# INVESTIGATION OF ECONOMIC PROBLEMS

**MONDAY, FEBRUARY 13, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met at 10 o'clock a. m., pursuant to call, in Room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Watson, Reed, Shortridge, Couzens, Keyes, Bingham, La Follette, Thomas of Idaho, Harrison, King, George, Walsh of Massachusetts, Barkley, Connally, Gore, and Costigan.

The CHAIRMAN. The committee will come to order. The committee have met this morning for consideration of S. Res. 315, introduced by Senator Harrison on January 4, 1933. At this point I shall ask that the resolution be placed in the record:

*Resolved,* That the Committee on Finance, or any duly authorized subcommittee thereof, is authorized and directed to make an investigation and study of the present economic problems of the United States with the particular object of obtaining the views of such economists, financiers, and other persons as in the opinion of the committee may be able to offer constructive suggestions with respect to the solution of such problems.

We have with us as our first witness Hon. B. M. Baruch, of New York. The committee will be pleased to hear Mr. Baruch.

## STATEMENT OF HON. B. M. BARUCH, NEW YORK CITY

Mr. BARUCH. Mr. Chairman, may I say that I have placed at the disposal of each member of the committee a copy of my remarks, and I should like very much if I would not be interrupted in the midst of the story, but that each member of the committee should mark the place at which he would like to ask questions, and I will be pleased to submit to any examination or questions any member of the committee may feel like asking at the conclusion of my statement.

The CHAIRMAN. That request will be granted.

### I. FOUR CAUSES OF DEPRESSION

Mr. BARUCH. The objective in the mind of every thoughtful man is to restore to distressed humanity the opportunity to earn its daily bread—to get people back to work again. We wish this for the whole world, but our primary duty is to put our own house in order. Our troubles come from four effects of war: Inflation, debt and taxes, national self-containment, and excess productive capacity.

#### (1) POSTWAR AND WAR INFLATION

The war cost the belligerents about $147,000,000,000—but in the purchasing power of 1913, to which level the dollar has about returned, that cost would have been $46,000,000,000. Thus, more than $100,000,000,000 was pure "inflation," due to the destructive demands of war. It tripled the terrible aftermath which we now suffer. I have proposed a prevention of future recurrence of this evil which your War Policies Commission has recommended to the Congress.

Inflation did not end with the war. The peak of prices came later and only now, 14 years after the war, wholesale prices are reaching what appears to be a normal or at least a long-time pre-war level. As a result of both the Civil and the Napoleonic Wars similar inflations occurred. It took about 14 years in each case for prices to recede to former levels, which they did as surely as water runs downhill. The wreckage due to these inflationary illusions had to be cleared away before normal processes appeared. It is so with us now and the chief barrier to returning prosperity now is the débris of World War inflation. We must courageously clear it away and stop our vain attempts to restore or preserve vanished values. That is the first step to recovery.

### (2) DEBTS AND TAXES

The bulk of the vast war cost (tripled by inflation) was paid in money borrowed from the people. It left a colossal load of public debt. Government costs rise during inflation and are hard to get down. Both of these causes produced high taxes. No matter what may be said in politics, taxes are paid in the sweat of every man who labors and in no other way. The farmer or the worker may never see a tax collector, but, either by deduction from his receipts or by increase in his expenses, the producer pays the cost of government. Prosperity only exists when all who work can freely and fairly exchange the products of their labor for the products of others. It seems to be agreed that costs of government have risen to about 33⅓ per cent of national income; in other words, that one-third of what our people now produce goes, not to exchange for the fruits of each other's labor, but to divide with nonproducers and thus to curtail the producing and consuming capacity of the country. That is the second principal cause of continuing distress.

Nearly every time a legislature votes an appropriation, or refuses to vote an economy, it is adding a new brick in the barrier against prosperity. Every debt we forgive to other nations lifts a burden from their distressed business and adds it to our more distressed business, thus doubling our handicap. Surely, it would be a fair rule to refuse relief unless the burden of a debtor's taxes on his income is as heavy as our own. It is a difficult figure to determine and it may be in error but I am told that this test would rule out every present claim on us for debt revision. So much for public debt. Reduction in public expense is indispensable to recovery.

Business is also borne down by private debts contracted at high prices which must be paid in low prices. But the decline in prices of itself is not the trouble. It makes little difference whether prices are high or low if they would only rise and fall together. It is profits, not prices, which make prosperity. The real troubles are that prices do not fall uniformly and that debt and taxes do not seem to fall at all. For example: It is the disparity (not the lowness) of farm prices which almost destroys the consuming power of the agrarian half of our population. And thus, because the burdens of debt and taxes are higher and higher while incomes are cut in half, there is little left to any man to buy the necessaries of life. These disparities are a third cause of continued distress.

### (3) NATIONAL SELF-CONTAINMENT

Before 1914, nations were content to rely on other countries for things which could be produced better and cheaper abroad. This mutual exchange constituted the commerce of the world. But the World War was an economic war. The Central Powers, ringed by fire and steel, turned perforce to self-containment. England and France, threatened with starvation by the submarine, learned the fear of economic strangulation. It was thus that the world became honeycombed into trade-tight economic compartments. Everywhere nations are now arming, but because of the lessons of the war they now arm on two fronts—military and economic. Tariffs, import quotas, domestic subsidies, and other trade barriers are symptoms of a universal fear of the imminence of war. They are ultramodern bulwarks of national defense, and the quicker we recognize that, the more competent we shall be to deal with them.

National defense is a first duty of government. It rises in direct ratio with the sense of danger. It is difficult for us, in our geographical isolation, to comprehend the thoughts of a nation such as France, which lives athwart a path of conquest like the defile of Verdun and the plains of Picardy, where millions have fallen in a series of struggles that began before history.

As long as the causes of conflict survive, we shall not be able to "buy" these barriers down by debt or any other economic concession. The movement toward national self-containment is defensive and not retaliatory. To the extent that we depend on world trade, it is a continuing cause of our depression. We must recognize its true nature to the end that, even if we can not wholly control it, at least we can shape our own economic policy to avoid deluding ourselves into making further vain sacrifices at the expense of our people.

### (4) OVERCAPACITY TO PRODUCE

During the World War we learned to produce more things with fewer men. It was as much a war of materials as a war of men, and its capacious maw gaped for all that the nations could produce. Labor-saving machinery was only one of many expedients. We transformed our country into a unitary production machine. The whole of our industry was mobilized. The lessons learned in war were not forgotten in peace and they have changed the essential character of our economics. So engrossed were we on production that we neglected altogether the problems of distribution, especially the maintenance of equally distributed buying power throughout our own population. We must recognize, also, that demoralization of national currencies (whether forced or voluntary) have an effect, just now, to intensify the race for self-containment.

I am not speaking of "overproduction" which is a mere corelative of "underconsumption." I mean excess productive capacity. I mean the vast plants which, though idle now, sometimes seem to me like masked batteries of machine guns waiting to lay down a new barrage of production whenever buying reappears. We must find means to control production, especially of farm and mineral output. It is a stupendous development throughout the whole world—sugar, silk, rayon, wheat, rubber, coffee, tin, iron, and copper. I know of no exception.

### (5) THE GREAT DELUSION

The world seems to be subject to curious brainstorms—the crusades, the Mississippi scheme, and the south sea bubble, are examples. Let me quote from Mackay's Popular Delusions, referring to what he calls the Tulipomania of the seventeenth century:

> Everyone imagined that the passion for tulips would last forever. * * * The riches of Europe would be concentrated on the shores of the Zuyder Zee, and poverty banished from the favored clime of Holland. People of all grades converted their property into cash and invested it in flowers. Foreigners became smitten with the same frenzy and money poured into Holland from all directions. * * * Holland seemed the very antechamber of Plutus.

You will recognize some of these expressions. It seems incredible that so solid a nation as the Dutch should nearly ruin itself on such a thought, but is it any more credible than that we would go into debt to pay thirty times earning power, and even more, for common stocks of the "New Economic Era" on the theory that we also were going to "banish" poverty by selling billions in manufactures to an almost bankrupt world by the expedient of continually lending our customers more money?

We built up a tinsel tower of paper prosperity out of debts and speculative hopes and such other things as dreams are made of. It lies in ruins, but the debts remain. What shall we do? Are we to try to put, or keep, substance in things which had no substance in the beginning, or shall we clear away the wreck? I think our duty is clear, and that in taking it we must remember that delusions swing between extremes, like pendulums. Delusions of grandeur and unending wealth give place to delusions of unending gloom. One is as unreal as the other.

## II. General Policy of Legislative Aid

We can not oppose legislation to natural laws. But legislation can aid and hasten and guide their effect. In this crisis, the golden rule should be:

Reject all plans which oppose or postpone the working of natural processes. Aid and accelerate the effect of curative economic influence. It is a simple rule, but it is a right one. We have overlooked simple things too long. The artificialities of the great delusion were plain. We closed our eyes and went on loaning two billion dollars a year to finance sales to "crippled" countries, because we were persuaded to disregard arithmetic. On this artificial expansion of our world trade we built a dream of boundless wealth. Based on that alone, individuals, in seven years increased their debts by 50 per cent, and corporations by 75 per cent—all to build that tinsel structure. Nothing had happened to lift real values to such dizzy heights above the slow sweep of progress. The collapse of 1929 was inevitable. No return to normal living is possible until we clear away the vestiges of that wreck. Natural processes are working to cure every evil, but what have done to aid that cure?

For four years we have treated the inevitable collapse of our folly as a mere interruption of a dream. We have maintained the boom-time costs of Government and incurred destructive deficits solely on the argument that the dream would come again. No other assumption could justify our policy. We have set every legislative force against the economics of cure. We have used Federal credit in a vain attempt to reconstruct or preserve the ruins of phantom values. We have tried to avoid paying for our folly. We have not yet taken one really constructive step. I doubt if we have even recognized the true evils.

And what is now proposed? The farm crisis comes from overproduction. Yet we propose to reward production by a billion-dollar bounty. The only remaining safeguard is the Federal credit. Yet it is slowly being undermined by deficits and recent methods of Federal financing and we are preparing to assault it now by many inventions. There are before the Congress a dozen projects that might involve it in repudiation and ruin, but I know of none that can be relied upon to preserve it.

This is not progress. This is opposition to progress. The single project to aid, and not to oppose, natural cure is to be found in the principles of the LaGuardia bankruptcy bill. It is high time that our affairs should by taking an upward turn, and I believe that we are delaying rather than advancing it.

I hasten to add that I blame nobody. Congress reflects a public opinion which is leaderless, bewildered, and confused. But fundamentals are becoming clearer with experience and it is time to state right principles.

There are many who say that there can be no hope until world distress is cured. There is, of course, an interdependence of nations. But ours is a country of boundless resources and of continental dimensions, extending across half of the temperate zone and providing a unitary market of 125,000,000 people, and the world's most advanced economic development. Surely we have within ourselves the materials for at least a moderate prosperity. The most important retarding influences are within our own control.

There is but a limited human capacity of both time and ability. As we had to do in the war, let us give "priority" to a definite few of the most effective forces at our own command in a limited program and then let us concentrate on that plan, leaving to one side action which depends on agreements with other nations and plans of a longer range. Some of these, like war debts, will intrude in spite of our plans, but let us take them in our stride.

If I were writing such a program it would be: First and foremost, make adequate provision against human suffering; second, put Federal credit beyond peradventure of doubt; third, aids to rapid liquidation of debt; fourth, plans to encourage rapid consumption of commodity surpluses and to control productive capacity; fifth determination of policy on world economics, disarmament and debt.

## III. The Credit of the United States

I wish I could make clear to our millions of sufferers their absolute dependence on the Federal credit. If our people only knew the dangers which our present inertia incurs, there would be a demand for instant action so great that no one could resist it. It takes money to relieve suffering, and we shall need billions. We think of money as coin and bills. But there are less than six billions of that kind of money in the country. The Federal Government alone has spent more than that in a single year. Most of our money is what the man in the street calls "money in the bank." But the banks do not keep coin and bills to pay their depositors. They keep securities, issued for goods or some other form of wealth, which they can sell to pay depositors. But securities of that kind are growing scarce and doubtful. The only kind of securities in which we have absolute confidence are the obligations of the United States Government. In the Federal reserve and so-called "reporting member banks" alone there are about 17 billion dollars of this "money in the bank," and more than one-third of it is backed by Government securities. These securities have no specific goods or wealth behind them. The only worth they have is the world's belief that this Government, at all times, can and will keep the letter of its promise instantly. If anything happens to shake our confidence in these, the loss will fall immediately on this "money in the bank." The only defenses between this country and ruin are these Government securities.

More than 90 per cent of our business is done, not in coins or bills, but in "money in the bank" (depositors check-book balances). You may own other securities or wheat or land, but when you want to sell these things to pay your taxes or your grocery bill, the buyer will give you this kind of "money in the bank" in the form of a check. But every bit of it depends for its value on the Federal credit because so much of it is backed by the banks' ownership of Government securities. We do not have accurate figures on the total of bank deposits but it is probably about $45,000,000,000. Newspapers recently quoted the Assistant Secretary of the Treasury as saying that all banks owned about ten billion dollars in Government obligations. Every bank, every insurance policy, the solvency and continued operation of every corporation, employing men, the wages of labor, the wherewithal to pay the farmer, and, above all, the resources to feed the hungry and relieve distress, they all hang by a single thread, the credit of the United States.

We have kept that credit above reproach for so long that people think it can stand any abuse. But this is an era of broken precedents. It is too painful to relate all those things which we are accustoned to say "could never happen" but which, unfortunately, are happening before our very eyes. We are witnessing the disintegration of the institutions of an era.

What maintains the credit of any government? It always stands on two supports; its gold reserve, and its power to meet its current obligations through taxes. Of these two, the essential one is the latter. Gold is only a sort of conventional restriction on the temptation of governments to extravagance. The real test of government credit is the same as the test of individual credit. Is it living within its income with something left over to pay its debt? When, as in the Confederacy, or in the revolted American colonies, or in Germany, or Russia, a nation loses both these props, the value of its money and its bonds goes down to absolute zero and nothing can restore it except to recreate one or both of these supports of national credit.

There are intermediate cases, such as that of England. Her gold reserve is so scant that she suspends specie payments, but her revenue is near enough in balance with her expenses to give a fairly stable, if, considerably reduced, value to the pound. Even without much gold England's credit is maintained by a balanced budget. France was in an intermediate case when she was devaluating the franc. Her gold reserve was not sufficient and she had a large deficit. The value of the franc went from 20 cents to less than two. The French credit stood on half a leg, but both by accumulating gold, and by bringing her budget into balance, France stabilized the franc.

In what category do we fall? We present a unique case because we have the largest deficit and the largest gold reserve in peace-time history. Decidedly, we rely on only one support, our gold reserve. But suppose we should lose that. Because of our monstrous deficit, we would be in a worse case than England and nearly as badly off as Germany or Russia when the basis of the wealth of these countries vanished like a drop of water on a red hot stove. Do we dare continue in such danger? There is one way out, and every day's delay invites sudden consequences which I hesitate even to mention.

Our fiscal circumstances are unpleasantly like those preceding a run on a bank. Our "cash money" is redeemable in gold on demand. Also, the entire pool of "money in the bank" is convertible into money redeemable in gold. The total of potential demands is many times the gold reserve and could exhaust it in 24 hours. If we resolutely balance the budget, there will not be the slightest danger of this and even if it happened we would be in no worse fix than England is to-day. But we now have a deficit of over two billions a year and the suspicion is growing that we do not really intend to balance it.

With the gold reserve gone, this Government would have no recourse except the issue of irredeemable currency, money unsupported by any value, not even by the prospect of revenue. We would not be as strong as many contemporary nations which are off the gold standard because no nation ever dared to incur deficits as large as ours. The demands on our Government for all forms of relief are stupendous. In event of such a collapse, we would be helpless to aid our people at the very moment when the need for aid is greatest. It is the weak who need a solvent government most. The strong are better able to take care of themselves.

Between our present status and the disaster just described, there is only a thin veil of popular complacency and there are projects before you now which might destroy that slender protection in one day. The most dangerous are the projects to inflate the currency.

## IV. Monetary Inflation

There are many people who earnestly believe that we can make commodity prices higher by the simple process of issuing more money. It is a complex question but what does our experience show? In December, 1932, we had outstanding nearly 5.7 billions of money and Dun's Commodity Index stood at 133.9. The highest commodity prices since 1921 were in May, 1928. Dun's price index then stood at 199.2, but the amount of issued money was then only 4.7 billions. Since September, 1930, the amount of money issued has risen about $1,000,000,000 while commodity prices have steadily fallen. There is no such thing as arithmetically relating prices as to the quantity of issued money.

Quite apart from any figures, the fact that the great bulk of our business is not done in issued money but in "money in the bank" should be enough to suggest that an increase in "cash money" alone could produce no such effect. The fact is that there is no lack of money—either of "money in the bank" or "cash money." In other words, all the money of both classes in 1932 would have financed much more business at prices current then, than all the money of both classes in 1928 would have financed at the height of 1928 activity at prices current then. Yet, in spite of all this excess stagnant pool of money in 1932, business activity was about half what it was in 1928.

For three years we have conducted a vast but vain experiment in inflation. Not being willing to sacrifice for a balanced budget, we have been selling Uncle Sam's duebills—not to people who have "money in the bank" which already exists and is backed by securities representing economic goods—but mostly to the banks themselves. The Government was saying in effect to a bank: Put this Treasury duebill for $1,000,000 in your vault and write on your books a credit to the Government of $1,000,000. After this transaction, the Government wrote checks for its expenses for that $1,000,000 and, by that process, without anything representing economic wealth having been deposited in that bank, but only a Treasury promise representing a deficit, the Government added $1,000,000 to the sum of all the "money in the bank."

We have coined our deficit to pay our expenses. I can see no fundamental difference between what we have done and the proposal to issue Federal reserve notes or other currency to pay for our deficits, which our inflationists now propose as a sure-fire method of raising prices, except that the inflationists do not propose to go half as far as our Treasury has already gone.

Out of more than five and one-half billions of dollars of deficit which we have piled up during the depression, nearly five billions is represented by increases in the holdings of Government securities by Federal reserve and member banks alone, and, as I read the news reports, the Assistant Secretary of the Treasury thinks total holdings of Government securities by all banks is as much as ten billions of dollars. Be that as it may, Government has added at least five billions and probably the whole deficit to "money in the bank." But it has produced no such beneficent effect on prices as the inflationists think would come from issuing a much lesser amount in Federal reserve notes to pay expenses.

Those notes, if issued, would be "money in the bank" just as quick as the recipients could deposit them in their bank accounts. Both plans come to the same thing in the end, but I fear that we have gone to the limits of prudence already in this method of Federal financing, and I doubt if we can continue to get money in that way. It has clogged our pools of bank credit. It has obscured the whole question of Federal credit by creating an artificial market for Federal securities. It is this method of financing that has lulled the country into complacency on the effects of deficits. Nobody can say with confidence that, in this condition, we can borrow in the ordinary way by selling long-term bonds. The outgoing administration will leave the cash balances at a low point and present us with a dangerous and totally obscure fiscal problem at the very outset. Delay in balancing the Budget is trifling with disaster.

I note that the Secretary of the Treasury said on Saturday:

> Ultimately the point might be reached where central bank credit has to be invoked to support the credit of the Government, and when that point is reached we have entered the field of destructive inflation.

You gentlemen know that we long ago reached the point where central bank credit was invoked to support the credit of the Government.

What is the matter with this theory that more money will make prices go up? To answer that you must ask: What is it that makes the prices of things go up? It is the fact that a prospective buyer would rather have the thing than the money. In booms, people prefer things to money because they hope the price of things will go up and they know that the price of money will not. If, at such a time as that, we make credit easy or issue more money, people will borrow to buy. So many people do that at the same time that their buying makes things scarce and sends prices higher. The higher prices go, the more people are able to borrow on the collateral of things, to buy more things and to send prices still higher. At such a time, if the Federal reserve "buys Government bonds" (which is what I think the Secretary of the Treasury means when he speaks about invoking central bank credit), or if the Government issues still more money and does other things to make speculative buying easier, it can precipitate a boom as it did in 1920.

But when nobody has confidence, nobody wants to buy things, which fall in price. Everybody wants to sell things to get money, which does not fall in price. In the scramble to exchange things for money, prices drop and that restricts credit still more because it reduces the collateral of loans. That forces more selling to protect loans and that forced selling sends prices still lower. At such a time, government can not force prices up by issuing more money because nobody will use credit to buy things because nobody wants to buy anything.

