tail County, and we can not operate branches outside of that to advantage.

The CHAIRMAN. One peculiar thing about this question of limitations is that we limit where the banks can do business, but we do not limit the customer as to where he shall do his banking business.

Mr. Adams. A trade area is very difficult to define. Fergus Falls is undoubtedly in the trade area of Minneapolis. Chicago and Minne-

apolis are undoubtedly in the trade are of New York, so I do not see

how you are going to define that term.

The CHAIRMAN. Do you think that if we should leave it to the Comptroller of the Currency, the Federal Reserve Board and the Secretary of the Treasury to define the term "trade area", that they could define the areas in which these banks should operate?

Mr. Adams. That might be a fair proposition, but, of course, we would not want the Federal reserve bank of our district to do that. when the majority of its board of directors are members of holding

companies.

The CHAIRMAN. Then there is danger of the control of the Federal reserve system by these groups?

Mr. Adams. They have practically all the members now.

The CHAIRMAN. That is pretty conclusive evidence, I would think,

that there is danger.

Mr. Adams. Of course, the unit banks have never paid any attention to who were members of the Federal reserve bank, and a good many of them never voted.

The CHAIRMAN. Do you have any affiliated institutions? Mr. Adams. The First National Bank of Fergus Falls?

The CHAIRMAN. Yes. Mr. Adams. No, sir.

The CHAIRMAN. You have no securities companies?

Mr. Adams. We have the First National Investment Co., which we organized to take assets out of the bank which were not permissible. At one time we purchased certain preferred stocks, and when the examiners came around they called our attention to the fact that they were not permissible, so we took them out and put them into this investment company and we acquired some assets of a character Which could not be carried in the bank and we found it advisable to carry them in the First National Investment Co.

The CHAIRMAN. Do you buy and sell securities through that

company now?

ð

8

e

S

e

t

S

Mr. Adams. No, sir.

The CHAIRMAN. It is strictly a holding company for those securi-

ties that you can not legally hold in your bank, is it?

Mr. Adams. Yes. Sometimes when some of the local power stock comes in, we buy it and carry it for investment, but we have never distributed any stocks and we have never sold anything and if anyone comes into the bank and wants to buy a bond, we have no recommendations. We show them our list and if they want anything we have, We will order it.

The Chairman. The stock of your investment company is owned by the same stockholders and in the same proportion as the shares

of your bank?

Mr. Adams. Yes, sir.

The Chairman. So that every stockholder that has stock in your bank has a corresponding interest in your securities company?

Mr. Adams. Yes.

The Chairman. What is the capital of your securities company?

Mr. Adams. \$12,500.

The Chairman. We have pending here before the committee a bill proposing that where a national bank has affiliated companies, the examining supervisor, which in the case of the national banks would be the Comptroller of the Currency, should have access to the records of that affiliated company. Do you see any objection to such a plan as that?

Mr. Adams. If the stock is owned by the bank, I think it should be examined, but if it is owned by the stockholders, I do not see any

reason why they should have that supervision.

The Chairman. Take, for instance, a national bank that has a securities company; it might become so involved in speculative transactions that it might affect the solidity of the bank. Would you not think that it is rather to the advantage of the bank to have that examination?

Mr. Adams. My statement is that if the bank has a securities company which the bank owns, there is no reason why that should not be examined just the same as the collateral which the bank has

for its loans.

The Chairman. No matter under what law that securities company may be organized, whether it is organized under the banking laws or the corporation laws, or the laws of some other State?

Mr. Adams. If it is a part of the banking capital, it should be

supervised.

The Chairman. Do you think that an affiliated company like that should have the right to buy the stock of a national bank, whereas the national bank is prohibited from owning its stock or dealing in its stock?

Mr. Adams. I have always believed that the stock of a bank ought to be owned by the men of the community whose money is in it, and whose wealth is behind the bank, and should not be held by subsidiary companies, where there is not any double liability or where there is not any power or capital to back up the bank when it is in trouble.

The Chairman. Do you think we should prohibit the ownership of national bank stocks by corporations and investment trusts and con-

fine that ownership to individuals?

Mr. Adams. I think that would be preferable. I do not believe that this investment-trust proposition with respect to bank stocks has worked to the good of the banks.

The CHAIRMAN. It indicates a spirit of speculation.

Mr. Adams. There would not be if that stock were held by the

men who are running the bank and looking after it.

The Chairman. Do you think that a bank would be more secure, then, if the majority of its stock or 100 per cent were owned by the management?

Mr. Adams. I think that would be very much better.

The Chairman. In other words, you are suggesting that the management of a bank takes more seriously its job if it owns the bank?

Mr. Adams. Yes; and their very good names are behind it. Of course, there has been an awakening now, for our Supreme Court has recently made a decision which held that the directors must know what is going on in a bank, and I think in one case there was a decision to the effect that if they did not know of their own knowledge, they should hire an auditor to ascertain it for them.

The Chairman. Your statement in regard to the ownership of the stock by the management is most interesting. I may have difficulty in finding the reference to it in these hearings, but I would say that it has been indicated that the ownership of most of our large banks is

n

not lodged in the management but that as a general thing probably less than 10 per cent of the stock of any one of our large institutions

is held by the management.

Mr. ADAMS. I think it would be much better if the greater part of the stock was held by the management. I know that years ago the First National Bank of Minneapolis was in trouble, and Governor Pillsbury, one of the very large owners of the stock, and John Martin, Were behind the bank and put it on its feet, but if that stock at that time had been widely scattered, nobody would have put it back on its feet as those two men did.

The CHAIRMAN. Mr. Goodwin, have you any questions?

Mr. Goodwin. There is only one question that I have in mind. It has been testified before this committee that there is no danger that the New York banks or financial interests will ever get control of the ownership of the stock of the group banks, partly for the reason that there is local pride in the ownership and operation of group banks in the different localities. Would it not be an easier matter for the New York interests to purchase the control of the stock of the holding company of the group companies than it would be if they had to go out and buy these different banks?

Mr. Adams. I think it would be very much easier to gather in the stock of the holding company than it would be to go out and buy the

Individual banks.

You raised that question of local pride. I think it was a serious error for Duluth, and possibly for St. Paul to permit their banks to go into a group, because Minneapolis is recognized as the head and those other towns have become way stations, so to speak, in finance.

Mr. Goodwin. In those instances the matter of local pride did not

protect the local ownership of the bank,

Mr. Adams. It did not prevent them from going in the group, and

I think it was a mistake for them to do it.

Mr. Goodwin. From your testimony I gather that you have felt that the independent unit banks in this country, whether in the agricultural sections or other sections, with adequate capital and proper and prudent management, can succeed in competition with

either branch or group banks?

Mr. Adams. I think so. Of course, branch banks would make it harder, and if group banks started out to destroy the individual banks, they might possibly make it hard for them. I do not know of any way of preventing the holding companies from buying more banks. It has been suggested that you might have a law that would prevent them from acquiring more than a certain amount of the stock, but I do not think that would be workable.

Mr. Goodwin. At any rate, we have no law that in any way interferes with any group buying all the banks they want to and are

able to purchase?

Mr. Adams. No. Mr. Goodwin. Would there be in your opinion any opportunity in a group system of banks to restrict credit to those who might be in competition with the officers or directors of the group banks?

Mr. Adams. There might be, but at present they are all high-

minded men, and I do not believe that that would be done.

Mr. Goodwin. That is a remote possibility, but it is possible?

Mr. Adams. It is possible, of course. A bank can always deny credit to anybody that it wants to on perfectly valid grounds, but I do not think it is generally done. If a loan is good, they are generally glad to get it, especially for a customer of the bank.

May I ask a question? The Chairman. Certainly.

Mr. Adams. It is contended that if a person goes into a bank and buys a draft, and is not a depositor of the bank, that that draft should be paid where there is the money in the bank on which the draft is drawn, notwithstanding that the bank closes before the draft reaches

destination. Is there any legislation along that line?

The Chairman. No; we have pending before the committee now a proposal to give a preference to shippers of grain, for instance, who draw a draft on a customer at some distant point and who sends that draft to the bank in the town where the consignee is located and where after the draft has been paid by the consignee and before the money is remitted to the shipper the bank fails. It is proposed that in liquidation that shipper should be given the preference, that he should have a preferred claim and it should be paid in full.

Mr. Adams. It is contended that if banks are going to sell drafts in competition with express companies and in competition with the post office, that the draft ought to be paid if the money is in the bank

at the time it is drawn.

The Chairman. In other words, the bank in that capacity is simply acting as a trustee. What is your own thought in regard to

that?

Mr. Adams. I think if a person goes into a bank and buys a draft and the money is in the bank on which the draft is drawn, that that draft ought to be paid if the bank fails before the draft gets to its destination. If that is not the policy, then the public ought to buy

express orders, or money orders.

The Chairman. That is a form of segregation of bank assets. Would you favor the segregation of banking assets so as, for instance, to give the savings bank deposits, or money that might be termed as "belonging to the widows and orphans," a preference in case of a bank failure as they do in some States? For instance, California has a segregation law, a preferential form of securing certain depositors.

Mr. Adams. I am glad you brought that question up, because the bulk of our savings deposits are in the form of certificates of deposit. That is the usual form in the West, and that is the main supply of

money in the banks.

The Chairman. As to this suggestion with respect to the segregation of the assets, it would not matter whether you had a savings book or a certificate of deposit; it would apply to the setting aside from the total volume of assets of your savings accounts.

Mr. Adams. That would force those savings to be put into certain types of investment, and it would remove from the use of the com-

munity a very large amount of the assets of the bank.

The Chairman. Then you would not favor that?

Mr. Adams. It would not be workable in our country at the present time, where there is a different condition than there is in New England. In New England the people put their money in the savings bank, and it has not been their habit to invest their funds, but to let the bank invest them. In the West we have never been able to build up savings for the reason that the public is investing its own funds; they are constantly drawing the funds out in order to buy a bond or a mort-

gage or something of that kind.

The Chairman. Do you think then, that it is all right to subject the life savings of a widow who might have invested them in a national bank to the same risks and hazards that the other depositors have? In other words, do you not think that there should be an additional safeguard thrown around what are sacred trust funds, and not subject them to the hazard and risk that the commercial business is subjected to?

Mr. Adams. I think that would be entirely proper, but I have always taken the ground that when a widow or a child or an individual puts money into a bank, it is our duty to return it to them, and we owe the same obligation to one as to another, although I would hate to see an elderly person or a child lose his money. If a child once loses his

savings account he becomes afraid of banks.

The Chairman. Your remark reminds me of a letter that came to me yesterday morning from a citizen in the State of Illinois who has been unfortunate in having had deposits in three national banks which have recently failed, and he raises the point that any depositor who puts his money in a national bank ought to have assurance from the Government of the safe return of his money, that the term "national bank" implies to the innocent, the ignorant depositor that the Government is back of it and that therefore we should, through an appropriation, reimburse all of the depositors who have lost money through the failure of national banks.

Mr. Adams. I do not believe that the Government should guarantee the funds of national banks, but I do believe that the Government

should use every effort to make those deposits safe.

The Chairman. Through the enactment of proper laws and seeing to it that those laws are strictly adhered to, through supervision?

Mr. Adams. If the supervision is vigorous enough, I do not see how a bank can fail. It is hardly possible that enough damage can be done between examinations to permit a bank to fail.

The CHAIRMAN. Have you any suggestions to make to this com-

mittee as to how that examination could be improved?

Mr. Adams. It may not be practicable, but I have always believed that if they had an advisory board in a district, they would get onto a great many things that the examiners do not learn, and I have always thought that if the State banking department had a secret service, or, rather, a service outside of the bank examiners just going into a town and listening, that they would hear a great many things which would be of interest to the department. The department seems to be the last to learn of certain conditions which exist in banks and which everybody else in the community knows, and if somebody followed up the examiners when they came to the town and checked up on what was going on, I think that many times they would be in a position to notify a bank that it has got to cease doing those things, or close.

The Chairman. The suggestion has been made by some of the People who are opposed to chains and groups and to the extension of branch banking that, however, branch banking should be extended state-wide in those States that now permit branch banking or else

many of the national banks will leave the system. Would you think we could safely consider that proposition?

Mr. Adams. I do not get the question.

The Chairman. In other words, would you favor the extension of branch banking in those States where branch banking is permitted by State banks, the extension of branch banking in such cases to be only state-wide?

Mr. Adams. If you are going to have it in one system, I do not see

why you should not have both.

The Chairman. In certain States, they now permit state-wide branch banking, whereas the national banks in those States are now prohibited from engaging in branch banking beyond certain limitations, that limitation being that they may not extend beyond the confines of the city in which the parent bank is located.

Would you not think it advisable to extend branch banking in

those States that now permit it to a state-wide basis?

Mr. Adams. I think that that is the case in California now. I

think the Bank of Italy has branches everywhere.

The Chairman. They have, but, of course, we have limited them now to the city in which the parent bank is located. They can no longer have state-wide branches, but the State banks can have, but they are denied membership in the Federal reserve system when they do.

Mr. Adams. I do not see why the national banks should not have

the same privilege as State banks.

The Chairman. You would see no harm in extending that right? Mr. Adams. It is going to make it harder for unit banks, probably. I think possibly in California the unit banks have taken care of themselves. I have spent a great deal of time studying the situation out there, and there are a good many unit banks that are taking care of themselves.

The CHAIRMAN. Have you any more questions, Mr. Goodwin?

Mr. Goodwin. Just one.

It has been suggested to this committee that to make national banks more attractive to the depositors, the franchise tax now paid by the Federal reserve banks to the Government be used as a fund to pay the depositors in closed banks. Have you ever given thought

to that subject?

Mr. Adams. I do not see any reason for guaranteeing bank deposits in any form. I can not see any more reason for guaranteeing a deposit in a bank, as I suggested in one of our town meetings, than that the people of that town should guarantee all the accounts in that town. We cured them of the idea that a good bank should take care of bad banks. I believe that if we have proper capitalization, proper management, some restriction on speculation, and a thorough examination, that conditions will rectify themselves. These failures have been most prevalent where speculation has been the strongest.

The CHAIRMAN. Would you favor the larger distribution of the

earnings of the Federal reserve banks to member banks?

Mr. Adams. I do not see any reason why that money should not be returned to us. We are obliged to keep our deposits there without getting adequate return, and, when the Federal reserve banks make those profits, I do not see why they should not be paid to the member banks.

The Chairman. You do not think that there is danger or the possibility that if that course is pursued it would put the Federal reserve banks into competition with the member banks?

Mr. Adams. I do not know enough about the Federal reserve system to pass on that question; I have never come in contact with it.

The Chairman. It takes arbitrarily the investment of a little over a billion dollars of the assets of the Federal reserve system now to pay its operating expenses and dividends, and if the banks were depending on the Federal reserve banks for the distribution of large earnings, the Federal reserve banks would have to take those reserves and invest them in securities, buying commercial paper or securities which were legal and thus put them into competition with the member banks.

Mr. Adams. If the Federal reserve banks were distributing some of those funds, they would have to operate more closely than they

now do with their expenses.

The Chairman. Of course, the Federal reserve management can make money or not to suit themselves. Arbitrarily we will say that about two billion dollars is sufficient reserve, but no one knows whether that is too much or too little, and, of course, if you invest all of that reserve into the kind of securities that are authorized, such as acceptances, bankers' bills and that class of paper, might it not tend to tie up the liquid assets of the Federal reserve system?

Mr. Adams. I do not see why those funds could not be carried in

Government bonds.

The CHAIRMAN. Do you think Government bonds are liquid in an

emergency?

Mr. Adams. The most liquid things I have ever had in my bank. The Chairman. When we passed the Federal reserve act, we were led to believe that we had to get away from Government bonds as security for circulating media. Of course, we have not done it, and by the use of Government bonds in the Federal reserve system we have continued to have outstanding from a billion and a half to two billion of Federal reserve notes, and it would seem to me that perhaps instead of following out what was intended under the Federal reserve act, we may have continued it and even enlarged upon it, because we still have out \$700,000,000 of national bank currency which has not been retired and we have an average of \$1,750,000,000 of Federal reserve notes and we note from year to year a constantly increasing amount of Government bonds held by the Federal reserve system.

Now, back in 1920 to 1922, we discovered that the buying and selling of Government bonds by the Federal reserve system had a very material effect on the price of money; it completely upset the money market to purchase \$480,000,000 of Government bonds by the Federal reserve system, and it had something to do with the price levels.

Mr. Adams. I have never studied carefully the Federal reserve system, and, as I say, I have only been in the building twice. I do

not know anything about it.

The Chairman. That is true practically of every officer of a national bank, is it not, that they know very little about Federal reserve operations, and notwithstanding the fact that you are, of course, stockholders of the system, you do not have much to say about its management?

Mr. Adams. We do not come in contact with it. The first time I went there, I went to see whether or not we could rediscount some farmers' paper in case we had to; I wanted to find out what the chances would be, and the proposition was that if this farmer had grain in his granary and ready for the market, they could loan on that. I asked them if the farmer who had plowed his field, put in his seed, and was almost ready to harvest was not entitled to have credit on what he had done. At first they took the ground that he was not, but later they assented to it. Although we did not borrow the money. But they were right in their first contention, that it was not security, because a hailstorm came along and spoiled that grain.

That is the only time I have talked to them about borrowing

money.

The CHAIRMAN. I think that is about all that I care to ask you, Mr. Adams, unless there is something you can add to the very intelli-

gent statement which you have made.

Mr. Adams. There are one or two things that perhaps I should add. It is shown in the record here that 71 per cent of the banks which failed had a capital under \$50,000. I was going to answer the point made by Mr. Goldsborough when he talked about having a bank of \$12,000 capital by saying that it had \$75,000 surplus. He was talking about small capital, whereas they built up very large surpluses in those banks in Maryland which he referred to.

The CHAIRMAN. And a surplus is the same as capital.

Mr. Adams. It is there to take care of a loss.

There is one other thing, and that is that for a long time in our State these banks which failed kept declaring dividends when they were not in shape to do that.

The CHAIRMAN. And that indicates lack of proper supervision.

Mr. Adams. Yes, and I was about to make the suggestion that a bank, before it declares a dividend, ought to get a clearance either from the comptroller or the superintendent of banks that it is proper to pay that dividend; but they paid dividends on December 31 and then go into the red for operating funds until the next fall when they made collections and, of course, after paying dividends there was nothing left on hand when grief came.

I think that is all.

The Chairman. I will say, Mr. Adams, that the committee are very grateful for your presence here, and I am sure that you have added very materially to the data before us in connection with this subject.

Mr. Adams. I am glad the committee feels I have done some good, and I thank them for the courtesy and patience which they have shown in allowing me to put it over in a sort of a country style.

The Chairman. The committee will adjourn until to-morrow morning at 10.30, when we will hear Mr. Charles E. Mitchell, of the National City Bank.

(Thereupon, at 3.40 p. m., an adjournment was taken until Wednes-

day morning, June 11, 1930, at 10.30 o'clock.)

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, JUNE 11, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met at 10.30 o'clock a. m., in the committee room,

Capitol, Hon. Louis T. McFadden (chairman) presiding.

The Charrman. The committee will come to order. There is present this morning, Mr. Charles E. Mitchell, head of The National City Bank of New York, who will make a statement to the committee on the subject of branch, chain, and group banking, after which I understand you will be willing to answer questions of the committee, Mr. Mitchell?

Mr. MITCHELL, Certainly.

STATEMENT OF CHARLES E. MITCHELL, CHAIRMAN THE NATIONAL CITY BANK OF NEW YORK

Mr. MITCHELL. You have invited a statement from me in regard to the operations of The National City Bank of New York and its affiliated companies, as well as the bank's or my own views on the

subject of branch, chain, and group banking.

Let me say at the outset that while The National City Bank of New York is extensively engaged in branch banking, both at home and abroad, under the provisions of existing laws, it has no interest, direct or through affiliated companies, or in any other manner, in

any group or chain of banks.

Our form of corporate organization comprises three separate institutions—The National City Bank of New York, which is a national banking association operating under the laws of the United States; The National City Co., which is a business corporation organized under the laws of the State of New York; and The City Bank Farmers Trust Co., formerly the Farmers' Loan & Trust Co., which is a trust company operating under its special charter and the banking

laws of New York State.

These three institutions operate independently of each other in their respective fields, but all three are affiliated by the manner in which their stock is held, so that, in effect, one body of shareholders owns them all. To be more explicit, all of the stock of The National City Co. and all, except directors' shares of the stock of the City Bank Farmers Trust Co., is held by trustees for the equal and proportionate benefit of all holders of shares of stock in the bank. Each shareholder in the bank has a stock certificate which carries indorsements evidencing his proportionate beneficial interests in the capital stocks of The National City Co. and the City Bank Farmers Trust Co., respectively, and he receives from time to time checks for his

proportionate part of the combined dividends paid by all three. The 5,500,000 shares of stock of the bank outstanding are held by more

than 65,000 shareholders.

The bank is now operating 42 branches in the city of New York. At each of these a full banking service is rendered to the community served. It is our policy to open additional branches in the city from time to time, as the extension of our business or the growth of this or that district seems to require. Urban conditions of life and business seem to us to call for this continuous development of our branch facilities throughout the city. We find them profitable and easy to manage

As permitted by the laws of the United States, the bank also operates abroad, directly or indirectly, 98 branches in 23 countries. These branches are established at natural centers or crossroads of commerce throughout the world and, in the main, serve American trade and commerce in the countries in which they are situated. In the scope of their banking business they are careful to preserve the amenities and avoid friction with the local banks, it being our policy to consider ourselves as a guest in the foreign countries which we enter

The National City Co. is the investment banking affiliate engaged in the analysis of corporate and Government finance, underwriting, and the purchase and sale of investment securities. It conducts its business through its head office in New York and 69 offices located in

the United States and abroad.

The City Bank Farmers Trust Co. is the fiduciary affiliate and is engaged in the handling of trusts and the performance of trust functions of all kinds. When its affiliation with The National City Bank of New York was effected in 1929, its commercial banking business was taken over by the bank, while, on the other hand, the bank turned over and is continuing to turn over to it, so far as the necessary consents of interested parties can be obtained, the trusts and trust business in which The National City Bank had been previously named.

Prior to affiliation with The National City Bank of New York the Farmers' Loan & Trust Co. had acquired jointly with the Central Union Trust Co., now the Central Hanover Bank & Trust Co., the ownership of the First National Bank of Palm Beach and the Central Farmers Trust Co. of West Palm Beach, Fla., both of which are small but sound and successful local institutions. The purpose was the de-

velopment and extension of trust business.

Our form of operating organization is generally as follows:

The chairman, according to the by-laws, is an operating official and the chief executive officer of the bank and of each of its affiliates. The National City Bank of New York, The National City Co., and The City Bank Farmers Trust Co. each has its president. The chairman and these presidents are permanent members of the executive committee of the bank, on which committee members of the board of directors of the bank rotate in office. While there are officers of the bank that perform general duties, there are also vice presidents whose responsibilities relate directly to a given territory, this applying to the United States, to divisions of the greater City of New York, and to the foreign fields. In branch operation the vice president in charge of a given territory has under him certain officers with executive titles, and a group of managers, each handling a separate office.

The control of foreign and domestic branches is generally similar. In New York City, however, a single vice president is constantly in touch with the managers of branches within his group, while abroad a double control exists, one managerial group under a vice president at head office cooperating with and interchanging personnel with the managerial group operating under the vice president in the foreign field.

Nowhere in our institution have we been as free in incurring expense as in our inspection departments, which are administered by the comptroller. Every department at head office is inspected two to four times a year, and credit inspection world-wide is constant. Inspection of trusts is constant. All domestic branches are thoroughly inspected at least twice each year, and "spot surveys" and "security counts" are taken by surprise at shorter intervals. These inspections are augmented by frequent visits by the executive forces attached to the vice president in charge of specific groups. In addition to all this, the Comptroller of the Currency makes an inspection of head office and domestic branches twice a year and of foreign branches at irregular intervals, and the examiner of the New York Clearing House makes his inspection at least once yearly.

Institutionally we take no firm position as favoring unit, branch, group or chain banking. We can not, however, be blind to the fact that while unit banking as a sole system has played a prominent part in the development of our country, and still has its ardent adherents, there is a very definite trend away from it, a trend that is fostered not by individual authorities but by public interest. It is to be expected that, as time goes on and the public has tested these varied types of banking, the right kind of banking for this country will develop from popular demand. The National City Bank of New York will adapt

itself to the developments.

It is our observation that while national feeling in the United States is second to none existing anywhere else in the world, local civic and neighborhood pride and desire for autonomy is prevalent throughout the United States to an outstanding and exceptional degree. We feel that this must be taken into consideration as the trend in banking develops and that, while in the ultimate whatever system best serves the public interest will doubtless be adopted, it is important that no banking trend should be forced by precipitate legislation, either permissive or restrictive. The development should be more rapid in any direction than is sanctioned by the gradual change of public

feeling.

Frankly, it would seem clear that the small unit banks for outlying and rural districts have as a system outrun their exclusive position of popularity. Such banks must be operated cheaply but manifestly can not be operated as cheaply and at the same time as safely as a system of them which is supervised by experienced and capable bankers. Age, experience, training, a wider view and contact with larger affairs, are of value in supervision but of less importance in the routine of a small bank. It always has been claimed for the locally owned unit institution that it was more responsive to the wants of the community than a branch of a larger institution, with headquarters elsewhere, would be. Doubtless, there is something in the argument, but it works both ways. The most important of all considerations in valuing the services of a bank to a community is

that it shall care for the funds intrusted to its custody in such manner that they shall always be safe and ready for return to the depositors on demand. There is such a thing as a banker being too responsive to local applications and too much under the influence of local and personal appeals.

The fact that a local banker is under greater pressure from local borrowers than a branch manager, supervised by an outside authority, may cause the interests of depositors to be imperiled for the accommodation of borrowers; indeed, the record of failures proves this to be frequently the case. Every period of boom times has had many bank failures in its wake, because the local bankers were under the same influences and affected by the same psychology as their customers.

Branch banking where permitted by law, and group banking in part as a substitute where branch banking is not permitted, and a combination of these developments sometimes working hand in hand, is gradually but assuredly taking hold alongside of the old unit The development has come about not by the establishment of new banks to compete with the old nor by aggressive action from large financial centers. It has been largely due to local conditions where the opportunity existed for constructive reorganization. It is well that this movement is gradual, as it is educational to a public that is primarily interested in banking service. It is not a movement to be feared. Banking is not a business which can be monopolized. The idea that local money or capital will be drawn away from the small towns to the large cities and that local needs will go uncared for is unwarranted. It is not at all likely that money will be drawn from a higher to a lower market, and since money is usually cheaper in large centers than in the outlying districts, closer relations between the two are more likely to result. There will be no monopoly. local fields will always be free and open for the establishment of locally owned banking institutions, and if they are capably managed and worthy of confidence they will be able to maintain themselves in the competition for local business. They will always have the best of the argument, certainly if the institution of outside ownership does not afford satisfactory safety or accommodation to deserving customers. That broad banking accommodation can be satisfactorily extended to outlying districts with comparatively small operating costs and with expert supervision provided by an overhead organization which covers numerous offices would seem to be assured by experience.

