In order to measure the relative increase in banking resources between 1914 and 1929 in each of the 12 Federal reserve bank cities and in 4 other selected cities, also in the United States as a whole, as well as in the United States exclusive of New York City, the following table has been prepared comparing total loans and investments of all banks in each of such cities in the two years. The results, while believed to be substantially correct, can not be said to be exact, for official figures for State banks are often not available separately for individual cities (only State totals often being published). The figures given were taken from the Rand-McNally bankers' directories for July, 1914, and July, 1929, except in the case of New York City. For that city official figures as published by the Comptroller of the Currency and by the State banking department were used, due to the fact that it was not practicable to eliminate from the bankers' directory figures the assets of the foreign branches of New York City banks.

City	Total loans and investments t		Increase,
	July, 1914	July, 1929	1914, to July, 1929
United States 2	\$20, 876, 000, 000	\$58, 533, 000, 000	Per cent
Unites States, excluding New York City		45, 928, 000, 000	175
New York	3, 978, 000, 000 873, 000, 000	12, 605 000, 000	217
Boston.	744, 000, 000	2, 708, 000, 000 1, 850, 000, 000	14
Philadelphia	775, 000, 000	2, 030, 000, 000	16
Cleveland	297, 000, 000	966, 000, 000	22
Richmond	59, 000, 000	135, 000, 000	12
Atlanta St. Louis	41, 000, 000	137, 000, 000	23
Minneapolis	301, 000, 000 109, 000, 000	594, 000, 000	18
Kansas City	106, 000, 000	310, 000, 000 242, 000, 000	12
Dallas	30, 000, 000	161, 000, 000	43
San Francisco	394, 000, 000	1, 895, 000, 000	(2)
Baltimore	242, 000, 000	591, 000, 000	14
Pittsburgh Detroit	489, 000, 000	1, 083, 000, 000	12
Vew Orleans.	178, 000, 000 85, 000, 000	1, 008, 000, 000 242, 000, 000	46

¹ Exclusive of joint-stock land banks, Federal Intermediate credit banks, and Morris-plan banks; figure³

for New York City also exclude private banks.

From annual reports of the Comptroller of the Currency, exclusive of Alaska and insular possessions.

Available figures for 1914 and 1929 are not comparable, due to the fact that the published figures for the city include a large number of out-of-town branches.

Mr. Wingo. Right on that point, if I may, I would like to ask the

governor one question before we go.

In the last three years, measuring banking capital and resources by loans and investments, while there has been a large increase, yet relatively the larger increase has been in the resources of other than the independent unit banking system. There has been a very rapid trend toward group, chain, and branch banking in the last few years, has there not?

Governor Young. That is correct.

Mr. Wingo. My recollection of that table that you had here the other day of member banks shows that the independent unit banking system had about thirteen billions in loans and investments out of thirty-five billions. I checked it up the other day, and that is one thing that I intended to ask the governor about, but I failed to bring over my notes.

Governor Young. I think that was some information that was

presented by the comptroller. I have a copy of it.

Mr. Wingo. I questioned you some about it.

Governor Young. But we put in some other information that included all of the banks of the United States, and the sum and substance of it was-

Mr. Wingo. Let me have that table that is before you; I think that is it. It is Table 4, "Number and loans and investments of all member banks in each State, and of member banks that operate branches or belong to groups or chains, by States, December 31, 1929," and is marked "St. 6526."

I notice that for the whole United States, the loans and investments amount to \$35,934,000,000; for the independent unit member

banks, \$13,275,000,000.

The point I want to get at is this, that that trend has been very noticeable in the last three years, and it leads to this conclusionand whether it be wise or unwise, I am not discussing now-that, measuring the resources of banks by the item of loans and investments, the greater part of the resources are in the banks other than the independent unit banks.

Governor Young. That is correct.

Mr. Wingo. The natural tendency seems to be that way, and I am not discussing the merits of whether that is wise or unwise. But we have reached that point where, from a practical operating standpoint, the banking business of the country has already gone into either chain, group, or branch banking, or the dominating volume of it has, has it not?

Governor Young. Yes, sir.

Mr. Wingo. So under the present law your independent unit banking system is being forced out. I am not talking about whether it is wise or not, and I am not using the word "forced" in an offensive sense, but, just on account of the competition and the natural choice of those engaged in banking, the independent unit bank seems to be passing to a large extent out of the picture.

Governor Young. I would not be prepared to say that it is forced; I am rather inclined to think that it is being done voluntarily in the

greater number of cases.

1,

t-

ar,

Mr. Wingo. I am not, as I have previously stated, using the word "force" in an offensive sense, but it is that force that flows from the natural exercise of judgment of those who choose between the different types of banking. They voluntarily are going more and more into group, chain, and branch banking and less and less maintaining the independent banking system.

Governor Young. The figures show that.

Mr. Wingo. In other words, I am not talking about any improper methods being used; that is not the point; but I am just talking about the natural trend of those who are responsible for the forms of banking in the United States represented by their actual action in that type of banking in which they engage, and it shows more and more that they are going into group, chain, or branch banking, and less and less to independent unit banking.

Governor Young. Modified to this extent: In volume, yes; in

number, no.

Mr. Wingo. That is very striking. That is another point I wanted to call attention to, and then I will close. The independent unit member banks of the Federal reserve system number 7,321, and only have resources, measured by loans and investments, of \$13,275,000,000. The remaining banks, out of a total number of 8,522, have total resources, measured by loans and investments, of \$22,659,000,000.

So that the only predominance of the independent unit banks to-day is in mere numbers of the banks. There are 7,321 out of 8,522, and a little more than a thousand other banks, other than the independent unit banks, have the remainder of the \$35,934,000,000 of resources, as against the \$13,275,000,000 that the larger number of \$35,934,000,000 that the larger number of \$35,000,000 that the larger number of \$35

small independent unit banks have.

Governor Young. Correct.

Mr. Wingo. Whatever is responsible for that we are not discussing; we are just talking about the natural trend. There is nothing strange about it, measured by the experience of other countries; it is the same

story of the way they went in England, Canada, France, and Germany—it is a natural trend in all countries, is it not?

Governor Young. Every country that I recall, although I do not remember that the independent bank ever developed in Canada. I do not think it did.

Mr. Wingo. Well, they had, when we first commenced this branchbanking controversy, over 30 banking systems there. Governor Young. They were all branch systems.

Mr. Wingo. Yet they were all independent systems. Now they have gotten down to where they have 10 actual banking systems, and 3 of them dominate all 10. I do not mean that they have a majority control, but it is generally admitted that the "big three" now dominate in Canada.

I have all of those statistics on these other countries, and I will put them in the record, but at this point, in connection with a suggestion that he made and without discussing the merits of the respective systems, I wanted to show what the natural trend is in this country.

That is all.

The CHAIRMAN. The meeting is adjourned.

WEDNESDAY, APRIL 2, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'elock a. m., Hon. Louis T. McFadden, (chairman) presiding.
The Chairman. The committee will come to order.
Governor Young, have you something further to submit?

STATEMENT OF GOV. ROY A. YOUNG-Resumed

Governor Young. Yesterday it was requested that I secure and put into the record a statement of the Federal advisory council as of date February 15.

The CHAIRMAN. That will go into the record at this point. (The statement referred to is here printed in full, as follows:)

[Statement for the press. For immediate release Friday, February 15, 3 p. m.]

The Federal advisory council at a preliminary meeting yesterday made the following minute, which was delivered to the Federal Reserve Board at the regular quarterly meeting of the council and the board this morning:

lar quarterly meeting of the council and the board this morning:

"The Federal advisory council approves the action of the Federal Reserve Board in instructing the Federal reserve banks to prevent, as far as possible, the diversion of Federal reserve funds for the purpose of carrying loans based on securities. The Federal advisory council suggests that all the member banks in each district be asked directly by the Federal reserve bank of the district to cooperate in order to attain the end desired. The council believes beneficial results can be attained in this manner."

The CHAIRMAN. Have you anything further, Governor?
Governor Young. The other information will take some time,
Mr. Chairman.

The CHAIRMAN. Now, Mr. Busby, you are to proceed next.

Mr. Busby. Some days ago when the Comptroller of the Currency, Mr. Pole, was before the committee, the main argument, as I understood it, urged by him for branch banking was that many of the unit banks had failed during the last 10 years. I called his attention to the fact that four States along the Atlantic coast—North Carolina, South Carolina, Georgia, and Florida—with a population of 7% per cent of that of the whole United States, had had 729 bank failures, and that nine States in the agricultural northwest—Minnesota, Iowa, Missouri, Oklahoma, North Dakota, South Dakota, Nebraska, Kansas, and Montana—with 14% per cent of the country's population, had had 2,768 bank failures, while 78 per cent of the population had 2,157 bank failures or 28.4 per cent of failures. So, that gave us 22 per cent of the population of the country having 71.6 per cent of the bank failures out of a total of 4,925 banks which failed from 1920 to 1929.

I asked him the question whether chain, group, or branch banks located in that type of territory—that is, agricultural territory would not be subject to the same pressure in times of deflation, especially where the loans were secured almost wholly by agricultural products, stock, and other products of the farm. What is your opinion regarding that situation with reference to these bank failures, about which you know?

Governor Young. I think that the pressure would have been just as great for additional credit. I think under a branch set-up that probably there would have been greater discrimination in the

way the money was lent.

Now, I want to refer to something I referred to the other day, something that is very seldom mentioned in the causes for bank failures, and that is the tremendous loss of deposits in many of those banks. I could name a great number of them that did lose during that period at least 50 per cent of their deposits.

Mr. Busby. In what way did they lose them?

Governor Young. Lack of confidence on the part of the public; they withdrew their deposits, so that the country banker was not able to liquidate rapidly enough to pay those deposits without getting assistance from a correspondent or from the Federal reserve bank, and even with the assistance that he got from the Federal reserve bank there was great hesitancy upon his part in acquiring any new loans, and I think, coming from that territory, as you have and I have, that we both know that many of these agricultural problems could have been worked out and were actually worked out by the banks that were in position to lend additional money to bridge men over and to take care of them.

The CHAIRMAN. Will you yield there, Mr. Busby?

Mr. Busby. Yes.

The CHAIRMAN. What caused the lack of confidence, Governor

Young, that you referred to?
Governor Young. One bank fails and that always creates a lack of confidence in the remaining banks, and, in the Northwest where they failed in such great number, there was an inclination on the part of the public to withdraw the funds, hoard them, or move them into the larger centers. Now, under a branch system, where these difficulties frequently are local and not general-in other words, where you may have a drought in one section but not in another, or you may have, difficulty with the sheep industry in one place but the cattle in another place you are not having difficulty withmany of those situations can be worked out if time is granted and if additional funds are lent to the proper kind of people. I think that a branch system would enable them to do that where in many, many cases the unit banker was not in position to do it.

Mr. Bushy. Do you not think that the biggest argument for a branch system is the fact that where there are several banks in the system a run on one of the banks would not be near so likely, and, if it were made, the other banks the system could come to its rescue in a sufficient way to reestablish confidence and stop the run?

Governor Young. I will go a little further than that and say that they would have to go to its assistance, because the failure of any branch or the failure of any part of the chain naturally would tear down the whole branch system or the whole chain system, and they could not let one section of it fail.

Mr. Busby. Of course, if the distress became so general as to reach nearly every bank, as it did in the central northwest when they had 467 failures in Iowa during a 9-year period, that would affect the parent bank as well as the branches if they were all located in that territory, would it not?

Governor Young. It would, Mr. Congressman, but the probabilities are that if we had a branch system established, say 20 years ago within those little trade areas, that they never would have accumulated many of the loans that they did accumulate. That is why many of those unit bankers in that territory have been able to stand up, because they did resort to diversification.

Mr. Busby. You stated the other day that undoubtedly there was great depreciation in the collateral used as a basis for loans in that section and all sections of the country, or words to that effect, I believe?

Governor Young. Yes, sir.

KS

ır s,

p

e

Mr. Busby. You stated in so many words that undoubtedly the Federal reserve system would have taken in, after having made due examination of these banks and their collateral, as many as 2,500 of the banks which later failed had they applied in 1917 or 1918 for membership in the Federal reserve system.

Governor Young. I made this statement, that there were 3,000 nonmember banks in the ninth Federal reserve district in 1917, and that if they had applied for membership in the Federal reserve system we probably would have accepted at least 2,500 on the information that we had in reference to those banks at that time, or, I will put it this way, on the information that we thought we had.

Mr. Busby. This is about what I wrote down at the time you were here before; that from what you, the Federal Reserve Board, knew about the banks in the agricultural section, and your opinion of their solvency, you were sure that 2,500 of those which had failed during the last 10 years would have been admitted as members of the Federal reserve system.

Governor Young. Well, if I stated it that way, I misstated it, Mr.

Congressman. I would like to refer to the record.

Mr. Bushy. I am not positive that these are your exact words, but I think I was taking down about what you said as nearly as I could follow you while you were stating it.

Governor Young. I will attempt to make that clear.

Mr. Bussy. I just called your attention to it for that reason.

The Chairman. I would suggest that in order to clear this up, the exact statement of just what Governor Young did say on this particular subject be placed in the record.

Mr. Busby. It is already in the record, and I think it would be well for him to cover this again. If I did not get it right, it is not due to any intention to mislead, but merely for the purpose of getting

more light as to the attitude of the Federal Reserve Board.

What I want to get is whether or not the Federal Reserve Board and the highest banking authorities in the country believed that the banks to which we referred and about which we have been talking were sound and were being conducted in a proper banking manner, and, of course, any explanation or any light that the governor may be able to give us on that subject is all that I am asking for.

Governor Young. That will require a little explanation, Mr.

Congressman, which I am very glad to give.

You are familiar enough with country banking as it was conducted for a great number of years to know that such a thing as a statement of a borrower was very, very seldom ever given to a country banker. The country banker felt he knew everyone in the community and knew all about their affairs, and he lent on that knowledge or that assumed knowledge. That was the information that the examiner had, to pass upon the assets of that bank, simply what the banker told him. I do not mean by that that the banker was dishonest; he really thought that he knew all about that bank; he would tell the examiner what he knew about a note. It would appear like good credit and the examiner would pass it.

From 1918 on, however, country banks proceeded to secure statements from their borrowers, so that by 1921, in the Northwest, it was a general practice both with member and nonmember banks to secure statements from all borrowers. Those statements were not always accurate as to values. The farmer in good faith would list 160 acres of land at \$200 an acre—

Mr. Bushy. Well, now, let me interrupt you there. The fact was that the market value of those 160 acres in all probability was \$200 an acre at the time he listed it.

Governor Young. Probably.

Mr. Bussy. And is it not a fact that conditions could have changed so much within a year that that same land on the market would not have brought more than 50 per cent of the price that it was listed at a year before?

Governor Young. Yes.

Mr. Bussy. That was really the trouble with the banks in that territory and in all agricultural territory, to a large extent, was it not, that the deflation brought down the values and left the loans without sufficient security?

Governor Young. Well, that came with too liberal lending in the first place. What I am attempting to point out, if I can just go a little bit farther, Mr. Congressman—

Mr. Bussy. I wanted to cover several other things, and wanted to abandon this line.

Governor Young (continuing). Is that previous to 1919 national-bank examiners and Federal reserve authorities had very little to go on other than the word of the country banker, and I am not accusing him of anything dishonest at all; it may be that he thought he knew all about this territory when he really did not, and under those conditions, with the reports on those banks, we probably would have accepted many of them for membership. After 1920 or 1921, when these lines of credit were supported by statements of the farmer, and the banker learned that the farmer not only owed his bank but owed maybe another bank and maybe three or four banks, and was liable in many ways as an indorser, that paper had an entirely different complexion, so that after 1921, had these same 2,500 banks applied to the Federal reserve for admission, probably a great number of them would not have been admitted.

Shiblab

Now, do I make my point clear?

Mr. Bussy. I wanted to come to this, and that is the idea of a trade area—of a branch banking system being made secure by operating in a trade area. Had a branch banking system with the same view that the Federal Reserve Board had concerning the solidity

or stability of many of these banks operated in the territory of the central northwest and been subjected to the same deflation which Was brought about, according to my notion, largely by reason of the action of the Federal Reserve Board in 1920, especially with regard to lands, would not the branch banking system confined to that trade area have received a considerable shock if it had not gone under just like the individual banks did?

Governor Young. To a degree, Mr. Congressman, I think it would have, but let us follow that in actual practice. Everything is a trade

area

d

t

Г

r

d

S

0

a.

1

0

Ó

TO V

1

1

Mr. Busby. That is my idea about it.

Governor Young. A little community, say in South Dakota, finally got up to a place where it had inhabitants numbering 200 or 300, with a trade area for a radious of 5 or 10 miles. After it became that trade area, the unit banker entered into that community and That trade area, in turn, was connected with another did business. trade area.

Sometimes it is well to illustrate by specific example, and I will in this case by taking Aberdeen, S. Dak. Aberdeen, S. Dak., is a trade area, I suspect, for a distance of from 50 to 75 miles north, south, and west, and possibly 25 miles east. Those banks did business with Possibly 200 little banks in that neighborhood. It was the customary practice, however, of the Aberdeen bank to lend those smaller banks money for seasonal requirements in the fall of the year, and it was always paid back. In 1919, because of railroad conditions and many other factors, they were not paid back, and, in fact, many of these little bankers went to the Aberdeen banker and told him all of their troubles and asked what they should do and asked for advice and also asked for more money. The Aberdeen banker lent more money. In 1920 that did not come back, and more money was required. Obviously the Aberdeen banker proceeded to look into many of these little units, and, while he could not operate them, he could state the conditions under which he would lend additional money to them, which he did, but even that was too small, and many of these little banks in that neighborhood, and, say, 50 other communities like it in the Northwest, found it necessary to go to their Minneapolis and St. Paul correspondents and they in turn found it necessary to go to the Federal reserve bank of Minneapolis, and, for the years 1920, 1921, 1922, 1923, and 1924 they borrowed very heavily, so much so that the Federal reserve bank at Minneapolis, If I remember correctly, was a continuous borrower from other Federal reserve banks for almost a period of a year and a half.

Now, there was a larger trade area centering in Minneapolis and St. Paul. I believe, Mr. Congressman—and our hindsight is always better than our foresight—that if branch banking had been permitted in that little trade area of Aberdeen 20 years ago many of these difficulties would have been avoided. However, that is an opinion. I believe to-day that that small trade area has passed; there has been a development away beyond that. It is almost beyond district lines,

but it is confined pretty well to trade areas.

You can not define a trade area by mileage. It might be 50 miles from one community; it might be 100 miles from another community; and, as it is in the Northwest, it stretches almost two-thirds of the way across the United States.

Mr. Busby. All right. In that connection, I want to read just a few lines from a book, Reserve Banks and the Money Market, by Mr. W. Randolph Burgess, assistant Federal reserve agent for the Federal Reserve Bank of New York, which book has a foreword by Mr. Benjamin Strong. On page 1 he says, "To reap the benefits of nation-wide branch banking this country would have needed banks with branches so far separated as the distances between London and Moscow, Constantinople and Paris, or Madrid and Vienna," giving me an idea as to what he conceives to be the proper "trade area" for branch banking.

What do you have to say in connection with his view as to the extent to which branch banking ought to be operated if it is going to be

worth while and effective in this country?

Governor Young. That, Mr. Congressman, is what I have been attempting to determine in my own mind, the trade area that it should be confined to. I have just stated that I thought it would have been a better development in this country if it had been confined to that little trade area that I recently described surrounding Aberdeen, S. Dak., but it has now gone beyond that, and what limit should be placed on that I do not know at the moment. I hope that this committee can get something that will define that area.

The CHAIRMAN. Will the gentleman yield for a question?

Mr. Busby. Certainly.

The Chairman. Governor, when the Federal reserve system was established, we created 12 districts. Those were sort of trade areas, were they not?

Governor Young. They were.

The CHAIRMAN. And has the idea been abandoned that the tying up of the member banks with the Federal reserve bank for the district can not serve the public satisfactorily and thus observe a unit

system?

Governor Young. There are some difficulties with that, Mr. Congressman—for instance, in Kansas City. Kansas City only has a very small strip in the State of Missouri that belongs to the Kansas City Federal reserve district. Obviously their trade area must extend into the Missouri territory much farther than the Federal reserve has outlined. You will find that in all the districts there is an overlapping. For instance, in the ninth Federal reserve district, where northern Michigan and northern Wisconsin have been assigned to the Minneapolis district, both Chicago and Minneapolis serve a trade area in that territory.

The CHAIRMAN. Is not that the fault of the laying out of the districts, and could not that be corrected by a rearrangement of

t)

ad

I

6

tl

D)

gi

W

thN

artv

districts?

Governor Young. I do not believe so.

The Chairman. Then apparently there are defects in the theory which was the basis for the establishment of the 12 Federal reserve distrcts.

Governor Young. No, I do not think so. There will always be

overlapping.

I will put it this way, Mr. Chairman, that the 12 Federal reserve districts, with the 25 branch districts, come just about as close as it is practicable to define a trade area at the present time.

Mr. Busby. I understand Mr. Seiberling wishes to ask a question.

Mr. Seiberling. I just wanted to ask you one question. I find that there is objection in my city to branch banking because the plan that you have would enable a bank in Cleveland to put a branch down in Akron, where we have all the banking facilities that we need. Would it be a feasible thing to have a bill passed to provide that branches might be put in trade areas but not in any county where they had a city with a population of, say, 100,000, or something of

Governor Young. That branch could not be put in Akron except

with the approval of the Comptroller of the Currency.

Mr. Seiberling. But he might approve it.

Governor Young. And I think that with the experience that we have had, the probabilities are that the Cleveland bank would not go into Akron territory and establish a branch, but they would probably associate or affiliate with some established bank in Akron and establish that as a branch.

Mr. Seiberling. Would such a provision as I have indicated be a

feasible one, in your judgment?

Governor Young. I have thought of that, but have not arrived at any conclusion about it yet.

Mr. SIEBERLING. Thank you, Mr. Busby.

Mr. Strong. May I ask a question? It would be rather dangerous to rest upon the presumption that the Cleveland bank would not be allowed to put a bank in Akron, or Dayton-

Mr. Seiberling. Or Canton.

Mr. Strong (continuing). As long as we had a comptroller who

believed in branch banking, would it not?

Governor Young. Well, can we not take the results of the McFadden Act, Mr. Congressman? You recall when the McFadden Act Was before Congress, everyone believed that there would be a branch established on every corner the same as is the case with chain stores.

Mr. Strong. I did not.

Goveror Young. That was one of the arguments that was used. Mr. Strong. I can not speak for anybody else, but I did not

believe in any such proposition as that.
Governor Young. That was one of the arguments made at the time. However, that has not developed, and, in so far as the McFadden Act is concerned, I can not help but feel that there has been no abuse in connection with the establishment of branches in the larger centers of the United States.

Mr. Strong. Has not the argument been made that the bankers are doing now indirectly what the law prohibited them from doing directly in establishing groups and chains all over the United States? If they are going to keep it up, in two years they will have them in

every State of the Union.

Governor Young. I assume that those groups are operating within

the law

Mr. Strong. The intention of the law was that they should not Proceed in that way. It was said here at the time that if we would give the national banks the right to have branches in the States where they permit branch banking, and limit them to the cities where the parent banks are located, that that would satisfy the situation. Now we are told by men who believe in branch banking that group and chain banking are developing to such an extent that within two years they will be in every State in the Union and Congress

will then feel that it is desirable to go to branch banking to avoid

the more undesirable group and chain banking.

Governor Young. It appears to me, Mr. Congressman, that that is what you are confronted with right at the moment. These groups and chains have developed; they have been in existence for 30 or 40 years.

Mr. Strong. Only a few of them for that length of time.

Mr. Bushy. I would like to go ahead whenever you get through with that, Mr. Strong, as consistently as I can, because I want to get through.

The Canadian branch-banking system is such that the banks in Canada may establish a branch in the most remote part of the

Province, is it not?

Governor Young. I am not familiar with the law, whether they have to secure permission from the Government, or whether they

just establish it.

Mr. Bussy. I am not talking about how they do it, but the law permits any one of the 34 banks there to establish branches wherever they care to by complying with the proper requirements of the law-Governor Young. That is my understanding.

Mr. Bushy. So that there is no attempt to define a trade area in branch banking in Canada?

Governor Young. That is correct.

Mr. Bussy. I read in this same volume of Mr. Burgess's that about 20 years ago the writer took part in a debate on the subject," Resolved, that the United States should adopt the Canadian banking system.

Did it ever occur to you that we would be better off with our bank ing arrangements if we had the Canadian system instead of the American system?

Governor Young. No; I would prefer to see a central bank of issue,

which Canada has not.

Mr. Bushy. The Canadian banks issue what we call paper money in this country without putting up any deposit or reserve whatever

back of that to secure it, do they not?

Governor Young. I do not think so. It is secured by gold up to \$ certain point, and, for seasonal requirements, the Government permits them to issue up to a limited amount against securities, if my memory of the law is correct.

Mr. Busby. I am not particularly interested in following that. Governor Young. It is a secured currency, I am sure, Mr. Congressman.

Mr. Bushy. Now, in Scott on Money and Banking, I read this on page 240:

After several bank failures in Canada-

About 1880-

agitation for a radical modification of the banking system was revived, and it was again proposed that the system in vogue in the United States should be introduced

So that the Canadian system, with all of its advantages of branch banking, is not to them the ideal system, as I understand their attitude toward banking?

Governor Young. I can not answer for the Canadians. I know that on different occasions they have investigated the Federal reserve system. Two years ago Governor Harding of the Federal Reserve

Bank of Boston appeared before the Canadian authorities and gave them a very complete and very accurate description of the Federal reserve system. What action has been taken since then I do not know.

Mr. Bushy. In order that we may have a general conception of the field in which banking operates, and the necessity for banking, the national wealth of our country is estimated around \$300,000,000 is it not, in round numbers?

Governor Young, Yes.

Mr. Bushy. I notice that Mr. Pole states in the 1929 report of the Comptroller of the Currency that the bank assets are about \$72,000,-000,000, so that the bank assets represent about 24 per cent of the national wealth. In the same report he also states that the loans and investments of banks in this country are practically \$58,000,-000,000, and that the other \$14,000,000,000 represent bank shares and other assets of the banks.

What I am coming to is this, the usual growth of our business activities in this country increases its need for credit, according to actuaries and economists, amounts to about 4 per cent a year, but In 1928 business developments need for credit amounted to an

Increase of only about 3 per cent.

Mr. Seiberling. Three per cent of what?

Mr. Busby. Three per cent of the bank credits outstanding; 1928 was a very active year in stocks and bonds, and in speculation, and I am coming now not to all the loans made by the banks in the country, but to brokers' loans made on the New York Stock Exchange, and I am reciting more than perhaps I ought to in order to get to the Point that I want to talk about.

Taking the reports of all banks in the United States, the combined loans and investments on January 1, 1928, total \$55,450,000,000; on anuary 1, 1929, they were \$58,206,000,000. That was an increase

In bank loans of \$2,816,000,000, or an increase of 5.1 per cent increase. Now, as to loans by banks "for the account of others," and that Type of loan carries no reserve whatever, does it—it is simply put out and called in?

Governor Young. That is correct.

Mr. Busby. On January 1, 1928, those loans amounted to \$1,627,-000,000, but by January 1, 1929, loans made by banks for "account of others" were \$3,361,000,000, or an increase of \$1,734,000,000, more than a 3 per cent increase in the Nation's bank credit—in that type of loan, with the 3 per cent increase in the Nation's need for credit for the country and adding it to the 5.1 per cent increase of credit made by banks in the regular channels of banking loans, there was more than an 8 per cent increase in credit as against a 3 per cent requirement for credit for business needs. That gave a certain inflation of credit of more than 5 per cent over and above the increase in the need for credit by business. Is that not true?

Governor Young. I have tried to follow you very carefully, Mr. Congressman. Let us go back to one figure you gave, or possibly two. You figured the increase in brokers' loans between January 1, 1928, and January 1, 1929, for the account of others, as \$1,700,000,000?

Mr. Busby, Yes. Governor Young. And, figured that is 3 per cent of the total wealth of the country?

Mr. Bushy. I will state it this way: So the necessity for credit on the bank credit outstanding was 3 per cent, but the credit extended was 8 per cent, and, if that be the situation, would that not increase inflation of credit tremendously and tend to cause just what happened in the stock market in October, 1929?

Governor Young, I think it did. I am not subscribing to your

figures, but I think they are approximately correct.

Is not that right, Doctor Goldenweiser? Doctor Goldenweiser. I think so.

Governor Young. There is a natural increase each year of about 3 per cent, I believe. Is not that about the normal increase?

Doctor Goldenweiser. Increase of credit?

Governor Young. Increase of credit.

Doctor Goldenweiser. They usually estimate it from 4 per cent

to 5 per cent.

Mr. Busby. Going along further, brokers' loans, call loans, on September 26, 1928, were \$4,435,000,000. On the same date in 1929 they amounted to \$6,671,000,000, a considerable increase. On October 2, 1929, they jumped to \$6,804,000,000, the peak of brokers' loans.

Now, I want to divide those into the sources from which they came, so that we can understand the operation of money in New York City

and where it came from.

I find that brokers' loans made by New York City banks on January 5, 1929, were \$837,000,000, and on September 25, 1929, the New York banks had increased their loans to \$1,024,000,000, an

increase of \$187,000,000 in that short time.

Now, the second source from which the call loans came was from the New York banks for out-of-town banks, and that relates specifically to instances such as Mr. Dunbar referred to the other day when he said that one of his city banks of New Albany, Ind., sent \$200,000 to New York banks to loan on call because of the splendid rate of interest.

The New York banks, were loaning for out-of-town banks, on June 5, 1929, \$1,513,000,000, and on September 25, 1929, \$1,876,000,000, an increase of \$363,000,000 in three and a half month's time.

Governor Young. May I make a slight explanation of that particular figure? That may represent loans of country banks to that amount and it may not. For instance, if I am a customer of a bank in Chicago, and I elect to lend \$1,000,000 on call in New York, I instruct my Chicago bank to charge my account and to lend that amount. When that goes to New York, the transaction is made for the Chicago bank and may be reported in these figures as lent for out-of-town banks when, if you were to trace the transaction back, you would really find that it was lent for a customer bank. Those figures we can not separate. So that may have some bearing on this increase.

Mr. Busby. I am glad to have that explanation.

In coming to the third source of call loans, on June 5, 1929, the loans made through New York banks for the account of others were \$2,934,000,000—

Governor Young. \$2,923,000,000.

Mr. Busby. And on September 25, 1929, those loans had increased to \$3,860,000,000.

Governor Young. Correct.

Mr. Busby. Or, in three and a half months, this increase in call loans made by other than banking institutions was \$926,000,000, so

that in percentages the call loans shortly before the break in the market stood as follows: The New York banks were lending 15 plus per cent of the money; the banks outside of New York City were lending about 28 per cent of the money; and individuals, corporations, and trust companies were lending 57 per cent of the call money in New York City; and that 57 per cent had no reserve whatever back of it, did it?

Governor Young. None whatever.

Mr. Bussy. Now, in the event that the market should become shaky and in the event that the individuals who had made call loans wanted to get their money, what could be done by investors in stocks when called on for a repayment of these loans except to throw their securities on the market or have them supported by the banks?

Governor Young. It was either one or the other. Mrs. Pratt. May I ask a question?

Mr. Busby, Surely.

Mrs. Pratt. Did that cover entirely call loans?

Governor Young. There were some time loans aggregating about \$600,000,000.

Mr. Bushy. I believe I am dealing with call loans altogether. Governor Young. No: both time and call loans, but the time loans are very small.

Mr. Bussy. The time loans about that time ran only about ten or twelve per cent of the total of brokers' loans, did they not?

Governor Young. I think that is approximately correct.

Mr. Busby. So you can see how little of that amount was stable and fixed and how much of it was liquid and could be slipped out from under the stock investors in a days' time and leave them stranded

in the air, so to speak.

Now, I beg your pardon for calling attention to so many figures, but banks deal with figures and the only way we can get at con-

clusions is to come along down this line.

Now, the banking situation in the country as developed during the last two years especially has been conducive to the result we have just described here, has it not?

Governor Young. It has permitted it, but I think, generally speaking, the bankers of the country discouraged it. Competition

and many factors forced them to do-

Mr. Bushy. But many of the banks in the country have established very extensive trust and investment subsidiaries which have brought to the front many of the stocks which went on the market and increased the number of listings on the New York Stock Exchange. will add to that question this, so that you can answer it all together: Has not the "right to purchase" shares issued to members of these Inancial institutions been a source of great inflation in stock issues?

Governor Young. Generally speaking, and I am talking a good deal from memory, Mr. Congressman, the banks in the country did not participate in that inflation. Now, there are exceptions to every

statement, of course.

Mr. Busby. Banks now operate many kinds of businesses. I use the Bank of Italy again as an example. The best information we have here is that the Transamerica Corporation, which is the controlling body of all of the Bank of Italy interests, has these different activities in hand-banking, securities, dealing in realty, security underwriting,

holding company, dealers in mortgages, farm loans, both joint-stock land bank loans and the ordinary farm loans, fire insurance, and, in fact, practically every business activity that our country deals with in a large way. Now, does it not strike you that a bank interested in the development of all of those lines, many of which presuppose the issuance of stocks that are eligible for listing on the New York Stock Exchange, tends greatly to increase the amount of listings?

Governor Young. Well, the stocks that you have mentioned so far, Mr. Congressman-land bank bonds, insurance stocks, Transamerica, and the various ones that you did name, are not listed on the New York Stock Exchange, I think, and I question very much whether any of the loans represented by the brokers' figures that you have

cited cover any of those securities which you mentioned.

Mr. Busby. How about securities underwriting and the activities

that the underwriting business develops?

Governor Young. Those credits covering underwritings of bonds and others are included in those brokers' figures. To what extent I do not know, and I do not think anyone else knows. It is extremely difficult to get that information. As a guess, however, I would say that it represents a very small percentage of it in so far as bonds are concerned. Obviously when the larger corporations that were listed on the stock exchange issue rights and those rights were subscribed and paid for, much of the credit extended was represented by this increase in brokers' loans.

Mr. Busby. A few days ago I ran across an article written by Lawrence Stern & Co., investment bankers of Chicago and New York, in which investments in bonds are shown in the aggregate over a 10-year period and the investments in stocks are shown during the same period. These are reliable people that I quote from, are they

Governor Young, I assume so.

Mr. Busby. I say that with a view of asking that these figures may be inserted in the record for the information of those who may want to refer to them later.

The CHAIRMAN. Without objection, that will be placed in the

record.

(The article referred to is reproduced below.)

PROSPERITY SHOWN BY INVESTMENTS-GROWTH OF PUBLIC PARTICIPATION IN NEW FINANCING IS ANALYZED

CHICAGO, March 26.—A striking indication of the rapid growth of wealth and prosperity in the United States is found in the constantly increasing amounts invested annually by the American public in new securities. Such investment for the past 10 years has totaled more than \$72,000,000,000, according to a statistical survey just completed by Lawrence Stern & Co., investment bankers of Chicago and New York.

Significant of the rapid growth of interest in securities, the survey pointed out, is the fact that while in 1920 the annual volume of investments was only 5 per cent of the national income, in 1929 annual security purchases had risen to 13 per cent of the estimated national income.

INVESTMENT AND POPULATION

"A comparison of the growth of security buying with the growth of population," said the survey, "furnishes an equally striking illustration of the increase in the securities market. The 1920 total of new security issues represented an annual per capita investment of only about \$36.50, whereas in 1929 the annual

investment in new securities per capita had risen to approximately \$96.50. In other words, new securities absorbed by the American public in 1929 were equiv-

alent to nearly \$100 for each man, woman, and child in the country.

"According to recent estimates, there are about 17,000,000 investors in the country, so the per capita share among actual investors would amount to about \$600 in 1929. It also is interesting to note that available income tax figures show the country have incomes of \$5,000 or show that while only 936,470 in the entire country have incomes of \$5,000 or more, almost 20 times that number have had the vision and confidence to lend their savings to the furtherance of the Nation's industrial and commercial

importance.

"Expressed in terms of volume, the increase in new securities purchased by the increase in the 10-year period—from an annual increase." investors shows a gain of 190 per cent in the 10-year period—from an annual total of about \$4,000,000,000 in 1920 to more than \$11,500,000,000 in 1929.

"Except for slight declines in the years of 1925 and 1926, there has been a gradual increase each year in the volume of new securities sold. Since 1926 a Yearly average of more than \$10,000,000,000 in investment capital has been poured into new stocks and bond securities, climaxed by the new high record established last year.

NEW SECURITIES

"While the relative importance of stocks as investment media has increased in recent years, bond issues comprised 74 per cent of the total of new securities sold during the 10-year period studied, 1920 to 1930, inclusive. Bonds have constantly led stocks in popularity until 1929, the first year in history in which stock issues exceeded bond offerings.

"Since 1922 the volume of stock financing has been increasing—in that year only \$623,299,000 in stock issues was sold out of a total of \$5,239,000,000 securities offered. Gradually increasing stock investments, however, reached \$3,575,000,000 in 1928 and then almost doubled in volume in 1929, reaching the high Point of \$6,865,000,000 and exceeding the bond offerings by more than two

billions of dollars.

That the excessive stock offerings in 1929 represented an abnormal condition seems to be proved by the fact that immediately following the stock market decline in November, a preponderance of bond offerings was again established and has been consistently maintained ever since. Bond financing has long been the favorite method of providing capital for the country's business and industrial growth and continues to carry a strong appeal to the conservative investor.
"So far in 1930 the bond volume has been substantially in excess of 1929, new

offerings in the first two months of the year having totaled over \$1,200,000,000, as against \$850,000,000 in the same period last year—an increase of nearly 45

per cent.

Ever since the Liberty loan campaigns the volume of bonds absorbed by the public has been gradually growing. For the 10-year period, 1920 to 1929, aclusive, investors have purchased \$53,156,383,000 in bond issues.

TREND OF FINANCING

"In the same period the total of stock issues was but \$19,003,738,000-more than 60 per cent of which were purchased by investors during the last three years. The following compilation shows the trend of new security financing annually during the 10-year period, 1920 to 1929, inclusive:

dente and the second of the second of	Bonds	Stocks	
	\$2, 938, 964, 000 3, 924, 429, 000 4, 615, 870, 000 4, 233, 129, 000 5, 482, 633, 000 6, 183, 921, 000 6, 183, 955, 000 6, 397, 657, 000 4, 820, 864, 000	\$1, 071, 984, 000 867, 010, 000 623, 992, 000 746, 439, 000 886, 286, 000 1, 310, 971, 000 1, 772, 000 1, 788, 906, 000 3, 570, 979, 000 6, 865, 579, 000	

Mr. Busby. I have called your attention to these figures which, of course, you do not vouch for, but which, if correct, would show, would they not, that our system of banking or the disposition of the public or some other unmentioned reason has caused a considerable increase in the buying of stocks and a disposition to disregard the buying of bonds?

Governor Young. I would say that it was the disposition of the public, and that that prevailed until October of 1929; and, since December, I have not the figures, but I would not be at all surprised

if it would show that they were turning back to bonds.

Mr. Busby. Bonds are more stable and a sounder investment than stocks, are they not?
Governor Young. I would say so; yes.

Mr. Busby. Banking circles so regard them, do they not?

Governor Young. They do. A bond is usually a secured obligation. A stock is an equity security, as a rule.

Mr. Fort. In some companies the bonds are not as good as in others.

Governor Young. That is true. There are exceptions to every statement I make.

Mr. Busby. I would like to call attention, just for the purpose of placing it in the record, to a statement in the report of the president of the New York Stock Exchange issued in 1929, wherein he says, on pages 24 and 25, that the bonds listed on the New York Stock Exchange in 1929 amounted to \$47,379,000,000 and the stocks listed amounted to \$67,474,000,000, a total of \$114,851,000,000 in listings on the New York Stock Exchange for 1929, an increase over 1928 of \$28,240,000,000, or 33 per cent. I do that for the purpose of show ing the disposition, either under our present banking system or for some other reason, on the part of the public to get into that type of transaction which most of the people in this country believe to be almost wholly a gambling proposition instead of an investment proposition.

Governor Young. Mr. Congressman, I would like to call attention, in connection with that point, to this: I think you said that the listings on the New York Stock Exchange now were \$140,000,000,000,

or were in January?

Mr. Busby. \$114,000,000,000 on January 1, 1929.

Governor Young. Well, let us take January 1, 1929; there was \$114,000,000,000 worth of securities, all paid for except \$5,330,000,000 represented by brokers loans at that time, or, going a little beyond that and taking all the security loans by all the banks, you bring it up to \$7,800,000,000. It illustrates the tremendous buying power of the American public.

Mr. Busby. I realize it.

Governor Young. When you figure that over 90 per cent of all of

these securities are paid for.

Mr. Busby. Now, that brings us back to this: Is it not a fact that this buying power of the public has been brought together and centered in New York and that that was largely responsible for the distressed conditions in many other sections of the country? In other words, did not the New York Stock Exchange siphon the money out of all other sections of the country to that one center, to the great detriment of business and, in many cases, to the absolute destruction of business?

Governor Young. I would not put it quite as strong as that, Mr. Congressman. The entire banking structure of the country had fifty-eight billions in loans and investments, of which the banks, at the peak before the crash, had loaned about two billion and a half. That is about 5 per cent.

half. That is about 5 per cent.

Mr. Busby. I know that down in my State you could not sell municipal, county, or State 6 per cent bonds to any advantage at

municipal, county, or State 6 per cent bonds to any advantage at all, because the money had all been taken out to be used in operations on the New York Stock Exchange, not with a view of getting dividends but with the hope that the stocks would go up in price and that the buyers could get out from under them at a profit, and leave them with somebody else.

Governor Young. That was the general feeling with many people

in the United States.

Mr. Bushy. Do you not think that a banking system that will encourage that condition is not to the best interests of the country as a whole?

Governor Young. Well, I take the other view, Mr. Congressman, that the banking interests of the country, generally speaking, dis-

couraged that.

Mr. Bushy. When those same banking institutions have trust subsidiaries and bond-selling syndicates organized under their control, do you not think that those were the direct causes of the overissuance of bonds that were listed on the New York Stock Exchange?

Governor Young. Bonds or stocks? Mr. Busby. Bonds and stocks.

Governor Young. To a degree; yes.

Mr. Busby. In other words, if these syndicates did not develop the business they are in, there would be no profits in their operations; and was that not involved at that time as a buying factor?

Governor Young. Correct; but I think we will all agree that the distribution of bonds through independent houses or any selling

organization is all right; I mean good bonds.

Mr. Bushy. Yes; I think so; but will you not also go far enough to say that many of the stocks listed on the New York Stock Exchange never paid a dividend, and that many of them never will pay a dividend to the buying public?

Governor Young. Well, I am not familiar with the details of the stock, but I will just accept your statement as an accurate one.

Mr. Bussy. One other thought. There is a great tendency in this country among the bigger banking institutions to combine with other big banking institutions and make still bigger banking institutions, is there not?

Governor Young. That is true in the larger centers.

Mr. Bussy. A list given out by the New York Times a few days ago contains 12 banks throughout the world 5 of them in the United States, with total resources of more than \$20,000,000,000. What do you have to say with regard to there being a disposition among the banking interests of the world to bring their operations together in such a way that will unify the banking activities of the world into one general or great system of financing?

Governor Young. I believe it is impossible. Mr. Busby. You believe it is impossible?

Mr. Busby. Well, is it not a fact that the Federal reserve system of our country has been operating, within recent months, so as to assist the banking interests in England?

Governor Young. Not that I know of.

Mr. Busby. Has it not maintained a discount rate favorable to the Bank of England, so that the Bank of England might build up its gold reserves?

Governor Young. The Bank of England has preceded the Federal reserve systen for a period of four or five months in discount rates. Mr. Busby. That is what I speak of. Has it not always main-

tained-

The CHAIRMAN. If you will pardon an interruption, I was going to suggest that we have matters in the House that are of importance to all of us, and perhaps we had better quit at 12 o'clock. I suggest that we adjourn at that time.

Mr. Busby. I can suspend at any time, Mr. Chairman.

The Chairman. Well, I suggest you go ahead until 12 o'clock. Mr. Bushy. Has it not always maintained a discount rate that gave the Bank of England an advantage of one-half of 1 per cent

until recently, and would not that situation naturally tend to build

up the Bank of England's gold reserve?
Governor Young. It would under normal conditions, with the free flow of gold between the countries. The situation that existed from, I am going to say, January 1, 1928, until October, 1929, a period of approximately 21 months, was such that the discount rate had but little effect. The call rate was the controlling factor.

I should like to put a little something else in the record here; that is, when you refer to brokers' loans, many of those were for foreign

account.

Mr. Bushy. I see, but they affected our stock market just the

same, nevertheless.

Governor Young. Doctor Goldenweiser calls my attention to the fact that the Bank of England's discount rate is below our rate.

Suppose you make that statement for the record, Doctor Golden-

Mr. GOLDENWEISER. The Bank of England's discount rate was below the New York discount rate from July 13, 1928, until February 7, 1929.

Mr. Busby. Now that condition existing has enabled the Bank of England to build up the best gold reserve that it has had for some years, has it not?

Governor Young. I think their gold holdings have been much

t

fi

b

S

b

higher at different times.

Mr. Goldenweiser. They have been losing gold.
Governor Young. They have not accumulated any great amount of gold during the last five months. They are apparently satisfied

with their position.

Mr. Busby. Two nights ago, Mr. James G. MacDonald, who talks on the international stituation, especially with regard to finance, spoke on the Bank for International Settlement. He made the statement, that shortly after its organization, \$9,000,000,000 in German bonds would be turned over to the Bank for International Settlements-which is located in Switzerland and will be managed by 25 individuals, and those bonds are to be sold to the public throughout the world to finance Germany's reparations. I will ask you if you have given any study to the preliminary steps that have been taken to organize this international bank.

Governor Young. I have.

Mr. Busby. That is about the amount of German bonds it will undertake to handle, is it not?

Governor Young. Yes.

Mr. Busby. He also stated that the New York market will be ex-. pected to take a considerable share of these bonds. Do you know whether or not that is true?

Governor Young. They expect the New York market will absorb

some.

Mr. Busby. The New York market is the greatest market in the world to-day for stocks and bonds, is it not?

Governor Young. I think so; yes, sir.

Mr. Busby. When the New York market takes those bonds, what will be the natural course, in a banking way, for it to take with respect to them?

Governor Young. They will be taken by private or public sub-

Scription, I suspect.

Mr. Busby. Well, is it your opinion there will be any limit to which New York will be supplied with those bonds?

Governor Young. Well, they can not take them, Mr. Congress-

man, any faster than the public will take them.

Mr. Busby. In other words, as fast as the American public will absorb them by purchasing them, bonds will be supplied to the New York banks or the New York bond market for the public in America, will they not?

Governor Young. I think there will be many restrictions on that. Obviously on one would care to borrow the entire amount at once.

It will be borrowed as and when needed.

I think the initial offering that has been suggested is in the neighborhood of \$300,000,000 of which this market will be expected to take \$100,000,000. That is nothing but gossip, however.

Mr. Busby. I understand.

Governor Young. Our people have figured out that the maximum that could be out at any one time, under the reparations settlements, will be in the neighborhood of \$2,000,000,000. Is not that correct, Doctor?

Mr. Goldenweiser. Yes, sir.

Mr. Busby. I suppose it is generally understood that the New York bankers have loaned billions of dollars to the European governments and European nationals and those loans are outstanding at the present time. Have you any information on that?

Governor Young. I have not, but I can get that. Mr. Busby. Would you mind, if the chairman thinks this is proper, furnishing us, for the record, the amount of loans made by American banking institutions to European government and European nationals, so that we may see something concerning the status of the private banking condition between our country and the countries in Europe?

Governor Young. That would cover municipalities and industrial concerns, or any bond issues floated-

Mr. Busby. Due to be repaid to our people.

Governor Young. I think those figures can be obtained.

The Chairman. Without objection, they will be inserted in the record at this point.

(The figures referred to are printed in full as follows:)

INTERNATIONAL CAPITAL POSITION OF THE UNITED STATES

Following is a brief statement of the best available estimates of the international capital position of the United States at the end of 1928, the latest date for which figures are available, based on the publication of the Department of Commerce, entitled "The Balance of International Payments in the United States in 1928." It should be noted that these figures are in the nature of estimates—

[In millions of dollars]

The second secon	Due from abroad	Due to abroad
Securities (excluding war debts) Deposits and short-term loans. Liability on account of acceptances	13, 555 797 779	4, 181 2, 803 53
	15, 131	7,037

Mr. Busby. As fast as the reparation payments are made through the Bank for International Settlements what would prevent the funds from being applied as credits to the countries to whom they should be paid and then passed over to liquidate the obligations of those countries to the international bankers and the American lenders of those countries?

Governor Young. If I correctly understand your inquiry—Mr. Busby. Through the Bank for International Settlements?

Governor Young. The initial transaction will be through the Bank for International Settlements, and those countries that receive the money and receive the credits could do whatever they wanted to with the money. If they wanted to pay their obligations to America, of course, they could pay them.

Mr. Bushy. Practically the same situation was pictured the other night by our chairman, and it was his deduction that those payments would actually come into—and if I misstate the chairman I hope he will correct me—will come largely into the hands of those who had extended the loans to European countries, and they would get immediate payments of those amounts immediately after they are paid on the reparations, and they could proceed with their banking activities, having collected their money from the European countries in that way. Would there be anything to prevent that?

at way. Would there be anything to prevent that? Governor Young. Immediately? Yes; many things. Mr. Busby. I mean within a reasonably short time.

Governor Young. I would rather say it was possible over the period of 60 years, which period is set up as the period over which the payments are to be made, and the assumption is that a sum has been fixed that Germany can and will pay.

Mr. Bushy. As soon as the bonds are sold the amount of money secured through the sale of reparation bonds of the German Government would be available to somebody, would it not?

Governor Young. Yes.

Mr. Busby. Would anything prevent an arrangement between the American bankers and European countries whereby this money may be paid over directly to the American bankers as soon as the bonds are sold?

Governor Young. Those are details that I should like to make some inquiries into. I suppose they can pay that when they want to. Obviously, I should think they would use it to reduce their obligations to this Government.

Mr. Bussy. That would be the natural inclination if the bankers

did not intervene with their scheme.

Now, one newspaper in this country sought to criticise our chairman, and I think very unjustly so, for having expressed a conclusion which we have practically reached in discussing this same proposition. There is nothing that you know of in the plan for organizing this international bank that would prevent the European governments from paying this money over when the bonds are sold, to satisfy their obligations to the American bankers, is there?

Governor Young. Well, I shall have to check that again, Mr.

Congressman.

Mr. Busby. That is all I care to ask.

Mr. Seiberling. I have just one question, Mr. Chairman. Mr. Fort. May I ask just one question of Mr. Busby?

Mr. Busby. Just a second, please.

The CHAIRMAN. Did you have a question, Mr. Seiberling?

Mr. Seiberling. Yes.

Mr. Fort. I wanted to ask Mr. Busby a question in reference to his last question.

The CHAIRMAN. Very well; go ahead.

Mr. Fort. On your previous questions you have developed the idea that the bonds that the American bankers took were all now distributed to the American investing public. When you say these moneys would be used for payment to the American bankers, you mean in order to cancel the obligations held by the American invest-

ing public and originally floated by the bankers, do you not?

Mr. Busby. I mean this—and of course it is a matter of detail and in the future—when the bonds are delivered to the Bank for International Settlements, if they are passed out to the American public, or to the extent they are passed out to the American public and paid for, the funds would go in to displace the bonds. Then, according to the scheme of things, when payments are to be made to the several countries as fast as these payments are credited to the countries by the Bank for International Settlements, the bankers of America, who have heretofore made loans to those same countries, could come in, and in all probability would, and present their claims for payment.

Mr. Fort. That is what I meant. Their claims, however, are for money they have loaned initially by purchasing the bonds of those countries, but they have turned around and sold those bonds to individual average investors; so, the money would go to the average investor and not the banker. That is what I am getting at.

Mr. Busby. To the extent, perhaps, that the individual investor deals with the New York banks in representing him in managing his

bond purchases.

Mr. Forr. I know a great many of those issues are wdiely held by individuals and they would get the money.

Governor Young. I think Congressman Fort's conclusions would

be more in line with my own views on that.

Mr. Busby. And in meeting that, I want to say this: We have had various Liberty and other loan issues in this country. They went out to the people and the people held them until after 1920 when they sold at 85 or 87 per cent then they drifted back into the hands of the big bankers and they got the people on our own bonds. I do not think our people would fare any better on these international bonds.

Mr. Fort. Of the total floated by the big bankers of about

\$300,000,000, they retain part and the public has the rest.

Mr. Bushy. If something like that \$300,000,000 of bonds have been sold in this country, have you any idea how much of that money will stay in this country?

Governor Young. That would depend upon many factors, Mr. Congressman. It would depend, in a measure, on the gold movement.

Mr. Forr. The payments from all sources would be \$300,000,000; and if the bonds stayed here, there would be no money taken out of

the country.

Mr. Busby. In order to keep the record straight, let me say this: When the money is available on the reparation bonds when sold, the New York banks that operate in international banking transactions would get the European bonds heretofore issued and sold to the people in the United States at a discount from the public, like they did the Liberty loan bonds, and profit by the discount in purchase. The public would be worked in the same way it was on their own national bonds. There is no reason why they should not, according to the bankers' view.

Governor Young. Liberty bonds sold in 1920 at about 82, 83 or 84. Mr. Smead, have you any figures of the bonds held by the banks in the United States in 1920? They were much higher than the amount held now, so I do not think you can accuse the bankers of the country

of taking the profit. They hold less to-day than in 1920.

Mr. Bushy. I can go into that further, but I will save that for another day. Many of that class of bonds have been called or have matured, and of course are off the market.

The CHAIRMAN. We will adjourn now until Friday morning at

10.30.

(Whereupon, at 12 o'clock, noon, the committee adjourned until Friday, April 4, 1930, at 10.30 o'clock, a. m.)

FRIDAY, APRIL 4, 1930

House of Representatives,
Committee on Banking and Currency,
Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock, a. m., Hon. Louis T. McFadden (chairman) presiding.

The Chairman. The committee will come to order. Judge Brand, I think you are the next on the list.

STATEMENT OF GOV. ROY A. YOUNG-Resumed

Mr. Brand. Before proceeding, Governor, to the real issue before the committee, I want to submit a few facts relative to the Federal reserve banks and the amount of franchise tax they have paid and when they have not paid, and get your judgment about it.

During the years 1914 to 1925, inclusive, the franchise tax paid to the Government by the 12 Federal reserve banks, amounted to \$139,173,943. For the year 1926, only \$818,150 was paid.

In the year 1927 all the 12 banks paid was \$249,591.

In the year 1928 all of the banks together paid an aggregate of \$2,584,659.

The aggregate amount throughout the years up to 1929 was

\$142,826,343.

d

it

y

t

3.

t

1

During the years 1927, 1928, and 1929 the New York Bank, the Boston Bank, the Philadelphia Bank, the Cleveland bank, and the San Francisco bank paid nothing. During the years 1927 and 1928 the Chicago bank paid nothing. During the year 1927 the Richmond bank, the Atlanta bank, the St. Louis bank, and the Dallas bank paid nothing.

What I want to know is why these banks did not pay any franchise

tax during those years.

Governor Young. Solely because of the law. The law permits the accumulation of a surplus 100 per cent of the subscribed capital of a reserve bank. Generally speaking, the banks in those sections increased their capital, thereby increasing their stock subscription to the Federal reserve stock, thereby increasing the possibility of increasing their surplus account.

In the other sections where a franchise tax was paid the profits in previous years were large enough so that they accumulated their surplus account up to 100 per cent of their subscribed capital, with

the result that the balance went to the Government.

Now, in addition to that, I want to call your attention to this, in the Minneapolis district: I am not quoting these figures accurately, but they are approximately correct. Seven or eight years ago the paid-in capital of the Federal reserve bank in Minneapolis was approximately three and one half millions of dollars. Many banks in that territory have closed, and as they closed they used their capital stock as an asset and it was withdrawn from the capital of the Federal Reserve Bank of Minneapolis, so that figures now of the paid-in capital of the Federal Reserve Bank of Minneapolis is approximately three million to three million one hundred thousand dollars. So, the Minneapolis bank reached its 100 per cent of its subscribed capital four or five years ago.

Mr. Brand. What district is that? Governor Young. The ninth district.

Mr. Brand. Is it not strange to you, even in the face of your statement, that during all of the hard and lean years of the country from 1920 on down to 1927, these banks paid millions and millions of dollars of franchise tax into the Treasury and yet these large banks to which I referred during the years 1927, 1928, and 1929, did not pay a cent?

Governor Young. Not strange, under the law.

Mr. Brand. I do not understand your answer. I asked this question a few years ago, and followed it up by another question, namely: By manipulation of figures and other ways of getting around it, would it not be possible that these banks could reach the point where they would not pay any franchise tax—and on that occasion I got an affirmative answer from that witness. Now, I want to ask you if that is not a fact?

Governor Young. Your inquiry is that they can juggle the figures in such a way that they do not have to pay a franchise tax?

Mr. Brand. Can they do that or something else in such a way as to

avoid paying a franchise tax?
Governor Young. My answer is no.

Mr. Brand. Why do they increase the stock-to keep from pay-

ing a franchise tax or for what reason?

Governor Young. When a member bank that has a capital stock of \$50,000 and increases that capital stock to \$100,000, that requires it to subscribe for that much more stock in the Federal Reserve bank. Mr. Brand. Well, I know; but is not the increase of this capital

stock one of the reasons why the franchise tax has not been paid?

Governor Young. For the last 10 years there has been an increase in the capital stock of member banks of approximately \$400,000,000. I can get those figures for you, Mr. Congressman. It is very hard to remember them all.

Since December 31, 1926, the capital stock of member banks has increased from \$2,200,000,000 to \$2,700,000,000 and the surplus has increased from \$1,955,000,000 to \$2,864,000,000. I am just taking

this roughly.

Mr. Brand. Yes; I want you to do that in the interest of time. Governor Young. Yes. That shows an increase of \$1,400,000,000 in capital stock, which requires those banks to subscribe for additional capital to the extent of 6 per cent of that amount, which is \$84,000,000, and to pay in 3 per cent, or \$42,000,000. I will reconcile those figures if I can. I want this to be fairly accurate.

Mr. Brand. I do not care to go into details too much about it. Governor Young. I would like to go into details to explain the law

and how it came about.

Mr. Brand, I know what the law is, but I do not know how it came about that those 10 banks ceased, for the years named, pay-

ing any franchise tax into the Treasury.

Governor Young. That was an increase in the subscribed capital of the Federal reserve banks by member banks of \$84,000,000, of which \$42,000,000 was paid in, but as those banks earned they were not required to pay a franchise tax to the Government until they had accumulated \$84,000,000 in their surplus account.

Now, maybe I can be specific by taking a certain bank and illus-

trate by that just what does happen.

Mr. Brand. Which one will you take?

Governor Young. I will take New York, if that is all right with

Mr. Brand. That is all right with me. For three years they paid

nothing.

Governor Young. New York, as of the date of March 26, 1930, has a paid in capital of \$69,718,000, which means a subscribed capital

of \$139,436,000.

Its surplus fund at the moment is \$80,001,000, meaning that the Federal Reserve Bank of New York would have to accumulate additional earnings above the 6 per cent that it pays on stock, \$59,435,000 before it would be required to pay any franchise tax to the United States Government.

Mr. Brand. According to your answer, based upon your figures there, there may come a time when none of the banks will pay any-

thing into the Treasury on the franchise tax.

Governor Young. Quite true. One year Minneapolis was the only bank that paid a franchise tax. I will make that statement and correct if it it is not accurate. The method of distribution of earnings of reserve banks is mandatory under the law.

Mr. Brand. Yes, I know; and it is a very wise requirement.

Governor Young. But there is no way they could juggle those figures at all.

Mr. Brand. I am glad to hear that. I am surprised to hear that is the only reason they have paid nothing in the last three years into

the Treasury.

Governor Young. Well, now, if some one made that other statement, they may have had this in mind, Mr. Congressman: One Federal reserve bank is permitted to rediscount for another Federal reserve bank, so that if the borrowings were very high in the New York district, the Federal Reserve Board would require the Federal Reserve Bank of Minneapolis to rediscount some of that paper for New York. There is a remote possibility of doing that and avoiding the payment of franchise tax, but it has never been done. That is the only thing that comes to mind.

Mr. Brand. This is not germane exactly to the present questions before the committee and I will not go into it any further. When, in your opinion—and this question is suggested by my friend to my left—will these 12 Federal reserve banks resume paying any franchise

tax, if ever?

Governor Young. That would be extremely difficult to answer, Mr. Congressman. If we should have a repetition of what we had in 1919 and 1920, when borrowings were very heavy and profits large, those surpluses would be built up very quickly. If, on the other hand, we should run into an easy money period for the next four or five years, it might be difficult for the reserve banks even to earn the 6 per cent dividends. I could not answer that.

Mr. Brand. Well, I will proceed with my regular questions on the

issue that is now before the committee.

I want to ask you, Governor, what is the chief evil, if you admit there is any, to the present system of banking under existing law, which would appeal to Congress to take into consideration the advisability of making a change?

Governor Young. I would say, first, too many banks.

Second, that group systems have developed which may be good and which may be bad; but, in my opinion, the branch system within trade areas, if you can define that, would be better than the group or chain systems.

Third, I think examination and surveillance have improved tremendously in the last 8 or 10 years. I think there is a possibility

for further improvement along that line.

Fourth, if it were possible, I should like to see more banks support-

ing the Federal reserve system.

Mr. Brand. Would it interrupt you there to ask this question: What benefit is it to a member bank—a bank of the Federal reserve system which does not have any occasion to borrow any money from its correspondents and does not have any occasion to discount any eligible paper with the Federal reserve bank—to remain a member of the Federal reserve system?

Governor Young. The main advantage in my opinion is that that bank which you describe is contributing to a system which I believe has been of tremendous benefit to the business, agricultural, and commercial interests of the country, and that banker has to look to an indirect benefit more than a direct benefit.

Mr. Brand. How will it benefit such a bank, for instance, when it receives no interest on its daily balances or for the use of its reserve fund, and not borrowing any money or discounting any paper—

fund, and not borrowing any money or discounting any paper—Governor Young. I think it is an insurance, Mr. Congressman, and the day will come when it will have to borrow some money.

Mr. Brand. When that time comes he can get back into the system, if that necessity arises and he has withdrawn from the system.

Governor Young. I am inclined to agree with you that, under ordinary circumstances a nonmember bank can not operate without contributing. However, that is an opportunity that every member bank has the same as the nonmember bank, and if all banks of the United States should arrive at the same conclusions, we would have no Federal reserve system, and I do not think that anyone wants that.

Mr. Brand. Now, in answer to the first question, you gave different reasons which account for the evil in the present existing law. Are you prepared, at this time, to suggest any remedy by way of proposed legislation or otherwise to correct this evil?

Governor Young. I am not, but I expect that the Federal Reserve

Board will be in a position to do so at a later date.

Mr. Brand. Governor, what, in your judgment, is the motive or real reason why these large banks are merging, such as occurred in New York a week or two ago, and the Fourth National Bank and the Atlanta & Lowry National Bank of Atlanta merging into the First National Bank of Atlanta a few months ago?

Governor Young. We have become a great commercial nation and a great factor in international finance, and larger units are required to

conduct that business.

Mr. Brand. Is it not true that such mergers and consolidations

of these large banks tend to monopolize capital and credit?

Governor Young. I have repeatedly said before the committee that I thought that was a possibility but highly improbable and I am still of that opinion.

Mr. Brand. Are not such consolidations as I have referred to prima facie evidence that these mergers will give to the consolidating

banks greater control over capital and credit?

Governor Young. Well, if there was just one developing, there might be some strength to your statement, but there are many of them developing.

b

0

re

to

tr

CO

Mr. Brand. Many consolidations?

Governor Young. Yes.

Mr. Brand. Does not that increase the tendency to give a monopoly upon capital?

Governor Young. I do not think so. I would say that the competition is just as strong to-day as it ever was and just as keen.

Mr. Brand. What sort of competition do you refer to?

Governor Young. For banking business.

Mr. Brand. Do the mergers of these great banking institutions meet with the approval of the general business interests of the country at large?

Governor Young. Any reply I make, Mr. Congressman, would have to be an assumption.

Mr. Brand. It would be your opinion, I take it.

Governor Young. These banks are owned by the public as stockholders. Many of them represent the business interests of the country, and if they consent to the consolidation or the merger or the grouping, I think it is fair for me to assume that the business interests of the country do approve of it.

Mr. Brand. Of course, if they consent. That is the crux of the question. Are the general business interests throughout the country approving, in your judgment, the great consolidations that are going

along all over the country in the great centers?

Governor Young. I do not know, Mr. Congressman. Certainly

those that are stockholders have consented.

Mr. Brand. I am not talking about the stockholders. They are Part of the banks and they are in this business of consolidating. I am talking about the business interests of the country that have no stock in the banks and have no connection in a financial way with the banks except possibly a desire to borrow money.

Governor Young. I can not answer that, Mr. Congressman.

Mr. Brand. I will ask you this question, in which I am very much interested: Are not such consolidations and mergers particularly antagonistic to the agricultural States and the agricultural classes in these States?

Governor Young. I do not think so.

Mr. Brand. Will not the effect of such mergers force the agricultural States to adopt branch banking, notwithstanding such States are opposed to universal branch banking?

Governor Young. I think so. I do not like the word "force." I think, as time goes on, the rural communities and agricultural communities will learn some of the advantages of branch banking.

Mr. Brand. As a general proposition does this—pardon me if I interrupted you.

Governor Young. No; go ahead.

Mr. Brand. As a general proposition, does this merger proceeding going on throughout the country meet with the approval of the Federal Reserve Board?

Governor Young. When I first appeared before the committee I read a statement to the committee. The sum and substance of that letter was that the board wanted more time to investigate it.

Mr. Brand. I did not hear your answer.

Governor Young. The board wanted more time to investigate the whole general question of group, chain, and branch banking before they made any commitments. That was also a statement of my own and anything I might say before the committee would be a rather impulsive conclusion. I would prefer to have more time to study the problems.

The CHAIRMAN, Would you allow me to ask a question there.

Judge Brand?

Mr. Brand. Yes.

The CHAIRMAN. In connection with this consolidation and concentration of assets the movement is pretty fast now. Is the board concerned about that development?

Governor Young. It is extremely hard for me to speak for my colleagues, but obviously, when they are arranging for an extensive investigation and study of the whole question, they are at least interested in the subject if not concerned.

The Chairman. Supposing that study should take a period of one or two years. Might it not happen that the consolidation and the full plan of the men aggressively at work now may be entirely completed before that determination is made?

Governor Young. Well, the figures I presented here the other

day show that it is pretty well completed now.

Mr. Brand. Does the Comptroller of the Currency consult with the Federal Reserve Board before giving his approval of these large

banks consolidating into one large institution?

Governor Young. I will have to refer to Mr. Wyatt as to the legal status of that. Not as a matter of statutory procedure, Mr. Congressman. He has frequently discussed with me as to what consolidations were taking place. There is nothing in the law that requires him to consult with the Federal Reserve Board.

Mr. Brand. I know that, but I did not know, as a matter of fact,

whether he consulted with you or not.

Governor Young. My relations are very close with the Comptroller

of the Currency.

Mr. Brand. I am very fond of him, too, but when you come to dealing with such propositions as the great mergers going on in New York and the great one in Atlanta, so far as we are concerned, it might not be out of place for him to consult you and other members of the board. I do not criticise him for doing or not doing so, however.

Governor Young. Congressman, all of those consolidations and mergers are reported to the Federal Reserve Board, and inasmuch as

we have no authority in the matter, we simply note them.

Mr. Brand. In your judgment, should Congress take any action by appropriate legislation seeking to check such mergers, or is that

one of the questions you have under advisement?
Governor Young. That is one of the questions we are considering. Mr. Brand. Along the same line—I wrote down these questions two weeks ago but did not get an opportunity to interrogate you sooner—should Congress take any action by appropriate legislation to give the Comptroller of the Currency authority, in his approval, when he gives it, of such mergers, to impose some limitation upon such mergers? It may be that the answer to that is now being considered likewise.

Governor Young. Yes; we are considering that.

Mr. Brand. Under your construction of the Federal reserve act has the Comptroller of the Currency or the Federal Reserve Board any right or authority to impose any limitations upon such consolida-

i

tions at the present time?

Governor Young. The Comptroller of the Currency, so Mr. Awalt informs me, has the authority to approve or disapprove these mergers and consolidations. The Federal Reserve Board has nothing to do with it in so far as national banks are concerned. We do, however, have the authority to approve or disapprove them in so far as State member banks are concerned.

Mr. Brand. Yes; I knew that the comptroller had authority to approve or disapprove, but I did not know whether, under the act creating the Federal Reserve Board, or in any other act of Congress, he had authority to put any conditions or limitations upon his approval.

Governor Young. If he disapproved, he would put a limitation upon it.

Mr. Brand. That, of course, would be the end of it. They would not merge. Could he say, for instance, "I am going to allow you to consolidate these institutions, provided it is done in certain areas or sections of the country or by imposing certain capital requirements, etc."? I am wondering if he has any authority, under existing law, to put any conditions on his approval?

Governor Young. Are you speaking now about chains?

Mr. Brand. I am speaking about approving the mergers of large banks—the consolidations in great centers of capital of different banks, like the First National and the Chase, of New York, recently, and the two banks in Atlanta.

Governor Young. We term that as a merger, and he has no authority, if I understand the law correctly, except approval or disapproval. May Mr. Awalt answer that?

Mr. Brand. Yes.

Mr. Awalt. Judge Brand, under the law, the comptroller is given the right to approve or disapprove.

Mr. Brand. Yes.

Mr. Awalt. Now, before he approves, he can say to these banks, "You must do so and so before I will give approval to this consolidation." So, while the law does not specifically state that he can put some limitations on it in the consolidation, they have to meet his approval. In order to do that, of course, certain conditions have to be met. Does that answer your question?

Mr. Brand. That is a more concrete answer to it. He has the

right to impose certain conditions on it?

Mr. Awalt. Before they consolidate, but not after it. The law

sets down certain conditions, of course, in itself.

Mr. Brand. I am going to ask you this question, Governor, which you may take under advisement when considering the other questions which have been submitted to you and which are unanswered, but which later on you will submit answers to:

As governor of the board, do you think it advisable to enact legislation to prevent such consolidations of the banks in the large centers of the country? If not, don't you think it advisable, if the board has no power to prevent such consolidation, that the Federal reserve act ought to be amended so as to give the board authority to impose limitations upon such consolidations?

You need not answer that now unless you are prepared to do so.

Governor Young. I should like to answer that later.

Mr. Brand. I think the authority ought to be lodged somewhere, in the Comptroller of the Currency or the Federal Reserve Board, to check or put some limitation upon them in the interest of the business world.

Governor Young. Mr. Awalt has just informed me that the Comptroller of the Currency, in his testimony, said that if the branch banking privilege was extended to the national or member banks, in his opinion Congress properly should place some limitation.

Mr. Brand. I am glad to hear that. I want you to take into consideration, when you are preparing your opinion about the questions already submitted to you, the answer to this question: If nothing is done to prevent such mergers or consolidations of the large banking institutions of the country, won't the inevitable result be that these large banking institutions will absolutely control or put the smaller banks of the country at the mercy of these consolidated banks? In short, if this consolidation or merger of large banks continues, won't it in the end give these banks absolute control and a monopoly of capital and credit throughout the country?

You need not answer those two questions now, but I should like to have you answer them when you are ready to give your opinion to the

committee upon other questions propounded to you.

Governor Young. I would like to do that, but I have answered that so many times before the committee, that it is a possibility but not a

probability.

Mr. Brand. I have not had the opportunity to be present at all the hearings, and therefore am probably asking questions which have already been submitted to you by other members of the committee.

Governor Young. I have a stenographic record of that and will be

glad to answer that at a later date.

Mr. Beedy. Would it not be helpful to have the governor explain why he thinks that is a possibility but not a probability?

Mr. Brand. I did not catch that that was his answer.

Governor Young. I have gotten the idea from the inquiries of the committee that there seems to be a fear 1 unit or 2 units or 3 units will eventually control all of the credit of the United States. The credit of the United States comes largely from the depositors who are great in number and, collectively, represent a tremendous volume of this credit. If those units become so strong, they become a monopoly to the detriment of other depositors and customers, the business being profitable, obviously it will induce many of these depositors and owners of credit to set up other organizations.

I think we will always have competition in credit, regardless of whether it be 26,000 independent units, as it has been, or whether it may be two or three hundred larger units. I just can not conceive of all the credit in the United States, which is owned by the people,

being centered in the hands of a few people.

Mr. Brand. I want to come nearer home. Take Atlanta, for instance, where the Fourth National Bank and the Atlanta & Lowry National Bank merged into the First National Bank, being only one or two banks left in Atlanta outside of their branches: What effect will such merger have upon the individual, and the small country bank borrowers?

Governor Young. The ability of the small country bank to

borrow from-

Mr. Brand. From the merged banks; and the farmer, for instance,

who wants to borrow money to make a crop.

Governor Young. Well, let us assume that the organization in Atlanta refused a deserving country bank credit. That country bank would not stop there. The country bank would go to New York or somewhere else.

Mr. Brand. He might go to New York or somewhere else, but it would be a vain thing to do if he is not known and could not borrow

money or get credit elsewhere.

Governor Young. My observation is that the banks are always

looking for good customers.

Mr. Brand. Referring again to the merger of banks in the great cities, what effect will that have on the rate of interest paid to small banks who have deposits with their correspondents in large cities? They only pay 2 or 2½ per cent now. If this reorganization of large banks continues, won't it have the effect to decrease the rate of interest on daily balances?

Governor Young. Not in my opinion. There will be sufficient competition in this country so that if Atlanta gets down too low in its rate it pays the country correspondents, they would seek cor-

respondents elsewhere and get them.

Mr. Brand. I know that is sound as a general proposition, but suppose the other two banks in Atlanta join with the First National Bank? What would prevent that group from running down the rate of interest they pay their correspondents on daily balances, when the correspondents have no other connections and are known to no other banks in the city or State?

Governor Young. If I were operating a bank in New York and knew of any such condition in the Atlanta district, it would not take me 24 hours to get down there to Atlanta and solicit that business

and get it on a profitable basis.

Mr. Brand. I hope you are right.

What effect will these mergers have on the rate of interest these New York banks, for instance, will charge a bank in Georgia if he wants to borrow some money; in my judgment it will have the effect of making the bank pay a higher rate of interest than now. Is that right in your judgment?

Governor Young. I do not think so. There will still be sufficient competition, Mr. Congressman, to compel those banks, whether in New York or Atlanta, to follow the market and obtain that business

on a competitive basis.

Mr. Brand. Take a country bank, for instance, member of the Federal reserve system, which has been doing business with New York and Atlanta banks, assuming the consolidation of large banks in New York and Atlanta will continue and they should decide to increase their interest rates on loans, what fix would this country bank be in when it has no financial connection with other banks in New York and Atlanta?

Governor Young. You have the simplest solution in the world on that, Mr. Congressman. Go to your Federal reserve bank where you can always get a lower rate than you get from your correspondents. Mr. Brand. Suppose you take a bank that does not belong to the

Federal reserve system?

Governor Young. That is the strongest argument I have heard for a long time for membership in the Federal reserve system. That is why he should be a member. That is the assurance he will have. Mr. Brand. Still, this is forcing the nonmember banks to join the Federal reserve system. This situation compels him from necessity to become a member.

Governor Young. That is proving to him it is advisable for him

to go in.

Mr. Brand. In your judgment? Governor Young. Yes, sir.

Mr. Brand. What effect does the increase in the discount rate or a decrease in the discount rate of the Federal reserve banks have on the price of farm commodities?

Governor Young. That is a question that has been before this

committee on many occasions.

Mr. Brand. But I never asked you about it before.

Governor Young. My opinion is that it is a factor and a contributing factor, but not a determining one; in other words, I do not think we could put the price of money down to 2 per cent and arrive at the conclusion that agricultural products are going to increase in price 10 per cent or 20 per cent any more than you could put up the rate to 7 per cent and it will depress agricultural products further than they have been.

Mr. Brand. How came cotton to go down from 40 to 10 cents a pound, under the deflation policy of 1920, if it does not have that

Governor Young. I will not admit there was a deflation policy in the Federal reserve system in 1920, because I operated a Federal reserve bank in an agricultural section and there was no deflation of credit.

Mr. Brand. I thought it had become an historic fact all over the world that there was a deflation policy inaugurated in 1920 and that the policy caused a decrease in the price of farm commodities, in-

cluding cotton.

Governor Young. There was a thorough investigation by a joint committee of the House and Senate in 1922, if I remember correctly, in which the House and Senate did not arrive at that conclusion.

Mr. Brand. Well, I have great respect for the members of the committee of the House and Senate to which you refer, but I do not agree with them if they reached such a conclusion. I know as a matter of fact that subsequent to the inauguration of this policy, unlike the policy inauguarted after the Civil War, when the people were given a year's advance notice of it, which was suddenly and secretly inaugurated so far as 90 per cent of the world was concerned, cotton which was selling at 40 cents per pound went down to 10 cents per pound, on account of which fact thousands of farmers and hundreds of banks in my State went broke.

Mr. Goldsborough. May I ask a question there in order to make a

suggestion?

Mr. Brand. Yes.

Mr. Goldsborough. Governor, in 1921, Governor Harding was before this committee and I remember very distinctly he had a large chart over on that side of the room [indicating] and I guess he was asked by different members of this committee twenty times about the deflation in the agricultural districts and he always evaded the ques-He never did answer it. He undertook to say that the credit throughout the country was not deflated, but when it came to the specific question regarding the agricultural sections, he would not answer. I was here in the committee and know that is a fact.

b

Governor Young. I was in an agricultural section-

Mr. Brand. And it is broke, too, is it not?

Governor Young. And there was lent not less than \$118,000,000, if I remember correctly, in the ninth Federal reserve district, an amount far in excess of what the Federal Reserve Bank of Minneapolis had.

Mr. Goldsborough. Is it not a fact that all our leading economists recognized that that deflation policy did take place as far as the agricultural sections were concerned; that they deplored it, but excused it on the ground that it was a very unusual condition; the first time the Federal Reserve Board had been subjected to that condition and they simply used poor judgment. Is not that generally recognized among economists?

Governor Young. Not that I know of, Mr. Congressman. It

may be true.

t

Mr. Steagall. That is what they said before this committee. They said the Federal Reserve Board in that period was simply feeling its way in the dark and finding their powers, and the statement was made not in support of the more bitter criticisms indulged against the Federal Reserve Board but, on the contrary, exculpating the board from the purposes so often attributed to them, but clearly insisting that the board did pursue a deflation policy in reference to agriculture.

Mr. Brand. I know it to be a fact that the people in my district and State clearly understood that a deflation policy had been inaugurated, with the results, so far as our farmers and banks are con-

cerned, as above indicated.

Say January, for instance, before this deflation policy was inaugurated, cotton was selling for 40 cents per pound, and in November thereafter this same cotton, of the same grade, weight, and condition, which was worth as much in November as it was in January, was selling for 10 cents per pound.

Governor Young. In 1920?

Mr. Brand. The year deflation of prices began. What caused this great reduction in the price of cotton, if not due to the effect of this deflation policy, as I call it and have always called it, right or wrong?

Governor Young. I think the main cause was a buyers' strike throughout the world. The first evidence we had of the deflation was in Japan, where the price of silk became so high there was no consumptive demand for it. That was the first evidence we had of the starting of a world-wide depreciation of products. It did not

start in this country.

Mr. Brand. I remember very well the Georgia National Bank of Athens had cotton warehouse receipts from farmers all over the country. They made the mistake of holding the cotton when it was 40 cents a pound for higher prices and when it got to 10 cents, the Atlanta Federal Reserve Bank and the bank's correspondent in New York called upon the president and directors of that bank to collect their money. When they called for it the farmer had to sell his cotton at this low price, the proceeds of which was not enough to pay his loan, and the consequence was he not only lost his cotton but his farm also, which broke the ordinary farmer and he has been broke ever since.

Mr. Steagall. Let me have the witness for a minute, please. This was shown in Omaha, Governor Young, before the committee to which you referred, which I suppose is the same committee: The insistence had been made all along and they brought figures to show there had been no decrease in loans to justify the charge

that a deflation policy had been effected. At Omaha—I forget who the witness was-but at Omaha a witness from the Federal reserve bank in that district brought a chart that showed this: When the seasonal demand for an increase in the loans for crop marketing and the like took place, the figures showed that there had been some increase in loans, but just as the chart showed an increase in loans, it showed a decrease in nonborrowers, clearly demonstrating that the regular borrowers from that Federal reserve bank did not enjoy any of the increase in loans for seasonal demands. The testimony was all to the effect that there was a normal seasonal increase in demands for loans but the banks in the small communities, instead of being able to carry their customers, and furnish additional credit had to collect on their paper. The only way they could collect was by the sale of their farm products and they were being thrown on a constantly falling market. That is what the testimony showed out there.

Mr. Wingo. I ask permission at this point to put that chart in the record.

The CHAIRMAN. Without objection that will be done. Mr. Wingo. I think I have a copy of it in my files.

(The chart referred to will be reproduced in a later part of these

printed hearings.)

Mr. Busby. Governor Young, do you know anything of a meeting held here in Washington on May 18, 1920, by the Federal Advisory Council and the class A directors of the Federal Reserve Board with a view to discussing a policy of deflation, that policy being to withdraw from the eligible paper for rediscount certain types of securities? It was not any open public meeting, but in a meeting held with Governor Harding and the type of directors I have mentioned.

Governor Young. I do not think I attended that meeting, but if I remember correctly, that was the meeting referred to many times in the public press in which they had a stenographic record of what

was said.
Mr. Bushy. Where the public was not taken into consideration in

W

e

di

an

ap Ha

my

Governor Young. That has been published.

Mr. Busby. As a direct result of that meeting and its actions and policies, discussed by it, the deflation policy of 1920 soon followed, and then the break in farm commodity prices Judge Brand referred to was the natural result. Was not that true?

Governor Young. I am not familiar with the meeting, Mr. Congressman. Mr. Wyatt can make a statement in reference to it.

Mr. Busby. I do not want to take any more time from Judge Brand.
Mr. Steagall. With Judge Brand's permission, I want to ask
another question. Regarding the policy of the Federal reserve banks
in handling Government bonds carried by member banks—

Governor Young. I can only speak for one district—the ninth

Federal reserve district.

Mr. Steagall. You know that general situation as regards the market for bonds, and the way the bonds were carried by the banks, do you not?

Governor Young. Well, I think it was optional with the bank to sell or buy. I talked frequently with bankers who paid, I think 5 or 6 per cent to carry the bonds, and they were only yielding 4% per

cent, as to whether it was advisable to sell or not. Sometimes they

sold, and sometimes they did not.

I ought to make this statement in defense of the board at that time. I was operating the Federal Reserve Bank of Minneapolis, where conditions were very bad. We lent in great volume, lent beyond our own capacity. The New York and other reserve banks in turn lent We took care of the member banks, and the nonmember banks were taken care of by city correspondents. We, in turn, lent the city correspondents to take care of the nonmember banks.

I recall very well coming to Washington at one time and talking with Governor Harding, of the Federal Reserve Board. gone up to \$113,000,000, and we were attempting to analyze the situation. At that time we felt we might possibly have to go up to \$150,000,000 or \$175,000,000 to take care of it or attempt to take

care of it.

There was no restriction on that bank, never a letter to the Federal reserve bank, and no one ever bothered me in the operation of the Federal Reserve Bank of Minneapolis from 1919 right clear through to the time I left.

Mr. Seiberling. May I ask a question there?

Mr. Brand. Certainly.
Mr. Seiberling. Did you not get instructions from the Federal Reserve Board to quit taking automobile accessory paper early in 1921?

Governor Young. Never did; not that I remember. Mr. Seiberling. You do not know that the Atlanta Federal Re-

serve Bank got such instructions, do you?

Governor Young. No; I do not know. I know that we in Minneapolis did make a very strong plea to some of our member banks to take care of the agricultural interests and avoid some of the unnecessary credit at the time.

Mr. Seiberling. It was the opinion of the Federal Reserve Board that the automobile business had gone about as far as the country

would stand at that time, was it not?

Governor Young. I would have to check that up, Mr. Congressman. Mr. Seiberling. And since then the automobile business has in-

creased many times beyond what it was then.

Governor Young, I can express my own opinion. Under the conditions that existed in the ninth Federal reserve district, I thought it was best at that time to give more attention to agriculture, to put them in a position so that they could buy the automobiles later. In other words, it was our desire to take care of agriculture first, in Preference to anything else.

Mr. Brand. Governor, the question was asked several years ago of a representative of the Agriculture Department if the Federal reserve banks, acting in conjunction with the Federal Reserve Board, could by the adoption and inauguration of a given policy, cause a decrease or an increase of prices of all farm commodities, and he

answered yes.

3

Ç,

S

3,

0

ľ

ľ

Governor Young. Who answered that way?

Mr. Brand. I think it was the Secretary of Agriculture that appeared before this committee several years ago after Governor Harding left the Federal Reserve Board. I asked the question myself.

In other words, do you not think that with cotton, say, selling now at 50 cents a pound and wheat at \$1.50 a bushel the 12 Federal reserve banks and the Federal Reserve Board can get together and agree upon a policy which when promulgated would have the effect of deflating the prices of these farm commodities?

deflating the prices of these farm commodities?

Governor Young. I do not think so. I am going to illustrate that by a specific example. It does not make any difference whether you are operating a Federal reserve bank or a commercial bank; your object is to conduct that institution in such a way that you will not

lose money.

Now, this deflation that they speak about occurred in 1920. In 1919 the Federal reserve bank had loaned in the neighborhood of \$90,000,000 in the Northwest. Practically every penny of it depended upon agriculture. Now, would I, as the executive officer of that bank, deliberately go out on any policy or campaign that would destroy the collateral back of the \$90,000,000 I lent? I do not think so.

Mr. Brand. I do not think you would have done it, but, as a matter of fact, something happened in the country that caused that very effect on farm commodities, and the Federal Reserve Board and the 12 Federal reserve banks constituted the only machinery of the Government that could do it. It seems to me that the conclusion is logical that it was done by the Federal Reserve Board, and if it was done one time by the Federal Reserve Board it could be

8

done again.

Mr. Steagall. If I may interrupt, a chart that we had showed this, that the amount of loans in that Federal Reserve district remained substantially the same during the period in which there was a largely increased seasonal demand for credit. There was no increase in loans, but there was a big decrease in nonborrowers, or the list of non borrowing member banks. In other words, the Federal reserve bank in that district had accommodated quite a number of new customers without increasing the amount of money it had out, leading inevitably to the conclusion that instead of increasing the loans to the member banks in the agricultural sections to take care of the seasonal demand, there had necessarily been a decrease in the amount of loans to them, and the only way that could happen would have been for them to have collected out of their farmers in a market where prices were constantly falling and where the only possible effect of calling a loan would be further to depress the price.

That chart showed all of that.

Mr. Wingo. I think the gentleman from Alabama is in error as to what locality the chart covered; I think it was either St. Louis or Kansas City.

Mr. Steagall. My recollection is that it was Omaha.

Mr. Wingo. But, anyway, wherever it was, I will put it into the record.

Mr. Steagall. This happened in Nebraska; the chairman will remember it.

Mr. Brand. One other question, and I believe I will conclude.

The Citizens and Southern Bank with which you are very familiar has a branch bank in Athens and others in Atlanta and different cities in the State. There is one other bank there ar Athens. Neither one of these banks nor any of the Atlanta banks will lend money on

crop mortgages which I know are very poor security. There is a great section of my district and in Congressman Bell's district where farmers have no money with which to make a crop and they can't borrow it unless the banks lend them money on crop mortgages. We have no branch banking law in the State of Georgia now, but our little bank, the Brand Banking Co. of Laureville, Ga., does

make loans to these farmers on crop mortgages.

Now, what is going to become of such farmers if all the banks of my district, say, refused to loan money for the purpose of enabling them to make crops? Many of the small banks in my district and Congressman Bell's district have been lending money on crop mortgages. What is to become of this class of people? What suggestion can you make as an expert witness and as a man who has had considerable experience in all phases of the banking business with respect to what such people should do, and what does the banking system of the United States owe to the farmers of the agricultural sections of the

country in the condition indicated by me?

Governor Young. Mr. Congressman, I do not think that I can afford to advocate any program that would take depositors' money and lend it on poor security or poor collateral, as you say these loans are. That condition has happened frequently in the ninth Federal reserve district. It was taken care of by a seed lien loan of the Government on several occasions. It was taken care of in 1927 by a seed lien loan authorized by the Congress, because there was failure to pass the deficiency appropriation bill, with the result that the Government was in the position of having the loans authorized with no money to lend. That situation was handled by those various counties issuing warrants, and those warrants were sold to Minneapolis and St. Paul banks and the proceeds loaned by the counties to the farmers.

Mr. Brand. Then if that is the only remedy, the banking business does not do the farming class any good in such a case as I have

referred to

1

S

V

ľ

1,

10

ar

nt

er

on

Governor Young. I think that they have done a great deal along those lines, to their sorrow in many cases. Surely, Mr. Congressman, you do not want me to advocate that a bank should take a depositor's money—a widow's, if you please—and make a poor loan with it?

Mr. Brand. Of course not, and that is the first time I have heard the word "depositor" used in all of this investigation. I thought

he was lost sight of entirely.

Governor Young. I think he is the man we should give a great

deal of attention to.

Mr. Brand. I think so, too; but I do not think that he is being given enough attention by the Federal reserve banks and the banks that belong to the Federal reserve system or do not belong to it.

I have given you a case where the situation is serious, and it is no hypothetical question. This class of farmers are in a position where they can not farm and cultivate a crop, which they must do if they feed and clothe themselves, their wives, and children, much less educate them, unless a bank loans them money on crop mortgages; and the banks in the large cities will not do this.

In such a case as I have cited, if we should have a good crop—and no one ever knows what it is going to be—the bank which loans money to these people on crop mortgages gets it back, because they

are honest and pay their debts when they can; but if there is not a

good crop I concede there is a loss to the bank.

Governor Young. My experience with crop mortgages has been this, that a crop mortgage may be the best security in the world if they get a good crop, but it is the poorest security in the world if they do not get a good crop.

Mr. Brand. When you are ready to answer the questions propounded to you by myself and other members of the committee, I

will thank you, at that time, to answer the following:

(1) Are the people in this section of the State of Georgia—and there are many sections of Georgia in the same condition—receiving the help or assistance they are entitled to at the hands of the present banking system of the United States?

(2) If they are not, what remedy do you suggest to correct this

evil?

(3) What system of banking would you suggest would best subserve the interests of the people of this section in the condition they

are in as described by me?

(4) Particularly in the counties where banks have all become insolvent, and on account of the distressed condition of the people they are unable to organize a bank, what would you advise to be done in order that such sections of the country may have the benefit of banking facilities?

Now, coming back to the depositor, what have you to suggest? I am not going into the subject of insurance for depositors, because both the Comptroller of the Currency and yourself are opposed to any sort of a guarantee of deposits, and it looks like the whole Treas-

ury Department is.

You have given us your opinion about helping the banks which are members of the Federal reserve system. Taking into consideration that you are opposed to paying any interest on reserve funds in the Federal reserve banks, are you prepared now to state in what manner you would suggest helping the member banks? They are not getting enough out of the system as I see it.

Governor Young. I stated the other day, Mr. Congressman, that the board in its annual report to the Congress of the United States would recommend that more of the earnings of the Federal reserve system be distributed to the member banks, but the method by which that distribution would be made has not yet been arrived at.

Mr. Brand. Have you any way of helping member banks other than using part of the franchise tax? If not, where are you going to

get the money to help?

Governor Young. One suggestion has been made that the amount that goes into surplus be reduced and that what is over that be distributed to the member banks. That is complicated and requires a

good deal of study.

Mr. Brand. I have finished, except for this suggestion, that I would like to have the board confer with the Comptroller of the Currency, the Secretary of the Treasury, and also with Judge Garrett, who once had a plan in mind, the details of which I do not have, and submit to the committee some workable plan to protect depositors or to guarantee deposits. Some sort of deposit guaranty is coming sooner or later. It may not come in your lifetime or mine either, but there

is going to be a revolution in this country unless depositors are given some character of protection against loss.

An amendment along this line was proposed to the original Federal reserve act when the same was before the Finance Committee of the Senate. If the Federal Reserve Board can work out a plan and make some recommendation for legislation giving protection to depositors by way of a guaranty fund or otherwise, without making the strong banks take care of the weak banks, I think it should be done. I think the highest duty you can render to the people of the United States and to the depositors in all of the banks, particularly the small ones in the agricultural States, is to devise such a plan, if you can. I am thinking more about the depositors than I am of the stockholders.

Mr. Steagall. Let me ask one or two questions. Mr. Fort. We had a special order for 12 o'clock. Mr. Steagall. I thought he was through.

Mr. Luce. Mr. Chairman, I move that we now go into executive session.

Mr. Fort. I second the motion.

8

f

The Chairman. It has been moved and seconded that the committee resolve itself into executive session.

(The question was put, the motion agreed to, and the committee went into executive session.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, APRIL 8, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met in the committee room, Capitol, at 11 o'clock, a. m., Hon. Louis T. McFadden (chairman) presiding. The CHAIRMAN. The committee will come to order.

STATEMENT OF GOV. ROY A. YOUNG-Resumed

The CHAIRMAN. Mr. Luce, would you like to question the witness this morning?

Mr. Luce. For a few minutes. Governor Young, some days ago Mr. Wingo made an observation that interested me much and will furnish a peg on which I may ask some questions of a general nature. He said that he was obliged to pay 10 per cent if he chose to borrow from his local bank. Of course I am referring to it as a typical instance, if I am right in my understanding that interest rates in the West average higher than those in

One of the criticisms made against branch banking is to the effect that it will tend to draw money away from the smaller communities and center it in the metropolis where it will be used for purposes of the stock exchange. This puzzles me. I had understood that the purpose of decentralizing the Federal reserve system or one purpose was to equalize the supply of money throughout the country and to equalize rates on commercial paper.
Will you explain to me how it happens that the cotton factor in

Arkansas must pay a higher rate of interest than, say, a potato mer-

chant in northern Maine?

Governor Young. Mr. Congressman, I do not know what the legal rate is in Arkansas, but I assume it is 10 per cent. If that cotton factor is a small operator and depends upon one or two local banks. he might have to pay a 10 per cent rate, although I doubt it. If he was a larger cotton factor, so that he had connections in various parts of the country, he would be in a position to bargain for his money the same as the jobber or wholesaler and he would know where he could get it cheapest, even though he had to go to New York City.

The smaller man would have to pay a higher rate and, to answer

your specific inquiry, I think that the State usury laws have more to do with that than any one thing I know of.

I have a list here showing the legal rate of interest and rate by contract in all of the States of the Union. It ranges all the way from a minimum of 6 per cent to a maximum of 12 per cent, and in a few

States, any rate. Mr. Luce. My difficulty goes beyond that. Twenty years ago it was known that loans on real estate commanded a higher interest in the West than in the East. We had, in the East, formed numerous investment companies for the purpose of taking advantage of that. Then we created the Federal farm system which seems to have equalized the opportunities for all parts of the country. At any rate in the insurance company in which I happen, by chance, to be a director and when I am able to attend a directors' meeting, when the list of loans in the preceding month is read off I notice loans in the Mississippi Valley, Ohio, Missouri, and so forth, at the same rate that is paid for loans in the immediate neighborhood of Boston. That leads me to conclude that the farm loan system has given all parts of the country equal opportunity in a general way.

But am I wrong in my understanding that still the rate for loans on commercial paper in the territory beyond the Mississippi is distinctly higher than it is on the Atlantic seaboard?

Governor Young. From what I have been able to observe, Mr. Congressman, I should say yes.

Mr. Luce. I am including the South also in my question. Governor Young. I would say yes, with the exceptions of Virginia, where I think they have a maximum rate of 6 per cent, also North Carolina, Tennessee, and West Virginia.

Mr. Luce. In those States where the usury law permits high rates, why does not the law of supply and demand operate to bring those rates down? There are large numbers of citizens in the East at the present moment who are seeking opportunity for investing their money at what they have, since the war, commenced to look upon as a fair rate and they can not get it. The money market is so flooded with money for investment that a prudent man will look askance at any offering on which he can earn more than 6 per cent. When money can be loaned in Arkansas and Georgia or anywhere west or south at 10 per cent, why does not capital flow from the East to those places?

Governor Young. It does to a certain extent, Mr. Congressman. We had a very specific illustration of that in December, January, and February of 1929 and 1930. Conditions eased in the New York The surplus funds gradually drifted to the interior. market first. They drifted in this way-and I am going to take a territory I am familiar with no illustrate what I have in mind: Minneapolis has several large grain concerns that are nationally known. They have banking connections in many sections of the country. At times they are very heavy borrowers. They have a very large credit standing so that if they, in a tight money period, should be asked to pay 6 per cent in the Minneapolis district and the New York correspondents offered them 5% or even 5%, they would immediately borrow in New York to save that one-quarter per cent over the rate they would have to pay in Minneapolis. That shifts the funds from the larger centers to the smaller centers.

Now, on the other hand, when we have a condition such as we had in January, 1927, and January, 1928, clear through until October of 1929, when the call rate was so high that it attracted funds from the interior to New York, credit has the tendency to a degree to flow where it brings the better rate.

Mr. Luce. That is what I wanted to bring out, because it seems to me inconsistent with the allegations that the West has to pay more for money than the East. I want to find out whether Maine, New Hampshire, and Vermont are any worse or any better off in that particular than Arkansas, Oklahoma, and Texas?

Governor Young. I think, generally speaking, that the customers through that territory—that is, Maine, Vermont and through there—

pay a lower rate-

Mr. LUCE. Why?

Governor Young. Than they do in Minnesota, Montana, and the Dakotas, because the small borrowers—and I refer to the small borrower when I make that statement—has not the opportunity to deal in several sections of the country the same as the large operator has.

Mr. Luce. You mean that the centers of commerce are far apart? Governor Young. He is so small that he is not known. For instance, let us take a small community in South Dakota: A farmer who has to borrow \$1,000 or \$2,000 is known to the local banker and not known to any one else. He can not go to New York, Vermont, or Maine and present his note. No one knows him. Therefore he has to pay the legal rate or contract rate, generally speaking. I have forgotten about South Dakota, but it seems to me the maximum rate is 10 per cent. That is the rate he would probably have to pay to the local bank unless he was well enough known so he could go to a near-by town with a very desirable piece fo paper and drive a bargain, say, for 8 per cent.

Mr. Luce. His local banker can take his note and send it to Minneapolis, through his correspondent, can he not, and then the correspondent there can rediscount, if he sees fit, with the Federal

reserve bank?

Governor Young. If he was dealing with a nonmember bank, the correspondent bank could not discount that with the Federal reserve bank at Minneapolis at the present time, although during the war period and for some time after the war period we did accept notes originating in nonmember banks.

Mr. Luce. Would that give the note a different standing when it reached Minneapolis from the paper of a member bank? In other words would there be a discrimination in the rate that the Minne-

apolis bank would impose upon that piece of paper?

Governor Young. Well, if that was a member bank, Mr. Congressman, in all probabilities they would go to the Federal reserve bank rather than their correspondent, because the Federal reserve bank always has a lower rate than the correspondent bank.

Mr. Luce. Then, it is easy for the paper, ultimately, to reach some place where it gets the standard rate for time loans fixed through-

out the country?

Governor Young. For instance, the Minneapolis bank—if the farmer's note bore 8 per cent and it was sent to the Minneapolis Reserve Bank, it would be discounted at 4½ per cent, and if it was 6 per cent it would be discounted at 4½ per cent. We pay no attention to the rate the paper bears.

Mr. Luce. Then the spread between the final discount rate and the initial rate furnishes the western banker a larger profit than it

furnishes the New Hampshire banker, for instance?

Governor Young. Generally speaking, I would say yes.

Mr. Luce. Now we come to what I mean. Under a branch banking system, would that still prevail? Assume that a bank in Chicago owned branches out in the district of which we are speaking: Would it impose a different rate on a customer in Fargo than it would on a customer in Springfield, Ill.?

Governor Young. I am inclined to think, Mr. Congressman, that it would have a tendency to bring rates down to the borrower and I base that statement on the experience we have had in California where there is a very extensive development of branch banking.

Mr. Luce. Then the branch-banking system would, if this line of reasoning is correct, directly aid the borrower in the small western town rather than hurt him?

Governor Young. That would be my opinion.

Mr. Luce. Would you say that the argument is fallacious under those circumstances, which is to the effect that a branch-banking system would tend to drain the aggricultural districts to the benefit of the industrial centers?

Governor Young. I do not believe that it would,

Mr. Luce. You have brought in usury as an important factor here. I do not quite reconcile that with my general understanding of the flow of capital. If North Carolina has a usury law of 6 per cent and South Carolina has 10 per cent, why does not all the money flow in to South Carolina instead of North Carolina?

Governor Young. Well, I am not familiar-

Mr. Luce. Oh, well, I am just assuming these quite arbitrary figures. There are throughout the country apparently different usury rates. Why does not the money go where it would get the most profit, to the detriment of places where it is prevented from getting the bigger profits?

Governor Young. Generally speaking, in the larger communities,

it does do that, Mr. Congressman.

Mr. Luce. If it does that, when it gets into that State, does not the law of supply and demand operate? Is there not competition between financial institutions? Do not they level again? I am puzzled by these discriminations between different parts of the country and do not understand why all the water in the reservoir does not seek the same level?

Governor Young. With the larger units and with the people that have national connections, it does. With the smaller communities

and the smaller borrowers, it does not to the same degree.

Now, perhaps we can take the intermediate credit bank and illustrate that the smaller borrower does get pretty close to a uniform rate throughout the United States. Yet the intermediate credit bank has not developed to a very large organization. I think the total outstanding amount is \$60,000,000. In so far as the intermediate credit banks are concerned, they have leveled those rates to borrowers in various sections of the country.

Mr. Luce. Can anything be done in the matter of the national banking system to carry still further the purpose of the Govern-

ment in equalizing opportunities throughout the land?

Governor Young. Well, Mr. Luce, I am not an attorney and I assume that States' rights come into that, but I suspect, that the legal rate and contract rate is too high in any State, it would have to be corrected by the State.

Mr. Luce. You doubt if any Federal usury law would stand? Governor Young. I have no right to say that. I am not a lawyer. I do not know.

Mr. Luce. Yet we do control the national banks? Governor Young. We do.

Mr. Luce. And the regulations imposed upon them, without a Federal usury law might stand where the Federal usury law might not stand?

Governor Young. If you did that, Mr. Congressman, would you not put the national banks at such a disadvantage with their com-Petitors, with the State nonmember banks, that they would be prompted to leave the Federal reserve system?

Mr. Luce. It would seem to me to work the other way. If you say that the national banker shall not charge more than 8 per cent and other banks charge 10 per cent, why does not all the trade go to

the national banks?

0

8

ł

9

1

Governor Young. If they reduced the rate of charge, obviously they would have to reduce the rate they pay depositors to operate as a profitable institution.

Mr. Luce. They pay next to nothing to their depositors. I get the gorgeous sum of 2 per cent per year and it has to be pretty big to amount to anything and they chop off a lot of that.

Governor Young. In western banks they pay on savings accounts

all the way from 3 to 4 per cent.

Mr. Luce. I am speaking of checking balances. In New York City they look askance at a man who asks interest on a balance of less than \$20,000, and when it gets below \$15,000 the operators of the bank begin to prod the depositor. I doubt if that end of it would, in that city, be a great factor.

Governor Young. Well, if New York pays 2 per cent and Chicago decides to pay 21/2 per cent, obviously the deposits of the people that

do business in both places will drift to Chicago.

Mr. Luce. Well, that is true; but it is hardly-Governor Young. I have seen instances of that.

Mr. Luce. It would be the case in big business, but it would hardly be the case in a small community where the bank balance of most of the depositors is not large anyhow.

Governor Young. It applies to the larger communities in the

That is true.

Mr. Luce. We are most naturally greatly concerned with the little man. He is the chap who is most unhappy in the present situation, and what we would like to do is to give the little man in Fargo, N. Dak., the same chance as the man in Bangor, Me.

Governor Young. If the competition was keen in Fargo, a good

outstanding man would probably get six per cent there.

Mr. Luce. Would that be true of a man of the same financial status who chances to be a rancher with his nearest banking point a much smaller place than Fargo?

Governor Young. What I have been able to observe of the notes that come to the Federal Reserve Bank of Minneapolis, the farmers, ranchmen, sheepmen, and other are generally above 6 per cent.

Mr. Luce. Now, that is just what we are aiming at. Why is that so, and can we correct it?

Governor Young. Well, it has been corrected in Virginia by the 6 per cent contract rate.

ii b

n

Mr. Luce. Is there any agitation in the west for similar usury

Governor Young. I never heard of it. When I first went to Minnesota, the contract rate was 10 per cent. I think about 8 years ago it was reduced to 8 per cent. I think that Montana had a 12 per cent contract rate and that since has been reduced to 10 per cent.

In Michigan, in my own State, the contract rate 30 years ago was 8 per cent and was changed to 7 per cent 30 years ago. There is a general tendency in all States of the Union to reduce the maximum rate.

Mr. Luce. Would it be a fair conclusion, then, to say to our western friends, rather than lay the blame at Wall Street, they should seek the remedy in their own State legislatures?

Governor Young. If that complaint was being made, I would say yes. That is the quickest way to correct it.

Mr. Luce. That is all.

The CHAIRMAN. I should like to ask you this question, Governor,

in connection with the questions that Mr. Luce has asked:

Referring to the rates of interest paid in these agricultural sections of the country that Mr. Luce referred to in the Northwest, the Middle West, and the South-agricultural sections particularly—the rate of interest paid on deposits in those banks is usually higher than in the eastern cities and States of the east, is it not? My thought goes to some specific cases where the general rate is from 4 to 6 per cent on deposits, whereas in the east we have rates that start with no interest and run up to 4 per cent, as the prevailing rate. In the east, of course, rates to borrowers are lower, whereas in those localities where the banks pay higher rates of interest, the laws of those States also permit higher rates of interest to be charged. I should like to get your general reaction as to what the situation is there, and I would also like to have you express the attitude of the Federal Reserve in regard to the discount of paper by those banks that charge 8 and 10 per cent interest and rediscount with the Federal reserve bank at a lower rate of interest. Is it the policy of the Federal reserve to admonish those people to make a lower rate to borrowers, or what do they do about that?

That is a composite question and you may answer any one or all of

the parts in your own way.

Governor Young. You asked three questions. In reply to the first one, I would say that previous to 1922 rates paid by banks in the Western States—and I am thinking of the Ninth Federal Reserve District with which I am familiar—were higher than the rates paid by the banks in the New England and Eastern States. After 1922, however, many of the banks in the West, if not all of them, found that they were paying an interest rate to depositors that was too high to permit them to make a profit on the rates that they were receiving, with the result that there was a general movement in the Northwest from 1922 clear through to 1927, to reduce the interest rate paid to depositors, so that, generally speaking, throughout the Northwest the rate was 3, 31/2, and, in no cases that I recall, in excess of 4 per cent, and, while I may be mistaken, I should be inclined to say that the rates paid in the West now are just about the same as those paid

in the East, although I have been informed that some mutual savings banks in the East pay as high as 4½ per cent. They, of course, do not deal with commercial borrowers. Their money is invested almost entirely in bonds and mortgages.

The CHAIRMAN. Is that true in respect to the past two years? Do not the savings banks go in for investments and brokers' loans and various other investments that exist?

Governor Young. I am not familiar with the law, but I am of the opinion that the law prohibits savings banks from taking collateral

Mr. Luce. That is true, but they do it indirectly through their connections with national banks and, in my own State, I think the banks are paving 5 per cent.

Governor Young. I think I am safe in saying that there is not a bank in the ninth Federal reserve district that pays 5 per cent on savings accounts.

Mr. Luce. I may be inaccurate about that.

Governor Young. I doubt if any bank pays in excess of 4 per cent. Mr: Luce. I may be mistaken, but I am sure that until a short time ago 5 per cent was paid.

The CHAIRMAN, Has the Federal Reserve Board an opinion in regard to rediscounting paper that draws 6 per cent or above in rates of interest?

Governor Young. None whatever.

t

The CHAIRMAN. You do not admonish those banks that are charging excessive rates to borrowers?

Governor Young. We never have.

The CHAIRMAN. You feel that is not part of your function, inasmuch as the State laws parmit it?

Governor Young. That is correct.
The Chairman. What is your opinion of these State laws permitting higher rates of interest in those localities? Do you think it is

Governor Young. Well, if they were not justified, Mr. Chairman, It seems to me the people of the States would repeal the laws. The conditions and circumstances as to hazard, and so forth, are all factors that must be taken into consideration in establishing a maximum contract rate. As I explained before, over the past 30 years there has been a tendency downward, and in no case that I know of has the rate ever been raised.

The Chairman. Of course the continuance of those laws permitting higher rates of interest, tends to sustain that policy?

Governor Young. That is true.

Now, in so far as the reserve bank is concerned, when a bank borrows from a Federal reserve bank, we usually satisfy ourselves that the request is justifiable and, while the banks were in our debt heavily in 1920, in 1921, and 1922, since 1923 the requirements have been seasonal, rather than continuous borrowing, lasting for a period of from three to six months, and, by tradition, the banks object to borrowing continuously. I do not know of any evidences at all of where banks have deliberately borrowed, for profit, in the last seven or eight years.

The Chairman. Has it been your observation in those sections that the change in the Federal Reserve discount rate affects the rate of Interest charged their borrowers?

Governor Young. We are told by member banks that it does; in other words, when we reduce our discount rate they say they have a demand from their customers for a lower rate because of the lower Federal discount rate. We are told also by the borrowers that when we raise the rate, that gives the member banks a stronger argument for charging the customers more.

The CHAIRMAN. Whether borrowing from the Federal Reserve

bank or rediscounting?

Governor Young. It works both ways. The discount rate of the Federal reserve bank is used by the lender and also by the borrower as an argument.

The CHAIRMAN. Mr. Beedy.

Mr. Beedy. Governor Young, other things being equal, money does generally flow into that market where the greatest return may be immediately realized, does it not?

Governor Young. Generally speaking, yes.

Mr. Beedy. As suggested by Mr. Luce's questions—I think he asked you why, we will say, in the State of Arkansas, with the State law permitting a charge of 10 per cent interest and the State law of Maine permitting 6 per cent—why does not the money flow into Arkansas? Of course the rate of interest alone would not influence the flow of money, would it? There must be coupled with it such a measure of industrial activity, with an incidental demand for the use of money which, coupled with the rate, would influence the flow?

Governor Young. Many factors would influence it.

Mr. Beedy. And is it not probably true in these States where people do not revolt against the higher legalized rate of interest that fundamental conditions justify it? For example, in the Western States where they have not reached the high state of development which we have attained here in the East, loans to the small borrower are more hazardous, in the main, are they not?

Governor Young. Well, I am not going to put it quite that way, Mr. Congressman. I think that the smaller loan requires more attention and more inspection and, obviously, if you lend \$500 to a farmer on a chattel mortgage, the inspection requires as much labor as a \$2,000 loan. Generally speaking, the expense of the inspection of

chattel loans runs about 11/2 per cent.

Mr. Beedy. A banker, when applied to for a loan by an established business concern, with large assets, in a highly developed community, would naturally be influenced by the attraction of such a loan as against a loan sought by a small concern just getting under way in a new territory where the development and growth were problematical?

Governor Young. Obviously so. We have very specific evidence

of that in commercial paper, bankers' bills, and so forth.

Mr. Beedy. Is that not one of the reasons why there is a difference in the legalized rate in the different States and sections of the country in the rate customarily charged by banks?

Governor Young. That is one of the reasons; yes, sir.

Mr. Wingo. I think both of you gentlemen are speaking without experience in that 10 per cent territory. That rate applies to a loan to a Congressman putting up Government bonds as security, so that there is not any risk.

Mr. Beedy. I could make the retort courteous, but I do not care to enter into any discussion about that. Personally what I am trying

to bring out are the fundamental underlying conditions which justify the institution of different interest rates and justify their maintenance. They are such as the governor has said obtain and he is not without experience, as I understand it, in the western country.

Mr. Wingo. He is from the Northwest. I do not think they have

a 10 per cent rate there.

Governor Young. South Dakota permits 10 per cent and Montana 10 per cent; Minnesota 8 per cent and North Dakota 9 per cent. Those notes that I have seen out there would average, I would say,

between 7 and 8 per cent.

Mr. Wingo. What I want to suggest to the gentleman from Maine is that the reason for this has been studied by practical bankers in that territory and it is unanimously agreed that the two major reasons for the higher rates are the law of supply and demand and the other is the expense of doing business and the necessity of making expenses and a profit for the stockholders. Those are the two major factors. I think the governor will agree with that.

That enters into the contention with respect to branch banks, that

because of the expense of doing business-

Mr. BEEDY. And I suppose the element of risk and hazard is equally important in connection with the maintenance of laws authorizing

different rates.

Mr. Wingo. Of course the element of hazard has something to do with that in that territory, but my general contention has been that the rate is the same. I mean if you walk up to a bank that is maintaining a 10 per cent rate and put up \$10,000 worth of Government bonds to cover a \$500 loan, you would still be charged 10 per cent. There is no risk involved there.

Governor Young. Where would they charge that? Mr. Wingo. In any of the Southwestern States.

Governor Young. I do not see why a borrower would pay 10 per

cent on a note secured by Government bonds.

Mr. Beedy. Governor Young, you have testified that the fundamental and underlying differences in conditions justify, for the most part, the variation in rates of interest which are charged, and probably justify the continuance of State laws permitting those differences

Governor Young. In a general way; yes.

Mr. Beedy. Exactly. In other words, the banker in Maine is no more humanitarian than the banker in Arkansas; the banker in Arkansas is just as decent a fellow as the banker in Maine; he does not arbitrarily rob his borrowers of that difference between 8 and 10 Per cent as against the rate of the humanitarian banker in Maine who will take 6 per cent?

Governor Young. I do not think so.

Mr. BEEDY. One other thing has been gone into here. It is the fixing of the call loan rate in New York and the effect that call loan rates has on the credit situation in general. If no one objects to it,

I should like to have five minutes on it.

We got to the point, in questions by Mr. Seiberling, Governor Young, where you said, in order for the price of securities to keep on ascending, there must be a continuous supply of money to make it possible, and the higher the call loan rate goes the more attractive becomes the money market in New York and the more money from the more distant places begins to flow in.

Now, do you think it is a good thing for call loan rates to go on pyramiding until there comes such a strain on the credit situation that ordinary borrowers engaged in legitimate business can not get money?

Si

n

Governor Young, I do not.

Mr. BEEDY. I did not understand why you do not think it is wise to limit the call money market rate, we will say, at 6 per cent?

Governor Young. I am not hesitating to be evasive: I am trying to follow this along. I have referred to Doctor Goldenweiser a little, all of which I assume is agreeable to you.

Mr. BEEDY. Certainly.

Governor Young. If there is anything in the theory at all that a higher rate has a restraint on a condition of that kind, obviously the 6 per cent rate from the experience I have had, would not be a restraint. It appeared for a long while that the higher rates of 10, 12, and 14 per cent did not have a restraint because the market kept

continuing even under those conditions, but-

Mr. BEEDY. May I interrupt you? You and I are thinking at cross purposes. Far from being a restraint, it is an encouragement. It is an inducement to a further continuation of the bad condition-a concededly bad situation. The higher you raise your rates, the more you induce the flow of money to that particular center and the more you accentuate the movement which multiplies the possibilities for evil consequences.

Governor Young. On the other hand, the more the speculator is penalized and obviously no man could continue indefinitely with such rates as 14 per cent and 15 per cent and expect to get a profit out of his speculative transactions. Eventually the interest that he pays would eliminate any appreciation in the value of his securities.

Now, under a 6 per cent rate, that restraint would not have been there and while I will have to admit that, for a long period it seemed as if the higher rates did not have an effect on speculation, obviously, in the last analysis, they did have some effect and were a contributing factor in controlling that situation.

Mr. BEEDY. During that time, when the rates were mounting in the call money market, the Federal Reserve Board in October-

was it October when you sent your letter of warning?
Governor Young. February.

Mr. Beedy. February of this year? Governor Young. February of 1929.

Mr. BEEDY. February 1929?

Governor Young. Yes. It was February 6 or 7. I have forgotten which.

Mr. BEEDY. You sent out your first letter of warning and from then on it was the policy of the board to do what it could to curb further extension of credit, was it not?

Governor Young. Correct.

Mr. Beedy. Now, the late Governor Strong, governor of the New York bank, testified a year or two ago that from the time the Federal Reserve Board began to increase its rediscount rate or decrease it, according to the results it hoped thereby to assist at least in attaining, a period of about six months elapsed before the first consequences of that step begin to be observed. Would you agree with that statement?

Governor Young, Well, the period would be different and I am just trying to think of the last period. The Federal reserve system started a firming-up policy about in November, 1927. That would bring it up to April. I should say that it was just about six months before any effects were seen.

Mr. Beedy. His testimony was that as he looked back over the operations of the Federal reserve system, it had taken about six

months for the machinery to turn out results.

Your letter of warning started in February. That would bring us up, if that six months' period obtained, into August. The call money rate, in the meantime, was firming up. Do you recall what the call money rate of August, 1929, was?

Governor Young. I think the call money rate had dropped a bit by August. It had dropped somewhat. It was 8% at that time—the

average rate.

Mr. BEEDY. That is a fairly high call money rate, is it not? It is more than twice the present call money rate.

Governor Young. It is very high.

Mr. BEEDY. From that time on how did the call money rate stand? Governor Young. The call money rate, on an average-

Mr. Beedy. From then on up to October, when the crash or break

came?

on

on

et

se

15

e,

a

e

200

ti

t

r

Governor Young, I find I was mistaken in my statement. The call rate was—it dropped down to as low as 7½ per cent—but at the beginning of August it was pretty close to 10 per cent on an average. Toward the end of the month it dropped to 8 per cent and at the time of the crash in the stock market the call rate was about 6 per cent.

Mr. Beedy. In other words, in August a 10 per cent rate prevailed

in the call money market?

Governor Young. In the early part of August.

Mr. Beedy. In other words, in about six months from the February warning, your call money market rate had gone up to a point higher than that which obtained when the crash itself came?

Governor Young. That is correct.

Mr. BEEDY. Of course that rate fluctuated during the months of June, July, and August to the extent of 1 or 2 per cent according as money flowed in from, we will say, places where it had been theretofore unattracted by the call money rate or for some other reason which, for the moment, increased the supply of available funds in New York City?

Governor Young. Correct. The highest average was in April or

May of that year.

Mr. Beedy. Between February and August, 1929, the Federal Reserve Board was finding that legitimate borrowers were not able to be accommodated to meet demands of industry, were they not?

Governor Young. We had complaints in reference to that. investigated through many sources and felt that in the great majority

of cases business was being taken care of.

Mr. Beedy. I am surprised at that because I understood the position of the board to be that the fundamental justification for their February warning was the failure of the legitimate borrower, the man engaged in industry, to be accommodated.

Governor Young. I think the warning specifically stated that they anticipated that it might develop to a point where it would be a

deterrent to business. I do not think they took the position that it

had been a deterrent up to February.

Mr. Beedy. Probably I am wrong but you say you investigated the rumor. How did you investigate that rumor? I am now referring to the rumor that legitimate borrowers were not being accommo-

dated between February and August of 1929?

Governor Young. I dispatched a telegram-I do not know whether it was just at that time or some time before that-to all the Federal reserve banks to make a careful inquiry in their own territory as to whether business was being denied credit and whether high rates were a real deterrent to business at that time, and if I remember correctly, the replies we got back were that up to that time it had not operated as a deterrent to business, although rates were higher.

Mr. BEEDY. If the call money rate had not mounted to 20 per cent, do you believe there would have been anywhere near the amount of money available in New York City for the purchase of securities that

was available?

Governor Young. I think so. That was a world market and I believe that they could have gone across the water and borrowed the money in a circuitous way and then transferred the funds here and handled the situation in that way. International finance naturally enters into the call loan rate.

Mr. Beedy. Exactly. They could have gone abroad and borrowed

it, if what?

Governor Young. If the lenders across the water were willing to lend, as they apparently were.

Mr. BEEDY. I am asking you to keep in mind the call money rate

as a factor in the situation?

Governor Young. Suppose they could not make a loan of that kind in New York City. There would be nothing to prohibit their making the loan in London or Paris or elsewhere. They could go all over the

world to get that money and would have gone.

Mr. Beedy. Suppose some one had the power to pass a law or had passed a law which held the call-loan rate at 6 per cent in New York City and money would not as easily have flown into New York City, yet you say that, granted a sufficiently strong combination of capital, so minded, they might have gone across the water and made a deal to get capital further to boost prices in this country? Governor Young. They might have.

Mr. BEEDY. That, of course, would depend on whether there was

surplus funds available in foreign countries?

Governor Young. Or even in this country. Our own funds could be sent to those countries and loaned there and transferred back here.

Mr. Beedy. It would be possible only when business itself in the various sections of the country was not developing to such an extent that the demands for further credit absorbed the available funds in the various localities?

Governor Young. That was a tremendous volume, Mr. Congressman, as shown by the brokers' loans for others which aggregated in the neighborhood of four or five billions of dollars, I think-four

billion at the maximum.

Mr. Beedy. Assuming that the call rate could never go above 6 per cent and assuming there are no available funds abroad. Before a bull market can be continued with profit to the operators in that market, there must be a decline in business throughout the country generally and a let-up in the demands for credit generally by legitimate borrowers before they can go out with a rate of 6 per cent and induce further capital to come to New York?

Governor Young. There is an old saying that if the rate is high

enough, it will draw gold out of the ground, and it will.

Mr. Beedy. That is why I asked you if you do not think it would be highly desirable for some legislative body, having the power, to

limit the call loan rate?

Governor Young. No; I do not think so. I think that if there is another bull movement started in the country and the speculators are so ambitious for funds that they are willing to pay the rates they paid before, that that credit would be produced in some way—some circuitous way.

Mr. Beedy. But I say if industry absorbed all available funds in the various localities of the country and the world, where would you get money unless you had some higher rate as an inducement?

Governor Young. Well, I suspect somebody would manufacture

some credit.

Mr. Beedy. Governor, as a matter of logic, if business is demanding credit—if business is on the upswing and is demanding credit which takes up the available funds of banks throughout the country and the bankers are loaning their money and getting their 6 per cent return, and they can not get 7 per cent in New York City under the call loan rate, they are going to loan their money at home, are they not?

Governor Young. The first procedure they follow is to buy bankers' bills and Government bonds and anything that offers the

best yield and the best possibility of profit.

Mr. Beedy. But they will not go away from home when they can use their money there and get 6 per cent when, to go away, it will not yield them any more than 6 per cent, no matter what they buy?

Governor Young. Business would not get the 6 per cent rate locally. They would get what the local bankers would pay, which

would be probably 2 or 3 per cent.

Mr. BEEDY. Why, business men can not borrow money at 2 or

Governor. Young. You are speaking about the borrower?

Mr. BEEDY. Yes.

Governor Young. I thought you were speaking about the lender.
Mr. Beedy. As long as borrowers can take money from their local
banks in order to satisfy the needs of their business at 6 per cent,
those banks would rather lend it at home?

Governor Young. That has been my observation. They take care

of the local industries first.

Mr. Beedy. If they can get 8 per cent in New York, it is human nature they would divide up—fairly equitable perhaps—some of the money at home to meet the local needs and skimp out a little to send to New York to make more profit out of the call money rate?

Governor, Young. The bankers deny that.

Mr. Beedy. Oh, well-

Governor Young. I think it was done to a certain extent, but not in large volume.

Mr. Beedy. From your experience, do you think there is a banker in the country that would not try to take a little of his money and send it to New York where he can get, on perfectly good security, 8 per cent, rather than lend it all out at home at 6 per cent?

Governor Young. No; my observation among the bankers in the interior of the country was that they continued to lend at home money on which they could get much more interest by sending it to New

Mr. BEEDY. What about the small banks?

Governor Young. Some of the small banks lent their surplus funds, as well as the large banks.

Mr. BEEDY. Would they lend as much of their surplus funds when the rate is 20 per cent as they would if it stays at 6 per cent?

Governor Young. No; not as much.

Mr. Beedy. It would be a pretty good idea, then, to have somebody limit the call money rate on the ground that the human tendency would be not to make it as easy to bull the prices of securities as would otherwise obtain, would it not?

Governor Young. There are so many other factors you have to take into consideration, Mr. Congressman, that I believe that the factor that you stress so much is insignificant in comparison with the

others.

Mr. Beedy. We can not take them all into consideration. We have to deal with them one at a time, but this factor has some influence.

Governor Young. It has some.

Mr. Beedy. And I say, would it not be a wise thing to start in with this one factor which has a tendency to induce a flow of money in great quantities to a single center, when we are on the upward swing, by limiting the returns which can be realized by sending funds to such center?

Governor Young. I do not see how you can do that, Mr. Congress-

Mr. Beedy. Possibly we can not, but waiving that for the moment, I am trying to get an answer as to whether or not it would be a wise thing to take that one factor and deal with it in such a way as would have a tendency to be helpful and prevent these wide swings in prices.

Governor Young. Mr. Congressman, I could not answer yes to

an inquiry that I do not see a solution of.

The Chairman. May I make an observation here, Mr. Beedy? Mr. BEEDY. I do not want to be swung off this line of thought.

The CHAIRMAN. You will not be swung away from your line of thought. I simply want to observe, because of this situation in regard to high rates in New York City during the period you referred to here, that it was necessary for Pennsylvania to change its usury laws in order to hold funds in Pennsylvania that were flowing into New York; in other words, the banks of Philadelphia felt they should have the same right to lend money at the rates New York had to protect their own funds in Philadelphia; otherwise they were being sucked into New York on account of the high rates there.

Governor Young. That was true also of Illinois. But meanwhile

those banks maintained a 6 per cent rate to business.

The CHAIRMAN. I do not know as to that.

Governor Young. But I do.

The CHAIRMAN. They are not in the habit, I know, of sending money into New York, when they can hold it and get the same rates at home, but the situation did arise where they changed the usury laws in Pennsylvania so as to conform to the laws in New York whereas, if New York had a law such as Pennsylvania, the rate would have been held down to 6 per cent.

Mr. Beedy. You have answered my question partly when you say, of course, if we make the rate of return on money high enough it

will drag gold dollars right out of the earth.

Following that thought, brokers' loans advanced from, we will say, the spring of 1929 from between four and five billion dollars to right around—what did they go up to in August, 1929?

Mr. Goldenweiser. The peak was \$6,900,000,000.

Mr. BEEDY. What month was that?

Mr. GOLDENWEISER. October.

Mr. Beedy. What were they in the spring of 1929? Governor Young. \$5,400,000,000, approximately.

Mr. Beedy. So, in six months, they went over a billion and a half dollars. Would that be an accurate statement?

Governor Young. About a billion and a half.
Mr. Beedy. Where did that money come from?

Governor Young. From all over the world, in my opinion.

Mr. Beedy. You think the call money rate had anything to do

with it at all?

Governor Young. The call loan rate had a great deal to do with it—the high rates—up to, say, September, when the rates were frequently above 10 per cent, but there was a tremendous increase

in those brokers' loans even after the rate went down.

Mr. Beedy. Exactly, because by the mere change in the rates, you can not cause the business world to readjust itself in a moment. It takes approximately six months for the tangible results to be evident to the ordinary person and even to the banker himself. That continued increase in brokers' loans and the attendant increase in price of securities was not a good thing, was it?

Governor Young, Not in my opinion.

Mr. Beedy. You have just said that one of the very considerable factors in the situation was the high rate of interest on call loans. Therefore, does it not follow, as a logical conclusion, that if the call loan rate had been fixed, it would have at least had a tendency to prevent that additional increase of a billion and a half in brokers' loans in a six months' period in 1929?

Governor Young. Not in my opinion. They would have gotten

that money from other sources in a circuitous way.

Mr. Beedy. It would have made it more difficult for them, at least, would it not? Here was the money available in New York City. It was easy to step out of one door and into another and get the money.

Governor Young. I do not think so. I think that is what put the rate up, because money was not available. Certainly the New York banks attempted to check this and if you will take their brokers' loans figures from 1927 clear through to October, 1929, there is very little difference in the amount they lent. It is the fact that they did not lend that forced the borrower to put his bid up so that it invited the entire world to come there with their funds. Generally speaking,

Mr. Congressman, there was a tendency upon the part of all banks of

the United States to control the situation.

The thing that seriously interferes with any control of it—and I do not know that they could have controlled it-was the so-called bootleg loan of funds coming from some source. If they had not come from one source, they would have come from another and if they had not come directly they would come indirectly. It was the lack of funds that put the rate up.

Mr. BEEDY. If you put the rate high enough-or, if you can not

put the rates high enough, those funds will not come.

Governor Young. They will come in a circuitous way just as sure as I am sitting here.

Mr. Beedy. They have to be used by somebody, do they not?

Money is to be used by some one.

Governor Young. Yes, it has got to be used.

Mr. BEEDY. Now, you are going to let the fellow use the money that pays you the most, other things being equal?

Governor Young. Yes.

Mr. BEEDY. If you get the call money rate high enough in New York, you will let that fellow in New York use it?

Governor Young. Not all of it.

Mr. BEEDY. Well, as much as he can get hold of with safety, and retaining enough to satisfy the local interests at the same time? Governor Young. Yes, sir, and credit is pyramided. You know

that?

Mr. BEEDY. That is true.

Governor Young. Those high rates tended to pyramid credit and expand credit. That is the one position the Federal Reserve took-It did not take any position with reference to the prices of securities. It took the position that this considerable expansion of credit for this particular purpose eventually would work to the harm of the business interests of the country, and all their efforts were used to curb that tremendous expansion.

Mr. Beedy. Now, following up this testimony of Governor Strong's, that it takes about six months for the machinery of the Federal Reserve Board to work out results, you began to cut down

your rediscount rates in 1929 when?

Governor Young. The first rate reduction was in November, I think. November 1, the New York rate was reduced from 6 to 5 per cent.

Mr. BEEDY. And the next reduction was?

Governor Young. November 15, to 4% per cent.

Mr. BEEDY. And the next reduction?

Governor Young. February 7, 4 per cent. The last reduction

was March 15, 3½ per cent.

Mr. BEEDY. Now, then, along in the middle of this summer, unless the Federal Reserve Board—the latter part of the summerunless the Federal Reserve Board changes its policy of doing what it can to ease the credit situation, let us see what will happen in the prices of securities.

Governor Young. You are not making an inquiry of me?

Mr. Beedy. No; I say let us see.

The CHAIRMAN. Governor, supposing a banker in Fargo, N. Dak. wants to lend some money in the call market in New York. I merely mention Fargo by way of illustration. It might be Memphis or any other part of the United States. What method do they pursue in lending that money?

Governor Young. They wire the New York correspondent to charge their account a certain amount and invest it in call loans.

The Chairman. There is a limitation to lending money to brokers;

that is, an individual or an individual banker, unless they go through a New York bank, can not lend money on the call market?

Governor Young. What is that, Mr. Chairman?

The CHAIRMAN. A bank in Fargo, N. Dak., can not lend money

on the call market without going through a New York bank?
Governor Young. It is a matter of procedure and not law.

The CHAIRMAN. All these brokers' loans have to be made through

a New York bank?
Governor Young. That is correct.

The CHAIRMAN. A Chicago banker can not lend money in New York—I am speaking of brokers' loans—without going through a New York bank?

Governor Young. That is the procedure, if I am correctly informed. The Chairman. Do I understand this to be a practice which has grown up in recent years—the question of banks throughout the country lending their surplus funds in the New York call loan market? My understanding is that that has developed somewhat in this manner, and I should like to have you check me up on it if I am wrong, that the large New York banks are largely responsible for this development of country bank loans in the call money market and loans for the account of others, through their practice of getting business throughout the country; in other words I have been told that a business concern or a bank that kept, say, \$3,000,000 on deposit in New York, would be approached by a New York bank and asked to transfer their account to that bank, and as an inducement to do that, they will say, "We will lend \$2,000,000 of that on the call market if you will keep the other million on deposit with us."

Through the operation of that plan they have built up a large clientele and have induced country banks to lend their surplus funds in the call-loan market and have also induced industrial concerns with surplus funds, concerns with attractive and profitable accounts for banks, to do the same thing. This development is due apparently to the large banks going to the small banks and offering the opportunity of lending their money at twice the usual rates in the call-

loan market. Do you know anything about that?

Governor Young. I have never had any actual experience with it myself, Mr. Chairman, but I am told that has been the procedure.

Mr. Beedy. You stated that the call-money rate got to a point where it was no longer profitable or would reach a point where it was no longer profitable to carry the stocks and make money and that, as I understood you to say, contributed to the collapse of the market last fall.

Governor Young. In my opinion it had an effect; yes.

Mr. Beedy. Was it not rather the fact that, even though a 20 per cent call-money rate obtained, they were not able to get any more money, and so had to stop?

Governor Young. No; the money was always forthcoming from

some source.

Mr. BEEDY. Was it still continuing to come when the market broke?

Governor Young. Oh, yes; there was a tremendous increase in broker's loans from July 29 to October 16; they raised almost \$800,000,000 in that short period, on rates averaging about 8 per cent, I should say.

Mr. Beedy. As you say, there are always so many factors in these situations that it is impossible to single out any one and attribute to it a major influence.

Governor Young. That is true.

Mr. Beedy. But it seems to me, as we look back over the history of the country and see what has happened to the market, that it was not because it was unprofitable to pay 20 per cent and to realize five, six, and eight points in three or four days on a stock that it collapsed, but it was because they could not get any more money.

Governor Young. No; the money was forthcoming.

Mr. STRONG. From where?

Governor Young. I suspect, Mr. Congressman, that when we refer

to money we mean credit. Much of it was manufactured.

Mr. Wingo. I either misunderstand Mr. Beedy or the governor on some of the figures that you have been talking about. I have before me your table that you referred to, "Loans to brokers and dealers in securities made by reporting member banks in New York City," and, on October 2-and these figures refer to millions of dollars-there were 6,804; on October 9, 6,713; on October 16, 6,801; on October 23, 6,634; on October 30, 5,538; on October 6, 4,882; on November 13, 4.172; on November 20, 3,587, and so on; and now, commencing with the 1st of October, instead of declining, the peak on October 2 occurred; it was \$3,000,000 more on October 2 than on October 16, the other peak, and then it dropped \$200,000,000 from the 16th to the 23d, and dropped over a million between the 23d and the 30th.

Governor Young, My statement, Mr. Congressman, is that between June and October there was a tremendous increase in brokers'

loans: almost \$800,000,000.

Mr. BEEDY. But the collapse did not come between June and October; it came in October, and at that time there was evidently a failure

of funds in New York City banks to sustain the market.

Governor Young. That is the point; the funds did come when the crash came; the New York banks stepped right into that situation and took over those brokers' loans as rapidly as they were called-That was the only thing they could do to prevent a widespread panic throughout the world.

Mr. BEEDY. That was not an increase in the supply of money; it was a matter of bookkeeping. In other words, it was changing from

brokers' loans to bank loans.

Governor Young. That is correct.

Mr. BEEDY. But they did not have any more money to do it than in the first place; there was not any more money in New York City when they began to cut down brokers' loans and increase their own borrowings.

The CHAIRMAN. And increase their borrowings at the Federal

reserve banks.

Mr. Beedy. And increase their borrowings at the Federal reserve banks. There was not any more money coming in from world

sources or from a mysterious source. Either one of two things happened-either somebody somewhere stopped manufacturing credit, or else, as the figures would seem to indicate in the New York banking situation, the available funds either for brokers' loans or for

borrowings by banks began to fall off.

Governor Young. The demand began to fall off. The funds were always available there, and that is what that call loan committee does; they fix the rate that will bring those funds, so that there will be no shortage.

Mr. Wingo. Right in that connection, before you get away from that, Mr. Beedy, attention should be directed to those figures that I gave a while ago so as to have the full picture, those figures showing a drop of about a billion dollars; and you should also consider the fact that there was an enormous drop in the value of the stocks and that there was a greater volume of stocks carried, even though It took a billion less, because the general average of stocks dropped very greatly. And I suspect the actual facts were that there was a larger volume of stocks carried. In other words, they took care of them, as the governor states, when the crash came, but it took less dollars in loans to take care of a larger volume of stock.

You catch the point I am making?

Mr. BEEDY. That is a fact.

Mr. Seiberling wanted me to yield to him.

Mr. Seiberling. Governor, if your theory is correct that there was always sufficient money in New York, then why did the call money rate go up?

Governor Young. During that period?

Mr. Seiberling. Yes.

el

in

st

er

Se

to

y

15

:0

è

۶

Governor Young. It went down.

Mr. Seiberling. I am talking about prior to that time. Why did the rate on call money go up if they always had sufficient money in New York?

Governor Young. It was the rate that brought it there. For Instance, you may have a shortage of \$30,000,000 in the call loan situation to-day, and this committee that we were speaking about the other day sizes that situation up. We will say that there is a rate of 4 per cent at the moment, and they figure that a 4½ per cent rate will bring that money in, and they may change it at 11 o'clock, and they are still short and they will raise it to 5 per cent, and that may not bring the money in, and they will raise it to 51/2, and, if that does not bring the money in, they will raise it to 6 per cent, and before the close of business that night they will have a rate that will bring that money from some place in the United States by telegraph.

Mr. Seiberling. But the call money rate went up because they did not have sufficient call money in New York?

Governor Young. At the time, but the rate always brought the

money and credit.

Mr. Seiberling. But when they got the rate away up and it still did not bring the money, something had to happen, did it not? Governor Young. It did bring the money, Mr. Congressman.

Mr. Seiberling. But there is a limit to the amount of money You can get even in New York at any call money rate, is there not? Governor Young. A theoretical limit, yes.

Mr. Seiberling. Well, the estimate is that it was \$58,000,000,000 that was lost in the stock market crash in paper values. Is that

Governor Young. I have heard estimates much higher than that. Mr. Seiberling. That is as much as all the deposits of all the

banks in the country, is it not? Governor Young. Yes.

Mr. Seiberling. So that putting this money in New York is a very serious thing for the country. The banker might continue to carry his old loans, but he would not encourage any new business or enterprises or anything of that kind in dealing with a customer from whom he could not get more than the usury rate in his State when he could lend the money at 15 to 20 per cent in New York, would he?

Governor Young. I think he would.

Mr. Seiberling. It is contrary to human nature.

Governor Young. No, I do not think so. If I am running a commercial bank, I am interested in my community and in the industries in my community, and if I can make a good loan to a permanent customer at 6 per cent, I would hesitate before I would lend to a temporary borrower at 18 or 10 or 12 or 14 per cent, because the local customer is going to be with me forever.

Mr. Seiberling. You would just put him off for a few months?

Governor Young. I would not do that.

Mr. Seiberling. You would not do it, but, as a matter of fact I know it was done.

Governor Young. I do not think it was done in the majority of cases, Mr. Congressman, and I say that with all sincerity. I believe

that the bankers of the country-

Mr. BEEDY. Of course, we do not know about that. Nobody knows about it, but it is clear from your testimony that the call rate does now suffice to bring money into New York when they want it, and if the then existing rate does not bring it in, they put it up until they get it in New York, and in getting it into New York they brought about a bad situation in the market, and we are feeling the consequences of it at the present time. Governor Young. That is correct.

The CHAIRMAN. Following up my questions of a few moments ago one of the problems which confronted you as the head of the Federal reserve system, I inferred from your testimony, was the lack of control over the money that came into this market for the account of others and country banks. Am I correct in that? You referred to them as bootleg loans.

Governor Young. Lack of complete control. We did have some surveillance over it-for instance, we watched the situation very carefully and would not permit a member bank to borrow from us and

then turn around and lend on call solely for profit.

The CHAIRMAN. But that was one of your problems, the fact that there was money coming in over which the Federal Reserve Board did not have jurisdiction?

Governor Young. I will go a little bit further than that and say

that the member banks did not have jurisdiction. The CHAIRMAN. The point I am getting at is that this New York call loan money market is limited by the rules in New York. New

York banks introduced bootleg loans into the call-loan market, they introduced the country banks into that market, and they introduced the business concerns of the country into that market, because those loans had to be made through the New York banks. Therefore I am assuming that the New York banks were largely responsible for

bringing that money into New York.

Now, I would like to ask whether or not that situation could not be remedied either by rules and regulations of the stock exchange pertaining to those brokers loans, or through putting limitations on the New York banks as to the amount of money they can loan for account of others, and, if such loans are made, whether they could not be regulated to a great extent by requiring reserves against those loans in the same manner as the banks are required to keep reserves against deposits, because it has been clearly proven in this particular situation that there is no difference between the total aggregate of those brokers' loans in New York City and deposits in those banks in New York City—in other words, when those loans were called, the New York banks had to meet them just as they would demands from their customers for the withdrawal of their own funds.

Governor Young. Mr. Congressman, experience is a great teacher, and I suspect that the New York banks worried enough about that situation during 1928 and 1929, so that they are giving a great deal of thought to it. I have been informed that some studies are being made of it to see what can be done. I hope something can be de-

veloped

Mr. Beedy. I am through but would tie all my questions up to the

issue by asking you one question.

In your opinion, is it going to be easier through call-money rates or other banking devices in New York City to get funds into that center under a group-banking or chain-banking or branch-banking system than it would be under a unit banking system? Is not one of the arguments for this branch banking movement the mobility of funds and the advantages of the system?

Governor Young. That is an extremely hard question to answer, Mr. Congressman. The answer, I suppose, would be determined entirely by the attitude of the unit banker or the attitude of the group

banker or the attitude of the branch banker.

Mr. Strong. How are you going to control the attitude?
Mr. Beedy. We can not go into that. Here is an opportunity, a possibility under a call-loan rate of 20 per cent, to get returns far in excess of any to be realized in any other interest market, and here is a big bank in New York City, in a group or a chain, extending clear across the country. All it has to do is to wire these banks and say, "Ship us so many thousand dollars." Is not that a fact?

We will not go into the attitude or the psychology of it, but it is going to much easier, as a matter of practical banking operation, to have that money there in New York and more quickly under a group, chain, or branch banking system than it would have been if consolidations had never been permitted or branch banks were never authorized

throughout the country?

Governor Young. Under a branch banking system, of course, they would have those funds in New York, theoretically; that is where the books would be kept. In the case of a group bank where they attempt to maintain local autonomy, the possibilities are that the

local bank had lent the money long before the central bank would have wired them.

Mr. Beedy. Of course.

Governor Young. The bank would not leave \$200,000 lying around

idle with a high call rate in New York.

Mr. Beedy. Of course, they could not do anything unless the banks in the group had available funds for loaning purposes, but, if they had, it would be easier to get them in New York where they control the system or part of it than where they have to deal with independent

Governor Young. I do not think so.

Mr. BEEDY, Why not?

Governor Young. If I am an independent banker in Minneapolis, Minn.. I can get money on call inside of an hour's time and get it out just as quickly.

Mr. Beedy. But you have to ask somebody else about it; you can

not issue an order merely.

Governor Young. I just have to wire my correspondent in New York to charge my account and put so much on call, and, if I want

it back, I wire, "Call the loan and credit my account."

Mr. Beedy. So that this argument which has been advanced here that there is an advantage under the branch-banking system in that it provides easier mobility of funds is not tenable, in your opinion? Governor Young. Mobility of funds to lend on the New York Stock Exchange?

Mr. BEEDY. For any purpose-getting funds and credits from one section of the country to the other in the group or chain or in the line of branches?

Governor Young. Yes; I think there is something to the argument;

but do not misunderstand me-

Mr. Beedy. How can you answer that question "Yes" and the other question "No"?

Governor Young. Because the argument for those funds was to

get them into the interior and not in New York City.

Mr. Beedy. Do you mean to say, then, that it would be easier to get funds out of New York City into the interior under a branchbanking system than it would be to get funds from the interior into New York City?

Governor Young. That is the argument of the Comptroller of the Currency, and an argument that I am inclined to agree with.

Mr. BEEDY. Now, I think it would be interesting to have us under-

stand why that is so. I have never grasped it.

Mr. Wingo. May I make a suggestion there? If I were to attempt to set forth the advantages of branch banking, I would say that there would be greater efficiency of control in a large bank with branches, with a quicker perception of the danger of keeping the money in the call-loan market, and a quicker tendency to pull it back to meet the needs of the interior.

Mr. Beedy. It works both ways.

Mr. Wingo. I was moved to say that because you were about to infringe on my right; you have gotten over on my side, and, so, to keep the balance, I have gotten over on your side. Mr. Beedy. I do not know what you are talking about.

enumerous the measure of appoint

Mr. Wingo. Did you never play the old game of "shinny"?

Mr. Beedy. Yes.

Mr. Wingo. You were "shinnying" on my side.
Mr. Beedy. What is your position?

Mr. Wingo. My side is against branch banking, and, if you get over on this side, against branch banking, I just thought I would

gravitate to the other side.

Mr. Beedy. I want to get all the facts. My thought was that it is easier under a branch banking system to get funds out of New York City if the attitude of the banker in charge of the branch system is such as to take that step, and that it is likewise easier to get money out of the small localities into New York it is believed that greater returns for the moment under a branch banking system or group banking system may thus be realized than would otherwise be the

Governor Young. I probably did not catch your former query.

Obviously it would work both ways.

The CHAIRMAN. Mr. Strong, it is your turn to question the

rd

28

d, re

e.

k

ø

Mr. Strong. Mr. Chairman, I want to examine the Governor on branch, group, and chain banking, but this subject that has come up this morning is producing such a fund of information in favor of a policy of the Federal Reserve Board stabilizing the price of money that I want it continued, and I yield to Mr. Fort.

The Chairman. I understand Mr. Fort is, then, to proceed.

Mr. Fort. I want to ask one or two questions in reference to matters that have not been touched upon.

Customarily, Governor Young, call loans are not accompanied by any deposit from the borrower with the bank from which he secures

the loan, are they?

Governor Young. So far as the bank that lends the money in the interior is concerned, I do not think so. What arrangements a broker may have with the New York correspondents about compensating

balances, I do not know.

Mr. Fort. As I get the practice, and certainly this is true as it relates to my own bank, if we lend money on the New York call market through our New York correspondent, we compensate that correspondent by a commission on the interest, but we get no deposits in Newark from anybody to compensate for the amount we loaned on call in New York.

Governor Young. That is correct, unless you would make a time

loan direct to that broker.

Mr. Fort. I am speaking of call loans only. Now, that differs from the usual rule of American banking, of requiring the borrower to maintain a deposit account with the bank that loans him the money,

Governor Young. That is true, with the exception of commercial

paper and bankers' bills.

Mr. Fort. Consequently, the bank has not the same opportunity to profit out of a call loan at 6 per cent when commercial loans in his vicinity are at 6 per cent, because it has no compensating deposit from the borrower on which it pays but 2 per cent or nothing.

Governor Young. That is correct.

Mr. Fort. In other words, it is not lending him back part of his own money?

Governor Young. No.

Mr. Fort. So that if you were to have a fixed call-loan rate, and desired to preserve the call-loan market, you would have to allow a higher charge for interest on call loans than on other loans, would you not?

Governor Young. That is correct.

Mr. FORT. Now, the method of making call loans is that certain money brokers on the New York Stock Exchange handle those loans for all accounts, do they not, banks and nonbankers?

Governor Young. In 90 per cent of the cases; yes.

Mr. FORT. And those money brokers make loans sometimes, we will say, of \$5,000,000 in a single loan, which represents the money of 40 or 50 different lenders?

Governor Young. It may be. Mr. FORT. In one single loan? Governor Young. It may be.

Mr. FORT. That money broker gets a compensation for his services as the intermediary, based on the amount he places, does he not? Governor Young. I do not know, Mr. Congressman, whether that

is so or not.

Mr. FORT. I think that is the fact.

Governor Young. Well-

Mr. Fort. Now, in the peak of the money trouble last fall, the major part of the money loaned in New York on call was for the account of others and not for the account of member banks-is not that true?

Governor Young. That is correct.

Mr. Fort. And that meant not merely loans for other banks, nonmember banks, but also very substantial loans for the account of business corporations and other types of financial institutions, did

Governor Young. That is correct.

Mr. Fort. There was nothing to prevent-and, indeed, it was done, was it not-the money brokers from handling the money for the account of nonmember banks directly without the intervention of any bank? For example, let us take the United States Steel Corporation; when it placed a call loan in the New York market of \$30,000,000 or \$40,000,000, it was placed through its own broker and not through its bank, was it not?

Governor Young. I do not think so; it was placed through its

bank. Mr. FORT. But not invariably.

Doctor Goldenweiser. Not invariably.

Mr. Fort. Many of the large industrial corporations maintain their own lending offices, do they not?
Governor Young. Not that I know of.

Mr. FORT. I thought they did. Many of the insurance companies and other institutions of that sort make the loans at their head offices and not through their banks.

Governor Young. That is all news to me.

Mr. Fort. And there are many private bankers who loan direct, are there not?

Governor Young. Yes; private bankers.

Mr. Fort. And when those men lend on call, they withdraw a deposit from a bank, do they not, in order to make a loan?

Governor Young. In the great majority of cases.

Mr. Fort. The tendency of the high loan rate on call last year was toward a reduction in deposits in the New York banks, was it not?

Governor Young. I will have to check those figures.

Mr. Wingo. Reduction of local deposits?

Mr. Fort. No: total deposits.

is

d

11

8

ø

Governor Young. Net demand deposits of reporting member banks of New York City between January and October 2 ranged from a low of \$5,106,000,000 on August 2 to a high on January 2 of \$5,682,000,000, and that \$5,682,000,000 really should not be taken, because that is after the period that I have—

Mr. Fort. Now, the 1st of February. Governor Young. \$5,354,000,000.

Mr. Fort. So that there was a decrease of \$200,000,000 between the 1st of February and August?

Governor Young. Approximately.

Mr. Fort. And that is the period when the highest call money rates prevailed, is it not?

Governor Young. Correct.

Mr. Fort. Now, deposits increased after the collapse in the call-money rate which accompanied the collapse in the stock market, did they not?

Governor Young, They increased very rapidly in New York City.

Mr. FORT. They went up from what?

Governor Young. The peak of demand deposits, according to my figures here, occurred on October 30, when they mounted to \$6,851,-000,000.

Mr. FORT. And that was just at the time of the big crash?

Governor Young. That was right at the end of it. Mr. Fort. The crash went on into November.

Governor Young. I mean that there was a very severe period

from October 23 to November 1.

Mr. Fort. Was not this in very large part due to the return to the banks of money which had been previously loaned for the account of others?

Governor Young. That is correct. What happened in October—that is from October 23 to November 1—is that the New York banks to save that situation (as the loans were called by country banks and by others, apparently through fear, because they had no use for the money), took the loans over, thereby increasing their loans, and the country banks and others left the money on deposit with the New York banks so that there was a very rapid increase in loans and a very rapid increase in deposits in the New York reporting member banks during that week.

Now, all that the New York banks needed to handle that situation was the additional reserve that they were required to carry with the Federal Reserve bank on the increase in deposits, and that is what

the New York banks did during that period.

Mr. Fort. What happened to time deposits in that same period, between the 1st of February and the high point? What were the low and high dates?

Governor Young. We will take February 1. Time deposits, New York reporting member banks, \$1,200,000,000. On August 28 there were \$1,189,000,000, practically no change.

Mr. Fort. What were they on the 30th of October? Governor Young. \$1,257,000,000.

Mr. Fort. That is an increase of nearly \$100,000,000.

Governor Young. From February, an increase of \$57,000,000.

Mr. Fort. But from August-

Governor Young. From August, \$100,000,000.

Mr. Fort. So that apparently between the low date of deposits in August, which was also at the time when the money rate was running very high and the time of the low money rate that followed the crash, there was a substantial increase in deposits with the member banks in New York City, both time and demand?

Governor Young. There was an increase of \$300,000,000.

Mr. Fort. Now, in that same period after the crash, would not the more significant figure be the total loans on collateral?

Governor Young. I am inclined to think so.

Mr. Fort. What was the figure covering total loans on collateral in August?

Governor Young. In New York, or throughout the United States?

Mr. Fort. In New York.

Governor Young. My previous reply to you applied to the entire

Mr. FORT. I appreciate that. I want to get New York first. Governor Young. I am giving you New York. Reporting member banks on January 30, loans on securities, which included brokers' loans, were \$2,795,000,000.

Mr. Fort. What about the latter date?

Governor Young. On October 30 they were \$4,205,000,000. Mr. Fort. What were they on that August date in between? Governor Young. On August 28 they were \$2,819,000,000.

Mr. FORT. So that between February and August the figure is about the same, but by October 30 the loans on collateral had risen \$1,300,000,000 by the New York banks?

Governor Young. Correct. That practically all came in the week

of October 23 to November 1st.

Mr. Fort. And that raise represented the transfer of securities by individuals from their broker's account to their bank, did it not?

Doctor Goldenweiser. Where customers berrowed directly from

the banks instead of through brokers.

Governor Young. That is correct; that represented a large part

of the increase. Mr. FORT. And it also represented a reduction in the amount of loans for the account of others which the banks had to step in and cover?

Governor Young. Correct.

Mr. Fort. In this same period, when we have been observing that the change in the deposit figure was only a few per cent, the total brokers' loans had gone up from what figure on February 1 to the August 28 figure in New York City?

Governor Young. On January 30 there were \$5,559,000,000; Mr. Fort. What was the peak?

on August 28, \$6,217,000,000.

Governor Young. October 2, I think.

Mr. Fort. What was that?

Governor Young. \$6,804,000,000.

Mr. Fort. And that is an increase of \$1,300,000,000 between February and October?

Governor Young. That is approximately correct, sir.

Mr. Fort. But in that same period the deposits with all New York banks had remained practically stationary, had they not?

Governor Young. Well, between February and August they had

Mr. Fort. No; February to October. Governor Young. Very little change.

Mr. FORT. So that the entire increase of \$1,300,000,000 in the loan account between February and October 2 was provided other than through an increase of deposits with the New York banks which they loaned out?

Governor Young. That is correct.

Mr. Fort. Now, that money came from abroad, as well as from this country, did it not?

Governor Young. It did.

Mr. Fort. And as to the major portion of it, the bank must have acted simply as an agent and not as a lender for its own account?

Governor Young. That is correct.

Mr. Fort. Otherwise it would be reflected by an increase in the deposit account?

Governor Young. That is right.

Mr. Fort. Now, that would perhaps to some extent bear out your theory, Governor Young, that they could get the money somewhere if they could not get it from the banks, would it not?

Governor Young. Yes. Mr. Fort. You said in answer to a question—I think by Mr. Beedy—that the rapid decline in the call rate in October was due Primarily to a drop in the demand rather than to an increase in the supply, in the total call loans.

Governor Young. If I did I should have added some other factors

ew

ere

ng

ne

er

ıl

12

0

Mr. Fort. I do not mean that you used those specific words, but

that was the impression I got.

Governor Young. I would like to add a little something to that, Starting with August, with the seasonal requirements of the country, the Federal reserve was buying bills and buying a limited amount of Government bonds, which had a tendency to put more credit into the market. In addition to that, in the latter part of October, when this crash did come, there was a willingness upon the part of New York banks to lend, when up to that time there had not been a willingness on their part.

Mr. Fort. I think you and I are not talking directly to the same Point. As I recall it, the question of Mr. Beedy and your answer were something like this-or it may have been Mr. Seiberling's Question: The question was asked you, in effect, whether the crash in the market was not due to a lessening of the supply of funds that even the high call rate failed to bring in, and your answer was that this decrease in loans was due rather to a decrease in demand for loans than to a lack of available funds. Is that correct, or is it notto a decrease of brokers' loans?

Governor Young. I want to answer that accurately, Mr. Congressman. That would cover the period from February until-

Mr. Fort. No. Perhaps I have not gotten it clear yet.

As I understood it, you were being questioned about the effect of high rates on drawing money in, and the question was asked you as to whether or not the high rate did not ultimately fail to draw enough money in to support the high stock market, and therefore it had to crash for want of money. What I am trying to get at is whether the crash came from the want of money to carry on, or whether it came from some other cuase, plenty of money being available?

Governor Young. I think I did reply to that at the time, Mr. Congressman, that there was less demand, but in reviewing these figures I think perhaps it would be better for me to correct that and say that that there was an increase in the supply rather than a lack of

Mr. Fort. It is now after 1, and there is a special matter coming up on the floor to-day.

The CHAIRMAN. I was simply letting you finish.

Mr. Fort. I know you were, and I would like, if I could, to finish because I had some conclusions I wanted to draw from these figures, and I would like to go on on Friday morning, as the governor says he can not be here to-morrow.

Mr. Dunbar. Can we not have a session at 2.30 o'clock?

The CHAIRMAN. In accordance with the instructions of the conmittee, the chairman has sent invitations as follows:

To the Northwest Bank Corporation, Minneapolis, Minn., Mr.

E. W. Decker, to appear before the committee April 15.

To the First Bank Stock Corporation, Minneapolis, Minn., Mr. L. E. Wakefield, to appear before the committee April 16.

To the Guardian Detroit Union Corporation, Detroit, Mich., Mr. Robert O. Lord, to appear before the committee April 23.

To the Marine Midland Corporation, Buffalo, N. Y., Mr. George F. Rand, to appear before the committee April 24.

To the First National Associates, Atlanta, Ga., Mr. John K. Ottley,

to appear before the committee April 29.

To Mr. A. P. Giannini, Transamerica Corporation, San Francisco, and Mr. James A. Bacigalupi, Transamerica Corporation, San Francisco, to appear before the committee May 6.

0

1

01

These invitations have been accepted by all except Messrs. Ottley Giannini, and Bacigalupi, and I have understood indirectly that it was agreeable to Mr. Giannini and Mr. Bacigalupi to appear on May 6 and I suppose I will receive later advice.

(Thereupon, at 1.05 o'clock p. m., a recess was taken until 2.30

o'clock p. m.)

AFTER RECESS

Upon the expiration of a recess, the hearing was resumed. The CHAIRMAN. The committee will come to order.

Mr. Fort, will you proceed?

Mr. Fort. Governor, I wish you would put into the record that memorandum you were referring to this morning of the usury rates in the different States.

Governor Young. It covers the legal rates of interest and contract rates of interest of all the States in the Union, as taken from the Rand McNally Bankers' Directory as of date of June 30, 1929. The CHAIRMAN. Without objection, that will be placed in the record at this point.

Mr. FORT. Governor, we were talking this morning about the effect of the brokers' loan situation on deposits. Will you give me again for the record the total of brokers' loans on February 2, August 28, and October 30, was it not, that we were using this morning?

Governor Young. Well, using January 30, 1929, August 28, 1929, October 2, 1929, and October 30, 1929—I think those are the dates

Mr. Fort. Yes.

Governor Young. Total loans and investments of all reporting New York City member banks, January 30-

Mr. FORT. No, brokers' loans.
Governor Young. Loans on securities? Mr. FORT. No, brokers' loans first, please. Then I will come to securities.

Governor Young. The total of all brokers' loans on January 30, 1929, was \$5,559,000,000; on August 28 they were \$6,217,000,000; October 2, \$6,894,000,000; and on October 30, \$5,538,000,000.

Mr. FORT. Now, will you give me the secured loans of the New ork banks for the same dates?

100136-30-vol 1 pt 7-3

Governor Young. January 30, \$2,795,000,000; August \$2,819,000,000; October 2, \$2,947,000,000; and October \$4,205,000,000.

Mr. Fort. And the demand deposits as of those same dates, of the New York banks?

The CHAIRMAN. May I ask, does that include time as well as call loans?

Governor Young. That includes time and call loans, both.

January 30, \$5,334,000,000 net demand deposits; August 28, \$5,106,000,000; October 2, \$5,279,000,000; October 30, \$6,851,000,000. Time deposits, January 30, \$1,200,000,000; August 28, \$1,189,

000,000; October 2, \$1,256,000,000; and October 30, \$1,257,000,000. Mr. Fort. Now, will you give me the brokers loans for others? Governor Young. Will that include out of town banks?

Mr. FORT. Yes.

Governor Young. I will have to add those figures.