In other words, confidence is the basis of higher prices. If there is no confidence, no amount of tinkering with the currency can raise the price level. On the contrary, and this is the very heart of the whole problem of the depression, deficits and the financing of them by "bank money" inflation (or even the mere talk of monetary inflation) impair confidence still more and drive money deeper into hiding.

I am aware of the rejoinder: "If you think inflation will have no effect on prices, why do you object to trying it?" The first answer is one I have just made, that the mere talk about proposals of inflation prevents confidence and bars recovery. That is the essence of our present trouble. It is not lack of money or credit. Men can not go back to work until money goes back to work. Men risk their money in commerce because they expect to get it back with a profit, but nobody will risk dollars which the Government threatens to devaluate. Business moves on faith in promises. Money itself is a promise. Every sale and every employment is a promise to do something and to pay something. Money will not go to work in the presence of any such desperately dangerous fiscal policy as we have pursued and are still pursuing—much less in an atmosphere full of talk of the repudiation of money and debts by both men and governments. That is why I say with such confidence, that until we make the money and the credit of the United States safe beyond peradventure no amount of economic mustard plasters will cure our pains. That is why the Reconstruction Finance Corporation plan has failed of full effect, and that is why other Federal aids to business are frustrated.

I am not given to prophecy but I am willing to hazard on this subject. From the moment that we honestly balance the Federal Budget and return to an orthodox Treasury policy, money will flow here from all the world and out of every cautious domestic hoard, seeking safety and employment, and we shall have reached the end of out downward path. There will be more sound money available than all the inflationists propose to print. That is the only way to restore to our people the means to earn their daily bread, and that will do it, in my opinion, with great rapidity. There is no magic in this conclusion. It is the simple arithmetic of the oldest axioms in the world.

Men who oppose this step are unwittingly opposing recovery. But men who insist on inflation are courting a greater danger. There is a way to inflate prices. It is possible to make people prefer things to money, not by increasing their confidence in things but by absolutely destroying their confidence in money so that they will "flee from the dollar" to buy things because they fear the future of money. The vast "bank money" inflation of the past two or three years has failed to frighten people to this extent for three reasons: The size of the gold reserve, their failure to understand what was going on, and the constant promise of our Government that it was about to balance the Budget. If you want to raise prices by destroying the Federal credit, you must go further than this. You must cast actual and widespread doubt on the Government's ability to perform its promises or on its good faith in making them.

The danger of this in our country is that when you have raised a sufficient doubt, people may not scramble to buy things. If a sufficient number got the same ide at the same time, the gold reserve would vanish overnight and then this Government would be helpless to do anything for anybody. That would make prices rise instantly and like a sky-rocket. It would do as it did in Germany when it took a valise full of paper marks to buy a sack of flour. With our present hordes of people out of employment, it would precipitate general starvation. The most enthusiastic inflationist contemplates no such result as this, but they do not see that we have reached a stage where any further tinkering with fundamentals is playing with dynamite at the heart of human welfare.

I want to talk at length about inflation and I ask for your patience because there is so much confusion. I shall use the project to cut the gold content of the dollar for illustration because, while other plans are admittedly indefinite, this one is specific. There are now approximately 26 grains of gold in the dollar. If we cut that by 25 per cent to about 20 grains, we at least have a mathematical formula. Other plans present some differences in result, but, so far as their effect on prices is concerned, they all propose similar results. To whatever extent other plans prove to be effective, all that I shall say about this plan applies to the others.

If the public foresaw the move, there would be an instant rush to redeem present money in gold, and the whole project would fail because there would be no gold left in the reserve. This is certain because, if we put the plan into effect to-morrow, every man who redeems to-day would be 33⅓ per cent richer to-morrow than the man who did not, as I have shown.

But let us suppose that by some magic, we could get by this danger, and that to-morrow, with $4,000,000,000 of gold, we should have reduced the redeemable value of the dollar 25 per cent. Will that inflate domestic prices? Not unless the move causes people to prefer things to dollars because their confidence in dollars has been destroyed. The new dollars would have more than 100 per cent gold coverage because of reduction in the redeemable value of all the dollars now issued. It seems extremely doubtful that there would be any domestic effect to raise prices. Of course, there would be a tremendous shock to confidence in such a wholesale act of outright repudiation and the feeling that it might be repeated at any time. But, passing over these conjectures and assuming that the attempt would act as its proponents hope, there are some probable results.

The domestic prices of surplus export commodities are made abroad by world competition. To make it simple, let us suppose that a shilling is now worth 25 cents and that the Liverpool price of wheat is $1 a bushel. An Englishman must spend four of his shillings to buy a bushel of wheat. But after a dollar is worth only about 20, and not 26, grains of gold, his shilling would exchange for 33⅓ cents of the new money instead of 25 cents of the old. While it would still take 4s. to buy a bushel of wheat, when these shillings were changed into dollars to pay the American farmer, they would be $1.33 in the new money. In other words, theoretically, the price of wheat at Liverpool, expressed in sterling, would still be 4s., but expressed in dollars, it would increase 33⅓ per cent. And since the Chicago price generally follows Liverpool the argument is that the domestic price of wheat would also rise, and so, theoretically, would the price of cotton and other export products.

It is wrong to suppose that this would increase the buying power of foreign countries for our surplus export commodities. It would still take 4s. to buy a bushel of wheat, because the price of wheat is made abroad in shillings and by world competition. Devaluation of the dollar would not change these competitive conditions.

But there would certainly be a decrease in our buying power abroad. For example, the British price of smoked rubber sheets would remain the same in shillings and pence. But it would take 33⅓ per cent more of the new dollars to buy rubber. In other words, this is a proposal (without any compensation to him whatever) to increase to the American consumer by 33⅓ per cent the cost of his sugar, coffee, tea, rubber, silk, imported wools, and other imported commodities, and also the price of his cotton and wheat, and all other export commodities, of which the price is made in foreign markets.

There would be an instantaneous harmful effect on our international creditor position. The world owes us upwards of $20,000,000,000 on which the interest payment of more than $1,000,000,000 is one of the strongest elements of our economy. Foreign debtors pay that charge in enough of their money to buy 26 grains of gold to the dollar or the equivalent of that in goods. After a 25 per cent devaluation they would pay only enough to buy 20 grains of gold. For instance, a present debt charge of 25 francs would be reduced to less than 19 francs. In other words, this proposal would certainly and instantly reduce all debt payments to us by 25 per cent. But our citizens owe billions abroad. If we suppose that $1 will now buy 4s. with which to pay an obligation due in English currency, instantly, after a 25 per cent devaluation, it will take $1.33⅓ to pay the same debt. In other words, this proposal would certainly and instantly increase the cost of American debts due in foreign currencies by 33⅓ per cent.

The Department of Commerce reports, for 1930, American receipts of $838,000,000 and expenditures of $227,000,000 on long-term international investment account, a net balance of $611,000,000. We do not know how much of the sums sent abroad were for debts in foreign currencies, but, if all were, and if devaluation were in effect, that net balance would reduce to $325,000,000. It seems a shocking proposal, to the benefit of nobody but foreign nations.

In the case of American manufactures where the price is made in this country, as distinguished from export commodities where the price is made abroad, there is an apparent benefit in export trade. If an American plow is made to sell to the Argentine for $100 and it now requires ₱400 to pay for it in New York, then after a 25 per cent devaluation it will take ₱300 and the Argentine can buy more plows. Why is this true? Starting from the raw material, the bulk of cost of that plow is the wages of labor and the reason it can be sold for fewer pesos is that such devaluation has an insidious but instant effect to cut those wages 25 per cent. To whatever degree inflation by any plan increases export trade, it does so by the sacrifice of our labor conditions and dissipation overseas of American assets. A country can continue this sort of thing for only a limited time. I cite the case of Russia, which has recently conscripted thousands of working men to the northern forests for the purpose of producing lumber to sell abroad to create export credit out of the very lives of her people.

But the effect of devaluation to reduce our creditor position is urged as relief to foreign customers to permit them to buy more of our goods. It is true that a creditor nation, especially one who declines imports, can not expect continued vast export expansion. For 10 years we neglected this fundamental and staged a fantastic boom on the basis of an increased export financed entirely by unwise foreign loans. The present argument for increasing exports by relieving burdens on debtors at the expense of American labor is a repetition of the same blind folly in a different guise. It would be far better to cultivate our domestic market by increasing the buying power of our own people.

So much for the wholly destructive effect of inflation on our international relations. Let us examine the effect at home. The producers of surplus export commodities would probably receive a higher price in a lower dollar, and the price of imported products, principally food, clothing, and other necessaries, would rise. But the price of other things would not rise nearly so fast nor so far. Indeed, it is not certain that they would rise at all, except in the panic event I have discussed. When England went off the gold standard and the pound declined more than 25 per cent, prices rose very little, and promptly declined again and after nearly two years there is no marked effect on domestic prices. Even suppose prices went up exactly as the inflationists hope, who would be affected? Only a relatively small part would at once feel any benefit. Some, but by no means all, farmers would get a benefit and also some manufacturers. But wages are fixed by contract and not in the open market. They would rise slowly if at all. The laborer's dollar, which yesterday bought 26 gold grains' worth of necessaries, would to-day buy only 20 grains' worth. Labor, which has already suffered a 40 per cent to 50 per cent reduction in income, would suddenly find itself the victim of a new and greater cut, not by its employers, but by the very Government upon which it relies for protection. And not labor alone. The same thing would happen to every man who works for a salary, every professional man, and the whole "white-collar" class, and also to every insurance policy, savings and bank account, investment, trust fund and endowment of colleges, hospitals, and other public institutions. If a man has a $3,000 life insurance policy which promises his widow about 78,000 grains of gold, instantly about $750 of this protection would be whisked away as effectively as though purloined from his widow's pocketbook.

It is said that the effect would be to lighten debt and taxes by 25 per cent. But, with the exception of a very limited class, the effect would be greatly to increase the burden of both. Thus, while the farmer might be able to pay taxes with fewer pounds of wheat, the wage or salary earner would have to pay a greater share of his wages for necessaries and would have less to pay rent, debts, and taxes.

These things are true of every one of the inflation plans to whatever extent they prove effective. They pass a plane of cleavage through our population and oppose class against class on the most vital issue of present human existence—the wherewithal to live and support a family. On one side of that plane are the beneficiaries—chiefly foreign nations (for whom alone is the benefit certain), and the producers of some export products. But on the other side are all those who work for wages and salaries, all pensioners, public servants and employees, professional men and all those who still retain any money or fixed-income securities from the wreckage of this four years of national blundering.

It is said that this is a capital levy to redistribute wealth. Until we can get buying power into the hands of our people we can not expect recovery. But this proposal, by inflation, to clip salaries and wages wherever they can be found will greatly curtail buying power. It is not a levy at all because it does not appropriate anything to the Government or to anybody else. It merely destroys whatever it touches and puts it to no new ownership or use.

I regard the condition of this country as the most serious in its history. It has been said to be like war. It is worse than war. In war there is a definite enemy. We know what and where he is and how to fight him. We can measure the necessary sacrifices and make them with certainty in their effect. But this enemy wears no uniform and takes no position on any front. He is everywhere, even within us. So far as I am concerned, there is no sacrifice I would not be willing to make to fight this terror, no plan, however revolutionary and bold, that I would not try if I could see in it an even chance of success. If I did not know that there was nothing but destruction to be derived from the project of inflation, I would be the first to advocate its trial. But I am as certain as that we are sitting here that the path proposed is the road to ruin.

## V. The Fundamental of Recovery—Balanced Budgets

What are we then to do? To my mind the road is wide and certain. There is one essential thing—to get people back to work. To do that, we must make money work. To make money work, we must balance the Budget. That should be accomplished first by reducing expenses. If we can bring the expenditures in our National Budget under $3,000,000,000 that in itself would result in a return of confidence and therefore an increase in business and employment. That increase of business would bring the Budget into full balance without further taxation. A balanced budget and a sound money policy go hand in hand. If those two things are done, there would be more sound money flowing into activity than all the unsound money our inflationist friends propose to coin.

Immediately the Government would be able to fund its already unwieldy short-term obligations into long-term investments, which would free the banks to take care of the business that must increase.

Balancing the Budget does not mean that there will not be plenty of money for relief purposes of all kinds. Indeed, it means there will be more money available. The credit of the Government would be increased and bonds could be issued and sold to almost any reasonable extent for the purposes of relief for the needy and such public works as would be deemed wise to undertake. But accompanying the issue of those bonds there must be assessed sufficient taxation to take care of the interest and amortization of the bonds issued for the above purposes.

As a part of the general tax system, I think the "beer tax" should be included in order to bring the Budget nearer balance before you assess new taxes for relief purposes. We should move immediately toward repeal of the eighteenth amendment, not alone for relief of its abuses but for the purpose of obtaining taxation which can be substituted for more onerous levies. The people of the country will bear any tax burdens provided they can see hope of relief from them in the future. We must preserve personal initiative. Taxation should not be levied beyond the point where men will cease to work because the tolls become too great and the profits too little.

With the Budget balanced, we can approach other problems with more assurance of success. Without it, all must fail. That has been, in my opinion, the reason why beneficent results have not flowed from the Reconstruction Finance Corporation. We must realize that, if our Budget had been balanced in the last three years, the Government of the United States would not have accumulated a deficit of five and one-half billion dollars, the interest upon which, at 4 per cent, is $220,000,000 per year, and with a sinking fund of 1 per cent is two hundred and seventy-five millions—a very large proportion of our total cost of government. This can not go on, because there is a limit even to the credit of the United States.

Finally, I think the Government should stop advancing money to pay interest and principal on private debts of a doubtful nature. It is a postponement and frustration of economic cure. I realize the danger of wholesale receiverships and crash sales on sterile markets but the way to avoid that is being blazed by the principles of the La Guardia bill. After debts and capital structures are scaled down to a realistic basis, I think the Government could aid—not by itself assuming direct liability and not on any plan that requires it to raise money, but by assuming only a contingent liability in guarantees of interest to support the value of reorganized and scaled-down securities in a manner which I shall definitely explain in the discussion of farm debt. I have not yet worked out the extension of this plan to other debts and do not know that I can do so, but I am quite sure that this principle marks the limit to which we should go in the use of Government credit in this field.

To sum up this suggestion of fiscal policy: (a) $800,000,000 of actual and certain saving; (b) $150,000,000 of new revenue from beer; (c) all emergency appropriations to be covered by new revenue sufficient for sinking fund and interest thereon; (d) abandonment of the present Treasury method of financing the deficit; (e) restriction of Government aid to debtors to immediate revision of the bankruptcy act and to a contingent liability on a guarantee of interest on scaled-down debts to be applied only on prudent risks.

## VI. Farm Relief

I began the study of the farm price problem in 1921 and have devoted my thought and attention to this serious difficulty ever since. I have studied every project that I have heard of for the stabilization of farm prices because I regard the effect of our tariff system on our agriculture as one of the most serious lapses in our domestic economy.

While I am in the fullest sympathy with the purposes of the farm bill now before Congress, I believe that there is a better way to get at them which I shall propose later. In order to discuss that way, it will be necessary to criticize this bill. I always dislike very much to criticize anybody unless I have something to offer. In doing that I shall try, in what I shall propose, to offer a constructive suggestion for every critcism.

The plan seeks to reduce production by curtailing acreage. Yet, instead of subsidizing nonproduction, it pays a bounty on a certain percentage of all included products which are marketed. This will increase production per acre. The methods for doing this are many and effective and unless the actual curtailment of acreage is both drastic and certain, these methods could frustrate the plan. The incentive created by the bill is also to overstate the acreage previously planted—and thus to upset the mathematical basis of curtailment—and also to understate the acreage harvested and thus to avoid curtailment. Since the bounty is to be paid on a percentage of each man's marketing, and since price plus bounty is nearly double price alone and bounty is paid regardless of grade, the result will be to bring in all seed and feed and farm-consumed product and also waste grades even if farm requirements are at once repurchased. On wheat alone this might be sufficient to frustrate the purpose of curtailment. No matter what may be the price on grades full of sand, dirt, chaff, stalks, and defects, the bounty is the same.

The plan assumes that the fund collected from the tax will be the exact equivalent of the amounts earlier paid out as bounty. Every human incentive of the taxed is to pay less—of the recipient of the bounty to get more. The result will be a deficit charged to the Treasury and it could run to very large figures. The percentage of each farmer's marketed production, which is to receive bounty, is the ratio of the estimated domestic consumption to the estimated total crop. But because of all the reasons just stated, the sum of the parts of each farmer's crop on which bounty is paid is sure to be larger than the estimated total domestic consumption of the whole crop. Also, the higher price of the favored crop will reduce the experienced domestic consumption of it.

The plan is not self-policing because there is no quota to be apportioned among each group. After the domestic percentage is once estimated, every farmer gets a bounty on that percentage of all that he sells. The incentive is not for the members of a community to police each other; it is to abet each other.

Blanket authority is given the Secretary of Agriculture to set up an organization and we can not say what the cost will be because the bill does not visualize what the action will be. The plan also proposes to put determination of a tax in the aggregate of nearly $1,000,000,000—or perhaps 40 per cent as much as the entire present Federal revenue—in the discretion of a single administrative officer, and it is a sales tax of as much as 100 per cent on necessaries of life. Finally, it does not sufficiently consider the harm it will do to certain established industries.

I shall submit my constructive suggestions at the end of my statement.

## VII. World Economic and Disarmament Conferences

Out of the depths of this gloom the hope of humanity is being beckoned by two great councils of the coming year—on world economics and disarmament. Though disillusioned by repeated failure and bewildered by obscurity of purpose and principle, people will still take from them the eternal human comfort that "all may yet be well." The current talk of agenda and protocol and similar abracadabra may savor of priestly mummery, but the proper purpose here is as plain as a pikestaff and the controlling principle is clear. With these attained, all things are possible. Trifle with them, obscure them, try to get by without them, and the world would better save its breath to cool its scanty porridge.

What is it that men hope? A chance to earn their daily bread? The commerce of the world is dying. The hope is to revive it. Problems of prices, debts, employment, prosperity, and of stark existence for some great governments all come to this—that the nations shall trade again. This and nothing else is the proper purpose in both of these conventions.

The controlling principle is no less clear. Why does commerce languish? Notwithstanding a vast and dreary literature, there is not a multifiplicity of reasons, there are not six nor two—there is only one. You can't buy goods with chaff.

Much of the money now proffered in the world's markets in exchange for things is like the fairy gold in children's books—it may be coin to-night and a handful of autumn leaves to-morrow. That is the malign center of this blight. Economic barriers and armaments and debts—all these are surface stigmata. Unsound money is the evil to be crushed.

When is a nation's money unsound? Is a great deal of gold a guaranty of soundness? There is not a tithe enough gold above ground to support the monies of the world on that theory. There is no mystery. A nation's money is unsound when it continually spends much more than it receives in revenue and makes up the difference by using its debts for money—no matter how adroitly. This has been true since the world began—not some of the time, not now and then, not here and there, but everywhere, and all of the time, and without one single exception.

We have reached a perilous point where triflers with these verities in every nation have become enemies of their people. We can not escape by palliatives. A nation's money is simply its promise to pay. No sophistry can change the rule that neither the paper promise of a repudiator, nor the note-of-hand of a spendthrift living beyond his means, nor sophisticated entries showing credits on the self-kept ledgers of a desperate debtor, will ever pass at par in the markets of the world.

No nation is living within its income now and the money of all is unsound or suspect. That is the effective cause of continued misery, and cure of that is the controlling principle for any council among nations. There is no need for long agenda or complicated plans. The program for both talk and action can be written on a calling card. "Balance the budgets of the world." That is the bed-rock purpose of these councils. The economic conference will say that commerce is the exchange of money for goods. But sound commerce can never be restored on unsound money. Why should we talk there of forcing up commodity prices when the money to pay for them remains unstable? Why should we then consider trade barriers when, as obstacles to commerce, the most formidable of them compare as molehills to mountains against the present demoralization of exchange? Money is the medium of trade and the very essence of the economic problem is to make it usable again. If that is omitted, all else is wasted effort. If that prevails, little more is needed.

At Geneva, men will talk of clipping the power of offensive armament, of limiting the calibre of movable guns and the tonnage of air-bombs, thus hoping to aggrandize defensive works. Geographically we are not in a position of offense. We have no aggressive arms to lay down. The chief reason we confer is our hope that there may be a greater tendency toward peace and less toward war and thus Europe may spend less on armament. Here again the avowed purpose—at least it should be—is to persuade frugality in aid of balanced budgets.

