

BOARD OF GOVERNORS  
OF THE  
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,  
Friday, October 20, 1939.

The following summary of general business and financial conditions in the United States, based upon statistics for September and the first half of October, will appear in the November issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve banks.

Volume of industrial production, which had turned up sharply last summer, advanced still more rapidly in the six weeks after the outbreak of war. Employment also increased but at a less rapid rate. Consumption of goods by industry and by individuals has not expanded so rapidly as production and orders. Buying of basic commodities, after a burst of activity in early September, has slackened considerably, but orders for many semi-finished goods and for finished products, particularly machinery and railroad equipment, have continued in large volume. Most orders have come from domestic sources. Prices of basic commodities advanced sharply in the early part of September, but in recent weeks prices of foodstuffs have declined while prices of industrial materials in most instances have been maintained. Prices of finished goods have shown a much smaller advance.

Production

In September the Board's seasonally adjusted index of industrial production advanced to 110 per cent of the 1923-1925 average as compared with 103 in August and 92 last spring. Increases in output of iron and steel, flour, sugar, meat products, and petroleum were particularly marked in September. In the steel industry ingot production rose from an average

rate of 61 per cent of capacity in August to 71 in September. In the first three weeks of October the rate advanced further to 90 per cent and actual volume of output was at the highest level on record. Flour production rose to near record levels and at meat-packing establishments activity was at the highest rate reached in several years. The sharp increase in output of crude petroleum followed a considerable reduction in the previous month and currently production is at about the high rate prevailing before wells were closed in the latter half of August.

In other industries increases in activity, though quite general, were not so marked. Automobile production showed a sharp seasonal rise as volume production of new model cars was begun at most plants, and in related lines, such as plate glass, activity also increased. Textile production increased somewhat further from the high level reached earlier. Shoe production, however, which had been in large volume in the first eight months of the year, decreased in September. Mineral production advanced generally and iron ore shipment schedules were expanded to build up stocks at lower lake ports before the close of the shipping season.

Value of construction contracts, as reported by the F. W. Dodge Corporation, rose further in September, reflecting a contraseasonal increase in private residential building. Other private construction showed little change and there was some reduction in the volume of new public projects, both residential and nonresidential.

#### Distribution

In September and the early part of October department store sales increased considerably. Freight-car loadings also advanced sharply, with

the most marked increases reported in shipments of coal and of miscellaneous freight, which includes most manufactured products.

#### Commodity prices

Wholesale prices of foodstuffs declined after the middle of September, following sharp advances earlier in the month. Prices of industrial commodities, which rose considerably until the third week in September, subsequently were generally maintained, although prices of some materials, such as steel scrap, hides, and rubber, declined from earlier peak levels.

#### Bank credit

Following reductions during the early part of September, Government security holdings by member banks in 101 leading cities increased somewhat during the three weeks ending October 11, reflecting largely the purchase of Treasury bills. Commercial loans continued to increase, but at a less rapid rate than in late August and early September. The volume of demand deposits at city banks also increased further.

Excess reserves, which had increased sharply at member banks during the first half of September, showed further moderate increases during the four weeks ending October 11.

#### Money rates and bond yields

Prices of United States Government securities increased in the latter part of September and the first half of October, following sharp declines early in September. Average yields on long-term Treasury bonds declined from 2.79 per cent on September 21 to 2.62 per cent on October 16. Yields on Treasury notes declined to 0.78 per cent from 1.30 per cent early in September.
