BRANCH, CHAIN, AND GROUP BANKING

House of Representatives. COMMITTEE ON BANKING AND CURRENCY, Tuesday, February 25, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order.

This is the beginning of the hearings on the subjects of branch, group, and chain banking, authorized under House Resolution 141, reported by the Committee on Rules February 3, 1930, and passed by the House on February 10, 1930. So that the record may be clear, the clerk will insert this particular resolution in the minutes at this point unless there is objection.

(The resolution referred to is here printed in full, as follows:)

Resolved, That for the purpose of obtaining information necessary as a basis for legislation the Committee on Banking and Currency, as a whole or by subcommittee, is authorized to make a study and investigate group, chain, and branch banking during the present session of Congress. The committee shall report to the House the results of its investigation, including such recommendations for legislation as it deems advisable.

For such purposes the committee, or any subcommittee thereof, is authorized to sit and act at such times and places in the District of Columbia, whether or not the House is in session, to hold such hearings, to employ such experts and such clerical, stenographic, and other assistants, to require the attendance of such witnesses and the production of such books, papers, and documents, to take such testimony, to have such printing and binding done, and to make such expenditures as it deems necessary.

The CHAIRMAN. I would like to say at the outset that this is an important study, and a valuable amount of material will be accumulated during the course of these hearings, and the chairman would like, so far as possible, to keep out extraneous matter and to keep the course of the hearings along the lines of the subjects immediately before the committee.

Of course, as the hearings go along they can not be indexed, but when completed I hope to have a proper index made as to both subjects and persons so that any one who reads or wants to study these hearings may do so with very little trouble as to reference.

I would like to say also at the outset of these hearings that I am going to invoke the rules of the House in the conduct of these hearings and, so far as possible, as the various witnesses appear, I am going to suggest that they be permitted to make an uninterrupted statement of their position, and then, with the cooperation of the committee, I am going to try to work out a plan of questioning by the members in regular order. In that connection, after each member has had an opportunity to interrogate the witness, I am going to suggest that we have more of an open forum if additional questions are necessary. I hope that when the members of the committee

want to interrupt a witness they will first address the chairman of the committee and secure such permission. I think that program will tend to smoothen procedure in the committee and make clearer what is taking place, and, so far as possible, I wish the members of the committee would make notes as the witnesses bring questions to their minds, and then propound those questions when they have the opportunity.

I wish it were possible for us to have agenda prepared in advance. of the subjects to be covered, but this matter is pretty well defined and under the rule we are kept strictly to the subject, so that the probabilities are we will be able to get along nicely without that.

Now, if any members of the committee have any suggestions that will tend to make these hearings run along smoothly, I would be very

glad to have them at the outset.

Mr. Luce. In support of the program that the chairman suggested, I want to ask the permission of the committee to read two or three sentences from a letter that I received from ex-Governor Benjamin Strong, of the New York Federal Reserve Bank.

Governor Strong not only had a most beautiful character, but he was one of the most efficient men that ever came before this committee, and I think we all came to trust and admire his judgment.

In one of his periods of convalescence, he wrote me a letter regarding his own experiences before this committee, in which he made certain suggestions, and one of the things he said is this:

It has seemed to me in all cases where I have appeared before a committee of Congress that much time was wasted and the opportunity to obtain much valuable material was missed by the failure to have agenda in the hands of both members of the committee and those appearing before the committee, so that the witnesses' statements would be consecutive and comprehensive on the one hand, and so that questions by the members of the committee would be directed at the particular part of the subject being discussed. Repeatedly at these hearings questions have been asked me relating to subjects other than those which were in my mind to discuss but for which I had already made preparation, thus interrupting the narrative, so that once or twice it has only been resumed at a later hearing, sometimes a day or two deferred.

Governor Strong then went on to contrast that with the method used in an intricate and important hearing in London, where he appeared before nine members of a commission, the chairman being a member of the House of Commons. In the course of this, he said:

As there were three of us appearing at the same time, we specified just when questions would be asked, in order that consecutive statements might not be interrupted, and when the question period arrived, the chairman first completed all the questions which he desired to ask and for which he had made notes, and then in turn called on each member of the commission to ask his questions for which he had made notes. At the conclusion of these nine series of questions a somewhat more informal discussion took place when questions were asked promiscuously, all however directed to the particular subject we had just discussed, and under the control of the chairman there was no interruption until the particular line of questioning then under way had been concluded.

Then he says that-

This particular hearing involved a subject of great complexity; in fact, some very obscure monetary questions indeed, and yet our appearance, which involved hearing three people, was certainly concluded in less than half the time required for my own statement alone at the hearing in Washington, and I confidently believe that the results in the more compact form in which they were so produced were of greater value than when interlarded with a vast amount of immaterial and irrelevant discussion.

I present this consideration, sir, from a man of wide experience in these matters, from the point of view of the witness; and the value of such procedure to the committee and to others is apparent.

So I express my own gratification that your program is to be as

announced.

The CHAIRMAN. Are there any other comments by the members

of the committee?

Mr. Beedy. As long as we have witnesses before the committee, I shall not make any further suggestions, but I had mapped out a plan of segregating and grouping our witnesses which I should like to submit to the committee; but perhaps we can do that later in executive session.

The Chairman. We now have before the committee Hon. J. W. Pole, the Comptroller of the Currency, as the first witness. In accordance with my previous statement, I understand that the comptroller has prepared himself to make an uninterrupted statement, after which he will submit to questioning.

Now, Mr. Comptroller, make yourself comfortable and entirely

informal, and be not afraid.

STATEMENT OF HON. JOHN W. POLE, COMPTROLLER OF THE CURRENCY

Mr. Pole. Thank you. I appreciate the action of the committee in permitting me to make this statement uninterruptedly, and, in view of its length, I will beg the committee's indulgence, but by reason of the great importance of the subject I feel that I could not say less.

The CHAIRMAN. Before you proceed with your statement, may I ask if you will embody in your statement a repetition of your recom-

mendations contained in your last report to Congress?

Mr. Pole. There will be a reference to them, but not a repetition. The Chairman. I am going to suggest, because of the importance of that recommendation, that it be placed in the record at this point.

Mr. Pole. That is my first suggestion, Mr. Chairman.

The CHAIRMAN. All right, sir.

(The recommendation referred to is here printed in full, as follows:)

LEGISLATION RECOMMENDED

The experience of the postwar period has been of sufficient duration to permit a comprehensive appraisal of the effect of the new economic and social conditions upon our system of banking. Briefly stated, it, may be said that banking is following in the wake of the trend of business in general toward larger operating units with stronger capital funds and more experienced and highly trained man-The natural result has been that the larger cities are being favored with banking organizations of great financial stability with the capacity to render

a better and more diversified type of service.

In the principal cities, therefore, in various parts of the country, there have grown up through mergers and through increases in the variety and volume of business banking institutions which for strength of capital and management technique were unknown in the pre-war period. There have been no failures of any of these types of metropolitan banks. They are giving the general public a safer and higher type of banking service than has hitherto been known. Their stability rests upon the great diversity of banking business to which they have access and to the further fact that they are able to secure the most highly trained and experienced talent. These banks comprise both unit and branch banking institutions.

The aggregate of all the banking resources in the United States is about \$72,000,000,000, held by a little more than 25,000 banks (as of June 29, 1929), but 250 banks hold resources to the aggregate amount of approximately

\$33,400,000,000.

While the largest and strongest banks with the bulk of the banking resources are in the large cities, about three-fourths of all the banks in number are in the smaller towns and cities and may be classed as country banks. It is these banks which serve directly the agricultural communities. They operate with small capital funds and are very much limited in their ability to employ a trained management. The economic developments of the postwar period have had the effect of decreasing the opportunities of these banks to operate with profit and it is this situation to which I should like to direct your most serious consideration.

We are faced with the fact that during the 9-year period from July 1, 1920, to June 30, 1929, inclusive, about 5,000 banks, nearly all in the agricultural communities, closed their doors and tied up deposits of approximately \$1,500,000,000.¹ These failures have not been limited to any one section of the country, although they have been most prevalent in the agricultural districts. Up to November 1, 521 banks with deposits of about \$200,000,000 had suspended during the year 1929. The number of failures by States during the fiscal years ending June 30, 1921 to 1929, inclusive, is as follows:

As will be observed from the foregoing table the failures of State chartered banks greatly outnumber those of the national banks, but small national banks have not been immune to the conditions which are causing the failures of small country banks generally. As an illustration of the wide scope of this economic condition, it may be said that in seven States over 40 per cent of all the banks in existence in 1920 have failed and in six States between 25 and 40 per cent. In 26 States, or more than one-half the total, over 10 per cent of the banks that were in operation in 1920 have since failed. When it is considered that no

¹ These figures embrace only those banks which actually went into the hands of receivers. They do not include about 500 banks which suspended business but were later reopened after reorganization, often resulting in depositors and shareholders voluntarily suffering some loss.

important failures have occurred among banks in the larger cities, the ratio of

failures in the country districts is even higher.

We have, therefore, a strong contrast between city and country bank operans. Whereas the depositor in a large city bank, whether a wage earner or a business man, has had full protection, the depositor in the small country bank has suffered severely from the inability of so many of these banks to meet their deposit liabilities. The farming communities have not been afforded the protection for their savings which has been available to depositors in the large cities.

It is cause for immediate concern that the operating conditions faced by the country banks show no prospect of improvement under the present system. There are many country banks now operated at a loss and many others operating upon earnings insufficient to justify their capital investment. There is not available to me the earning statements of State banks, but taking the national banks as an illustration and the year 1927 as a typical year (later earning figures not being compiled) 966 national banks operated at a loss and an additional 2,000 earned less than 5 per cent. These constituted about 38 per cent of all national banks in the United States.

Comprehensive study of the banking situation for the past nine years clearly indicates that the system of banking in the rural communities has broken down through causes beyond the control of the individual banker or the local community. These causes are of a basic nature and have many ramifications throughout the great economic and social changes which have occurred in the United States since 1914. I shall not attempt in this report a detailed analysis of this situation except to say that the economic movement away from a large number of independent local utility and industrial operating units toward a stronger and more centralized form of operation in the large cities has curtailed the opportunities of the country bank for diversity and extension of business while broad-

ening those opportunities for the large city bank.

Any attempt to maintain the present country bank system by force of legislation in the nature of guaranty of deposits or the like, would be economically unsound and would not accomplish the purpose intended. If in the free course of business the country bank can not successfully operate as an independent banking corporation, affording ample protection to its depositors and its stock-holders, the obligation and responsibility is upon the Government of the United States, at least so far as the national banks are concerned, to set up a system of national banking which will insure the rural communities against the continuing

disastrous effects of local bank failures.

There have been no general financial panics in this country since the warthanks to the Federal reserve system. Any bank can have access, directly of Any bank can have access, directly or indirectly, to the benefits of the Federal reserve system to the extent of its sound commercial and business loans and the decline of the country banks has taken place notwithstanding the valuable assistance rendered by the Federal reserve A Federal reserve bank is not charged with the responsibility of preventing bank failures. It is beyond the power of the Federal reserve system, as it is beyond the power of any governmental agency, to stand between these

banks and insolvency.

In the absence of legislation to remedy the conditions above described, private enterprise has within recent months undertaken to meet the economic situation presented by the growing isolation of the country banks. Local holding companies have been formed in many sections of the country for the purpose of bringing together a number of banks into a single operating group. The usual procedure is for the holding company, a State corporation, to purchase a majority of the stock of several banks, one of which would be a large city bank which in effect becomes the parent bank of the group. The management personnel of the central bank becomes in practice the responsible management for the entire Through such a group system it appears to be possible to make a close approach to a form of branch banking whereby each operating unit leans for support upon the central bank, or upon the holding company, and receives the benefits of its moral and financial support; its prestige and good will; its extension of the wider type of banking service; and the benefits of its highly trained management.

This holding-company movement is of such recent development that complete statistics are not yet available as to the number of companies in operation or the number of banks taken over. It appears that in many cases some of the most responsible bankers and business men of the community have been instrumental in the organization of these holding companies and this it would seem is a sufficient indication of the seriousness of the purpose behind the movement. However, these holding companies are attempting to do under the sanction of

existing laws, which are crudely adapted to the purpose, what should be made possible in a simpler manner by new legislation. If branch banking were permitted to be extended from the adequately capitalized large city banks to the outlying communities within the economic zone of operations of such banks, there would be no logical reason for the existence of the local holding company and it would give way to a system of branches operated directly by the central

bank of the group.

These conditions would seem to warrant a further amendment of section 5155 of the Revised Statutes of the United States as amended by the act of February 25, 1927 (U. S. Code, title 12, sec. 36), known as the McFadden Act, to permit national banks, with the approval of the Comptroller of the Currency, to establish branches within the trade areas of the cities in which such banks may be situated. These trade areas may in some cases be coextensive with Federal reserve district lines; in other cases they may be of a more limited extent, but in my judgment they should not extend beyond Federal reserve district boundaries, except to take care of a few exceptional cases where a trade area may extend from one Federal reserve district into another, nor should a bank be permitted to establish a branch in another city in which there is a Federal reserve bank or a branch thereof.

Under such a system of branches there would gradually be extended to the agricultural communities from the large city banks a safe and sound system of banking which would render remote the possibility of bank failures. There would, however, be no compulsion upon unit banks to enter a branch organization. The two systems of banking—unit banking and branch banking—would no doubt operate side by side for an indefinite length of time; that is to say, there would be in every rural section some unit banks well organized, competently managed, and held in high esteem by the community which would con-

tinue to operate advantageously

These suggestions for branch banking are made not with the intention primarily to deal with the question of the decline in the number of national banks through defection from the national to the State systems, but rather as a remedy for what appears to be a serious and fundamental weakness in our systems of banking both national and State. Such a grant of power to the national banks would, however, give them such an outstanding operating advantage that it would seem reasonable to expect that the exodus of banks from the national system would practically cease and that many now under State supervision would

return to the national charter which they have forsaken.

Any such legislation, based not upon the theory of equalizing the national with the State bank charter powers but giving a real advantage to the national charter, would be fully justified under existing conditions which seriously jeopardize the maintenance of the national banking system. The State legislatures have for years given to the State banks operating advantages which the national banks did not possess and it is in this situation that we find the motive for the abandonment of national charters. There is appended hereto a list of 127 large national banks which have within the past 10 years given up their national charters for the purpose of operating under State charters.

Many smaller national banks during this period also relinquished their charters to go into the State system, but the foregoing list includes only banks of the metro-

politan class.

Following the approval of the McFadden Act (act of February 25, 1927) several large State banks were converted into national banks, but this gain has been far more than offset by the recent great loss of national charters. Boards of directors of banks and their stockholders, in giving consideration to the question of whether the corporation should operate under the national or the State charter, are not moved by questions of sentiment or patriotism. The fact that a national bank is an instrumentality of the Federal Government designed to fulfil certain public purposes does not seem to be considered an operating advantage to the bank. The corporation must in the nature of the case be moved almost solely by consideration of the most profitable use of the capital invested in the enterprise. In other words, the question of the choice of charter presents to the corporation a

business proposition. In the history of banking in the United States since 1863 banking corporations have switched from State to national and from national to State charters as the business advantages lay with the one or the other. From the standpoint, therefore, of the operating banker the grant of the wider branch banking powers to national banks would be considered by him as an invitation to enlarge the sphere of his business operations to the greater advantage of his stockholders.

The Government of the United States, as distinguished from the national banking corporation, would be concerned primarily with the question of strengthening the national banks as Federal instrumentalities and with the establishment of a sound system of banking throughout the United States. Under the existing trend with the operating advantage in favor of the State banks the development is in the direction of 48 separate and distinct systems of commercial banking each under the supervision, control, and direction of a separate State government with

a corresponding disappearance of the national banks from the field.

It has been said that this situation does not present any cause for concern for the reason that the Federal reserve system which embraces State banks in its membership has made the national banking system unnecessary. The Federal reserve act, however, did not set up a system of banks in the United States. It did set up a system of coordination of bank reserves and a flexible currency, which operate advantageously for all banks. The approach to equalization between the State and national banks afforded by the Federal reserve system does not involve a rearrangement of charter powers but an extension of the privileges and the benefits of the Federal system to State chartered banks. If therefore, in addition to these privileges which they derive from the Federal Government, they secure from their respective legislatures charter powers giving them certain operating advantages over national banks, the Federal reserve system thus becomes indirectly the means of forcing national banks to take out State charters.

The announced legislative policy of the so-called McFadden Bank Act of February 25, 1927, was parity between the national and State systems. The purpose of the bill was to make the charter powers of national banks approximately equal in operating advantage to those of the State banks. Nearly three years of operation under that act has demonstrated that it has failed of its pur-

pose in this respect.

The theory of parity between the two systems of banks is, in my opinion, economically unsound. Commerce is interstate and is recognized by the Constitution of the United States as being fundamentally a national question. One of the primary purposes of the national bank act of 1863 was to establish a sound and uniform system of commercial banking throughout the country in order that commercial transactions growing out of the production, the manufacture, and the transportation of goods and commodities from one section of the country to the other might not be hampered by local banking legislation but should have access to a system of banks operating under Federal authority and supervision under a single set of rules and regulations and statutory enactments in order that the free flow of commerce should not be embarrassed by a multiplicity of restrictions having their origin in local political conditions.

The proposal for the extension of branch banking which is here made would have the direct effect of establishing a strong system of banks in the rural districts and indirectly it would lead to the gradual restoration of the national banks as

the primary system of commercial banking in the country.

While it would seem to be to the interest of the local bank holding companies to convert their groups of banks into branches after the enactment of legislation as above outlined, there might possibly still remain in operation some of these local companies and some of a wider regional operation. In view of the fact that such companies are outside of all jurisdiction of the Federal Government and that they would be in a position to dictate the policies and operations of such national banks as they controlled through stock ownership, I further recommend to the Congress an amendment to the national banking laws which will bring the operations of such bank holding companies under some degree of Federal supervision where they own the majority of the stock of more than one national bank and a further amendment to safeguard the additional shareholders' liability which each such bank holding company incurs through the ownership of the shares of national-bank stock.

The Chairman. I understand that my recent annual report to Congress will be placed in the record and I shall attempt to refrain from repeating the data given therein. In that report attention was

drawn to a condition in our system of bank organization which appears to require legislation to protect the interest of the public. It should, however, be said at the outset that there seems to be no need for emergency legislation but rather for an attempt to reach a normal and fundamental solution.

I will submit for the information of the committee copies of three formal addresses which were made by me last year, namely, the Demand for Professional Bank Management, delivered before the Ohio Bankers' Association, Columbus, Ohio, February 12, 1929; Banking and the New Finance Era, before the Maryland Bankers' Association, Atlantic City, May 23, 1929; and The Need of a New Banking Policy, delivered before the convention of the American Bankers' Association, San Francisco, October 2, 1929. These are marked "Exhibit A," "Exhibit B," and "Exhibit C," respectively.

I shall not attempt to elaborate further the facts which I have given relative to bank failures except to bring some of the figures down to date. In several parts of the country more than one-half of all of the banks in existence in 1920 have closed their doors and many of those which are left have little likelihood of success under present conditions. If such a condition of affairs were localized, that is to say, were confined to one particular section or subject to the conditions of one particular industry, general conclusions would no doubt be unjustified, but such is not the case. During the last 10 years and continuing at the present time bank failures have been a blight in the Mississippi Valley, the South, the Southwest, and Northwest. There are agricultural counties in which every bank has failed. In many cases it has been necessary to assess shareholders in order to keep banks alive and it has often happened that a failure occurred after as many as three such assessments had been paid in vain. The hardship which these failures have imposed upon depositors and upon those who invest their money in country bank stocks, over such a wide geographical area, is an indication that there is something seriously wrong with the system of banking in the rural districts. Surely a great country like ours should not permit the continuation of this suffering on the part of that element of the population least able to bear it if it lies within the power of the National Government

The views which I bring before this committee are not primarily the result of recent research and the collection of information. I was myself a country banker. Later, as a national-bank examiner and as chief national-bank examiner, it became my duty to examine the affairs of hundreds of country national banks. For more than 20 years I have been in daily and intimate contact with the operations of our banking system. No one knows any better than I do that there are still strong and profitable country banks, and if I had any prejudices they would naturally be in favor of the system of unit banking to the sustenance of which I have been devoted for so many years. It is with great reluctance that I have slowly come to the conclusion that our small independent unit country banks are no longer fulfilling the purposes of their creation and that there is need for a better, sounder,

and stronger system.

In order to avoid the impression that I am interested only in the national banks in this discussion, may I take this occasion to emphasize the fact that the statements I have made with reference to bank fail-

ures apply with equal if not greater force to State banks? The conditions which rural banking faces in the United States are the same for both national and State banks, and, as between the two, the statistics will show that the national banks have shown the stronger resistance in the ratio of approximately 3 to 1 during the last nine years. I am confident that your committee will have before it in the course of these hearings ample information which will lead to the conclusion that notwithstanding the fact that it is still possible for many country banks to operate successfully, the system under which rural banking as a whole is carried on does not provide a sufficient safeguard either to the depositors or to the shareholders nor does it offer a type of banking service adequate for modern conditions.

Many of the strong and well-managed country banks have found it necessary at times to discontinue making loans and to build up and carry large cash reserves for long periods of time. Due to the fear of "lack of confidence" and in their efforts to be prepared to withstand sudden withdrawals, some of these banks have restricted their operations to such an extent that they are of little benefit to the community in which they are located, and in some communities have practically ceased to function. Such banks are necessarily experiencing difficulty in earning a sufficient amount to cover

operating expenses.

We are faced with a banking situation which applies almost entirely to the rural districts, although it should be borne in mind that there are also a considerable number of small banks in the larger cities, particularly in the outlying districts. There were on June 30, 1929, in the United States, 24,912 incorporated banks. Of this number 20,008 were situated in cities of 10,000 population or less. In other words, more than four-fifths of all the banks in the United States are situated in small towns. The average capital of these banks is about \$44,000 and their aggregate capital about \$881,000,000. They are all small banks.

I shall submit in this connection, marked "Exhibit D," a statistical table by States showing the distribution of banks in cities of 10,000

population or less as of June 30, 1929.

It is among these small banks that most of the failures have occurred. Figures have not been compiled for the entire decade but for the eight-year period, ending with 1927, 71 per cent of the banks that failed, national and State, were capitalized below \$50,000 each and 88 per cent under \$100,000. By far the largest number of failures occurred among banks having \$25,000 capital or less, these constituting 63 per cent of the failures. The number of failures for this period was 4,513. These figures are embodied in a chart which I shall submit, marked "Exhibit E."

As to the places in which these failures occurred, 2,039—that is to say, a little over 40 per cent—were situated in towns and villages of population less than 500 persons; an additional 1,006, or 20 per cent, failed in towns having between 500 and 1,000 population; an additional 964 banks, or about 20 per cent, failed in towns of from 1,000 to 2,500 population; an additional 584 failures occurred in towns from 2,500 to 10,000 population. In other words, about 92 per cent of the failures were in places having less than 10,000 population. Reference is again made to the fact that there are also a number of banks of

small capital in cities above 10,000 population, failures among which go largely to make up the remaining 8 per cent of the total failures.

I feel quite certain that the figures for 1928 and 1929 will upon analysis disclose a situation equally as unfavorable as that of the previous eight years.

I have a charter, "Exhibit F," showing these figures.

During the last decade there were no failures in that class of banks known as metropolitan banks having a capital of more than \$2,000,000. There were three failures of State banks and one national bank in the million-dollar-capital class, namely, the Trement Trust Co., Boston, Mass., capital \$1,309,000, deposits \$15,472,000, which suspended in 1921; the Citizens Bank & Trust Co., Tampa, Fla., capital \$1,000,000, deposits \$13,737,000, which suspended in 1929; the City Trust Co., New York, N. Y., capital \$1,225,000, deposits \$7,482,000, which suspended in 1929; and the Exchange National Bank, Spokane, Wash., capital \$1,000,000 and deposits \$11,717,000, which failed in 1928.

In this connection I desire to state that I am using the term "failure" as synonymous with the term "suspension," although these two terms are not always so used. The statistics of the Federal Reserve Board for bank failures are based upon suspensions; that is to say, a bank suspends when it is unable or unwilling longer to keep open its doors for carrying on the business of banking. It sometimes happens that such a suspension is followed by a reorganization of the bank or a rejuvenation of its capital structure with the result that the bank is able to resume business. However, in many such cases both the shareholders and the depositors are called upon to make voluntary sacrifices in order to avoid a receivership with a resulting burden of loss as great as in some other cases where a receiver is appointed. On the other hand, the office of the Comptroller of the Currency many years ago adopted the practice of listing as a failed bank only those for which receivers have been appointed and leaving out those which have been restored to operations after suspension.

For the purpose of this discussion the Federal reserve figures present a more accurate description of the situation. The two systems of statistics, however, cause certain variations in figures compiled by the Federal Reserve Board and by the Comptroller of the Currency,

respectively.

Attention is particularly directed to the circumstances that the failures of country banks is not embraced in a period of time which has been closed and upon which we may look only in retrospect. This error has been made by many writers in making reference to the 5,000 bank failures as though the failures arose out of some past condition, the chief significance of which is to furnish an argument for or against a system of banking. It is true that this period had a somewhat definite beginning which appears to be coterminus with the war period and is no doubt related to many of the changes in our social and economic life caused directly or indirectly by the war. Unfortunately, the period in which these failures have occurred and are occurring has not been brought to a close. In the year 1929 there were 640 bank failures in the United States causing the tying up of about \$234,000,000 of deposits, the greatest of any year in the decade except 1926. During the first seven weeks of 1930, there have been

155 additional failures. In other words more than 10 years after the war we are still in the midst of a continuation of a condition which is causing small banks to fail. The 9-year period ending with December 31, 1929, witnessed 5,640 bank failures with aggregate deposits of \$1,721,000,000—scattered very largely throughout those small cities of less than 10,000 population to which reference has been made. Of this number 4,877 were State banks and 763 were National banks. I have not the figures for the actual and final losses to the depositors in these banks. Many of them are still in process of liquidation.

I shall submit as a part of my statement a table compiled by the Federal Reserve Board, January 28, 1930, marked "Exhibit G," which gives the bank suspensions by Federal reserve districts, 1921–1929, showing the number of banks, by districts, each year and the deposits

of each.

There has been prepared for the use of the committee a chart showing the operating profit and loss of all national banks in the United States, by States, for the year 1927, and there are in course of preparation other charts which will be submitted within a few days, giving the operating profit and loss of all national banks for the year 1928. I have made a study of these preliminary figures and they will undoubetdly emphasize the operating difficulties confronting

the small banks.

Your committee knows that a supervisory bank official is always reluctant to close a bank. He would naturally like to see no bank failures. The Comptroller of the Currency goes to the utmost lengths within his power and responsibility—having regard first for the depositors of the bank—to prevent a national bank from failing, and the State bank supervisors naturally have the same attitude toward State banks. Were this not the case and did the Comptroller of the Currency simply as a matter of machine routine permit national banks in bad condition to drift into insolvency, and did the State supervisors take the same attitude, there would, or course, be a great many more failures added to those already recorded than we have seen.

In considering the great flood of statistical information which must be studied in order to discover the causes and effects of bank failures there is the danger of losing sight of the human and social aspect of the situation. Every bank failure presents a distinct phenomenon to the local community. It is a local dramatic event. Whereas the supervising official may in many cases not be surprised that the bank has failed and the executive officers of the bank and perhaps the local board of directors have been struggling for months or years to keep the bank open, the actual failure comes as a complete surprise and a shock to the depositors and in most cases to those shareholders who are not officers or directors of the bank.

There is no more distressing sight than a group of citizens, men and women, clamoring before the closed doors of a bank bewailing the loss of their savings. These losses fall upon the best and most substantial citizens in the community and many of them never recover their previous financial condition. Multiply this local event by nearly 6,000 and scatter it throughout the great agricultural States of the Union and the magnitude of its effect reaches astound-

ing proportions.

It is estimated that 7,264,957 depositors have contributed to the great total of more than \$1,700,000,000 of deposits in failed banks during the past nine years and that no less than 114,000 shareholders

have suffered losses through these suspensions.

A similar adverse effect is had upon the borrowers of a bank which fails. When a receiver is appointed his duty is to wind up the affairs of the bank and to enforce liquidation. Many of the borrowers may have been doing business with the bank for years and may have been upon intimate terms with the officers of the bank. This is especially true of the so-called character loans where the bank takes an interest in a person who has good character and good prospects but weak in collateral and who is accommodated each year or from time to time covering a considerable period. The character and reputation of such person may be unknown to other banks; therefore, the credit standing of this class of borrower for the time being is destroyed. The receiver must demand payment and if payment is not made he must institute suit and prosecute the case to judgment in order to gain as much as he can for the depositors. Notwithstanding every means is employed to soften the blow which the community has sustained, this enforced liquidation in country banks works a bitter hardship upon the borrowers—the very type of borrowers which it has been claimed the unit system of banking is particularly designed to protect. Failed banks in the United States have caused within the last nine years the enforced liquidation of approximately two billions dollars of loans-chiefly small loans.

Many causes have been assigned for these bank failures; in one section droughts, in another insect pests, in another failure of the cattle market, in another a drop in the price of wheat, and so on. A great many failures have been attributed to mismanagement, incompetent management, or criminal management; some banks have been closed on account of single cases of defalcation and robbery; another cause assigned is that too many rural bank charters

have been granted.

While these various factors may have been the immediate occasion for the closing of these banks they do not indicate the basic cause. If one observes the same type of small country bank, situated in various sections of the country, unable to keep open its doors one naturally would seek the reason for the general condition. Can not the basic cause be found in the great economic and social changes which have come over this country within the past 15 years—the war period and the postwar period? We have witnessed a revolution in the method of transportation and communication in the rural districts. Local communities which were at one time economically and socially independent have been put upon arterial highways which have drawn them close to the larger cities. It is now impossible for the country bank to gain that diversification in the banking business which was possible a few decades ago. The business of the small city is becoming more and more an adjunct of the business of the larger commercial centers. Opportunities for independent local financing are becoming fewer and fewer. The commercial business and the trust business are going to the large city bank. The country bank is left largely with real estate and small local loans.

If therefore these fundamental conditions have caused the business of the small bank to shrink to the point where it becomes unprofitable for the bank to operate we are met with a basic condition which can not be cured by palliatives. Several remedies have been proposed to meet these conditions, the principal of which I shall here discuss.

The remedy most frequently suggested as a protection to the depositor is some form of guarantee of bank deposits. This guarantee may take the form of compulsory insurance for the payment of deposits or compulsory contribution on the part of all banks to pay deposit losses in failed banks or a direct governmental guarantee under which the taxing power of the State would be used to pay losses to depositors in failed banks. Several of the States in the Union have enacted guarantee of deposit laws but in every case the operation of

the law has proven unsuccessful.

A system of banking with a deposit guarantee superimposed upon the local bank by governmental authority under which some other instrumentality than the bank itself undertakes to insure the safety of deposits, will not prevent the local bank from failing if it can not maintain a successful operation as a business enterprise. If local economic conditions are unfavorable to such a bank and if the loans are not properly made or become frozen after they are made with reasonable care, the bank will have to close its doors. No system of guarantee of deposits under such conditions will serve to keep the bank open. In other words, whereas a system of guarantee of bank deposits might theoretically give the depositor a 100 per cent protection against loss in case of the failure of the bank such a system can not be said to be a remedy for the failure itself.

In the case where the burden of the system of guarantee of bank deposits has been carried by the banks themselves, the result has been that the strong and successfully operated banks have been compelled to assume liability for deposits in weak and unsuccessfully operated banks—a responsibility which the stronger banks were compelled to

assume without any power to protect themselves.

It has, I believe, been suggested that the Federal Government, in so far as national banks are concerned, undertake to set up some system of deposit guaranty in order to protect the depositors from the unsuccessful bank administration, either through a governmental subsidy or through a guaranty to be met by the Federal reserve banks. While I have not seen a formulation of such a plan it would appear that any such guaranty would be subject to similar objections to those heretofore adopted by the States. Laws involving the guaranty of deposits of State banks have been in operation in Kansas, Mississippi, Nebraska, North Dakota, Oklahoma, South Dakota, Texas, and Washington, but, with the exception of Nebraska, I understand, such laws have been repealed.

A member of this committee has introduced a bill providing for compulsory insurance for the shareholders' liability in national banks. This is a different question from the guaranty of deposits and I take it that this measure is designed to meet only one particular weakness in our banking system, namely, the frequent inability of the shareholder to meet the financial liability to the creditors of the bank imposed upon him by law to the extent of 100 per cent of the par value of his stock. I shall not attempt here to enter into a discussion of this measure but I wish to make some general observations on the

question of shareholders' liability.

The provisions of the national bank act fixing the individual liability of shareholders were enacted in 1864 as a part of the original act. It fixed the individual liability in an amount equal to the par value of the shares held. In other words, the amount of the liability has no relationship to the question of book value or of market value of the shares. This individual liability therefore is not equivalent to the value of the investment of the shareholder in the stock but

simply to the original amount paid in by him.

This additional individual liability was designed as a protection to the creditors of the bank but not as a full protection. For example, where the deposit liability of the bank is in proportion to capital of 10 to 1 it will be readily seen that the additional liability was not designed as a guaranty of the payment of bank deposits. The bank with \$100,000 paid-in capital and \$1,000,000 of deposit liabilities would carry an additional individual liability upon its shareholders of only \$100,000. To take an extreme case, if all of the capital and all of the deposits were wiped out by losses, the individual liability if realized in full would net the depositors only 10 cents to the dollar.

It may have been the presumption of the original framers of the national bank act that all the shareholders of the national banks would be persons of substance fully competent to discharge this individual liability. Otherwise it would seem that the act would have provided some safeguards to preserve and maintain it. Apparently it was not foreseen that the shares of national banks would find their way into the hands of persons who were financially irrespon-Neither was it foreseen that bank stocks of the large city national banks would be actively traded in on the securities markets by investors who had no personal relationship to the bank and little or no thought of their individual liability when they purchased the shares.

As a practical matter the question of enforcement by the Comptroller of the Currency of this individual liability has been confined during the past 65 years almost entirely against the shareholders in small country banks. Most of the shareholders resided in the rural communities and were small business men or farmers. In winding up the affairs of 815 national banks the records of the comptroller's office show that an average of 48.29 per cent has been collected from shareholders under their individual liability. These figures do not include numerous cases of assessments against shareholders

to restore the impaired capital of going national banks.

I may take this occasion to say that the enforcement of the individual liability against national bank shareholders is one of the most disagreeable duties which the Comptroller of the Currency is called upon to perform. These shareholders invest in local bank stocks upon the assumption that it will be a profitable enterprise. Some of them even feel that the Government of the United States is responsible for the operations of national banks. Many of them have no appreciation of the responsibilities which they incur under the individual liability clause. When therefore they have lost their original investment and they are called upon to pay in an amount equal to the par value of their stock a great hardship is incurred. In numbers of cases farms have been sold or mortgaged and whole families driven into bankruptcy through the enforcement of the individual liability.

It would seem therefore that the individual liability of the share-holders of national banks has been an inadequate protection to the depositors and where enforcement has been attempted, a great hardship upon the shareholders. Under a system of national banking created and supervised by the Government of the United States should not both the shareholder and the depositor enjoy a greater

security?

Several students of the banking situation, recognizing the difficulties under which the small country bank now operates, have suggested as a remedy for the failure of these banks and the improvement of rural banking conditions a Federal statute requiring a minimum capitalization of \$100,000 for national banks and a similar provision by the various States. The theory of this proposal is that such a provision will automatically decrease the number of country banks and will compel the formation of stronger banking institutions. Under this plan if the conventional ratio of 10 to 1 is maintained, there would be no banks in the United States with deposits of less than \$1,000,000. This proposal is open to several serious objections.

Such a plan to be successful would require complete legislative cooperation on the part of the State governments as the minimum capitalization of national banks has always been higher than that required as a rule by the State laws. The present minimum capitalization of \$25,000 for national banks as now required is too high for State banks in many States. In other words, the present capital requirements for national banks has not had the effect of causing State legislatures to require the State banks to adopt a similar standard. On the contrary, Congress, by the act of March 14, 1900, reduced the minimum capital for national banks from \$50,000 to \$25,000, thus lowering the standard toward that of the States.

One of the most natural effects of such an increase to a \$100,000 minimum for national banks would be to cause hundreds of national banks to take out State charters and thus remain in operation. The operating conditions of the banks in the rural districts are the same for both national and State banks and any comprehensive remedy looking to an improvement of the rural banking situation must em-

brace directly or indirectly both State and national banks.

There is another feature of this proposal which must be considered. A banking institution from the standpoint of the investing share-holder furnishes a vehicle for the employment of capital. Such a shareholder is not required to make his investment with patriotic motives or with a desire to confer a benefit upon the community. His motives are the same as those who employ capital in other business enterprises. In other words, he invests his money in bank stock with the expectation of a reasonable return in dividends. From the standpoint of the Government, however, a bank possesses certain public responsibilities which the Governments, State and national, have attempted to establish and protect by statutory enactment. If in pursuance of this aim the Government requires a minimum capitalization too high for profitable employment in a given local community no bank would be operative there.

There are thousands of communities in the United States where banks are now operating which would be deprived of all local banking services if the minimum capital for country banks were placed at \$100,000. This would mean that these local communities would be

put to the inconvenience of going considerable distances, especially in the less densely populated agricultural States. Such as situation would naturally result in hoarding of funds and this would be a backward step in the development of the country. Banking develops business in a community and every community should have convenient access to banking services. In our desire to create a sound system of rural banking we must guard against the establishment of safety at the expense of the convenience of hundreds of thousands of citizens

who ought to have immediate access to banking facilities.

In this connection permit me to survey the distribution of banking capital in the United States. Taking the figures as of June 30, 1929, there were in the United States 5,468 incorporated banks with capital of less than \$25,000. There were an additional 5,357 banks of \$25,000 capital; 6,031 banks with capital above \$25,000 but not exceeding \$50,000; and 1,073 banks with capital above \$50,000 and up to but not including \$100,000. In other words, there were on June 30, 1929, 17,929 banks in the United States capitalized at less than \$100,000 each. The total number of banks was 24,912, which leaves only 6,983 banks in the United States having a capital of \$100,000 and above, and nearly half of these have only \$100,000 capital. As has been shown, practically all of these small banks are in cities and towns having a population of less than 10,000.

The only method by which the minimum capital could be raised

The only method by which the minimum capital could be raised to \$100,000 would be to bring about the forced merger or consolidation of about 18,000 country banks, probably reducing their number to about 6,000. In the absence of branch banking these new banks would be in widely separated communities and that community would be favored in which the bank was actually situated whereas the other communities would have to suffer the inconvenience of traveling to and from a distant bank or suffer the deprivation of all banking services. I will submit, marked "Exhibit H," a table showing the distribution of banking capital of all banks in the United

States.

In discussing the question of the reduction in the number of country banks there should be borne in mind the danger of giving a single local bank a monopoly upon the banking business of an entire community. If we accept the theory that no country bank should possess less than \$100,000 paid-in capital we must immediately face the conclusion that in order to provide enough business to support a country bank of that size it would be necessary in many cases for it to be the only bank in the community. Monopoly of bank credit is more easily attained under our banking system upon a small scale than upon a large one. In a large city there is more likely to be several banks in competition, but the condition has already arrived in several of the small cities where there is only one bank left in the community. This condition never operates to the best interests of the community as a whole. Should we, therefore, adopt the expedient of reducing the number of banks by increasing the minimum to \$100,000, the credit of hundreds of separate communities would be in the control, respectively, of single independent local banks which would operate without any local competition.

In connection with proposed remedies for the country bank situation it may be appropriate here to mention some of the aspects of the relationship of country banks to large city banks as correspondents. There have been certain proposals put forward within recent months which recognize the difficulties which small country banks face in attempting to operate alone and independently, and which suggest as a remedy an intensification of the correspondent system. Under this suggestion the country bank would through voluntary cooperation draw closer to the large city banks and receive from them through conferences and contact of personnel the proper guidance in the direction of safe and sound banking. The technical banking experience and approved metropolitan banking methods and services would be made available to all the correspondents of a given metropolitan bank in so far as the country bank could and would receive them, and the metropolitan bank would, as compensation, in return gain a greater volume of banking business by virtue of the acceleration of the contacts with their country correspondents.

There has grown up over a long period of years the present system of bank correspondents in the United States. As a general rule the country bank is a correspondent of some New York bank, as well as of other metropolitan banks in the large commercial centers. It is a business relationship which facilitates the interchange of credit and, with respect to New York Cicy, large deposits of country banks are from time to time carried with the New York banks for temporary investment. Disregarding, however, the operation of depositing money on call in New York, the normal relationship between the country bank and its city correspondent may be reduced to about four elements: First, the deposit carried with the city bank upon which interest is paid to the country bank; second, the opportunity afforded to the country bank to purchase securities from or upon the advice of the city bank; third, the privilege given the country bank of borrowing from the city bank; fourth, the opportunity afforded the country bank of seeking the direction and guidance of the city bank in questions of bank policy and bank management.

It is the last of these relationships which it is now proposed should be developed more concretely to the advantage of the country bank. In this connection, however, it should be observed that a single country bank may have city correspondents in several cities. To which of these correspondents should the country bank attach itself—to

New York City for example or to St. Louis?

It should also be observed that the correspondent relationship is purely voluntary and therefore not enforceable as a banking policy. There is no responsibility upon the metropolitan bank for the policies and operating methods of its country correspondents. Neither is there any obligation on the country bank to accept the advice of its city correspondent. On the contrary, experience has shown that the country banks feel completely independent of their city correspondents, being free at all times to change from one bank to another. There is more concern upon the part of the city bank to hold the business of its country correspondents than upon the part of country banks to embrace the tutelage of the city bank.

The system of correspondent banks has been in full force and effect throughout the postwar period in which we have witnessed small bank failures at the rate of more than 500 per year. Each of these failed banks was a correspondent of a New York metropolitan bank and of other metropolitan banks. There was no obligation on these city banks to protect the local depositors of their country corre-

spondents and no such efforts were expected to be made. The correspondent relationship is strictly a business transaction in which each party receives some advantage. It can easily be understood how a constructive intensification of this relationship especially upon the side of bank policy and bank management might prove of great benefit to the country banks, but I do not see how the development of such a relationship would prove any positive protection to country bank depositors in case the country correspondent became insolvent. In such a case the burden would have to be borne, as it is borne now, by the community in which the country bank operates. It would not be transferred to the broader shoulders of the metropolitan city correspondent.

The city banks are naturally interested in the policies and management of their country correspondents but the amount of interest taken and the amount of constructive advice given in each case depends upon the value of the account of the country bank. The credit accommodation extended by the city bank is based largely on

the credit balance maintained with it by the country bank.

The remedy most frequently suggested for the failure of small banks is the inauguration of better bank management. The principal advocates of this remedy are those familiar with or engaged in banking as it is carried on by the large city banks. Their study of the small bank situation—especially the small country banks—has shown certain weaknesses in management, such as lack of a sound and definite loan policy; the lack of adequate credit information; the failure to build up an adequate liquid secondary reserve of securities; a lack of adequate knowledge of the securities market; the failure to obtain a diversification of loans, that is to say, too great a proportion of the loans are made upon the same class of security or credit.

No one who has made a comprehensive study of small country banks can deny that the above conditions exist. Their chief significance, however, lies in their comparison with the operations of the metropolitan banks. It has never been convincingly pointed out exactly how these small country banks could adopt these more approved methods of banking. Educational campaigns have been suggested as a means of bringing the situation home to the country banker. In fact, discussion of improving country bank management has been going on for the past 10 years with no very gratifying results.

The truth of the matter is that there has been developed in the United States, under the same banking laws, two definite types of banking, namely, that carried on by the small country bank and that of the large city bank. The independent country bank situated in small towns and villages and serving a limited area, rural in character,

is necessarily restricted to only a limited type of banking.

On the other hand, the metropolitan city bank has become a most complex instrumentality of finance. It does everything that the country bank could do and engages in a multitude of activities besides. It employs a large personnel and establishes different departments each under the administration of an expert in that field. The president of a metropolitan bank is in the position of an executive of a great business, supervising and directing the operations of its various departments.

A mere mention of the departments of such a bank conveys some idea of the magnitude of its operations and of the great diversification of its business. There is the commercial department embracing commercial deposits and commercial loans with ramifications of management and procedure including the work of the loan committee and the executive committee; the savings department which embraces the operations of a savings bank; the trust department with all of its complicated mechanism for the administration of every type of fiduciary business and which has in recent years become one of the major activities of modern city banking; the securities department through which eligible securities are bought and sold—a business which has grown to tremendous proportions since the war; the publicity department which takes care of advertising and of giving the public news from time to time with respect to the operations of the bank; the new business department which centers its attention on the question of new business for the bank in all of its departments; the foreign department which issues letters of credit, foreign exchange and conducts other foreign business; some banks have a women's department and a school-savings department.

How can we compare the operations of such a bank, with resources above \$50,000,000, in addition to its administration of many millions of trust assets, with a country bank of \$250,000 of resources in a town of 1,000 population? To invite the small bank to adopt the efficient methods of the large city bank would be to ask it to lift itself by its own boot straps. As a remedy for country-bank failures the establishment of improved banking methods is theoretically sound but impossible practically of general realization. The business is too small in volume, too limited in diversity, and too circumscribed geographically to create a normal motive for the establishment of

the high type of management possessed by the city banks.

In most of the discussions of branch banking the depositor seems to have been lost from view. It is said that branch banking will lead to a restriction upon local loans—that the borrowers will suffer. To this theory I do not subscribe. It is unreasonable to suppose that banks will make substantial investments in branches without any expectation of developing the business of the branch. This can not be done by draining the community of its cash. It can be done only by rendering to that community a scientifically balanced banking service including the making of loans as well as the receiving of deposits. Doubtless it will be developed during the course of these hearings that there are many instances where the necessities of a community have been such that the funds supplied by the parent bank for loaning purposes have far exceeded those which have been received in deposits.

Certainly it would be possible for the parent bank to develop a diversified banking business to protect it against economic depression in any one locality or in any one industrial activity or business enterprise. I am, however, more concerned with the depositor, especially the savings depositor, than with the borrower, and have therefore approached the question of branch banking as a remedy from the standpoint of safety to the depositor and to the local shareholder. It is the importance of this phase of the question which I

desire to bring before your committee for further study.

There are great commercial centers in the various regions of the United States. In these commercial centers there have been developed great metropolitan banks among which there have been no failures during the period we have under discussion and no depositor in those banks has suffered a loss. The laboring man and the small wage earner in these cities is receiving a stronger protection and a higher and better type of banking service than is possible for the farmers and small business men who must do business with country banks. I have therefore put forward for further investigation and study by your committee the question of the desirability of bringing these country banks into a more direct and closer relationship to city metropolitan banks than is possible under any voluntary extension or intensification of the correspondent relationship. If there is permitted to grow up, through branch banking strong metrolopitan banks in commercial centers outside of New York City with the right to open offices in the rural economically tributary communities, it would naturally follow that in time these small country banks would to a very large extent become branches or offices of such city banks.

In this connection I wish to discuss for a moment the question of the concentration of banking capital in the large cities. Under our present system of banking there has already occurred a concentration of banking capital in the commercial centers and more particularly in New York City. The growth of our cities in population and in commercial importance has naturally led to the growth of larger and stronger banks. But as your committee knows, it is not only in banking that this concentration has taken place, but rather that banking has followed the concentration of capital and centralization of manage-

ment in other fields.

The modern city itself is in a much closer relationship to the outlying territory than was the case a few decades ago when communication and contact were dependent upon horse or intermittent railroad transportation. Each one of us here to-day has witnessed the complete obsolescence of the slow and painful travel by horse on country roads which have been replaced by paved highways radiating in every direction from our large cities, upon which travel automobiles at high rates of speed. Communication by telephone is now almost universal, having largely displaced the slower methods of communication by mail and messenger. I do not wish to take up the time of the committee with a sociological discussion of municipal development, but in considering the question of concentration of banking capital in the large cities it is necessary to consider the new relationship which exists between the city and the rural districts.

There were on June 30, 1929, 76 banks in the United States, National and State, having each a capitalization above \$5,000,000, and there were an additional 335 banks with capital between one million and five millions, making a total of 411 banks above the \$1,000,000 capital class. Under a regional system of branch banking the number of banks in this class would increase through the pooling

of the capital of the smaller banks.

At the present time, as I pointed out in my annual report, 250 banks in the United States hold resources to the aggregate amount of about \$33,400,000,000. This is nearly one-half of all of the banking resources in the United States. Twenty-four banks, National and State, in New York City alone are capitalized at an aggregate of

\$677,014,000 and have combined resources of about \$10,791,448,000. This capitalization of the New York banks is almost comparable in total to that of the 20,008 country banks situated in towns of 10,000

population or less.

A comparison of the banking situation in 1900 with the present shows with what rapidity the United States has developed in banking resources. In that year there were 10,672 incorporated banks of all The aggregate capital was about \$1,150,000,000 and the total resources about \$12,000,000,000—the latter figure being less by more than \$4,000,000,000 than the resources of all the banks in New York City to-day. Within the short period of three decades the banking resources of the United States have increased by 600 per cent. This great development in banking resources is reflected in two aspects; first, in the increased number of country banks which remained small, and, second, in the growth in size and diversification of business of the large city banks. The latter are more prosperous to-day than ever in the history of the country, whereas the country banks are in a much less favorable position than they were 30 years ago. The acceleration of the flow of trade to the large cities has been one of the chief causes of the development of the modern form of metropolitan banking.

THE TRADE AREA

In my annual report I suggested that it might be found feasible to permit national banks to extend branches into the trade area of the city in which they may be situated. I realize that while the term "trade area" itself is susceptible of definition, there may be found some practical difficulties in mapping out a given trade area. Theoretically of course every city, no matter how small, might be said to have a trade area but it would prove no solution at all to the rural bank situation to permit small country banks to establish branches in such trade areas.

The trade area which I have in mind may be called the metropolitan trade area. Such an area would circumstance the geographical territory which embraces the flow of trade from the rural communities and small cities to a large commercial center. Branch banking extended by metropolitan national banks into such a trade area would natural give to these outlying rural communities and

smaller cities a strong metropolitan banking service.

I am not prepared to attempt to arrive at a legislative formula which would automatically delimit all of the trade areas in the United States. It does not seem possible to meet this situation with such a formula. When the Federal reserve act was before Congress a similar situation arose with respect to the Federal reserve districts. In that act Congress did not attempt to define the boundaries of the districts but provided that the districts should be approtioned with due regard to the convenience and customary course of business and that they should not necessarily be coterminus with any State or States. The Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency acting as a committee were empowered to lay out the districts.

The 12 Federal reserve districts thus laid out and the subdistricts within them as established by the Federal Reserve Board constitute

to-day the only areas which have been delimited upon the basis of

the relationship of the flow of trade to banking services.

It may be found advisable to adopt a similar procedure with respect to the present situation if it is determined that national banks shall be permitted to have branches in the rural districts. In this connection the question will naturally arise as to how far the Federal reserve districts or subdistricts are applicable to this question of branch banking.

DECENTRALIZED BRANCH BANKING

It has been urged as a consideration against branch banking that legislation permitting its extension to the rural districts would lead to the concentration of all of the banking capital in the United States in the New York banks and under the control of a compara-

tively small group of financiers.

It might be possible theoretically to conceive of this situation arising if Congress permitted the national banks to engage in nationwide branch banking at the present time, although many students of banking and many practical bankers are of the opinion that even were nation-wide branch banking permitted by law its spread would be a slow development out from the various commercial centers; that the country is too large and its financial operations on too vast a scale to permit of complete concentration in New York City. The banking resources of the United States are constantly increasing as the country develops industrially and commercially. At the present time they aggregate about \$72,000,000,000 and within another decade may approach \$100,000,000,000. With great commercial cities developing in various parts of the country outside of New York, it would seem an extravagant prospect to contemplate the control over these resources within a few hands in a single city.

However, the proposal which I have brought for the consideration of your committee would, it seems to me, clearly tend to decentralize banking capital through a system of regional branch banking. The metropolitan banks in the city of New York have always held a preeminent position and under any system of banking which would follow the normal course of business they will continue to increase in size and influence. Notwithstanding this aspect of the matter, branch banking emanating from commercial centers outside of New York City into surrounding trade areas would cause the New York banks to decrease in relative importance. There would be concentration of capital but it would be a regional concentration with local characteristics. Banks in Detroit, Cleveland, Boston, Atlanta, New Orleans, St. Louis, Buffalo, Minneapolis, and other such local commercial centers would grow into institutions fully capable of taking care of the financial requirements of their trade area com-Instead of nearly all of the largest banks being situated in munities. New York City there would be in every such commercial center banks whose resources would approach or exceed a billion dollars. Instead of being a menace would not such banks become a source of pride to the community in which they are situated, bringing prestige and new business to the city and taking out to the rural communities a strong and highly developed banking service with safety to the depositors there? Would not such a system of branch banking lead to an active

competition for business which would naturally result in the local community obtaining cheaper and better banking service?

8

Some critics of our banking system take the view that we have too many small banks and that one of the chief causes for bank failures has been the issuance of an excessive number of charters by the State and Federal Governments. Theoretically, of course, if no banks were chartered there would be no bank failures. There is no way by which the number of banks can be categorically determined in advance and consequently the laws of all of the States and of the Federal Government have left the discretion to the supervising executive officials. It comes down to a plain question of human judgment. If no more bank charters were issued, for example, in communities where all of the banks had failed the Comptroller of the Currency or the State banking superintendent as the case may be, would have to take the responsibility of denying banking services to such a community even though the new applicants for a charter possess the qualifications required by law and practice to carry on a small bank. In view of this situation it can not be expected of the supervising bank officials to take it into their hands without further legislative sanction to reform the system of banking in the rural communities through the process of denying bank charters. My own point of view is that the rural communities are not supplied with adequate banking facilities. I should like to see the people of every community no matter how small have access to more than one strong bank with the banks competing for business. All persons should have the benefit which comes from a competitive banking service. Our present system of independent unit country banks can not provide Would not the system of decentralized branch banking which I have suggested meet this condition?

GOVERNMENT CONTROL

It is recognized that a system of branch banking such as I have suggested would gradually bring about the development of greater banking institutions in the inland commercial centers and in the larger seaports of the country. These banks would be strong enough to resist the ordinary local causes of bank failures on account of the great diversity of their business. The only danger of failure would be in the management personnel and it is conceded that any bank or any sort of business institution can be wrecked through mismanagement and maladministration. There can be no absolute protection by law or otherwise against this condition. It can, however, be so greatly minimized by governmental supervision that the danger of any such failure will be remote.

Should Congress adopt such a branch banking policy there should be an expansion and an intensification of Government supervision. There would have to be a more constant contact with management policies than now obtains. The number of banks would be less and it would be easier for the Government to supervise and examine more closely and more often the operations of such larger institutions. It should be borne in mind that such a bank would have no difficulty in securing capable management and that it would, on account of the great value of good will, be sensitive to public opinion. It would not wish to encounter the just criticism of a Government official.

Congress has always recognized the necessity of maintaining adequate supervision over the national banks. The Comptroller of the Currency now has sufficient power to supervise the national banks in so far as examination into their affairs are concerned. The time and method as to examination is left to his discretion except that he must under the law examine each bank twice a year. What other powers the Government of the United States should exercise over such larger institutions which would come into existence under the extension of branch banking I am not prepared at this time to recommend, but should the committee desire to go further into this question the office of the Comptroller of the Currency will be at its service.

GROUP BANKING

In conclusion I feel it necessary to make some remarks with respect to a comparatively recent banking development which is coming to be known as group banking. Before proceeding further, however, I think that we should attempt to get down to definitions. In current discussions the terms "chain banking" and "group banking" are sometimes used synonymous and sometimes as opposed to one another. Frequently the phrases "chain and group banking" and "chain or group banking" are used.

The term "chain banking" has been in use for many years in this country to describe a condition in which a number of banks were owned or controlled by the same individual or by a group of individuals. These so-called chains were situated very largely in the rural districts and the member banks of the chain were principally small country banks. This condition was and still is quite prevalent in the agricultural regions of the West and South. Many of these chains have come to disaster through the failure of all of the banks which constituted them. During the many years this type of bank ownership has been in existence it was not considered as a trend toward a fundamental change in our banking system nor did it relate itself to the question of branch banking. On account of the failures of several of these chains the term "chain banking" began to carry

with it an element of disfavor.

The term "group banking" is of very recent origin and is being used to describe what appears to be a major movement in our banking system. The principal factor in group banking is that each group is centered around a city or metropolitan bank through means of a holding company, which owns the majority of the stock of each bank, thereby creating a system of banks more or less integrated in management with the central bank of the group. Its one common factor with the older type of chain banking is that several country banks may be owned by a single agency. In this discussion, therefore, I shall use the term "group banking" to mean the ownership and some element of operating control of several banks through the

medium of a bank holding company.

Official figures have not been compiled which show the number and distribution of these groups. The holding companies are incorporated under State law, and the Government of the United States has no immediate access to information concerning their organization. However, I attach hereto a list of what appears to be the most important corporations which have acquired the stock control of a considerable number of banks and which are operating these banks under

a group system. This is marked "Exhibit I."

From the character and standing of the bankers and other business men engaged in some of the principal groups in this new group-banking movement I have no doubt that they will be able to work out a system which will be profitable to the group company and give a safer and better banking service to the communities in which they own banks than was possible under the system of rural unit banking. For reasons heretofore stated, I am not in a position to give to your committee first-hand and authoritative information as to their operations.

I may say, however, that I naturally look upon this movement from the standpoint of a supervising official of the Government rather than from that of an operating banker, that is to say, I am concerned not with the question whether the movement is profitable but rather whether it is desirable from the standpoint of the public as a system of banking. The movement is new—hardly a year old—and your committee may find that it gives promise of better banking than the system of rural banking now generally in force. On the other hand, your committee may find that this new movement may be regarded as a temporary and transitional development, constitut-

ing a normal prelude or introduction to branch banking.

While perhaps my views may be immature, in view of the lack of opportunity for an exhaustive study of a movement which is so new, I am inclined to the view that group banking under its existing forms 18 not desirable as a permanent system of banking. Where a group 18 composed of both State and national banks, as well as of other types of financial institutions, it becomes practically impossible for any supervising governmental official to ascertain authoritatively and accurately the financial condition of the group as a whole. Each corporation in the group is an independent legal entity, some responsible to State governments, and some, that is, the national banks, to the National Government, while other State bank members of the Federal reserve system are responsible to both State and National Governments, and this creates a situation in which the public is not sufficiently protected, in so far as it can be protected by governmental authority. If a group were all national banks and the holding com-Pany were placed under the visitorial powers of the Comptroller of the Currency it would be possible, although difficult, to supervise the operations of the group. I may say, however, that if the Comptroller of the Currency be given visitorial powers over bank holding com-panies engaged in group banking, the Government would be in a Position to obtain information as to their operations and would be in A better position to regulate and control them by subsequent legislation should such action be deemed expedient.

In the case of branch banking the situation is different. Under the regional plan which I have discussed there would be no need of an operating holding company. The parent bank would be the only corporation in operation and it would have offices in various places within the trade area. There would be only one board of directors and one set of corporate minutes. The formulation and initiation of the policy for the bank would be subject to a single responsibility and the Comptroller of the Currency (or the State superintendent in case of a State branch system) could at any time determine the

true financial condition of the bank with all its branches.

This concludes the formal remarks which I wished to make to the committee, and I desire to express my appreciation of your consideration. I shall be glad to respond to any questions members of the committee may desire to ask, and I shall be pleased to return at any time your committee may desire. I wish also to offer to your committee all of the facilities of my office which may aid you in these

inquiries.

The Chairman. I want to express, Mr. Pole, the appreciation of the committee for your splendid statement. I shall tell you now that the members of the committee will be given an opportunity to ask you questions, and in all probability, after we have had an opportunity to study your statement, we may ask you to come before this In the meantime, we appreciate your offer to committee again. continue to cooperate with the committee as the hearings proceed and give us any advice that may be of help to us.

Mr. Strong, have you any questions you desire to ask of the

comptroller?

Mr. Strong. I regret I was detained and could not get in until late and, consequently, did not have an opportunity to hear what the comptroller had to say. I just heard his last remarks. However, Mr. Comptroller, your belief is that in a branch bank, with one or two hundred branches, you could accurately examine that bank with the force that you have now?

Mr. Pole. I think not, Mr. Strong. The force would undoubtedly have to be adjusted, to any new system of banking, which would create branch systems all over the United States. However, we do examine two banks now with over 100 branches each, quite satis-

factorily.

Mr. Strong. What do you mean by "quite satisfactorily"? You mean to get an accurate estimate and knowledge of their condition?

Mr. Pole. Yes, sir.

Mr. Strong. How many men does it require to do that, where

there are 100 branches?

Mr. Pole. That would depend entirely on the resources of the bank. I could not answer the question without referring to a bank which is in operation, as a branch system.

Mr. Strong. Well, take the Bank of Italy.

Mr. Pole. We examine the Bank of Italy with about 40 men.

Mr. Strong. How many branches has it now?

Mr. Pole. Approximately 300.

Mr. Strong. How long does it take those 40 men to exmaine that bank?

Mr. Pole. It is what amounts to a continuous examination.

Mr. Strong. They are there all the time with that bank and its

Mr. Pole. They are there practically all of the time with the various branches; that is, they go from one branch to another, which practically amounts to a continuous examination.

Mr. Strong. Do you think that is a satisfactory examination, to have to examine one branch and go to another and then to another?

Mr. Pole. That is only part of it. Mr. STRONG. What is the rest of it? Mr. Pole. The rest of it is that when we go to a bank we first send our examiners into the head office and the principal branches and we have a form which is sent out to every branch in that system calling for detailed information as to the operation of that particular branch, which is assembled at the head office, and we use that for the purpose of compiling the main report. Having done that, we visit each branch and check the figures back as of the date of the examination and examine it just as though it were an independent bank. I do not mean to say that it is not difficult. It is difficult to examine an independent bank. But all in all, it must be considered that it is easily possible to examine effectively a bank with 100 branches, but not simultaneously.

Mr. Strong. Well, you say in order to examine them, you have to keep the examiners continuously on the job, going from one branch

to another.

1

ö

Mr. Pole. Correct.

Mr. Strong. Suppose the bank was not in good condition: Would there be an opportunity to pass money or credit from one branch to another and back to the parent bank during the time that these examiners were passing from one bank to another, which you say, takes the entire time?

Mr. Pole. You mean to send money to the head office of another

bank?

Mr. Strong. Do anything to cover up those conditions which you would like to discover—passing credits, money, or anything in the way of securities.

Mr. Pole. I would say not in any material amount.

Mr. Strong. How long does it take one of your men to examine a

branch bank?

Mr. Pole. It would depend entirely on the size of the branch. If it were \$50,000,000, it would take a great many men and a good long time.

Mr. Strong. Are there many branches with \$50,000,000?

Mr. Pole. Yes, sir.

Mr. Strong. How many of them? Mr. Pole. I will say very few.

Mr. Strong. You know what I am trying to get at. I am trying to find out when your examiner goes to the ordinary branch of the Bank of Italy how long it takes him to examine that branch.

Mr. Pole. It is impossible for me to answer that. I do not know what you call an ordinary branch. Some have \$200,000 total resources and some \$10,000,000 or more.

Mr. Strong. You know what you call an ordinary branch, do you

not?

Mr. Pole. I do not know what you call an ordinary branch. You

mean a small country branch?

Mr. Strong. Of course, a small branch bank—one of the branch banks of the Bank of Italy which exist all over California—one of the 300 or more.

Mr. Pole. Mr. Strong, I do not know whether I understand you exactly. Of course, the Bank of Italy has branches all over the State of California, but they vary in size from \$200,000 up.

Mr. Strong. How long would it take to examine one of the banks

with \$200,000?

Mr. Pole. That would depend on its condition.

Mr. Strong. Then you can not give this committee information as to how long it would take to examine one of those ordinary branches of the Bank of Italy-

Mr. Pole. I shall be glad to give this committee categorical information on how long it has taken to examine any one of these branches.

Mr. Strong. You say you have 40 men who are occupied on this examination?

Mr. Pole. Used in an examination of the large California branch systems.

Mr. Strong. Forty men spending their entire time examining the

Bank of Italy, in this continuous examination.

Mr. Pole. You misunderstood me. I said when we come to make an examination of the Bank of Italy, we probably employ 40 men at the start.

Mr. Strong. That is a continuous proposition?

Mr. Pole. Not with the 40 men. May I furnish you with a detailed list of the time it takes to examine each one of the branches and the number of men?

Mr. Strong. I shall be glad to have it.

The CHAIRMAN. Any figures you furnish on this matter will be inserted in the record.

Mr. Strong. The number of men and time it takes to examine each branch of which I understand there are about 400. The point I want to inquire into-

Mr. Wingo. May I make the suggestion before he gets away from the statement? The comptroller spoke about the resources of the branches. I think it might be wise to include a statement of what

he means by "resources," and just what they are.

The CHAIRMAN. Mr. Comptroller, I should like to suggest, apropos of what Mr. Strong said, that you put in a statement of the plan under which the Bank of Italy is being examined by your department, so that the committee may understand just how the examination of one of these large branch banking groups is handled.

Mr. Pole. I understand perfectly, and I shall be very happy to do

that.

The Chairman. Particularly instruction from your office, which

have been set up as a plan for examining these banks.

Mr. Wingo. Might it be well—I do not know whether he wants to do it in response to that statement—but in response to Mr. Strong's question, to show the plan they have perfected; what safeguards they have got, in a practical way, by examining, against, say, a conspiracy of a number of officers or employees—take the Bank of Italy for illustration—covering up a shortage by substitution, or a shifting when you are checking one branch and before the time you get to another branch, and have it there on hand.

Mr. Pole. I understand.

Mr. Wingo. I think possibly a great many men who will read the hearings and a great many of the committee would be interested in knowing, from an economic standpoint, how you have developed a system of examination that guards against that difficulty.

Mr. Pole. Yes, sir.

The CHAIRMAN. Might I further supplement that it would be profitable for the committee if you would make a statement also of your present method of examining other big groups of banks.

Mr. Pole. For instance, the National City Bank of New York. The CHAIRMAN. Yes.

Mr. Pole. Of course the National City Bank of New York is not

one of the groups to which you refer.

The CHAIRMAN. Or a bank similar to that, whose branches are confined to a city, inasmuch as the Bank of Italy is confined to the

Mr. Pole. I understand what you would like to have. You would like to have included the method of examination of the National City Bank of New York, whose branches are confined to the city.

The CHAIRMAN. Or the Chase National Bank. Or any other of the large banks with many branches in one of our larger cities, so that the committee will have an opportunity to know how your examinations are carried out.

Mr. Pole. I will be happy to do that.

(The information requested will be inserted in the record at a

Mr. Strong. My purpose, Mr. Comptroller, in pursuing this line of questioning, is that it seems to be a rather difficult proposition. To put a force of men into the examining of a bank of 400 branches, which would preclude their passing of credits and funds and securities from one bank to another if it was in bad condition and the same was necessary to cover up lack of funds. I do not think, of course, the Bank of Italy is in such bad condition—at least I hope not.

Mr. Pole. No.

Mr. Strong. But here: Take a bank that was in failing condition and was perpetrating fraud and doing all kinds of illegal and unjustifiable acts. Now with a big bank of 400 branches, and you go into its examination with, say, 40 men. One bank examiner will take Ine bank and go to another. That would cover but 40 branches. There will be 360 that will not be visited until the 40 are examined. ot seems to me it would be a rather difficult thing to detect any illegal operation of that bank which was going on. That is the reason I am approaching the question, which it would be very interesting to have your conclusions on, together with a statement as to the method of conducting the examinations. I have not had an opportunity to hear your statement and I would like to waive further cross-examination until I have read it. So, with that understanding, Mr. Chairman, 1 surrender the witness.

The CHAIRMAN. Mr. Wingo.

Mr. Wingo. I have no questions at the present time. However. I might remind the comptroller that the question of a satisfactory examination is one that is of a great deal of concern to some gentlemen. For illustration, one of your predecessors testified that he could not satisfactorily examine a bank of the size of the bank of Italy at that time, which had only about two-thirds as many branches as now, and Possibly Mr. Strong had in mind that statement of his.

Mr. Strong. Yes; Comptroller Dawes. Mr. Wingo. He went into that situation some years ago when he was comptroller and took the position that it was almost impossible to prevent these shiftings of assets unless you had a simultaneous examination of the branches and an adequate force to check them up. So, I suggest, in discussing this, that you go into that in detail and show how you overcome that difficulty.

Mr. Pole. Of course there is no doubt that should there be a general extension of branch banking in this country, it would be necessary perhaps to adapt a system of examination to it. However, that would be an operating difficulty and I have no hestitation in saying that, with the experience we have already had in the matter of the examination of branches that, to a reasonable degree, we regard them as satisfactory. It is true it is not as simple as examining an independent bank, but, after all, it is an operating difficulty that can be met. It might be necessary to put on 400 men, to use an extreme illustration, but if we did, the bank pays for it. While it is not easy for me to convey to your committee just precisely the technical details in which we proceed with a bank examination, it is a measure which can be met and satisfactorily so.

Mr. Wingo. In other words, you are satisfied, from your experience, that that is an administrative difficulty that may be overcome

satisfactorily?

Mr. Pole. I feel that way, and I feel that our examinations are quite satisfactory. Of course, the banks themselves are very vitally interested in our examinations. In addition to the examinations which we make, the banks themselves have a traveling force of experts spot-checking everything that goes on in the system, and I shall be very glad to furnish the committee with any information along those lines that I think will be enlightening.

Mr. Wingo. Another thing. To-day there is not a very clear conception in my mind—and I think that difficulty may be experienced by some others—of the distinction that you make between group banking and chain banking. Do you, at the moment, recall a distinctive illustration of each that you might use or feel free to use without embarrassment in connection with any individual case?

Mr. Pole. Perfectly so. I would say that in the chain—what we call a chain of banks—there is in the State of Arkansas, as an illustration, a chain of some 55 banks, which, I am informed, are

actually controlled by a single individual.

Mr. Wingo. Now, you call that a chain. In other words, here are 55 independent banking corporations that have separate local corporate entities and one individual, whom we both have in mind, owns a controlling interest in those 55 separate corporations. You call that a chain?

Mr. Pole. Yes, sir.

Mr. Wingo. Now, give us an illustration of a group bank, as

contradistinguished from the chain.

Mr. Pole. An illustration of the group bank is where a holding corporation is formed and that holding corporation proceeds to purchase independent banks, usually within its trade area, either through an exchange of its stock or for cash and the control of each one of those banks is held through stock ownerships by the corporation.

Mr. Wingo. Now, I do not catch that difference. Take, in the first instance, now, the chain bank: That gentleman owns the control through an ownership of the stock of those 55 different corporations?

Mr. Pole. Individually.

Mr. Wingo. If he were to transfer that to the, let us say, A B C Banking Corporation, and that corporation were to take over the

controlling shares of stock of those 55 banks, you would call that a group banking system?

Mr. Pole. Yes, sir; a group banking system.

Mr. Wingo. After all, the mechanics are the same; the ownership is the only difference, in that it is in one individual in one instance or a group of individuals, whereas, in the other instance, the ownership is in the control of a holding corporation?

Mr. Pole. They are similar in characteristics.

Mr. WINGO. Is that the only distinction—that which you have given?

Mr. Pole. That is, I might say, about the only distinction, except

as to the methods of operation, which is all important.

Mr. Wingo. What are the differences in methods of operation? Take the banks owned by the individual or controlled by him: What change in the operations of those banks would there be if he would transfer his holdings to a holding corporation and it became, in your definition, a group bank operation? What change would occur?

Mr. Pole. In the case of the individual, who owns as an individual the stock—the controlling stock—of these various banks, these banks are usually—while under his domination to a certain extent—operated Independently of each other. In the case of a group-bank system, the holding corporation has usually one main, large metropolitan bank, and the management contact with these various members of the group is very much more vital than in the case of the chain.

Mr. Wingo. Take the case we have in mind: I heard it rumored Possibly that the individual had transferred to a corporation that is under his individual control, as a matter of fact-did it not revolve around a Little Rock bank that he controlled and did they not do their business and was not their chief correspondent in Little Rock

that he dominated?

1

5

Ö

h

ø

51

3

C

e

Mr. Pole. I think the group to which you have reference did own shares in the bank in Little Rock and probably controlling shares.

Mr. Wingo. As a matter of fact, did not this individual control, with his officers, attorneys, and employees, one big banking corporation in Little Rock-was the president of it?

Mr. Pole. I am not informed as to that.

Mr. Wingo. A trust company? Mr. Pole. I really do not know.

Mr. Wingo. I think I catch the point of distinction, though. You call it a group system where a corporation, as a holding company, has a metropolitan bank and then controls, through stock ownership, a number of other banks—that while maintaining their separate cor-Poration entities, they also control these other corporations?

Mr. Pole. That is a very nice distinction. The principal difference between a group and a chain is that the group always has some form

of central management while the chain has not.

Mr. Stevenson. And that corporation—
The Chairman. The gentleman from South Carolina is out of order. He did not address the Chair.

Mr. Stevenson. Pardon me, Mr. Chairman. May I ask the

Witness a question?

The Chairman. You may. Mr. Stevenson. The holding corporation maintain a very strong supervisory control by auditors usually which audit at least once every two weeks the transactions of everyone in the group. Is not that the rule?

Mr. Pole. I think that is generally the rule.

Mr. Stevenson. Where one man merely owns the controlling stock in a great many, which you describe as a chain, that system is not so rigidly enforced, is it?

Mr. Pole. I think that is more or less correct; they run more or

less independently.

Mr. Stevenson. The stock being held by the corporation, which they get from a State, are those corporations so organized as to be liable for a stockholder's liability? You know, a State can grant a charter and, in a great many cases, limit the things for which the corporation can be liable.

Mr. Pole. Of course the national-bank stock in every case is liable

for assessment.

Mr. Stevenson. The stockholder is.

Mr. Pole. Yes, sir; and if it becomes necessary to assess the stock which is in the hands of a corporation, of course, we would assess the corporation as you would an individual.

Mr. Stevenson. Yes, sir.

Mr. Pole. If the corporation had no assets other than the stock of the banks assessed of course it would be uncollectible.

Mr. Stevenson. Yes, sir.

Mr. Pole. But a corporation would probably hold, in addition to bank stocks, other securities, and I think a majority of those corporations which have already been formed could readily meet such

liability.

Mr. Stevenson. I want to ask a question which has been referred to here. You discussed pretty fully the question of putting the limitation on stock in banks to such a large amount as it would give a monopoly in any one community; in other words, they would be able to establish more than one bank. We are met with the same argument in the establishment of these branches, that the very strong metropolitan banks could establish branches in all communities where a unit bank, which was trying to operate, would be run out of business and the metropolitan bank, in that way, could acquire a monopoly. That is the principal argument we meet. What is your view about that? Is there a danger of that?

Mr. Pole. There is no doubt, in my mind, that if branch banking were permitted we would eventually have a branch banking system and not very many unit banks. However, I think that is looking pretty well ahead. Branch banking, under the regional system would develop so gradually that it would take many years before the unit bank was entirely out of existence, if it ever went entirely out of

existence.

Mr. Stevenson. This question arises: When they get out will it be the tendency or will it not-that is the argument that is used entirely almost-to have the territory apportioned among the various institutions that have the branches so that there will be a branch of one bank in community A and no other branch of any other bank would be placed there and the branch of another bank would be established in community B. That is going on and I think the comptroller is entirely familiar with it, in my State. The banks have almost all failed except these banks-group and chain.

Mr. Pole. And branch systems.

Mr. Stevenson. Yes; branches also. We have them all operating, and but for them a large part of our territory would be utterly bereft of banks. They have apparently divided the State among themselves and group A puts a bank in my town and group B puts a branch in Darlington, 30 or 40 miles away, and so on, and they are leaving each community with one bank, and that is the cry that is going to be made, as I see it. However, unless they had done this, we would have been in a terrible fix. It has done more to commit me to some system of the kind you have described than anything I know of—

the practical effect.

Mr. Pole. I do not know what would happen, but I can easily understand that in South Carolina the competition between branch banking systems—and the two to which you have referred are branch banking systems—the thing has not arrived at a point where competition is keen enough for banks to go in, each of them, in the same place, because there are locations without banking facilities where the opportunity is better and banking service is needed. Later on, when South Carolina becomes properly covered with branch banks, if it ever does, the arrangement you referred to might not prove attractive. I know in California branch systems are operating side by side in numbers of towns, and there is no trade arrangement between them, but they are in keen competition to give the best banking service that is possible.

Mr. Wingo. Mr. Chairman
The CHAIRMAN. Mr. Wingo.

Mr. Wingo. I believe I will defer further questions to a later date.

I have really forgotten the line I was on.

Mr. Dunbar. Mr. Pole, the Bank of Italy is an illustration of the branch banking system. I understood you to state to Mr. Wingo that the operation of those banks in Arkansas was an illustration of the chain banking system?

Mr. Pole. That is correct.

Mr. Dunbar. Now, then, I gathered the impression, when you were talking about Arkansas, that it was controlled by individuals rather than by a partnership or corporation.

Mr. Pole. By an individual. Mr. Dunbar. An individual?

Mr. Pole. Yes, sir.

Mr. Dunbar. Is the Bank of Italy controlled by an individual?
Mr. Pole. No; it is controlled by, as far as stock ownership is concerned, a corporation.

Mr. Dunbar. Then, that is an illustration of a chain banking

system controlled by a corporation?

Mr. Pole. That is a branch banking system.

Mr. Dunbar. What is the difference between them?

The CHAIRMAN. Will you yield a moment?

Mr. Dunbar. Certainly.

The Chairman. You were not here when we opened the hearings. We are proceeding under a regular order. I mention this so that you may know it. I am calling the members, according to their seniority, to question the witness, and you will come on later. I beg your pardon for interrupting you. I did not wish to interrupt you, but I do want to see this program followed.

Mr. Dunbar. Then you proceed according to the seniority of the members of the committee?

The CHAIRMAN. Yes. Now, Mr. Goodwin.

Mr. Goodwin. Mr. Pole, in the establishment of a branch banking system throughout the country, would you require legislation in the several States so as to make them uniform?

Mr. Pole. I would not.

Mr. Goodwin. You think the National Congress has authority to establish branch banking systems for the national banks without legislation?

Mr. Pole. I understand from my counsel that is correct.

The CHAIRMAN. Mr. Goldsborough.

Mr. Goldsborough. Mr. Pole, I understand from you, your view is if the legislation, such as you have in mind, were adopted by Congress, it would tend to disestablish the great concentration of banking resources in New York and tend to concentrate them in various centers, such as New York, Detroit, St. Louis, Baltimore, San Francisco, and Dallas, and other places. You do think, as I understand, that it will tend to a centralization in those various centers?

Mr. Pole. Unquestionably.

Mr. Goldsborough. Now, have you considered this question from any other standpoint than the standpoint of bank technique; in other words, have you considered the political implications which would necessarily arise from the concentration of credit in a great center? Have you considered it from that standpoint at all?

Mr. Pole. I have.

Mr. Goldsborough. Let us assume, for the purposes of illustration—because I have no reason to suppose this will happen—but let us assume that, in my own State, for instance, the banks of Baltimore were to get control of the resources and credit structure of the rural communities, such as in southern Maryland, western Maryland, and on the Eastern Shore of Maryland, which is the section that I happen to come from. Did you apprehend that the Members of Congress, for instance—I will take Members of Congress for purposes of illustration. Do you have in mind that the Members of Congress from the rural part of Maryland would not be representative of the genius of their communities but would be dominated and controlled by the financial system, which had its root and base in Baltimore

Mr. Pole. Well, I would not think so any more than it is the case now. I think on the Eastern Shore of Maryland you have one of the important systems of group banks.

Mr. Goldsborough. I did not ask that question, but I do not

want to interrupt you. Just proceed, sir.

Mr. Pole. If I understand you, you mean would the interest in the locality in which a branch might be situated be lost-would the interest be less in that locality—is that what you mean?

Mr. Goldsborough. I mean what I attempted to say, but I may not have made myself plain. What I have in mind is this, that all the business in this country is done on credit, of course.

Mr. Pole. Yes.

Mr. Goldsborough. You can not do business any other way, because there is not enough money to go around.

Mr. Pole. Yes, sir; at least 90 per cent done on credit.

Mr. Goldsborough. Now, if this system, which you have in mind. resulted in the concentration of credit and resources in these centers which I have in mind-would not the political conditions in the rural districts—would not those who are supposed to represent the rural districts be controlled not by the sentiment existing in their own communities, but by the powers in these centers of credit which you spoke of?

Mr. Pole. I should say not at all. Mr. Goldsborough. You think not? Mr. Pole. I should say not at all.

Mr. Goldsborough. Why?

Mr. Pole. Because the local touch in these smaller communities is not lost in any way. I thought that is what you had in mind. almost all instances where branch banks are operated or where group bank are operated in small sections, there is almost always a lot of interest in that local unit of the group or the branch, and there is usually a local advisory committee consisting of two or three people. and I can not feel that there will be any such state of affairs as you speak of.

Mr. Goldsborough. You have never had—I beg your pardon. I

thought you had finished.

Mr. Pole. I do not know that I am in a position to speak very in-

telligently on that point, however.

Mr. Goldsborough. You have not given that particular question the same mature though as you have the questions which arise more naturally in the mind of a man who has been a banker and who is primarily concerned in the stability of a banking system?

Mr. Pole. I have given a great deal of thought to that and I reply that I do not think there would be any such condition arising as you

suggest.

Mr. Goldsborough. Now, you remember that two or three years ago the Senate desired to investigate the public utilities, and that by virtue of the enormous control which the public utilities had of the political forces nationally, they, themselves, were able to direct the course of the investigation and transfer it from the Senate to the Federal Trade Commission. That is, when I say they transferred it, they were able to control the situation in the Senate to such an extent that it was transferred from the Senate to the Federal Trade Commission. I do not know whether you are familiar with that condition or not.

Mr. Pole. I understand your point of view there, but as the group bank or branch bank has been developed up to the present point I do not think it can be said that the interests of the local communities have been in any degree lessened; in fact, I think they have been increased by the upbuilding of an institution which is necessarily one which appeals more to the people of that community by

way of local pride.

Mr. Goldsborough. Now, would you be surprised if the suggestion were made that the influence of the city correspondent bankseven the city correspondent banks-is felt very sharply by those holding public positions, such as an office as Representative in Congress, in the country? That is the condition. I do not want to say that arbitrarily, but you would be surprised if the suggestion were

made that that condition was felt already even when the relationship is only that of a correspondent bank.

Mr. Pole. Well, I can not conceive of such conditions as that, Mr. Goldsborough, unless it would be through the channel of what

might be called controlled deposits.

Mr. Goldsborough. Now, what I have in mind is this—that the point of view of the local bank is dominated very largely by the point of view of the city correspondent bank. That is what I have in mind, and that point of view is always reflected out to the legislators.

Mr. Pole. I think that is one of the points that might be cured by branch banking. At the present time the city correspondent is probably the banking connection of a public utility. That public utility has its plants and offices in various small towns in which correspondents of the same bank may be located. The city correspondent, through a contact or through representation on the board of directors of the utility company, would control that deposit and it would reach out to the small community so that if you did not behave, as a small banker, the city correspondent would probably be able to control that deposit you had been receiving from the local utility and place it elsewhere.

Mr. Goldsborough. You say if the local banker did not behave.

Mr. Pole. If the local banker did not meet its wishes.

Mr. Goldsborough. That is the idea. You hit the nail on the nead the first time.

Mr. Strong. There is no doubt about that.

Mr. Pole. That, however, I think, would be cured largely by the branch banks, Mr. Goldsborough, because the city bank, which controlled this important deposit, would project itself into this community and it would have no independent unit. It would be a matter of indifference, then, whether the deposit were placed at headquarters or distributed among the local banks in the communities

from which it arose.

Mr. Goldsborduch. Mr. Pole, let us assume that, through a given congressional district, you have these branch banks centered in some great city, like Detroit, St. Louis, Baltimore, or New York, as the case may be, and let us assume that your Representative in Congress from that district—his views about finances were controlled by what he deemed to be the best interests of his Congressional district, and rural life in America. Let us assume that he felt that urbanization was progressing too fast in this country; that he felt a large proportion of city population was unassimilated into what we understand to be American life: Now, then, what would happen to him and his independent thought I am discussing—

Mr. Pole. I am not a politician, Congressman.

Mr. Goldsborough. I have not finished the question, and I should like to do so because I think it is important—what would happen to him if he persisted in representing what he thought and believed to be the true sentiment of his district; continued to feel it necessary for the rural districts to be independent politically in order to control this condition in the cities I have mentioned? What do you suppose would happen to him if he asserted himself, in view of the fact that the district was covered by branch banks that represented the city point of view?

Mr. Pole. Mr. Goldsborough, that is a hypothetical question which it would be very difficult for me to answer.

Mr. Goldsborough. It is not hypothetical. Those of us who have

been in politics know it is a very practical question.

Mr. Pole. I really could not answer that question.

Mr. Goldsborough. One more question, and then I think I am There is evidently pressure coming from various sources for an extension of branch banking, because these things never become politically acute or never become political issues until there is pressure concentrated on Congress from one source or another.

Mr. Pole. Yes.

Mr. Goldsborough. You will be surprised when I tell you that at our first meeting-a thing which never happened before since I have been a member of this committee-every member of the committee was in his seat when the gong sounded, and it was all because of this proposed discussion on branch, group, and chain banking. Would you feel that you could freely give your opinion as to where the pressure is coming from for this extension of branch banking in the rural districts?

Mr. Pole. I think I started a great deal of it myself, Mr. Goldsborough. I think, in addition to that, that the bankers associations

and the various bankers in the metropolitan centers-

Mr. Goldsborough. Exactly.

Mr. Pole. Have realized that something is necessary to protect the small communities against the bank failures which have occurred

in such large numbers over a period of years.

Mr. Goldsborough. Then, your aspect of the situation is something like this: That this pressure is coming from the metropolitan banks and not from the rural districts themselves and that the point of view of the metropolitan banks is not selfish at all, but simply for the purpose of helping and assisting the rural communities?

Mr. Pole. In a large measure I would say the latter is true in a

very large measure.

Mr. Goldsborough. You think-Mr. Pole. May I answer that?

Mr. Goldsborough. Yes.

Mr. Pole. At the same time there is considerable pressure coming from the rural communities. There are many country bankers who

are in favor of branch banking.

Mr. Goldsborough. That I am not prepared to dispute. I do not know. It does not exist in any locality I am familiar with. I would say, Mr. Pole, as far as I am concerned, that since the beginning of the present Congress I have had a vast amount of correspondence on this general situation, and the only opposition to the general Position which I have taken has come from large city banks.

Mr. Pole. Yes.

Mr. Goldsborough. Now, the difficulty the rural man has is something like this: He realizes when you control the credit of a community, you control all the capital-and that is the answerand he is unable to feel that the attitude of the city banker is philanthropic. He is forced to feel that the city banker is conducting his business as a business man should—for honest private purposes. That to me is a very controlling interest. All the pressure, as far

as I know, that is significant at all comes from the big metropolitan

banks.

Mr. Pole. I think there is pressure from hundreds of country State banks, Mr. Congressman, and also I think if we could take a poll of the number of people interested in a change of the banking system, among those, thousands of people who have lost money in those country banks, it is even more representative than the opinion of the country banker. He is the man who usually bas been lost sight of.

Mr. Goldsborough. Don't you think, as a matter of fact, Mr. Pole, there is already too great concentration of bank resources in

this country?

Mr. Pole. I would say that there is too much concentration of banking resources. It would be fortunate if it could be decentralized.

Mr. Goldsborough. Now, Mr. Pole, I received this morning—I do not want to get into individual cases, because I rather think that is not the standpoint from which I want to approach the subject—but I received this morning from some one in California, a deposit slip which is used by the Bank of Italy and, on the back of it, it says "Bank of Italy covers California," and then it has a map of California with the intersecting lines which show branches that exist in that State. To me that is a very unusual document. I should like the committee to see it, and will you pass it around, please—indicating rather, I am afraid, a position of arrogancy on the part of the Bank of Italy due to its undoubted control of the banking resources of that State. I did not imagine that any institution would have the hardihood to issue a paper of that kind.

The CHAIRMAN. Have you any further questions, Mr. Golds-

borough?

Mr. Goldsborough. That is all.

The CHAIRMAN. Under the arrangement the committee made the other day, we were to begin these hearings at 10.30 and end at 1 o'clock. It is now 5 minutes to 1. What is the pleasure of the

committee?

Mr. Fort. It seems to me before we go on with other witnesses we really ought to finish any questioning by the members of Mr. Pole, and the program on the floor of the House this afternoon is almost insignificant, unless it has been changed since I came out. It is nothing but a bill to change the mileage allowances and per diems allowed witnesses summoned before House committees, and I think the House could get along without us on that, and I wonder if we could not go on this afternoon and get Mr. Pole's views thoroughly developed before we take up the next witness we propose to call?

The Chairman. There was no intention to take up another witness before the committee until we completed with Mr. Pole. I should like to ask Mr. Pole if it would be convenient for him to come back this afternoon at 2.30 or would be prefer to come back to-morrow morning

at 10.30 o'clock.

Mr. Pole. I have some very important engagements this after-

noon, Mr. Chairman.

The CHAIRMAN. Under those circumstances, it is probably better to adjourn until to-morrow.

Mr. Beedy. Mr. Chairman— The Chairman. Mr. Beedy.

Mr. Beedy. Apropos the question asked by the gentleman from Maryland (Mr. Goldsborough) as to where this pressure is coming from for branch banking, do I not understand it to be your position, Mr. Pole, that this pressure is an economic urge, the result of an economic evolution and tendency in all lines of business, which is now being voiced by bankers not only in the cities but in the rural communities as well?

Mr. Pole. Precisely so.

Mr. Beedy. And referring again to the question about centralization, you say there is already probably too much centralization of credits. I presume you refer to the fact that to-day the great centralization of the credits and financial operations is in the cities of New York and Chicago, possibly.

Mr. Pole. New York, Chicago, and St. Louis.

Mr. Beedy. And do you not contend that the establishment of other branches by national banks would have a tendency to decentralize the concentration of credits, making more independent of the three centers to which you have referred, the various other natural industrial areas?

Mr. Pole. There is no doubt in my mind that that is what branch

banking would result in.

Mr. Beedy. You would not contend that the policy which you advocate would result in further concentration of power?

Mr. Pole. The policy which I advocate is a policy of further

decentralization.

Mr. Beedy. But whatever you may claim for branch banking, I understand you do not claim for it any guarantee of the reelection of Members of Congress?

Mr. Pole. I think that covers my thought. Mr. Fort. When will we get the exhibits to which you referred in

Your testimony?

4

8

r-

er

Mr. Pole. They are not here. I have only the one copy with me. The CHAIRMAN. In view of the fact that Mr. Pole has only one set of exhibits, which are material to each one of us here, it will be impossible for us, by to-morrow morning, to have an opportunity to look over those exhibits and the fact that to-morrow is Calendar Wednesday and our committee has the call, I want to raise the question with the committee, and I shall be glad to have a suggestion, as to whether or not it would not be better to have the matter go over until Thursday.

(Discussion off the record.)

The CHAIRMAN. Very well; we will adjourn to meet to-morrow morning at 10.30, when the hearings will be resumed and be continued to 12 o'clock.

(Whereupon, at 1 o'clock p. m., the committee adjourned until Wednesday, February 26, 1930, at 10.30 o'clock a. m.

> House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Wednesday, February 26, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The CHAIRMAN. The committee will come to order.

STATEMENT OF JOHN W. POLE-Resumed

The Chairman. I would like to repeat what was said in the committee the other day as to procedure, before we began the hearings, and also to state now, the Comptroller of the Currency being in the midst of his testimony, that an invitation has been extended to the Secretary of the Treasury to be here, or any members of his department; also the Federal Reserve Board has been notified of these hearings and they perhaps will have the opportunity to appear next, after which the officers and directors of the 12 Federal reserve banks, and after them, persons connected with group, chain, and branch banking operations. I want to make it perfectly clear, of course, that during the hearings the committee will hear all phases of the question.

Mr. Seiberling. You mean in the order in which you name them?

Mr. Pole. Group, chain, and branch, in the order named?

The Chairman. No; all together, collectively. I want to mention that there are on the committee two outstanding antibranch bankers that we have knowledge of—Mr. Strong, of Kansas, and Mr. Goldsborough, of Maryland.

Mr. Strong. Guilty as charged.

The Chairman. I presume there are others, and the chairman would be glad if those members will confer with him as to any possible witnesses against any of the branch, chain, or group banking proposals, or any other members of the committee that have suggestions to make, so that we can get word to the witnesses.

Mr. Steagall. Let me submit an inquiry.

The Chairman. I should like to furnish my statement. There are advocates of branch banking, but I do not know whether there are any advocates of chain or group banking on this committee, and if those or any other members know of persons who would like to be heard, the chairman would be glad to confer with those members, so that their witnesses may be invited to appear before the committee.

Mr. Steagall. I want to suggest to the chairman that I thought there were a number of members of the committee—and I say this because the chairman seems to want to discuss the attitude of the committee for the record—I thought it was understood there were a number of members of this committee who were against branch banking, and I thought the chairman of the committee was among those members.

Mr. Strong. I thought there were 15 or 20.

The Chairman. The chairman was simply trying to arrange this matter so that the members of the committee can confer with one another and the chairman as to witnesses.

Mr. Lerrs. I assume no one would undertake to say that the chairman of the committee had polled those mentioned in favor of branch banking—for myself, I want to say that I want to try to maintain

an open mind.

The Chairman. The chairman desires to state that he is not intending to define the attitude of any member of this committee. I am rather in hopes that the entire membership of the committee will maintain a judicial attitude in regard to this whole matter until these hearings are completed.

Mr. Hooper. I should like to put myself on record in the same way Judge Letts has done. I came here to gain information and possibly act on that information after it is gained.

Mr. Strong. I shall reserve my decision until after these hearings

have closed, and then I shall render it against branch banking. Mr. Letts. That is what we call a truly judicial attitude. Mr. Strong. That is an attitude in favor of the people.

Mr. Steagall. In that connection, just a word: If members declare their attitude—I do not think it is necessary that this all be said-I think the members of the committee who have served with me here for years will agree that I have an open mind in so far as the information and arguments are concerned, and I hope I shall always be that way. This subject of banking and finance, is, of course, one of the most intricate things in the world and if I know myself, I am the last man in the world that wants to deny himself any information that anyone wants to offer.

The CHAIRMAN. I have a letter from the Secretary of the Treasury in answer to the invitation which the chairman sent him in regard to these hearings which I think should be read at this point. It is dated February 24, 1930.

(The letter is as follows:)

3

æ

ĕ

h

;0

DEPARTMENT OF THE TREASURY, Washington, February 24, 1930.

MY DEAR MR. CHAIRMAN: I have your letter of February 21 in which you inform me that your committee will be pleased to hear my opinions in respect of the study undertaken by your committee in pursuance of the authority granted under House Resolution 141, covering the subject of group, chain, and branch banking.

In this connection I call your attention to the statement contained in my

Annual Report to Congress for the fiscal year 1929, which reads as follows:
"In banking, as in other enterprises of this country, there is increasing evidence of a movement toward larger operating units. The number of branches of banks in operation has increased and more recently there has been a growth also in the number of groups in which several independent banks are operated more or less as a single system. Both of these developments reflect changes in the underlying economic situation.

"Branch banking has always existed in this country to a limited extent in one form or another. At the present time the Federal reserve act and the national bank act, as amended in 1927, authorize national member banks to establish branches in foreign countries and in insular possessions of the United States, and all member banks to establish branches within the corporate limits of the center in which the head office of the parent bank is situated and in which State laws permit State banks to operate branches (with certain restrictions as to the size of centers in which branches may be established by national banks.) At the end of June, 1929, State-wide branch banking was permitted in nine States and in the District of Columbia; branch banking in more limited form was specifically permitted in 11 States; and in 23 States the operation of branch systems was specifically prohibited.

"In June, 1929, out of a total of 8,707 member banks in the Federal reserve system, 354 were operating 2,291 branches. This represents an increase of 130 branches during the year. On the same date 818 banks, including both member and nonmember, were operating a total of 3,440 branches, an increase of 210 for the year. The development of branch banking which is permitted by existing legal arrangements has facilitated the adaptation of banking facilities to requirements of urban areas.

More recently there has been a rapid increase in the organization of group systems of banks. Such groups comprise one or more banks that are brought under unified control and some degree of centralized management through acquisition by an individual or corporation of controlling interest in their stock issues. Although technically each bank in a group is a separate corporation operating with its own capital funds and under the direct supervision of a local board of directors, a certain degree of unity is achieved for the group as a whole.

At the end of June, 1929, it was authoritatively reported that there were in existence at the time 230 group systems of banks in the United States, which embraced about 2,000 banks. Group banking is a means of accomplishing in a measure the objects of more extensive branch banking systems than are permitted under the Federal reserve act or under existing legal arrangements in most States. Although banking groups may be expected in most instances to strengthen the banks which they control, the organization of such groups places great responsibilities upon the controlling interests, and is a matter of vital

interest to State and national supervisory agencies.

"In view of the fundamental economic situation which has given impetus to the organization of group banking systems and to the growth in branch banking, it is desirable that these developments be carefully studied. In the meantime it is hoped that any further extension of group and branch banking organizations will proceed with moderation, and that hasty legislation, either to liberalize or to constrict limitations now in effect, will be avoided. Our banking structure, the product of many years of experience, is part of an intricate economic fabric whose parts are closely adjusted to one another, and a too rapid reorganization would be likely to create serious and costly disturbances that would affect the entire country

"The time has come when it would seem to be wise to undertake a thorough study of the situation with a view to determining the soundness of the present-day tendencies, and more particularly the limits of the economic units within which branch banking may be advantageously permitted."

I may add that because of the more direct concentration of responsibility I believe that branch banking is on the whole sounder than chain or group banking, but that even branch banking should be limited to definite economic areas. As to what those economic areas should be, I am not prepared to state at this time without further study or thought. I should prefer, therefore, to defer my appearance before the committee until I have had an opportunity to study the

facts which I hope your committee will develop.

May I add that I think it fortunate that your committee has undertaken this study at this time, and that I am confident that much good will be derived from a careful ascertainment of all the facts in connection with the movement which

has been proceeding with great rapidity in the banking field.

Very sincerely yours,

A. W. MELLON, Secretary of the Treasury.

Hon. LOUIS T. McFADDEN, Chairman Committee on Banking and Currency, House of Representatives.

Mr. Strong. I think the Secretary misstates the law at present when he says that in States that permit branch banking the national banks are permitted to have branch banks in the communities. That is not the law. The law is that they are permitted to have branch

in the cities in which located.

Mr. Goldsborough. Mr. Chairman, I move that we proceed in

the order outlined at the beginning of the hearings.

The CHAIRMAN. You had finished, Mr. Goldsborough?

Mr. Goldsborough. Yes, sir. The Chairman. Mr. Busby.

Mr. Busby. I had in mind asking a few questions with regard to the effect of the different methods of banking on the people of the country who use the facilities afforded by banks. My questions will not be directed so much to the security of the stockholder and bank operators and to the depositors as they will be to the borrowers and users of the banks.

The statement of the comptroller gives us the information that 24 banks in New York City—

Mr. Fort. Showed \$10,791,000,000 of assets or resources.

Mr. Busby. Twenty-four banks, national and State, in New York City alone are capitalized at an aggregate of \$677,000,000 and have

combined resources of \$10,791,000,000. I will ask the comptroller if that is not a considerable concentration of money and banking resources of the country in one center?

Mr. Pole. Very obviously.

Mr. Busby. Now, much of the money and much of these resources are gathered into New York City because of the fact that these banks are used as correspondents of the smaller banks throughout the entire Nation, is it not?
Mr. Pole. That is very largely true, Mr. Congressman.

Mr. Busby. Most of those funds placed there by banks throughout the country, are used to make what is commonly known as brokers' or call loans by the New York banks, are they not?

Mr. Pole. Not most of them. A very small proportion of the total of the deposits in New York banks is used in brokers' loans. As a matter of fact, I think at the very peak only about two billion

dollars of the banks of New York City.

Mr. Busby. I find that on October 2, 1929, the brokers' loans in New York City were \$6,804,000,000. I find that as the crisis was reached in the bond market or the stock market, that brokers' loans had decreased \$3,476,000,000, or 51 per cent of the amount of the loans outstanding in October, 1929. Now I will ask the comptroller if that condition is not due very largely to the fact that the credit and currency of the country is centered at that one point

through our system of banking?

Mr. Pole. I would not say that that fact is demonstrated by those figures. It is true that the principal stock market of the country is in New York and necessarily any trading would have to be there; so the six billion of loans you are speaking of, I thank that, as far as my recollection serves me, as much as \$3,000,000,000, or 50 per cent of them, were loans for others and loans for others represented funds, of corporations and individuals, which were scattered all over the United States and the world which have found their way to New York for the purpose of being placed by the banks, but not for them, on the stock exchange.

Mr. Busby. But for our system of banking and concentrating the money and banking credits in New York City, would it be possible to have the kind of financial catastrophe that we have had in the

stock market in recent months?

Mr. Pole. I should say that under any system of banking, it might be possible to have a disastrous calamity on the stock exchange, if the general public were disposed so to invest their funds. I can not imagine that the difference in the system itself, such as I have suggested, would have a great deal of effect on the stock market, because funds may be transferred to New York by corporations and individuals which may represent the major share of funds available, and under any system they may be diverted to any point the holder of such funds may direct them.

Mr. Bussy. Does not our system of banking, and would not our system of banking, if followed in the course you suggest, tend to funnel the funds of the country into New York City as the center of

credit?

Mr. Pole. Our present system of banking, you mean? Mr. Busby. Well, our present system of banking; yes.

100136-30-PT 1-4

Mr. Pole. Yes; I should say that it does, and I have that in mind in suggesting that it might be that this situation would be corrected, if the bank resources of the country were further decentralized through

regional branch banking.

Mr. Busby. I must say that I can not follow your reasoning in trying to secure the result that you predict from the method that you propose. But to give your proposition due consideration at this point, the branch-banking system or the chain-bank system, which is proposed, and whether these systems, or either of them, suggested by you, would decentralize the currency to several points of the country. and whether or not the situation we are talking about would not be remedied any?

Mr. Pole. I can not imagine that the system of banking would

have very much effect on the New York stock market.

Mr. Busby. Well, if our system of banking carries money from every bank in the country to the New York banks, it would naturally have a tendency to cause those banks to make broker loans or call loans, and thereby increase the tendency of the people to play the

stock market throughout the country.

Mr. Pole. Our present system of banking is conducive to funds flowing to New York, which, of course, is the financial center of the country. My suggestion to the committee in regard to a development of banks in the larger metropolitan centers, would cause the funds in New York to be less concentrated. I would develop very much larger systems all over the country, and the funds would be

employed locally

Mr. Bushy. Now, another thought: In 1919 to 1921, during the deflating period, Mr. E. H. H. Simmons, in an address before the Chicago Stock Exchange on May 9, 1929, states that the broker loans were deflated to the extent of 60 per cent during that crisis. What I am trying to understand is if the banking system does not tend toward building up those periods of speculation on the New York Stock Exchange, and, through a collapse of the pyramiding of the prices of securities-whether that does not cause the financial situation we find in the country to-day?

Mr. Pole. I should say not, Mr. Busby. I should say it is not

the fault of the system of banking which we have at this time.

Mr. Bushy. I notice that last fall the paper values, within a very short period of time, on the stock exchange depreciated \$35,000,000,000. Now, somebody lost that much financial standing, did they not?

Mr. Pole. Not necessarily.

Mr. Busby. That is where the little fellows all got out, is it not? Mr. Pole. You refer to them as paper profits? Mr. Busby. That is, a bookkeeping status.

Mr. Pole. I should say that it made no difference to a man's actual net worth. He might have lost what he had won on the market, but I would not say that he was any worse off in the end than in the beginning through the loss of paper profits.

Mr. Bushy. The banks did not lose anything during that period; or, if they lost anything, it was very little during that period of

deflation in stock, did they? Do you recall?

Mr. Pole. The banks themselves were not speculating in stocks. They were carrying customers, perhaps.

Mr. Busby. And they dropped many customers during that period? Mr. Pole. Well, I think perhaps the customers dropped the banks. Mr. Bushy. Well, you put it that way; but the customer is the one who lost the money. Is not that true?

Mr. Pole. In a great many instances. Mr. Bushy. This may not appear to have any connection with the subject the committee is considering, but yesterday you told us of a few small losses by country banks. I say "small" in comparison with the great catastrophe we are passing over—the great catastrophe connected with the stock market collapse we are passing over. Does not that situation grow out of the banking arrangements of our country, and was that situation not just as effectively detrimental to the commerce of the Nation as the losses in the small banks you are talking against?

Mr. Pole. No. I should say by no means.

Mr. Busby. If you can explain to me why we have come to this period of financial distress not as a result of the New York Stock Market collapse, and yet it does not affect the people as much as the breaking of a few small banks, I shall be much obliged to you.

Mr. Pole. I think you misunderstand me. I did not say it has not arisen from any such cause. It seems to me that the thousands of small failures can not be brushed aside in any such light phrases.

Mr. Bushy. I said comparatively, or I mean to say "compara-

Mr. Pole. Because that is the basis of my belief that a change in our system of banking in this country, both national and State, becomes necessary, by reason of those failures.

Mr. Busby. Just a moment on this: You say it is estimated that 7,264,000 depositors have contributed to the great total of more than \$1,700,000,000 of deposits in failed banks during the last nine years?

Mr. Pole. Yes.

Mr. Busby. And that 114,000 shareholders have suffered losses through the suspension? Do you have any figures to show the amount of the losses that were passed on to the depositors by reason of these failures? You give the amount of the deposits, but not the amount of the losses.

Mr. Pole. Yes. Of course, that is problematical at the present time because the banks are still in process of liquidation and it would be difficult to forecast any percentage of recovery which the depositors

might have.

Mr. Bushy. That would run to the amount of-

Mr. Pole. I could say that liquidation of the national banksand of course these are not national banks only; there are many more State banks than national banks—our liquidation of the national banks would be probably 65 or 70 per cent.

Mr. Busby. Of the amount involved?

Mr. Pole. Of the amount involved; that is, as 763 is to 4,877, for instance, of national to State banks, and I am not advised as to what the liquidation on the State banks is.

Mr. Busby. Sixty-five per cent of the deposits involved in both

banks would be lost?

Mr. Pole. No; would be recovered over a period of many years. Mr. Busby. I want to get through and I know the rest of you want me to. Another question that I should like to ask is-

Mr. Pole. You understand that those are national banks?

Mr. Busby. Yes. A bank takes the depositor's money and the depositor is at the mercy of the management of the bank-I say mercy in the sense that he is bound to accept their judgment and management. What is your idea about its being fair and proper to require banks to insure the people who deposit their money in the banks against the loss of their money?

Mr. Pole. I think the idea is unsound. Mr. Busby. What do you think about a general insurance to the depositors by the banking institutions against loss where they place their money in the bank for safe keeping?

Mr. Pole. Nothing at all. Mr. Busby. You say it is unsound, having entire management of the institution in the hands of the directors and bank officers—why would it be unsound for them to assure the honest depositor that they will honestly return to him that which he has honestly deposited, when called for? I should like to know why it is unsound.

Mr. Pole. I would point to the practical experience of the States of Mississippi, Kansas, Nebraska, North Dakota, Oklahoma, South

Dakota, Texas, and Washington.
Mr. Bushy. I am not asking about the type of laws they have.
Mr. Pole. It is a form of a guarantee of deposits.

Mr. Busby. No; I am not asking about that.

Mr. Pole. The insurance would be a form of guarantee of deposits.

Mr. Busby. But not the form we have in my State-

Mr. Pole. I am not speaking particularly of your State. There are no two laws in these States which are similar-yes; similar, but not alike.

Mr. Bushy. Let me explain the idea that I am trying to convey. Mr. Pole. And that, without exception the principle has completely

fallen down.

Mr. Busby. The basis on which these laws were enacted is that the banks, in a body and individually, shall contribute to a central fund which shall be applied to the claims of depositors in failed banks in the order in which the amounts have been adjudged proper claims against the central fund, is it not?

Mr. Pole. A similar law has been in force in some States.

Mr. Busby. What I am referring to is a bank capitalized with \$50,000 stock and has \$200,000 or even a million dollars in deposits, why would it not be perfectly sound for that bank to take out an insurance policy with some reputable insurance company, guaranteeing to the people who put their faith and trust in that bank, that this bank will return to them that which it has received from them? What would be wrong with that type of insurance?

Mr. Pole. What insurance company, in the first place, would insure \$57,000,000,000 of deposits? How would you insure the deposits of the Chase National Bank, which has \$105,000,000 with \$135,000,000 surplus and, roughly figuring, a billion dollars in deposits-you would not discriminate between the large and small banks in regard to the

question of additional safeguards.

Mr. Busby. You ask a question in answer to my question. I am sure a system could be worked out where the risk would be taken over. But you can not expect people to come up with an insurance proposition before you lay down a plan and provide a premium to carry this, and almost every risk under the sun is being insured, and

the smaller banks especially could be cared for in that way, and an inspection of those banks be had by the insurance companies, and you need not say that each bank should stand on a parity in the rate of the risk that should be applied to that bank to insure it against

Mr. Pole. The systems which have been in force which contemplate the protection of the depositor have been universally unsuccessful. The price has to be paid by the going banks and it has often been such a burden on them as to even put them out of business.

Mr. Busby. I know that system has been, but the system I am talking about has never been tried.

Mr. Pole. I would not like to express an opinion on any new system which I had not had an opportunity to study.

Mr. Bushy. My idea was that we would get new ideas on proper

procedure and that is the reason I asked the question.

Mr. Pole. I should say that, in the light of experience, any system of insurance of deposits or guarantee of deposits is, in my opinion. entirely unsound.

Mr. Busby. Out of respect for the other members of the committee

who want to ask questions, I shall desist.

The CHAIRMAN. The gentleman will have another opportunity to ask questions later on.

Mr. Letts, of Iowa.

Mr. Letts. Mr. Chairman-

Mr. Brand. Would you object to my asking two questions at this point?

Mr. Letts. Certainly not. Go ahead.

Mr. Brand. I just want to ask Mr. Pole first: You can furnish and will furnish to the committee, the amount of the franchise tax paid by each of the 12 Federal reserve banks since the act was passed and the organizations of the banks established, per year, and showing the amount each one of these banks paid down to and including the year 1929?

Mr. Pole. I shall be glad to do so, Judge.

Mr. Brand. So that we will know what each bank has paid down to and including the year 1929.

Mr. Pole. Yes, sir.

Mr. Brand. This is a question I want information about: Of course it is well understood by the big bankers and members of the committee who associate with big banking institutions-but will you define briefly the difference between group banking and chain banking as compared with branch banking-either now or later on?

Mr. Pole. I think perhaps it would be very proper if I might use the same language I used yesterday.

Mr. Brand. I do not want you to do that. I heard that. Clearly define what is chain banking and group banking as compared with branch banking.

Mr. Pole. Chain banking consists of a number of banks in which an interest, not necessarily a controlling interest, is owned by one or

more individuals.

Mr. Brand. Individuals or individual banks?

Mr. Pole. Individuals. They have their separate corporate entity and operate entirely independently, but there is a greater or less control by reason of the interest which is owned by the individual or individuals, which more or less directs the policies of this chain of banks.

The group bank is a number of banks. Fifty-one per cent or more, usually, of the stock of each is owned by a holding corporation, and by reason of the ownership the policies of this group are directed by this corporation. In the corporation there is usually one major bank from which the others radiate and the policies are directed or influenced by the heads of those banks, who are usually the chief interested parties in the corporation. Management control is the principal difference.

Mr. Brand. And these banks which you refer to own, as I under-

stand, the majority of the stock in all the unit banks?

Mr. Pole. They may own the majority or all the stock except the

directors' qualifying shares.

Branch banking is different. A metropolitan bank, usually, with branches scattered over its district. A single corporate entity.

Mr. Brand. I understand what branch banking is. The other

two I did not clearly understand.

Mr. Pole. Have I made that clear, Judge? Mr. Brand. I think I understand them now,

Mr. Steagall. I was not here yesterday, much to my regret, having been called to appear before the hospitalization board on a matter of great interest to my State, and I did not get the benefit of the proceedings yesterday and I am not informed as to the rule which the committee adopted with respect to the manner in which we should proceed. I have no desire to interfere with the rule, whatever it is. It is all right with me. But I have some questions right in connection with the statement which Mr. Pole has just made. If it is desired to go along on the line of subjects under discussion, I shall be glad to proceed or wait, just as the chairman indicates, which would be more in accordance with the rule.

The CHAIRMAN. The rule we are working under is to call on the members of the committee according to their seniority. We are going ahead under that procedure. In accordance with the rule adopted yesterday, you are the next one on your side to be called. Mr. Letts

has now been recognized under that rule.

Mr. Steagall. That is all right with me.

Mr. Strong. Will you yield to me for a short question, Mr. Letts? Mr. Letts. Yes; but not for long.

Mr. Strong. Mr. Brand, I want to suggest, in getting information from the comptroller in regard to the amounts paid in excise or franchise taxes by the national banks-I want to inquire whether it would not be well to put in the record the amount of their earnings and expenses.

Mr. Brand. That would show the net income.

Mr. Strong. I think that would be helpful to the committee.

Mr. Letts. I have two or three lines of inquiry which I should like to indulge in. The gentleman from New Jersey—Mr. Fort has informed me that he must be away to-morrow and would like to go on to-day with his questions. However, there is one matter that I should like to open up because Mr. Fort undoubtedly knows a great deal about the matter and it is something that I think has a pertinent connection.

Yesterday I was very much interested in the line of questioning of the gentleman from Maryland—Mr. Goldsborough—and the answers of the comptroller. The questions indicated that, in the mind of the gentleman from Maryland, the plan to extend branch banking presented some serious political dangers. I understood, from the answers of the comptroller, that he was not greatly concerned about that matter and that perhaps he felt that the dangers

suggested were more apparent than real.

But I want to ask now whether or not the comptroller, upon an assumed state of facts—and I want to get his opinion—assuming that the issue in a State should be the control of the appointment of the supervisor of banks, who would have the power of issuing charters and the power of appointing inspectors and examiners and directing the examinations, and that a banking interest might become so powerful that they could control the nominations in the primaries and elections of officers, and, in that way, secure the person desired for the important position of supervisor of banks. Would you then say that the situation presented a political problem that

was a menace and ought to be avoided?

Before answering that question, I will say that I have tried to embody in that question a state of facts that I think has existed. I am told that, at the least gubernatorial election in the State of California, the Bank of Italy made a determined fight for Mr. Young, who is now the governor of that State, upon the issue that they should know that the person in whom they are interested would be the superintendent of banks. I understand he gets a salary of \$10,000 a year and I understand that they expressed their desire and made the request of every employee of their banks and of every branch that they should see that Mr. Young was nomniated at the Republican primaries for governor. I am told, too, that they went further than that and made the request of their depositors. I am not so sure of it. I think it can also be shown that, at the general election in the fall, they sent out a ticket in which they expressed their preference for every State office and for every congressional office and for Senator in the United States Congress. The ticket that they espoused was elected. Mr. Young was elected governor and the favored candidate was made superintendent of banking.

Now, perhaps you can tell me how accurate those facts are and whether or not, if it is true, it does not, in fact, present a very serious political problem and show that perhaps there is a real danger, in a political sense, such as was indicated by the gentleman from Mary-

land in his line of inquiry.

Mr. Pole. I have heard, Mr. Letts, that the appointment of a superintendent of banks in some States is regarded as more or less of a political appointment, but I am sorry I can not answer you as to the status quo of the political situation in regard to—

Mr. Letts. If my facts are substantially correct, would you say that there is presented a serious question as to the advisability of the policy which you advocated toward the extension of the branch banking system?

Mr. Pole. It is a question which would be exceedingly difficult

for me to answer.

Mr. Letts. I will excuse you from that. But now, as I understand the matter, we have been talking of the Bank of Italy. Now, there

is also what is called the Bancitaly Corporation. I do not know that I have a correct understanding of that and so I want to inquire of you—is that a holding company?

Mr. Pole. It might be called a subsidiary company.

Mr. LETTS. I understand that the Bancitaly Co. holds a large part of the stock of the Bank of Italy and of all of the branches.

Mr. Pole. I have no access to the books of the Bancitaly Co.

Mr. Letts. Is the Bancitaly Co. a banking institution?

Mr. Pole. It is not.

Mr. Letts. It is a holding company?

Mr. Pole. Yes. I presume it holds certain securities.

Mr. Letts. Does it do more than hold stock?

Mr. Pole. I think that their charter gives them rather a wide latitude. I, however, am not informed.

Mr. Letts. They are not subject to examination?

Mr. Pole. No; they are not subject to examination by the Federal Government.

Mr. Letts. Are the Bank of Italy and the branches of the Bank of Italy under national charter or State charter or both?

Mr. Pole. The branches are under national charter.

Mr. Letts. How about the Bank of Italy? Mr. Pole. The Bank of Italy is a national association and, necessarily, the branches are a part of the Bank of Italy-one branch being just as much a part as any other branch.

Mr. Letts. Is there just one charter? Mr. Pole. Just one charter.

Mr. Letts. And covers all branches? Mr. Pole. Yes, sir; covers all branches.

Mr. Letts. Now, I understand that more recently the Bank of Italy people have organized the Trans-American Co. Can you tell me anything about that?

Mr. Pole. Yes. I would not say that the Bank of Italy has formed The Trans-American Corporation was formed a number of

years ago and is, itself, a holding company.

Mr. Letts. That is organized, however, and operated by the same group of people?

Mr. Pole. I should say not. I should say that it has entirely a different personnel.

Mr. Letts. Distinct? Mr. Pole. Distinct from the Trans-America Corporation—the Bank of Italy personnel; yes.

Mr. Letts. Is that personnel entirely different?

Mr. Pole. As far as its officers are concerned, I think so. Mr. Letts. Of course I have no knowledge of it and am asking for information.

Mr. Pole. As far as my knowledge goes.

Mr. Letts. My understanding is that the Trans-America Co. is a holding company to put into operation the policies of the Bancitaly Co., by extending beyond the State of California; that they intend to reach out and do the same things in other parts of the country that the Bancitaly has done within the State. Am I correctly informed as to that?

Mr. Pole. I think, in the published statement of their assets, which is made periodically, a number of stocks of banks over the country were included, among them being, for instance, the National City Bank and the Chase National Bank—large banks and small banks in different parts of the country.

The CHAIRMAN. Will you yield to me, Mr. Letts?

Mr. Letts. Yes.

The Chairman. I think it might be helpful, at this point, to observe that the Trans-America Corporation is a Delaware Corporation and not only owns sufficient stock of the Bancitaly Corporation, but a sufficient amount of stock in the Bank of America to control the policies of each one of those corporations. The Bank of America includes the Bank of America in New York and the Bank of America in California.

Mr. Letts. Well, I thank the chairman for that statement, and I want to add this, that I have not very much knowledge about these matters and am seeking information, and I am very happy to have

that statement.

The Charrman. I might add further that my understanding is that the control of these various operations which were formerly vested in the Bancitaly Corporation and the Bank of America, both New York and California, as well as the firm of Blair & Co., are now operated under the Trans-America Corporation or Transameric-Blair Co. control.

Mr. Letts. I wonder, Mr. Comptroller, if at some later time you could supply us with the information to show whether or not the Personnel in these corporations is the same, or just what the facts

are in respect to that.

Mr. Pole. I will be glad to go as far as I can. But may I suggest that perhaps you might wish to call a member of the official family of the Bank of Italy and the Trans-America Corporation, and they will be glad, I am sure, to give you full information on their activities. I have no official information in regard to the corporations.

Mr. Letts. My only thought was-

Mr. Pole. Except the Bank of Italy which is a national asso-

Mr. Letts. I think it would be desirable to know whether or not these companies are advancing along the same policy and whether or not controlled by the same influences. Those are the things I am interested in knowing.

I do not care, Mr. Chairman, to pursue this further at this time. I do have one or two other things that I should like to go into, but I shall be glad to yield to the gentleman from New Jersey, Mr. Fort.

Mr. Fort. I am sorry to ask the committee to break the standing order, but I have an engagement for to-morrow of a year's standing out of the city.

The CHAIRMAN. You may proceed, Mr. Fort.

Mr. Fort. Mr. Pole, there has been some reference to the size of the aggregation of banking resources in the city of New York. Is it not true that in every major country in the world there is a concentration of banking control and banking resources in what is called the financial capital of the nation, usually the same as the political capital, because it is also the largest city?

Mr. Pole. I should say that that is true of the principal countries

of the world, as far as I know.

Mr. Fort. You said this morning the banks were not purchasing stocks. It is true, is it not, that many State banks enjoy the power of purchasing stocks?

Mr. Pole. My reference was only to the national banks.

Mr. Fort. It is also true that many, both State and national, banks have what is called security affiliates through which they purchase stocks.

Mr. Pole. That is largely true.

Mr. Fort. Is it not true that some chains of banks exist in States where banks are permitted to own directly the stock of another bank? It know it is true in my own State and I will make that statement.

Mr. Pole. I have no information on that. Mr. Fort. With reference to the power aggregated in groups, there is a rumor-I do not care to name the Federal reserve district-but there is a rumor that in one Federal reserve district in this country two bank-stock holding companies to-day own enough banks to give them the voting power to elect the directors of the Federal reserve bank in that district. Do you know whether or not that is a fact?

Mr. Pole. My belief would be that it is not the fact.

Mr. Forr. It is possible, however, under our present loose system of permitting groups and bank-stock holding companies, is it not?

Mr. Pole. It is a potential possibility.

Mr. Fort. You have heard the rumor to which I have referred? Mr. Pole. I have not. I think I know the locality of which you speak.

Mr. Fort. That, if true, would be a very serious danger, would it not, to confer on one banking group the power to control the board of the Federal reserve bank in any district in this country?

You know how the Federal reserve Mr. Pole. I rather doubt it.

directors of a bank are elected?

Mr. Fort. If one group could control the majority of banks in two groups, which elect the directors, they would control, would they not?

Mr. Pole. There might be a possiblity of such a thing.

Mr. Fort. And you would regard it as undesirable that that condition should exist?

Mr. Pole. I would.

Mr. Fort. And, in our general consideration of this situation, we should endeavor to avoid that possibility?

Mr. Pole. I think so.

Mr. Fort. I take it in the great bulk of your discussion, Mr. Polewhich I may say parenthetically is the strongest presentation of your position that I have seen anywhere, and is a very fine one—you are assuming that we have the power to permit national banks to extend their branches throughout an economic area?

Mr. Pole. Yes, sir.

Mr. Fort. But no law we could pass could extend the jurisdiction of State banks beyond the States in which they are chartered?

Mr. Pole. No, sir.

Mr. Fort. So your idea looks to the strengthening of the national bank system?

Mr. Pole. That is my one thought.
Mr. Fort. Your main reasoning is that we need larger and stronger banks? Your main desire for having the branch bank system extendedMr. Pole. I would not say that. I would say my main reason for suggesting any change in the system is that we need stronger banks and not necessarily larger banks.

Mr. Fort. I was using the two as almost synonymous. We do not

need stronger banks in the major cities, do we?

Mr. Pole. I would say that we do.

Mr. Fort. Still larger and stronger than the institutions known as the National City in New York or the Continental-Commercial in Chicago?

Mr. Pole. Not larger in the central reserve cities. I am speaking

of the country as a whole.

Mr. Fort. I am speaking of the central reserve cities. The banks are now adequate to handle the banking needs of those communities?

Mr. Pole. As far as I know.

Mr. Fort. The aggregation—just parenthetically—the aggregation of financial resources in New York is, in large part, due to the enormous foreign balances maintained there?

Mr. Pole. You speak of "foreign" as foreign countries? The

large part-

Mr. FORT. A large part? Mr. Pole. I think so.

Mr. Fort. It has been understood that \$2,000,000,000 of foreign money has been out on call during the last—

Mr. Wingo. You do not mean foreign nations?

Mr. Fort. Deposited by persons living in foreign nations.
Mr. Wingo. But you did not mean foreign governments?
Mr. Fort. No. I was in a foreign country last year where I was

Mr. Fort. No. I was in a foreign country last year where I was told very nearly every insurance company and banking company had all its loose money on call in New York City. If a single city is attracting practically the entire mass of this foreign money, it might be wise to divert as much as possible of our domestic moneys elsewhere, might it not?

Mr. Pode. I think a decentralization, as far as possible, would be

advisable.

Mr. Fort. In connection with the policy you have advocated, there is no general concurrence among the larger banks of the country, is there?

Mr. Pole. I have not made a sufficient survey, Mr. Fort, to

answer that question.

Mr. Fort. I am not saying that that is anything against your policy. Indeed, my own view is that we should legislate at this time before there is any such concurrence and the resultant pressure upon Congress.

Mr. Pole. I understand some New York banks are not expressing

themselves favorably toward a branch banking system.

Mr. Fort. But some of them are?

Mr. Pole. I know of no recent expression of opinion of a New York metropolitan bank in favor of rural branch banking, and I think there are a great many others that have not expressed themselves favorably, although, taking the metropolitan banks of the country as a whole, I think there is a very strong feeling that some change in the system of banking is necessary, and as far as I get it, the preponderance of opinion is in favor of some system of branches.

Mr. FORT. In connection with your general idea, which is to strengthen the country's bank systems-

Mr. Pole. Yes.

Mr. Fort. Have you given any thought to the idea of limiting the size of the city where the central institution, which might have branches in the country districts, could have its headquarters?

Mr. Pole. I have not given a great deal of thought to that, Mr. Fort, and have deemed it best to leave that to the discretion of the supervising officer under some general principle laid down by Congress.

Mr. FORT. I have noticed in your remarks that in two or three places you speak of larger commercial banks outside of New York,

Mr. Pole. Yes.

Mr. Fort. As requiring strengthening—as desirable places to centralize further banking power?

Mr. Pole. Yes. Mr. Forr. Did you make the statement "outside of New York" deliberately to exclude New York, or simply-

Mr. Pole. I have made no particular reference to New York.

Mr. Fort. You used that phrase two or three times.

Mr. Pole. Outside of New York, but not in that connection. My recommendation to Congress was that branch banking should be extended within the trade area of a city in which a bank might be located, the effect of which would be to develop a system around the larger metropolitan centers, including the New York City trade area.

Mr. Forr. My own opposition to branch banking legislation three or four years ago was, in large part, based on this: Rather than to permit banks to have a number of branches in the cities, we should forbid branch banking in the cities, but should extend them through the country sections. It has seemed to me and I wonder how much thought you have given to it—that we might prevent the concentration of banking power-which we are all afraid of-in a few hands, by adopting your suggestion in part; not by permitting the great metropolitan Federal reserve city banks to have branches out through the country, but by working toward the building of stronger banks in the cities of forty or fifty thousand, which are scattered through practically all the States, by permitting them to have branches throughout their trade areas.

Mr. Pole. I should answer that by stating that the area must be

large enough to permit of ample diversification.

Mr. Fort. I agree that it must be large enough for such diver-

sification.

Mr. Pole. And I doubt whether limiting it to the areas which you suggested would in many cases enable the bank properly to diversify its investments.

Mr. Fort. That, after all, is the problem that determines whether a bank is sound or not-diversification of investments?

Mr. Pole. I think so.

Mr. Fort. Is there not a complete shifting of what is regarded as good banking, or rather of banking necessity, in the last 20 years, with the enormous growth of corporate enterprises in place of individual enterprises?

I have seen figures somewhere as of a recent date, that only 18 per

cent of the loans of all banks were on name paper.

Mr. Pole. I could not say as to the figures, but I know that the

loans on corporate securities have increased.

Mr. Fort. So, the banker must know the value of the securities that are used as collateral in connection with the loans rather than the character of the borrower?

Mr. Pole. That is true in the metropolitan banks. Mr. Fort. But not in the country banks? Mr. Pole. No, sir.

Mr. Fort. Have you given any thought to the provision that is applied customarily to insurance companies by many States, which requires a company to have not only its capital but surplus funds proportioned to its capital, before it can start operations?

Mr. Pole. There is no law requiring a national bank to have a surplus when it starts operation. As a practical matter, it is rarely

that a bank does start without 10 to 20 per cent surplus.

Mr. FORT. I am getting at that now. If that proportion were made larger and were made mandatory, without increasing the loaning limit of the bank, might that not tend to strengthen the country banks?

Mr. Pole. I think that such increase would tend to strengthen the country banks, but it would be equivalent to saying that a bank

shall commence business with a larger capital.

Mr. Fort. Except that the capital controls the losning limit. I am suggesting a requirement for increasing the capital funds without

increasing the individual loan limits.

Mr. Pole. I think, regardless of whether the capital funds are expressed as capital, surplus, or profit, it would be necessary, of course, that a fair return should be made on it. There are many communities where banking services are urgently needed that perhaps could not earn a reasonable income on a larger capitalization.

Mr. Fort. Now, about your shareholders' liability: In 'some European countries, where they have an uncalled capital system, it is required that the stockholder cover his liability for the balance of the call by collateral, and the uncalled capital is then subject to call by the directors without waiting for receivership. Would not something of that sort reinforce our stockholders' liability provisions in this country?

Mr. Pole. I think it would reinforce the stockholders' liability

to that extent.

Mr. Fort. And in many cases would it not avoid suspension if the directors exercised their power to call for the capital the moment

they were in trouble?

Mr. Pole. In a comparatively few cases, but not generally, I would say, Mr. Fort. I explained yesterday-and I think you were not here—that if the entire assessment on capital were collected, it would only mean 10 cents on the dollar to creditors.

Mr. Fort. On the liability? Mr. Pole. On the liability.

Mr. Fort. But not 10 cents on the dollar on the total amount of

Mr. Pole. We have the right of assessing that-Mr. Fort. But you have collected only 40 per cent?

Mr. Pole. Fifty per cent average, I think, in the cases of insolvencies.

Mr. Fort. You take the view, do you not, Mr. Pole-well, I will put it this way: It is the correct statement, is it not, that under modern conditions, this Congress, through its control of the Federal Reserve system, really has the power, if it sees fit, to lay down a banking code, and the States would have to follow it?

Mr. Pole. There is no doubt in my mind that that is so. Mr. Fort. We could do it by denying them membership in the system and in other ways.

Mr. Stevenson. I did not catch that last. What was it? You stated there were a number of ways and you stated one of them.

Mr. Fort. A number of ways of forcing compliance by State banks with any code we chose to enact.

Mr. Stevenson. I am much obliged.

Mr. Fort. Has not one of the troubles been overpayment for the purchase of other banks, in order to create branches-payments in excess of value?

Mr. Pole. I know of no trouble that has arisen from that source.

Mr. FORT. No trouble?

Mr. Pole. No.

Mr. Fort. When a bank does buy a branch, through the purchase of stock of another bank, does the comptroller's office require them to write off everything down to the capital and surplus of the purchased bank?

Mr. Pole. When a national bank purchases a State bank?

Mr. Fort. Yes. Mr. Pole. We do not have the authority to prevent a bank from purchasing the assets and assuming the liabilities of a State bank, but do approve consolidations, and we are always very careful to see that the State bank is reasonably clean before we permit the consolidation.

Mr. Fort. Suppose they purchased a State bank at \$500 a share value for its stock? The actual capital and surplus value of that bank is \$250 and the balance is good will. Do you require them to

write those assets down to \$250 instantly?

Mr. Pole. When they purchase the assets we have nothing to say as to the arrangement between the banks. There is nothing to prevent a bank from paying for good will.

Mr. Fort. But do you allow them to carry that good will in any

form whatever?

Mr. Pole. Not in any form.

Mr. Fort. But some States still do?

Mr. Pole. I do not know that. It is not true as to national banks. Mr. Fort. You talked somewhat concerning diversification of the activities of modern banking, and made a very strong presentationthat it is spread out into trust powers and security affiliates, and all the rest of the powers that modern banks exercise. Does not that very diversification of power, involving, as it does, through trusteeships, the control of billions of assets in addition to the bank's own resources, make centralization of the control of our banks an extremely dangerous thing in this Nation?

Mr. Pole. It does tend, of course, to increase the responsibility of the larger banks, because the trust business is growing tremendously. However, with a system of branch banking, where great banks would

grow up in the metropolitan centers, that it tends to decentralize that responsibility to a very large extent.

Mr. Fort. I have only time for about one more question out of

the number I wanted to ask.

If we ever authorize the program which you suggest, or any other of the extension of branch banking, as a practical matter can we ever unscramble it if we do not like it afterwards? For instance, if we permit bank a in St. Louis to establish branches throughout its trade area embracing a large part of the State of Missouri, once established. there is no way that that bank, in justice to the stockholders of the bank, can ever be unscrambled?

Mr. Pole. As a practical matter, it would be difficult.

Mr. Fort. So it involves a very major policy which should be settled by the Congress of the United States rather than by the delegation of the authority to someone else? I mean, whether we should have that?

Mr. Pole. I am thoroughly in accord with that.

Mr. FORT. I think, Mr. Chairman, that is all I have time to ask. We have to adjourn in two minutes, if we have the call to-day. I am sorry, as I have some other questions.

The ACTING CHAIRMAN (Mr. Strong in the Chair). You may proceed a little while longer, Mr. Fort.

Mr. FORT. Mr. Pole, in the failures that you spoke of yesterday. I do not recall that you gave the proportion of failures between State and national banks. Is that in any of your exhibits?

Mr. Pole. Not in any of the exhibits, but I made the statement

that it was in the ratio of approximately three to one.

Mr. Fort. In favor of which?

Mr. Pole. In favor of the national banks.
Mr. Fort. That is, the national banks were the one or the three?
Mr. Pole. The national banks were the smaller, in ratio, to the number of banks that failed.

Mr. Fort. What is the proportion between national and State

banks throughout the country?

Mr. Pole. About 18,000 State banks and 7,500 national banks. Mr. Fort. Were the failures in the proportion of 3,000 State banks to 1,000 national banks?

Mr. Pole. Yes.

Mr. Fort. So that the failures—the percentage of failures of national banks was as great as the State banks?

Mr. Pole. There were 763 national and 4,877 State bank failures. Mr. Fort. Now, that is what I am getting at; in other words, the code of banking and the requirements of banking that we have set up for national banks, have proven more efficacious in preventing bank failures than the general codes of the States?

Mr. Pole. By three to one.

Mr. FORT. So that we can start, in any of these proposals regarding branch, group or chain banking, with the knowledge that one thing that should be done for the banking systems of the nation is to tighten up either the supervision or the regulations or the laws under which the State banks operate?

Mr. Pole. That seems to be necessary.
Mr. Forr. Has the matter of the development of branch banking gone far enough so that it is possible for anyone to venture a guess as to whether the loans made by the branches—that is to say, if a given branch has deposits of 10 per cent of the bank's total resources or deposits, is there any way through which, or could it be discovered whether the depositors in that branch get ten per cent of the loans, or not?

Mr. Pole. Are you including the groups of banks?

Mr. Fort. No; branches. Mr. Pole. Yes; I should say it has gone far enough to show that. I think the probability is that the California banks will make a very satisfactory showing along that line. In a great many instances, we shall find that there is far more money loaned to the community than it furnishes in deposits, in order to stabilize conditions and advance money to farmers, etc.

Mr. Fort. What would be a way to get at that fact statistically? Mr. Pole. I should think the way would be to call witnesses from either one of those banks, and I think those statistics will be right on

the tips of their fingers.

Mr. Fort. That would be very helpful. Increased capital requirements would accomplish one of the purposes you have in mind, through limiting the number of banks, and thereby reducing overhead and increasing the possibility of profit?

Mr. Pole. Yes. Mr. Fort. You spoke about the necessity of profit.

Mr. Pole. Limiting the number of banks but increasing the number of banking offices would give the banks a wider opportunity for earnings.

Mr. Fort. And, through the reduction of overhead, enable greater Now, what I have in mind is-

Mr. Pole. Per deposits, for instance.

Mr. Fort. If we have now a small community struggling to keep three \$25,000 banks going and, by making the minimum capital limit \$50,000 or \$75,000—the limit of capital in such a community the one resulting bank would have a far better chance of profit than the three banks now?

Mr. Pole. Undoubtedly.

Mr. Fort. And, therefore, that would, to some extent, solve

this problem?

Mr. Pole. I think to some extent. Of course, those communities would be denied what is very helpful, namely, competitive banking facilities, we should not have a monopoly of the banking business even in the small communities.

Mr. Fort. If we are going to suggest the idea of permitting branch banks all through the trade areas of such a city as St. Louis, should not we simultaneously prevent the consolidation of banks in St. Louis.

if you are after competition through the branches?

Mr. Pole. That is a big question, Mr. Fort. Mr. Fort. I appreciate it, but I am trying to think through these problems. If our object in permitting branch banking through the trade area—and I am not hostile to your proposition—if our object is to produce competitive banking in the smaller towns and cities through having the branches of two different St. Louis banks located there, and decentralizing these resources, should we permit two St. Louis banks having branches in those towns to consolidate in St. Louis?

Mr. Pole. I am inclined to think in that case that the natural economic development should be permitted to find the solution to such a problem. I should like, however, to give further consideration

to that question.

Mr. FORT. Mr. Pole, there is a great deal of belief-and I do not know whether there is any real foundation for it; it might only be gossip—that if the stock, market deflation had not come just about when it did the New York banks would have been reduced to approximately five or possibly four groups or individual institutions?

Mr. Pole. Through consolidations?

Mr. FORT. Through consolidations, purchases, mergers, and so forth. I am not ordinarily afraid of large organizations, but would you feel that we ought to, in establishing any such system of branch banking through the trade areas, permit the banking of America. by any chance, to get down into so few hands as that might involve?

Mr. Pole. I doubt very much if that condition would prevail for

very many years to come.

Mr. Forr. Should we adopt machinery that would permit it ever to prevail?

Mr. Pole. I am not prepared to go into that at this time. That is

too large a question to answer without further study.

Mr. Fort. I appreciate your desire not to commit yourself to a proposition until you have reached a conclusion. I would not want to do it, if I were in your place.

In connection with this matter of setting up branch systems, chains, or whatever they may be, through purchase or absorption of smaller banks by larger banks, have you given any thought to the wisdom of requiring that absorption to be by the exchange of stock and not permitting cash purchases?

Mr. Pole. I think that that might be quite desirable.

Mr. FORT. That would remove the incentive to speculative profit to individual insiders of the larger banks?

Mr. Pole. I think so. Of course, the methods now used are

frequently by the exchange of stock.

Mr. Fort. They are frequently, but there is a tendency to consider the possibility of speculative profits to be made out of the smaller banks through a sale for cash.

Mr. Pole. That is true.

Mr. Fort. And it would, in the long run, make those purchases be considered solely from their economic worth, if all speculative deals could be eliminated?

Mr. Pole. Yes, sir; if they could be eliminated.

Mr. Fort. In connection with all of this, does the comptroller's office feel that there should be any distinction between the requirements for the investment of savings deposits from those of commercial

deposits?

Mr. Pole. I think that the comptroller's office has never expressed itself on that point. However, my own opinion is that inasmuch as banks are privileged to require of a savings depositor as much as 30 or 60 days' notice of withdrawal, occasionally the 60-day clause is invoked, which has the effect of giving the demand depositor a preference over the savings depositor. My feeling has always been that since the banks are privileged to require 60 days' notice on savings.

that the investment of such savings should be segregated for their benefit.

Mr. Fort. That is my idea, plus the idea that we have educated the American people, in some States, at least, to the idea that a savings bank is the ultimate of responsibility, and where the word "savings" is used, we should not allow it to be depreciated in the public mind by the possibility of savings depositors losing their thrift money.

Mr. Pole. I think that is a very sound theory.

Mr. Fort. Have you given any thought, in connection with this whole thing, to the major question of security affiliates and their propriety in connection with modern banking?

Mr. Pole. A great deal. Mr. Fort. Have you reached a final conclusion? If not, I do not

want to ask you to express any.

Mr. Pole. I have reached the conclusion that the comptroller's office feels that it should have some supervisory powers over affiliated corporations.

Mr. Fort. I have not reached a final conclusion myself, but I am

asking this question simply to develop the idea.

Mr. Pole. It is possible that had we visitorial powers, we might suggest some legislation.

Mr. Fort. Is it customarily the fact that the affiliated corporation does its borrowing with the bank which it has the affiliation?

Mr. Pole. I think that is sometimes true.

Mr. Fort. If it is true that modern banking is increasing in loans on collateral, is there not, in the combination of the security affiliate and the bank-is there not danger in that situation of using the national bank's resources for speculation in stock—through the affiliate?

Mr. Pole. By loaning to the securities company?

Mr. Fort. Yes.

Mr. Pole. Of course, the loaning limit of the national bank would be applicable to the securities company as well as to any other corporation or individual.

Mr. Fort. On collateral?

Mr. Pole. On collateral; yes, sir.

Mr. Fort. And that loaning limit would be proportionate to its capital?

Mr. Pole. The capital of the national bank.

Mr. Fort. The thing that is stirring in my mind—and I do not know that I can make it clear—is this: Is there not danger from the consolidation of the security affiliate and the bank, in the fact that the market value of the security affiliate is directly reflected in the market value of the bank stock, quite a tendency psychologically, to transform a banker into a man who considers the fluctuations of the security market?

Mr. Pole. Of course, the bare fact that the stock of a securities company is frequently tied up with the stock of a national bank the connection, of course, is very close, and I think that the public

recognizes that condition.

Mr. Fort. I do not want to talk about myself, but I happen to be the president of a security affiliate owned by certain insurance com; panies of which I am the manager. Is there not a psychological danger of the bank taking off the security affiliate's hands, perhaps, its syndicated obligations that have not gone very fast to the public?

Mr. Pole. It might be possible.

Mr. Fort. I have seen it happen. You have spoken of the 10-to-1 relation between deposits and capital. In the customary acceptation, that is what it is assumed to be. Is there any necessity for the change of that proportion in the case of branch banks—either way—any necessity or propriety?

Mr. Pole. I should regard that as a fair capital requirement.

Mr. Fort. If your theory of branch banking, through the trade area, is adopted, do you feel that the liability of sudden withdrawals of deposits from a bank is greater or less?

Mr. Pole. I should say that they would be infinitely less.

Mr. Fort. Therefore, it might be possible for the bank properly to

increase the total of its deposits in reference to its capital?

Mr. Pole. I would not be in favor of that. I think, as a maximum, 10 per cent of the deposit liabilities should be required as capital funds.

Mr. Fort. Capital and surplus?

Mr. Pole. Capital and surplus; yes, sir.

Mr. FORT. I think that is all.

ä

B

0

Mr. Stevenson. May I ask Mr. Fort to ask just this question on that point—whether it is contemplated in the branch banking organizations, such as he refers to, to segregate a certain amount of capital to each branch, and allocate it so that the capital represents—

Mr. Forr. I do not think that would be possible.

Mr. Pole. That would not be my idea.

Mr. Stevenson. My own State has that provision. It is not in our national act.

Mr. Fort. I want to apologize for taking so much time.

The Acting Chairman (Mr. Strong in the chair). The committee will stand adjourned until to-morrow morning at 10.30 o'clock a.m. (Whereupon, at 12.20 o'clock p. m., the committee adjourned until Thursday, February 27, 1930, at 10.30 o'clock a.m.)

House of Representatives, Committee on Banking and Currency, Thursday, February 27, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The Chairman. The committee will come to order.

STATEMENT OF HON. JOHN W. POLE, COMPTROLLER OF THE CURRENCY (Resumed)

The Chairman. Mr. Pole, you have, I understand, something you want to put into the record in response to questions that were asked of you yesterday.

of you yesterday.

Mr. Pole. Mr. Brand asked me for the earnings and expenses of each Federal reserve bank and the franchise tax which had been paid to the Government from 1914 to and including 1929.

Mr. Strong. Is that gross income?

Mr. Pole. Gross income and net income, and the amount of franchise tax which has been paid to the Government.

The CHAIRMAN. Without objection, it will be placed in the record

(There was no objection, and the statements referred to are here printed as follows:)

Earnings and expenses of Federal reserve banks-Gross and net earnings of Federal reserve banks, and disposition made of net earnings, 1914-1929

[Figures for each Federal reserve bank are given in Table 83]

Year	Earnings		Disposition of net earnings			
	Gross	Net	Dividends paid	Trans- ferred to surplus ¹	Franchise tax paid to U. S. Gov- ernment 1	Profit (+) or loss (-) carried forward

¹ Amounts paid as franchise tax for 1922 includes additional franchise tax payments for prior years withdrawn from surplus account on December 31, 1922, as follows: For 1920, \$270,389; for 1921, \$3,129,673.

The CHAIRMAN. Mr. Seiberling, you are next on the list. Mr. Letts. I had not concluded, Mr. Chairman.

The CHAIRMAN. I beg your pardon. You had yielded to some

Mr. Letts. Yes; I yielded to Mr. Fort.
The Chairman. Very well; suppose you continue with your

questions.

Mr. Letts. Mr. Pole, yesterday I asked you something about the Bank of Italy and the Bancitaly Co. Do you regard the system out there as a branch system, or is it a group system?

Mr. Pole. Branch system, sir.

Mr. Letts. How do you distinguish between the two systems?

Mr. Pole. Between the branch and the group systems?

Mr. Letts. Yes.
Mr. Pole. The group system is a number of individual, separately incorporated institutions, the stock of which is owned by a holding corporation. A branch bank is a bank with branches located at various points over the State, and the entire resources of the parent bank are carried to any point where there may be a branch. These branches are a part of the bank itself.

Mr. Letts. To make it clear, the group system is composed of separate identities, but the stock is controlled by one holding com-

pany—is that correct?
Mr. Pole. That is correct.

Mr. Letts. Would you say, then, that the system in California is a pure branch system, or is it a mixture? Is it not true that most of the stock, or a large part of the stock, of the Bank of Italy is held by the Bancitaly Co.

Mr. Pole. I am not informed as to where the stock of the Bank of Italy is, but I think it may be chiefly held by the Trans-America

Corporation.

Mr. Letts. Assume that some considerable part is held by either; assume that the control is held by the Bancitaly Co. or the Trans-America Co., would you not say that it is in effect a group system just as much as if each of these branches were separate entities?

Mr. Pole. I would say not, because the stock of the Bank of Italy may be held by as many as 16,000 or 20,000 different people

and in part by the Trans-America Corporation.

Mr. Letts. I am assuming that the control is so held.

Mr. Pole. That is the control of a single bank.

Mr. Letts. I understand, but that single bank involves the consideration of many branches.

Mr. Pole. You must regard that as a single bank.

Mr. Letts. Yes; that is true.

Mr. Pole. A single corporate entity.

Mr. Letts. But, as to the practical effect, is it not the same as if the branches of the Bank of Italy were separate entities controlled

by the policies of the Bancitaly Co.?

Mr. Pole. It might be said that there are some similar characteristics, but different in that a bank, the stock of which is held as a member of a group, has a separate board of directors; it has a separate set of minutes; it has a separate set of officers and is operated to all intents and purposes as an independent unit, whereas the Bank of Italy is a corporation in San Francisco, which has its various offices scattered over the State, but just as much a part of the organization as the head office itself is.

Mr. Letts. The group system, to be effective, however, would place the control of the stock of the members in the holding company?

Mr. Pole. Yes; usually.

Mr. Letts. And that places the power, the directing policy, with

that holding company?

Mr. Pole. That would not be admitted by the groups, I think. They claim that each group is an independent unit and acts inde-

Pendently through its local directors.

Mr. Letts. I can see that there would be a great advantage in that, in having the policies of the members controlled as far as possible by those that are familiar with conditions in the country or community, but that independence could only exist so long as it did not come in conflict with the policy of the holding corporation.

Mr. Pole. It could not exist indefinitely. Of course, the board of directors is elected by the shareholders, and if the corporation held the majority of the shares at the annual meeting, they could elect their own directors, who would elect their officers, and their policies

would thereby be enforced.

Mr. Letts. Assuming that the holding corporation buys up the controlling stock, it would always have the power to control the election of directors, would it not?

Mr. Pole. Yes; undoubtedly.

Mr. Letts. And in that way they get this power.

Mr. Pole. Yes.

Mr. Lerrs. And that power could be political, as I indicated yesterday, or it could be economic, and reach out in a great many ways.

Mr. Pole. And be quite effective.

The CHAIRMAN. Would you yield there, Mr. Letts?

Mr. Letts. Yes.

The Chairman. I would like to ask Mr. Pole whether there is not an embodiment in this particular situation that you referred to of unit banking, branch banking, chain banking, and holding company banking?

Mr. Pole. There is in what might be called the Trans-America group, Mr. Chairman, but I am speaking of the Bank of Italy as a

separate corporation.

The CHAIRMAN. In that you have national banks and you have State banks.

Mr. Pole. In the Trans-America Corporation?

The CHAIRMAN. Yes; and you have international banking as well. Mr. Pole. I am informed that that is true. Of course, I have no means of knowing officially what the Trans-America Corporation holds in the way of bank stocks.

The Chairman. In other words, here is an illustration of the different forms of banking which this committee are inquiring into; this is a typical instance where all the elements that enter into our

inquiry are embodied in one group.

Mr. Pole. Within the Trans-America Corporation?
The Chairman. Within the Trans-America Corporation.

Mr. Pole. Yes.

The CHAIRMAN. That is all.

Mr. Pole. That may be correct, but not within the Bank of Italy. Mr. Letts. The point I want to make clear is this, that when we see the Bank of Italy and its operations and its policies, we have not seen the whole picture; we still have to go back of the screens and see the Bancitaly Corporation or the Trans-America Co. and understand the policies that control from those sources?

Mr. Pole. There is a picture back of the Bank of Italy, un-

doubtedly.

Mr. Letts. You have advocated the extension of the branch-banking system. Would you safeguard that in any way to prevent the policies of the parent bank and the policies of the branches to be controlled by an inner group, somebody back of the screens, in that manner?

Mr. Pole. I would recommend some such authority be given.
Mr. Letts. And could that be safeguarded in some such way?
Mr. Pole. I think it would be possible to work out a plan.

Mr. Letts. Is there any way to prevent any stockholder from selling his stock to whom he might wish?

Mr. Pole. There is no way I know of, Mr. Congressman.

Mr. Letts. Then a holding corporation could acquire it, if the possessor of the stock were willing to sell?

Mr. Pole. Yes.

Mr. Letts. So at this time at least we have that danger before us. In other words, if there is a danger in group banking, we ought to

avoid that danger if we are going to branch banking as a system to

be preferred.

Mr. Pole. I have suggested in my report to Congress that there should be given to the comptroller some supervision over these holding corporations.

Mr. Letts. The holding corporations are not under national

Mr. Pole. That is true.