Finally the debts: As I have said before, if we reduce every single substantial argument for modification to its essence, we find it running not to the injustice or even the expediency of the long-time burden, but solely to the present difficulty in the transfer of funds, which is to say to the unsoundness of the money of the debtor nations.

Thus at the heart of every subject for world conference, no matter what form the surface takes, we find one single evil—that governments refuse to balance budgets, and, as I have tried to show, it is no less true with us.

Until these causes are frankly addressed and fairly settled, the nations will arm on both the military and economic fronts and nothing that we can do by way of debt concessions or sacrifices of the best interests of our people will change the essential result. We may get some superficial change in form but whenever I hear talk of a reduction in the size of bombing planes or the calibre of a mobile gun, on the theory that thus the power of the offensive may be reduced and defensive arms lightened, I recall how we mounted heavy naval and even seacoast artillery on railroad cars in preparation for the bombardment of Metz. Nobody can foresee the kind of armament in the next war any more than anybody foresaw the tanks and flames and mines and gas and stabilized trench fighting of the World War.

Napoleon Bonaparte attempted to disarm Prussia and thought he had done so but, by the simple expedient of running classes of recruits rapidly through the skeletonized standing army, Scharnhorst and Stein created the legions which overwhelmed and sent the Emperor to St. Helena.

You can not disarm a nation by shortening the length of its sword. The real power of a nation is its resources of men, materials, money, and morale. Armament is merely a facility for mobilization. Its reduction is a worthy expedient for the reduction of expenses, but it is not a means of reducing the probability of war or of making war less horrible. The only way you can do that is to remove the case of war. We should concentrate our infleunce on that. For disarmament plus amelioration of the cause of war we could afford great sacrifice but we would be foolish to make any sacrifice at all for promises of disarmament alone.

There is one alternative to world disaster. The nations must live within their income. That achieved, all conferences may succeed brilliantly. That failing, no amount of scenic bargaining and solemn parley on superficial projects will avail. With the monotony and persistence of old Cato, we should make one single and invariable dictum the theme of every discourse:

"Balance budgets. Stop spending money we haven't got. Sacrifice for frugality and revenue. Cut governmental spending—cut it as rations are cut in a siege. Tax—tax everybody for everything. But take hungry men off the world's pavements and let people smile again."

If we can not enter these discussions with that as our purpose and our guiding principle, we ought not to enter them at all.

In the economic conference there is only one other subject worth considering—some international agreement on silver.

As to disarmament, both military and economic, the sole constructive possibility seems to me to be the removal of the age-old causes for world conflict. The Peace of Versailles was a peace dictated at the point of a gun. Its sanctions are failing. The questions of the Silesian Frontier, the Polish Corridor, the Saar, the Cordon Sanitaire which France has negotiated around Germany, and many boundary and ethnic questions left unsettled or badly settled at Versailles are the real cause of the heavy armament under which the world is groaning and, in my judgment, they are also the cause of most of the artificial trade barriers about which so much has been said.

I divide the farm problem into two things. One, the relief of the huge debt that is crushing the workers on the farm and depriving them of their homes, and the other is some definite, long-range plan that will give them a larger profit in the production from their farms.

I proceed first to the farm debt relief. I understand that a bill something similar to this is now under discussion. I do not know in what committee.

Let me say this, that in every suggestion that I have seen, no matter from what source it has come, it always has led back to the public treasury—and a burden upon the taxpayer. Even the suggested plan was made in New York to put up $10,000,000 on which it was proposed to borrow $100,000,000 from the Reconstruction Finance Corporation, and that goes back to the Government. And one of the ablest Senators has just introduced a bill for $500,000,000 from the Government. And so have many other bills made such proposals. I am prefacing my remarks because I propose to use the credit of the Government because I think we have to, because everything leads back to that. If these farmers are permitted to lose their farms and go upon the highways of the country they become charges upon the people and the States can not help them. We must help them—the public treasury.

Another thing I think is important, not alone for the great social question involved, of which you gentlemen all know better than I, but I think it is important that we should keep a satisfied agriculture, because every country which has permitted that to die has died itself. And there may come a time, not far distant, if you permit the laissez faire policy to go too far, as some want it to, when this country might be faced with an under production—I mean the nation might be in a position where it would have less to live on and less with which to clothe itself.

POSTSCRIPT NO. 1.—FARM DEBT RELIEF

We have between nine and ten billions of farm mortgages, created largely on the land values of the Great Delusion. It is a waste of money (which we do not have) to undertake the payment by Government of interest or maturities on existing mortgages. There must be a realistic reorganization of this structure. The principles of the LaGuardia bill are the first step but that alone will not solve this problem.

Let us create a corporation which shall be authorized to issue its 3 per cent tax-exempt, 30-year sinking fund bonds, callable by lot at par. The interest only on these bonds will be unconditionally guaranteed by the Government. This corporation will then offer to exchange its bonds for existing farm mortgages at not to exceed 60 per cent of the par of such mortgages and for as much less than 60 per cent as the circumstances of individual cases seem to require. It will then proceed to reform all the mortgages thus received in exchange for its bonds on a basis of 3¼ per cent interest on the scaled-down principal, plus a graduated amortization charge which starts at zero the first year, one-fourth of 1 per cent the second year, one-half of 1 per cent the third year, 1½ of 1 per cent the fourth year, and 2 per cent for the fifth year.

The effect of this plan will be to write down existing farm mortgages by a minimum of 40 per cent or an average of perhaps 50 per cent. It will write down the interest by a probable minimum of about 66⅔ per cent. Farmers receiving this very great aid should be willing to agree in the new mortgage contract to comply with such requirements of reduction in croppage as may from time to time be prescribed by the government until their mortgage is repaid.

As a means of offsetting the possibility of loss to the Government, I propose that there be collected under the provisions of the farm price relief plan (which I am about to propose) an annual fund of $30,000,000, which shall be paid into this corporation and any amount not needed to offset the guaranty allowed to accumulate together with the profits which I think will accrue for the purpose of the purchase of marginal and other farm lands and their retirement from production as may from time to time be required in the working out of a permanent agrarian policy for the United States.

This plan should be limited to present, not future mortgages. This plan does not mean that mortgages will be forced to take this new bond. It is only a way out for the unsalable mortgages. Nothing connected with this plan should infringe the right of foreclosure.

I am going into a little more detail here while we are on the subject. The way this would work would be this. Just as a convenient form we will say that the farmer had a mortgage for $10,000. Upon that now he probably pays not less than $800 a year. The man who has that mortgage can not sell it; even if he wants to foreclose it he can not get any money for it, because nobody wants to buy the farm. So he has got a dead asset on his hands, or it is held up by some governmental action to suspend foreclosure, but he has got a dead asset on his hands.

Now, if we could use this as, if I may use the term, as a kind of currency whereby negotiations depending upon the particular instance, the assessed value of the land, the condition of the mortgage, we could negotiate with the mortgagee $5,000 of these bonds. That would clear him out. The farm mortgage would then be $5,000. His other $5,000 was wiped off. Upon that $5,000 he pays 3 per cent. It is really 3½ per cent, but for the purpose of convenience of figuring it mathematically let us use the figure 3 per cent. We will say he would pay 3 per cent on that, plus an amortization charge, which would be, of course, lessening the principal amount of his debt which has been cut in half—an amortization charge of 2½ per cent, making 5½ per cent on $5,000. That makes $275 a year against $800 a year.

Now, that is a use of the Government credit, but the Government does not go out and unbalance its budget by selling a bond against current issues in the market. What it is doing is, it is replacing an inflated mortgage with this deflated mortgage, which goes to the benefit of the mortgagor. It benefits the mortgagee also because he has got something, whereas before he had nothing.

Now that is in essence the plan, and we will come back to that later for such questions as you wish to ask.

I want to add to the top of this first paragraph of postscript No. 2, farm surplus control, at the beginning of the paragraph, the following: "If it is deemed absolutely necessary for the Government to curtail surplus," and then proceed with the paragraph, "I propose," and so forth. And I must say I have taken the idea from the allotment plan and rather made it different or reversed its proposals, and no doubt there are many objections can be made to this plan, but I give it to you for what it is worth.

## POSTSCRIPT NO. 2.—FARM-SURPLUS CONTROL

If it is deemed absolutely essential for the Government to curtail surplus, I propose that the Secretary of Agriculture shall determine the amount by which total acreage of corn, cotton, wheat, and tobacco shall be reduced, and, for the first year that the reduction be drastic to consume the present overwhelming surplus.

Quotas of reduction should be allotted to States and then to counties and greater reductions should be made in surplus-producing States than in States where production is not equal to the State consumption.

Then the Government should actually lease, from each farmer who wishes to participate in the plan, not to exceed the percentage of his acreage which has been allotted to his county, on condition that he does not crop more than his now planted or last harvested acreage, minus the total acreage reduced from each crop in respect of which acreage is to be reduced. This is for the purpose of insuring that production of substitute crops is not increased. The rental to be paid should be an amount slightly larger than the profit that could be made on the reduced crops at farm prices in their pre-war relations to general commodity prices. Rough computations indicate that the average rental would be somewhere around $3 an acre, being higher near primary markets and lower in more distant places.

The cost of this plan has been estimated at around $160,000,000, but in order to provide the $30,000,000 I have mentioned as a guaranty fund in the farm mortgage plan, we should figure on raising about $200,000,000. That amount can be raised by a tax on the processing not of wheat alone but on all processed cereals, not on cotton alone but on all textiles, not on hogs alone but on all meat products. Unless this is done we will reduce the consumption of the particular product and frustrate the plan.

By substituting this plan for the plan now before Congress, which I understand has been changed, the tax would be reduced from the present project to tax wheat 100 per cent of the present price to a tax between 6 and 7 cents on all processed cereals, the tax on pork would be reduced from about 3½ cents to about one-half a cent on meats, and the tax on cotton cloth from 6 cents a pound to about one-half a cent on textiles. Such taxation is bearable and, if assessed in this way, will not disturb the present relation of consumption of the various commodities. From such conversations as I have had with leading processors, we can get their cooperation rather than their opposition. They recognize, as well as any of the rest of us, the absolute necessity of affirmative action.

From the farmer's standpoint, while the initial distribution of money may be smaller, undoubtedly will be, it is the opinion of commodity experts whom I have consulted that such a plan would be really effective in reducing production. While I do not wish to conjecture a definite result, it seems to be quite generally believed that the effect would be very promptly to raise the price of the managed crops to the prewar level and to carry other farm prices up sympathetically. There are obvious objections that may be made to any plan but in this emergency which is like the emergency of war, we must take some chances and while I deplore all statutory artificialities, I think we should make this attempt. Many think that all raw materials can be produced here by American labor and exported in the shape of manufactured goods, but I have not been able to see that through to its end.

Gentlemen, I would like to add this statement. I do not know whether the picture that I presented to you was a gloomy one or not, but I would like to say this, after most definite thought on this subject, if we but do these things there will lie before us opportunities for service, for fame, for fortune, and for the younger and coming generations, who are more interested in this than they think, such as have not existed at least in my lifetime, and that covers 60 years—I can not speak before my time—I believe there are great opportunities, and that this is not a time for gloom, if we will but see the stark necessities and face them.

Now I will be glad to submit to questions, and when we get into the details of the farm problem I am going to ask General Johnson here who has been trying to put it down on a drawing board, and who is more familiar with it than I am, to answer it with respect to the details.

The CHAIRMAN. Perhaps it would be just as well to have Mr. Johnson submit what he has to submit at this time.

Mr. BARUCH. If it is not clear, why we will clarify it.

General JOHNSON. There is not anything more to submit.

The CHAIRMAN. Any questions that may be asked or may b submitted at this time then.

Senator CONNALLY. Let us take one witness at the time, before we forget what he says.

The CHAIRMAN. That is what I say; if you have any questions to ask the present witness.

Senator CONNALLY. Being a junior member of the committee I will wait until the senior members have interrogated him.

The CHAIRMAN. You may proceed, Senator.

Senator CONNALLY. May I proceed?

The CHAIRMAN. Certainly.

Senator CONNALLY. Mr. Baruch, I want to ask you a few questions about your views on the so-called inflation, particularly with reference to the gold content of the dollar. You stated, I believe, that if they reduced the amount of the gold in the dollar it would not have any appreciable effect on raising prices, did you not?

Mr. BARUCH. It would have the effect of cutting the price in the new dollars, and there would be a flight from the dollar if there was a loss of confidence.

Senator CONNALLY. What is that?

Mr. BARUCH. It would have an effect in cutting the price in the new dollars, and it would also have an effect of raising it very, very high if there was a reduction in the amount of gold in the dollar and confidence in the new dollar was lost, because there would be a flight from the dollar.

Senator CONNALLY. If you are going to predicate everything back on the confidence, why I can not get very far.

Mr. BARUCH. What page are you now on?

Senator CONNALLY. I am on page 17. You say: "There are now approximately 26 grains of gold in the dollar. If we cut that by 25 per cent to about 20 grains, we at least have a mathematical formula," and so on. A little later you say that there would be a rush for gold. Of course, if the Government suspended payment in gold there would probably be a rush for the actual gold. But now you state down below: "It seems extremely doubtful that there would be any domestic effect to raise prices." Is that your attitude?

Mr. BARUCH. I have not followed you, Senator.

Senator CONNALLY. I followed you, and I think you ought to follow me a little.

Mr. BARUCH. I am trying to do it, Senator.

Senator CONNALLY. Page 17, about two-thirds down the page.

Mr. BARUCH. Yes, sir. "It seems extremely doubtful that there would be any domestic effect to raise prices."

Senator CONNALLY. "It seems extremely doubtful that there would be any domestic effect to raise prices." Is that correct?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. All right. Why do you say a little later that salaries would fall and wages would fall, if prices do not rise? How would wages fall and salaries fall?

Mr. BARUCH. Because we are talking in new dollars.

Senator CONNALLY. Oh, I know.

Mr. BARUCH. And the new dollars would not buy as much as they did before. The prices of products would go up to the percentage of 33⅓ per cent.

Senator CONNALLY. Well, they would go up then, would they not?

Mr. BARUCH. Yes, they would.

Senator CONNALLY. Well then, your statement that there would not be any influence in raising prices is not correct, is it?

Mr. BARUCH. Well, it is doubtful, because it did not happen in England, but as an arithmetical proposition you are right.

Senator CONNALLY. Well, that is what we are talking about.

Mr. BARUCH. But it is doubtful from the results; that it has not occurred.

Senator CONNALLY. Wait a minute. You say it has not raised prices in England?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. And that is because England is on the pound basis, which is paper money, is it not?

Mr. BARUCH. Yes, sir. It takes more shillings to buy gold.

Senator CONNALLY. To buy gold.

Mr. BARUCH. Yes.

Senator CONNALLY. Certainly. And in the world market the English prices of production have gone down, and the result is that she is out-selling us all over the world?

Mr. BARUCH. That is quite true in the export markets of the world.

Senator CONNALLY. In the export markets of the world. If England, instead of being on the paper standard had devaluated her pound at the present paper value of the pound, prices would have risen in the world markets, would they not?

Mr. BARUCH. If they had done what, Senator?

Senator CONNALLY. If England were now in the gold basis but had devaluated her pound at the same price that the pound is selling for, the paper pound is selling for, prices would increase in England?

Mr. BARUCH. Prices would be the same in gold value that they are to-day.

Senator CONNALLY. And the price would be in gold, the pound?

Mr. BARUCH. Yes.

Senator CONNALLY. The same would be true in our country?

Mr. BARUCH. We would have a better result in our country if we balanced our budget and had a gold standard.

Senator CONNALLY. Devaluating the gold dollar keeps you on the gold standard, no question about that.

Mr. BARUCH. Do you mean it keeps you on the gold standard if you devaluate the gold dollar?

Senator CONNALLY. We can take that up when we get to it. We can certainly suspend gold payments.

Mr. BARUCH. If you start talking about that you would not have a nickel's worth of gold in the Federal reserve system day after to-morrow.

Senator CONNALLY. If the Government did not pay it out it would.

Mr. BARUCH. It would have to pay that on demand.

Senator CONNALLY. Of course we have to pay it on demand.

Mr. BARUCH. If you start to tak about it or there is any threat to do so that would be the result.

Senator CONNALLY. Let us get back to these propositions about value.

Mr. BARUCH. Yes.

Senator CONNALLY. You say it would then raise the values 33⅓ per cent in dollars all over the country? Would it not?

Mr. BARUCH. Are you talking now about internal prices?

Senator CONNALLY. Yes.

Mr. BARUCH. Well, export prices in the new dollars would rise, and domestic prices are doubtful. It might have the effect that you say.

Senator CONNALLY. Well, do you not think that it would?

Mr. BARUCH. I have my doubts about it.

Senator CONNALLY. If the export prices would rise why would not the domestic prices rise?

Mr. BARUCH. No, these are export prices in new dollars.

Senator CONNALLY. I know. I am talking about export prices in new dollars.

Mr. BARUCH. And if they took enough out they would have that tendency to raise prices internally. And even, if they took enough out, Senator, they would rise above present gold prices.

Senator CONNALLY. All right. No matter what we take out, they will rise in proportion to what we take out, will they not?

Mr. BARUCH. Not unless you take no more out than you are taking out now.

Senator CONNALLY. All right. If export prices rise domestic prices will have to rise with them, will they not?

Mr. BARUCH. Only if you took enough. Yes; export prices.

Senator CONNALLY. I mean——

Mr. BARUCH. I see what you mean. If export prices rise in the new dollars they will rise inside?

Senator CONNALLY. Certainly.

Mr. BARUCH. I think that is probable; yes.

Senator CONNALLY. Is it not true?

Mr. BARUCH. They may not rise a great deal, Senator, but they may rise some.

Senator CONNALLY. If a man can get more abroad for a bale of cotton he is going to ship his cotton abroad, unless somebody paid him an equal price internally?

Mr. BARUCH. Yes.

Senator CONNALLY. So they will rise domestically and abroad, will they not?

Mr. BARUCH. Yes.

Senator CONNALLY. All right. You say among the results that we ought to obtain are those that would be obtained through the LaGuardia bill.

Mr. BARUCH. Through what?

Senator CONNALLY. The LaGuardia bill; that is a bankruptcy bill.

Mr. BARUCH. Well, I am talking about the principle of the LaGuardia bill, yes.

Senator CONNALLY. All right. Your plan there is to devaluate all these people that are owed money through the process of bankruptcy, is it not?

Mr. BARUCH. Yes.

Senator CONNALLY. What is the difference in devaluating them through the courts and devaluating the money in which they are to be paid? The effect is the same, is it not?

Mr. BARUCH. I do not know. I think it is very different, sir.

Senator CONNALLY. Very different?

Mr. BARUCH. Yes.

Senator CONNALLY. Well, you are depriving the creditor of something when you let the corporation——

Mr. BARUCH (interposing). I am depriving the creditor of something that he can not get anyhow.

Senator CONNALLY. Certainly. And that is what you are trying to do. The LaGuardia bill would authorize these big corporations and industrial concerns to seek refuge in the Federal courts and hold their creditors off their backs until they could effect a reorganization and a scaling down of their indebtedness. That is what is back of the LaGuardia bill, is it not?

Mr. BARUCH. It is a quickening of a process that is going to take place anyhow.

Senator CONNALLY. Well, is not that process going to take place with everybody if we do not do something?

Mr. BARUCH. If you want to go on the road to a place you had better go there right away.

Senator CONNALLY. I agree with you.

Mr. BARUCH. But the history of the world has shown this, that whenever we have taken that road we have had to come back and retrace our steps. I will admit, Senator, we have already gone very far on it, and the methods that have been adopted and carried on by the Treasury are not very different from those that have been already suggested.

Senator CONNALLY. All right. But the process that you propose now is to let corporations and industrial concerns scale their debts by taking refuge in the Federal courts and effecting reorganizations and pay less on the dollar that they owe. That is right, is it not? But you object to giving the benefit of that to everybody by devaluating the dollar and letting everybody have the advantage of that?

Mr. BARUCH. You are doing it by a different method.

Senator CONNALLY. Certainly, but it has the same result, has it not?

Mr. BARUCH. Well, there would be the same result, but not to everybody. The only person you are benefiting is the man that has a mortgage; he can not possibly get it and he is not entitled to it.

Senator CONNALLY. Why is he not? He has got a farm.

Mr. BARUCH. Well, yes; because he has bought something, a mortgage or loan, at an unwise time and at a price that is not fair.