It should be borne in mind, however, and the importance of it is so vital as to justify repetition, that the normal banking development which has occurred in a natural and orderly way in most other countries has been discouraged and restricted in this country, and this fact creates a danger of a hasty, competitive development and one that will be publicly resented in case all restrictions are taken off at once. It is undoubtedly best that we gain experience gradually, with legislation keeping pace therewith. No reasonable objection, however, from the standpoint of public interest can be offered to the extension of the branch banking privilege for State and national banks alike beyond the present restricted areas. If such a development gives to the public a safer and better banking service, the demand for a further extension of power will come from a convinced public and the development will be a normal and accepted one.

How far immediate legislation should go in advantageously extending permissive powers for branch banking is a difficult problem. The trade area suggestion appears to me at present too broad in its scope. The suggestion of extension to county or to State lines seems artificial. The expansion to Federal reserve districts extends the territory to an unwarranted degree under existing circumstances and furthermore is filled with impracticabilities owing to the fact that the districts themselves do not represent either trade areas or spheres of natural banking relationships. My one suggestion would be that legislation should be such that under the carefully given permits of the comptroller's office the limitations of branch banking be extended to a somewhat larger field in the immediate vicinity of our cities, allowing the experience of this extension to be the guide in future legislation.

I feel that group banking is playing a most important role in what may be a real trend from unit banking at the one pole to widely practiced branch banking at the other. Where well managed, the groups seem to be satisfying the needs of the public which they serve. That they lack the flexibility, the effectiveness, and the economies of the branch system is obvious. As a measure of prudence, I feel that the holding companies should be under the inspection powers of the office

of the Comptroller of the Currency.

In every country of the world that has attained financial maturity there is, so far as I know, a unified banking system operating under one set of national laws. The situation must necessarily be very different in the United States with our separate national and State jurisdictions. But wherever possible, through uniform State laws and wise development of Federal reserve legislation, the benefits of uniformity in the laws governing banking should be secured to the people.

The CHAIRMAN. Mr. Mitchell, what is your official position with The National City Bank?

Mr. MITCHELL. I am chairman of The National City Bank of New York and its affiliates.

The CHAIRMAN. The other witnesses who have appeared before the committee have furnished the committee either at the time of the hearing or subsequently have placed in the record a statement of the companies and affiliated companies. Will you furnish the committee with that data from your published statement?

Mr. MITCHELL. I will give you our last published statements. The CHAIRMAN. Without objection, they will be placed in the record

at this point.

Mr. Fenn. There is only one question I have to ask in regard to the excellent presentation which Mr. Mitchell has made. Just in passing I notice that you say that the Comptroller of the Currency inspects your foreign branches. How can he do that?

Mr. MITCHELL. It is not a regular inspection.

Mr. Fenn. I wish that he could make them, but I wondered how

he could do it.

Mr. MITCHELL. He does. He sends a small group of men to one country and then to another, very often while our larger groups of inspectors are making their examinations, so that he saves the traveling of a large body and get the same results. He follows our own inspectors' reports very carefully; in other words—

Mr. FENN. He checks up on them?

Mr. MITCHELL. He checks up on those reports; yes. The inspection reports of our own inspectors are always given to his office and are having very constant and very careful attention from him.

Mr. Fenn. Of course, that is an extraterritorial duty, if I can so term it, which he performs, and it is done under the authority of

his office?

Mr. MITCHELL. It is.

Mr. Fenn. And by inspectors appointed by his staff?

Mr. MITCHELL. Yes.

Mr. Fenn. So that the inspection of your foreign branches or departments is identical with that within the borders of the country?

Mr. Mitchell. I would hardly say identical.
Mr. Fenn. Well, similar, perhaps I should say.
Mr. Mitchell. It is similar but not identical.

Mr. FENN. That is all.

Mr. MITCHELL. Similar in that he sends his key men who work jointly with our own inspectors.

Mr. Fenn. Are the results of those inspections ascertainable by the

Public, or do you publish them in your statements?

Mr. MITCHELL. No; the comptroller's reports are never given to the public.

Mr. Fenn. I understand that, but I did not understand whether

you published them in your own reports or not.

Mr. Mitchell. No; they are very voluminous. Our own inspectors' reports are fully as voluminous as those of the comptroller.

Mr. Fenn. Are they published in your reports to the stockholders? Mr. Mitchell. No, sir; they would constitute, in a year, a record far greater than the record of this committee in its hearings. We would have to have a very friendly public to spend the time necessary to read a fraction of the reports.

Mr. Goldsborough. Mr. Mitchell, you used the phrase, a few

minutes ago, "carefully granted permits by the comptroller."

Now, I have heard it said—and I use this illustration to make my question clear—very often that a first-class judge, who is absolutely wise, absolutely impartial, and absolutely fearless would be preferable to a jury in all cases. The answer to that is that "there ain't no such animal."

Now, then, the difficulty that any Comptroller of the Currency is under, it seems to me, is the difficulty of pressure which he, being human, can not possibly avoid. Do you believe that any comptroller is in a position to control, actually control, the granting of permits?

Mr. MITCHELL. Experience would lead me to answer that in the affirmative. Our experience with several comptrollers has been that their studies with respect to applications for the opening of branches

have been quite thorough. They have not been granted without a fair knowledge of the desirability to the public interests of such branches being opened, and I think that those words used in my

statement fairly represent what I mean.

Mr. Goldsbordugh. I am sure they represent what you mean, and I think you are right. The practical question is whether or not any one individual is in a position to control great pressure. You take a large institution, such as yours or the Chase National Bank, or in my own State, the Baltimore Trust Co. or the Union Trust Co. Now, they want to establish a branch. Their executive officers and directors have political affiliations of one kind and another. Pressure is brought upon probably the President and the Secretary of the Treasury, and that gets around to the comptroller. Now, you can not expect him, you know, to be absolutely impervious to a situation of that kind.

Mr. MITCHELL. I think you are quite right in that. He has the same difficulties that he has in the granting of the permits for the opening of national banks.

Mr. Goldsborough. Yes.

Mr. Mitchell. And of course, under pressure, under argument which he perhaps can not refute, although he may feel is soundly against the granting of such power, he has and he does grant permits for the opening of new national banks. We have seen it in our own territory and we have seen it throughout the country, especially when there is excessive enthusiasm regarding the value of bank stocks. Where there is a strong movement toward consolidation and merger, there is always a flood of applications for new national banks, formed in many cases for the sole purpose of getting a small development and disposing of the bank to somebody else.

Those are problems which he now has and which I assume would not be different from the problems that he would have in connection with the issuance of permits for more widely extended branches. Yet I do not know how the difficulties of the situation can be avoided. I recognize them as being there, but they are inherent in the situation. They have existed, and I doubt if they will exist to any greater degree under such a suggestion as I have made, than under the unit

system of banking.

Mr. Goldsborden. Mr. Mitchell, we have had before the committee several classes of argument favoring an extension of branch banking. One has been the number of failures of State and national banks which have taken place in the last nine years. Another has been that chain banks are bad things, that they ought not to be permitted to exist, but that the only way to get rid of them is to make it possible for these chain banks to be transformed into branch banks, and even though the witness does not favor branch banks, he says it is preferable to chain banking and, therefore, advocates branch banking to get rid of chains. The same thing obtains in the argument for branch banking to get rid of groups. We have never heard an argument in favor of getting rid of chain and group banking by affirmative action, nothing except that we could get rid of these greater evils by adopting branch banking.

d

t)

8)

to

b

b

8)

ci

g

Now, have you any opinion as to the justification for chain banks?

Mr. MITCHELL. The one argument against chain banks is that
under a lax or improper control there may be introduced a weakness,

with perhaps one bad situation in the chain, bringing a collapse like a house of cards. I have always doubted whether chain banking added anything to the strength of the general banking situation.

Mr. Goldsborough. Mr. Mitchell, the comptroller's view is this: He thought that chain banking was an unmixed evil; that they ought to be abolished; that in certain instances group banking was preferable to unit banking, but branch banking was preferable to either one of the three systems.

Now, have you any definite feeling about this group banking which is developing, particularly in the Northwest? What is your reaction

to that economic development?

Mr. MITCHELL. I think it well has its place; that it is unquestionably in the public interest; and as to what the outcome of it is to be,

where it is to lead us, I feel content to await developments.

Mr. Goldsborough. You do not feel that it is necessary and proper to take such action as can be taken to stop group and chain banking where it is?

Mr. MITCHELL. No; I do not.

Mr. Goldsborough. Until we can find out just what they are going to develop into? You think it is all right to let nature take its course, as I might say?

Mr. MITCHELL. That is my feeling.

Mr. Goldsborough. I have this sort of reaction: If we are going through an economic cycle, where mergers of all kinds are inevitable as far as I am concerned the sooner the cycle works itself out the better and the less restraint placed upon it, in my judgment, the better, but if it is a casual thing; if, as a matter of fact, the spirit of the American people is still in favor of local self-government in banking as well as in everything else, then it seems to me that Congress should adopt a position of restraint, rather than to allow a condition which is not really a condition of cycle to go on.

Now, have you any opinion as to whether this is a situation that has got to run its course; whether, as a matter of fact, the country has permanently adopted, as a part of its psychology, great concentrations in business and, of course, in banking, as well as in every-

thing else?

ut

S,

Mr. MITCHELL. I think I can say that that is the trend.

Mr. Goldsborough. You think it has permeated the spirit of the people—of the public?

Mr. MITCHELL. I think it has probably created a demand for some different type of banking than the sole system of unit banking.

Mr. Goldsborough. I am from the eastern shore of Maryland, which is that part of Maryland east of the Chesapeake Bay. Down there we have almost entirely unit banking with the exception of a State organization known as the Eastern Shore Trust Co. and a few smaller branch systems. There has been, in the last 40 years, one temporary suspension. No depositor has lost a cent in 40 years of banking in the nine counties of the Eastern Shore.

I think I have made the statement heretofore I know of several banks with capital stocks as low as \$12,000 that have been prosperous and have served their communities very well and have declared suffi-

cient dividends to keep everybody happy.

Does it not seem, as long as a community can be served by an organization of that kind and maintain its autonomy and its feeling of

personal interest, and its bank officers can absorb, by attending various meetings of banking associations and by contact with its city correspondents, up-to-date banking technique—does not that seem to you to be a better situation than to have branch banks of, say, Baltimore or New York, dominating the credit situation, which in turn would dominate the business situation and, in turn, the political situation, and get virtual control by the great metropolitan centers of the rural districts?

Mr. MITCHELL. I would say if your district is receiving service that is entirely satisfactory to itself at the present time, that it would be difficult to supplant it with anything else unless that which was presented gives to the public a finer service, greater safety, and greater accommodation, and broader banking service than they are now receiving and, as I have suggested in my earlier remarks, your local

institutions will always have the best of it.

Mr. Goldsbordugh. I was talking to one of our bank presidents the other day, one of our leading bankers and a man of good sense, and I said: "Look. Suppose some Baltimore bank was to come down here and offer your stockholders one and a half of the market value of your stock." I said, "What would you do?" He said, "We

Me

1

bra

7

one

tha

would sell."

Now, suppose they sold to that bank and became the branch of some bank in Baltimore or New York, as the case might be: It would be in a position, as long as competition continued in that community to offer probably better service than the local banks could offer, but when it climinated competition, what would be the situation—after by its improved service, it had eliminated competition, would it continue to be interested primarily in the community or in using the community as a feeder for the home bank?

Mr. MITCHELL. In the banking business, I doubt if there is any such thing as the elimination of competition for more than a moment

of time.

Mr. Goldsborduch. That is what several witnesses have said, but it seems it has been done in England, in Canada, in Germany, in France, in South Africa, and in Australia. The practical fact is that competition has been eliminated in those countries—all great countries.

Mr. MITCHELL. But bear in mind that any system of banking—any bank—can live only as it serves the public interests in a real and continuing way. If there were a failure to serve the public interests by an existing system in any one of the countries which you named, there certainly would be something to take its place.

Mr. Goldsborough. But it would take a long while.

Mr. MITCHELL. Local pride, local insistence upon service, will assert itself almost overnight to supplant anything as important as the banking service, where the banking service rendered is unsatis-

factory or bad.

Mr. Goldsborduch. Is not that true among a people who are used to the unit system and used to local self-government? Would it not take a very, very long time among a people who had become habituated to a centralized government and a centralized banking system. Does it not take them a long, long while to awaken to their own interests? Is not that the case?

Mr. MITCHELL. Personally, my view would be to the contrary.

Mr. Hooper. I have just one question. On page 7, at the bottom of the page, you say:

No reasonable objection, however, from the standpoint of public interest can be offered to the extension of the branch banking privilege for State and national banks alike beyond the present restricted areas.

That raises the question discussed by some of the gentlemen who have testified, as to what your idea is-or have you one-as to the

trade area. Have you one that you care to express?

Mr. MITCHELL. You will notice that I say at the outset that the Problem is a very difficult one. I think that the trade-area suggestion is undoubtedly too broad for the moment. I think that we must be gradual in this development.

Mr. Hooper. You would limit it to State lines, certainly? Mr. MITCHELL, I do not think that that is altogether logical. I

can not believe, in the ultimate, that that restriction will exist. Let me amplify that. Take our situation in New York, where we are extending branches through the Greater City of New York. We have a large suburban area with 75 or 80 per cent of the people in that area doing business constantly in New York and having their contracts in New York. Let us say that we extend branch banking larther down Long Island, to go beyond the city limits and to take In such places as Glen Cove, Oyster Bay, and possibly running down to Patchogue. That serves those people who have interests in New

York City. Now, suppose we go down through Westchester. We are permitted, let us say, to go to Rye and Port Chester. There are certainly just as many people living just over the line in Greenwich, Conn., who have their interests in New York, as there are in Port Chester-

perhaps more.

Why, if the public interest is truly served by this expansion, should It be stopped at a State line and the people whose interests are identical

Just over that line, fail to get that service?

Mr. HOOPER. I am not maintaining that that should be the case, but would not there be complications arise merely from the different lurisdictions, even under the national banking laws, or would there Incline to be complications by reason of State lines, in your opinion?

Mr. MITCHELL. If the extension of the privilege were made under the national act, I do not see just why there need be complications.

Mr. Hooper. That is all, Mr. Chairman.

Mr. Goodwin. Does the National City Bank of New York now Operate branches outside of the metropolitan area of the city of New York?

Mr. MITCHELL. We operate in the boroughs of Manhattan, Bronx,

Brooklyn, and Queens.

Mr. Goodwin. And they come within the provisions of the McFadden Act?

Mr. MITCHELL. Yes; that is, the Greater City of New York.

Mr. Goodwin. Are they both National and State banks-these branches?

Mr. MITCHELL. They are branches of our national bank.

Mr. Seiberling. Do you think it would be possibly better to have One system of banking rather than two—Federal and State?

Mr. MITCHELL. Until we know a lot more about the situation than we know now, I should say most decidedly we ought to have two.

Any one of our 48 States may make mistakes in their banking laws, permissive or restrictive, and any State bank has the power to retire and to enter into the national system, and vice versa. We have, through this double system, at the moment a counteractant against any unwise legislation and, during this formative period certainly there is, and possibly for all time there will be, a distinct advantage in the dual system.

Mr. Seiberling. Of course, you can not get the uniformity of restriction that you recommend and the uniformity of laws governing banking with the dual system, where you have no control of State

Mr. MITCHELL. In connection with group banking?

Mr. Seiberling. You recommend, near the end of your state-

ment here, a uniformity of banking restrictions.

Mr. MITCHELL. Uniformity of banking laws. I have in mind there, particularly, laws relating to negotiable instruments, usury rates, and matters affecting bank operations. There should be very definitely an urge upon all men to get uniformity in laws of that kind-

Mr. Seiberling. As I understand it, your theory is that if you had branch banking and you could get more for your money in the rural districts or in the branches than you could get in your main bank, you naturally would lend your money where you could get good security and get the highest rates and therefore the community would not suffer by reason of having branches?

Mr. MITCHELL. Generally speaking, that is my argument; yes.

Mr. Seiberling. You think branch banking should be extended? Mr. Mitchell. I think it would be wise to extend branch banking beyond its present limits, in order that we might gain some more

Mr. Seiberling. Now, since Maryland does not want branch

Mr. Goldsborough. Maryland has state-wide branch banking

Mr. Seiberling. But I understand you are not for an extension of it?

Mr. Goldsborough. I am not, but the State, as far as the State

banking laws are concerned, has state-wide branch banking.

Mr. Seiberling. Then I will amend my question. As long as some States do not want an extension of branch banking, because their banking experience has been nearly 100 per cent, and other sections of the country need it very badly, I take it that is the reason why you have suggested that the matter of extension of branch banks should be left largely in the hands of the comptroller?

Mr. MITCHELL. No; I have not had that particularly in mind. feel that with respect to branch banking, it is worthy of being tried out by some further extension than we are permitted at the moment, allowing the public interest to determine, as time goes on, whether

further extensions are desirable.

Mr. Seiberling. Well, to get back to the other point, since it 15 difficult to determine the area in which branch banking should be permitted, if the comptroller had authority to permit branch banking, it would naturally follow he would permit it only in areas where it was desired and would not permit it in areas where it was not wanted, and that would meet the public demand, would it not?

N W

ir

0 it

hs 82 St

Sts. an

est

Mr. MITCHELL. I doubt if the powers of the comptroller would be quite as broad as that. I think that the areas must be stated in some legislation.

Mr. Seiberling. Now, that is what I am getting at. Your idea, then, is that the area should be stated in some manner; that the comptroller should be given authority within those areas to permit branch banking?

Mr. MITCHELL. Quite so.

Mr. Seiberling. You think branch banking should always be permitted to the same extent that States permit it?

Mr. MITCHELL. Yes; I feel that very strongly.

Mr. Seiberling. I think that is all.

Mr. Dunbar. Mr. Mitchell, you start out by saying "You have invited a statement from me in regard to the operations of the National City Bank of New York and its affiliated companies," which justifies this question: You are the man who, 6 or 8 or 10 weeks before the panic in Wall Street last October loaned \$25,000,000 over night, in order to furnish means to prevent a panic on the stock market? Are you the man?

Mr. MITCHELL. I am the man there has been so much talk about

Mr. Dunbar. That is all right. You are the man who loaned the money?

Mr. MITCHELL. The National City Bank of New York did so.

Mr. Dunbar. Now, I have always been very much interested in reading your monthly statements. Following your lending that \$25,000,000 you had an editorial in your monthly newspaper or weekly newspaper in which you gave advice to the public which I thought was wonderful and wise and good. That advice was this, that if frenzied speculation was discontinued by the public, and if those who were speculating would gradually reduce the amount of their loans, we could expect an era of prosperity which had never been exceeded in the United States, and then your newspaper went on to say that if this speculative frenzy which had taken possession of the whole people of the land had not occurred, there was nothing that we could expect but permanent prosperity and that the results which would follow its continuance would be attended by evil consequences.

Mr. MITCHELL. Yes, I remember that statement in general. I

think I wrote it largely myself.

Mr. Dunbar. That is just what occurred in Wall Street?

Mr. MITCHELL. Yes, sir.

Mr. Dunbar. If your advice was followed that trouble would not have occurred. The Federal Reserve Bank was blamed for not lending money to help keep up the speculation, and when you loaned the \$25,000,000 you were advertised almost as the savior of the United States and yet, at the same time, you knew the course being pursued by the speculators would bring about ruin unless it was stopped. Now, that is the situation.

Mr. MITCHELL. You ask me for an explanation of that?

Mr. Dunbar. No, I do not care for an explanation, because your statement is complete. However, I would be glad if you would give an explanation of it.

Mr. MITCHELL. I feel that no banking system, however it may be established, is a right and proper system that fails to provide money

to a legitimte borrower under any and all conditions at a rate of some sort. We never can close the door to a legitimate borrower.

In my own opinion, when we discuss credit, we must view it solely as one global thing. If there has been speculation in wheat, let us say, shall any banking authority say that banks can not loan to the dealer in wheat or to the wheat farmer; that there is over production and the banks must stop lending? That is attempting to control the direction of the flow of credit. It may be that bankers will make up their minds that there is danger in such a situation and the rate will indicate it, but if that wheat farmer or dealer in wheat has a legitimate demand for money, it must be satisfied by banking authorities.

Mr. Dunbar. Now, then, I just want to commend you Mr. Goldberger. He has not finished his statement. Mr. Dunbar. Then, proceed and finish your statement.

Mr. Mitchell. I would say that the same thing applies to the demand for money on collateral loans. If an industrial concern borrows for its needs, that is industrial borrowing of a legitimate character. If an industrial company issues securities and gets money to satisfy those needs, then, on some basis or another, there is a justifiable ground for a loan on the securities issued by that industrial company. The borrower who brings those securities in and asks a loan is a legitimate borrower, just as legitimate as though the industrial company itself came in and asked for a loan, and I can not conceive of greater economic wrong than for a banking system to refuse credit on such collateral on some terms.

The two questions, sir, that you raise strike me as not being altogether related. That is why I make this explanation. Speculation that demands a use of credit which makes the total volume of credit outstanding unjustifiably large, is to be deplored, but the lending of money on collaterals is quite a different question and there should be a banking power to do it.

Mr. Dunbar. I think the two questions I asked you are related, but ever since I heard of your lending that \$25,000,000 and ever since I read your article I thought that you had more wisdom in your brain in lending that money and then giving that note of warning, than I have read from any source, and I have thought that if all the bankers of our land had viewed the situation as youd did, first coming to the relief of the situation and then giving a note of warning, perhaps the panic in October might have been avoided.

Mr. Goldsborough. You and Mr. Mitchell will agree on that, undoubtedly.

Mr. Dunbar. What I want to bring up is this: We read yesterday of a bank in Cincinnati failing—an average bank, I suppose—but the losses through one individual are a million dollars, upon which I think he had borrowed money and had about \$100,000 of his own securities. He had been kiting checks. He lost over a million dollars last October and since then, in Wall Street, due to speculation entirely.

We agree so far?

Mr. MITCHELL. Quite so.

Mr. Dunbar. I want to commend you, sir, because you have given a piece of advice at a time when everybody should have taken it, and if they had taken it we would have been all right. Do you

not believe that the hard times of to-day are caused primarily by the panic we had in Wall Street?

Mr. MITCHELL. No.

Mr. Dunbar. You do not believe that had anything to do with it? upon the card districts and the condition obtlinit lands.

Mr. MITCHELL, Yes.

Mr. Dunbar. How much did it have to do with it? I am not a

lawyer, now, you understand?

Mr. MITCHELL. You are opening up a very broad question, but to answer it very, very briefly, I would say that the present difficulty that the country finds itself in resulted from a very broad overproduction that started with the war and has been going on apace since then. I think that the culmination of the speculative movement last fall accentuated a depression in business that was approaching

Mr. Dunbar. But in that acticle you wrote you said that if the frenzied speculation should be curbed, we could expect a continuation of reasonably good times never excelled in the United States.

Mr. MITCHELL. And I believe that to-day, sir.

Mr. Dunbar. Well, then-

Mr. MITCHELL. I believe that we are bound to hesitate, in our Prosperity in the United States, with comparatively brief breathing spells, but at times our bad habits and overproduction and oversalesmanship, all resulting in a great overenthusiasm-those were Mr. Dunbar. That is true.

Mr. MITCHELL. Those were bad habits and temporarily—for how long a period I would not say-we are bound to have a let down in

which those bad habits are going to be corrected:

I think one of our bad habits, as I have indicated just now, was an Overenthusiasm. That overenthusiasm showed itself and demon-Strated itself in the markets. That was the situation that was corrected in part by the collapse of the markets last fall, and we are now going through a period of more complete correction—a correction of that bad habit along with some others. How long it will take I do not know. My feeling, however, is that the fundamentals of this country and the character of the people make a state of prosperity the natural state for our country, and we are now on our way toward conditions that will be favorable to business and to business men.

Mr. Dunbar. You believe that there is any prospect of slight or Immediate revival of business now? What are the signs of the time? Mr. Mitchell. Mr. Chairman, has this definitely to do with

branch, chain, and group banking?

Mr. Dunbar. Pardon me, but you stated, "You have invited a statement from me in regard to the operations of the National City Bank of New York and its affiliated companies." What I am asking You is in reference to the operation of your bank. However, I will

withdraw the question.

Now, you said that you did not believe that the losses in Wall Street last October were responsible for the present hard times only so far as our bad habits had caused a great many people to lose money and that overproduction was a cause. Do you not think that the great tremendous losses experienced in Wall Street last October did have a whole lot to do with the bad times—perhaps precipitated the hard

Mr. MITCHELL. Yes—the same effect as overenthusiasm in agricultural land values during the period, let us say, from 1900 to 1920 had upon the rural districts and the condition of their banks.

Mr. Dunbar. That is a satisfactory answer.

Mr. MITCHELL. From 1900 to 1910, generally speaking, land values in the rural districts doubled, and doubled again from 1910 to 1920. That was an excess of enthusiasm that brought in its trail a great deal of misery and, by and large, perhaps, more bank failures in the country than any other single cause.

So I say the excesses and overenthusiasm in the stock market are

a directly parallel case.

Mr. Dunbar. Now, I just want to ask one or two other questions. In speaking of banks in foreign countries, you say they have attained a degree of excellence or unanimity as to what should be the factors in the operation of those banks. I think somewhere, although I can not find it now, you mention that they are superior to those in our own country. Did you?

Mr. MITCHELL. I did not. I think you are referring to what I said in the last part of my statement. I said in every country of the world that has attained financial maturityI B B I

in,

ha

ar lin

Mr. Dunbar. What page is that on?

Mr. MITCHELL. On page 8. "In every country of the world that has attained financial maturity, there is, so far as I know, a unified

banking system operating under one set of national laws."

Mr. Dunbar. How many large banks in Europe have failed in comparison with large banks in the United States? I do not mean 8 bank of less than \$250,000 capital stock. How many banks have failed in Europe as compared with failures in the United States?

Mr. BEEDY. Within what time?

Mr. Dunbar. During the last 10 years. Are there any more failures in the United States among large banking institutions, proportionately, than there are in Europe?

Mr. MITCHELL. Among large banking institutions?

Mr. Dunbar, Yes.

Mr. MITCHELL. No. In the United States we have not had many failures among what can be called large banking institutions, over many decades.

Mr. Dunbar. Then the unified banking system in Europe does not make for safety, eliminating the small banks, any more than we have

safety in the United States?

Mr. MITCHELL. I am not attempting to make a point in that sentence of my statement; I am merely stating a fact. Perhaps conditions in our country are very different than they are in any other country in the world. Remember that Germany is the size of Texas in area. Now, I think it would not be wise for us to leap to the conclusion that because a certain banking system is satisfactory and successful in Germany, it is adaptable to the needs of the United States, with our breadth and scope of interests. This is a problem. I am not arguing that we should have this unified system. I cite it as \$ fact that in every other country of financial maturity there is a unified system, a fact which will perhaps lead us, in our gropings, to the quest tion whether some day we will not reach the same goal—a unified system.

That is one of the problems that I think you gentlemen, who are making such a fine study at the moment, should definitely have before you, and it is the only reason I mention it.