Mr. Letts. And so Congress could not give you that supervision. Mr. Pole. Well, I think that in so far as they held stocks of a national corporation, it might be possible for Congress to do so.

Mr. LETTS. Now; just to follow that thought a little further, I am aware of the tendencies of the times, I think, toward centralization of power, political, economic, and financial. We see it in the control of the power resources of the country; we see it in the distribution of foodstuffs and merchandise; is it not quite conceivable that some very small group could control the policies of the power corporations. such as the American Gas & Electric Co., for instance, and control the policies of the great food distributing companies and other merchandising corporations? Now, while you feel that the system that you advocate, of extending branch banking, would decentralize banking resources, is it not quite apparent that we are centralizing in a very much greater degree the power to control production, to control distribution and price, and are we not putting the consuming Public at the mercy of a comparatively small group of persons that may financially be able to do the very thing that I am speaking of by uniting their forces?

Mr. Pole. Through a branch banking system?

Mr. Letts. The control of the banking policies of the country, the control of power, the control of the distribution of foods and all that sort of thing always cause me to think back to the time of Roosevelt: he became a great hero because he went out with the "big stick" to break up combinations, which he did in the interests of the consuming public; and, now, are we not drifting very rapidly in the other direction, and is it a wholesome indication?

Mr. Pole. I think, under the plans I have suggested to Congress. that the result of the extension of the branch-banking privilege would cause to spring up all over the country large organizations, and what

might be termed local centralization.

Mr. Letts. I understood that to be your recommendation. Mr. Pole. I think it would be decentralized as far as the largest cities of this country are concerned.

I do thing, also that consideration might be given to the question of consolidations of these large units after they had been formed.

Mr. Letts. And to interlock their directorates?
Mr. Pole. And to interlock their directorates. I think it is an

Important phase of it.

Mr. Letts. I understand your thought in that connection, but as 800n as you have decentralized by encouraging the development in St. Louis, Kansas City, Omaha, and other places over the country, would not some one come forward immediately and combine those large units?

Mr. Pole. That is what I have in mind, that perhaps some restrictions should be put on such consolidations. Of course, that is going

on now, in the form of group banking.

Mr. Letts. Now; can you tell me what the fee system is that is employed by holding companies—if I make that clear by the question?

Mr. Pole. What the fee system is?

Mr. Letts. Yes. I do not know that I have a clear understanding of it, but I think that some such system as this prevails, that they not only realize upon the stock of their subsidiaries which they hold, but they charge their subsidiaries a fee for service and in that way make the holding companies really profit-taking devices and they can be so operated as to permit the subsidiaries to show only moderate earnings and to make the big money flow into the holding company. I understand that is accomplished by some kind of a fee system. They charge for some kind of service, but what that service is I do not know; I do not know whether it is a convenient device or just what it is, but I would like to have some light on that.

Mr. Pole. I know of no such arrangement, Judge.

Mr. Letts. Mr. Pole, you have advocated diversification. How is that accomplished among the members of a group or in the branches of a banking system? Is it by shifting the paper from one institution to another?

Mr. Pole. I think that is one way it is done among members of a

group; the sale of paper by one bank to another.

Mr. Letts. Every bank would have a reasonable amount of paper of this character and of the other character so as not be loaded up, as in my part of the country, with real-estate loans entirely, or something of that kind; that would make the paper of the bank more

diversified and more liquid?

Mr. Pole. Such funds are shifted in a group system. Of course, there is not much doubt but what the management corporate of these groups would see to it that nothing happened to any member of

the group, and in that respect it has something of the protection of the branch banking system.

Mr. Letts. Now; the members of groups could be both national banks and State banks, and be located in various States?

Mr. Pole. Yes.

Mr. Letts. And subject to different States' laws?

Mr. Pole. Yes.

Mr. Letts. And the Comptroller of the Currency would have jurisdiction over some, but not over others?

Mr. Pole. Yes.

Mr. Letts. Is that a wholesome situation?

Mr. Pole. Quite unwholesome. Mr. Letts. Can it be corrected?

Mr. Pole. I think it can not except with difficulty. We do enter into arrangements with the superintendents of banks of the States in which members of a group or chain may be situated, and arrange to examine these banks at the same time with the State authorities. Having done that, we compare notes and arrive at our conclusions after consultation, but it is difficult to make these arrangements.

Mr. Letts. At least it would be possible to shift good paper from a bank in one State to a weak bank in another State, and perhaps from a national bank to a State bank, or the reverse of that, so that you would not have the power to examine fully nor would a State

examiner have the necessary power to do that?

Mr. Pole. That is correct. That is particularly true of the chain

Mr. Letts. And it could be of the groups?

Mr. Pole. It could be of the groups. If we suspect anything of that kind going on, and there are usually evidences of these things, we arrange to take care of such a situation but it is subject to those very difficulties to which you refer.

Mr. Letts. And that would operate, in a group system or a chain system, to prevent an examiner, whether from your office or from a State department, really to find that a bank is in fact insolvent?

Mr. Pole. It might operate that way. However, in justice to these important groups, I might say that I think the majority of them endeavor to operate their system either under the national law or the State law, and if they are not all under one system, when they acquire them, they usually have it in mind to convert them so as to operate under a single system as far as possible.

Mr. Letts. In the conduct of banks under the group system, and the chain system, where paper is shifted from one bank to the other.

does the bank which transfers the paper indorse it or not?

Mr. Pole. The custom is not to indorse it. However, there is usually a moral responsibility recognized.

Mr. Letts. But that is not a responsibility that could be enforced in the interest of creditors?

Mr. Pole. There might be such an arrangement.

Mr. Letts. You would have to show an agreement, either express or implied, in order to do that?

Mr. Pole. Yes. Mr. Letts. Or negotiations of some character if they did indorse?

Mr. Pole. Yes.

Mr. Letts. Then there would be a contingent liability would there not?

Mr. Pole. Yes.

Mr. Letts. And what relation would that contingent liability have

to the matter of rediscounts?

Mr. Pole. That would be limited—an indersement of that kind would be limited to the capital stock of the bank under section The bank could not become liable to another bank in excess of its capital.

Mr. Letts. Now, in these systems, is it recognized that a member bank will have the power to reject undesirable paper that is offered to it, or would the parent organization have power to thrust that

Paper upon the member bank?

Mr. Pole. It would have no power to thrust paper onto a bank. It would be within the power of the bank to refuse any paper, because it is a separate corporation and acting under a separate board of directors, and the practice to which you refer is not at all a common

Practice except under perfectly legitimate proceedings.

Mr. Letts. I am leading to this point: If in a system of that kind, group system or chain system, it was found that some part of the system was going to fail, that some banks were going to fail, they would have the power of strengthening some and making a selection as to which ones would fail and which would survive. In other words, they would be able to determine what communities would

suffer the loss and what ones would gain by the manipulation, would they not?

Mr. Pole. Technically that is correct.

Mr. Letts. But you do not apprehend that such a thing would happen?

Mr. Pole. As a matter of practice, I can not conceive of any mem-

ber of a group failing unless the group as a whole failed.

Mr. LETTS. That would be true of chains, but it is not neces-

sarily true of groups, is it?

Mr. Pole. Not necessarily, but it is quite likely that the group could not permit any of its members to fail without endangering them all.

Mr. Letts. In other words, is it not possible that the group plan might be a matter of convenience to the strong and result in disadvantage to the weak, and that applies not only to the banks but to the communities which they serve?

Mr. Pole. Of course, the group system of banking is more or less new. I think it has only been in effect not to exceed two years, and

nothing like that has so far developed.

Mr. Letts. That reminds me of something I overlooked. I intended to ask you how long the Bank of Italy has been in building itself up to its present proportions?

Mr. Pole. Oh, 15 years. I reserve the right to correct that.

The CHAIRMAN. Will the gentlemen yield?

Mr. Letts. Yes.
The Chairman. Might I suggest that the real coming-out party of the Bank of Italy was at the time of the earthquake disaster in San Francisco, in 1906?

Mr. Letts. At any rate, it showed a very rapid development,

did it not?

Mr. Pole. Quite rapid development.

Mr. Letts. In the examination of a branch bank, will the public have detailed information with respect to the condition of the branches, or will they get aggregate results of all the branches?

Mr. Pole. The statement which is issued by the Bank of Italy exhibits the condition of the bank as a whole, without reference to

any particular branch.

Mr. Letts. Suppose that the banks out in Iowa were in a system of that kind, a branch bank system; would it be possible for the people to Iowa to know the real condition of the Iowa bank?

Mr. Pole. Of an individual branch?

Mr. Letts. Yes. Mr. Pole. No, I think there would be no such information available to the public.

Mr. Letts. Do you think there would be no occasion for it?

Mr. Pole. I do not think there would be the slightest occasion for The full strength of the bank would be carried to the farthest hamlet in Iowa.

Mr. Letts. In your prepared statement of a few days ago, you in effect made a statement that a supervising bank official is always reluctant to close a bank, and you intimated that your office operated along that line, and that State bank supervisors naturally have the same attitude toward State banks, and further on in your statement you made the statement that oftentimes supervising officials are surprised that the bank has failed.

Mr. Pole. Did I say that?

Mr. Letts. No, I am mistaken. You said that "The supervising official may in many cases not be surprised that the bank has failed, and the executive officers of the bank and perhaps the local board of directors have been struggling for months or years to keep the bank open, and the actual failure comes as a complete surprise and a shock to the depositors, and in most cases to the shareholders who are not officers or directors of the bank."

That is some of your language; is it not?

Mr. Pole. Yes.

Mr. Letts. Now, I think that is the stand taken by banking departments, but I have never been able to see the philosophy of it. I have seen cases where banks have been kept open, where the examiner and the members of the board and the officers of the bank all knew that the bank ought to close, and yet up to the very hour of closing such banks took such deposits as were offered by the public. I have seen cases where it has been found that banks ought to be closed, and yet they were reluctant to do it and struggled along, as you indicate here, for months or years to keep them open. Is this fair treatment to the public?

Mr. Pole, I notice that in some part of your formal statement you stated that your principal concern and interest is in the depositor, but does a policy of this kind operate to the advantage of the depositor? I have seen a number of little banks out in Iowa fail after they had paid two and sometimes three assessments of 100 per cent in the endeavor to keep the bank open, and they finally had to lose them.

Mr. Pole. Yes.

Mr. Letts (continuing). Very much to the disadvantage of the shareholders, and conducted in a manner that kept the public in ignorance of the condition, and the bank would go on accepting the public's money, to the ruin of the depositors, and I have often wondered how a policy of that kind really can be justified. In other words, why should a banking institution, when it is found by the examiner to be weak and insolvent and unable to go ahead, not be closed? Why is not that the fair thing to do, having in mind the

interests both of the shareholder and the public?

Mr. Pole. Of course, if a bank is found insolvent by our department it is closed. However, banks fail through many different causes. It may be that the assets of a bank are in the opinion of the board of directors and in the opinion of the examiners good but slow. The directors will frequently come down in a body to Washington and insist that the examiner is too drastic in his classifications, that these loans are collectible, that they understand the people of the community, that they know all about them and that we do not. That means that the bank is probably in a very frozen condition, but not insolvent. There may be an unusual demand for funds, but by reason of the frozen condition of that bank they are unable to realize fast enough to meet the demands and the bank has to close regardless of the fact that it may be considered by us and by its own board of directors as solvent, as a going institution.

Mr. Letts. Do your examiners inquire into the policies of banks,

or only as to the assets of banks?

Mr. Pole. We go into every phase of the bank's operation.

Mr. Letts. I am unable to speak concerning national banks, but I know the policy prevailed for many years in my State of State institutions hiring some one to run the bank who could not live on the pay that was given him, and where he was encouraged by the directors to take on every kind of a side line that is imaginable, to write insurance, fire and life, to negotiate loans on land with the insurance companies, to connect himself with some automobile agency, to the point where in a comparatively short time he would have personal transactions that he as a bank official must deal with and where his opportunity for personal gain was entirely at variance with the welfare of the institution that he represented.

In other words, say that a man wanted to buy a farm, and he wished to borrow more than the farm could reasonably carry; he would be permitted first to negotiate a loan with some insurance company, and the bank official would get a commission, doing that as an individual, and then perhaps he would tell the borrower that he did not have security enough and that he ought to have more fire insurance, and then he writes the fire-insurance policy and tells the borrower that he had better carry more life insurance, and he writes that policy and gets fees and commissions all along the line. Some customer of the bank may be buying an automobile, and a bank official finds it convenient to accommodate that customer at the bank if he buys the right kind of an automobile, and all that sort of thing.

Now, is there not some way that we can protect the public against

that kind of banking?

Mr. Pole. In the course of our examinations, if we find that the outside duties of any officer interfere with the proper conduct of the bank, it is naturally a matter of criticism, and we try to have those

matters of criticism corrected.

Mr. Letts. Would it not be a wholesome thing if we had something in the law, and also in our State laws, that would prevent officials to pass upon loans and deal with the public who may be engaged in any business that would give them an interest which is contrary to the welfare of the bank?

Mr. Pole. I doubt whether that would be a practical thing in a very small bank. In the more important banks, I think that is a usual

policy.

Mr. Letts. Mr. Chairman, that is all I have to ask at this time. Some time later I may wish to examine Mr. Pole a little with respect to his analysis of land depreciation in the agricultural sections of the country, but I do not care to do that at this time, if I may have that opportunity at some later time.

The CHAIRMAN. Yes; the members will be given a chance to do

that after we have carried out this routine.

Mr. Steagall is next.

Mr. Steagall. Mr. Pole, the picture drawn by Mr. Letts respecting the small realizations going to depositors in insolvent banks hardly represents the situation as applied to the national system, does it?

Mr. Pole. The liquidation of national banks, I think the report

of insolvent division shows, is about 65 per cent.

Does that answer your question?

Mr. Steagall. Well, that is the average?

Mr. Pole. Oh, yes, that is the average.

Mr. Steagall. So I guess that answers that question.

Somewhere I saw-maybe in one of your recent reports-that the liquidations completed of national banks that were insolvent showed a realization of 79 per cent, leaving a loss of 21 per cent on eight hundred and some odd number of banks liquidated during the past 10 years. Is that right?

Mr. Pole. I do not carry that figure in my mind. I will be glad to

insert that in the record, Mr. Steagall.

Mr. Steagall. What I was attempting to do is to refresh your memory on that point. I may be in error about it, but somewhere in a hurried looking over of your report or something else—unless I am confused in my recollection—I saw those figures, that the losses in the banks where liquidation had been completed were 21 per cent. It impressed me very much. And, if that is true, 65 per cent would not quite do justice to the situation, would it?

Mr. Pole. On that hypothesis, you are correct.

Mr. Steagall. Now, since my reference to your report was madeif it was your report-would you adhere definitely to the statement that only 65 per cent had been realized?

Mr. Stevenson. Here are the exact figures. It is 70 per cent. The Chairman. I would suggest at this point that the statement appearing in the comptroller's report on this matter be placed in the record, and without objection that will be done.

(There was no objection, and the excerpt referred to is reproduced

below.)

NATIONAL BANK FAILURES

During the past year receivers were appointed for 79 national banks. Of this number, 72 were failures and 7 appointments of receivers were made in order to enforce stock assessments necessary to be paid under contract to succeeding institutions which purchased the assets of the bank, sold under a guarantee from stockholders, paying creditors in full. Of the 72 actual failures, 2 were restored to solvency, leaving 70 to be liquidated by receivers. This compares with 54 actual failures for the previous year, 2 of which were restored to solvency, and the appointment of receivers for 7 banks to enforce stock assessments. The capitalization of the 79 banks for which receivers were appointed during the past year was \$6.575,000, compared with the capitalization of the 61 banks for number, 72 were failures and 7 appointments of receivers were made in order to past year was \$6,575,000, compared with the capitalization of the 61 banks for

which receivers were appointed during the previous year of \$4,135,000.

The total of assets of the 79 banks for which receivers were appointed during the past year, including additional assets acquired after suspension, was \$62,612,500. Stock assessments in the amount of \$5,440,000 had been levied as

of September 30, 1929, by the comptroller against the shareholders of these banks.

The records of the division of insolvent national banks of the comptroller's office do not show as a failure the suspension of the First National Bank of Lagrange, Tex., with assets of \$1,213,812.02. The suspension occurred April 30, 1929, and the bank remained in the hands of an examiner in charge until May

20, 1929, on which date it resumed business.

During the past year two banks, each with assets of over \$12,000,000, became insolvent, and the receivers were appointed. Immediately arrangements were made with local institutions for the purchase, at par and interest, of such of the assets of the failed banks as were considered acceptable to the purchasing banks. The results were that in the first institution 50 per cent was made immediately available to its creditors, and in the second 60 per cent was immediately paid, thus relieving the local financial situation at once. Since such sales of assets, Since such sales of assets, funds have been accumulated for payment of additional dividends of 25 per cent to the creditors of the first-mentioned bank, who received a first dividend of 50 per cent, and funds have been accumulated for payment of additional dividends of 30 per cent to the creditors of the second-mentioned bank, who received a first dividend of 60 per cent, thus assuring the payment of 75 per cent and 90 per cent, respectively, to the creditors of these banks within 12 months after their failure.

This new method of liquidation has been followed in several smaller failures, and has proved most effective in relieving at once the acute financial situations

which follow bank failures.

From the date of the first failure of a national bank in the year 1865 to October 31, 1929, 1,313 national banks were placed in charge of receivers. Of this number, 72 were restored to solvency and permitted to resume business, leaving 1,241 to be administered by receivers. Of these so administered, 426 (26 less than reported at the close of 1928) are still in process of liquidation and 815 have been entirely liquidated and the trusts closed.

The capital of the 1,313 insolvent national banks at the date of failure was \$143,670,420. The capital of the 72 banks that were restored to solvency was \$12,180,000. The capital of the 426 banks that are still in receiverships is \$32,524,500, and the capital of the 815 banks that have been completely liqui-

dated was \$98,965,920.

Collections:

The book value of the assets of the 1,241 administered receiverships, including assets acquired after suspension, aggregated \$853,993,969, in addition to which there were levied against shareholders assessments aggregating \$92,315,740. Total collections by receivers to September 30, 1929, from these assets, including offsets together with collections from stock assessments, amounted to 56.01 per cent of the total of such assets and stock assessments. The disposition of such collections was as follows:

Collections: Collections from assets, including offsets Collections from stock assessments	
Total	530, 057, 798
Disposition of collections: Dividends paid to creditors on claims proved aggregating \$464,838,227 Payments to secured and preferred creditors, including offsets allowed and payments for the protection of assets Payment of receivers' salaries, legal and other expenses Cash returned to shareholders Cash balances with the comptroller and receivers	279, 772, 948
Total	530, 057, 798

In addition to this record of distribution there were returned to shareholders, through their duly elected agents, assets of a book value of \$16,211,624.

The 426 banks that were as of October 31, 1929, still in charge of receivers and in process of liquidation had assets, including assets acquired subsequent to their failure, aggregating \$339,517,557. The capital of these banks was \$32,524,500, and there had been levied by the Comptroller of the Currency to September 30, 1929, stock assessments against their shareholders in the amount of \$28,924,500. The collections from these assets, including offsets, together with collections from stock assessments, amounted to 52.24 per cent of such assets and stock assessments as shown by receivers' last quarterly reports under date of September 30, 1929. The disposition of such collections was as follows:

Collections from assets, including offsetsCollections from stock assessments	\$178, 488, 168 13, 999, 442
Total	192, 487, 610
Disposition of collections: Dividends paid to creditors on claims proved aggregating \$189,388,731 Payments to secured and preferred creditors, including offsets allowed and payments for the protection of assets Payment of receivers' salaries, legal and other expenses Cash returned to shareholders Cash balances with comptroller and receivers	86, 493, 085 82, 323, 457 10, 799, 475 350, 000 12, 521, 593
Total	192, 487, 610

From the date of the first failure of a national bank in 1865 to the close of October 31, 1929, 887 receiverships were liquidated and the trusts closed, or the affairs thereof restored to solvency. Included in this number are the 72 banks restored to solvency (2 in 1929) and 103 that were liquidated during the year 1929. These 815 banks had assets, including assets acquired subsequent to their failure, aggregating \$514,476,412. The capital of these 815 banks was \$98,965,920 and there were levied by the Comptroller of the Currency stock assessments against their shareholders in the amount of \$63,391,240. The collections from these assets including offsets, together with collections from stock assessments as shown by receivers' final reports amounted to 58.41 per cent of such assets and stock assessments. The disposition of such collections was as follows:

Collections: Collections from assets, including offsets Collections from stock assessments	\$306, 954, 813 30, 615, 375
Total	337, 570, 188
Disposition of collections: Dividends paid to creditors on claims proved aggregating \$275,449,496 Payments to secured and preferred creditors, including offsets allowed and payments for the protection of assets Payment of receivers' salaries, legal and other expense Cash returned to shareholders	193, 279, 863 118, 012, 673 22, 459, 854 3, 817, 798
Total The average percentage of dividends paid on claims proved as	337, 570, 188

receiverships that have been finally closed, not including the 72 restored to solvency, which paid creditors 100 per cent, was 70.19 per cent. If offsets, loans paid, and other disbursements were included in this calculation, the disbursements

to creditors would show an average of 79.13 per cent.

Expenses incident to the administration of the 815 closed trusts, such as receivers' salaries, legal and other expenses, amounted to \$22,459,854, or 3.88 per cent of the book value of the assets and stock assessments administered, or 6.65 per cent of collections from assets and stock assessments. The assessments against shareholders averaged 64.05 per cent of their holdings and the total collections from such assessments as were levied were 48.29 per cent of the amount assessed. The outstanding circulation of these closed receiverships was \$38,060,-477, secured by United States bonds on deposit with the Treasurer of the United States of the par value of \$40,506,920.

During the year ended October 31, 1929, 103 receiverships were closed in addition to which 2 banks were restored to solvency. The total assets of the 103 receiverships, including assets acquired subsequent to suspension, aggregated \$44,924,790. The capital of these banks was \$5,225,000, and the total assessments against shareholders levied by the Comptroller of the Currency aggregated \$5,225,000. The collections from these assets, including offsets, together with collections from stock assessments as shown by receivers' final reports, amounted to 54.72 per cent of such assets and stock assessments. The disposition of such

collections was as follows:

Collections: Collections from assets, including offsets Collections from stock assessments	
Total	
Disposition of collections: Dividends paid to creditors on claims proved aggregating \$25,714,590 Payments to secured and preferred creditors, including offsets allowed and payments for the protection of assets Payment of receivers' salaries, legal and other expenses Cash returned to shareholders	12, 653, 830
Total	27, 443, 963

The average percentage of dividends paid on claims proved against the 103 receiverships that were finally closed in the year ending October 31, 1929, not including the 2 banks restored to solvency which paid creditors 100 per cent, was 49.2 per cent. If offsets, loans paid, and other disbursements were included in this calculation, the payment to creditors would show an average of 65.86 per cent. Expenses incident to the administration of these 103 trusts, such as receivers' salaries, legal, and other expenses, amounted to \$2,224,420, or 4.43 per cent of the book value of the assets and stock assessments administered, or 8.1 per cent of collections from assets and stock assessments. The assessments against shareholders averaged 100 per cent of their holdings and the total collections from such assessments as were levied were 48.46 per cent of the amount

The financial operations of the division of insolvent national banks from Sep-

tember 30, 1928, to September 30, 1929, were as follows:

Collections: Cash on hand Sept. 30, 1928 Collections during the year, including offsets	\$13, 158, 682 46, 802, 886
Total	59, 961, 568
Disposition of collections: Dividends paid Secured and preferred claims paid Expenses paid Returned to shareholders in cash Cash on hand	28, 939, 840 15, 863, 280 2, 632, 455 4, 400
Total	59, 961, 568

Mr. Pole. May I answer categorically? [Reading:]

If offsets, loans paid, and other disbursements were included in this calculation, the payment to creditors would show an average of 65.86 per cent.

Mr. Stevenson. I read it [reading]:

If offsets, loans paid, and other disbursements were included in this calculation the disbursements to creditors would show an average of 79.13 per cent.

Mr. Pole. What are you reading from?

Mr. Steagall. That is in the report of the Comptroller of the Currency for December, 1929. That is where I got my figures. Since seeing this, I remember definitely where it was.

Mr. Pole. What page is that? Mr. Steagall. On page 24, in the third paragraph from the

bottom of the page.

Mr. Stevenson. That includes offsets, and the other excludes them; that is the only difference. The actual payment in cash was 65 per cent.

Mr. Pole. I will be glad to insert the facts in the record. I think we may assume, for the purposes of your inquiry, however, that it is

between 65 and 70 per cent.

Mr. Steagall. Mr. Pole, I would not for a moment attempt to put my judgment about technical matters of this kind against yours, but I think I was justified in the conclusion I reached from the statement in this report. I suggest that you read it again.

Mr. Wingo. If the gentleman will yield, may I read this statement

and possibly it will show where Mr. Steagall got his idea?
On page 24 of the Report of the Comptroller of the Currency of December 2, 1929, about the middle of the page, under that tabulation of figures, there is this statement:

If offsets, loans paid, and other disbursements were included in this calcula on the disbursements to creditors would show an average of 79.13 per cent.

Possibly that is what the gentleman from Alabama has in mind. It illustrates the old story that you can take figures to prove anything. Mr. STEAGALL. That statement includes everything, and means

that the creditors got 79.13 per cent.

Mr. Pole. In 815 banks which have been liquidated, 70.19 per cent was paid to general creditors. If preferred and secured claims are included the average would be 79.13 per cent.

Mr. STEAGALL: That is right.

Mr. Pole. And the other figure which I read has reference to the more recent closing of receiverships during 1929.

Mr. Steagall. I am speaking of the 815 banks completely liqui-

dated out of 1,300 and some number?

Mr. Pole. Roughly, yes.

Mr. Steagall. The fact is, Mr. Pole, that the best standard or guide that could be found on that question, that is to say, on the question of the amounts realized to creditors of national banks that are insolvent and liquidated, is the actual experience gained in liquidations and so the record shows that national banks, insolvent and liquidated completely, have paid 79.13 per cent.

Mr. Pole. Yes, sir.

Mr. Steagall. According to your report.

Mr. Pole. Yes.

Mr. Steagall. Of course, that report was carefully compiled?

Mr. Pole. Yes.

Mr. STEAGALL. And is better than off-hand recollection?

Mr. Pole. Yes; of course, that includes offsets, the debtor's own deposit as against his own loan, loans paid, and so forth. Otherwise it would be 70 per cent.

Mr. Wingo. May I interrupt and point out that that statement also includes the payment of receivers' salaries and legal and other

expenses of \$22,459,854, does it not?

Mr. Pole. That is correct.

Mr. Wingo. Of course, it is fair to say upon the other side that it included a stock assessment of \$30,615,375, less cash returned to shareholders of \$3,817,798, which I suppose represented the amount of the assessment which was in excess of the actual requirements.

Mr. Pole. That is right.

Mr. Stevenson. But the creditors themselves got 79.13 per cent. The man who owed \$100 and had on deposit \$1,000 got the offset; he received \$900.

Mr. Pole. In the course of time. In some cases it covered a

period of years.

Mr. STEAGALL. In that calculation, the expense of liquidation amounted to 6 per cent plus, did it not?

Mr. Pole. Six per cent plus.

Mr. Steagall. So that my statement that the losses were only 21 Per cent was correct. Mr. Stevenson. Will the gentleman yield? Mr. Steagall. Yes.

Mr. Stevenson. You mean the loss to the depositors, do you not? Mr. Steagall. Yes. I am not talking about the stockholders. We are talking about those who dealt with these stockholders; and we are not worrying about them.

I want to ask you, first, in order to refresh my own recollection, how far back these liquidations go?

Mr. Pole. That is from the beginning of time. Mr. Steagall. That is my understanding.

Mr. Stevenson. Since 1865.

Mr. STEAGALL. That is what I understood to be the fact.

Now, how much was the total loss during that time to depositors in the banks completely liquidated?

Mr. Pole. May I supply those figures later? Mr. Steagall. Yes.

(The figures referred to are as follows:)

Dividends paid to creditors on claims proved, aggregating \$275,449,496, amounted to \$193,279,863, showing a loss to general creditors of \$82,169,633.

Mr. Steagall. Mr. Pole, I dislike to repeat matters that have been discussed here extensively day before yesterday when I could not be present. I had to attend a meeting of the hospitalization board I will try to avoid things that I feel sure have been covered and will read the record on those things in the hearings later; but I want to ask you this: There has been an increase in the number of insolvent banks during recent years, has there not?

Mr. Pole. Quite a marked increase. I can give you the exact

figures, if you would like to have them.

Mr. Steagall. If they have not been inserted in the record, I should very much like to have them. I want to avoid repetition; but if they have not been put in, I would like to have them.

Mr. Pole. They are in the exhibit.

Mr. Steagall. If they are, it is not necessary to encumber the record, and I do not desire to do that; but there has been a large

How long has this increase existed or how long since it began? Mr. Pole. There appeared to be rather a definite beginning,

which was about 1920, I should say.

Mr. Steagall. Let me ask you this: Do you mean to say there was an increase in 1920 as compared to the entire period of national banking experience prior to that time?

Mr. Pole. Commencing about 1920 to 1921.

Mr. Steagall. Yes, sir. How did the percentage of the failures run during the years after the inauguration of the Federal reserve system down to this period of 1920?

Mr. Pole. Before 1920—much less pronounced than since 1920. Mr. Steagall. I do not believe I made myself quite clear in my question. What I was seeking to develop in the question was this: Whether or not there was an immediate increase of insolvencies following the inauguration of the Federal reserve system or was there a decrease for the first six years prior to this period of 1920, in which you say the increase began.

Mr. Pole. I would say there was a normal number of failures up

0

to 1920.

Mr. Steagall. And what you mean when you say a normal number is that the national bank system moved along about as usual?

Mr. Pole. Yes, sir.

Mr. Steagall. In that regard?

Mr. Pole. Yes, sir. I shall be glad to furnish detached list of failures.

Number of bank failures each year ended June 30, 1904-1920, inclusive

	State and private	National	Total		State and private	National	Total
1904 1905 1906 1907 1908 1909 1910	102 57 37 34 132 60 28	20 22 8 7 24 9	122 79 45 41 156 69 34	1914 1915 1916 1917 1918 1918 1949	96 J10 41 35 25 42 44	21 14 13 7 2 1 5	117 124 54 42 27 43 49
1911 1912 1913	56 55 40	8 8 6	59 63 46	Total	994	176	1, 170

Mr. STEAGALL. One of the prime purposes and thoughts back of the enactments of the Federal reserve law was to furnish a reservoir and supply of credit that would make bank failures less frequent,

was it not?

Mr. Pole. I do not think that was one of the purposes of the Federal reserve system to make bank failures less frequent. It was to give banks greater latitude in their loaning power and greater ability to serve the needs of the country. As to bank failures, I do not think it contemplated that the Federal reserve banks would

undertake to keep the banks from becoming insolvent.

Mr. STEAGALL. No; I do not mean that it was the business of the Federal reserve system to keep banks from becoming insolvent, but it was my understanding always that the philosophy underlying the Federal reserve act was that we would have a credit reservoir to which resort could be had in time of emergency and that one of the benefits to follow would be that a bank in distress would have somewhere to go to get relief and tide over the period of difficulty?

Mr. Pole. It did serve such a purpose.

Mr. STEAGALL. Now, I understood you to say it did not; that following the enactment of the Federal reserve law, things moved along as they had and there had been no effect on the national bank

system in that regard.

Mr. Pole. If we had not had the Federal reserve system I do not know what would have happened. There is no doubt the Federal reserve system did render great assistance to banks which, of necessity, would have had to go to their correspondents and there is a question whether they could have been accommodated. The Federal reserve funds were used quite liberally, as I am quite sure you know.

Mr. STEAGALL. That is the thought I had. I have some limited information, I think, regarding the benefits extended by the Federal reserve system in its early operations-cases of emergency, which, as I have thought must have saved banks from failures in many

instances which otherwise would have gone to the wall.

Mr. Pole. The Federal reserve banks of the various districts put many banks in funds which enabled them to stay open, whereas, otherwise, they might have closed.

Mr. Steagall. It has been one of my reasons for my devotion to the Federal reserve law, that it has granted relief in emergencies. so often, and, I thought, in a very helpful way. Such was true for

a while, I am sure.

Well, that brings us down to this point, that the fact that we had this increase in failures or insolvencies certainly is not due to defects inherent in the Federal reserve system itself?

Mr. Pole. By no means.

Mr. Steagall. It has grown out of conditions, whatever they may be, that have brought about these insolvencies, notwithstanding the relief facilities afforded by the Federal reserve banks in time of emergencies.

Mr. Pole. That is true.

Mr. GOLDER. Will you bring out, if you please, the relationship of the failures of the number of banks, other than member banks, compared with State banks, during the same period?

Mr. Steagall. That is some information we ought to have in this record. I suppose, in some of these reports somewhere it is to be found. I would imagine that had been developed before now.

The CHAIRMAN. Will you yield to me? Mr. Steagall. Yes, sir.

The CHAIRMAN, Can you furnish that information, Mr. Comptrol-

Mr. Pole. Yes.

The CHAIRMAN. Then, without objection, it will be put in the record at this point.

Number and deposits of all banks in United States 1 at the end of June, 1920, and number and deposits of banks that suspended from January 1, 1921, to December

	Total all	Memb	Member banks

¹ Exclusive of Alaska and island possessions (60 banks).

Mr. Golder. Mr. Steagall was bringing out the fact that the Federal reserve was in nowise responsible for the increase in failures and I think if we can show an equal number of failures outside of the-

Mr. Steagall. I think it properly comes in line with the suggestion you made.

r

C

Mr. Wingo. You mean other than member banks?

Mr. Golder, Other than those connected with the Federal re-

serve system.

Mr. Steagall. As I remember your testimony yesterday—and I will ask you to repeat it because there is no harm in repeating thatwhat is the proportion of failures of national banks, in the national system, as compared with the State banks?

Mr. Pole. During the period-

Mr. Steagall. Take the last 10-year period, since this failure

situation has been so accentuated.

Mr. Pole. There were 750 national banks against 4,700 State banks. The ratio, in proportion to number of banks, was approximately three to one.

Mr. Steagall. Now, do you mean to say that the proportion that the failures would be about one national bank out of seven

State banks that failed?

Mr. Pole. Between six and seven. If you do not consider the fact that there are twice as many or nearly three times as many State banks as national banks-

Mr. Steagall. I am leaving that out of the first question. There

is about one national bank to six or seven State banks to fail?

Mr. Pole. Yes; about one to six or seven.
Mr. Steagall. What proportion of the national banks have failed as compared to the proportion of State banks that have failed; in other words, what percentage of the national banks have failed in this 10-year period or 9 years or whatever it is?

Mr. Pole. Approximately 9 per cent over the 9-year period ending

1929.

Mr. Steagall. Here is what I am talking about: You have given me the percentage of the national banks that have failed as 9 per cent. That is what I want. What per cent of the State banks have failed during that same period?

Mr. Busby. I call your attention to page 4 of your first statement, in which you have that all figured out. The answer is 71 per cent.

Mr. Steagall. 71 per cent? No; those figures are not right. Mr. Busby. Seventy-one per cent that failed were State banks.

Mr. Wingo. That is not the question he asked.

Mr. STEAGALL. What I want to know is what per cent of the State banks have failed?

Mr. Stevenson. That is a very important item.

Mr. Pole. Twenty-two per cent of all State banks in existence June 30, 1920.

Mr. Steagall. About twice the percentage of State banks have

failed as compared with national banks?

Mr. Goldsborough. Will you find out at this point, what per-

centage of the banking resources failed?

Mr. Steagall. I am coming to that. What was the percentage of the resources involved in the national banks that failed as compared with the resources of the State banks that failed? If you can put the figures in the record—I think it would be more direct to ask, What were the resources of the national banks that failed, and what were the resources of the State banks that failed.

Mr. Pole. Your former question—there were 9 per cent of the national banks that failed over the period in question and 22 per cent of the State banks. That is in answer to your former question. Mr. Steagall. My next question is, What were the resources of the national banks to fail first, and next, What were the resources of the State banks that failed?

Mr. Pole. I shall have to furnish that.

Mr. Steagall. Then, when you furnish the amount in dollars and cents of resources of the national banks that failed and the State banks that failed, in that connection give also the amount of resources of the entire national system and the entire State system.

Mr. Wingo. And also reduced to a percentage basis in both

Mr. Pole. We have that information but I do not happen to carry it in my head.

Mr. Golder. I think on page 28 you will find the requested information in this report.

Mr. Steagall. Just let Mr. Pole furnish that information.

Mr. Pole. I will be glad to furnish it.

Mr. Steagall. Mr. Pole, we have had, this year, I believe you

said, 155 failures.

Mr. Pole. We have had 155 up to February 21. There were three additional national-bank failures this week and several additional State banks.

Mr. STEAGALL. At that rate, how many bank failures will we have

this year?

Mr. Pole. Well, that would be about 100 a month, would it not? Mr. Wingo. I figure, if you take the first seven weeks of the year and continue at that ratio, it would be 1,140 for the year.

Mr. Pole. Yes. Mr. Steagall. What proportion of these failures down to the 21st, I believe you said it was, are national banks? In other words, how many national banks have failed this year up to that time?

Mr. Pole. Twenty-one.

Mr. Steagall. How many of these 155 were banks of less than \$100,000 capital? Have you those figures?

Mr. Pole. One hundred and thirty of them.

Mr. Steagall. We had two in my State of more than \$100,000 this year.

Mr. Pole. I will be glad to furnish that information.

Classification of banks suspended during the period January 1 to February 21, 1930, according to capital stock

Number of banks with capital stock of—	Total, all banks	National banks	State bank members	Non- member banks
Less than \$100,000.	130	14	3	113
Over \$100,000. Not available	15	4	1	10
Total	155	22	4	129

Private banks.

Mr. Wingo. If the gentleman will yield-Mr. Steagall. Yes.

Mr. WINGO. The fact remains that the great bulk of failures this year, like they have been for the last nine years-for the immediate nine years preceding-are mostly small country banks?

Mr. Pole. Almost entirely small banks.

Mr. WINGO, That is the striking fact that I think would interest us, that the largest part of the failures are among what you class as country banks.

Mr. Pole. Yes.

Mr. Wingo. And very few large banks failed?
Mr. Pole. Very few.
Mr. Steagall. I want to ask you where these failures have occurred, speaking geographically?

Mr. Pole. This year, you are speaking of?

Mr. STEAGALL. We are discussing now the whole thing-this nineyear period we are talking about.

Mr. Pole. Taking the total number of banks on June 30, 1920, as

a basis, in the State of Vermont, there were no failures. In the District of Columbia there were no failures.

In the State of New Hampshire there was one failure. In the State of New Jersey there were three failures.

In the State of Massachusetts there were six failures, or 1.3 per

In the State of Connecticut there were three failures, or 1.4 per cent.

In the State of Maine there were three failures, or 1.9 per cent. In the State of New York there were 26 failures, or 2.5 per cent.

In the State of Pennsylvania there were 40 failures, or 2.6 per cent. In the State of Maryland there were 11 failures, or 3.9 per cent.

In the State of California there were 31 failures, or 4.3 per cent. In the State of Delaware there were two failures, or 4.3 per cent.

In the State of Ohio there were 55 failures, or 4.8 per cent.

Of all the banks which were in existence in 1920 in the State of Rhode Island three banks failed, or 6.3 per cent.

In the State of Kentucky there were 43 failures, or 7.4 per cent. In the State of Wisconsin there were 75 failures, or 7.7 per cent. In the State of Illinois there were 138 failures, or 8.6 per cent. In the State of Alabama there were 32 failures, or 9.1 per cent. In the State of Nevada there were 3 failures, or 9.1 per cent. In the State of Virginia there were 45 failures, or 9.2 per cent.

In the State of Michigan there were 66 failures, or 9.4 per cent. In the State of Mississippi there were 34 failures, or 9.6 per cent. In the State of West Virginia there were 34 failures, or 10 per cent. This is of all banks in existence, State and national, June 30, 1920.

This number has failed:

In the State of Indiana there were 115 failures, or 10.9 per cent. In the State of Tennessee there were 66 failures, or 12.1 per cent. In the State of Louisiana there were 34 failures, or 12.7 per cent.

In the State of Utah there were 18 failures, or 13.5 per cent. In the State of Washington there were 56 failures, or 14.2 per cent. In the State of Oregon there were 43 failures, or 15.5 per cent.

In the State of Kansas there were 223 failures, or 16.5 per cent. In the State of Missouri there were 296 failures, or 17.9 per cent. In the State of Texas there were 299 failures, or 18.9 per cent.

In the State of Arkansas there were 95 failures, or 19.5 per cent.

In the State of North Carolina there were 125 failures, or 20.1 per cent.

In the State of Colorado there were 89 failures, or 22.1 per cent.

In the State of Minnesota there were 411 failures, or 27 per cent.

In the State of Oklahoma there were 266 failures, or 27.7 per cent. In the State of Nebraska there were 339 failures, or 29.3 per cent.

In the State of Iowa there were 528 failures, or 29.9 per cent.

In the State of Arizona there were 27 failures, or 31 per cent. In the State of Idaho there were 72 failures, or 32.4 per cent.

In the State of Wyoming there were 72 failures, or 32.4 per cent. In the State of Wyoming there were 60 failures, or 30.5 per cent.

In the State of Georgia there were 319 failures, or 43.2 per cent.

In the State of Montana there were 203 failures, or 47.1 per cent. In the State of North Dakota there were 429 failures, or 47.8 per

In the State of South Carolina there were 227 failures, or 49.2 per cent.

In the State of New Mexico there were 62 failures, or 50 per cent.

In the State of South Dakota there were 394 failures, or 56.8 per cent.

In the State of Florida there were 190 failures, or 71.7 per cent, of all the banks which were in existence June 30, 1920 to 1929, inclusive.

Mr. Steagall. I do not suppose you are prepared, at the moment, to give the figures on the last year and this year, geographically, and if you will put them in your statement, I will be glad to have them.

Mr. Pole. These figures for the last year? Mr. Steagall. For the last year; yes, sir.

Mr. Pole. I can give you them now.

Mr. Steagall. Very well, sir. I did not suppose you had them on hand.

I

8

b

fı

ti

Mr. Pole. Six hundred and forty banks failed in 1929. By Federal reserve districts, none of them failed in the first district; 6 banks failed in district No. 2, 3 banks failed in district No. 3, 14 banks failed in district No. 4, 59 banks failed in district No. 5, 117 banks failed in district No. 6, 93 banks failed in district No. 7, 44 banks failed in district No. 8, 84 banks failed in district No. 9, 193 banks failed in No. 10, 11 banks failed in No. 11, 16 banks failed in the twelfth Federal reserve district, making a total of 640 banks.

Mr. Wingo. May I interrupt the gentleman right there?

Mr. Steagall. Certainly.
Mr. Wingo. In connection with these statistics, at this point, I want the record to carry a citation to your exhibits E and F. Exhibit E shows that the bank suspensions during the 8-year period, 1921 to 1928, inclusive—that 88.6 per cent of those failures or suspensions were in banks of \$100,000 and less capitalization, and as to sizes of towns in that same period, 87.7 per cent of those failures occurred in towns of 5,000 and less in population; in other words, 88 per cent plus were banks of \$100,000 and less capitalization, and 87.7 per cent were in towns of 5,000 and less population.

In other words, the great bulk of failures were small banks in small towns.

Mr. Pole. That is correct.

Mr. Golder. I should like to ask if the principal causes of most of these failures were loans—mortgages on land values?

Mr. Steagall. The gentleman asks, or desires me to ask, if the principal cause of the failures was loans on land values. You spoke of frozen assets and, of course, we understand to some extent, at least, that is covered by loans on real estate or tied up in real estate.

Mr. Pole. I referred to frozen assets in the particular illustration

Which I drew at that time.
Mr. Steagall. Yes, sir.

Mr. Pole. I would not say that the causes of the bank failures are in large part, or in an important part, on account of real estate loans or loans based on real estate. This is not the controlling factor.

Mr. Steagall. Are you familiar—I am sure you are—with the legislation passed two years ago, or about that time—I will not give the date—in which we permitted national banks to increase the amounts of their loans on real estate?

Mr. Pole. That was under the McFadden bill?

Mr. Steagall. Yes. Do you remember the increases permitted by that act? The figures escape my mind. Some of us favored it and some did not, but finally the legislation went through. I do not mean to play the rôle of "I told you so," but I was one of those

who did not think it was the proper thing to do.

Mr. Pole. There was no change in the law with respect to the appraisals of real estate or its loaning value. There was a difference in the length of time for which a loan on real estate might run and the aggregate amount of loans on real estate which might be made with respect to the savings deposits, the amendment being to allow a bank to loan up to 50 per cent, whereas formerly it was 33% per cent.

Mr. Steagall. I though the former amount was 25 per cent, but

I am sure you remember the figure better than I do.

Mr. Pole. Yes.

Mr. Steagall. So evidently we did not help the situation with that legislation. Mr. Pole, as I understand you, you regard the independent unit banking system, as compared to branch banking, chain banking, or group banking, as the best banking system for our country in so far as the system can function efficiently and meet the demand for banking facilities.

Generally speaking, you think that is the banking system to be desired? If I understand your position, you do not think that the system, as we have it, has worked successfully and you think there

should be some changes?

Mr. Pole. That is my recommendation to Congress.

Mr. Steagall. Yes; but fundamentally you regard the unit system as the best system, do you not?

Mr. Pole. Not fundamentally. I have a sentimental attachment

for it.

Mr. Steagall. But so far as it is practicable, that is the system you prefer? In other words, we want to adhere to it and get away from it only so far as developments make it necessary to do so.

Mr. Pole. The reason I want to get away from the present rural banking system is that it does not offer protection to the rural com-

munities.

Mr. Steagall. But you would not want to get away from it any further than it is necessary to do so in your judgment, in order to take care of the situation?

Mr. Pole. If it properly took care of the situation I would be in favor of it.

Mr. Steagall. Putting it bluntly, if I understand your view—and I am not finding fault with you for that view—but you have certain reasons for your attitude. Whether those reasons are conclusive I do not know, but there are some reasons for the view that you have that the present unit banking system, in the smaller communities, as manifested in our smaller banks, is defective, to say the least, from some cause. I agree with you as to that, and it is to remedy that that you would depart from the system, and, as I understand you, only so far as necessary.

Mr. Pole. That is the basis of my recommendation.

Mr. Steagall. That being the case, would not this be the logical course to follow in our legislation—the unit system being the preferable plan—as you suggest, certainly for sentimental reasons among others, it is the system to which we have been accustomed and it is the system we have been taught to believe in and I think everybody agrees, is preferable if it can be kept sound and practicable and made to meet the requirements of the country—but that being true, I agree with you in that there are defects in the present system, but the unit system being preferable, should not we follow this course in our legislation—that of trying, if we can, to perfect the unit system or at least remove its defects and wherever it can be done to cure inefficiencies as far as possible and abandon the system only to the extent that we find ourselves unable to save it and make it operate successfully?

Mr. Pole. I would not be able to answer that question, Mr. Steagall, unless I knew what plan you had in mind for perfecting it.

Mr. Steagall. I am not speaking about plans. I do not know that I have any. I have some thought about it, but I should hesitate to say that I have a plan to remedy a situation which is regarded as so difficult. It might be presumptuous. I have some suggestions in that connection which I think might be helpful. I would not say I have a plan that would save it, but if we could eliminate the defects and restore it I should think it the thing to do. Evidently the unit system of banking worked for many years all right, but somehow recent developments have brought about difficulties that did not exist for a long time, certainly difficulties out of proportion to the difficulties encountered for a long period—if we can find these defects and remedy them and get them out of the way, I think we might say that we would all agree that is the preferable thing to do.

th

Mr. Pole. If we could make the unit system effective-

Mr. STEAGALL. That is what I had in mind.

Mr. Pole. I think there would be no reason for any change.

Mr. Steagall. Let me ask you this: How do you account for the increase in our difficulties in our unit banking system during this recent period of years, since 1920, about which we have talked?

Mr. Pole. One of the important basic reasons is the fact that the small country bank is not able to earn sufficient to take care of its normal losses, its increasing expenses, and its diminishing business.

Mr. Steagall. It is a difficulty, however, that seems to have manifested itself only during these recent years?

Mr. Pole. It has been accentuated since the war.

Mr. Steagall. The system worked all right down to the period

about which you were talking?

Mr. Pole. I would not say so. I would not say that any system is working all right with the bank failures in any circumstances running into the hundreds. I think the difficulties of earning a proper return on invested banking capital in small communities have greatly increased since the war, but for a number of years before the war, there was a tendency toward diminishing opportunities for the small bank to make earnings. The cost of operations was getting heavier and heavier as time went on and net earnings were decreasing, so that the trend was not in the right direction. If a bank can not earn a fair return on its capital investment, that bank is eventually going to fail.

Mr. STEAGALL. Of course the system which has that inherent diffi-

culty in it will bring trouble.

Mr. Pole. Undoubtedly.

Mr. Steagall. Now, you have answered my own thought, in my own language. Unquestionably, generally speaking, the difficulty which has brought about the increase in failures, grows out of the fact that banks have been unable to make the proper earnings-these banks that have failed.

Mr. Pole. Sufficient to pay its increasing operating expenses and

its losses.

Mr. Steagall. What has brought about that changed condition? How do you account for their inability to make sufficient earnings?

Mr. Pole. Well, there are a great many things.

Mr. Steagall. Let us talk about them. That is what I wanted you to discuss.

Mr. Pole. In the first place, rates of interest in country banks have not increased.

Mr. Steagall. You mean by that, of course, the interest received

by the banks on loans?

Mr. Pole. The interest received by the banks on loans have not increased because, in small country banks, they have, for years, been

about as high as they could very well be.

The expenses of operating banks have been materially-very materially-increased. The opportunities of the country banks have diminished in that the small town has become less of a factor by reason of the improvement in roads and the quick transportation which takes people to the cities to do their business and their banking, frequently, instead of doing it in the small town.

Heretofore, in years gone by, a community has been more or less independent, with its locally operated utilities, its light plants, ice plants, and wagon factories, and so forth, all of which have been removed and those things have gone to the cities and now are controlled by large corporations and those opportunities have been

removed.

There has been a change in corporate financing within the last 10 Years. Heretofore large corporations and small corporations, similarly, would borrow seasonally, whereas now they have financed themselves through reorganization of their capital structures. That has removed the opportunities from the banks and such things as that have made it very difficult for a bank to stay on an even keel.

Mr. Steagall. You would not say that the difficulty has grown

out of the inability of the banks to make loans?

Mr. Pole. No, sir; they do not have any trouble in making loans, but they generally have to be satisfied with loans of a different quality—

Mr. Steagall. That is what you mean—not that they are not able to make loans enough, but the loans they have now are not as satis-

factory as previously?

Mr. Pole. Banks in small communities have to be satisfied with small local loans and real-estate loans which frequently are slow and unsatisfactory, resulting in a greater percentage of losses than in

years gone by.

Mr. Steagall. I remember having discussed with Mr. Williams, who was Comptroller of the Currency, the matter of interest rates which were being received by national banks. He issued some stubborn orders regarding the enforcement of the law which prohibited a national bank from receiving interest in excess of the law of the State in which the bank did business, and that was back at the time of the inauguration of the Federal reserve system.

Mr. Pole. Yes; later than that; about 1918.

Mr. Steagall. Mr. Williams did that in 1915. That is a matter about which I have some recollection, because I came to Congress that year and I remember the first time I discussed it. A bank in my district liquidated on account of that order and paid everybody in full, including the stockholders. Many thought it was an unreasonable thing, but it was not. There has been no change in the interest rates that banks receive since that order, as I have been advised. Is not that right? So that that order fixing the limitation on interest charges by the national banks went into effect some years prior to the time that these increased insolvencies developed?

Mr. Pole. I think that order, Mr. Steagall, was not an important factor in the return which a bank receives on its invested capital. I think it had reference, as I recall it—and I do remember it very well—as to whether or not a bank should be permitted to make a

minimum charge of \$1 or 50 cents.

Mr. Steagall. I am speaking about the interest rates. I have not yet reached the matter of charges on collection of checks. He put into effect an order that the banks must observe the law. The law did provide, long before that, that the banks should not charge an interest rate above the interest rate charged in the State in which it was doing business, and it had been discovered that it was violated, and he put that order into effect in 1915.

Mr. Stevenson. That did not affect State banks at all.

Mr. STEAGALL. No; but it did affect the national banks, all national

B

W

re

th

banks that were members of the Federal reserve system.

Mr. Pole. I would not say that that was a material factor. I do not think the small banks generally observed it, and if they had, I do not think it would have been an important factor.

Mr. Steagall. The deposits have substantially increased all

along, have they not?

Mr. Pole. They have not materially increased in the rural districts. They have, in the metropolitan districts.

Mr. Steagall. But not in the rural districts?

Mr. Pole. No; not anything like the proportion of increase in the larger centers.

Mr. Steagall. You referred a moment ago to the matter of charges that the little banks impose for the collection of checks. That right was taken away from the banks about-now, when was it? You remember it better than I do.

Mr. Pole. That was when the par collection system was put into effect by the Federal reserve banks, two or three years after

the system went into operation. Mr. Stevenson. About 1917.

Mr. Steagall. What amount of earnings did that take away? How did that affect the situation? That is certainly one factor entering into this matter of the ability of these banks to make sufficient earnings to succeed properly.

Mr. Pole. I think it was the contention of a great many small

banks, Mr. Steagall, that it affected their earnings.

Mr. Steagall. That was a considerable item with the little country banks, was it not?

Mr. Pole. It was probably a considerable item.

Mr. STEAGALL. That is what I had always thought. I have had this statement made to me, and I do not say it is true, because I am not sufficiently informed to pass on it, but the statement is often made that many of these little banks get enough out of their collection charges to pay their salary accounts and a big part of their running expenses.

Mr. Pole. I think that would be true in very few instances, and

if they did, they were probably making exorbitant charges.

Mr. STEAGALL. I think that was true in some cases. I think that Wherever that was the case their charges should be regulated, but evidently the taking away of collection privileges was one of the things that entered into the calculation, out of which grows their ability to make earnings. Personally, I always thought that that right should not have been taken away from the little banks. Maybe I was unduly sympathetic and maybe my views were not always sound, but I thought there should be a statutory regulation of the matter to protect the public against unfair charges but not deny them any aid and make them do the work for nothing, which was generally for larger banks and wholesale houses.

Mr. Pole. Yes.

Mr. STEAGALL. There is a long story in that connection with reference to the legislation which was passed, which finally gave authority to the Federal Reserve Board to enforce its will in that matter, but I do not care to enter into that discussion now. I wanted to ask you this: How much—and this is a matter I should not have to ask you about, but I do not have the figures before me-how much of the earnings of the Federal reserve system have gone in the Federal Treasury since the inauguration of the system?

Mr. Pole. I supplied that information for the record this morning.

Mr. STEAGALL. Did you?

Mr. Pole. Yes.
Mr. Steagall. Then, I will not ask you to repeat it. Of course, it will be true, will it not, that the small return that a member bank receives from the Federal reserve bank, which is limited to 6 per cent, on its stock, is one of the items that enters into the matter of their inability to make sufficient earnings?

Mr. Pole. I should say by no means.

Mr. STEAGALL. You think not?

Mr. Pole. I think not. Federal reserve bank stock is one of their securities upon which they get 6 per cent and on which the yield is better probably than the average yield on their total investments.

Mr. STEAGALL. They have to carry, in addition to that stock-Mr. Pole. That is another matter. I am merely speaking from the standpoint of the investment in the Federal reserve stock.

Mr. Steagall. In addition to that, they carry 7 per cent of their demand deposits and 3 per cent of their time deposits-

Mr. Pole. In the Federal reserve banks; that is true. Mr. STEAGALL. And on which they get nothing?

Mr. Pole. On which they get nothing.

Mr. Steagall. That would be one item, or course.

Mr. Pole. Yes.

Mr. Steagall. And it ought to be taken into the calculation and in connection with their earnings?

Mr. Pole. Yes; that is a consideration. Mr. Steagall. That, of course, would apply only to banks that are members of the Federal reserve system?

Mr. Pole. Yes, sir.

Mr. Steagall. And our greatest failures, of course, are not in the Federal reserve system?

Mr. Pole. The greatest number of failures are of banks not in the

Federal reserve system.

Mr. Steagall. However, this is true, we are striving—those of us who have responsibilities as legislators or otherwise—for the improvement of the national banking system. Of course we would not attempt to treat the State system as our pattern or anything like that, and we, of course, are pleased that the national system can make a better showing. It has many advantages.

You discussed yesterday, with Mr. Busby, the matter of the guarantee of deposits. I believe he suggested that an insurance method might be advisable, but that did not appeal to your judgment.

Mr. Pole. Not at all.

Mr. STEAGALL. Would there be insurance facilities sufficient to meet the requirements if we should attempt to say to the national banks of the country that they should insure their deposits?

Mr. Pole. I could not say about that.

Mr. Steagall. There would be at least some question about that would there not?

Mr. Pole. I am not informed as to what the insurance companies can do.

8

n

C

a

81

Mr. Steagall. This difficulty would occur, however, would it not that if we put a law into effect now-now or six months or a year from now-saying that all national banks must insure their deposits, the practical effect would be to automatically close every bank that was not able to get insurance, would it not?

Mr. Pole. I think that there are many banks over this country which enjoy such confidence on the part of their patrons that it would make no difference to them whether they were insured or not

Mr. Steagall. But if the law should require them to insure and insurance companies would not take them, they would have to go out of business?

Mr. Pole. Yes.

Mr. Steagall. There could be no law passed compelling insurance companies to take them. So, the practical effect would be those banks that were unable to pass muster before the insurance companies, would have to go out of business? And in that situation, we would not have the friendly, helpful hand of the Comptroller of the Currency, with his constructive and sympathetic attitude in dealing with banks, to say whether or not a national bank should close or not, but some inexperienced representative of an insurance company in New York would go down to South Carolina or Alabama and look into a bank and decide whether it should be closed or insure its deposits and keep open.

Mr. Pole. They would have to decide whether or not it was a good risk. I imagine there would be a few banks whose risk they

might not care to assume.

Mr. Steagall. You discussed yesterday the guarantee system as it had been attempted in certain States. I do not care to go into that in detail. I am taking so much of your time and so much of the time of the committee I want to hurry along, but this is true, is it not, that the State, as a unit, would afford much weaker facilities for putting into effect a guarantee system established and borne by the banks themselves, than would be the case if the whole United States should be made the unit and the guarantee system undertaken by the national banks of the whole country with its vast resources; it would necessarily, of course, be stronger and beetter able to undertake that burden and responsibility. That necessarily would be ture, would it not? I am not attempting to commit you to the idea that they should do it. That is another matter, but certainly they would be very much better able to do it than the weak little banks in what some one said in one of the Senate debates-in one of our "backward" States?

Mr. Pole. Yes.

Mr. Steagall. Of course, in that event, you would have the entire area of the United States, and a crop failure in one State would not pull down the whole system, which can happen in a small State unit. You would have all the big national banking system back of it which would, of course, make it much less hazardous and burdensome for them than would be the case where it was limited to the individual States.

Mr. Pole. Are you speaking of a guarantee of the funds by the United States Government to cover all the States and all the banks? Mr. Steagall. I am speaking of a guarantee system patterned

after those in the States.

Mr. Pole. That would be of the National Government?

Mr. STEAGALL. If the national banks themselves attempted to guarantee their deposits as the State banks have attempted to guarantee their deposits. I am not saying it is a desirable thing. course there would be a vast difference with the vast United States as compared with the small banks of small States.

Mr. Pole. I rather doubt that for the reason that if you are going to penalize national banks any further they might go into the State

Mr. STEAGALL. I am not talking about that phase of it.

Mr. Golder. What do you mean by "guaranteeing deposits"?

Mr. Steagall. A guarantee system patterned after the State systems, and their systems had-and most of them with which I have had any acquaintance—a plan by which each bank was assessed so much annually to set up a fund out of which to realize sufficient to take care of depositors when the bank was closed or something like As a rule it seems not to have worked well in some of the States.

Mr. Pole. That is true.

Mr. Steagall. I share the view—
The Chairman. Will you yield to me?
Mr. Steagall. Yes.

The CHAIRMAN. I understand the State guarantee plan has failed in every State in which it has been put into operation, and they have discontinued it in every State except Nebraska, and Nebraska's governor is calling a special session of the legislature now to repeal that law.

Mr. Steagall. I have never had faith in the guaranty system as the States have adopted it and I am not surprised that it has not worked well. I am not fully informed as to how it has worked in the various States and therefore I do not care to go into details about

Mr. Stevenson. Before you leave that point, would you mind one question? I shall not be able to be in another of these meetings for a couple of weeks.

Mr. Steagall. I am glad to yield.

Mr. Stevenson. On that very question yesterday the comptroller, being asked about depositors requiring or being given security by banks, the comptroller expressed the opinion that it is not a sound policy, with which I agree. But I want to ask the comptroller this: Is it not the rule that the United States Government requires for every one of its deposits, the bank to put up absolute security for its money and pay interest on it?

Mr. Pole. That is true as far as the United States Government is

concerned.

Mr. Stevenson. And we have our Government which supervises this whole business insisting on a preferential provision for itself, which is admittedly unsound for the other depositors. Is not that true?

Mr. Pole. Of course every depositor in every bank is interested

0

ar

its

ta

me

in the safety of a Government deposit.

Mr. Stevenson. To a small extent—a very small extent.

Mr. Pole. If you were to require the banks to give security to its

depositors that it would be very impracticable.

Mr. Stevenson. It would simply force the banks to loan out every bit of their deposits in order to have the securities in order to place the securities; in other words, the bank would simply become a loaning agency for the depositor and take the security and turn it over .o him. It is not a sound policy, and I have questioned, for a long time, the justice of the United States Government stepping in here and having an absolute preference over the small depositors when they require absolute gilt-edged security for every deposit they make, and make them pay interest on it.

Mr. Pole. It is the custom to secure public funds of all character not only the United States Government, but also municipal, State,

and county funds.

Mr. Stevenson. They did not use to. I have been in business for some 44 years, and in connection with the banking business until 15 years ago, when I got out, but they did not use to do that. They have simply all followed the lead of Uncle Sam. Right now, all of the States, counties, and municipalities, require securities for the funds, but they have done it under the inspiration and example of the United States Government.

That is all I wanted to ask and direct attention to. If the thing is unsound, the United States Government is responsible for it, and I think it is unfair for the strongest depositor you have got to have a

preference.

Here is man that carries \$100,000 on deposits. He makes them put up United States bonds as security. Here, on the other hand, are 100 depositors with \$1,000 each, and along comes some trouble that breaks one of the banks. The fellow that has \$100,000 on deposit and able to lose it—he steps in and takes the cream and leaves the little fellows with the skimmed milk. That is what happens, and it is not right, but Uncle Sam is the author of that proposition. I do not know when it was inaugurated, but it is wrong.

Mr. Steagall. I can see where the Federal Government is in a little different category from the business man or the citizen in the community who deposits funds. I think if I had Government deposits to make I would put them where I could realize on them im-

mediately, in case it was desired.

Mr. Golder. Does not the ordinary depositor in the bank get the benefit of the Government deposits? After all, the depositor goes to the bank and borrows from the Government deposits and uses that money in his business.

Mr. Stevenson. But he gives 200 per cent security.

Mr. GOLDER. But if he fails-

Mr. Stevenson. The Government does not lose anything.
Mr. Seiberling. I move that we proceed with the regular order.
The Chairman. Proceed, Mr. Steagall.
Mr. Steagall. I am willing to have the gentlemen interrupt me.

I am taking a lot of time I realize.

Mr. Pole, do you remember the Federal Reserve act as it was originally passed, embodied a provision providing for the guarantee of deposits in the member banks? Are you familiar with that provision?

Mr. Pole. I am not.

Mr. Steagall. I mean as it passed the Senate? Mr. Pole. No; I am not familiar with that.

Mr. Steagall. It is a fact that the Federal reserve act, as it originally passed the Senate, had in it a provision for the payment of deposits on the earnings of Federal reserve banks. That provision was stricken out in conference. I have always felt that while we are trying to legislate to protect the banks against one another and to set up safeguards by which other people deal with banks, and while we are trying to take care of, as Brother Stevenson says, the Government itself, we ought, if we could in a sound way, try to find a method of taking care of the citizens who deposit in a bank for which the Government assumes responsibility.

To me it looks hard that an old lady across the country should carry her money to town that she has saved for her old age, and get it out of her stocking in the old trunk in the corner, and takes it to town and sees the bank with a sign "Member of the Federal reserve system" and "National bank, a Government depositary"—the feeling is there, "This is my great Government." The American flag might as well be raised over that bank. She says, "Here is a safe place for my earnings and better than out here where I might get robbed, and I will put them there." The bank fails and she only gets back 79 per cent—and in many cases nothing.

Mr. Pole. While it would be very desirable indeed to have the depositors protected, Mr. Steagall, after all it is not a remedy for

preventing failures.

Mr. Steagall. Maybe not and maybe so, to some extent. It is unquestionably true, is it not, that a great many bank failures are precipitated by a lack of confidence on the part of the depositing clientele?

Mr. Pole. Yes; in some particular cases that is perfectly true.

That is not one of the basic causes for bank failures, however.

Mr. Steagall. Yes; I understand it would not remedy the inherent difficulties. We have just passed through this committee, and it is now up in the House, a provision to punish a person who slanders a national bank. It is recognized that an irresponsible person can start a run on a solvent bank and precipitate a failure that would involve the whole community and, of course, consequent loss in a bank, because its assets have a very different value as a going concern from that which it was forced into liquidation. That often happens.

Mr. Pole. Not often, but it does happen.

Mr. Steagall. If it were known that the depositors would be protected, of course that would not happen.

Mr. Pole. No; it would not happen.

Mr. Steagall. I wanted to ask you this, with reference to the guaranty proposition: If the earnings of the Federal reserve banks that accrue by reason of their operation with their member banks had been maintained as a separate fund, they could have taken care of all these losses to depositors in member banks and still have had large funds to go into the Treasury as a franchise tax, could they not? In other words, have not the Federal reserve banks made enough by reason of the operations with their member banks to much more than pay losses which have accrued finally to depositors in member banks, and still have funds left to go into the Treasury in the form of franchise taxes?

h

he

W

su

m. of

ba

op

Mr. Pole. I think the figures will show that.

Mr. Steagall. If that is true, then the reason the depositor can not get his money back is because the system in which he has deposited it has taken a part of the assets and earnings and paid it as a tax into the Treasury.

Mr. Pole. I do not follow you on that.

Mr. Steagall. The Federal reserve banks make these earnings out of the member banks—they raise three-fourths of it on the deposits and stock of the member banks—and operations with them and the assets of member banks consist in larger part of their deposits.

Mr. Pole. Yes, sir.

Mr. Steagall. The Federal reserve banks make something like 75 per cent of the earnings by reason of their member banks?

Mr. Pole. On discounts.

Mr. Steagall. And they have paid into the Treasury much more than enough to take care of the losses to depositors and still have money left to pay into the Treasury. Mind you, that is money that is made out of these banks in which these deposits have been placed. It is a part of their profits, but instead of going to protect the customers of the banks, it goes into the Federal Treasury.

Mr. Pole. But a small proportion of those profits would go to the banks that failed. If you distribute the profits in proportion to the amount of reserves carried a very large proportion would go to the

city banks.

Mr. Steagall. Very true; and I appreciate highly what you say, but I am only speaking of the principle involved. To me it is a sounder thing than this proposition of insurance, or to have the banks attempt to impose upon themselves charges out of which to

set up a fund to take care of deposits.

I do not attempt to pass on that. I recognize it is a great question and I am open to listen to the views and arguments of men who are better informed than I am, but I have always thought, that we should have a guaranty system for the national banks, and that the practical and sound way to do it would be to get that fund out of the earnings of the Federal reserve banks, the profit of the Federal reserve banks made by reason of their operations with the member banks and I think it should be done.

Mr. Pole. I do not think any guarantee of deposit system would be sound—none that I have ever heard of.

The CHAIRMAN. It is now 1 o'clock.

Mr. STEAGALL. I would like to go along with this discussion, but I am not going to ask Mr. Pole to come back here.

The CHAIRMAN. Mr. Pole is coming back.

Mr. Steagall. If I had know that I would have desisted long ago. The CHAIRMAN. We have not, by any means, finished with Mr.

Mr. Steagall. I meant I did not want to ask him to return for my particular benefit. I know I am in a field that there is no haste In finishing up.

The CHAIRMAN. There are several members of the committee who

have not had a chance to question the comptroller.

Mr. Steagall. I thought I was the last man, and that is the reason I have taxed Mr. Pole and the committee so long.

The CHAIRMAN. Under our plan, we will adjourn these hearings

until next Tuesday, at 10.30 o'clock a. m.

Mr. Goldsborough. Will Mr. Pole return on Tuesday?

The CHAIRMAN. Yes; and on Monday, the committee has a

hearing on the Federal farm loan act, the Letts bill.

Mr. Steagall. I have a bill here I have introduced repeatedly. which represents a crude idea I had, and followed up by a practical suggestion which was made to me by a banker in Kansas City, a man who impressed me very much as a very sound banker and a man of vast information. The bill provides that the Federal reserve banks shall distribute their earnings that accrue by reason of their operations with their member banks, to the member banks after

first having paid all expenses, set aside their dividends and their surplus, and so forth—and instead of paying a franchise tax into the Federal Treasury, covering all of it it shall go back to the banks out of which the money was made. It has occurred to me that that item would be helpful to these smaller banks if they could get this larger share of the returns on their stock in the Federal reserve banks.

Mr. Pole. I would be in favor of something like that.

Mr. Steagall. I am very glad to hear you say that. I have a bill here that does that particular thing. It was my own idea, but I did not have so much confidence in it, until after having heard it discussed so much and having a suggestion made by Mr. Goebel in Kansas City—who helped me put that into practical form, and I have always felt that was one piece of legislation that would be helpful to the smaller banks—and now that you agree with me, I am stronger in my view of it. If we are not going to guarantee deposits I think we should give a larger share of the earnings back to these member banks that are being strangled, and rendered unable to function successfully.

Mr. Pole. I am in perfect accord with that.

Mr. Steagall. In view of that, I will ask the chairman to let me call up the bill and get it reported favorably and let us have action on it.

The CHAIRMAN. The committee will stand adjourned until 10.30

o'clock, a. m., Monday morning.

(Whereupon, at 1 o'clock, p. m., the committee adjourned until Monday, March 3, 1930, at 10.30 o'clock a. m.)

BRANCH, CHAIN, AND GROUP BANKING

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Tuesday, March 4, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The Chairman. The committee will come to order.

Mr. Strong moved that, until further change, the hearings on House Resolution 141, beginning March 11, 1930, be held on Tuesdays, Wednesdays, and Fridays instead of on Tuesdays, Wednesdays, and Thursdays as previously provided for, and the motion was agreed to.

Mr. Goodwin. I make the motion that hearings on H. R. 7752 commence next Monday, when the proponents of the bill may be heard, and that the hearing be continued on the following Monday, when the opponents of the bill may be heard.

The CHAIRMAN. This is a bill proposing to amend section 5219 of the Revised Statutes, which is the statute that permits the taxation of national banks by States.

(The motion was agreed to.)

The Chairman. We will now resume the hearings on the matter of branch, chain, and group banking. Mr. Pole is here before us

this morning.

Mr. Steagall. Mr. Pole, I want to ask one or two questions just to complete some things I had in mind and to finish some figures had asked you to give. I took so much time the other day that I do not intend to prolong the discussion this morning.

The CHAIRMAN. All right.

STATEMENT OF HON. JOHN W. POLE, COMPTROLLER OF THE CURRENCY-Resumed

Mr. Steagall. You gave the percentages in connection with the liquidation of banks where liquidation had been completed, giving the amounts realized by creditors, in our discussion at the last session. I want to ask you to give the total amount, in figures, covering the losses sustained by depositors in banks as to which liquidations had been completed. Will you let that appear with your other figures?

Mr. Pole. I have already included that in the record. Mr. Steagall. Very well; I did not know you had.

Then I want to ask you, if you have it convenient, for the same figures with reference to State banks that are members of the Federal reserve system and that have been liquidated.

Mr. Pole. It might be difficult to obtain those figures. I will do

the best I can.

Mr. Steagall. I do not want to put any undue burden on you, but I imagine the Federal reserve banks could have that easily accessible.

Mr. Pole. But such information with reference to the State nonmember banks are not collected by the Federal reserve.

Mr. STEAGALL. I did not make myself understood.

Mr. Pole. That information would have to be obtained from the

State superintendents.

Mr. Steagall. I see that I did not make myself understood. The State banks I referred to are those which are members of the Federal reserve system and which have been liquidated.

Mr. Pole. Including national banks?

Mr. Steagall. Of course, you have the national banks, but you know that there are many liquidations of State banks that are members of the Federal reserve system. Those liquidations are not handled by your department, but by the State machinery, and it occurred to me that if you do not have it the Federal reserve banks would have the figures showing what had occurred in connection with the discharge of the liabilities, or the amounts realized, in these banks that are members of the Federal reserve system.

Mr. Pole. I will endeavor to obtain that.

Mr. Steagall. If it is convenient. I think it would fit very well into the information we now have. The truth is that the figures that we have would not be complete without this information. To illustrate, I imagine that the collections in insolvent State banks are about on a level with those realized in national banks, but I do not know.

(The figures referred to are not available.)

Mr. Steagall. I wanted to ask you one other question in connection with our little banks, which of course I am peculiarly interested in.

A question they often raise is in connection with their remittances to the Federal reserve banks and the manner in which remittances are placed to their credit at the Federal reserve banks. What I refer to is this: In my district, for instance, a farming district, where there is an accentuated demand for loans and where the banks are always loaning to the limit as a rule when crop-moving time comes, they find it difficult to keep sufficient balances to meet the demands and they are forever complaining, many of them, that the Federal reserve banks do not give them immediate credit for remittances as was the custom on the part of correspondent banks prior to the inauguration of the Federal reserve system. As I said, they complain a great deal about that. It has been discussed here, but I am wondering if you have any suggestion that you could make about that that would be helpful in that situation.

Mr. Pole. I think the plan that has been worked out by the Federal reserve bank is in crediting to the reserve account of a member bank only collected funds is sound. Formerly banks were usually

given credit for checks and drafts immediately upon receipt.

Mr. Steagall. That is right.

Mr. Pole. Those drafts, however, were frequently drawn on other cities, and very likely were collected through a circuitous method, and it was very likely days before the funds were actually placed to the credit of the Federal reserve bank there, and therefore I can not

help but feel that the present system of giving credit only as funds

are collected is a sound one.

Mr. Steagall. Do the Federal reserve banks apply that same rule when the operation is reversed? Is not that out of harmony with their rule requiring member banks to remit without charge and thereby of course giving immediate credit to them?

Mr. Pole. Their reserve account is not charged with those items until the bank has had time to remit for them, so that it is properly balanced in that respect. There is no advantage taken by the

Federal reserve bank.

Mr. Steagall. It is a technical matter, and I do not attempt to say that I should sit in judgment, but I have always sympathized with these little banks in that connection.

The CHAIRMAN. Will you yield to me?

Mr. Steagall. Yes.

The Chairman. Apropos of this question, my attention was called the other day to a practice in the third Federal reserve district, which seems rather arbitrary in this respect, where I understand that the Federal reserve bank is insisting that all member banks shall give them an order which permits them to charge against their account any items at any time that they see fit so to charge.

Mr. Steagall. I am coming to that very situation.

The CHAIRMAN. I was wondering if you were going to cover it,

and that is the reason I raised that question.

Mr. Steagall. Of course, as I look at the matter, it seems to me that it creates a situation more or less confused. Take a small-town bank that sends a check to the Federal reserve bank. They have got to keep books of some kind, but I do not see how they can keep their books straight with the Federal reserve bank if the payment of those checks is to be deferred indefinitely.

Mr. Pole. They are not deferred indefinitely. They are deferred in accordance with a schedule which is laid down by the Federal reserve banks, and when checks are sent to the Federal reserve bank from a member bank, the account of the Federal reserve bank is charged in a deferred account. When the date arrived for the transfer from the deferred account to the reserve account, such entry is made and the account closed. It is not complicated.

Mr. Steagall. Maybe that is a technical matter that is plain to the people who understand the technicalities of banking, but I had thought it was more or less confusing for a bank to have a check placed in its Federal reserve bank and not get credit for it then. I have understood that the Federal reserve bank fixes an arbitrary—and by arbitrary I do not mean that is is unfair; I am not passing on that—standard of dates for different distances as to which these checks are deferred.

Mr. Pole. That is correct. Their plan is to ascertain the exact time which it takes to reach any particular point and the remittance returned to the bank. Pending that time, which is two days, three days or four days, as the case may be, that item is in "float," so that the Federal reserve bank does not take credit when it sends an item to a bank, nor does it give credit when it receives an item from a bank unless it is on the Federal reserve bank itself. In other words, what is known as the "float" is eliminated, and it is a system

which is working all over the United States, and, as far as I know, there is no objection to it.

Mr. Wingo. No objection to it?

Mr. Pole. No serious objection to it.

Mr. Wingo. No objection to the member banks carrying the "float" instead of the Federal reserve banks?

Mr. Steagall. There is a great deal of objection.

Mr. Wingo. I have a whole file on it that I will send down to you. Mr. Pole. The Federal reserve bank carries just as much "float"

as the member banks do in the deferred account.

Mr. Wingo. That is one of the things they are objecting to, that it works altogether the other way, that the burden is on the small banks in the small towns. In the cities where the Federal reserve banks and their branches are located, they can step across the street and get immediate credit, and they can clear nearly every day on most of their items—not all, but most of them.

But take a member bank out in a small town. They are protesting all the time that they are discriminated against, for the reason that the percentage of reserve works out heavier on them than it does in a town like, say, Little Rock. Take the banks in my district; the reserve requirement there is heavier on them than it is in a city like Little Rock, because across the street from the bank in Little Rock is a Federal reserve branch bank.

Upon the proposition of carrying the "float," they claim that as a matter of fact the reciprocal burden is such that they carry the load.

and I have two letters to-day in my mail on that.

Mr. Pole. I did not wish to be understood as saying that there was no objection to it on the part of the banks. I meant that there is no objection to it as being a scientific method of collection of checks, that

the "float" should not be counted as reserve.

Mr. Wingo. Yes; measured by the standard in the Federal reserve system, and that is that the country banks render all the free service to the Federal reserve banks and to manufacturers and wholesalers in the large cities, and they are not even given credit for postage in collecting drafts on bills of lading. Measured by that standard, of course it is scientific. I know a bank that pays one man \$1,200 and he does not do a thing on earth except just run around and perform this free service, and Brother Strong's constituents are kicking because we do not make them preferred creditors. They want to be made preferred creditors if the bank fails.

That is one thing that is putting the country banks out of business, the free service that they have to render to the city banks and to the wholesalers and manufacturers getting the benefit of that, whereas

they used to pay for it.

Mr. Steagall. It virtually took away what might be termed a vested right when they proceeded to require the small banks to remit their checks and ineur the expense of making those remittances and making no charge for it. I never could see that it was fair or morally justified. I have introduced bills here requiring the Federal reserve banks to give immediate credit and permitting them to charge a current rate to cover the time between the receipt of checks and their final payment, which would still relieve the burden on little banks in the matter of balances in times of crop marketing, and so forth.

What would you think of that? There could not be any injustice, in that, could there?

Mr. Pole. I would have to think that over.

Mr. Steagall. Mr. Pole, I had my attention called several times lately to this kind of a stiuation, and this follows what Mr. McFadden suggested just now. There was a little bank in my district that was closed. There has been a great deal said about the merits of that situation, but I have no personal knowledge of it and no desire to attempt to inject an opinion into that matter. It was a State bank that was a member of the Federal reserve system. I have been informed, on what seems to be reliable authority that that bank, with \$50,000 capital and \$30,000 surplus, owed only \$38,000 to the Federal reserve bank. The bank is situated in a community that suffered very severely last year through floods, which were absolutely unprecedented in that county and in that section of the country. This bank had, of course, in the main, farm paper. It owed the Federal reserve bank maturities due some time around December 1. Some weeks prior to the maturity of the paper, the bank was closed.

A customer of that bank would give a check, or give checks, which would be cashed by the payee through another bank in this county. The bank that cashed the check would send it to its correspondent, and the correspondent send it to the Federal reserve bank, and the Federal reserve bank would send it directly to the bank upon which it was drawn. This bank would charge the checks to the accounts of their customers, and surrender the checks to the customers, and remit by cashier's check to the Federal reserve bank. In the meantime the bank upon which the checks were drawn was closed. The Federal reserve bank took the balances maintained by this little bank and applied them to their notes, which it is claimed were not due. The Federal reserve bank then charged the checks back to the next bank, and that bank to the original bank that paid them, and that bank charged them back to the payees. The payees have surrendered their checks; they have been marked paid; they are in the hands of the makers and those checks are charged to them in their accounts at the bank that failed. So the payee of the check has not got any check, nor any credit from the bank; he is left in

There are several cases exactly like that. I have an editorial from a paper published in that county, and, by the way, the editor of that paper is an unusual man in point of ability, and a very conservative man. I think he could write editorials creditable to any paper in the country. I have not that editorial with me; it is in my office, but with the permission of the committee, I will insert it in these hearings in connection with what I am saying right now.

(The editorial referred to is as follows:)

[From the Samson Ledger]

HEADS I WIN, TAILS YOU LOSE

(Whatever you may think of the following thoughts, do not attribute them to a sore editorial toc. We have not been tramped upon beyond having some money tied up in the banks under liquidation.—Editor.)

Some things have been brought home to us with much severity as a sequence of the recent closing of the two old Samson banks. One of them is the apparent fact that the laws or regulations governing banks treat the individual depositor as having no rights whatever, while banks, especially the Federal reserve system,

are given every consideration. In fact, consideration of certain incidents would in our judgment lead to a conclusion that all laws had broken down and it was

a case of might making right.

Each bank affiliated with the Federal reserve system is compelled to keep on deposit with that institution 7 per cent of its demand deposits and 3 per cent of its time deposits. This is entirely separate and apart from collateral for any loans the member banks may obtain from the reserve system. Of course, it is understood that any loans granted a member bank must be secured by approximately 200 per cent face value of security.

The purpose of this reserve is supposed by laymen to be to take care of the

balances against the member bank which arise through the collection of checks on it. Heavy interest penalties are imposed upon any bank failing to keep its

reserve up to the mark.

One would naturally conclude that when a member bank is compelled to close its doors, that items passing through the Federal reserve bank and which have been charged by the failing bank to its depositors' accounts would be paid by the Federal reserve bank from the member bank's reserve so far as the latter would permit.

However, it doesn't work that way. If there is the slightest reason to believe that a member bank is shaky, it is alleged that the Federal reserve bank at once begins charging back checks on that shaky bank to the banks depositing them for collection. It does not use the shaky bank's reserve fund, but seizes this fund as

additional protection for the loans it has made the shaky bank.

It is alleged that this has been done in the case of at least one bank for more than a week before the tottering institution actually had to shut up. This course meant that checks which had been drawn by Mr. A and sent to other places might have come back, been charged to his account and a warrant drawn on the bank's reserve fund, eight days before the bank closed up and yet the money

would not be transmitted to Mr. A's creditor.

It is well settled law, it is alleged, that in a case like this the creditor has a legal claim against the closed bank and that he has no claim against Mr. A. But here comes in another quirk. Mr. A wanted to transfer some funds from a bank in one city to a bank in another city. He drew a check on a bank we will call X and deposited it with bank Y. Y sent it through the Federal reserve system for collection. Bank X received the check charged it to A's account and sent a remittance order. Due to the belief that bank X was shaky, the Federal reserve charged the check back to bank Y. Bank Y charged Mr. A's account with it with the amount of the check.

Now you see A's predicament. He can't file a claim against bank X, because X has deducted the check from his account. He can't file a claim against bank Y, because that institution simply says it has not received the money. The way A looks at it (and this is an actual case), he has simply been held up and robbed

of that much money with absolutely no redress from anyone.

(Next week we will take up another phase of "Heads I win, tails you lose," provided we are not in jail for this one.)

Mr. Steagall. Now, Mr. Pole, how does that come about? I am reasonably sure that I have painted this picture correctly, and you can understand how that sort of thing will beget irritation, resentment, and an unhealthy state of mind toward the Federal reserve banks and toward the whole banking world, and I do not think it ought to happen. I think something ought to be done about it.

Mr. Pole. On this state of facts, it would seem that it might be a little unfair to the customer. At the same time, I think those settle-

ments are usually made in accordance with court decisions.

Mr. Steagall. Let me ask you this: Would the courts uphold the right of the Federal reserve bank to send these checks directly to this bank that had failed for collection and, when the banks have balances there to take care of the checks, to take those balances and apply them to the payment of paper not due, and then charge those checks back finally to the payee and make him lose that money? I do not think the courts would uphold that. They may have some kind of a contract covering such cases. Is it not regarded as negligence on the

part of the Federal Reserve bank to send checks directly back to the bank on which they are drawn?

Mr. Pole. You are asking legal questions based upon certain sets

of fact, which I am not prepared to answer.

Mr. STEAGALL. Maybe I should not have asked you that.

Mr. Wingo. May I interrupt there? There has been a group of complaints based upon the illustration that the gentleman from Alabama (Mr. Steagall) has used. I think it would be helpful to the committee if the comptroller would have his counsel insert in the record at this point any court decision that holds that after the drawer of a check has received it back and it has been cancelled, that then the Federal reserve bank can go back on the indorsers and make them liable. Of course, you can not make the drawer liable. I would like to find some decision of some court that will hold that what the Federal reserve bank has done in at least one instance was legal. Of course, it was not tested in court, because the bank was afraid to. You take the average country bank; it has no more idea of bucking the Federal reserve bank—why, some of them are even afraid to talk. They will talk to you confidentially, but they are "buffaloed"; they are scared to death, most of them, and when one case was brought to my attention I asked them, "Why do you not sue?" The attorney said to me, "I suggested that to the board of directors and they abhorred the very idea of getting into litigation with the Federal reserve bank." They are in a precarious condition now and they are afraid to protest.

Your counsel is familiar with this type of cases, and I would like to have any court decision, either State or Federal, that has sustained the Federal reserve bank in a proposition of this kind.

Mr. Awalt. On the basis of the facts stated by Mr. Steagall?
Mr. Wingo. You know the case I am talking about, where a check was cleared through and subsequently the bank failed and the Federal reserve bank realized on the remittance. There has been at least one case that I know of where the Federal reserve bank went back on the indorsers of that check, and when the first indorser went back to the drawer, he said, "My money has been taken away from me," and, of course, you could not bring suit against him.

The CHAIRMAN. Have you further questions?

Mr. Wingo. And I would like to have the court decisions on that point.

Mr. Polo. I think I understand what you want.

Mr. Steagall. That is the case I have in mind, and there are numbers of those cases in this particular bank that I mentioned, which have been called to my attention.

The Federal reserve banks perform an enormous free service in the collection of checks and naturally do not assume any liability except for their own negligence and their guaranty of prior indorsements. Each year they collect nearly 900,000,000 checks amounting to approximately \$300,000,000, 3 and it would be an intolerable burden to require them to guarantee the collection of all these checks or to absorb any loss which might be incurred without any negligence on their part. They, therefore, act only as agents in the collection of such checks and expressly reserve the right to send them directly to the banks on which they are drawn and to receive remittance drafts in payment. They also reserve the right to charge back to the account of the sending bank the amount of any check for which payment in actually and finally collected funds is not received. Their right to do so has been upheld in the following cases:

Craven Chemical Co. v. Federal Reserve Bank of Richmond (C. C. A., 18 F.

Fergus County v. Federal Reserve Bank of Minneapolis (244 Pacific, 833). Chicago, Milwaukee & St. Paul Railway Co. v. Federal Reserve Bank of San Francisco (260 Pacific, 262).

Transcontinental Oil Co. v. Federal Reserve Bank of Minneapolis (214 N. W. 918)

The trouble with the present system is a fictitious ruling of law which is very well established but which results in injustice. I refer to the rule, when a check has been charged to the drawer's account, it is deemed to have been paid and the drawer is released, even though the bank on which it is drawn fails without actually paying anybody. This results in a loss to the innocent holder of the check and results in the drawer of the check having his deposit in the failed bank paid in full to the extent of such check, while other depositors have to share the loss ratably.

Where a bank fails without remitting for checks drawn upon it the situation necessarily results in a loss to some innocent party. In such a case the rule of equity should apply, that, where one of two innocent parties must suffer, the one who made the loss possible is the one to suffer. In a case such as this, the drawer of the check made the loss possible by selecting that particular bank to do business with; and he should suffer rather than the man who did not select that bank as his depository. Certainly, neither the Federal reserve bank nor any commercial bank through which the check was sent for collection should have to suffer the loss, unless the loss resulted from its negligence.

Under modern conditions, it is a physical impossibility for all out-of-town checks to be presented across the counter and collected in cash in accordance with the old common law rules, and the present method of sending checks through the mails to the banks on which they are drawn and accepting drafts on other banks in payment is the only way that I know of in which the great volume of checks now used in the United States can be collected.

For the further information of the committee, I desire to call your attention to the fact that the practice of the Federal reserve banks in giving member banks deferred credit for cheeks which can not be collected on the day they are received by the Federal reserve banks has been upheld by the courts in the case of Pascagoula National Bank v. Federal Reserve Bank of Atlanta, 3 Fed. (2d) 465, 269 U. S. 537, 11 Fed. (2d) 866, certiorari denied, 271 U. S. 685.

The CHAIRMAN. Mr. Seiberling.

Mr. Wingo. Before you commence, may I ask Mr. Pole one question, because I have a letter from a bank to-day that I want to answer?

What is your definition, or what would be your definition under your proposal of a trade area for a bank? I will tell you what I have in mind. In our country, Memphis, Kansas City, and St. Louis all contend that Oklahoma, Arkansas, and Texas are their trade area. Evidently you do not concur in that broad area?

Mr. Pole. No.

Mr. Wingo. What would be your definition of a trade area? In

what trade area would Arkansas be included?

Mr. Pole. The trade areas in my report to Congress were left to the determination of Congress, as to what it considered to be the proper trade area, upon the basis of the natural flow of business to any metropolitan center.

Mr. Wingo. That would make Arkansas in the trade area of both

St. Louis and Kansas City.

Mr. Pole. As to how far that should reach out is a question for consideration.

Mr. Wingo. Suppose it were left to you? The Chairman. The thought occurs to me; might not Little Rock be considered the center of the trade area for Arkansas?

Mr. Pole. Little Rock would naturally be the center to which trade flowed. There would in each trade area be a point to which it would flow naturally, a metropolitan center.

Mr. Wingo. Do you know that from some points in my district you can go to Kansas City or St. Louis quicker than to Little Rock, and most of our wholesale trading and large banking is done with those two cities. Since we are putting in the highways, we have relieved that to a great extent, but until we developed our highway system, Kansas City and St. Louis were nearer to us than Little Rock for business purposes. Little Rock is growing rapidly as a trade area, but as a matter of fact it is not a metropolitan center. Take the wholesale trade; take the purchasers of shoes, hats, clothing, and the marketing of hogs and cattle and cotton and things like that—they do not go to Little Rock from my district.

Mr. Pole. Of course, Little Rock has a very definite trade area. Mr. Wingo. Yes; Little Rock, a splendid city, has a very definite trade area, and so has De Queen, and each town has a definite trade

area.

The Chairman. Mr. Pole, in view of the importance of this as an integral part of your recommendation, I believe the committee would appreciate it if you would briefly elucidate your thoughts as regards trade areas. If you will do that I will ask that it be put into the

record at this point.

Mr. Wingo. The reason I asked you the question is that I have a letter from a banker who states: "I am interested in knowing what trade area my city would be put in. Would it be put in the Kansas City or St. Louis trade area, and would my bank be taken over by a bank in Kansas City or St. Louis?" He is figuring on the future. I have written him what I thought was going to happen to him.

Mr. Pole. That is a very complex question, but I will be glad to

submit something to the committee on it.

(The memorandum on the subject submitted by the comptroller is as follows:)

FURTHER DISCUSSION OF THE TERM "TRADE AREA"

In the written statement which I read before the committee I devoted five paragraphs to the discussion of the question of the trade area to which I had previously referred in my annual report to Congress. Without repeating the previous discussion I may say that it covered the following points:

(1) The trade area of a given city is that geographical territory which embraces

its flow of trade.

(2) Every city, no matter how small, has a trade area.

(3) A trade area sufficient to support a sound system of branch banking by a given bank must be of sufficient area or of sufficient economic development to permit of the acquisition of a diversified banking business.

(4) No legislative formula has been prepared which would in itself delimit all

of such trade areas in the United States.

(5) A suggestion was made that Congress might find it advisable in determining the actual physical limits of the trade areas to follow a procedure similar to that laid down in the Federal reserve act for the delimitation of the Federal reserve

districts.

I have therefore in my previous statement to the committee covered this subject so far as the general principles are concerned. It is recognized that their detailed application may present a multitude of practical questions many of which we can not now foresee; that is to say, questions of boundary limits and adjustments of the boundary lines between trade areas. The fundamental principle, however, seems to me to be absolutely sound that city banks of sufficient ability be permitted in a more convenient manner than is now possible to serve the people in the trade area tributary to the city in which the bank is situated. Mr. Wingo has raised the question of the overlapping of trade areas; that is to say, a small city may be situated within more than one trade area. It seems to me that this does not present a serious difficulty. It would simply mean that in such a city there

might be branches of banks with head offices in different trade areas. This might prove to be an advantage to such a city through increased banking compe-

As to the size of the parent bank, under such a branch banking system as I have suggested, it seems advisable to consider the question of a minimum capitalization as a condition precedent to the establishment of branches in the rural districts in the trade area. In this respect discretion should be allowed the Comptroller of the Currency to require a capitalization higher than the minimum, as he now does with unit banks. Some trade areas are naturally more important and more highly developed financially than others. A bank of one million capitalization in some trade areas might be considered a large enough bank to support a branch system, whereas in other trade areas it might be small by comparison. To support a system of branches within a trade area the bank should be of undoubted strength and prestige in order to discharge the responsibilities which such an undertaking entails. This situation would be met if Congress required a minimum capitalization for a branch banking institution of \$1,000,000. Such a provision would automatically determine, to some extent, the size of the trade area for branch banking purposes. They would have to be large enough, at least, to support a bank of that size.

In the exercise of his discretionary power to require a greater capital than the minimum, the situation presented to the comptroller would be relatively the same Two hundred thousand dollars is the minimum capital for national as it is now. banks in large cities, but the actual capital required in some important cities is in excess of that amount. Trade areas would vary in their financial importance in the same manner.

Mr. Wingo, in referring to the city of Little Rock in his State, has brought out two very important considerations bearing upon he question of the extent of trade areas. One was that by reason of the lack of arterial highways the metropolitan centers of Kansas City and St. Louis were more available to many portions of Arkansas than Little Rock, from the standpoint of the flow of trade, but that under a system of modern highways leading from Little Rock that city would become a metropolitan center. This is a clear illustration that what constitutes a given trade area is a question of fact and while it is simple enough to define the term "trade area" by statute, it is an entirely different thing to make a practical application of that definition. It took only a few words to define the principle upon which the Federal reserve districts were laid out, but it took many months of careful study and investigation by executive officials to lay out those districts.

The following is the language from the Federal reserve act:

"The districts shall be apportioned with due regard to the convenience and customary course of business and shall not necessarily be coterminous with any State or States. The districts thus created may be readjusted and new districts may from time to time be created by the Federal Reserve Board, not to exceed Such districts shall be known as Fedreal reserve districts and may be 12 in all. designated by number."

We may, for example, say that a trade area is that geographical area which embraces the natural flow of trade from an outlying geographical territory to and from a metropolitan center. The term "trade," it seems to me, as Mr. Wingo has already suggested, must embrace the wholesale as well as the retail purchase and distribution of goods and commodities. That is to say, the trade area must have a rather definite economic autonomy.

Having, however, arrived at this definition it seems to me that Congress could not go much further by way of legislative enactment lest too many conditions in the law create a system of trade areas which would lack flexibility. Some executive agency or some agency created by Congress should actually lay out the trade areas.

Again it seems to me that it would not be wise to attempt to use the population figures as a basis for determining the principle of the selection of the metropolitan centers of trade areas. The size of a city may be no indication of its relative centers of trade areas. The size of a city may be no indication of its relative economic importance to the surrounding community. Bridgeport, Conn., with a population of 160,000 could not be considered an independent metropolitan center but is tributary to New York City and is within the New York City trade area, whereas Shreveport, La., with a population of 81,300 might be found to be the center of a trade area of the scope above discussed.

In the discussion of the question of the term "trade area" I have several times

used the expression that in my opinion the trade area should not be in any case greater or more extensive than the present Federal reserve districts. In saving

this I was attempting to lay down a general rule, the Federal reserve districts being the largest possible regional economic areas which we have established by I have no doubt it is a fact that there are many trade areas of less extent than the Federal reserve districts. That is to say, metropolitan centers with a definite area of wholesale and retail trade in the surrounding country but within a Federal reserve district. I realize, however, that there are metropolitan centers situated so near Federal reserve district lines that the surrounding trade area embraces territory in more than one Federal reserve district. In such a case the trade area rather than the Federal reserve district lines should govern.

Kansas City is such an example.

Again it seems to me it must be recognized that trade areas and the development of metropolitan centers within them have come about without reference to State lines. Very often the shape of a State may be a great influence in this connection. For example, the State of Tennessee is long and narrow and its three principal cities, namely, Memphis, Nashville, and Chattanooga, all have trade areas extending into other States. The trade area of Spokane, Wash., extends into Idaho and Montana; of Omaha, Nebr., into Iowa and Missouri; of Cincinnati, Ohio, into Kentucky; of Los Angeles into Arizona and Nevada; of Pittsburgh into Ohio and West Virginia.

I wish again to emphasize the consideration that in mentioning the term "trade area" I am not presenting a new idea, but am suggesting that Congress avail itself of an existing condition. The trade areas are already here. They have grown up through years of development but are being more clearly defined under modern conditions of communication and transportation. Metropolitan banking as it exists to-day reckons with the trade area. Rural banks in a trade area are correspondents of the large city banks in the metropolitan center of that area. Residents in the outlying rural communities, both business men and farmers, transact business with such metropolitan banks. Many such inhabitants in the outlying sections of the trade area carry their large deposit accounts with the metropolitan bank and maintain only small balances with the small local bank. The prosperous farmer or country merchant or manufacturer, even under present conditions, deals directly with a metropolitan bank in his trade area with respect to his most important financial transactions. In many cases the loaning limit of the local bank is too small to meet his requirements, and recourse must be had to

the stronger city banks. This is particularly true as to corporations dealing in farm commodities, lumber, mining, and the like.

Again, when an individual or a corporation in the rural districts wishes to purchase securities for investment recourse is had to the securities department of the large city bank rather than to the local bank. Also, if he wishes to establish a trust fund of any kind or to leave his estate in trust for his heirs he goes to the trust department of the metropolitan bank of the trade area and appoints that bank as his trustee or executor rather than the small local bank in his particular These two great fields of banking, namely, investment securities community. and fiduciary business, are under our present banking conditions carried on almost exclusively by the large banks in the metropolitan centers, in which respect they serve the entire trade area. The local country bank is not in a position to offer to its community adequate facilities as to these two types of business. Similar examples might be mentioned as to other departments of large city banks which also serve the entire trade area, such as the foreign department dealing in foreign exchange and information about foreign business. It is apparent, therefore, that the existing banking conditions in trade areas, even where no branch banking and no group banking is in operation, are causing the cream of the banking business to go from all points in the trade area to the central metropolitan banks, leaving the small local bank with the smaller, less profitable, and more restricted type of business. The small bank is not acquiring a sound diversification of business even in its own small trade area. Here, in my opinion, is the real cause for the failure of small banks in the rural communities, and every other local, immediate, proximate cause which may be assigned for a given failure must be simply regarded as a secondary cause.

It seems quite clear, therefore, that there is no hostility among the people in the rural communities toward the large city banks in the metropolitan centers of their respective trade areas. On the contrary, the average citizen seems, regardless of the question of the maintenance of a local independent bank, to prefer to do his most responsible banking business with a distant bank of the metropolitan type rather than with the more conveniently situated local com-munity bank. If all of this banking business which now goes from the outlying districts of the trade area to the netropolitan centers could be forced back into

the local independent country banks the country banker might look to the future with complacency. But that is an economic impossibility. It is the local community itself which is expressing a preference for the type of banking which the

large city bank can give.

Under the branch banking plan which I have suggested the same metropolitan banks would take their services to these communities through a system of branches and would afford to the entire community adequate banking facilities. In other words the big loans as well as the small loans and the big deposits as well as the little deposits would be made directly in the local rural community. Such a community would also have immediate access to the securities department of the large bank and to its trust and foreign departments in all of their ramifications.

I have therefore attempted to lay before your committee a suggestion which would fit into the present economic trend and which would at the same time preserve the outlying communities in the trade areas from the calamitous effect

of local bank failures.

The question has been asked by several members of this committee as to what recommendations for legislation I would make with respect to restrictions upon the consolidation of branch banking systems in order to avoid the danger of monopolistic control of banking within a trade area. In answer to this question I wish to call attention to the statement I made to the committee that the natural economic development would ordinarily continue to create a competitive banking situation within a given trade area. A banking institution must have the support of local public opinion in order to succeed and it would seem natural that under our system of issuing bank charters there would always spring up within a trade area new banking institutions if there be enough business to support more than one bank, such as certainly would be the case in any trade area large enough to give a diversity of business sufficient to support the type of branch banking I have suggested.

We are of course considering a possible future condition and the discussion of the question of undue concentration of banking resources in a given trade area under the plan of branch banking which I have suggested is necessarily academic. However, the theoretical possibility of undue concentration must be admitted. In the event of such branch banking legislation, how far Congress should go or could go in attempting to guard against the possibility of a monopolistic control of banking resources within the trade area I am not prepared definitely to recommend. I shall however, attempt to discuss several aspects of this situation

mend. I shall however, attempt to discuss several aspects of this situation.

The authority which Congress has already exercised over the consolidation of a national bank with another national bank or a national bank with a State bank under national charter would cover only one phase of the question. If the Comptroller of the Currency denied the application of such banks to consolidate under national charter upon the grounds of public policy they could forthwith consolidate or merge under State charter and Congress would thereby be deprived of all supervision and control over the institution so far as the office of the Comptroller of the Currency is concerned. If the State law gave to State banks branch banking privileges in the trade area equivalent to those granted by Congress to the national banks the concentration of banking resources to an undue extent, if such a thing did take place, could be had under the State law if the State as a matter of policy permitted it. If the State bank were a member of the Federal reserve system and if it be true that Congress has the power to impose on State member banks of the Federal reserve system the same restrictions as to consolidations or mergers which may be imposed upon national banks—and I am not prepared to offer an opinion on this legal question but leave that to the Federal reserve authorities—there would still remain the possibility of the consolidation of branch systems outside of the Federal reserve system. In other words, would not such legislation have a tendency to drive the branch banking institutions outside of the Federal reserve system where Congress would have no control over them?

This brings up another important question and that is the desirability of establishing a system of branch banks which would operate solely under the national bank law and which could not escape Federal jurisdiction and the effect of a Federal policy by switching over to State charters. What I have in mind is that if the trade areas were based solely upon economic considerations—such as was done in laying out the Federal reserve districts—and State lines disregarded, would not that be one way of holding branch banking institutions under Federal authority and subject to Federal control. They would remain National banks in order to gain the benefits of operating across State lines. There may, however, be other means of meeting this situation which do not occur to me.

Under any reasonable system, however, it may be found that there will be trade areas entirely within the boundaries of a single State and it is not clear to me how Congress could control consolidations in those areas where the State law had given equal or greater branch banking powers to the State banks. In other words, how could Congress prevent a nonmember State branch banking institution, from consolidating with another nonmember State branch banking institution under the authority of the State law?

There have already been mentioned at these hearings three other means by which it might be possible for banking institutions to amalgamate their interests

or otherwise attempt to eliminate competition within a trade area.

(1) The purchase of assets and the assumption of liabilities by one bank of another;

(2) The purchase of the control through acquisition of stock by a holding

corporation; and

(3) An agreement between banks not to compete within the trade area.

I shall take these up in order. In the matter of the purchase of the assets of a national bank or a State bank by another national bank or the purchase of the assets of a national bank by a State bank the Comptroller of the Currency has nothing to say. It is a matter of contract between the institutions over which no power of control has been conferred upon the comptroller. Under the present state of the law the comptroller would have no way of preventing one branch banking institution from purchasing the assets and assuming the liabilities of another such institution within the same trade area. That control could be given by Congress and that is a matter to which I invite your consideration.

In the matter of the acquisition of control by holding companies a much more difficult situation is presented. It is obvious that in the absence of restrictions to the contrary it might be within the realm of possibility for a holding company to acquire stock control over more than one branch banking system within the same trade area. From a practical standpoint there would, of course, be many factors to be considered, such as whether it would be good business for the holding company to attempt such control; whether the local branch system would be willing to enter into such an arrangement and other such questions, growing out of the local situation. In other words, the local conditions may not favor such a purchase by an outside holding company. Nevertheless, the

possibility of such control must be admitted.

This is one of the questions before this committee. It is not a situation created by any position I have taken. It is not a future condition contingent upon the possible enactment of branch banking legislation. It is a present condition and is involved in the present group banking movement. Your committee will no doubt have before it spokesmen from the leading group bank holding companies and will obtain from them first-hand information and views which naturally I am not in a position to give. I am not now prepared to make recommendations to Corgress with respect to the ownership of national-bank stock or State member bank stock by holding companies. When the committee has gotten along further in these hearings and there has been developed more complete information with respect to group banking I shall be glad to offer my further services to the committee.

As to the third question, that of a gentlemen's agreement to eliminate competition within the trade area, such as has been mentioned by the gentleman from South Carolina (Mr. Stevenson), I should not anticipate a general resort to any such plan. The natural desire to build up a banking business within the trade area would have the strongest tendency to lead all of the branch banking institutions to compete for business all over the trade area. It must also be borne in mind that under any such national banking plan of branches within a trade area the Comptroler of the Currency would have the discretionary power to permit the establishment of a branch, and I can not think that he would cooperate with any bank in eliminating competition. But assuming the possibility of such a scheme, it might be advisable to consider the application of the antitrust laws in the premises. On this point, however, I am not prepared to make recommendations. The subject is new and largely hypothetical in its application to the plan I have suggested. It might be time enough to deal with such a situation after it may have arisen in any one particular trade area. It would always be within the power of Congress to deal with that situation.

The Chairman. Now, Mr. Seiberling.

Mr. Seiberling. Mr. Pole, in view of the fact that section 8 of the Constitution of the United States provides that the Congress shall have power—

To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures:

To provide for the punishment of counterfeiting the securities and current coin of the United States.

And further, in section 10, that-

No State shall * * * coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts.

In view of this, do you think it was intended by the founders of our Government that the National Government should have an absolute monopoly in so far as providing a free circulating medium of the money system of the country is concerned?

Mr. Pole. I understand the courts have so held.

Mr. Seiberling. Now, the importance of banking and its relation to the happiness and contentment of the people in general is of greater importance, is it not, than that of any other business of the country? Mr. Pole. It is extremely important.

Mr. Seiberling. As a matter of fact, you can not buy milk for your babies unless you have money or credit, can you?

Mr. Pole. Obviously.

Mr. Seiberling. Can you give me the total deposits in the banks of the country at the present time?

Mr. Pole. May I set that out in the record?

Mr. Seiberling. Yes.

Mr. Pole. It is about \$58,000,000,000. I will correct that for the record.

Mr. Seiberling. Can you tell me what part of these deposits are savings deposits and what part postal savings deposits and what part commercial deposits?

Mr. Pole. May I insert those in the record also?

Mr. Seiberling. Yes.

(The information referred to is incorporated below:)

(The morning reserved to is morporated below)		
	cash 	\$3, 629, 197 837, 430
Deposits of other banks Other time deposits— Deposits evidenced by savings pass books Certificates of deposit (other than for money borrowed) Time deposits, open accounts; Christmas savings accounts, etc Postal savings deposits 133 24, 029 3, 169 117	, 383 , 085 , 247 , 073 , 877 , 952	
Total		28, 787, 617

United States deposits (exclusive of postal savings) 286, 112 Deposits not classified 20, 121

Total deposits _____ 57, 910, 641

Mr. Seiberling. Now, in a general way, to what class of people do these savings deposits in the banks belong?

Mr. Pole. Usually to the less affluent members of society.

Mr. Seiberling. They are the clerks, the workingmen, and the farmers who have put their money in the banks, saved it for a future emergency if it should arise?

Mr. Pole. That is right.

Mr. Seiberling. Now, the banking system in reality provides a great reservoir in which those who have surplus funds deposit them for a rate of interest which the bank is willing to pay, which gives the bank an opportunity to lend these funds to those who have insufficient funds for a rate of interest which the bank is willing to take, is not that right?

Mr. Pole. Yes; subject to the limit of State law.

Mr. Seiberling. The banking system, therefore, in a general way fixes the rate of interest to be paid on deposits and also, subject to the usury laws of the various States, fixes the rate which the borrower has to pay?

Mr. Pole. That is true, except that the interest which may be

paid on time deposits is frequently fixed by statute.

Mr. Seiberling. In some States.

Mr. Pole. Yes.

Mr. Seiberling. There are States where the banks pay no interest on deposits at all?

Mr. Pole. I know of none.

Mr. Seiberling. I think there are still such banks as that.

Mr. Pole. There may be banks, but they are not all the banks of a State.

Mr. Seiberling. I know, but some banks.

Mr. Pole. Possibly some banks which do not take savings.

Mr. Seiberling. That depends on competition, does it not, in their localities?

Mr. Pole. Yes, there might be some few banks.

Mr. Seiberling. If there is only one bank in a locality, it can

decline to pay any interest to the depositors, can it not?

Mr. Pole. They would have the right to do so.

Mr. Seiberling. Do you look upon deposits as the raw material of the banking system?

Mr. Pole. Yes, to an extent, if you put it that way; but the

deposits are not the property of the bank.

Mr. Seiberling. Is there any other business that you know of Where the managers of the business subject to local competition pay the prices they wish to pay for the raw material, and sell the use of it at the price they wish to charge to the one that wants it?

Mr. Pole. Banks receive deposits and loan them under highly

competitive conditions.

Mr. Seiberling. I want to go into the functions which the Government performs in connection with national banks. Will you tell me some of those functions?

I have some of them here, if you want me to assist you?

Mr. Pole. Yes, thank you.

Mr. Seiberling. Well, the granting of charters is one, is it not?

Mr. Pole. Yes.

Mr. Seiberling. And the coining and printing of money is another?

Mr. Pole. Yes.

Mr. Seiberling. And that is done without charge, I understand.

Mr. Pole. Yes.

Mr. Seiberling. Who pays for the examination of banks?

Mr. Pole. The banks themselves.

Mr. Seiberling. Now, as to the passing of necessary laws for the protection of the banking system, that, of course, is a matter that the Government has to do. The Government has also provided a Federal reserve system for the general benefit of all member banks, whether national or State, has it not?

Mr. Pole. Yes.

Mr. Seiberling. And it has to maintain the gold standard so as to secure the stability of money for the benefit of the banks, does

Mr. Pole. That is a governmental function.

Mr. Seiberling. In view of all these facts, will you say that banks can properly be classified as quasi-public corporations?

Mr. Pole. I would.

Mr. Seiberling. Are they not more so than any other quasipublic corporations that you know anything about?

Mr. Pole. In my opinion; yes. Mr. Seiberling. Then proper facilities for banking are of more importance to the people as a whole than transportation of persons and freight or the proper means of communication-for instance, railroads, express companies, and telegraph and telephone companies?

Mr. Pole. Banks are a most important factor in our economic life. Mr. Seiberling: And, while banks are privately owned the same as other public utilities, is not the nature of their business and the relationship of their business to the Government such that they owe a greater duty to the people at large in the matter of service than any class of corporations which have been mentioned, and is not this especially true since the people themselves, by their deposits, to a

large extent furnish the money which is reloaned by the banks to borrowers?

Mr. Pole. That is correct.

Mr. Seiberling. Now, the proper and regular supply of money at reasonable rates is necessary to keep industry going and labor employed, and to purchase the products of the farm?

Mr. Pole. Yes.

Mr. Seiberling. I want to ask you a question which is somewhat academic, but I am interested in knowing what your judgment is about it, and that is, what percentage of the bank's objective, in your judgment, should be service to the public and what percentage should be profit to stockholders?

Mr. Pole. That is academic, indeed.

Mr. Seiberling. Should it all be for the stockholders? Mr. Pole. No, I think that the one is necessary to the other, that the bank which gives no service probably makes very little profit for the stockholders, because its business is built up on service in large part. The profit to stockholders is so important that if the return were diminished to any very extraordinary extent, the chances are that the bank stocks would not sell, people would not invest money in bank stocks. In order to build a bank up to a point where it becomes profitable and is able to make a return on its shares it is necessary that that bank extend its facilities and offer every banking service to the public.

Mr. Seiberling. I want to make it perfectly plain that I am a director in the largest bank in my city, and have been for many years,

and that I am interested in the proper return for capital.

Mr. Pole. Naturally.

Mr. Seiberling. And I am here at all times to protect that, but I would like to get your judgment as to what percentage the objective of a banker should be with respect to service to his community, and what the percentage should be with respect to profit gained for stockholders.

Mr. Pole. Each is equally important.

Mr. Seiberling. Now, as to the attitude of banks and bankers toward a community, they can either develop a community or can greatly restrict it by their policy, can they not?

Mr. Pole. It is to their interest to develop the community.

Mr. Seiberling. Do you think it is possible for this committee or Congress to legislate properly upon the banking system unless it has the whole picture?

Mr. Pole. I think that it is very necessary.

Mr. Seiberling. You have painted a very disastrous picture as to the small banks in the South, Southwest, and Northwest, but you omitted to paint the rosy picture in connection with the banking business in the metropolitan centers, especially in the East, and in order that we may have the entire picture, I desire to insert in the record portions of a statement which I have here, but it will be in the form of testimony.

Do you know who Ralph B. Leonard & Co. are, of New York?

Mr. Pole. I understand they are dealers in bank stocks. Mr. Fenn. May I ask what that paper is that Mr. Seiberling has?

Mr. Seiberling. I am going to state what it is.

Ralph R. Leonard & Co. are very responsible brokers, are they not, in bank stocks?

Mr. Pole. I do not know as to their standing in New York.

Mr. Seiberling. You have heard of them, have you?

Mr. Pole. Yes.

Mr. Seiberling. They have a good reputation?

Mr. Pole. As far as I know.

Mr. Seiberling. I want to put into your hands here a statement put out by Ralph R. Leonard & Co. dated in January, 1930, called,

'A 5-year analysis of New York City bank stocks."

Is it not a fact that this statement shows that the 25 national banks in New York City, in the last five years prior to December 31, 1929, paid dividends to stocksholder at an average rate for all banks of 70 per cent for the period upon their stock?

Mr. Goldsborough. On the par value?

Mr. Seiberling. Yes.

Mr. Pole. I am not informed.

Mr. Seiberling. I will show it to you right here. This is the average for all of the 25 national banks.

Mr. Goodwin. For a 5-year period?

Mr. Seiberling. Yes.

Mr. Pole. According to this statement, those figures seem to be correct.

Mr. Steagall. May I interrupt?

Mr. Seiberling. No; I do not want an interruption, because I have listened patiently to everybody.

Mr. Steagall. I just wanted to ask what date that was. Mr. Seiberling. I gave the date; January, 1930. Mr. Steagall. That covers last year?

Mr. Seiberling. Yes.

Mr. Steagall. That is what I wanted to get. They are very interesting figures, and I wanted to get them in my mind.

Mr. Pole. The percentage paid in dividends-

Mr. Seiberling. The statement gives you the average, at the bottom of it.

Mr. Pole. Average, 70 per cent.

Mr. Seiberling. That is for the 5-year period. If you want to get the average paid per year, you divide that average by five.

Mr. Pole. Where does it say it is for the 5-year period?

Mr. Seiberling. On the front.

Mr. Pole. I see. Of course, I am not familiar with this.

Mr. Seiberling. You have your detailed earnings there for five

Mr. Pole. Yes.

Mr. Seiberling. But before that you have the average dividend for the period.

Mr. Pole. I see.

Mr. Seiberling. Now during the year 1929-and I am speaking now of just the year 1929—these 25 national banks increased their surplus and undivided profits account to the extent of \$139,005,500. in addition to an average dividend of \$16 per share on the capital stock. That is in the column marked "Average."

Mr. Pole. Yes, the average current rate of dividend was \$16.

Mr. Seiberling. That does not take into account any stock dividends declared during the entire period of five years and charged against surplus account. There were some, but I can not pick out the banks now. That does not take that into account.

Mr. Pole. In a good many instances.

Mr. Sieberling. Now, during the same five years ended December 31, 1929, the 34 trust companies paid an average dividend for the period of 61 per cent of the par value of their capital stock, did they not?

Mr. Pole. According to this statement; yes.

Mr. Seiberling. During the year 1929—and I am speaking now only of the year 1929—the same trust companies increased their surplus and undivided profit account to the extent of \$587,966,300, did they not?

Mr. Pole. I do not know exactly where you get that, but I assume

that is correct.

Mr. Seiberling. You have in the one column the surplus and undivided profits of the banks for December 31, 1928, and also in the other column for December 31, 1929, and I have had these figures added up on the adding machine.

Mr. Pole. How much did you say?

Mr. Seiberling. They have increased their surplus and undivided profit account to the extent of \$587,966,300.

Mr. Pole. I do not know that I understand this statement.

Mr. Seiberling. It would take you too long to add those columns. Mr. Pole. Well, I was going by the averages, that the difference between the surplus and undivided profits on December 31, 1928, and those for 1929 was about \$10,000,000, and that, multiplied by

Mr. Sieberling. Would be \$340,000,000.

Mr. Pole. \$340,000,000.

Mr. Seiberling. That is the computation I made in the beginning, but after adding them up on the adding machine, my secretary tells me that the amount arrived at is the amount I reached.

Mr. Pole. That should be more nearly correct, of course.

Mr. Seiberling. This increase in surplus and undivided profits was in addition to the average dividends for the year 1929 of \$13.40 per share on the par value of the trust company stock, and this does not include or take into account any stock dividends during the Period charged against the surplus account, does it?

Mr. Pole. I accept your statement as to that.

Mr. Seiberling. Now, taking that statement, can you give me the capital stock of the National City Bank of New York City, and the par value of its shares?

Mr. Pole. \$110,000,000 capital; \$20 par.

Mr. Seiberling. You divide \$110,000,000 capital by \$20 par. and you get 5,500,000 shares, do you not?

Mr. Pole. Yes.

Mr. Seiberling. Can you tell me what the highest price was that that stock sold for on the stock exchange during the peak of prices?

Mr. Pole. My recollection is something over \$500. Mr. Seiberling. It was \$575 a share, was it not?

Mr. Pole. Yes.

Mr. Seiberling. Now, if you multiply the number of shares by \$575, you get a selling price of that stock—aggregate selling price—of \$3,162,500,000.

Mr. Pole. Yes.

Mr. Seiberling. Now, let us take the statement of the National City Bank of 1929. Take its capital stock of \$110,000,000 and surplus of \$129,650,200 and add to that the deposits, \$1,649,544,300. You get an aggregate total of capital, surplus, and undivided profits and all deposits of \$1,889,194,500, so that it appears that, while you Were enforcing the double liability against stockholders in many banks of other sections of the country, the capital stock of this large metropolitan bank was selling at an aggregate price equal to almost twice the aggregate amount of its capital, surplus, and deposits. That is correct, is it not?
Mr. Pole. Correct.

Mr. Seiberling. For the moment the country forgot the deposits were liabilities of the bank instead of assets, apparently?

Mr. Pole. I did not get that.

Mr. Seiberling. For the moment the country must have forgotten that the deposits of banks were liabilities instead of assets? Mr. Pole. I think that is the case.

Mr. Fort. I wonder if Mr. Seiberling will permit just one statement in the record at this point?

Mr. Seiberling. Yes.

Mr. Fort. I think he wants properly to convey the picture. In the market price of the National City Bank stock is included in the market value placed on the National City Bank's companies?

Mr. Seiberling. I am going to get to that. These earnings are

also

Mr. Fort. The earnings of the two-

Mr. Seiberling. I will get to that a little later. I desire to take up now the individual cases of only three banks—the Chase National Bank, the City National Bank, and the Guaranty Trust Co.

The Chase National Bank has a capital stock, at par, of \$20, I

believe.

Mr. Pole. According to this statement; yes.

Mr. Seiberling. And it had a capital stock on December 31, 1928, of \$60,000,000; on December 31, 1929, of \$105,000,000—

Mr. Pole. According to this statement.

Mr. Seiberling. And it had a surplus and undivided profits as of December 31, 1928, of \$77,498,400, and, on December 31, 1929, of \$136,364,100.

Mr. Pole. That is in accordance with the statement.

Mr. Seiberling. I guess there are 77 cents to be added on there.

Mr. Pole. Yes.

Mr. Seiberling. Now, the deposits of the Chase National Bank as of December 31, 1928, were \$1,126,781,600, and the deposits as of December 31, 1929, were \$1,248,219,400.

They paid, during that year, 1929, \$4 dividends. I say the dividend rate is fixed at \$4. They are paid in quarterly periods,

and I assume that is \$4 a year.

Mr. Pole. Yes, sir.

Mr. Seiberling. You will note that the deposits of the bank increased only about \$126,000,000 and the earnings of the bank, according to the surplus and undivided profits, increased in the neighborhood of \$60,000,000. Now, how do you account for such earnings as that, when the increase in deposits was so small?

Mr. Pole. I would not attempt to account for it, Mr. Seiberling.

Mr. Wingo. Possibly through consolidations, Mr. Seiberling. Mr. Seiberling. This statement figures the average on—

Mr. Fort. And the call money.

Mr. Seiberling. I will get to the call money pretty soon. This is figured on the average for the banks, whether consolidated or not.

Mr. Wingo. I think a consolidation might account for that change.
Mr. Seiberling. Some bank had to make the money, you know.
They consolidated their deposits as well as their earnings. Now,
you speak of the National City Bank. The capital stock is \$20, par?

Mr. Pole. Yes, sir.

Mr. Seiberling. Their capital stock as of December 31, 1928 was \$90,000,000 and \$110,000,000 December 31, 1929. The surplus and undivided profits as of December 31, 1928, were \$76,992,900, and on December 31, 1929, were \$129,650,200. Its deposits, December 31, 1928, were \$1,349,024,400 and on December 31, 1929,

\$1,649,554,300. They also paid \$4, a share on their 5,500,000 shares

of capital stock, which means a dividend of \$22,000,000.

They increased their deposits \$300,000,000, but increased their surplus and undivided profits—29 plus 24,000,000 would be—\$53,000,000 for the year. You can not account for their earnings by the small increase of deposits, can you?

Mr. Pole. I would not attempt to do that except to say that in both of the instances which you mentioned, are included the earnings

of their affiliated corporations.

Mr. Seiberling. What is that?

Mr. Pole. Included in those earnings are the earnings of the affiliated corporations.

Mr. Seiberling. Yes.

t

5

0

),

Mr. Pole. And, of course, we have no means of knowing what they are. They are certainly very material.

Mr. Seiberling. Well, now, we take the Guaranty Trust, that has

a par value of its stock of \$100.

Mr. Pole. Yes: according to this statement.

Mr. Seiberling. And they had a capital of \$40,000,000 at the end of 1928 and \$90,000,000 at the end of 1929. Their surplus and undivided profits, at the end of 1928, were \$63,307,000. At the end

of 1929 they were \$202,636,000.

Their deposits at the end of 1928 were \$842,358,200; at the end of 1929 were \$1,309,289,600. They increased their deposits very much more than the other banks did proportionately, but their increase in surplus and undivided profits was approximately \$140,000,000 for the year. Is not that correct?

Mr. Pole. That seems to be correct.

Mr. Seiberling. What would you say as to whether or not the earnings of the banks in other Federal reserve centers of the country were comparable with the earnings shown by the New York banks?

Mr. Pole. Included in the earnings of the Guaranty Trust Co.

are also the earnings, I believe, of the Guaranty Co.

Mr. Seiberling. This securities company?

Mr. Pole. Yes.

Mr. Seiberling. What do you think of the wisdom of having large banking corporations owning securities companies where a great deal of their attention is given to speculation in stocks where they have a great interest in shoving stocks up on the market instead of attending to legitimate banking business?

Mr. Pole. I think it would be desirable that some supervision over the securities companies should be had in order that we might ascertain the nature of their business by reason of the fact they are so closely

allied with the banks.

Mr. Seiberling. I want to go to the subject of call money rates. I would like to ask you, if you know, who fixes the call money rate, and how it is determined from day to day?

Mr. Pole. I have very little information on that, Mr. Seiberling.

I would not attempt to answer that question.

Mr. Seiberling. Do you know that in past panies, the call money rate has gone as high as I per cent a day?

Mr. Pole. I recall that it has gone to some fabulous figure.

Mr. Seiberling. And in another panic, it went to as high as 150 per cent?

Mr. Pole. Yes.

Mr. Seiberling. You do not know who fixes the call money rate?

Mr. Pole. Specifically I would say I do not.

Mr. Seiberling. I am very sorry because I wanted to find out. Do you know, as a matter of fact, that New York does not have any usury laws in connection with the call money rate?

Mr. Pole. I do.

Mr. Seiberling. The call money rate can go just as high as anybody who has the fixing of it wants to put it?

Mr. Pole. On loans of \$5,000 or over.

Mr. Seiberling. New York does not have any usury laws in connection with loans to corporations either, does it?

Mr. Pole. I am not familiar with the usury laws of New York,

Congressman.

Mr. Seiberling. I think their usury law in connection with corporations is the same as the law in Ohio, and that was put through for the purpose of negotiating some loans out there and that is if the directors authorize the loan, the corporation can not, thereafter, set up, as a defense, usury for the benefit of the stockholders. I think that is the New York law. Now, as to whether they have no usury laws in connection with collateral loans as Mr. Fort suggests, I do not know.

Mr. Fort. I know that the lowest rate on even time loans is frequently 9, 10, and 11 per cent—not frequently, but occasionally.

Mr. Seiberling. Do you know of many other States that do not

have usury laws that cover all kinds of loans?

Mr. Pole. I think recent laws have been passed in Pennsylvania and possibly in Illinois with respect to call rates.

Mr. Seiberling. Taking off the usury from call rates?

Mr. Pole. I am under that impression.

Mr. Seiberling. Repealing the law so that there is no usury law on call money?

Mr. Pole. There has been some change in the law in that respect.
Mr. Seiberling. Now, how high did the call money rate go in
New York during the recent stock escapade?

Mr. Pole. I think about 12 per cent, as far as my recollection goes.

Mrs. Pratt. I think it went as high as 15.

Mr. Fort. It was higher before the panic. It was about 15 or 16. Mr. Seiberling. It did not reach its high point until after the stocks commenced to decline, did it?

Mrs. Pratt. I think it was in August or September it was as high

as that.

Mr. Seiberling. If you know, I should like to have it in the record.

Mrs. Pratt. I will have to check that up.

Mr. Seiberling. I thought the call money went to as high as 20 per cent.

Mr. Pole. I do not recall.

The Chairman. It did go to 22 per cent last spring.

Mr. Seiberling. Don't you know, Mr. Pole, that this call money rate affected every man, woman, and child in the United States that had stocks on margin with the brokers, and that there were thousands and hundreds of thousands of them?

Mr. Pole. I would say so.

Mr. Seiberling. This call money rate was charged back on these marginal accounts irrespective of the usury laws of the various States?

Mr. Pole. I am not informed as to that, Mr. Seiberling.

Mr. Seiberling. As a matter of fact, I will state that they were charged back on the marginal accounts and if you did not like to pay the rate of interest, you could let them sell your stock, but if you wanted to carry it with the broker, you had to pay substantially the call money rate, which varied from day to day—pay the call money rate of New York.

That is, Mr. Pole, they charged you for the month for the average of the call-money rate, whatever it might average. Do you know,

from your personal knowledge, whether that is true?

Mr. Pole. I have no knowledge of that.

Mr. Seiberling. There are probably others around here who could tell us. That was my experience. How about you, Mr. Fort?

Mr. Fort. I did not have any accounts at the time, but I understand the practice in most legitimate brokers' offices is that they charged the cost of the money to them, plus the commission. That does not necessarily mean the call rate. They took their time money and call money and merged it and fixed the rates that way. Most brokers did that.

Mr. Seiberling. The effect of the high call-money rate in New York was to draw immense sums of money out of all banks of the country and transfer them to New York, such withdrawals being made by people who had large sums of money on deposit and corporations with large sums on deposit with banks paying only 2 or 3 per cent on daily balances—they took their money out and withdrew it and sent it to New York to get the call-money rate.

Mr. Pole. I think large amounts were invested that way.

Mr. Seiberling. Do you think, out of a city like Cleveland, as much as \$100,000,000 would be withdrawn and sent to New York?

Mr. Pole. I have no idea.

Mr. Seiberling. The effect of the withdrawal of money from the local banks and sending it to New York to get the high call money rate was to compel all the local banks to go to the Federal reserve to get money, was it not?

Mr. Pole. It had that effect.

Mr. Seiberling. And that is what they did to an enormous extent, did they not?

Mr. Pole. To some extent.

Mr. Seiberling. Well, then, we have this situation, that the call-money rate caused an influx of tremendous amounts of money into New York to be invested in the New York Stock Exchange at high rates and withdrew it from local banks and the local banks had to go to the Federal reserve to borrow money. What rate did they pay?

Mr. Pole. Money was ranging over last year from 4 to 6 per cent. Mr. Seiberling. But a great part of the time was below 6 per cent?

Mr. Pole. A considerable part of the time.

Mr. Seiberling. Is it also true that some banks borrowed money from the Federal reserve, at the low rate of interest and sent it to New York to be used at the call-money rate?

Mr. Pole. I thought that was your question.

Mr. Seiberling. No; I was not talking about banks but individuals and corporations.

Mr. Pole. They do not go to the Federal reserve banks.

Mr. Seiberling. Not the individuals, but the point I make is this: When the individuals withdrew their money and sent it to New York, then the bank had to go to the Federal reserve in order to get money to run its business?

Mr. Pole. I think that is true in many cases.

Mr. Seiberling. Is it not also true that the banks themselves borrowed at the low rate from the Federal reserve and sent to New York and got the high call money rate?

Mr. Pole. I think that also might have been true.

Mr. Seiberling. The effect of all that was to take this money out of the legitimate channels of business and many people who needed money for their business needs were refused this money by the banks; because they could not, in good morals and under the usury laws of the States, charge them more than a limited amount when they could take the money and send to New York and get more?

Mr. Pole. There were undoubtedly illustrations of that kind.
Mr. Seiberling. You say that even though your the Comptroller of the Currency of the United States, you do not know who fixes the call money rate?

Mr. Pole. I do not know the technical operation of the fixing of

the call rate.

Mr. Seiberling. Do you know how we could find out who fixes it?

Mr. Pole. Yes.

Mr. Seiberling. Where?

Mr. Pole. From any banks that make loans on call in New York.

Mr. Seiberling. After it is fixed from day to day that the call money rate was so much, and so forth, who fixes it?

Mr. Pole. I think that is said to be fixed under supply and demand

by a committee of the stock exchange.

Mr. Seiberling. With the Federal reserve system, there is not any question about the supply of money in this country any more, is there?

Mr. Pole. There is, for speculative purposes.

Mr. Seiberling. Well, but you can not safeguard that where individuals and corporations and banks withdraw their money from banks and send it to New York and the banks themselves borrow from the Federal reserve—you can not question a bank when they come to the Federal reserve as to whether they want this for speculative purposes?

Mr. Pole. You can not question the individuals.

Mr. Seiberling. Or the banks either?

Mr. Pole. Yes.

Mr. Seiberling. If they come to you and give you the proper kind of paper—

Mr. POLE. It is not incumbent upon the Federal reserve bank to make loans if the bank is, at the same time, sending money on call to New York. The Federal reserve bank would inquire into it.

Mr. Seiberling. If the bank went to the Federal reserve with good rediscountable paper, they have the right to inquire why they wanted the money?

Mr. Pole. Yes.

Mr. Seiberling. You do not think they did inquire?

Mr. Pole. I think they did inquire.

Mr. Seiberling. Then you have agreed with me that the banking business is much more of a quasi-public nature than the business of other quasi-public corporations, whose rates are fixed by the public service commissions—whose rates to the public are fixed by the public utility commissions and the Interstate Commerce Commission, then why should not Congress, by the enactment of a Federal usury law, fix the limit which could be charged for the use of money?

Mr. Pole. Congress could do that probably and in respect to national

banks certainly.

Mr. Seiberling. Can not they also, in respect to member banks. if they want to be members of the Federal Reserve system?

Mr. Pole. Probably that is correct.

Mr. Seiberling. And States that do not have such laws could be controlled by the Federal usury laws?

Mr. Pole. I presume so.

Mr. Wingo. You gentlemen are both lawyers, I assume?

Mr. Seiberling. Somebody said I was a lawyer once, but I do not know whether I am or not.

Mr. Fort. Mr. Chairman, may I ask a question? Mr. Seiberling says he has no objection.

The Chairman. Yes. Mr. Fort. Mr. Pole, is it not a fact that a large part of the funds in the call loan market, which along in October exceeded the total loans of all banks for their own account, was money of so-called outsiders; that is, of corporations and foreign lenders and others, rather than the money of the banks themselves?

Mr. Pole. I think that is correct.

Mr. Fort. And a large part—the very large part of the money that went at the high rates of interest was not banking money?

Mr. Pole. I think the statements usually show that loans for others

exceeded the loans of which you speak.

Mr. Seiberling. And the result of the high rate is that the depositor who has a large balance, instead of letting the bank lend it and getting the profit, draws out that balance and becomes, himself, a lender of money?

Mr. Pole. That is correct.

Mr. Seiberling. I think this should be made plain, that when the private party or the corporation that lends through private bankers in New York, they have to withdraw that money from some bank in order to send it to a private bank.

Mr. Pole. I think the custom is for the New York banker to place the money for its customer, charging a small commission.

Mr. Seiberling. But they have to furnish the money to do that. They have to furnish the money from some place.

Mr. Pole. The customer does.

Mr. Seiberling. And he has to take it from the local bank. He does not carry thousands of dollars around in his stocking.

Mr. Pole. He has to take it from wherever it is deposited. The

local bank might be in New York.

Mr. Seiberling. We know, as a matter of fact, that hundreds of millions of dollars were sent from other parts of the country to New York for the high-money rate.

Mr. Pole. I am sure of that.

Mr. Seiberling. What effect, do you think, that had on the legitimate business of the country which is in the shape it is in?

Mr. Pole. I think the effect was bad.

Mr. Seiberling. Don't you think it would greatly stimulate business if borrowers could know what the limited interest they would have to pay under any circumstances would be?

Mr. Pole. I think that might be desirable.

Mr. Seiberling. Of course the interest rate would always have to be as high as the interest rate of the Bank of England, for instance; in other words, you could not let the foreign banks put the rates so high as to draw money from this country. There is an element there that would have to be protected, is there not?

Mr. Pole. Well, I suppose there naturally would have to be some adjustment between the foreign banks—the central-bank rates and

our own Federal reserve rates.

Mr. Seiberling. Now, in speaking of the branches—of extending branch banking—there is not any objection to-day to the consolidation of vast public utilities because the rates which they can charge the public are fixed by commissions, are they not?

Mr. Pole. Yes, sir; I understand the rates are so fixed.

Mr. Seiberling. And it would not make so very much difference in reference to the form of the bank if we had a limit on what they could charge for the use of the money?

Mr. Pole. I think not.

Mr. Seiberling. That is, after all, the protection to the people, and it is vital that those who are entitled to it, either on account of their moral responsibility or financial responsibility, should have money as the necessities demand?

Mr. Pole. Are you referring to the usury laws of the States which

fix the maximum amount that it is permissible to charge?

Mr. Seiberling. It is very vital, is it not, that those who are entitled to money should have the right and opportunity of getting it at a reasonable rate of interest?

Mr. Pole. Yes, sir.

Mr. Seiberling. In reference to this question of extension of branch banking, your proposal would have a tendency, unless there was some regulation as to what banks could do, to greatly increase their domination and control, would it not?

Mr. Pole. There would, in my opinion, always be ample banking

competition which would regulate that.

Mr. Seiberling. Well, now, the law preventing interlocking directors does not protect the situation at all?

Mr. Pole. I would say not.

Mr. Seiberling. It is a question of who the stockholders are, is it not?

Mr. Pole. I do not quite understand the question.

Mr. Seiberling. Is it not a fact after all a question of who the stockholders are?

Mr. Pole. I still do not understand the question. In respect to what?

Mr. Seiberling. In respect to the control of the stock?

Mr. Pole. As far as monopolies are concerned?

Mr. Seiberling. Control clear down the line. The stockholder can put in a dummy director and tell him what to do. The stockholders control the banks?

Mr. Pole. They could in any individual bank; yes.

Mr. Seiberling. Assuming that we adopted your suggestion, there would be nothing to prevent a Cleveland bank—and I am taking a Cleveland bank because you were an examiner out there—there would be nothing to prevent a Cleveland bank from making a branch of the Akron bank?

Mr. Pole. That would depend upon what Congress fixed as the

Cleveland area.

Mr. Seiberling. That is in the Federal reserve district. We

are all in that district.

Mr. Pole. I know, but I have not made any suggestion that the whole district should be included. I stated that in no event should It go beyond the district lines.

Mr. Seiberling. Here is a city within 35 miles of Cleveland.

It would certainly be within the trade area.

Mr. Pole. Yes, sir.

Mr. Seiberling. Canton and Massillon would be within the trade area of Akron?

Mr. Pole. It might be said that they would be.

Mr. Seiberling. And the Akron bank could make branches of the Canton and Massillon banks?

Mr. Pole. Yes.

Mr. Seiberling. If New York banks owned all the stock of the Cleveland bank, they would have branches, then, in Cleveland, Canton, Akron, Massillon, and possibly Warren?

Mr. Pole. If the New York banks could keep on reaching and

acquiring the stock, they might obtain control.

Mr. Seiberling. And you can not prevent that?

Mr. Pole. I think that Congress might adopt some legislation

which would prevent it.

Mr. Seiberling. There is another thing: You know the banks and the trust companies have trust departments and vast amounts of stock are willed to them in trust and put in living trusts which the banks vote and control? That is correct, is it not?

Mr. Pole. I think that is correct.

Mr. Seiberling. So that, in the course of time, these banks that belong to the parent bank and its branches, might even control large industries in their sections, might they not?

Mr. Pole. They might.

Mr. Seiberling. They might say to an industry that was about to start, "If you locate up here in my city"—I am talking about the head bank—"if you locate up in my city, we will lend you the money to start with, but if you do not do that, we do not have enough confidence in your business. We want to have it here to Oversee you." They could do that, could they not?

Mr. Pole. Under some circumstances, I imagine that might be

possible.

Mr. Seiberling. They could also have great political control,

could they not?

Mr. Pole. If there were a system of banking through stock ownership, such as you suggest, I think it could have this influence.

Mr. Seiberling. Do you know of any more potent influence than a banker has when he says to his borrower that he would like to have some one elected to office?

Mr. Pole. I would call that a rather potent influence.

Mr. Seiberling. Do you know that there is great danger of banks and trust companies having so much of their own stock deposited with them by wills and living trusts, that the trust department would finally control and own the bank?

Mr. Pole. I could not conceive of a condition of that kind-not to

the point where they would actually control it.

Mr. Seiberling. They could easily have a majority of the stock, could they not?

Mr. Pole. It would be possible.

Mr. Seiberling. How many shares of stock does a director have to have?

Mr. Pole. In a national bank he has to have \$1,000 worth at par value.

Mr. Seiberling. A thousand dollars' worth?

Mr. Pole. Yes.

Mr. Seiberling. Well, it would be very easy to have 10 or 15 men own sufficient stock to qualify them as directors and have the rest of the stock in the trust department of the bank?

Mr. Pole. Of course it would be much easier in a small bank than

in a larger bank.

Mr. Seiberling. I am talking about the course of time. It seems to me that you have to look a long ways ahead and we are not only protecting the interests of the people now, but we are protecting them for years to come. Is not that correct?

Mr. Pole. Yes.

Mr. Awalt. Speaking of voting trusts?

Mr. Seiberling. I am speaking of stock actually trusteed in the banks under trusts and living wills and banks transferring that stock to them and they vote it. Is not that right?

Mr. Pole. I should think that would be looking some way ahead.
Mr. Seiberling. It is the natural thing for a director or a stock-holder of a bank to make his own bank his trustee under his will, is it not?

Mr. Pole. Yes.

Mr. Seiberling. Do you think it would be wise to permit an extension of the branch privileges to banks unless some restrictions can be formulated, which will obviate these difficulties?

Mr. Pole. I think that question might well be given consideration. Mr. Seiberling. Well, now, I have just one more line that I want to ask you about and this is maybe a rather foolish suggestion, and I want to say it is not original with me, because I read a book on banking that gave the cue.

You are very much interested, I take it, in getting banking facilities to the outlying districts at points where—which would permit the establishment of an individual or unit bank and where there is not sufficient business and yet where the people should have some banking

facilities?

Mr. Pole. That is among my suggestions.

Mr. Seiberling. You are greatly interested in that?

Mr. Pole. Yes.

Mr. Seiberling. There seems to be a great deal of interest around here in reference to guaranteeing deposits also, which I understand you are against?

Mr. Pole. Yes.

Mr. Seiberling. And on which point I agree with you absolutely. Now, since we have the Joint Stock Land Bank and the Federal Farm Board to loan money on farms, on real estate, and since we have the Federal Farm Board to which we have appropriated \$500,000,000 to lend on grain and intermediate credit banks, and since just the other day we appropriated another \$7,000,000 for the Secretary of Agriculture to loan to farmers—a bill that provides specially for loans to buy fertilizers, and for which he will take a lien on the crops—since we have all those instrumentalities, these rural districts would not need a bank for borrowing purposes to any great extent, would they?

Mr. Pole. Oh, I should say so. Customers of banks do not go directly to these corporations that you speak of. They have to form associations, which associations in turn borrow from these cor-

porations except in the case of the Fedral land bank.

Mr. Seiberling. The farmer gets the money?

Mr. Pole. Yes; eventually. There are numerous small merchants and small operators that necessarily have to transact banking business outside of type of business which might to go these corporations. I would say that the banking facilities in a small community could not be eliminated without very great inconvenience to that community.

Mr. Seiberling. A small community with two or three hundred people who had opportunities to borrow, as I have said, from these various sources, really needs a place to deposit their money and a place

to check out more than anything else?

Mr. Pole. That is very important. They have also to borrow and to make such loans as would not be eligible with these other corporations you speak of, for current business.

Mr. Seiberling. What plan have you to work that out?

Mr. Pole. I think it might be easily possible that a bank having branches might go into such community and perhaps operate two days or three days a week in order that the community might have banking facilities.

Mr. Seiberling. You do not think that-

Mr. Pole. And there is nothing new in that idea.

Mr. Seiberling. You do not think that the Postal Savings could be expanded so as to take care of communities of that kind, where the Comptroller of the Currency would designate that it was impossible to establish a unit bank and where there were no banking facilities, because I am just as much opposed to the Government going into business as you are.

Mr. Pole. I think, as a savings bank, the Postal Savings might be of assistance, but I do not think it would take the place of a local

commercial bank.

Mr. Seiberling. They draw money orders now, do they not; they

do a great many things of that kind?

Mr. Pole. They deposit money and draw funds, but I think nothing else.

Mr. Seiberling. They have to keep books, of course?

Mr. Pole. Yes.

Mr. Seiberling. And you do not think it would be possible to enlarge that so that not only money could be deposited, but also withdrawn by check?

Mr. Pole. No; I do not think the post office could ever take the

place of the country bank.

Mr. Seiberling. I am talking about sections where it is absolutely impossible to have a bank on account of the business being so small?

Mr. Pole. Of course a community being that small, it might not be necessary to establish a bank there. It is not my idea that branches should be established in every small hamlet in the country.

Mr. Wingo. Might I suggest that in my country there is a possi-

bility of those villages losing even their post offices?

Mr. Seiberling. It is very desirable to arrange facilities where money in these rural districts, now in the stockings and other places, might be placed in circulation.

Mr. Pole. Yes, sir.

Mr. Seiberling. I think that is all.

Mr. Steagall. Just one suggestion there with reference to one statement the gentlemen made—and evidently made under misapprehension: He said that we had appropriated \$7,000,000 for the purpose of lending to farmers to purchase seeds and fertilizers. I do not think that act can be properly categorized along with the other loaning facilities, such as Federal land banks, the Farm Board, and intermediate credit banks. This \$7,000,000 fund is purely a temporary and an emergency matter to take care of unprecedented conditions created by a flood, something that probably will not happen again, and I do not think anybody had in mind to make that a permanent system.

Mr. Seiberling. It included Ohio, and we did not have any

flood there that I know anything about.

Mr. Steagall. It was done probably as a matter of strategy to get the matter through the other House. 'I do not advocate that as a permanent policy. It was purely an emergency measure.

Mr. Wingo. In connection with one question that Mr. Seiberling asked Mr. Pole, concerning limited credit under the Federal reserve system, there seems to be a mistaken idea in the country that the

Federal reserve system carries unlimited credit.

Is not this true? The first is that you have to have eligible paper before you can get credit. Another is the eligibility and acceptability of the paper itself—that is, the acceptability. First we have eligibility and second, acceptability and, in the circumstances in which it is offered, whether the bank will take the eligible paper and grant credit.

Then after you have gotten by those limitations and handicaps, the question of available gold for the required reserve comes in. So, it is a mistaken idea to think of the Federal reserve as a source of b

C

is

Co

SU

kI

th

br

unlimited credit.

Mr. Pole. Absolutely.

Mr. Wingo. There is another question in that connection that I want to ask in reference to branches to take care of small communities. I believe you said the other day, in response to a suggestion, that if you had a small town, say, one of these towns under 10,000, that if you undertook to take care of it by branch banks, they might under-

take to take care of it by one branch and there would be a monopoly and there might be two trade areas that would overlap; for instance, Dallas, Tex., is close to the south end of my district. That is in the trade area of Dallas as well as that of Little Rock. It is about as near to Dallas as to Little Rock. In one of those towns there might be a branch of a bank in Little Rock and also one branch of a bank in Dallas, and you suggested that would give the necessary competition of service there and insure good service. Is that your idea, that you would not be limited to the number of branches except as you are now limited in the discretion of the charter granting authorities which, in the case of the States, is the State commission, and, in the case of the national banks, the Comptroller of the Currency?

Mr. Pole. Yes. I spoke of these small communities being perhaps in a position to monopolize the banking business provided the banks were forced to a higher capital structure. In order to earn a fair return on such capital, it would be necessary that the banks should have a large enough area to attract sufficient business to do that.

Now, that was in connection with the suggestion which had been made that banks should have a minimum capital of \$100,000. I feel that in a town like Dallas or a town like Little Rock the chances are that there would be several important banks which would reach out

for business from every quarter.

Mr. Wingo. I see your idea. In addition to having two cities that might each one of the have more than one bank—in other words, in addition to having a bank in Dallas and a bank in Little Rock, which might, each one, have a branch in this small city, a town under 10,000, why there might be also two banks in Little Rock and in Dallas and the question of allowing them to have branches would still be one, under your theory, for the supervisory authority to control, as in the issuing of a charter to a national bank?

Mr. Pole. Yes, sir.

Mr. Wingo. In other words, if the banking facilities of that city would be sufficient to meet the public needs—

Mr. Pole. That is my idea, as far as possible, to endeavor to give every community of any size adequate competitive banking service. Mr. Wingo. As a rule now—you spoke awhile ago of the potent influence of the banker on the borrower—it is my experience that a

banker has considerable influence with the borrower.

Mr. Pole. Yes.

I

if if

er-

Mr. Steagall. Somewhere in Proverbs it is stated that the bor-

rower is the slave of the lender.

Mr. Wingo. But, Mr. Pole, how can you enswer this question: Mr. Goldsborough touched upon this question and Mr. Seiberling also did. I think we can reasonably assume that even if you did have branches, say, in a town that we will call A, one for each of the two central banks that may be in Little Rock, when you came down to the issues involved in a political campaign, those two banks would have a community of interest. The probabilities are that they would be supporting the same issues or the same candidates.

Now, then, would not this be what could naturally be expected, knowing human nature both by observation as well as experience, that the merchants and other people in that town where these two branches are, would find a very subtle political pressure put on them

to support the candidate or the issue that these central banks wished to have supported? Is not that reasonably to be expected?

Mr. Pole. They might naturally—that is individuals connected with such a bank—take an interest in a political issue. Whether they would exert improper political pressure is another matter.

Mr. Wingo. Now, if the logic of your scheme is sound, the benefits of that character along financial lines, having a tendency to grow—in other words, the institutions having a tendency to grow—would not their influence correspondingly grow?

Mr. Pole. As they grow larger, I would say that their influence would be greater, but it would not necessarily be directed to political channels or be detrimental to the public welfare if so directed.

Mr. Wingo. Is not this the probable outcome to your plan, that at first you would have—as a matter of fact, is it not the virtue of your plan from your standpoint-that probably you would have a bank with \$100,000 capital with one or two branches, and have a great many of them scattered around the country, but, ultimately, these banks in turn would be taken over and become nothing but branches of a large bank? You will start out and maybe, we will say, there will be 25, 30, or 35 banks over a State, each one having branches out in the smaller towns in their particular trade areas, but as time goes on there will be a natural tendency—and the arguments in favor of it would be the same as the arguments you make to-day— "Here, we can work out economies, greater security for the depositors and greater benefit and greater service if, instead of having 25 or 30, we have only 4 or 5," and where we have a bank to-day of \$100,000 capital, with three or four branches, that bank becomes a branch of a bank, say, located at Little Rock. It not that a natural evolution of your scheme if your theory is correct?

Mr. Pole. I think the size of a branch that would be permitted to operate or, rather, the size of a bank that would be permitted to operate a branch, should be regulated, and not permit branches for the small banks, and my idea is, further, that the banks in the important cities would develop branches around them. They would be gradually reaching out and, in the course of time, probably even those parent banks in such cities might themselves under certain conditions be consolidated and become branches, but I can not conceive of any idea where there would be any banking monopoly there.

I am inclined to think that there should be consideration given, as I have said, to legislation regulating perhaps the consolidation of banks after they get a certain number of branches or reach a certain size.

The CHAIRMAN. Might I suggest here that we proceed in order? Inasmuch as the comptroller is going to file a brief, he will cover that in his brief, so that we can proceed with Mrs. Pratt as the next interrogator.