Senator CONNALLY. That is why I say that it is fair to put this dollar down back to the commodity level and let the debtor pay that creditor in the same relative values as the debt was incurred, and that is your proposition, is it not?

Mr. BARUCH. My proposition under this natural process, yes.

Senator KING. Senator, will you pardon me just a moment?

Senator CONNALLY. Yes.

Senator KING. Is the LaGuardia bill limited to corporations?

Senator CONNALLY. No, I do not think so.

Senator KING. I think it is extended to farmers as well as the individuals, so it is not for the benefit of corporations only, but it is for the liquidation, according to the plan of the bill, of the indebtedness of individuals as well as corporations.

Senator CONNALLY. Well, everybody knows, of course, that they would put a little tail on for individuals, but you know an individual when he goes bankrupt comes out with nothing. A corporation that goes into bankruptcy and reorganizes and scales down its debts, its stockholders have something left.

Mr. BARUCH. I do not know the details. I am talking of the principle of it, and that is to permit debtors and creditors to get together quickly on some agreement.

Senator CONNALLY. You and I are not really in disagreement as to results, but we are favoring different methods of reaching the results. In the farm mortgage situation you say that your plan would be to make them take 60 per cent?

Mr. BARUCH. No, not make them.

Senator CONNALLY. Well, but you are going to persuade them?

Mr. BARUCH. Here is what I meant by this. That a mortgagee has got a mortgage for $10,000. He can not foreclose it. If he does go through and forecloses or sells out he is in the farming business and the farmers are out on the highway. So I propose that, and I put a imit of 60 per cent, that if the Government's credit is going to be used you are going to give the mortgagee something that he can not get now, and he can put in his books, and have a value.

Senator CONNALLY. You propose that the Government will issue its own bonds and take up farm mortgages at 60 per cent of their value?

Mr. BARUCH. I am just taking that as a figure.

Senator CONNALLY. What is the difference between doing that and revaluing the dollar at 60 per cent and letting them pay their mortgages?

Mr. BARUCH. This is a voluntary agreement between the debtor and the creditor, and the other is not, when you begin to revalue the dollar.

Senator CONNALLY. Your plan would work this way: A man that had a gold mortgage that was worth 100 per cent would not agree to this, and he would get his 100 per cent. The fellow that had a mortgage that was not worth 100 per cent would agree, and get the benefit of this.

Mr. BARUCH. The man that was running the thing would use wisdom in running it. I would assume some intelligence would be used.

Senator CONNALLY. But a man that had a bond worth 100 per cent would not take 60 per cent?

Mr. BARUCH. No.

Senator CONNALLY. Or a mortgage?

Mr. BARUCH. No.

Senator CONNALLY. He would get his 100 per cent?

Mr. BARUCH. Yes.

Senator CONNALLY. A man that had a bond worth 20 per cent would be glad to exchange it for a Government bond and get 60 per cent?

Mr. BARUCH. Or whatever it would be worth. I am sure, Senator, if anybody of intelligence were running that they would use wisdom in running it.

Senator CONNALLY. You have already indicated that the Reconstruction Finance Corporation has made a fizzle and used a lot of guesswork, and it is supposed to have intelligence.

I say, in your statement, Mr. Baruch——

Mr. BARUCH. I heard you the first time, Senator.

Senator CONNALLY. You heard me the first time?

Mr. BARUCH. It is not necessary for you to make a comment upon that, I do not think.

Senator CONNALLY. Well, good natured.

Mr. BARUCH. Certainly; I understand that, Senator.

Senator CONNALLY. You talked about revaluation of the dollar, cutting down the value of it, would ruin all the insurance companies, the policies, did you not, a while ago?

Mr. BARUCH. I said that it would affect the holdings of every one of them, yes.

Senator CONNALLY. How about your cutting down farm mortgages 60 per cent, in which all the life insurance companies have got their money invested?

Mr. BARUCH. There is a very great difference, Senator.

Senator CONNALLY. Would that not impair them——

Mr. BARUCH. There is a loss there already in that farm mortgage.

Senator CONNALLY. To be sure, but if the farm mortgage holder has got a mortgage that he can not collect for 100 per cent, and by devaluating the dollar you let the debtor pay 60 cents on the dollar, what is the difference between that and your plan?

Mr. BARUCH. I will tell you exactly. It is just as plain to me as it can be, Senator. It apparently is not plain to you.

Senator CONNALLY. No. I am pretty dumb.

Mr. BARUCH. No, you are not. We will take an insurance company which has got a mortgage now of $10,000, and it is an unwise one; they can keep it if they want to, but if they go to sell out they will be in the farm business. We will provide a currency in the form of all these mortgages, something that they can not possibly get themselves, and it is a voluntary thing with them, and they are only taking something which is already wiped off from the market. Insurance companies have got those loans, whatever they are, and we can talk about them as much as we want, they will only buy just so much in the markets of the world. But those who own the things will buy less in the markets of the world.

Senator CONNALLY. Well, an ounce of gold has an international value, has it not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. And it means the same everywhere?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. Well, if you cut down the content of the gold dollar by two-thirds inevitably in gold the values would have to rise, would they not?

Mr. BARUCH. Yes; but you are only going to get two-thirds in the value of the things that you buy.

Senator CONNALLY. That is true, but answer my question: Will it rise or go down? Will the prices rise? They will rise, will they not?

Mr. BARUCH. Yes; they will rise, but they will rise to the extent so that that new dollar will not buy any more things than it did before.

Senator CONNALLY. It will pay more on your farm mortgages and more on your debts, will it not?

Mr. BARUCH. That it will do.

Senator CONNALLY. Yes.

Mr. BARUCH. Senator, without a doubt a farmer who owes money and has got something to sell will be advantaged.

Senator CONNALLY. Certainly.

Mr. BARUCH. In the selling side. There is no doubt about that. You can do even better for him by printing paper.

Senator CONNALLY. Well, let us stay on the gold a while now.

Mr. BARUCH. All right.

Senator CONNALLY. I am not advocating paper.

Mr. BARUCH. I understand that.

Senator CONNALLY. I am talking about gold.

Mr. BARUCH. Yes.

Senator CONNALLY. I am talking about something that you folks understand in New York—gold.

Senator KING. Well, Senator, does not your proposition contemplate that notwithstanding an obligation may be to pay so many grains of gold according to the present weight and fineness, that Congress would have the power to modify or rescind that contract and compel the contracting parties to change the contract and accept less grains of gold?

Mr. BARUCH. Well, that is a legal question.

Senator KING. Well, it is a constitutional question.

Senator CONNALLY. Mr. Baruch is not a lawyer and I do not want to get into a legal discussion with him.

Mr. BARUCH. I think I can answer that.

Senator CONNALLY. All right.

Mr. BARUCH. The question is this: If you could find a legal method or a scheme whereby if a man demanded payment under a contract which was payable in gold, to tax him a certain percentage. In that way you could wipe off that debt.

Senator CONNALLY. Your idea then is that by the taxing power we could stop that?

Mr. BARUCH. I do not know whether it is constitutional or not, but you could do that.

Senator CONNALLY. I submit that to the Senator from Utah.

Senator GORE. You have to do it by the rule of apportionment.

Mr. BARUCH. I say that is the scheme. I do not know whether it is constitutional or not.

Senator CONNALLY. Senator Gore, you wish to ask something?

Senator GORE. I just remarked that it would have to be done by the rule of apportionment, if done.

Senator CONNALLY. But we would treat them all alike, of course.

Senator GORE. It would have to be apportioned among the States.

Senator CONNALLY. Let us stay on this gold question, Mr. Baruch. You are talking about gold. And you know all about it, I understand.

Senator REED. Mr. chairman, lest that suggestion go by unchallenged—it seems to me very clear that the Supreme Court has held that our taxing power can not be used to take away from a vested right of that sort. They held it in the case of the application of income tax to judicial salaries, for example. I am quite sure that they would hold the same thing if we tried to tax these gold-standard contracts.

Senator CONNALLY. Mr. chairman, I am not suggesting that. I am not going to argue it with Mr. Baruch or the Senator from Pennsylvania either at this time. We are trying to find out the economic effects of this thing right now, and of course if it comes up to the legal question that is another proposition. I might suggest, however, that Senators who are interested might read the legal tender cases in which the Supreme Court held that contracts made payable in dollars at the time when there were no other kinds of dollars except gold and silver dollars, were subsequently under acts of Congress made payable in paper money that had no redeemability whatever, but were merely a promise of the Government to pay some time in the future. That might be persuasive.

Senator BARKLEY. But that would not have any bearing on the actual value of a smaller gold dollar in comparison with one bigger.

Senator GORE. The Supreme Court held that contracts made payable in gold dollars are payable in gold dollars.

Senator CONNALLY. It does not say how big.

Senator GORE. Of the same standard weight and fineness.

Mr. BARUCH. Gold dollars of the present weight and fineness, I believe.

Senator CONNALLY. That is why I did not want to discuss this point at this time, because I knew it would provoke a good deal of discussion among us, and I did not want to talk about the legal part of it at this time because I did not think Mr. Baruch cared to engage in that. That can be raised when we come to it. There is no case in which the Supreme Court has ever handed down a decision where Congress undertook to fix or regulate the weight of money. Consequently the cases that the Senators are referring to are purely dicta.

You said a while ago in your statement, Mr. Baruch, that reducing the value, or reducing the amount of gold in the dollar would not increase the buying power of our people. It would in the terms of new dollars, would it not?

Mr. BARUCH. Well, you would have more dollars to buy things with, and if the things did not rise why you would be able to buy more things. If they rose in proportion you would be only able to buy the same amount of things, with the exception of one man, the farmer who has a debt, or any man who has a debt and produces something to sell.

Senator CONNALLY. Certainly. That is the fellow I am looking at now.

Mr. BARUCH. I believe you are right.

Senator CONNALLY. But it is not confined to the farmer. It applies to the gentlemen in New York that owe debts too, who would have the advantage of it.

Mr. BARUCH. If they owe money they would be in clover.

Senator CONNALLY. Everybody owes debts, do they not?

Mr. BARUCH. Or the fellow who has many obligations.

Senator CONNALLY. Do you know anybody that has got any actual gold now?

Mr. BARUCH. Somebody must have it.

Senator CONNALLY. But you do not know where it is?

Mr. BARUCH. No.

Senator CONNALLY. Let me ask you this, Mr. Baruch: You talk about salaries and wages. Salaries are not fixed by law, are they?

Mr. BARUCH. No, sir.

Senator CONNALLY. They go up or down according to prosperity, do they not?

Mr. BARUCH. They go up slower and down faster.

Senator CONNALLY. Well, do they go up or not with prosperity?

Mr. BARUCH. They do, sir.

Senator CONNALLY. They go up with prosperity and come down with hard times, do they not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. During this depression salaries of all kinds have been radically decreased, have they not?

Mr. BARUCH. Right, sir.

Senator CONNALLY. Why? Not because we passed any law, but because times were hard and people could not make it. Now anything that will have a tendency to improve business and improve activity will have a tendency to raise wages and raise salaries, will it not?

Mr. BARUCH. Unquestionably.

Senator CONNALLY. All right.

Mr. BARUCH. If there is enough confidence it will improve things.

Senator CONNALLY. Did you see a statement a few days ago by a professor of McGill University advocating the revaluation of the Canadian dollar, which is exactly our dollar, to 70 cents in the dollar? Have you had that called to your attention?

Mr. BARUCH. No, sir.

Senator CONNALLY. He is the economist in McGill University. I do not recall his name for the moment. I have his name in my office.

Mr. BARUCH. There is a heap of them around, Senator.

Senator CONNALLY. What is that?

Mr. BARUCH. There is a heap of them around. I do not mean to detract from this gentelman, nor do I want to put my judgment up against his.

Senator CONNALLY. You said in your testimony here that we had to scale down debts to get back to prosperity.

Mr. BARUCH. Yes.

Senator CONNALLY. How are you going to scale them down any better way than to get money so people can pay them? How are you going to force people to scale debt?

Mr. BARUCH. They will come down themselves, Senator. They are coming down every day. And all that I am suggesting is not to interfere with them by any process of law, but in anything that is done a machinery set up that will aid them and accelerate them, not extend them.

Senator CONNALLY. You will admit that since 1929 the price of practically every commodity in the United States measured in terms of gold has declined radically, will you not? That is true of your securities in New York, is it not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. That is true of your farm mortgages, is it not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. That is true of railroads, is it not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. That is true of the farmers' prices, is it not?

Mr. BARUCH. Yes, sir. I think the farmers started before that, but they did decline since 1929; that is quite correct, yes, sir.

Senator CONNALLY. Is it not true that the effect of what you advocate and most other people advocate is to devise some legislative process whereby you lift these values back up into the neighborhood of where they were on a gold basis? If that be true, why would it not be fairer and more reasonable instead of a dozen processes of raising up the railroads, of raising up the farmer and raising up everybody—why would it not be better to have one process, to bring the gold dollar down and put it on a commodity level with other commodities?

Mr. BARUCH. If I thought you could do it that way I would say "God bless you; go to it!"

Senator CONNALLY. If it can be done that way will you favor it?

Mr. BARUCH. Oh, yes; if it can be done that way, yes.

Senator CONNALLY. Well, if we can work out a plan then whereby we can actually devaluate the dollar and make it level with other commodities you would favor it?

Mr. BARUCH. Yes; if you can do it I certainly would.

Senator CONNALLY. Well, we can not do it unless we try, can we?

Mr. BARUCH. No, sir.

Senator REED. Will you permit me to ask a question here?

Mr. BARUCH. Yes, sir.

Senator REED. Mr. Baruch, England made her decision to go off the gold standard between Saturday afternoon and Monday morning in September, 1931. The people woke up on Monday morning to find that they were off the gold standard. There was not an opportunity for a panic. But in this country we would require congressional action to authorize such a step to be taken. And that congressional action could scarcely be accomplished in less than a week. What would happen in commerce during that week?

Mr. BARUCH. Well, what would happen is there would not be a nickel's worth of gold left in the Federal reserve system to get behind the devalued dollar. I said to the Senator if he could do it it is all right, but I think that if this were discussed, if it was even thought—I mean if there were discussions today about doing it, that you would have a run on the gold. Of course if there were such a power somewhere to say this afternoon that before the opening of the Federal reserve system they would take that gold and impound it and get this thing rearranged as the Senator suggests, that might be another thing. But the mere discussion of it I think would destroy the possibility of anything being accomplished.

Senator REED. In other words, we would have a panic and an outburst of hoarding that might take every particle of gold available?

Mr. BARUCH. Yes; or as an old negro is said to have remarked on an occasion: If you do that you aint seen nothing yet.

Senator CONNALLY. Senator Reed, are you going to examine Mr. Baruch at length? I was just about through with my questions.

Senator REED. I beg pardon, Senator Connally. You may go ahead. But I am not able to come back this afternoon, and I have one or two questions I should like to put to Mr. Baruch. However, I won't do it if you desire to go ahead.

Senator CONNALLY. Oh, no; I just thought if you had a number of questions to propound maybe I had better conclude mine first.

Senator REED. Certainly.

Senator LA FOLLETTE. Might I ask you, Senator Reed, whether you do not overlook certain wartime statutes, enacted to protect certain gold reserves of the United States, which have not been repealed so far as I know.

Senator REED. Oh, so far as that is concerned, under the wartime laws we could prohibit the export of gold. But I do not believe they gave anyone power to suspend specie payment.

Senator LA FOLLETTE. I have not looked at it recently. And it is only a vague recollection I have, that there were certain broad statutory powers given to the President during the World War, which even went so far as to forbid the issuance of gold, to prohibit transactions in gold, without a license issued by the executive branch of the Government. I may be wrong about that, but I wanted to inject that thought into the discussion.

Mr. BARUCH. To carry out that thought, we also made it so we could not export gold during war time. But I do not know whether that could be done in peace time.

Senator REED. One more question—and I am responsible for the unfinished business on the floor, and we are in recess, so that I must be in the Senate at 12 o'clock. Mr. Baruch, there would be a row between lawyers, evidently, as to whether gold-standard contracts were or were not subject to impairment by congressional action. In other words, there would likely be a lawsuit as to whether the Government's promise in its bonds to pay in gold coin of the present standard of value could be changed, whether that obliged the Federal Government to pay, as its certificates come due, in dollars of the present value or in dollars of depreciated value. And it might take two or three years to settle that litigation finally. What would happen to Government credit in the meantime?

Mr. BARUCH. I do not want to say, Senator Reed. You know what would happen.

Senator REED. Well, I think that is a factor that ought to be borne in mind.

Mr. BARUCH. In other words, your credit would disappear.

Senator REED. So that we have these two perils to apprehend: First, an instant hoarding of gold the moment the country thought Congress was seriously considering this scheme; and, second, a disappearance of Government credit, certainly during that period when the value of its promise remained in doubt.

Mr. BARUCH. Unquestionably.

Senator REED. I thank you.

Senator WATSON (presiding). Senator King, and other members of the committee, do you want to continue longer? It is now 12 o'clock.

Senator CONNALLY. I will be through in a minute.

Senator WATSON (presiding). All right.

Senator CONNALLY. Nobody is proposing, so far as I know at least, repudiating the Federal debt, I will say to the Senator from Pennsylvania. In discussing this matter in the Senate I distinctly said I had no disposition to interfere with Government bonds already contracted; in fact, I doubt if we could do it legally because it is the Government's own act. But——

Mr. BARUCH (interposing). Your idea, Senator Connally, as I understand——

Senator CONNALLY. How is that?

Mr. BARUCH. Let me get that clear, because it has a bearing upon the whole situation. And I will say that——

Senator CONNALLY (continuing). As to the outstanding Government bonds, payable in gold at the present standard of weight and fineness, I would not advocate repudiating those bonds.

Mr. BARUCH. But what would happen to corporation bonds which have the equivalent provision written into them, of being payable in gold coin of the then standard of weight and fineness?

Senator CONNALLY. That is what I waived a while ago. I do not want to get into that legal discussion. But the contention is that under the constitutional power of Congress to coin mere money and to regulate the value thereof.

Mr. BARUCH. They have that right.

Senator CONNALLY. And what does that power mean but to move the value of the dollar? It does not mean to stand still forever. It means to regulate it and change it from time to time. My contention is that any contract that calls for dollars as such can not be qualified by any such clause as present weight and fineness, because you are dealing in dollars and the Congress has the right to make those payable in gold dollars of a new value. As to commodity contracts, if you have a contract calling for so many ounces of gold it is like so many bales of cotton. But I do not want to argue that.

Mr. BARUCH. That is a very important part of it.

Senator CONNALLY. To be sure, that is an important part. But you are not an attorney, Mr. Baruch, and I am a very poor one, so I do not think we could get very far on that. But you are afraid somebody will withdraw all the gold, that they will hoard gold. As far as that is concerned they are hoarding gold to-day, aren't they?

Mr. BARUCH. Hoarding money and credit.

Senator CONNELLY. It could not be hoarded much more than is being done now, could it?

Mr. BARUCH. Oh, yes.

Senator CONNALLY. It could?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. All right. The Secretary of the Treasury is a member of the President's Cabinet, and is subject to the President's orders, is he not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. If the President ordered the Secretary of the Treasury, as has been done in similar cases in the past, to suspend paying any gold out of the Treasury, do you suppose it would so happen that he could not stop it instantly?

Mr. BARUCH. If he were bold enough to try to do that, and could get the Congress to back him up.

Senator CONNALLY. But you say the present is an emergency that is greater than war. I do not expect to see it cured by Christian Science or pink pills. But the President could stop the payment over night of gold dollars; the Secretary of the Treasury could suspend the paying of gold dollars over night. And you say that something radical must be done.

Mr. BARUCH. Yes, sir; but——

Senator CONNALLY (continuing). That is all that I am proposing. One other question and I am through: Mr. Baruch, you are talking about reducing farm mortgages 60 per cent voluntarily. I just want to emphasize what I said a while ago: Under that plan a man who had a farm mortgage that is worth 100 cents would get it all.

Mr. BARUCH. But it is not worth 100 cents, and——

Senator CONNALLY (continuing). It may be. But to put a hypothetical case, if a man had a farm mortgage that was worth 100 cents on the dollar he would get it all.

Mr. BARUCH. Yes, sir.

Senator CONNALLY. And if it was worth only 60 cents he might not get more.

Mr. BARUCH. He might not get even that much. He might only get 10 cents on the dollar, and in some cases even less than that.

Senator CONNALLY. That would all have to be voluntary.