Mr. Dunbar. The great difficulty in that is that each State can have a banking system different from the United States which, a while

ago, you did not deplore or did not believe detrimental.

Mr. MITCHELL. Certainly during the time when we are working up to a possible answer, I consider it advantageous that we have this dual system. I do not say that in the end that is what we should have or will have, but during this period when we are finding out something—and it will take us a great many years to find it out—I think it is well we have this dual system.

Mr. Dunbar. I want to say that you are a man who impresses me as a man in search of light and knowledge and to that extent I am very much gratified at your statement. I have only one other question. You say that, for the present, branch banking should be extended to a somewhat larger field in the immediate vicinity of our

cities

Now, you answered that in an inquiry propounded to you by Mr. Hooper, that New York City—Greater New York—and its environs and suburbs, and some of them go right over to Connecticut—you see no reason why you should not be permitted to extend over there. But, that is the limit of your demand for extension of branch banking at this time because you say you would allow the experience gained in this extension to be the guide in future legislation. So you believe, in any proposed extension of branch banking, we should go very slowly and deliverately and find out what a limited extension might suggest for the future?

Mr. MITCHELL. That is my view. Mr. Dunbar. That is your view?

Mr. MITCHELL. Yes, sir.

Mr. Dunbar. Now, you have 42 branch banks in the city of New York, within the corporate limits?

Mr. MITCHELL. That is right.

Mr. Dunbar. And other national banks are permitted to have the same thing?

Mr. MITCHELL. Yes.

Mr. Dunbar. That is all, except I want to observe this, that I was always very much impressed by what you did to relieve the money situation in New York and by the advice you gave us afterwards, and which, if followed, I believe, to-day we would be enjoying reasonable prosperity, and I attach more importance to the losses sustained by gambling in Wall Street last October as being the cause of our present distress, than you do. That is all.

Mr. Beedy. Mr. Chairman, I am sorry to say that I missed the statement of Mr. Mitchell, but I have been scanning it since I came

in, and I would like to ask one or two questions.

I notice you say that the National City Co. is the investment banking affiliate and the City Bank Farmers Trust Co. is your fiduciary affiliate, and then you go on to show how the organization is linked up, the set-up of the management.

Do you think it is sound banking policy for one organization to have on the one hand trust funds and on the other securities which it is interested in putting on the market?

Mr. MITCHELL. Let me answer that by two arguments.

I think it is unfortunate for one demanding the solution of a banking problem if he has to bring his problem to either an investment

banker, a trust banker, or a commercial banker alone.

I mean this, that if a corporation brings a problem in corporate finance to a purely commercial banker, it is likely that it will be solved through a commercial banking transaction while it may be that that problem should more properly be solved through investment banking action. In the public interest, therefore, I think it is well to have a linking of the various types of banking under one general management, and that they should be more or less separated and, in certain respects, definitely separated.

To go on with the second argument in answer to your question, I should say that we make it a rule in our trust company that they shall not buy from our investment affiliate, the National City Conexcept where in some specific trust it is set forth as the desire of the maker of that trust that they may buy from the National City Co. In other words, we hold the two absolutely separate, the National

88 1

City Co. and the City Bank Farmers Trust Co.

Mr. Beery. Why do you hold them separate, distinctly separate

You emphasized that.

Mr. MITCHELL. Yes, we hold them distinctly separate because we believe that there are different types of minds in banking which should be segregated and specialized. So, for the general safety, unless some customer making a trust specifically grants the power of direct dealing, we eliminate it. When we set up the City Bank Farmers Trust Co. as the oganization of our institution having to do with trusts, we did it believing firmly that trusts should be administered by trust-minded men. The trust-minded man, in my experience, is very different from the investment-banking-minded man, and the investment-banking-minded man is usually very differently minded than the commercial-banking-minded man.

We set it up as a general rule that these compartments in which these various types shall be operated without direct contact one with the other. However, I may add that if you were making a trust with the City Bank Farmers Trust Co., I think I might convince you of specific advantages in putting in that trust agreement a provision that so far as the purchase of securities is concerned, the City Bank Farmers Trust Co. should be permitted to deal with the National City Co., the investment affiliate. I think I could show anyone that argument to a point where he would likely say that it was to his advantage to put it in. Unless there be specific consent the public and ourselves are safer in working under the general plan of having no direct contact so far as purchases and sales are concerned.

Mr. Beedy. It would be your policy, would it not, when a man comes into your bank to make a trust, to have him see that by its terms you should be authorized to buy of your investment affiliate

Mr. MITCHELL. We give him the argument; we show him the advantages, and if he chooses to make that provision, it is made.

Mr. Beedy. He is free to make his choice, of course

Mr. MITCHELL. He is free to make his choice.

Mr. Beedy. But, believing as you do in your own company, it would be your duty to show him the advantages of authorizing purchase from your investment affiliate?

Mr. MITCHELL. Quite so.

Mr. Beedy. I do not question but what this is an age of specialization and the trained trust man should run the trust business and the trained commercial banker should run the commercial bank.

My question is, does the holder of stock in the National City Bank Participate in the profits of the three organizations put together?

Mr. MITCHELL. The stockholder?

Mr. Beedy, Yes.

Mr. MITCHELL. Oh, yes; he participates in it all.

Mr. Beedy. It is undoubtedly wise to have these separated, and the trained trust man in his proper department, but is it wise to link these two kinds of banking businesses together? We are all more or less human, and even if a man is trained as a trust banker, where he acts for a company that has an affiliate and where he owns stock in both companies and it is to his advantage to make a profit out of his own stock rather than the stock of somebody else, there is that human temptation perhaps to deal in securities through his own organization

and not by purchasing it outside. There is a danger there.

Mr. MITCHELL. It seems to me that if your argument were carried very much further the fallacy of it would be apparent. In our busihess we endeavor to make very broad contacts. We do a very large business in what is the equivalent of the savings-bank business, or similar to it; again, we make a big business of small loans, unsecured loans, of \$250 and \$300 on the average to a vast number of people. Those are specialized businesses in themselves but are all a part of the banking business. If you segregate these and if you say that the letter-ofcredit business, for instance, should be a separate phase of banking, and if you say that the foreign-banking business is a type of business extraneous from the domestic business and all of these units should be set up separately and that we should not be working as I think we are in a very definite way toward the department-store type in Our large financial units, then the argument that I could give with respect to the particular question of the trust business and the investment-banking business as to segregation would fall down, but I argue for a complete banking service to be rendered to a public that seeks a comprehensive banking service from the institution to which they come.

Mr. Beedy. Of course, there is a reductio ad absurdum to every argument. I should not attempt to go to the extreme to which you have gone in advocating the separation of the banking business of a banking institution for the purposes of your argument, but I did want to bring out the point that I think the linking of these two branches of the banking business places a very great necessity for wise management

upon the management of the combined institution.

Mr. MITCHELL. You are quite right in that deduction. Of course, we direct our trust company with a separate board of directors. We insist upon it being operated by so-called trust-minded men and, as far as we can do so, we do segregate its activities.

Mr. Beedy. May I ask another question, Mr. Chairman?

be be

ve

is

ık-

ent

I notice in the morning papers, or yesterday's papers, that the third of the reparations loans which were to be floated in this country is now being offered to the extent of about \$113,000,000.

Is your bank participating in the marketing of any of that loan? Mr. MITCHELL. You evidently have later information than I.

Mr. Beedy. I noticed it in this morning's paper.

Mr. MITCHELL. It may well be. Up to the time I left the office yesterday, I understood—

Mr. Beedy. I think that came out in this morning's paper.

Mr. MITCHELL. Yes, we are participating in the distribution of the

Mr. Beedy. Since the war, the latest figures that I have been able to get hold of is that this country has floated both in foreign government loans and foreign corporation loans about \$18,000,000,000, so that, added to the 12,000,000,000 of indebtedness owed it by foreign governments as the direct result of the war, it makes about 30,000,000,000 owed us by Europe and South America to-day.

Did you view it as a wise policy that this Government should not have gone into the League of Nations because of the danger of foreign

entanglements—and, if that seems a bit irrelevant—

Mr. Mitchell. I think it is pretty far afield.

The Chairman. I might ask what bearing that has on this question of branch, group, and chain banking?

Mr. Beedy. It does not have any bearing, and he does not have

to answer it unless he wants to.

Do you look upon these foreign loans as safe investments for trust estates?

Mr. Mitchell. I do not think you can generalize on foreign loans any more than you can generalize on railroad bonds or corporate bonds of any kind.

Mr. Beedy. Let us take the reparations loan. Does your trust affiliate handle any of these reparations loans? Do you underwrite them for sale purposes?

Mr. MITCHELL. Our trust affiliate does not do any underwriting.

Our trust affiliate buys only for investment in its trusts.

Mr. Beedy. Then this statement of yours is a little misleading, and I can see how it may be made to conform to the facts. Let me read it:

The National City Co. is the investment banking affiliate engaged in the analysis of corporate and Government finance, underwriting, and the purchase and sale of investment securities.

Mr. MITCHELL. Yes; but I understood you question to refer to the trust affiliate. Did I misunderstand you?

Mr. BEEDY. My question did refer to the trust affiliate.

Mr. MITCHELL. But if you will go on, you will see that I differentiate. The trust affiliate has to do with the fiduciary business only.

Mr. Beedy. That is interesting and informative; that is, the National City Co. has two functions—it underwrites certain securities from time to time?

Mr. MITCHELL. Yes.

Mr. Beedy. But it never underwrites any securities which it later might sell to the City Bank Farmers Trust Co. in conjunction with its trust business?

Mr. MITCHELL. Quite so.

Mr. BEEDY. Never?

Mr. MITCHELL. No, sir. The National City Co. does not sell anything to the City Bank Farmers' Trust Co. except where under some specific trust the maker of the trust has provided that the City Bank Farmers' Trust Co., the trustee, may purchase directly from the

National City Co.

Mr. Beedy. Exactly. So that, it being your policy to set forth the advantages of such a purpose whenever a trust is made with your City Bank Farmers Trust Co., if perchance any of the people who come in there to make a trust see those advantages as you think they should if they are wise, then that company does buy securities which the National City Co. underwrites and makes them a part of the trust

Mr. MITCHELL. Where that consent is given in specific cases,

Yes; but in the general trust business, no.

Mr. Beedy. Now, here is a reparations loan on the market. The National City Co., engaged in the investment banking business, has already analyzed those loans and decided whether it will sell those bonds, and if the City Bank Farmers Trust Co. has some trusts which authorized the purchase of securities from the National City Co., Your trust-minded men, if they are so minded, may buy reparations loan bonds and put them into those trust estates.

Mr. MITCHELL. Yes.

Mr. Beedy. I would like to ask you if you think it is wise to set up in one organization an institution with authority in the management of trust estates to purchase of another separate department in the same organization a foreign issue of bonds, such as the reparations loan bonds will be?

Mr. MITCHELL. As I see it, you are getting down to this specific question: Will a group of trust-minded executives and members of the executive committee or board of directors determine that the

German reparation bonds are fit for trusts?

Mr. Beedy. Yes.

Mr. MITCHELL. That is a problem that has not anything to do with . any investment banking policy or operation of the investment affiliate. That is a question for the trust-minded man to determine. Now, let assume that he did determine that those bonds were a right and Proper investment for certain trusts, and the National City Co. had no interest in that issue at all. Then the trust company would go out and buy those bonds where it could. I do not get the strength of the argument that it is wrong if in that particular instance the City Bank Parmers Trust Co. buys its securities directly through the National

Mr. Beedy. Let us assume that the National City Co. does not have any interest in the reparations loan, and you put your trusthinded man on the problem whether those bonds are a proper buy. Then let us assume again that the National City Co, is interested in he sale of a certain number of those bonds. Do you think it would have any tendency to affect the judgment of your own trust-minded man as to whether or not those bonds were a good purchase for the

Fust estate?

Mr. MITCHELL. Absolutely not.

Mr. BEEDY. That is, your organization is so perfect that the human element does not enter into it at all?

later h its Mr. MITCHELL. It does not with respect to matters of that sort-My experience over a long period of years makes me answer that in a very positive way.

Mr. Beedy. You know that there is some discussion as to the advisability of setting up under one organization the trust affiliate

and the commercial bank.

Mr. MITCHELL. I know that; yes.

Mr. Beedy. But you do not see any danger in it if the management is proper, and these departments are kept separate and run separately in so far as it is possible to do so?

Mr. MITCHELL, Absolutely not.

Mr. BEEDY. That is all.

The CHAIRMAN. Judge Brand.

Mr. Brand. Are you willing when you go home or while you are still in the city to send in for the record a clear definition of chain

banking, branch banking, and group banking?

Mr. Mitchell. It would seem to me that your committee has been a greater contributor to those definitions than I could possibly be I take my own definitions from what I got out of the reports of your hearings, and I have no other views.

Mr. Brand. Have you been able to find that any two witnesses

PE

el

ra

yo

at

rec

rest A Eng

non

Rone

per .

Bove

done

legal

T

alre:

bran

glad

have given the same opinion about it?

Mr. MITCHELL. I have gathered the definitions from my readings of the reports of these hearings, and while I may be wrong, if you wish me to give you the definitions as I understand them—

Mr. Brand. Yes; I would like to have you define chain banking, branch banking, and group banking at this time, and also state the

distinct differences between the three systems of banking.

Mr. Mitchell. Branch banking I understand to be where a parent bank establishes offices, assuming full and complete responsibility for the acts of those offices and pledging for the fulfillment of any obligations made by those offices the full resources of the parent company-

Chain banking I understand to be where two or more banks are owned completely or as to the majority of their stock by an individual

who has a general supervision of the banks so owned.

Group banking differs from chain banking in that there is a holding company supplanting the individual, which holding company makes it its business to develop for the benefit of the group, experts on one or another phase of the banking business and to give inspection and control to the banks in its group.

Now, those definitions as to chain and group banking I have drawn very largely from what I have read of the hearings before your com-

mittee, and maybe I have misunderstood them.

Mr. Brand. As I understood you, and I will ask you if it is not a fact, in both branch banking and group banking systems, the parent bank controls the directorate of the unit banks belonging to the two different systems?

Mr. MITCHELL. They must control the election of the directors.

Mr. Brand. That is what I mean, that in both systems they have
a right to say who shall be the directors.

Mr. MITCHELL. As a majority of the stockholders, yes.

Mr. Brand. Is that true of chain banking?

Mr. MITCHELL. It seems to me is must be equally true of chain banking.

Mr. Brand. I suppose so.

Now, one other question. What protection is given to the depositors in the case of the insolvency or failure of a bank in a group system and a branch system?

Mr. MITCHELL. As I pointed out, in the branch system the entire resources of the parent are pledged to fulfill the obligations of the branch in every case.

Mr. Brand. In other words, the parent bank is made liable to give full satisfaction to all creditors of that particular bank?

Mr. MITCHELL. They must.

Mr. Brand. Including depositors?

Mr. MITCHELL. They must.

Mr. Brand. Is that also true of the group banking system?

Mr. MITCHELL. Not necessarily, but from a practical standpoint it seems to me it would probably work out very much the same way. Mr. Brand. You have set out in your statement that you have 98 branches in 23 different countries. Would it be objectionable to you or to your institutions to furnish the committee with the names of the countries where these banks are located?

Mr. MITCHELL. No; I can give that to you now if you wish it.
Mr. Brand. And also the lawful rates of interest to be charged in
those countries and the rates of interest you charge.

Mr. MITCHELL. I hardly think I could do that, because interest rates are a fluctuating thing. We can not be in any country and charge more than a competitive rate.

Mr. Brand. Would you mind, then, confining your statement to the rates of interest fixed by law in the 23 countries, omitting what rates you charge in those countries?

Mr. MITCHELL. I would be very glad to, indeed. I fail to recall at the moment any country where the lending rate is established by law, but I will be very glad to investigate and advise you.

The CHAIRMAN. Without objection, that will be inserted in the record at this point.

(The information referred to is reproduced below.)

THE NATIONAL CITY BANK OF NEW YORK

Maximum contractural legal rate of interest fixed or permitted by law in the respective countries as indicated.

Argentine, none; Belgium, none; Brazil, none; Cuba, none; Colombia, none; Ingland, none; France, none; Haiti, none; India, none; Japan, none; Mexico, none; Panama, none; Peru, 12 per cent; Philippines, 14 per cent; Porto Rico, none; Santo Domingo, none; Straits Settlements, none; Uruguay, none; Veneulela, none; Chile, present rate as tabulated, rate is revised each six months, 13.41 per cent; China, probably none, but can not be set forth definitely due to present sovernmental conditions prevailing except at Hong Kong (British Crown Colony), none; Italy, legal rate is subject to determination by court after review; Spain, legal rate is subject to determination by court after review, 8 per cent accepted in general, 12 per cent has been permitted in unusual cases.

The Chairman. Mr. Mitchell, you will put in, if you have not already done it, a list of your foreign branches and your domestic branches?

Mr. MITCHELL. You have not asked me for it, but I would be very tall to put that in.

The CHAIRMAN. If you will, I should also like to have you state whether your branches are established under the laws of the countries In which the branches are located.

Mr. MITCHELL. Certainly.

Flushing, 85 Main Street.

The CHAIRMAN. Do you set aside a capital stock for those branches

In foreign countries?

Mr. MITCHELL. In certain countries we do, and in certain countries we do not. The laws in certain countries provide that we shall and in others do not, and from our standpoint it makes no difference whether we establish special capital for them or not since our entire resources are behind each of our branches.

The CHAIRMAN. If you do establish special capital, do you carry

It as an asset of the National City Bank or one of its affiliates?

Mr. MITCHELL. It is not done quite that way, Mr. Chairman. There is set aside for that branch so much capital in the currency of the country where that branch is located, but it is not necessarily a Separate corporation. It is merely a given amount of capital allocated to that branch.

The CHAIRMAN. Do you receive deposits and pay checks in those

foreign branches the same as you do in the parent bank?

Mr. MITCHELL. Yes.

The CHAIRMAN. Do you make deposits by the National City Bank Or any of its affiliates in those branches?

Mr. MITCHELL. Occasionally, but only occasionally.

The CHAIRMAN. If the demand for money in a locality should exceed the resources of the branch, I suppose that would be an occasion where you would send additional funds?

Mr. MITCHELL. Yes.

The CHAIRMAN. Your balances abroad are not kept entirely in those branches?

Mr. MITCHELL. The balances of head office of the National City

The CHAIRMAN. Yes.
Mr. MITCHELL. Oh, no.

The Chairman. Do you keep open accounts with other banks in London and Paris?

Mr. MITCHELL. A great number of accounts with foreign banks.
The CHAIRMAN. And foreign banks keep balances with the National
City Bank in New York?

Mr. MITCHELL. Yes, and also with the foreign branches.

The Chairman. And you buy and sell bills and carry on transactions with those foreign banks as you would with any local bank in the United States?

Mr. MITCHELL. Quite so.

The Chairman. Take, for instance, your branch in Cuba. Is that incorporated under the laws of Cuba?

Mr. MITCHELL. No, that is a full-fledged branch.

The Chairman. You are a director of the Federal Reserve Bank of New York, are you not?

Mr. MITCHELL. I am.

The Chairman. Are you a member of the clearing house committee?

Mr. MITCHELL. I am.

The Chairman. There has been much discussion about the scarcity of eligible paper for rediscount in the Federal reserve system. Do you consider that there is a scarcity of eligible paper for the proper conduct of the business of the Federal reserve system and its member banks?

Mr. MITCHELL. I think at the moment there is some scarcity of

such paper, but I think that the condition is temporary.

The Chairman. There have been suggestions made to this committee that we make eligible for discount at the Federal reserve bank certain additional classes of paper, representing partial payments in some form or another on notes of dealers, secured by municipal bonds in certain cases, and others have suggested that we make available for rediscount notes secured by railroad bonds and real estate loans.

Would you think it advisable to increase the eligible list to the

extent of including any one or all of those classes?

Mr. Beedy. Mr. Chairman, has that anything to do with branch, group, or chain banking?

The CHAIRMAN. It has very much to do with it, because it deals

with the assets of these banks.

Mr. Beedy. I do not see what difference it makes what the assets are. The question is whether it is better to have those banks operate as unit banks or in a chain, group, or branch banking system, and I do not see how that figures.

The CHAIRMAN. If the gentleman objects, I will withdraw the

question.

Mr. Seiberling. We have gone into that with practically all the witnesses we have had here. There is a wide interest in the subject.

Mr. Beedy. Not with my permission.

Mr. MITCHELL. I would be glad to answer it, Mr. Chairman.

Mr. BEEDY. I object to it.

The Chairman. You are operating a number of branches, and ¹ am presuming that in your case, where I know you analyze the districts very carefully, all of these branches are on a paying basis?

e

11

Mr. MITCHELL. In New York, all except branches recently established. Of course, it takes time for any branch to run from the red to the black. By and large, our branches run into the profit column

within an average, I should say, of about eight months from the time of opening. New branches that were opened within that eight months Period I would not say are universally profitable at the moment, although one branch that we have opened within this period has been in the black from the time it opened.

By and large, our branches in New York are profitable.

The Chairman. If after a reasonable test you find, however, that they are not profitable, what would be your policy?

Mr. MITCHELL. To close them, because we do not believe in con-

ducting anything in banking that does not pay its board.

The Chairman. Would you not say that in many of the cities—say, for instance, your own city of New York—there are probably many branches now that are not on a paying basis?

Mr. Mitchell. I would not want to answer that, because I have

not facts upon which to base an answer.

The Chairman. But is it not a fact that in certain districts in New York City they have too many branch facilities?

Mr. MITCHELL. That they are overbanked?

The CHAIRMAN. Yes.

mn

Mr. Mitchell. I think there is a tendency that way just at the moment, but our districts grow up to the facilities so rapidly in the city of New York that I think the inclination of the bankers' mind would be to let the branches stay there and let the territory grow up to them.

The Chairman. Do you see any danger, Mr. Mitchell, in the possible concentration through mergers and consolidations of banking assets in New York? In other words, do you see any danger in the control of credit and banking resources in the organization, for instance, of a bank of five billions or ten billions in New York?

Mr. MITCHELL. Absolutely not.

The Chairman. Do you think that competition will always be maintained even though we should ultimately get down to four or six banks in New York City?

Mr. MITCHELL. Quite so.

The Chairman. Do you feel perfectly sure that the average man would find that he could have his wants properly taken care of and do a banking business with those large units as well as he could if he were served by smaller banks?

Mr. MITCHELL. I feel certain of it.

The Chairman. You do not think that rules and regulations would be promulgated which might limit his ability to get banking accommodations?

Mr. MITCHELL. I would have no fear of it.

The Chairman. In connection with the questions that Mr. Beedy asked you in regard to the affiliated companies and your trust department, which is the City Bank Farmers Trust Co., do you think the fact that you are chairman of each one of your three units would influence the attitude of the board, for instance, of the trust company to take on certain securities in which one of your other companies would be interested?

Mr. MITCHELL. I do not think I would long hold my position if that

influence were apparent.

Directly answering your question, no.

The CHAIRMAN. The National City Co. originates and distributes securities, does it not?

Mr. MITCHELL. Yes.

The Chairman. And as I understood you to say, one certificate of stock represents ownership in the National City Bank, the National City Co., and the City Bank Farmers Trust Co.?

Mr. Mitchell. Direct ownership in the National City Bank and a beneficial interest in the City Bank Farmers Trust Co. and the

National City Co.

The Chairman. Does the National City Co. buy and sell National City Bank stock?

Mr. MITCHELL. It does, as a trading post.

The CHAIRMAN. But the City Bank Farmers Trust Co. does not do so?

Mr. MITCHELL. No.

The Chairman. Inasmuch as the national banking act prohibits a national bank from buying, owning, or selling its stock, do you see any possibility of the affiliated company, which has the same stock-

holders, being in violation indirectly of that law?

Mr. Mitchell. I think it could only be considered an indirect violation if they bought and continued to hold. Buying and selling as a trading post and never continuing for any period to hold the shares seems to me to completely strip that problem of any danger whatsoever.

The CHAIRMAN. The National City Co., as you say, originates and markets securities. Does it maintain the market for its securities—in other words, does it enter into any pools for the maintenance of the market in connection with the securities in which you are particularly interested?

Mr. MITCHELL. The National City Co. attempts to find buyers where securities are to be sold by investors, and where those securi-

ties have National City sponsorship.

So far as entering into pools, no; if I understand your question

correctly we have never had a case of that sort.

The CHAIRMAN. As I understood your statement, the National City Bank, of course, is a national bank, chartered under the national banking act, and the National City Co. is organized under the corporate laws of the State of New York?

Mr. MITCHELL. Yes.

The CHAIRMAN. And the City Bank Farmers Trust Co. is organized under what law?

Mr. MITCHELL. Under the laws of the State of New York.

The Chairman. Not under the corporation laws?

Mr. MITCHELL. No; under the banking laws of the State of New York.

ra gott

ti

th

St

lis

The CHAIRMAN. Is that examined by the State banking department?

Mr. MITCHELL. It is.

The CHAIRMAN. Is the National City Co. examined by the banking

department of the State of New York?

Mr. Mitchell. No; it is not. The Comptroller has always had the statement of the National City Co.—I say always; he has had it in recent years, and in addition he is invited to examine every cross transaction between the bank and the company.

The CHAIRMAN. That opportunity is voluntarily offered by the National City Bank?

Mr. MITCHELL. Yes.
The CHAIRMAN. Has he, as a matter of fact, examined the National City Co. simultaneously with the National City Bank?

Mr. MITCHELL. No complete examination.

The Chairman. Is there a simultaneous examination of the three companies at all?

Mr. MITCHELL. No, there is not.

The Chairman. In connection with the trust business, you spoke of the different angles of the banking business being conducted under one roof, so to speak, and I want to ask you if you would be in favor of the segregation of the assets of banks? For instance, where national banks are doing the different classes of banking business, would you favor the segregation of assets to give a preference to certain depositors over other depositors?

Mr. MITCHELL. No; I would not.
The Chairman. You do not see any danger in subjecting the saving deposits to the risks of commercial transactions?

Mr. MITCHELL. No; I do not.

The CHAIRMAN. You do not feel that they should have a preference in the assets in case of the failure of a bank?

Mr. MITCHELL. No; I do not.

The CHAIRMAN. I am referring particularly now to the operation of banks under such law in California, which apparently has worked successfully.

Mr. MITCHELL. Yes; I realized that. My answer would be no. The Chairman. Do any of your affiliated companies own a seat on the Stock Exchange?

Mr. MITCHELL. No.

The CHAIRMAN. Your stock and bond dealing is all done through

Independent houses?

Mr. MITCHELL. They have to be. You know that the New York Stock Exchange does not permit any corporate membership whatso-We, with other New York institutions, are seeking the establishment of a new form of special membership in the exchange so that we may deal directly in bonds on the exchange.

The Chairman. Some houses have officers or members of the firm hold the seats on the exchange. Do you cover it in that manner?

Mr. MITCHELL. No; we do not.