Mr. Wingo. I beg your pardon. I did not know I was interrupting.

Mr. Pole. That is, my brief in connection with trade areas?

The CHAIRMAN. Yes.

Mr. Wingo. The chairman was not following me very closely. I was going to another phase of the question. However, I will develop that some other time. I beg your pardon, Mrs. Pratt.

Mrs. Pratt. Mr. Chairman, most of the questions that have arisen in my mind have been covered by previous discussions, but there is just one point I should like to have made clear.

The purpose of your proposed legislation, Mr. Pole, as I understand it, is to provide adequate and more substantially reliable banking facilities for the smaller communities?

Mr. Pole. That is one of the outstanding phases of my recom-

mendation.

Mrs. Pratt. Broadly speaking, that is the outstanding phase?

Mr. Pole. Well, yes.

Mrs. Pratt. New York is the greatest money market of the world, is it not?

Mr. Pole. Yes.

Mrs. Pratt. There has been a great deal said here, in the course of the discussion, about the centralization of credit which exists and is probably increasing in New York?

Mr. Pole. Yes.

Mrs. Pratt. I do not know whether you view that with apprehension.

Mr. Pole. No; I do not.

Mrs. Pratt. And what I wished to know is if there might not be two results, with only one purpose, from this proposed legislation; namely, as you establish these branch banks throughout the country, having, as I understand it, parent banks.

Mr. Pole. Yes.

Mrs. Pratt. Eventually these different parent banks, which would be established, I think your purpose is, in trade areas somewhat along the lines of the Federal reserve areas, but not coterminus-

Mr. Pole. Yes.

Mrs. Pratt. Would become more important and greater banking centers.

Mr. Pole. I think so.

Mrs. Pratt. That would lead, would it not, possibly to drawing credit away from New York?

Mr. Pole. That is my thought.

Mrs. Pratt. And you will have, as a result of this legislation, more competitive credit centers throughout the country?

Mr. Pole. More competitive credit and decentralization.

Mrs. Pratt. I assume, because of its size and location, New York will always be, probably, the greatest center of credit, although it might not necessarily be so?

Mr. Pole. In all probability, as far as we would be willing to look

9

_

n

9

T

t

t-

p

Mrs. Pratt. Yes. You feel, do you not, that as the result of this legislation there would be a decentralization of credit, and that would be a valuable result?

Mr. Pole. I do indeed.

Mrs. Pratt. To have more decentralization of credit throughout the country?

Mr. Pole. Yes.

Mrs. Pratt. I did not know whether that was partly the purpose of the legislation or whether, as has been brought out in the discussions, that would be a direct result.

Mr. Pole. It might be said to be the indirect result should branch

banking limited to trade areas be adopted.

Mrs. Pratt. Just one more question, Mr. Pole. It is true wherever there is a great center for any commodity—calling money a commodity-individuals, and, as has been brought out here, even banks, go to the great center if they have something to purchase or to sell?

Mr. Pole. Quite often that is the case.

Mrs. Pratt. It is nearly always the case, is it not?

Mr. Pole. Yes.

Mrs. Pratt. Unless these centers that would be created by this proposed legislation do develop into large credit centers, you would still have the same conditions as exist to-day, because the large investor would still rather go to New York, would he not?

Mr. Pole. I foresee that if any branch banking might be extended in accordance with my suggestions, there would be no doubt, in my mind, that large banks would grow up all over this country, by reason of the fact they would embrace the capital and resources of probably hundreds of smaller banks which would be in their trade

Mrs. Pratt. And you would have essentially a great many money

markets of very large proportions?

Mr. Pole. I should say that that would be the result.

Mrs. Pratt. I think that is all.

Mr. Steagall. I want to ask Mr. Pole about one matter developed by Mr. Seiberling in his interesting discussion, and that is in reference to legislation to fix interest rates of national banks and banks of the Federal reserve system. I do not know how Congress can, in any way, regulate or determine interest rates to be charged by any banks outside of the national banking system, except, of course, we could pass legislation, controlling the Federal Reserve Board in the matter of admitting State banks into the Federal reserve system by requiring them to observe certain conditions.

Mr. Pole. I think the conditions of membership are within the

discretion of the Federal Reserve Board.

Mr. Steagall. I doubt that, in my own mind, except in dealing with the acceptability of the securities of a bank, and the question whether or not it is financially sound-to say that the Federal Reserve Board should arbitrarily deny membership to a State bank that is in condition to come into the system, I should question. Certainly Congress can not pass laws to determine the interest rates charged in the various States?

Mr. Pole. No.

Mr. Steagall. If we attempt to fix uniform rates for national banks, and indirectly we could find a way, through State banks becoming members of the Federal reserve system, to fix arbitrary rates throughout the country, of course no national bank, in any circumstances, could charge in excess of that-

Mr. Pole. No.

Mr. Steagall. In the present situation, the law simply requires a national bank to observe the law of the State in which it operates as regards the matter of interest rates to be charged?

Mr. Pole. Yes.

Mr. Steagall. If we attempted to fix a uniform interest rate throughout the country for national banks, how would it operate as between national banks and State banks? For instance, in the city of New York, if we fixed a uniform rate for national banks, what would be its effect upon the national banks in the city of New York, in attempting to compete with State banks unbridled in fixing interest rates?

Mr. Pole. Do you contemplate fixing the interest rates to be

charged by national banks below the State banks?

Mr. STEAGALL. Yes.

Mr. Pole. That would have the effect of driving the national

banks into the State systems.

Mr. Seiberling. I am not advocating the fixing of uniform interest rates. I am advocating fixing a maximum rate. If you undertake to fix a uniform rate, that would control the rate. I want a

maximum fixed beyond which no one can charge.

Mr. Steagall. I am in thorough accord with that, if I understand the gentleman. I am only thinking of the difficulties encountered in attempting to do that. It does not make any difference if you make it uniform or we say a national bank nowhere in this country shall charge to exceed 10 per cent per annum, we will be confronted with the situation in New York—and it does not matter what would be the justification for it or lack of justification, these conditions will come about again as they have in the past where this accentuated demand for loans will exist, of course, unless the State of New York steps in and regulates the interest rates—the interest rates will turn toward the skies again, and if the national banks are not permitted to charge those rates, they can not compete in that field with the other banks, and we will be confronted with the proposition that the national banks will leave the national system and go to the State systems. That is the difficulty.

Mr. Pole. That will be the result.

Mr. Steagall. I wish we could find a remedy, but I am pointing out the difficulties.

Mr. Strong. Could we not pass a usury law and bar from the mails and from interstate commerce, any banks that violate that law?

Mr. Fort. We would not have to go that far.

Mr. Steagall. There is no difficulty about fixing the rates, but the difficulty is the situation we would place our national banks in in States where there were high rates permitted.

Mr. Strong. That would put a limitation on them.

Mr. Steagall. Congress can not touch the operations of a State bank.

Mr. Strong. We could bar them from the United States mails.

Mr. Fort. I doubt that, in view of the decision of the Supreme Court in the Insurance Companies' case, where it was held that that was not interstate commerce.

Mr. Goldsborough. Mr. Chairman-

The Chairman. I think in the interest of order that we had better proceed according to our plan.

Mr. Goldsborough. Mr. Chairman, I thought we had finished with the questioning by the members.

Mr. Fort. The chairman has not asked any questions yet.

The CHAIRMAN. When all members have asked questions, the purpose was to go around again in a general symposium.

Mr. Goldsborough. Mr. Chairman, I move we proceed in order

as we have not been doing all morning.

The CHAIRMAN. Have you finished, Mr. Strong?

Mr. Strong. No; but I will yield to you.
The Chairman. The chairman is the next on the list. I desired to

ask my questions last.

Mr. STEAGALL. I think the chairman should have all the time he needs in his discussion with Mr. Pole, and I suggest to the chairman that it is now close to 1 o'clock and I think he had best begin his discussion when he has plenty of time.

The CHAIRMAN. Under those circumstances, then, suppose we ad-

journ until to-morrow morning at 10.30 o'clock.

(Whereupon, at 12.50 o'clock, p. m., an adjournment was taken until Wednesday, March 5, 1930, at 10.30 o'clock a. m.)

BRANCH, CHAIN, AND GROUP BANKING

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Wednesday, March 5, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock, a. m., Hon. Louis T. McFadden (chairman), presiding. The Chairman. The committee will come to order.

I desire to call the attention of the committee to a letter from Gov. R. A. Young, of the Federal Reserve Board, in reply to an invitation by the chairman of the committee, for the appearance of the Federal Reserve Board or their designates before this committee.

The letter reads as follows:

Your letter of February 21, inclosing House Resolution 141, with regard to the study of group, chain, and branch banking which your committee is to undertake, and stating that your committee will be pleased to hear from me or whomever the board may designate to speak for the board, upon the subject, has been

brought to the attention of the board by me.

In reply I am writing to say that while the board has in the past accumulated information on the subject of group, chain, and branch banking, nevertheless, the rapid strides made by group banking during the past two years particularly has made it extremely difficult for the board to secure information promptly enough to enable it to keep pace with recent developments and the present status of this whole matter. With this in mind, it recently, at the suggestion of the Federal Advisory Council and also of the governors of the Federal reserve banks and the Federal reserve agents, enlarged the membership of its committee prosecuting these investigations, by including representatives of the Federal reserve banks.

The board feels that group, chain, and branch banking presents one of the most important and most difficult problems of our changing banking structure before the country at the present time. It believes that more complete information regarding the forces which have impelled this new development will be necessary before conclusions of value can be arrived at regarding its effects—financial, economic, and social. The board has not yet reached such conclusions and is not, therefore, in a position to designate a representative to appear before your com-

mittee and to speak for the board at this time.

I will, of course, be very glad to appear before your body, furnish all the information we have at the present time, and answer any inquiries that I can, as

will also any of my colleagues.

In the course of your hearings questions may arise whereby our research and statistical division may be of service to you and to your committee. I hope you will feel free to command us at any time. I can assure you in advance of our complete cooperation.

STATEMENT OF JOHN W. POLE (resumed)

The CHAIRMAN. Mr. Pole, in answer to a question of Mr. Strong, you said you examined the Bank of Italy with 40 men. This is a plan you worked out to meet the situation which has developed in connection with the examination of these large groups of banks. Is that strictly in accordance with the law? The law, as I understand it, provides that the Comptroller of the Currency, through examiners, shall examine each bank at least two times a year?

Mr. Pole. Yes, sir. I think there would be no question about that.

The Chairman. You do not think it is necessary to amend the law to cover such situations?

Mr. Pole. I think not. The method of examination is discretionary with the comptroller.

The Chairman. The law is quite specific, however, in that respect. It says there shall be at least two examinations each year.

Mr. Pole. It is specific as to the number of examinations, but not as to the method.

Mr. Fenn. You can make more examinations than that if you care to? It does not restrict you to two examinations? It compels you to make two, but does not restrict you from making any more?

Mr. Pole. No, sir. Our experience with regard to the examination of the very large branch banking systems does not cover a long period of years and we are gradually becoming more and more familiar with it, and I think we shall be even better able to cope with such examinations as time goes on. It is quite likely we will have to materially increase our forces as the banks grow.

The CHAIRMAN. There has been much discussion in regard to the

methods of examining these large branch groups?

Mr. Pole. I am preparing, at your suggestion, a brief in that connection and am going to lay down, for the committee, the details

of our method of examining the branch bank systems.

The Chairman. In the past, in regard to these large groups, a serious question was raised as to whether or not there should not be a simultaneous examination of the parent bank with the branches. Of course, under this method that you have worked out, you do not have a man in each one of the branches at the same time the main offices are examined, do you?

Mr. Pole. We do not.

METHODS EMPLOYED IN THE EXAMINATION OF THE LARGE BRANCH BANKING SYSTEMS IN THE TWELFTH FEDERAL RESERVE DISTRICT

Until 1927 there was only one national bank in the twelfth Federal reserve district maintaining branches and that bank and its three branches were examined simultaneously. When a State bank was converted into a national bank with 287 branches the Comptroller of the Currency was confronted with a new and somewhat perplexing problem. If the bank and its branches were to be examined simultaneously, a force of more than 400 men would be required. The State department had found it necessary in making a simultaneous entry to employ temporarily a number of certified public accountants and others for this purpose but this practice was unsatisfactory on account of their lack of knowledge of the State banking laws and the rulings of the banking department; also for the further reason that improper comments were sometimes made of the bank's affairs by their temporary employees.

After careful consideration, and consultations by the chief examiner of the twelfth district with his associates, it was concluded that the best results would be accomplished by considering each branch as a semiindependent unit, for the reason that it would be a practical impossibility to assemble a force of 400 men who had the necessary detailed training and experience to make a simultaneous entry into each of the branches and to submit reports that could be merged into

one complete and intelligible consolidated report.

The larger branch-banking systems do not make up a consolidated balance sheet daily, though daily reports are required from the branches so that a balance sheet for the entire system can be made for any given date. Daily computations are made of items necessary to determine required reserves. When an examination of one of these systems is begun the examiners must close the books as of that date and obtain a balance sheet for the entire system, regardless

of the method of examination used. Since branch banking is comparatively new to the chief examiner and his staff in the twelfth district, the method of examination of the larger branch-banking systems has heretofore been varied from time to time. While the method now being employed will be described it is necessary to refer to our experience with at least one other method used.

In one of the earlier examinations of the large branch-banking systems forms were prepared (specimens herewith) to be executed by branch managers, giving a complete inventory of assets of each branch, as of date named, in sufficient detail that a consolidated report could be made therefrom excepting, of course (the most important part of any examination) the valuation of assets and their classification as "Slow," "Doubtful," or "Loss." In this particular examination simultaneous entry was made into the head office and five of the larger branches so that the examiners actually covered and verified approximately 60 per cent of the bank's total assets. As fast as the examiner in charge could release his men from the larger branches they were sent to the remaining branches with a copy of the previous report of examination of the daily statement of the branch as of date of current examination and of the branch manager's own inventory of the assets of his branch as of that date. The examinr was under instructions to examine the branch as of the date he reached it, but to make a sufficient check of the manager's inventory to satisfy himself of its accuracy. Inaccuracies discovered were trivial and largely attributable to carelessness or failure to correctly interpret instructions from the chief examiner. It would be possible to make an audit of the accounts by this method, but this course would be impracticable on account of the time and expense involved. Therefore, the examiners contented themselves with "spot checkings"; that is, tracing out to their final conclusion the larger items involved.

The method above referred to has developed the fact that the same borrower is found in only one branch except in rare instances when a border customer borrows from a second branch without the branch manager's knowledge. This is usually discovered at the head office which arranges for such borrowings to be

concentrated at one branch.

Relative to the exchange of loans or other assets between branches it may be said that this is positively prohibited without the consent of the head office. To illustrate, a large branch banking system purchased a bank in a town, which it merged with its existing branch there. The assets purchased included some \$300,000 of loans on real estate located in a section much nearer the other branches of the bank and by direction of the head office these loans were sent to other branches where they would receive the closer personal attention from the local manager. Another point of interest here is that branches do not carry accounts with each other. No. 20 will send checks upon No. 40 direct to it, but a copy of the letter of transmittal goes direct to the head office where all interbranch accounting is done. If No. 40 protests important items, of course No. 20 is notified by wire, but that has no effect on the accounting. In theory (of course, not in practice) the branches can be examined from the head office files and rec-

ords, including all loans for more than \$1,000.

An examination of a large branch bank system was begun on December 31, the date on which it was known the bank would obtain from its branches a daily statement and compile a balance sheet for the entire system. The head office only was examined on that date, including, of course, the administration department. The consolidated balance sheet contained assets of the head office verified by the examiners, as well as the assets reported by the branches. Examiners who were later sent to examine the branches were requested to carefully consider important changes between the daily statement of December 31 and the date of their entry into the particular branch, and to follow to a final conclusion any item bearing evidence of suspicion or irregularity. This would seem to be as far as the examiner can go with the individual branch. If irregularity exists it is usually the result of collusion between employees of two or more branches and this, of course, is possible between men in two or more unit banks. The inventory method enables the examiners to audit the period between date of inventory and date of examination of the branch and, therefore, provides protection against the exchange of assets between branches.

Branch bank systems carry their bond and securities investments, brokers' loans, commercial paper, and bankers' acceptances at the head office, so that in an examination the examiners have to consider only those securities which have already been placed under seal and such as may be in transit, the receipt of which they verify by an inspection of the securities upon arrival at the head office.

Interbranch accounts are carried through the head office entirely. instance, branch No. 10 will send to No. 30 its cash letters, copies of these letters and the replies thereto, whether return items or credits, are sent to the head office where all of the accounting is conducted. The method, of course, reduces the possibilities for any improper transfer of items or fictitious credits between branches.

As a matter of information it may be stated that the larger branch banking systems maintain thorough auditing departments, which report direct to the executive officers and through them to the executive committee and board of directors; they also maintain a comptroller's department and an examining department. The national bank examiners have found these departments

usually to be the most efficient of any of the departments of the bank.

If we had the type of branch banking which has been suggested by me there should be developed a continuous contact between the examining force and the executive committee of a branch institution and its board of directors. There is no doubt that in such an institution the initiation of policies which control the management are of great importance and the Government should be in a position to gain immediate first-hand information in order that the public might be protected.

To examiners and assistants:

In the present examination of the bank please observe carefully the following

instructions, suggestions, and comments

Branch examinations will be conducted as if each branch were a unit bank. A consolidated balance sheet will be prepared as of the date on which the head office is examined, namely, December 31, 1929. No data will be required from examiners in branches for this balance sheet.

 Transcripts of accounts with head office will not be required.
 All assets (except accounts, including transit, with head office) should be verified, including cash count, listing of loans and discounts, items for collection sent elsewhere than head office, etc., tracers to be sent by examiners returnable to chief examiner. It will not be necessary to verify the liabilities.

(3) Give date of report on head office on page 1.

(4) Consolidated schedules (except bonds, etc.) will be compiled from your reports of branches. These reports will be compiled on Form 1424-E and references to schedules in these instructions refer to that form.

(5) Give all information in detail called for in Schedule 1, on page 2, and in addition show the following in each instance:

Total	direct	loans	to	directors,	officers,	and	em-	Secured	Unsecured
ploy	rees							S	8
Total	direct	loans	to a	dvisory bo	ard men	bers.		\$	\$

(6) Give in detail all information called for in Schedule 2, page 2, and in addition show:

Total direct loans in which directors, officers, or em-	Secured	Unsecured
ployees are interested. Total direct loans in which members of advisory	\$	\$
board are interested	8	\$

(7) In addition to information called for by Schedule 3, page 2, show par value of national bank stocks pledged as collateral to bank under examination and name or names in which stock is issued, that we may determine whether directors are disqualified.

(8) In schedule of "Overdue paper" please show totals of class A and class B as follows:

(9) The schedule "slow and doubtful paper and losses on loans" should represent the examiner's opinion after full discussion with officers of the branch (and local directors, where necessary), and if there is a material difference of opinion, that fact should be discussed in detail in the confidential section of the report, and we should be supplied with full information on all important loss items that they may be intelligently discussed with officials at head office.

(10) The schedule of real estate loans requires unusually careful attention. Item 1 thereof (D. P. C.) refers only to those loans acquired since March 1, 1927, date of nationalization, and should include only those loans acquired in settlement of debts previously contracted in good faith. Nonconforming loans held prior to date of nationalization, or March 1, 1927, or any renewals thereof should be included with other nonconforming loans, total to be shown under item 4, "Nonconforming loans held at date of conversion."

Nonconforming loans acquired since March 1, 1927, should be shown under

item 3, as in violation of law.

Detailed schedules must be made of items 1, 3, and 4, and in addition thereto, please recapitulate schedule 4 under the following headings, showing totals: Value, \$---; maturity, \$---; unimproved, \$

Totals only need to be shown for item 2.

In classifying nonconforming loans please make careful inquiry of branch managers relative to each and do not rely wholly upon appraisal certificates, for we have found that highly improved, income-producing agricultural land has been reported "Unimproved," the examiner following the synopsis of the apprasiers' report, so made because there is no residence on the property. Those classes nonconforming on account of value should also be carefully considered.

(11) Item 2, page 7, should contain a complete schedule of overdrafts of six

months duration, showing names, and dates of inception, and those considered uncollectible should be marked "Loss."

(12) Reference is made to page 6, "Other assets." Your report on suspense resources should show date of item, brief description and classification. Total to agree with line 9 of face of report. Please also prepare a separate schedule of suspense liabilities or other liabilities, showing dates, brief description and amounts.

Items carried under city cash collection account and documentary transit account should be carefully scrutinized and totals shown separately on page 1.

All transit items are to be verified.

(13) Accounts maintained by other banks with the individual branches should be verified in the usual manner.

(14) Do not examine trust department. This will be done by an examiner especially designated for this purpose.

(15) Make up a schedule in confidential section showing loans secured by any of the following stocks:

Totals only need be shown, e. g., "Loans on stock of affiliates, \$10,000, 100 shares; \$35,000, 200 shares." (16) Omit items 4 and 5, page 7; items 10, 11, 14, and 15, page 8; schedule 1,

page A (salaries) and item 5, page B.

(17) Pencil copies of reports of examination of branches in the southern division should be promptly forwarded to examiners for review with credit department, or that he may arrange for such conference in important cases, with the examiner who makes the examination. If for any good reason you desire to personally discuss criticisms with the credit department, please so advise when transmitting your report.

(18) In submitting your monthly budget report, please show expenses as a separate item. (This will be included in the chief examiner's office with

subdistrict A).

Respectfully,

T. E. HARRIS.

SAN FRANCISCO, CALIF.

To the manager, Branch ---

Dear Sir: In order to facilitate an effective examination of the -following schedules in duplicate retaining triplicate for your files. It is important that this data be forwarded at the earliest possible moment and that totals of

schedules agree with daily financial statements.

In order that there may be uniformity, all branch managers must use legal size paper in preparing schedules, and place the name of your branch on each sheet of the report. If you do not have a supply of legal paper, purchase a supply

locally.

Schedule No. 1 .- Statement of assets and liabilities as of above date on the form used in submitting this information to the head office. This includes all depart-

Schedule No. 2. - All loans to directors, officers and employees, including members of the board of directors of the head office, and advisory board of any branch, with detailed list of collateral or security thereto.

Schedule No. 3.—Loans to corporations in which any director, officer, employee or advisory board member is interested, with detailed description of collateral or security thereto, together with name of party interested therein.

Schedule No. 4.—List of all overdrafts of directors, officers or employees showing date of inception. Also list of all other accounts showing overdrafts which are of more than six months' standing. (This schedule will not balance with D. F. S.).

Schedule No. 5.—A detailed list of public funds on deposit, showing name, title and address of officer who controls the account, amount of deposit and rate of interest paid thereon (including deposits of all Government, State, county and municipal authorities.)

Schedule No. 6.—All individual deposits (not including public funds, savings deposits, or certificates of deposit) on which interest is paid, omitting names, but showing aggregate amount for each rate paid. (This schedule will not balance with any account on D. F. S.)

Schedule No. 7.—Schedule of all unsecured loans, showing name of borrower,

amount of loan, and, if past due, date to which interest has been paid.

Schedule No. 8 .- Schedule of all secured loans, showing name of borrower, amount of loan and, if past due, date to which interest has been paid and an

itemized list of collateral or security thereto.

Schedule No. 9.—List in detail all "Suspense resources" showing collateral

or security thereto.

Schedule No. 10.—Schedule of all loans secured by real estate mortgage or deed of trust giving details provided for in pro forms schedule attached. In column 8 of the schedule indicate whether secured by improved farm land (I. F.), improved city property (I. C.), or unimproved real estate (unimp.). If mortgage was taken to secure a debt previously contracted in good faith this fact should be indicated by "D. P. C.". Also indicate in column 8 on past due items whether interest is payable semiannually (S. A.), quarterly (Q.), or monthly (M.) and date to which interest has been paid. (Property is within legal boundary if located in Federal reserve district.)

Schedule No. 11 .- Schedule all bonds, warrants, and other securities, showing

par value, name, maturity, book value, and interest rate. See specimen schedules attached for your guidance.

Yours very truly,

Chief National Bank Examiner, Federal Reserve District.

Branch managers should compile data asked for on legal size paper. The first page of each schedule must bear the columnar headings indicated below; and must bear the name of the branch.

Schedule No. 1.—This must be compiled on your regular form of report to head

office (Forms GL, 1x, and GL, 2x):

Schedule No. 2.-Loans to directors, officers, employees, and advisory board members:

The CHAIRMAN. Now, referring to the affiliated companies, you have stated that you thought it proper that the comptroller be permitted to examine the affiliated companies-companies affiliated with national banks, and, I am supposing, State member banks of the Federal reserve system?

Mr. Pole. I had no reference to State members banks because

we have no supervisory powers over them.

The CHAIRMAN. You are speaking particularly of the national banks?

Mr. Pole. Yes, sir.

The CHAIRMAN. In your examination of national banks, where there are affiliated companies, have you ever had any access to affiliated companies in your examination?

Mr. Pole. We have not, except occasionally banks will voluntarily permit or request us to inspect the assets of an affiliate. We have not

legal authority to do so.

The CHAIRMAN. But you have, in certain instances, been permitted to examine the affiliated companies?

Mr. Pole. Yes, sir.

The CHAIRMAN. That is optional, however, with the banks?

Mr. Pole. Yes.

The CHAIRMAN. As to whether you do that or not?

Mr. Pole. Yes. Mr. Fenn. May I ask just one question?

The CHAIRMAN. Yes.

Mr. Fenn. Were those inspections of the affiliated companies, so called, at the request of the banks or bank, or were they at your request that you should be allowed to examine them?

Mr. Pole. At our request or even at the request of the bank.

Mr. Fenn. Sometimes the bank might think it would be to their benefit to have a certification from you?

Mr. Pole. They feel that way; a great many of them.

Mr. FENN. They think it a good idea to have you check up on them?

Mr. Pole. Yes, sir. Mr. Letts. Will you get a definition of the term "affiliated companies" into the record at this point, Mr. Chairman?

The CHAIRMAN. Yes; we will be glad, Mr. Pole, if you will give us

the definition of an affiliated company?

Mr. Pole. The stock of an affiliated company is usually held in trust for the benefit of the shareholders of the national bank and is a State corporation with power to deal in stocks and bonds, make investments, and do such other things as are permitted under its State charter.

The CHAIRMAN. In addition to that, would that include the

ownership of the State bank?

Mr. Pole. Among its investments might be found the stock of

State banks.

The CHAIRMAN. In such a case as that, does your thought extend to the access, for examining purposes, of State banks, where control of such an institution is vested in an affiliated holding company?

Mr. Pole. My thought would hardly extend that far, Mr. Chairman. My particular reason for examination would be that the close affiliation of the stock of the affiliated company with that of the national bank may be such as to affect the national bank should the affiliated company become in anyway involved.

The CHAIRMAN. Where a securities company owns control of a State bank, whose solvency would affect the holding company and the holding company would affect the national bank, should you not

have access to an examination of such a State bank?

Mr. Pole. I hardly think it would be necessary to carry it to the point of examining the State bank any more than it would be to examine any other institution whose stock might be carried as an asset of the corporation. It would be possible to determine the value

of the assets of the securities company without that.

The Chairman. Referring to the stock ownership of affiliated com-Panies, I understand some affiliated companies' entire stock is owned by the stockholders of a national bank and there are other companies where they are not the same stockholders, but the stock is scattered, and simply controlled either through control of the officers and management or control of the stock, and the minority control would be in the hands of the public. Is that a fact?

Mr. Pole. As far as I know, I think there may be some such

instances.

Mr. Letts. Do you mean that the stock of the affiliated company is held by the stockholders of the national bank as individuals or held in trust for all of the stockholders of the national bank?

The CHAIRMAN. It might be either way. I am seeking information

I will be glad to have Mr. Pole answer that.

Mr. Pole. In the case of national banks the stock is usually held In trust for the benefit of the shareholders of the national bank.

The Chairman. It has happened, has it not, in the past where national banks have declared a dividend and organized an affiliated company from the dividend, that the entire capital has come as the result of the declaration of the dividend of the bank?

Mr. Pole. That is the case.

The CHAIRMAN. This is done with the approval of the comptroller always?

Mr. Pole. No; I would say not. The comptroller would not have

to approve such a thing as that.

The CHAIRMAN. It could proceed without his approval?

Mr. Pole. If a bank declares a dividend, it is entirely a matter for the shareholder to decide what he does with that dividend, whether or not he invests in the stock of a securities company or something else.

The CHAIRMAN. We have these various methods of organization, and control of affiliated companies. The national bank law, as I understand it, forbids the purchase by the bank itself of the stock of the bank. That is correct, is it not?

Mr. Pole. Yes, sir.

The CHAIRMAN. A national bank is not permitted to deal in its own stock in any manner whatsoever?

Mr. Pole. A bank may acquire its own stock to secure a previous

indebtedness.

The CHAIRMAN. It has come to my attention that some of these affiliated holding companies, where the entire capital stock is owned by the same stockholders as the national bank, have been buying national-bank stock—the stock of the affiliated national bank. Would you consider that to be legal under the national bank act?

Mr. Fort. Will you state that question over, please? The Chairman. I was stating where the stock of a company affiliated with a national bank, is buying the national-bank stock, the purchase of which is forbidden under the law to the bank itself, but is purchased by the holding company-

Mr. Fenn. The stock in the parent company?

The CHAIRMAN. In other words, that which is prohibited in the national bank law to a national bank, is being carried on by the purchase and sale by an affiliated company. Is that an evasion of the law, or of the intent of the law, or is it legal?

Mr. Pole. Where a State corporation is permitted to buy stock, I think it would be legal for it to purchase stock in a national bank with which it might be affiliated. As to whether or not I would deem that advisable if carried too far, is of course another question.

The Chairman. There was one particular case called to my attention—and I do not want to give any arbitrary figures, because I do not know whether they are exact figures—where one of the affiliated companies, the stock being owned entirely by the same interests as owned the national bank, purchased the controlling interest in the stock of the bank at a price of \$350 to \$400 a share. The fact that they were purchasing the stock ran the stock up to between \$700 and \$800 per chare—just the mere operation of the demand for the purchase of that stock.

Then I understand other circumstances arose, perhaps through the crash of last fall, where the stock depreciated in value again, and that the control of this national bank now rests entirely in the hands of the affiliated company whose stockholders are exactly the same.

Do you think such a condition as that should be permitted; or should it be denied?

Mr. Pole. I should think any manipulation of national banks would be objectionable.

The Chairman. Is not that a manipulation, to avoid the law? Mr. Pole. Such a case as you speak of might be so termed.

The CHAIRMAN. It might be construed as a dummy company, might it not?

Mr. Pole. Yes; it might be so construed.

The Chairman. Now, in regard to the examination of national banks and trust departments, which are created by national banks, under section 11-K of the Federal reserve act, which I think the national banks are permitted to do—to have trust departments and carry on fiduciary relations—are your examiners equipped to handle that increasing amount of trust business?

Mr. Pole. We are preparing for a more comprehensive examination of the trust departments, Mr. Chairman. That is an extremely technical and difficult operation. We are training the men and are

endeavoring to cope with that situation.

The CHAIRMAN. That is an increasing responsibility that comes through the growth of the trust business being conducted by the national banks?

Mr. Pole. Yes.

O'S

B

The Chairman. Now, as to the method of examinations: I understand that so far as the examination of State banks is concerned, that is done by the Federal reserve and your department has nothing to do with it?

Mr. Pole. Nothing whatever to do with State banks.

The CHAIRMAN. Do the Federal reserve people ever call upon you to examine a State bank?

Mr. POLE. No.

The Chairman. Now, as to the expense of these examinations. Before I take that up in detail, what arrangement have you with these big banks as to the payment for these continuous examinations? How is that worked out?

Mr. Pole. We assess the bank on the basis of its total resources. The Chairman. Well, is the cost of examination under a continuous plan, such as you are now pursuing, more costly to those banks than it would be by making individual examinations of the parent banks and the branches?

Mr. Pole. It is not more costly to the banks, because under the

law a bank shall be assessed on its resources.

The CHAIRMAN. So, the same-

Mr. Pole. So, we do not assess each branch separately.

The CHAIRMAN. But the cost of that examination is levied just the same as it is on other banks?

Mr. Pole. Just the same.

The Chairman. Does that actually cover the cost of examination

of these special groups?

Mr. Pole. Practically so. In the large banks, it about covers the cost. However, I have it in mind to recommend an amendment to the law which will permit an additional charge for each branch examined. But we have not done that yet.

The Chairman. Will you place in the record a statement showing just how you levy and collect the assessments for the examination of banks and show the cost over a period of the last five years—the annual cost. I would also like to have you put in a list of the names and addresses of your national bank examiners now in your service, including their assistants; the chief national bank examiners and their assistants, and the salaries paid?

Mr. Strong. And the number?

The Chairman. Including the number. You can do that, Mr. Pole?

Mr. Pole. Oh yes, and we will be glad to.

At the completion of an examination the examiner prepares a bill to cover the cost of the examination. The bill is based upon a minimum charge of \$50 on assests amounting to \$25,000, the remaining assest are assessed 3 cents on each \$1,000.

The following is a statement showing the annual cost of examination

of all national banks for the past five years:

RECAPITULATION IN NUMBERS

caminerssistant examiners	194 292
Total	486

The CHAIRMAN. Are you carrying out the system of simultaneous examination of any parent bank and its branches?

Mr. Pole. Yes.

0

The CHAIRMAN. They do that in the smaller groups?

Mr. Pole. In the smaller groups.

The CHAIRMAN. Of the branch banks?

Mr. Pole. Yes, sir; and as far as possible in the larger groups, by

covering the more important offices.

The CHAIRMAN. The reason you do not examine the larger groups is because it is physically impossible to do so with your present force?

Mr. Pole. Yes.

The Chairman. If you had a large enough force, you would rather

make a simultaneous examination of those banks?

Mr. Pole. That would be preferable.

The CHAIRMAN. Referring to the organization of these affiliated companies, I am not just clear as to whether or not, in your judgment, the affiliated companies, whose stocks are owned entirely or In part by stockholders of the parent bank or national banks-do you consider those as legal institutions under the law?

Mr. Pole. As far as I know, Mr. Chairman, they are State chartered institutions and I have no reason to question their legality.

The Chirman. Do your records show the ownership of these companies, where the control of the national banks is vested in the holding companies or these affiliated institutions?

Mr. Pole. Our records shown on July 1 of each year, where the

stock of these companies is distributed. .

The Chairman. Is it the usual practice of these companies to have the stock of a national bank owned in the name of a company or do they have it in dummy names?

Mr. Pole. Are you speaking of the holding corporations?

The CHAIRMAN. Yes.

Mr. Pole. I really am not informed.

The CHAIRMAN. I am speaking of what is shown in the stock list of the national banks as to the ownership of their own stocks-who owns their own stocks. Do the records of the banks show clearly where the holdings of a majority or less than a majority or control of them are in an affiliated company, or do you have to guess at that?

Mr. Pole. If the stock were in the name of another corporation,

of course the records would show that. It would be very difficult for us to tell if the stock were held in the name of a dummy—the records,

of course, would not show that.

The Chairman. In some of Mr. Wingo's questions to you the other day, he referred to State examinations, and I have understood from you this morning that you do not have anything to do with the examination of member banks?

Mr. Pole. That is correct as to State member banks.

The Chairman. Are you furnished with the examination sheets of any of these examinations of State member banks which are held entirely by the Federal Reserve Board?

Mr. Pole. They are held entirely by the Federal Reserve Board. The Chairman. In connection with these examinations, what part of the cost of the maintenance of your office or examinations is paid by the Federal reserve banks?

Mr. Pole. None of it.

The CHAIRMAN. None of it?

Mr. Pole. No, sir.

The CHAIRMAN. Do you furnish the Federal reserve system with any information as regards your examination of national banks?

Mr. Pole. Copies of reports of our examination are sent to the Federal reserve banks.

The CHAIRMAN. Each of the 12 banks?

Mr. Pole. Yes.

The CHAIRMAN. Do they pay anything now for that? Mr. Pole. The actual cost of typing that report.

The CHAIRMAN. What is that specific charge? Mr. Pole. I think it is \$4.50 or \$5 now.

The CHAIRMAN. Will you put into the record the total receipts from the Federal reserve to your department covering payments to you for any part of the examination which you have rendered?

Mr. Pole. Yes. The total amount received from such source

for the year 1929 was \$77,559.75.

The Chairman. Do you make any use of the examiners of the Federal reserve?

Mr. Pole. We do, Mr. Chairman. The CHAIRMAN. In what manner?

Mr. Pole. We enlist their assistance in the examination of the branch-banking systems.

The Chairman. They are always responsive to your calls to assist in these examinations?

Mr. Pole. Quite so.

The Chairman. How many examiners do the Federal reserve have—do you recall?

Mr. Pole. I really do not.

The Chairman. How many chief and assistant chief examiners have you at the present time? My understanding is that you have a chief examiner for each Federal reserve district.

Mr. Pole. That is correct.

The CHAIRMAN. That is correct, is it?

Mr. Pole. Yes.

The CHAIRMAN. And each one of those chief examiners has an

assistant, does he?

Mr. Pole. There are examiners who usually act in their stead, when they are away for any purpose. There is not such a title in the field as assistant chief national-bank examiner.

The Chairman. One of the regular examiners assigned to that

district acts as chief when the chief examiner is away?

Mr. Pole. Yes, sir; during his absence.

The CHAIRMAN. In your statement of the names and salaries, and so forth, of examiners, I wish you would also include such attorneys as may be regularly employed by your department, their names and addresses and the amount of salaries or compensation paid and also information pertaining to those attorneys employed in connection with failed national banks; and we will also like to have you put in a brief as to how you handle the business in connection with failed national banks. You have a department, I believe, that handles that?

Mr. Pole. Yes.

The Chairman. If you will give us a statement as to how that business is handled, we will appreciate it.

Mr. Pole. I shall be glad to do so.

(The statement referred to as being furnished by Mr. Pole is as follows:)

When a national bank is insolvent, the Comptroller of the Currency, in accordance with the statute, appoints a receiver for such bank; and if there is no possibility of reopening the bank as a going concern, the receiver thus appointed by the comptroller proceeds to liquidate the bank and pay its creditors to the limit which may be obtained from the realization on its assets. These receivers are usually appointed from men of experience in this line of work and who may be termed trained receivers, since they are shifted from receivership to receivership in accordance with the demands of the work. Such receivers are not paid on a commission basis, as was done in the earlier days of receiverships, but are paid

on a flat salary basis.

As of December 31, 1929, there were 424 insolvent national banks being administered by 172 receivers, some receivers in the interest of economy having charge of more than one bank. The average yearly salary paid these receivers on the basis of 424 banks was \$1,681 per bank; or, on the basis of 172 receivers, \$4,144 per year per receiver. Under the law, the liquidation of national banks by receivers is made under the supervision of the Comptroller of the Currency. As an example, all compromises of debts and all sales of assets are approved by the comptroller; all stock assessments are levied by the comptroller, and all dividends are paid by the comptroller through the issuance of checks. To maintain this supervision it is necessary for the comptroller to have in his office a division giving attention entirely to insolvent matters.

There is attached hereto a chart showing the personnel of this division as of December 31, 1929, at which date there were 73 employees, 2 field examiners, and 4 employees in the office of the general receiver, the general receiver being a receiver who takes over the liquidation of these receiverships which have been practically closed out, with the exception of certain miscellaneous assets and unfinished litigation which would not justify the expense of the continuance of a resident receiver.

In this division the supervising receiver, the two assistant supervising receivers, and the receivers shown on the chart as district receivers are all men of experience from the field, who have been detailed to the comptroller's office by virtue of their wide knowledge of conditions, their training, and their experience in liquidation work. These men have been brought from various sections of the country and give direct attention to the receiverships in the sections, the conditions of which they are familiar. As of December 31, 1929, the total amount of resources of the insolvent national banks then in liquidation being supervised by the comptroller's office through the insolvent division was, as of the date of the failure of the various banks, in the aggregate sum of \$344,486.598.

It can be readily appreciated that in these failed banks almost every question of law can arise. In view of the complexity of these various questions and the large amount of litigation, with numerous cases going to the Supreme Court of the United States, it has been necessary to maintain a legal staff in connection with this insolvent work. At the present time this staff consists of the general counsel and two assistants; and in accordance with the chairman's request, their salaries are as follows:

General counsel	\$9,000
One assistant general counsel	6,000
One assistant general counsel	5,000

The Chairman. I would like to ask, if in your judgment, national bank examiners and their assistants are properly compensated?

Mr. Pole. I should say the scale of salaries of examiners is quite low.

Mr. Steagall. Does not the comptroller's office fix those salaries? Mr. Pole. Yes.

Mr. STEAGALL. That is my recollection of the law.

Mr. Pole. With the approval of the Federal Reserve Board.

The Chairman. You are speaking now of examiners. How about the assistant examiners?

Mr. Pole. I think, as a general thing, the assistants are better paid than the national bank examiners.

The Chairman. At what salary do you start examiners and assistant examiners?

Mr. Pole. Assistant examiners are usually started at \$1,500 or \$1,600 a year and given the usual per diem in addition to their expenses while away from headquarters.

The CHAIRMAN. \$6 a day?

Mr. Pole. Yes, sir. Examiners quite often start as low as \$3,000, in accordance with their experience and aptitude for the position. They also receive their regular per diem and expenses when away from headquarters.

The Chairman. Some examiners are drawing less than \$3,000, are

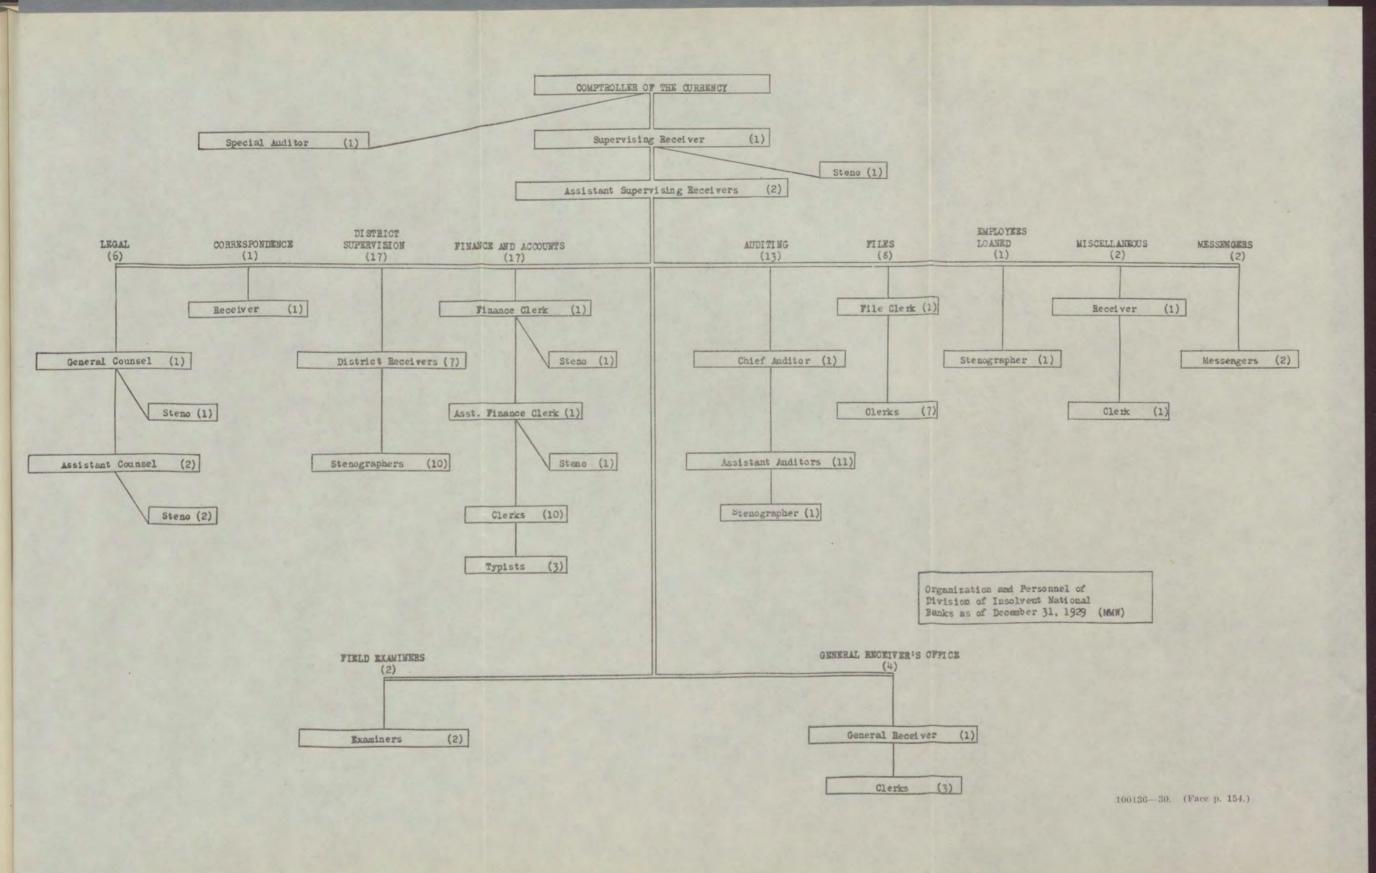

they not?

Mr. Pole. Some of the examiners of the junior grade. The Chairman. At what salary do you start them?

Mr. Pole. There is no fixed salary for them, but it is usually \$2,700—\$2,500 or \$2,700.

The Chairman. What is your experience as to the turnover among your examiners?

Mr. Pole. It is quite large.

The CHAIRMAN. What is the reason for that?

Mr. Pole. An examiner develops perhaps to the point where he attracts the attention of a bank and they offer him a position which

is much more remunerative than we can pay.

The CHAIRMAN. Taking into consideration the importance of the position of national bank examiners, clothed with the authority they have, as well as their assistants, do you not think that the quality of men employed could be improved a great deal by paying them higher salaries? In other words, it seems to me that we should have a very high type of man to be charged with the responsibility of examining these important banking institutions. I am not intending in this statement, to reflect upon your present corps of examiners. I think they are a splendid lot of men—at least those that I have come in contact with-but I am under the impression that they are greatly underpaid for the type of work they are doing.

Mr. Pole. Yes.

The CHAIRMAN. I believe you are losing a great many men in your department to-day because of the fact they are underpaid, and I believe that you would greatly improve your service if you would pay them a higher wage. The type of service they render certainly entitles them to a better salary than they are now getting.

Mr. Pole. I think you are right, Mr. Chairman.

The CHAIRMAN. I say that because I am deeply impressed with the importance of improving these examinations because of the rapid

and diversified development of the banking systems.

I believe that you have a problem on your hands and I believe it is most important that you should have the right type of men and that they should be better paid because they are coming into contact with the highest officers and managers of national banks; in other words, they must sustain a certain standard of living to enable them to meet men drawing salaries of from \$10,000 to \$50,000 a year in the management of banks. For that reason, it seems to me—and I am glad you agree with me—that the service could probably be improved by paying these men a higher wage.

Mr. Pole. I think there is no doubt of what you say. I think, however, it would be extremely difficult for us ever to compete in the matter of salaries with commercial banks. Men getting \$5,000 a year walk into positions of \$15,000 a year and men who are getting \$7,500 a year now and then \$15,000 or \$20,000 a year. It is extremely difficult

to compete with commercial banks in matters of salary.

Mr. Fenn. Is it not a fact that your ablest men are drawn away from you by the commercial banks?

Mr. Pole. Yes.

Mr. Fenn. The ability shown by them attracts the attention of the commercial banks and their large salaries take them away from you?

Mr. Pole. Yes, sir; those are the men we lose.

Mr. Fenn. Is it not really a training school?
Mr. Pole. For the examiners; yes. We usually consider it such. Mr. Fenn. They go to work at these low salaries with the expecta-

tion of getting higher salaries from commercial banks?

The CHAIRMAN. Mr. Pole, have there been any complaints by the banks as to the amount of charges levied against them for these examinations?

Mr. Pole. No complaints, Mr. Chairman. I might qualify that by saying that some time ago there was a feeling expressed upon the part of some of the larger banks that they were paying the loss which was entailed in the examination of the smaller banks in the country. They felt they were paying a little more than their share.

The Chairman. Am I correct in saying that a year or two ago, or during the period of Mr. McIntosh's term, that out of the funds collected, under the workings of the budget system put in operation in each Federal reserve district, under a chief national bank examiner, a surplus accumulated over and above that, which was paid back to the banks?

Mr. Pole. Yes, ir.

The CHAIRMAN. How was that disposed of?

Mr. Pole. Returned to the banks, Mr. Chairman, by making a round of examinations—one examination for each bank at a greatly reduced rate.

The CHAIRMAN. What was the amount of that accumulation so

reimbursed to the banks?

Mr. Pole. May I insert that in the record, as I have not the figures in mind.

The CHAIRMAN. Put it in at this point, if you will, please.

Mr. Pole. The amount of accumulation of funds that was reimbursed to the banks was \$577,118.21, which represented reduction in

fee of 21/2 cents per thousand of resources.

Mr. Wingo. Mr. Chairman, did you not ascertain—Mr. Pole suggested that some of the larger banks complained about paying for the smaller banks—I expected you to follow that up by asking if those banks were the ones mentioned by Mr. Seiberling that were having so much difficulty in making their expenses.

The CHAIRMAN. Do you put that in the form of a question?

Mr. Wingo. No; I did not, exactly.

The CHAIRMAN. It should be put in the form of a question. Mr.

Wingo, will you restate your question?

Mr. Wingo. Whether or not those who complained were these larger banks that Mr. Seiberling and you went over their earnings yesterday—these banks that have such difficulty in meeting expenses, were they the ones complaining about these examination expenses—

Mr. Pole. As I recall it the only complaints that have ever been recorded in our officers are complaints from the New York banks.

Mr. Wingo. They were only making about 16 per cent a year and they were probably trying to find some economics to increase their earnings.

The Chairman. You appoint all national-bank examiners and assistant national-bank examiners and chief national-bank examiners?

Mr. Pole. In the case of the national-bank examiners, with the approval of the Secretary.

The CHAIRMAN. Secretary of the Treasury?

Mr. Pole. Yes, sir.

The Chairman. Now if branch banking is permitted in the country as you suggest, limited to trade areas, such laws as are passed here would only apply to national banks. Is that correct? Also member banks of the Federal reserve system.

Mr. Pole. I assume that is correct.

The CHAIRMAN. Well, would not such a plan then favor national

banks to the exclusion of State banks?

Mr. Pole. I should hope it would favor the national banks. I do not know whether it would to the point of exclusion of the State banks, since the privilege of applying for membership or converting into national banks would be open to them.

The Chairman. If a national bank, for instance, operating in a trade area was permitted to have branches and a State bank operating in that particular trade area was not permitted to have branches, would not that tend to nationalize those State banks in that community

in order to enable them to compete?

Mr. Pole. The probability is that the States would pass similar legislation. However, if their trade area should extend beyond the State lines, it would be a decided advantage to the national banks and would probably attract a great number of State banks into the national system.

The CHAIRMAN. Because the State banks could not go outside of

State lines?

Mr. Pole. Yes.

The Chairman. Some allegation was made the other day as to trade areas. Take, for instance, Jersey City, Newark, New York City, Kansas City, Mo., and so forth. Under your plan of not permitting branches to cross Federal reserve district lines and State lines—

Mr. Pole. District lines, Mr. Chairman.

The CHAIRMAN. You mean district lines there?

Mr. Pole. Yes, sir.

The Chairman. Would not there be many troubles in defining trade areas through the Federal reserve districts; would not some State banks be discriminated against definitely under that plan? I wish you would, in the brief covering that, elucidate very clearly as to how you would restrict chain banking to certain areas.

Mr. Pole. I will try to do that. You mean chain banking or

group banking?

The Chairman. I have particular reference, in that last question, to your statement wherein you indicated there should be some restriction as to control through chain banking or holding companies of those groups developed in certain trade areas.

In other words, it was indicated there that you were of the opinion that New York should not control eventually these several independent trade areas by controlling the branches or the parent banks which

had branches in these trade areas?

Mr. Pole. Yes.

The Chairman. It is not clear to me just how control of that situation could be worked out and if, in your statement, you can clarify that, the committee, I think, would be very glad to have you do so.

In that connection, you rather indicated you thought it desirable to decentralize New York financially. Did I understand you correctly that you are in favor of building these units throughout the territory, in these trade areas, and decentralizing the financial situation in New York, by that operation?

Mr. Pole. The building up of larger groups of banks all over the country generally might result in a greater decentralization away from New York.

The CHAIRMAN. But it would tend to centralize in these trade

areas, would it not?

Mr. Pole. What might be termed a more local centralization. It would centralize the funds which properly belonged to that particular trade area or locality.

The Chairman. Mr. Busby, the other day, in his questions to you, referred to the flow of money into the stock market. I should

like to ask you a question in connection with that.

Do you not think we might restrict the flow of money into the stock-market operations by regulating the amount that a bank can lend on certain stocks?

Mr. Pole. That possibly might be done. It is rather difficult

to answer that question offhand.

Mr. Wingo. Do the banks not do that now, Mr. Chairman?

Mr. Fort. No.

The Chairman. Are there restrictions on the amount now?

Mr. Pole. There is a legal restriction with regard to the amount which an individual may borrow from a bank. Of course any number of individuals may borrow whatever the bank's limit might be.

The CHAIRMAN. I was referring to the amount loaned on the par

value or market value of stocks back of the loans.

Mr. Pole. Oh.

The Chairman. Do you not think that the flow may be checked by allowing a less amount, a safer amount, than the practice has been heretofore?

Mr. Pole. Possibly something like that could be worked out. I

could not very well answer that offhand.

The CHAIRMAN. Mr. Letts asked you concerning the Bank of Italy and affiliated companies. I wish you would tell us in detail the make-up of this group in all its known ramifications over which your department has jurisdiction. Just describe to us the make-up of this particular group.

Mr. Pole. Our department has jurisdiction only over the Bank of Italy, which is a national association, operating in California with

something like 300 branches.

The CHAIRMAN. How about the Bank of America in New York?

Is that a national bank?

Mr. Pole. The Bank of America in New York is a national association.

The CHAIRMAN. You have jurisdiction over them?

Mr. Pole. We have jurisdiction over them.

The Chairman. But the Bank of America in Los Angeles is a State bank?

Mr. Pole. A State bank.

The Chairman. Your jurisdiction, then, over the trans-American group is confined entirely to the Bank of Italy in California and the Bank of America in New York?

Mr. Pole. That is correct.

The Chairman. You have no access to any other of the affiliated companies?

Mr. Pole. None at all.

Mr. Letts. I wonder if it may be shown how many affiliated

companies there are?

The Chairman. I wish that you would put into the record how many branches the Bank of Italy has and their location and the number of branches of the Bank of America. Have you any knowledge as to the other affiliated companies in these particular groups?

Mr. Pole. I have no official knowledge, Mr. Chairman.

The Chairman. As I understood you to say, national banks were not permitted to own their own stocks or the stocks of other State or national banks. Is that correct?

Mr. Pole. Correct.

The CHAIRMAN. Nor are they permitted to own directly stocks of

affiliated companies?

Mr. Pole. That is correct, except such companies as might be formed for the purpose of holding real estate for the accommodation of the bank's own business.

The CHAIRMAN. Well, has the Bank of Italy or the Bank of America

such a company?

Mr. Pole. If it has the stock of such a company is not owned by

the Bank of Italy.

The Chairman. Well, it would be owned by one of the affiliated companies?

Mr. Pole. It might be owned by the Trans-America Corporation

or one of its affiliates.

The CHAIRMAN. Are the bank buildings and equipment and main offices and branches owned by the Bank of Italy or the Bank of America, or owned by the affiliated companies?

Mr. Pole. My recollection is that they are owned by the affiliated

company.

The Chairman. These various groups of banks are either owned by the Bank of Italy, the Bank of America, the Bancitaly, Trans-American Co., or the Trans-American-Blair Co.—in other words, there is a centralized control of the management, is there not?

Mr. Pole. I am not able to answer that. I know that those companies are affiliated with one another, except possibly the Bancitaly Co., which I understand has been absorbed by the Bank of America-Blair Corporation. But as to how the corporations are controlled,

I am not able to answer.

The Chairman. The make-up of officers and directors of these various companies does not indicate anything so far as control is concerned, of these big groups; in other words, there is a management group outside of the officers and directors of these various individual

institutions that has the real control, is there not?

Mr. Pole. I could not definitely answer that, Mr. Chairman. I have no official knowledge of the workings of these various corporations except those which are of national charter. I am quite sure, however, that any officer of any of those companies would be very glad to furnish you all the information. I presume you may call them to testify before your committee.

The CHAIRMAN. In that connection, it is the function of your office, is it not, in small national banks, in communities, to know who controls the institutions or who its stockholders and officers are?

Mr. Pole. We usually do.

The Chairman. Whether they are dummies or some one man or group controls and dominates the situation.

Mr. Pole. That is true.

The Chairman. Should any different rule apply as to large groups

than as to smaller ones?

Mr. Pole. It would be very difficult for us to trace out the ramifications of a corporation like the Trans-America Corporation and as to whether or not the stock of the bank may be held by it or one of its affiliates. It is a matter that we would hardly be posted on, inasmuch as we have no jurisdiction.

The CHAIRMAN. This is one added reason you should have au-

thority to examine these affiliated companies?

Mr. Pole. I think it is important that we should have an insight into to the affairs of corporations which own considerable amounts of

national-bank stocks.

The Chairman. In other words, you find, in the conduct of your examinations, it is rather difficult to examine and know the full facts as to the companies, because you are prohibited from examining the affiliated institutions?

Mr. Pole. Yes.

The Chairman. Now, Mr. Fort asked you concerning the ownership of bank stocks by banks and affiliated companies. I think you pretty well covered that this morning.

Mr. Pole. Yes.

The CHAIRMAN. Were you here this morning, Mr. Fort, to hear the answers which Mr. Pole made?

Mr. Fort. I was here most of the time.

The CHAIRMAN. Have you covered all the questions you wanted

to ask in regard to that particular phase?

Mr. Fort. Not quite; no, sir. I have had some others that have come to my mind during the examination of the comptroller by yourself and others.

The CHAIRMAN. I wish you would make note of them.

Mr. Fort. I am doing that. We are to go ahead, are we not, Mr. Chairman, after you, with a sort of recapitulation examination of the

witness?

The Chairman. Yes. Mr. Pole, you said in answer to Mr. Fort the other day that two holding companies in one Federal reserve district do not now hold enough stock of member banks to give them control of the election of the directors of the Federal reserve bank of that district. Would you not say that those influences would determine an election because of the preponderance of control of banks in that district; that it might control the election of directors in the Federal reserve district?

Mr. Pole. I said that I was not sure that that was the case. I might insert in the record, if you will permit me, a memorandum on

that question, Mr. Chairman.

The CHAIRMAN. Well it is perfectly clear that this question pertains to the district in which the Minneapolis Federal Reserve Bank is located.

Mr. Pole. Yes.

The Chairman. And I hope that you have in that brief you are submitting there a list of just how many banks are controlled by these two groups in St. Paul and Minneapolis, and I would like to ask you, in that connection, whether or not your office was consulted by either one of these holding companies as to the organization and

control of these several banks.

Mr. Pole. They have consulted us with respect to organizations of new national banks and with the taking over of certain national banks, and we have been very much delighted, in some instances, when they have gone into a community and have assisted us in correcting a bad situation. As to the number of banks which they

have in their groups, I could probably furnish that.

Mr. Wingo. Mr. Chairman, may I suggest that I intended, at the proper time, to suggest that we get a list of the names and locations of these different groups and chains where more than 10 banks were involved, and the names of the banks in the chain and where located, and the names of individuals that dominated them or the holding company or central bank that dominated them. We had a great many conflicting statements as to the extent of this and where it is located and I had intended suggesting to the committee that we call for that, and if you are going to go into that question, why not prepare that and get it into the record? It may take a couple of weeks to get it.

The CHAIRMAN. Is that available and can it be furnished to the

committee?

Mr. Pole. The information was compiled up to December 31 by the Federal Reserve Board, and possibly by the American Bankers Association. It has not been compiled by our office. I feel quite sure the records of the Federal Reserve Board would be available.

Mr. Wingo. It does not make any difference what source it comes

from. It is public information.

Mr. Fort. If you are going to get that information and have it in the record, is there any special necessity for restricting it to, say, 10 banks? There may be groups of 5 banks that would far exceed in importance a group of 10 or even 100 banks.

Mr. Wingo. I see the force of your suggestion as to putting a limit

on the number.

Mr. Fort. Why not get all?

Mr. Wingo. The trouble is that possibly there would be some where only one or two extra hands are involved. I think we should have the outstanding ones. Of course if it is thought necessary to

have all of them, let us have them.

The Chairman. While this is not under the jurisdiction of the comptroller, the comptroller is ex officio a member of the Federal Reserve Board, and I am going to suggest to you, if that is available through the Federal Reserve Board, that you present it to the committee and it will be inserted in the record here.

Mr. Pole. I shall be glad to obtain that for the record if it is

available.

Mr. Wingo. He would not only have to have the cooperation of the Federal Reserve Board, but the State banking commissions. However, I think they can give you this.

Mr. Pole. It has been compiled in connection with information

received from the State banking commissions.

Mr. Wingo. If it is available in the States, I have an idea you can easily get it.

Mr. Pole. It is a very difficult thing to get.

The CHAIRMAN. Governor Young stated in his letter this morning the willingness of his research department to cooperate with the committee. If Mr. Pole has not got that information, I think he can get it.

Mr. Pole. I think so.

The CHAIRMAN. We would like to have it in the record at this point.

CHAIN OR GROUP BANKING AT THE END OF DECEMBER AND JUNE, 1929

The attached list of bank groups or chains is based on information collected for the Federal Reserve Board by the Federal reserve agents and includes those systems in which any person, group of persons, partnership, association, or corporation has actual or potential control over the operations or policies of three or more banking units, each working on its own capital and under its own personnel. The sources of the information include State banking departments, national bank examiners, the management or controlling interest of some of the groups, press reports, etc. While the information obtained is believed to be reasonably correct it may omit a few small chains for which no information is available and may not include all the banks in some of the groups or chains listed. It is also possible that the controlling interests do not regard some of the banks included in the attached statement as constituting group or chain systems.

Number and loans and investments of banks in each chain or group

[All banks are located in the same State as the management or controlling interest in the chain or group, unless otherwise noted. Figures of loans and investments for both December and June are based largely on June, 1929, Bankers' Directory, and are in thousands of dollars]

Mr. Letts. I understand the statement with respect to the Minneapolis and St. Paul situation is ready to go in at this point.

The CHAIRMAN. Yes. Do you want to submit that now, Mr.

Pole?

Mr. Pole. This statement did not refer specifically to any particular banks. You asked that that be included, and so I shall have to revise it.

The CHAIRMAN. If you will revise that and insert it, we will be

obliged.

Mr. Pole. I will be glad to do so.

(The statement referred to is as follows:)

POSSIBLE CONTROL OF ELECTIONS OF FEDERAL RESERVE BANK DIRECTORS BY GROUP BANKS IN NINTH FEDERAL RESERVE DISTRICT

For purposes of election of class A and class B directors of Federal reserve banks, member banks in each Federal reserve district are divided into three groups, each electoral group consisting as nearly as possible of banks of similar capitalization. Each group of banks is permitted to elect one class A and one class B director. Each member bank certifies its first, second, and other choices for a director of class A and class B, respectively. Only one choice for any one candidate may be voted. A candidate having a majority of first choice votes is declared elected. In case no candidate has a majority of first choice votes, the first and second choice votes are added together and if any candidate then have a majority of electors voting he is declared elected; if not, the first, second, and other choice votes are added and the candidate then having the highest number is declared elected.

In the ninth Federal reserve district the electoral groups of member banks are as follows: Group 1 consists of banks having a capital and surplus of \$400,000 and over, Group 2 of banks having a capital and surplus of from \$60,000 to \$399,999, and Group 3 of banks having a capital and surplus of less than \$60,000. At the end of 1929, there were 683 member banks in the Minneapolis district, of which 30 were in Group 1, 299 in Group 2, and 354 in

Group 3

The number of member banks in the ninth district belonging to the Northwest Bancorporation group and in the First Bank Stock Corporation group, together with the percentage of the number of banks in each of these groups to the total number of banks in each electoral group are shown below:

Member banks in the ninth Federal reserve district, by electoral groups, December 31, 1929

	All	Number of banks in-				
	member banks Gro 1 683 65 9.5 23	Group I	Group 2	Group 3		
All member banks.	683	30	299	354		
First Bank Stock Corporation: Number. Per cent of total in group Northwest Bancorporation:		23, 3	47 15. 7	11 3. 1		
Number		1 13	30	12		
Per cent of total in group. First Bank Stock Corporation and Northwest Bancorporation combined:	8.1	43. 3	10.0	3. 4		
Number Per cent of total in group	120 17. 6	20 66. 7	77 25 8	23 6. 5		

Includes I bank which joined the group in January, 1930.

It will be noted that the First Bank Stock Corporation and the Northwest Bancorporation together control 66.7 per cent of the member banks in Group 1, the group of largest banks, in the Minneapolis Federal reserve district; and it is manifest that acting together these two corporations could easily control the elections of class A and class B directors in this group by having the mem-

ber banks which they own vote for a particular candidate. On the basis of their present holdings, therefore, these two corporations by their combined action would be able to place upon the board of directors of the Federal Reserve Bank of Minneapolis a class A director and a class B director from Group 1. Moreover, the First Bank Stock Corporation and the Northwest Bancorporation together control approximately 25 per cent of the banks in Group 2 in the Minneapolis district. While this number is, of course, not sufficient to control absolutely the elections of class A and class B directors in the district, it is obvious that by acting jointly, they could give to any specified candidate a large number of votes and with some additional votes from independent banks might bring about the election of the desired candidate. This would be more easily accomplished in an election where there were several candidates in the field, in which case control of a plurality of the votes might be sufficient to elect. Under some circumstances, therefore, on the basis of present stockholdings, the two corporations acting together might conceviably succeed in electing a class A and a class B director from both Group 1 and Group 2 in the Minneapolis district, a total of four directors

Acting separately, the Northwest Bancorporation, owning as it does, approximately 43 per cent of the member banks in Group 1, could probably control the election of class A and class B directors in that group in many cases, unless the opposition were united on one other candidate. The First Bank Stock Corporation, however, owning about 23 per cent of the member banks in Group 1, would probably find it difficult to compel the election of any candidate in the group unless it were able to obtain the support of at least some of the banks owned by the Northwest Bancorporation. It is doubtful whether either the First Bank Stock Corporation or the Northwest Bancorporation could, acting separately, control the elections of class A or class B directors in Group 2, as their separate holdings in this group are only about 16 per cent and 10 per cent.

respectively.

As shown in the above table, the holdings of these two corporations in member banks in Group 3, the group of smallest banks, are relatively small and it is very doubtful, on the basis of the present holdings, that much influence could be exerted by these two corporations on elections of class A and class B directors in this group, unless it be by moral suasion or some method other than direct

control of votes.

While the above shows the possibility of the control of elections of Federal reserve bank directors by group banking systems, I wish to point out that there would be no likelihood of similar control of such elections in the case of branch A parent bank and all its branches constitute but one corporate entity and, accordingly, a member bank with any number of branches would be entitled under the law to only one vote in elections of class A and class B directors. For example, if the Northwest Bancorporation were a member bank with a large number of branches instead of a holding corporation owning stock in a large number of individual banks, it would have only one vote in elections of class A and class B directors, whereas it now controls a large number of votes as indicated above.

The CHAIRMAN. What is the attitude of your department when you are approached by the heads of these chain groups for the organization of banks in any particular territory? Do you lend them assistance and cooperate with them to the end that these groups may be

developed?

Mr. Pole. I would not go so far as to say that, Mr. Chairman, because when a group undertakes to purchase a bank, it does not consult us unless it is a question of reorganization under a national charter which is sometimes the case-frequently the case-and in those circumstances we have always been very glad indeed to do what we can to promote a better state of affairs in any particular locality.

The Chairman. You have no notice, then, when a national bank is taken over by one of these groups until you examine the stock-

holders' list?

Mr. Pole. Not necessarily.

The CHAIRMAN. And you do not take any cognizance of it?

Mr. Pole. No; we can not take any more cognizance of that than We can the transfer of the stock into other hands than the group.

The CHAIRMAN. Have you ever suggested to the organizers of these groups the merging or taking over of a national bank in any of these groups?

Mr. Pole. I have not. There may have been some such suggestions

upon the part of our chief examiners or examiners in the field.

The CHAIRMAN. Is your department or are your chief examiners consulted in regard to the organization of these various holding companies affiliated with the banks?

Mr. Pole. What is that, Mr. Chairman?

The CHAIRMAN. Is your department or the chief national bank examiners consulted in connection with the organization of these

affiliated companies with national banks?

Mr. Pole. Usually our organization department is consulted, in order that a method may be adopted which has been approved, of declaring a dividend and using the proceeds of such a dividend for the capitalization of the affiliated company.

The CHAIRMAN. Does that extend to the point of approving or

disapproving the organization of these companies?

Mr. Pole. No; we do not have to approve or disapprove.

The CHAIRMAN. I understood you to say the other day that we did not need any larger banks in the central reserve cities. Was I correct in this? To which cities did you refer?

Mr. Pole. Chicago and New York are the central reserve cities.

The CHAIRMAN. Suppose two or more of the big banks in one of these cities wanted to merge or consolidate; is it the practice of your department to protest or approve, or could you stop, if you wanted to, such consolidation or merger?

Mr. Pole. Consolidations of banks has to be made with the ap-

proval of the comptroller.

The CHAIRMAN. None of these mergers could be brought about without the approval of the comptroller?

Mr. Pole. Consolidation can not be brought about otherwise.

The Chairman. The other day you said, in answer to a question, that you were largely responsible for much of the branch banking discussion going on at the present time. How did you mean that?

Mr. Pole. I mean that through my report to Congress, and through addresses which I have made, interest over the country has been aroused in the banking situation, particularly with respect to the banking situation in the rural communities, where the failures have been very large.

The Chairman. Are you carrying on any propaganda in favor of

branch banking or chain banking or group banking?

Mr. Pole. None whatever.

The CHAIRMAN. I have here a report of the Comptroller of the Currency, sent out by the National Shawmut Bank of Boston, it apparently having been sent to banks generally. It is dated December 2, 1929, and pertains to legislation recommended, and it is printed at the United States Government Printing Office.

Was that sent out as a circular to the banks for distribution?

Mr. Pole. May I look at it? [After examining document.] I know nothing about this. Mr. Awalt says that he does. The CHAIRMAN. Can Mr. Awalt tell us about it?

Mr. Awalt. As I remember it, Mr. Chairman, an officer of the Shawmut Bank came into the office in Mr. Pole's absence from the city one day and asked if we could furnish them with some of the copies of our annual report, and I said we could not. He wanted quite a large number. I called up the statistical division of our office, and they told me that some banks had desired copies of the comptroller's report and an arrangement had been made that they could get them from the Government Printing Office by getting in touch with the Public Printer and having them printed and paid for, and I assume that that was done in this case. I do not know why they wanted it.

The CHAIRMAN. The reason I mentioned it is that it seems that these are being sent out to the banks of the country as part of a move-

ment apparently to encourage certain forms of development.

Mr. Awalt. I might suggest that if the committee desires to find out the exact reason they call the officers of the Shawmut Bank. I do not know what their reason is, and we did not approve anything of the sort.

Mr. Luce. It might be useful in the record to have it appear at this point that any citizen may secure from the Government Printing Office, at cost plus 10 per cent, any public documents that he may

desire.

The Chairman. I was not raising that question, but raising it in connection with the dissemination of information that Mr. Pole referred to the other day, as to whether the discussion was being brought about from the comptroller's office, or whether it was proceeding independently of that, or just what there was to that.

Mr. Luce. I have an ulterior motive in making the statement that I did, because I desire to take every opportunity to correct the wrong impression on the part of the public that members of Congress are working the Public Treasury in the wide distribution of literature

at public expense.

Mr. Wingo. I think it might be well, for reasons not necessary to elucidate here—and the public seems to have developed a suspicion along these lines—to make it appear affirmatively in the record that what has been done, that what the Shawmut Bank has done is not reprehensible at all but what they had a right to do. You and I have seen some things go out in the last few weeks that are perfectly innocent, and yet the newspapers seem to think something terrible is suggested. So I do not think a reputable person or a reputable institution like a bank should be suspected in a case like this of having done something terrible where they have acted properly. They have done what any citizen has the right to do, go to the Public Printing Office and get copies of documents and pay for them. The Government does not lose any money. In other words, the right of legitimate propaganda is really a part of the right of free speech and freedom of press.

The Chairman. Now, Mr. Pole, reverting to that question I asked some few moments ago which was referred to by Mr. Fort the other day; take, for instance, St. Louis, as a trade area. You avoided answering Mr. Fort fully in his question the other day about how many banks you think, that city should have under your plan. For instance, do you think it should have 1, 2, 3, or more banks, and just how would you parcel out the business in the city? Would you, in

case there were four big banks with branches, permit each of the four to have a branch on each of the four corners of a location, or just how would you do it? Would you divide the city into four districts, one bank to serve each district, and where national-bank stocks are owned by group, chain, or holding companies, how are the stocks registered on the books of the bank, correctly or in the names of dummies-I think you have answered on this last feature.

When you answer this question, I wish you would specifically set forth just how you would deal with a specific trade area like St. Louis, for instance, so that the committee may understand just how this plan of branch banking would work out. If you will add that to the

brief you are preparing-

Mr. Pole. You wish me to add that to the brief on trade areas?

The CHAIRMAN. Yes.

Mr. Pole. I thought you wanted me to answer it now.

The CHAIRMAN. Do you regard the national banking system as a unit banking system?

Mr. Pole. A unit and a branch banking system.

The CHAIRMAN. Your branches being confined to the cities? Mr. Pole. There are also branches of national banks outside of the cities which have resulted from the conversion of State branch banking systems.

The CHAIRMAN. As I understand your testimony, you believe that We have arrived at the point where we should look the situation squarely in the eye as to these banks and recommend an enlargement of the functions of the national bank business as now conducted?

Mr. Pole. Yes, as being the only remedy which occurs to me, as the only one which will carry to the rural communities a safe and

sound banking service.

Mr. Steagall. Right there, let Mr. Pole insert the figures showing the development of branch banking in point of capital and the number of branches since the passage of the McFadden Act.

The CHAIRMAN. February 25, 1927

Mr. Wingo. Let that show not only the branches established by direct authorization, but those that have come into the national System by reason of mergers or by reason of taking over State banks. I think that is in your annual report.

Mr. Pole. It is.

Mr. Wingo. But it might be wise to get it into the record at this

The CHAIRMAN. Without objection, when Mr. Pole supplies that it will be put in the record at this point.

(The information requested is reproduced below.)

BRANCHES

In the comptroller's report for the year ended October 31, 1927, the statement was made that under the provisions of the act of February 25, 1927, the Comptroller of the Currency had approved the establishment of new city branches to the number of 127. In the year following 103 new city branches were authorized and during the year ended October 31, 1929, the number authorized was 89. Of the 319 local branches authorized by the comptroller 75 have been discontinued leaving the total of city branches now in operation authorized by the comptroller under the provisions of the McFadden Act as 244.

During the past year 2 branches were added to the system through the con-

version of a State bank and 82 branches were added through the consolidation of

State banks with national banks. These additions, together with those branches in the system under date of October 31, 1927, less 104 branches dropped through action of directors and shareholders or liquidation of national banks make a total of 1,061 branches in existence in the national banking system as of October 31, 1929, summarized as follows:

	In	In	Author- ized	Closed	Closed during the year ended Oct. 31, 1929

The Charrman. I would suggest to the committee that our committee has charge on the floor this morning of two bills, and probably we had better recess.

Mr. Goldsborough. Mr. Chairman, it seems to me that the rule under which this hearing is being conducted has worked out so far very satisfactorily, and I am going to suggest that when we further hear Mr. Pole, the same procedure be carried out. In other words, there are certain of the members, I am sure, who, because of the discussion, have other questions that they would like to ask, and if the chairman would just begin and go around the committee as we did before, I believe it would be better than to have a round table discussion.

The Chairman. The Chair will be very glad to comply with that. There are some members of the committee who have not had their opportunity to question the witness.

Without objection, we will stand adjourned until 10.30 o'clock

to-morrow morning.

(Thereupon, at 11.57 o'clock p. m., an adjournment was taken until Thursday morning, March 6, 1930, at 10.30 o'clock.)

BRANCH, CHAIN, AND GROUP BANKING

House of Representatives, Committee on Banking and Currency, Thursday, March 6, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The Chairman. The committee will come to order. Mr. Dunbar, would you like to proceed now?

STATEMENT OF HON. JOHN W. POLE-Resumed

Mr. Dunbar. Mr. Pole, you stated that the great number of failures in banks have occurred since 1921—I think it was 5,000—is that correct?

Mr. Pole. Five thousand six hundred and forty.

Mr. Dunbar. To what extent do you think that the failures of these banks were due to conditions existing since 1921? The reason I ask that question is this, that I was a member of the Committee on on Banking and Currency nine years ago and we at that time had confidential information that if the banks in Iowa were required to liquidate and to do so within two years' time, 95 per cent of them would prove to be insolvent.

Now, then, to what extent have these bank failures in small com-

munities been due to conditions existing since that time?

Mr. Pole. I think it has been due in considerable part to the

economic conditions.

Mr. Dunbar. Those banks at that time were practically insolvent but we were told that if they were given a chance, probably they could recuperate and that they might become solvent, and we were also informed that the condition of many small banks throughout the United States was the same. Has not the failure of these banks in rural communities largely been due to the fact that they have been unable to recover from the effects of frozen paper that they had in their possession at that time?

Mr. Pole. Undoubtedly that has had its effect.

Mr. Dunbar. Do you believe that if the banks at that time had been solvent in a fair proportion, that we would have had the bank

failures in recent years that we have had?

Mr. Pole. The banks were not insolvent as far as the national banks were concerned. Just as soon as we would discover a condition of insolvency, the law requires us to take charge of that bank or to put into effect such remedial measures as are available.

Mr. Dunbar. Does this figure of 5,640 that you have given us relate to national banks alone, or to national and State banks?

Mr. Pole. National and State banks.

Mr. Dunbar. Can you tell us how many of them were national banks?

Mr. Pole. There were 763 national banks, and 4,877 State banks.

Mr. Dunbar. Which shows that the national banks are better supervised and better conducted than the State banks.

Mr. Pole. We must take into consideration the fact that there were almost three times as many State banks as national banks.

Mr. Dunbar. But the proportion of failures is 3 to 1—is that correct?

Mr. Pole. Approximately, in ratio to the number of banks.

Mr. Dunbar. Of course, you have no supervision over any State banks except in so far as they are members of the Federal reserve system.

Mr. Pole. We have no supervisory powers over those banks.

Mr. Dunbar. A large number of the banks that have failed have been banks as to which you had no power or authority to regulate their affairs—is that correct?

Mr. Pole. Very largely.

Mr. Dunbar. You said that if a \$100,000 capitalization were required of all banks, that it would close a great many banks in that

area and that there would be a tendency to monopoly.

Mr. Pole. In the smaller communities, because there were in the United States on June 30, 1929, 5,468 banks with capital of less than \$25,000; 5,357 banks of \$25,000 capital; 6,031 banks with capital above \$25,000, but not exceeding \$50,000; and 1,073 banks with capital above \$50,000, up to, but not including, \$100,000. So that out of 24,912 banks, there were 18,000 which had capital under \$100,000.

Mr. Dunbar. In a community in which there is a large number of State banks, how would the requirement that a national bank have

a capitalization of \$100,000 produce a monopoly?

Mr. Pole. Because a bank has necessarily to have a sufficient territory from which to draw business, which will enable it to earn a reasonable profit on its capital investment, and, in addition to that, it must have an area which will permit of reasonable diversification.

Mr. Dunbar. If it were a monopoly, it would have all those ad-

vantages, would it not?

Mr. Pole. It would have those advantages, but it would also deprive many communities of banking facilities which they are entitled to.

Mr. Dunbar. Then you are in favor of communities having banking service in addition to the service to be rendered by national banks with \$100,000 capitalization?

Mr. Pole. I am in favor of that.

Mr. Dunbar. If you established branch banking systems in those communities, will that not drive away all of the State banks that are now serving those communities?

Mr. Pole. If national banks were given the right to extend their branches, that probably would have the effect of getting a great many

State banks into the national system.

Mr. Dunbar. Do you think it would get a great many of these small

banks into the national system?

Mr. Pole. I think a great many of those small banks would become branches of a bank which would be a member of the national system, provided the advantages which were given to the national bank were such as to make the national system more attractice than the State system.

Mr. Dunbar. What would you suggest in the way of advantages that we could give the national banking system that would make it more attractive than State banks?

Mr. Pole. If the national system were permitted to extend its

branches across State lines, it would be such an advantage.

Mr. Dunbar. You take Indiana and Ohio, for instance; we have the cities of Cleveland and Cincinnati, and their banks would come over into Indiana and compete with Indianapolis, Evansville, and every one of the other large cities. What would be the object of Why should they compete with one another in the different cities? Those cities are large capital centers.

Mr. Pole. As far as Cleveland and Cincinnati are concerned, my suggestion, in order that the development of the branch system might be orderly, is that a bank should not be permitted to branch out into a city in which there was a Federal reserve bank or a branch of the

Federal reserve bank.

Mr. Dunbar. You so stated the other day.

Mr. Pole. Yes.

Mr. Dunbar. But now we have communities in which the banks in existence are earning 10 and 12 per cent. They are prosperous, but they can not furnish all of the credit required by local manufacturers. Now, then, might not the plea be made that because they can not extend that credit, a branch bank would be justifiable in the opinion of the Comptroller of the Currency?

Mr. Pole. It might be so.

Mr. Dunbar. Then, if it were so, it would interfere with prosperous municipal banks that have filled the requirements made of them, with such assistance as they were able to give these manufacturers in obtaining credits in large cities?

Mr. Pole. That is the case now. Where banks are not able to accommodate the larger borrowings of their communities they now

have to go to these larger cities. Mr. Dunbar. That is true.

Mr. Pole. My idea is that the business that has developed in that particular community would remain there, but it would be transacted through a branch, furthermore it does not mean because banks would be permitted to establish branches, that they would be compelled to

In Indianapolis there is not a branch of the Federal reserve bank,

Mr. Dunbar. I do not know.

Mr. Pole. Indianapolis might be the center of a very large and important trade area of Indiana.

Mr. Dunbar. It is now.

Mr. Pole. Yes. It might be found that it would not be necessary for them to take full advantage of what opportunities were offered

them under such an amendment.

Mr. DUNBAR. That is true, but I can imagine a situation where some manufacturer might feel aggrieved in his dealings with the local bank and he would go to the Comptroller of the Currency and make his presentation to the effect that he could not be accommodated, and a branch bank would then be established in that community, which would interfere with and ruin the business of the banks which are there now. Do you not think that there is a high probability of interference with the banking business by the granting of a charter to

a branch bank in that kind of a community?

Mr. Pole. Under the suggestion which I have made, that there would not be much necessity for establishing de novo branches. There would be nothing to prevent, as far as I know, some Cleveland people coming down and buying a bank in Indianapolis, but, if they did buy it, I can not imagine that it would be such keen competition for the banks of Indianapolis.

Mr. Dunbar. Theoretically it has been stated that a branch banking system would have been of great benefit in the South, the South

west, and the Northwest. Mr. Pole. Undoubtedly.

Mr. Dunbar. But I fail to see wherein it would be of any advantage in Indiana. In the district I represent, we have 53 banks, and in 12 years there have been only 3 failures, 1 a national bank and 2 State banks. One State bank paid its depositors in full, the national bank paid about 90 per cent. The other is in process of liquidation. Most of the banks there pay large dividends, State and national, 10 and 12 per cent, and the only injury that has befallen them occurred in the debacle of last year's speculation when people began to use all their resources, borrowed from the banks, and lost their money in Wall Street. Now they are in the financial condition that they do not have money to deposit in banks and they do not have surpluses of necessary funds to engage in their enterprises, so that the country banks down there are somewhat embarrassed, because they do not have money to supply speculative losses. Now, the remedy, instead of establishing branches in those kinds of communities, is some law that would regulate speculation, because speculators borrowed money in those banks and invested it in New York. I know one bank in my own district that loaned \$200,000. Banks sent large sums of money to New York for speculation because of high rate of interest. Those banks have been injured, but it has been due only to speculation.

Mr. Pole. Mr. Congressman, that era of speculation is of quite recent date and covered a comparatively brief period, whereas banks have been failing in rapidly increasing numbers since 1920. Mr. Dunbar. National or State?

Mr. Pole. Both national and State; and there have been 115 banks fail in Indiana-more than 10 per cent of all the banks which were in existence in 1920. Under the branch banking plan, if it were not found to fit the particular State or the particular community to which you refer, it would not be compulsory for them to go into the branch-banking business. It would be easily possible for the important banks of Indianapolis to continue as an independent bank, perhaps taking advantage of the law to the extent of operating branches within a short distance of Indianapolis, but if banks of \$100,000 minimum capital are to be established, it would deprive a great many communities in Indiana of banking service to which they are entitled, and my chief interest, as has been already expressed, 15 particularly with the rural banking situation.

Mr. Dunbar. A branch bank would have available to be loaned not only \$100,000, but a great many times \$100,000, and it would

then interfere with the banks in the communities.

Mr. Pole. It would offer to any community in which it operates a branch its entire and complete facilities.

Mr. Dunbar. I do not see any objection to a national bank having a capitalization of \$100,000 being authorized for the simple reason that it would tend to promote a monopoly of banking institutions in the country, when the branch banks would certainly do it, with the great increased availability they have of loaning money

to the community.

O.

n

Mr. Pole. The point was raised that branch banking would tend to create a monopoly in banking, and as a remedy for the situation which exists in the rural communities, it has been suggested that banks of not less than \$100,000 capital be established, and it was there that I presented the argument that, such capital limitation would be more apt to create a monopoly among the small communities, which might be just as dangerous as a monopoly among the large communities, inasmuch as perhaps two banks could not succeed if their capital had to be \$100,000 or more unless they had territory sufficient to attract an amount of business necessary to make such a capital profitable.

Mr. Dunbar. I do not see where the objection would be to a national bank having a capital stock of \$100,000 on the theory of producing a monopoly, because if it did shut out some of these small banks, so would branch banks. I believe it would be beneficial to the entire community with the supervison given by the bank

examining system which you have.

Mr. Pole. It is not a question of supervison entirely. It is a

question of ability to earn a fair return on invested capital.

Mr. Dunbar. I think a \$100,000 national bank in my section of the country would be able to earn a fair investment on its return, because, with few exceptions, every bank in 12 years has been able to do so. And I am of the opinion that branch banking, except as it may be developed from now on account of speculation indulged in a year ago, would have no beneficial result in that district. However, I believe that there are a great many States where it would have beneficial results. At the same time, I recognize that theoretically it is the right idea of banking. One of my objections to branch banking is that it is going to run out all community banks eventually, and it is going to supersede every banking system in the United States outside of the large banking centers, and in doing that there will be a tendency to develop toward paternalism, and then, following paternalism, socialism.

We see that illustrated in our holding companies; we see it illustrated in our chain stores, and we see it illustrated in our great corporations, which are taking away the individuality of the people of all

the communities, and making them of no avail.

I used to be secretary of the American Gas Association. I remember 25 years ago when we would attend the convention of that association, every man had the courage of his convictions and would get up and express his opinion. I attended a meeting last October at Atlantic City, and there were 5,000 in attendance. I looked over that crowd and I was glad that I was not one of them, because but few of them had an opinion of his own; a man had to look to the fellow higher up if he wanted to talk, and he had to talk so as to get the approval of the man higher up. They were all college graduates, but all of them were impotent so far as having any personality or individuality or sovereignty because they were desirous of having the

approval of the superior, and I was glad that I was no longer connected with an organization that had to be servile to somebody, just because they had the money and knew how to manipulate politics.

Now, if we have branch banking, that is only adding to that condition of man, and I hate to see the individuality that used to exist on the decline.

Do you not think that that would be one tendency of branch banking, to promote paternalism, and, following that, socialism?

Mr. Pole. I have expressed myself as deploring the passing of the unit bank. I do, however, recognize that there is a banking condition in this country which must be remedied, with the tremendous number of failures with which we have been faced during the last nine or ten years, and with the earning position of the thousands of banks in this country to-day I feel sure that something must be offered as a remedy for it.

Mr. DUNBAR. Do you not think-

Mr. Pole. May I go on?

Mr. DUNBAR. Surely; pardon me.

Mr. Pole. After giving the matter considerable thought, the idea which has appealed to me as being the most effective is the branch banking system, and that particularly because I believe it is far better than the chain system or the group system. Now, inasmuch as there must be in my opinion some remedy for the situation, I recognize that it is very difficult to suggest anything which would be equally effective in every part of this great country. The conditions in Indiana are so different from the conditions in the Dakotas, that it is difficult to prescribe any remedy which will be equally fitting. That there is a necessity for remedy is well recognized and because of legal restrictions against branch banking there has sprung up in this country already a large number of chains and groups. National banks reported as members of banking chains or groups numbered 791 at the end of December, as compared with 646 in June

Mr. Dunbar. Pardon me, but are not those chains or groups

confined to the corporate limits in which the banks operate?

Mr. Pole. By no means.

Mr. Dunbar. Do you mean to say that a bank in Cincinnati that has a chain will go into Indiana, into Kentucky, and into adjoining communities?

Mr. Pole. I am not specifically referring to Indiana, but in certain sections of the country State lines and Federal reserve district lines have been entirely disregarded.

Mr. Dunbar. By what authority?

Mr. Pole. Through the organization of holding companies under State charters.

Mr. Dunbar. We have no jurisdiction whatever of holding companies under State charters, have we?

Mr. Pole. As far as I know, we have not.

May I continue this? Mr. Dunbar. Yes.

Mr. Pole. State banks, members of groups in December numbered 134, compared with 111 in June, and nonmembers 1,144, compared 1,049 in June. Loans and investments of national banks belonging to banking groups were \$5,600,000,000, or about one-fourth of the total of all national banks, where loans and investments of State

member banks belonging to the groups aggregated \$3,000,000,000 and

of nonmember banks \$1,800,000,000.

I was trying to show there that the 2,069 banks reported as belonging to banking groups or chains at the end of the year constituted one-twelfth of all the banks in the country, while the loans and investments of groups and chain banks were about 10,500,000,000 or nearly one-sixth of the aggregate loans and investment of all banks in the United States.

So, as I say, we are faced with that condition now-

Mr. Dunbar. Due to State charters?

Mr. Pole (continuing). And the question is, Would it be preferable to regulate it by law, or would it be better to let it develop as it is doing without regulation?

Mr. Dunbar. But if the Legislature of Indiana would be averse to such a system of banking, we would be secured against these branch

banks and group banks going far.

Mr. Pole. I do not know how far the laws could be amended to

cover such a situation.

Mr. Dunbar. We would have a right to control our own affairs within our own State, except in so far as it did not interfere with Federal law.

Mr. Pole. It might be possible to keep a group formed outside of the State of Indiana from owning the stock of banks within the State

of Indiana.

Mr. Strong. I am not so sure that it would be possible by a State law to keep another State from bringing a bank into that State.

Mr. AWALT. Of owning the stock in a bank in that State, which would be possibly controlled, and therefore part of the chain.

Mr. Strong. They could prevent the majority of the stock being owned outside, could they not?

Mr. Pole. That is a legal question I am not prepared to answer.

Mr. STRONG. I think they could.

Mr. Dunbar. I am not a lawyer, but I do not understand how any banking law of Indiana could not exclude branch banks from adjoining

States being legalized unless they were Federal.

Now, Mr. Pole, I recognize the theory of branch banking as being economical as applied to the Southwest, the Southeast and the Northwest, but do you not believe that it would be more conducive to the development of man, his courage, his ingenuity, his resourcefulness, not to have it, and that after the people in these various communities had suffered, they would find a way to overcome their difficulties?

Mr. Pole. I am trying to assist them along that line.

Mr. Dunbar. By branch banking?

Mr. Pole. Yes.

Mr. Dunbar. I do not think it would do it, although I do recognize it would help those communities at this time.

Mr. Strong. Do not admit it for our community.

Mr. Dunbar. What is your community?

Mr. STRONG. Kansas. Do not admit that branch banking would

help us. It would not.

Mr. Dunbar. It would not help us in Indiana, and I do not think it would help any of the States on the Mississippi River. I think it would help some of the States west of the Mississippi River, but I believe if they were put upon their own resources and made to

realize that they had to devise their means and plans to make the

banking system successful, they would do so.

I want to ask about the Bank of Italy. That is a branch bank system, is it not?

Mr. Pole. Yes.

Mr. Dunbar. How did they acquire all their banks? Did they purchase existing banks?

Mr. Pole. In a good many instances.

Mr. Dunbar. In a great many instances they purchased banks?

Mr. Pole. Yes.

Mr. Dunbar. To what extent were the existing banks coerced into selling?

Mr. Pole. I am not able to answer that.

Mr. Dunbar. Can you tell us how those that were not purchased succeeded after the Bank of Italy expanded?

Mr. Pole. I am hardly able to answer that.

Mr. Dunbar. Would not the natural presumption be that after the Bank of Italy began to obtain such a strong fortress, all the other banks of the community had to surrender on best terms?

Mr. Pole. That is a good many years ago.

Mr. Dunbar. Do you not believe that if branch banking were made effective in Indiana, the banks there would have to surrender and sell out on best terms?

Mr. Pole. Not necessarily so. I can visualize a strong bank in an Indiana town that is well managed and a profitable institution competing quite successfully with any branch which might be operated from Indianapolis?

Mr. Dunbar. I do not mean Indianapolis. I am down on the

Ohio River, in the "sticks."

Mr. Pole. Did you not say Indianapolis? Mr. Dunbar. No, sir. I did a while ago.

Mr. Pole. I thought you referred to Indianapolis.

Mr. Dunbar. Let us take a bank at Mitchell, Ind., which has a capitalization of \$100,000 and a surplus of \$100,000. We have institutions there that borrow \$500,000, and the bank can not lend that money, but it can advise where the money can be borrowed.

Suppose some one says, "We want a branch bank here that can lend us all their money." What chance would that \$100,000 bank with a \$100,000 surplus have after a branch bank came in. Because it would lose one of its best customers, and it would lose other customers, because it is easier to go right to a bank in your home town and get all your money.

Mr. Wingo. Mr. Chairman, if the gentleman will permit me, it is evident that he has not read the hearings of this committee some years ago where the methods of the Bank of Italy in extending its branches and destroying independent banks in other communities

were fully pictured, and both sides were presented here.

Mr. Dunbar. I never read it.

Mr. Wingo. I suggest that you can get there a concrete illustration of what happens.

Mr. Dunbar. What happens? Mr. Wingo. They drive them out of business.

Mr. Dunbar. The independent banks? Mr. Wingo. Yes.

Mr. Dunbar. And that would be the case if we had branch banks

in Indiana.

Mr. Wingo. May I suggest that there would be no virtue in the proposal if you did not, because you say the present situation is a bad one, and to get rid of what you call these weak banks is one of the alleged virtues of the branch-banking scheme, to give service to the community of stronger and better institutions. I did not know anybody was insisting that there should be branch banking and still at the same time expect that what they regard as unprofitable and economically unsound institutions continue. I thought they were going to supplant the present system with what they claim will be a stronger and better one.

Mr. Dunbar. Would you regard the present system at Mitchell,

Ind., as one which should be supplanted?

Mr. Wingo. I do not know anything about that system.

Mr. Dunbar. Take any bank in any town that has a capitalization of \$100,000 and had to loan \$500,000 perhaps to one institution. Would you regard that system as being ideal because they had to go out and borrow money in different cities, or would you consider it a system that was worthy or that should be supplanted?

Mr. Wingo. No; I am a great believer in the independent, unit bank. I have always opposed branch banking, chain banking and group banking. If you can show me that changed conditions make

branch banking necessary I shall be glad to hear you.

Mr. Dunbar. I think branch banking might have been the salvation of some of the communities of this country, but I believe that, having lost their all, they should begin over again and begin on a

sounder basis.

Mr. Strong. The evident purpose of branch banking is to build up a monopoly in banking; that has been the result of every branch bank group that has started, and consequently they have had to drive out competing banks to establish the monopoly. Otherwise there would be no use of starting it.

Mr. Dunbar. That is what I am afraid of.

Mr. Strong. It is the purpose of it.

Mr. Dunbar. I wanted information from Mr. Pole on that subject. Mr. Pole. I should differ with Mr. Strong when he says that it is the evident purpose of such a system of banking to drive out competition. I think there will be ample competition in branch banking, and where branch banking has been developed in this country there is no lack of competition, and the banking situation in California, where branch banking has been developed beyond that of any other State, shows over a period of 10 years an infinitely more satisfactory condition with regard to bank failures than most of the other States.

Mr. Dunbar. That is undoubtedly true. Mr. Busby. Will the gentleman yield?

Mr. Dunbar. Yes.

Mr. Busby. Would you call the absorption of the Bank of Italy, the Bancitaly and the other associated corporations by the Trans-America Corporation, issuing stock that was worth on the market less than one-fourth of the value originally of the Bank of Italy, a failure, or what would be your designation of the changed conditions of the Bank of Italy under the circumstances we find it to-day from what it was in June, 1928? It is not an independent entity any more

in the sense that the stock is owned as bank stock is usually owned, but the stock is owned by the Trans-America Corporation and is worth now less than one-fourth of what the Bank of Italy stock was in June, 1928.

What was that but a failure in the sense that the stock depreciated

three-fourths of its value?

Mr. Pole. That was the stock, Mr. Busby, of the Trans-America

Corporation of which you are speaking.

Mr. Busby. No, I am speaking of the Bank of Italy. The Bank of Italy is not an independent stock proposition, for the Bank of Italy stock is not listed any more, but the Trans-America stock is listed, and the Trans-America stock was traded on the basis of 1½ shares for 1 share of Bank of Italy, and that stock is listed to-day at 45, whereas the Bank of Italy stock on June 5, 1928, was listed at 293. That is a drop from 293 to 66½ at the present time. As to the Bancitaly Co., which was more or less of a trust corporation—Bancitaly Corporation, as it was called—the stock on June 5, 1929, was listed at 211, and that stock was exchanged for Trans-America Corporation stock, share per share, and the Trans-America Corporation stock is listed to-day at 45.

Was not that practically a failure of the whole Bank of Italy system?

Mr. Pole. I think that stock may have been split. I am not sure

of that.

Mr. Bussy. No; I have photographic copies of the history of it, taken from one of the reputable sources of information. It was handled in this way; it was exchanged share for share for Trans-America Corporation, and it is worth 45 cents now.

Mr. Fort. He has used the date of June 5. On the following day, or two days later, was not that stock worth on the market some-

thing more than \$200 less?

Mr. Busby. I will give you the history of it, if you will permit me, Mr. Dunbar.

Mr. Dunbar. Yes.

Mr. Bushy. On Saturday, June 9, the Bank of Italy closed at 280. On Monday it opened—Monday, June 11, 1928—at 257. It experienced a low of 125, and it closed at 212. On Tuesday its high was 250, and its low was 150½; it closed at 210, and it wiggled down the line until the 23d, when we find it standing about 180.

Now, as to its companion corporation, the Bancitaly Corporation, on Saturday, June 9, 1928—and this is after the slump had slightly started—it closed at 195. On Monday, June 11, 1928, its high was 177, and its low 109, and it closed at 153. On Tuesday it opened at

140; its low was 120, and it closed at 135.

So the Bank of Italy, as an original institution, has dropped from its high pinnacle of 293 to, for exchanged stock in the Trans-America Corporation of New York and San Francisco, 66% cents per share of what was formerly the Bank of Italy stock, or 45 cents for Trans-America Corporation.

Mr. Prall. Was there a corresponding decrease in the value of

all bank stocks at that time?

Mr. Bussy. There was not a corresponding decrease, although there was a slight and synpathetic decrease in other bank stocks, but they soon regained their position. However, the Bank of Italy stock, I find from following the San Francisco Chronicle quotations through those periods, never did get back to its former footing, and finally was taken over by the holding company that I mentioned, which took over practically all of the six or seven interests that were represented by the Bank of Italy. I say "interests" because they were independent corporations doing different types of business in line and in sympathy with the Bank of Italy; and that is the biggest branch banking institution in the country.

Mr. Pole. You are speaking largely-

Mr. Bushy. Will you please answer my question first? I was stating the condition, and asked you if that was not a virtual failure of this tremendous branch banking institution?

Mr. Pole. You are speaking here of the movements of stock

largely of the Trans-America Corporation.

Mr. Busby. It was not organized at that time; it was organized on the 11th of October, 1928, after the considerable slump in the Bank of Italy stock, and was organized as a holding company for the purpose of taking over the Bank of Italy interest in its several forms.

Mr. Pole. There might have been considerable fluctuation—and I think there was—in the Bank of Italy stock, whatever causes it

might have been due to.

g

Mr. Busby. I can explain the causes, which I think will interest Mr. Dunbar who is asking the questions of the comptroller. Do you understand the causes, Mr. Dunbar?

Mr. Dunbar. Yes, but ask the question. Mr. Busby. I will await another time.

Mr. Dunbar. Do it right now.

Mr. Pole. I was going to add, in answer to your question, Mr. Busby, that regardless of the stock fluctuations of the corporation to which you referred, the truth is that the history of the Bank of Italy is that it has increased from very small beginnings steadily upward until to-day it is a bank with more than billion dollars of deposits.

Mr. Dunbar. What is its capitalization?

Mr. Pole. May I incorporate that in the record? Mr. Dunbar. Yes. What dividends does it pay? Mr. Pole. I will furnish that for the record.

Mr. Fort. Here is the figure on the Bank of Italy—invested capital, \$106,253,731.

Mr. Pole. What is the capital stock? Mr. Fort. I do not know that it is here. Mr. Letts. That is as of November.

Mr. Dunbar. Can you tell us how much they have paid in dividends, Mr. Fort?

Mr. Fort. No.

(The information requested is as follows:)

The capital of the Bank of Italy National Association is \$50,000,000. Dividend rate is 12 per cent.

Mr. Dunbar. How many independent banks in California in the last 10 years have liquidated or been merged either with the Bank of Italy or with other institutions? Can you tell us anything about that?

Mr. Wingo. You mean either merged or sold out to the Bank of Italy, or acquired in some other way?

Mr. DUNBAR. Yes.

Mr. Pole. The Bank of Italy has to-day in the neighborhood of 300 branches. I think I could safely say that the majority of its branches outside the large cities were formerly independent banks. As to exactly how many were independent banks and how many were de novo branches, I have not the figures.

Mr. Dunbar. Can you tell us how many independent unit banks there are now in California, and the amount of their capitalization?

Mr. Pole. I will be glad to furnish those figures for the record.
Mr. Dunbar. Will you please inform us how many of them are
national banks and how many are State banks?

Mr. Pole. Yes.

Mr. Dunbar. Will you please put in the record their capitalization?

Mr. Pole. I will be glad to.

(The information requested is as follows:)

Three hundred and eighty-four unit banks in the State of California as of December 31, 1929. Of this number, 193 were national and 191 were State banks.

Mr. Dunbar. Most of the bank failures have been State banks—I believe that was your assertion a while ago?

Mr. Pole. That is true.

Mr. Dunbar. Most of these banks would never have been in existence if we had had the branch-bank system, would they?

Mr. Pole. A great many of them undoubtedly would not have been in existence.

Mr. Dunbar. Have you any idea of the number of State banks

that have failed in Indiana to date?

Mr. Pole. Indiana has been one of the States in which there have been fewer bank failures than in a good many other States. There have been 115 suspensions since 1921, up to December 31, 1929, which is 10.9 per cent of the 1,057 banks which were in existence on June 30, 1920.

Mr. Dunbar. That is a good record?

Mr. Pole. In comparison with some other States, it is quite good, but 10 per cent of the number of banks in a State like Indiana is no record to be particularly proud of.

Mr. Dunbar. Yet branch banking would not have assisted this

very much?

Mr. Pole. I think it would have assisted it very much, because

those banks generally are small banks in rural communities.

Mr. Dunbar. If it would have assisted to a considerable extent, it would only have done so by knocking out the country banks, the good as well as the bad.

Mr. Pole. Which knocked themselves out by failing.

Mr. Dunbar. But the good ones are still there and will be there, provided they can liquidate the financial losses due to stock exchange transactions.

Mr. Pole. May I just add one remark, and that is that because banks would be permitted to establish branches does not mean that

it would be incumbent upon them to do so.

Mr. Dunbar. I know it would not be incumbent, but it would be almost putting them in the position where they would have to surrender and give up like you would have to surrender and give up to bandits that accosted you.

Mr. Pole. That has not proved to be the case to any great extent. Mr. Dunbar. It would be almost that case, because I do not see how the banks in my district would exist if you had a branch bank

there for the reasons that I have given you heretofore.

Now, I admit that branch banking in some sections of the country would be a wonderful panacea, and I also contend that if these banks that have suffered as a result of their own lack of adequate knowledge and conduct of business affairs can be made to recover and stand on their feet in the future, they will be better off, and I believe that most of these bank failures have been due to conditions existing prior to 1922; they have never been able to dispose of their frozen paper due to the depreciation in the value of farms of 50 per cent, all of which has rendered it impossible for those banks to recover their prestige, and conditions existing since that time have been such as to have forced many of them into liquidation.

Mr. Pole. Regardless of what the reasons may be, they have failed. Mr. Dunbar. They have failed, but the point I am making is that

they failed because of conditions existing prior to 1922.

Mr. Pole. Might not those conditions prevail in the future?

Mr. Dunbar. Yes.

y

Mr. Pole. Do we not want to guard against them? I do not mean to be questioning you.

Mr. Dunbar. Do you want to guard against the banks getting into that condition as the result of their own fault?

Mr. Pole. It would be very desirable.

Mrs. Pratt. Mr. Dunbar, may I ask the comptroller a question?

Mr. Dunbar. Certainly. Mrs. Pratt. Mr. Pole, is it your idea to force a uniform system throughout the entire country, or to permit the present system to exist where unit banks have a sound position?

Mr. Pole. It is not my thought, Mrs. Pratt, that a bank should

be forced to go into a branch banking system.

Mrs. Pratt. But my point is this: There would be perhaps a branch system formed in one section of the country, and if in another district present conditions were sound under the unit banking system, would you still feel it incumbent to go on with a uniform system. in spite of the fact that present conditions in connection with unit banks were sound?

Mr. Pole. It is not my idea that we could permit branch banking in one part of the country and not permit it in another. I do think, however, that it would be more effective in some parts of the country

than in others.

Mrs. Pratt. It could be flexible?

Mr. Pole. It would automatically be flexible, because where unit banks are operating successfully and profitably there might be no inducement for them to sell out to any branch system of banking, and they might wish, as they have done in very many cases over the country, to continue as successful and profitable independent units. There are many instances where bankers will tell you that they want no better competition than that of branch banks.

Mr. DUNBAR. I think that is true, or would be true in many localities, but if you could have a branch banking system in some parts of the country, for the present at least it might be a good thing; but it would work hardship in other parts of the country.

We have talked a great deal about losses sustained by banks, about

bank failures, which have been mostly State banks.

Mr. Dunbar. We talked a great deal about bank failures, which were mainly State banks. It would be a good thing to have all banks, if possible, in the national banks system? Do you think that would be a good thing for the country? I might say that I do.

Mr. Pole. I think the national system, inasmuch as it is the only system through which the Government can enforce its policies, should be the predominating system. I am not prepared to say that

it should be the only system.

Mr. Dunbar. These financial losses that have been sustained are not as great as people think they are, usually.

Mr. Pole. I do not know what people usually think they are.

They are a very impressive set of figures.

Mr. Dunbar. How much has been lost by the stockholders of banks by failures in the last 10 years?

Mr. Pole. By stockholders? Mr. Dunbar. No; by depositors.

Mr. Pole. I am not able to say that, because out of 5,640 failures, 4,800 of them have been State banks and I have no idea as to what the loss to depositors in State banks has been. I do know that it has been very heavy and I think the loss which has been entailed has been nothing short of a calamity in the communities in which the failures have occurred.

Mr. DUNBAR. It is a calamity; it is true.

The CHAIRMAN. Will you yield for a minute? I want to suspend this inquiry just for a minute in order to call up two resolutions.

(Discussion off the record.)

Mr. Dunbar. Now, I am not going to detain you much longer, but I wish, Mr. Pole, that you would give us the amount of losses to depositors caused by failures of national banks during the last 10 years. Can you do that?

Mr. Pole. Yes, sir.

The CHAIRMAN. I think that material has already gone in.

Mr. Pole. It has.

Mr. Dunbar. Then, you need not put it in again.

Mr. Seiberling. If you have legislation here which would permit branches in trade areas, you could then have a main bank out in sections where you have no banking facilities, merely rent a room and put in a few employees and give banking facilities, and also protect the State banks by providing that no branch bank could be put in where they have banking facilities, without the consent of the State bank or the other bank, which would give them an opportunity to take over the bank, if it is desirable to be done.

I wish you would explain what you have in mind about that.

Mr. Pole. I could not imagine that the opinion of a State bank would be anything but a prejudiced opinion as to whether or not another bank should be established in that community, but, on the other hand, I, as comptroller, certainly would not permit the establishment of a branch in any community where the banking facilities were ample. As I have already stated, I think it would be, in practice, that very, very few de novo branches would be established. If a branch system wanted to establish branches in a community which was already adequately served, it probably would not get permission from the comptroller to do so.

On the other hand, if it wishes to negotiate with a bank already in existence, and they were willing to buy that bank and the bank was willing to sell, there would be nothing to prevent it doing so, in which case no doubt they would be permitted to establish that bank as a branch, which would not, of course, increase or decrease the number of banking offices in that community.

Mr. Seiberling. On the other hand, if they do not have facilities and needed them, that could be established by the way I have stated?

Mr. Pole. Yes.

Mr. Seiberling. Without any heavy overhead or anything of that kind?

Mr. Pole. Yes.

Mr. Dunbar. You are opposed to holding companies, so far as the Government is concerned?

Mr. Pole. As an ultimate system; yes. As a possible step toward

branch banking it has many good features.

Mr. Dunbar. This step toward branch banking—the tendency would be for holding companies to develop?

Mr. Pole. If no legislation were enacted-

Mr. Dunbar. Then, legislation would have to be enacted, in order to prevent the development of holding companies? To what extent have you holding companies? You spoke about that a while ago—only as State permits them to out into adjoining territory. There is no Federal law on the subject?

Mr. Pole. There is no Federal law on the subject.

They are developed to the extent that already there are included in such holding companies 2,069 banks, which are one-twelfth of all the banks in the United States.

Mr. Steagall. If you will pardon me-Mr. Dunbar. Yes.

Mr. STEAGALL. Mr. Pole went over those figures once already.

Mr. Pole. Yes. Those banks embrace \$10,500,000,000 of loans and investments, which is nearly one-sixth of all loans and investments in the United States, and the group system of banks is growing most rapidly. There are new groups being formed every week and I hear rumors from all over the country of large amounts of capital being so employed.

Mr. DUNBAR. You think branch banking would prevent the growth

of group banking?

Mr. Pole. I do to a very large extent.
Mr. Dunbar. One more subject and I am through. You said that branch banking-at least I understood you to say it-would help prevent the centralization of money in New York and other money centers and would decentralize it and distribute capital all over the country. Am I correct?

Mr. Pole. Yes.

Mr. Dunbar. That was the contention put forward for the adoption of the Federal reserve system and that failed. Capital has been centralized more in New York since the establishment of the Federal reserve system than ever before. Now, then, how would branch banking be any different from the Federal reserve system? Would not most of our branch banks be centralized right in New York and where

we had branch-banking corporations, say, in Pittsburgh and St. Louis, would they not still report right to New York as they do now?

Mr. Pole. I am not prepared to accept your premises as correct Mr. Congressman. While the banking resources of New York have tremendously increased since the establishment of the Federal reserve system, the resources of the other 11 Federal reserve districts have also tremendously increased, but as to whether or not New York has increased out of all proportion to the others, I am not prepared to say.

Mr. Strong. Might I suggest that in the other districts, the Federal reserve banks are not quite as close to Wall Street, and that such close association tends to a concentration of wealth?

Mr. Dunbar. Is it your opinion that the Federal reserve system

has decentralized wealth and money?

Mr. Strong. It certainly has not. It has centralized money every place where there is a Federal reserve bank.

Mr. Dunbar. It has centralized it every place there is a Federal

reserve bank, but, in your opinion-

Mr. Strong. The big centralization has been in New York, because the Federal Reserve Bank of New York City is close to Wall Street—I mean in the same city.

Mr. Steagall. I am wondering about this: If the branch banking plan gives us a system of banks strong enough to compete with the strong monopoly tending banks, what need have we for the Federal reserve system?

Mr. Pole. The large banks now are heavy borrowers at certain periods and would no doubt continue to use the facilities of the

Federal reserve banks.

Mr. Steagall. You do not think that would undermine or destroy the Federal reserve system—the elimination of the small unit bank?

Mr. Pole. I think that it is quite possible that under the present system, which has grown out of group banking, some small unit banks might leave the system. Already some groups have been formed, which are operating outside of the Federal reserve system.

Mr. STEAGALL. You think that evil is to be feared in the present

situation?

Mr. Pole. I do not think an important branch bank would undertake to operate outside the Federal reserve system.

Mr. Dunbar. I have nothing more, Mr. Chairman.

The CHAIRMAN. Mr. Strong.

Mr. Strong. Mr. Comptroller, while the chairman has gone over very carefully one subject which I wanted to discuss, there is a matter I want to take up further with you and that is the examination of national banks. The information I want to get is this: The bank examiners are not paid from the Government Treasury, are they?

Mr. Pole. The banks, Mr. Strong, are assessed for the cost of the

examination.

Mr. Strong. Who sets the limit on the salaries for the examiners?
Mr. Pole. The salaries of the examiners are fixed by the Comptroller of the Currency, with the approval of the Federal Reserve Board.

Mr. Strong. In the course of your examination by the chairman, you stated that our bank examiner department is now practically a training school; that you take them before they are experienced and

that after they have been with you a certain time and become experienced, some big bank comes along and takes them away from the service.

Mr. Pole. That is quite often the case.

Mr. Strong. Why are you not justified in paying salaries sufficiently large to hold good and experienced men in the service, as long as the banks that do take them away from you have to pay the expense anyway; why not pay them enough to hold them—those best qualified to examine banks?

Mr. Pole. The position of bank examiner, Mr. Strong, is a difficult one. He has to be away from home a great deal and has to

travel a great deal. It is not, in itself, a very attractive life.

Mr. Strong. What is the average salary that you pay?

Mr. Pole. I am furnishing a complete list of that.

Mr. STRONG. Well, about what?

Mr. Pole. \$5,000.

Mr. Strong. Well, why not pay a salary sufficient to these men so that they will stay in the service, regardless of the inconvenience? Mr. Pole. I doubt if you could offer them enough money for that, Mr. Strong.

Mr. Strong. Did you ever try it?

Mr. Pole. The service could be undoubtedly improved by offering better salaries.

Mr. Strong. Have you ever tried it?

Mr. Pole. Yes; salaries have been considerably increased during the last few years.

Mr. Strong. But have you tried to keep men from going out into private life, by increasing their salaries?

Mr. Pole. Oh, yes.

The CHAIRMAN. Will you yield to me a moment?

Mr. Strong. Yes.

The Charrman. I will say that in my conversation with some of these splendid men that I happen to know, I have observed a spirit of loyalty to duty, a spirit of craftsmanship, so to speak, where many of these men stay as national-bank examiners because of the pride they have in their work and because of a realization of the importance of it, and that they were rendering a real service, and it is my belief that they would stay in the positions at a lower salary oftentimes than what banks would pay them, because of their pride in their work. They realize the high quality of their work.

It is my observation that you would not have to meet the high salaries paid by banks in that respect, if a moderate salary were

paid these men doing this important work.

Mr. FORT. Is not that true through all the technical branches of

the Government service?

The Chairman. I think it is true, especially in the Department of Agriculture. It is true undoubtedly all through the Government service, that men do not have to be attracted by the salaries they receive in the Government, and many of them are doing their work at particularly small salaries. I know several men in the Agricultural Department who could go out in general work and draw \$25,000 a year, who are now drawing \$5,000 a year or less in the department. I think there are many of those men under Mr. Pole who feel the

same wav about it.

Mr. Strong. The point I was trying to bring out was this: These bank examiners are the guardians of the funds of the people. Their examinations protect the people who have the deposits in the banksa tremendous fund and a tremendous trust-and yet you say that when a man gets very proficient, some private bank takes him away from you and yet you say that the banks themselves that eventually pay the larger salaries to your examiners to get them away from you, are under obligation to pay the cost of the examinations, and, necessarily, would have to pay the larger salaries you might have paid them to keep them in the service. Therefore, why would it not be the proper policy for you to pay salaries sufficient to hold these men, especially when they go out into private life, they go to the same banks or other banks, which are assessed for the expense of these examinations. Why not pay salaries sufficient to retain these men in the service?

Mr. Pole. There is a consideration there that requires some thought. The banks, under the law, are assessed in accordance with their total resources. In the case of large banks, of course, they can easily pay whatever the costs may be. In the case of small banks, the present examination fee, is quite an amount for a small bank to pay.

Mr. Strong. Don't you think they should pay it in order to give

the public protection?

Mr. Pole. The earnings of small banks are so limited that any increased expense would have to be taken into consideration as

involving an additional burden.

Mr. Fort. As a matter of fact, the Government only allows a salary of \$9,000 to the Assistant Secretary of the Treasury, who is over the comptroller, who is over the examiners. You can not start by raising any one point without first rehabilitating the Government service and raising the officers still higher.

Mr. Strong. If he has power to assess banks to pay for examinations, he can pay sufficient salaries to keep efficient and experienced examiners. Their services to the public is very, very great and they

have a very great responsibility.

Mr. Pole. There are a great many practical difficulties. In a general increase of salaries of examiners, for the purpose of making their positions more attractive, so that the examiners will stay in the service, the increase would have to be general, and, in order to save for the service, perhaps, six men, you would have to increase the salaries proportionately of perhaps 12 or 15 or 20 men.

Mr. Strong. Why would you have to do that?

Mr. Pole. Because you have to make the scale generally uniform.

Mr. Strong. Is there any law that requires that? Mr. Pole. No; but it is a matter of practice.

Mr. Strong. But as a matter of good business—you do it in business?

Mr. Pole. I think that would involve a great deal of dissatisfaction if you should raise the salary of one man who has been in the service three years, four or five thousand dollars a year, and do not raise the salary of another man at all who has been in the service perhaps the same time. The question would be that of efficiency—

Mr. STRONG. Certainly.

Mr. Pole. And that is very largely a matter of opinion.

Mr. Strong. It ought not to be a matter of opinion.

Mr. Pole. It is not an easy question to settle.

Mr. Strong. It is exactly what you would do in private life. If you have an efficient man who has been with you 3 years and an inefficient man who has been with you 10 years, you would raise the salary of the efficient man and put him in the position of trust.

Mr. Pole. We endeavor to do that.

Mr. Strong. I think it would be a bad policy to say that you have to raise all of them because you want to keep a few outstand-

Mr. Pole. My feeling is that if you were to pick out 100 men and raise their salaries to the point of being able to compete with commercial banks from which they might have offers of perhaps double what they are now getting-and which offers are frequently made-it would cause a great deal of disturbance in the service. I think your idea is perfectly sound, but I think it would have to be worked up to the point you aim at gradually.

That is being done; salaries have been quite markedly increased

during the last few years.

Mr. Strong. Who has charge of the regulation of the salariesyourself or the chief examiners?

Mr. Pole. Myself, with the recommendation, usually, of the chief

examiner who knows the man best.

Mr. Strong. Naturally he would hesitate to advance some one or two men over his fellows, but it seems to me that the interest of the public in this matter is so very, very great, that it ought not to be the policy to let good examiners and good men go out of the service because of offers of large salaries by commercial banks, who would have to pay their salaries if they were kept in the service.

What salaries are paid to chief examiners in the different districts?

Mr. Pole. I will furnish that information.

Mr. Strong. You do not know?

Mr. Pole. Yes.

Mr. Strong. Why not state them?

Mr. Pole. Mr. Reeves, of New York, gets \$20,000 a year. In District No. 1, the salary of the chief examiner is \$13,000.

In District No. 3, it is \$15,000.

In District No. 4, it is \$10,000.

In District No. 5, it is \$10,000. In District No. 6, it is \$12,000.

In District No. 7, it is \$12,000.

In District No. 8, it is \$15,000. In District No. 9, it is \$11,000. In District No. 10, it is \$15,000.

In District No. 11, it is \$13,000.

In District No. 12, it is \$15,000. Mr. Fort. Will you let me ask the comptroller one question?

Mr. Strong. Certainly.

Mr. FORT. What is the salary of the Comptroller of the Currency?

Mr. Pole. \$12,000.

Mr. Strong. Then, your chief examiners are paid considerably more than yourself and other men in the Treasury Department and in your own department?

Mr. Pole. A great many of them are paid more than I am, Mr. Congressman. I am not so well posted on the salaries of other departments.

Mr. Strong. Do the chief examiners examine banks themselves?
Mr. Pole. To make a complete physical examination of a bank,
I would say not often. They are invariably on hand wherever there
is a bad situation—they cooperate with the board in shaping policies

and remedying undesirable situations.

Mr. Strong. What is the highest salary paid a bank examiner? Mr. Goldsborough. Mr. Strong, is it not your idea to prevent these bank failures that exist in the unit system by providing a better system of examination?

Mr. Strong. Certainly. That is why I am asking these questions. What is the highest salary paid to bank examiners outside of the chief

examiners?

Mr. Pole. My recollection is that the highest salary paid is \$9,500. Mr. Strong. What excuse is there for paying \$21,000 to a chief examiner, considerably more than you receive, and only up to \$9,500 to the man who stands between the banks and the people's interest?

Mr. Pole. It is \$20,000 in New York.

Mr. STRONG. Well, \$20,000.

Mr. Pole. The chief examiner in New York has a very responsible position.

Mr. STRONG. What is it?

Mr. Pole. He is in contact with all the national banks in New York. He consults with them on questions of policies and has supervision of the examinations of the entire second Federal reserve district and must be a man of wide experience and possess qualifications which fit him for that important position.

Mr. Strong. Do you think he is in a more important position than the Comptroller of the Currency, who has control of the whole

system?

Mr. Pole. Modesty prevents my answering that question.

Mr. Strong. Also the Secretary of the Treasury, a Cabinet officer? It seems to me the salaries in the comptroller's office, as far as the examiners are concerned, could be revised in the interest of the people.

The chief examiners are paid very high salaries while the examiners, who stand between the banks and the depositors, are not being paid

enough.

Mr. Fort. That is the exact policy the gentleman urged a moment ago—the policy the banks follow. The chief executive would get a higher salary than the man out on the road in the work. You suggested that we should pay salaries high enough to hold the men. In outside employment, the executive in charge would be getting a greater salary—

Mr. Strong. But here is a figurehead that gets \$20,000 and the

man who does the work gets \$9,500 and less.

Mr. Pole. He is an executive and not a figurehead.

Mr. Strong. But he does not do the work that protects the

people. He confers with the banks.

Mr. Pole. No; and I would not say that the president of the United States Steel Corporation goes out and makes steel. He is a very important executive nevertheless.

Mr. Strong. He is not in your department?

Mr. Pole. No.

Mr. Fort. I agree—

Mr. Strong. I decline to yield, Mr. Chairman. I do not want to get into an argument over that.

One of the principal reasons for your statement in favor of branch banking—the setting up of branch banking systems—is that there have been so many failures in the last nine years.

Mr. Pole. That is the principal reason—to offer something that

Will remedy that situation.

Mr. Strong. Why did you take the last nine years for an example? Mr. Pole. Because the failures have been increasing in numbers during the last nine years.

Mr. STRONG. Why not include nine years before that?

Mr. Pole. I thought nine years was far enough to go back. The war has been over for 9 years—10 years—and it seems to me that most businesses have been reestablished on a normal basis, but banking has lagged behind and instead of getting better in the rural communities, is getting worse and worse while every other business is prospering.

Mr. Strong. What percentage of failures are due to inefficient ex-

aminations, because you can not pay proper salaries?

Mr. Pole. Very few of them.

Mr. Strong. Then, that is not the reason they fail?

Mr. Pole. No, sir; I would not say so.

Mr. Strong. Will you put into the record, at this point, the number of bank failures prior to the nine years you have used in your first statement?

Mr. Pole. The number?

Mr. Strong. Yes.

Mr. Pole. I am already furnishing that for the record. Would you like to have this reinserted?

Mr. Strong. No; you need not encumber the record.

Mr. Pole. My information will cover the number of bank failures

for every year since 1904.

Mr. Strong. Is it not a fact that the reason we have had so many bank failures in agricultural States in the last nine years is really due to the deflation that followed the war?

Mr. Pole. That has accentuated it.

Mr. Strong. That has been principally the cause in the agricultural States?

Mr. Pole. Very largely.

Mr. Strong. Very largely the deflation of agriculture—Mr. Pole. The deflation of agriculture has accentuated it.

Mr. Strong. Very largely?

Mr. Pole. To a material extent.

Mr. Strong. You know that during the war the Government selected men to go out and urge agricultural States to produce more food, do you not, and the result of that encouragement was that the farmers extended their farming and credits, and then, when the war came to an end they were in debt from an inflation of their farming; they were in debt to the banks and those frozen credits that had been held during all these years were the causes of these failures, were they not?

Mr. Pole. To a considerable extent.

Mr. Strong. For instance, I know a great many banks that have had to take over farms, because of loans that were extended during and after the war. They could hold them in my State for but five years when they are forced to sell them. The losses were such that failures followed.

Now, do you think it is fair to urge a condition such as that as a

reason for putting out a branch bank system over the nation?

Mr. Pole. I think that a branch bank system extending to the rural communities would be decidedly helpful.

Mr. Strong. All right. Tell us how branch banking would have

handled the situation when deflation came after the war.

Mr. Pole. In one respect they would have been much more careful in the manner in which loans were made.

Mr. Strong. Why? Would they have had better information? Mr. Pole. They would have had better judgment, probably.

Mr. Strong. Why would they?

Mr. Pole. Because they are men of wider banking experience. They lend money more scientifically. They perhaps lend it less on character and more on actual intrinsic values and are generally more conservative.

Mr. Strong. You think they would not have been patriotic

during the war and loaned money to help produce food?

Mr. Pole. I would not say that it is very patriotic to lend other peoples money to irresponsible borrower.

Mr. Strong. Nobody asked you that. Mr. Pole. What did you ask me? Mr. Strong. Read the question. (The reporter read the question.)

Mr. Pole. I take it that the banker lends other people's money and if he does not lend it with judgment, he is not performing any

patriotic duty.

Mr. Strong. Then your idea is that during the time the Government was urging the farmers to increase their production and the banks to lend them money, that the branch banks would not have responded?

Mr. Pole. I could not uphold the position that the Government

would ask the banks to make improvident loans.

Mr. Strong. Now, did I ask anything like that?

Mr. Letts. I submit that the Comptroller is answering the question.

Mr. Strong. All right, let us have the question read and see if he is. (The reporter read the question.)

Mr. Strong. Now, read his answer and see what he said.

(The reporter read the answer.)

Mr. Strong. Now, did I ask anything like that?

The Chairman. Referring to your statement that branch banks would not lend on character as security, I am reminded that during the Pujo investigation of the money trust, when Mr. J. P. Morgan was on the stand, he made the statement that character loans were regarded by him as good and sometimes the best security; that he had loaned as high as a million dollars on a man's character. That is quite in contrast with your statement.

Mr. Pole. Not at all. I can conceive of numerous instances where men would lend on character, and I think character is perhaps the

most important element in granting a loan, but it must be taken in connection with other things and not solely character. A man's ability to pay must also be taken into consideration.

Mr. Strong. Now, the point-

Mr. Pole. A man of ever such good character might have his

ability to repay questioned.

Mr. Strong. The point I am trying to bring out is not that the banks made bad loans at the time they were made. During the war the 4-minute men were asked to go into the picture shows and make talks and were furnished data upon which they could present the facts to people, and one of the things suggested was that the farmers of the country should produce more food, not only to feed our men in France, but also the Allies, and the bankers were urged to support them. I made such speeches myself, in which I pointed out pardon me, if I am going to make this examination, I should like to have the attention of the comptroller.

I was sent data for one speech myself in which I was asked to urge the farmers to go to the banks and buy Liberty Bonds and pay only 10 per cent in cash and 90 in debt for the balance and go to the banks myself personally and see that they did it and that was done. They were also urged to produce more food, and if they needed money, to go to the banks for it; and the banks were expected to make such loans.

The banks did not make bad loans. They made loans which were good at that time. Then deflation came. The value of land, horses and cattle and sheep and everything went down and the loans were

Mr. Goldsborough. Will the gentleman yield? What caused the deflation? We have heard something about that in the committee.

Mr. Strong. There is a difference about that. My opinion was the

inflation that was permitted after the war caused it.

The point I am trying to get at is this: What would these branch bankers have done under those conditions? Would they have refused to make the loans?

Mr. Pole. To answer this question as to what would have happened under a situation involving a state of facts which did not exist,

would be rather venturesome.

Mr. Strong. Nobody has asked you anything of that kind. I have stated facts and asked what would your branch banks have done during the war; would they have made these loans that afterwards became bad?

Mr. Pole. I think such branch bank systems as existed during the

war did make them.

Mr. Strong. Did make them?

Mr. Pole. Yes.

Mr. Strong. And did not have any losses?

Mr. Pole. Yes; they suffered losses, but we are operating now

10 or 12 years after the time you are speaking of.

Mr. Strong. The deflation came in 1920 and 1921. I am asking these questions now, 10 years after that. Those frozen loans have carried over?

Mr. Pole. And the bank failures 10 years after the war are in-

creasing in number.

Mr. Strong. But the frozen loans—the examiners in the State bank departments and in your own department are urging the closing up of those frozen loans, and that is what is causing the failures now. Mr. Pole. It is an interesting fact that there are numerous instances where banks in the same town, side by side, have operated over a long period of years, before the war and since the war, and that some banks have succeeded and others have failed, with the same conditions to contend with, same localities—a question largely of

management.

Mr. Strong. That is your opinion, but I know banks where there were two banks in the same town, both of whom took over about the same number of farms. One bank happened to be in position to induce someone to buy those farms. The other bank was not in that position and could not find anyone to buy them and it had to close. It was not a matter of judgment. They both loaned the same amount of money practically on the same security.

The point I want to bring home to this committee is that the increase in the losses of banks in the agricultural country is because of the deflation since the war and it is not fair to assume that your branch banking system would have remedied it unless it refused to

make the loans.

Mr. Pole. I think that a system of branch banking, if it had been in effect in those days, would have managed its business in such a way that had these losses occurred, it would have been large enough and strong enough to have been able to absorb them, whereas the small bank is on such a narrow earning basis that if an unusual loss is sustained it can not stand it.

Mr. Strong. Do you think if the owners of these branch banks in the rural communities found they would have these large losses they

would have put up the money and taken the losses?

Mr. Pole. I do not think so-or the unit banks either.

Mr. Strong. Is it not one argument in favor of branch banking that the parent banks, buying the branch bank, will retain the local management that understands the people in the community and their credits?

Mr. Pole. That is often the practice.

Mr. Strong. Then, you would have had the same men at the heads of the banks if you had had branch banking?

Mr. Pole. You would have had the same man, but the policies of that branch would have been directed by experts at the head office.

Mr. Strong. Well, the experts would not have known what value the securities had; they would have had to depend on the local management.

Mr. Pole. To some extent. Mr. Strong. Certainly.

Mr. Letts. But that would be a matter of applying a policy.

Mr. Strong. The applying of the policy at that time would have been to make the loan or not. At that time the security was good. We had, after the war, a gentleman lay down on this table loans from a western bank made to a sheep raiser. The sheep at the time the loan was made were worth about \$9.50, and he loaned \$3.50, and we had him lay down alongside that loan the account of what those sheep sold for in Chicago after the transportation cost and commissions were paid and it was about 35 cents a head. No one could have foretold a loss of that kind. Now, what would the branch bank have done in that circumstance?

Mr. Pole. If that loan had been made by a large branch bank, it would have been able to have absorbed such losses, whereas had he borrowed the money from a small bank, it might not have been able to do so.

Mr. Strong. That gentleman was here and he told us in executive session that if that kind of testimony got out it would break 47 banks with which he was connected in the Northwest. He was making a plea that we use our influence to urge that the loans be not called.

I should like to put into the record the fact that 35 cattlemen from Kansas came to this Capitol headed by Governor Stubbs, asking for an arrangement to prevent the calling of cattle loans, and the Secretary of Treasury helped to raise \$100,000,000 to be deposited in Chicago to relieve the situation, yet the loans at the time they were made by the banks were considered good. It was simply the aftermath of the war and the deflation that caused the failures.

And such failures are not fair argument that our system of unit banks is unsound and we ought to have a branch banking system?

Mr. Fort. As I understood the comptroller's argument as to the greater soundness of branch banking, as he urges it—and the gentleman from Kansas knows I am not committed to it—it was that branch banking would produce a greater diversification of loans, because the same bank would be making both city and country loans and could therefore stand losses in one line of business without affecting its solvency.

Mr. Strong. That might apply to your country, but not to an agricultural district, where all business depends on agriculture.

Mr. Fort. Would it not apply to a Kansas City bank with branches

out in Kansas, with both types of loans?

Mr. Strong. I am pointing out that the banks would not have made the loans and in that way have embarrassed the country, or they would have made them and suffered the same losses. Whether they could have made them and met the losses, I do not know.

Mrs. Pratt. Isit not true, Mr. Strong, that some of the losses which some of the farmers sustained, were due more or less to speculation on their part? Were they not relying on the food prices that prevailed during the war and instead of merely using the land they had to produce food, did they not go out and buy more land with the possible presumption that they were going, thereby, to make more money?

Mr. Strong. That is undoubtedly true in individual cases.

Mrs. Pratt. They pyramided, so to speak, and the losses were,

largely, speculative?

Mr. Strong. Some were, no doubt. Up in Iowa I think they indulged in that kind of speculation, but in general, in Kansas, they did not. In my State they cultivated more land more intensively, and

went into debt to get the machinery with which to do it.

Mr. Letts. I admit there was more or less of that in Iowa, but it was done with the concurrence of the banker in a great many instances, and, as I stated for the record a few days ago, some of our bankers not only put the second mortgages into their own little banks but sometimes the thirds. They sometimes sent the first and the only good one to some insurance company and oftentimes, as I stated before, it was found that the first and the second mortgages did not supply enough money to buy an additional piece of land, and it became necessary to have a purchaser take out some additional

insurance upon which the banker was getting a commission. Altogether it was not only a spirit of speculation which existed in the farmer, but one which existed in the banker as well.

Mr. Strong. Certainly.

Mr. Letts. In a great many instances.

Mr. Seiberling. You do not mean to say that the depreciation in farm lands on account of the deflation after the war, was any greater than the depreciation in industry?

Mr. Strong. The deflation in agricultural, products was greater.

Mr. Seiberling. I do not think so.

Mr. Strong. Two million farmers lost their farms, but a great many more lost their entire working capital.

Mr. Seiberling. In our cities, within 30 days, the raw materials and products on hand depreciated 50 per cent, more than \$100,000,000,

in the plants in our community.

Mr. Strong. I remember that we passed a bill before this committee, putting in the step rate interest plan and it was represented that it was done to check the inflation in New York, but they did not put it into effect in New York City—but in Kansas. I appreciate the whole country was deflated, but agriculture suffered most because they were left in debt, with the prices of their products below the cost of production.

I know losses to occur from instances of that kind that the bankers could not have controlled; great financiers could not have controlled—no one could control. A lot of money was lost in the stock market recently. That can not be charged to the impotence and inability

of the men who lost the money.

I am holding that our bankers in our agricultural districts are not incompetent to run banks. They are the same men who would be used, under a branch banking system, to run the banks as managers. These banks failed because of the effort during the war to increase production and the deflation that followed, and it is not fair to make

that an argument for branch banking.

Mr. Letts. May I add to what I said a moment ago, by making further reference to the matter of deflation in the agricultural regions; we had been accustomed, year after year, to have supplied all the money necessary at harvest time to move the crops and to enable the farmers to carry their young animals over the winter and fatten them and send them into the market when they were prime and would bring the highest prices and furnish the best products to the consuming public. The year of the deflation, for some reason or other, from some policy perhaps the loans were called; instead of supplying the credit to which we were accustomed, the existing loans were called and the farmers were required to gather up everything they had on their farms and sell it in order to meet the demands, even to the point of driving young animals-pigs, lambs and calves-off their farms so that the year following they did not have the necessary animals on their farms to go ahead in the normal way in the breeding and raising of stock.

Mr. Strong. And was it not the custom of those farmers to give a mortgage on the farm to the bank in order to carry over those conditions, and when they gave up the farms to the banks and the banks became vested with the title, they were entitled, under the law, to hold them only five years before disposing of them, and it was being forced to dispose of a lot of those farms that broke the banks?

Mr. Letts. I hope, out of these hearings will come some sort of understanding that will develop a banking policy under which, at no time in the future, can it ever happen that loans will be called at harvest time, and when it will require men to dispose of their young animals and deplete the farms and bring on ruin as it did a few years

Mr. Strong. In regard to the monopoly of money and credits that will ensue from a national branch-banking system, you are proposing in each of the 12 districts—I presume these are the Federal reserve districts or like districts-I understand you call them trade areas; you will set up 12 trade areas in the United States and confine branch banking to each one of those areas.

Mr. Pole. That is not my suggestion.

Mr. Strong. Well, what is it?
Mr. Pole. That branch banking should be extended to within the trade area, but as to the extent of that trade area I have not suggested, but have said that in the most extreme case it should not be permitted to extend beyond the Federal reserve district lines.

Mr. STRONG. Who would grant that permission?

Mr. Pole. Congress.

Mr. Strong. Then your idea is that in each one of the 12 trade areas, as determined by Congress, should be set up a branch banking system that should not be allowed to run out to another trade area.

Mr. Pole. There might be, in some instances, a Federal reserve district consisting of a trade area. In other Federal reserve districts the entire district may more than cover the situation and it might be necessary to set up three or four areas.

Mr. Strong. I thought you said you would confine it to 12 trade

Mr. Pole. I made no such suggestion as that.

Mr. Strong. Who would determine whether they could extend outside of the trade areas?

Mr. Pole. The law would cover the extent to which branch banking might be extended.

Mr. Strong. What is the objection to extending them from one

trade area to another.

Mr. Pole. I should like to see the trade areas limited to the point where each important center would develop its own branch system and in an orderly manner without permitting any bank to cover the entire country with branches, even if it were so disposed.

Mr. Strong. Then you would only have branch banking groups

in each trade area?

Mr. Pole. Radiating from a central point.

Mr. STRONG. How would you prevent holding companies from get-

ting control of all these trade area branch banks?

Mr. Pole. The probabilities are that the holding companies would disappear if they were given the greater advantage of being permitted to operate branches instead of members of a group.

Mr. Strong. You think it would have a greater advantage?

Mr. Pole. I think the operating advantage would be sufficient

Mr. Strong. What do you mean by "greater advantage"?

Mr. Pole. I said "operating advantages."

Mr. STRONG. Yes. Well, what do you mean by that?

Mr. Pole. Under the present system a unit bank has to keep an entire board of directors and full set of officers.

Mr. Strong. I am talking about the danger of group banking or a holding company getting possession of all the trade areas and you say that you hope to build up strong enough branch banks in each of the trade areas, so that there would be no incentive for that.

Mr. Pole. I do not quite understand your question. I think that it was the suggestion there should be some regulation as to how far groups should be permitted to consolidate or branch banking systems should be permitted to consolidate.

Mr. STRONG. Why?

Mr. Pole. So that their operations could be confined to their own trade areas and not extend all over the country.

Mr. Strong. What is the objection to extending all over the

country?

Mr. Pole. I do not think anybody is advocating nationwide branch banking for the moment. It is looking entirely too far ahead-

Mr. Strong. When we passed the McFadden bill, the Comptroller of the Currency thought it would be sufficient to limit the branches to the city in which the parent bank was located. Now the Comptroller of the Currency says we should establish 12 trade areas.

Mr. Pole. You keep referring to 12 areas. I did not limit it to 12

trade areas.

Mr. Strong. Now you believe in extending the branch banking to cover the different trade areas?

Mr. Pole. Yes.

Mr. Strong. Now, would not the same desirability of enlarging the system apply if somebody would urge that it should be made nationwide branch banking?

Mr. Pole. I would not be in favor of that. It is on entirely too large a scale and would present operating difficulties which I do not know whether the supervising authorities would be in a position to

cope with.

Mr. Strong. When we discussed the McFadden bill we had a great deal to say about getting the nose of the camel under the tent as far as branch banking was concerned and some of us thought it could be limited, if it was an evil, and it was generally admitted that it was an evil—be limited to the city in which the parent bank was located. They said that the State banks in the larger centers were putting in branches, which embarrassed the national banks, but if the national banks were permitted to have branches in the cities where the parent banks are located, that would meet the situation. Now, your suggestion is that we extend the range of branch banking to trade areas and it seems to me that the same argument will eventually lead us into favoring an extension of branch banking so that it will be nation-wide. What would be the objection to nation-wide branch banking?

Mr. Pole. If nation-wide branch banking were permitted by Congress it might create a condition where large banks might establish branches all over the country without respect to the natural flow of trade to any central community, in addition to which the operating difficulties would be so great that the supervisory authorities will have

trouble in coping with it.

Mr. Strong. You have no fear of a money and credit monopoly if you had nation-wide branch banking?

Mr. Pole. I am so far from thinking that nation-wide branch banking would ever be permitted, that I have not given a great deal of thought to what might happen under such a system.

Mr. Strong. Would not that be one danger if we had nation-wide

branch banking?

Mr. Pole. I say I have not given a great deal of thought to such a contingency as nation-wide branch banking. I do not think it will happen for years to come.

Mr. STRONG. Chain banking is extending and becoming nation

wide?

Mr. Pole. I am not advocating it.

Mr. Strong. I thought you said a moment ago that as a step to

branch banking it might be advisable.

Mr. Pole. I said that group banks might have some characteristics which are desirable as a step toward branch banking, but not as an ultimate system.

Mr. Strong. How do you regard chain banking? Mr. Pole. I am not in favor of chain banking.

Mr. Strong. You are only in favor of group banking as an ultimate step toward branch banking?

Mr. Pole. I said it might possibly make the inauguration of

branch banking more orderly.

Mr. Strong. When you cover a trade area with branches, would there not be the tendency toward a monopoly in that trade area of

money and credits?

Mr. Pole. I do not see why there should be any greater monopoly in a trade area than there is in banking now. If branch banking were permitted, the big banks in any metropolitan center would take advantage of such an opportunity and would be just as much in competition with each other as they are to-day.

Mr. Strong. Do you think there is much competition in banking

in the northern part of California to-day?

Mr. Pole, Yes.

Mr. Strong. You think there is much competition between the independent banks and the Bank of Italy?

Mr. Pole. I think they are competitors; yes.

Mr. Strong. Has it not been the history of the Bank of Italy that it has absorbed whatever bank it wanted and forced that absorption?

Mr. Pole. There are numerous towns in California where the Bank of Italy operates side by side with a unit bank.

Mr. STRONG. But they generally force the unit bank to sell out to

them if they want it?

Mr. Pole. I say there are plenty of instances where they operate

side by side and do not force them to sell out.

Mr. Strong. They may have an agreement. Is it not a fact that the Bank of Italy have forced banks to sell out to them in numerous instances?

Mr. Pole. I am not informed of that.

Mr. Strong. There have been instances of that right in Washington, have there not?

Mr. Pole. Not that I know of.

Mr. Strong. Let me call your attention to the fact that a man by the name of Savage, one of the old and experienced bankers, had a bank at Columbia Road and Eighteenth Street, and one of the banks in Washington put in a branch within half a block of him, and being unable to buy or force him out of business, purchased the land at the back of his bank and announced they would build an immense bank overtowering his bank and finally forced him to sell out against his will. That is true, is it not?

Mr. Pole. I do not know about those facts.

The CHAIRMAN. Will you yield to me?

Mr. Strong. Yes.

The CHAIRMAN. You spoke a moment ago to the effect that you were not in favor of chain banking. Will you state your reasons why? Mr. Pole. I have already defined a chain bank. The particular danger is that if a member of a chain fails, it drags with it the entire chain.

The Chairman. Under those circumstances, then, in view of that statement, should we permit membership in the Federal reserve system of chain banking, where it is operated by a bank in the Federal reserve system?

Mr. Pole. That would be a matter, I think, Mr. Chairman, for the

Federal Reserve Board to cover, would it not?

The Chairman. Well, you are ex officio a member of the Federal Reserve Board.

Mr. Pole. But I am not authorized to speak for the board.

The Chairman. You are in charge of examinations of all national banks and many national banks are now owned and operated by chains. These banks are being operated under your supervision and you have already expressed the difficulties which you encounter in the examination of these banks where they are intermingled with other companies and control and you have said that you should have authority to examine these affiliated companies. I think, under the circumstances, you are the proper one to answer that question.

Mr. Pole. Chain systems of banking are frequently composed of both State and national banks. The national banks are, perforce, members of the Federal reserve system and as to whether or not it should be denied such affiliation because its stock is owned by an individual or group of individuals, is a question which I would not be prepared to answer now. The question would seem to involve, possibly, the expulsion of a national bank from the system because it was a member of a chain.

The Chairman. Well, if a national bank was violating methods in its operation which tended to endanger the security and perhaps cause the failure of that bank would you not as comptroller, feel justified in taking drastic action?

Mr. Pole. I would not say chain banking is operating in any

sense illegally. The law permits it.

The Chairman. You just said its existence is a dangerous situation.

Mr. Pole. Did I say that?

The Chairman. The reason I am asking these questions is that this question of chain banking has been considered in this country for many years, and in some instances, it has succeeded, where it was in strong hands, and in other instances, where it was in weak hands, it has failed, and caused great suffering and disaster.

Mr. Pole. Yes.

The Chairman. There are a great number of chain banks in operation to-day. It is very difficult to know whether they are strong hands or in weak hands. I have no doubt there are some

in the hands of people who are not as capable as they should be in operating such institutions. Exploitation may be taking place but national banks are involved in those chains. I think it raises a very serious question in regard to the future conduct of banking in the United States, as to whether we are going to permit our national banks to be tied up in chain banking and I would like to know your frank opinion in regard to it.

Mr. Pole. Personally, I am not in favor of it.

The CHAIRMAN. Well, one way to prohibit it would be to deny the national banks that are parts of chains the right to continue as members of the Federal reserve system. Don't you think, if the continuation of such a system endangers national banks, that drastic action should be taken?

Mr. Pole. I should like to see some legislation which would pro-

hibit the operation of chain banks.

The Chairman. Do you know of any legislation that could be enacted that would be more effective than to forbid them membership in the Federal reserve system?

Mr. Pole. That, of course, would not prevent a chain of banks from

operating outside of the system.

The CHAIRMAN. But it would protect the national banking system.

Mr. Pole. Yes.

Mr. Fort. May I ask a question right following your line, Mr. Chairman?

The CHAIRMAN. Yes.

Mr. Fort. Mr. Pole, don't you feel that if we recognize definite abuses anywhere in the system we should proceed to correct them even though that involved unscrambling some things that have already happened?

Mr. POLE. I do.

Mr. Fort. And following up Mr. McFadden's question further, have we not, in addition to the power of debarring from the Federal reserve system, a still more potent weapon, the right to prohibit any bank to clear checks that violate our theory of sound banking?

Mr. Pole. I imagine that would be possible.

Mr. Strong. In view of the fact it is common knowledge that wherever chain banking or group banking or branch banking is permitted, it is spreading very rapidly, do you not believe that if your system of establishing branch banking in trade areas is permitted, that eventually, inside of those trade areas will be only one or perhaps two groups of branch banks?

Mr. Pole. Legislation might be enacted to prohibit two free con-

solidations of banks, eliminating competition thereby.

Mr. Strong. Then you believe it would be dangerous if but one or two groups of branch banks were established in the country?

Mr. Pole. I am not in favor of a banking monopoly. I would like to see a continuation of banking competition.

Mr. Strong. How are you going to prevent it under your system?

Mr. Pole. My system?

Mr. STRONG. Under the system you propose, I mean.

Mr. Pole. I think that that might be taken into consideration by Congress through legislation preventing consolidations of such groups.

Mr. Strong. But there would be no groups established until after we created a trade area. For instance, in California, will we say we will tear down the Bank of Italy's branch banks and reduce them.

Mr. Pole. I do not think the law would be retroactive.

Mr. Strong. Do you think there could be any hope of building up another group that could compete with the Bank of Italy?

Mr. Pole. There is more than one group that competes with the

Bank of Italy in California.

Mr. Strong. I understand they had an understanding between the group in Los Angeles and the group in San Francisco, under which the Bank of Italy would take the northern part of the State and the group in Los Angeles would take the southern part of the State, but when I was out there some time ago, there was a great deal of excitement when the Bank of Italy bought a bank in Los Angeles in alleged violation of the agreement.

Mr. Pole. I know nothing of such an agreement, but outside of the Los Angeles group there is a very strong competition out of San

Francisco itself.

Mr. Strong. There are a few strong banks, of course.

Mr. Pole. I am talking about a single very important branch banking system.

Mr. Strong. How many branches have they?

Mr. Pole. They are in keen competition with the Bank of Italy, as far as I am informed, with considerably more than 100 branches.

Mr. Strong. Do they extend out into the rural districts?

Mr. Pole. Yes.

Mr. Strong. Outside of the towns adjacent to San Francisco?

Mr. Pole. Yes.

Mr. Strong. Then, your idea is that there would be competition between branch banks in the trade areas?

Mr. Pole. My idea is that I would see to it that there was competition by preventing too free consolidations of groups and large banks having branches.

Mr. Strong. If you think it necessary to give them the extent of territory that a trade area would make, it would necessitate having a very large number of branches?

Mr. Pole. That is true.

Mr. Strong. All right, now. You mean you would say to one branch banker, "You must have a branch in this town, but the other branch bank group can not?"

Mr. Pole. Not at all.

Mr. Strong. How would you prevent a final working out of a

monopoly?

Mr. Pole. I doubt, in the first place, whether that would be very much to be feared, because I think that there would be sufficient opportunity in the banking business for certainly more than one bank and the chances are there would be sufficient opportunity for a number of banks in a large town, as there is now and the mere fact that the banks were given the privilege of branches would not diminish the number of important units in metropolitan centers.

The Chairman. Suppose the First National Bank of New York the Chase National Bank of New York and the National City Bank of New York should decide to merge or consolidate: Could that be

done without your permission?