Mr. BARUCH. Yes, sir.

Senator CONNALLY. That is the case now, and we don't need any law to do that.

Mr. BARUCH. You do not need any law, but I am trying to show you——

Senator CONNALLY (continuing). If you have a compromise that can be done now.

Mr. BARUCH. But I am trying to provide something that will induce mortgagees to take a new amount of money.

Senator CONNALLY. I believe that is all.

Senator BARKLEY. I should like to ask a question or two along the line of this gold content proposition.

Senator WALSH of Massachusetts. I do not believe we can conclude with Mr. Baruch this morning.

Senator WATSON (presiding). Is it the desire of the committee to recess at this time?

Mr. BARUCH. Might I make one statement before you recess, and that is this: I think too much emphasis on the gold standard is laid upon its value, and not enough on what I think is the more important one, and that is the restraining influence it has upon the issuing of money and of credit.

Senator CONNALLY. My plan is just as much a gold standard as yours. The only difference is in the amount of gold content, isn't it?

Mr. BARUCH. If you can approach this proposition——

Senator WATSON. (presiding). Well, the committee desires to rise at this time. Mr. Baruch, we will ask you to come back this afternoon. The committee will now rise until 2 o'clock this afternoon.

(Thereupon, at 12.03 p. m., Monday, February 13, 1933, the committee recessed until 2 o'clock p. m., the same day.)

AFTER RECESS

The committee resumed at 2 o'clock p. m. at the expiration of the recess.

The CHAIRMAN. The committee will resume. I was not here at the recess, Mr. Baruch. Had you concluded your statement?

Mr. BARUCH. Oh, yes; Mr. Chairman. But I understood some Senators wished to ask me some questions.

The CHAIRMAN. All right.

**STATEMENT OF HON. B. M. BARUCH, NEW YORK CITY—Resumed**

Senator SHORTRIDGE. Mr. Baruch, I did not have the benefit of hearing your testimony given this morning. You may have covered and considered this thought. I will put the question in this form: In seeking for a solution of what might be called the farm problem may we assume that you have had in mind the debtor as well as the creditor

Mr. BARUCH. Are you talking now about the matter of debt?

Senator SHORTRIDGE. Certainly.

Mr. BARUCH. Yes; I did.

Senator SHORTRIDGE. The thought has been suggested to me many times that a local savings bank may be the debtor, and, we will say, a farmer is the creditor.

Mr. BARUCH. Certainly.

Senator SHORTRIDGE. And we must consider the rights and the necessities of both.

Mr. BARUCH. That is quite right, sir.

Senator SHORTRIDGE. Both the debtor and the creditor must be considered.

Mr. BARUCH. Yes, sir. But the only thing I suggested this morning, Senator Shortridge, was this: That to try to anticipate the inevitable we must have in mind that the value of the mortgage has lessened. There is no salability for it. And I suggested a new form of security, guaranteed by the Government, should be exchanged, on some basis satisfactory to mortgagor and mortgagee. It does not remove the man's right to foreclose, and if he wants to foreclose, if he wants to take the property, he can do so.

Senator SHORTRIDGE. Of course, it is the depressed price of farm products that has caused the depression, so to speak, in the value of a given mortgage.

Mr. BARUCH. Quite right, sir.

Senator SHORTRIDGE. And a rise in farm products, a return to prosperity in the matter of farm prices, would of course restore the mortgage, or presumably might do so.

Mr. BARUCH. It would have that tendency at least.

Senator SHORTRIDGE. The savings bank I take it generally speaking contains the moneys of the people roundabout.

Mr. BARUCH. Of you and I and everybody.

Senator SHORTRIDGE. Yes. Very little from me, but that is all that I wished to ask. I merely wanted to bring that out.

The CHAIRMAN. Mr. Baruch, I left before you got through at the morning session. Taking those farm mortgages, or home mortgages, and having the Government of the United States advance 60 per cent of the mortgage, would the Government's mortgage be a first lien as against the original holder's 40 per cent?

Mr. BARUCH. Yes, sir.

The CHAIRMAN. You did not say so in your testimony this morning, and I merely wanted to bring that out.

Mr. BARUCH. All right.

Senator HARRISON. Mr. Baruch, you laid great stress on this country balancing its budget.

Mr. BARUCH. Yes, sir.

Senator HARRISON. And stated, of course, the best way to do it is by cutting down expenditures and coming within a $3,000,000,000 range if possible. Then in further speaking of the matter you talked of balancing the budgets of other countries, and of stabilizing currencies, exchange, and so forth. Is it your opinion that if England, France, and other countries, that are not to-day upon balanced budgets, or maybe not to the extent that we are, should really soundly balance their budgets, that that would have any very appreciable effect upon the stabilization of exchanges?

Mr. BARUCH. Unquestionably, provided they would continue to be balanced.

Senator HARRISON. Yes.

Mr. BARUCH. But that is the foundation stone of the stabilization of exchanges, that the money of any particular country can only remain good as long as it takes in more than it spends, or it has the credit to go out and borrow the difference. When that ceases and the budget becomes unbalanced, then much of the coin of to-day becomes the chaff of to-morrow.

The CHAIRMAN. Mr. Baruch, the answer you have just given to the Senator from Mississippi, does that take into consideration the fact that some countries are off the gold standard?

Mr. BARUCH. Well, the only way that they could get back on the gold standard would be to balance their budgets.

The CHAIRMAN. Yes. But I wanted to know your views on this. Unless they get back on the gold standard could they arrive at the conclusions that you suggested in your answer to the Senator from Mississippi.

Mr. BARUCH. No, sir.

Senator SHORTRIDGE. Frankly, I do not understand that answer. Suppose a given nation is on a silver basis, or on a bimetal basis, couldn't they balance their budget? Couldn't such a nation balance its budget if it used both gold and silver at a certain ratio?

Mr. BARUCH. I do not believe any particular nation can have both, because history has shown that the Gresham law works to the end that cheap money drives out sound money.

Senator SHORTRIDGE. What is the current money of India to-day?

Mr. BARUCH. India is supposed to be on the gold basis.

Senator KING. On a gold exchange basis to-day.

Mr. BARUCH. Yes. And you doubtless know what the situation is there.

The CHAIRMAN. India uses more silver for ordinary circulation than any other country according to population.

Mr. BARUCH. I think that India's position is a little different in this respect. It is hard to get them gold-minded after all the centuries of having been silver-minded. It is a rather difficult problem. I think it is not quite on all fours with other white races. For instance, your question, and I do not know whether I made myself clear on this question or not, assumes that you propose the Government will advance 60 per cent of the money, yes. But what I meant was mortgages. My idea is to prevent the Government going out and selling anything, but just exchanging this new bond for the old mortgage. You have that quite clear, have you?

The CHAIRMAN. Yes.

Senator KING. Mr. Baruch, in your testimony this morning you incidentally mentioned silver. Have you any suggestions to make as to the course which might safely and wisely be taken with respect to the rehabilitation of silver other than an international agreement, which might result in the stabilization of silver at a certain ratio with reference to gold?

Mr. BARUCH. My theory is that it ought to be done, but I do not consider myself an expert on the subject; I think it ought to be done through some international agreement, especially if you were to take some particular basis like has been discussed.

Senator KING. What do you think would be the effect of a measure something like this: Authorizing the Secretary of the Treasury to purchase, say, 5 per cent of our gold reserves in silver. That is to say, in its present value, going into the market and buying silver up to the amount of 5 per cent of our gold reserves held by the Federal reserve banks, and then for a law to be enacted authorizing the utilization of that 5 per cent as a part of our metallic reserves. So that silver might be given a sort of primary monetary status to the extent of 5 per cent of our reserves. And may I say before you answer that question, if you will permit me, the view of some persons who have given attention to this subject is that it would, first, relieve the tension of gold; and, secondly, that it would direct attention to the importance of silver as an accretion to our gold reserve' to our metallic or primary basis; and, third, that it would invite other nations to give it consideration, or that the psychological effect would be important in that other nations would say: If the United States as a gold-standard nation is willing to use silver as a part of her metallic reserves may we not also do so, and thus relieve the tension on gold in other countries, increase the demand for silver, and thus increase the price of silver, until as it goes higher and higher, it would lead to a period when the nations of the world would with greater willingness establish a ratio and make silver a primary money.

Mr. BARUCH. I should like to answer those questions seriatim if I may.

Senator KING. All right.

Mr. BARUCH. Your first question would be, what would be the effect of a purchase of 5 per cent of our gold reserves in silver?

Senator KING. Issuing silver certificates for the purchase, of course.

Mr. BARUCH. But not at a ratio, but at whatever the price may be.

Senator KING. Yes.

Mr. BARUCH. Of course, that is sounder than some ratio. Then it would always depend on how far you would go. It is just like the other things we are discussing, the trouble is when you start out on the road they never stop. And it would depend upon the condition of our Federal Treasury more than anything else. When in sound condition it could stand almost anything, or at least could stand a good deal. It is just like the edging of the camel's nose into the door; if a small amount it would probably have no effect, but at the present I think it would have a bad effect. My thoughts have always been running along the line that we ought to do it through some international agreement. I think we ought to go at it very gently and wisely, because with the great hoards of silver, and every Chinaman has a shoe of silver, when we come to the place where there is no international proportionate share we might became the international fat boy.

Senator KING. There is one other question I should like to ask you in view of your testimony of this morning: Do you see any real ground for analogy or comparison in the matter of issuing bonds, between the condition during the World War and the present time? You will recall that when we issued enormous quantities of bonds and unloaded them upon the public. They were used as the basis of paper credit or of bank credits, and billions of dollars of bank credit were thus made available for everyone. That resulted in increased prices of all commodities, labor, and so forth. Suppose the same policy were pursued now, what about it?

Mr. BARUCH. Well, I think I referred to what I called the evils of that inflationary method. But you had something then that we do not have now. The condition of war meant that there was a demand for everything. You had a buyer for everything. There was no question then of how much there was but how little there was.

Senator KING. What I wanted you to explain, Mr. Baruch, is this: That there could not be a perfect comparison between the situation then and now.

Mr. BARUCH. No, sir.

Senator SHORTRIDGE. But the bonds that were issued during the war period are good to-day.

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. Uncle Sam isn't talking about repudiating those bonds.

Mr. BARUCH. Not that I have heard.

Senator SHORTRIDGE. Nor of canceling them.

Mr. BARUCH. No, sir.

Senator KING. But the Government could issue too many bonds.

Mr. BARUCH. But the Senator did not ask me that question. I kept off that question. I wanted to stick to the question in making my answer.

Senator KING. This morning you made that very clear. But there might come a time when a superabundant issue of bonds might mean a different condition.

Mr. BARUCH. Yes; and I think Secretary of the Treasury Mills made that clear.

Senator BARKLEY. Mr. Baruch, I should like to get back to your discussion of this morning of the so-called inflation, with special reference to the revaluation of gold. My association with money has not been sufficient to make me very intimate with it except theoretically. But somebody is responsible for the fact that I am getting about a hundred letters a day, and I think in the last two weeks I have received about 1,200 letters, almost all from one community, urging a revaluation of the gold ounce, the gold dollar, and so forth. It has rather whetted my appetite to learn more about this so-called remedy, if it is that, and I am not using the term "so-called" as any reflection on it. I want to find out if it is to be wisely considered for the purpose of helping us. I understand that we have now in circulation about a billion dollars more than we had in 1929, in money. Theoretically it is in circulation, although as a matter of fact it is not. But the total amount of money outstanding——

Mr. BARUCH (interposing). Do you mean, Senator Barkley——

The CHAIRMAN (interposing). Senator Barkley, do you mean gold?

Senator BARKLEY. No. I am talking about money now.

Mr. BARUCH. Do you men Federal reserve and bank notes?

Senator BARKLEY. I mean all kinds of circulation at this time amounts to about $5,700,000,000, and in 1929 I think it was about $4,700,000,000.

Mr. BARUCH. Yes, sir.

Senator BARKLEY. So that we have now a billion dollars more in circulation than we had in 1929. Of course, that money is not actually in circulation in the sense that it is working all the time, and working as you call it. There is a lot of it in banks, and some of it is hoarded in lock boxes and one place and another. I saw the other day where more than 50 per cent of all the bank deposits, outside of savings banks, was now in the vaults of 100 banks of the United States. If we were to take all the gold that we have, including all the gold dollars, the gold eagles and $20 gold pieces and all the bullion that we have, and coin it into money, it would amount to about $4,000,000,000 under the present valuation and the present size of the gold dollar. If we were to revalue that gold, to evaluate it or revaluate it, so as to coin about a fourth as much more——

Mr. BARUCH. About a third as much more.

Senator BARKLEY. Well, if you reduce it 25 per cent.

Mr. BARUCH. You would then have 1.33.

Senator BARKLEY. So that instead of having $4,000,000,000 gold actually now in the present gold dollar, say, we would have $5,000,000,000.

Mr. BARUCH. It would then be $5,300,000,000.

Senator BARKLEY. And if everybody who had any gold dollars would have to turn them in to the mint and have them melted into bullion and recoined into this new dollar, we would have a billion dollars more of them after we got them out than we have now. But we would not have any more gold. We would have the same amount of gold that we have now. Under the Federal reserve act and under the Glass-Steagall bill which we passed a year or so ago, I am informed there is already the basis for an increase in our circulating medium of about $4,000,000,000 which is not used now, or is not called for because of lack of demand, the banks won't loan money in the present state of confidence. Now, if we were to take all this gold and reduce the size of the dollar, and coin out of the present supply a billion dollars more than we have now, would the tendency be, so long as there is the same lack of confidence and the same lack of business demand that there is at present, is it probable that that extra billion dollars would find its way to the same place where the money now is, in hiding, either in banks or in vaults or in socks or wherever it is, or would there be an increase in the amount of money actually in circulation?

Mr. BARUCH. Your question is, whether if instead of a reserve of $4,000,000,000 we would have a reserve of $5,300,000,000 against currency, and therefore really a larger percentage of gold against the circulating medium, that would have an effect upon prices?

Senator BARKLEY. What effect would it have upon the workability of the money, the actual circulation of the money in business, which is necessary in order to expand business?

Mr. BARUCH. It would depend first of all whether people would have confidence then in the dollar and in the Government. If they have confidence, they will proceed to invest it in some enterprise; but if they haven't got any more confidence then than they have now, they wouldn't invest it. A mere increase of the medium in my opinion won't do anything.

Senator BARKLEY. That is the thing that has worried me about all these remedies. If we have a billion dollars more in circulation now than in 1929, when everything was booming, but the most of that money has been withdrawn from actual use because of lack of confidence, won't the same thing happen to any additional amount that we might either coin or print?

Mr. BARUCH. Well, certain things will take place. For instance, as Senator Connally brought out this morning, a man who is in debt, like the farmer, and has something to sell, he will benefit. But you must remember ——

Senator BARKLEY (interposing). He will benefit in the sale of his wheat, for instance.

Mr. BARUCH. Yes. And he can pay off his mortgage, perhaps, and he will then be free of his mortgage.

Senator BARKLEY. Well, let us assume that a farmer has 1,000 bushels of wheat now, and that it is worth a dollar a bushel, which it is not, but let us, for the sake of the argument consider that price. He will sell that 1,000 bushels of wheat and get $1,000 in the shape of the present dollar. But suppose we reduce the amount of gold in a dollar, so that instead of getting $1,000, he will get $1,250. When he turns around to use that $1,250, instead of $1,000, to buy machinery or fertilizer or anything else for which he must pay money, has he obtained really any benefit from the transaction? Doesn't he have to pay more dollars for what he buys than under the present situation? So in the long run has he really been benefited?

Mr. BARUCH. I think in the long run he will be benefited if he gets more dollars for his stuff, unless his mortgage is made payable in gold of the present weight and fineness and that can be enforced. But answering the other part of your question, the trouble is that it will not take effect and cause the rise in prices hoped for, unless there is a loss of confidence in the dollar, and then you get all the evils——

Senator BARKLEY (interposing). I know, but suppose there is no loss of confidence in the dollar. This remedy has got to work both ways if it works at all.

Mr. BARUCH. If people will believe that they won't repeat this performance, and if you still have your gold reserve, which we take for granted, I can not see any great evil effect from it. But I think you will be ruined before you get into it.

Senator BARKLEY. Probably you did not get my point. Leave out the question of debt for the moment. I realize if a farmer has 1,000 bushels of wheat, and instead of getting $1,000 for it he can get $1,250, and he can pay off $1,250 of debts with that $1,250, whereas he could only have paid $1,000 of his $1,250 debt before, he would be benefited. But laying aside any question of debt, and assuming that he is going to take these new dollars and exchange them for something that he has to buy, what about that?

Mr. BARUCH. If his wheat goes up then other things will go up.

Senator BARKLEY. Exactly. He does not get any more if he takes his $1,250 and buys something that the original $1,000 would buy.

Mr. BARUCH. No. The only question is, if they can go up together, then all right. But if they do not, and for instance take the matter of wages, then he is in a bad way.

Senator BARKLEY. But you can not figure that a change in the value of the dollar would produce an increase in the price of two or three things without going all the way along the line.

Mr. BARUCH. No, sir.

Senator BARKLEY. So that the question is whether after the transaction has occurred, on the theory as they say on the stock market, for the long pull, the people at large have been benefited.

Mr. BARUCH. I do not think so.

The CHAIRMAN. And if it would work with 10 per cent it ought to work with 50 per cent.

Senator BARKLEY. Mr. Baruch, in your suggestion of a farm bill a while ago I think you said, and we were talking about a so-called moratorium or stopping of foreclosures as I believe it was under your suggestion, would there be any encouragement in your plan if it were carried out, to those who now hold mortgages and are not foreclosing because there is nobody to buy, and because they do not want themselves to buy and take over land, would your scheme produce such a situation as would make a lot of mortgagees feel that it might run the value of land up and therefore they would go ahead and foreclose and buy the land in during this 2-year period or any other period, in the hope that they might sell at a profit later on?

Mr. BARUCH. I think it would have a tendency to stabilize farm values because there would be some value placed upon it. But it would not be all of one value, but a value depending upon the assessed valuation at the time, and other things that would come into the revaluation of that mortgage.

Senator BARKLEY. Of course, an eagerness of somebody to buy that farm, even the mortgagee, might tend to elevate prices generally above the present value or present level, I might say, for farm land.

Mr. BARUCH. Well, it might have that tendency. I know it would have a tendency to stabilize it. But I think the net result of it would be that it would help many farmers to retain their farms under less onerous conditions than they have now. That was the idea I had back of it. Of course, there are a lot of men who if they have a good mortgage would not take the new obligation but would take the land.

Senator BARKLEY. Mr. Baruch, with reference to your emphasis on the question of balancing the budget, which has been, as I happen to know, one of your themes for some time.

Mr. BARUCH. And always will be, Senator Barkley, until it is done.

Senator BARKLEY. Yes.

Mr. BARUCH. And I think you have taken too much time to do it.

Senator BARKLEY. Let us take the situation as it is. We have about $1,250,000,000 of annual charge on account of the public debt, interest, and annual payments to the sinking fund. The only way we can reduce that is to reduce the interest on these outstanding Liberty bonds, which might be done to the extent of a couple of hundred million dollars if the bond market were favorable, but under present conditions we may not be able to do that. So we will put that $1,250,000,000 on the shelf for the moment. Then we have about $900,000,000 as a charge at the present for veterans, hospitalization, benefits, and all that. That, we will say, is $2,150,000,000. Then we have the Army and the Navy costing another $700,000,000. There you have about $2,800,000,000, leaving, out of a possible $4,000,000,000 annual expenditures, about $1,200,000,000 for the ordinary running expenses of the Government out of which we can effect any economies. Are you prepared to make specific recommendations as to how to get the annual expenditures of the Federal

Government down below the $3,000,000,000 that you suggested this morning?

Mr. BARUCH. Yes, sir. I will say that I have had some figures made down here at Washington and I have not had time to go over them in detail. I had them prepared by I think a very able man, with the idea of showing what we would do if we had to do it. And you gentlemen understand it is not a question of what we want to do. Nobody wants to cut down any Government expenditure, and I myself do not want to do it, but they have got to be cut down unless we are to have other conditions. If the budget remains unbalanced we can not pay, and that is all there is to it. If you put down 2,800,000,000 dollars as sacrosanct, and say that you can not touch that—and I do not care to assume that——

Senator BARKLEY (interposing). Well, that is for illustrative purposes.