The CHAIRMAN. There has been some discussion here, and while it Perhaps does not have particularly to do with branch, chain, and group banking, it does indirectly affect it, in connection with the fixing of rates on the New York money market. The committee has not yet got hold of a man who has been able to tell us just the process in which the daily rates for money in the New York money market is fixed.

Mr. MITCHELL. Are you speaking of the call rate?

The CHAIRMAN. Yes.

Mr. MITCHELL. The call rate is fixed by the Stock Clearing Corporation, which is a corporation attached to and owned by the members of the New York Stock Exchange. That committee, a committee of the Stock Clearing Corporation, review every morning the loans made to Stock Exchange members the day before and the rates, and they establish a rate which in their opinion is a fair rate in the light of the previous day's lendings and in the light of what is known of the money

market that morning.

By and large, I believe that their work has been well done, and it is done as accurately as it could be by anybody. The establishment of that rate does not make it incumbent on any bank to accept it, and certain of our banks refuse to accept the rate so established whenever they deem it to be unfair. But, by and large, in the great majority of instances that rate is accepted, but if it ever failed in fairness over a period, it would not be an accepted rate.

Mr. Beedy. That is a committee of about three men?

Mr. MITCHELL. I think three men are on it. It is a committee that is under the supervision of Mr. Streit.

The Chairman, Does the management of the Federal Reserve

Bank of New York have any influence over those rates?

Mr. MITCHELL. They have no influence on that rate at all.

The Chairman. The Federal reserve people have no influence over that committee?

Mr. MITCHELL. No, sir.

The CHAIRMAN. It is a free committee?

Mr. MITCHELL. Absolutely free.

The Chairman. And the independence of that committee is made secure by the check referred to, that any bank can disagree with that rate?

Mr. MITCHELL. Yes, sir.

The CHAIRMAN. That is a check, is it not?

Mr. MITCHELL. That is a check; oh, yes. It is more or less of a rebuff that that committee does not relish, to have any bank in New York refuse to accept the rate, because it indicates that they have either missed something in their calculation or that they have not been fair.

The CHAIRMAN. How is that committe designated?

Mr. MITCHELL. I can not answer that, Mr. Chairman. It is a committee that has to do with the Stock Clearing Corporation, and is really under New York Stock Exchange control. It is a committee of members of the exchange.

The CHAIRMAN. And the men on that committee are of long service

in that particular line, as I understand it?

Mr. MITCHELL. Yes; they are.

The CHAIRMAN. They are experienced in that class of work, and and continue from year to year to act in that capacity?

Mr. MITCHELL. Yes; that is true.

The CHAIRMAN. Can you tell us also, in regard to the short and

long time money market, how that rate is arrived at?

Mr. MITCHELL. That is not fixed at all; it is established purely by the conditions prevailing from day to day. For instance, we are having in New York at the moment a 3 per cent call rate. You may have noticed that 30-day time collateral loans have gone to a 2% per cent rate, indicating that certain bankers feel that during the next thirty days the call rate will be lower than the average of 2% per cent. That is a matter purely of the individual banker's view, and if some banker is unable to put out 30-day money at 3 per cent and elects to offer it at 2% in order to get takers, then 2% per cent becomes the rate you see announced in the paper as the 30-day rate. But there 15 nothing that binds any bank with respect to it.

n

b

u

The CHAIRMAN. Mr. Dunbar, in his questioning of you a little while ago, referred to a period a little over a year ago when your bank made a loan of \$25,000,000 to the market. As I recall it, about that time the call rate ran up to about 20 per cent, and I think perhaps a little higher than that?

Mr. MITCHELL. Yes.

The CHAIRMAN. And now the rate is 2% per cent, you say, or around 3 per cent?

Mr. MITCHELL. Three per cent.

The CHAIRMAN. Have you any comment to make as regards our banking system that permits such a wide spread in rates over apparently such a short time? Do you think it is the fault of our banking system that causes that, or, what in your judgment, causes rates to vary, and should they be permitted to vary that way? In other words, is it a sad commentary on our bankers or our banking system

that those things exist?

Mr. MITCHELL. It is an absolutely necessary thing that they do Rates are like the pharmaceutical thermometer or register; they show the condition of the patient from time to time. If you tried to stultify the movement of rates and make them artificial, you would be unable to get a gauge of the situation existing at any particular time. There should be freedom of rates. When credit is plentiful, the interest rate is going to show it, and when the use of credit is being overdone, the interest rate is going to show it—it becomes a red flag.

The Chairman. You recognize, do you not, that it is within the

Power of the Federal reserve system to check that?

Mr. MITCHELL. Not altogether. The high rates that existed a Year ago did not exist in so-called commercial loans at all. As you know, the commercial rate was from 4% to 6 per cent, while at the same time loans on call were jumping from 10 to 20 per cent. Bankers like to keep their own portfolios balanced; no banker is going to lend all of his funds in the call market regardless of the rate existing in the call market. He must take care of his commercial customers if

he is going to continue to do businses.

Now, if the bankers are aiming to maintain a balanced portfolio for themselves and have enough of collateral loans and enough of call money in their portfolios, and there comes a demand for additional call money, those bankers are not going to the Federal reserve and rediscount to get it unless there is some incentive given them through the interest rate to get it, and then only to a limited extent. So that rates with respect to this class of loan or that class of loan are going to vary from time to time, and you have got to expect collateral loans to carry very different rates than commercial paper and, perhaps, from time to time one will be higher and again lower.

The CHAIRMAN. During the particular time I have just referred to, there was being applied by the Federal reserve system a restrictive Policy against the release of credit for speculative purposes, was there

Mr. MITCHELL. Quite so. The CHAIRMAN. To get back to this suggestion that was pending here before the committee as to the possible extension of branch banking or legislation affecting this whole general development, as I understand your position you feel that in certain cities or centers perhaps branch banking should be extended to what might be termed "contiguous territory"? For instance, take New York City; you have mentioned outlying districts on Long Island.

Mr. MITCHELL. Yes.

The CHAIRMAN. Would you also include within your scope there Jersey City, for instance, and Newark, and other cities lying in close

proximity to New York City but in another State?

Mr. Mitchell. Well, frankly I do not know, Mr. Chairman. That is a very difficult problem. Purely from the economics of the situation, and from an operating banking problem, I should say yes—extend it to include the environs of New York regardless of what state they may be in. I realize, however, that there are other problems that enter into the situation that make it very difficult. It may be that I myself would find those objections, so strong as to outweight what I feel is a proper economic development and a perfectly feasible development from a bank operating standpoint.

The Chairman. It has been urged upon the committee that branch banking be permitted within trade areas, but we are all impressed with the uncertainty as to what a trade area is. The other day when Mr. Wiggin was before the committee, he defined a trade area to include the United States and perhaps the world, so far as the Chase Bank was concerned; he would not want to restrict the term "trade area" to any small unit, but he did not know what a trade

area was.

Mr. MITCHELL. I can not but believe that even if we could define it, it would be too broad a movement, too great a step to take at one time

The Chairman. Mr. Wiggin did recommend, however, as I recall his testimony, that branch banking be extended state-wide in those States where branch banking was permitted under the State lawhe felt that national banks should be given that right. Mr. Davison, who appeared before the committee here in opposition to branch chain, or group banking, distinguished, however, between the two forms of branch banking, that which is now permitted within city limits and all other branch banking.

Do you care to be any more definite than you have been as regards

these several plans that have been suggested?

Mr. MITCHELL. No; I do not know that I do, and yet city-wide branch banking and, let us say, suburban-wide branch banking, seem to me to be so nearly alike that we have got to set up some really false

h

C

aj

In

86

us

CO

W

th

lines to separate them.

Mr. Chairman, my view is that branch banking has distinct advantages to the public, but that its development should be fostered with such care that we may know as we go along that the public supports its extension. I urge that we move very slowly. To go out into the suburban territory of a great city seems to me to be a logical step perhaps at this time. Take that step and let us see what the public reaction will be in the course of the next year or two.

The Chairman. You have stated that you experienced no difficulty

in managing your several branches in and around New York.

Mr. MITCHELL. Quite so.

The Chairman. Would you say that if you were permitted to have branches state-wide, or Federal-reserve district-wide, or nation-wide, you would feel so sure about that? In other words, statements have

been made here that absentee management of a bank or branches and the long distances from a parent bank present problems which are in opposition to the theory of the development of branch banking.

Mr. MITCHELL. I doubt if you are going to have at any time strictly nation-wide branch banking with banks operated, let us say,

the country over, from New York or Chicago.

The CHAIRMAN. I will say to you that Mr. Giannini and Mr. Bacigalupi, representing the Transamerica Corporation, indicated to us that they were ready to establish banks generally throughout the United States, when the law is changed to permit nation-wide branch

banking.

Mr. MITCHELL. Yes, their view is that. My own personal view is that the sectional feeling and differences throughout the United States are so great that that would be unwise, even if it would be practical in operation. I could conceive of an extension of branch banking within given sections of the United States where it would not in any sense offend the public desires and where branches could be conducted with great safety and in the public interest, but it is hard for me to conceive of a New York bank operating a branch in Peoria, Ill., with great satisfaction, or in some city in Minnesota with great satisfaction except as the administration came from some center of that particular district that thoroughly understood the district, and where the directors and operating men were known and accepted in that district.

It seems to me that if the public sanctions an extension of branch banking, it is really going to come in regions and it may be that parent banks in various regions of the country will find some method by which they can contact one another and find a common interest. In other words, it may be that we are moving to a regional system, with branch banking within regions; I do not know, but I say let us not try to find the answer to the problem faster than experience

points the way.

The Chairman. The comptroller, when he was asked the question whether there was not the possibility of the control of these various groups by, for instance, New York, when they would eventually develop throughout the country, it having been suggested that perhaps we would have 30 of these great areas with branches of other banks serving those areas, and then when that was finally consummated New York would reach out by force of necessity and take over control of those groups and operate them.

Mr. Wiggin suggested, as I recall it, that if the mad rush continued and the territory was taken over by these groups, it might force, for instance, the Chase Bank to get into the rush and preempt certain

sections in order to hold the business.

Mr. MITCHELL. There is great danger of that.

The Chairman. Of course, we are facing a very practical situation.

Mr. MITCHELL. Yes.

The Chairman. Apparently, from the information that comes to us, there is a mad rush to take in all of the solvent country banks and control them, sometimes by responsible parties, and sometimes by what appear to be rather irresponsible parties. For instance, there is information coming to us from various sections of the United States that some groups are accumulating options on banks and others are

·e

going out and feeling their way looking towards concentration of

the development of this chain or group plan.

Have you any practical suggestions to offer to this committee as to how we are going to meet a situation of that kind? Should we just sit by and let this thing continue to develop naturally as it is and then, if trouble develops, meet the situation when it comes? You know, we have had experience in the past with the development of chains like the Manly chains in Georgia and Florida, where the banks were in weak hands and it spelled disaster.

The committee here are groping and trying to study this situation, and they would greatly appreciate suggestions from men like you who are at the head of our large institutions, because we want to deal intelligently with the situation, and at the same time we do not want to sit idly by and permit a situation to develop in this country that

will spell disaster.

Mr. Mitchell. As I tried to point out in the statement which I made at the outset, I do believe in some logical but not too drastic extension of the branch banking powers. I think that the development of group banking is inevitable, and if we feel that it is inevitable we should find some way at least to keep a check on it, to have a control of it, and that is why I suggest that in some manner or other these parent companies and groups come under the inspection at least—which to a certain degree means control—of the Comptroller of the Currency, and that they be considered national. I think that when these groups are formed under the laws of Delaware and have to do with the States of Texas and Oklahoma, it is a little far-fetched. It seems to me that there must be some national control introduced, and I think that that would avoid much of the difficulty that you fear.

The CHAIRMAN. Of course, we as a national legislative body can

only deal with national institutions.

Mr. MITCHELL. Yes.

The Chairman. In that particular sense, with national banks and with the State member banks of the Federal reserve system. We can deprive banks of membership in the Federal reserve system, we could deny them the use of the mails, we could deny them the privilege of the collection of checks, and forbid interstate transactions by them. Those are all very drastic things.

Mr. MITCHELL. Could it not perhaps be done through the Federal

reserve banks?

The Chairman. I introduced a bill mainly to bring about discussion, to the effect that before any of these banks were taken over by any of these groups the consent of the Comptroller of the Currency or of the Federal Reserve Board should be had. That suggestion, however, has met with opposition on all sides, but it does seem to me, as you suggest, that there ought to be some check on this or somebody to whom these proposals should be submitted, that there might be some safeguard put around them.

Mr. MITCHELL. I think there should.

The Chairman. For instance, I am told that there are two New York groups that are now attempting to organize the banks in Pennsylvania; one group in western Pennsylvania, and the other group in eastern Pennsylvania, picking out key institutions and proposing to control 25 to 50 banks in each of the two groups. That means much to the State of Pennsylvania for those old and the best institutions.

(4)

D

n

tions, conveniently located throughout the State, to be taken over by some group in New York that is unknown to that particular territory and to be controlled for some purpose—we do not know what.

But that same thing is apparently taking place in many other places. I was told recently that a group in New York and Chicago were considering taking over 200 banks in Texas. It seems to me that this is a development over which there should be some check.

Mr. MITCHELL, I think there should, Mr. Chairman, I agree

with you.

The Chairman. Mr. Stevenson, have you any questions?

Mr. Stevenson. I have not been attending these meetings; I have been providentially detained.

I would like to ask this, and I guess the answer would be that I

ought to know it as well as Mr. Mitchell.

When an institution organizes in Delaware and takes over banks in Pennsylvania, New Jersey, Texas, the Carolinas, and so on, is not that institution embarking in interstate commerce? Would it not come within that provision of the Constitution and, if so, the answer would be that we could control it, provided that it went out of its own State.

Mr. MITCHELL. I think that that is very largely a legal question, and I am not a lawyer, but as a layman I should doubt the ability to

control it through that channel.

Mr. Stevenson. This is the question: Is banking, which is so ramified that it is dealing in finances in the different States and as between each other, commerce? It seems to me that that would be the only way we could control the situation, except with respect to our own institutions, the national banks. But, with respect to State institutions, are they engaged in interstate commerce when their transactions go across State lines? It has not usually been so determined, but we know that the commerce clause of the Constitution has been very widely extended.

Mr. Beedy. If the transmission of a message on the telephone, a conversation over telephone wires, is commerce, why is not the ex-

change of credits and the transmission of securities?

Mr. Stevenson. That is the question: Why is that not commerce? This development with respect to branch banking and group banking has been illustrated in my own State, South Carolina. There is a national bank in the State that has acquired a small State bank, a \$200,000 bank, and it is placing branches of that bank all over the State under the State law. Of course, the national bank is not responsible legally for the liabilities of those small institutions. Now, which is preferable, for the national bank to have the authority to establish its own branches, branches where you can point to the head that is responsible for everything, or to have those groups for which the head is not responsible? In other words, as between group banking as it is developing there and national banks with the right to establish branches, which would you say was preferable as a banking proposition?

Mr. MITCHELL. I have always contended that if a banking institution desires to do business in some part of the country or the world, where it is permitted by law, that it is better to go in under its own name and its own flag and pledge its resources to the maintenance

and to the fulfillment of contracts made by its organization, than to

go in through a subsidiary or an affiliate.

This is a broad question. I have been often asked why in the various countries where we place our branches we do not separately incorporate in order to limit liability. My own personal view is that we might just as well go there ourselves and take full responsibility for our own acts, that that is really the proper way and what the public should expect us to do.

Mr. Stevenson. And the public knows then who is responsible.

Mr. MITCHELL. Absolutely.

Mr. Stevenson. I agree with that proposition very thoroughly. I am rather dissatisfied with the situation that is developing, on that

account.

Now, in the other instance, the oldest known bank in South Carolina has lately converted into a State bank and it is placing branches in its own name all over the State, and the two of those Charleston institutions are about covering the State and I think the latter method is preferable, but they could not follow it as a national bank and they had to convert into a State bank. Mr. Rhett's bank has thirty-odd branches in the State, and all this presents one of the questions that we are going to have to deal with here, whether we have any control over these groups organized under State charters, whether we can ever control them or not, unless we can under the interstate commerce clause, and I doubt if we can.

Mr. MITCHELL. Or through Federal reserve banks.

Mr. Stevenson. Well, they can stay out of the Federal reserve system. The fact is that this very institution that I spoke of that Mr. Rhett has organized and which is establishing these branches has to stay out of the Federal reserve system under the McFadden Act, because they have branches all over the State now, established since the passage of that act.

Mr. Luce (presiding). Is that all, Mr. Stevenson?

Mr. Stevenson. That is all.

Mr. Luce. Mr. Mitchell, you happily and tersely expressed one of your opinions here by saying that you did not believe any banking operation should fail to pay its own board. The idea embodied therein has an important bearing on our problem. Our attention here is chiefly called to the big men, particularly the big borrowers. Now, where there is one big man, there are a thousand little men, and especially when primaries and elections are approaching, a Member of Congress remembers the little man.

I have been a little man in business all my active life, and I would like to lay before you an experience and get your judgment.

If this widespread apprehension that the growth of group banking and of holding companies of every sort is a menace to the country is well founded, that situation ought to be met. A correspondent in the West who has had wide opportunity to observe public affairs recently wrote me a long letter in which he predicted that the one live issue in the next presidential campaign would be this question of the amalgamation of wealth, with danger and injury to the little man.

Many years ago, as a young man, while still in newspaper work, I shared in starting a magazine. The subscriptions were a dollar a year. After a few months the bank in which the dollar checks were

deposited asked me to withdraw the account. Ever since then that bank has nestled in the center of a very sore spot in my heart—in other words, that bank cultivated ill will by refusing to do business at a loss.

Not long afterward I shared in starting another business, which in the course of time found its main office located in New York, where it established banking connections. It does not borrow any money—we do not believe that is the way to prosper and be happy—but it does deposit. Some years ago we found that our bank balance had become substantial and we asked that bank to allow us interest thereon. After considerable hesitation, reluctance and demurring, the officers in the bank finally consented, and we are getting, I believe, 2 per cent interest on our balances. When that balance gets down below \$15,000, the bank begins to grumble, and if it approaches \$12,000 it intimates that it will cut off the interest.

I have watched in Boston and New York the steady development of big banking, and what has seemed to me the steady progress of a tendency to pay less regard to the little fellow. We are here getting from every direction expressions of fear that these amalgamations all through the business world are an injury to the 115,000,000 little people in this country, to the benefit of the 5,000,000 big people.

To give you another illustration from my personal experience. Last winter an ice storm damaged the telephone line to by summer home so greatly that it must be rebuilt. The manager informs me that he will stand half of the cost. His half will amount to several hundred dollars and what I shall pay for service in 10 years will just about offset his share of the cost of rebuilding the line. He is doing that because it is to his advantage to have me as a subscriber, that his system may be larger by one. It is a benefit to the whole system, even if it seems to lose money in this particular transaction.

We are appropriating here every year large sums for rural free delivery of the mail, conducted at a loss. That is true in many directions. Municipalities will lay water mains to reach remote points where the charges do not nearly represent the cost of the outlay; build school-houses where children are few; furnish fire and police protection in

outlying districts.

The word "national" is in the name of your institution; you have received a charter from the Federal Government, a very valuable possession upon which in your own case you would place a valuation of many millions of dollars, and you are furnished inspection by the National Government, and you are furnished the Federal Reserve Board with all of its advantages. Yours is thus recognized to be a quasi-public institution.

Under all these circumstances, I wonder if you want to qualify your statement that you do not believe in doing anything at a loss?

Mr. MITCHELL. Mr. Luce, will you let me take the time for my answer that will match that taken by your question, because I would like to give you a little of my own background of experience, to show you what a great bank is doing for the small capitalist; for if there is any one class which interests me, it is the little-fellow class.

Mr. Beedy. You would make a good Congressman. [Laughter.]
Mr. MITCHELL. I go back to the time when we started in operation
the National City Co., and before I had anything to do with the
National City Bank. We started out to develop the investment

banking business to a point where the small capitalist could have the advantage of some knowledge, at least, of investments, and an opportunity to make investments himself. Our work was materially aided by the Liberty Loan campaigns; we realized that if a man held a Government bond, he was safe from becoming an anarchist, because a man, and especially an American, sees through his pocketbook; and following the Liberty Loan campaigns we made it our great endeavor to put railroad bonds, public utility bonds, and then industrial bonds into the hands of this same small capitalist, tending to save him from socialistic bent.

I think that a great deal has been done in this country by the investment houses in educating the small capitalist. The National City Co. to-day does a business, in the distribution of securities, of something over two billions of dollars a year, but with respect to the issues going to the public, and I mean issues suitable for the public, our sales have run about \$3,000 to an individual. Therefore, in the National City Co., we have brought about contact with a public of smaller

for

people.

When I was a young man, to go back, Mr. Luce, I came to New York and my family was developing and it became my desire to open some savings accounts. There was a certain savings bank in Wall Street, where I attempted three different times to open a savings account, and lost the time allotted to me for lunch because the line extended out to the street and I never did get to a window. Subsequently I went to the savings banks and found queues of people who wanted to withdraw their money, and I saw how hard it was to get it out, and, being interested in thrift through my own experience, I said that if I were ever in position to do it I was going to find the way to make it easy for people to save and easy to get their money out of their savings accounts.

When I came to the National City Bank, one of the first papers that was laid upon my desk was a lease for a basement in the old. Manhattan Hotel at Forty-second Street and Madison Avenue, which you all remember. Our bank had taken over that hotel building and it was remodeling it into a bank and office building and this lease was about to be made of the basement to a gents' furnishing house of repute in New York. That lease I tore up for there I saw the opportunity for setting up the equivalent of a savings bank. To make a long story short, we did it, and that business was built up on a stopwatch basis—how long does it take a man to get his money in, and how long does it take to get his money out? No queues, no lines; it must

be perfection of service.

Then, as it developed, ways and means for taking care of that little fellow were studied. One question was what we were going to advise him to do with his money when it got to a sizeable amount, when he should be doing something more constructive with it. How could we take him into our commercial bank and give him a checking account, and by what machinery could we take care of him with loans

at the time he might want them?

We have consistently paid less than the mutual savings bank rates of interest in that department, that "compound interest department" which I so named at that time because "compound interest" had a lure for every youth and would induce savings—and we have gone on with that development to ever-increasing volume and success.

It is only about eight years since that department was established, and we have to obey the clearing house regulations—3 per cent interest as a maximum, although we are in competition all of the time with savings banks that pay from 4 to 4½ per cent—yet in New York City to-day we have 346,000 accounts running to a total of \$73,130,000. Where we have put this same system in some of our foreign branches and preached the benefits of thrift to people, we have gathered 163,000 additional accounts, amounting to a total of \$47,000,000. That department of our business to-day therefore carries 509,000 accounts and deposits of over \$120,000,000.

Mr. Beedy. Those are all compound interest accounts?

Mr. MITCHELL. Yes. We have also gone after the little fellow who is forced to make a small loan, largely on personal credit, and who has previously had little opportunity to do so except through the so-called loan sharks or the high rate industrial loan banks.

Two years ago last month, we set about to make such loans to needy people at what might be a fair interest rate, a rate that would pay its board, and we have given loans from that day at an effective rate 8 per cent lower than any known agency across this country has offered heretofore and we have made in this 2-year period 145,000 such loans, running in the aggregate well in excess of \$50,000,000. We have at the moment on our books approximately 77,000 loans

of that character, running to a total of \$26,000,000.

Now, Mr. Luce, we do not yield our position to any one in the way we have beneficially affected the smaller fellow. Our bank years ago was looked upon solely as a bank for the larger interests, a bank where no one who had anything short of a pretty good sized fortune might have any contact at all, but to-day our bank is a bank of the people, and it gives me great pleasure to feel that we are really serving this class of the community. Over 30 per cent of all that money loaned on those small loans has gone to pay doctors' bills and dentists' bills and hospital bills. Doesn't that give you a thrill? It gives me one.

Mr. Luce. It certainly does.

Mr. MITCHELL. When I realize how many people we are keeping off of the charities and who are made self-respecting, that gives me a At the same time this service pays its board—it is profitable, In our compound-interest department, which is the equivalent of Savings, any man can get 3 per cent interest, compounded monthly, and if he ever wants to make a withdrawal, he can step up to a Window and get a cashier's check. He does not have to have a checking account unless he has real need of a checking account. Now, if he wants a checking account, he can go to our commercial department and if he has a small account, with a lot of checks on it, we make a service charge. If it is a small account, that really should not be a checking account, but ought to be where it is getting this higher interest offered to savings, we do transfer it if the depositor insists and we make a service charge. We watch the individual, and if a person wants a checking account and has apparently little use for it, but it gives him some self-respect to have it, and if it promises to be a good thing for that man, we make no charge. We have no standard rules for it, but we try to analyze every small account in our bank to the

end that we can give to the small fellow all the advantages that the

larger capitalist has and always extend a helping hand.

Now, Mr. Luce, one more thing. No one can handle that business of compound interest or that business of personal loans—and I can point to several other phases of banking of which the same thing is true—unless they do it on a mass-production basis. A little unit bank can not do it. I do not know whether it can be done through the group system or not, but I know that handled as we are handling it, it is possible to give to the public something that they can not possibly get out of the existing unit system.

I hope I have not taken too much of your time.

Mr. Luce. No, sir. I think we are all very grateful to have this information, and, for one, I congratulate you. Also I think it is fair to contrast it with other information, coming to us, in addition to that resulting from our personal experience. Apparently all over the country there is an ever-spreading belief on the part of bankers that small checking accounts ought to be discouraged. There has grown up in this country in the last 30 or 40 years a very general and, what seems to me, a very useful system under which the householder, the woman who has charge of the shopping and the cooking, the boy at college, the small retailer, have been convenienced by the development of this system of checking accounts, but until you testified we had not had a glimmer of hope, for everything has been to the purport that small checking accounts are a nuisance, are costly, and ought to be discouraged, and that groups of banks have agreed, under the leadership of the larger banks, to put an end to it or to eliminate it as much as possible.

I have had a feeling that this is an unwise policy, and I have thought that it was poor business judgment on the part of the banks themselves. It has seemed to me they ought to remember that it is the little fellow who becomes the big fellow and that the public convenience and necessity call for some instances where that little fellow

shall not have to pay his whole board.

That is why I asked you if you wanted to reconsider your rather

broad statement.

Mr. MITCHELL. I think this, Mr. Luce, that the public must be served. I see no reason why banks should persist in methods of serving the public that mean loss to themselves. If they have an operation that is a loss to themselves, they should substitute something else where the customer will get what he wants and where the business can be done without loss to the banks. In our bank we constantly close small accounts, checking accounts which really there is no

necessity for.

We put service charges, yes, on accounts where the depositors issue great quantities of checks every month and where there is no way to compensate the bank for the incidental work. Ordinarily such a man is very glad indeed to pay a small sum to his bank to take care of his business for him in that way. We do not turn these people out, for in any case where we contact a capitalist, no matter how small, we have a very keen interest in serving him, but we see no reason for serving him at a loss to ourselves, because we can always find the way to meet that man's requirements without a loss to our

m fre

ba

th

it

a

thi me par ser the diff

S2, Que defi

it, d Con M M act

mak

M

selves, and if we do not find it, it is our own fault in which we will be the sufferer.