Mr. Pole. It could not.

The CHAIRMAN. What would be your attitude, for instance, following up that hypothetical situation, and the question Mr. Strong has asked you, if, say, those three banks should want to consolidate? Would you approve or disapprove?

Mr. Pole. I would not express any opinion on that now. When we have a request for consolidation we look into all the facts and circumstances and our decision is determined upon our findings.

Mrs. Pratt. May I just ask one question in connection with Mr.

Fort's questions?

The CHAIRMAN. Yes.

Mrs. Pratt. How can you debar a national bank from the Federal reserve system just because it is a member of a chain banking group if it complies with the regulations, because, of necessity, it is no longer a national bank if it is not a member of the Federal reserve system?

Mr. Pole. That is correct.

Mrs. Pratt. How would you proceed?

Mr. Pole. There is no way under the present law. A national bank is, perforce, a member of the Federal reserve system.

Mrs. Pratt. You can not debar them unless you find something

wrong with the particular bank?

Mr. Pole. You could not even then, as long as it held its national charter.

Mrs. Pratt. Unless it ceases to be a national bank-

Mr. Pole. It would remain a member of the Federal reserve system. If it ceased to be a national bank it would become a question of whether or not it would be eligible or wish to come in as a State

Mr. Fort. It could be done by an amendment of the law.

Mr. Letts. How could you accomplish it?

Mrs. Pratt. You would have no jurisdiction over a chain bank unless it be a member of the present Federal reserve system?

Mr. POLE. No.

Mrs. Pratt. And you can not differentiate between the national banks?

Mr. Pole. No.

Mrs. Pratt. A national bank would cease to be a member of the chain system if it is not a member of the Federal reserve system?

Mr. Pole. Yes. Mrs. PRATT. And that could not be changed without changing the law?

Mr. Pole. No.

The CHAIRMAN. While it is 1 o'clock, the House has adjourned, and I am informed by Mr. Strong that he can finish within a few minutes. I think we had better let Mr. Strong proceed.

Mr. Busby. Before Mr. Strong proceeds, may I ask a question?

Mr. Strong. Go ahead.

Mr. Busby. Do you know of any national banks whose stock is held or a majority of whose stock is held or controlled by a holding corporation?

Mr. Pole. Yes.

Mr. Strong. As I understand it, your position would be that as comptroller, you would seek to restrict branches in the trade areas from forming a monopoly through competing with and forcing independent banks to sell out to them?

Mr. Pole. I do not know of any way in which a bank can be forced to dispose of its stock. It would not require any legislation for that. I can not conceive of any Comptroller of the Currency authorizing the establishment of a branch in a town or a community where independent banking was supplying all the banking needs of such a community.

Mr. Strong. Well, they allowed a branch bank to be placed on Eighteenth Street within a few hundred feet of a bank that was satis-

factory to the people there.

Mr. Pole. Of course there is a lot of difference between what I intended to convey to the committee when I spoke of branch banking in the rural communities, and what you speak of, which is city branch banking. In the city branches are more in the nature of a convenience to the bank's clients and has no reference to the safety of a small bank.

Mr. Strong. That is true. Of course I am opposed to branch banking because I fear a monopoly of money and credit. Especially do I think such monopoly will work against the agricultural States, and if permitted, I think it will finally dominate and control the Government, just as the Second United States Bank did when it forced a bill for the renewal of its charter through Congress by loaning money to Members of Congress and to the newspapers, and would have succeeded but for the veto by Andrew Jackson. I am afraid of any monopoly built up by group or chain or branch banking. I believe it would have more power than the Government.

Mr. Pole. Has there been a monopoly of banking in countries

where branch banking is in effect?

Mr. Strong. I have been told that there is. I was in Canada once when a gentleman, who was in the manufacturing business, told me that they had forced his private bank out of existence through a branch bank and then declined to extend credit to him. That was a monopoly in that town; so much so that he sold his business. He was forced not only to sell his interest in the bank, but his interest in the manufacturing concern, because his competitor was interested in the branch bank.

Mr. Pole. In a very large number of towns in Canada there are not only two branch banks, but three and four competing keenly

with each other.

Mr. Strong. That may be, but here we have unit banks and then a branch banking group comes in and forces those unit banks out of existence in order to get control of the banking in that community. That was done in the building up of branch banks in California by the Bank of Italy. I had a banker out there tell me he had a bank that he operated a great many years and raised a boy and sent him to school with the purpose of having him succeed him and there came an offer to buy from the Bank of Italy and he refused. They then said they would put a bank building alongside him and they went so far as to buy a lot near him and still he refused. Then one day some men walked in and said, "We have purchased the accounts of your customers and we want the money right now." Being unable to comply, he sold his bank. I can not say whether that is true, but the man was vouched for by his friends as a thoroughly reliable man. I am pointing out a condition that might arise.

How will you prevent a final monopoly of banking in trade areas where you permit branch banking? Will the comptroller step in and forbid that kind of business?

Mr. Pole. Why should there not be legislation on that point?

Mr. Strong. Without legislation— Mr. Pole. I think it would be extremely undesirable if any single bank were permitted to monopolize the banking business of any area or section of the country. I am perfectly in accord with your idea.

Mr. Strong. We had a law restricting the branch banking to the city where the parent bank was located. Unable to violate that law they started group banking systems and they are doing indirectly what the law prevented their doing directly.

Mr. Pole. Not under the national law. They are being formed

under State laws.

Mr. Strong. But you can not pass laws which will provide in every case where a branch bank shall or shall not be established.

Mr. Pole. If you will leave that to the discretion of the comptroller, as far as I can speak for myself, there would be no monoply. It might be, Mr. Strong, that in giving consideration to this question. you might say that the discretion should be in the comptroller and possible with some other officials, with the idea of carrying out a national policy governing the consolidation of banks and preventing monopoly in banking.

Mr. STRONG. From your testimony I am quite willing to believe that if you were the comptroller you would try to prevent the establishment of a monopoly in branch banking. I believe you would,

but how about the next comptroller?

Mr. Pole. He might have a different view?

Mr. STRONG. He might believe a monopoly would be the right thing.

Mr. Pole. That is true.

Mr. Strong. A comptroller, for instance, came before this committee several years ago and made a positive statement against branch banking and yet you now come before us and favor it.

Mr. Pole. Yes. Mr. Strong. Suppose these trade areas would be established, in which branch banking would be permitted, and they would finally dominate the banking interests in that district-would there be any use of the Federal reserve system after they so controlled? Mr. Pole. Oh, there is no question in my mind but there will

always be use for the Federal reserve system.

Mr. STRONG. Would not they dominate and control the Federal reserve bank in their trade areas?

Mr. Pole. Undoubtedly to an extent.

Mr. STRONG. Then, they would virtually, in fact, be the Federal

reserve system?

Mr. Pole. I am filing a brief, if you recall, on that very question. as to the possibilities or probabilities of members of a chain being able to elect directors of the Federal reserve bank of its district, which will cover that.

Mr. Strong. And there would be that possibility?

Mr. Pole. It might be theoretically possible, but, as a matter of practice, quite unlikely that it would happen.

Mr. Seiberling. The comptroller referred a few moments ago to countries having branch banking. I wonder if you could tell us the countries having nation-wide branch banking.

Mr. Pole. England and Canada are two of them.

Mr. Strong. I believe I have no other questions. I will put into the record at this point, as I have suggested to the chairman, the statement of former Comptroller Dawes, made to this committee, in opposition to branch banking.

(The statement referred to is as follows:)

You have invited me to express my views to your committee doubtless for the reason that as Comptroller of the Currency I have general supervision over the national banks. I wish to state clearly at the outset that the statements which follow are made by me solely upon my responsibility as Comptroller of the Currency. They are not intended in any way to represent the views of

the Federal Reserve Board of which I am a member ex officio.

With your permission I shall confine my discussion primarily to the subject of branch banking—the outstanding problem in our banking system to-day. On the side of the National Government this question is simultaneously before the Federal Reserve Board and the comptroller; before the board in the matter of the extension of branch banking by the State member banks in certain States, and before the comptroller as a question of preserving the integrity of the national banking system in those States. Since the national banks constitute the backbone of the Federal reserve system, it becomes necessary therefore for me as comptroller, in this discussion, to refer to the situation before the Federal Reserve Board.

The organization of the Federal reserve system was possible because of the power of the National Government to enforce the cooperation of the national banks. At its inception it was primarily an instrumentality of coordination, imposed upon the existing national system. At the present time, of the 31,000 banks in the United States 9,916 are members of the Federal reserve system, and of the members of the Federal reserve system 8,292 are national banks. The assets of the national banks as of June 30, 1923, were \$21,511,766,000, as compared with the assets of the State member banks amounting to \$12,293,

124,000.

The national bank act does not permit national banks to engage in the exercise of general banking functions beyond the limits of the municipalities in which they are located. They can not, therefore, enter the general field of branch banking. These elementary facts are stated in order to bring out the obligation of the

These elementary facts are stated in order to bring out the obligation of the Federal reserve system to the national banks, and the extent to which the Federal reserve system is dependent upon the national banking system. Except for the national banks the Federal reserve system could not have been organized, and if a conditions is permitted to develop which should seriously and permanently eripple the national banking system it would be a direct and possibly fatal blow

to the Federal reserve system.

The development of the American banking system has been an evolutionary process, and the preeminent strength which it possesses in world finance at the present time is in large measure due to the fact that it took its form in a gradual and orderly way, meeting by practical adjustment conditions as they developed. It is distinctly not an adaption of any foreign system nor is it a structure conceived and built by any individual or group of individuals at a given time involving the rigid enforcement of a ready-made theoretical plan. Under our system of banking, the most stable and most rapid economic development that the world has ever seen has taken place.

From time to time efforts have been made to substitute for the old machinery a system which might seem to be theoretically and technically more perfect. The frontal attacks of the proponents of foreign banking systems have invariably broken down without, in any substantial manner, permanently modifying or affecting the general principles of American banking. The genius of the American people for independence in matters of local self-government is thoroughly ingrained and will never succumb in any clean-cut issue where the choice rests between centralized control and personal and community independence.

At the present time no direct or open attack is being made on these traditional principles. The danger which confronts our present banking system lies in an insidious and gradual undermining influence which is not so much the outgrowth of a conscious effort to introduce a new system as it is the result of a natural desire

to secure temporary benefits for particular individuals and banking institutions without consideration being given as to the ultimate effects on the highly complicated and efficient machinery of American finance and exchange. It is peculiarly a time when these indefinite tendencies should be precipitated into their essential

If a new system and theory of banking is in progress it should be determined whether or not it is a desirable system, and if a desirable system it should be encouraged, fostered and put into effect as rapidly as possible. If it is not a desirable system that fact should be developed and steps should be taken now to eradicate it before a condition has developed which would involve a great national disturbance and injustice to individuals and communities.

The above remarks are intended to apply to the general subject of branch nking. By branch banking I mean an association of banking houses operating banking. in one or more cities or towns but all under the discretionary control of the board of directors of a parent bank and upon the capital of such parent bank.

Unless the State member banks enter into branch banking there is, in my judgment, no material divergence of interests between the State and national banks. If, however, State member banks engage in unlimited branch banking it will mean the eventual destruction of the national-banking system and the substitution for it, and eventually for the Federal reserve system, of a privately owned and highly centralized financial control of the banking machinery of the United States.

It is this belief which impels me to discuss at some length present tendencies in branch banking, and if the interest of your committee is largely centered on the status of nonmember banks it is proper to say that these nonmember banks are almost entirely independent unit banks and any substitution for the present system would have as vital an effect on their future as it would have upon the member banks and on the old independent unit banking operations of the nationalbanking system.

In support of the general contention that the principle of branch banking has been carried to such an extent as to constitute a definite trend in certain localities

the following facts are submitted:

Branch banking is permitted with various modifications in the following 18 States: Arizona, California, Delaware, Georgia, Louisiana, Maine, Maryland, Massachusetts, Michigan, Mississippi, New York, North Carolina, Ohio, Oregon, Rhode Island, South Carolina, Tennessee, and Virginia.

The laws of some of these States restrict the establishment of branches to the city or county of the location of the parent bank, while others permit branches to be established in any part of the State. In California, for example, 82 of the State banks are operating a total of about 475 branches. In that State, one bank operates 28 branches, one bank 19 branches, another about 71 branches in 48 different cities, another about 72 branches. Four banks in California operate a total of 190 out of the 475 branch banks in the State. In the State of Massachusetts, chiefly in the vicinity of Boston, State banks and trust companies are operating several hundred branches. In the State of Michigan upward of 300 branches of State banks are in operation. In the city of Detroit 14 banks are operating about 200 branches and there are in Detroit only three national banks left in operation. In the State of New York about 251 State banks are operating branches. In the United States to-day it is reported that 517 State banking institutions have in operation 1,675 branches.

The figures used above are not intended to be authoritative or complete, and are used only for the purpose of illustration. They are, I believe, sufficient to indicate that the issue has long since passed the theoretical stage and has reached

the status of a practical condition.

Granting that a State legislature may properly enact legislation permitting the local State banks to engage in branch banking, the larger questions remain, first, as to the effect of such legislation upon the national banks operating in such States under the national bank act as administered by the Comptroller of the Currency, and, second, the effect upon the Federal reserve system of admitting to or retaining in membership such State banks engaged in branch banking.

In view of the facts stated above I may safely say that branch banking already

exists in the United States, and that it is distinctly a practical and not a theoret-

ical issue.

The discussion of branch banking seems naturally to divide itself into three

main questions:

First. Is a reserve system, either governmentally or privately controlled, necessary?

Second. Can the present Federal reserve system survive the imposition upon it of large and powerful chains of branch banks which, in practice as well as in theory, are privately owned and privately controlled reserve systems?

Third. Can a general system of branch banks exist simultaneously with a

system of independent unit banks?

If it should be concluded, in the consideration of these questions, that the Federal reserve system is necessary and that it can not survive the strain upon it of systems of branch banks, and that branch banks will mean the elimination of independent banks, it will then, I believe, be a logical and necessary conclusion that the issue is a clean-cut one as to whether the country prefers a system of privately owned branch banks or a reserve system under Federal control.

As to the first question, namely, the necessity for a reserve system, it seems hardly necessary, in view of the record of the existing organization, to enter into any extended arguments, but it would, perhaps, be well to state some of the basic considerations on account of which it was given its present form. The principle of a central bank has been a controversial one for over a century. deference to the widespread and thoroughly American distrust of the centralization involved in a single Government bank 12 banks were established in different sections of the country in order to secure the closest possible contact with the local member banks and a thorough understanding and adaptability to community conditions. Through the operations of the 12 individual units a proper sympathy with an understanding of local conditions and needs is secured, while at the same time, through the Federal Reserve Board, a liaison between the districts is secured and the detachment necessary for a proper compromise between local interest and national policy. Through the Federal reserve system the transfer of funds from points of surplus to points of deficit is accomplished with the primary purpose of promoting the best interests of the whole country and not with a view to enabling individuals or sections to reap a financial advantage at the expense of others. If it were assumed that the instrumentality for the transfer of funds could be provided by a private reserve system, such as a branch banking institution, it could hardly be fairly contended that the controlling influence would be other than profit. Necessarily, in adjustments of this kind the interests of a branch bank or individuals must be private profit and not public welfare.

The whole Federal Reserve System bears a very striking analogy to the general principles which underlie the American Government, being founded upon a system of checks and balances calculated to preserve local independence under centralized and coordinating control. It would be so distinctly a step backward and so manifestly a dangerous proceeding to destroy the regulated cooperation of banking facilities that it seems to me entirely unnecessary to discuss further the necessity for some sort of a reserve system, and the issue is, should it be done

by governmental coordination or private centralization?

The second point referred to, as to the ability of the Federal reserve banks to survive the imposition upon the system of large privately controlled reserve systems, is a practical one which at the present moment faces the Federal Reserve Board. The question as to the duties and rights of the board to interfere in the extension of a system which, in the opinion of many might contain the seeds of a development which will mean the eventual destruction of the Federal reserve system, is by no means a simple one, either legally or from the standpoint of policy. The board, however, clearly has the moral and legal right to refuse admission to the system of any institution which either because of its financial condition or the method of its operation is unsound, and it has the same right to deny the privileges of the Federal reserve system to a member bank under similar conditions. It is reasonable to assume that a bank, for administrative purposes, might safely control 10 branches; but the same bank under American conditions might not, in safety to its depositors and general creditors, operate a thousand branches. If the Federal reserve system takes a neutral position on the general issue of branch banking and refuses to sanction the admission to the system or request the withdrawal of banks which are operating more than a safe number of branches, they will be faced continually with decisions of a highly controversial nature and which are not susceptible of reduction to elemental formulæ. The local situation, the personal equation, the temporary financial conditions, and a thousand and one conflicting influences will have to be balanced and considered in every application for a branch. However wise their decisions the board will, of necessity, frequently appear to be arbitrary and improperly partisan. The publication of their reasons for action in particular cases would frequently be productive of injustice to the individual applicant and disturbance to the financial community. If the reasons for decision in these

matters were not made public, in my opinion, the system would be subjected to such attacks and insinuations as would eventually seriously impair its standing and be destructive of its dignity and influence. In order to avoid these consequences the board has it in its power to adopt a general policy of clarification and control.

The elementary considerations which I have stated above and purpose to elaborate further seems to me to justify a decision on the part of the authorities to limit definitely the extent to which member banks may indulge in the estab-

lishment of branch banks.

As a practical consideration, aside from the broader aspects of the case, it must be constantly borne in mind that the Federal reserve system can only be successfully maintained if the administrative authorities have an adequate knowledge of the conditions of the member banks. This necessitates examination, which, in the case of the national banks, is provided by the Comptroller of the Currency. National banks can not engage in banking beyond the limits of the city in which the institution is located. In the examination of State banks the Federal reserve system is compelled to rely on its own examiners and such incidental and voluntary assistance as it can secure from the various State

The examination of an institution with branches and subsidiaries is a very difficult one. The interdepartmental relationships vastly complicate it. It is more difficult to examine 10 institutions of a given size which are associated in a branch banking system than it would be to examine 10 independent institutions, as all of the transactions between the different branches have to be investigated, and eliminations and adjustments made to produce a composite picture and prevent the improper manipulation or shifting of assets. This can not be done satisfactorily without a simultaneous examination of parent band and each one of the branches. This may be construed as an ex parte statement, but it bears the weight not alone of my individual opinion but of the employees of the comptroller's office who have been engaged in the examination of banks for many Bank examination involves very much more than a mere scrutiny of Questions of moral character, of local reputation, of valuations of securities, of conformity to laws and rulings - these and many other elements enter into a proper examination. In the case of the examination of a very large bank, say with 75 to 100 branches, it would be impossible to mobilize a force of examiners of the ability to make an intelligent analysis of the situation in each individual community even if it is to be assumed that the character of the banker is not a factor in the condition of the institution.

The last stated considerations are incidental as compared with the more important one which involves the ability of the Federal reserve bank to meet the mobilization demands of an association of institutions under the control of a single interest having the power to concentrate the requirements of all of the separate institutions into one demand. This demand might be made practically without notice in a period of stress, on account of necessity or with a desire to produce a certain condition in the community which might be opposed to the general interest but favorable to that of the particular institution. To say that if a large proportion of the banking interests of a State are centralized in the hands of five or six or a dozen branch banking institutions and that these institutions will not combine, either as a result of direct conferences or agreement or of mutuality of interests, is to ignore the fundamental basis of human action. If any lessons are to be drawn from the development of large industrial enterprises in the United States it is that the principle of centralization, when once inaugurated, will proceed, unless interfered with by governmental action, to a point of complete concentration in an individual, or a group dominated by an individual. Should a situation of this kind develop in any Federal reserve district the Federal reserve bank would either be eliminated as a factor in the financial community or

be virtually under the control of such a group.

As to the question of whether or not it is possible for independent unit banking systems to exist and operate in conjunction with a branch banking system, very definite conclusions may be drawn from the results of the operations of branch

banking systems in other countries

Branch banking is in vogue in England, Scotland, Ireland, Canada, Australia, New Zealand, France, and other parts of continental Europe. I understand it is also in operation in the Latin-American countries. According to figures published in the bulletin of the American Institute of Banking for July 1923, in 1842 there were in England 429 banks and in 1922 only 20 banks, of these 20 banks, 5 controlled practically all of the banking of the nation. There are about 7,900 branches in operation. In Scotland there are only about 9 banks with about 1,400 branches, and in Ireland about 9 banks with about 800 branches.

In 1885 in Canada there were 41 independent banks. Under the operation of branch banking, the number was reduced to 35 by the year 1905. I am informed that in Canada to-day there are only 14 banks, operating about 5,000 branches. There are no independent unit banks in western Canada, in fact none west of Winnipeg. Banking control through the branch system is concentrated in the cities of Montreal and Toronto.

It has been authoritatively stated that there are only 6 unit banks in New Zea-

land, and 20 in Australia. (See Statesman Yearbook for 1923.)

Experience in other countries definitely indicates that independent unit banks do not exist parallel with branch banks. As indicating that this is not necessarily due to conditions which exist abroad, but might not exist in the United States, the following points are adduced, which to my mind, show that there are such inherent antagonisms between the two systems that they could not, under any

circumstances long operate together in the same country.

Branch banking is, in its essence, monopolistic. The financial resources of a number of communities are put under the control of a single group of individuals. Funds liquidated in one community may be used to develop other communities at the discretion of the officers of the central bank. The economic development, therefore, of a given territory under the control of a branch would depend upon the policy of the bank. The bank would have the power to retard or to encourage the development of a given community or individual enterprise. In this connection it has been well said that if the sudden creation of great branch banking systems shall result in withdrawing funds from the support of rural communities in order that they may be invested in self-liquidating commercial paper originating elsewhere, then it will be true that sound abstract banking principles will have been applied, but at a cost to the future development of the rural communities

that will far outweigh any advantages that may be gained.

In a system of independent unit banks, the bank which best serves the community is the bank which is most certain to live the longest and be the most profitable to its stockholders. Since the type of man who starts a bank in a small community is essentially constructive, his natural associations and sympathies are with men of constructive type, and he extends the facilities of the bank most liberally to them. His loans take into account as a first consideration character and moral responsibility. He is naturally inclined to encourage young, aggressive, and enterprising individuals who will, in the course of time, bring business to the institution as he succeeds, and will develop commercial and industrial enterprises and be a factor in the creation of corporate and private undertakings, all of which will be feeders to the bank. As this type of individual is usually not the possessor of high-class collateral at the beginning of his career, the banker is dependent in a large measure on the character, of which he can only be sure by personal contact and acquaintance.

The distinctive accomplishment of the banking system of the United States is its contribution to enterprise and its stimulation of growth; its criterion is service.

The European standard is safety first, last, and all the time.

It can well be said that the rapid economic development of America has been largely due to the policy of the pioneering unit banks which recognized this principle of service. It is inconceivable that the representative of a nonresident board of directors should be granted the authority and the discretion to make a type of loan which is based on character, knowledge of local conditions, and ultimate benefits to be realized by the community and by the banks. While it requires a high order of ability to make this class of loan, the banking history of the United States would show, in the main, a surprisingly small mortality. These loans, however, on account of their small size in individual cases, and difficulty of ascertaining their intrinsic value, do not afford a basis for discount with other banks in case of stress, and no bank could exist if it were dependent entirely upon them. If, across the street from the unit bank making this sort of loan, were the agent of a great branch banking institution, this agent would very quickly acquire the larger and from the narrow banking standpoint, the desirable business of the town. This he could do by offering lower rates of interest on loans and higher rates on deposits than local conditions would ordinarily justify, which, in the nature of the case would probably be withdrawn as soon as the independent unit banks of the town were finally eliminated. This is a process which has been pursued in the evolution of our great industrial enterprises which have had to be curbed by the action of the Sherman antitrust law and other governmental action.

The opportunities for coercion on the part of large institutions with branches scattered over a whole State are very great. This coercion might take any one of a number of forms. The connection of the branch banks with out-of-town customers of the institutions of a community permits of pressure being readily

brought.

Under the Federal reserve system, and through his relations with his correspondents, the competent unit banker is able to secure for the larger customers of his town facilities which are beyond the abilities of his own institution to The branch banker can, in the case of every large customers, grant these facilities more directly and to that extent is rendering a special service to the community, but the ultimate result of these influences is to give the easiest obtainable and most desirable business to the branch bank, leaving the unit bank to take care of the enterprises of the town which have not already reached a condition of independence.

The expression has been used as applied to one State where branch banking exists on a large scale that the branch banks skim the cream and the unit banks are left with the skimmed milk, the result being that the unit banks have gone out of existence and the borrower who is a good moral risk but can not produce a certain form of collateral is left to depend on the good graces of a representative of a branch bank who is frequently the possessor of all the discretionary powers

of the local railroad agent and no more.

One of the monopolistic influences exerted by the branch banker is the ability to secure, by the payment of higher salaries, the transfer to other points of the efficient employees of the unit banks. A general procedure in the creation of branch banking systems in one of our American States has been the absorption of local unit institutions. During the first few years the operations of these local unit institutions have, in many cases, been successful because the enterprising and pioneering talent that created the bank is still retained in an official capacity, but men of this type will not long consent to hold positions which are, in their essence, merely advisory and there is soon substituted therefore the type of employee who must be bound by rigid instructions and is capable of interpreting them in only a mechanical way. In case of an acute financial disturbance demanding immediate action it is necessary for the representative of the branch bank to refer back to the head office for instructions as to his course of action, and a delay is occasioned by red tape which frequently makes it impossible for them to help in an emergency, even when they have the desire.

The relations of the national bank to operations in branch banking have been the subject of a very widespread misunderstanding. In order that the situation might be clarified and defined, the present comptroller requested an opinion of the Attorney General which has just been handed down. A previous opinion given by Attorney General Wickersham was to the general effect that a national bank might not de novo establish a branch bank. The present opinion from the Attorney General makes it clear that none of the major or important incidental functions of a national bank may be exercised beyond the limits of the city in which the parent institution is located. This opinion also indicates that certain functions of a national bank, incident to the banking business, may be be carried on at fixed points within the city limits and outside of the four walls of the banking house. This opinion is not inconsistent with that of Attorney General Wickersham, and the practical application which will be made of it will be that certain national banks will be permitted to establish what are virtually tellers' windows in places more or less removed from the banks, but in the city limits, where they may take deposits and eash checks. The discretionary powers which are inherent in such transactions as making loans, purchasing securities, and similar activities will not be permitted to be carried on in such offices located at a distance from the parent institution.

It seems to me unnecessary at the present time to do more than make the above reference to the legal situation. The force of the opinion of the Attorney General just handed down would as a practical matter remove the national banks from the branch bank controversy since a national bank can not engage in the banking business outside of the city limits of its location and inside of the city limits it may under certain conditions perform only limited functions at a dis-

tance from the banking house.

I am of the opinion that the comptroller could not properly permit the establishment of these outside activities by a national bank, such as teller's windows, in any locality where the State laws or practices prohibit the State banks from

rendering similar services.

Authorization to national banks to establish such additional offices will be of great advantage in certain localities where the State banks are already extending their services in this manner. In such cities as New York, Cleveland, Detroit, and California, the national banks will be able to reach their customers in the matter of making deposits and cashing checks in the same way that their com-

petitors do in this single important aspect of the banking business. At the present time, in the city of Cleveland there are only three national banks, and in the city of Detroit only three. This will enable the national banking system to really eneter these two great cities, from which they have previously been excluded,

perhaps not on equal terms, but at least on a living basis.

It is my opinion that the major question of branch banking is not in any way affected by this differentiation of the functions of the tellers' windows except to mitigate the handicaps that at present exist in some great cities and that it can not by any possibility be used for the extension of the principle of branch banking. The banking arrangements of any individual city are distinctly a matter for local determination. When the extension of branches passes the city lines and becomes State wide a condition such as I have previously described is created, under which the whole balance of the Federal reserve and unit banking system of a large section of the country is disturbed and the fire will, in my opinion, very quickly jump over State lines.

If the branch banking movement can not use the Federal reserve system as an instrumentality for its extension, it will probably never become a great menace, and with the national banks extended a reasonable measure of facilities for self protection within the limits of the municipalities in which they operate the national banking system and the Federal reserve system can be maintained in

their present status.

First, that the development of branch banking, unless curbed, will ban the destruction of the national banks, and thereby the destruction of the Federal reserve system and the substitution of a privately controlled reserve system for a governmental system of coordination.

Second, that if the Federal Reserve Board has not the power to refuse the admission of institutions engaged in general branch banking, and to curb the further extension of this principle by member banks, they should be given the power.

(Whereupon, at 1.45 o'clock p. m., the committee adjourned until Tuesday, March 11, 1930, at 10.30 o'clock a. m.)

BRANCH, CHAIN, AND GROUP BANKING

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Wednesday, March 12, 1930.

The committee met in the committee room, Capitol Building at 10.30 o'clock a. m., Hon. James G. Strong (acting chairman) presiding.
Mr. Strong. The committee will come to order, please. The chairman has left with me his list of names of members of the committee to be called in their order, but, before starting to call them, I want to put into the record a letter handed me by Congressman Box of Texas, written to him by one of his constituents on this subject.

Mr. BEEDY. About what?

Mr. Strong. Branch, group, and chain banking—on this subject. I would like to have the clerk read it.

(The clerk thereupon read the letter referred to, at the conclusion

of which reading, the following occurred:)

Mr. Beedy. Mr. Chairman, I was thinking, as the letter was being read, that we are just starting in on these hearings. I, personally, would like very much to show every courtesy to Congressman Box, but I am wondering if it is not going to be rather dangerous and lead to a great deal of misconception, if we start printing letters indiscriminately in the record.

For instance, I think the use of the word "chain" in that letter is

not strictly correct.

Mr. Strong. I think he refers to branch banking in Canada. Mr. Beedy. Exactly; and when he makes his references to the

Canadian banks, he is speaking about branch banking.

I do not think we ought to let these generalizations go into the record when the party is not here to be questioned. He makes some very sweeping assertions in his letter and on just what he bases them, the committee has no means of knowing. While I do not want to take an arbitrary stand, I should like to know what the committee thinks about it.

Mr. Fort. It also seems to me that here we are getting a very strong statement from Mr. Pole, and it breaks the continuity, in the record, of his testimony and of his questioning, to insert some-

thing like this into the middle of it.

Mrs. Pratt. Mr. Chairman, I want to say that I have received innumerable letters along that line. The question of banking is particularly interesting to my district, but I agree with Mr. Beedy and with Mr. Fort that it is simply cluttering up the record to permit Members of the House to bring in the letters they receive from con-

Mr. Beedy. And every letter introduced would prompt another

Congressman to bring in an opposing letter to match it.

Mrs. Pratt. Would it not lead to the introduction of a tremendous

amount of correspondence?

Mr. Strong. Mr. Box handed it to me, stating that with the man's experience, as given in the letter, and his visits to Canada, he thought it would be helpful to the committee. He did not want to come before the committee himself, but wanted to have the letter placed in the record.

I have presented the request, and if you want to refuse it, all

right.

Mr. Fort. I do not think the statement should go into the record

without an opportunity to examine the witness.

Mr. Strong. If the committee wants to bar this letter, all right. Mr. Seiberling. It is difficult to discriminate among the letters. For instance, I have a circular letter from some radio company protesting against certain features of branch banking.

Mr. Letts. Why would it not be a safe rule to permit members

of the committee to introduce such letters as they think important and which come to them personally, and to bar others, unless the

action of the committee is to the contrary?

Mr. Fort. That does not open the door to any cross-examination of the witness, as to his information. I think we are going to get a lot of information that way, and that we should have an opportunity to cross-examine those making the statements.

Mr. Letts. You may have a letter from some one in your district that you think contains some important facts, and you, personally, can tell us something about the man and about his experience.

Mr. Fort. I have a lot of them.

Mr. Letts. So I thought, in my suggestion, we ought not to bar letters offered by members of the committee.

Mr. Goldsborough. Would it not be better to take the letters and use them as the basis for cross examination?

Mr. Strong. Whom would you cross examine?

Mr. Goldsborough. When you take a witness, you could say, "I have received such-and-such a letter," and ask him about the statements contained in that letter or letters, and then it would give

him a chance to answer.

Mr. Fenn. It seems to me since these hearings have been so well advertised throughout the country and a special rule adopted toward them in the House, gentlemen interested in them should take the opportunity and occasion to come here themselves. Personally, I have no objection to the introduction of the letters, except from the standpoint of encumbering the record. You will get one letter one way and another the other way. I think these ex parte statements are of no particular value. They are of no value to me, and I think the other members will take the same view.

Mr. Goldsborough. If you have a letter that you think is perti-

nent, you can then ask the witness about it.

Mr. BEEDY. In order to get the sense of the committee, and in order not to seem to make this personal in its application to Mr. Box's request, I move that the committee do not include in the record any letters except those which are submitted by witnesses who are testifying, in amplifying statements which the witnesses make before the committee.

Mr. Fenn. I second the motion.

Mr. STRONG. I just want to call attention to the fact that it is the habit of the chairman very often to introduce matters sent to him.

Mr. BEEDY. He can do it through witnesses.

Mr. Goldsborough. That, then, includes the chairman?

Mr. BEEDY. Yes.

(The motion was carried.)

STATEMENT OF J. W. POLE-Resumed

Mr. Strong. Mr. Luse is the next interrogator, but he is delayed. and Mr. Fenn is the next.

Mr. Seiberling. Does this letter go out of the record?

Mr. Strong. It is not included in the record. The chairman has adopted the plan of going down the committee, according to the rank of the members, giving them each another chance to cross-examine Mr. Pole, and you are next, Mr. Fenn. Mr. Fenn. I have no other questions.

Mr. Strong. Mr. Campbell is next. He is absent. Mr. Beedy is next.

Mr. BEEDY. I do not care to question Mr. Pole.

Mr. Strong. Mr. Hooper is next.

Mr. Hooper. I have not asked any questions yet, because I was away when my turn came. I should like to ask one or two questions that have been brought up or suggested by the letter that was read

I will say to Mr Pole that my attention has been called to a letter which covers the banking situation in Canada. The Canadian system, Mr. Pole, is a system of what sort of banking?

Mr. Pole. Branch banking.

Mr. HOOPER. The banking business in Canada is largely done by a small number of large banking organizations, such as the Bank of Montreal, the Bank of Nova Scotia, the Royal Dominion Bank of Canada, and others of that kind-is not that true?

Mr. Pole. Yes, sir.

Mr. HOOPER. This is typical of branch banking? The banks which the Bank of Montreal controls out through the Dominion of Canada are branches of that bank, are they not?

Mr. Pole. The question has to do with the branch banking system

as it is operated in Canada?

Mr. HOOPER. In the Dominion of Canada. Mr. Fenn. May I interrupt a moment?

Mr. Hooper. Certainly.

Mr. FENN. The Canadian banks have not only branches through-Out Canada proper, but I know the Bank of Nova Scotia, the Bank of Montreal, and the Royal Bank of Canada, and others have branches in the West Indies, too.

Mr. Pole. Yes, and overseas.

Mr. FENN. The banks in general-

Mr. Pole. I had not quite finished my answer.

Mr. Fenn. I wanted to point out how widely that system is operat-

Mr. Pole. Very widely. The branch banking system in Canada differs very materially from the branch banking system which I

suggested, the difference being that they cover the entire country. My plan would be to develop a branch banking system within restricted trade areas.

Mr. Hooper. Your idea, Mr. Pole-

Mr. Pole. Instead of having 10 banks, as they have in Canada, the probability is that we would have several hundred banks in this

Mr. HOOPER. I was not trying to contrast the system in Canada with that of the United States, but what I wanted to ask you was: Bank failures are very rare in Canada, are they not?

Mr. Pole. Very rare.

Mr. Hooper. And they have banks operated through the small towns, through the rural regions of the Dominion, in much the same way as in the United States?

Mr. Pole. Very much so. Mr. HOOPER. You will find branches of the Bank of Montreal or of the Bank of Nova Scotia in the small villages of 500 or 1,000 in Canada, as you will find branch banks or State banks of similar size in the United States?

Mr. Pole. Yes, sir; in competition with one another.

Mr. HOOPER. The reason why there has been a scarcity of failures or a dearth of failures in the Canadian small towns, has been that the large banks protect the institution if trouble comes to the branch-is not that true?

Mr. Pole. Yes, sir.

Mr. HOOPER. And in Canada, at least, branch banking has worked out very much to the advantage of the financial situation in that

Mr. Pole. I am under that impression.

Mr. Fenn. I do not think they have ever had any other system.
Mr. Pole. No, sir; not within recent years.
Mr. Fenn. I suppose there is no other country in the world that has the dual system that we have?

Mr. Pole. No, sir. Mr. Fenn. I think you stated to Mr. Fort a few days ago that the tendency in all the principal countries of the world-England, France, Germany, and other great European countries-is the same tendency as in the United States; namely, the centralization of the banking business in the capital, which is usually the metropolis of the country?

Mr. Pole. That is true, with the possible exception of some little difference with regard to the system which is in force in Germany. They have a number of small independent banks in Germany in addition to the banks operating from the large centers, and the record of failures of these small independent banks in Germany last year was an imposing number.

Mr. Hooper. They have a large number there?

Mr. Pole. Yes, sir.

Mr. HOOPER. And that was not true of the other-

Mr. Pole. Among the small banks. Mr. Hooper. One or two more questions.

In your preliminary statement you mentioned various reasons for the lack of success of the small banks located in small places remote from the larger centers?

Mr. Pole. Yes, sir.

Mr. HOOPER. You spoke of the lack of diversification, for instance. I assume that same lack of diversification would be found in Canadian towns of small size?

Mr. Pole. Yes, sir.

Mr. HOOPER. In the West they would be lending money on wheat or on wheat lands, and in the forest territory, where lumber is produced, that would be the principal item?

Mr. Pole. Yes, sir.

Mr. Hooper. I suppose in Canada, as well as the United States, there is not the general diversification in the banking loans in the small towns as in the large centers, like Montreal and Toronto?

Mr. POLE. No.

a

В

3

Mr. Hooper. What, then, would you say is the reason that the Canadian bank system has proved more solid and sound in the way

of absence of failures than in the United States?

Mr. Pole. I think their system is responsible for the absence of failures largely by reason of the fact that the metropolitan banks are more scientific in their management and are enabled to diversify and absorb such losses as occur.

Mr. HOOPER. Is the banking system of Canada superior to the two systems in the United States-do you think, generally speaking?

Mr. Pole. The results of the situation, with regard to the rural

districts, are far more satisfactory.

Mr. HOOPER. Do you think that the bankers of the higher grade in Canada are, generally speaking, abler men, in their line of business, than in the United States?

Mr. Pole. I should be unable to answer that.

Mr. HOOPER. What I was seeking to find out was the reason why, in a country with 8,000,000 of people, with less opportunity for developing genius along those lines, why the Canadian system, for a long time, has really been more stable, as far as failures are concerned, than our own, as it apparently is?

Mr. Pole. I think an independent unit system, such as ours, is less able to care for a general situation than a branch banking system. Mr. Strong. Will you tell us, if you know, to what extent the Government controls these banks in Canada? What is the Govern-

ment control over banks?

Mr. Pole. There is very little Government control. There is no system of examination in Canada. Reports are filed with the commissioner of banking and are analyzed by him, in addition to which the banks are examined by certified public accountants, which accountants are approved by the banking department.

Mr. Strong. Mr. Pole, you stated that you thought that, under Your plan of branch banking in the United States, we would have many more hundred systems of branches than they do in Canada.

Will you explain to me why you arrive at that conclusion?
Mr. Pole. My reason for that, Mr. Chairman, is that under my proposal, a system of branch banking would be developed from the metropolitan centers. Undoubtedly, if opportunities were given banks in such centers of operating branch systems there is no reason why there should not be a very large number of important groups developed from each metropolitan center.

Mr. Strong. Would not that be true in Canada?

Mr. Pole. They have a nation-wide branch banking system there. My suggestion is that we have a regional branch banking system.

Mr. Strong. Would that prevent a branch banking system from

excluding others?

Mr. Pole. It would prevent them from operating nation-wide. It would not prevent the growth of a big branch system within a restricted area.

Mr. Strong. Would not there be a likelihood of a monopoly

within the big area?

Mr. Pole. I think there would be bank competition throughout this country, and I see no reason why there should be a greater fear of monopoly beyond the metropolitan area than there is within the cities now.

There is plenty of competition in the different cities. To extend the areas would not make for lessened competition. I think it would stimulate it. The opportunities for profit would be greater.

Mr. Strong. Mr. Luce is here now, and we will ask him to proceed

with his cross-examination.

Mr. Luce. Mr. Pole, it requires some ingenuity to think of some

question that has not been asked you already.

Mr. Pole. I think you are right, Mr. Luce. I was afraid the committee had overlooked the fact the committee might want to call other witnesses than myself.

Mr. Luce. We look to you as the main fount of information.

I shall try not to cover ground already covered.

I wish to address myself to the broader principles at stake rather than to details. Let me sketch hastily the background for my

questions.

About 30 years ago the country got very much excited over monopoly from the formation of big business institutions of one sort or another. It would seem as if every generation must go through a period of excitement over the question of monopoly and, judging from the speeches in the Senate recently, we are entering another spasm of that sort and it would be of use, I think, to bring out whether the present situation in banking will add any fuel to the flame.

First, let me say that the people got alarmed 30 years ago over the obnoxious features of monopolies, price cutting, rebates, the destruction of small competitors, and other processes that were supposed to be particularly exemplified in the Standard Oil Co. Has it come to your observation that the extension of branch banking so far has

produced evils of that sort?

Mr. Pole. A far as I know, Mr. Luce, the branch banking systems which are in operation in this country and abroad have been rather conducive to keener competition than is in existence in a great many parts of our country under the unit system of banking.

Mr. Luce. You might well elaborate that, if you will, and show us how that develops—through the placing of branches in the same place

by two banks, for example.

Mr. Pole. In very many places in Canada and in very many places in England, in comparatively small places, there are as many as two, three, and even four branches of large metropolitan banks, and they carry to those small communities the complete banking service of those important metropolitan institutions, and I have never

heard but what competition among the branch banking systems is

anything but extremely keen.

Mr. Luce. In California, or elsewhere, have there been any instances brought to your attention where a branch of a great bank has tried, by any unfair methods, such as price cutting or what would correspond to it in the banking world—where such tactics have been adopted by a big bank in order to destroy a little bank?

Mr. Pole. I do not know that I can recall any instance of the kind. In California, in every important town, there is, as far as I know, no banking monopoly. The branch banking systems are operating in keen competition with one another in many towns, in addition to the

unit banks.

a

ľ

Mr. Luce. Now, turning to the question suggested by the development in my own neighborhood, it has been observed that the striking tendency in banking in New England is the entrance into the investment field. More and more our national banks are resorting to

investments for the use of their funds.

I am not prepared to admit that it is the function of Congress to go beyond securing safety in the matter of banks, but even that factor may enter into what I want to call to your attention. You are, of course, aware of the growth of trust companies in New England. They have larger opportunities for business and greater chance to go into promoting. Of course, you are familiar with the fact that some of our sizable trust companies failed as a result of going into the investment business.

If it is the function of the Government to interfere in such emergencies, is it your expectation that branch banking—that is, the concentration of banking into few groups—would increase or diminish the likelihood of investment banking, assuming for the moment that

Investment banking has its objections?

Mr. Pole. My belief is that the distribution of securities would be a part of the bank's regular business much more than it is to-day and that their importance as underwriters and distributors might be developed even to the point that the bulk of the investment business in this country might eventually be done by the large banks.

Mr. Luce. We have hitherto conceived the purpose of commercial banking to be what I might call the brief aid it gives to commerce and

industry rather than long-time investment of capital.

Are you quite sure that the present tendency is altogether admirable? Mr. Pole. The attitude of the people of this country is changing very rapidly with regard to investments. The business of banking is also rapidly changing until to-day banks have become great institutions, operating in every financial direction, and there have been recently instances where banking corporations have underwritten and distributed independently of New York, unusually large underwritings and I think, under proper regulations, there would be no reason to anticipate any very great danger in the extension of such activitiy.

Mr. Luce. Now, let me bring your attention to a particular phase of the investment of moneys; that of the savings accounts of large numbers of people and, on an average, a small amount from each.

Anyone who has watched the progress of things in our neighborhood—I speak only from that information—I will not say views with alarm, but views with much interest the entrance of commercial banking into the handling of the small savings of the people. In Massachusetts we have thought such savings peculiarly deserving of governmental protection. To illustrate, we went so far as to insist that no savings bank and national bank should exist in the same room; they should not exist in the same building unless there was a solid wall without any opening between the two; the reason, of course, being that it was thought unwise to permit the commercial bank to have

resort to the small savings of the people.

There have been several disastrous failures, as the result of the opportunity of national banks to invest the savings of the people. Yet, to-day, I find in a national bank-and a very good bank, too; not a great bank, but a successful bank, where I have a small deposit-I find a wicket there for savings accounts, and I see here and there advertisements of Christmas savings clubs, and pretty soon they will have birthday savings clubs and wedding anniversary savings clubsand it is suggested that we may have to have baby clubs, too; in other words, the national banks are making a drive all over the country to take away the business of the savings banks; to get that money to invest in commerce or in industry or in various business activities, involving the investment of large amounts of capital.

We have very strictly confined the use of the people's savings-and I always use the word "people" with some fear of being suspected of demagoguery. However, I know of no other way to characterize the savings of millions of persons who desire, first of all, protection of

their money and, secondarily, a fair amount of interest.

By the way, I might say that I am constantly irritated in Washington by observing the announcement of national banks that will pay as much as 3 per cent and sometimes 31/2 or even 4 per cent for savings, when, in the savings banks of my own State, I think no bank is paying less than 5 per cent, and I think some are still continuing to pay 5% per cent. The magnanimity of the Washington banks amuses [Laughter.] me.

Now, I am very much concerned about this proposal to concentrate, in commercial institutions, without these safeguards in the matter of investments, what has resulted from the thrift of many millions of

our people.

In Massachusetts we have also a requirement strictly limiting the class of securities that the savings banks can buy and it is a common thing to use that as an illustration of perfect safety. You will find it in banking literature—the protection thrown around the savings banks by the Massachusetts law. It is a standard that other States,

to some extent, try to reach. I fear not enough, as yet.

Is it your judgment that it is a wise thing-and of course I am going somewhat beyond the instant problem before us, assuming we are really making a study of the whole banking system of the country-do you think it is a wise thing, a prudent thing, to put savings of the citizens of the country at the command of commercial institutions, with the many dangers that accompany the lending of money for commercial projects?

Mr. Pole. Congress has given national banks the right to accept savings. The matter has been subject to a great deal of discussion as to whether or not savings deposits should be invested in certain characters of securities. In the case of national banks, I think the law is unfortunate in that it permits banks to enter into a contract with its savings depositors, giving the bank the right to require 30 or 60 days' notice before withdrawal. Occasionally this has resulted in a preference of the regular depositors—the demand depositors—because the clause has been put into effect. There is, of course, no notice required with respect to demand depositors.

I personally have felt that if this 30 or 60 day clause is going to be maintained the savings investments should be segregated for the savings depositors, and those investments should be regulated. Under

such circumstances, I think, there would be no danger.

Mr. Luce. At present there is nothing in the way of intermingling of all the funds of a national bank, is there?

Mr. Pole. Nothing at all.

Mr. Luce. I do not get clear in my mind what might be the effect of the extension of branch banking upon this particular feature of the situation. Do you think it would conduce to greater or to less safety for savings deposits, if we had branch banking, than if we had the unit

banking?

Mr. Pole. I think it would be conducive to much greater safety in that a large part of the deposits, of rural districts are saving deposits and the result, over the last 10 years, has been very disastrous to savings depositors under our unit system of banking, under branch banking as I have heretofore pointed out there would be few bank failures, and consequently greater safety to the savings depositors.

Mr. Luce. It would be quite practicable, under branch banking, to

require the segregation of the savings deposits?

Mr. Pole. I think it would, if Congress saw fit to do so.

Mr. Luce. When the McFadden bill, so-called, was passed a few years ago, in view of this particular phase of the question, I was a great deal exercised about the permission given to banks to invest a larger part of their money in real estate loans. My view, however, did not prevail, and banks now have a much larger opportunity to lend with real estate as the security.

Have you any knowledge as to how far that has been used? Of course, in a most general way, has it resulted in a considerable increase

in real estate loans by the national banks?

Mr. Pole. Some banks have taken advantage of the liberality in the law to extend their investments in real estate. There is, however, another aspect of the matter and that is that banks acquire, in protection of debts, which have been previously contracted, perhaps as much real estate as they invest in under the McFadden Act directly.

Mr. Luce. That provision was the result of competition between national banks and State banks or, what we, in our neighborhood, call trust companies. It was pointed out to us that a man who came into a national bank and could not get a loan, backed up by his property, would go across the street to his State bank, so that the national bank lost a customer, which brings me to a still broader aspect of this

whole problem.

There is, in economics, the familiar law known as Gresham's law, under which the baser metal drives out the costlier metal. We have in this country, existing side by side, two systems—the national bank system and the State bank system. In many States State banks have much more freedom of action than national banks. It seems to me, in hearing the arguments in this room for 10 years, that, perhaps

quite unconsciously, a great war is going on—an economic war—between the two systems, and that the State banking system is the

baser instrument of the two.

Do you have any apprehension that no legislation we might be able to pass will prevent the poorer system from driving out the better system? In answering that, you might also comment upon what will be the effect of the branch banking system on trust companies and

State banks of the country. Would it tend to lessen-

Mr. Pole. It would depend very largely upon the provisions of the act. It would undoubtedly take a long time, under present conditions, for the principles of the Gresham law to apply with complete effect. On the other hand, I can not conceive of the national system driving the State banks out of business, unless the provisions of the national banking act were made so attractive as to invite them into the national system.

Mr. Luce. You would make it a matter of moral sussion rather

than compulsion?

Mr. Pole. By all means.

Mr. Luce. Is it not a fact that in this great flood of bank failures that we have had in the last 10 years, the State banking systems have shown themselves greatly inferior to the national banking systems?

Mr. Pole. Over the country as a whole; yes.

Mr. Luce. And if we were to assume that it is our function to protect, as far as possible, the depositors, particularly those who make savings deposits, is there any place where we can stop short of putting

the State banks out of business?

Mr. Pole. Under a branch system, as heretofore suggested, Mr. Luce, I think that the particular attraction would be the element of safety which appeals to the public at large, and if the general impression got out that the branches of a national bank were a safer place to deposit money than in an independent State bank, I believe that the State banks would naturally become less and less important in that community and that the branch of the national bank would become more important—from the standpoint of safety, if for no other reason.

Mr. Luce. That is all I have to ask.

Mr. Strong. Mr. Beedy.

Mr. Beedy. Inasmuch as you have passed me, may I ask now a question suggested by Mr. Luce's questions?

Mr. Strong. Certainly.

Mr. Beedy. If it becomes desirable for a closer supervision of banking by the Government, would the concentration of the banking business in branch banking groups tend to increase or diminish the efficiency of such Government supervision?

Mr. Pole. The system of supervision would have to be adapted

to the new system, which could be easily done.

Will you ask that question again, please?

Mr. Beedy. If it becomes desirable for a closer supervision of banking by the Government, would the concentration of the banking business in branch banking groups tend to increase or diminish the efficiency of such Government supervision?

Mr. Pole. My idea would be to make the supervision of the banks more efficient than it is to-day. I think it would be easier to do that under branch banking, in that there would be fewer banks to examine.

Mr. BEEDY. Then, your answer is-

Mr. Pole. And, by adapting a better method of examination than is in force to-day, the advantage would all be in favor of branch

banking.

Mr. BEEDY. Your answer is, then, that the concentration of banking business into branch banking groups would make it easier for the Government to make a supervision of the banking business which would result in an added element of safety to the depositors?

Mr. Pole. I think so, by reason of the fact that, under a branch banking system, where large institutions would develop, the question of policy would be given more consideration than under the

detailed examinations which are made of unit banks to-day.

It might be, even, that there would have to be a more or less continuous examination going on. The Government would probably ave a much closer contact with the executive committees and with the directors of banks, so that it would have first-hand knowledge of any change in banking policy, as applied to any particular institution.

Mr. Beedy. That is all, Mr. Chairman.

Mr. Strong. Mr. Goodwin.

Mr. Goodwin. Do you have any record of any failures in the Canadian banking system, as it has been operated?

Mr. Pole. Yes; there have been failures.

Mr. Goodwin. Of the parent bank as well as of the branches?

Mr. Pole. Yes.

Mr. Goodwin. Have these failures been of large proportions?

Mr. Pole. There have been no failures of recent years. My recollection is that the last failure was, about 10 years ago, of the

Home Bank of Canada.

Mr. Goodwin. I think several days ago, in answer to my question at that time, you stated that, in your opinion, supported by the advice of your counsel, branch banking could be permitted under the national law in those States where branch banking, is by the law of those States now prohibited.

Mr. Pole. That was the advice of counsel. Mr. Goodwin. Is that advice in writing?

Mr. Pole. Yes, and will be supplied for the record.

Mr. Goodwin. You also stated that, in your opinion, no national bank should be chartered with a capital of less than \$100,000; that 1s, it could not operate successfully and profitably with a capital of less than \$100,000. Did I understand you correctly?

Mr. Pole. I said that that had been recommended by several as a remedy for the existing situation; that no bank should be established with a capital of less than \$100,000. It was not my recom-

mendation.

Mr. Goodwin. If that should be adopted, would that apply to banks already chartered? Would they have to comply with the

same law as to capitalization?

Mr. Pole. I do not know what Congress could do in that direction. assume that that law would not be retroactive, if any such law were passed.

Mr. Goodwin. It would apply only to those banks which may be chartered in the future?

Mr. Pole. It is not my suggestion at all that banks should be limited to \$100,000. I have already expressed opposition to it.

Mr. Goodwin. That is all, Mr. Chairman.

Mr. STRONG. Mr. Letts.

Mr. Letts. Mr. Pole, when I questioned you before, it was largely with respect to the Bank of Italy and the Bancitaly Corporation and the Transamerica Corporation. I have before me what purports to be a reprint from a report recently compiled by the research department of the Los Angeles stock exchange. Have you seen that report?

Mr. Pole. I have not, Mr. Letts.

Mr. Letts. I have no way of knowing whether the information contained in it is authentic. It is stated here that the information and figures are obtained from sources deemed reliable. It shows that the Transamerica Corporation is a holding company, total capital investment, over \$1,150,000,000; that its subsidiaries perform a wide variety of functions, including banking in all its phases; insurance, real estate, the financing of investments, brokerage business, securities, underwriting, and many other things.

I find this statement:

The size of this combination is roughly indexed by the fact that its work is not only nation-wide but world-wise; that its controlled subsidiaries operate 525 banking offices and numerous investment houses.

It contains a table showing the holdings of the Transamerica Corporation, indicating that it holds 99.6 per cent of the stock of the Bank of Italy, which is a banking concern; that it holds 99.93 of the Bancitaly Co. of America, sureties, realty, and so forth, and various other banking houses; the Bancitaly Mortgage Co., total invested capital \$1,983,817; owned 100 per cent by the Transamerica Corporation; that it owns the California Joint Stock Land Bank, capitalized at \$1,399,050—100 per cent; that it owns the Pacific National Fire Insurance Co., capitalized at \$3,000,000, by possessing 100 per cent of its stock; the Bancitaly Agricultural Credit Co., capitalized at \$1,006,620; possessing 100 per cent of that stock; in addition to that it has banking operations and investments operations in Italy.

The information contained would indicate that within eleven months after its organization, the Transamerica Corporation paid a stock dividend of 150 per cent. Would the fact that this stock dividend was paid in September, 1929, have any relation to the contention which was made by Mr. Busby a few days ago, that the Bank of Italy was bankrupt at the time its holdings were taken over by the Transamerica Corporation—would it have any bearing on that inquiry, would you say? I think Mr. Busby showed some figures which indicated a sharp decline in the value of the stock of the Bank

of Italy. Have you given any thought to that?

Mr. Pole. I have not seen the circular to which you refer. If you are speaking of any evidence of the Bank of Italy being bankrupt, of course we are very certain there is nothing like that.

Mr. Letts. I was wondering if there was incident to the taking over

of this stock by the Transamerica Corporation-

Mr. Pole. I have no official information as to the stock dividends or any transactions in connection with the Transamerica Corporation.

Mr. Busby. Mr. Letts, if you will permit, I will make a short statement and give you what I said the other day.

Mr. Letts. Yes.

Mr. Bushy. It was this, that on June 5, 1928, the Bank of Italy stock on the San Francisco Exchange had reached 293. On June 11 a drive was made by certain competitive banking interests on the Bank of Italy standing, and before night on June 11 this stock, which that morning opened at 286, had been driven down to 125. On the 11th of October following that, the Transamerica Corporation was organized for the purpose of taking over all the stock, or as much stock as it could get in hand, of the Bank of Italy, the Bancitaly Corporation, and the other subsidiaries that you have alluded to in the pamphlet you hold in your hand, and their stocks were taken over. Now, the Transamerica Corporation stock was exchanged on the basis of one and three-fourths shares of Transamerica stock for each Bank of Italy share. The Bancitaly Corporation, which was an investment and trust corporation owned by the Bank of Italy, stock was exchanged for Transamerica Corporation stock share for share. At the present time the Transamerica Corporation stock is quoted on the stock exchanges of the country at 45. Now, one and three-fourths times 45 would be 78% that the Bank of Italy stock would sell for if it were in existence against 293, where it stood when it started its skidding performance.

My proposition was that that was a virtual failure of the institution with its 299 branches, a failure from the standpoint of its maintaining its financial integrity among the other business institutions of the

country.

That is all I desire to say now.

Mr. Fort. The gentleman has overlooked the fact that in between there was a 150 per cent stock dividend, so that he has to take his 78 and multiply it by 21/2, for each shareholder now has 21/2 shares for each one he then had.

Mr. Busby. I intend to go into that later. Mr. Letts. That, of course, was the gist of my inquiry.

Mr. Beedy. That would make the present worth of that stock 192 plus.

Mr. Busby. Taking that phase of it, it has dropped at least 100, and other banks in the same locality have not dropped so much.

Mr. Beedy. How does that compare with the drop in other bank stock in the recent crisis-National City, for instance, and some of the strongest banks in the country?

Mr. Busby. National City Bank stock ran up so high that it split into \$20 shares and so mystified the public that they did not know what happened.

Mr. Letts. I will pass that for the moment.

Mr. Pole. May I say this for the record, that I think it is only fair to say that the fluctuations of the stock of the Bank of Italy or the Transamerica Corporation have been a matter of comment, but the condition of the Bank of Italy has not changed in any way and is Just as good now as it was before these fluctuations took place, and, as I said the other day, it is a bank that has grown steadily during all of these stock transactions and ramifications from a very small bank to a bank of more than a billion dollars in resources.

100136-30-VOL 1, PT 3-2

Mr. Buser. I would like to add one thing in reply to what Mr. Fort said about the Bank of Italy stock, and that is that the friends that I have who have Bank of Italy stock have not been let in on any such bonanza as Mr. Fort pointed out. They do not know anything about that share dividend, if it happened, and I very seriously doubt that.

Mr. Letts. This is a stock dividend of the Transamerica Corpora-

tion.

Mr. Busby. The holders of Bank of Italy stock are still in the lurch which I described.

Mr. Letts. I am only speaking of the Transamerica Corporation.
Mr. Fort. That was the price the gentleman used, the price of
Transamerica Corporation stock translated into Bank of Italy.

Mr. Letts. I shall pass that for the time being. It is somewhat

aside from my general inquiry.

I note this statement with respect to the expansion policy of the Transamerica Corporation:

This great combination is in a position to assure itself profits in many fields. Its banks provide the funds necessary for any desirable deal; its own investment houses underwrite stocks and bonds, which may be marketed and protected by its wide-flung bond houses and securities companies; its banking and investment houses can divert tremendous business to its insurance company; its banking offices may act as agents for the farm loan and real estate mortgage companies; its real estate companies can help to liquidate foreclosed real estate of other departments; its stock trading and brokerage companies have tremendous sources of information and almost ulimited financial support.

Now, I would like to inquire of the comptroller whether or not this information is to his knowledge substantially correct?

Mr. Pole. I have no information with regard to the expansion program of the Transamerica Corporation. It does not come under our

supervision, Mr. Letts.

Mr. Letts. The particular thing that I am interested in, as perhaps was noted from the trend of my questions the other day, is that a very serious consideration exists in connection with this feature, that if we accept branch banking as the less of three evils, perhaps—branch banking, chain banking, and group banking—are we avoiding the pitfalls and the dangers that are incident to group banking after all? Does not this report indicate that the Bank of Italy with its 300 branches is controlled, after all, by a holding company through the medium of its board of directors that sits back of the screen, subject to no supervision or regulation whatever as a banking organization, and is there any way to safeguard the Nation against such control of the banking interests and banking policies of the country through the medium of one or more strong holding companies if we go to the branch banking system as advocated in your formal statement?

Mr. Pole. There should be some control of and some supervisory power over holding corporations, and I suggested in my report to Congress that that be given to the comptroller where the stock of the

national banks is held in large part by such corporations.

Mr. Letts. Well, if seems quite clear that by simply going to branch banking we are not avoiding the dangers that are incident to group control.

Mr. Pole. Of course, the Transamerica Corporation is one which is engaged in the business of both group and branch banking. The par-

ticular activity of the Bank of Italy is a branch banking operation. Now, as to whether Congress would want to legislate prohibiting the entire capital stock, with the possible exception of directors qualifying shares being held by such a corporation, that would be a matter that I should think might have consideration. Under the present laws, of course it can not be prohibited.

Course it can not be prohibited.

Mr. Letts. Mr. Chairman, I would like at this point to insert in the record the information which I find in this report. It is brief,

and the information will be of interest.

Mr. Strong. If there is no objection, it is so ordered. (The pamphlet referred to is reproduced below.)

TRANSAMERICA CORPORATION

A reprint from a report recently compiled by the Research Department of the Los Angeles Stock Exchange Statements and figures berein while obtained from sources deemed reliable are not guaranteed]

INTRODUCTION

Transamerica Corporation is a holding company organized to coordinate the work of a number of financial institutions. Total capital investment is over \$1,150,000,000. Its subsidiaries perform a wide variety of functions, including banking in all its phases, insurance, real estate sales, and financing, investment and brokerage service, securities underwriting, and many others. The size of this combination is roughly indexed by the fact that its work is not only nationwide, but world-wide; that its controlled subsidiaries operate 525 banking offices and numerous investment houses.

It is difficult to visualize the extent of the Transamerica system, or to estimate the amount of capital invested in it. The table set forth on the following page

presents a general outline of the structure, omitting minor subsidiaries.

Holdings of principal banking and auxiliary companies controlled or effectively controlled through Transamerica Corporation

DEVELOPMENT

Transamerica Corporation was organized in October, 1928, to bring under a single ownership the Bank of Italy and Bancitaly Corporation, together with a number of smaller cooperative companies. From the resulting reorganization the present Bank of Italy, N. T. & S. A., and Bankitaly Company of America emerged, as the two principal subsidiaries of Transamerica. Bankitaly Mortgage Co., Bankitaly Agricultural Credit Co., National Bankitaly Co., California Joint Stock Land Bank, Pacific National Fire Insurance Co., and Commercial Holding Co. were the remaining original subsidiaries.

The corporation's first year has witnessed a steady development. The first major incident was the acquisition of control of the Bank of America National Association, in March. A portion of it was exchanged for a stock interest in the underwriting and investment banking firm of Blair & Co. Shortly thereafter the investment arm of the Bank of America National Association was merged with Blair & Co. to form the Bancamerica-Blair Corporation. The Bank of America National Association and the Bancamerica-Blair Corporation are now owned share-for-share by the same stockholders, and form one of the strongest links of the Transamerica chain.

Control of the Bank of America of California was obtained in June, and The

Control of the Bank of America of California was obtained in June, and The Oakland Bank (Oakland, Calif.) and the Pacific National Bank (Los Angeles, Calif.) have also been acquired this year. The nine Pacific National Bank offices have been absorbed by the Bank of Italy, N. T. & S. A., and the Bank of America of California.

The latest developments are new organizations. Bancamerica-Blair has organized Interstate Equities Corporation to act as an investment trust, probably to take a primary interest in Bancamerica-Blair underwritings, and had financed it to a large extent privately. Intercoast Trading Co. has, on the other hand, been financed one-third by Transamerica and two-thirds by Transamerica stockholders under rights. The Intercoast Trading Co. is operated to deal substantially in stocks listed in Los Angeles and San Franciso, and should be a powerful and profitable addition to the Transamerica group.

EARNINGS

Transamerica in 1928 reported earnings of \$97,373,000 on the companies in the original Transamerica group, equal to \$11.12 per share on Transamerica's

8,747,594 shares then outstanding.

For the first half of 1929 Transamerica reported earnings on the companies in the group of \$49,185,173, equal to \$5.47 per share on the average number (8,988,631) of shares outstanding during the half-year. However, these earnings do not include undistributed earnings of Bank of America National Association, Bancamerica-Blair Corporation, Bank of America of California, Oakland Bank, and certain other companies in the group in which Transamerica's holdings are less than 99 per cent. It would appear that the \$49,185,173 of earnings come mainly from the original Transamerica companies.

The 150 per cent stock dividend which was recently paid has, of course, increased the number of shares outstanding, and reduced the earnings per share. In terms of the new stock the half-year's earnings per share become \$2.14 on 22,996,725 shares now outstanding. The number of new shares to be outstanding shortly will be 23,226,692.

DIVIDENDS

Transamerica has paid a quarterly dividend of \$1 per share in cash since its organization, and in April and July of this year also paid 1 per cent in stock. These payments were made on the old stock, prior to the 150 per cent stock dividend. The number of outstanding shares was multiplied by two and one half when the 150 per cent stock dividend was paid to stockholders of record September 10, 1929. Dividends on the new stock will be at the annual rate of \$1.60 in cash and 4 per cent in stock dividends. This is the exact equivalent of the dividend paid on the old stock.

YIELD

Based on the dividends of \$1.60 per annum and 4 per cent per annum in stock, Transamerica (new) yields the following as of the prices listed below:

Price:	Per cent
\$50	7. 20 6. 90 6. 67
\$55	6, 90
\$60	6. 46
\$65	0. 40

EXPANSION POLICY

Transamerica has made a policy of expansion through the exchange of Transamerica stock for those of the desired companies, and the ability of its management is manifest in the steady progress and development of such subsidiaries.

This great combination is in a position to assure itself profits in many fields. Its banks provide the funds necessary for any desirable deal; its own investment houses underwrite stocks and bonds, which may be marketed and protected by its wide-flung bond houses and securities companies; its banking and investment houses can divert tremendous business to its insurance company; its banking offices may act as agents for the farm loan and real estate mortgage companies; its real estate companies can help to liquidate foreclosed real estate of other departments; its stock trading and brokerage companies have tremendous

sources of information and almost ulimited financial support.

Transamerica is now strongly entrenched in California and New York, has important European branches, and through Bancamerica-Blair, National Bankitaly Co., and America Investment Co. has an underwriting and investment business to the European in New York and California is still business which is nation-wide. Expansion in New York and California is still going forward. Furthermore, there is talk of liberalizing the banking laws to permit national banks in every State to have branches, and such legislation would possibly result in Transamerica's embarking on a vigorous program of bank expansion. Certainly there is no reason to believe that Transamerica's expansion program is complete, and the banking field is one which offers the

Sreatest opportunity to its diversified facilities.

While it is generally assumed that Transamerica Corporation is now acting as a holding company exclusively, controlling only its known subsidiaries, many well-informed people believe that the Transamerica subsidiaries are acquiring the stock of prospective additions to the Transamerica chain.

ASSET VALUES

Transamerica's balance sheet of December 31, 1928, gave total cash and investments of \$1,093,449,250, equal to approximately \$125 per share on \$,747,594 shares outstanding. This would indicate a book value of \$50 per share on the new stock.

MANAGEMENT

While the Transamerica Corporation is generally conceded to be controlled by the group of financiers associated with A. P. Giannini in the original development of Bank of Italy and Bancitaly Corporation, the board of directors includes prominent bankers and business men from practically all of the merged organization. The former moving spirits of the Bank of America, N. A., Blair & Co., and other merged companies have been taken into the Transamerica directorate, which now numbers 22 people. Experience in every phase of the widespread field

covered by Transamerica is thus to be found on the board of directors.

Transamerica's 22,996,725 shares are owned by more than 135,000 stockholders, making an average holding of approximately 170 shares. While there are, no doubt, many large holdings of Transamerica, there are also many thousands who have bought a few shares as a permanent investment. Transamerica officials have announced that they hope to increase the number of stockholders to 500,000, and a special effort is being made to sell the new shares recently authorized in and a special effort is being made to sell the new shares recently authorized in small amounts, preferably to individuals living outside of California. policies are intended to develop a large sympathetic and geographically-scattered group of stockholders, who will provide the nucleus for a growing clientele, and will be acceptable. will help to mold a friendly public attitude toward the corporation.

W. W. Garthwaite, president The Oakland Bank, Oakland, Calif.

Mr. Letts. There is just one other question, Mr. Comptroller. Have you given any consideration to the tax question? Many of our States are finding it necessary to reexamine their tax plans, and one question that exists in the minds of many of the legislators is whether or not the national banks are bearing their proper part of the tax burden of the States.

Have you given any consideration to that problem?

Mr. Pole. Yes. The comptroller's office is on record as being in favor of the existing section 5219. No recommendation was made by me, so that the former recommendation that we do not advocate any change in that stands. However, the matter is being given consideration by the American Bankers' Association and is being investigated very thoroughly, which may possibly enable us to offer some suggestions at a later date.

Mr. Letts. Under a branch system, the parent bank would place in each state only such assets and banking facilities as were deemed to be necessary to meet the conditions and to render the appropriate

service-is that not correct?

Mr. Pole. Yes. Mr. Letts. In relation to chain merchandising, we find that it is never possible to find enough in stock and wares on the shelves in January, when the assessor makes his visit, to furnish any kind of a proper tax basis. An individual merchant, a unit merchant, may have, we will say, \$150,000 worth of stock on his shelves, and he is assessed accordingly. A chain hardware store across the street from him will have about \$3,000 worth of stock on its shelves, and a requisition sheet lying on the manager's desk, and when he sells a hoe or a hatchet, he writes "hoe" or "hatchet" on his requisition sheet, and sends that to Chicago or to some other center, and the stock is in that way replenished, to the point that in many instances there chain merchandising corporations are obviating the difficulties and the expense incident to storage by getting away from storage, by keeping their merchandise in transit and using their railroad cars for their storage purposes.

Will we have any corresponding difficulties in that regard if we go

to branch banking?

Mr. Pole. I do not know what amendments there might be in the law with respect to such a contingency, Mr. Letts, but this I do know, that whatever new methods of taxation must be adopted to cover such a situation, the branch bank would be far better able to meet that expense than would the unit bank.

Mr. LETTS. I think that is all.

Mr. STRONG. Mr. Fort.

Mr. Wingo. Judge Letts, his answer assumes that Congress by legislation might affect that matter. There might be another question that would arise that nothing but a Federal Court could determine, that it was beyond the power of Congress to grant that power. Congress can not grant taxing power to the States at all. We might say to the States that they can tax these banks as they please, that we will make no restrictions, and yet the difficulty to which Judge Letts points would be one that would still have to be met.

As an illustration, suppose that you had your parent bank in Memphis, Tenn. It is a foreign corporation so far as Arkansas is concerned, and all the efforts of the Arkansas Legislature to enforce its taxation might meet with the same situation that arose in the case that was settled in the Supreme Court, in the Western Union case, under what they called the Wingo Corporation Act that I was the author of in

the State senate.

So it is not so easy as you suggest, that Congress should simply

handle it.

e

Ś

3

Mr. Pole. It was not my idea that that would be necessarily an amendment by Congress, but it might be by a change in the State laws with regard to taxation, and I feel that section 5219 that, as far as we are concerned, banking capital shall not be assessed at a greater rate than other similarly invested capital, is for the time being satisfactory.

Mr. Wingo. I thought, however, that he was calling attention to

the difficulties that might arise.

Mr. Letts. My particular point is this, if I may make it plainer, and if you will pardon me, Mr. Wingo, that there will be no invested capital represented by the branch. The invested capital will be in the parent institution.

Mr. Pole. Well, I would not be able to answer offhand on an intricate question of taxation as to what modifications the State might

find necessary to make in such a contingency.

Mr. Letts. Well, of course, if there is no invested capital, that can not be made the basis of taxation, and yet the States should have some part of its tax burden borne by an institution which renders that service and has that privilege within the community.

Mr. Pole. The States do not ordinarily overlook the opportunities

for adjusting their taxing systems-

Mr. LETTS. It is a very difficult question.

Mr. Pole. Extremely.

Mr. Letts. In my State we have a tax commission that is making a study of that matter and that has been looking into the matter for a long time, and I think that in a great many States they are finding that it is quite necessary that they reexamine their tax methods; they must get on some kind of a new basis, because there have been so many new and novel situations arise in business and the manner of handling property.

Mr. Wingo. Mr. Chairman, if I may right there, I still think that the comptroller does not catch the point I am seeking to impress upon him, that it is not an easy matter, either for Congress or the

States, to handle this question. We will take the illustration that I used awhile ago. The parent bank is in Memphis, and it says that Arkansas is in its trade territory. It will have, say, several small branches like they have in these small villages on these plantations across the river in Arkansas where they will have an office open two or three days a week, and the Legislature of Arkansas, under the decisions of the courts, can not arbitrarily say that they will assess them on the basis of their capital, because the courts say that they can not do that, that they have tried that once. The corporation will take the position that it has a desk and so much furniture in Arkansas, but the physical deposits are not there, that they are in Memphis. Three days in the week there are some papers brought there by the manager in his bag, and that is all that is there outside of the furniture. It will take a more ingenious law or plan than anyone in this room has worked out whereby that State can tax other than the actual physical furniture in that branch.

That is the difficulty you are thinking of, Judge Letts, is it not?

Mr. Letts. Precisely. Mr. Luce. May I interpose a statement there? For about thirty years I have made my bread and butter out of a corporation that does business both in Massachusetts and New York, and during that time every year we have had to apportion the amount of capital used in each of those two States, and it has not proved to be an insurmountable proposition.

Mr. Wingo. For the corporation? Mr. Luce. For the corporation.

Mr. Wingo. I am familiar with that apportionment business, and it is not satisfactory to the States. The corporation always to the State, "Challenge our apportionment if you want to, and into the courts we go," and they cite certain decisions of the courts to support them.

Mr. LETTS. Would it be as easy and as simple as you indicate, Mr. Luce, if you had a parent organization in New York City, with

branches throughout the entire Nation?

Mr. Luce. It makes no difference what the comparative size of the corporation is. The proposition is not to tax the material assets of the corporation, but we are asked to furnish figures from which a computation may be made as to the relative proportionate use of that capital in the two States.

Mr. Letts. That was just a harmonious plan that was used to

take care of your situation, was it not? Mr. Luce. I am not sure about that.

Mr. Letts. It was a harmonious plan of taxing companies in one State and the other?

Mr. Luce. Oh, no; my State holds that it has the right to tax the capital used.

Mr. Letts. I understand that, but how did you make this ap-

portionment? Mr. Luce. We do not make it. We furnish the figures and let them make it. We give them the figures of our business.

Mr. Letts. But who had authority to make that apportionment?

Mr. Luce. The tax commissions of the two States.

Mr. Letts. Well, it was by mutual and satisfactory agreement that they were able to arrive at it, and there is nothing in the law of either State that controlled the matter, as I understand it.

Mr. Luce. The law of Massachusetts has a yardstick by which it

measures the amount of capital used in Massachusetts.

Mr. Letts. But that would not be binding in my State.

Mr. Luce. But, as a matter of fact, the thing works out without any difficulty.

Mr. Letts. By the harmonious action of the officials that are

charged with the duty of levying the tax.

Mr. Luce. Of course, it is possible that one State might claim that a much larger proportion of the capital is used in its borders than the other State would be able to admit.

Mr. Letts. And would not the difficulties be multiplied in putting

branches in 48 States?

Mr. Luce. Well, I can only answer that as far as I know the thing does not happen.

Mr. Letts. You do not have difficulties? Mr. Luce. Not in my State of any appreciable consequence.

Mr. Letts. A good many of the States now feel that there must be

some kind of a readjustment along those lines.

Mr. BEEDY. It think, for the purpose of the record, that it ought to appear that there is no proposal before the committee at the present time that would authorize the establishment of branches in 48 States. At best, the only proposal that has been suggested is the limitation of branches within the areas of 12 commercial districts, so that your Question would simply go to the extent of the size of the branchbanking system.

Mr. Letts. I take it that Congress might decide now to permit branches within certain trade areas, and another Congress might take another step at a later time, and it is quite conceivable that it

might become nation-wide.

Mr. Beedy. Oh, yes. Mr. Wingo. I do not want the comptroller put in the attitude of saying on the record that the question of taxation would be an easy one, which it is not. I suppose he recognizes that the taxation Problem is a very difficult one, and, with the shifting conditions, it becomes a constant problem that has to be met. I assume that they are handling it in some way in connection with the Bank of Italy, and that as they extend branch banking they will work out a way, and the courts can be determined upon to protect the interests of both the States and the banks; but I do not want it to appear to the attorneys and directors of banks who may read this record that the comptroller who is making this recommendation to us that we have to pass on treats the taxation problem as a light one.

Mr. Pole. I intended to convey to you, Mr. Wingo, that I realized that the taxation problem was a most intricate one, and I reiterate

Mr. Strong. Now, Mr. Fort.

Mr. Fort. Mr. Pole, on this tax problem, we now have a statute, as you pointed out awhile ago, by which the Federal Government restricts and limits the powers of the State to tax national banks so that the capital invested in national banks shall be treated the same as other capital in the State similarly employed.

Mr. Pole. That is correct.

Mr. Fort. I assume that that act has been sustained in the courts?

Mr. Pole. I am sure it has. Mr. Fort. If we have, then, the power to put on that type of limitation, we would also have the power, if we saw fit, would we not, to draw a statute providing-and I am just suggesting this, not having thought through this particular matter—that each national bank which had branches shall pay in each city or in each town where it had branches a tax proportionate to the volume that the deposits from that branch bear to its entire resources, or something of that sort?

Mr Pole. That would seem to be entirely reasonable.

Mr. Fort. In other words, we have the power, if we choose to use it, to establish a rule of taxation for national banks which will compel them to pay taxes?

Mr. Pole. I feel sure that the States tax the national banks by

permission of Congress. That is my understanding.

Mr. FORT. And we could compel it as well as permit it? That is, we could compel the bank to pay?

Mr. Pole. That would be my idea.

Mr. FORT. We have had a lot of discussion here about the Bank of Italy. I do not hold any brief for their system of banking or of holding companies, but, as a matter of fair consideration of this whole question, substantially the same thing that is happening in the Bank of Italy group is happening in other banking groups in this country, 15 it not?

Mr. Pole. The same methods of transacting business and the same developments along the line of branches is going on with respect to

other banks.

Mr. FORT. And the same development in the line of affiliated organizations of one type or another?

Mr. Pole. In a greater or less degree.

Mr. Fort. For example, the Chase National Bank in New York today has the American Express Co. as a part of itself, has it not? Mr. Pole. I believe that is true through the Chase Securities

Mr. FORT. As a result, today, in effect, the Chase National Bank is operating branch banking of a type throughout all of the cities of any importance in the United States and Europe, is it not?

Mr. Pole. It is operating a branch system directly in the city of New York and, through its Securities Co., I think over the country

in the manner suggested by you.

Mr. FORT. All of the business of the American Express Co. is banking business of a type, is it not? I do not mean that they are necessarily depositary banks, but they do a banking business, do they not, in exchange, in the issuance of letters of credit, and in the issuance of traveler's checks?

Mr. Pole. That is my understanding.

Mr. Fort. So that we already have at least one affiliated organization in the United States which is engaged in certain forms of branch banking, not only nation wide, but world wide?

Mr. Pole. Yes. Mr. Fort. And somewhat the same thing is true-and, of course, it is a part of the Bankitaly group-of the Bancamerica since its

affiliation with the Blair Corporation, is it not? They are issuing letters of credit and doing a banking business throughout the world and in the larger cities of the United States?

Mr. Pole. That is true.

Mr. Fort. And the same thing is true with the National City and Guaranty Cos., or their affiliates, and the Chicago Continental & Commercial Bank?

Mr. Pole. In many respects.

Mr. FORT. So that we already are faced, as a practical existing question and not a mere future possibility, with the expansion of some form of branch banking activities, both nation wide and world wide, by some of our large banks?

Mr. Pole. Other than by the Transamerica Corporation? Mr. Fort. Yes, other than by the Transamerica Corporation.

Mr. Pole. Yes.

Mr. Fort. And in some cases those functions are really carried on by the bank as a bank, are they not? For instance, the Bankers Trust Co., of New York, as I understand, has no security affiliate, but has securities offices and letters of credit offices, and so forth, throughout this country and Europe-is not that so?

Mr. Pole. I think you are correct. Of course, the Bankers Trust Co. is not a national bank and I have no official information with

regard to its operations.

Mr. Fort. Now, in that connection, you have spoken, under the

questioning of Mr. Luce-

Mr. Bushy. Will the gentleman yield at this point, before he leaves that matter? I want to call attention to the fact that I was not Pointing out these things that you have asked about-

Mr. Fort. I was referring to Judge Luce's questions. Mr. Bushy. But to the fact that the Transamerica Corporation had been formed to take care of all the interests of the Bank of Italy,

which has not happened in any other system.

Mr. Fort. It has happened in the Chase National Bank taking

over the American Express Co.

Mr. Bushy. No; not by a holding corporation formed independently of all these units, to take over all the units under a new name. Mr. Fort. Mr. Pole, in regard to the question of the shift which Mr. Luce, I think, very aptly described as from the finer to the baser system of banking, the shift from the national to the State system, what has been the shift in terms of resources between the two systems since the passage of the McFadden bill?

Mr. Pole. There have been four and a half billion dollars of re-Sources that have been converted from the national to the State

system within the past 10 years.

Mr. Fort. Is that a net figure, or have there been corresponding shifts of State to the national that would reduce that?

Mr. Pole. No, that is the total resources of all national banks of live millions of resources and over which have left the national system within the past 10 years, as set out in my report to Congress.

Since the passage of the McFadden Act (Feb. 25, 1927) to March 14, 1930, the total resources of the 377 national banks which have Sone into the State systems is approximately \$3,400,000,000, while

the total resources of the 181 State banks which have come into the national system during the same period is about \$2,700,000,000.

Mr. Fort. Have you the figures in number of banks?

Mr. Pole. I shall be glad to supply that.

Mr. Fort. I should like to see it.

Mr. Wingo. Right in that same place, will you insert the resources of State banks and the resources of national banks on the date the McFadden Act passed, and the same figures of resources of State banks and resources of national banks on the last available date, or at the present time?

Mr. Pole. I will be glad to.

Mr. WINGO. Pardon the interruption, but I wanted to get the whole picture there.

(The information called for is reproduced below.)

This office had no call showing the resources of national banks as of February 25, 1927, but did through process of calculation estimate the total amount of resources of national banks on that date as being \$25,136,426,000. No figures were available, however, for State and private banks. The nearest available figures on call reports for State and private banks and national banks was June 30, 1927, four months subsequent to the passage of the McFadden bill, on which date the total resources of 7,796 national banks was \$26,581,943,000. Total resources for 19,265 State and private banks was \$41,550,615,000. The total resources for 7,536 reporting national banks as of June 29, 1929, was \$27,440,228,000, and the total resources for 17,794 State and private banks as of June 29, 1929, was \$44,732,277,000. No later figures are available for State and private banks but the total resources of 7,408 national banks as of December 31, 1929, was \$28,882,483,000. 1929, was \$28,882,483,000.

Mr. Fort. Now, we have also had some discussion as to the political power resulting from these various systems. Is it not a fact also, Mr. Pole, that these changes in the banking systems, of branch banking and group banking and other affiliations of banking power, are resulting in an enormous concentration of economic power. apart from political power?

Mr. Pole. It would seem that that would be natural.

Mr. FORT. And that that is running along correlatively and simul; taneously with an aggregation of economic power in our industry and in our merchandising

Mr. Pole. Undoubtedly.

Mr. Fort. The tendency everywhere seems to be toward the establishment of greater units under single control?

Mr. Pole. Yes.
Mr. Fort. It has seemed to me, parenthetically, that we are somewhat getting to the point where we have got to consider the aggregation of economic power, through control of personal property as England was forced three or four hundred years ago to consider it when all property was real property. If this aggregation of economic power through consolidation of banking resources is moving as fast as it is, do you still feel, as you said awhile ago, that allowing these great banks of deposit to go into the investment field and the origination of securities is wise, or should they be restricted and held out of the investment and origination of securities altogether and forced back into what used to be called banking?

Mr. Pole. A very important factor in the banking business 15 dealing in securities, and it is becoming more and more important as the commercial business of the bank appears to be coming less and

less profitable.

Mr. Fort. Let us get a clear view of what we mean by dealing in securities, Mr. Pole. Dealing with securities and dealing in securities are two different things, of course?

Mr. Pole. Yes.

Mr. Fort. Can you see no possible basis for a differentiation between the function of loaning on securities held by somebody else and the function of originating securities and selling them to some-

Mr. Pole. A very wide difference.

Mr. Fort. Granting that there is a difference there, are they, in Your judgment, as a supervising bank official, the type of functions that should be in the same hands?

Mr. Pole. I know of no dangerous developments to date, Mr. Fort.

Mr. Fort. No; but that does not go to the theory.

Mr. Pole. No.

Mr. Fort. Banking, as it has been regarded traditionally, is the receipt of deposits and the loaning of money, is it not?

Mr. Pole. Yes.

Mr. Fort. Now, the loaning of money to-day, by virtue of the transformation in our business and economic structure, has become increasingly a loaning on securities rather than a loaning on names or on individually-owned business. Do you feel that it is sound banking—and I am not precommitted one way or the other—or sound banking theory that the same man should sell me a security and then determine how much he should lend me to buy it?

Mr. Pole. I can not see any objection to banks going into the underwriting and the distribution of securities on a large scale.

Mr. Fort. In the one case the psychology of the banker is that of a lender whose sole consideration is the safety of the loan and the making of a loan that is wise for the borrower to have; do you see no difference between that psychological viewpoint and the viewpoint of the salesman who is making money or profit out of selling the security on which the loan is sought?

Mr. Pole. Yes, I see a very great difference.

Mr. Fort. In that psychology?

Mr. Pole. A very great difference in that psychology.

Mr. Fort. Now, the trust powers of banks have been exercised to a very great extent, have they not?

Mr. Pole. To an increasing extent.

Mr. Fort. And are continuing. The percentage of increase is really tremendous, is it not?

Mr. Pole. Remarkably large.

Mr. FORT. That results in the control of very large resources going into the hands of the management of banks, that management having no financial interest whatever in the funds in its control, does it not?

Mr. Pole. It certainly does.

Mr. Fort. In other words, it is another step by which we are passing from the owner controlling his property to somebody else controlling it for him?

Mr. Pole. I think you are correct.

Mr. Fort. Now, if an individual is trustee under a will or a voluntary trust, he may make no profit whatever, directly or indirectly, out of the funds in his hands as trustee, other than his legal commission, may he?

Mr. Pole. That is correct.

Mr. Fort. And if he does, he is liable to removal, and also to deprivation of his profit, and, simultaneously, to make up any loss which may have occurred on one transaction, while being denied a profit on the other transaction. Is there any sound reason why the same rule should not apply to corporate trustees?

Mr. Pole. I think not. Mr. Fort. Then should banks which are corporate trustees be permitted to deposit the funds of the trust with themselves, except that they pay as interest the same earnings that they make?

Mr. Pole. I should say that under regulation there would be no

objection to it.

Mr. FORT. Why not? If it were a private individual, he would not

be allowed to do it, would he?

Mr. Pole. I think that the trust department might properly, deposit its uninvested trust funds in the commercial department of a bank, which it does to-day, such deposit being covered by securities under governmental regulation.

Mr. FORT. And then, when deposited in the commercial department, they become subject to the ordinary hazards and investments

of the bank, do they not?

Mr. Pole. They are protected by a deposit of securities with the trust department, covering the full amount of deposit.

Mr. Fort. The individual trustee under a will is covered by A surety bond, is he not?

Mr. POLE. Yes.

Mr. Fort. So that there is no difference between the one case and the other?

Mr. Pole. As far as the security is concerned; no.

Mr. FORT. But the individual trustee would not be permitted, even though under bond, to utilize the funds in his custody as trustee in his own business and make a profit?

Mr. Pole. That is correct.

Mr. Fort. Nor would be be permitted to buy securities from himself or from a corporation which he owned?

Mr. Pole. That is true. Mr. Fort. Now, all that I am asking is this, that as a matter of sound theory, is there any reason why a corporate trustee should have broader powers in this respect than individual trustees?

Mr. Pole. I probably see no reason why there should be any

difference there.

Mr. Fort. Is it not possible, under the present situation of security affiliates, as was brought out by somebody else the other day, for the little actual stock ownership of a bank to be in its own security affiliate?

Mr. Pole. There is no law prohibiting that at present. I have suggested that where the stock is held by these securities companies, or where there is a securities company that is closely affiliated with the bank, that the supervisory authority should be extended to such corporations.

Mr. Fort. The fact is that the stock of security affiliates and the stock of the banks themselves are traded in as a unit, is it not?

Mr. Pole. That is quite often the case.

Mr. Fort. Is there anything in the national bank act that permits that?

Mr. Pole. There is nothing prohibiting it.

Mr. Fort. The tieing of the two stocks together so that neither could be sold separately from the other.

Is there anything in the national bank act that permits voting

trusts on national bank stock?

Mr. Pole. There is no mention of voting trusts as far as I know. Mr. Fort. Are there any court decisions on that subject in regard to national banks?

Mr. Pole. I am sure there are.

Mr. FORT. Which way? Do you know? Are they legal or illegal?

Mr. Pole. I have not the information on that.

Mr. Fort. If Mr. Awalt knows the decisions, I wish he would put

them in the record.

Mr. Awalt. I can not offhand tell you the exact decisions, but there was a decision in New York State on a voting trust, holding it illegal, and there was a decision in one of the southern States holding a voting trust illegal.

Mr. Wingo. That was not with reference to national banks,

was it?

m-

988

S

r

y

Mr. AWALT. I do not believe either one had reference to national banks.

Mr. Wingo. I do not think they were. I remember that I had occasion to ask about that.

Mr. Awalt. I might say that we have consistently opposed voting

trusts in our office.

Mr. FORT. That is what I was coming to. I think generally that there is a feeling that a voting trust of bank stock at least is against the public interest.

Mr. Pole. There is.

Mr. Forr. Is there any logical difference between a voting trust on the bank stock and the ownership of the majority of the stock of that bank by a corporation?

Mr. Pole. As a matter of practice, there would be great similarity

in the operation of the two ideas.

Mr. Fort. In the one case the man would have his voting trust certificates for his holding, and in the other he would have a certificate of stock in the Transamerica Corporation, or whatever it might be that owned the stock of the bank, but in either case the control is locked, is it not?

Mr. POLE. Yes.

Mr. FORT. Do you feel that the locking of control of banks through any form of device is a desirable thing?

Mr. Pole. I think it is undesirable.

Mr. FORT. In the examinations of banks having trust departments, are the securities held by the banks for their own account crosschecked by number and in other ways against the securities held by the bank for trust accounts?

Mr. Pole. Those are kept entirely separate.

Mr. Fort. You seal the one box so that they can not be transferred back from box to box until you make your examination?

Mr. Pole. We do. We take care of that situation.

Mr. Fort. Has the question come to you in any way that will give you grounds for an opinion as to whether we should, now that banking has become so largely a matter of loans on collateral, in addition to our 10 per cent limit, or some other limit, of resources that may be loaned to any borrower, make a lending limit as to the amount that can be loaned on the securities of any corporation?

Mr. Pole. I have not given that any consideration.

Mr. FORT. Now that collateral loans have replaced personal loans to such a large extent, do you not think it is something that we should

Mr. Pole. I think it might be given consideration.

Mr. Forr. Is it not essential if you are going to get real diversification of investment?

Mr. Pole. I do not know that I would say that it would be essen-

tial. I think it might be desirable.

Mr. FORT. In regard to branch banking again, has the branch banking system in California, in your judgment and from your vision of it, produced really strong banks in the small towns? That is, have the branch banking systems penetrated into the very small towns as well, or have they only gone into the larger towns?

Mr. Pole. They are in very many small towns as well as the larger

ones.

Mr. FORT. You have said that branch banking will intensify competition. Has not its tendency so far been, as applied to city-wide banking, to reduce the competition in the sense of the number of competitors, while at the same time it has furnished stronger independent banks, larger individual banks?

Mr. Pole. I think that might be true as to the cities.

Mr. Fort. Would not the same thing be true in the country? Mr. Pole. The small unit banks in the cities have very frequently been replaced by branches, and there are branches on almost every block of one bank or another, thus increasing competition with, it is true, a less number of competing systems. I think that the large cities would reach out into the rural sections and the competition would be just as keen there.

Mr. Fort. You have spoken of the fact that the branch banks would be stronger by virtue of a greater diversification of loans, which

I think is a very sound observation.

Mr. Pole. Yes. Mr. Fort. That has not necessarily been true, however, of our

great city systems has it?

Mr. Pole. I should say so, in their diversification of loans with respect more, of course, to industries than to rural credits. There are greater opportunities for diversification in the cities by reason of the great diversification of industries there.

Mr. FORT. I think the panic of 1920 is far enough back so that we can perhaps talk about it a little. Is it not true that in 1920 and 1921, some of the very largest banks in America were in pretty tight straits?

Mr. Pole. I have heard that some of them were.

Mr. Fort. But were not permitted to fail because of the danger to the whole banking structure of the Nation if they did fail?

Mr. Pole. I think that is correct, Mr. Fort.

Mr. Fort. Is not the explanation in part of the absence of failures in the Canadian system the fact that they have not been allowed to fail? Was not that the case just two or turee years ago, where one bank was on the verge of failure and was taken over by two or three of the other major systems of Canada?

Mr. Pole. I think that may account in some measure for the few failures which do occur in the metropolitan centers. That is also true

A

A

in this country.

Mr. Fort. In Canada, too. It is true in a group system. In other

Mr. Fort. In Canada, too that its failure would be a shock to the whole banking structure, somebody is going to step in and take it over and not let it fail, whereas that does not happen with these little country banks.

Mr. Pole. That is undoubtedly true. Mr. Fort. So that in part the safeguard to the small country town is not altogether from the diversification?

Mr. Pole. Not altogether.

Mr. FORT. Or from the greater capital, in the sense that it enables it to stand the shock, but from the fact that the size will make it inadvisable for other banks to let it fail.

Mr. Pole. That is an important factor.

Mr. FORT. Now, we have developed in these questions of you, Mr. Pole, a very great deal of interesting thought from which it might appear to some of us at least that perhaps our loss of banks from the national system to the baser system, as Mr. Luce very well called it, could be in either of two ways. One is by extending the powers of national banks and the other by endeavoring to force improvement in banking methods among State banks. One would be as effective as the other, would it not?

Mr. Pole. I do not know how we could force improvement in the

management of State banks.

Mr. Fort. Not in the management, but in the code. Mr. Pole. The code?

Mr. FORT. The code under which they operate. You said, in answer to a question the other day, that we had the power, if we chose to exercise it through the Federal reserve system, to lay down rules which every State bank would have to live up to.

Mr. Pole. As a condition of membership.

Mr. Fort. As a condition of membership, or, I assume, as a condition of having their checks cleared.

Mr. Pole. I think that Congress might pass legislation to that

effect.

Mr. Fort. So that we have the power if it is wise to use it?

Mr. Pole. As far as I know, Mr. Fort.

Mr. Fort. But, in any event, so far as moderate regulation of the State banks goes, we have unquestionably the power through the Federal reserve system?

Mr. Pole. I should say so.

Mr. FORT. So that we can approach the question of the strengthening of the national system from either angle we choose, either by making the membership in the Federal reserve system mean a better bank or by extending to the national banks more of the privileges that the State banks now enjoy, or other privileges that the State banks can not enjoy, as in your suggestion?

Mr. Pole. I think that might be said to be correct.

Mr. Fort. Somewhere in between there probably is a balance that represents what we ought to do?

Mr. Pole. Yes.

Mr. FORT. The shift from the national to the State system really will not be stopped if we permit either chain or group banking while the States still give greater advantages to the State banks?

Mr. Pole. I do not think I understand the question.

Mr. Fort. I will ask my question differently. All of us are vitally concerned with this shift of resources out of the national system into the State system.

Mr. Pole. Yes. Mr. Fort. If the State laws continue to permit greater flexibility in banking practice to banks incorportaed under State charter than we do under the national charter, and we continue to permit group and chain banking, will not the tendency be for the groups and chains to transform their national banks that they own into State banks?

Mr. Pole. I think that tendency would be so if they did not attach too much value to their membership in the Federal Reserve System. I think, however, if privileges were given to national banks which would permit them to cross State lines with branches it would attract a great many State banks into the national system.

Mr. FORT. That I see.

Mr. Pole. If they were permitted to cross State lines, which is the

important factor there.

Mr. Fort. But we have not found, practically, that the extension of branch banking facilities to national banks in cities has not retained their resources in the system, has it?

PAUSPUAL

TO A VER SE STONE OF THE COLUMN

西田田田

Mr. Pole. Not at all, because that extension was to meet State bank competitors and gave the national bank no superior advantage Mr. Fort. On the contrary we have lost four and one-half billions

in three years, in spite of extending that privilege.

Mr. Pole. From the national system, but not from the Federal Reserve System.

Mr. FORT. We have lost that because of the greater flexibility permitted banks under the State laws, have we not?

Mr. Pole. That is correct. Mr. FORT. I think that is all.

Mr. Wingo. May I ask a few questions along the line of the questions Mr. Fort has been asking?

A moment ago, on the voting trust proposition-

Mr. Beedy. Will you permit me, before we leave this particular subject to ask one question?

Mr. Wingo. Yes.

Mr. Beedy. It has been developed here in answer to a question that the one thing that might tend to check this shift from the national to the state system would possibly be the attraction of membership in the Federal Reserve System, which membership would be doubly attractive if the national banks were permitted to establish branches beyond State lines. I do not want to say to the committee that 1 have given extensive consideration to that very problem, but I have in my possession a consideration of the cases bearing upon the right of Congress to pass a law authorizing national banks to establish

branches in States, even where the State law does not permit it. You recently answered a question which was asked you as to the power of national banks under Federal law to establish branches in more than one State irrespective of State lines. You said you though there was such Such power, or you had been so advised. Have you any legal opinion in writing which you could put in the record at this point as bearing upon this subject?

Mr. Pole. I have, and shall be glad to do so.

(The opinion referred to is as follows):

NOVEMBER 16, 1929.

Memorandum for the comptroller.

zt

e

0

You have requested my opinion as to the constitutional power of Congress to authorize the establishment of branches by national banks irrespective of State

In order to fully cover the question involved, it is necessary to go back to the

In order to fully cover the question involved, it is necessary to go back to the establishment of the first bank of the United States in 1791.

The legal theory upon which Congress enacted the national bank act and the rederal reserve act is the same as that upon which Congress authorized the establishment of the first bank of the United States in 1791 and the second bank of the United States in 1816. When the first bank was proposed in Congress, the constitutionality of the bill was seriously debated but a majority of both Houses supported it. The act as passed provided in part:

"It shall be lawful for the directors of aforesaid to establish offices wheresoever they shall think fit in the United States, for the purposes of discount and deposit

they shall be lawful for the directors of aforesaid to establish the united States, for the purposes of discount and deposit only, and upon the same terms, and in the same manner, as shall be practiced at the bank; and to commit the management of such offices, and the making of the said it is made parsons, under such agreements, and subject to such the said discounts, to such persons, under such agreements, and subject to such tegulations as they shall deem proper; not being contrary to law, or to the con-

Ritution of the bank.

President Washington signed the bill after considering the official opinions of the United States was was opened December 12, 1791, and established eight branches in several States, amely, in Boston, New York, Baltimore, Washington, Norfolk, Charleston, Savannah, and New Orleans. This is the first precedent of the establishment of branches by national banks. Upon the occasion of the failure of Congress to be the charter of the bank, which expired in 1811, the constitutional question was again raised and some of the opposition against the renewal was upon the cound that Congress was without power to establish and maintain a national round that Congress was without power to establish and maintain a national

THE SECOND NATIONAL BANK OF THE UNITED STATES, 1816-1836

The attempt to finance the war of 1812-1814 without any banking instru-mentality under the control of the Federal Government proved so disastrous that ongress in 1816 passed a new bill to charter a bank of the United States similar to the first bank, President Madison approving the act, having the year before vetoed a similar measure which did not meet his views. As compared with the last bank of the United States there was little difference between their organilation and purpose.

The second Bank of the United States likewise established branches in various at the union. In 1818 the legislature of the State of Maryland passed an of the effect of which was to place a special tax upon the branch of the Bank of the United States in operation in Baltimore. The Baltimore branch refused bay this the United States in operation in Baltimore. he United States in operation in Baitimore. The Baitimore that the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCulloch, was sued in the State court and a judgheavy this tax; its cashier, McCull

Court of the United States. Here for the first time the constitutional power of congress to establish the bank, and of the bank to establish branches, was confirmed by that tribunal. (McCulloch v. Maryland, 4 Wheat. 424.)

The following year, 1819, the State of Ohio imposed a tax of \$50,000 on the following year, 1819, the State of Ohio imposed a tax of \$50,000 on the following year, 1819, the State of the United States, established at Cinculation of the two branches of the Bank of the United States, established at Cinculation of the States seized \$98,000 in money. The State officials concerned were arrested by the Federal authorities and tried in the Federal Circuit where judgment was rendered against them to restore to the bank with

interest the funds seized. An appeal was taken to the Supreme Court of the United States (Osborn v. Bank of the United States, 9 Wheat. 738), where again the constitutional power of Congress was brought into question and formed the basis of the opinion.

The opinions in both of these cases were written by Chief Justice Marshall. and for practical purposes can be considered as one case, the second being an

elaboration and a review of the first.

The principles decided in these cases may be briefly stated as follows:

(1) Congress has the constitutional power to incorporate a national bank. (2) The existence of State banks can have no influence upon the question of

this paramount power of Congress. (3) "After the most deliberate consideration, it is the unanimous and decided opinion of this court that the act to incorporate the bank of the United States is a law made in pursuance of the Constitution, and is a part of the supreme law of the land. The branches proceeding from the same stock, and being conducive to the complete accomplishment of the object, are equally constitutional.

(McCulloch Case 4 Wheat. 424.)

(4) Congress, having the constitutional power to create a national bank, has also the constitutional power to determine, authorize, or create the faculties necessary to enable it to perform the services for which it was created and Congress the services for which it was created and congress the services for which it was created and congress the services for which it was created and congress the services for which it was created and congress the services for which it was created and congress the services for which it was created and congress the services for whi gress alone is the judge of the means to be employed in the exercise of these faculties.

The Supreme Court of the United States in these two cases upheld the power of a national bank, to establish branches in the various States without permission or authority from the State governments.

THE NATIONAL BANK ACT OF 1863

With the failure of Congress to renew the charter of the second bank of the United States the Federal Government operated without a banking instrument tality under its control until the enactment of the national bank act in 1863 That act set up a system of independent national banks rather than one central national bank with branches. The question of the power of national banks to establish branches did not again come before the Supreme Court of the United States until 1924, more than a century after the decision of McCulloch v. Mary land and Osborn v. Bank of the United States when it was presented in the case of the First National Bank in St. Louis v. Missouri. (263 U. S. 640.)

In the meantime, however, many cases had come before the Supreme Court of the United States in which it became necessary to interpret and construe national bank act with reference to the charter powers of national banks in their relationship to the State legislatures, in all of which the fundamental principles enunciated in the McCulloch and the Osborn cases were sustained and followed It seems appropriate to consider some of these cases before proceeding to the

First National Bank in St. Louis v. Missouri.

PRIGG V. PENNSYLVANIA (16 PETERS, 539, 617-19)

The Supreme Court of the United States in discussing the respective domains

of Federal and State legislation, said:

"If this be so, then it would seem upon just principles of construction, that the legislation of Congress, if constitutional, must supersede all State legislation upon the same subject; and by necessary implication prohibit it. For, if Congressive a constitutional power to regulate a particular subject, and they do actually regulate it in a given manner, and in a certain form, it can not be, that the State legislatures have a right to interfere, and as it were, by way of compliment to the legislation of Congress, to prescribe additional regulations, and what they deep auxiliary provisions for the same purpose. In such a case, the legislation of Congress, in what it does prescribe, manifestly indicates, that it does not intend that there shall be any further legislation to act upon the subject matter. silence as to what it does not do, is an expressive of that its intention is, as the direct provisions made by it. This doctrine was fully recognized by this court in the case of Houston v. Moore (5 Wheat, 1, 21-2), where it was expressly held that where Congress have exercised a power over a particular. that where Congress have exercised a power over a particular subject given then by the Constitution, it is not competent for State legislation to add to the provisions of Congress upon that subject; for that the will of Congress upon that subject is as clearly established by what it has not declared, as by what it has expressed." has expressed."

FARMERS' AND MECHANICS' NATIONAL BANK V. DEARING (91 U. S. 29, 1875)

This was a case before the Supreme Court which construed the national bank act with reference to the authority of the State governments and involved the application of the usury law of the State of New York. The court said:

"The constitutionality of the act of 1864 is not questioned. It rests on the same principle as the act creating the second bank of the United States. The reasoning of Secretary Hamilton and of this court in McCulloch v. Maryland (4 Wheat 316) and in Ochara v. Bk. (9 Wheat 738), therefore applies. The (4 Wheat. 316), and in Osborn v. Bk. (9 Wheat. 738), therefore applies. The national banks organized under the act are instruments designed to be used to aid the Government in the administration of an important branch of the public services of the necessity. bervice. They are means appropriate to that end. Of the degree of the necessity which existed for creating them. Congress is the sole judge.

Being such means, brought into existence for this purpose, and intended to be so employed, the States can exercise no control over them nor in anywise affect their their operation, except in so far as Congress may see proper to permit. Anything beyond this is 'an abuse', because it is the usurpation of power which a single state can not give. Against the national will 'the States have no power, by taxation or otherwise, to retard, impede, burthen or in any manner control the operation of the constitutional laws enacted by Congress to carry into execution the powers vested in the General Government.' (Osborn v. Bk., supra; Weston v. Charles of the Congress of the Charleston, 2 Pet. 466; Brown v. Maryland, 12 Wheat. 419; Dobbins v. Eric Co., 16 Pet. 435.

The power to create carries with it the power to preserve. The latter is a corollary from the former.

ġ.

The principle, announced in the authorities cited, is indispensable to the efficiency, the independence, and, indeed, to the beneficial existence of the General Government; otherwise it would be liable, in the discharge of its most important trusts. trusts, to be annoyed and thwarted by the will or caprice of every State in the Union. Infinite confusion would follow. The Government would be reduced to a pitiable condition of weakness. The form might remain, but the vital essence would have departed. In the complex system of polity which obtains in this country, the powers of government may be divided into four classes:

Those which belong exclusively to the States;

Those which belong exclusively to the National Government;
Those which belong exclusively to the National Government;
Those which may be exercised concurrently and independently by both; And those which may be exercised by the States, but only with the consent,

express or implied, of Congress.

the Whenever the will of the Nation intervenes exclusively in this class of cases, the authority of the State retires and lies in abeyance until a proper occasion for exercise shall recur. (Gilman v. Philadelphia, 3 Wall. 713, 18 L. ed. 96; Aparte McNiel, 13 Wall. 240, 20 L. ed. 625.)

The power of the States to tax the existing national banks lies within the category last mentioned.

It must always be borne in mind that the Constitution of the United States, and the laws which shall be made in pursuance thereof, are 'the supreme law of

and the laws which shall be made in pursuance thereof,' are 'the supreme law of the land' (Const., art. 6), and that this law is as much a part of the law of each State, and as binding upon its authorities and people, as its own local constitution and laws."

CASEY V. GALLI (94 U. S. 673, 1877)

This case held that Congress had the power to authorize a State chartered bank to convert into a national bank without any assent or permission by the State upon the ground that no authority from the State was necessary.

DAVIS V. ELMIRE SAVINGS BANK (161 U. S. 275, 1896)

The court in denying the validity of a statute of the State of New York fixing breferences in cases of insolvency, in so far as it applied to national banks, through

Mr. Justice White, said:

National banks are instrumentalities of the Federal Government, created for a public purpose, and as such necessarily subject to the paramount authority of the United States. It follows that an attempt by a State to define their date. duties or control the conduct of their affairs is absolutely void, wherever such attempted exercise of authority expressly conflicts with the laws of the United States. States, and either frustrates the purpose of the national legislation, or impairs the efficiency of these agencies of the Federal Government to discharge the duties for the control of these agencies of the Federal Government to discharge the duties for the control of the cont for the performance of which they were created. These principles are axiomatic, and are sanctioned by the repeated adjudications of this court."

EASTON V. IOWA (188 U. S. 220, 1903)

In this case the president of a national bank was sentenced under a criminal statute of the State penalizing the receipt of deposits with knowledge of the insolvency of the bank.

In taking issue with the Supreme Court of the State, Mr. Justice Shiras, in

delivering the opinion of the court, said:

"We think that this view of the subject is not based on a correct conception of the Federal legislation creating and regulating national banks. That legislation has in view the erection of a system extending throughout the country, and independent, so far as powers conferred are concerned, of State legislation which, if permitted to be applicable, might impose limitations and restrictions as various and as numerous as the States. Having due regard to the national character and purposes of that system, we can not concur in the suggestions that national banks, in respect to the powers conferred upon them, are to be viewed as solely organized and operated for private gain. The principles enunciated in McCullough v. Maryland (4 Wheat. 425, 4 L. ed. 606) and in Osborn bank of United States (9 Wheat. 738, 6 L. ed. 204), though expressed in respect to banks incorporated directly by acts of Congress, are yet applicable to the later and present system of national banks."

"Such being the nature of these national institutions, it must be obvious that their operations can not be limited or controlled by State legislation, and the Supreme Court of Iowa was in error when it held that national banks are organized and their business prosecuted for private gain, and that there is no reason why the officers of such banks should be exempt from the penalties prescribed for fraudulent banking."

FIRST NATIONAL BANK V. FELLOWS (244 U. S. 416, 1917)

In this case the State of Michigan contested the power of Congress to enact the provisions of the Federal reserve act conferring trust powers upon national banks. The Supreme Court of the United States (opinion delivered by Mr. Chief Justice White) reversed the Supreme Court of Michigan and upheld the powers of Congress citing with approval the principles enunciated in McCullough v. Maryland and Osborn v. Bank of the United States. Referring to the basic principles of constitutional law laid down in the above two cases, the court further said: "The doctrines thus announced have been reiterated in a multitude of judicial decisions, and have been undeviatingly applied in legislative and enforced in administrative action."

First National Bank of San Jose v. State of California et al. (262 U. S. 366, 370)

In this case the Supreme Court declared invalid, so far as national banks were concerned, a State law providing for the escheat to the State of California of bank deposits remaining unclaimed for more than 20 years, and in commenting upon attempted interference with national banks by State legislation, said:

"This court has often pointed out the necessity for protecting Federal agencies against interference by State legislation. The approved principle of obsta principiis should be adhered to. (McCulloch v. Maryland, 4 Wheat, 316; Osborn v. United States Bank, 9 Wheat. 738; Farmers' and Mechanics' National Bank v. Dearing, supra; California v. Central Pacific R. R. Co., 127 U. S. 1; Davis v. Elmire Savings Bank, supra; Easton v. Iowa, supra; Covington v. First National Bank, 198 U. S. 100; Farmers and Mechanics Savings Bank v. Minnesota, 232 U. S. 516; Choctaw, Oklahoma and Gulf R. R. Co. v. Harrison, 235 U. S. 292; Bank of California v. Richardson, 248 U. S. 476."

BARNES NATIONAL BANK V. DUNCAN (265 U. S. 17, 1924)

In this case the State of Missouri attempted to enforce against a national bank, the State law regulating the exercise of trust powers. The Supreme Court of the United States reversed the State Supreme Court upon the authority of the Fellows case and others above cited. Mr. Justice Holmes in delivering the opinion of the court reiterated the principle that the constitutional power of Congress was to be tested by the right to create the bank and the authority to attach to it that which was relevant in the judgment of Congress to make the business of the bank successful and that this excluded the power of the State in such cases.

FIRST NATIONAL BANK IN ST. LOUIS V. MISSOURI (263 U. S. 640, 1924)

This case involved primarily the question of the power of national banks to establish branches under the authority of the national bank act and rests upon a state. state of facts different from that of McCulloch v. Maryland in which the question of branches for national banks was first considered by the Supreme Court.

The First National Bank, upon the advice of its own counsel, proceeded to establish and conduct a branch bank in the city of St. Louis upon the theory that whereas the Federal statutes did not expressly authorize national banks to establish Thereas the Federal statutes did not expressly authorize battonia banks to establish branches, such banks nevertheless possessed the incidental charter power so to do. No permission from the comptroller was obtained for the establishment of the branch. There was upon the statute books of the State a law prohibiting the establishment of branch banks in that State. The Attorney General of Missouri on behalf of the State took the position, first that the national bank exceeded the position of the stablished the exceeded the position of the stablis exceeded its charter powers under the national bank act when it established the branch and second that there being no permissive Federal statute, the State was Competent to enforce against the national bank its own law against branches. The following propositions are quoted from the brief of the Attorney General of the State which he filed before the Supreme Court of the United States:

(1) "Branch banking by a national bank in a State is conduct in excess of any authority from the Nation."

(2) "Acts of a national bank in a State which are in excess of any authority from the Nation, and in contravention of State law, can be stopped by the State. (3) "An unauthorized, unlawful act of a national bank in a State should stand upon the same footing as the unauthorized, unlawful act of any other corporation. (4) "A national agency is no more free from responsibility to the state for unlawful acts done in the State beyond the scope of its powers and authority than a State agent."

ø r. (5) "The same conduct may be an offense against both State and national

Sovereignty, and may be restrained by both Nation and State.

It was upon these grounds that the action was brought by the State in the supreme court of the State in the nature of quo warranto. The formal allegation the State was to the effect, first that the bank was not authorized by Congress to establish a branch and second, that in establishing the branch it violated a statute of the State expressly prohibiting the establishment of branch banks.

At the request of the Comptroller of the Currency the Attorney General of the United States intervened in this case, not however for the purpose of upholding the right of the national bank to establish the branch but to contest the jurisdicion of the State to inquire into the question whether Congress had authorized

a national bank to establish a branch.

It was shown before the court that the office of the Comptroller of the Currency

bank act as denving the right of national It was shown before the court that the office of the Comptroner of the Currency had for years construed the national bank act as denying the right of national banks to establish branches. This opinion was supported by an opinion of the Attorney General, May 11, 1911, which was cited with approval in the opinion of the court in this case. The principal argument of counsel on both sides before the court, and the bulk of the opinion of the court, is devoted to the question of whether Congress had authorized national banks to establish branches. The court received the conclusion that there was no doubt, especially in view of the court reached the conclusion that there was no doubt, especially in view of the long-continued construction of the national bank act by the Comptroller of the Currency, that Congress had not conferred upon national banks the charter power to establish branches.

In view therefore of this condition precedent the court held that the State was In view therefore of this condition precedent the court held that the State was competent to enforce its own law against the national bank. The question therefore of the constitutional power of Congress to permit national banks to establish branches was not involved in this case. The case is in harmony with the previous decisions of the court hereinabove considered. Had there been upon the Federal statute books an amendment to the national bank act permitting national bank as a stablish branches the Supreme Court of the United States. national banks to establish branches the Supreme Court of the United States would have undoubtedly held the State law invalid as applied to national banks. The question asked by the court of the State law, "Does it conflict with the laws of the United States?" would have been necessarily answered in the affirmative. In the absence of such an amendment the question was answered in the negative.

Congress inserted in the so-called McFadden-Pepper Act of February 25, 1927, a clause in its branch banking section, that branches of national banks would be permitted only in those States which permitted the State banks to establish This clause was a concession to the States not as a matter of constitu-

tional necessity but rather as a matter of legislative policy.

In view of the above consideration there appears to be no doubt of the constitutional power of Congress to permit the national banks to establish branches in any State of the Union, irrespective of the laws of the State. If Congress determines that the national banks could better serve as instrumentalities of the Fedrick of the Fedric eral Government through the establishment of branches it would not be within the jurisdiction of a State to prohibit or restrict the purpose of the National Legislature to this effect.

F. G. AWALT, Deputy Comptroller and Counsel. 66

Mr. Wingo. You said you knew of no power by which we could prevent and control the State standards of banking. Is that true, do you think, in its entirety?

Mr. Pole. I said I did not know of anything that Congress could

do to control a State bank, except-

Mr. Wingo. I am talking about a charter to the State bank, not talking about controlling the actual operation of the bank after it gets the charter, but about the powers of the bank secured from a charter given by the State-in other words, under the State banking laws. You say you do not know of any power we have to affect that?

Mr. Pole. I know of none. Of course, I am not a lawyer.

Mr. Wingo. Let us speculate just a little bit and draw on experience, too, Let me cite to you the fact that we drove out of existence the State bank issues by the exercise of a Federal power, the taxing

Before I go into these illustrations I want it distinctly understood that by enumerating the possibilities I do not by my questions indicate my personal opinion on or approval of the use of any of these methods, but, in talking about possibilities, we will take the question of the commerce clause of the Constitution.

Mr. Pole. I thought you were talking about existing law.

Mr. Wingo. No; I am talking about the power to enact a law and that the effect of it would be to drive out of existence every State bank that did not come up to a standard that Congress fixed.

Mr. Pole. I would not question that in any way.

Mr. Wingo. As an illustration, we could use the taxing power to stop chain banking or group banking; we could use the interstate commerce clause; we could use the barring of the mails; we could provide that no national bank or Federal reserve bank should clear or have any relations with a bank that did not come up to a specific standard, and if we did those things would we not ultimately force the different State banks up to a standard that was comparable to the ideal standard that we have fixed in the national bank act?

Mr. Pole. There is no question in my mind that Congress could

eliminate the State banks.

Mr. Wingo. Is it not a question of the power of Congress by several means to check what we all recognize and what you denominate as the evils of chain and group banking? But your idea is that the ideal way to check these evils is to adopt what some other people regard as another evil, branch banking?

Mr. Pole. Yes.

Mr. Wingo. If you are a chain banker or group banker, and you were given the alternative what reason or what motive or what philosophy would there appear to you that would lead you to say, "I had better change my chain and my group into a branch banking system?"

Mr. Pole. Greater mobility of resources and ease and economy of

operation.

Mr. Wingo. What do you mean by "greater mobility of resources?" Mr. Pole. That the transfer of funds from one section of the area in which I was operating my branch system to another would be far easier under the branch banking system than it would under the other systems which you speak of.

Mr. Wingo. I can not comprehend that statement, because I have an idea that the transfer of funds would either come by telegraph

Mr. Pole. Under the group plan, each bank is an independent unit, and it has its own investments, so that if it wished to transfer funds from one point to another, it would be under the necessity of selling some of its assets or transferring them through a holding company to some other bank which had funds.

Mr. Wingo. Not necessarily; it could transfer a deposit, could it

not, without doing that?

Mr. Pole. It could not transfer its deposits.

Mr. Wingo. What is to prevent a chain bank from making a transfer of its deposits in the same identical instance that a branch bank could? Suppose that here is a chain bank that has a deposit in New York City with a correspondent, and it is changed over night into a branch banking system. Is there any difference in the mechanles of transferring those funds in one case than in the other?

Mr. Pole. We must be talking about different things.

Mr. Wingo. That is the reason I am asking you to elucidate.

Mr. Pole. If you were to deposit your funds in a bank which was a member of a group, it would not be within the province of the holding company which held the stock of that member of the group to transfer your deposit to another member of its group where funds might be needed for loaning purposes.

Mr. Wingo. Well, they are doing it everyday. Even if the laws of Arkansas prohibit branch banking, they do permit chains, and funds are being transferred from Arkansas to Nashville, Tenn., under chain banking and under group banking just the same as they would have the power to do if you had branch banking.

Mr. Pole. Funds may be transferred, funds which are involved in

the operation of a single unit.

Mr. Wingo. That is what we are talking about.

Mr. Pole. But there would be no possibility of transferring the deposits of one independent bank which might be a member of the group to another independent bank which might be a member of the group.

Mr. Wingo. You mean the book record, not the deposit.

Mr. Pole. The deposit.

Mr. Wingo. Are you talking about the actual money or the actual

credit or the record on the books?

Mr. Pole. I am talking about the actual credit. If a bank itself wished to transfer its funds, that still might be a very difficult matter.

Mr. Wingo. We will say that there is a holding corporation in Nashville, Tenn.; can it not direct one of its chain banks in Arkansas to transfer my funds that are there to my credit—and there is no occasion to specify "Wingo deposit"; they say, "from your deposits, you transfer \$10,000 or \$20,000"-whatever they wanted-"over to the depositary in Nashville, Tenn."

Can they not do that now, and do they not do it?

Mr. Pole. Such funds as that may be moved, but they would be limited to the amount which the bank might deposit or the amount which the bank might borrow.

Mr. Wingo. That would be true in both instances.

Mr. Pole. With small banks it would be a very small amount, whereas in the branch banking system funds could be transferred very freely to any branch of the system.

Mr. WINGO. What limitation is there in the national bank act with reference to such transfers? The limitation you are talking about is the 10 per cent limitation, and that applies to loans.

Mr. Pole. No; I was not referring to that.

Mr. Wingo. What statute did you have in mind? Mr. Pole. I was having in mind the statute where a bank could not keep on deposit, for instance-

Mr. Wingo. I see what you are driving at now.

Mr. Strong. Are you going to finish soon? Mr. Wingo. Yes; I have one or two more questions.

Is it not then true, talking about the standards of the State banks, that we have been engaged for years in this committee and in Congress in constantly framing our laws to meet the competition of State banks, and has not that been the chief cry and reason for our doing these things?

Mr. Pole. I think that is a fair statement of the situation.

Mr. Wingo. Was not that the late argument for the McFadden Act?

Mr. Pole. Yes.

Mr. Wingo. To liberalize the national bank standards, and whenever we pointed out objections to any particular proposal around this table, instead of discussing the merits of the objection, we were told that "Well, we have to do that in order to meet the competition of State banks."

Mr. Pole. That was largely the case in the McFadden bill.

Mr. Wingo. And the reason for that was that these State banks, as my friend Mr. Luce would say, had a baser standard, which was lower, and so we have governed our conduct in meeting this competition by reasons of expediency and not by measuring the standard or what should be the ideal, have we not?

Mr. Pole. In the McFadden bill there was some liberalization.

Mr. Wingo. I am talking about the major features of it.

Mr. Pole. Of course, the important thing in the McFadden bill was not so much the liberalization of a bank's privileges as it was with

respect to the extension of branches.

Mr. Wingo. Oh yes; we had the argument made here that we ought to permit them to deal in securities because State banks were permitted to do it. I think every major proposal in the McFadden Act was bottomed not upon the justification that it was sound banking, but we were trying to meet the competition of State banking systems.

Can you name a major proposal where that argument was not made?

Mr. Pole. I think that is correct.

Mr. Wingo. And the point I want to drive home is this, that if there are evils in these State banking systems which, by reason of an enforced competition, are weakening the standard of the National system, would it not be profitable for us, instead of spending our time in devising schemes of expediency and lowering the national standard in order to meet this competition, to spend our time in devising legislation embracing methods by which we could enforce a higher standard in the State banking laws so as to protect both the State bank patrons as well as the national bank patrons from the evils of the baser standard as referred to by Mr. Luce?

Mr. Pole. I think we have to consider it from the economic point of view. The announced legislative policy of the so-called McFadden bank act of February 25, 1927, was parity between the National and State systems. The purpose of the bill was to make the charter powers of national banks approximately equal in operating advantage to those of the State banks. Nearly three years of operation under that act has demonstrated that it has failed of its purpose in this respect.

The theory of parity between the two systems of banks is, in my

opinion, economically unsound.

g

-

d

f

g

Mr. Wingo. Should we not say that we will spend our time in bottoming everything we do upon building up the system that from an economic standard is sounder and better than the baser standard

now permitted by the States?

Mr. Pole. I think so, and hence my proposal for an increase of branch banking powers for national banks without reference to State laws. I think that the economic change is such that the small bank can not operate successfully any more. I am, therefore, suggesting a plan which will enable banking service to be carried to every community from a metropolitan center.

Mr. Wingo. In other words, your theory is that the changed economic structure is such that in order for banking institutions to render to the public that service to which it is entitled, necessarily you have

Mr. Pole. That is correct.

Mr. Wingo. And you think that necessarily then in order to have larger banking units, you have to choose between three types—group banking, chain banking, or branch banking—and in your own mind branch banking possesses fewer of the evils and more of the benefits than the other two?

Mr. Pole. I think decidedly there is no question in my mind as to which is the best of the three, and I am not advocating either chain

banking or group banking as a remedy.

Mr. Wingo. That is what I say. Mr. Pole. I am advocating branch banking.

Mr. Wingo. Your ideal, as I understand it, is the independent unit banking system, but you say that changed economic conditions have made us face a condition and not a theory?

Mr. Pole. Yes.

Mr. Wingo. And your belief is—and your judgment is entitled to a great deal of weight—that the only choice we have now in order to do what you think is necessary is between a group banking system or a chain banking system or a branch banking system, and you think the branch banking system is preferable, both from the standpoint of

the service they may render, the superior service, and from the standpoint of having fewer evils than either of the other two systems? Mr. Pole. And from the standpoint of successful operation.

Mr. Wingo. That is included.

Now, let us go back to the proposition of the trustee. Is it not a fact that the courts in New York City now sometimes designate banks as receivers and trustees, and permit those banks to deposit with themselves the trust funds and to pay the trust estate, of which it is receiver, or trustee, only 2 per cent, or whatever the current rate is, upon deposit balances, and the bank gets the benefit of those funds and in some instances makes 10 or 12 per cent, or whatever its earning is upon its deposits, and, in addition thereto, draws its fees as trustee and remuneration as receiver? Is not that an actual practice in New York City and possibly in other cities and States?

Let us just take one instance, and it is not an isolated one. Do you not know that the Irving Trust Co. had such an experience? Was it not appointed receiver, and did not the court permit it to deposit the trust funds in its own institution and let them use them and simply account to the trust estate for the current rate of interest on deposit balances, and, in addition thereto, the same court allowed

them a fee for acting as receiver?

Mr. Fort. If the gentleman will permit, I understand that in New York there have been some modifications made of the ordinary rules applicable to trustees, in favor of corporate trustees under the supervision of the banking department as organized.

Mr. Wingo. That is true.

Mr. Fort. As against individual trustees.

Mr. Wingo. What I am talking about is this, that regardless of the fundamental rules, time and experience as well as statutes have set up certain safeguards governing the use of trustees' funds. I am not discussing whether they are wise or unwise, whether they should be permitted to be changed or not; I am talking about what is actually being done. Is not that very thing being done in New York City? I am not undertaking to criticize it, to say whether it is justified or not; I am just asking you if it is not a fact that in actual practice, such as in the illustration I have used, that that has taken place place in more than one instance in New York City?

Mr. Pole. I know nothing, of course, of the Irving Trust Co. think as a general rule that trust funds do not remain uninvested

for any great length of time.

Mr. Wingo. That, of course, does not answer my question. You do not know whether any such practice as I have given obtains of not?

Mr. Pole. No, I do not.

Mr. Strong. Is that all, Mr. Wingo? Mr. Wingo. Can you conceive of any reason why a trust estate should not be protected by the same jealous rules when a corporation is dealing with it as when an individual is dealing with it?

Mr. Pole. None at all.

Mr. Strong. Mr. Goodwin has a matter that he wants to bring

before the committee.

(Thereupon, 1.15 o'clock p. m., the committee went into executive session.)

BRANCH, CHAIN, AND GROUP BANKING

House of Representatives, Committee on Banking and Currency, Friday, March 14, 1930.

The committee met in the committee room, Capitol Building, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding. The Chairman. The committee will come to order.

Mr. Seiberling, you seem to be next on the list this morning to question the Comptroller.

STATEMENT OF HON. JOHN W. POLE-(Resumed)

Mr. Seiberling. Mr. Pole, there has been a good deal said about the Canadian banking system, and I would like to read into the record a paragraph from an address made by A. B. Barker, of Toronto, Ontario. It is found in the Journal of the Canadian Bankers' Association for October, 1929, and I read from page 81 as follows:

Many comparisons are made between the banking systems in Canada and the United States, but there is one feature which is seldom referred to, and that is the extraordinary difference in the attitude of the general public in each country toward its own system. In Canada the banks are not popular, and the criticism of a certain class is very forcibly expressed in Parliament whenever the opportunity occurs. Across the border, however, this does not seem to be the case, and the average American freely asserts that, in his country, they have the finest banking system in the world. Canadians know in their hearts that their own system is the equal of any, but when opinions are expressed they seem to be suffering from an inferiority complex, and praise that of every country but their own.

I suppose, Mr. Comptroller, that the unpopularity of the banks is due to a large extent on account of the service that they render and the price at which they render it—is that not so?

Mr. Pole. I would not like to be put in the position of admitting the unpopularity of the Canadian banking system in Canada. That is the opinion of one writer, but there are other opinions which differ.

Mr. Seiberling. You think that their system is popular over there? Mr. Pole. I would say it is popular, with the possible exception of western Canada.

Mr. Seiberling. They do not get anywhere near as large an amount on their deposits there as we do in this country; they do not pay as much interest on deposits as we do here.

Mr. Pole. Of course, the rates of interest which we pay in this country vary very greatly. In Canada it is much more uniform, and I think quite reasonable. Certainly the rate at which they lend money not only in the cities but in the farthest hamlet is very much more reasonable and very much more uniform than it is here.

Mr. Seiberling. I assume that that is a very admirable feature of their banking system?

Mr. Pole. It is, indeed.

he is?

ks

is,

ds

ng

ee

W

0

3?

d

n

d

S

e

Mr. Seiberling. The failure, however, to pay as much interest on deposits there is due probably to lack of competition, is it not?

Mr. Pole. I would not say that. I am not prepared to say that the average amount of interest which is paid on deposit accounts in Canada is not as great as it is in this country Do you know that to

Mr. Seiberling. I only know what this gentleman says in his address.

Mr. Pole. I would not accept that article without knowing something more about it.

Mr. Seiberling. This article is written on the subject of savings deposit accounts, and in the paragraph immediately preceding the one I read, in speaking of United States savings banks and trust companies, he says:

These institutions operate savings departments, but they are for real savings, and for that reason American banks and trust companies are able to pay higher rates of interest on savings deposits than Canadian banks.

Mr. Pole. I do not know how authoritative that is.

Mr. Seiberling. I do not, either, except that that is said in his address published here in the Journal of the Canadian Bankers' Association.

Mr. Pole. That is undoubtedly his honest opinion.

Mr. Seiberling. After my examination of you the other day, some one said that he thought I was "out on a limb," and I want to put this statement in the record, that, as far as I am personally concerned, if we are going to concentrate banking in this country and put it in the hands of fewer people, then I should favor restrictions upon the rates which may be charged for money, and that is the connection between my examination and the bill pending before the committee.

Now, Mr. Comptroller, you said the other day that you were in favor of having banks also underwrite securities—is that correct?

Mr. Pole. Yes, certain classes of securities. The national banks

now have authority to deal in securities of certain types.

Mr. Seiberding. They are given the authority to deal in industrial bonds?

Mr. Pole. Bonds, notes, and debentures are the three types of securities which the law permits them to deal in.

Mr. AWALT. Under regulation, under our control.

Mr. Seiberling. But your statement was that you thought it was perfectly proper for a large bank to have the right to underwrite securities, and in these securities would be classed industrial bonds? Mr. Pole. Bonds, notes, and debentures, under regulation of the

comptroller, under the present law.

Mr. Seiberling. Let us assume that an industry owes a large bank in a large center \$10,000,000 on notes running for three or four months and that we have a stringent money market; what is to prevent this bank from calling this loan, and, of course, in a stringent money market they could not go out and borrow \$10,000,000 some other place, and to say to them "We want a first mortgage on your property, and we want you to put out a bond issue; we will underwrite the bonds for you, and we will pay you 90 cents on the dollar, and you have to give us 8 per cent interest and then you have to redeem these

n

h

n

y

bonds at a fixed price; if you do not want to do that, you pay the loan."

Is there anything to prevent that?

Mr. Pole. If the notes were due, there would, of course, be nothing to prevent the bank from requiring their payment under any system of banking. As to what further arrangements for financing that interest there might be, would be difficult to answer. If the bond issue were acceptable, the bank might undertake to refinance it. Under this plan which you just suggested, if the rate of interest were regulated, I presume that would include bonuses of stock?

Mr. Seiberling. Yes, and a lot of things that I have not mentioned in my question; there are a lot of other things I could have put

in, but did not.

)

Mr. Pole. All of that would, of course, have to be taken into

consideration.

Mr. Seiberling. If a bank did not have the right to underwrite the bonds, and that profit was going to some other bank, is it not possible that they might not call the loan?

Mr. Pole. I should say that would be possible, if the bank wished to continue the loan and knew that it was good, that it might retain

it in its portfolio.

Mr. Seiberling. Where you put all these transactions into the hands of one institution, is there not great danger that just such manipulations as that will be carried on in order to make a profit?

Mr. Pole. Those things might happen, Mr. Seiberling, under any form of banking, as far as I see. The protection of the public against manipulation is, of course, a question of banking ethics as well as public opinion, and I am convinced that there will always be plenty of banking competition in this country which would prevent undue advantage being taken.

Mr. Seiberling. Not on a loan of the size I have mentioned, in a

stringent money market.

Mr. Pole. That is a hypothetical question, which would be very

difficult for me to answer.

Mr. Seiberling. Of course, no bank would call a loan if it thought it was reasonably good in a money market where there was plenty of money, and rates were low.

Mr. Pole. Unless under your proposal it might take advantage of

a situation to obtain a better underwriting arrangement.

Mr. Seiberling. They would not be very apt to do that if the profit on the underwriting was going to somebody else. You have not in your experience seen many banks working for a profit for other banks, have you?

Mr. Pole. Not often.

Mr. Seiberling. That is very seldom?

Mr. Pole. Yes; never.

Mr. Seiberling. I was glad to hear you say "never," because I never have.

Now, I want to ask you a few questions along other lines. I have heard a good deal of criticism of the Federal reserve system in connection with the limitation on loans which can be rediscounted. Have you heard any criticism of that kind?

Mr. Pole. That is stated in the law.

Mr. Seiberling. I know it is in the law, but have you heard criticisms of the law, that it is too restrictive in the particular I mentioned?

Mr. Pole. I would not say criticism. I have heard the matter discussed, as to whether perhaps different characters of paper might be admissible for discount at the Federal reserve banks, such as stock exchange loans and other classes of secured paper.

Mr. Seiberling. How about paper secured by municipal bonds?

Mr. Pole. I think that has also been discussed.

Mr. Seiberling. As a matter of fact, the member banks, in view of these restrictions, are not getting anywhere near as much service out of the Federal reserve banks as they could get otherwise-is not that true?

Mr. Pole. I think not. I think the liberality with which the Federal reserve bank has dealt with its members is quite remarkable.

Mr. Seiberling. But they can not go beyond the restrictions fixed by statute, can they?

Mr. Pole. That is true.

Mr. Seiberling. Within those limits, they have taken care of the situation?

Mr. Pole. Yes.

Mr. Seiberling. Here is a large municipal bond house in Ohio that buys municipal bonds, and they have to carry them in the banks until they can sell them at, they say, a present rate of 8 per cent. These bonds only yield about 41/4 to 5 per cent, and in many cases the rate of interest is limited by statute. Do you think that if the law could be amended so that loans with municipal bonds as collateral could be rediscounted, that would help that situation?

Mr. Pole. That is a difficult question to answer without giving full consideration to it. As to whether or not the classes of paper which might be eligible for rediscount by the Federal reserve banks should be enlarged is a question which would require a great deal of thought, and I have not given sufficient thought to it, Mr. Seiberling-

Mr. Seiberling. I suppose you will agree with me that municipal bonds are a security that should be classed as nearly comparable with Government bonds as any security in the country, will you not?

Mr. Pole. Speaking very generally, I should say yes. Of course, there are numerous instances where they are not comparable in any respect.

The CHAIRMAN. Will you yield there?

Mr. Seiberling. Yes. The Chairman. I would like to ask Mr. Pole a fundamental question. Do you consider it good practice to permit the rediscount of loans secured by Government bonds?

Mr. Pole. I would see no objection to that. As a matter of fact,

banks indirectly have that privilege now.

The CHAIRMAN. Do you think that brokers' loans secured by stock exchange collateral could safely be made subject to rediscount at the Federal reserve bank?

Mr. Pole. I have not given that sufficient consideration, Mr. Chair-

The CHAIRMAN. Do you think mortgage loans, when given as security for notes to banks, could be made eligible for rediscount by Federal reserve banks?

Mr. Pole. I have not given that sufficient consideration. It is a very important question.

The CHAIRMAN. You do not care to express an opinion on that? Mr. Pole. It requires a great deal of thought, and I would not

be prepared to answer that question now. The Chairman. All right, Mr. Seiberling.

Mr. Seiberling. When the Federal reserve act was passed, it was intended to help member banks by rediscounting acceptances for merchandise, and so forth, was it not?

Mr. Pole. The Federal reserve banks do purchase acceptances. Mr. Seiberling. But in view of the fact that many corporations have now financed themselves by the sale of stock and have a large amount of cash, we do not have acceptances any more to any such extent as we did have, do we?

Mr. Pole. Yes, I think the acceptance method of financing trans-

actions is increasing rather than diminishing.

Mr. Seiberling. It certainly is not in my city. Mr. Pole. We are developing quite a good acceptance market now in New York and elsewhere, which was unknown before the

Federal reserve act was passed in this country.
The Chairman. Will you yield again there?

Mr. Seiberling. Yes.

The CHAIRMAN. Does not a good deal of the acceptance business cover exportation and importation transactions?

Mr. Pole. Quite largely.

The CHAIRMAN. During the last year and a half, in your observation as comptroller-and, of course, you have jurisdiction over the banks who hold those acceptances?

Mr. Pole. Yes.

The CHAIRMAN. Do you consider that acceptances are always a very liquid form of paper, or has there been a tendency to consider them as frozen assets?

Mr. Pole. There may have been instances where acceptances have not been paid at maturity, but I know of no instance. They are probably considered in banking circles as the most liquid form of Paper.

The CHAIRMAN. Under recent amendments to the Federal reserve act, the scope of the service of acceptances has been largely extended, has it not? In other words, it has been extended to cover goods in storage in foreign countries, and in process of manufacture?

Mr. Pole. There have been certain changes in the regulations. The CHAIRMAN. Does it not cover that particular situation? Mr. Pole. I believe that, generally speaking, that is correct.

Mr. Seiberling. The Federal reserve banks are piling up an enormous amount of wealth, are they not?

Mr. Pole. The capital and surplus accounts of Federal reserve banks, of course, are growing. Is that what you mean?

Mr. Seiberling. Yes.

Mr. Pole. Yes.

Mr. Seiberling. Is there any reason in a situation of that kind why the law should not be liberalized as to the paper that can be rediscounted?

Mr. Pole. You are going back to that same question again. I have not given sufficient consideration to any changes in that respect of the Federal reserve act. It is a very involved question.

Mr. Seiberling. I would like very much to have you give consideration to it and, if you reach a conclusion, I would like very much

to have it in the record.

Mr. Pole. It is a matter to which the Federal reserve board itself is giving consideration to, and I have no doubt that at a later date probably a member of the board might be able to give a more definite answer.

Mr. Seiberling. You will agree with me that it would help the business of the country a great deal if the law could be liberalized without interfering with the functions of the Federal reserve bank,

permitting the rediscount of a wider range of paper?

Mr. Pole. Due to a change in the financing of industry over the last few years, what is known as commercial paper is decreasing in volume, but there is usually ample credit to accommodate industry and agriculture under the present arrangements, and as to whether it might be found necessary to enlarge the scope of paper which the Federal reserve bank should discount is quite open to question.

Mr. Seiberling. I think that is all.

The CHAIRMAN. Mr. Steagall, have you any further questions to ask the comptroller?

Mr. Steagall. Not right now. The Chairman. Judge Brand, have you any further questions? Mr. Brand. I want to ask just one or two, Mr. Chairman.

Mr. Pole, in your judgment, what effect on business do the decreasing of the discount rate and the increasing of the discount rate by the Federal reserve bank have?

Mr. Pole. That would depend very largely on what the condition of the country was at the time of the rate change. Yesterday the rate was lowered from 4 to 3½ per cent.

Mr. Brand. What was the reason assigned for that?

Mr. Pole. The effect of that, in my judgment, would be almost entirely psychological, which would be good.

Mr. Brand. You say it would have a good effect on business? Mr. Pole. The psychological effect, I think, would be good.

Mr. Brand. It is 3% per cent now in the New York Federal Reserve Bank; that is the rate they reduced it to, on yesterday. Suppose that thirty days from now, this bank runs it up to 4% or 5 per cent; what effect would that have?

Mr. Pole. I could not answer that question. That would depend upon the condition of the country at that time. I could not answer

that question now.

Mr. Brand. Well, it would have a different effect than decreasing

it, would, would it not?

Mr. Pole. Judge, you are asking me what would happen in thirty days time if the discount rate were increased or decreased. I can not answer that, because I do not know what the necessity for any change might be in thirty days from now. I would like to answer your question if I could, but I think it would be difficult for me to venture any guess on a proposition of that kind.

Mr. Brand. They have reduced it now from 4 per cent to 31/2 per cent, as has already been stated. What effect, in your judgment, will this reduction have on farm commodities, and on prices generally?

Mr. Pole. I think that the psychological effect of a reduction in the rediscount rate at this time is decidedly good. As to whether it would have any practical effect as far as the bank's loaning rate is concerned, I can hardly believe that it would have any effect at all.

Mr. Brand. It would have some effect, would it not, if they put

it back to 41/2?

T

O.

Mr. Pole. Banks are borrowing very little now from the Federal Reserve banks.

Mr. Brand. That is one reason, I suppose, why they reduced it

to 31/2 per cent, is it not?

Mr. Pole. My opinion is that the particular reason for the reduction in the rate at this time would be to perhaps create a little easier feeling on the part of the public that money was easy, and that there was no particular reason for retrenchment, but that business could go ahead with the reasonable assurance that money would continue to be cheap and plentiful.

Mr. Seiberling. Mr, Brand, if you will get the United States Daily for this morning, you will see that it gives the reason why the

rate is down.

Mr. Brand. I have not had a chance to read to-day's issue of this Paper, but at the same time I want to get Mr. Pole's opinion about it. had intended to ask this the other day, without knowing, of course, that it was going to be reduced from 4 per cent to 31/2 per cent yesterday, but others prolonged their questions, so that I did not have the opportunity.

Now, Mr. Pole, it would make a decided difference in the prices of farm commodities and in the prices of all other things that people have to buy if they should run it up say thirty days from now to

4% or 5 per cent?

Mr. Pole. I think there is not much question of that, Judge. Mr. Brand. Mr. Pole, do you think that any such power as that ought to be lodged in the hands of seven men?

Mr. Pole. I think there should be no change in the number of men

in which such power is lodged.

Mr. Brand. In any given number of men, or a reasonable number? Mr. Pole. I have not given any thought to the question, as to whether or not the membership of the Federal Reserve Board should be reduced or increased.

The Chairman. Will the gentleman yield there?

By your answer, I am inferring that the Federal Reserve Board fixes the discount rate—is that correct?

Mr. Pole. The Federal Reserve Board approves or disapproves

any change in the discount rate.

The CHAIRMAN. Do they ever initiate, or have they ever initiated, a rate?

Mr. Pole. That would be a question that you would have to inquire

of the Board. The CHAIRMAN. But you are a member of the Federal Reserve Board?

Mr. Pole. I have been a member since I have been Comptroller

of the Currency.

The CHAIRMAN. During your term of office as a member of the Federal Reserve Board, have they ever initiated a change in the discount rate?

Mr. Pole. Not to my knowledge.

The CHAIRMAN. Referring to Judge Brand's question about the lowering of the discount rate to 3½ per cent, that is the lowest rate since the summer of 1927, is it not?

Mr. Pole. I believe so.

The CHAIRMAN. What effect did the lowering of the discount rate have in the summer of 1927?

Mr. Pole. It had a stimulating effect.

The CHAIRMAN. Stimulating to what extent?

Mr. Pole. I was not a member of the Federal Reserve Board then.

The CHAIRMAN. No; but you have an observation.

Mr. Pole. A marked extent.

The CHAIRMAN. Is it not a fact that it did stimulate commodity prices about 3 per cent?

Mr. Pole. It did stimulate commodity prices, but to what extent

I would not be prepared to say.

The CHAIRMAN. It stimulated speculative activities too, did it not?

Mr. Pole. I think so.

The Chairman. And it resulted in the export of a large amount of gold, did it not?

Mr. Pole. There was a considerable amount of gold exported about that time, but as to whether or not that was the reason for it. I could not say.

The CHAIRMAN. Well, inasmuch as the rate is now lowered to 31/2

per cent, do you think that similar results will come about?

Mr. Pole. It might have that tendency.

The CHAIRMAN. Do you think it might encourage speculation?
Mr. Pole. That was embraced in your question. I say, it might have that tendency.

r pd sbb

it

b

di

R

The CHAIRMAN. All right.

Mr. Steagall. Just in that connection, with your permission, Mr. Brand—

Mr. Brand. Yes.

Mr. Steagall. It was the avowed purpose of the Federal Reserve Board, and was made known to the public some months back, that the rate should be fixed with reference to its effect upon speculation, was it not?

Mr. Pole. I know of no such statement on the part of the board. Mr. Steagall. Maybe I have not expressed myself clearly in a sechnical way.

Mr. Pole. It is possible that such a statement might have been made, but I say that if it was made I am not familiar with it.

Mr. Steagall. Well, in any event, the board did issue a warning the avowed purpose of which was to notify the public that the rates would be adjusted in order to affect the situation unless the necessity for it was removed. That happened, did it not?

Mr. Pole. The act passed clearly indicates that Federal reserve credit is not intended to be employed in speculative transactions.

Mr. Steagall. I understand that, and I am not raising any question about that. The inquiry up to the point where I came into the discussion was with respect to the effect of the change or the various changes in rates and as to what purpose was contemplated by those changes, and, as I understand the situation, this change that was recently made was not accompanied by any public statement from the Federal Reserve Board—is that right?

Mr. Pole. As far as I know.

Mr. Steagall. But heretofore the board has issued statements to the public respecting changes in rates and the purpose sought to be accomplished by those changes—is not that true?

Mr. Pole. There have been statements made by the Federal Reserve Board, but my recollection is vague as to the particular language of them. Those statements of course could be supplied for

the record if you desire them.

Mr. Steagall. Mr. Pole, I believe you said in answer to a question by Mr. McFadden that the Federal Reserve Board did not initiate rates. As a practical matter, is not this true, that no Federal reserve bank acts in a matter of that sort without a full consultation and understanding with the Federal Reserve Board? That is the way those changes are made, is it not?

Mr. Pole. I think that is not a fact.

Mr. Steagall. Do you think in practice that the Atlanta bank would ever change its rate to the extent of the change recently made in New York without first taking up the matter for discussion with the board here?

Mr. Pole. Yes.

Mr. STEAGALL. They do that?

Mr. Pole. Yes.

Mr. Steagall. I had this thought, that the mere technical expression describing what the board does with respect to the initiation of a rate was a sort of a technical differentiation that meant little in Practice. It was my idea that in a matter of that importance, the district bank would bring the Federal Reserve Board into conference so that such action would not be said necessarily to have been initiated by the Federal Reserve Board, nor, on the other hand, would it have been done independently of them, but that, as a practical proposition, it would be in the nature of joint action.

Mr. Pole. As a practical proposition, Mr. Steagall, it is sometimes by certain banks discussed prior to any change on the part of such

bank, but not generally so.

Mr. Steagall. What is the practice of the Federal Reserve Board with reference to changes proposed by the different Federal reserve banks?

Mr. Brand. You mean as to the rate of discount?

Mr. Steagall. In the matter of fixing the rates of discount?

Mr. Pole. Whenever there is a rate change proposed, the board discusses the question very thoroughly and approves or disapproves it.

Mr. Steagall. Have there been instances where the Federal

Reserve Board disapproved such rates?

Mr. Pole. Yes.

Mr. STEAGALL. How many instances of that kind?

Mr. Pole. I am not prepared to answer that.

Mr. Steagall. What occurred when that situation arose?

Mr. Pole. When the Federal Reserve Board disapproves a rate,

the rate remains unchanged.

Mr. Steagall. Have there been instances where a rate was put in effect, and announced by a district bank, and then for lack of approval of the Federal Reserve Board, that rate would be withdrawn of changed?

Mr. Pole. There may have been such instances, Mr. Congressman. Mr. STEAGALL. What would you think of legislation to fix a uni-

form rediscount rate?

In the first place, let me ask you this question: What would you think of requiring a uniform rediscount rate for all the banks, the 12 banks?

Mr. Pole. That is entirely too large a question to answer off-hand. Mr. STEAGALL. Each bank has access to the loaning facilities of all the other banks, has it not?

Mr. Pole. Yes.

Mr. Steagall. It is one great system under one control, as far as the Government is concerned?

Mr. Pole. Yes.

Mr. STEAGALL. That leads to the other question: What would you think of fixing the rediscount rate by law?

Mr. Pole. I have not given consideration to that question and

I

b

f

is

0

p

0

B

h:

h

A

ci

ti

could not answer it off-hand. It is far too important.

Mr. Brand. As I understood you, Mr. Pole, none of the 12 Federal reserve banks on its own responsibility decreases the discount rate without first consulting the Federal Reserve Board?

Mr. Pole. You misunderstood me. I said that the rates were initiated by the banks themselves and were subject to the approval

or disapproval of the board.

Mr. Brand. Suppose that the board disapproves a proposed increase or decrease; is that final and binding on the proposing bank? Mr. Pole. The board has the right to approve or disapprove.

Mr. Brand. Have you ever known of the Federal Reserve Board disapproving any rate, either a decrease or increase in the discount rate, proposed by the New York Federal Reserve Bank?

Mr. Pole. Yes.

Mr. Brand. Was it a decrease or increase?

Mr. Pole. Both.

Mr. Brand. I am surprised to hear that.

Now, Mr. Steagall, of Alabama, Mr. Chairman, has asked two questions that I intended to propound, so I will finish very briefly.

