

BOARD OF GOVERNORS  
OF THE  
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,  
Saturday, December 20, 1941.

The following summary of general business and financial conditions in the United States, based upon statistics for November and the first half of December, will appear in the January issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve Banks.

Industrial activity was maintained at a high rate in November and the first half of December and distribution of commodities continued in large volume. Our entry into the war was reflected in a sharp advance in the prices of some commodities, some decline in security prices, and further curtailment of nonmilitary production.

Production

Volume of industrial output was sustained in November at the high rate of the previous two months, although a decline is usual at this season. The Board's adjusted index advanced from 163 to 167 per cent of the 1935-39 average. In industries engaged in production of armament and munitions activity continued to increase and in most other lines volume of output was maintained or declined less than seasonally.

Output of materials, such as steel and nonferrous metals, was maintained at about capacity. In the automobile industry activity increased, reflecting larger output of both military and civilian products, and at lumber mills and furniture factories activity declined less than seasonally. At cotton and rayon textile mills activity rose to new record levels, and at woolen mills the high production rate of other recent months was maintained. Less than seasonal declines in output were indicated for shoes and manufactured food products.

Crude petroleum production increased further in November. Bituminous coal production declined somewhat owing to temporary shut-downs at some mines during November, and anthracite production was curtailed as a result of unusually warm weather in some areas and the existence of considerable stocks of coal accumulated in earlier months.

Iron ore shipments continued in large volume until the shipping season closed early in December; during 1941 about 80 million tons of ore were brought down the Lakes as compared with the previous record of 65 million tons in 1929. Stocks of ore at lower Lake ports on November 30 amounted to about a seven months' supply at the current consumption rate of around 6.5 million tons a month.

Following a declaration of war by this country in early December further steps were taken to curtail output of nondefense goods using critical materials. Output quotas for passenger cars and household appliances were greatly reduced and cessation of output of some other products was ordered as of the end of January. Also, the production and sale of new automobile tires and tubes for civilian use were halted temporarily, pending establishment of a system for controlling their distribution.

Value of construction contracts awarded in November declined sharply from the high level of other recent months, according to figures of the F. W. Dodge Corporation. Awards for privately-financed construction decreased more than seasonally and contracts for publicly-financed projects also declined following a continued large volume of awards since last spring. Total awards in November were about a fifth larger than a year ago, while for the first ten months of the year they were three-fifths larger.

### Distribution

Volume of retail trade increased in November following some decline in the previous month. Department store sales, as measured by the Board's seasonally adjusted index, advanced to 115 per cent of the 1923-25 average as compared with 105 in October and 116 in September. Larger sales in November were also reported by variety stores. Sales of automobiles increased somewhat, according to trade reports, but, as in other recent months, new car sales were smaller than output and dealers' stocks rose further.

In the second week of December sales at department stores rose less than seasonally, particularly in the coastal regions.

Freight traffic on the railroads continued in large volume in November and the first half of December. Grain shipments increased considerably and loadings of miscellaneous merchandise, which includes most manufactured products, were maintained at the high level reached several months earlier. Coal loadings declined somewhat, owing in part to temporary shutdowns at some mines. Shipments of most other classes of freight decreased less than is usual at this season.

### Commodity prices

Following the entry of the United States into the war, prices of grains, livestock, and foods rose sharply. Prices of most industrial materials traded in the organized markets, being limited by Federal regulation, showed little change. Additional measures to prevent advances in wholesale prices were soon announced for wool and shellac and for such imported foods as cocoa, coffee, pepper, and fats and oils.

Retail food prices, as measured by the Bureau of Labor Statistics' index, increased 1-1/2 per cent further from the middle of October to the middle of November to a level 18 per cent above a year ago. Indications are that retail prices of both foods and other commodities continued to rise in December.

### Bank credit

Total loans and investments at banks in leading cities continued to advance during November and the first two weeks of December, owing mostly to increased holdings of Government securities at banks outside New York City. Commercial loans, after showing little net change in November, again increased sharply in the first two weeks of December.

Excess reserves increased through most of the period as a result of Treasury expenditures from Reserve Bank balances, but declined sharply on December 15 when these balances were replenished in connection with the issue of 1.6 billion dollars of new Government securities. Money in circulation has continued to show a marked increase.

### Yields on United States Government securities

The yield on 2-1/2 per cent United States Government bonds of 1967-72, which reached a record low level of 2.32 per cent on November 5, advanced somewhat in November and, after the entry of the United States into the war, rose to 2.50 per cent. Yields on short-term Government securities increased further. The yield on Treasury notes of December 1945 advanced to 0.93 per cent on December 17, compared with 0.62 per cent on September 15, and the rate on three-month bills rose to .295 per cent.