If I may go one step further—and I feel I should apologize for the time I am taking at this late hour-I conceive that the small public need fiduciary service perhaps more than any other stratum of the You and I know that the trust companies are not able to handle small trust business under the methods that have been employed, and make a dollar out of it. The result is that trust companies have not urged the appointment of corporate executors and trustees in cases where the estates are very small. Now, I have contended that we must find a way, if we are going to serve the Public, of giving to the small fellow all the advantage we can possibly give to the large personal trust or the large estate. We are trying to solve that problem through what we call the uniform trust. do not know that we are going to do it, but I think we are.

The trust business in this country is just where the insurance business was 25 years ago. We are building a very large building for the trust company in New York, and I am of the firm belief that Inside of the next 20 years the business of our trust departments in the lower part of New York is going to fill that entire building, and It is going to come through properly serving the moderately wealthy

and the rather poorer classes of the public.

Mr. Brand. May I ask one question there? Mr. Luce. Go ahead.

Mr. Brand. You have dealt very sympathetically with "the little and the gentleman from South Carolina and the gentleman from Mississippi and all the other members of the minority of this

committee come in contact with "the little man."

I want to ask you if you have the same feeling about the little bank relative to what benefit he is getting out of the Federal reserve System? In other words, do you not believe there ought to be something more done for the member banks, particularly the smaller member banks, than is being done now under existing law, either by Paying them something out of the net earnings of the Federal re-Serve banks or out of the franchise tax which they are now paying to the United States?

Mr. MITCHELL. It is hard for me to see why there should be a differentiation between a bank of \$25,000 or \$10,000 or \$250,000 or \$2,000,000 when you come to a question of that sort. The particular question that you asked me does not seem to be one that applies

definitely to any particular size of bank.

Mr. Brand. I will make it more concrete and specific. Federal reserve system was not established for the purpose of making Mr. MITCHELL. No.

Mr. Brand. Woodrow Wilson never had that sort of an idea about to did he, when he first brought his banking views to the attention of

Mr. MITCHELL, I do not know what he had in mind.

Mr. Brand. Did Congress have in mind, when the Federal reserve act was being considered that the system should become a money-

Mr. MITCHELL. I do not know what Congress had in mind.

Mr. Brand. What did you have in mind—that it should be a money-making institution?

Mr. MITCHELL. I say that there can be no Federal reserve bank that will properly function if it is fundamentally a money-making organization.

Mr. Brand. There has been over \$146,000,000 paid by the 12 Federal reserve banks since their formation in 1914 as a franchise tax to the United States. There is not a single member bank in the Federal reserve system—and it does not make any difference whether it is a \$25,000 bank or a \$25,000,000 bank—that gets anything on its reserve funds, and all of the member banks of the country in the Federal reserve system have lost their right to charge for collecting checks and that kind of service.

Mr. MITCHELL. Yes.

Mr. Brand. I want to ask you the direct question, in view of what you have said here to-day, if you do not think that out of the net earings of the 12 Federal reserve banks it would be a wise thing and a fair thing to pay to the member banks, large and small, something over and above the 6 per cent on the paid-in capital stock?

Mr. Mitchell. Let me put it this way. I think it would be a great mistake to impose any requirement as to the payment of dividends on the Federal reserve bank stock to the holders of that stock who are the member banks that would in any way cause a Federal reserve bank to feel under the necessity of making money. I can not believe that a central bank that feels the necessity upon it for money making is going to properly administer the problems that come to it. Money making must never be in the picture at all, but if money is made, and, of course, Federal reserve banks certainly should be able to make money with assets based upon other fellows money for which they pay nothing, then I am inclined to believe there should be a more generous distribution of such profits as do occur among the members as against the National Treasury.

Mr. Brand. That is an answer to the question, and a satisfactory

Mr. Bussy. I have just a couple questions.

In your statement you call attention to the fact that group banking is playing a most important part, is steering the banking system away from the unit bank. Would it be possible to have group banking if we did not have the holding company that takes over the stock of the several banks and brings the group together?

Mr. MITCHELL. If I get the proper meaning of your question, 1

should say that there had to be a common tie.

Mr. Bussy. And that common tie is through a holding company under the practice that has grown up during the last 18 months of 2 years, is it not?

Mr. MITCHELL. It is; yes.

Mr. Bushy. Without that common tie, or without the holding company and operating free and uncontrolled under the national legislation, it is impossible to bring together what is known at the present time as group banking?

Mr. MITCHELL. Yes.

Mr. Busby. And that usually consists of a number of very strong banks, and they often operate with branches and otherwise to form system—am I stating the situation?

Mr. MITCHELL. Yes; if I gather your question, it is, can you have group banking without a holding company and have it on a cooperative basis, something of that sort—is that your thought?

Mr. Busby. That is the central thought; yes. Mr. MITCHELL. Personally I do not think so.

Mr. Busby. I am asking that question to direct attention to this idea; Is it not at the present time largely a question of developing some means by legislation to deal with the holding companies if we are

going to deal with group banking?

Mr. MITCHELL. I think you have got to find some way to control or to contact these holding companies. If it can not be done effectively by the States it must be done by the Nation, and if it is to be done by the Nation, it must be done either through the Federal reserve banks or through the comptroller's office.

Mr. Busby. For legislation to reach the ends we are trying to reach here, is not the pivotal proposition one of dealing with holding companies, and in doing so are we not incidentally dealing with the

group banking situation to a large extent?

Mr. MITCHELL. I do not think I could quite answer that without

further study of just what is in your mind.

Mr. Busby. But you do feel that holding companies are out in the open, free from any control by the National Government, and that that is a vital question we are confronted with at this time?

Mr. MITCHELL. I do.

Mr. Busby. Do you believe it is necessary to have the deflation both of property values and of credit that has grown up or that has been extended?

Mr. Mitchell. We are having it; whether it is necessary to have

it, or not, we are having it.

Mr. Busby. We had a deflation of credits in 1921, did we not? Mr. MITCHELL. Yes.

Mr. Busby. Do you feel that that was helpful to the business

interests of the country?

Mr. MITCHELL. I think that in economics, banking, and everything else, the laws of compensation and balance, of action and reaction, all hold. When you get an inflation, it immediately spells the word "deflation" as the reaction and you have got to have it.

Mr. Busby. Recently we had more inflation of credit than we did

of values, if I understand the situation.

Mr. MITCHELL. Oh, yes; no doubt about that.

Mr. Busby. That inflation of credit was far beyond the industrial and commercial needs of the year 1928 or 1929, was it not?

Mr. MITCHELL. Yes.

Mr. Bushy. That being the case, did it not tend to cause people to use that credit to deal in stocks, and participate in the market with a view to securing a bigger price for the stocks they purchased than that which they gave for them, rather than with a view to securing dividends?

Mr. MITCHELL. I assume so. At the same time, it seems that you are getting me a long way from branch banking, group banking,

chain banking.

Mr. Busby. I thought you had dealt with this situation, and knowing where you come form, I am coming to this point in connection With your bank's operation: When call money rates were good,

your bank stood in opposition to the attitude of the Federal reserve

bank at that time, did it not?

Mr. MITCHELL. No. It did not matter and it does not matter what the rate is. The volume of call loans that we have on our books never depends upon the rate at all. The rate can be 3 per cent, or the rate can be 30 per cent, and I will guarantee that because of the rate there will not be any more call loans at the higher rate than there was at the lower. As a matter of fact, we are now operating under a 3 per cent call renewal rate, and we have, I think I am safe in saying, three times as much in the call money market to-day as we had a year ago to-day. Why? Because commerce is not taking our money. Our first obligation is always to our customer. The call-money market is not our customer, and we do not gain any lasting advantage by dealing with Mr. Call Money Market, but we do with Mr. Industry and Mr. Corporation and Mr. Farmer and Mr. Shipper.

Mr. Bussy. Getting to the thought that your bank and a number of New York banks opposed the policy of the Federal reserve bank in fixing rediscount rates, did not your attitude tend to continue the spirit of inflation rather than to put a check on it and in that way bring to an end the orgy of speculation that everybody knew was on

Mr. MITCHELL. I have been through two or three different kinds of panics; I do not know whether you have or not.

Mr. Busby. I have watched them pass.

Mr. MITCHELL. People who went through the panic, if you want to call it that, of last fall, thought that they had seen a panic, but the men that have seen a real panic are those that have seen money and credit panics. Now, the thing that was threatened last spring was # credit panic-do you realize that?-a panic because the legitimate borrower would find himself unable to borrow at any rate for his requirements.

Mr. Busby. I am not going to pursue this matter further, but it is

all interesting to me.

Mr. Goldsborough. Mr. Mitchell, I personally felt that the rediscount rates in the Federal reserve system ought to have been raised in the fall of 1927. It seemed to me that anybody could see as early as the fall of 1927 that this thing was coming. Of course, Mr. Young undertook to esplain why the rates were not raised earlier last year, but I do not really remember what his explanation was at this time, as to why it was not done.

Mr. Beepy. Failure to act with promptness, due to lack of courage.

Mr. Goldsborough. I did not understand him to say that. Mr. BEEDY. I do not know that he said that, but that was the

general testimony.

Mr. Goldsborough. I gather that the reason you felt it was proper to put that \$25,000,000 into the market when you did was in an effort to stimulate the courage of the people as a whole and make the liquidation more orderly than it would have been if everybody had simply gotten scared to death at the same time-is not that about what you

Mr. MITCHELL. No. That particular incident has been over emphasized.

Mr. Goldsborough. I am sure of that.

Mr. MITCHELL. As a matter of fact, we loaned to the call-money market at that time, as previously and quite generally during that whole season, not from any desire to put out our money on call, but in order to stabilize and steady the situation. At that particular time we were not borrowing and had not been borrowing from the Federal reserve bank. There suddenly developed in New York a situation where there was no call money on the board, and absolutely insistent borrowers had to borrow money to fulfill their contracts of that day or fail and take the consequences.

Mr. Goldsborough. And you mean that the consequences if they had failed would have been that somebody else would have failed and

then somebody else, with an accumulation of failures?

Mr. MITCHELL. The only other way they could have met their contracts would have been to throw their securities on the market. Now, we did then what we had done before, but it has not come into Public notice. We said:

We will not loan money at the going rate, but if there are honest borrowers—that is, borrowers who honestly must have it and are willing to pay an increasing rate—here is the money that we will put in to aid the situation over the day.

What money we put in that day caused us, I think, to borrow from the Federal reserve bank something like \$32,000,000, most of which was paid by the next day and all of which was paid by the second day.

To say that we used Federal reserve credit to maintain a great speculative market is incorret. All we were after was to stabilize credit as far as we could, and also to see to it that the legitimate borrower could get his money at some rate or another.

To say that that stimulated speculation is also incorrect. I do not believe that any agency of the United States Government would have wanted to take on the responsibility of having brought about a panic through insisting that the ordinary recourse to the Government agency, the Federal reserve bank, be refused at that particular time for a comparatively small amount of money.

A newspaper man happened to come in to see me in my office as

I was leaving that night and asked:

What about this? Are you not violating the Federal reserve dictum when You do this?

I said:

Why, see here; to my notion the Federal reserve bank was organized for the very purpose of seeing to it that the legitimate borrower could always get his money at some rate under proper circumstances, and if they do not accept that full responsibility, it remains with the banks, where it rested long before the Federal reserve system came in.

That is all that was said. It was not a formal statement, but it drifted into the papers, and there were headlines that we had loaned \$25,000,000 and great hullabaloo about it, and editorials and talk In Congress and whatnot.

Mr. Brand. Was that loan made to your own customers?

Mr. MITCHELL. No. We put it right on the board.

Mr. Brand. And let anybody have it who wanted to borrow the money?

Mr. MITCHELL. Anybody. Of course, that was on the loan board of the New York Stock Exchange.

er

Mr. Luce. I would like to insert right at this point the fact that Mr. Mitchell is not the only man who suffers from headlines.

Mr. Beedy. The papers must have headlines always.

Mr. MITCHELL. Yes; I have learned that.

Mr. Beedy. I move that we extend a vote of thanks to Mr. Mitchell for his very interesting and instructive talk.

Mr. Busby. Is that usual?

Mr. Beedy. And that we now adjourn. Whether it is usual or not. I move it.

Mr. Luce. The chairman has requested me to ask you to furnish the committee with a list of stockholders owning over 500 shares.

Mr. MITCHELL. All right. Of course, you realize that that will be very voluminous, as our stock is a \$20 par stock, so that 500 shares are the equivalent of 100 shares ordinarily.

Mr. Luce. I will ask Mr. Thompson to get in touch with the chair-

man and then communicate with you further on this matter.

The committee stands adjourned.

(Thereupon, at 2 o'clock, p. m., the committee adjourned.)

(In pursuance with an agreement reached by the committee that written statements be invited from persons unable to attend, and incorporated in these hearings, letters and statements have been received and are printed in full as follows:)

CHERAW, S. C., May 8, 1930.

Hon. L. T. McFadden, Chairman, Washington, D. C.

My Dear Mac: In reference to one of the gentlemen that I asked you to call in the bank hearings, I enclose letter and pamphlet from him which might be spread on the minutes of the hearings as a statement from Mr. Rhett who is one of the most prominent financiers in the South having been president of the United States Chamber of Commerce, and with a very wide experience in every kind of financial transaction.

Most sincerely yours,

W. F. STEVENSON.

Peoples State Bank of South Carolina, Charleston, S. C., April 29, 1930.

Hon. W. F. STEVENSON,

Fifth District of South Carolina, Cheraw, S. C.

MY DEAR STEVENSON: Yours of the 25th instance received.

I was on my back in a hospital in Baltimore for five months last summer and fall and I have not yet quite recovered from the very serious operation I then underwent. My physician has not been willing for me to attend the annual meeting of the Chamber of Commerce of the United States held in Washington this week, and I hardly feel equal to the task of appearing before a congressional committee at this time.

The bank which myself and my associates have been endeavoring to develop in South Carolina is based upon the principle of having a large capital, surplus and stockholders liability behind the deposits, not only of the main office but of every one of its branches, just as the Canadian banks have, but we have also provided for local self-government for these branches by the stockholders of the bank resid-

ing in their respective communities.

We have been endeavoring to work out this system so as to throw the proper safeguards around it but it is growing so rapidly and so much of our time has been taken up with purchasing existing banks many of them the most conservative national banks in the State and the opening of new branches, that we have not perfected the details of the safeguards to be thrown around their operations to such an extent as would enable me to give in detail the precise plan under which we propose to continue these operations.

I am inclosing you herewith, however, a set of by-laws which sets forth the

constitution under which we are working.

or auc

ad

in

offi

and

mr

80ry

boar and hold polic

of tr

Busul

the L

at la

tees

boarc

more

b

I do not know that there is anything that I can add to this that can be of any value at the present time. I can only say that the idea has taken such a hold upon the people of the State that the Peoples State Bank which started with a capital and surplus of \$600,000 and a deposit of \$3,500,000 and 10 branches on May 15, 1929, has grown in one year to a bank with a paid-up capital and surplus May 15, 1929, has grown in one year to a bank with a paid-up capital and surplus the started with a paid-up capital and surplus the of \$2,400,000, with a deposit of approximately \$30,000,000, and some 35 branches.

I would much prefer waiting until the next session of Congress, when I can give you a more detailed account of the safeguards provided for the operation of such a system as I have outlined. It seems to be in line with the spirit of the American

people and its Government.

My main objection to a branch bank system has been that it takes away the power of the local authorities to invest the funds of the community accumulated in deposits in the community itself and under the direction of its local government. We are endeavoring to cure what I consider to be that defect, but we realize that extraordinary safeguards must be provided to insure that investments shall be sound and sufficiently liquid.

The by-laws inclosed will reveal our plans to you as fully as I could state them before a committee at this time, and I hope that you will excuse me until I feel a little stronger and we have advanced a little further in the development of our

plans.

BY-LAWS OF THE PEOPLES STATE BANK OF SOUTH CAROLINA

[Main office, Charleston, S. C.]

It is proposed that the by-laws of the Peoples State Bank of South Carolina be amended at the annual meeting of stockholders, January 21, 1930, so that When amended they will read as follows:

ARTICLE I. STOCKHOLDERS

The annual meeting of the stockholders shall be held in the city of Columbia on the third Tuesday in January of each year, at the office of the corporation, unless a different place be designated by the board of directors and notice thereof

mailed to each stockholder at least three days in advance.

2. Special meetings of stockholders may be called at any time by the chairman of the board of directors, by the president, by a majority of the board of directors, or by a majority of the stockholders. A written notice, stating the purpose of such special meetings, and the time and place they are to be held, shall be mailed each stockholder at the stockholder's last recorded address at least 10 days in advance of the meetings.

3. There shall be issued to each stockholder a certificate or certificates of stock in the corporation for shares owned. The certificates shall be signed by two officers of the corporation, one of whom shall be the president or a vice president, and the other the cashier or secretary. The seal of the corporation shall be

impressed upon each certificate.

ARTICLE II. BOARD OF TRUSTEES

1. There shall be elected by the stockholders at each annual meeting an advi-

sory board, which shall be known as the board of trustees.

2. The duties of the board of trustees shall be to receive reports from the board of directors, the executive committee, and the officers of the corporation, and to make to the board of directors or the executive committee, or the stockholders, as it may see fit, such recommendation with reference to the general Policies or operations of the corporation as it may deem desirable. The board of trustees shall elect its chairman and secretary who shall perform the duties usually incident to such offices.

3. The board of trustees shall consist of 1 member from each district and not hore than 10 members at large. The district members shall be nominated by the boards of managers of the banks of their respective districts. The members the boards of managers of the banks of their respective districts. at large shall be nominated by the stockholders at the annual meeting. In the event of a new district being added between annual meetings, the board of trusteent of a new district being added between annual meetings, the district being added between annual meetings. ees shall have the right to elect a member upon nomination by the district

board of managers of such new districts.

4. Vacancies on the board of trustees occurring during the year shall be filled by the board of trustees; but in filling such vacancies district representation as hereinabove provided shall be observed.

5. Each member of the board of trustees in order to qualify must hold shares of the capital stock of the bank totaling a par value of \$1,000, of which shares totaling a par value of \$500 shall be and remain unpledged.

6. The board of trustees shall meet twice a year at the office of the corporation in the city of Columbia, on the second Tuesday in July and the third Tuesday in January, at 11 o'clock in the morning.

ARTICLE III. BOARD OF DIRECTORS

The board of directors of the corporation shall consist of not less than 11 nor e than 15 members. The stockholders at each annual meeting shall elect at more than 15 members. The stockholders at each annual meeting shall elect at least 11. In the event the stockholders shall elect less than 15 the duly elected directors may elect such additional members as may not make the total number exceed 15, and in the event of a vacancy occurring the board itself shall fill same. Members of the board of directors shall serve until the annual meeting succeeding their election and until their successors have been elected and shall qualify.

2. The board of directors shall hold regular meetings on the second Tuesday.

of each month at the office of the corporation in the city of Columbia at 11.30 o'clock in the morning, unless some other place is designated by the board itself

of which due notice shall be given.

3. Special meetings of the board may be called by the chairman, by the president, or by a majority of the board at any time, and to meet at any place, provided three days' notice thereof be first given to each member of the board.

The board of directors shall be responsible for conducting the business of the corporation as provided by law.
 The board of directors shall elect the officers of the corporation and fix

6. The board of directors shall consider nominations by the resident stock holders for their boards of managers, the nominations of the board of managers for the offices and employees of the main bank and several district banks and confirm same where it deems proper to do so, except that the chairman of the board of directors and the president of the corporation shall be the chairman of the board of managers and president of the main bank.

The board of directors shall fix limits within which the management of the main and each district bank shall be permitted to make loans and it shall appoint a finance committee or finance committees to consider and act upon loans proposed by the main and district banks in excess of the amounts thus fixed for each

8. The board of directors shall prescribe the districts within which the stock holders of the main and each district bank shall act as hereinafter prescribed. In general, the board of directors shall make such rules and regulations for the operation of the main and district banks not inconsistent with these by-laws

as it may see proper.

10. The board of directors are hereby vested with power to discharge or change in its discretion, any officer or employee of the corporation or of any of the main and district banks, provided such action be authorized by a two-thirds vote of those present at any regular or special meeting of the board of directors. And all officers and employees of the corporation and of the main and district banks accepting positions or employment shall be deemed to have done so under this provision which shall be a condition of their positions and employments. And when and if any such action be taken by the board of directors such officers and employees shall have no recourse against the corporation or any of the banks of

officers thereof by reason of any such action.

11. Each member of the board of directors must qualify by holding shares of the capital stock of the bank totaling in par value \$1,000, of which shares totaling

in par value \$500 shall be and remain unpledged.

12. The secretary of the corporation shall be the secretary of the board and shall

keep its minutes and send out it notices.

13. The board shall have power to declare such dividends out of the earnings of the corporation as in its discretion it may deem proper.

ARTICLE IV. EXECUTIVE COMMITTEE

 The board of directors shall elect an executive committee to consist of 5, 2 of whom shall be the chairman of the board of directors and the president of the corporation and the remaining 3 to be selected from the vice presidents resident in Charleston.

2. The main bank, each district bank, and each office shall make daily reports to the office of the executive committee on forms furnished by the executive

3. The executive commmittee shall see that examinations of the main bank, the district banks, and offices are made as frequently as practicable, by a competent examining force which shall make reports of these examinations in duplicate, one copy going to the office of the executive committee and one copy to the bank

examined.

4. The executive committee shall submit these reports to the board of directors at the executive committee shall submit these reports to the board of directors at the executive commendation as it together with such action as it may have taken, or such recommendation as it

may make with respect thereto.

The expenses of officers of the corporation, of the executive office, and of the board of directors incurred in operating the corporation, together with the salaries of the general officers and the employees of the executive office shall be apportioned by the executive committee amongst the main and district banks, taking into consideration the allotted capital and deposits of each.

Expenses not connected with operation, but incident to looking into the advisability of opening or closing of branches or purchasing banks and all expenses incident to the organization or to enlargement of the capital shall be charged by the executive committee directly to the undivided profit account of the corpora-

the ent 6. Meetings of the executive committee shall be held at its offices in Charleston each day at 10,30 o'clock in the morning. The secretary of the corporation shall be the secretary of the executive committee and also its fiscal agent, charged With keeping the accounts and vouchers of expenses incurred; with the payment of these expenses, and with the collection of the funds with which to pay them from the various banks, or from the main bank where the charge is to be made against the undivided profit account

The executive committee shall exercise the powers of the board of directors in the intervals between its meetings, subject to such limitations and restrictions

as the board may impose.

ARTICLE V. GENERAL OFFICERS

 The officers of the corporation shall be a chariman of the board of directors, a president, cashier, a secretary, and such vice chairmen of the board, vice presidents, and assistant cashiers or other officers as the board of directors may determine, all of whom shall be elected by the said board.

2. The chairman of the board shall be the general executive head of the corpora-

tion and is charged with such duties as are necessarily incident to such office
3. The president shall be charged with the duty of assisting the chairman and

also with the duty of taking up and reporting on expansion of the activities of the bank, opening branches or purchasing other banks for the corporation. In the absence of either the other shall discharge his duties.

4. The cashier shall be charged with such duties and responsibilities in connection with the corporation as may be designated in the by-laws and such as may from time to time be assigned him by the board of directors; and he also shall becharged with the duties and responsibilities of the cashier of the main bank which shall be assigned him by the board of managers of said main bank.

5. The secretary shall be charged with the duty of keeping the minutes of the meetings of the stockholders, board of directors, executive committee, and of sending out such notices as may be required by them. He shall also be the fiscal agent of the executive committee.

ARTICLE VI. BRANCHES

1. There shall be established branches of the corporation to be known as "district banks" located wherever deemed advisable by the board of directors. There shall also be "offices" for the taking in and paying out of deposits, located in like means and paying out of deposits, located in like manner, and each attached to some district bank. Branches or offices may be discontinued or converted one into the other by the board of directors at its pleasure

2. The board of directors shall each year allot, to each bank a certain portion of the capital and surplus of the corporation, in accordance with the law and also taking into consideration the average deposits of each bank. The board of also taking into consideration the average deposits of each bank. directors shall have the power at any time to make changes in such allotments (not contrary to law) as the circumstances and interests of the corporation may

require.

The foregoing provisions as to allotments, however, shall not in any manner limit or affect the obligation of the entire capital and surplus of the corporation to the depositors and creditors of the several banks and offices comprising the system of the Peoples State Bank of South Carolina.

The working capital thus allotted, together with the deposits, shall be used in the manner and to the extent such funds are customarily used in a well managed bank and as nearly as practicable, under this system as though the banks were separate banking institutions, subject, however, to the provisions of these by-laws and such rules and regulations as may be prescribed by the board of directors or the executive committee and to the law in such cases made and provided

3. The board of directors shall prescribe the district in which a branch is to operate. Each district shall conform generally to the city or town in which it is located and such surrounding territory as the board of directors may see fit to designate.

ARTICLE VII. MANAGEMENT OF MAIN AND DISTRICT BANKS

Prior to each annual meeting of the stockholders of the corporation such stockholders of record as are resident in the district in which the main bank of any of the district banks are located shall meet upon reasonable notice given by the president of the corporation in the district where the main bank is located and by the executive vice presidents in charge of the districts in which are located the district banks and shall nominate by stock vote a board of managers for the ensuing year for their respective district banks. A majority in amount of the stock resident in the district shall be necessary to constitute a quorum, but any stockholder may be represented in such meeting by a written proxy. These nominations shall be sent to the board of directors of the corporation, who shall thereupon select from said nominations all or so many of the persons so nominated as it shall see fit. Those selected shall constitute the board of managers for the

con

mer

3

main bank and the district banks, respectively, of the current year.

2. Members of the board of managers of each bank must qualify in like manner

as members of the board of directors of the corporation.

 The board of managers of each bank shall nominate to the board of directors of the corporation and executive vice president, a district cashier, and such other officers and employees as they may respectively deem advisable for the bank in their respective districts, together with salaries recommended for each. All such nominations and salaries must be approved by the board of directors of the corporation, subject to the provisions of Article III, section 10.

4. The qualification of each executive vice president shall be the same as is required of the members of the board of directors.

5. No member of the board of managers shall be allowed to borrow over \$500 unless the loan is secured by actively marketable securities, or unless it is approved by the executive committee of the corporation.

ARTICLE VIII. MANAGERS' CONFERENCES

There shall be held at least once each year upon call of the executive committee (and at such other times as the managers conference or the executive committee shall determine) what shall be known as the managers' conference. At this conference there shall be invited to be present one representative from the main bank, and one from each district bank who shall be delegated by the board of managers of such bank, respectively, together with at least one or more members of the executive committee. The duty of this conference shall be the formulation of rules and regulations to be recommended to the board of directors for the internal management of the system. This conference shall also make any other suggestions with respect to operations that it may deem advisable. All such proposed rules and regulations and such suggestions shall be reported to the board of directors at its next regular meeting for such action thereon as that board may deem advisable. Such of said rules and regulations as may be all proved, and adopted by the board of directors, shall be those under which the banks and offices shall be operated (unless otherwise provided in these by-laws) until further order of the board of directors.