Mr. Pole, does not the Federal Reserve Board recognize that they have full authority under the Federal reserve act to suggest to any Federal reserve bank an increase or decrease in the discount rate?

Mr. Pole. I do not know what the opinion of the board is on that subject.

Mr. Brand. Have they, in any given instance, suggested to any of the banks, within your knowledge, a decrease or increase in the discount rate?

Mr. Pole. If they have, I am not aware of it.

Mr. Brand. I am going to ask you another broad question. Do you not think that the Federal Reserve Board feel that they have the

authority, under the provisions of the Federal reserve act, to increase or decrese the discount rate so as to effect the prices of farm commodities and the prices of every other thing people purchase?

Mr. Pole. I could not speak for the board, Mr. Brand.

Mr. Steagall. Your question was whether, under the provisions of the law, they contend that they have that authority?

Mr. Brand. Yes.

t

t

b

Mr. Pole. It is a question of interpretation. I would not be authorized to speak for the board on that subject.

Mr. Brand. Mr. Pole, let me get down to a more practical and

personal proposition.

As I understand, in one of the counties of the State of Georgia, and I know it is so of one or two counties in the State of Alabama, and I know it is so of one of the counties in Mr. Stevenson's district, every bank in the county has failed. Take the State of Georgia; it has repealed the law which authorized the establishment of branch banks. That county has no banking facilities, on account of three banks having failed in the last 60 days.

Now, what system of banking would you advise the people of such a county as that to adopt, where they can have no branch bank under the law-would you advise either the chain or the group banking

Proposition?

Mr. Pole. Between chain and group banking, I prefer group

banking.

Mr. Brand. Then, under the law of Georgia, it permitting no branch banking at present, the Atlanta banks, for instance, could establish a bank down in that county where there are now no banks, could they?

Mr. Pole. An independent bank, the stock of which might be owned by certain persons who were interested in the Atlanta bank.

Mr. Brand. It would have to be an independent bank, but it would be within the classification of group banking?

Mr. Pole. The majority of the stock perhaps might be controlled by

the holding company in Atlanta.

Mr. Brand. As our law exists at present, there is no opportunity for those people to establish a branch bank in that particular county, is there, under the McFadden bill or any other bill?

Mr. Pole. No, assuming that your Georgia law does not permit the

organization of a State system of branches.

Mr. Brand. They have repealed that law. Do you not think, and is it not your opinion, that it lies within the Power of the Federal Reserve Board, by adopting a policy of deflation or inflation, absolutely to control the price of farm commodities, thereby having the effect to increase or decrease the same?

Mr. Pole. I think action might be taken by the Federal Reserve

Board which would affect the prices of commodities. Mr. Brand. Like cotton, for instance, and wheat and corn. It has done it in the past, has it not?

Mr. Pole. I think the prices of commodities, as I said before,

have been affected by the rate changes.

Mr. Brand. Does not the board so construe its Federal Reserve Act as to give its board the authority—if the board wishes to exercise it—to adopt such a policy as to run the prices of farm commodities down, cotton for instance?

Mr. Pole. As I stated before, Judge, assuming that you have reference to the increase or decrease in the discount rate, those changes are initiated by the Federal reserve banks themselves and not by the Federal Reserve Board.

Mr. Brand. I was talking about the effect that it would have uppose that the Federal reserve banks get together and decide that they are going to deflate the prices of all farm commodities, and their action is approved by the Federal Reserve Board—and you say that they generally approve what they ask.

Mr. Pole. I did not say that.

Mr. Brand. I thought you said that they generally approved.
Mr. Pole. Not at all. I said quite the contrary. I said they did
not always approve.

Mr. Brand. I said generally.

Mr. Pole. I would not go so far as to say that.

Mr. Brand. Suppose that the 12 Federal reserve banks did decide that the prices of wheat and cotton are too high, and that their action were approved by the Federal Reserve Board; could they not effect a substantial decrease in the prices of cotton, wheat and corn?

Mr. Pole. I could not answer that question, Judge. Mr. Seiberling. May I ask just one question there?

Mr. Brand. Yes.

Mr. Spiedeling. Mr. Comptroller, is it not a matter of quite current knowledge that the deflation following the war, which resulted in the big collapse in 1921, was caused by the Federal reserve banks extending credit so as to keep Liberty bonds at par that had been sold to the public?

Mr. Pole. There are some who entertain such an opinion as that. Mr. Seiberling. You do not know whether that is a fact or not? Mr. Pole. As to what their reasons might have been for a low

rate of rediscount, I would not precisely be able to say.

Mr. Seiberling. When they found that they could not keep Liberty bonds at par—and they went down, I think, to 85, was it not?

Mr. Pole. I think it was.

Mr. Seiberling. Then they contracted the credit, because they could not go any further.

Mr. Pole. Credit was contracted, but as to whether it was because they could not go further or not is debatable.

Mr. Seiberling. The object of liberalizing credits was not accom-

plished, and they had to reverse the thing.

Mr. Brand. I had not finished my question, Mr. Pole, in connection with the increasing and decreasing of the discount rate. I asked the question if the board did not feel that they had authority to adopt a policy, in connection with the banks, which would have the effect of decreasing or increasing the price of farm commodities, if they saw fit to adopt such a policy?

Mr. Pole. You are asking me, Judge, to represent the opinion of

the board, and I can not do that.

Mr. Brand. Do they not claim that they have that authority? Mr. Pole. I do not know what the board does claim, Judge.

Mr. Brand. I do not mean to ask an unfair question.

Mr. POLE. I know you do not.

Mr. Brand. That is all I care to ask. The Chairman. Mr. Goldsborough?

Before you start, Mr. Goldsborough, I would like to finish with Mr. Pole for this period. Later on, of course, we will have to have Mr. Pole back again, but I am trying to arrange to finish with him to-day. I do not want to hurry you unduly, Mr. Goldsborough, but we still have Mr. Busby and Mr. Dunbar, and if you can arrange it so that we can finish with Mr. Pole to-day, I think we should do so. Mr. Pole. It is very kind of you, Mr. Chairman; I should appre-

ciate it very much.

The CHAIRMAN. The Comptroller has been very liberal in giving us his time, and he has also given us very material information.

Mr. Goldsborough. Mr. Pole, getting back to what seems to be a little closer to the subject that we are here to discuss, I understood You to say a few minutes ago that you favored group banking over chain banking. Did I understand you correctly?

Mr. Pole. Of the two, I should prefer group banking. Mr. Goldsborough. You do not think that either type of banking is sound or good, do you?

Mr. Pole. I would not undertake to say that, Mr. Goldsborough.

Mr. Goldsborough. Do you favor chain banking?

Mr. Pole. I do not.

Mr. Goldsborough. Do you favor group banking?

Mr. Pole. As an ultimate system, I do not.

Mr. Goldsborough. How do you distinguish between an ultimate

system and the system that is existing at this time?

Mr. Pole. Under the present law, branch banking is not possible. Group banking is possible under the present law, and I know of very many instances where groups have been formed which have resulted in great benefits to the communities in which they are operating, so that there is much good in group banking. I also know of individual chains of banks which are operating successfully and are well and carefully managed; but, speaking of them as systems of banking, I much prefer the branch banking idea.

Mr. Goldsborough. I understand, but do you care to say whether or not you approve of chain and group banking? You answered before, but then you appeared to have modified your statement. Do you care to make a direct statement as to whether you do or do not approve of group banking or chain banking as being sound in

theory?

£=

10

uti

T t

n

t

0

d

V.

Mr. Pole. I do not approve of chain banking. I do not approve of group banking as a system of banking which is best adapted to this country.

Mr. Goldsborough. Now, would you favor legislation which would make chain banking impossible if it were possible to formulate such legislation, as chain banking is now conducted?

Mr. Pole. Yes.

Mr. Goldsborough. Would you favor legislation, if such were Possible, which would do away with group banking, as now conducted?

Mr. Pole. That involves the question as to what legislation would be offered to take the place of group banking, I think. If you ask the the question whether group banking should be abolished, and undertake to unscramble those groups which have already been formed, I would not be in favor of that, but I would be in favor of

regulating those groups by the extension of supervisory powers on the part of the comptroller. But as to legislation which might affect the future expansion of group banking, I think that I should be in favor of limiting that and regulating it.

Mr. Goldsborough. You would not be in favor of stopping it for the future and making it impossible either to increase the size

of the present groups or form other groups in the future?

Mr. Pole. I think that that would correct itself automatically, if banks were given the privilege of extending, through the method of

operation of branches.

Mr. Goldsborough. Of course I know your view on branch banking and if you would rather not answer my question, sir, it is perfectly satisfactory to me. I would rather have you say you do not prefer to answer than seem to evade it.

Mr. Pole. It is a pretty involved question; you are asking me what

I would rather do-

Mr. Goldsborough. My question was not involved. Read the question.

The reporter read the question.)

Mr. Goldsborough. That question certainly is not involved, as

far as I can tell.

Mr. Pole. It would depend upon what you have to offer in place of group banking. If such legislation as you speak of proposed to give something in place of group banking, I would say yes to your question. If it offered nothing at all by way of substitute legislation, my answer would be no.

Mr. Goldsborough. Your answer is, as I understand it, this, that if you can not have branch banking, you prefer group banking to

the unit banking?

Mr. Pole. Yes, sir.

Mr. Goldsborough. I think, in your various-

Mr. Pole. May I add something there?

Mr. Goldsborough. Yes.

Mr. Pole. Under proper regulation.

Mr. Goldsborough. I may be confusing what you have said with what others have said, and I am not sure that you made the state8

b

8

n

By

Si

to

em

ment that I am now about to refer to.

In the various addresses you delivered this summer, or in your report to the Federal Reserve Board, I believe you stated, did you not, one reason for the extension of the right to establish branches of banks, was the fact that these groups were being formed that you you did not approve of? I may be wrong about that. That is only my recollection. I know that has been said a great many times.

Mr. Pole. I have made objections to the group banking system, Mr. Goldsborough, in my addresses, my particular reasons being that it is difficult to supervise groups of banks by reason of the fact that many groups are composed of national banks, of member banks, and of nonmember State banks, some of which we have jurisdiction over and some of which we have not, and for other reasons, and I think I have usually said as an ultimate system, I was very much in favor of branch banking as against group banking.

Mr. Goldsbordgh. Your idea is, I suspect, that if it were per-

mitted further to extend branches in accordance with the plans which

you have suggested, that that would tend to abolish or do away

with group banking, automatically?

Mr. Pole. I feel quite sure that the groups themselves, at least in a large number of cases, would prefer to operate under the branch system rather than the group system and I think that that would automatically change from one to the other.

Mr. Goldsborough. Now, the State of California has had extensive

systems of branch banking for quite some years, has it not?

Mr. Pole. Yes.

n

t

e

f

t

Mr. Goldsborough. The group banking began, I think, not more than two years ago. Is not that right? I do not mean in California; I mean anywhere, as far as we know it?

Mr. Pole. I think that is correct, including California.

Mr. Goldsborough. Including California?

Mr. Pole. Yes, sir.

Mr. Goldsborough. Now, is it not a fact that in California there has been a great extension of group banking, as in other parts of the United States?

Mr. Pole. I should say by no means.

Mr. Goldsborough. Well, I did not anticipate that answer, but the December number of the Federal Reserve Bulletin states what I am saying to you now.

Mr. Pole. Oh, does it? I am perfectly willing to accept your statement for it. I was not aware that group banking had developed in California to the same degree that it had in other States.

Mr. Goldsborough. I did not bring the Bulletin with me. I did

not anticipate that answer.

Mr. Pole. I am surprised when you make that statement but no

doubt your information is correct.

Mr. Goldsborough. Of course, if my premises are not correct, it is not worth while to discuss it further—that is, if my premises do not agree with yours.

Mr. Pole. That is a question of fact. Mr. Goldsborough. Of fact; yes.

Mr. Pole. Decidedly so.

Mr. Goldsborough. Assuming that is the fact, certainly branch banking in California did not interfere with the development of group banking in California?

Mr. Pole. Well, Mr. Goldsborough, branch banking is not per-

mitted any more in California than it is in any other State.

Mr. Goldsborough. But it has been extended so much further than any other States—

Mr. Pole. Not since the passage of the McFadden Act. These systems were inaugurated and in operation prior to that time.

Mr. Goldsborough. Yes.

Mr. Pole. No branches have been created outside of the cities since that time.

Mr. Goldsborough. They have state-wide branch banking there

Mr. Pole. Neither can a large bank or any other bank operate a system of branches unless it wishes to remain outside of the Federal Reserve System.

Mr. Goldsborough. Well, the point I was emphasizing or trying to emphasize, was that branch banking had not stopped group banking.

Where branch banking has been in existence in a very practical way, it has not interfered with group banking, where you indicate your branch banking system would probably do away with a system that you probably disapprove of.

Mr. Pole. There is no branch banking now.

Mr. Goldsborough. In California?

Mr. Pole. They can not extend their branch banking systems and remain in the Federal Reserve System.

Mr. Goldsborough. I am thoroughly aware of it. But they do have branch banking and have it all over the State and it has not

stopped group banking.

Mr. Pole. It would stop group banking, in my opinion, if those groups were permitted to operate under a branch system. But it is because there is no right for a bank to operate branches that the group systems are developing.

Mr. Goldsborough. Then, as you said a few moments ago, the

group system is a lesser evil than the unit system?

Mr. Pole. I said that a group system was preferable to the chain system.

Mr. Goldsborough. You said it was preferable to the unit system,

also?

Mr. Pole. Yes; I would agree with that.

Mr. Brand. What do you mean by "unit system"?

Mr. Goldsborough. Independent banks. The Chairman. Will you yield for a question?

Mr. Goldsborough. If you can defer your question, I would appreciate it, because I think I have something going now.

The CHAIRMAN. I think this is in line with your questions.

Mr. Pole. I want to ask, in line with the questions that have been put and answered, in regard to chain and group banking: You have recommended that branch banking be extended to trade areas and stop there. I think that is correct, is it not?

10

N

b

ra

he

of

m

th

to

a]

hav

Mr. Pole. Yes; except that I-

The Chairman. You have also said that you would like to prohibit the control of those main banks in trade areas by another group or bank; for instance, like—

Mr. Pole. A consolidation of a large group so as to form a banking

monopoly.

The CHAIRMAN. Yes. Mr. Pole. I have.

The Chairman. If you stop there, group banking and chain banking will continue as it is now operated under State law, will it not?

Mr. Pole. It might do so.

The CHAIRMAN. Then, under your plan, you would not stop group and chain banking in the United States?

Mr. Pole. There might still be chains and groups formed after the passage of such branch banking legislation as I have suggested.

The Chairman. It is all proceeding under State law now, and no national law could forbid the continuance of State group and chain banking, could it?

Mr. Pole. The fact that the Federal reserve system might, as a condition of membership, impose such conditions as would make it impracticable, might stop it.

The Chairman. Is that your suggestion for controlling it?

Mr. Pole. I made no suggestions for controlling that, Mr. Chairman.

The Chairman. Do you care to make a suggestion?

Mr. Pole. Not at this time.

The Chairman. Well, inasmuch as you have asked for an extension of branch banking to trade areas and you have expressed your unqualified opposition to group and chain banking—

fied opposition to group and chain banking—
Mr. Goldsborough. Not to-day, but previously, as I understand
it. To-day he defends group banking over unit banking, as I under-

stood his answer.

0

e

)-

P

P

10

0

n

The CHAIRMAN. I think it would be helpful to the committee if you will tell the committee just how you propose to stop group and chain banking under your plan of extending branch banking in trade areas.

Mr. Pole. My plan is this: If banks are given the right to operate branch systems, the advantages would be such as to automatically convert these groups and chains into branches for the most part.

Mr. Goldsborough. Mr. Pole, the arguments which have been made by you, I think, as well as others, in favor of branch banking, have been that it is necessary to do it in order to enable the national bank system to compete with State banking systems which do permit branch banking. That is a fact, is it not?

Mr. Pole. That is a factor.

Mr. Goldsborough. You distinguish between a fact and a factor?

Mr. Pole. Yes.

Mr. Goldsborough. I see. Now, Mr. Pole, suppose it were practicable for Congress to pass legislation which would entirely stop branch banking within the States. Would you still then recommend an extension of branch banking by the Federal Government?

Mr. Pole. Yes.

Mr. Goldsborough. Suppose it were possible for Congress to pass legislation which would stop chain and group banking right where it is within the States—State banks—would you then think it proper for Congress to pass legislation which would stop further group or chain banking among national banks?

Mr. Pole. Not without offering something in its place.

Mr. Goldsborough. Do you not think in communities where banks have failed on such a scale as to indicate there was something radically wrong, that the community had failed first before the bank had failed?

Mr. Pole. Under the present system that might be correct.

Mr. Goldsborough. Is it not a fact, Mr. Poie, that this condition of failures, which you have testified to, and which has been made a matter of comment in numerous articles by yourself and others during the last six or eight months, is almost entirely directly attributable to the after-war conditions in this country?

Mr. Pole. No. The number of banks which have failed includes a large number of banks which have been organized since the war.

Mr. Goldsborough. Well, I do not know about the percentages.

Mr. Pole. It is at least 10 per cent. Mr. Goldsborough. How is that?

Mr. Pole. At least 10 per cent of failures have been of banks which have been organized since the period referred to.

Mr. Goldsborough. I will change the question. Is not substantially all of the 90 per cent of banks which were in existence prior to the war and which have failed since the war, have not these failures been the result of after-war conditions?

Mr. Pole. I should say not.

Mr. Goldsborough. Do you not believe it is true to a very great extent?

Mr. Pole. To an extent, Mr. Goldsborough.

Mr. Goldsborough. Have you any idea to what extent?

Mr. Pole. Well, to a considerable extent.

Mr. Goldsborough. Do you think it is fair, in attempting to conduct a judicial—I am not referring to these hearings here—in attempting to argue this matter judicially, do you think it fair to lay the great accent which has been laid on the failure of small banks since the war in the last nine years, as any real evidence of the breaking down of the unit system?

Mr. Pole. I do, indeed.

Mr. Goldsborough. You have just said that you thought afterwar conditions were very largely the cause of these failures. You could not tell to what extent. If you can not tell to what extent, but you think to a large extent, how are you in a position to say?

7

Mr. Pole. I think failures have been accentuated to a considerable extent by the economic conditions in the agricultural sections of the

country, but I do not think that is the basic reason.

Mr. Goldsborough. Mr. Pole, is it not a fact that banks have been gradually failing and trying to hold on and one would be a little stronger than another and then first one would fail and then another, almost all due entirely to after the war deflation? Banks filled with frozen paper, bad mortgages, etc., have been just hanging on and gradually, first one then another, would fail as time went by. We countrymen have understood that to be the condition.

Mr. Pole. I agree that that has had its effect.

Mr. Goldsborough. Now, if that is the cause, if that is the reason, it does not constitute an argument against the unit system. If a man has got a pimple on his hand and it may be caused from fifty different diseases, no doctor would say, arbitrarily, it was because

of some disease he was interested in, you know.

Now, Mr. Pole, I have made rather careful inquiry from the Bureau of Investigation of the Federal Reserve Board and I may be mistaken—I will not undertake to tie them into this because they may say I am wrong and they might not have meant exactly what I thought was in their minds—but I am strongly of the opinion that they think that a substantial number of these failures which have happened in the last nine years, are directly caused by the after-war deflation.

Mr. Goldsborough. Do you think it is possible—practically possible—for a bank of \$25,000 capital to make a success?

Mr. Pole. There are such banks that can be made successful and are successful to-day.

Mr. Goldsborough. Do you think it is possible for a bank with a tess capital than \$25,000 to succeed?

Mr. Pole. There are undoubtedly banks with less than \$25,000 capital succeeding.

Mr. Goldsborough. A mere illustration is never convincing, but in 1909. I was the attorney in the set-up of banks in my own community with a capital stock of \$12,000. They both have been wonder-

fully successful.

I sent for the last statements of each bank, but I have had only one answer so far. This institution has been in extence in a little place of 300 inhabitants for nearly 21 years now. It has absolutely around it nothing but a rural community and is surrounded, within a radius of 7 or 8 miles, by large banks in county seats-comparatively large banks. That bank paid a dividend of 6 per cent from its inception. Since 1918 it has paid a dividend of 20 per cent. It has always paid 4 per cent on savings deposits. It has about \$4 in the savings deposits to every \$1 it has in commercial deposits, and its stock is now worth 8 for 1. Its capital stock is \$12,000; surplus \$75,000 and undivided profits, \$7,928.80, according to this last statement. Its deposits are \$780,000 plus. It pays its cashier \$3,200 a year. That is the Hillsboro, Queen Anne, Bank of Hillsboro. Md.

The other bank I have in mind is the Goldsborough Bank of Goldsborough, Md., a village of about 150 inhabitants. It has done nearly

Do you think that the banking business is like any other business? If you are a good banker, you bank makes money and if you are not a good banker your bank does not make money? Do you not think that is the real crux of the situation?

Mr. Pole. I think that is a very important phase of it and much more important, perhaps, than the question of economic conditions

to which you refer.

I assumed these banks to which you refer were not affected by the

economic conditions?

Mr. Goldsborough. Yes sir; after the war they were loaded up, but came out all right.

Mr. Pole. By reason of good management?

Mr. Goldsborough. By reason of good management; yes. The section, the eastern shore of Maryland, is just as distinctly rural as

Iowa. I am satisfied of that.

Mr. Pole. My point is that the reason for the bank failures in communities is not entirely-I think you used the word-due to economic conditions because these banks, as you say, were just as Subject to them as other banks in rural communities. It survived and

other banks failed.

Mr. Goldsborough. Mr. Pole, with the good roads we have now and telephones, radio and frequent bank meetings and the very, very close touch that the country banks are in now with the metro-Politan banks, do you not think that country bank management is Improving very, very rapidly, especially in the last 10 years, just as the country doctor or country lawyer and other professional men are gradually reaching the average level?

Mr. Pole. We have in our office so very, very many evidences of poor bank management, Mr. Goldsborough, that it is doubtful, in my mind, as to whether the better element among the bankers is finding a resting place among the small country banks. I doubt very much whether the management of country banks, speaking generally,

has improved, perhaps in proportion to the other branches of business and professions.

The CHAIRMAN. Will you yield a moment?

Mr. Goldsborough. Just one other question, if you can reserve that.

I have an article that I cut out of some paper yesterday. I think it is the Marylander and Herald, probably one of our local papers. It is in the pot metal type and evidently taken from some city paper.

A survey of State banking departments by the State bank division, American Bankers Association, discloses a distinct tendency the last five years to take bank supervision out of politics, to increase the discretionary powers of bank commissioners, to lengthen their terms of office, to supply them with adequate forces of qualified examiners and to relieve banking departments of duties foreign to banking, says a recent statement.

Then the statement continued, and finally this is said:

The office of bank commissioner is now operated as an independent department of State government in 34 States.

Do you not think that the management of country national banks is comparable to the management of country State banks?

Mr. Pole. Yes.

Mr. Goldsborough. And do you not think that the management of country State banks is being greatly assisted by the increasingly efficient State bank departments?

Mr. Pole. No doubt the State banking departments do render \$ great deal of assistance to the executives of the banks in the matter

Mr. Goldsborough. Now, Mr. Chairman, I beg your pardon. 1 wanted to finish that line.

The CHAIRMAN. Have you finished with the witness?

Mr. Goldsborough. Oh, no.

I gather from what you stated the other day, that you thought mergers in the central reserve cities of New York and Chicago had proceeded far enough. Did I interpret what you said correctly?

Mr. Pole. I do not recall having made such a statement as that,

Mr. Goldsborough. Mr. Goldsborough. Well, my recollection is quite distinct, but, of course, I may be wrong. Mr. Busby thinks you stated you are in favor of larger banks.

Mr. Bushy. My recollection is that in a very short answer you stated that you were not in favor of larger banks than now existed in centers like New York and Chicago.

Mr. AWALT. He did not say that. Mr. Busby. Then, the answer is, he did not say that.

Mr. Pole. Let me answer my own questions.

(Discussion off the record.)

Mr. Goldsborough. I will put my question another way. My recollection of the statute is that the Comptroller of the Currency has to approve mergers.

Mr. Pole. Consolidation.

Mr. Goldsborough. That is the same thing, as far as I know. Mr. Pole. Practically so. I might qualify it by saying that the Comptroller of the Currency approves consolidations, but a bank has the right to purchase the assets and assume the liabilities of another bank, without approval of the comptroller, which is, in

effect, a merger without the approval of the comptroller.

Mr. Goldsborough. Mr. Pole, last summer the Guaranty Trust Co. and the National Bank of Commerce consolidated, did they not, in New York?

Mr. Pole. Yes.

01

Mr. Goldsborough. Was that consolidation approved by the

Comptroller of the Currency?

Mr. Pole. No, sir; it was a consolidation under State charter, the national bank going into liquidation. The comptroller's approval

was not necessary.

Mr. Goldsborough. Now, Mr. Pole, suppose the National City Bank and some other large institution in New York wanted to consolidate-really wanted to do it and made up their minds to do it, and set the machinery to work with the vast influence they have, to get the consent of any Comptroller of the Currency?

Mr. Pole. Yes.

Mr. Goldsborough. The only thing he could do would be to grant the permission?

Mr. Pole. Not at all.

Mr. Goldsborough. The only practical thing to do?

Mr. Pole. Not at all.

Mr. Goldsborough. I am not referring to you, you understand.

Mr. Pole. I understand.

Mr. Goldsborough. You never were subject to that ordeal, were You, of trying to resist a situation of that kind?

Mr. Pole. Of that magnitude, no; but of considerable magnitude.

Mr. Goldsborough. It is not pleasant, is it?

Mr. Pole. By no means, but it is done.

Mr. Goldsborough. It is done up to a certain point and then

resistance breaks down inevitably.

What I am trying to get at is this: Of course, your theory is that under this trade area plan of yours, there would be sufficient competition always to protect the rural communities from autocratic credit domination.

Mr. Pole. That is my feeling.

Mr. Goldsborough. Is it not a fact that as groups get larger and get further away from smaller groups, they inevitably get closer and closer in their manner of approaching things and in their point of View and in their selfish interests? There is pretty near consolidation there at the top. Now, two, three, four, five, or six very large institutions in a city who, together, dominate the credit situation, gradually find it to their interest not to fight each other but to cooperate in their policies, and so, even though they do not consolidate, is there not a tendency for them so to cooperate in matters of Policy with those who are nearly as strong as they are, so as practically to do away with any real competition? That is my experience in other walks of life.

Mr. Pole. With regard to banks, I would not see why there would be any more reason for diminishing competition than there is now. Banking competition is rife in the cities. Just because they were permitted to put out small branches in that direction or this direction. do you think that would make competition any less keen? With

100136-30-vol 1, PT 3-5

enlarged opportunities for banks, would competition be any less keen? I should think not. I think it would be accentuated.

Mr. Goldsborough. You do not think gradually and more gradually they would find that it was to their interest to merge to stop competition?

Mr. Pole. I think there might be a certain amount of merging going on, as there is to-day, but I do not think the time would ever come when the banking business of the country would be consolidated in a very few hands. Banking is a business, and if properly conducted is a profitable business and a necessary business, and I see no reason why competition should not be keen.

Mr. Goldsbordgh. Now, Mr. Pole, in this country at this time, we are going through an epoch which is, by a great many, viewed with great alarm. There is a tendency to consolidate in every industry and in every walk of life. Of course, it is very evident in public utilities and chain stores and in mail-order houses, and three things that are right on the surface and that we all see. But it is so in every other business. It is so in the professions; for instance, take the legal profession as an illustration. A man buys an automobile and he insures it. If he has an accident he is represented by the insurance company. The insurance company, in turn, has a law firm in some city which represents it, so that the country lawyer is gradually eliminated.

The same thing exists among the doctors; in other words, what I am driving at is this tendency has gotten into the final place it would drift to and that is the learned professions. Now, it is a tendency.

N

ir

W

C

in

re

to

81

De

m

CO

ar

of

of

ac

ob

drift to and that is the learned professions. Now, it is a tendency. It may be that 25 or 30 years from now, we will all sleep in the country and all work in the city, because there will not be any other place to work and that our farming will be done by great corporations who own thousands and thousands of acres of land and that work the farms by machinery. This may be inevitable and it may not be possible to stop it no matter how much we may deplore it.

As I see it, any monopoly of credit will accelerate that situation more than anything else, because credit controls everything else economic in the community and is it not the province of statesmanship, if it has any, to rather restrain that tendency than accelerate it until, of course, it becomes clearly demonstrated that you are in an actual economic cycle?

Is there any reason why we, as legislators, should sit here and deliberately formulate a plan to accelerate that condition unless we think it is a good one? It certainly can not be that the people in the country are suffering for want of banks. I will guarantee we can sit here from now to the first of July, Mr. Pole, and you will not find a single country banker here asking that his bank be transformed into a branch banking system or any community coming here and asking for a branch banking system.

That is my question. Do you think it is the part of legislators, who have the public interest at heart and who are bond to visualize the future, in so far as they can, to accelerate a condition of that kind or to restrain it in so far as it can be done?

Mr. Pole. I do not think it is the part of legislators to participate in such acceleration, but under my suggestion of a branch banking system, the question of decentralization of credit is a very important part of it. I think you will find in very many sections of the country

to-day, that the presidents and executive officials of independent bank are importuning the large group bankers to admit them into their systems. That is my information from those people who are in that business. That, of course, is a matter than can be easily demonstrated, during the hearings as they develop.

Mr. Goldsborough. That is all, Mr. Chairman. The Chairman. Mr. Dunbar.

Mr. Dunbar. You stated a few moments ago, decentralization of credit is a very important object to be attained by branch banking. Is that right?
Mr. Pole. Yes.

Mr. Dunbar. The other day I made the statement that the argument was used by proponents of the Federal reserve system in favor of the passage of the bill, that decentralization of banking credits would be diverted from New York and I understood you to state that the Federal reserve banking system had decentralized credit from New York, but that the credits had grown in other communities, giving the impression that centralization of banking credits was effective in New York.

Now, I get my-Mr. Pole. I am not agreeing to that.

Mr. Dunbar. I know you are not. Mr. Pole. I am not agreeing to that being a correct statement of what I said.

Mr. Dunbar. Pardon me. What did you say?

Mr. Pole. I said that while undoubtedly there had been a large increase in deposits in New York, I was not prepared to say they Were out of proportion to the increase of deposits in other parts of the country

Mr. Dunbar. That is what I understood you to say and perhaps

I did not make my observation and thoughts clear.

Mr. Carter Glass, who was the author of the Federal reserve act. In a speech made the statement that the operations of the Federal reserve system had centralized credit in New York City, and I talked to him yesterday. He said that it was absolutely true that the operations of the Federal reserve system had increased, to a very, very great extent, the centralization of credit in New York City. You do not agree with him?

Mr. Pole. I agree with him, but I do not know whether it has increased out of all proportion to the increase in other sections of the country. There is no doubt but that it has increased in New York.

Mr. DUNBAR. His idea was that it had disproportionately increased and to all intents and purposes, had increased beyond the intention of the proponents of the bill.

Mr. Pole. I am not prepared to say.

Mr. Dunbar. Have you any record of the statements of the credits of banks in New York City before the passage of the Federal reserve act, together with other cities? Of course, now, they have very greatly increased, but have you those statistics from which we could Obtain an idea of the proportionate increase in the respective cities?

Mr. Pole. Yes. Mr. Dunbar. Will you publish them in your remarks? Mr. Pole. There will be no objection to publishing them.

(The figures referred to are in course of preparation and will be furnished later.)

Mr. Dunbar. You said that the capital and surplus of the Federal Reserve System had very largely increased-

Mr. Pole. Yes, sir. Mr. Dunbar. The amount of the franchise tax paid to the Federal Government last year by the Federal reserve-system banks, was \$2,900,000. How is the amount arrived at that they shall pay the Federal Government?

Mr. Pole. After paying a 6 per cent dividend to their shareholders. The Federal banks are permitted to increase their surplus and their earnings until it equals the subscribed capital, after which 10 per cent of the earnings go to surplus, and the balance goes to the Govern-

ment as a franchise tax.

Mr. Dunbar. After the war, the amount of money paid to the Federal Government, instead of being \$2,900,000 was \$60,000,000 \$ year, or twenty times more than now paid by the Federal reserve banks. Was that because their earnings were so much greater at that time in proportion to their capital stock?

Mr. Pole. Obviously, I would say so.

Mr. Dunbar. Then, the Federal reserve banks are not making as much money now as they did nine years ago?

Mr. Pole. I think some of them are and some are making less. Mr. Dunbar. Not in the aggregate, because in the aggregate they paid last year to the Federal Government \$2,900,000, instead of \$60,000,000 annually some 9 or 10 years ago.

Mr. Pole. Those complete figures on the earnings of the Federal

reserve banks have been furnished the record, Mr. Dunbar.

Mr. Dunbar. I know, but I would like to know some reason for the fact-

Mr. Busby. May I suggest this, that the building program of the Federal reserve banks has taken \$160,000,000 out of the earnings for the last year or two?

Mr. Dunbar. Would that affect the amount of the franchise tax

paid by the Federal reserve banks?

Mr. Pole. Yes, sir.

Mr. Dunbar. And the suggestion was made the other day that the amount of the franchise tax paid to the Federal Government might be used to reimburse depositors in the national banks which have Would the \$2,900,000 pay the losses—be sufficient to pay the depositors in national banks which have failed and which did not pay their depositors 100 cents on the dollar?

Mr. Pole. It will be impossible to tell that because banks which have failed last year have only started on their liquidation and it will depend on how they liquidate. I think that \$2,900,000 would

not be nearly enough to pay that.

Mr. Dunbar. Another question: The Federal reserve bank has reduced its discount rate to 3½ per cent. What is the amount of discount of the Bank of England to-day?

Mr. Pole. Four per cent.

Mr. Dunbar. The reduction of the Federal Reserve rate to 31/2 per cent, if it is less than the rate charged by the Bank of England does that cause an outflow of gold from the United States to England? Mr. Pole. It might make some little difference.

Mr. Dunbar. It might make some little difference?

18 of Mr. Pole. Yes, sir.
Mr. Dunbar. Then, that outflow of gold from the United States

to England would reduce the available credit of our banks?

Mr. Pole. Well, the gold reserve would have to be very materially reduced before the Federal reserve banks would feel the effect of that, Mr. Dunbar. I note in financial newspapers that great importance is paid to the outflow of gold from the United States on our business and credit systems.

Mr. Pole. Yes, sir.

Mr. Dunbar. So that if there is any outflow due to the 31/2 per cent rate, notwithstanding our business men can obtain money at a less

amount, it would pretty near balance the situation?

Mr. Pole. I do not think, under the present circumstances, there will be very much outflow of gold. The Federal reserve banks themselves are probably almost at their high point as to gold reserve, so that the difference would not affect, in a practical way, the amount of credit which could be extended by the Federal reserve system.

Mr. Dunbar. During the last year, the Federal reserve banks Were criticised for raising the rates for the purpose of preventing speculation. I do not say they did so, and you would not care to commit yourself on that subject anyway. But was not a large amount of the speculation due to the fact that last year the corporations of the country loaned their surplus for the purpose of speculation?

Mr. Pole. That was a very important factor.

Mr. DUNBAR. The Federal Reserve Bank officials were apprehensive all along that the debacle of speculation would result just as it did, were they not?

Mr. Pole. I can not speak for the Federal Reserve Bank officials.

Mr. Dunbar. But you believed that?
Mr. Pole. I think that may be correct.
Mr. Dunbar. Now, another question. You have heard a great deal about the unit bank and about its being driven out of business by branch banking. Branch banking would drive the unit banking system out of existence, according to my notion, the same as chain stores to-day are driving out the individual stores in our respective

Mr. Pole. You are making that statement?

Mr. Dunbar. I am making that statement. Does it agree with your idea?

Mr. Pole. No. Mr. Dunbar. You do not believe that branch banking would drive out the unit banks?

Mr. Pole. It has not done so where branch banks are in operation. Mr. Dunbar. How could a branch bank go into a community with several banks of \$100,000 capital and have available to loan in that community \$200,000 to a corporation or an individual instead of \$20,000 and not drive those other banks out? Would not that be a natural sequence?

Mr. Pole. Well, you are assuming a great many things there, Mr. In the first place, if the banking facilities in the particular community to which you refer were ample, it might not be possible for the branch bank to go in there, with its branches, unless it purchased one of the going banks.

Mr. Dunbar. I know it could not go in there without the consent of the Comptroller, and also unless it could be shown that the branch bank was needed.

Mr. Pole. That is my answer, substantially.

Mr. Dunbar. Yes, but it is my opinion that branch banking would go into all these communities. They would find some reason for being established and these unit banks would be eliminated and caused to cease to exist—the local unit banks which we have. Now, you do not believe that?

Mr. Pole. Not necessarily. A great many unit banks will tell you they do not want any better competition than a branch of a city bank.

Mr. Dunbar. That is all, Mr. Chairman.

The Chairman. Have you any questions, Mr. Busby? We have just five minutes left.

(Discussion off the record.)

The Chairman. The committee will stand adjourned until Tuesday morning at 10.30 o'clock a. m.

(Whereupon, at 12.55 o'clock p. m., the committee adjourned until Tuesday, March 18, 1930, at 10.30 o'clock a. m.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, MARCH 18, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY, Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding.
The Chairman. Now, Mr. Busby, if you will take the witness.

STATEMENT OF HON. JOHN W. POLE-Resumed

Mr. Busby. Mr. Pole, I want to ask you a few questions which may be general in their nature, before we get down to the discussion

of banking and finance.

Now, speaking of the national banks, the State banks, the holding companies, and of branch, chain, and group banking, and other similar entities which have considerable proportions in the banking world, I take it that we are all agreed that no major part of this system could be ignored or left out of consideration when it comes to the operations in the field of finance. Is that your view?

Mr. Pole. My view is that every major point which might affect chain, group, or branch banking should be given consideration.

Mr. Bushy. Suppose that any one part of this group—and this is a hypothetical question—or any one part of a financial organization should be discriminated against or should fail in whole or in part, would not that in a sense affect all the other parts?

Mr. Pole. It might do so.

Mr. Bushy. Is there not a sympathetic response in the financial world to any sort of a failure of a financial unit or an institution which is as far reaching as any of these I have mentioned?

Mr. Pole. Undoubtedly its effect might be felt.

Mr. Bushy. Is it not true in the commercial and investment world? Mr. Pole. I think that might be said to be true.

Mr. Bushy. Now, coming particularly to the subject of bank failures, you have stated that by far the greatest number of bank failures were among small banks.

Mr. Pole. Yes.
Mr. Busby. Do you not also think that the greatest number of bank failures have been confined to certain territories in the United

States, where a period of undue inflation has been experienced?

Mr. Pole. Failures of banks have been scattered all over the
United States. The record shows that in the agricultural districts

it has been most prevalent.

Mr. Bushy. Is not the bank in the agricultural district of necessity required to make loans on collateral that is more hazardous than the collateral furnished on loans in the metropolitan centers?

Mr. Pole. Loans in the agricultural sections are not quite so well fortified as they might be in the industrial sections.

Mr. Busby. Is not the stability of the collateral often dependent on weather conditions, crop conditions, and future developments?

Mr. Pole. Those are all factors. Mr. Busby. Where a crop is mortgaged that has not been planted, that is a very important factor, isn't it?

Mr. Pole. Quite.

Mr. Busby. Frequently the banks in the agricultural sections take as security mortgages on crops that have not been planted—is not that true?

Mr. Pole. I think that is the custom in some parts of the country. Mr. Busby. What is your view with regard to that custom, as to

whether that type of security ought to be accepted by banks?

Mr. Pole. I would not say that that type of security is generally taken, but I think usually the loans are made on crops which have been planted, but the proceeds of those loans in such cases are used gradually as the time goes on and the crop approaches maturity.

Mr. Bushy. Is it not a fact that there is one system of banking which applies to the metropolitan centers, and another system of banking and security which has to be used in the country districts and small towns?

Mr. Pole. Yes. Mr. Busby. The two systems are not altogether alike, especially from the standpoint of the type of security that may be offered by the borrower, are they?

Mr. Pole. That is generally correct.

Mr. Busby. Now, with further regard to bank failures, referring to the hearings on page 4, I find that four States along the Atlantic coast—North Carolina, South Carolina, Georgia, and Florida—with a population, based on the 1920 census, of 7% per cent of the population of the country, have had 729 bank failures, or 15% per cent of the

bank failures of the country.

I also call your attention to another rather well-defined section of our country, Minnesota, Iowa, Missouri, Oklahoma, North Dakota, South Dakota, Nebraska, Kansas, and Montana, nine additional States in the central Northwest, a purely agricultural section, which nine States had a total of 2,768 bank failures in the period from 1920 to 1929. That territory represents 14% per cent of the population and represents 56% per cent of the bank failures during the period of time I have mentioned.

Taking the two areas together, I find that the 13 States mentioned with 22 per cent of the population of the country, have had 71.6 per cent of the bank failures of the country, while the other 35 States, with 78 per cent of the population of the country, have had only 24.4

per cent of the bank failures from 1920 to 1929.

If you have given any thought to the situation in these two particular areas, do you not see in these bank failures something besides the fact that they were individual banks and not in a chain or branch system?

Mr. Pole. Yes, I see quite a difference.

Mr. Busby. Is it not a matter of common knowledge that the territory about Florida and north of Florida, in the States I have men-

tioned on the Atlantic coast, has experienced a considerable period of inflation in land values during the last nine years?

Mr. POLE. Yes.

Mr. Busby. Much of the security offered and taken by the banks in that territory was based on lands in that section, was it not?

Mr. Pole. Quite largely so.

Mr. Busby. And do you not think that it was the inflation of value of lands and real property, and then a collapse of those values, that primarily caused the failures of the banks in the section we are now discussing?

Mr. Pole. That had a lot to do with it.

1年 孫於 新田田 Mr. Busby. Now, going to the other territory in the central Northwest, the nine States mentioned a moment ago, is it not a fact that during the postwar period, land values in that section grew to a pro-Portion far beyond that which had existed at any time prior to that period?

Mr. Pole. I think so.

Mr. Busby. That is an agricultural section, is it not? Mr. Pole. Yes.

Mr. Busby. The basis for the business and commerce of that section is very largely agricultural, is it not?

Mr. Pole. Quite largely so.

Mr. Busby. Stock raising enters into consideration to a considerable extent in that territory, does it not?

Mr. Pole. It does.

Mr. Busby. Considering the fact that the nine States mentioned in the central Northwest section of the United States, with a population of 14% per cent, had 56% per cent of the bank failures during the nine years mentioned, do you not see that the inflation of values in that section, and then the inflation coming to an end, was the direct cause of the failures there?

Mr. Pole. Certainly it was a very important factor. However, we must bear in mind that all banks were not affected. There were a large number of banks in those sections which you referred to which have gone through this period of deflation and are still operating and operating successfully, and the large banks have been practically free from failures, and they were faced with the same economic condition.

Mr. Bussy. Can you tell the committee why they were able to go through this situation and why the great number of the banks which

did fail went under; in a general way?

Mr. Pole. In a general way, the large banks were operated more scientifically; the loans were more carefully made, their judgment was better, they saw further ahead and, with regard to the smaller banks, the same reasons might apply, which might be summed up very largely in the question of management. A small bank might be termed more or less of a fair-weather bank, because if it is faced with successive crop failures the support in the way of capital structure and savings is not sufficient to enable it to take care of its losses,

whereas the larger banks, of course, are much more able to do so.

Mr. Busby. The people in that section of the country, being largely engaged in agriculture and stock raising, will of necessity have that kind of property, including their lands, to offer as security for credits,

will they not?

Mr. Pole. Yes.

Mr. Busby. If they can not get credit on their lands, their agricultural products, and stock-raising activities, what collateral would you suggest that they could offer to the large banking systems in order to secure needed credit?

Mr. Pole. The larger banking systems, under my suggestion, would cover a wider, and do cover a wider, diversification of interests. As I say, they make loans more carefully and more scientifically.

Mr. Busby. Do you mean by "more carefully" that they do not make the loan unless they can see absolute certainty in its return?

Mr. Pole. I would not go so far as to say with absolute certainty, but I would say that they do not make them so freely, and it is no benefit to a borrower to borrow more money than he can pay back. Banks that are scientifically managed generally realize that if loans are made too freely, it hurts both the lender and the borrower.

Mr. Brand. Is it not true that these large banks, especially in the

cities, do not lend their money on lands or on crops?

Mr. Pole. In the cities, they generally would not be offered that

character of security to the same extent.

Mr. Brand. A farmer who has nothing to offer except his land or his crop can not go to any big bank and borrow a dollar in my country. I would like to find some big bank which will lend some money to farmers on the crop markets; I would like to know where it is located. Mr. Busby. I want to continue with my examination, Judge.

Then, Mr. Pole, as a natural result of the system of what you term "careful lending," and what you term a "far insight" into the banking situation, the larger banking institutions, or the chain or branch banking institutions, would take into consideration the possibility of crop failures and take into consideration the possibility of the security being deflated and becoming at the time of payment not what it was when the loan was made—they would take into consideration all of those things which would tend to reduce the amount to be loaned on the collateral or security offered by the borrower, would they not?

Mr. Pole. In making loans every factor is taken into considera-

tion, Mr. Busby.

Mr. Busby. Those would be the factors that the banks would have to take into consideration in the territory I have mentioned, would they not?

Mr. Pole. Those would be factors, unquestionably.

Mr. Busby. Now, you know the system of banking in Canada, do you not?

Mr. Pole. Yes.

Mr. Busby. You know that the Canadian banking system is not conducted on the basis that the American banking system is conducted, do you not?

Mr. Pole. Yes.

Mr. Bussy. Instead of taking deeds of trust and mortgages, they take straight bills of sale for loans made by the banks and the branches of banks in Canada, do they not?

Mr. Pole. I think that may sometimes be done; I am not suffi-

ciently familiar with those details.

Mr. Bussy. Do you not know that the banks of Canada deprecate loans around \$500, \$600, and \$700, and refuse to make loans below that amount to farmers or to people who need credit in small amounts?

Mr. Pole. No: I do not know that.

Mr. Bushy. If that is true, that is news to you, is it?
Mr. Pole. I doubt the accuracy of that statement.

Mr. Bussy. Do you know the minimum of deposits that they will accept in the Canadian banks?

Mr. Pole. I think that varies in different parts of Canada.

Mr. Bushy. Do you not know that the Canadian banking system does not deal with the small men at all?

Mr. POLE. No.

Mr. Bussy. Do you not know that the Canadian system has no desire, through the numerous branches maintained by the five large systems, to deal with the small borrower or the small depositor?

Mr. POLE. I do not think that is a fact.

Mr. Bussy. You do not think that is a fact?

Mr. POLE. No.

Mr. Busby. Now coming back to the question we started on, I want to ask you two or three academic questions.

What is the necessity for a banking system in any country?

Mr. Pole. Obviously there is great necessity for a banking system in order that people may deposit money and make loans and transact such other business as is ordinarily transacted through banks.

Mr. Bussy. The fact is that 90 per cent of the business of the country is done on what is called checking or clearance accounts, is

it not, and about 10 per cent is done on credit?

Mr. Pole. In a general way, it might be called credit.

Mr. Bushy. What is your idea about the expression that "currency is the life blood of the commerce of the Nation?"

Mr. Pole. I do not know who coined that phrase. I think possibly

it was intended to cover credit, also.

Mr. Bussy. Do you think credit can be dissociated in any sense from banking?

Mr. POLE. No.

Mr. Busby. Is it your idea that banking is an objective or means to an end, the end being commerce and exchange of commodities and Products and values among the people of the Nation?

Mr. Pole. I think it is a necessary complement to the business of

this or any other country.

Mr. Bushy. To be a little more specific, do you think that that is the primary objective to be sought, that is, to create a system of banking or money dealing by a portion of the people, or should it be the servant of commerce, and the handmaid of commerce and trade?

Mr. Pole. I think it should be the handmaid of commerce and trade, but I think it should also be regarded as a definite business enterprise in which people may invest money and hope to make a reasonable return on it, the same as in industry.

Mr. Bushy. You have stated in the hearings that you were decidedly of the view that the best system of banking in this country

would be the branch banking system, have you not?

Mr. Pole. Not precisely that statement.

Mr. Busby. What is your attitude with regard to that?

Mr. Pole. I said that if it were possible that a unit banking system could be made profitable and effective, that I should prefer such a system, but inasmuch as the system appears to have broken down, Particularly in the agricultural communities, the best substitute that occurs to me is a branch banking system rather than a group or a

chain banking system.

Mr. Busby. You used one expression, that the unit banking system had broken down in the agricultural communities. Have the banks in either of these communities mentioned by me, the Atlantic States group and the North Middle West group—or in any other agricultural community, ever failed until the community failed from under the bank?

Mr. Pole. Of course, if the community fails, the unit bank must fail, and frequently if a bank fails it is difficult for the community to

get along.

Mr. Bussy. If the branch banking system had operated in those communities and had extended the help and the credit to the people in those communities that was needed, similar to that extended by the unit banks, would it not have also failed or at least been materially crippled when the period of deflation came along?

Mr. Pole. The facts are that in some sections of the country there

are no banks left. They have all failed.

Mr. Busby. And the facts are that the branch banking system would not extend the assistance or help to that community that the

individual bank would-is not that true?

Mr. Pole. I would differ with you on that. The experience with branch banks is frequently that they put into a community a tremendous lot of money where the deposits may be at a very low ebb; in other words, they put far more funds into the community than the

community provides in the way of deposits.

Mr. Bussy. I tried to get away from that subject, but that brings me to this thought, that if they put that greater amount of money into a community than the deposits secured from that community, and they will not take the security that the community has, on what basis do they make the loans or place the money among the people?

Mr. Pole. Of course, they do take the security that the com-

munity has.

Mr. Bushy. What kind of security in the agricultural northwest would they—the chain banking system—take in order to put more money into that community than they would take out?

Mr. Pole. The same class of security that you mentioned.

Mr. Busby. They whittle it down until it does not amount to so much, do they not?

Mr. Pole. It amounts to more in a great many instances than

the community is able to supply from its own resources.

Mr. Bushy. Do not despoits run largely in proportion to the amount of credit extended by the banks in the community in which

the bank operates?

Mr. Pole. Speaking generally, it might be said that they do, but on these special occasions when a community is hard hit by crop failures, and when it is necessary for a bank to put money into the community, that is very frequently done by branch banking systems. That is one of the theories on which the system works, that money may be transferred from one place where there is a plethora of funds to a place where there is a dearth of them.

Mr. Busby. There is considerable controversy in the banking

world as to whether or not that statement is a fact.

Mr. Pole. I think there is considerable controversy on every banking point.

Mr. Bussy. I mean, on that one point.

Mr. Pole. I should say on that point among others.

Mr. Bushy. You have described your position with regard to branch banks.

Mr. Pole. Yes.

Mr. Busby. You stated, on March 6, in your examination, these words:

I would be glad to see some legislation which would prohibit the operation of chain banking.

That is your position on the question of chain banking, is it not?

Mr. Pole. Right.

Mr. Bushy. Now, we have some very extensive branch banking

operations in this country in a few States, do we not?

Mr. Pole. There are extensive branch bank systems in operation. Mr. Busby. I have asked you some questions heretofore about the Bank of Italy, rather for the purpose of using it as an example of the development of branch banking. I hand you a chart which shows the locations of the branch banks of the Bank of Italy in the State of California. There is hardly a community in that State that is not covered by a branch bank of the Bank of Italy, is there?

Mr. Pole. I would not go so far as to say that. There are very many communities not covered by branches of the Bank of Italy.

Mr. Busby. I mean banking communities, or communities of

credit.

Mr. Pole. I understand what you mean.

Mr. Bushy. Of course, that would not be the same as a school

district, or anything like that.

Mr. Pole. There are a large number of branches. If you exclude those branches which might be termed city branches, I should estimate roughly that you would have 200 points covered by branches of the Bank of Italy in California.

Mr. Busby. How is the business at a branch of the parent bank conducted with reference to extending credit to applicants for loans?

Mr. Pole. The branch manager, in conjunction with the advisory committee, is given a certain loaning limit. In the case of very large loans which have not been passed on, they are taken up with the

head office.

Mr. Busby. I am informed by people who do business with the branches of the Bank of Italy, members of the House from California, that no loan is made by the cashier of one of the branches on an application for a loan; that he takes your application, with your financial statement, and tells you that it will be presented to the loan committee of the central institution the next morning at the meeting of this committee. Then your application, together with your financial statement, is presented to the committee on loans by the cashier or representative of the branch bank the next day, and that is passed on entirely in the absence of the applicant for the loan.

Do you know whether or not that is true?

Mr. Pole. I do not think it is true if it comes within the limit.

Mr. Bushy. Do you have any idea what the limit is?

Mr. Pole. It varies in different places. As a matter of fact, you perhaps are speaking of new loans. Now the business of a bank might be said to be 90 per cent with regular customers, whose lines

of credit have been established perhaps for years in that community, and they are given a regular line of credit. Those loans are usually reviewed by the executive committee or by the loaning committee and are fixed quite in advance of the time when the customer may come to take up his loan, and with respect to the new loans, if they are of any size they, of course, should be given very careful consideration and, if necessary, referred to the head office.

Mr. Busby. I know that is the sytem usually used by the inde-

pendent individual banks.

Mr. Pole. That is the sytem employed by the Bank of Italy, I

Mr. Busby. But the branch-banking system entirely leaves out of the loan the question of personal responsibility or the fact that the individual, because of his course of business activity and conduct, is entitled to credit, and makes the loan solely on the collateral that the borrower has to offer, nothing else being considered by a body of men who do not take the man into consideration at all, or very little. Is that not the case with branch banking?

Mr. Pole. On the contrary, I think that the character element is

perhaps the most important, and it is given consideration.

Mr. Bushy. How do you reconcile that statement with the fact that more careful loans, for instance in the central Northwest territory that we were talking about, would be made by the branch banking system, leaving out of consideration the personal character of the applicant for the loan?

Mr. Pole. I have never made the statement that the personal character feature is ever left out of consideration on loans. I think that is the most important, but there is also connected with that the borrower's ability to pay which is frequently lost sight of by small

banks.

Mr. Busby. I will have to hurry on.

Now the Bank of Italy until recently had 299 branches scattered over California. Some time ago we went through a period of depression that reflected itself on the stock of the Bank of Italy, when on the 11th of June, 1928, it opened in the morning at 286 and ran to a low of 125 on the same date, closing at a somewhat higher figure. At that time it had the 299 branches. I might say it is my information that other banking interests in the same field sought to bring about the depression in the Bank of Italy stock. Now, even though you have a system with many branches, it is not entirely secured against the competitive banking activities of other institutions in the same field, is it?

Mr. Pole. By no means.

Mr. Bussy. Even though it does not break in the sense that we speak of the individual country bank, the financial effect of such an experience in the affairs of a bank is of such broad extent in deflating the stock that it is similar to a bank failure in that territory, is it not?

Mr. Pole. Not at all.

Mr. Busby. Does that not affect the investors in the stocks of that bank just as effectively as if they had been interested in a bank that

failed and got only a portion of their invested money back?

Mr. Pole. I see no direct connection there. The stocks of banks are always going to fluctuate. They have in the past and will in the future. But the condition of that bank is not affected by the fluctuation of the stock, and in the case you mentioned there was a large speculative element in that trading.

Mr. Busby. Two or three other banks making a desperate effort to drive down the Bank of Italy stock while Mr. A. P. Giannini

was in Italy?

Mr. Pole. I do not know as to that. I have never heard that the banks made any concerted drive against the Bank of Italy. You have referred several times to the breaking of the Bank of Italy and bankruptcy in connection with the Bank of Italy. I think the record ought to be cleared on that point; and, even at the expense of reiteration, I should say that the Bank of Italy has steadily grown from a very small institution to a bank of, according to the last statement, more than a billion dollars of resources; so that the bank per se has not been greatly affected by the fluctuations in the stock.

Mr. Bushy. Has it not been difficult to trace the activities of the Bank of Italy, to tell whether it has grown or absorbed and combined with other institutions so as to make the showing you speak of

in the last report?

Mr. Pole. I should say not.

Mr. Bushy. All right. Now, immediately after the period that I referred to as the break of the Bank of Italy stock, which you explained and on which you place another light, the Transamerica Corporation, a New Jersey corporation, a holding company, was organized for the purpose of taking over all or as much of the stock as it could get of the Bank of Italy, its subsidiaries and affiliates, was it not?

Mr. Pole. I think it is a well-known fact that the Transamerica

Corporation was formed to take over its various activities.

Mr. Bushy. It was formed October 11, 1928, after the period I mentioned as June 11, 1928?

Mr. POLE. Yes.

Mr. Bushy. Now, listed among the corporations a majority whose stock is owned wholly or largely by the Transamerica Corporation, are 11 banking, investment, insurance, trust, and other similar types of financial institution covering every business activity in our country, and two additional institutions in which the Transamerica Corporation holds about 50 per cent of the stock. Now, the holding company, having this stock in hand, controls the policies of all of these banks and other institutions, and directs their course in whatever business activity they are operating, does it not?

Mr. Pole. Theoretically.

Mr. Bushy. Does not the holding company direct the directors that do direct the policies of these institutions?

Mr. Pole. Elects them. Mr. Busby. Elects them? Mr. Pole. Yes.

Mr. Busby. What do you mean by that term? Mr. Pole. I mean to say that the directors would undoubtedly be elected by the shares which were preponderantly held by the Transamerica Corporation.

Mr. Busby. Well, the Transamerica Corporation is operated by about 25 men composing the directors of that institution, is it not? Mr. Pole. I really do not know how many men direct the affairs

of the Transamerica Corporation.

Mr. Bushy. I think you can get that from Poor's Banking Directory.

Mr. Pole. I think so, too.

Mr. Busby. So that takes entirely away the human element of management, so far as the stockholders and the investors in the stocks are concerned, the management of these institutions which embrace some 525 independent units that are managed by the Transamerica Corporation?

Mr. Pole. Theoretically, if you wish to assume that the directors

and the executive officers of the Bank of Italy are dummies.

Mr. Busby. They do not know anything about the several communities in which the 525 units operate, do they?

Mr. Pole. What do you mean by "they"?

Mr. Busby. That is, the men that control and direct the policies, through the Transamerica Corporation, of all of these 525 institutions that are under it?

Mr. Pole. I am not informed as to what is the extent of the power of those 25 men who are connected with the Transamerica Corporation.

Mr. Busby. The Transamerica Corporation controls national banks, does it not?

Mr. Pole. I think so.

Mr. Busby. It owns all of the stock in some national banks, does it not?

Mr. Pole. Yes; practically all.

Mr. Busby. It owns all of the stock or practically all of it,, in some State banks?

Mr. Pole. That is my information.

Mr. Bushy. Some of the national banks that are owned and controlled by the Transamerica Corporation also have branches in other territory under the McFadden Act, have they not?

Mr. Pole. Yes.

Mr. Busby. And some of the State banks that are owned and controlled by the Transamerica Corporation also have branches in the States where branch banking is permitted, do they not?

Mr. Pole. I do not know what the State banks have.

Mr. Busby. The fact is that there is such a confusion of interests in a financial institution as gigantic and extensive as the business the Transamerica Corporation controls that it is very difficult for one without a special accountant to go through the situation to understand what the financial relations of the several elements are is not that a fact?

Mr. Pole. Of the Transamerica Corporation?

Mr. Busby. Yes.

Mr. Pole. Yes; I think that is right.

Mr. Busby. Now, the Transamerica Corporation and the Bank of Italy also own and are interested in a bank in Rome, Italy, are they not, or do you know about that?

Mr. Pole. I have heard so. Of course, I do not know very much

about the Transamerica Corporation's investments.

Mr. Busby. You have never examined Poor's Directory on Banks and Trust Companies, 1929, with reference to the Banca D'America e D'Italin, in which James A. Bacigalupi and A. P. Giannini, the man who established the Bank of Italy in the United States, are directors? You know nothing about that?

Mr. Pole. I have never examined Poor's report.

Mr. Busby. I want to call your attention to another illustration. Mr. Chairman, I will quit any time.

The CHAIRMAN. We were planning to finish with Mr. Pole at

11.30, to hear Governor Young.

Mr. Bushy. All right. I find, in regard to the National City Bank of New York, in Poor's Bank Directory, that on December 31, 1928, the bank contained, in addition to a main office in Wall Street, New York, 30 city branches and, in addition, direct and subsidiary foreign branches numbering 89 in 23 countries, and plans were being Perfected to enter two additional countries during 1929, and I also find that the National City Bank at that time had resources of \$1,847,000,000—and that has been considerably increased since then-with a capital stock of \$110,000,000.

I call attention to that for the purpose of leading up to the other thought, that this country is becoming a country of big banking institutions, which leaves out of consideration any place for the country bank or for any bank that is not a part of a chain, group, or

branch system.

h

Also, in connection with that, I want to call attention to the statement of Mr. Thomas W. Lamont with regard to the Bank for International Settlements, where the big banking interests of all the countries could come together and settle the financial policy of the world.

You know about the situation I refer to, do you not?

Mr. Pole. I have heard of the Bank for International Settlements. Mr. Bushy. Is it not your opinion that the group, chain, and branch banking systems are playing directly into the hands of that kind of a policy of internationalizing the money system of the world?

Mr. Pole. Through the Bank of International Settlements?

Mr. Busby. Yes.

Mr. Pole. I am not sufficiently familiar with that, Mr. Busby, to

give you an intelligent reply.

Mr. Busby. Well, the Federal reserve system, of which we may talk more some other day, would be considerably disparaged if the holding companies took over the management of banks and placed them under State charters, and left out of consideration the national system, would it not?

Mr. Pole. If all the large banks left the Federal reserve system,

it would unquestionably be affected.

Mr. Bushy. There is no way to place a holding company in the national banking system, is there?

Mr. Pole. No.

Mr. Bushy. If the holding companies become the managers of the banking interests of the country, they will be outside the management of the Comptroller and the Federal Reserve Board, will they not?

Mr. Pole. Not necessarily. Banks, regardless of where their stock is held, may be, and must be in the case of national banks, members of the Federal Reserve System.

Mr. Busby. I will suspend here, Mr. Chairman. Mr. Goldsborough. May I ask Mr. Pole one question? It is not

controversial, and he can answer it.

Mr. Pole, there is about to be effected a merger between the Chase National Bank and the Equitable Trust Co. and another bank whose name has slipped my memory.

Mr. Pole. Interstate. Mr. Goldsborough. Yes. Was it necessary to get the consent of the Comptroller of the Currency to effect that merger?

Mr. Pole. Yes, sir.

Mr. Goldsborough. And that consent was granted?

Mr. Pole. That consent will be granted.

The CHAIRMAN. Gov. Roy A. Young, of the Federal Reserve Board, is present, and I am going to suggest that when Governor Young begins his statement, he be not interrupted until he may so indicate.

Before hearing him, I would like to suggest that when we have completed with Governor Young, perhaps the next persons that should be heard before the committee are the members of these chains and groups. It seems to me that, as has been disclosed before the committee, the witnesses who can give us the most valuable detailed information in line with the scope of our hearings are the officers of the Transamerica group. From my knowledge of the management of that organization, it would seem to me that the two men we should have are Mr. A. P. Giannini, who was the originator of the plan and its president, and Mr. James A. Bacigalupi who, I believe, is director of the Bank of Italy. It may later develop that there are other men connected with that group whom it might be desirable for the committee to hear, and I would suggest that representatives of the St. Paul and Minneapolis group would probably be the next ones that the committee might profitably hear.

My purpose in bringing that up this morning is to ask the committee to authorize me to extend invitations to Mr. Giannini and Mr.

Bacigalupi.

Mr. BEEDY. Mr. Chairman, before we proceed to that, these hearings have been very interesting indeed up to the present point, but the time is passing so rapidly and we do not seem yet to have made more than a start. The Senate is presently to finish with the tariff and to start its hearings, and we are losing, it seems to me, our position of vantage that we had.

This thought occurs to me that if we should start in with a man like Mr. Giannini, he will be here for three or four weeks and we will have completed an investigation of that particular subject and then it will

be about time to wind up these hearings.

The Chairman. I do not think that is a correct statement. Mr. Beedy. It is an exaggerated statement; I concede that. think if we could get some witnesses before the committee who could give us the basic facts with reference to group, chain and unit banking, it would not take us into such elaborate detail as Mr. Giannini's examination would be obliged to. We would then have the broad foundation laid for the examination of such a witness, whose testimony in the light of the facts then covered might be much curtailed.

The CHAIRMAN. I am interested in this group because there is included in their organization every form of banking that we are proposing to study, and inasmuch as that was the big movement in this country, practically the original movement of this new expanded idea, it seems to me that there is embodied in a study of that organiza-

tion the elements that we should have before us.

Mr. Beedy. Well, perhaps that may be so. I am simply interested in some method of procedure here that will enable us to get on with these hearings. I personally have not taken more than perhaps three minutes in examining, and the motion I am about to make is not a reflection on anybody; it is just an observation and perhaps a necessity, and I would like to have the viewpoint of the committee on it.

For that purpose I want to move that hereafter each member of the committee be limited to 15 minutes in his examination of any witness. There are 21 members, and that will take up five hours and a quarter in the cross-examination of each witness. Of course, a good many of us will not want to use the 15 minutes and we can yield to

others; that will be permissible.

1 1

ø

h

Mr. Goldsborough. This is probably by far the most economic question that the country is now interested in. Usually it is very difficult to get the public to take hold of a matter of this kind at all, because they do not understand it. As Mr. Beedy said, it seems to me that up to this time these hearings have been interesting, and very informative. Personally it does not make any difference to me if it takes six months or a year for the country to get a thorough understanding of just what this is all about and just what its future implications are. I do not see any reason why it should be hurried, as long as we do not waste any time. As far as I can see, up to this time there has been no time wasted, and I see no reason why a member of the committee who has an intelligent question to ask should be limited to any particular time. If in the future we should feel that we have to make some different arrangements, it seems to me that it will then be time enough to do it, but certainly as long as the inquiry is being confined to the subject matter and as long as there is no rancor and no Partisanship of any kind injected into the hearings, as long as they are Purely for the purpose of getting information, it seems to me it would be a great mistake to limit it in any way.

Mr. Beedy. I want the committee to understand that I did not make that motion with the thought of hurrying these hearings at the expense of denying ourselves any of the facts that would be helpful. I thought there would be more of an inclination perhaps on the part of members to carefully prepare their questions and to avoid repetition, and the question is vast in scope unless we adopt some limitations.

The Chairman. The chairman had it in mind to consider the matter which Mr. Beedy has proposed and in which there is much merit. There is no desire on my part, however, to curtail any member of the committee who has questions pertinent to this inquiry that will bring forth necessary information; but I had in mind that when we had finished with Governor Young—considering Governor Young as one of the officials here in Washington whom the members of the committee would want to ask many questions to elicit information along the lines furnished by Mr. Pole, which I think has been very instructive and has involved no waste of time up to this point—a different situation will exist when we begin to hear these outside men, for the information secured from these men will be not only valuable to Mr. Pole but valuable to Governor Young, to the members of the Federal Reserve Board, to the Treasury, and to all the members of this committee.

100136-30-vol 1 pt 4-2

I had hoped that when we had finished with Governor Young, the committee might have an executive session to discuss our further procedure, and I believe all the members of the committee will agree to that. If we could have an agenda of witnesses representing these various groups so that specific information could be secured from them, whether the questions are asked by the chairman or a member of the committee, I think that would be very helpful.

I am not in disagreement with what Mr. Beedy is proposing, but I think if this matter were not raised until after we had finished with Governor Young, it would be helpful to us in connection with the

further procedure.

Mrs. Pratt. Is it not possible for the members of the committee to have the minutes of the hearings between the times we are actually engaged in the hearings? Is not one of the things that delays us quite a long time the repetition that we have?

The CHAIRMAN. Yes.

Mrs. Pratt. And I think if we could see those minutes in between times, it would be very helpful. I know that as far as I am concerned, many questions that I had were covered by others, and yet I could not remember how they were covered and I may have spent a great deal of time.

The Chairman. We are endeavoring as far as possible to print the minutes of each week's hearings immediately after they are closed.

While I am on the subject, I would like to suggest to the members of the committee that this printing is being greatly delayed because of the fact that the members of the committee desire to correct their questions in the stenographic transcript before it can be sent to the printer. The clerk of the committee is delayed in getting these minutes to the printer because every member wants to read these hearings for purposes of correction. So there has been some delay. Parts 1 and 2, however, are printed and, as soon as corrected, this last week's hearings will go to the printer this week.

I think it is very essential for the members of the committee to note carefully the testimony up to this time, in order to enable us properly to question the other witnesses who are coming before the committee. So I would like to stress that the members of the committee correct each week, as quickly as possible, the stenographic

notes.

(Discussion off the record.)

Mr. Beedy. Mr. Chairman, in order that we may clear the situation and get on with the hearing, there is a motion before the Chair, which I will now withdraw. I think it is wise to take up the matter in executive session, and I think it is well to have the members get the record and look it over, and then we can adopt some intelligent procedure.

Mr. Luce. Mr. Chairman, I move that the members of the committee have three legislative days after the day of the hearing in

which to correct their remarks.

Mr. Goldsborough. Of course, Mr. Chairman, we have to have access to the record in order to do that.

The CHAIRMAN. The record will be available here in the committee The witness has one copy and there is only one other copy available, so that it will be available for the members of this committee in this room. This room is very convenient to the House, and the members will be expected to come here to make their corrections.

Mr. Goldsborough. I second that motion.

(The motion was agreed to.)

The CHAIRMAN. I believe, Mr. Pole, you have some additional data you want to submit for the record in regard to holding companies.

Mr. Pole. I think everything is in the record, Mr. Chairman. Mr. Beedy. I was going to ask Mr. Pole if he has any record of bank failures in groups by congressional districts that he could put into the record.

Mr. Pole. Covering the United States?

3

t

t

1n 0

Mr. Beedy. Yes. Mr. Pole. That could be prepared, Mr. Beedy, and I shall be glad to supply the record with that.

Mr. Beedy. Then, I would ask the comptroller to make such a

tabulation of bank failures and put it into the record.

Mr. Pole. State and national banks covering congressional districts of the United States?

Mr. Beedy. Yes. Mr. Pole. That will be done.

Mr. Fort. Will you make that in 4-year or 10-year periods?

Mr. Pole. Whatever the comparable periods are. Mr. Luce. I think that will be very difficult to carry out literally in some of the larger centers embracing several congressional districts. For instance, in Boston-

Mr. Pole. I think, Mr. Luce, the number of failures in Boston is

so small that it will not make any real difference.

Mr. Luce. Yes; but if there were a failure there, you might have difficulty in discovering whether it was embraced within the ninth or the tenth congressional district.

The CHAIRMAN. Was there printed in the record a list of chain and

group systems?

Mr. Pole. Yes, sir; that has been furnished.

Mr. Beedy. I should like to change my request so as to make that tabulation on the basis of metropolitan centers and congressional districts outside of the metropolitan centers. The reason for the change is that some cities embrace parts of four or five congressional districts. It will be almost impossible for you to draw the lines of the districts there.

The CHAIRMAN. That will be inserted in the record at this point. (The information requested of Mr. Pole is here printed in full, as

follows:)

Mr. Pole. Mr. Chairman, on that question you asked a moment ago in reference to chain and group systems-

The CHAIRMAN. Yes.

Mr. Pole. Those systems were not mentioned by name, but simply by number of banks controlled. That will be sufficient?

The CHAIRMAN. Yes. Mr. Pole. If you want the names they can be made available.

The CHAIRMAN. We will now hear Governor Young.

STATEMENT OF HON. ROY A. YOUNG, GOVERNOR OF THE FEDERAL RESERVE BOARD

Governor Young. Mr. Chairman and members of the committee, I want, first, to refer to a letter that the board wrote to the committee about a week ago and quote excerpts from it.

The board feels that group, chain, and branch banking presents one of the most important and most difficult problems of our changing banking structure before the country at the present time. It believes that more complete information regarding the forces which have impelled this new development will be necessary before conclusions of value can be arrived at regarding its effects—financial, economic, and social. The board has not yet reached such conclusions and is not, therefore, in a position to designate a representative to appear before your committee and to speak for the board at this time.

That would appear that the board has not done any work in reference to group, chain, and branch banking. In reality it has done a great deal of work. I have watched the records of these hearings with a great deal of interest and much profit. I find much that I am going to present will be a repetition of what the Comptroller of the Currency has already presented. Very much of what I have does not need to be a part of this record, in my opinion.

In this file [indicating] there is a great deal of information that the board has made public at different times over the past eight or nine Years in reference to group and chain banking. That is far too much material for anyone to read and there is much repetition in it; so that I have attempped to condense this in the statement that I will leave with the committee. Even that statement is far too long to

read at this meeting to-day. We can, however, furnish mimeographed copies of it to the members of the committee. It is a digest of all the data in the possession of the Federal Reserve Board on the subject of branch, group, and chain

banking.

There are being submitted to the committee at the same time, as

exhibits, copies of all material referred to in this digest.

In this connection, however, attention is called to the fact that Part of the material submitted is confidential in its nature and probably ought not to be published in any report of the committee's hearings. These confidential reports are indicated both on the exhibits and by explanatory statements in the body of the digest, so that the committee can easily eliminate them if they should decide to publish this digest or any of these exhibits.

I shall try to cover this briefly, Mr. Chairman.

The CHAIRMAN. For the purpose of clarifying the record I understand you will furnish each member of the committee with mimeographed copies of this brief which is for their immediate information.

Governor Young. Correct.

ed it

The Chairman. To be used as the committee sees fit in the conduct of this study?

re

pand

Governor Young. There is nothing confidential in this report,

however-this part of it [indicating].

The Chairman. It is a separate report you are submitting?
Governor Young. Yes. Some of these other reports are confidential.

Mr. Fort. And there is an indication on the material of which part it is confidential?

Governor Young. Yes, sir.

Mr. Brand. Have you that ready for distribution now? Governor Young. I will have it before the day is over.

The CHAIRMAN. When you furnish that we will distribute it to the

members of the committee.

Mr. Fort. May that distribution be made tonight so that we will have it ready for cross-examination of Governor Young to-morrow?

The Chairman. I understand that is the intention.

Mr. Fort. So that we will not waste time with useless questions

to-morrow that may be covered in the statement?

The Chairman. That will be taken care of. Now, let me get this clear—

Governor Young. That will be ready to-night.

The CHAIRMAN. This statement that you are filing with the com-

mittee this evening is the same as you have there?

Governor Young. Yes, sir; I can cover that briefly. That covers all the legal research work that the Federal reserve system has done since 1922 and concludes with a statement that the Federal reserve system made in February, containing a digest of all the State laws regarding branch banking in the United States. That is brought up to the last minute.

The Chairman. I should like to ask you also, Governor, whether you have extra copies of the exhibits or whether that is the only copy

available.

Governor Young. That is the only copy I have with me. I think this is condensed in such manner that very few members of the committee will care to refer to this detailed information. If they do, we can furnish it.

Mr. Letts. If a member of the committee becomes interested in one particular point, he can go to the exhibits and follow it up?

Governor Young. Yes, sir.

The Chairman. I am wondering whether this statement you are going to go over this morning should not be placed in the record.

Governor Young. I think that it should.

The Chairman. Without objection this particular document from which Governor Young is speaking now will be inserted in the record and furnished to the members of the committee this afternoon so that it will be available for study before the meeting to-morrow.

Governor Young. Correct.

(The statement referred to is here printed in full as follows:)

FEDERAL RESERVE BOARD DIGEST OF DATA ON BRANCH, GROUP, AND CHAIN BANKING

The following is a digest of all the data in the possession of the Federal Reserve Board on the subject of branch, group, and chain banking. There is being submitted to the committee at the same time as exhibits, copies of all the material

referred to in this digest. In this connection, attention is called to the fact that part of the material submitted is confidential in its nature and probably ought and to be published in any report of the committee's hearings. These confidential portions are indicated both on the exhibits and by explanatory statements in the in the body of the digest, so that the committee can easily eliminate them if it should desire to publish this digest or any of the exhibits.

RESEARCH WORK

During the past eight years the Federal Reserve Board has done a great amount of research work in connection with the subject of branch banking, and during the past four years it has made much research in connection with the subject of group and chain banking. It is believed that the results of this research work will be very enlightening and helpful to the committee. There is given below a brief discussion of the committee. given below a brief discussion of the various different phases of this research work, and there are attached exhibits containing the principal documents containing the detailed information resulting from this research work.

I. LEGAL RESEARCH

 During September, 1922, Mr. Robert F. Leonard, secretary to Hon. John R. Mitchell, who was at that time a member of the Federal Reserve Board. prepared a preliminary draft of a digest showing the status of branch banking under the laws of the several States. In this digest it appears that in September, 1922, branch banking was prohibited by law in 15 States and was expressly permitted by law in 13 States. In 12 States there were no specific provisions of law prohibiting branch banking, but the State supervisory authorities did not permit branches to be established. In four States the laws weeklighted beautiful. permit branches to be established. In four States the laws prohibited branch banking, but permitted the establishment of branch offices or agencies; and in 3 States the establishment of branches was permitted without any express authorization of law. In 1 State branch banking was permitted by implication but there were no branches then in operation in that State. Of the 13 States expressly permitting branch banking & permitted it without accurately

expressly permitting branch banking, 8 permitted it without any geographical limitations, while 5 permitted the establishment of branches only within certain geographical limits. A copy of this preliminary digest (X-3530) is attached hereto as Exhibit A. It appears that it was never put in final form.

2. In December, 1924, there was published in the Federal Reserve Bulletin (pp. 925-940) a comprehensive article with reference to the entire subject of branch banking, which reviewed the administrative policies of the Federal Reserve Board with reference to this subject, the board's recommendations to Congress, the extent of branch banking in the United States, both within and without the Federal reserve system, and the growth of branch banking. In addition to the Federal reserve system, and the growth of branch banking. In addition to

much valuable statistical material, this article also contained (pp. 930-931) a valuable statistical material, this article also contained the states and a map showing in which States branch banking was authorized, in which States it was prohibited and in which States branch banking was authorized, branch banking. This summary showed that at that time branch banking was branch banking. expressly prohibited by statute in 17 States and was either expressly or implied bermitted by statutory provisions in an equal number of States. The free extension of the control of the was impliedly authorized in 2 other States, and was permitted without specific, data and the states and was permitted in all in which states wide branch banking was permitted. Three States restricted branch banking was permitted. Three States restricted branch banking to the city or county in which the parent lig to the county or territory contiguous to the city or county in which the parent bank was located and two States limited the establishment of branches to the was located and two States limited the establishment of States limited the parent bank was located. In three states additional offices or agencies, but not full-power branches, were permitted ther by statutory provisions or under judicial decisions. A copy of this article a attached as Exhibit B.

3. In March, 1925, there was published in the Federal Reserve Bulletin (pp. 187) a complete digest of State laws pertaining to branch banking, which became a prepared in the office of the board's general counsel with the assistance of the board's general counsel with the assistance of the counsel for the various Federal reserve banks. This digest showed the status of branch-banking legislation in the various States at the close of the year 1924. by the control of the various states at the close of the year the showed that branch banking was permitted either specifically or by implication in 20 States and was specifically prohibited in 17 States. It also shows that at the 20 States and was specifically prohibited in 17 States. at the 20 States and was specifically promoted in 1. States having no express provisions of law covering branch time there were 11 States having no express provisions of law covering standard hereto as Exhibit I (3). branch banking. A copy of this digest is attached hereto as Exhibit I (3).

401 In June, 1926, there was published in the Federal Reserve Bulletin (pp. 408) an article with reference to branch banking in the United States, bringhg up to date the data contained in the article published in the Federal Reserve By up to date the data contained in the article published. It is sufficiently by the published in the various states had enacted legislation regarding. States, this article showed that three States had enacted legislation regarding the establishment and maintenance of branches during the year 1925. It showed that, on December 31, 1925, branch banking was permitted in 20 States either pressly or by implication; it was prohibited in 17 States; and there was no tisisation on the subject in 10 States. In addition to the 20 States permitting branch banking, New Jersey had recently enacted a statute authorizing banks that trust companies to establish branches within the limits of the city in which the head office was located, if national-banking associations in New Jersey should at the time be permitted by act of Congress to establish branches. A copy of this article is attached as Exhibit D.

billed is attached as Exhibit D. In February, 1929, there was published in the Federal Reserve Bulletin (pp. 97-103) an article entitled "Branch Banking Developments to June 30, 1928," which not only brought up to date much of the statistical data on this publication which not only brought up to date much of the legal situation existing on ubject but also contained a brief summary of the legal situation existing on line 30, 1928. This showed that in the period which had elapsed since the had ment of the McFadden-Pepper Act of February 25, 1927, several States had ment of the McFadden-Pepper Act of February 25, 1927, several States had enacted legislation expressly forbidding branch banking. A table published this article indicates that on June 20, 1928, branch banking was permitted in 22 States and in the District of Columbia, but was limited to the city or county in Which the head office of the bank was located in 10 of these States and was hermital the head office of the bank was located in 10 of these States and was hermital the head office of the bank was located in 10 of these States and only in permitted only in the home county and adjoining counties in 1 State and only in the home city or territory contiguous thereto in 1 other State, so that 12 of the States in all permitted branch banking only within limited geographical limits, while 10 States (not counting the District of Columbia) permitted branch banking without any geographical limitation. Branch banking was prohibited except as to branches already existing) in 20 States. In only 6 States was there have been as to branches already existing and no branches in operation. ho egislation on the subject of branch banking, and no branches in operation.

degislation on the subject or branch of the copy of this article is attached as Exhibit E.

6. In October, 1929, there was prepared in the office of the board's general company of the copy of the co to October, 1929, there was prepared to the various Federal reserve banks, a digest of Seel, with assistance of counsel to the various Federal reserve banks, a digest of bank stock by holding corporations. State laws regarding the ownership of bank stock by holding corporations. This was not published, but a copy is attached hereto as Exhibit F. It shows that only 19 States had any legislation affecting this subject either expressly or by implication. In most of these States the legislation obviously was not intended to deal of the second of these states are group banking. Most of the legislation deal directly with the subject of chain or group banking. Most of the legislation was very general in its character and dealt only with the general powers of banks

7. In December, 1929, there was published in the Federal Reserve Bulletia (pp. 762–771) an article with reference to branch and chain banking developments during the year 1929. This article pointed out that "the area within which banks were operating branch offices" on June 30 was composed of 28 States and the District of Columbia. In 9 of these States, however, any further extension of branch banking has been prohibited by law, leaving 19 States and the District of Columbia as composing what may be called "the branch-banking area, which may perhaps be added Wyoming, whose banking code would seem to permit branch banking, although no branch offices have been reported from the State. In 8 of these States (or 9 including Wyoming) State-wide branch banking is permitted, the establishment of branches being restricted in the other 11 States to the home city of the parent bank or territory nearly contiguous thereto the States are grouped with reference to the status of branch banking as defined in the State banking codes. A copy of this article is attached hereto as Exhibit 6.

8. In February, 1930, the office of the board's general counsel, with the assistance of counsel to the various Federal reserve banks, completed a preliminary draft of a new digest of State laws regarding branch banking. This digest has recently been completed in final form, and a copy of the final draft is attached hereto as Exhibit H. This digest shows that the establishment of branch banks is prohibited in 22 States; that the establishment of branches is authorized in 19 States, and that there are no specific provisions covering branch banks in 7 States. Of the 19 States permitting branch banking, 9 permit State-wide branch banking and 10 permit branch banking only within limited areas.

II. STATISTICAL RESEARCH ON BRANCH BANKING

1. June, 1924: The first survey made for the Federal Reserve Board of branch banking in the country as a whole, i. e., including nonmember as well as member banks, was prepared as of June, 1924, and the results were published in the 1924 December Bulletin (pp. 925–940). That summary showed that 68 member and nonmember banks, out of a total of 28,468, were operating a total of 2,233 branches. Of this number, 248 were branches of national banks, 1,137 were branches of State bank members, and 848 were branches of nonmember banks. The States in which the largest number of branches were reported at that time were California, 538; New York, 359; Michigan, 332; and Ohio, 203. A copy of the Federal Reserve Bulletin for December, 1924, is attached hereto as Exhibit 9. December, 1925. The next the summary of the state of the summary of the summ

the Federal Reserve Bulletin for December, 1924, is attached hereto as Exhibit-2. December, 1925: The next survey on branch banking made for the Board was as of December, 1925, and the results are published on pages 401-408 of the June, 1926, Federal Reserve Bulletin. This survey showed that the number of banks operating branches had increased from 686 in June, 1924, to 735 in December 1925, and the number of branches in operation from 2,243 to 2,572. Of the total number of branches in operation in December, 1925, 332 were branches of national banks, 1,280 of State bank members, and 960 of nonmember banks. A copy of the Federal Reserve Bulletin for June, 1926, is attached hereto as Exhibit D.

3. December, 1926: In 1926 the board decided to maintain a complete record of all branches coming into an account of the second of the process of the process

3. December, 1926: In 1926 the board decided to maintain a complete recomplete recomplet

situation at the end of 1926 as follows:

"The summary shows that out of a total of 28,000 banks in the United States on December 31, 1926, 789 banks in 401 cities were operating 2,777 branches. If mutual savings and private banks are excluded, in order to obtain figures comparable with previous compilations, it is found that 730 banks were operating 2,690 branches at the end of 1926, as compared with 735 banks with 2,572 branches in December, 1925, and 686 banks with 2,243 branches in June, 1924. There was during 1926, therefore, an increase of 118 in the number of branches in operation (exclusive of branches of mutual savings and private banks) and nominal decrease in the number of parent banks operating the branches, this decrease being more than accounted for by consolidations of banks having branches."

A copy of this report (St. 5334) is attached hereto as Exhibit I. addistics, i. e., for December, 1926, were published in somewhat different form the May, 1927, Bulletin (pp. 315-318 and 384-389), a copy of which is attached the set of as Exhibit J. The same

4. February 25, and June 30, 1927: Under date of February 17, 1928, Mr. § February 25, and June 30, 1927: Under date of Testing the branch banking stones submitted a memorandum to the board summarizing the branch banking stones. This submitted a memorandum to the board summarizing the orange of the date on which the so-called McFadden bill was passed. This morandum also brought the statistics up to date as of the end of June, 1927. he following material taken from the first page of that memorandum shows be following material taken from the first page of that memorandum shows well as four months later, i. e., in June, 1927:

"On February 25, 1927, the date on which the McFadden amendment to the reserve and national bank acts became effective, there were in the later States 777 banks in 396 cities which were operating a total of 2,902 do-

bited States 777 banks in 396 cities which were operating a total of 2,902 do-

States 777 banks in 396 cities which we being as follows:

	Number of banks operating branches	Number of branches
Total_	777	2, 902
Astonal banks sate bank members sate bank normembers sate bank normembers sate bank sommembers sate banks	144 189 385 50 9	389 1, 562 863 76- 12

On June 30, 1927, the latest date for which complete figures for both member and On June 30, 1927, the latest date for which complete agency to be a nonmember banks are available, the number of banks operating branches 788, or about 3 per cent of the total number of banks (about 26,800) in the number of branches on the same date was 2,989, about the number of branches on the same date was 2,989, about the number of branches (parent banks plus branches) in the weed States, while the number of branches of the banks plus branches) in the control the number of banking offices (parent banks plus branches) in the banks—481 out of 788—had branches only in the head-office city, there were 978 branches, or one-third of the total Although the majority of the banks-481 out of 788-had branches the head-office city, there the head-office city. that were located outside the head-office city.

h most cases the size of the individual branch system was small, 442 of the banks having only 1 branch and 136 but 2 branches. Of the 210 banks that more than 2 branches, 58 were located in cities of less than 100,000 populalion (where national banks may not hereafter establish more than 2 branches), beloding 3 national banks, 13 State bank members, and 42 nonmembers. There be 51 banks that had more than 10 branches on June 30, 1927, including the blowing which had 30 or more branches.

5. June, 1928: The next tabulation of statistics on branch banking gives the June, 1928: The next tabulation of statistics on branch banking in the the the end of June, 1928, and is covered by Mr. Smead's memorandum the board of December 1, 1928. The first paragraph of that memorandum on the board of December 1, 1928. to the board of December 1, 1928. The first paragraph of the status of branch banking and is quoted

Branch banking since passage of McFadden Act.—In the 16-month period, ween February 25, 1927, the date on which the McFadden Act became effective and June 30 of the present year, the number of branches of member and the management of the second second property of the second and June 30 of the present year, the number of branches of the 2,900 to the summer banks in operation in the United States increased from 2,900 to 5,000 or by 330, and the number of banks operating branches increased from 1,000 to 835, or by 56. While the net increase in the number of banks operating branches on June 30, 1,000 banks operating branches of 1,000 banks operating branches operating branches of 1,000 banks operating branches of 1,000 banks operating branches operat hanches was 56, there were really 109 banks operating branches on June 30, that had no branches whatever when the McFadden bill became a law. The difference between this figure and the net increase of 56 in the number of the operating branches is accounted for by the fact that 39 banks which on the operating branches is accounted for by the fact that 39 banks which on the operating branches went out of existence through the operating branches abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks, 10 banks abolished their branches, and 4 banks suspended berger with other banks. perations on account of financial difficulties. Of the 2,900 branches that were 1900 peration on February 25, 1927, 72 were no longer in operation on June 30, 1928, 64 having been abolished or merged with other branches or with the head 1900 peration on June 30, 1900 peration of the parent 1900 peration of the parent 1900 peration on June 30, 1928, that were not 1900 peration on June 30, 1928, that were not There were 402 branches in operation on June 30, 1928, that were not

in existence when the McFadden Act became effective, including 258 established de novo and 144 that succeeded independent banks.

A copy of this report (St. 5987) is attached hereto as Exhibit L.

6. June, 1929: Under date of October 1, 1929, Mr. Smead submitted a member of the board of the b randum to the board giving status of member and nonmember banks as of the end of June, 1929. The changes that took place during that year are summer ized in the following paragraph quoted from that ized in the following paragraph quoted from that memorandum:

"Branch banking since June 30, 1928: During the 12-month period between 30, 1928, when the last recent of her between the her between June 30, 1928, when the last report of branches of member and nonmember bank was submitted to the board, and June 20 of the was submitted to the board, and June 30 of the present year, the number of bank operating branches declined from \$25 to \$150. operating branches declined from 835 to 818, or by 17, while the number branches in operation increased from 3,230 to 3,440, or by 210. Although just stated there was a decreased from 1,230 to 3,440, or by 210. Although & just stated there was a decrease during the year of 17 in the number of pages operating branches, there were 56 banks operating branches on June 30, 102 which had no branches in operation a year earlier. This is accounted for by fact that 51 banks which were operating branches in June 30, 102 and 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were operating branches in June 30, 102 banks which were 30 banks which fact that 51 banks which were operation a year earlier. This is accounted for by the fact that 51 banks which were operating branches in June, 1928, went out existence during the year through merger with other banks, 5 banks suspended operation on account of financial difficulties, and 17 abolished their branches of the 3,230 branches that were in operation on June 30, 1928, 96 were discovered during the year, \$1 were abolished on marginal with the same and the same applications of the same and the same abolished on marginal with the same and the same applications of the same and the same applications of the same and the same and the same applications of the same and the same applications of the same applications of the same applications of the same and the same applications of the sam tinued during the year, 81 were abolished or merged with other branches, were 306 branches in operation on June 30, 1929, that were not in existence of June 30, 1928, including 171 established do not be a set of the parent bank. June 30, 1928, including 171 established de novo, and 135 that succeeded independent banks."

statistics, i. e., for June, 1929, were published in somewhat different form in December, 1929, Federal Reserve Bulletin (an arms) and the statistics of the December, 1929, Federal Reserve Bulletin (pp. 762-770), a copy of which attached as Exhibit G.

7. December, 1929: These are the latest statistics that we have available anch banking but the board's discountry. branch banking, but the board's division of bank operations is now finishing the preparation of a complete statement showing the branch-banking situation at end of the year 1929. A copy of this statement end of the year 1929. A copy of this statement will be furnished to the mittee as soon as it is available; and for account will be furnished to the mittee as soon as it is available; and, for convenience, it will here be designated as Exhibit N. as Exhibit N.

III. STATISTICAL RESEARCH ON CHAIN BANKING

1. December, 1922: The Federal reserve agents were requested (by the vision of research and statistics) to gather together what material was available on the subject of chain banking including a list on the subject of chain banking, including a list of the claims and the constitute banks, and to send it to the board. This material was reviewed in the division of research and statistics, but any of research and statistics, but apparently no memorandum on the subject prepared for the board. A copy of this material is attached as Exhibit 0, apparently it is confidential and should not be released.

apparently it is confidential and should not be released.

2. June, 1926: At the board's request, the Federal reserve agents made and survey of chain banking as of June, 1926, and a memorandum summarizing results of this survey was presented to the secretary of the board by Mr. Smell This memorandum summarized the situation under date of May 7, 1927. briefly as follows:

"A review of the data submitted indicates that on the whole there is relative little chain banking in the eastern section of the country, though quite a number of small chains or afflictions are section. of small chains or affiliations are reported in New York and New Jersey. It central and Western States, however, in most of which there is little of branch banking, chain banking appears to be conducted on a considerable of the banks in the chains are in most cases controlled by a majority owners. of stock—sometimes through a holding company, but quite often the ball policies are dominated by interests owning a substantial part but not a major of the stock. Quite a number of the of the stock. Quite a number of the constituent banks, it will be noted the statement attached, are national banks, particularly in New York, Jersey, Minnesota, Kansas, and Oklahoma."

A copy of this report is attached as Exhibit P. Apparently the part tyl on white paper (which contains the names of the banks) is confidential and show not be released.

not be released 3. June, 1928: Another survey was made by the Federal reserve agents as the end of June, 1928, and a memorandum summarizing the agents' reports this subject was presented to the Federal Reserve Board by Mr. Van Fosser the division of bank operations under date of January 17, 1929. The situation of the control of t prevailing at that time was summarized in the memorandum as follows:

"Attached hereto is a summary showing the extent of chain banking in the various States, grouped in accordance with the provisions of State laws as research branch banking. It will be noted, as might be reasonably expected, that thain banking has had very little development in those States in which statebanking has had very little development in those States in which states branch banking is permitted by State law. Generally speaking, also, claim banking has not developed extensively in those States in which branch banking restricted as to location is permitted. The greatest development of banking exists in those States which either prohibit branch banking or in banking exists in those States which either prohibit branch banking is not practiced. banking exists in those States which either promite branch banking is not practiced.

"In States which permit either state-wide or local branch banking there is, of to States which permit either state-wide or local branch banks in a chain, but a little occasion for the operation of a number of local banks in a chain, and pittsburgh, where and a matter of fact, except in the case of Chicago and Pittsburgh, where ranch banking is prohibited, there are no known instances of a banking chain beated either entirely or chiefly within a large city. The Old Colony Trust Co., of Boston, and the Marine Trust Co., of Buffalo, each have banking chains confied to banks located within a comparatively short distance of Boston and buffalo. haffalo, respectively, and constituting in effect extensions of their branch sysmialo, respectively, and constituting in effect extensions of their order of the property of t banks located outside of the head-office city are encountered in California and have located outside of the head-office city are encountered in Camorina and by be due in part to the restrictions of the McFadden Act against state-wide fact, apparently a group of country banks, usually including one or more members of the Federal reserve system, united by common stock ownership, in most apparently a group of individuals, into a banking combination hat ances by an individual or group of individuals, into a banking combination had under State law could not exist in the more obvious form of a branch banking

A copy of this report is attached as Exhibit Q. The entire report is marked confidential," though the summary on the first few pages probably could be

beleased if names of banks are deleted. June, 1929: A fourth survey was made by the Federal reserve agents as of the 1929, and, in order to insure uniformity in the reports on the subject, in so he 1929, and, in order to insure uniformity in the reports on the storics, as practicable, each Federal reserve agent was supplied with a copy of the least rendered the year before covering the entire country. The survey for the large to be much more comprehensive and reliable than James rendered the year before covering the entire country.

James 1929, was felt, therefore, to be much more comprehensive and reliable than that had been previously made.

memorandum summarizing the chain banking situation in June, 1929, was been previously made.

Memorandum summarizing the chain banking situation in June, 1929, was supported to the board by Mr. Snead on September 20, 1929. Following is an

Reports of the agents indicate that on June 30, 1929, there were 231 chains in prising 1,563 banks of which 597 were national banks and 966 State banks. is noteworthy that as of the same date, June 30, 1929, there were 818 banks and the same date, June 30, 1929, there were 818 banks are together with the chain banks makes a operating 3,440 branches which taken together with the chain banks makes a ball-right 3,440 branches which taken together with the chain banking groups. dal of over 5,800 banking offices belonging to branch or chain banking groups. The there were about 28,550 banking offices in the United States on June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the process of the United States of June 30, the the there were about 28,550 banking offices in the Chick State over 20 humber connected with branch and chain banking groups constitute over 20 ber cent of the total.

The States in which chain or group banking has had its principal growth are blancesota, New York, Iowa, Illinois, Michigan, Arkansas, Nebraska, North Dawlesota, New York, Iowa, Illinois, Michigan, Arkanas, Branch bank-bakota, Washington, Oklahoma, Kansas, Utah, and New Jersey. Branch bank-ing is Washington, Oklahoma, of these States, in three others it is limited to hakota, Washington, Oklahoma, Kansas, Utah, and New Jersey. Branch Dank-ling is prohibited by law in seven of these States, in three others it is limited to the city in which the head office is located, and in the other three there is no provision in the State law regarding branch banking and there are no branches "Deration."

There is available at this time only one carbon copy of the record for June, but the memorandum prepared for the board and the accompanying list banking chains or groups is attached as Exhibit R.

After the data on chain banking as well as branch banking as of June, 1929, and been presented to the board, the material was written up and published in the been presented to the board, the material was written up and published in the beat part of the article pertaining particulary to chain banking appears on pages and 771, a copy of which is attached as Exhibit G.

5. December, 1929: There are still some reports outstanding on the subject of the particulary as of December, 1929, but they probably will not affect materially After the data on chain banking as well as branch banking as of June, 1929,

the probably will not affect materially approximate the probably will not affect the probably will not affect materially approximate the probably will not affect materially approximate the probably will not affect the probably will n the preliminary summary of the situation as given in a memorandum of February

15, 1930. The situation is pretty well summarized on the first page of the memorandum, the first two paragraphs of which read as follows:

"We have just completed a preliminary compilation on chain banking as of the end of 1929, subject to some revision upon receipt of additional data in a instances. On the basis of the data now available it appears that there were banking chains or groups in the United States banking chains or groups in the United States at the end of December embracing 2,069 banks, as compared with 274 groups embracing 1,806 banks at the end of June. The 2,069 banks reported as belonging to banking groups or chains at the end of the year constituted about one-twelfth of the 25,000 banks in the country while the loans and investments of the chain banks in the country. while the loans and investments of the chain banks were about \$10,500,000 or nearly one-sixth of the aggregate loans and investments of all banks in United States.

"National banks reported as members of banking chains or groups numbered at the end of December as 791 at the end of December as compared with 646 in June, State-bank member 134 compared with 111 in June, and nonmember banks, 1,144 compared with 1,049 in June. Loans and investments of the national banks belonging to the banking groups were approximately \$5,600,000,000, or about one-fourth of the total for all national banks, while loans and investments of State-bank members belonging to the groups aggregated \$2,000,000,000 belonging to the groups aggregated \$3,000,000,000, and of nonmember banks \$1,800,000,000.

A copy of this preliminary report is attached as Exhibit S. It is marke "Confidential," but part of it could be released if names are deleted.

6. Annual report, 1927: The subject of chain banking was discussed in the

board's annual report for the year 1927 (p. 31), as follows:

"During the past few years the expanding operations of financial companies specializing in the purchase of bank stock have presented special problems to Federal and viace officials charged with the responsibilities of bank supervisions. Such companies have been organized in increasing numbers to operate extensively in the field of handing sively in the field of banking, not simply as investment agencies but specifical in individual instances to acquire control of corporately independent banking institutions, through stock averaged in the control of corporately independent banking institutions. institutions, through stock ownership, and to exercise this centralized control of effecting bent programs of the control of t effecting bank mergers; in extending identical or virtually single corporate control over companies operated as subsidiaries in special fields of banking; building up branch systems in States which permit branch banking; and building up in these and in other States—but particularly in States which do not building up in these and in other States—but particularly in States which do not be supported by the states which sup permit branch banking—chain systems, embracing in individual instances balling institutions constitutions sing institutions operating under national and State charters in several States Since such companies are not directly engaged in the business of banking defined in Federal or State statutes, they have not been subject to supervision regular examination by backing the statutes. or regular examination by banking authorities. In some respects the control exercised through stock ownership over a group of banks operated as a system is similar to that exercised by a parent bank over its branch offices. This character of the financial company brings it clearly within the field of banking activities, and banking officials have been urged to subject developments this character to careful scrutiny."

A copy of this report is actached as Exhibit T. 7. Annual report, 1928: In this report the subject is discussed in somewhat greater length on pages 30-31 and the report shows the number of chains operation in each State in June, 1928. A copy of the report is attached as Exhibit. U. Exhibit U.

IV. BRANCH BANKING AND ITS EFFECT IN FOREIGN COUNTRIES

In order to ascertain the possible effect of unrestricted branch banking in the country, the board has caused investigations to be made of the history of branch baking in foreign countries with special reference to its effect on unit or single office banks in those countries. The information obtained is very enlightening and will be summarized below: and will be summarized below:

and will be summarized below:

1. Canada.—Among banks doing a general banking business, the unit bank has disappeared. As of December 31, 1928, 10 chartered banks controlled general banking in the Dominion. Each of these is a branch banking system with none having less than 30 branches. The three largest banks, the Boyal Bank of Canada, the Bank of Montreal, and the Canadian Bank of Commerce have \$2,500,000,000 in assets out of \$3,500,000,000, the aggregate of all Of the 3,966 domestic branches and agencies of the chartered banks, these three largest banks have 2,219. three largest banks have 2,219.

The progress of concentration from 1868 to 1928, which resulted in the decrease of the total number of banks from 21 to 10, is shown by a table contained in a report attached hereto as Exhibit V.

2. British Isles.—Among banks doing a general deposit business, the unit bank has practically disappeared in the British Isles. Only seven small institutions doing all their business at one office exist. Indeed, most of these are doubtfully all their business at one office exist. doubtfully classified as deposit banks, some classifications placing them among acceptance or discount houses. Forty-two concerns are in the general deposit banking business in the British Isles, with 12,837 offices in all. The five big banks have 8,050 of these offices and have 67 per cent of the banking assets.

Twenty is a constant of the banking assets. wenty-six concerns, including the big five, each with more than 100 offices, have 93 per cent of the assets.

A century ago banking in the British Isles was done by private banking houses. By 1862 joint-stock banks were not uncommon, but real impetus to their organization was given in that year by an act which permitted the registration of such banks with limited shareholder liability. Before 1880 Lloyds Banking Co. had Participated in a number of amalgamations, and concentration moved rapidly after that date. However, it was not until 1896 that 20 private banking concerns united in Barclays Banking Co., and the fifth of the present big five began its career.

During the period between 1895 and 1928, the total number of banks in the British Isles was decreased from 154 to 42.

More detailed information on this subject is contained in a report attached hereto as Exhibit W.

3. Germany.—In Germany, the movement from the unit bank to a branch banking system among banks doing a general banking business advanced considered.

siderably in the 20 years from 1888 through 1907.

In 1888, 164 credit or joint-stock banks with 173 branches were in existence. By 1907, there were 421 such banks with 1,064 branches. Of the total number 21907, there were 421 such banks with 1,001 blanks with paid-in capital of less than 1,000,000 marks. These small banks controlled less than 2 per cent of 1,100,000 marks. These small banks controlled less than 2 per cent of 1,100,000 marks. By the end of 1926. of the aggregate paid-in capital of the 421 credit banks. By the end of 1926, out of a total of 488 credit banks, as many as 354 were classified as having less than 1,000,000 marks capital. Unfortunately no figures for all credit banks are available to us since that date. However, the absorption of the smaller banks by the control of the smaller banks. by the larger ones has progressed rapidly since that time, it is said.

For a long period of years, four great Berlin banks have been in the forefront German banking—Deutsche, Disconto-Gesellschaft, Dresdner, and Darmstadter. The first two have recently merged. Among the 100 largest credit banks in Germany in 1907, these four banks controlled 27 per cent of the aggregate capital and in September 1929, 42 per cent.

More detailed information is contained in a report attached hereto as Exhibit X. 4. France.—The unit bank in France has suffered severely from the competition of extensive branch banking systems and has been losing ground in recent Yours. Four great French banking systems and has been losing ground in recent yours. Four great French banks, doing a general business, control approximately one-half the commercial banking business in France, it has been estimated. Three of these have a large net-work of branches throughout the country: Credit Lyonnais, 1014 branches; Societe Generale, 1,350 branches; Comptoir d'Escompte, over 250 branches. The fourth, the Credit Industriel et Computerial by the country of the cou

mercial, has many branches in Paris but none outside the city. In addition to these large banks there are several sizable banks which have many branches in particular regions of the country. For example, there are the Credit du Nord (branches in 75 places), Societe Nancienne (105 branches and agencies), Banque Privee (more than 200 branches and agencies), and Societe Marson. Marseillaise (107 branches and agencies). Figures for branches are as of 1922. Narseillaise (107 branches and agencies). Figures for Dianetes and agencies).

No satisfactory figures exist as to how many banks of a purely local importance survive. It was estimated for the National Monetary Commission (1911) that there. there were 2,700-2,800 banks (probably a loose classification) in France. Browth of the four big banks and the regional banks has been at the expense of

the local bank, which is said to play a small role in French banking to-day.

More detailed information is contained in a report attached hereto as Exhibit Y. 5. Japan.—The unit bank in Japan is losing ground rapidly in the face of a progressive branch banking movement. In the past few years the tendency has been deliberately fostered by the government based on the belief that larger organizations would contribute to stability. Between 1913 and 1928 the total humber of banks was reduced from 2,156 to 1,163.

Of the 1,163 banks in existence in 1928, 100 were savings banks, 32 special banks, and the remainder ordinary banks which do a general banking business. The special banks were individually chartered to further some particular end often as public or semipublic institutions. In this group are the Bank of Japan Bank of Chosen, Bank of Taiwan, Yokohama Specie Bank, and the agricultural and industrial banks. Moreover, these figures do not include Japanese trust companies and cooperative banks.

Fourteen important ordinary banks at the end of 1928 had deposits equal to 55 per cent of all the deposits of the ordinary banks. The Big Five alone had 34 per cent of the aggregate of such deposits.

More detailed information is contained in a report attached hereto as Exhibit

V. HISTORY OF BRANCH BANKING IN THE UNITED STATES

The early history of branch banking within the United States has been the subject of research word done by Hon. Edmund Platt, vice governor of the Federal Reserve Board, in connection with certain speeches delivered by him. The more recent history of branch banking in the United States is very well covered by series of articles published in the Federal Reserve Bulletin, commencing with the number for December, 1924. This material will be discussed briefly and copies will be attached as exhibits.

1. Branch Banking Before the Civil War.—In an address on this subject delivered before the national bank section of the New York State Bankers' Association at Ithaca, N. Y., on June 22, 1925, Mr. Platt points out that branch banking was very much in evidence in this country before the Civil War, especially in the West and in the South.

In 1848, out of 48 banks in Ohio, 29 were branches of the Ohio State Banks Indiana had 17 branches of one State bank and no independent banks, Missour had 1 bank and 5 branches, Kentucky 3 banks and 13 branches, Tennessee banks and 17 branches, Virginia 6 banks and 30 branches, North Carolina banks and 14 branches, South Carolina 12 banks and 2 branches, Georgia 13 banks and 7 branches, Delaware 5 banks and 3 branches, and Alabama 2 banks and branches. At the same time no branches were listed in the eastern States except two each in the States of New York, Maryland, and New Jersey.

two each in the States of New York, Maryland, and New Jersey.

In 1860 the situation was similar, though Illinois appeared with 75 banks, Indiana with 13, all of which were branches of the State Bank of Iowa, and Missouri had 42 banks of which 33 were classed as branches. The two branches existing in New York in 1848 had disappeared in 1860, and apparently branch banking was forbidden in New York, Pennsylvania, Massachusetts, and Compecticut.

Mr. Platt's address contains an interesting discussion of the motive for the establishment of such branches (which appeared to be the facilitation of the issue of bank notes which would be difficult to redeem) and also the reasons for the opposition to the establishment of branches in Eastern States.

A copy of Mr. Platt's address is attached as Exhibit BB.

A copy of Mr. Platt's address is attached as Exhibit BB.

2. Branch banking for country banks.—On May 20, 1927, Mr. Platt made an address at Birmingham, Ala., before a meeting of the American Bankers' Association, at which he discussed the above subject. In this address he pointed out that, in the early days of banking in the United States, the right of any bank to establish branches was rarely questioned; both the first and second banks of the United States had branches; many of the early State banks established branches, and branches were looked upon as the natural means of providing banking facilities.

ties and convenience to the smaller communities.

He discussed the development of banking in the United States, commencing with the first incorporated bank in Philadelphia in 1781 and pointed out that the Philadelphia Bank, chartered in 1804, established branches in many of the interior towns of Pennsylvania, pursuant to an act of the legislature passed in March 1809. It also appears that the Bank of Manhattan Co. had at least three branches outside of New York in 1811. It appears that most of these branches in the Eastern States were replaced by smaller independent banks during the early part of the nineteenth century.

This speech also reviews again the cause leading up to legislation in the Eastern States restricting the establishment of branches, which apparently was due to the fact that banks were frequently located in remote places with branches in the financial centers at which their circulating notes were redeemed at a discount From this, Mr. Pratt reached the conclusion that the early legislation restricting branch banking was not really aimed at branch banking itself, but at the issuance of "wild-cat currency."

In the South and the West, however, branch banking was the general rule. In the South and the West, nowever, branch data incorporated in Mr. Platt's connection much of the statistical data incorporated in Mr. Platt's Carlier speech with reference to branches in the Southern and Western States

in 1848 and 1860 is covered again.

Mr. Platt states that the branch banking systems in the South and West

Show Platt states that the branch banking systems to have been expected in 1866, when the State bank notes were taxed out of existence, that the successful banks in the Western States would convert into national banks and retain their branches. It appears, however, that they did not do so but reorganized as national banks and reorganized their branches as independent unit banks.

Manufacture of the country banks in the South and West.

Mr. Platt points out that in 1860 the country banks in the South and West had a much larger average capitalization than at present, but that the authority contained in the national bank act for the organization of banks with a capital of call of the organization of small banks and that of only \$50,000 furnished an impetus for the organization of small banks and that some of the Western States "ran wild in the effort to provide banking facilities in the very smallest towns by permitting the organization of independent banks with a capital as small as \$10,000, and even in a few States \$5,000."

Mr. Platt then traces the difficulties arising out of the organization of numerous small independent banks and calls attention to the number of failures among these contents of the product of the produ them in the panic of 1893. From about that time he traces the modern development of branch banking, which apparently started in the Southern States and

in California.

Mr. Platt then discusses the number of bank failures in small banks during the years 1921 to 1926, inclusive, and calls attention to the fact that almost twothirds of the suspended banks had a capital of \$25,000 or less and that 72 per cent of them had a capital of less than \$50,000. He points out that, in his annual report for the year 1898, Mr. Charles G. Dawes, then Comptroller of the Currency, tecommended that branch banking be authorized in communities of less than 2,000 inhabitants, since many of such communities were not able to support independent He then compares the experience of farmers in the wheat sections of the United States where the independent bank system was in operation and in Canada where the branch banking system was in operation and concludes that "The Canadian farmers have lost nothing from the bank failures while \$298,070,000 in deposits has been tied up and at least 50 per cent of it lost, in the bordering States of Montana, North and South Dakota, and Minnesota in 1,134 bank or the bordering states of Montana, North and South Dakota, and Minnesota in 1,134 bank. bank suspensions in the past six years, nearly all of them in small towns and small banks.

Mr. Platt states that he does not advocate nation-wide branch banking for the United States, but believes that we need and must have "larger country banks with a limited number of branches along the lines of the development that has taken place in many of the Southern States for many years." He claims that the MeFadden Act discriminates against country banks and in favor of banks in the big cities. He reviews the statistics with reference to the number of branch banking organizations in the United States and concludes with a plea for branch

banking in the country districts.

A copy of Mr. Platt's speech is attached hereto as Exhibit CC.

3. Recent growth of branch banking through 1924.—On pages 925 to 940, inclusive, of the Federal Reserve Bulletin for December, 1924, there is published an article entitled, "Branch Banking in the United States," which contains a comprehensive through the state of t hensive survey of the recent growth of branch banking in this country through the year 1924. No attempt will be made to summarize this article here, but its scope may be indicated by listing its various headings, which are as follows:

Limitations upon Federal Control of Branch Banking.

Administrative Policy of the Board Prior to November, 1923.

Administrative Policy of the Board Prior to November, 1923.

Branch Banking Recommendations to Congress.

Resolution on Branch Banking Adopted by the Board on November 7, 1923.
Further Definition of the Board's Branch Banking Policy. (In the Regulations of 1924.)

Extent of Branch Banking in the United States.

Legal Status of Branch Banking.

Branch Banking within and without the Federal Reserve System. Resources of Banks Operating and Not Operating Branches.

Banks Operating Home City and Outside Branches.

Size of Branch Systems.

4. Branch banking in the United States from June, 1924, to December, 1925.—On pages 401 to 414, inclusive, of the Federal Reserve Bulletin for June, 1926, which is published an article entitled, "Branch Banking in the United States," describes the development of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December, 1925, and thus supplement of branch banking from June, 1924, to the end of December of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, to the end of Branch banking from June, 1924, t December, 1925, and thus supplements the article published in the Federal Reserve Bulletin for December, 1924. It contains not only a discussion of the development of branch banking during the development of branch banking during this period but also a classification of the States with reference to their branch banking laws as of December 31, 1926, and certain valuable statistical material with reference to the status of branch banking in this country on the same date. A copy of the Bulletin containing this article is attached as Exhibit D this article is attached as Exhibit D.

5. Branch banking developments in 1926.—On pages 315 to 318, inclusive, of the Federal Reserve Bulletin for May, 1927, there is published an article describing the development of branch banking in the United States during the year 1926, which supplements the article describing the supplements the sup which supplements the earlier articles on this subject. It contains discussions of the legal status of branch hashing at the contains discussions are of the legal status of branch banking, the extent of branch banking, branch banking in California, and the method of establishing branches, and also valuable statistical tables showing the status of branch banking at the end of the year 1926. A copy of the Bulletin containing this article is attached hereto as Exhibit J.

6. Branch bank developments to June 30, 1928,—On pages 97 to 103, inclusive of the Federal Reserve Bulletin for February, 1929, there is published a discussion of branch banking developments in the United States from the end of the year 1926 to June 20, 1928, which 1926 to June 30, 1928, which supplements the earlier articles on this subject. This article is especially interesting because it describes the effect of the Fadden-Pepper Act of February 25, 1927, during the first 18 months of the functioning of that act. It contains a table showing the States permitting restricting, and prohibiting branch banking to June 30, 1928, tables showing the number of banks operating branches and the number of branches in operation together with the increase in these numbers from Exhaustice. together with the increase in these numbers from February 25, 1927, to July 30, 1928, together with other parts of the february 25, 1927, to July 30, 1928, together with other parts of the february 25, 1927, to July 30, 1928, together with other parts of the february 25, 1927, to July 30, 1928, together with other parts of the february 25, 1927, to July 30, 1928, together with the increase in these numbers from February 25, 1927, to July 30, 1928, together with the increase in these numbers from February 25, 1927, to July 30, 1928, together with the increase in these numbers from February 25, 1927, to July 30, 1928, together with the increase in the second of the february 25, 1927, to July 30, 1928, together with the increase in the second of the february 25, 1927, to July 30, 1928, together with the february 25, 1927, to July 30, 1928, together with the february 25, 1927, to July 30, 1928, together with the february 25, 1927, to July 30, 1928, together with the february 25, 1927, together with 30, 1928, together with other valuable statistical material. A copy of this article is attached as Exhibit E.

7. VI. FEDERAL LEGISLATION ON BRANCH BANKING

Congress has in several instances enacted legislation authorizing the establishment lishment of branch banking systems. In the early years of this country, 1791 and 1816, Congress authorized the establishment of the First Bank of the United States and the Second Bank of the United States. Both of these banks were

anthorized to establish branches in any part of the United States. The national bank act did not expressly forbid the establishment of branches; and the amendment of March 3, 1865 (sec. 5155 of the Revised Statutes), authorized State banks having branches, with capital assigned to the head office and branches in definite proportions, to convert into national banks and retain their branches, regardless of their location.

08;

Branch banking systems for particular purposes were also authorized when congress authorized the establishment of the postal savings banks, Federal resources authorized the establishment of the postal savings banks, Federal reserve banks, Federal land banks, joint-stock land banks, Federal intermediate redit banks, and the War Finance Corporation. The establishment of branches in the control of the control in each of these systems, however, was permitted only under certain conditions and and subject to certain restrictions and safeguards. In determining what legislation should now be enacted with reference to the establishment of branches by commercial banking institutions, it would be advisable to examine carefully the lestrictions and safeguards which Congress has thrown about the establishment of branches in the banking systems it has heretofore authorized.

The legislation authorizing these various systems of branch banks will be

discussed very briefly. 1. First Bank of the United States.—In 1791 Congress chartered the First Bank of the United States. The charter of this bank provided that its head of the United States. office should be located at Philadelphia and authorized its board of directors to establish branch offices within the United States wherever thought fit, for purloses of discount and deposit. It appears that eight branches of the First

Bank of the United States were established in various parts of the country.

2. Second Bank of the United States.—In 1816 Congress authorized the establishment of the Second Bank of the United States with its head office in the city of Philadelphia. The charter of this bank authorized its directors to establish branch. Given wherever, they thought fit within the United States, for lish branch offices wherever they thought fit within the United States, for burposes of discount and deposit. It appears that 18 of such branches were established.

established by this bank.

3. National banks.—The national bank act did not expressly forbid the establishment of branches, and it was not until January 28, 1924, when the Supreme Court of the United States rendered its decision in the famous case of First National Decision of the United States of Missouri (263 U. S. 640), that it was National Bank in St. Louis v. State of Missouri (263 U. S. 640), that it was definitely and finally settled that national banks could not establish branches under the provisions of that act. Even after that decision, it was contended that that, in the exercise of their incidental powers, national banks could establish additional offices" for the performance of certain limited functions within the limit

the limits of the city or town in which they were located. Although the national bank act did not expressly authorize the establishment of branches by national banks, the amendment of March 3, 1865 (sec. 5155 of the Revised Statutes) specifically provided that State banks having branches with capital assigned to the head office and branches in definite proportions could convent assigned. convert into national banks and retain their branches, regardless of the location of such branches. Moreover, under the act of November 7, 1918, a national bank having branches retained upon conversion from a State bank could consolidate with a branches retained upon conversion from a State bank could retain the branches. with another national bank and the consolidated bank could retain the branches. which another national bank and the consonant of banks could acquire branches the State law was suitable, therefore, national banks could acquire branches the State law was suitable, therefore, national banks could acquire branches. by the device of organizing a State bank with branches, converting it into a hational bank, and consolidating with it. In 1925 there were in existence 103 branch. branches of national banks acquired under these Statutes.

All of this, of course, was changed by the McFadden Act of February 25, 1927, which expressly authorized national banks to establish branches within the limits of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly all their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city or town in which their head offices are located but expressly of the city of the city or town in which their head offices are located but expressly of the city of the cit forbids them to establish or acquire, by consolidation or otherwise, branches beyond the limits of the city, or town in which their head offices are located, except that they may retain or acquire by consolidation or conversion branches lawfully established and in actual operation prior to the passage of that act. This

will be discussed in more detail under a separate heading.

In this connection, it may be pointed out that, under the provisions of section of the Federal reserve act, any national bank having a capital and surplus of the Federal reserve act, any national bank having a capital and surplus of the Federal Reserve Board and upon \$1,000,000 or more with the permission of the Federal Reserve Board and upon such conditions and under such regulations as may be prescribed by the board, hay conditions and under such regulations or dependencies or insular possessions of the establish branches in foreign countries or dependencies or insular possessions of the United States; but this privilege is denied to State member banks of the Federal Reserve System under the provisions of the McFadden Act.

4. Postal Savings banks.—In 1910 Congress authorized the establishment of the Postal Savings System. (U. S. C., title 39, ch. 20.) This system is under the control, supervision, and administration of a board of trustees consisting the Postmaster General, the Secretary of the Treasury, and the Attorney General Every post office designated by the Postmaster General may act as a postal savings depository and receive deposits of funds from the public. Such funds may be received from any one person in amounts of \$1 or multiples thereof, but not more than an aggregate amount of \$2,500 may be received from any operson. Interest at the rate of 2 per cent per annum is to be paid upon such deposits. These deposits may be withdrawn under such regulations as the Postal savings deposits shall be kept with the Treasurer of the United States as a reservand that the balance of such deposits shall be deposited in banks located in the city, town, or village of the postal-savings depository which receives such deposits or under certain circumstances with the treasurer of the board of trustees. It was also provides that under certain circumstances these deposits may be invested in bonds or other securities of the United States. Depositors in the Postal Savings System may surrender their deposits in certain specified amounts the Postal Savings System is a form of branch banking with the controlling and supervising board located in Washington, D. C., and with branches located in the various post offices designated by the Postmaster General in different parts of the country.

It appears from the Annual Report of the Postmaster General for the fiscal year ending June 30, 1929, that at the close of that year there were 6,770 postal savings depositories in operation in the various post offices, including 794 such depositories located in branch post offices. Postal-savings deposits held for depositors at the end of that fiscal year amounted to \$158,055,538.55 and there were 416,580 depositors.

5. Federal Reserve Banks.—In 1913 Congress enacted the Federal reserve to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford a means of rediscounting commercial paper, and to establish a more effective supervision of bracking commercial paper, and to establish a more effective supervision of banking in the United States. (U. S. c. title 12, ch. 3.) This act authorized the division of the continental United States, evaluation of Alacha, in the Continental United States. States, exclusive of Alaska, into not more than 12 districts and the establishment in each district of one Federal reserve bank. The act authorized such Federal reserve banks to every panels of the extra control of the continental Unity in each control of the control reserve banks to exercise certain banking powers and to perform certain functions for the national and State banks which were required or permitted to become members of the Federal reserve system by the purchase of stock in Federal reserve hank. Federal reserve bank. It provided for the creation of the Federal Reserve Board with appropriate the control of the Federal Reserve Board with appropriate the control of the Federal Reserve Board with appropriate the creation of the Federal Reserve Board with appropriate the creation of the Federal Reserve Board with a control o with supervisory powers over the entire Federal reserve system, and section of the Federal reserve act authorizes the Federal Reserve Board to permit of require any Federal reserve bank to establish branch banks within the Federal reserve district in which it is less to the stablish branch banks within the Federal reserve district in which it is less to the stablish branch banks within the Federal reserve district in which it is less to the stablish branch banks within the Federal reserve district in which it is less to the stablish branch banks within the Federal reserve act authorizes the reserve Board to permit of the stablish branch banks within the Federal reserve act authorizes the reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to permit of the stablish branch banks within the Federal Reserve Board to be stablish branch banks within the Federal Reserve Board to be stablish branch banks within the Federal Reserve Board to be stablish by the stablish branch banks within the Federal Reserve Board to be stablish by the stablish by th reserve district in which it is located or within the district of any Federal reserve bank which may have been suspended. Pursuant to this authority the board has permitted the Federal has permitted the Federal reserve banks to establish branches within respective districts. The total number of such branches which have been established is 25. It will thus be seen that, when Congress enacted the Federal reserve act, it authorized the reserve act, it authorized the reserve act. reserve act, it authorized the establishment of a system of banks having branches with the supervisory power over such system vested in the Federal Reserve Board, with its offices in Washington, D. C., and the banking functions vested in the Federal reserve banks and their branches located in various parts of the United States. It will be noted that Covers the control of the control of the covers of the control of the covers of th United States. It will be noted that Congress in this instance restricted the establishment of branches of a Federal reserve bank to the district in which particular Federal reserve bank is located, except in those cases where a Federal reserve bank may have been suspended.

6. Federal land banks and joint-stock land banks.—In 1916 Congress enacted the Federal farm loan act to provide for loans on farm lands secured by more gages. (U. S. C., title 12, ch. 7.) This act authorized the creation of the Federal Farm Loan Board with supervisory powers and the creation of Federal land banks and joint-stock land banks with power to make farm loans and, with the approval of the Federal Farm Loan Board, to issue farm loan bonds. It was provided that the continental United States, exclusive of Alaska, should be divided into 12 districts and that in each district there should be established one Federal land bank. It was not required, however, that only one joint-stock land bank be established in each district. Such Federal land banks and joint-stock land banks were authorized, with the approval of the Federal Farm Loan Board.

to establish branches within the district in which such banks are located. The Federal Farm Loan Board was also authorized to designate a Federal land bank which. Which might establish a branch in Porto Rico and to designate a Federal land bank which might establish a branch in the Territory of Alaska. It will be seen that in this instance Congress has again provided for the establishment of a banking system with branches with the supervisory powers over such system rested as a system of the banking functions. voted in a board with offices in Washington, D. C., and the banking functions vested in banks and branches thereof located in various parts of the country. h is significant that here also Congress has restricted the right of each bank to significant that here also Congress has reserved it is located.

It is branches to the area of the district in which it is located.

It appears that no branches of either Federal land banks or joint stock land banks have been established in the United States. One branch of a Federal land

hank, however, has been established in Porto Rico. 7. War Finance Corporation.—In 1918 Congress enacted legislation to create War Finance Corporation.—In 1918 Congress Corporation to make loans to persons, firms, or corporation whose operations were necessary or contributory to the prosecution of the war. (U. S. C., title 15, ch. 9.) By a later amendment of the prosecution of the war. ment the corporation was also authorized to make loans for agricultural purposes. This corporation was also authorized to issue its notes or bonds. The management of the corporation was also authorized to issue its notes or bonds. hent of the corporation was vested in a board of directors consisting of the Secretary of the corporation was vested in a board of directors considered by the President, with the advice and consent of the Senate. It was provided that the principal office the corporation should be located in the District of Columbia, but the corporation was related by the corporation should be located in the District of Columbia, but the corporation was related by the corporation was related by the corporation of the corporation was related by the President, with the corporation of the corporation of the corporation was related by the President, with the corporation of the c tion was authorized to establish agencies or branch offices in any city, or cities, of the 12 of the United States, under rules and regulations prescribed by its board of directorie United States, under rules and regulations present banking system Congress thus authorized the establishment of a branch banking system of a congress thus authorized the certain restrictions and provision. for a particular purpose and subject to certain restrictions and provision.

At the peak of its activity the War Finance Corporation had 33 loaning agencies

or branches in operation in various parts of the country in connection with its

loans for agricultural purposes. 8. Federal intermediate credit banks.—In 1923 Congress amended the Federal tann loan act so as to authorize the creation of Federal intermediate credit banks.

(U. S. C., title 12, ch. 8.) This amendment provided for the establishment of Pederal intermediate credit banks, 1 to be located in each of the cities in which a Tanach is located, and authorized these institutions to make which a Federal land bank is located, and authorized these institutions to make loans for agricultural purposes and to issue debentures. The powers granted to these institutions to make these institutions to make these for agricultural purposes and to issue debentures. The powers granted to be seen institutions are to be exercised under the supervision and control of the Federal Farm Loan Board. It appears that in this instance also Congress has approved a form of branch banking. In this case the control and supervisory functions are vested in the Federal Farm Loan Board, with its offices in Washington, D. C. and the banking functions are vested in the Federal intermediate ingtons are vested in the Federal Farm Boan Boan and the Federal intermediate rection, D. C., and the banking functions are vested in the Federal intermediate redit banks located in different parts of the country.

9. The McFadden Act.—No discussion of congressional legislation of branch banking would be complete without a discussion of the McFadden Act of February 25, 1927, though the provisions of that act are familiar to everyone who has

made any study of the subject of branch banking.

(a) National banks.—The provisions of the McFadden Act with reference to branch banks.—The provisions of the McFadden St. (branch banks.—The provisions of the McFadden Act with reference to branch banks.—The provisions of the McFadden Act with reference to branch banks.—The provisions of the McFadden Act with reference to branch banks.—The provisions of the McFadden Act with reference to branch banks.—The provisions of the McFadden Act with reference to branch banks. hranches of national banks may be summarized as follows:

(1) Any national bank may retain and operate such branch or branches as it

had in lawful operation on February 25, 1927, regardless of their location.

(2) Any national bank which has continuously maintained and operated not more than one branch for a period of more than 25 years immediately preceding them. February 25, 1927, may continue to maintain and operate such branch, regardless of the legality of the establishment of such branch or the maintenance of it Drior to the legality of the established Act.

(3) Where a State bank converts into a national bank such national bank May Where a State bank converts into a national State bank which any bank retain and operate any and all branches of such State bank which any bank and retain and operate any and all branches of such State bank which any bank had in lawful operation on February 25, 1927, regardless of their location.

(4) If a State bank consolidates with a national bank, such consolidated nablank bank may retain and operate any and all branches of either the State bank or the national bank which any bank had in lawful operation on February 1927, regardless of their location.

(5) Where two or more national banks consolidate, such consolidated national bank may retain and operate any and all branches of any one of the constituent hational banks which any bank had in lawful operation on February 25, 1927,

regardless of their location.

(6) After February 25, 1927, national banks may establish and operate new branches subject to the following conditions and limitations:

(a) Such branches may be established and operated only within the limits of

the city, town, or village in which the parent bank is situated;
(b) Such branches may be established and operated only in those States the laws of which permit State banks to establish and operate similar branches; (c) No such branch may be established in a city, town or village of which

population by the last decennial census was less than 25,000;

(d) Not more than one such branch may be established in any city, town of village of which the population by the last decennial census does not exceed

(e) Not more than two such branches may be established in any city, town of village of which the population by the last decennial census does not exceed

100,000:

(f) In any city, town or village the population of which exceeds 100,000 the determination of the number of branches which may be established by national banks is left to the Comptroller of the Currency; and

(g) No such branch shall be established or moved from one location to another without first obtaining the consent and approval of the Comptroller of

(7) The term "branches" as here used includes any branch bank, branch office, branch agency, additional office, or any branch place of business located in any State or territory of the United States or in the District of Columbia where deposits are received, checks paid or money lent.

(8) This section of the McFadden Act does not affect the establishment of maintenance of branches by national banks in foreign countries or dependences or insular possessions of the United State pursuant to the provisions of section

25 of the Federal reserve act.

(9) The words "State bank," "State banks," "bank," or "banks" as used in this section includes trust companies, savings banks, or other such corporations or institutions carrying on the banking business under authority of State laws.

(10) National banks are expressly authorized to transact at branches establed lished or maintained in accordance with the provisons of the McFadden Act and and all business which might be lawfully transacted at the head office.

(b) State member banks of the Federal reserve system: Under the Morrador Act, any State bank which, on February 25, 1927, had established was operating a branch or branches in conformity with the State law, may retain and create a state of the state law, may may be supported by the state law, may may be supported by the state law, may be supported by the state law retain and operate such branch or branches while remaining or upon becoming a member of the Federal reserve system. In other words, any nonmember State bank which, on February 25, 1927, had established and was operating a branch or branches in conformity with the State law and which becomes a member of the Federal reserve system is entitled by law to retain such branch or branches regardless of the number or location thereof; and any State member bank which on February 25, 1927, had established and was operating a branch or branches in conformity with the State law is lawfully entitled to retain and operate such branches while remaining branches while remaining a member of the Federal reserve system, regardless of the location or number of such branches.

The only restriction on the establishment of branches by State member banks is that no State bank may become a member of the Federal reserve system of may remain a member of the Federal reserve system any branch or branches catallished of the Federal reserve system except upon relinquishing any branch or branches catallished of the Federal reserve system except upon relinquishing any branch or branches established after February 25, 1927, beyond the limit of the city, town or village in which the parent bank is located. In other words no nonmember State bank may become a member of the Federal reserve system except upon relinquishing any branch or branches established after February 25, 1927, beyond the limits of the city, town, or village in which the parent bank is situated; and any State member bank which establishes a branch of branches beyond the limits of the city town, or village in which the parent bank is situated; and any State member bank which establishes a branch of branches beyond the limits of the city town. branches beyond the limits of the city, town, or village in which the parent bank is located after February 25, 1927, must either relinquish such branch of branches or give up its membership in the Federal reserve system.

The McFadden Act prescribed as limitation was a limitation of the stability of the stabil

The McFadden Act prescribed no limitations upon the number of branches which State member banks may establish or maintain within the limits of the city town, or village in which the parent bank is located, nor does it require any specified population of the cities, towns, and villages in which State member banks may establish or maintain branches.

On the other hand, no exception is made as to foreign branches of State member banks and the Attorney General has held that they may not lawfully establish foreign branches and remain members of the Federal reserve system since the

Passage of the McFadden Act, although the right of national banks to establish foreign branches under the provisions of section 25 of the Federal reserve act is expressly preserved.

There are many inequalities in the branch banking provisions of the McFadden Act as they affect national banks and State member banks, respectively, and to a tertain extent that act fails to place these two classes of banks on an equality with respect to the establishment of branches.

VII. POLICY OF FEDERAL RESERVE SYSTEM ON BRANCH BANKING

the Federal Reserve Board recommended to Congress that national banks be permitted to establish branch offices within the city, or within the county in which they were located. The Federal Advisory Council, under date of September 21 and November 16, 1915, had recommended that the national bank act be amended so as to permit national banks to establish branches under certain conditions.

2. Recommendations during 1916.—Consistently with this recommendation, the herd in 1916 prepared and transmitted to Congress the draft of an amendment the Federal reserve act. In the terms of this amendment national banks located in cities of 100,000 and over having a capital and surplus of \$1,000,000 or more would have been permitted to establish branches within the corporate inits of the cities in which they were located, and any national banks located in other places would, with the approval of the Federal Reserve Board and under then regulations as the board might prescribe, have been permitted to establish branches within the limits of the county in which they were located or within a radicles within the limits of the county in which they were located of within a diug of 25 miles, irrespective of county lines, but not in any case outside the state or Federal reserve district of the parent bank. (Federal Reserve Bulletin, pp. 323, 327; 1916 annual report, pp. 29, 145.)
Under date of November 20, 1916, the Federal advisory council renewed its recommendation.

recommendation regarding the establishment of branches by national banks but added that the privilege of establishing branches should apply to all banks in that the privilege or establishing branch banks as were located by Satisfian banking system and not only to such national banks as were located by Satisfian branch banks. (See in States which permitted State institutions to establish branch banks. (See

pp. 28 and 34 of 1916 Recommendations.) An amendment drawn in compliance with the recommendations of the board was adopted by the Senate, during 1916, and together with other amendments, was referred to a conference committee of the House and Senate. In conference it developed that the amendment was not acceptable to the House conferees and the Senate on recommendation of its conferees receded from its proposal. (1916

annual report, p. 135.)

3. Annual report for 1917.—In its 1917 annual report to Congress (p. 33),

13. Annual report for 1917.—In its 1917 annual report to provide the board recommended an amendment to the Federal reserve act to provide that that any national bank located in a city or incorporated town of more than 100,000 inhabitants, and possessing a capital and surplus of \$1,000,000 or more, may under such rules and regulations as the Federal Reserve Board may prescribe, establish branches, not to exceed 10 in number, within the corporate limits of the city or town in which it is located, provided that no such branch may lawfully establish branches. The board stated that "State banks which become a located by law to retain any lawfully establish branches. become members of the Federal reserve system are allowed by law to retain any branches which may already be in existence and, with the approval of the board, to establish new branches. National banks which have taken over State banks having the operations of these branches. having branches are permitted to continue the operations of these branches. here seems to be no reason for such discrimintation between members of the pure seems to be no reason for such discrimination between including them more nearly upon terms of equality, besides affording in many cases better service to the public, it is it is recommended that provision be made for the establishment of branches by

hational banks, under proper limitations."

4. Annual report for 1918.—In its annual report for the year 1918 (p. 83) the board renewed its recommendation, expressing the opinion that national banks were "at a serious disadvantage in meeting the competition of State banks with heart of the treatment of the Federal reserve system. with branches," and that "the proper development of the Federal reserve system makes it necessary to coordinate as far as possible the powers of all member banks." This coordination of powers could not be effected without amendment of crist." existing laws under which "some member banks, both National and State, are given advantage over other member banks." The board renewed its recommendation of previous years, being confident that the proposed amendment would "prove beneficial to the Federal reserve system, as well as to the communities concerned." The Federal advisory council also renewed its recommendation that an amendment of this character should be enacted. (P. 6, 1918 recommendations of Federal advisory council.)

5. Developments during 1919.—In 1919, a bill was passed by the Senate which proposed to authorize national banks in cities of 500,000 or more population having a capital and surplus of \$1,000,000 or more, to establish not exceeding 10, branches within the corporate limits of the cities in which they were located provided State law extended a similar privilege to State banking institutions. Under date of September 16, 1919, the Federal advisory council urged the Federal Reserve Board to use every effort to secure the passage of this bill in the interest of sound banking and the granting of equal banking facilities to all people in the same business. (P. 19 of 1919 Recommendations of Federal Advisory Council (p. 64) made substantially the same recommendations of the poor to the year 1919.

6. Annual report for 1919.—The board in its annual report for the year 1919 (p. 64) made substantially the same recommendation regarding the branch banking amendment as it had made in its annual report for the year 1918, and commented upon the bill above referred to as follows:

"Under the present law national banks can not afford the same facilities to the public as are given by State banks having branches, except in cases where State banks and trust companies operating branches have merged with national banks, when existing branches may be continued by the national banks. "While the board would prefer to have this privilege (of establishing branches) extended to national banks in cities of not less than 100,000 inhabitants, of, failing that, have the population limit raised to 200,000, it wishes to point out that the limit fixed in the Senate bill does not affect the principle involved, and it therefore respectfully recommends once more that national banks be permitted to establish branches in cities in which they are located under such limitations as in the wisdom of Congress may be deemed desirable."

7. Recommendation of agents' conference in 1921.—The conference of Federal reserve agents held in October, 1921, adopted a resolution favoring the establishment of branches in the same city in which a national bank is located, provided State banks are permitted that privilege under State law. (Pp. 111-115 of proceedings of October, 1921, Conference of Federal Reserve Agents.)

8. Annual report for 1922.—Again in its report for 1922 (pp. 5-6) the board commented briefly upon branch-banking developments.

S. Annual report for 1922.—Again in its report for 1922 (pp. 5-6) the board commented briefly upon branch-banking developments, noting that the establishment of branches by the larger State banks "had gone so far in a few States notably California, and in a few large cities, including New York, Cleveland, and Detroit, as to reduce greatly the number of national banks." The board expressed the opinion that the action of the Comptroller of the Currency in permitting national banks to open "additional offices" within the corporate limits of the cities in which they were located in States which permitted branch banking "does not meet the situation in California and does not fully meet it in the cities mentioned," and that "an amendment to the national banking act allowing national banks the same privilege given to State banks in States where branch banking is permitted is much to be desired."

In this connection the board noted a suggestion made by the joint commission of agricultural inquiry in its report to Congress dealing with the problem of rural credit, to the effect that "a system of limited branch banking might furnish a possible solution of this problem." Upon this suggestion the board commented as follows:

"Such systems are in fact already established in some sections of our country, notably in California, and appear to have gone far toward solving the problem. Branch banking has lowered the rate of interest in some of the leading agricultural sections of California, and at the same time has provided added security for the deposits of the farmers. There are interesting neighborhood branch banking groups in other States, which appear to be serving their communities well."

groups in other States, which appear to be serving their communities well."

9. Annual report for 1923.—Finally, in its 1923 report, page 48, the board notes the difficulties which originate in the differences of State laws and the competitive disadvantages under which national banks operate in States which permit branch banking, and expresses the hope "that it can by administrative measures find some reasonable method of harmonizing existing differences of interest of State and national banks in the matter of branch banking, and thus lay the basis for a policy which will result in shaping the development and practice of branch banking in the United States along useful and serviceable lines."

10. Administrative policy of the board prior to November, 1923.—In acting upon application of State member banks for permission to establish additional branches within the system the board, prior to November, 1923, had considered each case

Don its merits, giving consideration to public convenience and to the parent bank's capacity for properly organizing the branch and assimilating the business taken over. As a matter of general policy rather than specifically of branch banking policy, the board in individual cases withheld its approval until satisfied that that establishment of the additional branch or branches in question would not impair the solvency or liquidity of the parent bank. It gave consideration to the the rate of expansion of the given branch system; coordination of branches already acquired; head-office control, supervision, and personnel; affiliation with outside corporations, relation of capital and surplus to deposit liabilities, especially in lands. tapidly expanding branch systems; methods of acquiring branches; and generally local conditions and needs in so far as they could be clearly defined. The board distinguished branches from paying and receiving stations not vested with discretionary power to make loans, except for inconsiderable sums and, while reserving the right to reconsider in case such offices in any instance developed into the right to reconsider in case such offices in any instance developed into the right to reconsider in case such of such outside offices more or less into full fledged branches, it made approval of such outside offices more or less a matter of form, except where it appeared that the expense of maintaining them hight impair the capital of the bank.

Although the board had not formulated any arbitrary rule requiring simulta-beous examinations of head offices and branches, it had nevertheless regarded any evidence of inability on the part of State authorities to conduct proper examinations of banks maintaining extensive branch systems as being in itself adequate justification for limiting further expansion of such systems. It felt that responsibility for the conduct of adequate examinations must, in the case of many conductive to the conduct of adequate examination of the conductive to account of the conductive to account the conductive to the conductive t of member as of nonmember banks, be assumed primarily by State authorities rather than, in the case of member banks, by the Federal reserve bank of the

given district.

In general, it may be observed that, prior to November, 1923, the board permitted expansion of member bank branch systems under State supervision and contact expansion of member bank branch systems under State supervision and control, in so far as such expansion was consistent with sound banking principles of efficient administration, adequate State supervision, and complete solvency.

11. Resolution of November 7, 1923.—On November 7, 1923, the Federal Reserve Board adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted a resolution (X-3881) formulating certain general principles for Suidan adopted for Suida Suidance of the board in acting upon individual cases presented to it in applications for admission to membership of State banks operating branches outside the city or town or contiguous territory in which the parent bank was located and in applications of State member banks for permission to establish such branches.

This resolution reads as follows:
"Resolved, That the board continue hereafter as heretofore to require State banks applying for admission to the Federal reserve system to agree as a condition dition of membership that they will establish no branches except with the per-

mission of the Federal Reserve Board; be it further "Resolved, That, as general principle, State banks with branches or additional offices outside of the corporate limits of the city or town in which the parent the corporate limits of the city or town in the banks with branches or additional offices outside or territory contiguous thereto ought not be admitted barent banks are located or territory contiguous thereto ought not be admitted to the to the Federal reserve system except upon condition that they relinquish such branches or additional offices; be it further "Resolved, That, as general principle, State banks which are members of the Federal reserved, and the permitted to establish or maintain branches

Federal reserve system, ought not be permitted to establish or maintain branches or additional offices outside the corporate limits of the city or town in which the

parent bank is located or territory contiguous thereto; be it further Resolved, That in acting upon individual applications of State banks for admission to the Federal reserve system and in acting upon individual applications. entions of State banks which are members of the Federal reserve system for permission to establish branches or additional offices, the board, on and after rebruary 1, 1924, will be guided generally by the above principles; be it further Resolved, That the term 'territory contiguous thereto' as used above shall hean the territory of a city or town whose corporate limits at some point coincide with the corporate limits of the city or town in which the parent bank is located; be it further

Resolved, That this resolution is not intended to affect the status of any branches or additional offices established prior to February 1, 1924, either those of banks at the present time members of the Federal reserve system or those of banks subsequently applying for membership in said system."

The Federal advisory council, however, was not inclined to favor this resolution. Under date of November 19, 1923, it stated with reference to the resolution that "it believes that the resolution, if carried into effect, will give a position of monoply to those State banks that have established state-wide system of branches, while those State banks that have refrained from branch banking will be placed in a position of great disadvantage." (P. 11 of 1923 recommendations of Federal advisory council)

recommendations of Federal advisory council.)

12. Recommendations re McFadden bill.—On February 11, 1924, the so-called McFadden bill was introduced in Congress giving to national banks the right to establish branches and imposing some restrictions upon the establishment of branches by State member banks of the Federal reserve system. As has been shown above, the board had repeatedly recommended the enactment of legislation authorizing the establishment of domestic branches by national banks and a number of bills designed to accomplish this general purpose were introduced from time to time. These bills were in various forms and contained various limitations and restrictions, but none of them was ever passed by Congress.

On May 26, 1924, and April 22, 1926, in latter was ever passed by Congress.

On May 26, 1924, and April 23, 1926, in letters addressed to Congressman McFadden and Senator McLean, respectively, the board expressed its general approval of the McFadden bill. The Federal advisory council in 1924, 1925, and 1926 also recommended enactment of the bill, and on February 25, 1927, it

was finally enacted into law.

13. Administrative policy during 1924.—At its meeting on January 7, 1924, the board gave consideration to the applications of three banks for permission to establish branches from time to time over a period of several months in accordance with contemplated programs of development, and adopted a resolution to the following effect: That no blanket authority to establish branches would be granted; that each application must be presented separately in regular form and manner, subject to approval of the State banking authorities and a recommendation of the Federal reserve bank of the district; that applications to establish branches in noncontiguous territory, filed before February 1 (under the board's resolution of November 7) might be considered by the board after that date and that the board reserved right to pass on each application on its merits. (See X-3937.)

14. Regulations of 1934.—On March 27, 1924, the board issued a revised and further elaboration of its regulations formulated under that general provision of the Federal reserve act which authorizes it to prescribe conditions of membership for State banking institutions applying for admission to the system. In these regulations, as amended a month later, on April 7, the board took occasion to give more formal statement than it had previously given to principles which would grown it in approximate the actablishment of branches.

would govern it in approving the establishment of branches.

By Section IV of its Regulation H, as amended April 7, 1924, the board stated that it would prescribe the following conditions of membership for every State bank thereafter admitted to the Federal reserve system:

"(4) Such bank or trust company shall not, except after applying for and receiving the permission of the Federal Reserve Board, establish any branch, agency, or additional office.

agency, or additional office.

"(5) Such bank or trust company, except after applying for and receiving the permission of the Federal Reserve Board, shall not consolidate with or absorb or purchase the assets of any other bank or branch bank for the purpose of operating such bank or branch bank as a branch of the applying bank; nor directly or indirectly, through affiliated corporations or otherwise, acquire an interest in another bank in excess of 20 per cent of the capital stock of such other bank; nor directly or indirectly promote the establishment of any new bank for the purpose of acquiring such an interest in it; nor make any arrangement to acquire such an interest."

These conditions were prescribed for all State banks and trust companies which were admitted to membership between April 7, 1924, and February 25, 1927, and were conditionally prescribed for all institutions admitted between February 26, 1927, and January 3, 1928. Prior to April 7, 1924, these conditions, or conditions substantially similar thereto, were prescribed for special reasons for a number of State banks and trust companies admitted to the system.

In Section VI of the same regulation, the board stated the administrative policy which it would pursue in acting upon applications for permission to establish branches under these conditions of membership as follows:

"SECTION VI. PRINCIPLES GOVERNING ESTABLISHMENT OF BRANCHES

"In passing upon applications by State banks and trust companies for permission to establish branches, agencies, or additional offices, under condition No. 4 of Section IV, or under any similar condition which may have been prescribed by the Federal Reserve Board and agreed to by any bank or trust company heretofore admitted to the Federal reserve system, the Federal Reserve Board will observe the following principles:

(1) The Federal Reserve Board will as a general principle restrict the establishment of branches, agencies, or additional offices by such banks or trust companies to the city of location of the parent bank and the territorial area within the State contiguous thereto, as said territory has been defined in the board's resolution of November 7, 1923, excepting in instances where the State banking authorities have certified and the board finds that public necessity and advantage render a departure from the principle necessary or desirable.

(2) The Federal Reserve Board as a general principle will not consider an application by such bank or trust company for a permit to establish a branch, agency, or additional office, unless the authorities of the State in which such bank is located regularly make simultaneous examinations of the head office and all branches, agencies, or additional offices of such bank, nor unless the examinations made by the State authorities are, in the judgment of the Federal Reserve Board, of such character in every respect as to furnish the Federal Reserve Board with sufficient information as to the condition of such bank and the character of its management to enable the Federal Reserve Board fully to protect the interests of the multise.

of the public.

"(3) The Federal Reserve Board as a general principle will require each bank or trust company which establishes or maintains branches, agencies, or additional offices to maintain for itself and such branches, agencies, or additional offices an adequate ratio of capital to total liabilities and an adequate percentage of its total investments in the form of paper or securities eligible for discount or purchase by Federal reserve banks.

(4) The Federal Reserve Banks.

a branch, agency, or additional office until the State banking authorities have approved the establishment of such branch, agency or additional office, and the directors or executive committee and the Federal reserve agent of the Federal reserve bank of the district in which such bank or trust company is located have made a report upon the financial condition of the applying bank or trust company, the general character of its management, what effect the establishment of such branch, agency or additional office would have upon other banks or branches in the locality in which it is to be established, and whether in their opinion, it would be in the interest of the public in such locality, together with their recommendation as to whether or not the application should be granted.

or additional office same shall be established and opened for business within six months after such permission is granted. If such branch, agency or additional office is not established within such time the permit shall become void, unless the time is extended by the board for good cause.

it may grant hereafter to establish any branch, agency or additional office whenever shall appear, after hearing, that such branch, agency or additional office is being operated in a manner contrary to the interest of the public in the locality in which it is established."

15. After the McFadden Act.—As a result of the amendments to the Federal reserve act contained in the McFadden Act, the board issued a new set of regulations applicable to member banks which became effective on January 3, 1928. Before these new regulations became effective and after the passage of the McFadden Act, a number of State banks and trust companies were admitted to membership in the system. These banks and trust companies were admitted subject to certain conditions of membership which usually included the conditions in the 1924 regulations regarding the establishment of branches, and such conditions were subject to any changes which the board found to be necessary on account of the amendments to the Federal reserve act contained in the McFadden Act. After the board's 1928 regulations became effective (January 3, 1928) these banks were advised of the new conditions of membership to which they were subject. As the McFadden Act prescribed the conditions under which branches might be established by State member banks, the board did not include a condition in these new regulations in that connection. In Section V of Regulation H,

however, it stated its interpretation of the provisions of the McFadden Act regarding branches of State member banks as follows:

"1. Any State member bank which, on February 15, 1927, had established and was actually operating a branch or branches in conformity with the State law is permitted to retain and operate the same while remaining a member of the Federal reserve system, regardless of the location of such branch or branches.