Mr. Fort. Well, then, give them to me separately, loans for others and loans for out-of-town banks.

Governor Young. For out-of-town banks, January 30, \$1,8537 000,000; August 28, \$1,756,000,000; October 2, \$1,826,000,000; and October 30, \$1,005,000,000.

For others, January 30, \$2,615,000,000; August 28, \$3,468,000,000; October 2, \$3,907,000,000; and October 30, \$2,464,000,000.

Mr. Fort. Now, one other set of figures, for all reporting member banks, demand deposits and secured loans. Let me have secured loans first on those same four dates.

Governor Young. Loans on securities?

Mr. FORT. Yes.

Governor Young. January 30, \$7,440,000,000; August 28, \$7,515, 000,000; October 2, \$7,828,000,000; and October 30, \$9,179,000,000.

Mr. FORT. And the deposits?

Governor Young. Demand deposits, January 30, \$13,395,000,000 August 28, \$12,985,000,000; October 2, \$13,295,000,000; and October 30, \$15,110,000,000. Now, time deposits. January 30, \$6,893,000,000; August 28,

\$6,786,000,000; October 2, \$6,825,000,000; and October \$6,868,000,000.

That covers about 700 banks, that represent 101 cities, about 40 per cent of all total loans and investments.

Mr. Fort. From these figures, Governor, it appears that brokers loans between January 30 and October 2 of the New York City banks increased from \$5,500,000,000 to \$6,800,000,000, or \$1,300,000,000?

Governor Young. That is correct. Mr. FORT. And in that same period the secured loans of the New York banks for their own account only increased \$150,000,000?

Governor Young. For October 2?

Mr. Fort. Yes, sir.

Governor Young. \$150,000,000.

Mr. Fort. And that the loans for out-of-town banks, brokers loans, decreased \$27,000,000?

Governor Young. \$27,000,000; that is correct.

Mr. Fort. But that in the same period the loans for the account of others, which means non-banks, I take it, increased from \$2,615,000,000 to \$3,907,000,000, or \$1,300,000,000?

Governor Young. That is correct.

Mr. Fort. In that period it also appears that the deposits, demand deposits, in New York City banks actually decreased \$55,000,000?

Governor Young. That is correct.

Mr. FORT. And the deposits of all banks decreased \$100,000,000? Governor Young. Demand deposits?

Mr. FORT. Demand deposits.

Governor Young. That is correct. Mr. Fort. And the deposits on time of all banks decreased \$68,000,000?

Governor Young. \$68,000,000.

Mr. Fort. In other words, at the peak of brokers' loans on October 2, banks for their own account were lending less money, or only slightly more money, both out-of-town and New York banks, than they were lending at the end of January?

Governor Young. That is, October 2?

Mr. Fort. Yes.

).

Governor Young. \$47,000,000 less.

Mr. Fort. The money that made the trouble, then, in New York was not bank money, was it; that is, the money that met the high Interest rate?

Governor Young. Not in my opinion; practically no increase in the amount the New York banks had loaned to brokers from 1927.

Mr. Fort. It is not only the New York banks, but the loans of all banks, secured loans, have gone up in that period, between January 30 and October 2, for their own account, \$382,000,000, while the brokers' loans have risen \$1,300,000,000?

Governor Young. That is correct.

Mr. Fort. And the banks have lost \$100,000,000 deposits in that

Governor Young. Demand deposits?

Mr. FORT. Yes.

The CHAIRMAN. May I suggest that it would be helpful if Governor Young would describe the sources from which this money came?

Mr. FORT. I was coming to that.

There are only two places from which a bank can get the resources with which to loan funds for its own account, are there not, and those are its own capital and surplus funds and its deposit account? Governor Young. And what it might borrow from the Federal

reserve banks.

Mr. Fort. Yes. The outsiders, however, nonbankers, have available all of their funds in any form to loan if they want to loan them-I mean, they can with iraw their moneys from the bank to make loans with, if they want to?

Governor Young. That is correct.

Mr. Fort. Do you know or do you know whether there were Substantial withdrawals from the banks for the purpose of direct loan by corporations on the stock market?

Governor Young. There were.

Mr. Fort. Now, one other figure. We have confined ourselves here to the period between January and October 2. I now want to use the October 30 figures which I have taken off as you read them. If I am wrong, will you correct me as I read them into the record? Brokers' loans between October 2 and October 30 had gone down

from \$6,804,000,000 to \$5,538,000,000?

Governor Young. That is correct.

Mr. FORT. The secured loans of New York banks had in the same period gone up from \$2,947,000,000 to \$4,205,000,000? Governor Young. That is correct.

Mr. Fort. That difference is practically \$1,300,000,000 in each case, is it not? Brokers' loans are down \$1,300,000,000, and loans on security by New York banks are up \$1,300,000,000?

Governor Young. That is correct.

Mr. Fort. As to loans for the account of others in that period,

brokers' loans had gone down from \$3,907,000,000 to \$2,464,000,000, or about \$1,450,000,000?

Governor Young. That is correct.

Mr. Fort. In that same period also New York demand deposits had increased from \$5,279,000,000 to \$6,851,000,000, had they not? Governor Young. Yes, sir.

Mr. Fort. Or about the same amount that their loans had increased?

Governor Young. \$1,550,000,000, approximately.

Mr. FORT. Their time deposits were stationary. Their loans for out-of-town banks in that period had gone down from \$1,826,000,000 to \$1,005,000,000; is that correct?

Governor Young. \$1,826,000,000 to \$1,005,000,000.

Mr. Fort. Now, turning to all bank loans for their own account between October 2 and October 30 on secured loans, that figure had gone up from \$7,828,000,000 to \$9,179,000,000; is that not correct? Governor Young. Yes, sir.

Mr. FORT. Which, again, is that figure of \$1,300,000,000 that we

seem to get?

Governor Young. Practically all in New York.

Mr. FORT. And their deposits had gone up from \$13,295,000,000 to \$15,110,000,000?

Governor Young. That is correct.

Mr. Fort. So that we find, when we come to analyze that loan picture, that the banks gained in deposits as they increased their loan account?

Governor Young. That is always true.

Mr. FORT. And that the market was not financed between January and October by way of increase in loans out of bank funds, but out of funds for others?

Governor Young. That is correct.

Mr. FORT. And the deflation between October 2 and October 30 resulted only in a decrease in the loan account for the account of others and an increase in the loan account for the account of the banks themselves?

Governor Young. Not dollar for dollar.

Mr. Fort. Not exactly? Governor Young. No.

Mr. Fort. But a correlative one, in part. Governor Young. I think, if you figured that out, that there was

a real liquidation, exchange of securities.

Doctor Goldenweiser. That was after October 30.

Mr. Fort. There was some before, obviously.

Governor Young. Yes.

Mr. Fort. You have a decrease in loans to brokers between October 2 and October 30 for all accounts, a net decrease of about \$900,000,000 in brokers' loans?

Governor Young. For what dates? Mr. Fort. October 2 to October 30.

Governor Young. \$1,262,000,000, I would say. That is, all brokers' loans went from \$6,800,000,000 down to \$5,538,000,000.

Mr. Fort. And that includes time loans?

Governor Young. Yes; that is a \$1,262,000,000 reduction.

Mr. Fort. But you had in that same period a deduction of \$1,400,-000,000 in loans for others, and a deduction of \$800,000,000 in loans for out-of-town banks?

Governor Young. That is correct.

Mr. Fort. Now, are you able to hazard what we might call an educated guess as to how much of that money was foreign money that was in those loans for the account of others?

Governor Young. That is a very difficult figure for us to furnish, Mr. Congressman. The nearest that we can come to it is the amount of money that might have been loaned on call by New York banks or private banks for foreign banks, and that would exclude individuals and corporations and others, and that figure is only \$150,000,000.

Generally speaking, foreign banks of issue and other foreign banks either leave their money on deposit here or they invest it in United States Government bonds, so that that figure would be of little benefit.

Mr. Fort. Or handle it through banking houses, which you get

no record of.

Governor Young. I think this does cover a record of some of the

Private banking houses.

The Chairman. May I ask, in connection with that, whether or not the Federal reserve keeps a record of the amount of foreign money on deposit in this country?

Governor Young. We attempt to keep a record, and the Department of Commerce is attempting to do the same thing, but they are

very unsatisfactory figures.

The CHAIRMAN. I should think they would be very essential figures

In the exercise of the functions of the Federal reserve.

Governor Young. We realize that, but they are extremely hard to get. At one time those figures were as high as \$370,000,000, Mr. Congressman, just before this break, and the procedure, I think, that was followed generally by the foreign correspondents was to leave the money on deposit with the New York banks or the interior banks, and they paid them a rate of interest that bore relationship to the call-loan rate or the average rate they received.

I would rather not furnish that figure, because it does not sound

right; it sounds much too small.

Mr. Fort. Very much too small. What I am after, however, is to see how much money there is available for what you call bootleg loans in this country. It seems to me quite obvious from these figures that there is a substantial volume of it.

Governor Young. Well, there was approximately \$4,000,000,000

October 2

Mr. Fort. Out of total loans of \$6,800,000,000, brokers' loans. Governor Young. That is correct.

Mr. Fort. Now, that money was attracted here undoubtedly, or attracted into the loan market, by the rate, was it not-not necessarily by the individually high rate for a given date, but by the continuance of high rates over a long period?

Governor Young. I would say that those funds were attracted in

that market ever since the rate got to 3 per cent.

Mr. Fort. And kept increasing in volume as the rate went up? Governor Young. Yes.

Mr. Fort. The bulk of that money which was American in its origin as distinguished from foreign, must have come out of the

deposits of some bank, must it not?

Governor Young. Well, there are many factors to take into consideration there. If you would take the figures that we have been using, it would look as if the deposits had not gone down in any such proportion as the loans for others had gone up, so we have to go back a little bit and remember that there was a great gold movement into this country from 1921 clear through to 1924, that permitted a tremendous pyramiding of credit in this country. The momentum that that received up to 1924 continued clear through until 1928. In 1927 gold proceeded to leave this country, and as it left the country the only way that the banks of the United States-I mean collectivelycould make up that shortage, was to borrow from the Federal reserve banks, with the result that their rediscounts did increase very rapidly during that period. Now, as those deposits were withdrawn from banks to lend on call, obviously somebody purchased the stock on credit and paid the owner, and the owner in turn had to redeposit in some bank somewhere.

Mr. Fort. But the original effect of the creation of the credit that was continually marking up the prices of securities and marking up the amount of chips that were exchanged for them should have been

to swell the deposits, should it not?

Governor Young. It did decrease the deposits throughout the

United States?

Doctor Goldenweiser. Somewhat, but I think the point is cor-The loans for account of others did not create new deposits.

Governor Young. It did not increase the deposits; it had a tendency to decrease them.

Doctor Goldenweiser. Just transferred them from one bank to another without increasing them.

Governor Young. And if there was any tendency at all, it was

N

(c)

a

b

Mr. Fort. Let us get at this other factor that affects the capital that was used there. What was the rediscount position of the New York banks? What were their total rediscounts on these same dates that we are talking about?

Governor Young. On January 30 they were \$215,000,000; August 28, \$241,000,000; October 2, \$152,000,000; and on October 30,

\$246,000,000.

Mr. Fort. And for all banks?

Governor Young. For all banks, on January 30-

The CHAIRMAN. Do you mean for all banks in the United States or all banks in this-

Mr. Fort. All reporting banks.

Governor Young. This cover all member banks: would \$821,000,000 on January 30; \$974,000,000 on August 28; \$931,000,000 on October 2; and \$991,000,000 on October 30.

Mr. FORT. You say that no great part of that volume of additional

Capital came by way of rediscounts?
Governor Young. Not during that period. Mr. Fort. Only an increase of \$110,000,000 in all banks between January 30 and October 2, and an actual decrease of \$61,000,000 in New York between those same dates?

Governor Young. That is correct.

Mr. Fort. What were the gold imports in that same period? Governor Young. They would have a bearing on the amount of rediscounts. There was a large increase of \$200,000,000 or more in gold supply.

Mr. FORT. What are the figures?

Governor Young. On January 26, this figure was \$4,117,000,000; On October 26, the average for that week was \$4,386,000,000, an increase of \$269,000,000 during that period.

Mr. FORT. How much currency was based on that increased gold? Mr. Beedy. Will you pardon me? Your record here tends to show that this was all imports, but you are now quoting figures on the stock of gold in the country, not just imports.

Governor Young. I don't know just what the imports were during that period, but it was released from earmarks or imports or produc-

tion; it came from those three sources.

Also, during that period money in circulation increased about \$121,000,000.

Mr. FORT. From what to what?

Governor Young. From January 26, when it was \$4,677,000,000, to October 26, when it was \$4,791,000,000, and an increase in currency requirements would have a tendency to increase the discounts, while the imports of gold would have a tendency to decrease the discounts of the banks.

Mr. Fort. Altogether, however, there is not enough in that to account for the inflation in the loans, is there? There is not enough

in those gold figures or those rediscount figures?

Governor Young. Well, that would make a difference to the extent of \$100,000,000 only.

Mr. FORT. Have you the figures there, Governor, that will show what the commercial-loan picture was as of these dates?

Governor Young. I am furnishing that figure with reservations.

Mr. FORT. This is for all banks?
Governor Young. This is for reporting member banks. Mr. Fort. This is the comparative figure to what you are using? Governor Young. Yes; and I do not know as I should give these figures as commercial loans. They are classified as all other loans. Mr. FORT. Other than secured?

Governor Young. Other than secured loans, presumably commercial loans, but, of course, you know and I know that many of them

On January 30, \$8,675,000,000; August 28, \$9,434,000,000; October 2, \$9,600,000,000; October 30, \$9,755,000,000.

Mr. FORT. So that running hand in hand with the increase in brokers' loans of \$1,300,000,000 between January and October 2, there was an increase of \$925,000,000 in unsecured loans?

Governor Young. Correct.

Mr. Fort. So that apparently if those unsecured loans were not for stock-market use, the business of the country got a substantial increase in funds at the same time the stock market was continuing to substantially increase?

Governor Young. That is correct.

Mr. Fort. Somewhere, then, between January and October we found \$925,000,000 of additional loans for general business purposes, along with \$1,300,000,000 of additional loans for brokers?

Governor Young. That is correct.

Mr. FORT. Now-

The CHAIRMAN. May I ask a question there, Mr. Fort?

Mr. FORT. Yes.

The CHAIRMAN. Are we to infer that that money was used in industry, or did it go into the stock market?

Mr. Fort. I said I had some reservations on that subject in some

of my questions. These were nonsecured loans.

Governor Young. I presumed that they were used for business. The CHAIRMAN. There is no way of telling, however, what it was used for?

Governor Young. No. For instance, Mr. Chairman, a good customer of a bank comes in and asks for a loan of \$10,000. They lend it to him. They do not ask any questions what he is going to do with it. It might go one way and it may go another way.

The CHAIRMAN. In that connection, a case was cited to me in New York where a man went in with United States Steel stock and asked his bank for a loan of \$100,000. The bank said that they could not loan it to him if he was going to buy stocks, and he said that that was what he was going to use it for; but they did make the loan to him on his own personal note for \$100,000 and he put his collateral in his pocket and walked out.

Governor Young. There may be some of those cases, Mr. Congress.

man, but in the aggregate they would not amount to much.

I want to remind the committee that between February and July there was very active business in this country.

Mr. Fort. Which is reflected in the increase in loans; there is no

question about that.

The conclusion that I personally reached on these figures, and would like to have you check up with me, Governor, is this, that the banks as such were neither responsible for nor did they gain in any material way by the exaggerated brokers' loan position in New York City.

Governor Young. I think, generally speaking, Mr. Congressman, with very few exceptions throughout the United States-and my contact was mostly with the larger banks-that they did everything within reason, everything within their power, to restrain this from

expanding any further.

Does that answer your question?

Mr. Fort. It does, in part. Governor Young. There were some exceptions.

Mr. FORT. The further question in my mind is whether, with the net loss in deposits which accompanied this performance in spite of an increase in commercial loans of \$925,000,000 between January 30 and October 2, the fact that there was a decrease of \$100,000,000 in

deposits in that same period in the same banks indicates, as it seems to me it does, that they lost substantial deposits that they should have had?

Governor Young. I think that is true.

Mr. Fort. And that therefore from the banks' own position, this

money flurry in New York was harmful?

Governor Young. I think it was harmful to everyone, Mr. Congressman. Perhaps I can illustrate that by following along just what did happen. For instance, when the broker got up to a point where he was charging the customer, say, 8 per cent, that prompted that customer to go to his local bank and request accommodation at 6 per cent or 5 per cent or whatever rate he could command, and he could command a pretty good rate because he had been a customer of the bank for many years, carried a very handsome deposit there and had not asked for any accommodation for years. So that, taking the city of Chicago, while they called these New York loans at the higher rates of 8, 9, or 12 per cent, they simply took that customer to another window where they lent him the money at 6 or 7 per cent. Of course, 6 or 7 per cent is a good profitable transaction for a bank, but not as profitable as the 14 or 15 per cent that they could have gotten by continuing to lend on call.

Mr. Fort. But the thing I am trying to get to is this, that if, as these figures seem to bear out, the banks, looking at them from their Primary function, as banks of deposit, are not gainers by this enormous Volume of loans induced by high call rates, and are losers from the Subsequent disturbance of business, would they be better off if in any of these laws we make here we considered this question of call loans?

Governor Young. Obviously that is a thing that should be considered. What the solution of it is, I do not know.

Mr. FORT. I do not, either.

Governor Young. You have to bear in mind that the New York banks did increase their profit to a certain extent when they put a charge of one-half of 1 per cent on all of these loans they made for the account of others.

Mr. Fort. I am taking the banks of the Nation as a group. We can not consider legislation solely for the benefit or harm of a given

group of banks.

The CHAIRMAN. That commission only went to the New York banks, though.

Mr. FORT. Yes.

The CHAIRMAN. That is right, is it not?

Governor Young. Generally speaking, yes. Whether some of the interior banks charged a commission on top of what New York charged, I do not know. Some of them may have.

Mr. Fort. But it is also a fact, is it not, Governor, that if we attempted to regulate this situation by drastic regulation, we would simply increase what you called bootleg loans at the expense of loans that are placed through the banks and which we at least have a

Governor Young. I am afraid so, and I think that the only possibility of controlling that is in the way of something that the New York banks and the stock exchange may be able to work out themselves, but I do not know that there is a possibility of that.

in

Mr. Fort. It is also a fact that the inception of every speculative market is in low money and not in high money, is it not?

Governor Young. As to every one that I can remember, that is

Mr. FORT. The accumulation of holdings by pools and large borrowers is always or almost always at a time of cheap money, is it not? Governor Young. The inception of it; yes.

Mr. FORT. And the high money period follows, when they have got, ten the public interested and the public is beginning to clamor and not care what they pay for money, as long as they think they are going to make 10 per cent overnight in the stock?

Governor Young. I think that in the last experience, maybe some

of the originators staved a little too long.

Mr. FORT. They originated too high. So that a mere curb on the high rate would not necessarily reach the whole evil?

Governor Young. I do not think so.

Mr. Fort. And there would be some excuse for a higher call rate than for an ordinary loan rate because of the absence of a covering deposit, would there not?

Governor Young. In the period such as we had from 1927 on, that is what happened, but ordinarily the call loan rate, which is supposed to be for an overnight loan, commands a much lower rate.

Mr. FORT. I know it does ordinarily, but there would be some excuse for the usury laws to be fixed, for example, so as to permit the call rate at times to rise above the commercial loan rate, because there is no covering deposit?

Governor Young. Yes; that would be one factor.

Mr. FORT. On the other hand, the call loan is regarded generally as the safest and most liquid loan possible, is it not?

Governor Young. I would prefer to put the bankers' bills and trade bills ahead of them.

Mr. Fort. But, with a trade bill, you have to wait until its due date. Governor Young. Yes.

Mr. Fort. And call money is the most liquid, because you can get it the next day.

Governor Young. You mean, an overnight transaction?

Mr. Fort. Yes.

Governor Young. I think Federal funds would be a little more liquid.

Mr. Fort. But even Federal funds would have to be sold at a discount the following day-a discount below the price at which they were purchased.

Governor Young. Oh, no; you get 100 cents on the dollar the next You discount it to-day and it calls for 100 cents on the dollar to-morrow.

Mr. Fort. I thought you meant Government bonds?

Governor Young. If you are operating a bank and you have some surplus reserve with the Federal reserve bank and I am short, I will say, "I will buy your surplus from you." If the discount rate is 3% per cent, you have to make me a rate to induce me to buy it. But you sell it at a rate probably under 3% per cent and you get your money the next morning at 100 cents on the dollar.

Mr. Forr. But the volume of that is not like the demand for call

money?

Governor Young. No; but at times it runs to one hundred to one hundred and fifty million.

Mr. FORT. But in comparison with any other form than what you call Federal funds, call loans are the most liquid, in that they are callable, practically speaking, without notice and payable at par?

Governor Young. No; I would put bills before call loans. I would put bills ahead of call loans on collateral because, in a real emergency, if you have a call loan on bills you can always go to a Federal reserve bank and sell at a price.

Mr. Fort. If your call loan on collateral has been intelligently

made and watched, you can also.

Governor Young. As long as you can borrow from Peter to pay Paul; yes. You can not take call money to the Federal reserve bank, but you can take bills.

Mr. Fort. I was not thinking in terms of liquidity in Federal reserve terms but liquidity in the sense of instant realization.

Governor Young. I hesitate in putting collateral loans above the commerce and business of the country.

Mr. Fort. I do not blame you for that.

The CHAIRMAN. May I ask a question there, Mr. Fort?

Mr. Fort. Certainly.

The CHAIRMAN. The suggestion has been frequently made that brokers' loans be made eligible for rediscount in the Federal reserve. What is your opinion about that?

Governor Young. I am opposed to it.

Mr. Fort. There is just one other question along a different line, but it was brought out by what Mr. Luce and Mr. Beedy were questioning you about.

Generally speaking, the higher rates of legal interest are to be found in those sections where there is less capital invested in bank-

ing-is not that true?

Governor Young. I should like to check that, Mr. Congressman, but I think you are right in that statement.

Mr. Fort. Generally the lower rates prevail in those States that are known as possessing more capital, like the eastern States and the

more powerful mid-western States—is not that true?

Governor Young. That is true, but I took the position this morning that the rates were generally lower in the East than in the West, but I did not take into consideration the compensating balances which might make quite a difference. Generally speaking, I think, in reply to your inquiry, rates are higher where there is less banking

Mr. Fort. That is true internationally as well as within this Nation and has always been true, has it not, that in the nations or sections where there is the greatest amount of capital for investment, the

supply side produces lower rates?

Governor Young. Generally speaking; yes.

Mr. Fort. And we, as a nation, used to pay England very much higher rates for the capital that was invested over here by England than England was able to get on her own loans at home?

Governor Young. That is correct.

Mr. Fort. Until we became a nation of large capital? Governor Young. That is correct.

Mr. Fort. And if that be true—and I interject here that I am somewhat like Mr. Wingo; I am not yet a convert to branch bankingif it be true, will it perhaps not have a tendency to influence country, loan rates downward if banking institutions with substantial capital extend out into those sections?

Governor Young. In my opinion it will.

Mr. Fort. Governor, will you put into the record at this point, the call-loan rates on the four days that we have been using?

Governor Young. I shall be glad to do that.

Mr. FORT. And the Federal rediscount rates on the same day-call and time on collateral?

Governor Young. We shall be glad to do that.

(The figures referred to are printed in full as follows:)

Discount rate at the Federal Reserve Bank of New York, compared with open-market rates on stock exchange collateral loans; 1929

	Call rate (renewal)	Time rate	Discount rate, Federal Reserve Bank of New York
1929: Jan. 30. Ang. 28. Oct. 2. Oct. 30.	Per cent 7 9 9 6	Per cent 7½-7¾ 8¾-9 9 6	Per cent 6 6 6 6

The CHAIRMAN. There has been so much said about brokers' loans, I suggest, Governor, that you define a brokers' loan and tell us how it is handled.

Governor Young. Why, a buyer of securities goes to his broker and orders certain stocks. He may put up a cash deposit with the broker or he may put up some listed securities. He ends up, if he can not pay for them in full, with a debit balance. In so far as he is concerned, it is an open account with the broker. No note 15 given.

A broker has many customers. During the course of a day he buys a certain number of shares of stock for various customers and, to settle for those the next morning at 10 o'clock, he has to borrow some money. So, he telephones to the exchange that he wants to borrow a certain amount of money. Simultaneously, some one who has some money to lend, phones to the exchange at the loan desk and offers to lend a certain amount of money. The rate, as I explained the other day, is fixed by the stock clearing committee. That means that the broker has an obligation to furnish certain collateral covering a certain loan at a certain rate promptly the next morning. The lender has an obligation to lend money, if the note is presented and satisfactory collateral is delivered.

m

G

de

be

re

co

m

811

118]

Now, what more would you want to know about it. Mr. Congressman?

The CHAIRMAN. In that connection, the loan is made necessary, because of a larger volume than the capital the broker has on hand to carry on the transaction?

Governor Young. Quite right.

The CHAIRMAN. And a margin is exacted, of course, a minimum of 20 per cent and, in many instances, like last year, the margins run up even as high as 60 per cent on those loans?

Governor Young. That is correct.

The CHAIRMAN. Is it not a fact that a broker's loan, when it gets into the portfolio of a bank is no different than any other collateral loan except it would be regarded as the highest type of collateral loan because of the fact that there are certain restrictions as regards the kind of collateral and the margin back of the loan?

Governor Young. That is a correct statement.

The CHAIRMAN. In other words, these brokers' loans, when they are finally lodged in the portfolios of any bank, are similar to any other collateral loan?

Governor Young. That is correct.

The CHAIRMAN. The stock exchange clearing house has an organi-Zation for the purpose of handling the loans of all their member brokers, have they not?

Governor Young. Arranging for the loans.

The CHAIRMAN. So that any broker who finds himself in need of additional funds, to make settlements for the stocks and securities which he has handled during the day, either in buying or selling, is promptly furnished through that organization each day with whatever his requirements may be?

Governor Young. At the rate.

The CHAIRMAN. And I understand each morning, at a quarter to ten, the committee in the clearing house of the stock exchange, meets and decides what the renewal rate shall be?

Governor Young. I do not know what the exact time is, but it

is flashed on the ticker at 10.40.

The CHAIRMAN. That is a very complete organization and it serves that purpose perfectly, so far as the brokers' requirements are concerned?

Governor Young. Both borrowers and the lenders seem to be

satisfied with the method of handling it.

The CHAIRMAN. It is my observation that when the brokers have had a large volume of business during the day and there has not been Sufficient funds offered at the loan post to make complete settlements, It is the practice of the committee in charge to call up the banks and tell them how much money they need, either 1 million or 5 or 10 millions, in order to make these settlements.

Do you know about that? I do not mean to exact that from you, Governor. I will state that as a fact. That is the method pursued. This loan group in the stock exchange clearing house is governed in the fixing of rates by taking into consideration the amount of demands for loans, the amount of money that is freely offered by banks and I suppose undoubtedly they keep in touch with the Federal reserve bank as to conditions there; in other words, they take into consideration all the elements that enter into the money situation in arriving at a proper renewal rate for the day. Whether they con-

Sult with the Federal reserve bank or not, I do not know.
Governor Young. They do not. The CHAIRMAN. But they do take into consideration the published reports of the Federal reserve banks?

Governor Young. Yes, sir.

Mr. Seiberling. Did the stenographer get that answer?

re

tic

ag

It

BI

as

p

C

fi

e

it

t

V

The CHAIRMAN. I mention that to show, in connection with what you said to-day, that there does exist perfect machinery for handling these brokers' loans and that machinery serves to make readily accessible all the money that is sent there to finance the stock-exchange operations.

Now, in that connection, it seems perfectly plain that the cooperation by the banks in New York, particularly in furnishing these funds for these stock-exchange operations, adds to that easy accessibility of

these funds for stock-market operations.

If that machinery and that cooperation by the big banks of New York-I am not saying it is not necessary or nonessential; it is probably necessary in the present method of doing business-but if those operations were not synchronized into a perfectly working machine, and the stock brokers had to secure their money in the same method as commerce has to secure it, by going to individual banks throughout the country, it would not be so readily accessible for large stock operations. So, to that extent, it is perfectly plain to me that the organization between the stock-exchange brokers and the clearinghouse association which negotiates those loans and the cooperation of the big banks to meet the demands for settlement each day, are furnishing almost a perfect machine to facilitate the carrying on of stock-market operations.

Under the plan which has been operating, the New York banks solicit funds, not only from the country banks, but from industrial and commercial institutions throughout the country who have sent surplus funds into that market; that they are also encouraging the use of money from the country in that market and greatly facilitating

the opportunity for financing stock-exchange transactions.

I would ask you, Governor, whether I have correctly stated that

possibility.

Governor Young. I think that the machinery has been set up to handle that class of business in the best way that they can devise; yes. As I have said earlier in the day, I have never had any actual experience, but I have been informed that New York banks have solicited accounts and offered that service originally gratuitously and within the last year making a charge for it.

The CHAIRMAN. You suggested that perhaps some protection might come about in a change in the rules that the stock exchange could adopt. Do you care to make any suggestion as to what that rule

might be?

Governor Young. I do not. I have not anything to offer on that,

Mr. Chairman. The CHAIRMAN. You referred in the questioning by Mr. Fort I think it was as of October 2, to \$4,000,000,000 of brokers' loans. Was that the date?

Governor Young. For the account of others?

The CHAIRMAN. Yes.

Governor Young. \$3,907,000,000.

The CHAIRMAN. Mr. Fort asked you from what source that money Would you think any of that money was made available through the use of Federal Reserve credit?

Governor Young. Indirectly; yes.

The CHAIRMAN. Now, another question that was raised here-Governor Young. I want to amplify that a little further, Mr. Chairman, by saying that it is extremely difficult for the Federal reserve system to earmark the credit it releases. The initial transaction may be a commercial one that is paid to some one else and paid again to another party-

The CHAIRMAN. But finally gets into the brokers-

Governor Young. What finally becomes of it one can not tell.

It can move in almost any direction.

The CHAIRMAN. You were stating that some of this increase was made possible by the influx into this country of a large volume of gold. I think you said from 1920 to 1925.

t

S

f

ø

Governor Young, 1924. The Chairman. I have the impression—it is rather hazy in my mind—that during this period of time the Federal reserve or some of the officers of some of the Federal reserve banks made an explanation as to the use to which that gold was being put and I gained the Impression that the country was told that that gold was being im-Pounded and was not being used or permitted to be used in increasing credit facilities here, but that it was looked upon rather as a trust fund and was held intact and, therefore, could not tend to create an excess amount of credit in this country.

I also gained the impression two years ago when I was in London that that had been the policy of the Federal reserve, but apparently

It had not worked out that way.

Do you recall whether the Federal reserve did explain, or some of the officers of the banks explained, that that money was being steril-

ized or not used?

Governor Young. I have no knowledge of that, Mr. Chairman. I have no recollection of any statement. What happened between 1920 and 1922 was that the gold that came to this country was used largely by member banks to enable them to retire their rediscounts with the Federal reserve system.

I shall have to carry that up to 1924, Mr. Chairman. All that gold that came in between 1920 and 1924, generally speaking, was used to retired rediscounts of the Federal reserve banks, the rediscounts going down to about \$400,000,000 in 1922 and later, in 1924, going

down to about \$225,000,000.

The CHAIRMAN. What was the effect of that? Did that have the

effect of increasing credit?

Governor Young. Yes; to a certain extent. We have observed in the Federal reserve system (not only in the New York district, but in the entire system) that when rediscounts of member banks get above \$500,000,000 there is a tendency to tighten credit through the country; conversely when rediscounts get below \$500,000,000 it has a tendency to ease credits and when it gets down to \$200,000,000. where it is to-day, you get real easy credit in short-time credits.

Now, that comes about because, traditionally, our banks do not like to show obligations for borrowed money. When it is under \$500,000,000 it works from bank to bank, so that no particular bank is in debt any great length of time. When it is above \$500,000,000. It is harder to pass it around the circle and a bank stays in debt longer and to get out of debt it naturally puts pressure on the borrower and that has a tendency to tighten credit.

The CHAIRMAN. So that really, as a matter of fact, when that gold came in, it was put to use; it was not sterilized or stored, but used by member banks to reduce their borrowings from the Federal

Reserve banks?

Governor Young. That is correct.

The Chairman. Now, referring to the February 5, statement of 1929 and the subsequent months in connection with the questions of Mr. Fort, and the borrowings by the New York banks from the Federal reserve, and the other 700 banks that he was referring to in his questioning, did the Federal Reserve Board or the Federal reserve bank of New York admonish member banks to reduce their borrowings during the period from February to October 1, 1929?

Governor Young. The Federal Reserve Board's public statement clearly asked for their cooperation to prevent a continuation of rapid

expansion.

The Chairman. I am led to ask that question because it is a matter of record that the New York banks, during that period were not borrowing to any great extent from the Federal reserve bank of New York, as I recall.

Governor Young. Well, on February 6, the date that statement was issued, the rediscounts in the New York bank were \$195,000,000.

The CHAIRMAN. They are reported weekly? Governor Young. This report covers weekly.

The Chairman. I am going to suggest that you place in the record at this point the borrowings of the New York banks from the Federal reserve bank from the period February 6, up until November 1, 1929. Governor Young. That includes the New York City banks or New

York district?

The CHAIRMAN. The New York district, including the New York

City banks.

Governor Young. I have the figures right here, but I can furnish that to go into the record. You do not want me to read them all now?

The CHAIRMAN. No; just put them in.

Governor Young. I can give the maximum and minimum during that period.

(The figures referred to are printed in full, as follows:)

Total discounts of the Federal Reserve Bank of New York

[In millions of dollars] 318 1929—Jan. 30_____ 213 1929—June 26_____ 425 Feb. 6. 195 Feb. 13 253 Feb. 20 182 Feb. 27 222 Mar. 6 271 Mar. 13 225 Mar. 20 208 Mar. 27 299 236 236 Mar. 27 299 Apr. 3 236 Apr. 10 247 Apr. 17 260 Apr. 24 263 May 1 248 May 8 277 May 15 254 May 22 197 May 29 194 June 5 210 240 Sept. 11 240 Sept. 18 220 Sept. 25 233 Oct. 2 152 Cot. 2 131 Oct. 9 Oct. 16 Oct. 23 Oct. 30 131 130 107 246 June 5_____ 210 226 Nov. 6_____ June 12_____ 252 June 19_____

The Chairman. There is an indication that New York banks realized the danger of the situation of having an increasing amount of brokers' loans outstanding and they realized that if there was a readjustment they would be called upon to meet that emergency and there was an indication, from my own observation, that they were preparing very carefully to meet any emergency, which emergency arose in October. I think the New York banks were particularly farsighted and I was trying to ascertain, for the record here, whether they arrived at that conclusion on their own account, or whether they were admonished by the Federal Reserve Board or the Federal reserve bank at New York to get their house in order and keep the borrowings down and keep in as liquid a condition as possible. If you can give us any information on this subject, it will be helpful in these studies.

Governor Young. I think the Federal Reserve Board realized that situation as evidenced by the February 6 statement. I know that the officials of the New York banks were thoroughly familiar with the situation, and while I can not speak for all of the New York banks, those that I talked with, I think, thoroughly realized the situation, and I have some publications of New York banks that appeared during that period clearly indicating that they had concern about the

situation.

Now, the board's contact, of course, is not with the New York banks. Our contact is with the Federal reserve bank. Its contact, in turn, is with the New York banks. I could not make it as a positive statement, but I assume all those situations were discussed between the New York banks and the Federal Reserve Bank of New York.

Mr. Beedy. Since there have been so many references to this February 6 statement of the Federal Reserve Board, may we have it

in the record?

Governor Young. It is in the record now, Congressman.

The CHAIRMAN. I think it is fair and should be said in this record, in connection with this discussion—and I think it will be shown by the records probably—that the Federal Reserve Bank of New York, through the assistance of New York banks, met this crisis in a far better manner than anyone, even though he had been a close observer, could have expected.

Governor Young. I will be glad to make that statement for the

record, Mr. Chairman.

The Chairman. I think myself the Federal Reserve Bank of New York functioned 100 per cent during the crisis, and had it not been for the very active cooperation of the Federal reserve bank in New York, in aiding the big banks of New York who had the responsibility on their shoulders of liquidating those brokers' loans in this stockmarket crash, very serious consequences would have resulted.

Governor Young. I should be very glad to make that statement for

the record and I take your words in making it, Mr. Chairman.

The Chairman. I do not know that I have any further questions. Mr. Seiberling. I was going to suggest that you cover the point of who constitutes this committee that handles that call rate situation. I should like to know that.

100136-30-vol I pt 7-4

The CHAIRMAN. That is a rather voluntary committee. It is made up a great deal to do the job that is before them.

Mr. Seiberling. To whom are they responsible?
The Chairman. They are really not responsible to any one. They are a group of men who are chosen to do this job and have done it for many years. My own thought is that those men who are fixing that rate are doing a good job. I have the highest regard for the integrity of the men who meet each morning to fix the renewal rate.

Taking into consideration the various elements that enter into the money situation and so far as they are capable of doing the job, I

believe they are doing an honest and consistent job.

Mr. Seiberling. I am not attacking their integrity. I am only

attacking the results.

The CHAIRMAN. I would not want to express a thought as regards that, but as to the integrity of the men who comprise that renewal committee, with the information they have, I think they are honestly doing their job.

Mr. Bussy. I have come to the place in the record, as I revise this transcript, where Governor Young told us he would insert the figures in regard to foreign loans made by the American banks. I understand

that he has that prepared. I wonder if he will file that?

The CHAIRMAN. Are you ready to put that in, Governor Young? Governor Young. I want to furnish what I have, but this information comes from the Department of Commerce and is for the close of the year 1928. Those are the latest figures we can get.

The CHAIRMAN. The meeting is now adjourned until Friday

W

CC

b

le

re

morning at 10.30.

(Whereupon, at 4 o'clock p. m., the committee adjourned to meet at 10.30 o'clock, a. m., on Friday, April 11, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

FRIDAY, APRIL 11, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met in the committee room, Capitol, at 10.45 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The CHAIRMAN. The committee will come to order.

STATEMENT OF GOV. ROY A. YOUNG-Resumed

The CHAIRMAN. Governor Young, you have something that you

Would like to insert in the record.

Governor Young. This was something that was requested by the committee the other day, which shows the number and deposits of all banks in the United States located in places having a population of large the committee of the

banks in the United States located in places having a population of less than 25,000. The figures are given by geographical divisions.

The Chairman. Without objection, that will be placed in the record at this point.

(There was no objection, and the statement referred to is as follows:)

de

ey or at

ty

1

y

y

S

In accordance with the committee's request, I have had compiled for insertion in the record figures showing the number and deposits of all banks in the United States located in places having a population of less than 25,000. These figures, by geographical divisions, are as follows:

	Number of banks	Deposits
New England States Middle Atlantic States. East North Central States West North Central States West North Central States South Atlantic States East South Central States West South Central States West South Central States Mountain States Mountain States Pacific States	4,726	\$1, 787, 204, 000 3, 700, 915, 000 2, 971, 194, 000 2, 288, 496, 000 1, 308, 348, 000 777, 414, 000 1, 142, 693, 000 618, 853, 000 653, 810, 000
Total	21,742	15, 228, 837, 000

Nore.—Above figures were compiled from the January, 1930, Rand McNally Bankers Directory. Population figures were based on latest Census Bureau estimates.

The Chairman. Now, Mr. Strong.
Mr. Strong. Governor Young, would you favor nation-wide branch banking?

Governor Young. Not at the moment.

Mr. STRONG. Why?

Governor Young. I do not think that we are ready for nation-wide branch banking. I do not think we have the men trained technically at the present time, although, as I stated before the committee the other day, I believe that eventually there will be a demand for nation-wide branch banking. It may be 50 years from now.

Mr. Strong. You think that when you get the men trained to

handle it, it will come?

Governor Young. I do. That is an opinion, Mr. Congressman. Mr. Strong. Do you think it will be a good thing for the Nation? Governor Young. Well, if I did not, I would not want to see it

Mr. Strong. If we have nation-wide branch banking, that will be practically a monopoly of the money and credits of the Nation, will

it not?

Governor Young. I do not believe so.

Mr. Strong. Why not?

Governor Young. Because I believe there will be many nationwide set-ups, rather than one.

Mr. Strong. You mean that there will be competition?

Governor Young. Strong competition, keen competition, between larger groups.

Mr. Strong. How many groups do you suppose that there will be at the end of 50 years if we have nation-wide branch banking?

Governor Young. Well, that would be making a guess that might embarrass me 25 years from now.

Mr. Strong. I made it 50 so that it would not embarrass either one of us.

Governor Young. I would put 50 as a minimum.

Mr. Strong. Now, with the whole trend of Government and of business operations throughout the country toward centralization and consolidations, what would tend to hold back a monopoly of money and credit through having 25 or 50 separate units? What influence do you think would continue the competition so that we would have 25 or 50 independent units?

Governor Young. I explained to the committee the other day that the deposits are really owned by the public, and if these monopolies which you anticipate should develop, they would be profitable and that would induce other people to go into the banking business.

Mr. Strong. While I think it is true that a reasonably substantial independent unit may carry on against a large monopolistic organization, nevertheless a large organization generally controls policies and prices. Take the Standard Oil Co.; we have a lot of independent oil companies, perhaps as many as or more than the Standard Oil, yet the Standard Oil Co. and its kindred organizations set the price. When they say oil is 17.7 cents, everybody says oil is 17.7 cents. Would not the same rule apply to banking? If a great organization with 1,000 or 2,000 branches should set up certain policies, could any small organization oppose them? Would not all organizations fall in line with their policies?

Governor Young. Would it not be their object to encourage the

smaller organization?
Mr. Strong. Why? They would be their competitors.

Governor Young. I do not mean a small banker; I mean a small industry or any industry that is profitable. Is that not what has happened in countries that have the branch-banking system?

Mr. Strong. I do not know. I did not get that kind of information from Canada when I visited there. I did ge it from a big banker when I talked to him, but the business men out in the small towns, not wanting to be quoted, seemed to be very much opposed to it and they thought that they were in a very serious situation. For instance, one of them pointed out to me that if his competitor should become interested in the parent bank or had associates interested in it, he might be in a very dangerous position.

Governor Young. I have been informed, Mr. Congressman, that the Canadian banks lend small amounts to farmers, jobbers, wholesalers, and others in the agricultural territory of Canada. They have

no objection to the small loan.

M. Strong. Let us take a nation-wide organization, with head-quarters in New York. The men who are largely interested in that organization, the head bank, would also be largely interested in the railroads of the country. Suppose that their organization of railroads wanted to acquire a competing line; do you suppose that they would permit the extending of credit to that railroad which that railroad would get if such a combination of wealth did not exist? I just mention that as one of many things that might happen.

Governor Young. That is, a railroad wanted to purchase a com-

peting line?

de

00

or

to

1?

it

1-

t

e

n

ø

5

Mr. Strong. Suppose that a great group of railroads that was owned by the same group that owned the parent bank, or controlled it, wanted to get a certain railroad; could they not withhold credit and get it practically at their own price?

Governor Young. Then, could not that other group go to the public

with a bond issue and raise the money?

Mr. Strong. It would be pretty hard to sell bonds against that kind of an influence, I should think.

Governor Young. It has been done for 50 years.

Mr. Strong. But we have not had a great monopoly of banking for 50 years. We have had practically only independent banking.

You know that we changed the form of bond of the farm loan banks and made it a consolidation bond because we found that here in the East, north of the Ohio and east of the Alleghenies, they were discriminating against the Federal land western banks; they would buy the bonds of the eastern banks, whereas the western banks was having trouble selling their bonds, and so we consolidated the bonds to be issued by the 12 Federal land banks to get rid of that danger that we saw confronting us.

Governor Young. Well, no monopoly developed.

Mr. Strong. It was not a monopoly; perhaps it had not developed to that point, but it was getting to the point where we could see that we were going to have trouble selling our bonds of our western banks.

Governor Young. It has all been consolidated to a certain extent, Mr. Congressman, in an organization that bears many of the earmarks of a branch organization; and I believe, for the benefit of our western people that you and I are interested in—

Mr. Strong. Yes, governmental control; but you are going to

Put this monopoly in private interests, privately controlled.

Governor Young. I am old-fashioned enough to believe that this country can not continue indefinitely with only one section of it prospering. I believe it all has to prosper.

Mr. Strong. I agree with you.

Governor Young. And I can not believe that any such concentration of wealth as you anticipate—even though it should develop to the point that you are inclined to believe it will develop to, that is, a monopoly—will ever be so short-sighted as to neglect the requirements of the balance of the country that makes that center possible.

Mr. Strong. Well, human nature is rather selfish. Through the generations,—the centuries,—we finally arrived at the conclusion that we could not put governmental power in the hands of individuals without having autocratic rule, so we built a republic in this country so that the government might be in the hands of the people, that the people might be sovereigns, and in order that they could change the form of government in any way they wanted to. We did that because we realized that men were selfish and, when given power, would take advantage of it.

Now, you propose to have nation-wide branch banking, and, as I get your viewpoint, you hope that men will be unselfish enough so that they will not combine to control the money and credits of the United States, or that through competition they will avoid combinations of capital that will practically effect a monopoly of the money

and credits of the country.

Governor Young. Let me answer it this way, Mr. Congressman: If those monopolies which you anticipate should develop, to the detriment of the interior of the country, particularly the agricultural and livestock sections and the interior manufacturing sections and mining sections, I agree with you that that would be bad; but I can

not bring myself to believe that that will happen.

Mr. Strong. Well, of course, the great handicap in my mind to the agricultural regions of the country has been a lack of capital at reasonable rates. When I went to Kansas they were loaning money at 12 per cent, and sometimes 18 per cent and 24 per cent. Then laws were passed against usury and finally got the rate down to 10 per cent, and the ruling rate out there now is 8 per cent, which is a pretty heavy tax upon capital to be used for agricultural purposes. Then we created the farm loan banks and the intermediate credit banks in trying to relieve that situation, and, with the intermediate credit banks, we tried to set up a plan whereby farmers could go to their banks and put up their paper to be discounted by the bank at the intermediate credit banks, so that they could borrow money at 7 per cent, but none of the banks do it; they maintain an 8 per cent rate and they do not use that system that we set up because it reduces their rate of interest. Now, we still have that handicap in the West. Now, if you give men the right to set up and control a monopoly of

a

II

ir

In

CE

go

De

m

Su

to

banking, will they not continue that system?

Governor Young. Mr. Congressman, under a unit system in the State of Kansas, the unit bankers had quite an influence in the legislature in reference to rates; but, even with his influence, as you point out, the rate has come down from 24 per cent to 8 per cent, the prevailing rate, and to 10 per cent, the contract rate. The probabilities are that in the State of Kansas to-day an agricultural loan bearing an 8 per cent rate is much more profitable than the 24 per cent rate that existed 30 years ago.

Now, obviously, the unit banker has a certain influence in a legislative way; and, although your 10 per cent rate still prevails in

Kansas, your unit banker charges 8 per cent on a average. If these other organizations that you speak about existing outside of the State of Kansas should become so strong that they could put a 10 per cent rate in, the people of your State would fix a contract rate of 8 per cent, or 7 per cent, or 6 per cent, to outside sources much quicker than it would to your local people. So I think the possibilities of any large corporation charging unreasonable rates are very far removed.

Mr. Strong. But fixing the rate so low might not get the money. Governor Young. Then the rate is wrong and you have to put it up: that is all.

Mr. Strong. That is what happened. We paid those big rates when you were paying 6 per cent down here, and now we are paying 8 per cent when you are getting money for 4 per cent and 5 per cent.

Now, here is a combination of banking, through branch banking or group banking, that gets together only for one purpose, and that is to increase its income and protect future income and to build up a business that will be more profitable. Do you suppose that, given that power, they are going to be so magnanimous as to reduce the rate in the West?

Governor Young. I think their profits will come through simplification of organization and operation rather than an increase in

rates charged to borrowers.

Let me illustrate what I have in mind. You take a small bank in Montana, locally owned. It can, and probably does, charge the legal rate in that State of 10 per cent on a good chattel loan. It would be extremely difficult for a large set-up in Minneapolis to charge that same rate in my opinion. Public sentiment will put that rate down.

Mr. Strong. But when one group of banks controls the credit and the money, how can public sentiment put the rate down? If you want the money, you have to pay for it.

Governor Young. Because they have two groups there at the moment, and the strongest kind of competition, very keen competition. When they can only get 3 or 3½ or 4 per cent on call money in New York and they have surplus funds, they will go into the interior and make some of these chattel loans at less than 10 per cent.

Mr. Strong. But if a pinch came and they wanted money in New York, they would put up that rate to 4, 5, or 6 per cent?

Governor Young. They would.

Mr. Strong. And they would bring the money of the country to New York?

Governor Young. But still your State law prohibits them from going above 10 per cent in Montana.

Mr. Strong. Well, as I get your idea, Governor, it is that if we permit branch banking in restricted trade areas, that eventually it is going to be nation wide?

Governor Young. In my opinion, Mr. Congressman.

Mr. Strong. Now, suppose that we had nation-wide branch banking in 50 groups or trade areas each dominating and controlling such trade area; do you not think that would be pretty dangerous to the Federal reserve system?

Governor Young. No, sir.

Mr. Strong. Would they have to go to the Federal reserve system? Could they not go to each other? Could they not have a trade agreement or a gentlemen's agreement with each other without going to the Federal reserve system?

8

0

n

e

to

8

tl

W

a

8

b

b

8

Governor Young. They could if they had sufficient funds, and probably would; but there would always be a time in America when there would not be sufficient credit for those groups to trade between themselves, and the Federal reserve will have to release credit and will have to release currency to take care of seasonal requirements and to take care of seasonal emergencies. I am firmly convinced that the larger those set-ups are the more necessary will they find

membership in the Federal reserve system.

Mr. Strong. I think that is true if they are not large enough to control the money and credits of the United States, but here are 50 groups controlling the banking of the United States. Now, you have pointed out that little bankers out in the West had influence enough in the legislature to at least influence the laws of their States, and if that is true—and I think it is—and you have 50 great groups in the United States controlling all the banks, would they not have power enough to influence the Federal reserve system?

Governor Young. Not with 119,000,000 people left that you say

would be harmed, or that might be harmed.

Mr. Strong. But the 119,000,000 are going to allow the banking industry of the United States that handles their money and credit to form consolidations so that they will be reduced to about 50 groups. If they would work together, I do not see how the influence that they would have could be kept from dominating and controlling the Government and the Federal reserve system, too.

Governor Young. Those 50 banks?

Mr. Strong. Yes.

Governor Young. I do not think so. Mr. Strong. I meant, those 50 groups.

Governor Young. You have six large banks in England, and I do not think they control the Bank of England and dominate its policies in any particular.

Mr. STRONG. But the Government has a lot of influence in the Bank of England, more than we would have in these 50 groups that we have

been talking about.

Governor Young. Well, the Government, through the Federal Reserve Board, has some influence with the Federal reserve banks. Mr. Strong. But here are 50 groups bigger than the Federal reserve system, controlling more money and credits than the Federal reserve system.

Governor Young. Under the present law, they could go as far as the Federal Reserve Board and they could go no further. Is that not

correct?

Mr. Strong. Yes; but my idea is that they would dominate and control the Federal reserve banks and the Federal Reserve Board. You will remember that the Second National Bank, with its branches and the monopoly given it by its Federal charter, was so strong in this country that it dominated and controlled Congress, loaning money to Members of Congress and the great newspapers of the country until, although a national election campaign decided to the contrary, were able to force through Congress a renewal of their charter.

Nothing but the backbone of Andrew Jackson stopped by a veto the extension of that charter.

Governor Young. I should regret it, of course, Mr. Congressman, if the Federal Reserve Board should ever get to a position of that kind, or the Congress of the United States. When the Second Bank of the United States did get to that position, of course, the bank was terminated.

Mr. Strong. The present Comptroller of the Currency, having espoused branch banking, advocates as a restriction that it be limited to trade areas? I am unable to tell just what he thinks their territory should be, but he uses the term of "trade areas." Now, your belief is that regardless of such limitation, eventually we will have nation-

wide branch banking.

Governor Young. I may be entirely wrong, Mr. Congressman, and he may be entirely right, and we hope that these investigations will bring out what is best. I agree with the comptroller entirely in so far as the present situation is concerned that if a trade area can be described, as I think it can be, it would be better to confine branch banking to that trade area in an attempt to permit branch banking to build up in a systematic way and not build up in a way that is too rapid for us to operate at the moment. Now, if he feels that that is as far as it should ever go, and I feel that eventually it will become nation wide, that is a difference of opinion; that is all.

Mr. Strong. Well, as I understand it, then you both are agreed on this proposition, that for the present it would be better to limit

It to trade areas?

Governor Young. I do.

Mr. Strong. Is it your idea, then, that men are going to be less selfish and more patriotic 50 years from now so that they can be trusted with nation-wide branch banking?

Governor Young. I do not like to put it that way, Mr. Congress-

man.

8

d

n

d

d

ø

Mr. Strong. I know, but there is a difference; you and the comptroller agree that we ought not to have nation-wide branch banking now, that first of all we should build up trade area branch banking, but you believe that eventually they will break down those trade areas and we will have nation-wide branch banking?

Governor Young. I think so; yes. Mr. Strong. Why do you think so?

Governor Young. My position to-day, at the moment, Mr. Congressman, is that technically we are not prepared to operate a

system of that kind.

Mr. Strong. Do you think that the men are not experienced enough so that at the present time it would not be safe to trust them with nation-wide branch banking, so that you propose to build up with trade area branch banking?

Governor Young. I would prefer to see it approached through

trade areas.

Mr. Strong. That is what I am afraid of, that it is going to be approached in that way.

Governor Young. I think, Mr. Congressman, that it is now being

approached through the group banker.

Mr. Strong. Yes; I know there is a very decided effort on the part of capital—and everybody knows it—to break down the independent

bank and finally come to nation-wide branch banking. I can see that coming and, of course, this group banking is helping their cause.

Governor Young. I think it is a little more than that, Mr. Congressman. I do not think this demand comes entirely from the cities. I think it comes from the country to a certain extent, so much so that the commissioner of banking of the State of Minnesota in a public statement yesterday advocated branch banking. He stated that there are 154 communities in the State of Minnesota to-day without banking facilities, many of which do not need banking facilities and many of them that do. He advocated the extension of branches into those communities rather than a revival of the \$10,000-unit banks. I can not help but agree with him, that he is right.

Mr. Strong. And I can agree with you that more and more our officials are seeking banking through a branch-banking class. For instance, in recent years we had the Comptroller of the Currency come before this committee and make a very eloquent and splendid statement against branch banking, but he thought that we could limit it to the city where the parent bank was located, and we passed a law agreeing with such position. Now comes the present Comptroller of the Currency and says it ought to be extended to trade areas, and following him, you, as the Governor of the Federal reserve system say that eventually, within 50 years, we will have nation-wide branch banking. That is what I am worrying about.

Governor Young. Mr. Congressman, the probabilities are that 10 years ago or 6 years ago I probably would have said the same thing that the Comptroller of the Currency Dawes said at that time, but conditions are changed.

Mr. Strong. Then the influence in favor of branch banking is gradually having an effect.

Governor Young. Conditions are having their influence on their position, as they are on mine, yes.

Mr. Strong. Do you not think that they are controlling the conditions?

Governor Young. The Comptroller of the Currency?

Mr. Strong. Oh, no; the men who control and dominate the money of the country, and that it is their influence that is bringing about the conditions which are causing the officials to change their position?

Governor Young. Well, if they are bringing those about for the betterment of the country, obviously I can agree with them—I mean, in my opinion.

Mr. Strong. I will agree with you that if they are doing it for that purpose and those men should always continue in that mind, it might be a good thing, just like I think a monarchy would be more economical and a good kind of a government if the monarch were always just and unselfish and had the interests of the people at heart, but we found through the generations that that does not result, and consequently we have come to a people's government, which is much more expensive and inefficient, in order to keep selfish interests from dominating and controlling.

Now you propose to gradually increase a system that you admit within 50 years will bring about nation-wide branch banking, controlled by perhaps 50 groups. To say that those 50 groups will be unselfish and have only the interests of the people at heart seems to

me to be kind of going against the rules of human nature as we have

known them in the past.

Governor Young. Well, I just would like to correct that: I said it would probably take 50 years and that the minimum would be fifty

groups.

Mr. Strong. Well, if within three or four years the officials of our banking system of the United States have changed from a belief that branch banking ought to be limited to the city where the parent bank is located to a position where it is believed that there ought to be branch banking limited to trade areas, is it not reasonable to suppose that nation-wide branch banking will come in less than 50 years?

Governor Young. You have had an expression from two officials, from the Comptroller of the Currency and myself. What my colleagues may say to you or what others may say to you in the official life of the Government or in the State governments I do not know. I have had a feeling for some time that I have been almost alone in

my opinion.

Mr. STRONG. But this committee, and I think the country generally. has a good deal of confidence in your opinion.

Governor Young. I hope so. Mr. Strong. I think they do, and your opinion is that within 50 Years we will have nation-wide branch banking?

Governor Young. Probably.

Mr. Strong. I am only pointing out that if some influence or some conditions or whatever you may call it have changed the views of the officials within three or four years from believing that branch banking should be confined to the city where the parent bank is located to believing that it should now be confined to trade areas, it does seem to me that perhaps nation-wide branch banking will come in much less than 50 years.

Governor Young. Well, that is a frank opinion, Mr. Congressman,

and I will have to confess that it is not a very popular one.

Mr. Strong. Well, it is not popular with me.

Now, I would like to get to this present situation. The Comptroller of the Currency evidently thinks, and you seem to think, that branch banking should be restricted now to trade areas. Governor Young. That is correct.

Mr. Strong. And Congress is to be asked to set up a definition of those trade areas. What is your suggestion to this committee as to

What those trade areas should be?

Governor Young. I have stated before the committee several times, Mr. Congressman, that I can not at the moment define a trade area. It would be very easy in certain Federal reserve districts and hard in others. I think it would be very easy to define a trade area in the first Federal reserve district, the New England district, while in your district in Kansas it would be extremely hard to define it, and there would be much overlapping at Omaha, Wichita, Kansas City, Tulsa, and Oklahoma City.

Mr. Strong. And when we reached Chicago and St. Louis, espe-

cially Chicago-

Governor Young. It would be difficult there.

Mr. STRONG. What would be the situation in the East? Would Boston and Philadelphia have separate trade areas, or would they be In the trade area of New York?

Governor Young. These are impulsive thoughts, Mr. Congress-

Mr. Strong. I appreciate it.

Governor Young. You would have to sit down at the map and consult with the local people and attempt to work out something, but I would say that the three of them would be separate trade areas.

Mr. Strong. You would not think that New York would finally

dominate and control the three?

Governor Young. I do not think so; not at this time.

Mr. Strong. How many trade areas do you think there would be in the United States if we would agree with the comptroller's idea,

and yours?

Governor Young. As near as the Federal reserve system has been able to define those trade areas through its branch districts, it would be 25, and then, of course, there is much overlapping in that, and there is a larger trade area covering those trade areas. That is represented pretty well by the 12 Federal reserve districts.

Mr. Strong. And we would have perhaps Boston, Philadelphis,

and New York, the three of them, out of the 25?

Governor Young. There would be 37, Mr. Congressman, if you include the territories of the head offices of the Federal reserve banks; Mr. Strong. Would or would not that necessitate the changing of the districts of the Federal reserve system?

Governor Young. It might. We have changed the district lines

on two or three occasions.

Mr. Strong. Would you increase the number of Federal reserve banks?

Governor Young. You can not. Mr. Strong. Well, Congress can. Governor Young. Yes.

Mr. Strong. Would you recommend to the Congress that they do that, or do you think that would finally follow?

Governor Young. Mr. Congressman, you are pressing me on a question that I really have not made up my mind on yet.

Mr. Strong. I do not want to do that. Governor Young. I am afraid that-

Mr. Strong. I do not want to embarrass you at all. I am just intensely alarmed about the extension that you propose. I just want to get all the information I can, and I would rather have your opinion on it than my own.

Governor Young. It is a bit embarrassing to say to you that I can not give you that information yet. I expect some day to be able to

recommend something.

Mr. Strong. Then if we had 35 or 37 trade areas in the United States, or any set number, the growth and improvement of the country would finally, in your opinion, demand more trade areas-an increase in the number of trade areas?

Governor Young. It probably would.

Mr. Strong. In these trade areas group banking, unless restricted, would finally dominate and control the banking in those trade areas,

Governor Young. Group banking has a possibility of proceeding

too rapidly, in my opinion.

Mr. Strong. Do you think it ought to be checked?

Governor Young. Not unless you offer something in substitution. Mr. STRONG. You offer branch banking-that is the idea?

Governor Young. That is my idea.

Mr. Strong. Are you going to restrict those banks so that there can be no consolidation of interests by group banking?

Governor Young. I would; yes.

884

ıg, as.

ly

be

8.

n

re

8,

0

Mr. Strong. You would absolutely fix those branches and those trade areas so that they could not extend by any combination of interests, out beyond those trade areas?

Governor Young. That would be my solution of the difficulty

at the present time, if such a thing is possible.

Mr. Strong. Why do you think that eventually the adoption of that system would spread into nation-wide branch banking?

Governor Young. Because as men became trained in the operation of these smaller groups, they would be in position to expand further. Mr. STRONG. And they would want to do so?

Governor Young. I believe so.

Mr. STRONG. Then, whether we will have trade area branch banking or nation-wide branch banking simply depends on the time when we will have men trained in nation-wide branch banking?

Governor Young. I believe so.

Mr. Strong. Now, do you think there will ever be men created on this earth who, after they become efficient in nation-wide branch banking and achieve it, will not be selfish enough to look after their interests as against the interests of the country?

Congressman, so I do not believe that is possible.

Mr. Strong. Just let me go into this a little. Suppose that we set up 37 trade areas, that by law we restrict them absolutely. Yet your opinion is—and I respect it—that eventually out of those 37 trade areas will grow nation-wide branch banking, when the men are trained and desire nation-wide branch banking?

Governor Young. I do.

Mr. STRONG. And the only thing that will cause those men to break down our law, to change our law of trade area branch banking, will be the ability to handle nation-wide branch banking and their influence to change the law, will it not?

Governor Young. Well, the public influence to change the law. Mr. Strong. You explained that the bankers in the States have had that influence in their legislatures to change the law. Now you are going to have trade area branch banking, and then you are going to build up men of such experience that they will have nation-wide branch banking ability and eventually achieve it. It will not be by the influence of the people; it will be by the same influence of the National Legislature that has been exercised and used on the State legislatures. It will not be the demand of the people.

Governor Young. Mr. Congressman, a banker has two classes of customers, depositors and borrowers, and the number of depositors always exceeds the number of borrowers. If a branch system is created in this country, even in a small trade area, and the depositor gets the protection that he has not been given for the last 10 years, and that extends to a larger trade area and those depositors get the Protection that they have not been given previously (and that I

believe they can get it under a branch system), their influence 15 going to be very far-reaching as to whether or not that extends to a nation-wide branch banking system.

ur

Mr. Strong. Yes; but you do not think that the depositors are

ever going to control these groups, do you?

Governor Young. The depositor is the man that makes it possible. Mr. Strong. He is the man that has the money to deposit, but he has to put it in these banks. These banks are already in this country, although they have not yet achieved their objective, of trade area branch banking; they already have such an agreement when you go in and deposit the money in the bank whereby they say, "If you do not deposit a certain amount, we will have to charge you a fee, and if you want to borrow money, you must leave a part of it in the bank." So the depositor will have no choice but to put it in one of those banks. He can not exercise any influence; he does not now.

Governor Young. If the depositor is not satisfied with the solidity or the policy of the bank, obviously he does not deposit there at all-If he is a depositor and these groups or branch banking organizations are unreasonable with him, obviously he has an investment market that extends all over the world, so that he can do what he wants to do with his money. They are compelled, through the depositor and his power in the whole situation, to make things attractive to him. They have got to compete, and if they do not make things attractive to him, they lose the depositor.

Mr. Strong. Yes; the depositor goes to his bank and says, "I do not like that new rule you have; I will take my money to some other place," and the banker says, "All right." The depositor goes over to the other bank and he is confronted with the same rule. He can not dominate and control and dictate to that bank as to what their

rules shall be; they are going to dictate to him.

Governor Young. From what we hear from the bankers and from what we have heard from the bankers in the last 10 years, the competition that they had through Government bonds and the competition that they had through bond houses, as well as the competition that they had, if you will, with the call loan money, leads me to believe that the depositor has become a very important factor in this entire situation.

Mr. Strong. But unless he organizes into groups himself, he will

exert no influence.

Governor Young. There has been no organization for the last 10 years; there was no organization in so far as call loans were concerned. Mr. Strong. But when he withdraws his deposit and goes to the next bank and he meets the same condition, what can he do?

Governor Young. He withdraws his deposit and he has the entire

investment world to take his money to.

Mr. Strong. Yes, but perhaps he is not a judge of what those investments mean; perhaps he does not want to bury his money in those investments, but he just wants to leave it in the bank. It may be \$5,000, \$10,000, \$50,000, or \$100,000. Maybe he wants to leave it there against the seasonal requirements of his business, and if he does not like the terms offered him by the bank and he goes to the next bank he will probably meet the same terms.

Governor Young. I will again repeat that if conditions ever get so bad as that in this country, I will agree with you on that; but I do

not think they will.

Mr. Strong. I hope that your thought is right, but my fear is that they might, and I think that the Congress of the United States ought to so regulate the financial policies of the country and make such laws that the men who handle the money and credit of the United States will never dominate and control it, because I fear that

they will not be unselfish when they get that power.
Governor Young. Well, I think, Mr. Congressman, that one of the great steps in that direction is the Federal reserve system, and

that is still with us.

Mr. Strong. I agree with you, if we do not build up organizations of banking that overpower and dominate the Federal reserve

Now, in your opening remarks to the committee, you referred to our changing bank structure. By that do you mean the tendency toward group and chain and branch banking?

Governor Young. Yes, sir.

Mr. Strong. Who should control those changing conditions, the

banks or the Congress?

Governor Young. I believe the Congress, but it has gone so far, Mr. Congressman, that it is going to develop many complications In attempting to control it.

Mr. STRONG. I agree that the banks are bringing about those

Governor Young. They have under State laws; yes.

Mr. Strong. Now, if the Congress does not take some drastic action, under your thought, we are going to proceed with branch banking and eventually we will have nation-wide branch banking? Governor Young. Well, group banking; nation-wide group bank-

ing; yes. Under the present law we now have-

Mr. Strong. And if we control the group banking, we are going

to have nation-wide branch banking?

Governor Young. If you control the group banking, I think it has gone to a point where you must offer something in substitution.

Mr. Strong. That is, we have to abandon in the United States

the policy and idea of unit banking?

Governor Young. In my opinion; yes, sir. I do not mean by

that that the unit banker will necessarily be eliminated.

Mr. Strong. Well, the former Comptroller of the Currency came to us and said, "Unless you have branch banking in cities like New York, Detroit, New Orleans, and San Francisco, where they are Permitted to have branch banking under State law, you are going to destroy the unit banker; they are going to put branch State banks all over the city of New York, and if you are to maintain the Federal reserve system and the national banking system you have got to Permit the national banks to have branches in the cities where the Parent banks are located," and we acceded to that.

Governor Young. Has not that been for the benefit of the depositor

and borrower in those districts?

Mr. Strong. I do not know. It has been followed up with combihations of great banks. The combinations are increasing, and the unit and individual private bankers are being driven out.

Governor Young. I believe that it has been a benefit.

Mr. Strong. To whom?

Governor Young. To the depositor and the borrower.

Mr. Strong. Have interest rates to the depositor been increased or decreased?

Governor Young. Well, I do not know. I would say it is about

the same.

Mr. Strong. Is it not a fact that generally throughout the country the man who deposits money in a bank is being asked to take a smaller rate of interest, and is that not the tendency?

Governor Young. That happened in the Northwest in 1921

clear through until 1927, under the unit banking system.

Mr. Strong. Yes; and that is a gradual tendency, is it not?

Governor Young. In the East there seems to be a tendency on the part of the mutual savings banks to pay a higher rate.

Mr. Strong. I do not know about that.

Governor Young. But the rate 8 or 10 years ago was an average

possibly of 4 per cent.

I will ask Congressman Luce to correct me if this is not true. The mutual savings banks have had a tendency to increase in the last 10 years, rather than decrease their rate to depositors.

Mr. Luce. Absolutely.

Mr. Strong. But the regular banks that are in these combinations, group and chain, have not increased the rate to their depositors, have they?

Governor Young. Nowhere that I know of.

Mr. Strong. Then it has not been for the benefit of the depositors to have these groups formed, because they are getting a smaller rate

Governor Young. I was speaking about his protection, rather than

the interest return he received.

Mr. Strong. I know; but you might give him ever so much

protection and no return.

Governor Young. Mr. Congressman, I can pay 3 per cent and give a depositor security in an institution. I can pay 4 per cent and break that institution.

Mr. Strong. But suppose that these combinations would tell the depositor that they could give him security at 2 per cent, but not

at 3 per cent?

Governor Young. Then the depositor can still go to the postal savings bank or to the United States Government bonds or to innumerable well-seasoned bonds throughout the United States and get a much higher rate than 2 per cent.

Mr. Strong. But the average depositor, except the big fellow,

throughout the country, does not deal in bonds.

Governor Young. I believe that many of them have become security

buyers.

Mr. Strong. Yes; many of them have, possibly, but I am talking about the poor depositor in a small bank. He puts his money in there against the seasonal requirements, and does not want to put it in bonds, and he used to get 4 per cent where he is now offered 3. In some places he is not offered anything; I know of banks that say, "We have too much money; we will not pay a cent on deposits."

Governor Young. My experience in the commercial banking business, Mr. Congressman, was that a man that deposited seasonally was not paid any interest. I do not think he is to-day in the unit

bank, and I do not think he is in your chain or group bank.

Mr. Strong. If he is not paid any interest on a deposit, and in addition to that he is asked to maintain a certain amount of money in the bank, if he is allowed to put his money at all, he does not have the accommodation he used to have, does he? It is getting worse all the time.

Governor Young. That has developed under the unit banking system, Mr. Congressman, and one of the faults of the unit banking system was that they would take an account of any kind, even though a man only maintained a balance of \$5 or \$10. Experience has shown that, even in those small country banks, if there is a depositor who maintains a balance of less than \$200 on a regular checking account, that account is handled at a loss. I do not think you can ask any banker to operate at a loss. The result was that many of the unit banks in the ninth Federal reserve district realized that that was a source of loss to their institutions, and they put on a charge of 50 cents or \$1 a month; and in my opinion they were entirely within their rights when they did put that charge on.

Mr. Strong. Then that is under the policy that unless the banker makes money out of the little depositor, the depositor is entitled to

no service?

Governor Young. But he gives him a service. Mr. Strong. But not unless he charges him?

Governor Young. I do not think he should give it at a loss or

gratuitously.

Mr. Strong. Then through this development in banking that has been going on, we have reached the point where the banker is going to have a profit upon every item of his business?

Governor Young. Why shouldn't he?

Mr. Strong. Other businesses do not do that, do they? Governor Young. Why shouldn't they? They should.

Mr. Strong. Simply because it is rather a hardship upon the little depositor and the little business man and the little individual. The railroads claim that they do not make any money out of their passenger service, but we compel them to run passenger trains because of the franchise that is given to them to operate railroads. Now, if we do not have any more control over them than we apparently have been having over the banks, if they can build up combinations, the time will come when they will say, "No, we must have a profit out of every service we render."

If that system is continued, it means monopoly, and combinations are going always to continue to make a greater hardship upon the

people.

The CHAIRMAN. May I ask a question there?

Mr. Strong. Yes.

The Chairman. Governor, a suggestion was made here, I think by Mr. Seiberling or some one earlier in these hearings, in regard to introducing facilities for service to these rural communities in the post offices. Now the post offices are legalized to receive savings deposits up to \$2,500, and in that connection I understand there is pending here in one of the committees a proposal to increase the limit which one can deposit in the savings end of the post offices up to \$5,000. Inasmuch as the post offices are also authorized to issue money orders, I am wondering, in connection with your suggestion here that we are headed for group banking and eventually nation-wide

branch banking, which would indicate the coming of larger groups and perhaps of less service in rural communities, whether you would advocate an enlargement of the facilities of post offices to enable these people in remote districts of the country to have some facility whereby they could pay their bills by checks on the post office, after having first deposited their money there.
Governor Young. They have that facility now.

The CHAIRMAN. They have the facility of drawing cheeks against their accounts?

Governor Young. No; but they have the facility of buying post-

office money orders.

The CHAIRMAN. Apparently we are getting to the point where these rural communities are going to be deprived of banking facilities, and I am wondering whether you would advocate the enlargement of the facilities of the post-office system so that a farmer could draw his own check against the post office in his locality and in that way facilitate the settlement of his necessary transactions? I am prompted to ask that because of the questions which have been asked you by Mr. Strong as to the attitude of the banks in refusing to take small accounts without paying a service charge.

Governor Young, I would not. The Chairman. You would be against that?

Governor Young. It would be a tremendous cost to the United States Government on which it would get no profit. It costs the Federal reserve system in the neighborhood of \$10,000,000 a year to handle checks gratuitously.

Mr. STRONG. And that has been saddled by the banks onto the

Governor Young. The banks say it is the other way.

Mr. Strong. But the banks in the cities where the Federal reserve or its branches are located are escaping their former costs in the way of collection charges.

Governor Young. Not at all.

Mr. STRONG. Why, the national banks do not charge for collections now, do they?

Governor Young. Many of them do.

Mr. Strong. But those exchanges are made by the Federal reserve system now; those clearing-house exchanges?

Governor Young, Yes.

Mr. Strong. At the expense of the Treasury?

Governor Young. At the expense of the Federal reserve banks. Mr. Strong. But if that money remained in the Federal reserve system and if they collected the charges and were charging the banks for that service that the banks used to have to pay for, then the excise tax to the Government would be increased, would it not?

Governor Young. That is correct.

Mr. Strong. Then the Government is paying it.

Governor Young. We maintain that that is one of the services that we give to the banks.

Mr. STRONG. Yes; at the cost of the Government.

Governor Young. At the cost of the banks. The banks furnish the reserve balances that permit the handling of these checks.

Mr. Strong. But if a profit is made by these Federal reserve banks after the 6 per cent is paid and if you do not take the cost of making those collections out of the Federal reserve balances, there is that much more left that goes to the Government.

Governor Young. I know, but if one-third of the banks of the United States join the Federal reserve system in contributing the capital and the reserve, they are entitled to some service.

Mr. Strong. They get it, do they not? Governor Young. That is what I say; they get it; they furnish the funds that make these profits possible. The Government does not furnish the money.

Mr. Strong. Together with the fact that they can offer eligible

Paper and get money without interest?

Governor Young. Yes. Now, there is a strong desire that the member banks get a larger return of the profits of the Federal reserve system, and I am in agreement with that.

Mr. STRONG. I know, but at the present time the banks in the cities where there are Federal reserve banks or branches get that

service free that used to cost them thousands of dollars.

Governor Young. It did not cost them anything in the past; they passed that cost back to the depositor in a great majority of cases. This has been a relief to the public of America at the expense of the

Mr. Strong. Well, in my own city competition brought about no charge for the collection of checks long before that, so that our people did not get any relief. The banks used to take our checks and pay at their own expense the cost of collection, and now the banks in the cities where there is a Federal reserve bank or branch save that expense; they have their checks cleared without cost.

Governor Young. In your home community, Mr. Congressman, You are speaking about the foreign checks that you deposit with your

local bank?

15 d

e

y

t

d f

Mr. Strong. Yes. Governor Young. How about the checks that foreign banks got on your local bank previous to the passage of the Federal reserve act: did they charge to collect and remit on those checks?

Mr. Strong. It depended on how strong the competition was.

Sometimes they did and sometimes they did not.

Governor Young. Now that it has been eliminated, your little local banker is the loser. There is no difference as far as the city bank is concerned, and the public has gained an advantage.

Mr. Strong. Yes; he is the loser and he is deprived of a large part

of his earnings.

Governor Young. And he is a member bank. So I still maintain that if \$10,000,000 is paid by the banks of the United States, they are the losers, the public is the gainer, and the Government does not enter into it at all.

Mr. Strong. Well, I have to disagree with you on that, because if that was paid it would eventually go into the Treasury of the United States, but if it is not paid it is paid out of the profits of the Federal reserve system, which simply holds back that much of those profits that ordinarily would go to the Federal Treasury under the excise tax.

Governor Young. That is true. The Federal reserve system could

Put a charge on every check it handled and charge that back to its member bank, and if the member bank would not stand it it would

Pass the charge back to its depositor.

Mr. Strong. They did not in the past do that in a great many

Mr. Wingo. May I interrupt you gentlemen right now? Investigating another question, within the last few weeks, I find another time they charged their depositors for the deposit of a foreign check-They charged them not only interest on the check for the period between the time they are credited with it and the time the amount actually comes in, but they also charged them a nominal exchange fee.

Governor Young. Correct.

Mr. Wingo. In other words, it used to be that the country bank charged for remitting the exchange on the bank-he is required to perform that service free now and not even allowed postage; that is, he is not allowed to make expenses to say nothing of profits-and whereas he is compelled to lose that, the bankers in the cities where are located the jobbers and wholesalers, are still collecting exchange unless the question of competition forces or compels them to forego it. I am prepared to introduce documentary evidence to that effect if this is doubted.

Governor Young. I will confirm the statement.

Mr. Wingo. So, instead of the business of America being relieved of this burden of exchange, it is just shifted and instead of the country banker getting it, the bankers in the centers where the jobbers and the shippers are located, are getting it. The country bankers used not to get it where there was perhaps competition that compelled him to forego it, but now he is compelled to render all of that service free, but, on the other hand, the jobber and the wholesaler and others, in a great many instances, have to pay their own bank for collecting the foreign checks.

Governor Young. They always did, Mr. Congressman. There is just this difference. Heretofore the country banker charged for cashing his own checks, and to-day the city banker and the banker in the larger centers charge for advancing credit on a check that is drawn on some one else that it may take 5 or 10 days or two weeks

to collect.

Mr. Wingo. The country banker did not charge for cashing his own checks. He agreed to do that when presented across the counter, but he charged for remitting exchange—where he had to send it to another point. That is what you had in mind? Governor Young. Yes.

Mr. Wingo. He charged for the remittances and not for his check. It was not permitted under the law. If he had undertaken to discount his own check, under the laws of many States, he would have been put into the hands of a receiver.

Mr. Stevenson. Will the gentleman from Kansas permit me to

follow that with one suggestion?

Mr. Strong. Go ahead.

Mr. Stevenson. That very suggestion appeals to me more strongly than any other feature of the suggested change by the Comptroller of the Currency, and that is the whole trade area of the National Bank of Philadelphia should have the right to put branches in the whole trade area. Then a man who has one of these checks and has his money deposited in a branch of Bank A, and the head of the branch A or another branch is in a town where he is paying his bills, he deposits in one bank in one town and sends a check to another town

to another bank and, being all one system, there is not this charge. He should be able to deposit his checks in any one of those banks

constituting that system.

Mr. Wingo. I think there is one concern where the bank has branches-either a branch or chain, I forget which-and still charges its customers an arbitrary interest rate on the clearance period and, in addition to that, it charges 25 cents on up; 25 cents is the minimum fee for each check.

Mr. Stevenson. Just to illustrate my suggestion-

Mr. Wingo. I do not object to showing the gentleman my file on that—on the collection of exchange on remittances on foreign checks. Mr. STEVENSON. If you say the National Bank of Philadelphiaif there is such an institution—has a branch in Wilkes-Barre, Pa., and a merchant in Wilkes-Barre has an account in the branch of that bank there and he wants to pay a bill in Philadelphia, he draws a check on the First National Bank of Wilkes-Barre, the branch, and sends it to the merchant in Philadelphia, and he can go to the First National Bank of Philadelphia and say, "Here is a check that I want credit for."

Mr. Wingo. He does not get credit for it now.

Mr. Stevenson. I think if the system is established, he would.

Mr. Wingo. If he draws a check on a certain branch, he does not get credit if that is presented in the home office in the city. He sends it to his hat merchant, to use an illustration I have in mind-he sends it to the hat merchant, the wholesaler, and that hat merchant takes it to the central bank. That is not cleared immediately and he pays an estimated interest on that.

Mr. Stevenson. Well, that is not right. It is the same institution and it has got his money, whether in Wilkes-Barre or in Philadelphia. Mr. Wingo. Of course they all do not do that, where competition is fierce; in other words, here is a good strong hat house or wholesaler or a groceryman and the banks are competing for his business. The bank will take and carry the float for that wholesale house, but unless there is very strong competition—and I have found in one or two cities where there is apparently competition—they must have some gentlemen's agreement where everybody is carrying that float and

charges something for the remittances. Mr. Stevenson. The unit bank at Wilkes-Barre is a different institution from the Philadelphia bank, but if it is the Philadelphia National Bank, located in Philadelphia with a branch in Wilkes-Barre, it is not right to charge exchange on the money that institution

has in Wilkes-Barre.

Governor Young. I should like to correct the record, for a moment. The discussion has been in Philadelphia. Philadelphia does not

charge that exchange.

Mr. Wingo. When did Philadelphia stop charging on foreign checks? I had that statement made to me by Mr. Norris once before and I took occasion in Philadelphia on one occasion to test that out. Certainly my check bore an exchange charge, and they said my bank would charge on it. Of course, before I left town, my 25 cents was returned to me. They did not know at the time they made the charge that I was a member of the Committee on Banking and Currency. They returned the 25 cents.

Mr. Strong. I should like to put into the record a letter sent to the Banking and Currency Committee through the chairman, by Hon. Hatton W. Sumners, from Dallas, Tex.

This is dated Dallas, Tex., April 1, 1930:

HOD. HATTON W. SUMNERS:

I am inclosing a clipping from a local paper. This action in effect denies to the small depositor banking facilities, as wage earners seldom have that much to leave in the banks for their use over and above their own needs. Since they operate mostly under Federal charters I think it about time some regulatory measures were considered by Congress and Senate. They regulate service of railroads, post offices, and several other public service institutions, and I think they need it as much so as any of these other concerns.

Mr. Wingo. Is that the letter that inspired the chairman to advocate these checking accounts in post offices?

Mr. Strong. He incloses a newspaper clipping headed, "Banks to hike service rates-To double 50-cents charge and raise \$50 to \$100."

He also incloses a slip evidently being sent out to depositors by the Dallas National Bank, which reads as follows:

MARCH 31, 1930.

Notice to our depositors:

Beginning with the month of April, we will make a service charge of \$1 per month on all checking accounts averaging less than \$100. We have been handling accounts of this size at a loss.

We believe that every citizen is entitled to banking facilities, but feel that

each person should pay the actual cost of handling her or his account.

We sincerely hope that all of our customers can keep their balances above \$100. This does not apply to savings accounts-no charge will be made on them.

DALLAS NATIONAL BANK.

That is in line with your thought, Governor, that banks should rightfully make those charges to their depositors, so that they will not operate at a loss?

Governor Young. It is. I think that.

Mr. Strong. Is not that a very strong reason why the suggestion of the chairman might be considered, that if the banks are going to refuse to small depositors and the laboring men whose semimonthly payments probably will not be much over \$100—they are going to charge them \$1 a month-might it not be a good thing for the Government to liberalize their postal-savings banks so that the small depositor in rural communitities may be served without that kind of charge?

Governor Young, I think I know enough about the commercial banking business to realize that the Dallas National Bank is not mak-

ing a profit on that transaction. They may be breaking even.
As a citizen of the United States, I would be bitterly opposed to the United States Government assuming a cost of \$12 per person for cashing their checks in payment of bills.

Mr. Seiberling. In this connection, I should like to ask a question or two.

Mr. Strong. Go ahead and ask them, but make it just one or two questions as I should like to go on with my thought.

Mr. Seiberling. It is in connection with this particular subject. Since you have made the statement you have about the charge on accounts below \$100, what balance do you think makes an account a paying account?

Governor Young. It would depend on different sections of the

country.

Mr. Seiberling. Just an average, in a general way-\$100 or \$200? Governor Young. As I figured it out at one time in the bank I was with, I think it was in the neighborhood of \$200.

Mr. Seiberling. If you believe they should charge them when they have a losing account, do you not think they should pay interest on daily balances above \$200, on checking account? Do you not think they should pay some interest because that becomes a profitable account?

Mr. Brand. Governor, you had better be careful about answering that question. The whole country will read about that when these hearings are published.

Mr. Strong. Are you a banker?

e

0

r-

18

0

ø

We do not charge anything for the serv-Mr. Brand. A small one.

ice nor do we pay an interest on deposits.

Governor Young. I think competition, Mr. Congressman, would force him to pay interest on deposits over and above a certain amount. I can not fix the amount because it is different all over the country. But you know and I know that there are national banks that do not pay interest.

Mr. Seiberling. I am not asking you what competition would do. but you have stated that where an account is below \$100 or \$150, it becomes a loss to the bank and the depositors should pay for the service. I am asking you theoretically if you believe that, that the depositor should pay because it is a loss to the bank, should not the bank pay the depositors something when the account's average daily balances reaches an amount where the bank makes a profit on it?

Governor Young. In actual practice, Mr. Congressman, it is done. Mr. Seiberling. What do you think about that yourself? Is not that right both ways? If your theory is correct, should not the other theory also apply?

Governor Young. Well, I have done that very thing in commercial

banking-not with all accounts.

I have to correct that a little bit, because when I was in the commercial banking business, they had not gotten up to the point of analyzing their accounts sufficiently well to realize they should put a charge on unprofitable accounts. I never put a charge on an unprofitable account, but if I was in the commercial banking business to-day, I would do it.

On certain open checking accounts that I had and I felt they were profitable and knew they would go elsewhere if I did not meet competition, I have paid an interest on the average daily balances. Having done that and believing it, my reply to your inquiry, actually

and theoretically, is yes.

Mr. Seiberling. I think that is all. I should like to ask another question, but I do not want to take up any more time from Mr. Strong.

Mr. Strong. Well, go on.

Mr. Seiberling. There are many banks in the country that charge this \$1 a month service that do not pay a cent to any one on checking accounts, is not that true? That is true, is it not, no matter what the amount of the balance is?

Governor Young. No; I think that practically every banker in the United States has announced that it will pay interest on some

accounts.

Mr. Seiberling. Oh, a \$100,000 or \$200,000—big commercial companies—but I am talking about the ordinary commercial accounts.

Governor Young. Yes, there would be many of those.

Mr. Seiberling. And there are banks that will make a man's wife pay if the account goes below \$100, \$1 a month, when the husband has an account of five or ten thousand dollars balance and gets nothing on it.

Governor Young. Well, I do not know about that, Mr. Congress-

man.

Mr. Seiberling. That is all, Mr. Strong, and I thank you very much.

Governor Young. It seems to me that could be avoided by a joint account.

Mr. Seiberling. I want to say I am opposed to the \$1 a month charge and I agree with Mr. Strong that that is a service the banker should render just as the groceryman has to deliver a small order of groceries at a loss or a merchant deliver thread to a house.

As long as the bank makes a large profit for the stockholders, I think they owe some duty to the public, especially to these young people who are starting out in life, and ought to be educated in the

banking business and should not be shut out of the banks.

Governor Young. This has been developed in the ninth Federal reserve district in the small country banks. Obviously when the banker saw his bank go down and did not have any profits himself and he began to analyze his own situation and discovered where he could cut down where business was not profitable, and he felt compelled to do so.

He learned that he had a large number of small accounts that were not profitable and he was distributing calendars and pocketbooks, and in an effort to put his institution on a paying basis, he put on the

service charge.

Mr. Seiberling. He finds one part of his business unprofitable and he charges for the service and finds another part extremely profitable and pays no reward for those accounts. At the end of the year the stockholder has received a fine dividend and the depositors have been penalized and others not rewarded who held big accounts.

Governor Young. That is not true in many of the small banks I

am speaking about in Minnesota and the Dakotas.

Mr. Strong. It is also true, Governor, is it not, that a few years ago the little bank was deriving a great deal of income through charging for the cashing of checks, and largely through the influence of the Federal Reserve System checks were taken up and collected at par and no charge made, and that revenue was taken away from them?

Governor Young. That is correct.

Mr. Wingo. Is this true or not, may I ask-

Mr. Strong. Certainly.

Mr. Wingo. It has been contended that a great many of the small grocerymen and small bankers have been forced out of business because they have rendered so much free service they could not make a profit and no business, grocery or banking, can exist in a community and serve a community unless it can make enough profit to live?

n

n

P

ir

n

b

th

Governor Young. Correct.

Mr. Wingo. Is not that one of the major reasons why the smaller banks are dropping out, because they find the business unproficable and they have started to analyze their losses and finding where they could charge for a service and exist and serve the community?

Governor Young. That is correct.

Mr. Strong. In my question I wanted simply to draw a comparison where formerly the little bank was charging a fee for the collection of checks, which was a considerable part of its income, through the action of the Federal reserve system and its par collection of checks, that revenue was taken away from them?

Governor Young. I would rather say it was the action of the Con-

gress of the United States.

Mr. Strong. Well, the idea being developed and encouraged by

the Federal reserve system?

Governor Young. The law is specific, I think, Mr. Congressman. Mr. WINGO. But the law specifically says they may charge not to exceed one-tenth of 1 per cent. But there was a little joker put in there. Congress was told that it would not destroy that revenue but would only prevent excessive charges, but in actual operation, it did. That is the trouble with that. The little joker is that they provided that a charge shall not be made against a Federal reserve bank and then you compelled them to go through the Federal reserve banks.

Mr. Strong. We had that in our hearings once.
Mr. Wingo. The effect was the same as repealing that one-tenth of per cent permissible charge.

Mr. Strong. Now, I am not going to yield any more until I develop

my own line of thought.

Mr. Wingo. Very well; you use the rest of your 10 minutes, and what you do not use, yield to Mr. Luce. (Laughter.)

Mr. STRONG. I am going to decline to yield any more.

This privilege of charging this fee on checks, having been taken away from the banks, went largely to the profit of the big banks in the float, has it not-in carrying that float-and passing it on to the Government?

Governor Young. I do not think so. The larger banks in the larger centers, if they were to charge their country correspondents they, in turn, pass the charge back to their depositors. That was the general practice, with the exception of one or two points in the United States, where they figured they could absorb that charge and the business they would get would compensate for the charge.

The CHAIRMAN. May I suggest, Governor, that Philadelphia, at the time of the passage of this particular provision here, was one of the cities that was doing an extensive collection of checks for country banks and was requiring compensating balances. They took practically all checks that came to them and credited them on sight and made no charge for collection, but absorbed whatever charges there

might be in the collection of those checks, themselves.

It was made known at the time of the discussion here that the Philadelphia National Bank, as I recall it now, was one of the largest Institutions in Philadelphia and was doing the largest collection business of probably any of the banks there. By this change, and not being forced to pay anything for the collection of those checks which they took from the country banks, they made a saving of approximately \$500,000 a year.

Under the working of the plan, those checks were cleared through the Philadelphia Reserve Bank and that did relieve the big city banks of that charge which they had heretofore been absorbing.

Governor Young. In those two or three specific cases where they

were collecting nation-wide; ves.

Mr. Strong. In this case of the Dallas bank don't you think it fair to assume that this notice by the Dallas National Bank was not sent out until all the banks of that city had agreed to this proposition?

Governor Young. I do not think so, but I assume it was a clearing

and

house agreement.

Mr. Strong. Then, the more closely banks in the cities become connected with each other, the more it is going to cost the public to do business with them.

Governor Young. They were just as close 20 years ago as they

are to-day, under a unit system. This is not a group system.

Mr. Strong. If they are proceeding to do that now, saying, "We are not going to do business with the public unless the workingman leaves \$100 in our bank or pays \$1 a month"-if they continue that, they will deprive the public of a banking privilege they have had?

Governor Young. No; they are going to charge them for it. Mr. Strong. Yes, at a profit. Now, if the Government can forego several millions of dollars in its revenue it would get from the Federal Reserve System because of this system that they have of standing the expense of the clearing house in the various cities and the banks are going to put that obligation upon the people who have small accounts, do you not think the Government would be justified in providing a system of banking through its Post Office Department or otherwise, whereby the people could enjoy those privileges without paying the price they are asked to pay for them?

Governor Young. I do not.

Mr. Strong. You think the banks should be allowed to insist on a profit in every line of their business?

Governor Young. I do, if they elect to take it.

Mr. Strong. Following up my thought that I have in my mind, the thought I have is this: When we have trade area branch banking, which will be dominated and controlled by a few groups in the trade area, the rules and agreements between the banks will very likely be more stringent and more demanding of a profit than they are now. Along that line, let me say in my district I know of a new bank that started out and had pretty hard sledding. It adopted a policy of accepting a checking account as low as \$1. It admitted it was unprofitable, but they built up a clientele of a great many thousand boys and girls who never had had a bank account before.

In the course of six or eight years, those boys and girls and young men got into business. They still keep their accounts in that bank. Gradually that bank became the dominant bank of the town through the fact of doing a little business for less than cost and accommodating the small depositor who finally became a business man with a large

There was no agreement among the banks and that was possible But to-day the banks have gotten together and say, "Let us all charge the small depositors. They must have \$50 or \$100 or we will charge them for carrying those accounts and we will not pay interest on deposits except over so many dollars and we will agree to pay only 3 per cent."

That is by reason of agreements, and gradually those have grown up among the banks. The thought comes to me that when those banks that have had to spend years reaching these agreementswhen they are all under one or two or three heads in the trade areaswhether or not it will not be very easy for the officers of those branch banks existing in those trade areas to get together and do about anything they want to the public, to say nothing of the fact of dominating business through the contraction of credits in the trade area. I am just trying to develop my opposition to branch banking.

Governor Young. They could do those things that were within reason and permitted them to make a profit, but they could not

charge that man \$100 a month for the account or \$80-

Mr. Strong. No.

Governor Young. Or \$50.

Mr. Strong. No; but they might charge him \$5. Governor Young. They might charge him \$5 a month for the account, but he would not have to pay it. He still could go to the Post office and buy postal money orders to pay his bills at a much more reasonable rate than that.

Mr. Strong. But would have to carry his money in his pocket. He could not deposit the money and check against it. He would

have to carry it in his pocket.

Now, I want to ask you in regard to the matter of examination of these groups. Do you think where a bank has 100 branches that it is a safe examination to send examiners out to examine one of those branches and the next day another and the next day still another? Do you think that is a safe way to guard the public?

Governor Young. I do not think that is what is done, Mr. Congressman. In these large branch set-ups, they usually center on the parent office and several of the larger branches and, in my opinion.

that is a fairly safe examination.

Now, there may be some little discrepancy or something wrong out in a small branch. There might be a defalcation, but it would be so small in comparison with the total that it would not affect the solvency of the bank.

Mr. Strong. If the bank was in bad condition, could not they kite their funds around among the hundred branches unless they were all

investigated, including the parent, on the same day?
Governor Young. I do not think so. I think that by getting in the parent office and some of the larger branches, which the Comptroller now can do, that he can uncover anything that would be seri-

ously wrong.

Mr. STRONG. Of course the Banking and Currency Committee was told, a few years ago, by the Comptroller of the Currency, that that was not a safe examination and that a branch or a bank with 100 or 200 branches, could not be examined unless they had a force to put one at each branch at practically the same time. where I got the idea.

Governor Young. Did he say it was not safe or not thorough? Mr. Strong. My recollection is that it was practically impossible

to make a proper examination of the bank.

Governor Young. Mr. Congressman, I am not a bank examiner and not trained along those lines. Those questions came before the

Federal Reserve Board some time ago when we had insisted on a simultaneous entry and we called the Comptroller of the Currency at that time and discussed the situation with him and also consulted our chief examiner. The conclusions of those men were that, with a large set-up, where they could get into the key places—the parent office and at an occasional outlying branch—that they were fairly safe in so far as the solvency of that institution was concerned.

Mr. Strong. If there was danger in the bank and it was unsound,

do you suppose they could tell where the key places were?

Governor Young. Yes.

Mr. Strong. The banker who realizes he is insolvent would not be likely to cover up the small places and leave the key places open? Governor Young. Well, the examiner would get quickly to the

place where he suspected trouble.

Mr. Strong. Only a few years ago this committee was told by the Comptroller of the Currency that that was not a safe and proper examination. Now the committee is told that it is. Undoubtedly the heads of the department get their information, as you say, from the examiners, and I am wondering whether or not the influence of these groups which are headed toward branch banking, has not worked on those examiners, when they come forward and say it is not a safe examination and then, two or three years afterwards, they say they think it is.

Governor Young. Would the experience of the Federal reserve system be anything to go by? We have 12 Federal reserve banks.

We do not attempt to examine them simultaneously.

Mr. Strong. But they are separate and distinct institutions.
Governor Young. They are coupled up with one general gold
settlement fund in Washington. A thorough examination would cover

all those banks simultaneously.

Mr. Strong. But the Federal Reserve Board has a very able

governor looking after them.

Governor Young. Still defalcations could occur and irregularities could occur, but we feel we are fairly safe in examining the banks

individually.

Mr. Strong. But here is a bank dominated and controlled by one group, with a thousand branches and it is getting in bad shape and the examiner comes in and he proceeds to go from one bank to another or to take the key positions. It seems to me the former information given us by the Comptroller of the Currency that that was a dangerous kind of examination, may be considered to be better.

Governor Young. Well, I would not have that feeling, Mr. Con-

cff tddd

0

0

gressman.

The Chairman. Governor, the present Comptoller of the Currency is advocating a change in our system of unit banking to trade area branch banking. He is emphasizing the fact that our present unit

system can not continue as at present.

Now, he is the chief advocate of branch banking to be confined to trade areas. What is the effect on the unit banking system by having it supervised by an announced trade area branch bank examiner? Do you think under that system unit banking could proceed when the man who is supervising it is against it and advocating another system and says it is unsafe to continue in that manner?

Governor Young. I do not think the Comptroller of the Currency takes that position, Mr. Chairman.

The Chairman. What do you understand his position to be?

Governor Young. I think he advocates the extension of the branch banking area to the so-called trade area. I do not think that he has ever said or ever recommended or suggested that the unit banker should be put out of business.

The CHAIRMAN. He has stated in his annual report they were leaving, even under the McFadden Act of 1927; that national banks were gradually leaving the system and he advocated, as a method of

saving the system, branch banking confined to trade areas.

It naturally occurs to me that when the unit banking system is supervised by the people who are against unit banking and in favor of branch banking, it would naturally follow that unit banking would be

rather the sufferer in that respect.

In that connection also I would like to ask you whether or not. under those circumstances, it would not be natural for the Comptroller of the Currency to refuse to grant charters to unit banks and whether or not, under your observation, preference is not being given to these larger banks in the big cities to open branches, over the establistment of unit national banks?

Governor Young. I could not answer for the Comptroller of the

Currency, Mr. Chairman,

The CHAIRMAN. I am speaking particularly of the situation in New York City which, of course, is one of the tense branch banking cities and where I understand last year there were applications for something over 100 national banks and approximately 10 charters were granted and where there were branches authorized for existing institutions in many of the localities where unit banks were applied for but charters refused. They may have been properly refused, but I was just wondering how much such a situation would be affected by the supervision of a man who was a branch-banking advocate as against the unit banking system.

Of course these applications, I know Governor, are under the joint supervision of the Federal Reserve Board which power is dele-

gated, I understand, to the Federal Reserve banks.

Governor Young. That is correct-not as a matter of law, but as a

matter of procedure.

You must bear in mind, Mr. Chairman, that there is always a check on the Comptroller of the Currency. If there is an application for a national charter, he must be reasonable as to whether he grants that charter or does not grant the charter, for the simple fact if he does not grant the charter, they can always go to the State banking department and use the same arguments and either get the charter or do not get the charter; in other words, he always has to take into consideration this: "If I refuse this charter will the State grant it and will I thereby weaken the national system to that extent?"

The CHAIRMAN. In the close working arrangements between the Federal Reserve and the Comptroller's office and the Superintendent of Banks, there is a matter of reference of all these applications

back and forth, is there not? Governor Young. There is.

The CHAIRMAN. And they do not go contrary to each other's views on that?

Governor Young. Not as a general rule.

The Chairman. In other words, if the comptroller refuses a charter, the State superintendent knows that, and he is reluctant to grant the charter.

I was wondering what effect that had on the decrease in the number of national bank charters issued and if, in the circumstances, it might not be working to the detriment of the building of the unit system?

Governor Young. From what I have observed, I do not believe so. Mrs. Pratt. I happen to know of two instances that might bear on what you say in regard to the refusal of charters to unit banks and the granting of permission to establish branches in New York.

In the instances where people apply for charters, they should have proper financial backing. There is no question about that, and in the instances I have in mind where charters were refused for the establishment of unit national banks it would seem, and I think we will all agree, that it was not a matter of prejudice on the part of the comptroller that resulted in that refusal.

W

However, the fact that permission to establish a branch bank was granted in almost the same area to an existing bank with sound financial backing and which seemed to be in the interest of the public, might give rise to the suspicion that there was some favoritism displayed.

I mention this because it is quite conceivable there might be many instances of that character which might lend color to the suspicion.

The Chairman. I was not suggesting a situation like that, Mrs. Pratt.

Mrs. Pratt. I think it will be found that in most cases the refusal is sound.

The Chairman. What I was illustrating is this, that the Comptroller, being a branch banking advocate, his leanings might unconsciously influence him in granting charters to branch banks as against unit banks.

Mrs. Pratt. My point is that it might look like favoritism where, when all the circumstances are known, it would not be. I know of two instances, which I have mentioned.

The Chairman. But in some instances, the comptroller being in favor of branch banking, might not favor the unit system as against the branch institutions.

Mr. Wingo. I think what the Chairman has in mind is this, that the comptroller, assuming that he is using or exercising good judgment in the matter, yet, because he believes in branch banking, might be swayed to grant or refuse a charter because of his convictions with respect to branch banking. I do not think you mean to imply he would arbitrarily refuse or grant a charter because of his bias for or against any particular system, as against the interests of the public-

The Chairman. I am not attempting to criticise the comptroller in that respect. We are all human, but if applications come along for unit banks and branch banks, he will follow the dictates of his conscience.

Mr. Wingo. What you mean is that if there is an application from a branch bank and an application from a unit bank, your theory is that the comptroller, being in favor of branch banking, would naturally give preference to the branch bank?

The CHAIRMAN. I think he would be more favorably inclined to the

branch bank; yes.

Mr. Wingo. I knew you did not intend to charge the comptroller arbitrarily, without regard to the public welfare, with doing that. The thought you have been trying to get over is that a man in favor of a particular system will naturally give that system preferred consideration?

The CHAIRMAN. Yes.

Mr. Strong. What the chairman is trying, in his modest and quiet way, is to point out whether or not it is a fair thing for the government, in this contest between unit and branch banking, to have a man who has power to grant charters, that is a branch banker.

Just one more thing and I am through, Governor. This board that has been discussed in New York that fixes the rate on call money and the renewal rate on money, has a great deal of effect

and influence-it has a nation-wide effect, has it not?

Governor Young. At times; yes.

Mr. Strong. That being the case, do you think the Government ought to exercise any control over that board as to who it shall be and how it shall be regulated?

Governor Young. I do not.

Mr. STRONG. Here is a board that may attract the savings of the nation to the stock market by a higher rate, and did do it and has done it in the last few years, which is generally admitted to be a rather dangerous procedure, and put them into speculative buying of

stocks on the New York Stock Exchange.

Governor Young. They can not do that, Mr. Congressman, even under very unusual conditions. It is the conditions that bring about that rate and not any arbitrary action of those three men. Their rate has to be right. In other words, the rate has to bring the money; and, if they make it too high, too much money comes and, if they make it too low, not enough money comes.

Mr. Strong. I appreciate that, but we have got to the point where the money in New York for stock-market operations, by increasing the rate, they draw it from the savings of the Nation, perhaps to the

detriment of other business.

Governor Young. They did do that.

Mr. Strong. I was wondering whether or not the Government should take some supervision of aboard that had that power.

Governor Young. I have answered repeatedly before the com-

mittee that question, and given my reasons.

The Chairman. Are there any further questions? I may say at this point that I am hoping we can finish with the governor to-day, because, under the program as previously announced, Mr. E. W. Decker, of the Northwest Banking Corporation, of Minneapolis, Minn., will appear before the committee on April 15, and, on the following day, Mr. L. E. Wakefield, of the First Bank Stock Corporation, of Minneapolis, will appear.

Are there any further questions of Governor Young at this time? Mr. Wingo. You favor the extension of branch banking, as I

understand, personally? Governor Young, I do.

Mr. Wingo. You covered, in your statement here, the extent to which you favor its being granted?

Governor Young. I have not.

Mr. Wingo. Do you mind giving the committee the benefit of your judgment as to whether it should be state-wide, district-wide,

or trade area, or what you have in mind?

Governor Young. I made the statement in the committee that I favored the trade area, the same as the Comptroller of the Currency. I can not define that at this time. I am hoping some day I will be able to do that.

Mr. Wingo. I do recall you said that. You took the position, necessarily, there would have to be some flexibility in defining the

trade area.

Speaking a while ago about the question of profit for banking, I asked you if it was not true, from your observation, that one of the major reasons why the small bank has fallen and is passing out of the picture, is the same reason that a lot of small merchants are passing out of the picture-that they can not make money out of it?

Governor Young. That is true and they have been trying to con ert

some of their gratuitous services into profitable services.

Mr. Wingo. In the last analysis, Governor, someone has to pay for that service?

Governor Young. Certainly.

Mr. Wingo. Take the groceryman, when he delivers a small package, or if he gives unlimited free delivery service, he has to cover that in the profits that he makes out of all of his customers, and those who carry their own goods from the store, have to contribute their part of the expense of carrying the purchases to other customers in their apartments or their homes. That is true, is it not?

Governor Young. That is true.

Mr. Wingo. A bank that renders free service, by keeping an unprofitable checking account for me, unless I pay for that service charge, you and others who have profitable accounts, must show that bank enough profits to cover the deficit or the loss in handling my

Governor Young. Some where some one has to pay that.

Mr. Wingo. And if that free service and the limitation by reason of the interest rate and the limitation on the charge for remittances all of these different limitations and losses make it impossible to pay a dividend to the stockholders, it means that sooner or later that bank will be liquidated?

Governor Young. That is right.

Mr. Wingo. If it does not fail it will be liquidated, as being an unprofitable investment for the stockholders?

Governor Young. Usually local pride carries that bank along. Mr. Wingo. That local pride has been one of the incentives, though, that has led them to put their heads together and bring about a consolidation in these small towns, where they have had banking facilities. One of those consolidations occurred in one of my county seats, in the town of Nashville last week. Two banks there have consolidated, and in their advertisement they directed attention to the fact they could operate at less expense and render better

That is taking place in the different smaller communities over the United States where they have more banking facilities than the business men in that town feel they can maintain and make pay for

themselves—they are consolidating.

Governor Young. Up to 1920 the number of banks was increasing and since 1920 they have been decreasing through consolidations.

mergers, and failures.

Mr. Wingo. That decrease in the number does not mean, necessarily, that in every instance some community has been robbed of proper banking service, but it means in a great many instances a sounder, larger and better banking service is afforded that community by reason of the consolidation of in some instances two unprofitable institutions into one that can exist and make a profit and have a

larger opportunity to serve the community.

Governor Young. Generally speaking, that would be true, Mr. Congressman; but I referred, in the record this morning, to the statement of the superintendent of banks of Minnesota, in which he said that there are 154 communities in the State of Minnesota that had banking facilities that now have no banking facilities. Many of them are entitled to banking facilities.

He recommends under their State law that they be permitted to

establish branches in those smaller communities.

Mr. Wingo. In other words, the point you are making is that notwithstanding the efforts of people in these localities to preserve their institutions, inability to maintain them at a profit has caused 154 communities to lose the service and the banking superintendent says that, in order to enable them to have it, the State law should be changed to enable them to have branches in those communities?

Governor Young. In a percentage of them.

Mr. Wingo. In which they could be operated profitably?

Governor Young. Yes. Mr. Wingo. Now, there is another reason for the decline in the number of banks, which is this, is it not-I think it is true in my part of the country but I do not know whether it is true all over-but with the system of improved highways that have been established, improved transportation and improved communications, distances have been shortened so that a man who formerly lived a in small town that was 15 or 20 miles away from the metropolis of his county, we will say, that man now can go to the metropolis of his county about as easily as he used to go to the village, and the family are going to the metropolis for their purchases and the merchants in the small locality are passing out of the picture because of their inability to meet the competition of the larger merchant or banker that attracts the larger business to them.

Governor Young. There is a great deal to that.

Mr. Stevenson. My conception of the problem that is before us,

Governor, is twofold: We want to make the system such that a man who goes to bed tonight will realize that his money is in a bank that is of such a type that it will be there the next morning. Then we have to guarantee to every business community proper credits for legitimate business in that community.

Now, those are the two main reasons why we need to do something

with this banking system.

1

0 -

r

0

T

As I understand, you believe that the suggestion of the comptroller would help that situation?

Governor Young. It would help it.

100136-30-yol 1 pt 7-6

Mr. Stevenson. In removing all trouble?

Governor Young. No.

Mr. Stevenson. There is no trouble-proof proposition to be put over here?

Governor Young. No.

Mr. Stevenson. But we certainly need to do something to insure the confidence of the depositors and justly insure the commercial interests proper credits. If we can do that with branch banking, we have done something.

Governor Young. The name, branch banking, chain or group banking, is not a cure-all. Obviously all of those systems will have

to go through a period of experiment.

Mr. Stevenson. I believe the branch banking system is superior to all of those. You have one big institution responsible for all of

them, and with group banks and chain banks it is not so.

Mr. Strong. Governor, this may not be in the record, but as I am the chairman of another committee, I often have to be absent from this committee and probably was not present when it was discussed, and that is the matter of the division of profits in the Federal reserve system. Several propositions have been made and several bills are pending before this committee regarding that.

Several years ago, when we were, as a committee, going over the Nation investigating why smaller banks did not join the Federal reserve system, it was suggested that a proper division would be to take the profits of the Federal reserve system and divide them proportionately between the banks that furnished the reserves, to the amount of money furnished by the Government in currency.

Governor Young. My reply is all in the record, Mr. Congressman, and it is substantially this: That the Federal Reserve Board, in its annual report, has recommended that the member banks participate to a larger extent than they are now participating in the earnings of the system, if earned. We have not been able to work out the exact procedure, but expect to do so and present it to the committee.

Mr. Chairman, I have been here for three weeks. I have attempted to be of some benefit to you. I hope that I have. I have received

very courteous treatment for which I am most grateful.

The Chairman. We are deeply appreciative, Governor, of the frank manner in which you have responded to questions of members of this committee. You have been very generous of your time, and I know you have given us information that will assist us very much and will be of great advantage to us in our survey of this great problem.

The probability is, however, that before we complete our study,

we may want you back again.

Mr. Dunbar. Is Governor Young to appear this afternoon?

The CHAIRMAN. No.

Mr. Dunbar. My thoughts are along the lines discussed the other day by Mr. Beedy and Mr. Fort, and one of the questions you propounded, Mr. Chairman, was that if, in the panic which resulted last fall, a great many banks did not impound their gold and did not use it for cerdit purposes. As I understand it that was one of your questions.

I want to observe and ask Governor Young if it is not true practically every dollar of gold and bullion that is in this country is the basis for all our credit to-day?

Governor Young. It is.

ιt

0

p

e

ø

Mr. Dunbar. It is the basis of all our credit?

Governor Young. Yes, sir.

Mr. Dunbar. We have gold and bullion to the amount of \$4,300,000,000. We have deposits amounting to \$58,000,000,000 in the banks of our country. It seems to me if any of that gold in the banks had been impounded and had escaped being used as a sort of credit, it must necessarily be very small.

Governor Young. You are making the inquiry as to whether any

gold was sterilized, as many of the economists refer to it?

Mr. Dunbar. Yes.

Governor Young. I do not think it was.
The Chairman. The committee will stand adjourned until Tuesday next, at 10.30 o'clock a. m.

(Whereupon, at 1 o'clock p. m., the committee adjourned to meet at 10.30 o'clock a. m. on Tuesday, April 15, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, APRIL 15, 1930

HOUSE OF REPRESENTATIVES. COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met at 10.30 o'clock a. m., Hon. James G. Strong,

Mr. STRONG. The committee will come to order.

Mr. Goldsbordugh. Mr. Chairman, before we begin the regular business, it has been called to my attention that April 22 is an open date in this committee. I am going to suggest that the Eastern Shore Trust Co. be invited to send a representative here for that day.

Mr. Strong. Very well. The clerk will take care of that.

I understand we are to meet this morning for the purpose of hearing Mr. E. W. Decker, of Minneapolis, Minn., from the Northwest Bancorporation. Mr. Decker is present. We shall be glad to hear Mr. Decker at this time.

STATEMENT OF E. W. DECKER, REPRESENTING THE NORTHWEST BANCORPORATION, MINNEAPOLIS, MINN.

Mr. Decker. Mr. Chairman, I asked the chairman for the privilege of telling my story, which is not prepared in writing, without interruption, which permission he has granted. Following that I will be very glad to answer any questions that I can.

Mr. Strong. That will be the procedure of the committee, Mr.

Mr. Decker. Let me say first, Mr. Chairman, that in my opinion this committee is now approaching a subject which is the most important and far reaching, so far as banking is concerned, of any which has engaged the attention of the country since the days of Andrew Jackson. That being true, at least in my judgment, I think the committee is very wise in proceeding with the plan of an exhaustive study of the entire subject before attempting any hasty legislation. Mr. Wakefield, who is to appear, I believe, to-morrow, and I, certainly appreciate the courtesy of the invitation to appear before you, to tell you of the conditions in our part of the United States.

One reason that I think you are very wise in your procedure is this. Congress attempted some sixty-odd years ago to establish a national banking system in this country, and very wisely so. They invited the people to deposit their money in these banks and to apply

to these banks for proper banking facilities.

Undoubtedly there followed with that procedure the responsibility on the part of the Government which I have no doubt your committee fully recognize. One of the responsibilities in connection with that system, in my judgment, is to allow the banks in that system to be prosperous.

It is fundametal, gentlemen, that no single bank, no group of banks, nor all the banks in the United States together, can be safe for the depositor, give adequate facilities to the legitimate borrower, year in and year out, unless they are prosperous.

All of the commercial banking capital of this country to-day is private capital. Private capital always seeks for investment lines which are profitable. That is also fundamental. If banking is not prosperous, private capital will not go into it.

We have been operating in this country for 150 years under a system of unit banks. I believe that system has been the best that we could have had for the development of a country that is so vast in area; 3,000 miles long and nearly 1,500 miles wide; and also considering the diversity of our resources and the various problems which confront different parts of the country, I believe that the unit system was the best system we could have operated under.

With 27,000 to 30,000 individual banks in the United States to-day, it has become perfectly apparent to students of the situation that that system has now become antiquated and absolutely inadequate. No better evidence is needed than the tremendous failures of banks which are taking place. I am going to endeavor to show you a way in which the advantages of that system will be retained, not disturbed, but will be supplemented by a development which will meet the changing conditions.

The building of our highways and the incoming of the closed car, the automobile, the telephone, the radio, and various other modern appliances, has brought us very closely together.

Anoka, a small town 25 miles outside of Minneapolis was as far from Minneapolis 30 years ago as Minot, N. Dak. is to-day, a distance of 600 or 700 miles, so far as business and banking are concerned.

The crossroads bank has had its farm-loan business taken away from it, largely by the United States Government. There is very little dealing in land, which formerly was profitable. In North Dakota, the State has taken the hail insurance away from the small banks. Their profit on exchange has been disturbed somewhat. They have been unable to resort to other forms of making money, as the city bank has, in these changing conditions, and therefore they find it very difficult to exist.

In the city, whether you like it or not, the commercial banker of to-day must be an investment banker. He can not escape it.

I might say that I was born in Minnesota, on a farm. I lived there 18 years. I used to milk 12 cows and walk 2 miles to school, so I know something about hard work on a farm.

I have been in the banking business in Minneapolis 43 years in a bank which has correspondents all the way to the Pacific coast, so with ordinary observation, I ought to be able to give some idea of the conditions there in banking.

Notwithstanding these conditions, business in our section of the country is in my judgment on a sounder basis to-day than it has ever been in my experience.

We have been operating as business men under a tremendous handicap of an antiquated system of banking, as I will attempt to show you.

I assume you will want to hear from me more particularly regarding conditions in the section where we operate. I might say that the bank with which I have the honor to be connected in Minneapolis was organized in 1872 and has never missed a dividend. I do not speak of that to brag about my bank, but to show you that under proper management, banking has been continually prosperous in our

part of the country.

Now, when you come to the country districts, you have an entirely different situation. We fully recognize that we can not operate a bank in the country on the same basis on which you operate a bank in the city. A city bank is, as I said a moment ago, becoming partially at least an investment bank. Customers of ours in Minneapolis who used to borrow money are not applying for loans any more, except very occasionally. They have financed themselves by bond Issues, note issues, stock issues, and instead of coming to the bank to borrow \$500,000 for their business, they have in many instances been loaners of money.

Therefore, whereas 30 years ago when Mr. Forgan came to our bank, great sums of money were loaned there in the fall to move the crop by Canadian banks, and our bank was always a heavy borrower in the fall for the purpose of moving crops, in many seasons in the last 10 years our bank has been loaning money on the Street in New York at the time when crops were moving, because of a surplus of

funds.

H.

Mr. Wakefield's bank and my own are large owners of bonds; Government bonds, municipal bonds, various investment bonds, commercial paper, because our customers have not absorbed all of

That is true, notwithstanding the fact that in the deflation period of 1920 and 1921 our two banks alone loaned \$60,000,000 to country banks who were our customers, to tide them over that crisis, and in many instances accepted collateral which, to say the least, was doubtful.

The city banks in Minneapolis and St. Paul have charged to profit and loss in the last 10 years at least \$6,000,000, a very large proportion of which was lost indirectly in loans to bankers throughout that

section of the country.

Our loans direct to the banks themselves on collateral as a rule were paid. But indirectly we furnished capital for these banks by loaning money to country bankers and those losses have been very heavy. So we can not be charged with not using our own resources

to tide over the situation in banking in our section.

The reason we were able to do that and continue paying dividends and remain as strong as the Rock of Gibraltar, as we have in season and out, is because the banks naturally were prosperous. No bank in the world can live by loaning money to people who can not pay It back. A commercial bank is expected to take reasonable chances in its loans. That we did so is evidenced by the statement I have made regarding losses.

Those losses must be taken care of by profit, or the result is disastrous. In the last 10 years the banking situation in our country has been deplorable. In my judgment it is a national disgrace. In a country as rich and as intelligent as the United States is, to be permitting a condition of banking which has existed there for 10 years is

nothing less than tragedy.

I believe it is the duty of the banker, as well as those in charge of banks, to furnish the same protection and the same facilities to the farmer in North Dakota, so far as banking is concerned, as the broker who does business with the National City Bank in New York City.

Our trouble with agriculture, about which there has been so much talk, in my judgment is largely due to the banking situation. It is not true, in my judgment, that these banks have failed due to agricultural distress, but that agriculture has been in trouble because of our banking distress, as I will show you.

Have in mind, gentlemen, that banking is the heart of business. It is utterly impossible permanently to have prosperous business and weak banks. Had not the large banks of the United States been absolutely and fundamentally strong during the recent stock collapse. the whole business of the United States would have fallen flat.

could not have been otherwise.

I will give you a few instances—and I am only going to attempt, Mr. Chairman, to hit the high spots in my talk—of what that situation in banking has been. Take Cavalier County, N. Dak., a county, gentlemen, with good soil and generally speaking, a good class of In 1919 there were 26 banks in Cavalier County. I will not read off the names, although I have them here, because I do not care to burden you with that. Twenty-one banks out of the 26 have closed and are closed to-day. The total deposits in 1919 of those 26 banks was \$5,665,000. The deposits in the remaining five banks are \$717,000.

What do you think happened to the farmers of Cavalier County? Was this agricultural distress? Supposing thay had gotten 10 or 15 cents more a bushel for their wheat? You might about as well have allowed a cyclone to go across Cavalier County as to have allowed

that condition of banking to exist.

Now have in mind that a similar condition, but not as bad, of course, in all sections which during that 10-year period closed 1,500 banks in our district, with between three and four hundred millions of deposits, created a loss to those depositors, a class of people who could less afford to lose it, and that is undoubtedly true, generally speaking, throughout the whole United States in the loss or at least the tie-up of a billion and a half in deposits in closed banks. The burden has fallen upon the people who could least afford to stand it. Have in mind also that the depositor not only lost his money but the borrower in those banks was approached by the receiver and informed he would have to pay up.

What happened to him? What resources he had he had to attempt,

at least, to turn into money to meet his note.

Do you wonder we have had some so-called Bolshevists in our

country when such a condition exists?

In Cavalier County, to which I referred, I will give just one instance of a woman who came in with \$3,400 in dirty money, in a shoe box, to pay her mortgage. I know of one other instance—I could give you innumerable ones—of a very prosperous farmer in North Dakota who had a sizeable deposit in a number of banks. Three of those banks failed. He went to the balance of them where he had his money on deposit, drew it out, took it home, hid it in his bed ticking, bought a sawed-off shotgun, and said, "From now on this is my bank." Do you blame him?

I know of a great many instances where farmers have had money in banks accumulated to pay off their mortgages and before the mortgage matured, the bank failed.

I know of one instance at least where a farmer had sufficient money in two different banks to pay his mortgage and both banks failed.

In Moorhead, Minn., the only bank there closed December 22, 1928, with \$2,200,000 deposits. They appealed to the Northwest Bancorporations to put in a bank. We responded. We organized a national bank, opened it in Moorhead and March 5, 1925, three months later, immediately made available to the depositors of the closed bank, \$1,000,000 cash, \$750,000 of which they immediately brought back and deposited in the new bank.

Gentlemen, that country is not broke by any manner of means. But it is pretty hard for a man to swim when you tie a millstone

around his neck.

In Two Harbors, Minn., the president of a bank belonging to our group a few months ago committed suicide. He had a daughter who was mentally defective and it had grown on him mentally until he finally killed his daughter and committed suicide. That was on a Sunday. The next morning, naturally, there was a run on the bank. Two Harbors is 22 miles north of Duluth. We telephoned to our bank in Duluth to send them \$100,000 in currency and as much more as they wanted. Before noon the run had subsided; no trouble. I do not know what would have happened to that bank, had they been independent entirely.

Now, what did we do for Cavalier County, the one I just mentioned? Across the line is the city of Grafton. The Grafton National Bank has been a customer of ours for over 40 years. They came down to us and actually cried for help. We took over that bank, put in some new capital just recently. Money is now coming into the

They were absolutely helpless—absolutely helpless.

The Northwest Bancorporation has put into banks in its group, of which there are 98 banks and trust companies, in the last 12 months, in cash, over \$4,000,000 and taken out of those banks undesirable if not bad paper, and to secure us against this advance which was made through the medium of loaning to a separate corporation organized for that purpose, we took over the assets charged off and in addition held out a sufficient amount of stock in the Northwest Bancorporation which is the holding company, to secure us, as that stock was to be given and will be eventually given to the shareholders of the old bank when their loan is paid, which is evidence that we have been willing to put in money to clean up the situation. Mr. Wakefield will be able to tell you a similar story

In order to make my story as short as possible, about two years ago my young men came to me in the bank and said that they were absolutely convinced that a concentration of banking capital was going on in the country and that I should direct my attention to it; and that they thought that we should in some way or other assist in

stabilizing the banking business in our part of the world.

1 said, in my judgment, it is the business of the banker to stabilize banking conditions here because if he does not, either the politician or the business man who has become thoroughly disgusted, will step in some day and change it for us, perhaps in a way that does not suit

So I proceeded with my directors to devise a plan first of stabilizing banking in our part of the country; second, in attempting to provide facilities for our people, of which there was an apparent dearth, and to prevent, if you please, eastern or foreign interests obtaining control through purchase of stock of the banks in our district.

Now, you may think we are trying to set up a monopoly. I am going to endeavor to show you that we are trying to prevent a monopoly. It is idle for any one to say to-day that we do not like big business. It is here. It is here to stay and it is never going to go. It is utterly impossible, if desired, to drive it out. We are the richest nation in the world. We are a world banker if not the world banker.

Big business is going to grow and you can not take care of big business without big banks and big banking capital. It makes no difference whether you like it or not.

I consider it our job to see that we accomplish that with the least

possible harm, if it is harmful.

I found in three or four instances definite cases where eastern capital had approached our banks in our territory—sound banks—to buy control. The people had been asked to set a price on their banks. I said to our directors, "if these banks are going to pass into other hands, the control should be kept in this district."

When we approached those men with our plan, they said, "We do not want to sell out. We do not want the money, but we do want to have a partner. We are sick and tired of sitting up here on the prairie with the lack of confidence, as we have for many, many years, without a partner."

So we have attempted to set up in our district what is actually a cooperative system of banking. It is not a monopoly. It is the

only way that I know of to prevent a monopoly.

During the 43 years that I have been in the banking business, I have seen my customers and my own directors go to New York and Chicago—such as Pillsbury, General Mills, Archer Daniels, Minneapolis Honeywell, Cream of Wheat, Munsingwear. New York banking houses have underwirtten their securities, taken off 10 or 15 points, sent the security back at the higher price. Our customers draw the money out of our bank to buy it, not by hundreds of dollars or thousands of dollars, but millions of dollars.

I said to our people, "Why should not that profit be kept at home—at least, some of it"? We are not foolish enough to think we can become independent. But we are sufficiently satisfied with out own capital and ability to believe we can become more independent.

How could that be prevented? No one bank nor no two banks in our district were large enough to handle transactions of that sort,

8

no matter how sound they might be.

We felt that a group of banks all in our country, largely with the same problems, sympathetic with each other, each cooperating, coordinating, not consolidating, can and will do it. So we organized the Northwest Bancorporation under the laws of Delaware. We went to four of the best banks—not the poorest, the best banks—presented our plan. They said immediately, "That is the most constructive thing that has ever been offered here in this part of the country. We will gladly join you. We will not sell our banks."

Take the First American National Bank, Duluth, a consolidation of the two largest banks there, a bank of \$36,000,000 deposits to-day.

They said, "We would not sell control of this bank outside of Duluth at any price." They have 30 directors, half of whom are millionaires. We will join you in this group, leaving this bank still a Duluth

bank but assisted by the cooperation of these other banks."

Now, the Northwest Bancorporation, with its ninety-odd banks all in that part of the world, is attempting to retain to our country the unit bank, but adding to it all the strength and influence of the It is not a monopoly. It is not dominated in Minneapolis, although that is the headquarters, because there are on the board of directors of the Bancorporation 126 men, practically every one of whom is a successful business man, in numberless lines of business, and less than 30 of them reside in the city of Minneapolis. They are running that corporation. They attend the meetings regularly and enthusiastically.

There are so many things which this banking corporation can and is doing for our part of the country that it is almost impossible to enumerate them. First, it has unquestionably, together with Mr. Wakefield's corporation, stabilized our banking conditions at least at

the points where there are banks which have joined our group. It is enabling us to finance our people at home, as I explained to It is enabling us to secure trusts in these various points where

our banks are located, which is a field hardly touched.

In Fargo, N. Dak., alone, our bank has already written in the last Year a dozen trusts from people who were unwilling to create a trust in a local bank, not being assured of its perpetuity. A man has \$100,000 that he wants left to protect his wife and girls. He wants to know that his trustee is going to be there 25 years after he is gone. It was utterly impossible to convince him that he should create that trust and leave it in the local bank. He knew nothing of what the management of that bank would be in five years or whether it would be in existence.

We satisfied him that the Northwest Bancorporation with \$75,-000,000 of capital and nearly \$500,000,000 of resources was going to be there, that it was large enough and strong enough and presided over by a sufficient number of capable, successful business men, that the perpetuity would be guaranteed; that they would hire good management and would always see that the institution was properly managed and not dependent on any one man or two men or any set

That trust business in itself is not only a tremendous service, but

it is profitable business which belongs in our own district.

We are entitled to retain in our district as much of the wealth which we take out of the soil as is possible and in my judgment we are entitled to the support of the United States Government in so doing. We were not smart enough to find any better way of doing it.

In the matter of young men, from time immemorial our smartest young men have been leaving us for New York and Chicago. Why? Greater opportunity. Mrs. Pratt here may know that some years ago a Westerner was bragging in New York that all the smart men that they had down there came from the West.

"Yes," the New Yorker said, "and the smarter they were the

sooner they came."

can tell you of one instance of a young man who was receiving \$25,000 a year, connected with our organization who within four months was offered \$75,000 a year to go to Chicago, not with a bank. He declined. Why? Northwest Bancorporation offered opportunities to him which were good enough for him and had it not been for that company, he said he would have gone.

Another young man who handles our publicity work in Minneapolis was offered \$35,000 a year to go to New York City. He came back and told me he declined it purely because of this banking group;

that he saw opportunities enough for us at home.

That is a much larger question than appears on the surface. Why? In banks as in everything else, management is nine-tenths of the story. Pass all the laws in the world about banking. Without man-

agement your institutions would fail.

How are you going to secure management if your best and most capable young men and women leave you to go to larger fields? The keeping in our own district of young developing men is in my judgment a very important consideration in the organization of these

Our section of the country was in disrepute. Large international and national concerns would not even open offices there 8 or 10 years ago. An agricultural credit corporation was organized with the assist ance of Secretary Mellon and Clarence Wooley and one or two others and eastern interests subscribed \$10,000,000 in cash, immediately available, to correct the distress there, so-called, in agriculture and banking, but largely in banking.

We wanted capital to come in. We want to develop our country. Yet it was all going the other way, so far as banking was concerned.

In the meantime we are on a sounder foundation, as I said at the outset. We have diversified our farming. We are a very wealthy country and if we had had in operation in the last 15 years, gentlemen and Mrs. Pratt, a sound banking system, it is my judgment that 50 per cent of all the so-called agricultural distress would not have been heard of-absolutely.

Another percentage was due to poor farming and of course another

percentage to conditions over which no one had control.

Now, what is the remedy? That is what you people want to know; I think we have found the solution, so far as our country is concerned in the banking line, and it is the result of a great deal of thought and considerable experience.

We have the temperament of the people to deal with. You will ask me, "Will branch banking cure it?" My answer is, "Emphati-

cally no."

The banks throughout our district who are members of the North west Bancorporation, regardless of what my personal opinion might be, and their competititors which are still independent banks, are unalterably opposed to branch banking. Why? I will give you #

concrete illustration.

Take the city of Minot, N. Dak. It has a little less than 25,000 people. The First National Bank is a member of our group. It has been there a great many years. They have a fine board of directors it is a fine bank; small capital and large deposits. I said to them-"Supposing you are asked to become a branch of the Northwester" National Bank of Minneapolis, instead of a member of our group?"
They said, "We would not have it. Our bank has been here # o is left b

great many years. We have our local pride; local board of directors,

local management."

They are now members of the group, mind you; the same local authority, and the same local responsibility which they had before they joined our group. We have taken not one iota of a thing away from them in any manner, shape, or form. They have got everything they had before plus the strength, the influence and power of a cooperative system or group system, as we call it, of banks at their back.

You say, "Well, you would supplant them if the management did

not suit you, at headquarters."

My answer is it would be against our interests to supplant them unless the bank was mismanaged. If the bank was mismanaged grossly it would not make any difference who owned the stock. It is our business to put them out and put some one in who could manage it. We have a large investment in that town, in that territory. It would be against our selfish interests to supplant the management.

That feeling exists throughout our entire district and in my judgment to attempt to force branch banking at this time on those people, in lieu of group banking would stir up the biggest hornet's nest that you have seen for some time, because that is a big country and there are a lot of people there and a great many banks, and they are

unalterably opposed to branch banking.

Their training and their traditions are all along other lines. They believe in group banking, because they see that they have retained all that they had before and added all the advantages, or practically

all the advantages that branch banking would give them.

In the small towns, the so-called crossroads towns, I will admit that we have a real problem. A town which is so small that it can not support a unit bank, regardless of whether it is independent or in a group, but which is large enough to be entitled to some banking facilities, will probably need some kind of a branch or teller's window. I know of no other solution.

But in a town of sufficient size to warrant a unit bank, which has existed in most cases for 50, 60 years, many of them, with its local pride, its local directors, its local interests, its local management—to force that bank to become a branch bank will run counter to public opinion and in my judgment create a great deal of unnecessary

trouble if you can accomplish the same things in other ways.

It is true branch banking can be operated more economically probably than group banking. I think the difference in cost to-day is a great deal more than made up by the advantages of the independence of the locality which has been the basis of our Government since it started; and to destroy which would be exceedingly unfor-

It is idle for me to attempt to say what we should have in 15 years or 25 years. I do not know. I only know that, as I see it, our duty is to meet the situation as it is to-day and correct the evils with the least possible disturbance to the machinery which has been operating for many years. That is more true in banking than in any other business in the world, because banking is based on the confidence of the people, and as I stated before, is the heart of business. Unless it is sound, business can hardly possibly prosper.

Millions of dollars in our part of the country have been and still are, in my judgment, to-day in hiding. We have many evidences of

it. One town in Minnesota had five banks. They are all closed. A friend of mine owns some mortgages out there. Recently he went out to collect them and every one of them was paid—brought in cash in tin boxes and in socks—in Minnesota, one of the richest States in the Union; producing more butter than any other State in the Union. It is not a wheat State at all. We get more money for our eggs than we do for our wheat.

You ask me, "What about stockholders' liability, if this stock is owned by a corporation?" My answer is that in a well-managed corporation, that question will never arise. If one of the banks in our group has a misfortune, it will be taken care of and the public will never hear from it. But if it should develop, the chance of collecting liability or taking care of the deposits of the bank belonging to a group in my judgment are greater, better than the likelihood of collecting money on stockholders' liability in country districts, because in most cases when the bank is gone, the shareholders are also gone.

In that connection, I advocate the requirement if possible, in some legal way, of a percentage of assets of a holding company being in liquid securities other than bank stocks. Mr. Wakefield's company and out own each has 10 per cent to-day in liquid securities that can be turned into money immediately to clean up the bank, if it requires it.

The comptroller says it is difficult to audit holding companies. Very true. We not only welcome, but solicit visitorial powers by the Comptroller of the Currency in not only our national banks but our State banks, the security companies belonging to our institution and the parent company itself. Nothing would suit us better than to have him in control of every feature of our group banks. Whether that is legal or not, I can not say.

Mr. Wingo. You would include the holding corporation, too, would you?

Mr. Decker. Absolutely. You say, "We will have some bad holding companies. We will have some organized for stock-jobbing purposes. That makes the comptroller's job difficult." Yes; but the fact remains that if you furnish the Comptroller of the Currency with sufficient money, with sufficient organization, he can quickly determine whether national banks joining groups are being used for illegitimate purposes. It is not a difficult matter to determine whether our group and Mr. Wakefield's is founded for the purpose of of anything except the good of the banks of the country and for their solidarity, or whether there is evidence of stock jobbing or manipulation. It is not a difficult matter. After all, the comptroller has to use his judgment in judging human nature as well as in examining figures, which do not amount to much, because they are not always correct.

There are so many ways in which the Northwest Bancorporation is assisting the banks in its group, it is hard to enumerate them. For instance, they have been buyers of bonds, some of them, for years. They have no experts. Some of them have no bond department. They have bought bonds with very slight knowledge of their merit. They immediately said to us, "For goodness sake, help us to buy bonds and tell us whether what we have we had better get rid of."

They solicit our assistance. We are not cramming it down their throats. It is cooperative in every sense of the word. But if one member misbehaves, he is going to be called and he will be called so much more promptly in a good group of banks than he would as a unit bank, that the saving to depositor and borrower will be tremendous; there is no question about it in my mind.

To-day there are hundreds of banks in our section of the country who want to join these two groups. There is no trouble in getting banks in. The trouble is in keeping them out. Why do they want to come in? Simply because, as I say, they realize they can retain everything they now have, with all these advantages. We are not

urging them to come in.

We are making great plans for development of our country in finan-

cial lines aside from ordinary commercial banking.

It is obvious to any of you that the average farmer can not come to a local bank and borrow money for 90 days with any expectation of paying it. Unless he is shipping wheat to market or cattle or sheep,

he must have a longer time for credit.

The independent bank during these years would say to that borrower, "Yes, we have some money to loan. You are good. You will eventually pay. I have not the money to spare now and therefore I can not accommodate you." Or, if he had the money to spare he would say, "I am afraid I will need it before you can pay it and I do not dare let you have it."

To-day, every legitimate borrower in every bank in these two groups is taken care of in every bank in the group, without exception.

We are also interested in this long-time credit. Northwest Bancorporation recently acquired the Montana Cattle Loan Co., which now has over a million dollars in cattle loans in Western Montana; necessarily long-time loans. The loans are not properly acceptable to a commercial bank. So we are carrying them in this outside corporation.

We have under discussion right now, Mr. Wakefield's institution and ours, a question of such business as the agricultural credit corporation has been handling, and they have done a wonderful job up there in getting sheep and cattle into North Dakota, which was only a

lew years ago an exclusive wheat State.

Why, I could keep you here all day giving you figures of the way North Dakota is diversified. It takes capital. Who is going to furnish it? Those little individual banks certainly could not. They could not even take care, many of them, of their good customers.

That is one of the many things being planned to-day. Now, you say, "Why does the Northwest Bancorporation go into Iowa and

Nebraska? They are not in your Federal reserve district?"

My answer is threefold. In the first place, they asked us to come in and they gave as their reason, this: "We are satisfied group banking is coming. We believe in it. We want to get in it. Obviously, we can not join New York or Chicago because they are not forming groups, and we would not if we could. We won't go to Kansas City. We want to join Minneapolis, because we believe that you understand our problems and are sympathetic with them and by joining you, we believe the best can be accomplished for our company."

That was their reason and I believe it was a good one. Another reason why we went into that territory was that we believed that in

order to make a unit sound and at least partially self-sufficient, you must have a very great diversity of resources. We have in the Northwest Bancorporation to-day mining interests and water power interests of the Rocky Mountains, the grain growing, the tremendous dairy interests of Minnesota, the iron mining of Minnesota, the corn and the hogs of Iowa, the manufacturing business of Iowa, which is much greater than those people realize—tremendous manufacturing business there now, and in Nebraska the winter wheat and cattle as an offset to our spring wheat.

This territory furnishes a diversity of resourses which in our

judgment makes a unit justifiable.
Obviously, a unit in North Dakota or a system of branch banking in North Dakota alone would be fatal. They would be worse off than they are to-day, because the same conditions would embarrass them all at the same time.

So, in order to have a unit sufficiently large in diversity of resources

to make it reasonably self-sufficient, we include those States.

And another reason we included them was this: We realized that to have a bank group able to function in a way that I have indicated, it must be large enough to be effective. Whether you like it or not, size is fundamental in many lines of business to-day. It certainly is in banking. It is impossible for the banks in our district to do the things which I have enumerated, financing our industries at home, and so on, without large units. Those large units, in my judgment, will build up the country more and keep more of its wealth at home than any other one thing that has been done since that country started.

We are tired, as we say, of having the cow fed in Minnesota and milked in New York. We have paid tribute to the East from time immemorial and you would be amazed if you knew the percentage of our wealth that passes out of that State every day to other hands;

in financing, in insurance, in interest and in 40 ways.

Is there any reason why we should be forbidden to keep that business at home? Is there any reason why we should not expect

to be assisted in keeping it home?

It is not monopoly. It is an attempt to prevent monopoly. But I do not know of any way under the sun, of 40 little fellows preventing monopoly unless they get together and cooperate. We

have not discovered any way, at least, in our country.

Those are the three reasons that we cover a large territory. In many instances Mr. Pole will tell you where we have taken over banks that were not in beautiful shape. The national bank examiner sat in, has approved of the whole deal, exchange of stock, and been delighted. We have taken out of those banks assets that were not desirable.

Now, have in mind, we did not buy these banks. We exchanged stock in practically every instance where we have a bank to-day, and notably in the leading towns. There are twice as many shareholders to-day, in Minot, for instance, in the Northwest Bancorporation as there is in the bank at Minot. And there is more than twice as much money invested in Northwest Bancorporation stock in Minot these was in the First National Bank of Minot.

Based upon the books of the corporation as of December 31, 1929, the Northwest Bancorporation had 11,469 stockholders, 90 per cent

of whom resided in the territory served by affiliated banks. The following table shows the number of stockholders of the Northwest Bancorporation by States:

Minnesota	7, 719	Iowa	400
Dakoto	650.63 1	Nebraska	250
Wulli Bultota	72()	Washington	260
		Miscellaneous	750
Michigan	50	Total	11, 469

It is the policy of the corporation to encourage the distribution of stock among customers and employees of the affiliated banks as well as among other persons in the States of the Northwest. We believe that a wide distribution of stock in the territory which the corporation serves is an element of strength and will be an important factor in building up the business of affiliated banks.

Comparison between the number of stockholders of various banks before affiliation with the number of Bancorporation stockholders

after affiliation in the same city are given below.

29. ent

It should be remembered that in giving the number of shareholders of the bank, this includes all shareholders regardless of whether or not they live in the city where the bank is located, while all Bancorporation shareholders given are residents of that city.

Before banks became affiliated

	Bank share- holders	Bancor- poration share- holders
National Citizens Bank, Mankato, Minn. First National Bank, Winona, Minn. First National Bank & Trust Co., Fargo, N. Dak	100	110 112 -177 39
First National Bank & Trust Co., Fargo, N. Dak. National Bank & Trust Co., Minot, N. Dak Security. National Bank, Sioux Falls, S. Dak National Bank of LaCrosse, Wis.	44	61 142 220

Now, is not that cooperation? We have made available the stock in the corporation. If it is a good thing, if it is prosperous, our people can participate in it. They would not buy stock in the local bank, many of them, and if it was a bank that they wanted to buy stock in, they could not get it. It was closely held.

We have attempted to put that on a democratic basis. So that the interest in the localities is greater in the cooperative group than

it was in the local institution.

Take the matter of taxes. Our banks in North Dakota say, "If You ask us to become branches, where are we going to collect taxes?" They are taxing these local bank stocks. They are getting a large amount of money annually from them. They say, "If we are a branch of the Northwestern National Bank of Minnesott sota will collect all the tax, because the stock will be issued there, and we will have to resort to other forms of taxation to run our government."

100136-30-yol 1 pt 8-2

I hold no brief either for or against branch banking. I have no prescribed theory on which this whole question can be soundly settled. I only know that the people, in my judgment, in banking and in business, including farmers, in our section of the country believe that we have at least, for the time being, found the solution of our banking problem, and as I say it is hard to say what we will need in 15 or 20 years. I do not know, Mr. Chairman.

I could go on and talk here for four hours, but I have just tried to touch the high spots, and I think I will stop and give the members a chance to ask questions, if they want to, and make further expla-

nation.

Mr. Luce. Mr. Decker, your very instructive statement might be supplemented, it seems to me, by a little more description of the machinery and the operation.

Mr. Decker. Yes. You asked certain questions—your chairman did—in a memorandum sent to me. Would you like me to read

those?

The first question asked is—Copy of the charter, date of organization, and by-laws.

We will furnish that. Is that satisfactory?

Mr. Luce. Yes.

Mr. DECKER. Second:

Furnish list of the directors of your holding company showing the principal business occupation of each.

(The list referred to is as follows:)

NORTHWEST BANCORPORATION

OFFICERS

E. W. Decker, president; J. C. Thomson, vice president and general manager; Robert E. Macgregor, vice president and treasurer; H. D. Thrall, vice president and assistant treasurer; Alex. Highland, vice president and assistant general manager; E. J. Weiser, vice president; Theo. Wold, vice president; Hanford MacNider, vice president. David Williams, vice president; Isaac S. Moore, vice president; Clyde E. Brenton, vice president; Gardner B. Perry, vice president; R. O. Kaufman, vice president; D. R. West, secretary; H. Hallenberg, chief examiner; W. E. Brockman, director, advertising, and publicity; Robert F. Mactavish, assistant treasurer; William N. Johnson, assistant secretary; Grant W. Anderson, assistant secretary; Willis D. Wyard, assistant secretary; J. W. Groves, assistant secretary; John DeJong, assistant secretary; W. Gordon Hegardt, assistant secretary; M. E. Ryan, comptroller.

EXECUTIVE COMMITTEE

E. W. Decker, chairman, W. G. C. Bagley; Clyde E. Brenton; G. W. Burton, W. A. Durst; Alex, Highland; Ford E. Hovey; F. A. Irish; R. E. Macgregof, Hanford MacNider, Isaac S. Moore; W. Z. Sharp; David C. Shepard; J. C. Thomson; H. D. Thrall; George P. Tweed; E. J. Weiser; David Williams, Theodore Wold; G. H. Yates, D. R. West, secretary.

Mr. Decker. Fourth:

Give a list by name and capital structure of each corporation other than banks, the majority of the stock of which is owned by your holding company.

That will be furnished. It consists largely of securities companies, like the Northwest Bancorporation, and such companies.

Mr. Luce. That may be handed to the stenographer. (The list referred to is as follows:)

Affiliated companies

	Capital	Surplus and undivided profits
Banc Northwest Co., Minneapolis, Minn. (securities): Common Preferred Union Investment Co., Minneapolis, Minn. (holding and managing) Central Co., Minneapolis, Minn. Mr. Decker. Fifth:

State fully the method of acquiring a bank, whether by cash, purchase of stock, or by exchange of stock, and the method of negotiation.

That can be briefly answered, although I think I have covered it. In nearly every instance banks are acquired by an exchange of stock, although when the corporation was first organized we offered

them part cash if they preferred it.

In each acquisition, consideration is given to the territory served by the bank and the need and provision for a more stabilized local banking condition and a broader, more uniform and complete servas well as continuous banking facilities which will not be affected by temporary and local depressions.

Negotiations are generally initiated by those desiring to affiliate, but in some instances the corporation, through its representatives,

invites affiliation.

Stock of the corporation is exchanged for stock of the bank, except in cases where it is necessary to recapitalize the bank, and in those instances the old capital structure is wiped out by losses or reserves set up for possible losses, and it is then necessary for the corporation to provide new capital. All exchanges are made on as uniform a basis as is possible, taking into consideration the capital, surplus and undivided profits, resources in use as capital and net accruals; the foregoing constituting the bank's total invested capital. The total invested capital, the volume of deposits, and the average earnings over a 5-year period to a great extent determine the ratio of exchange. Of course, management and future prospects for growth and strategic location are also taken into consideration.

When an agreement has been reached on the exchange ratio, the bank is examined by our own examiners who make the examination without having in mind the terms of the contract and ultimate consummation of the deal. The examination is unbiased with the end in view of obtaining all information possible regarding the prospective affiliate. Before affiliation is finally brought about, the undesirable assets are eliminated and the bank comes into the group on a clean basis and thereafter is maintained in a sound and healthy

Mr. Luce. How large a proportion of the stock?

Mr. Decker. Well, out of a total of stock issued to-day-

Mr. Luce. I mean by any individual bank—in the case of any one bank.

Mr. Decker. What percentage was cash?

Mr. Luce. Was all of the stock of the bank exchanged!

Mr. Decker. About 98 per cent-practically all, with the exception of the director's qualifying shares. The greater part of the stock has been exchanged. You may say that the Northwest Bancor-Poration owns practically 98 per cent. To be exact, it is 96.2 per cent of all the stock as of December 31, 1929. Some of the rest has been turned in since, which will bring the percentage up.

Now, the basis of exchange of stock, where stock was exchanged, was, of course, a matter of mutual agreement. We took into consideration profits, book value, earnings, prospects, and everything, and agreed upon what would be a fair exchange for their giving up their stock in the local bank and taking for it stock in the holding

company, and we retained the stock in the local bank.

39.

2. 74 5. 19 7. 71 0. 64 5. 56

19

5.85

an ıy. s,

01

57 72 Mr. Goodwin. Were the stockholders practically unanimous in

the transfer?

Mr. Decker. Yes. About 97 per cent of the stock has been exchanged, so I think that answers that. Of course, a part of the remaining 3 per cent is accounted for by the directors' qualifying shares. So there is very little left. There is no trouble in exchanging stock. They were delighted to get a stock that had a market and that was based on diversified resources in place of a local bank subject to local business vicissitudes and changing management, the perpetuity of which was not assured.

Sixth:

Describe the capital structure of your holding company, showing the classes of stock and the extent and method of the stock distribution.

There is only one kind of stock. There are 1,600,000 out at \$50 a share par value. To be exact, there are 1,641,364 shares and of the total amount outstanding, 342,869 were sold at public offering and the balance was used in the exchange of stock with the affiliated banks. So about four-fifths have been issued to member banks and one-fifth to the public.

Mr. Luce. How much was pooled?

Mr. Decker. None at all.

Mr. Luce. All subject to be marketed?

Mr. Decker. Yes, sir.

Mr. Seiberling. What par has the stock?

Mr. Decker. \$50. I think you were about to ask me how we would prevent Wall Street from buying control.

Mr. Luce. Yes, sir; that was what I wanted to know. Do you care

to answer it now?

Mr. Bussy. We can not hear a thing at this end of the table.

Mr. Luce. The point I am driving at is whether this stock, being on the market, can be concentrated by purchase on the part of New

York interests or any other interests?

Mr. Decker. My answer is this: One of the leading purposes in the organization of the Northwest Bancorporation was to prevent outside interests obtaining control of our banks. My contention is that it would be much easier for an outside institution to acquire these one hundred-odd different banks, one at a time, and buy from the individual's control, if they wanted to sell, than it would be if they wanted to buy control of the Northwest Bancorporation for the reason that the Northwest Bancorporation is presided over by 126 directors, practically all of whom are wealthy, independent business men. Not one would sell control of that institution knowingly at any price. It would make no difference whatever what the price was. Also, they have that same local pride and local interest which has been in existence for 60 years, which dominates these small banks.

Now, if there is no loyalty anywhere; if money is the only thing in the world, I do not know how you can pass any law toprevent a man selling out to some one else. You may know of a way; I do

not.

But my judgment is that what we have done has made it much more difficult, if not impossible, for outside interests to acquire control than would have been the case before the corporation was organized.

We do not want to be dominated by New York or Chicago; it is not sound; it is not good for New York or Chicago, and it is not good for us, and I do not know of a commercial banker-and I know them all personally-in either New York or Chicago that has the slightest desire to acquire control in the Northwest Bancorporation. Every one says they have enough trouble of their own and the only thing that would tempt them to do it would be they felt some one else was going to do it ahead of them. There is always that fear, I suppose.

I think we have reduced that danger to the minimum, because we have set back of it the best brains, the best minds, and the most loyal people who live in our country. If you can not trust them, whom will you trust? They do not want to sell out; they want to

buy more stock.

I should be entirely sympathetic with any move on the part of this Congress to pass a law which would make it impossible for people outside of our district to acquire control of our holding company and banks. "Then," perhaps you ask, "why are you not willing to have some law to make it impossible for you to acquire, say, the Minot Bank?"

My answer is that at some place along the line you must build a unit strong enough to stand on its own feet. Minot can not do

it alone. Minneapolis and St. Paul, in that district, can.

Our banks are managed by experts, people born and bred in that country. They know the problems and their solutions. Our problems are different from the Atlantic seaboard. For instance, take the freight rates, water rates, tariff, and so forth. We have a pride in our affairs, and we are going to look after our own interests, and that is what we are doing here. We would solicit any assistance from the Government to make it impossible for people outside of our district to acquire control of our banks or holding company. Is that an answer?

Seventh:

Explain fully what control or influence the holding company, or a central bank controlled by the holding company, exercises over the group of banks acquired. That is to say, what sort of central management or central advisory board or committee is set up and exactly how contacts are maintained between the member banks of the group and the central bank or holding company. How is the group policy initiated and applied or enforced?

Well, we have set up a staff of examiners who examine every bank in the group at least once a year, and those examinations will be very thorough, believe me, from a business standpoint, pure and simple. They will review the examinations twice a year, by the national bank examiner, or State bank examiner, as the case may be.

We will have a report from these banks sufficiently often to know what their operations are, but with no desire whatever to dominate a local bank or other local interests who find it wise to follow a

certain policy.

Practically every bank in the group, except some of the very small

ones, are represented on our board of directors.

By the way, I forgot to say that there is a provision that is either in our constitution or by-laws-I forget which-which makes it mandatory that every bank in our group must have 75 per cent of its directors local men. As a matter of fact, to-day, they are all

local men. We have not put a Minneapolis man on the board of

directors of any bank that is in our group.

You will say, though, "Well, you can fire them at the annual election and put in another set of directors." Yes, but would it be to our interest to do it if they were not pretty bad? We have a large investment, for instance, at Minot and naturally we want the cooperation of the people, or they will go to some other bank.

Eighth:

Upon what principle are you working in determining the geographical area into which your group of banks will be extended? In other words, what do you consider to be the territorial limits of your group and what determines the limits of the area?

I think I have answered that and I do not think you want me to

repeat it.

Affiliated banks of the Northwest Bancorporation are located generally, through the ninth Federal reserve district and in portions of the seventh, tenth, and twelfth. In the acquisition of banks, Federal reserve district lines have not governed the territory which we have entered. The purpose in the organization of this corporation was to assist in stabilizing the banking conditions in the Northwest States and adjoining natural trade territories. The corporation's

activities now cover eight States.

Assurance that continuity and stability of earnings will be maintained is found in the wide diversification of business activity in the territory served by affiliates in Northwest Bancorporation group. Basic sources of wealth in many principal lines are found in the extensive territory from eastern Wisconsin to eastern Washington, from North Dakota to Nebraska, and in the intermediate States. Montana, Minnesota, South Dakota, and Iowa. In some areas business comes primarily from the production of corn, wheat and other grains, dairy products, sugar beets, vegetables and fruit, while livestock production predominates elsewhere. In other areas, banks in the group are concerned primarily with business from the great ironcopper, gold, and silver mining, and oil industries. In the larger cities particularly, manufacturing, in itself widely diversified, contributes a large volume, and other important business comes from insurance, transportation, public service and general wholesale and retail merchandising.

Along with this diversification of outside sources from which business is derived, the organizations in Northwest Bancorporation group diversify within themselves in commercial banking, savings trust functions, financing of industries, making of mortgage loans investments, safe deposits, foreign exchange, and all other banking

functions. Ninth:

Give method of central audit and examination of the members of the group of banks owned by your holding company.

I have covered that.

Mr. Luce. Will you tell us a little more about the mechanical process? You told us, for example, that there was no borrower in your field who could get up the securities, who would fail to get a loan. How is that accomplished?

Mr. Decker. It is accomplished by the fact that the local bank

naturally wants to take care of its good customers.

Mr. Luce. But if that bank has not the money, how does it get

it and where does it get it?

Mr. Decker. If the bank has the money it feels free to lend it, knowing if the deposits go off, or there is a crop shortage, he has some one to call on. If he has not the money in that bank, he can easily borrow it from some other bank in the group—say, for example, the Northwestern National Bank, as it was formerly, before the members joined the group—or, in the case of Minot, if Minot has a customer that is good, and that customer wants \$50,000 and the local bank can only legally lend \$25,000, we will take the additional loan—not a permanent line of credit, but an additional loan to tide over the period, if it is a loan for a period. If he needs additional lines permanently, he will have to secure it from the local banks, as he would if there was not this group. It is not our policy to overload local banks if it is possible to avoid it. If the local borrower is entitled to that loan and there is good

If the local borrower is entitled to that loan and there is good reason to believe that some day he will pay it back, and you can do the country some good up there by lending the money, we will

Provide means for doing it, that could not be done before.

Mr. Luce. It is the mechanics of the thing that I am interested in. Do you maintain a central office under the name of the North-west Bancorporation?

Mr. Decker. Oh, yes.

Mr. Luce. You have funds there to loan?

Mr. Decker. Not as a corporation. It is a holding corporation. Mr. Luce. Suppose the First National Bank of Minot desires to get money to lend and it does not turn to some other bank, as it

might, but turns to you, what do you do?

Mr. Decker. If they convince us that that is a section where the legitimate borrowing capacity is larger than the depositing capacity, which is not likely to exist except in cases such as those I mentioned, where there are cattle loans or sheep or livestock loans—and those we are providing for in the side corporations—aside from that, there would be very few cases, in my judgment, where deposits in that section will not be sufficient to take care of the legitimate borrowings there. That is the fact. We are not such a poor country that you have to bring in a mass of outside money to take care of the district from the banking standpoint.

Mr. Luce. I appreciate that.

Mr. Decker. You mean if John Smith, for example, comes in and borrows \$100,000 and puts in a note?

Mr. Luce. Yes.

Mr. Decker. We will take that note into our portfolio. The holding company, of course, makes not loans. They will send it, probably in our instance, to the Northwestern National Bank, which is the largest unit in the Northwest Bancorporation.

Mr. Luce. Suppose the bank in question has not the money that

you are referring to?

Mr. Decker. The Minot bank?

Mr. Luce. The National Bank of Minot.

Mr. Decker. Well, supposing the National City Bank has not the money to lend, they will find a place to get it.

Mr. Luce. I think you are drawing a contrast between the opera-

tions of the group system and the branch system.

Mr. Decker. Yes; on this theory-

Mr. Luce. Let me bring out what I am trying to understand.

Mr. Decker. Go ahead.

Mr. Luce. A branch bank is a branch of a parent bank, which conducts a large banking business with deposits and resources of all kinds, so that it can direct its funds to this or to that locality where there may be a greater need or greater profit.

Mr. DECKER. Right.

Mr. LUCE. Now is there any corresponding machinery under your system to do the same thing?

Mr. Decker. No.

Mr. Luce. If more money is necessary in North Dakota at a given time than is necessary in Minnesota, have you any method for diverting funds from one part of your area to another part of your areaas a branch bank can?

Mr. Decker. Plenty of means of doing it, if our best judgment in-

dicates that it should be done.

Mr. Luce. What would be the means?

Mr. Decker. The bank at Minot, for instance, if that was the point where loans were larger in proportion than deposits, would rediscount. First, they will undoubtedly rediscount with the Northwestern National Bank at Minneapolis, which had been their corre-

spondent many years before they joined the group.

If it became apparent that the Minot bank was permanently and constantly overloaning, we would go up there and see if it was necessary and whether the management was lax in putting out too much money in slow loans and discover whether there was no evidence that we would get it back in a particular time. We would review that situation and determine what was the fair and right thing to do and, having in mind our large investment in the Minot bank, our selfish interest would demand that the interests there be protected.

To answer your question, a group bank, as we operate it, would not operate quite as quickly nor would it be as well oiled, in shifting money from one section to another, as a branch bank; and that is one of the things that our people object to. They do not want all their money taken out of one section and loaned to another unless they

can be assured they can have it at a time when needed.

Mr. Beedy. Are you referring to the officers of the Northwestern National Bank of Minneapolis?

Mr. Decker. Yes.

Mr. Beedy. You do not refer to the set-up of your holding cor-

Mr. Decker. I would not say that. We have a president, general manager and corps of officers. Unquestionably the officers will supervise the operation of these banks, and the Minot Bank will have practically the same scrutiny under the Northwest Bancorporation management as it would have if it was a branch of the Northwestern National Bank. We have our money invested there and we will see that it is properly loaned, but we will leave it to the local management of the Minot Bank and the management of these local institutions, as long as we are satisfied they are running them right, and when we are satisfied they are not, we are going to correct that situation.

Mr. Luce. Let me ask some questions about this matter of local management. You have given us to understand that the stock, which was once owned by the people in that locality, is now owned by what is virtually a cooperative association; however, that the directors are still elected locally. The common experience of mankind is that office without power sooner or later degenerates into something of a traversty. We find it here in Congress, as illustrated, for example, by the fact that the Committee on Appropriations holds the purse strings and, therefore, in many directions controls, and that other committees have been shorn of much of their responsibility and power.

Why do you assume that, through a period of years, a local board of directors, that has no final responsibility, will meet the needs of a community as a unit bank would meet it? For instance, a board of directors, confronted by some difficult situation, will be led to feel, Well, we have no authority here; we have no responsibility; no final authority or responsibility. The men down in Minneapolis

will have to carry this load."

Do you not apprehend that, in time, there may develop in this or that locality, a situation that might have been avoided if the men who run the bank, own, and control the bank, and were responsible

for it?