ARTICLE IX. ADVISORY BOARD

1. All stockholders of the corporation, who are of age, not suffering from any disability making it impossible for them to render service, and expressing willingness to serve, residing in the district where the main bank or any of the district banks are located and holding at least five shares of the capital stock of the corporation shall constitute what shall be known as an advisory board for the main bank or district bank for that district, with the executive vice president in charge of such bank as its chairman. This advisory board shall meet at the call of the executive vice president of such bank at least twice during the year and shall take such steps, not contrary to law and the rules and regulations of this corporation, as it may think advisable, for the upbuilding of the business of the bank. The advisory board shall receive such compensation for this

service as is hereinafter prescribed.

2. In order to stimulate local business and interest in the banks in the various districts there shall be paid to the said advisory board of the bank in each district, as compensation for their services (to be distributed amongst themselves as they may by majority vote determine), such portion of the profits as may be earned by the bank, in such district, under the rules herein prescribed, not exceeding, however, in any one year, 2½ per cent on the average par value holdings of the bona fide stockholders of record resident in such district for the current year; said average to be determined by multiplying such face holdings of each resident stockholder by the number of days during the year in which the stock has been

held and then dividing the product by 365.

3. The rule determining what part, if any, of the net earnings is available as compensation for said advisory board shall be as follows: Deduct from the gross earnings the operating expenses, including the proportionate part of the expenses of the executive office; then deduct for estimated losses a reserve fund of three-fourths of 1 per cent of the average "receivables" of the bank for the year; then deduct 8 per cent on the allotted capital and surplus, and one-third of the remainder, not to exceed the 2½ per cent limitation above described, shall be paid to the advisory board. The board of directors shall determine the rules for the appraisal of the bonds and investment securities held by the banks to be utilized in calculating their net earnings. All profit or loss on actual sales of bonds or investment securities during the current year shall go into the operations of the year. All losses incurred on "receivables" shall be first charged against the assumed "reserve fund" above referred to, until that is exhausted, and then against the profits for the current year.

ARTICLE X. LOANS

1. All loans out of the funds or resources of the main bank and of each district bank shall be initiated by the managements of the said main bank or of each district bank, respectively, and may be made outright by said managements, within such limitations as shall be prescribed by the board of directors of the corporation. All loans in excess of amounts so fixed by the board of directors must be sent for authorization to the finance committee designated by the board of directors.

Zones may be established by the board of directors with finance committees for each zone, but no finance committee shall consist of less than five nor more than seven and all finance committees shall be appointed by the board of directors and be charged with the duty of passing upon all loans transmitted to them

under rules established by said board.

2. All applications for loans in excess of the limitation fixed for local managements shall be made over the signatures of the applicants and shall state the amount desired, the time the loan is to run, and shall describe the security offered. They shall also be accompanied in each instance by a recent statement, signed by the applicant, or in case of a corporation by its duly authorized officer, showing the assets and liabilities of the applicant. It shall also be accompanied by a certificate of approval of the local board of the bank where the application or the loan originates.

3. All such applications shall be in duplicate. One copy shall be sent to the executive office; and simultaneously the other shall be sent to the finance committee; and the executive committee shall have the power of requiring the application sent to it for confirmation in the event it shall determine such course to

be advisable.

e

r

r nu

e

it

98

n

rs

eť

h

at

he

ny o

he of

ARTICLE XI. INVESTMENTS

1. All investments outside of loans shall be initiated by the managements of

the local bank.

2. If the proposed investment is real estate it must first receive the approval of the board of directors of the corporation. If a proposed investment shall consist of investment securities it shall be submitted to the department of investments and securities of the corporation and handled by that department. The

department of investments and securities shall be established in accordance with such rules and regulations as the board of directors shall prescribe.

ARTICLE XII. TRUST DEPARTMENT

There shall be established a department of the corporation which shall be known as the trust department which shall be in each bank of the system of the corporation, under the supervision of a vice president of the corporation who shall also be known as the trust officer. The duties and responsibilities of the trust officer shall be those prescribed by law and such rules and requirements as shall be prescribed by the board of directors of the corporation not inconsistent with law and the by-laws of the corporation.

All assets held by the corporation in a fiduciary capacity shall be under the supervision and control of the trust department and shall be segregated from the general assets of the corporation. A separate set of books and records shall be kept of all of such assets which shall show in proper detail all transactions engaged in by the corporation in its capacity as trustee.

All sums of money deposited or held in trust by the corporation awaiting investment or other disposition, shall be carried in a separate account upon the aforesaid records and shall not be used by the corporation in the conduct of its business, unless the corporation shall first set aside in the trust department as security therefor United States bonds, Federal land bank bonds, municipal bonds, or notes or other safe investment bonds having an active market. The owners of all such funds held in trust for investment or other disposition are hereby given and shall have a lien on such securities so set apart for the protection of such funds, which lien shall be an additional security to that which the beneficiaries may have under their claim against the corporation.

The trust officer and/or the assistant trust officer shall have the custody of all securities held by this department, but in no case shall the trust officer or the assistant trust officer enter the trust compartment, where such securities are held, without being accompanied by one or more of the officers of the bank in which the trust compartments are located, who shall be designated by name for that purpose by the board of managers of said bank. No investment of funds of any trust estate shall be made by the trust officer, except by the authority of the executive committee, over their signatures, and with the approval of the board of directors.

ARTICLE XIII. TRANSFERS AND CONVEYANCES OF REAL ESTATE

All transfers and conveyances of real estate shall be made by the corporation under its seal, in accordance with the orders of the board of directors, and shall be signed by the president, or a vice president, and the cashier or secretary. Mortgages of real estate, however, may be assigned or satisfied by the joint signed. natures of the executive vice president and the district cashier of the bank to which any such mortgage shall have been given as security.

ARTICLE XIV. AMENDMENTS

These by-laws may be altered or amended-

First. By a majority vote of the stockholders at any regular or special meeting where notice of the proposed alteration or change is mailed to each stockholder at the last address known to the corporation not less than 10 days in advance of the meeting.

Second. By the board of directors, as prescribed by the laws of the State; provided, however, that 10 days' notice of any proposed change shall be mailed each director and that at least two-thirds of the entire board shall concur in the amendment.

ARTICLE XV. SEAL

The seal of the corporation shall be the impression upon wax or paper of the words "Peoples State Bank of South Carolina," in a circle, with the word "seal" in the center.

Hon. L. T. McFadden, Chairman Committee on Banking and Currency, House of Representatives, Washington, D. C.

DEAR MR. McFadden: I am inclosing statement for incorporation in the series of hearings which you have been so ably conducting, in accordance with the suggestion in your letter of June 14. I have rewritten the first part of the address that I delivered at Poland Spring, Me., and have shortened the whole thing so that it now makes only 11 pages instead of 16.

Yours very truly,

O

EDMUND PLATT.

BRANCH BANKING BY CONSOLIDATIONS OF COUNTRY BANKS

(Statement by Edmund Platt, Vice Governor Federal Reserve Board)

For a number of years I have been collecting information with relation to branch banking—its history, particularly in our own country; its safety by comparison with so-called unit banking; and its success in the rendering of service to the people. I found at once that there was very strong opposition to branch banking among bankers, though business men who had transacted business with branch banks only occasionally had any complaints to make. Some of the oppohents of branch banking went so far as to declare it un-American, unpatriotic, and a breeder of every kind of monopoly—but a little delving into the early history in our own country brought out the fact that branch banking was formerly generally recognized as the most natural way of extending banking accommodation to small communities, and to newly established and growing communities. I found, in fact, that some of the early State charters, in the days when banks were chartered by special legislative acts, required the banks to establish branches. I found also that branch banking was abandoned first in the East, in the financial districts, and continued in many sections of the West and South until the establishment of the national banking system after the Civil War. In fact I found that a few State banks continued their branches long after the Civil War, some of them being still in existence.

The so-called unit banking system originated in the State of New York with the passage of the "free banking act" of 1838, and this act with its amendments was in large measure copied into the Federal Statute books and became the national banking act of 1863-64. Without doing very much violence to a much abused expression it might be said that unit banking, involving correspondence banking, is of Wall Street origin, and it certainly has served the financial centers well, and has resulted in the concentration of stupendous sums of money in the

great banks of these centers, particularly in New York.

An interesting study of Money Rates and Money Markets in the United States has recently been published by Winfield W. Riefler (Harper Bros.). On page 107 I find the statement: "The industrial and banking structure is such, therefore, as to divert from smaller banking communities to larger ones a certain portion of the loanable funds, and these are returned only through indirect processes such as out-of-town deposits and interbank loans at high money rates." Interest rates are lowest where the loaning funds are concentrated and banking Profits are also greatest in the financial centers chiefly because of the greater volume Mr. Riefler in the sentence quoted above is referring particularly to the diversion of loanable funds through correspondence banking—every small bank finding it necessary to carry balances in large banks in the large cities. But that isn't by any means all of the diversion of loanable funds from the small to the great cities. In almost every small city and in many of the rather large cities in the large cities in the large cities in the large cities. there are large industries and people of wealth who find the local banking facilities too small for their purposes, and therefore carry accounts in New York or Chicago. It would be easy in many of these smaller communities to create larger banks capable of taking care of much of this business if mergers of country banks were permitted. A curious feature of the present Federal law is that you can merge two or more banks within the limits of the same county—but if you do you must close all the banking offices but one. It seems odd that our devotior to "unit" banking should be carried quite that far. A bank might still be called a "unit," one would think-and would in fact be a unit bank essentially-even though it extended its services to the people of the county or a group of near-by counties through several localities.

Although unit banking was the product of the East, and has been sedulously fostered by the big banks seeking correspondence accounts in the big cities, the Craze for "units" was carried much further in the West than in the East. the 1880's certain Middle Western States decided that every little hamlet should have a banklet of its own, and began to charter banks with a capital as small as \$10,000 and even \$5,000. Some of them were located in growing lowns and grew into larger and successful institutions, but a great many of them

went down in the panic of 1893—after which we find two comptrollers in succession recommending branch banking, Mr. Eckles, and Mr. Charles G. Dawes. The latter recommended specifically that branches be authorized in places of 2,000 inhabitants or less. If this recommendation had been heeded it would have strengthened country banking very materially. Instead of heeding it Congress decided to compete with the States by chartering smaller national banks, and in 1900 lowered the limit of capital from \$50,000 to \$25,000—thus making things worse instead of better.

It does not seem to be clearly understood that the unit banking system, carried to such an extreme as we have carried it in this country, forces banking business into the big cities and particularly into New York that could and should be done elsewhere, and also fosters speculation by forcing money into Wall Street to be loaned to brokers that might frequently be loaned, if not at home, at least to industries in the same State or in the same general neighborhood. Some economists have recognized this fact, but I think it was never forcefully presented until Comptroller Pole's recent report and addresses, in which he brought out the fact that to permit branch banking within "trade areas" would "decentralize credit" by creating banking institutions large enough to handle much of the larger business at home. Ample proof of these statements is at hand. First, there is the testimony of the witnesses who have appeared before this committee. Every one of the men representing the group banking corporations stated that they were able through their larger organizations to keep business at home that had previously gone to New York or Chicago, and some of them cited specific instances. I can add some convincing testimony from a Southern State.

Early in 1926 there was formed in South Carolina a combination of three banks under the auspices of the Bank of Charleston, which after the necessary consolidations became the South Carolina National Bank. Interests connected with the Bank of Charleston, of which Mr. R. S. Small was the president, acquired control of the Norwood National Bank of Greenville in the Piedmont section and the Carolina National Bank in Columbia, in the center of the State. These three banks became State banks for a brief period and were consolidated under State laws, the Greenville bank and the Columbia bank becoming branches of the bank in Charleston. They were then converted into a national bank with branches under the provisions of the act of 1865 (a wise provision of law unhappily repealed by the McFadden Act in 1927). In a circular letter issued to the shareholders of the Bank of Charleston, N. B. A., in January, 1926, Mr. Small stated that it was planned to consolidate these three banks into one corporation in order, first, to be able to compete with the larger institutions in the North and East for the best class of business in the State, and, secondly, he said:

"The demand for money in one locality, such as this, is seasonal, which means

"The demand for money in one locality, such as this, is seasonal, which means that we have a big demand at one season and a small demand at another, resulting in our having to borrow at one season and to lend on call in New York at another, both of which processes are expensive. Through operating in Greenville we diversify our loans by having a number of them dependent upon an entirely different set of conditions, which insures a diversity, not otherwise obtainable, and in addition, the seasonal demand in Greenville for funds is exactly the opposite from Charleston, with a result that it will avoid, to a large extent, the necessity of borrowing at one season and lending on call in New York at another, thus giving us greater diversity and a more uniform demand."

Here is a distinct recognition of the fact that money was loaned on call in New York either from Greenville or from Charleston which could have been loaned in the State if the institutions in both sections of the State could work together. Greenville is a manufacturing town and the peak of demands in that section would naturally come at a different time from the peak of demands at Charleston I understand that the expectations outlined in this circular on the seacoast. letter in 1926 have since been realized and that the institution is successful. That similar conditions obtain in many other States and sections and particularly in the Middle West can not be doubted. Almost all the witnesses, including some who came to oppose branch banking, admitted under questioning that there were some places where branches would serve better than small separate corporations Mr. A. J. Viegel, banking superintendent of the State of Minnesota, in a recent statement, mentioned 154 places in that State which previously had supported banks where there are now no banking accommodations whatever, principally About one-half of them he said should have some kind of because of failures. banking service, but he said he could see no way of safely serving them except through branches.

The system of group banking resulting from an exchange of bank stock for holding company stock is new and is certainly different from what has been known for many years as "chain banking" where one man or a group of men have purchased for cash the control of a number of banks. As conducted in the Minchased for cash the control of a number of banks. heapolis-St. Paul district, in the Detroit district and by the Marine Midland group of Buffalo, the groups bear a very strong resemblance to branch banking. The men representing them all declared that no single bank in the system could or would be allowed to fail. They declared also that whenever any individual or industry in any community had need for loans larger than the loaning limit of the local group bank of the community such loans were taken care of within the group. I agree with Comptroller Pole that this development of group banking should not be checked by law unless something better can be substituted for it. We pass too many restrictive laws. What we want now is something constructive,

This kind of group banking not only resembles branch banking, but probably would have been called branch banking in the days of the old State banks before the Civil War. One of the model branch banking organizations of that period was the Bank of Indiana, of which Hugh McCulloch who became the first Comptroller of the Currency was the president. If you look into the history and structure of the old Bank of Indiana you will find that its branches were pretty nearly independent. There was a central board of directors, with certain super-Visory and directory powers, while the branches were independently organized banks with separate stock. The Bank of Ohio was also a group of pretty nearly independent banks bound together under a modification of the New York safety fund principle. In those days, the emphasis was on giving security to note issues, but the principles are the same when applied to security for deposits. Deposit banking was something which grew up in the cities and was not much understood for a long time outside of the cities. The notion that depositors did not need any special protection persisted for many years after the national banking act

The resemblance of the group banks of to-day to the branch banks of the days before the Civil War suggests that with proper legal recognition and direction they might be developed into branch banking institutions somewhat of the old type—the branches retaining a considerable amount of independence, but being lointly responsible for the debts of every branch in the group as was the case in the old Bank of Indiana, and each group supervised and in a measure controlled by a central board of directors, under governmental supervision. Possibly such a system of branch banking—a sort of compromise between group and branch banking-would meet the chief objection of many of the ardent opponents of branch banking. I mention this merely as a possibility, and without much confidence that such systems would take care of the very small towns where most of

the banking failures occur.

It should serve to bring to mind that branch banking need not necessarily be of one pattern. Branch banking can be organized so as to give the branches a certain amount of independence, and can be organized without any "parent bank"—simply a group of banks in different places operating under one corporation. The head office, where the directors meet and where the corporation books are kept, need not be a bank. I am not quite sure that there must be a "head office." At any rate, one of the institutions in the South operating two banking offices—banks recently consolidated—maintained in recent letters to the Federal Reserve Board that there was no "parent bank" involved, and no "head office." Therefore, they thought they should be allowed to remain in the Federal reserve system. I thought so myself, but our counsel could not be convinced.

"Whether you like it or not," said Mr. Decker, of Minneapolis, in his recent statement to the committee, "size is fundamental in many lines of business. It certainly is in the banking business." Now, keeping always in mind the main Purpose of making our country banks large enough to take care of a larger share of the local business, the best of which now goes to New York, and large enough and with diversification enough to be able to stand up in adverse times, what limits should be set, with relation to capital and to extent or number of branches? Mr. Henry Dawes, former comptroller, represented the extreme position of apposition to branches, but admits the necessity of larger banks. He cites the fact that 88 per cent of the failures of the last nine years have been banks with a capital less than \$100,000, and recommends that no banks be chartered in the future with a capital less than \$100,000.

He would not permit smaller country banks to consolidate so as to obtain the requisite capital, if consolidation involved the maintenance of banking offices in different places. His idea seemed to be that unless a town or community is large enough to maintain an independent bank with a capital of \$100,000 it should depend on the nearest large town—i. e., it should be deprived of convenient banking service. Mr. Dawes took the ground apparently that we must either have nation-wide branch banking or none at all outside of cities. "It seems to me," he said, "there is no room for compromise on this subject and that a determination should be reached as to whether the United States wishes to embrace a national system of branch banking or to preserve its coordinated independent parts."

I disagree wholly with this dogmatic position. There was more branch banking in the United States 100 years ago, in proportion to population and banking resources, than there is to-day, and there always has been some branch banking in the United States. In fact there always has been some branch banking in the national banking system, and it can be shown that not quite all of it came in through conversion of State banks. There is no clear evidence that the Congresses of Civil War days in enacting the national banking act had any intention of prohibiting branch banking, and the comptroller's office did not finally pass upon the question until 1902. In 1911 Attorney General Wickersham delivered an opinion adverse to branches in the case of the Lowry National Bank of Atlanta, an opinion later much modified by Attorney General Daugherty, who October 3, 1923, found in favor of additional offices within city limits. The matter was never definitely decided by the Supreme Court, the St. Louis case in 1924 having turned on enforcement of a State law. Now and then national banks opened outside offices and sometimes they withstood the comptroller's criticisms for a considerable period.

The Citizens National Bank of Newport, N. H., was given a certificate by the Comptroller on March 27 last for the operation of a branch at Warner, in an adjoining county, on the ground that the branch had been operated for the past 25 years. They are today (April 8 figures) 273 banks in the United States maintaining 570 branches outside so-called city limits without counting California. Twelve of them are national banks maintaining 28 branches. North Carolina heads the list with 34 banks maintaining 66 outside branches. California has two less banks (32) with outside branches, but the number of branches is much greater, 547, of which 313 are branches of national banks, Of the banks maintaining outside branches 52 are in New England, 22 of them in Maine, the Maine banks maintaining 57 branches. The Maine law, permitting branches in the county of the parent bank and any adjoining county seems to me excellent, and the limit it provides would be sufficient, I think in any Eastern State. In Western States where there is much less diversification of industries the limit should doubtless be much wider, perhaps in some districts comprising more than one state.

Branch banking can be limited in any way desired—by territory to be covered, by number of branches to be allowed each bank, or by the size of the places in which branches may be organized. As four-fifths of all bank failures have occurred in places of less than 2,500 inhabitants the law might provide that no more unit banks should be incorporated in places of less size, branches to be authorized instead. There is no reason why we should decide now with relation to what kind of banking may seem desirable to the people 50 or 100 years from now, and no reason why we should not apply a desirable and well proven remedy within limits now because of fear that some future generation may decide to enlarge the limits.

Banks have a common-law right to establish branches. This was generally recognized in the early days of our Nation's history. In many States they have lost this right through restrictive legislation, some of it not originally intended to prohibit branches. The obvious thing to do is to repeal some of the restrictions and allow some freedom of natural development. I do not believe that there would be any rapid or dangerous development if the establishment of branches were permitted within trade areas as the comptroller suggests. I do not believe that any comptroller would permit a dangerous or a very rapid development, and the history of branch banking where long authorized by State laws seems to indicate (with the single exception of California) that development would proceed slowly anyway. Branch banking is really a country-bank proposition. New York and Chicago bankers are generally opposed to it (witness the testimony of Mr. George W. Davison of the Central-Hanover), having learned many years ago that correspondent banking serves them best. As long as the banking units out in the States can be kept comparatively small the biggest and best business must come to the big cities, and the country banks themselves through their correspondent accounts must furnish a large part of the funds with which this

business is taken care of. The present system suits Wall Street bankers exactly. They do business throughout the United States without the expense of main-

taining branches.

I suggest as the first amendments necessary to remedy the present disgraceful situation with relation to bank failures that National banks be given the same privileges with relation to branches that State banks have, and second that in all States national banks should be permitted to establish branches through consolidations in trade areas, which might well start with the limits of the present Maine law, with discretion to the comptroller for extension where necessary in Order to secure the diversification essential to safety.

> THE NEW AMERICAN BANK OF OSHKOSH, Oshkosh, Wis., July 3, 1930.

S e

dy

g ŝ r Chairman, Washington, D. C.

Honorable Sir: I am inclosing my brief of unit versus branch, chain, group banking. I thank you for the opportunity you so kindly gave me to state in my poor way, what truths there are on the side of unit banking, and I hope you will bear with me and in patience read my earnest defense of the best banking system ever devised under the sun.

Respectfully,

T. R. FRENTZ, Cashier.

INDEPENDENT OR BRANCH BANKS

I am only a humble country banker from the little city of Oshkosh, of 40,000 inhabitants, in the great State of Wisconsin, and I appear before your great body of men with trepidation, and fully conscious of my lack of oratorical abilities, and only the spirit of placing the much abused unit banks in a more favorable light amongst you fair-minded men, urges me onward to do my little all to fairly

and squarely lay their case before you.

I had not the slightest intention of boring you gentlemen with my urban Point of view, but as I carefully read the testimony and arguments made by man after man and learned that the great national-banking system had broken down and that State banks were far inferior to national banks, I wondered how far down in the scale of financial houses the baser State banks really were and the spirit moved me to arise and in my lowly way try to unpaint the somber hues that have been daubed upon the canvas. I was amazed to learn that branch banks never failed in Canada, and the losses under branch banking were pracpanks never failed in Canada, and the Josses under branch banking were practically nil! And when the statement was made that the Canadian branch-banking system was far superior to our independent banks, I wondered by what authority such an assertion was backed up by. And then I read once more the article published in the Toronto Star in 1912, Monster Banking Monoply a Leech at Canada's Throat, Killing Local Industry, Depopulating Rural Districts, Centralization of Almost Entire Financial Power of Dominion in the Hands of a Few Capitalists, Has Resulted From Our Much-Vaunted Banking System—Almost Total Extermination of Local Banks.

Under these startling headlines the article continues—"while large capital insures slow, steady transmission of deposits to 'branches' for control, and use of head offices in smart, alien centers, local credit based on local savings is transtransferred to parasites on whom rests neither responsibility, object, nor desire to exercise banking functions in support of local enterprises. With such credit basis lost, not only does the collapse or absorption of local bank institutions become inevitable, but local aspirations and confidence which had sustained local industry, are wiped out or made dependent on the will and nod of competitive enterprises. So secretely, so gradually, does this sequestration of savings proceed, so insidiously are local enterprises undermined, that planting of a 'branch' to suck out local earnings, to extirpation of even the last local industry or instisuck out local earnings, to extirpation of even the last local industry of institution is embraced by 'slow-going' people with the same artless innocence as a
3-year child fondles a viper. To this accursed system of concentration of credit
and destruction of local industry, the Dominion of Canada stands indebted for
a contracted population of 7,000,000 in place of 25,000,000 rightfully due it
under decentralized systems of banks designed to sustain, to breathe the breath
of economic life through the remotest, as well as the most insulated of its parts."

And yet we are told that branch banking in Canada is far superior to our
unit banks! It is to laugh!

We are further informed that branch banks will not drive out the independent banks, yet not one statistic is quoted from any country under the sun to support this assertion. Let us take England for example. In that country there are five banks with nearly eight thousand branches, and they have put out of business practically every unit bank in the Kindgom.

In Germany and France 10 banks dominate the whole banking power of those

two countries.

In Canada there are less than 15 "parent banks" with over 4,000 branches

that rule the finances of the Dominion.

As we read further we are startled to learn that branch-banking is much safer than unit banking. Again one is lead to marvel why no stastistics are quoted to support this rather daring assertion. There are many statistics extant that might have been incorporated, but, I fearme, not to support this bare statement. Inasmuch as these tables will throw the spot-light on "greater safety" let me quote you a few.

A. J. Frame has compiled some extremely interesting tables on this subject.

Listen carefully.

"Statistics clearly show that failures and losses to depositors in Canada, compared with our national-banking system, exceed ours several times over, and her banking power is less than little Massachusetts alone.

"In 1866, when Overend, Gurney & Co. failed for \$50,000,000, the bank failures

in Great Britian aggregated the stupendous sum of \$250,000,000.
"In 1878, 3 banks in Scotland with some 200 branches failed for \$100,000,000, with a deficit in assets about equal to the total losses to all the depositors of all the national banks of the United States since 1863. Our banking power averaged one hundred times these three banks.
"In 1893, out of 28 banks in Australia with 1,700 branches, 13 of them, with

800 or 900 branches, failed in six months for \$450,000,000. Her banking power

approximated one-sixth of ours.'

Besides, there were many branch-banking failures in Japan, India, Denmark, and

Now compare these stupendous losses with all the losses in all the national banks in the United States from 1863 to 1901. For this period of 38 years, the total losses were less than \$100,000,000. Also remember that the population of our country averged nearly 100,000,000 people, and that meant a loss of \$1 per inhabitant for 38 years. Take the \$450,000,000 losses in Australia in six months, and remember that Australia's population was less than 7,000,000 and tell me again that branch banking is safer than unit banking.

Touching upon the assertion that "an independent unit system such as ours is less able to care for a general situation than a branch-banking system, again quote from the highly touted Canadian branch-banking world.

The American Banker's Association Journal, under date of November, 1929, published several letters from the Weyburn Security of Canada to their branch managers, and I will quote from only three of them. The first is dated January, 1918, and reads as follows: "It has been decided that it is to the advantage of the institution, and also it will be a great assistance to the managers, if, until further notice, all applications for loans exceeding \$300 be submitted to the directors through the head office for their approval.

Compare this with the statement made to your committee that "\$2,500 is

minimum limit that they have ever placed on a manager.

The letter dated July 5, 1918, says: "After taking everything into consideration, it has been decided that the wisest thing to do is to ask the managers not to make any more loans, except very small ones, say from \$50 to \$75, without first sending the application to the head office."

