

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,
Sunday, December 25, 1938.

The following summary of general business and financial conditions in the United States, based upon statistics for November and the first three weeks of December, will appear in the January issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve banks.

The sharp rise in industrial production, which began early last summer, continued in November. Preliminary reports for the first three weeks of December indicate some slowing down in the advance. Employment also increased in November and payrolls showed little change, although a decline is usual at this season. Distribution of commodities to consumers increased considerably.

Production

The Board's seasonally adjusted index of industrial production in November rose to 103 percent of the 1923-1925 average from 96 percent in October. Output of steel continued to increase, contrary to the seasonal trend, and there was a further sharp rise in automobile production. In the first three weeks of December activity at steel mills declined somewhat more than seasonally, while output of automobiles continued at the high level reached at the end of November. Lumber production in November decreased by more than the usual seasonal amount. In the nondurable goods industries, shoe production declined

seasonally, while output of textiles showed a considerable expansion, with increased activity at cotton, wool, and silk mills. At mines, bituminous coal output increased further and production of anthracite showed less than the usual seasonal decline. Output of petroleum showed little change.

Value of construction contracts awarded in November showed a decline from the high level reached in October, according to F. W. Dodge figures for 37 Eastern States. Private and public projects both declined, following increases in October. The decline in contracts for private residential building was less than seasonal.

Employment

Employment increased somewhat further and payrolls showed little change between the middle of October and the middle of November, although declines are usual at this time of year. In manufacturing the number employed continued to rise, reflecting principally a further sharp increase at automobile factories and substantial increases in the machinery, steel, and textile industries. Employment declined seasonally at establishments producing clothing and shoes; in most other industries employment increased somewhat. In lines other than manufacturing, employment showed some increase, when allowance is made for usual seasonal changes.

Distribution

Distribution of commodities to consumers showed a considerable increase in November. Department store sales and mail order sales,

which had been retarded in October by unseasonably warm weather, rose sharply, and sales at variety stores also increased in November. Sales of automobiles to consumers expanded sharply following the introduction of new models and in November were larger than a year earlier.

Freight-car loadings, which had increased considerably in previous months, showed a slightly less than seasonal decline in November.

Commodity prices

Prices of some industrial materials, such as nonferrous metals, hides, and cotton goods, decreased somewhat from the middle of November to the third week of December. Sugar prices also declined, while grains advanced somewhat. Prices of most other agricultural and industrial commodities continued to show little change.

Bank credit

In connection with pre-holiday trade, there was a sharp increase in money in circulation and as the result of this increase in the demand for currency, together with Treasury operations around December 15, there was a temporary decline in member bank reserves.

Following declines during November, total loans and investments of reporting member banks in 101 leading cities increased during the first three weeks of December, largely reflecting operations of the Treasury. Loans to security dealers by New York banks increased sharply, reflecting temporary borrowing for the purpose of carrying Government securities exchangeable for new issues on December 15. Adjusted demand deposits rose to a new high level in the first half of December.