"2. Any nonmember State bank which, on February 25, 1927, had established and was actually operating a branch or branches in conformity with State law may, if otherwise eligible, become a member of the Federal Reserve system and retain and operate such branches, regardless of their location.

"3. In order to remain a member of the Federal reserve system, every State member bank must relinquish any branch or branches established after February 25, 1927, beyond the corporate limits of the city, town, or village in which the parent bank is situated.

"4. Any State member bank which establishes any branch or branches after February 25, 1927, beyond the corporate limits of the city, town, or village in which the parent bank is situated must either (a) relinquish such branch of branches or (b) forfeit all rights and privileges of membership and surrender its stock in the Federal reserve bank.

"5. No State bank which has established any branches subsequent to February 25, 1927, beyond the corporate limits of the city, town, or village in which the parent bank is situated may become a member of the Federal reserve system except upon relinquishment of every such branch.

"6. State member banks may establish branches within the corporate limits of the city, town, or village in which the parent bank is situated without obtaining permission of the Federal Reserve Board."

VIII. POLICY OF FEDERAL RESERVE SYSTEM ON CHAIN BANKING

1. Conditions of membership.—Prior to the enactment of the McFadden Act, the board prescribed conditions of membership under which State banks could be admitted to the Federal reserve system, in order to effect some degree of control over chain banking. One of the conditions with which State banks entering the Federal reserve system were required to comply, reads as follows:

"(5) Such bank or trust company, except after applying for and receiving the permission of the Federal Reserve Board, shall not consolidate with or absorb or purchase the assets of any other bank or branch bank for the purpose of operating such bank or branch banks as a branch of the applying bank; nor directly or indirectly, through affiliated corporations or otherwise, acquire an interest in another bank in excess of 20 per cent of the capital stock of such other banks nor directly or indirectly promote the establishment of any new bank for the purpose of acquiring such an interest in it; nor make any arrangement to acquire such an interest."

This condition of membership was incorporated in the board's regulations of 1924 and was prescribed for every State bank admitted to membership between April 7, 1924, and January 3, 1928. As a result of an amendment to section 9 contained in the McFadden Act (February 25, 1927), there is some doubt whether the board now has authority to prescribe this broad condition and, therefore, it has been unable to exercise the same degree of control over chain banking. It has, however, prescribed the following condition of membership for every State bank or trust company admitted to membership since January 3, 1928.

"(3) Except after applying for and receiving the permission of the Federal Reserve Board, such bank or trust company shall not acquire an interest in any other bank or trust company, through the purchase of stock in such other bank or trust company."

2. Recommendations for legislation.—As early as January 8, 1926, the board addressed a letter to Congressman McFadden (X-4500) recommending that there be incorporated in the pending McFadden bill certain provisions designed to secure adequate information regarding national and State member banks which are closely related in management, operation or interests to other banking institutions and, in particular, to afford some check upon the abuses frequently occurring from chain banking. These suggestions were not adopted by Congress. A copy of the board's letter is attached hereto as Exhibit DD.

3. Correspondence with Hon. Louis T. McFadden re administrative control. Under date of May 2, 1927, Congressman McFadden addressed a letter to the Comptroller of the Currency, suggesting that he adopt administrative measures calculated to control or prevent the growth of chain banking among national

banks and sent a copy of his letter to the Federal Reserve Board with the suggestion that the board should adopt similar administrative measures with reference to State member banks of the Federal reserve system. The board, under date of May 18, 1928 (X-4854) replied that it was powerless under the law to take any such action. The board called attention to the fact that it had suggested legislated action. legislation along this line, but that Congress had not adopted its suggestions, and also called attention to the fact that Congress in the McFadden Act had amended the law so as apparently to take away the board's power to control this practice through conditions of membership. The board's letter, a copy of which attached as Exhibit EE, concluded with the statement that the remedy lies

with Congress.

4. Annual reports for 1927 and 1928.—In addition to the correspondence with Congressman McFadden above referred to, the board has in its annual reports for the years 1927 and 1928 brought to the attention of Congress the fact that the expanding operations of financial companies specializing in the purchase of bank stock have presented special problems to Federal and State officials charged with the responsibilities of bank supervision. It was pointed out that such companies have been organized in increasing numbers and that since they are not directly engaged in the business of banking as defined in Federal and State statutes, they have not been subject to supervision or regular examination by banking authorities. (See pp. 31, 32 of 1927 annual report.) The difference between branch and chain banking was explained and it was pointed out that the more considerable developments in chain banking have been generally in States which prohibit the establishment of branch offices by banks. The chain banking situation in the United States was also summarized for the information

of Congress. (See pp. 30, 31 of the 1928 annual report.)

5. Conferences of Federal reserve agents and governors of Federal reserve banks in 1927 and 1928.—The 1927 fall conferences of Federal reserve bank governors and Federal reserve agents considered the development of investment companies for the purchase of bank stock, and the Federal reserve agents were of the opinion that a dangerous situation is developing which should be brought to the attention of the Federal Reserve Board and the banking authorities with the view that some legislation should be obtained placing such companies under the jurisdiction of the banking departments. The Federal reserve bank government of ernors felt that the possible dangers incident to a widespread development of Such companies make it a matter for the consideration of the Federal reserve system. The governors discussed this question further at their April, 1928, conference and while nothing definite was recommended, it was stated that the

question is a matter that deserves thoughtful consideration.
6. Committee to study chain banking.—The question of branch, chain, and group banking development in the United States with particular reference to the effects of bank stock ownership by investment trusts and holding corporations, was considered by the Federal advisory council in 1929, and, on November 19, 1929, it recommended that "the Federal Reserve Board appoint a committee to study the merits of the branch banking system as practiced in this and other countries conditions in Canada being apparently more comparable with our own), the group or chain banking system as developed in this country and elsewhere, and the unit banking system as developownership of bank stocks by investment trusts and holding corporations, in order that the Federal Reserve Board may be in possession of accurate and authoritative information on this important subject."

The December, 1929, conference of Federal reserve bank governors and Federal reserve agents voted to concur in and indorse the recommendation of the Federal advisory council that a committee be appointed to study the subject of branch, chain, and group banking.

Accordingly, on February 27, 1930, the board appointed a committee for this purpose, naming as members thereof, Messrs. Goldenweiser and Smead of the board's staff, and Messrs. Rounds, Fleming, and Clerk, deputy governors of the Federal reserve banks of New York, Cleveland, and San Francisco, respectively.

IX. BANK FAILURES

In connection with the subject of branch, group, and chain banking, some consideration must be given to the unfortunately large number of bank sus-bensions and failures in the United States, especially in view of the fact that the advocates of branch banking contend that the solution of the problem of bank failures lies in the substitution of branches of strong, well-managed banks for small-unit banks in the rural communities. Fortunately, the Federal Reserve Board has reliable statistics with regard to bank failures and has made some study

of the causes of these failures. 1. Federal Resere Board Annual Report for the Year 1926.—On pages 10 to 13, inclusive, of the text of this report the board called attention to the fact that during the year 1926, 956 banks, with deposits of nearly \$275,000,000, had suspended, as compared with 612 suspensions, involving deposits of about \$175,000,000 in 1925, and 777 suspensions, involving deposits of about \$215,000,000 in 1924. Contain additional content of the cont in 1924. Certain statistics were given with reference to the number and percentage of member and nonmember bank failures and the causes of these failures were discussed briefly. One of the fundamental causes appeared to be that in many communities, and especially in small communities, there were more banks than could profitably engage in the local banking business, and many of these banks had insufficient capital. A statistical table brought out the fact that nearly two-thirds of the banks which failed during 1926 had a capital of \$25,000

or less and were situated in towns of less than 1,000 inhabitants.

The situation described in the following paragraph, appearing on page 12, undoubtedly accounts for the present tendency to build up chains of banks with strong management or supervision in view of the legal restrictions on branch banking:

"Some small banks in small communities have found it difficult to make ade quate earnings by conducting their business along strictly conservative lines and have not been able to afford the expense of engaging skillful and experienced managers. The volume of business done by small banks in rural communities, furthermore, has diminished in recent years, as the result of improvement in roads and the widespread use of automobiles, which has led many bank customers to prefer to drive to the control of the cont to prefer to drive to the county seat or other near-by center and to use the facilities of the larger banks in these towns.

The general economic conditions leading up to the failures during the year 1926 were discussed concisely on page 13; and, on pages 190 to 196, inclusive, there were published a series of tables containing valuable statistics on bank suspensions during the years 1921 to 1926. suspensions during the years 1921 to 1926, inclusive.

A copy of this report is attached hereto as Exhibit FF.

2. Report on bank suspensions, 1921-1927.—Under date of April 11, 1928, Mr. E. L. Smead, chief of the division of bank operations, submitted to the Federal Reserve Board a comprehensive report on bank suspensions in the year 1927 and during the years 1921 to 1927, inclusive. A copy of this report is attached hereto as Exhibit GG.

This report showed that, during the year 1927, there was a total of 662 bank suspensions involving total deposits of \$194,000,000, and detailed figures were given for the various classes of banks.

The report also showed that, during the 7-year period, 1921-1927, 4,513 banks with an aggregate capital of \$169,000,000 and deposits of \$1,351,000,000 had suspended operations. During the same period 559 banks with a capital of \$21,000,000 and deposits of \$200,000,000 had reopened, leaving net failures of 3,954 banks with an expense of 3,954 banks with a capital of 3,954 banks with a capita 3,954 banks with an aggregate capital of \$148,000,000 and deposits of \$1,151,000,000. Detailed statistics are given for the various classes of banks. These 000,000. Detailed statistics are given for the various classes of banks. These statistics showed that, of the total of 4,513 banks that suspended operations during this 7-year period, 3,609 were located in places having a population of less than 2,500 and that more than 60 per cent of all suspended banks were located in places having less than 1,000 inhabitants. It also showed that nearly 40 per cent of the suspended banks had a capital of less than \$25,000 and that over 63 per cent of them had a capital of \$25,000 or less.

On page 5 of this report the principal causes of bank failures during this 7-year

period were discussed as follows: "The principal cause of bank suspensions during the 7-year period was reported as the accumulation of a large proprotion of worthless, slow or past-due paper, but in quite a number of cases poor management and heavy withdrawals were assigned as largely responsible for the suspension. The causes of suspension listed in the order of investment of the suspension. listed in the order of importance, i. e., based on the number of times shown as having been a primary or contributory cause, are as follows:

"1. Doubtful, slow or past-due paper.

"2. Heavy withdrawals. "3. Poor management.

Depreciation of securities. Loans to officers and directors.

"6. Defalcation.

"7. Loans to enterprises in which officers and directors were interested.

8. Failure of banking correspondent. 9. Failure of other large debtors."

While "doubtful, slow or past due paper" was given as the most important cause of bank failures and "loans to officers and directors" and "loans to enter-brises in which officers and directors were interested" were listed as separate causes it which officers and the these causes could all be grouped under the

Gausses, it might well be argued that these causes could all be grouped under the head of "poor management," making that the principal cause of bank failures. Some statistics are given with reference to the number of failures of banks operating the statistics are given with reference to the number of failures of banks.

operating branches and, on page 6, there is an interesting discussion of the failure of certain chain systems, notably the Witham System, with 179 banks in Georgia, and Florida and 10 in New Jersey and New York.

3. Study of bank suspensions, 1921–1929.—A similar report covering the 9-year period, 1921–1929, is now in course of preparation. The information pertaining the causes of failures has not yet been completely tabulated, but it appears that the relative inverse of the causes of suspensions will not be very different that the relative importance of the causes of suspensions will not be very different from that shown in the report for the years 1921-1927.

4. Federal Reserve Board Annual Report for the Year 1929.—While it has not yet been completed, a preliminary draft of that portion of the board's annual report for the year 1929 which discusses bank failures is attached hereto as

From this it appears that 642 banks with aggregate deposits of \$235,000,000 suspended operations during the year 1929. This was larger than any year except 1926, when both the number and deposits of suspended banks were the largest argest on record. Although member banks constitute only about one-third of the total number of banks in the United States, only about one-eighth of the total number of banks in the United States, only about the member banks; and although the deposits of member banks are approximately three-fifths of the aggregate deposits of all banks in the country, the deposits of the member banks that suspended during the year 1929 were only about one-fourth of the aggregate deposits. deposits of all suspended banks.

During the 9-year period, 1921–1929, a total of 5,642 banks were reported as having suspended operations either temporarily or permanently on account of financial difficulties, and of this number 657 have since been reopened, leaving 4,985 as the net number of bank failures. The deposits of the banks which suspended operations during this 9-year period aggregate about \$1,720,000,000 and the deposits of the reopened banks about \$240,000,000, leaving the net deposits of failed banks aggregate about \$1,720,000,000 and failed banks aggregate about \$1,800,000,000, leaving the net deposits of

failed banks aggregating \$1,480,000,000.

A number of interesting tables are included in this draft of the report and one of them shows that over 62 per cent of all the banks which failed during this year period had a capital of \$25,000 or less and that over 60 per cent of the total number of 1,000 or less; 91.6 per cent of number were located in town with a population of 1,000 or less; 91.6 per cent of all these banks were located in towns with a population of 10,000 or less, and only A per cent were located in towns with a population exceeding 10,000 inhabitants. this clearly lends some support to the opinion that branches of strong banks are

heeded in small rural communities. 1925. Studies of bank failures by Professor Sprague and Doctor Burgess.—In April, finance at Harvard University, as a research assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of page and the search assistant in the board's division of the search assistant in the search assistant in the search assistant in the search as the search assistant in the search as the s hisearch and statistics, for the purpose of studying the question of needed bankincarch and statistics, for the purpose of studying the question of needed bank-board legislation. During the course of Professor Sprague's employment with the board he made a study of the causes of bank failures. He published an article on this subject in the Journal of the American Bankers' Association for April, 1927, at pages 703 and 704; and the report of the committee on economic changes of the Provident of the Committee on economic changes of the President's conference on unemployment, published in volume 2 of Recent Economic Changes (pp. 393–396), contains a discussion of bank failures, which was prepared by Professor Sprague and Dr. Randolph Burgess, assistant Federal Reserve agent of the Federal Reserve Bank of New York. Quotations of certain Buss. portions of these articles discussing the causes of bank failures will be of interest.

The following is quoted from Professor Sprague's article on The Cause of Bank following is quoted from Professor Sprague's Association

Bank Failures, published in the Journal of the American Bankers' Association of April, 1927, pages 703 and 704:

Scattered banks in other parts of the country, and particularly banks in the larger site of the advantage of local diversity in loans and have funds larger cities, also enjoy the advantage of local diversity in loans and have funds available for other employment. But thousands of banks in the West and South are in a strikingly different position. They are established in localities in which there is but slight diversity in occupation, localities also in which the local de-

mand for accommodation commonly tends to absorb all of the resources of the local banks and at higher rates than can be secured on outside investments.

"The more conservative banks, as a matter of wise policy, do not employ all resources locally, and these banks may properly resort to reserve banks or to city correspondents for accommodation to take care of seasonal or other temporary requirements. At the opposite extreme are the numerous banks that make local loans to the full extent of their own local resources, and in addition acquire outside deposits, both public and individual, by the offer of a high interest rate, and still further enlarge the supply of bank credit in the locality by securing accommodation from reserve banks and city correspondents.

"Banks which follow this course may acquire prestige in their communities and earn large profits for shareholders in years of abounding prosperity; but clearly they are in no position to withstand successfully a long period of adverse conditions. Failure is probable unless quite extraordinary care and discrimination have been exercised in the determination of the amount of credit extended to each individual borrower. It is a reasonable presumption, however, that the lack of caution manifested in the general policy of a bank will also be exhibited in the quality of the particular leave that it makes

in the quality of the particular loans that it makes.

"When the problem of bank failures is approached with full recognition of the powerful influence unfavorable to safety in banking exerted by the absence of industrial diversity and by the intense local demand for credit, it becomes evident that policies governing the establishment of banks have not been sufficiently directed toward the maintenance and improvement of standards in the management of banks.

"While there is no exact relationship between the size and number of banks in locality and the strength of the banking position, it is certain that these are factors which have a decided bearing upon competence in management. A community with aggregate banking resources of, say, \$5,000,000 will be better served in every way, including safety, by two or three banks than by six or more. The excessive number of banks induces cutthroat competition for accounts, and tends to undermine conservative standards in the granting of credit. A decided increase in minimum capital requirements would do much to restrict the number of banks within more desirable limits, but whatever may be accomplished in this direction should be coupled with the specific grant of power to the appropriate authority, as in the State of New York, to decline to approve new charters where it is evident that a community is already well served by existing banking institutions, and that additional competition will serve no useful purpose.

"No doubt bank examinations might be improved, and in some States vet, materially improved, but incomplete information about the condition of the banks is not the most serious defect in existing supervisory arrangements. opinion may be ventured that, aside from a few instances of exceptionally skillful dishonesty, and the special situation created by chains of banks, successive examinations preceding failure have regularly disclosed an increasingly unsatisfactory condition. But in making effective use of this information, almost insurmountable obstacles are encountered. Governmental authorities may criticize unwise policies, but they can only take action when statutes are violated or upon clear evidence of impairment of capital or insolvency. Moreover, even within the field of violations of statutes, effective administration is hampered by the common failure of legislation to provide penalties other than the cessation of business or a receivership."

The following is quoted from volume 2 of a book on "Recent Economic Changes" containing the report of the President's conference on unemployment (pp. 693-696):

(pp. 693-696):

"Dishonesty and gross mismanagement account for a small number of these failures. The suspension of a larger number was precipitated by adverse conditions of a purely local character, such as a succession of crop failures or the sudden collapse of real estate booms in particular towns and cities. But the great majority of banks failed because they were unable to withstand the stress exerted by the persistence of unprofitable prices for the products of agriculture and animal husbandry—stress that was particularly severe because it was experienced after years of a bounding prosperity and extreme appreciation in value of farm property, and a large increase in the number of farms mortgage and the amount of mortgage indebtedness.

"These adverse conditions alone, it can hardly be too strongly emphasized do not furnish a complete explanation of the numerous bank failures of the

seven years. By no means all, or even a majority, of the banks in the localities most seriously affected have been obliged to suspend operations. Financially weak and unskillfully managed banks have been weeded out; strong, well-managed banks have no doubt experienced heavy losses, but they survive.

"There are hundreds of small banks throughout the country which are ably managed and abundantly strong, and which overcome the handicap of an absence of industrial diversity in the communities which they serve by the exercise of exceptional judgment and caution. On the other hand, while there is no exact relationship between the number and size of the entire group of banks in a locality and the state of the entire group of the enti and the strnegth of its banking position, it is certain that no community can hope to enjoy the benefits of safety in banking if the business is organized in units so numerous as to exceed the available supply of competent officers and responsible directors as to exceed the available supply or to be able to absorb inevitable

"No community can possibly provide adequate resources, competent officers, and experienced directors for one bank to every 750 of its inhabitants as in North Dakota, or to 1,400 as in Iowa. And the situation in these States was not exceptional; on the contrary, an excessive number of banks have been established throughout those sections of the country that are mainly devoted to agriculture. Banking troubles were inevitable with the advent of adverse conditions, and for the severity of these conditions the unwise use of credit administered by an inordinate multiplicity of banks was in no small degree responsible.

The CHAIRMAN. Go ahead, now, Governor.

Governor Young. That also covers all the statistical and research work that we have done in reference to the development of branch banking in the United States and recently of group and chain bankwith the statements that we have issued at various times.

It covers a short synopsis of branch banking in several foreign countries with the development and results as near as we can find

out in this country.

It covers the history of banking in the United States—a very short

synopsis of it.

It covers Federal legislation in the United States in reference to branch banking from the time of the first branch bank in the United

It covers the policy of the Federal reserve system on branch banking from the annual report in 1915 up to the passage of the McFadden

It coves the policy of the Federal reserve system on chain banking since that has been a rapid development in the United States.

It covers the reports of bank failures in the United Staes and the

causes for those failures as we or experts have seen them.

While it is a very lengthy document, we have condensed it as much as we can possibly for the benefit of the committee.

The CHAIRMAN. This is prepared under the direction of the Federal Reserve Board?

Governor Young. Really it was prepared under my direction, with the research department.

The CHAIRMAN. Does that include the study that has been made

the special committee of the 12 Federal reserve banks?

Governor Young. It does not. That committee was only recently organized. Our research and statistical division is so busy with many other problems that come before us that we have recently employed man who spends all of his time on that particular subject.

The CHAIRMAN. But there will be further additional information

available from this other committee, I imagine?

Governor Young. At any time we get it, we will be glad to pass it on to the members of the House committee. We expect to get a great deal out of your conferences up here and in your investigations.

That is all I have to present to-day. I think the members of the

The Chairman. Do you desire to make a statement to the committee and give an expression of the board's view or your personal view on the subject?

Governor Young. I have stated the board's view here [indicating], and I am not prepared to make a statement in reference to branch, group, or chain banking at this moment.

The Chairman. Do you, as governor, care to make a statement to

the committee, or as an individual?

Governor Young. I would prefer, Mr. Chairman, to get all the information that is available rather than make an impulsive statement at the moment—yes. On the other hand, I am here to answer any questions that the members of the committee care to ask me.

The Chairman. Inasmuch, then, as we have not had an opportunity to make a study of the data you have presented, I am going to suggest that the committee do now adjourn until to-morrow at 10.30.

Mr. Goldsborough. Mr. Chairman, may we have an executive session before adjourning?

The CHAIRMAN. Very well, the committee will go into executive

session.

(Whereupon, at 12 o'clock, noon, the committee went into executive session, at the conclusion of which the committee adjourned until Wednesday, March 19, 1930, at 10.30 o'clock a. m.)

Mr. Wingo. Mr. Chairman, I want it understood that we will waive the rule we adopted and permit those members who missed their turn this morning by reason of their being detained, to crossexamine when they come in.

STATEMENT OF HON. ROY A. YOUNG-Resumed

The CHAIRMAN. Governor, I understand you have some additional data you want to put into the record?

Governor Young. Yes, sir; Mr. Chairman. This will be ready for

distribution late this evening.

The Comptroller of the Currency furnished the committee with statistics and information in reference to group and chain set-ups in the United States at the present time, showing that approximately one-sixth of the resources of the banking structure of the country was either in groups or chains. That was up to the end of the year. Since then the board has prepared, through its statistical division, information showing group, chain, and branch banks. That will be ready, in mimeographed form, this evening and I would like to have

that inserted in the record.

The Chairman. Without objection, this will be inserted in the

record at this point, in these proceedings.

(The information referred to is here printed in full as follows:)

The tabulation of the data received from the Federal reserve agents on the above subject as of December 31, 1929, has been completed and there is presented herewith a summary thereof as of that date.

Experience with our branch banking record during the past three years leads us to believe that it is substantially complete and accurate, even as to nonmember banks. In the case of the chain and group banking statistics, the present compilation is probably the most complete that has thus far become available, but due to the difficulty of obtaining information on this subject it is quite likely that it is to the difficulty of obtaining information on this subject it is quite likely that it is to the difficulty of obtaining information is available. that it does not include a few small chains for which no information is available, and it may not include all the banks in some of the groups or chains. It is also Possible that the management or controlling interests do not regard some of the banks that are included in our figures as constituting group or chain systems. On the whole, however, the information as submitted on chain and group banking is believed to be substantially correct.

The material is presented under three general heads. The first part relates to branch, chain, and group banking taken as a whole, the second to chain and group banking alone, and the third to branch banking.

No account is taken in this memorandum of Morris plan banks or small loan

agencies which operate in a number of States.

BRANCH, CHAIN, AND GROUP BANKING

General summary.—According to statistics just compiled, there were in operation in the United States at the end of 1929, 24,645 banks and 3,547 branches. or a total of 28,192 banking offices. Of this total of approximately 28,200 bank ing offices, there were 6,353 banks and branches that belonged to branch-bank systems, to chain or group-bank systems, or to both. This leaves 21,839 banking institutions that might be definitely termed as "independent unit banks" having no branches and being in no way connected with other banks through chain or group affiliation.

As a measure of the banking resources of the banks falling into the different categories, we have tabulated the figures of total loans and investments. this basis it appears that at the end of 1929 all banks in the country had total loans and investments of approximately \$58,500,000,000.1 On the same date the branch, chain, and group banking systems, embracing a total of 6,353 banks and branches, had total loans and investments of approximately \$30,000,000,000 In other words, the banking resources of the branch, group, and chain systems were more than one-half the total of all banks in the country

The branch-banking systems at the end of 1929, taken alone, embraced 82^2 banks and 3,547 branches with aggregate loans and investments of \$25, 100,000,000, but these figures include 119 banks with 1,415 branches and loans and investments of \$6,300,000,000 that were also reported as belonging to bank groups or chains. There were 287 chain or group bank systems reported in a system at the and of 1020 existence at the end of 1929, embracing 2,103 banks with loans and investments of \$11,200,000,000. These figures, like those given for the branch systems, include a certain amount of duplication, that is to say, they include 119 banks with 1,415 branches and loans and investments of \$6,300,000,000, which were reported as belonging to chain or group systems. This duplication is, however, all migrated from the control of \$6,300,000,000, which were reported as belonging to chain or group systems. eliminated from the combined statistics given in the two preceding paragraphs

The table following shows the number and loans and investments of branch, chain, and group banking systems at the end of 1929, in comparison with figures for all banks in the country.

Number and loans and investments of all banks in the United States and of branch, chain, and group bank systems at the end of 1929

	Number of banks (or branches)	Loans and investments
All banks (head offices) in United States •	24, 645 3, 547	(b) (b)

Banks that belong to chains or groups but operate no branches. Banks that belong to chains or groups and operate branches: Head offices (parent banks) Branches. Banks that do not belong to chains or groups but operate branches: Head offices (parent banks) Branches. Independent unit banks (banks that do not belong to chains or groups and do not operate branches).	1, 984 119 1, 415 703 2, 132	4, 913, 000, 00 • 6, 264, 000, 00 • 18, 839, 000, 00 (5) 28, 445, 000, 00

Exclusive of private banks not under State supervision. For two States the December figures were
not available for State banks, and the latest available figures were therefore used.
 Separate figures not available.
 Includes branches, separate figures not being available.

¹ Excluding private banks not under State supervision. For two States the December figures for State banks are not available, and in these cases the latest available abstract was used.

Branch, chain, and group banking areas.—Taken generally and looking at the situation from the standpoint of the number of banks involved, chain and group satuation from the standpoint of the number of banks involved, chain and group banking exists on the widest scale on those States in which branch banking is prohibited entirely, for example, in Minnesota, North Dakota, Kansas, Iowa, Illinois, Oklahoma, and Texas. It has, however, grown to considerable proportions in so-called restricted branch banking States—where branches may be established only in the head office city, notably Michigan and New York. From the standpoint of banking resources controlled by the members of the groups and chains, chain and group banking is also found on an extensive scale in certain additional States including particularly California, Florida, Georgia, and additional States, including particularly California, Florida, Georgia, and Montana.

As is generally known, chain and group banking has had its most rapid development in recent months in the Northwestern States, but considerable activity has been reported in some of the eastern and southern States. There are relatively few States where it does not exist to a substantial extent, but the predominant chain or group banking area may be said to comprise the Middle Western, Western and Central States. There seem to be at present very few legal restrictions on the on the formation of bank groups or chains, and the continued growth of this system, which might be termed indirect branch banking, is thus possible generally

throughout the country.

10

The growth of branch banking, on the other hand, has been restricted by law in many States, and the branch banking area has not changed materially in recent State-wide branch banking has, of course, had its greatest development in California, but it has also developed to a considerable extent in Maryland, North Carolina, Rhode Island, South Carolina, and Virginia. The other States embraced in the principal branch banking areas are those in which the establishment of branches is restricted as to location, including New York, Michigan, Ohio, Pennsylvania, Louisiana, New Jersey, and Massachusetts. The branch Ohio, Pennsylvania, Louisiana, New Jersey, and Massachusetts. The branch banking area is, therefore, much less extensive than that in which chains or groups Operate. It includes most of the Eastern States, and Michigan, Louisiana, and California, but very little of the central and middle western sections of the country.

Member banks of Federal reserve system.—The branch, chain, and group banking systems, which in the aggregate had approximately \$30,000,000,000 of loans and investments at the end of 1929, included 923 national banks with loans and investments. and investments of \$11,800,000,000 and 278 State bank members of the Federal reserve system with loans and investments of \$10,800,000,000, or a total of 201 member banks with aggregate loans and investments of \$22,700,000,000. These banks therefore controlled approximately 63 per cent of the banking resources (as measured by loans and investments) of all member banks of the

Federal reserve system.

In some States the member banks that operate branch systems or belong to chains or groups control the greater part of the banking resources of all of the member banks in the State, as is brought out in Table No. 4 submitted herewith. It will be noted from this table that in the following States the loans and investments of member banks that operate branch systems or belong to chains or groups constitute more than one-half of the loans and investments of all member banks in the State:

California. Delaware. District of Columbia. Florida. Georgia. Kentucky. Louisiana.

Maryland. Massachusetts. Michigan. Minnesota. Montana. New Jersey. New York.

North Dakota. Ohio. Rhode Island, South Dakota. Tennessee. Washington.

Tables.—For reference purposes, the following tables relating to branch, chain, and group banking are attached:

Table 1: Number and loans and investments of all banks and branches in the United States and of branch, chain, and group banking systems, December 31, 1929, by classes of banks.

Table 2: Number of banks and branches and number of branch, chain, and group banking systems, by States, December 31, 1929.

Table 3: Loans and investments of all banks and of branch, chain, and group banking systems, by States, December 31, 1929.

Table 4: Number and loans and investments of all member banks in each State and of member banks that operate branches or belong to groups or chains, December 31, 1929.

More detailed information on chain and group banking and on branch banking is given in the separate sections relating to these subjects.

CHAIN AND GROUP BANKING

Definition.—When the Federal reserve agents were requested to furnish the board with reports on chain and group banking, the term "chain and group banking" was defined as comprising those systems "in which any person, group of persons, partnerships, association or corporation has actual or potential control over the operations or policies of three or more banking units, each working on its own capital and under its own personnel." It is on this basis that the statistics submitted herewith have been prepared. It should be realized, of course, that under any definition of the term, many difficulties present themselves in endeavoring to make a comprehensive survey of the subject, particularly where nonmember banks are involved. The sources of the information obtained by the Federal reserve agents include examination reports of member banks, national-bank examiners, State banking departments, the management or controlling interest of some of the groups, and in some instances press reports or similar information.

aminers, State banking departments, the management or controlling interest of some of the groups, and in some instances press reports or similar information.

No attempt has been made in the present tabulation to distinguish between "chain banking" and "group banking," but it is of interest in this connection to note that the Comptroller of the Currency, in a statement made before the House Banking and Currency Committee on February 25, made a distinction between the two terms as follows:

the two terms as follows:

"The term 'chain banking' has been in use for many years in this country to describe a condition in which a number of banks were owned or controlled by the same individual or by a group of individuals. These so-called chains were situated very largely in the rural districts and the member banks of the chain were principally small country banks. This condition was and still is quite prevalent in the agricultural regions of the West and South. Many of these chains have come to disaster through the failure of all of the banks which constituted them. During the many years this type of bank ownership has been in existence it was not considered as a trend toward a fundamental change in our banking system nor did it relate itself to the question of branch banking. On account of the failures of several of these chains the term 'chain banking' began to carry with it an element of disfavor.

"The term 'group banking' is of very recent origin and is being used to describe what appears to be a major movement in our banking system. The principal factor in group banking is that each group is centered around a city or metropolitan bank through means of a holding company which owns the majority of the stock of each bank thereby creating a system of banks more or less integrated in management with the central bank of the group. Its one common factor with the older type of chain banking is that several country banks may be owned by a single agency. In this discussion, therefore, I shall use the term 'group banking' to mean the ownership and some element of operating control of several banks through the medium of a bank holding company."

Summary for the United States.—As has already been noted, some of the banks that belong to chains or groups also operate branches, in fact, the two largest branch systems—the Bank of Italy National Trust & Savings Association, San Francisco, and the Bank of America of California, Los Angeles, with a total of 447 branches, are included in the Transamerica Corporation group of New York. If all chain and goup banks are included, whether or not they operate branches, the statistics show that at the end of 1929 there were 287 bank chains and groups in the United States embracing 2,103 banks, as compared with 275 chains and groups embracing 1,821 banks at the end of June. The 2,103 banks reported as belonging to bank chains or groups at the end of last year constituted about one-twelfth of the banks in the country, while their loans and investments were about \$11,200,000,000 or nearly one-fifth of the aggregate loans and investments of all banks in the United States.

Summary by classes of banks.—National banks reported as members of banking

Summary by classes of banks.—National banks reported as members of banking chains and groups numbered 802 at the end of December, as compared with 645 in June; State bank members 136, compared with 111 in June; and non-member banks 1,165, compared with 1,065 in June. Loans and investments of the national banks belonging to the banking chains and groups were approximately \$5,900,000,000 or over one-fourth of the total for all national banks, while loans and investments of State bank members belonging to the groups aggregated \$3,400,000,000 and of nonmember banks \$1,900,000,000.

The following table gives a summary comparison for the country as a wholeby classes of banks, for June and December, 1929:

	Number	of banks	Loans and invest- ments (in millions of dollars)

S

Principal chain and group banking States.—Chain and group banking has teached its greatest development in the Northwestern States, but it embraces a considerable number of banks and a relatively large proportion of the banking resources in many other States. There were, as a matter of fact, 25 States at the end of 1929 in which chain and group banks constituted a substantial part of the number of banks or of the banking resources, as indicated in the following table:

	Number	of banks	Loans and investments (in millions of dollars)

For 2 States the December figures for State banks are not yet available and the latest available abstracts used in those cases.

Recent developments.—The first survey of chain banking made by the Federa reserve agents for the Federal Reserve Board was in December, 1922, the second in June, 1926, the third in June, 1922, and the second in June, 1926, the third in June, 1922, and the second in June, 1926, the third in June, 1922, and the second in June, 1926, the second in June, in June, 1926, the third in June, 1928, and the last complete survey in June, 1929, Since that time monthly supplements on changes in chain and group banking have been submitted to the board by the Federal reserve agents. submitted for the board by the Federal reserve agents. The day submitted prior to June, 1929, however, are not sufficiently complete to make it possible to compare the present situation with that which existed in earlief years, in fact even the figures as reported six months ago have since had to be revised considerably. It is during the last six months, however, that group banking has been expanding so rapidly.

banking has been expanding so rapidly.

Increases in the number of banks belonging to chains and groups since Jude are confined largely to 9 States, and most of the growth is the result of the rapid expansion of a relatively small number of groups, notably the Northwest Bancorporation, of Minneapolis, which increased from 20 banks in June to 92 in December, the First Rank Stock Comments ber, the First Bank Stock Corporation, of Minneapolis, from 12 to 78, and the Guardian Detroit-Union group, of Detroit, which was not in existence in June but comprised 35 banks in Detroit, which was not in existence in June but comprised 35 banks in December. The number of chain and group banks at the end of June and December. at the end of June and December in each of the 9 States in which the principal increases occurred was as follows:

¹ Some of this increase may represent simply banks that were not known to be or were not previous reported as belonging to chains and groups.

Principal chains and groups.—Recent months have witnessed the rapid rise of quite a number of bank groups of the type referred to by the Comptroller in his recent statement, before the Comptitude recent statement before the Committee on Banking and Currency. This type of bank group is generally centered around a city or metropolitan bank through means of a holding company which owns the majority of the stock of each bank Examples of these newly formed groups, which are the ones in which the greatest interest centers at present, are the Northwest Bancorporation and the First Bank Stock Corporation, of Minneapolis; the Guardian Detroit-Union group, Detroit; the First National Paralles Ways Guardian Detroit-Union group, and the stock of each parallel par Detroit; the First National-Peoples Wayne County group, of Detroit; the Mariet Midland Corporation of Buffelor and Detroit of Peoples Wayne County group, of Detroit; the Mariet Midland Corporation, of Buffalo; and the First Wisconsin National Bank group of Milwaukee. Some of these groups have expanded their fields of operations beyond State lines and in one case beyond Federal reserve district lines. beyond State lines and in one case beyond Federal reserve district lines. chain systems which have been in existence for years, in most of which the control is held by one or more individual. is held by one or more individuals and which generally are composed of banks in the rural communities, do not appear to have grown materially in recent months.

The principal groups and chains, with the number and loans and investments

of banks included therein, are as follows:

Based largely on condition figures published in July, 1929. Includes 38 banks formerly reported in A. B. Banks chain of Arkansas,

Size of banking chains or groups.—In order to have the board's record of chain group banks include all banking institutions that might reasonably be dassified as constituting groups or enains, the Federal reserve agents were legisted as constituting groups or enains, the Federal reserve agents were legisted to include groups comprising as few as three banks. As shown in Table 6 submitted herewith, there were at the end of 1929 only nine chains or groups that comprised more than 20 banks, and only 26 additional groups that had from 11 to 20 banks. Following is a distribution, according to the had been also been also been some and groups. auded from 11 to 20 banks. Following is a distribution of banks included in the groups, of the 287 bank chains and groups reported at the end of 1929:

ber of groups with—							
banks to 6 banks	 	 	 	 	 	 	
to 6 banks	 	 	 	 	 	 	
1 to 20 banks	 	 	 	 	 	 	
More than 30 banks	 	 	 	 	 	 	

Type of chains or groups.—While it is difficult in many instances to obtain the of chains or groups.—While it is diment in than, an expensive information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as to the degree and method of actual or potential control information as the degree and method of actual or potential control information as the degree and method of actual or potential control information as the degree and method of actual or potential control information and the degree and method of actual or potential control information and the degree and degre the information as to the degree and method of the chains or groups, the seed by the management or controlling interest of the chains or groups, The rather distinct types have been reported as follows:

1. Control by a holding corporation which in the first instance is generally control by a holding corporation which in the principal banks belonging

Control by a holding corporation which in the most banks belonging by interests connected with one or more of the principal banks belonging

Control held or exercised by the principal bank in the group, either through the Control held or exercised by the principal bank or through ownership by the whole ownership of stock by such principal bank or through ownership by the ockholders or directors of such principal bank.

3. Ownership of substantial or controlling interest in a number of banks by a

Ownership of substantial of control individuals. At the control of the end of 1929 there were 53 groups of the first type, 44 of the second, and loo the end of 1929 there were 53 groups of the first type, 47 of the end of 1929 there were 53 groups of the first type, 47 of the third, but this classification according to type of control is general the third, but this between the banks is such as to make it impossible by because the relationship between the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as to make it impossible in the banks is such as the ba by because the relationship between the panks is such as for example, a trust come cases to make a definite classification. In one case, for example, a trust company whose stock is entirely trusteed for the benefit of the stockholders of a hational bank has organized an associate company, and the latter in turn owns

Based largely on condition figures published in July, 1929.

Investment trusts specializing in bank stocks.—The present survey does not include any instances where a substantial amount of bank stock is owned by a investment trust purely as an investment—without any control. Such cases through the acquisition of additional stock, may of course give rise to actually control over a group of banks in the course of time. There is one group included in the present compilation that is perhaps of this sort—that of the Goldment in the present compilation of New York which at the end of 1929 was reported as substantially controlling 3 banks in New York, 1 in California, and Pennsylvania, with aggregate loans and investments of \$816,000,000.

Subsidiary investment and finance companies belonging to groups or chains. The statistics that are here presented as to banks that belong to chains or groups not include investment banking houses, joint stock land banks, trust companie engaged solely in trust operations, and so-called commercial credit or finance companies. The Federal reserve agents were not requested to list such investment or finance institutions in reporting on chains and groups, but in many case ment or finance institutions in reporting on chains and groups, but in many case ment or finance institutions of such institutions in the group is not at all uncommon, in fact the inclusion of such institutions in the group is not at all uncommon, in fact the indications are that at least some of the groups had definitely mind the organization of such subsidiary investment and finance companies would make it possible for them to engage in all forms of financial operations only commercial banking, savings bank and trust operations, but also in the under for financing such purchases as automobiles and household goods, etc.

An example of such affiliations are certain subsidiaries.

An example of such affiliations are certain subsidiaries of the Transameria Corporation, shown in the American Banker of February 20. This group, addition to controlling one bank in New York and 17 in California with aggregations.

Summary for United States and by classes of banks.—At the end of 1929 there were 822 banks in the United States that were operating branches. The total number of branches operated by these banks at the end of the year was 3,547, and the aggregate loans and investments of the banks and their branches was \$25,100,000,000 or over 40 per cent of the total loans and investments of all banks in the country. Adding the total number of branches, 3,547, to the total number of banks in operation in the country, 24,645, gives a total of approximately 28,200 banking offices in the United States. About one-eighth of all the banking offices were, therefore, branches. As stated in the first part of this memorandum, 119 of the branch systems with 1,415 branches and loans and investments of \$6,300,000,000 were also reported at the end of the year as belonging to bank chains or groups.

There were 166 national banks that were operating 1,027 branches at the end of the year, and the loans and investments of these national bank branch systems aggregated \$9,000,000,000, or more than 40 per cent of the total for all national banks in the country. State bank members operating branches at the end of 1929 numbered 180, their branches 1,299, and their loans and investments \$9,900.000,000. There were 476 nonmember banks (including mutual savings and private banks), with loans and investments of \$6,200,000,000, operating 1,221 branches, at the end of 1929.

branches, at the end of 1929.

Developments during last six months of 1929.—Since the last report was submitted on branch banking as of the end of June, 1929, there has been a net increase of 107 in the total number of branches in operation and a net increase of 4 in the number of branch systems. This net increase in the number of branches is all about the same annual rate as during the last three years. Some of the large branch banking States, however, show but little increase in the number of branches in operation for the 6-month period; for example, California, and Michigan.

The principal increases for the period were in New York, Ohio, Pennsylvania, and

Massachusetts.

Although there was a net increase of only 4 in the number of branch systems during the last half of 1929, there were actually 36 banks operating branches at the end of 1929 that had no branches whatever in June, this gross addition to the list of branch systems being offset partly by the fact that 25 branch systems went out of existence through merger with other banks, 6 banks suspended operations, and I bank abolished its branches.

tions, and I bank abolished its branches.

The net increase of 107 in the total number of branches in operation in the 6-month period is the result of the establishment of 82 de novo branches and the conversion of 81 banks into branches, partly offset by the discontinuance of branches through merger with other branches or otherwise and the closing of 7 branches following the suspension of the parent banks. In other words, there were 163 new branches in operation at the end of 1929, as compared with June of the same year, while 56 of the branches that were in operation six months earlier went out of existence.

Branch banking since passage of McFadden Act.—At the time that the McFadden Act was passed, on February 25, 1927, there were 779 banks in the United States that were operating 1,929 branches in the head-office cities and 971 branches located outside such cities, or a total of 2,900 branches. Since that time there has been a net increase of 43 in the number of branch bank systems and a net increase of 647 in the number of branches in operation. Most of the increase represents branches located in head-office cities, the number of which increased from 1,929 to 2,432, or by 503. The number of branches located outside of head-office cities increased from 971 to 1,115, or by 144. The annual increase in the number of branches has averaged over 200, and this rate has been maintained in the last six months.

Although there were 206 banks operating branches at the end of 1929 that had no branches whatever when the McFadden bill became a law, there has been a net increase of only 43 in the number of branch systems since the passage of that act. This is due to the fact that 120 branch systems went out of existence through merger with other banks, 15 suspended operations, and 28 abolished their branches. Of the 28 banks that have abolished their branches since February 25, 1927, 26 had only 1 branch each and 2 had 2 branches each.

February 25, 1927, 26 had only 1 branch each and 2 had 2 branches each.

It is also found that of the 2,900 branches that were in operation on February 25, 1927, 224 have since gone out of existence—194 having been discontinued or merged with other branches and 30 going out of existence following the suspension of the parent bank. There was a gross increase of 871 in the number

branches, of which 511 were established de novo and 360 were independent banks that were purchased and converted into branches. Since the passage of the McFadden Act there have been a number of mergers of some rather large branch bank systems, thus bringing to existence even larger systems, the principal ones being as follows:

Pacific Southwest Trust & Savings Bank, Los Angeles, with 100 branches consolidated with First National Bank and its 1 branch to form the Los Angeles-

First National Trust & Savings Bank. Security Trust & Savings Bank, Los Angeles, with 54 branches, consolidated with Los Angeles-First National Trust & Savings Bank and its 95 branches to

the number of branches operated by national banks and by State bank members of the Federal Reserve System has been materially affected by the nationalpation of a number of large bank branch systems in California, either directly or by merger with existing national banks. These include the Bank of Italy of the part of the control of th an Francisco, the Pacific Southwest Trust & Savings Bank of Los Angeles, and the Security Trust & Savings Bank of Los Angeles, which had a total of 425 branches when the McFadden bill became a law. Therefore, it is found that lartly be a saving for the number of branches of national banks increased barry because of this fact the number of branches of national banks increased tom 390 on February 25, 1927, to 1,027 at the end of 1929, while the number of ranches of State bank members declined from 1,560 on February 25, 1927, to 1,027 at the end of last year. There has also been a considerable increase in the part the end of last year. There has also been a considerable increase in the part that the end of last year. the number of branches of nonmember banks, of which there were 950 on Febru-25, 1927, and 1,221 at the end of 1929.

Following is a summary showing the number of branch systems and the number of branches in operation on February 25, 1927, and December 31, 1929, by

classes of banks:

Class of bank	banks o	ber of perating ches	Number of branches		
	Dec. 31, 1929	Feb. 25, 1927	Dec. 31, 1929	Feb. 25, 1927	
Total Nan	822	779	3, 547	2, 900	
Aalional banks State bank members Mile bank nonmembers Mutual savings banks Private banks	166	145 189 387 50 8	1, 027 1, 299 1, 115 99 7	390 1, 560 863 76 11	

Developments since June, 1924.—The first complete statistics gathered by the board on branches of both member and nonmember banks were for June, 1924, at the property of the which time 714 banks were reported as operating a total of 2,293 branches. There was, therefore, an increase of approximately 600 branches in the three Pars preceding the McFadden Act, about the same rate of growth as has taken place since that act was passed. National banks at the end of June, 1924, were operating 248 branches, State bank members 1,137 branches and non-members 1,137 branches and member banks (including mutual savings and private banks) 908 branches. Of the total number of branches in operation in June, 1924, 785 were located outside the head-office cities and 1,508 in the head-office cities.

In the five and one-half years ending with December, 1929, there was an increase of 330 in the number of branches located outside head-office cities and an increase of 1,254 branches. This comparison is shown in more detail in accompanying

Principal branch banking States and cities.—The 3,547 branches in operation the end of 1929 were located in 30 States, 1,286 being located in 10 States in which State-wide branch banking is permitted by law or implication, 2,207 in the 12 States in which the operation of branches is permitted but restricted as to location, and 54 in 8 States in which the further extension of branch banking prohibited by law. There are, therefore, branches in operation in three-fifths the States, but the great majority of the branches are located in a relatively

few States, in fact two-thirds of the total number are in 5 States—California, New York, Michigan, Ohio, and Pennsylvania. Four other States, however, also had more than 100 branches in proceedings. had more than 100 branches in operation at the end of 1929—Massachusetts New Jersey, Louisiana, and Maryland.

What might be termed as "local" branches, i. e., branches located in the same city as the parent banks, are largely confined to a few of the principal cities of the country, in fact 10 cities account for 1,659 of 68 per cent of the total 2,432 local branches. The number of branches in operation in each of these cities at local branches. the end of 1929 was as follows

one city of rose tree to rose the	95

Philadelphia 133	Cincinnati	

Size of branch bank systems.—At the end of 1929 there were 18 banks that we operating more than 30 branches, the two largest being the Bank of Italy National Trust & Savings Association, San Francisco, and the Bank of America of California Los Angeles, both of which fornia, Los Angeles, both of which are controlled by the Transamerica Corporation group. These of the controlled by the Transamerica Corporation group. tion group. Three of the other large systems also belong to a single group, viz., the Peoples-Wayne County Bank, the First National Bank and the Peninsular State Bank of Defruit Mix Bank, the First National Bank and the Peninsular State Bank of Defruit Mix Bank, the First National Bank and the Peninsular State Bank of Defruit Mix Bank, the First National Bank and the Peninsular State Bank of Defruit Mix Bank, the First National Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank of Defruit Mix Bank and the Peninsular State Bank and the Peninsular lar State Bank of Detroit, Mich., which had a total of 158 branches at the end of 1929 and which are all part of the First National-Peoples Wayne County group. In addition to the 18 branch systems that were operating 30 or more branches at the end of 1929, there were all branches are the end of 1929. branches at the end of 1929, there were 41 banks operating 30 or more and 41 other banks operating 6 to 10 branches. More than half of the branch systems, however (448 cut of 822) branches. systems, however (448 out of 822) had only 1 branch each, 150 had only branches, and 124 had 3 to 5 branches.

On February 25, 1927, when the McFadden bill became a law, there were 12 branch systems with 30 or more branches.

The following list shows the large branch systems in operation both on Februs ary 25, 1927 and December 31, 1929, and the disposition made of those systems which were in operation when the McFadden Act was passed but have since merged with other systems:

	Number o	f branches
Location and name of parent bank	Feb. 25, 1927	Dec. 31,

56

Branches located in small cities.—In connection with the branches located outside the head office, numbering 1,115, or nearly one-third of all branches in operathe head office, numbering 1,115, or nearly one-third of an organization at the end of 1929, it is interesting to find that by far the greater number of these "outside" branches are located in small towns and cities. Of the 1,115 outside "branches are located in places that had less than 2,500 outside "outside" branches are located in small towns and cines. Of the 1,110 outside branches, 612 were in fact located in places that had less than 2,500 population in 1920, including 208 in California, 54 in Louisiana, 44 in Maine, 52 in Maryland, 46 in North Carolina, 34 in South Carolina, 32 in Tennessee, 28 in Virginia, 21 in Mississippi, and 93 in 15 other States. Besides these 612 branches located in places of less than 2,500 population, there were 136 branches branches located in places of less than 2,500 population, there were 136 branches in places that had a population of 2,500 to 5,000 and 86 in places with population of 5,000 to 10,000. There were 281 "outside" branches reported as being located in cities with a consistency of 10,000 or more, but this figure represents largely in cities with a population of 10,000 or more, but this figure represents largely branches of the state-wide branch systems in California whose headquarters are in San Francisco and Los Angeles but which have branches in such other large

cities as Oakland, Sacramento, San Diego, Long Beach, and Pasadena.

The first tabulation made of branch banking according to size of towns in which the branches are located was for June, 1928, at which time there were 572 branches are located was for June, 1920, of 2,500 or less. During the branches are located was for June, 1925, at which the table branches in places having a population (in 1920) of 2,500 or less. During the classing year and a half, therefore, there has been an increase of 40 in the number of heavy

of branches located in such small places.

Method of establishment of branches.—More than two-thirds of the branches that that were in operation at the time that the McFadden bill became a law were So-called de novo branches, i. e., established as branches in the first instance. Most of the remaining branches had at one time been in operation as independent banks, having been purchased and converted into branches, but in a number of instances the method of establishment was not ascertained. The number of de novo branches has increased by 383—from 1,996 to 2,379—since the passage of the McFadden bill, while the number of independent banks purchased and converted into the method of establishments. converted into branches (including branches for which the method of establishment was not reported) has increased by 264.

De novo branches of national banks numbered 635 at the end of 1929 out of a total of 1,027 branches; State bank members operated 967 de novo branches out of a total of 1,299; and nonmember banks (including mutual savings and private banks) 777 out of a total of 1,221. National banks show a considerable increase, since the passage of the McFadden Act, in the number of branches resulting from the conversion of independent banks, but this is due largely to the factories of the factori the fact that some of the large State bank branch systems nationalized or were

consolidated with national banks after the passage of the McFadden Act.

The following table gives a classification of the number of branches in operation on February 25, 1927, and December 31, 1929, according to method of establishment.

	Total branches	De novo branches	Independent banks converted into branches	Method of establish- ment not reported

Interstate branch banking.—There are two instances of banks operating branches in States other than those in which the parent banks are situated. The Bank of California, N. A., San Francisco, a conversion of the Bank of California into a national bank in 1910, operates I branch in Portland, Oreg.; I in Seattle, Wash, and I in Tacoma, Wash., all of which became branches of the Bank of California in 1905. Prior to 1905 they were branches of the London and San Francisco Bank (Ltd.), which was succeeded by the Bank of California. The other case is that of the First Camden National Bank & Trust Co., New Jersey, which operates a branch in Philadelphia. This branch originally came into existence in 1813.

Suspension or failure of branch bank systems.—On the basis of reports submitted to the Federal Reserve Board on bank failures or suspensions and on branch banking, it appears that during the 9-year period 1921–1929, a total of 41 branch bank systems suspended operations. These branch systems were operating 9 branches in head office cities and 71 branches outside such cities. The total deposits of the 41 banks and their branches were \$49,000,000. Five of the branch systems, 4 of which were operating 1 branch each and 1 operating 2 branches, subsequently reopened. Later one of the systems again closed.

Of the 41 branch systems that were reported as having suspended during the period 1921–1929, 29 had only 1 branch each, 6 had 2 branches, 2 had 3 branches, 2 had 4 branches, 1 had 5 branches, and 1 had 20 branches. The latter bank and its branches at the time of suspension were reported to have had deposits of \$2,805,000.

Following is a summary covering the suspension of branch bank systems during the 9-year period.

Number				Bran	nch systems	reopened

¹ This bank reopened but closed again and is not therefore included with the reopened banks.

State laws relating to branch banking.—The board's counsel, with the assistance of the counsel to the various Federal reserve banks, recently prepared an up-to-date digest (X-6528) of State laws relating to branch banking. The summary statement that accompanied this digest, in which the States are classified into four groups, is shown below. It will be noted that under the provisions of State laws, state-wide branch banking is permitted in 9 States; it is permitted within limited areas in 10 States; and in 22 States it is prohibited entirely (except as to branches in operation at the time the prohibitory legislation was enacted). Seven States have no legislation regarding branch banking, but this includes Kentucky, in which the establishment of additional offices or agencies is permitted under court decisions, and Michigan, where the State banking department has raised no objection to the establishment of branches in cities in which the parent banks are located. There were 28 branches in operation in Kentucky at the end of 1929 and 439 in Michigan, as compared with 13 and 401, respectively, on February 25, 1927, when the McFadden bill became a law. The District of Columbia is not included in this summary, but banks in Washington may establish branches anywhere in the district.

According to information which has come to our attention, four States—Mortana, Nebraska, Iowa, and West Virginia—have enacted legislation prohibiting the establishment of branches since the passage of the McFadden Act. The State of Georgia passed similar legislation in 1927, but in 1929 the law was again

anches Bank into a Vash.; fornis neisco r case which

itted ranch anch ating total anch ches,

tence

the hes, ank sits ems

ed ber hes

·i 2

5

amended to permit the establishment of branches in head-office cities, provided such cities have a population of not less than 200,000. In New Jersey the State law was amended in 1927 to permit the establishment of branches under the same conditions as govern national banks. In Pennsylvania, legislation was enacted in 1927 population the establishment of branches within the corporate limits of in 1927 permitting the establishment of branches within the corporate limits of these permitting the establishment of branches on March 1, 1927 those cities in which national banks were operating branches on March 1, 1927. In Vermont legislation was recently enacted permitting the establishment of agencies, which for all practical purposes seem to the be same as branches.

Summary of State laws

States permitting state-wide branch banking (9)	States permitting branch banking within limited areas (10)	States prohibiting branch banking (22)	States having no legislation regard- ing branch bank- ing (7)
Arizona. California. Delaware. Maryland. North Carolina. Rhode Island. South Carolina. Vermont. Virginia.	Georgia. ² Louisiana. ³ Maine. ⁴ Massachusetts. ⁴ Mississippl. ⁶ New Jersey. ⁷ New York. ⁴ Ohio. ⁹ Pennsylvania. ¹⁰ Tennessee. ¹¹	Alabama. Arkansas. Colorado. Connecticut. Florida. Idaho. Illinois. Indiana. Iowa. Kansas. Minnesota. Missouri. Montama. Nebraska. Newada. Newada. New Mexico. Oregon. Texas. Utah. Washington. West Virginia. Wisconsin.	Kentucky, ¹² Michigan, ¹³ New Hampshire. North Dakota. Oklahoma. South Dakota. Wyoming.

No provisions regarding branches, but state-wide establishment of "agencies" permitted.

City or municipality.
Municipality or parish.
County or adjoining county.
Same city.
Same city, town, township, borough, or village.
City limits.
Same city or city or village contiguous thereto.
Corporate limits of same place.
Corporate limits of same place.
No provisions regarding branches, but court decisions permit establishment of additional offices or agencies to receive deposits and pay checks.
Industrial banks may establish branches in city or village of head office, but no provisions covering establishment of branches by other banking institutions.

Nore.—Of the 2,432 branches located in head-office cities, 687 were operated by national banks, 1,163 by State bank members, and 582 by nonmember banks. Of the 1,115 branches located outside head-office cities, 340 were operated by national banks, 136 by State bank members, and 639 by nonmember banks

Mr. Wingo. Will the governor, just at this point, give us some totals? It seems that some of the information that he has supplied here, and which I have hastily glanced over, is so contradictory of the information we have had before, I think it ought to be pointed out at this time.

The CHAIRMAN. You can furnish that, Governor?

Mr. Wingo. Let him read it now. It is so contrary to what we

have been told before, I am startled by it.

Governor Young. According to the statistics just compiled, there were in operation in the United States, at the end of 1929, 24,645 banks and 3,547 branches, or a total of 28,192 banking offices.

Of this total of approximately 28,200 banking offices, there were 6,353 banks and branches that belonged to branch banking systems, to chain or group banking systems or to both. This leaves 21,839 banking institutions that might be definitely termed as independent unit banks, having no branches and being in no wise connected with other banks, through chain or group affiliation.

As a measure of the banking resources of the banks falling into the different categories, we have tabulated the figures of total loans

and investments.

On this basis, it appears that, at the end of 1929, all the banks in the country had loans and investments of approximately \$58,500,-

000,000.

it-le de y

11

150

On the same date, the branch, chain, and group banking systems, embracing a total of 6,353 banks and branches, had total loans and investments of approximately \$30,000,000,000 in other words, the banking resources of the branch, group and chain systems were more than one-half of the total of all banks in the country.

The branch banking systems, at the end of 1929, taken alone, embraced 822 banks and 3,547 branches, with aggregate loans and investments of \$25,100,000,000, but these figures include 119 banks with 1,415 branches with loans and investments of \$6,300,000,000 that were also reported as belonging to banking groups or chains.

There were 287 chains or group banking systems reported in existence at the end of 1929, embracing 2,103 banks, with loans and investments of \$11,200,000,000. These figures, like those given for the branch systems, include a certain amount of duplications; that is to say, they include 119 with 1,415 branches and loans and investments of \$6,300,000,000 which were reported as belonging to the chain or group systems. This duplication is, however, eliminated from the combined statistics given in the two preceding paragraphs.

Following is a table comparing them.

I might say, of course, those figures include the banks in the large metropolitan areas, such as New York City, that have branches. That is quite a lengthy report.

Mr. Wingo. In other words, includes all the banks?

Governor Young. Includes all the banks; yes, sir. That is quite a lengthy report, but I am sure that the committee will get much

information out of it.

The Chairman. Before we start general questions, that is a very important statement, indicating development in regard to chain and group banking, particularly, as well as branch banking. I am sure

we will be glad to have your views on what this development means to the Federal reserve system.

Governor Young. Well, in so far as the Federal reserve system is concerned, we have lost very little in the way of member banks through the group, chain, and branch development. That is not true of the national banking system.

SV

W

Is

la

The national banking system has lost quite heavily over the past two or three years, but most of these large set-ups, groups or chains, continue their membership in the Federal reserve system, and it has been my belief that the larger the set-up the more necessary the membership is to that set-up.

The first indication that the board has received of any loss of members through group and chain set-ups—and really branch set-ups—came in a letter this morning from one of the reserve banks, citing the members that they had lost because those banks had gone into a branch system. That was in the States where branches are permitted.

The Chairman. That were not members of the Federal reserve

System?

Governor Young. They were members of the Federal reserve system and many of them national banks. They have since gone into a branch banking set-up.

The Chairman. That was not a member of the Federal reserve

Governor Young. That was not a member of the Federal reserve system, and of course under the terms of the Federal reserve act it could not be a member of the Federal reserve system now.

The Chairman. Do you find, Governor, that in the operation of the Federal reserve system, the forms of these large groups, taking over independent banks, interferes in any manner with the operation of the Federal reserve system? In other words, does it permit as easy a cooperation as previously, or more so?

Governor Young. I would say just as much.

The Chairman. So far as the operation of the Federal reserve system is concerned, you do not note any particular change?

Governor Young. Except this one particular case I have cited this morning.

The Chairman. Where you have lost some members?

Governor Young. Yes, sir.

The Chairman. That was because members of the Federal reserve system were leaving the system and joining a system not operated under the Federal reserve law?

Governor Young. A branch system; yes, Had they gone into a chain or group system they would have remained. There are advantages, apparently, that the group and chain system do not give.

Mr. Fort. And the branch system overrunning the city limit does give?

Governor Young. Yes, sir.

The Chairman. The only reason, then, that such institutions are not members of the Federal reserve system is because of the limitation now in the law confining branches to the cities in which the parent bank is located?

Governor Young. Correct.

Mr. WINGO. I did not catch that.

The CHAIRMAN. The reason they are leaving is to join in a State system where they can carry on branches beyond the city limits in which the parent bank is located.

Mr. Wingo. I got the impression that you made the point that that was the exclusive reason. I happen to know better in one instance.

Is that the exclusive reason for it?

Governor Young. It was so reported to me, Mr. Congressman. I will correct that. It was reported to me, and I will give the exact language of the letter. It says:

There is reason to believe that all of these banks would have remained in the system but for the law prohibiting branches in their cases.

The Chairman. How many banks left the system on account of that one particular reason?

Governor Young. I will have to check that, Mr. Chairman. I got

that letter just before I came up to the committee.

Mr. Wingo. In order to follow the statement you put in a moment ago, I am correct in assuming that mere numbers of banks is not the thing you are looking to? You look more to strength in assets? that the main thing?
Governor Young. Yes, sir; but we look to both, of course.

The CHAIRMAN. I am going to suggest that we proceed in the regular order.

The first on the list is Mr. Strong.

Mr. Wingo. Is not the governor going to make a general state-

The CHAIRMAN. The governor filed his statement yesterday. Mr.

Mr. Fenn. I have not had an opportunity, Mr. Chairman—although that is probably my own fault-of going entirely through this statement. I just received it this morning. However, I have a few questions I should like to ask at this time.

Is there a general desire, as far as you know, in the country that the present banking system should be changed, radically changed; in other words, is there enough desire for that to warrant a change?
Governor Young. Well, Mr. Congressman—

Mr. Fenn. Or is there really a desire on the part of the great banking institutions to absorb the banking facilities of this country

and wipe out of existence the unit banking system?

Perhaps my question is a long one, but I think you will understand In other words, is there a general desire—a public desire—that there should be a centralization of banking to the exclusion-which would be a practical exclusion from the statements that have been made here—of the unit banking system? I do not say that is my position. I simply ask for information.

Governor Young. That question is debatable. There are two factions. There is the unit banker that wants to continue; there are

the group, chain, or branch bankers that want to expand.

Mr. Fenn. I am not speaking of the financial position of these representative groups-of these two groups-but take the individual; that is, in the aggregate. Of course, I presume that the unit banks want to continue as unit banks. I take that as a presumption.

Governor Young. Correct.

Mr. Fenn. And also I take it as a presumption that the great banks, so to characterize them, desire to do as much of the unit banking business as possible by absorption of the unit banks.

an

st

8

S

0

The CHAIRMAN. Your question is whether there is a public demand

for this or whether it emanates from the operating banks?

Mr. Fenn. That is what I wanted to get at so far as you know,

Governor Young. I doubt whether there is a popular public demand for group, chain, or branch banking. Traditionally we are

As I see the whole situation, Mr. Congressman, the group and chain banks have developed because of necessity, even though the law has not encouraged it to any great extent. It therefore seems to me a natural development and certainly these figures that I have given to the committee this morning must convince the members of the committee that this is a tremendous growth in the country that must come from some reason.

Mr. Fenn. Take, for instance, the great amalgamation in New York. I believe it has gone through. Take this amalgamation of the Chase National Bank and the trust company and the Interstate Bank. In its aggregate, the great amount of assets, capital, etc.,

would far exceed probably a thousand unit banks?

Governor Young. Far exceed the entire ninth Federal reserve

district.

Mr. Fenn. Now, what I want to know is should we consider the desire of this combination of capital, assets, and so forth to be the wish of the public of New York City, for instance?
Governor Young. I do not know, Mr. Congressman.

Mr. Fenn. I did not suppose you did. I presume that before the

hearing is over that will be presented to us.

Now, I notice here in just casually glancing at this statement, in relation to the history of branch banking in this country, it refers to branch banking, I believe, in Mr. Platt's address previous to 1860. Has anybody considered that a successful system?

Governor Young. If I remember correctly, the national banking

act

Mr. Fenn (interposing). That was passed in 1860.

Governor Young (continuing). Was passed in 1863 and gave some very decided advantages to the unit system, under a national charter. Mr. Fenn. In other words, they rather took away the branch

banking system and encouraged the unit banking system?

Governor Young. I think that is correct.

Mr. Fenn. Was not that due to the sad experience that the country had gone through in connection with the branch banking system, before the Civil War? It seems to me there was a natural inference

Governor Young. It was either that or a war measure.

Mr. Fenn. Of course I think you are quite correct in saying that the national banking system was induced by the war, in order to stabilize the money of the country?

Governor Young. I think so.

Mr. Fenn. What I have to ask, Governor, is simply for information and not because of any position I have taken in the matter.
The Chairman. Mr. Beedy.

re.

Mr. BEEDY. This material has just come to my office, and I am not prepared, at this time, to ask any questions.

The CHAIRMAN. Mr. Hooper?

Mr. Hooper. I have not had an opportunity yet to read the statement of the governor.

The CHAIRMAN. Mr. Letts?

Mr. Letts, Mr. Chairman, I have just one question to ask at this time. It is twofold.

Governor Young, would it be desirable, if a way can be found to accomplish the result, to separate banking activities from all other

activities that are now indulged in by banking groups?

My thought is this: I have noticed a tendency on the part of banking institutions to go into many lines of business—the handling of securities; the handling of mortgage business; agencies for the sale of real estate-to the point that I understand the Transamerica Corporation has announced that it has the necessary funds to put over any enterprise that they wish to take hold of.

They have included in their enterprises, insurance, which I think embraces every branch of insurance. It seems to me that this evidences the tendencies of the time and I am wondering whether it would be desirable, if possible, to separate these activities, so that banking activities will stand alone, and if it is desirable, whether you have any suggestion as to how that result might be accomplished.

Governor Young. That is an extremely difficult question to answer, Mr. Congressman, because it is very hard to unscramble. national law has permitted many things in the way of fiduciary powers, in handling securities, and so forth. It has been in operation

a great many years.

Many of the banks have learned that they can operate those to advantage with independent corporations. They have developed and they are here with us. There are many things in the group and chain banking that must necessarily be in the experimental stage. I think that is one of the reasons that there has been hesitancy on the Part of the Federal Reserve Board to commit itself one way or the

In reply to the second part of your inquiry, I say that I have nothing at the moment to suggest to correct that situation, if it

needs correction.

Mr. Letts. Is there danger that a policy of this kind will lead to the point where financial institutions will serve themselves and their affiliates and not the public?

Governor Young, I doubt that very much. These large

groups-

Mr. Letts. In other words, will they compel men in business as individuals or in corporate capacity, to play hand in hand with the

financial groups, in order to get necessary accommodations?

Governor Young. I doubt that very much. It seems to me that that would be a very short-sighted policy on the part of large groups and others, and if business and commerce and agriculture are not served in a credit way by the large corporations and set-ups, something else will be developed to take their places, because those industries have got to be served, and it seems to me it would be a very short sighted and disastrous policy on the part of those large groups to do anything along those lines.

Mr. Letts. My concern is in regard to the powers that may be acquired through the policies of holding companies that sit back of the screen and control the activities of the banking institutions in a community and many other lines of industry. It is conceivable it may even go to the point of involving the control of companies that are engaged in the distribution of our foods and other necessaries of life.

Governor Young. That is a possibility, but, in my opinion, highly improbable.

Mr. LETTS. That is all I have at this time, Mr. Chairman.

The CHAIRMAN. Mr. Wingo.

Mr. Fort. Mr. Chairman, I should like to know whether we are to come along with our questions later. I notice that you have skipped us on this side.

Mr. Wingo. Mr. Fort, for your information, I asked for unanimous consent to waive the rule in behalf of you gentlemen who have been detained. However, I shall be pleased to have you go ahead now.

Mr. Fort. No; I should like to have you go ahead. I would prefer that. I just wanted to know the practice.

Mr. Wingo. Governor, I notice in the table that you have inserted in the record, giving the number of banks or branches and also the loans and investments, that the total number of banks is given as 24,645. The total number of branches is 3,547.

Now, of that number, there are 1,984 group or chain banks that do not have any branches. Those chains and groups are located principally in what States, Governor?

Governor Young. Michigan, Wisconsin, Minnesota, North and South Dakota, Montana, Wyoming, Nebraska, Iowa, Utah, Oklahoma, and the New England States.

The CHAIRMAN. And the State of Georgia?

Governor Young. I will have to check that. My answer to that would not be correct.

Mr. Wingo. The table will show that?

Governor Young. Yes, sir.

Mr. Wingo. Now, there are chain and group banks operating in the State of New York that do not have branches, are there not?

Governor Young. I will ask Mr. Smeed to correct me if I am wrong. I will say yes, there are groups in the State of New York that do not operate branches.

Mr. Wingo. The State of New York authorizes branches of State institutions, does it not?

Governor Young. It does.

Mr. Wingo. Now, some of these chains and groups are not confined in their operations to one State, are they?

Governor Young. That is correct.

Mr. Wingo. In other words, for illustration, there is one group whose headquarters are at Nashville, Tenn., that has chains and groups covering more than one State—Tennessee, Arkansas, and possibly some other States. That is true, is it not?

Governor Young, And Kentucky-that is true; ves sir.

Mr. Wingo, And those chains and groups are among those that have no branches.

Now, I notice that the banks that belong to chains or groups that operate no branches have loans and investments of \$4,913,000,000.

Now, I notice that you also have 119 banks that belong to chains or groups and also these 119 banks operate 1,415 branches. Some of the larger of thse banks-these 119 banks-are located in New York, are they not?

Governor Young. In New York City?

Mr. Wingo. New York State, which would include, of course, the city of New York.

Governor Young, I am not sure.

Mr. Wingo. Now, I am asking for information, Governor, and if you are not sure-

Governor Young. I am not sure. I do not think that would apply

to New York City.

Mr. WINGO. You do not think there is any bank in New York City that has both a chain or group controlled by it or by the same group and also has branches either of the parent bank or of some of the banks that belong to the group or chain?

Governor Young. I do not think so, but I am not sure of that.

Mr. Wingo. Now, Governor, do not think that I have taken any definite position in this matter. I am simply trying to get information in every question I ask. Will you undertake to ascertain and furnish, for the record, at the close of your testimony here, this information-those States which have the larger or the most important ones of these groups and chains which also authorize branch banks by their State laws, if any. Do you catch the question?

Governor Young. I do. The CHAIRMAN. Might I suggest if that is already covered in the Papers submitted, you make reference to the part where that appears.

I think that will save duplication.

Mr. Wingo. If it is covered, why it is not necessary to duplicate it.

Governor Young. It is covered in there.

Mr. Wingo. In other words, this statement you are going to perfect and put in, will show the States, whose State laws authorize branch banks that have located in them banks which are group and chain banks but which have no branches, and will also show those States which authorize branches and in which these 119 banks, which are chain and group banks and also operate branches, are located?

Governor Young. Yes.

Mr. Wingo. Will it undertake to show, though, the larger ones of

these banks measured by assets or loans and investments?

Governor Young. I think your entire inquiry is covered by that report. But, if it is not, we will supplement it and give you all the

information.

Mr. Wingo. I doubt if your tabulation will show the last item, which possibly you did not catch, and that is this: In what States are located the outstanding groups, measured by loans and investments, and in what States, naming the principal outstanding groups and chain banking systems and giving their loans and investments-

Governor Young. I think that is all in there.

Mr. Wingo. I do not think it will give the individual chains and

Governor Young. I think it will.

Mr. Wingo, Mr. Chairman, suppose I devote no more time to that until I get a chance to examine the data. Possibly it will save some duplication. I will go on now with something else.

Governor Young. Does not this show that [exhibiting]?

Mr. Wingo. Will it indicate which of these groups or chains in these States—indicate which States authorize branches?

Governor Young. That exhibit is a complete digest of all the States

n

it

li

C

a

n

of the Union.

Mr. Wingo. But you have to wade through that to make a tabulation. If it is already tabulated in there, all right. However, suppose I lay off of that, because possibly all those things may be disclosed there.

I caught, from the statement you made awhile ago, that you feel that the fact that there has been a development of branches—branch banking and chain banking and group banking in this country-that that indicates there is a sound banking reason for such development.

Governor Young. I think so.

Mr. Wingo. The outstanding fact in your tabulation, according to the first page of it, is that over one half of the resources of banking in the United States is now in banks that are either group, chain, or That shows the growth of those three types of bankbranch banks. ing as contradistinguished from the independent unit bank?

Governor Young. Correct.

Mr. Wingo. The independent unit banks are only superior in point of number of individual banks?

Governor Young. Correct.

Mr. Wingo. Measured by assets, power, and influence, the chain, group, and branch systems have already taken over the banking business of the United States?

Governor Young. Yes, sir; taken over over half of it.

Mr. Wingo. And you also suggested, in response to a question-

Governor Young. May I correct that answer?

Mr. Wingo. Yes.

Governor Young. You may have a bank in New York City with total resources of \$500,000,000, classified as a unit bank. Up to the moment it establishes a branch, which it has authority of law to do-while that still has all the earmarks of a unit bank, independently operated, the fact that it has 1, 2, 3, or 4, or 5 branches, involving three, four, or five million dollars, it comes within this classification of one-half of the assets of the United States.

Mr. Wingo. Of course, the old law of relativity covers everything when you come to measuring influence, power, and assets; and it 15 true that the largest part of the banking assets of the country are to be found, naturally, in the large business and commercial centers

of the country?

Governor Young. Yes, sir. Mr. Wingo. New York, Chicago, Kansas City, St. Louis—these large industrial centers where there is large business, which naturally and legitimately demands large credits. Naturally the large banking facilities will be congregated there?

Governor Young. Yes, sir.

Mr. Wingo. Because the credit facilities have to be close to the business it serves?

Governor Young. Yes, sir.

Mr. Wingo. Is there anything in this contention that has been made that as the business of the country proceeds along the line of its apparent present tendency to be gathered into the hands of larger units—for illustration, in the automobile industry, such a concern as General Motors and in the steel industry, such concerns as the United States Steel Corporation and the Bethlehem—that they are forced to do that by what the proponents of such development contend is the economic necessity to have mass production and the economies that flow from large units and all such things as that—I say, is there anything to the contention that, as the natural development in the business and industrial world takes place, that that carries with it a corresponding demand for greater capacity of the individual credit agency to meet the needs of these larger business units?

Governor Young. There seems to be very strong evidence of that,

Mr. Congressman.

Mr. Wingo. In other words, where a business is done by larger units on larger scales, their credit demands come in what you might call larger blocks, which a small bank, by reason of its proper limitations, could not meet and serve?

Governor Young. That is true; but, on the other hand, the large unit can not neglect the small borrower. It has got to serve that small

borrower as that small borrower has been served in the past.

Mr. Wingo. Do you think it is correct, as contended, that even though these larger units will naturally better serve the public, the larger units of banking will better serve the larger units of commerce and industry and will also be in a better position to serve the needs of the smaller business man and smaller corporation?

Governor Young. I think it would be a very short-sighted policy

on their part if they do not do it.

Mr. Wingo. I am talking about their capacity now?

Governor Young. I think they have the capacity to serve the small

borrower.

Mr. Wingo. It is contended by men whose capacity and character command respect, that the natural tendency of our industrial organizations will necessarily compel the grouping or rather the vesting of banking capital and banking activities in larger units in the 25 or 30 large industrial centers of the country and they in turn—these larger units in these different industrial centers, in those particular industrial centers—will furnish the necessary competition to insure service aside from the natural desire to profit by the service extended; that also these larger units of banks, through the branches that they will establish in the smaller cities and towns in their particular trade area, zone or whatever you may call it—that the furnishing of these branches by these different large units in these centers, the competition between those larger units in establishing branches, will also protect the small cities and towns against the evils of monopoly.

What is your opinion about that?

p

Governor Young. I believe that is correct and, in addition to that, we must remember that there are many unit banks left in the United States. They are large in number and cover a wide area, and particularly in the territory that I am familiar with, the Northwest, embracing some 2,700 banks. There are still 2,500 individual unit banks in this territory.

Mr. Wingo. Will not those large unit banks be compelled, by necessity, to meet competition by establishing branches in their territory?

Governor Young. You mean county-wide?

Mr. Wingo. Whatever area you may have. Candidly, I think the development with reference to geographical lines will be one that will be determined by necessity and the development of our economic structure, rather than any arbitrary rule of statute; in other words, the statute will be made to conform to the necessities.

Do you not think the large unit banks, when they are face to face with this competition of the branches of the larger systems, will be compelled, in order to meet the needs of their clientele, to establish branches?

To give you a concrete illustration, we will take two banks in the city of Chicago. One of them is a large independent unit bank, to which you referred. The other is a large bank that has branches. They are competitors. Each one is going after the business, say, of an industrial concern located in a small outlying city or town. The bank that has branches will say to these business men over there, the owners of the factories or whatever they are:

We can give you better service than our competitor because we have a branch bank in your own town.

Will not the independent unit bank, in order to meet that competi-

tion, have to establish a branch in that town?

Governor Young. That has happened in many cases, but in many cases it has not. The territory that has had branch banking longer than any other section is probably California. The unit banker there is still able to operate profitably and has not been forced into any competitive group.

It is very hard to say what the future will bring forth.

Mr. Wingo. Have there not been complaints from some unit bankers, or suggested by some independent unit bankers in California, that they have lost some of their good customers in outlying towns where a branch bank was established in that outlying town and that they had to choose between the necessity of establishing branches or losing the business? Has not that been the contention of at least one independent unit banker in California?

Governor Young. Not that I know of.

Mr. Wingo. Is there not a general rule, applicable to banking, as well as other activities that, in competition, the giving of the thing that the customer wants, either in quality of quantity—but measured in the banking business mostly by service—is not that the thing that controls the flow of the business?

Governor Young. Absolutely.

Mr. Wingo. I mean the general thing. Of course, in that community, you may have some outstanding man that, by reason of his character and integrity, will maintain a small shop beside a large-

department store; yet, as a general rule, the business concern that gives the greater amount of service, either of quality or quantity, gets the business?

Governor Young. That is correct.

Mr. Wingo. That is a natural tendency in the present competitive field, is it not?

Governor Young. Yes, sir.

Mr. Wingo. Now Gresham's law operates just inversely in the business field—the good service drives out the bad?

Governor Young. Yes, sir; correct.

Mr. Wingo. And so far as money is concerned, bad money drives out the good?

Governor Young. Yes, sir.

Mr. Wingo. In the business competitive field, Gresham's law is reversed, and that business concern, whether an automobile factory or a steel business or a department store or a bank, that gives the greatest measure of service, either quality or quantity, naturally outstrips its competitor that does not match that service? Is not that true?

Governor Young. Yes, sir.

Mr. Wingo. There are exceptions, of course.

Governor Young. Yes, sir.

Mr. Wingo. You suggested awhile ago that there are some States where you lost banks from the system because they could not establish branches and you indicated or said that there were some advantages in branch banking that did not obtain in group or chain banking. I have had urged on me by group and chain bankers two major reasons why they would like to change from chains or groups into branches. Those two major reasons are that it requires less capital. That is one—that it requires less capital for the same volume of business; and secondly, they could have a more efficient control of the business by reason of the elimination of the cumbersome local directorate that now dominates their local banks which are members of the chain or group, and substitute for it more efficient centralized management that would give the public quicker and more efficient service.

Now, those are their two contentions. Can you name any other advantages that you conceive, and which the advocates of branch banking conceive, to be an advantage of branch banking over chain

and group banking?

Governor Young. Economy of operation.

Mr. Wingo. Well, that is included in the first or in the latter, rather.

Governor Young. Yes.

Mr. Wingo. Suppose you just name the advantages you think

branch banking has over chain and group banking.

Governor Young. I will repeat those two that you cited, and add economy of operation, and in so far as the local loans are concerned, in a local community, the local directors can handle those very nicely, perhaps much better than the parent officers can handle them; that is, assuming that the local directors are conservative business men. With the surplus funds that the branch has, obviously the man in the center is more familiar with the bond market and more familiar

W

F

8

with the bill market, and he can invest much more advantageously than the small local man.

Another reason that I can give is that the national banking act has permitted national banks to exercise fiduciary powers. In my opinion, there is a tremendous field in the United States for that work; It may take a long time for it to develop. It is a highly specialized work. Many of the smaller banks are not thoroughly equipped to

handle it the way they should handle it.

A large branch set-up can afford to employ the proper kind of men to handle that, and it seems to me, with a branch banking set-up in the United States, with the assurance of proper administration of fiduciary trusts, there is a tremendous opportunity for branch banks to develop a business that will be profitable for many years to come, a business that the small local bank can not always get. That procedure has already been adopted by both the large groups in the Northwest.

Mr. Wingo. Then I presume also, along the line you have just suggested, that a smaller bank attempting to act in a fiduciary capacity, not only would be limited in its activities-it could not undertake to act in such capacity except on a smaller scale-but you also would include the element of greater safety that is to be found in the

larger capitalized institutions? Governor Young. In making that statement, there is no reflection on the small country banker. My sympathy is with him, but a highlytrained man could render greater service than the small country

banker could afford to employ.

Mr. Wingo. I am trying to get your judgment on the contention of those who come to me, and say, "Now, Wingo, you are opposed to chain, group, and branch banking. I agree with you in theory, but we are facing a condition and not a theory." He points to the facts disclosed by your table here, that the great bulk of the assets of the banking institutions has already gone into that type of banking, which is other than the old individual unit type of bank; that there are good, sound reasons why that is done. "Now, why not legislate," he contends, "in the face of this situation, regardless of theory, recognizing existing facts and trying to arrive at what is best, by way of legislation, in shaping this trend, so as to protect the public and the depositors, and insure that banks, which are credit merchants, which render the fundamental duty of credit merchants, render the greatest possible service to the business world?"

Now, in connection with that fiduciary capacity, is it true that, as contended by some, there is less danger of a larger bank being per-

mitted to fail than there is of a small bank?

I do not know whether you grasp what I mean or not. Here is a large bank where it would be represented to the comptroller and the Federal reserve bank that if you permitted this large bank to fail, serious consequences would follow, that it numbers among its correspondents, say, 80 banks. I remember a case in Topeka, Kans-I believe, a few years ago, where the Federal reserve bank was urged to save one bank that there was a run on, because they said that it had a large number of correspondents and if the bank was permitted to go down there was no telling where the crash would lead to. It was like a row of 10 pins; if you knocked down one pin, you knocked

down the whole thing, and it was argued that that was a different situation from that of a small unit bank, whose failure would be confined in its evil effects to a very small area.

Is it true that that is a reason why it is less probable that a larger

bank would be permitted to fail than a smaller one?

Governor Young. I would not want to give that as a reason, Mr. Congressman, as a public official and the operator of a reserve bank. I would want to believe that I gave just as much consideration to the small as to the large bank, and I thoroughly recognize the seriousness of the failure of a large bank. Of course, I will have to admit that a large bank, with a number of correspondents, going down not only carries down that bank but seriously cripples the correspondents and perhaps brings some of them down. Whether unconsciously we give more consideration to a large bank or not, I am not prepared to say.

Mr. Wingo. I am talking about the fact that inconsciously men naturally will treat with greater concern and will take greater risk in a situation where there is greater welfare involved or greater evil threatened than they will in connection with smaller things. That

is human nature.

Governor Young. That is human nature; yes.

The CHAIRMAN. Mr. Fort.

Mr. Fort. Governor Young, I want to ask you one or two general

questions preliminarily.

Is the function of the Federal Reserve Board, as you view it, that of controlling the policy of banking generally and the forms of codes of banking, or is it simply to administer definite, prescribed duties?

Governor Young. I would describe the board, Mr. Congressman, as a central body with certain supervisory powers and many regulatory powers, that functions more and more in accordance with the intent of the act and the traditions of our country when it operates as a coordinating supervisory body rather than an administrative body.

Mr. Fort. Then that implies really a function to advise Congress as well as to advise banks, does it not, as to what is proper banking?

Governor Young. I think the function of advising banks as to what is proper banking is a function that comes under the supervisory powers of the Comptroller of the Currency rather than the Federal Reserve Board.

Mr. Fort. But you have State banks also as members of your

system.

Governor Young. Generally speaking, that is left to the super-

Visory authorities in the many States.

Mr. Fort. But you have not answered whether you feel you have a function to advise Congress as to what, if any, changes should be made in the code of law governing national banks and the Federal reserve system in its power over State banks.

Governor Young. I think we not only have the function, but we

have a duty.

Mr. Fort. Is there any concurrence of opinion in the board at the present time toward recommending to Congress any changes in the banking code, either as it relates to national banks or as it relates to State member banks of the system, or as to the powers of the board over either of those types of banks?

Governor Young. The board has sent, both to the Senate and the House, during the past two or three years, recommendations for changes in legislation, largely technical, in connection with—I am going to say offhand—14 or 15 amendments since Christmas of this year. The board is not prepared to make any recommendation to the Congress of the United States in reference to this question of branch, group, or chain banking, as was stated in my letter the other day.

Mr. Fort. Yes; I understood that.

Governor Young. My colleagues preferred to see the results of this investigation, and they preferred to make a further study with their own committee before making any recommendations, and I would like to have it understood by the committee here this morning that any statement I made was as an individual and not an expression on behalf of my colleagues or an expression of the titular head of the Federal Reserve Board, known as the governor.

Mr. Forr. You not only have no recommendation as a board on matters of the general code of banking, but you have no recommendations as to any change in the powers of the board itself dealing with above of a conditions?

changed conditions?

Governor Young. The board, if I remember correctly, and you will find that in the brief submitted, recommended several years ago that it be given certain regulatory powers in reference to development of group and chain banking.

Mr. Fort. Are those now renewed?

Governor Young. No, they are not; not at this time.

Mr. Fort. I notice-

Governor Young. If I may just go ahead and finish this-

Mr. Fort. Certainly; go ahead.

Governor Young. The Federal Reserve Board, under the Federal reserve act, if we read it correctly and interpret it correctly, has almost unlimited powers in dealing with reserve banks which, fortunately, the board has very seldom exercised.

I think that completes the answer to your original question.

Mr. Fort. I notice on page 56 of your memorandum a reference to a condition which the board had prescribed in its 1924 regulations relating to State banks, which provided that they should not consolidate without the permission of the board, nor absorb nor purchase the assets of other banks, nor directly or indirectly, through affiliated corporations or otherwise, acquire an interest in any other bank in excess of 20 per cent of the stock; and I notice further that on the same page you say that as a result of the amendment of section 9 of the McFadden Act, there is some doubt whether the board now has authority to prescribe this condition and therefore it has been unable to exercise the same degree of control over chain banking, and yet the regulation which I have quoted from has now been changed, as set out on page 57, so as to eliminate all reference to the acquisition of control indirectly by any State bank or trust company.

I take it from the occurrence of that language in the memorandum that you now feel powerless to deal with the acquisition of control through affiliate corporations?

Governor Young. Correct.

Mr. Fort. Do you feel that you should have that power conferred

he

m

is

to

e

Governor Young. I think that my colleagues would prefer to see the conclusions of this investigation and their own investigation before asking for it again.

Mr. FORT. Even as to the grant of power? That does not require

its exercise.

Governor Young. On the theory, Mr. Congressman, that it is hard to unscramble. Earlier this might have worked to our advantage, but this has all taken place.

Mr. Fort. It is not a complete process yet, is it? I mean that there are still further possible absorptions through affiliates or otherwise, are there not?

Governor Young. That is true.

Mr. Fort. I am not now asking you whether you feel we should diretly legislate to enact the particular thing that was your old regulation, but I am simply asking you whether you feel we should relodge the power in your body to make such a regulation if in your Judgment such regulation was desirable?

Governor Young. Under the present conditions and what has

developed, individually I would say no.

Mr. FORT. In other words, you would feel that it was wiser to leave no power anywhere except in Congress to interferre with it?

Governor Young. Correct.

Mr. Fort. If Congress, as a matter of policy, however, felt that it was undesirable to permit this further extension of acquisition of control, would you feel that we should directly legislate upon it and make it always illegal, or that we should confer upon you the power to determine whether it should be allowed or not be allowed?

Governor Young. In other words, that would make it mandatory with the board, or discretionary? I would like more time to think

that over, Mr. Congressman. Mr. Fort. All right, sir.

Governor Young. I am not trying to be evasive on these things. Mr. Fort. I understand that. I appreciate that in your official

Position you should be very slow to express opinions.

We have had some indications, some of us, that a condition is Possibly arising in some-perhaps only one at the present time-of the Federal reserve districts where control of the elections of the directors of the Federal reserve banks is being in effect vested in one or two holding companies. Would you feel that it was desirable that such a condition should be permitted by law?

Governor Young. Could you state the district you are referring

Mr. Fort. I have refrained from injecting names into this discussion where possible, but I can do so very easily.

Governor Young. I think I can answer that without having any

Specific district.

I think the combination of certain groups, with what they now have, could elect two of the nine directors of the Federal reserve bank. theoretically. Through their influence, they might go beyond that, but I do not see how those groups could elect and maintain a control of the Federal reserve bank.

Mr. Fort. Is it or is it not possible under the law and the method of the selection of the directors that a group or two groups—and, of course, if two could, one could—could acquire sufficient control in a district to enable them to directly influence the election of a majority of the directors of the Federal reserve bank of that district?

Governor Young. If they owned and controlled more than half of the member banks of that district, they could do it; otherwise not Mr. Fort. Is that a condition that we should permit to happen?

Governor Young, I think that the supervisory and regulatory powers of the Federal Reserve Board are such that if there should be any abuse whatever of the powers of those directors, the board would be in position to correct it very quickly.

Mr. Fort. Is it a sound practice to permit, even though the evils resulting from it might thereafter be corrected?

Governor Young. I do not think it is possible, Mr. Congressman. Mr. Fort. For one group to acquire such control?

Governor Young. No. Mr. Fort. Why not?

Governor Young. They would have to own half of the banks in the

district in the first place, member banks.

Mr. FORT. You just said that a single bank in New York City is to-day larger than the entire resources of one whole Federal reserve district. Why is it not possible for a single holding company to acquire complete control in a district?

Governor Young. It is possible.

Mr. Fort. If they thought it desirable?

Governor Young. Yes.

Mr. Fort. And were willing to pay the necessary price?

Governor Young. Correct.

Mr. Fort. Would you feel that that was a condition that we should

leave as a possibility? Governor Young. That is possible, but highly improbable, in my opinion. If it should develop, legislation could correct that very

I see no necessity for it at the moment. Mr. Fort. Except that it is more difficult to unscramble than to

let it be set up, as you very properly said?

Governor Young. Well, not in a case of six directors that are elected.

Mr. Fort. But I mean that the ownership and control of the banks that do the electing, once acquired, is very difficult to-

Governor Young. Oh, yes; it is hard to unscramble.

Mr. Fort. You have said that there is no fear of the large banking systems leaving the Federal reserve, have you not?

Governor Young. Yes; that is my opinion.

Mr. Fort. You think that we are in a fairly favorable position to stiffen up any regulation that we may think needs stiffening without the fear that by so doing we will weaken the Federal reserve system's membership, substantially?

Governor Young. It might be so drastic that it would force some of them to move out. For instance, if legislation forcing the unscrambling of some of these groups should develop, it might result in serious loss to the Federal reserve banks in the way of members.

Mr. Fort. Which it seems might be a further reason for legislation before the scrambling went so far as to make the unscrambling impossible.

Has the Federal Reserve Board as a board given any consideration to the very rapid entry of banks into the investment business, either

directly or through affiliates?

Governor Young. It has given consideration to it.

Mr. Fort. But is has no definite policy to recommend?
Governor Young. Correct. It has felt that it is one of those things that the board is powerless in, the same as the comptroller's

thod

1?

Mr. Fort. Does the board, or do you, individually, have any opinion as to the soundness as a banking function of the purchasing and selling of bank stocks by banks, for the account of the bank, which is permitted now by some States in connection with their Danks?

Governor Young. That is confined, is it not, Mr. Congressman, to

Preferred stocks?

Mr. Fort. No; not in all States.

Governor Young. Are there not some restrictions?

Mr. Fort. The laws of the different States, as I understand it. differ on that point. I would be very glad if, as a part of your testimony you could give us a digest from your records of the State laws on that question.

Governor Young. We have State laws regarding the ownership of

bank stocks by holding corporations.

Mr. Fort. I am not speaking of stocks held by holding corporations. In my own State, for example, one State bank or trust company can own stock of another bank, State or national, in its own name; it can own the stock of an industrial corporation or a railroad, and I would like to have a digest of the laws on that throughout the United States, if I can have it.

Mr. Wingo. Would it not be wise if you not only had a digest which would show the laws of the States separately with reference to ownership of other bank stocks, but also a separate digest which would show the different laws of the States with reference to owning stock

generally?

Governor Young. That will be prepared for you, Mr. Congressman.

Mr. Forr. I will be very glad to have it.

Governor Young. In reply to the other part of your inquiry, Mr. Congressman, I will report that the Federal Reserve Board in the Past, when it has admitted a State bank to membership, in exercising Its statutory authority has usually laid down a condition of membership which prohibits that bank from acquiring stock in another bank except with the permission of the Federal Reserve Board.

Mr. Fort. That is, as to future acquisition. Governor Young. The board, however, has never issued any regulation or requirements in reference to acquiring stocks in other corporations.

Mr. Fort. What I am trying to get at is whether, in your judgment-for which I have a very high respect-the dealing in stocks is a proper banking function.

Governor Young. I would say, Mr. Congressman, that the buying and selling of stocks for a profit and turning them over is not a proper function for a bank. The investment of all surplus funds in seasoned stocks and bonds solely for the income might be a proper function for a bank.

pr

ea

ex

W

Co

W

as

m

r

Mr. Fort. Along with that, then, if the buying and selling for the purpose of profit is not a proper function, is the underwriting of large issues and the merchandising of them a proper banking function?

Governor Young. National banks are not permitted to do that. Mr. Fort. No, sir.

Governor Young. Some State banks are.

These inquiries come to me out of a clear sky, Mr. Congressman,

and I would like a little more time to think that over.

Mr. Fort. And, while you are thinking that over, because I am going to ask you some more questions on that, or I will ask them of some other member of the board, would you also consider the propriety and wisdom of it being done indirectly through the security affiliate which is in the public mind tied in with the bank, if it is not a proper function for the bank itself to do, because that is being done by national banks as well as State banks?

Governor Young. Well, I am going to ask for a little more time

on that.

Mr. Fort. I will gladly concede it, as I have been thinking about it for several years and have not reached a final decision in my own

We have had some testimony from Comptroller Pole on the need of branch banking in country districts because of a lack in part of the difficulty of maintaining a bank with adequate capital in small towns because of the lack of profit possibilities in these small towns. That is perfectly sound, I think. I wonder if there is in the record yet, or in any of the exhibits you have given us, any statement of the profits actually made by banks by any classification as to size, of the percentage of profit on invested capital—or if such a thing could be gotten up for us?

Governor Young. Not in anything that has been submitted by me. Did the comptroller's office furnish anything along those lines?

Mr. Awalt. We have some information in regard to their earnings, classified by States.

Mr. Forr. But not by size of banks?

Mr. Awalt. Not by size of banks, I am sure.

Mr. Fort. I wonder if it would be too difficult to get for us some information as to the banks in the various capital classes, with some range—I do not mean each size, but the smaller banks and the banks of over half a million dollars, and the banks of over \$5,000,000, as to their percentage of profit on invested capital?

Governor Young. Doctor Goldenweiser informs me we have pub-

lished that from time to time.

Mr. Fort. We would be glad if it could be put in the record.

The Chairman. Without objection, it will be put in the record at this point.

(There was no objection, and the information referred to will be printed at the conclusion of Mr. Young's testimony.)

Mr. Awalt. The comptroller has some confidential information on earnings, I think, that he wants to lay before the committee in executive session some time, but I do not believe that he wants the information he has along that line to go into the public record.

Mr. Fort. The Federal reserve figures would show State banks as well as national banks, and they would be more useful than the

comptroller's figures alone.

There has been a complete transformation in banking practice in the larger towns, has there not, Governor Young, in the last few years, with respect to the shift from loans on name paper to loans on secured paper?

Governor Young. Yes; there has been a very large change in the

assets of the banks.

per

ned

ion

the

rge

an,

am

0-

ty

ne

H

Mr. Fort. And that shift necessarily requires the banker to be a man who has some understanding of securities and of their fundamental values, does it not?

Governor Young. Yes, sir.

Mr. Fort. And in contrast to the old-fashioned banker, who could rely entirely on his Dun and Bradstreet and his judgment of character?

Governor Young. That is correct.

Mr. Fort. That may furnish some sound reason, may it not, for larger institutions having a contact with the investment and securities phases of modern banking spreading out into the districts where that type of information is not so readily accessible?

Governor Young. That is correct.

Mr. Fort. And also perhaps furnishes us some basis for branch banking. The better information that a large institution is able to get on securities and security values would be a possible reason in sound banking for the larger institution itself to exist.

Governor Young. I believe that is an accurate statement. It is like all of those statements, however; there are some exceptions to it.

Mr. Congressman.

The Chairman. Would you permit a question at that point?

Mr. Fort. Yes.

The Chairman. I was interested in the colloquy that has just taken place, and I ask you how much of that change from eligible paper to notes secured by investment securities was caused by the banks themselves, or has it been caused by a more intense development of investment banking and distribution of securities?

Governor Young. I would say it is caused by more intensive

development of the securities business.

The Chairman. In other words, industry has changed its method of financing itself from the old method of borrowing on its own notes to that of securing its financing through investment houses, which results in the issuance of securities, but which ultimately gets back into the banks?

Governor Young. That is the way I see it, Mr. Congressman.

The Chairman. That, of course, then is a changed situation which confronts the operation of the Federal reserve system, is it not, in getting more investment securities into the system rather than

commercial paper and eligible paper that was issued as a direct result of settlements of trade transactions?

Governor Young. When you say in the system, do you mean the members of the system?

D8

it.

p

n

The CHAIRMAN. Yes.

Governor Young. That is correct. Mr. Wingo. Mr. Fort, in connection with that underwriting question, may I ask a question?

Mr. Fort. Let me develop it and see if I do not cover it.

Governor Young, you have spoken also of the tremendous growth of the fiduciary powers and operations of banks. Is there any statement now in the record, or could one be put in, showing the amount of assets now in the control of the members of the Federal reserve system in their fiduciary capacity, apart from their own resources?

Governor Young. I think that that can be furnished, Mr. Congressman, in so far as the national banks are concerned. I think we experienced some difficulty in securing that information from the State member banks.

Mr. Fort. And the State member banks, of course, constitute the old trust companies?

Governor Young. They are the old trust companies.

Mr. Fort. And, therefore, there is far more of it likely to be in their hands than in the hands of the national banks?

Governor Young. That is correct.

Mr. Fort. And you have no such figures for the State banks, or none that you feel are complete?

Governor Young. They are not complete.

Mr. FORT. Will you put such as you have into the record, both with respect to National banks and State banks?

Governor Young. I will be glad to.

Mr. Smead tells me there is very little in reference to State member banks that is of value.

Mr. Fort. Do you or do you not feel that that is something you should have complete information on in regard to your member banks?

Governor Young. We thought so, Mr. Congressman, but, as you say, the old trust companies that have been in operation in this country for a great number of years did not accumulate these statistics as the national banks have accumulated them, because the national banks have been more recent in that connection, and that information has been asked for.

Mr. Fort. Would you not be able to get it if you put into effect a regulation of the Federal Reserve Board requiring it to be given?

Governor Young. We made a very courteous request at one time that they give us that information, with such a reaction that we abandoned the idea of attempting to get it. There was a very strong complaint from many of the State member banks that they had already furnished us so much information and that the compilation of what we wanted would be so expensive to them that they asked us not to require it.

Mr. Fort. It seems to me, as a member of this committee, that it is one of the very vital things that we should know in considering this whole question of the aggregation of economic power in chain, group, or branch banking, that we should get those figures somehow. If you can not get them, I think we ought to.

Governor Young. Mr. Smead informs me that it would take weeks to get that information, even though there was a willingness on the

Part of the State member banks to furnish it.

Mr. Fort. If it is difficult for the Federal Reserve Board to get it, I assume that this committee, under its powers, can get it if it thinks it wants it from any bank, and perhaps they might be more willing to have it furnished to us by you in lump form than they

Would to furnish it in the shape of individual reports.

The reason I asked that question is that it has a bearing directly on this whole question of chain banking and of investment banking. The modern banker, certainly in the larger cities, is operating generally either directly or through affiliated organizations as a house of issue of investment securities and as a seller and purchaser of securities for his own account. He also is operating as a fiduciary charged with the duty of considering the investment of trust funds solely from the interest of the cestui que trust. In private enterprise there has grown up the class of house known as investment counsel, who advise as to investments, but who exercise no purchasing or selling functions in connection with them and make no profit whatever out of any dealings in securities, but simply advise.

Governor Young. And charge a commission.

Mr. Fort. Charge a commission for advice based on principal or income. The trustee is compensated legally by a commission, either on principal or on income. It has seemed to me that the growth of the investment counsel idea was based upon the theory that human psychology was such that the man who did the advising as to the nature of the investment ought not to have any interest in or possible profit out of the making of the investment.

I wondered if you had given any thought as to the propriety of the exercise of fiduciary powers by banks, including the undisturbed right to sell or purchase securities for profit for their own account or

that of an affiliate?

Governor Young. Yes; I have given some thought to that.

Mr. Fort. What is your judgment on it?

Governor Young. Well, the national bank law permits banks to buy bonds, permits banks to exercise fiduciary powers, and I am inclined to agree with you that human nature is the same one place as it is in another. It has prompted the development of these investment counsels, and what the future of those will be will depend, I expect, entirely upon what the public thinks about them.

That is not answering your question directly, and I do not want to be evasive, but could I answer in in this way: Is there any great harm, or have any great losses developed, through the set-up that we have in our banking systems to date, or is it too early to determine?

Mr. Fort. If you are asking me that question, I think I would answer "yes" both times.

Governor Young. Well, that is information that I have not got,

Mr. Congressman.

Mr. Fort. It all leads, however, to the general consideration—and I had wondered just how much consideration you had given to it and whether you had reached any final conclusion in your own mind—as to whether the psychology of men is such that it is wise to

mix the traditional functions of a banker, as a receiver of deposits and a lender of funds, with the function of the dealer in securities, particularly in a time when the great bulk of the investments and loans of the banks is based on securities.

Governor Young. I am going to answer that, Mr. Congressman, by saying that I have given some thought to it, but not sufficient thought

to it.

Mr. Fort. Do you not feel that perhaps it is one of the lines of thought to which this committee ought to direct its attention and to which perhaps the Federal Reserve Board ought to direct its attention in any revamping of our law, if we are going to revamp it at all?

Governor Young. I think so, but, Mr. Congressman, we have to keep in mind all the time that the Federal reserve system is a very important credit structure in this country. Drastic legislation is liable to cripple that system. The competition of State banks and State laws and State trust companies has always been a hard one to overcome, and perhaps always will be. I think it is safe to say that much of our Federal legislation has been enacted in an attempt to meet that competition. In other words, there is always a liberali-

zation of the national law.

Mr. Fort. Mr. Luce of this committee, described the situation very aptly, I thought, the other day, when he spoke of the finer and the baser systems of banking, using the State system with its greater freedom and flexibility, as the baser system, and speaking of the danger of the flow from the finer to the baser, which is somewhat, I think, what you have in mind. But, assuming that we had the power to control the major systems, at least the larger banks, through the Federal reserve, whether they be State or national, is it not wiser perhaps for us to consider legislation which is not necesssarily drastic at this time and place all banking upon a somewhat sounder basis than it would be perhaps to let ourselves five years from now be thrown into a situation where we might have to adopt some very drastic legislation?

Governor Young. If that could be done, I should think it would

be much better.

Mr. Fort. Do you favor the locking up of the stock control of a bank in voting trusts, as a matter of policy?

Governor Young. I would rather see branch banking.

Mr. Fort. If you had a large branch banking system, would you favor a provise by law that that stock could be put either in a voting trust or consolidated into a holding corporation, either one, or would you prefer legislation that would compel its being left free?

Governor Young. I would prefer the legislation that it be left free. Mr. Fort. That reaches right to the whole question of chain and group banking, does it not?

Governor Young. Correct.

Mr. Fort. There is some power at present in the board, is there not, to control the number of banks of which a man can be a director?

Governor Young. Under the Clayton Act; yes, sir.

Mr. Fort. But there is some discretion in the Federal Reserve Board to allow a man to be a director in more than one bank, is there not? Governor Young. In not more than three banks, any one of which

has combined resources in excess of \$5,000,000.

Mr. FORT. But as long as it is a large chain of small banks, there would be no interference with it under the present law, would there, and no supervisory power?

Governor Young. It would not even be referred to the Federal

Reserve Board. The law would permit them to serve.

Mr. Fort. One of the forms of legislation that we could use if we desired to control the chain and group banking would be further limitation of the right of a director to serve in more than one institution, would it not?

Governor Young. That would be some control,

Mr. FORT. And a requirement that the majority of a board must be local men?

Governor Young. That is a requirement under the national banking act now, is it not, Mr. Awalt?

Mr. AWALT. Yes.

Mr. FORT. Is that an absolute requirement?

Mr. Awalt. I am not sure. May I look it up for you?

Mr. Fort. While that is being looked up, I only have one or two

other questions.

Mr. Wingo asked you some questions about the tendency to protect a larger bank from failure rather than a smaller. As I take it, it is not so much that the Federal Reserve Board would exert its Powers in that direction as that other large banks would step into the Situation and rescue the bank—is not that a fact? Governor Young. That is correct.

Mr. Fort. Where they would not feel the same obligation to pro-

tect a small one.

Mr. Wingo. If you will pardon me, that is what I really had in mind. I was not limiting it simply to his organization, but to the banking world generally.

Mr. FORT. There have been some notable illustrations of that in recent years, have there not? I do not want to go into names, but is

not that a fact?

Governor Young. I have been trying to think of the Northwest. the territory that I am familiar with, and I think every effort was exerted by the Federal reserve system and the Comptroller of the Currency and the State banking authorities and the larger banks in the large centers, including Chicago, New York, Minneapolis, St. Paul, to save every bank in the Northwest that possibly could be saved.

Mr. FORT. I am not disputing that; do not misunderstand me; I am not trying to argue that everything has not been done that could have been done, but it is a psychological fact, as I think you admitted, that a tremendous effort would be made, even at the chance of considerable loss, on the part of those cooperating, to protect any of the major banks of the country from failure in a time of stress?

Governor Young. Yes; I think that that would be just human nature-not for that particular bank, but for the number of banks

that may be involved.

Mr. Fort. That is what I was coming to. Is not that effort, where a bank has a large number of small correspondent banks, quite as

much in the interest of the small correspondent bank as it is in the interest of the major bank itself?

Governor Young. More so.

Mr. Fort. So that where the banks and the Federal Reserve Board are making a particular effort to save a large structure, it is not solely for the benefit of the stockholders of the large structure, but it is for the preservation of all of the correspondent banks and all others having dealings with them?

Governor Young. That is correct.

Mr. Fort. As well as the maintenance of public confidence. just wanted to get that view of the matter into the record.

Mr. AWALT. I now have this information for you.

Section 5146 of the Revised Statutes, as amended by the act of February 25, 1927, known as the McFadden Act, provides in part that three-fourths of the directors of a national bank must be residents of the State in which the bank is located or within 50 miles of the location of the bank.

Mr. Fort. But there is nothing limiting them to the immediate

locality of the bank, to the corporate limits?

Mr. AWALT. No; and that only applies to three-fourths of the

Mr. Wingo. Three-fourths of them shall live either within the city or within 50 miles of it. There is a peculiar reason why that was put in there.

Mr. Fort. I think that is all. I am sorry to have taken so much

of your time, Governor.

Governor Young. Mr. Chairman, some reference was made to eligible paper. Anticipating that some inquiries might be made about it, I have had prepared some information in reference to eligible paper, which shows the total amount held by all member banks in the United States, subdivided into central reserve cities, reserve cities, and country banks, showing the percentage of their assets that is in eligible paper at the present moment. It further divides it by Federal reserve districts, and one Federal reserve district divides it by banks.

I do not know that that would be of any benefit to the committee! Mr. Forr. I think it would be very good to have it in the record.

Let me ask one additional question on that subject.

Mr. Wingo (presiding). In the absence of objection, we will put that statement in the record right here.

(There was no objection, and the statement referred to is reproduced

below.)

FEDERAL RESERVE BOARD, March 17, 1930. eligik net t

Bos Nev Phi Cle Ric Atli St. Mi Ka Da

da

fo

To Governor Young. From Mr. Smead.

Mr. Wyatt gave me a copy of his memorandum to you to-day on "Questions which you will probably be asked during hearings on branch banking," and in this connection I am handing you herewith Table No. 79 taken from the galley proof of the board's 1929 annual report which shows the gross and net earnings and disposition made of net earnings of each Federal reserve bank and of all the banks combined, by years from 1914 to 1929. I have also compiled certain data relating to eligible paper held by member banks which you may find helpful in case this subject is brought up.

The following table shows, by classes of banks, the amount of eligible paper and of United States securities—net, i. e., after deduction of United States securities pledged to secure national bank notes outstanding; and the ratios of

the

eligible paper to total loans and of eligible paper plus United States securities— let to total loans and investments:

December 31, 1929 [In millions of dollars]

[14 minote of stormer]						
All member banks	Central reserve city banks	Reserve city banks	Country			
4, 397 3, 218	1, 310 1, 189	1, 403 1, 215	1, 684 814			
7, 615	2, 499	2, 618	2, 498			
17 21	16 24	15 22	19			
	All member banks 4,397 3,218 7,615	All member banks city banks 4,397 1,310 3,218 1,189 7,615 2,499	All member banks Central reserve city banks banks 4,397 1,310 1,403 3,218 1,189 1,215 7,615 2,499 2,618			

We have also compiled the following table to show this information by Federal reserve districts:

[In millions of dollars]

Federal reserve district	Eligible	Govern- ment se- curities, net	Total	Ratio of eligible paper to total loans	Ratio of eligible paper plus United States se- curities, net, to total loans and invest- ments
Boston New York Philadelphia Cleveland Richmond Atlanta Chicago St. Louis Minneapolis Kansas City Dallas Ban Francisco Total	252 1, 382 271 272 194 205 621 202 180 268 235 315	172 1, 258 138 327 72 70 321 82 108 149 85 435	424 2, 640 409 599 266 275 942 284 288 417 320 750	Per cent 13, 2 15, 2 14, 6 11, 3 20, 0 24, 1 16, 5 21, 1 32, 0 33, 4 32, 9 14, 0 16, 8	Per cent 16. 6 21. 4 15. 2 17. 3 20. 9 24. 7 19. 1 21. 3 31. 6 34. 4 34. 2 23. 5

We have just completed the tabulation for one district—Richmond—of the data recently requested by the board as to the distribution of eligible paper among individual member banks. The figures for the Richmond district are as follows:

	Number of mem- ber banks	Eligible paper	Loans
Number eligible paper Eligible paper equal to following percentage of total loans: Less than 5 per cent. 5 to 10 per cent. 10 to 20 per cent. 20 to 30 per cent. 30 to 40 per cent. 40 to 50 per cent. 5 to 60 per cent. 80 per cent.	31 53	\$1,000,000 9,000,000 62,000,000 53,000,000 25,000,000 22,000,000 11,000,000 1,000,000	\$18,000,000 42,000,000 127,000,000 412,000,000 215,000,000 50,000,000 19,000,000 1,000,000
Total	514	194, 000, 000	974, 000, 000

Mr. Fort. Is there any view on the part of the Federal Reserve Board as to whether the growth of loans upon security in contradistinction to loans on name paper should be followed by any modification of the rules as to what constitutes eligible paper in the Federal reserve system?

Governor Young. The board has made one recommendation to both the House and the Senate, and that is that debentures of the intermediate credit banks which we are now permitted to buy under the law be made eligible as collateral for 15-day notes, provided that they do not have a maturity to exceed six months.

Mr. Fort. That is the limit of the recommendation?

Governor Young. That is the limit of the recommendation of the

Mr. FORT. There is no feeling on the part of the board that this condition which Mr. McFadden so clearly described, where corporations, instead of being borrowers, are financing themselves by the sale of securities and trusting to individuals to find that money by borrow, ing on the securities, justifies extending the sligible paper rules of the Federal reserve system so as to embrace collateral loans for rediscount?

Governor Young. I can not answer for the board; I can answer for myself. These figures will show that the member banks of the United States now have \$7,615,000,000 of eligible paper. That represents 17 per cent of the total investments.

I believe that the eligibility regulations are sufficiently broad at present. I think that the restrictions no doubt contributed in A large way toward enabling business to get money at a reasonable rate for the last two years. Eligible paper was preferred by the banks: they paid a premium for it by keeping the rate down.

I do not know how to illustrate it, but if that entire \$7,615,000,000 were under rediscount at the Federal reserve banks, we would think

that there was sufficient eligible paper in America. Now, the time may come in the future when we will have to libereralize the eligibility requirements, but I do not think that time is here at the moment. If it does come, I am inclined to agree with Governor Harding, of the Federal Reserve Bank of Boston, who has had a great deal of experience in the operation of the Federal reserve system, that we should resort to the Lombard loan rather than pick out any particular kind of paper.

Mr. Fort. Just what is the Lombard loan? Governor Young. The foreign banks of issue have a straight collateral note where they loan on most any kind of collateral that 15 acceptable to them. That Lombard loan usually carries a higher rate than the prevailing rate for bills, but that would have to be approached very carefully in this country, in my opinion. If the Lombard loan were ever adopted, I think it should be used only in an emergency, and then only with the approval of the Federal Reserve Board.

Mr. Wingo. You may have covered this when I was not listening, but have you stated your personal views with reference to the branch banking proposal of the Comptroller of the Currency? Do you favor that proposal or not?

Governor Young. I do. I think there should be a liberalization of the national banking law in reference to the establishment of branches.

Mr. Wingo. Would you make that extend to a particular area, or

make it nation-wide or state-wide or a trade area?

Governor Young. I have given a good deal of consideration to that. I have thought of it from the county-wide standpoint, and that does not permit proper diversification, in my opinion. I have considered it from the standpoint of state-wide, and there have been some difficulties with that. I have considered it from the standpoint of being district-wide, and that would work out very nicely in some districts, but in others it would not. I have considered it from the standpoint of being state-wide or district-wide, together with a radius of 100 miles, and there are some difficulties with that.

So I have come down to the same conclusions that the Comptroller of the Currency has, that a trade area is the proper thing at the To describe a definite trade area is extremely difficult. If the Federal reserve act intended to have the Federal reserve system do it, I might say that they did it as well as they could with 12 regional banks, and we have since extended that by the establishment

of 25 branches, and even that is not 100 per cent perfect.

Mr. Wingo. Would you have that trade area defined by legislative enactment, or by some administrative authority? Governor Young. Do you mean in the future?

Mr. Wingo. Yes. If we amended the law, liberalizing as you say the branch banking operations of national banks, would you have that legislative enactment define the trade areas which you say in your judgment are preferable, or would you leave the definition of a trade area and the division of the country into trade areas to an administrative authority?

Governor Young. I would leave it to an administrative authority

or authorities, because trade areas are changing continuously.

Mr. Wingo. You would make it flexible, then?

Governor Young. I would.

Mr. Wingo. Mr. Seiberling is next.

Mr. Seiberling. I have not had a chance to read the governor's statement at all. I would very much prefer to question him tomorrow morning.

Mr. Wingo. Mr. Busby.

Mr. Busby. Not this morning.

Mr. Wingo. Is there any member of this committee that wishes to question Governor Young at this session, or do all of you prefer to wait until you have read this statement of his before you question him further? Our time is about up, anyway; we only have just about 12 minutes.

If there are no further questions, then we will adjourn until Friday

Mrs. Pratt, I beg your pardon; did you have any questions you wanted to ask the governor this morning?

Mrs. Pratt. No; I would rather wait.

Mr. Wingo. I thought you had indicated that before.

Mr. Seiberling. I would like to have Mr. Young put into the record the branches of the Federal reserve banks and where they are located.

Mr. Wingo. Yes; that can be done.

(The information referred to will be printed at the conclusion of

Mr. Young's testimony.)

Mr. Wingo. Then, Governor, I presume there will be some members of the committee Friday morning who will be prepared to question you further. Will that suit your convenience?

Governor Young. At 10.30?

Governor Young. At 10.30 Mr. Wingo. At 10.30. Governor Young. Yes.

Mr. Wingo. In the absence of objection, we will now adjourn until 10.30 o'clock Friday morning to resume the questioning of Governor Young.

(Thereupon, at 12.45 o'clock p. m., the committee adjourned to

tic

of

an

c tin rng

meet at 10 o'clock a. m. on Friday, March 21, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

FRIDAY MARCH 21, 1930

House of Representatives, COMMITTEE ON BANKING AND CURRENCY. Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock a. m., Hon. James G. Strong presiding.

Mr. Strong. The committee will come to order.

I understand that Mr. Seiberling is ready to continue the examination of Governor Young. You will proceed, Mr. Seiberling.

STATEMENT OF HON. ROY A. YOUNG-Resumed

Mr. Seiberling. Mr. Young, you stated in the record that some of the information which you placed on the table is confidential. Will you tell us why this information is confidential?

Governor Young. Mr. Congressman, when we furnished that information originally, we had listed many of these groups by name. That was information that was collected by the Federal reserve agents, and it was a question in our mind as to whether that should be a public document.

However, that same information has been introduced by the Comptroller of the Currency in the record, so that it is no longer confidential information, and therefore I think I am safe in saying that there would be nothing else that would be of a confidential

Mr. Seiberling. My purpose in making that inquiry was that the record showed that the information put on the table here in open meeting was considered confidential, and unless some reason was given why it should be confidential it might be very misleading.

of

Governor Young. Yes. Mr. Seiberling. Now, under a branch bank plan with trade areas, the number of members of the Federal reserve system would decrease, would it not?

Governor Young. Yes, sir. Mr. Seiberling. That is, if a main branch bank took over a member bank and made it a branch, the branch would cease to be a member of the Federal reserve system, would it not?

Governor Young. It would be a member.

Mr. Seiberling. It would be a member through the main bankis that what you mean?

Governor Young. Yes.

Mr. Seiberling. In other words, there is no point in having any bank in a group a member bank except the main bank?

100136-30-vol 1 pt 4-14

Governor Young. That is correct.

Mr. Seiberling. Because all the branches would have the facilities of the Federal reserve system through the main bank?

Governor Young. That is right.

Mr. Seiberling. Now, in the great number of researches that you have made, as shown by your reports, you seem to have taken into consideration only the number, location, and assets of the various forms of banking organizations—is that correct?

Governor Young. I think that covers the things we did take into

consideration.

Mr. Seiberling. And from my reading of your report, I take it that the logical conclusion to be derived from your statistics would be that the Comptroller of the Currency was correct in his advocating of branch banking, instead of chain and group banking?

Governor Young. Answering personally for myself and not for

the board, I would say yes.

Mr. Seiberling. How many individuals out of our 120,000,000 people do you think are directly interested in banking as stockholders?

Governor Young. I have not any idea.

Mr. Seiberling. Do you think there would be a million people

interested in banks as stockholders?

Governor Young. That would be an average of 40 stockholders per bank. I would say yes, that there are a million people interested in banks as stockholders.

Mr. Seiberling. The number of stockholders in the present progress or evolution of the banking system is constantly decreasing, is

it not? Governor Young. If you eliminate the holding company, yes. If you include the holding company, I would say that they are increasing very rapidly.

Mr. Seiberling. That is more or less of an indirect interest, how-

ever, is it not?

Governor Young. From a practical standpoint, it is a pretty direct interest.

Mr. Seiberling. If all the banks of the country were taken into chain, branch, or group organizations, you do not think the increase in stockholders would be as great as the decrease, do you?

Governor Young. If you include the group and chain organizations, I would say that there would be an increase. I am guessing 1

good deal at this.

Mr. Seiberling. I am just asking you for your judgment.

Now, in the researches that you have made of branch, chain, and group banking, I do not find that you have made any researches as to which form of banking renders the best public service.

Governot Young. I think that is what we will go into with our

committee that we now have.

Mr. Seiberling. Do you not think that that would be the most important research that could be made and that it would bring forth the most valuable information on which this committee could base legislation?

Governor Young. It would.

Mr. Seiberling. Since the estimate is that only one out of every 120 people in our country is interested in the financial side of banking, what would be the chief interest of the 119,000,000 people in reference to our banking system?

Governor Young. They would have two interests; one as deposi-

tors and another as borrowers.

Mr. Seiberling. I wonder if we could agree on these fundamental principles: I have listed here, first, safety of deposit as the prime interest. Would you say that that was the prime interest?

Governor Young. Yes, sir.

Mr. Seiberling. I have listed as second, availability of necessary funds for legitimate business at all times.

Governor Young. Yes, sir. Mr. Seiberling. And, third, rate of interest paid by banks on deposits.

Governor Young. I do not get just what you mean by that, Mr.

Congressman.

ities

hat

ken

the

it

ild at-

or

00

s?

Mr. Seiberling. I am speaking of the public interest of the 119,000,000 people who are not interested in the banks as stock-

Governor Young. I see. I think as a rule that depositors are more

interested in safety.

Mr. Seiberling. But I am putting this third. Safety I put

Governor Young. That is a consideration on the part of the public, of course. Competition controls that a good deal, though,

Mr. Seiberling. I know, but do you not think that the public, that has invested in deposits fifty-eight billions of money, is interested in the rate of interest that it receives on those deposits-vitally interested?

Governor Young. Yes, sir.

Mr. Seiberling. I have put as fourth the rates of interest charged for loans by banks. I am speaking now of public service.

Governor Young. Yes, sir; I would include that.

Mr. Seiberling. Again having the public interest in mind, would you say that I had listed these in substantially the order of their importance?

Governor Young. Yes; I will agree with that order.

Mr. Seiberling. Now, I have looked over your reports quite carefully, and I find that the word "interest," in its application to the rate paid on money, appears only once in all the material that you have furnished, and that is on page 46, where you quote from the report of the joint commission on agriculture, where the report says:

Branch banking has lowered the rate of interest in some of the leading agricultural sections of California and at the same time provided an additional security for depositors.

I am assuming that the reason that you have not gone into that subject is because you have not yet made your research?

Governor Young. That is correct.

Mr. Seiberling. When do you expect to complete that kind of a research?

Governor Young. We have employed a man for not to exceed a year. It will take three or four months, at least, Mr. Congressman, unless the material that this committee gets can help us.

Mr. Seiberling. It is apparent that these agriculturists were quick to discover the reduction of the rate of interest on loans.

Governor Young. Yes, sir.

Mr. Strong. Will you ask him whether or not it will be desirable to give us the name of the gentleman that they have employed to make this investigation?

Mr. Seiberling. Yes; I will be very glad to. Governor Young. The board has authorized me to negotiate with a man by the name of John Riddle.

Mr. Seiberling. What is to be the scope of his research?

Governor Young. Well, Mr. Congressman, I have not that before me. I can furnish that to the committee.

Mr. Seiberling. Is it to cover this other line of what kind of a banking organization renders the best service to the people?

Governor Young. That will be covered. Everything we can think of will be covered.

Mr. Strong. Do you not think it would be well to put into the record who Mr. Riddle is, and what his connections are?

Mr. Seiberling. You just ask him the question.

Mr. Strong. No; you go right ahead. Mr. Seiberling. Will you tell us who Mr. Riddle is, and what his connections are?

Governor Young. May I have Doctor Parry answer that?

Mr. Seiberling. Surely.

Doctor Parry, Mr. Riddle was formerly chief of the Division of Financial and Economic Research of the United States Treasury, and subsequently he served on the staff of the transfer committee of the reparations commissions in Berlin, and more recently has been connected with a financial house in New York.

Mr. WINGO. What financial house?

Mr. Seiberling. Yes; what financial house?

Doctor Parry. I can not give you the name of that.

Mr. Wingo, Mr. Seiberling, have you ascertained the character of his work?

Mr. Seiberling. Can you find out what financial house he is with, and insert that information in the record?

Doctor Parry. Yes.

Mr. Seiberling. And the character of work he has been doing. Mr. Strong. And all the connections he has had in the last 10

Doctor Parry. I can put that in the record.

Mr. Seiberling. Have you had anything to do with the employing of this man?

Doctor Parry. I have been consulted.

Mr. Seiberling. Who has to do with the employing of that man? Doctor Parry. The board has a committee for the study of this subject, consisting of Mr. Goldenweiser and Mr. Smead of the board's staff, Mr. Rounds, of the Federal Reserve Bank of New York, Mr. Fleming, of the Federal Reserve Bank of Cleveland, and Mr. Clark, of the Federal Reserve Bank of San Francisco; and, by authorization of the board, this committee, under the chairmanship of Mr. Goldenweiser, has negotiated with Mr. Riddle. This committee has general charge of the direction of the investigation.

Mr. Seiberling. Have they employed Mr. Riddle?

Doctor Parry. Yes.

Mr. Seiberling. You have had something to do with it, but you do not know what banking connections he had in New York?

Doctor Parry. I have forgotten the name of the house. Mr. Seiberling. Do you know, Mr. Goldenweiser?

Doctor Goldenweiser. I have forgotten the name of the firm for the moment.

Mr. Seiberling. Can you telephone and find out?

Doctor Goldenweiser. Yes.

Mr. Seiberling. I wish you would.

(The information called for with respect to Mr. Riddle appears

Mr. Seiberling. Mr. Young, a business man or any other borrower would show poor management if he placed himself in a position where he had to dispose of the principal of his estate to pay interest. would he not?

Governor Young. There might be circumstances that would force

him to do that.

Mr. Seiberling. But he would be a poor business manager if he did that, would he not?

Governor Young. It would weaken his position; yes. Mr. Seiberling. Not many men do get themselves into that kind of a position.

Governor Young. Maybe I misunderstood your question.

Mr. Seiberling. It was only a general question.

I will ask you another question. Interest is always paid, if possible, out of net earnings, wages, or sale of farm products. Would you say that that is a correct statement?

Governor Young. I will have to ask you to repeat it again. Mr. Seiberling. We will go into more detail. An industry pays its interest, if possible, out of net earnings, does it not?
Governor Young. You mean on its borrowing?

Mr. Seiberling. Yes; interest is paid out of net earnings?

Governor Young. Yes.

Mr. Seiberling. And industry does not expect to sell a part of its capital to pay interest, does it?

Governor Young. Not as a rule.

Mr. Seiberling. And railroads do not do that?

Governor Young. No, sir.

Mr. Seiberling. A laboring man who borrows money has to pay interest out of his earnings. He can not sell his home to pay interest. can he?

Governor Young. That is correct.

Mr. Seiberling. And a farmer has to sell his product to pay the

interest on the money he borrows?
Governor Young. Yes, sir.
Mr. Seiberling. He can not sell his farm in order to pay the interest?

Governor Young. No, sir.
Mr. Seiberling. Now, interest received on deposits and interest paid on borrowed money are therefore the chief factors of concern to the public at large that needs banking facilities, and the public at large is not interested in banking profits. Is that statement correct?

Governor Young. Correct.

Mr. Seiberling. I believe you stated that the total deposits in the banks in this country are about fifty-eight billions? Governor Young. Yes, sir.

Mr. Seiberling. If a monopoly of banking could secure by such monopoly, an additional 1 per cent per annum upon the total deposits by the reduction of the rate of interest paid on deposits and by an increase in the rate of interest charged on borrowed money, such additional earnings, if that were possible, would amount to \$580,000,000 per year, would they not?
Governor Young. That is correct.

Mr. Seiberling. Do you think that if there were a monopoly of banking, and all banks were either in a chain or group or branch banking system with a great metropolitan institution and with billions of assets, that it would be possible to increase the earnings to the extent of 1 per cent per annum on deposits?

Governor Young. It might be.

Mr. Seiberling. As a matter of fact, the Government securities are sold now and have been for two or three years past at approximately what rate of interest?

Governor Young. I will have to correct this, but I think 3 was the minimum and 5% the maximum over the last three years, i. e.,

1927 to 1929, inclusive.

Mr. Seiberling. You may correct it; it is the fact that I am after, and I do not want you to put in something the record that is not correct.

The Government secures money at this low rate of interest, first on account of the nontaxability of its securities—is that one of the

Governor Young. One of the features.

Mr. Seiberling. And another feature is because the money is apparently safe?

Governor Young. Yes, sir. Mr. Seiberling. Now, if we had a monopoly of the banking business and deposits backed up by the vast billions of the great metropolitan centers, then it would be an easy matter for the banks to reduce interest that they paid on deposits because of the safety of the depositor's money. Would not that be a good, logical argument?

Governor Young. Not in competition with the many other forms of investment that there are in the country. Banks are compelled to follow the market to a certain degree, and if the banks are out of line with what other forms of investment offer, the depositor goes where he thinks he can get the best for his money.

Mr. Seiberling. Yes; Mr. Young, but do you not appreciate the fact that there are millions of people who deposit their money in the banks and who do not know how to buy a bond or a share of stock?

Governor Young. There is a great number.

Mr. Seiberling. Millions of them.

Governor Young. Well, they are being educated from day to day and from year to year.

Mr. Seiberling. They were educated last fall, a good many of them.

Governor Young. I think they were educated during all the liberty loan campaigns into the purchase of securities.

Mr. Seiberling. Yes; but there is still a vast number of people in the class I have referred to?

Governor Young. Yes. Mr. Seiberling. And they have to take just what they can get

from their deposits in the banks.

Governor Young. Not from the complaints that I have heard from the banks at different times. I know that when the Government bond rate got above the bank rate, there was very serious complaint because depositors were investing in Government bonds. Mr. Seiberling. I am talking about the monopoly of the bank-

Governor Young. Is not that an improbable thing? You do not

expect that to develop, do you?

Mr. Seiberling. I think there are rapid strides in that direction. Governor Young. Will there not always be competition, even though these large groups do develop? There will be more than one of them and competition, in my opinion, will be just as keen as it is to-day, and maybe more so.

Mr. Seiberling. Well, now, if this 1 per cent could be made of additional earnings, that would pay 6 per cent dividends annually on

\$9,666,000,000 of banking capital, would it not?

Governor Young. Yes, sir.

Mr. Seiberling. Do you know what the total banking capital of the country is to-day?

Governor Young. Capital and surplus and undivided profits?

Mr. Seiberling. Just capital.

Governor Young. Roughly, I would say, \$5,000,000,000. It is

usually 10 for 1.

Mr. Seiberling. A very small margin of additional profit on the deposits would therefore mean a tremendous thing as far as earnings are concerned, would it not?

Governor Young. Yes, sir.

Mr. Seiberling. On page 59 of your report you speak of a dangerous situation developing in connection with investment companies acquiring bank stock. Would you care to explain to us what con-

stitutes that dangerous condition?

Governor Young. You will observe on page 59 that it quotes the Federal reserve agents, that the Federal reserve agents were of the opinion that a dangerous situation is developing which should be brought to the attention of the Federal Reserve Board and the banking authorities with the view that some legislation should be obtained placing such companies under the jurisdiction of the banking departments.

I can not speak for the agents, but I suspect that what they have in mind are holding companies.

Mr. Seiberling. Why are they dangerous?

Governor Young. I think that the thought they had in mind was that they might be dangerous.

Mr. Seiberling. Why? Governor Young. Lack of supervision, first, and, second, some of the holding companies might not be financially strong and in event

of difficulty with the bank there would be difficulty in collecting the double assessment.

Mr. Seiberling. You do not think that the danger referred to was danger to the public at large by reason of the concentration of banking power and money?

Governor Young. It may have been in their minds at that time.

Mr. Seiberling. That does not occur to you as being a danger, I
take it?

Governor Young. No, I do not think so, Mr. Congressman.

Mr. Seiberling. You have spoken about human nature two of three times in your testimony. Do you think from your knowledge of human nature that it is perfectly safe to permit banking to approach a State where there is a monopoly of the business?

Governor Young. I do not think there is going to be a monopoly. Mr. Seiberling. No; but we are going that way, are we not?

Goveror Young. I do not think so, Mr. Congressman. If there is a monopoly in anything, and it becomes tremendously profitable, that just induces other people to go into it; that is all. I do not think this country is going to end up with one large bank or two large banks or three large banks; I think it will end up with a number of large groups and, furthermore, I think that the unit bank will continue.

Mr. Seiberling. I want to put into the record here a paragraph from an editorial in the Washington Post of March 20. The editorial is headed, "Biggest Bank in the World." It is in connection with the consolidation of the Chase National Bank, the Equitable Trust Co., and the Interstate Trust Co. I will read the last paragraph:

If the merger movement continues a money monopoly ultimately may be created. The new Chase National will have 52 branch offices; National City has that many or more. As the consolidation movement proceeds, branch banking promises to play a more and more important part in the financial life of the nation. Somewhere a halt must be called.

What do you think the editor who wrote that editorial in the Washington Post had in mind in reference to that admonition?

Governor Young. I think he had a fear of monopoly.

Mr. Seiberling. Do you know, as a matter of fact, that there is restricted competition now in large financial operations in New York that, as a matter of ethics, the bank that contacts with the customer first is to have a preference and that the other banks will lay off of that customer?

Governor Young. No, sir; I do not.

Mr. Seiberling. You do not know that?

Governor Young. No, sir. It has not been the ethics of banking. Mr. Seiberling. That has been the ethics for 10 years in New York, as far as back as 1920, has it not?

Governor Young. I never worked in New York City, so I do not know, Mr. Congressman. Banking business is solicited continuously, and the customer at any time is free to go where he wants to go-

Mr. Seiberling. That is true, but he can not get any accommodations. Let us assume that he is in financial difficulty and he takes up his matter with one group of banks in New York; do you mean to tell me that the other group will take up his situation until he gets through with the first one?

Governor Young. I do not know, Mr. Congressman. There might be conditions when they would, and there might be other conditions when they would not. In my banking experience I have frequently had men come to me that were refused by my competitor and I did business with them, and I repeatedly refused customers where they did business with my competitor afterwards. That is a matter of judgment, as to whether you want to take the business or whether you do not.

Mr. Seiberling. Do you not know that there is very strong suspicion that sometimes a banking group will pay another banking group a consideration to lay off and to let them handle that situation?

Governor Young. No, sir; I do not know that. Mr. Seiberling. You do not believe that is so?

Governor Young. I should not think so. Mr. Seiberling. I want to ask you a few questions about the call money rate. Do you know who fixes the call money rate in New

York from day to day, and how it is fixed?

Governor Young. I have been informed that it has been fixed by the stock clearing committee—I think that is the name of it—in the Stock Exchange. They meet every morning at 10 o'clock, and information is furnished to them through banking and other sources as to the condition of the money market. I think it is fixed by three men, and it is announced, if I remember correctly, at 10.30. the renewal rate.

Mr. Seiberling. Who appoints the three men?

Governor Young. One of them is the president of the New York Stock Exchange; the other is the president of the Stock Clearing Corporation, and the third man I do not know.

Mr. Seiberling. Then the fixing of the call money rate is purely

a New York Stock Exchange proposition, is it?

Governor Young. No, sir.

Mr. Seiberling. Who else is connected with it?

Governor Young. If that rate is not near the market and not accurate, the banks are still permitted to go into the market themselves and make loans, and you frequently see the outside market quoted sometimes above the official rate and, more often, below the official rate. Competition fixes that rate.

Mr. Seiberling. If a bank needed money badly, they could pay

more for money?

he

88

10.

I

T

PB

Governor Young. The banks would be the lenders.

Mr. Seiberling. But sometimes a bank needs money, too?

Governor Young. They go to the Federal to borrow.

Mr. Seiberling. I would like to get this call money situation straight, because I think the public is very much interested in it.

You say that the rate of call money is fixed every morning at 10 o'clock on the New York Stock Exchange by a committee of three men selected by the New York Stock Exchange?

Governor Young. I think I am correct about that, Mr. Con-

Mr. Seiberling. Is there any question about it, Mr. Young? You certainly ought to know who fixes the call money rate.

Governor Young. I know that those three men fix the call renewal rate, yes.

Mr. Seiberling. The renewal rate?

Governor Young. The original rate in the morning. The rate is fixed at 10.30 in the morning, and is known as the renewal rate. Then the rate is fixed during the day at various intervals. That is fixed by those three men in the New York Stock Exchange.

Mr. Seiberling. How do they determine whether the rate shall be 5 per cent, 10 per cent, or 22 per cent, the high point it went to

last vear?

Governor Young. Why, they take a number of factors into consideration, Mr. Congressman, in arriving at what the rate should be I regret that I am unable to give the details at the moment. think that the stock exchange, however, has issued a pamphlet in reference to that explaining it in detail, and I will attempt to get it and furnish it for the record here.

(The information requested will be inserted at the conclusion of

Governor Young's testimony.)

Mr. Seiberling. I understood you to say that the banks them-

selves had something to do with the fixing of that rate.

Governor Young. If the banks are not satisfied with the call rate and they can do better in the outside market, of course, they lend their money that way. I am informed, however, that it has been the experience of the banks in New York that over a long period they get better returns by lending at the call-loan post.

Mr. Seiberling. The man who is lending the money would be interested in putting the call rate just as high as he could, would

he not?

Governor Young. In so far as return is concerned; yes.

Mr. Seiberling. And a bull on the market would want to keep the rate down, would he not?

Governor Young. Yes.
Mr. Seiberling. And a bear would want to put it up?

Governor Young. Yes, sir.

Mr. Seiberling. So that right in the heart of the New York Stock Exchange, where they have the bulls and the bears, this call money rate is fixed, is it not?

Governor Young. Well, there are many other factors besides those two that you mentioned, Mr. Congressman. In fact, the bull and the bear have not very much to do with the call rate. They are the borrowers in the market; they are the customers.

Mr. Seiberling. Of course, there is no shortage of money, since

we have the Federal reserve bank, is there, Mr. Young?

Governor Young. There has been repeatedly a shortage of credit

for certain forms of investment.

Mr. Seiberling. That is because the Federal Reserve Board issued an order to that effect. It was not because the Federal reserve system did not have ample money and resources?

Governor Young. That is correct.

Mr. Strong. Mr. Seiberling, will you develop for whom and in whose interest this board acts?

Mr. Seiberling. Yes. Going back to the call money board— Mr. Beedy. Would you mind, Mr. Seiberling, getting an answer to your question? I understood you to ask if the call money rate is fixed in the heart of the New York Stock Exchange, where the bulls and bears operate?

Mr. Seiberling. Yes.

is

en

n-

96

ė

Mr. Beedy. Would you like to have an answer to that?

Mr. Seiberling. Yes. Governor Young. It is fixed there. Many factors, however, outside of the stock exchange fix the rate.

Mr. Beedy. What are they?

Mr. Seiberling. What are those factors? I understood you were

going to give them to us.

Governor Young. The demand for call money, the supply the banks have to lend, the gold movements in and out of the country, the currency requirements, the seasonal requirements, the business requirements, and many other factors have to be taken into consideration in connection with what that rate is going to be.

Mr. Seiberling. In whose interest is the rate fixed, the public

interest or private interest?

Governor Young. I would say it is a combination of both. It is fixed in the interest of the borrower and in the interest of the lender.

Mr. Seiberling. In New York? Governor Young. Yes, sir.

Mr. Seiberling. Is any consideration paid to the citizen who lives

way out in the Middle West or the West?

Governor Young. There was for the past two years, when that call rate in New York was disturbing the entire credit structure of the world. Every banker and every business man and everybody associated with the Federal reserve system were using everything they had at their command to attempt to give interest rates to business at a lower rate, and, in fact, that call rate did disturb the situation. and we know and everybody knows that the call rate did disturb the

Mr. Seiberling. Then do you mean to say that these three men sitting in the New York Stock Exchange at 10 o'clock in the morning take action which disturbs the financial equilibrium of the world?

Governor Young. No, sir; I did not say that.

Mr. Seiberling. That is the import I got from what you said. Governor Young. They fix the rate, Mr. Congressman, but conditions and many factors force them to fix the rate at a certain figure.

Mr. Seiberling. What the rate shall be each morning at 10 o'clock, considering these factors, is a matter of human judgment, is

Governor Young. Somewhat, yes.

Mr. Seiberling. Might it not be possible that sometimes they would put the rate too high?

Governor Young. Sometimes.

Mr. Seiberling. They might not know that the Federal reserve banks were willing to release a lot of credit and money, and put it too high?

Governor Young. They might.

Mr. Seiberling. Do they have to cooperate closely with your board to know what you are going to do?

Governor Young. No, sir; they do not. They can change their rate every half hour.

Mr. Seiberling. But if you released credit, then they have to put the rate down?

Governor Young. Provided that there were no other counteracting forces.

Mr. Seiberling. Your rate, that you fix from day to day, has a lot to do with the call-money rate, does it not?

Governor Young. I would not say so. The call rate is fixed every day, whereas discount rates are fixed only about once a month.

Mr. Seiberling. Does not the call-money rate go up and down as the Federal reserve rate goes up and down? Do they not practically

Governor Young. Not always. Call rates were averaging around 10 per cent and in August of last year the New York bank raised its discount rate from 5 to 6 per cent and the call rate came down to an average of around 6 per cent-just the opposite direction.

Mr. Seiberling. What was the effect of this high call-money rate?

It went to 22 per cent, did it not, at the highest point?

Governor Young. I was going to say 25.

Mr. Seiberling. That means at the rate of 25 per cent per annum?

Governor Young. Yes, sir.

Mr. Seiberling. Of course, no borrower could afford to pay such a rate as that very long, could he?

Governor Young. I do not think he could. Mr. Seiberling. What was the effect of that high call money rate on the circulating medium of this country?

Governor Young, Bad.

Mr. Seiberling. To what extent do you think it affected the present industrial condition of the country?

Governor Young. It was a contributing factor.

Mr. Seiberling. To what extent do you think it was a contributing factor?

Governor Young. Well, it is hard, Mr. Congressman, to measure

Mr. Seiberling. Was it to a considerable extent a contributing factor?

Governor Young. I think so.

Mr. Seiberling. Then we are driven to this conclusion, that three men sitting at 10 o'clock in the morning in the New York Stock Exchange can take action which affects to a material extent the industrial and business conditions of this country, are we not?

Governor Young. No, sir. The work of those men, Mr. Congressman, is largely mechanical. For instance, to-morrow they could not put in a 25 per cent rate, they could not put in a 15 per cent rate or a 10 per cent rate; they could not put in a 5 per cent rate and make it stand, with the conditions we have in the country to-day.

Mr. Seiberling. No: because the Federal reserve bank is now liberalizing credits and is endeavoring to assist in the rehabilitation of the industrial situation of the country. That is correct, is it not?

Governor Young. That is correct, and I think another factor is that the tremendous demand for speculative credit has subsided. Mr. Seiberling. There had to be a limit to the height to which

call money went in New York.

Governor Young. There always is a limit to anything of an inflationary nature.

Mr. Seiberling. Suppose that the limit would have been 8 per cent, fixed by law. What effect would that have had on the situa-

tion? Governor Young. I do not know. The probabilities are, Mr. Congressman, that had there been an 8 per cent limit for call money this speculative hysteria would have extended much further than it did go, and the crash would have been that much more severe when the inevitable crash did come.

Mr. Seiberling. Is it not possible that you would not have had this big bull movement in New York if the rate had been limited to 8 per cent? You would not have had the money to operate with

to start with.

Governor Young. Well, I can not agree with you there.

Mr. Seiberling. Did not the call money rate bring millions of dollars into New York?

Governor Young. Yes, sir.

Mr. Seiberling. And the higher they put the call money rate, the more millions came in?

Governor Young. Yes. Mr. Seiberling. And the more millions that came in, the higher they could put the stock market?

Governor Young. Yes, sir.

Mr. Seiberling. If they had been limited to 8 per cent, they could not have gotten the money to speculate with.

Governor Young. I think they could.

Mr. Seiberling. Where? From the Federal reserve bank?

Governor Young. No, sir. I think you overlook the fact that the demand for that type of credit was far in excess of what the banks were willing to lend, and that is what attracted the nonlenders into that market.

Mr. Seiberling. This stock market collapse has been a very serious

thing for this country, has it not?
Governor Young. Very.
Mr. Seiberling. And if they had had this rate fixed by law so that they could not have had this great boom in the stock market. we would have been saved this disastrous condition?

Governor Young. Yes. If the boom could have been stopped by

such action.

Mr. Seiberling. If they could not have put the call-money rate up, they would not have had the money to operate with.

Governor Young. I think they would have. Mr. Seiberling. Where would they have gotten it?

Governor Young. Eight per cent will attract a lot of money; 6 per cent will.

Mr. Seiberling Let us make the rate six. Suppose it had been put at 6 per cent?

Governor Young. If you had done that, Mr. Congressman, it

would not have had the restraining influence of a higher rate.

Mr. Seiberling. You remember, Mr. Young, that we started with
the proposition that there had to be a limit somewhere, and the limit was 25 per cent. Now, if there has got to be a limit, why can we not have a lower rate just as well as a higher one?

Governor Young. If I stated that that was the limit, I misstated it. I stated, I thought, that that was the highest point it had gone to as well as I could remember. Now, call rates have gone to 100 per cent.

ab

ab

yo

W:

of

th

di

p

a

Mr. Seiberling. And 150.

Governor Young. Ten or 15 years ago.

Mr. Seiberling. In past panics, 150. As a matter of fact, it went to 1 per cent a day one time in New York, did it not?

Governor Young. I do not know about that.

Mr. Seiberling. I think I can show you the authority for that. Since there is no limit to which this committee can put call money do you not think, in the interests of the country, Congress should put a limit on it?

Governor Young. I am not going to agree with you, Mr. Congressman, that that committee has any such power to put that rate where they want to put it. They put it where conditions force them to

put it.

Mr. Seiberling. It does not make any difference who is responsible for it; is it not in the interests of the country that there be a limit to the call money rate that can be fixed in New York?

Governor Young. Well, that is a question that has been debated for years. I can not help but feel that those things control themselves

eventually, Mr. Congressman.

Mr. Seiberling. They do not control themselves, Mr. Young, because you have stated here, if I remember correctly, that the Federal Reserve Board took a hand in this stock speculation and put the brakes on—is that correct?

Governor Young. It attempted to.

Mr. Seiberling. Then they do not control themselves, do they?

Governor Young. I think they eventually do control themselves.

Mr. Seiberling. Did you put the whole power of the Federa

Mr. Seiberling. Did you put the whole power of the Federal Reserve Board into this stock market situation, to stop this high, sky-rocketing of stocks?

Governor Young. Not a drastic power into it, no. And for the

purpose of controlling credit not the price of stocks.

Mr. Seiberling. No, because you could not put a drastic power into it, but you put such power on as you thought would be effective. Governor Young. We attempted that.

Mr. Seiberling. Then things do not take care of themselves after

all, do they?

Governor Young. They did.

Mr. Seiberling. After you put on the brakes.

Governor Young. It was a long time after we put on the brakes. Mr. Seiberling. You know, Mr. Young, that if you let things take care of themselves, it is a question whether we would not be better off than we are now, because it is a fact that if economic conditions are permitted to run their course, that may cause us less difficulty than putting on the brakes; but, since we are going to have brakes somewhere, should not the brakes be put on by Congress?

Governor Young. I do not want to be evasive, Mr. Congressman,

but in what way?

Mr. Seiberling. By limiting the rate they can charge on call money.

Governor Young. Throughout the United States? That is debatable, Mr. Congressman, as to whether Congress should fix the maximum rate.

Mr. Seiberling. I can see that you have not made up your mind. about that.

Governor Young. Did you say that I have or have not? Mr. Seiberling. That you have not. You think it is debatable; You have not arrived at any conclusion, I assume.

Governor Young. That is correct.

Mr. Seiberling. You would not be for or against it?

Governor Young. After I have studied it more, I would be one

way or the other.

ne

10

Mr. Seiberling. Do you not think that when fifty-eight billions of value has been swept out in this country in the stock market collapse, that people who have a hand in the responsibility should study the situation?

Governor Young. Yes, sir. Mr. Seiberling. When do you expect to make that study?

Governor Young. From day to day.

Mr. Seiberling. I noticed this morning in the Federal Reserve Bulletin for March, on pages 99 and 100, a schedule of distribution of member-bank credit, exclusive of loans to banks, by classes of banks during 1929. Why do you exclude from that statement loans to

Governor Young. May I look at the statement?

I am going to answer that, and, Doctor Goldenweiser, correct me if I am not correct in my answer. Loans to banks may be on securities; they may be on agricultural paper; they may be on commercial Paper; they may be on United States Government bonds; and they may be on municipal warrants or what not. We do not get the detailed classification of that, and therefore we exclude it.

Mr. Seiberling. You have the aggregate amount, do you not? Governor Young. We have, and, in addition, that is a duplication. Mr. Congressman. If it is reported in what the bank has loaned. and then reported the second time where the second bank lends to the first bank, that would be a duplication.

Mr. Seiberling. Have you a schedule showing how much money was loaned by the Federal reserve to member banks during the latter part of the year 1929, during this peak of stock market prices. and the subsequent collapse?

Governor Young. Have I answered this other question correctly.

Mr. Goldenweiser?

Mr. Goldenweiser. Yes; I think you have.

Governor Young. Now, to your pending question, that would be in October, November, and December?

Mr. Seiberling. Could you give it to us by months during the Year 1929?

Governor Young. That is, on rediscounts?

Mr. Seiberling. Yes.

Governor Young, I am going to say that in September, the rediscounts in the system-

Mr. Seiberling. Mr. Chairman, I hope I am not taking up too much time.

Mr. Strong. That is what we are here for.

Mr. Steagall. You may have some of my time, if necessary.

Governor Young. I have the figures right here.

September 4 the rediscounts in the system were \$1,046,000,000. On September 25 they were \$944,000,000. The average for the month of September was, I would say, about \$960,000,000. The average in October was about \$850,000,000; average in November about \$950,000,000; average in December approximately \$800,000,000.

Mr. Seiberling. You were pulling down your loans during those

months?

Governor Young. No; during that period we were buying bills very freely.

