

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,
Thursday, August 25, 1938.

The following summary of general business and financial conditions in the United States, based upon statistics for July and the first three weeks of August, will appear in the September issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve banks.

Industrial activity increased in July, when there is usually a considerable decline, and rose somewhat further in the first three weeks of August.

Production

Volume of industrial production increased from 77 percent of the 1923-1925 average in June to 83 percent in July, according to the Board's index which is adjusted for changes in the number of working days and for usual seasonal variations. Steel output rose sharply, lumber production also increased, and output of cement and glass was maintained. Automobile production declined somewhat further. In the first three weeks of August activity at steel mills was at a rate of around 40 percent of capacity as compared with an average of 35 percent in July, while in the automobile industry there was more than the usual seasonal reduction in output as producers closed plants somewhat earlier than in other recent years to prepare for the shift to new model production.

At textile mills activity in July showed a further rise, marked increases being reported in mill consumption of cotton and wool and in

shipments of rayon yarn. Shoe production also increased substantially, following a decline in June.

Bituminous coal production advanced somewhat in July, and output of crude petroleum was at a much higher rate, reflecting chiefly a return to production on a six-day week basis in Texas. Anthracite production decreased sharply following a considerable volume of output during May and June.

Value of construction contracts awarded in 37 eastern States showed little change from June to July, according to figures of the F. W. Dodge Corporation. Contracts for residential building continued to increase, and there was an increase also in commercial building, reflecting the award of a contract for a large office building. Factory construction remained at a low level and declines were reported in most other types of construction.

Employment

Factory employment and payrolls, which usually decline at this season, increased somewhat from the middle of June to the middle of July. There were substantial increases in the number employed at textile mills, clothing establishments, and shoe factories, and at railroad repair shops there was a slight increase. In the machinery and automobile industries employment declined somewhat further. In non-manufacturing industries the principal changes in employment were a decrease at mines and an increase on the railroads.

Agriculture

A domestic cotton crop of 12,000,000 bales was indicated on August 1, according to the Department of Agriculture. Last season the

crop was 19,000,000 bales and, with world consumption of American cotton about 11,000,000 bales, the carryover increased sharply to 13,500,000 bales. The wheat crop was forecast at 956,000,000 bushels, as compared with 874,000,000 bushels harvested last year and usual domestic consumption of about 670,000,000 bushels. Production estimates for most other major crops were slightly under the large harvests of a year ago. Preliminary estimates by the Department of Agriculture indicate that cash farm income, including Government payments, will total \$7,500,000,000 for the calendar year 1938, a decline of 12 percent from last year, which was the highest since 1929.

Distribution

In July department store sales declined by less than the usual seasonal amount, while sales at variety stores and mail-order houses decreased seasonally. Retail sales of automobiles increased somewhat, although there is ordinarily a decline in July. In the first half of August sales at department stores showed less than the usual seasonal rise.

Freight-car loadings increased from June to July, reflecting chiefly larger shipments of grain, coal, and miscellaneous freight.

Commodity prices

Prices of grains, cotton, livestock, and meats were lower in the third week of August than in the middle of July, while prices of most industrial commodities were unchanged. Steel scrap advanced further in July, then declined somewhat in the first half of August. Cotton grey goods also declined in the early part of August, while

prices of copper and rubber were maintained, following increases in the latter part of July.

Bank credit

Excess reserves of member banks declined by about \$230,000,000 in the five weeks ending August 17 to a total of \$2,930,000,000, following a steady growth from the middle of April to a peak on July 13. The decline in reserves was largely the result of an increase in Treasury deposits with the Reserve banks, reflecting receipts from weekly Treasury bill offerings in excess of maturities and a sale of Reconstruction Finance Corporation notes. Most of the decrease in excess reserves was at city banks.

Following substantial declines since the autumn of last year, commercial loans and brokers' loans at reporting member banks in 101 leading cities increased somewhat during the first half of August. Member banks in leading cities added about \$170,000,000 to their holdings of investments in the middle of July, mainly United States Government guaranteed obligations, but thereafter their holdings showed little change.
