## STATEMENT FOR THE PRESS

For release in Morning Papers  
Monday, March 28, 1927.

The following is a summary of general business and financial conditions throughout the several Federal Reserve Districts, based upon statistics for the months of February and March, as contained in the forthcoming issue of the Federal Reserve Bulletin.

Industrial output increased further in February and was slightly larger than a year ago, and distribution of commodities by the railroads was larger than for the corresponding period of any previous year. The general level of wholesale prices continued to decline and was in February at the lowest level since the summer of 1924.

Production

Production of manufactures increased in February for the second consecutive month, and the output of minerals, after declining in January, advanced once more in February to the record level reached last December. Factory production and employment, however, continued smaller than during the corresponding month of last year. Production of iron and steel has increased steadily since December, and reports indicate that operations of steel mills in March were at almost the same high rate as in March, 1926. Automobile production increased from 234,000 cars in January to 298,000 cars in February, and weekly figures of employment in Detroit factories indicate some further additions to production in March, but output has continued much smaller than a year ago. Daily average consumption of cotton by mills in February was larger than in any previous month on record, but activity of woollen and silk mills decreased as compared with January. Production of bituminous coal has been maintained in large volume, while that of

anthracite has been considerably reduced. The output of building materials was smaller during the first two months of this year than in the corresponding period of 1926. The value of building contracts awarded in February was 3 per cent smaller than in the same month of last year, but awards for the first three weeks in March were in approximately the same volume as in 1926. Contracts in Southeastern and Northwestern states have been considerably smaller than a year ago, while those in the Central West have been much larger.

#### Trade.

Retail trade showed less than the usual seasonal decline between January and February. Sales of department stores and chain stores were larger than in February of last year, while those of mail order houses were smaller. Wholesale firms reported a smaller volume of business in February than a year ago, and this decline occurred in nearly all leading lines. Inventories of department stores increased in February in anticipation of the usual expansion in spring trade, but the growth was less than is customary at this season and at the end of the month stocks were slightly smaller than a year ago. Stocks of merchandise carried by wholesale firms also increased in February, but they were generally smaller than in the corresponding month of last year.

Railroad shipments of commodities have increased steadily since January by more than the usual seasonal amount and have exceeded those for the same period last year, owing to larger shipments of coal, of miscellaneous commodities, and of merchandise in less-than-car-load lots.

#### Prices

Wholesale prices, according to the index of the Bureau of Labor Statistics, continued to decline in February. Among non-agricultural products decreases

occurred in the prices of coal, petroleum, iron and steel, nonferrous metals, and lumber, and the index for non-agricultural prices as a group was at the lowest post-war level. Prices of livestock and livestock products and of clothing materials advanced in February. During the first three weeks of March there were decreases in prices of grains, livestock, sugar, silk, wool, coal, petroleum, and gasoline, while prices of potatoes, pig iron, hides, and rubber advanced.

#### Bank credit

Demand for commercial credit at member banks in leading cities increased seasonally between the middle of February and the middle of March. There was also growth in the volume of funds used in the security market as indicated by increases in loans to brokers and dealers in securities. Consequently total loans of the reporting banks at the end of the period were close to the level of last autumn. Financial operations of the United States Treasury around the middle of March, with disbursements temporarily in excess of receipts, resulted in a temporary abundance of funds which was reflected at member banks in leading cities in a growth of deposits, in reduced indebtedness at the reserve banks, and in increased holdings of securities.

At the reserve banks, following changes in holdings of bills and securities accompanying the financial operations of the Treasury, the total volume of credit outstanding on March 23 was somewhat larger than four weeks earlier.

Conditions in the money market in March were slightly firmer than in February. Rates on prime commercial paper advanced from 4 per cent to 4 - 4 1/4 per cent and call money was also higher, while rates on acceptances declined somewhat.
