

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

Statement for the Press

For release in morning papers,
Wednesday, June 19, 1940.

The following summary of general business and financial conditions in the United States, based upon statistics for May and the first half of June, will appear in the July issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve banks.

Industrial activity increased considerably in May and the first half of June, while prices of commodities and securities declined sharply in the middle of May and fluctuated near the lower levels after that time. Distribution of commodities to consumers was maintained at levels prevailing earlier this year.

Production

Volume of industrial production increased in May and the Board's seasonally adjusted index advanced from 102 to 105. The rise in May reflected chiefly sharp increases in activity at steel mills and woolen mills. Steel production in May was at about 71 per cent of capacity, as compared with 60 in April, and by the third week of June activity had risen further to 88 per cent. Lumber production also increased. In the automobile industry, where output had been at a high rate in the first four months of the year, dealers' stocks were in large volume and production was curtailed in May and the first half of June. Retail sales of automobiles continued at a high level during most of May, although in the middle of the month a

temporary sharp reduction was reported.

In the woolen textile industry activity in May rose sharply from the low level reached in April. At cotton mills activity was maintained at about the rate prevailing in March and April and was somewhat lower than in the early months of the year. Rayon production continued large, while mill takings of raw silk declined to the lowest level in nearly twenty years. In other industries producing nondurable manufactures activity generally showed little change from April to May.

Coal production in May continued at a high level for this time of the year, reflecting in part increased exports and unusually large shipments of coal to Upper Lake ports. Iron ore shipments down the Lakes were also large for this season. Petroleum production in May declined somewhat from the high rate maintained in March and April.

Value of construction contract awards increased further in May, according to figures of the F. W. Dodge Corporation, reflecting principally continued growth of private building. Private residential contracts rose to the highest level in the past 10 years. Awards for commercial buildings advanced somewhat further while those for factory construction continued at about the level reached in April. Both were considerably larger than a year ago. Contracts for public construction increased slightly in May but were about one-sixth lower than a year earlier.

Distribution

Department store sales in May declined from the level prevailing in the past three months, while sales at variety stores and mail-order

houses were largely maintained at earlier levels. In the first week of June department store sales increased considerably.

Volume of railroad freight traffic increased in May, reflecting larger shipments of miscellaneous merchandise, coal, and forest products. Loadings of grains declined.

Foreign trade

Total exports of United States merchandise showed little change from April to May. Increases were reported in shipments to Canada and Australia and to Italy and Finland, while exports to other European nations showed declines. Exports of industrial machinery in May declined somewhat from the high level reached in April, while exports of steel, copper, chemicals, and commercial vehicles increased, following declines in the previous month. Coal shipments, largely to Canada, rose to the highest level in recent years. Cotton exports continued to decline from the high level of last winter.

The monetary gold stock of the United States increased by \$439,000,000 in May and by \$250,000,000 in the first two weeks of June.

Commodity prices

Following a general decline in basic commodity prices around the middle of May, prices of industrial materials, particularly steel scrap, zinc, tin, and wool, advanced and by the middle of June were in some instances above the levels of early May. Raw cotton prices also increased, and in the second week of June prices of cotton gray goods likewise advanced as sales of these goods were in exceptionally large volume. Prices of a number of foodstuffs continued to decline.

Bank credit

Total loans and investments at reporting member banks in 101 leading cities showed little net change during the four weeks ending June 5. Holdings of United States Government obligations increased further at New York City banks, while loans to security brokers and dealers declined considerably. Deposits and reserves of member banks continued to increase sharply as a result mainly of heavy gold imports.

Government security market

Prices of Government securities held relatively steady during the latter part of May and the first part of June, after a reaction at the time of the invasion of Belgium and Holland. Subsequently prices increased sharply, and on June 15 the yield on the 1960-1965 bonds was 2.40 per cent, compared with 2.52 per cent on June 10 and 2.26 per cent at this year's peak in prices on April 2.
