

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM

STATEMENT FOR THE PRESS

For release in afternoon papers,
Wednesday, April 22, 1942.

The following summary of general business and financial conditions in the United States, based upon statistics for March and the first half of April, will appear in the May issue of the Federal Reserve Bulletin and in the monthly reviews of the Federal Reserve Banks.

Industrial activity continued at a high rate in March and the first half of April. Distribution of commodities to consumers was maintained in large volume and commodity prices advanced further.

Production

Volume of industrial production increased seasonally in March and the Board's adjusted index remained at 172 per cent of the 1935-39 average. Output of durable manufactured products, now mostly war materials, continued to advance, reflecting mainly increased activity in the iron and steel, machinery, aviation, and shipbuilding industries. Production of lumber and cement, which had been maintained at unusually high levels during the winter months, increased less than seasonally in March.

In most industries manufacturing nondurable goods activity was sustained at earlier high levels. In some, however, notably wool textiles and petroleum refining, there were declines owing to restrictions on production for civilian use and, in the case of petroleum products, to transportation difficulties. Mineral production declined in March and the first half of April, reflecting sharp curtailment in output of crude petroleum. Coal production, which usually declines at this season, was maintained in large volume. The Great Lakes shipping season opened in the latter part of March and the first boatload of iron ore reached lower Lake ports 12 days earlier than the record set last year. Shipments during the coming season are expected to exceed considerably the total of 80 million gross tons brought down the Lakes last year.

Value of construction contract awards continued to increase in March, according to figures of the F. W. Dodge Corporation, and the level of the first quarter of 1942 was the highest in recent years, being some 30 per cent above that of the corresponding period last year. Awards for public work amounted to close to 80 per cent of the total and in the residential field accounted for 52 per cent of the value of all projects. Publicly-financed contracts for factory construction showed a sharp increase, partly offset in the total by a decline in private factory construction.

On April 9 the War Production Board issued an order which required explicit permission of the Government for initiation of all new private construction involving expenditures in excess of specified small amounts and not covered by specific priority ratings.

Distribution

Value of retail trade in March continued at the high level of other recent months, making allowance for customary seasonal changes. Sales at department and variety stores increased by somewhat less than the usual seasonal amount while sales by mail-order houses rose more than seasonally.

On the railroads total loadings of revenue freight were maintained in large volume in March and the first half of April. Shipments of coal and coke declined less than seasonally and ore loadings increased sharply, while grain shipments declined further from the peak reached in January. Loadings of miscellaneous merchandise, which had been unusually large in the preceding three months, increased less than seasonally.

Commodity prices

The general level of wholesale commodity prices advanced 1-1/2 per cent further from the middle of March to the middle of April. Among manufactured products, finished consumers' goods, such as foods, clothing, and shoes, continued to show the largest price increases. Prices of most raw materials were unchanged or showed increases, which in a number of cases reflected the raising of Federal maximum price levels. There were declines in prices of wheat and of a few other commodities, including gasoline at Gulf ports and turpentine.

In retail markets maximum prices were fixed in this period for a number of electrical products, most of which will no longer be produced for civilian use after May 31. Prices of many other commodities and services advanced further.

Bank credit

During the four weeks ending April 15 holdings of Government securities at banks in leading cities increased by nearly 700 million dollars, while commercial loans declined somewhat, following a rise in previous weeks. Changes in member bank reserves and deposits reflected principally the temporary effects of Treasury operations in connection with income tax collection and the sale of certificates of indebtedness. Money in circulation continued to increase.

United States Government security prices

Following an advance from the mid-February low, prices of U. S. Government bonds remained relatively steady in the first half of April.
