

BOARD OF GOVERNORS  
OF THE  
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,  
Tuesday, February 18, 1941.

The following summary of general business and financial conditions in the United States, based upon statistics for January and the first half of February, will appear in the March issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve Banks.

Industrial activity continued at a high level in January and distribution of commodities was maintained in large volume.

Production

In January volume of industrial production declined less than seasonally and the Board's adjusted index rose one point further to 139 per cent of the 1935-39 average. There were further considerable increases in activity in industries making machinery, aircraft, ships, and similar products important in the defense program, and output of industrial materials, such as steel and nonferrous metals, continued at near capacity rates. Lumber production also was in unusually large volume owing to demand arising from construction under the defense program as well as from private building.

Automobile production, which ordinarily declines considerably at this time of year, was maintained at a high rate in January and the first half of February. This reflected in part an unusually large volume of retail sales and in part the industry's efforts to build up

dealers' stocks of cars as much as possible with a view to having an adequate supply on hand in case priorities or work on defense orders should necessitate curtailment of automobile production. Currently dealers' stocks of new cars are probably near record levels.

In the cotton textile industry, activity in January showed some further increase from the record level reached in December but the rise was less than usually occurs at this season. At wool textile mills there was some decline from the high level of November and December, while output at rayon mills was maintained in large volume. Defense program orders for textiles, particularly wool and cotton products, have been substantial for some time, and these combined with considerable civilian demand have resulted in the accumulation of large order backlogs at most mills. Activity at meatpacking establishments was reduced in January owing chiefly to a sharp decline in hog slaughter, which had been exceptionally large in the latter part of 1940. Shoe production advanced by less than the usual seasonal amount following a high rate of output in November and December.

At mines output of most metals continued at record levels in January. Production of fuels was sustained in large volume but was not at such high levels as output of other minerals owing in part to the existence of considerable stocks, particularly of petroleum products.

Value of construction contracts, as reported by the F. W. Dodge Corporation, declined in January. The decrease reflected chiefly a sharp reduction in awards for public construction from the exceptionally

large December total, which had included a number of defense projects not previously reported by the Dodge Corporation for lack of detailed information. Contracts awarded for private nonresidential building declined somewhat in January but as in December were twice as large as the amount awarded in the corresponding period a year ago. Awards for private residential building increased and on a seasonally adjusted basis were at the highest level since the middle of 1929.

#### Distribution

Distribution of commodities to consumers in January was maintained at the high level reached in the latter part of 1940. Sales at department and variety stores declined seasonally following an unusually large amount of Christmas trade, while sales of automobiles continued near the rate prevailing in December. In the early part of February department store sales were sustained in large volume.

Total freight-car loadings, which usually decline from December to January, showed little change this year and the Board's seasonally adjusted index rose two points further to 86 per cent of the 1923-25 average.

#### Wholesale commodity prices

Prices of industrial materials and foodstuffs generally showed little change from the middle of January to the middle of February. Some imported commodities, principally coffee, cocoa, rubber, and tin, rose slightly and there were increases also in prices of lard and wool tops, while declines were reported for livestock and meats, hides, grains,

lumber, and scrap metals. Prices of some finished commodities, particularly textile products, showed advances in this period.

Bank credit

Total loans and investments at reporting member banks in 101 leading cities increased substantially during January and the first half of February, reflecting largely purchases of new Defense Notes issued by the Government. Commercial loans at these banks increased further while loans to New York security brokers and dealers declined.

United States Government security prices

Prices of United States Government securities continued to decline in the latter half of January and the first half of February, more than canceling the gains from the end of October to the peak on December 10. The 1960-65 bonds on February 14 were selling on a yield basis of 2.28 per cent, compared with a low of 2.03 per cent on December 10.