Mr. Decker. I think there is a danger, yes; but so long as those men are the best men in the community; so long as they have a large financial interest in the Northwest Bancorporation, a larger financial interest than they had before in the local bank, and so long as they have the power, which we do not take away from them, the management of the bank, we believe, and we have sufficient faith in humanity to believe, that that is a workable plan.

Now, if I am wrong; if you can not trust these men and they will say, "Let George do it now; he is responsible; why should I worry; have my stock in the company and can sell it and go to California and quit "-if that is what the whole country does, there is

Just one result and there will be branch banking.

But to-day, if you choose to call ours an experiment, I believe it is the best experiment that could be tried to retain all we have now, and yet meet the changing situation, without necessarily running counter to a very strong local feeling in our section against branch banking.

believe that the psychology of the situation has to be taken into full consideration, particularly in banking, because you must have the confidence of the community in order to draw out the money

from hiding.

We think we have found a way so that the local depositors and borrowers—the fellows on the street—are going to have greater safety and better service than they had before, or that they would get to-day under branch banking and, therefore, we believe that it

18 a better plan.

Now, I can not guarantee that, as you suggest, some day in this Particular case, if this group of directors fall down on the job-well, we would see that coming in advance and we would provide men there that will take the responsibility—but if I am a director in the Standard Oil Co. of New Jersey, or some big corporation, or

even the National City Bank of New York, I do not think it is fair to assume that, because it is a big institution and a long ways off, I would not be a good director, if responsibility is placed on me. We place that responsibility absolutely on them. We do not take any authority away from them. Naturally, they will not assume responsibility without authority, and we would not let them assume authority without responsibility.

Mr. Luce. There is this difference between group and branch banking, that when a doubtful loan is in question, I understand in the case of your group banks, you learn of it only once a year from your examiners when they go around and examine your banks. The central office of a branch-bank system learns of it within 20 minutes.

Mr. Decker. There will be no loans of any size or unusual character made without submitting them to the head office. But there is exactly where the local board of directors assume their authority. If, in their judgment, there is a safe loan to be made, they will go ahead and make it. We will say it is a new one and has not been passed on before, or comes up since our men examined that bank. We expect those local directors to assume the responsibility of that loan. I believe it is safe to assume that they will, because they have been there for years, and know the local situation. These are not new men. They have been operating successful banks. Mind you, the banks we have taken in are not banks, with a few exceptions, where we felt we had to lend assistance. As a rule the banks are 50 or 60 years old and successful banks. We have not picked up a lot of cripples. We are picking up nothing but good banks, because we felt that the only way to make a banking institution there that would survive would be to have a cooperative banking group of good banks, and not poor ones.

So, we put that responsibility on the local board. If we discover that they have not good judgment, why, they will be told so.

Mr. Luce. But then you will be locking the stable door after the horse has been stolen.

Mr. Decker. They are not going to make a lot of bad loans before we know it. We get reports every 30 days. We also get the State Bank and National Bank Examiners' reports.

Mr. Luce. I think perhaps you misunderstand, from the burden of my questions—

Mr. Decker. If I speak earnestly, you will understand that I mean nothing personal.

Mr. Luce. These hearings began with the statement by the Comptroller to the effect that the overwhelming occasion for an investigation was the fact that thousands—I think it was 9,000 banks—have failed in the past decade; that the safety of the funds of the people is our chief concern.

Mr. Decker. Right; absolutely right.

Mr. Luce. And in order to have you throw further light upon this question as to how increased safety is going to be accomplished by your system, I will further inform you that this committee has now, through 8 or 10 years, watched the failure of the cooperative idea to function as was hoped in the farm-loan system, and some of us are not very hopeful about the possibility of the cooperative idea sufficing to meet the banking situation.

Mr. Decker. Neither am I.

Mr. Luce. Now, you present to us a system that is based purely upon the cooperative theory, but as yet, to be frank, it does not disclose a great addition of safety to depositors of the various banks.

Mr. Decker. My answer to that is this, the depositor in the local bank has everything he had before in the way of safety. He has the knowledge that the management of that bank is going to be checked and watched as it was not before. He has the knowledge that the Northwest Bancorporation is back of it, with its large resources, and they are able to take out of that bank the securities which may get into it that are not desirable.

After all, management is nine-tenths of the law. Heretofore his bank had a manager and the only one who was watching him was his directors. They were all local men. Now he has all that, and he has the Northwest Bancorporation's organization watching him in addition to that, checking him and advising him and assisting him.

So I think that the depositors in any one of the banks in our group have double security, at least, to-day, over what they had be-

fore. They have lost nothing and have gained a lot.

Mr. Luce. One further question and then I have to be excused, to go on the floor by reason of a matter in which I am vitally conrerned. Is any uniformity in discount rates secured or encouraged?

Mr. DECKER. I did not get that. Mr. Luce. Is any uniformity in the discount rate obtained or

Mr. Decker. Between the banks in the group?

Mr. Luce. Yes. Mr. Decker. No, sir.

Mr. STRONG. I was called away and I do not know whether or not you have advised the committee regarding the plan of your group organization.

Mr. Decker. Yes.

Strong. Let me ask you this: Suppose a bank get in

Mr. Decker. One of our banks? Mr. Strong. Yes; one of your banks.

Mr. Decker. It is not going to get in trouble.
Mr. Smooth Rut groupose it does

Mr. Strong. But suppose it does.

Mr. DECKER. All right.

Mr. Strong. And you send your committee down there and take out \$100,000 worth of paper and replace it with the funds of the bank and there is a loss on that paper. Who stands that loss?

Mr. Decker. The Northwest Bancorporation. We would put new capital into the bank immediately.

Mr. Strong. The other members of the cooperative organization—are they not liable to resent the fact that you took the profits or capital of the cooperative group to repair an injury to a single member of the organization?

Mr. Decker. Not if they believe in the principle of the group. Mr. Strong. Well, supposing I am the president of a large bank in a city called A, and a bank in a city named B gets into trouble. It with be not very far from my bank. How long will I be satisfied with taking the profits or the capital of the group to which I belong, to help out this bank at B?

Mr. Decker. The answer to that is this, that, as president of the bank of A, you are a director of the Northwest Bancorporation and you helped get up the organization and know its policies and methods. You went into that banking corporation and exchanged your stock in the local bank for the stock in the Northwest Bancorporation because you thought it was better for yourself and your You must have believed in the principle involved, or you would not have gone in. You must believe that the directors of the Northwest Bancorporation will see that proper officers, at all times look after these banks, and do not allow them to make excessive loans, Of course there may be some losses, but the minute a bank gives evidence, through its management, of making excessive loans, that management will be supplanted.

I do not want to give the impression that the Northwest Bancorporation will not have any control or supervision of these banks so they will not at all times know what is going on, because I would not have put our money into it; we would not have given up a record of 60 years without missing a dividend, if we did not believe we had set up an organization which we proposed to watch and follow and manage, to make our investment there good.

Mr. Strong. When a bank goes into your group, it does bury itself individually and the owners place their stock in the Northwest Bancorporation. If that is true, I do not see how any individuality of management and local control can prevail.

Mr. Decker. That local control is only exercised in case of emergency.

Mr. Strong. You mean that central control?

Mr. Decker. Yes, sir; absolutely. If we have a group of fellows up in Minot who do not know how to run the bank, we will find it out and put some one in that does.

Mr. Strong. The local institution continues to elect its board of

directors? Mr. Decker. Well, the election of the board has to be made by the shareholders, of course.

Mr. Strong. Then, in case of mismanagement, your group organization steps in and supplants that authority?

Mr. Decker. Yes, sir.

Mr. Strong. And has the right to vote those directors out and take charge?

Mr. Decker. Absolutely.

Mr. Strong. Then, there is a domination by the central group?

Mr. Decker. To that extent, absolutely.
Mr. Strong. You have formed a group organization of big, strong banks. What becomes of the little banks in the small communities

Mr. Decker. We have some small banks, through the Union Investment Co.—about 31 banks. I do not know how small some are but they are very small.

Mr. Strong. Are those banks branches of the Union Investment

Co. Mr. Decker. No; the Union Investment Co. is a small holding company which has been in existence for a great many years which you may refer to as approximating what we call chain banking We bought or exchanged stock with the shareholders of the Union Investment Co. just as we have with the various banks, because we wanted those large banks to look after small banks that wanted to come into the organization, so that local institution, which is better qualified to handle the small local banks, than the Northwest Bancorporation, has charge of them.

Mr. Strong. Then, your small banks are handled by chain banking

institutions within your group?

Mr. Decker. There is just that one institution and there will be no more. That is a matter of convenience. There is an instance of taking in 31 small banks that wanted to come in. We took them in through that organization, instead of directly through the corporation, because that special organization is organized to look after little banks and they require different supervision than such a bank as is located at Minot, where you have a strong board of directors.

Mr. Strong. Within the territory of your group corporation, there

Are a great many other small banks?

Mr. Decker. Yes, sir. Mr. STRONG. What do you propose for their protection? Mr. Decker. You mean banks that are not in our group?

Mr. Strong. Yes. Come into your group?
Mr. Decker. That depends.

Mr. STRONG. What?

Mr. Decker. That depends on a great many things.

Mr. Strong. You would not take them in if they were not strong

Mr. Decker. I would not take them in if we did not think we could make money at that point by operating a branch there, nor would any one else.

Mr. Strong. Would you ever put in a competing bank; would your group ever install or create another bank in competition with a bank

outside your group?

Mr. Decker. No, sir; no such instance has ever been brought up. We have plenty of places to go in without competing with other

Mr. Strong. Then, your plan of cooperative banks or group banks will not remedy the need of proper banking facilities in the small towns?

Mr. Decker. No, sir.

Mr. Strong. How do you propose to take care of those?

Mr. Decker. I think I mentioned that while you were out of the room.

Mr. Strong. I beg your pardon. Mr. Decker. That, in my judgment, under the present terms and conditions, is the place where branch banking could and should function. There are small towns where either a county seat bank, or a larger bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could afford to operate a branch economically bank in the State, could be also be a branch economic bank in the State and branch econ ically bank in the State, could allord to operate a small loans, if there was a demand, where we could not afford, nor could loans, if there was a demand, where we could not afford, nor Could anyone else afford, to invest the money to operate a unit bank. In those instances, I believe branch banking is the only answer.

Mr. Strong. But a branch banking group could hardly be or-Sanized and continued successfully that would only control little banks. They would want to go into the larger towns.

Mr. Decker. Yes, sir; that is the reason I say branch banking should supplement group banking and not be fastened onto it; otherwise, in the end, the situation will be worse than in the beginning.

Mr. Strong. You want the branch bank established to be a branch

of some bank in your group?

Mr. Decker. No; that would be a freeze-out game.

But, for illustration, here is a good county seat, with two banks. One bank is in our group and the other bank is in Mr. Wakefield's organization. I assume any law passed will enable a bank to establish branches only with the approval of the comptroller. That will be for him to answer whether the bank is strong enough and sufficiently capitalized to operate branches in its immediate territory.

Mr. Strong. I do not see how your plan will work in conjunction with the branch-banking scheme unless you dominate and control

the branch banks in your territory.

Mr. Decker. Well, whether we dominate or control them, I think is a question whether we render better service and the people prefer to do business with us than with some one else.

Mr. Strong. Then it comes to this: Cooperative group banking in larger places for the larger places, and branch banking for the small

towns?

Mr. Decker. Yes, sir; but that branch banking limited to those small towns, without the support of the other, in my judgment, would be fatal-particularly in the rural districts, where they would be.

Mr. Strong. Do you think there would be any danger in competition of that kind, of the people living in the smaller communities of the United States, of which there are, of course, thousands, not getting proper banking service?

Mr. Decker. I did not get that.

Mr. Strong. Do you think there is any danger, if your system is adopted, that the people living in the thousands of small towns will

not get the proper banking service?

Mr. Decker. I think there is less danger of their not receiving if under our system than any other system proposed in this country, of any other country. In Canada, half a dozen banks control the whole

We are not proposing to go that far. We propose to adopt the feet tures of their system which we have been forced to adopt under the changing conditions, but retain all local pride and responsibility that

is possible under our system.

Mr. Strong. Now, the Comptroller of the Currency and the Gover nor of the Federal Reserve System has approved branch banking over the United States confined to trade areas.

Mr. Decker. Yes.

Mr. Strong. In your case, Minneapolis would be a trade area. Mr. Decker. You mean it would be a center of a trade area?
Mr. Strong. Yes.
Mr. Decker. Yes.

Mr. Strong. Then branch banking, under the proposition proposed by the comptroller, and approved by the Governor of the Federal reserve system, would be established in your community or trade

Mr. Decker. It would be authorized.

Mr. Strong. That would set up competition between some large branch bank and your group?

Mr. Decker. Yes, sir-right.

Mr. Strong. Well, your idea is that also a law, if one were passed, would have to legalize or authorize or permit the continuance of your form of cooperative group bank?

Mr. Decker. Exactly.

Mr. Strong. And let the two systems operate in competition?

Mr. Decker. If they do naturally, yes, sir; but not to destroy what has been set up in a natural, evolutionary way by forcing another system at a time when public sentiment is against that in the country.

I do not fear the competition of branch banking, provided you keep Mr. Chase National and Mr. National City Bank of New York out of our district. Anyone who chooses to come into our district and organize a large bank in Minneapolis or a small bank in Podunk and put their money in competition with us, we are willing. If we can not stand up against legitimate competition, we are not worthy to be there.

Mr. Strong. Then, you do not propose a monopoly of banking by

group banking or chain banking in trade areas?

Mr. Decker. I will answer that—I think I have already answered it, though—the so-called group banking, set up in an area sufficiently large to include resources of sufficient diversity to establish a sound unit—that system asks no assistance of Congress, or of anyone else

to-day. We are not asking for any assistance.

Now, if Congress chooses to set up a branch banking system, limited to a somewhat similar area, we will say, in competition with us, we have no objection whatever, and if that system is better, we will be the first ones to adopt it. We are not wedded to our system. We have developed what we believe to be the best under all the existing circumstances in our district, and if anyone can show us a better, we will be delighted.

Mr. Strong. How long has your system been in effect?

Mr. Decker. About a year, last January.

Mr. Strong. Is it growing!

Mr. Decker. In number of banks?

Mr. STRONG. Yes.

Mr. Decker. Well, we are not taking in banks very fast, for a couple of reasons: First, we want to have time in which to digest what we have swallowed. That is not the proper word, but you have used the word "monopoly" and so I will use the word "swallow."

Mr. Strong. I think that is very apt.

Mr. Decker. And, secondly, the Secretary of the Treasury, in his annual message, stated that he hoped while Congress was making an exhaustive study of group and branch banking, that group banking would proceed very moderately. We respected his suggestion, as Mr. Wakefield, at least, will agree, and immediately changed our policy out of respect for his suggestion. Now we have banks camping on our doorstep by the hundreds demanding not that we keep out of their country, but that we get in their country. That comes from the country, from the little fellow on the street, who thinks he is entitled to protection and service.

ver

٠

eral rade Mr. Strong. And is he not?

Mr. Decker. Absolutely; and we have found no better way of furnishing it.

Mr. Strong. And it will be your intention, later, to expand and

take in all worthy banks in that territory?

Mr. Decker. I would not say that; but when the Lord has given us a garden to hoe I think we had better hoe the whole garden and get all the weeds out.

Mr. Strong. And if branch banking wants to come in and wants

to do some hoeing, what will be your attitude?

Mr. Decker. We will furnish him with a hoe, because every time he hoes out a weed he helps us.

Mr. Strong. Providing he does not attack your weeds?

Mr. Decker. We will take care of our weeds.

Mr. Strong. But do you honestly think there will be continued throughout a great many years, real competition between two such systems as that in a trade area? Would not either they swallow you or you swallow them?

Mr. Decker. You mean small banks?

Mr. Strong. You say you eventually expect to take in the little panks that are knocking at your door.

Mr. Decker. Oh, no.

Mr. Strong. I mean the desirable ones. You will not take in banks

that are not making money.

Now, if we follow the suggestion of the comptroller and set up branch bank in a trade area, I want to ask you if it is your real honest opinion, as the result of your experience in life, that those two systems will continue in competition with each other, or will not

the natural result be that one will absorb the other?

Mr. Decker. My answer is that the banking business of this country is absolutely under the control of either the Government of the United States or one of the 48 States. They grant charters. Money is the most difficult thing in the world to monopolize, notwithstanding the general feeling to the contrary. It flows like water. To-day we make our loans in Minneapolis in competition with London absolutely, and we have to meet that competition. It would certainly be against our interests to have, we will say, just one group in our whole trade area with no competition. Competition, unless it is destructive is the life of trade. If it is destructive, it is the death of trade; absolutely.

Mr. Strong. Absolutely.

Mr. Decker. There is less danger of monopoly, in my judgment in banking than in almost any line, for this reason: We have no patent on it; we do not own the mine from which it is taken. The Government grants the charters, and if, however, we can see greater security to the depositor and better service to the borrower by a system which we have set up, then the fellow on the street will take care of that business himself, because he will go where he chooses to go.

t

0011

Mr. Strong. All you say is true; and yet any competitor coming into your territory now would have a pretty hard row to hoe, would

he not?

Mr. Decker. I think, as a compliment— Mr. Strong. That is the way I intend it. Mr. Decker. As a compliment to the present organizations, he would have to be a pretty good banker and have some capital to run

it right. If he has, we will welcome him.

Mr. Strong. The fact you have seen fit to gain strength through the uniting of your banking institutions, would not that same incentive, if you had a great competitor up there in branch banking or any other competition—would not that same incentive lead you to a combination of those groups?

Mr. Decker. I do not think so. I think it would be the worst thing that could happen to the development of the country and the worst thing that could happen to the banking situation. Competi-

tion keeps my boys on their toes.

Mr. Strong. You have created a monopoly of the best banks in that territory and you do not want New York to come in.

Mr. Decker. I would not say we have created a monopoly.

Mr. Strong. You have created a combination so strong that all the rest want to get in.

Mr. Decker. You are speaking about Mr. Wakefield and ourselves,

also?

Mr. Strong. Oh, no.

Mr. Decker. If you think we have no competitor, come up and listen to some of the cussing and discussing that is going on up there.

Mr. Strong. Does Mr. Wakefield join you in the wish that New

York shall not come in?

Mr. WAKEFIELD. Absolutely.

Mr. Decker. Of course. That is exactly what we are trying to avoid. When you talk about monopoly, do not lose sight of the fact that in order to protect yourself you have to be of sufficient size.

Mr. Strong. I will avoid the use of the word "monopoly." Let us say we will have controlling groups—and I speak of groups of banks like yourself and the gentleman behind you, Mr. Wakefield—in that trade area. Evidently you do not want anyone else to come in.

Mr. Decker. I have not said so.

Mr. Strong. You do not want New York or Chicago to come in? Mr. Decker. No, sir; because I do not think it is a good thing for our territory or for them.

Mr. Strong. Then, it is your idea that it would be a pretty good thing to set up a system by which we would have great groups dominating or controlling the banking business in trade areas, but not in

the United States as a whole?

Mr. Decker. Do not misunderstand me. We have no objection to New York or Chicago coming in with capital and starting banks. What we object to is for them to be able to establish branches of their existing banks. If the people connected with the Chase National Bank of New York choose to come into Minneapolis and organize a \$5,000,000 bank, they have the same right as anyone. We do not object to that. We do object, however, to a domination in New York of our loan resources, and the reason we do not object to the same domination, if you choose to call it that, on our part as against Minot—which would be a perfectly legitimate question for you to ask me—is that unless you set up a unit of sufficient size and strength you can not protect your country, and the answer is that

red.

of

ind

ven

nts

ime

ttle

nks

P a eal, nose not

the ney nd-

be oso ole ive de;

rhe ater sysake

oses ing Minot wants to come in. When we want to go into New York that will be a different story, but it will not be in my day.

Mr. Strong. I can see how you set up a strong system of banks in your territory, but I can not see what will come of the small banks in the small community.

Mr. Decker. What do you care about the small bank in the small community? You are concerned about the man in the small community.

Mr. Strong. If I was a man in a small community, I would care. Mr. Decker. I came from Chicago over the Baltimore & Ohio Railroad. I do not care who owns that railroad. All I am interested in is whether it has a good roadbed and furnishes good transportation service. Banking is a vehicle for the convenience of business, and you must have strong banks.

Mr. Strong. That is the argument of the Comptroller for branch

banking.

Mr. Decker. Well, if our system is not better, as we think it is, for our section of the country and for the little fellow and the big fellow, you need not worry about what will work out, because nature will take its course.

Mr. Strong. What I can not see is that if branch banking, group banking, and chain banking are proper kinds of banking in trade areas, irrespective of the fact they may not take in some smaller fish, why is it objectionable as a nation-wide banking system?

Mr. Decker. I will tell you.

Mr. Strong. You are willing to absorb, in Minneapolis, the other towns, the larger towns, where you have group banking—you are willing to absorb the interests and life and necessities of the banks in the little towns. Why should you object to New York absorbing the interests and growth and development of your organization?

Mr. Decker. I will tell you why. If you go to the leading bankers of London and Berlin and Paris, they will tell you, "For God's sake, do not set up in your country such a system as we have got." Why? Because they do not care for that great responsibility.

When you come to the United States, you have an entirely different problem. You have an empire 3,000 miles long and 1,500 miles wide, with a republican form of government, which, as the Irishman told his friend as he landed in New York and asked what kind of a democracy we had—"Why," he said, "each man here is as good as any other man, and most of them are a damn sight better."

That is the independent American spirit which we do not want

to crush.

Mr. Strong. But how——

Mr. Decker. Now, wait a minute. Our territory is so large, and the interests so diverse that, in my judgment, a nation-wide system of branch banking would be fundamentally unsound, undesirable, and not even courted by New York or Chicago banks that know their business to-day.

business to-day.

Mr. Strong. The governor of the Federal Reserve Board told us the other day that he thought nation-wide branch banking would come; perhaps within 50 years.

Mr. Goldsborough. Governor Young said that.

Mr. Strong. Yes; Governor Young—that nation-wide branch banking would come within perhaps 50 years. He was opposed to

it now, because we did not have the men trained to handle it; consequently, he is willing to limit it to trade areas, but he gave the implication very plainly that as soon as men are trained for nation-wide branch banking, he would have no objection.

The suggestion that the responsibility would prevent men that might handle nation-wide branch banking from desiring it, would be entirely overcome by the profits. Objection to responsibility is generally overcome by profits. No man likes the responsibility of any work, but he assumes it and carries it for the profits that is in it.

Mr. Decker. My answer is that I am not smart enough to say what will come in 50 years, or 25 years, or even 15 years. My training has been to meet the situation as it is, in a practical way, handle it the best I know how, in the interests of the people, and take care

of to-morrow's problems when they come.

Mr. Strong. I appreciate that and it may be that no one in Congress is smart enough to work it out and yet we will be asked to do it. What is your suggestion and your proposition? Should we permit branch banking in your trade area?

Mr. Decker. I have no objection to it whatsoever.

Mr. Strong. And you are perfectly willing to approve the comp-

troller's proposition?

Mr. Decker. Perfectly willing and personally I have no objection to it whatsoever. Outside of some cities I have in mind, I believe that the rank and file of the people are unalterably opposed to it. I respect their wishes. I believe it is good business to respect their wishes. Therefore I would suggest, if you want my suggestion, that I certainly would not advise Congress to hurry into branch banking. I would not hurry into anything until I was pretty sure I was right.

Mr. STRONG. I do not think we shall.

Mr. Decker. Because in the meantime, and in the moving of natural forces and natural developments, that situation will be taken care of. There are forces at work to-day which may make your problem, Mr. Strong, very much simpler three or four years from

to-day. None of us see very clearly to-day.

The members of this particular committee are facing a responsibility in banking which has not been equaled since the day of Andrew Jackson. Therefore I would suggest that you make a very exhaustive study. This country is rich. We have gone through the worst of it, I hope, and I would not hurry into anything until I was sure of a solution.

Mr. Strong. We are doing that. In the meantime we are advised that banks are organizing groups to do what the law contemplates

they shall not do.

Mr. Decker. I do not follow you there. I do not see anything

in the law that prohibits-

Mr. Strong. We tried to prevent national banks from engaging in branch banking, and then we provided a limitation whereby they should only engage in it in States permitting branch banking by State banks, and then only in the cities where the parent bank was located.

Mr. Decker. Yes.

Mr. Strong. Then the group and chain bank were developed, under which they can go outside of those lines, and they are doing

now what, by the McFadden Act, we sought to prevent the national

banks from doing.

Now, this development is going on all over the country. How long shall we sit down and let this development go on? The time finally will come when we can not control it. I realize, and this committee realizes, that we have to go slow, and, I think, that is our intention, but if we go too slowly we may meet a condition where you gentlemen have built up something that we can not overcome without a catastrophe.

Mr. Decker. You will do ten times as much damage to the business in the United States in a hurried and ill-advised action than you will to allow the bankers to take care of the banking business

in the United States.

Mr. Strong. We do not act hurriedly or ill advisedly, but you have taken care of the big banking interests in your territory and others are doing so in other territories, and then when we start in and try to provide some law by which there will be some control, then, you think, the catastrophe will come. You think we ought to allow the bankers to take care of the banking business of the United States. Our fear is that the longer we delay it the greater the catastrophe will be.

Mr. Decker. Please differentiate between looking after small banks and little people. You are not interested in protecting little or big banks; you are interested in the people of the United States. The little fellow, I maintain, is entitled to the same protection and safety and the same service in borrowing or anything else as the big

ŋ

1

aj

W

of

B

tin

ei;

di

ba ot

Fe

fellow.

Mr. Strong. But we have to look after the little fellow. The big fellow will look after himself.

Mr. Decker. That is true. That is a fundamental truth. But there is a chance for the little fellow to become a big fellow.

Mr. Strong. And there is a big chance of the big fellow gobbling

up the little fellow.

Mr. Decker. That has existed from time immemorial. But there is no country in the world, either now or at any time in history, when the little fellow with industry and ability and application stands one-tenth the show he does to-day in the United States. It is all bunk saying that the little fellow does not have a chance. He has the most excellent chance he ever had, and the banks are not holding him back.

Mr. Strong. He has a chance unless he is an individual business man or an individual banker against the chain stores and department stores, and various groups and chain banking combinations.

Mr. Strong. It is about 1 o'clock. I have no further questions. Do you want to adjourn now, or do you want to continue?

Mr. Fenn. I have only a question or two. I should like to ask them before we adjourn.

Mr. Strong. Very well, proceed.

Mr. Fenn. As I understand, there are two of these associations represented here—the Northwest Bancorporation and the First Bank Stock?

Mr. Decker. Yes.

Mr. FENN. Now, which of them are in the cooperative system?

Mr. Decker. We call it group banking. It is practically and identically the same.

Mr. Fenn. In your membership, if I can use that term, of these two organizations, are there State and National banks, too?

Mr. Decker. Yes, sir.

Mr. FENN. Irrespective of charters?

Mr. Decker. Absolutely.

Mr. Fenn. Now, is there any considerable group of banks there, State, or National, in your area that do not belong to one or the other of these associations?

Mr. Decker. Not of any considerable size.

Mr. Fenn. Mostly small banks that you have described?

Mr. Decker. Yes, sir.

Mr. Fenn. And I understood you to say there was another association?

Mr. Decker. The Union Investment.

Mr. Fenn. I think you said it was somewhat connected with your association?

Mr. Decker. Yes, sir.

Mr. Fenn. And takes care of those-I use the term "takes care

of "_takes supervision of those small country banks?

Mr. Decker. Let me answer your question this way: There are a number of small so-called groups. Take the John W. Black Co. They have about 18 or 20 banks operating entirely independently and then Bremer, of St. Paul. He is personally a shareholder of a hundred banks in our territory, and there are a number of other smaller ones, like Hazlett, with 8 or 10 banks, and has been operating for many years.

Mr. FENN. Are all the banks in the Minneapolis area connected

with an association?

Mr. Decker. Not at all. There are about 2,300 banks left in the ninth district. Out of that 2,300 there certainly are not in excess of 300 in the groups, large and small.

Mr. Fenn. Now, the important thing—important in reference to capital and surplus—are there important banks not connected with

any one of these groups?

Mr. Decker. Yes; indeed. Mr. Fenn. What is their impression of group banking?

Mr. Decker. I would say, generally speaking, they are watchfully waiting.

Mr. FENN. You do not know whether their sentiment is in favor

of branch or group banking?

Mr. Decker. Take the First National of Butte and the Bremer Bank in St. Paul have sixteen or eighteen millions of deposits, entirely independent, and there are other banks with three, six, or eight millions in deposits, not in any group and not being disturbed, but the great majority, in number of banks, of course, in the whole district, either in or out of groups, are small banks.

Mr. Fenn. Now, how many banks in your group—the national banks are, of necessity, members of the Federal reserve system—in other words, how many of your banks are member banks of the

Federal reserve system?
Mr. Decker. Seventy.

Mr. Fenn. Seventy out of ninety-eight?

Mr. Decker. Yes, sir.

Mr. Fenn. A large proportion?

Mr. Decker. Naturally, we have up to date taken the larger banks and beter banks, either State or National.

Mr. Fenn. I wanted to know if there were other banks that were

· important in that region, not in the groups.

Mr. Strong. We will adjourn now until 2.30, at which time Mr. Campbell will be allowed to question the witness. If he is not here, Mr. Beedy will question the witness.

(Thereupon, at 1 o'clock, p. m., a recess was taken until 2.30

o'elock, p. m.)

AFTER RECESS

Pursuant to the taking of a recess, the committee resumed its hearing, Hon. James G. Strong presiding.

Mr. Strong. The committee will come to order.

Mr. Decker, you may resume.

Mr. Campbell does not care to cross-examine and so, Mr. Beedy, you are next.

STATEMENT OF E. W. DECKER-Resumed

Mr. Beedy. Mr. Decker, Mr. Luce brought up a matter that has seemed to be of quite general interest. There seems to be a fear here or a doubt as to whether we are on the way to a monopoly of credit in this country, and he asked you the question as to whether you thought it would be easier for Wall Street or New York interests to buy up your group, once you had it organized, than it would have been before, and your answer was that you thought it would be very much easier for New York interests or Chicago interests to go to 100 different banks separately and buy them than it would be to get control of the organized group.

You will remember that question and answer.

Mr. Decker. Yes, sir.

Mr. Beedy. And yet you have more than once said, unless my memory is at fault, that the group system was the natural evolution of the banking business, that it was possible to form such a system because individual banks would not sell out, that they wanted to hold their individuality or retain it, that they would join in a group where they would not sell.

How do you reconcile those two statements?

Mr. Decker. Because they do not consider joining our group by

an exchange of stock selling out.

Mr. Beedy. You do not get the pertinence of my question. In reply to Mr. Luce's question, you said it would be easier for big interests in New York or Chicago to buy up individual banks than it would to get control of your group through a purchase of your holding company stock, and yet you say that group banking is preferable to branch banking as a matter of evolution because individual banks will not sell out, that public sentiment is against the branch-banking proposition and they will come into a group where they will not sell; yet your answer to his question was that it would be easier to buy individual banks than to take over the group.

Your two answers would seem to be somewhat inconsistent, and

I wondered what your explanation is.

Mr. Decker. I get your point. The explanation is this, that had there been no prospect of the formation of such a group as we have formed, those individual banks would have been tempted to sell out because they were discouraged; they could see no future in staying up there all alone, with no partners, and now that a plan has been devised whereby they can join the group which they believe is largely self sufficient and strong, they would not be so much inclined to sell their stock in the Northwest Bancorporation. When I said that they would not sell out to us for cash, I meant that, because they saw what it would mean; neither did we want them to sell for cash, but had they sold for cash, then they would not have been a part of the group in which that bank was going because we made no secret about our plans at all. Therefore they said to us:

As partners, yes, delighted to join: we do not want to ever sell our stock; we would rather own the stock than to own the cash.

Of course, they could turn around with the cash and buy stock if

it were publicly offered.

Mr. Beedy. In other words, your judgment, based on your experience of some 40 years as a banker, is that there is less danger of a big organized interest in a great financial center such as New York or Chicago taking over a group which has already been bought up and organized, necessitating but one transaction, than there would be of its going to work and picking up individual banks and attempting to build up a structure which would approximate a control or

the ability to control credit in a given locality?

Mr. Decker. Absolutely. In the first place, they realize now that what they have is worth more than they thought it was by that union. Their stock in the Northwest Bancorporation is going to be worth more than their stock in the local bank ever would have been worth, and therefore they are less willing to sell it. Second, the Northwest Bancorporation, with 126 directors of the best men in that part of the world, the most loyal men, is placing your fortunes in the hands of the most reliable, those who are able to keep it, who do not have to sell, and those who have at stake the greatest interest in that part of the country and therefore less apt to sell.

Mr. Beedy. Now, with respect to this stock of the holding company, this \$50 par-value stock, as bearing upon your financial structure, did you make the exchange or did these individual owners of bank stocks make their exchanges with the holding company on any basis which would result in a uniform return on their investment?

Mr. Decker. Not entirely.

Mr. Beedy. So that one bank stock which went into your group might have represented such a return on the investment that when it was exchanged for the holding company stock it might return 15 or 20 per cent, and again it might to another bank represent 8 per cent on their original investment?

Mr. Decker. On their original investment?

Mr. Beedy. Yes.

Mr. Decker. On the stock in the local bank?

Mr. Beedy. Let me make myself clear. They turned over what stock they had in their local bank. That stock might have been

returning them 15 or 20 per cent on their original investment, and they turned it over for the stock in the holding company in such a way that, as against another bank, they are getting 25 per cent return while the other bank is only getting 8 per cent.

Mr. Decker. As a matter of fact, most of them were not getting any return; they had used all of their profits to clean up the poor stuff, and a good many of those banks were not paying any dividends.

Mr. Beedy. I understand that you have taken on very few weak banks, that all of your banks were strong banks.

Mr. Decker. No. I beg your pardon. Mr. Beedy. The majority of them.

Mr. Decker. Yes, but I gave you a number of instances where we cleaned up situations.

Mr. Beedy. You said except in a few exceptional instances you had taken over strong banks.

Mr. Decker. The larger number were strong banks.

Mr. Beedy. You made it a point to take over strong banks that were money-makers?

Mr. Decker. Yes, sir; but many of those strong banks had been using their profits to clean up their banks, and they had been declaring no dividends at all and there was no market for their stock, you might say.

Mr. Beedy. But the majority of them had, and now have, surplus funds for loaning purposes?

a

tl

tl

tl

12

8t

h

Mr. Decker. Yes, sir; they have great potential value for the future, if properly managed, in this group.

Mr. Beedy. In fact, a great number had so much of a surplus of loanable funds that they have been investing them in good bonds because they could not find safe loans in other directions?

Mr. Decker. Quite true.

Mr. Beedy. On what basis or value was this holding company

stock, reckoned in the transfer?

Mr. Decker. We took into consideration the book or so-called liquidated value of the holding company stock, which was determined, of course, by the total book or liquidated value of the bank stocks which they had up to that time acquired, as against the book or liquidating value of the stock in the bank which was joining. We considered the earnings of the two as nearly as you could estimate them over three, four, and five years, the amount of capital invested, of course, in good paper, and the prospects, and if it was a bank that had excellent prospects, we considered its good will of more value.

Mr. Beedy. My question went more directly to the point of the value reckoned for the holding company stock. Was it computed at \$50 per share?

Mr. Decker. When we sold stock to the public, we offered it, the first issue, at \$50, but when we made the exchange we figured the par value at \$50, but the book value of the holding company stock was determined by the book value of the stocks in banks which it owned.

Mr. Beedy. And that largely paralleled the market quotations of the stock from time to time?

Mr. Decker. No, we did not pay very much attention to the market value. They ran the stock up higher on the market than it should have gone, we thought.

Mr. Beedy. It went up at one time to 90.

Mr. Decker. Yes.

of

Mr. Beedy. Did you ever trade in any of that at that value?

Mr. Decker. No, sir. It really did not make any difference what Price we put our stock at until you also determined the price of the other, because it was an exchange. We endeavored to make an exchange which was fair to the shareholders of the holding company who had already come in and to the shareholders of the bank under consideration.

Mr. Beedy. Is the stock of the holding company on sale to the

Public to-day?

Mr. Decker. Yes, sir.

Mr. BEEDY. What is the price of it to-day?

Mr. Decker. Fifty-four.

Mr. Beedy. Is any of the stock of the Northwest Bancorporation owned or controlled by New York or Chicago interests?

Mr. Decker. So far as we know, not a dollar. There may be

some scattering shares in the hands of investors.

Mr. Beedy. But, as to the majority of it, you know where it is and you local men control it?

Mr. Decker. Wait a minute-I must qualify that.

We offered last September to our shareholders a new issue of approximately 144,000 shares, which was 1 share for each 10 which they owned, at \$72.50 per share. Before that stock was offered to the shareholders, I had it underwritten at \$70 a share, because I thought it was good business.

Mr. Beedy. Do I understand that you have increased your capital-

^{1Z}ation of your holding corporation?

Mr. DECKER. Three times.

Mr. BEEDY. Within a year and-

Mr. Decker. And three months. That stock I had underwritten by, I think, 75 different houses who were invited to join in the underwriting at \$70 a share.

Mr. BEEDY. Locally?

Mr. Decker. No; scattered all over the country.

Mr. BEEDY. You did not have to go to New York for the under-

writing?

Mr. Decker. There were New York houses, Chicago houses-all bond and security houses had an opportunity to join, and I think that the most that any one house had was something like 3,000 shares. That was an underwriting, you understand.

Now, before the time arrived for our shareholders to take this stock and pay for it—and if they had done so, the underwriter would

have received no stock-

Mr. Beedy. Is the underwriter a Minneapolis concern?

Mr. Decker. No; 75 different houses.

Mr. Beedy. So that the purpose for which you organized this group, namely, to finance your own locality with your own capital, has failed in respect to your own organization?

Mr. Decker. No, sir.

Mr. Beedy. Why did you have to go to bond houses in New York or go outside of your own trade area?
Mr. Decker. We did not have to.

Mr. Beedy. Why did you?

Mr. Decker. Well, I thought it was good business.

Mr. Beedy. Then, it is not good business to organize for the purpose of financing your own business in your own locality with your own capital?

Mr. Decker. Certainly, but we can not do it all.

Mr. Beedy. Ah!

Mr. Decker. We do not attempt for one minute to say that we

are able to finance everything in our district.

Mr. Beedy. I thought it was rather peculiar that you would not finance your own business in your own community, if that was one

of the essential purposes of your organization.

Mr. Decker. Please understand that this stock was put over and was offered to the shareholders at that time. I thought I saw trouble ahead in stock prices, so I had that stock underwritten, and we invited any bond house—whoever they were, whether in San Francisco or New York-to join in that underwriting, but none of them had more than 3,000 shares of the 75 houses.

Before the time arrived for our shareholders to buy that stock at 721/2, and at the time it was offered it was selling on the market at 85, the collapse came on the stock market and our stock gradually went back to \$50 a share, and in the meantime I called on the

underwriters to pay for it at \$70.

Mr. Beedy. Now, the original capitalization of your holding company was what?

Mr. Decker. Do you mean authorized?

Mr. Beedy. Yes.

Mr. Decker. Authorized capital stock was \$75,000,000.

Mr. Beedy. And that was all issued in stock?

Mr. Decker. No; it was issued, you see, a little at a time, as we acquired-

Mr. Beedy. What I mean is, there were no bonds involved in that

Mr. Decker. No; only one kind of stock; no other securities of any description.

Mr. BEEDY. Of that original authorization of \$75,000,000, you issued how many shares of the capital stock at \$50 par value before you began to-

Mr. Decker. Acquire banks? Mr. Beedy. No; before you began to change your set-up. You

said that you had changed it three times?

Mr. Decker. Our first issue of stock to the public for cash was \$5,000,000 at \$50 a share. That was greatly oversubscribed, and that was on the 1st of March, 1929. In August we sold 100,000 shares, or \$5,000,000 worth more to the public for cash.

Mr. Beedy. That was in August?

Mr. Decker. In August. Then, as I saw the crisis coming pretty fast, and requiring some cash, as I thought, or at least as needing a large surplus in cash always on hand, I insisted on selling out 150,000 shares more.

Mr. Beedy. For \$7,500,000?

Mr. Decker, At \$72 per share. That was offered to the share-holders first. The original offer, by the way, was the only offering not made to the shareholders. That was foreclosed after the first offer, and the constitution of the company provides that all further issues of stock must be made to the shareholders, thereby preserving their rights.

Mr. Beedy. Then the result of your first sale of stock was approxi-

mately \$7,500,000?

Mr. Decker. No; 150,000 shares at \$70 was between \$10,000,000

and \$11,000,000.

d

Mr. Beedy. And those are the three stock issues that you referred to in your original testimony?

Mr. Decker. Yes.

Mr. Beedy. So that as a result of your stock sales, you have about \$21,000,000 worth of stock issued and outstanding?

Mr. Decker. That is correct.

Mr. Beedy. Now, how much of this stock, if any, went to the underwriters?

Mr. Decker. Well, a very large per cent, practically all, you might say, of the last issue, because in the meantime the collapse had come and our stock among others had moved back to \$50 a share.

Mr. Beedy. So the underwriters themselves took these 150,000

shares?

Mr. Decker. Right; at \$70 a share.

Mr. Beedy. And that stock is theoretically on the market at the Present time?

Mr. Decker. Yes. However, since then I have organized a private syndicate of individuals in our own town who have been willing to take over that stock from these underwriters at \$50 a share. They have said that they did not care to sell it at that price, so a great deal of it they still have, but they will market it whenever, in their judgment, the market price warrants it, I suppose.

Mr. Beedy. Now, in the course of your testimony, I notice that you admitted that branch banks can be run more economically than

the individual banks under the group system.

Mr. Decker. Yes.

Mr. Beedy. I suppose that is generally conceded, and you further stated, if I remember correctly, that the majority of your banks were what you termed the larger banks that you had taken into the group, that one local syndicate, the name of which I forget—

Mr. Decker. Union Investment Co.

Mr. Beedy (continuing). Had organized and taken under its control some 25 small banks, that you took over the stock of the Union Investment Co. as such, and therefore those 25 small banks were in your system but subject to the immediate supervision of the existing investment trust company?

Mr. Decker, Right.

Mr. Beedy. And is it true as a matter of principle that you do not care to take in any more small banks at the present time?

Mr. Decker. No; I would not say that.
Mr. Beedy. You are not out seeking them?

100136-30-vol 1 pt 8-4

Mr. Decker. We do not care whether a bank is large or small. It is a question of whether it is needed in the community where it exists and whether it can be made profitable.

Mr. Beedy. Your criterion would be rather the soundness of the

institution and the local need for its maintenance?

Mr. Decker. Yes, sir; and its ability to make money under our

management or with our system.

Mr. Beedy. Now, having no objection to the branch-banking system in your trade area as a competitor with the group-banking idea, in your opinion, would a branch-banking system, since it can be more economically administered, perhaps prove to be somewhat more advantageous to the small banker than the group system?

Mr. Decker. More advantageous for the small banker?

Mr. BEEDY. For the small bank.

Mr. Decker. If it was a branch, it would not be a bank.

Mr. Beedy. Of course; if a central branch bank were organized and it took over 100 small banks, we will say, and operated them as branches—

Mr. Decker. I get you.

Mr. Beedy (continuing). They could probably be better operated in that kind of a system than they could under a group?

Mr. Decker. Well, I think that would be the easiest competition

we could have.

Mr. Beedy. Somebody has got to take care of these small banks. Mr. Decker. Yes. Therefore my judgment is that the way to take care of the small banks would be this: Let us take the county seat, for argument's sake, which has a national bank or two or three of them; the best way would be to allow them to have branches in their own county or immediate terirrory, but in my judgment the natural evolution would be that the county bank with these branches will want to join a group; it will not want to stand alone.

Mr. Beedy, Just as your investment trust is now in your group?

Mr. Decker. That is it exactly.

Mr. Beedy. While you do not pretend to predict what the next 10 or 15 years is going to bring about, you think that the natural tendency will be perhaps for the county bank or a bank within some limited area to take over and operate a few branches?

Mr. Decker. Yes.

Mr. Beedy. And that county bank, in turn, will be inclined to come into your group?

Mr. Decker. Yes, sir.

Mr. Beedy. That is the trend, as you see it?

Mr. Decker. Yes, sir; that as against a bank in, say, Minneapolis, with branches in all these little towns. In my opinion the branch bank in Minneapolis would be a very poor competitor of ours, because in the larger towns, in these centers, we do not operate a branch but an independent bank, one that is popular at home and in which the local business men have an interest. For instance, if the people who own the National City Bank came into Minneapolis, after you passed a branch banking bill with your trade areas, and started branches over the same country where our member banks are located, they would immediately run counter to public opinion and get very little business.

Mr. Beedy. That is an interesting feature of your testimony. You counselled us against rushing into any action, which is perhaps wise; but you say that if we should now attempt to force upon the country a branch banking system, general in its application, that we would run counter to public sentiment.

What is public sentiment; what is your definition of it? What

did you mean when you said that?

all.

it

1

Mr. Decker. I perhaps can best explain it by taking an individual case. I think I referred this morning to the First National Bank of Minot, a bank with \$4,000,000 or \$5,000,000 in deposits. They would be unalterably opposed to becoming a branch of the Northwest National Bank at Minneapolis, which is a large unit in our bank corporation, because, they say, "Our bank has been here 30 or 40 years; we have our own board of directors, our own pride, and if we are to become a branch you will send a hired man up here to run it, and after he has been here 2 years you will send him off some other place, and we do not want it."

Mr. Beedy. Then, I understand you to refer to the public banking

sentiment as represented by the banks.

Mr. Decker. Yes; but still further, the business sentiment is also exactly the same. One of my friends within the last two weeks attended a meeting of lumbermen from all over our part of the country, and he took the pains to ask them what their feeling was toward this group-banking movement as against branch banking, and they said that without any question they did not want the branch banks, they did not want the Canadian system, that they want their local banks. So I think the feeling is general among business men that way.

Mr. Beedy. Beyond the popular conception that you referred to, simply to the effect that certain communities do not want an outside fellow sent down to run a local bank, it is doubtful, is it not, whether the public as such understands the difference between branch banking and group banking, or the difference between branch

banking and chain banking?

Mr. Decker. I think you would be surprised how well they do understand it around in our country.

Mr. Beedy. Members of this committee did not understand the

difference until Mr. Pole had explained it to us.

Mr. Decker. You ask the farmer around Minot whether he would rather go into the Minot bank and do business with it as organized to-day or take his chances with a branch bank there operated by a hired man, and I warrant that nine times out of ten he will say, "Leave it as it is, because the manager of the branch will have to submit to headquarters practically all loans," and they know that the Minot bank still functions under the authority of its board of directors.

Do I make myself clear on that?

Mr. Beedy. Yes. Would you not be willing to make the statement that probably none of us yet know what the public sentiment, in the broad sense of that term, is as yet as to the advisability of having either a branch banking or a group banking system?

Mr. Decker. In sections where group banking has not been tried, probably yes, but in our section, where it has been in effect for over

a year, I would say no. I think that is pretty clear.

Mr. Beed. Of course, Mr. Decker, we are trying to keep in mind the little depositors, the individual depositors, and the man that sometimes want to buy an inexpensive home, and borrow \$1,000 or \$2,000. When we consider that class of people as opposed to the business interests and the banking interests, it is difficult for us here, from the testimony we have yet had, to find out what the sentiment of that class of people is, and I was wondering if you have anything along that line. Your statement is very interesting about the lumbermen, but have you taken any steps to find out what the small depositor is thinking about this trend toward concentration in the banking business?

Mr. Decker. It is a matter of education, and I have failed as yet to hear of one case of an individual who was a doubting Thomas or even an objector who had not changed his mind when he understood what group banking meant as against branch banking.

Now, naturally the man on the street does not know what he wants except that he wants to borrow \$1,000. My experience as a banker there shows me that his chances of getting that \$1,000, if he is worthy of it, are better, infinitely better, under our group system than it was before, because many of the unit banks were unable to accommodate him, and in my judgment his chances are infinitely better than under the branch-banking system, because I think that man's individual case will receive more attention and sympathy with the local bank and its local man than he would from a manager of a branch.

Mr. BEEDY. What dividends does the stock of the holding company pay now?

Mr. Decker. \$1.80 a share a year, or 45 cents a quarter.

Mr. Beedy. What is your theory of the increased capacity to pay dividends on this increased capitalization of the banks that you have grouped? You have no more banks than existed before, yet they are paying dividends on a vastly increased capitalization.

Mr. Decker. No, they are not paying any more dividends than a

fair dividend.

Mr. Beedy. Let me make myself clear. When you took over some of these individual banks, you took into consideration their standing and reputation, and their good will, as we sometimes say, and those banks were not paying any dividends on good will; yet you in your holding company issued stock representing that good will, and the syndicate or group is now paying dividends on that stock which was paid for good will. I think it would be interesting for you to explain to us what your theory is, and there is a legitimate explanation, of course, as to the ability to pay dividends on that increased capitalization where you have no more banks than in the first place and no more money in the aggregate than was originally in your community.

Mr. Decker. Well, the answer to that is that the book or liquidating value of the Northwest Bancorporation stock to-day is \$40 per share, independent of all good will. There are sufficient assets under any sort of reasonable management to earn at least double the present dividend requirements; in fact, our earnings last year were considerable more than double the dividend rate. The dividends are

very small, and we are going to keep them small.

Mr. Beedy. In other words, reckoning your stock in the holding company at \$40 per share, you want the committee to understand that that is the parallel value of the existing banks just as you took them over, with assets?

Mr. Decker. Yes, without any account of good will.

Mr. Beedy. Now, irrespective of what this committee might do to meet the situation, the developments in the formation of groups and chains have come upon us so rapidly that unless we do lay ourselves wide open to the charge of precipitate action, it is probably true that whatever was going to be accomplished will have been accomplished. Would you think it advisable, if the evidence that we have had presented to us should convince the majority of us that there is a limit to the advantages of a concentration in the control of credit as there is in the concentration of capital for purely industrial purposes, for us to pass a law which would impose such burdens upon these groups and chains as they are now set up as to discourage further action along that line?

Mr. Decker. No. I think you could better afford to let nature take its course until you are pretty clear in your mind what is best to be done, because it is perfectly apparent to me that banking is going to concentrate very much along the same lines as the public utilities have, and I doubt very much if any law can be passed that will work that will prevent it, because I think it is fundamental to-day by reason of the concentration of capital in business, in large companies, requiring large banking accommodations, that a large number of small banks in the United States can never again

accommodate the business of the United States.

Mr. Beedy. But you will agree that we do arrive at a point when in the concentration of banking facilities we have attained the highest economic efficiency?

Mr. Decker. Yes, sir.

ė

Mr. Beedy. Then, of course, what that point is is what we are trying to find out. After we have gotten so far, it then becomes disadvantageous to go further with the group system or the branch banking system, does it not?

Mr. Decker. Yes.

Mr. Beedy. You have no suggestion, if any, as to what limitations should be imposed upon the concentration of banking capital, have you?

Mr. Decker. I would be delighted if a way could be found to prevent the concentration of banking capital further than liberally prescribed trade areas, of which there might be a number—I do not know how many, but in our section, so sparsely settled, with relatively few diversified interests, that trade area would have to be very large in order to make it a workable unit as to size and influence in competing, if you please, with other large combination of capital in New York and Chicago. It if could be prevented and not go beyond certain districts, so far as we are concerned, it would suit us fine, but when you come to talk about Pittsburgh, Cleveland, Detroit, Boston, Philadelphia, New York, or Chicago, I confess that I would not undertake to say whether a man in New York should be prohibited from owning stock in a bank in Pittsburgh, or a holding company, even, but I am very clear that in our section a man on the

street, a business man or a farmer, will be best served in a banking way by prescribing something like the trade area which I had mentioned, to be managed, supervised, controlled, and owned by people who live in that district and who make the wealth which goes into the banks. I confess that I do not know just how you are going to do that, however.

Mr. Beedy. It is a difficult problem.

Mr. Decker. Very.

Mr. Beedy. Of course, it is fully as essential that we see to it that healthy competition in the banking business obtains.

Mr. Decker. Absolutely. I think that is fundamental, but it is

t

difficult.

Mr. Beedy. You twice have used the phrase here that you want to let nature take its course, and I am not sure that you want to let that stand. Of course, the set-up of credit and the manipulation of credit come about by purely artificial methods; nature does not have anything to do with it, in the broad sense?

Mr. Decker. What I meant by that was that the bankers are working out a solution of our present difficulties, and doing it cautiously, because the investor in bank stock is watching them closely, so that

they do not go so far that they will become top-heavy.

Mr. Beedy. But in dealing with banking we must make a very fundamental distinction between it and agriculture, over which the forces of nature have such a tremendous control.

Mr. Decker. Very true. Mr. Beedy. While the banking business is a man-made business controlled by arbitrary rules which men imposed and which lawmaking bodies set up.

Mr. Decker. Right. Mr. Beedy. That is the distinction that we are agreed upon. understand, then, in a few words, that your testimony might be summed up as follows, that group banking within reasonable trade areas is the natural evolutionary development of the banking business to satisfy the needs of commerce and industry in general,

Mr. Decker. Right.

Mr. Beedy. And that, as a matter of fact, branch banking as such is the more economical system in administration, and that so far as you are concerned you are perfectly willing that this committee should pass some law authorizing branch banking within trade areas, that you do not want the committee to take any arbitrary steps to hurt you and the group which you have set up, that you are willing to take your chances in competition as a group banker with legally authorized branch banks?

Mr. Decker. Yes, sir; provided it is confined to these trade areas. Mr. Beedy. Exactly. You are not advocating nation-wide branch

banking?

Mr. Decker. No, sir.

Mr. Beedy. I think that is all.

Mr. Decker. Having in mind all the time that my testimony refers more particularly to the conditions in the district in which we operate, rather than attempting a solution for the problem in any other sections with which I am not familiar.

Mr. Beedy. Yes, indeed.

Mr. Strong. Mr. Fort is next.

(Mr. Fort was not then present.) Mr. Strong. Mr. Goodwin.

Mr. Goodwin. I just have a question or two, Mr. Decker, to ask you.

Speaking on the subject of the public mind in reference to branch banking, several States—yours and mine included—have passed laws Prohibiting branch banking. Does that not give us a very fair picture of the public sentiment at least in those States that have passed laws prohibiting branch banking?

Mr. Decker. I think the sentiment, Mr. Goodwin, is changing very rapidly. Two or three years ago that sentiment was general, but to-day, to say the least, they are in doubt, but if you refer to branch banking alone, I would say that the sentiment, outside of the centers, the cities, was still, so far as I have been able to learn, almost unanimously against branch banking, but the sentiment in those same rural districts regarding group banking is very different indeed.

Mr. Goodwin. In your experience in the building up of the North-West Bancorporation, have you found the people in the localities where you are now operating friendly to the suggestion of group

banking!

Mr. Decker. Very; exceedingly so, so much so that a great number of them want to buy stock in both Mr. Wakefield's group and our own. They feel it is sort of their own baby there in the northwest, but the baby is growing up, and they are proud of it.

Mr. Goodwin. Is there any industry with proper security or collateral, or any individual, that can not now, within reasonable limits, be financed in the Twin Cities or in the area in which you operate?

Mr. Decker. If you refer to long-time financing, I would not want to say that we would be able to finance all enterprises originating in Take water power in the Rocky Mountains, natural gas developments, large industries-I would not want to say that we could unassisted finance, for a long time, all of the industries originating in our district, but if you refer to commercial banking-

Mr. Goodwin. I mean the ordinary business interests that are local

to the community within which your group operates.

Mr. Decker. No trouble whatever for him to get all the money he 18 entitled to. In fact, my experience of 40 years in banking leads me to believe that there have been nine failures due to too much credit to one failure due to too tight credit, and a great majority of the people in the United States would go broke if you loaned them enough money.

Mr. Goodwin. You just made the statement that the third issue of stock, the issue that was underwritten, is partially held by the under-

writers now.

Mr. Decker. Yes.

Mr. Goodwin. Can you tell the committee approximately how much of that stock is so held?

Mr. Decker. Oh, I should say possibly 100,000 shares out of

1,600,000. Mr. Goodwin. There will be no danger, then, that the owners of that stock would in any way control the operations of the company

or dictate its management or in any way interfere with its operations? Mr. Decker. My judgment is there is no way in the world that any individual or set of individuals or holding company or corporation could obtain control of the Northwest Bancorporation without coming to headquarters and selling the idea to its directors and leading shareholders, which would mean that the whole district was willing to sell out. That is why I am so sure that they would never be willing to do it, which leads me to believe that we are now in a safer position in that respect that ever before.

Mr. Goodwin. I think that is all.

Mr. Strong. Mr. Letts.

Mr. Letts. Mr. Decker, did you place in the record the names of the various banks in your group?

Mr. Decker. Yes.

Mr. Letts. That has been done. Mr. Decker. That will be done.

Mr. Letts. And that contains a statement of the capital and surplus of each bank?

Mr. Decker. Yes.

Mr. Letts. You are a Delaware corporation, I understand?

Mr. Decker. Yes, sir.

Mr. Letts. What is the authorized capital?

Mr. Decker. \$300,000,000.

Mr. Lerrs. Has any part of that capital been issued out of the treasury of the company for anything other than cash or the stocks

of banks that you have taken into your group?

Mr. Decker. Yes. In addition to the issuance of our stock for cash in its sale, or in exchange for bank stocks, there has been some stock issued for a cattle-loan company in western Montana, of which I spoke this morning, and two or three security companies which are capitalized independently in Minneapolis and, I think, Des Moines, Omaha, and Duluth.

Mr. Letts. Has any part of this stock been issued for organization or promotion purposes?

Mr. Decker. Not a dollar.

Mr. Letts. What are the powers authorized by your corporate charter?

Mr. Decker. They are very general.

Mr. Letts. Are you authorized to issue insurance?

Mr. Decker. I doubt it. I would have to examine the articles to

Mr. Letts. Have you those articles of incorporation here?

Mr. Decker. Yes.

Mr. Lerrs. I think it would be a good thing to have them in the record.

(The articles of incorporation referred to are reproduced below.)

ARTICLES OF INCORPORATION AND BY-LAWS OF NORTHWEST BANCORPORATION, MINNEAPOLIS, MINN.

STATE OF MINNESOTA,

County of Hennepin, ss:

I, Grant W. Anderson, do hereby certify:

That I am the duly elected, qualified, and acting assistant secretary of

Northwest Bancorporation, a corporation.

That the following is a true, complete, and correct copy of the Articles of Incorporation and By-laws of said corporation together with all amendments thereto; that the same was spread on the minute books of said corporation and now forms a part of the minutes and records of this corporation.

In witness whereof I have hereunto set my hand and the seal of this cor-

poration this 11th day of April, 1930.

GRANT W. ANDERSON.

T

To acquire by purchase, subscription, or otherwise, and to own and hold, for investment purposes, the capital stock, scrip or any voting trust certificates in respect of the shares of capital stock issued or created by any moneyed, financial, or investment corporation or association created and organized, or to be created and organized, under the laws of the United States of America or of any State or Territory thereof; and to issue in exchange therefor shares of the capital stock of this corporation; and while the holder or owner of any such shares of capital stock, scrip or voting trust certificates, to possess and exercise in respect thereof any and all rights, powers, and privileges of ownership, including the right to vote thereon;

To loan money to any aforesaid corporation or association, any of whose shares of capital stock, scrip, or voting trust certificates aforesaid shall be owned at the time of such loan by this corporation, and to do any and all lawful things designed to protect, preserve, improve, or enhance the value of any such

shares, scrip, or voting trust certificates;

In addition to and not in limitation of any of the aforesaid powers, to invest temporarily any of its capital or surplus funds in bonds, mortgages, or evidences of indebtedness, and any other securities issued or created by any individual, copartnership or other corporation, joint-stock company or association, public or private, or of the Government of the United States of America, or of any foreign government, or of any State, Territory, municipality, or other political subdivision, or of any governmental agency;

Provided, however, That this corporation may not use any of its funds or property for the purchase of its own shares of capital stock when such use would cause any impairment of the capital of this corporation: And provided further, That the shares of its own capital stock belonging to this corporation shall not

be voted, directly or indirectly;

To organize, incorporate, and reorganize subsidiary corporations for all lawful

Durposes:

To conduct all or any part of its operations and business without restriction or limit as to amount in the State of Delaware or in any or all other States, Territories, districts, colonies, and dependencies of the United States of America:

To have and to exercise any and all powers and privileges now or hereafter conferred by the laws of the State of Delaware upon corporations formed under the acts hereinafter referred to, or under any act amendatory thereof or sup-

plemental thereto or substituted therefor;

The foregoing clauses shall be construed both as objects and powers; and it is hereby expressly provided that the foregoing enumeration of specific powers shall not be held to limit or restrict in any manner the powers of this corporation.

Fourth. The total authorized capital stock of this corporation is \$75,000,000,

divided into 1,500,000 shares, of the par value of \$50 each.

If it seems desirable so to do, the board of directors may from time to time issue scrip for fractional shares of stock; such scrip shall not confer upon the holder any voting or other rights of a stockholder of the corporation but the corporation shall, from time to time, within such time as the board of directors may determine, issue one whole share of stock upon the surrender of scrip for fractional shares aggregating one whole share, properly indorsed, if in registered

form, Amended October 10, 1929. (See in back.)

The holders of common stock of this corporation shall have their respective breemptive rights to subscribe for other shares of common stock, except as by law limited and except that, free of such preemptive right, the board of directors may (1) from time to time exchange unissued stock of the corporation or any stock of the corporation to be issued by reason of any increase of the authorized capital stock of the corporation for stock of financial, moneyed, or investment corporations and associations, and (2), prior to January 1, 1930, at such time or times and in such amount or amounts as said board of directors deems advisable, sell common capital stock not exceeding in the aggregate \$5,000,000 par value.

Fifth. The amount of capital with which this corporation will commence business is \$1,000, being 20 shares of the par value of \$50 each.

Sixth. The names and places of residence of the subscribers to the capital stock and the number of shares subscribed for by each are as follows:

Stock and the named of shares substituted for by own are as interest	
	Number of
	shares
	18
A. V. Lane, Wilmington, Del	
C. S. Peabbles, Wilmington, Del	1
L. E. Gray, Wilmington, Del	1
L. E. Gray, Willington, Del-	

Seventh. This corporation is to have perpetual existence.

Eighth. The private property of the stockholders shall not be subject to the

payment of corporate debts to any extent whatever,

Ninth. The number of directors of the corporation shall be as specified in the by-laws, and such number may from time to time be increased or decreased in such manner as may be prescribed in the by-laws, provided the number of directors of the corporation shall not be less than three. In case of any increase in the number of directors, the additional directors may be elected by the board of directors to hold office until the next annual meeting of the stockholders and until their successors are elected and qualified. In case of a vacancy in the board of directors, a majority of the remaining members of the board may elect directors to fill such vacancy.

Directors shall be stockholders.

Tenth. In furtherance and not in limitation of the powers conferred by the laws of the State of Delaware, the board of directors is expressly authorized:

To make, alter, amend, or repeal the by-laws of the corporation, except as

otherwise provided in said by-laws.

To determine from time to time whether and to what extent and at what times and places and under what conditions and regulations the accounts and books of the corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right to inspect any account or book or document of the corporation except as conferred by the laws of the State of Delaware, unless and until authorized so to do by resolution of the board of directors, or of the stockholders.

To set apart out of any funds of the corporation available for dividends a reserve or reserves for working capital or for any other lawful purpose, and also to abolish any such reserve in the same manner in which it was created.

If the by-laws so provide, to designate two or more of its number to constitute an executive committee, which committee shall for the time being, as provided in said resolution or in the by-laws of this corporation, have and exercise any or all of the powers of the board of directors in the management of the business and affairs of this corporation and have power to authorize the seal of this corporation to be affixed to all papers which may require it.

This corporation may in its by-laws confer powers upon its directors in addition to the foregoing and in addition to the powers and authorities expressly

conferred upon them by the statute.

Both stockholders and directors shall have power, if the by-laws so provide, to hold cheir meetings and to have one or more offices within or without the State of Delaware and to keep the books of this corporation (subject to the provisions of the statutes) outside of the State of Delaware at such places

as may be from time to time designated by the board of directors.

Eleventh. In the absence of fraud, no contract or transaction between this corporation and any other association or corporation shall be affected by the fact that any of the directors or officers of this corporation are interested in or are directors or officers of such other association or corporation, and any director or officer of this corporation individually may be a party to or may be interested in any such contract or transaction of this corporation; and no such contract or transaction of this corporation with any person or persons, firm, association, or corporation is a party to or interested in such contract or transaction or in any way connected with such person or persons, firm, association, or corporation; provided that such contract or other transaction shall be authorized or ratified by the vote of a majority of the directors of this corporation not so interested; and each and every person who may become a director or officer of this corporation is hereby relieved from any liability that might otherwise exist from thus contracting with this corporation in which he may be in anywise interested.

Twelfth. This corporation reserves the right to amend, alter, change, or repeal any provision contained in this certificate of incorporation in the manner now or hereafter prescribed by statute, and all rights conferred upon stock-

holders herein are granted subject to this reservation.

We, the undersigned, being each of the original subscribers to the capital stock hereinbefore named, for the purpose of forming a corporation to do business both within and without the State of Delaware, and in pursuance of the general corporation law of the State of Delaware, being chapter 65 of the Revised Code of Delaware, and the acts amendatory thereof and supplemental thereto, do make and file this certificate, hereby declaring and certifying that the facts herein stated are true, and do respectively agree to take the number of shares of stock hereinbefore set forth, and accordingly have hereunto set our hands and seals this 24th day of January, A. D. 1929.

ALBERT L. MILLER.

A. V. LANE. C. S. PEABBLES. L. E. GRAY.

STATE OF DELAWARE,

County of New Castle, 88:

Be it remembered, that on this 24th day of January, A. D. 1929, personally came before me, Albert L. Miller, a notary public for the State of Delaware, A. V. Lane, C. S. Peabbles, and L. E. Gray, parties to the foregoing certificate of incorporation, known to me personally to be such, and severally acknowledged the said certificate to be the act and deed of the signers respectively and that the facts therein stated are truly set forth.

Given under my hand and seal of office the day and year aforesaid.

ALBERT L. MILLER, Notary Public.

Recorded in the recorder's office at Wilmington in Certificate of Incorporation Record H, vol. 30, page 516, etc., the 24th day of January, A. D. 1929.

OFFICES

1. The principal office shall be in the city of Wilmington, county of New Castle, State of Delaware, and the name of the resident agent in charge thereof is the Corporation Trust Co. of America.

The corporation may also have an office in the city of Minneapolis, State of Minnesota, and also offices at such other places as the board of directors may from time to time appoint or the business of the corporation may require.

SEAL

2. The corporate seal shall have inscribed thereon the name of the corporation, the year of its organization, and the words "Corporate seal, Delaware." Said seal may be used by causing it or a facsimile thereof to be impressed or affixed or reproduced or otherwise.

STOCKHOLDERS MEETINGS

3. All meetings of the stockholders shall be held at the office of the corporation in Minneapolis, Minn., or at such other office of the corporation as shall from time to time be designated by the board of directors.

4. An annual meeting of stockholders, after the year 1930, shall be held on the first Tuesday of January in each year, if not a legal holiday, and if a legal holiday, then on the next secular day following, at 11 o'clock a. m., when they shall elect by a plurality vote, by ballot, a board of directors, and transact such other business as may properly be brought before the meeting.

5. The holders of a majority of the stock issued and outstanding, and entitled to vote thereat, present in person, or represented by proxy, shall be requisite and shall constitute a quorum at all meetings of the stockholders for the transaction of business except as otherwise provided by law, by the certificate of incorporation or by these by-laws. If, however, such majority shall not be present or represented at any meeting of the stockholders, the stockholders entitled to vote thereat, present in person, or by proxy, shall have power to

adjourn the meeting from time to time, with notice other than announcement at the meeting, until the requisite amount of voting stock shall be present. At such adjourned meeting at which the requisite amount of voting stock shall be represented, any business may be transacted which might have been

transacted at the meeting as originally notified.

6. At each meeting of the stockholders, every stockholder having the right to vote shall be entitled to vote in person, or by proxy appointed by an instrument in writing subscribed by such stockholder and bearing a date not more than three years prior to said meeting, unless said instrument provides for a longer period. Each stockholder shall have one vote for each share of stock having voting power, registered in his name on the books of the corporation, except that no share of stock shall be voted on at any election for directors which has been transferred on the books of the corporation within 20 days next preceding such election. The vote for directors, and, upon the demand of any stockholder, the vote upon any question before the meeting shall be by ballot. All elections shall be had and all questions decided by a plurality vote.

7. Written notice of the annual meeting shall be mailed to each stockho'der entitled to vote thereat, at such address as appears on the stock book of the

corporation, at least 30 days prior to the meeting.

8. A complete list of the stockholders entitled to vote at the ensuing election, arranged in alphabetical order, with the residence of each, and the number of voting shares held by each, shall be prepared by the secretary and filed in the office where the election is to be held, at least 10 days before every election, and shall at all times during the usual hours for business, and during the whole time of said election, be open to the examination of any stockholder.

9. Special meetings of the stockholders, for any purpose or purposes, unless otherwise prescribed by statute, may be called by the president, and shall be called by the president or secretary, at the request in writing of a majority of the board of directors, or at the request in writing of stockholders owning a majority in amount of the entire capital stock of the corporation issued and outstanding, and entitled to vote. Such request shall state the purpose or purposes of the proposed meeting.

10. Business transacted at all special meetings shall be confined to the

objects stated in the call.

11. Written notice of a special meeting of stockholders, stating the time and place and object thereof, shall be mailed, postage prepaid, at least 10 days before such meeting, to each stockholder entitled to vote thereat at such address as appears on the books of the corporation.

DIRECTORS

12. The property and business of this corporation shall be managed by its board of directors, not less than 3 nor more than 45 in number. The number to constitute the first board shall be three. Directors must be stockholders. They shall be elected at the annual meeting of the stockholders, and each director shall be elected to serve until his successor shall be elected and shall qualify. The number to constitute the board of directors shall be determined by resolution from time to time increasing or decreasing such number, provided that the number of said directors shall not at any time be reduced to less than 3 nor increased to more than a total of 45. In case of any increase in the number of directors, the additional directors may be elected by the board of directors to hold office until the next annual meeting of the stockholders and until their successors are elected and qualified. In case of any vacancy or vacancies in the board of directors, a majority of the remaining members of the board may elect a director or directors to complete the board.

(As amended February 19, 1929)

13. The directors may hold their meetings and have one or more offices, and keep the books of the corporation, except the original or duplicate stock ledger, outside of Delaware, at the office of the corporation in the city of Minneapolis, Minn., or at such other places as they may from time to time determine.

Minn., or at such other places as they may from time to time determine.

14. In addition to the powers and authorities by these by-laws expressly conferred upon them, the board may exercise all such powers of the corporation and do all such lawful acts and things as are not by statute or by the certificate of incorporation or by these by-laws directed or required to be exercised or done by the stockholders.

15. The board of directors may, by resolution or resolutions passed by a majority of the whole board, designate one or more committees, each committee to consist of two or more of the directors of the corporation, which, to the extent provided in said resolution or resolutions or in these by-laws, shall have and may exercise the powers of the board of directors in the management of the business and affairs of the corporation, and may have power to authorize the seal of the corporation to be affixed to all papers which may require it. Such committee or committees shall have such name or names as may be stated in these by-laws or as may be determined from time to time by resolution adopted by the board of directors.

16. The committees shall keep regular minutes of their proceedings and report the same to the board when required.

COMPENSATION OF DIRECTORS

17. Directors, as such, shall not receive any stated salary for their services; but by resolution of the board a fixed sum and expenses of attendance, if any, may be allowed for attendance at each regular or special meeting of the board, provided that nothing herein contained shall be construed to preclude any director from serving the corporation in any other capacity and receiving compensation therefor.

18. Members of special or standing committees may be allowed like compensation for attending committee meetings.

MEETINGS OF THE BOARD

19. The newly elected board may meet at such place and time as shall be fixed by the vote of the stockholders at the annual meeting for the purpose of organization or otherwise, and no notice of such meeting shall be necessary to the newly elected directors in order legally to constitute the meeting, provided a majority of the whole board shall be present; or they may meet at such place and time as shall be fixed by the consent in writing of all the directors.

20. Regular meetings of the board may be held without notice at such time

and place as shall from time to time be determined by the board.

21. Special meetings of the board may be called by the president on two days' notice to each director, either personally or by mail or by telegram; special meetings shall be called by the president or secretary in like manner and on like notice on the written request of two directors.

22. At all meetings of the board one-third of the total board of directors, but not less than two directors, if the board shall at such time have a total membership of less than six, shall be necessary and sufficient to constitute a quorum for the transaction of business, and the act of a majority of the directors present at any meeting at which there is a quorum shall be the act of the board of directors, except as may be otherwise specifically provided by statute or by the certificate of incorporation or by these by-laws.

OFFICERS

23. The officers of the corporation shall be chosen by the directors and shall be a president, such vice presidents as the board of directors may from time to time determine, and a secretary and a treasurer. The board of directors may also choose assistant secretaries and assistant treasurers. The secretary and treasurer may be the same person and any vice president may hold at the same time the office of secretary or treasurer.

24. The board of directors, at its first meeting after each annual meeting of stockholders, shall choose a president and such vice presidents as it may determine from its own members, and a secretary and a treasurer, who need not be members of the board.

25. The board may appoint such other officers and agents as it shall deem necessary, who shall hold their offices for such terms and shall exercise such powers and perform such duties as shall be determined from time to time by the hoard.

26. The salaries of all officers and agents of the corporation shall be fixed by the board of directors.

27. The officers of the corporation shall hold office until their successors are chosen and qualify in their stead. Any officer elected or appointed by the board of directors may be removed at any time by the affirmative vote of a majority of the whole board of directors. If the office of any officer or officers becomes vacant for any reason, the vacancy shall be filled by the affirmative vote of a majority of the whole board of directors.

1:

i

THE PRESIDENT

28. (a) The president shall be the chief executive officer of the corporation; he shall preside at all meetings of the stockholders and directors; he shall have general and active management of the business of the corporation, and shall see that all orders and resolutions of the board are carried into effect.

(b) He shall execute contracts requiring a seal under the seal of the corpo-

ration.

(c) He shall be ex officio a member of all standing committees, and shall have the general powers and duties of supervision and management usually vested in the office of president of a corporation.

VICE PRESIDENTS

29. Any vice president shall, in the absence or disability of the president perform the duties and exercise the powers of the president, and shall perform such other duties as the board of directors shall prescribe.

THE SECRETARY AND ASSISTANT SECRETARIES

30. (a) The secretary shall attend all sessions of the board and all meetings of the stockholders and record all votes and the minutes of all proceedings in a book to be kept for that purpose, and shall perform like duties for the standing committees when required. He shall give, or cause to be given, notice of all meetings of the stockholders and of the board of directors, and shall perform such other duties as may be prescribed by the board of directors or president, under whose supervision he shall be. He shall keep in safe custody the seal of the corporation, and when authorized by the board, affix the same to any instrument requiring it, and when so affixed it shall be attested by his signature or by the signature of the treasurer. He shall be sworn to the faithful discharge of his duty.

(b) The assistant secretaries in the order of their seniority shall, in the absence or disability of the secretary, perform the duties and exercise the powers of the secretary, and shall perform such other duties as the board

of directors shall prescribe.

THE TREASURER AND ASSISTANT TREASURERS

31. (a) The treasurer shall have the custody of the corporate funds and securities and shall keep full and accurate accounts of receipts and disbursements in books belonging to the corporation and shall deposit all moneys, and other valuable effects, in the name and to the credit of the corporation in such depositories as may be designated by the board of directors.

(b) He shall disburse the funds of the corporation as may be ordered by the board, taking proper vouchers for such disbursements, and shall render to the president and directors, at the regular meetings of the board, or whenever they may require it, an account of all his transactions as treasurer and

of the financial condition of the corporation.

(c) He shall give the corporation a bond if required by the board of directors, in a sum and with one or more sureties satisfactory to the board, for the faithful performance of the duties of his office, and for the restoration to the corporation, in case of his death, resignation, retirement or removal from office, of all books, papers, vouchers, money, and other property of whatever kind in his possession or under his control belonging to the corporation.

(d) The assistant treasurers in the order of their seniority shall, in the absence or disability of the treasurer, perform the duties and exercise the powers of the treasurer, and shall perform such other duties as the board of

directors shall prescribe.

VACANCIES

are

the

fa

ers

ive

n;

ve

ee

10-

ve

n

32. If the office of any director or directors becomes vacant by reason of death, resignation, retirement, disqualification, removal from office, or otherwise, the remaining directors, though less than a quorum, shall choose a successor or successors, who shall hold office until the next annual election and until a successor or successors have been duly elected, unless sooner displaced.

DUTIES OF OFFICERS MAY BE DELEGATED

33. In case of the absence of any officer of the corporation, or for any other reason that the board may deem sufficient, the board may delegate, for the time being, the powers or duties, or any of them, of such officer, to any other officer, or to any director, provided a majority of the entire board concur therein.

CERTIFICATES OF STOCK

34. The certificates of stock of the corporation shall be numbered and shall be entered in the books of the corporation as they are issued. They shall exhibit the holder's name and number of shares and shall be signed by the bresident or a vice president and the treasurer or an assistant treasurer, or the secretary or an assistant secretary.

CONTRACTS

35. Section 1. Except as may be otherwise expressly provided in these bylaws, no written instrument usually under seal, made by any person or persons in behalf of the company, or in its name, shall be binding upon it, unless the same, in each instance, shall have been made under authority of said board of directors or shall have been duly ratified by said board or shall have been made pursuant to power by it especially delegated.

SEC. 2. Except as may be otherwise expressly provided in these by-laws, all contracts or other written instruments made in the company's name shall be signed by the president and attested by the secretary, or shall be executed by such other persons and in such other manner as shall from time to time be directed by the board of directors by appropriate resolutions.

TRANSFERS OF STOCK

36. Transfers of stock shall be made on the books of the corporation only by the person named in the certificate or by attorney lawfully constituted in writing, and upon surrender of the certificate therefor.

CLOSING OF TRANSFER BOOKS

37. The board of directors shall have power to close the stock transfer books of the corporation for a period not exceeding 40 days preceding the date of any meeting of stockholders or the date for payment of any dividend or the date for the allotment of right or the date when any change or conversion or exchange of capital stock shall go into effect: Provided, however, That in lieu of closing the stock transfer books as aforesaid, the board of directors may fix in advance a date not exceeding 40 days preceding the date of any meeting of stockholders or the date for the payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect, as a record date for the determination of the stockholders entitled to notice of, and to vote at, any such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights or to exercise the rights in respect of any such change, conversion or exchange of capital stock, and in such case only such stockholders as shall be stockholders, of record on the date so fixed shall be entitled to such notice of, and to vote at such meeting, or to receive payment of such dividend, or to receive such allotment of rights, or to exercise such rights, as the case may be, notwithstanding any transfer of any stock on the books of the corporation after any such record date fixed as aforesaid.

38. The corporation shall be entitled to treat the holder of record of any share or shares of stock as the holder in fact thereof and accordingly shall not be bound to recognize any equitable or other claim to or interest in such share on the part of any other person, whether or not it shall have express or other notice thereof, save as expressly provided by the laws of Delaware.

LOST CERTIFICATE

39. Any person claiming a certificate of stock to be lost or destroyed, shall make an affidavit or affirmation of that fact and advertise the same in such manner as the board of directors may require, and the board of directors may in their discretion, require the owner of the lost or destroyed certificate, of his legal representative, to give the corporation a bond, in such sum as they may direct, not exceeding double the value of the stock, to indemnify the corporation against any claim that may be made against it on account of the alleged loss of any such certificate; a new certificate of the same tenor and for the same number of shares as the one alleged to be lost or destroyed, may be issued without requiring any bond when, in the judgment of the directors, it is proper so to do.

STOCK HELD IN OTHER CORPORATIONS

40. All capital stocks in other corporations owned by this corporation, except as hereinafter provided, shall be voted at the meetings, regular and/or special, of the stockholders of said other corporations by the president of this corporation, or, in his absence, by any vice president, and in the event, during such absence, of the presence of more than one vice president of this corporation, then by a majority of said vice presidents present at such stockholders, meeting, unless there shall have been executed and delivered, pursuant to a resolution of the board of directors of this corporation, to some other attorney specifically named in a proxy a power of attorney to represent this corporation at such stockholders' meeting for the purposes in said power of attorney specified, and in the event that no such proxy shall have been authorized by the board of directors with reference to any stock owned by this corporation, and as often as such may be the case, the president and secretary of this corporation are hereby authorized to execute in the name and under the seal of this corporation proxies in such form as may be required by the corporation whose stock is to be voted thereunder, naming as the attorney authorized to act by said proxy such individual or individuals as to said president and secretary shall seem advisable, and the attorney or attorneys so named in said proxy shall, until the revocation or expiration thereof, vote said stock at such stockholders meetings only in the event that neither the president nor any vice president of this corporation shall be present thereat.

president of this corporation shall be present thereat.

41. In the event that this corporation shall own in excess of 50 per cent of the capital stock of any financial or money corporation or association and if, in the acquisition of such stock this corporation shall have agreed that as to the voting of such stock for the election of directors this by-law or an agreement substantially in accord therewith shall be binding on the corporation, then and in each such event the stock so acquired shall, at all meetings for the election of a board of directors of any such association or corporation, be voted in favor of the election to such board of a sufficient number of residents of the city where the principal office of such corporation or association is located so that, if the candidates so voted for shall be elected, at least 75 per cent of the members of said board of directors shall be residents of said city. This section 41 of these by-laws shall be amended only upon the affirmative vote of 80 per cent in amount of the common stock of this corporation outstanding at the time of such amendment or by the board of directors after receipt of the written consent of the holders of at least 80 per cent of the common stock of this corporation.

INSPECTION OF BOOKS

42. The directors shall determine from time to time whether, and, if allowed, when and under what conditions and regulations the accounts and books of the corporation (except such as may by statute be specifically open to inspection) or any of them shall be open to the inspection of the stock-

holders, and the stockholders' rights in this respect are and shall be restricted and limited accordingly.

CHECKS

43. All checks or demands for money and notes of the corporation shall be signed by such officer or officers as the board of directors may from time to time designate.

FISCAL YEAR

44. The fiscal year shall begin the 1st day of January in each year.

DIVIDENDS

45. Dividends upon the capital stock of the corporation, subject to the provisions of the certificate of incorporation, if any, may be declared by the board of directors at any regular or special meeting, pursuant to law. Dividends may be paid in cash, in property or in shares of the capital stock.

Before payment of any dividends there may be set aside out of any funds of the corporation available for dividends such sum or sums as the directors from time to time in their absolute discretion, think proper as a reserve fund to meet contingencies, or for equalizing dividends, or for repairing or maintaining any property of the corporation, or for such other purpose as the directors shall think conducive to the interests of the corporation.

DIRECTORS' ANNUAL STATEMENT

46. The board of directors shall pesent at each annual meeting, and when called for by vote of the stockholders at any special meeting of the stockholders, a full and clear statement of the business and condition of the corporation.

NOTICES

47. Whenever under the provisions of these by-laws notice is required to be given to any director, officer or stockholder, it shall not be construed to mean personal notice, but such notice may be given in writing, by mail, by depositing the same in the post office or letter box, in a post-paid sealed wrapper, addressed to such stockholder, officer or director at such address as appears on the books of the corporation, or, in default of other address, to such director, officer, or stockholder at the general post office in the city of Wilmington, Del., and such notice shall be deemed to be given at the time when the same shall be thus mailed.

Any stockholder, director, or officer may waive any notice required to be given under these by-laws.

AMENDMENTS

48. These by-laws, except as hereinabove otherwise provided, may be altered or amended by the affirmative vote of a majority of the stock issued and outstanding and entitled to vote thereat, at any regular or special meeting of the stockholders if notice of the proposed alteration or amendment be contained in the notice of the meeting, or, except as hereinbefore and in the certificate of incorporation of this corporation otherwise provided, by the affirmative vote of a majority of the board of directors: Provided, however, That no change of the time or place for the election of directors shall be made within 60 days next before the day on which such election is to be held, and that in case of any change of such time or place notice thereof shall be given to each stockholder in person or by letter mailed to his last known post-office address, at least 20 days before the election is held.

Article 4 of the articles of association of Northwest Bancorporation as amended October 10, 1929:

"4. The total authorized capital stock of this corporation is \$300,000,000. divided into 6,000,000 shares of the par value of \$50 each.

"If it seems desirable so to do, the board of directors may from time to time issue scrip for fractional shares of stock, such scrip shall not confer upon the holder any voting or other rights of a stockholder of the corporation but the corporation shall from time to time, within such time as the board of directors may determine, issue one whole share of stock upon the surrender of scrip

for fractional shares aggregating one whole share, properly indersed if in

registered form.

"The holders of common stock of this corporation shall have their respective preemptive rights to subscribe for other shares of common stock, except as by law limited and except that, free of such preemptive right, the board of directors may (1) from time to time exchange unissued stock of the corporation of any stock of the corporation to be issued by reason of any increase of the authorized capital stock of the corporation for stock of financial, moneyed, of investment corporations and associations, and (2) prior to January 1, 1930, at such time or times and in such amount or amounts as said board of directors deems advisable, sell common capital stock not exceeding in the aggregate \$5,000,000 par value, and (3) where individual persons for the purpose of enabling them to qualify as directors of any bank, in which this corporation enabling them to qualify as directors of any bank, in which this corporation shall have acquired shares of stock in such bank, as and when the stockholders in this corporation may become entitled to subscribe for additional shares of stock in this corporation, at the same time there may be sold, by the issuance of subscription rights or otherwise, to each of said persons so owning and holding shares of stock in any such bank such number of shares of stock of this corporation and at such prices as the board of directors of this corporation shall determine to be adequate to compensate such person or persons for any loss of subscription rights by such person or persons by reason of the fact that he has retained or acquired shares of stock in such bank."

Section 12 of the by-laws of Northwest Bancorporation as amended January

Section 12 of the by-laws of Northwest Bancorporation as amended January

n n o I Hot

7, 1930:
"Sec. 12. The property and business of this corporation shall be managed by Its board of directors, not less than three in number. Directors shall be elected at the annual meeting of the stockholders, except as hereinafter provided, and each director shall be elected to serve until his successor shall be elected and shall qualify. The number to constitute the board of directors shall be determined from time to time by resolution of the stockholders or of the board itself, increasing or decreasing such number, provided that the number of said direct tors shall not at any time be reduced to less than three. In case of any increase in the number of directors, occurring between the dates of the annual meetings of the stockholders, the additional directors may be elected by a majority vote of a quorum of the board of directors to hold office until the next annual meeting of the stockholders and until their successors are elected and qualify. In case of any vacancy or vacancies in the board of directors a director or directors may be elected to complete the board by a majority vote of a quorum of the board of directors, or in the event that the remaining directors are less than a quorum, then by a majority of the remaining directors."

Mr. Letts. Have you engaged in any business up to this time other than the banking business and the handling of securities?

Mr. Decker. No; and its allied industries, like this cattle loan

Mr. Letts. This morning you said something about a large amount of money getting away from your district, and as illustrating that you said something about insurance. Is it a part of your plan that you will finance an insurance company, for instance?

Mr. Decker. No, sir.

Mr. Letts. Life, accident, fire, or otherwise?

Mr. Decker. No, sir. We buy our insurance, and we have no idea of writing it ourselves or financing other insurance companies. My impression is that our articles do not permit us to go into the insurance business.

Mr. Letts. That was the purpose of my first question.

Mr. Decker. I am quite positive about that.

Mr. Letts. The reason I asked that question is that in considering another group we found that they claimed to be able to divert \$ large amount of insurance to their own company through their banking policies and facilities.

Mr. Decker. We buy our insurance on the open market.

Mr. Letts. Is it your intention to handle real-estate mortgages? Mr. Decker. The holding company?

Mr. Letts. Yes. Mr. Decker. No, sir.

Mr. Letts. Is it your intention to operate real-estate agencies for the sale of lands?

Mr. Decker. No, sir.

Mr. Letts. Then I take it it is your purpose to stick to the banking business, other than the handling of securities?

Mr. Decker. Yes, sir.

Mr. Letts. And the handling of securities is done by security companies organized for that purpose?

Mr. Decker. Right.

Mr. Letts. This morning you made some mention of the matter of taxation, and I assumed you were about to tell us how under your plan the banks here and there bore their proper proportion of the tax burden of the various States, but you did not develop that. Can you tell us a little further just what you were then about to say?

Mr. Decker. Yes. We have in our bank corporation a certain number of banks in North Dakota, we will say, both State and national. Those banks pay a personal-property tax on every share of stock in existence into the treasury of the State of North Dakota. If those banks were dissolved and we established branches in their place, the State of North Dakota would receive no tax; the tax would be paid entirely in the State of Minnesota where all the stock was in the parent bank.

Mr. Letts. In other words, you say that under your plan the present method of taxing in the various States will continue to pre-

Vail, whereas it would not under the branch system?

Mr. Decker. That is right.

Mr. Letts. What is the par value of your stock?

Mr. Decker. \$50 a share.

Mr. Letts. Has any of that stock been issued from the treasury for less than that?

Mr. Decker. No, sir.

Mr. Letts. I think that is all.

Mr. Beedy. There was one misconception or misunderstanding in figures that I want to clear up.

When Judge Letts just now asked you what your capitalization was, you said "\$300,000,000."

Mr. DECKER. Authorized.

Mr. Beedy. What was the figure of \$750,000,000 that you gave me?

Mr. DECKER, \$75,000,000?

Mr. Beedy. I guess that is it.

Mr. Decker. \$75,000,000 was the first authorization. That was later increased.

Mr. Strong. Mr. Seiberling.

Mr. Seiberling. This organization, the holding company was promoted by a large bank, I take it, with which you were originally connected in Minneapolis?

Mr. Decker. They were the prime movers; yes, sir. Mr. Seiberling. What was the name of that bank?

Mr. Decker. Northwestern National Bank.

Mr. Seiberling. And that was the first unit taken over, I take it, the stock in that bank?

Mr. Decker. No; there were three or four banks taken over simultaneously.

Mr. Seiberling. And who fixed the value of the stock of the banks you took over in the first instance or first transaction?

Mr. Decker. By mutual agreement between the four banks who joined simultaneously.

Mr. Seiberling. These banks were also interested in the holding company?

Mr. Decker. They became interested.

Mr. Seiberling. They promoted the holding company?

Mr. Decker. Yes; just as much as we did.

Mr. Seiberling. So that in the first instance when you took over these banks, you had the same parties in interest on both sides of the transaction?

Mr. Decker, Mutual agreement.

Mr. Seiberling. And how did you arrive at the value of the stocks

in the banks you first took over?

Mr. Decker. Well, largely in three ways. First, book or liquidated value-in other words, invested capital; average earnings over a period of years; and prospects for future earnings.

Mr. Seiberling. And how did you fix the value of the holding company stock which you issued? Was that fixed at \$50.

Mr. Decker. That was fixed at \$50.

Mr. Seiberling. And you arrived at the value of the banks you first took over and issued stock in accordance with that valuation! Mr. Decker. That is right.

Mr. Seiberling. Then you went out and acquired other banks?

Mr. Decker. Yes.

Mr. Seiberling. How did you determine the value of those banks when you took them over?

Mr. Decker. Well, we attempted to be perfectly fair with both

I

n

C

0

J.

by

pe

parties to the transaction.

Mr. Seiberling. I do not question that.

Mr. Decker. Along the same lines; the book value, earnings, and prospects, and volume of deposits, of course, which entered into the question of earnings.

Mr. Seiberling. Then you figured the book value of your holding

company stock when you issued it to them?

Mr. DECKER. Yes, sir.

Mr. Seiberling. So that the cheaper you could buy these other bank stocks, the higher, of course, your book value of your holding company would go

Mr. Decker. Yes; if we acquired them for cash.

Mr. Seiberling. Have you written up any of these stocks on your holding company's books?

Mr. Decker. No, sir; we wrote some of them down.

Mr. Seiberling. I see that under your charter you have the right to organize, incorporate, and reorganize subsidiary corporations for all lawful purposes, so that you could authorize an insurance company, an abstract company or, in fact, any kind of a company or subsidiary you would find to your advantage.

Mr. Decker. I did not know it; it has never been suggested or discussed.

Mr. Seiberling. Why did you not take over these small banks that you put into the subsidiary of your holding company?

Mr. Decker. Why didn't we take them direct?

Mr. Seiberling. Yes.

Mr. Decker. Because we were satisfied they could be better looked after by the Union Investment Co., because those small banks owned by the Union Investment Co. are not organized locally with directors and managers in quite the same manner as the other banks are, and We thought the Union Investment Co., which had built up an organization for 25 or 30 years that they have been in existence, had built up an organization better fitted to handle those small banks.

Mr. Seiberling. Are you sure that that is the only reason for

adopting that plan?

Mr. Decker. You mean, of taking those in through the Union

Investment Co.?

Mr. Seiberling, Yes. Your overhead would have been much less if you had taken them into your holding company, would it not?

Mr. Decker. No; because we would have to increase the overhead expense of the holding company in order to take care of these little

Mr. Seiberling. When you approach a bank, who determines Whether it shall go into your subsidiary or holding company?

Mr. Decker. We have never taken any in in any other way. We did not buy these small banks; we traded our stock for the stock in the Union Investment Co.

Mr. Seiberling. And some other person organized that company?

Mr. Decker. Oh, yes.
Mr. Seiberling. And you had nothing to do with it in the be-

Mr. Decker. Not at all. It had been in existence 25 years.

Mr. Seiberling. You just bought that; I did not understand that. I was somewhat interested in what you said about-

Mr. Decker. If you will pardon me, I might add that we have not taken in any more independent banks and put them into that corporation, if that answers your question.

Mr. Siberling. You have not taken in any additional banks?

Mr. Decker. No.

Mr. Seiberling. If I understand your testimony correctly, you think that chain banking is preferable to branch banking because of the local-

Mr. Decker. Group banking; don't call it chain banking.

[Laughter.]

Mr. Seiberling (continuing). Because of the local interest which You maintain in connection with the unit bank?

Mr. Decker. Yes, sir.

Mr. Seiberling. And you think the customer likes that plan of banking better than branch banking?

Mr. Decker. Yes, sir.

Mr. Siberling. And what is your reason for that? Mr. Decker. Well, I thought I had covered that.

The customer likes it better because, he thinks, he will get a better hearing, a more sympathetic hearing, in the local bank with its local board of directors and local manager and local pride than he would from the manager of a branch.

Mr. Seiberling. But the manager would be in the main branch,

i

Pti

0

8

8

in the large city.

Mr. Decker. There would be a local manager in that city.

Mr. Seiberling. Yes, but the real manager would be in the large center.

Mr. Decker. Yes, the situation would be much less favorable than

it would be under group banking.

Mr. Seiberling. Do you think the customer might also be afraid that he might not get the same terms in connection with the rate of

interest for his loans?

Mr. Decker. Yes, I think he would, because the man who determines the rate of interest in a group bank is the local man, who lives there. He has his home there, and his directors all live there, and they all pay taxes there. Probably everything that they own in the world is there.

Mr. Seiberling. But you did not give that reason a while ago and I wanted to bring that out, that where you deal with your home

people, you have the human interest.

Mr. Decker. Yes, sir.

Mr. Seiberling. And you get consideration that you do not get when you are dealing with somebody a long distance away.

So you think you overcome that by your plan here?

Mr. Decker. Yes, sir.

Mr. Seiberling. And it does not make much difference if they do shift the money in your district, because the stockholders of your holding company are scattered all over your district and they are interested in maintaining every unit bank they own?

Mr. Decker. Yes, sir.

Mr. Seiberling. And so you do have that local interest?

Mr. Decker. Yes, sir.

Mr. Seiberling. Just the same as though they owned the bank.

Mr. Decker. Even larger than it was before.

Mr. Seiberling. More stockholders?

Mr. Decker. Yes, in number and the amount.

Mr. Seiberling. How do you figure you are going to increase your rate of dividend in the holding company?

Mr. Decker. You mean over what we are paying now?

Mr. Seiberling. You said you were going to increase it greatly.

Mr. Decker. I said we were not likely to increase it.

Mr. Seiberling. No; you said you were going to double your earnings.

Mr. Decker. No; I said the earnings were now double the amount

of the dividends which we are paying.

Mr. Seiberling. But you are going to greatly increase those earnings?

Mr. DECKER. Well, we hope to.

Mr. Seiberling. How are you going to do that?

Mr. Decker. In the first place, by economy. We will save \$75,000 a year on surety bonds alone and get a better coverage, in some instances ten times over what it has been. We will save considerable money in buying adding machines and standard equipment which are not made locally. We always say to our local bank, "Patronize

home industries." Then we say to them, "If you are buying machines not made at home, we do not ask you to buy them from us, but if you wish to join the rest of the crowd and save money, you are permitted to," and without exception they are delighted to have that opportunity.

Mr. Seiberling. Do all of your banks pay the same interest on

deposits?

Mr. DECKER. No, sir.

Mr. Seiberling. Do you have banks that pay no interest on deposits?

Mr. Decker. There are plenty of banks that pay no interest on an

open checking account.

Mr. Seiberling. Or on savings accounts?

Mr. Decker. We have no banks that pay no interest on savings accounts.

Mr. Seiberling. But you have banks that pay different rates?

Mr. Decker. Yes, sir.

Mr. Seiberling. And you charge different rates for loans also?

Mr. Decker. Yes, sir.

Mr. Seiberling. Why is it that you do not pay the same rate on savings deposits in one bank as you do in another?

Mr. Decker. For a number of reasons.

Mr. Seiberling. Give us some.

Mr. Decker. Conditions of the locality, competition of other banks in the locality, custom—we would hesitate to disturb a policy which a

bank had been operating successfully under.

Mr. Seiberling. You would not hesitate to increase the rate of interest, would you? If a bank had been paying 3 per cent on deposits, you would not hesitate to increase it to 4 per cent, would you? Mr. Decker. Yes; certainly we would.

Mr. Seiberling. Why?

Mr. Decker. Because it would be a question whether we could afford to do it.

Mr. Seiberling. But you do pay it in some sections?

Mr. Decker. But these banks, please remember, are still unit banks, and the local management is responsible for the results, which include the earnings, and why should Fargo be willing to advance their rate to 4 per cent because La Crosse was paying 4, if their earnings did not warrant it?

Mr. Seiberling. What is the difference in the various banks?

What is the lowest rate that you pay, and the highest?

Mr. Decker. I think I would say that, in a general way, 3 per cent about the lowest and 4 per cent is about the highest.

Mr. Seiberling. Where do you pay the 3 per cent?

Mr. Decker. Minneapolis.

Mr. Seiberling. And where do you pay the 4 per cent?

Mr. Decker. In the smaller towns.

Mr. Beedy. You are talking about savings accounts?

Mr. Seiberling. Savings accounts; yes. Mr. Decker. Or certificates of deposit.

Mr. Seiberling. And does the same rate obtain in all country districts?

Mr. Decker. No.

Mr. Seiberling. What is the difference in the country districts?

Mr. Decker. Well, there may be a case in which for years they have been paying 4 per cent, and that is because they could not agree among

themselves, even though they knew it was too high.

Then, here is another district where the banks have been cooperating and working together better, and they have reduced the rate, and for years the State departments of banking have urged that they reduce the interest that they are paying on deposits, for they had been getting to the point where the banks were not earning money on savings, and Mr. Wakefield says that there is now a law in the State of Minnesota prohibiting the payment of over 4 per cent on savings.

Mr. Seiberling. Is there a law fixing the amount you can charge

for loans, too?

Mr. Decker. No, sir; except usury. The usury law is 8 per cent. Mr. Seiberling. Well, the chief interest that the citizen who does not own bank stock has is to get as much for his deposits as he can, and to borrow his money as cleaply as he can.

Mr. Decker. Right.

Mr. Seiberling. And then, in addition to that, there is also the safety of the deposit. Those are really the three only interests that the public in general have, that part of the public who are not stock

owners of banks. Is that not correct?

Mr. Decker. Yes; perhaps so, but remember that we are in competition with the Government on savings; we are in competition with the bond man on the sale of securities; we have plenty of competition when we attempt to induce Jim Smith to put his money in the bank at 3 or 4 per cent.

Mr. Seiberling. But if you can eliminate that competition, you could lower the rate you pay on savings deposits, could you not?

Mr. Decker. Not as long as the Government savings banks are there and the public can buy Government and other bonds; no. We have got to meet the open market; they do not have to deposit their money in the local bank. They have learned a lot better than that that they can buy Government bonds, or buy stocks, and they have learned that they can put their money in the postal savings banks.

Mr. Seiberling. I have heard that stated here a good many times, but are there not millions of people in the United States that do not know anything about the things you are talking about? Is it not

true that the only thing they know is the bank?

Mr. Decker. Oh, I think they are wiser than you realize, Mr. Seiberling.

Mr. Seiberling. I do not think so.

Mr. Decker. They have got radios and newspapers, and they know a lot more than they did a few years ago.

Mr. Seiberling. But when it comes to money, the only person they

have dealt with is the banker.

Mr. Decker. That has been the inclination in years past, but now they have learned so much that they are seeking other avenues of investment for their funds.

Mr. Seiberling. Now, you stated awhile ago that a great deal of the money was carried in stockings, and so forth. Why does not the postal savings draw that money out? Mr. Decker. It has. In the State of Montana, in 1919, the per capita investment in postal savings banks was \$2.66. Ten years later it was \$11.26; and Montana moved into first place of all the

States in the Union in investments in postal savings.

That is the answer; that money has gone out of circulation so far as Montana is concerned, whereas it should be in deposits in Montana for the benefit of her own industries, and those industries are deprived of that because they did not believe that they had a sound banking system which made it safe for them to leave their money in the bank.

Wyoming moved into second place.

Take South Dakota; that is a flagrant case. In 1919 the per capita investment of the inhabitants of South Dakota was 7 cents in postal savings. Ten years later it is \$6.25. So, what good do Postal savings do to the State of South Dakota?

Mr. Seiberling. Is not the money deposited in the Federal reserve

centers of the State?

Mr. Decker. You have to buy Government bonds and put them up

as collateral.

I have here a whole list of all the States in the Union and the increases in postal savings. It has been a tremendous competitor, and you could not blame the people.

Mr. Wingo. I think it would be well to have that statement go

in the record at this point.

Mr. Strong. Without objection, it is so ordered.

(There was no objection, and the statement referred to is printed below.)

Mr. Seiberling. Do you mean to tell me that in controlling this large group of banks your unit managers do not constantly confer with you as to rates of interest to charge on loans and things of that kind?

Mr. Decker. Never have we discussed it. It would be true on large loans; if you had a concern in Des Moines, where we have a bank, that was a large borrower, or in Duluth, where they have large grain and elevator accounts, we would and have conferred on rates for the last 25 or 30 years, but on the local loans of these banks we pay no attention to the rate they charge. What we are interested in are two things, the development of the country around that bank where we have a large financial interest and the showing on the part of the bank of reasonable profits above losses.

Mr. Seiberling. Do you think the same institution which acts as trustee should also engage in the business of underwriting securities!

Mr. Decker. No, sir; absolutely not.

Mr. Seiberling. Should the holding company?

Mr. Decker. No, sir; absolutely not.

Mr. Seiberling. How many subsidiaries have you in this holding company?

al distos

1

Mr. Decker. One hundred and ten.

Mr. Seiberling. What are these investment companies?

Mr. Decker. They are companies in four or five centers who handle securities, underwriting sales of securities, bonds, and, in some instances, stock.

Mr. Seiberling. And they own stocks, do they?

Mr. Decker. Own them? Mr. Seiberling. Yes.

Mr. Decker. No, sir.

Mr. Seiberling. Have you any subsidiaries that own stocks?

Mr. Decker. They might take up a stock they had underwritten until they had sold it, but they would be more cautious of the stocks. Of course, there is no halo around bonds. Many people would rather have stock in some company than bonds in others.

Mr. Seiberling. Then, you have, counting all of your subsidiaries

one hundred and some corporations?

Mr. Decker. Right.

Mr. Seiberling. I think that is all.

Mr. Letts. I intended to ask one question I overlooked.

Mr. STRONG. All right.

Mr. Letts. I wanted to inquire whether or not you have been approached by any other large interest, such as the Transamerica Corporation or this new one, the Manhattan Corporation, or whatever its name is, to sell out?

Mr. Decker. Not directly. We have been approached, not knowing whom the parties represented, and we told them that we were

not interested.

Mr. Letts. I asked that because I have an idea that there will be a tendency to spread across the country.

Mr. Decker. Very naturally. It indicates we have something

worth having.

Mr. Strong. Mrs. Pratt, you are next.

Mrs. Pratt. Most of the questions that I had in mind have been covered by others.

I would like to ask Mr. Decker a question, and perhaps I will be

excused if I make a statement first.

I judge from your testimony here that you feel, from the way it has worked out in your district, that the solution to the banking troubles of this country is in group banking?

Mr. Decker. Yes.

Mrs. Pratt. It has been stated here that the purpose of any proposed legislation would be to give to the smaller districts, where there have been bank failures due to frozen credits, and so on, a more fundamentally sound banking system. I think you said that you felt that those districts would be perhaps better taken care of by a branch banking system.

Mr. Decker. The very small ones. I would draw the line here in a town so small or inconsequential that it could not support a unit bank, no matter who owned the stock, whether it was in our group or out, and make it profitable, and yet a town large enough so that it was entitled to banking facilities. In such a town I see no other solution than what you might call a branch or a teller's window.

I can illustrate that possibly by what took place in Jamestown, N. Dak. There were four or five banks in Jamestown, and all of them were in more or less trouble. They had within a radius of 15 or 20 miles, 15 or 20 small banks, many of which were owned by the same people who owned the bank in Jamestown. The whole situation was bad, and my honest opinion is that the whole thing would have collapsed without any doubt.

The First Bank Stock Corporation, of which Mr. Wakefield is President, and ourselves, at earnest solicitation, went out there and consolidated the Jamestown banks into two good banks and cleaned them up, and then these banks within a radius of 15 or 20 miles which they had owned and which they said never could make any money, of their own accord dissolved and told their customers to

ride into Jamestown to do their banking.

Now, that could not be done in every case, but it was done in that case. If there was a town out from Jamestown so far that it would really be a great inconvenience to force them to go into Jamestown every time they wanted to make a deposit or do any banking busi-

hat

ition

on ave on ese are

ing as est

ing

vho

ten ks.

ies,

ness, one of these banks in Jamestown, if permitted to do so legally, could establish a branch or even have a teller's window.

We have had them come to us and ask us to let them make deposits in the drug stores, which they were willing to do if they could only get their money into our bank, because they felt that our bank was safe.

Now, I say that if a branch banking law were to be legalized in this country, I would suggest starting on a very small scale, possibly, for argument's sake, say county-seat branch banking, and then allow it to develop and see whether it is a better system than the other.

Mrs. Pratt. Would you feel that under the group system you could eventually take care of the whole situation without branch banking?

Mr. Decker. It would be more difficult and more expensive. Mrs. Pratt. And you would not advocate branch banking from

your group system? You would advocate a separate branch system? Mr. Decker. I am not advocating one or the other. I would have no objection and I see no objection to a branch banking system in trade areas, provided that you do not undertake to upset the group banking system which is now in existence, but if the one were to be

forced at the exclusion or termination of the other, in my judgment it would be disastrous. Mrs. Pratt. And you feel that really the only way to take care

of these small communities at the present time is through a branch banking system?

Mr. Decker. Except as they are willing to come to the centers

or if the town is large enough to support a unit bank.

Now, let me qualify that to this extent. You can go into certain sections of Iowa where the country is very thickly settled and very prosperous, and, notwithstanding some reports to the contrary, there are many small banks that are very prosperous. I happen to know of one group of small banks there where the profits are so much larger than our own that it makes us look like 30 cents. But, when you get to the sparsely settled regions of the Dakotas and Montana, it is quite different; it just is not in the cards for a small unit bank to make a living; it is not there. So many of their prerogatives have been taken away. They no longer loan money on mortgages at a profit; they no longer have land, their insurance has been taken away from them, and they can not handle securities because there is little demand for them, and their overhead is so great and their taxes so high that they can not make money enough to take care of their losses, to say nothing of their operating expenses.

Mrs. Pratt. But you have, through your group system, practically cleaned up the area through which you operate, have you

not?

Mr. Decker. No; we have hardly started. Generally speaking we have taken banks in key towns.

Mrs. Pratt. What I meant was that you have taken care of those

communities where there have been failures.

Mr. Decker. Not in every instance, no. We have taken banks largely in key points, as we call them, feeling that if we had in North Dakota, for instance, 15 important points where there were sound banks, the State would not suffer very greatly, at least in

comparison with the condition that they had been in.

Now, we have soft-pedalled, so to speak, on reaching out further and taking more banks, partly out of respect, as I stated this morning, to the Secretary of the Treasury, who said he hoped that group banking would proceed moderately until this whole question has been considered. We do not want to go ahead, Mr. Wakefield's group and ours; we could go out and in 12 months take in 500 banks without any question whatever, and they would be delighted to come in on almost any kind of a basis. If this committee wants to assume the responsibility of saying, "Go ahead and do it," we will get busy, but while the question is being agitated nationally we felt It was no more than decent for us to slow up a little until we saw what action Congress was going to take, and we knew better ourselves how far we could find it profitable to go because we are not a philanthropic institution, and neither is any other banker or group of bankers, because you can not get away from the fundamental Principle that banks have got to make money or go broke. We have had it demonstrated many times.

Mrs. Pratt. You feel that the group system, or banks operating under a group system, gives a greater stimulus and initiative to local

Industries, do you not, than, say, a branch banking system?

Mr. Decker. Very greatly, Mrs. Pratt. I can not help but feel that a system of branch banking in this country such as exists in England, with five banks, we will say, controlling the banking interests of the United States, will be almost a death-knell to the initiative of the American people. Their whole training and traditions are contrary to it; they rebel against it, and I share that feeling with them.

Mrs. Pratt. The Comptroller of the Currency, and I do not know whether Governor Young made the statement, but it was made here several times, said that it was desirable to decentralize credit and to have a greater number of credit centers throughout the country.

Would you subscribe to that?

Mr. Decker. Absolutely, but those centers must be large enough and strong enough to be of some consequence, or you accomplish nothing. We, therefore, have set up a unit which in diversification

and size we believe is large enough.

I want to make this perfectly clear, that we are in a very much more independent position of New York financially to-day than we ever were in the history of that country. There is no comparison. When Mr. Wakefield and I go down to New York to-day, they sit inp and take notice. Why? We do not represent just one little bank that they can do what they please with; we represent an aggregation of capital and an aggregation of men and an aggregation of brains in different lines of business, so that they have a wholesale respect for us, and any deals we have with them are entered into-to-day on a very much different basis than they were formerly.

Do I make that clear? Mrs. Pratt. Yes; perfectly clear.

I think that is all. Mr. Strong. Mr. Wingo. Mr. Wingo. Do you know of any incentive that leads men to invest their money or keep it invested in the banking business when it is no longer profitable?

bn

Mr. Decker. No, sir.

Mr. Wingo. That is sometimes done in a local community to protect a local bank, it is not, but that is an exception?

Mr. Decker. Yes, and that time has gone, Mr. Wingo.

Mr. Wingo. As I gathered from your statement, in your opinion the day of the independent unit bank has passed?

Mr. Decker. No, I would not say that. I would say that in the very small town, yes.

Mr. Wingo. Except in the larger communities?

Mr. Decker. Yes.

Mr. Wingo. What would you call a small town? What would be the limit, under your theory? If nothing is done and the natural trend of things is not interfered with, in what towns or in what size towns would the individual bank survive, in a State where branch banking is permitted statewide?

Mr. Decker. Well, for instance, like California?

Mr. Wingo. Take any illustration that you care to give.

Mr. Decker. We have not had any experience, Mr. Wingo, so it would be difficult for me to answer that.

Mr. Wingo. I was just trying to get your opinion. You said that in your opinion the independent unit bank had passed in the smaller

towns. What did you have in mind there?

Mr. Decker. It is not entirely the size of the town. It is the amount of business which they can acquire. A town might be very small and still have quite a rich farming community around it, and it might have considerable deposits, much larger than the size of the town itself would indicate.

Mr. Wingo. But that is an exception. Just take the general run of towns in your country, in which you are doing business. What do you have in mind as to the size of the town from which the unit bank will probably pass and which will have to be served either by

group banking or by branch banking?

Mr. Decker. Perhaps I can best answer with these statistics: The statistics show that during the last 8-year period, between 1921 and 1928, inclusive, 63 per cent of the bank suspensions were in banks with capital stock of \$25,000 or less; 40 per cent were in towns with less than 500 population; 20 per cent were in towns of less than 1,000 population, and 19 per cent in towns of less than 2,500.

Mr. Wingo. That is interesting, and we have had those statistics and I have been studying them for months, but that does not answer my question. You stated in response to my question, that the day of the independent unit bank was passing, and you said that was only true of small towns. What size town did you have in your mind when you made that statement?

Mr. Decker. I did not have any particular size in mind. I had in mind the town which was not large enough to enable a bank to make

Mr. Wingo. What, in your mind, in your territory is the size of

Mr. Decker. I would not want to say. I have not had enough experience to tell.

Mr. Wingo. Do you think, having in mind the natural trend of banking, that the independent unit bank is going to survive in communities of less than 5,000 or 10,000 population?

Mr. Decker. I think it can easily survive in towns of 5,000.

Mr. Wingo. Do you think that the independent unit bank can survive in a town in competition either with a unit of a group banking or of a chain banking system?

Mr. Decker. I do not know. I think only time will tell.

Mr. Wingo. You have not studied that question?

Mr. Decker. The competition will be not of size, but of service.

Mr. Wingo. That is the point I am getting at.

Mr. Decker. I think it will be increasingly difficult for the inde-

pendent unit.

Mr. Wingo. Is there any reason why competition in banking service will affect the maintenance of the different units of banking any differently than in the case of grocers or hardware stores, or anything else?

Mr. Decker. Yes; because banking is based on confidence. A man will go into a grocery store and buy a dozen oranges, and he does not care who he is dealing with, but when he goes in a bank there is the personal equation brought in, and there is the safety of the bank and the friendliness indicated in loaning money, and it is very different from getting on a street car and paying 10 cents for a ride.

Mr. Wingo. What is the total outstanding capital at the present

time of your holding corporations?

Mr. Decker, Approximately 1,600,000 shares, at \$50 a share, par

value, about \$80,000,000.

Mr. Wingo. And how much of that is invested in the capital of the banks or subsidiary corporations?

Mr. Decker. All of it except about, say, \$12,000,000, which is in

cash or its equivalent.

Mr. Wingo. And that sum represents what you called the liquid assets that you set apart?

Mr. Decker. Yes, sir.

Mr. Wingo. You are keeping over 10 per cent of the liquid assets as reserve?

Mr. Decker. Right.

Mr. Wingo. Your experience has shown you that that is ample in

the group banking system?

Mr. Decker. As far as we have gone so far. That is not in the banking system; that has nothing whatever to do with the individual banks. We do not take \$1 out of any of the banks in our group, except the usual dividends paid. All the rest of the earnings remain in the individual bank, not a nickel in the holding company.

Mr. Wingo. You stated that you felt like keeping a certain amount of the liquid assets in the holding corporation to meet emergencies

that might arise in some of these banks.

Mr. Decker. That is right.

Mr. Wingo. I was wondering whether or not you had operated to the extent where probably you had established in your mind what would be a fair reserve—we will call it a reserve; it is comparable to the reserve for deposits in the bank.

Mr. Decker. I would say that our experience up to date would

indicate about 10 per cent or 15 per cent.

Mr. Wingo. In response to one or two questions by Mr. Beedy, you said something about its being better for Congress to proceed slowly and to "let nature take its course." I suspect that that expression has a different meaning in Maine than in your country?

Mr. Decker. The gentleman here corrected me on that.

Mr. Wingo. As I understand, you mean that the credit necessities of the changing economic structure naturally will follow these economic changes?

Mr. Decker. Right.

Mr. Wingo. And you think it is better to wait until you see what is going to be the final trend of this economic structure before you undertake to fix the final set-up of your credit structure to serve that economic structure; is that your thought?

Mr. Decker. Will you repeat that, please?

Mr. Wingo. I got this thought when you first answered that, in view of something that you had said earlier in the day. Of course, we all agree that the credit machinery has to bend and to conform to the economic machinery—the structure which it serves.

Mr. Decker. Right.

Mr. Wingo. And that with the change that is rapidly going on in the economic structure and industrial organization of America there is a tendency toward larger units?

Mr. Decker. Yes.

Mr. Wingo. With mass production and resulting economies and all that talk that we are all familiar with, I took it that your thought was, when you said we ought to let nature take its course, that it would be better for the legislative body to wait until we had a settled economic structure that you thought was going to represent the general trend for some time, before we undertook to finally shape the credit machinery that would serve that economic structure?

Mr. Decker. That was not exactly correct. What I meant was this: That there are forces at work, naturally, to-day correcting this situation, through group banking and otherwise, so that there is not the same necessity for haste on the part of Congress as there would be if those forces were not correcting the situation; and that the reason I thought it was wise for Congress to take its time was not so much to await developments but to make an exhaustive study of what the needs would be. If this committee of Congress, for instance, had sufficiently studied this question so that they were satisfied they had its solution, I would not wait for any development; but I do not believe that any one person in the United States to-day knows just what form this legislation should take, and that being the case, I see nothing in the present situation which calls for precipitant action without due and exhaustive study.

Mr. Wingo. The natural trend, you think, beyond all question,

is toward group and chain and branch banking?

Mr. DECKER. Undoubtedly.

Mr. Wingo. Undoubtedly, you think?

Mr. Decker. Undoubtedly.

Mr. Wingo. What distinction do you make between group banking and chain banking?

Mr. Decker. There is a very decided difference. Chain banking is largely small banks, or, perhaps, a little larger bank, operated more nearly like branches and owned and operated by a holding company, which is in turn owned and dominated by 2, 3, 4, or 5 men.

Mr. Wingo. There is a difference, then, only in the spirit and

uomination of management?

I.

Mr. Decker. No. Group banking consists in the joining of strong bank, large or small, goods banks that can make money, each one of which is presided over by a local board of directors and local management and not dominated in the same way that a bank in a chain is, and the parent company in group banking like ours is presided over by 126 directors, all of whom are successful men, so that you have not the domination of 1, 2, 3, or 4 men, for no matter how good they might be, they might be tempted to do some things which should not be done. In other words, it is utterly impossible with 126 directors in our corporation to join in any movement that would weaken or undermine our banking structure.

Mr. Wingo. You said that there were 500 banks that were anxious

to come into your system-

Mr. DECKER. I think that is about right.

Mr. Wingo. If you had not decided to go slow on account of the suggestion of the Secretary of the Treasury.

Mr. Decker. Yes, sir.

Mr. Wingo. Naturally the inquiry in my mind was why there had not been another group formed to take over these 500, if they are

80 enamored of the group-banking system.

Mr. Decker. Well, it makes no difference how much they are enamored of it; the fact is that these so-called 500 banks that wished to join our group have evidently not interested some one with sufficient capital and brains and organization to take them and form a group.

Mr. Wingo. And they are attracted by the brains and the success in the operation of your corporation—that is the reason they come

to it?

Mr. Decker. Let me make clear another thing. In my judgment it would be impossible to successfully form a group system of banking unless it was centered around one or two, at least, very strong, successful banks in an important center. It would have to head up in one or two very strong banks or it would not be a success.

Mr. Wingo. And I believe you stated earlier in the day that, after all, the success or failure of a bank largely depended upon its man-

agement?

Mr. Decker. Yes; and its location in a place where it is possible

to make money.

Mr. Wingo. Yes. The success or failure of the average bank will depend largely, like the success or failure of the average industrial plant, automobile corporation, or any other, upon the ability and the efficiency of the managing brains?

Mr. DECKER. Right.

Mr. Wingo. Management is three-fourths of it?

Mr. Decker. Well, I would say nearer seven-eighths.

Mr. Wingo. All right. In these groups that you have just spoken of there is danger of deterioration when they lose these few choice

100136-30-vol. 1 pt 8-6

executives which attract these banks now. Take these 500 banks, for instance; if you and these other executives who have proven their ability were to pass out, do you think they would be less inclined to get into your group?

Mr. Decker. I think you would always find in our organization young men coming along who are smarter and abler than we are

Mr. Wingo. The perpetuity and continual growth of the strength of your corporation depends upon your ability to train additional executives to take the place of your men as they drop out?

Mr. Decker. Absolutely; and we have a school for that purpose.
Mr. Wingo. Do you think there is any unhappiness in the business
world in the fear that possibly we will not be able to get enough
trained executives to handle these larger units?

Mr. Decker. In banks?

Mr. Wingo. Banks and everything else. I have been led to believe, in my conversation with men, that there was this fear. They believe in these economies of mass production, and so on, but their chief fear was that they would not be able to find men with the executive ability and training that can make a success of the operation.

Mr. Decker. I think that is answered by the greater opportunity for the development of young men at large salaries and profit-sharing plans which make these young men independent, and a great deal more independent, Mr. Wingo, in my judgment, in most cases than they would be if in business for themselves.

Mr. Wingo. As I understood, your suggestion was that you went out of your trade area, or your Federal reserve district, down into Iowa and Nebraska in order to get diversification?

Mr. Decker. Yes.

Mr. Wingo. Or, rather, you cited that as one of the benefits that flowed from your going down there; that that gave your corporation a diversity of investments or banking operations which added to the strength and security as well as the profits of your institution?

Mr. Decker. Right.

Mr. Wingo. You suggested that you would limit branch banking to, say, a county seat or a small area; that possibly the set-up you thought would be available would be a group system, and, say, here in a large town—we will take a county seat for an arbitrary illustration—will be one of your sound and capable group banks, a unit of your group. Then your theory will be that that unit of your group will be permitted to have tellers' windows or branches in these smaller towns in that county or immediate area that would not be able to maintain profitably a separate independent unit bank?

Mr. Decker. Right.

Mr. Wingo. If it is necessary, in order to give strength to a group system, to have a wide diversity of business and of area, why is it not also true of the branch? Would you not have a failure of diversity of business if you had that branch confined to that one

county?

Mr. Decker. I have no objection whatever, Mr. Wingo, to the branch privilege being extended over that entire trade area so long as you do not disturb the group bank which is in existence to-day. If you will allow the two to compete with each other, you can make the trade area in branch banking just as large as you please, and

if that proves to be the better plan and people like it better, Mr. Wakefield and I will be delighted to take that.

Mr. WINGO. You put your finger on the real situation, and that is this, that in spite of the efforts to restrict concentration of capital, both in industry and banking, as represented by laws of Congress and as represented by banking laws and other laws of the different States, the combination of the leaders of industry and banking, of necessity, finding these other concentrations of capital, have found a way to develop those larger concentrations, and you think, I gathered, that even if we changed these laws, these same men will through these combinations find a way to meet the changing necessihes of the day?

Mr. Decker. Yes; if you do not interfere with existing conditions; but my judgment is that if branch banking were authorized over our entire so-called trade area, or the area which the Northwest Bancorporation is operating to-day, and group banking were in some way legally forbidden that it would result in disaster.

Mr. Wingo. But if we left the situation as it is now, the determination whether group banking or branch banking would prevail, or whether you would have a combination of each, would depend entirely upon the determination or judgment of the men who were Putting their capital in the banking business?

Mr. Decker. Absolutely.

Mr. Wingo. Do you know of any reason why we should suspect that those who are engaged in the banking business would have less difficulty in getting around restraining laws than do the industrial leaders in getting around the restraining laws with regard to industrial combinations?

Mr. Decker. Well, I think banking is much more dangerous to tinker with than any other business in the world, because it is the

heart of all business.

Mr. Wingo. I agree with you, but you do not catch my question. Is there any reason why we, as legislators, could hope that a restrictive law restricting the combination and concentration of capital in banking can be any more effectively enforced than the present laws restricting the combination of capital in industry?

Mr. Decker. Well, I do not know.

Mr. Wingo. It is the same problem, is it not?

Mr. Decker. Very largely. Bankers are human; there are good,

bad, and indifferent ones, but the poor ones do not survive.

Mr. Wingo. In other words, if a majority of the men engaged in the banking business-men whose character and achievements and ability, as well as their control of funds, command the respect of the Investment and the banking world—make up their minds that a given form of banking shall be used, they will find a method, do you not think, to use that form, just like the same type of men in the Industrial world are finding a way to get around the antitrust law?

Mr. Decker. I have no doubt that they would attempt to find

Mr. Wingo. Yes; we know that, but I am not quarreling with you. The thought I had was this, that I sometimes wonder if there is not such a thing as the futility of attempting to enforce certain laws, unsupported by public sentiment.

Mr. Decker. Against economic laws, absolutely.

Mr. Wingo. There are certain economic forces that are represented by the conclusions that are registered by leaders of industry in this country, and those economic forces have in the past frequently proven superior to either the wisdom or stupidity of legislative bodies, have they not?

Mr. Decker. Absolutely, and the sooner Congress can determine what those economic laws are and we go with them instead of against

them, the sooner you will get effective legislation.

Mr. Wingo. You said that branch banks could be operated on a more economical basis than units of a group. What economies of

operation did you have in mind when you said that?

Mr. Decker. Less taxes; you could operate on a much smaller capital. I have the figures here to show that our deposits in proportion to the total capital investment in our group are much smaller than in Canada, Great Britain, or any other country that operates entirely on branch banking. If we were to change all of our banks into branches and make them all branches of the Northwestern National Bank of Minneapolis, that bank would not require as much capital as the combined capital of all of these banks, and there would be a great saving there. There would be a saving in the cost of operation of a branch bank, because it would be run by these so-called hired men at a great deal less expense; but I am equally certain that the difference in cost is more than offset by the advantage of our plan, at least so long as public opinion in that district is as it is to-day.

Mr. Wingo. Public opinion is changed by propaganda overnight;

you are aware of that.

Mr. Decker. Well, it is changing, but it is not merely public opinion; it is local pride, a very desirable thing to have, to maintain, and not to destroy, I think.

Mr. Wingo. Are you an attorney?

Mr. Decker. Not yet.

Mr. Wingo. You made the statement that if your system were turned into a branch banking system, then the local branches in the States other than the States where the parent corporation is located would not pay any taxes.

Mr. Decker. Personal property taxes.

Mr. Wingo. What attorney gave you that opinion?
Mr. Decker. No attorney did. All I know is that the banks in North Dakota are paying in about \$150,000 a year in personal property taxes, on the capital stock of those banks.

Mr. Wingo. Do you mean to say that if a bank in Minneapolis had a branch in South Dakota, the branch would not pay any personal

property tax in South Dakota?

Mr. Decker. Not unless they enact a new law.

Mr. Wingo. Have they not a personal property tax out there?

Mr. Decker. I understand so.

Mr. Wingo. How can they escape it?

Mr. Decker. Mr. Washburn here is a lawyer.

Mr. Wingo. They would tax you on real estate and on the capital out there.

Mr. Decker. There would be no capital there.

Mr. Wingo. No capital? Mr. Decker. No, sir.

Mr. Wingo. They might do like some of the States, require these foreign corporations to estimate the amount of capital used in the State and then that would be the basis of a contest in the courts.

Mr. Washburn. Perhaps so, but they would have to pass a new

law.

Mr. Wingo. Do you think Congress would permit a corporation to escape taxes like that?

Mr. Washburn. Section 5219 now covers that.

Mr. Wingo. Your corporation is a Delaware corporation, is it?

Mr. Decker. Yes, the holding company.

Mr. Wingo. Suppose that you had a corporation with branches in other States; if it is a State corporation, section 5219 would not apply to it, and you gentlemen might say that they would escape local taxes.

Mr. Decker. No, the corporation which would have branches would be the Northwestern National Bank of Minneapolis. The

Northwest Bancorporation would be dissolved.

Mr. Wingo. You say that under a branch banking system that the branches would not pay any taxes because the situs of the branch was in a different State than the situs of the home bank?

Mr. Decker. I assume that. Perhaps I may be wrong.

Mr. Wingo. I think you are in error, but you may be right. I am not much of a lawyer, and I am mistaken frequently, but I think you are now.

Mr. Decker. Very likely.

Mr. Wingo. Mr. Chairman, I believe I will forego the other questions so as to give these gentlemen an equal opportunity with mine.

Mr. Strong. Mr. Fort.

Mr. Fort. Mr. Decker, you have said that your banks, with the exception of three or four, do not deal in securities—is that correct? Mr. Decker. Well, the banks themselves in no case deal in securities

Mr. Fort. Either as underwriters or otherwise?

Mr. Decker. No, sir; except as they buy them for their own investment.

Mr. Forr. They do not enter into underwriting?

Mr. Decker. No. sir.

Mr. Forr. But they have affiliates in some cases?

Mr. Decker. Yes, sir; corporations capitalized for that purpose.
Mr. Forr. With the same officers as the officers of the bank?

Mr. Decker. Not entirely. They are expert men in that particular line.

Mr. Forr. Do you feel in these modern days, when so many of the loans of banks are upon collateral, that it is wise for the same men to act both as officers of an affiliate underwriting securities and as officers of the bank making loans on those identical securities?

Mr. Decker. I think it is an element of safety, because the securities company affiliated either directly or indirectly with a strong bank will be more conservative than a securities company which is

not affiliated with a strong bank.

Mr. Fort. You think that there would be no feeling of obligation on the part of the bank to grant greater loans on securities sold to its customers by its affiliate than it would grant on securities sold to its customers by others?

Mr. Decker. Not the slightest obligation. In fact, in our own bank, we do not even know what securities the securities company is handling, unless it is a special one that has been brought to our attention. We pay no attention to that whatever.

Mr. Fort. Some of your banks are incorporated under Federal law, under the national bank law, and some under State laws, are they not?

i

0

Mr. Decker. That is correct.

Mr. Fort. Do you see any advantage or any disadvantage to be had by having uniformity of both State and national laws?

Mr. Decker. Very great.

Mr. Fort. Which way should it be-uniform or not?

Mr. Decker. Uniform.

Mr. Forr. Would it be your judgment that the national code, as it now stands, is a better banking code than the State codes?

Mr. Decker. I think, as a rule, yes. Many of the State codes, however, are modeled after the national. Our own is in Minnesota-

Mr. Fort. How many banks are there in your own group?

Mr. Decker. Ninety-eight.

Mr. Fort. And how many in Mr. Wakefield's group?

Mr. Decker. About 93.

Mr. Forr. How many member banks are there in the Ninth Federal Reserve District?

Mr. Decker. Members of the Federal reserve system, you want?

Mr. Forr. Yes; the total number.

Mr. Wakefield. There are over 300 and some odd banks which are members.

Mr. Fort. The story has been told to some of us that your two corporations combined own sufficient banks to give you, acting jointly, the power to elect the directors of the Federal Reserve Bank of Minneapolis. Is that true or not?

Mr. Decker. I do not know. I have not taken the trouble to even look it up. I have absolutely no interest in it, because I do not know what in the world we would do with the Federal Reserve Bank if we did control it.

Mr. Forr. Do you feel that it is a desirable situation that an instrumentality of the Government, such as the Federal reserve banks should be subject to control as to its directorate by any single group!

Mr. Decker. No, absolutely not.

Mr. Fort. Or any combination of a couple of groups, working together?

Mr. Decker. Well, it would be just a question of which would secure the better management of the Federal reserve bank.

Mr. Fort. But, the distinction being that the Federal reserve bank is a Federal instrumentality, do you think it ought to be allowed to be controlled by a relatively small number of men in a district ?

Mr. Decker. I should think it would be better if it were not, and certainly we have not the slightest desire to control it.

Mr. Fort. You have said, and quite wisely, that we should be very slow to legislate in this question, and I think you have shown a very fine spirit in your view that you should be slow to proceed to scramble anything that we might feel ought to be unscrambled.

Mr. Decker. Right.

Mr. Fort. Do you think that it would be wise for us to request the banks of the United States generally to withhold group and merger action until we can reach a decision?

Mr. Decker. Well, I should doubt it.

Mr. Fort. Your own procedure has indicated that you feel that

18 what should be done.

Mr. Decker. Well, in the meantime there might be delay in operations which are distinctly of service to the business of the country. I never had the thought presented to me before of Congress suggesting to the public that some day it is going to pass a law and they had better hold off until Congress decides what the law shall be.

Mr. Fort. Of course, a great deal of this has to meet the approval

of Federal officers.

Mr. Decker. I think it would be very proper for the Comptroller of the Currency to keep very close supervision of what is going on in the country in the way of group banking, to see that nothing is done which would indicate a stock-jobbing plan or a manipulation of banks, and if he saw the slightest evidence of it, I think it would be very proper for this committee to charge him with keeping a closer watch to see that no damage was done.

Mr. Forr. A merger of a national bank has to be with the consent

of the Comptroller of the Currency!

Mr. Decker. Right.

Mr. Fort. That he could control absolutely.

Mr. Decker. Yes, sir. I would have no objection whatever to the Comptroller of the Currency being informed of every acquisition we propose to make, and I think we could satisfy him or at least he would agree with us or we would agree with him as to whether

It was wise to go ahead, if it were a national bank.

Mr. Fort. You were asked a question or two about the operation of the fiduciary powers of banks in connection with the buying and selling of securities. Do you see any reason, Mr. Decker, why the same relation should not exist between a bank as trustee and its cestui que trust as the relation that exists between an individual trustee and the cestui que trust?

Mr. DECKER. Yes. Mr. Fort. What?

Mr. Decker. A bank is a large holder of people's money on deposit. We have felt in our own case that it was better to have the trust in an absolutely separate and distinct trust company, because under our own State laws, and therefore in the case of the Northwestern National Bank, we have no trust department. The trust company is managed by specialized men. It is a very dangerous, very complicated, and a very intricate business; it requires expert training particularly on the part of lawyers who have no knowledge whatever of commercial banking or even investment banking except as their trusts are buyers of securities.

Mr. Fort. I think you answered the previous question as though you differed with me. What I had in mind was this: That the or dinary private trustee may not, directly or indirectly, in any transaction with the trust make any profit of any sort or description other than the commission.

Mr. Decker. Right.

Mr. Fort. In Kentucky they have a law that the bank must pay ! minimum of 5 per cent interest on all funds on deposit with itself where it is the trustee and must further allow whatever it makes on other funds in its hands as interest to the depositor. That rule would apply to the individual trustee if he retained any moneys of the trust. Is there any reason for distinction in favor of a bank over an individual trustee?

Mr. Decker. I do not think any bank or any individual trustee can afford to pay 5 per cent on trust funds and invest them in proper

securities.

Mr. Forr. I said funds on deposit in those banks acting as trustees Mr. Decker. Yes; but they must carry reserves against those deposits. My judgment is that they can not invest them safely and get such a rate of interest on the deposit.

Mr. Fort. The rule in Kentucky, as I understand it, is that it must pay all that it makes on its own trust funds, and that it may not deposit at 2 per cent, for instance, trust funds in its own checking

department while awaiting investment.

Mr. Decker. We are not permitted to keep our own trust funds in the trust company at all.

Mr. Fort. Do you believe in that? Mr. Decker. Absolutely.

Mr. Fort. Then the question of the rate of interest becomes in material.

Mr. Decker. And we have to go out and compete in the open market for the interest you can get,

Mr. Fort. I think that is eminently correct.

Chain banking, as we have it to some extent in my State, has taken the form of ownership of the stock of one bank by another bank. Are your banks permitted to own stock in other banks?

Mr. Decker. No, sir; except in foreign banking corporations, and

then with the consent of the Comptroller of the Currency.

Mr. Fort. How about your State banks and trust companies? Mr. Decker. They are not permitted to own stock in any corporation.

thi

b

Mr. Fort. Are your trust companies?

Mr. Decker. No, sir.

Mr. Fort. So there is no cross-ownership of stock anywhere 10 your system?

Mr. Decker No, sir.

Mr. Fort. In a group system such as this, in those States that per mit banks to own stock, they ought not to be permitted to own stock in the company that owns the control of them, ought they?

Mr. Decker. Certainly not.

Mr. Fort. Or cross-stock ownership in each other?

Mr. Decker. No. sir.

Mr. Forr. Your suggestion of teller's windows in the smaller towns which are not big enough to maintain a unit bank brings up this question: Would you limit those teller's windows to those communities where there was no unit bank?

Mr. Decker. Well, I think the natural result would be that if there was a unit bank in that town and it was unprofitable, they would certainly want to go out of business and would immediately go to the bank which was authorized to start a branch there or a so-called teller's window, and if they had assets that were of any value at all, the two would get together.

Mr. Forr. Yes; but let us take the towns where there is a unit bank and where it might be thought that there was also room for a teller's window; would you have the teller's window go in and compete with

the unit bank?

Mr. Decker. I would not fear that, because the bank would not start a branch there without the approval of the Comptroller of the Currency if it were a national bank, or without the approval of the State department of banking if it were a State bank, so that I think that that check would take care of it.

Mr. Forr. But we are considering here the possible adoption of branch banking through trade areas, and in formulating legislation should we permit the Northwestern National Bank of Minneapolis, as an example, to establish a branch or a teller's window in a town al-

ready possessing unit banks?

Mr. Decker. Certainly, with the consent of the Comptroller of the Currency; otherwise they could only have a branch in some place where there was not a unit bank. The probabilities are that they

could not make any money there.

Mr. Forr. I am not speaking of your organization in the Northwest, but, generally speaking, men being human, would not the power to establish a branch in competition with a unit bank have the result of forcing the unit bank to become a member of a group, if you wanted it?

Mr. Decker. Well, I think that if that privilege were given, it could only be operated with the consent of the Comptroller, and the

danger would be very greatly minimized.

Mr. Fort. Not so long, would it, as you have a duplicate system of State and national banks and you have in your group members of

both?

Mr. Decker. If the group continues, I see no objection whatever to saying that you could not put in a branch where there is a unit bank, but if you are talking about branch banking exclusively, that is, doing away with group banking and having nothing but either trade area branch banking or absolute unit banking, group banking and chain banking to be done away with entirely, then that is a different question.

Mr. Fort. I was talking on the theory of a possible extension of branch banking privileges without an effective prohibition of group

or chain banking.

Mr. Decker. Well, then, we have no objection whatever to branch banking being restricted to towns where there are no unit banks.

Mr. Forr. Would it or would it not be a sounder piece of legisla-

Mr. Decker. Well, that is a pretty delicate question. I do not know.

Mr. Forr. The theory being whether we want to permit competition from a big bank in a metropolitan center—

Mr. Decker. I see your point.

Mr. Fort (continuing). With a locally controlled bank which desires to remain independent.

Mr. Decker. If you prohibited the larger bank from having a

branch in that town, how are you going to serve the people?

Mr. Fort. Presumably the unit bank will not continue unless it is profitable, as you very ably pointed out.

Mr. Decker. You would wait until they were ready to quit?

Mr. Fort. In other words, you would either have to wait until they were ready to quit the locality or else you would have to permit a big bank like yours to go in and put up a form of competition that the local bank could not stand.

Mr. Decker. I still think I would not make that restriction so long as the larger bank could not put a branch in the town where there was a unit bank except with the consent of the Comptroller of the Currency. If you want to entirely eliminate the competition between the State and the national system—and, of course, the small bank in most cases will be the State bank—then you immediately say to the national bank, "You can not go into a town where there is a State bank," and I do not believe that that would be in the interest of the national banking system.

Mr. Fort. I see that view; I had not thought of that.

One other line of questions. You have explained, and I think entirely proper, the reasons for the different rates of interest that are paid by local banks in your group to depositors. Do those same reasons apply as to the rates of interest that should be paid to the depositors in a branch banking system, or should a branch banking system pay uniform rates to all of its depositors?

Mr. Decker. Well-

Mr. Fort. The investment of funds is identical.

Mr. Decker. I have had no experience in branch banking, but my first thought would be that in all probability under branch banking they would pay the same rate at all points, and I think the Canadian banks do that. I think that would be a natural development.

Mr. Forr. Of course, if we were going to allow branch banking to compete with unit banking, they could go in and pay a higher

rate of interest.

Mr. Decker. The unit bank could.

Mr. Forr. The branch in the town where it was competing?

Mr. Decker. Yes.

Mr. Forr. And the question in my mind is, if we are going to extend branch banking, should we permit that to be done, or should we say that since all of these investments gain the same rate of interest, whether from Minneapolis or Fargo, you have to pay the same rate to your depositor?

Mr. Decker. I think that would be fair. In other words, I think it would be unfair to let the branch go into a town to-day where there is a unit bank and try to run that bank out by putting up the rate. I think that would be grossly unfair, and should be

curbed.

Mr. FORT. Or for them to get the money from the town where they had no competition and paid a minimum rate of interest

Mr. Decker. I think that is unfair.

Mr. Fort. And then pay a higher rate where they had competition?

Mr. Decker. I think that is unfair.

Mr. Fort. That is all. Mr. Strong. Mr. Busby.

Mr. Busby. I believe you stated that your authorized capitalization was \$300,000,000?

Mr. Decker. Yes, sir.

Mr. Bussy. And you only have \$80,000,000 of that subscribed and outstanding in stock?

Mr. Decker. Right.

Mr. Bushy. And that gives you an additional \$220,000,000 to be brought into play in the operation of your Northwest Bancor-Poration in the event you decide that you need it?

Mr. Decker. Yes, sir.

Mr. Busby. What amount of that \$80,000,000 outstanding covers banking operations?

Mr. Decker. All except about \$12,000,000, which is in cash or

liquid securities.

Mr. Busby. Now, what part covers investment trust operations or securities? Do you have separate corporations organized as investment security organizations?

Mr. Decker. Yes, sir.

Mr. Busby. How much do they amount to?

Mr. Decker, I would have to guess at it, but I would say \$3,000,-000 or \$4,000,000.

Mr. Busby. Now, you have also your cattle loan financial organiza-

tion. What does that amount to?

Mr. Decker. I think the capital is \$150,000, capital and surplus. Mr. Busby. You told us a while ago of issuing 150,000 shares of stock of the holding company, which was taken over by a syndicate at \$72 a share?

Mr. Decker. At \$70. It was offered to the shareholders at 72.

The underwriters were given two points for underwriting it. Mr. Busby. And, that having been taken over by the underwriters,

they attempted to sell it and the stock market crash came before they disposed of it?

Mr. Decker. No, the stock market crash came long before they acquired it. They did not pay for it until December 15, or six weeks after the crash in the stock market.

Mr. Busby. What type of organizations composed your under-

Writing syndicate?

Mr. Decker. Banks, securities companies, bond houses like Harris-Forbes, Guaranty Trust, Halsey-Stuart, the Continental in Illinois,

First Chicago, and others all over the country.

Mr. Bushy. The greatest number of units included in that number of 75 which formed the underwriting syndicate were investment trust organizations, were they not?

Mr. Decker. No, none of them were investment trusts. They were bond and securities houses who buy and sell securities.

Mr. Busby. Outright?

Mr. Decker. Yes, sir. Mr. Busby. The way things turned out, your organization made \$3,000,000 on that adventure, between the price at which it proposed to repossess them and that at which it sold them?

Mr. Decker. And we added \$2,800,000 to our surplus. Mr. Busby. You outguessed the other fellows?

Mr. Decker. We thought we did a good piece of merchandising.

[Laughter.]

Mr. Busby. That is the situation all over the country with banks that have large banking organizations and that have these subsidiaries?

Mr. Decker. Yes, sir.

Mr. Busby. They are engaged largely in the merchandising or guessing game, as to which one is going to get the better of the securities operation when it finally is sold out?

Mr. Decker. Yes, sir.

Mr. Busby. Do you not think that that situation has largely inflated the bond and stock markets of the country?

Mr. Decker. Undoubtedly.

Mr. Busby. Do you not think that the credits required by the business of the country are much less than the amount of credits that have been extended by operations just described and by bank loans and call loans?

Mr. Decker. At the inflated period prior to the crash, yes; to-day-

Mr. Busby. A year ago at this time, did your banks maintain a large reserve in the New York banks so as to take advantage of the high rate on the call money market?

Mr. Decker. Many of them; not with the New York banks. Mr. Bushy. I mean in that locality, so as to be available for the

New York Stock Exchange operations.

Mr. Decker. Many of them loaned money on the Street on call loans and made those loans through a New York bank.

Mr. Busby. That is what I mean.

Mr. Decker. Oh, yes. In our case, it happened at a time when our elevators were full of grain, and our money was all being used at home. We did not have any money loaned in Wall Street because we did not have any to spare.

Mr. Busby. I did not say when the crash came; I said a year ago

at this time.

Mr. Decker. Well, we do not hesitate to loan on the New York Stock Exchange, so-called brokers' loans, when the money is not

required at home by our own customers.

Mr. Bussy. Do you not think that the fact that the call loans commanded an interest rate considerably above that ordinarily realized in the commercial field that it pulled much money from all other parts of the country to New York City where those operations were under way?

Mr. Decker. Not in our banks. We paid no attention whatever

to the call-rate loan in New York.

Mr. Busby. You could make more money by placing it there. Mr. Decker. Yes, temporarily, but we would have driven our trade away. We loaned to our customers at 6 per cent millions of dollars when we could have loaned it on the Street at 10 per cent, and it did not tempt us a particle. In the first place, we were not interested in the other 4 per cent and, in the second place, we thought that it was safer to lend our money at home.

Mr. Busby. Subsidiaries that deal in stocks and bonds are hardly as stable as the main banking institutions in their operations, are

I.

Mr. Decker. No, sir; they are not as stable.

Mr. Busby. And that is the reason why you would prohibit them from holding and handling trust funds placed as you mentioned a while ago?

Mr. Decker. Yes, sir.

Mr. Busby. With your banking institution.

Mr. Decker. But I want to differentiate between the securities company affiliated with us and the one that is independent on the Street, because we have a reputation at stake, and naturally our securities company will decline many underwritings which the private banking institution takes over.

Mr. Busby. What would you think of a law that would prohibit banking institutions from having subsidiaries that engaged in that

class of marketing!

Mr. Decker. I think it would be disastrous, because it would leave the field absolutely over to the private operater, who could raise more cain than the banks would ever think of.

Mr. Bushy. It would make banks safer, would it not?

Mr. Decker. No, sir; not in my judgment.

Mr. Bussy. Do you not know that a bank that has a subsidiary, where that subsidiary is handling an issue of bonds, is going to be more lenient toward its own institution than it would toward the general field of investment?

Mr. Decker. No, sir; absolutely not.
Mr. Buser. Do you not think that those same directors in the bank as are in the subsidiary, operating for the same purpose, to secure dividends on investments, would be easier with the investments handled by the subsidiary than they would with those com-

ing from the general field of investment?

Mr. Decker. No, sir. If a customer came in to see me as president of the Northwestern National Bank and wanted to borrow money on a certain security, and I happened to know that that security had been handled by our own securities company, I would scrutinize it more carefully than I would if it came from some other place.

Mr. Bushy. That is a little contrary to human nature, is it not? Mr. Decker. No, sir; not in banking. It is contrary to the

methods of banks that have gone broke.

Mr. Busby. I thought you had been putting human nature into Your banks, until we came to these securities companies, and there

you seem to get hard on them.

Mr. Decker. Any banker who is not hard once in a while won't be a banker very long. It is not at all impossible for a bank to be strict and severe and still be human.

Mr. Bussy. Now, the inflation of 1921 was spread over the country generally, was it not?

Mr. Decker. Yes. 1920, I think it was.

Mr. Bushy. I meant 1920. And then we began to build up a new method of financing. Instead of borrowing money from a bank, business enterprises issued stocks and bonds and sold those to the public generally, and the public all over the country acquired those investments, did they not?

Mr. Decker. Yes.

Mr. Bussy. Those were sold largely on the New York Stock Exchange and on the other stock exchanges throughout the country to the public. Do you not believe that the public bought many of those with a view to getting a raise in the market rather than getting dividends on the stocks?

Mr. Decker. Unquestionably.

Mr. Bussy. And it was more of a gamble, so far as the public was concerned, than an investment?

Mr. Decker. Yes.

Mr. Bussy. And these inflated bank credits and the easy money for call loans increased that type of operation on the part of the people over the country, did it not?

Mr. Decker. Yes, sir.

Mr. Bussy. And when the crash came, although it was in another way from the way the 1921 crash happened, it just as effectively stifled business and crippled the people financially as the crash of 1921, did it not?

Mr. Decker. No. The stock-market crash last year was not the cause; it was the result. We had been through seven or eight years of tremendously rapid expanding business; we were due for a slow-up. It was in evidence six months before the stock market collapsed, and therefore I think it would have come anyhow, a slowing up in business, and business is not slow to-day throughout the United States generally because of the stock-market collapse; it is slow because we have been going very fast, and naturally it is healthy to slow up.

Mr. Busby. We were overbuilt in many lines, were we not?

Mr. Decker. In many cities.

Mr. Busey. I am not talking of building in the sense of brick and mortar, but we were overdeveloped?

t

1

Mr. Decker. We were overtrading.

Mr. Busey. If I understand the situation aright, the demand for increased credits in 1928 was about 3 per cent, while through the different types of loans made in 1928 increased credit to something like 8 per cent, and we necessarily had to wait until we caught up with the demands for business to the extent that we had extended credit in the field of credit operations beyond a safe point compared with business needs.

Mr. Decker. Well, when you become too much inflated and you get prices too high, you have got to slow up until your savings and your increase in wealth is able to take care of that situation, and it happened in 1893 one way, in 1897 in another way, and last year in still another way, and the next one will probably be different. It all

goes back to the same thing.

Mr. Busey. Are your stocks listed on the Chicago Stock Exchange? Mr. Decker. Ours is; yes, sir.

Mr. Busby. I notice that last week 2,750 shares—Mr. Decker. In the Northwest Bancorporation.

Mr. Busey (continuing). Were sold on the Chicago exchange. What would prevent outside interests from acquiring a controlling interest in your holding corporation if its shares are listed in sufficient number on the Chicago exchange?

Mr. Decker. There is no list of shares, Mr. Busy, on the exchange. They are simply offers to trade in it. It would make no difference whether they were listed or not; it is always a question of buyer and seller. When those two meet, there is a trade.

Mr. Busby. Suppose some one kept on buying until enough of Four shares were sold to a purchaser—

Mr. Decker. They never would get them, because the higher the price goes, the less the holder is inclined to sell.

Mr. Bussy. You saw to it that not enough shares in the Northwest Bancorporation are available at any price to the prospective

Purchaser to get control of your institution?

Mr. Decker. I would say that 90 per cent of our stock belongs to People who would not consider selling it at any price, and if they suspected, as they would a long way in advance, a desire to get control, the proposed purchaser would be checked before he had started

Mr. Busby. Where did these 2,750 shares that were sold come from?

Mr. Decker. I have no idea.

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, APRIL 16, 1930

House of Representatives,
Committee on Banking and Currency,
Washington, D. C.

The committee met at 10.30 o'clock a. m., in the committee room,

Capitol, Hon. James G. Strong presiding.

The ACTING CHAIRMAN (Mr. Strong in the chair). The committee will come to order and the hearings will be resumed. Mr. Wakefield, of Minneapolis, is present and will address the committee. Mr. Wakefield.

STATEMENT OF L. E. WAKEFIELD, VICE PRESIDENT FIRST BANK STOCK CORPORATION, OF MINNEAPOLIS AND ST. PAUL, MINN.

Mr. Wakefield. Mr. Chairman and gentlemen, I represent the First Bank Stock Corporation, of Minneapolis and St. Paul, and I have here a prepared statement with copies enough to present to the various members of the committee; but in order to get the matter before you this morning I will give you briefly some of the facts which are presented in the statement.

As I understand it, the purposes of this committee are to investigate the trends which are taking place in the banking business, attempt to discover the causes for the recent developments, and to find a Proper solution of the difficulties which have arisen and enact laws which will provide for the conduct of the banking business of

ue future.

In order to arrive at a satisfactory conclusion concerning matters of that kind, it is perhaps essential that we have some of the facts which have developed the present situation; and in speaking of the banking business my experience has been entirely within the ninth federal reserve district, in that territory, and the things that I speak of will be those of my own knowledge as existing within that territory, and without any pretense on my part of understanding or of knowing definitely what may be the facts in other sections of the country.

Our territory was developed and built up from nothing, and during a long period of years, largely, I think, through the influence and operation of the so-called unit bank. Small groups of persons in communities of various sizes organized banks, and during a great many years successfully operated them, always, in my opinion, with

the desire on the part of the people operating them to serve to the best possible advantage their particular community and the businesses and people who were within that community. Their undertakings were successful and commendable over a long period of years

Up in our territory the development of the unit bank went way beyond any possible reason for the existence of banks, and in 1920 we found ourselves with a greatly excessive number of banks compared to population over any other section of the United States.

The State of North Dakota at that time had 5 banks in existence per population to 1 on the average over the country; South Dakota had 4; Montana, 3; and Minnesota twice as many as the average. Most of these were banks of small capital and small deposits.

Mr. Letts. How was it in Iowa—can you say? Mr. Wakefield. I never made up figures on Iowa.

This development was largely encouraged by the feeling on the part of the various legislatures, the lawmaking bodies of the States that the privilege of banking ought to be extended to the small individual—which is a perfectly natural and proper feeling—and the permitting of the establishment of banks of as small capitalization as \$10,000, and in towns where the need for additional banks was not, perhaps, evident and justified. Banking was a popular business. During all that time there were certain profits to be derived in the banking business which have since been eliminated.

The business of making farm mortgages, and of selling them and transferring them to insurance companies and investors, afforded a very substantial profit to the country banker in the way of commissions on those loans. The business of selling lands, of dealing in them, during all this period, occurred when lands were increasing in value and the buying and selling of lands was of large volume and there were substantial profits to be derived by country bankers in the operation of the land business.

In addition to that, during that period, and up until recent years, each of those small country banks made it a practice to charge exchange on their checks when they were returned to those banks, and which furnished them, in many cases, with revenues sufficient practically to pay the clerical help of their banks.

Now all of those sources of revenue have disappeared. The establishment of the Federal land banks and the joint stock land banks, with their tax exempt securities, have changed completely the current of the mortgage business. The deflation and difficulties in the agricultural sections have practically eliminated farm land sales.

The establishment of the rural credit associations by the various States has been an added source of money on farm mortgages, and eliminated the natural and existing methods of handling those securities.

The Federal reserve bank, when it was established, operated upon the theory that all transfer of checks should be carried on a part basis and that eliminated, over a period of years, those exchange charges from which the small banks had derived considerable revenue in the years past. That particular feature, however, has recently been modified to some extent, and those small banks are again privileged to charge exchange and do so charge; that is, those not members of the Federal reserve system.

The general basis of loans in those banks in the ninth Federal reserve district, was upon credits largely based upon farm values and the business of agriculture. So in 1920, there was in existence in the

hinth Federal reserve district, about 3,800 banks.

With the change that followed the deflation of agriculture, a large part of the basic value of the collateral upon which their loans were based, was destroyed. Over a period of many years, the increasing value of farm lands was an automatic debt satisfier on the part of the farmer and it was frequent or ordinary that the country banker would loan to his farmer customer on a second mortgage certain funds which, after a period of three to five years, could be joined onto the first mortgage on that land and liquidated to his bank.

With the deflation period coming on, that possibility or opportunity was no longer in existence and the country banks found themselves holding equity security to cover the debts of his customers to

his bank and to which there was no value.

Just in order that we may understand just a little of what has taken place in connection with farm values, there have been in the ninth Federal reserve district, during a period of four years, abandonments or foreclosures in the four States of North Dakota, South Dakota, Minnesota, and Montana (this is based upon figures prepared by the Department of Agriculture), the years being 1923, 1927, 1928, and 1929, involving 25,820,000 acres and covering 67,867 farms.

During the period from 1920 to 1929, there were 1,517 banks closed in that district. There were 226 of those banks which have since respend, leaving the remaining 1,300 closed involving deposits of over \$300,000,000, which represented the savings of the thrifty people of the towns in which those banks were located, to the number of ap-

Now, gentlemen, I do not know whether any of you have ever lived in a town where there has been a bank closing. But if you have, you have some appreciation of what it means to have the savings of the thrifty people of the community, accumulated over 15, 25, or 30 years, wiped out and destroyed in an overnight catastrophe. It means that that community has a setback that it will be the most difficult thing for them to recover from, and such things have happened in 1,517 communities in the ninth Federal reserve district, and I have a map here showing the ninth Federal reserve district and showing by black spots each point where there has been a closed bank. Some of them have several. I thought it would give you a picture, offhand, of the extent that that thing has occurred.

Of course, very many of these towns or sections were left entirely

Without banking facilities.

I have a statement here which is very carefully prepared. It is not an individual effort. It is the result of facts and thought given over several months, and I am going to leave enough of them so that each member may have one to read fully if he chooses to do so. I really would like to have this become a part of the record when I get through with it.

Mr. Strong. Without objection, it is ordered that the statement prepared by Mr. Wakefield, part of which he is now discussing, shall

be wholly incorporated in the record at this point.

(The statement referred to is here printed in full, as follows:)

STATEMENT BY LYMAN E. WAKEFIELD, VICE PRESIDENT FIRST BANK STOCK COP PORATION; PRESIDENT FIRST NATIONAL BANK IN MINNEAPOLIS; BEFORE THE BANKING AND CURRENCY COMMITTEE OF THE HOUSE OF REPRESENTATIVES

Gentlemen of the committee, group banking as it has developed in the ninib Federal reserve district is designed to neet definite conditions existing in the Northwest. I am not here as a special pleader for group banking as against any other system, but simply to explain the causes that resulted in the develop ment of a system of banks around the First National Banks of Minneapolis and

Essentially group banking is the control through majority stock ownership of a number of banks through a holding company, patterned corporately after the modern investment trust, but operated as a central management institution In our case the holding company is the First Bank Stock Corporation. With it are affiliated some 97 banks, trust companies, and financial institutions, located within the boundaries of the ninth district, which includes the States of Minnesota, Montana, North and South Dakota, the upper peninsula of Michiganand northwestern Wiscons n.

Banks in the group affiliate with the holding company through exchange of shares, or through outright sale of stock. Each retains its separate identify under local management of officers and directors and operates independently of the other member of the group, but subject to examination and supervision of the halding company. of the holding company

Affiliation is a mutual transaction. We have maintained the position of offering opportunity to the individual banks to enter the group. Banks desiring to remain independent will continue to have our earnest support and cooperation. The First National Banks of Minneapolis and St. Paul have thousands of accounts from unit banks throughout the Northwest and Middle West, and certainly we would do nothing to jeopardize their position or attack their independence. But the independent banker appreciates the benefits to derived from the group plan as acutely as do the metropolitan banks which fathered this practical reorganization of the banking structure in the Northwest

The alacrity with which both the large and small banks in the district have taken advantage of the opportunity of affiliation is evidence of the fact that the northwestern banks is that the northwestern banker is conscious of the benefits that the group system offers.

To understand the group banking movement requires an appreciation of conditions in the Northwest. Actually, a changed economic status has compelled a reorganization of rural banking. The group plan as we have developed it is accomplishing this reorganization and should result in greatly improve conditions, for certainly the Northwest must have strong banks in which there is absolute confidence if we are to progress commercially. The territory was and still is largely agricultural, although its resources are as diverse as any section of the United States, but the collateral that agriculture offered to substantiate its loans has always been the basis of most credit outside the largest commercial centers. largest commercial centers.

Prior to 1920 can be considered "the good old days" in rural banking since the Civil War, land values in the Northwest had been steadily appreciating. Agricultural banks loaning on real-estate collateral could deal almost The increase in land values over the period of three to five years always provided a volume of additional collateral and safety. Farm mortgage were as salable as Government bonds. The country banker was constants solicited to sell mortgages to investors at distant points. If he made a mistaken multing too many error in the country banker was constants. in putting too many eggs in the one basket, he had every reason to believe that it was about the best basket available.

Since 1920 the Northwest has been the scene of a constant struggle, political and economic, to reestablish the foundations of its basic financial structure which were rudely jarred by the sequences of the war. The years 1917 and 1918 had witnessed a magnificent effort on the part of the farmers of the Northwest to increase to a war in the part of the farmers of the sequences. Northwest to increase to a maximum the production of foodstuffs as a patriotic contribution of the National Contribution of the Nati contribution of the Nation's war effort. Production costs increased, market values rose and land values appreciated greatly as a consequence. These

cidents of expansion were reflected in the operations of the rural banks of the territory. Much additional land was brought into cultivation. Machinery and stock to till this new land were purchased in large quantities at high brices. The banks cooperated fully with the agricultural population by the extension of new credits which were reflected in tremendously increased deposits. A large equity in these newly developed farms was represented in

second mortgages held by the banks as collateral for note loans.

