

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

R-195 155

STATEMENT FOR THE PRESS

For release in morning papers,
Saturday, February 26, 1938.

The following summary of general business and financial conditions in the United States, based upon statistics for January and the first three weeks of February, will appear in the March issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve banks.

The decline in business activity, which had been rapid during the last quarter of 1937, continued in January but at a slower rate.

Production

Volume of industrial production, as measured by the Board's seasonally adjusted index, was at 81 percent of the 1923-1925 average in January as compared with 84 percent in December. Output of durable goods continued to decline, reflecting chiefly considerable decreases in production of automobiles and plate glass and a further decline in output of lumber. Steel ingot production increased somewhat, the output for January averaging 30 percent of capacity. In the first three weeks of February, activity at steel mills showed little change at about 31 percent of capacity, while production of automobiles was at a lower rate than in January.

In the textile industries, activity at silk and rayon mills in January showed a sharp rise from the low levels reached in December. At cotton mills, however, there was less than the usual seasonal increase and output of woolen products continued in small volume. Shoe production, which also had been at a low rate in December, increased considerably in January, and activity at meat-packing establishments

rose somewhat further. Output of tobacco products remained at a high level, while sugar meltings declined. At mines, bituminous coal production was considerably smaller than in December, and there was also a reduction in output of nonferrous metals. Petroleum production continued at the high level of other recent months.

Value of construction contracts awarded in January was smaller than in December and somewhat below the level maintained during the last four months of 1937, according to figures of the F. W. Dodge Corporation. Contracts awarded for public projects increased somewhat further, while awards for private work continued to decline, reflecting a further decrease in residential building and a sharp reduction in awards for factory construction. In the first half of February awards for private projects were at about the same rate as in January, while those for public work showed a sharp decline.

Employment

Factory employment and payrolls declined substantially further between the middle of December and the middle of January. In the durable goods industries, decreases in employment were general and were particularly large at factories producing automobiles, steel, and machinery. Employment in nondurable goods industries showed a somewhat smaller decline than in previous months. There was some increase in the number employed at shoe factories and little change in the food industries as a group, but in other nondurable goods industries employment continued to decrease. Employment on the railroads, in mining, and in the construction industry also declined.

Distribution

Department stores sales showed a seasonal decrease from December to January, while sales at variety stores and mail order sales declined by more than the usual seasonal amount.

Freight-car loadings continued to decline in January, reflecting principally a reduction in shipments of coal.

Commodity prices

Prices of steel scrap and nonferrous metals declined from the middle of January to the third week of February, following some advance in December and the early part of January. There were further decreases in some other basic commodities, while prices of cotton and silk advanced. Livestock products continued downward and a number of finished industrial products declined further. Prices of pig iron and most finished steel products have been reaffirmed for second quarter delivery.

Bank credit

During the first three weeks of February excess reserves of member banks were little changed from the level of \$1,400,000,000 reached at the end of January following the post-holiday return of currency from circulation.

During January there were substantial reductions in commercial loans and brokers' loans and moderate increases in investments at reporting member banks in 101 leading cities. In the first three weeks of February loans and investments of these banks showed little change.

Money rates

Rates on Treasury bills and yields on Treasury notes and bonds continued in February at the low levels reached in the latter part of January.