Mr. BARUCH. When you do that, and then say that we can not touch the Army or the Navy, or the veterans, and all these other things, and then if you go on with the fact that on account of this unbalanced budget we have already accumulated 4 per cent and 1 per cent amortization, or if you say 3 per cent and 1 per cent amortization, over $100,000,000 a year that we have to look after, and if you keep on with that, why, it can not be done. And if you go on with another $1,000,000,000 or $2,000,000,000, then you will get another million dollars at 4 per cent. Well, I feel that in this veterans' drive that we have, to cut out what are generally called the abuses of the Veterans' Bureau, I think we are laying too much emphasis on that alone. There are other things that could be done. There are a lot of other things hiding behind that citadel of letting the veterans make the fight. Take the Army and the Navy, and the comparisons of the sums of money, that if given a dollar to-day it would certainly be more than the dollar last year. But I know the difficulties of the situation, and when you lay aside certain amounts as sacrosanct then you are up against it and the only time when you will change it is when you go into bankruptcy, if you say: "We can not get our Government expenditures down below a certain amount." Last year I thought we ought not to have had more than $3,500,000,000 and I do not think this Government can vote more than $3,000,000,000 now. We just haven't got the money.

Senator BARKLEY. I appreciate fully that situation, Mr. Baruch. The other day I offered a few figures over there on the floor, figures that startled me when one compares them. We have in this country in the last three years reduced our total net income from about $85,000,000,000 to $40,000,000,000.

Senator KING. It is less than that, really.

Senator BARKLEY. Well, I will use $40,000,000,000 as it is an easy figure to remember. The total cost of government in this country is $15,000,000,000. That includes all kinds of government—State, county, city, and national. The total interest charge on what we owe in this country is $8,000,000,000, and out of $40,000,000,000 we are spending $23,000,000,000 for government raised by way of taxes, leaving about $17,000,000,000 to operate business and agriculture and the corporate and individual activities of all the people. It is perfectly apparent that we can not stand that sort of basis. We can not spend more than 50 per cent of our annual income in unproductive enter-

159450—33——4

prises, which we might say is represented roughly by government and interest on what we owe. Now, assume that we balance the Budget of the National Government by lopping off a billion dollars of the $23,000,000,000 that we are paying out now for government and interest, how far is that really going toward solving the economic problem which confronts the whole country?

Mr. BARUCH. In my opinion it goes right to the root of it. I hear this question asked so many times, not by one person, nor 20 persons, but by all of the innumerable persons in all walks of life in which I move: I have some money. What shall I do with it?

Senator BARKLEY. And what do you tell them?

Mr. BARUCH. I say, I don't know. That is the answer. Some fellow may say: If you don't know what can I know? I reply: I am serious, I don't know what to do with it. Then I say: If I could get everybody who has money—and somebody owns all this money in the banks, and I do not know what the deposits are—but I say: Our objective ought to be to get that money to work, and by doing that we will get people back to work, and then you will have a money turnover, and then with the turnover, and even with the enormous debt and taxes, if we can get activity in business, say, of 20 per cent, we will be over the top of the hill. Therefore, I say confidence goes to the root of the thing. If you can get the man who has money to say: I am going to put it into this venture or that venture, I am going to lend it, I am going to do something because I know my money is all right, you will have started the wheels going. Things are going down like this [indicating] now, and you want to stop that, and to start them going up.

Senator BARKLEY. I agree with you, Mr. Baruch, entirely on the matter of balancing the Budget, but I think it ought to be done by reducing expenses instead of increasing taxes. But I am not quite able to go along with you in saying that is the magic wand that will start things back, that as soon as we quit spending more in the Government that will of itself turn the wheels.

Mr. BARUCH. The first thing that will happen if you have your Budget in balance, of the huge amounts of bonds carried in the banks to give them a hiding place, they can be sold to the people, to investors, and that would start the wheels going, and get people to putting money into investments instead of hiding places. Then, after they are satisfied with that, they will turn round to something else.

Senator KING. Mr. Baruch, isn't this really one of the primary considerations that would result from a balancing of the Budget, or rather failing to do it, if we do not balance the Budget there will be this continued and increased apprehension that the credit of the Government itself, including State and municipal governments, will soon be impaired and Government securities can not be sold? If we continue to increase deficits and a loading up with bonds, then the Federal Government itself may be plunged into the abyss, carrying business with it.

Mr. BARUCH. I think that is what goes to the root of the matter, and whether justified or not it is still there.

Senator BARKLEY. I do not know whether you would want to answer this question or not: Our total indebtedness in this country is $154,000,000,000, including all kinds of governmental debts, all kinds of corporate debts, all agricultural debts, all personal debts;

it amounts to $154,000,000,000, which is more than half of our total wealth. In fact, we do not know what our total wealth is just now. When we were on the upgrade, two or three years ago, we were estimated to be worth about $350,000,000,000, not net but gross. Would you want to give an opinion as to whether this country can ever lift itself out of that enormous burden of debt without a considerable scaling down? And if you do not want to answer that question, all right.

Mr. BARUCH. My personal opinion is that it can not.

Senator KING. Might I suggest right there, would the ——

Mr. BARUCH (continuing). And already that indebtedness is really wiped out in the markets. Take railroad bonds, where you have a market, and you gentlemen understand that ——

Senator KING (interposing). Yes; they are scaled down all right, because the man who bought a bond or a stock at $100 four years ago may have had to sell it for $25.

Mr. BARUCH. Yes, Senator King, and you can get a good many witnesses to that.

Senator KING. He scales it down but holds it against the corporation that issued the bonds. That is not a scaling down brought about by legislation.

Mr. BARUCH. No, sir.

Senator KING. It is, of course, a voluntary scaling down, like all scaling down must be voluntary, unless it goes through the bankruptcy courts.

Senator GORE. It is not a scaling down so far as the corporation is concerned.

Senator BARKLEY. No. Now, to get to the farm situation——

Senator KING (interposing). Isn't it a fact, however, that notwithstanding this large indebtedness to which Senator Barkley referred—and, by the way, Prof. Irving Fisher says it is $230,000,000,000 instead of $154,000,000,000.

Mr. BARUCH. Oh, well, what are a few billion dollars as between friends.

Senator KING. Isn't it a fact that much of that would wash itself out if it were in active business? The aggregate may be a maximum of $230,000,000,000, but if you start $1 out at work, and A gets it, and A pays it to B, and B pays it to C, the debt being domestic instead of foreign, much of this debt would be wiped out. It would be a bookkeeping transaction in the course of a year or two if we had active business.

Mr. BARUCH. Yes; because earning capacity behind an indebtedness increases the value of the indebtedness.

Senator BARKLEY. If we could get our annual income back to $85,000,000,000 it would be different. Now, Mr. Baruch, let us take the case of the farmer: Do you think the bankruptcy law offers any remedy for the farmer?

Mr. BARUCH. So far as the farmer is concerned I was trying to apply this if certain processes have set in. If the farmer can not sell then he can not pay off his mortgage, and the fellow who has the mortgage can not sell it. Now, if he could establish some relationship whereby there could be an exchange of some new bond for that present indebtedness, on a basis that gives the use of Government credit, if we could establish that as a means of reducing his fixed obligation, and therefore his interest charges, he would be helped, and the man who holds the mortgage could be helped, because he can not sell it now.

Senator BARKLEY. I think you have in mind some agency probably of a kind of Government set up to bring about accommodation between debtor and creditor. The word "bankrupt" is odious to the average farmer. Many of them would rather lose their farms than to go into a bankrupt court. What I had in mind was: Do you think farmers as a class, and I am not attempting to put them above anybody else, but they are not skilled in the intricacies of the bankruptcy law, and it is a last resort, and in the most extreme case at that when the farmer will go into a bankruptcy court to get relief from his debts——

Mr. BARUCH (interposing). There is no question about that. In the reconstruction days I lived in South Carolina, when nobody had anything, but the last thing anyone wanted to do was to leave his debts unpaid.

Senator BARKLEY. I have thought that any bankruptcy law we might pass offers to agriculture no remedy or relief. What do you think about that, Mr. Baruch?

Mr. BARUCH. I think you have two things mixed up a little bit. What I had in mind about this LaGuardia bill was to make it possible to shorten bankruptcies and not permit a small amount of private claims, either against an individual or a corporation, to hold up a settlement when a large majority of the claims against an individual, we will say, agree. That very frequently happens in court. Sometimes you have to pay one man 100 cents on the dollar when the other 75 per cent are willing to give up. That is happening all through the country. In New York City we have mortgages, and they are making adjustments at, say, 75 per cent, and are reducing the interest to 4 per cent.

Senator LA FOLLETTE. Mr. Chairman, might I now ask a few questions that occur to me?

The CHAIRMAN. Yes.

Senator LA FOLLETTE. I will try to be as brief as possible. Mr. Baruch, on page 2 of your statement you said:

> It seems to be agreed that costs of Government have risen to about 33½ per cent of national income.

Have you in mind what percentage of cost of Government is Federal as distinguished from State and local?

Mr. BARUCH. Senator Barkley just stated that, but his figures are larger than mine.

The CHAIRMAN. Do you mean of the United States Government, or the States and cities and counties?

Senator LA FOLLETTE. I asked Mr. Baruch what percentage of the total cost of Government was chargeable to the Federal Government.

The CHAIRMAN. And that includes State, county, and city.

Mr. BARUCH. No; as I understand, you are only asking as to the United States Government.

Senator LA FOLLETTE. Yes.

Senator BARKLEY. About 33⅓ per cent.

Mr. BARUCH. No; not for the United States Government.

Senator BARKLEY. The annual expenditures of the United States Government are nearly one-third of the total of the Government charges of the country.

Senator LA FOLLETTE. That is higher than the figure I have seen usually quoted. It is placed somewhere between one-fourth and one-fifth of the total cost of Government. The point I wanted to bring out was this: You could not, Mr. Baruch, accomplish the results which you seek to obtain and hope for as flowing from a balancing of the budget of the Federal Government, by merely doing that and stopping there. Balancing budgets is to be the next objective toward remedying economic conditions, as I took it from your statement you believe necessary, but the problem does not stop with the balancing of the Federal Budget. There is also the problem of the larger governmental expenditures of States and counties and cities and municipalities, which in the aggregate is much larger than the Federal Government's expenditures.

Mr. BARUCH. That is right, sir.

Senator LA FOLLETTE. Then also I wish to bring out, or to get your idea, as to whether or not there is not a great deal of money of the Federal Government spent for services which we would otherwise have to maintain regardless of whether carried on by the Federal Government or not. I have in mind such items as national defense, and the other items which must, I think, or almost anyone would admit, are necessary in any event, and that statement brings me to another question: In another part of your statement as I understood it, Mr. Baruch, you said that $800,000,000 should be cut out of the Federal Budget. Is that right?

Mr. BARUCH. If you want to bring it down.

Senator LA FOLLETTE. Could you tell us where to make the cuts?

Mr. BARUCH. Well, of course that is a moot question. I can show you figures that have been made up and which I have not studied myself.

Senator LA FOLLETTE. I wanted to get your suggestions, if you had any, as to how that could be accomplished, because that seems to be where even the most ardent Budget balancers fall into disagreement among themselves when they start in to carry out their proposition that we should cut and slash.

Mr. BARUCH. Well, I base that upon this, first: That I believe if we did that there would be enough revival in business to bring up the receipts of the Government so that the Budget would be practically in balance. If you did it only to 3½ billions of dollars it would not do that. But if you bring it down by a cut of $800,000,000 it would bring it to $2,800,000,000. Then I believe there would be such a restoration of confidence that it would bring up the receipts.

Senator LA FOLLETTE. That is a mathematical calculation.

Mr. BARUCH. Yes, sir.

Senator LA FOLLETTE. But the problem that confronts both the executive and the legislative branches of the Government is: Where are you going to start with those cuts? And when you start with it then those who have been most ardent about the matter are opposed to your cutting the thing which they think, or a particular group happens to regard, as a particular service of the Government.

Mr. BARUCH. Now, let us take the Army and the Navy. I have from the figures I have had presented to me at different times, and I believe we could get just as effective ones, that this money if spent in a different way——

Senator SHORTRIDGE (interposing). That is the point. Will it be as efficient?

Mr. BARUCH. Yes; I think it would be. After all, Senator, we have to cut our cloth accordingly. If you have not the money you can not do certain things, and then it will be a question of the best judgment of where that cut ought to be.

Senator LA FOLLETTE. That is where the difficulty comes in. The minute you start in to find out where to cut $800,000,000 you find a great divergence of opinion, not only in the Senate, but among the very groups out in the business world, coming from those who have been very active in their condemnation, or very vociferous in their condemnation of Congress because it does not proceed to make cuts. I am not going to point out any specific example because I think it is a very human reaction, but I get letters in one mail from business men in my own State urging me to join in the economic drive. Then when the Appropriations Committee cuts off some activity of a bureau, or some activity that they are interested in, they immediately write me and tell me to get up and fight that particular proposal. All I am trying to point out is that it is easy enough to make an arithmetical calculation as to how much should be cut out of the budget in order to bring it more nearly into balance, but when you get down to the practical proposition as to where the cuts are going to fall, it is a much more difficult problem.

Mr. BARUCH. In other words, a man is willing to cooperate as long as you do all the cooperating.

Senator LA FOLLETTE. Yes, sir.

The CHAIRMAN. We can save $400,000,000 here in one place. But we won't do it. We have not the votes.

Senator SHORTRIDGE. And what is that place?

Senator KING. The Veterans' Bureau.

The CHAIRMAN. In the Veterans' Bureau.

Senator SHORTRIDGE. Just for the record I wanted that stated.

The CHAIRMAN. The Veterans' Bureau, where we are paying men who were thousands of miles from the scene of war, and who never saw a gun fired, and who are just as healthy as you are, and more so.

Senator SHORTRIDGE. I doubt it.

The CHAIRMAN. And they are drawing $400,000,000 from the Government.

Senator LA FOLLETTE. I do not wish to get into anything that is going to be a miniature Senate debate here. I wanted to bring that question out. Now, Mr. Baruch, another point: On page 4 of your statement you say:

> I am not speaking of overproduction which is a mere correlative of underconsumption. I mean excess productive capacity.

As a matter of fact do you really believe that with very few exceptions taking the world as a whole there is no real overproduction? Isn't it a matter of inability to consume? You go forward to mention certain raw materials of which there is an excess of production, but if we were to envision a high enough standard of living for the peoples of the world there would not be as a matter of overproduction with very few exceptions.

Mr. Baruch. If we could possibly see in front of us enough demand to consume all these things, why, you would have a different story. But we have not yet been able to envision that.

Senator La Follette. My only point is that for the long pull perhaps you can over emphasize an attempt to regulate, curtail and restrict production to meet the failing ability to consume, whereas if we were ever to establish economic stability it has always seemed to me we should not overlook the fact of lifting the capacity to consume to more nearly equal the capacity to produce.

Mr. Baruch. I tried to suggest that thought, that we had gone from the delusion of grandeur to the delusion of poverty. I think there is a good deal in the mental condition of the poeple. If it were possible to lift this up in the way I suggested, that that was the only practical one. There would be a reconsumption of goods that might change the whole picture.

Senator La Follette. Mr. Baruch, you spoke in one place of phantom values which we have been struggling to maintain. From that do you mean present commodity prices and values of real estate, and other essential values, are now at normal?

Mr. Baruch. No; my opinion is that it is subnormal. You must see it is subnormal from what I have been suggesting. Present values are due not alone to fear of what has been but of what is and what might happen over this country, and we are coming to feel ourselves hopeless with the reflection of the prices of commodities as you have referred to them.

Senator La Follette. On page 8 you said:

First and foremost, make adequate provision against human suffering.

Of course I agree with you absolutely about that. But it leads me to ask this question: Do you believe that the money necessary to prevent human suffering in this country may be borrowed, either directly or indirectly, as a means of providing it rather than attempting to carry it as a current item of expenditure in the budget?

Mr. Baruch. I tried to show you what I thought should be done, whatever money you need to use there are additional taxes, and you have a large field, if you have an excise tax, and you can widen that field, and put on additional taxation. That will be for interest and amortization of that loan in a certain length of time, and you can use that money.

Senator La Follette. But you see no objection to carrying items of that kind outside the current budget, provided you set up the means for their amortization and retirement?

Mr. Baruch. I do not. I tried to make that plain, Senator.

Senator Shortridge. Mr. Baruch, for the record——

Senator La Follette (interposing). One minute, please.

Senator Shortridge. I beg pardon; I thought you were through.

Senator Barkley. Mr. Baruch, do you make the same answer to the inquiry as to whether all this vast construction program of the Government should be carried as current expense, or would you charge that to capital investment and provide for its gradual amortization after a period of years instead?

Mr. Baruch. Yes; plus this fact, that where you put in a capital investment on what I term a self-liquidating enterprise. And by that I mean something that we have, like a bridge in New York City, on which they will charge tolls, and those tolls ought to be impounded and come back to the Government and start to pay interest and amortization, and you would amortize the bonds and draw them down, and as things started to improve your indebtedness would gradually come down.

Senator La Follette. Even a budget of a corporation, which, of course, I do not agree is entirely analogous to a governmental budget which has the taxing power behind it; even the budget of a corporation would not charge off capital expenditures for increased plant capacity as a current operating item.

Mr. Baruch. Yes, sir; they ought to pay it every year.

Senator La Follette. Well, you mean to charge off the debt service on it?

Mr. Baruch. Do you mean interest on debt and amortization?

Senator La Follette. But you would not find, for instance, in a statement of the United States Steel Corporation, when they were going to spend $5,000,000, let us say, this year for new plant, they would not set that up and try to charge it off out of revenues for the current year.

Mr. Baruch. Yes; for depreciation.

Senator La Follette. I understand that.

Mr. Baruch. They must charge that off.

Senator La Follette. But we are carrying in this Federal Budget an item for capital expenditures as though it had to be provided for out of this year's revenue.

Mr. Baruch. As I said, if you have to spend a billion dollars for some purpose, or for relief; if you would issue a billion of dollars worth of bonds, and pay interest and amortization through taxation, that ought to be carried as capital.

Senator La Follette. And that applies, as Senator Barkley suggested, as a capital expenditure, for public works.

Mr. Baruch. If you provide for interest and amortization, I think it is sound.

Senator Barkley. Take all this public buildings program started here two or three years ago, for which we provided $500,000,000. Of course those buildings take the place of private buildings upon which the Government pays enormous rents, and it was of course inaugurated as employment relief also. Presumably those buildings are to benefit the people for 50 years. The question in my mind is whether they ought to be charged off against revenues of one year, as if they were going to be torn down at the end of the year, or if they ought to be a capital investment paid for by taxes, of course, but spread out a period of 15 or 20 years, so that you do not have to consider them in your annual budget, except interest and amortization.

Mr. Baruch. Interest and amortization to the extent of replacing the old ones, yes.

Senator La Follette. Mr. Baruch, you spoke of the danger of our losing gold. Do you happen to have in mind the amount of claims which foreigners have on gold in the United States?

Mr. Baruch. No, and I do not think anybody has that.

Senator La Follette. You do not think those figures are available?

Mr. Baruch. They may be available through the Federal reserve system, or they might make a good guess at it. But I do not know.

Senator La Follette. Have you any idea what the holding of American securities abroad is?

Mr. BARUCH. No; but the best guess that has been made is that, including the debts owed by the allied governments, it is over 20 billion dollars. Those are the figures that are generally used, and I have never heard them disputed.

The CHAIRMAN. Senator La Follette, Mr. Teague is here, and we would like to get through with him this afternoon.

Senator LA FOLLETTE. One more question. Mr. Baruch, you referred also to the fact that people sold goods to obtain money. As a matter of fact, they are selling goods in order to exchange goods, are they not?

Mr. BARUCH. Do you mean to new barterers?

Senator LA FOLLETTE. Yes.

Mr. BARUCH. Yes.

Senator LA FOLLETTE. Another thing, the most of the business done to-day is being done at a loss, isn't it?

Mr. BARUCH. I think so.

Senator LA FOLLETTE. What causes that?

Mr. BARUCH. Well, a man has an establishment, and he wants to keep it up, doesn't want to discharge his employees, and it is always a case of the hope of to-morrow.

Senator LA FOLLETTE. Has banking policy anything to do with it?

Mr. BARUCH. I do not think so.

Senator LA FOLLETTE. You do not think that there has been any pressure upon business from the banking community in order to become liquid, which has forced the liquidation of goods and their sale at a loss?

Mr. BARUCH. I would answer the question this way. Naturally, if a concern owes money to the bank they are going to sell what they can if the bank puts pressure upon them. There is no doubt about that.