With the advent of 1920, the general price level took a sharp decline and the reaction followed throughout the entire credit structure. Country banks serving exclusively agricultural communities and often areas dependent upon one or two cereal crops found themselves confronted with drastic deflation of all values upon which their business was based. When the price deflation began loans and discounts were at a peak two and one-half times as high as the level of a normal period before the war. The late John H. Rich, chairman of the board and Federal reserve agent for the Federal reserve bank in Mindeapolis, described the banking structure as it existed in 1921 in a report

submitted to the Federal Reserve Board.

"Just preceding the collapse of 1920," he said, "the district contained 3,875 banks, the acreage in wheat had increased, merchandising establishments had Towded in where there was no economic necessity for them, and all lines of business activity had been overdone. Nothing could be more characteristic than the then existing banking situation. Based on the ratio of population per bank for the United States as a whole, North Dakota had five banks where one would have been sufficient, South Dakota, four, Montana three, Minnesota business.

twice as many as the national average."

Since 1920 America has heard much of the farm problem from the territory hrolved; but the banking problem was equally acute. During the 10-year beriod from 1920 to 1929, inclusive, 1.517 banks in the ninth Federal reserve district closed their doors. Of this number, only 226 reopened. The remaining 1,300, with deposits in excess of \$300,000,000, were liquidated at a heavy cost to hore than 300,000 depositors. These losses fell most heavily upon our farming bornlation and it is from the districts hardest hit by bank failures that the host insistent demands for farm relief have come. In many cases the recovery depositors was practically nil. Some paid from 15 to 20 cents on the dollar. the it was a minority that yielded the depositors more than one-half of the funds intrusted.

The grim record of closed banks by years follows:

In desire recover or cropper survey			
100	35	1925	168
100	73		283
100	64	1927	142
100.	279	1928	94
924	295	1929	84

But no statistical summary can tell the whole story of the distress that followed in the communities affected. The wiping out of the capital investments of stockholders and the further levying of liability assessments consumed the wings of thousands of individuals and families. Sacrifices far beyond legal requirements often were made in vain attempts to avert closings. Many towns were left without banking facilities. In a number of instances, public-spirited Broups of business men out of loyalty to their home towns guaranteed deposits and brought out frozen assets enabling the banks to continue. These patriotic mptions of loss, however, were few as compared with the total.

The farmer customer of a closed bank suffered doubly. Not only was his eash capital tied up, but he was deprived of his source of credit and was combelied to submit to hasty and unexpected liquidation of his loans to satisfy the hims of closed bank receivers. The man who had undertaken a program of versification was forced to sell off his foundation stock at meat prices to

atisfy his loan.

The rural bank failures are a direct reflection of agricultural conditions. The behavior of Agriculture recently compiled a comprehensive record of agriculture recently compiled a compiled a comprehensive record of agriculture recently compiled a compi attiment of Agriculture recently compared of Minnesota, North and South bakota, and Montana, it shows that farm bankruptcies for the four States during the five years from 1910 to 1914, inclusive, averaged 159 a year. Here is the record of such bankrunteles in the four States beginning five years later:

The precipitate deflation of farm land values carried prices to a point lower than had existed since the panic of 1893. The decline in some areas was much heavier than in others. Recently the Department of Agriculture surveyed the farm land situation in the States of the Northwest. Establishing the average price of lands from 1912 to 1914 at 100, it shows that the inflation carried valuations in Minnesota in 1920 to point 213, an increase of 113 per cent. The present level is 138. North Dakota went to 145 in 1920 and is now at 98, two points below the pre-war price. South Dakota went to 181 in 1920 and is now at 96. In Montana a peak of 126 was reached in 1920. In 1929, prices had fallen to a level of 72, or 28 points below the pre-war average. In 1925 the department estimated the loss in the four States in dollars at \$2,754,000,000, and since 1925 this total has continued to mount.

With agriculture the basis of rural banking credit, these conditions resulted in an accumulation of "other real estate" in the banks of the territory. On June 2, 1918, "other real estate" in the banks of the four States totaled \$9,271,000. Seven years later on September 28, 1925, "other real estate" was listed to a total of \$45,323,000. And this does not include the great volume of such collateral that had been taken out of the banks through the organization of liquidating companies among the stockholders. Nor does it include the frozen real estate assets in the banks that had closed up to that time. Farm mortgages lost their liquidity and hundreds of banks were deprived of one of their chief sources of income.

Selling direct to the public or to large investing corporations, the rural bank was the primary farm loan agency prior to 1920, and the great traffic in such collateral was the prompting reason for the overly banked situation. Today the remnant of this business is being conducted by new agencies such as the Federal and State farm banks, specifically chartered land banks, and employed agents of the larger mortgage purchasers such as the insurance companies Many rural banks also conducted a general real-estate business, deal ng principally in the sales of farm lands. This source of profit, too, has been practically wholed out.

Income from service charges of one form or another also has been reduced due to the constant pressure exerted by the Federal reserve banks and commercial organizations. The principle that the flow of commerce should not be hambered by exchange charges was costly to the rural banks, but in recent months there has been a tendency to restore a number of the abandoned service

Looking back over this period we can see that the banking crisis had its inception in the events of the spring and summer of 1920. In 1918 a wheat crop of 277,000,000 bushels was grown in the four States of Minnesota, North and South Dakota, and Montana, and was marketed on a basis of \$2,23½ per busher for the best grade of hard spring wheat, the Government-fixed minimum price. The inflation commenced with the 1918 crop. Land values boomed sales of farms and new lands were at record volume and price; deposits in country banks were at a peak and their loaning power was greatly expanded. Many banks established record earnings, which were distributed in dividends.

The 1919 crop, however, was short, only 140,000.000 bushels of wheat being produced, due to bad weather factors and rust damage. In the menutime the price had risen and reached as high as \$3.40 a bushel during the fall of 1919. A peak of \$3.50 was paid during the spring of 1920, and propaganda began to be heard in the farm areas that with the dissolution of the food commission grain purchasing and rationing the lid would be off. "Five-dollar wheat was the slogan and farm leaders, politicians, agencies, and seers of all kinds were actively urging the farmers to hold their 1920 wheat until after the Food Administration control expired the last of July. This propaganda was ex-

tremely effective, although world-wide distribution of foodstuffs was rapidly being restored. Had there been a normal marketing of grains during the period of fixed prices, a tremendous liquidation of farm borrowings would have ordiharily occurred. But by November best grades of spring wheat were selling as low as \$1.49. The crop was being marketed in small quantities and the banks of the region were unable to collect more than a fraction of their seasonal bills receivable. The deflation set in quickly.

During the war-expansion period the country banks had been compelled to borrow heavily from their rediscount correspondents and the Federal reserve bank to carry their customers through the growing season, and it must be remembered that the war crops were produced at excessive costs for labor, machinery, seed, and materials of all kinds. The fall of 1920 found the country banker, who generally had excess funds at that period of the year, forced to

borrow, further expanding his loans.

The 1921 crop was a partial failure and the banking situation began to become acute, with the country banker carrying a 2-year total of unliquidated

The 1922 crop was large and prices correspondingly low. Best wheat brought from \$1.06 to \$1.22 during September and October. Collections somewhat im-Proved. But the next year, 1923, the crop was again short with only 156,000,-000 bushels of wheat being grown in the four States. Bank failures during the year showed a tremendous increase.

A large crop was grown in 1924 and was marketed at better prices then had been paid since 1920. Conditions were somewhat alleviated, but not perma-

nently.

By this time confidence in country banks was badly shaken, and this lack of confidence further added to the rural banker's difficulties. He felt forced to keep his bank in sufficiently liquid condition to meet a mass withdrawal at any homent and as a consequence built up his reserves of cash on hand and on deposit with other banks, Government boards, and other easily negotiable lowtate paper. This not only reduced the bank's earning power but withdrew a

large volume of capital from the support of ordinary business.

In the meantime new loaning agencies of all kinds had sprung up providing further expansion of land credits. Federal farm banks, State land banks, Joint-stock land banks, etc., were offering a margin on first mortgage real estate loans greater than the commercial banks had afforded at the peak of War expansion, thus increasing the farmer's fixed charges but not increasing his earning power. The intermediate credit banks were developed and continue Operate absorbing a considerable volume of business that should be conducted by the commercial banks. Chattel loans of a first mortgage nature on Prestock and grains are agriculture's nearest parallel to the short-term notes of industry—basic banking collateral, and the intermediate credit banks aborbed much of this business.

These new agencies poured a tremendous volume of money into the country, but did little to assist in accomplishing liquidation of previous borrowings

which the rural banks were carrying.

In this emergency, the first step toward group banking was taken with the organization of the Agricultural Credit Corporation of 1924. Financed by the largest industries of the Northwest with the aid of eastern interests, it set work to meet a territorial problem. During its first year of operation, the corporation took over a large volume of livestock loans from operating and elosed banks, and the following year began making livestock loans direct to the whers, taking a chattel mortgage on the animals. These loans are payable in installments and have greatly aided the general diversification program which the Northwest has undertaken. During the five years that this loan plan has been functioning, the corporation has distributed \$5,892,000 on direct livestock loans to 12,169 farmers. Repayments of \$3,448,000 have been made and loans low in force amount to \$2,443,000. To date, losses of only \$24,346 have been the charged off and charge-offs are made as soon as the first delinquency arises.

Group banking is designed to meet territorial problems of the same nature. New territory must necessarily develop largely on credit, and group banking can

The collapse of farm values was but one of several factors with which the banks of the Northwest were confronted. In former years, there had been an annual influx of new capital into the territory represented by the investment of settlers, capital expenditures for development purposes of an industrial nature,

and time deposits in the banks from outside the territory. Much money from distant points was in Northwestern banks attracted by the high rates of interest paid. This money rapidly melted away in withdrawals as interest rates declined.

As we have watched the situation develop in the Northwest, the factor of management in the rural banks has thrust itself more and more into the foreground. The well-managed bank whose officers were in a position to realize the changing conditions in the entire agricultural territory survived, where its less capably directed competitor encountered difficulties. On June 30, 1913 there were 2,928 banks in the district. Seven years after, on June 30, 1920, the total had reached 3,877.

New banks had sprung up like mushrooms after a rain. Prosperous farmers in scores of instances had moved to town and, attracted by the reported large earnings in the banking business, had enlisted the support of a few friends applied for charters, and launched banks. But banks are more easily created than bankers. For a manager, they looked around and hired an assistant cashier or clerk from some near-by bank, prevailed upon a school-teacher to exchange professions, or brought in an ambitious son from the farm. In one instance the town bartender was made the bank manager. And everything went well as long as land was booming.

But that type of banking definitely has come to an end. No longer is the increase in land values the automatic debt satisfier that it was for generations. We are increasing our capital by working, saving, and careful investing; and banking for our territory requires able, alert, and trained intelligence.

I have cited these as the factors that brought about the banking crisis, but I do not want to leave you with the impression that our territory has suffered any permanent injury. The boom days have ended, but we are building a firmer more stable, and better prosperity than ever before. The Northwest is on an earning and saving basis. Its bank deposits are again showing an upward trend, but this time we intend to fortify our capital and protect it with a stronger banking structure. In 1913 our banks had deposits of \$755,000,000. They reached \$1,855,000,000 in 1920, and a year later had declined to \$1,512,000,000. On October 4, 1929, total deposits of all banks in the district were \$1,678,205,000. The average deposit of the 2,350 banks in the district is greater than ever before.

Our agricultural areas are being revolutionized. Single cropping has given way to a widely diversified agriculture. Our cities are growing and prospering and our people are looking forward confidently to material prosperity. But the rural banking situation remains as a severe handicap.

The Comptroller of the Currency in his recent report summed up the existing

situation in these words, upon which I can not improve:

"Whereas a depositor in a large city bank, whether a wage earner or a business man, has had full protection, the depositor in the small country bank has suffered severely from the inability of so many banks to meet their deposit

"It is a cause for immediate concern that the operating conditions faced by country banks show no prospect of improvement under the present system. There are many country banks now operating at a loss and many others operating upon earnings insufficient to justify their capital investment.

"Comprehensive study of the banking situation for the past nine years clearly indicates that the system of banking in rural communities has broken down through causes beyond control of the individual banker of the local community. It was to remedy this situation that group banking developed out of the

Twin Cities.

For generations the larger banks of Minneapolis and St. Paul have been territorial banks of approximately the same region now included in the reserve district. They were the depositories of the railroads, the mills, the manufacturing plants, the jobbing houses, the line elevator companies and lumber yards, drawing from and servicing the territory as a whole. They were also the reserve depositories and rediscount correspondents of the country banks in the district. In a major way the final financial responsibility for the vast section extending from the Great Lakes to the Rocky Mountains was theirs. Although their relations with the country banks of the district were primarily those of banker and customer, when the agricultural crisis arose the burden of sustaining the entire fabric was thrust upon the Twin City banks. It is more than simply circumstance that the best and most liquid paper of many of the

correspondent institutions was held by the larger banks as rediscount collateral. At once this collateral became essential to the stability of the rural units caught by the deflation, and the large depositories found the fate of many of their customer banks their responsibility. Exercising this responsibility became a matter of management—their own treasuries must be protected, their customer banks must be saved wherever possible.

This cooperation of the large commercial and reserve deposit banks undoubtedly saved many of their smaller correspondents. Aid of the War Finance Corporation was enlisted and through it much of the rediscount collateral was released and liquidated and the proceeds returned to the original holders. But in too many instances the combined efforts of all agencies could

not avert failures.

In reaching our decision to embark upon the group-banking program we were prompted solely by the necessity of some form of practical reorganization of the rural banking structure, if the territory as whole was to recover from the effects of the farm deflation. The soundness and adequacy of the banking facilities of the district are vital and we who are residents of the larger cities must expect the cities to develop and prosper only as the rest of the district grows and prospers.

To correct the situation, we felt that if we could create an advisory organization, properly manned and with sufficient banking experience to offer to individual units making up the chain expert advice and assistance in the management of their local banks that there would be no question of the benefits

that would accrue.

The basic change in the nature of the investments of the rural banks has been great. The rural banker has had to turn to bonds and commercial paper, collateral investments of another type, with a proportion of his assets. In buying such investments he was dependent largely upon traveling securities salesmen who visited him periodically. Investment of his surplus funds beyond the needs of his local requirements can be much better handled centrally by highly experienced buyers purchasing in substantially larger quantities, and much more closely in contact with the securities market.

As far as the general operations of the banks are concerned, our plan provides for the retention in the local community of the strongest possible control over the affairs of the unit. Management remains in the hands of resident officers and local directors, the central office exercising its supervision through periodical reports of condition, regular examinations, and the adoption of proven

standards.

By the creation of a group a wider diversification of risk and resources is accomplished than is possible in a single unit. The group includes not only a great variety of agricultural depositories but also many of the commercial banks of both the metropolitan and secondary cities. Seasonal needs of various industries vary widely, but each division has a period of peak load. The diversification existing behind each individual unit will enable it to meet more adequately the seasonal needs of its customers and district.

Its association with the central banks in the group will enable it to arrange credit facilities for its larger customers whose needs at times exceed the loan limitations of a local unit. The parent corporation, also, is in a position to increase the capital structure of any of its affiliates should local conditions

warrant greater credit resources.

Chain banking—that is, a number of units under the same ownership, generally a single individual—is now new. These chains of rural banks have existed for generations, but the units have seldom stressed affiliation, preferring to maintain the fiction of local independence. The group plan is a departure from the older chains in that the group is created about one or more central institutions of established reputation. For instance, the First Bank Stock Corporation group is headed by the First Nationals of Minneapolis and St. Paul. the two largest banks in the ninth Federal reserve district, each with resources in excess of \$100,000,000; the Metals Bank & Trust Co., of Butte, and the First National of Great Falls, the largest banks in Montana.

In establishing the group we have had to feel our way. Originally the First National Banks of Minneapolis and St. Paul organized the First Bank Stock Investment Co., the stock of the investment company being held by allied corporations of the two banks. In other words, it was a subsidiary holding combany. Our first practice was to purchase a majority interest in banks seeking affiliation. After several months' operations we came to the conclusion that

the holding company should be the parent corporation, and we amended our paral and created the First Bank Stock Corporation. The First Bank Stock Corporation now is a holding corporation for all the banks in the group, great and small. We now acquire, if possible, all the stock of the unit banks, with the exception of directors' qualifying shares, local investment interest being maintained by ownership of stock in the holding company.

D)

This has the result that the corporation instead of individuals carry the stock liability for the member banks of the group. This, we believe, is one of our greatest contributions to the security and stability of the member banks. Legally the stockholder of a bank is subject to a double liability, but the parent corporation of a group has a factual liability for the maintenance of its units to a degree far beyond any legal requirements. If, through some disastrous happening, such as a serious conversion of a bank's funds, its structure should be impaired, the holding company must reestablish it from the central reserve of the group. It would be suicidal to permit any single unit in the group to fail, no matter what the cause.

The individual bank now is supported not only by its own capital and reserve structure but also by that of the corporation. The holding company's legal responsibility is no greater than was the individual stockholder's, but its moral liability goes to the nth power.

We are building up a double reserve, in the banks themselves, and a central reserve in the First Bank Stock Corporation. Actually, the entire capital and surplus of the corporation is a reserve of its units.

This group plan in practice affords the customer of the smallest, rural affiliate, the same degree of security that the great metropolitan banks provide their customers. It also meets the growing demand from the smaller centers that their financial agencies provide more intelligent and alert guidance in business and investment matters, and more favorable treatment as to interest rates, which have been high by comparison with the larger cities. We have established a major subsidiary which will operate through all the banks in the group and provide the residents of the smaller cities the same investment service that is maintained in connection with the banks of the Twin Cities. It is also our intention to expand the trust facilities of the smaller members, either in their own units or in cooperation with long-established trust companies which are members of the group.

Unquestionably the immediate result of the increased security that group banking affords will be the return to the local communities of considerable capital that has been sent away in recent years, to create a highly liquid reserve. The group plan, too, offers opportunity for the capable banker, no matter where situated, to demonstrate his ability, and provides a road for his advancement and progress.

We can expect that within a few years the farm mortgage will be restored as a liquid instrument. Upon what basis of valuation final stability will be reached no one can say, but once a stability is reached, agricultural areas will return to a normal credit basis. The group plan of banking should be able to speed the attainment of such stability and assist in restoring the farm mortgage to its rightful place in the credit scheme.

In adopting the group plan, we set up the only machinery that was available to us. Critics have alleged that it is but an evasion of the ban on branch banking. It is probably true branch banking might be more economical in some instances. Our operations to date have shown that there is a size and type of community which is too small to justify the maintenance of a separately capitalized and corporately staffed bank of its own and which the group can not enter with a unit bank. On the other hand, those towns want some form of banking convenience. A branch of a larger bank with perhaps a single officer in charge, could take care of them while the larger central bank would provide greater security and better service than the small, independent unit.

Banks in these small communities can not and do not earn sufficiently to justify their existence. And gentlemen, let me make this point with all the force that I command. A bank that does not make a profit is a highly dangerous institution in its community. Any commercial institution that is not endowed must earn to exist, and commercial banking is a business of small profit. It follows, therefore, that its profit must be certain.

Experience indicates that it takes exceptional management to enable a bank to earn sufficiently to justify its existence if it has deposits of less than \$250,000 under a State charter, or less than \$500,000 under a national charter.

In this connection it is interesting to note that 73 towns in Minnesota, with less than 100 population, have banks. In nine of these towns the total deposit is less than \$50,000; 24 have deposits from \$50,000 to \$100,000; 19 from \$100,000 6 \$150,000; 10 from \$150,000 to \$200,000; and five from \$200,000 to \$250,000. In communities of from 100 to 200 in population, five have deposits under \$50,000; 36 from \$51,000 to \$100,000; 29 from \$100,000 to \$150,000; 19 from \$150,000 to \$200,000; and 12 from \$200,000 to \$250,000.

In towns of all sizes in Minnesota there are 55 with a total deposit less than \$50,000, 71 from \$51,000 to \$100,000, 88 from \$100,000 to \$150,000, 95 from \$150,000 to \$200,000, and 16 from \$200,000 to \$250,000. This shows a total of 325 towns in the one State where the bank deposits are less than \$250,000. At the same time, there are 145 towns which have no banking

facilities whatsoever.

I am not prepared to suggest what areas from a standpoint of public policy should be included within a banch-banking zone. A central bank in a county seat town could conveniently have offices in the smaller centers within the county. On the other hand flow of trade is a matter of convenience and not governed by fixed county limitations. State branch banking or even reserve district limits would avoid conflict with already established routes and zones of trade.

I do believe, however, that the benefits of group banking should not be sacrificed. Group banking and branch banking could well go hand in hand, supplementing each other. The group plan offers distinct advantages at points sufficiently large to warrant the maintenance of a unit bank. It retains in the local community the benefits of local management, satisfying the very natural desire of the residents of the community that their bank be actually a home

institution,

Then, too, there is a widespread public feeling that the branch bank is not as responsive to purely local needs as the home bank. This need not be true, but, the feeling is actual whether the premise is correct or not. The group blan obviates this criticism. An affiliated bank is as much a home institution after as before joining the group. The holding company is not a bank, and its success is dependent upon the growth and its success is dependent upon the growth and success of its units. Naturally it must look to the development of each affiliated bank wherever located for its own profit and assist in the development with every means at its command. To do otherwise would be contrary to its own self-interest. If the affiliated bank does not serve its community equally well or better than the independent unit we may expect competition to arise at the first opportunity. The group bank has no exclusive form of franchise, and we recognize that it must provide an improved service to exist

The whole tendency of operation is d'ffusion rather than concentration

around a central treasury

We can foresee that if branch banking under certain limitations of area and boundary should be permitted that a number of the larger banks in the group could extend their service by the establishment of branches in near-by

communities.

Although I can speak only for our own organization, I bel'eve that group bankers generally would encourage the suggestion that the investigative powers of the national banking department be extended to the holding companies, and that these corporations should be subject to periodical examinations. We, in the banking business, know that searching examination is one of the real safeguards of sound practices and this would hold as true in the managing cor-Dorations as in the banks themselves.

In conclusion, may I add that the first objective of every bank must be service. This is not altruism, but simply sound business. Service means deposits and deposits mean profits. The prosperity of the community and the prosperity of its bank inevitably go hand in hand, and whatever increases the brosperity of the bank adds to the prosperity of the community which it

serves.

The group system of banking is sound because it rests on these foundations: First: Cooperation of resources.

Second. Diversification of resources.

Third. Ownership spread throughout the territory. Fourth. Creation and management by bankers.

Mr. Wakefield. In 1913 the total banking resources in our district Were \$755,000,000. In 1920 they were \$1,855,000,000, and a year later

had declined to \$1,512,000,000.

mention that because at the present time our banking resources are again on the increase, and because I want it distinctly understood that, in spite of all of the statements which I will make here of the difficulties and disasters which we have experienced, we still have a fairly sound and coming section of the country. Fundamentally and basically there is not any better part of the United States than the ninth Federal reserve district. Everything is there to grow and build with, and if we can find a satisfactory method of stopping these calamities which have been with us these years, I am sure it will not take very long for us to be again on the upgrade.

There are remaining now about 2,300 banks in the ninth Federal reserve district. In making this statement I want the committee to know that the institutions around which the First Bank Stock Cor-Poration was built are the First National Bank of St. Paul and the First National Bank of Minneapolis, each institution with approximately \$100,000,000 of deposits, both old banks which have been in vistence since 1868, and that those banks have had and now have as their customers a great many hundreds of small unit banks of the district, and that our desire and our efforts are and have been devoted to supporting the small unit banks in every manner possible. They to-day are our customers, and these things we are undertaking do we would not permit to interfere with their business in any manner possible, because they are entitled to every possible help and support.

As Mr. Decker told you yesterday, during the years 1921 and 1929 the Twin Cities banks were into the Federal reserve bank for the maximum amount practically that they could borrow and turned around and furnished that money to the small unit banks in the territory in an effort to carry them through the extreme difficulties

Now, I think that the officials of the Twin Cities banks, the Northwestern National, the First St. Paul, the First National of Minne apolis, undoubtedly saved a great many possible closings that may have taken place if they were not there ready and willing to help and assist those small banks.

In reaching our decision to go into the group banking business, it

was based upon these factors:

This thing has been discussed over several years in our territory we felt, because of the realization that, with the experience that we have had, our territory must continue to be in a depressed and un satisfactory situation until the time came when there were banking facilities of the right character provided over the territory, and we have studied that and worked on it.

Mr. Decker and the Northwestern National people were the first to conclude to undertake a movement of this kind. We were all reluctant to do it. I do not think any of us who were engaged in the banking business in the Twin Cities were anxious to assume the responsibility and set out and become interested in the banking situation over the entire territory. So we moved rather slowly.

My own associates, at first, felt we would involve ourselves in exactly the same undertaking, but that we could do identically the same thing without forming a group tied down to the First National

Banks of St. Paul and Minneapolis.

So, we undertook to handle it in a different way, and this statement will verify what Mr. Decker said yesterday about the attitude of the banks in the territory. We undertook to form a separate corporation controlled by the First National Bank of Minneapolis and the First National Bank of St. Paul and, through it, go into the various com munities and acquire a controlling interest in various banks. undertook that operation over a period of about six months-long enough to discover that the people out in the territory absolutely were not interested in selling a control of their bank, nor were the willing to sell it entirely, but they were very anxious to have us form the same type of organization as the Northwest Banking Corporation put into effect, in an undertaking looking toward the straightening up and carrying on of the banking business of the territory.

So, a few months later, we changed our plan and adopted identically the same plan as used by the Northwest Banking Corporation and, at that time, we exchanged the capital stock of the First tional Bank of St. Paul, the First National Bank of Minneapolis and the Metals Bank & Trust Co. of Butte, Mont., and the Fit National of Great Falls, Mont., and the Western Montana Bank

Missoula. They formed our original group.

We got together with the different interests involved, agreed upon a basis of capitalization and incorporation, and made an exchange of stock with those particular banks and, from that time, have been adding additional banks through the exchange of stock as opport

tunity offers, and it seemed desirable to do so until, at the present time, we have a group, a statement of which each one of you has before you.

Now, our plan provides for retaining the local management and local directors in exactly the same manner as described yesterday.

At this point I am going to file some information, because I want to give certain information at this time and have already mentioned this list. In the questionnaire which came from Mr. McFadden he asked for certain information. First, we were asked for a copy of the charter, date of organization, and by-laws.

I have a copy of the charter which is attached here, and which I

will offer at this time for the record.

Then, there is requested a list of the directors of our holding company, showing the practical business occupation of each, which is

In this pamphlet which I am filing also.

Then the number, name, location, capital, surplus, deposits, and resources of each bank acquired, showing which are national, which are State members of the Federal reserve system, and which are nonmembers.

Then a list by name and capital structure of each corporation other than banks, the majority of the stock of which is owned by our holding company. That is contained in the pamphlet. [Reading:]

State fully the method of acquiring a bank, whether by cash, purchase of stock or by exchange of stock, and the method of negotiation.

Now, I have a statement here, attached to this [exhibiting], which I will file, but which I will read at this time, because it describes the method.

We have acquired controlling interest in the various banks and corporations comprising our group in the following manner:

(a) By purchase of their stock for cash.

(b) By incorporating new banks, and paying in the capital in cash.(c) By exchanging stock of this corporation for stock of the banks.

(d) By a combination of (a) and (c).

In some cases we have solicited the affiliation, but in a large majority of cases we have been approached by the banks themselves. In every case a very thorough examination is made before the purchase is completed, and all undesirable assets are either removed from the bank or insured by adequate guaranty. In some cases where undesirable assets are removed, the accepted assets are guaranteed by deposit of a portion of our stock, given to them in exchange for theirs. We require all depositing stockholders to guarantee the validity of their stock, and also require them to sign a guaranty protecting us against any liabilities of the bank existing on the date on which the deal is closed, and now shown on the balance sheet. The number of shares of our stock given in exchange for the stock of affiliating bank or corporation is determined both by the amount of net capital assets which we require, and by the earning lower of the bank or corporation over a period of years.

The methods are similar to those described by Mr. Decker yesterday.

The capital structure of the First Bank Stock Corporation is composed solely of fully paid and nonassessable shares of the par value of \$25 per share of our capital stock. There was outstanding on December 31 a total of 3.016,870.57

Shares of this stock with a par value of \$75,421,764.39.

The stockholders are distributed geographically as follows: M'nneapolis, 6,753 stockholders; St. Paul, 2,345 stockholders; Minnesota (outside of Twin Cities), 3,201 stockholders; Michigan, 383 stockholders; Montana, 987 stockholders; North Dakota, 892 stockholders; South Dakota, 516 stockholders; Wisconsin, 446 stockholders; other States, 596 stockholders or a total of 16,119 stockholders.

I will file that statement.

Mr. Strong. Without objection it is received.

(The statements referred to are printed in full as follows:)

CERTIFICATE OF INCORPORATION OF FIRST BANK STOCK CORPORATION AS AMENDED. NOVEMBER 5, 1929

First. The name of this corporation is First Bank Stock Corporation.

Second. Its principal office in the State of Delaware is to be located at 900 Market Street, in the city of Wilmington, county of New Castle, and the name and address of its resident agent is Corporation Service Co., 900 Market Street, Wilmington, Del.

Third. The nature of the business and the objects and purposes to be transacted, promoted, and carried on are to do any or all of the things hereinafter mentioned as fully and to the same extent as natural persons might or could

do, viz:

(a) To subscribe for or cause to be subscribed for, buy, own, hold, receive acquire, sell, assign, transfer, hypothecate, pledge, or otherwise deal in, handle, or dispose of the bonds, stocks, and other securities or evidences of indebtedness created or issued by any bank or by any other corporation or corporations, partnerships, individuals, associations, whether public, private, or municipal, or any corporate body or by any government; and while the owner thereof to posses and to exercise in respect thereof all the rights, powers and privileges of ownership, including the right to vote thereon, and the right to transfer the said securities to one or more persons, firms, or corporations, subject to voting trusts or other agreements placing in them the voting power of said securities: to guarantee the payment of principal of and/or interest upon any bonds or other evidences of indebtedness; and to guarantee the payment of dividends on any of the above-mentioned securities issued by corporations or associations in which this corporation may at any time have an interest and to guarantee the performance of any contract by, or otherwise aid in any manner, any other corporation or association in which this corporation shall at any time have an interest.

(b) To loan money upon security or otherwise, either for itself or as agent

for others.

(c) To organize, incorporate, reorganize, merge, consolidate, and finance banks, companies, corporations, joint-stock companies, syndicates, and associations of all kinds engaged or to engage in any lawful kind of business, and to underwrite, subscribe for, and indorse the bonds, stocks, securities, debentures, notes, or undertakings of any such companies, corporations, joint-stock companies, syndicates, and associations, and to make any guarantee in connection therewith or otherwise for the payment of money or for the performance of any obligation or undertaking, and to do any and all things necessary of convenient to carry any of such purposes into effect.

(d) To purchase, lease, or otherwise take, hold, sell, exchange, transferrepair, maintain, improve, mortgage and in any other manner deal in and deal with real property, mixed and personal property, wherever situate, whether

within or without the State of Delaware.

(e) To acquire the good will, rights, and property, and to take over the whole or part of the assets and liabilities of any person, firm, association, or corporation, and to pay for the same in cash, the stock of this corporation, bonds, or otherwise; to hold or in any manner dispose of the whole or any part of the property so acquired; and to conduct in any lawful manner the whole or any part of the business and property so acquired, and to exercise all the powers necessary or convenient in and about the conduct and management of such business.

(f) To purchase or otherwise acquire, hold, use, sell, and in any manner dispose of and deal in patents, inventions, improvements, processes, trademarks, trade names, rights, and licenses secured under letters patent, copy-

rights or otherwise, and to grant licenses or other rights therein.

11

(a) To enter into, make, and perform contracts of any and every kind for any lawful purpose, without limits as to amount, with any person, firm, association or corporation, municipality, county, State, Territory, or govern-

(h) To borrow or raise moneys for any of the purposes of this corporation, and from time to time, without limit as to amount, draw, make, accept, indorse, execute, and issue promissory notes, drafts, bills of exchange, warrants, bonds, debentures, and other negotiable or nonnegotiable instruments and evidences of indebtedness, secure the payments thereof and of the interest thereon by Mortgage upon, or pledge, or conveyance, or assignment in trust of, the whole or any part of the property of this corporation, real or personal, including contract rights, whether at the time owner or thereafter acquired, and sell, pledge, Or otherwise dispose of such bonds or other obligations of this corporation for Its corporate purposes.

(i) To purchase, hold, and reissue the shares of capital stock, provided it shall not use its funds or property for the purchase of its own shares of capital stock when such use would cause any impairment of its capital, and, further, that shares of its own capital stock belonging to it shall not be voted directly or indirectly.

(i) To carry on any and all of its operations and business and to promote its objects within the State of Delaware and elsewhere without restrictions as to place or amount.

(k) To do any or all of the things set forth to the same extent as natural Dersons might or could do, and in any part of the world, as principals, agents, contractors, trustees, or otherwise, alone or in company with others.

The foregoing clauses shall be construed both as objects and powers, and it is hereby expressly provided that the foregoing enumeration of specific powers is in furtherance of and in addition to, and not in limitation of, the general Dowers conferred by the laws of the State of Delaware.

Fourth. The total authorized capital stock of this corporation is 10,000,000 shares of the par value of \$25 each. Shares of the capital stock of this corporation may be issued by the corporation from time to time for such consideration, not less than the par value thereof, as may be fixed from time to time by the board of directors.

At all meetings of the stockholders of this corporation each stockholder shall

be entitled to one vote for each share of capital stock held by him. The holders of the capital stock of this corporation shall have the preemptive right to purchase shares of the capital stock of the corporation now or hereafter authorized which may from time to time be issued and sold save and except that an aggregate of 500,000 shares of the corporation may be issued for Cash without offering the same to the holders of capital stock pro rata for subscription and that any stock of the corporation may be issued and exchanged for stock of any bank, banking association, trust company or other corporation of whatsoever nature, without so offering the same to the holders of capital

Stock Fifth: The minimum amount of capital with which it will commence business, 18 \$1,000.

Sixth: The name and place of residence of each of the incorporators are as follows: S. J. Mackey, Wilmington, Delaware; J. Skrivan, Wilmington, Dela-Ware; H. Kennedy, Wilmington, Delaware,

Seventh: The existence of this corporation is to be perpetual,

Eighth: The private property of the stockholders of this corporation shall not be subject to the payment of corporate debts to any extent whatever,

Ninth: The number of directors of this corporation shall be fixed and may be altered from time to time as may be provided in the by-laws. In case of any increase in the number of directors, the additional directors may be elected by the board of directors to hold office until the next annual meeting of the stockholders and until their successors are elected and qualified. In case of Vacancies in the board of directors, the remaining directors may elect directors fill such vacancies. Directors of this corporation need not be stockholders therein and need not be elected by ballot.

Tenth: In furtherance and not in limitation of the power conferred by statute, the board of directors is expressly authorized:

(a) To fix, determine, and vary from time to time the amount to be mainthined as surplus and the amount or amounts to be set apart as working capital.

(b) To adopt, amend, alter, change, add to or repeal by-laws of this corpora; tion, without any action on the part of the stockholders. The by-laws adopted by the directors may be amended, altered, changed, added to or repealed by the

stockholders.

(c) By resolution passed by a majority of the whole board, to designate one or more committees, each committee to consist of two (2) or more of the directors of the corporation, which committees shall have and exercise (except when the board of directors shall be in session) such powers and rights of the board of directors in the management of the business and affairs of the corporation as may be provided in the by-laws or in said resolution, and shall have power to authorize the seal of this corporation to be affixed to all papers which

(d) To authorize and cause to be executed mortgages and liens, without limit

as to amount, upon the real and personal property of this corporation.

(e) From time to time to determine whether and to what extent, at what time and place, and under what conditions and regulations the accounts and books of this corporation, or any of them, shall be open to the inspection of any stockholder; and no stockholder shall have any right to inspect any account. books, or document of this corporation except as conferred by statute or by the by-laws, or as authorized by a resolution of the stockholders or board of directors.

(f) To sell, assign, convey, or otherwise dispose of a part of the property assets, and effects of this corporation, less than the whole, or less than substantially the whole thereof, on such terms and conditions as they shall deem advisable, without the assent of the stockholders in writing or otherwise; and also to sell, assign, transfer, convey, and otherwise dispose of the whole of substantially the whole of the property, assets, effects, franchises, and good will of this corporation on such terms and conditions as they shall deem advisable, but only with the written consent or pursuant to the affirmative vote of the holders of a majority in amount of the stock then having voting power and at the time issued and outstanding, but in any event not less than the amount required by law.

(g) All of the powers of this corporation, in so far as the same lawfully may be vested by this certificate in the board of directors, are hereby conferred upon

the board of directors of this corporation.

Eleventh. In the absence of fraud, no contract or transaction between this corporation and any other association or corporation shall be affected by the fact that any of the directors or officers of this corporation are interested in or are directors or officers of such other association or corporation, and any director or officer of this corporation individually may be a party to, or may be interested in, any such contract or transaction of this corporation; and no such contract or transaction of this corporation with any person or persons, firm association, or corporation shall be affected by the fact that any director or officer of this corporation is a party to, or interested in, such contract or transaction, or in any way connected with such person or persons, firm, association, or corporation; and each and every person who may become a director or officer of this corporation is hereby relieved from any liability that might otherwise exist from thus contracting with this corporation for the benefit of himself or any person, firm, association, or corporation in which he may be in any way interested: Provided, however, That in any such case the fact of such interests shall be disclosed to the other directors or stockholders acting upon or in reference to such contract or transaction.

Twelfth. This corporation may in its by-laws make any other provisions or requirements for the management or conduct of the business of this corporation, provided the same be not inconsistent with the provisions of this certificate or contrary to the laws of the State of Delaware, or of the United

States.

Thirteenth. This corporation reserves the right to amend, alter, change, add to, or repeal any provision contained in this certificate of incorporation in the manner now or hereafter prescribed by statute, and all rights conferred upon officers, directors, and stockholders herein are granted subject to this reserve

We, the undersigned, being all of the incorporators for the purpose of forming a corporation, in pursuance of an act of the Legislature of the State of Delaware entitled "An act providing a general corporation law" (approved March 10, 1899), and the act amendatory thereof and supplemental thereto, do make and file this certificate of incorporation, hereby declaring and certifying that the facts herein stated are true and accordingly hereunto have set our respective hands and seals this 1st day of April, A. D. 1929.

S. L. MACKEY. [SEAL.]
J. SKRIVAN. [SEAL.]
H. KENNEDY. [SEAL.]

In the presence of: John W. Gailey.

BY-LAWS OF FIRST BANK STOCK CORPORATION AS AMENDED

ARTICLE T

Section 1. The principal office of the corporation in Delaware shall be in Wilmington, and the resident agent in charge thereof shall be Corporation Service Co.

The corporation may also have offices in the cities of Minneapolis and St. Paul, in the State of Minnesota, and at such other places as the board of

directors may from time to time designate.

Sec. 2. The corporate seal shall be circular in form and have inscribed thereon the name of the corporation, the year of its incorporation (1929) and the words "Corporate Seal, Delaware."

ARTICLE II, STOCKHOLDERS

Section 1. The annual meeting of the stockholders of the corporation, beginning with the year 1930, shall be held at its office in Minneapolis or at its office in St. Paul as may be determined by the executive committee and stated in the notice of said meeting mailed to the stockholders, on the first Tuesday of January of each year at 3 o'clock p. m. (or if said day be a legal holiday, then on the next succeeding day not a holiday), at which meeting the stockholders shall elect by ballot by plurality vote a board of directors consisting of not less than 50 nor more than 150 members. Each stockholder shall be entitled to one vote in person or by proxy for each share of stock held by him.

No change of the time or place of a meeting for the election of directors, as fixed by the by-laws, shall be made within 60 days next before the day on

Which such election is to be held.

Sec. 2. A complete list of stockholders entitled to vote, arranged in alphabetical order, shall be prepared by the secretary and shall be open to examination by any stockholder at the place of election for 20 days prior thereto and

during the whole time of election.

Sec. 3. Special meetings of stockholders may be called by the chairman of the board of directors of the president and shall be called on the request in writing of any three directors, or on the request in writing of stockholders of record owning not less than one-fourth of the capital stock outstanding which call or request shall in each case specify the purpose of the meeting so called or requested. The notice of such meeting shall in general terms state the purpose of such meeting and no business shall be transacted thereat except as stated in the notice thereof. Any such meeting may be held at such place within or without the State of Delaware as may be fixed by the board of directors, or by the executive committee, or the chairman of the board or the president, and as may be stated in the notice of such meeting.

Sec. 4. Notices of all meetings shall be mailed by the secretary to each stockholder of record at his last known post-office address as the same appears on the books of the corporation. Notices of annual meeting shall be mailed 10 days prior to the date thereof, and notices of special meetings shall be mailed

5 days prior to the date thereof.

Sec. 5. At any annual or special meeting of the stockholders, a majority of the shares of capital stock of the corporation then outstanding, represented by the owners thereof or by their proxies duly authorized in writing, shall con-

stitute a quorum for the transaction of business.

Any meeting of the stockholders at which a majority of the capital stock then outstanding is not so represented, shall be adjourned from time to time, not exceeding 30 days in any one adjournment, until a majority of the stock is so represented, and at any adjourned meeting of the stockholders, a quorum being present, any and all business may be transacted which might have been

transacted at the original meeting and with the same force and effect, and at any such adjourned meeting, proxies intended for use at the meeting originally called shall be valid unless such proxies otherwise provide.

SEC. 6. The chairman of the board of directors or the president shall, in the order named, preside over all meetings of stockholders, and if neither of such officers be present, then the chairman of the meeting shall be elected by plurality vote of the stockholders.

Sec. 7. The board of directors may close the stock transfer books of the corporation for a period not exceeding 20 days preceding the date of any meeting of stockholders or the date for payment of any dividend or the date for the allotment of rights or the date when any change or conversion or exchange of stock shall go into effect; or, in lieu of closing the stock transfer books, the board of directors may fix in advance a date, not exceeding 20 days preceding the date of any meeting of stockholders or the date for the payment of any dividend or the date for the allotment of rights or the date when any change or conversion or exchange of stock shall go into effect, as a record date for the determination of the stockholders entitled to notice of and to vote at any such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights, or to exercise their rights in respect of any such change, conversion or exchange of stock, and in such case only such stockholders as shall be stockholders of record on the date so fixed shall be entitled to such notice of and to vote at such meeting, or to receive payment of such dividend, or to receive such allotment of rights, or to exercise such rights, as the case may be, notwithstanding any transfer of any stock on the books of the corporation after any such record date fixed as aforesaid.

ARTICLE III

Section 1. The board of directors of the corporation shall consist of such number of directors as may be elected by the stockholders or board of directors from time to time, such number, however, to be not less than 50 nor more than 150. The directors shall hold office until the next annual election and until their successors are elected and qualify. The board of directors may at any time, and from time to time, elect directors to fill vacancies among their number in any manner arising and, within the limits as to numbers above set forthmay at any time, and from time to time, elect additional directors. A quorum of the board of directors shall at all times consist of the smallest number of directors permitted by law to constitute a quorum, i. e., one-third of the number of persons who shall at any given time be directors. Directors need not be stockholders.

SEC. 2. Meetings of the board of directors shall be held at such place, within or without the State of Delaware, as may from time to time be fixed by resolution of the board or as may be specified in the call of any meeting-Regular meetings of the board of directors shall be held at such times and at such places as may from time to time be fixed by resolution of the board and special meetings may be held at any time upon the call of the executive committee, the chairman of the board of directors, or the president, by oral-telegraphic, or written notice duly given, sent, or mailed to each director not less than two days before the meeting. A meeting of the board may be held without notice immediately following the annual meeting of the stockholders at the same place at which such meeting is held. Notice need not be given of regular meetings of the board held at times fixed by resolution of the board.

6

10

ð

SEC. 3. The board of directors may, by resolution or resolutions, passed by a majority of the whole board, designate an executive committee to consist of not less than 6 nor more than 15 directors, as the board may from time to time determine. In addition to the members designated by the board, the president of the corporation shall at all time ex-officio be a member of the executive committee. The executive committee shall have and may exercise when the board is not in session, all the powers of the board of directors in the management of the business and affairs of the corporation and shall have power to authorize the seal of the corporation to be affixed to all papers which may require it, but the executive committee shall not have power to elect members of the board of directors or to change the membership of, of to fill vacancies in the executive committee or to make or amend by-laws of the corporation. In addition to the foregoing powers and without in any manner limiting the same, the executive committee is hereby specifically granted the following powers:

(a) To issue shares of the capital stock of the corporation and within the limitations set forth in the certificate of incorporation to offer shares of the capital stock of the corporation for sale pro rata to the stockholders of the cor-Doration or otherwise as the executive committee may from time to time determine, and to offer shares of the capital stock of the corporation in exchange for shares of stock of any bank, banking association, trust company, or other cor-Poration of whatsoever nature on such basis as the executive committee may from time to time determine.

(b) To declare dividends upon the capital stock of the corporation and to set

aside such reserves as the executive committee may determine advisable.

(c) To borrow money and to secure the repayment of the same by pledge or mortgage of any or all of the assets of the corporation.

(d) To determine the terms and conditions upon which the stockholders may examine the books of the corporation and the extent of such examination.

(c) To sell a part of the assets of the corporation less than the whole or less

than substantially the whole thereof

(f) To direct the closing of the books for the transfer of shares of the capital stock of the corporation and to fix record dates for determination of stockholders entitled to vote at meetings of the stockholders of the corporation, or to receive dividends upon the capital stock of the corporation, or to receive rights to purchase additional shares of the capital stock of the corporation, or for any other

(9) To purchase property of any sort or description for the use of the corporation.

(h) To appoint officers of the corporation, excepting only the chairman of the board of directors, the president, and the vice presidents, and to determine the salary and compensation of all of the officers of the corporation.

To authorize the signing of checks, notes, contracts, and other instruments

for and on behalf of the corporation.

- (j) To propose and declare advisable amendments to the certificate of incor-Poration of the corporation and to call meetings of the stockholders to consider the same.
- (k) To authorize the purchase by the corporation of shares of its capital stock, (1) To fix the amount of or to waive a bond upon the issuance of certificates of stock in lieu of lost, destroyed, or stolen certificates.

(m) To change the principal office of the corporation and the resident agent

in charge thereof.

- (n) To authorize the issuance of scrip of the corporation in lieu of the fractional shares and to determine the date upon which such scrip shall be and become void.
- (o) To make application to the New York Stock Exchange and/or the Chicago Stock Exchange for the listing thereon of the shares of the capital stock of the corporation and to execute any and all instruments, and do all acts and things necessary or proper in order to cause said shares so to be listed, including the appointment of New York and/or Chicago transfer agents and registrars.

(p) To appoint proxies and attorneys in fact for the corporation to vote upon shares of stock of any bank or other corporation owned by this corporation

at meetings of stockholders of such bank or other corporation.

The board shall have the power at any time to change the membership of the executive committee, to fill existing vacancies in its membership, or to dissolve The executive committee may make rules for the conduct of its business and may appoint such committees or assistants as it shall from time to time deem necessary. Five members of the executive committee shall constitute a Quorum but any less number thereof may adjourn. While the members of the executive committee shall act only as a committee and the individual members shall have no power as such, still it shall not be essential that said committee act only in meeting but any action taken with the written consent of all memhers of the executive committee shall be as valid and effectual as though formally taken at a meeting of said executive committee,

SEC. 4. The board of directors may also, by resolution or resolutions passed by a majority of the whole board, designate one or more other committees, each of such committees to consist of two or more of the directors of the corporation Which, to the extent provided in said resolution or resolutions, shall have and may exercise the powers of the board of directors in the management of the business and affairs of the corporation, and shall have power to authorize the Seal of the corporation to be affixed to all papers which may require it. Such committee or committees shall have such names or names as may be determined

from time to time by resolution adopted by the board of directors. A majority of the members of any such committee may determine its action and fix the time and place of its meetings, unless the board of directors shall otherwise provide. The board of directors shall have power at any time to fill vacancies in, to change the membership of, or to dissolve any such committee.

ARTICLE IV

Section 1. The board of directors, as soon as may be after the annual election in each year, shall choose a chairman of the board of directors, a president and two or more vice presidents, to serve until the next annual meeting of the directors and until their successors shall be elected and shall quality. The board of directors shall also appoint a secretary and treasurer and such other officers, agents, and employees as it may deem proper, who shall serve during the pleasure of the board of directors. The office of secretary and treasurer may be held by the same person and a vice president of the corporation may also be either the secretary or treasurer. The chairman of the board of directors and the president shall be chosen from among the directors.

SEC. 2. Subject to such limitations as the board of directors or the executive committee may from time to time prescribe, the officers of the corporation shall each have such powers and duties as generally pertain to their respective offices as well as such powers and duties as may from time to time be conferred by the board of directors or by the executive committee. The secretary shall be sworn to the faithful discharge of his duties. Any of the officers of the corporation may be required to give bond for the faithful discharge of their duties, in such sum and with such surety as the board of directors or the executive committee may from time to time prescribe.

Sec. 3. The salaries of the officers shall be fixed from time to time by the board of directors or the executive committee and no officer shall be prevented from receiving such salary by reason of the fact that he is also a director of the corporation.

ARTICLE V

Section 1. The interest of each stockholder of the corporation shall be evidenced by a certificate or certificates for shares of stock in such form as the board of directors may from time to time prescribe. The shares of the stock of the corporation shall be transferable on the books of the corporation by the holder thereof in person or by his attorney upon surrender for cancellation of a certificate or certificates for the same number of shares with an assignment and power of transfer indorsed thereon or attached thereto duly executed, and with such proof of the validity of the signature as the corporation or its agents may reasonably require.

Sec. 2. The certificates of stock shall be signed by the president or a vice president and by the secretary or an assistant secretary, provided that if such certificates are signed by a transfer agent or transfer clerk and by a registration the signatures of such president, vice president, secretary or assistant secretary may be facsimiles, engraved, or printed.

SEC. 3. No certificate for shares of stock in the corporation shall be issued in place of any certificate alleged to have been lost, stolen, or destroyed, except upon production of such evidence of such loss, theft, or destruction, and upon delivery to the corporation of a bond of indemnity in such amount and upon such terms and secured by such surety as the board of directors or the executive committee in its discretion may require.

ARTICLE VI

Section 1. The books of the corporation, except the original or duplicate stock ledger, may be kept outside of the State of Delaware at such place or places as the board of directors or the executive committee may from time to time determine.

SEC. 2. The board of directors or the executive committee may authorize any officer or officers, agent or agents of the corporation, to enter into any contract or execute and deliver any instrument in the name of and on behalf of the corporation, and such authority may be general or confined to specific instances, and unless so authorized by the board of directors or executive committee no officer, agent, or employee shall have any power or authority to bind the corporation.

fation by any contract or engagement or to pledge its credit or to render it

liable pecuniarily for any purpose or to any amount.

No loans shall be contracted on behalf of the corporation and no negotiable baper shall be issued in its name unless authorized by the board of directors or the executive committee. When so authorized, any officer or agent of the corporation may effect loans and advances at any time for the corporation from any bank, trust company, or other institution, or from any firm, corporation, or individual; and for such loans and advances may make, execute, and deliver promissory notes or other evidences of indebtedness of the corporation; and when authorized as aforesaid, as security for the payment of any and all loans and advances to, and indebtedness and liabilities of the corporation, may, subject to the provisions of the certificate of incorporation, mortgage, pledge, hypothecate, or transfer any real and personal property at any time held by the corporation, and to that end execute instruments of mortgage or pledge or otherwise transfer said property. Such authority may be general or confined to specific instances.

All checks, drafts, or other orders for the payment of money, notes, or other evidences of indebtedness issued in the name of the corporation, shall be signed by such person or persons and in such manner as shall from time to time be determined by the board of directors or the executive committee.

All funds of the corporation shall be deposited from time to time to the credit of the corporation under such conditions and in such banks, trust companies, or other depositaries as the board of directors or the executive committee may designate, or as may be designated by any officer or officers, agent or agents of the corporation to whom such power may from time to time be delegated by the board of directors or the executive committee; and for the purpose of such deposit any person or persons to whom such power is so delegated may indorse, assign, and deliver checks, drafts, and other orders for the payment

of money which are payable to the order of the corporation.

Unless otherwise ordered by the board of directors, or the executive committee, the chairman of the board of directors or the president shall have full bower and authority in behalf of the corporation to attend and to act and to vote at any meeting of the stockholders of any corporation in which the combany may hold stock, and at any such meeting shall possess and may exercise any and all the rights and powers incident to the ownership of such stock, and which, as the owner thereof, the corporation might have possessed and exercised if present. The board of directors or the executive committee by resolution, from time to time, may confer like powers upon any other person or persons.

Sec. 3. The fiscal year of the corporation shall begin on the 1st day of annuary in each year and shall end on the 31st day of December following.

SEC. 4. Any stockholder, officer, or director may waive in writing any notice required to be given under these by-laws whether before or after the time stated therein.

Sec. 5. The by-laws of the corporation may be amended, added to, rescinded, or repealed at any meeting of the stockholders, provided notice of the proposed thange is given in the notice of the meeting. Subject to the power of the stockholders to amend, add to, rescind, or repeal any by-laws made by the board of directors, the board may make additional by-laws for the corporation and may from time to time amend, add to, rescind, or repeal any of these by-laws

STATE OF MINNESOTA,

County of Hennepin, 88:

I. A. E. Wilson, do hereby certify that I am the duly appointed, qualified, acting secretary of First Bank Stock Corporation, and that the foregoing a true and correct copy of the by-laws of said corporation in effect at the date hereof.

8 In witness whereof I have hereunto set my hand and the seal of First Bank Corporation this 5th day of November, 1929.

A. E. Wilson, Secretary.

FIRST BANK STOCK CORPORATION

With the adoption of the Federal reserve act, banking in the United States was established upon a definite regional basis, within areas having common conomic interests and bound together by established zones of trade and renues of transportation.

The ninth Federal reserve district, comprising the States of Minnesota, Montana, North Dakota, and South Dakota, the upper peninsula of Michigan, and northwestern Wisconsin, is centralized in the Federal Reserve Bank of Minneapolis. St. Paul and Minneapolis are the largest cities within the district, the terminal headquarters of the railroads traversing the territory, the seats of many the larger industries and businesses serving the district as a whole, and the clearance centers of a major volume of commercial transactions originating within the territory.

For generations the First National Banks of Minneapolis and St. Paul have been territorial banks of approximately the same region now included within the reserve district. They are the largest banks in the district, and have always been closely identified with the major fiscal activities of the Northwest serving as the depositories of the territorial industries and also as the rediscount correspondents and reserve depositories of the majority of the banks of the smaller cities and towns.

ORGANIZATION

In August, 1929, the stockholders of these two banks in association with a number of the other leading banks of the ninth district decided to unite the strength of their institutions within a group organization, which it was believed could better serve this territory by creating a medium through which the banks of the Northwest could associate for common strength, improved service, and facility.

and facility.

The First Bank Stock Corporation of Minneapolis and St. Paul was organized as a central holding company, affording opportunity to the key banks of the district to affiliate through common ownership, bringing into a partnership relation the territorial banks of the metropolitan cities, the commercial banks of the industrial centers, and the agricultural banks of the rural areas.

PRESENT SCOPE

Since its organization the corporation has grouped together 93 of the leading banks, trust companies, and allied financial houses, including many of the oldest and most substantial institutions of the territory with long records of sound management, substantial earnings, and notable service to their communities. By pooling the interests of these banks greater diversification of res urces and risk is accomplished; each affiliate is enabled to meet more adequately the seasonal needs of its trade area, while periodical surpluses of funds accumulated beyond local credit needs can be constantly and profitably employed supporting the general trade of the territory.

Sixty-seven cities now are served by affiliates of the corporation, as follows:

Cities	Un
24	
17 10	
3	
	24 13 17 10

OWNERSHIP

The First Bank Stock Corporation is territorially owned. Its authorized capitalization is 10,000.000 shares at \$25 par, of which approximately 3,030.000 shares are outstanding, held by some 16,000 individual stockholders resident almost exclusively within the district. Thus the territory as a whole particle pates in the distribution of the earnings of the corporation.

INVESTMENTS AND FINANCING

Supplementing the usual banking functions of the affiliated members of the group, two major subsidiaries are maintained. The First Securities Corporation provides a general investment and securities service operating through the banks of the group and extending its facilities to the investing public throughout the Northwest.

The First Bancredit Corporation is an agency for providing credit facilities in specialized financing fields, particular in the building and construction lines, Anancing installation sales through manufacturers and dealers.

OPERATIONS.

Operations of the First Bank Stock Corporation contemplate the refention in the hands of local boards of directors and resident officers of the management of the banking units. The central organization affords a supplementary, cooperative service functioning through several divisions and designed to maintain highly competent management in the units. Periodical examinations, central investment of secondary reserves, adoption of proven standards, exchange of information and the bringing to bear of trained judgments throughout the entire system of banks should insure their operation at a maximum constant of efficiency, providing a degree of security for depositors equal to that of the greatest banks of the nation.

MANAGEMENT

Management of the First Bank Stock Corporation is vested in a board of directors representative of the most substantial interests of the Northwest, an executive committee of commercial, agricultural, and investment bankers of many years experience in the territory served and a group of operating officers recruited from the executive staffs of the First National Banks of St. Paul and Minneapolis.

The executive committee of fifteen is composed as follows:

C. T. Jaffray, chairman of the board of First Bank Stock Corporation, and bresident of the Minneapolis, St. Paul & Sault Ste. Marie Railroad.

George H. Prince, president of the corporation and chairman of the First National Bank of St. Paul.

Lyman E. Wakefield, vice president of the corporation, president of the First National Bank of Minneapolis and chairman of the Board of the First Minneapolis Trust Co.

Richard C. Lilly, vice president of the corporation and president of the First National Bank of St. Paul.

P. J. Leeman, vice president and general manager of the corporation and vice President of the First National Bank in Minneapolis,

James E. Woodard, President of the Metals Bank & Trust Co. of Butte, Mont. Sam Stephenson, president of the First National Bank of Great Falls, Mont. T. A. Marlow, President of the National Bank of Montana, Helena.

J. C. Bassett, chairman of the board of the Aberdeen National Bank & Trust

Co., and president of the First State Savings Bank, Aberdeen, S. Dak, C. B. Little, president of the First National Bank of Bismarck, N C. B. Little, president of the First National Bank of Bismarck, N. Dak. R. W. Webb, president of the First Minneapolis Trust Co. J. A. Oace, vice president of the First National Bank of St. Paul.

Julian B. Baird, president of the First Securities Corporation, St. Paul. A. McC. Washburn, vice president and general counsel of the First Bank

Stock Corporation, Minneapolis.

N. Paul Delander, vice president of the First Securities Corporation, St. Paul.

RESPONSIBILITY

The management of the First Bank Stock Corporation is conscious of the strent degree of public responsibility which the nature of this organization entails. Banking is a semipublic function and banks are charged not only with the safeguarding of the accumulated capital of the areas they serve but with the maintenance of a stable financial structure through careful direction of the maintenance of a stable maintenance of the stable put. Strong banks are essential to prosperity and sound development and it is our purpose to afford the entire territory a banking service meriting the greatest degree of confidence.

It is also our intention that the development of this system shall be conducted frankly and openly and that the residents of the Northwest shall at all times be provided with comprehensive information concerning its activities.

With that policy in view this booklet is published.

GROUP BANKING

Group banking is the name that has come into common usage for this step in the evolution of the American banking system, which has developed extensively in the Northwest, prompted by a need to meet a definite change in economic conditions. Group banking is not simply chain banking under another name. Chains of banks under common ownership or common control, usually of a single individual, have existed for generations, the majority stockholder or stockholders simply exercising that natural right to supervise the operations of all the corporations in which their holdings represented controlling interests. Chain management generally reflected a single dominant individual. Group banking, on the other hand, is the association of a number of corporately independent institutions within a single holding company for mutual advantages, the group being built around one or more large banks of a territorial nature and its management resting in the hands of the banking interests of the territory served.

HOW BANKS AFFILIATE

The association of these banks is accomplished by the exchange of stock of the affiliating institutions for the shares of the holding company, the investment interest of the individual stockholders being transferred to the controlling corporation. As a consequence, the ownership of a group rests in the hands of a large number of stockholders representative of the entire district served by the group.

In the parent corporation, a reserve capital structure is created which stands as an emergency reserve for every member of the group.

ADVANTAGES

Group banking of this type has certain inherent elements of increased strength over single banking institutions. Banking is a business of careful investment of the funds entrusted by depositors, and the simple pooling of the investments of a number of banks entails a wider diversification of risk. The group accomplishes a further diversification through the greater variety and type of area and industry served by its members.

Supported by this greater diversification the unit is in a position to meet more fully peak credit loads and seasonal needs of its community. Such seasonal needs of different localities and industries vary widely, often to a point of complete absorption of local credit resources. The group organization provides means of mobilizing the credit supply of the territory to meet these conditions. At the periods of over-supply of available money in units of the group this capital may be marshaled for financing the general business of the territory.

The central treasury also provides a means for expanding the capital structure of its affiliates if the growth of the local communities requires the expansion of loaning power to meet rapid development of trade and industry.

Maintenance of supplementary facilities in territorial divisions of the group will enable the affiliated banks to provide types of services formerly offered by only the largest banks.

Management of the banks in the group remains in the hands of their corporate organization, the credit authority being exercised by local officers and directors. Supervision by the holding company is directed at maintaining efficient management, the conducting of careful examinations, the requirement of periodical reports, the exchange of information, and the adoption of efficient standards and methods.

BUILDING THE COMMUNITIES SERVED

Group banking contemplates the development to the maximum of the service of the component units to the communities in which they are situated. Only through the prosperity and success of its affiliates can the group expect to develop and prosper, and its continued prosperity rests with the development of the communities served.

In recent years there has been a growing tendency among the smaller and more isolated banks to keep their assets in such a liquid condition as to be able to meet an emergency, mass withdrawal at any moment. This has resulted in the creation of overly large liquid reserves, such as cash on hand, cash on deposit with other banks, investments in highly liquid assets such as Government and other low-return bonds and notes. The existence of a large mobile reserve within the holding company will release back to the use of the local communities a large volume of capital now withdrawn from support of general business.

The Northwest is a new country, rich in resources whose exploitation for the benefit of the people living within the territory, will require large credits from outside its borders. The group is a medium through which capital can be drawn into the Northwest and diffused throughout the entire region.

These are the financial institutions affiliated with First Bank Stock Corporation.

³ First Securities Corporation, organized Jan. 2, 1930, assumes all business First St. Paul Co. and bond department of First Minneapolis Co.

(5) We have acquired controlling interest in the various banks and corporations comprising our group in the following manner:

(a) By purchase of their stock for cash.
(b) By incorporating new banks, and paying in the capital in cash. (c) By exchanging stock of this corporation for stock of the banks.

(d) By a combination of (a) and (c). In some cases we have solicited the affiliation, but in a large majority of the same cases we have been approached by the banks themselves. In every case a very thorough examination is made before the purchase is completed, and all lands of the same secured by adors the bank or are secured by adors. Indesirable assets are either removed from the bank or are secured by adewate guaranty. In some cases where undesirable assets are removed, the accepted assets are guaranteed by deposit of a portion of our stock, given to them in exchange for theirs. We require all depositing stockholders to guarantee the validity of their stock, and also require them to sign a guaranty brotecting us against any liabilities of the bank existing on the date on which the deal is closed and now shown on the balance sheet. The number of shares of our stock given in exchange for the stock of the affiliating bank or corpora-tion is determined both by the amount of net capital assets which we require, and by the earning power of the bank or corporation over a period of years.

(6) The capital structure of the First Bank Stock Corporation is composed bolely of fully-paid and nonassessable shares of the par value of \$25 per share of our capital stock. There was outstanding on December 31 a total of 3016,870.57 shares of this stock with a par value of \$75,421,764.39. The stock-

holders are distributed georgraphically as follows:

	mber of kholders
Saint Paul Minnesota (outside of Twin Cities)	6, 753 2, 345
All Ohters	3, 201 383
Montana Vorth Dakota South Dakota	987 892
VI Same	516 446
Other States	596
	16, 119

With the exception of 200,000 shares sold through First Minneapolis Co. and First St. Paul Co. to the general public at \$47.50 per share, and 32,000 shares sold to officers and employees of the corporations affiliated with First hank Stock Corporation at \$42.50 per share, all of the stock has been issued a exchange for the stock of banks and corporations now affiliated with us, and ho attempt has been made to otherwise control its distribution.

I have some facts concerning the matters you discussed yesterday which I know you will be interested in. The conditions which I described a few moments ago, concerning the possible earnings of the mall banks, have changed substantially the opportunity for a bank various-sized communities. To-day the bank in the small community finds it practically impossible to make a fair earning and I want to repeat what Mr. Decker told you yesterday that there is no hore dangerous institution in a community anywhere than a bank which can not make money. It is just fundamental if they can not make a profit, they are a dangerous institution because they can not xist. They do exist over a period, because the stockholders will permit themselves to be assessed for operating charges, but eventually they get tired of that and there is a closing.

My experience is that it takes exceptional management to enable bank to earn sufficient to justify its existence if it has deposits of than \$250,000 under a State charter, and less than \$500,000

ander a national charter.

I am reading these figures, because I can not carry them in my head, but taking Minnesota alone, there are 73 towns in Minnesota with less than 100 population that have banks. In 9 of these towns the total deposit is less than \$50,000; 24 have deposits from \$50,000 to \$100,000; 19 from \$100,000 to \$150,000; 10 from \$150,000 to \$200,000; and 5 from \$200,000 to \$250,000.

In communities of from 100 to 200 in population, 5 have deposits under \$50,000; 36 from \$51,000 to \$100,000; 29 from \$100,000 to \$150,000; 19 from \$150,000 to \$200,000; and 12 from \$200,000 to

In towns of all sizes in Minnesota, there are 55 with a total deposit less than \$50,000; 71 from \$51,000 to \$100,000; 88 from \$100,000 to \$150,000; 95 from \$150,000 to \$200,000; and 16 from \$200,000 to \$250,000. This shows a total of 325 towns in the one State where the bank deposits are less than \$250,000. That does not mean there is only one bank in the town; in many instances there are two There are 145 towns which have no banking facilities whatsoever.

I want to call your attention to this: Is it possible to make a state ment before you that will not be circulated in the newspapers, to the detriment of our own people back home?

Mr. Strong. Not in the presence of the newspaper gentlemenbecause that is what they are paid for. These young men are paid to get the news; especially to get the news you do not want them to have.

Mr. Wakefield. It is my observation that most newspaper men have some judgment.

Mr. Strong. It is my experience that if you ask them not to print a thing they will not print it.

Mr. WAKEFIELD. I will say this, at this point, that since I came

down here—
Mr. Brand. Let us settle this question. I want the information which he thinks would be interesting to this committee, in order that we may intelligently prepare legislation to remedy these evils

Mr. Wakefield. I will get to it in another way.

Mr. Busby. If it is worth while to explain the matter, I do not think it is well to cover it up, even if it applies to your institution.

Mr. WAKEFIELD. It does not involve my institution.

Mr. Busby. Or any other institution.

Mr. Wakefield. It does not involve much, but it might be misunderstood.

Referring to these 145 towns without banking facilities, and where there were banks, since I came down here, Mr. Veigel, who is superintendent of banks of the State of Minnesota, has come out publicly with a recommendation that the State of Minnesota authorize State banks to put branches or offices or teller's windows into those towns I will read the statement.

Personaly, I am inclined to think the State might permit strong banks to establish branches in neighboring places, say within a radius of 20 miles. That right would be carefully limited so it could not be abused. No bank would be allowed to put a branch in a town which had a bank already. No branch would be permitted except under a charter from the commission. Ordinarily not more than one bank should be allowed to have a branch in any place.

not more than one bank should be allowed to have a branch in any place. Branches such as I have in mind would be merely offices, with a teller charge, whose authority would be limited to receiving deposits and cashing checks.

Mr. Veigel's purpose in making that recommendation undoubtedly 18 because of the fact there are so many small communities at the present time not served with banking facilities, and he would like the State banks of Minnesota to take care of these people.

Mr. Decker described yesterday the requests that had come to permit deposits in drug stores. We have had the same kind of thing and have them constantly, but there is not any way you can take

Care of those things under the present conditions.

This position on the part of Mr. Veigel is a complete change of attitude. He has been, in the past, firmly opposed to any form of

branch banking at any time.

Now, this condition that I have just described in reference to these small towns, there are the points where this branch banking seems to become a topic for discussion. I feel myself that ultimately the small banking business must be taken out through branches of some Institution that can afford to run offices at various points. We are not prepared to suggest areas, from the standpoint of public policy, for branch banking and our opinion and our belief of the attitude of the general public in the territory concerning branch banking, as a general thing, are the same as those described by Mr. Decker Vesterday. I think our larger towns would be resentful of an effort Or a necessity of having branch banks in their various communities. It is quite likely that the trend may be such that within a few years Our people out there may change their attitude in that respect.

However, I feel confident at this time that if legislaion were Passed, which directed or made necessary for us immediately to convert our banks into a branch banking system, it would mean the destruction of that business, because I think that it would mean that We would have a new crop of banks formed to take advantage of the leeling existing at the present moment, and it would simply destroy an agency that is there taking care of the business better than it can be through any other arrangement and it would be very very

I realize that it may be necessary that branch banking be author-¹²ed within certain trade areas. I do not know who will determine

those areas. I should hate to try to do it myself.

If that were done, we would be perfectly willing to operate in competition with whatever might develop under a privilege of that kind. But I do believe that it would be destructive and disastrous If a permission of that kind were granted, and at the same time legislation, destructive of the thing which we are undertaking to do, were but into effect.

Now, do not forget this: I think I can show you that my motives and feelings in that statement are sincere, because, in my opinion, if we could to-day convert our entire group into a branch system, I leel satisfied that we could handle that business more profitably and

hake more money than we can under the group system.

We feel that the benefits from group banking should not be sacrificed, and even though there were a branch banking system I still believe there will be for many years a better and more successful banking service rendered in many communities through the group System as we are operating.

Now, I referred awhile ago to the motives which prompted our

Undertaking this type of organization.

Gentlemen, I think that you will all admit that if you were living out in Minneapolis and St. Paul and you were engaged in the bank ing business there and in a position to see the possibility for future development and the carrying on successfully of the business of the territory and you realized that there was no possibility for growth or development within your city, except as the territory which makes it should grow and develop, you would be very much interested in trying to see that that territory outside of your trade area got itself into a position where it would be satisfactorily banked at the earliest possible moment, and that is the only motive which we have in undertaking the job which we are doing. It is for the definite put pose of furnishing banking facilities in each one of the points where we operate, which will have the confidence of the public, which will be in the position of knowing that they need not be fearful of their own single institution, and on account of that fact unwilling to take care of the loans and business in their own community which they should take care of, and who understand that the driving force back of the entire organization is the means and the will to serve those various communities and develop any business that is legitimate in this territory to the limit. That is not altruism. There is nothing to that. That is the way through which our banks have grown in the cities, and it is the only way. That is the means through which the business of the Twin Cities was developed. It is the development of the territory surrounding it, and there is no other way to develop it.

So our purposes are those of self-preservation practically. We want that territory to stand out in a business way. Over very many years the territory of the ninth Federal reserve district was freely from any business and financial difficulties than any other section of the United States. We have always been able on account of the agricultural background to hold ourselves in steady rein and go ahead processively.

We have gone through a period which has been very unsatisfactory and we are on the way up and we are trying to see that we do not again find ourselves in the difficulties which we have just experienced and through which we have passed.

Now, I am going to state a few things here which I trust, from the questions asked here yesterday, are those things which you are particularly interested in and anxious to have information on. In the questionnaire you asked me to explain fully what control or influence the holding company, or a central bank controlled by the holding company, exercises over the group of banks acquired.

Now, gentlemen, the First Bank Stock Corporation is organized under the laws of Delaware, and I should like to tell you why. In our first consideration of this matter we intended to organize under the laws of Minnesota, which would have given our corporation a double stock liability. That particular feature is one which we would have welcomed in the organization.

However, we transferred the corporate organization to the laws of Delaware for this reason, that under the laws of Minnesota any stockholder of our corporation living in any other State, in case of death, his stock would be subject to inheritance taxes in two or three different States, and we felt it was an unjust thing to ask our people to buy stock when we were covering a wide area, in a corporation

where, in case of their death, they would be subject to the inheritance-tax penalties at two or three different points. That was the basis for using the Delaware incorporation. It was not to avoid the double liability on the stock. We did not care anything about that.

Mr. Brand. Would it interrupt you to ask you a question there?

Mr. WAKEFIELD. No, Sir.

Mr. Brand. What is the liability under the present law of the

group banks?

Mr. Wakefield. They have the double liability, but the corporation is the holder of their stock. We would not have had any objection to the double liability of the holding company's stock.

Mr. Brand. But it is a double liability on the stock of the banks?

Mr. Wakefield. Yes, sir.

Mr. Wingo. I do not think you made clear the point you wanted to

make in reference to the inheritance tax.

Mr. Wakefield. I think you gentlemen are all familiar with the fact that it has gotten to the point now where different States have passed laws that if a man goes to New York and dies—rather, if he owns stock in Minnesota, we collect an inheritance tax on it in Minnesota.

Mr. Goldsborough. You mean two States, and not two or more

States?

Mr. Wakefield. It may be many States. There have been cases where the whole stock has been used up in payment of taxes.

Mr. Wingo. Why did you go to Delaware? They do not have it

there?

Mr. WAREFIELD. No, sir.

Mr. Seiberling. There is no transfer tax in Delaware?

Mr. Wakefield. No, sir. In our case we have the First Bank Stock Corporation with officers and employees set up to supervise the management of the banks in our group, and in that supervision we go a long ways. We depend upon the officers and directors of the banks, who, by the way, have identically the same responsibility, and they do not avoid it—the same responsibility they have always had, or would have had, and as is true under all corporate ownership, in case of mismanagement. The stockholders are the ones who are

^{ob}liged to make changes in the directors and officers.

In this case, we feel that we have a much more live and active interest on the part of the stockholders, because the stockholder is the First Bank Stock Corporation, and the First Bank Stock Corporation is following the business of that institution intimately and it will, if anything goes wrong in any single unit in that institution, be in a position of taking an active interest as a stockholder and bring about required changes in a much more satisfactory manner than is ordinarily true of a corporation whose stock is spread over a large group of small stockholders, the interests of which are not definite or active.

Mr. Goodwin. And perhaps more expeditiously?

Mr. Wakefield. Yes, sir. Our method of conduct is this: No bank has been taken into our organization except upon a complete examination which involved the setting up of a complete set of information for our own office concerning the loans in that bank, and we have a record to start with of the loans in that bank. In

all cases, every loan made by officers involving \$500 and over are reported to our office in Minneapolis daily and accompanying that loan, if it is a new loan, is a financial statement or a statement of the collateral upon which the loan is made; so that in the case of a poor one being made, we have knowledge of that fact within 24 hours after it has happened.

We have a corps of examiners who are charged with the responsibility of entering and examining those banks not less than two times each year, and who make those examinations and bring them into the office and enter into correspondence with the officers of the banks or discuss with them there anything that they think needs a

little attention.

One of the difficulties of the small banker has been this fact, that he has had no opportunity to get in touch with people and avail himself of the modern method of banking—the modern method of determining the value of credits, and our experience is that that group with which we are associated are the happiest bunch of men over the fact they have a chance to sit in and advise, and work out and find out how a bank should be operated and how loans should be made.

pu

I want to repeat what Mr. Decker said yesterday, that there is much more damage done by a poor loan than there is by not making loans that should be. There is much more harm done by making the loan that is not justified than ever will be created by turning down

some one who should have the money.

In connection with all this, I want to say that I have been reading the testimony that has been presented before this committee, and it has been my opinion—and perhaps it is not correct—that there has been in the minds of the members of the committee the need of pro-

tecting the borrower.

Now, gentlemen, I want to make this clear. In my opinion, the job this committee has to undertake is to protect the depositor, and the borrower needs no protection. Money is the most competitive commodity in the world. There is not anyone that I ever have known of that can get a monopoly in it. It will move overnight if there is a better place to put it, and I have never seen the time when any business or enterprise that needed capital to develop it did not find it. There will always be varying costs of money, based upon the risks and the type of thing that the money is going into. Some people are willing to take a long risk and a long rate. Others prefer to confine their loans to those which carry no risk and always secure the least possible commercial rate.

In my opinion, Congress nor no one else needs to devote one more ment's thought to protecting the borrower. The borrower will take care of himself, and he will get his money at the most reasonable rates possible, where the credit is justified, during whatever condition

prevails at that time.

So our supervision of those banks is intimate and very close, because we recognize that in every single institution in our group our responsibility is complete. We have a liability for assessment on stock that we own in these individual banks of 100 per cent. That does not mean anything. Our liability is what is involved in every bank we operate, and it is necessary to see to it that those banks do not have any more difficulties than is reasonable.

Now, then, yesterday questions were asked about the flexibility or the flow of funds through group operation from section to section. I can not speak for any other people in the business, but I am going to

make a statement of our own practices in that respect.

We are operating entirely within the ninth Federal reserve district, and there are varying needs and conditions over that district. If we have a bank located at a point where, at a particular time, there is a demand for funds beyond which we have deposits to make loans, we Investigate the credit involved, and at the same time the First Bank Stock Corporation has intimate knowledge of the money available to lend in each bank or their condition, and if there is some other bank needing loans, and the loans are good ones, we have no hesitancy In transferring that loan to that particular bank, or to the First National Bank of Minneapolis or the First National Bank of St. Paul, and if a case should develop where there were no funds within the group we will do what we have done in the past. We have 67 banks who are members of the Federal reserve system. The First National Bank of St. Paul and the First National Bank of Minneapolis are both members. We will go to the Federal reserve bank and borrow such money as is required to take care of the reasonable needs of our territory over any particular period. It is our business and what we should do and what the Federal reserve bank is for and what we have done in the past.

In answer to this question-

Upon what principle are you working in determining the geographical area into which your group of banks will be extended—

I desire to say that we have confined ourselves to the ninth Federal reserve district as a matter of principle and I have described the method of audit and examination.

I think, gentlemen, that is all I have to say in the way of a state-

ment at this time.

Mr. Strong. I understood you a few moments ago to say that Congress should devote itself to the protection of the depositor—the man with the money—and give no concern to the man who wanted to borrow money. Is that your position?

Mr. Wakefield. I think so.

Mr. Strong. How many banks are there in your group?

Mr. WAKEFIELD. There are 91 in that list.

Mr. Strong. How many were in the group as originally started? Mr. Wakefield. Well, there were a few more than that. We had this little company while we were trying to buy banks, and we had 17 banks in that company.

In this information I have given, I have given the percentage of stock owned by the First Bank Stock Corporation in each bank.

In two or three banks, you will find we only own the control.

Mr. Strong. But 17 started the group?

Mr. Wakefield. There were 33 banks to start with.

Mr. Strong. Who set the values on those banks, as taken over

y your group?

Mr. Wakefield. The First National Bank of St. Paul was an independent institution, and so was the First National Bank of Minneapolis. The value of those 17 banks which we had already burchased was what we paid for them.

Then we had a conference between the people in the three Montana banks, the First St. Paul, and the First Minneapolis, to determine a fair basis upon which they should join.

Mr. Strong. I have not gotten to that. I am talking about the

5

N:

B

original group.

Mr. Wakefield. Our original group started with what I have described.

Mr. Strong. Who set the value on the two big banks in Minne

apolis and St. Paul?

Mr. Wakefield. We sat down and took the capital, resources, and earnings, together with the deposits, and figured out a formula which was worked out.

Mr. Strong. Were you an officer in either bank?

Mr. Wakefield. The First National Bank of Minneapolis.

Mr. Strong. You set your prices upon your own banks when you started the group?

Mr. Wakefield. We did not. It was a difficult thing to do be-

tween the two cities.

Mr. Strong. You agreed between the two banks how much stock

of the holding company you would take for the stock of your banks!

Mr. WAKEFIELD. We agreed upon a formula which the officers thought would be fair, and then that formula and agreement were turned over to a committee of the boards of each of the two banks for review and approval and was finally approved by the board of directors of the two banks.

Mr. Strong. But the officers of the two banks agreed upon how much stock they would allow themselves for the stock of the two

banks?

Mr. Wakefield. Absolutely. Some one had to do that.

Mr. Wingo. Do you not think in that connection it would be wise to have him give the formula?

Mr. Wakefield. I can not-

Mr. Strong. Do you have any objection to giving us the formula

that you used?

Mr. WAKEFIELD. I have described it, but I can not tell you exactly the figures used. But it was based upon this: The First St. Paul had less capital assets than we had and they had less stock, although they had a bank with deposits as great.

Mr. Strong. Did you have an examination made of each of those

Mr. WAKEFIELD. Yes; they examined ours and we examined theirs. Mr. Strong. You jointly agreed on the stock you would allow?

Mr. Wakefield. Yes.

Mr. Strong. When you came to take in the stock of the other banks you used a different formula? You said how much they should have for the stock?

Mr. Wakefield. In a great many cases they got a better deal than

we got ourselves.

Mr. Strong. I do not know anything about the facts. I expect there were a great many cases where they did not, were there not?

Mr. WAKEFIELD. I can see what you have in your mind, Mr. Strongand of course any statement that I might make you would feel was probably my opinion. I think it would be propably the best thing for you to find out from a lot of the people who got the stock whether they were treated fairly and are being treated fairly.

Mr. Strong. They might not know, if they get a dividend, whether

they were treated fairly or not.

Mr. Wakefield. Many of the stockholders to-day are receiving greater dividends on their stock which they received than they used to pay themselves in their own banks.

Mr. Strong. Oh, I realize that combination of money and credit

are likely to produce large incomes.

Mr. Seiberling. Will you ask him at this point if that applies to

the original banks?

Mr. Wakefield. They are receiving identically the same dividends. Mr. Strong. But they placed a value on the banks of which they got the stock. I think it is fair to go into this because of the statement you made that Congress should take care of the man who has the money—the depositor—and not the man who has to borrow it. Personally I think that is a peculiar statement.

Mr. Wakefield. The difficulties in our territory have arisen en-

tirely from the difficulties of the depositors.

Mr. STRONG. It has been suggested that I ask you how are the directors in the individual banks of the group elected?

Mr. WAKEFIELD. They are elected by the stockholder which hap-

Dens to be the First Bank Stock Corporation.

Mr. Strong. Then they are not elected by the individual banks?

Mr. Wakefield. The First Bank Stock Corporation is the owner of the stock of the banks and is the only person who can elect the directors.

Mr. Strong. Then you elect the directors in all the banks?

Mr. Wakefield. Yes, sir.

Mr. Strong. What dividends on your stock do you pay?

Mr. Wakefield. Our stock is \$25 par value and pays a dollar dividend.

Mr. Strong. What was the original stock of the two banks—the one in St. Paul and the one in Minneapolis?

Mr. Wakefield. Both have \$6,000,000 capital.

Mr. STRONG. Both had?

Mr. WAKEFIELD. It is the same to-day.

Mr. Strong. And they took \$6,000,000 of stock from the holding

company?

Mr. Wakefield. They had \$6,000,000 capital. I have it all in this little booklet. You take our bank, the First National Bank of Minneapolis: It has capital, surplus, and undivided profits of \$11,613,170.30.

Mr. Strong. How much stock did you take in the holding com-

pany?

Mr. Wakefield. Let me finish this. All these institutions belong in the First National Bank, and I will tell you this. We have \$11,613,170.30 in capital, surplus, and undivided profits in the First National Bank.

We have \$2,400,000 in the First Minneapolis Trust Co. We have \$3,697,000 in the First Minneapolis Co.

Bank. We have \$667,000 in the Minneapolis Trust Joint-Stock Land

In addition to that we have an equity of a considerable amount in

our buildings, which has been charged down.

Now, our total set-up of capital assets that we showed was \$22,000,000, and we received \$30,000,000 of stock of the First Bank Stock Corporation.

Mr. Strong. After you figured in all the assets and value you got

\$8,000,000 more than the figures showed?

Mr. WAKEFIELD. In stock.

Mr. Strong. In the holding company?

Mr. Wakefield. Yes, sir.

Mr. STRONG. What did the St. Paul bank get?

Mr. Wakefield. They got \$27,000,000, I believe. I can not tell you that exactly. I remember my own figures, because I handled them.

Mr. Strong. Theirs was also watered—that stock? [Laughter.]
Mr. Wakefield. I do not admit there was any water around the

Mr. Strong. Of course, there could not be any other liquids at the present time. There was some liquid put into it, evidently,

anyhow.

Mr. Wakefield. At the time we made this arrangement the stock of the First Natitonal Bank of Minneapolis was selling at \$220 a share. The stock that we received—the par value of the stock that we received, which was four shares for one, was \$100. Now, I do not think we watered any.

Mr. Strong. Did you do the same thing with the other banks increase them in a proportionate amount in your corporation for the

stock you took from them?

Mr. Wakefield. If they had an organization that you justify it; es.

Mr. Strong. But you passed upon that?

Mr. Wakefield. Yes, sir. In connection with that, every one of these deals was a mutual transaction. There was nobody obliged to sell. That was a mutual agreement.

Mr. Strong. I know some little banks that were glad to sell.
Mr. Wakefield. I know a lot of them that would be glad to sell.
Mr. Strong. But it was the most intense pressure upon them anyone could possibly imagine.

Mr. Wakefield. Not in our section.

Mr. Strong. You feel that branch banking would be all right in

the little towns that could not support a regular bank?

Mr. Wakefield. Mr. Strong, I feel that it is almost essential in order to find some means of taking care of these deposits, where there are no banks in those communities—almost essential to get them into some live institution that can furnish the necessary banking facilities.

Mr. STRONG. But you think in the small towns that no one can make enough profit in to support a unit bank, that branch banking should be permitted?

Mr. Wakefield. Yes, sir.

Mr. Strong. But in communities where banks can make a regular profit—enough profit to support a regular bank—you do not think Congress should authorize branch banking?

Mr. Wakefield. I think it may be perfectly proper for Congress to authorize branch banking in trade areas, but if they should do it, I think it would be disastrous to force us to discontinue our group banking.

Mr. Strong. You would have no objection to branch banking

operating in your area?

Mr. Wakefield. None at all.

Mr. Strong. Of course, the argument the branch banker or the man advocating branch banking, might make in your trade area, is that if they are allowed to go in there, they will select not only the profitable banks in the good banking towns, but they will put branches in all towns and that they can do it through teller windows, and give the people banking facilities which your arrangements withhold from them.

Mr. Wakefield. No. If such authority was given, do not ever think that we would be asleep. We would be taking care of those

small towns.

Mr. Strong. With teller windows?

Mr. Wakefield. With all the banking facilities that could be handled profitably in those communities.

Mr. Strong. But you would be the judge, of course, as to what

that town would be entitled to.

Mr. Wakefield. Some one has to be.

Mr. Strong. You do think the residents of the town should be,

but it should be some one in distant control?

Mr. Wakefield. It must be some one who understands that business and knows whether they can operate that branch with profit in

that territory.

Mr. Strong. Do you agree with Mr. Decker—I did not listen very closely to your discourse with regard to the farm problem—do you agree with Mr. Decker's interesting statement yesterday that the farm problem grew out of lack of capital rather than the lack of banking facilities?

Mr. Wakefield. It grew out of too much capital. Mr. Strong. Grew out of too much capital?

Mr. Wakefield. Yes, sir. I agree with Mr. Decker that a great deal of our difficulty was occasioned entirely by our banking situation, but not all of it by any means.

Mr. Strong. You think you had more banks than bankers?

Mr. WAKEFIELD. Yes, sir.

Mr. Strong. Are you aware of the fact that just prior to the war the tariff was taken off of agricultural products? We had practically free trade in agricultural products.

Mr. Wakefield. I have been engaged in business in a manner which has kept me alive to the farm difficulties over a great many

years.

Mr. Strong. That being true, you know that as a fact, do you not?

Mr. Wakefield. I do not know a thing about the tariff.

Mr. Strong. That is one branch of the farm problem you have not followed?

Mr. Wakefield. I do not feel that it has been an important factor in the farm difficulty.

100136-30-vol 1 pt 8-10

Mr. Strong. You think it is not important, not having investigated it?

Mr. Wakefield. No; I think—let us delve into that a bit.

Mr. STRONG. All right, delve.

Mr. Wakefield. I will make my statement about farm products in this manner: The products of the farm are primarily food products. The market for those products is dependent upon the needs of the population of the world for food. There is no method or means whereby an extension of that market can be brought about beyond those needs.

It is not as it is with the automobile manufacturer, or other manufacturer of other articles. You can not get a man to buy twice as much food as he needs, although you may induce him, through sales efforts, to buy two automobiles, or half a dozen neckties. It is an

absolutely limited market.

The world generally is attempting to produce the food necessary in the various countries, as far as possible in those countries, and, in my opinion, there are no means whereby the United States, as an individual nation, can create a condition which will enable us to produce unlimited quantities of food products and secure an adequate price for them; in other words, in my opinion, the industry of farming in this country must depend primarily upon the domestic market for the sale of its products, and when it reaches beyond that or attempts by any artificial means to provide a market beyond that, they are treading on dangerous ground.

Mr. Strong. Then you do not think we should attempt to export

agricultural products?

Mr. Wakefield. I think it is perfectly legitimate to export all you can, but you are up against all the factors of the world market when

you do it.

Mr. Strong. In your discussion of the farm problem—I want to try to follow you along those lines—you seemed to think that it is wholly a matter of financial trouble, or wholly a financial problem.

Mr. Wakefield. The farm problem?

Mr. Strong. Yes.

Mr. Wakefield. No; I do not-by no means.

Mr. Strong. What I wanted to point out was that after the war was over we were the only major country in the world that was flooded with farm products.

Mr. Strong. Now, as I understand, under your system, so far, you have accepted only banks in communities where you feel a banking

Mr. Wakefield. Yes, sir.

Mr. Strong. Then it will be necessary for Congress, or by some other means, to provide banking facilities or accommodations by teller windows, or in some way, for those communities that can not support a bank proper?

Mr. Wakefield. Under the present law, there is not any way we could take care of those small communities, and do it in a sound

ousiness way.

Mr. Strong. How do you feel that Congress ought to proceed in its legislation toward permitting branch banking—just simply permit it in trade areas by national banks, unlimited?

Mr. Wakefield. That would require more thought than I have given it, before I could set up a formula.

Mr. Strong. Do you think trade areas is the proper limitation? Mr. Wakefield. I do. I do not know how you are going to determine trade areas. There is this thing to think about, that is, when the Federal reserve banks were established, it evidently was in the mind of Congress at that time they were opposed to permitting a central bank in the United States, or a centralized control of credit and of banking facilities, and so they undertook at that time to set up districts, based upon the flow of banking business, and determined on certain areas which, in my opinion, were pretty carefully and Pretty successfully worked out, to govern the location of the various Federal reserve banks. There were hearings held in our section, I Presume there were in others, at which all people interested might present themselves and their arguments and finally a certain district was located and determined as being the ninth Federal reserve Now, in my opinion, that was a thoroughly sound idea. The last thing that we want to see is to find ourselves hitched up body and soul with, we will say, New York City or Wall Street; because we believe if we are permitted to have an independent, strong, institution, with plenty of competition in our territory, that We can serve that territory more intelligently and better than it can be done through any other method.

Mr. Strong. I know you have said that; but what I am trying to get at is what you think Congress should do with regard to setting

up trade areas.

Mr. Wakefield. I think that would have to be left to some kind of commission that could sit down and make a study, the same as they did in establishing the Federal reserve banks, and determine what

those should be.

Mr. Strong. The governor of the Federal Reserve Board when before the committee said, I think, they had a tentative figure of

making a division of about 27 areas, if I am correct in that.

Mr. Awalt. Thirty-seven. Mr. Strong. Yes; 37 areas.

Mr. Awalt. And afterwards amended it to 50, I believe, Mr Strong.

Mr. Strong. And afterwards amended it to 50; that would not be In accord with your idea?

Mr. WARPFIELD. It might. I have not any idea on that particular thing; I do not know just how the country should be divided.

Mr. Strong. The president of the Federal Reserve Board also said he thought that finally those areas would be broken down and we would have national branch banking, but he did not contemplate that would happen for perhaps 50 years and gave as a reason that they did not have at the present time trained men to handle nationwide branch banking. Is that in accord with your views?

Mr. Wakefield. I do not know as it is in accord with my views. My views are that I should dislike very, very much ever to see country-wide branch banking in this country. I do not think we would

Mr. Strong. Your present idea is it might be confined practically to the 12 Federal reserve systems?

Mr. WAKEFIELD. Yes, sir.

Mr. Strong. That is what you sought to do in your group bank, in your district?

Mr. Wakefield. Yes, sir.

(At this point Mr. Luce took the chair.)

Mr. Luce. Did I understand you to say, Mr. Wakefield, that when those banks were taken over you required that each one of them should guarantee its liabilities of the moment?

Mr. Wakefield. Yes. We could not take in a bank and assume undisclosed liabilities that they might have. We made those people stand back of what they gave us in the way of figures.

Mr. Luce. You referred to the undisclosed liabilities.

Mr. Wakefield. It covers all liabilities.

Mr. Luce. And how were you able to help out any bank that had suffered as a result of the inflation and was struggling to keep its head above water?

larg

Whe

Mr. Wakefield. Well, sir, I will give you a picture. Here is just one instance which just tells that story. This is in a city of 3,000. The largest bank in the community was experiencing an active with drawal; the bank's reserve account was overdrawn and its cash on hand was less than \$1,000. When our examiners reached the scene. they found the town alert with lots of people in front of all three banks, and the public generally disturbed by rumors. This was an old bank with deposit liabilities in excess of a million dollars. The stockholders had previously paid an assessment of 50 per cent. was very recent. The affiliation was accomplished by our organization of a new corporation, which was supplied with a capital structure of \$150,000 and which assumed the former bank's deposit lia, bilities. The bank pledged all of its assets, including its capital and surplus and, in addition, the stockholders and the directors of the old bank put up a guarantee fund of \$200,000 in cash. That was \$200,000 on a \$100,000 bank and they had already paid a 50 per cent assessment. Now, then, that shows you how far those people would go to prevent a closing in their community, and their one ambition was to save their depositors from being tied up by the failure of the bank, if there was any way to do it.

Mr. Luce. But your central organization took no risks in the

creation of this structure?

Mr. Wakefield. Well, we took some. Mr. Luce. And what were they?

Mr. Wakefield. Well, after all of this was done, we do not know whether we are going to come out entirely whole, or not. We figured that if that arrangement did not cost us over \$50,000 we would feel we were justified in preserving that town; because it would have involved a large group of banks up and down that territory.

Mr. Luce. How would that be a loss of \$50,000, if all of the list

bilities were guaranteed?

Mr. Wakefield. Guaranteed to this extent, that we accepted in mediately certain assets and assumed the entire deposit liabilities.

Mr. Luce. I see.

Mr. WAKEFIELD. The guarantee is not big enough.

Mr. Luce. Did I understand you aright, also, when I gathered your shares in the holding company are nonassessable?

Mr. Wakefield. The holding company's shares are nonassessable.

They are a Delaware corporation.

Mr. Luce. Is it your judgment the requirement of contribution by owners in case of failure is a wise and admirable thing in the business world?

Mr. Wakefield. Not generally; but I think it is proper in banking. Mr. Luce. And why should the owners of a holding company

escape these liabilities more than anybody else?

Mr. Wakefield. They have not. They are stockholders in the holding company—the holding company itself is liable for 100 per cent assessment on every bank stock it owns, which comes out of the property of the stockholders of the holding company.

Mr. Luce. But you are not liable on those holdings in proportion

to the old holdings?

Mr. Wakefield. On the individual stock owned in the holding

company, we could not levy an assessment.

Mr. Luce. It has been brought up from time to time that branch banking may at times result in collapse of a huge institution, as took place in Canada in one instance.

Mr. WAKEFIELD. Just one, I think, in the whole history of the

country.

Mr. Luce. That shows the possibility that your holding company might go on the rocks.

Mr. Wakefield. I do not believe it would, but there is a possibility. Mr. Luce. The Canadian bank undoubtedly did not believe it would.

Mr. WAKEFIELD. Quite likely.

Mr. Luce. But an attempt is made to discourage us from instituting branch banking on the ground it once did happen; that once there was a great failure of a bank with many branches, and that establishes the possibility your holding company might, in a period of financial stress, become bankrupt.

Mr. WAKEFIELD. Yes.

Mr. Luce. Now how do you justify the exemption of your own directors and your own stockholders from the double liability which is required under those circumstances from other corporations?

Mr. Wakefield. Well, my opinion is this, that through a set-up with a capital structure such as we have, the liability, in case of loss of some unit in that group, is far more strongly covered than it would be with an individual liability of a group of stockholders.

Mr. Luce. Very likely this is a technical question and has no important bearing, but we are confronted with the Canadian episode and it may be proper to inquire as to what would happen under similar circumstances in this country.

Mr. Wakefield. Yes.

Mr. Luce. Suppose some of the communities in your neighborhood dwindle. There is a story in this morning's paper—or was it resterday—to the effect that the census enumerators are finding throughout Illinois, I think was the particular locality specified, large numbers of villages that are dwindling and in one case the whole village was sold out at auction—the changing conditions of the

time resulting in a dwindling of the smaller communities. What will happen; what course shall you pursue if one of your communi-

ties has that experience? Shall you close that bank?

Mr. Wakefield. I think good business judgment would require us to liquidate the institution and close it if we were operating in a town where it was no longer possible to make a profit in doing the business.

Mr. Luce. Then, your form of doing business does not necessarily

assure a continuance of existing banking facilities?

Mr. Wakefield. It certainly assures a continuance if there 15 enough business there to justify a continuance.

Mr. Luce. But would it be in the case of competition in a pros-

perous community?

Mr. Wakefield. Well, competition is the best thing we know of and, if we had competition which took our business away from us we would probably have to quit and go out of that community. We

never have had that experience yet.

Mr. Luce. I might say, Mr. Wakefield, that your admirable state ment covered most of the questions I wanted to ask, but there are one or two questions I would like to ask, particularly in the case of the shifting of funds. We are constantly told in the discussions of this subject that either holding companies or branch banking or any other form of amalgamation will inure to the disadvantage of the smaller communities and will shift funds to the great centers, notably New York and Chicago. In the first place, will you tell us what actually happened, so far as your own experience shows, during the period of the great inflation last summer, when money rose as high as 9 per cent in New York?

Mr. Wakefield. Well, our situation was just this: Some of the banks in our group had funds which they loaned on call in New York The First National Banks of St. Paul and Minneapolis were loaning money largely on account of the grain situation and our own discounts were running very high, comparatively; so that at no time during that period did we have any surplus funds. We were, most of that time, borrowers at the Federal reserve bank and at no time during that period did we have a dollar of the funds of those two big banks loaned in New York on call, although we could have made

double the rate we were getting by putting it there.

Mr. Luce. How was it in the case of the bank in Fargo, for example!

Mr. Wakefield. That did not.

Mr. Luce. Suppose it had surplus funds, did those reach New York last fall?

Mr. Wakefield. If they had had surplus funds, they possibly might have loaned; but at that time we had not yet taken complete control of all of these banks and could not regulate or control of direct their loaning, and some of them did have-I know that-all through the period surplus funds loaned in New York.

Mr. Luce. Of course, what I am driving at is to try to find out whether the holding company or branch bank tends to send money to the spot in the country where the best return can be received for

it, to the detriment of local industries requiring funds?

Mr. Wakefield. No; I am positive that does not happen, because it would be the poorest thing we could have happen. You must remember this, that nobody is obliged to do business with a certain bank, and the bank recognizes its responsibility to the business of its community. It must. It does not make any difference what their selfish motives might be, the fact remains they must take care of that business or they can not keep it. And during the period you describe, of all of this inflation, the banks that I know of were loaning money at a fixed arbitrarily low rate to business people, and borrowing money to furnish to them instead of trying to shift it down to where

they could make a profit.

in

Now, then, you are speaking of loaning money on call in New York. There come periods, seasonal periods, in the banking business when every bank may find itself temporarily long on money. Nearly all the banks in this country are paying interest on deposits, and the banker can not sit with that money idle, and the logical and reasonable place for him to loan it is to loan it on call in New York City, because he can get it back at the moment he wants it. In the history of the country there never has been a time, except a very brief period at the opening of the war, when money loaned on call could not be returned at once and immediately. As it is at present, this happens to be right now the time when there is perhaps a greater freedom of money than usual, and there is a considerable amount of it which is loaned in New York on call, and at a very low rate because of the fact there is so much money looking for any price to cover its cost.

Mr. Luce. The argument we most hear here might be illustrated by taking at random Fargo, which comes in my mind: It is urged that if some man is starting in business and desiring to establish some new industry, the success of which is always problematical, and should go to the Fargo bank in such a period as that of last August and ask for a loan, the centralized banking system would say to itself, "We can get a sure thing by loaning this money in New York at 8 per cent; we are not sure this fellow is going to make good, and it is better to send that money to New York at 8 per cent than it is to run

any risk with the hope of getting 6 per cent."

Mr. Wakefield. The man that felt that way about it would not stay in business long, would not stay in the banking business very long, because there is not any banker I know anything about who does not take the keenest interest in any business that is going to be conducted and developed in his territory, and he will go just as far as his business judgment will permit to take care of that thing. Banking business is competitive, and if he does not do that he will lose that business; his bank will become known as an institution that is not taking care of the local people and they will go to his competitor. I have not the slightest fear of that sort of thing developing.

Mr. Luce. Possibly others of us do not, but that charge is made and must be met. Carrying that a bit further, it is urged, under the unit-banking system, the president of the local bank has that very keen heart factor at work for the safety of his own institution and the maintenance of his own business and preservation of his position of influence in the community. Now, by such a change as you have brought, the banker has lost some part of his personal anxiety; he no longer depends upon the business of that bank for the safety of his own fortune; he is now dependent upon the prosperity of a large group of banks; and it is suggested that you have thereby diminished his own zeal, caution, prudence, enterprise, and

interest in the community; in other words, that all amalgamation tends to destroy local initiative, courage, hope, zeal, and all the other

good things involved in it. What do you say to that?

Mr. Wakefield. I would say this: That under the system we are operating our group banks up in the Northwest—I do not know about them anywhere else—it is just exactly the contrary to the thing you have described. If there is any man out there running a bank who thinks he is through or that he has been relieved of any responsibility, we are going to find it out very soon and he won't remain there very long; because in every case we are stockholders of the First Bank Stock Corporation, the success and profits of which are dependent upon each individual unit being successful and making money and going ahead, and that can not be accomplished without that particular institution looking after its territory and taking care of its local business to the limit.

Mr. Luce. You think the president won't go out on the golf links

any more days of the month after that change than before?

Mr. Wakefield. I am dead sure he won't; and perhaps a good deal less.

Mr. Luce. Now, it is furthermore urged that under chain-banking systems there is an inevitable favoritism to borrowers.

Mr. WAKEFIELD. I do not know what that means. I have never

known of favoritism to borrowers.

Mr. Luce. Well, that is the allegation; that, for example, somebody controls your system. It is the story of all human enterprise that there is some one man at the middle of the thing whose judgment dominates. Now, the allegation is made, under those circumstances, that central man, whose word goes, if he has a prejudice in favor of mining, for example, or against mining, will in the first place favor one particular group of borrowers against another; or, going beyond that, if he has a prejudice within the mining group, he will through his influence turn the money to the advantage of one man and the disadvantage of another man. That charge is being made all the time in the discussion of this subject—that concentration conduces to favoritism.

Mr. Wakeffeld. Well, I do not know. I have never come in contact with anything of that sort. I have been president of the First National Bank of Minneapolis for some time. Perhaps I might be considered to be the fellow who could do something like that, something such as you describe concerning the bank; but I would hesitate to try to do anything like that with the group of officers in the bank and directors that are in touch with the business of that institution and following it all of the time. And besides that, it would be the poorest business judgment any man could exercise; and most of us like to think we are going to exercise good business judgment.

Mr. Luce. Very well. Now, turning to another phase of the subject: You know, of course, the proper committee of the House is at present investigating the subject of holding companies in railroad stocks; there is a demand that we investigate holding companies in public-service corporations and very strong and able men have written in the magazines, notably, Professor Ripley, describing what is going on in the way of pyramiding securities and intimating or arguing that harm would come to the country. Now in uniting these

bank stocks, there is nothing standing in the way of some super holding company getting a majority of the stock of your group, is

Mr. Wakefield. I think it would be practically impossible: but. at the same time, of course there is no way we could prevent stockholders selling their stock and finally finding out that it might be controlled by somebody. I wish there were.

Mr. Luce. Do you think there would be harm if some second Mr.

Insull got into the banking field and got control through this par-

ticular method? I want to bring out-

Mr. Wakefield. I will make this statement: I have thought of that a good deal. The purposes of our organization are primarily based upon the desire to have institutions up there that are big enough to take care of the present-day types of business and which are owned and operated by the people living practically within the territory served. Now we have recognized and I have had the question asked by others as to what would prevent some super holding company, such as you describe, stepping in and taking possession and control of our group of banks and our institutions, possibly we will say in New York-that is what most people try to talk about; they seem to think that just the use of the word "Wall Street" 18 sufficient.

Now my opinion is this: In the first place, I do not think it ever will happen; I should dislike very much to see it happen. On the other hand, if it did happen, and anyone in the organization in New York came out and acquired, through purchase, the controlling interest of the First Bank Stock Corporation, I do not believe there could be any change in policy or any change in degree of service rendered to the communities, or any real practical difference ever made in the conduct of the business; because the business is competitive in that territory and, if any New York institution attempted to operate it against the interests of that terriory, they would destroy the value of the thing they had purchased. And I do not believe it would ever happen, because I think any one that did acquire it would be anxious to protect the value of the holdings and earnings of the thing they purchased, rather than to buy it and destroy it.

Mr. Luce. I rather think you are right, but a large number of

People discussing this question think you are wrong.

Mr. Wakefield. I know it.

Mr. Luce. So we must try to find out how to meet their arguments, because it is urged, under such circumstances, our banker, Mr. Insull, will then have command of such enormous aggregations of capital that he can-well there are those who say he can ruin the whole United States.

Mr. Wakefield. Well, that could not be, because anybody who finds themselves in a position of having control of that kind, if they are going to keep it at all, must carry on those businesses the way they should be carried on, or else they destroy the very thing

they acquired.

Mr. Luce. Another argument raised against the form of organi-Zation you have established is-and I do not use the word with any Invidious significance—that it is slippery; it gets out from under the tax laws, it gets out from under the banking laws; that the

holding-company idea is not that of openness with the capacity for examination and comprehension which the branch-banking system presents. And, by the way, before you answer I would say that you have not yet quite made clear to me why you have thought the holding system to be superior to the branch-banking system.

Mr. Wakefield. The reason I feel it is superior at the present time is because of the fact that it permits continued operation of

Mr. Luce. That is, the nominal operation; the banks still look like unit banks?

Mr. Wakefield. Are unit banks.

Mr. Luce. Well, let us see. As I said yesterday, power is the test all the time of what a thing is; not the looks of it, not the name or appearance, or mask under which it works, but power is the test. Now the power, in the case of your banks, has been collcentrated in the Twin Cities; you dominate; that is what you went into it for-to dominate.

Mr. WAREFIELD. All right.

Mr. Luce. And I do not say that any criticism ought to be made-Mr. Wakefield. Dominate it for the benefit of the territory in which it is operating.

Mr. Luce. And for your own profit. Like every business man; you have the double concern of doing somebody else a favor and

bringing to yourself a gain. I am a business man myself.

Mr. Wakefield. In answer to that, if you are a business man, then you know mighty well that our form of set-up has shared the prosperity of our big banks with a tremendously greater group of people, and there is not any more money to be made by the individual that did own stock in the First National Bank of Minneapo lis under this system than there was under the old holding.

Mr. Luce. I grant you; but let us get back to the question of why a somewhat obscure, tenuous, and hazy form of organization like a holding company is, in your judgment, superior to a definite-

clear, open, above-board form of branch banking.

Mr. Wakefield. Eventually it may not be; but the thing we have done was the result of absolute necessity under the conditions that prevailed. It is the only means to-day whereby any one could step in legally and present to this territory banking institutions that the public have confidence in; it is the only means there is. Now, then possibly—probably—a branch-banking system, properly determined as to area, may develop and be the solution of it all; but, for the time being, with the public habits and training relating to the operation of a unit bank, the directors and officers of which are living in their community-they are at home-it is so strong that it would be destructive and disastrous to make any change in that.

Mr. Luce. Will you make a little clearer why any provision on our part for branch banking would, under those circumstances, imperil

your own institution?

Mr. Wakefield. Oh, it would not; and I have said before we would be perfectly willing that such provision should be made, and perfectly willing to meet whatever competition is developed for us; but we do not want it made upon the basis which is intended immediately to destroy and put out of business the group system. If 3 branch bank law were passed to-day, we probably would be the first people to be out in some of these communities making use of it.

Mr. Luce. One other phase of the subject: When one of the banks in your group has an excess of funds, what do you advise them to do

with the excess?

Mr. Wakefield. That depends upon the conditions prevailing. If, as I described awhile ago, we had some other section that was needing money and did not have it, if we could make good loans there, we would certainly advise that other bank to buy some of those loans.

Mr. Luce. Would you advise them under any circumstances to buy

securities?

Mr. Wakefind. Oh, yes. There is a certain amount, a reasonable amount, of marketable securities that are almost essential in any bank.

vank.

n

t

Mr. Luce. It has been brought out in our hearings there is a marked tendency to turn banking from what we used to think its proper function—commercial loans—to investment securities. What

18 the situation in your district in that regard?

Mr. Wakeffeld. Well, banking and the use of money must always keep up with the times, and if conditions change, so that one type of loan disappears, some new development comes in and takes its place. Take your installment-selling business to-day: The loans to those large corporations that are furnishing funds to carry installment contracts are a substantial factor in banking loans to-day. They did not exist 10 years ago. Money is always seeking the opportunity to take care of development and will always abandon and disappear from businesses that have passed by the need of it.

Mr. Luce. You see no objection, then, to permitting banks to go into the investment business; that is, you see no harm in the tendency

of bankers to become investment bankers?

Mr. Wakefield. I think the banker to-day must be familiar with the investment banking business if he is going to operate successfully. Mr. Luce. Is there any attempt made in your district to imitate or to follow the eastern example in giving, special protection to

savings depositors?

Mr. Wakefield. Well, we have laws covering that in our State institutions that are especially designed to protect the savings depositors. The national bank does not have any special—there is no special provision regarding savings deposits in national banks.

Mr. Luce. Why should not there be?

Mr. Wakefield. I think the proper banking structure does not require any. There is nobody operating banks that intends to lose any savings deposits.

Mr. Luce. Oh, not intend to; but we find sometimes in the East, in spite of good intentions, they sometimes do, and we have passed

stringent laws preventing the intermingling of funds.

Mr. Wakefield. I think any law of that kind extending to the general banking structure would be disastrous. I think it would be a great disadvantage to the banking business and absolutely unnecessary.

Mr. Luce. Well you impugn the judgment of the legislators of

my State very seriously in your statement.

Mr. WAKEFIELD. That may be true; but I still feel that way about it.

Mr. Luce. As I have before pointed out in these hearings, we have a law that is very strict that there must be a solid brick wall without any aperture-

Mr. Wakefield. You are from New York?

Mr. Luce. I am from Massachusetts-between the savings bank and the national bank; because in so many instances have the officers in the national banks been able to lay their hands on the funds of the savings banks.

Mr. Wakefield. Oh, you mean between the same institution, the

same crowd operating the two types of institutions?

Mr. Luce. I mean we go so far as to prevent the two banks from having any physical access to each other.

Mr. Wakefield. Yes; but your national banks in Massachusetts

can receive deposits for savings accounts?

Mr. Luce. They have been coming to do so, lately, and it is perhaps part of my job here to bring to the attention of this committee what we think is the safe and prudent course in that matter.

Mr. Wakefield. I think, if you are looking after the best interests of your people up there, you won't try to interfere with the national banks taking savings deposits.

Mr. Luce. We are very proud of our mutual savings bank

Mr. Wakefield. So are we, and we have some very fine ones. Mr. Luce (continuing). Yet we feel the mutual savings banks

may interfere with the national banking system.

Mr. WAKEFIELD. I think one of the worst things that could hap, pen would be to require that all savings deposits should be deposited in mutual savings banks; because, when so deposited, they are then available for only one purpose, that is, investment in a very limited type of security and, of course, unavailable for the good of the general business of the country.

Mr. Luce. Well, my own community differs completely from you

I think that is all the questions I want to ask.

Mr. Forr. Mr. Wakefield, there has been some question about the valuation of stocks for the purpose of an organization like yours Bank stocks customarily sell in the market away in excess of their capital, surplus, and undivided profit book value, if they are soundly maintained, do they not?
Mr. WAKEFIELD. Yes.

Mr. Forr. And in the fixation of the value at which a bank stock sells, for example, the extent of the assets and services that it has as a fiduciary are always figured in the prospective earnings from them, are they not?

Mr. Wakefield. Yes.

Mr. Forr. And also the rate of earnings of the capital, which would be fixed by the proportion of deposits to capital?

Mr. Wakefield. Yes.

Mr. Forr. Also the value of any special service that the bank may have created which produces earnings?
Mr. Wakefield. Yes.

Mr. Forr. All of those things are reflected in the price, so that the preparation of a formula that could be absolutely uniform would be very difficult, would it not?

Mr. WAKEFIELD. I do not think you could develop one that would

apply the same in any large number of cases.

Mr. Fort. A bank with a very small capital and surplus value hight have trust estates, earnings on which would make the stock-harket value a very high one?

Mr. Wakefield. There are always some unusual conditions in

every institution.

88

ik

rs

of

Mr. Fort. We had a case in my own State where the sale of the bank was set aside because the selling board of directors had filed a consent to the substitution of another trust company for themselves as trustee under a large estate, and our court held that in itself made the whole transaction of fixing price fraudulent.

Mr. Wakefield. That meant the deprivation of an income piece of

business from the institution.

Mr. Fort. Yes; which was in no way reflected in the capital, surplus, and book value.

Mr. WAKEFIELD. Yes.

Mr. Fort. Do you feel, however, if we are definitely, either by failure to legislate or by legislation, to consider group banking as a definite national policy we should in any way regulate the price bases in which banks should be taken into the group?

Mr. Wakefield. No, sir; I do not. I do not see where there can

be any possible reason for even any discussion of it.

Mr. Fort. You do not feel there is any hazard, speaking generally how, of individuals who are substantially controlling in a group company purchasing a lot of small banks at deflated values and putting them into holding companies at high values?

Mr. Wakeffeld. I do not believe—if there is anybody going to do thing like that they are not serious in the business; they are doing

It for a stock-jobbing proposition and manipulation.

Mr. Fort. Exactly. Well, should there be no restriction of any kind of a possibility of that in anything that touches the fundamentals of the Nation as banking does?

Mr. WAKEFIELD. I think the court would protect anybody that was

mixed up in anything like that amply under the present law.

Mr. Fort. Has not that been going on, as a matter of fact, actually in taking over the branches of some banks, in some sections of the country?

Mr. Wakefield. Not that I know of; I have never heard of any.
Mr. Fort. We hear rumors of these things, without ability to
prove them, that banks have been bought, small banks, by large
banks from their own insiders, at highly inflated values, for the
purpose of establishing branches.

Mr. WAKEFIELD. I do not know where that could happen; it

could not happen in our neighborhood.

Mr. Fort. And you would have no suggestion of any way in which we could protect against it?

Mr. Wakefield. I think the public are amply protected to-day.
Mr. Fort. In setting up your plan, were any banks forced in,
forced to join your organization by any competition or threat of
competition locally?

Mr. WAKEFIELD. Never.

Mr. Forr. That, however, is a real possibility in a company such

bi

in

as yours, if people chose to use it, is it not?

Mr. Wakefield. I do not think it is a possibility to-day. I can not think or have not been able to think of a single case where an influence of that kind could have been used with any result whatever.

Mr. Forr. Not even if you had first acquired, we will say, in a small town—I see you have in some minor cities two and three banks in your group; the purchase of the first of those banks could be used to afford special accommodations of one sort and another?

Mr. WAKEFIELD. No. I will tell you how that works: We have two banks down there in Austin, Minn. That happens to be the town where I first started in the banking business—southern Minue sota. The First National Bank of Austin was the one for which I first worked. That was owned by the Banfield family down at Austin and was a very successful and good bank. I never even had a conversation with them about that bank, believing they would not want to let go of it; it had been in the family for very many years. The Austin National Bank, in Austin, was saved a few years ago from closing by voluntary contribution from Mr. Hormel, of the George A. Hormel & Co., whose business is located in that town. He found the bank was going to close and stepped in and put \$275,000 into it and kept it open, which gave him the ownership of the bank, a business in which he did not want to be engaged. They came to us and wanted us to buy that bank. A few weeks later, the Banfields came up to me and told me they thought the consolidation of those two banks down there would really put that town on the map and make it a worth-while institution and they wanted to come in with us. The Northwest Bancorporation did not have a bank in Austin and I rather expected they would acquire the First National Bank until the owners came voluntarily and asked to be put into our institution. The banks will be consolidated later. Since the Northwest Bancorporation has acquired the third bank in that town.

Mr. Fort. Please get this very clear, Mr. Wakefield: I do not mean to suggest or to intimate that you have done that thing up to date. I think, on the contrary, your and Mr. Decker's organizations have done a very fine job for the Northwest territory; but I am

talking in general terms, throughout the United States.

Mr. Wakefield. I see what you have in mind. Let me say

Mr. Fort. Now taking your very illustration of Austin, if there are two banks there and you step in and take one, is it not very easily possible that you can, through your greater facilities and other things, competitively force the other bank, willingly or unwillingly, to join your chain?

Mr. Wakefield. We are occupying a great many towns where there are banks not connected with us in existence, and we have a most harmonious arrangement in those towns. I have not heard of a single case where there has been anybody even suggesting there was any thought or any possibility of that sort of thing happening.

Mr. Fort. Well the possibility is there in the power, is it not?

Mr. WAKEFIELD. I think it is. I thing we could go out and just simply raise the deuce in a town and possibly put a bank out of business; but I think it would be the poorest policy on the part of our organization of anything they could do.

Mr. Fort. You could put it out of business or force it to accept an exchange of stock which, in the first instance, it was not willing

to accept?

Mr. Wakefield. I rather doubt that. Of course, if we were the only fellows working, we might be able to do something like that. Mr. Fort. The same thing has been done since the passing of the McFadden bill, by placing a branch of the larger bank in the immediate neighborhood of the smaller unit bank and the smaller unit bank has felt that the part of prudence was to sell out, rather than

to continue to buck the competition of the larger organization. Mr. Wakefield. Of course, that would have to be in a territory

where branch banking was permitted.

Mr. Fort. Exactly; but is there any difference in principle as to the possibility of operation between your system and the branchbanking system?

Mr. Wakefield. Well, I think there is very much difference.

Mr. Fort. Why?

Mr. Wakefield. Because our institution differs in that each bank continues its corporate existence, with a group of officers and complete legal organization and must have a real, substantial business to warrant its going in. It would be an entirely different thing to open up a little office here with practically no expense and go ahead and do business.

Mr. Fort. Well, one of the services you can give in a town, and a Proper and needed service, undoubtedly, arises from the fact that

the local bank has only a 10 per cent loaning limit?

Mr. Wakefield. Yes.

Mr. Fort. And there may be very desirable accounts in that town that need larger accommodation. You can permit the deposit to remain with the small local bank, the whole deposit, but can grant accommodation from your First Minneapolis, can you not?

Mr. Wakefield. Absolutely, and do.

Mr. Forr. That would be rather destructive to the other local

bank, would it not?

Mr. Wakefield. No; because the old methods of doing business are still in existence, and wherever it has been the case in any town, where there is a business located that is substantial and their loan requirements have been above the legal limit of the local bank, the local bank has made an arrangement for those people to go to some central bank somewhere and secure additional accommodations, and they are now getting them.

Mr. Fort. And, in a great many instances, they are getting them

also from two or three local banks?

Mr. Wakefield. Yes, in some cases.

Mr. Fort. Instead of going to out-of-town people?

Mr. Wakefield. Yes, in some cases, they are. Mr. Fort. Now I asked a question or two yesterday of Mr. Decker in regard to branch banking, on which I want your views as a banker. Can you see any justification for the branches of the banking system, if we are going to authorize them, paying different rates to depositors on the same class of deposits in different branches?

Mr. Wakefield. Well that would require consideration of the policy of operating the branch bank. I do not know what the answer is, but my first impression would be you would absolutely be required to have a uniform rate; you could not vary those rates. While your funds would be in one place, I do not see just how you could do it.

Mr. Forr. We have in my State savings banks paying as high as 43/4 per cent, credited monthly in some towns; we have other towns where the credit is semimonthly, at 4 per cent, or below. If we were to have this trade-area branch banking, the branch going into the town where the local banks were paying 43/4, would either have to pay that or get no business, would it not—other things being equal as to the solidity and solvency of the banks?

Mr. Wakefield. Well one of the most definitely destructive tendencies in banking competition is that of attempting to pay rates on money greater than really warranted by good sound business judgment.

Mr. Fort. Of course, some mutual savings banks have accumulated surplus enough, which belongs to their depositors, does it not?

Mr. Wakefield. That is true.

Mr. Fort. Now should the branch-banking system be permitted to compete with local banks on interest, or should the rates be uni-

form throughout the system?

Mr. Wakefield. I do not think anything ought to be done that would prevent competition,—free competition. Now you are speak-

ing of the surplus—
Mr. Forr. Would that include the right to go into a community where the banks were paying 4 per cent and to offer 43/4 for the branch-banking system?

Mr. Wakefield, Well I do not believe competition would be that way.

Mr. Fort. Would it not be, in order to attract deposits, in the first instance?

Mr. Wakefield. Oh, no. I think the tendency would be to lower the rate; because any one who has been in the banking business long knows you can not attract money to you that way and hold it, but that you have to keep it.

Mr. Fort. Unless you first force out all competition.

Mr. Wakefield. It does not make any difference, whether there is open competition there, or not; money won't go at unfair rates; it will find some other source of use. You are speaking of the surplus of mutual savings banks?

Mr. Fort. Yes.

Mr. Wakefield. The committee must keep in mind this, that the mutual savings bank is a nontax-paying institution and, in considering the difference between the two types of institutions, just remember that the tax of the State and National Banks is a very subsantial item of expense.

Mr. Luce. Might I correct you in one particular: That is not true in my State.

Mr. Wakefield. In mutual savings banks?

Mr. Luce. Our savings banks pay a tax of one-half of one per cent on their deposits.

Mr. Wakefield. But how does that compare with your National

Bank tax?

Mr. Luce. Well, our national bank system has been thrown into confusion by the action of this particular committee, much to my

[Laughter.]

Mr. Fort. Then you do not feel, if we are going to authorize any branch banking, that we ought to attempt to have anything to say about the uniformity of the rate, or competitive rate, or anything else !

Mr. Wakefield. No; I think it would be a mistake.

Mr. Forr. We ought to leave it entirely to the working out of the system as it is?

Mr. WAKEFIELD. Yes. Mr. Fort. Now, I said a while ago one of the bases of calculation of the value of bank stocks is the relation of deposits to capital, the usual rule, I think, being there ought to be about 10 per cent as a maximum.

Mr. Wakefield. About 10 times.

Mr. Forr. Ten times? Mr. Wakefield, Yes.

Mr. Fort. A system such as yours giving a secondary security in the public mind to the bank in which they deposit, would be able, would it not, to secure deposits in greater volume than the public would generally think appropriate for banks of their capital, if

they had no such secondary security?

Mr. Wakefield. Well the facts are that in comparison between the capital requirements that anybody has ventured to even suggest as being adequate of a branch banking system, and the actual capital investment under a group system, we could operate with the same deposits we have to-day, as branch banks, taking any basis I have ever heard of, on a very greatly reduced capital investment.

Mr. Fort. Mr. Wakefield, I am trying to talk general principles and do not question what you gentlemen are doing; I am trying to get at the fundamentals of this question for general use. Now, what am trying to get at is whether such a system as yours, with a secondary line of defense, will not perhaps open the door to the banking business of America being carried on with a less capital Investment than it is now required to have?

Mr. Wakefield. Well, one of the disadvantages of the group sysem is that it can not do that; that it does require a complete capital structure for each institution, based upon the business in that com-

munity.

Mr. Forr. So that, as between these two, if we regarded less capital h banking as a desideratum, would it not be better off under the branch system than it would under the group system?

Mr. Wakefield. If you want to reduce the capital required?

Mr. Forr. If we want to reduce it. Mr. WAKEFIELD. I think that is true.

Mr. Fort. Now, the reduction phase is of interest only in order to heach small communities than can not earn on a large capital?

Mr. Wakefield. The what?

Mr. Fort. The reduction phase of the capital position—that is, the idea that possibly we might want to reduce the capital anywhere-the reduced capital requirement is of interest only in order to reach those sections which can not earn on the present capital requirement?

Mr. Wakefield. I do not understand just exactly what you have

in mind.

Mr. Fort. Here is what I mean: If the branch system can operate on a less capital per volume of deposits than the group system, then it can afford to install branches or teller windows in places where a

unit bank could not afford to be set up?

Mr. WAKEFIELD. Surely; in those small towns where to-day the capitalization of an individual unit requires an investment there and an operation that is unprofitable, it is the only means of going into that community. One of the reasons why a branch could go in there is because it would not be required to have the capital investment.

Mr. Fort. But that would not apply to your group system?

Mr. Wakefield. No; that stops the group system.

(The committee thereupon took a recess until 2.30 o'clock p. m.)

AFTER RECESS

The committee reconvened pursuant to the taking of the recess Hon, E. Hart Fenn presiding.

STATEMENT OF L. E. WAKEFIELD-Resumed

Mr. WAKEFIELD. Mr. Chairman, may I have permission to further explain a little visit Mr. Strong and I had this morning, in which he was discussing my attitude or expression of opinion that we did not need to devote a great deal of time to protecting borrowers!

Mr. Fenn. I think so.

Mr. Wakefield. And he replied to me something along this line my associates have called my attention to a condition in the record that might be misunderstood—he made the reply, "Then you are in favor of looking after the rich fellow and letting the poor fellow look after himself."

Mr. Wingo. Now, Mr. Chairman, I think, if that explanation is to be made, Mr. Strong ought to be here. Mr. Strong, so far as my

recollection is concerned, made no such statement as that.

Mr. Wakefield. It is perfectly agreeable to me.

Mr. Fenn (presiding). Then let us let it rest there. Mr. Forr. Mr. Wakefield, you have spoken very interestingly of the greater desirability to the bank of local loans over call-money loans. Is it the custom in your territory to expect local borrowers to maintain deposits with the bank bearing some relation to the amount of their borrowings?

Mr. WAKEFIELD. In most cases lines of credit are granted upon the

basis of deposits only.

Mr. Forr. So that, where you make a local loan, you get a deposit. say, of 20 per cent normally as an average of the amount of the loan and a maintained balance?

Mr. Wakefield. Your 20 per cent we do not know anything about.

Mr. Fort. You hope for it, but do not get it? Mr. WAKEFIELD. We would like to get it, if we could, but we do not

Mr. Forr. Ten per cent?

10

10

h

18

te

n

W

to

ot

an

Mr. WAKEFIELD. Well, there is not any set figure, and, in many cases—you take these small banks in the country—many loans are made to people that practically have no balance.

Mr. Fort. Small loans, though?

Mr. Wakefield. Yes.

Mr. Fort. But when you come to your larger loans-

Mr. Wakefield. They are usually based upon a corresponding

Mr. Forr. So that one of the direct advantages that is bound to Come to a bank that does maintain that policy of local loaning is an Increase of deposit accounts?

Mr. Wakefield. Yes.

Mr. Fort. And the ordinary banker, from purely cold-blooded hotives, in a time when he has a demand for money locally, knows that he is going to get more money to loan by loaning locally than

he will by loaning on call in New York?

Mr. WAKEFIELD. Absolutely. The deposits of every bank come from the community where the bank is located, and, unless the bank carries on and helps the individuals and institutions of that comhunity, it is defeating its own growth and development.

Mr. Fort. So you do not believe there is any serious danger of starving local borrowers for the purpose of taking advantage of the call-loan rate in any section of the country?

Mr. WAKEFIELD. I am positive that there is not.

Mr. Fort. On the other hand, there are some places where the borhowing demand does not equal the resources of the bank, are there not ?

Mr. WAKEFIELD. That is true.

Mr. Fort. And those banks turn to the call-loan market, rather han to investments, as their only means of utilizing their funds? Mr. Wakefield. Or to the purchase of commercial paper in the

pen market, or to the purchase of acceptances, that type of thing. Mr. Fort. Now, you have not expressed any opinion that I have eard to-day in regard to the merger of banks. I notice, as I said arlier, that you have in some of your small cities two and three and some cases, I think, four banks in a single town: Is it the policy of ach an institution as yours to maintain all of those local units, or is

your plan ultimately to merge them?

Mr. WAKEFIELD. It is the plan ultimately to put them all together. Mr. Fort. You feel, then, the effect of your operations will be limately to reduce the number of banks?

Mr. Wakefield. Yes.

Mr. Fort. Of course, where you own all of the stock, or substanally all of the stock—I say you; your corporation—the question of price at which a merger is effected is of slight importance, I mean price at which the stock of the different banks is taken into ecount in the merger.

Mr. Wakefield. In a merger?

Mr. Fort. Yes.

Mr. Wakefield. No; where we own the stock of both banks, it is just the assets that are merged, and the business is merged without any regard to price.

Mr. Fort. Have you any views on how far such holding companies as yours and the Northwest Bancorporation, for example, ought to

be allowed to merge?

Mr. Wakefield. No. I do not know whether there is any spot am satisfied of this, in a territory such as we are occupying, that it would be a great misfortune, in my opinion, if anything were ever done to eliminate the competitive situation that exists there.

Mr. Forr. Then since competition is, in your judgment, as I think it is in that of practically this entire committee, if not all of it, desirable factor where it can be maintained, would we be doing, in your judgment, what we should not do if we tried to find ways and

means of maintaining competition?

Mr. WAKEFIELD. No; I think you would be justified.

Mr. Forr. You have said that it is, and of course we all know that it is, whether the securities are listed or not, always possible that the control of an institution such as your corporation could be bought if somebody wanted to pay the price.

Mr. WAKEFIELD. Yes.

Mr. Forr. It would not be sound policy for the Nation to permit the control of the banking within any Federal reserve district to get into one hand, would it?

Mr. WAKEFELD. I do not think there would be any danger of that, because if it did it would be a temporary situation. Unquestionably there would be competition come into a situation of that kind.

Mr. Forr. There might in the larger cities; there would not in

the smaller ones.

Mr. WAKEFIELD. Well, for instance, if the Northwest Bancorporation and our corporation should see fit to merge, you can not make me believe it would take to leave the northwest Bancon not make me believe it would take 60 days for somebody to be in the field setting up a competitive institution.

Mr. Forr. You mean a competitive group institution such as

Mr. Wakefield Yes; or, if branch banking were in existence,

competing branch bank.

Mr. Forr. You do not think such an institution as that would find any excuse to put a bank into some of those smaller towns when the local bank was already sufficient?

Mr. WAKEFIELD. I do not think there is going to be—in the little towns such as I have described this morning, I do not think there is ever going to be are is ever going to be any competition in those towns; because I do not think there can be not think there can be.

Mr. Forr. Well by "little towns," you mean, perhaps a different thing from what I mean.

Mr. WAKEFIELD. A town where there are four or five or six hundred depositors.

Mr. Forr. I mean a town of four or five or six thousand people. Mr. Wakefield. Oh, I think those towns are big enough for two banks.

Mr. Fort. But if you have one and the Northwest Bancorporation has the other and you consolidate the ownership of the two corporations, even without formal consolidation-

Mr. WAKEFIELD. I think there would be another bank in that town.

Mr. FORT. You do?

Mr. Wakefield. Yes. Mr. Fort. That, however, would rest with the comptroller and the State authorities?

Mr. WAKEFIELD. Yes.

Mr. Fort. And there would have to be proof of the need, would

Mr. WAKEFIELD. That is not going to be difficult to supply, the

heed of competition in a substantial town, is it?

Mr. Fort. I do not know. How do you operate your organiza-tion, in view of the provisions of the Clayton law on directorates? Mr. Wakefield. You see we have no—our directorates in each of those banks are entirely different people; there is no one connected with the First Bank Stock Corporation who is either an officer or a director of the group of institutions of any of them.

Mr. Fort. There is not? Mr. WAKEFIELD. No.

Mr. Fort. That confirms as a policy what some of us have believed, namely, that if we are to permit any group ownership, we should insist upon at least a majority of the directorates being local.

Mr. Wakefield. Oh, yes. Mr. Fort. In each bank. Mr. Wakefield. Yes.

Mr. Fort. You would feel that is a sound policy?

Mr. WAKEFIELD. Well, it is our policy. Our policy is that the officers and directors of the banks in our group are 100 per cent local people.

Mr. Fort. So that you feel-

Mr. Wakefield. Mr. Fort, Mr. Washburn corrects me to this exlent: You asked me about the directorates?

Mr. Fort. Yes.

Mr. WAKEFIELD. Of course, there are officers of the individual banks who are directors of the First Bank Stock Corporation.

Mr. Fort. Oh, I understood that. Now, how do you handle this situation: Your directors, if you have taken all of the stock over in the First Bank Stock Corporation, your local directors have no actual capital stock ownership in the bank of which they are directors?

Mr. WAKEFIELD. They are required to buy; a man is required to buy the number of shares to qualify as a director, which he owns

Mr. Fort. He buys them through you?

Mr. WAKEFIELD. Yes.

Mr. Forr. You would have to keep some string on them so that he can not resell them if he is out as a director, would you not?

Mr. WAKEFIELD. We try to.

Mr. Fort. I suppose you are advised as to whether that is strictly legal?

Mr. WAKEFIELD. Well, we have used good attorneys, I think.

Mr. Forr. But the maximum, then, of the director's liability of individual loss through mismanagement is his holding of that minor amount of qualifying shares—say, 10 shares?

Mr. Wakefield. Oh, in our case, where we have directors, they are substantial owners of stock in the First Bank Stock Corporation.

Mr. Forr. But that loss that may result through local misman-agement is pretty widely cushioned by the holding of the first bank stock?

Mr. Wakefield. Yes.

Mr. Fort. So that you have not the same protection, quite, that the ordinary bank has where their directors, as they do in most cases, actually own control of these smaller banks?

Mr. Wakefield. Were you here when I described our method?
Mr. Forr. Part of it; not all of it. I happen to be on the Rules
Committee and had to attend a meeting of that committee, and I
want to say, apologetically to the committee and the witness, my
absence was occasioned by the fact I had to attend another committee meeting.

Mr. Wakefield, I think I showed we have been keeping track of that and followed that thing, so that that responsibility is complete.

Mr. Forr. All right; I won't ask you to go back over that. Now, you have said, and Mr. Decker said—I think you have said; I know he did—that we should be very slow to pass any legislation on this general subject, because of a lack of sufficient information on which to proceed at the present time. It seems quite clear from your description of your set-up that a properly-managed group (and it sounds as though your management was entirely proper) might be a very considerable public value and relatively small public injury, but it is a fact, is it not, Mr. Wakefield, the plan does open itself, under improper management, to grave dangers?

Mr. Wakefield. Well, I am glad you mentioned that point, because I would like to state right here our feeling is that if this development, this type of group banking, is to continue, it ought to be accompanied by a provision for supervision of the holding company and the whole institution, and examination and control by the comptroller's office, just the same as the bank is now. And that ought to be done; we are anxious that it be done, because of the fact we recognize the weakness you have just described and possibility that somebody may, possibly, try to start a group of banks, not with the intention of handling them in the interest of the community, but as a mean of making money out of the transfer of stock, or something else, and which, in case they did and there was a failure of that sort of institution, would be extremely injurious to us.

Mr. Forr. And have you any special regulations in mind that we should consider the adoption of as relating to group banking, other than that of inspection and supervision?

Mr. Wakefield. I have not gone far enough in the consideration of that topic to formulate a definite proposal. I think we could; I think we could work out a set of regulations that might be very beneficial, if given time.

Mr. Forr. My own feeling is that nobody can advise this committee so well as to what we ought to do, to guard against dishonest

or improper management, as an honest man running a thing properly; because he can see the hazards much more clearly than we can see them.

Mr. Wakefield. I am quite sure, if we were requested to do it, we

could develop a set of suggestions. Mr. Forr. I, for one, would be delighted if you would do so and Submit them to the committee—at your leisure, I mean. I do not know there is any objection to that. We are not going to settle this thing to-morrow and pass a law the day after.

Mr. WAKEFIELD. Yes.

Mr. Forr. It is a fact, Mr. Wakefield, is it not, that the larger an institution becomes, the more completely the management in everything but policy passes to the chief executive head and out of the hands of the board of directors, whether it is banking or any

Other form of industry?

Mr. Wakefield. That depends on two or three factors, I think, Mr. Fort. Where you have a very large board of directors of any big corporation, especially a bank, it is not possible to keep all of that board intimately in the affairs of the bank; but that is usually covered by the formation of an executive committee, or management committee, which is a smaller group of directors, who do have access to the affairs almost daily of the ordinary bank, and do keep in very close touch with them. I do not believe a single individual, no matter how big the institution may be, actually goes off and formulates all of the policies and uses his own judgment without advice and consultation.

Mr. Fort. No; I said the matters of policy are for the board; but, after the policies are once settled, the executive of an institution such as this you are managing has very wide discretion.

Mr. Wakefield. And responsibility.

Mr. Fort. And can wreck or make the institution pretty much before his board knows very much of one thing or the other about it. Mr. WAKEFIELD. I do not think that would be true in a bank. Mr. Fort. Well it has been almost if not quite true in some. Mr. Wakefield. Well, it would not be true in the banks I am

familiar with.

Mr. Forr. Do you think the 10 per cent loan limit is big enough for all essential banking purposes?
Mr. Wakefield. Yes; I do.

Mr. Fort. With the modern shift of banking from commercial paper to collateral loans, should we consider, particularly in a group ystem like yours, or branch system, the limitation of the amount that might be loaned on a single collateral; that is, we will say, On United States Steel stock?

Mr. WAKEFIELD. That is a new thought to me. That is, you might

Mr. Fort. Yes.

Mr. Wakefield. In a total amount equaling considerably more than 10 per cent?

Mr. Fort. The average banker makes his loan on collateral, with-

out regard to the name of the maker.

Mr. Wakefield. There is a question in my mind whether a definite legal restriction might not cause some confusion or difficulty in certain cases.

Mr. Forr. Well, I am thinking particularly of the unlisted local stocks.

Mr. Wakefield. Of course, there again you have to go back to the fact that if the management of the bank, the people in charge of making loans, do not use good judgment, I do not believe you can make legislation that is going to furnish a substitute for managerial capacity and ability to run institutions that ought to exist in good banks.

Mr. Forr. I agree there; but, at the same time, we have put 10 per cent limit on the individual loans.

Mr. Wakefield. Yes.

Mr. Fort. Because we felt we ought not to allow the power to the individual who was a bad banker to go beyond that. The question is whether we should not parallel that with reference to the collateral, with the developments in modern banking.

Mr. Wakefield. I could not answer that offhand.

Mr. Fort. In such an organization as yours should we permit cross loans on collateral; in other words, should your First National Bank of Minneapolis make collateral loans based on the stock of the

First Bank Stock Corporation?

Mr. Wakefield. I do not think any bank owned by a holding company such as ours should be permitted to loan a dollar on the stock of the holding company. I think it is just the same thing, in effect as though you took the First National Bank of Minneapolis and permitted it to loan on the stock of the First National Bank, which has never been done.

Mr. Forr. How about affiliated corporations and things of that

sort-the same rule?

Mr. WAKEFIELD. The same rule.

Mr. Forr. Nor should the affiliated corporation be allowed to loan on the bank stock, should it?

Mr. WAKEFIELD. No.

Mr. Fort. And in places where ownership of stocks is permitted by banks or trust companies, ownership for their own account of stock in other banks or trust companies, cross ownership ought not to be permitted there, should it?

Mr. WAKEFIELD. We do not have any of it; we are not permitted

to do that.

Mr. Fort. No; but there are a great many places where they are.
Mr. Wakefield. I do not understand just how that would work.
Mr. Fort. In my own State a bank may own stocks more freely.
for instance, than a fire insurance company, with less restriction of
the type of stock that may be bought. Assuming that one trust
company owns the stock of another trust company, it should not
be permitted that the second trust company should own stock in the
first?

Mr. Wakefield. I do not think that one trust company—that a trust company ought to be permitted to own stock of another trust company.

Mr. Fort. Nor to loan on it?

Mr. Wakefield. No—well, yes.
Mr. Fort. I mean nor loan on it if it were affiliated in any sense,
directly or indirectly?

Mr. Wakefield. Yes.

Mr. Forr. I think that is all. Thank you very much, Mr. Wake-field.

Mr. Beedy. Did you testify as to the par value of your shares in the holding company?

Mr. WAKEFIELD. Yes; I described the entire thing.

Mr. BEEDY. And what was the par value?

Mr. Wakefield. \$25.

Mr. Beedy. And when you exchanged stock in banks which you took over for shares in your holding company what was your method of ascertaining values? Did you cover that?

Mr. Wakefield. I covered that with Mr. Strong, and I guess some-

body else asked me all of those questions.

Mr. Beedy. Did you trade in your holding stock-company shares as of on the basis of \$25 per share.

Mr. Wakefield. Yes.

Mr. Beedy. Irrespective of what the market value might have been?

Mr. Wakefield. Yes.

Mr. Beedy. And have you fixed upon any method of attempting to approximate a uniform return on the investment to all share-holders?

Mr. Wakefield. No. The situation existing in one bank that was taken in was entirely different from that in another, and the arrangement was an attempt to be absolutely fair under all the circumstances with the people that held the stock.

Mr. Beedy. But the conditions were so diverse it was practically impossible to approximate an equal return on the investment?

Mr. Wakefield. Yes. Well, Mr. Beedy, we have had cases of where we have taken banks, where the stockholders of that bank not only waived their capital and surplus accounts but put up additional cash to guarantee the deposits that were taken over, and then turned around and bought stock in the holding company.

Mr. Beedy. You testified about the ownership of stock in the holding company by directors. I presume you were talking about directors.

tors in the holding company?

Mr. WAKEFIELD. No.

Mr. Beedy. Directors in the various banks? Mr. Wakefield. Directors in the various banks.

Mr. Beedy. Are you familiar with the legal requirement as to ownership?

Mr. WAKEFIELD. In a bank?

Mr. Beedy. Yes. Mr. Wakefield. Yes.

Mr. Beedy. And you said you were attempting to keep some strings on this stock held by directors. Will you explain that to us?

Mr. Wakefield. We have not any string on that stock that could enforced, because you can not make it.

Mr. BEEDY. That is, all this stock in the holding company that is

owned by the directors is owned as of their own right.

Mr. Wakefield. Absolutely, in the holding company; but what you are referring to, really, is the qualifying shares that a man has in the individual bank.

Mr. Beedy. Yes; that is it.

Mr. Wakefield. And those shares which he has to qualify as a director in that bank, if it were attempted to enforce any agreement and he did not want it enforced, we could not do it.

Mr. Beedy. That is, you have no legal hold on those shares? Mr. Wakefield. No legal hold on those shares whatsoever.

Mr. BEEDY. But may have a moral hold on them? Mr. Wakefield. We have a gentleman's agreement.

Mr. Beedy. That is all.

Mr. Goodwin. I just want to ask a few questions, Mr. Wakefield, in reference to country banks. The farm-mortgage loan business has practically disappeared from the country banks as an item of profit and revenue?

Mr. WAKEFIELD. I think that is true.

Mr. Goodwin. Loaning under the McFadden act, national banks are permitted to loan on village property, both business and home property?

Mr. Wakefield. Up to a certain amount, Mr. Goodwin. Up to a certain amount?

Mr. Wakefield, Yes.

Mr. Goodwin. Those kinds of loans are rather precarious, are they not, in this particular day, when chain stores are entering the field of commercial enterprise in the small towns and villages throughout our State and other States?

Mr. Wakefield. Well, Mr. Goodwin, it has been my observation, as far as values in the small towns are concerned, the chain-store unit has sort of strengthened the market and made a little rise in values there.

Mr. Goodwin. But the country bank is a little timid about loaning

on village property, as a rule, within the bounds of safety?

Mr. Wakefield. Yes; they have to be rather conservative, due to the fact there is but little of a market in a small country town for

houses and other pieces of real estate.

Mr. Goodwin. The par clearance of checks has also reduced the revenue of country banks to some extent; at least, those who are members of the Federal reserve?

Mr. Wakefield. Yes; but that has been partially corrected.

Mr. Goodwin. Now, what other avenues are there left for the country bank, out of which it can make a profit, so that it can exist

Mr. Wakefield. Practically the only thing left is the privilege of doing a commercial banking business; that means receiving deposits and loaning those in a commercial way and making a return.

Mr. Goodwin. Has it been your experience that the ordinary country banker is sufficiently familiar with the value of bonds so that he can make a loan and safe investment?

Mr. WAKEFIELD. I think it has been very perplexing to the country banker who has found it necessary to buy securities, due to the fact of his unfamiliarity with them and his lack of a source of his own through which he could secure the right kind of information concerning them.

Mr. Goodwin. And through your organization you are in a position where you can advise the members of your group as to what invest ments, in the way of bonds, are safe and can prudently and profitably

be made?

Mr. Wakefield. We have an expert bondman and a department in the central office of our corporation, charged with the responsibility of buying all bonds that may go into the bank and with the responsibility of having those checked up concerning conditions that may make it advisable to move them out, at all times, and that is all that department has to do. It is not engaged in buying or selling bonds, or marketing them; its job is to use all of the statistical and other information which we possess, and expert knowledge, to buy the right kind of bonds for our banks.

Mr. Goodwin. It has been suggested in the line of Mr. Luce's questioning this morning, in regard to favortism, that there may be institutions or individuals who may be entitled to credit but who can not obtain credit because of conflicting interests that they have in reference to some of the stockholders or directors of a holding

Company. Is there anything to that intimation?

Mr. Wakefield. You have used the words "holding company,"
Mr. Goodwin, and I have had that same expression made concerning
an individual bank. The same thing would be true. In my experience, I have never known of a case of where a stockholder or director
of an institution, particularly a banker, where he was interested in
a line in competition with some other man doing business with the
bank, where we have had any suggestion that we should not go right
along and take care of the other fellow. And it would not be possible
to have that in your organization; if it were, that man would not be

Mr. Goodwin. It also has been suggested that contractors who employ union labor have been discriminated against. Have you found any such situation in your experience?

Mr. Wakefield. I never heard—I never knew, myself, whether a man employed union labor or not, so far as the contracting business was concerned.

Mr. Goodwin. I think that is all.

Mr. Letts. Mr. Wakefield, your company is incorporated, of course?

Mr. Wakefield. Yes.

Mr. Letts. Under what law? Mr. Wakefield. Delaware.

Mr. Letts. You said this morning something about going down to Delaware, because you could avoid difficulties with respect to the inheritance tax.

Mr. Wakefield. That is true.

Mr. Letts. And you said something about double liability—if you organized in Minnesota, you would be subject to the double liability?

Mr. Wakefield. Yes, sir.

Mr. Letts. Is that true as to the holding company?

Mr. WAKEFIELD. It is true as to any company not a manufacturing

^cOrporation in Minnesota.

1

.

Mr. Letts. I see. However, by going to Delaware, you nevertheless have retained the corporate entities as you found them with respect to the banking units?

Mr. Wakefield. Oh, absolutely.

Mr. Lerrs. You have not reorganized them in any way?

Mr. Wakefield. Oh, no.

Mr. Lerrs. And, for the most part, I suppose the banks connected with you in Minnesota are organized under the laws of Minnesota

1

gro

Mr. Wakefield. No. Out of the 91 banks, 67 of them are national banks. There are some State banks; the balance are national banks.

Mr. Lerrs. It will be your purpose from time to time to take State banks as well as national banks into your organization? Mr. WAKEFIELD. We have not hesitated to take a bank, State or National, and have up to date continued the same corporate existence that it had before; but in cases where it was necessary, with one exception, to organize a new bank, that has been a national bank; and that one case where it was necessary and we did not have a national bank was where it would have necessitated carrying it over the week end, and there was one day in there and we could not wait to have the charter granted in Washington.

Mr. Larrs. You are authorized to do almost any kind of business,

are you not?

Mr. WAKEFIELD. Well, sir, I have not read what the lawyers put into the powers of that corporation; but I imagine they will let you do almost anything.

Mr. Letts. And you have up to date proceeded to conduct a bank-

ing business through these various units?

Mr. WAKEFIELD. Yes, sir.

Mr. Letts. And you have your securities corporation?

Mr. WAKEFIELD. Yes. We have a securities company. The capital and surplus in the securities company amounts to seven and a half million dollars.

Mr. Lerrs, And you have a financing company called the First

Bancredit Corporation?

Mr. Wakefield. Yes. That is a small finance company which was organized to loan money to people building new homes, small homes, and is handled in this manner—that there are certain lumber dealers out through that territory who want to furnish the materials for somebody who is going to build a house, and they will take a second mortgage on the monthly payment plan. Then if their statement is satisfactory and they guarantee that to us we advance them the

Mr. Letts. And is that agency through which your customers

are permitted to finance the purchase of automobiles?

Mr. Wakefield. No; we do no automobile business. Mr. Letts. Nothing like that?

Mr. WAKEFIELD. No.

Mr. Letts. Or household devices?

Mr. Wakefield. Well, we do expect to do that; as that business grows, as we can find the places to do that business, we are going to do some.

Mr. Letts. Of course, and what you call the Bank Credit Cor-

Mr. Wakefield. The First Bank Credit Corporation.

Mr. Letts (continuing). Is an organization designed to do just that sort of thing?

Mr. WAKEFIELD. Yes, sir.

Mr. Lerrs. Do you expect to do any insurance business?

Mr. Wakefield. No.

Mr. Letts. Life, accident, fire, or otherwise?

Mr. Wakefield. No. Mr. Letts. You could?

ıl

e

k

Mr. WAKEFIELD. No; the banks-some of our banks in the country have been for years agencies for insurance companies; but you meant, when you said, "to do an insurance business," to organize an insurance company and run it?
Mr. Lerrs. I mean a place for issuing policies of any kind.

Mr. Wakefield. Oh, no; absolutely not.

Mr. Letts. Or operating agencies, or anything of that kind?

Mr. WAKEFIELD. No.

Mr. Letts. Now, you have been in existence about eight months, have you?

Mr. Wakefield. Yes; just about.

Mr. Letts. And during that time you have acquired 91 banks?

Mr. Wakefield. Ninety-one banks.

Mr. Letts. And amassed a large capital, of course?

Mr. Wakefield. Yes.

Mr. Letts. It is your purpose to enlarge, to grow?

Mr. Wakefield. We want to stay right in the field and fill it as fully as possible. Now, what that will involve I do not know.

Mr. Letts. The Northwest Bancorporation is two or three months older than you?

Mr. Wakefield. Yes; six months, probably.

Mr. Letts. And they have been equally successful, I take it? Mr. Wakefield. I think so; at least equally. [Laughter.]

Mr. Letts. I see there is a very friendly relationship between you gentlemen, and I am glad to see that, of course. How long would It takes your organization and the Northwest Bancorporation to control the financial life and activities of the Federal reserve district in which you are located?

Mr. WAKEFIELD. I do not think they could ever do it.

Mr. Letts. You do not think it would be possible, even if you hight desire, eventually, to become a monopoly in that regard?

Mr. WAKEFIELD. No; I do not. I feel very sure that it would not be possible.

Mr. Letts. From the standpoint of returns to your stockholders, would it be desirable if you could?

Mr. WAKEFIELD. No; it would be destructive.

Mr. Letts. Why do you say that?

Mr. Wakefield. I say that for this reason, that if any operation of that kind ever took effect, there is plenty of the business, what we call choice business of the territory, that would leave us and go right out into Chicago, or somewhere else. We are constantly in com-Detition, in the banking business, with New York, Chicago, and other

Mr. Letts. Have you been approached to go into an amalgama-

tion which would cover the country?

Mr. Wakefield. We have never had one suggestion or word from anybody in the world indicating or discussing a matter of that kind.

Mr. Letts. When one sees how quickly you have grown, to such proportions, it makes us wonder just how long it might require a group of men to exercise a very great influence over the activities

of the whole country by joining hands. That is the reason I am asking that question.

Mr. WAKEFIELD. We have never heard of it.

Mr. Letts. You now have about eight banks in Minneapolis? Mr. Wakefield. You say "we have?"

Mr. Letts. Yes.

Mr. Wakefield. Yes.

Mr. Letts. And six in St. Paul? Mr. WAKEFIELD. I think so.

Mr. Letts. How many does the Northwest Bancorporation have in Minneapolis; can you tell me?

Mr. Wakefield. They have more; I think nine. Mr. Letts. How many do they have in St. Paul?

Mr. WAKEFIELD. One bank.

Mr. Letts. All told, can you tell us how many there are in the two cities? Just approximately.

Mr. Wakefield. In the two cities?

Mr. Letts. Yes.

Mr. Wakefield. Just about 50 banks—27 in Minneapolis and 23 in St. Paul.

Mr. Letts. You have not gone into Iowa?

Mr. Wakefield. No, sir.

Mr. Lerrs. You are confining your activities within the Federal reserve district?

Mr. Wakefield. Yes; it has been our policy to do that.

Mr. Lerrs. That is a present policy, of course, and one which may be changed at any time. You are quite young.

Mr. Wakefield. I will have to have some pretty good argument

advanced before that policy is changed.

Mr. Letts. Have you found it advisable to adopt that as a policy?
Mr. Wakefield. Well, I do not know that I can answer that question fully. I will say this, that we are not seeking to have control over or responsibility for a particular sized institution or any thing of that sort. We do feel our obligation to the particular territory we are in and we have felt that we had all the responsibility that we want within the territory that we are covering.

Mr. Lerrs. How is that responsibility fixed? Is that because of

the trade conditions?

Mr. WAKEFIELD. No; I would not say that. You take the territory that the Northwest Bancorporation has gone into. It has a very close contact with our territory.

Mr. Letts. You speak of your responsibility. What responsibility

do you have in respect to Montana?

Mr. WAKEFIELD. Well, we are in the position, in our group, of having the large banking interests on our hands out in that territory. Mr. Letts. Is that because of investments out there or business!

Mr. WAKEFIELD. Because it is in the ninth Federal reserve district. Mr. Letts. That is rather arbitrary from your point of view, is it

Mr. WAKEFIELD. I explained this morning the ninth Federal reserve district, under the set-up, did cover pretty well the territory under the flow of banking business, back and forth.

Mr. Lerrs. Will it be your policy to serve the smaller communities by branches? You have suggested that that, in your judgment, is the proper way to serve the smaller community, and I am wondering Whether, in deliberating upon your policy, you have deemed it nec-

essary for you to render that service?

Mr. Wakefield. Our policy would be to go just as far as the law will permit in supplying the right kind of banking facilities in the territory in which we operate. If it is a branch-banking system, we We will go just as far as the particular system will justify that we go.

Mr. Letts. You, of course, in allowing these banks to affiliate with you, have only taken the strong banks, and I think that is proper

because you want your venture to be a success, of course.

Mr. Wakefield. You are mistaken. There are 19 banks which we have taken which required a complete recapitalization. That does not mean that they are strong banks.

Mr. Letts. Were those ones with which you started out originally?

Mr. Wakefield. No; those banks were strong.

Mr. Letts. Then, what actuated you to take in these weak banks?

What was the purpose behind it?

Mr. WAKEFIELD. Just this: That if we could, without loss, take over a situation where there was bound to be a closing and a liquidation of a bank and tying up of the deposits of that town, I feel certain that we have rendered that community a tremendous service if we have been able to work with the stockholders and directors of that bank which was going to close, and provide a means where a new bank was created, and kept those funds, as liquid deposits, in those communities.

Mr. Letts. And you saved those?

Mr. Wakefield. Yes, sir; and that was the main part of this organization—to attempt to arrest the tying up of banking deposits and keep them in the community.

Mr. Letts. The Northwest Bancorporation shares with you that

responsibility?

e

Mr. Wakefield. Yes, sir; and have done a lot of it.

Mr. Letts. Have they done their part in preventing disasters? Mr. Wakefield. Absolutely; they are on the job every day.

Mr. Letts. Now, how can you decide whether a given responsibility is yours or the other fellow's?

Mr. Wekefield. It is usually decided automatically by this fact: If that bank has for many years been our customer-

Mr. Letts. Then it is your problem?

Mr. Wakefield. Yes, sir; and we go there and try to take care of it. Neither one of us is running into those things head over heels, you understand.

Mr. Lerrs. I understand that, and I can see just what you are trying to explain. When you have a choice in the matter you only take In strong banks; but when it is necessary to save a situation in the territory, you go to a bank in distress?

Mr. Wakefield. Yes, sir.

Mr. Letts. That is often done whether you are in a group or otherwise?

Mr. Wakefield. We could not do that without the group system. If we were just operating our bank, all we could do is make some loans and carry them as far as possible.

Mr. Letts. In this way, it permits you to reorganize it and put it on a firm basis?

Mr. Wakefield. Yes, sir.

Mr. Letts. I thank you very much. I think that is all.

Mr. Seiberling. Mr. Wakefield, you said that the principal reason why you were incorporated under the laws of Delaware was on account of the inheritance tax?

Mr. Wakefield. Yes, sir.
Mr. Seiberling. I assume you do not know that under the Federal law you are allowed credit up to 80 per cent of the Federal tax for all taxes paid in other States?

Mr. WAKEFIELD. I am talking about the conflict of State in-

heritance taxes.

Mr. Seiberling. You can not get out of the State inheritance taxes, because you are incorporated in Delaware.

Mr. WAKEFIELD. All right; what State are you from?

Mr. Seiberling. I am from Ohio.

Mr. Wakefield. Do you own stock in a corporation? If you own stock in Minnesota, Minnesota is going to collect inheritance tax on that stock.

Mr. Seiberling. I am going to get credit for that on my Federal

Mr. Wakefield. But you are going to pay Ohio's tax, too.

Mr. Seiberling. And I will get credit for that on the Federal tax-The fact you are incorporated in Delaware does not cost your stock, holders a cent less for Federal taxes than if you were incorporated in Minnesota.

Mr. Wakefield. Well, all I know is that our attorneys, who looked into the original set-up, insisted that we be not incorporated in

Minnesota.

Mr. Seiberling. It is true that you get credit up to 80 per cent for

all inheritance taxes paid to the States on your Federal tax.

Mr. Wakefield. That is a legal question about which I am not competent to talk. I am not a lawyer. The statement I have made is the judgment of the attorneys we had to look over the situation, and I am quite sure if you will take the individual cases and look them over you will find it is a serious situation.

Mr. Seiberling. But assuming my statement to be true, and that you get credit up to 80 per cent on your Federal taxes for taxes paid in other States, your reason that you advance for incorporating in

Delaware falls, does it not?

Mr. WAKEFIELD. I do not think that allowance on the Federal tax

compensates for the situation.

Mr. Wingo. In those States that have reciprocity, you would get the benefit of that. Minnesota, of course, is not a reciprocity State. Mr. Wakefield. We have a very difficult situation there in that respect.

Mr. Seiberling. You do not think the escape of the double lia-

bility is any feature of your organization?

Mr. WAKEFIELD. That particular thing, in the discussions at the time of our organization, when it was being arranged, would have been accepted if we had our choice out there.

Mr. Seiberling. You never said to the stockholders who were coming into your organization that they would be relieved from double liability?

Mr. Wakefield. Never. Some groups that have formed have deliberately provided for double liability. If we had it to do over again, we would provide for it.

Mr. Seiberling. You have not put into the record a statement of

Your First Bank Stock Corporation.