The last letter I quote from says under date of July 10, 1918: "I realize that " great many of the farmers do need \$50 to \$75 to buy what coal they would stock at this time of the year, and it is not expected that you loan even this amount unless they are entitled to it without question. Unless we get more rains, the condition as to crop situation in not bright, and although it is disagreeable to refuse people credit, which ordinarily we should be glad to grant, still the good of the community is best served by keeping people from borrowing money under such conditions. It is surprising how little money a man can get along with when

In the light of these letters would you lend much credence to the statement that branch-banks are more able to care for a general situation than unit banks? Can you imagine an independent bank saying to a farmer that he could not have \$50

to buy coal with to keep him from freezing?

eno dep long Now as to taxes branch banks would pay in such localities in which they have a branch, I would respectfully call your attention to the fact that branches have no capital and consequently would pay no taxes at all except on their furniture and fixtures—a mere noting. If there were not other banks in my city than branches, the city of Oshkosh would lose over \$50,000 in taxes. The city of Denver, over a million dollars. Figure for yourselves how much that would amount to in 50 years. Who would have to pay these taxes in lieu of the banks? Why, God's patient poor of course!

And who wants branch banking? Has a single one of you gentlemen ever received a single request for branch banking from a single one of your constituents?

I venture to answer "no" for each and every one of you. Am I wrong?

Then who is behind this clamorous call for branch banking? Oh, a few greedy bankers who would reap where they have never sown. A mere handful of ambitious men who would grab and absolutely control all the money in our country. They tried it 35 years ago, and are attempting to do it now. They use that fact that nearly 6,000 banks have failed in the last 10 years, and with patriotic fervor cry the poor depositors must be protected. They tearfully admit that this can only be done through that entirely new plan of banking—branch banking.

What the actual losses were in these all too many bank failures during the last

What the actual losses were in these all too many bank failures during the last 10 years, no one seems to know, for the experts themselves seem to disagree by a very wide margin as to the total. At any rate, they were not very staggering for even the most ardent advocates of branch-banking have to admit that they were

not over 20 cents on the dollar.

And what was the cause of the numerous failures? Different minds have different ideas, and many are firmly convinced it was entirely due to the deflation operations of the Federal reserve banks. Personally, I can not agree to this viewpoint. I do contend that the Federal reserve banks were one of the very main causes of these failures, but not because they furnished these unfortunate banks with too little money, but entirely too much. I further maintain that entirely too many banks were organized, and that it was nothing short of riduculous for a little village of 300 inhabitants having three and four banks. It is almost impossible for one bank to exist in such a small hamlet, and it was out of the question for three or four to live on a legitimate banking business. Then how did

they subsist even the short time they did?

Listen. I will give you the history of a bank in Montana and that is the whole story of, practically, all of these failed banks. The capital of this bank was \$15,000, no surplus, less than \$2,000 undivided profits, and \$80,000 in deposits. Naturally you will all say that they could hardly exist under these conditions, yet twice they paid dividends of 50 per cent. Sounds absolutely preposterous, does it not? Still it was done. How, do you ask? Oh, it was all extremely easy. They charged all borrowers 12 per cent interest, and rediscounted the paper at 5 per cent, thus making 7 per cent net on all loans, and that too without having a dollar invested in such loans over night. Of course, the more rediscounts they had, the more money they made. And how many rediscounts did this Montana bank with its \$15,000 of capital have? Oh, a mere \$232,000. You can hardly believe that? Neither could I, yet the president of the bank told me so with his own lips. Any wonder they failed? Anything marvelous about the fact that when a farmer came into one of these banks to borrow \$200 to buy a horse, that the president should urge him to buy a tractor instead, for \$1,200? On \$200 he only made \$14, while on \$1,200 he profited \$84.

Now, what happened when these loans came due? Practically none of these farmers could pay, and as note after note matured, the farmer, like the historical Arab, folded his tent, and quietly stole away. And the bank? How could they meet \$232,000 of rediscounts? They could not, and that is why they failed.

It is a matter of history that many of the farmers that abandoned their farms, left behind them from \$2,000 to \$12,000 of power machinery. Had there not been such an unlimited amount of easy money forced upon them, and had they, perchance, plowed with a horse and a cow, they might still own their farms.

In my own State there have also been entirely too many bank failures, and too much money was also here, the main contributing cause. Not, however, too many rediscounts, but too many deposits. How, perhaps you may ask in deep perplexity, can too much money on deposit wreck a bank? It is quite easy if you

will only give it a little sober thought.

A little country bank is started, and for years the deposits are just about enough so that all local demands for loans are nicely taken care of. Soon the deposits grow larger and larger, and there are not enough home demands to any longer absorb these funds, and an outlet somewhere must be found. Now, along

comes a silver-tongued bond salesman, who has an array of wonderful gold bonds as safe as the Rock of Ages, and which will net the handsome returns of 7 per cent. Just exactly the outlet the bank was looking for. What chance had the feeble objections of the country banker, whose knowledge of bonds was extremely limited, against the persuasive eloquence of this city chap? Of course, he fell, and the downfall of the bank was on its first stages. It needs no Solomon to continue the sad story to its inevitable ending.

And that is the story of practically all the bank failures in my Wisconsin-What can be done to put an end to these failures that cause such widespread ruin in their wakes? Not very much. The weak sisters that are yet hanging hopefully on, must, in my humble opinion, go the way of all human flesh, and when the deplorable, but absolutely inevitable, weeding out has run its course, the

solid, safe, strong unit banks will once more fulfill their destinies.

Would branch banking be a better system? You have already heard of the tremendous losses sustained under that antiquated system, and one more delve into the world's history of banking will not be amiss, considering the supreme necessity of a stable banking system.

Five hundred years before America was discovered England, France, Spain. Holland, Denmark, Persia, and Egypt were powerful, rich, and wonderful countries. In all of them branch-banking had full sway.

The history of the independent national banking system starts in the United States of America in 1863, and in its 67 years of existence it has carried our country so far ahead of all lands under the sun that none can compare with it in greatness or riches, and that system, the greatest, the best, the safest that ever was devised by the ingenuity of man is now being decried as having broken down.

In closing, I wish to say a word or two about the abuse now being heaped upon the poor country banker. Many years ago the greatest comic paper ever published in the world, Puck, had a cartoon about the American soldier during the Spanish-American War in Cuba. He was depicted as wading through the swamps of Cuba, knee-deep in water, mud, and slime, a million gnats swarmed around his head, a broiling sun mercilessly beat down upon his crown, great drops of sweat were dropping from his overheated head, a 90-pound pack was strapped to his aching back, a rifle was gripped in his arms, bullets from the foe in front zipped, and zoomed, and whistled all around him, and behind his stooped back, the sensational papers of his beloved country were pouring an unending blast of vituperation at the efforts of the American soldier. Beneath this striking cartoon were printed the words "How would you like to be an American soldier?"

American soldier?"

Now, I ask you, how would you like to be a country banker? Years ago Mr. Mueller started his little country bank at Mueller's Corner. Slowly but surely his little bank grew, and in course of time by indefatigable efforts, and untiring devotion, his bank did show very fair earnings, was a credit to its village, and Mr. Mueller was respected, honored, and esteemed. Now one sad day for Mr. Mueller, the Federal reserve bank was grafted unto the financial world, and the first thing they did to this little bank that all the villagers were so proud of, was to arbitrarily take away his exchange. Then along comes the Federal land bank, and they take away his farm mortgages. Scarcely has he recovered a part of his wind, when the city insurance men, in fleet automobiles rolling along the cement roads the farmers built with money out of their pockets and they grab most of his insurance. Then the chain store drives out of business his best customer, the country general store. As if these locusts were not enough to make life scarcely bearable, it began to be rumored all over the village that Mueller's bank was loosing its grip, and deposits began to fade away. Result! Mueller's bank failed, Mueller lost his money, his job, and all of his friends. To make his life still more burdensome, self-appointed critics cried out to the world at large that all country bankers were unscientific, unfit, incapable, and should never have been allowed to start a bank. I will propound this query to all fair minded men: Could Alexander Hamilton, George Reynolds, Charles E. Mitchell, A. W. Wiggins, or William Woodward with all their science, with all their skill, with all their ability have done any better than poor Mueller's to tridiculous to say that the best banker in the largest city in all the world would have succeeded at Mueller's Corner any better than Mueller did?

Beware the branch-banks. May it never be said of you that your vote helped to fasten this merciless octopus upon the land of your fathers. With a branch in ever city of the Union, they will absorb the money of the entire country into their greedy paws, and can you faintly picture to yourselves the tremendous

power this Frankenstein will have? It will make or unmake all Presidents, all Congressmen, all Senators, all judges, all governors, all mayors. It will dictate all tariffs, all taxes, all laws. None can become great without its sanction, and it will chain to its golden chariots all men, all women, all children, just as did the Romans in days of old. Men will no longer be free, for he who holds in his claws all the money in the world, enslaves the nations of all the world.

> THE FIRST-MECHANICS NATIONAL BANK OF TRENTON, Trenton, N. J., July 7, 1930.

Hon. L. T. McFadden, Chairman Committee on Banking and Currency, Washington, D. C.

My Dear Mr. Chairman: In accordance with our conversation and due to the difficulty of appearing before your committee in accordance with your invitation, I take the liberty of writing you upon the subject of unit banking as opposed to the system of branch and chain banking. This subject is far-reaching and has collateral connections involving a movement that tends toward the extinction of the middle class just as chain stores are driving out the local merchants and reducing our small cities and towns to mere tributaries of a metropolitan center,

and destroying the individualism of our local community life. So far-reaching is its relation to this subject that one can only touch the high spots in a letter. If, in addition to the general trend of centralization of industrial, commercial, and business life, we had a chain or branch banking system, the last vestige of local independence would be gone and the individual independence that has made America great would gradually be lost in the domination of centralized power. It is the individual and not the thing that we are most interested in in America, and the development of the individual is a far greater asset to our country than the bigness of enterprises. When you take from a community its independent merchants and manufacturers and business men and make them the mere agents for metropolitan centers, you have robbed that community of its self-thinking, self-acting, and self-progressive asset. When you have put the independent banker in the same class and torn from him his shoulder straps, you have deprived

the community of one of its inalienable rights.

A definition of terms sometimes conduces to a better understanding. When I speak of branch banks, I distinctly eliminate what I regard as bank offices. A bank in a city finds its location perhaps somewhat removed from its depositors, due to the shift of business just as in Philadelphia, business has moved up around Broad Street from Second. Such a situation demands that a bank in order to accommodate its patrons must establish offices in different parts of the city. That decidedly is not branch banking. It is simply the extension of the parent bank for the accommodation of its own customers, and is unit banking with service extended necessary to take care of the bank's business. The law that grants the privilege to banks to expand their business area and have an office outside of the four walls of the parent institution for the convenience of their customers is not a law for branch banks at all. It is simply permission granted to our unit banking system to meet the requirements of the changes of the location of business activities in our various municipalities. A branch bank is an adjunct operation

outside of the home city of the parent bank.

The experience of years is usually a wise guide in business affairs. After over 65 years of experience, dating from the inauguration of the national banking system, no American Bankers Association, at any of its sessions, has declared for branch banking and its only recorded action is in opposition to that system.

The laws of our States on this subject are equally conclusive. In six States the law is silent. Twenty States do not permit branches or even branch offices. Twelve States permit branch offices only in the home city and county of the parent banks. This makes 32 States of legal inhibition of branches and only 10 States permit the system.

Before we depart from a banking policy that has been voiced in legal statutes

as the deliberate conclusion of our people after years of trial, we should pause for a moment at least before a "Stop, Look, and Listen" signal.

The United States Constitution has been the one charter under which free government has permanently survived. It sufficed for the needs of 3,000,000 people on a seaboard line. It sufficed for the growth of a great nation over a continent's expanse. It suffices to-day for over 100,000,000 people, with arms stretching out over two seas. It survived the vicissitudes and changes, needs and wants of over 130 years of progress of the greatest Nation on earth, with only four fundamental changes up to the adoption of the eighteenth amendment. This Constitution that has served so well, under which has been written the greatest story of progress, educational, industrial, religious, and agricultural is entitled to the greatest reverence and should not be lightly thrown aside for a

new form of government.

Parallel this illustration with the banking system of America, a system of unit banks under which this country has reached a prosperity greater than any nation on earth, until our pay roll exceeds the pay roll of the rest of the world combined. a system under which we have taken more individuals without means and without capital and, by our local banking credit, developed more successful men of every kind of avocation, not only than any other nation on earth, but of the whole world combined. With this splendid picture of happiness and improvement before me, I hesitate before I take a leap in the dark and adopt the European system of either chain banking or branch banks.

Certainly, judged by results, our unit banking system has been more of its brother's keeper than that of any other nation, and makes the student ask, "What is the complaint against the unit bank that has done so well and why change?" Restlessness is not always progress, and copying the systems of the bankrupt nations of Europe is not necessarily a forward step. We have won our place as the creditor nation of the world. Let Europe copy our system.

I once heard a speech on individualism as the source of progress; government ownership the beginning of decay. I delivered it, so of course I heard it. It is the individual who does things, not the masses. You may have looked upon some beautiful painting, like that of the Sistine Madonna. An individual painted that picture, the masses never painted a picture. You may have seen a magnificent statue, harmonious in all its proportions. An individual carved that statue; the government never carved a statue. The masses never made an oration, penned a poem, shaped a cathedral, invented a machine, nor discovered a law of gravitation. It is individuals who take these steps of progress alone, and in so far as we curb individual effort and individual initiative, we retard progress. The reason why America has given us the sewing machine and the electric light, the harvester and reaper, telephone and telegraph, flying machine, and radio and the electrical marvels of the world, is because our individuals have been the captains of their own souls and have not become mere routine automatons of gigantic enterprises. The man who is head of a small institution develops better than the man who is a mere departmental tool of a gigantic corporation. Not that these great enterprises are not necessary. They are profoundly necessary in America today as the leading nation of the world and the hope of civilization. I, for one, most strongly advocate them, but I call attention to the fact that the big corporations, especially the large banks of our great cities, are drawing on the country institutions of the Middle States and the South and the West and New England, for their Presidents and their Vice Presidents, men who have developed not in branches, but in smaller independent institutions. Numerous instances could be cited, but they might make odious comparisons.

The distinguishing feature of America's financial system has been its numerous independent, individual banks. This fact has stood out in a marked contrast to the European system. America has over 24,000 practically independent banks, each locally owned and managed by a local board of directors and officers who use the funds of the bank legitimately for the development of the community. Contrast this with Great Britain that has 23 main banks and 9,476 branches, and with France with 19 main banks and 1,351 branches.

This local banking system of ours has been one of our greatest resources and has contributed to America's development and prosperity. The credit of these institutions has been extended to the needs of worthy and enterprising individuals whom the officers and directors of the various localities personally knew and in whom they had confidence. Many a poor boy through credit extended by his local bank has become a successful merchant, manufacturer, or professional man. On the contrary, in the countries across the sea where the bank is a mere cold-blooded proposition, individuals do not find it so easy to receive accommodations as they do here, where personal character, abilities, and ambition are regarded as assets. There is scarcely a community in the country where an illustration can not be found of some worthy individual with ability and without capital who has been able, through the help extended him by his local country bank, to make a success in life and add to the development of his country. It has been this personal, humane feature of America's banking system that has made it a motive power for progress such as the world never before saw. The reason for this is fundamental. It is founded upon the law of wealth as certain as the law of gravitation.

It is a somewhat antiquated political economy that imputes value to anything per se. Aside from a few of the fundamental metals and minerals, like gold and silver, diamonds and coal, there is no value in any material thing. There is no value in the hotels, lands, homes, public buildings, docks, wharves, and street-car lines of any municipality—say, for instance, Atlantic City. They are not worth a farthing. Their value and their wealth lie solely in the brains of Atlantic City's citizens, and if all the people in Atlantic City should leave that city and none ever return to take their places, Atlantic City as a deserted village would not be worth the attention of the tax gatherer. Its wealth would depart with the brains of its departing citizens. It is the brains of the individual, therefore, that are the asset of any nation, and just as you develop the individual, you add to wealth and

prosperity.

The independent banking system of our country has fitted in admirably and practically with this philosophy. It has worked with the individual and helped him to grow industrially, educationally, inventively, and commercially. It has worked with him because he was a neighbor and an acquaintance and the bankers knew and trusted him and he in turn cooperated therewith. He rose to success through the help of his local independent bank, and rarely would have had that opportunity had he depended upon a bank in some large center, because he would not have known the bank and the bank would not have known him, and credit extension would have been well-nigh impossible. In the little town of Roebling, N. J., on the Delaware, Carl Roebling, then the head of the great John A. Roebling's Sons Co., organized a little bank that has deposits to-day of a million dollars. It admirably serves that community. It helps to build its homes, and to finance its merchants and public improvements. The bank takes a pride in this work, a work of service because it is a part of the life of the community, and it touches elbows with its needs and its wants, with its aspirations and its prosperity. If that bank was owned by a Chicago corporation and was one of a great chain system, this personal touch with the little village of Roebling would be lost and its entire relation to the community would be changed. The Roebling bank would no longer be the Roebling Bank but the bank of a foreign landlord and its interest in individual local enterprises would diminish and the plants of purely local and community pride and development would deal with a foreign instead of local The chain stores-I do not criticize them nor claim they do not serve a useful purpose—have almost entirely eliminated the local merchant who dealt in the same commodities they do but they are like exotics among the native flowers of the garden. The branch banks would eliminate the local banks as surely as the chains are eliminating the local merchants.

The system of chain or branch banking is contrary to the spirit of American independence which prompted us to throw off the vassalage to a foreign government and our local communities would resent becoming vassal and tributary to a metropolitan banking institution, however fine. We, country bankers, and we are largely in the majority, do not object to selecting metropolitan banks as our correspondents. We seek their advice, we trust them with our deposits and if the Federal reserve system would pass away so that we could give them all of our deposits we would, but we do not propose to become tributary to their imperial will or become a branch of their great institution so that our community can be drained of the idle balances of our people to feed some other section of the country. Do not misunderstand. The resources of the local banks are always available for all in time of need but not as a branch under some one else's command, but as an independent sovereign, contributing of its own free will. ropolitan banks as correspondents make a system that has all of the advantages and none of the disadvantages of the branch-banking policy. On the board of the bank with which I am associated are the leading cirizens of that community. They take a pride in that institution. They give it their advice and deposits and term it their bank. They serve it faithfully and well but not for one moment would those men serve as the vassals in a branch bank or in a chain bank. Under the branch-banking system, the country would lose the service of such men as I speak of in its financial affairs, a most valuable asset, and the loss of the services of thousands of local directors throughout this country would be a nation-wide

catastrophe.

Divison of the Central Hanover Bank & Trust Co. well said: "In banking nothing can take the place of the man on the ground who knows local conditions and the man with whom he is dealing and has the power to make his own decisions under a responsibility only to resident ownership control."

decisions under a responsibility only to resident ownership control."

The branch-banking system is European not American. The unit

The branch-banking system is European not American. The unit system is American not alien or foreign. In England everything is tributary to London,

in France to Paris, in Germany partially to Berlin but with a wholly different picture, where the bank becomes a partner in an industrial enterprise.

None of those systems could serve our needs so well as our present unit system. In none of those countries are their farmers like our farmers or their small merchants like our merchants or their small manufacturers like ours. It has been well said that the feudalistic overlord system has no place in American banking where the people want to deal with bankers of their own community in an institution whose stock is owned by their own neighbors and friends. May God long postpone the day when this splendid asset of Americanism ceases to dwell in the American heart. The American is not willing to forget his banking independence any more than his forefathers were willing to forget their political independence.

Two recommendations have recently been advanced for branch banking, one is that it would improve the mechanics of banking, creating a highly specialized body of experts who could give the branches the benefit of advice from the parent institution.

The answer to that is most manifest. It fails to consider the human side of the banking function. A bank is a personal institution. It does not sell goods or manufacture material products, it deals exclusively with persons and their possessions and thus it can only be wisely administered by people on the ground, familiar with local conditions. Moreover, the correspondent banks willingly and gladly give advice on the mechanics and operations of successful banking but more than that the A. B. A. furnishes to every institution a wonderful set of pamphlets upon all phases of banking formula and operations that can not be surpassed by the experts in the parent institution, wide-awake, perhaps, but a long distance away.

The second argument, which grows out of the too many failures of banks, is advanced in a most constructive and judicial way by a distinguished public official. This phase of the situation is presented with the suggestion that if these institutions which have failed had been tied to a stronger parent that unfortunate banking story might not have been written. The banks in question, however, upon analysis of their failure are found to largely small institutions in localities where perhaps no parent bank would want a branch, and the failures largely were due to a deflation of values in agricultural centers for which bank management was not responsible and over which it had no control. The best banking in the world could not fail to be affected in a period of industrial or agricultural depression or, in a stock market crash that drags down and makes bankrupts out of those formerly prosperous. In any country, under any system and under any management, banks would suffer under this condition of affairs. The remedy for hard times and general economic depression is not to be found in branch banking any more than the purity of a stream is improved by the storage of its waters by dams and reservoirs.

When the Federal reserve system was inaugurated, its advocates said, and sincerely said, that it was panic proof, that cheap credit hereafter would always be available, that it would stabilize conditions and that money rates would always be reasonable, but under that system, we recently had average higher interest rates than in a long period in our history, credit was scarce and dear, we had a stock market panic utterly unnecessary and to-day we have industrial business depression and non-employment. This boasted banking system did not fulfill the prophecy of its sincere proponents and no banking system can escape the consequences of the laws of trade and commerce.

Allied to the branch banking policy, there had developed a system of holding companies for the ownership of bank stock and the control of the banking institutions. I trust I am not unfair when I say that this system of chain banking through holding companies is conceived in a spirit of illegality. It clearly violates the laws, both national and state, as they now exist against branch banking. A holding company of Chicago, as an illustration, might own banks in New Jersey, in Pennsylvania, and in other states where the law forbids branch banking. These corporation owned banks would be linked together and would really become the branches of a parent company and the anti-branch-banking laws will thus be nullified and the holding companies would not be under the jurisdiction of the Comptroller of the Currency or Banking and Insurance Commissioners.

of the Comptroller of the Currency or Banking and Insurance Commissioners.

Tremendous publicity and propaganda have been utilized to favor this new system. It changes the whole character of our banking policy, creates a foreign owner in the form of a corporation that is impersonal and resident in some metropolitan center controlling the functions of some far distant community bank, destroying their credit humanity and ability to serve their community. The

bank ceases to be owned by the people among whom it is located and is no longer their possession. One of these holding companies through its ownership of bank stock controls one of the largest banks in the world. This bank had at one time 289 branches in one state alone. A local bank, owned by such a corporation becomes a stranger in the community and that psychological asset called confidence which binds the bank and the community together is destroyed.

The Financial Chronicle of October, 1927, well said:

'Credit is a commodity more important to the people than ordinary commercial products. Tying strings to 30,000 banks and putting them in the control of a half dozen companies certainly would not be in the public interest. The independent bank is of immense value to the country and should be preserved at all hazards. Every local merchant and manufacturer is entitled to credit according to his deposits. The creating and maintenance of locally owned and operated banks should be held sacred. The organization of local credit being free business outside of the bank will contract or expand in accordance with the average profits that business can earn. Thus the community and local banks go up or down together. To sacrifice this freedom to initiate new business not only by so-called controlled credit but by means of retaining at home the earnings of its own organized credit, must prove a detriment to a natural progress and prosperity

* * * Ownership by a holding corporation * * * pumps the profits from
the (local) reservoir and adds nothing in return. Depositors in these local banks now about to be coralled by holding companies are not asking for this change and are loath to see the stock of their local banks go into foreign and unknown and impersonal hands. Local bank stock should be kept at home."

In New Jersey we held up our hands and said to these holding corporations, "Thou shalt not enter" and we passed an act, still upon the statute books, that no corporation should own the stock of a bank or trust company of more than 10 per

cent and we have teeth in that law that makes it effective.

When the Federal reserve system was created, in order that it should not become centralized, it was divided into 12 districts. The act went further and provided that directors should be voted for by classes so that a Federal reserve bank is always beyond the control of a majority or combination of the banks of the district, but the holding company policy threatens this safeguard against centralized mono-It could own enough of the member banks in a Federal reserve district to absolutely control the directorships thereof and control rediscount rates subject, of course, to the reserve board at Washington, and use the powers of the Federal Reserve Bank for its own corporate advantage. The possibilities of such a gigantic corporation are terrifying.

But aside from the uneconomic, un-American, feudalistic spirit of branch or chain banking, it is amateurish in its daring. Under it would arise the greatest of

Š

n.

all trusts, a money trust, utterly abhorrent to the American people who are our masters. This is a case where angels fear to tread.

The chain system boasts of its progress. The other day I received a pamphlet declaring that this movement could not be stopped any more than old King Canute could stop the rising tides of the sea. I wonder if this pamphletier ever read American history? He seems to forget that whether wisely or unwisely America will not permit concentrated power in any enterprise or in any vocation and when the American people take the bit in their teeth and attack a monopoly or trust, they always go to extremes and endanger the welfare of the country and do injustice to the object of their wrath. We have seen our railroads attacked, I think unjustly, until the hysteria of the hour 40 per cent of them were driven into receiverships or bankruptcles. We have seen our industrial combinations, manufacturing and public utilities, attacked with a vehemence that sent some of their officials to jail and injured their progress. I am sure in many cases it was unfair and unjust, indeed, in most cases. To-day Congress is investigating and threatening holding corporations of railroad stocks and the Interstate Commerce Commission is raising a red flag to frighten the people about a danger that to me does not really exist. To-day Congress is investigating the mergers of public utilities and the holding companies of their stocks and spreading a propaganda of socialistic opposition that will end either in Government ownership or in drastic laws that will injure the prosperity of these great and useful enterprises. The man who fails to learn the lesson taught by the resentment and anger of the American voter against concentration of wealth or power is indeed an amateur and whether he is right or whether he is wrong in advocating branch or chain banking he invites a deluge which will overwhelm him to his sorrow if not to his ruin. These men are like the blind traveler who walks over the precipice. Branch banking may become our policy, chain banking may become our policy (I do not think it will), but when it does the American people will rise up in their wrath as surely as the rising of the sun and in their unreasoning and unjust indignation will visit a vengeance upon our banking system and that will hamper constructive progress and seriously injure our banking institutions and percipitate a financial panic such as will make the advocates of this policy rue their folly and their blind obliviousness to American resentment of centralized power.

At this point, allow me to say that I am not arguing as to the wisdom of this policy, but like Elijah, to whom nobody would listen, I am pointing out to you from the history of this country what we should all foresee and what we should hesitate to invite—the disastrous consequences that will follow a concentration of money power in defiance of the independent spirit of the American voter.

Let us not try to make our banks too big by reaching out into territories where we do not belong, nor try to stretch our holding company chains even if we have the power. The sword of Damocles hangs over our heads and it will surely fall. I would rather be a small bank with the love of my community than a too large institution with the resentment of my fellowmen.

I have written strongly on this subject, perhaps too strongly, because I feel strongly. Ours is a nation of depositors. The bank, like the church, is a community enterprise, its stock a community investment, its success a community pride. It is a community temple where the saver and the borrower meet in a home they call their own, whose vestal fires must be kept alive by the trusted financial priests of their own hearthstones.