Mr. Seiberling, But you were pulling down your loans to

member banks?

Governor Young. No.

Mr. Seiberling. Does not the amount show that?

Governor Young. The amount went down, but simultaneously we increased our bill portfolio from \$183,000,000 to \$392,000,000. We increased our Government bond holdings from \$149,000,000 to \$511,000,000.

Mr. Seiberling. Were you buying those bonds from banks?

Governor Young. We bought them in the market. I assume that they were owned by banks or individuals, it does not make any difference. In other words, there was during that period a \$500,000,000 increase in acceptances and securities. As we take on acceptances, and as we buy Government securities, that enables the banks to reduce the discounts, providing no other factors interfere, such as gold movements or currency requirements, and during this period there was the seasonal requirement that comes every fall, so that the reduction in discounts is not quite as large as the amount we took in in acceptances and Government bonds.

Mr. Seiberling. Well, the stocks were going upon the New York Stock Exchange. Were your loans increasing to member banks?

Governor Young. Over what period?

Mr. Seiberling. Do not give me the detail, because it takes too much room in the record. Let us take the year preceding October.

Governor Young. The discounts on September 5, 1928, Mr. Congressman, were \$1,080,000,000. On September 4, 1929, they were \$1,046,000,000, practically the same. During the interim, of course, they went up and down, with seasonal requirements.

Mr. Seiberling. To what extent do you think that the contraction of credit by the Federal reserve put a brake on the speculation in

New York?

Governor Young. It was somewhat of a restraining influence, I think, Mr. Congressman. If I see the picture correctly of that entire period from 1927 to 1929, when we had an unusual speculative situation, that was just in the minds of the public and they insisted upon speculating and they did speculate, and restraining influences were very slow in operation, and whether those restraining influences were effective to a considerable degree or whether the public had changed its mind is a debatable question, but I am inclined to think that the public had changed its mind and that is why the speculation ceased.

Mr. Seiberling. You helped them to change their minds, did you not?

Governor Young. We tried to.

Mr. Seiberling. I understand that you made an address down at

the Willard yesterday.

Governor Young. Yes, sir.

Mr. Seiberling. A lawyer from my home town stated that you made the statement that the Federal Reserve Board was of material

assistance in this crisis.

Governor Young. I have not a copy of my talk here, but I made the statement that I thought the courageous manner in which the banks of the larger centers handled the situation between October 23 and October 30 was of tremendous assistance. I further made the statement that the system did use its powers, the discount rate and the bill rate and the open market operations, and direct action as restraining influences, and I did point out that under those conditions the main thing the Federal reserve system could do was to attempt to keep its own system in such shape that when the inevitable crash did come it would be in a position to function and function quickly.

Mr. Seiberling. Well, now-

Governor Young. I tried, Mr. Congressman, to make a very modest

statement in my talk yesterday, and I think that I did.

Mr. Seiberling. I merely asked this gentleman what you said, and he replied that you stated that the Federal reserve did a great deal to help the country in the crisis.

Doctor Goldenweiser. There is a complete text of it in the

United States Daily.
Governor Young. This is perhaps what he has reference to, and I think I give a little more credit to the member banks than I do to the Federal reserve system.

Money rates were in fact advanced in all principal countries to the disadvantage of business throughout the world. This state of affairs was not only puzzling to the bankers of America, but caused them great concern. That they gave the matter careful study and laid definite and positive plans for handling the situation when it should break is clearly evidenced by the courageous manner in the language of the situation particularly in the language content. in which the bankers did handle the situation, particularly in the larger centers, during that critical week of October 23 to October 30, and in my opinion if they had not acted as quickly and as courageously as they did, this country would have witnessed one of the greatest panics it had ever experienced.

There, Mr. Congressman, I was speaking about the member banks. Mr. Seiberling. Mr. Young, that is very commendable, of course, but what I am trying to get at are the causes which created a situa-

tion where such heroic measures had to be taken.

Now, you will agree with me, I take it, that the Federal reserve bank, by releasing credit and by contracting it, can have a very marked effect upon commodity prices, business, and everything that has to do with the finances of the country. Am I correct about that?

Governor Young. It has an influence, more as a contributing in-

fluence than a determining influence.

Mr. Seiberling. But as credits are released and money becomes cheap, bonds, preferred stocks, commodities and all things of that kind go up, do they not?

Governor Young. The odd part of it is at the moment that com-

modities are going down with that program.

100136-30-vol 1 pt 4-15

Mr. Seiberling. I notice that bonds and preferred stocks are going up.

Governor Young. Yes; and that is the reason I hesitated. That is not always true. There may be other conditions and other factors that would present themselves.

Mr. Seiberling. But, in a general way, that is a correct economic statement, that as credits are released and money becomes cheaper, prices go up, and as credits are contracted and money becomes scarce, prices go down?

Governor Young. That is debatable. A year ago easier money might have stimulated the stock market. To-day it does not stimulate the stock market; it has not so far.

Mr. Seiberling. Everybody is scared out of the stock market. Governor Young. I say that there are always other factors that you must take into consideration.

Mr. Seiberling. You have to give them time to coax them back in. Governor Young. I am not coaxing them back in.

Mr. Seiberling. I am not speaking of you personally, but, as the propaganda goes out, they will gradually get them back in again. Do you not believe that is so?

Governor Young. I hope not.

Mr. Seiberling. I notice on page 99 that you speak of the condition of the money market and of the increase in total loans and investments of banks at the end of the year, that they were larger than on October 4. That was after the stock market crash?

Mr. Beedy. You are referring to what document?

Mr. Seiberling. That is from the Federal Reserve Bulletin for March, 1930.

Governor Young. That is in New York City, is it not, Doctor?

Doctor Goldenweiser. Yes.

Mr. Seiberling. The point I want to make is this: It is said here that this increase is attributable in part to loans taken over by these banks from nonbanking lenders in October and November, in part to temporary increases in loans occasioned by end-of-year developments, and in part also to investments made during the period of easy money after the stock market broke.

easy money after the stock market broke.

To what extent do you think that the New York banks were able to take advantage of easy money after the stock market broke and to buy stocks when they were cheap?

Governor Young. I do not think the New York banks buy stocks. National banks certainly do not.

Mr. Seiberling. Their securities companies do, do they not?

Governor Young. They may.

Mr. Seiberling. Do you not know?

Governor Young. I do not think they buy stocks as a trading proposition.

Mr. Seiberling. Do they not have enormous investments in stocks and bonds and securities of all kinds?

Governor Young. They have in bonds; yes.

Mr. Seiberling. And stocks, too?

Governor Young. For trading purposes?

Mr. Seiberling. They buy them and carry them for trading purposes?

Governor Young. All I know about that is what is public information, that a group of New York banks through their securities compahies went into the market very heavily in October to prevent a calamity. That was closed out 30 days ago, I think.

Mr. Seiberling. They did not buy stocks at the high prices? Governor Young. No.
Mr. Seiberling. They bought them after the break?

Governor Young. They bought them during the break, when they were on the way down. That was not done, in my opinion, Mr. Congressman, as a money-making program.

Mr. Seiberling. I have gotten off my line of questioning and

I want to go back.

Now, as to this call money rate, do you know as a matter of fact whether the high call money rate affected the rate on all marginal accounts in the United States?

Governor Young. It did not-you mean, affected them up to 25

re

at

rs

iic er, e,

y

11-

it

u.

ľ

Mr. Seiberling. Not as high as that, but affected them, I say.

Governor Young. It affected them all.

Mr. Seiberling. So that the average of these high call money rates was taken by the brokers and charged back to their customers all over the United States?

Governor Young. That is correct.

Mr. Seiberling. I know that in many instances customers had to pay a higher rate of interest on their marginal accounts than the usury laws of the States in which they resided permitted, on account of the high money rate.

Governor Young. That would be possible.

Mr. Seiberling. These contracts and purchases were made in the States in which they lived and yet this call money committee in New York can compel these people to pay a higher rate of interest than the laws of their States permit?

Governor Young. You can not compel them.
Mr. Seiberling. You can make them sell out. They have either to pay it or sell their securities?
Governor Young. That is correct.
Mr. Seiberling. That is considerable pressure on them, is it not?

Governor Young. That is considerable pressure, but it did not work very well, as they apparently did not sell out. Mr. Congressman, in dealing with a broker I am not quite sure but that the contract is in the State of New York. Is it not?

Mr. Seiberling. I do not think it is. I think it is in the local

office of the broker.

Governor Young. I am under the other impression. Mr. Seiberling. You may be right. Governor Young. I think that I am.

Mr. Seiberling. But it had the same effect, did it not, nevertheless?

Governor Young. The same effect.
Mr. Seiberling. You probably know that New York has no usury laws as to call money, bank loans, and corporation loans. Governor Young. It has on time loans.

Mr. Seiberling. I am talking about not on call money; not on bank loans secured by collateral, stock exchange loans, or corporation loans.

Governor Young. I do not remember the law, Mr. Congressman, but I think there is no limit on a demand collateral loan except when made by an individual and not below \$5,000, but I am not sure about

Mr. Seiberling. Well, the fact there is no limit in New York has compelled Pennsylvania and Illinois to repeal their usury laws as to call money, so as to prevent withdrawal and transmission to New York of funds from Philadelphia, Pittsburgh, and Chicago.

Governor Young. That is correct.

Mr. Seiberling. Now if it has done that with these three States. it will mean that eventually all other States with large centers will have to do that, will they not?

Governor Young. I think so.

Mr. Seiberling. And you still think, in view of all that, that it is a good thing to let New York fix the call money rate at any rate they see fit?

Governor Young. I do not agree with you. Mr. Seiberling. Well, any limit in their judgment they think the

situation warrants?

Governor Young. I can not agree with you. All that committee in New York does is to fix that rate in a mechanical way in which many factors contribute as to what the rate is or what it shall be.

Mr. Seiberling. Did you ever look up the usury rates-

Mr. Beedy. Will you pardon me?

Mr. Seiberling. Yes.

Mr. Beedy. Will you frame your question—granted they take into consideration all these factors, do you still think that it is best for the country, as a whole, to permit these three men to perform arbitrarily what you term this mechanical duty or act?

Mr. Seiberling. I will adopt that.

Governor Young. I will reply that it is the best that has been devised so far.

Mr. Seiberling. Did you ever look up the usury rates of the American Colonies?

Governor Young. I never have.

Mr. Seiberling. I have here on page 27 of this work by Franklin W. Ryan, M. B. A., Ph. D., instructor in business reports, graduate school of business administration, Harvard University, the early usury laws in the American Colonies.

This reads as follows:

Connecticut: Date of statute, 1718; legal rate and maximum limit 6 per cent; penalty for usury, voidance of contract.

Delaware: Date of statute, 1759; legal rate and maximum limit 6 per cent; penalty for usury, forfeiture of whole debt.

Georgia: Date of Statute 1759; legal rate and maximum limit 8 per cent; penalty for usury, forfeiture of three the average of the second of the seco

penalty for usury, forfeiture of thrice the amount of the contract.

Maryland: Date of statute 1692; legal rate and maximum limit 6 per cent; penalty for usury, forfeiture of treble the principal.

Massachusetts: Date of statute, 1661; legal rate and maximum limit, 8 per cent; penalty for usury, voidance of contract.

Massachusetts: Date of statute, 1693; legal rate and maximum limit, 6 per cent.

New Hampshire: Date of statute, 1791; legal rate and maximum limit, 6 per cent; penalty for usury, forfeiture of three times the excess of interest.

New Jersey: Date of statute, 1738; legal rate and maximum limit, 7 per cent; penalty for usury, forfeiture of contract.

New York: Date of statute, 1717; legal rate and maximum limit, 6 per cent; penalty for usury, forfeiture of contract.

1

New York: Date of statute, 1718; legal rate and maximum limit, 8 per cent.

New York: Date of statute, 1737; legal rate and maximum limit, 7 per cent.

North Carolina: Date of statute, 1741; legal rate and maximum limit, 6 per cent; penalty for usury, voidance of contract and forfeiture of twice the amount of the contract.

Pennsylvania: Date of statute not known; legal rate and maximum limit, 8

Per cent; penalty for usury, forfeiture of contract

Pennsylvania: Date of statute, 1700; legal rate and maximum limit, 6 per cent.
Pennsylvania: Date of statute, 1705; legal rate and maximum limit, 8 per cent.
Pennsylvania: Date of statute, 1723; legal rate and maximum limit, 6 per cent.
Rhode Island: Date of statute, 1767; legal rate and maximum limit, 6 per cent; penalty for usury, forfeiture of the excess of interest.

South Carolina: Date of statute, 1719; legal rate and maximum limit, 10 per cent; penalty for usury, forfeiture of three times the principal.

South Carolina: Date of statute, 1748; legal rate and maximum limit, 8 per cent; penalty for usury, forseiture of three times the principal.

South Carolina: Date of statute, 1777; legal rate and maximum limit, 7 per cent; penalty for usury, forfeiture of three times the principal.

Virginia: Date of statute, 1730; legal rate and maximum limit, 6 per cent; no penalty for usury.

Virginia: Date of statute, 1734; legal rate and maximum limit, 5 per cent; Denalty for usury, none.

This schedule shows that the American Colonies' maximum rate Permitted was 8 per cent, with the exception of South Carolina, that Permitted 10 per cent from 1719 to 1748, and every single State, with the exception of Virginia, had a usury law with a penalty attached.

I now want to submit, if consent is given, and insert in the record, the schedule of the usury laws of all the States as of 1921, with the Penalties attached, which appears on pages 28, 29, 30, and 31 of this These schedules read:

Alabama: Legal rate, 8 per cent; lawful limit, 8 per cent; penalty for usury. Alabama; Legal rate, o per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of double the amount of usurious interest.

Alabama; Legal rate, o per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of double the amount of usurious interest.

forfeiture of all interest. Arkansas: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury forfeiture of principal and interest. Negotiable paper tainted with usury is void

In the hands of an innocent holder. California: Legal rate, 7 per cent; lawful limit, 12 per cent; penalty for usury,

forfeiture of three times the excess. Imprisonment and fine for evasions.

Colorado: Legal rate, 8 per cent; lawful limit, no limit; penalty for usury, no penalty.

Connecticut: Legal rate, 6 per cent; lawful limit, 12 per cent; penalty for usury,

ho action shall be brought to collect either principal or interest.

Delaware: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury, contract is vitiated, and anyone may sue usurer for amount equal to sum loaned. District of Columbia: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury, forfeiture of all interest.

Florida: Legal rate, 8 per cent; lawful limit, 10 per cent; penalty for usury,

forfeiture of all interest.

Georgia: Legal rate, 7 per cent; lawful limit, 8 per cent; penalty for usury, forfeiture of entire interest.

Idaho: Legal rate, 7 per cent; lawful limit, 10 per cent; penalty for usury, for-feiture of entire interest. Can recover excess only if paid. Forfeiture also of 10 per cent of principal to school fund.

Illinois: Legal rate, 5 per cent; lawful limit 7 per cent; penalty for usury, forfeiture of entire interest. Can not recover anything if paid.

Indiana: Legal rate, 6 per cent; lawful limit, 8 per cent; penalty for usury,

forfeiture of excess interest over 6 per cent.

Iowa: Legal rate, 6 per cent; lawful limit, 8 per cent; penalty for usury,

forfeiture of interest and costs. Kansas: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury.

forfeiture of double the amount of usurious interest. Kentucky: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury, forfeiture of excess interest.

Louisiana: Legal rate, 5 per cent; lawful rate, 8 per cent; penalty for usury. forfeiture of interest.

Maine: Legal rate, 6 per cent; lawful limit, no limit; no penalty for usury. Maryland: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury, forfeiture of excess interest.

Massachusetts: Legal rate, 6 per cent; lawful limit, none; penalty for usury, none, except on loans of less than \$1,000.

Michigan: Legal rate, 5 per cent; lawful limit, 7 per cent; penalty for usury, forfeiture of all interest

Minnesota: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury, forfeiture of all interest.

Mississippi: Legal rate, 6 per cent; lawful limit, 8 per cent; penalty for usury, forfeiture of all interest.

Missouri: Legal rate, 6 per cent; lawful limit, 8 per cent; penalty for usury, forfeiture of excess interest.

Montana: Legal rate, 8 per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of twice the interest.

Oklahoma: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury, forfeiture of twice the interest.

Oregon: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury,

forfeiture of principal.

Pennsylvania: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for

usury, forfeiture of excess interest. Rhode Island: Legal rate, 6 per cent; lawful limit, 30 per cent; penalty for

usury, loss of principal and interest. Also fine and misdemeanor.

South Carolina: Legal rate, 7 per cent; lawful limit, 8 per cent; penalty for usury, forfeiture of entire interest. Double the amount may be recovered if paid. Corporations can not plead usury.

South Dakota: Legal rate, 7 per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of interest. Usury is a misdemeanor.

Tennessee: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury, forfeiture of excess interest. Usury is a misdemeanor.

Texas: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury, forfeiture of all interest. Double the amount may be recovered if paid.

Utah: Legal rate, 8 per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of principal and interest. Also misdemeanor.

forfeiture of principal and interest. Also misdemeanor.

Vermont: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury forfeiture of excess interest.

Virginia: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury,

forfeiture of all interest.

Washington: Legal rate, 6 per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of amount of accrued interest, but, if interest be paid, then forfeiture of twice the amount.

West Virginia: Legal rate, 6 per cent; lawful limit, 6 per cent; penalty for usury, forfeiture of excess interest. Corporations can not plead usury.

Wisconsin: Legal rate, 6 per cent; lawful limit, 10 per cent; penalty for usury, forfeiture of all interest. Three times the excess may be recovered if paid.

Wyoming: Legal rate, 8 per cent; lawful limit, 12 per cent; penalty for usury, forfeiture of the contract forfeiture of interest and costs.

By the way, the District of Columbia has a usury law, does it not, with a limit of 10 per cent?

Governor Young. I am not familiar with the District of Columbia

I am informed that it is 8 per cent.

Mr. Seiberling. This is 1921. It has been reduced to 8 per cent?

Governor Young. Yes, sir.

Mr. Seiberling. Congress has passed a usury law for the District of Columbia?

Governor Young. Yes, sir.

Mr. Seiberling. And Congress has been very careful in authorizing loans of the Federal Farm Board and the Joint Stock Board, to fix the maximum rate at 6 per cent?

Governor Young. Yes, sir.

Mr. Seiberling. And in the recent \$500,000,000 appropriation, do You remember what the maximum rate was there?

Mr. Wingo. The Farm Board appropriation?

Mr. Seiberling. Yes. It was much less than 6 per cent; was it

Mr. Brand. Not over 4 per cent.

Mr. Seiberling. Not over 4 per cent; so that this matter of interest to be charged the American people has been safeguarded by Congress in the loans it has authorized its agents to make on behalf of the Government?

Governor Young. Yes, sir. Mr. Seiberling. Now, just a few more questions: Do you not think we ought to have the Federal usury law so that private industries that need money-private business-in times of stringent money markets may have a limit in the amount of interest and other considerations that can be extracted from them for accommodations?

Governor Young. Many States have put in laws of that kind. I believe the Federal reserve gives some protection to the business interests of the country; and that is evidenced by the business rates that prevailed during all this high call-money rate-8 and 10 per Business rates did not get above 6 per cent, generally speaking.

Mr. Seiberling. Whenver a railroad company or private industry puts out securities at a discount and redeemable at a premium, that discount and that premium and the interest on it has to be earned by some one, does it not?

Governor Young. Yes, sir.

Mr. Seiberling. And in the case of a great railroad system, where bonds are sold at a discount—and I understand an issue was sold some time ago at \$200,000,000, one of the important systems of this country, out of which the railroad got 921/2.

Mr. Strong. At what rate?

Mr. Seiberling. Six per cent. A railroad system that was of absolute necessity to this country and yet they had to sell their 6 per cent bonds, amounting to a little over \$200,000,000, at a discount of \$15,000,000. That affects passenger and freight rates on that railroad system, does it not?

Governor Young. Indirectly; yes.
Mr. Seiberling. And it affects the price of every commodity and every product that is shipped over that road to the consumer, does it not?

Governor Young. Yes, sir. Rates are a contributing factor.

Mr. Seiberling. Of course, we all believe in reasonable and fair and proper compensation for every task rendered, but to the extent that these discounts and premiums are excessive, that puts an unnecessary burden on the people of the country-to the extent they are excessive?

Governor Young. If they are excessive; yes,

Mr. Seiberling. In a private industry, where that happens, of course, the labor has to earn that discount and premium and the labor and consumer who buy the product together, have to pay that somewhere?

Governor Young. Generally speaking: yes, sir.

Mr. Seiberling. So that when securities are issued, in the absence of a usury law, where a State has no usury law, a great financial center can impose, in times of stress, almost any terms they want on corporations that need money?

Governor Young. I do not suppose they can impose punitive

Mr. Seiberling. What is to prevent them from doing it?

Governor Young. A man does not have to take it.

Mr. Seiberling. Suppose it is a great industry such as-well, I will say such as Armour & Co., who were in trouble in 1920, furnishing food supplies to the whole country: You could not let an industry like that go down; it would not be policy to let it go down?

Governor Young, No.

Mr. Seiberling. And men of long reputation and great pride in their business, a profitable business for many years, would pay almost any price to save the industry, would they not?

Governor Young. I think they would.

Mr. Seiberling. And where there is no usury law and no limit, the bankers can charge an excessive rate and, understanding human nature as you say you do, do you not think there should be a limit?

Governor Young. Well, is there not a limit in practically every

State?

Mr. Seiberling. Not in New York?

Governor Young. No.

Mr. Seiberling. But these bonds and securities are all taken to New York and executed there to make them a New York contract?

Governor Young. Yes, sir; but you are citing specific cases with which I am not familiar, Mr. Congressman. Why a solvent railroad whose securities are perfectly good should pay more for underwriting its bonds than competition would prompt them to pay or anything that is punitive, I can not see.

I would like to take the other side of it just for a moment. You ask about the limit on interest rates. You have a limit with the land banks and with the intermediate credit banks. There was a time in 1928 and 1929 when it was extremely difficult, if not impossible. for the intermediate credit banks to sell their debentures in the markets of America or elsewhere to enable them to lend at the limit which was fixed by Congress, with the result that the intermediate credit banks came to the Federal reserve banks in 1928 and again in 1929. We bought their debentures—those that we were permitted to buy under the law with six months maturity. Now, the market is entirely changed, and they do not have any difficulty in floating them and do not owe the Federal Reserve banks anything at all.

Mr. Seiberling. You do not need usury laws now, but you need them when there is a stringent money market, when people need

Do you mean to say that there would be competition in New York for a \$200,000,000 loan?

Governor Young. I should think so.

Mr. Seiberling. Not very much? Governor Young. I think there would be plenty of houses anxious to handle a \$200,000,000 loan if it was a good one.

Mr. Seiberling. Do you think there are more than three houses in the United States that would undertake to handle a \$200,000,000

Governor Young. By grouping others with them. Yes.

Mr. Seiberling. I am not asking that. You think there are more than two or three houses that would undertake a loan of that Size?

Governor Young. Yes. Mr. Seiberling. Now, I have just one more question, and this is rather hypothetical. I have several more questions. I have a

telegram I want to ask you something about.

Assuming that a large corporation with many thousand stockholders needed financing in a stringent money market and a reorganization was necessary, the financial difficulty being caused entirely by the depreciation of raw materials and reasonable commitments for raw materials for which the management was in nowise to blame, having only supplied themselves with such materials as were necessary and they had to have money and the best terms at which they could get it-the actual amount of money furnished; the actual cash being furnished by underwriters-was \$24,300,000, and they made a Profit or had the opportunity of making a profit on the securities issued, including the peak of the price for the stock that was given as a bonus for making the loan-they had an opportunity for making a Profit exceeding \$41,350,000 in the last 10 years, besides getting substantially 9 per cent on their money. Would you think that that was a proper kind of transaction to be permitted under the laws of this country?

Governor Young. Is that quite fair, Mr. Congressman, to put that kind of question up to me when I do not know all the details of it or

anything? Mr. Seiberling. I have given you the details. Governor Young. Well, I can not answer that, Mr. Congressman. Mr. Seiberling. You do not think that we should have a law to prevent such refinancing as that?

Governor Young. Was there a great deal of risk with that?

Mr. Seiberling. All of the securities have been paid off and redeemed in six years.

Governor Young. It could not have looked very attractive at the time or somebody else would have taken it.

Mr. Seiberling. I am talking about a stringent money market now.

Governor Young. Well, even under those conditions.

Mr. Seiberling. You think under any stringent money conditions of the country any group of financiers should be able to drive a bargain like that?

Governor Young. Supposing the stringency had continued: What

would their profit have been?

Mr. Seiberling. You can not have a continuing stringency in the country with the Federal reserve bank, can you?

Governor Young. You did have quite a period. Suppose it had continued for a year longer?

Mr. Seiberling. It did continue for a year longer.

Governor Young. Suppose it continued for two years longer?
Mr. Seiberling. Well, it is not reasonable to suppose a thing like that, is it? Past history does not justify such an assumption?

Governor Young. I know in 1927 everybody thought it could not

last much longer then, but it did last for two years longer.

Mr. Seiberling. As I understand it, you think that people who put through a reorganization like that should be trusted by the people of the country as a whole and that no restrictions should be enacted by law to prevent such a thing as that?

Governor Young. I think that competition will put a restriction

8

y

R

n

r

on that, Mr. Congressman.

Mr. Seiberling. Now, I have a telegram here in reference to liberalizing the kind of paper which can be rediscounted in the Federal reserve. Banks over in Ohio seem to think that they are not getting the service out of the Federal reserve bank they are entitled to because of the limited paper that can be rediscounted.

Now, do you think that municipal bonds, for instance—paper secured by municipal bonds—should be permitted to be rediscounted in the Federal reserve bank provided such municipal bonds should be approved by the—

Governor Young. At the present time?

Mr. Seiberling. Yes.

Governor Young. I should say not. The law does permit us to buy warrants of political subdivisions that have maturities not exceeding six months and are issued in anticipation of revenue. We can go that far now. I think in the entire history of the Federal reserve system, covering 16 years, we have not had, at any time, to exceed a million dollars of those.

Mr. Goldenweiser. Yes, Governor, in the early years we had

more.

Governor Young. I will say in the last 10 years we never had over \$500,000 under rediscount at any one time.

Mr. Seiberling. You know the Government permits municipal bonds to be deposited as protection to postal savings deposits?

Governor Young. Yes, sir.

Mr. Seiberling. And yet you do not think paper with municipal bonds as collateral should be rediscountable at the Federal reserve

Governor Young. I stated the other day, Mr. Congressman, my views on eligible paper. There is held by the member banks at the present time, including Government bonds, approximately \$7,600,000,000 in eligible paper. I think that is sufficient to take care of anything that would develop in the country. If, at some future date, there is to be a liberalization of paper that would be eligible for rediscount at the Federal reserve bank, I would prefer to see the Lombard loans permitted and not pick out any particular class of paper.

In addition to that, we have made a recommendation to both the House and the Senate that the debentures of the intermediate credit banks with maturity not to exceed six months, which we are now permitted to buy in open-market operations, be made eligible for a 15-day collateral note. That is the only recommendation of the

board.

Mr. Seiberling. You have not recommend what you call Lombard loans?

Governor Young. No; I do not think it is necessary at the moment. Mr. Seiberling. Of course, you could not have legislation passed when the emergency arises. You must have it before that time.

Governor Young. If the Lombard loan is permitted, I would only permit it to be used in an emergency and only then with the approval of the reserve board.

Mr. Seiberling. I thank you, Governor Young, and members of the committee for indulging me. I appreciate I am a new member and have taken more time than I should. I apologize for that.

Governor Young. I have a few things that I should like to report on, if I may; some information that I was asked to get day before

yesterday.

Mr. Seiberling. Will you tell us something about Mr. Riddle? Mr. Goldenweiser. Mr. Riddle was a graduate of the University of Davis and Elkins in West Virginia and then did three years graduate work in Princeton. After that he did two years in colleges— Dartmouth and Davis and Elkins— and then was employed by the New York Reserve Bank for two years and after that he was with the United States Treasury for four years organizing a division on statistical research for the Treasury.

After that he went to Berlin with Mr. Parker Gilbert as a member

of the economic staff in connection with the Agent-General of Reparations and he came back about a year ago and became connected with the Guardian Investors Corporation in May of 1929 and

remained with them until just now.

Governor Young. There were six requests made of me Wednesday.

I want to report on those.

First. Digest of State laws relative to the powers of banks to invest in stocks.

This is being prepared in the counsel's office but it will take some time to get that out.

Second. Statistics relative to earnings of banks grouped according to size of banks.

That is being prepared but not ready to-day. Mr. Fort. May I interject there, Governor? Governor Young. Yes.

Mr. Fort. That is being prepared on the basis of percentage to invested capital? That includes capital, surplus, and undivided profits?

Governor Young, Yes.

Third. Statistics as to trust business in national banks,

That is being compiled. That is not ready to-day but will be ready shortly.

Fourth. Statistics as to trust business of State banks and trust

companies.

As stated the other day it was almost impossible to get that informa-We have tried to get it and have been unable to get it.

Fifth. Location of Federal reserve banks and branches.

I have that report ready to put into the record. In addition to that I am filing this little map [exhibiting] that gives all the reserve banks and branches and the territory assigned to each one. If the members of the committee would be interested in that, I can furnish additional copies.

Mr. Strong. If satisfactory to the committee, I would suggest that when the data is finally prepared, the data be inserted at this

Mr. Wingo. I understand it will require some time to prepare You would not want to hold up the record for that?

(The information referred to is as follows:)

LIST OF FEDERAL RESERVE BANKS AND BRANCHES

Boston: No branches. New York: Buffalo.

Philadelphia: No branches. Cleveland: Cincinnati, Pittsburgh. Richmond: Baltimore, Charlotte.

Atlanta: New Orleans, Jacksonville, Birmingham, Nashville. Chicago: Detroit.

St. Louis: Louisville, Memphis, Little Rock.

Minneapolis: Helena. Kansas City: Omaha, Denver, Oklahoma City.

Dallas: El Paso, Houston, San Antonio. San Francisco: Los Angeles, Portland, Salt Lake City, Seattle, Spokane.

The CLERK. We will make the proper reference to it when it is submitted.

Mr. Strong. Then, that will be satisfactory.

The ACTING CHAIRMAN (Mr. Strong in the chair). Mr. Dunbar,

have you any questions to ask?

Mr. Dunbar. Mr. Young, a bank with a capital stock of \$10; 000,000, a member of the Federal reserve system, takes over a bank with a million dollars capital, a member of the Federal reserve system, and that bank which had a million dollars capital continues to enjoy the benefits of the Federal reserve system through its parent bank,

having \$10,000,000 capital, which took it over. That is true, is it

Governor Young. Both member banks?

Mr. Dunbar. Are they separately member banks after the million dollar bank becomes a branch bank?

Governor Young. It would depend upon whether it was a con-

solidation, whether it joined a group or became a chain.

Mr. DUNBAR. What I mean is the parent bank had \$10,000,000 capital stock and took over this million-dollar bank and made it a branch bank. For instance, a bank in New York would take over a bank in Albany with a million dollars capital stock-that is, under the supposition we have branch banking.

Maybe I do not understand what branch banking is.

Governor Young. I think you do. The parent bank's capital would be \$11,000,000. The branch would not have any capital. Mr. DUNBAR. It would not, in any way, affect the Federal reserve

Governor Young. Unless they applied for a reduction in capital and we would not permit that reduction unless we were satisfied it should be reduced.

Mr. Wingo. Would it not be possible for the bank to buy the assets and the other bank surrender its charter? Would you approve

the purchase of the assets?

Governor Young. If it was a State member bank we would. We would have the power. If it was a national bank, as a matter of precedent and not as a matter of law, those things are always referred

to the Comptroller of the Currency.

Mr. Wingo. I am afraid you did not understand my question. Mr. Dunbar wants to know the effect it would have on the system. You suggested you might change one bank and increase its capital \$1,000,000. As a matter of fact the Bank of New York can buy the assets, either one piece of paper at a time or all of it in bulk?

Governor Young. Correct.

Mr. Wingo. Whether it be a State bank or a national bank and then that bank, whose assets have been sold, can surrender its charter without anybody's approval and the other bank would have bought its assets without anybody's approval, save and except a bank examiner comes along and says the paper is not good and you have to charge it off.

Governor Young. A State member bank would have to apply to us for permission-would have to request us to cancel their Federal

reserve stock they own.

Mr. WINGO. If the law provides they can go out of business and

surrender the charter, that automatically cancels it?
Governor Young. If they were performing fiduciary trusts, we might require them to continue to handle the fiduciary trusts until

discharged.

Mr. Dunbar. We have one bank with a capital of \$10,000,000, a member of the Federal reserve system and another bank with a capital of \$1,000,000, a member of the Federal reserve system. Now, the bank with the capital of \$10,000,000 buys this bank with a capital of \$1,000,000 and makes it a branch of the \$10,000,000 bank. Before the purchase you had two members of the Federal reserve system. Now you only have one member of the Federal reserve system?

Governor Young. Yes; that is correct.

Mr. Dunbar. Now, then, how will the Federal reserve system be

affected by just having one member instead of two?

Governor Young. In the reserves that they are required to carry with us or in the stock that they hold in the Federal reserve or in what influence they might exercise in electing directors of the bank?

Mr. Dunbar. Well, you have the Federal reserve system-

Governor Young. It would have no effect upon the stock holdings or reserves they carry unless the second bank happened to be in a smaller community and then if they were taken over by a larger bank, they would have to carry a larger reserve than before.

Mr. Dunbar. Would you consider it detrimental for a branch

bank to be established under those circumstances?

Governor Young. It would be detrimental.

Mr. Dunbar. Would not affect it one way or the other?

Governor Young. No, sir.

Mr. Dunbar. The Federal reserve system now has about one-half of its members belonging to branch, chain, and group banks. Now, are very many national banks going out of existence?

Governor Young. I have not the figures, but I think the Comptroller of the Currency left those figures here the other day. Na-

tional banks have lost in the last two or three years.

Mr. Dunbar. Very largely? Governor Young. Yes, sir.

Mr. Dunbar. Now, national banks are going out of the national bank system because they claim under the State charters they have very much more liberal courses of action? That is true, is it not?

Governor Young. Yes.

Mr. Dunbar. Now, what is there that we can do for national banks that would keep them in the national bank system by liberalizing their business methods?

Governor Young. I think-

Mr. Dunbar. First, do you consider it desirable that national banks be continued in the system?

Governor Young. Very.

Mr. DUNBAR. What could we do then to continue them in the system?

Governor Young. I did not read all of the comptroller's testimony before this committee, but I think that was one of his strongest arguments for an extension of branch banking.

Mr. DUNBAR. All the national banks, I think, have a currency circulating privilege under bonds which are redeemable in 1932. Is n

T

if

II

a

that correct?

Governor Young. 1930.

Mr. Dunbar. 1930? Governor Young. I think those bonds are all due now. It is discretionary with the Secretary of the Treasury as to whether he takes up the bonds or not.

Mr. Dunbar. Those bonds are 2 per cent?

Governor Young. Nothing but 2 per cent now carry the circulation privilege. The 4 per cent bonds were retired.

Mr. Dunbar. The Government gives the difference between 2 per cent and 31/2 or 4 per cent in the amount of interest paid by reason of the national banks being paid but 2 per cent on those bonds on which they base their circulation?

Governor Young. Yes, sir.

Mr. Dunbar. You consider it very desirable that national banks continue in the system. Would it be economic and just for the Federal Government to pay them more money on the bonds which are used to redeem their circulation?

Governor Young. I think it is still profitable, Mr. Congressman, for banks to buy the 2 per cent bonds and issue circulation against

them even where they pay a premium of 2 points.

Mr. Dunbar. Then, if it is still profitable for them to do that, why

do they leave the system?

Governor Young. The profit is so small that it does not amount

to very much.

Mr. Dunbar. Do you believe one way to keep the national banks in the system would be to pay them part of the interest money saved by reason of their receiving but 2 per cent interest, whereas the Government pays from 3½ to 4¼ per cent interest.

Governor Young. Then you are further extending the national bank currency that has clearly demonstrated that it is not an elastic currency such as a Federal reserve note. I do not believe that would

Mr. Dunbar. Well, then, you do not believe that the national banks confer any great benefit upon the banking system or currency system?

Governor Young. No, sir.

Mr. Dunbar. That is your idea? Governor Young. That is right.

Mr. Dunbar. The Federal Government benefits by the 2 per cent interest they receive on bonds which national banks buy to secure their currency. What suggestions have you to make that would be more favorable to the operation of national banks, so they could be kept in the Federal reserve system?

Governor Young. That is the hardest question I have had so far,

Mr. Congressman

Mr. Dunbar. Then, it is a subject for future consideration?

Governor Young. It is. It is very hard to do anything for the national banks that you should not do for the State member banks. There is a very strong feeling throughout the country now that the member banks of the Federal reserve system should be paid a greater return on their stock holdings other than the 6 per cent they now get. I, myself, believe that that dividend should be increased. Of course, if you do that for national banks, obviously you would have to do it for the State member banks too.

The ACTING CHAIRMAN (Mr. Strong in the chair). Had we not

better adjourn for the roll call?

Mr. Dunbar. Very well, I can take up my questioning when we meet again.

The ACTING CHAIRMAN. Then, if there is no objection, we will

adjourn until Tuesday, at 10.30.

(Whereupon, at 12.25 o'clock, p. m., the committee adjourned to meet at 10 o'clock a. m., on Tuesday, March 25, 1930.)

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, MARCH 25, 1930

House of Representatives. COMMITTEE ON BANKING AND CURRENCY. Washington, D. C.

The committee met in the committee room, Capitol at 10.35 o'clock, p. m., Hon. Louis T. McFadden (chairman) presiding. The CHAIRMAN. The committee will come to order.

STATEMENT OF GOVERNOR ROY A. YOUNG-Resumed

The CHAIRMAN. Mr. Dunbar, I believe you had not finished with your questions.

Mr. Dunbar. Governor Young, when we adjourned the other day, We were talking about what inducements could be offered to national banks so that they would remain within the Federal reserve system.

You stated that that was a very hard question to answer.

Now, the Federal reserve system is becoming to be controlled by State banks and other institutions rather than the national banking system—is that so? Has there not been a very great number of national banks withdrawn from the Federal reserve system by reason of the party of th son of the forming of coalitions or absorptions of other banks operating under State control?

Governor Young. That is correct. Mr. Dunbar. How much do you believe that the Federal reserve system should be under the control of the Federal Government by reason of the affiliation with it of national banks rather than the

affiliation with it of State banks?

Governor Young. Can I point out, Mr. Congressman, that a Federal reserve bank, because of the nature of its directors, or the way its directors are appointed, theoretically takes the actual control away from the banking interests? The banks elect three directors that may be stockholders of banks. They elect three other directors that represent business, that are not officers or directors of banks, although they may be stockholders. The Federal Reserve Board appoints three directors, two of which represent commerce and industry and can not be directors, stockholders, or officers of any bank; so that, theoretically, the control of every Federal reserve bank is in the hands of business rather than the banking interests.

Now, in addition to that, the Federal Reserve Board is appointed from various districts of the United States. No two members, except the ex officio members, can come from the same district. They are appointed to represent the industry of the country and, as I stated the other day, the powers of the Federal Reserve Board, if they elect

to exercise them, are very far reaching, in so far as the operation and policies of the reserve banks are concerned; so that I think I am safe in saying that the possibility of State banks gaining control of the reserve banks is very, very remote.

Mr. DUNBAR. Even though most of our national banks would become State banks and withdraw from the national banking system?

Governor Young. No: I can not go that far.

Mr. Dunbar. Is not that the present tendency; is not the present tendency in that direction?

Governor Young. It is.

Mr. DUNBAR. Is it not very much so?

Governor Young. The national system has lost a great deal in the last two or three years.

Mr. DUNBAR. Does the Chase National Bank in New York remain

in the Federal reserve system?

Governor Young. I am informed they are going to continue under

a national charter.

Mr. Dunbar. Then, according to your judgment, am I right in presuming that if national banks would largely withdraw from the Federal Reserve System, that the Federal Reserve bank could operate and function with practically the same degree of efficiency and economic requirements?

Governor Young. Under war conditions, I would say it would be very advantageous to have a large representation of the banking

strength of the country in national banks.

Mr. DUNBAR. You spoke the other day about national banks withdrawing from the Federal Reserve System by virtue of State charters being more advantageous to them than operating under the national banking system, and the subject was also discussed as to what we can do to make national banks remain in the system. Nothing can be done, as I understand it, that will not be applicable to State banks.

Now, have you any plan or do you think any readjustment is possible where greater inducement can be offered to banks that remain in the Federal reserve system and of those which remain out of the system by reason of the present inducement, so we could draw a number back and probably cause the greater number of our na-

tional banks to remain in the system?

Governor Young. I think that additional inducemement could be offered to member banks, but, obviously, in so far as the Federal reserve system is concerned, anything that would be done for a national bank it would be necessary to do the same thing for the State member banks. There is quite a feeling in the country at the moment that the members of the Federal reserve system are entitled to a larger return than the 6 per cent that they receive upon their stock investment in Federal reserve banks. I am inclined to agree with that view. Different proposals have been made.

I would not want to commit myself at the moment, but I lean very strongly toward increasing the dividends that are paid member

banks.

One other suggestion has been made that would require a great deal of thought and further investigation, and there might be legal complications that would prevent it from being put into operationbut the suggestion has been made that it would be for the best interests of the country if all banks in the United States were required to carry a portion of their reserve in the Federal reserve system, regardless of whether they are members or not.

Mr. Dunbar. Is there any way possible by which the Federal Gov-

ernment could require that?

Governor Young. That is a legal question, Mr. Congressman, that

I am not prepared to say yes or no on at this moment.

Mr. Dunbar. Each State exercises its sovereignty over the State banks, so that any Federal laws can not extent to them and that seems to be the weakness, in my opinion, of the present banking system of the Federal Government.

Governor Young. Well, of course, the Federal Government abolished the wild cat currency that existed, by a tax. Whether that is applicable to checks or interstate transactions I am not prepared

to sav

Mr. Dunbar. You would not like to give us your views on that point? I think you entertained the thought that such a thing is impossible. Have you any other suggestion to make as to how the Federal reserve system could be made so attractive that State banks, as well as national banks, would become members of the Federal reserve system?

I think you believe that if all belonged to the Federal reserve

System, much of our troubles and difficulties would disappear.

Governor Young. No; I can not say that, Mr. Congressman.

Membership in the Federal reserve system is not a guarantee of bank deposits.

Mr. Dunbar. Is not a guarantee of banking deposits?

Governor Young. Yes.

Mr. Dunbar. What I mean is the system has the bulk of the

deposits.

Governor Young. I did not understand that, Mr. Congressman. Mr. Dunbar. You stated bank deposits were essential for the transaction of the banking business of all banks. We all recognize that. What is there in the Federal reserve system that would cause the depositors in those banks to get away from the Federal reserve banks?

Governor Young. They can. A national bank can convert into a State bank and withdraw from membership. A member State bank

can get out of the system on six months' notice.

Mr. Dunbar. Pardon me, I suspect I misunderstood you. I thought you had reference to individual deposits in the banks which are members of the Federal reserve system?

Governor Young. That is correct. We can not guarantee those

deposits.

Mr. Dunbar. No; you can not guaranty those deposits. They are the result of the natural volition of the people, and I do not see how the Federal reserve system can increase or decrease the deposits in any particular bank except in so far as people found it advantageous to do busines with that bank.

Governor Young. That is correct.

Mr. Dunbar. A great many banks believe the Federal reserve system should pay an interest on daily deposits, the same as other banks do. What is your opinion with respect to that?

Governor Young. I would be opposed to that. If that policy were adopted, there would be great pressure upon the reserve banks and the Federal reserve system, to earn good returns for their members. The reserve system was not intended as a money-making system. The Federal reserve system simply took the reserves held by individual banks, and thus concentrated them in one general gold reserve, which was the basis of the note issue and credit extension for seasonal requirements and other emergencies.

If the reserve banks under certain conditions were required to earn a return that would enable them to pay any rate of interest on deposits, it would so upset the entire credit structure of the country

that the effects would be felt in all parts of the country.

Mr. DUNBAR. What are the daily deposits of member banks in the

Federal reserve system?

Governor Young. Approximately \$2,300,000,000. That varies from day to day and according to seasons approximately \$100,000,000 variation.

Mr. DUNBAR. The returns to the Federal Government last year

were around \$3,000,000?

Governor Young. A little higher than that, I think. You mean the franchise tax?

Mr. Dunbar. Yes.

Governor Young. \$4,283,000. Mr. DUNBAR. \$4,283,000?

Governor Young. Yes, sir.

Mr. Dunbar. Did that approximately represent all the profits of the Federal reserve system?

Governor Young. No, sir.

Mr. DUNBAR. What were the profits of the reserve system?

Governor Young. Last year the dividends paid aggregated nine million five hundred and eighty-three thousand and odd dollars.

Mr. DUNBAR. That was 6 per cent?

Governor Young. Yes, sir. Transferred to surplus, \$22,535,000: franchise tax paid to the United States Government, four million two hundred and eighty-three thousand and odd dollars. That is a total net earning of \$36,402,000?

Mr. DUNBAR. If all that were paid for interest on daily deposits of \$2,300,000,000 in the Federal reserve system, it would amount to about 11/3 per cent; so that if you paid all of it for interest to the

depositors, it would not leave you any profit?

Governor Young. It would not leave any profit, and 1929 was the highest year from the standpoint of earnings since 1921.

Mr. DUNBAR. That year you paid a Federal Reserve tax of

\$60,000,000? Governor Young. In 1920 we paid a franchise tax of \$60,724,000.

Mr. DUNBAR. Would it not be very advisable, if some system could be conceived whereby interest on balances would be paid to the depositors of the Federal reserve system? I think it would make the system more popular than anything that could possibly be done, and if it could be made more popular you would have more money and you would retain your national banks as members of the system. Now, you say the Federal reserve bank is not run for profits.

That is true, but it is necessary that the profits be such that they

can maintain themselves and I believe they could maintain themselves by making the terms more attractive in order to retain the national banks and the State banks, and that this, to a considerable extent, would solve the problem of branch banking, group banking, and chain banking?

Governor Young. I will agree with you, Mr. Congressman, except as to the procedure. I should regret very much to see legislation enacted that would compel the reserve banks to pay a fixed amount

of interest on deposit accounts.

),

I would, however, be agreeable to any equitable plan that would permit more of the profits of the reserve system to be distributed to the member banks, if earned. But I would not put the obligation on the Federal reserve system of earning 1 per cent on deposit accounts, one-half of 1 per cent on deposit accounts, or any other amount.

Mr. Brand. Will you yield to me for a question?

Mr. Dunbar. Certainly.

Mr. Brand. Referring to your answer, Governor, about the Federal reserve system, you say the Federal reserve system is not a money-making system. I want to call your attention to the fact that from 1914 to 1926 the gross earnings were \$678,999.660. The total expenses in this time were \$257,144,956. The net earnings for the 12 Federal reserve banks during that time, from 1914 to 1926, were \$421,854,704. Do you not think that was a pretty good money-making institution?

Governor Young. Very.

Mr. Brand. With very good net earnings?

Governor Young. Yes, sir.

Mr. Brand. Therefore, would you not say it was a money-making institution?

Governor Young. Yes, sir.

Mr. Brand. You spent nearly 25 per cent of that \$678,000,000 on expenses and yet you got nearly \$422,000,000 net profits?

Governor Young. Correct.

Mr. Brand. Then, it is a money-making machine? Governor Young. Yes, sir; it has been making money.

Mr. Dunbar. You do not expect the Federal reserve system in the

future, as now operated, to make anything like that money?

Governor Young. It might or might not, but I would regret very much if a policy were ever adopted by the Federal reserve system which would be based upon earnings and not with the view of accommodating commerce and industry as the law now requires it.

Mr. Dunbar. I agree with you. I am not in favor of any legislation that would compel you to pay interest on deposits. But I wish

You could voluntarily work out a plan to do this.

Reserve Board could work out some plan whereby it would pay interest on daily deposits, it would be the most popular thing to do and would result in advantage in your operations.

Governor Young, Mr. Congressman, would it accomplish the same

results if it was paid in dividends on stock?

Mr. Dunbar. I do not know.

Governor Young. Or if the earnings were paid above a certain amount on the capital investment they had in the Federal Reserve banks and the reserves they carry in the banks?

Mr. Dunbar. People like to receive a return for every specific act and although some other plan might be devised which, in the aggregate, would pay more money, yet their return on single investments seems to impress them more than the aggregate on the whole proposition, which would bring them more. Everywhere I go I find complaints because the Federal reserve system does not pay an interest on daily deposits.

t

n

Governor Young. I can say, Mr. Congressman, that that question has been referred to the Federal advisory council; has been referred to a conference of the governors of the Federal reserve banks; has been referred to a conference of Federal reserve agents, and I think that they are practically unanimous—not quite unanimous—in believing that the time has arrived when the member banks are entitled to a larger return on their stock investment in the Federal reserve system.

Mr. DUNBAR. In your opinion that will make the system more popular and will materially assist you in retaining banks in the system

which are now going out?
Governor Young. I believe so.

Mr. Dunbar. The Massachusetts decision, and I believe the decision of the Supreme Court of New York, interfered very largely with the successful operation of the McFadden Act, did it not?

Governor Young. In reference to fiduciary powers?

Mr. Dunbar. Yes.

Governor Young. Yes, sir; that is correct.

Mr. Dunbar. Is there any way the national bank act might be amended, so as to permit national banks to exercise those powers?

Governor Young. I do not think so. But if I may have the privilege of asking our counsel if he has any suggestions along those lines, I should like to do so.

Mr. DUNBAR. That is satisfactory to me.

Mr. Wyatt. I think the act could be amended so as to compel the States to treat national banks exactly as they treat State institutions in respect to that question. The case referred to did not deny the right of national banks to exercise fiduciary powers, but dealth simply with the question of whether a consolidated bank resulting from the consolidation of a national bank with a State trust company, succeeded automatically to the executorships and trusteeships under which the trust company was acting, under wills, prior to the consolidation, and the court held that where the State law did not permit such a succession, the McFadden Act should not be construed as requiring it.

In so holding, however, they called attention to the fact that the McFadden Act was very careful to say that these consolidations should not be in contravention of State or local law and the court did not pass upon the question of whether Congress could pass an act requiring that result in contravention of State law. That was

I feel certain, however, that Congress could pass a law compelling State courts to treat national banks exactly as they treat State banks in reference to recognizing a consolidated institution as a successor to the constituent institutions; in other words, Congress could provide that if, under State law, a consolidated institution, resulting from the consolidation of two State constituent institutions is recog-

nized as the same person and may be permitted to continue to execute the trusts held by the constituent institutions, such States shall permit a consolidated institution consisting of a national bank and a State institution, to do the same thing. I think that would be sustained by the courts.

Mr. Dunbar. Were these decisions by State courts?

Mr. Wyatt. The decision was of the Supreme Court of Massachusetts, which was affirmed by the Supreme Court of the United

States, but on different grounds.

Mr. Dunbar. You believe it would be advisable to work out a plan whereby a national bank and a State bank consolidates, and the consolidation does not continue as a member of the Federal reserve system, by reason of these decisions—do you believe that some plan might be worked out whereby that consolidated institution would be permitted to exercise all the powers that the State banks exercised and still be retained as a member of the Federal reserve system?

Mr. WYATT. I did not quite catch the question. I thought you

said, in the first place, where they did not stay in the system.

Mr. Dunbar. I will restate the question. Here is bank No. 1 in Massachusetts, a national bank, and it consolidates with bank No. 2, which is not a national bank, but by reason of the exercise of executorships by bank No. 2 and other business in the nature of trusts, they are not permitted to remain a national bank. That was true; was it not?

Mr. WYATT. No, sir.

Mr. DUNBAR. Well, what is the truth?

Mr. Wyatt. The situation is this, that a State trust company, which was acting as an executor under a will, was consolidated with a national bank under the charter of the national bank, so that the consolidated institution was a national bank and remained a member of the Federal reserve system, necessarily. This consolidated national bank then attempted to file with the court, a final accounting as trustee or executor—I forget which—in the case in which the State bank had been appointed, and the court held that they could not recognize that national bank as the executor because it was not the executor named in the will and appointed by the court, but that it was a different institution, a different corporation and a different person; so, they said, the court would have to appoint another trustee or another administrator.

Now, the practical effect is this; that where you have got a big trust company, operating under the State law, and a national bank, and the directors of the two institutions decide to consolidate, the question always comes up whether the consolidated institution shall be a national bank or a State bank and, on account of that decision, they very frequently think it is safer to consolidate under State charters so that there will be no question of their right to continue the trust business under the consolidated State institution. Frequently the State banks have more trust business than the national banks, because they have been exercising that function longer.

Mr. Stevenson. Did not the court hold that the national bank could, by application to the local probate court or whatever court handles probate matters, be appointed in place of the other?

Mr. WYATT. They suggested that it could be appointed, but there was nothing to control the action of the probate court.

Mr. Stevenson. But it was eligible to be appointed, if they applied?

Mr. WYATT. Yes, sir.

Mr. WINGO. The decision specifically said so.

Mr. Wyarr. In a great many States they have considered it safe to go ahead and take the national charter because they know the probate courts will appoint the consolidated national bank or administrator, except in cases where there are wills which have been executed, but where the testator has not died, they are afraid in some States, that unless they can get a codicil or new will appointing the new institution, there may be some difficulty about having the new institution recognized under that will.

Mr. Stevenson. If a man appointed a State institution executor and, before he died, that institution was consolidated and became a national institution, the question is whether the national institution

can succeed to the right which was provided in that will?

Mr. WYATT. Yes, sir.

Mr. Dunbar. What suggestion have you to offer in the way of Federal legislation that would make it easier for a bank, under those circumstances, to remain in the Federal reserve system?

Mr. WYATT. They can all remain in the Federal reserve system. They usually do, even where they take the State charter. A State bank can be a member of the Federal reserve system.

Mr. DUNBAR. This bank in Massachusetts did not remain in the

system?

Mr. WYATT. Yes, sir; as a matter of fact, it remained a national bank. The effect of the decision was to discourage other national banks from taking out the national charter instead of State charters when they consolidate with State trust companies.

Mr. DUNBAR. Have you any suggestion to make in reference to legislation that might be recommended by the Committee on Banking and Currency that would make it more attractive for banks to

remain as members of the Federal reserve system?

Mr. Wyarr. I think clearly the suggestion Governor Young made would be very helpful, and there is another recommendation which the Federal Reserve Board has made which I think would be helpful in a way, and that is a recommendation that the board be permitted to waive the cost of examining State member banks. At the present time the law requires the expenses to be assessed against the State member banks and they also have to pay for the examinations made by the State authorities and that is not very attractive to them.

The Federal Reserve Board has recommended, in its last two

annual reports, that it be permitted to waive those costs.

Mr. DUNBAR. That is more irritating than it is a question of great

expense!

Mr. Wyatt. Nevertheless, the banks take serious exception to it. Mr. Dunbar. I know they do. That is the reason I would favor doing not only that, but granting the reserve banks interest on their deposits even though it might be only 1 per cent. I believe if the Federal reserve system would work out such a plan, it would remove a very irritating condition of mind among the banks who are members.

We spoke the other day, Governor Young—and I will not take up very much more time—or some members of the committee did—

hey

safe the ninexeme ing

the tor me ion

of ose m. te

he al al rs

to Tto le ıl

d t A o

have a very beneficial effect on business?

Governor Young. Under certain conditions, but I do not think it would have had any effect in 1927, 1928, or 1929 the way the American public felt about buying stocks.

about your being able or it being advisable to restrict the interest on call loans on the New York Stock Exchange, which went as high as 24 or 25 per cent, and it was thought by my friend on my left that if they could be restricted to 8 per cent, it would result in the welfare of the country during hours of disturbance.

But now, would that have restricted or helped in any way to have prevented the panic which we had last October? If banks were required by the board that controls the Federal reserve rates, to loan money at 8 per cent, they absolutely would not have loaned it, would they? They would not have had it to loan at those figures?

For instance, money was sent in from the interior to New York. One of the banks in my part of the State sent in \$100,000. They would not have sent it in at 8 per cent?

Governor Young. What price did they send it in for?

Mr. Dunbar. I do not know.

Governor Young. Eight per cent is a very attractive rate.

Mr. Dunbar. It is an attractive rate.

Governor Young. And when you stop to consider that the banks throughout the United States maintain rates to business at 6 per cent and they have the option of placing their surplus funds in United States Government bonds, and bankers' acceptances at not to exceed 51/2 per cent for the bankers' acceptances or commercial Paper at 6 per cent or possible 61/4 per cent, there would have been a strong desire to go to the New York call market at 8 per cent.

Mr. Dunbar. Do you believe that the fixing of the maximum rate at 8 per cent by the three members of the stock exchange that fix

the rates for call loans, could be made effective?

Governor Young. I think there has been a great deal of misunderstanding about the three members who fix the call rates. People seem to be under the impression they arbitrarily fix those

Mr. Dunbar. You explained the other day they do not.

Governor Young. They can not do that. If they fix the rate at 10 o'clock in the morning and it is not right, they have to change it during the day. It depends upon the funds that come in and the

amount of money that is short in the market. Now, the highest call rates, properly should have a restraining influence on the borrower. In 1927, 1928, and 1929, they did not seem to have a restraining influence. There is no specific evidence of it. But ordinarily, that rate would have a very restraining influence. Under the conditions that exist to-day, I think a 6 or 7 Per cent call rate would have a restraining influence and a very

Mr. Dunbar. You then would be inclined to adopt Mr. Seiberling's

opinion on that?

Governor Young. Eight per cent?

Mr. Dunbar. Yes.

Governor Young. I would not. I think that call rate had better

Mr. Dunbar. You said you believed an 8 per cent call rate would

Mr. DUNBAR. You do not think it would be a practical thing in times of emergencies?

Governor Young. That is correct.

Mr. DUNBAR. The people did have a speculative mania—there is no doubt about that-and I suppose nothing would stop them. The Federal reserve system did try to stop that speculative mania, did it not ?

Governor Young. It did.

Mr. Dunbar. I remember some people back home criticising the Federal reserve system very severely because its policies interfered with some of their transactions.

Governor Young. Yes.

Mr. DUNBAR. It did have a restraining effect, did it not?

Governor Young. We think so, to some extent.

The CHAIRMAN. Mrs. Pratt.

Mrs. Pratt. Mr. Chairman, I am sorry I was not here on Friday. It may be that some of the questions I may ask are already in the record. If so, will you please advise me? The Chairman. Very well, Mrs. Pratt.

Mrs. PRATT. During the course of the hearings, Governor Young, a great deal has been said about the decentralization of credit. It has been stated that part of the proposed legislation to permit branch banking would be for the purpose of decentralizing credit and creating, as I understood it, a greater number of large credit centers. Is that inconsistent with approval of such mergers as we have seen recently in New York?

Governor Young. May I answer that in this way: Let us take the Federal reserve system, for example. It mobilizes credit, which permits it to decentralize credit; in other words, the mobilization of the credit at any one point permits you to put it into the districts where it is needed and draw it from the districts where it is not

needed.

Now, it is hoped-and in my opinion, it would be a very shortsighted policy on the part of large groups, large chains, and even of branch banking, if it is permitted, if that decentralization after mobilization is not followed as a policy by these groups or chains.

Mrs. Pratt. Now, to go to the subject of your paper: How does the concentration of capital in banking compare with the concen-

tration of capital in business and industry in general?

Mr. Bussy. Mr. Chairman, we can not hear, and we should like to

follow the examination.

Mrs. Pratt. The question was, How does concentration of capital in banking compare with concentration of capital in business and

industry generally?

Governor Young. I can not state accurately, but I would say that up to 10 years ago, it lagged. Since then, consolidations, mergers and developments of groups and chains have been quite rapid. What relation that bears to business, I can not say. Can you tell us, Doctor Goldenweiser?

Doctor Goldenweiser. I would say it has not gone as far in bank-

ing as in other business.

Mrs. PRATT. That is the information I have. In your opinion, does the concentration in large communities, of the banking credits,

make it more difficult for smaller communities having smaller businesses, to secure accommodations and loans?

Governor Young, I have seen no evidence of that to date.

Mrs. Pratt. On page 29 of your statement, in the second paragraph, I was impressed with the number of agencies which have been created for the relief of the farmer. Do you think the fact that the farmers in Canada have lost nothing from their bank failures, as compared with the losses of their near neighbors in the States south of them, points to the possibility that the troubles in our agricultural communities can be better solved by permitting branch banking than by providing additional credit facilities, by paternalistic methods which impose heavy drains upon the Treasury? That is what happened when all these various agencies were instituted after the war.

Governor Young. Well, that is a very strong argument, Mrs. Pratt, for the branch banking system, in so far as the depositors are con-

cerned

rin

e is

The

I make that statement with a great deal of reluctance. I am a country banker and was raised in a country bank. My association has been with them for a great many years. I realize the difficulties they have experienced. I am thoroughly familiar with their resourcefulness and sticktoitiveness, and my sympathies are with the small country banker. I have the greatest admiration for those who have been able to pull through this very unfortunate period that we have had in the agricultural sections of the United States. I have great admiration for even some of those who were unfortunate enough to be compelled to close their institutions. But, I think, we are faced with facts rather than sympathies in this present situation. There has been a tremendous development of the group and chain idea, which is branch banking in another form.

Mrs. Pratt. You do feel, perhaps, that in many instances, the losses that were sustained might be laid to duplication of facilities?

Governor Young. I think so.

Mrs. Pratt. Now, on page 61—and I shall try to concentrate the questions so as to make them as brief as possible—it appears there that the fundamental cause of bank failures, apparently, was the lack of sufficient capital and the existence of more banks than could profitably exist in many communities, especially in the small communities. Following that summary, the statistics indicate that the largest proportion of failures occurred in communities of less than 1,000 population. From 1921 to 1927, 80 per cent of the banks failed in communities of less than 2,500, and, during the last 9 years, 91.6 per cent were located in communities of less than 10,000 population. I think that is correct, is it not?

Governor Young. I think so.

Mrs. Pratt. Now, it was in those communities, particularly, that the competition of facilities provided by the farm-loan system and later the intermediate credit banks operated, which would seem to indicate that the efforts of the Federal Government to extend cheap credit has produced harm rather than assistance and, as I intimated before, these communities may have lost more from bank failures than they gained through interest rate reductions.

Governor Young. I could not make that positive statement. I think it can be stated in this way that the inauguration of the Fed-

eral reserve system took away certain profits that the country bank had in the past in the way of collection charges that were made on checks. I think that the Federal land banks and joint-stock land banks, took away certain profits that the banker had previously to the enactment of those laws-profits which he received in handling farm mortgages-so that these two agencies did interfere with his profits. Does that answer your inquiry?

Mrs. Pratt. I think I shall find that it does when I read it over.

I was not able to follow it very closely.

Now, referring to Professor Sprague's statements quoted by you. I think it was in the last part of this statement, page 67, first paragraph, that Professor Sprague seemed to indicate that bank examinations have sometimes, prior to actual suspension, indicated increasingly unsatisfactory conditions. It might be giving too much power to a single individual to permit the Comptroller of the Currency, or a corresponding official charged with the duty of making such an investigation, to insist on a clean-up of the conditions complained of by the examiner; therefore-and this is a more or less an academic question-would it be advisable to set up some kind of banking board that would consider such questions as would arise from impending insolvencies?

Governor Young. I do not think it necessary to set up such a

board.

Mrs. Pratt. Do you think it is a good idea when they foresee an insolvency is inevitable that the operation should be more rapidly brought about rather than wait for the actual failure to occur?

Governor Young, I doubt it. I think the actions of the board would be the same as the actions of the Comptroller of the Currency; It is the ambition of everyone, the Comptroller of the Currency and any board, to give the bank the advantage of the doubt and do everything within their power to attempt to pull that bank through. either through assessments, voluntary or legal, or assistance from neighbors or consolidations or what not. The banking authorities. in 99 cases out of 100, do everything they can before they permit a bank to close. I think that any board that might be set up would do the same thing, not in the interests of the stockholders of that bank particularly, but in the interests of the depositors, in the interests of the community, and, if you will, in the interests of some good near-by banks. The closing of a bank has a far-reaching effect upon institutions that are good and solvent.

Mrs. Pratt. I was very much interested in the next paragraph of Professor Sprague's report. In reading it over the thought occurred to me that it apparently suggests the approval to all new charters be withheld awaiting what we call-with respect to public utilities-a certificate of public convenience and necessity and where competition is not held to achieve a public benefit; in other words, where it would be a mere duplication and would not be a benefit, it seems to suggest the possibility of banks, as is the case with public utilities, being required to present a certificate of public convenience and necessity. Do you think that would be a bad proposition?

Governor Young. I think that is what is done in actual practice

to-day. I think previously to 1920, charters were granted rather freely, both by the national department and also by the State departments. After 1920 it was much harder to get a national charter. because the supervising authorities realized that there were too many banks; so that, to-day, while the Comptroller of the Currency is vested with the power of granting national charters, in the last five or six years, I do not know of a national charter that was granted in the United States that was disapproved by the Federal reserve bank of the district.

Now there may be one or two exceptions, but I do not think so. So the procedure followed by the Comptroller of the Currency, when an application for a charter is made, is to refer that to the Federal reserve bank in the district in which the bank desires to locate. It is also referred to the chief examiner of that district and they both made independent investigations and recommendations to the Comptroller of the Currency to grant the charter, deny the charter, or withhold the charter. That is what happens in actual practice.

You may have a Comptroller of the Currency that would disregard that procedure and arbitrarily grant charters where he wanted to. There has been a suggestion at different times that the approval of the national charters might go a little bit beyond the Comptroller

of the Currency and include the Federal Reserve Board.

Mrs. Pratt. You think, as a general principle, that the creation of competition is better than the strengthening of the existing system? Which has the better effect—competition or—

Governor Young. I should like to answer that both would be beneficial, good competition and strengthening of the banking

structure.

ľ.

Mrs. Pratt. I have been away, Mr. Chairman, and I should like to ask more questions later.

The CHAIRMAN. Mr. Steagall.

Mr. Steagall. Governor Young, what is the total capital of the Federal reserve banks?

Governor Young. \$172,245,000.

Mr. Steagall. What is the present surplus of the 12 Federal reserve banks?

Governor Young, \$276,936,000.

Mr. Strong. What is that surplus again?

Governor Young. \$276,936,000.

Mr. Strong. And what is the capital? Governor Young. \$172,000,000 paid in.

Mr. Steagall. Governor, you stated to Mr. Dunbar the amount that would be paid to the member banks if the present earnings of the system could be applied and distributed among the member banks on a basis of their balances. What per cent did you say that would have been last year?

Governor Young. Mr. Dunbar figured it out. Mr. Dunbar. One and one-third per cent.

Mr. Steagall. Can you state what percentage it would be if dis-

tributed on the basis of stock held by the member banks?

Governor Young. It would be almost 331/3 per cent on the capital stock, I think. Let me examine the figures; \$22,000,000 was transferred to the surplus account.

Mr. STEAGALL. I mean to include in that the amount paid to the

Government?

100136—30—vor. 1 pt 5——2

Governor Young. \$26,000,000 that would be distributed on a capital of \$172,000,000. That is about 15 per cent or 16 per cent.

Mr. Steagall. The Federal reserve banks have set aside a surplus,

down to this time, amounting to almost twice their capital?

Governor Young. Twice the paid-in capital. The subscribed capital is-

Mr. STEAGALL. You are going to continue to set aside 10 per cent

each year!

Governor Young. For those banks who have already accumulated a surplus of 100 per cent of their subscribed capital.

Mr. STEAGALL. That is what I mean. Well, they will do it any-

how, will they not?

Governor Young. They will take more into the surplus account-Mr. STEAGALL. At any rate, after setting aside the 100 per cent they will continue to set aside 10 per cent after the earnings are paid?

Governor Young. After the 6 per cent dividends are paid. The

dividends are paid first.

Mr. STEAGALL. Do you think it advisable and wise that this law operate perpetually under which the banks will continue to increase their surplus?

Governor Young. I think when the surplus gets to 100 per cent

it is plenty large enough.

Mr. STEAGALL. We are still, nevertheless, paying the 10 per cent?

Governor Young. Correct.

Mr. STEAGALL. The member bank is arbitrarily held to 6 per cent return on the capital stock and nothing upon balances or deposits? Governor Young, Correct.

Mr. STEAGALL. Your Federal reserve banks have paid into the Treasury, since the inauguration of the system, approximately \$150, 000,000, have they not?

Governor Young. \$147,000,000. Mr. Steagall. \$147,000,000? Governor Young. Yes, sir.

Mr. STEAGALL. And during that time they have set aside \$170,000,-000, did you say?

Governor Young. \$276,000,000. Mr. Steagall. \$276,000,000? Governor Young. Yes, sir. Mr. Steagall. Surplus? Governor Young. Yes, sir.

Mr. STEAGALL. And this, of course, is exclusive of the varied and extensive expense accounts that they have encountered in the way of building-

Mr. Strong. And salaries.

Mr. STEAGALL. And other things incident to the inauguration of the Federal reserve system? Governor Young. Yes, sir.

Mr. STEAGALL. Which, of course, would not be expected to con-

tinue in the future?

Governor Young. That is correct. I will correct that just a bit. Mr. Congressman. The probabilities are, as time goes on, it will be necessary to build more branch buildings.

Mr. Steagall. There will not be many more buildings, I take it?
Governor Young. Not unless the branch system of the Federal reserve system is extended.

Mr. Steagall. Well, what would you suggest instead of a continued accumulation of unnecessary surplus out of the earnings of

these banks?

ital

lus,

bed

ent

ted

ıy-

ent

re

he

W

to

t?

3 %

16

Governor Young. I would suggest these earnings over a certain

amount be paid to the stockholding member banks.

Mr. Steagall. Governor Young, I have had some bills pending before this committee for probably 10 years undertaking to enable member banks to share in the earnings of the system. I first introduced a bill providing that there should be an administration upon the assets of the Federal reserve banks after setting aside their surplus, paying the 6 per cent earnings to their stockholders and all expenses—that there should be an administration by the Federal Reserve Board and the earnings returned to member banks upon a basis of their daily balances and in proportion as those earnings accrued by reason of the operations of the Federal reserve banks with their member banks.

Governor Young. Not retroactive? Mr. Steagall, Not retroactive.

Governor Young. But from that point on!

Mr. Steagall. Yes. Later I introduced the bill in a different form, providing that the earnings distributed be paid up on the basis of the capital stock held by the member banks, and I believe you said that the latter, you think, would be preferable, if such a law were to be passed.

Governor Young. If I did, I spoke a little too quickly. I think, and this is a rather impulsive thought, that returns should be paid to member banks not alone on their stockholdings in the Federal reserve system but also in proportion to the reserves they carry—

the combination of the two.

Mr. Steagall. I appreciate very much, representing an agricultural section that is in considerable distress, not only as expressed in banking facilities, but in a general way—I appreciate what you say in reference to the country banks and small banks.

If these earnings should be distributed on the basis of stock held, the proportion of help would be more favorable to the country banks and smaller banks than would be the case if it were distributed on

the basis of daily balances; would it not?

Governor Young. A slight preference, because the country banks carry lower reserves in proportion to the banks of the larger cities.

Mr. Steagall. And the deposits run lower than is the case with the larger banks in the larger cities?

Governor Young. The difference would be very slight, Mr. Con-

gressman.

Mr. Steagall. I want to ask you what portion of the earnings of the Federal reserve banks result from the relations of the Federal reserve banks with their member banks; in other words, what portion of those profits come out of the member banks?

Governor Young. I suspect, Mr. Congressman, that would be confined entirely to the amount we lend member banks in discounts. Is

that the way you want it divided?

Mr. Steagall. I want you to put that in your own way, because you are better informed than I am and can tell me things about it

that, perhaps, I do not know.

Governor Young. Our profits come from three main sources. First, there are the discounts received from member banks on the paper that they rediscount with us; the second source of income is that received on Government bonds that we buy in the open market; and the third source are the discounts that we earn on bankers' bills that we buy in the open market. Dividing those, the profit we get from member banks comes from the amount of paper that they rediscount. Then there are the bills that we buy and the Government securities, and the income on those constitutes profit that we do not get from the member banks.

Over the last 10 years, I would say on an average, and I am going to ask Mr. Smead to correct me if I am wrong, it has been just about

50-50.

May I insert this table in the record?

The Chairman. Without objection the matter referred to will be inserted in the record.

Governor Young. Two-thirds of the earnings come from the paper that is discounted with the member banks, approximately.

Mr. Steagall. As a matter of fact-

The CHAIRMAN. I am under the impression that this matter has already gone into the record. Am I correct in that?

Governor Young. Not to my knowledge.

Mr. Steacall. I was not here during all of this examination, and I do not like to repeat, but this is information that I am anxious to get into the record.

Governor Young. Can I give this information?

The CHAIRMAN. All right; if you will read it into the record.

Governor Young. Total earnings in 1920, \$181,000,000; earnings on discounted bills, \$149,000,000; on purchased bills, \$22,000,000; on United States Government securities, \$7,000,000; and there was a small amount of earnings coming from penalties on deficiencies in reserve, only amounting to \$1,500,000; miscellaneous other sources, \$1,500,000.

That was the year in which the banks were very heavily in debt

to the Federal reserve.

In 1921 total earnings, \$122,000,000; earnings on discounted bills, \$109,000,000; on purchased bills, \$5,000,000; on United States Gov-

ernment securities, \$6,000,000.

From 1922 on, the earnings, I would say, averaged about \$43,000,000. The average return on bills discounted would amount to about \$23,000,000; the average earned on purchased bills, about \$8,000,000; the average on United States Government securities, about \$9,000,000.

Mr. Steagall. Governor, the fact is, is it not, that the Federal reserve banks get their money out of their member banks, even

their capital?

Governor Young. That is correct,

Mr. Steagall. Your rediscounts, or discounts, whichever you call them, are mainly with the smaller banks and the banks that are more in need of sharing the earnings of the Federal reserve system?

Governor Young. In number, Mr. Congressman, but not in volume.

Mr. Steagall. Not in volume? Governor Young. Oh, no.

Mr. Steagall. These investments that you make, other than loans to member banks, are made out of your reserves and balances that are obtained from the member banks?

Governor Young. Yes, sir.

Mr. Steagall. And all of the profits that you make out of these bills that you buy come out of the handling of the funds of the member banks maintained by the Federal reserve bank?

Governor Young, Yes, sir.

Mr. Steagall. Governor, is it a true picture of that situation to say that only two-thirds of the profits of the Federal reserve banks accrue by reason of the relations of the Federal reserve banks with their member banks?

Governor Young. No: that is not a fair statement.

Mr. STEAGALL. They make more than that out of the member

banks, do they not?

ause

it it

cees.

the

e is

zet;

ills

get

re-

ent

not

ng

ut

be

er

ıs

Governor Young. You might just as well say that they make everything out of the member banks. I thought you were trying to divide it.

Mr. Steagall. I wanted the whole picture, and you have answered it fairly and have given the information I had in mind, and done it

in a comprehensive way, I think.

Governor Young. I want to correct that somewhat. The United States Government has given the Federal reserve system a very unusual franchise in its note-issue power. I think that there is no doubt that that is one of the very valuable assets of the Federal reserve system, and I think it would be fair to say, Mr. Congressman, that in view of the power given to the Federal reserve system which enables it to issue an elastic and well-secured currency each and every individual of the United States contributes to a certain extent to the possibilities of profit of the Federal reserve system.

Mr. Steagall. After all, the franchise granted the Federal reserve banks by the Federal Government was in contemplation of an enlargement of the service of the banks already in existence and

already chartered?

Governor Young. Yes, sir.

Mr. STEAGALL. And, incidentally, it was an additional franchise for their benefit?

Governor Young. I would say, a very important franchise, for without it it would have been extremely difficult for the Federal Reserve system to operate.

Mr. Steagall. It would require the enactment of legislation to terminate the operation of the system under which the surplus is continually enlarged 10 per cent annually, would it not?

Governor Young, Yes.

Mr. Steagall. In your judgment, if no other provision of law is made for the redistribution of these earnings, you think some legislation should be passed which would terminate the setting aside of unnecessary surplus?

Governor Young. Yes, sir. The Federal Reserve Board is making a recommendation to the Congress of the United States in its annual report that a greater distribution of the earnings of the Federal reserve system be made to the member banks. As to the details, the board has not yet arrived at any conclusions, but it is satisfied that it can eventually work something out after all plans and proposals are considered.

Mr. Steagall. The bill that I first introduced provides that the Federal Reserve Board shall be directed to ascertain approximately the proportion of the earnings that are made out of their member banks, and to distribute to those banks that portion of those earnings and pay the balance into the Treasury as a franchise tax. Would that be practical?

Governor Young. Do you mean by that-

Mr. Steagall. Here is what I mean, as suggested in your answer to Mr. Dunbar as to the wisdom of attempting to set up a definite percentage of return to the member banks: It readily occurs to anyone, of course, that a situation might exist where all banks would not earn a sufficient amount to meet that requirement, and then, of course, they would be driven to the practical necessity of undertaking to make sufficient earnings to take care of that demand, or, failing to do so, would be unable to pay—

Governor Young. That would be poor policy.

Mr. Steagall. Yes; I agree with you, but under the bill that I have suggested at the end of each fiscal year the Federal Reserve Board would administer upon their earnings, and it would not matter whether they had made large or small earnings; they would proceed to cast up the account to ascertain what portion of those earnings accrued by reason of their relations with member banks, and then base the returns to the member banks upon that calculation. That would be practical, would it not?

Governor Young. Do you mean by that, Mr. Congressman, that if you had two banks in the community, one that had not borrowed from the Federal reserve system and the other that had borrowed liberally for the entire year, that the profits would go back to the

borrower and not to the lender?

Mr. Steagall. No, sir; I do not mean to carry it to that finality, but simply to base it either upon the stock held by member banks

or upon the stock plus daily balances as suggested by you.

What I am asking you now is for the practical way of going about the plan that I have outlined, by which the board would undertake to determine the amount of earnings that had accrued by reason of operations with their member banks.

Governor Young. I can not give you the details at the moment, but I am confident in my own mind that some equitable basis of

distributing earnings can be worked out.

Mr. Steagall. Governor, do you think the small banks in the smaller communities should not be permitted to impose charges for the collection of checks?

Governor Young. Well, Mr. Congressman, that has been a debatable question for a great number of years. The Congress of the United States, I think, has answered that question.

Mr. Steagall. And thereby hangs a tale, but I will not go into

that situation.

Mr. Stevenson. That is the ultimate wisdom, of course.

Governor Young. I will answer it this way, that I think it is extremely unfortunate that a State bank under certain conditions is permitted to make those charges and the national bank is denied that right.

Mr. Steagall. That discrimination was brought about by those who were responsible for the law or for the practices of national banks, was it not? The system before it was disturbed gave the same privilege to the national banks as to the State banks?

Governor Young. That is correct.

Mr. Steagall. So that if there has been brought upon the national banks a discrimination that is injurious, we have ourselves to blame and not the State banks; have we not?

Governor Young. That is debatable, whether it is injurious to

them or not.

Mr. Steagall. I am not saying it is; but if it is injurious, whoever is responsible for that situation is to blame, and not the State banks. If it is right for banks to charge for remitting checks from rural districts to wholesale houses, the State banks are not to blame for continuing to permit that to be done, are they?

Governor Young. No; you can not blame them.
Mr. Steagall. And if it is a legitimate charge for the exercise of a legitimate function of a bank, it also follows that we should not have taken that right from the national banks; does it not?

Governor Young. Well-

Mr. Steagall. Anyhow, we did that; we took that right awaysomebody did; I did not. At any rate, they got it taken away. Are you familiar with the history of that legislation in Congress?

Governor Young. Not entirely.

Mr. Steagall. Well, that is beside the question. That is one instance in which the House of Representatives did something that they did not want to do. They instructed the conferees not to agree to the Senate amendment which took away that right, and they brought in a report which did take it away, and the House ratified the report; and that is how the national banks lost the right to collect for remitting checks. It was an error of the head and not of the heart. The House did not intend to do it.

(Thereupon, at 12 o'clock noon, the committee went into executive

session.)

BRANCH, CHAIN, AND GROUP BANKING

WEDNESDAY, MARCH 26, 1930

House of Representatives,

Committee on Banking and Currency,

Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock a. m., Hon. Louis T. McFadden (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Mr. Steagall, you were questioning the governor when we adjourned yesterday.

STATEMENT OF GOVERNOR ROY A. YOUNG-Resumed

Mr. Steagall. Yesterday when we adjourned we were speaking of the discrimination against national banks in connection with making a charge for remitting from some rural district to, say, a wholesale house in a large center on checks drawn, and how that situation came about.

Mr. McFadden, you are a little more familiar with that history than I am. Will you state in your own language what took place in connection with that legislation, in my time? I can state it roughly, but probably you have the identical language in mind in which that amendment was expressed, and, if you have, inasmuch as we have

already referred to it, I wish you would do so.

The Charman. I do not recall now just the language of the amendment. It was known as the Hardwick amendment. It was inserted in the bill in the Senate and came over in a conference report to the House. It gave the banks the right to make a minimum charge of 10 cents, I believe, on the collection of checks, and I made the motion in the House to instruct the conferees to sustain the substance of the Senate amendment. After about 60 or 90 days' time, with great propaganda carried on throughout the country—the National Credit Men's Association and other affiliated organizations being interested in the collection of par checks—including the activities of the Federal Reserve Bank of New York, the Federal Reserve Board, and the administration generally, the matter finally came up for a vote; and, as I recall, my motion was defeated by 2 or 4 votes. That would have given the country banks the right to an exchange charge on the collection of checks.

Mr. Steagall. If you will pardon me, you have not expressed correctly what took place in a parliamentary sense with reference to your amendment. This is what occurred: You offered an amendment to instruct the conferees on the part of the House to agree to the substance of the Hardwick amendment—and I am going to ask the clerk to insert in the hearings right here the original Hardwick amend-

ment

(The amendment referred to is here printed in full, as follows:)

b

Provided, Such nonmember bank or trust company maintains with the Federal reserve bank of its district a balance sufficient to offset the items in transit held for its account by the Federal reserve bank: Provided further, That nothing in this or any other section of this act shall be construed as prohibiting a member or nonmember bank from making reasonable charges, in no case to exceed 10 cents per \$100 or fraction thereof, based on the total of checks and drafts presented at any one time, for collection or payment of checks and drafts and remission therefor by exchange or otherwise.

Mr. STEAGALL. Continuing, this is what took place: You made a motion to instruct the conferees to agree to the substance of the Hardwick amendment. They reported the Hardwick amendment with a proviso which nullified in effect the purpose of that amendment. A point of order was made in the House against that amendment, for the reason that the conferees had disobeyed the instructions, and Mr. Clark ruled it in order, upon the statement from dis-tinguished Members of the House and members of the conference committee that what the conference committee had done did not amount to a violation of the instructions of the Houe but that the changes incorporated in the Hardwick amendment by them were simply designed to secure its practical operation, and, in short, that they had obeyed the rules of the House, and upon that assurance Speaker Clark overruled the point of order and the House voted upon the report of the conferees and sustained it, although it turns out that that report was in violation of the specific instructions of the House.

Now, the resolution offered by you to instruct the conferees was adopted in the House—

The CHAIRMAN. You are quite correct in that.

Mr. STEAGALL. That is the history of that transaction.

The CHAIRMAN. And an interval between that time and when the matter was finally voted on of about 60 days elapsed, in which such propaganda was spread throughout the country as I have never seen before nor since, and it resulted, of course, in the defeat of the right of banks to make that collection charge.

Mr. Steagall. And, as a matter of fact, this was a fight between the large wholesale houses and the large banks in the larger cities, on the one hand, and the small country bank, on the other; in short, it was an effort to require the small banks to render for nothing the service of collecting those checks and remitting on them.

Mr. Stevenson. And if you will allow me to "butt in" now, the very same gang is endeavoring to get us to pass the Strong bill here, to give them a preference, to make them preferred claimants whenever they send a check to a bank to be collected for them for nothing, and it fails before the remittance clears. That is just the next step.

Mr. Steagall. I realize as a practical proposition that that fight is lost, I suppose; but it is just as well to let that history go into the record, and I do it for this reason, that the taking away of the right to impose charges for the collection of checks is one of the things under which the small banks have suffered and which, in my opinion, has contributed to their difficulties. If I am not in error in my recollection, the proof before this committee showed, when we had that matter under consideration, that it was not an unusual thing for small country banks to be able to realize out of these charges for

collecting checks sufficient sums to meet the salary rolls of those banks,

Mr. Stevenson. And they enforced it in a brutal way, too.

Mr. Steagall. And there were instances brought before this committee—I did not intend to refer to them, but I will—where the Federal reserve banks, in cases in which the small banks had refused to render this service for nothing and to remit these checks without charge, started out with a practice of accumulating a number of checks and even sending them across the country with men on cars armed with Winchesters and throwing an accumulation of those checks on the windows of small country banks to be paid in cash—and not pay, of course, such bank loans—have had to close their doors.

You need not shake your head, Governor; there was proof of that before this committee. I am not censoring the present Federal Reserve Board or the Federal Reserve Board at that time, because I do not think they had any part in it, but it shows that Mr. Stevenson is not unjustified in saying that they went about it in a brutal

Manner in some instances.

I do not say that that was a common practice at all, or that the

Federal Reserve Board was responsible for it.

Mr. Brand. You know that the Federal Reserve Board did take

A part in it.

Mr. Steagall. Not in that; they took part in putting over the plan
by which banks were denied the right to charge for remitting checks.

Mr. Brand. They were opposed to the paying of a collection

charge on these checks.

Mr. Steagall. There is no question about that; but I am talking about these instances when the Federal reserve banks, when the little banks would not remit these checks for mothing, would accumulate quite a number of them and send them across the county with guards armed with Winchesters, an act, of course, calculated to break such banks.

Mr. Brand. But they were not in favor of having the banks make

this charge.

Mr. STEAGALL. There is no question about that; that is another

matter entirely.

Mr. Brand. They probably would have succeeded in getting a little benefit if it had not been for the Federal Reserve Board's activity, and the propaganda against it.

Mr. Steagall. I think the Federal Reserve Board had a large share of the responsibility for taking away that privilege from the

iittle banks, but not the present Federal Reserve Board.

Governor Young. Is it not fair to say, Mr. Congressman, that the board was required to do that under the law?

Mr. Steagall. Oh-do you mean the law as it finally passed?

Governor Young. Yes.

Mr. Steagall. They had no authority to do it under the original law. Of course, as the law finally passed, it was construed to give them that authority.

Governor Young. Mr. Congressman, I would like to have Mr. Wyatt answer some of these questions. He is thoroughly familiar

with that matter.

Mr. Steagall. I would be glad to have him do so, but my only purpose in referring to it was to keep the record straight.

Governor Young. I do not know but what it would be a good thing to put into the record the history of the par collection of checks, and the Hardwick amendment in particular-

Mr. Steagall. I have already asked that that be inserted.

Governor Young (interposing). As construed by the Federal Reserve Board in the Pascagoula case. which I think is a complete

history of it.

Mr. Wingo. No record would be complete without a copy of the statement that was made in the House at the time you brought in the report, when the House was told that the banks would be permitted to make the specific charge provided by the Hardwick amendment and that it was not the intention of the Federal Reserve Board to prevent the charge.

Mr. STEAGALL. If we attempted to encumber this record with one side of the argument in that controversy, to make it complete we

would have to go back and get the file on the other side.

Mr. Brand. That is res adjudicata.

The Chairman. Governor, did you want Mr. Wyatt to make 3 statement?

Governor Young. Yes; I would like to have him make a statement. Mr. WYATT. I would like to clear up two or three points about that In the first place, some reference was made to the propaganda that went on during the time the bill was in conference, and there was a lot of propaganda, but I would like to make it clear that the Federal Reserve Board did not engage in that propaganda. That was done by the National Credit Men's Association, which was the original proponent of par checks, and they fought that fight all the

way through. The CHAIRMAN. In view of that statement. I will say that I knew about some of the propaganda put forth, and I differ with you particularly in regard to the Federal Reserve Bank of New York. They were very active in this matter, as were certain members of

the Federal Reserve Board. The record is clear on that.

Mr. Wingo. The record of this committee shows that at least two members of the Federal Reserve Board were very active.

Mr. Brand. Were you with the department at that time?

Mr. WYATT. Not at the time the Hardwick amendment was

Mr. Stevenson. Most of those fellows are gone. Let us draw the veil and try to forget the things that are past and look forward to doing something now. It does not seem to me that we are getting anywhere in rehashing all of this stuff. Paul was a wise man, and he said he believed in forgetting the things that are past.

The CHAIRMAN. I think that is a good suggestion; but if Mr.

Wyatt wants to proceed, we will hear him.

Mr. WYATT. I do not want to take up the time of the committee.

I think the suggestion made is a good one.

Mr. STEAGALL. Governor, this kind of a transaction took place in a small country State bank that is a member of the Federal reserve system in my district not long ago. The bank was closed. My information is that they owed only \$48,000, and they had \$50,000 capital and \$50,000 surplus. They were in a farming community. I do not know the details or the merits of any controversy that they may have had as to whether they should be closed or not except in

a general way, when some transaction of this kind were called to my attention: There were depositors in that bank who gave checks on that bank in payment of obligations, and the payees deposited those checks in another bank in the same county, which other bank was a member of the Federal reserve system. That bank forwarded, through their regular connections, these checks for collection to the Federal reserve bank, and the Federal reserve bank sent them direct to the bank on which they were drawn for collection. In the meantime the bank on which they were drawn charged these checks to the makers and surrendered them with a statement of their accounts and remitted with its own check to the Federal reserve bank, and the bank on which the checks were drawn, closed. The Federal reserve bank held the notes of this bank, not then due, and they charged these checks back against the bank from whom they received them. They took the balances of the bank on which these checks were drawn and applied them to the payment of notes not due, charged the checks back against the banks that had sent them in, and the bank that originally cashed the checks went back on the payees and required them to refund the money. The payees of those checks did not have the money and did not have the checks. They paid the money back to the banks that had cashed the checks, and the man who had drawn the checks originally had them in his possession marked paid and surrendered by the bank on which they were

What suggestion would you make with reference to a transaction

like that, or a situation where those transactions can occur?

Governor Young, I think the law holds that the drawer of the check is out of the transaction; he has paid his bill as far as he is concerned. Whether the reserve bank is liable or not would depend on whether they were negligent in the presentation or collection. The responsibilities beyond that would depend upon the terms of their circular. Generally speaking, reserve banks handle those checks as agents.

Now, there has been a recent decision of the Supreme Court of the United States that has a bearing on this whole transaction, and I am not an attorney, Mr. Congressman. It is rather difficult for me to

answer this. May I have Mr. Wyatt answer it?

Mr. Steagall. Yes; I would be glad to have him discuss that.
Mr. Wyatt. I do not think the recent decision of the Supreme
Court in the case of Thomas A. Hurley, receiver, against the Federal Reserve Bank of Richmond has any great bearing on the general
question except the fact that it definitely establishes the proposition
that the rights, responsibilities, and duties of a Federal reserve bank
in collecting checks are governed by the terms of their check collection circulars, which really constitute a contract between the
Federal reserve banks and the banks which send in the checks.

Mr. Steagall. In other words, the Federal reserve bank has contracted with its member banks along lines that relieves it of any responsibility in this transaction, although it sends it direct to the

member bank for collection?

Mr. Wyarr. Of any responsibility except for their actual negligence and their liability as a guarantor of prior indorsements. The reason for that, Mr. Congressman, is that the Federal reserve banks handle such an enormous volume of checks that they simply could

not undertake to guarantee or underwrite the safe collection of those checks. I think the amount of checks collected through the Federal reserve system in one year runs like \$300,000,000,000.

66

he

is

th

P

O

Mr. Steagall. You do not mean that that is the amount of checks that went the rounds and ended like the ones I referred to?

Mr. Wyatt. No; I am telling you the amount that they actually handle for collection. Under modern conditions it is physically impossible to present out-of-town checks across the counter and demand payment in cash as you are required to do under the old common-law rules. As I say, it is physically impossible; there really is not enough currency available to settle those checks every day, and it would be physically impossible to present them across the counter if you could get currency, and practically all the commercial banks that do not clear through the Federal reserve system have some such procedure as was in effect before the Federal reserve system was in operation.

Mr. Stevenson. Under the decisions, if they mailed it direct to the drawee bank, and the remittance failed, they were held to have been

negligent in selecting that method of collection.

Mr. Wyatt. That was the old common-law rule, and it was so held in the case of Malloy against the Federal Reserve Bank of Richmond in the Supreme Court of the United States, and in that same case the Supreme Court said that these old common-law rules as to the duties of a collecting agent can be varied by contract, and they have been changed by contract. The Federal reserve banks have contracted for the right to present those checks through the mails and accept a remittance draft in payment instead of presenting them across the counter.

Mr. Stevenson. In other words, they held that they could con-

tract against negligence of a certain kind?

Mr. WYATT. No, sir; that they could contract as to the method by

which they should collect the checks.

Mr. Stevenson. The reason they could not collect that way and were held responsible was on the ground that it was negligence for them to make the drawee bank send for a remittance and then allow them by contract to excuse themselves for the negligence which had been held by all the courts, from the sending direct to the drawee bank for collection, but they held, further, that they could not contract against actual negligence if it was thought that the bank was in a shaky condition and they still sent it there, that they could be held.

Mr. WYATT. On this last point, you are right; the Federal reservebanks can not contract against liability for their negligence, and they have never attempted to do so. The board's regulations, and their circulars, say that they assume no liability except for their own negligence and for their own guaranty of prior indorsements.

This loss that Mr. Steagall mentioned is a very unfortunate thing and I think it is unjust, but I do not think it results from the system of collection or the method adopted by the Federal reserve banks. I think the loss results from an unsound but, unfortunately, very well-established rule of law, and that is the rule to the effect that a check is deemed to have been good when it was charged to the depositor's account, even though the bank on which it is drawn never remits to anybody, and when that check is presented to the bank on

hose Ieral

ecks ally

imdeomally and

ter nks ich in

the en eld

hne to ev ve-

ls. 1g 1-

d à-

Mr. WYATT, May I answer that?

which it is drawn, the bank charges it to the drawer's account, cancels it and surrenders it, but never remits to anyone. Yet the courts hold that so far as the drawer is concerned, that check is paid and he is released, and I think that there is where the inequity comes in in the case of a failed bank; that results in the drawer of that check receiving his deposit in full to the amount of that check while the other depositors have to share the losses.

Mr. Stevenson. That does not always follow that he gets it in

full; it depends on the law in the State where it happens.

Mr. WYATT. Oh, yes.

Mr. Stevenson. In a national bank he does not get it in full.

Mr. WYATT. I am talking about the man who drew the check; if that check is canceled and is charged to his account, his deposit is paid off to that amount and his account is reduced by that amount.

Mr. Stevenson. The banks in this city do not all recognize that yet, because a year ago I sent a check to one of them for \$1,000, and it went down to the bank on which I drew it and was charged to my account and remittance made, but the bank closed before it was cleared—and it took them an unconscionable time to clear it—and the Riggs Bank was holding me for the \$1,000 just the same.

Mr. WYATT. Was that your check?

Mr. Stevenson. Yes. I have been through that mill,

Mr. Wingo. You should have hired a lawyer. [Laughter.]

Mr. Stevenson. I did.

Mr. WYATT. As to this method of collection—

Mr. Stevenson. What I did was this: The State of South Carolina had passed a law that under those circumstances that was a Preferred claim and should be paid before they began to pay general creditors, and I got it that way.

Mr. WYATT. You filed a claim against the receiver of your bank?

Mr. Stevenson. Yes.

Mr. Wyatt. And got your check paid in full. I might say that that rule has been adopted either by statute or by decision of the court in quite a number of the States in the last six or eight years,

Mr. Stevenson. But the national banks do not always follow that

Mr. Wyatt. They can not, because the national bank act governs the receiver in the liquidation of the affairs of an insolvent national bank, and it says that the creditors shall be paid ratably and the matter is handled in the Federal courts. The receiver acts under the jurisdiction of a Federal court and those rules adopted by the States have no application to the liquidation of a national bank.

Mr. Stevenson. I know it. Mr. Steagall. Governor Young, what would you suggest should be done with reference to the practice in the system that makes this kind of a thing come about?

Governor Young. Do you mean what the Federal reserve could

Mr. Steagall. What should be done by somebody? Governor Young. I do not know, Mr. Congressman, what could be

m

The American Bankers' Association has for the last two or three years been advocating a uniform State law giving the holder of a check that is canceled but for which no remittance is made a preferred claim against an insolvent bank on which that check is drawn, and such a statute has been passed in a number of States, and the American Bankers' Association is trying to get it enacted in all the States. If that is enacted in all the States, and, as I said a moment ago, that rule has been adopted by the courts as a common-law ruling in a number of States, that will very largely cure the situation in so far as State banks are concerned, but it will not cure the situation in so far as national banks are concerned, and I think it would place the national banks at a disadvantage because, assuming that this rule is adopted in all the States, it will mean that a person having a check in a State bank will get his check paid in full if it is charged off before the bank fails through having a preferred claim or he will get his check back uncanceled and duly protested.

The CHAIRMAN. Would that apply also to the collection of drafts!

Mr. WYATT. I think it will; yes, sir.

The CHARMAN. To any case covered by the Strong bill?

Mr. Wyatt. Yes, sir; but if this State legislation goes through and no similar national legislation is passed, a person holding a check on a bank that fails after the check has been charged off would be in a much better position if that bank is a State bank than he would if it were a national bank, and people may get the impression that it is safer to write checks on State banks than national banks.

Mr. Stevenson. Well, as I said a while ago, that saved me \$1,000, or at least whatever per cent I would have lost on that if I had been one of the general creditors. At the same time, within my town, a lady deposited a check that represented her husband's life insurance, \$3,000, all she had. It went into the bank and the bank collected it and then closed. In the first place, she has got to wait until \$90,000 of preferred claims growing out of that statute are paid in full to the bankers and to all the other people, the big shippers and all that, that are protected by it, and then take her pro rata of what is left. There is a great deal of inequity in it, and I would not be surprised if they repealed the law in South Carolina.

Mr. WYATT. I think it is inequitable, and that is why I suggested that the fair remedy would be to have the law changed so that a check that is charged to the depositor's account but for which no remittance is made and for which nobody is ever paid will not be deemed to have been paid, and the drawer of that check will not be released, so that the holder of that check can go back against the drawer. I think that would be the fair thing, but I do not believe that Congress has any jurisdiction to correct that situation. It is a matter of contract in commercial law, and you would have to correct it by amendments to the State laws in all the different States.

Mr. Wingo. Some of us have difficulty enough paying our debts once, but according to your rule we would have to pay twice.

Mr. WYATT. Well, the man who is unfortunate enough to select

Mr. Wingo. You are overlooking the fact that the man who takes the check has his remedy now. Do you want to make the drawer of the check guarantee proper handling of his check and protect the

man against his willingness to take a check, without failing to demand something better?

Mr. WYATT. Of course, when a man draws a check, he contracts

that that check will be paid.

Mr. Wingo. But he does not guarantee the method of payment; he simply says that when the check is presented it will be charged to his account.

Mr. WYATT. And that the holder will be paid.

Mr. Wingo. If he had presented it in person across the counter, it would have been paid and the payee would have gone out before the bank failed.

Mr. WYATT. That is right.

Mr. Wingo. But, for the convenience of the gentleman paid, he turns it over to his agent, and he has a right to demand something beside that check in the first instance if he wants to.

Mr. WYATT. That is right.

Mr. Wingo. But for his convenience as much as for the convenience

of the drawer, he takes the check.

Mr. WYATT. You have to recognize that, under modern conditions, these checks could not be collected in the manner in which they are now collected if you had to present them across the counter and demand cash. It would be so expensive and inconvenient that people would not take checks as freely.

Mr. Wingo. Your suggestion is almost unanswerable not only

under modern conditions but also under the rules of law.

Mr. WYATT. May I make one further statement? And that is, that all of this trouble grows out of failed banks, and if you can

stop bank failures you can stop this trouble.

Mr. Stevenson. And, according to the statement of the comptroller, something like 7,000 banks failed in the last 9 years. You said something about a man being unfortunate in the selection of his bank, and, it seems to me, that at the rate we have gone it takes a man who is a good gambler to determine which bank is not going to fail.

Mr. Wingo. Your remedy, to stop the banks from failing, is like saying, you can enforce the eighteenth amendment by eliminating

the appetite for liquor.

Mr. Steagall. We can all understand that transactions of this kind evoke complaints, criticism, and irritation that should be avoided.

Governor Young. Mr. Congressman, the law is so complicated in various States that you can see there are difficulties with every suggestion that has been made.

Mr. STEAGALL. Yes.

Governor Young. The United States Government enters into a contract with anyone from whom it receives checks that they can pass the check back to the drawer, and, if I remember correctly, several of the large concerns have done that. That is the only remedy that I know of.

Mr. Steagall. Well, we will pass on from that.

In discussing the matter of permitting member banks to share the earnings of Federal reserve banks, you said something about requiring a law forcing State banks to carry balances with the Federal reserve bank. Did I understand you right? Governor Young. I said that had been a suggestion.

Mr. Steagall. What did you have in mind in that reference? Governor Young. On the theory or on the belief that we all think that the Federal reserve system has been beneficial to the country and it is quite necessary that it continue. Obviously, under the present conditions the nonmember bank can get many of the benefits indirectly through its correspondent that the member bank can get directly from the Federal reserve bank. In other words, I think that you found in your investigation that the main reason why State banks did not join the Federal reserve system was because they lost the 2 or 2½ per cent interest that they might be paid by a corre-

spondent if they carried their reserve with the Federal reserve bank.

Mr. Steagall. I can not agree with you that that was the main

reason, but that was one of the reasons.

Do you think that Congress would have any right to pass a law requiring a State bank to deposit and maintain deposits in a Federal reserve bank?

Governor Young. I do not know.

Mr. Wingo. Did you say "right" or "power"?

Mr. Steagall. Power.

Mr. Wingo. There is quite a difference.

Mr. Steagall. I am not as good a lawyer as you are. I meant to ask if Congress has such legislative power?

Governor Young. I do not know, Mr. Congressman. That is

something for the lawyers to determine.

Mr. Steagall. Governor Young, I am interested in all of these various suggestions with respect to legislation, banking rules, and everything else designed to protect bankers and banks in their transaction with one another, and I think it should be done as far as it can be wisely done by legislation, but this discussion leads up to another suggestion. I am wondering what your views are upon the question of the advisability of trying to protect depositors in banks that are members of the Federal reserve system. I speak of that as in my views of the matter we have no authority to touch the question through legislation further than the Federal reserve system or its member banks.

Governor Young. Well, of course, Mr. Congressman, I have given

be

81

In

ne

118

its

82

ar

11

an

very much thought to it.

Mr. STEAGALL. I would like to hear your views upon it.

Governor Young. Better banking, of course, would be the quickest and best solution of it.

Mr. Steagall. No question about that. That is like Mr. Wingo's suggestion about the Volstead Act, that if we all quit drinking it would be possible to enforce the law.

Mr. Wingo. No; you said that, I did not. You know I do not drink. I said if you killed the appetite. I am one of those fortunate individuals that has no appetite for liquor.

Mr. Brand. You are very fortunate.

Governor Young. I have given consideration to the question of the guarantee of bank deposits, and followed it in the various States where it has been enacted, and it does not seem to be practical. I have given some consideration to the segregation of certain specific assets, against savings deposits, because that is really the depositor that we want to protect more than anyone else, and I think there is some merit in that plan embraced in the laws of California, Michigan, and Maine.

Mr. Steagall. Do you think that the savings depositor has a fund that is entitled to more consideration than that of the ordinary citizen?

Governor Young. From a legal standpoint, no; from a practical standpoint, sympathetic standpoint, I would say yes.

Mr. Steagall. The savings deposit is more in the nature of an investment, is it not? The savings depositor goes out for the purpose of making money, as an investor, and he puts his money where it will bring him something. He does not contribute to the activities of business, commerce, industry and agriculture, but he simply follows what he thinks is the safe method of placing his money, where he can get it back with interest. So I would not think that that fund should be treated with more consideration than the fund of a depositor who puts his money into banks that in turn put it into the channels of trade and commerce.

Governor Young. The savings depositor is usually a time depositor, and I suspect that in every instance in the United States before he can draw his money in an emergency, when a bank is in difficulty, he is required to give 30, 60, or 90 days notice, and during the interim many of the good assets of the institution may be sold or disposed of to pay the demand depositors, the business men, and others. Under those conditions I think that the savings depositor is entitled to some consideration.

Mr. Steagall. What you mean is that the rules of banking should be different in the effort to safeguard deposits of that character from what they are as applied to ordinary demand deposits?

Governor Young. I think so.
Mr. Steagall. But you are not speaking of any effort to guarantee either sort of deposits, are you?

Governor Young. I am not.
Mr. Steagall. You are merely speaking of the methods of banking?

Governor Young. That is correct.

or is Mr. Steagall. But, getting back to the question of guaranteeing deposits, I believe you said that you have studied this effort that has been made in different States?

Governor Young. That is right.

Mr. Steagall. You do not understand that there is any essential similarity between the effort of the State of Nebraska, for instance, in imposing assessments against banks to take care of deposits and the guaranty of deposits by the Federal reserve system? You would not attempt to say that that would be a guide by which you could ascertain whether or not the Federal reserve system could guarantee its deposits, would you?

Governor Young. I think so.

Mr. Steagall. What are the assets of the Federal reserve system? Governor Young. The member banks' reserve deposits are about \$2,300,000,000; the capital is about \$176,000,000; the undivided profits are \$278,000,000, I think, and there is a small surplus beyond that—I have forgotten what it is—and there are some Government deposits and some very small foreign deposits.

Mr. Steagall. The Federal reserve system embraces how many national banks and member banks?

Governor Young. About 9,000—that is about right, is it not, Mr.

Smead?

Mr. SMEAD. About 8,500.

Mr. Steagall. Would you say that the Federal reserve system, with all its resources and these 9,000 banks, should treat the experiments in Nebraska as a final determination of the question of what the Federal reserve system could do toward protecting deposits or guaranteeing deposits in member banks?

Governor Young. I think so, in proportion. You have to take things in proportion. Let us take the Reserve Bank of Minne-

Mr. STEAGALL. The Federal reserve banks embrace the whole United States, do they not?

Governor Young. Yes.

Mr. Steagall. The United States is a unit. Do you not think that that makes a great deal of difference, as between that and a small State—not to call it backward, as some one has done—with a handful of small State banks?

Governor Young. We have to take it in proportion, Mr. Con-

gressman, and-

Mr. Steagall. Is not this true also, Governor Young, that the State banks are permitted to loan on real estate? Is not the trouble with them in a great many instances that their loans rest upon real estate and they can not realize them?

Governor Young. National banks are permitted to loan money on

real estate.

Mr. Steagall. But not like State banks, are they?

Governor Young. Not to the degree that State banks are.

Mr. Steagall. And we came along and liberalized the law, and did it at the instance of men who were supposed to know all about banking, to permit national banks to increase their loans on real estate, and we made a mistake when we did it and added to their difficulties and helped to bring on some of these failures which all of us regret.

Governor Young. I think the difficulty with the small banks did not come so much with loans on real estate as with loans that were

made where they had to take equities in real estate.

Mr. Steagall. That is all very true, but you will find, I am sure and you are better informed than I am—that a great many of these small national banks are banks that were members of the Federal reserve system and found that a great part of their difficulty was due to the fact that they got their loans tied up in real estate, out of which they could not realize. Every time we read of one of these banks failing we read headlines in the paper "bank freezes," and in a large number of instances you will find that one reason for it is that they have a good portion of their loans tied up in real estate.

Governor Young. Mr. Congressman, I am afraid you are under a misapprehension. Under the old national bank act you were permitted to take a real-estate mortgage, a first mortgage, second mortgage, or third mortgage, or anything you could get, for a debt previously contracted, and I think if you would look into the difficulties of the banks of the United States you would find that the reason

they closed was not because of an original loan on farm land, but it was because of taking an equity in the farm land.

Mr. Steagall. I do not doubt that some of it is that way.

Governor Young. I was going to say that 90 per cent of it is that

Mr. Steagall. Anyhow, passing on from that—Governor Young. May I ask Mr. Awalt if that is an accurate

Mr. Awalt. I do not know about the percentage, but that is true

as to a great majority.

Governor Young. Something that could have been done-Mr. STEAGALL. I propose to defer to Mr. Awalt and not to attempt to pass judgment on that, but, at any rate, of course these State banks are up against that difficulty to a much larger extent than the national banks—that is, having their loans resting upon real estate which is not liquid, and that being the case, that, of course, would

Mr. Brand. He has not answered that.

Mr. Steagall. I think that is a matter of common knowledge. Governor Young. I think it is the equity in real estate rather than the direct-

Mr. Steagall. You did not catch my question. I say that this is true, that the State banks have had greater difficulty in connection with loans on real estate because of the lack of the limitations as to loans on real estate that apply to national banks.

Governor Young. The limits are more liberal.

Mr. Steagall. And, of course, in the case of State banks a larger Percentage of their difficulties is traceable to real-estate loans than is the case with national banks.

Governor Young. I do not know as much about the State member

banks as I do about the national banks.

Mr. Steagall. Let me ask you this: What have been the total losses to depositors in national banks, and when I say national banks Federal reserve system. Do you know what the total losses of depositors have been since the establishment of the national bank

Governor Young. I think that is covered in the comptroller's state-

ment before this committee, and I-

Mr. Steagall. I will say this to you—and I will be glad to have you correct the figures if I am in error—that my information is that down to 1925 depositors in national banks had sustained losses totaling approximately \$45,000,000, and, while we have not the exact figures for the past five years, the comptroller's report and testimony show that insolvent banks have realized 79 per cent. Certainly \$1,000,000 a year, or very little more than that, would have taken Care of the losses to depositors in national banks from the beginning of the national bank system down to now, would it not?

Governor Young. I do not doubt that you are quoting accurate gures, but I am trying to think of the ninth Federal reserve district alone. I am quite sure that the losses to depositors are beyond

Mr. STEAGALL. That might be true.

Mr. Fort. I think they were put into the record in Mr. Pole's testimony.

Mr. Steagall. I think the comptroller's figures show that the maximum of losses to depositors from the foundation of the national banking system to 1930 was around \$80,000,000, which would be a little over \$1,000,000 a year, and I will say to the gentleman that those are the figures, for I happen to be familiar with them, and that is what the comptroller showed. That being true, the plain fact is that the Federal reserve system, not counting its surplus, which you think has now reached a larger sum than wisdom requires, and notwithstanding the absorption of the initial expense of incorporating the Federal reserve system and the building program carried out by the Federal reserve system, has paid into the Treasury \$150,000,000, a little under that, so that the franchise tax paid by the Federal reserve system into the Treasury amounts to substantially twice the sum that would be required to take care of or to guarantee all the losses to depositors in the national banks since the foundation of the system.

Governor Young. Mr. Congressman, can we go a little further

with those figures, and assume-

Mr. STEAGALL. That would be the fact, would it not?

Governor Young. No; I am going to go a little bit further than that.

Mr. Steagall. All right. Answer it in your own way, of course. Governor Young. This figure of \$80,000,000 total losses to national banks covers a great number of years. What the actual losses were, of course, is much beyond that. Many of those losses were covered by voluntary assessments, and—

Mr. Steagall. A voluntary assessment would not be a loss against

a depositor.

Governor Young. Yes; but, Mr. Congressman, the point I ambringing out is this, that if you had a guaranty of bank deposits by the Federal reserve system, you would not be struggling with \$80,000.000; you would be struggling with an amount much in excess of that, because if the stockholders of a bank which got in bad condition knew that that institution was going to be taken care of by the Federal reserve system they would pay their 100 per cent legal assessment and that is all they would pay. As it is now, they pay 100, 200, 400, and even 500 per cent in certain cases. So these figures of the Comptroller of the Currency do not tell the entire loss.

Mr. Steagall. I beg your pardon; I do not think you should say

that. I am talking about losses to depositors.

Governor Young. You can see very readily that the amount that the Federal reserve system would be required to guaranty would be

far in excess of this \$80,000,000.

Mr. Steagall. Well, I am only offering you the figures to show what the actual losses have been down to this time. You do not apprehend that conditions are going to get worse with respect to the solvency of the banks that are members of the Federal reserve system, do you?

Governor Young. With the guaranty of deposits by the Federal reserve system every bank in the United States obviously would

attempt to join the Federal reserve system.

Mr. Steagall. They would not have a right to join of their own will. The Federal Reserve Board would, of course, pass on the wisdom of taking them into membership.

Governor Young. It would. But I think it is fair, Mr. Congressman, that you take the entire loss of all the banks in the United States into consideration with a guaranty such as you have in mind.

Mr. STEAGALL. You do not proceed upon the idea that the Federal Reserve Board would admit to membership all the State banks in the United States, including those who are not in condition to make

them fit for membership in the Federal reserve system?

Governor Young. All right; let us go back to 1917, when the appearance of all banks in the United States was good, even in the agricultural section. Those banks under this guaranty obviously Would come to the Federal reserve system, and from what I know of the conditions out there at that time the probabilities are that we would have accepted a great majority of those banks for membership in the Federal reserve system. Then came your great agricultural crash throughout the United States. The losses would have been Just the same to the depositors from 1919 on clear through to 1925 and right up to the moment, and I think that when you advocate any guaranty of bank deposits you have to take all those figures into consideration as to what you may have to pay, and that is why I Say that you can take the State of Nebraska and the State of South Dakota to determine whether the guaranty of bank deposits is a good thing or not.

Mr. STEAGALL. What I have in mind is this: I appreciate the force of your suggestions and, of course, there will be some difficulties there, but I can not for a moment anticipate that conditions in the banking World are going to continue as they are or that they will fail to improve or that the Federal reserve banks would admit to membership State banks upon terms that would constitute a partial attitude on the part of the Federal Reserve Board toward State banks. My Impression has been up to now that the Federal Reserve Board was inclined-and I will not say unfairly-to act more favorably with national banks, which was a natural thing, and I am not finding fault with them about it, but they have certainly been on their guard with respect to the admission of State banks into the Federal reserve system. I have known of such instances where I think they were right about it, where they exercised exceeding care, and I should think they would continue to do that.

Governor Young. Of course, we do do that, Mr. Congressman, but the Federal reserve banks and examiners, and the Federal Reserve Board, are not infallible, as was conclusively shown by the fact that we did admit many State member banks that subsequently had to

Mr. Steagall. You have had much more trouble with them than with the others, in proportion?

Governor Young. With the State member banks?

Mr. Steagall. The Federal reserve system has not had any more trouble with the State member banks than with the others, has it? Governor Young. No.

Mr. Steagall. So that if they should exercise the same care in the future that they have in the past, there is nothing to fear in that connection, is there?

Governor Young. For membership, no.

Mr. Steagall. I mean in the developments after they are admitted to membership. You have had just as fortunate results; in other

words, your member banks and State banks have succeeded as well as the national banks in the Federal reserve system?

Governor Young. Generally speaking, yes.

Mr. Stegall. That being true, then, of course, you would exercise the same wisdom in the future as in the past, so that you would not encumber your Federal reserve system with all of the weak State banks throughout the country?

Governor Young. Well, I am just trying to think, Mr. Congressman, what the Federal Reserve Bank of Minneapolis would have done in 1917, if 3,000 member banks came to us for membership, because

of this guarantee of bank deposits

Mr. STEGALL. I agree they would come. It puts work on the Fed-

eral Reserve Board, I am sure.

Governor Young. I dare say 2,500 would have been admitted from what we knew about those banks at that time or thought we knew.

Mr. Stegall. Governor Young, is not this a fair statement: The law contemplates and, in practical operation, the Federal Reserve Board deals just as intelligently with State banks as with National banks in the system?

Governor Young. That is true.

Mr. STEGALL. And that would continue to be true?

Governor Young. Always.

Mr. Steagall. Governor Young, I was glad to have your statement that you thought it would be wise to distribute some of the earnings of the Federal reserve banks to member banks instead of paying it into the Treasury as franchise taxes. I appreciate your views in that respect. It has occurred to me that the Federal Reserve Board could be empowered by Congress to set aside a part of the earnings of the Federal reserve system to build up a fund to be placed in the hands of the Comptroller of the Currency to be used by him in undertaking to work out the difficulties encountered in administering upon insolvent banks and to use in the purchase of assets where necessary and for the purpose of carrying a bank along for a time as seasonal conditions made it desirable to do so; to liquidate it in an orderly way and to conserve its resources and assets and within conservative and safe calculations to build up a fund and have it in the hands and under the control of the Comptroller of the Currency with which he would reimburse depositors in national banks who incurred losses; not that the Federal reserve system would attempt to say, "We are going to take over the whole banking business of the United States and guarantee all depositors," but that the Federal Reserve Board should take these earnings and begin to set aside this fund and establish rules by which this fund should be devoted to the absorption of these losses and the reestablishment of banks and assist the comptroller in the orderly liquidation of banks that have to be closed, and if the fund or earnings in the future, as in the past, prove themselves more than adequate to take care of these deposits, let that be done, and, if not, let the comptroller be empowered to use it in so far as it could be done, to take care of the conditions growing out of the distress and failures that may be expected.

That certainly would be a very different thing from any guaranty

system that has been undertaken by a State, as a rule?

Governor Young. Does not that come pretty close to the Nebraska plan?

Mr. Steagall. No.

Governor Young. The Nebraska law, when they found a bank tottering the commissioner took it over and assessed the other banks.

Mr. Steagall. I would not favor that plan. I am not talking about that, I should think that would be unsafe. I do not think the Federal reserve system would be justified in attempting to levy any charges on any bank or assess any bank or have them assess

I am only making my inquiry in reference to what may be done out of the earnings of the Federal reserve banks which you say come out of their member banks and, of course, the assets of the member bank rest largely upon depositors and the only thought I have is that a part of those earnings should be put into a fund which would help in such situations and, if sufficient to do it, would take care of the depositors. If not, the comptroller would use it as intelligently as possible and make it go as far as possible.

The record shows down to this hour they have made enough to

take care of the losses of all depositors.

Governor Young. I am convinced in the ninth Federal reserve district from the year 1920 clear through to 1927 we could have given the capital, surplus, and all earnings of the Federal Reserve Bank of Minneapolis for that very purpose and probably a good portion of the reserves of the member banks.

Mr. STEAGALL. I am not talking about any particular district. What I have in mind is the disposition of the earnings of the whole system that are now going into the Treasury; this \$150,000,000 that Went into the Treasury came out of the small banks that are struggling and failing and would have paid the depositors of those banks for 150 years from the passage of the national banking act based on the developments down to this time. That is the thing I have in mind. It is the matter of the distribution of those earnings; not for the Federal reserve banks to undertake to do a certain thing, anticipating ability they may not have when the time comes, but simply disposing of their earnings which they now pay into the Treasury.

Governor Young. The difficulty with the whole program, Mr. Congressman, is this: In Nebraska, if the fund had been large enough, this would have carried through and would have been a success, but the assessments got to a point where the good banks knew they were carrying the poor banks, and the assessments which were being levied against the good banks went beyond their ability

Mr. Steagall. I agree with you that-

Governor Young. That is entirely possible with any plan which is set up and, on top of that, your member banks now are asking for more earnings and, in my opinion, justly so.

Mr. STEAGALL. Well, that is what I am talking about; that we devote a part of the earnings to the depositors instead of distributing

them to the stockholders.

Governor Young. If you state to member banks, "We will give you the earnings, but we will hold on to them and put them into a pot to take care of your depositors," that would not please the member banks.

Mr. STEAGALL. You mean the depositors?

Governor Young. The good member banks who feel that they do

not need this protection of the deposits.

Mr. STEAGALL. I think we ought to look forward to the time when the depositors of the Federal national banks can look at their deposit slips as good to the last dollar, and when we pay out this money that comes into the Treasury from these banks, I think we should let some go to the protection of the depositors. I beg the chairman's pardon for taking so much time.

Governor Young. I think the large part of the earnings Mr. Congressman, come out of the large banks of the United States. They

are the heavier borrowers.

Mr. Steagall. I appreciate that fact, but the large banks are interested in the little banks and the little banks in the large banks and the big towns are interested in the little towns, or ought to be, and vise versa. We are all one people. I would like to see it succeed, and it is not succeeding now.

The CHARMAN. Will you yield to Judge Brand at this point?

Mr. STEAGALL. Certainly.

Mr. Brand. Mr. Chairman, I want to submit a request and then

I will yield to Mr. Stevenson who must leave to-morrow.

Governor Young, if it would not be too much inconvenience, I should like you to put into the record the gross earnings, the expenses, and the net earnings of all of the 12 reserve banks in the United States from 1912 down to and including the year 1929, showing the gross earnings of each bank, the expenses of each bank, and the net earnings of each bank during that period, which is for 15 years.

Governor Young. You mean since 1914?

Mr. Brand. Yes. I want the gross earnings for all, because that

will show when we get it for each one. Can you do that?

Governor Young. I have a report right here which has been prepared, Mr. Congressman, which shows the earnings and expenses of each reserve bank, gross, net, dividends paid, transferred to surplus, franchise tax paid the United States Government, for all of the 12 banks and for each individual bank.

Mr. Brand. You have the expenses there, too?

Governor Young. The expenses would be the difference between the gross and the net.

Mr. Brand. Of course. But for convenience though-

Governor Young. I can have Mr. Smead add those figures. It is

nothing but a case of subtraction.

Mr. Brand. For instance, the gross earnings of the Federal reserve bank at Atlanta is shown here as \$31,712,460; the total expenses of the Federal reserve bank at Atlanta are \$12,526,915, and the net earnings of the Atlanta bank are \$19,185,545, from the years 1914 to 1926. I would like to have a list showing that for each of the banks. Governor Young. It is all right here. This is to the close of busi-

ness at the end of 1929.

The CHAIRMAN. Are you ready now, Mr. Stevenson?

Mr. Stevenson. Yes, sir.

The CHAIRMAN. Without objection, these matters Governor Young submits will be inserted in the record at this point. (The statistics referred to are printed in full as follows:)

1 See note on p. 573

Mr. Stevenson. Governor Young, you were a practical banker before you came on the board, were you not?

Governor Young. Yes, sir.

Mr. STEVENSON. What banks were you connected with?

Governor Young. I started with the First National Bank at Marquette, Mich.; later with the Marquette National Bank of Marquette, Mich.; later with the First National Bank of Lake Linden, Mich.; later with the Citizens National Bank of Houghton, Mich.

Mr. Stevenson. In all those relations you had more or less deal-

ings with what are known as country banks, did you not?

Governor Young. They were country banks.

Mr. Stevenson. You learned something of their practical difficulties?

Governor Young. Many of them.

Mr. Stevenson. What was the capital stock of the bank you were with when you were appointed to the board?

Governor Young. \$100,000. Pardon me, Mr. Congressman. You asked when I was appointed to the board?

Mr. Stevenson. Yes.

AND

Governor Young. For 10 years I was governor of the Federal reserve bank at Minneapolis.

Mr. Stevenson. When you became governor of the Federal Reserve bank at Minneapolis, you came from a country bank? Governor Young. Yes; a \$100,000 bank.

Mr. Stevenson. Governor, reference has been made to the difficulties in the last 10 years of the banks and the failures. As a matter of fact, from your observation, has not a great deal of that come from the shrinkage in the values of the assets of the customers of the banks, which has come about-I am not charging it was anybody's fault-but has not a great deal of the difficulty resulted from the shrinkage in value of real estate and other assets of the people who dealt with the banks?

Governor Young. It was a very contributing factor.

Mr. Stevenson. For instance, in my country, agricultural products were high; agricultural lands were high, and the man who owned 200 acres of land was considered a perfectly good risk for a sizable loan anywhere from two to ten thousand dollars. When the deflation, or whatever it might be termed, of 1920 came about, the banks were full of paper of that kind. Men who were perfeetly good, as their assets stood prior to the beginning of the decline—this is my observation down there and I take it was so where you were—the decline in the price of agricultural products (cotton with us and various other things with you) rendered that fellow unable to pay his debt, and the bank began to renew his paper.

By the next year they began to call for security and wanted a mortgage on the land. That is the way a great deal of the mortgages got into the banks with us. Is not that true in your section? Governor Young. Yes, sir; that is true with us, and usually they

were second mortgages.

Mr. Stevenson. He would come up and say, "I can not pay this, but I have land worth \$10,000. I can borrow \$5,000 from the Federal land bank and pay that to you and give you a second mortgage for the balance." That is about the history of things with us. They did that and he farmed another year and they did that again. The value of the land shrinks and he begins to fall down in his installments with the joint-stock land bank that he is dealing with and in about a year they begin to foreclose and sell him out. The margin the commercial bank has is wiped out. That is what happened with us. Is that what happened in the Northwest?

Governor Young. That is an accurate description of what hap-

pened in the Northwest.

Mr. Stevenson. Then he is out, barefooted and coat gone, and no way to farm; and there are thousands of those fellows who were that way, and it was the result of the collapse in agricultural values that got so much frozen assets in the banks. They continued to carry them. They could not do anything else. He, the farmer, did not have the money. The land was mortgaged, so it could not be given as further security.

Now, has there not been a great deal of this not due to any inefficiency in the system, in managing banks, but due to the conditions that arose without anybody being able to forecast it, that has torn

down the country bank in this country?

Governor Young. It was a very contributing factor, Mr. Congressman, if not the main factor, but on the other hand, in those same communities where banks did go down others stood up.

Mr. Stevenson, Yes.

Governor Young. Apparently they used more discretion in lending their money, so that management must also be a factor in the circumstances.

Mr. Stevenson. The judgment of management, of course, is the

final factor and that is so in all banking institutions.

Now, suppose we had had what we call a decentralized branch banking system spread all over that country and dealing with the same people, having the same character of security, and that had occurred. Would there not have been great danger of a decentral-

ized branch banking system getting into the same fix?

Governor Young. It would be possible, but not as probable, in my opinion. We can look across the border, and, if I am informed correctly, the Canadian banks had losses in that same territory, but the depositors did not lose. Now, the probabilities are that the Canadian bank did not lend as indiscriminately as the American unit bankers did. That may have been for the good of the territory, as I believe perhaps it was, so that when losses did develop with the man who had to go through a drought of 3, 4, or 5 years in succession, his losses were smaller and he was in better position to stand them than the small-unit banker.

Mr. Stevenson. The advantage of a system of that kind, spread over a large area, would be, according to my observation, that the

losses are somewhat local, sometimes.

Governor Young. Frequently.

Mr. STEVENSON. And if you have them spread over a territory that has very diversified industries, the losses of one industry would be tided over by the success and prosperity of another. That is the situation that I think would probably arise in the Federal reserve

district.

Governor Young, I think, Mr. Congressman, that there is one thing I should mention before this committee. I have read very carefully all these reasons for bank failures. I think one of the things in the Northwest that caused as much trouble as anything. was a lack of confidence in the local bank which resulted in tremendous loss in deposits, thereby crippling their earning power and simultaneously putting them into a position where they could not take hold of a situation and work a man out, as you know many of these agricultural problems have had to be worked out with the aid of the bankers.

Those banks that did retain the confidence of the public, and had money to lend, accomplished more than those that lost deposits

rapidly.

Mr. Stevenson. They naturally held the best class of business and best class of deposits, and the fellow who was wobbling was obliged to take what the stronger banks left. That is about the size of it with us, and, of course, they ultimately went down.

Now, I was going to speak of the fourth Federal reserve district. I was not in Congress in those days when that matter was settled, but there was a member of the commission in South Carolina that appeared before the board before that district was established, and

our position was that we wanted to be in this district because of the diversification. If we were put in the Atlanta district, we were afraid that Georgia and Alabama would borrow all the money. But in this district we had wheat, coal, a diversity of livestock, and a great manufacturing industry in North and South Carolina, and then agriculture, and our belief was that when manufacturing and coal and all that kind of thing were not borrowing, we would be. and, in the fall of the year, when we had our cotton money then would be the time they would need to borrow. That has worked out very well. We got into the district after a fight, and I imagine that a district-wide branch banking system would get more benefits of that same thing; in other words, if they had losses in South Carolina or slow paper in South Carolina, they would have paper that was moving in Virginia, and West Virginia, and Maryland.

Would not that be an advantage of the proposed district-wide

branch banking system?

Governor Young. In my opinion, it would be.

Mr. STEVENSON. It would tend to stabilize it. But there is thisand we are depending upon that in South Carolina-there are three or four banks that have mighty near all the business in the State from the branches of subordinates that has taken place and they are exercising now a great deal more discretion about the loans they are making. We are having a terrific holler from the general public that they are choking business in the small towns. They have only one bank in a small town and the folks there can not borrow. The truth of the business is, probably, they have not the right kind of security. But that builds up sentiment, where they holler "monopoly." They are beginning to do that now.

If there was money enough to establish independent unit banks. they would be established, but everybody has been burned up on bank stock and they are trying to give some of it away now. That psychological condition is going to arrive when you establish a system of that kind. You will have all kinds of complaints about

monopoly.

What is the answer to that? You have to deal with these matters as human questions. We have campaigns on now against chain stores and against everything that is not centralized in the home community.

Governor Young. There are still unit banks in your territory.

Mr. Stevenson. Yes, but mighty few of them.

Governor Young. Of course the unit bank has the opportunity to diversify if it so elects. It can diversify through commercial paper. through bonds, through United States Government's and many investments that are not dependent upon their own territory,

Mr. Stevenson. Then there is another great criticism which is being made and being directed at the very moment that is on now, and that is the deposits are collected and gathered and sent to New York and put on call. They say that is absolutely safe, and they are sure to get their money as they want it and get it at their profit as they go along, and the cry is being raised already that that means all money, instead of going to the development of local communities, is being taken into New York and loaned on call.

Is there any way to prevent that?

Governor Young. I should think that those statements are overstatements, as I have looked into them, Mr. Congressman. I have stated many times before the committee that I thought it would be a very short-sighted policy for any group or chain or branch banking system to neglect industry in its own territory. I do not believe that they will do it and expect to continue in business in that territory.

Mr. Smead, it seems to me I checked up, at one time, on the State of South Carolina as to the amount of brokers' loans that the banks

reported.

Mr. Stevenson. That is national banks or member banks?

Mr. SMEAD. Member banks; yes.

Governor Young. And it aggregated \$1,600,000. I do not know what the total deposits of the State of South Carolina amount to

Mr. Stevenson. I do not remember either.

Governor Young. It is at least fifty times that amount.

Mr. Stevenson. At least that. I think, to be frank with you, that some of the difficulty banks get into on that matter is due to the officers of the banks getting into the market themselves. We had a catastrophe down there with one of the best banks in town, in my district. Less than three months ago, at Gaffney, the president of the bank got killed accidentally—supposed to be, but no question it was suicide—and it turned out he was \$130,000 short, and I think that pretty well ran back to the collapse in October on the stock market.

That was not a bank lending its money on call, but the president, an official of that bank, and a very efficient one, having gotten short and using the bank's money. Of course that is the personal element that has to be dealt with there. No system can overcome that.

Governor Young. Was that covered by bond?

Mr. Stevenson. Oh, a \$25,000 bond. It was the First National Bank, at Gaffney, and closed an affiliated bank with it. It was a terrible catastrophe in one of the best banking towns in my district,

just a few miles out of Charlotte.

There was a discussion as to the Federal reserve system, and I wanted to ask your opinion here on the question of whether the Federal reserve system would continue if the national banks continued to go out of existence. You would not have very much to stand on when they got out, would you?

Governor Young. If they all went out; no.

Mr. Stevenson. And there has been quite a movement to go out? Governor Young. Well, while those national banks have given uptheir national charters, Mr. Congressman, they still find it advantageous to retain membership in the Federal reserve system.

Mr. Stevenson. But after having given up the charter in such a way, they could not, under the law, be in the system. Take the national bank at Rock Hill, S. C., and the Columbia National Bank, two of the best banks in the State, the other day consolidated, making 2 branches 80 miles apart. They are not eligible under the McFadden Act to be members of the system.

Governor Young. We are losing some members in that territory

Mr. Stevenson. They could not be in the system. I have had an idea that we might get rid of that trouble and all of this quarrel

about whether the member banks were getting what they were entitled to, by the Government simply putting up the capital, which is only \$107,000,000 for the Federal reserve bank. The surplus belongs to the Government under the law. That could be done, and would make them entirely independent of any banks-make them a Government institution and let them serve all the banks that are worthy of service. Have you ever thought of that way to solve that ques-

Governor Young. I have not.

Mr. Stevenson. It strikes me it is time for us to begin to consider that. It is property that all belongs to the Government-everything over and above the capital stock belongs to the Government. The capital of \$107,000,000 is all the banks have, except their equity in the surplus, and on that equity they can not get over 6 per cent under the present law. They would not be averse, if they were paid their money back, to letting the Government man run the whole business. I am personally in favor of some plan like that. Then you would not be subject to the varying whims of the banking world as to whether they will be in or out.

Governor Young. I do not just understand your proposal. Will

you go into that in a little detail?

Mr. Stevenson. My proposal is to do exactly what you are doing with all banks you are prepared to accept as depositories and carriers of their reserves, but do not require them to put up any of the capital. Then, State and national banks both, when they were accepted as members of the institution would have the right to use the facilities of the Federal reserve bank and carry their reserves there, but they would not be required to furnish the capital with which to do the business. The Government naturally would select, then, the directors, instead of the banks selecting them, as they select part of them now.

That is not now before this committee, but it is an idea I have considered a great deal. I do not know when it will work out.

Now, you discussed the other day the election of directors. You said there were so many selected by the banks—class A directors, I believe. All directors are selected by the banks, but three are bankers and three not-all except those selected by the board.

Governor Young. There are nine directors, of which six are se-

lected by the banks.

Mr. Stevenson. Yes. Governor Young. And three appointed by the board.

Mr. Stevenson. Of those six selected by the banks, three are not bankers; they represent industry and agriculture. Is not that true?

Governor Young. That is correct.

Mr. Stevenson. So that the majority of the whole business is selected by the banks. The banks are in two classes, however, I believe class A directors are elected by one set of banks and class B by the others.

Governor Young. I will correct that just a little bit. Banks are in three groups in the district, according to the size of the banks.

Mr. Stevenson. Yes.

Governor Young. And each group elects a class A and a class B director, so that the little bank has the opportunity of electing one class B director just as much as the other group has.

Mr. Stevenson. The banks all have a voice in the selection of six directors, but they must select three who are not bankers?

Governor Young. That represent industry.
Mr. Stevenson. That represent industry?

Governor Young. Yes, sir.

Mr. Stevenson. Now there was a discussion here during the examination that has been going on about the amount of dividends that has been paid. As I understood you, it was time when they might pay the member banks a little more dividends on the capital they have in?

Governor Young. If earned.
Mr. Stevenson. If earned?
Governor Young. Yes, sir.

Mr. Stevenson. That, of course, should always be optional with the Federal reserve bank or the Federal Reserve Board, because you would always want to keep a check on it, so as not to deplete too much your surplus?

Governor Young. I would rather see it specified under the law

'if earned."

Mr. Stevenson. If earned; yes.

Governor Young. And not left to the discretion of anybody or any board.

Mr. Stevenson. Would you put a maximum limit on it?

Governor Young. I would like to have more time to work out the details. We are making a recommendation to Congress that the member banks participate to a large extent in the earnings. The details we have not been able to work out yet.

Mr. Stevenson. You spoke yesterday, I believe it was, of the intermediate credit banks and land banks taking away a great deal of the custom of member banks. As a matter of fact, they relieved the member banks of a great many customers who were pretty slow, did they not? Did they not rather help than hurt?

Governor Young. What I had in mind, Mr. Congressman, was the

earnings of small country banks.

You know in the old days the country banker handled farm mortgages for an insurance company or other investors, for which he got a commission. When the land bank came in he could not get that commission. That practically drove him out of the farmmortgage business, which was a source of his profit.

Obviously, the land bank did take over many of those loans and relieved him after 1921, I think it was. You will recall that the tax clause of the land-bank bonds was not adjudicated until 1921, so the land banks were not in the field in 1919 and 1920, when they

really should have been in the field.

Mr. Stevenson. They were also excluded from the field because the Treasury Department was selling an enormous number of United States bonds and did not want the competition of the land-bank bonds. As a matter of fact, we appropriated \$200,000,000 to buy the first \$200,000,000 of land-bank bonds, according to my recollection, to keep them from interfering with the sale of Liberty bonds.

But those land-bank developments really, in the end, have been rather a source of weakness to the country banks, for the reason that they got the first mortgage always and, in the decrease in the

value of land which I referred to a little while ago, they got the land. They have a great deal of it now, by the way. But the commercial banker, when his customer got on the rocks, lost. He did not get anything out of that security, because the land banks got the whole security. That has been the result in the country districts.

Governor Young. The country banker usually ended up with a \$2,500 note of a farmer who owned 160 acres of land with an \$8,000 mortgage ahead of the banker, and the only method he had of protecting the \$2,500 was to take up the first mortgage, but in many

cases it was not advisable to do that.

SIX

ds

al

O

3

Mr. Stevenson. In the instance I mentioned of 7,500 acres of farm

land, that is what occurred as the result of that process.

You spoke also of the intermediate credit bank. I want to call your attention to one difficulty about that institution which has not made it a help. The rate of discount was limited to 7 per cent. The intermediate credit bank would not handle any paper upon

which more than 7 per cent had been charged.

In the cotton country 8 and 9 per cent and, in some States, I think 10 per cent is lawful as the contract rate. There is a bank in my town, for instance, that has got some farm customers who have raised \$25,000 worth of cotton. They want to get advances or get the advantage of the intermediate credit bank. They can not go to their bank and give it their paper and let it take it to the intermediate credit bank and rediscount it, because the bank can not afford to break its discount rate. If it breaks the 8 per cent rate for Jones, it has to break it for Smith. As the result, there is none of that paper handled through the banks and the customers get the money otherwise.

The result was disastrous, because it went through agricultural corporations, and the agricultural corporation required them to take 10 per cent of their stock in that corporation and charged them 7 per cent, and in the fall of the year they would make losses enough to lose the whole capital stock, and the man's money cost 17 per cent, and yet he was deprived of dealing through his own bank.

If the intermediate credit banks allowed the banks to handle that paper in the usual way and take it to the intermediate credit bank and rediscount it, whether 7 per cent or 8 per cent, the usual course would have been followed and the fellow would have paid 8 per cent. As it was, he paid 17 per cent and there have been worlds of losses. There has been a great scandal over it. In one instance they mortgaged a crop 3 miles down the road near Beaufort. When they identified the land it was on a highway. I believe it is now United States 29.

The intermediate credit bank, with that weakness, has not been of much help. I imagine the Federal Reserve Board would not oppose our amending that law so as to permit them to charge not over

the local rate of the State in which it is located.

Governor Young. There are difficulties in both ways, Mr. Congressman. It might end up in a rate of 6 per cent in Virginia and 10

per cent in South Dakota.

Mr. Stevenson. If they were permitted to discount paper on which not over the contract rate in the State where it was located was charged, that would relieve that situation, so whenever the man was

located, he would simply pay the contract rate and could handle it through his usual local bank. That has destroyed the efficiency of

the intermediate credit bank in our section.

Just one other question: I notice the comptroller recommends a decentralized district-wide branch banking system. Can you give me your idea of what that woult be? The term "decentralized" is attractive, but what does it mean? I can not follow the comptroller in his reasoning on that, as to what would be decentralized, as contrasted to a centralized bank. For instance, you have the bank in Richmond given authority to place branches all over its Federal reserve district, and you call it a decentralized bank. It is not pretty considerably centralized if it has tenacles all over the district?

Governor Young. It would mobilize the credit.

Mr. Stevenson. I appreciate that.

Governor Young. And as you mobilized the credit, as you do in the Federal reserve system, the decentralization comes afterwards, or you put that credit where it is needed. I think that is what the comptroller had in mind.

Mr. Stevenson. His view is that such regulations should be applied as not to centralize the loans; in other words, to require them

to make a fair distribution of their loaning capacity.

Governor Young. It is to be hoped they would do that.

Mr. Stevenson. I do not know just how you could do that, because the people who would handle a bank with a widespread business like that would have to be given the very widest discretion, would they not? If you would have it judiciously managed, you can

not interfere too much with the details.

Governor Young. No; I do not think you could regulate that.

Mr. Stevenson. The cry of centralization would naturally arise from the communities that did not get as much money as they thought they should have.

Governor Young. I did not know the Comptroller of the Currency

had specified any area.

Mr. Stevenson. I understood him here to say that he thought it should be limited to the area of the Federal reserve district.

Governor Young. I thought it was the trade area.

Mr. Stevenson. I got that from reading his report. I did not hear him on three days.

Governor Young. I think his recommendation was trade area.

Mr. Stevenson. But he has that provision, that it should not go beyond the Federal reserve district in which the parent bank is located.

Mr. Wingo. I am not sure about this, but I think the comptroller did, in his report, say the Federal reserve district. But I got the impression, since then, he has come to the conclusion that it was not necessary to confine it to the Federal reserve district, but to the trade area. That is the impression that was left with me.

The CHAIRMAN. He did not define what was a trade area. As I recall, he said Congress could define that. I understand the governor's expression on that was a little different. He wanted an elastic

area. Is that correct, Governor?
Governor Young. That is correct.

Mr. Stevenson. The comptroller's report very distinctly intimates the idea of areas not going beyond the limits of the Federal reserve

district. Now, I did not hear his statement here on that particular question. I have not had the opportunity of being here all the time. Those are going to be very intensely practical questions when we come to write a bill, if we write one.

Governor Young. Very.

The CHAIRMAN. I think the comptroller did specify Federal reserve districts, but in any particular trade areas where the Federal reserve districts or State lines interfered, the trade area lines should control rather than the Federal reserve district or State lines.

Mr. Wingo. In other words, in the last analysis, the trade area should be the controlling factor. For illustration, in my State, I think I asked the comptroller about this. My recollection is that my home town is in the Kansas City district. Little Rock is in the St. Louis district. I think we discussed it and I got the impression from him that the trade area lines should be the controlling factor, but they should stay within the Federal reserve district as far as possible. The trade area district should be the dominant factor in determining where the branches should be established.

Mr. Stevenson. The governor will see that is a very hard thing to

determine.

The CHAIRMAN. Will you yield to me?

Mr. Stevenson. Yes.

The Chairman. It is my recollection, back in 1912 and 1913 when the Federal reserve act was passed, that the argument was made then that the organization of the Federal reserve system would tend to do the very things it is now proposed to do with the establishment of branch banks in trade areas.

As you said a moment ago, the money would flow through the Federal reserve system into those sections where it was needed. Has the Federal reserve system failed in that respect in serving the country through its system of banks?

Governor Young. I would not say so, Mr. Chairman. What I said the other day was that it was not 100 per cent efficient. I do not believe it will ever be 100 per cent.

The Chairman. Is the Federal reserve system a branch banking system?

Governor Young. I would rather classify it as a group system.

Mr. Wingo. It might be well for you gentlemen to read the debates on why we established the Federal reserve system the way we did instead of having a private branch bank system.

Mr. Stevenson. What I want to get is a practical definition of trade area. We know what a Federal reserve district is. That is fairly well defined. If Congress is going to define a trade area, they will have to recast its legislation every few years, because business will develop and, for instance, oil will be discovered around Little Rock, and we will have a big trade area where there is just a bullfrog pond now, probably, and all that kind of thing. There is not very much chart or compass to that designation of a trade area. That is what I wanted to get at.

Governor Young. In reply to an inquiry from the chairman the other day I said that that should be discretionary with the proper officers as to what the trade area is, because it does change,

Mr. Stevenson. Just as the board had wide discretion in defining and limiting the Federal reserve districts.

Governor Young. Branch districts?

Mr. Stevenson. Yes. The Federal reserve districts were fixed by the board and not by statute.

Mr. Wingo. By a special committee.

Governor Young. We could change the territory in a district now by giving it to another district. But I do not think we could change the number of reserve banks.

Mr. Stevenson. The number of reserve banks was fixed, but the committee-Mr. McAdoo, Mr. Williams, and Mr. Houston-they delimited the districts and some have been changed since. I believe

it is within the power of the board to do that.

Governor Young. Yes, sir; that is within the power of the board. Mr. Stevenson. What would you suggest, if this plan was adopted, of having branch banks confined to trade areas? What board would you suggest should have authority to determine what would be the trade area in which to put branches? Would the Federal Reserve Board be given that power or would you establish a new board? Just what is your suggestion about that?

If we are going to write a law, we want to get the combined wisdom of the bankers in this country on how to apportion this thing.

Governor Young. Granting charters is now under the Comptroller of the Currency.

Mr. Stevenson, Yes.

Governor Young. It seems to me if this trade area is to be deter-

mined, it should be left to him.

Mr. Stevenson. In other words, when the bank desires to establish branches it should make a showing before the comptroller as to where they are to be put, and they could not do it without his approval; in other words, he establishes the trade area in which that particular bank would have a right to operate with branches?

Governor Young. That is my idea. The CHAIRMAN. Will you yield? Mr. Stevenson. Yes.

The CHAIRMAN. Would that be exclusive of the Federal reserve banks?

Governor Young. It is now; yes.

The CHAIRMAN. You think the comptroller should have the sole power without consulting with the Federal reserve bank in that

Governor Young. He has that in the granting of charters now. The CHAIRMAN. But there is a consultation, is there not, with the Federal reserve agent?

Governor Young. In actual practice it is referred to the Federal reserve banks. It could, of course, be extended to the Reserve Board

and the Comptroller of the Currency.

Mr. Stevenson. You have many member banks, and you would have many more very large State-chartered institutions, over which the comptroller would have no authority at all, who would probably desire to be members of the Federal reserve system and desire to have branches which would be in contravention of the McFadden Act as it now stands.

The comptroller could not determine where those member banks or those banks that desire to be member banks, who are under State charters could put branches.

Governor Young. No.

Mr. Stevenson. You would have to have some machinery to take care of that.

Governor Young. Yes. I am doing a great deal of thinking while I am talking, and it would probably be better, under those circum-

stances, under the Reserve Board.

Mr. Stevenson. Suppose some of these days we do write a law on this matter: Regardless of the insurance of deposits, and other things, the thing we need is information on where should we best lodge the power, if we are going to give authority to do these things, to work out the details. That is a very important subject that needs

to be elucidated, in my mind.

Governor Young. I realize that, Mr. Congressman. In my initial statement before the committee, I stated that the board was not prepared at the moment to make a recommendation; that they were making a further study of this whole question, and that is why I am unable to answer many of your questions as to details. I hope that the work we are doing and the work this committee is doing, will permit something to be worked out.

The CHAIRMAN. May I call your attention to the fact, Mr. Stevenson, that this Congress can not pass any legislation regulating where State banks shall have branches, except as they become members of

the Federal reserve system.

Mr. Stevenson. We have legislation that State banks that put branches elsewhere than where they are or elsewhere than within the city where it exists, can not become members of the Federal reserve system.

The CHAIRMAN. That is right.
Mr. Stevenson. Of course, we will carry forward some legislation on that subject, and many of those things—for instance, the one I referred to a while ago; these two national banks in my State that consolidated under a State charter under the terms of the McFadden Act, are excluded from membership in the Federal reserve system. Many of them would like to come in, and we should have some authority to define within what area it should be allowed to operate branches and under what conditions they should be allowed to

Of course, we could determine under the statute under what condi-

tions they could come in. We could modify the statute.

That is all I wanted to add. I wanted to get the combined wisdom of your board before I helped write a bill, if we ever do.

Governor Young. We will try to do that.

Mr. STEVENSON. The practical thing in my mind is, first to what extent-within what areas can banks who are members of the Federal reserve system have branches, and what authority shall determine what their areas shall be? Those are two fundamental things that have to be dealt with.

That is all I wanted to ask, Mr. Chairman.

The CHAIRMAN. Mr. Bland has left.

Mr. Goldsborough. Governor Young, I think you said the other day that you thought the limits of these trade areas should be

Is that your present view?

Governor Young. That is my present view. I will put it this way, Mr. Congressman, that the establishment of branches could not be defined by law within certain territories, but should be left to the discretion of somebody—the Federal Reserve Board, if you will.

In other words, they would have the right to permit branches to be established.

Mr. Goldsborden. Do you believe that the body which has the discretion, such as the Federal Reserve Board, or the Comptroller of the Currency, would be any more able to control the boundaries of these trade areas than the Comptroller of the Currency is now able to control, as a practical proposition, mergers of enormous banking institutions?

Governor Young. If Congress will give us that power; yes.

Mr. Goldsborden. Congress, of course, gives the Comptroller of the Currency authority to permit or refuse authority to consolidate. A few days ago, the Comptroller of the Currency gave authority to the Chase National Bank, the Equitable Trust Co., and a smaller bank to consolidate into an institution with resources of nearly \$3,000,000,000.

Do you believe, as a practical proposition, he could have avoided granting that permission if he had felt himself it was an unwise thing to do?

Governor Young. I am hesitating to try to think of what they could do.

Mr. Goldsborough. What is that?

Governor Young. I am trying to work out what they could do if he refused them.

Mr. Goldsborough. You do not catch the force of what I had in mind. I mean, would not the pressure, political and otherwise, on a Comptroller of the Currency, in a case of this kind, be so great that he would practically be forced to grant it?

that he would practically be forced to grant it?
Governor Young. No; I do not think so. The practical side of

Mr. Goldsborough. I was not asking about the practical side. I understand that. You can answer that way, if you wish.

Governor Young. In that case, Mr. Congressman, they could have consolidated under a State charter and, under those conditions, the comptroller would have had nothing to do with it.

Mr. Goldsborough. Of course; now, this term "decentralization." I find—decentralized trade areas—is being used a great deal. I am getting letters about it and bankers and individuals are talking to me about it. I find it is a very attractive word.

But, is it any more valid than any other advertising slogan? For instance, you see advertised the "Sunkist" orange, and I buy an orange that is advertised as a Sunkist orange even if there is another orange right beside it that looks just exactly like it, because the slogan is extremely attractive.

the slogan is extremely attractive.

Again, one man in Congress may call his element the progressive element and another element standpatters, whereas his opponets call themselves conservatives and his group radicals; in other words, does this word "decentralized," used in connection with this inqury, mean anything at all except an endeavor to make a monopoly attractive? Is not that all there is in it?

Governor Young. Well, that is not my expression, Mr. Congressman.

Mr. Goldsborough. I did not intimate it was. But it was the comptroller's expression. According to his own statement, he is more responsible than anyone else for this agitation.

Governor Young, Well, if it describes it accurately-

Mr. Goldsborough. Well, does it describe a monopoly accurately

to say it is decentralized?

Governor Young. I think what he has in mind is decentralization from the very large centers within the United States-New York and Chicago-where they have not gone into branch banking or group banking.