Mr. Wakefield. Only just what is there in the statement. Mr. Seiberling. You have not put in a financial statement. Mr. Wakefield. There is not any.

Mr. Seiberling. You certainly must have a financial statement of the holding company.

Mr. Wakefield. It is not active. It does no business.

Mr. Seiberling. I have a statement of the issued stock or assets. Mr. WAKEFIELD. I think I have that right here. I think I have a copy of it here, and if we have it, we shall be glad to put it in. Mr. Seiberling. How much stock have you issued of your holding

company?

Mr. WAKEFIELD. It is stated in the record this morning-3,016,000 Mr. Seiberling. At \$25 a share, how much would that be?

Mr. Wakefield. \$75,000,000, approximately. Mr. Seiberling. With that \$75,000,000, you have purchased \$54,-000,000 of capital stock, surplus, and undivided profits in these sub-8idiary banks?

Mr. WAKEFIELD. Yes, sir.

Mr. Seiberling. You were discussing this morning a bank that was in great difficulty in a city of 3,000 inhabitants, and the depositors were there to get their money when you arrived on the scene, but you did not state how much stock you gave those stockholders for their bank.

Mr. WAKEFIELD. We did not give them any. They put up \$200,-

Mr. Seiberling. And gave you the bank?

Mr. Wakefield. Yes; sure.

Mr. Seiberling. How many other banks were given you in this organization?

Mr. Wakefield. Not very many, but there have been several cases

where that has happened.

Mr. Seiberling. About how many? Mr. WAKEFIELD. I can not tell you.

Mr. Seiberling. Then, this bank that you had given to you, how

o you carry that on your books?

Mr. WAKEFIELD. We put in \$150,000 in cash. We capitalized a New bank and assumed the deposit liabilities of that bank and after the stockholders had put up \$200,000 in cash, we figured it may cost Mr. Seiberling. You made them guarantee the debts ?

Mr. Wakefield. Up to that point-\$200,000.

Mr. Seiberling. When you take over banks not insolvent, but almost insolvent, you escrow the stock delivered for debts?

Mr. Wakefield. Not unless there is further need for security of the paper in the bank at the time it is taken over.

Mr. Seiberling. You want to be sure that all of the assets of the

bank are good when you take them over?

Mr. WAKEFIELD. We are not crazy and we would simply not go out and throw the money over the transom in order to get possession of a bank.

Mr. Seiberling. You do not pay anything for good will?

Mr. Wakefield. Wherever there is anything coming for good will,

Mr. Seiberling. How do you estimate that?

Mr. Wakefield. Based upon the earnings of the bank, its capital

Mr. Seiberling. Have you ever considered good will in taking over any bank?

Mr. Wakefield. Almost always.

Mr. Seiberling. Have you sold any of your stock in the market

since you organized the corporation?

Mr. WAKEFIELD. I stated that this morning; it is in the record We sold 200,000 shares to the public originally at \$47.50 a share and 32,000 shares to officers and employees in the various banks in the group at \$42.50.

Mr. Seiberling. You issued it to the original banks on the basis

of \$25 a share?

Mr. Wakefield. On an agreed basis, but it was \$25 par value stock. Mr. Seiberling. When you agreed on the original value of the bank, you paid them at the rate of the par value for your stock!

Mr. Wakefield. I explained that this morning. The First National Bank of Minneapolis, at the time this corporation was formed—our stock was selling for \$220 per share. We received four shares of \$25 each par value for 1 share of our stock.

Mr. Seiberling. You took the market price?

Mr. Wakefield. No; we took what we considered to be a fair basis of exchange based upon the assets and earnings of the bank regardless of the market value of the stock, because if that stock is worth that price in the market, as First National Bank stock, and it is put in on a fair and equitable basis all the way through, it ought to have an appreciation in value as First Bank stock that would approach it, at least. The fact is it has not.

Mr. Seiberling. Would that price, if the stock was sold to the

public, be a higher price than the price you took it over at?

Mr. WAKEFIELD. It was a lower price than the price existing at that time on the First National Bank stock.

Mr. Seiberling. What time was that?

Mr. Wakefield. It was in late August. Mr. Seiberling. You took your stock at \$55 a share?

Mr. WAKEFIELD. That is about it.

Mr. Seiberling. And you sold to the public at \$43?

Mr. Wakefield. At \$47.50.

Mr. Seiberling. I believe you stated this morning that there were some sections in the ninth Federal reserve district that had too many banks?

Mr. Wakefield. I do not think there is any question about that

Mr. Seiberling. That is, the communities will not support all the banks they have?

Mr. Wakefield. Yes, sir.

91

al

et

16

10

1-

18

ik

k

d

p.

it.

Mr. Seiberling. And some of them have to go out of business?

Mr. Wakefield. I think that is true.

Mr. Seiberling. That is not a very good thing for the community?

Mr. Wakefield. It is a very bad thing to have too many banks. Mr. Seiberling. I think you also stated there were many communities that should have banking facilities that do not have them? Mr. Wakefield. I stated that there were 145 communities where

there used to be banks and there are none now.

Mr. Seiberling. And you think one of the difficulties in organizing a unit bank in those cases is the fact the Federal farm land banks and the joint-stock land banks loan on mortgages in these communities?

Mr. Wakefield. That is one of the difficulties; yes, sir.

Mr. Seiberling. What is the banking business that those com-

munities need that they have not got?

Mr. Wakefield. Just a place where the local people can go and deposit their money, cash checks and do a little banking business.

Mr. Seiberling. And borrow money on mortgages?
Mr. Wakefield. It may be that that ought to be done.

I have great faith in the future of farm mortgages. At the present time they are in disrepute, but you can not make me believe that our basic type of security in our territory is forever going to be in disrepute. I think the time is coming when the farm mortgage

willI have as good a standing as it had in the past.

Mr. Seiberling. We appropriated \$500,000,000 to lend farmers on grain or loan associations, with grain securities. We have appropriated \$150,000,000 already. Since they have that money available for their associations and they have the other instrumentalities available for farm mortgages—and then we have appropriated another \$7,000,000 to lend for individual purposes when needed, by the Secretary of Agriculture—what more could the people need back in those communities?

Mr. Wakefield. I think all that type of appropriation is really ineffective. It is not doing the average farmer any good what-

Soever.

Mr. Seiberling. Don't you think that the functions of postal savings could be expanded so that in those far-off communities where no one can organize a bank successfully and yet where they need banking facilities these few needs that they have could be taken have of?

Mr. WAKEFIELD. I think it would be an ineffective and cumber-

80me and an undesirable attempt.

Mr. Seberling. If the law provided that the money that was deposited in the postal savings should be deposited in the banks in the hinth Federal reserve district—money taken in the ninth Federal reserve district should be deposited in the banks of the ninth Federal reserve district—would that make any difference?

Mr. Wakefield. I think the law does permit that and it is largely done, but in all cases it requires the banks to go and buy either State or Government bonds and deposit those in Washington to cover the

amount of the deposits they have from postal-savings banks, which means that that fund, if you have a small town where the postalsavings money is in the form of postal-savings deposits, is not available for loans and never can be.

Mr. Seiberling. They can be made available for deposits for use

in connection with checking?

Mr. WAKEFIELD. I think if you are going to ask the Government to become responsible for the savings of the people through the postal savings of the people, they must be protected in the manner they are

Mr. Seiberling. You say these communities need banking facilities which neither you nor any other organization can afford to furnish

What do you think we should do for them?

Mr. Wakefield. I say if permission were given to banks in the country to put offices in the small towns where the public could come and borrow money and deposit money, it would meet every requirement needed and do it in an intelligent and desirable way.

Mr. Seiberling. That could only be done by branch banking?

Mr. Wakefield. That is true.
Mr. Seiberling. You think some form of branch banking should be adopted in order to take care of those needs?

Mr. WAKEFIELD. I think some form of branch banking, as far as

those towns are concerned, is absolutely essential.

Mr. Seiberling. Should branch banking be limited to the towns

where there are no banks?

Mr. WAKEFIELD. I do not think it would be possible for Congress or for the State legislatures to set up a regulation of that kind. think the permission to put branches in the towns would have to be left to the superintendent of banks or the comptroller, in his discretion. I think any other method would run into conflict and difficulty and work a hardship on some community.

Mr. Seiberling. You think if the Comptroller of the Currency had charge of it and took supervision over it, it would be proper to permit branch banks to be put in the trade areas in those places where

banking facilities are not developed?

Mr. WAKEFIELD. I think the comptroller is entirely competent to

exercise that supervision.

Mr. Seiberling. You spoke about the deflation period in your statement this morning. As a matter of fact, after 1920, many industries that suffered this same deflation that the farmers did either reorganized or put bond issues on their plants, paid their obligations and went on, but the farmer was unable to do that?

Mr. Wakefield. That is true.

Mr. Seiberling. And consequently the banks have had to carry the loans while their securities have depreciated in value over a long period of years?

Mr. Wakefield. Yes, sir.

Mr. Seiberling. Now, many found themselves in difficult circum stances, practically insolvent, and you have organized your group plan to go out and take over these banks, some for nothing and others for such terms as you can agree upon, so as to reorganize the banking facilities of your Federal reserve district. Is that correct?

Mr. Wakefield. Not quite.

Mr. Seiberling. What is there incorrect about it?

Mr. Wakefield. Well, there is an inference or two in your statement which is incorrect.

In the first place, I will state again that the only interest we have In having banks in our territory is in order that there may be Institutions there which have the confidence of the public and with which they are willing to deal, and which are ready and competent and willing to take care of the banking needs of the community served. There is no other motive or purpose in it.

Mr. Seiberling. Your venture is very profitable in that these banks have a very valuable good will. Here is a bank that has been in operation for many years. It may be practically insolvent; nevertheless, it has a tremendous good will. You can take their assets over and have them guaranteed by responsible people and have the

banking business conducted by competent people.

Mr. WAKEFIELD. But in every case we have figured a percentage value to the owners of the banks for the deposits that were turned ^{0ver}, which we have tried to give them in compensation for any good will that might exist there.

Mr. Seiberling. Do you agree with Mr. Decker that if proper banking facilities were furnished out in your community it would do more good than any other kind of relief that could be given to

the agricultural districts?

Mr. Wakefield. I agree with him that it furnishes the basis for constructive development and prosperity, and without it you can not have any such thing.

Mr. Seiberling. Then, of course, you agree that the banking facili-

hes are very important?

Mr. Wakefield. Absolutely important.

Mr. Seiberling. Now, I did not quite understand what you meant this morning when you said that the borrower needed no protection. assume you have not been a borrower very much in your life?

Mr. WAKEFIELD. Yes, I have. Let me illustrate what I have in mind. There have been rare cases, in my opinion, when there have been developments started which the banks were not ready to assume responsibility for; that, they have been untried. I have in mind one very practical illustration. A few years ago there came into existence widespread development of installment selling. Every manufacherer and merchant found he could increase his sales and production could be increased through the use of installment buying. It was some years before the banks were willing to assume the responsibility of lending upon that class of security. What happened?

Almost immediately great corporations were formed with substanhal capital to undertake to furnish that money that was needed for those purposes, regardless of the banks.

Mr. Seiberling. Talking about automobile finance companies and 80 forth now?

Mr. WAKEFIELD. Yes, sir.
Mr. Seiberling. What rates of interest do they charge?

Mr. Wakefield. It does not make any difference what the rates of

Mr. Seiberling. Is not the borrower interested in that?

Mr. Wakefield. Yes, sir; but the cost of credit is usually gauged the amount and type of risk involved in the transaction.

Mr. Seiberling. If you are going to make a man a loan at all, you are not going to make the loan unless you think the principal is reasonably safe?

get retu

Mr. Wakefield. In a bank; yes.

Mr. Seiberling. If a man is entitled to a loan at all, is he not entitled to it at a reasonable rate of interest?

Mr. Wakefield. It depends upon what the loan is for and what his situation is.

Mr. Seiberling. What do you mean by that? If you are going to make a loan at all, why is he not entitled to a reasonable rate of

Mr. WAKEFIELD. The word "reasonable" is to be associated with or defined with the type of credit you are extending and a rate of interest that is reasonable on one form of credit may be unreasonable

Mr. Seiberling. You think a man who is greatly in need of money ought to pay more for it than the man who does not need it so

Mr. Wakefield. I want to get set with you. Mr. Seiberling. All right; let us get set.

Mr. Wakefield. The banking business has been developing in the larger communities all the time. Up in our country, on account of that fact and because we have recognized the development of that situation, we understand fully if the smaller bank is to be eliminated and can not prosper the large bank must step in and furnish the facilities to the small man. He must do it not entirely upon a deposit basis, either, but the large bank must be in a position to take care of the small people, and we have done everything we could to take care of them, even to the extent that two years ago, recognizing that responsibility that we have, we formed what we call a personal loan department in our bank, through which we loan to small individuals, without any other connection with the bank, up to \$500 on an indorsement basis.

Mr. Seiberling. What per cent do you charge on that? Mr. Wakefield. Six per cent, and we are losing money on it.

regard it, however, as one of the best things we do.

Mr. Seiberling. You do not think the borrower is entitled to any protection under the law?

Mr. WAKEFIELD. Certainly I do; but I say I think he is protected

under the law in every way I can think of.

Mr. Seiberling. What rate of interest do they pay on these mortgages you referred to?

Mr. Wakefield. Our usury laws permit 8 per cent. Mr. Seiberling. But what rate do they pay?

Mr. Wakefield. I do not know.

Mr. Seiberling. What rate do you pay when you take them over! Mr. WAKEFIELD. I do not know. I am not active in the corporation.

Mr. Seiberling. Do they buy them at a discount?

Mr. WAKEFIELD. That is a very small company and handles a very small business.

Mr. Seiberling. I wanted to get the facts.

Mr. Wakefield. I do not know.

Mr. Seiberling. Is there anybody here that does know?

Mr. Wakefield. No; but you can rest assured of this, that they get a charge on that business that pays the cost of operation and a return on the money. I do not know what the rate is.

Mr. Seiberling. Mr. Decker referred to banks yesterday as com-parable with public-service corporations. Do you agree with him

Mr. Wakefield. I have never been able to find a basis of com-

parison myself.

Mr. Seiberling. You would not think it would be proper for the licket agent of the Baltimore & Ohio down here, if he found a man had to go to New York to-night to charge him \$5 or \$10 more for his ticket than if he could wait until to-morrow?

Mr. Wakefield. I do not understand that question, Mr. Seiber-

Mr. Seiberling. Does not the Government do more for the banks

than it does for any other business in this country?

Mr. WAKEFIELD. I do not think so. I think the banks do a tremendous amount for the Government every day in the year.

Mr. Seiberling. For the Government?

Mr. WAKEFIELD. Yes, sir.

Mr. Seiberling. Well, the banks operate with the money that belongs to the people, do they not?

Mr. Wakefield. Now, do you want to get into an involved discus-

sion of the theories of banking?

Mr. Seiberling. Do not your deposits come from the people?

Mr. Wakefield. Yes, sir. Mr. Seiberling. Even the very money you are lending back?

Mr. Wakefield. Yes, sir.

Mr. Seiberling. Are they not entitled to get that money on a reasonable basis?

Mr. WAKEFIELD. I claim they do.

Mr. Seiberling. How much money have you made with this corporation of yours since you organized it?

Mr. WAKEFIELD. Which corporation?

Mr. Seiberling. Your holding company.
Mr. Wakefield. The First Bank Stock Corporation? Mr. Seiberling. Do you get out monthly statements?

Mr. WAKEFIELD. We get statements every day.

Mr. Seiberling. How much money are you making? Mr. WAKEFIELD. I do not know, but last year, on the basis of peration of each unit, for the full year, the earnings of this cor-Poration would be approximately \$7,300,000 from all sources. That

approximately \$2.40 a share on the capital stock. Mr. Seiberling. That is the bank you took over?

Mr. WAKEFIELD. Yes, sir; the whole group. Mr. Seiberling. But, as a matter of fact, what have you been

haking since you took them over?

Mr. Wakefield. Less, because it is a low-money period right at

he present time. Mr. Seiberling. You do not think any money went from the ninth ederal reserve district to New York during the high call-money

Mr. WAKEFIELD. I do.

Mr. Seiberling. Do you know of any banks that borrowed from the Federal reserve bank and sent it to New York?

Mr. WAKEFIELD. I am quite sure they did not do that in our district.

Mr. Seiberling. You do not know of any?

Mr. Wakefield. No, sir. Mr. Seiberling. You think it is all right to have a call-money rate

of 25 per cent?

Mr. WAKEFIELD. I think the best sort of regulation and the best indication to the general public of pending difficulties are secured through the fluctuations of the call-money rate in New York.

Mr. Seiberling. But you do not answer my question.

Mr. WAKEFIELD. I think it is perfectly proper that the rate should go to 25 per cent if the situation warrants it.

Mr. Seiberling. And very much higher?
Mr. Wakefield. So much higher that they would not use it. Mr. Seiberling. You think it should go to an unlimited amount?

WAKEFIELD. Yes, sir. I think any attempt to fix that rate would be to the detriment of the good of the entire country. I think that is the one mark we have to watch as showing pending danger, and if the public had paid attention to the call-money rate on the New York market in the last two years, they would not have been stung in the stock market like they were.

Mr. Seiberling. Do you think there should be any machinery in New York or any other place that could put the money so high that they can make the people pay more interest than the usury laws of

the States permit?

Mr. WAKEFIELD. That period was one of the highest call money rate periods that we have had in this country. I know that it had no influence whatever upon the banking resources in our section being diverted to New York in order to get that high rate.

Mr. Seiberling. You know it did draw a vast amount of money

to New York?

Mr. WAKEFIELD. Yes, sir. Mr. Seiberling. Then where did it come from?

Mr. Wakefield. From individuals and not from the banks. Mr. Seiberling. But they had to take it out of the banks?

Mr. Wakefield. Probably some did.

Mr. Seiberling. And diverted it to New York?

Mr. Wakefield. Yes, sir.

Mr. Seiberling. And to the extent that that was done you did not have that money available to lend in your district?

Mr. WAKEFIELD. We took care of every requirement in our district Mr. Seiberling. Where did you get the money with which to do that?

Mr. Wakefield. From the Federal reserve bank.

Mr. Seiberling. And that money you loaned back to your cus tomers, who took it and sent it to New York and loaned at 15 and 25 per cent in New York?

Mr. Wakefield. I think, as a customer of our bank, it is not oul

business to know what they do with their money.

Mr. Seiberling. Do you think the Federal reserve bank should be the instrumentality that permits the New York Stock Exchange to get 25 per cent for its money?

Mr. Wakefield. I do not think your premises are correct.

Mr. Seiberling. Did it not work out that way?

Mr. Wakefield. I say I do not think your premises are correct. Mr. Seiberling. You can not control your customers?

Mr. WAKEFIELD. Their money; no. Mr. Seiberling. It is their money?

Mr. Wakefield. Yes. Mr. Seiberling. They pulled it out of your bank and sent it to

Mr. Wakefield. I do not know as they pulled it out, but they did

aot deposit it.

m

ct.

ed

ık

10

n

n

at

of

10

y

it

ø.

Mr. Seiberling. Some of them pulled it out?

Mr. Wakefield. I really doubt it.

Mr. Seiberling. Did not some of your large corporations lend Money in New York on call?

Mr. Wakefield. Very few. I think perhaps three or four million

dollars was loaned that way in our entire territory.

Mr. Seiberling. And you had to go to the Federal Reserve Bank and borrow money to take care of the banking requirements of your community?

Mr. Wakefield. We did at some times.

Mr. Seiberling. And you did that because you needed it in the

hinth Federal reserve district?

Mr. Wakefield. But do you think because we had to go and bortow money from the Federal reserve bank, that we ought to fix it 30 that the fellow who gets the money must deposit it in our banks? Mr. Seiberling. The high call money took the money out of your banks and drew it to New York?

Mr. WAKEFIELD. I think it did in some instances.

Mr. Seiberling. And, to take care of that money that was drawn New York, you had to go to the Federal reserve bank to get the

money with which to carry on your business?

Mr. WAKEFIELD. I think that is somewhat true, but think of this: We were passing through a period when there was this inflation in ew York of stock prices, and one of the real cures for a situation of that kind, is not to fix it arbitrarily so that it can not be carried on for a certain period, but if the public would accept the warning of the rate, then it would take care of itself.

Now, they went blind for a certain period and would not accept

any warning.

Mr. Seiberling. The result was a tremendous crash in this country that affected the industrial situation and labor productivities.

Mr. Wakefield. I do not think the crash has really resulted in

affecting business very much.

Mr. Seiberling. That is your opinion, that it has not affected business?

Mr. Wakefield. My opinion is that that is not the main cause of

business conditions to-day.

Mr. Seiberling. The result is that the Federal reserve bank indibetly furnished a large amount of money for speculation in New fork, and they could not help themselves under the system that exists.

Mr. WAKEFIELD. To an extent, I think, that may be so, but the Federal reserve system functioned in a most admirable way all through that period, in my opinion.

Mr. Seiberling. Do you think there should be some machinery

set up somewhere so as to prevent the rates going so high? Mr. WAKEFIELD. No, sir; I think the best thing we have in the country to-day is the absolutely free play of the rate on the New York call-money market. I think this: If there had been a limited rate fixed in New York City for call money, above which the price could not go, I think the stock exchange situation would have gone on considerably longer and the crash would have been far greater.

Mr. Seiberling. That theory you get from certain classes in New

York and other places?

Mr. WAKEFIELD. I do not live in New York.

Mr. Seiberling. But suppose we had a limit that would not have drawn the money to New York, and they could not speculate with it, would there have been that great speculation?

Mr. Wakefield. Why, money is going to New York at 3 and 4 per

cent to-day faster than before when the high rates obtained. Mr. Seiberling. They have no use for the money in your district

that they have left in the banks? Mr. Wakefield. There is very little demand for money to-day. Mr. Seiberling. You think business is all right?

Mr. Wakefield. Yes, sir; fundamentally.

Mr. Seiberling. But there is no use for money in the country? Mr. WAKEFIELD. If you want to get me onto the business situ-

Mr. Seiberling. No; but what do you think caused the business

Mr. Wakefield. The business recession at the present time?

Mr. Seiberling. Yes.

Mr. Wakefield. Well, we start out and go through a period in this country every once in a while of very rapid production and acceler ated sales and high tension of business and run until we overdo all those things.

This very factor of this new instrument of installment buying that I have been speaking of, was one of the main sources of increase ing purchases on the part of the public. The first suit of clothes hought was a \$10 cm. bought was a \$10 suit on which I paid \$2 down and \$2 a month. I am in favor of installment buying.

Mr. Seiberling. I have one better than that in connection with the

first suit I bought.

Mr. Wakefield. The people were inexperienced with that type of facility. During the few years that have passed they have gained that experience and to-day, instead of having three or four or five contracts running at once, they are not going to be in quite the pinched condition from the exercise of the privilege of installment buying they have been in the past, and so they have shut down buying.

Mr. Seiberling. I can not take any more time. I have taken too much already. But you do not believe in usury laws, do you?

Mr. WAKEFIELD. Yes, sir; I do.

Mr. Seiberling. But you do not believe they should apply to the

New York Stock Exchange?

Mr. Wakefield. I think we need in this country a free market In the country of the type of the New York call money market because it is the finest barometer that exists in this country to-day, if people will watch it.

Mr. Seiberling. That is all.

Mrs. Pratt. Mr. Seiberling's questions seem to express objection to the fact that people drew their money out of a bank or took their money and invested it as they chose. That is the individual's right, 18 it not?

Mr. Wakefield. It is.

Mrs. Pratt. And would not, in your opinion, any legislation to Prevent the individual from doing just that very thing, be a type of legislation which this country seems to object to as affecting personal Privilege and personal rights?

Mr. Wakefield. I think I have covered that, Mrs. Pratt, in my statement that, in my opinion, there should be never any attempt of

that sort.

the

Mrs. Pratt. Would not that be legislation infringing on personal Privilege ?

Mr. Wakefield. Absolutely.

Mr. Luce. I understand that Mr. Wakefield is going to come back in the morning, and so I will adjourn the meeting until to-morrow, but will ask the indulgence of the committee, inasmuch as I have to be at another committee meeting to-morrow morning, to ask one Question at this time which I would have asked during my time, if this document had been before me.

I observe from his list that you have two banks in Austin, Blue Earth, Little Falls, and Mankato, Minn.; Aberdeen and Gettysburg,

8. Dak.; and Helena, Mont.

Now, there are two of these places—Gettysburg, S. Dak., and Blue Earth, Minn., of which probably I should have been informed, but, In fact, I never heard of before, indicating possibly they are not both of them metropolises. [Laughter.]

Mr. Wakefield. Those banks will be consolidated.

Mr. Luce. How does it come that you are maintaing two banks in

any place?

Mr. Wakefield. We are not, in those cases that you mention there. It will take those two banks put together to make a bank that is lustified, and they have already been consolidated. Mr. Luce. It is not your intention to maintain two banking offices

In those places?

Mr. WAKEFIELD. No. sir.

Mr. Seiberling. Before we adjourn, is this financial statement to go into the record?

Mr. Wakefield. Yes.

(The statement referred to is here printed in full as follows:)

Min Mo Nou Min

To the Stockholders of the First Bank Stock Corporation:

Since the last report to stockholders covering the operations of your corporation, the First Bank Stock Corporation's system of banks has been progressively expanded and at the close of the fiscal year, December 31, 1929, it included 85 affiliated institutions all situated within the boundaries of the ninth Federal reserve district. All units of the group are being maintained at a high point of operating efficiency, providing their communities with the most adequate banking and credit facilities, and affording their depositors a maximum degree of security.

The operations of the group are also being reflected in restored confidence throughout the territory and a consequent firmer foundation for stabilized

conduct of general business.

We are now concentrating our attention upon the development of the coordinated activities of the group making available to the trade areas and customers of each unit the greater facilities of the system as a whole.

In expanding the First Bank Stock Corporation system as a whole, the position of affording opportunity to the independent bank upon its own volition to affiliate with the corporation, and new affiliations are being accomplished only upon this basis. The growth of the group is evidence that the independent banker recognizes the benefits to be derived by association with your corporation. Negotiations for the affiliation of a number of additional banks are now pending and will be announced from time to time.

BALANCE SHEET

Of the First Bank Stock Corporation's authorized capitalization of 10,000,000 shares of a par value of \$25, there was outstanding upon December 31 a total of 3,016,870.57 shares. The condensed balance sheet of the corporation of that date follows:

Note.—The item "stocks" represents the valuation at the time of purchase of our equities in the affiliated corporations. In arriving at the purchase price all factors tending to establish the going-concern value of these corporations were considered and final acquisition was accomplished upon a very conservative basis. In view of the fact that all purchases were made upon valuation established within recent months, no effort has been made to revalue them for purposes of this report. The management feels that the true value of these properties is constantly increasing. A consolidated statement of the banks and companies controlled by the corporation appears on page 4 of this report.

EARNINGS

We have obtained from each bank in the group an earnings statement the entire year 1929, and where the bank was not in operation for the year, its income has been carefully estimated. Based on these figures.

annual net operating profit accruing to the corporation, after deducting all expenses and taxes, will amount to \$7,282,652.04, or \$2.4139 per share of our stock. It is not to be understood that these earnings have actually been received by the corporation; nor will they be received hereafter. It is the policy of your officers to ask dividends from the several banks only sufficient to meet our own dividend requirements, and to allow the excess earnings to remain in the several banks in the form of surplus or reserves, thus continuously strengthening the component parts of the entire organization.

The rate of earnings as at present determined is approximately 2½ times dividend requirements. It may be of interest to note that the earnings of the First National Bank of Minneapolis and First National Bank of St. Paul, independent of their respective subsidiaries and affiliates, are of themselves more than sufficient to meet the entire dividend requirements of the corporation.

FUTURE EARNINGS

The general lowering of interest rates throughout the country will undoubtedly affect banking profits for 1930, but it is hoped that this will be offset by other considerations, of which the principal are as follows:

(a) The benefits of group operation, which have scarcely as yet had time to make themselves felt, should be reflected from now on in expanded activities throughout the entire system. We are developing the facilities of our units in the credit, investment, and trust fields, thus increasing their earning capacity, and at the same time are accomplishing economies through the central clearance functions of the corporation.

(b) Prior to affiliation with the corporation, the unit banks operated on an excessive reserve basis, due to the fluancial uneasiness which prevailed throughout the district, and this naturally tended to reduce operating profits. Backed by the combined strength of the organization, it will now be possible for the unit banks to operate on a narrower reserve basis with a resulting increase in profits.

(c) That group banking is rapidly increasing public confidence in the member banks is already apparent, and this must inevitably bring about an increase in deposits.

(d) Prospects are excellent for substantial profits from our two divisional subsidiaries, First Securities Corporation and First Bancredit Corporation. These companies did not become operative in the group until recently and the carnings report for 1929, therefore, does not reflect their full possibilities. The First Securities Corporation was established with a capital and surplus of \$7,500,000 and took over the investment business formerly handled by First Minneapolis Co. and First St. Paul Co. and is extending its service throughout the group. The First Bancredit Corporation is the successor to the Lumberman's Acceptance Corporation of Chicago and conducts a specialized financing business in the construction fields. Its capital structure of January 1 totals \$1,101,000.

DIVIDENDS

The board of directors has declared the second quarterly dividend of 25 cents per share payable April 1 to stockholders of record March 15. This is at the annual rate of \$1 per share.

TERRITORY SERVED

As of December 31, 1929, 60 cities were served by affiliates of the corporation, \mathfrak{s}_8 follows:

State	Number of cities	Number of affili- ates
Minnesota Montana North Dakota	21 11 15	42 13 15
South Dakota Michigan	10 3	12
	60	- 83

CAPITAL-STOCK DISTRIBUTION

The stockholders of the First Bank Stock Corporation are distributed geographically as follows:

graphically as rollons.	
Minneapolis	6, 700
St. Paul	2, 345
Minnesota (outside of Twin Cities)	3, 201
Michigan	987 892 510
Montana	892
North Dakota	516
South Dakota	441
Wisconsin	440
Other States	-

INDEPENDENCE OF UNITS

There has been some uninformed criticism of group banking based upon the claim that the various banks composing the group have sacrificed their independence and that their operations, including their local loans, are directed from the head office of the corporation. This is absolutely untrue. The several banks are corporately just as independent as they were before they became affiliated with the corporation. They are operated and directed by local men for the benefit of the communities which they serve and from which they derive their business. Nothing has changed but the stock ownership and the remedy for inefficiency is just what it was before, namely, removal from office by the stockholders. On the other hand, each unit bank receives the benefit of cooperation with the other units and it is the function of the head office to centralize and improve this cooperation and the advantages which may be derived therefrom.

We look forward to a year of substantial progress and we would remind each stockholder that he can contribute thereto by directing business to our banks whenever he has an opportunity to do so.

Respectfully submitted.

BRANCH, CHAIN, AND GROUP BANKING

THURSDAY, APRIL 17, 1930

House of Representatives. COMMITTEE ON BANKING AND CURRENCY. Washington, D. C.

The committee met in the committee room, Capitol, at 2.15 o'clock P. m., Hon, E. Hart Fenn presiding.

Mr. Fenn. The committee will come to order.

STATEMENT OF L. E. WAKEFIELD-Resumed

Mr. Fenn. Mrs. Pratt, when we closed last evening you were cut short; you had not finished your inquiry.

Mrs. Pratt. I shall take only two or three minutes.

Mr. FENN. You have that opportunity now, and Mr. Dunbar follows and then Mr. Wingo.

st

Mrs. Pratt. Mr. Wakefield, I do not profess to be a banker, and that reason I have no preconceived notions for or against the subject under discussion here; but I do wish to state that I have been very greatly impressed by the way in which you and Mr. Decker have handled the banking situation in your part of the country, and unquestionably you seem to have solved many of the problems there which we have under contemplation here for possible legislation; but the fact is that such men as you and Mr. Decker might not always be in control. What I wanted to ask was whether you felt that these holding companies—for instance, such a holding company as yours should be subjected to the same rigid inspection as the banks?

Mr. WAKEFIELD. We feel very strongly on that point that the comproller's office should have the right to come in and examine our holding company or any of the institutions in the holding company.

Mrs. Pratt. You feel that that would really be a safeguard? Mr. WAKEFIELD. I do. I think there should certainly be some egulation and some restrictions put upon that type of business. We want that for our own benefit.

Mrs. Pratt. I do not know whether this is a proper question, and, it is not, do not answer it; but do you feel that such holding

ompanies should invest their funds in speculative stocks?

Mr. WAKEFIELD. No; I do not. My own view on this is contrary some others; my own view is that no banking institution as such hould invest in common stocks of any nature.

Mrs. Pratt. Just one more question. I think you stated that you Vere not as yet able to handle the banking situation in the smaller howns; at least, that you had not attempted to do so, and that you felt

that would be more appropriately covered by branches of State banks-I think you used the word "State."

Mr. Wakefield. If I did, it was inadvertent, because I did not

intend to say branches of State banks.

Mrs. Pratt. At the time I noted it down, because I wondered if you were opposed to any form of national-bank branch banking. Mr. Wakefield. Not at all. I believe that that privilege should be granted to national banks.

Mrs. Pratt. Do you feel that a national branch-banking system extending over a fairly wide area tends to establish in this country

too much of a paternalistic system?

Mr. WAKEFIELD. No; I do not. Our position on the method of solving the difficulties that exist is in harmony, to a certain extent, with the suggestion made by the Comptroller of the Currency and the Governor of the Federal Reserve Board, except that we approach that topic from a reverse angle. Our belief is that if we are to have branch banking, it should be permitted originally from the outside in and not thrust upon the people from the center out into the country.

In other words, taking this town of Austin that I spoke of, the first national bank there might properly be authorized to do a branch banking business within its territory, its vicinity, in the smaller communities, and eventually that might develop into a situation where it would be perfectly feasible and acceptable to the public that it become

a branch of some system within a certain trade area.

Mrs. Pratr. Do you think that such a national bank, with branches established in the smaller communities, might become part of the group system, so that eventually your group system would absorb the whole?

Mr. Wakefield. Eventually the group system might be converted into a branch system, if that became the thing that it was decided

ought to be done.

Mrs. Pratt. I think that is all. Mr. Fenn. Thank you, Mrs. Pratt.

Mr. Goldsborough, you are next on the list, if you wish to interrogate Mr. Wakefield.

Mr. Goldsborough. Mr. Wakefield, I have here Barron's for April 14, and it has a leading article by Ernest T. Clough, which is headed "Group Banking Sweeps the Country."

As I understand it, your organization and that of which Mr. Decker is president have been in existence each for less than a year! Mr. WAREFIELD. The Northwest Bancorporation has been in existence about 13 months and our present set-up about 9 months.

Mr. Goldsborough. This article, in table No. 4, gives the Northwest Bancorporation as having 98 banks in its group and the First Bank Stock Corporation as having 100 banks in its group.

Has your group 100 banks? Mr. Wakefield. No; about 91.

Mr. Goldsborough. Have you ever had as many as 100?

Mr. WAKEFIELD. It may be that they would get that figure from the fact that possibly in the total operation there may have been 100 banks involved, remembering that in some cases there have been two or three banks put together to make one at the time of the acquisition, or a couple of them consolidated.

Mr. Goldsborough. Mr. Decker's statement was, as I remember it, that the first thing which was done, some four banks he named agreed on this set-up, but after a little while the movement became accelerated and, instead of having to suggest to the banks they come in—instead of the suggestion going from the holding company to the bank, very often it would come from the bank to the holding company, and, as I understand, that was also your experience?

Mr. Wakefield. It was very much so in both cases.

Mr. Goldsborough. The territory within which you and the Northwest Bancorporation are operating is a territory through which the banking experiences of the last 10 years have been tragic?

Mr. Wakefield. That is true, I think.

Mr. Goldsborough. I think Mr. Decker, in speaking of Cavalier County, in one of the Dakotas, stated there were some 26 banks when this difficulty started, and there are only 5 or 6 now in existence afterwards?

Mr. Wakefield. Yes.

Mr. Goldsbordough. That the rest had been forced to close. I think he also stated in this Cavalier County the original capital—that is, the deposits of these banks before their failure took place—was around \$5,000,000 for the 26 banks. Prior to the deflation period—that is, prior to 1921—were the banks, on an average, throughout the territory in which you operate as small as that would indicate?

Mr. Wakefield. Yes; in the State of North Dakota, where Cavalier County is, they had one bank in 1920 for every 752 population. Mr. Goldsborough. That is a very interesting observation. As far as you know, had this banking situation in North Dakota prior to 1920 been of a sudden or a gradual growth?

Mr. WAKEFIELD. It had been rather gradual, over quite a period

of years.

ä

e

g

ŭ

e

Mr. Goldsborough. It is obvious, do you not think, that one bank, with its building and general overhead, for less than 1,000 population, is too much under any banking system?

Mr. Wakefield. Yes; and in some cases even 1,000 population

do not think would supply anywhere near-

Mr. Goldsborough. I fully agree with you on that.

Is it not more nearly true that one bank for every 2,500 or 3,000

18 entirely adequate?

Mr. Wakefield. I think you are correct. I have never made a careful study myself to determine a population basis for banks.

Mr. Goldsborough. The business, of course, in the territory cov-

ered by the population would have a great deal to do with it.

Mr. Wakefield. There certainly is a point there beyond which it is undesirable to go; it is simply destructive when you begin to have competition.

Mr. Goldsborough. Now, the natural result of the very distressing condition which the Northwest Territory went through was, of course, that the people were more amenable than they ordinarily would be to suggestions as to changes in the banking situation?

Mr. Wakefield. I think that is true, based on this fact, that they were ready to welcome any arrangement that they felt would be sound and safe and do the thing that they wanted to have done.

Mr. Goldsborough. Now, do you believe the people who allowed such a number of banks to grow up in North Dakota prior to 1920 would, in so far as banking is concerned, have a very clear conception of what is sound banking? Do you not think a people of that kind would welcome almost anything which appeared to give relief?

he

W

Mr. Wakefield. I think that they have given that topic much greater thought and that they probably have a better understanding to-day than they did when the times did not call for their thought on it.

Mr. Goldsbordgh. Do you not think that in any line of endeavor, when a movement begins to gain momentum there is a tendency to try to get on the band wagon, as it were, whether it be in banking or in any other activity? Where there seems to be a movement on foot, do you not think there is a tendency, irrespective of every other consideration, to become panicky and desirous of getting on the band wagon? I do not know of any other way to express it which conveys my meaning more clearly.

Mr. Warefield. I do not think that is always true. I think there may be a tendency of that kind, but I think it is accompanied in business by rather clear consideration and judgment in connection

with what is best to do.

Mr. Goldsborough. I notice in this article the statement is made

If the unit bank did not ally itself with the powerful city institution, would it find itself playing a lone hand against great odds, with the neighboring unit bank gleefully advertising its strength as a member of the XYZ corporation, with total resources of so many hundreds of millions of dollars?

Do you think there is any vitality in that observation?

Mr. Wakefield. I think in the territory that I am familiar with that the matter has been handled in such manner that the sound unit bank has not been unfairly prejudiced in the public mind.

Mr. Goldskorough. Mr. Wakefield, you do not have it in mind, do you, that either at this time or ultimately your organization will not do what other organizations have done since the beginning of time, and any or the advantage of its competitor?

endeavor to get the advantage of its competitor?

Mr. Wakefield. Why, I have in mind that in the operation of our institution we are going to serve the public to the fullest possible extent, with the very idea of making that service of such value and attractiveness that we will get all the business that can come to us.

Mr. Goldsborough. But you think that would continue to be the condition if competition were eliminated?

Mr. Wakefield. I never expect to see it eliminated.

Mr. Goldsbordgh. You say you never expect to see it eliminated, which would seem to me to be an unusual observation, an unusual point of view, but it seems to parallel an observation you made. I think, yesterday, that you did not understand what was meant by favoritism to one possible borrower over another, that you did not have any conception of what that meant.

I think that fairly states what you said, and if it does not you

can correct it.

Mr. Wakefield. That is correct; and in my experience in business I have never known of a thing of that kind to exist, nor do I know to-day of any area in the banking business in this country that has not very strong, substantial competition.

Mr. Goldsborough. Do I understand you to say you have never known of an instance where a borrower has been favored over another, where everything else was equal?

Mr. Wakefield. Do you mean in the ordinary business transac-

tion?

Mr. Goldsborough. Yes.

Mr. Wakefield. What do you mean by "borrower"? Mr. Goldsborough. I mean a borrower from the bank.

Mr. Wakefield. You mean, supposing there were two grain men doing business with us, both equally good, would there be any chance of favoring one over the other?

Mr. Goldsborough. Any business.

Mr. Wakefield. In any business doing business with the bank, equally good? I have never known of a case.

Mr. Goldsborough. You have never known of a case?

Mr. Wakefield. Never; and I do not think it would be possible to happen. It might happen in some bank-

Mr. Goldsborough. All I have to say is that your experience is

different from that of everybody else I have ever heard of.

Mr. WAKEFIELD. I am running a bank, and that is the way I run mine.

Mr. Goldsborough. I am not running one, but I am a director in three, and I have had some experience. I remember-and I am going to base a question on this observation-that in my county there was at one time only one bank, and I remember very distinctly if anybody wanted to start in a business which was in competition

with those who were in control of that bank, they could not borrow any money from it. That condition has been cured by competition,

and that is the only way it was cured. I remember in an adjoining county, Talbot, there used to be only one bank and that exact condition existed, which ultimately brought another institution into the county; but when you say you never

knew of an instance of that, you surprise me very much. Mr. WAKEFIELD. My own judgment is that the very instance you have recited is evidence that their shortsighted policy in running that original bank without competition brought about the cure for

it, because it did bring competition.

Mr. Goldsborough. I know, but the very interesting thing to me is your statement that you never knew of anything of that kind going on in a banking institution.

Mr. Wakefield. I never did.

Mr. Goldsborough. It is done every day, my dear sir, in every

bank in the United States except yours.

Mr. Wakefield. If any banks are doing that kind of business, I do not know of them, and I do not believe they could keep the business very long if they did.

Mr. Goldsborough. You can not keep the selfish instincts of the

boards of directors down.

Mr. Wakefield. No, sir; but the most selfish instinct of a board of directors is the building up of the business of the institution in which they have made their investment.

Mr. Goldsborough. Not necessarily, because in this country bankers are not bankers; they are business men who are drafted to become directors of banks because of their influence in the neighborhood.

Mr. WAKEFIELD. You had better send them up to Minneapolis and

COL

ar

we will educate some of them.

Mr. Goldsborough. That is the universal situation in this country. It may not be in Minneapolis, but I have no doubt that the Minneapolis boards of directors of banks are made up of prominent

business men, just as they are elsewhere.

Mr. Wakefield. They are, but I have never known of a case where one of those business men has ever interfered or ever requested that there be interference with the taking care of competitors in the same line of business as theirs, where the request of the competitor was

justified. If they did, we would not have them for directors.

Mr. Goldsborough. That is a very ideal condition which I am sure exists nowhere else on earth, because it is contrary to human instincts.

Mr. Wakefield. I can not agree with you on that.

Mr. Goldsborough. It is like King Canute, trying to sweep back

the ocean.

Of course, if your theory were correct, is it not true we would not have to have any banking restrictions at all; we could simply say, "You are all-wise and you are absolutely honest; now, go to it and benefit the public "?

You would not have to have any restrictions at all; that is where

your theory would lead to.

Mr. Wakefield. I do not think it would go quite that far.

Mr. Goldsborough. I see. In your organization, do you borrow on the stock that you own in the constituent banks?

Mr. Wakefield. Who? Individually?

Mr. Goldsborough. No; this corporation. The First Bank Stock Corporation owns the stock of these constituent banks.

Mr. WAKEFIELD. Yes; but it never has borrowed a cent, and I do

not expect it ever will.

Mr. Goldsborough. But it has the right to borrow, like any other owner of property would have such a right. Mr. Wakefield. Yes; it could borrow.

Mr. Goldsborough. It could take that stock and borrow on it and then it could take the proceeds and buy common stocks on margin, and it would not be doing anything illegal; you would not be violating the law if you did that.

Mr. WAKEFIELD. Yes; and somebody would be unwise if the

did it.

Mr. Goldsborough. No, no; you misconceive the purpose of my question entirely.

Mr. Wakefield. You are asking a hypothetical question.

Mr. Goldsborough. No; I am not asking a hypothetical question at all. We are not interested as a legislative committee in whether you are honest or dishonest, or in whether you are wise or unwise. Those are matters with which the authorities whom you deal with and the public with which you deal are concerned, but as a legislative committee we are not interested in that. What we are interested in is whether or not the proposition is economically sound.

Mr. Wakefield. Yes, sir.

Mr. Goldsborough. And that is the only thing we are interested in.

What I am asking you is whether or not, under your setup, you could not borrow on the stock that you own and take the proceeds of that borrowing and buy common stocks on margin.

Mr. WAKEFIELD. Certainly.

٧.

Mr. Goldsborough. And you could do it legally, could you not?

Mr. Wakefield, Certainly.

Mr. Goldsborough. Without violating the law?

Mr. Wakefield. Certainly.

Mr. Goldsborough. Do you think you ought to have that right?
Mr. Wakefield. I would think it would be a great mistake if
there were ever any attempt to say by legislation how the owner of
an individual piece of property might use it or what he might do
with it.

Mr. Goldsborough. Even though he is the absolute owner-

Mr. Wakefield. Yes.

Mr. Goldsborough (continuing). Of all of the stock in a banking institution?

Mr. Wakefield. Yes.

Mr. Goldsborough. Do you want to correct that statement? It is Perfectly all right to do it.

Mr. WAKEFIELD. I do not want to correct it.

Mr. Goldsborough. That is rather an astonishing statement. How do you distinguish, as a practical proposition, between one of your constituent banks and a branch bank?

Mr. Wakefield. They are entirely different.

Mr. Goldsborough. Of course, you have absolute control of the institutions, and the mother bank has absolute control of the branch

banks. What are the differences?

Mr. Wakefield. The First Bank Stock Corporation owns the stock of the First National Bank at Austin, and the First National Bank at Austin is a separate corporate institution, capitalized and officered there in Austin, and its board of directors and its management are there in Austin, with absolute control. The only supervision we have over that bank is exactly the same as the individual stockholders have had in the past and do always have as owners of the stock.

Mr. Goldsborough. But you own all the stock.

Mr. Wakefield. Yes, sir; and so was all of the stock owned before. Mr. Goldsborough. But you do not get all of the stockholders to act cohesively.

Mr. WAKEFIELD. And that is the reason this is much more effective that we have a live, active stockholder that is watching that

hant-

Mr. Goldsborough. Do you not control that bank just as absolutely as the home bank controls any of its branches in a branch banking system?

Mr. Wakefield. No. If we had a branch bank down there under the branch-banking system, we would have no capital investment in

that town,

Mr. Goldsborough. Why is that true of necessity?

Mr. Wakefield. Because, we will say, that the First National Bank of Minneapolis was authorized to have branches, and it would be capitalized the required amount as a single bank; it would have an office or a branch in Austin managed by a manager.

Mr. Goldsborough. Why does that have to be the system?

Mr. Wakefield. I have never heard of any other system of branch

Mr. Goldsbordugh. We have been told by Governor Young and by Mr. Pole that the branch banks do not have to lose their individuality at all.

Mr. Wakefield. I read Governor Young's testimony and Mr. Pole's

testimony and I do not remember reading that statement.

Mr. Goldsborough. You say that, as far as you know, there is no branch-banking system which provides for local boards of directors and local capital to control the branches?

Mr. Wakefield. No.

Mr. Goldsborough. It may be very interesting to you to know that there is a branch-banking system in Maryland with 21 branches, which has no parent bank and no branch bank; each bank stands on exactly the same level, but they each support the other. In other words, there is a general capital set-up involving all the banks, and when a new bank is started the community is canvassed for the purpose of getting the stock which is to go into that institution and that institution is put on its feet with that stock and the board of directors is elected locally.

Mr. Wakefield. Is that local bank, then, a separate corporation?

Mr. Goldsborough. No, indeed.

Mr. Wakefield. I do not understand that a set-up of that kind, as I have been familiar with branch banking in my experience, is typical branch banking.

Mr. Goldsborough. I do not know that it is typical branch banking, but it is perfectly conceivable to have a branch banking system where you have your local directors, if you want it that way. You do not have to have just a local manager.

Mr. Wakefield. You can do most everything. The question is

whether it is the right thing to do.

Mr. Goldsborough. Then I will ask you this: I will ask you whether you do not think that in a branch banking system the constituent banks should be autonomous?

Mr. Wakefield. I think that in a branch banking system the capital structure should have a relationship to the deposit liability and

should be based upon that and that only.

Mr. Goldsborough. You can not conceive, as a business man, of a branch banking system where the capital is so divided up that each institution has the responsibility of earning dividends on a certain proportion of that capital which is locally owned and where the board of directors is exclusively local and where no outside board of directors has anything to do with it at all?

Mr. Wakefield. I do not think that that is branch banking.

Mr. Goldsborough. What would you call it? Mr. Wakefield. That is group banking.

Mr. Goldsborough. No; that is not group banking; that is, it is not the kind of group banking we have been hearing about for the last three days.

Now, Mr. Wakefield-

Mr. Fort. Before you leave that subject may I give you an illustration of that same idea that has now taken place in New Jersey?

Mr. Goldsborough. Yes, sir.

Mr. Fort. In the setting up of branches in my home city of Newark since the passage of the McFadden bill, they have largely taken over old banks and converted them into branches, but have retained the old boards of directors as advisory boards of directors in those branches, and in every case I understand that the local advisory board of directors passes on the loans that are made to the customers of that branch, subject, however, to supervision from the main office. That is somewhat similar. They have been taking stock in the parent bank in exchange for their own holdings of stock in the bank that sold out.

Mr. Wingo. Do you mean from among the local stockholders? Mr. Fort. They were all in the city of Newark under the McFadden bill, but 1 bank in Newark has absorbed 7 or 8 other Newark banks and made them branches of the major bank, and they retained the old boards of directors as advisory boards in charge of the affairs or the business done at the branch, which has supplanted the old local neighborhood bank.

Mr. Wingo. But his illustration was, if I got the set-up-

Mr. Fenn. Does Mr. Goldsborough yield?

Mr. Goldsborough. Yes.

Mr. Winco (continuing). That the parent bank was in Baltimore and had branches scattered over Maryland towns, whereas the set-up you have in mind would be that the local stockholders of the Baltimore bank, living in this village here, would among them select an advisory board and run that branch?

Mr. Forr. It might be that way, yes; it is possible, but they would

have to be supervised, of course, from the central office.

Mr. Wingo. Purely advisory?

Mr. Fort. Yes.

Mr. Wakefield. I think that has been done in many cases—in most cases, where a bank has absorbed other banks and made them branches, but the fact remains that after that absorption, the capital structure is in the one bank, and that the board of directors and the officers of the one bank are absolutely running that branch, without any—

Mr. Fort. These boards of advisory directors have to retain stock in the parent bank, and therefore have a direct financial interest in

the way they operate their branch.

Mr. WAKEFIELD. That is true; but that advisory board can not be put together down there so that it has any real authority over the business of that bank.

Mr. Goldsborough. Why can it not?

Mr. Wakefield. Because the law does not allow it.

Mr. Goldsborden. It does in Maryland, and it has worked for 30 years, and each one of those banks is autonomous and nobody knows which is the parent bank.

Mr. Wingo. I thought that was chain banking.

Mr. Goldsbordoh. No; that is not chain banking. You will have it described to you on the 22d of this month. Of course, there is theoretically a parent park at Cambridge, because it was the first bank, but, as a matter of fact, the local banks are absolutely autonomous—absolutely.

Now, in a recent statement of Mr. Insull's, in which he was discussing holding companies, he made this very significant statement: "The ability of the holding company to help depends largely on its ability to act without restrictions, other than those in an ordinary private business."

2)

0

ti

M

0

a

t

b

ti

ti

Is that your view?

Mr. Wakefield. I am not familiar with what is involved in that statement by Mr. Insull, because of his entirely different problems. Mr. Goldsborough. Would that be your statement in connection with your holding company?

Mr. WAKEFIELD. No; I have expressed myself before this committee and, in response to Mr. Fort, I have agreed to attempt to

set up a formula of supervision and restriction.

Mr. Goldsborough I know, but you have said you wanted to be examined, for instance, by the comptroller or by the banking authorities, which was very commendable; but you have also said, as I understood you a few minutes ago, that you did not think the conduct of your business ought to be interfered with any more than the conduct—

Mr. Wakefield. In connection with that borrowing problem you

described.

Mr. Goldsborough. Yes.

Mr. Wakefield. My answer to that is based upon this: As far as I am concerned, I would be perfectly willing that a regulation should be prescribed that would prevent our institution ever going out and placing those stocks and borrowing money. On the other hand, I think the principle involved in an attempt to do that would be entirely wrong to American business.

Mr. Goldsberough. In other words, you think your holding company which has to do only with banks ought not to be encumbered with the same restrictions as are the ordinary banking institutions!

Mr. Wakefield. I do not think that you can. There is no restriction that says that if you own bank stock you can not borrow money on it, and I do not think you can pass or fix any regulation governing a company of that kind and interfering with the general business structure.

Mr. Goldsborough. Do you think the ordinary safeguards which experience has taught us should be placed around banking institutions are right or wrong?

Mr. Wakefield. Right, absolutely.

Mr. Goldsberger. Now, if they are right, why should not those same restrictions be placed around an organization which in effect is nothing in the world but the parent bank of a branch banking system.

Mr. WAKEFIELD. All right; I think they should, but there is not at

the present any restriction of the kind that you described.

Mr. Goldsborden. Now you say that you think they should have

Mr. Wakefield. I think they should have the same restrictions that are placed upon present banking institutions.

Mr. Goldsborough. Could present banking institutions borrow money on stock that they own and buy common stock with it?

Mr. Wakefild. The stockholders of a present banking institution can borrow money on the stock that they own.

Mr. Goldsborough. But the institution itself?

Mr. Wakefield. The First Bank Stock Corporation is in effect an individual stockholder of the banks. It is not in the banking business. It is the owner of stocks of the banks. It does no banking business.

Mr. Goldsborough. Does no banking business—and yet it controls

91 banking institutions?

Mr. Wakefield. You might individually own the control of a bank; would you welcome a law that said you could not take your bank stock and pledge it as collateral?

Mr. Goldsborough. No; I would not welcome it. Mr. Wakefield. Do you think it should be done?

Mr. Goldsborough. I would expect it to be done, or expect to be put

out of business.

Mr. Wakefield. No; you would not; you would want it left to your judgment as to what you did with your property, because what you did with the stock in that bank is not going to affect the bank itself.

Mr. Goldsborough. Not going to affect the bank itself?

Mr. Wakefield. No.

Mr. Goldsborough. The conduct of your institution absolutely controls the very breath that the directors of those banks breathe, and yet you say they exist independently of you?

Mr. Wakefield. Well, we are not getting anywhere in a conversa-

tion of this type.

Mr. Goldsborough. Well, if you do not care to answer my questions it is absolutely all right.

Mr. Wakefield. I would like to answer them.

Mr. Goldsborough. Just simply say so if you do not want to.

Mr. Wakefield. But you have gone into a line of conversation which is all theoretical.

Mr. Goldsborough. Theoretical?

Mr. Wakefield. My first answer to you is that I have never had any notion of anybody having any intention in any group company of going out and pledging its stock to buy common stocks on margin, and I do not think it has ever been done.

Mr. Goldsborough. Every law is based on a theoretical condition, is it not, if you want to control something that might happen?

Mr. Wakefield. In spite of any law made governing banks, if there is somebody that is absolutely foolish and crazy enough to go and bust his bank, he can do it.

Mr. Goldsborough. But you are not in favor of regulating it?

Mr. Wakefield. I certainly am.

Mr. Goldsborough. You are in favor of just letting the personal equation be the entire guide?

Mr. Wakefield. No, sir. The argument we are in is one concerning the right of the owner of stock to use his stock in banking at all.

Mr. Goldsborough. It is very interesting to get that point of view, because I do not think the committee in the previous hearings has gotten that impression from your testimony.

Mr. Wakefield. I do not know what impression you are referring

Mr. Goldsborough. What I am referring to is this—one of the things I am referring to—that this committee, in my judgment,

from what I know of the committee and from what they have said to me, would not begin to stand for a position taken by a holding company which controls banks exclusively that it should be allowed to do business without the same restrictions being placed around its business as are placed around other banking institutions.

Mr. Wakefield. I agree with you absolutely, but there is not any restriction placed around a banking institution that says that a stockholder of that institution can not borrow money on his stock.

Mr. Goldsborough. Well, will you explain what that has to do with the question I have been asking you? In your case, your corporation owns all of this stock.

Mr. WAKEFIELD. It is the stockholder.

Mr. Goldsborough. I say that, but yet, in effect, it is in the banking business because it absolutely controls these banks.

Mr. Wakefield. It is in the banking business exactly as any

stockholder of a bank is in the banking business.

Mr. Goldsborough. We will not get anywhere if that is the way you feel about that.

Let me ask you another question:

You, or either you or Mr. Decker, and maybe both of you, have contended that these constituent banking institutions still have the same local pride that they had when they were owning their own stock locally?

Mr. Wakefield. Yes, sir.

Mr. Goldsborough. Now, as I understand it, these directors have to own a certain amount of the stock of a bank in order to qualify?

Mr. Wakefield. Yes, sir.
Mr. Goldsbordgh. But, as a matter of fact, they do not own it
at all, because you put such restrictions around them that if they
attempt to dispose of the stock, it puts them out of business.

Mr. WAKEFIELD. They own it outright, absolutely; they paid their

money for it and have received the dividends on it.

Mr. Goldsborough. Did you not say yesterday that they could not

Mr. Wakefield. No. I said there is no way you could set up an agreement that would hold water whereby you could force them to sell it.

Mr. Goldsborough. By which you could force them to sell it? Mr. Wakefield. Prevent them from selling it or offering it.

Mr. Goldsborough. Did you not say that you made every attempt—

Mr. Wakefield. I said we had a gentleman's agreement.
Mr. Goldsborough. You did not use that expression.

Mr. Wakefield. I used that expression.

Mr. Goldsborough. I did not hear you. Go shead; you had a gentleman's agreement—

Mr. WAKEFIELD. That if they are going to leave us, they will sell

the stock back to us, not to somebody else.

Mr. Goldsborough. Do you mean to say that their minds, in dealing with their customers, have the same freedom of action as they would have if they were actually controlling their own institution?

Mr. Wakefield. I can not understand why there should even be a

question of that kind asked.

Mr. Goldsborden. I do not believe you do, from the testimony.

Mr. Warefield. A director of any institution, a man who directs or that becomes a director of a bank knows what kind of an obligation he has assumed, and it has been my observation that they understand that fully and the past history of banks has made it obvious to directors of that class of institution that they did have obligations, and I think those who are directors of banks understand fully that they are taking responsibilities when they become directors. The old day, when it was just an honor to be a director of a bank, has passed, and the man who is a director of a bank to-day in our country knows mighty well he is assuming as obligation of responsibility in taking that position.

Mr. Goldsborough. But did I suggest that he did not have any such feeling as that? Did I ask you any question that had any rela-

tion to what you have just said?

Mr. Wakefield. You just asked whether the directors felt their

responsibility.

Mr. Goldsborough. I asked whether they have the same freedom of action as they would have if they were not simply vassals. That is what they are.

Mr. WAREFIELD. You are making the statement that they are.
Mr. Goldsborough. I am making the statement upon all the facts
you have given us as to your set-up.

Mr. Wakefield. You have assumed a conclusion concerning those

facts which is incorrect.

Mr. Goldsborough. My dear sir, you have only been in existence for 8 months and your competitor for 13 months, and no secondary reaction has had time to show itself at all. You do not know, and I do not know, and nobody else knows, what the result of this sort of a set-up is going to be as time goes on. What I am trying to find out, and what the committee is interested in, is whether or not this terribly rapid growth ought to be stopped until we find out what It is. This is a serious discussion, and I am not primarily concerned in personal equations, but that has been practically the only thing which has been discussed around this table for three days. This committee is entirely convinced of the business integrity, of the wisdom, of the foresight, of the energy, and everything of that kind of the present set-up of these organizations. There is no criticism of anything of that kind, but what we are trying to get at are the "guts" of the economic structure that is being built up. That is what we are after.

Now, Mr. Wakefield, you agree, do you not, that equality of economic opportunity is the thing we all should try to facilitate?

Mr. WAKEFIELD. If you will explain that, elucidate that— Mr. Goldsborough. You do not know what I mean by that?

Mr. Wakefield. No.

Mr. Goldsborough. You have never known, then, of an individual or a business organization to be squeezed out by a group of bankers, or anything of that kind?

Mr. Wakefield. It has not been true in my experience.

Mr. Golsborough. That has not been true in your experience. As far as your experience goes—and I am perfectly sincere in this question—banking everywhere as you have known it has been conducted in an absolutely fair way?

Mr. Wakefield. The prime motive back of every successful banking institution—

Mr. Goldsborough. I did not ask you that.

Mr. WAKEFIELD. All right.

Mr. Goldsborough. I did not ask you about successful banking institutions, as you have based your whole argument on your faith in this institution of yours and on the fact that there have been a great many institutions that were not successful, and both you and Mr. Decker began with this long story, which was a true one, and a very proper one for you to give, of the conditions in your territory and the bank failures which had led up to this structure. Of course, if we had not had unsuccessful bankers, we would not have group banking, branch banking, or chain banking, and this committee would not be considering them.

So you do not understand what I mean by equality of economic

opportunity?

Mr. Wakefield. You would have to make a much longer explana-

tion than that in order that I might answer it.

Mr. Goldsbordgh. All right. Now, in view of the fact that these two great institutions in the Northwest have been built up in 13 months' time, and in view of the fact that they constitute an absolutely unchartered sea in so far as banking is concerned, do you not believe as a citizen, and not as a successful banker, not as one who believes himself useful—and I believe you are useful, too, in this exigency down there—

Mr. WAKEFIELD. Thank you.

Mr. Goldsborough. But, as a citizen, do you not believe that the least this committee can do is to stop that growth right where it is until we can find out what is going to be the result of that sort of a set-up?

Mr. Wakefield. There are two factors or two things in your statement which I shall have to refer to before I answer your question.

The first is that this big thing that you described as having been built up in a year was in existence and was nothing more than a joining together of those institutions that were in existence. It has not been created. Those banks were there operating, and then, in answer to your question, I think that any legal restriction upon our operations at the present time would be extremely detrimental to the best interests of the territory in which we are operating, and very disastrous.

Mr. Goldsbordgh. Well, I did not mean in that question to suggest that for the present your set-up was to be interfered with, or that any institution which you now control should be, or that any attempt should be made to dissociate that institution from your organization, but my question was this, whether or not you do not think, in view of the fact that this holding-company system of banking is so novel and has had such a rapid growth within the last two years—and that covers the Transamerica, too, within that 2-year period—it ought to be stopped where it is until we can find out what is going to be the ultimate result of that sort of banking? That is my question.

Mr. Wakefield. The only answer I can make to that, Mr. Goldsborough, is what has been said previously, and that is that in my

opinion, and I think in the opinion of everybody that is involved in the problem of banking to-day, there should be, if we are to have group banking, restrictions and regulations to govern that business, and there is not anybody that would welcome those any more than we would.

Mr. Goldsborough. I think that is all.

Mr. Fenn. Mr. Wingo.

Mr. Wingo. I shall not ask many questions, Mr. Chairman.

All of your stockholders live within your Federal reserve district, do they not?

Mr. Wakefield. All except 500. It is in that tabulation. Out of 16,000, there are but 500 that live outside of the ninth Federal reserve district.

Mr. Wingo. Are any of those very large stockholders?

Mr. Wakefield. I could not tell you exactly that the number of shares of stock involved is, but it is a very small proportion of the total.

As a matter of fact, this might be interesting, that it would take—I do not know just how many, but I know it would take hundreds of stockholders, of the larger sockholders, added together to make anywhere near a control of it.

Mr. Wingo. But the greater portion of your stockholders, both in number of individuals and in the number of shares they hold, are directors in your unit banks, are they not?

Mr. Wakefield. Not directors, because we have 16,000 stockholders.
Mr. Wingo. They are either directors or patrons of your institutions?

Mr. Wakefield. Yes.

Mr. Goldsborough. May I ask one more question?

How many directors have you in your holding company?

Mr. Wakefield. Sixty-seven. Mr. Goldsborough. That is all.

Mr. Wingo. The point I had in mind was that I think the record will show that the great majority of your stockholders, both as to number and volume of stock held, are local?

Mr. Wakefield. Yes.

Mr. Wingo. That they are around these different units that compose your system and that the holding company controls as part of their group.

Mr. Wakefield. Very largely so.

Mr. Wingo. Have you had a stockholders' meeting since you organized?

Mr. Wakefield. Yes.

Mr. Wingo. Where was that held? Mr. Wakefield. In Minneapolis.

Mr. Wingo. How many were present in person, if you recall, approximately?

Mr. Wakefield. Just about 100 stockholders that came in.

Mr. Wingo. How many of your different banks were represented in that meeting? Do you recollect whether there was a stockholder from every community present?

Mr. WAKEFIELD. No; I am quite sure there was not.

100136-30-vol 1 pt 8-14

Mr. Wingo. Under your charter, under the laws of Delaware, you may hold your annual stockholders' meeting elsewhere than in the State of Delaware?

cor

Mr. Wakefield. Yes, sir.

Mr. Wingo. And you intend to hold your stockholders' meetings at the head office in Minneapolis, I presume?

Mr. Wakefield. Either St. Paul or Minneapolis.

Mr. Wingo. In other words, you are going to hold them within your local territory?

Mr. Wakefield. Yes, sir.

Mr. Wingo. I suppose that a large part of your stock was represented by proxies at that stockholders' meeting?

Mr. Wakefield. Yes, sir

Mr. Wingo. In other words, about the customary situation existed with reference to the meeting of your stockholders as would with an

ordinary corporation of that sort?

Mr. Wakefield. That is true. However, in this case the presence of about 100 stockholders was a greatly increased representation of stockholders present as compared with my experience in operating the First National Bank, when it was rare that more than two or three outside stockholders would come.

Mr. Wingo. Do different banks in your group lend on the stock

of your holding corporation?

Mr. Wakefield. Some loans have been made, but those loans are being absolutely taken out of the bank. My purpose at the present time is that no loans should be made. I expressed myself yesterday that it should be legally restricted so that a loan on the stock of the holding company could not be made from a bank owned by the holding company.

Mr. Wingo. Well, under the law one of your constituent banks I will call them that—can lend to one of its customers who own stock in your First Bank Stock Corporation, the parent company?

Mr. Wakefield. At the present time; under the present law.
Mr. Wingo. Under the present law one of those constituent banks
can make a loan, with the collateral being the stock of the parent
company?

Mr. Wakefield. That is true.

Mr. Wingo. But you say it is the policy of those who are now managing your parent corporation to restrict that, and you feel it would be proper as one of the restrictive provisions in any law that we passed to prevent that?

Mr. Wakefield. I do. I think it is absolutely wrong,

Mr. Wingo. Well, if you did not do that you would have possibilities of pyramiding and it would be very dangerous.

Mr. Wakefield. Surely.

Mr. Wingo. There is some confusion in the minds of some members of the committee, and especially among some of the bankers who either sat here in the room or read some of the hearings, as to what is the distinguishing characteristic of a group bank as compared with a chain bank. Will you give us for our information what your conception of the difference is? Just what is group banking and what is chain banking? How can you distinguish the two?

Mr. Wakefield. I think there is a confusion in the general understanding, and possibly there is not any absolutely accurate descrip-

tion which can be made. My experience has been and my thought and my understanding was that chain banking was such a thing as that which we have always criticised and been looking out for; a certain group would start in and form an individual bank, put it in operation and begin to do business, and then they would decide to put a bank at another point and would let the people that put up the money for the stock of the first bank capitalize the second one.

That is the general impression I have of what I used to think was chain banking until I began to read these hearings, but I have discovered that there is a wide difference of opinion about what

chain banking means.

Mr. Wingo. You are not the only man who has been confused

from reading these hearings.

Well, now, what would you class this? I just noticed this recently, and frequently you have something right under your nose for years and all of a sudden you will notice the significance of it, and I noticed this since these hearings started: That the name of one gentleman has appeared on three different letters that have come to my office from three different banks; he happens to be president of each one of three State banks. There are three or four gentlemen who are interested in all three of those banks, and yet they are separate corporations in separate towns, two of them in one company and another in another county.

Would you call that a group banking or a chain banking system? Mr. WAKEFIELD, I do not know. If that particular individual owned the control of all of those banks, personally I should think that it is not group banking as we are talking about it to-day.

Mr. Wingo. I had always understood before this hearing started that a chain bank was where the parent corporation owned and controlled the stock of several constituent banks, and that a group bank was where there was a group of individuals that owned and controlled the stock of a group of banks. Now I seem to be in error or. Tather, that conception does not seem to be the one some of you gentlemen have.

Mr. Wakefield. This conception that I just expressed to you of a chain bank was the one we always had in our minds up there as representing chain banking, and we are always anxious not to be thought of in that same lot, and so we chose to call ourselves group

bankers.

Mr. Wingo. The only distinction is that you wanted to get away from what you regarded as an evil, of having the parent bank go to the head of another bank and saying, "We want to buy the control of your bank," or "We want you to tie up with us, and we will lend on your stock"; in other words, they would pyramid that way, and the distinction you want to make is that you are not that kind of a chain?

Mr. WAKEFIELD. That is it. That may not be fair, to make that statement in connection with what is now thought of as chain bank-

ing, but I say it has all been discussed and muddled up.

Mr. Wingo. It is hardly worth the time to discuss that any further on account of the limited time. I am afraid we have made the confusion worse than we found it—I mean that I have, not you.

Now, what is to prevent one of your national banks—that is, a constituent bank—from doing this: The national-bank examiner

comes in and examines it and says, "Here is some paper that I do not think ought to be in here; you will have to take this paper out."

We will take, for illustration, these two banks that you have in Potter County, S. Dak., at Gettysburg; one is the First National Bank and the other the Potter County Bank.

Mr. Wakefield. They have been consolidated.

Mr. Wingo. All right; use them as illustrative. One is a State bank and the other a national bank, and we will assume that they are still in existence. While they are still in existence, the national-bank examiner comes into the First National Bank of Gettysburg and says, "You have to take this paper out of here." They say, "All right." Then they will step across the street to the Potter County Bank and say to them, "We have got to get rid of this"—

Mr. WAKEFIELD. But the Potter County Bank won't take it.

Mr. Wingo. Then within a week or 10 days along comes a State-bank examiner, and he goes into the Potter County Bank and says, "You have some paper here you have got to get rid of." So they will then again step across the street and pass it over into the First National Bank.

Is there anything to prevent that under existing law?

Mr. Wakefield. Not under the law; but the thing that would prevent it would be the directors of the Potter County Bank; they would not receive it from the other bank, in my opinion, and what I have said before is this, that I think that if a group bank system is operated and it has national banks, that that fact ought to authorize the comptroller to make examinations of any bank that it owns, State or national.

Mr. Wingo. In other words, you are getting into this situation with your banks: You have practically the same set-up as a Federal reserve bank. Now, that Federal reserve bank, under the law, has a right to check up on the member bank, even if it is a State bank?

Mr. Wakefield. Yes.

Mr. Wingo. If group banking is to continue, such as yours, do you think in any legislation we may enact there should be some restrictive legislation? I can conceive of occasions arising where a man will say that the national bank examiner does not understand the situation and where a State bank examiner will say the thing is perfectly right and that the national bank examiner is wrong; in other words, you might have something else besides improper practices, and, in order to protect the system, do you think there should be some restrictive legislation?

Mr. Wakefield. I think there should be authority given to the comptroller's office to examine every unit of any group operated.

regardless of whether it is State or national.

Mr. Wingo. The question has been asked: How would Congress be able to say that a State bank must submit to that examination?

Mr. Wakefield. I do not know, but I have an idea that if we are operating a group with members of the Federal reserve system in that group, that fact in itself could be a basis for requiring the privilege of an examination. You understand we always pay for the examinations, anyway.

Mr. Wingo. In asking that question—the question was suggested to me—the thought occurred to me that we could find some way.

One way would be that we could provide that no national bank could belong to a group system whose stock is held by a corporation that did not agree to submit to an examination by the comptroller, or by our taxing power, or the use of the mails. There are many different ways we could use to make it effective. If all these different constituent banks of yours were national banks, of course, that question would be obviated, would it not?

Mr. WAKEFIELD. Yes.

D

k

Now, if trade area or Federal reserve district branch banking were permitted for your territory, the probabilities are that you would transform your system into a branch bank system, would you not?

Mr. Wakefield. I think we would be obliged to.
Mr. Wingo. You could not avoid it, could you?
Mr. Wakefield. Not within a reasonable time.

Mr. Wingo. In the first place, it would be to your advantage from

the standpoint of economic operation?

Mr. Wakefield. I think it would. The only thing I have in mind is that until the time comes when the public is ready for that sort of system, I would be a little bit concerned about trying to force

it on the various large communities.

Mr. Wingo. What I was trying to do was to detect the trend, and I know of no way of getting the trend of business in any line than to get the reaction of the leaders in that particular business. Now, while I do not believe in anything except the independent unit banks, I have gotten old enough to know I must face conditions and not theories.

You feel, then, that the natural trend would be such that not only from force of competitive necessity, but the very practical consideration of economic administration would lead you gentlemen to trans-

form your system into a branch-banking system?

Mr. WAKEFIELD. I think that is true.

Mr. Wingo. Even if we do not change the law, is it or is it not your opinion that the independent unit banks will continue to dwindle, both in importance and number?

Mr. WAKEFIELD. In the small towns, I think they will.

Mr. Wingo. Take the larger towns; take the cities where they have branch banking: Has not the experience been that the branch-banking systems are eliminating the independent unit banks? First, is the decrease in the granting of charters to independent unit banks, and then the competition has gradually caused independent unit banks to sell out and become branches of a larger system, not always because unfair methods are used—I am not trying to get into an argument over that; I am simply discussing the natural trend and assuming always proper methods are used—but I know in some instances, without any effort made to drive an independent unit bank out of the city, the directors and stockholders of the unit bank have gotten together and concluded that they had better become a branch of a larger bank.

For illustration, I understand the Riggs Bank here in this city have taken over one or two unit banks in the city that afterwards became branches. So the natural tendency in the city is to do that,

as well as in the smaller towns?

Mr. Wakefield. Perhaps I can answer that by giving the history of our own city. Our State now has a law prohibiting a bank operating in the State of Minnesota, from operating branches, even within the city. A few years ago that restriction did not exist. There was no law to that effect. At that ime-I was not then connected with the bank-our bank bought outlying banks and converted them into branches. We have three operating to-day that were established before the legislature passed the law prohibiting further branches. To-day, we can not establish branches outside of our main office, but in spite of that, the number of individual banks in the city has steadily decreased. There are less now than there have been at any time, and the interesting factor in connection with that is this, that each year, some time during the year, we are waited upon by a delegation of citizens from some improvement association or from some section of the town, with the request that we put an office out there. They explain they have a growing trade center and want banking facilities and ask us to put them there. Of course we can not do it.

Mr. Wingo. I want to get your reaction on the present trend of banking organization, just assuming that we did not change the law, but stood pat-to use an expression I have heard used, sometimes: Take my State, for instance, that does not permit branch banking. We have some branches, but at the present time we do not permit branch banks to be established. Nevertheless, there has been a gradual decrease in the number of banks and in the importance of those individual unit banks, and a growth in chain or group banking. For illustration, I know of one group that, until recently was controlled by one man mainly, a man of high character who commanded the respect of the business world. A bank would get into trouble in a small town. They knew he was president of, or through his business associates, controlled banks, and so the citizens would wait on him and say, "We wish you would take over this bank." In two or three instances, they appointed a committee, after the bank was closed, to wait on him and ask him to take over the bank or become the head of a reorganized bank.

The last time I made inquiry about that, the comptroller suggested that in that group or chain, there were 55 banks. That has been built up by that kind of process more than any desire of his to build up a chain. His chief business has been insurance, but he has developed into this other.

Now, that natural trend in my State is further accentuated almost week by week. I notice in my State where two banks in some of the smaller communities—and that means outside of the four or five cities, like Little Rock, Fort Smith, and Pine Bluff—there is a consolidation of two banks where perhaps both of them were apparently doing very well, and in some instances, I would hear it whispered under cover that we had a consolidation of bank A and bank B because bank A got in bad shape and "We took it over."

I find that process going on in my own State, and is not that the

natural trend in your section?

Mr. Wakefield. Yes, sir; and the superintendent of banks of the State of Minnesota has been privately and constantly advocating the consolidation of banks and units into bigger units, in order that

the small units may be built up to a size that will enable them to go ahead properly.

Mr. Wingo. They have reached that conclusion, but naturally these things have influenced it, such as changed conditions like par exchange on checks, and the elimination of exchange on remittances on checks that come in. There are many reasons why the banking business has become not only less profitable, but, in some instances, almost impossible for them to make enough to pay their expenses.

t

Then, in other instances, there is the attraction of larger banks offering greater facilities and better service which has taken their business away from them by gradual accretions, so that they found they could not longer exist.

Mr. Wakefield. I think that comes primarily from the natural development of the age and the country, and this fact being worked out: In the early days, in the past history of our territory, a small bank could secure very high rates for money that they were loaning, and gradually, as those people grew in size (that is the customers and borrowers of those small banks) they discovered they could go on to some place else and borrow the money at the current market rates, if their credit was substantial. So, I think the banking business generally is coming nearer to a uniform level of rates charged and service rendered, which means that unless there is a sufficient amount of commercial banking business at a point, it can not justify or pay the expenses of an organization at that point.

Mr. Wingo. Then I have noticed this: It is not only true in my own district, but I have been told it is true in other sections of the country, that with the improved highways and motors, villages—and by that I mean the great mass of smaller towns—in a large number of instances are being destroyed by the people moving to the county seat, or the metropolis due to the fact that, with improved highways and motors, a point 25 miles away is nearer now than the local village bank used to be formerly, 5 miles away.

Mr. Wakefield. There is no question but that the east of transportation and the development of good roads has changed the habits of the people of the country. They now prefer to go to the place where there is a good moving picture and where the stores are better and different, rather than stop at the little village where they used to transact their business.

Mr. Wingo. Yes; I know that is true. I can meet at a movingpicture house in my town people who come there in cars from towns that I know are 50 miles away—people that I know.

You have stated that if we did not pass any laws at all, that was the natural tendency and it meant the ultimate extension of these large branch banks into the smaller towns. Suppose that we should believe in the independent unit bank and would put a restraining order in the statute that would prevent the organization of any more branch banks in the United States: What effect do you think that would have upon the maintenance of these independent unit banks in these small towns?

Mr. Wakefield. I am afraid that would result in a considerable diversion of the banking business into the State systems, following along the lines of the recommendation of our own superintendent of banks, that the legislature authorize State banks, within certain areas, to take care of the situation with branches.

Mr. WINGO. Suppose all the States followed the suit of the Federal Government: Do you think that business would be sufficiently profitable to maintain small independent unit banks in the small communities?

Mr. Wakefield. No, sir; I think you would force closings in those

gr

op

W

ba th

eu

bu

an

an

di

W

of

en

ye

la

th

ot. fo

ba

Mr. Wingo. And that would force those people to go further to get to an independent unit bank?

Mr. Wakefield. Yes, sir; I think so.

Mr. Wingo. Now, some question was asked about your capital stock liability, but I believe you said, as far as you are concerned, you are perfectly willing that there should be 100 per cent liability on that stock.

Mr. WAKEFIELD. Yes, sir.

Mr. Wingo. But, as a matter of fact, the First Bank Stock Corporation is liable under the law of your State to a 100 per cent assess-

ment on the stock of the constituent banks owned?

Mr. Wakefield. Yes, sir. It goes further than that. We would not last a minute if we had an occasion where the liability in connection with that individual bank was greater than the capital stock of that bank, and we did not supply it. We would be out of business.

Mr. Wingo. I do not believe I care to ask any further questions.

I thank you very much, Mr. Wakefield.

Mr. Busby. How many systems of group banking are there in the ninth Federal reserve district?

Mr. Wakefield. Of group banking?

Mr. Busby. Yes.

Mr. Wakefield. I do not know just how to answer that. are, of course, the two-the Northwest Bancorporation and ourselves-which are the large ones. There are others. For instance, J. W. Black Co. are interested in a group of banks.

Mr. Busby. Of about how many?

Mr. Wakefield. I think 10 or 12. I can not be accurate about that. There are two or three cases where there are individuals who have a group of banks and are operating them. There is the Isaac Hazlett group. I forget how many banks he has. That has been in existence for many years.

Mr. Otto Bremmer, of St. Paul; I do not think he is a controlling stockholder, but he is a stockholder in a large number of banks in

that territory.

Mr. Busby. How many in that group?

Mr. Wakefield. About 75.

Mr. Busby. And the Hazlett organization has about how many! Mr. Wakefield. Probably 10 or 15 banks in the Hazlett group.

Mr. Bussy. And the First Bank Corporation has, I believe you said. 91%

Mr. Wakefield. Yes, sir. Mr. Busby. And the Northwest Bancorporation—

Mr. Wakefield. I think they said they had 98.

Mr. Bussy. Do you know how many banks are operating in the ninth Federal reserve district?

Mr. Wakefield. Two thousand two hundred and fifty. Mr. Busby. Two thousand two hundred and fifty?

Mr. WAKEFIELD. Yes, sir.

Mr. Busey. So there are about 300 of those banks that are in the group system?

Mr. WAKEFIELD. I think that would be about right.

Mr. Busby. What is the attitude of the independent banks and bankers toward your group system in the territory in which you

operate in competition with them?

Mr. Wakefield. We have at the present time practically—well, I would say there was 60 per cent of those banks that are independent banks who are customers of the First National Bank of St. Paul and the First National Bank of Minneapolis. They are our friends and customers.

Mr. Busby. Customers to what extent and in what sense?

Mr. Wakefield. They carry deposits with us and transact their

business with us.

Mr. Bussy. Does that mean that you have amicable leanings toward them and their business operations and that you are ready to cooperate and coordinate your efforts where there is need of assistance for them on your part?

Mr. Wakefield. Always. Every year we loan those banks large

amounts of money.

Mr. Busby. Of those independent banks-you say 60 per cent are

your customers-

Mr. Wakefield. And the other 40 per cent, of course, there is a duplication in that 60 per cent. Some do business with the Northwestern National Bank in addition to doing business with our two banks.

Mr. Bushy. How about the other banks that are not customers

of yours?

Mr. WAKEFIELD. They are all customers of ours, or of the other

groups.

Mr. Busby. All of the 1,950 that are not in your systems are the customers of your systems, and therefore somewhat dependent on your systems for banking assistance in times of need?

Mr. Wakefield. The Twin Cities banks have been the depositories of the banks in the ninth Federal reserve district for many years.

Mr. Bushy. Now, what is the Twin Cities bank?

Mr. WAKEFIELD. The Twin Cities banks—they are the banks located in Minneapolis and St. Paul.

Mr. Bushy. You do not mean individual banks?

Mr. Warefield, Yes.

Mr. Bushy. What are the names of the individual banks?

Mr. Wakefield. Well, there is the First National Bank of Minneapolis, the Northwestern National Bank of Minneapolis, the Midland National Bank of Minneapolis, the Metropolitan National Bank of Minneapolis, and the Marquette National Bank of Minneapolis.

In St. Paul they have the First National, the American National,

the Empire National-I can not remember them all.

Mr. Bussy. That is sufficient to illustrate. You mean to say, in other words, that St. Paul and Minneapolis are the banking centers for the ninth Federal reserve district and to those centers all the banks of that district come for banking contact?

Mr. WAKEFIELD. That is right.

Mr. Bushy. Since you have organized these two very powerful, extensive and active groups of banks under the holding corporations, St. Paul and Minneapolis are even more the centers of financial operations in that district?

Mr. Wakefield. It is probably accentuated to some extent. They

have always been centers, however.

Mr. Bushy. Is there not considerable dependence on your and the other banking groups—more than there was before?

Mr. Wakefield. No; but there is just as much. When one of those

banks in the country needs help, they come straight to us.

Mr. Bushy. They feel you are operating in the banking field as a friend to the other banks, as well as to secure business and make profits out of your enterprise?

Mr. Wakefield. Our relations, as far as I know them, with those

customer banks are cordial and are as complete as always,

Here is an instance that occurred the other day. There was a farmers and merchants bank in Winette, in the oil district in Montana. They came to us a while ago and talked about joining up with us. That negotiation was not completed, and the bank closed. After it closed, the stockholders and depositors that represented the whole group of Winette, met and prepared a petition which was printed in the Winette paper, a copy of which I have here, in which they petitioned the First Bank Stock Corporation to come out there, and they said that they, as individuals, would raise whatever money was required to pay out the poor paper in the bank, if we will come and organize and open a bank there.

Mr. Bussy. What was their purpose in doing that?

Mr. Wakefield. It is pretty well described in this statement [exhibiting].

Mr. Busby. In a few words—

Mr. Wakefield. They describe their location, the fact that the nearest bank east is 98 miles and the nearest bank west is 26 miles; that it is the county seat, and they feel they ought to have a bank there.

Mr. Bushy. They have no hope of getting a return of their stock

in other words, they have lost money?

Mr. Warefield. They, as citizens of the town, are willing to put

up the money to get us in there.

Mr. Bushy. It is more of local business pride than the advantage they may derive?

Mr. Wakefield. Yes, sir.

Mr. Busey. In establishing a bank there, you assume no responsibility whatever for any errors committed in the banking operations at that place?

Mr. Wakefield. That process would have to be this: It would mean you would have to organize a new bank and take over such assets as acceptable and assume the deposit liabilities of the old bank.

Mr. Bushy. You described your stock operations yesterday in regard to organizing your holding company. If I remember correctly, you stated you had \$22,000,000 in assets and you exchanged that for \$30,000,000 in stock in the holding company.

Mr. Wakefield. Yes, sir.

Mr. Busby. What did the \$8,000,000 difference between the \$22,000,000 as assets and the \$30,000,000 in stock, represent?

Mr. Wakefield. It represented a situation like this—at that time if you owned 1 share of First National Bank stock, you could sell it for \$220.

Mr. Busby. Yes.

a-

al

Mr. Wakefield. We had no desire to attempt to capitalize the holding company to take over the stock at its then market value, because we felt if the holding company took it over it should show at an appreciated value in the holding company's stock. So we figured a basis which seemed fair and agreeable of \$100 of the stock of the holding company for each share of the stock of the bank.

Mr. Bushy. As a matter of fact, the four shares in the holding

company were worth on the market more than \$100?

Mr. Wakefield. Yes; at that time the market put them up equal to the bank stock—practically \$55 a share.

Mr. Bushy. \$220 for the four shares?

Mr. Wakefield. Yes, sir.

Mr. Bushy. What did the \$8,000,000 represent?

Mr. Wakefield. Capital value in the set-up. It is not a matter

that you can figure any way you want to.

Mr. Bushy. Is not this the situation: You fellows were setting up the holding company and determining the size of shares and par values and the exchange ratios, and the \$8,000,000 represented a margin of safety more than anything else, did it not?

Mr. Wakefield. No; that thought never came in. I know how it was done. It represented delivering shares of the stock in the holding company which would be an equivalent to the thing that the

fellow owned before he got it.

Mr. Busay. At the time you gave the figures I figured that the actual market value of the four shares of the holding company's stock you would receive would just about equal the market value of your bank stock, per share, and that the \$8,000,000 was what we would commonly term "water."

Mr. Wakefield, All right. The market value-

Mr. Busby. What do you say about that feature of it, before we leave the \$8,000,000?

Mr. Wakefield. We do not regard it as water. It is done-

Mr. Busby. I understand how it was done, but water in a stock transaction represents an issue back of which is no economic value or back of which you have no assets, or to represent which you have no assets.

Mr. Wakefield. Watered stock, as the term is used, has usually represented a set-up of stock that has been sold at a price which included the water. In this case it was not sold to the public. It was given to the people who owned the stock originally. You might say that \$220 a share for the First National Bank stock would have a lot of water in it.

Mr. Busby. No.

Mr. Wakefield. That \$8,000,000 represented good will and earning power of that bank.

Mr. Bushy. That is the most substantial basis on which you could put it.

Mr. WAKEFIELD. That is the sound basis.

Mr. Busby. Did you assign that basis to it when you issued it!
Mr. Wakefield. That was the basis—earnings, capital assets, good will and prospects of that bank, and deposits.

Mr. Bushy. Outside of good will, you had collected in stock of equal value to the amount that you had involved in your banks?

Mr. WAKEFIELD. Collected what?

Mr. Bushy. In getting stock in your holding company of equal value for all of the assets you had in your banks, outside of the good name of the bank.

Mr. WAKEFIELD. Let us get this picture in this way: You are an

individual and you want to buy some stock-

Mr. Busby. Pardon me just a moment. I can not examine you

if you insist on directing questions to me all of the time.

Mr. Wakefield. I am making a statement to you. I am an individual and want to buy some stock in the First National Bank of Minneapolis. I pay \$200 a share for it because I believe it is worth it. I have bought it at a price which includes the future prospect and earning power and good will of that bank, have I not?

When we set up our holding company, we did not do that literally, because we did not want a capitalization that represented any such market price. We believed the market price was higher than it should be. We capitalized it down close to the asset value, giving consideration to all those things.

Mr. Bushy. Take the original question: If the \$8,000,000 represented your good name largely, you still had that in your old banking institutions, did you not?

Mr. WAKEFIELD. Yes; and have it yet.

Mr. Bussy. There was no necessity of paying the holding company, because you set up a holding company, or taking any shares of the holding company you set up because your bank had a good name in the banking field, was there?

Mr. Wakefield. Well, now-

Mr. Bushy. But you do not answer my question. You insist on explaining something else. If you were in a court, there would be objection to your answer and you would be directed to answer "yes" or "no."

Mr. Wakefield. You do not ask questions that I can answer "yes" or "no" to. You ask me questions to which I object to saying "yes" or "no." I can not say "yes" and—

Mr. Bushy. Then you can say "no."

Mr. Wakefield. And I do not want to say "no," because that would not be correct.

Mr. Busby. Then, we will quit.

Mr. Wakefield. Let me explain this to you: In our stock transaction the stock went to the stockholders of the bank. There was nothing involved except an exchange of stock.

Mr. Bushy. And the bank remained as it was?

Mr. Wakefield. Yes, sir.

Mr. Busby. And it took the same good name it had?

Mr. Wakefield. Yes, sir.

Mr. Bushy. And continued practically uninterrupted, as if no holding company had been organized?

Mr. Wakefield. Yes, sir.

Mr. Busay. That being the case, I can not see the reason for extending to the persons who had formerly owned the bank stock that had turned it over to a holding corporation—I can not see the advantage of giving those same persons \$8,000,000 in shares of the holding corporation, when all the shares of the holding corporation had been paid for by the bank stocks, dollar for dollar.

Mr. Wakeffeld. All right. In no case where we have taken over a bank, even though it was a bank that was, as some one suggested yesterday, given to us, have we failed to recognize in the price paid for that bank a percentage value of the deposits of the bank. If that was recognized in the deposits of the bank in Minneapolis, it would have always the 28,000,000.

have almost covered the \$8,000,000.

Mr. Bussy. What did the holders of the bank stock give for the

\$8,000,000 ?

od

Mr. WAKEFIELD. They gave their stock in the First National Bank, which they could have sold for twice that amount.

Mr. Busby. Well, they got twice that amount. They got \$22,000,000.

Mr. WAKEFIELD. No; they got stock in the holding company.

Mr. Bushy. In the holding corporation?

Mr. Wakefield. Yes.

Mr. Bushy. I see why you fellows are good bankers. Now, you say those banks out there can not make money where they are operating as individual banks?

Mr. Wakefield. It is becoming more difficult for them under

present conditions.

Mr. Bushy. Why can't they?

Mr. Wakefield. Well, there is a point—in order to operate a bank you have to have a capital structure which is set by law; how much that shall be. You have to have vaults, a place to do business, and have to have a group of officers.

Mr. Bushy. Yes; I know that.

Mr. Wakefield. And you have to pay taxes on that capitalization. Unless that bank is at a point where the deposits are particularly large so that they can earn all those costs and a return on the investment and a sufficient margin to cover losses, they can not operate successfully.

Mr. Bushy. Well, a bank with \$500,000 in deposits is not an

unusual bank, is it?

Mr. Wakefield. If you were here all the time, you heard me tell about a lot that were very much less.

Mr. Bussy. In my section, banks with \$25,000 and \$50,000 capital frequently have \$750,000 in deposits.

Mr. Wakefield. That is not true in our section.

Mr. Bussy. That is not so?

Mr. WAKEFIELD. No.

Mr. Bussy. And yet there is all that money described by the gentleman who represented the Northwest Bancorporation as being in the country and lying out in hidden places, available for them if they have a bank in which people have confidence.

Mr. WAKEFIELD. That is what we are trying to do, get that money.

Mr. Busey. Don't you think that the bank failures in that section of the country are due to the deflation in land and agricultural commodity values?

sa

ar

Mr. Wakefield. That has been an important factor, but it has been accompanied by a change in conditions and a change in banking

trend that has taken place.

Mr. Bushy. A few days ago I checked over the report of the comptroller—Mr. Pole—and I found that in nine of the States lying in the Central Northwest section, comprising about 14½ per cent of the population, you had 56.2 per cent of the bank failures of the country, or 56½ per cent of the 4,925 banks that failed between 1921 and 1929.

Do you know, as a resident of that section, that the securities taken by the banks—such as lands, livestock, wheat, and other agricultural products—have practically ceased to be a safe form of security or

collateral to offer for loans?

Mr. Wakefield. No, sir; that form of securities and the deflation of the agricultural situation was an important factor in closing banks. There is no question about that. But this type of security is taken and being taken to-day in a manner perfectly sound and safe, and is the best security you can get on earth.

Mr. Bussy. If your banking system had gone into this same field in 1921 and remained there through this inflated period, don't you think it would have been seriously crippled, even though it had the judgment of men behind it that your corporation has behind it?

Mr. Wakefield. No, sir; I do not. I know of any number of instances where men ran banks in that territory side by side with others

that failed.

Mr. Bushy. What would have been your policy toward making loans—what do you think would have saved those banks?

Mr. Wakefield. An intelligent basis of credit.

Mr. Busby. You would have refused credit to some that the other banks extended credit to?

Mr. WAKEFIELD. I think I would not have made loans the same

wav.

Mr. Busby. Mr. Young, Governor of the Federal reserve systemstated that if many of those banks had applied for membership in the Federal reserve system in 1917 and 1918, that he estimated as many as 2,500 banks that later failed would have been taken into the Federal reserve system on what they understood about them and about judging bank's assets at that time.

Mr. Wakefield. I do not think that-

Mr. Busby. You have understood better than that?

Mr. Wakefield. I think that is probably true; but remember, the basis upon which a bank might become a member of the Federal reserve system at the time he described was on the condition of the assets as of that time.

Mr. Busby. Do you not think that, with all of the bank crashes and the financial upheavals that have come about in the last few years, including the recent stock-market crash, you are exceedingly opportune in coming forward with your group-banking system at this time; so much so that you can put it over better now than at any time prior to this, and you will be better able to put it over now

than when things have gotten back to a normal basis? Do you not

think that is the situation?

Mr. Wakefield. That is partly true; yes. There is no question but what there is a change in sentiment based upon this fact, that the thing that the public wants in our territory is banking facilities in which they have confidence and which they believe will take care of them in a proper banking way.

Mr. Bussy. I am going to get through in a little bit. Why is it that your bank can thrive and make money with other banks are failing? After all, that is the thing we are trying to find out.

Mr. Wakefield. I think, as Mr. Decker said—and I would like to repeat—there are two factors involved in that, and one is management.

Mr. Busby. You have to have something to manage. What I am talking about is the concrete application of your business principles to instances.

Mr. Wakefield. I know of no occasion in our territory where it

nas failed.

Mr. Bushy. What is so different in your case that the other banks can not get hold of?

Mr. Wakefield. Nothing.

Mr. Busby. Can you give us a detailed explanation of how you get dividends on the things that they handle but out of which they can not get dividends?

Mr. Wakefield. A large part of the difficulty is based on the ability of the community in which the bank is located to furnish the business to make it a success.

Mr. Bushy. I agree that if a bank is located in a place where there is no business it can not thrive.

Mr. Wakefield. Yes; and you must remember that there has been a great shift in business.

Mr. Busby. How much dividends does your holding corporation

Mr. Wakefield. One dollar per share.

Mr. Busby. Is that dollar rate a fixed amount?

Mr. Wakefield. It is always determined by the board of directors, based upon the earnings of the bank.

Mr. Bushy. Are all your dividends declared through your holding

Mr. Wakefield. Yes, sir. The banks individually declare the dividends, and they declare that dividend to its stockholder, which is the First Bank Stock Corporation. It is from the receipt of those dividends that the corporation pays its dividends.

Mr. Busby. What becomes of the remainder of the dividends from

those banks?

Mr. WAKEFIELD. It is put into the reserve of the banks.

Mr. Bushy. Your system has not existed long enough to build up satisfactory reserves in these group banks in every instance?

Mr. Wakefield. No; some banks have not been permitted to pay any dividends. They have held all earnings in order to build it up. Mr. Busby. They get a dividend on the holding-company stock.

Just as the more prosperous banks get?

Mr. WAKEFIELD. The stockholders do.

Mr. Bussy. What is the best dividend that could be paid if all

earnings were declared and none were passed to surplus?

Mr. Wakefield. That would always be a fluctuating amount. Based upon the experience of the last year—that is, giving credit to each individual unit for its earnings for the year-the total earnings of the group were \$7,300,000, approximately, and the payment in dividends was \$3,000,000—equivalent to \$2.41 a share as the average gross earnings of the institution.

Mr. Busby. If you run along for a few years, and have the same success you have had, you will be able to increase your dividend payments on your holding company stock quite materially, will you

not?

Mr. WAKEFIELD. We should be able to do that if we can maintain

those earnings.

Mr. Bushy. I notice that quite a number of you gentlemen who are directors in the holding corporation are directors in the subsidiaries of that organization.

Mr. Wakefield. Not bank subsidiaries. Mr. Busby. I mean your trust companies.

Mr. Wakefield. We have a trust company operated in Minneapolis. Mr. Bushy. I notice some of them are presidents of railroads and directors.

Mr. WAKEFIELD. That is true.

Mr. Bushy. Now, is it not a fact that your financing corporation will be more lenient toward an application for financing from some of its subsidiaries, than from outsiders?

Mr. WAKEFIELD. What do you mean—Mr. Bushy. For instance, if a railroad wants to borrow money— Mr. WAKEFIELD. I wish we could make some of those railroads apply to us. They do not do it.

Mr. Busby. Where do they put their bonds or stocks? Mr. Wakefield. In New York and Chicago.

Mr. Busby. You fellows are too careful, I imagine, for them. Mr. WAKEFIELD. We would like to get it, but those are old associations, and we can not get them.

Mr. Busby. A man who wants credit looks out for himself—that

is what you stated, is it not?

Mr. WAKEFIELD. I said he usually gets credit according to the justification for his receiving credit.

Mr. Busby. Do you not think credit is very uncertain as to whom it will favor?

Mr. Wakefield. It is my experience that credit favors the fel-

Mr. Bussy. Have you not heard the proverbial expression that a fellow takes his hat in his hand and goes out to borrow money to

meet his obligations?

We saw a man going through here the other day from an Oklahoma bank to New York hunting finances, and I think we find men doing that all the time, trying to get money, where they have plenty

Mr. Wakefield. They always get it, do they not?

Mr. Bussy. Well, I have not seen them all, but I do not think so. Do you have any suggestions in regard to the thought that credit is inclined to come together and form a monopoly?

Mr. Wakefield. It is my honest opinion that credit is the last thing in the world that any one in the world will get a monopoly on.

Mr. Bussy. The New York Times, a few days ago, published a list of 12 banks in the world, 5 in the United States and 3 in New York, that had combined assets of more than \$20,000,000,000, which is a fourth more than all the gold and silver in the world. Do you call it credit combining, where banks—

Mr. Wakefield. Why, the Chase National Bank, of New York, has total assets to-day amounting to twice the total resources of our

entire Federal reserve district.

3

Mr. Busby. I understand it is about \$3,000,000,000.

Mr. Wakefield. But that is not a monopoly of credit, although

it furnishes very acute competition.

Mr. Busny. Bringing all of the banks that are embraced in this Chase National Bank together, in forming that gigantic merger—is not that a combination of credit?

Mr. Wakefield. Well, yes; it is.

Mr. Bussy. If you get enough combinations like that together, so that you would have a combination representing thirty-five or forty billion dollars of banking credit, would you not be approaching a monopoly?

Mr. Wakefield. Yes; if you could do that, but it would not exist

for more than about two weeks.

Mr. Bussy. Is there any law preventing that?
Mr. Wakefield, I do not know that there is,

Mr. Bushy. Do you not think there ought to be a law to prevent that?

Mr. Wakefield, No.

Mr. Bushy. Do you not think if they continued to bring in the biggest banks and then bring together still bigger banks, that it will become dangerous?

Mr. Wakefield. They will have an unending job on their hands. Mr. Bushy. Do you not think there is a limit to the credit to be issued in a country where the total assets of the country are limited to \$300,000,000,000?

Mr. WAKEFIELD. I do not think there is a way to do that.

Mr. Bushy. Do you think there could be any more credit possible than would bear a proper relation to the assets of the country?

Mr. WAKEFIELD. I do not think there is any way in which anyone can ever go to work and put a ring around the credit of this country.

Mr. Bushy. Do you know anything of the rumors in the banking world to the effect that certain South American countries came to big New York banks negotiating loans and had to pay individuals, who spoke for those countries, securing the loans, millions in commissions in order to get a hearing at the hands of the bankers?

Mr. Wakefield. I know that there are in New York various groups that are constantly in keen competition for financing of that type.

Mr. Bushy. That is not my question at all.

Mr. WAKEFIELD. Well, I do not know. I never heard of it.

Mr. Bussy. Do you not know that it is rumored that one of the South American countries came to New York and borrowed \$40,000,-

100136-30-vol 1 pt 8-15

000 and a certain gentleman who negotiated that loan, kept \$12,000, 000 of it that the South American country never did get and never will get, for commmissions for handling the big loan of the South American country?

Mr. WAKEFIELD. I have been in the bond business and business relating to it a great many years, and it sounds almost impossible.

Mr. Busby. You never heard of it?

Mr. Wakefield. No, sir.

Mr. Busby. Do you not think that if these trust subsidiaries were taken away from your holding company, that one of its chief sources of income would be cut off?

Mr. Wakefield. No.

Mr. Busby. You heard Mr. Decker tell about making \$2,800,000 by a stock manipulation within his own Northwest Bancorporation selling it to an underwriting syndicate and then proposing to buy it back at about \$3,000,000 less than they sold it for, because he said he put over a good piece of merchandising?

Mr. Wakefield. That was a perfectly proper and regular busi-

ness transaction.

Mr. Busby. Do you think banks should be tied up with an organ-

ization that puts that over?

Mr. Wakefield. There were no banks connected with it. The underwriters of that stock agreed to underwrite 150,000 shares. They agreed to underwrite 150,000 shares of that stock, which was offered to the stockholders at \$72 a share, and, on the proportion of that stock which they were obliged to take and pay for, they were supposed to get at \$70. That was \$2 a share commission for assuming the responsibility of underwriting.

Mr. Bushy. Assuming the responsibility is what I am getting at. Mr. Wakefield. They assumed that responsibility and those underwriters lost the difference between \$54 and \$70 a share, which they paid for it. But the corporation itself had no thought except

the thought of selling its capital stock.

Mr. Bushy. Under former banking practices and the purposes of banking, that kind of transaction was entirely outlawed, was it not? Mr. Wakefield. Never. It was never—there was never a time when it was not perfectly legitimate for banks, or anyone else. If our bank wanted to increase its capital stock, there would not be anything wrong with it, or unusual.

Mr. Bushy. Do you not feel that that type of business is un-

desirable?

Mr. WAKEFIELD. Not that type; that type is all right.

Mr. Wingo. I am not sure about this and possibly those who read the record may not be sure. As I understand, these under writers, while, in this particular case they suffered a loss, if their judgment had been sustained, they would have made a profit?

Mr. Wakefield. Yes; of \$2 a share.

Mr. Wingo. In other words, their faith in the future price of that stock proved to be unfounded?

Mr. Wakefield. That always happens in the underwriting business. You can not guess right always.

Mr. Wingo. This was a customary underwriting transaction?

Mr. Wakefield. Yes, sir.

Mr. Busby. I want to ask you what those same underwriting organizations do with that stock in placing it on the market?

Mr. WAKEFIELD. In this case they sold it and took their loss.

Mr. Busby. What was their purpose to do with it?

Mr. Wakefield. The purpose was to sell it and make the difference in the price at which it was bought and the price at which it was sold.

Mr. Bussy. Was it listed on the Chicago and New York exchanges?

Mr. Wakefield. Yes, sir; it was.

Mr. Bussy. And the people did not take it?

Mr. Wakefield. No, sir; because the market went off.

Mr. Bushy. What do you think about the idea ultimately, through the World Bank for International Settlements, of there growing up a superfinancial organization that will not only control credits in foreign countries, but in America?

Mr. Wingo. You are going to infringe on Mr. McFadden's

copyright.

h

S

Mr. Wakefield. That is beyond my-

Mr. Busby. What is your idea of the original reparation bonds, to the amount of \$300,000,000 that are to be taken over by the Bank of International Settlements, being placed on the market of this country through the New York banks, and subscribed by the American people?

Mr. WAKEFIELD.- I am not well enough informed as to the set-up

and what is going to be offered, to make any expression.

Mr. Busby. What do you think of the Federal reserve banks buying Government bonds and bankers bills in sufficient quantity to force credit, unasked for, into the banking field of more than half a billion dollars, within the last 30 days? Do you think that is a thing to be desired now, when money is easy and no one wants money?

Mr. Wakefield. I am not familiar with just what the Federal reserve has done, but I am a great believer in the Federal reserve

8vstem

Mr. Bushy. So am I; but do you think we need a great amount of credit thrown on the market when money on call is around 2 and 2½ per cent; when it is so easy nobody cares for it, and the Federal reserve forces it on the banking institutions of the country and in competition with them for the business that is available in these depressed times?

Mr. Wakefield. I do not know. It may be entirely justified. If that would act as a means of stimulating business, it may be very

desirable. You are getting out beyond my depth.

Mr. Busby. I am afraid I am not. I am afraid I am getting out beyond where you want to go. Do you not think it would be a very helpful factor in the disposition of \$300,000,000 of German reparation bonds, if there was a lot of easy money when they arrived here?

Mr. Wakefield. Yes; I presume so. I do not think that we in this country can completely disassociate ourselves with world con-

ditions any more.

Mr. Busby. I understand. This is a sort of winding up swing. We have been talking about everything else, and I thought we might as well take a crack at that.

Mr. Fort. I have just a few questions I should like to ask you in connection with matters that have been brought up since I ques-

tioned you.

In regard to the question of the propriety of your institution, the First Bank Stock Corporation, borrowing, it might happen in some stage of the game when banking conditions were particularly disturbed that you might have to borrow on your assets through your inability to sell further amounts of your own stock in order to get cash to protect some bank?

of cas the

Mr. Wakefield. Yes, sir.

Mr. Fort. Banks are permitted to borrow on collateral, are they not?

Mr. Wakefield. Yes, sir.

Mr. Forr. There is no distinction between what you can do and a bank can do, under the law?

Mr. Wakefield. That is true. The question was whether we should

borrow to buy stocks on margin.

Mr. Forr. Banks borrow to protect their investments by loans and other methods at times?

Mr. Wakefield. Yes, sir.

Mr. Fort. And they borrow from the Federal reserve bank very frequently?

Mr. Wakefield. Yes, sir.

Mr. Fort. Your purpose being to purchase bank stocks, you may be justified in some instances in borrowing to make that purchase!

Mr. Wakefield. Yes, sir.

Mr. Fort. In some of these groups I see a reference to the percentage of total outstanding stock owned by the corporation, which runs, in some cases, up to 100 per cent?
Mr. Wakefield. Yes, sir.

Mr. Forr. That is impossible if your directors own qualifying

Mr. Wakefield. We included the qualifying shares as originally

being in our possession.

Mr. Forr. In connection with Mr. Goldsborough's questioning today, I have looked back to your testimony of yesterday when I was questioning you on the power of your corporation to regain from any director the stock you sold to him. You did not use exactly the same language yesterday, namely, that it was a gentleman's agreement. You said that you had tried, with the best lawyers you could get, to tie it up.

Mr. Wakefield. But found it was impossible from a legal view-

point. You will find that in there somewhere,

Mr. Fort. You may have meant that, but that is not what you

Mr. Wakefield. I said it somewhere.

Mr. Fort. Not in the questions I asked you. I have the record here and the question and answer you made are as follows: I will read your answer.

They are required to buy; a man is required to buy the number of shares to qualify as a director, which he owns outright.

Then I asked you:

He buys them through you?

Mr. Wakefield. Yes. Mr. Fort. You would have to keep some string on them so that he can not Tesell them if he is out as a director, would you not?

Mr. WAKEFIELD. We try to.

Mr. Fort. I suppose you are advised as to whether that is strictly legal? Mr. WAKEFIELD. Well, we have used good attorneys, I think.

Mr. Wakefield. Then, read on further.

Mr. Fort. That is all.

Mr. Wakefield. There is another place where I said something about that.

Mr. Forr. I did not happen to be in the room when that remark was made. I thought you should have a chance to amplify on that If it is not exactly what you intended to say.

In your group, do you interchange information as between the banks for the passing of credit lines between individual borrowers?

Mr. WAKEFIELD, Yes, sir.

Mr. Fort. That is for the purpose of checking up the borrower's own statement?

Mr. Wakefield. Yes, sir.

Mr. Fort. Do you fix the total credit line for the entire group? Mr. Wakefield. In the purchase of commercial paper we do.

Mr. Fort. I think we talked yesterday concerning individual borrowers who might want to borrow from local bank A and local bank B both. Assuming they were both members of the First Bank Stock Corporation, would the First Bank Stock Corporation fix the total credit line which might be extended to an individual by all the banks in its group?

Mr. Wakefield. I think we would. That has not come up, but, I think, we should pass on what we will loan to different borrowers

through our banks.
Mr. Forr. There was one question I asked Mr. Decker, but I find I did not ask you.

What is your judgment as to the desirability of uniformity of banking code. State and National?

Mr. Wakefield. I think it would be beneficial.

Mr. Fort. And that code should adhere to the stricter form of banking regulations, rather than the more lax?

Mr. Wakefield. Yes, sir.

Mr. Fort. And we would be justified, in your opinion, in such steps as we might take to endeavor to bring the entire banking system of the country up to the highest possible standard of sound banking?

Mr. Wakefield. Yes. I would not want to say, offhand, that the strictest form would be the better form, if that form would appear

unreasonable. If it was along national banking lines-

Mr. Fort. One further question in reference to your cross-examination on the basis of your organization's exchange of stock: It would be absolutely true, would it not, if you took simply the asset valuethat is, capital, surplus, and undivided profits, divided by the total number of shares outstanding in each bank, and use that as the basis of your stock exchange, you would be putting too high a price in some cases, and too low a price in others, because of the total disregard of the intangible, such as good will?

Mr. WAKEFIELD. That is true.

Mr. Fort. So, it is not water to include the good-will item, but it is necessary in order to preserve an equitable adjustment of value as between different banks?

Mr. Wakefield. Yes, sir.

Mr. Forr. Suppose your First Bank Stock Corporation was organized on a nopar stock basis, the same purpose would be reached by simply fixing the taking over of the other banks on the basis of so many shares of nopar stock?

Mr. Wakefield. That is true.

Mr. Forr. That is a modern method of capitalization in a great many instances, is it not?

Mr. Wakefield. Yes, sir.

Mr. Bushy. I want to remind you, apropos of my cross-examination, that you are making the statements and all you are getting from the witness is "yes" or "no." When you put words in his mouth he can answer "yes" or "no." But when I asked some questions that required him to use the words he could not answer for me.

Mr. Forr. Well, you might call me the counsel for the defense.

Laughter.

On the distinction Mr. Wingo was asking you about between chain and group banking, it has seemed to me that the word "chain" implies interlocking links and that that means ownership by one bank itself of another bank, or ownership where the stock is locked in loans in one bank to own another bank, rather than any system of ownership where either an individual or a group of individuals or a corporation, as in your case, owns the stock, which we would call group banking.

Is that the distinction you have in mind?

Mr. Wakefield. That is the old common conception of group banking, but I think there are some people who control banks along slightly different lines that we call group banks.

Mr. Fort. Namely, when the stock is owned by one bank in another bank, or stock is owned by a group of individuals in more

than one bank, they borrowing from one to buy the other.

In your judgment is that type of chain banking either sound of defensible?

Mr. Wakefield. I think it is very undesirable.

Mr. Forr. That is my own idea.

Mr. Fenn. The committee will stand adjourned until next

(Whereupon, at 4.25 o'clock p. m., the committee adjourned to

meet at 10.30 o'clock a. m., Tuesday, April 22, 1930.)

THE DEMAND FOR PROFESSIONAL BANK MANAGEMENT

Address by J. W. Pole, Comptroller of the Currency, before The Ohio Bankers Association at Columbus, Ohio, February 12, 1929

The last two decades have witnessed a remarkable development in the volume and in the variety of the banking business. Demands for financial services unheard of by the last generation are now required to be met by banking institutions. The old simple form of banking in which the banker relied almost entirely upon his personal knowledge of his customers is no longer adequate to

meet the present day situation.

We need only refer to the history of banking in the State of Ohio for an illustration. In the year ending June 30, 1908, there were 990 banks of all classes in operation in this State. These had total aggregate resources of about \$952,000,000. Twenty years later, for the year ending June 30, 1928, there there were 1,051 banks of all classes but with aggregate resources of \$3,377,-000,000. Thus while the number of banks in the State of Ohio has remained almost stationary the banking resources are nearly four times as great. This means that the officers of these banks have had nearly four times as much business thrust upon them as they had 20 years ago. Nor do these figures for resources tell the whole story because they do not take into account the tremendous growth of the trust business now in the hands of these banks nor of the investment securities which they buy for sale over their counters. The State of Ohio may be taken as an index of the development of banking throughout the United States, for here are represented every type of banking from those banks situated in the outlying agricultural districts to those in the most congested commercial and industrial centers.

Twenty years is an extremely short time in the history of a State or a nation, The remarkable increase in growth of the banking business within that time can be taken as an indication of the trend toward a future growth in even greater volume. Another 20 years should see the banking resources of this State exceed \$12,000,000,000. It takes no gift of prophecy to make this prediction. We are still a very young country and the full force of our economic vitality has yet to be developed. Our population will greatly increase, our cities become larger and larger and our rural population denser than it is to-day. There will be further expansions and intensifications of industrial activity. Our world commerce, already at imposing figures to-day, must be regarded as almost in its infancy. The very economic necessity of the situation will bring agriculture up to a higher point of efficiency. And any statement as to the future of transportation and communication must seem extrapolation. travagant beginning as we are with transportation by air at great speed over

vast distances and communication through the air by radio.

All of these developments will be reflected in the expansion of banking resources for our banks are the handmaids of progress, supporting, sustaining, and serving in an essential capacity every forward economic movement.

There was a time in this country when almost any person of average intelligence.

Sence could aspire to become a banker without any special previous training. It may be said that it was the original theory of the law that any group of citizens had a right to form a banking corporation. The old-fashioned banker was primarily a custodian and a lender of money. If he possessed a natural shrewdness of mind and a strong character he was likely to succeed. In the local local community he was the dominant financial figure. He had opportunities

to make money outside of his banking business. He became financially interested in the local street car company, in the light and power company, in the gas works, in the ice plant and in other such enterprises in which local capital participated. These opportunities are also fast disappearing not only because modern banking requires all of the energy and attention of the banker but also because these local forms of public utilities are fast giving way before the economy and efficiency of great central organizations operating through local branches and there is no local financing. Some banks of this old type still remain in existence but they must be regarded now as survivals of a financial era which has passed.

Modern banking is a highly complicated and technical business, and it is exemplified primarily by the city banks which have been compelled to meet the varied financial demands of commerce and industry. It is in these commercial centers that the competition in all lines of business is so keen as to compel the utmost economy in operation and the most efficient management control. Out of the experience of these city banks there has developed in the United States a fairly definite opinion in financial circles as to what constitutes sound banking. This standard of bank management has not been theoretically arrived at by any manner of means. It has grown up through hard knocks until finally the best method has been found to meet a given situation.

Let us pass briefly in review some of the principal features of modern banking. First let us take the loans and discounts. The old-fashioned character loans have almost disappeared. This does not mean that character is not a valuable asset in the transaction. It simply means we are no longer in the pioneer stage of our civilization. We have reached a stable development where the instrumentalities of credit are ample. Great emphasis now is laid upon adequate credit information and analysis. Nothing is left to chance, guesswork or favoritism. This credit information is often obtained as a result of the most skillful scientific investigation, involving the study of plants, machinery, cost accounting, estimates of future operations, financial history, personal reports on management, personnel and the like. The bank must be in a position not only to acquire but to comprehend and digest the most technical information and data concerning its customers. In this country where every variety of business operation is carried on by corporations, the bank must be generally familiar with corporate organization and management in the field of production, manufacture, transportation, and distribution, for the simple reason that it is to the banks that these corporations must turn for advice and assistance in financing their operations. Commercial banking therefore requires a fundamental knowledge of every process of commerce itself.

Now let us look at the business of buying and selling investment securities

Now let us look at the business of buying and selling investment securities by banks. This is largely a postwar development. It is well known that the Liberty loan campaigns during the war served to educate the public at large in making small investments in sound securities. The tremendous commercial expansion in this country following the war has been financed in increasing volume through the issuance of investment securities in which the general public is invited to invest. It is natural that the banks should participate in this development because their customers turn to them for advice.

The amendment in the McFadden Bank Act of 1927 has added impetus to the movement to make the banks distributors of the best type of investment securities. This means that the modern bank must be equipped with the proper instrumentalities to deal with this new financial development. It imposes a grave responsibility upon the banks which in turn requires them to create the facilities for a comprehensive and accurate knowledge of the various issues of securities which from time to time come upon the market. Not only must they have adequate financial and statistical information with respect to each issues but they must be in a position to interpret this information and to apply it to the particular transaction in hand.

Turning now to the fiduciary operations of the modern bank we find a similar growth and development. Within our own time we have seen the banks gradually displace the old type of individual and personal trustee, executor, administrator, guardian, and custodian. It has become a function of banking to administer the estates of deceased persons, many of which are of great magnitude. In addition, largely as a postwar development, there has been a most remarkable growth in the creation of corporate trusts. For every issue of securities for corporate financing, whether in the form of stocks, bonds, debentures or notes, a bank is required to perform some ministerial or fiduciary function. The bank has thus become an essential factor in the procedure of cor-

Porate finance and must act as trustee of bond and debenture issues and of long-term notes, as fiscal agent, as registrar, as transfer agent, as a participant in underwriting syndicates, as depositary under plans of reorganization, as assignee and receiver, as custodian or trustee for investment trusts—in fact in every fiduciary capacity which may be required by the machinery of corporation finance.

The future of the trust business of banks in the United States would seem to make it one of the most important phases of banking business. On the other hand its proper administration makes it absolutely necessary that the bank equip itself with the most advanced facilities for discharging these

fiduciary responsibilities and obligations.

r

The impressive growth of trust service in the banking field is illustrated by considering the expansion in recent years of the fiduciary activities of banks in the national banking system. The passage of the Federal reserve act made possible the further extension of corporate trust facilities to practically every section of the Nation. Since February 25, 1915, when the first permit under this law was issued to a national bank, hundreds of banks throughout the United States have availed themselves of this opportunity to render additional service to their communities, until to-day 2,400 national banks have trust powers, representing 31 per cent of the number and 73 per cent of the capital of all banks in the national banking system. During 1928 these banks were administering 63,776 trusts, with individual trust assets aggregating more than \$3,000,000,000 and were acting as trustees for bond and note issues totaling close to \$8,000,000,000.000.

Compared with the year 1926, these figures represent an increase of 47 per cent in the number of national banks administering trusts; an increase of 145 per cent in the number of trusts being administered; an increase of 257 per cent in the volume of assets of individual trusts, while the bond and note issues outstanding for which these banks are acting as trustees aggregate

in amount four times that in 1926.

About one out of every three national banks has authority to administer trusts, while in the State of Ohio 21 per cent of the number of national banks, representing 65 per cent of all of the capital of the national banks in the State are authorized to act in fiduciary capacities. Since 1926 the number of trusts being administered by these banks in Ohio has increased 52 per cent, while the volume of note and bond issues for which they have been named to

act as trustees has doubled.

There is another phase of banking which has made remarkable strides within the last few years and that is the savings department. The great increase in individual wealth affecting every class of our population has put before the banks of the country a potential opportunity to build up a large savings business. Here again the bank must know how to cultivate habits of thrift in its community and to carry on extensively an intelligent campaign for savings deposits. That this is being done is evidenced by the remarkable increase in the aggregate total in the savings deposits in the country year by year. Taking the national banks alone, here in the State of Ohio these deposits have grown from \$20,700,000 in 1908 to \$269,000,000 in 1928, being an increase of over tenfold. There was an even greater increase in the State banks, although I have not the exact figures. For the country at large the ratio of increase is about the same as for the State of Ohio.

This brings me back to the subject of this address and that is that banking in the future will be in the hands of professional management. (I am using this term as opposed to amateur management.) This applies to banks of all classes, whether city or small town because banking in its essence is the same whether the population served be large or small. The very nature of our economic life which expresses itself through corporate organizations and in mass production will naturally demand of the smaller banks the same standards and type of banking services which have been demonstrated as

sound and efficient by the larger city banks.

While the need for a higher training is increasingly demanded for making commercial loans upon the proper credit basis it is in the newer fields of banking—the trust business and the securities business—where technical training and specialized experience are emphatically the essential requirements for success. It is in these two fields that there is likely to be the greatest future expansion in banking and those banks will maintain the largest growth which equip themselves technically to meet this opportunity.

It would be worse than useless for a bank to embark upon them with an

amateur management.

In general it must be said that old-fashioned business practices in banking must give way to scientific methods in the acquisition and the formulation of information, and in the application of the banking policies based thereon, by men who have acquired what might be called a professional knowledge of banking—a technical equipment to deal with method and policy.

I have in this address attempted to point out a practical condition which is facing the banking business to which remedial measures must be applied. I have also suggested the type of management personnel that will be necessary whatever form the remedy may take but I have not attempted to go further than that.

I may, however, say in closing that the large number of bank failures outside of the metropolitan centers during the past few years is an indication there are more banks than bankers. The scarcity of trained executives—that is to say, executives with that degree of managerial ability required by modern conditions—may be one of the underlying reasons for the rapid spread of branch banking and group or chain banking ideas among bankers and business men in this country. As the business of banking is growing at a more rapid pace than executives are being developed to operate each unit bank as a separate institution, it would seem to be an almost natural and logical outcome that this scarcity of talent will lead to a more centralized form of banking control.

EXHIBIT B

BANKING AND THE NEW FINANCIAL ERA

(Address by John W. Pole, Comptroller of the Currency, before the Maryland Bankers' Association at Atlantic City, N. J., May 23, 1929)

I. The Need For a National Banking System.

e

y

There are two fundamental reasons why a system of national banks is essential to the public welfare. First, commerce between the States is vested with a national interest and in order that it may be financed in an orderly manner it is necessary that there be a uniform system of commercial banking with a common standard under the direction and supervision of the Federal Government. Second, and more important than the first, it is necessary for the Government of the United States to possess a governmental instrumentality of finance in the form of a system of national banks in order that it may through them in times of stress be able to enforce a national financial policy. Our own financial history has conclusively demonstrated that the Federal Government can not rely upon the voluntary cooperation of the State banks and trust companies for the execution of a national policy. It may be instructive to pass some of this history briefly in review.

At the very beginning of our national life the woeful failure of the Continental Congress to finance the War of the Revolution was due in no small part to the lack of an instrumentality in the form of a national bank. The first bank of the United States was an outgrowth of this experience.

The First Bank of the United States was opened at Philadelphia, December 12, 1791, and its charter limited to 20 years. It later established branches at Boston, New York, Baltimore, Washington, Norfolk, Charleston, Savannah, and New Orleans and served as an instrumentality of the Federal Government. Through it loans were made to the Government in anticipation of taxes; it acted as custodian of Government funds; in the collection of the revenues; in the transmission of public moneys; and otherwise strengthened and improved the public credit.

As early as 1808 it was recommended to Congress that the charter be renewed. Later, as it became increasingly evident that war was imminent with Great Britain, Gallatin, then Secretary of the Treasury, urged upon Congress the necessity of the renewal of the charter in order to safeguard the interests of the Government. Strong opposition developed to the renewal of the charter, and in 1811 the bill for renewal was finally lost. The Government thus entered the war the following year without any banking instrumentality under its control.

There were in 1811, 88 local State chartered banks, with a combined capital of nearly \$43,000,000. The failure to charter the Bank of the United States, or set up some similar Federal instrumentality in its place, caused enormous losses to the Government during the war period of 1812 to 1816 in the flotation of its loans. The Government was not able to secure the cooperation of any of the State banks. The Treasury received only \$34,000,000 in specie for \$80,000,000 of Government obligations put out. In other words we paid about 135 per cent for the money to finance the war, and the State banks profited at the expense of the public.

In 1816, as a result of this bitter lesson, Congress chartered the Second Bank of the United States. With the veto of the recharter bill for the Second Bank of the United States on July 10, 1832, by President Jackson, the Government was again deprived of a fiscal instrumentality. In 1841 a bill passed both Houses of Congress for the incorporation of a new Bank of the United States, but was vetoed by President Tyler. During the 30-year period preceding the Civil War the Federal Government operated without any fiscal instrumentality other than the Independent Treasury system.

At the outbreak of the Civil War in 1861 Secretary Chase foresaw the need for a national banking system to support the public credit. At this time there were more than 1,600 State banks in the country. No action was had in that year by Congress and in 1862 Chase again presented his plan in detail for a system of national banks and urged its adoption. After the outbreak of the war the circulating currency of the State banks rapidly increased with the result of great depreciation in value and loss of public confidence. In the following year (1863) the national bank act was passed but only a handful of new banks were incorporated that year.

In 1864 the national bank act was reenacted whereby many of its provisions were improved and the State banks were by a special amendment invited to

become national banks.

The act still remained ineffective. Secretary Fessenden thereupon made a recommendation to Congress that the opposition of the State banks to the new national system be removed by the enactment of discriminatory legislation and Congress by the act of March 3, 1865, used the taxing power to compel the State banks to nationalize. The Civil War was over before the national

banking system got under way.

Under the Federal reserve act of 1913 as originally enacted national banks were forced to become members of the Federal reserve system, and State banks were permitted to become members, if they so desired. From the period of 1914 to June 21, 1917, only 53 State banks and trust companies joined the Federal reserve system. We had entered the World War in April of that year and it was considered absolutely necessary that the Federal reserve system have the support of all of the banks, State and national. In order to induce the State banks and trust companies to come in, special amendments were made to the Federal reserve act and approved by the President, June 21, 1917. These amendments offered to the State banks more favorable conditions of membership than that held by the national banks. An extensive campaign was inaugurated for State bank membership. Under the stress of war with its liberty loan drives and the great fervor of patriotism, State and Federal officials as well as committees of the American Bankers' Association, publicly and repeatedly urged State banks and trust companies to enter the Federal reserve system as a patriotic duty. On October 13, 1917, the President of the United States issued a proclamation calling upon all eligible State banks to join the Federal reserve system as a "solemn obligation." Notwithstanding these circumstances, out of 8,500 State banks and trust companies eligible for membership, only 212 joined the system in 1917 after the amendments were adopted, and only 686 in 1918. The total membership of State banks and trust companies at the close of the war was only 936.

The Federal reserve system could not have been created by Congress out of the State banks and trust companies. Had the national banking system not been in existence the year before the outbreak of the World War, we would in all probability have witnessed another disastrous attempt in war finance.

II. The Plight of the National Banking System.

It is no criticism of the State banks and trust companies to say that the National Government can not rely upon them to serve as its instrumentalities in the enforcement of a Federal fiscal policy. Banking, like other business enterprises, is entered into by stockholders for the purpose of realizing a return upon the investment. It is futile to attempt to impute to such stockholders altruistic or patriotic motives. As between two systems of banks, capital will flow more freely into the one which yields the largest returns in dividends. If the advantage in this respect be fundamental and permanent, the system of banks thus favored will be the one which will survive.

If Congress therefore would protect itself from the loss of its present banking instrumentality, it must make it to the advantage of capital to seek the national rather than a trust company charter. Banking capital is wihout prejudice or sentiment. It will flow back into the national banks normally and easily with the turn of the tide of advantage. The alternative would seem to be the elimination of the national banks in favor of 48 distinct systems of banks

under the supervision of 48 separate banking departments.

Within recent months the trend toward trust company charters by national banks has been alarmingly accentuated. Great consolidations of national banks and trust companies are taking place in which the national charters are being given up. Within the past 6 months, 79 national banks with aggregate resources of two and three-quarter billions have passed over under State

Jurisdictions. I shall not attempt here to analyze the cause of these defections, but it is quite evident that it is being found more advantageous to carry on the

business of banking under trust company charters.

However, it is within the power of Congress to turn the advantage in favor of the national banks and thereby make it to the interest of all banks to operate under the national charter. What form this action should take requires the most careful consideration. I shall, in the course of my remarks, suggest a method of approach to an adequate remedy.

III. Banking Faces New Economic Conditions.

The inauguration of the Federal reserve system in 1914 and the outbreak of the World War in that same year definitely marked the close of a financial era in the United States. The line of cleavage between the pre-war and the postwar periods is so clear that the student of finance has no diffi-culty in setting off the one against the other. Our economic development within the past 15 years has been so rapid and so varied that it seems as though we had lived in that short period through several generations. The mere mention of some of the outstanding factors in this development will be sufficient to bring to your minds the new conditions under which we now live. Not the least of these is the modern automobile upon the automobile road. These have abolished distances between local communities and have revolutionized the social life of the country districts. Transportation by air is now a practical fact and it would tax the imagination to conceive how it will accelerate the ease of transportation begun by the automobile. The extension of communication by telephone and now by radio to every rural community has brought into a common knowledge and contact every phase of our national life. The need for mass production of goods and commodities has caused greater centralization to corporate management in industrial enterprises with the result of greater efficiency and economy in operation and with cheaper and better output for the consumer. We have achieved an outstanding position in world finance and are rapidly developing the instrumentalities to discharge that serious responsibility. We are now in a period of great national prosperity and growth in which the public at large is participating to a degree hitherto unknown,

IV. The Unit System of Banking.

The system of banking which developed in the United States under the State banking laws and later under the national bank act of 1863 has come to be known as unit banking. The term unit banking is of recent origin and is used in contrast to the development of branch banking and group banking within the

last few years.

A unit bank may be defined as a banking corporation having its origin in a community. Its original organization was a local enterprise of considerable significance and local public interest. Its board of directors, officers and employees are residents of the local city, town or village. On the average the capital stock is relatively small. Of the 7,575 national banks in operation on March 27, 1929, 7,193 or 95 per cent had an average capital of \$107,000, which includes all banks outside of central reserve and reserve cities; while the remaining 5 per cent or 382 banks in the central reserve and reserve cities had about 57 per cent of the total resources.

The business of a unit bank is derived from the community in which the bank is situated. This includes such business as may be afforded by the commercial activities of the city, town or village and by the outlying farming communities. The president of the unit bank is ordinarily a prominent local citizen and under the old economic regime he had an opportunity to become interested

in local industrial enterprises and local public utilities.

Under the system of horse transportation for the rural communities—a system of horse transportation for the rural communities. tem which ended with the close of the pioneer life of America—the unit bank Was in a much stronger position than it is to-day. Apart from the question of their great contribution to the up-building of local communities, they were profitable as operating corporate units for the reason that they were normally integrated with the local economic situation. The president of such a bank was a personage in the community and the bank fostered and financed local business enterprises. The banker was a factor in the local street car company, the local telephone company, the local gas plant, the local power plant and the like. If I were asked to pick out a single type of institution which has contributed the most to local community independence and thereby to the foundation of our national development, I should choose the unit bank. It is the most

representative of the genius of the American people.

Looking, however, at the unit bank from the viewpoint of present day economic and social conditions, the question is being raised whether the unit bank can survive. The unit bank like many other types of local enterprise, was made possible by the great distance between the local settled communities. Distance has now been abolished and as a consequence of this one factor, the unit bank finds itself face to face with difficulties that seem to be almost insuperable. The old opportunities for the local banker to have a hand in local enterprises has passed away because the local enterprises have become to a large extent merged into larger national operations. Every phase of the public utility business has passed from local control into the hands of great centralized corporations which are able to give better and more efficient service. The financing is not done in the rural communities but in the large cities by the metropolitan banks.

The unit bank being therefore thrown back upon its own resources has to face the rising cost of management with a relative decrease in income. Many of them are now unable to offer to young men entering the banking business either salaries, or the prospects of a career of sufficient attractiveness to obtain the

highest type of management personnel.

We can not escape being moved with great concern to observe that at a time of the most unparalleled strengthening of our financial position in domestic affairs and in foreign commerce and in investments, namely, during the last eight years, there have been more than 5,000 failures of unit banks in the United States, with an aggregate total of deposits of \$1,500,000,000. These banks were scattered in various sections of the country districts of the United States, in the South, the Mid-West, the Northwest, and the Southwest, with a scattering few on the Pacific coast and the Northeastern States. It is impossible for me to describe the acute local suffering occasioned by the losses of hard-earned savings and by the disruption of local business enterprises. In many of the communities public confidence in the unit banks has been so severely shaken that funds which should find their way into banking channels are being withheld. During this 8-year period there was not a single failure of a large metropolitan bank.

The unit States banks in rural districts as a rule have not found it profitable to become members of the Federal reserve system. Out of about 15,000 State banks and trust companies in the United States, only 1,208 have become members. If it were not compulsory for national banks to become members of the Federal reserve system, considerably more than one-half of them would probably never have become members. The State unit banks outside of the large

cities seem to find no place in the Federal reserve system.

V. The Growth of Group Banking.

We have witnessed within the last two years an amazing development in the concentration of control over groups of unit banks. This has come to be called group banking. It is not confined to any one section of the country, but seems to be springing up everywhere. There are literally hundreds of these groups of banks varying in size from half a dozen banks to a hundred or more. The usual form of the group system is for a holding company to acquire the majority of the stock of a number of unit banks and then set up a central management personnel for the purpose of operating the group as nearly as possible as a single system. Organizers of these groups maintain that a combination of unit banks under a single ownership affords greater safety to the public and an improvement in the quality of the banking services.

There appear to be, however, certain inherent weaknesses in a system of group banking. From an operating standpoint it is necessarily unwieldy. Each member of the group is a separate and distinct corporation responsible to its own board of directors. It must operate as a separate corporation under its own capital and resources and under the distinct limitations placed upon its activities by law. The central management can enforce its policies only by indirection, that is to say, by inducing the local boards to accept voluntarily its policies and in case of refusal, to set up at the next annual election a new board through its control over a majority of the stock. It is necessary to carry

a full complement of overhead of personnel for each bank.

In other words, as compared with branch banking, group banking from an operating standpoint seems to lack the flexibility and the economy and efficiency

which carries the services of the central bank directly to the public served by each branch. Morally and psychologically the central management of the group system may go to each member of the group with its support, but the funds of the various members of the group can not be shifted about from one bank to another. The corporate set-up, therefore, of a group system is necessarily complicated, whereas under a system of branches, each branch is the bank itself and the full power and resources of the bank is in each place where it does business, whether at the head office or at the branches. Disregarding for the moment the question of public policy, the branch system is, in operation, incomparably simpler than the group system.

VI. Reexamination of Branch Banking Necessary.

Contrary to the opinion of many the McFadden Act of February 25, 1927, was not intended to be a permanent settlement of the branch banking ques-

tion. It was a compromise measure.

Prior to the passage of this legislation, branch banking had made considerable headway in many sections of the United States. In certain large metropolitan centers like New York City, Detroit, Cleveland, Los Angeles, Boston, and others, branch banking as an extension of services by downtown banks to other parts of the city had demonstrated that the movement was sound and practicable. This latter situation was recognized by Congress in the McFadden Act when national banks were permitted to establish city branches. In some sections of the United States branch banking had been extended by State banks beyond the city limits to the surrounding suburban communities; to the boundary limits of the county or adjoining county; and in several instances to the boundary lines of the State itself. Regarding these outside branches as being in the nature of an experimental operation, Congress desired to create a situation under which this movement could be studied for a few years without permitting it to expand. As a consequence the McFaddem Act held all of these branches in statu quo as to number and location, but permitted them to be nationalized. After the approval of the act practically every large branch banking system, with branches on the outside of the city in which the bank was situated, took advantage of this opportunity and became national banks and are now operating under the national banking laws.

In view of the existing situation with reference to unit banking, the growth of group banking, the curtailment of branch banking by Federal statute, and the increasing number of bank mergers under trust company charters, the time appears opportune to reexamine the basic structure of our entire banking system and to formulate a new banking relies to provide the product of the system.

system and to formulate a new banking policy to meet present-day conditions. The national bank act specifically makes it the duty of the Comptroller of the Currency to recommend to Congress "any amendment to the laws relative to banking by which the system may be improved and the security of creditors may be increased." In the present state of the national banking system I feel it to be a serious undertaking to discharge that responsibility. Before proceeding, therefore, to lay before Congress a definite formulation of proposed amendments to the banking laws, I shall, at an early date, call into consultation a group of outstanding bankers and students of finance and shall ask their assistance in the formulation of recommendations to Congress which will offer to State banks and trust companies an opportunity to gain a wider field of banking operations under the national charter.

EXHIBIT C

THE NEED OF A NEW BANKING POLICY

(Address by J. W. Pole, Comptroller of the Currency, before the convention of the American Bankers Association at San Francisco, Calif., October 2, 1929)

I am happy to avail myself of this opportunity to lay before your association and the public, certain considerations which are of great importance to our system of banking. It is fortunate that this can be done at a time of business prosperity when the financial condition of the country is unquestionably sound.

Before I attempt to set forth any conclusions or suggest any remedies I wish to present a few salient facts and statistics which in the main tell their own story. In the course of the development of this country there have been evolved two types of banks; namely, the metropolitan bank which serves a city population and the larger business enterprises, and the country bank which serves the rural communities and the independent business houses in the smaller cities. The metropolitan banks, by virtue of their large capital, their access to a great diversity of banking business and their ability to secure the most highly trained personnel, are in a prosperous condition and reflect (as all banks should) the

general strength of industry and commerce.

However, about three-fourths of the banks in the United States are outside of the metropolitan centers and it is these banks which serve the majority of our population. They necessarily have a small investment of capital funds, because there is not enough banking business in their localities to justify a larger capital. More than three-fourths of all national banks are capitalized at less than \$200,000. The ratio is even less for the State banks. A study of bank earnings covering the last two or three years, which have been years of general bus ness prosperity, shows that a large percentage of banks outside of the principal cities are operating with insufficient earnings. Taking 1927 as a typical year, 966 national banks operated at a loss, and an additional 2,000 earned less than 5 per cent. In other words about 38 per cent of all national banks earned for the year 1927 less than the yield of a high-grade security. It is well known that the earning capacity of the general run of country national banks is certainly not below that of the State banks similarly situated.

Current statistics for State banks are incomplete for the whole country, but figures are available for the calendar year 1926 which show that about 2,000 State banks operated at a loss. The average earnings of all banks, National and State, in one of our great agricultural States for the years 1924 to 1928, inclusive, were less than 1½ per cent on invested capital. In four other great middle western States comprising both agricultural and industrial activities 2.053 banks, National and State, earned in 1927 less than 6 per cent

on invested capital.

BANK FAILURES

The inability of many country banks to earn a fair profit upon invested capital is naturally reflected in the large number of failures which have occurred during the past eight years. From 1921 to 1928, inclusive, about 5,000 banks closed their doors and tied up deposits of more than \$1,500,000,000. Of this number, 700 were National banks and 4,300 were State banks. In 4 States from 40 to 53 per cent of all banks in existence in 1920 failed; from 20 to 40 per cent in 6 States; and from 10 to 20 per cent in 10 other States. Only two small Eastern States have had no bank failures within this period. Eighty per cent of these failures occurred in cities with a population of less than three thousand and about 70 per cent of the failed banks were capitalized at \$50,000 or less.

I have, upon a previous occasion, discussed the social and economic changes through which the rural communities have passed since the World War, and

I shall not go further into that question at this time than to say that the country bank faces vastly different conditions from those which confronted it in 1913.

I do not wish to be misunderstood as putting all country banks into the same category. There are many country banks that are sound and prosperous because they are in a position to obtain diversification of their business or are managed with unusual skill and conservatism. But surely the failure of between five and six thousand country banks to which the savings of small depositors had been intrusted is a serious indictment against the system of banking in the rural communities of the United States. The burden of these failures has fallen upon those least able to bear it, and they have suffered

both as depositors and as stockholders

The principal remedy which has been tried in the past for bank failures is the Government guaranty of bank deposits. It may be definitely said that this remedy has failed wherever it has been adopted. There are those who have advocated stronger capitalization and more capable management for the country banks. This doctrine has been preached for years without avail, for the simple reason that the local business is not of sufficient volume to justify the larger capital or the employment of a more highly trained management. Many causes have been assigned for bank failures in the country districts, but one primary and fundamental cause covers all of the others; namely, that diversification of business is not generally possible. Without diversification

there can be no assurance of success in the long run.

The condition which I have pointed out above is a present condition, for the figures which are available for the year 1929 show that 52 National banks and 403 State banks have failed within the last eight months. If these facts as to earnings and as to bank failures had been presented at the close of eight years of business stagnation and financial depression there might be no cause for concern. But the contrary is the case. The last eight years have witnessed the greatest business activity, commercial expansion, and financial strength the country has ever seen. Does not, therefore, the failure of so many country banks to share proportionately in this increased prosperity clearly indicate that there is a fundamental weakness in our banking system? Is it fair or just, or reasonable, to subject so many of our people to the hazards of continued bank failures? Where is the responsibility for this condition? It is not primarily upon the bankers. The responsibility of the banker is to operate his bank safely and profitably within the limits prescribed by the contraction. by law, but the responsibility for the system of banking under which he operates is upon the Government of the United States in the case of National banks and upon the State governments in the case of State banks. I shall return to this consideration before I close.

BRANCH BANKING

In all of the current discussions of the country bank situation, branch banking is involved in one way or another. Branch banking has existed in the United States in some form since the earliest times both under the authority of acts of Congress and of State laws. Under the Federal reserve act and under the McFadden Bank Act of 1927, national banks may establish branches in all foreign countries; in the insular possesisons of the United States; and within the corporate limits of all large cities in which the head office of the bank is situated where the State law permits State banks to have branches. In the case of the establishment of foreign branches, a national bank must have the approval of the Federal Reserve Board and in the case of a domestic branch, the approval of the Comptroller of the Currency. A number of States permit State banks to establish state-wide branches but the establishment of any such branches debars them from membership in the Federal reserve system. This restriction, however, has not been sufficient to restrain all State banks from establishing state-wide branches under the authority of State laws.

When the McFadden Act was under consideration, the extreme opponents of branch banking predicted that if national banks were permitted to establish branches even within the cities in which they were situated there would be a great scramble for branches with a consequent confusion in the banking business accompanied by the danger of overexpansion. Such has not been

the case.

At the time the McFadden Act went into effect; namely, February 25, 1927. 145 national banks were operating a total of 390 branches. On June 30, 1929, about 21/2 years later, 164 national banks were operating 992 branches, an increase of only 19 banks and 603 branches. When it is considered that between 7,500 and 8,000 national banks were in operation during this period, the establishment of 603 branches throughout the whole of the United States must be considered as only nominal. In fact the rate of increase was about the same as that prior to the McFadden Act when a national bank could only acquire branches by purchasing a State bank with branches. At the time of the approval of the McFadden Act the total number of branches of all banks in the United States was 2,900 and on June 30, 1929, this number had been increased to 3,440.

As the national law stands to-day the metropolitan banks can not extend their services to the rural communities by establishing branches.

GROUP BANKING

Notwithstanding the technical restrictions in the law against the establishment of branches in the country districts by banks in the cities, there has developed since the McFadden Act a new form of branch banking which appears to be without legal objection. For many years single individuals or groups of individuals have owned the majority of the stock of more than one bank. These banks were usually small and operated within a limited geographical area. This phenomenon was regarded as being without particular economic significance. The term group banking has come to be used to embrace a new type of bank ownership. A central financial corporation acquires the controlling interest in the stock of a number of banks, one of which is a metropolitan bank around which the others are grouped. Although technically each bank in the group is a separate corporation operating with a local board of directors, practically each member of the group depends upon a central management which controls the banking policy of the group. The financial responsibility of the central ownership and management is the main support of the

This movement is so new and is developing with such apparent rapidity that it is not possible to present complete statistical information about it. Strong financial groups for this purpose have been formed in practically every great commercial center of the country Some of these have already progressed to the point where they own from 25 to 50 banks. It is reported that there are 230 groups in existence in the United States including groups owned by individuals, and that they own about 2,000 banks. These figures are believed

to be approximately correct.

Considering group banking as a phase or form of branch banking and counting each branch as a banking office, there are about 29,000 banking offices in the country as a whole, 6,000 of which are not strictly speaking unit banks. In other words, something over 20 per cent of all banking offices in the United

States may be classed as branch banks.

Banking groups in the large cities which are thus obtaining control over country banks appear to be driven by economic necessity to using this method of extending the services of the metropolitan banks to the rural communities. They no doubt realize that the method used is more cumbersome and more expensive than branch banking in its proper sense. With the best of intentions, the most capable management and the highest financial responsibility on the part of a centrol group-and many of these groups meet these high qualifications-the group can never be operated with the economy, the flexib lity and the singleness of policy which is possible under a branch system. If the laws permitted the establishment of branches in the country districts by these banks, group banking would disappear and the country districts would be able to do business directly with strong city banks.

While it is undoubtedly true that a strong metropolitan bank may, through the group system, greatly improve the rural-banking situation by putting behind a group of country banks its financial strength and skill of management, it is debatable whether or not this form of banking is the best remedy for the situation which confronts us. The central management of a group must operate through a number of separate corporations, each of which must maintain its own operating status under the banking laws with a full complement of banking overhead. Diversification of banking business in the group and the use of liquid funds can only be obtained by transferring assets from a bank in one locality to that in another, at the same time maintaining the separate financial condition of each bank at the required standard. In the case of a group composed of both national and State banks this procedure complicates the work of the supervising authorities. While the conditions of each bank may be determined, the condition of the group as a whole does not come under the visitorial powers of the government concerned.

In the absence of Government permission for branch banking in its true sense present developments indicate that group banking, under the force of economic law, may eventually displace the present system of country unit banks.

THE EXTENSION OF BRANCH BANKING

I have given long and careful study to this question and have conferred with representative bankers of all classes. I have caused to be gathered comprehensive statistics on bank operations throughout the country. After reviewing all of the discussions concerning branch banking before and since the McFadden Act and having in mind that this should not be regarded as a controversy solely between bankers but that the interest of the general public also be given full consideration, I have reached the conclusion that an extension of branch banking privileges should be granted to national banks.

That it should not be nation-wide will be generally admitted. It has been suggested that branch banking be limited to the confines of each Federal reserve district. This may not be feasible to the same extent in all Federal reserve districts. Restricting it to State boundaries, which are political, rather than economic, presents difficulties, as does the suggestion that a radius of 50 or 100 miles from the parent bank be fixed, but there is an economic area to which the extension of branch banking can be applied, varying in size to meet the diversified conditions that exist in this vast country.

It is for Congress ultimately to fix the boundaries of these districts; but Congress, of course, would not and could not attempt to do so prior to careful consideration and study of all the factors, which could only be carried on by a committee of qualified experts. Would we not be making real progress if, at the coming session, the Congress were to instruct, let us say, the Secretary of the Treasury, the Governor of the Federal Reserve Board, and the Comptroller of the Currency to study the banking situation and to report the boundaries which they would recommend that the Congress set up, establishing such definite areas?

In order that this development, within whatever economic areas may be determined upon by Congress, may be sound and orderly, it should be protected by three safeguards: First, that government supervision be further extended and intensified; second that each parent bank be capitalized adequately to meet the responsibility of operating branches; and third, that discretion over the establishment and over the removal of every branch be vested

in the Comptroller of the Currency.

Under a branch system of this character it would be possible for the parent bank to have a diversified banking business to protect it against economic depression in any one locality or in any one industrial activity or business enterprise. It would then be able to extend to the country districts the same quality of banking services and the same safety to its depositors which the customers of metropolitan banks in the large cities now enjoy. There would, of course, still remain the question of incompetent management and in a branch system the question of management is of the greatest importance on account of the magnitude of the enterprise. It is to this end that it seems wise that governmental supervision be developed to the point where the supervising authorities can protect the public as far as is humanly possible in this respect.

No weakly capitalized bank should be permitted to engage in branch banking and in the ordinary course of business it is not likely that such a thing would be proposed. Nevertheless, I am in favor of a statutory requirement for a minimum capitalization which will be large enough to insure the protection of the depositors and to discharge properly the responsibilities incident to the

operation of a branch system.

One of the principal reasons why the scramble for branches under the McFadden Act, prophesied by many of the opponents of the measure, failed to materialize, was undoubtedly the incorporation in that act of the wise provision that no branch could be established without the approval of the Comptroller of the Currency. It was required that an application be filed by the bank

setting forth the reasons why the branch was desired, such application to be supported by a formal resolution from its board of directors in authorization thereof. Further procedure involved the detailing of a bank examiner to make a thorough investigation, having in mind the effect of the establishment of the branch upon the local community, upon the banking situation as a whole and upon the parent bank, and the filing with the Comptroller of the Currency of a full, written report of this investigation, along with recommendations from the chief national bank examiner. Upon the basis of this information and such other information as the comptroller might acquire from the Federal reserve bank or from other sources rests the approval or denial of each application for the establishment of a branch. This procedure has been sufficient to discourage any precipitate rush, and this discretionary power lodged with the Comptroller of the Currency will enable him at all times to require a branch system to develop in an orderly manner.

What of the sound country bank which has been operating for years with profit and is serving its local community? Under the procedure outlined above such a bank could not be driven out of business through the establishment of a de novo branch, for the simple reason that no Comptroller of the Currency would permit it. Bank stock is a commodity with a market value and if a stockholder wishes to sell to a branch system that is his right under the ordinary law of contract. But it is inconceivable that any Comptroller of the Currency, the proceedings of whose office are important public records, would ever lend his high responsibility to aid of a branch bank unfairly to drive a local bank out of business. The successful country bank, therefore, should have nothing to fear from the recommendation which I propose.

In my recent address at Atlantic City, I indicated that the proposal for the new legislation which I intended to formulate would offer to State banks and trust companies an opportunity to gain a wider field of banking operations under the national charter. With liberal branch banking privileges conferred upon the national banks, the attractions of a national charter would be considerably enhanced and while there would of course be no compulsion upon the State banks and trust companies to become national banks, in the usual course of business, it is believed that the stockholders of the large State Institutions would find it to their advantage to operate under the national charter.

From the standpoint of the public, since commerce is national and interstate, the creation of a uniform banking system through the assimilation of the bulk of the banking resources of the country would be not only an advantage but a logical development. From the standpoint of the Government of the United States, the increase in the resources and strength of the national system as a result of the extension of branches and the conversion of large State banks into national, would bring into the Federal reserve system a great volume of banking resources now operating independently and at the same time develop an instrumentality over which the Government would have complete control and through which it could enforce an adequate banking policy.

Total (38 groups)	547	1, 012, 648, 807	6, 635, 003, 140	8, 505, 255, 969	

Other group systems exist throughout the United States than those listed above. The above tabulation, however, comprises what might be termed the leading "visible" groups, as far as can be determined at this writing, being with few exceptions the groups which are openly committed to group-banking policy and advertising or linked through interlocking directorates.

THIRTY-EIGHT LEADING BANK GROUPS REVEAL SPREAD OF SYSTEM—NEW FORCE IN MULTIUNIT BANK MANAGEMENT APPEARS IN 1929

The 38 leading groups of unit banks in the United States on December 31, 1929, which controlled resources of over \$8,500,000,000 in 547 unit banks, according to the roll call of group systems just presented by the American Banker, represent the dominant institutions in the field of group banking as distinguished from branch banking and unit banking and demonstrate the extent to which this system of multi-unit banking spread during 1929.

This survey represents the most complete tabulation of group banking resources which has been published, and will serve to clarify the degree to which this method of achieving successful banking operation while maintaining the individual banking units as separate chartered units has progressed.

In addition to the groups listed in the tabulation, there are many lesser chain systems and also many group organizations, large and small, which are built around a more or less "invisible" central ownership of stock. No effort has been made to include these "invisible groups" in the tabulation. Several such chains when approached for statistics replied that they were not a "group system" and would not accept such a classification.

Nor has an effort been made to tabulate the branch bank systems which exist in the States which permit city-wide or state-wide branch operation, except as these systems are part of "groups" of independently chartered banks. Hence certain North Carolina and South Carolina branch bank systems which were

formerly groups escape the "roll call."

If branch systems were taken into consideration, they would include such organizations as the National City Bank of New York, with 37 branches, and \$2,200,000,000 in resources; Corn Exchange Bank, and numerous other New York and other city institutions; quite a number of California and other branch bank State institutions, including the Bank of California of San Francisco, which enjoys the peculiar privilege of conducting branch operations outside of its home State; the North Carolina Bank & Trust Co., with 10 branches and resources of \$46,600.000; the Peoples State Bank of South Carolina, with branches in 27 cities and resources of \$14,864,000, etc.

MULTIUNIT BANKING RESOURCES MAY TOTAL \$18,000,000,000

Full knowledge of the figures for city or state-wide branch institutions would possibly double the amount of our Nation's banking resources which are represented in institutions committed to one form or another of multiunit banking operation making their totals \$18,000,000,000 or so.

Barely two-thirds of the groups listed are more than a year old and organiza-

tion of groups still continues.

In some instances these new organizations are simply the coming forward into open group operation of systems which have hitherto been invisibly linked together. Once organized they both attract other unit banks and create a situation in which competing key correspondent banks find it advisable to organize their own groups. Such a situation impelled the organization of some of the largest mid-western groups last year.

Developments in group banking during 1930 are expected to reveal the organization of still new groups, and the aggressive promotion of those already

existing.

CONTROVERSY IN LEGISLATIVE FIELDS

State legislatures and Congress are likely to be scenes of sharp controversies as to the advantages and disadvantages inherent in the group banking system

as compared with either unit or branch bank methods of operation.

One of the things which loom as a possibility as a result of the legislative attitude and which has been seriously though not publicly discussed is the organization of a group bankers' association, which will consider the problems of legislation, operation, and management principles which are peculiar to multibank systems as, for instance, the trust company division of the American Bankers' Association considers pertinent trust questions.

The SS leading around of and blade in the fraces are there are the same of the same that the same of t

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, APRIL 23, 1930

House of Representatives,
Committee on Banking and Currency,
Washington, D. C.

The committee met at 10.30 a. m. in the committee room, Capitol, Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order.

We have before the committee this morning Mr. Robert O. Lord, of the Guardian Detroit Union Group of banks. Mr. Lord has prepared a statement, and it has been requested, inasmuch as Mr. Lord has furnished the members of the committee with copies of the statement, that he be permitted to proceed without interruption until he completes the statement.

We will be very glad to have you proceed now, Mr. Lord.

STATEMENT OF ROBERT O. LORD, PRESIDENT GUARDIAN DETROIT UNION GROUP (INC.)

Mr. Lord. I have read carefully all published reports of hearings before your committee, and from them I understand that, following your usual procedure, you wish me to make an uninterrupted statement on the subject of group banking, at the conclusion of which I shall be glad to endeavor to answer, to the best of my ability, any questions which may occur to members of the committee in

connection therewith.

A few weeks ago your chairman very courteously furnished me with an outline of the points upon which the committee desired information. If it is agreeable to the committee, I shall, in my verbal statement this morning, take up each of these subheadings in turn, touching upon what I consider the high lights of the material which I have prepared, and submitting detailed data as appendices for inclusion in the printed record, if, in the judgment of the committee, this information is deemed to be of sufficient value to warrant its conclusion.

I should like to state right at the start that I feel that the committee, through these hearings, is laying the statistical foundation upon which we must build the banking structure of the future.

Information developed through the instrumentality of these hearings is bound to be of inestimable value to bankers generally. I have already derived great benefit from the information so far published, and I am more than glad to make what small contribution I can to the common fund of information, bearing upon the economics of the present situation in regard to banking, with the

thought that we bankers will all have more accurate and more comprehensive charts by which to steer the courses of our respective financial institutions in the future.

Every banker is to-day faced with the necessity of adapting banking practices and methods to economic conditions which have changed materially over those which obtained but a few years ago-

changed materially over those which obtained but a few years ago. The past few years, here in America, have witnessed the sudden acceleration of economic forces which had been silently at work for more than a decade. Our use of electrical energy is increasing four times as fast as our population and even now equals that of the rest of the world combined. As a consequence, we have been able to obtain a steadily increasing productivity per worker, and simultaneously effect a gradual but substantial reduction in the hours of labor.

Commodity prices have, in general, declined—in the face of rising wage scales. The resultant improvement in our standard of living has excited the interest of the world and thrust upon America a new leadership—and with it new responsibilities, of which a considerable portion have devolved upon the bankers of to-day.

Many years ago economic pressure welded our crazy quilt of hundreds of short local railroads into a relatively small number of trunk lines, which, by superlatively prompt and effective service-have been heavy contributions to the national prosperity with which we have been blessed over a period of years, and which we shall undoubtedly continue to enjoy in spite of occasional recessions. Yet the pressure still persists, under mandate of Congress, for fewer and presumably more efficient railroad systems. The present line of the New York Central Railroad, between New York and Buffalo, originally consisted of literally dozens of independently owned short lines, each with its own management, frequently at odds with that of other short lines.

Similarly, the line of the Pennsylvania Railroad between New York and Pittsburgh originally consisted of a large number of short lines. Who, to-day, would venture the claim that a return to former conditions would be an improvement over the satisfactory service, for passengers and for freight, which we take for granted to-day.

Our highly integrated industrial enterprises have time and again proved bulwarks of strength in piece and in war, in prosperity and in depression. Our great superpower systems have created huge reservoirs of energy, with a flexibility of distribution which has enormously increased our potential productivity, and, incidentally, substantially lowered the average cost of electrical energy to the consumer.

Throughout our whole business structure the pressure is in the direction of larger and larger units, and more and more effective interconnection of units over wider and wider areas. The compelling reason is greater efficiency, bringing in its train lower prices for the consumer, greater stability of operations for the producer, and therefore a more abundant prosperity for the community served.

Banking, too, has felt the pressure toward larger units and closer interconnection of units, the better to serve growing industries and communities. The quickened tempo of to-day's business has emphasized the interindependence of communities within the same

natural industrial area, and has indicated the need for a more comprehensive and more closely knit banking service than has been available heretofore through the isolated unit banks, which met the

less exacting requirements of a few years ago.

The impact of science is a major factor in keeping the business world in a state of flux. Research is creating new industries and destroying entrenched monopolies. We telephone London or Paris as easily as the nearest city; radio flings whispered words around the world; television will be an accomplished fact before we finish saying "It can't be done." The airplane shrinks America to one-fourth railroad size. Improved means of communication and transportation are constantly accelerating the pulse of business. Banking must

keep pace.

It seems to me axiomatic that the happiness and prosperity of the residents of a given community depend, with few exceptions, upon the progress of its wealth-producing industries and other activities. These, in turn, can not flourish unless adequate banking facilities are promptly and continuously available. I think we should all remind ourselves, at this juncture, that banking is not business of itself—banking is merely a facilitating function of business. Banking of itself creates no new weath, but a sound and adequate system of banking does aid in the creation of new wealth and can be of great assistance to the actual producers in facilitating the prompt and efficient interchange of goods and services, without which there can be no general diffusion of the state of well-being which we all desire.