Senator LA FOLLETTE. What I was trying to find out was whether or not the banking policy had contributed anything to this forced liquidation of goods and this decline in the price level.

Mr. BARUCH. I do not think so. I think it did in the beginning, but I do not think so now. Except the natural pressure of a bank that is owed money, they want to get the money.

Senator LA FOLLETTE. That is just the point.

Mr. BARUCH. That is always happening, Senator. When a concern owes money to a bank and the bank wants the money, the concern naturally will try to get the money to pay what it owes. Nobody wants to go through bankruptcy, and the fellow will sell his shirt if necessary to get the money.

Senator LA FOLLETTE. There has been a lot of that?

Mr. BARUCH. Yes; a fellow is scared to death and wants to get out of debt.

The CHAIRMAN. We notice in the sales that are made, the ones that are cutting the prices more than any one else and leading in the price reduction are the large stores that are not in trouble at all, but they have got to keep up the volume of business in order to pay their expenses, and that is the way they are doing it.

Mr. BARUCH. That is quite true. I think it is a mixture of everything. But I do not think there is an malicious endeavor, Senator, on the part of——

Senator La Follette. I am not questioning anybody's motives. I do not think there is any profit in doing that. I am only interested in getting your view as a very experienced man of business affairs as to what some of the contributing factors to the situation are. You mentioned one of the benefits to be derived from a balanced budget the influx of gold into the United States. Is it not true that there has been a considerable influx of gold during the last eight months?

Mr. Baruch. Yes, sir; but whenever you talk about balancing the budget it flows in here. If we did this this would be the safest place in the world for everybody and they would put their money here.

Senator La Follette. But have not the gold transfers resulted in an increase over the last eight months, and I merely wish to point out that it has not yet produced any of the beneficial results that you anticipated?

Mr. Baruch. And the only reason it has not is because it has not come in sufficiently, because there is not sufficient confidence.

Senator Barkley. It does not stay when it does come?

Mr. Baruch. It will stay when we balance our budget. That is my opinion. I get back to that all the time.

Senator Barkley. Up to what percentage?

Mr. Baruch. The people do not know which way to turn with their money. They do not know how to put it to work.

Senator Shortridge. Mr. Baruch, you have mentioned the word gold and the word silver, and necessarily repeated even the word money. What is money? Will you for the record give us your definition? What is money?

Mr. Baruch. Well, money is the medium which people are willing to accept for the exchange of goods and services.

Senator Shortridge. Gold bullion is not money, is it?

Mr. Baruch. No. But gold is the basis of the ——

Senator Shortridge. No, but ——

Mr. Baruch. You asked the question and I would like to answer.

Senator Shortridge. You answered the question. Gold out in the undeveloped mines of California is not money?

Mr. Baruch. No, sir; not until you get it out.

Senator Shortridge. No.

Mr. Baruch. Neither is anything else of value.

Senator Shortridge. All right. Silver bullion is not money anywhere, is it?

Mr. Baruch. No, sir.

Senator Shortridge. When it is in the mines there undeveloped in Utah. And I dare say they have vast quantities of that metal. Now what is the transformation which turns gold bullion or gold in the mines of Alaska, in the ledge, or in California, or the silver in Utah—what is the process that turns the bullion into what we call money?

Mr. Baruch. Take the gold and carry it to the mint and they give you $20.67.

Senator Shortridge. Oh, no, it is Government that makes it, is it not?

Mr. Baruch. I say when you take it there and they stamp it $20.67.

Senator Shortridge. Yes. Governments.

Senator Walsh of Massachusetts. Government action does it.

Senator SHORTRIDGE. I have an idea struggling to emerge. Governments must then pass laws whereby certain metals are called or turned into and regarded as money for the exchange of products?

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. Is that right?

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. From the remotest periods the metal, gold, has been by government made into money, has it not? And from even remoter periods, far back yonder, in Egypt and India and Mesopotamia, governments have turned the metal, silver, into money, have they not?

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. And through the ages, the centuries, the old gray centuries, governments have turned those two metals into money, is that right?

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. They could do it tomorrow, could they not, on a ratio?

Mr. BARUCH. Well, it all depends on what the ratio is.

Senator SHORTRIDGE. Why certainly. Certainly.

Mr. BARUCH. As long as you do not make—you are familiar, of course, with Gresham's law?

Senator SHORTRIDGE. I have read the book.

Mr. BARUCH. And as long as there is the cheaper money of course that will always drive out the other money.

Senator SHORTRIDGE. Well, but that depends on the ratio.

Mr. BARUCH. Yes. If silver were 25 cents as now and you made it on the basis of 20 cents people would buy silver instead of gold.

Senator SHORTRIDGE. Precisely. But if governments would agree that we need money—now we have not really had a definition of money yet.

Senator KING. Purchasing power.

Senator SHORTRIDGE. No. Well, pardon me, Senator.

Senator KING. That is all there is to it. Purchasing power.

Senator SHORTRIDGE. It is a measure of human labor, is it not? Is not that the idea of the value of money?

Mr. BARUCH. Well, something that you will exchange for your labor.

Senator SHORTRIDGE. Yes.

Mr. BARUCH. Instead of using barter, people take something in exchange for it.

Senator SHORTRIDGE. Yes, truly. Shells in some countries were used as money, were they not?

Mr. BARUCH. Wampum was used in this country.

Senator SHORTRIDGE. Yes, certainly. And it represented human labor, and that was used in lieu of an absolute barter of labor for labor or coon skin for coon skin.

For future discussion I want to get your view on this further point. When gold was discovered in the far West it had a very materially beneficial effect on the business of the country, did it not? When gold was discovered up in Alaska similarly there were beneficial results? Is that right? Now if capital could return into the developing of the mines of our own country, the gold mines, that would be beneficial, would it not? By increasing the volume of what we call money? And would it not be so—and by putting the question I do not indicate my views; I want to develop the thought—if a metal as bullion is not money, if the metal which we call gold or the metal we call silver is not money in its original state, and if governments can turn it into money, why would it not be a wise thing to make use of they metal, silver, since the quantity of gold is more or less limited?

Mr. BARUCH. Well, of course if they could turn it into money and the people will take it as money you are right.

Senator SHORTRIDGE. Well, they took it for about 1,900 years.

Mr. BARUCH. Yes, sir. And they might take it again. But look at the countries on the silver basis as compared with America on the gold basis. Although that is not naturally a sequatur, I will admit that. My remarks are not naturally a sequatur, I will admit that.

Senator SHORTRIDGE. Of course we call a piece of paper money. Is it money?

Mr. BARUCH. Well, if you can use it for money.

Senator SHORTRIDGE. Well, is it money?

Mr. BARUCH. Yes, sir.

Senator SHORTRIDGE. Then gold is money?

Mr. BARUCH. That is money as long as people will take it as such.

Senator SHORTRIDGE. I might pursue the matter, but I thank you for your views.

Senator WALSH of Massachusetts. May I ask you, Mr. Baruch, a question? Calling your attention to what you said about the destructive effects of devaluation I want to read a sentence.

Mr. BARUCH. What page is this?

Senator WALSH of Massachasetts. Page 20.

Labor, which has already suffered a 40 per cent to 50 per cent reduction in income, would certainly find itself the victim of a new and greater cut—not by its employers, but by the very government upon which it relies for protection. And not labor alone.

Would you care to amplify that?

Mr. BARUCH. Yes. What I mean by that is this, that what has always occurred would occur. The extremes of this thing result in this, that wages never move as fast as other things, sir. If the price of things went up they would not raise the price of labor in proportion to the other things. If everything rose together that would be all right, but that is not the history.

Senator WALSH of Massachusetts. You base that on the experience in the past in inflation movements?

Mr. BARUCH. Yes, sir.

Senator WALSH of Massachusetts. What has been the experience in England?

Mr. BARUCH. In England the things are just about where they were when they put inflation into effect. That I could not answer. What I had in mind more, of course, was the experience of a country like Germany.

Senator WALSH of Massachusetts. Where labor specially suffered?

Mr. BARUCH. Yes. Finally everybody suffered.

Senator WALSH of Massachusetts. Yes.

Senator LA FOLLETTE. On that very point, Mr. Baruch, you mentioned in your statement, and you just now mentioned again, the fact that British prices did not rise after the country went off the gold standard. But as a matter of fact prices fell elsewhere, and

British prices on a weighted index rose about 2 per cent. So that measured in what happened elsewhere their prices really have risen, is that not true? For instance, prices here since England went off the gold standard have fallen, according to the Federal Reserve Bulletin, about 10 per cent. They have risen in England about 2 per cent. They have fallen in Germany about 14 per cent, and in France about 13 per cent. So that as compared with what happened elsewhere their prices have really risen substantially have they not?

Mr. Baruch. Well, that is like a good many post hoc arguments. In the meantime, England has put on the tariff and the Empire trading, and every one of these countries have shoved up their tariffs. That complicates it very much.

Senator La Follette. I understand that, but it is not quite right to say that the prices have not——

Mr. Baruch (interposing). I took these figures from—I haven't got them in front of me, but the statement I made is substantially correct, sir.

Senator King. Well, it is worthy of comment, if I may be pardoned for interrupting——

Senator Walsh of Massachusetts. Senator Gore wants to say a word.

Senator Gore. I want to interject that gold prices have declined in England 23 per cent since then; gold prices have declined in Germany since that time 15 per cent, and in France 13 per cent. That is in gold price.

Senator King. It is worthy of comment, however, that Mr. O'Brien, the head of the Tariff Commission in the report which was submitted has stated that so far as it affected our trade and commerce or prices in the United States there was no disadvantage by reason of England going off the gold standard, and that the imports into the United States have been substantially the same, relatively, from those countries operating on the gold standard and those that have gone off of the gold standard. That is to say, there have been declines, but the decline has been substantially the same, in the same ratio, whether they were on the gold standard or off the gold standard. And he has deduced from that that going off the gold standard has not affected the imports into the United States.

Senator Shortridge. Senator, do you not think that depreciated currency has resulted in increased imports?

Senator King. I do not. Quite the reverse.

Senator La Follette. Mr. Baruch, may I ask you one more question?

Mr. Baruch. Certainly.

Senator La Follette. You anticipate that balancing the Budget will help to start business in this country?

Mr. Baruch. Yes, sir.

Senator La Follette. Are you relying largely on the psychological factor?

Mr. Baruch. Yes, sir, on the psychological factor. The dispelling of the fear in the man's mind that the dollar is not going to be as good to-day as it was yesterday.

Senator La Follette. It has been in balance some times early in the depression and it did not seem to stop the depression. I wanted to bring out whether you felt it was the psychological factor that was the chief thing.

Mr. BARUCH. I think it is the thing that has been turning the thing faster than it should have been.

Senator BARKLEY. Do you think the fact that prior to that it was over-balanced had any effect on business.?

Mr. BARUCH. What is that?

Senator BARKLEY. The fact that the Budget was over-balanced? That we had a surplus every year from $300,000,000 to $900,000,000 for four or five years prior to 1929—did that have a beneficial effect on business?

Mr. BARUCH. Looking at the records: Retiring the Government bonds and taking those out and making people get into other investments. And that was the period of our highest prices. Not entirely because of that, but I think it was affected by the great amount of retirements.

Senator BARKLEY. The reverse effect probably would be true?

Mr. BARUCH. Undoubtedly. In my opinion it would be true.

Senator BARKLEY. The Government is spending more money than it takes in. And that fact is from lack of confidence and the decline in prices and the situation which confronts us. Reversely, the taking in of more money than the Government spends and the consequent improvement of its obligations would have the opposite effect.

Mr. BARUCH. Yes.

Senator BARKLEY. Thank you.

Senator GORE. On the point that Senator Connally was asking. You state that if we should reduce the number of grains in the gold dollar, or should take steps looking in that direction, it would result in immediate withdrawal of all gold reserves from the Treasury, and from the banks too, I take it?

Mr. BARUCH. Yes. From the Federal Reserve System. They would be the one that would have it taken from them.

Senator GORE. Would not the withdrawal be from the Federal Treasury in the case of the greenbacks?

Mr. BARUCH. No; from the Federal Reserve System.

Senator GORE. Not of the greenbacks.

Mr. BARUCH. No. I think some of them are only redeemable in silver, and the bank notes are redeemable in something else. But the Federal Reserve notes are the only ones redeemable in gold.

Senator GORE. But the old United States notes are redeemable in gold at the Treasury.

Mr. BARUCH. Yes.

Senator GORE. Would that not cause a complete collapse of the credit structure?

Mr. BARUCH. Undoubtedly.

Senator GORE. Would it not also tend to draw gold from other couhtries into this country and drain the gold reserves?

Mr. BARUCH. Do you mean because people would want to buy it?

Senator GORE. No. Let us assume that we divide the number of grains in the gold dollar half in two. That makes the calculation easier. That would double the debt-paying power of a given number of grains of gold?

Mr. BARUCH. Yes.

Senator GORE. You would pay twice as much debts, and we would assume they would have just as much purchasing power as debt paying power. Now if we double them, we, now having $4,000,000,000 of gold, would then have $8,000,000,000. That would be diminished weight and value, of course. Now that would be a gift to the people who hoarded their gold of $4,000,000,000 would it not?

Mr. BARUCH. Yes.

Senator GORE. A few would get nothing in return. Those that had hoarded their gold could avail themselves of the law and double their boarded gold, is that not true?

Mr. BARUCH. Yes, sir.

Senator GORE. Would that not tend to draw gold into this country from other countries, where it could pay twice as much debt as it could there?

Mr. BARUCH. Well, if we had any debts like the foreign debts, if they were not payable in gold, the person that had borrowed would be able to pay off their debts with the new dollar.

Senator GORE. Yes. And if foreign gold came in here its debt-paying power and purchasing power would be doubled, when it got in here? Because a less number of grains of gold would make an American dollar?

Mr. BARUCH. If things did not go up, that is the point.

Senator GORE. Yes. I am coming to that.

Mr. BARUCH. If they did not go up.

Senator GORE. I am coming to that. It would tend to drain gold out of foreign countries, and in so far as it would drain the gold out of foreign countries it would shrink their credit basis, would it not?

Mr. BARUCH. Yes; if they did that, unquestionably.

Senator GORE. Would that not shrink their purchasing power?

Mr. BARUCH. Yes.

Senator GORE. Would that not make them worse markets for our surplus products than they are now?

Mr. BARUCH. Yes.

Senator BARKLEY. Senator Gore, right on that point let me ask this question. If this scheme or plan would drain our own gold supply from the Treasury, from the Federal reserve system and the places where it is now, and the same thing would drain the other countries of all their gold, where would it go?

Senator GORE. To this country where it pays the debts.

Senator BARKELY. It would come into this country?

Senator GORE. Yes. It would double its value.

Senator BARKLEY. What would happen to it? What becomes of the gold that is drained from the Treasury and the Federal reserve system, leaving out all foreign gold? What happens to it if it is going to be drained from the places where it is?

Mr. BARUCH. Well, what finally will happen, the gold will be used to buy something with it.

Senator BARKLEY. Yes.

Mr. BARUCH. I mean, it is not going to disappear. You are not going to eat it at all. It is still there.

Senator BARKLEY. It might be withdrawn from the Treasury and the Federal reserve system and hidden.

Senator GORE. Hidden. Twenty-five grains make a dollar now?

Mr. BARUCH. Yes.

Senator GORE. Suppose 12 and a fraction grains make a dollar under that scheme; then these foreign countries can come in here where they can pay with a gold dollar containing 12½ grains a dollar of debt that was contracted when we had the old dollar containing 25 grains, and they will come in here with the dollars containing 12½ grains of gold to pay the debts.

Now I will put the reverse side of it. Any scheme to take grains of gold out of the gold dollar has reference to some fixed level of prices at some given period of time, does it not?

Mr. BARUCH. Yes.

Senator GORE. Now, if when prices go down you take grains of gold out of the gold dollar and they go down below your fixed standard of price level, then when prices go above your fixed price level you have got to put more grains in your gold dollar, haven't you?

Mr. BARUCH. You have got to pay more gold for it; that is so.

Senator GORE. That works both ways.

Mr. BARUCH. That is if you change your standard, Senator. Is that what you mean?

Senator GORE. Well, that is what we are doing. That is what we have under consideration.

Mr. BARUCH. Yes. True.

Senator GORE. When prices go down below our fixed price level, whatever that may be—we will say it goes down one-half—then we will say that 12½ grains instead of 25 grains of gold make a dollar. Now, suppose prices would go twice as high as your fixed level, then you have got to put 50 grains of gold in your gold dollar. You have got to work this in both ways.

Mr. BARUCH. Certainly.

Senator GORE. Now, then, suppose you lived at Buffalo and prices went up above our fixed and chosen level, and Congress here is going to put twice as many grains of gold in a dollar as now, do you not think that anybody that has gold on the border would take it across to Canada?

Mr. BARUCH. Yes. In the meantime he would be so dizzy that he would not know where he was with all these changes.

Senator CONNALLY. He would not be any dizzier than he is now.

Mr. BARUCH. He is pretty dizzy now, Senator, but it would make him dizzier.

Senator GORE. Would not such a plan make it still more difficult than now to establish and maintain any fixed standard of value for international trade?

Mr. BARUCH. Yes, sir.

Senator GORE. Is not the lack of such a fixed standard one of the most serious embarrassments now to world trade?

Mr. BARUCH. Unquestionably.

Senator GORE. Nobody knows how to compute it; whether you are going to gain or lose by contracts, because you can not tell whether the exchange is going to go up or down. That would obstruct trade and make recovery more difficult than it is now?

Mr. BARUCH. Unquestionably. I tried to bring that out in my statement.

Senator GORE. I did not hear all your statement. The variable standard of international currencies discourage trade?

Mr. BARUCH. Absolutely unquestionably.

Senator GORE. In relation to future contracts?

Mr. BARUCH. Unquestionably.

Senator GORE. We have got about $100,000,000,000 of indebtedness in this country that carry the gold clause. A great deal of that is Government bonds. Thirty billion dollars of Government bonds of some kind or another containing the gold clause, principal and interest payable in gold.

Senator KING. Of the present weight and fineness.

Senator GORE. Yes. You said this plan would make it easier on the taxpayer. It would for current expenses. But in order to pay taxes to pay Government debts, principal and interest, he would have to pay twice as much gold as he does now if you cut the number of grains in the gold dollar down to half. He would have to get two of these new dollars to pay a dollar of the old debt.

Mr. BARUCH. The old debt. But if your taxes are in the new dollars he would have to pay the same amount of dollars.

Senator GORE. No.

Mr. BARUCH. But the Government would have to go out and get twice as many dollars.

Senator GORE. That is the point.

Mr. BARUCH. They would have to go out and get twice as many dollars with which to pay their interest.

Senator GORE. Yes, to pay the debts that contain the gold clause.

Mr. BARUCH. Yes.

Senator GORE. The Government would have to go out and get out of the taxpayers' pocket twice as many of these new dollars as it would the old dollars?

Mr. BARUCH. That is right, sir, because it is payable in gold.

Senator CONNALLY. They would have to get the same amount of grains of gold, yes.

Senator GORE. That is the point. They would have to get the same amount of gold. Now let me give this illustration. A year ago Congress set aside 400,000 bales of cotton to manufacture into cloth for the unemployed and the distressed and the naked. We just recently set aside 400,000 more bales of cotton.

Senator KING. 350,000.

Senator GORE. Well, I am taking the figures to keep them even, Senator.

Senator KING. All right.

Senator GORE. We recently set aside 400,000 more bales of cotton to manufacture cloth for the unemployed, the distressed of the nation. Would it not have been better had we cut the yardstick in half? We would then have had twice as many yards of cloth and could clothe twice as many people. Does it not come to that?

Mr. BARUCH. I think so.

Senator CONNALLY. I just want to briefly summarize now. I want to say that this morning I did not know Mr. Baruch was going to touch on this, and I came in while he was reading a statement about gold, and some of you know I have been making a little noise about it, so I was not really prepared to interrogate him as I should, but during the noon hour I have gone over the matter. I want to very briefly sum up.

Mr. Baruch, you admit that a rise in commodity values generally is desirable, do you not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. And when commodity values are going up people bring their money out and buy and engage in business, and prosperity returns, does it not?

Mr. BARUCH. Yes; because, I presume, they buy them because they think they can make money.

Senator CONNALLY. They are going up, and they think they can make money.

Mr. BARUCH. Yes.