Mr. Goldsborough. If these areas are made flexible in size, will

they not inevitably grow larger?

Governor Young. In my opinion, yes.

Mr. Goldsborough. Which tends to the very centralization which this proposed legislation is to do away with. Is not that true?

Governor Young. That is true.

Mr. Goldsborough. Then, what is the use of starting here and saying we are trying to fix trade areas which will decentralize monopoly, when the inevitable drift, after we do it, is to go back to the same condition we are trying to get away from?

Governor Young. In those circumstances, I would suggest placing

a limitation on it.

Mr. Goldsborough. Is not this whole thing, as a matter of fact, simply an attempt to make universal branch banking-unlimited branch banking-attraction, by starting it in a particular way?

Governor Young. I think that is what will eventually develop, but I do not think this country is ready for that at the moment.

Mr. Stevenson. Mr. Goldsborough, there is one question I forgot to ask. Will you yield to me now?

Mr. Goldsborough. Yes.

Mr. Stevenson. Suppose it is a State member bank. Of course, its charter would not extend beyond the limits of the State. Therefore, this trade area limitation would not authorize a State member bank to put a branch in another State. There would have to be some State action there, would there not?

Take, for instance, New York and New Jersey. That is a good instance of it right there. A State bank in New York, chartered by the State of New York, would not have the right, without the consent of the State of New Jersey, to run a branch in the State of New

Mr. Wingo. I think you are in error, there. Mr. Goldsborough. I have but six minutes left, Mr. Stevenson. Mr. Stevenson. I simply wanted to ask that question, but I do not want to enter into a discussion about it.

Mr. Goldsborough. Governor Young, what I have in mind is, that it seems to me in approaching this subject, we ought to do it with our eyes open-and for the present I am not arguing against branch banking, but am suggesting that Comptroller Pole's proposal raises clearly the issue as between monopolistic banking and unit banking. If it does, let us discuss it from that standpoint.

Mr. Pole has testified he does not think there should be universal branch banking. He is advocating what he calls trade areas. That is another attractive term. A trade area, within which everybody can do business most conveniently, to a person who is not thinking about it, sounds attractive, but it does not mean anything, especially when you say the size of the area shall be discretionary with some body.

Governor Young. He did not say that. I said that.

Mr. Goldsborough. I know, but it is all in the course of the discus-

sion. I did not say that he said that.

Now, Governor Young, Prof. John Dewey, who is certainly the greatest modern philosopher and one of the most careful men I know, in an article entitled "Individualism, Old and New," in the New Republic, of January 27, makes this statement:

It was stated in a recent convention of bankers that 80 per cent of the capitalization of all banks in the country is now in the hands of 12 financial concerns. It is evident that actual control of the other 20 per cent, except for neglibible institutions having only local importance, automatically ensues.

What do you think about the validity of that statement?

Governor Young. I think the statement I left with the committee the other day will show just the contrary. If I remember your statement correctly, 12 financial-

Mr. Goldsborough. Twelve financial concerns; yes.

Governor Young. Own 80 per cent of the banking capital of the United States.

Mr. Goldsborough. Yes; that is the statement.

Governor Young. The figures we have prepared do not show any

such conclusions.

Mr. Goldsborough. I will approach it from another point of view, because the question of monopoly is the one I have in mind. I think you said, in your testimony, Governor, that the capital stock of the banks of the country, roughly speaking, amounted to about \$5,000,000,000?

Governor Young. I guessed at that. I have not checked that

Mr. Goldsborough. I remember you did not claim the statement to be accurate.

Governor Young. Mr. Smead says probably around \$4,000,000,000.

I just took it roughly, one-tenth of the total banking resources.

Mr. Goldsborough. Now, the total capital of the banks of Greater New York, alone, is \$1,155,062,000, according to the figures furnished to be my Mr. Smead, which would mean, of course, that more than one-fourth of the total banking capital of the country is centered in Greater New York alone.

The CHAIRMAN. It is now 1 o'clock.

Governor Young. Mr. Congressman, can I just get the statement again? Your statement was that the capital of the banks in the city of Greater New York was \$1,155,062,000?

Mr. Goldsborough. Yes.

Governor Young. I have not that figure here, but that is approximately correct.

Mr. Goldsborough. I will proceed a little further along that line

when we meet on Friday.

The Chairman. The committee will stand adjourned until Friday at 10.30 o'clock.

(Whereupon, at 1 o'clock p. m. the committee adjourned to meet at 10.30 o'clock a. m. on Friday, March 28, 1930.)

Young, Hon. Roy A., Governor Federal Reserve Board questioning of 591

BRANCH, CHAIN, AND GROUP BANKING

TUESDAY, APRIL 1, 1930

House of Representatives,
Committee on Banking and Currency,
Washington, D. C.

The committee met in the committee room, Capitol, at 10.30 o'clock, a. m., Hon Louis T. McFadden (chairman), presiding.

The Chairman. The committee will come to order.

STATEMENT OF GOV. ROY A. YOUNG-Resumed

The Chairman. Mr. Goldsborough, when we closed last week, you were asking questions of Governor Young. Do you wish to continue now?

Mr. Goldsborough. If it is agreeable.

The Chairman. Before you begin, however—Governor Young, you have some papers you would like to submit for the record in response to some previous requests for information?

response to some previous requests for information?
Governor Young. Yes; if I may, Mr. Chairman.
The Chairman. Suppose you submit them now.

Governor Young. I should like to read this statement into the record, because it contains some figures on which we were in doubt at the last meeting. It covers losses in failed national banks.

Congressman Steagall made the statement at the hearing last Wednesday that the total loss to depositors in national banks since the enactment of the national bank act in 1863 amounted to only about \$80,000,000. The Comptroller of the Currency published a statement in his annual report to Congress for the year ending October 31, 1929, which is incorporated on page 75 of his testimony, and which shows that 815 receiverships paid 70.19 per cent of proven claims; and that, if offsets, loans paid, and other disbursements were included, the total disbursements to creditors would show an average of 79.13 per cent of proven claims. Possibly Congressman Steagall has based his estimate on this percentage of the proven claims.

I have obtained from the Comptroller of the Currency certain information which I wish to insert in the record showing the losses on the basis of actual deposits of failed banks. In this connection I wish to make clear the distinction between the total amount of deposits in failed national banks and the amount of proven claims against failed national banks. There are numerous depositors who do not prove their claims against insolvent banks; and what would otherwise be their share of the dividends paid go to the benefit of those who do prove their claims. For this reason, the total amount of losses must be increased by the difference between the total amount of deposits and the total amount of proven claims. Even this is not absolutely accurate; because the figures given by the

comptroller's office include in the amount of proven claims those proven by secured depositors; whereas, the figures given for total

deposits do not include the amount of secured deposits.

The total deposits of the 815 failed national banks fully liquidated to October 31, 1929, were \$312,358,671; whereas the total proven claims amounted only to \$275,449,496. Total dividends paid to creditors, including secured creditors, were \$193,279,863. Thus the total loss to unsecured creditors of these closed trusts on the basis of dividends paid amounted to \$119,078,808.

In addition to the above, there are 448 insolvent national banks in process of liquidation, and the following figures are given with respect

to those:

Total deposits of 448 active receiverships ... Estimated total dividends to creditors of 448 active receiver-\$229, 088, 269 141, 736, 812 87, 351, 457 Estimated loss to creditors of 448 active receiverships_____

Add the estimated losses of depositors and other creditors of national banks now in process of liquidation (\$87,351,457) to losses of depositors and other creditors of national banks completely liquidated (\$119,078,808) and you have total actual and estimated losses to creditors of national banks, amounting to \$206,430,265.

While it is true that, for the banks in liquidation, the figures are estimates; it is safe to assume that the liquidations will not exceed the average for past years. Conditions have been much worse since 1920 than during the prior periods of liquidation, and it would seem reasonable to expect that the average of dividends would be less. Therefore, I believe that the figures for losses given are rather conservative.

If the Federal Government should undertake to set up a depositors guaranty system, applicable to all national banks or to all member banks of the Federal reserve system, it would be so attractive to depositors that every bank in the United States would be compelled either to join that system or to go out of business, with the result that whatever system is devised would be compelled to guarantee all deposits in the United States, or approximately \$58,000,000,000 of deposits. It must also be understood that, in view of the enormous growth in the total deposits of all banks, the annual losses would be much greater than is indicated by the total losses from 1863 to date. This is indicated by the fact that total bank deposits in 1890 amounted to less than \$5,000,000,000, whereas to-day the figure has grown to \$58,000,000,000.

Supplementing the figures as placed in the record on April 1, 1930, with reference to the total amounts of estimated losses to depositors of failed national banks since 1863, I have had compiled estimated figures for total losses to State banks from 1864 to December 31,

1929.

While there are no accurate figures available for losses in State banks, State superintendents up until 1896 reported to the Comptroller of the Currency total liabilities of failed State banks and total dividends paid. On these figures from 1864 to 1896, inclusive, the total liabilities of 1,234 failed State banks were \$220,629,988.27, and the total dividends paid during the same period were \$100,088,-726.09, showing a loss of \$120,541,261.32 or 54.64 per cent loss. No figures are given for dividends paid since 1896 but the total liabilities

of failed State banks from 1897 to December 31, 1929, were \$2,130,613,648.27. Using the same percentage of loss for the years 1897 to December 31, 1929, as used for the first 33 years, the total loss from 1897 to 1929 would be \$1,164,167,297.41. Adding to this the loss for the first 33 years, \$120,541,261.32, the total loss for the 66-year period would be \$1,284,708,558.73.

The other day I said I would get a pamphlet that was issued by the New York Stock Exchange in reference to call money. I have secured that and would like to put that in the record at this point,

0 S The CHAIRMAN. By whom was that prepared?

Governor Young. I think that is prepared by the committee on Publicity of the New York Stock Exchange. I referred to it the

other day and said there was such a pamphlet.

I was also requested to get a digest of State laws relating to the purchase of corporate stocks by banks and trust companies. I have a preliminary draft of that and I should like to put that in the record at this point.

The CHAIRMAN. Those statements will be received and incorporated

in the record at this point.

(The papers referred to are here printed in full, as follows:)

[Reprinted by permission from the New York Times December 23, 1928]

CALL MONEY RATE IS PUZZLE TO MANY

Violent fluctuations recently in the rates of interest charged for funds employed in the stock market have focused attention upon the call money market, particularly as to the method by which the renewal rate is fixed on the New York Stock Exchange. The widespread interest in the subject has been reflected in an increasing number of inquiries received by the exchange from various parts of the

That a somewhat general misconception exists concerning the renewal rate is indicated by the questions that are asked at the stock exchange and in brokerage offices. Under normal conditions, when there is no credit stringency, the whole subject of call loans, which are the life blood of the stock market receives only passing attention from the average trader who looks upon these loans as merely

a part of the mechanics of his operations.

For some months, however, the call money market has been a factor of paramount interest to investors and speculators for the reason that the rates of interest to investors and speculaters to readjustment, thus exerting a Powerful influence upon the trend of prices on the stock exchange. variations between the renewal rate and the rates established later in the day were so wide as to puzzle the new crop of traders in Wall Street.

RENEWAL RATE

The renewal rate, it was pointed out at the stock exchange last week, represents what, in the opinion of a committee of experts, is a fair charge for the renewal of call loans. Borrowers and lenders are not obliged to accept it. If a lender feels that the suggested rate is too low, he is privileged to refuse to renew loans at that figure, and if a borrower considers the rate too high he is at liberty to pay off

his loan and arrange a new loan in the call money market.

Wall Street gets its first official information as to the position of the call money market when, at 10.40 o'clock every morning, the renewal rate is announced on the stock ticker. This rate is fixed by the executive committee of the stock classics. clearing corporation, a subsidiary of the stock exchange. The committee is made up of Samuel F. Streit, president of the clearing corporation; E. H. H. Simmons, president of the stock exchange; Robert R. Atterbury, Robert Gibson, and William A. Greer. It arrives at its decision after examining all available data beautiful and the control of the stock exchange; Robert R. Atterbury, Robert Gibson, and William A. Greer. bearing on the supply of funds and the possible borrowing requirements. Frequently, before announcing the rate, the committee consults bankers, officials of other lending institutions and large borrowers.

OPINION OF EXPERTS

"The renewal rate as posted on the floor of the exchange each morning," a spokesman for the institution explained, "is merely the opinion of experts, the demonstrated fairness of which over a period of years has won the confidence of lending bankers and borrowing brokers.

"The present practice of suggesting a renewal rate resulted from the experience of the informal money committee instituted with the full understanding of the Treasury Department during the Government war financing. It was found that the wide and unsettling fluctuations of call-money rates and the confusion and friction which characterized the pre-war call-money market under the old hap-hazard practice could be avoided by a rate suggested by experts in possession of all pertinent data. So about five and a half years ago, there was formed this committee of experienced men to have before them daily complete information with respect to the supply of loanable funds and the demand therefor, and all other relevant data, and to announce at exactly 10.40 on every full business day their opinion of a fair rate for the renewal of call loans.

"All lending banks in the financial district arrange with one or more stock exchange member firms to handle their call loans on the floor of the exchange. The procedure is for the bank to telephone to the office of the stock exchange member instructions to lend a sum of money at the current or at a specific rate. These instructions are relayed in turn to the money desk on the floor of the exchange, where they are duly recorded. In like manner, the borrowing broker files at the money desk a memorandum stating how much money he requires. Thus lender and borrower meet in their turn and both are promptly notified of the identity of the other party to the transaction by the money clerk of the exchange.

SUBSECUENT FLUCTUATION

"After the renewal rate has been posted, the rate for new loans may fluctuate with the constantly changing conditions of supply and demand.

"It might be timely to consider the reason for the call-money rate fluctuating more widely than any other money rate in the world, inasmuch as a general misapprehension of this phenomenon has provoked a great deal of criticism.

"Eccentricity seems to be inherent in the interest rate for call loans because it is the resultant of two forces of supply and demand, unrelated in this unique instance. Every contract made on the exchange is completed and the securities are delivered and paid for on the full business day next following. It is thus seen that a day of heavy liquidation on the part of customers of New York Stock Exchange firms will cause a material shrinkage in credit requirements, necessitating the paying off of loans and the recovery of securities to be delivered against the previous day's sales. On the demand side, therefore, we see the possibility of material overnight changes due to either a heavy liquidation of speculatively held securities or a sudden wave of speculative enthusiasm.

DEMAND AND SUPPLY

"Thus on the demand side of the transaction we have the brokers' credit requirements changing from day to day with the constantly shifting speculative position of their customers. The day loan, therefore, is admirably suited to their need of daily adjustment.

"On the other hand the supply of call money is regulated solely by the reserve position of the banks throughout the country and their natural desire to make full use of their lending power right up to the limit set by their reserve requirements and bear no relation to stock market needs. This unresponsiveness of credit supply to demand is peculiar to brokers' loans and is largely due to their exclusion from the Federal reserve rediscount privileges."

President Simmons of the stock exchange in his last annual report drew attention to the "accuracy with which the renewal rates are regularly made," pointing out that in 1927 the "annual average rate on renewed call loans was 4.076 per cent, while the annual average rate on new call loans was 4.084 per cent, thus," he added, "renewal rates were, over the year, within 0.008 of 1 per cent of new loan rates."

DIGEST OF STATE LAWS RELATING TO THE PURCHASE OF CORPORATE STOCKS BY BANKS AND TRUST COMPANIES

(Preliminary draft, subject to verification)

There is given below a preliminary draft of a digest of the State laws relating to the power of banks and trust companies to invest in or purchase stocks in other corporations, including stocks in other banks or trust companies. This digest, which shows the status of State legislation dealing with the purchase of corporate stocks by banks and trust companies as of March 1, 1930, was prepared in its present form in the office of the counsel to the Federal Reserve Board and will be submitted to the counsel to the various Federal reserve banks, who are especially families. familiar with the laws of the States in their respective Federal reserve districts, for a final check as to its accuracy. When the Federal reserve bank counsel have completed their check of the digest, revised copies thereof will be furnished to the Committee on Banking and Currency of the House of Representatives.

The digest does not cover permission granted to banks and trust companies to invest in or purchase stocks in municipal or other public corporations. reserve banks, joint-stock land banks, corporations engaged principally in foreign banking operations, safe-deposit companies, or similar institutions affiliated in some respects with the business of banking.

SUMMARY OF LEGISLATION IN VARIOUS STATES

STATES HAVING LEGISLATION PERMITTING PURCHASE OF CORPORATE STOCKS

By both banks and trust companies:

Arizona. Connecticut. Amount of purchase limited.

Delaware. Amount of purchase limited. Louisiana.

S, ew Pennsylvania. Apparent conflict in laws of this State, as other provisions prohibit banks from purchasing stocks.

Tennessee.

Texas. Amount of purchase of bank stock limited. Utah.

Total, 9. By banks only:

Alabama. Bank stock only may be purchased and amount limited.

California. Stock of only one trust company may be purchased and amount limited

Florida. Apparent conflict in laws. Savings banks only may purchase stocks; but other provisions also prohibit them from doing so.

Massachusetts. Savings banks only may purchase stocks in certain trust

companies and national banks within certain limitations. New Hampshire. Savings banks only and savings departments of banks may invest in stocks of banks, trust companies, and certain other corporations,

subject to certain limitations.

North Carolina. Purchase restricted to "central reserve bank" and corporation owning land or building used by bank. Ohio. Savings banks only may purchase stock of certain companies, but not

bank or trust company stock.

Rhode Island. Probably authorized by implication to purchase stocks; but savings banks and banks receiving savings deposits specifically authorized to purchase bank, trust company, and steam-railroad stocks.

South Carolina.

Vermont. Amount of purchase limited.

Virginia.

West Virginia. May "invest" in bank stocks.

Total, 12. By trust companies only:

Arkansas. Colorado.

Florida. Apparent conflict in laws. Other provisions prohibit purchase of stocks. Georgia.

By trust companies only—Continued.

Kansas. Amount of purchase limited.

Maryland.

Massachusetts. Amount of purchase limited.

Missouri. Amount of purchase limited.

Nebraska.

New Hampshire. Amount of purchase limited. New York. Amount of purchase limited.

Ohio. All stocks except bank stocks may be purchased.

Oklahoma. All stocks except bank and trust company stocks may be purchased.

Rhode Island. Probably authorized by implication to purchase stocks; but savings deposits of trust companies specifically permitted to be invested in bank and trust company and steam-railroad stocks.

West Virginia. May purchase limited amount in "business corporations" and may purchase bank stocks for "investment."

Total, 16.

STATES HAVING LEGISLATION PROHIBITING PURCHASE OF CORPORATE STOCKS

By both banks and trust companies:

Florida. Apparent conflict in laws of this State, as other provisions authorize savings banks and trust companies to purchase corporate stocks. Mississippi. Prohibition is against purchase of bank stocks.

Ohio. A savings bank, however, can purchase stock in certain "companies," and a trust company in any corporation; but neither can purchase bank or trust company stock.

South Dakota. Washington.

Total, 6. By banks proper:

Colorado.

Georgia.

Idaho. Prohibition is against purchase of bank stock.

Kansas. Montana. Nebraska.

Nevada.

North Dakota.

Oklahoma.

Pennsylvania. Apparent conflict in laws of this State, as other provisions authorize "corporations organized for profit" to purchase stocks.

Wisconsin. No provisions prohibiting banks proper; but mutual savings banks expressly prohibited from investing in corporate stocks.

Wyoming. Total, 12.

By trust companies:

There do not appear to be any States having legislation prohibiting trust companies alone from purchasing corporate stocks.

STATES HAVING NO SPECIFIC LEGISLATION ON SUBJECT

Covering both banks and trust companies:

Illinois.

Indiana.

Iowa.

Kentucky.

Maine. However, purchase of corporate stocks probably authorized by implication.

Michigan.

Minnesota.

New Mexico.

Wisconsin. No provisions covering banks proper; but mutual savings banks expressly prohibited from investing in corporate stocks. Total, 9.

Covering only banks proper:

Arkansas. Maryland.

Massachusetts. No provisions covering banks proper; but savings banks and trust companies may purchase stocks.

New Hampshire. No provisions covering banks proper; but savings banks and savings departments of banks and trust companies may invest in stocks of banks, trust companies, and certain other corporations, subject to certain limitations.

New York.

Rhode Island. No provisions covering banks proper; but probably can purchase stocks by implication; however, savings banks and savings departments of banks and trust companies may purchase bank, trust company, and steam railroad stocks. Total, 7.

Covering only trust companies:

Alabama. California. Idaho. Nevada. North Carolina. North Dakota. South Carolina. Vermont. Virginia. Wyoming. Total, 10.

ALABAMA

Purchase of bank stock permitted if not in excess of 25 per cent of purchasing bank's capital and 10 per cent of other bank's capital.—"* * No bank shall subscribe for or own exceeding 10 per cent of the capital stock of any other bank, or invest or have invested an amount exceeding in the aggregate 25 per cent of its own paid-in capital stock in the capital stock of any other bank or banks. Any bank acquiring capital stock in any other bank in the usual course of business in payment of an indebtedness owing to it, must sell such portion of said stock provided within one year from the time the same is acquired. Any bank failing to sell any such excess stock within the time herein directed, shall forfeit to the State. State an amount equal to the face value of such excess stock held by it, which sum the superintendent shall sue to recover in the name of the State in any court having jurisdiction, and the amount recovered shall be paid into the State treasury." (Civil Code of Alabama, sec. 6355; Combined Banking Laws of Alabama, 1928, sec. 6355, p. 25.)

ARIZONA

Purchase of bank or trust company stocks permitted.—"No bank, loan, or trust company or association, organized under the laws of the State of Arizona, may purchase, own, hold, and sell or otherwise dispose of any of the shares of the capital stock of any other bank, loan, or trust company or association or other corporation; unless, such purchase shall be authorized by the executive committee or approved by the board of directors; and in case the purchase is of stock. stock or approved by the board of differences of approved of said purchase must also be had from the superintendent of banks." (Laws of 1922, ch. 31, sec. 20, p. 130, p. 17)

130; Banking Laws, 1922, sec. 20, p. 17.)
Savings banks are prohibited "to invest or loan any of its capital, or any of the shares, stocks, or bonds of any mine or mining the money of its depositors in the shares, stocks, or bonds of any mine or mining company or oil company." (Laws of 1922, ch. 31, sec. 26 (8), p. 134; Banking Laws, 1922, sec. 26 (8), p. 20.)

ARKANSAS

Banks-no specific statutory provisions.—There are no statutes in this State specifically authorizing banks to purchase the kinds of corporate stocks covered by this digest. However, "no bank shall employ its moneys, directly or indirectly, in trade or commerce by buying and selling goods, chattels, wares, and merchandise dise, nor be the purchaser or holder of its own capital stock, unless such security

11ut 831

ize

ing

by

nks

or purchase shall be necessary to prevent loss upon a debt previously contracted in good faith; and stock so purchased or acquired shall, within 12 months of its purchase, be sold or disposed of at private sale; after the expiration of said 12 months any such stock shall not be considered as part of the assets of any bank. Provided, That it may hold and sell all kinds of property that may come into its possession as collateral security for loans or any ordinary collection or debts, in the manner provided by law. Provided further, That any goods or chattels coming into its possession as aforesaid shall be disposed of as soon as possible and after twelve months from the date of acquirement shall cease to be reckoned

and after twelve moleus from the date of acquirement shall cease to be reckeded as a part of its assets." (C. & M. Dig., sec. 695; Banking Laws, 1929, sec. 26, p. 18.)

Trust companies—Purchase of stocks permitted.—Trust companies are authorized "to buy and sell all kinds of * * * stocks, and other investment securities." (Act of April 13, 1903, sec. 2, p. 228, as amended by acts of 1923, act 627, sec. 10; Banking Laws, 1929, sec. 135 (9), p. 102.)

CALIFORNIA

Banks—general power to purchase corporate stocks denied.—"No bank shall' except as otherwise provided in this act, purchase or invest its capital or surplus or money of its depositors, or any part of either, in the capital stock of any corporation unless the purchase or acquisition of such capital stock shall be necessary to prevent loss to the bank on an obligation owned or on a debt previously contracted in good faith. Any capital stock so purchased or acquired shall be sold by such bank within six months thereafter if it can be sold for the amount of the claim of such bank against it; and all capital stock thus purchased or acquired must be sold for the best price obtainable by said bank within three years after such purchase or acquisition unless the superintendent of banks shall extend the time of its sale for a period not to exceed two years." (General Laws, 1923, Act No. 652; bank act, 1929, sec. 37, p. 36.)

Exception—Stock in one trust company.—"Any bank, with the previous written

consent of the superintendent of banks, may purchase or otherwise acquire and hold the whole or any part of the capital stock of not more than one trust company organized and existing under the laws of this State, and doing business in the same county in which the principal place of business of such bank is located. Provided, however, That not more than an amount equal to 25 per cent of the capital and surplus of any such bank may be at any one time invested in the capital stock of such trust company or such other corporation." (General Laws, 1923, Act No. 652; bank act, 1929, sec. 37, p. 36.)

COLORADO

Banks may not purchase corporate stocks.—"No bank shall purchase its own stock, nor the stock of any other corporation, except such as it may necessarily acquire in the protection or satisfaction of previously existing loans made in good faith. Any stock so acquired shall be sold by the bank within three years, and sooner if it can be done without impairing the bank's investment in the same." (Compiled Laws of Colorado, 1921, sec. 2683; Banking Laws, 1928,

Trust companies authorized to buy and sell stocks.—"All trust companies incorporated under the provisions of this act are duly authorized:

* * "Seventh. To purchase, invest in and sell stocks * * *." (Compiled Laws of Colorado, 1921, sec. 2765; Banking Laws, 1928, sec. 128, p. 66.)

CONNECTICUT

Purchase of corporate stocks permitted up to certain amount.—Banks and trust companies "* * * may purchase and hold corporate securities of any description, provided the total amount at the purchase price invested in corporate stocks shall at no time exceed 25 per cent of its combined capital, surplus, and undivided profits, and provided its investment in the stock of any one corpora-tion shall not exceed 10 per cent of the stock of that corporation or exceed 10 per cent of the percentage prescribed herein, whichever may be the greater. * * *" (General Statutes of Connecticut, sec. 3955, as amended by Laws of 1927, ch. 251; Banking Laws, 1929, sec. 3955, p. 9.)
Savings banks and banks and trust companies maintaining savings depart

ments may make limited investments of their savings deposits in the stocks of

certain banks located in the State of Connecticut and certain cities in other States. (General Statutes of Connecticut, sec. 3928, and sec. 3972 (27) as amended by Laws of 1929, ch. 279; Banking Laws, 1929, sec. 3928, p. 20; and sec. 3972 (27) 3972 (27), p. 52.)

DELAWARE

Banks and trust companies may purchase stock.—"No bank or trust company shall invest more than 25 per cent of its total capital, surplus, and undivided profits in the stock, bonds, or other obligations of any one corporation or political entity. entity or political division except bonds or other obligations of the United States, of the State of Delaware, or of any county, city, town, or school district in this State. (Act of March 31, 1921, sec. 13; Banking Laws, 1929, p. 26.)

Banks and trust companies may not purchase stock.—"That it shall be unlawful for any bank or trust company organized under the laws of this State and doing business in this State, to directly or indirectly invest any of the funds of said bank or trust company in stock of any incorporated company in this State or elsewhere * * *." (Compiled General Laws of Florida, 1930 Supplement, sec.

Savings banks may purchase bank stock.—"The capital and deposits and the income derived therefrom shall be invested only as follows:

"4. In the stock of any bank incorporated under the authority of the State, or the stock of any banking association incorporated under the authority of the United States * * *." (Compiled General Laws of Florida, 1927, sec. 6120; Banking Laws, 1926, p. 30.)

Trust companies may purchase stocks.—"Every trust company organized under and in pursuance of this article shall have power:

Laws of Florida, 1930 Supplement, sec. 6126 (10). (Compiled General

Note. It will be observed that apparently there is a conflict in the laws of this State with reference to the power of trust companies to purchase stocks. An explanation of this apparent conflict has been requested of the counsel to the Federal Reserve Bank of Atlanta, in whose district the State of Florida is situated.

GEORGIA

Banks may not purchase stock.—"No bank shall subscribe for, purchase, or hold stock in any other bank * * * nor in any other corporation unless the the same shall have been transferred to it in satisfaction of a debt previously contracted, or shall have been purchased at a sale under a power contained in a note or other instrument by which it was pledged to the bank or under a judge of the bank or under a judge. judgment or decree in its favor, and all such stock shall be disposed of by the bank within six months, unless the superintendent of banks shall extend the time for good cause shown. * * *" (Georgia Code, 1930 Supplement, sec. 2366 for good cause shown.

Trust companies may purchase stock.—"Dealing in stocks and bonds: Trust companies, operating as investment bankers, and maintaining departments for the purchase and sale of securities, may purchase for resale whole issues or Parts of issues of stocks, bonds and debentures of industrial, railroad and public service corporations and other investment securities, and may resell and deal in the same, under such regulations as may be prescribed by the superintendent of banks." (Trust company act of 1927, sec. 5A.)

Purchase of bank stock prohibited.—"No bank shall * * * purchase any shares of * * * any other bank wherever organized, or situated * * * unless such * * * purchase shall be necessary to prevent loss upon a shall previously. previously contracted in good faith; and stock so purchased * * * shall within six months from the date of acquirement be sold or disposed of at public or residue and the date of acquirement be sold or disposed of at public or residue and six months from the date of acquirement be sold or disposed of at public or residue and six months are six months. or private sale; after the expiration of six months any such stock shall not be considered as a part of the assets of such bank." (Laws of 1925, ch. 133, p. 204. Beach of the considered as a part of the assets of such bank." 204; Bank Code, 1925, sec. 29, p. 18.)

ILLINOIS

No statutory provisions.—The statutes of Illinois contain no provisions authorizing or prohibiting banks or trust companies to purchase corporate stocks.

INDIANA

No statutory provisions.—The laws of Indiana contain no provisions authorizing or prohibiting banks or trust companies to purchase corporate stocks.

IOWA

No statutory provisions.—There do not appear to be statutory provisions in this State authorizing banks and trust companies generally to purchase corporate stocks. Banks and trust companies, however, are empowered "to purchase, invest in, and sell promissory notes, bills of exchange, bonds, mortgages, and other securities." (Iowa Code, 1927, sec. 9284 (5); Banking Laws, 1929, sec. 9284 (5), p. 47.)

KANSAS

Banks may not purchase corporate stocks .- "No bank shall employ its moneys, directly or indirectly, in trade or commerce, by buying and selling goods, chattels, wares and merchandise, and shall not invest any of its funds in the stock of any other bank or corporation * * *." (Session Laws of Kansas, 1927, p. 126; Banking Laws, 1929, sec. 11, p. 6.)

Trust companies authorized to purchase stock.—"The purposes for which trust

companies may be formed are:

. "Eighth, * * * to buy and sell all kinds of Government, State, county, municipal, and corporation bonds, and all kinds of negotiable and nonnegotiable paper, securities, and stocks: Provided, That the total investment of any such trust company in bank stock shall at no time exceed one-fourth its paid-up capital stock: * * * Provided, That the total investment in bank stock held by any trust company in excess of one-fourth of its capital shall be disposed of within two years from the passage of this act." (Laws of Kansas, 1901, ch. 407, as amended; Banking Laws, 1929, sec. 2, pp. 38 and 39.) "Eighth, * * * to buy and sell all kinds of Government, State, county,

KENTUCKY

No statutory provisions.—The laws of Kentucky contain no specific provisions with reference to the purchase of corporate stocks by banks or trust companies. With reference to banks, the law does provide that no bank shall employ its moneys, directly or indirectly, in any enterprise or business except as authorized by law. (Carroll's Kentucky Statutes, 1930, secs. 579 and 582; Banking Laws,

1926, secs. 579 and 582.)
Trust companies are not authorized expressly to purchase corporate stocks, but the law does provide that "the capital stock of a trust company, and the funds in its possession, not held in a fiduciary capacity, may be invested in such manner as the directors deem prudent and safe; * * *." (Carroll's Kentucky Statutes, 1930, secs. 606 and 614; Banking Laws, 1926, secs. 606 and 614.)

LOUISIANA

Purchase of any corporate stocks permitted .- Any corporation "conducting s savings, safe deposit, and trust banking business in any of its branches" is empowered "to receive, hold, purchase, acquire, and convey, by and under their powered "to receive, hold, purchase, acquire, and convey, by and under their corporate name, such property, real and personal, including bonds, stocks, and securities of the United States, or of any of the United States, or of any corporation, board, or body, public or private thereof, as may be necessary, proper, of convenient to the objects of the association, and to exercise in relation thereto, all the direct and incidental rights of ownership." (Laws of 1902, Act. No. 45, sec. 1 (2), p. 59; Banking Laws, 1928, sec. 1 (2), p. 26.)

The act approved July 18, 1928 (Act No. 221, Session Laws of 1928), which has to do with the manner of arriving at the value of shares of stock of banking

has to do with the manner of arriving at the value of shares of stock of banking institutions for taxation purposes, recognizes that banking institutions have the power to purchase stocks in other corporations. In dealing with the various deductions that a banking institution may make, this act provides that "the capital stock and obligations of any corporations, all the capital stock of

* is owned by said bank, banking company, firm, association, or corporation" may be deducted.

MAINE

No express authorization but apparently purchase permitted by implication.—The laws of Maine do not contain any provisions expressly authorizing banking institutions to purchase corporate stocks, but the following provision appears to give them such power by implication: "to hold and enjoy all such estate, real, personal, and mich power by implication: "to hold and enjoy all such estate, real, personal, and mich power by implication: and mixed, as may be obtained by the investment of its capital stock or any other moneys and funds that may come into its possession in the course of its business and dealings, and the same sell, grant, and dispose of: * * *." (Public Laws 1923, ch. 144, sec. 61: Banking Laws, 1927, sec. 61, p. 41.)

MARYLAND

Purchase of corporate stocks permitted to trust companies.—Trust companies are given the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, or agents, all and the power "to exercise, by its directors, duly authorized officers, all and the power "to exercise, by its directors, duly authorized officers, and the power "to exercise all such power "to exercise, by its directors, tany and such powers as shall be usual in carrying on the business of banking. * * * by purchasing, investing in, and selling stocks, * * * and other securities * * * '' (Bagby's Code, article 11, sec. 46; Banking Laws, 1927, sec. 46 (0) 46 (9), p. 23.)

MASSACHUSETTS

Purchase of corporate stocks by trust companies permitted.—A trust company may "** * invest its moneys or credits, whether capital or general deposits, in the stocks, bonds, or other evidences of indebtedness of corporations or of associations or trusts, * * * " (General Laws, ch. 172, sec. 33; Trust Company) Company Pamphlet Laws, sec. 33, p. 21.)

Limitation upon purchase of stock in other trust companies.—"No trust company shall hold more than 10 per cent of the capital stock of any other trust company (General Laws, ch. 172, sec. 43; Trust Company Pamphlet Laws, sec. 43, p. 23.)

Savings banks may purchase bank stocks.—Savings banks may invest their

deposits and income derived therefrom—

"In the stock of a trust company incorporated under the laws of and doing bush the stock of a national banking assobusiness within this Commonwealth, or in the stock of a national banking association located in the New England States and incorporated under the authority of the United States, which has paid dividends of not less than 4 per cent therein in cash in each of the five years next preceding the date of such investment and the amount of whose surplus is at least equal to 50 per cent of its capital; but a savings bank shall not hold, both by way of investment and as security for loans, more than 25 per cent of the stock of any one such company or association, nor shall it hold by way of investment stock of such companies and associations having an aggregate initial cost in excess of 15 per cent of the deposits of such savings bank, or stock of any one such company of association having an initial cost in excess of 1 per cent of the deposits aforesaid." (General Laws, ch. 168, sec. 54, (7th), as amended by acts of 1929, ch. 315, sec. 1; Savings Bank Pamphlet Laws, sec. 54 (7th), p. 39.)

MICHIGAN

No statutory provisions.—The statutes of Michigan contain no provisions authorizing or prohibiting banks or trust companies to purchase the capital stock of other corporations.

MINNESOTA

No statutory provisions.—The laws of Minnesota contain no provisions authorizing or prohibiting banks or trust companies to purchase corporate stocks.

MISSISSIPPI

Purchase of bank stock prohibited.—" No part of the stock of any bank * * * shall be owned by any bank under the provisions of this act. Any such stock owned by any bank at the time this act takes effect shall be disposed of within 12 months after such time. In cases where such stock is taken as collateral and the purchase thereof shall be necessary to prevent loss upon a debt previously contracted in good faith, then in such cases such stock shall be sold by the bank within 12 months from the time that it was required. A violation of this section by any bank or banks under the provisions of this act shall be constituted a breach of law and subject any such bank or banks to liquidation and forfeit

ch ng he us he of their respective charters." (Laws of Mississippi, 1922, ch. 172, sec. 49; Brown's 1925 Mississippi and Federal Statutes Pertaining to Banks and Banking p. 71.)

p. 71.)
The term "bank" as used in the laws of Mississippi includes trust companies and savings banks. (Laws of Mississippi 1914, ch. 124, sec. 66; Brown's 1925 Mississippi and Federal Statutes Pertaining to Banks and Banking, p. 72.)

MISSOURI

Purchase by trust companies of corporate stock limited.—A trust company "shall not invest or keep invested in the stock of any private corporation an amount in excess of 15 per cent of the capital and surplus fund of such trust company; nor shall it purchase or continue to hold stock of another bank or trust company if by such purchase or continued investment the total stock of such other bank or trust company owned and held by it as collateral will exceed 15 per cent of the stock of such other bank or trust company: Provided, however, That this limitation shall not apply * * * to the ownership by such trust company or its stockholders of a part or all of the capital stock of one bank organized under the laws of the United States or of this State." (Revised Statutes of Missouri, 1919, sec. 11807, as amended by Laws of 1927, p. 241.)

There are no statutory provisions in this State governing the purchase of corporate stocks by banks; and the Missouri courts have held that in the absence of express authority, one bank can not purchase the shares of stock of another bank.

MONTANA

Banks prohibited from purchasing stock.—"No commercial or savings bank shall purchase or invest its capital or surplus, or money of its depositors, or any part of either, in the capital stock of any corporation, unless the purchase or acquisition of such capital stock shall be necessary to prevent loss to the bank on a debt previously contracted in good faith. Any capital stock so purchased or acquired shall be sold by such bank within six months thereafter, it it can be sold for the amount of the claim of such bank against it; and all capital stock thus purchased or acquired must be sold for the best price obtainable by said bank within one year after such purchase or acquisition. Every person or corporation violating any provision of this section shall forfeit to the State twice the nominal amount of such stock." (Laws of Montana, 1927, ch. 89, sec. 39; Banking Laws, 1927, sec. 39, p. 32.)

Trust companies authorized to purchase stock.—The laws of Montana authorize the organization of trust companies which may invest in corporate stocks and other securities and also provides as follows: "The board of directors of any such corporation [trust company] is authorized to invest the capital and assets of said corporation * * * in * * * stocks and bonds of corporations * * *." (Laws of Montana, 1927, ch. 89, sec. 4 (c) (8) and sec. 26; Banking Laws, 1927, sec. 4 (c) (8) and sec. 26.)

Investment companies may purchase stocks.—The laws of Montana authorize the formation of investment companies with the power to receive deposits. These companies are authorized to buy and sell stocks as well as other securities. (Laws of Montana, 1927, ch. 89, sec. 4 (d); Banking Laws, 1927, sec. 4 (d).

NEBRASKA

Banks—Purchase of corporate stocks prohibited.—'No corporation transacting a banking business shall * * * be the purchaser or holder of * * * the shares of any corporation, unless such * * * purchase shall be necessary to prevent loss upon a debt previously contracted in good faith; and such stock so purchased or acquired shall, within six months from the time of its purchase be sold or disposed of at public or private sale; or in default thereof, a receiver may be appointed to close up the business of the bank: Provided, In no case shall the amount of stock so held exceed 10 per cent of the paid-up capital of such bank.' (Comp. Stat. of Nebraska, 1922, sec. 8006; Banking Laws, 1929, sec. 8006, p. 12.)

Trust companies—Purchase of corporate stocks permitted.—Trust companies have the power "to buy, hold and own and sell * * * stocks, * * * and other investment securities." (Comp. Stat. of Nebraska, 1922, sec. 8008, as amended by Laws of 1927, act approved April 20, 1927.)

NEVADA

Purchase of corporate stocks prohibited.—"No bank shall employ its moneys, directly or indirectly, in trade or commerce by buying or selling goods, chattel wares, or merchandise, and shall not invest any of its funds in the stock of any bank or trust company or corporation, * * * *." (Revised Laws of 1912, sec. 13, p. 195, as amended, Laws of 1915, p. 32; Banking Laws, 1927, sec. 13, p. 7.)

NEW HAMPSHIRE

Purchase of corporate stocks permitted.—Trust companies are authorized and empowered "to negotiate, purchase, and sell stocks, bonds, and other evidences of debt; to do a general banking business; and to conduct a savings department." (Public Laws, ch. 265, sec. 31; Banking Laws, 1929, sec. 31, p. 41.)

Limitation upon such purchase.—"The total liabilities of a person, firm or corporation including in the liabilities of a firm the liabilities of its several members.

poration, including in the liabilities of a firm the dabilities of its several members, for money borrowed of the commercial department of a trust company or other corporation of a similar character, whether organized under the provisions of this chapter or otherwise, shall at no time exceed 10 per cent of its capital stock actually paid in and surplus, nor shall such corporation purchase or hold, by way of investment, the stocks and bonds of any corporation to an amount in excess said 10 per cent." (Public Laws, ch. 265, sec. 37; Banking Laws, 1929, sec. 37, p. 42.)

Savings banks and savings departments of banks and trust companies.—Subject to certain limitations, savings banks and savings departments of banking and trust companies may invest in the capital stock of banks, trust companies and certain other corporations. How ever, such investments are limited, in the case of any one corporation, to 5 per cent of the deposits of the purchasing savings banks or savings departments of banking and trust companies. (Public Laws, ch. 260, sec. 16, ch. 262, secs. 1, 7, 8, 9, 12, 13, 14, 15; Banking Laws, 1929, sec. 16, p. 7; secs. 1, 7, 8, 9, 12, 13, 14, 15, and pp. 20, 23–29.)

NEW JERSEY

Banks and trust companies authorized to purchase corporate stocks.—Banks "in addition to the power and authority now conferred upon them, shall be authorized to purchase, invest in and sell stocks of corporations." (Laws of 1927, ch. 12; Banking Laws, 1928, sec. 10, p. 54.)

Trust companies are authorized "to purchase, invest in and sell stocks * * * and other securities; * * *." (Laws of 1899, ch. 174, sec. 6 (10); Banking

Laws, 1928, sec. 6 (10), p. 66.)

NEW MEXICO

No statutory provisions.—There do not appear to be any provisions in the laws No statutory provisions.—There do not appear to be any provisions in the laws of New Mexico expressly permitting or prohibiting banks and trust companies to purchase corporate stocks. Trust companies, however, are authorized "* * * to purchase, invest in, and sell all kinds of * * * investment securities." (Laws of 1915, ch. 67, sec. 60 (7); Bank Code, 1929, sec. 60 (7), p. 22); and with reference to banks, the laws of New Mexico provide that "* * * no bank shall at any time trust and more than 30 per cent of its unimpaired capital shall at any time have invested more than 30 per cent of its unimpaired capital and surplus in the notes, bonds or other securities of any person, firm or corporation * * * *." (Laws of 1929, ch. 131, sec. 9; Bank Code, 1929, sec. 36, p. 15.)

NEW YORK

Trust companies permitted to purchase stocks.—" * * every trust company shall, subject to the restrictions and limitations contained" the laws, have the power "to purchase, invest in, and sell stocks * * * and other securities;

* * " (Banking Law, sec. 185 (9)).

Limitation upon purchase of corporate stocks.—A trust company "shall not invest or keep invested in the stock of any private corporation an amount in excess of 10 per cent of the capital and surplus of such trust company; nor shall it purchase or continue to hold stock of another moneyed corporation if by such purchase or continue to hold stock of another moneyed corporation of by such purchase or continue to hold stock of another moneyed corporation owned continued investment the total stock of such other moneyed corporation owned and held by it as collateral will exceed 10 per cent of the stock of such other moneyed corporation, provided, however, that this limitation shall not apply to

the ownership of, and such trust company may to the extent of 10 per cent of its capital and surplus purchase, acquire, hold and own, and exercise in respect thereof capital and surplus purchase, acquire, hold and own, and exercise in valual the rights, powers, and privileges applicable to the ownership of, * * * all all the rights, powers, and privileges applicable to the ownership of, * * * " (Bankor any part of the capital stock of an investment company ing Law, sec. 190.)

Banks—No statutory provisions, but purchase generally of corporate stocks held prohibited.—There are no provisions in the laws of New York expressly permitting or prohibiting the purchase of the kinds of corporate stocks contemplated by this digest. The only provisions affecting banks are those authorizing the purchase of Federal reserve bank stock and stock in safe-deposit and investment

companies. (Banking Law, sec. 106.)

The banking department of the State of New York holds that banks have no authority to buy stocks other than those classes above referred to, and the courts in this State have rendered decisions to the effect that banks can not purchase stocks of other corporations for the purpose of selling at a profit, can not become stockholders in a railroad corporation, and can not purchase State stocks to sell at a profit.

NORTH CAROLINA

Banking institutions may purchase corporate stocks and certain bank stocks.—
"No bank shall make any investment in the capital stock of any other State or national bank: Provided, That nothing herein shall be construed to prevent the subscribing to or purchasing of the capital stock of * * * central reserve banks, having a capital stock of more than \$1,000,000, by banks doing business under this act, upon such terms as may be agreed upon. To constitute a central stock of the capital stoc reserve bank as contemplated by this act at least 50 per cent of the capital stock

of such bank shall be owned by other banks." (Ann. Code of North Carolina, 1927, sec. 220 (c); Banking Laws, 1927, sec. 220 (c), p. 20.)

Limitations upon purchase of stock.—"The investment of any bank in the capital stock of such central reserve bank * * *, shall at no time exceed 10 per cent of the paid-in capital and permanent surplus of the bank making same. No bank shall invest more than 50 per cent of its permanent surplus in the stocks of other corporations, firms, partnerships, or companies, unless such stock is purchased to protect the bank from loss. Any stocks owned or hereafter acquired in excess of the limitations herein imposed shall be disposed. of at public or private sale within six months after the date of acquiring the same, and if not so disposed of they shall be charged to profit and loss account, and no longer carried on the books as an asset. The limit of time in which such and no longer carried on the books as an asset. The limit of time in which such stocks shall be disposed of or charged off the books of the bank may be extended by the corporation commission, if in its judgment it is for the best interest of the bank that such extension be granted." (Ann. Code of North Carolina, 1927, sec. 220 (c); Banking Laws, 1927, sec. 220 (c) p. 20.)

Corporation commission may suspend limitations on amount may purchase.—
"The board of directors of any bank may, by resolution duly passed at a meeting of the board, request the corporation commission to temporarily suspend the limitation on loans and investments as same may apply to any particular leap or investment, which said bank desires to make in excess of the pravisions.

the inmitation on loans and investments as same may apply to any particular loan or investment, which said bank desires to make in excess of the provisions of sections 220 (b), 220 (c) * * * of this act. Upon receipt of a duly certified copy of such resolution, the corporation commission may, in its discretion, suspend the limitation on loans and investments in so far as it would apply to the loan or investment which such bank desires to make." (Ann. Code of Next) Corolling 1927, see 220 (c) : Banking Laws 1927, see 220 (c

North Carolina, 1927, sec. 220 (e); Banking Laws, 1927, sec. 220 (e), p. 21.)

Purchase of stock of corporation owning land or building used by bank.—A bank may invest "50 per cent of its unimpaired capital and permanent surplus in the stock or bonds of a corporation owning the land, building, or buildings occupied by such bank as its banking home" and a bank may not be compelled "to surrender or dispose of any investment in the stocks or bonds of a corporation owning the lands or building occupied by such bank as its banking home, if such stocks or bonds were lawfully acquired prior to the ratification of this act: Provided further, however, That the corporation commission may, in its discretion, authorize banks located in cities having a population of more than 5,000 according to the latest United States census to invest an amount greater than 50 per cent of its unimpaired capital and permanent surplus in the stocks or bonds of a corporation owning the land, building, or buildings occupied by such bank as its banking home." (Ann. Code of North Carolina, 1927, sec. 229 (b); Banking Laws, 1927, sec. 220 (b), p. 20.)

B

Purchase of corporate stocks by banks prohibited.—"No bank shall * *** employ or invest any of its assets or funds in the stock of any corporation, bank, partnership, firm, or association, nor shall it invest any of its assets in speculative margins of stocks, bonds, * * *." (Supplement to 1913 Comp. Laws of margins of stocks, bonds, * * *." (Supplement North Dakota, sec. 5187; Banking Laws, 1929, p. 25.)

OHIO

Banks (other than savings banks) not permitted to purchase corporate stocks of kinds covered by this digest.—Banks, other than savings banks, are authorized to make certain investments of their capital, surplus, undivided profits and deposits in certain securities, stocks and bonds, but apparently they are not authorized to make investments in the kinds of corporate stocks contemplated by this digest.

Throckmorton's Code of 1929, sees. 710-111, 710-111a, 710-121; Banking Laws, 1928, sees. 710-111, 710-111a, 710-121.)

Savings banks—Purchase of bank stocks forbidden, but "stocks of companies" may be purchased.—A savings bank is empowered to invest its funds in "stocks of companies" and the companies companies comprising the same. of companies, upon which or the constituent companies comprising the same, dividends have been earned and paid for five consecutive years next prior to the investment and stocks of companies taken on a refinancing plan involving an original investment, which was legal at the time it was made; provided, every such investment, which was legal at the time to do have provided by an affirmative vote of a majority of the board of directors of such savings bank" but "no purchase or investment shall be in the stock of any other corporation organized or doing business under the provided by the light of the United States." (Act provisions of this act or of the national banking act of the United States." approved April 18, 1929, Laws of 1929, sec. 710-140 (b).)

Trust companies—Purchase of bank stocks prohibited, but other corporate stocks may be purchased.—"A trust company may invest in * * * stocks and bonds of corporation when authorized by the affirmative vote of the board of direct. directors, or of the executive committee of such trust company," but the prohibition against savings banks purchasing bank stocks is also imposed upon trust companies. (Throckmorton's Code of 1929, sec. 710-166; Banking Laws, 1928, sec. 710-166, p. 64.)

OKLAHOMA

Banks-Purchase of any kind of corporate stock prohibited .- A bank "shall not invest any of its funds in the stock of any other bank or corporation * * *. (Oklahoma Comp. Stat., 1921, sec. 4123; Banking Laws, 1926, sec. 11, p. 15.) The constitution of Oklahoma also provides that "No trust company, or bank or banking company shall own, hold, or control in any manner whatever, the stock of any other trust company or bank or banking company, except such stock as may be pledged in good faith to secure bona fide indebtedness, acquired upon foreclosure, execution sale, or otherwise for the satisfaction of debt; and such stock shall be disposed of in the time and manner hereinbefore provided" (within 12 months from the date of acquisition). (Constitution of Oklahoma, art. 9, sec. 41.)

Trust companies—May purchase any kind of stock, except in a bank or in another trust company.—Trust companies are given the power "to buy and sell * * * all kinds of * * * stocks and other investment securities." (Oklahoma Comp. Stat. 1921, sec. 4194 (9); Banking Laws, 1926, sec. 119 (9), p. 64.)

In view of the above provision of the Oklahoma constitution prohibiting a trust company to "hold or control in any manner whatever, the stock of any other trust company or bank or banking company," it would seem that the power given to trust companies to buy and sell * * * all kinds of * * * * stocks, and other investment securities, is restricted in so far as the provisions of stocks, and other investment securities, is restricted in so far as the provisions of the Oklahoma Constitution are applicable.

OREGON

Purchase of corporate stocks prohibited.—Except for the authority to purchase Federal reserve bank stock, stock in safe deposit companies, agricultural and livestock finance companies, and in the case of a trust company, stock in a subsidiary investment company, the laws of Oregon provide that "Hereafter no bank or trust company shall invest any of its assets in the capital stock of any other corporation." In case stock is purchased or acquired to save loss on a preexisting corporation." In case stock is purchased or acquired to save loss on a preexisting debt, such stock must be sold "within 12 months of the date acquired or purchased or within such further time as may be granted by the superintendent of banks". (Laws of 1925, ch. 207, sec. 81, p. 336; Banking Laws, 1925, sec. 81, p. 28.)

PENNSYLVANIA

Banks not authorized to purchase corporate stocks.—"* * * it shall not be lawful for such corporations (banks), directly, or through the agency of any person or persons whomsoever, either in trust or confidence, to deal or trade with any profits, stocks, moneys or effects, in buying or selling any goods, wares, merchandise, whatsoever; * * * such corporations shall not be at liberty to purchase any stock whatsoever to a greater amount than one-third of the capital stock actually paid in; and that in the stocks or loans of this State and of the United States, except their own bank stock and such stocks as shall be taken in satisfaction of debts previously contracted, such corporations shall not deal or trade in anything but bills of exchange, promissory notes, gold and silver, and bullion, or in the sale of goods truly pledged for money lent and not redeemed in due time, or in goods which may be the produce of lands." (Act of 1850, Public Laws, p. 477; West's Penna. Statutes, 1920, sec. 1358.)

With regard to the purchase of corporate stocks by banks, the Pennsylvania laws also provide "The several banks of this Commonwealth are hereby authorized to negotiate loans to, or to purchase the stock of, this Commonwealth from the officers or agents appointed under the authority of the State to effect such loans, or to sell such stock; but nothing in this act or any other law shall be construed to authorize any of said banks to make such purchases of any individual or corporation, except such as shall be taken in satisfaction of debts previously contracted in the course of its dealings: Provided, That the amount of such loans made, or stock so held, shall not exceed one-third of the actual capital stock of such bank or corporation: And provided also, That the said banks may sell out such stocks at any time their interest may require." (Act of April 23, 1829, Public Laws, p. 360; West's Penna. Statutes, 1920, sec. 1363.)

viously contracted in the course of its dealings: Provided, That the amount of such loans made, or stock so held, shall not exceed one-third of the actual capital stock of such bank or corporation: And provided also, That the said banks may sell out such stocks at any time their interest may require." (Act of April 23, 1829, Public Laws, p. 360; West's Penna. Statutes, 1920, sec. 1363.)

Corporations permitted to purchase corporate stocks.—"That hereafter any corporation organized for profit, created by general or special laws, may purchase, hold, sell, assign, transfer, mortgage, pledge, or otherwise dispose of, the shares of the capital stock * * * of any other corporation or corporations, public or private, of this or any other State * * * and while the owner of said stock may exercise all the rights, powers, and privileges of ownership, including the right to vote thereon." (Act of July 2, 1901, Public Laws, p. 603 (West's Penna. Statutes, 1920, sec. 5785), as amended by acts of March 27, 1929, Public Laws, p. 74, and April 18, 1929, Public Laws, p. 544.)

Note.—It will be observed that apparently there is a conflict in the laws of this State with reference to the right of banks to purchase corporate stocks. An explanation of this apparent conflict has been requested of the counsel to the Federal Reserve Bank of Philadelphia.

RHODE ISLAND

Purchase by trust companies permitted by implication.—The laws of Rhode Island do not contain any express authority for trust companies to purchase corporate stocks, but it would seem that this power is given to such companies by implication. A trust company is authorized "* * * to invest its capital stock and moneys in its hands in such bonds, obligations, or property, real, personal, or mixed, as it may deem prudent, * * *." (General Laws, 1923, ch. 271, sec. 4; Banking Laws, 1929, sec. 4, p. 16.)

Savings banks and banks and trust companies receiving savings deposits—Purchase of steam railroad and bank stocks permitted.—Deposits in savings banks and in the savings departments of banks and trust companies, and in the case of savings banks, the income derived from investments held, may be invested subject to detailed limitations in the capital stock of banks and trust companies and certain steam railroad companies. (General Laws. 1923, sec. 1, Clause IV, Clause VII, as amended by laws of 1927, ch. 1034, Clause XIV, Clause XV, as amended by the laws of 1925, ch. 653; Banking Laws, sec. 1, p. 22, Clause IV, p. 30, Clause VII, p. 37, Clause XIV, p. 43, Clause XV, pp. 44-45.)

SOUTH CAROLINA

Banking corporations may deal in corporate stocks.—"Every banking corporation may * * deal in * * * public and other securities, and stocks of thay * * * deal in * * * public and other securities, and stocks of other corporations; * * * may purchase and hold such * * * personal property as may be conveyed to it to secure debts to the corporation, or may be sold under execution to satisfy debts due in whole or in part to the corporation, and as may be deemed necessary or convenient for the transaction of its business, and may sell and dispose of the same at pleasure; * * *." (Code of 1922, sec. 3992; Banking Laws, 1928, sec. 62, p. 29.)

SOUTH DAKOTA

Banks prohibited from purchasing corporate stocks.—"No bank shall employ its money, directly or indirectly, in trade or commerce by buying or selling goods, chattels, wares, and merchandise, nor shall it invest any of its funds in the stock of any other bank or corporation, nor make loans or discounts on the security shares unless such security or purchase shall be necessary to prevent loss upon a debt previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall, with its previously contracted in good faith; stocks so purchased or acquired shall be accounted to the contracted in good faith; stocks so purchased or acquired shall be accounted to the contracted to the contracted in good faith; stocks so purchased or acquired to the contracted to the con within six months of the time of its purchase, be sold or disposed of at public or private sale; and after the expiration of six months any such stock shall not be considered as part of the assets of such bank." (Session Laws of South Dakota, 1919, ch. 125; Banking Laws, 1927, sec. 8983, p. 27.)

Trust companies prohibited from purchasing corporate stocks.—"No trust company shall employ its money, directly or indirectly, in trade or commerce, by buying or selling goods, chattels, wares, and merchandise, nor shall it invest any of its funds in the stock of any other trust company or corporation, nor make any loans or discounts on the security of the shares of its own capital stock, nor be the purchaser or holder of any shares unless such security or purchase shall be necessary to prevent loss upon a debt previously contracted in good faith; and stock so purchased or acquired shall, within six months of the time of its purchased. chase, be sold or disposed of at public or private sale; and after the expiration of six months any such stock shall not be considered as a part of the assets of any trust company." (South Dakota Code, 1919, sec. 9050; Banking Laws, 1927, sec. 9050, p. 68.)

TENNESSEE

All corporations authorized to deal in stocks.—"That all private corporations now existing or organized by virtue of the laws of Tennessee, and all private corporations hereafter to be organized and created according to law, for the transaction of any lawful business, or to promote or conduct any legitimate object or purpose, shall have the right, power, privilege, and immunity to purchase, hold, own, sell, transfer, assign, vote, mortgage, pledge, and otherwise deal in stock, bonds, or evidence of indebtedness of other corporations in the same manner and with all the rights, power, privileges, and immunities of individual owners, except that this act shall in no way be construed to give corporations power to create unlawful monopolies, trusts, or combinations in restraint of trade." (Act approved Manufacture 1992) Proved March 31, 1923.)

TEXAS

Purchase of corporate stocks permitted.—Banks and trust companies may pur-

chase, invest in, and sell stocks and other securities. (Rev. Stat. 1925, 17ts. 396 (9) and 1513; Banking Laws, 1929, art. 396 (9), p. 18, and art. 1513, p. 76.)

Limitation upon purchase of bank stocks.—"It shall be unlawful for any State bank or bank and trust company to own more than 10 per cent of the capital stocks.—"It shall be unlawful for any State bank or bank and trust company to own more than 10 per cent of the capital stocks.—"It shall be unlawful for any State bank or bank and trust company to own more than 10 per cent of the capital stocks. stock of any other banking corporation, or to make a loan secured by the stock of any other banking corporation, if by the making of such loan the total stock of such other banking corporation held by it as collateral will exceed, in the aggregate, 10 per cent of the capital stock of such other banking corporation, unless the ownership or the taking of a greater percentage of such capital stock as collateral shall be necessary to prevent loss upon a debt previously contracted in good faith; and any such excess so taken as collateral or owned by such bank shall not be held as collateral nor owned by it for a longer period than six months." (Rev. Stat. 1925, art. 513; Banking Laws, 1925, art. 513, p. 44.)

UTAH

Purchase of corporate stocks permitted.—"Any bank or loan, trust, and guaranty company or association, organized under the laws of the State of Utah, may purchase, own, hold, and sell or otherwise dispose of any of the shares of the capital stock of any other bank, loan, trust, and guaranty association or other corporation: Provided, Such purchase shall be authorized by the executive committee and approved by the board of directors; and in case the purchase is of stock in any other banking corporation the approval of said purchase must also be had from the State bank commissioner: And provided, further, That nothing in this section shall be so construed as to permit the establishment, maintenance, or control of any branch bank or loan, trust, or guaranty company in the State. All acts or parts of acts in conflict with this section are hereby repealed to the extent of such conflict." (Compiled Laws of 1917, sec. 986, p. 299; Banking Laws, 1927, sec. 986, p. 8.)

VERMONT

Purchase of bank or trust company stocks permitted.—Banking institutions are empowered to invest their assets "in the stock of any national bank in the New England States or the State of New York, or in the stock of any banking association or trust company incorporated under the authority of and located in such States, or in the stock of any bank incorporated under the authority of and located in the Dominion of Canada; but a bank shall not hold bank stock both by the way of investment and as security for loans in excess of 10 per cent of its assets, nor, in any one bank, more than 5 per cent of its assets, or more than \$200,000, or more than 10 per cent of the capital stock of any one bank." (General Laws, sec. 5363, par. (a), Subdivision VI, as amended by acts of 1929, Act No. 90, sec. 5.)

VIRGINIA

Purchase of corporate stocks permitted.—All banking institutions are empowered to purchase and sell "all stocks and bonds." (Acts of 1928, ch. 507, sec. 12; Banking Laws, 1929, sec. 4149 (13), p. 30.)

WASHINGTON

Purchase of corporate stocks prohibited.—"* * Nor shall any such corporation (bank or trust company) subscribe for or purchase the stock of any other banking house or trust company, or of any domestic or foreign corporation of any character, * * * : Provided, That such bank and/or trust company may purchase, acquire and hold shares of stock in any other corporation which shares have been previously pledged as secruity to any loan or discount made in good faith and such purchase shall be necessary to prevent loss upon a debt previously contracted in good faith and stock so purchase or acquired shall be sold at public or private sale or otherwise disposed of within two years from the time of its purchase or acquisition. (Laws 1929, sec. 5, p. 100; Banking Laws, 1929, sec. 46, p. 26.)

It is also provided that corporations doing a trust business may not invest trust funds in corporate stocks. (Laws of 1929, ch. 206; Banking Laws, 1929, sec. 77, p. 37.)

WEST VIRGINIA

Purchase of stocks of business corporations permitted but limited to 20 per cent of purchasing bank's capital and surplus.—Banking institutions authorized to transact a trust business are empowered "to buy, hold, sell and deal in * * * the stocks or bonds of any business corporation." (Acts of 1929, ch. 23, sec. 4.)

Banking institutions shall not invest "in the stock of any corporation" an

Banking institutions shall not invest "in the stock of any corporation" an amount exceeding "20 per cent of the capital stock and surplus fund of any banking institution * * *. The corporation mentioned in this section shall not be construed to mean municipal corporations, districts or counties, or corporations owning the building in which the banking institution is located." (Acts of 1929, ch. 23, sec. 21.)

Purchase of bank stocks.—"It shall be unlawful for any firm, association or corporation to purchase and hold stock in any banking institution organized or

authorized to transact business hereunder for the purpose of selling, negotiating or trading participation in the ownership thereof either for the purpose of perfecting control of one or more such banking institutions or for the purpose of inducing other persons, firms or corporations or the general public to become participating owners therein. Nothing herein shall prevent the ownership of stock in any such banking institution by any corporation for investment purposes." (Acts of 1929, ch. 23, sec. 9.)

WISCONSIN

No statutory provisions.—The statutes of Wisconsin contain no provisions with reference to the purchase of corporate stock by banks and trust companies except mutual savings banks. The provision with reference to mutual savings banks provides that "* * * no mutual savings bank shall invest any part of its deposits in the stock of any corporation * * *." (Wisconsin Stat. 1929, sec. 222.13; Banking Laws, 1925, sec. 222.13, p. 52.)

WYOMING

Purchase of corporate stocks by banks prohibited.—"Hereafter no State bank shall invest any of its assets in the capital stock of any other corporation * * *, and except such as it may acquire or purchase to save a loss on a preexisting debt, and stock so acquired or purchased shall be sold within 12 months from the date acquired or purchased: Provided, That a further time may be granted by the State examiner." (Comp. Stat of Wyoming, 1920, sec 5138 Banking Laws, 1927, sec. 32 · p. 18.)

Governor Young. We were asked for four other things. I have prepared that information in a letter to you, Mr. Chairman.

During the course of the hearings on branch, chain, and group banking held before your committee on March 19, requests were made for the following data which are submitted herewith.

State-wide branch banking, and in States which permit restricted branch banking.

2. The capital, surplus, and total resources of banks in States which permit restricted branch banking, and total resources of banks in States which permit state-wide branch banking, in States which permit restricted branch banking, and in States in which branch banking is prohibited.

3. Available information on trust assets of national banks is shown on the inclosed pages (16-21) of the 1929 Annual Report of the Comptroller of the Currency.

4. Available data relating to the ratio of net earnings of banks, classified according to size, to capital funds, i. e., capital and surplus and undivided profits. A number of the Federal reserve banks have from time to time made studies of the earnings and expenses of member banks in their respective districts and have included in these studies certain ratios, among which are the ratios of net earnings and of net profits to capital funds. In cooperation with the State banking departments, the Federal Reserve Bank of Chicago has made similar studies covering all banks in the States of Iowa, Illinois, Indiana, and Wisconsin. These ratios of earnings to capital funds, in so far as available by size of bank, have been tabulated in the inclosed statement. As a sample of the studies made by certain of the Federal reserve banks, I am inclosing herewith a copy of the study made by the Federal Reserve Bank of Chicago for 1928.

I should like to insert that in the record. That was called for. The Chairman. That will be inserted at this point.

local branches.

¹ The other States which permit state-wide branch banking are Arizona, Delaware, Maryland, North Carolina, Rhode Island, South Carolina, Vermont, and Virginia, but no chains or groups whatever were reported in 3 of these States and only small chains or groups in the 5 other States.

2 Exclusive of banks located in other States that belong to this chain or group.

3 No provision in State law, but branches or additional offices are operated under court decisions.

4 No provision in State law, but State banking department has made no objection to establishment of local branches.

No provision in State law, but State banking department has made no objection to establishment of branches.

A number of branches are in operation, which were established prior to prohibitory legislation.

NATIONAL BANKS IN THE TRUST FIELD

The development of trust operations by national banks was evidenced by continued and substantial progress throughout the Nation during the part year. The statistics for this function compiled as of June 29, 1929, revealed that 2,442 national banks had received authority to exercise trust powers, with a combined capital of \$1,218,049,515, representing 32.4 per cent of the number and 74.8 per cent of the capital of all banks in the national banking system.

Trust departments had been established by 1,734 of these banks and 75,988 trusts were being administered with individual trust assets aggregating \$4,237,648,663. Seven hundred and thirty-six of these banks were also acting as trustees for bond and note issues aggregating \$7,370,154,456.

Compared with October 3, 1928, these figures represent a net increase in the number of national banks authorized to administer trusts under section 11 (k) of the Federal reserve act of 69, or 2.91 per cent; an increase in the number operating trust departments of 149, or 9.40 per cent; an increase in the number of trusts being administered of 12,212, or 19.15 per cent, and an increase in individual trust assets of \$940,338,544, or 28.52 per cent.

The growth in the fiduciary activities of the banks in the national banking

The growth in the fiduciary activities of the banks in the national banking system and the increasing popularity with the public of this important department of national bank operations are even more impressive when comparisons are made with the activities of national banks in this field just three years ago. In June, 1926, national banks numbering 2,026 had authority to exercise trust powers, with 1,104 actively engaged in administering trusts. These banks were then acting in a fiduciary capacity for 26,053 trusts, with individual trust assets of \$922,328,677, and were acting as trustees for bond and note issues aggregating \$2,463,553,316. The figures compiled as of June 29, 1929, represent for the 3-year period an increase in the number of national banks authorized to administer trusts of 416, or 20.53 per cent; an increase in the number of trusts being administered of 49,936, or 191.67 per cent; an increase in the number of trusts being administered of 49,936, or 191.67 per cent; an increase in the volume of bond and note issues outstanding for which these banks were acting as trustees of \$4,906,601,140, or 199.17 per cent.

As the activities of national banks have grown, so have the earnings that these banks have reported from this source. For the fiscal year ended June 30, 1929, trust department gross earnings aggregating \$20,583,000 were reported, as compared with \$16,165,000 in 1928, \$10,811,000 in 1927, and \$8,255,000 in 1926.

Another phase of fiduciary activity which is gaining in popularity is the creation of insurance trusts. While the administration of this type of trust is a comparatively recent development in national bank trust departments, yet on June 29, 1929, 118 national banks were administering 271 insurance trusts representing the proceeds of insurance policies aggregating \$11,384,632. Some indication of the place this type of trust will make for itself in the future operations of national banks is evidenced by the fact that 558 trust departments now hold 9,505 trust agreements which name those banks trustees in the future of the proceeds of insurance policies with a present face value of \$375,524,409, an amount aggregating more than one-third of the total individual trust assets under administration in 1926 by the 1,104 national bank trust departments then in operation.

National banks with authority to exercise trust powers have shown continued interests in the privilege afforded them to include the words "trust company" in their titles. While only 101 were operating with trust in their names in 1927, the number has increased to 302 since that time, and this method of informing the public of their authority to engage in trust functions is becoming general in many sections of the Nation.

A recent analysis developed that of the 7,536 national banks in operation, 2,442, or 32.4 per cent, had authority to exercise trust powers; 2,839, or 37.7 per cent, had capital sufficient to entitle them to apply for permission to exercise trust powers under section 11 (k) of the Federal reserve act, and 2,255, or 29.9 per cent, were ineligible to receive permission to engage in trust operations because their capital was less than that required by the laws of the States in which they were located for competing State institutions to receive like powers.

The accompanying recapitulation segregates national banks into six classes according to capital and gives detailed information relating to their fiduciary activities, following which is a table showing consolidated figures by Federal reserve districts.

Fiduciary activities of national banks in 1929 segregated according to capital

							,	_	-	-			-
	Total	Banks with cap- ital of \$25,000	Percent	Banks with capital over \$25,000 to \$50,000		Banks with cap- ital over \$50,000 to \$100,000	Per cent	Banks with capital over \$100,000 to \$200,000		Banks with capital over \$200,000 to \$500,000		Banks with capital over \$500,000	Per cent

Analysis of Member Bank Earnings and Expenses, Chicago Federal Reserve District, December 31, 1927, to December 31, 1928, Inclusive, By Means of Ratios of Aggregates

The third special compilation of statistics on earnings and expenses of member banks in the Chicago, Federal reserve district—covering the calendar year 1928—has been completed and the results thereof are presented in this pamphlet to member banks and others interested, to provide the banks with data in a form readily usable by them as a basis for comparing their own operations with those of other banks, and in cases where they are desirous of so doing, to aid them in discovering wherein a higher degree of efficiency might be attained.

The first of these special compilations of earnings and expenses, in so far as the seventh Federal reserve district is concerned, was based upon reports of operations for the year 1924. It was followed by a second study, covering 1926, the latter distributed in printed form in the spring of 1928. The current study follows closely the lines laid down in the 1926 compilation, and includes, as did that for 1926, data for banks classified according to the size of centers in which they are located and further classified within such groups according to the size of the banks as measured by the volume of their principal earning assets, i. e., total loans and investments. The 1928 compilation includes two tables not presented in the previous studies, namely, one showing ratios of selected earnings and expense items to related bases for all member banks in the district, and a similar tabulation excluding the city of Chicago. It is believed these additional data supplement the other material in an interesting and helpful way. They will be found on page 11, together with a brief analysis of them.

METHOD OF COMPUTATION

A few points regarding the method used in computing the accompanying tables, and suggestions regarding the method which might be used in computing ratios for an individual bank comparable with the data shown herein, may prove helpful in interpreting them, and add to their usefulness in gaging the position of any particular bank.

The original information underlying the statistics was in all cases derived from the regular reports of condition and of earnings and expenses which member banks are required to submit periodically to the Federal Reserve Board and to the Comptroller of the Currency, and it may be remarked that the amount of detail provided by these reports determines the scope of the statistics which may be compiled from them. Although the reports are not so complete as might be desired in respect to such matters as income and expense directly related to the banks' premises, statistics summarizing the earnings and expenses of member banks as reported are of considerable value. At least a part of this value will be realized if the accompanying comparative tables and charts based on these statistics but emphasize the importance to banks of adequate records and analyses of their operations.

In compiling the ratios for groups of banks as presented in the accompanying ables, the first step was to classify the banks into groups, first according to the size of the centers in which they were located, and then according to the size of the banks. Following this, figures from the condition and the earnings and dividend reports of the individual banks were combined to obtain aggregate figures for each of the groups. These aggregates were then employed in calculating various group ratios. Ratios, or percentages, are used because groups of banks having earnings and expenses of widely different magnitudes are more easily compared by means of percentages than on the basis of the actual dollar

amounts.

Four bases have been used in calculating the ratios (see Table I). They are (1) earning assets (gross loans and investments); (2) capital funds (capital, surplus, and undivided profits exclusive of reserves for taxes, interest, etc., accrued); (3) gross earnings; and (4) gross deposits. The ratios were obtained by dividing the aggregate figures for the various items of earnings and expenses (or such other items as were to be expressed in the form of ratios), of a given group by the base figure for the same group, and expressing the result as a percentage; for example, the ratio of interest and discount received to average earning assets for banks in a given group was obtained by dividing the aggregate amount of interest and discount received by banks in that group by the aggregate amount of the banks' earning assets. The figure for earning assets, capital funds, and gross deposits which were used as bases on which to calculate ratios are averages of amounts

reported on the five condition reports submitted during the year, including the reports for December 31, 1927, and December 31, 1928.

This was done because changes which occur in these items during the year render it desirable to ascertain approximately the average volume outstanding during the year before relating earnings and expense data to them by means of ratios. An individual bank may make rough comparisons of its earnings and expenses with those of groups of banks by means of ratios calculated on the basis of earning assets (and other items from its condition report) for a single date. It would be better, however, for the bank to follow as closely as possible the procedure by which the accompanying ratios were obtained, using averages of the amount of the five amount of amounts of its earning assets, capital funds, and deposits as reported for the five call dates during the year.2

In compiling these statistics member banks were classified into groups according to their size and location in order to obtain a certain amount of uniformity among the banks within the various groups. An important statistical result of this procedure was to eliminate to a considerable extent the disproportionate influence of large banks upon the ratios for the earning asset groups. A more important result was to make possible comparisons between groups of banks which were, in each case, subject to similar conditions of operations in respect to the volume of their transactions and the size of the centers which they served. The size of banks and of the of the centers in which they are located are not the only, or always the most important, criteria of the conditions under which they operate. For this reason, in comparing itself with other banks, any given institution should take into account differences in the character of its operations as compared with those of the other banks. These differences are, in part, indicated by dissimilarities in the proportion of time deposits which a bank holds and in the proportion of its investments to its total earning assets and to some extent, by the relative importance of earnings which it derives in forms other than interest and dividends on loans and investments. It is also important to bear in mind the effect on earnings and expenses of variations in in practice as regards cost and income directly related to bank premises.

For your convenience in determining what figures to use in computing these ratios, we list below the numbers on the national and State banks' condition reports and on the reports of earnings, expenses, and dividends for all the items used in the study. Items taken from condition statements, Form 2130, No. 319 for National banks, and Federal Reserve Board Form 105 (revised November 1928), for State member banks:

white of month of the order of the chort of	National banks	State banks
L. Earning assets. II. Capital, surplus, and undivided profits. IV. Time deposits	Items 15, 16, 17, 18 Items 21, 22, 23, 24	Items 1, 2, 3, 4. Items 14, 15, 16, 17. Items 19, 20, 21, 22. Item 21.

Items taken from reports of earnings and dividends, comptroller's Form 2129 for national banks, and Federal Reserve Board Form 107 for State banks (revised November, 1928):

	National banks	State banks
Interest and discount received. All other earnings. Total gross earnings. Salaries and wages. Interest and discount paid on borrowed more and discount paid on borrowed. Taxes. All other expenses. Total expenses. Otal expenses. Net earnings. Wet losses. Net additions to profits * Net additions to profits *	1 (a-i inclusive) 2 a	1 (a-i, inclusive). 2 a. 2 b. 2 (c, d, and e). 2 f. 2 g. 2 (a-g, inclusive). 3. (a, b, c, and d) minus. 4 (a, b, and c)

Change to deficit if minus item.

In view of questions which have arisen in the past concerning the meaning of "average" as here used, it may be said that figures for the five dates were merely added together and then divided by five.

In utilizing group ratios which are presented in the following tables, it should be borne in mind that they are ratios of aggregate amounts, and that consequently the influence which the figures of the larger banks of a given group exert on the group ratio is somewhat disproportionate to the number of such banks. This is not a consideration of great important for most of the groups, since the range of size within any one group is relatively marrow. group is relatively narrow

With these figures at hand, all that is necessary in order to determine the percentage ratio is to divide each item for which a ratio is desired by the base Given below are the various items for which ratios are shown in the accompanying tables, indicating the operation involved in their computation:
Interest and discount received divided by average earning assets.

All other earnings divided by average earning assets. Total gross earnings divided by average earning assets. Interest paid on deposits divided by average earning assets.

Interest and discount paid on borrowed money divided by average earning assets.

Salaries and wages divided by average earning assets.

Taxes divided by average earning assets.

All other expenses divided by average earning assets. Total expenses divided by average earning assets.

Net earnings divided by average earning assets. Net losses divided by average earning assets.

Net additions to profits divided by average earning assets.

Stocks and bonds divided by average earning assets.

Average earning assets divided by average capital, surplus, and undivided profits.

Net earnings divided by average capital, surplus, and undivided profits. Net additions to profits divided by average capital, surplus, and undivided

Interest paid on deposits divided by gross earnings.

Interest and discount on borrowed money divided by gross earnings.

Salaries and wages divided by gross earnings. All other expenses divided by gross earnings.

Total expenses divided by gross earnings. Net losses divided by gross earnings. Net additions to profits divided by gross earnings.

Dividends divided by gross earnings.

Interest paid on deposits divided by average gross deposits. Average time deposits divided by average gross deposits.

Average capital, surplus, and undivided profits divided by average gross deposits.

By computing these per cent relationships between the various items, an individual bank may compare itself with the group of banks to which it belongs It will reveal any ratios which are much out of line with the group averages for other institutions of its size. Many variations from group averages may be shown due to peculiarities in the bank's particular situation or to the type of business handled, as already noted. Other differences might bring to light conditions which officials would wish to correct.

We should welcome any questions which may arise, either with respect to

working out these ratios or in regard to results obtained.

⁵ Includes demand, time, and Government deposits plus amounts due to banks.

This table includes 1,176 member banks (1,239 for the entire district, including Chicago), which have been classified into 13 groups with 27 ratios computed for each group, 13 on average earning assets as a base; 3 on average capital, surplus, and undivided profits; 8 on total gross earnings; and the remaining 3 on average

gross deposits.

The trends shown in 1928 are similar to those in the corresponding tabulation for 1926, especially those ratios based upon gross earnings, which represent a percentage distribution of the banks' earnings as between amounts absorbed by expenses, losses, and amounts remaining as profits, and which are therefore perhaps the most easily understood and generally speaking provide the most ready means of making useful comparisons between groups of banks and between individual to the portion of Table I. which individual banks and groups. For instance, the portion of Table I, which deals with banks outside the city of Chicago, gives evidence, as was the case in 1926, of a tendency toward proportionately smaller expenditures for salaries and wages by larger banks as compared with those of smaller size, a trend also evident in the tabulation presenting the data for banks classified according to size of center in which located. For the group composed of the smallest banks (earning assets less than \$250,000), the percentage of gross earnings paid out for salaries and wages in 1928 was 28.87, as against 28.45 per cent in 1926, while the percentage of gross earnings paid out for salaries and wages in 1928 was 28.87, as against 28.45 per cent in 1926, while the percentages for the group comprising the largest institutions were 19 and 19.26 respectively.

Interest on deposits in 1928 absorbed 34.74 per cent of gross earnings, a small reduction from 1926, when 35.06 per cent of gross earnings constituted the cost of deposits. The foregoing item, combined with interest on borrowed moneyfunds borrowed from other banks—represents the direct cost of the funds which a bank employs; as in 1926, interest on borrowed money in 1928 tended to be proportionately larger in the case of the smaller banks; this trend, however, is less clear than in 1926, the group of 25 banks with earning assets of over \$15,000,000 discount on borrowed money, as against only 2 per cent in 1928. The group comprising the smallest banks, on the other hand, in 1928 employed a somewhat small or the smallest banks, on the other hand, in 1928 employed a somewhat small or the smallest banks. smaller percentage of their gross earnings for interest and discount on borrowed

money, 2.71 per cent in 1928 as against 3.26 per cent in 1926.

The proportion of gross earnings of member banks absorbed by total expenses was slightly greater in 1928 than in 1926, the percentage last year being 75.59 compared with 74.94 in 1926. Net losses were greater, most of the groups showing a heavier volume than in 1926, and for all member banks outside the city of Chiangle Pharmacian 1926 than 1926 the compared with 74.94 in 1926 th Chicago, the aggregate was 8.24 per cent of gross earnings whereas in 1926 the ratio was 7.43. As was the case in the preceding study, the 1928 compilation shows that the groups comprising the smaller banks, in general wrote off heavier loss. losses that the groups comprising the smaller banks, a greater proportion of gross than the larger institutions. As a result of the greater proportion of gross earnings absorbed by expenses, coupled with heavier losses as between the two Years, net additions to profits showed a material reduction, totaling 16.17 per

cent in 1928 and 17.64 per cent in 1926.

Attention is again drawn to the ratios in the accompanying tables which express earnings and expenses in terms of average earning assets, i. e., in terms of the volume of business handled by the banks as indicated approximately by the volume of their loans and investments. Both earnings and expenses in relation to earning assets show a fairly uniform downward trend for the smaller groups, while while in the so-called intermediate groups (earning assets \$1,500,000 and more), they show no particular trend; for the group of banks with earning assets over \$15,000,000, however, a drop in both earnings and expense items is evident as compared with preceding groups. Salaries and wages show a progressive decline for banks up to the million-dollar earning asset group, and remain practically on the same level until reaching banks of the \$6,000,000 size, after which another drawn asset same level until reaching banks of the \$6,000,000 size, after which another drawn asset same level until reaching banks of the \$6,000,000 size, after which another drawn asset same level until reaching banks of the \$6,000,000 size, after which another drawn asset same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which another drawn as the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the \$6,000,000 size, after which are the same level until reaching banks of the same level until reac drop is noticeable, especially for the group with earning assets of over \$15,000,000. Interest on deposits in 1928, for all member banks outside Chicago, was 2.20 per cent of average earning assets, the ratio being materially lower than in 1926 in the group of smallest banks. Losses as expressed in relation to average earning assets show a uniform downward trend with the increase in size of bank, and additions to profits moved upward in 1928, although after the group of banks of \$3,000,000 size is reached, both of these trends are irregular. A steady gain in the ratio of earning assets to invested capital can be noted in the groups of larger banks.

Differences between banks in respect to earnings and expenses are a reflection differences in organization, efficiency, and character of business handled. These basic differences are evidenced to some extent, though not wholly, by

differences in the size of the banks and in the size of the centers which they serve. The ratios which are discussed above take no account of differences in the size of the centers in which the banks operate, or of other differences in their operat-

Includes demand, time, and Government deposits plus amounts due to banks.

In this table are given data similar to those carried in Table I, with banks classified according to the population of cities in which located, five population groups being used as was done in the 1926 study, namely, (1) Banks in cities of less than 1,000 population, (2) 1,000 to 5,000, (3) 5,000 to 15,000, (4) 15,000 to 100,000, and (5) 100,000 and over. In subsequent tables, banks in each of the population groups listed above are further classified according to volume of average earning assets and ratios computed. A few noteworthy facts brought out by these arms listed are gifted.

by these compilations are cited: An increase in the size of city is accompanied by a decline in the ratio of interest and discount received to earning assets; on the other hand there is also evident an increase in the ratio of "other" earnings, so that as a result of the contrary trend of the of these items, total earnings showed irregular fluctuations and no definite trend. An increase in the size of the bank, or in its earning assets, however, was accompanied by a downward movement in both interest and discount received and other earnings, for groups of banks with less than \$1,500,000 earning assets, total total earnings, for groups of banks with less than \$1,000,000 earning assets, total earnings reflecting this trend definitely whether arranged with reference to size of city or not. Total expenses move fairly uniformly downward with an increase in either size of city or of bank. Net earnings, determined as they are by variations in gross earnings and total expenses, showed a fairly uniform upward trend. trend accompanying increases in size of banks and of cities, net losses showing a

Includes total loans, and total bonds and stocks.
Includes interest and dividends on bonds and stocks.
Includes capital, surplus, and undivided profits (exclusive of reserves for taxes, interest, etc., accrued.)
Equivalent to the ratio of net additions to profits to earning assets multiplied by the ratio of earning sets to capital funds.

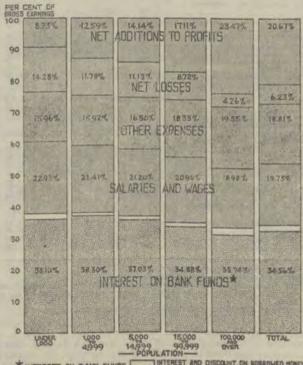

Includes damand, time, and Government deposits plus amounts due to banks.

reverse of this movement, thereby further emphasizing the upward trend for additions to profits. As there is a distinctly upward tendency in the ratio of earning assets to invested capital with an increase in size of bank, and as this trend is apparent irrespective of whether banks are arranged according to their own size or that of city in which located provided the population does not exceed 15,000, the ratio of additions to profits on the basis of invested capital shows an even stronger upward trend than when on the basis of earning assets.

TABLES IV A TO E, INCLUSIVE

These tabulations are designed to supplement Tables III and III-A, and form the basis of some of the discussion in the foregoing paragraphs. It will be noted

Table III-A.—Distribution of gross earnings of member banks in the Chicago Federal reserve district, banks grouped according to size of centers, December 31, 1927, to December 31, 1928

TINTEREST ON BANK FUNDS INTEREST ON DEPOSITS

(Table III) that time deposits show a rising tendency for cities with less than 15,000 population, and a downward trend for cities in the larger population groups. For banks with earning assets of less than \$1,000,000, the trend is upward and for the larger earning asset groups (\$10,000,000 and over) there is a definite downward movement, these trends typifying situations wherein both factors, i. e., size of bank and size of city, are operative. Where the size of city as a factor is eliminated by following the trend as shown by the earning asset groups within a group of cities of uniform size, the tendency is upward for size of bank until reaching the \$2,000,000 earning asset volume, and irregular thereafter. Where the factor of bank size is eliminated by grouping banks of uniform volume of earning assets according to cities in which located, the trend is generally downward throughout all the groups.

Note.—Size of city denoted as follows: A, under 1,000; B, 1,000 to 5,000; C, 5,000 to 15,000; D, 15,000 to 100,000; E, 100,000 and over.

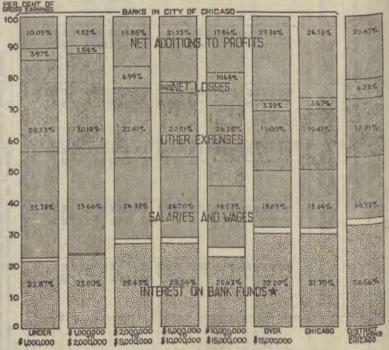

This tabulation presents more compactly a portion of the data given in Tables IV-A to IV-E, inclusive. Here will be found nine leading ratios, from those given in the tabulations mentioned, and also a recapitulation of the number of banks in each population group classified according to the volume of earning assets.

¹ Includes total loans and total bonds and stocks.
2 Includes interest and dividends on bonds and stocks.
3 Includes capital, surplus, and undivided profits (exclusive of reserves for taxes, interest, etc., accrued).
4 Equivalent to the ratio of net additions to profits to earning assets multiplied by the ratio of earning assets to capital funds.
5 Includes demand, time, and Government deposits plus amounts due to banks.

Data similar to that given in Table I are presented in Table VI and accompanying graph, Table VII. It will be noted that for the Chicago banks, the ratio of gross earnings to earning assets was higher than for the rest of the district totaling 6.84 per cent as the result of heavier "other" earnings, inasmuch as interest and discount received averaged lower. Expenses on the basis of earning assets averaged the same as for banks outside the city of Chicago, 4.79 per cent, declines in interest on deposits and tax payments offsetting larger "other expenses. Net losses were considerably smaller and net additions to profits larger than for the rest of the district. In the distribution of gross earnings expenses absorbed a lesser percentage as did losses, with resultant heavier additions.

Table VII.—Distribution of gross earnings of member banks in the city of Chicago, December 31, 1927, to December 31, 1928

TINTEREST ON BANK FUNDS INTEREST AND DISCOUNT ON BORROWED MONEY

tions to profits. Earning assets showed a lower ratio to invested capital and the latter was larger in comparison with gross deposits. Time deposits constituted 31.05 per cent of gross deposits, whereas in the rest of the district they comprised 49.87 per cent, while interest paid on deposits was 1.91 per cent against 2.12 per cent.

In comparison with the 1926 study, the ratio of earnings to earning assets of the Chicago banks was heavier in 1928, as were total expenses and losses, and also additions to profits. With respect to the distribution of gross earnings, expenses in 1928 were lower, largely offset, however, by greater losses, so that net additions to profits were smaller. The ratio of earning assets to invested capital declined, while that of invested capital to gross deposits increased. The ratio of time to gross deposits rose from 26.87 in 1926 to 31.05 in 1928, and the interest paid thereon from 1.80 to 1.91 per cent.

Table VIII.—Ratios of selected earnings and expense items to related bases, member banks in the Chicago Federal Reserve District, including the city of Chicago, December 31, 1927 to December 31, 1928

¹ These percentages represent only rough approximations of average rates of return, since they are based upon average amounts of loans and of investments for only five dates during the year.

In the above tables are presented a number of additional ratios not included in the 1926 study, computed for certain selected earnings and expense items on their related bases. Interest and discount received, for example, was subdivided according to source, i. e., from loans, investments, or bank balances, and ratios were computed on the basis of the first two of these sources, as well as on gross carnings. The interest paid on time deposits was computed on the volume of

Such deposits.

Of the gross earnings of 1,176 member banks in the district without Chicago (Pall 177) of 11 per cent represented the interest and discount received on Of the gross earnings of 1,176 member banks in the district without unicago (Table IX), 65.01 per cent represented the interest and discount received on loans, 22.69 per cent the income from investments, 1.68 per cent the income from bank balances, and 10.61 per cent earnings from "other" or miscellaneous sources, such as exchange and collection charges, profits on investments, trust department, and other services. Interest and discount received on loans amounted to 5.86 per cent of the volume of loans, and income on investments was 4.84 per cent of the volume of investments.*

For the entire district (1.239 banks), including the city of Chicago—the

For the entire district (1,239 banks), including the city of Chicago—the interest and discount received on loans and investments constitutes a smaller proportion of gross earnings, due to the fact that "other" earnings are in greater proportion, 17.74 per cent against 10.61 as shown in Table IX. On the basis of the ratios the related earning assets, the Chicago banks tended to decrease also the ratios of the classified earnings items, the interest received on loans totaling 5.56 per cent, and that on investments 4.58 per cent.* The interest paid on time deposits by all member banks of the district embraced in the study, averaged 2.86 per cent of the volume of these deposits, while for banks outside Chicago this ratio was 3.20 per cent.

Governor Young. I think that covers everything except the earnings and expenses of each Federal reserve bank, which I had the other day except for one column and that has been prepared. I shall put that in the record.

The CHAIRMAN. That will be inserted at this point. (The figures referred to are here printed in full, as follows:)

Mr. Goldsborough. Governor Young, a letter was referred to the other day presented by Congressman Box, of Texas, written by George M. Craig, president of the Merchants National Bank, which is dated March 5. Mr. Craig says that he spends his vacations in Canada and is on rather intimate terms with the bankers up there.

net

ed urd

2, 347 6, 888 1, 542

They are frank to tell me they can do nothing without first consulting the parent bank which is usually located in Montreal. When money and credit are plentiful the local farmers, merchants, and the industries can get loans at the local bank without approval of the parent bank, and when conditions are the reverse, it is the larger merchants and industries in the larger centers that get the accommodations. the accommodations.

also found that smaller accounts than \$300 were not wanted and acceptable in the small banks on account of not being profitable.

What, if anything, do you know about the conditions in Canada as reflected by this statement?

Governor Young. I have an entirely different idea of the Canadian banking system, Mr. Congressman. My information, of course, comes entirely from talking with Canadian bankers. I am told that their branch managers are permitted to loan up to a certain amount. Others that have been with them a longer while are allowed a larger amount, and some of their branch managers have no limit as to the amount they can lend; \$2,500, I am informed, is the minimum limit that they have ever placed on a manager. Anything up to \$2,500 they can lend, as they see fit, without consulting either the division office or the head office. That is what they tell me and it seems to me that would be the logical way to operate it.

I do not think that every little small loan should be referred to the head office any more than the loans that the Federal reserve banks make to member banks should be referred to the Reserve Board. They never are.

Mr. Goldsborough. What class of banks, if you do not object to saying, have you discussed the matter with? Have you discussed it with the officials of the parent banks or of the small unit and branch

Governor Young. My talks were with Mr. Rowley of the Canadian Bank of Commerce and, if I remember correctly, I also discussed it with Mr. McEackran. At that time he was the division superintendent of one of the Canadian banks.

Mr. Goldsborough. Now, the first gentleman you spoke of—what

was his position? Governor Young. I think at that time he was division superintendent. I think that was the title, and I think he was located at Winnipeg. Since then he has been made, I believe, general manager of the Canadian Bank of Commerce.

Mr. Goldsborough. You never had any opportunity to investigate or make an investigation coming from the rural banks?

Governor Young. I never have.

Mr. Goldsborough. The suggestion is also made in this letter, 48 follows:

Another danger is that the powerful chain-store groups might dominate to an extent the heads of chain banks and cause the local banks to refuse credit to

That same observation, of course, if it is valid, could be made as to branch banks. What, if any information, or opinion could you ex-Press on that observation?

Governor Young. I have never thought of it, Mr. Congressman. As an impulsive reply, I would say it is a possibility, but that it is highly improbable.

Mr. Goldsborough. Governor Young, can you tell me or give me any idea as to what percentage of the total banking resources of the country, State and National, are in cities and towns and villages of 25,000 population and under?

Governor Young. I do not think that I could give you that accurately. I think that 698 reporting member banks would be fairly

close to it. Did you say 25,000 or less? Mr. Goldsborough. Yes.

Governor Young. I misunderstood the question. We can get that

information for you, Mr. Congressman.

Mr. Goldsborough. It would be interesting to me and probably to the committee, bearing on this question of the extension of branch banking into the rural districts.

Governor Young. That information can be prepared.

Mr. Goldsborough. It will be convenient for you to do that?

Governor Young. Yes; and we shall be glad to do it.

Mr. Goldsborough. Governor, it would be very interesting to this committee and to the House and to the country to know where the pressure is actually coming from for an extension of branch banking into the rural districts, and, having that in mind, I should like to ask you if you can name any community which now has unit banking or any bank, in any such community, which is asking for an extension of branch banking involving that community?

Governor Young. Well, I would have to answer, Mr. Congressman, that I can not recall anyone at the moment. I assume that those banks in the smaller communities that have voluntarily joined up with these groups would prefer branch banking, but I can not make

that as a positive statement.

Mr. Goldsborough. Have any banks joined up with these groups or chains or branches except those of two classes; one class, in which the unit bank has been driven to effect a consolidation because of what would be termed unfair competition, that is, competition of a kind, the direct purpose of which would be to drive out competition (that would be one class), and another class, those banks who have been offered a very abnormal price for their stock and have sold out, therefore, simply as a purely commercial proposition?

Governor Young. Well, I would prefer, Mr. Congressman, to have those people who have been engaged in the formation of these groups answer those questions. I have not talked with them about those points that you bring up. I would say that every bank in the Northwest that has joined a group has done it voluntarily. I speak about the Northwest because that is the territory with which I am more

familiar.

I think some of the banks in those groups that were in difficulties, that their directors did not care to carry on any further, paid a voluntary assessment, cleaned the institution out, and were glad to

turn it over to a group.

Now I am informed by both the Northwestern groups that they have not taken any banks except those that were agreeable to the proposal that they had to make to them and I am further informed that there have been many applications received by both of those

groups that they have not, as yet, taken into the groups. That comes about because the applications come very rapidly and they are conservative men and do not care to expand too rapidly until they know where they are going.

Mr. Goldsborough. Do you believe that these groups or chains or branch banks would be the ones who would be most apt to give us the information that would accurately perfect the situation?

the information that would accurately portray the situation?

Governor Young. Yes, and I think it would be advisable for the committee to invite in some of the remaining independent bankers

and learn what their experience has been.

Mr. Goldsborough. Now, as I understand you, you know of no community which now has the independent banking system—no rural community—that is a community affected by the trade area system advocated by yourself and Mr. Pole, which is asking for an extension of branch banking into that community?

Governor Young. I do not know of any, but I believe that there

Mr. Goldsborough. Your attention has not been called to any?

Governor Young. Not to any specific instance.

Mr. Goldsborough. And no appeal has been made to you or, as far as you know, to the board from such a community to facilitate the passage of this legislation?

Governor Young. No, sir.

Mr. Goldsborough. Governor Young, the McFadden bill, which extended branch banking in metropolitan centers, first came up for consideration, I think, in 1925 and then again in 1927, when it was Passed. I was not here in 1927, but I remember very distinctly that those who opposed the McFadden bill in 1925, definitely argued and consistently argued that if the extension was granted, it would inevitably lead to a demand for further extension into the rural districts. What I mean is that this very condition which apparently exists now, was prophesied with absolute accuracy when that bill was up for consideration and I remember distinctly the advocates of that measure declared that if that measure were passed, it would put the national banks on a parity with State banks, practically speaking and, as a matter of fact, instead of being a branch banking bill, it was an antibranch banking bill, and it was on that basis that the bill was passed. It was that assurance gotten into the minds of a sufficient number of Members of Congress, in the House and Senate, that caused that bill to pass.

Is it not a fact that the pressure for this legislation is coming from the larger institutions who want to absorb these various territories

and not from the territories themselves?

Governor Young. I could not say that, Mr. Congressman.

Mr. Goldsborough. Well, it is coming from somewhere, evidently, because you never have legislation up for consideration unless some one wants it. Legislation is never considered for philanthropic purposes. That, I mean, is simply out of the question. There is somebody who is advocating this—some economic group advocating this legislation, evidently.

Governor Young. I think, Mr. Congressman, it probably origi-

Mr. Golpsporough That was his view?

Mr. Goldsborough. That was his view?
Governor Young. Branch banking? Yes.

Mr. Goldsborough. You do not think that the larger banks, which have branches in the cities, are behind this legislation?

Governor Young. I think they are, exclusive of New York and

Chicago and possibly some other large centers.

Mr. Goldsborough. You think they are? Governor Young. No; I think New York and Chicago-

Mr. Goldsborough. You think New York and Chicago are not, as I understand you.

Governor Young. I do not think they are back of branch bank

Mr. Goldsborough. But the other centers, as far as you know, are back of branch banking?

Governor Young. I would have to exclude certain centers.

Mr. Goldsborough. They are in favor of this particular sort of extension into the rural centers, outside of the metropolitan centers? Governor Young. It is pretty hard for me to answer for another

Mr. Goldsborough. I do not want you to answer if you do not

know. I thought you had some information about it.

Governor Young. What I have observed of the development of the group banking systems throughout the various sections of the United States and from the information that has been furnished to the committee as to the volume that it has reached, it is reasonable to assume they approve of what they are doing.

The CHAIRMAN. Governor Young spoke of the fact that New York and Chicago are not in favor of this plan of extension of branch banking. I suppose you refer to the plan suggested by the Comp-

troller, Mr. Pole?

Governor Young. Yes; and I do not know that I should answer that way, Mr. Congressman. This is just casual talk.

The CHAIRMAN. Will you explain what Chicago and New York

are opposed to?

Governor Young. I have talked with some New York bankers and I have read some articles by other New York bankers, and I would gather from those talks and from those articles, that they are opposed to the extension of branch banking.

Mr. Goldsborough. Do you object to giving your views of their

reasons for objecting to the extension of branch baking?

Governor Young. I would like to get the articles and quote them

accurately.

Mr. Goldsborough. If you have an opinion as to why they are opposed to branch banking—and I do not know whether you have an opinion or not—but if you do, you prefer not to give it? I might say I think it is very important for us to know why they are opposed to branch banking.

Governor Young. I was thinking of one particular bank. They believe in the unit bank and the correspondent system of banking in the United States so strongly that one of their officers has appeared

in public in opposition to the extension of branch banking.

The CHAIRMAN. You mean Mr. Davidson of the Central Hanover,

I presume?

Governor Young. That is the gentleman I had in mind. It has been some time since I read his article, however.

The CHAIRMAN. I should like to ask, in view of the statement you have made, whether or not one or more of the banks in New York and Chicago have lodged with the board their views on this particular question?

Governor Young. No bank has lodged its views.

The CHAIRMAN. They have not given an expression of their views to the board?

Governor Young. No.

The CHAIRMAN. I should like to ask another question. Have you any idea of the kind of banking that they want to do? I have gained the impression from your answers that they would prefer a continuance of the unit banking throughout the country, with contacts through correspondents.

Governor Young. In so far as that one particular bank is con-

cerned; yes.

The CHAIRMAN. That does not apply to the banks generally in

those cities?

Governor Young. Well, I have talked with two other bankers that remember and they seemed to have the feeling that we were not ready for branch banking in this country at the present time and, for that reason, I gathered that they were opposed to an extension of

branch banking.

The CHAIRMAN. The reason I asked those questions was due to the fact that a vice president of one of the large banks in New York, doing branch banking, said to me a year ago last October, in discussing the possible extension of branch banking through national legislation, that if they did not get legislation, it was coming anyway; that it was necessary to run pipe lines around this country and head them into New York and if we did not authorize it by national legislation, they would proceed under State authority or chain ownership; that it was bound to come. Now, Mr. Goldsborough.

Mr. Strong. May I have a moment there?

Mr. Goldsborough. Yes.

Mr. Strong. It was stated this country was not ready for branch

What did you think he meant by that?

Governor Young. Well, the technical set-up of a nation-wide branch banking system, with all the mechanics that are involved and the development of people to operate the various divisions, takes time. It took 50 or 100 years in England.

Mr. Strong. That would indicate they desired it but they were

not ready for it?

Governor Young. No; I rather got the impression from them, Mr. Congressman—from those two men—that they would prefer not to have it, but, as the chairman has said, they felt it was inevitable and It was coming.

It is very hard for me to express another man's views. I did not go into it in any detail at the time. I am simply trying to give the

committee the impression I got.

Mr. Strong. I think the record should show that when we were considering the McFadden bill, New York bankers came down here and insisted on clauses that would give them the right to have branches In New York

Governor Young. Well, they have them in New York.

Mr. Strong. Now they want them in New York and also in the rest of the country.

Governor Young. I think, generally speaking, New York has refrained from going outside of the city.

Mr. Strong. Of course they are prohibited from doing that under the McFadden bill, if they are national banks.
Governor Young. I mean even by groups or chains.

Mr. Goldsborough. Last Wednesday I think I stated, according to figures given to me by Mr. Smead, the banks in Greater New York City, State and National, had a total capital of \$1,155,063,000 and, in answer to a question by me, you stated the total deposits of all banks in the United States, State and National, amounted to about \$4,000,000,000.

Governor Young. That was capital. Mr. Goldsborough. I mean capital; yes.

Governor Young. That is just capital. The New York figures

were also just capital.

Mr. Goldsborough. That means, of course, that Greater New York alone—that is, the city—has more than one-fourth of the total capital of all the banks in the United States. Now, does not that indicate a

strong trend toward monopoly, in your mind? Governor Young. To answer that, Mr. Congressman, I should like to refer to the figures that the Comptroller of the Currency, I believe, has introduced in the record, showing the total deposits of banks in various cities in the United States in 1914 and again in 1929, and showing the percentage of increase in various large cities throughout the

United States.

The increase in deposits in the United States from July, 1914, to July, 1929, was 180 per cent.

Without New York City, it is slightly below the average-172 per

cent.

In New York City the increase is 217 per cent. Of the 16 cities listed, the highest increase of any place in the United States, during that period, is Detroit, where it is 466 per cent and, in making that statement, I am not including San Francisco, because in San Francisco there has been a very large increase because of the branch banking system in California all of the deposits of which are now listed under San Francisco; whereas in 1914, they were not.

Dallas, during that period, has increased 437 per cent. Atlanta

has increased-

Mr. Goldsborough. That is State and National banks?

Governor Young. All banks; yes. Atlanta has increased 234 per cent.

So, the increase throughout the United States, Mr. Congressman, has averaged 180 per cent, of which the increase in New York is 217 per cent, and the highest, excluding San Francisco, is Detroit, 466 per cent.

So that increase has been general throughout the United States. Mr. Goldsborough. As I understand you, outside of the branch banking systems in California, the only increases higher than the New York banks have been in Detroit and Atlanta—is that correct?

Governor Young. No; there has been a higher increase in Cleve-

Mr. Goldsborough. How much was that?

Governor Young. Two hundred and twenty-five per cent for Cleveland. I will name all of them. Chicago, practically the same—210 per cent; Cleveland, 225 per cent; Atlanta, 234 per cent.

Mr. Goldsborough. Atlanta, Ga.?

Governor Young. Yes.

Mr. Goldsborough. I thought you said that was four hundred and something?

Governor Young. No; 234 per cent.

Minneapolis, 184 per cent; Dallas, 437 per cent; San Francisco, I am not giving because of the branch situation out there; Detroit, 466 per cent.

The lowest increase was 97 per cent and, because of adverse pub-

licity, I will not name the city.

Mr. Goldsborough. What was Baltimore? Have you that there?

Governor Young. One hundred and forty-four per cent.

Mr. Goldsborough. Now, do you not think, in view of the average of 180 per cent, with New York 217 per cent, that shows a trend toward New York, even though these isolated instances, which you mentioned, do exist?

Governor Young. I would say it is very slight.

Mr. Goldsborough. Governor, I have here a clipping from the Baltimore Evening Sun of March 24, an article dated New York, March 24, written by Preston R. Krecker. In speaking of a statement by Mr. McGarragh, former chairman of the Federal Reserve Bank of New York, in his annual report of 1929, this article states:

In that document, Mr. McGarragh, who has since resigned to become the president of the Bank for International Settlements in Basle, Switzerland, states that for a number of weeks, from February to May for last year, the New York bank's directors repeatedly voted an increase in the bank's discount rate only to be overruled each time by the Washington body. It will be recalled that the rate was eventually raised, but not until the following August, months after the bank's directors first thought credit conditions called for an increase.

Is that an approximately correct statement of what occurred in 1929?

Governor Young. A very accurate statement.

Mr. Goldsborough. Now, will you state the board's reasons for not granting that permission to the New York Federal Reserve Bank and, in connection with that question, I think I should say that I personally felt away back early in 1928 that if the discount rates

Were not raised we would have a collapse in this country.

Governor Young. I shall be very glad to speak for the Board. In January, 1929, after the seasonal requirements were out of the way, there was a return flow of currency, reducing the amount of member banks' indebtedness, as it does every year. Speculation was proceeding at a very rapid rate. Speculative credit was expanding to such an extent that the board felt that some direct action—moral suasion or whatever you want to call it—was an advisable thing for the system to do at that time.

Mr. Goldsborough. That was in 1928?

Governor Young. That was 1929.

Mr. Goldsborough. 1929? Governor Young. 1929; yes.

With that thought in mind, the board dispatched a communication to each of the reserve banks in reference to speculative credits, while

banks were simultaneously borrowing from the Federal reserve banks. The reaction to that letter was very good from practically every reserve bank.

8(

to

C

r

t.

r

On February 14 or 15—I can not recall the date now—the Federal Advisory Council was here in Washington and approved the action of the board. Previously to that, the Federal Reserve Board had issued a public statement appealing not only to the borrowers but to the lenders, with reference to this vast increase in the use of

speculative credits.

The advisory council approved of the action of the Federal Reserve Board. The New York directors felt that that should be supplemented by an increase in the rate. The board felt that the results could be accomplished without the increase in the rate and I think I state accurately that between February and May, in so far as member banks were concerned, there was a reduction in security There was, however, an increase in loans coming from nonbanking sources and I will have to refer to Doctor Goldenweiser. but I think in May, brokers' loans were just about what they were in February. So, during that period, the board felt that its program of direct action was accomplishing results and it was not necessary to raise the rate, feeling if they did raise the rate, a great deal of the increase would be passed on to business.

In the latter part of May, up until August, there was a large increase of brokers' loans and other security loans, in member banks. Most of the increase came about, I believe, because of the great amount of stock rights that were issued at that time. In addition to that, the exchange of old currency for new currency required more Federal Reserve credit. The result of all this was that, in August. the rate request of 6 per cent was approved. It was initiated by the Federal Reserve Bank in New York and approved by the Federal

Reserve Board.

From August until the latter part of September-

Mr. Goldsborough. May I interrupt there? By August, had not the situation gotten entirely out of hand? Could any raise of the rediscount rate at that time, in view of the mental attitude of &

great part of the public, be of any practical service?

Governor Young. Well, there are many people within the system now that say that the 6 per cent rate in August did eventually. in October, have some effect on speculation. I think it had some effect, but a very slight effect. I think that the situation broke in October because the American public was ready to change its mind.

Mr. Goldsborough. Your opinion is, as I understand it, that the board's action in not permitting a raise in rate in August was sound

Governor Young, I am speaking, Mr. Congressman, for the board.

Mr. Goldsborough. You still think so? Governor Young. The board still thinks so.

The CHAIRMAN. Will you yield, Mr. Goldsborough?

Mr. Goldsborough. Yes; but I want to go along further along

that line, Mr. Chairman. However, go ahead.

The CHAIRMAN. You mentioned a result to be accomplished in February, due to the change of your policy. What results were you referring to?

Governor Young. Starting with August each year there is a seasonal requirement which, over a period of five years, has been shown to be in the neighborhood of \$300,000,000 additional Federal reserve credit that is needed between August and December, 1931. That is represented largely by currency requirements—additional currency

that is used at that season of the year.

You will recall at that time the discount rate in New York was raised and the bill rate was lowered. It was believed that, if additional credit was to be put into the market, it would be better to have it go in through bills. It was believed that that would not increase the volume of the discounts and would not put any additional pressure on the member banks, which might tempt them again to raise rates to business throughout the country.

The CHAIRMAN. On the theory that it would be less apt to go into

brokers' loans, that release of credit?

Governor Young. Yes. Of course, it is extremely hard to earmark credit. Generally speaking, it is less easy for credit to seep into the speculative field through bills than—

The Chairman. This change in the policy by raising the discount rate to 6 per cent was with the view of taking care of that \$300,000,000

demand that occurred between August and December?

Governor Young. Yes, sir; and in addition to that—
The Chairman. It was not aimed further to tighten and restrict money that was going into brokers' loans and into the stock market? Governor Young. Well, could I explain that in my own way, Mr. Chairman? I think by doing that I will perhaps answer your question.

The CHAIRMAN, Yes.

Governor Young. In August the Federal reserve system found itself in this position, that it had a bill rate much higher than the discount rate—I think the minimum bill rate at that time was 5% per cent and the discount rate was 5 per cent. That was rather inconsistent, having a bill rate, which is your prime paper, higher than the discount rate. So, partly to correct that situation and partly to say to the banks that were borrowing from the Federal reserve and simultaneously loaning for speculative purposes, "Go easy" and by reducing the bill rate to commerce and industry and saying to them, "Come on." That briefly was the policy as nearly as I can recall. I want to recall, also, that the discount rate was only raised in New York. It was not raised elsewhere.

The CHAIRMAN. You were classifying credit, then, were you not? Governor Young. Attempting to, by moral suasion or whatever

You want to call it.

The Chairman. You referred to the period of raising rates in August. Did the international exchange situation come into consideration in connection with that change in rate?

Governor Young. I am just trying to think of that particular

time, Mr. Chairman, if you will give me a minute or two.

I will answer it this way: If my memory serves me correctly, I do not believe the international exchange was taken into consideration at that time.

The Chairman. What happened to the Bank of England rate at or about that period? Was it raised or lowered?

Governor Young. The Bank of England raised its rate on February 7, 1929, from 4½ to 5½ per cent and nothing was done with their rate until September 26, when the rate was put up to 6½ per cent. That was about 40 days after the New York raise.

Mr. Goldsborough. May I proceed?

The Chairman. Just one other question, if you will pardon me.
My question also embodied the period of February when the board
sent out its notice, on February 6, as I recall it, admonishing the
banks to observe a little more closely the requirements of borrowers.

That notice was aimed at what, Governor?

Governor Young. That notice was aimed to attempt to restrain the tremendous expansion of speculative credit.

The Chairman. With particular reference to the increasing amount of brokers' loans?

Governor Young. If I can read this statement, then I can state it accurately, Mr. Congressman.

The CHAIRMAN. That is the statement that was issued at that time?

Governor Young. Yes.

The Chairman. Suppose we put that into the record. I am familiar with it. That will be done unless some member of the committee wants it read.

Mr. Strong. I would like to hear it read. The Chairman. All right; proceed with it.

Governor Young. That statement was as follows:

The United States has during the last six years experienced a most remarkable run of economic activity and productivity. The production, distribution, and consumption of goods have been in unprecedented volume. The economic system of the country has functioned efficiently and smoothly. Among the factors which have contributed to this result, an important place must be assigned to the operation of our credit system and notably to the steadying influence and moderating policies of the Federal reserve system.

During the last year or more, however, the functioning of the Federal reserve system has encountered interference by reason of the excessive amount of the country's creidt absorbed in speculative security loans. The credit situation since the opening of the new year indicates that some of the factors which occasioned untoward developments during the year 1928 are still at work. The

volume of speculative credit is still growing.

Coming at a time when the country has lost some \$500,000,000 of gold, the effect of the great and growing volume of speculative credit has already produced some strain, which has reflected itself in advances of from 1 to 1½ per cent in the cost of credit for commercial uses. The matter is one that concerns every section of the country and every business interest, as an aggravation of these conditions may be expected to have detrimental effects on business and may

impair its future.

The Federal Reserve Board neither assumes the right nor has it any disposition to set itself up as an arbiter of security speculation or values. It is, however, its business to see to it that the Federal reserve banks function as effectively as conditions will permit. When it finds that conditions are arising which obstruct Federal reserve banks in the effective discharge of their function of so managing the credit facilities of the Federal reserve system as to accommodate commerce and business, it is its duty to inquire into them and to take such measures as may be deemed suitable and effective in the circumstances to correct them, which in the immediate situation means to restrain the use, either directly or indirectly, of Federal reserve credit facilities in aid of the growth of speculative credit. In this connection the Federal Reserve Board, under date of February 2, addressed a letter to the Federal reserve banks, which contains a fuller statement of its position:

"The firming tendencies of the money market which have been in evidence since the beginning of the year—contrary to the usual trend at this season—make it incumbent upon the Federal reserve banks to give constant and close

attention to the situation in order that no influence adverse to the trade and industry of the country shall be exercised by the trend of money conditions, beyond what may develop as inevitable.

The extraordinary absorption of funds in speculative security loans which has characterized the credit movement during the past year or more, in the judgment of the Federal Reserve Board, deserves particular attention lest it become a decisive factor working toward a still further firming of money rates to the prejudice of the country's commercial interests.

"The resources of the Federal reserve system are ample for meeting the growth

of the country's commercial needs for credit, provided they are competently administered and protected against seepage into uses not contemplated by the Federal reserve act

"The Federal reserve act does not, in the opinion of the Federal Reserve Board, contemplate the use of the resources of the Federal reserve banks for the creation or extension of speculative credit. A member bank is not within its reasonable claims for rediscount facilities at its Federal reserve bank when it borrows either for the purpose of making speculative loans or for the purpose of maintaining speculative loans.

"The board has no disposition to assume authority to interfere with the loan practices of member banks so long as they do not involve the Federal reserve It has, however, a grave responsibility whenever there is evidence that member banks are maintaining speculative security loans with the aid of Federal reserve credit. When such is the case the Federal reserve bank becomes either a contributing or a sustaining factor in the current volume of speculative security This is not in harmony with the intent of the Federal reserve act nor is it conducive to the wholesome operation of the banking and credit system of the country.

Mr. Strong. What date was that? Governor Young. February 5, 1929.

The CHAIRMAN. That letter was sent to the different Federal reserve banks, was it not? Governor Young. Yes, sir.

The CHAIRMAN. And the effect of that letter on the Federal reserve banks was, of course, to examine more closely rediscounts that were offered from member banks. Did it have this effect, that It was a notice to member banks to discriminate on loans, and did the Federal reserve banks so direct member banks?

Governor Young. From what I know of the operation of the Federal reserve banks, and having operated one for 10 years, I believe that that is the procedure that has been followed by the Federal reserve banks ever since they have been organized. I think the letter of the board was a remainder of what should be done. I think the subsequent statement of the Federal Advisory Council went beyond the Federal Reserve Board, and went right directly to the member banks.

The CHAIRMAN. Without objection, a copy of that communication from the Federal Advisory Council will be placed in the record at this point.

(There was no objection, and the communication referred to is as follows:)

The Federal Advisory Council at a preliminary meeting yesterday made the following minute, which was delivered to the Federal Reserve Board at the regular

Quarterly meeting of the council and the board this morning:
"The Federal Advisory Council approves the action of the Federal Reserve Board in instructing the Federal reserve banks to prevent, as far as possible, the diversion of Federal reserve funds for the purpose of carrying loans based on securities. The Federal Advisory Council suggests that all the member banks in each district be asked directly by the Federal reserve bank of the district to cooperate in order to attain the end desired. The council believes beneficial results can be attained in this manner." Mr. Brand. What was the date of that?

Governor Young. Of the communication of the advisory council? Mr. Brand. Yes, sir.

Governor Young. February 15, I think.

The Chairman. The point that I was making in that connection was that it seems to me from memory that that is the first time since the Federal reserve system was organized that by an official edict of the board and the advisory council the use to which proceeds of loans granted by member banks was attempted to be directed.

Was there ever another period when such was the case?

Governor Young. I think that was mentioned in 1923 in our annual report.

Doctor Goldenweiser. 1923, and, in more detail, in 1926.

Governor Young. What action individual reserve banks have

taken publicly I do not know.

The CHAIRMAN. I recall that when Governor Strong of the Federal reserve bank appeared before this committee, he stated that the Federal reserve management had no jurisdiction over what use was to be put to the proceeds of loans granted by member banks.

Do you agree with Governor Strong's statement in that respect?
Governor Young. From a practical and legal standpoint, yes; but
I am quite sure that Governor Strong in his way practiced direct action
in the New York district just as much as I did in the Minneapolis
district.

Do not misunderstand me; I had the very highest regard for Governor Strong, and I do not think he intended to make any misstatement, but to a degree the Federal Reserve Bank of New York exercised direct action; there is not any question about that.

The CHAIRMAN. They did that last October, did they not?

Governor Young. In specific cases.

The Chairman. Now, Mr. Goldsborough, I do not want to break in any further on your examination.

Mr. Goldsborough. Governor, referring again to this article of

Mr. Krecker's, the statement is made:

The point is that, in the opinion of many bankers, the devastating break in the stock market last autumn might have been averted had the central banks put the screws on the money market early in the year, as the New York bank's directors sought to do. As it was, the orgy of speculation on the stock exchange was continued for several months longer, while the bubble of inflation was blown bigger, with the result that when the boom did collapse the destruction was farreaching.

As I understand it, speaking for the board, that is not your view? Governor Young. That is not the board's view, or was not the board's view, and they still retain the same view.

Mr. Goldsborough. Another statement made in this article is as

'n

BMB

d

b

follows:

The suggestion is that when the directors of a regional reserve bank decide definitely on a change in the bank rate they make public their decision irrespective of whether Washington vetoes that decision or not. By so doing they would lift the veil of mystery which breeds uncertainty. The public would be advised at least of how the bank's directors feel about the credit situation and could be guided accordingly.

Under existing practice a very few become exclusively possessed of information of immense and general importance to all bankers and business men everywhere, while the latter are kept in the dark and grope along trying to find out where they stand. If, moreover, publicity should be given to a reserve bank's decision

the moment they are made the full responsibility for failure to make the desired change could then be placed squarely where it belonged.

What do you think particularly of his statement that information is gained by a limited number of individuals and groups that is not available to the entire business public?

Governor Young. I do not think so. In the 12 years that I have been associated with the Federal reserve system, I have yet to hear of any officer or director—

Mr. Goldsbordgh. I did not suggest that; I did not mean that. I did not mean to intimate, and I want this put in the record, that any officer or director of the Federal reserve system or of the Federal reserve bank used the information he acquired; I meant bankers and business men who were not officials of the Federal Reserve Board or the Federal reserve bank.

Governor Young. Well, what others, Mr. Congressman, would have it?

Mr. Goldsborough. That is just what I am trying to find out. Governor Young. No others would have it. I think I can illustrate that by stating what happened on February 15 when the New York board requested that the rate be raised to 6 per cent. You will recall that that was an all-day telephone session between the New York bank and the Federal Reserve Board, in which there were nine directors of the reserve bank in New York, eight members of the Federal Reserve Board, two secretaries of the Federal Reserve Board. and possibly four or five officers of the New York bank that had that information. You will recall that on the start the newspapers arrived at erroneous information. They thought that the board was trying to put a 6 per cent rate in in the New York bank, instead of what actually happened. In the course of 30 days, I would say that that information was known by at least 150 people within the Federal reserve system, directors or officers or secretaries or others. If I remember correctly it was almost two months after February 15 before the public arrived at the real story.

So that I think I can say with safety that no one had any informa-

tion that they could use to advantage.

Mr. Goldsborough. I see. That is a very fine statement to be able to make, and as far as I am concerned, I believe every word of it. But what I was trying to find out was whether there was anybody outside of the system who could get the information or who did get the information, as this article seemed to imply.

Governor Young. I doubt it. Suppose that they had the information that the New York directors wanted to raise it to 6 per cent and the board would not grant the raise; they would be just where they were before. There was no real information until the

Federal Reserve Board approved the rate.

Mr. Goldsborough. I do not know about that. I think if an individual knew the New York bank wanted to raise the rate to 6 per cent, and the board would not grant them the permission, he would be in a vastly better position than one who did not know about it at all, because that first individual would at least know the drift of the mind of the bank and the mind of the board, which would be of great value.

Governor Young. Well, the directors of a reserve bank would have every right in the world to issue that kind of statement if they

so elected, and the board could not possibly object to it.

Mr. Goldsborough. They would have the right to do it?

Governor Young. Obviously so. You can not deny men the right to free speech. Whether it would be advisable to issue such a statement is a debatable question.

Mr. Fort. May I ask one question right there, Mr. Goldsborough?

Mr. Goldsborough. Yes, sir.

Mr. Fort. A year or two ago, Governor Young, there was public information as to a dispute between the Chicago board and the Federal Reserve Board, which was thoroughly understood by all the public. There were statements issued on that, were there not, about the raising of the rediscount rate?

Governor Young. That was before I came on the board. I do

not think the board issued any statement.

Mr. Fort. The board did not, but the Chicago board did, did it not? Governor Young. I think individual members of the Chicago board did. I do not think the—

Mr. Fort. I mean, the information was made public at the time that the controversy was on between the Chicago board and the Federal Reserve Board.

Governor Young. Correct.

Mr. Wingo. Is it not true that in February, 1929, there were some individual members of the Federal reserve bank board in New York who were quoted as to their opinion about the situation and the advisability of action one way or the other?

Governor Young. Not in February. I think one member did

express himself in May.

Is that correct, Doctor Goldenweiser?

Doctor Goldenweiser. That is right; not at the time.

Mr. Wingo. What I had in mind was that they were directly quoted—

Governor Young. In March one of the banks advocated within its

8 H

n

d

ti

F

m

Vi

fu

W

to

di

monthly bulletin-

Mr. Wingo. What I had in mind was not only in the current number of a bulletin that came out, or a statement that came from some bank—and I get so many of them that I do not recall—but some writer, while he did not quote any specific name—just as in the case of the quotations that used to come from the White House—stated that:

It is known or said upon good authority that the directors of the Federal Reserve Bank of New York think that stringent action should be taken.

I was struck at the time because I had the impression that the general public had, just the reverse of what the situation was.

Governor Young. Was not that 60 days later? The Chairman. Will the gentleman yield?

Mr. Goldsborough. I think I ought to be allowed to finish my cross-examination.

Mr. Wingo. I beg the gentleman's pardon.

The Chairman. If you will permit me one question further; apropos of what has just been said, the controversy arose through the disclosure by a director of the Federal Reserve Bank of New York that he was in favor of raising the discount rate.

Governor Young. I do not know that,

The Chairman. The press indicated that Mr. Charles E. Mitchell, president and chairman of the board of the National City Bank, was that member of the Federal Reserve Board, of New York.

In view of what has happened here in the last few minutes, I want to ask if there is not grave danger, when action like that is known to a director of the Federal reserve bank—particularly when that director is the head of an institution which is affiliated with institutions that are interested in stock market operations—of disclosing information that may be used for speculative purposes?

Governor Young. I do not think so, and I would regret to think that any director or any officer of any Federal reserve bank would use information of that kind to his advantage.

The Chairman. I was not suggesting that, but the crux of the situation is that here is a man, a director of the Federal reserve bank with that knowledge, who happens also to be the managing head of a national bank and the head also of affiliated institutions engaged in stock market operations. From the very make-up of the situation, it would seem to me that any man in that favored position is bound to use that information, whether he does so willfully or not. The fact that he possesses that information will bring about decisions which will necessarily affect the transactions in the market.

Governor Young. Mr. Congressman, he does not get it any quicker than the public gets it. What happens is that the New York directors meet about 2 or 2.30, and they usually take care of the routine business first. The rate discussion is then brought up during the meeting, and some one makes the motion to establish a higher rate, or to fix a higher rate. There is discussion and maybe there is a unanimous Vote and maybe a divided vote, and it carries or it does not. Federal Reserve Board holds itself in readiness at all times either to approve or disapprove rates. That information is phoned to the Federal Reserve Board and followed up by a wire, and the board meets immediately and discusses the situation and approves it or disapproves it by a uananimous vote or a majority vote. That action perhaps is taken not before 2.30, and it is released simultaneously by the Federal Reserve Bank of New York and the Federal Reserve Board at 3 o'clock. Those directors stay in conference until after that is released and the public has that information just as quickly as that director has as far as any use could be made of the information.

The Chairman. This particular occasion was a matter of controversy between the Federal Reserve Bank of New York and the Federal Reserve Board, was it not?

Governor Young. That is correct.

The Chairman. Mr. Goldsborough, I do not wish to take any more of your time.

Mr. Goldsborough. I have a question or two.

Mr. Young, on last Wednesday I directed several inquiries to your view as to whether when banking groups become sufficiently powerful they do not become measurably the Government itself—in other words, whether the officials representing the Government are able to act independently of the pressure which either directly or indirectly comes to them from these powerful groups.

I am going to illustrate what I have in mind by a situation which is now developing along another line. The Standard Oil Co. of New York and the Vacuum Oil Co. are in process of effecting a merger.

The directors of each company have approved it, but it has not yet been submitted to the stockholders of the two companies. Those two companies were constituent members of the Standard Oil Co. of New Jersey, which was dissolved in 1909 by a decree by the Supreme Court of the United States holding the groups a combination in restraint of trade.

As I said before, these companies desire to merge, and the Department of Justice has filed a bill in equity to restrain the stockholders of the constituent companies from voting the merger. In other words, a bill in equity has been filed by the Government to prevent

the violation of a penal statute.

Now, any lawyer will tell you that can not be done, and the general understanding among lawyers who have the situation in mind is this, that these two companies, when they file their answers to this bill in equity, will not plead to the jurisdiction; in other words, that particular question will not be raised and they will be able to get a declaratory decree of the court before anything is actually consummated. Stated in another way, it appears to be an amicable suit. It is obvious that the ordinary individual or the ordinary business could not make any such arrangement as that with the Department of Justiceand I am not criticising the Department of Justice; I am only saying that when aggregations of individuals or of capital become strong enough, inevitably to a greater or less extent they control those who should control them.

Now, then, here we have a situation where almost all of the banking resources of this country are now centered in the metropolitan areas. If these metropolitan banks extend their influence out into the rural districts, they will control the economic situation, which in turn, will control the social situation and the political situation, and in turn will create a condition where the cities will control the policy of the Government. In the cities, of course-for we are a new countrythey have an unassimilated population to a large extent, and politics are not handled and decisions as to governmental matters are not made as they are in the country I think it has been said that the so-called graft conditions which exist in American cities do not exist anywhere else in the civilized world, and it is attributed to the control, the easy control by politicians, of this vast horde of unassimilated foreign population.

Now, do you not think that one of the things we ought very carefully to consider before we assist in the extension of branch banking into the rural districts is the question whether or not American life ought to be turned over to the great centers of population?

Governor Young. If there is such a possibility, I think you ought to consider it very carefully.

Mr. Goldsborough. That is all.
Governor Young. Mr. Chairman, Congressman Goldsborough made an inquiry of me earlier, as to whether I knew any place where unit banking existed where there was a demand for branch banking or group banking. At the moment I could not recall or did not remember. I now recall that one of my friends in the Far West that went into one of the group set-ups in the Northwest wrote me, after he had taken the action, and asked me if he did not act wisely. So I assume that he arrived at his own conclusion voluntarily.

That is the only case that I recall at the moment.

Mr. Fort. May I interject one question in regard to a matter, Governor Young, that you were discussing some time ago under the questioning of Mr. Goldsborough and Mr. Wingo. I did not want to interrupt Mr. Goldsborough at the time. It relates to the matter of the value to an institution with which a Federal reserve bank director might be connected of the knowledge of the action taken by the Federal reserve bank, and you said you felt, and I agree with you, that no officer or director would utilize that deliberately for the advantage of his own institution; but is it not a fact that so long as the contemplated action of the bank is not known-in other words, so long as the public has no knowledge of whether or not the bank is considering officially a change in the discount rate-the knowledge of that status would be of very great value and inevitably used, as Mr. McFadden has said, in making decisions by any director of that Federal reserve bank who also was the director of a bank which was dealing in stocks, either for its own account or for the account of an affiliate?

Governor Young. Let us take the outstanding case, from February 15 or 14, whichever it was, clear through until May or June. If that director during that period had attempted to take advantage of the contemplated raise in the rate, he would have been out of luck for three months at least, because of the position that the board took.

Mr. Fort. But the general public did not even know in any definite way that the board was even considering the change in the rate, did it? It has only guesswork to go by.

Governor Young. Nothing but guesswork.

Mr. Fort. The question I am coming to—and I have not any preconceived idea on it—is whether or not the public is entitled to the information generally at the conclusion of a board meeting as to whether the discount rate is even up for discussion.

Governor Young. Possibly.

Mr. Fort. And as to the size of the vote by which the discussion is resolved.

Governor Young. Well, I have a feeling myself—a personal feeling—that the less those things are discussed in the newspapers, the better, but I may be wrong. If the directors of the New York bank care to make a public statement as to what they have done, I could not object to that, but during the year 1929, and I will ask Doctor Goldenweiser and Mr. Smead or Mr. Wyatt to correct me if I am wrong, the board had 49 requests for increases in rates, 24 of which were approved and 25 disapproved. I think those figures are accurate; if they are not I will correct them.

Now, that means that you would be in the newspapers practically

all the time, and with additional controversy all the time.

Mr. Fort. Of course, stock markets thrive on uncertainty and not on certainty. That I realize is true.

Governor Young. Maybe the uncertainty between February and

May had an effect on the market.

Mr. Fort. I am not sure it did not, but my thought in this connection—and the matter I am trying to direct your thought to—is along the line that I questioned you when I had you under examination, namely, whether it is proper for the officer of an institution which itself deals in stocks to be also a director of the Federal reserve bank

that fixes the rediscount rate which we all know vitally affects the stock market.

Governor Young. I will have to answer that, Mr. Congressman, by saying that in my entire association with the Federal reserve system I have never seen a director take advantage of that, or never had any intimation he did in any way, shape, or manner. That would mean that you would have to get directors that were divorced

from the stock market entirely, to follow your thought out.

Mr. Forr. Not necessarily. The distinction is this, that if either for the account of the bank or for a security affiliate the dominating officer of the bank is accustomed to dealing in securities for its account in large volume-

Mr. Wingo. Pardon me, but you used the word "bank." Do you mean the Federal reserve bank or a member bank?

Mr. Fort. Member bank.

Mr. Wingo. You mean to say, then, that the director of the member bank is also a director of the Federal reserve bank?

Mr. Fort. He might very well be.

Mr. Wingo. I just wanted to follow you.

Mr. Fort (continuing). Dealing largely in securities for the account of his own institution, it seems to me, without any dishonor or discredit, that he would be gravely deficient in the performance of his duties as an officer of his own institution if he did not have his judgment controlled as to the bank's further operations by his knowledge of the judgment of his Federal reserve bank codirectors as to a forthcoming increase or decrease in the rediscount rate.

Governor Young. Let us follow that right along in actual practice. I have described the customary method of fixing and approving the discount rate. Obviously no director can take advantage of that situation.

Mr. Fort. Absolutely: I agree with you.

Governor Young. So we will eliminate that. Then we come to a controversy such as existed between the board and the New York bank from February until May. That director had that information every day; he had it every week, but he could not use it; it was of no benefit to him at all until it had the approval of the Federal Reserve Board.

Is not that reasonable conclusion to arrive at?

Mr. Fort. It might be that he could not use it, Governor Young, with the same value that he could use knowledge of a definite happening, but, knowing the condition that existed, that his bank was keeping up the pressure on the Federal Reserve Board to produce action in accordance with its views, he certainly had a balance of knowledge that the rest of the country did not have-he knew that there was at least more likelihood of an increase than a decrease.

Governor Young. But he did not get it.

Mr. Fort. Not immediately; he got it eventually.

Governor Young. I will go a little further with that. I think it was in May that they ceased making the recommendation to the Federal Reserve Board for an increase in rate, and the discount rate raise in August really originated with a conference of governors that was held in Washington, so I do not see, Mr. Congressman, how they could use that information to advantage. There might be a possibility of using the information that they could get in reference to open-market

operations, but I do not think so.

0

d

1

r

S

e

ž.

Mr. Fort. How about the reverse of the situation, where the Federal Reserve Board desired the local Federal reserve bank to raise the rate, so that he was sure of its approval?

Governor Young. Well, the only time that the Federal Reserve

Board initiated a rate, it did not happen that way.

Mr. FORT. But the member of the Federal reserve bank or board of the district, having that knowledge and knowing the attitude of his own board, would have a distinct advantage over the rest of us, would he not, which he might or might not use?

Governor Young. I do not think so.

Mr. Wingo. Your theory is that he would necessarily use it in casting his vote as a member of the directorate of his own bank, that it consciously would affect him?

Mr. Fort. Well, I think that in the larger banks, where they have the power, they do not wait for directors' meetings to buy stocks.

Governor Young. Let us follow that along. Let us assume that the Federal Reserve Board should arrive at a conclusion that there should be a rate raise in some bank-

Mr. Fort. Or a reduction. Governor Young. Or a reduction, one or the other. Well, the law gives the board the power to fix the rate for the Federal reserve The procedure bank, and that has only been done in one instance. that would be followed would probably be this, that the board, Viewing the entire credit structure of the United States, would believe that it was advisable that there should be a rate raise or a rate reduction. They would pass that information on to the officers of the reserve bank, not to the directors, because we are not in close contact with them. At a meeting of the directors at 2 o'clock they would be acquainted with the views of the board, and the directors might agree and they might disagree. If they disagreed, they would not initiate the rate. If they did agree, they would initiate the rate, and it would be immediately approved by the board and a director would be in the same position as if the bank initiated the rate itself and the board approved it.

Mr. Fort. Except that they might agree to initiate it a week

later or two weeks later.

Governor Young. That might be possible; they might say it is

too early.

The CHAIRMAN. In connection with the change of rate that you spoke of a few moments ago, what would be the process in a change in rate supported, for example, by the bank in Philadelphia? . Do You consult with the other banks, the other 11 banks?

Governor Young. No. The Chairman. They are not consulted?

Governor Young. No.

The CHAIRMAN. They are not made cognizant of any change in the rate of the Philadelphia bank until after that has been decided

Governor Young. Under some conditions they would be and under

others they would not.

The CHAIRMAN. Under what conditions are the directors and officers of all of the 12 banks notified or consulted before a change in rate is made effective?

Governor Young. Under no conditions, but this has happened: Obviously a rate raise in one district which would be above the rate in other districts, has an effect upon the entire United States, and I mean by that that if New York were on a 5 per cent rate and elected to raise it to 6 per cent, obviously the board in approving or disapproving would take into consideration the effect, immediate or eventual, that that might have on the other districts of the United States in determining whether we would approve or disapprove of the rate. Now, it would be possible under those circumstances that I, as the head of the board, might consult with the officers at Cleveland or with the officers at Chicago, Philadelphia, or elsewhere, to find out what, in their opinion, the effect of that rate would have in their district and whether there was strong opposition to it or whether they had no feeling about it at all. That would not, however, go to the directors of these other banks, because they only meet every two weeks or every 30 days, and the board has to act quickly.

The Chairman. Of course, this problem is a very sensitive one, and I would like to state for the record that in my questions a few moments ago wherein I mentioned Mr. Mitchell of the National City Bank of New York in connection with the rate change and the possible benefit he might derive from his associations, I was not accusing Mr. Mitchell of having used that information in any manner; I was merely using that to illustrate the possibilities, or the sensitiveness

Vil t Til

n

p

0

0

connected with that kind of a situation.

Mr. Fort. I have the same feeling about all of it; I think the Federal

reserve system has been run with a very high sense of honor.

The Chairman. It seems to me that there is a grave possibility of information pertaining to possible changes in the policy of the Federal reserve getting out to those who are closely associated with officers and directors of the Federal reserve banks. As an illustration of what I mean, take, for instance, a class C director of a Federal reserve bank who attends a directors' meeting where a matter of change of policy is up for consideration. He has a business associate who knows from his partner's action one being a director of the Federal reserve bank and the other the operating head of the business, practically what action took place in that meeting without the director telling him, if it happens to be a class of business that is affected by a change in rate or a change of policy. It seems to me that it is such a sensitive thing that in many instances information like that is bound to get out.

By way of illustration, I want to cite an incident that occurred on the 1st of last October. I was in New York, on lower Broadway, when I met an officer or director of one of the Federal reserve banks, who shook hands with me, and I said, "What are you doing in New York?"

He said, "I am just going over to my brokers to sell everything I

have got."

He passed on, and I went my way. My natural thought was, What is going to happen? What is this all about? Here is an officer of the Federal reserve bank—

Governor Young. An officer?

The CHAIRMAN. He was a director of the bank, and I thought that he must have advance information on some movement. I have thought of that many times since.

Governor Young. Well, let us follow that a little further-

The Chairman. I bring that up just to get your reaction on it, whether or not there is a possibility of anything like that happening. Governor Young. I will be glad to give it to you. In August we took action in reference to the discount rate and the bill rate, which was known to the public as quickly as it was known to any director or officer of any reserve bank—or, inside of five minutes.

The Chairman. Does the public get the effect of that action as quickly as a man immediately engaged in the activities of the system?

Governor Young. It has the same information.

The Chairman. But the capacity there to analyze it and note its effect is not as keen as with the one who is very close to the Federal

reserve operations.

Governor Young. In September we proceeded to buy bills; that was public information. In October we were asked for authority to buy Government bonds, if necessary, to relieve the situation. Now, that was the information that that man had, which was an easing policy so far as the credit situation was concerned; so that in October he did not have any information that the public did not have, and he must have been prompted to sell securities for some reason other than Federal reserve policy or Federal reserve action.

Mr. DUNBAR. I would like to ask the chairman and Mr. Fort a

question.

You have spoken about the possibility of contemplated action being disseminated to the public and thereby creating a speculative market. It is pretty hard to keep it a secret; you can not do it; people contemplate and have in their minds certain procedure and, somehow or other, the newspaper men get their information mostly out of the air, but they know what is going to occur before the participants themselves come to a conclusion.

What have you to suggest that would prevent this impression going forth which has influenced speculation and disturbed the business conditions of the country which you in your questions to Gov-

ernor Young have somewhat deplored?

Mr. FORT. Are you asking me?

Mr. Dunbar. Both of you.

Mr. Fort. I have no commitments in my mind other than the feeling, which I think I have disclosed, that the whole practice of the purchase and sale of stocks by banks for their own account or affiliates is bad banking and ought to be stopped.

Mr. Dunbar. How would you stop it?

Mr. Fort. By forbidding banks to include in the purchase or sale of stocks.

Mr. DUNBAR. That is right.

Mr. FORT. That is another question, however.

Mr. Dunbar. That is the one I was talking about.

Mr. Fort. What I mean is that there ought to be some law that

would be definitely applicable to banks on that.

The Chairman. The point I was raising was that there was a sensitiveness here that probably could not be reached by law. It comes back to the element of human nature, and I do not know but that it goes even beyond that, where a man, by not saying anything, really answers a question, because the understanding is so close between those who are associated in the actual operation of the system and those who are either engaged in market operations or in

business that they decide the course as to a change in policy as affecting their own particular situations or their opportunity to make money. That is something that no law can cover. It is a situation that an officer of an institution, either as a director or an active officer, be he ever so honest, might, by evading an answer to a direct question, give information of material value to one engaged in speculative operations.

Mr. Dunbar. I agree with you as to that; that is the difficulty that the directors of the Federal reserve system labor under, and it is one that they would like to solve if possible, and yet at the same time it is a condition that more or less reflects unjustly upon them.

Mr. Wingo, Mr. Chairman-

The Chairman. I might say here for the purpose of this record that this present discussion is proceeding as it is because of the fact that Judge Brand does not happen to be present, but he will proceed to-morrow, and, having this time available, a latitude is being given to the members of the committee to ask questions of Governor Young out of the regular order.

Mr. Wingo. A while ago, Governor, you were talking about rates, and you suggested that the board had the power to fix rates. I believe that has been decided by the present board and I also believe that you have had one or two Attorney Generals tell you that you

had the power to fix rates.

I do not know that it is worth while, and may be it is just a personal satisfaction, but I would like to reiterate what I have said every time that question was raised, that that was not the original contemplation. One of the bitter controversies as far as this House committee was concerned was where the power to fix rates should be lodged, and originally it was suggested that the board should have that power. That very controversy was involved in the question which concerned the selection of directors, and the directors we divided into three classes, letting the member banks be represented, letting business be represented and letting the board be represented. Those who had raised the original controversy objected to a central board having the power to dominate the rate by initiatory declarations, and they were led to believe that all on earth that this final language which was used meant was to approve or review or determine, I believe the language is "subject to review and determination."

That word "determination," they were led to believe meant the final determination; in other words, that the rate should not become effective until reviewed and determined finally by the board, and, of course, it may be another one of those instances where a few knew what they were driving at and used language to conceal what they were doing to get by the opposition of an unquestioned majority, both in the committee and in the House. It is also true that some gentlemen who were connected with the writing of the act have right-about-faced on that, for they have given two opinions in writing, and one was that it was intended for them to have the power and the other that they should not have it; and, while my judgment or my recollection may be confused on some things, on a major controversy like that I do not think I can be confused, and only recently did I refer to my notes as to the controversy in which I engaged in reference to that very question, and I specifically asked the question not on the floor but of some gentleman who had some-

thing to do with it if that language would be interpreted as centralizing the power to fix rates here in the board at Washington, and I was assured that it would not, that they simply wanted to have the checks and balances, and the review and the determination was intended to give the supervisory board some control and veto power and not just unlimited power to fix the rate.

Governor Young. It clearly gives the board the veto power.

Mr. Wingo. No question about it. The argument used was this, in connection with the original proposal for a uniform rate, that there are different types of business in different parts of the country, and seasonal demands are different, and that therefore a rate which might be beneficial for a New York bank would be just the opposite for Minneapolis or San Francisco or Kansas City. Then the argument to leave the final determination with the board, the veto power, was urged by those replying to that argument, that that was true, but that if You leave the power without any review by the Federal Reserve Board in any one of the 12 banks, that then that one bank might be arbitrary in the use of its power and might put in effect a rate which by its reaction would affect the other 11 banks, and therefore the board sitting here at Washington should have the final veto power, so as to check a bank that used its power unwisely or arbitrarily so far as the whole country was concerned or abused its power by putting in effect a rate which it realized would have a punitive effect on some other bank that it wanted to affect.

That is the argument that was made pro and con here at the table and in conferences, and the real intention was that never should the board initiate a rate, that the board should take no action at all until the bank submitted a proposed change, and then the board could either approve it, or else it could veto it and the bank then, if it wanted to take any further action, would have to make some other suggestion.

That was the original thought. Maybe it was wrong, and maybe the present determination is wise—I do not undertake to discuss that, but I just wanted to put that in the record in view of some

contentions that have been made.

Governor Young. It has been my observation, Mr. Congressman, in the actual operation of the system, that the initiation of a rate in one district does have an effect on other districts, not to the extent,

however, of requiring a uniform rate throughout the system.

Mr. Wingo. Well, this is true, is it not, that at a certain season of the year there is a larger demand for credit, say, in Kansas City, and under normal conditions, especially before the war, at the very time you had the heaviest load, at the peak of your credit load in Kansas City, nine times out of ten, for a period of 10 years prior to 1913, that was the dull period in New York. In other words, credit was more plentiful then and as a rule New York sent out its surplus credit into the Kansas City territory and met the demands out there for surplus credit.

Now, if there is a heavy demand for credit in Kansas City or in some of the States where they recognize under the usury laws a 10 per cent rate in advance that the member banks may charge their borrowers, and the wheat farmers and the country bankers are carrying those accounts, on account of the scarcity of cash, say at a rate of 8 per cent, the very necessities of the case demand the highest seasonable rate in that territory, and if at the particular moment the

New York rate should be put abnormally low, it would have one effect and, on the other hand, if the New York rate were put very high, it would have just the opposite effect. If the New York rate was the same that day that the rate is at Kansas City, it would make the burden in Kansas City a little bit heavier, would it not? In other words, a 6 per cent rate in New York is higher for New York than a 6 per cent rate in Kansas City is for that territory, is it not? Governor Young. I would say yes.

Mr. Wingo. You catch the point? In other words, 6 per cent is a high rate in New York City, is it not?

Governor Young. Very high.

Mr. Wingo. But a 6 per cent rate in the Kansas City territory is not an abnormally high rate?

Governor Young. It might be a very effective rate in that district. Mr. Wingo. I am talking about member banks. I do not know of a bank in my district that charges the general run of people-

Governor Young. You are talking about member banks?

Mr. Wingo. Yes; about the general credit rate. In other words, I do not know of a single member bank in my district that is making a 6 per cent rate to all of its customers. Its preferred customers get it, but I can not get a 6 per cent rate; I have to pay 10 per cent in advance at my bank, even now with this plentiful money and with this wonderful easy credit.

The point I am getting at is the necessity for having a different

rate sometimes in different Federal reserve districts.

Governor Young. Oh, yes.

Mr. Wingo. That was recognized in the beginning, and for that reason it was first urged that you ought to have 12 different banks and that each bank ought to fix the rate to meet the needs of each particular district with which they were more familiar, but, on account of the general effect that might have on any other single bank, it was thought that the Federal Reserve Board ought to have the veto power so that if some bank showed a reckless disregard of the whole country, the board could preserve and protect the general public interest in

Governor Young. I think that has been followed out in the operation of the system. Uniform rates have not been general. We have

rates now ranging from 31/2 to 41/2 per cent in the system.

Mr. Wingo. But, within itself, a 31/2 per cent rate in one district is relatively lower than a 31/2 per cent rate in another district at the same time, is it not?

BCOBWE()tt

inCd

Governor Young. It might be.

Mr. WINGO. In other words, as to the effect—and that is what you go by-a 31/2 per cent rate in Kansas City would be entirely different from a 31/2 per cent rate in New York City, would it not?

Or, let us take a 41/2 per cent rate; a 41/2 per cent rate in New York City would have a very different effect than a 41/2 per cent rate in

Kansas City, would it not?
Governor Young. It would depend upon the conditions and cir-

cumstances.

Mr. Wingo. In other words, there is more than just a 1 per cent difference in the relative demands and actual price of credit as fixed by supply and demand in Kansas City on the one hand and New York on the other?

Governor Young. There might be.

Mr. Wingo. As a general rule, measured by the actual transaction, it runs between 2 per cent and 3 per cent, does it not, so far as the member banks are concerned? In other words, the current level of interest rates in the Kansas City district runs from 2 to 3 per cent above the current interest rate in the New York district. That was true the last time I checked up on it and got expert advice, although it may not be true now. That was a few years ago.

It may not be true now. That was a few years ago.

The Chairman. It is now 1 o'clock, but before we adjourn I want to place into the record a letter from the Comptroller of the Currency under date of March 27, 1930, inclosing certain information previously asked for in regard to a comparison of bank assets in the United States between July, 1914, and July, 1929, showing the increase in banking assets in a number of the larger cities in the United States.

Mr. Wingo. Does that statement show the assets with reference to what you might call the two major groups, the independent unit banking group and then the others?

The CHAIRMAN. No; it does not. It shows the entire banking assets in the United States for July, 1914, and July, 1929, showing the per cent of increase to be 180 per cent.

(The letter and statement referred to are reproduced below.)

COMPTROLLER OF THE CURRENCY, Washington, March 27, 1930.

Hon. Louis T. McFadden, Chairman Committee on Banking and Currency, House of Representatives, Washington, D. C.

My Dear Mr. Chairman: In compliance with the request of the Hon. James W. Dunbar upon the occasion of my appearance before your committee on March 14, I am inclosing a table showing a comparison of total loans and investments of all banks in each of the 12 Federal reserve bank cities and 4 other selected cities as of July, 1914, and July, 1929, together with the percentage of increase during that period.

This is submitted to you for insertion on page 256, Volume I, part 3, of the hearings before the Committee on Banking and Currency, House of Representatives, Seventy-first Congress, second session, under H. Res. 141.

Yours very truly,

J. W. Pole, Comptroller.

MARCH 25, 1930.

Subject: Banking resources in New York and other cities, 1914-1929.