Banking must adapt itself to changing conditions if industry and trade are not to be hamstrung in the struggle for world markets, which is beginning to emerge as the outstanding characteristic of

the period through which we are passing.

I think it has been amply demonstrated, from the testimony already presented to the committee, that the larger cities to-day enjoy a safer and more effective banking service, in all phases, than is

available to the smaller communities.

One of the movements to extend metropolitan service to subcenters, within a given trade area, has come to be known as group banking. Guardian Detroit Union Group (Inc.) was organized to acquire the stocks of banks, trust companies, and other corporations for the purpose of providing unified ownership, coordinated operation, massed resources, and world-wide contacts with industry and trade—an improved, completely rounded-out banking service for the great industrial area of lower Michigan. Quite frankly, it is as yet too early to appraise the results attained to date. Time alone will tell whether or not we are on the right track. In the meantime we are keeping our minds open and will welcome suggestions from governmental authorities or guidance through legislation.

Taking up, in order, the topics suggested by your chairman, I shall endeavor to conserve the time of the members of the committee by endeavoring to point out what I consider to be the significant features of the information requested, submitting, at the conclusion of each phase of my statement, complete detailed data as an appendix.

1. CHARTER AND BY-LAWS

In order to present a proper picture of the organization of Guardian Detroit Union Group (Inc.), it is perhaps necessary to start the story a few years previous to the formal incorporation of the group

As we all know, the effect of the growth of the automotive industry was a tremendous and rapid increase in the population of Detroit. Thirty years ago, it was a city of about 300,000. Now it has in excess of 1,500,000 people.

During this period, manufacturing so absorbed the attention and energy of Detroiters that banking facilities did not keep pace with the needs of the growing city. Detroit found itself dependent financially on outside cities. Even up to a few years ago, Detroit, fourth in population and value of manufactured products, ranked eighth or ninth in banking resources.

To help remedy this situation, on June 15, 1927, there was organized, under the banking laws of the State of Michigan, Guardian Detroit Bank. Under the plan and subscription agreement, there was sold unified stock. Each subscriber to stock in Guardian Detroit Bank at the same time subscribed for the same number of shares of Guardian Detroit Co., an investment affiliate, and for onefifth of the number of shares in Guardian Trust Co., a purely fiduciary organization, which had been organized under the banking laws of the State of Michigan about two years previously. There were thus created three independent corporations owned by the same stockholders, in no way subsidiary to each other.

It was provided that none of the stock of the bank, the trust company, or the securities company should be acquired or transferred except in connection with the acquisition or transfer of a proportionate amount of the stock of each of the other two companies, so that each stockholder would, at all times, own the same percentage of the stock of any one of said companies as he owned of the stock of each of the other two companies.

The Detroiters—drawn from the ranks of manufacturing, merchandizing, construction, transportation, publishing, real estate, finance, and the professions-who sponsored the formation of Detroit's first group of related institutions equipped to transact, under one roof, every kind of banking, trust, and investment business for individuals and corporations, included, among others-

()

Henry E. Bodman, counsel Packard Motor Car Co. Ralph H. Booth (now minister to Denmark), president Booth Publish ing Co.

Roy D. Chapin, chairman of the board, Hudson Motor Car Co. Howard E. Coffin, president National Aviation Corporation, George R. Fink, president Michigan Steel Corporation. Fred J. Fisher, vice president General Motors Corporation. Edsel B. Ford, president Ford Motor Company.

Albert Kahn, architect.

Ernest Kanzler, now president Universal Credit Corporation, Carlton M. Higbie and Jereme E. J. Keane, partners in the security busi ness of Keane, Higbie & Co.

Alvan Macauley, president Packard Motor Car Co.

W. Ledyard Mitchell, vice president Chrysler Corporation, Charles S. Mott, vice president General Motors Corporation. Fred T. Murphy, trustee Murphy family trusts, also a trustee of Yale University.

Alger Shelden, president Shelden Land Co.

William Robert Wilson, chairman Great Lakes Aircraft Corporation.

Under unified ownership, and with coordinated management, these three institutions, which came to be known popularly as "the guardian group," grew and prospered so that within two years their aggregate resources amounted to approximately \$78,000,000, without including the figures of the Guardian Detroit Co., the securities company.

Branch banking, within the corporate limits of the municipalities in which organized, had been permitted in Michigan for several years, one of the larger State banks having no less than 100 branches

in the city of Detroit.

Due to its great growth in recent years, several adjoining municipalities had been annexed to Detroit, but several others had maintained their corporate identity although plainly included in the same economic area. In fact, two municipalities, Highland Park and

Hamtramck, are entirely surrounded by Detroit.

In one of these municipalities was Highland Park State Bank (with seven branches) and Highland Park Trust Co. The officers and directors of the Highland Park institutions felt that it would be distinctly advantageous to effect a closer working arrangement with a large down-town bank, and the officers and directors of Guardian Detroit Bank were equally desirous of obtaining suitable additional banking locations in the metropolitan area of Detroit, without going through the slow and expensive process of acquiring sites and building up deposits in the various shopping and industrial communities.

In order to acquire the Highland Park institutions, which were outside the corporate limits of the city of Detroit and could not, therefore, be operated as branches of Guardian Detroit Bank, although from a purely economic standpoint they occupied exactly the same status as branch offices in the contiguous corporate area of Detroit, it was decided to organize under the provisions of the general corporation laws (Act 84, Public Acts of 1921, as amended) a Michigan corporation under the corporate title Guardian Detroit

Group (Inc.), for the following purposes:

to acquire, own, hold, dispose of, and deal in stocks, bonds, and other evidences of indebtedness and securities, including those issued by any corporation, domestic or foreign, and to possess and exercise in respect thereto, all rights, powers, and privileges of individual owners thereof, including the right to vote the same and to execute proxies thereof.

The banking laws of Michigan (including Act LXVI, Public Acts of 1929) impose no limitation on the ownership of bank stocks which would make such ownership different from that of other corporate shares. Furthermore, express power to acquire and own shares of other corporations is given in Article III of the articles of association quoted above. The ownership of such shares by the company is specifically "in furtherance of the objects of its existence." The power so to do is conferred upon the company by its charter and the statute of the State of Michigan. Furthermore, no statute could be found wherein a restraint of any sort is imposed

100136-30-vol 2, PT 9-3

upon the transfer or ownership of shares of stock in national banks operating in Michigan, in Michigan State banks or Michigan trust

Guardian Detroit Group (Inc.) was organized purely as a holding company, and, as such, its powers are limited solely to ownership and other securities and the exercise of the incident privilege of such ownership. This is the entire scope of its powers under its

In order to determine whether the owning and voting of such shares (which is the full extent of business in which it is engaged) by the company might be held to engage the company in the business of banking, this question was submitted to the attorney general of the State of Michigan. It was our contention that the answer must be found in the nature of the business as authorized and carried on by the company. With this view, the attorney general agreed in an opinion filed on October 9, 1929, in which he reached the following conclusions:

BANKING LAW-CORPORATION LAW-STOCK

(Opinion of Attorney General of the State of Michigan, Filed October 9, 1929)

SYLLABUS

First. A holding company may organize under the general corporation laws of Michigan and may, if its charter is broad enough, purchase, own, and hold shares of stock in State banks.

Second. The ownership and exercise of incidents of ownership of stock in a holding company owning all but qualifying shares in several banks is not

legally doing a banking business in the State, in violation of law.

Third. It is only when the practices of a holding company become such as to usurp the functions of the bank in fact and in reality, so that a banking business is being done by the holding company that intervention can be sus-

Fourth. A holding company, can, by expression in its charter, meet the double indemnity of statutory liability under the banking act.

Fifth. It is the banking department's duty to continue to treat individual banks concerned in stock purchased by a holding company in all respects. as individual units for examination and all other purposes; and also to scrutinize the operation of such banks in their factual relationship with the holding

It will be noted from paragraph 4 of the above syllabus that the Attorney General held that a holding company could, by expression in its charter, meet the double indemnity of statutory liability under the banking act. Provision to this effect had been made some five months previously in the original articles of association of guardian Detroit Group (Inc.), filed on May 10, 1929, as follows:

ART. IX. The holders of the stock of this corporation shall be individually and severally liable (in proportion to the number of shares of its stock held by them respectively) for any statutory liability imposed upon this corporation by reason of its ownership of shares of the capital stock of any bank or trust

Subsequently, the above paragraph of Article IX of the articles of association was amended at a meeting of the stockholders held on October 18, 1929, so as to provide a method of enforcing the double liability of stockholders with respect to bank and trust company shares owned by said corporation, as follows:

ART. IX. The holders of stock of this corporation shall be individually and severally liable (in proportion to the number of shares of its stock held by iks

ust

them respectively) for any statutory liability imposed upon this corporation by reason of its ownership of shares of the capital stock of any bank or trust company, and the stockholders of this corporation by the acceptance of their certificates of stock of this corporation severally agree that such liability may be enforced in the same manner as statutory liability may now or hereafter be enforceable against stockholders of banks or trust companies under the laws of the United States or the State of Michigan. A list of the stockholders of this corporation shall be filed with the banking commissioner of Michigan and the Comptroller of the Currency whenever requested by either of those officers.

Another provision to which we shall have occasion to refer later is that embodied in the second paragraph of Article IX, as amended, which reads as follows:

ART. IX. This corporation reserves and shall have the right from time to time, upon the affirmative vote of three-fourths of its directors, to issue and dispose of all or any of its unissued or increased stock for the purpose of acquiring stock of banks, trust companies and other corporations without offering to the stockholders of this corporation for subscription any of the stock so to be disposed of.

The only particularly significant paragraph in the by-laws is the following:

ART. VI. Whenever at any meeting of the stockholders of a bank or trust company of which this corporation shall at the time own 75 per cent or more of the outstanding stock, an election of a board of directors is held, the shares of such bank or trust company owned by this company shall be voted in favor of the election of a board of directors of which at least 75 per cent shall consist of directors residing in the municipality where said bank or trust company is located or within a radius of 50 miles thereof.

Perhaps I should mention in passing that the board of directors of all of our member units outside of the Detroit metropolitan area, are made up entirely of local men, except in three instances wherein the local boards were insistent upon having in one case three and in the other two cases one representative from Detroit to serve on their directorates. All of these representatives are practical operating officers of Detroit units.

In brief, the articles of association (charter) have been accepted and approved by the secretary of state of Michigan. The provisions as to statutory liability give the same protection to depositors in unit member banks and trust companies as when the shares

in these institutions were owned by various individuals.

In order to complete the record, photostatic copies of the following documents (marked "Appendix I") are submitted for the information of the committee:

Certificate of the secretary of state of Michigan authorizing the corporation to commence business, dated May 10, 1929.

Articles of association with all amendments to date.

Copy of by-laws with amendments to date.

Lord's testimony.)

DIRECTORATE OF HOLDING COMPANY

The original board of directors was a small one, comprising only nine members, but, with the acquisition of additional banks, one or more directors chosen from the board of the unit acquired was added to the directorate of the holding company, except in the case of a few of the smaller institutions. Usually, the chairman or president or senior operating officer of the unit in question was elected a director, and, in addition, the unit bank was invited to designate a

senior active operating officer to serve on the operating committee, the functions of which will be described later.

The board at present comprises:

Frank W. Blair, chairman of the board, Union Guardian Trust Co., Detroit, Mich.

Arthur C. Bloomfield, chairman, Union & Peoples National Bank, Jackson, Mich.

Henry E. Bodman, counsel, Guardian Detroit Union Group (Inc.), Detroit, Mich.

Clarence H. Booth, chairman of the board, Motor Bankers Corporation, Detroit, Mich.

Ralph H. Booth, president, Booth Newspapers (Inc.), Detroit, Mich. Joseph H. Brewer, president, Grand Rapids Trust Co., Grand Rapids, Mich. Walter O. Briggs, chairman and president, Briggs Manufacturing Co., Detroit,

Daniel D. Brown, president, First National Bank & Trust Co., Port Huron-

Mich. Harry C. Bulkley, attorney, Campbell, Bulkley & Ledyard, Detroit, Mich. Charles S. Campbell, president, First National Bank & Trust Co., Kalamazoo, Mich.

Roy D. Chapin, chairman of board, Hudson Motor Car Co., Detroit, Mich. George R. Fink, president, Michigan Steel Corporation, Detroit, Mich. William A. Fisher, president, Fisher Body Corporation, Detroit, Mich. Edsel B. Ford, president, Ford Motor Co., Detroit, Mich.

Frank E. Gorman, vice president, Capital National Bank, Lansing, Mich. Stephen A. Graham, president, Federal Commercial & Savings Bank, Port Huron, Mich.

John C. Grier, jr., president, Guardian Detroit Co., Detroit, Mich. C. H. Haberkorn, jr., chairman of board, Bank of Detroit, Detroit, Mich. Carlton M. Higbie, chairman of board, Keane, Higbie & Co., Detroit, Mich. Sherwin A. Hill, attorney, Warren, Hill & Hamblem, Detroit, Mich. Charles H. Hodges, vice president, American Radiator & Standard Sanitary Corporation, Detroit, Mich.

James Inglis, president, American Blower Corporation, Detroit, Mich. Richard P. Joy, director, National Bank of Commerce, Detroit, Mich. George B. Judson, president, Bank of Detroit, Detroit, Mich. Ernest Kanzler, president, Universal Credit Corporation, Detroit, Mich.

Jerome E. J. Keane, director, Guardian Detroit Bank, Detroit, Mich. Dwight B. Lee, president and treasurer, Motor Products Corporation, Detroit. Mich.

Robert O. Lord, president, Guardian Detroit Bank, Detroit, Mich.

Alvan Macauley, president and general manager, Packard Motor Car CoDetroit, Mich.
Francis C. McMath, director, Canadian Bridge Co. (Ltd.), Detroit, Mich.
George B. Morley, chairman of board, Second National Bank & Trust Co-Saginaw, Mich.

Charles S. Mott, vice president, General Motors Corporation, Detroit, Mich-Fred T. Murphy, trustee, Murphy Family Trusts, Detroit, Mich. Edwin H. Nelson, president, Nelson, Baker & Co., Detroit, Mich. Phelps Newberry, vice president, Guardian Detroit Bank, Detroit, Mich. Ransom E. Olds, chairman of board, Reo Motor Car Co., Lansing, Mich. Jerome H. Remick, president, Detroit Creamery Co., Detroit, Mich.

Herbert S. Reynolds, president, Union & Peoples National Bank, Jackson, Mich.

John R. Russel, director, Union Guardian Trust Co., Detroit, Mich. Murray W. Sales, president, Murray W. Sales & Co., Detroit, Mich. Henry H. Sanger, president, National Bank of Commerce, Detroit, Mich. R. Perry Shorts, president, Second National Bank & Trust Co., Saginaw-Mich.

Hal H. Smith, attorney, Beaumont, Smith & Harris, Detroit, Mich. Oscar W. Smith, president, Parke, Davis & Co., Detroit, Mich. John N. Stalker, president, Union Guardian Trust Co., Detroit, Mich. James L. Walsh, vice president, Guardian Detroit Bank, Detroit, Mich. Charles Beecher Warren, attorney, Warren, Hill & Hamblen, Detroit, Mich. Dudley E. Waters, chairman, Grand Rapids National Bank, Grand Rapids. Mich.

3. NUMBER, NAME, LOCATION, CAPITAL, SURPLUS DEPOSITS, AND RE-SOURCES OF EACH BANK ACQUIRED BY GUARDIAN DETROIT UNION GROUP (INC.)

The following information is submitted as of the close of business March 27, 1930, which is taken as a convenient date by reason of the fact that it is the date of the last call of the Comptroller of the Currency for Statement of Condition of National Banks. It also is the date upon which the State Banking Commissioner of Michigan called for a Statement of Condition of all State Banks and

Trust Companies in Michigan.

As of March 27, 1930, Guardian Detroit Union Group (Inc.) owned all or practically all of the capital stock (except directors' qualifying shares) of 10 national banks, 2 located in Jackson and in each of the cities of Battle Creek, Detroit, Grand Rapids, Kalamazoo, Lansing, Niles, Port Huron, and Saginaw, 6 State banks, members of Federal reserve system, 2 located in Detroit and in each of the cities of Dearborn, Flint, Highland Park, and Port Huron; 6 State banks nonmembers of Federal reserve system, 2 located in Dearborn and one in each of the cities of Detroit, Grosse Pointe Park, Hamtramck, and Trenton, and 5 trust companies, limited to purely fiduciary activities under the Michigan law, 2 located in Detroit and one in each of the cities of Flint, Grand Rapids, and Highland Park, with capital, surplus, deposits, and resources as follows:

Units in which the Guardian Detroit Union Group (Inc.), holds a controlling interest, recapitulation

	Capital	Surplus	Undivided profits and reserves	Deposits	Resources
10 national banks State banks (members Federal research	No. of Contract of	\$10, 500, 000. 00	\$4, 189, 210. 70	\$176, 707, 176. 87	\$205, 977, 951. 1
8 State barres system)	12, 000, 000. 00	7, 510, 000. 00	3, 121, 497, 18	155, 884, 329, 58	181, 519, 387. 1
Federal reserve system) trust companies		492, 150, 00 4, 574, 000, 00	159, 174, 88 1, 653, 977, 77	10, 130, 710, 62 58, 117, 955, 12	12, 697, 578, 8 76, 194, 525, 0
	31, 600, 000. 00	22, 626, 150. 00	9, 123, 860. 53	400, 840, 172. 19	476, 389, 442. 2

On March 27, 1930, the Guardian Detroit Union Group (Inc.), also owned an approximate 40 per cent interest in seven small State banks nonmembers of the Federal Reserve System.

In order to complete the record, detailed figures are submitted for

the information of the committee, marked Appendix II. (The document referred to is printed in full at the conclusion of Mr. Lord's testimony.)

4. NAME AND CAPITAL STRUCTURE OF CORPORATIONS OTHER THAN COMMERCIAL BANKS AND TRUST COMPANIES, THE MAJORITY OF THE STOCK OF WHICH IS OWNED BY GUARDIAN DETROIT UNION GROUP (INC.).

On March 27, 1930, Guardian Detroit Union Group (Inc.), owned either directly or indirectly all or substantially all of the capital stock of two joint stock land banks; nine securities companies; one

it,

ee,

m. it, m,

ch. ds, title guaranty company; two building companies; and one safe deposit company, all located in Michigan, excepting one Joint Stock Land Bank Co., whose principal place of business was Cleveland, Ohio, and one securities company in California, with a nominal capital of \$10,000.

In order to complete the record, detailed figures as to capital stock, surplus, undivided profits, reserves and total resources of these corporations (marked "Appendix III") are submitted for the information of the committee.

(The document referred to is printed in full at the conclusion of Mr. Lord's testimony.)

5. METHOD OF ACQUIRING BANKS AND CORPORATIONS

As previously indicated under the original articles of association (charter) of Guardian Detroit Group (Inc.), the company may, upon the affirmative vote of three-fourths of its board of directors, issue and dispose of unissued or increased stock of said company for the purpose of acquiring stocks of banks or trust companies without offering to the stockholders of the company for subscription the stock to be so disposed of. By special provision of said charter, it is provided that the stockholders of said company shall be individually and severally liable (in proportion to the number of shares of stock held by them respectively) for any statutory liability imposed on such company by reason of its ownership of such shares of the capital stock of any bank or trust company.

In accordance with these provisions of the charter, Guardian Detroit Group (Inc.), acquired all or substantially all of the capital stock of the following institutions (except directors qualifying shares):

Guardian Detroit Bank, Detroit, Mich.
Guardian Trust Co., Detroit, Mich.
Guardian Detroit Co., Detroit, Mich.
Highland Park State Bank, Highland Park, Mich.
Highland Park Trust Co., Highland Park, Mich.
Bank of Dearborn, Dearborn, Mich.
National Union Bank & Trust Co., Jackson, Mich.
Federal Commercial & Savings Bank, Port Huron, Mich.
First National Bank & Trust Co., Port Huron, Mich.
Bank of Detroit, Detroit, Mich.

While Guardian Detroit Group (Inc.), was negotiating with and acquiring the above-listed institutions another company, called the Union Commerce Corporation, of Detroit, Mich., had acquired all or substantially all of the capital stock (except directors' qualifying shares) of the following institutions:

National Bank of Commerce, Detroit, Mich.
Union Trust Co., Detroit, Mich.
Union Co., Detroit, Mich.
Michigan Industrial Bank, Detroit, Mich.
Union State Bank, Dearborn, Mich.
Bank of Commerce, Dearborn, Mich.
Jefferson Savings Bank, Grosse Pointe, Mich.
Union Joint Stock Land Bank, Detroit, Mich.
Ohio-Penn. Joint Stock Land Bank, Cleveland, Ohio.
City National Bank & Trust Co., Battle Creek, Mich.
Keane, Higbie & Co., Detroit, Mich.
Union Industrial Bank and Union Industrial Trust Co., Flint, Mich.

Union Commerce Corporation had also acquired through exchange of its stock an approximate 40 per cent interest in seven small banks located entirely in agricultural communities. In two other cases 58 per cent and a 78 per cent interest was acquired. In acquiring the Ohio-Penn. Joint Stock Land Bank of Cleveland, Ohio, the Union Commerce Corporation exchanged its own stock for a portion of the Land Bank stock and in addition, purchased a large number of shares for cash. In the case of one other bank, the Union Commerce Corporation after exchanging its stock entered into an agreement with the stockholders wherein the Union Commerce Corporation purchased a considerable number of shares for cash.

Early in September of 1929, representatives of Guardian Detroit Group (Inc.) and Union Commerce Corporation discussed the possible advantages which might arise from a merger of the two companies. The discussion pointed out manifest benefits, and accordingly a proposed plan and agreement was drawn up providing for the acquisition of the stock of Union Commerce Corporation by Guardian Detroit Group (Inc.) through exchange of shares on a share for share basis after declaration of a 20 per cent stock divi-

dend by Guardian Detroit Group (Inc.)

On December 17, 1929, the plan was declared operative—the title of Guardian Detroit Group (Inc.) thereupon being changed to Guardian Detroit Union Group (Inc.), which is its title to-day. Through this merger the latter company acquired ownership of stock in the financial institutions and other corporations referred to in the preceding paragraphs.

Subsequently, Guardian Detroit Union Group (Inc.) acquired by exchange of stock all or substantially all of the stock, except direc-

tors' qualifying shares, of the following institutions:

Peoples National Bank of Jackson, Mich. City National Bank & Trust Co., Niles, Mich. Capital National Bank of Lansing, Mich. Grand Rapids National Bank, Grand Rapids, Mich, First National Bank & Trust Co., Kalamazoo, Mich. Grand Rapids Trust Co., Grand Rapids, Mich. Second National Bank & Trust Co., Saginaw, Mich.

Subsequent to March 27, 1929, which date has been selected for the data included in this statement, Guardian Detroit Union Group (Inc.) acquired (on April 8, 1930) practically all of the capital stock, except directors' qualifying shares, of the National Bank of

Ionia, Mich.

In figuring the basis of exchange of stock of the group company for that of the banks or trust companies acquired, it may be stated that, in general, the method was to reduce to a parity of actual value both the stock of the holding company and the stock of the bank to be acquired; and earnings of both institutions were also reduced to a parity—both factors being given due consideration in arriving at a basis satisfactory to both parties at interest. In this manner any tendency toward dilution of either actual value of the shares of earning power was minimized.

Actual values were determined by an examination of the assets of the bank with which negotiations were under way; and the bank, through its representatives, in turn, was afforded an opportunity to satisfy itself as to the value of the shares of the group company.

On March 27, 1930, Guardian Detroit Union Group (Inc.) owned all or substantially all of the stock of 27 banks and/or trust companies and a minority interest in seven additional banks. This is exclusive of the two joint-stock land banks owned. Many of the units acquired already had existing branches within the city limits of the municipality in which located. The total number of locations at which banking business is now transacted aggregates 102, exclusive of the seven banks in which a minority interest is owned.

6. CAPITAL STRUCTURE OF GUARDIAN DETROIT UNION GROUP (INC.)

Guardian Detroit Union Group (Inc.) has but one class of capital stock of \$20 par value. To date 2,500,000 shares have been authorized, of which there are at present issued and outstanding 1,544,844 shares, representing a total of \$30,896,880 par value out of a total authorized capital of \$50,000,000.

These shares have been validated by the Michigan Securities Commission and were listed on the Detroit Stock Exchange on February 8, 1930.

It may be of interest to state at this juncture that Guardian Detroit Union Group (Inc.)—a Michigan corporation—is distinctly a Michigan institution inasmuch as 7,192 stockholders out of a total of 8,090 are residents of Michigan; 88.9 per cent of the stockholders reside in Michigan, and these Michigan stockholders own 92.64 per cent of the total stock now outstanding; New York City with 150 stockholders owns only 2.13 per cent of the total shares outstanding.

Details as to the geographical location of the stockholdings of the group company are as follows as of April 1, 1930;

DISTRIBUTION OF STOCK

The distribution of shares of Guardian Detroit Union Group (Inc.), according to the records as of April 1, 1930, was as follows:

Area	Number of stock- holders	Total shares held	Percentage of stock- holders to total	Percentage of stock to total	Average share holding
Michigan New York City Eastern part of United States (exclusive of	7, 192 150	1, 424, 390 32, 751	88. 90 1. 85	92, 64 2, 13	198,05 218,34
New York City	244	31, 303	3. 02	2, 04	128, 20
	296	30, 190	3. 66	1, 96	101, 99
Western part of United States (west of Mississippi) Outside of United States	170	17, 762	2.10	1.16	104. 48
	38	1, 119	.47	,07	29. 45
Outside of Michigan, total	898	113, 125	11. 10	7. 36	125. 97
	7, 192	1, 424, 390	88. 90	92. 64	198. 05
	8, 090	1, 537, 515	100.00	100, 00	190.05

7. RELATIONS BETWEEN GUARDIAN DETROIT UNION GROUP (INC.) AND BANKS ACQUIRED

I believe that the information which the committee has requested on this subject can best be given by reading excerpts from confidential bulletin No. 1 of Guardian Detroit Union Group (Inc.): dated January 2, 1930, copies of which were furnished to all officers and directors of unit members of the group. (Complete text included in Appendix IV.)

(The documents referred to are printed in full at the conclusion

of Mr. Lord's testimony.)

OD

ne.

From its inception Guardian Detroit Union Group (Inc.) has stood committed to the fundamental policy of developing the standing and prestige of local management and has placed the responsibility of such management upon the local boards of directors and local officers.

Article VI of the by-laws of the group provides:

Whenever at any meeting of the stockholders of a bank or trust company of which this corporation shall at the time own 75 per cent or more of the outstanding stock, an election of a board of directors is held, the shares of such bank or trust company owned by this company shall be voted in favor of the election of a board of directors of which at least 75 per cent shall consist of directors residing in the municipality where said bank or trust company is located or within a radius of 50 miles thereof.

To further carry out these policies, the board of directors of Guardian Detroit Union Group (Inc.) adopted the following resolutions:

Resolved, That credit based upon the deposits in a local bank, which is a unit member of Guardian Detroit Union Group (Inc.), shall be controlled wholly

by the board of directors and the officers of the local unit bank; and Resolved. That Guardian Detroit Union Group (Inc.) in its relationships with local banks which are unit members of the group, accepts as its sole function, responsibility, and duty—to provide stronger support to the banks and a more secure basis for these institutions—and the officers and staff of the group be, and they hereby are, directed to devote their energies and restrict their activities accordingly.

In order to put into effect these broad policies and such other more specific courses of action as may be adopted in conformity thereto, if is necessary to develop a form of organization for the group which will not only allow the greatest possible latitude in the transaction of local business, but will also, by a process of mutual education, make constantly available to each unit all the accumulated knowledge and expert opinion possessed by all the other units.

In considering this subject of the organization and functions of the group company, it should be borne in mind that (the banking laws) Act No. 66, public acts of 1929, State of Michigan, effective

April 19, 1929, provides

Sec. 14. The affairs of each bank shall be managed by a board of not less

than five directors

Sec. 15. The board of directors, or a quorum thereof, * * * shall meet at least once each month and shall at such meetings examine the loans and investments made by the officers thereof since the last meeting of such board and shall review the other transactions of such bank. It shall cause to be spread upon the records of such bank, in the record book thereof which shall be be be a such bank, in the record book thereof which shall be be be be been such as the sections and all its actions he kept for that purpose, the minutes of such meeting and all its actions thereat, including the approval of all loans required to be approved by the board of directors

Sec. 17. The board of directors of each bank shall appoint from its members or stockholders an examining committee, or committees, not including any officer who has active management of the bank, whose duties it shall be to examine the condition of the bank at least once every six months. The examining committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the board, giving in detail all items included in the committee shall report to the commit in the assets of the bank which they have reason to believe are not of the value at which they appear on the books and records of the bank, and giving

the value of each of such items as in their judgment they may have determined.

From the above paragraphs it is evident that in each local bank incorporated or existing under the act referred to, and similarly in each bank chartered under the national banking act, the directors have certain statutory duties, for the satisfactory performance of which they are held personally responsible, and which can not be by them delegated to any other person or persons.

Aside from the bald illegality of any attempt to ursurp the functions or hamper the activities of the board of directors of a local unit bank, such a course would run directly counter to prudence, good judgment and commen sense. Experience indicates that the bulk of profitable business enjoyed by a given bank is the result of the personal efforts of directors and officers. Hence, any policy which impairs, even in the slightest degree, the prestige and enthusiasm of a local board of directors is a body-blow at the growth of the local unit bank, and therefore at the growth and prosperity of the group as a whole.

The deliberate adoption of policies so obviously suicidal is unthinkable; nevertheless, extreme care must be exercised to insure that group management does not perhaps unconsciously encroach upon the statutory and customary authority and responsibility of the unit-bank management. Accordingly, it was deemed advisable to particularly emphasize "the group policy of noninterference with local management," by formal action of the group board of directors. It was, therefore,

Resolved, That the board of directors of each local unit institution in Guardian Detroit Union Group (Inc.), is responsible for the management of the affairs of the institution in question; and that the officers of each unit institution in the group are responsible directly to the board of directors for their own institution and to no other authority, except the law.

In brief, the local banks, trust companies, and other unit members of the group are, and should be, considered as enjoying all the rights and accepting all the responsibilities of full partnership in the group, among the advantages of which are:

First. Each separate institution has the backing of resources many times greater than its own, giving the depositor even greater assurance as to the safety of his funds.

Second. The larger local corporations need no longer go to New York or Chicago for such accommodations as they may need in the matter of loans. The group should be able to provide all the funds to which any of the local corporations are entitled.

Third. The depositors will have available to them the credit information and the financial and investment advice of a large organization, including specialists in many lines. A single institution of moderate size could not afford to employ such experts.

Fourth. The depositors are assured of the continuance of capable management of the local institution. The group company must, of necessity, be in a position to furnish capable personnel to any unit member of the group when called upon to do so.

Fifth. The group provides contact with innumerable types of businesses and cooperation in developing new business for clients.

Sixth. The original stockholders of the unit bank, after exchanging their stock for stock of the group company, will have a diver-

sity of risk, dependent not alone on the prosperity of their local community but supplemented by larger resources with the investment spread over banking institutions located in many cities-in

banks serving a wide range of industry and territory.

Seventh. Their new group stock is part of an issue of much greater number of shares, owned by thousands rather than hundreds of investors, giving them a broader and more active market in case they care to buy or sell—a stock recognized as desirable collaterial

in every large city in the country.

Of course the advantages referred to above can be obtained only as a result of establishing sound policies uniformly throughout the group, developing unit organizations with the ability to put these policies into effect, and providing a means of measuring the degree in which these policies are effectively applied. The problem is to devise a form of organization which will accomplish these purposes without in any way infringing upon local autonomy.

GENERAL FUNCTIONS OF GROUP COMPANY

It would appear that the board of directors of the group company (upon which practically all units are represented by one or more directors) could, with perfect properity, announce its belief in the soundness of a given policy, and request the president to bring it, as a "recommended policy" to the attention of the boards of directors of all unit member institutions liable to be benefited thereby.

The board of directors of the local unit institution would be at liberty to agree or disagree with the recommendation, but when, as and if approved by the local board, it would become the "approved

policy" of the local unit institution.

Both the board of directors of the local unit institution and that of the group would have, then, a joint interest in seeing that these approved policies are put into effect. They also have a natural desire to know the degree of conformity to established policies attained by the local unit in question and how it compares in relative operating efficiency with other units of the group.

Apparently, then, the group company can perform the following useful functions for the local unit institutions without in any way Violating the basic policy of encouraging local management to run

their own banks, namely

(a) Acting as a clearing house for information bearing upon policies, practices, and results obtained by the various member unit Institutions.

(b) Systematically making available to all units the practice of the best with a view to enabling all to reach the highest standards of operation and resultant profit.

(c) Providing expert advice at minimum cost in regard to tax

and insurance matters and extraordinary legal questions. (d) Providing capable supervision in connection with building construction and management.

(e) Coordinating business development activities.

(f) Purchasing standard equipment and supplies in quantity. (g) The group company should also provide an independent examining force, in no way responsible for the condition which its examination discloses, to supplement the work of the board of directors of a local unit in connection with the examining responsibilities imposed by statute.

In brief, it should be the principal function of the group company to act in an advisory capacity—recommending to the boards of the

local units, policies, practices, economies, and so forth.

The local boards and the local officers of the units must operate their own banks or trust companies. They are better able to know

and judge local conditions.

Guardian Detroit Union Group (Inc.) is not engaged in the banking business and has no intention of engaging in the banking business. However, the need for coordinating activities of the various member institutions requires some sort of organizations, in order to achieve the increased efficiency which may reasonably be expected from separate organizations imbued with a desire and a will to help each other in providing the best possible service for the community served. Accordingly, the following committees were elected by the board of directors: Advisory committee, executive committee, operating committee.

The advisory committee is largely a policy-making committee, its membership is comparatively small, and includes no active operating officers of any unit. This committee has entire freedom in criticizing either the policies or the management of any unit or any department of the associated institutions. Its meetings are not held on stated days, but upon the call of the chairman. Operating heads of units or departments have the advice and assistance of this committee as to any questions under consideration. The advisory com-

mittee, as at present constituted, includes the following:

Fred T. Murphy, chairman, trustee Murphy Family Trusts. James Inglis, president American Blower Corporation.

Henry E. Bodman, counsel Guardian Detroit Union Group (Inc.), Detroit, Mich.

Roy D. Chapin, chairman of board Hudson Motor Car Co., Detroit, Mich.

Edsel B. Ford, president Ford Motor Co., Dearborn, Mich.

Charles H. Hodges, vice president American Radiator & Standard Sanitary Corporation, Detroit, Mich.

Ernest Kanzler, president Universal Credit Corporation, Detroit, Mich.

Alvan Macauley, president and general manager Packard Motor Car Co.

Detroit, Mich.

George V. Morley, chairman of board Second National Bank and Trust Co., Saginaw, Mich.

Charles S. Mott, vice president General Motors Corporation, Detroit, Mich. Jerome H. Remick, president Detroit Creamery Co., Detroit, Mich.

John R. Russel, director Union Guardian Trust Co.

Murray W. Sales, president Murray W. Sales & Co., Detroit, Mich. Charles B. Warren, attorney, Warren, Hill & Hamblen, Detroit, Mich.

The executive committee includes several members of the advisory committee, together with other members of the board of directors who are operating men in the organizations in the group. Its duties are much the same as any executive committee, empowered to act

on behalf of the board of directors.

The operating committee is made up of the operating heads of the various large units in the group. Its function is to discuss operating details, new business, and other matters pertaining to direct operations of the various institutions, which would make for better and more economical operation and for the further growth and development of the units in the group.

The following are members of the operating committee:

James L. Walsh, chairman, vice president Guardian Detroit Bank.

Frank W. Blair, chairman of board Union Guardian Trust Co., Detroit, Mich. Frank M. Brandon, president City National Bank & Trust Co., Niles, Mich. Joseph H. Brewer, president Grand Rapids National Bank, Grand Rapids, Mich.

Harry S. Covington, executive vice president National Bank of Commerce, Detroit, Mich.

Frank E. Gorman, vice president and cashier Capital National Bank, Lansing, Mich.

Stephen A. Graham, president Federal Commercial & Savings Bank, Port Huron, Mich.

John C. Grier, jr., president Guardian Detroit Co., Detroit, Mich.

Carlton M. Higbie, chairman of board Keane, Higbie & Co., Detroit, Mich. George B. Judson, president Bauk of Detroit, Detroit, Mich. Charles A. Kanter, executive vice president National Bank of Commerce, Detroit, Mich.

Samuel R. Kingston, executive vice president and cashier National Bank of Commerce, Detroit, Mich.

Robert O. Lord, president Guardian Detroit Bank, Detroit, Mich.

Duncan J. McNabb, president Keane, High e & Co. (Inc.), Detroit, Mich. Frank J. Maurice, executive vice president Highland Park State Bank, Highland Park, Mich.

E. R. Morton, vice president and cashier City National Bank & Trust Co., Battle Creek, Mich.

Phelps Newberry, vice president Union Guardian Trust Co., Detroit, Mich. Bert K. Patterson, vice president and treasurer Guardian Detroit Union

Group (Inc.), Detroit, Mich.
Herbert S. Reynolds, president Union and Peoples National Bank, Jackson,

Alex. Robertson, vice president National Bank of Ionia, Ionia, Mich. Henry H. Sanger, president National Bank of Commerce, Detroit, Mich. Earl H. Shepherd, vice president First National Bank & Trust Co., Kalamazoo, Mich.

R. Perry Shorts, president Second National Bank & Trust Co., Saginaw, Mich.

John N. Stalker, president Union Guardian Trust Co., Detroit, Mich. Arthur H. Vogt, vice president and comptroller Guardian Detroit Union Group (Inc.), Detroit, Mich.

Herbert R. Wilkin, executive vice president Union Industrial Bank, Flint,

Mich.

Instead of setting up a number of departments or divisions in the group company, certain staff officers have been appointed to assist the president of the group company in coordinating and stimulating the activities of local institutions in accordance with "approved policies."

A complete list of the entire personnel of the group company is included in the annual report which is attached as Appendix V. (The document referred to is printed in full at the conclusion of

Mr. Lord's testimony.)

With the exception of the vice president and treasurer, and the secretary of the group company, the official personnel of Guardian Detroit Union Group (Inc.) is made up entirely of talent loaned by the members of the group. The salaries, except in the instances given above, are paid by the local units of which the individual is an officer. This is in order to keep at a minimum the expense of the group organization and at the same time supply to the units of the group the best available advice on special subjects.

In the official organization of the group company, we have a group of active officers and advisory officers who, through their knowledge and experience, should prove to be of great service to all of the units in the group. All operating heads are encouraged to write to the group company on any questions wherein it is felt that the staff of the group company can be helpful. Communications are ordinarily addressed to the president and by him referred, if necessary to the proper officer in the group organization for

necessary action.

The advisory committee concerns itself only with the consideration of broad questions which affect the policy of the group as a whole; and the executive committee is limited in its activities to functioning in lieu of the board during the interval between regular quarterly meetings. However, the operating committee is intended to be the instrumentality to which the operating heads of the various unit members bring their day-to-day operating problems. In this connection, I think it would be of interest, inasmuch as we are dealing with a new kind of organization—to read a few extracts from the minutes of the first meeting of this operating committee:

The chairman outlined the purposes of the meeting, quoting from the annual report of the president of Guardian Detroit Union Group (Inc.), as follows: "The operating committee is made up of the operating heads of the various large units in the group. Their function is to discuss operating details, new business, and other matters pertaining to direct operations of the various institutions, which would make for better and more economical operation and for the further growth and development of the units in the group."

It was pointed out that the operating committee consists, as present, of 27 members, and that it is apparently expected to take cognizance of all matters which have a bearing upon efficient and economical operation, or which may be expected to have an effect upon the growth of any banking, fiduciary, or investment unit, or of the group as a whole. It was the concensus that with such a large membership and such a broad range of activities, the operating committee can function most effectively through the organization of subcommittees, appointed to consider specific questions and to make appropriate reports and recommendations to the operating committee.

It was agreed that the operating committee should be represented by one of its own members on each subcommittee, but that the entire field of group official personnel should be drawn upon freely in mak-

ing up the membership of the various subcommittees.

The chairman emphasized the importance of actually carrying out the policy laid down at the first meeting of the board of directors of the group company, namely, that the unit instructions were to continue to function independently and subject only to the control of their respective boards of directors and officers. He explained that the operating committee was essentially a voluntary gathering of operating heads of unit banks, trust companies, and other financial organizations who plan to foregather, from time to time, with a view to interchanging ideas; to determine, as the result of general discussion, the best banking policies and practices to the end that each "recommended policy" should be adopted by such units as saw fit to recognize the sheer logic of the suggestion, after taking into full account the exigencies of its local situation.

The chairman requested all members to consider the meetings of the committee as a forum for the discussion of, and a clearing house for, information bearing upon local-banking policies, operating methods, difficulties encountered, and results obtained by the various member unit institutions, with a view of systematically making available to all units the practices of best so as to enable all to reach the

highest standards of operations and resultant profit.

The chairman suggested that it was entirely possible that certain recommended policies might be applicable to certain member unit institutions and obviously inapplicable to others, and, accordingly, that votes be taken by units on each separate question considered by the operating committee so that proper flexibility of application would be insured without sacrificing the greatest possible degree of harmonious operation.

8. GEOGRAPHICAL AREA

In determining the geographical area into which Guardian Detroit Union Group (Inc.) has so far extended its operations, we were fortunate in having a natural, relatively compact trade area lying almost wholly within the State of Michigan. We have to date confined our operations entirely to the lower Peninsula of Michigan, the upper peninsula forming no part of the natural trade area.

All corporations now a part of the Guardian Detroit Union Group (Inc.) are located within the confines of the State of Michigan with the exception of the Ohio-Pennsylvania Joint Stock Land Bank, Cleveland, Ohio, and the Guardian Detroit Co., of California, a securities sales organization operating with a nominal capital of \$10,000 and with offices in Los Angeles and San Francisco, Calif.

We have no present intention of crossing State lines, although economically Toledo and other Ohio cities are within the trade area

of Detroit.

We feel at this time that group or branch banking should so far as our own activities are concerned be confined to an area which by the very nature of its business and industries is more or less dependent upon Detroit.

9. AUDIT AND EXAMINATION

Guardian Detroit Union Group (Inc.), is fortunate in having as vice president and treasurer, Mr. Bert K. Patterson, formerly chief national bank examiner of the seventh Federal reserve district, assisted by other former national bank examiners and assistants. These examiners made, during the formative stages of the group, detailed examinations of banks with which negotiations were under way, and their findings were used in determination of values and earnings necessary to arrive at an equitable basis for exchange of stocks.

These gentlemen have now completed a thorough examination of each unit member institution and, generally speaking, followed the same procedure as do national bank examiners, except that they are allowed much more time than is ordinarily permissible for regular examinations of national banks by the comptroller's representatives. Their examination is perhaps more comprehensive as to the condition of the banks.

We contemplate having examinations made by these gentlemen of all unit banks at least twice each year, examinations of course

to be in addition to those of national or State examiners.

IS IS The unit banks forward to the group office each week a balance sheet statement of their condition which is used principally to keep the officers of the group company advised of any important fluctuations in the main accounts of the bank—for example, marked increases or decreases in deposits, etc. The unit banks also forward to the group office a balance sheet at the end of each month. These figures are assembled and consolidated. Likewise, the unit banks forward at the end of each month a statement of their earnings. These are also combined to note progress made from month to month.

All unit members of Guardian Detroit Union Group (Inc.) are gradually establishing the accrual system, in accordance with the most modern practice. Besides establishing a uniform method of bookkeeping and minimizing the possibilities of errors and inaccuracies, it is felt that the accrual system is an additional safeguard against possible loss in that it tends to show up any unusual transaction or series of transactions and thus invite immediate investigation as to the reasons therefor.

CONCLUSIONS

I think this completes the information which your chairman requested me to furnish. Before concluding my statement, I should like to say that if there is any other information desired by the committee, I shall be glad to have it prepared promptly and forwarded to the committee for inclusion in the record.

In that part of the latest Report of the Comptroller to Congress, under the heading, "Legislation Recommended," I note that the comptroller recommends the enactment of legislation which will bring the operations of bank holding companies under some degree of Federal supervision. The Guardian Detroit Union Group (Inc.) would welcome the expansion of the visatorial power of the comptroller to include all of the corporations in which we are interested.

The comptroller also recommended a further amendment to safe-guard the additional shareholders' liability which each such bank holding company incurs through the ownership of the shares of national bank stock. As you will have noted from my statement, Guardian Detroit Union Group (Inc.), through the provisions of its charter filed May 10, 1929, Article IX, provided for this double liability, feeling that the depositor should be given every possible protection and safeguard.

As I see the situation to-day, we are confronted with the following facts:

(a) During the nine years ended December 31, 1929, 5,640 banks failed, with aggregate deposits exceeding \$1,700,000,000, affecting the savings of over 7,000,000 depositors, and causing 114,000 shareholders very serious losses.

(b) During the last calendar year, there were 640 bank failures which caused the tying up of \$234,000,000 of deposits—the greatest of any year in the decade except 1926.

(c) It is perfectly obvious that there is something radically wrong with a system of banking which permits such unusual hardships to be imposed over a wide geographical area, particularly in the smaller communities.

(d) During the same period, there have been no important failures among the banks in the larger cities.

(e) All attempts to improve matters by legislation requiring the guaranty of deposits or the like, have been proven to be economically

unsound, and have been practically abandoned.

(f) Federal reserve banks are not charged with the responsibility of preventing bank failures and it is clearly beyond the power of any governmental agency to stand between banks and insolvency.

(g) Intensification of the present correspondent system has been suggested as a remedy, with the thought that the technical banking experience and approved metropolitan banking methods should be made available to a greater degree to smaller banks. Probably every failed bank was a correspondent of some metropolitan bank, but that fact has not prevented failures at the rate of more than 500 per year. In any event, there would be no obligation, under the correspondent system, for the metropolitan banks to protect the local depositors of their country correspondents.

In the final analysis, successful banking depends upon able management and upon outside economic conditions. Through branch or group banking, management for the smaller communities can undoubtedly be improved in the vast majority of cases—and through a larger institution properly capitalized with large financial resources and diversification of assets and carefully supervised both by the organization itself and by the government authorities, much greater

Protection can be given to the depositors and shareholders.

To my mind, there is no probability of undue concentration of capital, nor of the building up of a monopoly—for so long as the banking business can be made to earn with safety a satisfactory return, competition will exist, and new banks will continue to be

organized in the future as in the past.

I am in full agreement with Gov. Roy A. Young, of the Federal Reserve Board, in his statement before this committee, that group, chain and branch banking have developed because of business necessity, even though there has been little encouragement for it in the way of legislation. Manifestly, more than one-half of the total banking resources of the country, measured in terms of loans and investments, would not now be held by branch, chain, and group systems unless there had been some good reason for this great growth.

With him, I regard it as a natural development.

While undoubtedly economies of operation would result from the conversion of some of the present group systems into branch systems, I question whether this should be forced by legislation. There is a very definite advantage arising from the retention, by a local bank, of its own name and identity which, in most cases, has a long and honored significance in the eyes of the local public. Even though branch banking were permitted statewide in Michigan, at the present time it is likely that some of our unit banks would be kept as units, retaining their own corporate identity. In any event, I should like to emphasize that the financial mechanism of the country is a delicately balanced machine, and I respectfully urge upon you gentlemen that whatever course you decide to pursue should be tempered with the knowledge that its effects are likely to be far reaching. It seems to me that we must seek improvement

through evolution, rather than revolutionary measures, and allow time for the entire banking structure to adapt itself to the new order.

I want to thank the members of the committee for their courtesy in permitting me to cover this subject in my own way, without interruption, I shall be glad to answer, to the best of my ability, any questions which may occur to the members of this committee.

GUARDIAN DETROIT UNION GROUP (INC.) BY-LAWS

ARTICLE 1. MEETINGS OF STOCKHOLDERS

Annual meetings.—1. The annual meeting of the stockholders of this company shall be held at the principal office of the company the fourth Tuesday of January of each year at 11 o'clock a.m., eastern standard time, for the election of directors and such other business as may properly come before said meeting.

2. Notice of such meeting shall be sent by the secretary to each stockholder, by mail, addressed to such stockholder at his address as shown on the records of the company at least 10 days prior to the date of such meeting.

of the company at least 10 days prior to the date of such meeting.

Special meetings.—3. Special meetings of the stockholders shall be called at any time on the order of the president or upon a resolution of a majority of the directors, or upon a written request of the holders of the majority of the stock of the company. Such meetings shall be held at the principal offices of the company.

4. Notice of each special meeting of stockholders shall be given in the same manner as in the case of the annual stockholders' meeting, but in addition thereto such notice shall state the object of such meeting, and no business shall be transacted thereat which shall not have been specified in said notice.

Quorum.—5. The owners of a majority of the capital stock of the company, represented in person or by proxy, shall constitute a quorum for the transaction of business at any meeting of the stockholders, but less than a quorum shall have power to take a recess or adjourn any such meeting.

Record of stockholders.—6. The board of directors of this corporation shall have the right to fix in advance a date, not exceeding 40 days preceding the date of any meeting of stockholders or the date for the payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect, as a record date for the determination of the stockholders entitled to notice of, and to vote at, any such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights, or to exercise the rights in respect of any such change, conversion, or exchange of capital stock.

ART. II. DIRECTORS

Number and election.—The affairs of the company shall be managed by a board of nine directors to be elected by the stockholders at each annual meeting to hold office for one year or until their successors are elected.

Amended August 8, 1929: The affairs of the company shall be managed by a board of 15 directors to be elected by the stockholders at each annual meeting to hold office for one year or until their successors are elected.

Amended September 10, 1929: The affairs of the company shall be managed by a board of 25 directors to be elected by the stockholders at each annual meeting to hold office for one year or until their successors are elected. Vacancies or newly created directorships may be filled at any time during the year.

Amended December 16, 1929: The affairs of the company shall be managed by a board of 41 directors to be elected by the stockholders at each annual meeting to hold office for one year and until their successors are elected. Vacancies or newly created directorships may be filled by the board of directors

at any time during the year

Amended January 28, 1930: The affairs of the company shall be managed by a board of 50 directors to be elected by the stockholders at each annual meeting, to hold office for one year or until their successors are elected. Vacancies or newly created directorships may be filled by the board of directors at any time during the year.

Quorum.-2. A majority of the directors shall constitute a quorum for the

transaction of business.

Vacancies. -3. Vacancies in the board of directors shall be filled by the re-

maining members of the board.

Regular meetings.—4. The board of directors shall meet at the office of the company on the second Wednesday of December, March, June, and September, at 2 o'clock p. m. eastern standard time, unless such day be a legal holiday when such meeting shall be held on the next succeeding secular day at the same hour and place.

Special meetings.-5. Special meetings of the board of directors shall be called at any time on the order of the president or whenever a request of such

meeting is made by a majority of the directors.

Directors' meeting-Notice.-6. No notice need be given of the time or place of the regular quarterly meetings of the board of directors, but notice shall be given of all special meetings, which notice may be in writing, or by telegram, addressed to each director at his address as shown on the books of the com-Dany, or verbally, or by telephone, at least 24 hours before the time of such meeting. Notice of special meetings of the directors need not specify the object of such meetings.

Powers .- 7. The board of directors shall at each annual meeting or adjourned annual meeting elect the following officers: A chairman of the board, a president, one or more vice presidents, a treasurer, a secretary, one or more assistant treasurers, and one or more assistant secretaries. Each of the foregoing officers shall, unless meantime removed by the board of directors, hold

office for the period of one year, or until his successor is elected.

The board of directors may also elect or appoint such additional officers as

they may from time to time deem wise.

Executive committee.-8. The board of directors shall appoint from time to time an executive committee consisting of not less than 11 or more than 21 directors which committee shall have full power to act in the intervals between meetings of the directors, with all the power of the directors. The directors shall elect a chairman of said committee whose duty it shall be to preside at meetings thereof. The secretary of the company shall act as secretary of said Committee and shall keep a record of its proceedings. Regular and special meetings of the executive committee shall be held at such times and places and upon the giving of such notice as the committee shall from time to time determine. A majority of such committee shall constitute a quorum for the transaction of business.

Advisory committee. 9. The board of directors shall appoint from time to time an advisory committee, none of whom shall be active, salaried operating officers of any of this corporation's affiliated companies, who shall have such duties as shall be delegated to it by said board of directors. The board of directors. rectors shall appoint a chairman of such committee. A majority of such com-

mittee shall constitute a quorum for the transaction of business.

ART. III. OFFICERS

Chairman of the board .-- 1. The chairman of the board of directors shall preside at all meetings of the board and of the stockholders of the company and in the absence or case of disability of any officers of the company may exercise the Dowers of any such officer.

President .- 2. The president, subject to the board of directors, shall have general charge of the business, property, and affairs of the company. He shall be ex officio a member of all committees. He shall have power to execute, on behalf of the company, checks, drafts, orders, acknowledgments, receipts, certificates, and all other documents not by the by-laws of the company or by any resolution of the board required to be signed by another or two or more officers. He shall have power to sign in conjunction with the secretary or an assistant secretary certificates of stock of the company. He shall preside at meetings of the stockholders and of the board of directors in the absence of the chairman. He shall also have power to employ such executives and engage such employees of the company as are not required to be elected or appointed by the board.

Vice president .- 3. Each of the vice presidents shall have and exercise such powers as the president may delegate and as are not required by these by laws to be performed by some other officer; and in the absence or disability of the president, the vice president first in order of election shall have and exercise all the powers of the president, and in case of the absence or disability of the vice president first in order of election the other vice presidents shall in the order of their respective elections have and exercise the powers of the president.

ART. IV. SEAL

The seal of the corporation shall be in the form impressed hereon.

ART. V. STOCK CERTIFICATES

1. Stock in the company shall be represented by certificates in the following form

2. Certificates representing stock of the company shall be executed by two officers of the company as follows: A president or a vice president and the secretary or an assistant secretary.

3. Transfers of shares of stock of this company shall be made upon the books of the company by the registered holder in person or by attorney duly authorized upon surrender of the certificate or certificates representing such shares, but only when duly indorsed upon the form appearing on the reverse side of the certificate.

ART. VI

These by-laws may be amended, altered, or repealed by the board of directors at any regular or special meeting.

1. That whenever at any meeting of the stockholders of a bank or trust company, of which this corporation shall at the time own 75 per cent or more of the outstanding stock, an election of a board of directors is held, the shares of such bank or trust company owned by this company shall be voted in favor of the election of a board of directors of which at least 75 per cent shall consist of directors residing in the municipality where said bank or trust company is located or within a radius of 50 miles thereof.

ART. VII. REGULAR DIRECTORS' MEETING

A regular meeting of the newly elected board of directors shall be held immediately upon the adjournment of the annual meeting of stockholders at the same place at which said annual meeting of stockholders is held, provided however, that the majority of directors attending said meeting may authorize and adjournment thereof. At said meeting the directors shall elect officers for the ensuing year.

ART. VIII. AUTHORIZED SIGNATURES

Whenever certificates representing stock of this company have been or shall be executed by or with the signature of officers authorized to execute the same, and any such officer or officers shall cease to be such officer prior to the issuance of such certificates, or any of them, said certificates may, nevertheless, be issued by this company and shall constitute valid certificates representing ownership of the stock of this company.

APPENDIX IV

GUARDIAN DETROIT UNION GROUP (INC.)

BASIC POLICIES

President Hoover, in his recent message to Congress, referred to the group banking movement as "a groping for stronger support to the banks and a more secure basis for these institutions." However, he also raised the question as to whether the development of group banking might not "concentrate control of credit" and enunciated as one of the fundamentals of the American credit tsystem that "Credit which is based upon banking deposits should be controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits are controlled by persons within those areas which furnish these deposits and the controlled by persons within those areas which furnish these deposits are controlled by persons within those areas which furnish these deposits are controlled by persons within those areas which furnish these deposits are controlled by persons within those areas which furnish these deposits are controlled by persons within the controlled by the con thus be subject to the restraints of local interest and public opinion in these areas.'

The President has stated, briefly, but completely, the advantages to be sought and the disadvantages to be avoided, in any program of group banking. In this connection, it may be pertinent to quote Article VI of the by-laws of

Guardian Detroit Union Group (Inc.):

Whenever at any meeting of the stockholders of a bank or trust company of which this corporation shall at the time own 75 per cent or more of the outstanding stock, an election of a board of directors is held, the shares of such bank or trust company owned by this company shall be voted in favor of the election of a board of directors of which at least 75 per cent shall Consist of directors residing in the municipality where said bank or trust company is located or within a radius of 50 miles thereof."

From its very inception, Guardian Detroit Union Group has, by common consent, stood committed to fundamental policies in full accord with the ideals expressed by the President of the United States. In order that there might be no possibility of misunderstanding in this regard, the board felt that the present was an opportune time to go formally on record in reference to the control of credit" and also the fundamental basis of the relationship between the Group Co. and a local bank, which is a unit member of the group.

was, therefore.

Resolved, That credit based upon the deposits in a local bank, which is a un't member of Guardian Detroit Union Group (Inc.), shall be controlled Wholly by the board of directors and the officers of the local unit bank; and Resolved, That Guardian Detroit Union Group (Inc.), in its relationships With local banks which are unit members of the group, accepts as its sole function, responsibility and duty—to provide "stronger support to the banks and a more secure basis for these institutions,"—and the officers and staff of the group be and they hereby are directed to devote their energies and restrict their activities accordingly.

In order to put into effect these broad policies and such other more specific courses of action as may be adopted in conformity thereto, it is necessary to develop a form of organization for the group which will not only allow the greatest possible latitude in the transaction of local business, but will also, by a process of mutual education, make constantly available to each unit all the accumulated knowledge and expert opinion possessed by all the other units.

In considering this subject of the organization and functions of the Group Co., it should be borne in mind that Act No. 66, Public Acts of 1929, State of Michigan, effective April 19, 1929, provides:

"Sec. 14. The affairs of each bank shall be managed by a board of not less than five directors * * *.

"SEC. 15. The board of directors, or a quorum thereof " " shall meet at least once each month and shall at such meetings examine the loans and investments made by the officers thereof since the last meeting of such board and shall review the other transactions of such bank. It shall cause to be spread upon the records of such bank, in the record book thereof which shall be kept for that purpose, the minutes of such meeting and all its actions thereat, including the approval of all loans required to be approved by the board of directors " " ".

"SEC. 17. The board of directors of each bank shall appoint from its members or stockholders an examining committee, or committees, not including any officer who has active management of the bank, whose duties it shall be to examine the condition of the bank at least once every six months. The examining committee shall report to the board, giving in detail all items included in the assets of the bank which they have reason to believe are not of the value at which they appear on the books and records of the bank, and giving the value of each of such items as in their judgment they may have determined."

From the above paragraphs, it is evident that, in each local bank incorporated or existing under the act referred to, and similarly in each bank chartered under the national banking act, the directors have certain statutory duties for the satisfactory performance of which they are held personally responsible, and which can not be by them delegated to any other person or persons.

Aside from the bald illegality of any attempt to usurp the functions of hamper the activities of the board of directors of a local unit bank, such a course would run directly counter to prudence, good judgment and common sense. Experience indicates that the bulk of profitable business enjoyed by a given bank is the result of the personal efforts of directors and officers. Hence, any policy which impairs, even in the slightest degree, the prestige and enthusiasm of a local board of directors is a body blow at the growth of the local unit bank, and therefore at the growth and prosperity of the group as a whole.

The deliberate adoption of policies so obviously suicidal is unthinkable; nevertheless, extreme care must be exercised to insure that group management does not perhaps unconsciously, encroach upon the statutory and customary authority and responsibility of the unit bank management. Accordingly, it was deemed advisable to particularly emphasize "the group policy of noninterference with local management," by formal action of the group board of directors. It was, therefore,

Resolved, That the board of directors of each local unit institution in Guardian Detroit Union Group (Inc.), is responsible for the management of the affairs of the institution in question; and that the officers of each unit institution in the group are responsible directly to the board of directors of their own institution and to no other authority, except the law.

In brief, the local banks, trust companies and other unit members of the group are, and should be, considered as enjoying all the rights and accepting all the responsibilities of full partnership in the group, among the advantages of which are:

First. Each separate institution has the backing of resources many times greater than its own, giving the depositor even greater assurance as to the safety of his funds.

Second. The larger local corporations need no longer go to New York or Chicago for such accommodations as they may need in the matter of loans. The group should be able to provide all the funds to which any of the local corporations are entitled.

Third. The depositors will have available to them the credit information and the financial and investment advice of a large organization, including specialists in many lines. A single institution of moderate size could not afford to employ

such experts

f

Fourth. The depositors are assured of the continuance of capable management of the local institution. The group company must, of necessity, be in a position to furnish capable personnel to any unit member of the group when called

Fifth. The group provides contact with innumerable types of businesses and

cooperation in developing new business for clients. Sixth. The original stockholders of the unit bank, after exchanging their stock for stock of the group company, will have a diversity of risk, dependent not alone on the prosperity of their local community, but supplemented by larger Tesources with the investment spread over banking institutions located in many cities-in banks serving a wide range of industry and territory.

Seventh. Their new group stock is part of an issue of much greater number of shares, owned by thousands rather than hundreds of investors, giving them a broader and more active market in case they care to buy or sell-a stock

recognized as desirable collateral in every large city in the country.

Of course, the advantages referred to above can be obtained only as a result of establishing sound policies uniformly throughout the group; developing unit organizations with the ability to put these policies into effect; and providing a means for measuring the degree in which these policies are effectively applied. The problem is to devise a form of organization which will accomplish these purposes without in any way infringing upon local autonomy.

GENERA FUNCTIONS OF GROUP CO.

It would appear that the board of directors of the Group Co. (upon which bractically all units are represented by one or more directors) could, with perfect propriety, announce its belief in the soundness of a given policy, and request the president to bring it, as a "recommended policy" to the attention of the commendation of the comme of the board of directors of all unit member institutions liable to be benefited thereby

The board of directors of the local unit institution would be at liberty to agree or disagree with the recommendation, but when, as, and if approved by the local board, it would become the "approved policy" of the local unit

institution.

Both the board of directors of the local unit institution and that of the group would have, then, a joint interest in seeing that these "approved policies" are put into effect. They also have a natural desire to know the degree of conformity to established policies attained by the local unit in question and how it compares in relative operating efficiency with other units of the group.

Apparently, then, the Group Co. can perform the following useful functions for the local unit institutions without in any way violating the basic policy

of encouraging local management to run their own banks, namely:

thees, and results obtained by the various member unit institutions.

(b) Systematically making available to all units the practice of the best with a view to enabling all to reach the highest standards of operation and resultant profit.

(c) Providing expert advice at minimum cost in regard to tax and insurance

matters, and extraordinary legal questions.

(d) Providing capable supervision in connection with building construction and management.

(e) Coordinating business development activities.

(f) Purchasing standard equipment and supplies in quantity.

(g) The Group Co. should also provide an independent examining force, in no way responsible for the condition which its examination discloses, to supplement the work of the board of directors of a local unit in connection with the examining responsibilities imposed by statute.

In brief, it should be the principal function of the Group Co. to act in an advisory capacity-recommending to the boards of the local units, policies, practices, economies, etc. The local boards and the local officers of the units must operate their own banks or trust companies. They are better able to know and judge local conditions.

B m

ORGANIZATION OF GROUP COMPANY

In connection with the organization of the group company a tentative of

ganization chart has been drawn up and a copy attached hereto.

The advisory committee is largely a policy-making committee, its membership is comparatively small and includes no active operating officers of any unit-This committee has, and should have, entire freedom in criticizing either the policies or handling of any unit or any department of the associated institutions. Its meetings are not held on stated days, but at irregular intervals upon the call of the chairman. Operating heads of units or departments will, from time to time, be called to confer with this committee as to any questions under consideration.

The following have been elected members of the advisory committee:
Fred T. Murphy, chairman; Henry E. Bodman, Edsel B. Ford, James Inglis,
Alvan Macauley, Jerome H. Remick, Murray W. Sales, Roy D. Chapin, Charles
H. Hodges, Ernest Kanzler, Charles S. Mott, John R. Russel, Charles B. Warren.

The executive committee includes largely the advisory committee together with other members of the board of directors who are operating men in the organizations in the group. Its duties are much the same as any executive committee, empowered to act on behalf of the board of directors.

The following have been elected members of the executive committee:

H. E. Bodman, chairman; Frank W. Blair, John C. Grier, jr., Carlton M. Higbie, Richard P. Joy, Robert O. Lord, Fred T. Murphy, Phelps Newberry, Henry H. Sanger, James L. Walsh, Harry C. Bulkley, C. H. Haberkorn, jr., Sherwin A. Hill, Ernest Kanzler, Charles S. Mott, Edwin H. Nelson, Murray

W. Sales, John N. Stalker.

The operating committee is made up of the operating heads of the various large units in the group. Their funtion is to discuss operating details, new business, and other matters pertaining to direct operations of the various institutions, which would make for better and more economical operation and for the further growth and development of the units in the group. When deemed advisable more than one member from each unit can be included in the membership of this committee.

The following have been elected members of the operating committee:

James L. Walsh, chairman; Frank W. Blair, John C. Grier, jr., Carlton M. Higbie, Charles A. Kanter, Samuel R. Kingston, Robert O. Lord, Duncan Mc-Nabb, Phelps Newberry, Bert K. Patterson, Henry H. Sanger, John N. Stalker, Arthur H. Vogt; Frank E. Quisenberry, representing Highland Park; Frank J. Maurice, representing Highland Park; George B. Judson, representing Bank of Detroit; H. S. Reynolds, representing Jackson; George R. Paul, representing Jackson; S. A. Graham, representing Port Huron; H. R. Wilkin, representing Flint; E. R. Morton, representing Battle Creek.

To this committee will be added, from time to time, representatives of other important departments in the above institutions and also representatives of

other units which may come into the group.

IMMEDIATE OBJECTIVES

The future success of the Guardian Detroit Union Group is a question of management. The board of directors and such committees of the group as may be appointed can contribute in a large measure. If we are to operate successfully and increase the earnings of the separate units, and of the group company, we must concentrate our efforts upon the following:

1. Increase the deposits of the banks and trust companies.

2. Increase the trust business of the Union Guardian Trust Co. and of the other trust units.

3. Develop the investment business of the Guardian Detroit Co. and of our general distribution through the out-of-Detroit units.

4. Curtail expenses to the greatest possible extent consistent with operating efficiency.

FUNCTIONS OF GROUP OFFICERS

It is believed that the above objectives can be attained without creating a large operating organization in the group company. Such a course would not only be unnecessarily expensive, but would tend in time to weaken the authority, and therefore the sense of responsibility, of the management of local unit institutions.

Instead of setting up a number of departments or divisions in the group company, it is recommended that certain staff officers be appointed to assist the president of the group company in coordinating and stimulating the activi-

ties of local unit institutions in accordance with "approved policies."

Referring to the accompanying organization chart, it will be noted that but a single "line of authority" leads from the group board of directors, through the the group president, the local board of directors, the president of the local unit institution, to the operating departments of the local bank or trust com-

an

pany. This has been done advisedly. Nothing is more destructive of morale nor more conducive to confused and ineffective operation than to have every Tom, Dick, and Harry possessing an official title take it upon himself to write letters asking for information—which which has perhaps already been furnished; making requests—with the force of demands—for action which may conflict with existing policies; dispensing information or advice—possibly not the most accurate or dependable to be obtained. tained within the group, etc.

A cross-fire of conflicting communications can yield chaos in short order. Hence, the president will sign all the mail, even if the staff officers prepare

most of the letters for his signature. To further insure continuity and consistency of policy, a vice president and general manager has been provided to serve as an "alter ego" for the president, and to coordinate the work of the staff officers, who have been designated and assigned duties as follows:

GENERAL SAUES MANAGER

(a) Coordinates and stimulates business development activities of all local units.

(b) Handles public relations for group.

(c) Initiates group advertising.

(d) Harmonizes advertising of local units.

(e) Operates central file showing relationships of all customers of all units in the group.

(f) Supervises technical instruction of business development personnel.

COMPTROLLER GENERAL

(a) Keeps general books of the group.

(b) Prepares group balance sheet and operating statements.

(c) Develops standard operating methods, accounts, and reports. (d) Develops standard accrual systems and audit procedures.

(e) Analyzes reports of auditing departments of local units. (f) Supervises technical instruction of accounting and auditing personnel.

GENERAL PURCHASING AGENT

(a) Purchases standardized equipment and supplies on requisition of local units.

(b) Establishes standard stock records and normal inventories.

(c) Salvages surplus property.

(d) Supervises technical instruction of purchasing personnel.

INVESTMENT COUNSEL

(a) Advises local unit management in regard to purchase of securities for investment portfolio.

(b) Supervises technical instruction of investment personnel.

100136—30—vol 2, pt 9——5

GENERAL TRUST OFFICER

- (a) Establishes standard trust account records.
- (b) Reviews investments made for trust accounts.
- (c) Supervises technical instruction of trust personnel.

GENERAL CREDIT MANAGER

- (a) Reviews financial programs of all local units.
- (b) Analyzes characteristics of local deposits and loans.
- (c) Assists in the development of standard program for conversion of funds-
- (d) Specifies items for secondary reserve.
- (e) Tests "turnover" and diversification of loans in unit institutions.
 (f) Checks "follow-up" of slow and doubtful lines.
- (g) Establishes standard set-up for credit files.
- (h) Analyses reports of examination by State or national examiner, of clearing house.
- (i) Assists, when required, in examination by examining committee of board of directors of local unit.
 - (i) Supervises technical instruction of credit personnel.

SUPERVISOR OF BUILDINGS

- (a) Assists in the construction and operation of buildings owned by local units.
- (b) Leases or sells vacant quarters not required by the activities of the group.
 - (c) Supervises technical instruction of building management personnel.

GENERAL COUNSEL

- (a) Handles all legal matters affecting the group as a whole.
- (b) Advises local units in the handling of income and personal property taxes. (c) Supervises placing of fidelity, fire and other forms of insurance in copnection with the property and business of the local units.

EXTRA COMPENSATION PLAN

Financial incentive has proved most effective in producing results, according to the experience of the larger New York and Chicago banks.

In order to insure that the local management of each local unit shall main tain the keenest possible interest, in the economical operation of the institution entrusted to its direction, as well as contribute to the general welfare and progress of the group as a whole, an extra compensation committee has beep established by the board of directors with instructions to recommend, early in 1930, a definite profit-sharing or extra compensation plan for all local units.

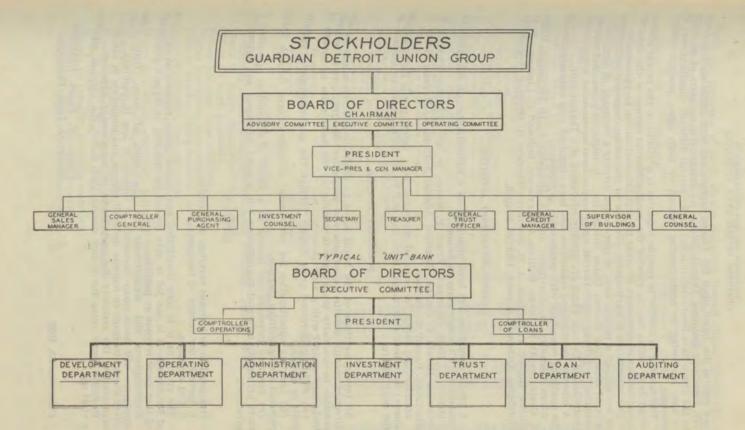

The following have been elected members of the extra compensation committee:

Clarence H. Booth, chairman; Roy D. Chapin, Murray W. Sales, Edwin B. Nelson, Hal H. Smith.

TRUST COMPANY ACTIVITIES

In order to provide the highest possible type of investment counsel for the Union Guardian Trust Co., a trust investment committee, composed of directors having an outstanding reputation in the mind of the public for experience and conservatism, none of whom are active operating officers, has been established and will include:

Henry E. Bodman, Walter O. Briggs, Roy D. Chapin, Luman W. Good enough, Charles H. Hodges, Richard P. Joy, Alvan Macauley, Fred T. Murphy, Ralph H. Booth, Harry C. Bulkley, Edsel B. Ford, Sherwin A. Hill, Hobart Hoyt, Wm. Kales, Charles S. Mott, Hal H. Smith.

BUSINESS DEVELOPMENT ACTIVITIES

A central file, based upon the Findex system, has been established in room 777, Penobscot Building, Detroit, Mich. All commercial accounts of all units in the group have been cross-indexed under several different classifications; as to size, borrowing or nonbarrowing, branch or main office, possible related business, etc.

Information in answer to specific inquiries is available to the proper officers of all local units; but, in view of the semiconfidential nature of the data, no complete lists of customers, or other blanket information can be furnished.

The central file is particularly effective in preventing improper solicitation by one unit of a person, firm, or corporation already a customer of some other unit of Guardian Detroit Union Group, Inc. It ought to prove increasingly valuable in helping out-of-Detroit units secure local accounts of corporations controlled in Detroit which are already customers of a Detroit unit.

A business development committee has been organized as a subcommittee of

the operating committee with membership as follows:

Alvan Macauley, jr., chairman; John A. Reynolds, L. H. D. Baker, Harry S. Covington, C. M. Beers, William A. Mayberry, Emanuel C. Lindman, R. O. Bisbee, Russell T. Jackson, A. B. Pfleiderer, Herbert H. Gardner, Andrew D. Hotchkiss, Andrew C. Lassen, Charles French.

CREDIT DEPARTMENT ACTIVITIES

A credit committee has been organized as a subcommittee of the operating committee with membership as follows:

Orville L. Hatt, chairman; Frank P. Evans, jr., B. F. Saylor, Charles M. Spinning, Gerald F. Collins, Griswold Adams, Norman H. Moysey, Harry C. Blackman, Russell T. Jackson.

Standardized forms for personal statement, etc.; notes; credit file; analysis sheets; have been determined upon and will be available, upon requisition, in the near future.

BUDGETARY CONTROL

As future meetings of the board serve to crystallize in the minds of the directors certain definite aspirations and ideals for the group, it is believed possible to gradually inaugurate in certain of the local units as system of budgetary control with a view to-

(a) Securing increased gross income through the establishment of definite

goals or quotas.

(b) Locating opportunities for curtailment of expenditures through fixing

personal responsibilities therefor.

(c) Securing increased net income as a result of economical operation, \$\beta\$ more accurately informed management, and a more intelligent and aggressive personnel.

EXPENSES

Our problem to increase earnings is twofold:

1. Increase our volume of business.

2. Cut expenses.

The group as it is now constituted has annual gross revenue of upwards of \$30,000,000—it is our job to save for net income just as large a percentage

of that gross revenue as possible.

Extravagance and wastefulness on the part of more than 4,000 employees will mean many thousands of dollars of loss in earnings. Every effort should be made to impress upon all officers and employees in the entire organization, the necessity for curtailment of unnecessary expenses.

Probable lower rates for money during 1930 makes the expense question

a vital one.

FRANK W. BLAIR, Chairman. ROBERT O. LORD, President.

COCCOCCEBBE

DECEMBER 31, 1929.

PRESENT STATUS OF PROGRAM

Upon the exchange of stock of the Guardian Detroit Union Group (Inc.) for stock of Union Commerce Corporation, the group corporation will own the following financial institutions (either directly or indirectly):

PURPOSES

In the past decade, banking like industry has felt the economic pressure toward larger units and closer connection of units. The progress of business has emphasized the interdependence of communities within the same industrial area, and has shown the need for a more comprehensive banking service.

The purpose of the group has been to gather together under unified ownership outstanding banks, trust companies, and financial institutions in the leading industrial and commercial centers of Michigan to the end that—

1. Industry, commerce, and the individual shall be better served, by a strong and progressive group of banking and financial institutions, whose directors and officers have a clear and sympathetic understanding of the needs and problems of business in the vast industrial region of lower Michigan-one of the most important manufacturing districts in the world.

2. There shall be retained for Michigan and for its cities the banking resources and deposits which might otherwise of necessity go in substantial

amounts to financial centers outside of the State.

3. Further growth and development in Michigan shall be aided and fostered

by Michigan institutions and by Michigan capital.

The practical advantages which the group offers are many. Each unit institution is associated with the group company having aggregate resources many times greater than its own, giving the depositor even greater assurance of the safety of his funds. The larger local corporations need no longer go elsewhere for such loan accommodations as they may need. If individual units of the group do not have sufficient legal loaning capacity to provide for the requirements of the large corporations, the other units of the group should be able to take care of these requirements.

Depositors will have available the credit information and the financial and investment service of a larger organization fully equipped to render such service. The group through its units and through its outside relationships Provides contact with innumerable types of business and cooperates in develop-

ing new business for customers.

POLICY OF MANAGEMENT

From its inception Guardian Detroit Union Group (Inc.) has stood committed to the fundamental policy of developing the standing and prestige of local management and has placed the responsibility of such management upon the local boards of directors and local officers.

Article VI of the by-laws of the group provides:
"Whenever at any meeting of the stockholders of a bank or trust company of which this corporation shall at the time own 75 per cent or more of the Outstanding stock, an election of a board of directors is held, the shares of Such bank or trust company owned by this company shall be voted in favor of the election of a board of directors of which at least 75 per cent shall consist of directors residing in the municipality where said bank or trust company is located or within a radius of 50 miles thereof."

To further carry out these policies, the board of directors of Guardian

Detroit Union Group (Inc.) adopted the following resolutions:

*Resolved, That credit based upon the deposits in a local bank, which is unit member of Guardian Detroit Union Group (Inc.), shall be controlled wholly by the board of directors and the officers of the local unit bank; and "Resolved, That Guardian Detroit Union Group (Inc.), in its relationships with local banks which are unit members of the group, accepts as its sole function, responsibility and duty—to provide 'stronger support to the banks and a more secure basis for these institutions'—and the officers and staff of the group be and they hereby are directed to devote their energies and restrict their activities accordingly; and "Resolved, That the board of directors of each local unit institution in

"Resolved, That the board of directors of each local unit institution in Guardian Detroit Union Group (Inc.), is responsible for the management of the affairs of the institution in question; and that the officers of each unit institution in the group are responsible directly to the board of directors of their own institution and to no other authority, except the law."

Subject to the broad policies outlined above, the group company can perform

the following useful functions for local unit institutions:

(a) Acting as clearing-house for information bearing upon policies, practices,

and results obtained by the various member unit institutions;

(b) Systematically making available to all units the practice of the best

with a view to enabling all to reach the highest standards of operation and resultant profit;

(c) Providing expert advice at minimum cost in regard to tax and insurance matters, and extraordinary legal questions;

(d) Providing capable supervision in connection with building construction and management:

(e) Coordinating business development activities;

(f) Purchasing standard equipment and supplies in quantity;

(g) The group company should also provide an independent examining force in no way responsible for the condition which its examination discloses, to supplement the work of the board of directors of a local unit in connection with the examining responsibilities imposed by Statute.

In order to perform the above functions effectively, the following committees have been elected, by the board of directors: Advisory committee, executive

committee, operating committee.

The advisory committee is largely a policy-making committee; its member ship is comparatively small, and includes no active operating officers of any unit. This committee has, and should have entire freedom in criticizing either the policies or the management of any unit or any department of the associated institutions. Its meetings are not held on stated days, but upon the call of the chairman. Operating heads of units or departments will have the advice and assistance of this committee as to any questions under consideration.

The executive committee includes several members of the advisory committee together with other members of the board of directors who are operating men in the organizations in the group. Its duties are much the same as any executive committee, empowered to act on behalf of the board of directors.

The operating committee is made up of the operating heads of the various large units in the group. Their function is to discuss operating details, new business and other matters pertaining to direct operations of the various institutions, which would make for better and more economical operation and for the further growth and development of the units in the group.

To assist in coordinating and stimulating group activities, the following staff officers have been provided for: Manager business development, comptroller, purchasing agent, chairman bank investment committee, general trust officer, manager department of examinations, supervisor of buildings, general counsel-

RESULTS OF OPERATIONS DURING 1929

The results of operations of the above unit institutions of Guardian Detroit Union Group (Inc.) for the year ending December 31, 1929, were satisfactory in spite of the difficult condition which confronted every banking institution during the last 10 weeks of the calendar year.

Aggregate gross earnings of the units of the group amounted to_\$41,847,489.21 From which all expenses (including taxes of all kinds, and depreciation of buildings and equipment) were paid to the

Total invested capital _____ __ 81, 037, 388, 56 The Guardian Detroit Union Group (Inc.) has more than 8,000 stockholders. The Guardian Detroit Union Group (Inc.) has more than 5.000 steel business of the various units of the group, not only through the use of all facilities offered by the units but also in urging their friends to do likewise. Much of this this assistance has already been given by our stockholders for which the management wishes to express appreciation. In asking a further measure of support we are mindful that whatever benefits the units of the group is of direct benefit to the stockholders.

Acknowledgment is made of the loyal support and untiring efforts of all of our directors, officers, and employees during the past year.

By order of the executive committee,

The CHAIRMAN. I want to compliment you, Mr. Lord, on your presentation of the case to the committee. I think it covers the situation quite thoroughly.

Mr. Luce, do you desire to ask any questions?

Mr. Luce. Just a few.

A paragraph on page 17 attracts my attention. It is about two thirds of the way down the page:

The chairman suggested that it was entirely possible that certain recommended policies might be applicable to certain member-unit institutions and obviously applicable to others.

Would you go into that a little further to give us some illustrations of certain policies?

Mr. Lord. Mr. Luce, the average city bank loans an individual of an unsecured basis very rarely. The country bank must do it. There is an example of a policy which would apply in Detroit which would not apply in a smaller community.

Mr. Luce. Would that extend to the charging of different rates of discount?

Mr. Lord. Our unit banks determine their rates and other policies for themselves. We have never attempted to direct them as to rates. They fix them themselves as though they were unit banks.

Mr. Luce. Would not the system of branch banking present a different situation?

Mr. Lord. I think it would. I think branch banking would materially reduce the rates of interest charges in the smaller communities. In our own group we have no very small communities.

Mr. Luce. Then we will set that down on the credit side for branch

banking ?

C.B.

,f

g,

Mr. Lord. Yes, sir.

Mr. Luce. Is the same statement applicable to the rate of interest

Paid to depositors on balances?

Mr. Lord. In our group we have some banks that pay 4 per cent on savings and some that pay only 3. We have never disturbed their old-established rates. There are some cities known as 4 per cent cities and some as 3 per cent cities, throughout Michigan.

Mr. Luce. Is there any justification for that difference?

Mr. Lord. I think where they are 4 per cent cities the customers, in

borrowing, pay the difference.

Mr. Luce. I notice in the pamphlet, the annual report for 1929, that there are listed, as a part of this organization, seven securities companies. What is their function? That will be found on page 6 of the annual report.

Mr. Lord. Their function, Mr. Luce, is the purchase and sale of investment securities. The reason there are so many is that some of

the existing units had their own securities company.

The Bank of Detroit had its securities company.

The Grand Rapids National Bank had its securities company.

The National Union Bank of Jackson had its securities company.

The First National Bank of Kalamazoo had its securities company. We have left those securities companies as small local institutions tied into the parent institution.

Mr. Luce. Am I to understand that the securities institution has

no other function than to buy and sell bonds and securities?

Mr. Lord. Yes, sir.

Mr. Luce. And that covers corporation notes?

Mr. Lord. Yes, sir.

Mr. Luce. Is it not an economic waste to have seven different organizations doing that?

Mr. Lord. I should say it is.

Mr. Luce. It has been alleged that securities companies affiliated with banking institutions result at times in the purchase of—well, I do not want to say "questionably," but less valuable securities than would otherwise be bought, by reason of the fact that if offerings are not taken up no more offerings are made. How about that?

are not taken up no more offerings are made. How about that?
Mr. Lord. Applying it to our own group, Mr. Luce, we do not force any of our securities offerings on any unit in the group. They can either take them or reject them. There is no question of pressure

whatsoever brought upon them.

Mr. Luce. Supposing your group comes to the conclusion that some industry or some locality is particularly promising in the way of investment. Does this set-up warp their judgment at all in that matter?

Mr. Lord. I do not think so, Mr. Luce. We do not lend money to our securities companies except on the same basis as outsiders; and, in fact, I think we are a little bit harder boiled with them.

ba

Vo

80

M

10

a

Mr. Luce. There is that possibility, however, that the judgment

may be biased in this or that direction?

Mr. Lord. There is that possibility.

Mr. Luce. There is the further criticism—and I am not advancing these criticisms as indicating the amount of weight that I am attaching to them, but simply to fortify myself in answering questions—the general criticism is (the one that arouses the most apprehension among most of the Members of Congress and in certain parts of the country) that both of these systems, group and branch banking, tend to drain the money out of the smaller communities and take it into the larger centers where more profit is to be made of its use. How do you answer that?

Mr. Lord. I would answer that in this way, that we have several cases where industries in such cities as Kalamazoo and Port Huron must, at certain times of the year, borrow more money than all the banks in those cities can give them. Instead of the Guardian Detroit Union Group draining the funds from those cities, they are loaning those industries money, rather than have them go to New York

or Chicago and centralize their business there.

Mr. Luce. Won't you explain a bit about the mechanism of doing that under a group system where you have maintained the individual units? Supposing more money is needed in Kalamazoo, for instance: How is it secured—by recourse to a single bank in Detroit?

Mr. Lord. By recourse, in this case, to the Guardian Detroit Bank. We have a loaning capacity, under the State banking laws, in the Guardian Detroit Bank, of \$1,600,000, which is more than any indus-

try in Kalamazoo needs at one time.

Mr. Luce. Frankly, to a layman, this looks like a cumbersome form of organization which would not stand the test of time. Do you think you can hold out against branch banking?

Mr. Lord. We have both branch and group banking, Mr. Luce. We have 72 branches within our group right now. I think we can hold out, if we keep them as units, against branch banking.

Mr. Luce. It looks to an outsider as though branch banking is a

simpler way to meet the situation.

Mr. Lord. It is.

Mr. Luce. And, of course, the simpler and cheaper form, in the long run, wins out. Is it possible that you may look upon group banking as a step toward branch banking?

Mr. Lord. I think it is. Mr. Luce. That is all.

Mr. Wingo. I have been somewhat interested in the practical benefits of your set-up. As I gather, you have three different provisions in your holding company, through which the benefits of your holding company are extended to individual units; that is, your advisory and your executive committee and operating committee. That is true, is it?

Mr. Lord. Yes, sir.

Mr. Wingo. What do you understand are the benefits which your set-up affords which can not be furnished by the individual unit

banker or which your set-up can afford to a greater degree, both in volume and in safety?

Mr. Lord. As against the unit bank?

Mr. WINGO. Yes.

Mr. Lord. I think the greatest example that we have had in our experience of the benefit of a group organization came when 20 or 22 employees of the Union Industrial Bank at Flint stole a total of \$3,600,000 from that bank. We were fortunate in having as the head of that bank Mr. Charles S. Mott, vice president of the General Motors Corporation. Mr. Mott immediately put up the funds to take care of that defalcation. Had he not done it, the group company would have done it. The day after the defalcation was discovered, we had 35 bank officers, tellers, and clerks in there running that bank, and without such support that bank would probably have closed.

Mr. Wingo. That was but a repetition of what has been done more than once by the Federal reserve bank at Kansas City in that ter-

ritory.

Mr. Lord. The Union Industrial of Flint is a State bank.

Mr. Wingo. Mr. Mott did take care of it.

Mr. Lord. Yes.

Mr. Wingo. And he was the president of a unit bank, and he took care of it.

Mr. Lord, He was the chairman of the board.

Mr. Wingo. But he was the head?

Mr. Lord. Yes, sir.

Mr. Wingo. The responsible head of the institution. But what I was thinking about was a general benefit. Of course, the benefits of a banking system are twofold: One is the service that is afforded to the depositors and borrowers in the community in which it operates, and the other is the means of profit to the stockholders. Now, measured by that, do you think that your set-up affords a larger measure and a greater degree of safety, both to the depositors and to the borrower in the communities in which your units operate?

Mr. Lord. Yes, sir.

Mr. Wingo. Aside from furnishing a larger reservoir of capital. I am wondering if the benefits you have in mind include the advisory and operating group benefits.

Mr. LORD. I think they do.

Mr. Wingo. As I understand your advisory group in your holding corporation, that is the group that gives direct study to the general policies?

Mr. Lord. Broad policies.

Mr. Wingo. Broad policies, not only of your own holding corporation, but the broad policies that shall aid and insure the security and the prosperity of each unit in the group?

Mr. Lord. Yes, sir.

Mr. Wingo. And necessarily they have to consider the peculiar problems that concern each unit bank?

Mr. Lord. Yes, sir.

Mr. Wingo. And they, as well as the operating committee, have

to consider the operations of each unit; do they not?

Mr. Lord. The advisory committee do not go into the detailed operations of the separate units. That is done by the operating committee.

Mr. Wingo. You stated that your advisory committee concerned itself only with the consideration of the broad questions which affect the policy of the group as a whole. I interpreted that statement to refer not to your holding corporation but to the individual unit that compose your group, and you used the word "group." It concerns itself, then, with the broad questions which affect the policy of each unit of your group?

Mr. Lord. Yes, sir.

Mr. Wingo. You further stated that the executive committee is limited in its activities to functioning in lieu of the board during the intervals between regular quarterly meetings for the purpose of what I was discussing with you, but there is no use to pursue that further. In other words, it functions in the absence of your full board.

Mr. Lord. We have a board of 48 members, and it sometimes is

difficult to get 48 men together.

Mr. Wingo. In other words, in the absence of the board, it simply performs the ordinary functions of an executive committee?

Mr. LORD. That is right.

Mr. Wingo. And it takes authority to act within the broad confines of the general, well-known policy?

Mr. Lord. Yes, sir.

Mr. Wingo. And then you went on and said that the operating committee is intended to be the instrumentality to which the operating heads of the various unit members bring their day-to-day operating problems. I presume, then, that your operating committee is your real committee?

Mr. Lord. Yes, sir.

Mr. Wingo. And your real agency whereby your local units and your local communities are benefited by your organization, other than through that reservoir of capital?

Mr. Lord. Yes, sir.

Mr. Wingo. We will just eliminate that broad benefit which you claim through a larger reservoir of capital, and we will now speak of the other benefits. I take it that the operating committee is the one that really has the practical working out of the extension of these benefits, and I am interested in how that can be demonstrated as being true other than in theory, so I want to ask you this: You say that they bring to that committee their day-to-day operating problems; do you mean that they confine their advice, assistance direction and discussion with the local directors to the policies of that local unit, or do they go into a discussion with them in order to aid them and advise them in reference to the actual detailed operations of the bank?

Mr. Lord. More the detailed operations, and, in explanation of that statement, one of the first things that the operating committee undertook was to educate the unit banks as to a proper credit file and investigation of credit. If you have ever been in a country bank and tried to find a credit file, you have probably found out that it is usually on the cuff of the president of the bank, and when the personnel changes, it is almost impossible for a new officer to have a complete and satisfactory understanding of the demands of the credit situation, and so they had a committee made up of various members from the units, who studied the question of credit files.

form of unsecured notes, and form of collateral notes, and that committee turned its recommendations in to the operating committee and the units were given the privilege of accepting this information and studying it, and I think most of them did.

Mr. Wingo. That is what you might call the mechanics of your

credit agency?

Mr. Lord. Yes, sir.

Mr. Wingo. In other words, advising them how they could maintain accurate information, readily available, with reference to any depositor or borrower?

Mr. Lord. Yes, sir.

Mr. Wingo. Is that all? Do you not give any greater benefit? Let us assume that here is a board of local directors that is dealing with a local manufacturing concern, and a board of local directors are not satisfied as to their judgment with reference to the line of credit to give to that particular established manufacturing concern; would your operating committee or your advisory committee confer with your local board or with your local officers that are managing the bank in fixing the amount of credit to be given to this manufacturer?

Mr. Loro. I should say that the operating committee would secure the information and data on that industry and on the particular company, and it would be sent back to the local bank and the local board of directors would then decide whether or not their bank

should lend this company money; and if so, how much.

Mr. Wingo. That is your hypothetical opinion. In actual experience, has your operating committee ever rendered any such service or assistance to a local unit?

Mr. Lord. The operating committee as such has not, but our own

redit department has frequently done so for the unit.

Mr. Wingo. Here is the thought I had in mind: Here is your active vice president, or your cashier, or maybe the whole board, in some local bank that is considering whether or not they shall extend a certain line of credit to, say, the ABC Stepladder Co., located in their town. Do you know whether or not, in a case like that, the local bank, either through its cashier or managing vice president or other officer or its board, consults with your holding corporation, or the advisory committee or the operating committee?

Mr. Lord. For the sake of speed I would say they would come

direct to the Guardian Detroit Bank and its credit department.

Mr. Wingo. I am talking about your opinion about what might happen; I am asking you whether or not you have any knowledge in actual operation of such benefits as you contend in theory might flow from your set-up to the local unit, whether or not such benefits have been extended or such service has been rendered to them.

Mr. Lord. It has, many times.

Mr. Wingo. Well, do you recall whether or not where a new business was being started the question came up whether or not this local unit should undertake to meet their credit needs, or whether or not they would undertake to send the request to a larger bank in the parent bank city or somewhere else, or whether or not they would undertake to act as their agents in procuring the larger line of credit for them? Has such a situation as that, to your knowledge, practically arisen and been passed upon by your group or organization

ment units It

3+

18

and, if so, has it been the advisory board or the operating committee that passed on it and extended help?

Mr. Lord. To my knowledge it has not happened in the case of a new industry, but it has happened frequently in the case of established industries.

Mr. Wingo. What benefit is your operating committee to the local cashier or the local loan committee, say, of your board in determining whether or not the line of credit that they already had extended or the line of credit that they contemplate extending to a given customer is wise?

Mr. Lord. The operating committee is not necessarily made up of credit experts. If the question came up of the credit of a corporation, it would immediately be referred to the credit department either in the Guardian Detroit Bank or the National Bank of Commerce or the Bank of Detroit, or all of them, to find out and assemble all available information on that corporation. It would be referred immediately to credit experts rather than to operating men.

Mr. Wingo. I do not know whether I have made myself clear. I am not trying to get into any argument with you, but you have given the theory and I want the answer, if you have any as a result of your practical experience. Here is a little unit bank in one of your communities, and here is a proposed and particular loan of a particular borrower; do you know whether or not that bank has ever had the practical benefit of the assistance of the holding company on any such particular loan?

Mr. Lord. They have had the practical benefit and assistance of other members of the group on those loans.

Mr. Wingo. I am not talking about a particular industry, such as the automobile industry, or the plow industry, as to whether it is prosperous or not, but what I am talking about is this: When Bill Jones comes into the local bank, has the question of Bill Jones's loan and whether it is wise or unwise ever been considered at all by any part of your holding company?

Mr. Lord. There is a paper company in Kalamazoo that has need at different times in the year for as much as half a million dollars or more in money, and it comes to one of our units, the First National Bank & Trust Co. That bank has a loaning limit of less than \$125,000, and we have loaned this paper company \$250,000 for the benefit of our unit in Kalamazoo.

a o a ti

TIBLEFFE

Mr. Wingo. You say "we "?

Mr. LORD. The Guardian Detroit Bank.

Mr. Wingo. But it is not your holding corporation?

Mr. Lord. No; the holding company is not in the banking business. Mr. Wingo. Here is what I am trying to find out: In actual operation—not in theory—what practical benefit is there here to strengthen the local unit bank, by advice, say, in particular cases and not in connection with general credit policies or the maintenance of a credit file but in actual everyday operation—that either makes or breaks a bank or determines the extent to which it will serve the community in which it is operating? In other words, wherein does your concern in actual practice help the local unit; and is that help in actual practice, according to your experience and not your theory extended through the advisory committee or through the operating committee?

Mr. Lord. What is your question?

Mr. Wingo. Here is what I am trying to get at: I want you to forget the theory; I want your experience. Has your holding corporation ever been of any practical benefit to your local unit bank in exercising its judgment and passing upon any particular loan?

Mr. Lord. It has been of very considerable benefit in handling for the local banks, through other members in the group, loans for an

amount larger than that which the local bank could handle,

Mr. Wingo, I see. Do you do that through your operating com-

mittee or advisory committee?

Mr. Lord. That goes through another unit in the group. You asked about the benefits; if the Kalamazoo bank were not a member of the Guardian Detroit Union Group, the Guardian Detroit Bank would feel no obligation whatever to take the excess amount of this

Mr. Wingo. But it would if it were a correspondent, would it not? Mr. Lord. Not necessarily. It might take it if it were a corre-

spondent, but it would be under no obligation to do so.

Mr. Wingo. My little touch with a few banks has shown me that sometimes there are correspondents that are competing for business of that kind which comes from the local banks.

Mr. Lord. But the first duty of the metropolitan bank is to its own

Mr. Wingo. Then that operation does not go through your holding company?

Mr. Lord. No. sir. The holding company is not in the banking

Mr. Wingo. Your thought is that by reason of the fact that both of them are controlled by your holding corporation, naturally one of them goes to the other when it wants a larger loan handled than

the smaller bank can handle?

Mr. Lord. A request for the handling of a loan might come to me as president of the holding corporation. I happen also to be president of the Guardian Detroit Bank. It goes to the holding corporation in that way, but it ends up in one of the unit banks, because the holding corporation does not lend money. It is not in the banking business; it is merely a vehicle by which these banks in the group

are gathered in association together.

Mr. Wingo. So that is the service that your corporation has rendered where the local unit bank had an application for a larger line of credit than it was permitted to handle. But let us take a situation where the local bank is permitted to handle the loan. Let us say that I am located in one of these small communities where you have the unit banks, and that I am a customer of that unit bank and I walk up and ask for a loan of \$10,000, which is within the limit of that bank. The only question to be determined is whether or not it is safe, whether or not they should give me that accommodation. In your experience, has your holding corporation ever given that local unit any benefit or assistance in determining the course of the local bank in that situation?

Mr. Lord. The local bank would make its own loan; make its own

decision on the loan.

Mr. Wingo. We have been told and we have found by observation and some of us by experience that local banks are wrecked through improvident loans and not through corrupt practices or fraud. Now, your set-up offers no protection whatever to the local community against the wrecking of a unit bank by improvident loans, does it?

Mr. Lord. Yes; it does. We have two examinations a year.

th

Ce

m

0

hd

obtisb

Mr. Wingo. The presumption is that the examining authorities are efficient; that is a presumption of law, as you know, but, of course, they are not, and the same presumption of efficiency goes to your examiners, but in practice you will find that your examinations will sometimes fail and not be 100 per cent efficient. However, aside from that examining supervision, there is nothing in your set-up that will give any assistance to the local community against the danger of it being injured by the failure of a bank by reason of improvident loans, is there?

Mr. Lord. The holding company does not guarantee the deposits

of the local banks.

Mr. Wingo. That is not my question.

Mr. Lord. How can we give other assistance except management assistance and advice as to the amount that they should loan on real

estate or on other class of security?

Mr. Wingo. You just said that you did not give them any assistance other than on the broad general policies, that on the individual loans you give them absolutely no assistance. You just said that you did not.

Mr. Lord. The examinations point out the poor loans, just as the national bank examination points them out, and the group company, through its examining department, follow the criticized loans of their own report to see that they are taken care of.

Mr. Wingo. Who supervises that, the operating committee or the

advisory committee?

Mr. Lord. An officer of the group company, Mr. Patterson.

Mr. Wingo. Neither of the committees exercises control over him!
Mr. Lord. He is accountable only to the board of directors.

Mr. Wingo. You have a more cumbersome set-up than I thought you had.

Now, you say that you are absolutely not engaged in the banking business?

Mr. LORD. No, sir.

Mr. Wingo. You have nothing to do with the operation of a local unit bank except as to the broad policies, broad advice, and the inquisitorial and supervisory powers over your examiners?

Mr. Lord. Yes, sir.

The CHAIRMAN. You are speaking now of the holding company!

Mr. Wingo. Of the holding company, yes.

That brings me down to this question: You were saying that you were not doing a banking business, that you are simply a stock holding company?

Mr. Lord. Yes, sir.

Mr. Wingo. Then what is the justification for all of the expense of this extensive set-up, if you do nothing more than to give broad general advice and have these examinations?

Mr. Lord. There is no additional expense except the expense of

examination and the license tax of our corporation.

Mr. Wingo. Do you not have any employees of your operating committee?

Mr. Lord. Outside of Mr. Patterson and his examining corps and the secretary of the company there are no salaries paid by the group company.

Mr. Wingo. You have no clerical force for the operating company?
Mr. Lord. No, sir. The talent that makes up the operating committee is contributed by the various units, and they are paid by their own institutions. They are not drawing a salary from the

holding company.

Mr. Wingo. Then your operating committee does not have any unit of operation, with a stenographer, say, and a file, or anything else; it is just made up of these different gentlemen who are the heads of your larger banks, and they get together at intervals and discuss the situation? Is that what your operating committee is?

Mr. Lord. Putting it broadly, it is more or less of an educational committee to bring to the units the best practice, the best methods, both as to operations and as to the acquisition of business, and questions of investment of trust funds, questions as to income taxes, personal and property taxes, and the operation of the buildings owned by the banks. It is more of an advisory committee.

Mr. Wingo. I am wondering how they do it. If at any of these little gatherings a question of income-tax liability comes up, you

refer that to an attorney, do you not?

Mr. Lord. I was speaking of the make-up of the return.

Mr. Wrngo. All right. Do you furnish employees to help the local unit banks in making up their returns?

Mr. Lord. Yes; Mr. Patterson's department, or the comptroller of one of the banks.

Mr. Wingo. But Mr. Patterson's department is a department of the holding company, is it not?

Mr. Lord. That is correct.

Mr. Wingo. And it must have some stenographers and files?

Mr. Lord. Yes.

Mr. Wingo. So that you do have some expense there, do you not?

Mr. Lord. Yes.

Mr. Wingo. You are very careful to keep yourself in a position of not doing a banking business—I refer to your holding company?

Mr. Lord. We do not have the right under our charter to do it.

Mr. Wingo. I am wondering if there is anything else besides that. Have you any other reasons why in the statement which you read you were so careful to avoid any suggestion that you are engaged in the banking business? Is it because you do not want to violate the corporation laws of Michigan? Is that the sole reason?

Mr. Lord. Under the laws of Michigan, state-wide branch banking is not permitted, and our corporation was organized solely for the purpose of owning the capital stock of banks and trust companies and other corporations, and we propose and expect to live within the

powers of our charter.

Mr. Wingo. I notice you have the opinion of the Attorney General that you are not performing any of the functions of a bank. Have you any other legal opinion as to the legal status of a holding corporation such as yours?

Mr. Lord. We, of course, had our own counsel's opinion before we

went into it.

Mr. Wingo. You are not an attorney yourself, are you?

Mr. LORD. No. sir.

Mr. Wingo. And I assume you do not know whether he has any further opinions, but the real test, you can understand, as a layman, is not what you say you are but whether in reality you discharge any of the functions of banking.

bu

K

be

W

te

Mr. Lord. Yes, sir.

Mr. Wingo. Your idea of the functions of banking is the everyday routine such as the discount of notes, the paying of checks, and such as that. The General Motors Corporation is not in the motor-car business, according to your theory, is it?

Mr. Lord. I do not recall the exact corporate set-up. They have

several units.

Mr. Wingo. The General Motors Co., according to my understanding—and if I am wrong in this there are gentlemen here who will correct me—is a holding corporation that controls different corporations, like the Buick Co., and that Buick Co. with its own set-up engages in manufacturing. So, according to your theory, the General Motors Co. itself is not engaged in the manufacturing of automobiles.

Mr. Lord. I think that is correct.

Mr. Wingo. It is purely a holding corporation?

Mr. Lord. I think that is correct.

Mr. Wingo. It is no more engaged in the motor-car business than your corporation is engaged in the banking business. Do you not think that that would be news to Mr. Raskob and these other gentlemen, that they are not in the motor-car business?

Mr. Lord. I do not believe that the United States Steel Corpora-

tion is in the steel business.

Mr. Wingo. In other words, according to your theory, taking the banking business, the motor-car business, the steel business, and the dairy business—and, taking the Southern Dairy, I think they have a holding corporation—none of them is engaged in business excepting as holding and controlling and directing? Is not the greater part of the function of a bank the directing of that bank by the directors and the directing officers? They are the ones that engage in banking in my town; it is not the bookkeeper; it is not the paying teller; it is not the note teller. We, the officers and the directors, in my part of the country, are under the delusion or illusion that we are engaged in the banking business, not these employees of ours; and for all practical purposes your unit banks are nothing but employees of your holding corporation in carrying out a general policy in actual banking in their particular communities.

Mr. Lord. The unit banks are no more employees of the holding corporation in our group than any unit bank is an employee of its

stockholders.

Mr. Wingo. So they are absolutely free to do as they please?

Mr. Lord. Absolutely. If you lived in Kalamazoo and had done your business with the First National Bank & Trust Co. of Kalamazoo, so far as the conduct of your business before and after the acquisition of the stock of that bank there was concerned, you would not know that the group existed.

Mr. Wingo. What is your definition of a trade area?

Mr. Lord. I have covered it in this way:

any

man, any

vday such

-car

nave

der-

who

S.

3

e

We feel at this time that group or branch banking should, so far as our own activities are concerned, be confined to an area which, by the very nature of its business and industries, is more or less dependent upon Detroit.

Mr. Wingo. Take the case of a wholesale dry-goods company at Kansas City; what is its trade area? Would you regard Texas as its trade area? I think Texas is its biggest area of distribution.

Mr. Lord. I should say that the trade area of such a concern should be where the major part of its business is transacted. I do not know Whether a wholesale dry-goods business in Kansas City would go into Texas, but I should say, offhand, that Dallas would take a piece out of that trade area.

Mr. Wingo. You have other people right in Detroit to take something out of your trade area inside the city; that would not be the

lest as to whether you had an absolute monopoly?

Mr. Lord. No; but, following your statement, the trade area of Detroit is the world, because their motor cars are shipped all over

Mr. Wingo. That is the point I wanted to get at. A trade area

18 rather a difficult thing to define, is it not?

Mr. Lord. I think it is very difficult.

Mr. Wingo. You could not define it in a statute, could you? It would necessarily have to be left to a supervisory board or an official?

Mr. Lorp. I would think so, unless you, instead of designating trade areas, want to take the Federal reserve districts. I think it

must be made flexible and left to a supervisory board.

Mr. Wingo. What would you do with a district like mine? Parts of my district is or was in a Federal reserve district different from that in which most of the rest of my State is located, as well as my capital city.

Mr. Lord. I think there might have to be permission to overlap. Mr. Wingo. My district runs right along the State line, with the state line as an arbitrary dividing line. You see where you get. You have never heard of any business—banking or dry goods or groceries or anything else—that followed arbitrary political lines?

Mr. LORD. No.

(Thereupon the committee went into executive session, to resume its hearing at 2.30 o'clock p. m.)

Mr. Lord. Yes, sir.

Mr. Strong. Then you purposely intended to do indirectly what the law prohibited your doing directly, to quote a gentleman here present?

sh

Mr. Lord. I do not think so.

Mr. Strong. Well, your laws prohibited it and you say you created the group to evade the law. Now, is not that a correct statement?

Mr. Lord. We created this holding company and gathered together

this aggregation of banks which serve or feed into Detroit.

Mr. Strong. But you said you did it because you can not indulge

in State-wide branch banking?

Mr. Lord. I also stated that if we could do state-wide branch banking, I doubt if all the units would be taken in as branch banks. Mr. Strong. But you got up this organization because you can not indulge in state-wide branch banking?

Mr. Lord. We got it up in order to own the Highland Park State

Bank, and we had to do that to have a holding company.

Mr. Strong. In order to evade the law of your State. How many

banks were in the original group?

Mr. Lord. Our original group before there was a holding company constituted the Guardian Detroit Bank, the Guardian Trust Co., and a securities company, the Guardian Detroit Co.

Mr. Strong. Three? Mr. Lord. Yes, sir.

Mr. Strong. And you exchanged your stock for the stock of the holding company?

Mr. Lord. Yes, sir.

Mr. Strong. Who passed upon that exchange of stock?

Mr. Lord. Our counsel, Mr. Henry E. Bodman.

Mr. Strong. I mean the value of one stock for the other—who passed upon the number of shares of stock of the holding company you would give for the stock transferred to it?

Mr. LORD. Are you speaking of the original group?

Mr. Strong. I am speaking of the original group; yes, sir.

Mr. Lord. The board of directors of the banks.

Mr. Strong. When you take in another bank, who passes upon that?

Mr. Lord. The board of directors of their bank and the board of

directors of the group company.

Mr. Strong. They do not have an opportunity to pass upon the number of shares they shall receive for the number of shares they are to contribute to the holding company from the banks without the consent of your group, then?

Mr. Lord. No, sir; it is by mutual agreement. However, no stock-holder, by any action of the board of directors in the unit bank, can be forced to exchange his stock. It is a purely voluntary act of

the part of the stockholders.

Mr. Strong. They can not be forced? Mr. Lord. No, sir; he can retain the stock.

Mr. Strong. And not take stock in the holding company?

Mr. Lord. Absolutely.

com-

what here

ated ther

ilge nch

iks. not ate

iny ni-

10 1V

Mr. Lord. No, sir. Mr. Strong. Mr. Wingo was asking you a line of questions, and Your answers indicated you did not think the holding company was In the banking business?

Mr. Strong. How does he become a member of the group?
Mr. Lord. By consent of the stockholder, voluntarily. In the

In the case of the First National Bank & Trust Co., of Kalamazoo, there are 109 shares outstanding.

Mr. Strong. But the majority of the shares were taken in?

Mr. Lord. Yes, sir.

Mr. Strong. And if you control the majority of the shares, you control the bank?

Mr. Lord. But the stockholder has the same rights as before, if he

does not want to exchange the stock.

Mr. Strong. Even if he does not want to exchange the stock, enough have exchanged the stock to make a majority and that is control?

Mr. Lord. Yes, sir.

Mr. Strong. You do not need the odd shares?

Mr. Lord. That is correct.

Mr. Strong. What did you do to induce the other banks—how many are in the group now?

Mr. Strong. Have they any branches? Mr. Lord. Included in those 27 banks are 102 places of business. That would leave 75 branches.

Mr. Strong. There are 102 banks or places for business in your group?

Mr. Lord. Yes, sir-

Mr. Strong. What inducement was held out, if any, to get them

Mr. Lord. The offer of shares of the group company stock.

Mr. Strong. Are any banks ever coerced?

Mr. Lord. No, sir.
Mr. Strong. The reason I am asking you these questions is because I received a letter in the morning's mail from the Minneapolis Council of Agriculture. The writer says, in referring to a like statement made by Mr. Wakefield and Mr. Decker:

It is the opinion of the writer that if an investigation was made and an examination held into the methods used by the First National Bank and the Northwestern National Bank in acquiring control of various banks now constituting their group, that red-blooded American citizens, having pride in the honesty of the banking institutions of the country, would bow their heads in

Mr. Wingo. What is the gentlemon reading from?

Mr. Strong. I am reading from a statement, something sent to

the committee by the Minneapolis Council of Agriculture.

This indicates that the group banks of Minneapolis and St. Paul forced some of the smaller banks in their territory to join their System. Was anything of that kind done in your group?

V

te

a

0

to

8,

n

a

d

h

8

N

2

0

i

8

Mr. Lord. No, sir; I do not.

Mr. Strong. If any investments were made by any units in your group that caused the examiner to report that they were irregular and not in line with proper banking, would the officers of your group be called upon to explain them?

Mr. Lord. I would say not. The officers of the particular institution would be called upon to explain. No officer of our group has ever been called on to explain or discuss, by a State or National bank examiner, any report.

Mr. Strong. Have some of the examiners called upon your banks to make explanations of loans and investments?

Mr. Lord. Of our unit banks?

Mr. Strong. Yes.

Mr. Lord. Yes, sir; certainly.

Mr. Strong. But your holding company took no part? Mr. Lord. We were not called upon by the examiner.

Mr. Strong. And they took no part?

Mr. Lord. No, sir.

Mr. Strong. But you could imagine there might be cases?

Mr. Lord. If a serious situation arose, I imagine the group conpany might be called upon to help.

Mr. Strong. Why, if they were not in the banking business, could they be called upon?

Mr. Lord. In time of trouble, I think every agency should be called in to help.

Mr. Strong. An agency not connected with the banking business would not be called upon?

Mr. Lord. Frequently other banks are called upon to help when a

bank is failing.

Mr. Strong. They might be called upon to take some paper and put up some money, but they are not called upon for an explanation of the loans and investments?

Mr. Lord. That is correct.

Mr. Strong. But you think your group might be so called upon?

Mr. LORD. To explain investments?

Mr. STRONG. Yes.

Mr. Lord. No, sir; I think the local directorates are responsible.
Mr. Strong. But you will admit that the Comptroller of the Currency might ask your group for an explanation?

Mr. Lord. I do not know what he might do, but we would be glad to help out if we could.

The Charman. Is there any difference between your group, as a stockholder, and the individual as a stockholder?

Mr. Lord. Not the slightest that I can see.

The Chairman. The same relationship exists between your group as exists between the stockholder and any bank?

Mr. Lord. Yes, sir; absolutely.

Mr. Strong. But there is this difference, that the group holds control of the shares of the banks?

Mr. LORD. Yes, sir; that is true.

Mr. Strong. And can dominate them? Mr. Lord. Yes, sir; can dominate them.

Mr. Strong. You still think they are not in the banking business!
Mr. Lord. No. sir.

Mr. Wingo. I forgot to ask you one question. Mr. Strong, will you ask him this question at this point—what business do you contend you are in; what classification would you give it, if you had to answer some of these census or other comparable queries?

Mr. Lord. We are operating under the general corporation laws

of the State of Michigan as a holding company.

Mr. Fenn. There are some of us, Mr. Chairman, who are waiting to ask questions.

Mr. Wingo. I will withdraw the other question I had in mind. Mr. Strong. Do you also accept in your group only, such banks as

are making money?

vour

rular

roup

tituhas

onal

anks

oni-

he

1855

11 11

ind

ion

ad

:1

: 9

Mr. Lord. Up to date, we have accepted only such banks as are making money. We have had innumerable banks come to us and

ask to be taken into the group.

Mr. Strong. Then, your group banking does not provide a way to do away with the weak banks of the country. The statement has been made here that branch banking will eliminate the weak banks of the country. Your group banking does not propose to do that?

Mr. Lord. If all of the banks of the State of Michigan were in strong groups or strong banks, I would say that the weak banks

would be eliminated.

Mr. Strong. But you will not let the weak banks into your organi-Zation. That being so, how are you going to take care of the weak ones? You say you are only taking in those that make money?

Mr. Lord. That is correct.

Mr. Strong. And the weak bank has no chance to get into the

Mr. Lord. Unless we want to take them in.

Mr. Strong. That argument, then, does not apply to group bank-

ing that it will help the weak bank?

Mr. Lord. It applies to the community in which we are operating and to the institutions we own. We can not own all of the banks. Mr. Strong. You say you did not admit any except those that make money. The weak banks have no haven of refuge in your

Mr. Lord. Do you think they should have?

Mr. Strong. Do you not think some system should be devised where the people in the country should be served with banking facilities and should have such facilities?

Mr. Lord. I do not think there should be any law requiring a strong bank to take in a failing institution, whether a bank or other-

Mr. Strong. Do you think we should allow banking to fall only into the hands of the strong institutions and the weak banks be left out in the cold so that there would be people with no banking service?

Mr. Lord. After all, in any kind of business, it is the survival of the fittest and the weak ones will fail, whether they are in the automobile business, in the dry goods business, or in the banking business.

Mr. STRONG. Then you think there is no difference between the Government's charge of banking and the automobile business?

Mr. Lord. So far as the weak and strong are concerned. Mr. Strong. You think the Government ought to sit idly by and let you form strong groups and fail to take in the small communities of the country that need banking, and build up your groups, and let the others fail?

Mr. Lord. I think the Government should allow the strong groups to go into communities where there are weak banks, so that the cour munities can do business with the strong banks.

Mr. Strong. Is there any one interfering with your taking over

the weak banks? You do not let them in your system.

Mr. Lord. We do not want them,

Mr. Strong. You control the clearing house in your city, do you not?

Mr. Lord. Our group? Mr. Strong. Yes.

Mr. Lord. No, sir; the Detroit Bankers Co. have greater resources than we.

Mr. Strong. Are they also a banking group?

Mr. Lord. Yes, sir.

Mr. Strong. What are the little banks in the small communities going to do if your groups control the banks in the city? They are pretty nearly forced out of business, or have to join your group, are

Mr. Lord. There are small independent banks in Detroit making

Mr. STRONG. But in the small communities, are they not em

barrassed because you control the banking in Detroit? Mr. Lord. No, sir; the little bank would not get any business in Detroit any way if they are out from Detroit, whether we have \$

group or whether the Detroit Bankers Co. have a group.

Mr. Strong. You do not think the little bank out from Detroil would be embarrassed in any way from the fact that, in Detroit and in the other cities of your State, your different groups control the banking business?

Mr. Lord. Not the slightest.

Mr. Strong. How many banks in this group of yours are branch

Mr. Lord. Do you want me to read them or count them? The City National Bank & Trust Co. of Battle Creek has 1 branch.

The National Bank of Commerce of Detroit has 20.

The Grand Rapids National Bank has 8.

The National Union Bank & Trust Co. of Jackson has 1.

The Capital National Bank of Lansing has 1.

The Second National Bank & Trust Co. of Saginaw has 1.

The Bank of Detroit, of Detroit, has 20. The Union Industrial Bank of Flint has 9. The Highland Park State Bank has 7.

The Federal Commercial & Savings Bank of Port Huron has 4.

The Union State Bank of Dearborn has 2.

The Jefferson Savings Bank of Grosse Pointe has 1.

Mr. Stevenson. That totals 75 Mr. Lord. Yes, sir.

Mr. Strong. Are there any chain banks in your group?

Mr. Lord. How do you define a chain bank? Mr. Strong. Where one or two men own a bank. They may join your group? intermed from salt of take or tief the square mores or of the

Mr. Strong. I think that is all.

The CHAIRMAN. Mr. Brand, it is your turn.

Mr. Brand. I yield to Mr. Fenn.

Mr. Fenn. I have only one or two questions to ask. You said, Mr. Lord, that Michigan did not allow branch banking?

Mr. LORD. Not state-wide but within the municipality.

Mr. FENN. Yes. Now, you said to Mr. Strong, in reply to the interrogatories he directed to you—it seemed to me your rather agreed to his statement, as I listened to your answer—that you had formed this group in order to evade the laws of the State of Michigan?

Mr. LORD. I did not agree to that statement. He took it for granted. We have never intended to evade that law.

Mr. Fenn. I took your answer the same as you have explained it. Let me ask you a little about the stockholders of this organization of yours. Is the stock in these banks which make up your association owned by the stockholders of the respective banks or owned by the association?

Mr. Lord. Owned by the Guardian Detroit Union Group (Inc.),

except the directors' qualifying shares.

Mr. FENN. Just the directors' qualifying shares?

Mr. Lord. Yes, sir.

Mr. Fenn. When you make an issue of stock-I understand you are capitalized at \$50,000,000, but you have issued \$32,000,000-

Mr. LORD. Between thirty and thirty-one million.

Mr. Fenn. In what way, if you see fit to issue that treasury stock balance that is in your treasury—the unissued stock—how do you get that out? Is that issued for the purpose of taking in other banks as you see fit, or issued to the general public?

Mr. Lord. It may be issued for the purpose of taking in other banks, in which case, upon a three-fourths affirmative vote of the board of directors of the group company, it can be so issued without

offering it to our stockholders. If it be issued for cash and the cash should be used for any other purpose, or buying other banks for cash, then it is necessary for us offer the stock first to our own stockholders.

Mr. Fenn. By your own stockholders, do you mean individuals or

Mr. Lord. Individuals.

Mr. Fenn. Then it does go to individuals?
Mr. Lord. Absolutely. I thought you were speaking of the unit bands. The stock of the group company is owned largely by indi-

The CHAIRMAN. You spoke this morning of the stockholders of he holding group agreeing to the double liability.

Mr. LORD. That is correct.

Mr. Fenn. May I pursue my interrogation, Judge Letts.

In your list of stockholders given, there is a schedule of percentages and number of stockholders, we will say, of New York. I presume that applies to New York City.

Mr. Lord. Yes, sir.

Mr. Fenn. And then there is the eastern part of the country, and other sections. You have given it all very clearly in your history there. So I take it that these are individual stockholders of the group company?

Mr. Lord. Yes, sir.

Mr. Fenn. Then, can that stock be bought and sold on the exchanges, or disposed of by the individual owner as he sees fit and when he sees fit?

Mr. Lord. At any time.

Mr. Fenn. This is a little different from the northwestern and the other banking group in Minneapolis. There the banks making up that group, as I understood it, transferred their stock to the group center, and the group center owned the thing, and there were no private stockholders or personal stockholders or individual stockholders. But in your case the individual stockholders own their stock and can transfer or sell it or dispose of it as they see fit.

Mr. Lord. Of the group company, and the group company, in turn,

owns all or practically all of the stock of the unit banks.

Mr. FENN. And gets it in that way?

Mr. Lord. Yes, sir.

Mr. Fenn. What would be your course in case one of your banks became unfortunate, either through bad investments or lack of proper management, or for any other reason, and, in the phrase of the street, fell down? What would you do in that case if you had a bank of that kind that was going to smash or had gone to smash?

Mr. Lord. The group company would put up cash to make it

good.

Mr. Fenn. Would put up the cash to make it good?

Mr. Lord. Yes, sir.

Mr. Fenn. Is that provided for in your articles of incorporation Mr. Lord. It is not provided for, but that is the law of self-preservation.

Mr. Fenn. I see that you have a couple of joint-stock land banks

in your group ownership. Mr. Lord. Yes, sir.

Mr. Fenn. Are they subject to the same surveillance and supervision that your other units are?

Mr. Lord. They certainly are.

Mr. Fenn. How did you happen to go into the joint-stock land banks?

Mr. Lord. The Union Joint Stock Land Bank-

Mr. Fenn. There is another bank of that name in Cleveland?

Mr. Lord. Yes, sir.

It was organized by the Union Trust Co. of the Detroit group. That bank has been in existence for a great many years, and has been operated and controlled by the same crowd.

Mr. FENN. In this double liability of yours, does that apply to

State banks the same as national banks?

Mr. Lord. Yes, sir.

Mr. FENN. Is that the law of Michigan?

Mr. Lord. Yes, sir.

Mr. Fenn. I ask that question because some States do not have double liability for their State organizations.

Mr. LORD. Michigan has.

Mr. FENN. I think that is all. Mr. Stevenson. I only want to ask one or two questions along the line Mr. Fenn was speaking about. When a bank of your group, that he was asking about, goes bad, you say it is up to the group corporation to make it good? There is no legal obligation to make it good?

Mr. Lord. None except the double liability of a stockholder. Mr. Stevenson. Any stockholder owes double liability?

Mr. Lord. Yes, sir.

Mr. Stevenson. In your argreement I understand that liability is assumed by the stockholder in the holding company?

Mr. Lord. Yes, sir.

Mr. Stevenson. You take it out of the stockholder in the group

company and put it over in the till of the weak bank?

Mr. Lord. Mr. Stevenson, before an assessment would be levied on the stockholder of the group company, the resources of the group company would be used.

Mr. Stevenson. Of course.

Mr. Lord. To protect any failing bank.

Mr. Stevenson. At least you would go far enough to see if it was necessary to levy an assessment?

Mr. Lord. Yes, sir.

Mr. Stevenson. The assessment would be levied by the State authorities on the stockholders of the group company?

Mr. Lord. Yes, sir; or by the national authorities in the case of a

national bank. Mr. Stevenson. Have you any authority for levying the assessment, or is it merely a matter of contract between the stockholder

and the group company? Mr. Lord. I should say it is a matter of contract with the stock-

holder of the group company, inasmuch as that provision is a part of the stockholder's certificate. Mr. Stevenson. It is part of the contract; yes, but it is purely a contractual and not a statutory liability.

Mr. Lord. That is the way I understand it.

Mr. Stevenson. The liability on the holding company, however, is a statutory liability in Michigan, as I understand it.

Mr. LORD. The holding company takes the place of the individual stockholder and there is the further protection that the stockholder of the holding company assumes that liability.

Mr. STEVENSON. That is all.

Mr. Wingo. While I think of it, is there anything in the record show what State your corporation is incorporated under?

Mr. Lord. Under the laws of Michigan.

The Chairman. Mr. Beedy, you are next.
Mr. Beedy. Of course, I can not ask any questions, because I did
not hear the original statement.

The Chairman. Mr. Letts, you are next.

Mr. Letts. Mr. Lord, can you tell us how many banks you have in the State of Michigan?

Mr. Lord. We have 27 banks and/or trust companies.

Mr. Letts. I do not mean your group.

Mr. Lord. How many there are altogether?

Mr. Letts. Yes.

Mr. Lord. I can not answer that question.

Mr. Lerrs. Do you happen to know how many national banks there are?

Mr. Lord. No; I do not know. I can give you the total resources,

but not the number of banks themselves.

Mr. Lerrs. Then tell me how many banks there are, State and national, in the city of Detroit, including branches. How many banking places or banking offices are there in the city of Detroit?

Mr. Lord. I can not tell you that; they have been closing branches

so rapidly.

Mr. Letts. You can approximate it, of course.

Mr. Lord. I should say that there are, including our own group, between 250 and 275 places doing a banking business; probably nearer 300.

Mr. Lerrs. How many banks do you have in your group in the

city of Detroit?

Mr. Lord. We have the Guardian Detroit Bank, National Bank of Commerce, Bank of Detroit, Michigan Industrial Bank, Union Trust Co., and the Guardian Trust Co.; and the Guardian Trust Co. and Union Trust Co. have been consolidated into the Union Guardian Trust Co., a single institution.

Mr. Letts. Are there other banks there as large and as strong as

these?

Mr. Lord. Yes, sir. In the metropolitan district of Detroit, the Guardian Detroit Union group represents deposits of about \$290,000,000; the Detroit bankers group represents deposits of approximately \$560,000,000; and miscellaneous banks represent deposits of approximately \$165,000,000.

Mr. Letts. I notice in your statement that on March 27 just past, your group controlled 2 joint-stock land banks, 9 security companies, and 1 title guaranty company, as well as 2 building companies and 1 safety deposit company. Tell us what these security

companies are.

Mr. Lord. The security companies are the Bancdetroit Corporation, which was a subsidiary of the Bank of Detroit, having a capital stock of \$1,000; the Guardian Detroit Co., which is a securities company, having a capital stock of \$5,000,000; the Guardian Holding Co., which has a present capital of \$1,000,000; Keene-Higbie & Co., having a capital of \$1,000,000; Grand Rapids National Co., having a capital of \$40,000; Union & Peoples Co. of Jackson, with a capital of \$70,000; the F. N. B. Securities Co., Kalamazoo, with a capital of \$150,000; and the Guardian Detroit Co. of California, with a capital of \$10,000.

Mr. Letts. Were all of these security companies in existence at the time your group was started?

Mr. Lord. Yes, sir.

Mr. Letts. Were they affiliated with some of these companies that are now in your group?

Mr. Lord. They were all affiliated when our group was put

together.

Mr. Letts. With some one or other? Mr. Lord. With one or another.

Mr. Lerrs. What is the nature of the business done by these com-

Mr. Lord. The purchase and sale of bonds and investment stocks. Mr. Letts. Now, coming to the title guaranty company, is that the only title guaranty company in Detroit?

Mr. LORD. No, sir.

Mr. Letts. How many are there?

Mr. Lord. There are two.

Mr. Letts. Is this a strong company, or an old company?

Mr. Lord. Yes, sir; it has been in business for quite a number

Mr. Lerrs. You mentioned two building companies. What busihess do they engage in?

Mr. Lord. Those corporations are merely corporations for the purpose of owning the bank buildings, which are office buildings.

Mr. Letts. They do not deal in real estate? Mr. Lord. No, sir.

Mr. Letts. I suppose that this safety-deposit company does the kind of business that its name indicates?

Mr. Lord. Yes, sir.

Mr. Letts. Do you see a possibility of controlling many lines of business that are not banking in nature?

Mr. Lord. I do not see any possibility of controlling them; no. These securities companies are in business to buy and sell invest-

Mr. Letts. I see on page 13 of your statement that you mention as one of the advantages to be gained by the group system the fact that the group provides contact with innumerable types of business and cooperation in developing new business for clients.

Just what do you mean by that?

Mr. Lord. We have on the books of the Guardian Detroit Bank a great many accounts of steel corporations all over the country. They want contact with the manufacturer and the users of steel, and we can give them that contact. We can not sell their goods, but We can open doors for them.

Mr. Letts. Can you close doors for them? That is the thing I am interested in. Do you see any real danger that groups may close

the doors of industry? Mr. Lord. No, sir.

Mr. Letts. In other words, one of the fears that I have is that the groups may become so strong that it may be practically impossible for men going single handed and alone to finance their affairs unless they submit to the will of those that control the banking Policies of the community.

Mr. Lord. Mr. Letts, I do not know of any bank, in the years ! have been in them, that has not been willing to loan to an individual or a corporation where that individual or corporation is entitled to credit. A bank must prosper on service to its customers.

Mr. Lerrs. Is there such a thing as favoritism at times?

Mr. Lord. Not in our institutions.

Mr. Letts. Very often there is quite distinct rivalry between en terprises in the same line of business, and it is quite conceivable that one might prosper because of the favoritism that is extended to him by those in control of banking, to the detriment of the other. That is true; is it not?

Mr. Lord. It is possible, but not probable. We can not in the banking business take sides, favoring one customer as against another, so long as our relationship with both customers has been

a satisfactory one.

Mr. Lerrs. In reading a prospectus of, I think, the Transamerica Corporation, or perhaps it was a statement by the Los Angeles Board of Trade in a report that they had made covering the state of the operations of that corporation and its possibilities, it was said that they would have the opportunity to divert large quantities of business to their companies, and illustrated that by saying that they could divert tremendous amounts of insurance to their insurance company, which is one of the industries that they further Do you see any danger in that policy?

Mr. Lord. There might be, although I am not close enough to that

to know.

Mr. Letts. You have been in existence about 10 months?

Mr. Lord. As a group; yes.

Mr. Letts. As a holding company?

Mr. Lord. Yes, sir.

Mr. Letts. Directing the policies of the banks under your control

Mr. Lord. Advising with the banks.

Mr. Lerrs. Yes, of course; but you expect that advice to be ac-

Mr. Lord. It is not always accepted.

Mr. Letts. But it is natural that it would be?

Mr. Lord. It is listened to.

Mr. Letts. Yes, of course; it ought to be.

Well, 10 months is not a very long time; and, yet, no doubt, be cause of the success with which you have met, you are looking ahead Are you thinking of other possibilities than banking? Have you ever considered the possibility of an insurance company-fire, life, or accident?

Mr. Lord. We have, and discarded it. Mr. Letts. Why did you discard it?

Mr. Lerts. It was said in this report of the Los Angeles Board of Trade that the Transamerica Corporation expected to handle real estate transactions in the State of California. I do not pretend to quote from it, but I think that is the substance of it; and they do have a company that depends upon commissions from the sale of real estate and on making trades.

Have you thought of a possibility of that kind?

ars I

idual ed to

enable ided her.

the inst peen

rica eles of of aid ties hat

urer. at

C.

Mr. Lord. No, sir.

Mr. Lord. I believe the record shows that 66 banks failed during the period covered by Mr. Pole's testimony, in nine years.

Mr. Letts. Do you now have more banks than are needed throughout the State, would you say?

Mr. Lord. We have, and we felt that the outside broker can do it better than we can when it comes to the sale of real estate, and the only real estate we own (except our buildings) is what we may have to take under foreclosure.

Mr. Letts. Is it your policy, then, to limit your operations to the holding of bank stocks and the developing of banking policies?

Mr. Lord. Yes, sir; so far as the group company is concerned. Mr. Letts. I am speaking of the group company.

Mr. Lord. Yes, sir.

Mr. Letts. You say that yours is a mixed condition, group and

Mr. Lord. It is a group of branch banking institutions.

Mr. Letts. But not entirely?

Mr. Lord. Not entirely; no. There are some without branches. Mr. Letts. Now, I suppose that Detroit is the banking center of your State?

Mr. Lord. Yes, sir.

Mr. Letts. And naturally you have an interest in the smaller communities of the State; you would like to see the smaller communities provided with suitable banking facilities?

Mr. Lord. Yes, sir.

Mr. Letts. I understand that it is your judgment that those facilities can be furnished best by going to the branch system?

Mr. Lord. Yes, sir.

Mr. Letts. In other words, you think that the strong banks which form your group could render a better service to the varied communities of your State if they were permitted to establish in those communities branches which would approximate the needs of the communities?

Mr. Lord. Yes, sir.

Mr. Letts. Do you feel that this policy is one which will destroy individual initiative?

Mr. Lord. No, sir. Are you speaking of the person or the corporation?

Mr. Letts. I am speaking of persons now.

Mr. LORD. Far from it.

Mr. Lerrs. Can it do other than to encourage initiative within your group? It would destroy competition without the group, would it not?

Mr. Lord. I think it would encourage initiative within the group. Banking talent, banking brains, are scarce, and the opportunities are greater in an organization such as this than they ever can be in small

So far as discouraging competition is concerned, as long as the banking business can be done safely and at a profit there is going to be competition. Neither you nor I nor anyone else can keep it out.

Mr. Letts. Did you have bad times in Michigan, comparable in any way with those we experienced in Iowa?

Mr. Lerrs. Did you lose any of your banks up there?

Mr. Lord. In some communities, yes; and there is a very consider able duplication of branches throughout the city of Detroit. may be three and four different branches within two blocks.

Mr. Lerrs. How many groups have you in the State of Michigan Mr. Lord. I can not recall. Mr. Pole's testimony shows it, I think

Mr. Letts. How many do you have in Detroit?

Mr. Lord. There are three so-called groups in Detroit.

Mr. Letts. There are some not located in Detroit up there, are there?

Mr. Lord. I believe so.

Mr. Letts. Is there harmony among the three Detroit groups, of is there competition in a live sense?

Mr. Lord. There is very keen competition.

Mr. Letts. The feeling, I suppose, is good, however?

Mr. Lord. Entirely friendly; but take the other fellow's business

if you can get it.

Mr. Lerrs. There is just one other thing that I had in mind. You have acquired the stocks that you possess largely by transferring the stock of the holding company in exchange?

Mr. Lord. Yes, sir.

Mr. Lerrs. At what value did you exchange the stock of the hold

ing company for the stock of the unit banks?

Mr. Lord. It depended on the bank itself, but in general we matched actual value of group shares for actual value of unit bank shares, and our earnings against their earnings. In other words our examiners would go into a unit bank prior to our proposal of exchanging stock and make a careful examination of the bank and set up reserves that the examiners considered were necessary to show the actual value of the shares of that bank.

Mr. Letts. You tried to maintain a parity, I suppose, as to the

value that you sought to get?

Mr. Lord. Yes, sir.

Mr. Letts. What was that? Was it approximately \$20 par, of

Mr. Lord. No. The actual value of the group company shares was somewhere between \$55 and \$56 per share of \$20 par value.

Mr. Letts. Now, in your own bank-Mr. Lord. The Guardian Detroit Bank.

Mr. Letts (continuing). How did you arrive at the ratio of exchange in that instance? That, I suppose, was the first one or one

of the first?

Mr. Lond. That was the first. The Guardian Detroit Bank stock carried with it, for each share of bank stock, as a part of the certificate itself, one-fifth of a share of stock of the trust company and one share of stock of the securities company. The book value of that Guardian Detroit Bank share, carrying with it the other two interests, when it was \$100 par value, was approximately \$280. That was exchanged for five shares of group stock, \$20 par value.

Mr. Letts. And that was arrived at by just figuring values? Mr. Lord. It made no difference to the stockholder; he held exactly

what he held before, so far as proportionate interest is concerned. Mr. Lerrs. I want to ask you as to your judgment as to whether or not it is a wholesome thing for the country that banks are connect ing with their institutions security companies, trust companies, and that sort of thing?

Mr. Lord. Yes, sir.

Mr. Letts. They are largely doing the trust business of the country. Do you think that that is a wholesome thing?

Mr. Lord. I do, sir. I think they are better qualified to do it than

the average individual.

Mr. LETTS. Do you see any danger incident to the policies that prevail throughout the country in managing securities companies?

Mr. Lord. No, sir.

Mr. Letts. Have you solicited the banks that you connected with your group, or have they come to you?

Mr. Lord. We have solicited some, and some have come to us. Mr. Letts. How many have applied to you for affiliation with

Your group?

Mr. Lord. It is pretty hard to answer that. Many have applied to us that we have not taken in. In fact, we have had an entire group apply to us.

Mr. Letts. Do you find that often it is desired that someone from Detroit, somebody connected with the holding company, should go on the board of directors or take a position as an official in the unit

sider-

Mr. Lord. Some of them have insisted upon it; they wanted the help of an operating officer and asked to have that officer on the

Mr. Letts. I believe that in your set-up, 75 per cent of the mem-

bers of the board must be local?

Mr. Lord. Must be local, or must reside within 50 miles, the same as under the national bank law.

Mr. Letts. Why is that necessary?

Mr. Lord. It would be necessary in our national bank units under the law. In our State bank units it would not be necessary, but we wanted to keep the local units local so far as possible.

Mr. Letts. Well, leaving out of consideration the requirements of

the law, is it desirable? Mr. Lord. I think it is.

Mr. Letts. Why would you think it is desirable?

Mr. Lord. Because we want the interest of the local people kept in the banks.

Mr. Letts. And you think you get that better by having it known as their bank?

Mr. Lord. I do, sir.

Mr. Letts. Rather than a Detroit bank?

Mr. Lord. I do. I think I would like to state in passing that the boards of directors of the local units banks, far from being dummy directors, are taking greater interest in the operation of their banks than they did before the banks were members of the group.

Mr. Letts. Mr. Lord, have you been approached to become a part

of some larger plan than yours?

Mr. LORD. No, sir.

Mr. Letts. Or a plan that might cover the country?

Mr. LORD. No, sir.

Mr. Letts. And extend through other States than Michigan?

Your

Mr. Lord. No. sir.

Mr. Letts. You have not had any such contact?
Mr. Lord. That is, not by a group or corporation that would take us over; no. We have been approached by other banks and other smaller groups that wanted to come into our system.

Mr. Lerrs. Yes; I understand that, but I meant by an interest larger than yours that would like to associate you with other groups comparable in size and strength with yours?

Mr. Lord. No, sir.

Mr. Letts. That is all.

The CHAIRMAN. Mrs. Pratt.

Mrs. Pratt. Mr. Chairman, Mr. Lord's statement is so comprehensive that I find that many of the questions that have arisen in my mind have been answered as he read his statement, but I would like to get this clearly in mind: Mr. Lord, your holding company, I think you mave made very clear, is not a bank, does not do any banking business, and is not in a parent position, is it, to the banks in that group? You do not attempt to control?

Mr. Lord. Only own them; not control them or operate them. Mrs. Pratt. Have you formed sort of a liaison between the different unit banks?

Mr. Lord. Yes.

Mrs. Pratt. Would you attempt, for instance, to advise the transfer of funds from one bank to the other, or, rather, transfer the credits if you knew that one bank in your group could not meet the borrowing that it was called upon to meet of some depositor or other person? You would be in position to advise them that some other bank in your group could help them, would you not?

Mr. Lord. We would.

Mrs. Pratt. And you would do that? Mr. Lord. We have done it many times.

Mrs. Pratt. Have you attempted in any way to control the type of security?

Mr. Lord. No; they buy their own securities.

Mrs. Pratt. I meant the security that the borrower must give. Mr. Lord. Not through the group company. Each bank prescribes its own collateral.

Mrs. Pratt. In your position as more or less of an adviser, would you feel that you are in position to criticize certain types of collateral?

Mr. Lord. We would feel entirely free to criticize any type of security and advise the unit bank as to our opinion of such security;

Mrs. Pratt. And you would feel that your advice should prevail if they did not agree with you as to what was considered suitable?

Mr. Lord. If they thought they knew more about it than we, that would be their party.

Mrs. Pratt. Do you feel that your system of group banking is meeting the necessity for sounder banking facilities in the smaller communities?

Mr. Lord. We do not go in very small communities. Ionia and Niles, Mich., are the smallest communities in which we are located, of about 10,000 people.

Mrs. Pratt. Then you do not really cover the Federal reserve district?

Mr. LORD. No. We are in the seventh district, and that includes Chicago, Milwaukee, and quite a substantial number of large cities. We do not go outside of the State of Michigan, so far as our banks and trust companies are concerned.

Mrs. Pratt. Do you anticipate any further merging of groups in

your communities-

Mr. Lord. I hope not. Mrs. PRATT (continuing). Where you would ultimately be in con-

trol of the banking business?

Mr. Lord. No. We have had numerous opportunities in some of the communities in which we own units to buy all of the stocks of banks in the community, but we did not want it; we want competi-

Mrs. Pratt. I think you said that in Detroit there were two other

take

ther

ing hat

er-

ns. he

he

er

er

10

Mr. Lord. We are the second in size; not the first.

Mrs. Pratt. And there is a third?

Mr. LORD. There is a third and smaller group.

Mrs. Pratt. You have no thought in mind of those large groups merging into one great monopoly?

Mr. Lord. I think not. If that were done, there would immedi-

ately start up in Detroit new banks that would compete. Mrs. PRATT. I think that is all.

The CHAIRMAN. Mr. Busby.

Mr. Bushy. In order to follow up the questions that Mr. Letts asked, I want to make this statement which I gathered from Governor Young's testimony, that there are 109 banks in Michigan that belong to groups or chains which do not operate branches, 26 banks belonging to groups or chains which operate 353 branches, as well as 36 banks that do not belong to groups or chains but which operate branches. There are also 572 additional independent banks, making a total of 1,182 banks in your State.

Now as to your statement of a moment ago that you had not gone

into cities of less than 10,000 inhabitants-

Mr. LORD. Except the seven small banks that are mentioned in the

report, in agricultural communities. Mr. Bushy. Do you find that it is not desirable under your system go into those places that are smaller than 10,000 in population? Mr. Lord. I do not believe that a bank can survive in a small town over a period of years.

Mr. Busby. Do you believe that a bank will survive reasonably

well in a town smaller than 10,000 people?

Mr. Lord. It will have in my opinion to have exceptionally able

management.

Mr. Bushy. What would be your suggestion in the way of affording banking facilities to places having a population smaller than 10,000 \$

Mr. Lord. Branch banking.

Mr. Busby. Do you think branch banking would be the desirable method of furnishing banking service to practically all places with a population of less than 10,000 inhabitants?

Mr. Lord. Yes.

Mr. Busby. You spoke awhile ago of the method that your holding company followed in transacting its business, and the manner in which it dealt with the several banks in your system, and your statement made this morning uses the term "recommended policy" that is arrived at by one certain group of your managers under the owning company.

the

be

m

bo

di

01

Tr

al

ti

t

8

What do you mean specifically by "recommended policy"?

Mr. Lord. This might be a recommended policy that a bank should not have over 50 per cent of its assets or loanable funds in securities based upon real estate, and we might have one, two, or three units that went above that percentage.

Mr. Busby. Is your "recommended policy" so worked out that it applies to the several banks individually, or is it a class action?

Mr. Lord. I think each unit would have to be taken into consideration, and the nature of the business in that community would have to be considered.

Mr. Bussy. Then your board that defines the recommended policy would take up each individual unit in your system and adopt a recommended policy for that banking institution, if I understand you?

Mr. Lord. Yes, sir.

Mr. Busby. Now, are your examiners acquainted with the recommended policies for these several banks?

Mr. Lord. Probably the recommended policies are based upon the

examination of the examiners.

Mr. Bussy. I know, but when your examiners go out from the holding corporation to a unit bank are they made acquainted with the recommended policy for the handling of the business in that bank so that they can, in the light of that policy, better make a true and proper examination of the bank?

Mr. Lord. Yes, sir.

Mr. Bussy. What happens if the directors of that bank refuse to follow the recommended policy for the bank as declared by the board that promulgated that policy, after an inspection has been made and it is disclosed that the directors of this local institution have refused to adopt the recommended policy?

Mr. Lord. They never have refused.

Mr. Busey. They never have refused? That is what I was get ging at.

Mr. Lord. Because the recommended policies are based upon

sound banking.

Mr. Bushy. I understand that, of course.

Now, the trouble about the whole situation is that you have an ironclad method of doing business with each one of these several banking institutions through a recommended policy and your system

of examination, do you not?

Mr. Lord. Mr. Busby, we do not have an ironclad fist or anything of that nature. For instance, one of the banks in the group has shown that it can operate its own bank as it pleases; it uses one of our competitors in Detroit as its principal Detroit correspondent, rather than us.

Mr. Busby. What do you assign as a reason for that?

Mr. Lord. Because they happen to have done business with that bank for a great many years and there is a certain sentiment attached to it, and if they want to continue it, it is all right with us.

Mr. Buser. You have no recommended policy for that bank along that line, have you?

Mr. Lord. We have not recommended a policy for that bank,

Mr. Busby. But if you recommended a policy to the contrary

they would not dare to do that, would they?

Mr. Lord. We would not recommend it for a reason like that, because that is sound banking whether they take us or our competitor in Detroit as the correspondent.

Mr. Bushy. This morning you stated that you were more "hard

boiled" with your trust subsidiaries-

Mr. Lord. Securities companies.

Mr. Busby. Yes, securities companies—then you were with some disconnected security company that came to your bank for credit?

Mr. Bussy. Who does that act of being "hard boiled "?

Mr. Lord. I do.

Mr. Busby. You do? Mr. Lord. Yes, now.

Mr. Busby. As the president of the holding company?

Mr. Lord. As the president of the Guardian Detroit Bank and

of the holding company.

Mr. Busby. Suppose that they did not come to your bank but went to one of your other independent units; you would likely hear about it, would you not?

Mr. Lord. I know where the securities companies are borrowing

their money. That is my business to know.

Mr. Busby. And you would certainly hear about that?

Mr. Lord. Yes.

Mr. Bushy. And yet you are the president of the holding company and not the manager of the banks; is that right?

Mr. Lord. Yes, sir.

Mr. Bussy. But the fact is that you are indirectly the manager of all of these banks when it comes to making big transactions and putting out loans that are of unusual size, are you not?

Mr. Lord. No; I think I am merely the adviser.

Mr. Busby. Adviser? Mr. Lord. Yes, sir.

Mr. Bushy. With more than the usual emphasis upon that word.

though, are you not?

Mr. Lord. I do not think so.

Mr. Bussy. I find that while there are 610 banks in your State, a few of which are not in the area in which you operate, that are connected with the chain, group, and branch banking activities with Yourself and others, there are 572 banks that are running and operating independently of any group, branch, or chain system. You say it is not your purpose to take over any more of those small

Mr. Lord. No; I did not say that.

Mr. Busby. The fact is, that you have not taken any banks in small places, is it not?

Mr. Lord. No, sir; we have not.

Mr. Busby. You said that it was not your purpose to take over and that you had not taken over any except those that are making money. You said that, did you not?

Mr. Lord. That was the idea.

or

the

WO

ha

7:

no

b

C

Mr. Bussy. Well, they did not particularly need your protection, did they? They were making money and on a sound basis.

Mr. Lord. We did not take them over for their protection.

Mr. Bussy. What did you take them over for?

Mr. Lord. To help build them up.

Mr. Bussy. Did you not take them over to help you build up a strong banking institution in that section of the country, with which to make dividends?

Mr. Lord. Maybe; that may have been one of the reasons, yes.

Mr. Busby. Your institution is not so altruistic that it is going out for any other purpose than to make dividends, to make money, is it?

Mr. Lord. We can not prosper unless we do operate on a more of less altruistic basis so far as service to the customer at proper rates is concerned.

Mr. Busby. You have to show a certain amount of consideration to the trade, or the trade will not patronize you. I grant that.

Mr. Lord. Certainly.

Mr. Busby. But the ultimate purpose is the one I asked about?

Mr. Lord. Yes, sir.

Mr. Busby. You say that these banks, unless there is an unusual condition, can not make money in cities or towns of less than 10,000 population, and yet you do not think it is feasible for you—and, of course, you would not think it was feasible for others in the same line of operation that you are engaged in—to take them over. So what do you see left for them to do but to liquidate?

Mr. Lord. There are many communities in which the Guardian

Detroit Union Group would be glad to establish branches.

Mr. Bushy. Then you would not have all of those 572 banks go broke, or any appreciable number of them, because they were left out in the cold by the group organizations?

Mr. Lord. No.

Mr. Busby. What solution do you have for those particular cities, and how would you take care of them?

Mr. Lord. Branch banking would solve it.

Mr. Bussy. Are you asking that a system be established that will compel branch banking in the field in competition with you?

Mr. Lord. No; that it be permitted, not compelled.

Mr. Bussy. What if they did not take to it any more than you have taken to it?

Mr. Lord. You mean, to the communities?

Mr. Busby. To the smaller banks, the 572 that are operating inde

pendently of any branches.

Mr. Lord. Mr. Busby, a bank of limited size could be profitably operated as a branch, whereas it might not be possible to make even

expenses operating it as a separate unit. Mr. Bushy. But you certainly would not think that a system which would continue 572, or even half that number of independent banks, especially those in towns of 5,000 or 6,000 people, as banking institutions on an independent basis, was feasible, would you?

Mr. Lord. If branch banking were permitted-

Mr. Busby. I am not asking you that.

In other words, your knowledge of banking operations would not lead you to, say, that independent banks in towns of 4,000, 5,000, 6,000, or 7,000 people should be encouraged to continue as they have done in

the past? That is what I gathered from your statement.

Mr. Lord. I think that the record of failures in towns of that size would indicate that they can not continue on and continue profitably. Mr. Busby. Your State has not such a bad record for failures,

Mr. Lord. My State has an unusually good record.

Mr. Bussy. In 1921 it had eight failures.

Mr. Lord. Yes.

Mr. Bussy. And in 1922 it had 4; in 1923 it had 3; in 1924 it had 7; in 1925 it had 5; in 1926 it had 3; in 1927 it had 7; in 1928 it had none; and in 1929 it had 9-66 in all.

Mr. Lord. Why should it have had nine failures in 1929? With branches or group banking or a combination of the two, there should

have been no failures in Michigan.

Mr. Busby. One reason is that which you spoke of awhile ago-Somebody stealing \$1,200,000—and, of course, the bank would have gone broke had it not been for the intervention which followed. Then, they will go broke for the same reason as that reported in to-day's paper in connection with a Texas bank, involving a steal by officers of the bank of over \$1,000,000.

Dishonesty and bad management are reasons for the failure of

banks.

Mr. Lord. A strong group, properly supervised, could protect the community against failure, even against a defalcation of that size. Mr. Busby. But you will admit that 66 failures is a very small Percentage, considering the fact that Michigan had 1,182 banks?

Mr. Lord. It has had a very wonderful record.

Mr. Busby. Why, then, do you make your statement that they can not safely operate as independent banks?

Mr. Lord. I did not say safely; I said profitably.

Mr. Busby. You say profitably?

Mr. Lord. Yes, sir.

Mr. Busby. Do you think the depositors are reasonably safe in those banks?

Mr. Lord. If the bank is reasonably well managed, yes.

Mr. Bussy. Now, your investment companies, as you call them-

Mr. Lord. Yes.

Mr. Busby (continuing). Are engaged in buying and selling bonds, and in the general financial investment business?

Mr. Lord. Yes, sir.

Mr. Bushy. Is that a more hazardous financial business for the in-

stitution than straight banking?

Mr. Lord. No; I do not think so. Their earnings may fluctuate up and down more than the ordinary banking or trust business.

Mr. Busby. If I recall, Mr. Wakefield seemed to express himself that it was much more hazardous, and Mr. Decker stated positively that it was much more hazardous than the ordinary banking business. What is your view on the subject?

Mr. Lord. I do not see why it should be.

Mr. Busby. It is only in recent years that that class of business has

been coupled with banking, is it not?

Mr. Lord. Banks have had investment departments for many, many years. I worked for a bank in Chicago when I went to work in 1906, where the biggest part of its business was the investment business.

that not.

Mr. Bushy. It has all grown up in the last 25 or 30 years, practically. Does it not appear to you that that type of banking activity, where the work is done under high pressure, is tending largely to place many investment bonds and securities in the field to-day?

Mr. Lord. Banks have certainly a very large distribution of in-

vestment securities; yes.

Mr. Busby. Does your holding company have any syndicates for

the underwriting of security issues?

Mr. Lord. The securities companies have; not the holding com-

Mr. Bussy. Well, they are owned by the holding company, are they not?

Mr. Lord. Yes, sir; just as the banks and trust companies are

owned by the holding company.

Mr. Bussy. Do you not think that that all tends to greatly inflate the credit of the country beyond the actual commercial needs of the country?

Mr. Lord. Why should it? If the banks-

Mr. Busby. To answer you, it has. Now, why did it?

Mr. Lord. If the banks do not supervise and handle securities and advise their customers independent so-called investment houses are going to sell to those customers. Would you not rather have the public get advice from the banker than perhaps some other advice?

Mr. Bussy. Do you think that the advice of the bankers and of the officers of trust and investment companies has helped the public in the last two or three years?

Mr. LORD. Yes, sir; I do.

Mr. Busey. Do you not think that the banks and underwriting syndicates, with their agents going up and down these corridors and into every nook and corner where they thought they could interest somebody in buying a security or a stock, and by selling to many people who knew nothing about the stocks or the securities but who hoped that the stock market would go up and that they could sell at a better price than that at which bought, have done a great injury to the finances of this country in the last two or three years?

Mr. Lord. I do not think that the banks, generally speaking, advised the public to go in and buy stocks, either for cash or on mar-

gin, during the past two years or at any time.

Mr. Busby. Do you not know that the underwriting syndicates employ high-powered stock salesmen to go among the people everywhere they think they can sell stocks, and that these solicitors do not carry with them the knowledge that the bank possesses concerning the validity or the desirability of those securities?

Mr. Lord. Are you speaking of securities companies affiliated with their banks?

Mr. Busby. Yes.

Mr. Lord. Or independent brokers and security dealers?

Mr. Busby. I refer to the securities companies affiliated with their banks.

Mr. Lord. I think, generally speaking, that securities companies affiliated with banks or trust companies are very conscientious about what they are recommending for investment by the public.

Mr. Bussy. Do they not employ agents to go out and solicit individuals?

Mr. Lord. Yes.

ent

cti-

ity,

to

in-

for

re

re

te

18

Mr. Busby. How do you expect these solicitors to carry all of this

expert information to the individual?

Mr. Lord. Before the securities company connected with the bank buys securities for sale, the salesmen do not examine the securities and purchase them, but the heads of the organization pass on them as to their value and safety, and the salesman is the one who goes out to sell them.

Mr. Bushy. And he is not very particular about giving the purchaser inside information, is he, or anything except a glowing ac-

count of the possibility of the stock?

Mr. Lord. I do not know that banks use the high-pressure method that you are speaking about, or bank securities companies. We do

Mr. Busbr. But you employ agents to go out among the people,

do you not?

Mr. Lord. Salesmen; yes.

Mr. Bushy. I believe that is all. The CHAIRMAN. Mr. Dunbar.

Mr. Dunbar. Mr. Lord, on page 3 of your statement you say that Your stockholders of the Guardian Detroit Bank have the same humber of shares of stock in that bank as in the Guardian Detroit Co., and that they have one-fifth of the number of shares in the Guardian Trust Co. Is the Guardian Trust Co. larger than the other two companies?

Mr. Lord. Mr. Dunbar, that was the original corporate set-up of the Guardian Detroit Co., Guardian Trust Co., and Guardian Detroit Bank. It does not apply to the present organization, or what

We term the group company.

Mr. Dunbar. I know, but do you have a larger number of stockholders or a larger capital stock in the Guardian Trust Co. than

you have in the other two?

Mr. Lord. No, sir. The Guardian Trust Co. had \$1,000,000 capital and \$1,000,000 surplus. The Guardian Detroit Bank had \$5,000,-000 capital and \$3,000,000 surplus; and the Guardian Detroit Co. had 50,000 shares originally of no par value stock, \$35 per share, paid in.

Mr. Dunbar. But the shares of stock in all three of them so allocate themselves that a man can have an equal number of shares in the Guardian Detroit Bank, the Guardian Detroit Co., and one-fifth

of the stock in the Guardian Trust Co.?

Mr. Lord. They could have before those three institutions became affiliated with the present group company. You could not separate

one from the other.

Mr. Dunbar. Now, in answer to a question by Mr. Letts, you said that there was a keen competition between these companies. I do not see how you could have keen competition.

Mr. Lord. He asked about the other companies in Detroit, Mr.

Dunbar, the other banks.

Mr. Dunbar. But there is no keen competition.

t

Mr. Lord. Between our own companies?

Mr. Dunbar. Yes. Mr. Lord. No, sir.

Mr. DUNBAR. That is what I thought. I did not see why there should be.

On page 6 of your statement I note that 75 per cent of the directors of one of your unit banks must come from the municipality in which that bank or trust company is located.

Mr. Lord. Yes, sir; or within 50 miles of it.

Mr. Dunbar. They are all stockholders in the parent company, are they?

Mr. Lord. They are also stockholders in the old, original unit. Mr. Dunbar. In the selection of these people you dictate to them,

Mr. Lord. We never have changed the boards from the way they came to us.

Mr. Dunbar. But you decide their reelection? Mr. Lord. As a majority owner of the stock.

Mr. DUNBAR. To what extent do you dictate to them in managing the bank? I understood you to say you did not dictate to them.

Mr. Lord. We do not.

Mr. DUNBAR. Suppose that you got hold of a wild set of directors!

Mr. Lord. We would get a new set.

Mr. DUNBAR. How would you get them? They are elected for \$ year, are they not?

Mr. Lord. At a special stockholders' meeting. Mr. Dunbar. You could depose them, could you?

Mr. Lord. Yes, sir.

Mr. DUNBAR. This is not in the nature of a criticism, but, with the consent of your directors, are you not really the czar of the whole system?

Mr. Lord. I do not think so.

Mr. Dunbar. Do you think that any of these directors in any of these other banks would dare to disobey your wish?

Mr. Lord. They have, in some instances.

Mr. Dunbar. Did it turn out that they were right?

Mr. Lord. Sometimes.

Mr. Dunbar. Then you are a wise person, one who, when anyone disagrees with you and they turn out to be right, does not "hop them for it; do you?

Mr. Lord. Sometimes.

Mr. Dunbar. Now, suppose that you got all wrong; then the whole system is going to be all wrong; is it not?

Mr. Lord. If I go all wrong, the board of directors of the group company would have me out before I could go very far wrong.

Mr. Dunbar. But suppose that you are elected for a year; they could not put you out before a year?

Mr. Lord. Yes; they could. We have a directors' meeting every three months, and a special meeting could be called and I could

be thrown out in two days. Mr. Dunbar. Well, the point I was trying to bring out is this that it is a bad thing for this country when you find its people being driven for a living, when they have to bow and to get upon their knees. I do not know what is going to become of us; in

dividuality is going away. That is my principal objection to your system, that individuality and personality are being developed less and less, and after awhile people will not have minds of their own because they will be depending on the dictators above them.

Mr. LORD. I do not think so, in this country. Mr. Dunbar. All right. I hope you are right.

Now, suppose that you owned a bank in Wyandotte that went broke; all of the depositors would be secured under your system,

would they not?

here

ctors

hich

any

em,

hey

51

Mr. Lord. To the extent of the resources of the group company, and, in turn, the assessment that might be levied upon the stockholders of the company.

Mr. Dunbar. Not any more?

Mr. Lord. Unless they kept on levying 100 per cent assessments. Mr. Dunbar. You would not, as a group head, assist them in any

Mr. Lord. We certainly would.

Mr. Dunbar. In what way would you assess them?

Mr. Lord. Putting up the money.

Mr. Dunbar. Then, getting back to my question, would the de-

Positors in that bank be secure?

Mr. Lord. Mr. Dunbar, it would depend upon the size of the bank, but a bank in Wyandotte would be so small that it would be very easy to take care of the depositors.

Mr. Dunbar. But your depositors in a group bank would not have very much more assurance of receiving their money than if they

were in a unit bank?

Mr. Lord. They would have \$81,000,000 back of it as against the \$500,000 or whatever the capital might be of the Wyandotte bank. Mr. Dunbar. You say that the capital of the Wyandotte bank is \$85,000,000?