Very sincerely yours,

E. C. STOKES.

The following chapter from the Laws of New Jersey are printed herewith:

[Laws of 1928, ch. 273]

AN ACT To regulate the purchase and owning by certain corporations of capital stock of banks, trust companies, and national banks doing business in this State and in certain cases to limit and prohibit the purchase and ownership of such stock and to provide punishment for violation thereof

1. Any corporation, other than corporations specifically exempted from the provisions of this act, which now owns any of the shares of the capital stock of any bank or trust company or national bank, doing business in this State, and which shares of stock are not registered in the name of such corporation on the books of the bank or trust company or national bank issuing or which issued the same, shall within 60 days after the taking effect of this act cause the said shares of capital stock to be transferred on the books of such bank or trust company or national bank so that the same will be issued to and be registered in the name of such corporation, and shall keep the same so registered in the name of such corporation while it continues to be the owner of such stock.

2. Any corporation, other than corporations specifically exempted from the provisions of this act, which now or hereafter owns any shares of the capital stock of any bank or trust company or national bank doing business in this State, shall not cause or permit any such shares of capital stock to be issued to or to be registered on the books of the bank or trust company or national bank issuing the same, in any name or names other than the name of the corporation so owning such shares of stock.

3. Any corporation, other than corporations specifically exempted from the provisions of this act, which now or hereafter owns more than 10 per cent of the number of shares of the capital stock now or hereafter at any time issued and outstanding of any bank or trust company or national bank, now or hereafter doing business in this State, shall not purchase more than 10 per cent of the number of shares of capital stock at any time issued and outstanding of any other bank or trust company or national bank, now or hereafter doing business in this State.

4. Every bank and trust company doing business in this State, as to any of its shares of capital stock now or hereafter registered on its books in the name of any corporation and as a condition precedent to permitting such stock to be voted upon at any stockholders meeting, shall take and require from such corporation a statement in writing, dated and made on a date not more than seven days including Sundays and holidays, prior to the date of such meeting or any adjournment thereof, stating (a) the number of shares of the capital stock of any and every bank, trust company, and national bank doing business in this State, owned by it on the date of taking effect of this act, and the names and addresses of the same; (b) the number of shares of the capital stock of any and every such bank,

trust company, and national bank purchased by such corporation after the taking effect of this act and the names and addresses of the same; (c) the number of shares of the capital stock of any and every such bank, trust company, and national bank owned by such corporation on the date of such statement and the names and addresses of the same; (d) the date or dates of purchase of all such shares of stock specified in (b) and (c) above; (e) the total number of shares of capital stock of any and every such bank, trust company, and national bank issued and outstanding on the date or dates of such purchase or purchases and on the date of such statement; (f) that such corporation has not after the taking effect of this act purchased any of the shares of the capital stock of any bank, trust company, or national bank in violation of provisions of section 3 of this act. such statement is not furnished, such stock shall not be voted. If it appears from any such statement that such corporation on the date of such statement owned shares of the capital stock of any such bank, trust company, or national bank, purchased in violation of the provisions of section 3 of this act, the said shares of stock shall not be voted at such stockholders meeting. If it appears from any such statement that such corporation has violated the provisions of section 3 of this act, such bank or trust company shall inform the attorney general and the prosecutor of the pleas of the county in which its principal office is located of the contents of such statement.

5. Every bank and trust company doing business in this State, as a condition precedent to transferring any of its shares of capital stock into the name of any corporation, shall take and require from such corporation and such corporation shall make and deliver to it, a statement in writing, dated and made on a date not more than seven days, including Sundays and holidays, prior to the date of offering the certificates of stock for transfer, stating the particulars required by subsections (a) to (f), inclusive, of section 4 of this act. Until such statement is furnished such shares of stock shall not be transferred. If it appears from any such statement that such corporation on the date of such statement owns shares of the capital stock of any bank, trust company, or national bank doing business in this State, purchased in violation of the provisions of section 3 of this act or that the shares, transfer of which is requested, were purchased in violation of section 3 of this act, such stock shall not be transferred. If it appears from any such statement that such corporation has violated the provisions of section 3 of this act, such bank or trust company shall inform the attorney general and the prosecutor of the pleas of the county in which its principal office is located of the

contents of such statement.

6. Every bank and trust company doing business in this State, as a condition precedent to paying dividends upon any of its shares of capital stock registered on its books in the name of any corporation, shall, on or after the date of each and every declaration of dividends upon such stock, take and require from such corporation and such corporation shall make and deliver to it a statement in writing, stating (a) the information required by subsection (a) of section 4 of this act; (b) the information required by subsection (b) of section 4 of this act; (c) the number of shares of the capital stock of any and every bank, trust company, or national bank doing business in this State, owned by such corporation on the date of declaration of such dividends; (d) the date or dates of purchase of all such shares of stock specified in (b) and (c) above; (e) the total number of shares of capital stock of any and every such bank, trust company, and national bank issued and outstanding on the date or dates of such purchase or purchases and on the date of declaration of such dividends; (f) the information required by subsection (f) of section 4 of this act. If any such statement is not furnished within six months after the date of declaration of such dividends, they shall be forfeited to If it appears and become the property of the corporation declaring the same. from any such statement that such corporation on the date of declaration of such dividends owned shares of the capital stock of any such bank, trust company, or national bank purchased in violation of the provisions of section 3 of this act, the dividends which would have been payable with respect to any such stock shall be forfeited to and become the property of the bank or trust company declaring the same. If it appears from any such statement that such corporation has violated the provisions of section 3 of this act, such bank or trust company shall inform the attorney general and the prosecutor of the pleas of the county in which its principal office is located of the contents of such statement.

7. Any corporation which purchases shares of stock of any national bank doing business in this State, in violation of the provisions of section 3 of this act shall not vote such shares of stock, now shall it cause or permit the same to be

transferred to it on the books of said national bank nor shall it take or receive

any dividends declared on such shares of stock,

8. Whenever the attorney general of this State has reason or information to suspect or believe, or whenever it appears to the attorney general by complaint or otherwise that any stock of any bank or trust company doing business in this State has been purchased in violation of the provisions of this act, he shall, by proceeding in the court of chancery of this State, procure determination as to such purchase. Such proceeding shall be by petition in the name of the State of New Jersey, and in which the bank or trust company whose stock is involved and the registered holder of such stock and any other person or corporation having any interest therein to the knowledge or information or belief of the attorney general shall be parties defendant, and of which they shall receive such notice as the court shall prescribe. Notice to any absent defendant shall be given according to the statute and rules of said court in such case made and provided.

In any hearing thereon the burden of proof that such stock has not been purchased in violation of the provisions of this act shall be upon the registered owner

of such stock or upon any other party thereto claiming to own the same.

If it is determined that such stock has not been purchased in violation of the

provisions of this act, it shall be so decreed.

If it is determined that such stock has been purchased in violation of the provisions of this act, it shall be so decreed, and it shall also be decreed that any and all dividends thereafter declared with respect to such stock while such stock is so owned shall be forfeited to and become the property of such bank or trust company, and that while such stock continues to be owned in violation of the provisions of this act it shall not be voted at any stockholders' meeting. Upon any such determination the costs of such proceedings and any counsel fees allowed by the court may be decreed to be paid by the registered owner of such stock or

by any other party claiming to own the same.

If after such determination such stock ceases to be owned in violation of the provisions of this act, its status with respect to this act may be determined and its right to dividends and voting may be restored upon petition in said court by the registered holder of such stock or other person or corporation interested therein, of which such notice as may be prescribed by the court shall be given to the attorney general and to the bank or trust company whose stock is involved. If it is determined that such stock has ceased to be owned in violation of the provisions of this act, it shall be so decreed and also that all dividends declared after cessation of such ownership shall be paid without interest, and that such stock may thereafter be voted. Upon any such determination the costs of such proceedings and any counsel fees allowed by the court shall be decreed to be paid by the petitioner.

9. The stock ownership permitted or prohibited by this act shall be construed to mean and include any ownership, owning, holding, having, or controlling directly in any way whatsoever, or indirectly in any way whatsoever, through any agent

or other representative.

10. The words "purchase," and "purchased," as used in this act shall be construed to mean and include any purchase or other acquisition of ownership, or of any right, title, or interest, directly or indirectly, in any way whatsoever, or indirectly in any way whatsoever, through any agent or other representative.

11. Whenever in this act any statement in writing is required to be made by any corporation, such statement shall be made in the corporation's name, shall be under its corporate seal, and shall be signed for the corporation by its president, vice-president, treasurer, or secretary

12. Any corporation guilty of making in whole or in part any false statement required by the provisions of this act shall be guilty of a misdemeanor and upon

conviction thereof shall be punished accordingly.

Any corporation guilty of violating any of the other provisions of this act shall be guilty of a misdemeanor and upon conviction thereof shall be punished

The making by any corporation of any false statement required by this act shall be deemed to be also a false statement by the individual officer or officers of such corporation making the same, and of the individual director or directors and officer or officers of such corporation ordering, or doing, or permitting the same, and he or they shall be guilty of a misdemeanor and upon conviction thereof shall be punished accordingly.

Any violation by any corporation of any of the other provisions of this act other than the making of such false statement, shall be deemed to be also the violation of the individual officer or officers, director or directors, ordering of doing, or permitting such violation, and he or they shall be guilty of a misdemeanor and upon conviction thereof shall be punished accordingly.

In addition to the penalties otherwise provided in this act for such violation or violations, the charter of any corporation making any false statement required by this act, or violating any of the other provisions of this act, shall be revoked in appropriate proceedings by the attorney general of this State; and in case of a foreign corporation authorized to do business in this State its permission granted to do business in this State shall be revoked in appropriate proceedings by the attorney general of this State.

13. Any person or persons who for the purpose of enabling any corporation to evade or attempt to evade the provisions of this act shall permit any shares of the capital stock of any bank, trust company, or national bank, doing business in this State, owned by any corporation to be held or registered in his or their names, shall be guilty of a misdemeanor and upon conviction thereof shall be punished

accordingly.

14. The provisions of this act and the penalties thereof shall not apply to the following corporations, viz.: Banks and trust companies organized under the laws of this State and national banks doing business in this State, nor to such banks, trust companies, and national banks while acting in a fiduciary capacity representing any individual or individuals or the estate of any individual; nor to any other corporation the entire capital stock of which is owned by or held in trust for the shareholders of any bank or trust company organized under the laws of this State or any national bank doing business in this State, in the same relative proportion as the stock held in said bank, trust company, or national bank.

15. If any part or parts of this act shall be held to be invalid or unconstitutional,

the validity of the other parts hereof shall not thereby be affected or impaired.

Winona, Minn., October 22, 1930.

Hon. Louis T. Macfadden, Chairman, Committee on Banking and Currency, House of Representatives, Washington, D. C.

DEAR SIR: It occurred to us that you might be interested in receiving a copy of a letter which we are sending to the American Bankers Association with respect to the recent branch bank resolution passed at their Cleveland convention.

The letter appears self-explanatory. It is the feeling of the committee that the resolution does not represent the wishes of anything like the majority of the members of the American Banking Association, and we are simply challenging

them on their standing.

It is not my purpose in this letter to assign any argument for or against branch or unit banking; however, it does appear that the demand for branch banking is coming entirely from the bankers themselves and not from the public, since the present institutions certainly are receiving satisfactory patronage, and since it is a demand from the bankers it appears to us that their wishes in the matter should be known.

Very truly yours,

J. R. CHAPPELL, Vice President.

MINNESOTA BANKERS ASSOCIATION, Minneapolis, Minn.

The American Bankers Association, New York, N. Y.

Gentlemen: The action taken by those in attendance at the recent annual meeting of the American Bankers Association with respect to branch banking has come to the attention of this committee, which, for your information, was created at the last annual meeting of the Minnesota Bankers Association to preserve the interests of the independent banks.

The purpose of the resolution on branch banking as adopted appears quite evident. It apparently will be an authoritative expression to legislative bodies, particularly to Congress in an attempt to secure the enactment of laws beneficial

to those wishing branch banking in its broadest scope.

It is not our purpose to advance any arguments for or against the resolution, however, we feel that an issue not only associated with the welfare of the majority of your members but probably affecting their very existence should not be decided by the few representatives who happened to be in attendance at the

Many complaints are heard relative to the action taken. It seems certain that it is not the representative expression of the bankers of this country nor of your members, and we believe in fairness to those who have supported your association for so many years that a question of such importance should be decided by the entire membership.

We should like to suggest therefore that you mail a questionnaire to every member requesting an expression on the resolution passed, advancing no arguments for or against, and we are certain the decision will be acceptable.

Knowing that considerable expense is involved and thinking your budget might not permit the expenditure, if the plan is accepted and funds are not available for the purpose, this committee will gladly undertake the raising of the necessary amount upon your request.

We believe this letter suggests fair and impartial action, and we sincerely trust that it may receive favorable consideration and support. A copy of this request is being mailed to some of your officers and committee members, certain interested Members of Congress, and to certain publications.

Assuring you of our appreciation of its consideration, we are

Very truly yours,
Committee on Unit or Independent Banking,

MINNESOTA BANKERS ASSOCIATION,
J. R. CHAPPELL, Winona, Chairman.
N. J. PETERSON, Little Falls.
EDWIN BRICKSON, Adrian.
J. J. RACHAC, Faribault.
OLUF GANDRUD, Benson.

Mr. J. R. CHAPPELL,

Chairman Committee on Unit or Independent Banking, Minnesota Bankers Association, Winona, Minn.

Dear Mr. Chappell: Your letter of October 17, addressed to the American Bankers Association, was received at the general office and has been forwarded to me as president of the association. Your suggestion is that the association, "advancing no arguments for or against," mail a questionnaire to every member, requesting an expression of their views upon the resolution with respect to unit and branch banking adopted at the recent general convention at Cleveland.

I doubt very much the propriety of such action. Although myself a unit banker and in sympathy with the maintenance of that system of banking, I feel that any action toward ascertaining and determining the policy of the association upon such an economic subject must be in accordance with and not in defiance of its established law and methods of procedure.

Under the consitution of the American Bankers Association—and in what follows, I am quoting our general counsel, Thomas B. Paton—"the supreme authority of the association is vested in the general convention" and the constitution provides (Art. IX, Sec. 1.) that "Decisions and authorization of appropriate action upon matters of economic, financial, or legislative policy or upon any other subject, shall be made by vote of a majority of the delegates present and voting at any session of the general convention."

The above is the sole method provided by our constitution by which the general convention, which is the supreme authority, makes its decisions upon matters of economic policy. True, section 2 of Article IX of the constitution provides that "in the interim between sessions of the general convention decisions upon matters of policy and action not inconsistent with any previous decision of the general convention shall be made in the manner provided by the by-laws" and By-Law XI in section 3 provides, among other methods of ascertaining the policy of the association between sessions of the general convention, that "it shall also be within the power of the president of the association when in his judgment occasion warrants, and if authorized by four-fifths of the administrative committee, to submit or authorize the submission of any question of policy by mail to the entire membership of the association, and if replies are received from the majority of the members and if three-fourths of the replying members concur, the policy and action of the association shall be determined accordingly, subject only to review and revision by the general convention."

Section 3 further provides that "All questions of policy submitted to referendum vote of the entire membership * * * shall be accompanied by a brief statement of facts and reasons on both sides of the question." Furthermore, section 4 of this by-law provides that "all questions within the jurisdiction or scope of investigation of the economic policy commission shall, when practicable, be submitted to the commission for it investigation, findings, and recommendations before being presented to the * * * entire membership for referendum vote. The presentation of such questions * * * for referendum vote shall be accompanied in each case by the conclusions and recommendations of the commission." But this authority for referendum, in addition to being entirely different in form to what you suggest, does not in any event apply in this case because it is limited to questions of policy which arise between sessions of the general convention and which are not inconsistent with any previous decision of the general convention.

The subject of unit, chain and branch banking was advertised well in advance through announcement of the president mailed direct to every member as one of three major subjects which would be debated and acted upon at the Cleveland convention and, further, all delegates had notice through the columns of the American Bankers Association Journal that this important subject was to be on the program for discussion and decision. On the convention floor the resolution was in fact debated at considerable length prior to the voting of the delegates.

The American Bankers Association having at its Cleveland convention attended by a large representative of delegates from all sections and after full discussion, adopted a resolution on the subject of unit and branch banking, such policy becomes the established policy of the association, legally and constitutionally declared, and our organic law provides no method by which such policy can be changed other than by vote of the delegates at a subsequent general convention.

What you are asking, in effect, is that the association, through its responsible officials and without authority of the general convention, which was just delcared its policy upon this subject, initiate an inquiry of all the members whether or not they are in accord with such policy and having for its purpose the discrediting

if possible of the validity of such declared policy.

You will see from the foregoing statement of facts, therefore, that a compliance with your request would not only be unauthorized but would be improper as in violation of our organic law.

Very truly yours,

Rome C. Stephenson, President American Bankers Association, South Bend, Ind.

> MINNESOTA BANKERS ASSOCIATION, Minneapolis, Minn., November 28, 1930.

Mr. ROME C. STEPHENSON,

President American Bankers Association, South Bend, Ind.

Dear Mr. Stephenson: Acknowledgment of your letter of October 30 rejecting our suggestion that a referendum be submitted to the members of our association in connection with branch bank resolution adopted at Cleveland has been delayed until it could be presented to our committee for consideration.

The delay, however, has given you an opportunity to appraise the comments and expressions from various members and financial magazines. It must have come to your attention that there is an overwhelming demand for such a referendum, a concurrence for which has prevailed among all financial editors who indicated sufficient interest for expression.

The interest displayed and the requests received make it mandatory that our committee arrange for some sort of a referendum, and we believe there is an opportunity for the American Bankers Association to remove some of the criticism

directed on account of its action by undertaking this task.

You desire that the membership, due to some technical objection, accept as final, official, and conclusive the resolution as adopted at the Cleveland convention. May we inquire if the past association officials and committees have so acted in accepting resolutions adopted at the preceding conventions as final and conclusive. If so, permit a few facts. With several resolutions opposing branch banking appearing on the official record, your most important and active committee, the economic policy commission, appointed in 1929, submitted an exhaustive report at the Cleveland convention indicating a favorable position toward group

and branch banking. All of this was in spirit contrary to the previous distinct expressed wish of the membership and against the official records of the associa-This report without a doubt led to the adoption of the branch-bank resolution.

Has the result accomplished some selfish interest or will the committee continue study and investigation of the subject? If the latter is true, and we hope it is, might you not suggest to this committee that in the continuation of their work and in order to be fully informed as to the wishes of the members that they submit an unofficial questionnaire on this all important question. The results thus obtained will be accepted as entirely satisfactory to our committee and other interested parties and should serve as a basis for future association action.

Knowing that you have a sincere interest in the welfare of the association, we hope that you will not endeavor to find some technical or organic objection to the suggestion herein contained and on the contrary will gladly and willingly do your fair share to eventually purge the record of an act adopted by a vote of approximately 150 members from a twenty thousand membership, and an act that may affect the future welfare and success of your association.

A copy of this letter is being forwarded to Mr. R. E. Heck, chairman of the economic policy commission.

We shall await an early reply.

Very truly yours,

J. R. CHAPPELL, Chairman Committee on Unit or Independent Banking, Minnesota Bankers Association. t sul a s

SECURITY-FIRST NATIONAL BANK OF LOS ANGELES, Los Angeles, November 29, 1930.

Hon. Lewis T. McFadden, Chairman Committee on Banking and Currency, Washington, D. C.

MY DEAR MR. McFadden: In compliance with your suggestion made when you were in Los Angeles a few days ago, I beg to submit herewith some suggestions

with respect to the amendment of the national bank act:

1. Capital Stock.—At present it is not possible for a national bank to have an authorized capital stock in excess of the paid-in and issued capital stock. Under the state law in California a bank may have an authorized capital, only a part of which may be issued. In actual operations, in connection with the merger or consolidation of banks, we found it very advantageous in the old Security Trust & Savings Bank to have an authorized capital stock larger than the issued and paid-in capital stock so that the directors were in a position to authorize additional stock either for a stock dividend or for the exchange of stock in the case of a merger. If the authorized stock is large than the issued stock, the directors can from time to time sell stock pro rata to the old stockholders when it is desired to increase the paid-in capital stock. It may well happen that a bank may desire to increase its capital stock and add to its surplus account by selling the stock at an advance over the face value of the shares, giving to the capital stock the share value and to the surplus the difference between the share value and the sale

Authorization for the stock would, of course, be subject to the approval by the Comptroller of the Currency, as would the issue of additional paid-in stock out of the already authorized stock. If provision for authorized but unissued stock were made, there should likewise be a provision requiring the advertising of the amount of the paid-in capital stock whenever the amount of the authorized capital was advertised. This would obviate any possibility of the public being deceived

in this matter.

2. Real estate loans.—Under the law as it at present stands, national banks may make loans secured by first lien on improved real estate not to exceed 50 per cent of the actual value of the real estate and not for a longer time than five years. The aggregate of such loans may be made in a sum equal to 25 per cent of the amount of capital and surplus of the association, or of one-half of it savings deposits, subject to the general limitations contained in section 5200 of the Revised Statutes. Loans on unimproved real estate are not permitted.

It would be a great help to the national banks in California if the aggregate amount which may be loaned should be raisd to 60 per cent of the savings deposits and if the amount that could be loaned on any one property should be raised to 60 per cent of the actual value of the real estate. If choice had to be

made between these two, I think the raising of the amount of the individual loan

would be the more helpful in meeting competition.

The 5-year limit seriously interferes with the making of installment loans on homes. Loans on homes to homeowners on a monthly payment basis, which included a steady reduction of principal as well as payment of interest, have always been regarded as a very satisfactory type of loan and is one which we believe could safely be made by national banks with their savings deposits. is very difficult at the present time to get these loans on a 5-year basis. It would be far easier if installment loans on homes could be made with a 10-year limit.

There is an anomalous situation existing in connection with the amount that may be loaned on a particular piece of property. Trust departments in national banks, under a rule of the Federal Reserve Board interpreting section 11K of the Federal reserve act, Federal Reserve Bulletin, (vol. 6, pt. 2, p. 949), may lend the funds of a particular trust, when so authorized by the trust agreement, on real estate in accordance with the provisions of the State act, which would govern a State trust company if it were acting as trustee under the same trust instrument. This means that in sucn cases a loan up to 60 per cent of the value of a particular

piece of property is possible in California.

Savings deposits in national banks have increased rapidly in recent years and there is every prospect that they will continue to increase, both through natural there is every prospect that they was the growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the property of the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth and through the consolidation with national banks of State banks that growth are consolidation with national banks of State banks that growth are consolidation with the have been engaged largely in lending on real estate. This situation, as you are aware, has already developed in California and I think we must anticipate that a similar situation will develop in the rest of the country, if the national banking system is to grow in the way you hope it will. If, for example, legislation should be enacted which will permit national banks to extend their branches within a determined trade area or within Federal reserve limits, the result desired by such legislation would be greatly facilitated by the amendments above suggested

In connection with the increase in savings deposits in national banks and the consequent increase in real-estate loans by these banks, I noted an item in the Los Angeles Examiner of Januray 3, of this year, with the date line New York, to the effect that "Holdings of real-estate loans by national banks of the country as a group registered an increase of \$127,000,000, or 10 per cent in 1929 as compared

with the preceding year. Realty loans approximated \$1,413,000,000."

The competition of building and loan associations throughout the country for the savings of the people is tremendously keen. The restrictions upon the national banks in the matter of lending upon real estate make it very difficult for us to compete successfully for many good loans. The competition with national banks comes not alone from building and loan associations in California, but from State banks which can lend up to 60 per cent of the appraised value for a period not banks which can lead up to 00 per the approximation of period not exceeding 10 years and without any limit upon the aggregate amount of loans that may be made by a savings department or a savings bank other than the requirement of a reserve in cash.

If amendments such as these could be adopted national banks would be helped

toward a fairer competitive position in comparison with State banks and building

and loan associations.

gs

nė 20

gs be

be

I am quite aware of the prejudice with respect to the making of real-estate loans by national banks, a prejudice holding over from a time when national banks were purely commercial banks. That condition has been enormously changed. Practically all of the larger national banks are in reality doing a departmental banking business and many of the smaller banks are taking savings deposits, though possibly not lending them on real estate. There seems to be a feeling that a national banker can lend more successfully when he is not lending on real estate, but I do not quite know why this should be the case. banker is lending daily to a yery large exrent on his judgment of the value of the realty holdings of his customers. Under the present situation the savings depositor in a national bank is really in a more precarious position than the demand depositor, due to the fact that if the bank finds itself pressed its demand depositors. can insist upon payment, while notice is demanded of a savings depositor. if this does not take place, the demand depositors seem to be a little more in touch with the conditions of their banks and withdraw their money, to a certain extent, when difficulties are encountered, while the savings depositors generally do not do so to the same extent. This means that if the bank fails the bulk of the savings depositors are left with whatever commercial depositors still are in the bank, with only the poorest assets of the bank from which they can realize.

If at the same time it could be possible to segregate the assets of the savings department and give the savings depositors a first lien upon these assets the situation, in my judgment, would be vastly improved. Loans on real estate could more readily be made and I suspect it would bring a more wholesome situation in many small banks that are now lending commercially upon real estate.

With kind regards, I am Sincerely yours,

EDWARD ELLIOTT, Vice President.

FIRST NATIONAL BANK IN DALLAS, Dallas, Tex., December 4, 1930.

Hon. Louis T. McFadden,

Chairman House Committee on Banking and Currency,

Washington, D. C.

Dear Congressman McFadden: As you, of course, learned to-day, the First National Bank of Charlotte, N. C., suspended business this morning. One of our friends there wired us that the failure was not unexpected and grew largely, if not entirely, out of the bank erecting an office building costing \$1,850,000. It appears that the capital and surplus of the bank amounted to only \$700,000 and the deposits only about \$1,700,000.

As you probably know, the banking laws in some States provide that a State bank shall not invest in a building and fixtures in excess of a certain percentage of its automatical capital and surplus. One or traverse in excess of a certain percentage of

bank shall not invest in a building and involves in excess of a certain percentage of its unimpaired capital and surplus. One or two, I recall, limit the amount to 33% per cent. I think any effort to fix a percentage lacks flexibility, but there ought to be something to restrain a national bank from doing what the Charlotte bank did, and it is my thought that Congress could very well afford to enact an amendment to the national bank act which would provide that in the event a bank should desire to expend more than 33% per cent of its unimpaired capital and surplus for a bank building and fixtures it should first obtain the approval of the Comptroller of the Currency, or if thought desirable, the Federal Reserse Board. Perhaps some penalty should be attached, such as creating liability on the part of directors who voted for such an expenditure without first obtaining the approval of the comptroller or board, as the case might be. You will recall that there is a precedent for this in the amendment to the Federal reserve act which prohibits Federal reserve banks from erecting buildings for headquarters

or branches in excess of a certain amount without the approval of Congress.

There could be no better illustration of the need of the legislation which I suggest than this case of the First National Bank of Charlotte, which put \$1,000-000 more than its capital and surplus, or, measuring it another way, more than its entire deposits, in an unliquid asset such as the building erected in this case.

This suggestion is submitted to you through no other motive than my desire to improve the banking situation of the country, a proposition in which I know that you and Mr. Pole, to whom I am sending a copy of this letter, are deeply and most unselfishly interested. Very truly yours,

B. A. McKinney.

Very truly yours,
