

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in morning papers,
Wednesday, January 21, 1942.

The following summary of general business and financial conditions in the United States, based upon statistics for December and the first half of January, will appear in the February issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve Banks.

Industrial activity declined less than seasonally in December and the first half of January, retail trade continued in large volume, and prices of many commodities rose further.

Production

In December total volume of industrial output declined less than is usual at this season and the Board's adjusted index rose further to 158 per cent of the 1935-1939 average. In the armament industries output continued to advance and at machinery plants activity rose sharply, following little change in November. Output of materials, such as iron and steel and nonferrous metals, continued at peak levels and lumber production showed less than the usual seasonal decrease. Automobile production declined sharply in the latter half of December, following announcement of sharp reductions in passenger car quotas, but early in January quotas for that month were increased and output rose considerably. Sales of new automobiles to civilians were halted at the beginning of January pending the establishment of a rationing system.

Textile production declined somewhat in December owing to a reduction in activity at cotton mills from the record level reached in November. Output of wool and rayon textiles was sustained at about capacity. Output of manufactured food products and shoe production showed about the customary seasonal declines. Coal output decreased somewhat in December, while petroleum production and mining of nonferrous metals were maintained at the high November rate.

Value of construction contracts awarded in December declined less than is usual at this time of year, according to figures of the F. W. Dodge Corporation. Awards for public projects showed little change, while those for residential construction declined less than seasonally following a considerable reduction in November.

Distribution

Volume of retail trade, which had been large during most of the autumn, increased less than seasonally in December. This reflected to some extent a temporary slackening in sales around the middle of the month following this country's entry into the war. In the first half of January sales at department stores showed less than the customary sharp reduction from the Christmas buying peak and were at a level substantially higher in comparison with a year ago than that prevailing in other recent months.

Freight-car loadings of most products decreased by less than the customary seasonal amount in December. Coal shipments declined considerably in the latter part of the month but then increased sharply in the first half of January. Shipments of miscellaneous freight, which includes most manufactured products, were maintained in large volume for this season of the year.

Commodity prices

Wholesale commodity prices increased sharply when this country entered the war early in December and then showed little change during the latter half of the month. In the first half of January prices again advanced, the principal increases being in agricultural commodities and chemicals.

Federal action to impose maximum prices was accelerated with the outbreak of war and applied on a wider scale to industrial products. Ceilings were extended to products in later stages of production and distribution and in most instances covered consumers' goods. Certain of the actions, like those relating to rubber and wool products, were associated with new Federal production restrictions. In this period also there were advances in a number of price ceilings established earlier.

Bank credit

Total loans and investments of banks in leading cities, which had advanced sharply during the first half of December, have subsequently shown little further change.

Treasury financing in the middle of December and heavy currency withdrawals during the holiday season absorbed close to 700 million dollars of excess reserves during the month. About 500 million of this was recovered in the first half of January, as the result of a decline in Treasury deposits at the Reserve Banks and a return of currency from circulation. Recent changes in excess reserves have been almost entirely at banks outside of New York City.

United States Government security prices

Prices of Government securities were steady in the first half of January, following a decline in December after the entry of the United States into the war.