Mr. Lord. Wait a minute. I do not know what the capital is.

Mr. Dunbar. Let us suppose that you have a bank in Chicago that has a capital of \$85,000,000, and it fails. To what extent would you in Detroit help them?

Mr. Lord. To the extent of our ability.

Mr. Dunbar. What is the size of your largest bank?

Mr. Lord. The largest bank we have has a capital of \$5,000,000, a surplus of \$6,000,000, and undivided profits of about \$1,500,000.

Mr. DUNBAR. What bank is that?

Mr. Lord. The National Bank of Commerce.

Mr. Dunbar. You mentioned \$85,000,000. Suppose that you had a branch bank at Lansing, with \$500,000 capital?

Mr. Lord. Yes, sir.

Mr. Dunbar. And that it had \$2,000,000 on deposit, and it failed. Your double liability would not amount to nearly \$2,000,000. After selling your assets, there might be a deficiency of \$1,000,000. Would there be any hope of those people getting money from your system? Mr. Lord. We could not afford, from the standpoint of the stand-

ing of the group, to allow any bank to fail. Mr. DUNBAR. You would pay the \$1,000,000, would you?

Mr. Lord. Probably would.

Mr. Dunbar. Then you practically, although you do not specifically say so, guarantee the deposits of any bank that might fail?

Mr. Lord. To the extent of our financial ability to do so.

Mr. DUNBAR. But suppose that you did not have that financial ability?

Mr. Lord. We would still have the 100 per cent assessment available.

Mr. Dunbar. Which is the same as all other banks of the country!

Mr. Lord. Yes.

Mr. Dunbar. You do not go into cities of less than 10,000 population, do you?

Mr. Lord. Approximately that.

Mr. Dunbar. Now, then, if all of our failures, or at least 95 per cent of them, occur in banks having less than \$25,000 capital and in towns of 1,000 population and less, you do not run any risk by not going into that kind of a community, do you?

Mr. Lord. Not without being allowed to do branch banking.

Mr. Dunbar. But you do do branch banking?

Mr. Lord. In the big communities.

Mr. Dunbar. You are growing into a branch banking system, are you?

Mr. Lord. Modestly.

Mr. Dunbar. The impression you gave us is that branch banking must take care of the business in these small towns, and you want to take the cream, as it were?

Mr. Lord. It is the best way to take care of it, in my opinion.

Mr. DUNBAR. I am asking for information more than anything else. Now, in these smaller towns you believe that we should have branch banking?

Mr. Lord. Yes, sir.

Mr. Dunbar. Do you think you will engage in it?

Mr. Lord. To a reasonable extent; yes, sir.

Mr. DUNBAR. Then, the branch banks in those cases would be

subsidiaries of the holding company?

Mr. Lord. No, sir. If branch banking were permitted, and we went into branch banking, there would be no holding company; there would merely be a single bank with branches constituting our pres-

Mr. Dunbar. I notice that some of your banks are not members of

the Federal reserve system.

Mr. Lord. Yes, sir.

Mr. Dunbar. What do you think about the Federal reserve system?

Mr. Lord. I am for it.

Mr. Dunbar. Why do you not make these other banks members, then?

Mr. Lord. They are so small that they could get no advantage from being members. They were not members before they came into our group.

Mr. Dunbar. We have a bank in our town that has a capital of \$100,000 and a surplus of \$125,000 and undivided profits of \$50,000, which is not a member of the Federal reserve system because they say that they can have dealings with some bank that is a member and get all the benefits which might accrue to them. That is not right, is it?

Mr. Lord. That is true that they can.

Mr. Dunbar. But that is not right, is it? Mr. Lord. For a small bank, they can.

Mr. Dunbar. Do you think that that bank is justified in not being

a member of the Federal reserve system?

Mr. Lord. It make so much difference in their earnings, Mr. Dunbar, that they can not afford to join the Federal reserve system. The reserves that they would be required to carry in the Federal reserve system against their deposits, and upon which they would receive no interest, would be a great handicap to them.

Mr. DUNBAR. How much is that reserve?

Mr. Lord. It depends-

rcial

vail-

ry

ula-

per

not

re

ng

100

Mr. Dunbar. There are other advantages that they get that enable the country bank to carry on its banking business, so that I think they ought to be members of the Federal reserve system and I think you ought to require your banks to be members, and the question is how many banks are going to permit members of their system not to be members of the Federal reserve system.

Mr. Lord. That question has not come up.

Mr. DUNBAR. These questions I have asked are largely for infor-

Mr. Lord. We have no thought of the present members of the Fed-

eral reserve system resigning.

Mr. Fort. I hope I will not cover other matters that have been covered. I had another committee meeting this morning. If I do cover matters that have already been covered, will you please advise me, Mr. Chairman?

Mr. Lord, in looking over your statement I notice that you have a by-law that directors—75 per cent of the directors of every bank—inust be residents of the community or within 50 miles of the bank.

Mr. Lord. Yes, sir.

Mr. Forr. Of course, that 50-mile limit, on the bulk, if not all of the banks of the group, permits the directors to come from Detroit?

Mr. Lord. No, sir.

Mr. Fort. Not the major part?

Mr. Loro. It would eliminate Jackson, Kalamazoo, Battle Creek, Niles, Saginaw, Flint, and Grand Rapids. It would eliminate most of them because they are more than 50 miles from Detroit.

Mr. Fort. You feel, from your own information, that, in the proper management of a group system, the directorate should be

ocal ?

Mr. Lord. Mr. Fort, I feel it so strongly that in case we were doing branch-banking business in Michigan we would retain the board as

an advisory committee for that district.

Mr. Fort. If we, here, considering this thing as a national problem, should be inclined directly or indirectly to authorize branch banking, we would be wise to insist upon the maintenance of the local directors?

Mr. Lord. I think so.

Mr. Fort. Have you ever considered the propriety, in group banking, of permitting minority stockholding interests to be represented on the directorate?

Mr. Lord. Mr. Fort, in effect, the minority has a directorate in our group.

Mr. Fort. Except, I take it, all the directors are stockholders in the Guardian Stockholding Corporation?

Mr. Lord. Yes, sir.

Mr. Forr. What I am getting at is there are some States that, in corporations, call for cumulative voting, in order to insure minority representation on the board of directors.

Mr. Lord. Yes, sir.

Mr. Forr. Can you see any objection to a thing of that sort, if we are going to authorize group banking?

Mr. Lord. Not the slightest.

Mr. Fort. Now, as a part of your organization, do your group banks loan on the stock of the holding company as collateral?

Mr. Lord. Yes, sir.

Mr. Fort. Do you approve of that?

Mr. Lord. In reasonable amounts; yes, sir. Mr. Fort. What is a reasonable amount?

Mr. Lord. We would not allow any bank—that is, the Guardian Detroit Bank, of which I am president, would not lend an unreasonable amount on General Motors stock, Packard Car stock, or United States Steel stock. In theory, I think they should not loan on that stock.

Practically, I think it is quite safe. In a period of two years, we will have every such loan out of the group banks, as a matter of policy.

Mr. Forr. But those things which seem to you, perhaps, as good policy, had we not better regard as a matter of law for protection against unscrupulous banks?

Mr. LORD. I think you should.

Mr. Forr. Do you see any reason why trust companies and others exercising fiduciary powers should have any different rules applied to their fiduciary relations than those which apply to individual trustees under like instruments?

Mr. Lord. Mr. Fort, what—

Mr. For. For example, an individual trustee may make directly or indirectly no profit whatever out of his handling of the trust, other than the legal commissions.

Mr. Lord. Yes, sir.

Mr. Forr. Should the bank, acting as a fiduciary, have any greater power?

Mr. Lord. Our company makes no profit except the fee.

Mr. Fort. Does it bank funds?

Mr. Lord. It banks them separately and the trust receives the interest.

Mr. Fort. You think that is sound?

Mr. Lord. Yes, sir.

Mr. Fort. However, in that group organization, Mr. Lord, it might, of course, accomplish the same purpose by banking with other members of the group.

Mr. Lord. I think it is perfectly proper they should bank with other members of the group, providing the interest received is in keeping with interest they would receive from other outside banks.

Mr. Fort. You think there is no psychological danger in withholding the investment of funds in time of high interest rates on money!

Mr. Lord. No, sir.

the

rity

we

up

an

11-

at

10

11

Mr. Forr. You think such an organization, doing a trust business, should be allowed to buy securities from itself or affiliated organi-

Mr. Lord. Without profit; yes, sir.

Mr. Fort. Would you include a securities organization owned by the group holding company?

Mr. Lord. Yes, sir.

Mr. Forr. Have you been asked any questions about the segregation of savings deposits?

Mr. LORD. No, sir.

Mr. Forr. Have you any views on the propriety or impropriety of requiring savings deposits in ordinary commercial banks to be segregated as to investments and preferred as creditors?

Mr. Lord. The laws of Michigan require that we segregate our

bank deposits and segregate certain assets against them.

Mr. Forr. And you approve of that?

Mr. LORD. I do not think it is necessary, provided the bank has proper supervision—I mean Government or State.

Mr. Forr. However, you have had remarkably few failures in Michigan.

Mr. Lord. Yes, sir.

Mr. Forr. Do you object to the law? Mr. Lord. I do not object to it; no.

Mr. Fort. One of our committee members one day made reference in a very fine way, I thought, to Gresham's law, relating to the driving out by the baser metals of the better.

Mr. Lord. Yes, sir.
Mr. Forr. His reference was in reference to the tendency of banks to shift from the more rigorous code of law to the lesser.

Mr. Lord. Referring to the national system as against the State

system?

Mr. Fort. Yes. Mr. Lord. Yes, sir.

Mr. Fort. Do you feel that it is desirable, from a national viewpoint, that where possible we should bring the national code to the highest possible point of wise banking legislation, and then use our best efforts to make the States measure up to it?

Mr. Lord. I do. If we, to-day, could operate as a branch-banking system under the national system, we would prefer it to the State System. We welcome any supervision that makes banking better.

Mr. Fort. Do you approve of banking regulations that permit of the investment by banks in stocks?

Mr. Lord. We do not invest in any stocks, and therefore I do not approve of it, except stocks of building companies, or something that goes with it.

Mr. Forr. Necessary affiliations?

Mr. Lord. Yes, sir.

Mr. Forr. In regard to branch banking, I take it from your statement and from the few questions I have had the privilege of hearing you answer, you believe that branch banking is a necessity for the small communities?

Mr. Lord. Yes, sir; I do.

Mr. Forr. If we are going to authorize branch banking, do you feel we should authorize the establishment of branches in communities where they would come in competition with local unit banks?

Mr. Lord. Mr. Fort, I think that the establishment of new banks, whether they be unit banks or branch banks, should, in some way, be controlled so there does not exist or come to pass a situation where neither of several banks are able to make any money in a community. Whether that control comes from the Federal reserve bank or system or through the comptroller's department makes no difference, but I think it should be accomplished, because three banks in a community that might be making no money, certainly can not be as good for a community as one bank that is prosperous or two banks that might be prosperous.

Mr. Fort. But, of course, if branch banking were permitted concurently with unit banking, assuming, as would normally be the case in all but the larger cities, the branch was a branch of a far stronger bank than the local bank, would not the tendency be for the larger bank, with the branch, provided it maintained its contracts, to drive the unit bank out?

Mr. Lord. I do not think so. Banking is largely a question of acquaintance and contracts, so far as securing business is concerned.

Mr. Forr. And credit facilities.

Mr. Lord. And if the unit bank has the proper capital and surplus or proper loaning capacity, it should certainly retain a proper share of the business of the community.

Mr. Forr. Some of us who have been thinking on this branch banking question, are wondering whether, if we should decide to permit it at all, we should not handle the matter in some way so as to prevent the larger metropolitan city banks from going out into the branch banking business into the country, and hold that down so that the branches would be those of nonmetropolitan cities. Have you any views on that?

Mr. Lord. In other words, do you mean you would not want a bank in New York City to be able to acquire banks or groups in other centers?

Mr. Forr. Yes-branches I am speaking of and not groups.

Mr. Lord. Through separate institutions? Mr. Fort. Through branches—not groups.

Mr. Lord. I think the extension of branches should be limited to

trade areas as Mr. Pole suggests.

Mr. Forr. For example, he used an illustration here of St. Louis and Detroit as well, perhaps. Some of us have had the thought that the St. Louis trade area, being quite extensive, it might be preferable to say that St. Louis might not go out through its entire trade area, which would spread to Little Rock on one side and Des Moines on the other, but that Des Moines should be permitted to have branches out through its area in order to prevent the aggregation of banking control and resources in the major cities.

Mr. Lord. I should think that the better way would be for St. Louis to be allowed to be the center of a trade area and Little Rock the center of a trade area and Des Moines also. There might be an overlapping of the trade areas with centers at Des Moines, St. Louis, and Little Rock, but there certainly would be competition, and cer-

tainly St. Louis would not gobble up all the business if that were

Mr. Fort. You at least agree with those of us who are not necessarily committeed to it but think along that line, that in any way We do it we should be sure to preserve competition?

Mr. Lord. Competition will be there whether we try to preserve

it or not, in my opinion.

Mr. Fort. Not if adequate facilities are there without competition. Mr. Lord. In the small communities probably not, because one bank only could live; but in the sizable communities there will be competition whether there is unit or branch banking in that city.

Mr. Fort. You see no hazard in permitting an aggregation of financial resources under a single management as long as there is

Mr. Lord. I do not see any danger.

Mr. Fort. I think that is all, Mr. Chairman.

The Chairman. This morning, Mr. Lord, some one questioned you about the scope of your plan. I understood you to say that your scope was confined to your trade area?

Mr. Lord. Yes, sir.

The CHAIRMAN. You consider your trade area Detroit and the

State of Michigan?

Mr. Lord. I should think, Mr. Chairman, that our trade area would also include Toledo, which does feed into Detroit. Toledo is 60 miles from Detroit. We have not gone into Ohio at any time, nor do we contemplate doing it.

The CHAIRMAN. When was your plan declared operative?

Mr. Lord. December, 1929.

The CHAIRMAN. What brought about that consolidation? Was it the fact that you had joint owners in the group?

Mr. Lord. No, sir.

The CHARMAN. There was no affiliation between you?

Mr. Lord. No, sir; it was brought about purely by negotiation. The CHAIRMAN. Was it purely a banking negotiation, or did it arise from business conditions?

Mr. Lord. Banking conditions.

The CHARMAN. The whole development sprang from a banking situation?

Mr. Lord. Yes, sir.

The CHAIRMAN. There has been no demand for it from the public? Mr. Lord. I would not think so. It is pretty hard to allocate the reasons, Mr. Chairman.

The CHAIRMAN. You felt it was the logical thing to do to serve

Your trade area and improve your banking institutions?

Mr. Lord. In Detroit, if you know the city, the industries are Pretty well scattered around the city, and, in order for us to serve the industries that wanted to bank with the Guardian Detroit Bank, we had either to build our own branches and develop them or take in Some institutions that had branches.

The CHAIRMAN. You have stated that you do not think under Present conditions, unit banks in small towns can continue to make

sufficient profits to exist?

Mr. Lord. I think the majority of the banks are unable to make a profit.

The Charman. For a number of years, we have had a system of unit banks in the country and they have apparently succeeded up until the last few years.

Mr. Lord. Yes, sir.

The Charman. Have we reached a condition in this country where unit banks can no longer exist?

Mr. Lord. In the small communities; yes, sir.

The CHAIRMAN. What is responsible for that change?

Mr. Lord. There are a great many factors, as I see it; in the first place, the banks used to make quite a profit through real estate of farm mortgages. They used to make a profit from the collection of checks. At the present time, Mr. Chairman, the expenses of operating a bank have increased, just as the expenses in your own house hold or living costs, and yet the rates of interest do not increase, and the margin between the gross income and expenses is getting narrower and narrower.

The Chairman. In other words, these unit banks have been deprived of previous sources of income and there has been an increase in expenses?

Mr. Lord. Yes, sir.

The Chairman. You would not attribute that to improper management?

Mr. LORD. I think many failures are traceable to that.

The Charman. You are speaking of the country as a whole?

Mr. Lord. Yes, sir.

The Chairman. There are certain States where unit banks continued uninterrupted by failures, like Vermont and Connecticut.

There was not a failure in Vermont.

Mr. Lord. You have a situation there that does not exist in other States. You have a diversity of risk which is unusual. I think that is one of the reasons, Mr. Chairman, Michigan has such a good record; but going back to the question of management, take, for instance, Florida, in Miami: The First National Bank there shrank in its resources from \$72,000,000 to twenty million dollars and odd almost over night, yet it survived. I call that good management. Plenty of other banks went down.

The CHARMAN. I do not want to detain you too long, but in connection with your statement this morning showing a list of your stockholders and where the stock is held, is control of your holding

companies lodged in the hands of any group?

Mr. Lord. It is lodged in the hands of residents of Detroit. The largest single holding, I think, is 3 per cent of the total stock.

The CHAIRMAN. Is there any pooling of the control of the stock!

Mr. Lord. No, sir; absolutely free.

The CHAIRMAN. No understanding about control?

Mr. Lord. No. sir.

The CHAIRMAN. The control is in the hands of the management only so far as successful management prevails?

Mr. Lord. Yes, sir.

The CHAIRMAN. Is there a large amount of stock of your holding company in the officers of the banks and directors?

Mr. Lord. Yes, sir.

The CHAIRMAN. What per cent of the holding company's stock would be in the control of officers and directors?

Mr. Lord. Mr. Chairman, I could not tell you. I can get you that information. I should say that all directors and presidents of unit banks are substantial stockholders.

The CHAIRMAN. Your stock of the holding companies is all one class of stock?

Mr. Lord. Yes, sir; \$20 par.

The CHAIRMAN. Any inducement to management offered to any institution in the way of distribution of profit sharing, and so forth?

Mr. Lorp. We are working on a profit-sharing plan which has not been put into effect, because it has not been completed. We do, in some communities, have group insurance, pensions, and so forth, which are inducements, but as far as regular profits are concerned there is no plan in force.

The CHAIRMAN. In Mr. Luce's questions this morning he was referring to interest charges paid by your bank. You stated, I believe,

that was optional with the banks themselves.

Mr. LORD. Yes, sir.

The CHAIRMAN. Does the change in the Federal reserve rates or rates on commercial paper or bills change the rates of interest paid or charged by any of your banks?

Mr. Lorn. It changes the rate of interest charged more than that Paid.

The CHAIRMAN. You do vary that charge in accordance with the fixed money rates? Mr. Lord. Yes, sir.

Mr. Chairman, we have in Detroit to meet to a great extent the New York and Chicago rates.

The CHAIRMAN. You spoke during the day here of closing many branches in Detroit. That was brought about through the consolidation of groups?

Mr. Lord. Of the other group, particularly. When the other group got together it had approximately 200 branches. I believe they expected to close quite a substantial number where they com-Peted in adjacent locations.

The CHAIRMAN. You mean the commerce group that joined with you ?

Mr. Lord. No, sir; the Detroit Bankers Co. The Peoples Wayne County Bank had about 100 branches.

The Peninsula State Bank had 30 or 40 branches.

The First National Bank had about the same number and the Bank of Michigan also. When they were all put into the Detroit Bankers Co. the combined picture showed about 200 branches, and In many locations there were two and three and four competing with each other within an area of two blocks.

The CHAIRMAN. The consolidation of these two groups in Detroit

will result in closing a number of branches?

Mr. Lord. Over a period of two years, by the time it takes to adjust it, they would close, I would say, from 30 to 40 branches.

The Chairman. Does your holding company or your banks own as investments, stocks in other banks than those which form your group?

Mr. Lord. The Securities Co. may have some moderate holdings in other banks that do not amount to anything. They may be trad-

ing for customers.

The Chairman. They own no stock except of the group of banks and companies affiliated, of which you put a list in the hearing?

Mr. Lord. Yes, sir.

The Charman. Some groups that have been developing have seen fit to take over banks in New York; for instance, the Marine Midland group who have taken over the Commercial Fidelity of New York. Have you an institution of that kind there?

Mr. Lord. No, sir; and I think we do business with almost every big bank in New York. We have no interest in banks in New York.

The Charman. Your investment companies do maintain an office in New York?

Mr. Lord. Yes, sir; the Guardian Detroit Co.

The Chairman. Your group company owns no other stocks except the stock of institutions referred to by you as part of your group!

Mr. Lord. That is correct.

The CHAIRMAN. It is purely a stockholding company?

Mr. Lord. Some of the subsidiaries may own other stocks, but the group company does not. It owns only the banks and institutions mentioned.

The Chairman. You referred to the fact that you did not take over any banks that did not pay. Could you not take over many small banks that are now operated at a loss because of poor management and high operating costs that you could operate at a profit?

Mr. Lord. As units?

The Chairman. As units; yes. From your statement I presume you would say "yes" if you could operate them as branches.

Mr. Lord. If we could operate them as branches; there are many,

but not as units.

The CHARMAN. Under your plan of operating units, you could not lot that?

Mr. Lord. I would not want to do that as a business proposition. In the first place, we want to retain the local management and the same management as far as possible, so as not to disturb the local situation and, with that in mind, we have endeavored to select banks operating satisfactorily.

The Chairman. As I understood you to say, it would be very difficult for the small banks, in small communities, to exist in the future?

Mr. Lord. Yes, sir.

The Chairman. What would you recommend to this committee to furnish banking facilities to those communities? Would you recommend branch banking nation-wide, state-wide, or trade area?

Mr. LORD. Trade area.

The Charman. You think the trade area would cover every community in the United States that is now being served?

Mr. Lord. Yes, sir.

The CHAIRMAN. In other words every part of the United States, You believe, would be included in some particular trade area?

Mr. Lord. Yes, sir.

The Chairman. Do any of your banks or your holding company buy and sell stocks in your banks or companies; in other words, do you maintain a market on any of your stock?

Mr. Lord. We maintain a market for the holding company stock

only for the accommodation of our stockholders.

The CHAIRMAN. That is to say one of your companies buys and sells your holding company stock and maintains a market on it? Mr. Lord. We do not support the market unduly. We maintain market so that proper distribution will be given to the shares of that company; for instance, we would rather have a shareholder come to the Guardian Detroit Co. when he wants to buy or sell shares of the group company than go to some broker with the stock.

The Charman. Your holding company maintains a market for

Individual people in the country who want to buy stocks? Mr. Lord. No sir; we do not have enough to sell, often.

The CHAIRMAN. In the fiasco last fall, it was shown some affiliated companies were selling stocks of banks and recommending them to investors. You do not pursue that policy with your organization?

Mr. Lord. We want to create local interest in the group company and we try to select, in Kalamazoo or Jackson or Grand Rapids, or in communities where we have a unit, people that we think can do our institution good from the standpoint of business contact and we do try to place stock with such people, but the stock is quoted on the exchanges and sold at the current market price.

The CHAIRMAN. In reply to Mr. Fort's questions in regard to Profits on trust business, you said they were never carried on at a Profit. What would you consider a profit in a trust transaction?

Mr. Lord. We do not sell to our own trusts either mortgages or bonds except at our cost to the securities company and as I said to Mr. Fort, where there are funds in those trusts, they are deposited With other institutions and the trust receives exactly the same rate of Interest we receive.

The CHAIRMAN. Where these various trusts have been invested in other stocks that are local and they have gone up in value and in the management of those securities you sell them, do you give the trust whatever profit may have accrued on those investments?

Mr. Lord. Yes, sir.

The CHARMAN. You were speaking a few moments ago in regard to the consolidation of one, two, three, or more banks in small communities, and I think you said it was better to have one well-managed and conservatively operated money-making bank in the community than to have three. Is it a voluntary proposition as to whether those banks get together?

Mr. Lord. Yes, sir.

The CHAIRMAN. Do you not think it advisable to authorize the Comptroller of the Currency, the Federal Reserve Board, or the Supervisor of banks to determine whether there are too many banks In those towns and whether those banks should consolidate?

Mr. Lord. I do not believe it would be wise to force them to consolidate, but I believe that the comptroller or the State banking commissioner could advise with them with the result that there would be consolidations that would benefit the community. I do not see how you could force them to consolidate if they did not choose to.

The Charman. Under the premise that the bank was not making money and that there were too many banks in that area, could not the supervising function of one of those officers be applied so that it would become apparent that it was necessary to consolidate in order to facilitate the banking business in that community?

Mr. Lord. I do not know how you could do it by law, but I know that the banks always listen with open ears to the comptroller or the

State banking commissioner.

The Chairman. I am jumping from one thing to another here, Mr. Lord, but in the last few years we have had a change in the method of financing industries; in other words, many industries are now financing themselves through the sale of stock issues and building up their treasuries that way. How has that affected banking business generally?

Mr. Lord. Take our own situation, Mr. Chairman; it has necessitated our carrying in the Guardian Detroit Bank—and I am using that because I know that bank more intimately than any other between 20 and 25 per cent of our deposits in Government bonds because we have insufficient eligible paper.

The CHAIRMAN. That plan of financing tends to decrease the amount of eligible paper in banks.

Mr. Lord. Yes.

The Chairman. And, because of that, you, just the same as many of the other large banks there, utilize Government securities as the most convenient means of going to the Federal reserve bank, if you have to?

Mr. Lord. As practically the only other way we can go to the

Federal reserve bank.

The Charman. Do you not think that that is a situation that requires very careful study in connection with any change in our banking system?

Mr. LORD. I do, sir.

The Charman. Particularly when, in these days, we are hearing a lot of talk about the amount of brokers' loans and all that, do you not think that the changed conditions are a factor to be considered!

Mr. Lord. I think that should be recognized.

The Charman. And before we deal with it we should know to what use that money is put before we attempt to regulate it?

Mr. Lord. Yes.

The Chairman. I am not going to keep you any longer.

Mr. Lord. Go right on.

Mr. Forr. May I ask one question I omitted, or, rather, two small ones?

Mr. Lord, we have a 10 per cent limit on individual borrower's loans under the law. Do you think we should have any limit on the amount that might be loaned on the identical collateral by a bank,

Now that loans are made on collateral rather than on name in so many cases?

Mr. Lord. No; I do not think so. I do not think it is necessary.
Mr. Fort. In many towns, is not the major type of frozen loans that the banks get on local securities?

Mr. Lord. Yes; but I think that situation is always called to the

attention of the bank of the examiner.

Mr. Fort. But he has no power to force them to do anything.
Mr. Lord. He has no power, except that his comments on the
condition of the bank, in my experience, are always recognized by
the board and by the officers. So far as our bank is concerned, we
keep a running record of how much is in General Motors stock and
how much in Packard stock, and so forth, in connection with all our
loans.

Mr. Fort. Last week Mr. Wakefield, of the First Bank Stock Corporation, offered to furnish the committee his views as to the type of regulatory legislation which might be proper for the committee to recommend in regard to group and branch banking.

Would you be willing to do the same thing?

Mr. Lord. I would be willing to do anything you want me to

that might be helpful.

Mr. Fort. I think we would be very glad to have them. We would get more help from you gentlemen who have had this experience in running these institutions as to the hazards we ought to guard against in connection with inefficient and incompetent management than we can devise out of our own heads, and perhaps we would annoy you less if we got intelligent aid first.

Mr. Lord. I do not know that I can add anything to it, but I

would be glad to do anything I can.

Mr. Forr. I think the committee would be very glad to get a statement from all of you gentlemen as to what regulations you may regard as wise or necessary if the expansion of group banking is to be permitted.

Mr. Lord. Have you in mind merely group banking, or the whole

Subject of group, branch, and chain banking?

Mr. Fort. Anyone of them. I think we would be glad to have the views of any of these witnesses—don't you, Mr. Chairman?

The CHAIRMAN. I certainly do. Mr. Fort. On essential regulation.

The Charman. After all, Mr. Lord, this committee is trying to deal constructively with this situation. Some of us are more or less familiar with banking conditions throughout the country, but there are men like you and the others who are in the midst of these undertakings who can give us very good information, and we would appreciate it as a committee if you men who are appearing before this committee would take it upon yourselves to make any suggestion to be which might be helpful to us in solving this whole problem.

After all, this is a study of the whole situation; we are looking for

ught.

I want, on behalf of the committee, to express to you our sincere appreciation of the statement which you have given us. I am sure it has been very helpful, but I am also of the opinion that, upon your

return to Detroit, other things may occur to you that will be helpful to us, and we would like to hear further from you and receive any

suggestions which you may care to make.

Mr. Wingo. I think, in making suggestions in response to the request of Mr. Fort, he should not confine himself alone to suggestions with respect to restrictive legislation, but if he thinks that there is any restriction that now exists that could be liberalized or removed, we would like to have that also. In other words, feel free to offer such suggestions as to legislation which, if you were sitting in our place on the committee, would occur to you as being wise and important.

Mr. Lord. I will be very glad to give you whatever may occur to

me in that connection.

(Thereupon, at 4.50 o'clock p. m., the committee went into executive session, following which it adjourned until Thursday morning, April 24, 1930, at 10.30 o'clock.)

BRANCH, CHAIN, AND GROUP BANKING

THURSDAY, APRIL 24, 1930

House of Representatives. COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock

The CHAIRMAN. The committee will come to order.

Before we hear from Mr. Rand, I would like to insert in the record here a communication which has come to the committee from the Minneapolis Council of Agriculture, under date of April 18, 1930, and another letter from Stanchfield & Co., St. Paul, Minn., under date of April 22, 1930.

Unless there is objection, these letters will be placed in the record at this point.

(There was no objection, and the letters are reproduced below.)

MINNEAPOLIS COUNCIL OF AGRICULTURE. Minneapolis, Minn., April 18, 1930.

COMMITTEE ON BANKING AND CURRENCY, House of Representatives, Washington, D. C.

GENTLEMEN: C. T. Jaffray, president Soo Line, former president and now director First National Bank, Minneapolis; Joseph Chapman, affiliated with Affector First National Bank, Minneapolis; Joseph Chapman, anniated with Northwestern National Bank, and manager L. S. Donaldson Co.; F. M. Prince, First National Bank; W. H. Brammer, receiver Minneapolis & St. Louis Railfoad; C. D. Mills, Midland National Bank & Trust Co.; L. E. Wakefield, First National Bank; F. B. Wells, Peavy Grain Co.; E. W. Decker, Northwestern National Bank, joined in a telegram sent to the then President Coolidge, Igned by 20 in opposition to bill for the relief of agriculture, from which the following is contest: following is quoted:

"FEBRUARY 15, 1927.

"As a result of our five years' diversified-farming program, the indebtedness of As a result of our live years diversided at the Assertion Bank has been reduced from 3145.000,000 to \$3.500,000. Paper from closed banks acquired by the Ninth Federal Reserve Bank have been reduced from \$14,000,000 to \$1,800,000. Loans because of the Assertion have been reduced from \$100,000 to \$1,800,000. borrowed by banks from the War Finance Corporation have been reduced from \$60,000,000 to \$2,000,000. Total bank deposits in the Northwest now are the same as in 1920.

"We believe, with the proper methods of farming and application of sound business principles to our agriculture, almost every northwest acre can produce gross profit of more than \$25 annually.

"During the past five years hundreds of thousands of dollars have been been annually by northwest business leaders, representing railroads, banks, hanufacturers, newspapers, and many others, on educational work with the forthwest farmers for the promotion of diversified farming."

Again, in Minneapolis Tribune, January 26, 1927, Roy A. Young reports deposits of Astrict reached total held in 1920.

deposits of district reached total held in 1920.

The sound financial position of the inland Northwest and its banking instibittons is indicated by the fact that the loans of the Federal Reserve Bank of

100136-30-vol 2, pt 9-11

1169

pful any re-

ions

e 18 ved, ffer our im-

· to

cung

Minneapolis to its members now are around \$3,500,000, as compared with \$115,000,000 seven years ago," Roy A. Young, governor of the bank, told members of the Northwest Shippers Advisory Board, and so forth, in his report as chair man of the board's committee on finance and credit.

"That the operating member banks in Montana on December 22, 1926, owed the Helena branch of the Federal reserve bank but \$23,033; on August 31, 1924

the banks' advances in Montana totaled \$13,601,000.

"As further indication of the Northwest's improved financial situation, the banks of the ninth district to-day hold about the same total of deposits as in 1920, when inflation was at its peak, although the number of banks has been reduced considerably.

"Borrowing on a sound basis is legitimate and benefits the community of the

bank which does it."

According to press dispatches under date of April 6, 1930, L. E. Wakefield President First National Bank, Minneapolis, is quoted as having told the House Banking and Currency Committee: "Since 1920, the Northwest has been the scene of the scene of a constant struggle, political and economic, to reestablish the foundation of its basic financial structures which were rudely jarred by the consequences of the war." consequences of the war."

Developments which resulted in a group banking movement, he said, included "The increase in production costs, due to sharp uptrend in output during the

war years and the general price level decline in 1920.

" PRIOR TO 1920

"The banks cooperated fully with the agricultural population by the external sion of new credits which were reflected in tremendously increased deposits A large equity in these newly developed farms was represented in second mortgages held by banks as collateral for note loans.

With the advent of 1920, the general price level took a sharp decline and

the reaction followed throughout the entire credit structure.

"Much money from outside territory which was on deposit, attracted by the

high rate of interest, was withdrawn.

"The pressure of the Federal reserve and trade associations against the charging of exchange, deprived rural banks of another of their sources of

"In reaching our decision to embark upon the group-banking program we were prompted solely by the necessity of some form of practical reorganization of the rural banking structure if the territory as a whole was to recover from

the effects of the deflation.

"To correct the situation we felt that we would create an advisory organization, properly manned, and with sufficient banking experience to offer to individual units making up the chain, expert advice and assistance in management of their local banks, that there would be no question as to the benefits which would accrue.

"We can expect that within a few years the farm mortgage will be restored as a liquid instrument."

Mr. E. W. Decker, of the Northwest Bancorporation, Northwestern National Bank, Minnesota Loan & Trust Co., on the same date is quoted: "The average small bank has been unable to earn a profit or even to pay the overhead in some cases. It can readily be seen that a bank operating on such a small margin would not be in a position to take care of such losses when they came necessitating the closing of its doors.

"They retain local officers and directors consisting of men intimately iden tified with local systems under the systems of group banking. Each State the advantage of personal property taxes. In 1927 such taxes for Minnesotathe Dakotas, and Montana amounted to over \$3,000,000.

"The bank that can not make money should not be in business."

The attitude of Mr. Decker and Mr. Wakefield in 1927 seems to have heel that there was no thing wrong with the Northwest—that there was no economic that there was no economic that there was no economic that there was no economic than the control of the contr problem, and it would seem to be substantiated by their message to President

From the statement of Mr. Young, it is found that during the 5-year period prior to 1927, the indebtedness of member banks in the ninth Federal reserve district has been reduced by a total of \$111,500,000, and paper from closed banks acquired by the Federal reserve bank, had been reduced \$12,200,000. Add to this, loans borrowed by banks from War Finance Corporation, which Derio a tot Be bank cultu Daid had r Stric Th that Dles of m ing : indu 1027

Bear in mind that this payment was forced—that is, the Federal reserve bank refused agricultural paper for rediscount—and during this period, agriwhere had no credit in the ninth Federal reserve district, this amount had to be baid out of its savings and current earnings, and during all of this period they had to pay the ever increasing tax burden, and all other obligations, other than strictly Federal reserve and War Finance Corporation indebtedness.

Then again, Mr. Wakefield and Mr. Decker in that telegram state in effect hat with proper methods of farming and application of sound business princi-bles to our agriculture almost every Northwest acre can produce a gross profit of more than \$25 annually. It would seem from this that the method of farming and the unsound business principles used in the operation of the farming industry in the ninth Federal reserve district for the 5-year period prior to 1927 resulting as it did in the payment of \$181,700,000 indebtedness to these two reditors, was brought about by improper methods of farming and the applicaton of unsound principles in the business of our agriculture,

These gentlemen now tell the committee that owing to the political and economic struggle to reestablish the foundation of its (Northwest) basic financial struchres a movement developed which resulted in group banking, and yet the facts are, according to the statement of these gentlemen, that the group banking movement is about a year old, so all of this has developed, if you believe their

statements in the telegram to Mr. Coolidge, since 1927,

In view of the now admitted unsound financial structure according to their statements, what is the meaning of Governor Young's statement as of January 3. 1927, that the sound financial position of the inland Northwest and its bankinstitutions is indicated by the fact that the loans of the Federal Reserve be assitutions is indicated by the target and so forth? It does appear to the writer that these gentlemen in 1927 were in accord with Mr. Young, and at hat time agreed that the financial position of the Northwest and its banking issitutions was sound. Their statement to Mr. Coolidge in the telegram that during the past five years hundreds of thousands of dollars have been spent annually by Northwest business leaders representing railroads, banks, manuacturers, newspapers, and many others, on educational work with the Northwest armers for the promotion of diversified farming is another indication that lesse gentlemen believed in the soundness of the financial structures up to 1627, and the only flaw they found in the agricultural situation in the North-West was improper farming methods and lack of diversification. Bear in mind that at this time in 1927, according to the statement of Governor Young, "total bank deposits in the Northwest now are the same as in 1920," and the peak of deposits in the Northwest period was in 1920.

Now, in view of the contradictory statements given to the President in 1927, with those statements given to the Committee on Banking and Currency in 1930, have these gentlemen qualified as being competent to advise the agricultural business and matrix. caltural Northwest as to sound agricultural business and methods. history I do not recall as ever having heard such an ill-advised and impossible statement as that they make when they say that every Northwest acre can

broduce a gross profit of more than \$25 annually.

Mr. Wakefield says in a statement to your committee, "With the advent of 1920 the general price level took a sharp decline." Again he says, "The presthe general price level took and trade associations against the charging of thange deprived rural banks and others of another source of income,

It is true that there was pressure from the Federal reserve. In May, 1920. The Federal Reserve Board, in session at Washington, singled out the agrientural industry for deflation, and the instructions went to the various Fedbal reserve district banks to refuse agricultural paper for rediscount purloses, so that as far as the agricultural section is concerned in the district of which Mr. Wakefield and Mr. Decker speak, the Federal reserve bank failed function for the purposes for which it was created, and when you bear in hind that in addition to this \$181,700,000 of obligations paid through the Fedequi reserve bank and the War Finance Corporation, and vastly larger sums obligations that must of necessity have been discharged in the other avenue of doligations that must of necessity have been in the Northwest is as favorable finance, it is a wonder that the condition in the Northwest is as favorable it is. None but a people of the hardy pioneer type, with a territory rich in that is. None but a people of the star is, could have survived.

You will bear in mind in this connection that Mr. Wakefield and Mr. Decker probably seconded and helped shape the policy of the Federal reserve bank with reference to agricultural paper at this time. Mr. Young came to the Ninth District Federal Reserve Bank as assistant to the then Governor Wold and upon Mr. Young's selection as governor of the Ninth Federal Reserve District Report Mr. Wold however affiliated with the Ninth Federal Reserve District Reports of the Ninth Reports of the Ninth Reports of the Ninth Reports of the Ninth Re Bank, Mr. Wold became affiliated with the Northwestern National Bank, of

which Mr. Decker is the controlling factor.

Mr. Wakefield further states to your committee, "In reaching our decision to embark upon the group-banking program we were prompted solely by the necessity sity of some form of practical reorganization of the rural banking structure if the territory as a whole was to recover from the effects of farm deflation Is this an admission on the part of Mr. Wakefield that the Federal reserve bank as it functions, is a failure, and can not aid a territory in recovering from the effects of deflation brought about by causes beyond their control, and the responsibility for this deflation rests, as Mr. Wakefield places it—upon the consequences of the war, he might well add that the evil consequences following this were appreciated and explanated by the action of the consequences of the war, he might well add that the evil consequences following this were appreciated and explanated by the action of the consequences. this were augmented and enlarged by the action of the Federal reserve system in denying this depressed territory the aid of credit through the Federal reserve system. Not only denial of aid and credit but the ruthless demand for the immediate payment of all agricultural paper.

"Prompted solely by the necessity of some form of practical reorganization of rural banking structure"—the first evidences of spreading out, or a ground control, was when the First National Bank and the Northwestern National Bank of Minneapolis acquired control of various other banks in the city of Minneapolis and in direct violation of what I believe was the law attempted to control them as hyperbolic them. operate them as branches, and this was long before they felt the prompting of the reorganization of the rural banking structure. They state that they felt they "could create an advisory organization properly manned and with sufficient

banking experience to offer to individual units making up the chain experience advice and assistance in the management of their local banks."

Who are these supermen who have advised agriculture through these periods of depression and who have now that them. of depression and who have now, that they are displacing the community banker the community center, and forming a channel through which they can control the entire flow and line of credit and money to every community in the North west—is there anything in history of either of these men or the institutions that they are connected with which, if carefully examined, would justify the least efficient farmer or business man in placing his future and his prosperity in their hands. It is the carefully examined. in their hands? It is the opinion of the writer that if an examination was made and an investigation held upon the methods used in the distribution of funds through the Northwest Agricultural Credit Corporation and, if you please in the methods used by the First National Bank and the Northwestern National Bank in acquiring control of various banks now constituting their group, that red-blooded Americans, proud of the liberties and honesty of its countrymen would bow their heads in shame,

Your committee can not expect to secure from these gentlemen any admission that they used anything but the very kindliest persuasion to get banks into their group, neither can you expect a small community banker, with his very healthy bank, who is still independent, to come before your committee and tell you of the means and methods employed to indicate to him the necessity of his joining one group or other or finding himself possibly without means of establishing a clearing, or a correspondent in either Minneapolis of St. Paul. It is likely that a few independent bankers will appear before your committee and give techniques with the likely that the same class to the likely that the likely th committee and give testimony along this line but for the most part they will not care to incur the displeasure of a clearing house in Minneapolis and St Paul, which is necessary for them in order to serve their customers. Minne apolis banks no longer are in competition to secure correspondent accounts from the country banker and the independent banker is finding it harder and harder to comply with the month. to comply with the regulations required for carrying an account in these banks through which to clear. In fact, it will be found to be true, I believe, that the group banker is now analyzing personal accounts and a small account that is active is being analyzed to determine whether there is a profit sufficient to the handling of the account to warrant their extending that convenience some of their customers and perhaps shortly the edict will go out that account that do not carry a daily balance of \$500 or perhaps \$1,000 are not desired.

Your committee is undoubtedly familiar with the earnings of the Federal reserve bank in the ninth Federal reserve district covering the territory discussed by Mr. Decker and Mr. Wakefield. I merely want to call your attention

H Drob He arge Th Syste

lon to the earnings for the year 1921, in which occurred this sudden and drastic deflation, and I believe it will be found that the Federal Reserve Bank of Minneapolis earned 126 per cent on its capital. There is something wrong then a banking institution, at a time of distress felt in every home throughout the district, can earn such an exorbitant income upon its capital invested and a continuation of such a process is sure to absorb the entire production of wealth and savings of any community wherein an institution of this character 18 permitted to exist.

The inadvertent use of the word "chain" by Mr. Wakefield must not go innoticed. Evidently he is having the same difficulty in differentiating between group bank, branch bank, and chain bank that Mr. Pole, Comptroller the Currency, experienced in his efforts and explanation to your committee, In Mr. Pole's examination by your committee, the statement was made that anadian failures were rare, yet those failures are more far-reaching and but for the Dominion Government coming to the rescue of the Canadian Bank of Commerce, one more failure might have been added, and we all know of the collapse of the Home Bank, and I venture to make the statement that if there

Were no bank examinations and regulations in the State of Minnesota, 90 per

ent of the State banks closed would be still operating.
When Mr. Decker states "The bank that can not make money should not be in business," he gives you an insight into the workings of his mind, mayhap, indicating that the controlling factor with him is—will I make money. It may be that the Northwestern National Bank's business has been very profitble during this time when desolation, abandonment of homes, misery, and want stalked throughout the district, that his institution should serve. Speaking of taxes, it may be that the statement, the States of Minnesota, the Dakotas, and want the States of Minnesota, t and Montana taxes amounting to over \$3,000,000 is true, but he does not say but this amount was paid, nor does he say that the national banks went into the courts in Minnesota in an endeavor to pay a lesser amount, and they are now baying taxes in Minnesota under a "Gentlemen's agreement."

The unit bank and the banking system in operation for so long in the United States, has adjusted itself to the rapid growth and development of the greatest hation on earth, and until the Federal reserve system was adopted, no valid addetment of our banking system would stand, so that it would appear that the functioning of the Federal reserve bank, or its failure to function, as anticipated, has hindered, or obstructed America's banking system from ad-Justing itself to meet the conditions that have arisen since the adoption of the Pederal reserve system, or perhaps more rightly, since it began to force

deflation beginning in 1920.

And it seems to the writer that the outstanding conclusion that can be drawn from our banking experience is that to no small group of men, however patriotic hey may be, can be given the control of money and credits when such control, rereised for other than the common good of the whole people, might result in Drofit or advantage to some group or section and to the disadvantage, necesorly, of some other group industry, or section, and perhaps to the personal anin of the group controlling the flow of moneys and credits.

Respectfully submitted.

JOHN MEYER, Secretary.

STANCHFIELD & Co., St. Paul, Minn., April 22, 1930;

COMMITTEE ON BANKING.

GENTLEMEN: I wish to protest against any legislation in favor of group or branch banking. Rather, I urge action which will absolutely prevent action, as firmly believe it will nullify all good features of the reserve system.

Mr. Wakefield's testimony on April 16 was remarkable for what he did not

tell you.

He did not tell you that his 150 banks are controlled absolutely by the credit department of the parent institution and the old officers are merely puppets. The local paper is examined by and absolutely controlled by a traveling credit han, who can have and has no interest in local affairs,

He did not tell you that through his trust companies and subsidiaries he brobably holds an amount of bad farm paper proportionate to any rural bank. He did not tell you that increased money power will enable him to make arge speculative loans in which his sole interest is large underwriting profits.

The greatest hindrance to the development of Canada has been its banking system. In a rural town the only logical man to increase its prosperity is the banker, for he is in a sense the partner of every borrower and mutual success is vital.

The group bank is merely a safe-deposit vault, and it is the consensus of opinion of business men of this territory that group banking spells the ultimate ruin of the rural town. Too much centralization of money power is probably the cause of our nation-wide depression; in part, at least.

Any favorable legislation toward group or branch methods will simply be another nail in the coffin of the Grand Old Party, a coffin which, since the wath has been almost totally completed.

The opinion of an individual citizen will probably reach only the waster basket, but all the people can not be fooled all the time, as the Whig Party discovered.

Respectfully,

GEO, F. STANCHFIELD.

TICALCIVO

The Chairman. We have before the committee this morning Mr. George F. Rand, president of the Marine Midland Corporation of Buffalo, N. Y.

Mr. Rand asks that he be permitted to make his statement without interruption until he has completed it. So, if you will, Mr. Rand, proceed in your own way.

STATEMENT OF GEORGE F. RAND, PRESIDENT MARINE MIDLAND CORPORATION, BUFFALO, N. Y.

Mr. Rand. Mr. McFadden and gentlemen of the committee, I think that my statement will cover our corporation pretty well, and after I have completed it I will be glad to answer any questions you ask if I am able to.

INTRODUCTION

While the term "group banking" is of comparatively recent origin, the need for such a relationship between the larger city banks and the smaller town banks has become increasing evident to us for years past.

The traditional American banking system functioned for many years, before the era of the automobile, good roads, radio, consolidations in industry, etc. quite successfully. Changing business methods have, however, made it increasingly difficult to transact business in the smaller towns profitably as heretofore. Where formerly there were possibly 15 or 20 small or moderate sized manufacturing concerns or jobbers in a city of 25,000, there are now perhaps 4 or 5 big companies. If these operate as branches of a parent corporation, the bank balance which they carry in that community is probably reduced to petty cash or pay-roll accounts. If, on the other hand, they are the head offices of large corporations, their credit requirements are probably in excess of the available bank credit in that community, and if they have large bank balances, these are probably carried in the larger metropolitan banks either for the purpose of assuring adequate lines of credit or possibly as a matter of safety. These conditions apply even in cities the size of Niagara Falls, Troy, and Rochester, the population of which ranges from 80,000 to 250,000.

We have had small banks come to us to sell or rediscount either secured of unsecured paper which they are unable to handle on account of certain definite limitations, perhaps because of insufficient resources. They have come to us pledging bonds other than Government securities, usually when bond prices are low and money is in demand in their local communities. They have even been forced to sell securities at times when they have had to take losses of a substantial character.

On the other hand, occasionally, lacking a sound local market for their funds, in order to keep their money in use, we have seen such banks take unsound credit risks locally or purchase investments in an inexperienced way, being unduly influenced by the prospective yield. From our experience we might cite instances where credit has not been granted to local enterpises because the amounts involved were not within the ability of the local bank to loan. The same local enterprises have found it difficult to obtain credit

Under the correspondent banking system because the granting of such credit involved an intimate knowledge of the company's management. Under the System of group banking such credit is extended, because through the local unit in the group there exists the necessary intimate knowledge of the company's affairs and the resources of the entire group are thereby made available to it

The management of the Marine Trust Co. of Buffalo has for years had an interest in a small city bank (the First Trust Co., of Tonawanda). Through its affiliation this local bank has been able to keep its funds safely and profitably invested and to supply the credit requirements of its community so adequately that although it is in a city of 15,000 population, no other bank has been started there, every other bank having failed years ago. Because of its relationship with the Marine Trust Co., this bank has experienced few of the difficulties which beset the management of the average small bank operating alone.

Our experience with these conditions and knowledge of these facts prompted us to form the Marine Midland group.

BACKGROUND

The Marine Trust Co. of Buffalo is the direct successor of the Marine Bank, a New York State corporation, organized in 1850. In 1902 it became the Marine National Bank of Buffalo and absorbed the Buffalo Commercial Bank, which had been organized in 1836, so that it can now trace its corporate existence over a period of 94 years.

Branch banking in Buffalo started in 1916 when Bankers Trust Co. of Buffalo (merged into the Marine Trust Co. in 1919) organized by George F. Rand, sr., opened its Cold Spring branch. After it had absorbed the Central National Bank, it continued to operate the office of that institution as a branch, thus opening the first two branch banks established in the city of Buffalo.

George F. Rand, sr., who was at that time president of the Marine Trust Co. of Buffalo, was the first advocate in that city of branch banking. He haugurated the definite policy of developing branch banks in all of the more important community centers within the city for the purpose of bringing banking facilities within easy reach of all the retail business and residential centers, thereby encouraging greater use of such facilities, educating the public in the various branches of banking service which were available for their use, and inducing the removal of hoarded savings from chimneys, socks, and mattresses to the vaults of a financially responsible bank.

In carrying out this policy the Marine Trust Co. of Buffalo has continued to open branches, with the approval of the State superintendent of banks, at various central locations, until it now has some 34 of such branches within the city of Buffalo, operating to the mutual advantage of the public and the trust

company.

Concurrently with the development of branch banking within the limits of the city of Buffalo. Mr. Rand, sr., began laying the foundation of the present Marine Midland group of banks, through extending the influence of the Marine Trust Co. outside the city of Buffalo. He had started his banking career in Tonawanda and was a substantial stockholder in the First Trust Co. of Tonawanda at the time he became president of the Marine Trust Co. This Tonawanda bank, therefore, as stated above, was closely affiliated with the Marine Trust Co., and the officers of the latter institution, as directors or advisers, played a very important role in guiding the policies and extending the development of the smaller bank.

It was largely as a result of this experience, referred to above, and of the realization of the mutual advantages to be derived from such relationships that the officers of the Marine Trust Co. began systematically to build up a group of banks affiliated with their larger institution through closer cooperation, some common stockholders, and a growing acquaintance and friendship among the

officers and directors.

The group so built up comprised, prior to the organization of Marine Midland Corporation in September, 1929, the following banks:

The Marine Trust Co. of Buffalo. Union Trust Co. of Rochester. Niagara Falls Trust Co. First Trust Co. of Tonawanda. State Trust Co. of North Tonawanda. Lackawanna National Bank. Niagara County National Bank & Trust Co. (Lockport). Peoples Trust Co., Binghamton. Workers Trust Co. of Johnson City. Union Trust Co. of Jamestown. Bank of East Aurora. Bank of Snyder.

MARINE MIDLAND CORPORATION

HOT C

p

h

On September 23, 1929, Marine Midland Corporation was incorporated under the laws of the State of Delaware, with an authorized capital consisting of 10,000,000 shares of the par value of \$10 a share, for the express purpose, among other things, of acquiring a controlling interest in the stock of various banks and trust companies in the State of New York. Certified copies of its certificate of incorporation and by-laws are attached hereto, marked "Schedule

1 and 2," respectively.

Offers were made to the stockholders of all of the banks listed above, and also to the stockholders of the manufacturers National Bank of Troy, Cortland Trust Co., Orleans County National Bank and Bank of LaSalle (Niagara Falls) to exchange their stock for stock of the new corporation. The ratio of exchange was in each instance worked out between officers of the new corporation and officers and stockholders of the respective banks, giving due consideration to the earning power, liquidating value and market value of these bank stocks, and taking the stock of Marine Midland Corporation at \$60 a share-Concurrently with this offer, underwriting agreements were entered into for the sale for cash of 1,000,000 shares at \$60 a share, less commissions to the underwriters.

The formal offer of exchange was made to the stockholders of all these banks on September 24, 1929. They were given until October 7, 1929, to deposit their stock. On October 17, 1929, the necessary number of shares having been deposited, the underwritten stock was taken up by the bankers for cash, and 1,025,055 shares of stock were issued in exchange for stock of all of the banks other than the Marine Trust Co. of Buffalo. On October 21, 1929, 2.816,430 shares were issued in exchange for stock of the Marine Trust Co. of Buffalo.

On October 25, 1929, an agreement similar to those made with the first 16 banks and trust companies was made with the stockholders of the Power City Bank of Niagara Falls, and on November 30, 1929, 140,328 shares were issued in exchange for stock of that bank.

On February 28, 1930, an agreement was entered into with the stockholders of Fidelity Trust Co., of New York, similar to the agreement previously entered into with the stockholders of the other banks and trust companies for the acquisition of stock of that bank. In this case, however, stockholders of Fidelity Trust Co. were offered the option of exchanging their stock either for 13% shares of Marine Midland stock or for 1 share of Marine Midland stock. 1% shares of Marine Midland stock, or for 1 share of Marine Midland stock and \$40 in cash in exchange for each share of their stock carrying one share of stock of Fitrust Corporation, an affiliated securities company.

This was the only instance in which cash was paid by Marine Midland for stock of its affiliated banks, except a small amount paid for adjustment of

fractional shares.

Under this agreement, on March 29, 1930, 274,893 shares of Marine Midland stock and \$8,498,360 in cash were delivered in exchange for 248,169 shares of the capital stock of the Fidelity Trust Co. of New York, and the same number of shares of stock of Fitrust Corporation.

PRESENT BANK HOLDINGS OF MARINE MIDLAND CORPORATION

Additional stock of all the banks was deposited and accepted for exchange after the deposit date until as of April 9, 1930, Marine Midland Corporation held stock of the various banks which, with directors' qualifying shares retained by the directors, constituted over 97 per cent of the aggregate number of shares

of the 18 banks and trust companies.

Attached hereto, marked "Schedule 5," is a statement showing in detail the number of shares of stock of each bank and trust company authorized and out standing, the number held by the directors as qualifying shares, the number of shares exchanged and held by Marine Midland Corporation, the combined percentage, and the number of shares remaining available for exchange held by nondepositing stockholders.

DIRECTORS OF MARINE MIDLAND CORPORATION

Attached hereto, marked "Schedule 3," is a list of the directors of Marine Midland Corporation as of this date, showing the principal business occupation of each

DESCRIPTION OF BANKING INSTITUTIONS CONTROLLED

Attached hereto, marked "Schedule 4," is a statement as of March 31, 1930, of each of the banking institutions controlled by Marine Midland Corporation, showing its name, location, capital, surplus, deposits, and total resources; whether it is national or State; and which of the State institutions are not members of the Federal reserve system.

CORPORATIONS OTHER THAN BANKS CONTROLLED BY MARINE MIDLAND CORPORATION

It is the policy of Marine Midland Corporation to own the stock of banking corporations only. However, in the case of two of the banks acquired there were affiliated securities corporations controlled by the stockholders, the stock of the securities corporation being transferred with the stock of the bank. Therefore in acquiring majority interests in the stock of these banks Marine Midland also acquired a controlling stock interest in these two securities corporations, viz, Security Properties Co. (Inc.), affiliated with Manufacturers National Bank, of Troy, and Fitrust Corporation, affiliated with Fidelity Trust Co., of New York.

METHOD OF ACQUIRING BANKS

Generally speaking, the policy of Marine Midland Corporation is to acquire its holdings of bank stocks through the issuance of its own stock in exchange therefor, but this policy will not prevent it from using cash for part or all of the purchase price if that means will be helpful in any given case.

CAPITAL STRUCTURE AND STOCK DISTRIBUTION

As already stated, the capital structure of Marine Midland Corporation is extremely simple, there being only one class of stock authorized, consisting of 10,000,000 shares of the par value of \$10 each.

The extent and method of stock distribution may be considered under two heads. The stock issued in exchange for bank stocks was, of course, distributed among the stockholders of the various banks who deposited their stock under the several plans and agreements and received Marine Midland stock in exchange therefor when the requisite amount of stock had been so deposited, and the transactions were closed. In addition to this stock, 1,000,000 shares were underwritten and offered to the public at \$60 a share. This public offering was made by Stone & Webster and Blodget (Inc.), White, Weld & Co., Chas. D. Barney & Co., Schoellkopf, Hutton & Pomeroy (Inc.), and Marine Union Investors (Inc.), and 75,000 shares underwritten without commission by certain individuals were sold to the management at the same price paid by the bublic. The total number of stockholders of the corporation is now somewhat over 20,000. The complete statement as to the distribution of stock in all Marine Midland cities is as follows:

Place	Number of stockholders	Total shares
New York: Buffalo New York City Rochester Troy Niagara Falls Binghamton Tonawanda North Tonawanda Lockport Johnson City Lackawanna Jamestown East Aurora Cortland Alblon Snyder	2, 667 1, 555 534 967 184 194 169 372 80	2, 891, 844 877, 911 249, 067 102, 650 231, 297 31, 788 115, 455 84, 210 62, 315 11, 457 1, 535 16, 653 8, 664 8, 296 1, 864 3, 458
Total Marine Midland cities	13, 776 2, 191	4, 698, 464 287, 778
Total, New York State, 427	15, 967	4, 986, 242

In Note.—There are many communities tributary to Marine Midland cities whose figures are not included in Marine Midland cities totals.

land, Hawaii, and the West Indies.

In many cases where, under the unit system, one individual or a group of two or three controlled the bank and the number of stockholders in the community was comparatively small, now there is a much wider distribution of Marine Midland stock throughout the same community and the percentage of customers who are stockholders has been and is being substantially increased.

MARINE MIDLAND GROUP (INC.)

Marine Midland Corporation is purely a holding corporation, organized under the laws of Delaware and transacting no business in the State of New York. For the purpose of affording the various banks in the group the benefits of centralized supervision, cooperative buying and selling of securities, stabilization of methods of operation, cooperative purchasing and advertising and the other advantages which naturally accrue from group organization, the above corporation was organized under the laws of New York as a management company.

This company has only a nominal capitalization and all of its stock is owned by the trust companies or officials of the banks comprising the group. It has its head office in Buffalo and a board of directors comprising representatives from all of the banks in the group. Under management contracts with each bank, its expenses are prorated quarterly among the various banks in proportion to their deposits at the beginning of the quarter. This company has adopted a very carefully worked out program covering the service which it renders and will render to the members of the group, which may be analyzed as follows:

1. Supervision and examinations.—An expert examiner, who was formerly a chief bank examiner of the New York State banking department, has been secured to head this department. He, with his associates, and with the assistance of auditors drawn from other banks than the one being examined, will conduct frequent examinations of the various member banks, thus insuring that they will be maintained in excellent condition, that their methods will be up to date and standardized according to the best accounting practice, and that any weaknesses will be promptly discovered. The best methods developed in any one bank will be made available for all in the group. This we conceive to be the most important service rendered available by the group system, and one which will inevitably tend to weed out incompetent officials and doubtful loans, build up the standards of each separate bank, and give to the smallest institution the same high character of supervision otherwise available only to the larger institutions.

2 Advertising and new business.—Through the management company a national publicity campaign is being carried on which has certain unique features. Each advertisement has reference specifically to one of the communities in which the Marine Midland Group operates and features that city and the particular bank located there, Batten, Barton, Durstine & Osborn have been retained as publicity counsel, and a comprehensive program is being worked out by which all the banks will benefit from the publicity of each and the development of the local community in which each is operating will be consistently advocated.

Representatives of this department will also be constantly on the alert to obtain new business for the various member banks. This department will furnish a clearing house where all information regarding business developments which offer opportunity for banking service will be noted and followed up. Through having the combined resources of all the member banks at their disposal, representatives of this department will be able to offer lines of credit and other banking service commensurate with the needs of the largest corporate enterprises in the country.

3. Bonds and Investments.—One of the important divisions of this management corporation is that which will analyze the investments of the various banks and assist them in making changes in their portfolios. The highest class of investment service will thus be available for each bank and information possessed by any one will be open to all. Experts have been at work for months analyzing the portfolios of the various banks and recommending changes in the investments tending to strengthen the list and increase the rate of return. Their advice will always be obtained before any changes are made, and they will likewise call the attention of the several banks to opportunities for profitable and safe investments as they arise.

4. Central credit file.—A central credit file is being inaugurated which will contain credit information regarding customers or prospects whose principal offices are located outside the immediate territory served by the group. This will be of great value to any member considering increasing lines to such customers or extending lines to new prospects. In addition, the credit files of each bank will, of course, be at the disposal of all the members.

5. Central purchasing bureau.—As standardized forms and equipment are introduced throughout the group, economies will be effected through the employment of the services of this department in making purchases in larger quan-

lities and on better terms than otherwise possible.

6. Trust departments.—One of the most important services will be that pertaining to the trust departments of the various institutions. Here, especially, the smaller banks are lacking in the experience and facilities which would enable them to develop trust business in their communities. Efficient trust officers will be at the disposal of all the members of the group, so that the internal organizations of their trust departments will be standardized, enlarged, and improved, and their external relations with the community correspondingly developed.

i. Miscel aneous.—In addition to the services outlined above, this company will be in position to help the member banks in many other ways, as for instance in developing their travel departments, their foreign departments, their realestate and mortgage departments, and in all the other branches of banking.

One which should perhaps receive special mention is that of industrial survey and financial advice. The company will supply experts to study the business methods and conditions of customers who are not making good, and to give advice regarding changes in business methods or capital structure, by means of which results advantageous to the banks and customers alike may be obtained.

GEOGRAPHICAL AREA

The Marine Midland Group is the normal development of affiliated banks throughout a territory closely bound together by common ties of industry, comherce, and finance. This development started in the so-called Niagara frontier, Including the cities of Buffalo, Niagara Falls, the Tonawandas, Lockport, and ackawanna, as well as the smaller communities of East Aurora, Albion, and Snyder, and the territory immediately adjacent to the Niagara frontier extending as far south as Jamestown and as far east as Rochester. All of these communities are united by close trade relations, and the territory which they Cover may properly be described as a "trade area" in the restricted use of that term. By a normal extension three banks in the adjacent territory, known as the southern teir, were added to the group in Binghamton, Johnson City, and Cortland. Also in recognition of the fact that the commerce of western and central New York normally flows largely along the route of the Erie Canal and the New York Central Railroad a representative bank in the manufacturing city of Troy was added to the group. Finally, to round out the territory served and pursuant to the plan originally adopted, which recognized the necessity of a New York City connection because of the very large volume of trade, commerce, and finance between all of these communities and that city, the Fidelity Trust Co. of New York was acquired by the group. For generattions all the so-called "up-State" banks and industries in New York have had close business and financial relations with New York City.

The entire territory served by the Marine Midland Group may, therefore, properly be regarded as a "trade area." The rural communities in the southern tier send their dairy and farm products to New York City. Grain, blg iron, flour, and many other commodities originating in western New York

are shipped to New York City by rail or water transportation.

The State of New York is an economic unit bound together by a community of trade, transportation systems, uniform business customs, and the same laws. It is also a financial unit comprising substantially the entire New York Federal

reserve district.

At the present time we do not contemplate the acquisition of any additional banks outside this territory, as we feel that we should first coordinate the banks which we have acquired and such additional ones within these limits as we may acquire in the near future before considering the possibility of extending our investment beyond these lines. As a matter of principle, however, it would appear reasonable that a group of banks controlled by one corporation need not of necessity be confined to the limits of any one State

or Federal reserve district. Certainly, where a recognized trade area overlaps such lines the group of banks might well be likewise extended.

If the group is to be confined to one trade area, the definition of trade area should not be too limited or narrow, but should be broad enough to include sufficient diversification so that if one locality is going through a business depression the others will be far enough removed not to be affected by such a purely local condition.

Such a condition of trade area has been repeatedly recognized as applicable to New York State and contiguous territory. The United States Government census figures and all official reports divide the country into standard sections one of which is the Middle Atlantic division, comprising the States of New York, Pennsylvania, and New Jersey.

The Federal reserve district No. 2 comprises all of New York State, Fairfield County in Connecticut, and the northern section of New Jersey as far as Mercer and Ocean Counties.

In the Market Data Handbook of the United States, published by Batter Barton, Durstine & Osborn in 1929 as the result of an exhaustive field study and statistical analysis covering several years of work, a trading-area map of the United States is presented which includes as a "major area" New York State, 5 counties in Connecticut, 14 counties in northern New Jersey, and a portion or all of 9 northern counties of Pennsylvania. This so-called "major trade area" has been adopted as the basis for sales promotion programs by a number of large corporations, including, among others, Armstrong Cork Co., Atwater Kent, Johnson & Johnson, Zellerbach, Clicquot, and General Electric Co. This last-named company in its bulletin, Sales Office Territories, published January 1, 1930, prints a map showing its New York sales territory to be exactly that of the "major New York area" described above. International Magazine Co. has issued a study of trading areas called Trading Area System of Sales Control, copyrighted 1929. In this a marketing map of New York State is published including, in addition to New York State, a portion of Connecticul northern New Jersey, and five counties in northern Pennsylvania. The same territory is shown on a map published by the Chicago Tribune Book of Facts issued in 1927, except that the last named includes all of the State of New Jersey instead of only the northern part.

Jersey instead of only the northern part.

From all these references it is clear that both logically and by recognized governmental and business authorities the territory served by the Marine Midland Banks is well within a recognized major trade area.

Whether or not any geographical limitation upon the group is wise depends largely upon each particular case, and until experience has given us more information upon which to base a judgment in this regard we prefer to remain open minded.

GENERAL COMMENTS-RELATION TO GOVERNMENTAL OFFICIALS

Marine Midland voluntarily offered to permit the New York State superintendent of banks to examine its business, affairs, and records at any time as fully as though it were subject by law to such an examination. Later, the New York Legislature amended the banking law so as to extend the jurisdiction of the banking department to corporations affiliated with State banks or trust companies, and the governor has approved this bill. In my opinion this is a proper arrangement. We are equally willing to submit to examination by the Comptroller of the Currency, since some of our banks are national banks and others are members of the Federal reserve system.

STOCKHOLDERS' LIABILITY FOR ASSESSMENTS

Under both Federal and State laws, the stockholders of banks and trust companies are liable to an assessment for the benefit of creditors in an amount equal to the par value of the stock owned by them. Bank holding corporations have sometimes been criticized on the ground that they constitute an evasion of this liability. I feel that the contrary is the case, and that such a corporation, properly organized and conducted, makes the stockholders liability much more readily enforceable.

Experience has demonstrated that under the ordinary unit banking conditions less than 50 per cent of such liability is in practice actually collected. Contrast this with our own situation. It is almost inconceivable that a condition could arise among our banks where the stockholders' liability could not

be enforced 100 per cent. The total authorized capital stock of all our banks is \$28,025,000, which is, therefore, the extent of stockholders' liability, if all the banks should fail so badly as to make the maximum assessments necessary. Against this, Marine Midland Corporation has over \$45,000,000 in cash, outside its investment in bank stocks, and it is our policy to keep at all times an amount in cash or its equivalent equal to our aggregate stockholders' liability on the bank stocks owned by us. It is, however, beyond the bounds of probability that any such situation as the failure of all the banks should arise, if it did, it could only be as the result of such a cataclysmic financial debacle as would render the ordinary individual stockholders' liability actually unenforceable to any extent.

Experience has demonstrated that in nearly all cases it is the smaller banks which get into difficulties requiring resort to assessments against the stock-bolders. When we remember that the total surplus and undivided profits of our banks combined is \$42,134,389.72, as of March 31, 1930, or half again much as their total authorized capital, and that the Marine Midland Corporation owns substantially all of this surplus and undivided profits in other banks (in addition to its other resources) it is readily seen that payment of an assessment by any one bank in full is assured. Certainly, therefore, the depositors have vastly stronger protection than in cases where the stock of a bank is widely scattered among individual holders of every variety of

type, business, and financial responsibility.

If a holding company were organized to own only the stock of a single bank, and no other assets, then it might properly be said to constitute an evasion of the stockholders' liability. But where, as in our case, the holding company owns the stock of a large group of banks, located in many different communities, and serving widely varying industries, and has also a substantial worth outside of such bank stocks, there can be no possible conclusion but that the stockholders liability becomes a much more readily enforceable and valuable asset of each separate bank. Moreover, the actual obligation of the holding company to protect every bank in its group is far greater than the legal requirements represented by its stockholders' liability. It would be fatal for it to permit any single bank controlled by it to fail for any cause whatever. Its moral responsibility goes far beyond its legal obligations as a stockholder.

GROUP BANKING THE NATURAL RESULT OF MODERN ECONOMIC TENDENCIES

During the past 10 years the methods of conducting business in this country have been revolutionized. As stated by Comptroller Pole in his testimony before this committee: "The economic movement away from a large number of independent local utility and industrial operating units towards a stronger and hore centralized form of operation in the large cities has curtailed the op-bortunities of the country bank for diversity and extension of business while-broadening those opportunities for the large city bank. * * The expenses of operating banks have been materially-very materially-increased. The op-Portunities of the country banks have diminished in that the small town has become less of a factor by reason of the improvement in roads and the quick ransportation which takes people to the cities to do their business and their hanking frequently instead of doing it in the small town. Heretofore in years Rone by a community has been more or less independent, with its locally op-"rated utilities, its light plants, ice plants, and wagon factories, etc., all of Which have been removed and those things have gone to the cities and now are controlled by large corporations and those opportunities have been removed. "There has been a change in corporate financing within the last 10 years. Heretofore large corporations, and small corporations similarly, would borrow seasonably, whereas now they have financed themselves through reorganizationof their capital structures. That has removed the opportunities from the banks and such things as that have made it very difficult for a bank to stay on anven keel. * * * Banks in small communities have to be satisfied with small local loans and real-estate loans, which, frequently, are slow and un-Satisfactory, resulting in a greater percentage of loss than in years gone by."

The banking system has not kept pace with all these changes. On the contrary, it tried to continue unchanged the traditional American ideal of the small, independent banker operating in thousands of small communities. The changed business conditions, as well as the agricultural depression, cut off the former sources of profit for such bankers, so that thousands failed, and other thousands

have been on the verge of failure.

In the 10 years from 1920 to 1929, inclusive, about 750 national banks and 4,900 State banks, mostly small in size, failed. It is a ghastly record. About 10 per cent of the national banks and 20 per cent of State banks closed their doors. In the current year 1930, the Comptroller of the Currency has testified before this committee that from January 1 to February 21, 1930, 155 more banks failed, or at the rate of 1,140 a year. These failures have not only caused tremendous losses to the depositors and the stockholders, but they have virtually paralyzed business in whole sections of the country. The remaining banks have been afraid to make loans even well within their capacity, feeling that they must retain sufficient liquid assets to meet a run which might be caused at any time by the suspension of a neighboring institution.

Moreover, the vastly increased banking and financial needs resulting from so many consolidations and mergers rendered the resources of banks which had been large enough 10 years ago inadequate to meet these new demands.

As a result of these two tendencies in industrial development, two distinct movements have become manifest in our banking structure, first the stupendous increase in the size and decrease in the number of the metropolitan banks through huge mergers and consolidations, and, second, the rapid development of group banking throughout the country.

Unlike manufacturers or retailers, bankers could not establish branches except to a very limited extent. Branch banking, except within city limits, is generally speaking, prohibited by the national bank act and by the laws of most States. The ownership of stock control of one bank by another is likewise for bidden. Therefore, to accomplish the same results that industry had reached by means of consolidations and branches, group banking developed almost over night, as an entirely new form of banking development.

GROUP BANKING V. CHAIN BANKING

As generally understood, "group banking" implies the ownership by a holding company managed by bankers of a controlling stock interest in a group of banks or trust companies. It is a banking system whereby a number of corporately independent financial institutions, retaining their own identity, capital personnel, and management, are coordinated through majority stock control by a supervising holding company, operated by the banking interests of the territory which it serves. The stock of this holding company is widely distributed among a large number of stockholders.

"Cha'n banking" as the expression is commonly used, refers to the ownership of stock control of a number of banks, directly or indirectly, by one or more individuals who may be bankers, but are more often business men who have acquired or operate the banks as adjuncts of their business interests. Ultimate stock control is usually lodged in one, or at most, in a very few individuals.

GROUP BANKING U. BRANCH BANKING

We were compelled to carry out our plans by the method of "group bank'ng" because as already intimated, the laws of New York State and the national bank act both prohibit branch banking beyond city limits. It is, therefore somewhat academic for me to try to compare one system with the other, when only one was open to us. However, in view of the suggestion that the national bank act may be amended in such a way as to permit at least state-wide branch banking, I have given considerable thought to the question as to which form of operation would be preferable in our case.

Obviously certain advantages of branch banking can not be realized fully by group banking. For instance, more economies may be effected, both in operating costs and in overhead. Administration, also, would be more direct and simple. The corporate set-up is less complicated, the resources of the system more closely integrated, and authority more concentrated.

On the other hand, there appear to be certain advantages which group bank ing possesses over the branch system.

Ernest T. Clough in Barrons for April 14, 1930, in an article on "Group Banking Sweeps the Country," summarizes these advantages as follows:

"Banking facilities broadened: In many ways, the group-banking movement offers advantages to American business, to individuals in the community, and to the depositors and stockholders of the numerous unit banks. Banking operations are thereby broadened, the ability to handle the credit requirements of large corporate enterprises in the various territories is improved, sounder

Investment advice is being given, individuals are offered opportunities of trust department and safekeeping facilities never before available, and advantages in the financing of foreign trade and in the obtaining of letters of credit for travel abroad are given the community served such as they are not able to secure in any other way under the present system of banking. At the same time, the local banking personnel is handling the problems of each community, which means that local requirements are fully understood and given sympathetic consideration. Depositors continue to have a feeling of pride in the institution as one which reflects the financial strength of the community, and the ability to maintain this close kinship between the depositor and his bank is unquestionably one of the strongest factors of strength in group banking."

Group banking is a compromise between the British, continental, and Canadian systems of branch banking, and the traditional unit-bank system of the United States. Possibly it is only a transitional stage. But for the present, at least, the retention of local interest and contacts, through independent boards of directors and real local autonomy, seem very real advantages. Local pride and rivalry are stimulated. Cooperation rather than centralization is stressed. In the numerous meetings we have had of the officers and directors of the different banks, a splendid esprit de corps was developed, with much friendly emulation as to the relative merits, efficiency, and progress of their respective institutions. It is hard to conceive of such a spirit—at least under Dresent conditions-in a convention of branch managers. However, we are Open-minded on the subject, and I am frank to confess that our experience has been too short to justify forming any final judgment as to the respective ultimate advantages of group versus branch banking. Nevertheless, I can and do heartily indorse the statement made by Mr. Wakefield of the First Bank Stock Corporation in his testimony before this committee, in which he said:

"The group system of banking is sound because it rests on these foundations: First, cooperation of resources; second, diversification of resources; third, ownership spread throughout the territory; fourth, creation and management by bankers."

ADVANTAGES COMMON TO GROUP AND BRANCH BANKING

Through its affiliations with the other Marine Midland banks, The Marine Trust Co. in February was able to become the successful bidder for an entire issue of \$50,000,000 of the United States Government certificates. This fact attracted widespread notice and much favorable newspaper comment. It was stated to be the first time that such a large Government issue had been taken up by a bank outside of New York City. This is one illustration of the many ways in which bigger things can be done under the group or branch system.

The Orleans County Trust Co. is one of our smallest banks, being located at Albion, N. Y., in the midst of a farming community. Most of the farms are already mortgaged, and the farmers are having a hard time to make them pay. Through its affiliation with the Marine Midland group, this little trust company has been able to secure the services of an expert on farm loans, who is now studying the situation there and advising the farmers how they may so improve their methods or refinance their operations as to turn failure into prosperity and gradually liquidate their loans. This is an illustration of a very different way in which advantages may result from a coordinated banking system.

Another real gain from an organization viewpoint is the greatly enlarged opportunity afforded to every officer and employee in the whole group. Here we can learn much from the experience of Canadian bankers, where they are able to try a man out in a small branch and promote him or shift him around until he has broadened his experience and developed his abilities and become a seasoned, well-trained banker. The chance for advancement is multiplied many times. Good men are bound to be discovered and given promotion in their own or some other bank. A messel ger in one of the country banks may some day become president of The Marine Trust Co. or of the Marine Midland Corporation.

RELATION TO OTHER INDEPENDENT BANKS

The Marine Midland banks number among their correspondents hundreds of independent unit banks. It is the policy of Marine Midland to work with these banks and serve their requirements as conscientiously and ably as it does its own member banks as far as it lies within its power so to do.

Whatever power and influence the joining of this group of banks into the Marine Midland group has given will never be used to force or coerce a smaller independent bank either into joining the Marine Midland group or into taking action detrimental to its own best interests.

Rather Marine Midland will use its power and influence to first protect its depositors' moneys, build up and assist local enterprise, better in so far as it can local banking conditions, develop the communities which it serves to the end that by serving others efficiently and well it also best serves itself. Local independent banks will find Marine Midland helpful, aggressive for business but only on a fair and profitable basis. Several times at the request of the New York State banking department the Marine Trust Co. has aided in saving smaller banks from failure each time at no gain to itself. A bank that is not a profitable bank is a poor bank. The Marine Midland Corporation desires its member banks to be profitable ones. We desire our employees and officers to receive a living wage. Too often the wages and salaries paid bank employees are a temptation to dishonesty.

CONCLUSION

Industrial and economic progress in the past 20 years has improved the standards of living and contributed to the happiness and welfare of the greater bulk of the people. Most of this progress has resulted from developments in transportation and communication which have broken down barriers and prejudices and changed methods of transacting business both in manufuacturing and distribution.

In this progress, up to the present time, banking organization has lagged behind. To-day, however, group banking is the logical means by which the two basic functions of a bank, the protection of its depositors' money, and the sound constructive extension of credit can be most effectively exercised.

Marine Midland Corporation, as an exponent of modern banking structured efinitely benefits the public, 350,000 depositors, and over 20,000 stockholders. These advantages may be summarized as follows:

ADVANTAGES TO THE DEPOSITORS

Greater protection for their deposits in a member bank through the availability of greater resources in money and experienced management as applied both to operations and the handling of the bank's investments.

2. Greater mobility of credit. (Example: The manufacturer in a small community who needs more credit than has been available to him through an isolated unit bank may now, through a group bank in his own home town, make arrangements for his requirements with greater facility.)

Group banking will benefit many communities by furnishing the assurance that credit is extended on the basis of sound business judgment rather than prejudice. (Example: Many times the president of a small bank, because of prejudice, will refuse to meet the legitimate needs of his customers or will often use the bank for his own personal ends.)

Certain small town banks with little paper to rediscount have been unable to take care of the legitimate matters of their individual borrowers. To such banks, members of Marine Midland, we are sending funds.

3. More complete financial service: The isolated country bank, while professing to have trust and investment departments, has been unable to afford competent officers along such lines. Now through any Marine Midland member bank there is available to the public such service through the part time of men who are experienced in their respective fields.

4. More efficient service. (Example: Through the extensive contacts of the Marine Midland group member banks are able to secure better and quicker credit information for their customers.)

In some instances readjustment of operating practice will improve the service at tellers windows and necessitate less waiting in line on the part of the public.

5. Financial advice: Manufacturers, jobbers, and merchants have a right to expect advice from their bank on many problems of a semibanking or business nature. If the officers in any particular Marine Midland bank can not from their own experience contribute constructive advice, such counsel is more directly available to the inquiring business man by virtue of the fact that the bank is a member of the group.

6. Development of communities and areas served by the group: The Marine Midland Corporation is not a bank and can profit only as the communities in the area which it serves themselves grow and prosper. With this in mind a national advertising campaign pointing out the advantages of Marine Midland cities and New York State from a manufacturing and sales distribution standpoint is being run in national publications.

We are also preparing a marketing survey of New York State designed

to point out the opportunities in New York State.

None of these things which in the last analysis should tend to build up these communities could be attempted or carried out by the average small or moderate size unit bank.

ADVANTAGES TO THE STOCKHOLDERS

1. Safety of investment: The value of stock in an isolated unit bank is subject to depreciation, which might come from a business depression affecting hat particular community or even from a single credit loss. An investment in stock, such as that of Marine Midland Corporation, owning as it does 17 banks, has the advantage of safety through diversification of risk.

A change in management necessitated, perhaps, through the death of the chief executive of a small country bank might be detrimental to the value of Stock in such a single institution. On the other hand, under group banking Continuity of good management in any single bank is more readily assured.

2. Opportunity for normal increase in value: Economies in operation and Breater efficiency in management go hand in hand with group banking. Furthermore group banking furnishes opportunities for increased earnings through the ability to extend trust and investment facilities to a greater number of people. 3. Greater marketability: Stock in the Marine Midland Corporation is listed

and affords the investor an opportunity to liquidate at any time if he needs to do so. Oftentimes the holder of stock in a small bank finds it almost impossible

to dispose of his holdings without sacrifice

The sole basis of profit, so far as Marine Midland Corporation is concerned. is the growth and development of the banks in Marine Midland cities. In each of these there is aggressive normal competition. Our banks' opportunity there-

fore lies chiefly in better serving the public.

In advocating group banking I do not deprecate the accomplishments and ability of the banker in a small city or town. Changes in business methods, however, are making it more difficult for him to operate a safe and profitable bank playing a lone hand. As outlined above, group banking retains all that is good in the unit and contributes much in resources and management which Is of benefit to the public and through them of benefit to the bank in the small

We look forward to the future with confidence. We welcome cooperation with both State and governmental authorities and will furnish them every opportunity to examine our affairs. Our directors and officers have the confidence of the communities in which we do business, and we are equally proud of the character of our customers. At the same time we are not unmindful of the great responsibility resting upon us, especially in being one of the pioneers in this new field of American banking, and we are determined to do our utmost to serve faithfully and efficiently our 20,000 stockholders, our 350,000 customers. and every community, both the smallest and the largest, in which a Marine Midland bank is operating.

CERTIFICATE OF INCORPORATION OF MARINE MIDLAND CORPORATION

First: The name of this corporation is Marine Midland Corporation. Second. Its principal office in the State of Delaware is located at No. 7 West Tenth Street, in the city of Wilmington, county of New Castle. The name and address of its resident agent is the Corporation Trust Co. of America, No. 7 West Tenth Street, Wilmington, Del.

Third. The nature of the business and the objects and purposes proposed to be transacted; promoted, and carried on are to do any or all of the things herein mentioned as fully and to the same extent as natural persons might or could do in any part of the world, as set forth below. (Wherever used in this article 3, the expression "evidence of indebtedness" or "evidences of indebtedness"

100136-30-vol 2, pt 9-

0

edness" shall mean and include, without limiting its generality, any and all bonds, debentures, notes, coupons, mortgages, commercial paper, and/or any other instruments evidencing indebtedness, however created, issued, or granted, and whether fully paid or subject to further payments; and the expression "certificate of interest" or "certificates of interest" shall mean and include without limiting its generality, any and all certificates or shares of stock, scrip, interim receipts, participation certificates, voting trust certificates; subscription warrants, option warrants, and/or any other instruments evidencing interest in share capital or other property, however created, issued, or granted, and whether fully paid or subject to further payments.)

(1) To acquire by purchase, subscription, contract, or otherwise, hold for investment or otherwise, own, sell, exchange, mortgage, pledge, or otherwise dispose of, and generally deal in and with evidences of indebtedness, and/or certificates of interest issued or created in any and all parts of the world by banks, trust companies, financial institutions of every kind and description, corporations, associations, partnerships, firms, trustees, syndicates, individuals governments, States, municipalities, or other political governmental divisions or subdivisions, or by any combinations, organizations, or entities whatsoever, trrespective of their form or the name by which they may be described, and to issue in exchange therefor or in payment thereof, in any manner permitted by law, its own evidences of indebtedness, and/or certificates of interest, or to make payment therefor by any other lawful means of payment whatsoever; and to exercise any and all of said powers, either on its own account, or with or as agent for other persons, firms, corporations, or organizations.

(2) To receive, collect and dispose of interest, dividends, and income upon of and from any evidence of indebtedness or certificate of interest and any other property held or owned by it, and to exercise any and all rights, powers and privileges of individual ownership or interest in respect of any and all such evidences of indebtedness or certificates of interest, including the right to vote thereon for any and all purposes.

(3) To indorse or guarantee the payment of principal and/or interest of dividends upon, and to guarantee the performance of sinking fund or other obligations of, any evidences of indebtedness or certificates of interest, and to guarantee the performance of any of the contracts or other undertakings in which the corporation may otherwise be or become interested, or any corporation association, partnership, firm, trustee, syndicate, individual, Government, Statemunicipality, or other political or governmental division or subdivision, domestic or foreign, in so far as may be permitted by law to a corporation of this character.

(4) To enter into, make, perform, and carry out or cancel and rescind contracts relating to or underwritings of evidences of indebtedness or certificates of interest, of any corporation, association, partnership, firm, trustee, syndicate, individual, Government, State, municipality, or other political or governmental division or subdivision, domestic or foreign, or of any combination organization, or entity, domestic or foreign, and to act as manager of any underwriting or purchasing or selling syndicate.

(5) To lend money, whether or not secured by mortgages or other liens of real estate or personal property, and to negotiate and make, either as principal or broker or agent, contracts or other agreements in connection therewith.

(6) To borrow money with or without security, to make, accept, indorse guarantee, execute, and issue evidences of indebtedness and to secure the same by a mortgage, pledge, deed of trust, other lien, or otherwise, upon all of any part of the property of the corporation, wherever situated.

any part of the property of the corporation, wherever situated.

(7) To act as agent or representative of individuals, firms, and corporations, and as such to develop and extend the business interests of individuals, firms, and corporations.

(8) To purchase, hold, sell, and transfer the shares of its own capital stockprovided it shall not use its funds or property for the purchase of its own shares of capital stock when such use would cause any impairment of its capital, and provided that shares of its own capital stock belonging to it shall not be voted upon, directly or indirectly, but nothing in this subdivision shall be construed as limiting the exercise of the rights given by section 27 of the general corporation law of the State of Delaware.

(9) To take, lease, purchase, or otherwise acquire and to own, use, hold, sell, convey, lease, exchange, mortgage, improve, develop, cultivate, and otherwise handle, deal in, and dispose of real estate, real property, and, any interest or right therein.

(10) To purchase, manufacture, acquire, hold, own, mortgage, pledge, lease, sell, assign, and transfer, and to invest, trade, deal in and with goods, wares, merchandise, patents, trade-marks, rights, privileges, franchises, grants, and property of every kind and description; to carry on any of the above businesses or any other business connected therewith, wherever the same may be per-mitted by law, and to the same extent as the laws of this State will permit and as fully and with all the powers that the laws of this State confer upon corporations and organizations under the general corporation law of the State of Delaware.

(11) To acquire and take over as a going concern and/or carry on the business of any person, firm, association, or corporation engaged in any business

which this corporation is authorized to carry on,

(12) To render service, assistance, counsel, and advice to any person, firm,

association, or corporation in the conduct of his or its business.

(13) To do all and everything necessary, suitable, and proper for the accom-Dlishment of any of the purposes or the attainment of any of the objects or the furtherance of any of the powers hereinbefore set forth, either as principal or agent, either alone or associated with other corporations or with firms or individuals, and either directly or indirectly through one or more subsidiary company or companies organized or utilized for the purpose, and to do any other act or acts, thing or things, incidental or pertaining to, or growing out of, or connected with the aforesaid business or powers, or any parts thereof, provided the same be not inconsistent with the law under which this corporation is organized.

(14) The business or purpose of the corporation is from time to time to do any one or more acts and things herein set forth; and it may conduct such business in all its branches or any part thereof either within or outside the State of Delaware, and in other States and Territories and dependencies of the United

States and in foreign countries.

The foregoing enumeration of specific powers shall not be deemed to limit or restrict in any manner the general powers of the corporation and the enjoyment and exercise thereof as conferred by the laws of the State of Delaware upon corporations formed under the general corporation law of said State and the doing of any or all the things hereinbefore set forth to the same extent as hatural persons might or could do; but this corporation shall not by any implication or construction be deemed to possess the power of issuing bills, notes, or other evidences of debt for circulation as money, or the power of carrying on the business of receiving deposits of money, or the business of buying gold and sliver bullion or foreign coins.

Fourth. The total number of shares of stock which the corporation shall have authority to issue is 10,000,000, and the par value of each of such shares

is amounting in the aggregate to \$100,000,000.

Fifth. The minimum amount of capital with which the corporation will com-

mence business is \$1,000.

Sixth. The names and places of residence of each of the incorporators are as follows; C. S. Peabbles, Wilmington, Del.; L. E. Gray, Wilmington, Del.; E. Grantland, Wilmington, Del.

Seventh. This corporation is to have pepetual existence. Eighth. The private property of the stockholders shall not be subject to

Dayment of corporate debts to any extent whatsoever.

Ninth. The holders of the stock of this corporation shall have a preemptive or preferential right to be exercised upon such terms and conditions (including a determination of what disposition shall be made of fractional shares resulting from a pro rata offering to stockholders) as the board of directors in its discretion may from time to time fix and determine, to subscribe to any shares of stock or obligations convertible into stock of this corporation, issued for cash: Provided, That such right of subscription shall not apply to any shares of stock issued upon the organization of this corporation or within 90 days thereafter: Provided also, That such right of subscription shall not apply to any shares issued to any director, officer, or employee of the corporation, not exceeding 25,000 shares in the aggregate, at such price or prices, not less than \$60 per share, as the board of directors may from time to time determine, but no shares issued upon the organization of this corporation or within 90 days thereafter shall be deemed to be issued out of said 25,000 shares; but no holder of stock of this corporation shall have any preemptive or preferential right of subscription to any shares of stock of this corporation or to any obligations convertible into stock of this corporation issued for any consideration

other than cash. As used in this paragraph, the term "obligations convertible into stock" shall include any notes, bonds, or other evidences of indebtedness which by their terms are convertible into shares of stock of this corporation or with which are issued warrants (either in attached or detached form) or other rights to purchase for cash shares of stock of this corporation.

Tenth. Subject to the provisions of law and in furtherance and not in limitation of the powers conferred by law, the board of directors of the corporation

is hereby empowered by resolution or resolutions:

1. Subject to the provisions of article 9 hereof, to provide for the issuance from time to time of its shares of stock of any class, whether now or hereafter authorized, and securities convertible into shares of its stock of any class, and/or securities whether now or hereafter authorized carrying a privilege to subscribe for or receive shares of its stock of any class, for such considerations and upon such terms and conditions as the board of directors may fix from time to time.

To determine that only a part of the consideration which shall be received by the corporation in excess of the par value of its shares of capital stock or

any thereof, which it shall issue from time to time shall be capital.

3. Without the consent of the stockholders of any class, to authorize the issuance and sale from time to time of evidences of indebtedness (as defined in article 3 hereof) of the corporation for such consideration as it may deem advisable, to provide that such evidences of indebtedness be issued in such series, in such denomination or denominations, and with such interest rate or rates, redemption price or prices, and maturing at such time or times and otherwise varying as it may determine; and likewise without such consent to mortgage, pledge, and/or hypothecate all or any part of the corporation's property, real, personal, or mixed (except its corporate franchises), and its rents, revenues, and income, whether now owned or hereafter acquired, and to authorize the execution, delivery, filing, and recording of all mortgages, deeds of trust, or other indentures, in such form as shall be determined by it, to secure the payment of all or any of such evidences of indebtedness, the principal and interest thereof, the premium, if any, thereon, and any and all other amounts or sums payable in respect thereof or in connection therewith.

4. To make, alter, amend, change, add to, or repeal the by-laws of this cor-

poration without any action on the part of the stockholders.

5. By resolution passed by a majority of the whole board, to designate two or more of its number to constitute an executive committee, which committees of far as is provided in said resolution or in the by-laws of this corporation shall have and may exercise the powers of the board of directors in the management of the business and affairs of this corporation and have power to authorize the seal of this corporation to be affixed to all papers which may

require it.

6. When and as authorized by the affirmative vote of the holders of a majority of the stock issued and outstanding having voting power given at a stockholders' meeting duly called for that purpose, or when authorized by the written consent of the holders of a majority of the voting stock issued and outstanding to sell, lease, or exchange all of the property and assets of the corporation, including its good will and its corporate franchises, upon such terms and conditions and for such consideration, which may be in whole or in part evidences of indebtedness and/or certificates of interest (as defined in article 3 hereof) as its board of directors shall deem expedient and for the best interests of the corporation.

7. From time to time, to determine whether and to what extent and at what times and places and under what conditions and regulations the accounts and books of this corporation (other than the stock ledger) or any of them shall be open to the inspection of stockholders; and no stockholder shall have any right of inspecting any account, book, or document of this corporation, except as conferred by statute, unless authorized by resolution of stockholders or directors.

ferred by statute, unless authorized by resolution of stockholders or directors. S. To set apart out of any of the funds or assets of this corporation, available for dividends, a reserve or reserves for any proper purpose, and to abolish any such reserve or reserves. Against any such reserve or reserves and/or surplus so established, there may be charged losses at any time incurred by this corporation, also dividends or other distribution upon stock. Such reserve or reserves and/or surplus may be reduced from time to time by the board of directors by transfer from such reserve or reserves and/or surplus to capital account.

9. Subject to the provisions of article ninth hereof, at any time or from time to time to create and issue (without any action by the stockholders of

the corporation), whether or not in connection with the issue and sale of any shares of stock or other securities of the corporation, rights or options entitling the holders thereof to purchase from the corporation shares of its capital stock, such rights or options to be evidenced by or in such instrument or instruments as shall be approved by the board of directors. The terms upon which, the time or times, which may be limited or unlimited in duration, at or within which, and the price or prices at which any such shares may be purchased from the corporation upon the exercise of any such right or option shall be such as shall be fixed and stated in a resolution or resolutions adopted by the board of directors providing for the creation and issue of such rights or options, and set forth or incorporated by reference in the instrument or instruments evidencing such rights or options.

Eleventh. The number of directors which shall constitute the whole board shall be such from time to time as shall be fixed by the by-laws, but in no case shall the board be less than three (3). In case of any increase in the number of directors, such additional directors shall be chosen by the directors or stockholders at the time entitled to vote, as may be prescribed in the by-laws of this corporation. Directors need not be stockholders. This corporation may in its by-laws confer powers upon its directors in addition to those conferred in this certificate of incorporation and in addition to the powers and authorities ex-

Dressly conferred upon them by statute.

Twelfth. The corporation shall be entitled to treat the person in whose name any share is registered as the owner thereof for all purposes, and shall not be bound to recognize any equitable or other claim to or interest in such share on the part of any other person, whether or not the corporation shall have not the thereof, save as expressly provided by the laws of the State of Delaware.

Thirteenth. Both stockholders and directors shall have power, if the by-laws so provide, to hold their meetings and to have one or more offices within or without the State of Delaware and to keep the books of this corporation (subject to the provisions of the general corporation law of said State) outside the State of Delaware, at such places as may be from time to time designated by the board of directors.

Fourteenth. All the powers of this corporation in so far as the same may be lawfully vested by this certificate of incorporation in the board of directors, are hereby conferred upon the board of directors of this corporation, provided, however, that by resolution of the board of directors adopted either by a quorum disinterested in the subject matter of the resolution or interested therein, as the case may be, any matter concerning the management of the corporation or its affairs may be referred to the stockholders of the corporation for decision and in such cases such matters may be authorized by vote adopted by the majority of a quorum of the stockholders entitled to vote at a meeting thereof duly held.

Fifteenth. A director of the corporation shall not in the absence of fraud be disqualified by his office from dealing or contracting with the corporation either as a vendor, purchaser, or otherwise, nor in the absence of fraud shall any transaction or contract of the corporation be void or voidable or affected by Peason of the fact that any director, or any firm of which any director is a member, or any corporation or association of which any director is an officer, director, or stockholder, is in any way interested in such transaction or contract; Provided that at the meeting of the board of directors or of a committee thereof having authority in the premises, authorizing or confirming said contract or transaction, the existence of an interest of such director, firm, corporation, or association is disclosed or made known (or shall have been disclosed and spread upon the records at a previous meeting at which a quorum was present) and there shall be present a quorum of the board of directors or of the directors constituting such committee, and such contract or transaction shall be approved by a majority of such quorum, which majority shall consist of directors not so interested or connected. Nor shall any director be liable to account to the corporation for any profit realized by him from or through any such transaction or contract of the corporation ratified or approved as aforesaid, by reason of the fact that he or any firm of which he is a member, or any corporation or association of which he is an officer, director, or stockholder, was interested in such transaction or contract. Anything herein contained to the contrary notwith-Standing, all or any of the directors of the corporation, in connection with the Organization of this corporation and the issuance of its stock for cash and/or Droperties, may vote to approve and authorize plans and agreements for the acquisition by this corporation, through the issuance of its own stock in exchange therefor, of stock in banks and/or trust companies of which said directors, or

any of them, may be stockholders, directors, or officers, and to approve and authorize an underwriting agreement or agreements for the sale of stock of this corporation, in which they or any of them may be interested, with the same force and effect as though not so interested. Directors so interested may be counted when present at meetings of the board of directors or of such committee for the purpose of determining the existence of a quorum. Any contract, transaction, or act of the corporation or of the board of directors or of any committee thereof (whether or not approved or ratified as hereinabove provided) which shall be ratified by a majority in interest of a quorum of the stockholders entitled to vote at any annual meeting or any special meeting called for such purpose or approved in writing by a majority in interest of the stockholders entitled to vote without a meeting, shall be as valid and as binding as though ratified by every stockholder of the corporation.

Sixteenth. This corporation reserves the right to amend, alter, change, or repeal any provision contained in this certificate of incorporation in the manner now or hereafter prescribed by statute, and all rights conferred on officers directors, and stockholders herein are granted subject to this reservation.

We, the undersigned, being each of the incorporators hereinbefore named for the purpose of forming a corporation to do business both within and without the State of Delaware, and in pursuance of the general corporation law of the State of Delaware, being chapter 65 of the Revised Code of Delaware, and the acts amendatory thereof and supplemental thereto, do make and file this certificate, hereby declaring and certifying that the facts herein stated are true, and accordingly have hereunto set our hands and seals this 23d day of September, 1929.

88 E

In the presence of: Albert L. Miller.

STATE OF DELAWARE,

County of New Castle, 88:

Be it remembered that on this 23d day of September, 1929, personally came before me, Albert L. Miller, a notary public for the State of Delaware, C. S. Peobles, L. E. Gray, and H. E. Grantland, all parties to the foregoing certificate of incorporation, known to me personally to be such, and severally acknowledged the said certificate to be the act and deed of the signers respectively, and that the facts therein stated are truly set forth.

Given under my hand and seal of office the day and year aforesaid.

[SEAL.]

ALBERT L. MILLER, Notary Public.

STATE OF DELAWARE, OFFICE OF SECRETARY OF STATE.

I, Charles H. Grantland, secretary of state of the State of Delaware, do hereby certify that the above and foregoing is a true and correct copy of certificate of incorporation of the Marine Midland Corporation, as received and filed in this office the 23d day of September, A. D. 1929, at 11 o'clock a. m.

In testimony whereof I have hereunto set my hand and official seal, at Dover, this 23d day of September in the year of our Lord 1929.

[SEAL.]

CHARLES H. GRANTLAND, Secretary of State.

BY-LAWS OF MARINE MIDLAND CORPORATION (AS AMENDED TO OCTOBER 1, 1929)

OFFICES

1. The principal office shall be in the city of Wilmington, county of New Castle. State of Delaware, and the name of the resident agent in charge thereof is the Corporation Trust Co. of America.

2. The corporation may also have offices at such other places, within or with out the State of Delaware, as the board of directors may from time to time appoint or the business of the corporation may require.

SEAL

3. The corporate seal shall have inscribed thereon the name of the corporation, the year of its organization, and the word "Delaware." Said seal may be used by causing it or a facsimile thereof to be impressed or affixed or reproduced or Otherwise represented.

STOCKHOLDERS' MEETINGS

4. Meetings of the stockholders shall be held at the principal office of the

corporation in Wilmington, Del.

5. An annual meeting of stockholders, after the year 1929, shall be held on the first Wednesday after the first Tuesday in February in each year if not a legal holiday, and if a legal holiday, then on the next day following that is not a legal holiday, at 12 o'clock m., when they shall elect by a plurality vote, by ballot, a board of directors and transact such other business as may properly be brought before the meeting.

6. The holders of a majority of the stock issued and outstanding, and entitled to vote thereat, present in person, or represented by proxy, shall be requisite and shall constitute a quorum at all meetings of the stockholders for the transaction of business except as otherwise provided by law, by the certificate of incorporation or by these by-laws. If, however, such majority shall not be present or represented at any meeting of the stockholders, the stockholders entitled to vote thereat, present in person, or by proxy, shall have power to adjourn the meeting from time to time, without notice other than announce. ment at the meeting, until the requisite amount of voting stock shall be present. At such adjourned meeting at which the requisite amount of voting stock shall be represented any business may be transacted which might have been transacted at the meeting as originally notified.

7. At any meeting of the stockholders every stockholder having the right to Tote shall be entitled to vote in person, or by proxy appointed by an instrument in writing subscribed by such stockholder and bearing a date not more than three years prior to said meeting, unless said instrument provides for a longer Deriod. Each stockholder shall have one vote for each share of stock having voting power, registered in his name on the books of the corporation, and except where the transfer books of the corporation shall have been closed or a date shall have been fixed as a record date for the determination of its stockholders entitled to vote, no share of stock shall be voted on at any election for directors which shall have been transferred on the books of the corporation

Within twenty days next preceding such election of directors.

8. Written notice of the annual meeting shall be mailed to each stockholder entitled to vote thereat at such address as appears on the stock book of the

Corporation, at least 10 days prior to the meeting.

9. A complete list of the stockholders entitled to vote at the ensuing election, arranged in alphabetical order, with the residence of each, and the number of Voting shares held by each, shall be prepared by the secretary and filed in the office where the election is to be held, at least 10 days before every election, and shall at all times, during the usual hours for business, and during the whole

line of said election, be open to the examination of any stockholder.

10. Special meetings of the stockholders, for any purpose, or purposes, unless otherwise prescribed by statute, may be called by the president or by resolution of the board of directors, and shall be called by the president or secretary at the request in writing of a majority of the board of directors, or at the request in Writing of three or more stockholders owning at least 10 per cent in amount of the entire capital stock of the corporation issued and outstanding and entitled to vote. Such request shall state the purpose or purposes of the proposed meeting

11. Business transacted at all special meetings shall be confined to the objects

stated in the call.

12. Written notice of a special meeting of stockholders, stating the time and place and object thereof, shall be mailed, postage prepaid, at least 10 days before such meeting, to each stockholder entitled to vote thereat at such address appears on the books of the corporation.

DIRECTORS

13. The property and business of this corporation shall, except as otherwise provided in the certificate of incorporation, be managed by its board of directors, 20 in number. Directors need not be stockholders. They shall be elected at the annual meeting of the stockholders, and each director shall be elected serve until his successor shall be elected and shall qualify. In case of any increase in the number of directors, such additional directors shall be chosen by the directors.

14. The directors may hold their meetings and have one or more offices, and keep the books of the corporation except the original or duplicate stock ledger outside Delaware, at such office of the corporation as they may from time to time determine.

15. If the office of any director or directors becomes vacant by reason of death, resignation, retirement, disqualification, removal from office, or otherwise a majority of the remaining directors, though less than a quorum, shall choose a successor or successors, who shall hold office until the next annual election and until a successor or successors have been duly elected, unless sooner displaced.

16. In addition to the powers and authorities by these by-laws expressly conferred upon it, the board of directors may exercise all such powers of the corporation and do all such lawful acts and things as are not by statute or by the certificate of incorporation or by these by-laws directed or required to be exercised or done by the stockholders.

EXECUTIVE COMMITTEE

17. There shall be an executive committee of the board of directors consisting of five directors in addition to the president, ex officio which shall be designated by resolution or resolutions, passed by a majority of the whole board. The members of such committee shall serve for a period of one year and until their successors are elected and have qualified. The board of directors may also in the same manner designate an alternate for each such member. In the event that any member of the committee is unable to attend any meeting or meetings his alternate may act thereat in his stead. Vacancies in alternate membership shall be filled in the same manner as vacancies in the membership of the continuation.

18. In the event of a vacancy occurring in the executive committee, the board of directors shall, by resolution passed by a majority of the whole board designate a successor to fill the vacancy for the unexpired term.

19. Subject to such limitations and regulations as may be prescribed by law or these by-laws or by the board of directors, the executive committee shall have and exercise all the powers of the board of directors in the intervals between the meetings of the board, and shall have power to authorize the seal of the corporation to be affixed to all papers which may require it.

20. Regular meetings of the executive committee shall be held on such days at such hours and at such place or places as the committee may by resolution appoint.

21. No notice shall be required to be given of any regular meeting of the executive committee.

22. Special meetings of the executive committee may be called at any time by any two members of the committee and may be held at any place and at any time designated in the notice thereof.

23. Notice of each special meeting of the executive committee, stating the time, place, and purpose or purposes thereof, shall be given by the president or by the secretary or by any member of the committee to each member of the committee not less than three days by mail or one day by telegraph of telephone prior to the meeting. Special meetings of the executive committee may also be held at any place and time, without notice, provided all the members are present at such meeting or the members absent shall waive notice.

24. At any meeting of the executive committee a majority of the entire committee shall constitute a quorum and, except where otherwise provided by law or by these by-laws, a majority of such quorum shall decide any question that may come before the meeting. A majority of the members present at any regular or special meeting, although less than a quorum, may adjourn the same from time to time, without notice other than announcement at the meeting, until a quorum is present. At such adjourned meeting at which a quorum

shall be present any business may be transacted which might have been transacted at the meeting as originally called.

25. The chairman of the executive committee shall be designated by the board of directors and shall preside at all meetings of the committee. The secretary of the corporation shall act as secretary of the executive committee. In the absence of the chairman or of the secretary, the committee shall appoint a chairman or secretary of the meeting as the case may be. The committee shall keep a record of its acts and proceedings and report thereon to the board of directors at its next regular meeting.

ADDITIONAL COMMITTEES OF DIRECTORS

26. The board of directors may, by resolution or resolutions passed by a majority of the whole board, designate one or more committees in addition to the executive committee, each committee to consist of two or more of the directors of the corporation, which, to the extent provided in said resolution or resolutions, shall have and may exercise the powers of the board of directors in the management of the business and affairs of the corporation, and may have power to authorize the seal of the corporation to be affixed to all papers which may require it. Such committee or committees shall have such name or names as may be determined from time to time by resolution adopted by the board of directors.

27. Said committees shall keep regular minutes of their proceedings and report the same to the board when required.

COMPENSATION OF DIRECTORS

28. Directors, as such, shall not receive any stated salary for their services, but by resolution of the board, a fixed sum and expenses of attendance, if any, may be allowed for attendance at each regular or special meeting of the board: Provided, That nothing herein contained shall be construed to preclude any director from serving the corporation in any other capacity and receiving compensation therefor.

29. Members of special or standing committees may be allowed like compensation for attending committee meetings.

MEETINGS OF THE BOARD

30. Any member of a newly elected board of directors may call a meeting of such board, to be held at such place either within or without the State of Delaware, and at such time as shall be stated in the notice to be given in the same manner as for special meetings.

31. Regular meetings of the board may be held without notice at such time and place either within or without the State of Delaware as shall from time to time be determined by the board.

32. Special meetings of the board of directors may be called at any time by the president or any three members of the board and may be held at any time and place designated in a notice thereof given by the president or by the secretary or by the members calling such meeting to each member of the board not less than three days by mail or one day by telegraph or telephone prior to the

33. At all meetings of the board one-third of the total number of the board but not in any case less than two directors shall be necessary and sufficient to constitute a quorum for the transaction of business, and the act of a majority of the directors present at any meeting at which there is a quorum, shall be the act of the board of directors, except as may be otherwise specifically provided by statute or by the certificate of incorporation or by these by-laws.

ADVISORY BOARD

34. The board of directors of the corporation may, in its discretion, at any time and from time to time make, constitute, and appoint an advisory board of the corporation, consisting of such persons as the board of directors of the corporation shall from time to time designate, under such rules and regulations as the board of directors of the corporation may adopt. Such advisory board shall be for the purpose of enabling the board of directors of the corporation to obtain counsel and advice with respect to such matters as may be from time to time referred by it to such advisory board for such purpose.

OFFICERS

35. The officers of the corporation shall be chosen by the directors, and shall be a chairman of the board, a president, vice president, secretary, and treasurer. The board of directors may also choose additional vice presidents, assistant secretaries, and assistant treasurers. The secretary and treasurer may be the same person, but a vice president may not hold at the same time the office of secretary or treasurer.

36. The board of directors at its first meeting after each annual meeting of stockholders shall choose a chairman of the board and a president from their own number, and one or more vice presidents, a secretary, and a treasurer, who need not be members of the board.

37. The board may appoint such other officers and agents as it shall deem necessary, who shall hold their offices for such terms and shall exercise such powers and perform such duties as shall be determined from time to time by the board.

38. The salaries of all officers and agents of the corporation shall be fixed by the board of directors.

39. The officers of the corporation shall hold office until their sucessors are chosen and qualify in their stead. Any officer elected or appointed by the board of directors may be removed at any time by the affirmative vote of a majority of the whole board of directors. If the office of any officer or officers becomes vacant for any reason, the vacancy shall be filled by the board of directors.

40. The chairman of the board shall preside at all meetings of the stockholders and of the board of directors, and shall be entitled to vote upon all questions. In thet absence of the president, the chairman of the board shall exercise the power and perform the duties of the president. He shall also perform such other duties as the board of directors or the executive committee may from time to time prescribe.

THE PRESIDENT

41. The president shall be the chief executive officer of the corporation and shall, under the control of the board of directors and of the executive committee have the general management of its affairs and shall perform all duties and exercise all powers incident to his office.

42. In the absence of the chairman of the board, the president shall preside at all meetings of the stockholders and of the board of directors. He shall have power to employ and discharge all employees, and to fix their salaries from time to time. He shall have power to fix and from time to time to change the salaries of all officers whose salaries shall be at the rate of less than \$10,000 per annum. He shall execute bonds, mortgages, and other contract requiring a seal under the seal of the corporation. He shall also perform such duties and be vested with such powers as shall be assigned to him from time to time by the board of directors and by the executive committee, and shall be exofficion a member of all committees authorized by these by-laws or created by the board of directors. He may, from time to time, in his discretion, compensate any director who does not receive a salary from the corporation, for any special service rendered by said director, at his request, not exceeding, however, in amount for any day's service, the amount paid to a director for attending a regular meeting of the board.

VICE PRESIDENTS

43. The vice presidents shall, in the absence or disability of the president perform the duties and exercise the powers of the president and shall perform such other duties as the board of directors shall prescribe.

THE SECRETARY AND ASSISTANT SECRETARIES

44. The secretary shall attend all sessions of the board and all meetings of the stockholders and record all votes and the minutes of all proceedings in a book to be kept for that purpose; and shall perform like duties for the standing committees when required. He shall, if requested, give, or cause to be given notice of all meetings of the stockholders and of the board of directors, and

shall perform such other duties as may be prescribed by the board of directors or president, under whose supervision he shall be. He shall keep in safe custody the seal of the corporation, and when authorized by the board affix the same to any instrument requiring it, and when so affixed it shall be attested by his signature or by the signature of the treasurer or an assistant secretary. He shall be sworn to the faithful discharge of his duty.

45. The assistant secretaries may, in the absence or disability of the secretary, perform the duties and exercise the powers of the secretary, and shall perform

Such other duties as the board of directors shall prescribe.

THE TREASURER AND ASSISTANT TREASURERS

46. The treasurer shall have the custody of the corporate funds and securities and shall keep full and accurate accounts of receipts and disbursements in books belonging to the corporation, and shall deposit all moneys and other valuable effects in the name and to the credit of the corporation in such depositories as may be designated by the board of directors.

47. He shall disburse the funds of the corporation for proper corporate purposes, taking proper vouchers for such disbursements, and shall render to the Dresident and directors, at the regular meetings of the board, or whenever they may require it, an account of all his transactions as treasurer and of the finan-

cial condition of the corporation.

48. The treasurer and the assistant treasurers shall, respectively, give the corporation a bond if required by the board of directors in a sum and with one or more sureties satisfactory to the board for the faithful performance of the duties of his office in such form as the president or board of directors shall approve.

49. The assistant treasurers may, in the absence or disability of the treasurer, or at his request, perform the duties and exercise the powers of the treasurer, and shall perform such other duties as the board of directors shall

Drescribe.

DUTIES OF OFFICERS MAY BE DELEGATED

50. In case of the absence of any officer of the corporation, or for any other reason that the board may deem sufficient, the board may delegate, for the time being, the powers or duties or any of them, of such officer to any other officer, or to any director.

CERTIFICATES OF STOCK

51. The certificates of stock of the corporation shall be numbered and shall be entered in the books of the corporation as they are issued. They shall exhibit the holder's name and number of shares and shall be signed by the president or a vice president and the treasurer or an assistant treasurer, or the secretary or an assistant secretary. If the corporation has a transfer agent or an assistant transfer agent or a transfer clerk acting on its behalf and a registrar the signature of any such officer may be facsimile. In case any officer or officers who shall have signed, or whose facsimile signature or signatures shall have been used on, any such certificate or certificates shall cease to be such officer or officers of the corporation, whether because of death, resignation or otherwise, before such certificate or certificates shall have been delivered by the corporation, such certificate or certificates may nevertheless be adopted by the corporation and be issued and delivered as though the person or persons who signed such certificate or certificates or whose facsimile signatures shall have been used thereon had not ceased to be such officer or officers of the corporation.

TRANSFERS OF STOCK

52. Transfers of stock shall be made on the books of the corporation only by the person named in the certificate or by attorney, lawfully constituted in-writing, and upon surrender of the certificate therefor.

CLOSING OF TRANSFER BOOKS

53. The board of directors shall have power to close the stock transfer books of the corporation for a period not exceeding 40 days preceding the date of any meeting of stockholders or the date for payment of any dividend or the

date for the allotment of rights or the date when any change or conversion or exchange of capital stock shall go into effect: Provided, however, That in lieu of closing the stock transfer books as aforesaid, the board of directors may fix in advance a date, not exceeding 40 days preceding the date of any meeting of stockholders or the date for the payment of any dividend, or the date for the allotment of rights, or the date when any change or conversion or exchange of capital stock shall go into effect, as a record date for the determination of the stockholders entitled to notice of, and to vote at, any such meeting, or entitled to receive payment of any such dividend, or to any such allotment of rights, or to exercise the rights in respect of any such change, conversion, or exchange of capital stock, and in such case such stockholders, and only such stockholders as shall be stockholders of record on the date so fixed, shall be entitled to such notice of, and to vote at, such meeting, or to received payment of such dividends, or to receive such allotment of rights, or to exercise such rights, as the case may be, notwithstanding any transfer of any stock on the books of the corporation after any such record date fixed as aforesaid.

REGISTERED STOCKHOLDERS

54. The corporation shall be entitled to treat the holder of record of any share or shares of stock as the holder in fact thereof and, accordingly, shall not be bound to recognize any equitable or other claim to or interest in such share on the part of any other person, whether or not it shall have express or other notice thereof, save as expressly provided by the laws of Delaware.

LOST CERTIFICATE

55. Any person claiming a certificate of stock to be lost or destroyed shall make an affidavit or affirmation of that fact and advertise the same in such manner as the board of directors may require, and the board of directors may, in its discretion, require the owner of the lost or destroyed certificate, or his legal representative, to give the corporation a bond, in such sum as it may direct, not exceeding double the value of the stock, to indemnify the corporation against any claim that may be made against it on account of the alleged loss of any such certificate. A new certificate of the same tenor and for the same number of shares as the one alleged to be lost or destroyed may be issued without requiring any bond when, in the judgment of the directors, it is proper so

CHECKS

56. All cheeks or demands for money and notes of the corporation shall be signed by such officer or officers or such other person or persons as the board of directors may from time to time designate.

FISCAL YEAR

57. The fiscal year shall begin the 1st day of January in each year.

DIVIDENDS

58. Dividends upon the capital stock of the corporation, subject to the provisions of the certificate of incorporation, if any, may be declared by the board of directors at any regular or special meeting, pursuant to law. Dividends may be paid in cash, in property, or in shares of the capital stock.

59. Before payment of any dividend there may be set aside out of any funds of the corporation available for dividends such sum or sums as the directors from time to time, in their absolute discretion, think proper as a reserve fund to meet contingencies, or for equalizing dividends, or for repairing or maintain ing any property of the corporation, or for such other purposes as the directors shall think conductive to the interests of the corporation, and the directors may abolish any such reserve in the manner in which it was created. Any such reserve or reserves may be reduced from time to time by the board of directors by transfer from such reserve or reserves to capital account. Transfers to capital account may also be made from surplus.

[SEAL]

60. Whenever under the provisions of these by-laws notice is required to be given to any director, officer, or stockholder, it shall not be construed to mean personal notice, but such notice may, unless some other method is provided therefor, be given in writing, by mail, by depositing the same in the post office or letter box, in a post-paid sealed wrapper, addressed to such stockholder, officer, or director at such address as appears on the books of the corporation, or, in default of other address, to such director, officer, or stockholder at the general post office in the city of Wilmington, Del., and such notice shall be deemed to be given at the time when the same shall be thus mailed.

61. Whenever any notice whatever is required to be given under the provisions of the general corporation law of Delaware or under the provisions of the certificate of incorporation or by-laws of this corporation, a waiver thereof in writing, signed by the person or persons entitled to such notice, whether before or after the time stated therein, shall be deemed equivalent thereto.

AMENDMENTS

62. These by-laws may be altered or amended or repealed by the affirmative vote of a majority of the stock issued and outstanding and entitled to vote thereat at any regular or special meeting of the stockholders or by the affirmative vote of a majority of the board of directors at any regular or special meeting of the board if notice of the proposed alteration or amendment or repeal be contained in the notice of the meeting of stockholders or directors, as the case may be: Provided, however, That no change of the time or place for the election of directors shall be made within 60 days next before the day on which such election is to be held, and that in case of any change of such time or place notice thereof shall be given to each stockholder in person or by letter mailed to his last-known post-office address at least 20 days before the election is held.

I, Edward H. Letchworth, secretary of Marine Midland Corporation, hereby certify that the foregoing is a true and complete copy of the by-laws of said corporation as the same arc in force and effect as of the date beyond

Corporation as the same are in force and effect as of the date hereof.

In witness whereof I have hereunto subscribed my name and affixed the seal of said corporation this —— day of ————, 19—.

SCHEDULE No. 3

BOARD OF DIRECTORS OF MARINE MIDLAND CORPORATION (DELAWARE)

George G. Allen, president Duke Power Co.
John L. Clawson, chairman of the board, Clawson & Wilson Co.
Walter P. Cooke, chairman of the board, the Marine Trust Co. of Buffalo.
Arthur V. Davis, chairman of the board, Aluminum Co. of America.
William C. Feathers, president the Manufacturers National Bank of Troy.
Seymour H. Knox, president Marine Union Investors (Inc.).
Edward H. Letchworth, director and general counsel, the Marine Trust Co.
of Buffalo.

BRANCH, CHAIN, AND GROUP BANKING

FRIDAY, APRIL 25, 1930

House of Representatives, Committee on Banking and Currency, Washington, D. C.

The committee met at 10.30 o'clock a.m. in the committee room, capitol, Hon. Louis T. McFadden (chairman) presiding. The Chairman. The committee will come to order.

STATEMENT OF GEORGE F. RAND-Resumed

The Charman. Mr. Rand, in your very excellent statement which you read yesterday morning you covered, sufficient for our purposes, a number of aspects of the type of banking in which you are engaged; but it seems to me that you touched rather lightly, if at all, upon the question of the initiation and application of the groupbanking policy. From the standpoint of this committee that is about the most important question we have to consider in this investigation. I should like, therefore, to ask you to state fully to the committee how and by whom—that is to say, by what committee—the Marine Midland Corporation arrived at a banking policy for the group as a whole or for any member of the group, and what means are employed to make this policy effective in the banks.

I should like you to cover the following points:

First. Investment policy: After you have acquired control of a bank what steps are taken to see that the securities which it purchases are sound and liquid?

Second. Loan policy: What action does the Marine Midland, or any other agency connected with it, take in the matter of reviewing or fixing lines of credit or otherwise attempting to improve the loans

of one of its banks?

Third. Examination. When your examiner goes out and makes an examination of a member bank of your group I presume he brings in a written report much the same as that of the National and State bank examiners. Should one of these reports reveal incompetency of management, unsatisfactory loans, or securities purchased not up to the standard, what means does your group employ to remedy such a situation? As the majority stockholder of such a bank you hold the power of removal over directors, and through that power indirectly control the appointment and tenure of office of the management personnel. In such a case as I have described would the Marine Midland Corporation call the officers of the bank on the carpet as a means of enforcing the group policy?

I wish you would address yourself to those questions and any other points that may appear pertinent to you along those lines. The committee would be glad to have you answer as fully as you can.

Mr. Rand. I will state in answer to question No. 1-investment policy—which question is, "After you have acquired control of " bank, what steps are taken to see that the securities which it purchases are sound and liquid?" the first thing we do after we have acquired control of a new bank, and even before we have acquired the bank, is to make a detailed examination of its loans and all its

After we have acquired control of a bank we have in the Marine Midland Group (Inc.) an investment committee who are experts in the handling and purchasing of securities. This committee is constantly working with the individual bank in going over its securities, in weeding out the undesirable ones. The securities that the individual bank holds have generally been handled by the president or by a vice president—one officer generally has had charge of them and our committee works with that officer more or less in advising the retention of good securities and the elimination of unsound securities.

There is a statistical department and an analysis of securities department. Every security that is owned by Marine Midland banks is constantly being analyzed and reviewed. If we hold railroad bonds, the reports of those railroads are followed very closely. If we hold industrial bonds, each report of that industrial concern is studied. The conditions of the industry are tabulated and watched, something that the individual bank perhaps did not do before. the securities are constantly reviewed and information about the particular industry or the particular railroad is constantly before our committee working with the officer in the bank who has particular charge of the bank's investments.

Then the matter is brought up to their board, with the recommendation that certain securities be disposed of or certain new securities be added, with the reasons why we make the recommendations

Many of these banks have not, in the past, given sufficient consideration to their liquidity and we have endeavored to remedy that by the putting of a certain portion of their security holdings in Government bonds and a certain proportion in railroad bonds, with the idea of having a liquid additional reserve for those banks, to have a certain proportion in high-grade rails, a certain proportion in highgrade industrials, a certain proportion in high-grade public utilities, of course, starting with Government and municipal bonds. The Chairman. Now there is a second question.

Mr. Rand. The second question referred to loan policy-

What action does the Marine Midland, or any other agency connected with it, take in the matter of reviewing or fixing lines of credit or otherwise attempt ing to improve the loans of one of its banks?

After we have assumed control of the stock of a Marine Midland bank, we very carefully go over the loans, review as far as possible the financial statements of the makers of the loans. We have in mind also the length of time the loans have run, what payments have been made upon the loans, and the type of industry to which the credit is extended. We work with the proper loaning officers-the

president, vice president, or cashier. Sometimes we work with the borrower in pointing out ways and means by which he can improve his business.

This loan committee of the Marine Midland Group (Inc.) is constantly working to eliminate unliquid loans or frozen loans, to get the borrower, individual or corporation, in the habit of filing his financial statements, or, if he is a farmer, working with him on his

farm problems.

The smaller banks have, in the past, not been as scientific as the larger banks. They have loaned a small industry in the town because a director sitting around the table will say, "I know John Smith, and know that anything he desires is all right," and they make the loan. Now, in the interest of the borrower as well as our bank, we are encouraging them to get auditors in and make an audited statement of that particular company, to check up on the management and see what the trend is and look back over a period of years to see what progress the company is making and check up on its inventory.

We have done another think in connection with the loans, which I think is very helpful. In the past, the local banker has been too apt to just sit in his bank and talk with his customers. We have urged our local bankers to get out and call on their customers and go into their stores and see the condition of the merchandise, see whether the store looks prosperous, see whether he is keeping his windows clean and up to date, and the way he is operating his store, and offering suggestions. We go through the local factories with the same object

in view

We have retained a former agricultural expert to work with our farmers in the farming communities, to go out and advise with them on the diversification of crops, better ways of running his farm, and, in many cases, we have arranged sales for parts of the farm to enable

the farmer to operate his farm in a better way than before.

We are doing a great deal in trying to improve the character of loans in these banks, always, of course, cooperating with the local bank board and the local president. We avoid dictating to them as long as the bank is running smoothly. We have some banks that have been very efficiently and very properly run, and there are very few loans that are subject to criticism. Those banks we have not interefered with, but where a bank has an undue proportion of poor loans, not as liquid as they might be, we do all in our power to assist that bank and show them some similarly situated institutions. We are constantly taking men from one bank and placing them in others for certain periods so that they may learn from observation better methods of operation. It has been quite an eye opener in land cases, and they have gone back and put their own banks voluntarily, of their own accord, in much better condition.

Are there any other questions on that?

The CHAIRMAN. I think that covers that quite well. Mr. RAND. Now the next question, examination:

When your examiner goes out and makes an examination of a member bank your group I presume he brings in a written report much the same as that the national and State bank examiners. Should one of these reports reveal

incompetency of management, unsatisfactory loans or securities purchased not up to the standard, what means does your group employ to remedy such a situation?

Now, our bank examiner, as I said in my statement yesterday, was formerly chief bank examiner for western New York for the New York banking department, a very able man. He has under him seven or eight very capable men. They will go in and make an examination of a member bank of our group and unless the examination shows dishonesty, which it very rarely does, we endeavor to educate the management of that particular bank by placing certain officers or employees in other member banks very much as I have said before. Many of these banks have had a poor business policy, due to the fact they do not know how to run a bank. They have been in a single small bank all of their lives and have had little opportunity to see how other banks operate.

In brief, what we endeavor to do is to educate the management. If we find they have not operated the bank efficiently, we sometimes loan a good man from another bank to work with them for a period;

Should their reports reveal gross incompetency, or should we find that the men in the bank are, in our opinion, not capable of running a bank, then we call a special meeting of the board of the small bank and put the whole situation up to them. Fortunately we have only had to do that once, and we told the person who was in that bank that he was not a born banker and did not have a future in the banking business and should get in some other line. But we always work through the individual board, and the cooperation of the individual boards, after we have had control of the bank, has been very gratifying.

The Chairman. Your chief examiner, with a corps of assistants,

is engaged exclusively in examining that group of banks?

Mr. RAND. Yes, sir.

The CHAIRMAN. And spends all of his time doing that work?

Mr. RAND. Yes, sir.

The Chairman. You get this information in regard to mismanage ment or anything else affecting conditions in those institutions through your examiners?

Mr. RAND. Yes, sir.

The CHAIRMAN. That is the way it is brought to your group?

Mr. RAND. Yes, sir.

Now, our examiners confine themselves very much to the condition of the bank. They do not handle the securities. They receive a list of securities, but the handling of those securities is done by a separate division of our Marine Midland Group (Inc.). The average examiner is not an expert on securities, and we have three of four men who do nothing but handle securities. The bank examiners study the loans. The analysis of securities is handled by the securities division of the Marine Midland Group (Inc.). The individual bank purchases its own securities, cooperating with our securities division and their own board of directors.

The CHAIRMAN. When the examinations by the banking department or the examinations of the national banks which may be in your group, by the Comptroller of the Currency, take place, your examining department or your chief examiner and his assistants go through the examination with these independent examiners?

Mr. Rand. No; we get the report of the banking department of the State or the National department and then go over that report with the officers of the bank, in addition to making our own complete examination.

The Chairman. After the State examination has been completed, however, or the national-bank examination is completed, those results

Mr. RAND. Yes, sir.

The Charman. How often does the State of New York examine the banks?

Mr. RAND. Twice a year.

The CHAIRMAN. At stated periods?

Mr. RAND. No sir; we do not know when they are coming.

The Charman. You do not rely upon the examinations of the State banking department or the comptroller's examinations exclusively to keep in touch with your bank's conditions, but keep your own examining force and they go into these banks the same as the State banks or national-bank examiners, without notice?

Mr. RAND. Without notice; yes sir.

The CHAIRMAN. As a matter of fact, then, I suppose they may drop into any one of your banks half a dozen times a year, for that

matter?

Mr. Rand. Yes. As a matter of fact, after we have made an examination, this chief examiner of ours will make certain recommendations and then possibly within a month he will send out one of his men to that bank and say, "What have you done with these recommendations? How are you following out the recommendations we have made?" He will probably meet with the board of directors. The board and our examiner will agree on a certain policy and later we will follow up and see how the policy is being carried out.

The Charman. Supposing the State banking department, as the result of the examination made by their examiner and the comptroller's office, as a result of the examination by the national-bank examiner, make definite recommendations to charge off assets which

are not in conformity with the department's idea?

Mr. RAND. With our department's idea?

The CHAIRMAN. With the ideas of the comptroller's office or of

the State banking department?

Mr. Rand. I do not believe I understand that question.

The CHAIRMAN. In other words, if an examiner, either from the comptroller's office or from the State banking department, recommends certain assets to be charged off, are they charged out of the assets of those banks or does one of your banks take over the criticized assets?

Mr. RAND. No, sir; they are charged off by that bank.

The CHARMAN. There is no taking out of criticized assets and putting them in another company?

Mr. RAND. No, sir.

The CHAIRMAN. Each bank stands on its own foundation?

Mr. Rand. Yes, sir. We handle it this way: In the case of a bank that has a large number of charge offs, or the banking department, either State or national, has to make certain charge offs and if those charge offs are of sufficient number to be serious, we will charge them

off and then the holding company will pay in additional money into

You see, we raised \$57,000,000 in cash. We are keeping a revolving fund anywhere from thirty to forty-five or fifty million dollars in cash at all times, and in case any bank's assets are impaired through the charge offs we do either of two things—have the bank stop paying dividends and let their earnings build up to take care of it, or increase their capital and pay in additional money to the surplus and their capital.

We do not feel that it is wise to take those assets out of the bank for two reasons: First, it relieves the banker of his responsibility on those assets to a certain extent; secondly, they are not apt to be followed up as closely as if left in the bank and that bank left to collect them.

The Charman. Now, as to the latter part of the question—as the majority stockholder of such a bank you hold the power of removal over directors, and through that power indirectly control the appointment and tenure of office of the management personnel—can you elucidate on that, as to how you meet that situation?

Mr. Rand. In our banks we have never used our power to eliminate any directors of one of our member banks unless the board of that bank desired those directors eliminated themselves. In other words, we will go to the president of one of our member banks when the annual election comes up and say, "Are there any changes that you people desire to make on your board?" And if the president says, "Well, John Smith is no longer of any use to us; we should like to elect another man in the town who is a capable and coming man in place of him," we will take their suggestions on him and first we will check up on him to see if their recommendations seem sound to us, and the board will go ahead and make those changes by the election of the additional directors.

Now, in the case of officers of banks, if they are incompetent—and as I said, we have only had that experience once—we would call a special board meeting and put it up to the board, and the board would have to do that themselves. They will have to get rid of that president, vice president, or cashier or whoever it was that was incompetent.

The Chairman. But, as a general thing, you prefer to keep the local boards or the majority of them in the locality where the bank is. Mr. Rand. Yes, sir; in many localities we have not even put a man on the board and have kept them intact. They run the bank under our supervision and with our help. If the local board wants to make a loan, they can loan any money they want to the community providing it is good. The only time we veto a loan—and then we only do it through moral suasion—is after a long conference, and if we feel it unwise to make that loan we tell the member bank. "We do not advise you to make that loan," and they do not do it. The Chairman. Your management makes no limitation as to the

The Chairman. Your management makes no limitation as to the amount the officers can lend, either to individuals or to corporations? Mr. Rand. The officers do not make loans unless approved by their particular boards and we make no limitation on the loaning power of those boards other than the limitations made by law.

The CHAIRMAN. Do you find it necessary at times to transfer funds from one locality to another?

Mr. RAND. Yes, sir.

The CHAIRMAN. You do that?

Mr. RAND. Yes, sir.

The CHAIRMAN. That is done through your parent institution?

Mr. Rand. That is done through one of the larger banks in the group; yes, sir; depositing money with the various banks. For instance, at the time of the stock-market crash last fall we had about \$50,000,000 in cash or call loans, extra money which was ready to be used for any of these banks that needed additional funds. In three or four cases, we deposited considerable amounts of money in those banks to enable them to take care of their requirements at that time.

The Chairman. Do you find that, in the smaller towns, you frequently have to send more money to serve the community, or do they have sufficient money there to take care of their requirements? Mr. Rand. It seems to average up pretty well. One town will

need money and another will have a surplus.

I would say at the present time we are not having to shift funds. The banks are running on about an even keel themselves, but even in times of distress it seems to run fairly even—one bank will need funds and another will have an excess.

The Chairman. Now, you are operating an interesting group. should like to ask you what economies in management you have

instituted?

Mr. Rand. The economies in management—I mentioned them in my statement yesterday. We formed our group last October. The economies are just beginning to show now. In one bank, for instance, I think it is safe to predict a saving in overhead of from \$100,000 to \$200,000 a year.

The CHAIRMAN. How did you bring about such economies-by

the discharge of unnecessary employes?

Mr. RAND. No.

The CHAIRMAN. Reducing salaries?

Mr. Rand. No; we have never made it a policy to discharge employes. We have, on the contrary, recommended consistently the increase of salaries to employes.

Perhaps if I give a case involving one of our larger banks, a bank of some \$70,000,000, where we are able to effect a great many econo-

mies, it will serve to illustrate what I have in mind.

Those economies are to be made, first, in the rentals that bank has been paying for space. That bank had several unnecessary offices. It had 11 branches, I believe, and we are able to show them how they

can eliminate two or three of those branches.

In the second case—that same bank—in connection with the amount of cash that that bank carried in its own vault, we have been able to save that bank forty or fifty thousand dollars a year, by showing how similar banks, in our group, operate with less cash in their vault. In other words, it does not matter to a local bank whether it carries cash in its vaults or on deposit with the Federal reserve bank. The tellers were doing business with fifteen or eighteen thousand dollars in their cages, and we were able to show those tellers that in another bank of the same size, the teller could do the same amount of business with \$4,000 in his cage if he would use his head a little. We were able to cut down the cash requirements in that bank and give the

same service to the customer, I think almost to the extent of \$1,000,000, in the aggregate. Now, if you figure 5 per cent on \$1,000,000, it is \$50,000 a year.

We have done that in all our banks, and the saving has not been so much in the smaller banks, but in the larger banks it is quite a great deal. We have done the same thing in purchasing.

Most of the little banks, and larger ones, are the prey of every salesman that goes into their town. They will buy adding machines; they will buy typewriters; they will buy ledgers, and a little bank, with three or four million dollars in resources, will spend sometimes three or four thousand dollars a year unnecessarily in doddads that people come in and sell them. The savings we have made in that connection are remarkable.

We are also showing these smaller banks, and larger ones, too, that are in our group, that, through certain physical changes in their set-up of their bank inside, in the way they handle their collections and handle their items, they can cut down the number of their employees.

As I said a moment ago, we have never let out employees. Where we have, in our group, two or three thousand employees, they are always leaving and there is always a turnover, and we simply stop from hiring for a while. If we go into one bank and find an excess of employees, we will take possibly two or three employees out of that bank—say, for instance, the bank is in Niagara Falls—and move them into our head office in the Marine Trust Co., in Buffalo, where we may need additional employees in the bond or trust department.

We are trying to increase the salaries of our employes and at the same time increase their efficiency and cut down on the total salaries. The Charman. Would you say, in that connection, you have in-

creased or decreased salaries on the whole?

Mr. Rand. Increased them on the whole.

The Chairman. Would you care to state the maximum and minimum salaries paid?

mum salaries paid?

Mr. Rand. That is difficult to state, because the banks vary so.

The Chairman. You have no set rule, then, for the different classes

Mr. Rand. No; we have more or less standards. We feel that a man who handles money, a teller, should receive a decent living wage. The Chairman. For instance, take a teller: What is the salary paid

to a teller?

Mr. Rand. Taking the teller in a bank in Buffalo, one of our tellers receives \$4,000 a year.

The CHARMAN. And in the smaller institutions?

Mr. Rand. In the smaller institutions the teller's work is entirely different. There a teller does not have to be on his toes as he does in a big city, where he has a string of people waiting to cash checks and do business. He has to be a much more capable man in a larger city. In a smaller town we take into consideration the living conditions of the town, whether he is married or not, and how long he has been with the bank.

I should say that the teller in the small town would receive possibly a minimum wage of \$150 a month.

The CHAIRMAN. Take stenographers and bookkeepers: What rate

of salary do you pay them?

Mr. Rand. With the stenographers and bookkeepers, it depends upon the banks in which they are. In the small towns a stenographer will do all kinds of work in a bank. She may work in the bank part of the time or may do stenographic work. We pay our stenographers, I would say, depending upon their age, their qualifications, and length of time they have been in the bank from \$75 a month to \$250 a month.

The Charman. Mr. Lord the other day in his testimony before this committee made the statement that their group never took over an institution that was not on a paying basis, and he also stressed the thought that these small banks in small towns could not operate successfully and that the only way that situation in these rural communities could exist in the future would be to adopt a form of branch banking; that those units could be operated as branches efficiently and serve those communities. Do you agree with that statement?

Mr. RAND. In general I do.

The CHAIRMAN. You have taken over small banks in small com-

munities?

Mr. Rand. Our group, Mr. McFadden, is very similar—our problems in our group are very similar—to the problems in Mr. Lord's group. His group radiates out of Detroit and we radiate out of Buffalo. We have 18 banks in our group and he has more than that.

We have 18 banks in our group and he has more than that. We have, for the most part, taken over paying banks. Now we have taken over two or three banks—I will say two—that are not making earnings at the present time, but we think they have a great future. We believe the town in which they are located is growing.

I do not know of any way of taking care of the banking requirements of many towns in New York State without a straight-out

branch banking system.

The CHAIRMAN. In the acquisition of these banks, do you wait for them to suggest to you that they be taken over or do you go out

and negotiate or buy up control of the banks?

Mr. Rand. We have never bought up the control of any bank, and my policy is never to buy up the control of a bank unbeknown to the officers of the bank or, in any way, detrimental to the best interests of the town. In fact, we have never bought up control of the banks without full consent of the directors of the banks. In every case in the acquisition of our banks we have never used any force or suasion. The banks have all come to us, I think, in every single case and asked that they be included in our Marine Midland group.

In the original formation of the group, however, we went to some 12 or 13 banks who had been working with us for years and we knew them and knew their officers and directors, and told them what we were planning to do and asked them if they cared to come in with 18. We simply told them our plan, and if they wanted to come in it was all right, and if they did not want to come in it was all right.

The Chairman. You dwelt at some length yesterday on the trade area of Buffalo. I notice, in looking over your group, that you have gone across the State line into territory that might be tributary to New York City. Have you arrived at what you consider to be your definite trade area or do you consider the whole of New York State as your trade area?

Mr. RAND. We feel that the whole of New York State is our definite trade area. I should like to read something here that I have prepared—

Mr. Charman. I should like also to embody in that question, for your thought and consideration in making your answer, the fact that you have acquired a bank in New York City which is a somewhat different plan than some of the other groups are working under. Will you explain to us that plan?

Mr. RAND. A New York City bank is very essential to our group. I should like to elaborate on that. I was hoping you would ask that question because it is very essential to us.

The Chairman. In that connection, the thought occurs to me as to whether or not, in the working out of your plan of group management, you contemplate the use of that bank exclusively for your group in New York—that is to say, whether your New York operations are to be conducted through that institution or whether you will utilize other banks for correspondents, and so forth.

Mr. RAND. We do not contemplate using the New York bank exclusively.

The Charman. But the major portion of the business will be

done through that institution?

Mr. Rand. The major portion of the business will be done through that institution; yes—probably 50 or 60 per cent through our New York bank and the other 40 per cent through bank correspondents in New York. Of course you must realize nearly all the banks are members of the Federal reserve system and a large portion of the New York business is done through the Federal reserve banks.

The same changing methods in business and the tendency toward consolidation which deter banks in small towns from retaining their business makes a bank in New York of great value even to such banks as the Marine Trust Co., of Buffalo, the Union Trust Co., of Rochester, and our banks in larger cities.

In an ever-increasing measure we have seen independent manufacturing companies in Buffalo and western New York merge or sell out to other concerns in a similar line of business. In case after case the executive offices are now in New York.

Cash balances which formerly ran into hundreds of thousands of dollars with our up-State banks are gradually reduced, becoming small operating accounts.

In many instances a large stock interest in the merged company remains—for, example, in Buffalo. Men whom we know well become prominent in the affairs of the company moving to New York. Much as they would like to continue to do business with the old bank which they know, gradually this business slips away, due to the convenience of doing business with a New York City bank at their headquarters. There is already an indication that with a bank in New York City we will regain their business which has been lost in recent years and retain within the group such business in the future.

(After discussion off the record.)

Mr. Rand. I will say this, that we have seen no evidence of the New York banks trying to take this business away from us except in a perfectly fair competitive way. Many of these mergers and con-

solidations had nothing at all to do with the New York banks, but

Just for economic and business reasons.

For instance the Hotel Statler Co. moved down to New York because the president of it, Mr. Statler, wanted to live there, and gradually he began doing business in New York, and there are many, many cases of that kind totally outside of the investment and underwriting business or the power of the New York banks that have caused this business to go to New York.

I will also say that I do not see any way in which banks outside of New York City could act as registrar and transfer agent of corporations whose stock is listed on the New York Stock Exchange. Other cities have a similar rule. We have in Buffalo, in our local stock exchange, a rule that you have to have a registrar and transfer agent

In Buffalo, and Chicago, I believe, has the same.

Mr. Wingo. Explain why that is necessary.

Mr. Rand. Because, when a man in Buffalo sells some stock on the Buffalo Stock Exchange, he could not go to New York or Chicago and have a New York or Chicago bank act as registrar, because it has to be delivered under the rules of the stock exchange immediately, and the expense and all that is prohibitive.

Mr. Wingo. You do not mean immediately. Explain that, for the benefit of the thousands who may read this record and who do not understand this transfer situation. You do not have to deliver it

on the very day; it is the next day, is it not?

Mr. RAND. I can not qualify to state the rules of the stock exchange, but it interferes seriously with the delivery if it has to go

out of town to be registered or transferred.

Mr. Wingo. I do not know anything about the stock exchange, but I have read somewhere that you have to make your transfer by 3 o'clock the next day.

Mr. Fischer. That is delivery, but that does not necessarily mean

It has to be transferred.

Mr. Wingo. That is the point I wanted to get at; go on and explain it, because you just made a statement in the record that will be challenged by a great many gentlemen.

Mr. RAND. I will have to get somebody more familiar with the

rules of the stock exchange than I am.

The CHARMAN. Is not this the real answer: That these transactions take place in New York City and, because of the requirements of the exchange as regards deliveries, it would be physically impossible to send them to these other cities for these transfers; in other words, it would impede these transactions to such an extent that it would be a great handicap, and inasmuch as the New York stock market is the big market, it is necessary that these transfers and registrations take place in close proximity to the exchange?

Mr. Wingo. Both of you gentlemen, I presume, are lawyers?

The CHAIRMAN. I am not a lawyer.

Mr. RAND. I am not.

Mr. Wingo. I said that sarcastically. When you say it is necessary physically to do this, unless they are different stocks from any I have ever seen or any I have ever as an attorney prepared for a little country corporation, I do not believe that you have given the real reason yet. There is another reason, I anticipate, aside from the

natural selfish desire to control the business. I have seen stock certificates with three or four transfers on them before they were ever transferred on the books. If a man wants to take a risk, and not have it transferred on the books, he can do so, and in some instances that happens.

(After further informal discussion off the record.)

Mr. Seiberling. The important thing that we have not in the record is that these corporations consolidating and moving to New York affect the banks to the extent of \$100,000 a year in connection with transfers.

Mr. Rand. That is not accurate. I could not say with accuracy just what that would amount to, but suppose one of our customers in Buffalo were to sell a bond issue and have that bond issue listed on the New York Stock Exchange. The trustee of the bond issue would have to be a New York bank. If we had a bank in New York, we would receive the fee ourselves, assuming that our customer picked out our bank as trustee.

The CHAIRMAN. Which they would be likely to do.

Mr. Rand. Which they would be more apt to do. In many cases this amounts to between \$20,000 and \$30,000, depending on the size of the bond issue.

Mr. Wingo. That is a bond to be listed on the New York Stock Exchange?

d

ir

or

F

as

of

pr

sta

You

of

Mr. RAND. Yes.

The Charman. I think a statement should go into the record that Mr. Rand discussed with the committee, off the record, an angle of this development in banking such as he has engaged in through the organization of the Marine Midland Corporation, with particular reference to their taking over the Fidelity Trust Co. in New York, operated as the New York City institution of their group.

Mr. Wingo. Before you get away from that stock transaction and that stock registrar, there are two reasons why they insist upon that, and one is to keep the stock there, and frequently stock will be held in brokers' hands with numerous transfers of ownership but without an actual transfer on the books, and the major reason why they insist on it is that they want to keep those transactions as a New York contract, governed by the laws of New York. For illustration, there are the call-loan rates. This is a real reason. There is nothing physical that would require the registrar or the stock-transfer bank to be there; and the registrar or the stock-transfer bank could be in Buffalo just the same as in New York except for the reason I mentioned. Their selfish idea is to keep it in New York City, and they use that practice to make it a New York contract, so that if any litigation arises the New York courts have jurisdiction and the New York laws as to usury and everything else govern-

I think, if you ask them in New York, they will tell you that that is the real reason why they require it.

The Charman. In connection with this discussion of consolidations and mergers and control of banking incident thereto, during the past few years a new method of financing industry independently from bank loans has developed through the issuance of common stocks and their sale to the public. How has that affected, in your judgment, the general commercial banking business? In other words,

the Federal reserve act was created in 1913 to serve the business interests of this country through making eligible for rediscount paper representing commercial transactions, and practically ever since the development and organization of that system, we have been having a decreasing amount of that very class of paper, and the concerns who were to be served from that source have gained their money from the public through the issuance of common stock and other classes of securities.

Now, in your judgment, how has that tended to affect the general

banking business of the country?

Mr. Rand. Well, it has changed quite materially the general character of our business by cutting down the eligible paper we have for rediscount with the Federal reserve bank, in that the amount and number of commercial loans that we are called upon to make is declining, and on the other hand the amount of collateral loans we are called upon to make is increasing.

The CHAIRMAN. Collateral loans are usually secured by stock-

exchange securities, are they not?

Mr. RAND. Stock-exchange collateral.

The CHAIRMAN. How do you meet that, then, in carrying your assets in such condition that will permit you to obtain money from the Federal reserve in case you require it? What class of securities do you carry?

Mr. Rand. We meet that by increasing, of course, our supply of Government bonds. We carry larger amounts of Government bonds. We also carry larger lines of acceptances and bankers' bills, which

are eligible for rediscount.

The Charman. You are forced to do that because of these changing conditions?

Mr. Rand. Changing economic conditions.

The Chairman. And your situation in that respect is no different from that of any of the other large banks?

Mr. RAND. No.

The CHARMAN. Particularly the banks in New York City.

Mr. RAND. Our situation is comparable to that of banks in New

York City, Cleveland, Detroit, and Pittsburgh.

The CHAIRMAN. Have you any suggestion to make as to whether or not that is a development that synchronizes with the intent of the Federal reserve plan?

Mr. RAND. I could not answer that,

The Chairman. In other words, does not that tend to freeze the assets of the Federal reserve system?

Mr. Rand. I suppose it does in a smaller way.

The CHAIRMAN. As a matter of fact, does not the large volume of acceptances which the Federal reserve carries from time to time Practically resolve itself into frozen assets?

Mr. RAND. I would not be qualified to say that.

The CHAIRMAN. Mr. Luce.

Mr. Luce. Before asking a question or two I want to take the stand myself and from personal experience add something to the considerations that have resulted in the centering of business in New York.

Something more than 40 years ago I started a business in the city of Boston. Five years later we opened a branch in New York. The

New York business grew rapidly and the Boston business grew slowly, and three years ago we abandoned our business in Boston and centered it in New York, and such funds as the corporation possessed were transferred from a Boston bank to a New York bank.

That was not done through any love of New York. Personally, if I were faced with the prospect of having to live in New York in order to make a living I would go and try to exist without the same sort of living somewhere else somehow. This business went to New York simply because there was more money to be made in New York, and I did not have to go with it.

I think you will find that is at the heart of this whole tendency of business to go from the smaller to the larger place. It goes because that is more profitable. There is no personal consideration, and nothing in connection with any social tendency that could be checked if we wanted to do it. I reiterate that business goes to the larger place because it is more profitable to do business in the larger place.

Now, as to the physical factors connected with the transfer of stocks, in Massachusetts the head office of our public service corporations were generally at first in the city concerned. That is changing, but still there are some public-service corporations with their main offices in the smaller cities. They maintain a transfer office in Boston in large part because of the convenience to the stockholders. It is a nuisance when you are closing up an estate or when you are making an individual purchase or sale to have to send certificates of stock off some 30, 40, 50, or 100 miles and take several days to get the thing done, rather than to step around the corner into the office of the transfer agent and have it done in five minutes.

Now, one or two questions. Unfortunately I was kept away from yesterday's hearing by the necessities of the business on the floor of the house, and I am not informed as to whether in your group there are any securities companies.

Mr. Rand. When we took over the Fidelity Trust Co. they had a small securities company called the Fitrust Corporation, and that is still in existence, and also in the Manufacturers' National Bank of Troy they have a small securities company in connection with that bank, called the Security Properties Co. (Inc.).

Mr. Luce. It has been disclosed that in the West, from which we have had most of the testimony prior to this, there has been a marked growth of lending on securities. Is that true also of the business in New York State?

Mr. Rand. Yes; lending on collateral. I just mentioned that.
The banks are lending in increasing amounts on collateral.

Mr. Luce. Is it your expectation that you will concentrate the business of all your banks in that regard in one securities company,

Mr. Rand. Well, the securities company has nothing to do with the loans that the banks make. The collateral loans that the banks make to customers are made at the banks, and not through any securities company. I do not know of any securities company that makes loans on collateral. That is a banking function.

Mr. Luce. I think that we have different things in mind. I have

had in mind the allotments to others.

Mr. Rand. Do you mean the underwriting of securities?

Mr. Luce. Yes; the underwriting of securities.

Mr. RAND. What was the question?

Mr. Luce. Is it your intention to develop a central bank separately for that purpose?

Mr. RAND. Do you mean, is it our intention to develop a securi-

ties company for the underwriting of securities?

Mr. Luce. Yes.

Mr. Rand. We are studying that proposition now, and we are not prepared to say at this time whether we will develop that or not. We are selling through our bond departments, through the bond department of the Marine Trust Co., the Union Trust Co. of Rochester, and our other large banks—selling and distributing large amounts of securities. We have to do it in self defense, and there is a demand by our customers for that kind of business, and it fulfills an economic function, of the banks selling high-grade securities. Whether we will form a securities company to handle that end of it or not, I am not prepared to say at this time. We have not decided. I would imagine that we probably will.

Mr. Luce. Is it your judgment that the tendency toward the greater participation by banks in that particular type of business is

wise or unwise?

Mr. Rand. My judgment is that it is probably wise. It all depends on the way the securities company is operated. If the securities company is operated in a high-grade way, and distributes only the highest-grade securities, I think it is a wise thing to do. In our trust departments and in our fiduciary capacity, we have made it a practice never to buy any securities that are sold by ourselves. In any of our trust accounts, we never purchase securities from our own banks or from any member of our own bank group. We have never done that; we never will.

Mr. Luce. It has been charged that your high standard is not observed in many parts of the country and that banks having trust departments are willing to unload into trust funds the poorer grades of securities for which they do not find a ready market. What is

the answer to that?

Mr. Rand. My answer to that is that all of the banks that I know of, the higher-grade banks, particularly in New York and the larger cities, have adopted the same policy that we have, of never purchasing securities from themselves with trust funds. I do not know of a large New York bank or a large bank of any standing anywhere that purchases securities from itself. I may be mistaken on that, but that is my impression.

Mr. Luce. You have pointed out that the tendency of business to go from smaller cities to the larger cities has resulted in gain on the part of the banks in the larger cities, at the expense of those in the smaller cities, and that you are attempting by your form of organi-

cation to recover some of that loss.

Turn the matter around. When the banks in New York discover and realize that they are thus being attacked in a perfectly legitimate way, will not the inevitable result be that they will turn around and begin to form holding companies themselves?

Mr. RAND. I should think it would be.

Mr. Luce. Then tell me this: If you were to start over again with a perfectly free hand to establish branch banks, would you establish branch banking system?

Mr. Rand. That is a difficult question to answer.

Mr. Luce. It is an important part of what we are trying to find out, whether, with free competition between the two systems, and full opportunity, the branch banking system or the group banking system will bring the community greater economic advantage and more safety?

Mr. RAND. I discussed that at length in my statement yesterday,

of which I would be glad to give you a copy.

Mr. Luce. It would be in the transcript, then, and I shall read it.

I feared I might be duplicating.

Mr. Rand. My conclusion on that was that we had not really made up our minds which system was preferable, that each has many advantages over the other.

Mr. LUCE. That is all.

The CHAIRMAN. Judge Brand.

Mr. Brand. I want to ask you a few questions only.

First, what is the approximate size of the smallest bank in your system?

Mr. RAND. About \$1,000,000 in deposits.

Mr. Brand. What is the population, say, of the city or cities in which such a bank is located?

Mr. Rand. I would say about 3,000 population; 2,000 or 3,000. Mr. Brand. Your group banks loan to farmers, as I understand it!

Mr. RAND. I beg your pardon?

Mr. Brand. Do your group banks loan to farmers?

Mr. RAND. Yes.

Mr. Brand. Upon what character of security?

Mr. RAND. Sometimes we take a mortgage on their farm, and at other times we loan them to buy a tractor, and we take a note from them, and things of that kind.

Mr. Brand. What rate of interest do you charge the farmer?

Mr. RAND. Six per cent.

Mr. Brand. How long do you carry it?

Mr. RAND. When I said 6 per cent, that is our standard rate. Some of the banks—and I may be mistaken—might charge 6½ or 5½ per cent.

S

0

51

Ϊ

I

What is your other question?

Mr. Brand. How long do you carry the loan?

Mr. Rand. A commercial bank should not carry a loan longer than 90 days. Of course, that is ridiculous when it comes to farmers. Sometimes we have loans that we carry along for several years, but we do not like to do it. We like to have the farmer amortize the loan.

Mr. Brand. For instance, if he wanted to borrow \$1,000 in March,

payable this fall, would you make him that loan?

Mr. RAND. Yes.

Mr. Brand. Do you charge any commission outside of the rate of interest?

Mr. RAND. No, sir.

Mr. Brand. That is the total cost to him for the use of that money?

Mr. RAND. Yes.

Mr. Brand. Do you loan at any time on the crops that he produces on the farm?

Mr. Rand. We have never had that in New York State to any extent; we have never taken an assignment of the crop, and never been asked to. We will loan a man in the spring \$1,000, with the understanding that when his crop comes in he will pay us off, but we, unlike banks in other localities, have never been called upon to make loans directly on the crop.

Mr. Brand. What is the average value of the land that the farm-

ers own who apply to you for money?

Mr. RAND. That would be hard to answer, because the sections are different. We have some dairying, some in orchards, and some in hay. I would say it runs anywhere from \$100 an acre to \$300 or

\$400 an acre.

Mr. Brand. We know that there has been more or less criticismand I think that is impliedly admitted in your statement and in the statement of others-of this group banking on the ground that either impliedly or expressly they are trying to evade the double liability of stockholders in case of the insolvency of the bank. What is the amount of stock on an average that your holding company owns in these smaller banks?

Mr. Rand. Taking all the banks, we own about 97 per cent Mr. Brand. Suppose that you were to buy a bank and you could not buy up over 51 per cent?

Mr. RAND. Then we would not buy it.

Mr. Brand. Say two-thirds.

Mr. RAND. We would probably take it if we could get two-thirds. Mr. Brand. Suppose that that bank failed; your bank would be hable for the double liability, would it not?

Mr. Rand. Yes, sir. Bank stockholders would be liable.

Mr. Brand. Would these other stockholders owning one-third of the stock in that insolvent bank be assessed in order to help pay the

creditors of the failed institution?

Mr. Rand. In the first place, in our particular group we would never let a bank get in that shape. Our holding company has as a part of its plan the keeping of a revolving fund of between \$30,000,-000 and \$50,000,000 in cash at all times. At the present time we have some \$45,000,000 in cash. If a bank got in a bad condition, before it got to the double liability we would pay any amount of money to take care of it.

Mr. Brand. But suppose that it did fail and the holding company owned 66% per cent of the stock, which you would have to make good and would make good; the owners of the other third of that

stock would be liable for the double liability, would they?

Mr. RAND. Yes.

Mr. Brand. And have to pay?

Mr. RAND. Depending on whether we would allow them to pay I do not know. That contingency would probably never arise.

Mr. Brand. Would you not require them to pay?
Mr. Rand. I would not say as to that. We might pay for them; I do not know.

Mr. Brand. But it would be paid in any event?

Mr. RAND. It would be paid.

Mr. Brand. There is no danger, then, of a holding company not paying the assessment which may be levied by the Government or by the State banking department in case of the insolvency of a bank?

100136-30-vol 2, pt 9-14

Mr. Rand. I can not say as to any other holding company; I only say as to our own. As far as our own is concerned, I can not conceive of any minority stockholder having to pay anything.

Mr. Brand. Does your holding company carry double liability in

case of insolvency?

Mr. RAND. Our holding company does not carry double liability.

We would welcome it if it were necessary.

The combined capital of our banks at the present time is \$28,025,000, and therefore the double liability would be \$28,025,000. We aim to keep at all times in cash an amount sufficient to take care of that double liability. In other words, our company will carry in cash anywhere from \$30,000,000 to \$50,000,000, so that the double liability is assured. We have it in cash, in other words.

Mr. Brand. Suppose that one of your banks began to get in a shaky condition or in an unsound condition, financially, and the probabilities were that it would become insolvent. What would

you do?

Mr. Rand. I believe I explained that. We would keep it from getting that way by our examination by working out the poor assets, by paying in additional money from our holding company into the capital structure of the bank.

Mr. Brand. Getting back to that surplus fund that you referred to once or twice, where do these member banks of the holding com-

pany deposit this surplus fund?

Mr. Rand. For the most part, in the Federal reserve bank where they are members; most of our banks are members of the Federal reserve. There are four or five exceptions. The other banks deposit in their bank correspondents. I would say that very few of them carry more than a third or a quarter of their funds with other members of our own group.

The CHAIRMAN. May I ask a question there?

Mr. Brand. Yes.

The CHAIRMAN. They do not deposit the surplus funds with your

holding company, do they?

Mr. Rand. No; the surplus funds of the holding company are carried on deposit with our own banks and with other banks, and where they are carried on deposit with our larger banks—

The Chairman. Do you mean the larger banks of your group? Mr. Rand. The larger banks of your group—the money is placed on call in Government bonds or invested so that it is always kept liquid.

Mr. Brand. You recognize that there have been criticisms of this group banking?

Mr. RAND. Yes.

Mr. Brand. Relative to the question whether you want to evade this double liability.

Mr. RAND. The formation of our holding company was in no

sense due to the intention to evade the double liability.

