

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,
Monday, October 20, 1941

The following summary of general business and financial conditions in the United States, based upon statistics for September and the first half of October, will appear in the November issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve Banks.

Industrial activity continued at a high rate in September and the first half of October. Further advances in the output of defense products were accompanied by curtailment in some lines of civilian goods, particularly automobiles, rubber, and silk. Prices of industrial products increased further but agricultural prices declined after the middle of September, and on October 16 dropped sharply in response to international developments.

Production

Industrial output increased by about the usual seasonal amount in September and the Board's adjusted index remained at 160 per cent of the 1935-1939 average, the same as in July and August. Continued increases in activity were reported in the machinery, aircraft, and ship-building industries. At steel mills activity in September and the first half of October was maintained at about 97 per cent of capacity. Output and deliveries of nonferrous metals likewise remained at about capacity levels, while lumber production declined somewhat from the high August

rate. Automobile production increased less than seasonally in September, following the changeover to new models, and, according to preliminary estimates, output in September was considerably below the maximum quota that had been authorized by the Government.

In the textile industry activity declined somewhat in September, reflecting mainly a further sharp reduction at silk mills. Activity at wool mills rose to a new high level, while at cotton mills there was little change from a rate slightly below the peak reached last May. Shoe production continued in large volume, and output of manufactured food products was maintained near the peak August level. Output of chemicals likewise continued at earlier high rates, but at rubber plants activity was considerably below the level of last summer owing to curtailment programs ordered by the Government.

Coal production, which during the summer months had been unusually large, increased less than seasonally in September, owing in part to temporary work stoppages at some bituminous and anthracite mines. Crude petroleum production advanced to record levels in September and the first half of October, and output of metals and shipments of iron ore down the Lakes continued at about capacity.

Value of construction contract awards declined in September, according to figures of the F. W. Dodge Corporation, reflecting chiefly decreases in awards for public projects which had been exceptionally large in August. Awards for private residential building also declined, while contracts for other private work increased somewhat further.

Total awards in September, as in August, were 80 per cent larger than in the corresponding period last year. This higher level reflected mainly a greater amount of public construction, which was nearly three times as large as a year ago, compared with an increase of about 10 per cent for private construction.

On October 9, the Supply Priorities and Allocations Board announced that, effective immediately, no public or private construction projects which use critical materials could be started during the emergency unless these projects were either necessary for direct national defense or essential to the health and safety of the nation.

Distribution

Distribution of general merchandise showed less than the customary seasonal rise in September, following an unusually large volume of sales in August. During the past three months sales have been larger than in the corresponding period of any previous year. In the first half of October sales at department stores declined from the peak reached in late September when there were considerable consumer purchases, particularly of articles subject to higher taxes on October 1.

Loadings of revenue freight in September increased less than seasonally, particularly those of miscellaneous freight, which have been high in recent months, and loadings of coal, which were curtailed during part of the month by work stoppages at some mines. Shipments of forest products declined considerably from the high August level.

Commodity prices

Prices of industrial products continued to advance in September and the first half of October and Federal price ceilings were announced for additional commodities, including leading types of lumber, coke, wastepaper, paperboard, acetic acid, alcohols, and carded cotton yarns. In some cases these ceilings were below previously existing market quotations. Price advances were permitted, however, for some other commodities under Federal control. Prices of cotton and of foodstuffs increased further in the first half of September, but subsequently declined, owing partly to seasonal influences. On Thursday, October 16, prices of these commodities dropped sharply.

Bank credit

Commercial loans at member banks continued to rise during September and the first half of October, reflecting in part defense demands. Increases were substantial both in New York and in other leading cities. Holdings of United States Government obligations decreased, mainly at banks in leading cities outside of New York. Excess reserves of member banks showed little change in this period.

United States Government security market

Following a slight decline in the first half of September, prices of long-term Treasury partially tax-exempt bonds increased during the latter half of September and in the first part of October. The yield on the 2-3/4 per cent bonds of 1960-65 reached a new record low of 2.01 per cent in October. Prices of taxable bonds moved within a relatively narrow range during the period with yields slightly above previous low levels.