Mr. Brand. But there has been that criticism made, that the holding companies were formed to evade this double liability. Do you deny that that is true?

Mr. RAND. Yes.

Mr. Brand. For your holding company.

Mr. RAND. We are perfectly willing to have double liability on our holding company stock, so far as that is concerned.

Mr. Brand. Are your smaller units, located in agricultural sections, supplied with all the money they want and need to carry on their business?

Mr. RAND. I would not say that the small bank is supplied with all the money they want; the small bank receives all that they should have. Sometimes a banker will think that he should have a lot more than he is entitled to. I would say that they are supplied with all the money they need for their legitimate demands to take care of their communities.

Mr. Brand. Are there other banks in these cities where you have your smaller banks?

Mr. RAND. Yes, sir.

Mr. Brand. Were they there when you got possession of your

Mr. RAND. Yes.

ot

n

e

1

0

a

e

Mr. Brand. Are all of them there that were there when you established your group banks in those smaller communities, or have any of them failed?

Mr. Rand. None has failed, to my knowledge.

Mr. Brand. Then, so far as your group banking business is concerned, you have not interfered with the other banking institutions In cities in which they are located?

Mr. RAND. Not in the slightest.

Mr. Brand. I want to ask you one other question, along the line that the chairman was questioning you, which is more or less immaterial. As I understand you, the average salary that you pay to Your tellers is \$150 per month in your smaller banks.

Mr. RAND. I may be somewhat guessing on that. I should think that that would be the average salary. In some of our smaller banks. in a bank of \$1,000,000, where we sometimes have a cashier act as teller, I would say as a general rule that \$150 a month was about the lowest we paid the teller.

Mr. Brand. What do you pay your cashier in a \$1,000,000 bank? Mr. RAND. I would say that we pay him between \$3,000 and \$4,000

Mr. Brand. Do you have a vice president and a president in each

Mr. RAND. Not in a small bank like that. A president and a cashier.

Mr. Brand. What do you pay the president? Mr. Rand. Very often the position of president of a small bank is an honorary position, but where he is active, we probably pay him \$3,000 or \$4,000 a year, maybe \$5,000. Where the president is active, the cashier would generally not be active.

Mr. Brand. In the Bank of Snyder, I notice that the resources are about \$650,000. In a bank like that, do you have a loan committee independent of the board of directors to pass on loans?

Mr. RAND. That particular bank is practically in a suburb of Buffalo; it is to all intents and purposes a suburb of Buffalo; and that bank is officered by some of our officers of the Marine Trust Co., and they have a loan committee that acts for that bank.

Mr. Brand. Are you familiar with the merger of the Fourth National Bank in Atlanta with the Atlanta Lowrey National Bank, into the First National Bank?

of

Mr. RAND. No, sir.

Mr. Brand. What suggestion would you make in regard to the establishment of a bank in a section where the people themselves are not able to form a bank and where all the banks have failed? Would you suggest that they go in a branch banking system or a chain banking system, or a group banking system?

Mr. RAND. Branch banking system.

Mr. Brand. A branch banking system can be more economically operated than a group banking system, or chain banking system, can it?

Mr. RAND. Yes, sir.

Mr. Brand. Do you recommend branch banking because it is safer, or cheaper?

Mr. Rand. It is more economical—that is, for the contingency

that you mentioned.

Mr. Brand. Take a State like Georgia or South Carolina. Georgia, at least, is purely an agricultural State. What sort of a banking system would you suggest for Georgia?

Mr. Rand. I could not offer a suggestion, because I do not know

the conditions.

Mr. Brand. There is nothing there but farmers growing cotton.
Mr. Rand. I would think a branch banking system would be the
best; but, as I say, that is only a haphazard answer, not knowing
the conditions there.

Mr. Brand. Then, if Georgia does not have a branch banking law, your opinion is that the State legislature ought to provide for it?

Mr. RAND. I could not answer that unless I knew the conditions better. I think it is unwise to try to answer something where I do

not know anything about the conditions in Georgia.

Mr. Brand. Well, the agricultural classes are depending upon wheat, or corn, or cotton to make a living, and in that State, as well as in the South generally and the West, which is preferable, in your opinion, going into a branch banking system or a group banking system or a chain banking system?

Mr. RAND. I would hesitate to answer that, because I do not know

the conditions.

The Chairman. What is the please of the committee now? It is 12.30.

Mr. Wingo. I would like to ask a few questions. I will have to leave in a few minutes.

The CHARMAN. All right; proceed.

Mr. Wingo. You stated, in response to a question from Judge Brand a moment ago, that branch banking is more economical than group banking. Did you mean that in connection with the situation he mentioned down in Georgia, or as a general proposition?

Mr. Rand. I think it is true as a general proposition.

Mr. Wingo. Then why do you not engage in branch banking exclu-

sively, instead of group banking?

Mr. RAND. I thought I covered that in my original statement; that group banking is more economical than independent banking, unit banking, but there are so may other conditions that come up in group

banking that are advantageous that, in my opinion, it offsets to some extent the greater economies that might be effected out of straight branch banking. In other words, in group banking you retain many of the benefits of independent unit banking which you might not be able to obtain in straight branch banking. As I said in my statement yesterday, I am not prepared to say which system is preferable, but I think either system is preferable to the independent unit bank.

Mr. Wingo. If the law and the restrictions were identical, do you think then that you would in some instances maintain group banking

and in other instances maintain branch banking?

Mr. Rand. So far as our particular operation is concerned, if I might hazard a guess, I would say we would probably go to branch

banking.

Mr. Wingo. That is the point I wanted to get at. If we liberalized the law along the line you and the advocates of branch banking insist would be proper, the probabilities are that you would gradually be transformed into a branch-banking system?

Mr. RAND. Yes, sir.

Mr. Wingo. Which would you prefer, the trade area or the State ine?

Mr. RAND. I feel that the trade area would be preferable.

Mr. Wingo. What reasons now occur to you, as a practical banker, based upon your own observation and experience, that would make a trade area preferable to a limitation based solely upon the polical

lines of a State?

Mr. Rand. Well, I discussed that at length in my statement, and I feel I can only speak for our own situation, because I am not familiar with the other trade areas or trade locations. For our own situation, I would say that New York State and possibly a part of Pennsylvania and a part of New Jersey, as well as a part of Conhecticut, following in general the second Federal reserve district, which includes those particular States.

Mr. Wingo. In other words, you have some natural industrial centers which are near State lines, and their trade and business are not limited to the political subdivisions of the country, but covers other States adjacent to those industrial centers and banking cen-

that is the gist of your thought on that, I presume?

Mr. RAND. Yes.

Mr. Wingo. Your corporation, as I understand, is a Delaware corporation?

Mr. RAND. Yes, sir.

Mr. Wingo. Where do you hold your stockholders' meetings?

Mr. RAND. Wilmington, Del.

Mr. Wingo. Do you intend to hold your stockholders' meeting there each February, or are you permitted to hold it in Buffalo, if you desire to do so?

Mr. RAND. No; we are not permitted to hold them in Buffalo.

We hold them in Wilmington, Del.

Mr. Wingo. I think you would be permitted to hold it elsewhere, but your policy is to hold it at Wilmington and you have been holding it in Wilmington?

Mr. RAND. Yes, sir.

Mr. Wingo. All three of your original incorporators are citizens of Wilmington?
Mr. Rand. Yes.

Mr. Wingo. Under your charter, your holding corporation is permitted to engage in any business that an individual could engage in, except a few functions of a banking nature; for illustration, you are not permitted to receive deposits; you are not permitted to issue a circulating medium; and you are not permitted to buy and sell gold bullion and foreign coins; but is there any other business that you are barred from under your charter?

Mr. RAND. I do not know.

Mr. Wingo. You can do anything that an individual can do except those things which are specifically enumerated in your charter that

you are barred from doing, can you not?

Mr. RAND. I could not answer that. I am not a lawyer, and therefore could not answer that. I know that our holding company, the Marine Midland Corporation, is a holding company exclusively engaged in no other business except the holding of bank stocks.

Mr. Wingo. You mean that in practice you are strictly a holding

company?

Mr. RAND. Yes.

Mr. Wingo. Is your attorney here?

Mr. RAND. No. sir.

Mr. Wingo. That is my interpretation of your charter, that you can do what any person naturally can do except those things which I have enumerated. I am under the impression, as a country lawyer, that where you enumerate and include certain things in a document that way, that that excludes the others, and the reverse would be true, that where you undertake to give a broad authority except as to certain things, then those few would eliminate from the exceptions all others. But your directors do not have to be stockholders, do they?

0

t

fi

to

if

tı

h

fi

in

Vi

01

Mr. Rand. I do not know-no.

Mr. Wingo. Your directors may alter, amend, add to or repeal any by-law without the consent, knowledge, or approval of the stock-holders—is not that true?

Mr. RAND. I could not answer that.

Mr. Seiberling. That is true. Mr. Rand. I believe that is true.

Mr. Wingo. You will find it on page 7 of your printed charters in article 4:

To make, alter, amend, change, add to, or repeal the by-laws of this corporation without any action on the part of the stockholders.

That is under the tenth subdivision, giving the powers of your board of directors, and under your charter all your powers are vested in your board of directors, who do not have to be stockholders, and that board of directors in turn may subdelegate all of their power to two members.

Do any of your banks act in a fiduciary capacity?

Mr. RAND. Yes, sir.

Mr. Wingo. Do they loan on the stocks either of the parent corporation or of any of the unit banks in your group?

Mr. RAND. No, sir.

Mr. Wingo. They are permitted to do it, are they not?

Mr. Rand. Our banks are permitted to do it, are they not?

Mr. Rand. Our banks are permitted to loan on the stocks of every other bank in the group, but we do not do it. We do have a few

loans, but our policy is not to lend upon our own stock, upon the stock of the holding company. We do have a few loans that are gradually being liquidated that hung over from before the time we formed the Marine Midland Corporation. For instance, we took into the Marine Midland Corporation the Union Trust Co. of Rochester, the largest bank in Rochester. Before we took that into the Marine Midland Corporation there were some few loans on the Marine Trust Co. and Union Trust, of Rochester stock, and vice versa. Now, that stock was exchanged for stock in our holding company, but gradually we are eliminating that, so that eventually we will not loan upon our own stock.

Mr. Wingo. Your policy, then, is to avoid what, of course, is obvi-

ously a dangerous practice, which would permit pyramiding?

Mr. Rand. Our policy is to treat our holding company as much like an actual bank as we possibly can, and not loan upon our own stock.

The Chairman. Do you maintain a market for any of your stocks? Mr. Rand. Do you mean the other stocks of the constituent banks? The Chairman. Yes.

Mr. RAND. No.

The CHAIRMAN. Do you maintain a market on the stock of the

olding company?

Mr. Rand. We have nothing to do with that. When our company was formed we had a million shares of our stock that were handled by four different firms, and whatever marketing was done was maintained by them, but we have never tried to manipulate the stock or put it up.

The Chairman. Have you any arrangement for the maintenance of or for making a market for your stock with any of those houses?

Mr. Rand. We have not. The houses themselves are doing it, but

it is independently of us.

The CHAIRMAN. Do you have to sell those stocks?

Mr. RAND. No, sir; never.

Mr. Wingo. As to those banks that act in a fiduciary capacity, do they receive on deposit the trust funds of the trust where they are acting in a fiduciary capacity?

Mr. RAND. Yes.

Mr. Wingo. Do they pay the customary interest on that deposit?

Mr. RAND. Yes.

Mr. Wingo. Do they not pay any additional?

Mr .RAND. No, sir.

Mr. Wingo. Do you think that is wise?

Mr. Rand. I do not see how we could discriminate and pay trust funds left on deposit with us more than we pay our regular customers. It would open up all kinds of embarrassing problems for us if we did. Our policy is to treat them all alike, however, paying our trust funds the highest rate of interest we can under the clearing house arrangements in the cities in which we operate.

Mr. Wingo. Do you think a bank should be permitted to be exempt from the ordinary rules governing a trustee where the trustee is an individual? Why should a bank be given preference over an individual in connection with the income to be derived from the handling

of trust funds?

Mr. RAND. I can not answer that.

Mr. Wingo. Do you not recognize that that is a sound rule, that the trustee shall not derive any emoluments or profits from the handling of trust funds other than the commissions allowed by law?

Mr. Rand. Yes; I agree with that.

Mr. Wingo. Why should a bank acting in a fiduciary capacity be permitted to profit from handling the trust estate in addition to the regular commissions allowed by law?

Mr. Rand. Of course, we keep most of our trust funds invested at all times; we have very little in the way of trust funds on deposit. Most of them are invested, and most of the trust fees are fixed by law. Mr. Wingo. But, as to the deposits that are made, you simply treat

them as the other deposits bearing interest?

Mr. Rand. I do not know as I understand exactly what you mean. We pay our trust funds the same interest that we pay our other accounts, but we have no bank that I know of that has a uniform rate for all their accounts. Some are savings, some are thrift, some are checking accounts, and the rates vary. We aim to pay our trust funds the largest rate of interest that we consistently can, but we do not favor a trust account over some widow that may have a deposit with us. In other words, it seems to me that we should have a fair rate of interest, pay a fair rate of interest to all of our customers, and, simply because one is a trust account, we should not pay more on that than we would some individual or some poor person or some widow or orphan, and that is the way we try to operate.

Mr. Wingo. Where you are dealing with an individual who comes and voluntarily deposits the funds with you, each one of you, as contracting parties, is capable of protecting the interest of himself; but, on the other hand, where you are acting as trustee for an estate, you are dealing with yourself, and is it not the natural tendency, without any corrupt motive, for anyone who is borrowing money to pay the

lowest rate he can pay on it?

Mr. Rand. I think that is true, but in handling our trust estate we pay the largest rate of interest we consistently can, and we have never penalized to the slightest extent because of that contractual relation.

Mr. Wingo. But that results in the trust estate sometimes having to

take a lower return than could be safely procured elsewhere.

Mr. Rand. I do not think so. It does not in our case. We invest that money possibly down to \$100 or \$200. We do not let it lie in the bank at interest.

Mr. Wingo. So your policy is not to take advantage of your power there and accumulate the trust funds and simply pay a current rate of interest on the deposits?

Mr. RAND. I think that would be very wrong. Mr. WINGO. That would be very reprehensible?

Mr. RAND. That would be wrong. We have never done that.

Mr. Wingo. Your corporation is authorized to do an underwriting business. Have you ever done any of that?

Mr. RAND. No. sir.

Mr. Wingo. Do any of your constituent banks do an underwriting business?

Mr. RAND. Yes.

Mr. Wingo. Do any of your banks buy securities underwritten by your other banks?

Mr. Rand. Yes; our banks do. Where our Marine Trust Co., for example, has a bond issue, we allow participation in that bond issue to our group of banks, and that is one of the benefits of group banking.

Mr. Wingo. Is there not a possible danger there?

Mr. Rand. There may be a possible danger, but I do not see that there is any more danger in buying from the bond department where we underwrite the securities than in buying elsewhere. If they do not buy from us, they will buy from some other bank, and maybe an inferior security, or they will buy from some bond salesman or some bond house, and it might be an inferior security.

The Chairman. I would like to ask, Mr. Rand, whether you invest the trust funds of your customers in securities of your own

organization?

ıt

e

0 3

t

t

a

B

Mr. RAND. No, sir; never have done that.

Mr. Wingo. Notwithstanding the authority in your charter, you have never engaged in anything except holding the stocks of your unit banks?

Mr. RAND. Yes.

Mr. Wingo. You have not done any mortgage business?

Mr. RAND. No, sir.

Mr. Wingo. And your holding corporation has not done any underwriting; your banks do that?

Mr. RAND. That is right.

Mr. Wingo. What size community, as a general proposition, do you think would be able to maintain a unit bank profitably?

Mr. RAND. I think a town of 10,000 or 15,000 people could main-

tain a unit bank profitably.

Mr. Wingo. Where there is a unit bank in a town and there is a manufacturer in that small community who needs more credit, as suggested in paragraph 2 under the heading "Advantages to the depositors" on page 18 of your statement, it is customary now for the independent unit bank to arrange for the handling of that larger credit through one of its correspondents, is it not?

Mr. RAND. Yes, sir; if the correspondent will do it. Very often the correspondent will not take the excess line of the unit bank.

Mr. Wingo. It would not do it unless it were profitable and sound. Mr. Rand. Unless it were profitable and sound, and unless they happened to have the money.

Mr. Wingo. Would your group take it if it was not profitable

and sound?

Mr. RAND. We would not want our member bank to take the loan originally unless it were profitable and sound. If our member bank took the loan, we would assume that it was profitable and sound or they would not have taken it.

Mr. Wingo. You would assume it?

Mr. RAND. We would approve it before it came to us.

Mr. Wingo. In other words, if a loan would appeal to you as being safe and sound, why would it not appeal to the correspondent of the independent unit bank?

Mr. RAND. Their judgment might be different than our own, and it might appeal to the independent unit bank. I do not know—it

would have to depend on the individual loan, and you can not inswer in advance what it would be.

Mr. Wingo. So the logic of your answer on that point is that the superior judgment of your group system is the determining factor as against the unit bank taking care of that excess credit needed by the manufacturer in a local community?

Mr. RAND. Yes: I would say so.

Mr. Wingo. Under subdivision 3 of the same chapter, on page 19, you say, "The isolated country bank, while professing to have trust and investment departments, has been unable to afford competent officers along such lines." Then you say that through your banking organization there is available to the public such service through the part time of men who are experienced in their respective fields. Do you mean that you send out your different experts to these different unit banks in these small communities?

r

p

C

c]

p

fi

F

N

80

d

y

it

p

Mr. RAND. Yes.

Mr. Wingo. As a matter of fact, you exercise considerable supervisory control over the detailed operations of your unit banks, do you not, in order to guarantee the safety and soundness of them?

Mr. Rand. Well, I think I covered that in my answer to Mr. McFadden earlier in the hearing. Our examining committee works with these banks; we get to know how they operate; we get to know whether the loans that they are making are good and sound. We do not require the individual bank to take up with us a loan beforehand unless it is an unusually large loan or unless they are in doubt as to whether they should make the loan.

Mr. Wingo. In other words, it is comparable to this, that in an ordinary, individual unit bank there are certain types and sizes of loans and the operating officer, say the cashier or the active vice president, or president, whoever is the operating head, makes the great bulk of the loans without consulting the board of directors

or a loan committee-

Mr. Rand. Yes.
Mr. Wingo (continuing)—and it is the unusual loan that the board of directors or the loan board or committee passes on?

Mr. RAND. Yes, that is correct.

Mr. Wingo. Now, your holding company and its supervisory officers and advisory officers occupy about the same relation to your banks as the directors in the independent unit bank would occupy to the cashier on these current loans?

Mr. RAND. Marine Midland Group (Inc.) does.

Mr. Wingo. And it is only the unusual loan that the operating officer would not act upon?

Mr. RAND. Yes.

Mr. Wingo. In other words, if I walked into a unit bank in one of your towns, and I was a citizen there, and I asked for an ordinary small loan, nothing unusual in size, and I had an established credit and standing, they would not ask the holding company or its advisory group or board for approval, but if I asked for an extraordinary loan or was engaging in some new venture and wanted to establish some new manufacturing enterprise and wanted a line of credit, the possibilities are that they would get the benefit of your judgment?

Mr. RAND. Yes.

Mr. Wingo. Although the local board would ultimately determine what that would be?

Mr. RAND. Yes.

Mr. Wingo. Now, you have examiners that go around, I understand?

Mr. RAND. Yes.

Mr. Wingo. And they are in close touch with the credit organization of your holding company?

Mr. RAND. With the credit organization of Marine Midland

Group (Inc.)

Mr. Wingo. And, for practical purposes, those examined are really traveling credit representatives? They are the agency through which your holding company protects your stockholders against improvident loans or improvident management of your units banks?

Mr. RAND. Yes.

Mr. Wingo. And that control, in your experience, has been effective?

Mr. RAND. Yes.

Mr. Wingo. That is all.

The CHAIRMAN. Before we adjourn, I would like to ask you one or

two questions.

You defined your particular trade area as New York State and a certain portion of northern Pennsylvania. Would you acquire any banks outside of that area?

Mr. Rand. Our policy at the present time is not to acquire any banks outside of New York State. We may some time later wish to change that, but we are not going outside of New York State at the present time.

The Chairman. There is nothing in your make-up to prevent you from acquiring a bank in San Francisco if you want to, is there?

Mr. RAND. No. sir.

The Chairman. Now, the presentation of Mr. Lord, of Detroit, the other day embodied a statement as regards their stock holdings. For instance, he told us what per cent of his stock was held in Detroit, what per cent was held in New York, and what per cent was held in other parts of the country. Have you your stock ownership classified so that you could give us some idea as to where your stockholders are?

Mr. RAND. Yes, sir.

The Chairman. Would you put that in the record at this point?
Mr. Rand. It is covered in my statement. Our stock is held in 45 different States.

The CHAIRMAN. If that is already in the record, I do not want it repeated, but if you have it by States, I would like to have it. Have you separated the amount that is held in New York City?

Mr. RAND. Yes.

The Chairman. If you would put that in also, we will appreciate it, and, without objection, that will be placed in the record at this point.

(There was no objection, and the statement referred to is reproduced below.)

STATEMENT OF GEORGE F. RAND-Resumed

The CHAIRMAN. The committee will come to order.

Mr. Seiberling. I should like to ask the witness just a few questions. By the way, are you going to put the articles of incorporation and by-laws in the record, Mr. Chairman?

The CHAIRMAN. They were placed in the record yesterday.

Mr. Seiberling. I just wondered if you wanted it in; and how about the exhibits that go with it? He has Schedules Nos. 4 and 5.

The Chairman. They also have been placed in the record.
Mr. Seiberling. Mr. Rand, I notice on page 3 of the articles of
incorporation, paragraph 8, that your corporation has the right to
deal in its own shares to the extent, however, that it can not impair
its capital. That is correct, is it?

Mr. RAND. Yes, sir.

Mr. Seiberling. In your statement of December 31, 1929, you show a surplus of \$19,670,000. It would have been possible on that date to have had invested in your holding company stock, holding

company funds of over \$19,000,000?

Mr. Rand. The surplus of the 17 banks of the Marine Midland Corporation as of December 31, 1929, was \$19,670,000 not the surplus of the holding company. The holding company as of that date had cash on hand or in transit of \$57,157,689.71. The only stock we have purchased of our own is eight or ten thousand shares for our employees, as employees' stock. I think the amount, as of January 1, was not over two or three hundred thousand dollars.

Mr. Seiberling. That is not the question I asked you. Under your set-up it would have been possible to have invested over

\$19,000,000 in your own stock if you had wanted to?

Mr. Rand. We had the right to do it, but we did not do it. That is common to Delaware corporations—investing in their own stock.

Mr. Seiberling. You have an executive committee provided for of

five members?

Mr. RAND. Yes, sir.
Mr. Seiberling. And, of course, they control the activities of your company between meetings of the board of directors?

Mr. RAND. Yes.

Mr. Seiberling. And you have a provision that a majority shall control so that, as a matter of fact, it makes it possible for three men in your organization to control the whole organization between meetings of the board?

Mr. Rand. It does in theory, but actually the company is simply a holding company and does not take any action of any importance without a full board meeting, although under the by-laws, we have

that power.

Mr. Seiberland. Of course, that is your present practice, but you do not have to continue to run it that way and neither does your successor?

Mr. Rand. That is common with banks and with most corporations. During the absence of the board, the men on the executive committee—a majority of them—are in control.

Mr. Seiberling. You do not have to make any reports, as a

banking company?

Mr. Rand. We are not a banking company, but a holding company. Mr. Seiberling. In accordance with your charter and by-laws, you are not a banking company?

Mr. RAND. That is correct.

Mr. Seiberling. But, in reality, you are a tremendously big banking company?

Mr. RAND. No; we do not do any banking. Mr. Seiberling. You run a great many banks.

Mr. Rand. The Marine Midland Corporation of Delaware does not run any banks. It is simply a holding company to hold bank stocks.

Mr. Seiberling. When you hold stocks, your holding company,

In reality, runs the banks?

Mr. Rand. Not the holding company; no. We have a separate company, the Midland Group (Inc.) under which the banking business of this company operates; that is, we do not do any banking business or perform any banking function, but the explanation and all functions I mentioned this morning are handled by a sort of clearing-house group of the various banks themselves—the presidents of these various banks acting as the Marine Midland Group (Inc.).

Mr. Seiberling. That is true; but your holding company sits away

"p on top and directs all of them, does it not?

Mr. RAND. It does not direct them.

Mr. Seiberling. It has a right to direct them, though?

Mr. RAND. The holding company does not have the right to do business in New York State and does not do business there.

Mr. Seiberling. It owns the capital stock of all the banks?
Mr. Rand. Yes, sir; but it does not actually do any business. It transacts no business, but simply holds the stock of the banks and receives the dividends and pays out dividends.

The CHAIRMAN. May I ask a question right there?

Mr. Seiberling. Yes.

The CHAIRMAN. It has no other income?

Mr. RAND. Except from the cash which it has on hand—forty or fifty million dollars.

The CHAIRMAN. Except the income it receives from that?

Mr. RAND. Yes, sir; it has no other income.

Mr. Seiberling. Just one more question along that line: Then, while you own all of these banks—substantially all the capital stock—you have here the sheet showing the proportionate part of the capital stock you own, showing an average of 93.83 per cent—

Mr. RAND. Yes, sir.

Mr. Seiberling. You own 93.83 per cent of all the banks of the group and yet you contend you are not in the banking business?

Mr. RAND. We are not in the banking business, as a holding com-

pany; no.

Mr. Seiberling. You make no reports as a holding company to the State or to the Federal Government—you are not subject to call for any reports?

Mr. Rand. No; but we have voluntarily offered to the banking department of New York State to permit them to examine our company at any time and recently a bill has been passed in the New York State Legislature and the House, and I believe signed by the governor in the last few days, which would put our holding company under the banking department for examination; so, from now on I believe the bank holding companies in New York State will be subject to examination by the New York Banking Department.

Mr. Seiberling. You are familiar with living trusts and trusts under wills, I take it?

Mr. RAND. Yes, sir.

Mr. Seiberling. Under this set-up, it will be possible, at future times—25 or 50 years from now—to have all of the stock of this holding company deposited in trusts of one kind and another and the holding company run by men without a dollar's interest in the company?

Mr. RAND. No, sir.

Mr. Seiberling. It would be possible?

Mr. RAND. I do not see how.

Mr. Seiberling. Under the set-up, it would be perfectly legal?
Mr. Rand. I do not know. I am not a lawyer, and can not answer that.

Mr. Seiberling. You do know that a director does not have to have any stock?

Mr. RAND. Yes, sir.

Mr. Seiberling. And a member of the executive committee does not have to have any stock?

Mr. RAND. No. sir.

Mr. Seiberling. If three men on the executive committee can control the company, then it would be possible to have your stock trusteed and three men run the holding company without any owner.

ship of stock?

Mr. Rand. In theory it would be possible, but not in practice to-day. I do not see how much difference it would make under the requirement that the three men should own 10 shares each—the difference between owning 30 shares of stock out of 5,500,000 shares and owning none—the difference is so small that it reduces it almost to the point of absurdity. As a matter of fact, the directors that are on the executive committee are very large stockholders—they are the largest stockholders in the Marine Midland Corporation. I suppose, in theory, you could take a bank like the National City Bank and work out the proposition you have submitted, and have the directors, owning ten shares of stock each out of five or six million shares of the National City Bank, control the whole bank.

Mr. Seberling. Do you thing it is a good thing to have such a large company as you have here controlling so many banks and so many deposits of the people, and upon whom the people depend for their money to do business, controlled by three men who have no interest in the company and who do not even have to live in the

State of New York?

Mr. RAND. Three men do not control the company.

Mr. Seiberling. I am not asking that. Would you think that would be a good thing if such a thing should be done?

Mr. Rand. If such a remote contingency arose, I think it would be

a very bad thing, but it is almost impossible.

Mr. Seiberling. As long as you are managing this holding company, with the views you have expressed here, I have no doubt it would be all right, but looking into the future, do you think that legislation should be passed permitting such a possible situation as I have just described to you?

Mr. RAND. I think the situation is so remote that no legislation of that kind would be needed. The same contingency you mentioned, you could work up for any large corporation or any great bank. The same think could be true of the Chase Bank and the National City

Bank or any other great institution.

Mr. Seiberling. You do not think a banking institution is com-

Parable with any large industrial company, do you?

Mr. RAND. No; but the same banking institution is comparable, in some respects, to our holding company, and the same contingency you mentioned is perfectly possible in connection with any bank you can mention.

Mr. Seiberling. I just want to ask a few questions along another

You had the Lackawanna Steel in Buffalo recently?

Mr. RAND. Yes, sir.

Mr. Seiberling. And that consolidated with the Bethlehem Steel Co.?

Mr. RAND. Yes, sir.

Mr. Seiberling. Did you do business with the Lackawanna at that

Mr. RAND. Yes, sir; and we still do.

Mr. Seiberland. Now, the consolidation-I do not want to dig into the affairs of that company, but the consolidation of that company with the Bethlehem-what effect did that have on the banking situation in Buffalo, not only as to deposits, but as to the transfer of stock, trusteeship of bonds, and those things that were necessary in the actual financing of the company?

Mr. RAND. In that particular company it did not have so large an effect, except a Buffalo man who was president of it is no longer resident, and the directors' meetings are no longer held in Buffalo. That stock, before the merger with the Bethlehem, if I remember correctly, was already listed on the New York Stock Exchange.

Mr. Seiberling. You are familiar with the contest going on beween Cleveland and New York now in reference to the Youngstown

Sheet & Tube Co.?

Mr. Rand. Only from newspaper reports.

Mr. Seiberling. Do you know that just now, probably for the arst time in this country, as far as I know, a Cleveland house is Underwriting debentures for an Akron company amounting to \$30,-000,000? That is very unusual, is it not?

Mr. RAND. I would not say that it was unusual for a Cleveland or

Chicago house to underwrite a large bond issue.

Mr. Seiberling. Is it not desirable that we keep these sections, like Buffalo, Cleveland, and Chicago, in a position so that they can under-Write securities for companies in their own territory?

Mr. RAND. I think that is very desirable.

100136-30-vol 2, pt 9-15

Mr. Seiberling. Why do you think it is desirable? I just want to

get your reasons for it.

Mr. Rand. Well, I think it is desirable because it diversifies the large financial transactions and spreads them out over the country as a whole. It builds up in these large cities like Chicago, Detroit, and Buffalo, and Cleveland big houses who can do a big underwriting business. It retains money and business in those localities that otherwise might be concentrated in another locality.

Mr. Seiberling. Incidentally, it also gives the lawyers of those

centers something to do?

Mr. RAND. Yes, sir.

Mr. Seiberling. And insurance agents something to do?

Mr. RAND. Yes, sir.

Mr. Seiberling. And the trust departments of banks something to do in the way of registering bonds and collecting coupons, and there is not any real reason why New York should do all the business of that character in the country, is there?

Mr. Rand. No. Generally, when a big issue is handled by a house in Cleveland, Buffalo, or Chicago, or Detroit there are New York

partners taken into the picture.

Mr. Seiberling. I think that is all.

The CHAIRMAN. Mr. Busby.

Mr. Bussy. On page 7 of your statement, headed "The Midland Group (Inc.)," you say the Marine Midland Corporation is purely a holding corporation organized under the laws of Delaware and transacting no business in the State of New York?

Mr. Rand. Yes.

Mr. Busby. In the same paragraph you state that for the purpose of affording certain advantages you mention there the Marine Midland Group (Inc.) was organized under the laws of New York as a management company.

I take it that you refer to the Marine Midland Group (Inc.) as being a different organization from the Marine Midland Corporation,

the one originally mentioned?

Mr. Rand. Yes; we formed the Marine Midland Group (Inc.) organized under the laws of the State of New York, which is a small company with a moderate capital, which does these things mentioned in that paragraph.

The CHAIRMAN. Under the corporation laws or under the banking

laws?

Mr. Rand. Under the corporation laws.

Mr. Busby. So the Marine Midland Corporation and the Marine Midland Group (Inc.) are two distinct bodies?

Mr. RAND. Yes.

Mr. Busby. One organized under the laws of Delaware and the other under the laws of New York?

Mr. RAND. Yes. That is done entirely for matters of taxation.

Mr. Bushy. Well, what stocks or evidences of ownership in the Marine Midland Group (Inc.) do you have outstanding? What is it, in other words, anyway?

Mr. Rand. The Marine Midland Group (Inc.) is in reality a sort of clearing-house arrangement or group arrangement of various banks with a capital, I believe, of \$3,000. It is a very nominal cap

Ital. Each of the presidents of the individual banks is a director in the Marine Midland Group (Inc.). The expenses of the Marine Midland Group (Inc.) are nominal. The only expenses they have are the paying of the examining committee, the paying of the investment experts that we have, and the handling of whatever group advertising is being done by the group. In effect, it is like a clearing-house arrangement of a city, where the banks chip in and pay the clearing-house examiners and pay for whatever expenses may come up.

Mr. Seiberling. Who owns the \$3,000 stock?

Mr. Rand. The \$3,000 stock is owned by the trust companies that can own the stock. In case the member bank can not own the stock, it is owned by the president of that bank. That amounts to from \$30 to a few hundred dollars in each case.

Mr. Bushy. What relation does this body have to the other body—

the holding corporation?

p.

Mr. RAND. The holding company is simply a holding company to Peccive dividends and pay out dividends. Some of the directors of the Marine Midland Group (Inc.)—the key directors—are also directors in the Midland Corporation, and from time to time the executives and directors of the Marine Midland Corporation confer with the directors of the Marine Midland Group (Inc.).

Mr. Busby. This organization is the agency that handles the busi-

ness, largely, of the main holding company, is it not?

Mr. RAND. Yes.

Mr. Bushy. It is merely the contact agent between the holding company and the individual banking units in your system?

Mr. RAND. Yes.

Mr. Busby. You say you have \$57,000,000 cash that belongs to the holding company?

Mr. Rand. That was at the first of the year-yes.

Mr. Busby. How do you keep that cash invested--or is it invested?

Mr. Rand. I explained that this morning. Were you here?

Mr. Busby. Yes; I was here. Mr. Rand. That is deposited among the various member banks and other banks.

Mr. Bushy. And do those banks pay interest on that?

Mr. RAND. They pay interest upon that deposit. The banks that that money is deposited in keep that money in Government bonds or call loans—keep it liquid.

Mr. Bushy. What do you think of an independent bank making money in a town of six or seven or eight thousand people-an average

city of that size?

Mr. RAND. That is just about the border line in my own feeling. feel a bank in a city of ten or fifteen thousand population—an independent bank-would have a chance to get along fairly well.

Mr. Busby. Suppose you have several banks in a town of that

size—say three?

Mr. RAND. That makes it that much more difficult.

Mr. Bushy. What about a town of four or five thousand people having its own independent bank?

Mr. RAND. It would have very hard sledding in a town of that Size.

Mr. Busby. Does your managing board, representing the holding company, arrive at policies that should be put into effect by the banks in your system?

Mr. RAND. That is largely arrived at by the directors of the Marine Midland Group (Inc.) rather than the directors of the holding

Mr. Bushy. Is that the institution we were talking about awhile

Mr. RAND. Yes; the management company.

Mr. Bushy. I believe it was Mr. Lord who, in his statement the other day, told us about "approved policies" that had been decided upon by the managers of his holding corporation. So the Marine Midland Group (Inc.) decides on "policies" for your institutions? How is the decision passed down to the several banks?

Mr. Rand. For each bank, a member of the group—the president of the bank is a director in the Marine Midland Group (Inc.). He attends the meetings of the Marine Midland Group (Inc.); he enters into the discussions and knows what is going on and when he goes back to his own bank, the policy decided on he carries back to his own bank and puts it into effect in his own bank.

Mr. Bushy. Suppose the directors of his bank do not agree with

Mr. RAND. That has not arisen so far.

Mr. Bussy. But suppose it does arise?

Mr. RAND. He discusses that with his directors. That has not arisen so far, however.

Mr. Busey. Do you think the time will ever arrive when the separate banks in your group will refuse to accept these policies decided on by the Marine Midland Group (Inc.)?

Mr. Rand. We would welcome that. If the directors of our bank in Rochester, for example, which is the largest bank in Rochester, a big bank, should feel that the Union Trust Co. of Rochester should operate under a different policy than the Marine Midland Group feel they should, we would go down there and have a meeting with those directors and thresh the matter out and discuss it, and if they convinced us, we would do what we thought was best; and again maybe we would convince them. It is all a matter of discussion and conference. The larger banks in our group are well-run and the matters of policy are pretty well defined. They have operated much the same policies as we have, and they are working together in that respect.

Mr. Bushy. Whom do your examiners represent? Who selects

them, and to whom do they report?

Mr. Rand. The examiners are selected by the directors and officers of the Marine Midland Group (Inc.). They report direct to the

officers of the Marine Midland Group (Inc.).

Mr. Bushy. Is there only one individual from each group that is a member of the organization that controls the Marine Midland Group (Inc.)?

Mr. RAND. In some banks we have more than one.

Mr. Busby. How many members are in it?

Mr. Rand. About 25. We have about 17 banks. We had 18 banks, but we are merging two. We have 17 banks and the larger

banks have more representatives than the smaller banks. We have at least one from each bank.

Mr. Bushy. Does this organization employ economists and statisticians to keep them advised as to the situation of finance throughout the country, as well as your business?

Mr. RAND. It does in respect to the purchase of securities in our

bonds and investments. We have experts along that line.

The Marine Trust Co. is a large bank of \$300,000,000 resources. We have our own statistician and economist in the Marine Trust Co. That function has not been taken over by the group, as yet. Later on, undoubtedly it will.

Mr. Bushy. Is it your belief or not that the credit of the country should be in proportion to the needs of commerce and business of

the country?

Mr. RAND. Well, I certainly do.

Mr. Busby. Suppose, through our banking system and method of handling financing the credit is extended greatly in excess of the proper needs of the business of the country: What, in your judgment, would be the result?

Mr. RAND. That is difficult to say. I think the law of supply and demand will operate in banking the same as it does in any other

line.

Mr. Bussy. Do you not think the recent collapse of the stock market was due largely to the fact that the agencies for creating securities and bonds and putting them on the market, and especially through the individual bond salesmen, who went to the individual person and solicited, and sold bonds, created such a great supply of bonds and stocks throughout the country that credit was extended far beyond any business needs of the present time, and that that is what caused the collapse in finances recently?

Mr. Rand. I do not feel qualified to state why the collapse occurred and what caused it. I have heard so many different angles on it and so many different agencies blamed for the smash, that I think anyone who would try to put his finger on the cause is a very brave person. I do not feel qualified to express an opinion on that.

Mr. Busby. Of course, these investment houses underwriting syndicates are bound to depend on stocks and bonds being handled in quantity in order to have a big business, are they not—in order to make money?

Mr. RAND. That is a little out of my line, and I do not feel quali-

hed to state anything on that.

Mr. Bushy. You have some of those organizations in your insti-

Mr. Rand. We handle bonds and handle the underwriting of bonds, but I have not seen how the underwriting of good, high-grade bonds, such as we do, has created an oversupply, or has had a con-

Tributory cause to the stock-market crash.

Mr. Busby. I will take but two or three minutes more. Suppose, as we have witnessed in this city, perfectly desirable buildings constructed by reason of the fact that an underwriting syndicate has made it possible to supply the funds with which to place the bonds of that building on the market: The building is not needed, but it is a good building. The bonds are sold to the public, and then the

building is not used. It is a good building, and the public loses what it has invested in the bonds, by reason of the building being sold out under a first trust to pay off a part of the first-mortgage bonds. Could you not see, under circumstances like that, where easy money, being made available by underwriting syndicates, would be a detriment to the people and to business?

Mr. RAND. I think you are getting back to the law of supply and

demand again.

Mr. Busby. I am not dealing with that now. I am looking at the situation created by the underwriting syndicates and these investment companies. I think they have gone far beyond the requirements according to the law of supply and demand in furnish-

Do you not think that kind of condition would be detrimental to

the people-business stability?

Mr. Rand. If you had a condition that caused the creation of more production than you need, that might be detrimental, but I think that might be just one of the many other contributing causes. I do not see how you can pin it onto any one agrees.

not see how you can pin it onto any one agency.

Easy money may be conducive to speculation, but it is only one of the great many other contributory causes, and it is hard to put them in their proper relationship. You can read volumes on it and study it until you are dizzy, but I can not, in my own mind, pin it down to any one cause.

The Chairman. Mr. Rand, I should like to ask two or three questions before I defer to Mr. Fort, on the organization of your

roup.

In the organization of your group, what was the motivating cause that prompted it? Was it the business in your section, or particular trade area, that demanded improved service, or was it to strengthen the local banking situation, or was it that you and your associates saw an opportunity to progress from a banking

standpoint?

Mr. Rand. I think that is the real reason—possibly a combination of all three. As I said this morning, many of our customers are growing larger and becoming stronger and requiring larger lines of credit and carrying larger balances with us, and many spreading out through our trade area and we desired to strengthen our position in our territory. We desire to strengthen the position of a number of the smaller banks who were having increasingly difficult sledding.

As I said in my statement yesterday morning, several times in the last year or two, at the request of the State banking department, we have aided State banks and kept them from failing in two or three

instances

The Chairman. If the laws of the State and Nation had permitted you to organize as a branch banking institution, would you have organized as a group, as you have?

Mr. Rand. I think not. I think we probably would have organized as branches, although I think the group system provides an admirable

transitional stage.

The Chairman. In regard to the purchase of these various banks, do you believe that the price at which the stock was bought by your company, represents a fair capitalization of the earning power of the units?

Mr. RAND. Yes.

The CHAIRMAN. Is it not true that some of the prices paid have been such that the returns must, necessarily be low for some period of

time?

Mr. Rand. That is probably true. Of course, our corporation was formed in October or September of last year, when all bank stocks were selling on a very high basis. We ignored, as far as we possibly could, the market value of the stocks, and took into consideration mainly the earning power and asset value, liquidating value, and the communities in which they were, in arriving at the basis on which we

exchanged stock for the various banks.

The Charman. In listening to the testimony of others, as well as yourself, under the group plan, I am impressed with the thought that where these companies are well managed they are successful and probably advantageous to the community, as well as to the men who are running the institution, but in view of the possibilities of the future and possible changes in management, do you not think that we, Representatives in Congress here, with legislation in mind, should take into consideration the question of maximum and minimum as to the size of these groups and the territory they should cover; in other words, this particular plan of group or chain banking—and there is quite a similarity between the two—has had a variety of experiences in this country. It has been clearly demonstrated that where it is in strong hands it has succeeded, but in weak hands it has usually failed. Do you not think there should be some limitations placed in order to protect the public?

Mr. Rand. I think there should be limitations as to territory. I do not see how or why you should limit the size of these groups any more than you limit the size of large banks in New York or Chicago.

I do not see why they should be-

The Chairman. In other words, you think you have as good a right to have a big bank in Buffalo as they have to have a big bank in New York City?

Mr. RAND. Yes, sir.

The Charman. And in serving your particular trade area, if the business of the trade area requires it, you should have the opportunity of taking care of the business of that particular territory, without regard to the size of your institution?

Mr. RAND. Yes, sir.

The Chairman. Supposing that branch banking were authorized how, would you probably convert into a branch-banking system or

continue under your present form?

Mr. RAND. Of course, that is a difficult question to answer. My feeling is—and speaking only for myself and not for my board of directors—I would prefer to see us in a reasonable time convert into a branch-banking system.

The CHAIRMAN. Now, in regard to your holding companies, the Delaware corporation, which is the Marine Midland Corporation, which is the holding company of these stocks of banks in your group,

who votes that stock at the annual meetings?

Mr. RAND. The stocks of the various banks?

The CHAIRMAN. Yes.

Mr. RAND. That is voted by the officers of the Marine Midland Corporation of Delaware.

The Chairman. You designate certain officers?

Mr. RAND. Yes, sir; designated at the board meeting, as to the voting power of the stock.

Mr. Seiberling. Who votes the stocks held in your companies and trusts, and various corporations, banks, and so forth, held under wills-who votes that?

Mr. RAND. As a rule, our policy under that is that unless we have a large block of stock in any individual corporation we do not vote them. If we have a couple hundred shares of United States Steel Corporation stock in one trust, we do not vote that stock unless our coexecutor desires us to. If we have a very large block of stock in a certain corporation and the management of that corporation is good and the company is making progress, our trust department brings it before the executive committee of the trust company and we vote it in favor of the management. We try to put ourselves in the position that the person naming us trustee was himself before

The CHARMAN. What would be your view on the question of examination of affiliated companies, either by the Comptroller of the Currency of national banks, or the superintendent of State banks in connection with State banks?

Mr. Rand. I think they should be examined. The CHAIRMAN. You would be in favor of that?

Mr. RAND. Yes, sir.

The CHAIRMAN. You do not have any examination by the corporation department of the State of New York over your New York company, do you?

Mr. RAND. No. sir.

The CHAIRMAN. That is, the group company?

Mr. RAND. Yes, sir.

The CHAIRMAN. Do you have to make any reports to the depart ment covering your operations of that group?

Mr. RAND. To what department?

The CHAIRMAN. To the corporation department of the State of New York.

Mr. RAND. I do not think we do.

The CHARMAN. Let me ask you one or two other questions pertain ing to the expenses of the Marine Midland Corporation of Delaware. Is there any expense attached to the operation of that company?

Mr. Rand. A nominal expense. The CHAIRMAN. Any salaries of officers?

Mr. RAND. A few salaries of officers.

The CHAIRMAN. How about the Marine Midland Group (Inc.)

the New York corporation?

Mr. RAND. The Marine Midland Group (Inc.) pays only salaries to its bank examiners and its bond experts, or where we have, in \$8 number of cases, taken a man from the Marine Trust Co. who spends part time with the group and part time with the Marine Trust Con his salary is prorated.

The CHAIRMAN. How is that money furnished to the group company?

Mr. RAND. Each bank chips in, and we take our expenses for the quarter, and each bank contributes in proportion to its deposits.

The CHAIRMAN. The officers and directors of the Marine Midland Co. of Delaware and the officers and directors of the Marine Midland Group (Inc.)—their salaries are paid by the banks, are they

Mr. RAND. The directors get no salary. The officers of the Marine Midland Group (Inc.)—the only salaries they get are those who are employed full time in the examinations and in a supervising

capacity.

the

Now, there are one or two officers there in the Marine Midland Group (Inc.) who receive part of their salary from the group and Part from the bank in which they serve. For instance, we have an officer who serves as president of the Marine Midland Group (Inc.), Mr. Becker. He was receiving a moderate salary at the Marine Trust Co. When he went to the Marine Midland Group his salary was adjusted and paid in proportion to the work that he did for the group and the trust company. So there is no double salary. There is no double salary and there is no desire on the part of those forming the group to give large salaries.

The CHARMAN. The salaries of the officers of the two holding

companies that are affiliated-

Mr. RAND. The officers' salaries of the Delaware corporation are very nominal.

The CHARMAN. And deducted from the dividends they receive? Mr. RAND. Yes, sir; deducted from the income of the corporation,

dividends and interest.

Mr. Fort. Unfortunately, I missed a great deal of Mr. Rand's testimony on account of having to attend to other duties. I do not want to duplicate, and hope you will call my attention to the fact If I should happen to.

We have asked other witnesses, Mr. Rand, who have been here representing other groups, whether they believed that there were any legal regulations of group banking that we should adopt if we are

to recognize it legally at all. What is your view on that?

Mr. RAND. I think that probably the territory should be defined. It is hard to give an off-hand opinion on that. I had not thought

Mr. Forr. When you say the territory should be defined, you mean similarly to the suggestion of the comptroller, for instance, as to branch banking, through trade areas?

Mr. RAND. Yes, sir.

Mr. Fort. Some such basis of definition?

Mr. RAND. Yes, sir.
Mr. Fort. You men who have been running the companies are so much better posted than we are as to the hazards there may be in bad management through your personal observation of it, we have asked the other gentlemen if they would not tender a memorandum of their views as to what, if any, form of regulation it may be wise for Congress to consider, applicable to group, chain, and branch banking. Mr. RAND. I shall be glad to do that.

Mr. Fort. For advisory use.

Mr. RAND. I shall be glad to do that.

Mr. FORT. In your handling, Mr. Rand, if your fiduciary business, is that so handled that the trust companies which act as trustees, or banks having trust departments, earn directly or indirectly any profit whatever other than the statutory commissions?

Mr. RAND. None whatever.

Mr. Fort. Do they buy secruities from the security affiliates of the bank?

Mr. RAND. No, sir.

Mr. Fort. They always buy outside?

Mr. RAND. Yes, sir. Mr. Fort. And bank outside?

Mr. Rand. No, sir. We discussed that this morning at some length.

Mr. Fort. Then I will not go into that any further.

Mr. RAND. We keep very little on deposit of our trust funds. Most of it is immediately invested.

Mr. Fort. Have you expressed your views on branch banking as a

Mr. Rand. Yes; I expressed them at length in my original state-

Mr. Fort. I saw that. Have you gone into the question as to whether branch banking should be permitted—that is, the establishment of branches should be permitted—in competition with existing unit banks?

t

t

p

Mr. Rand. We have not discussed that.

Mr. Fort. What would your view on that be? Let us take one of the small towns that Mr. Busby spoke about: If there is a unit bank in a town of five or six thousand, should the Marine Trust or any large institution, in a neighboring town, be allowed to go into that town with a branch?

Mr. RAND. I should say no. I think the way to handle that would be the way the national banking department and State banking department handle it now. If we had national branch banking and the Marine Trust wanted to start a branch in a certain town, whether they should be allowed to start the branch should be in the discretion of the banking department, who would investigate the banking conditions there and see whether the town would be better served by a branch bank, and it should not be permitted if there is proper service there.

Mr. Forr. That is difficult to do as long as you have a dual system, naturally.

Mr. RAND. If you have State and national banks?

Mr. Fort. Yes. I speak as one coming from New Jersey. We had a situation there three or four years ago where it seemed almost for a time that there was competition between the State department and the national department to see who would authorize the most banks

Mr. RAND. I have understood that the State banking department of New York State and the national department were cooperating pretty well on matters of that kind.

Mr. Fort. That always depends upon the personality at the head of the departments?

Mr. RAND. Yes, sir. Mr. Fort. We had a situation where that did not work out so well. and we had to get rid of our commissioner. Consequently, as long as that dual control in that matter does not have access to a court of appeals, you are faced with that bad situation?

Mr. RAND. Yes, sir.

Mr. Fort. That leads to another question. Do you see any real excuse in America for a dual code of banking; that is having both national and State codes working side by side, or would we be better off with a single code?

Mr. RAND. Well, that is a large understaking to answer.

Mr. Forr. I notice that the bulk of your banks are State chartered?

Mr. RAND. Yes, sir. Mr. Fort. All but two.

Mr. RAND. We have two or three national banks.

Mr. Fort. Is that the result of preference in setting up the organizations or does it happen that the banks you wanted were so incor-

porated in the first place?

Mr. Rand. There is no intention to discriminate against national banks; it is simply a condition that exists in New York State to-day. We have not changed any banks from State to National or from National to State.

Mr. Fort. Is that because you are indifferent in your choice between the two sets of laws or because you did not want to disturb

the status quo?

Mr. Rand. I feel I personally would prefer to operate, at the present time, under a State charter, but not to the extent, if we had a good national bank or had a number of them, we would have them change over to State institutions. We would prefer to keep them as national banks.

Mr. Forr. That interests us here because we are considering, as a Part of all this, some reference to the weakness or point of strength

of the national code in distinction to the State codes.

You say you think you would prefer the New York State code.

What are the reasons for that?

Mr. RAND. In the first place, we can be a trust company which we can not be under the national code. We can be a national bank with trust powers, but as a trust company under the State law, we have broader power in mortgage loans, etc. Our preference is not strong—

Mr. Forr. Is it in any way influenced by the fact that State institutions—trust companies—can buy and sell stocks which the national

banks can not do?

Mr. RAND. Not to any extent.

Mr. Fort. Do you think that is a wise power for a bank to have?

Mr. Rand. I do not think a bank should deal in stocks.

Mr. Fort. Either for itself, for its own account, or as an under-writer?

Mr. RAND. I do not say as to underwriting.

Mr. Fort. It may be for itself, for its own account?

Mr. Rand. Our trust companies have never underwritten stock. Occasionally we offer a high-grade preferred stock, but I do not know, in the last three or four years, when we have offered stock.

Mr. Fort. Do you have a securities affiliate?

Mr. RAND. No. I explained that this morning at length,

Mr. Fort. Have you been asked about the question of segregation of savings deposits?

Mr. RAND. No.

Mr. Fort. We have been trying to find out the views of bankers on whether or not savings deposits ought not to be segregated as to investment and made preferred creditors of a bank as against commercial deposits. What is your view on that?

Mr. RAND. I think it would be unwise.

Mr. Fort. Some States have gone so far as to forbid joint operation even in the same building. You see no reason for elevating the savings deposits accounts to a higher level of security than the ordinary account?

Mr. RAND. No.

Mr. Fort. In your institution, do you permit your subsidiary banks to make collateral loans on the stocks of the Marine Midland Cor-

poration itself?

Mr. Rand. I discussed that this morning. Our policy is not to make loans on our own stocks. As I said this morning, when we formed our group last October, the Marine Trust Co. was loaning perhaps on the Union Trust Co. of Rochester stock and vice versa. We are working that out and taking on no new loans.

Mr. Fort. It would be, perhaps, a wise regulation, if we regulate this matter at all, to prohibit such loans except after a reasonable

period of time after the organization of the group?

Mr. RAND. I should be in favor of that.

Mr. Forr. In our banking laws now, we limit the amount that can be loaned to an individual borrower to a certain percentage of the bank's surplus and resources. Modern loaning having become so much a matter on collateral rather than on names, have you ever considered the question as to whether a similar limitation on percentage of loans on any one single collateral might or might not be desirable?

Mr. Rand. That is a question I would have to think about a little. I am inclined to say that I think it would be desirable but, on the other hand, it depends on the security. For instance, if a banker were limited to an amount of United States Steel common or preferred stock it could take, it might work a hardship, whereas it might take a great deal of that stock profitably rather than take a lot of little dabs of second-rate companies. It is rather a difficult matter to legislate on. Some regulation might be worked out that might be beneficial.

Mr. Forr. It has always seemed to me, as a banker, and looking into this question, that many of our most serious troubles in these banks has come from loans on frozen securities. I think every bank has had its troubles with that and possibly some regulation of it might be in the general public interest and in the interest of the

banks themselves in the long run.

Mr. Rand. It would have to be worked out carefully because, as I say, some banks could take a great deal of a great big nationally known company that enjoys a good market, and a regulation of that kind might hurt a bank that way. I think some regulation along that line, taking that into consideration, might be advisable.

Mr. Fort. The factor of ready marketability might enter?

Mr. RAND. Yes, sir.

Mr. Forr. I guess you have heard, as we have, that the only place to buy control of a company is to go to one or two banks and get it, and they would be glad to let you have it.

Did you discuss this morning the question of how you set up your directorates in your local banks?

Mr. RAND. Yes. Mr. Fort. You keep them local?

Mr. RAND. Yes.

Mr. Fort. The stock which they hold to qualify them is your stock ?

Mr. RAND. No, sir; it is theirs. Mr. Fort. For the time being?

Mr. RAND. In some cases it is owned outright by the individuals. and, in a few other cases, we have an agreement to repurchase the stock from them.

Mr. Fort. An enforceable agreement at your option?

Mr. Rand. Yes, sir; only a few cases.

Mr. Fort. So, you could disqualify a director overnight, by making

him give up his stock?

Mr. RAND. I think that that is not our case; that we have an option to buy the stock of the director upon his death. We agree to buy it from his estate, but he can own it until his death.

Mr. Fort. I would like to see a copy of the agreement, because

that is a very interesting situation.

Mr. RAND. We have no arrangement whereby we can disqualify a

director overnight.

Mr. Fort. Have you any arrangement in a bank where there is any substantial minority interest for representation of that minority interest?

Mr. RAND. In all our banks we own at least 93 per cent of the

stock and there is practically no minority interest.

Mr. Fort. I thought you showed in one of these documents 12 per cent outstanding in the Fidelity Trust Co. ?

Mr. Rand. That was in the process of taking over. Now I believe

we have 96 per cent in that institution.

Mr. Forr. Well, on the general principle of group banking or some group institution having in some cases only control or something over control, would you feel it was desirable or undesirable for us to consider the idea of providing for minority representation?

Mr. RAND. I should think the group bank itself would want the

minority interest on the board.

Mr. Fort. That would depend upon the sincerity of the group management to some extent and its purposes.

Mr. RAND. I should think that might be incorporated in the regu-

lations.

Mr. Fort. What is your arrangement as to your security affiliates. such as you have in your institution-you lock the stock of the security affiliates so it can only be sold as part of the stock of the bank itself?

Mr. RAND. Both of our security affiliates were not of our own forming. They had been formed when we took over the bank, and

we have arrived at no policy as to them.

Mr. Forr. Have you given any thought as to the wisdom, from the general banking angle, of permitting the tying up of nonbanking stock as a unit with a bank stock and marketed the same

Mr. RAND. I do not believe I understand that,

Mr. Forr. Is it not possible that, through bad fortune or speculative efforts, or something else, of a security affiliate, when the stock is tied in with it, as a market factor, that a great lack of confidence in the bank itself might come from a collapse of the stock value?

Mr. Rand. That might be possible.

Mr. Fort. And is it not putting an entirely fictitious view in the public mind of the value of bank stocks, as bank stocks, to include the market price of the stock of the corporate affiliate, as some are!

Mr. Rand. I could not answer that question. We are making a study of that now. Some of these securities companies are able and well run, and their business fits in admirably with the banking business.

Mr. Fort. That is the next question I wanted to ask. Just what advantage do you think it is to a bank to have its own securities affiliate?

Mr. Rand. It is a tremendous advantage in that it is a valuable by-product of the bank's own business. What we are up against not having a securities company of our own, is that some affiliated security company of a New York bank or a Chicago bank or some other bank, will go to one of our customers and underwrite a bond issue for him, and the first thing we know that customer will be going to that other bank. Furthermore, the bank, by its close contact with the customs and through accounts, is very often in a posttion to guide its capital requirements and developments better than some outside agency that comes in.

Of course that opens up a field for a great deal of discussion and

a great deal of study and thought.

Mr. Fort. That is all on the theory that investment and commercial banking are now so close that it is difficult to find the line of demarcation.

Mr. Rand. That is true; there is a great deal in common.

Mr. Forr. But if no bank had security affiliates, the first hazard you spoke of, namely, losing your accounts to the bank whose security

affiliate would be financing, would not obtain?

Mr. Rand. Of course what might happen there—I am speaking offhand-and as I said I have not given the possibility very much thought, and it requires a great deal of thought; if a bank did not have a security affiliate, some officers or directors of a bank might organize one on the side and they might reap a very large profit out of operating a security company and the profits of that company would go to the individuals instead of to the banking institution where it rightfully belongs. As I say, that is a subject for profound study and it is a big subject.

Mr. Forr. I have operated one myself and I know something

about it, but not for a bank.

You see no hazard in the affiliation between an investment house and a bank of possibly getting your bank loaded with some frozen

Mr. Rand. There again you get back to the management of the bank and the investment company. There is that possibility, but you

can get loaded and frozen with other things than that.

Mr. Forr. You think there is no greater tendency to get loaded when they own the affiliate itself through circumstances arising from bad management than there is getting loaded at the hands of other customers?

Mr. Rand. I do not think so-perhaps not as much.

Mr. Fort. I think that is all.

1

The Chairman. I should like to ask you if you see any danger in this quite recent development of mixing commercial and investment funds?

Mr. RAND. I do not see any; no.

The Chairman. Of course, in England they keep the two quite separate.

Mr. RAND. Separate the savings deposits from the

The CHAIRMAN. No; I did not mean that. For instance, you have in banks short-time money and long-time money. You have cash and you have credit. Short-time funds are mixed in with long-time investments, and long-time investments are mixed in with short-time funds. The thing is becoming quite mixed; in other words, we are mixing our commercial and our investment banking to an extent that it makes available, when not controlled, funds, for instance, for speculative purposes, like last fall or the past two years, in speculating operations. There were all the funds available that anyone would want to play the market with by the mingling of those funds and making them available for any particular movement and without any segregation of the short-time funds and the long-time funds. For instance, savings are long-time funds and invested in securities. and the short-time funds are supposed to be liquid. Do you think there is any danger in that, or do you think it is a proper and ethical banking movement, or do you think we should stop, look, and listen when we mix commercial funds with long-time investments?

Mr. Rand. I do not see how you can very well differentiate those funds. I do not see any real danger. I think the way the various banking institutions came through this crash was really remarkable.

I am afraid that any radical change in handling or segregating those funds might be more dangerous than the evil you are attempt-

The Charman. Let me ask you this, quite aside from that question: The movement toward consolidations in groups and branches is pretty active just now. Returning to the question of Mr. Fort—and the suggestion, I think, was brought about by the testimony of other witnesses—to the question of regulation of these movements, is it your practice, when you take over a bank, to consult with the banking superintendent or the Comptroller of the Currency, or do you acquire the institution without taking it up first with the bank-

ing superintendent or the comptroller?

Mr. Rand. As a rule, we have conferred with the banking superintendent or the Comptroller of the Currency. We have conferred more with the superintendent of banks, because most of the banks have been State banks, and we have been in a little closer contact with the State banking department than with the Comptroller of the Currency, and in a number of cases, where we thought there was any question that might arise in the mind of the Comptroller of the Currency or in the mind of the State superintendent of banks, we have conferred with them. The Chairman. Under the present movements is it possible for a weak group or mercenary group to take over control of many banks without consulting the Comptroller of the Currency or the banking superintendent?

Mr. RAND. It is possible.

The Chairman. It seems to me there should be some check on that temporarily while this movement is running so rapidly. For instance, I was furnished with information the other day that indicated to me a group which apparently did not have sufficient financial backing was considering taking over some 200 banks in one of the States of the Union, and they could proceed to do that without consulting the banking superintendent or the comptroller. So while that movement is as active as it is now, it seems to me some temporary check should be placed on it either through the State banking department or through the comptroller's officer. What would you think of a regulation like that, before these groups can extend, that they must get permission of the Comptroller of the Currency or of the State superintendent of banks?

Mr. Rand. I think these groups should be under the jurisdiction of the State superintendent or the Comptroller of the Currency, or both; and that, in taking over banks, that should be one of the functions of the comptroller or the State banking department to pass upon the stability and strength of the various holding companies.

That would overcome the objection you mentioned.

The Charman. We could probably reach most of those by providing a regulation in the national law in regard to membership in the Federal reserve system to prohibit membership if their business was not conducted in that manner by first getting the consent of the

Comptroller of the Currency or the banking superintendent.

Mr. Rand. I think the Controller of the Currency or the superintendent of banks, or both, should have the power to prevent a holding company that had not passed their requirements or is not the type of holding company that they feel a bank should be owned by—I think they should have the power of preventing that holding company from taking over the bank.

The CHAIRMAN. Mr. Dunbar.

Mr. Dunbar. In your testimony, Mr. Rand, you stated that one of the means of economic reforms and activities in the substation banks you acquired, was to cause them to have less actual cash in their safe, and you instructed them to deposit some of that money in the Federal reserve bank.

Now, the Federal reserve bank pays no interest. Did you mean

to make that statement?

Mr. Rand. Yes; our banks have to carry a certain amount on deposit with the Federal reserve banks anyway. We have certain requirements as to the money we have to carry wit hthe Federal reserve banks. If we take money out of the tellers' windows and from out of our own vault and put it there, that releases other money which we will have to invest in Government bonds or to put in other banks where we do get interest on it.

Mr. Dunbar. Is your Marine Midland Corporation a member of

the Federal reserve system?

Mr. Rand. No, sir; it could not be.

Mr. Dunbar. How many of the substation banks are members of the Federal reserve system? be

an

SV

tal do an rel con

tel sw

res

tal

W

rel

pa

Pa

Mr. Rand. Ten of our banks are members of the Federal reserve system. The other eight are not, but those eight, for the most part, are very small banks.

Mr. Dunbar. Would your corporation be permitted to be a mem-

ber of the Federal reserve system?

Mr. RAND. No.

Mr. Dunbar. No bank holding company would be permitted to be a member of the Federal reserve system?

Mr. RAND. Not under the present law.

Mr. Dunbar. Now, you stated that you deposited this money in the Federal reserve bank and it would release credit to you that would enable you to make money.

Mr. RAND. Yes, sir.

Mr. DUNBAR. In the Federal reserve bank you are required to carry a certain amount on deposit for reserves, and you get no interest for that?

Mr. RAND. Yes, sir.

Mr. Dunbar. Have these banks that you advised to deposit their surplus money in the Federal reserve bank been depositing their money there?

Mr. RAND. Yes, sir; they have been.

Mr. Dunbar. Then, why deposit any more there when you get no interest on it, but could get interest on it by depositing it in other

banks?

Mr. Rand. In other words, this is what we were doing: We were taking money that they were holding in the bank in the tellers' windows and in the vault, and on which we were drawing no interest, and we deposited that money in the Federal reserve bank, and that released money that was in the Federal reserve bank so that we could use that in buying Government bonds or in placing it in banks where we did get interest.

Mr. Dunbar. But why not use the money that you saved from the tellers' windows and held in your vault for that purpose, instead of

swapping the money?

Mr. Rand. We took the money that we were getting no return on, and placed it where we got return; in other words, we could have taken the money we had in the tellers' windows and put it in other banks and gotten a return on it.

Mr. Dunbar. But you get no return on any money in the Federal reserve bank over and above your lawful reserve that you are

required to keep there?

Mr. RAND. No, sir.
Mr. Dunbar. I wish you would explain how it was possible to get

money from money you put into the Federal reserve bank.

Mr. Rand. We took money that was idle and put it in other banks. We had money in the Federal reserve banks, and we replaced that money by money that we saved by the methods I mentioned.

Mr. DUNBAR. You put the money in the Federal reserve and you

released the money in the Federal reserve bank to other banks?

Mr. RAND. Yes, sir.

Mr. DUNBAR. I thought you loaned more money and took the paper and rediscounted it and continued to pyramid it?

Mr. RAND. No, sir.

Mr. Dunbar. The same effect could be effected by depositing the money directly into other banks instead of putting it into the Federal reserve bank?

law

the

Mr. RAND. Yes, sir.

Mr. Dunbar. Now, Mrs. Pratt this morning, brought out the point in reference to your establishing a bank in the city of New York so that you there might take care of your customers who would naturally leave you and go to other banks there and she said the thought was new to her and possibly the trust companies would fall into that habit and the chairman said perhaps they would, and I think Mr. Wingo said after they got there they would be swallowed up by the banks in the city of New York. Is not that a possibility?

Mr. RAND. That is a possibility, but—
Mr. Dunbar. In other words, are we not going right toward

centralization and everything of that sort?

Mr. RAND. No; sir; I think it is going the other way. Mr. DUNBAR. You think the business is decentralizing?

Mr. Rand. No, I think our plan of banking decentralizes banking control away from, for instance, one center. I think it means stronger banks in the Northwest and stronger banks in Detroit and stronger banks in Buffalo and decentralizes the banking business.

Mr. DUNBAR. Then, by buying this bank in New York City who

made your bank in Buffalo stronger?

Mr. RAND. Yes, sir.

Mr. Dunbar. Has this bank in New York more capitalization than your bank in Buffalo?

Mr. RAND. No.

Mr. Dunbar. The resources of your bank in Buffalo are available for this bank in New York?

Mr. RAND. No, sir.

Mr. Dunbar. If your customers were transferred to a bank in New York City not as strong as your bank in Buffalo, I should think there would be a little hesitancy—I should think they would go to the stronger bank.

Mr. Rand. I thought I covered that this morning.
Mr. Dunbar. Perhaps you did, and I will look it over.

Now, this morning, you said you sold securities in self defense, and Mr. Luce thought it was not wise to do so. These securities which you sold in self defense—what do you mean by that? Does that mean people you are doing business with issue bonds, and you buy them and sell them?

Mr. Rand. Our Marine Trust Co. has 150,000 customers. They are coming to their banker and asking him for information about securities. They are coming to us and asking us to find or secure certain securities for them, so our bond department in our Marine Trust Co. is selling securities to our own customers, the same as other banks throughout the territory are doing.

Mr. Dunbar. You do that as much as an accommodation to your customer as yourself, because they expect you to do that for them?

Mr. RAND. Yes, sir

Mr. Dunbar. Do you encourage your substation banks to become

members of the Federal reserve system?

Mr. Rand. We have not changed the banks that have gone into our group. If they are members of the Federal reserve, we want

them to remain members of the Federal reserve. So far, we have not adopted a policy. I should say, however, our policy is to have our large banks, particularly, members of the Federal reserve system.

Mr. DUNBAR. Why should not the smaller banks be members? Mr. RAND. Well, we allow our banking boards a very large degree of local autonomy and where the board of directors of the local bank wish to become a member of the Federal reserve system, we encourage it and sometimes they have not wished to become a member of the Federal reserve system and we have not interfered with the local autonomy that they cherish.

Mr. Dunbar. You are a believer in the Federal reserve system? Mr. Rand. By all means. I am a director in the Buffalo branch of the Federal reserve.

Mr. Dunbar. To what extent will these holding companies interfere with the Federal reserve banks?

Mr. RAND. I do not think they will interfere.

Mr. Dunbar. You believe the holding company will encourage most of the substation banks to be members?

Mr. RAND. Yes, sir.

Mr. Dunbar. All of your national banks are members of the Federal reserve system, of course?

Mr. RAND. Yes, sir.
Mr. Dunbar. You have to deal, in doing business with your industrial companies, you have to deal in a great many of their bonds and stocks, do you not?

Mr. RAND. Not in stocks. We occasionally buy some of their

bonds.

3

Mr. Dunbar. Now, to what extent do you think that our industrial system is being encouraged to promote their business beyond requirements, by reason of the easy credit which exists throughout

our country most of the time?

In my district I have seen more failures of industrial plants due to the fact that when they get on easy street and make \$100,000 they want to make \$500,000; and they begin to expand and their credit was good, and before they knew of it they got in deep water. Would you call that a fault of the banking system out there as much as anything else?

Mr. RAND. I have not had experience out in your territory, so I

really can not answer that.

Mr. Dunbar. You watch all the people you lend money to very carefully, of course!

Mr. RAND. Yes.

Mr. DUNBAR. That is one of the advantages you claim for group banking?

Mr. RAND. Yes, sir.

Mr. DUNBAR. Is there any legislation, in your opinion, going to solve this problem? I have been coming here every day and the longer I come the more confused I get. Could we have any national legislation that would affect group banking all over the United States to apply to it?

Mr. RAND. Yes; if Congress would put it into effect, it would. Mr. DUNBAR. If Congress put it into effect, the States could pass laws in respect to group banks and they might antagonize, might they not?

Mr. Rand. I really could not answer that question.

Mr. Dunbar. We have our State banks, which are antagonizing our national banks, and it seems to me we would have different laws in different States respecting group banking that would not be in harmony with the national act. For instance, take the matter of taxation: In your State of New York you only pay one-tenth the tax on your capital we have to pay out in Indiana. It is just a matter of State law. The laws of the State of New York are especially applicable to all bank stocks and all capital. Out in Indiana the bank stock is assessed as capital, surplus, and undivided profits, and then pays tax at 4 per cent.

The States are not in harmony in their dealing with banking institutions and the States could enact laws which are not in harmony with our Federal law so long as they remain within the State.

You believe, even under this situation that will exist, that the Federal Government could enact a holding company group bank law that would be made effective throughout the country?

Mr. RAND. As far as it applied to Federal reserve banks or national banks. I could not answer your question fully because it is a legal

question, and I am not a lawyer.

Mr. Dunbar. I infer from your testimony that you are broadminded and you believe branch banking has a place just as well as group banking?

Mr. RAND. Yes. Mr. Dunbar. You spoke about group banking should be established in cities above 10,000, because you said unit banks could flourish in towns between 10,000 and 15,000—could prosper?

Mr. RAND. Well, I said in answer to the question as to how large a city should be to start an independent bank, the city should be

approximately 10,000 or above. I think that is correct.

Mr. Dunbar. Now, it would be your opinion, if we had a Federal group law-and for that matter we could have a State law on the subject—in all probability the unit banking system will disappear?

Mr. RAND. No, sir; I do not think so. I think we will always

have unit banking.

Mr. Strong. I wanted to ask you a few questions about the organization of your holding company. As I understand, the first authorization was for \$10,000,000 capital.

Mr. Rand. Ten million shares authorized.

Mr. STRONG. At a value of \$10 par?

Mr. Rand. \$10 par.

Mr. Strong. And that stock was used in exchange for stock of the

Mr. RAND. Only a part of it. If you read the original statement,

it gives the whole history of that,

Mr. Strong. I wanted to ask some questions and wanted to lay the

Mr. Rand. About 3,800,000 shares were issued in exchange for the stock of various banks.

Mr. Strong. How many banks were in the group when it was first formed?

Mr. Rand. When it was first formed there were 16 banks.

Mr. Strong. Was that the start of your group?

Mr. RAND. Yes, sir.

Mr. Strong. Now, what arrangements are made as to the exchange

of the stock of the banks for the holding company stock?

Mr. Rand. I explained that while you were out. We worked out a plan with all the various banks, taking into consideration their earnings, asset value, liquidating value, and the market value of the stock at the time, and the prospects of the bank and the locality in which it was located.

Mr. Strong. When you take in new banks, what procedure do you

go through ?

Mr. RAND. The same.

Mr. Strong. What I am asking is whether the banks that first created the holding company did not have the advantage of making their own deals as to the proportionate amount of holding company stock they should have for the stock of their exchanging bank, and when the other banks come in, you do not scrutinize them very carefully, and perhaps make a less generous proposition with them.

Mr. RAND. We carefully refrained from that. We were afraid we would be open to that criticism, and besides it would not be fair

and it is not fair.

We go through exactly the same procedure when we take over a

bank as we did when we formed the group.

Mr. Strong. Is the amount of stock larger in amount—than the

combined amount you hold in the banks?

Mr. RAND. It is, in number of shares, but the stock we exchange for the stock of the bank coming in is probably about equal in value for the bank stock that we are receiving.

Mr. Strong. Of course, the bank stock you are putting out at first has really no value until you get control of the banks for which the stock is issued; it is only paper. You issue that for the stock of the bank?

Mr. RAND. Yes. No stock has been issued except for cash or bank

Mr. Strong. Do you issue a proportionately larger amount of the stock of the holding company than the stock of the bank you take in?

Mr. Rand. No; for instance, we have outstanding at the present time approximately \$55,000,000—five and one-half million shares at \$10 par. The combined capital of these various banks is \$28,025,000. Their surplus and undivided profits are over \$40,000,000. The combined capital surplus and undivided profits of the banks is \$70,-159,000.

Mr. Strong. Capital and surplus?

Mr. Rand. Yes, sir. The issue in exchange was five and one-half million shares, approximately, of new stock, of \$10 par, or \$55,000,000.

Mr. STRONG. What is the stock of the holding company worth?

Mr. Rand. It is selling for approximately \$45 a share.

Mr. STRONG. That is four and one-half times the original value of the stock?

Mr. RAND. Yes.

Mr. STRONG. There are considerable paper profits in that?

Mr. RAND. When we took over the various banks, their own stock was selling from three to eight times their book value. When we took over the Marine Trust Co., the stock was selling for \$1,200 a share, and had a book value of about \$150 a share.

My position on the market value of the stocks of these banks has been that I am not interested in the market values. The market values are created by conditions over which we have no control.

Mr. Strong. You have control over the profits; if you make a

good profit you increase the value of the stock.

Mr. Rand. By increasing the earning power of these various banks, and that is all we have been interested in doing.

Mr. Strong. You have been organized about four or five months?

Mr. Rand. We organized September, 1929.

Mr. Strong. Have you paid any dividends yet?

Mr. RAND. Two-30 cents a share each.

Mr. Strong. How do the earnings compare to those dividends?

Mr. Rand. We are earning about \$2 a share.

Mr. Strong. Quarterly?

Mr. RAND. No; per year. Our stock is selling on a higher yield basis than the average New York bank stock; that is, it is not selling as high as the average New York bank stock.

Mr. Strong. Do you intend to confine your operations to the State

of New York?

Mr. RAND. That is our intention at the present time.

Mr. Strong. Have you some banks in Canada?

Mr. RAND. No.

Mr. Strong. You say it is your intention to stick to the State of New York?

Mr. RAND. Yes.

Mr. Strong. Does your charter provide you can go outside of the State of New York?

Mr. RAND. Yes.

Mr. Strong. You do not intend to do that?

Mr. RAND. At the present time we do not intend to. We may change our minds later.

Mr. Strong. I presume you do not want to take into your group any

bank that does not make money.

Mr. Rand. The only banks we have taken in that do not make money are banks that we feel in the future will make money. A bank that does not make money is a poor bank, and we do not want to take them in.

Mr. Strong. What is your scheme or your proposition in these holding companies? What do they provide in the way of taking

care of the small towns or small businesses?

Mr. RAND. I thought I covered that in my original statement.
Mr. Strong. Maybe you did, but I will not keep you very long.
Mr. RAND. I have discussed that so much to-day I hardly know here to commence. We of course try to build up the local com-

where to commence. We, of course, try to build up the local communities.

Mr. Strong. Mr. Seiberling says that your argument was that branch banking was necessary to take care of that situation.

Mr. Rand. In the very small town I think that branch banking is necessary.

Mr. Strong. Then you think branch banking is preferable to your

system of banking?

Mr. RAND. I should say if branch banking were permissible in New York State, or if Congress would amend the law and make branch banking legal, the chances are that we would favor the branch system. Mr. Strong. You would convert to a branch banking?

Mr. RAND. Our inclination would be to do that.

Mr. Strong. Are you in favor of the suggested trade area plan of branch banking?

Mr. RAND. Yes.

Mr. STRONG. What trade area would your group of banks belong to?

Mr. Rand. As I said previously, I feel that the second Federal Reserve District would just about suit our trade area; that is, New York State, parts of New Jersey and parts of Pennsylvania and part of Connecticut.

Mr. Strong. Do you think your group would be able to dominate

the banking in that trade area?

Mr. RAND. No.

Mr. Strong. Are there other groups?
Mr. Rand. Yes; there are other groups.
Mr. Strong. Organized along your lines?
Mr. Rand. Somewhat along our lines?

Mr. STRONG. How many banks are in your group?

Mr. RAND. Seventeen.

Mr. STRONG. That is including branches?

Mr. RAND. No. I think the 17 banks operate 68 branches.

Mr. Strong. They are State banks mainly that have these branches?
Mr. Rand. State and national. I think there are four national banks and the balance State banks.

Mr. STRONG. National banks have no branches outside of the State

in which the bank is located?

Mr. Rand. No, sir; that is against the law in New York State and national banking laws. Some national banks have branches inside of the city but not outside.

Mr. Strong. The real purpose of organizing your group is to have branches outside of the city in other parts of the State or States in

Your Federal reserve district?

Mr. RAND. That is one of the purposes.

Mr. Strong. If your group continues for 5 or 10 years, do you think you will be able to dominate the Federal reserve bank in your territory?

Mr. RAND. No; it would be ridiculous to think we could dominate

the Federal reserve bank.

Mr. STRONG. You have dominated the other banks in that territory,

have you not?

e

k

e

e

W

1-

at

15

W

ch

n.

Mr. Rand. No; there are some pretty strong banks in our territory.
Mr. Strong. You started about five or six months ago and you have 68 banks now.

Mr. RAND. No; 17 banks.

Mr. Strong. But you have 50 or 60 branches?

Mr. RAND. Thirty-four branches in Buffalo, but there are other banks in Buffalo that have almost as many as we have.

Mr. Strong. That is pretty good progress in that short time?
Mr. Rand. We have added only one in the last two or three years in

Buffalo.

Mr. Strong. Now, you have 17 banks in this original group controlling about 70 branches. Do you contemplate you will take in a great many more banks and branches?

Mr. RAND. Not indiscriminately. We might add three or four banks a year, but we are not—

Mr. STRONG. Are you contemplating that those banks will each have a number of branches?

Mr. RAND. We can not tell that.

Mr. Strong. How many other groups in that trade area that you refer to—how many other groups have branches like you have?

Mr. Rand. I could not answer that offhand. There is one at Syracuse, the Bank of Manhattan of New York City, and others in New York State.

Mr. Strong. Do you not really believe as a practical proposition in time there will be a uniting of some of those groups, as a natural consequence?

Mr. RAND. There may be. I do not know.

Mr. Strong. It is reasonable to suppose there will be?

Mr. RAND. I could not say.

Mr. Strong. You would say it is reasonable to believe that?

Mr. RAND. I would not say that, even.

Mr. Strong. If there were, and those banks up there would unite in these groups, don't you think they would have a dominating influence in the control of the Federal reserve bank?

Mr. Rand. No; I think there are too many banks in New York State to have any one group have any appreciable influence on the Federal reserve.

Mr. Strong. I was suggesting there would be a combination of banks down to two or three groups and if that should happen, I think there would be a domination of the Federal reserve bank. One of the things I am worrying about in this new changing banking system of ours into chain, group, and branch banking, is whether or not, during the course of the years, there will not be such a combination of banks that they will dominate and control the Federal reserve banks. Everybody knows that if banking should be centered in one or two groups in each Federal reserve district, they would exert a tremendous influence on the Federal reserve banks.

Mr. RAND. I can not see any danger of that in New York State. I do not know the conditions outside of New York State. I can see no danger in New York State at present or future of one or two or three groups dominating the Federal reserve bank in New York

Mr. Strong. Have you ever attempted to solicit any other banks to join your group?

Mr. RAND. No, sir; they have come to us.

Mr. STRONG. Unsolicited?

Mr. Rand. Yes. We might solicit them in the future. We would never use any force or coercive methods to get banks to join our

Mr. Strong. Mr. Wakefield and Mr. Decker held out that statement to us, and yet before they got home we got a letter from a considerable group insisting they had used persuasive measures that might be described as practically force to bring certain banks into the group. Do you realize that if that were done it would be a serious proposition?

Mr. RAND. Yes.

Mr. Strong. Just one more question: Do you not really believe that if combinations of banks are allowed to spring up and grow as rapidly as your system is growing, and the one at Minneapolis and St. Paul and St. Louis and San Francisco and throughout the country, eventually we are going to have a control of money and credits in this country by a few groups?

Mr. RAND. No; I think the country is so large and the proportion the groups could have in proportion to the total resources and growth and strength of the country—I do not believe any group

can dominate or attempt to dominate in the country.

Mr. Strong. We have had group banking only a few months, and they are controlling hundreds of banks in their groups and dominating and controlling the banking business in their territories.

If those strides are maintained, in the course of a few years it seems to me there is serious danger of a control of money and credits in various territories of the United States and which will, in turn, lead to amalgamation of such interests, and what I am afraid of is that, through combinations of group banking, chain banking, and branch banking, we will have a control of money and credits in the

country that will be a dangerous thing for the Nation.

Mr. Rand. I do not think you will have anything to fear on that. Mr. Strong. Naturally, having formed a successful combination of banks, I imagine you would not be fearful of it, and as long as you are at the head of them, probably there should not be any such fear, but our lives are short and when men get into power they become selfish, and it has been the history of the world that the greatest domination of a nation is money and credits. They dominate armies, and we said during the war "that men win battles, but money wins wars."

That is all I care to ask.

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, APRIL 29, 1930

House of Representatives. COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met in the committee room, Capitol, at 11.10 o'clock a. m., Hon. James G. Strong presiding.

Mr. Strong. The committee will come to order.

Mr. Ottley, you are to address us this morning, and you will proceed, please. We are very glad to have you here.

Mr. Brand. This is the day we agreed that Mr. Ottley was to be

here.

Mr. Strong. Just state your name and whom you represent.

STATEMENT OF JOHN K. OTTLEY, PRESIDENT FIRST NATIONAL BANK OF ATLANTA, GA., AND PRESIDENT FIRST NATIONAL ASSOCIATES OF ATLANTA

Mr. Ottley. I am president of the First National Bank of Atlanta and president of the First National Associates of Atlanta, a corpor-

ation organized under the laws of Georgia.

Before proceeding with the information called for in the questionnaire addressed to me by your chairman, I should like, with the permission of the committee, to make a few general observations with respect to the banking situation in our part of the country. The First National Bank of Atlanta was chartered in 1865 and is the oldest and largest national bank in the sixth Federal reserve district. Its aggreagte resources exceed \$108,000,000. It has ten branches in operation in the city of Atlanta. Within the area of its operations the First National Bank offers all of the modern facilities of banking

to every type of customer.

There is in the sixth Federal reserve district, of which Atlanta is the Federal reserve city, a great diversity of industry and business. In raw materials there is produced lumber, iron ore, coal, phosphates, and oil. We have cotton and manufacture of cotton, rice, livestock, dairying, and the commercial production of all of the cane sugar made in the United States. We have one of the greatest fruit-producing territories in the world. In addition to cotton factories, there are steel and iron mills and factories of national importance. Hydroelectric power is highly developed. In this district there are five seaport cities with great volumes of ocean shipping. The sixth Federal reserve district is economically sound and the diversity of its business enterprise offers an ample opportunity for a sound banking system to prosper.

How does it come to pass that with this great potential economic strength the sixth Federal reserve district has witnessed so many bank failures during the past decade and still witnesses them? The population of our small cities and of the farming rural sections have suffered loss after loss as depositors, borrowers, and stockholders of local community banks. Your committee already has the statistical information with respect to these failures and I shall not attempt to

repeat these figures.

Public confidence in the small independent bank has been greatly shaken in our section of the country. The system of banking with which the rural population had to deal has failed. This has added greatly to the burden of the farmer and the small business man. When strongly adverse economic conditions strike a local community in which there is a bank which serves that community alone it is next to impossible to prevent such a bank from failing. Successive periods of drought, the activity of a fruit pest or of a plant disease, the adverse conditions of the market for a local product-such causes as these have brought about the downfall of hundreds of small banks in our district. Such banks by virtue of their limited size and influence can not possibly secure the type of management which modern banking demands, but even with good management the little local bank under such conditions as I have described would be virtually helpless. As has been said by members of this committee at these hearings, many of these banks failed because the community in which they operated failed. The bank had to attempt to the last to offer what facilities it possessed.

What is really the matter with the small bank? The answer lies in the narrow base upon which it rests. It can not avail itself of the diversity of business which is essential to banking strength. Without such diversification it can only be a fair-weather bank. If, therefore, we could throw behind every local bank in the Sixth Federal reserve district the strength and stability which come from the diversified business of the entire district, bank failures from local causes would cease. The local bank itself can not extend its business to tap the great variety of enterprises embraced in our area. That contact it can gain by becoming a part of a group system of banks or a branch

of a large parent bank.

First National Associates of Atlanta have begun under the group system to undertake to stabilize banking conditions in the Atlanta trade area—using the term which has been discussed before your committee. It has brought together 8 banks, 3 in Atlanta—including the first National Bank—1 in Augusta, 1 in Columbus, 1 in Macon, 1 in Rome, and 1 in Savannah. The parent bank and the 10 branches in Atlanta bring the total banking offices of the group to 18. The smallest bank in this group has a capital and surplus of \$362,000. These banks are limited entirely to the State of Georgia, but by reason of the business spread of the First National Bank of Atlanta they now have behind them a large share of the diversification of business in the sixth district. The extension of the First National group into other parts of the Atlanta district would strengthen the group from this point of view.

I do not argue that the banking conditions in the agricultural districts which are served by small local banks, which have been so impressively brought to your attention by the Comptroller of the Cur-

rency, can be met and remedied by group banking. Group banking under the form in which we have it can not afford to attempt to operate a local bank unless there is in that community a sufficient amount and variety of banking business to make the enterprise profitable as a business investment. The local bank under the group system remains an independent banking corporation. It is not flexible in its technical organization or in its responsibilities under the banking laws. It must operate, if at all, as a full-fledged bank with capital, surplus, reserves, loans, investments, and deposits. Group banking, to be successful, must therefore confine its membership to the banks with resources, I should say, above \$1,000,000.

It seems to me that branch banking alone can meet the needs of the small communities, either straight-out branch banking from large banks in cities like Atlanta, or a combination of group banking

and branch banking.

Branch banking is in operation to some extent in all of the States in the sixth Federal reserve district except Florida. So far as I know there is no public prejudice against it. In the State of Georgia we have had State-wide branch banking for a number of years. There is a branch in Atlanta of a national bank in Savannah which bank also has several other branches in different parts of that State. The McFadden Act has restricted member banks to branches within city limits where branches are permitted at all. If in view of the present situation national banks in Atlanta were permitted, for example, with the approval of the Comptroller of the Currency, to put branches into the small towns in the agricultural sections the First National Bank of Atlanta could in my opinion effectively establish a safe and

sound system of banking for those people.

There is a great difference between a branch of a bank and an independent bank. The size of a branch and the extent of its operations can easily be adapted to the banking needs of a particular community. There are outlying communities where a small branch could be placed and kept open two or three days a week as a convenience in the depositing of money, paying of checks, deposits of valuables for safe keeping, perhaps making a few small loans and making available other banking facilities. The cost of the operation of such a branch would be very small. In other somewhat larger communities such a branch could be kept open daily and would vary in size and personnel according to the available local banking business. Every one of such branches would tap the mass business operations embraced in the diversified activities of the entire area covered by the parent bank. Local depression in agriculture in one section would be offset by favorable business in other lines.

The branch itself would not necessarily require a diversification of local business because it would not rest for its support upon that business. This is the real difference between a branch and an independent unit bank. A branch, wherever situated, of the First National Bank of Atlanta, would be an office of that bank and all of the strength of the capital structure and of the great diversification of banking business of the First National Bank would be in that branch just as much as in the head office of the bank. If such a branch be situated in a peach-growing section where the principal banking business rests upon that industry, two or three successive years of failure to make profits on the peach crop might cause the

failure of independent local banks, but any losses which might be made in the branch would be absorbed by the entire branch banking system, which would have many avenues of profitable business besides

that dependent upon the growing of peaches.

In our own case the organization of the First National Associates as a group banking plan, was due to the lack of a national law permitting the extension of branch banking within the Federal reserve system outside of Atlanta. I myself have always been in favor of branch banking by national banks and my associates and myself in the First National Bank of Atlanta would have preferred to engage directly in branch banking rather than to resort to the more cumbersome method of group banking as a means of furnishing adequate banking facilities to our territory. The First National Bank has for eight years been engaged in branch banking within the city of Atlanta and has developed sufficient experience to extend its branches beyond city limits into the trade area which it serves. In establishing a group banking system we pursued the only means available under the law to make an approach to the advantages and benefits of a wider operation of branch banking. The question may be raised whether, since branch banking beyond city limits is prohibited by the McFadden Act, the First National Bank is not doing indirectly what is unlawful to be done directly. My answer is that the law permits us to do exactly what we are doing. It is done under the sanction of the law.

I do not regard group banking in its present form as the equal of branch banking either in its ability to meet the needs of local communities with dispatch and precision, in the flexibility and simplicity of its organization or in the economy of its operation. On the other hand I regard group banking as undoubtedly superior to that of the independent local unit bank with its isolation from metropolitan business contacts and its complete dependence upon the business of the com-

munity in which it is situated.

In view of the fact that group banking, such as the First National Associates has embarked upon, is designed to respond to an economic demand in our civilization-a demand for greater strength and stability in banking and a more even distribution of banking facilities to the various types of our population-may I take the liberty to say that this committee should make toward it a sympathetic approach. If the committee should decide that group banking ought to be permitted to continue in operation under Federal supervision and control, certain restrictions and safeguards should be thrown around it for the general protection of the public. The first National Associates of Atlanta would welcome any reasonable provisions to this end. If Congress in its wisdom should see fit to permit branch banking by national banks into wider areas than is at present possible under the law it would seem that those corporations engaged in group banking should be permitted gradually to adapt their organizations to branch banking rather than be forced suddenly to embrace it. The First National Bank of Atlanta would immediately avail itself of the opportunity to substitute branch banking for group banking. On the other hand, I realize that our situation is different from those other communities in which group banking is operating in the entire absence of branch banking.

I shall now proceed to give more specifically the information called

for in the letter sent out by your chairman.

I am submitting, marked "Exhibit A," the incorporation papers including all by-laws of First National Associates of Atlanta; a list of its directors showing the business connection of each, marked "Exhibit B"; and a list of the banks in First National Associates Group showing the date when organized, name of bank, city in which located, capital structure, deposits and total resources, marked "Exhibit C.

The First National Associates of Atlanta is an affiliated subsidiary of the First National Bank of Atlanta. Its capital stock is entirely owned by the Trust Co. of Georgia, the shares of which in turn are

owned by the shareholders of the First National Bank.

The senior executive officers of the bank, the trust company, and of the Associates are identical, and the directorate of the bank includes all of the directors of the trust company and of the associates. In addition, the presidents of each bank in which the associates are controlling shareholders are members of the board of the associates.

The Associates owns the controlling stock of four national banks; one State bank, which is a member of the Federal reserve system, a real estate loan bank, and of a company for the underwriting and

distribution of investment securities.

The Associates owns from 50.16 per cent to 78.28 per cent of the capital stock of the four national banks and one State bank located in cities other than Atlanta. These banks are located in five cities in all sections of the State of Georgia. The shares of these banks were acquired by purchase for cash after negotiations with the management of each bank and the purchase consummated after an examination

and appraisal of the assets in each instance.

The First National Bank of Atlanta actively cooperates with each of these banks in the management of its affairs. Coordination of activities and cooperation in the management are effected by one officer of the parent bank being on the board of each affiliate bank and by one vice president being assigned exclusively as a contact with the local management of each affiliate bank. As an officer of the First National Bank, of the Associates, and of the affiliate bank, this official supervises operating methods and obtains for each affiliate the aid of any department of the parent organization. Each affiliate bank is audited by the audit department of the First National Bank. In addition, each affiliate has at its disposal constantly the facilities of the credit and statistical department of the parent bank. Our first act was to set up in each affiliate adequate credit records, which, as a unit bank, would have been very difficult to accomplish. Each affiliate furnishes daily reports, including its daily statement, new loans, accounts opened and closed, and comparative figures of deposits, loans, investments, and earnings. These reports are inspected daily by the operating and credit divisions of the parent bank. In short, each affiliate receives the complete cooperation and supervision of a large metropolitan bank staff which would have been impossible had those banks continued as independent institutions. That such a system is effective is best evidenced by the fact that credit losses have been smaller, operations more economical, and earnings increased in each instance since the affiliation was made.

The scope of banking service in each of the communities where these affiliate banks are located has been materially widened. Credit lines have, in many instances, been granted by the parent bank to worthy customers of the affiliate banks whose needs were greater than local banks could either legally or comfortably meet. Facilities for the investment of funds in securities, the administration of trusts, the obtaining of mortgage loans, etc., have been made available through the affiliate banks where formerly no such services were offered to the public.

The First National group has, up to this time, confined its affiliations to the State of Georgia, but it is my opinion that the natural development of group or branch banking will justify our consideration of extending into the larger trade territory served by the city of While it is difficult to define this territory exactly, it may Atlanta. be roughly outlined as including the sixth Federal reserve district in addition to portions of North and South Carolina. Atlanta now enjoys trade relations actively in that area in almost every line of business. Such a development will require, doubtless, a change in the form of holding companies which we now use—that is, the subsidiary holding company-to a parent holding company, owning the stocks of each bank or company in the group, and effecting further affiliations by an exchange of shares, rather than by cash purchases. (The exhibits submitted by Mr. Ottley are reproduced below.)

Ехивит А

GEORGIA,

Fulton County.

To the Superior Court of said County:

The petition of J. E. Hickey, C. T. Hopkins, jr., and T. T. Flagler, all of said

State and county, respectfully shows:

1. That they desire for themselves, their associates, successors and assigns, to be incorporated and made a body corporate under the name and style of Trusco Investment Co.

2. That the principal office of said corporation is to be located in the city of Atlanta and State of Georgia, but with the right, power, and authority to establish branch offices for the transaction of its business in any other place within the State of Georgia, and in any other States, territories, or dependencies of the United States of America.

3. The general object of the incorporation is pecuniary profit to its stock-

holders.

4. The nature of the business and objects and purposes proposed to be trans-

acted, promoted, and carried on are as follows:

(a) To purchase or otherwise acquire, hold, own, sell, deal in, and otherwise dispose of stocks, bonds, notes, mortgages and other evidences of indebtedness, whether secured or not secured, and whether issued by corporations or individuals, as well as any other personal property of any kind and character which it desires to own or deal in.

(b) To do a general commission and buying and selling agent's business, and acting for others to purchase, or otherwise acquire, sell, deal in or otherwise dispose of, any of the securities hereinbefore enumerated, or any other property, either real or personal, and to negotiate and procure loans, secured and unsecured, and to receive commissions or other compensation for its services as such agent.

(c) To purchase, or otherwise acquire, hold, own, sell, deal in or otherwise dispose of, any real property, leaseholds thereon, or other right, title or interest therein in any State, territory, or dependency of the United States or in any foreign country or place, with the right to improve, develop, subdivide or otherwise deal with such real estate as in the opinion of said corporation may be beneficial or profitable to it.

(d) To act as agent, either general or special, and to receive compensation for its services as such, for life, fire, casualty, liability, burglary, tornado, fidelity,

and any and all other kinds of insurance companies.

(e) To guarantee or indorse bonds, notes or other evidences of indebtedness and other obligations of any corporation or individual. To lend its own money upon such terms and at such rates of interest as it may desire and either with or without

5. Petitioners desire that said corporation shall have the right, power, and authority to borrow money, to issue bonds, notes, or other evidences of indebtedness, and to secure the same or any of them, by trust deed or mortgage or pledge of any or all of the real or personal property which may be owned by the corporation, and generally to use any or all of its property, both real and personal, as a basis of credit for the raising of money to be used in connection with its operations and the prosecution of its business.

6. Petitioners further desire that said corporation shall have the right and power to do each and every thing which will be necessary, suitable, convenient, or proper for the accomplishment of any of the purposes, or the attainment of any one or all of the objects hereinbefore enumerated or incidental to the powers herein named or which shall at any time appear conducive to or expedient for the protection, profit, or benefit of the corporation, either as holder of or as interested in any property or otherwise and generally to have all of the rights, powers, and privileges now or hereafter conferred by the laws of the State of Georgia upon like corporations, including the right to sue and be sued, to have and use a common seal, and all other rights enjoyed by such corporations.

7. The capital stock of said corporation is to be \$50,000, divided into 500 shares of the par value of \$100 each, all of which has been paid in; with the right,

nevertheless, in said corporation at any time, upon the vote of the holders of a majority of all of the stock at the time outstanding, and from time to time as may be deemed expedient and best, to increase its capital stock, provided that the maximum capital stock which it may ultimately have outstanding shall not

exceed the sum of \$1,000,000.

8. It is desired that said corporation shall likewise have the right, power, and authority at any time, upon the vote of the holders of a majority of its capital stock then outstanding, to reduce its capital stock from time to time as may be deemed expedient and best, to such sum as may be determined upon, provided that the minimum capital stock which said corporation shall be entitled

to have shall not be less at any time than \$25,000.

9. It is also desired that said corporation shall have the right, power, and authority at any time, upon the vote of the holders of a majority of the capital stock at the time outstanding, to amend its charter, either in form or in substance; and also the right, power, and authority, upon a like vote, at any time to wind up its business, dispose of all of its assets of every kind, and nature whatsoever and distribute the same among its shareholders as they may be entitled to the same and to cease to do business, whether said corporation be then or thereafter dissolved under the provisions of the laws of Georgia or not.

Wherefore your petitioners pray that they, their associates, successors, and assigns, be incorporated and made a body corporate under the name and style of Trusco Investment Co. for all the purposes and objects, and with all the rights, powers, and privileges hereinbefore set out, together with all other rights, powers, and privileges usually, enjoyed by like corporations under the laws of the State of Georgia, and that it be incorporated for a period of 20 years, with the right of renewal from time to time as may be then allowable under the laws of the State of Georgia.

ANDERSON, ROUNDTREE & CRENSHAW. Attorneys for petitioners.

Filed in office, this the 23d day of June, 1922.

ARNOLD BROYLES, Clerk.

BY-LAWS OF THE TRUSCO INVESTMENT CO.

ARTICLE I. OFFICES

Section 1. The principal office of the corporation shall be in the county of Fulton, State of Georgia.

The corporation may also have offices in such other places as the board of directors may from time to time appoint and the business of the corporation require.

ARTICLE II. SEAL

Section 1. The corporate seal shall be circular and shall have thereon, around the edge of the circle, the name of the corporation and the words "Fulton County" and in the center of the circle the word "Seal."

ARTICLE III. STOCKHOLDERS

Section 1. Annual meeting.—A meeting of the stockholders shall be held annually at the office of the corporation in the county of Fulton, State of Georgia, on the second Wednesday in April in each year, if not a legal holiday, and if a legal holiday, then on the next successive business day, at 4 o'clock in the afternoon, for the purpose of electing a board of five directors (unless the number be changed, as hereinafter provided for) to serve one year and until their successors are elected and qualified, and for the transaction of any other business authorized or required to be transacted by the stockholders. Notice of the annual meeting shall be mailed at least 10 days prior thereto to each registered stockholder entitled to vote at his address as the same appears on the books of the corporation.

Sec. 2. Special meetings.—Special meetings of the stockholders for any purpose or purposes shall be held at the office of the corporation in the county of Fulton, State of Georgia, whenever called by the president, the board of directors, or by stockholders holding together at least one-fourth of the capital stock of the corporation then issued and outstanding. Notice of each special meeting, stating the time, place and in general terms the purpose or purposes thereof shall be mailed at least five days prior to the meeting to each registered stockholder entitled to vote at his address as the same appears on the books of the corporation; but in the event any stockholder shall reside at such distance that a letter mailed would not, in due course, reach him so as to enable him to attend at the date fixed for such meetings, such stockholder may be notified by telegram, and the sending to him of a telegram five days before the date of the meeting, addressed

notice of said meeting.

Sec. 3. Quorum.—At any meeting of the stockholders, the holder or holders of a majority of the stock of the corporation issued and outstanding, present in person or represented by proxy, shall constitute a quorum for all purposes, including the election of directors, except where otherwise provided by statute.

to his last address as appears on the books of the corporation, shall be a sufficient

the election of directors, except where otherwise provided by statute.

Sec. 4. Order of business.—The order of business of all meetings of stockholders shall be as follows:

(a) Roll call; a quorum being present (b) reading of minutes of preceding meeting and action thereon; (c) reports of officers; (d) reports of committees; (e) Election of directors; (f) unfinished business; (g) new business.

Sec. 5. Adjournments.—If at any annual or special meeting a quorum shall fail to attend in person or by proxy, a majority in interest of the stockholders having voting powers attending in person or by proxy at the time and place of said meeting, may adjourn the meeting from time to time without further notice until a quorum shall attend, and thereupon any business may be transacted which might have been transacted at the meeting as originally called had the same been then held.

Sec. 6. Organization.—The president, and in his absence the vice president, and in the absence of the president and vice president, a chairman appointed by the stockholders present and entitled to vote, shall call meetings of the stockholders to order and shall act as chairman thereof. The secretary of the company shall act as secretary at all meetings of the stockholders when present and in his absence the presiding officer may appoint any person to act as secretary.

absence the presiding officer may appoint any person to act as secretary.

Sec. 7. Voting.—At each meeting of the stockholders every stockholder entitled to vote shall be entitled to vote in person or by proxy appointed by an instrument in writing subscribed by such stockholder or by his duly authorized attorney and delivered to the secretary of the corporation, and he shall be entitled to vote one vote for each share of stock appearing in his name on the books of the corporation, provided that no share of stock shall be voted on at any election for directors which has been transferred on the books of the corporation within 10 days next preceding such election. Transfer books of stock may be closed so as to fix the persons entitled to vote the same, by order of the board of directors, not exceeding 30 days preceding any stockholders' meeting. Upon the demand of any stockholder, the vote for directors, or upon any other question before the meeting, shall be by ballot; in the absence of such demand, it may be viva voce. All matters or questions before a stockholders' meeting shall be decided by a vote of the majority of those present, except where otherwise required by the charter.

ARTICLE IV. DIRECTORS

Sec. 1. Number.—The business and affairs of the corporation shall be managed and controlled by a board of directors, five in number, which number may be altered from time to time. The directors shall be elected by the stockholders

entitled to vote at the annual meeting of the corporation, and each director shall be elected to serve until the next annual stockholders' meeting and until his successor shall be elected and qualified.

In the event it is desired that the number of the directors be increased at any time other than the annual meeting, the additional directors may be elected by the board of directors to serve until the next annual meeting or until their suc-

cessors are elected and qualify.

SEC. 2. Vacancies.—In case of any vacancy among the directors through death, resignation, disqualification, removal or other cause, the board of directors may elect a successor to hold office until the next annual election and until the election and qualification of his successor. If the number of directors had until the election and qualification of his successor. If the number of directors be reduced below the number necessary to constitute a quorum, the remaining directors, though less than a quorum, may fill the vacancies. The stockholders may fill any vacancies not promptly filled by the directors.

Sec. 3. Place of meeting.—The directors shall hold their regular meetings and keep the books of the corporation at the principal office of the corporation in the County of Fulton State of Georgia, as the same may be hereafter located but

County of Fulton, State of Georgia, as the same may be hereafter located, but may hold meetings at such other place or places within the State of Georgia, or

outside of the State of Georgia, as the board may from time to time determine.

SEC. 4. Annual meeting of the board.—After each annual meeting of the stockholders, the newly elected directors may meet for the purpose of organizing, the election of officers, and the transaction of other business at such place and time as shall be fixed by the stockholders at the annual meeting or by the by-laws of the company, and if a majority of the directors be present at such place and time, no prior notice of such meeting shall be required to be given to the directors. place and time of such meeting may also be fixed by written consent of the direc-

Sec. 5. Regular meetings.—Regular meetings of the board of directors shall be held at the office of the corporation in Fulton County, State of Georgia, until otherwise ordered by the board, and at such times and places as the board of directors shall from time to time appoint, of which no notice shall be required.

Sec. 6. Special meetings.—Special meetings of the board shall be held whenever called by direction of the president or the vice president or of a majority of the directors for the time being in office. The secretary, or some other officer or director of the corporation shall give notice to each director of each special meeting, by mailing the same at least two days before the meeting or by telephoning or telegraphing the same not later than the day before the meeting. If every director shall be present at any meeting, any business may be transacted without previous notice.

Sec. 7. Quorum.—A majority of the directors shall constitute a quorum for the transaction of business, but a majority of those present at the time and place of any regular or special meeting, if there be less than a quorum, may adjourn the same from tine to time without notice, until a quorum be had. of a majority of directors present at any meeting at which there is a quorum

shall be the act of the Board of Directors.

Sec. 8. Compensation of directors.—Directors, as such, shall not receive any stated salary for their services, but by resolution of the board a fixed sum and expenses of attendance, if any, may be allowed for attendance at each regular or special meeting of the board; provided, that nothing herein contained shall be construed to preclude any director from serving the corporation in any other capacity and receiving compensation therefor.

Members of special or standing committees may be allowed like compensation

for attending committee meetings.

Sec. 9. Order of business.—The Board of Directors may from time to time determine the order of business at their meetings. Until changed, the order of business at such meetings is as follows:

(a) Roll call, a quorum being present; (b) reading of minutes of preceding meeting and action thereon; (c) report of officers; (d) report of committees; (e) unfinished business; (f) miscellaneous business; (g) new business.

Sec. 10. Chairman.—At all meetings of the board of directors the president,

or, in his absence, the vice president, or, in his absence, a chairman chosen by

the directors, shall preside.

SEC. 11. Committees.-From time to time the board may appoint any committee or committees for any purpose or purposes to the extent lawful which will have such powers as shall be specified in the resolution or resolutions of appointment.

ARTICLE V. OFFICERS

Section 1. Executive officers.—The executive officers of the corporation shall be a president, a vice president, a treasurer, and a secretary, any two of which offices may be held by the same person, except that the same person may not be president and vice president; all of whom shall be elected annually by the board.

Sec. 2. Subordinate officers.—The board may appoint one or more assistant treasurers and one or more assistant secretaries, and such other officers and em-

ployees as it may deem necessary, who shall have such authority and perform such duties as from time to time may be prescribed by the board.

SEC. 3. Tenure of officers—Removal.—All officers and agents shall be subject to

removal at any time by affirmative vote of a majority of the whole board. board may delegate powers of removal of subordinate officers and agents to any officer of the company.

SEC. 4. The president.—The president shall be a chief executive officer of the corporation, with all of the powers usually exercised by the chief executive officer of like corporations; he shall sign all deeds, conveyances, transfers, assignments of personal and real property, and other instruments in writing which may be executed in behalf and in the name of the corporation; he shall have general charge of the business of the corporation; and shall do and perform such other

duties as from time to time may be assigned to him by the board.

Sec. 5. The vice president.—The vice president shall have such powers and perform such duties as may be assigned to him by the board. In case of the absence or disability of the president, the duties of his office shall be performed by the vice president.

Sec. 6. The treasurer. The treasurer shall have the custody of all of the funds and securities of the corporation which may come into his hands; he shall sign all checks or drafts drawn against the funds belonging to the corporation; he shall sign all notes, obligations, and other evidences of indebtedness, and shall perform all duties incident to the position of tresaurer, subject to the control of He shall do and perform such other duties as may from time to time the board. be assigned to him by the board. If required by the board, he shall give a bond for the faithful discharge of his duties in such sum as the board may require.

Sec. 7. The secretary.—The secretary shall keep the minutes of all proceedings of the board and the minutes of all meetings of the stockholders in books provided for that purpose; he shall attend to the giving and serving of all notices for the corporation; be shall have charge of the certificate books and such other books and papers as the board may direct; he shall attest all instruments in writing required to be under seal, and have the custody of the seal; and he shall in general perform all the duties incident to the office of secretary, subject to the control of the board; he shall also perform such other duties as may be assigned to him by the board.

SEC. S. Vacancies.—All vacancies among the officers shall be filled by the

board of directors.

ARTICLE VI. CAPITAL STOCK

Section 1. Form and execution of certificates.—The certificates of shares of the capital stock of the corporation shall be in such form as shall be approved by the The certificates shall be signed by the president or the vice president and the secretary or an assistant secretary. Each certificate of stock shall certify the number of shares owned by the stockholder in the corporation.

SEC. 2. Certificates to be entered .- All certificates shall be consecutively numbered and the names of the owners, the number of shares, and the date of issue shall be entered in the books of the corporation.

SEC. 3. Old certificates to be canceled.—Except in cases of lost or destroyed certificates, and in that case after receipt by the corporation of satisfactory indemnity, no new certificate shall be issued until the former certificate for the shares represented thereby shall have been surrendered and canceled.

Sec. 4. Transfer of shares.—Shares shall be transferred only on the books of the corporation by the holder thereof in person or by his attorney, upon the surrender and cancellation of certificates for a like number of shares.

SEC. 5. Regulations.—The board may make such rules and regulations as it may deem expedient concerning the issue, transfer, and registration of stock.

SEC. 6. Transfer agent and registrar.—The board may appoint a transfer agent

and registrar of transfers, and may require all stock certificates to bear the signature of either or both.

SEC. 7. Closing of transfer books.—The transfer books of stock entitled to vote may be closed by order of the board of directors not exceeding 30 days next preceding any stockholders' meeting and may also be closed for the payment of dividends during such period as from time to time may be fixed by the board, and during such period no stock shall be transferred on such books.

ARTICLE VII. DIVIDENDS AND WORKING CAPITAL

Section 1. Board to declare dividends.—The board, in its discretion, from time to time may declare dividends upon the capital stock from the surplus or net profits of the corporation and may fix and change the dates for the declaration

and payment of dividends.

SEC. 2. Surplus.—The board of directors may fix a sum which may be set aside or reserved over and above the capital stock paid in as a surplus and working capital for the corporation, and from time to time they may increase, diminish, and vary the same in their absolute judgment and discretion.

ARTICLE VIII. FISCAL YEAR

Section 1. Fiscal year.—The fiscal year of the corporation shall be the calendar year or otherwise as the directors may determine.

ARTICLE IX. NOTICE AND WAIVER OF NOTICE

Section 1. Notice.—Any notice required to be given under these by-laws may be given by mailing the same, addressed to the person entitled thereto, or by telephoning or telegraphing the same, as hereinbefore provided for in these by-laws, at his address as shown on the books of the corporation, and such notice shall be deemed to be given at the time of such mailing, telephoning, or telegraphing.

Sec. 2. Waiver of notice.—Any stockholder, director, or officer may waive any

notice required to be given by these by-laws.

ARTICLE X, AMENDMENTS

Section 1. By-laws subject to amendment by stockholders.—All by-laws shall be subject to amendment, alteration, or repeal by the stockholders entitled to vote at any annual meeting and at any special meeting called for that purpose.

August 16, 1922.

At a special meeting of the stockholders of the Trusco Investment Co. held May 14, 1929, the following amendments to the by-laws were made:

Further resolved, That article 4 of section 1 of the by-laws be amended by

changing the number of directors called for in said section from 5 to 12.

Further resolved, That article 10, section 1, be amended so that as amended the same shall read as follows:

"Section 1. By-laws subject to amendment by directors.—All by-laws shall be subject to amendment, alteration, or repeal at any regular directors' meeting, or at any special directors' meeting called for that purpose."

In a special meeting of directors of Trusco Investment Co. held May 14, 1929,

the following amendments to the by-laws were made:

Resolved, That Article V, section 1, of the by-laws be amended so that as amended it shall provide as follows:

"Section 1. Executive officers.—The executive officers of the corporation shall be a president, four vice-presidents, a treasurer, and a secretary, any two of which offices may be held by the same person, except that the same person may not be President and vice president; all of whom shall be elected annually by the board."

Further resolved, That Article V, section 5, of the by-laws be amended so that as amended the same shall read as follows:

"The vice presidents shall have such powers and perform such duties as may be assigned to them by the board, or the president. In case of the absence or disability of the president his duties shall be performed by any available vice President."

GEORGIA,

Fulton County.

To the Superior Court of said county:

The petition of Trusco Investment Co. respectfully shows to the court: 1. Your petitioner was incorporated by an order of this court granted on the 22d day of July, 1922, and thereafter duly organized in accordance with the provisions of the laws of this State, and is now in the active conduct of its business in accordance with the provisions of its charter.

2. Your petitioner desires to change its name from Trusco Investment Co. to

First National Associates.

3. This change in name has been requested and approved by the unanimous vote of the stockholders of your petitioner at a meeting held on the 20th day of November, 1929, at which the following resolution was unanimously adopted by the stockholders:

Whereas it is deemed advisable and beneficial to change the name of this company from Trusco Investment Co., to First National Associates: Be it there-

Resolved, That the name of this company be, and is hereby, changed to First National Associates and the officers and attorneys of the company are authorized to make application for an amendment to the charter of the company accomplishing such change of name and take such other steps as may be necessary to carry these resolutions into effect.

4. The action of the stockholders looking toward a change in the name of your petitioner was unanimously ratified, approved, and adopted at a meeting of the

Wherefore Trusco Investment Co. prays that its charter be amended by changing its name to First National Associates.

Attorneys for Petitioner.

IN THE MATTER OF THE APPLICATION OF TRUSCO INVESTMENT CO. TO AMEND ITS CHARTER BY CHANGING ITS NAME TO FIRST NATIONAL ASSOCIATES

The attached and foregoing petition of the Trusco Investment Co. praying for an amendment of its charter as therein set forth came on for a hearing in due days of ____; and it further appears to the court that all other requirements of law for such cases have been fully complied with, and that the subject of said petition comes within the purview and intent of the law: It is therefore

Considered, ordered, and adjudged, That the prayer of said petition be granted and that the charter of Trusco Investment Co. be and the same is hereby amended as requested, and the name of said corporation is hereby changed to First National Associates.

In open court this -- day of ----, 1929.

Judge Superior Court, Fulton County, Ga.

Ехнівіт А

BY LAWS OF TRUSCO INVESTMENT CO.

MEETINGS OF STOCKHOLDERS

SECTION 1. There shall be an annual meeting of the stockholders on the fourth Tuesday in January of each year, at 11.30 o'clock a. m., for the purpose of electing directors and transacting any other business that may lawfully come before an annual meeting. A majority of the capital stock at the annual meeting or at any other meeting shall constitute a quorum.

Sec. 2. Stockholders shall have one vote for each share of stock held by them

and may vote by written proxy.

ELECTION OF DIRECTORS

SEC. 3. At each annual meeting of the stockholders a board of not more than 26 directors shall be elected and 7 directors shall constitute a quorum for the transaction of business at any meeting lawfully held. The directors so elected shall hold office for one year and until their successors are elected and have qualified. Any vacancy that may occur, either by resignation or otherwise, may be filled by the remaining directors at any regular or at any special meeting called for that purpose on proper notice to each director.

BOARD OF DIRECTORS

Sec. 4. The board of directors shall have full authority to give directions to the policy of the company and as to the general conduct of its business; shall have supervisory authority over all officers; shall elect all officers not otherwise required by law to be elected; shall fill all vacancies that may occur; and shall generally discharge the duties incident to boards of directors of institutions of like character.

MEETINGS OF THE BOARD OF DIRECTORS

Sec. 5. The regular meetings of the board of directors shall be held immediately after the adjournment of the stockholders' annual meeting and thereafter on the second Tuesday in each month of April, July, and October, at 11.30 o'clock a. m.

EXECUTIVE COMMITTEE

Sec. 6. The chairman of the board, after each annual meeting, shall appoint nine members of the board who, with the chairman, the president and such other officers of the company as from time to time shall be called by the committee to act with it, shall constitute the executive committee. The executive committee shall meet on the first Tuesday of each month at 11.30 o'clock a. m.; shall have the full authority of the board when the board has not otherwise directed; and shall keep records of its meetings and actions to be submitted to the board for its approval, and a majority of its members shall be necessary for a quorum. Its chairman shall preside at all its meetings and shall perform such other duties as the committee may direct. Each member shall receive a fee of \$10 for each meeting he attends.

OFFICERS

Sec. 7. The officers of the corporation shall be a chairman of the board, a president, a chairman of the executive committee, an executive vice president, as many vice presidents as the board of directors may determine upon, a secretary, a treasurer (the last two offices may be united in one person) and such other officers as the board of directors may from time to time appoint. Each officer shall hold his position for a term of one year and until his successor is duly elected and qualified, or until his resignation is requested by the board of directors or the executive committee.

DUTIES OF OFFICERS

Sec. 8. The chairman of the board of which he shall be a member, shall preside at all meetings of the stockholders and directors; shall be the chairman and presiding officer of all committees except the executive committee; shall appoint all committees, except that the board of directors at its first meeting held after the adoption of these by-laws shall appoint the executive committee; shall perform all the duties of the president in the event of the latter's absence or disability, and such other duties as may be lawfully required of him by the board of directors or the executive committee.

directors or the executive committee.

Sec. 9. The president shall be a member of the board; shall be the chief executive officer of the company; shall have general charge of the business of the company, subject to the lawful control of the board of directors and the executive committee; shall perform all the duties of the chairman of the board in the event of the latter's absence or disability; and he shall perform such other duties as may be required of him by the by-laws, and such as may be lawfully required by the board of directors and the executive committee. The president shall have the right to prescribe the duties of the vice presidents and other officers, except the chairman of the board, when not prescribed by the board of directors or the executive committee.

THE TREASURER

Sec. 10. The treasurer shall have the custody of the funds and securities of the company and shall deposit its money in the name of the company in such bank as the board of directors may designate. He shall render a full and particular statement of his cash accounts as often as called for by the board of directors or the executive committee, showing the condition of the company's affairs. He shall perform such other duties as the board of directors or the executive committee may require. No money shall be drawn from any bank or other depositions.

tory, except on checks signed by the president or vice president and by the The treasurer shall not give such bond as the board of directors or the executive committee may require.

THE SECRETARY

SEC. 11. The secretary shall give due notice of all meetings of the stockholders and directors; shall report the proceedings of all meetings in a book of minutes; shall perform all other duties pertaining to his office and such as may be required of him by the board of directors or the executive committee.

STOCK CERTIFICATES

Sec. 12. Certificates of stock shall be signed by the president and counter-signed by the secretary and shall be in such form and words as the board of directors may determine. No transfer of stock shall be valid unless entered on the books of the company.

SPECIAL MEETINGS

SEC. 13. Special meetings of the stockholders, the board of directors, and the executive committee may be called at any time by the chairman of the board, or by the president, or, upon written request of any five directors, by the treasurer on 24 hours' notice; and the chairman of any committee may call it in special session at any time on such notice as he may determine upon. At special meetings lawfully called a quorum shall be authorized to transact any business that could be transacted at a regular meeting.

BY-LAWS

SEC. 14. These by-laws may be changed or amended at any meeting of the directors and shall be subject to revision, modification or repeal by the stockholders at any meeting.

SEC. 15. The board of directors shall be authorized to adopt a seal.

SEC. 16. All meetings of the stockholders, directors, and committees shall be

held at the company's office.

Sec. 17. When any meeting day provided by these by-laws shall fall on a legal holiday, the meeting for that day shall be held on the first day thereafter that shall not be a legal holiday.

FIRST NATIONAL ASSOCIATES-ATLANTA

A special meeting of the stockholders of the First National Associates was held January 15, 1930, and the following amendments to the by-laws were made at this meeting:

Section 1 of the by-laws was amended to read as follows:

"There shall be an annual meeting of the stockholders on Friday after the second Tuesday of January of each year, at 11 o'clock a. m., for the purpose of electing directors and transacting any other business that may lawfully come before an annual meeting. A majority of the capital stock at the annual meeting or at any other meeting shall constitute a quorum.

Section 5 of the by-laws was amended to read as follows:

"At each annual meeting of the stockholders a board of not less than five directors shall be elected and a majority shall constitute a quorum for the transaction of business at any meeting lawfully held. The directors so elected shall hold office for one year and until their successors are elected and have qualified. Any vacancy that may occur, either by resignation or otherwise, may be filled by the remaining directors at any regular or at any special meeting called for that purpose on proper notice to each director."

Section 5 of the by-laws was amended to read as follows:
"The regular meetings of the board of directors shall be held Friday after the second Tuesday immediately after the adjournment of the stockholders' annual meeting and thereafter on Friday after the second Tuesday in March, June, September, and December at 11 o'clock a. m."

Section 6 of the by-laws was amended to read as follows:
"The chairman of the board, after each annual meeting, shall appoint six members of the board who, with the chairman, the president, and such other

officers of the company as from time to time shall be called by the committee to act with it, shall constitute the executive committee. The executive committee shall meet on Friday after the second Tuesday of February, April, May, July, August, October, and November at 11 o'clock a.m.; shall have the full authority of the board when the board has not otherwise directed; and shall keep records of its meetings and actions to be submitted to the board for its approval, and a majority of its members shall be necessary for a quorum. Its chairman shall preside at all its meetings and shall perform such other duties as the committee may direct. Each member shall receive a fee of \$10 for each meeting he attends." At a meeting of the board of directors of the First National Associates held

March 11, 1930, the following amendments to the by-laws were made:

Section 5 of the by-laws was amended to read as follows:
"Sec. 5. The regular meetings of the board of directors shall be held immediately after the adjournment of the stockholders' annual meeting and thereafter on the second Tuesday in each month at 5.20 o'clock p. m., or as soon thereafter as the meeting of the board of directors of the First National Co. held on that day shall adjourn.

Section 6 of the by-laws was amended to read as follows:

SEC. 6. The chairman of the board after each annual meeting shall appoint six members of the board, who, with the chairman, the president, and such other officers of the company as from time to time shall be called by the committee to act with it, shall constitute the executive committee. The executive committee shall meet when called by the chairman of the committee, the chairman of the board or the president shall have the full authority of the board when the board has not otherwise directed, and shall keep records of its meetings and actions to be submitted to the board for its approval, and a majority of its members shall be not action. be necessary for a quorum. Its chairman shall preside at all its meetings and shall perform such other duties as the committee may direct.'

1 Represents capital structure.

Mr. Strong. Mr. Ottley, I will say to you that I think you have

taken an unusually fair position.

I, of course, do not agree, however, that your group banking has proceeded under sanction of law. The intention of Congress, when it passed the McFadden Act, was to permit national banks to engage in branch banking only in the city where the parent bank was located, but, unfortunately, not knowing that group banking was to come upon us, we used the word "branches"; that they should not have "branches" outside of the city of the parent bank. Of course, when you go around the law and put in groups instead of branches, I do not think you can hardly say that it is done with sanction of law, but, rather, in avoidance of the law.

What I would like to examine you about and to get your opinion on is this: How far do you think it is safe to let the money and credits of the United States be controlled by small groups of men?

8

r

r

8

C

f

V

Mr. Ottley. Mr. Chairman, I want to be perfectly frank in any answer that I give, and I would like to have you just enlarge a little

on that question.

Mr. Strong. The reason that I have opposed branch banking, group banking, and chain banking, is that I have the fear that, through their growth and mergers and amalgamations, eventually we will have all the money and credits of this national controlled by a few groups of men, who, through working together, can dominate and control the country.

It was proposed first by a Comptroller of the Currency that we should let national banks meet the competition of State banks that were allowed branches, by permitting national banks likewise to have branches in States where they permitted the State banks to have them, but to confine them to the city in which the parent bank was located. Now, group banking has been brought into the picture in order to get around that law, and now the Comptroller of the Currency comes before us and recommends that we have branch banking, which he thinks will curb group banking the same as you suggest, but to limit branch banking to trade areas.

The term "trade areas" has been rather indefinitely defined, but the best definition that I think we got was that territory where a money center attracted the trade of the territory, and Governor Young thought that perhaps there might be 37, indicating that the Federal Reserve Board had given some thought to how many areas there should be, although they said they were not ready to submit

their conclusions to us.

Now, your suggestion is that you should have branch banking to augment your group banking in order to take care of the little town, because you do not want in your group any bank that is not a money maker, but you want to serve the little town that can not support a money-making bank with a branch, and you say you think that if you were allowed to have extended branch banking, your banks would go into it. How far would you want to extend that, and would not your plan lead to a control of money and credits.

Mr. Ottley. I thank you for your explanation.

Mr. Strong. It is rather long and probably involved, but I hope

got the idea over.

Mr. OTTLEY. I have tried in my statement, in a very limited way, to cover that, but I would be glad to explain further that I think that in the cities that were large enough throughout the country, branch banking would develop within the area. I think the trade area, measured by my yardstick, is the hardest nut that your committee is going to have to crack.

Mr. Strong. We appreciate that.

Mr. Ottley. Now, you will recall that when our Federal reserve system was established and it was decided that we should have 12 Federal reserve districts, there were, I believe, 130 places in the United States that put a dot on their city and took a string and drew

a circle and made that city the exact center of that territory. Now, a very careful study, of course, was given by the organiza-

tion committee, and it resulted in the establishment of 12 Federal reserve districts, and I think that in the main those 12 Federal reserve districts have to a very large extent established or, you might Put an emphasis on what might be considered a trade area, and I think that possibly some cities might not cover the entire area, but I think that when it would come to what you have in mind, the concentration of credit, that certainly this country would be safe from any monopoly if the trade areas within Federal reserve districts were adopted.

A great many corporations are beginning, in the operation of their businesses, both in sales organization and in finances, to adopt those trade areas.

Now, in my statement I have cited, as the trade area of Atlanta, the sixth Federal reserve district. When that district was established, we felt in Atlanta that certain portions of the Carolinas should come within the Atlanta area; for instance, the South Carolina line is only 100 miles from Atlanta, and that is a very short distance in a big section of the country as far as business is concerned, with constant communication, many daily trains, air mail, airplanes, paved roads, and so forth, constituting very close communication, and, to be perfectly frank, I think that anything outside of the Federal reserve district should be the exception rather than the rule, and they should be measured very carefully.

Mr. Strong. Your idea is, then, that the territory covered by each Federal reserve bank could very fairly constitute the trade areas of

the nation?

Mr. OTTLEY. I think that should be the basis. I am perfectly frank on that.

Mr. Strong. How many States are there in your district?

Mr. OTTLEY. Well, we have all of Georgia, all of Alabama, all of Florida, a part of Louisiana, a part of Mississippi, and east Tennessee-

So that we have in whole and in part, six States.

Mr. Strong. Then your idea would be that the Atlanta bank should be allowed to have branch banking to cover those six States? Do you not really relieve, with the advantage you have secured by the building of your group, that if branch banking were allowed and limited to all of the sixth Federal reserve district area, your group would dominate and control the banking of the sixth district in the course of time? I ask you that as a fair proposition.

Mr. Ottley. Well, I am too modest a man to agree to that.

Mr. STRONG. Would you set aside your modesty by saving what

you think would be the situation 25 years from now?

Mr. OTTLEY. I will be perfectly frank with you. There is another banking institution, with headquarters at Savannah, that has a large branch, as I pointed out, in Atlanta, and that has branches in the State. It is a large and successful institution. Then there are banks in other cities, such as in Birmingham and in New Orleans, and they are large banks, that have the capital and the experience to establish branches if branch banking should be allowed, and I do not think there would be any basis for thinking that either the First National or any other bank would dominate the banks in so large a territory as the sixth Federal reserve district.

In other words, I think that competitionis the life of trade, and banking is to-day, I believe, one of the most highly competitive businesses we have and I do not see any reason to suspect or to suppose

that there would not be a number of different systems.

Mr. Strong. But you have destroyed the competitive feature of banking in Atlanta and in the trade area served by your group banks, have you not?

Mr. Ottley. I beg your pardon; we have not.
Mr. Strong. You then think that there would be probably five or six groups dominating in the sixth Federal reserve district?

Mr. Ottley. Yes, sir.

Mr. STRONG. Do you not really think that if combinations in banking result in better banking, less overhead expense, and so forth, that eventually those six groups will get together-and I am

taking a term of years-and that they will say that in the interest of reducing overhead costs, better banking and better facilities, it would be a good think for them to unite their banks through mergers and to have one or perhaps two banks? Would not that naturally

occur to them as proper?

Mr. Ottley. Mr. Chairman, I am not a prophet or even a son of a prophet, and as to what will happen in 25 years I have not even a remote forecast, but, having been in the banking business all my life, and having had to fight for everything that either I personally or my bank has gotten, and looking at other lines of business, it is my opinion that whenever profits in any line of business are sufficiently great, that that will produce competition.

Mr. Strong. How long have you been in the banking business?

Mr. Ottley. I am ashamed to tell you—all my life.

Mr. Strong. How long have you been actively engaged in the banking business?

Mr. Ottley. Forty years in Atlanta.

Mr. Brand. Prior to that time, what experience did you have as a

banker?

80 am

Mr. Ottley. I started in the Boatmen's Bank, as a boy, in St. Louis, and cashier in a country bank in Mississippi. Then I came to Atlanta in 1890 with the same bank with which I am now connected.

Mr. Strong. What position did you first take?

Mr. Ottley. I started in what was then the American Trust & Banking Co., as assistant cashier, which was the bottom office in the

Mr. Strong. And how many banks have you now in your group?

Mr. OTTLEY. Eight.

Mr. Strong. When did you commence to expand in that group? Mr. Ottley. We started our expansion about eight years ago, with branches in Atlanta and in that vicinity. Within a year ago this last January, we started-well, several years ago we acquired one in Macon-but last year we acquired part of them and the last one about three months ago.

Mr. Strong. For 32 years, then, you were a unit banker in Atlanta?

Mr. Ottley. Yes, sir.

Mr. Strong. And for eight years you have been a branch banker and a group banker?

Mr. Ottley. Yes, sir. Mr. Strong. During those eight years, you have gotten together eight group banks with 10 branches, comprising 18 banking institutions?

Mr. Ottley. Yes, sir.

Mr. STRONG. That has occurred in eight years?

Mr. Ottley. Yes, sir.

Mr. Strong. I was just going to suggest something that might seem to you a little foolish, namely, what would happen in 25 years. It might be said that I could make predictions ahead for 25 years with some degree of safety from the fact that I do not expect to be here 25 Years from now, and that I run no danger of being confronted with the charge that I was a false prophet, but, if you should continue at your present rate for 25 years, at the same ratio, do you not believe You will cover your whole Federal Reserve district?

Mr. OTTLEY. Why, Mr. Chairman-

Mr. Strong. I am not saying it would not be to the advantage of the district, but I am asking you if you do not think that is reasonable?

Mr. Ottley. Suppose that is true. The point I intended to convey and would like to convey now, is just what the First National Bank could do, there is nothing to stop anybody else from doing.

Mr. Strong. I appreciate that.

Mr. OTTLEY. And there are, at the present time 16 branches, owned and operated by State banks in Georgia, independent of the First National Bank of Atlanta and the national bank in Savannah.

Mr. Strong. But it is generally admitted that if Congress should permit national banks to override State lines, the State banks will probably go out of business or convert to national banks, because they would only have the right to have branch banking within the State. But the proposition proposed now is to have branch banking within Federal reserve districts and even in your district that would cover six States, which naturally represents a very large handicap on the State banks and I think would cause them either to go out of business or change their charters to national bank charters, so that gradually State banks, with the group banking, and chain banking, will be eliminated and you will have, in the sixth Federal reserve district, and may be one and maybe four or five systems of large branch banks established.

Now my idea is that it might become an advantage to those three or four or five groups to say, "Here; there is no use of our fighting each other for business. Let us merge into one or two groups with a

friendly working relation with each other."

Would they not dominate and control the money and credit of that

district if that should happen?

Mr. OTTLEY. Mr. Chairman, I would say that there is nothing at the present time to prevent, by law, the consolidation of all of the banks in a given city into one bank, even under the unit system.

Mr. Strong. That is what I am getting to.
Mr. Ottley. I mean now. There is nothing to prevent that at all.

Mr. Strong. You think that would be desirable?

Mr. OTTLEY. I do not, but I do not think there is anything to prevent it, and I think that it would not be desirable. I believe that bankers in any city, if they were reasonable, intelligent-and certainly if they were intelligent enough to be in the banking business in this competitive day-would realize that that was not good business-not good for the public-and it is my humble thought that what is good for the public in the end is good for the banks, and what is not good for the public in the end is not good for the banks, because they are, to say the least, in my judgment, at least semipublic institutions and I do not know of any city in which that has happened.

I do not believe that in any city of any size that will ever happen because, if you should take 10 banks in a city and consolidate them into 1, overnight there would be another, another, and another.

Mr. Strong. You do not think it would be a good thing to allow two or three groups to control the money and credit of your district?

Mr. OTTLEY. When you have two, you have competition in banking, but, Mr. Chairman, I should like to say this, that I do not think there is any more likelihood of those groups combining than there would be of unit banks in the several cities in that district combining. Mr. Strong. Yes, but they told us when we passed the McFadden bill there would not be any likelihood of anyone wanting to extend branch banking outside of the city where located. They said there was no need of it, and that it was simply wanted within the city within which the parent bank happened to be located, to meet the competition of State banks, but we have found they were mistaken or insincere.

You do not think it would be a good thing for this Federal reserve district—and naturally that would apply to the people and districts all over the country—to have its money and credits controlled by

two or three groups in those six States?

Mr. Ottley. What I should like to say for the record is that definitely I think it would be a very bad thing for the money and credit to be controlled by one group.

Mr. Strong. Yes, sir.

Mr. Ottley. But now, when you come to the question of three, why I do not know that I would be so sure of that.

Mr. Strong. You would not be so sure if it was only two?

Mr. Ottley. In other words, this is just my opinion expressed to you in an effort to meet your question fairly. It is my opinion that, with the number of strong individual unit banks in the sixth Federal reserve district, if you announced branch banking tomorrow within Federal reserve district lines, you would likely have half a dozen right now.

Mr. STRONG. But you do not think one would be a good thing?

Mr. OTTLEY. No, sir.

Mr. Strong. Then, do you think Congress should pass laws preventing, through group banking or any other form of banking, the amalgamation or the merger of those groups in those districts, or if you do not think so, what restrictions do you think we should pass?

Mr. Ottley. I think in the interest of the public there should certainly be restrictions or if they got below a given number, either the Comptroller of the Currency or some governmental agency should have discretion to stop it; in other words, I come back to my original Proposition that I do not think it should come down to one. I think it should be confined to two or more.

Mr. Strong. I am advised that Mr. Luce has to attend a meeting,

and I shall yield to him at this point.

Mr. Luce. I thank the chairman for his courtesy in yielding to me.

I see, Mr. Ottley, by Exhibit C, which is the statistical exhibit relating to your statement, that the Trust Co. of Georgia owns all, of the stock of the First National Associates, and the First National Associates own a controlling interest in the stock of eight other banks, and in turn the Trust Co. of Georgia stock is held by the trustees for the benefit of the shareholders of the First National Bank. That brings the control of this whole set-up to the First National Bank.

Much criticism is being expressed of the complicated arrangements, by which it turns out, in the last analysis, that a few men or one man may control a network of corporations, which makes it difficult for investors to understand the true situation and is thought by some

to endanger minority holders.

What is the reason for this complication in your case?

Mr. Ottley. Well, in the first place, by law a national bank can not own stock of any kind. The Federal reserve bank stock, I understand, is the only stock permitted by law for a national bank to own; so the idea of this set-up or similar set-ups—it can be done in several different ways—the main idea is to maintain the same list of shareholders in the First National Associates as are maintained in the banks. Consequently the only certificate of stock that is issued is the stock of the First National Bank, and there is an indorsement on the back of it showing that the shares of the Trust Co. of Georgia are held for the beneficial interest of the shareholders in the First National Bank.

Mr. Luce. If the results not contemplated by the existing law are secured in this fashion—without raising any question of whether such evasion of law is reprehensible or not, but assuming for the moment there is nothing questionable about it—do you not think that the existing law should be changed so as to get rid of these complications?

Mr. Ottley. I am very frank to say to you that I think—as far as my opinion is worth anything—that it should be changed to simplify the situation and that the interests of the country and banking would be best served by permitting branch banking. That would simplify the very things to which you refer.

Mr. Luce. That would not, of itself, remove this pyramiding of corporations nor meet the view about protecting the rights of minority stockholders.

Mr. Ottley. I hold no brief for the particular form of this. As a matter of fact you probably noticed in my paper that I stated if we are going to progress, instead of the holding company being a subsidiary company, it is my opinion that it would be simpler for the holding company to be the major company and for that company to own directly the stocks of these other institutions.

Mr. Luce. Has this title "Trust Co. of Georgia" any significance in the word "trust"?

Mr. Ottlev. Yes sir; that has, for the reason that that Trust Cowith its capital of \$2,000,000 and surplus and undivided profits of \$2,946,000 is what its name implies; that is, it is the first trust company organized in the State of Georgia and the business of that company is confined strictly to trust business and exclusively that business.

Mr. Luce. Do your other banks turn over to it all the trust business

or do they continue to do a trust business?

Mr. Ottley. Under the law, the First National Bank, by approval of the Federal reserve board, has trust powers. If you come into the First National Bank with a trust business you are referred to the Trust Co. of Georgia. If you say for any reason, "I prefer to have a national bank act as my executor, trustee, etc.," why, we say, "All right." But what I mean is that the First National Bank, while it does a banking business, has two vice presidents who are trust officers, in addition to being vice presidents. If anybody insists or prefers a national bank to handle their trust business, we do it. But the Trust Co. of Georgia does a trust business.

Mr. Luce. Will you tell us about the relations between the Trust Co. of Georgia and the First National Co., which, I take it, is a

securities company?

Mr. Ottley. Yes, sir; the First National Co. is a securities company and they do the usual business done by such companies connected with banks throughout the country.

Mr. Luce. Does the Trust Co. of Georgia, having at issue the dis-Posal of \$1,000,000 say, that has been turned over to it in trust-does 1t, itself, continue to buy securities, or does it turn to the First National Co. and have the First National Co. buy the securities?

Mr. Ottley. The First National of Georgia is not engaged in

either the purchase or sale of securities.

Mr. Luce. What do they do with their money?

Mr. Ottley. They simply invest it. When I say purchase and sale, I mean that in the proper sense; that is, they do not do any trading. They make loans on real estate and own certain bonds, and employ their capital to earn an income on it in addition to the income which they receive from the trust business proper. But so far as the Purchase and sale of securities to the public are concerned, that is conducted by the First National Co.

Mr. Luce. Suppose some industrial amalgamation is in progress In New York and you are notified of a chance to participate. Who

furnishes the money?

Mr. Ottley. The First National Co. Mr. Luce. Where do they get it?

Mr. Ottley. If they have it themselves, they use their own money. If they need additional money, they are in a position to borrow it and

Mr. Luce. Does the First National Bank, for example, get a chance to get into this distribution, through the First National Bank of

Atlanta?

Mr. Ottley. The profit on the transaction you referred to in the last few moments is earned by the First National Co., which, in turn, at the end of the year, is the same thing as the First National Bank, since it is all one. But I mean the bank does not engage in those participations. They are handled by the First National

Trust Co.

Mr. Luce. My questions are directed to find out how this situation meets the charge that when securities of less assured safety are assued in New York and distributed throughout the country, banks in such places as Atlanta are virtually compelled to take a share in that issue, through the probability that if they decline because their own judgment is against it, they will not have a chance in other distributions; and the further charge that where there are these combinations, it is possible for a bank which does not readily sell this or that type of securities, to work them off by investing them in trust funds which have been put at the command of the bank.

Do I make myself clear?

Mr. Ottley. Yes; you make yourself clear. In answer to your Question I would say that the First National Co. is organized and does the business to which you refer. Now, if that company should acquire securities that they could not sell and should go ahead and invest in them assets which they hold for trust purposes, they would be doing that certainly contrary to law and contrary to the custom in this institution as well.

Mr. Luce. Now, a final question-

Mr. Ottley. Just one minute further: You have a member of your committee here who is a lawyer from Georgia who will tell you that the law is very specific as to what can be done unless authorized under the will.

Mr. Luce. We have been confronted this year by the tangled situation of a joint stock land bank in Kansas City-and by the way, I would say for the benefit of the committee, a full statement of the proposal by the stockholders in that matter is printed in this morning's United States Daily-and in that situation the trouble arose from the opportunity of the management to invest in doubtful securities, indulge in promotion and to resort to various types of questionable banking.

That naturally prompts us to examine bank set-ups to see if they furnish the same opportunity, regardless of whether they are in

righteous hands.

Now, let me turn to the last institution on this sheet, the Atlanta Savings Bank, which seems to have deposits of only \$58,258. I am unfamiliar with the situation of savings deposits in the South. Will

you explain why that is so trivial?

Mr. Ottley. Yes, sir; I shall be glad to. The Atlanta Savings Bank has a very old charter; it was originally chartered by the Legislature of the State. It does not solicit deposits and the nominal amount of deposits are simply deposits to comply with a decision

of the Supreme Court of Georgia.

The business of the Atlanta Savings Bank is strictly confined to the lending of money on real estate by way of mortgages for itself and for its clients. Those clients are individuals, but very largely represent life insurance companies. They represent, as loan correspondents, several life insurance companies, the custom being that in some of the cases they make the loans out of their own funds and they present them to the life insurance companies as completed transaction tions. But they do not solicit deposits and I hope I have made myself clear that they simply accept, as a matter of fact, a few deposits to comply with a decision that was rendered by the Supreme Court of Georgia quite a number of years ago. They are not in the deposits business. The real estate mortgage loan business is their real business.

Mr. Luce. If a wage earner in Atlanta wishes, against the needs of sickness and old age, to lay aside a few dollars every month to

put in some bank, where does he go?

Mr. OTTLEY. The First National Bank. There are several strictly savings banks in the city and, in addition to that, the commercial banks all have savings deposits.

Mr. Luce. What is the customary rate of interest you are paying? Mr. OTTLEY. The rate of interest of the First National Bank is 3½ per cent per annum.

Mr. Luce. Are those funds separated in any way from the other

funds of the bank?

Mr. OTTLEY. No, sir; they are not.

Mr. Luce. Has it ever been discussed in your neighborhood that the savings of the poor deserve particular protection?

Mr. OTTLEY. Well, of course, that matter has been discussed from time to time-certainly in print-at various times by different people.

Mr. Luce. Does it seem to you proper that we should permit national banks to mix the funds of those depositors with those put in by men engaged in commercial enterprise who are, as a rule, in a much better position to hazard the risks of a commercial bank?

Mr. OTTLEY. Well, I think that is a question perhaps not as simple as it sounds, for this reason, that you take a large number of people of very small means that carry their accounts in what are termed straight checking accounts; that is to say, they are on deposit subject to check, people who carry their household accounts and have them immediately available. There are really thousands of that type of people and they do not receive any interest on that at

all on those small accounts subject to check.

Theoretically it would seem, at first blush, that your question would indicate that the savings accounts were those of the poor or of very moderate means. On the other hand, the savings deposits, by dollars, are not represented by people such as you would imagine, but they are the thrifty people. Corporations have surplus money from time to time and in order to produce interest they will put it into a savings account to draw 3½ per cent interest. So, I would say that the major portion of the accounts, not necessarily by numbers, but by dollars, are represented by owners other than the class of people that you Particularly have in mind, but that taken into consideration and to come out with a clear, flat answer to your question, I would say that if customers were dealing with a national bank, they should all be treated alike and particularly the man who has \$100 and comes and Puts it to his account subject to check and does not draw interest on it, with the man who puts \$100 in a savings account and draws interest on it which, in another way of speaking, means that one man is depositing money and another man is lending it. I do not think there should be any difference between one class of customers and another class.

Mr. Luce. I should like to pursue the inquiry, but I must leave. I will simply say that your point of view is not that of the law-makers in my own neighborhood for in New England we find a trust company compelled by law to segregate its savings deposits, although next door a national bank, which is beyond the reach of a State legislature, allowed to mingle those deposits. Our belief is that

savings have a peculiar sanctity and should be segregated.

Mr. Strong. Mr. Wingo has an engagement that is pressing and will yield my questioning to him in order to permit him to question the witness before he has to leave.

Mr. Wingo. As I understand it, your holding company or parent

company is the Trust Co. of Georgia?

Mr. OTTLEY. No; our holding company is the First National Associates.

Mr. Wingo. And all of the stock of that is owned by the Trust Co.

99 rer Mr. OTTLEY. Yes, sir.

Mr. Wingo. So at the top of your structure is the Trust Co. of Georgia, which owns all of the stock of the First National Associates, and the First National Associates, in turn, own a controlling interest in the different unit banks that compose your group?

Mr. OTTLEY. That is correct. Mr. Wingo. That is the structure?

Mr. Ottley. On the other hand, the First National Bank, I really would take it, is the head, in that that is the stock held by the public and the ownership of the Trust Co. of Georgia stock is indorsed on that certificate, so the shareholders really own the First National Bank and likewise the Trust Co. of Georgia.

Mr. Wingo. Well, in other words, your corporation at the head the Trust Co. of Georgia—its shares are owned by the shareholders of the First National Bank?

Mr. Ottley. Yes, sir.

Mr. Wingo. And the connection is not a corporate connection; it is the similarity in identity of the stockholders?

Mr. Ottley. Yes, sir.

Mr. Wingo. As far as the corporate identity is concerned, the prima facie one is the Trust Co. of Georgia whose stock is owned by the First National Associates, and the First National Associates is the corporation that owns the controlling stock in the different small corporations that constitute the unit banks in your so-called group?

Mr. OTTLEY. Yes, sir.

Mr. Wingo. Do you find that structure gives you effective control of the different unit banks?

Mr. Ottley. Yes, sir.
Mr. Wingo. And you are enabled to dominate those banks so as to protect your shareholders against improvident loans by the small banks constituting your group?

Mr. Ottley. I do not know whether you were here when I read

my original paper.

Mr. WINGO. No; and I have not read it all. The point I want to get is this: Here is a proposition that you have set up there-

Mr. OTTLEY. I think I can tell you in one second what I think you want to know and that is that in those affiliated banks, each one of those banks has an officer of the First National Bank as a director in that institution. Next, we have a vice president who gives his exclusive time to-

Mr. Wingo. If you will pardon me, you have set all this out in your previous statement. The record shows it. My question is bottomed upon what you said before; that is, you have found, by practical experience, that the set-up which you explained, and the connection by which you dominate and control these unit banks, has been effective in practice to the extent you have protected your stockholders in the parent association against improvident management of the individual units of your system.

Mr. Ottley. Yes. Mr. Wingo. Nothing but necessity puts you in the group banking business. If you had been authorized to conduct branch banking within trade areas, you would be engaged in that?

Mr. Ottley. Yes, sir.

Mr. Wingo. Do you regard branch banking as the most efficient and economical method of banking?

Mr. Ottley. Yes, sir. Mr. Wingo. You were one of the receivers of the Witham chain banks that failed a few years ago?

Mr. Ottley. Yes, sir. Mr. Wingo. How many banks were in that chain? Mr. OTTLEY. Somewhere between 100 and 200. Mr. Wingo. How many States did they cover?

Mr. OTTLEY. They covered Georgia and Florida and I think perhaps some in New Jersey and some in New York.

Mr. Wingo. They were scattered around considerably and they were not confined to any particular trade area, were they?

Mr. OTTLEY. No.

Mr. Wingo. They failed, did they not?

Mr. Ottley. A great many of them did. All of them did not. Mr. Fenn. Did you say they all failed?

Mr. OTTLEY. No, sir.

Mr. Fenn. Pardon me; I did not hear the witness's answer.

Mr. Wingo. How many failed?

Mr. Ottley. Well, I have not the record on that, but I would just simply say two-thirds of them failed.

Mr. Wingo. Approximately—that is all I wanted.

Mr. Ottley. Two-thirds to three-quarters.

Mr. WINGO. And the rest of the pins in that alley would have fallen down if you, as receiver, had not taken hold of them? I think that is a fair way to put it—that the pins were falling down and when twothirds of them fell down they were put into the hands of a receiver

and you took charge as receiver?

Mr. Ottley. I should like to refresh your memory on that, or at least state exactly what happened. I was not receiver of the Witham banks. They were never put into the hands of receivers, but what they did was they had a concern known as the Bankers Trust Co., and the Bankers Trust Co. went into the hands of receivers and I was one of the three receivers.

The Bankers Trust Co. did not own a control in these banks, nor did they have stock in a great many of them, but their method of Operation was simply a contractual relation; that is to say, this Bankers Trust Co. made a contract with those banks for a compensation of so much a year to act as what they termed fiscal agents and the Bankers Trust Co. was the concern that went into the hands of

Mr. Wingo. And you were one of the receivers of that concern?

Mr. Ottley. Yes, sir. Mr. Wingo. That is what you might call the parent corporation of that chain?

Mr. OTTLEY. Well-

Mr. Wingo. Either by ownership of stock or by being tied up by contract, they controlled them?

Mr. Ottley. It was not by ownership of stock but by contract. Mr. Wingo. In some cases they owned controlling interest in the stock?

Mr. Ottley. I do not know. So far as that is concerned, I doubt if they owned the control of a single one of the banks; and if they did, it would be probably only one.

Mr. Wingo. But they owned considerable stock?

Mr. Ottley. Not so much. The founder of that system organized a large number of those banks himself.

Mr. Wingo. He owned quite a large portion of the stock in each one of them, did he not?

Mr. OTTLEY. Yes.

Mr. Wingo. At any rate, that was known as a chain banking

Mr. Ottley. That was known as a chain system; yes, sir; but it hardly could be called strictly a chain system. In a sense it was rather unique and in a class by itself; in other words, a chain, group, or branch system, as I understand it—and I suppose you do—means

ownership. This was rather a peculiar banking system. banker conceived the idea of just simply establishing these banks and making contracts to supervise them for a consideration. was the main method. It was not by ownership,

Mr. Wingo. In other words, it was an operating control and not

an ownership control?

Mr. Ottley. Well, now, when you say an operating control, I should like to go into that a little further. I am trying to give you a clear picture of it. These banks made a contract with the Bankers Trust Co., we will say, as financial agent for which the bank agreed, on the one hand, to pay a cash consideration per annum and, on the other hand, this Bankers Trust Co. agreed to do certain things, which were to audit the banks and borrow money for them and assist them in investing money when they had a surplus, and so forth. So far as the control is concerned, they did not have control and, if I may make myself clear, there was nothing in the contract that gave them the control. The control remained with the board of directors.

Mr. Wingo. Technically; yes. I am speaking about the substance of the thing. That is one reason why they failed. The people regarded it as a chain, dominated by one man or one group, and when they saw one link in the chain break, they started a run on the rest

I am talking of the psychology of it and not of the technical feature of it. They knew the corporations belonged to one group or one chain and they got afraid because one link had broken or proven defective and that precipitated the run.

Mr. Ottley. That is the general impression.
Mr. Wingo. That is the danger of chain banking, is it not?

Mr. OTTLEY. Yes.

Mr. Wingo. You are opposed to chain banking?

Mr. Ottley. Yes, sir. Mr. Wingo. You think it is unwise, unsound, and uneconomical?

Mr. OTTLEY. I do.

Mr. Wingo. You regard the branch banking system as the most economical system that can be established?

Mr. OTTLEY. I do. Mr. Wingo. What, in your judgment, as a practical banker, experienced in banking in that part of the country of which your city is about the hub, in the South Atlantic States-in your judgment, in what size community can a unit bank be operated profitably? What is the minimum size community?

Mr. Ottley. I think the population would not be so good a measure

as deposits. Mr. Wingo. Of course there are exceptions, but as a general rule, there is a fairly uniform relation between population and banking resources in business. It may be a very strong community financially and otherwise, but taking it by and large over the South Atlantic States, there is a relation between population and the banking done. In your judgment, what would be the size of community better served by a branch than by an independent unit bank, from the standpoint of population?

Mr. OTTLEY. You have propounded a question that would take just a little thought. Now, about your population, I think as to the unit bank, the population would have naturally a bearing but at the same time the question of the business of the surrounding or subordinate territory of that town also has a bearing; that is to say, if you have a purely agricultural territory, with no manufacturing or no diversification. I think all those questions have their bearing.

Mr. Wingo. In other words, you think it is easier to maintain a unit bank system in a community, even if it is small, if the business is diversified than in a larger community if the business is not

diversified?

Mr. OTTLEY. Yes, sir.

Mr. Wingo. In the last analysis, does not the question of the maintenance of any bank on a profitable basis depend upon two things—one, the available business, and the other, the ability and character of the management? Can an independent unit bank thrive if the public has no confidence in the ability and character of the management, whereas, in the same community or maybe a smaller community, a unit bank would thrive if there was a complete confidence in the ability and integrity of the management? Does not the personal equasion count more in banking than in manufacturing?

Mr. Ottley. I think so.

Mr. Wingo. Because you depend, for the greater amount of your capital, on the deposits?

Mr. OTTLEY. Yes, sir.

Mr. Wingo. And deposits depend on confidence?

Mr. Ottley. Yes, sir. The deposits unquestionably depend largely upon confidence.

Now, the question about your loans, is a very important but still

a very different matter.

Mr. Wingo. Do your constituent banks, your different units—make loans upon the shares of stock of either the First National Bank or the Trust Co. of Georgia or the First National Associates?

Mr. Ottley. The trust Co. of Georgia occasionally has made, and occasionally does make, loans upon stock of the First National Bank.

That is the only transaction of that kind which we make.

Mr. Wingo. Take one of your small individual unit banks tied up in your corporation—we will call it a constituent member of your group—does it make loans upon the shares of stock of either the Trust Co. of Georgia, the First National Associates—either one of those two?

Mr. OTTLEY. There is only one exception to the rule that they do

not that I should like to make off the record.

(Discussion off the record.)

Mr. Wingo. Under the law, your banks can make loans upon the stocks of each other?

Mr. OTTLEY. Under the law they can.

Mr. Wingo. And in at least one instance they have done it—without giving the name in your answer?

Mr. OTTLEY. That is correct.

Mr. Strong. I want to go back, Mr. Ottley, to the line of questions I had adopted. I believe we had reached a point where you thought, in order to keep branch banking from being controlled by one or two groups in the Federal reserve districts, that Congress should pass some law preventing it.

If we should have branch banking throughout the Federal reserve districts, there should be some law to keep them from being reduced to one or two groups?

Mr. OTTLEY. I am free to admit there should be a law to prevent

them from being reduced to one group.

Mr. Strong. Do you not really think if there were two groups and the dominating minds of the two groups belonged to the same club, the same church, and went with the same crowd, they would be very apt to consult with each other and plan with each other and a borrower who would want a large line of credit would discover that those two gentlemen would agree between themselves as to how much they would give him if they gave him anything at all? Do you not know they would consult together as two managers of two great combinations?

Mr. OTTLEY, I think it is perfectly reasonable they should and I

think they would.

Mr. Strong. They would work together if there were two; they would consult together, because they would work together?

Mr. OTTLEY. I presume so.

Mr. Strong. Do you think there should be some law to prevent holding companies from dominating branch banking groups in two of more Federal reserve districts?

Mr. Ottley. Well, the idea I have, Mr. Chairman, as outlined, is

trade areas.

Mr. Strong. You would not let any one who controls banks in one trade area go over and control banks in another trade area?

Mr. Ottley. That is correct.
Mr. Strong. You think that would be bad?

Mr. OTTLEY. Yes, sir.

Mr. Strong. What is the most northerly State in your district?

Mr. Ottley. Tennessee. Mr. Strong. You think they should go into Tennessee in your district but not into Kentucky?

Mr. OTTLEY. I would think, judging from Atlanta, Kentucky

would be out of the trade area.

Mr. STRONG. You do not think they should be allowed to go out of the trade areas?

Mr. OTTLEY. No, sir.

Mr. Strong. Governor Young, when before this committee; thought or said it was his opinion that within 50 years we would have nation-wide branch banking, evidently realizing the human desire to dominate and control would want to step across those trade Do you think there is any danger of that?

Mr. Ottley. I have just said, Mr. Chairman— Mr. Strong. Yes; you think it should be kept to trade areas. Mr. Ottley. In my opinion it should be kept within trade areas. Mr. STRONG. And your idea is that we should say they may have

trade-area branch banking but not let them set up branches in other

than their trade areas? Mr. OTTLEY. That is right. I made the slightest exception. I am more familiar, naturally, with the sixth Federal reserve district-You stated that Tennessee is the northern State within our boundaries and I said going into Kentucky would be out of the trade area of Atlanta. You took, for instance, as I said, the hardest nut the committee will have to crack, which is the trade area. Georgia goes right up to the South Carolina line.

Mr. Strong. I know.

Mr. OTTLEY. I think the trade areas should be restricted to the sixth Federal reserve district, and if anything over that it should be the exception and should be passed upon by the Federal Reserve Board or the Comptroller of the Currency.

Mr. Strong. Whatever trade areas we set up, they should be ab-

solutely kept within them?

Mr. OTTLEY. Yes. Mr. STRONG. Why?

Mr. Ottley. Because of just what apparently is in your mind about the absorption of credit and money in this country into the hands of

a few. If you did that, you would have 12-

Mr. Strong. Your idea is if we do not maintain 12 Federal reserve districts outside of which branch banking shall not reach or extend from one district to another, there would be a danger of monopoly of Mr. OTTLEY. Yes, sir.

Mr. Ottley. Yes, sir.
Mr. Strong. You think it would be all right to have a monopoly of money and credit inside of the Federal reserve districts?

Mr. OTTLEY. The monopoly would be divided by 12, to say the least, in the first place, and in the second place, I am not in favor of a monopoly in the sense of one banking combination or two-

Mr. Strong. But if you are afraid to let them overlap from one Federal reserve district to another because of the fear of monopoly of money and credit in the United States, are you not afraid of monopoly of money and credit inside of the Federal reserve districts?

Mr. OTTLEY. Personally, I am not.

Mr. Strong. You would not be afraid if you were the man in

Mr. OTTLEY. Mr. Chairman, I do not mean that.

Mr. Strong. If you knew that the man in control was able and

honest and competent, you would not be afraid?

Mr. Ottley. I would not want one individual of any kind in control.

Mr. Strong. But you do not think two is bad?

Mr. Ottley. I think it would be better if there were three or four.

Mr. Strong. But you are not afraid——Mr. Ottley. I can give you a picture along that line, and that is this: You take in the smaller towns, if you had half a dozen groupsbranch or group or any other system—a number of those small towns in the rural communities would not support more than one bank under any circumstances, and it would not make any difference whether you had five or six or a dozen.

Mr. Strong. Do you not know, as a matter of fact, when you have but one bank in a town, it pretty much dominates and controls the

business of that town?