Senator CONNALLY. Now on the other hand, is not one of the chief causes of hoarding a falling commodity market? People hoard their money because they do not want to spend it because they think values are going lower, is that not true?

Mr. BARUCH. To some extent, yes. I think maybe we have got the cart before the horse. I think commodities are falling down because people will not buy them.

Senator CONNALLY. Certainly. And the reason they will not buy them is because they do not have any confidence in those values and think they are probably going lower. It is the reverse of the other proposition, that when they are going up people buy them because they think they are going higher. When they are going down they will hoard their money.

Mr. BARUCH. They will not buy them because they think they can not make a profit on them.

Senator CONNALLY. I think you and I are in agreement on some points. I think you admitted this morning, and I agree with you, that reducing the content of the gold dollar would cause domestic prices to rise somewhat in the same relation?

Mr. BARUCH. I do not think they will rise as much as export prices. I said in my statement "probably."

Senator CONNALLY. All right.

Mr. BARUCH. Probably.

Senator CONNALLY. It would have an effect of raising prices. And of course it would increase the farmer's purchasing power in terms of dollars. I am not speaking in terms of gold ounces now but in terms of increasing his buying power in terms of dollars.

Mr. BARUCH. He would get more dollars.

Senator CONNALLY. And enable him to pay his debts.

Mr. BARUCH. That is right. He would be benefited.

Senator CONNALLY. You agreed awhile ago in answering Senator Barkley that all values were now subnormal, did you not?

Mr. BARUCH. I do, Senator.

Senator CONNALLY. You mean subnormal in terms of gold, do you not?

Mr. BARUCH. Yes.

Senator CONNALLY. In other words, you mean that the gold dollar is too high, or any kind of a dollar is too high?

Mr. BARUCH. I think they are subnormal in their relation, sir, to anything in human activity, and the only thing we have got to measure them by is the dollar.

Senator CONNALLY. Yes, the only thing we have got to measure them by is the dollar; so all other values are now below what they ought to be in relation to the dollar?

Mr. BARUCH. Let me add one thing to it. And they are down there because people with money will not buy them.

Senator CONNALLY. Well, no matter how they are down.

Mr. BARUCH. That is very important, though.

Senator CONNALLY. No matter how they got down there you admit that they are now down below what they ought to be?

Mr. BARUCH. Yes.

Senator CONNALLY. In other words, you agree to the proposition that the value of the dollar ought to be decreased if it can be done legitimately?

Mr. BARUCH. Well, I can not agree with you there.

Senator CONNALLY. How then are you going to get these commodities back up to a level with money if you say money is too high and too dear?

Mr. BARUCH. Because I think when the fear is removed from people about their Government credit and the fear of what is going to happen with these dollars they will buy things and go into business activity.

Senator CONNALLY. You are simply talking about the process. I am talking about the fact. You say that the price of the money is too high and commodities are too low. You think that can be accomplished by removing fear?

Mr. BARUCH. Yes.

Senator CONNALLY. Well, if we could pass a law abolishing fear that would be fine.

Mr. BARUCH. If you can do that, if you can pass a law abolishing fear, I am with you.

Senator CONNALLY. I am trying to see if we can find a way to do that. You have already admitted that commodities are too low and money is too high. Now you furthermore stated to Senator Barkley that in view of the present volume of debts that they can not be paid off unless they are scaled down, did you not?

Mr. BARUCH. A great many of them; yes, sir.

Senator CONNALLY. Well now, did you not say that taking the whole volume?

Mr. BARUCH. The whole volume; yes. But of course there are exceptions.

Senator CONNALLY. Well, I can not take up each farm mortgage and discuss it.

Mr. BARUCH. No.

Senator CONNALLY. I am talking about the whole debt, Federal, State, county, and individual; that on the present volume of indebtedness it can not be paid off unless it is scaled down.

Mr. BARUCH. Unless it is scaled down.

Senator CONNALLY. All right. Reducing the dollar would scale it down, would it not?

Mr. BARUCH. It would scale it down a lot.

Senator CONNALLY. It would scale it down a lot.

Mr. BARUCH. It might make it disappear.

Senator CONNALLY. What is the other alternative? If you admit that the present volume of indebtedness is so great that it can never be paid without scaling down, the only other alternative to scaling down is universal liquidation or bankruptcy, is it not?

Mr. BARUCH. No; not universal liquidation.

Senator CONNALLY. It has got to be scaled down, has it not?

Mr. BARUCH. Senator, I know of no way that any man can pay any of his debts except to go out and work and save his money. Now, if he can not pay them the process he has always gone through is that he has compromised with his creditors.

Senator CONNALLY. If he can not compromise it will mean he is foreclosed and will have to go out?

Mr. BARUCH. Yes; it may be that way.

Senator CONNALLY. In other words, he liquidates it either voluntarily or is forced.

Mr. BARUCH. I think that has already taken place. It is simply a question of adjusting with his creditors.

Senator CONNALLY. Senator Gore made the statement that we had $4,000,000,000 in gold, and if we increased that to $8,000,000,000 every man that had any gold in his possession would be given a gift of double its value. Is it not true that international values are based not on nominal value of so many grains in a dollar or in a pound but in the actual weight of the gold?

Mr. BARUCH. Actual weight of what?

Senator CONNALLY. Actual weight of the gold in ounces?

Mr. BARUCH. Yes. They are based on gold values.

Senator CONNALLY. An ounce of gold will buy the same everywhere in the world, will it not?

Mr. BARUCH. Yes.

Senator CONNALLY. So if a man has actual gold, by cutting the value of the dollar in two it would not either increase or decrease the value of what he has? He would have still so many grains of gold, would he not?

Mr. BARUCH. Yes.

Senator CONNALLY. In the nominal increase in the value he would get $2 for $1 it is true, but those $2 under our whole theory would still be simply in the same amount, but in dollars it would be twice as much. He would still only get what he has got now—so many grains of gold, and it would not be a gift to him of a cent. He would be more fortunate, of course, than a man that had a mortgage that would have to be discharged in those new dollars, but gold in itself would still have the same value all over the world that it has got now.

Mr. BARUCH. That is ture.

Senator CONNALLY. The theory of this is that every other commodity would always increase, is it not?

Mr. BARUCH. I do not think that it would increase relatively any more than gold would.

Senator CONNALLY. Maybe not. If other commodities did increase you would not be giving this man twice as much, because he could not buy twice as many commodities with the same amount of gold. But if he has gold, and it is his property, and you would thereby increase the value of all other property by increasing the commodity values, why should not the man that got the gold get the same increase in his gold as the man who had silver, or the man who had copper, or the man who had cotton, or the man who has a farm?

Mr. BARUCH. The only difference is this, I think, that the man with gold would be able to buy twice as much, no matter what the price is, but the man with other commodities would have an inequality with the other man.

Senator CONNALLY. Stop right there, Mr. Baruch. You said the man with gold would be able to buy twice as much with his dollars?

Mr. BARUCH. If we cut them in half.

Senator CONNALLY. Then commodities would double in value, would they not? That is all I am trying to get you to admit.

Mr. BARUCH. It would have that tendency.

Senator CONNALLY. No; you can not make the statement in one breath that a man with gold would get twice as many commodities and then deny that the other commodities would not go up twice.

Mr. BARUCH. That is right.

Senator CONNALLY. That is right, is it not?

Mr. BARUCH. Yes.

Senator CONNALLY. It has got to be hot or cold, one or the other. It can not be both.

Mr. BARUCH. No.

Senator CONNALLY. So according to your formula, then, every other commodity would double in value.

Senator BARKLEY. Senator, this man who gets his double amount of dollars then could buy just as much with them, whatever it was, as he could an hour before with the gold dollar.

Senator CONNALLY. Yes, and according to that theory it does not matter how low it would go, because it would still buy the same amount of products. That contradicts Mr. Baruch's other statement that it was desirable to lift all commodity values. You want them to be raised?

Mr. BARUCH. I think they would have the same relationship as they had before.

Senator CONNALLY. Increased commodity level is beneficial, is it not? So it has that effect.

Now, one other point and I am through. After we have gotten through here, the only difference is that you agreed this morning that you would favor this process if it could be worked out in a practical way.

Mr. BARUCH. So I would, yes, sir, with any measure.

Senator CONNALLY. Yes; I am trying to help the man who produces and who can not now get values for his product. I am trying to help the man who is in debt and who you say can never pay his way out of debt because the burden is so great. I am trying to speak for that man in order that we can scale it down, and in behalf of the man who is producing at starvation wages and starvation prices at this time, to try to bring about a liquidation, if you want to call it that, by Government action rather than to leave him to the mercies of the strong creditor who has got the advantage in the case where a man is trying to adjust his debt with that man, the creditor has got the advantage, he has a strong character and he has an aggressive force and he is going to come out on top in any sort of adjustment like that.

Senator KING. One question on that. If the theory that has been suggested by the able Senator from Texas were to prevail and would be beneficial, why would it not be more beneficial instead of having one-third go to cut it down to one one-hundredth part?

Senator CONNALLY. Oh, no, we want to get it to the fair figure, the commodity figure. That is why I proposed it, to get it to the commodity level. One other question. You do not think that Europe can pay the debts that they owe us on the present value, do you? Did you say that?

Mr. BARUCH. I do not know that I——

Senator CONNALLY. Is it not a fact that the depreciation of foreign money has made it harder for Europe to pay us than it would be otherwise?

Mr. BARUCH. Yes; her unstabilized currency.

Senator CONNALLY. Her unstabilized currency?

Mr. BARUCH. Yes.

Senator CONNALLY. In other words, she would have to pay us two or three times, measured in her commodities, more money than she would when she incurred her debt?

Mr. BARUCH. But the same in our own dollars.

Senator CONNALLY. Sir?

Mr. BARUCH. But the same in our own dollars.

Senator CONNALLY. Yes; I understand; the same in our own dollars.

Mr. BARUCH. And the same kind of dollars our taxpayers have got to pay.

Senator CONNALLY. I understand that. I am not arguing that. Senator Gore brought out that you had to have a fixed amount of gold to keep international balances on an even keel. Are they on an even keel now?

Mr. BARUCH. Are they on an even keel?

Senator CONNALLY. International exchanges and currencies and their foreign trade, are they on an even keel now with our present fixed standard of the gold dollar?

The CHAIRMAN. They are wherever gold is involved.

Mr. BARUCH. You can take it with anything. I know it is very unstabilized and very uncertain.

Senator CONNALLY. Senator Gore, though, seemed to make a point of the fact that if we changed the gold content of the dollar we would ruin international exchanges and international trade.

Senator GORE. My point was that it would disturb it worse than it is.

Mr. BARUCH. I think it would be a wonderful thing for the other nations if we do it.

Senator CONNALLY. When England went off the gold standard was not the effect of her action to devaluate the pound in terms of gold? It amounted to a devaluation of the pound, did it not?

Mr. BARUCH. Yes, sir.

Senator CONNALLY. France after the war devaluated the franc.

Mr. BARUCH. Eighty per cent.

Senator CONNALLY. And paid her debts off, and is she not about the most prosperous country in Europe to-day?

Mr. BARUCH. No, sir.

Senator CONNALLY. What is the most prosperous?

Senator KING. No, indeed.

Mr. BARUCH. France is almost as badly off with its budget and in as bad trouble as we are.

Senator CONNALLY. Let us forget the budget.

Mr. BARUCH. They have just gotten over their inflation.

Senator CONNALLY. I know about the budget.

Mr. BARUCH. She has just gotten over her inflation.

Senator CONNALLY. Is not France in good condition when compared with other countries?

Senator SHORTRIDGE. Czechoslovakia is in much better condition.

Mr. BARUCH. Compared with which one, Senator?

Senator CONNALLY. Any one of them.

Mr. BARUCH. I think Germany is in better condition because she has repudiated practically everything.

Senator SHORTRIDGE. Senator Connally, if you will be good enough to give me your attention?

Senator CONNALLY. I shall.

Senator SHORTRIDGE. The debts due and to become due us from England, France, Italy, and 8 or 10 of those European nations are severally payable in gold of present weight and fineness.

Senator CONNALLY. Yes.

Senator SHORTRIDGE. Or, as you might otherwise express it, of present value. Now does your plan contemplate by cutting up the gold dollar that England, for example, or Italy, or Czechoslovakia may pay us in these cut-up dollars?

Senator CONNALLY. I will say to the Senator——

Senator SHORTRIDGE. No, I am serious, and that is worthy of an answer.

Senator CONNALLY. I know, Senator, and I am going to answer you if you will give me a chance.

Senator SHORTRIDGE. Yes.

Senator CONNALLY. I do not know what those contracts provide for.

Senator SHORTRIDGE. They do provide for the payment in gold, Senator.

Senator CONNALLY. Present standard weight?

Senator SHORTRIDGE. Yes.

Senator CONNALLY. If they are, I would treat them like I would treat every other kind of contract written in those terms. I admit it is an open legal question. I am not prepared to say what the Supreme Court would hold, nor can any other man say what they would hold. I would treat them in the same way that I would treat the others.

Mr. BARUCH. I think the Senator was quite right in the statement he made in which he said that every one of these contracts was payable in gold coin of the present weight and fineness, and remained payable as such.

Senator CONNALLY. I said if it was a dollar contract, it would be paid in dollars. I think that is all, Mr. Baruch.

Senator WALSH of Massachusetts. Mr. Baruch, let me ask you this question: Is it not a fact that commodity prices are controlled not merely by the volume of money but as well by the volume of credit? And is it not a fact that a great deal of our volume of credit has disappeared and our volume of money has somewhat increased at the present time?

Mr. BARUCH. Yes.

Senator WALSH of Massachusetts. I ask you, assuming that the volume of credit is essential to raise commodity prices, what effect will the inflation such as proposed here have upon increasing the volume of credit?

Mr. BARUCH. The first effect—if you can get over the first flush of this thing—I think the first effect would be bad. Then if the people get accustomed to it after a while, and we went through all of the trials and tribulations, and people got confidence that they were not going to make any other change, why we would work out of it, because they would accept the conditions.

Senator WALSH of Massachusetts. The volume of credit during our prosperous era was a large factor in increasing commodity prices, and contributed to our prosperity, did it not?

Mr. BARUCH. I am not in agreement with that entirely. I do not care what the volume of credit was. If there is a less supply than demand prices will go up. And I think Senator La Follette brought out very carefully that if you could get the demand for higher standards of living the prices would go up.

Senator WALSH of Massachusetts. Regardless of the extent and ease with which credit can be obtained?

Mr. BARUCH. No; I think we have got to have credit to put in manufacturing and production for the commodities to be produced and sold to the public.

Senator WALSH of Massachusetts. Was not one of the chief elements of our prosperity the extent and ease with which credit could be obtained?

Mr. BARUCH. Yes.

Senator WALSH of Massachusetts. And to come back to a period of prosperity we have got to also have a period of easy credit?

Mr. BARUCH. Yes.

Senator LA FOLLETTE. Do you agree with the statement of one economist who said that credit was suspicion asleep?

Mr. BARUCH. I think there is a great deal to that.

Senator BARKLEY. Will not any artificial remedy that may be devised in the change of our monetary system that affects advantageously the seller, to a corresponding degree affect disadvantageously the buyer, so as to affect his purchasing power which reversely operates against the seller?

Mr. BARUCH. Yes; but Senator Connally was assuming that the purchasing power will go up with the dollars the same as the selling price.

Senator BARKLEY. Yes; I know that. But it seems to me that if we were to draw a straight line and put all the sellers on the left and all the buyers on the right, and say that this artificial increase in money of the country is going to help the seller, it will correspondingly injure the buyer. Because he will have to pay more dollars for what he buys from the man on the other side of the line.

Mr. BARUCH. He will be in a bad fix if he does not get many dollars.

Senator BARKLEY. The first thing you know his purchasing power will be reduced to the extent that he can not buy anything from the man on the other side of the line, and therefore, on the whole, I am unable to see how it benefits the general situation.

Senator CONNALLY. There is not anybody that is simply a buyer and a seller. Everybody is both a buyer and a seller.

Senator BARKLEY. But you have got to treat the buying and the selling as a different transaction.

Mr. BARUCH. If we can get more buyers through any such thing as Senator La Follette suggested our troubles will disappear.

The CHAIRMAN. We thank you, Mr. Baruch, for your testimony. Mr. Teague will proceed with his statement. We have about 100 witnesses to appear here, and we will never get through with these hearings unless we confine ourselves to the subject matter.

Mr. Teague, will you proceed.

## STATEMENT OF C. C. TEAGUE, SANTA PAULA, CALIF.

Mr. TEAGUE. Mr. Chairman and gentlemen. My name is C. C. Teague, Santa Paula, Calif. For the purpose of identification, I am president of the California State Chamber of Commerce, the California Fruit Growers Exchange, and the California Walnut Growers Association.

Senator GORE. You used to be on the Farm Board, Mr. Teague?

Mr. TEAGUE. Yes, sir. Gentlemen, in common, I presume, with every good American who loves his country and hopes that our Government will be maintained, I have been thinking some of these problems, and out of my thinking I have evolved some plans which seem to me might be helpful in the present depressed condition of this country.

It seems to me that the fundamental cause of the depression is the complete collapse of the credit structure of this country. Following the period of inflation we had the stock market crash of 1919, followed by bank failures, followed by hoarding by the people, followed by hoarding of the bankers who were afraid there was going to be a line in front of their banks the next day, and the result is that we had a fear psychology in the hearts of the people so that no one is operating normally.

These bank failures have undoubtedly affected 10,000,000 of depositors. There are something like 10,000 banks that have failed, and probably the total number of people that are affected are three times the number of depositors.

The result of this fear psychology and this breakdown in the credit structure of the country is that the 45 billion dollars of deposits of the people are not operating in the credit structure. Confidence has been completely destroyed. No one is acting normally. All values are out of their proper relation to the value of the dollar. There is no bottom to the market.

The question is: How can values be restored to their proper relation to the dollar? One school of thought says currency inflation (*a*) by decreasing the number of grains of gold in the dollar, and (*b*) remonetizing the silver, and (*c*) the issue of fiat money. In my opinion all of these proposals are unsound.

The other school of thought says: Inflate or restore credit by restoring confidence in banks so that 45 billion of deposits will operate in the credit structure. In my opinion this is the sound procedure.

How can this be done? The Reconstruction Finance Corporation was created for that purpose. It has not accomplished that result. It has no doubt stopped many failures. It did not release bank credit. It did not restore the confidence of the public in banks. It did not restore the confidence of bankers. Many loans to banks by the Reconstruction Finance Corporation were used to increase the liquidity of banks, but did not release credit.

There can be no return to normalcy, in my opinion, until confidence in banks is restored so that there will be a normal operation of credit. With continuing bank failures there is no hope for this confidence returning.

How can this confidence be restored? In my opinion it can only be done in time to meet the present emergency by emergency measures. I can see no hope except through some form of Federal guarantee of bank deposits. If the guarantee were only applicable to 75 per cent of the deposits of all banks it could be put into effect quickly without the delays that would probably be necessary if there were a 100 per cent guarantee, as in the latter case it would be necessary to examine all banks coming under the guarantee to be sure they were solvent, and the delays that would be inherent to the reorganization of banks that could not qualify would be great.

A small tax on banks would create a fund which, plus the 25 per cent of deposits not under guarantee and plus the capital and surplus of impaired banks should insure the Government against loss.

To avoid excessive losses through encouragement of unsound banking under the guarantee system there should be more strict limitation of bank charters. National examination of banks should be tightened. Branch banking should be extended, thus averaging the loans and deposits over broader and more diversified industry. Clearing houses could be used to investigate and make recommendation with reference to complaints of banks practicing unfair competition by soliciting deposits by making unsound loans. If such practice were not corrected they should be expelled from the guarantee.

If bankers do not set aside their pride of position and consent to some form of guarantee of deposits we are headed straight for currency inflation and the only stable thing we have left, the value of the dollar, will disappear.

The second largest contributing factor to depression is the low buying power of the 30,000,000 people on the farms due to depressed prices caused largely by surplus production.

I have a short memorandum here that I would like to read which is devoted to that phase of the subject.

Senator KING. Before you leave that, may I ask one question?

Mr. TEAGUE. Yes.

Senator KING. In your discussion about the guarantee of bank deposits do you refer to State banks as well as national banks?

Mr. TEAGUE. It seems to me they would all have to come under the guarantee unless you would put off the time of going into effect a sufficiently long time to permit of the reorganization of State banks to come into the Federal structure.

Senator KING. Would you favor, assuming it is constitutional, the compulsion of State banks to come within the periphery of the Federal system?

Mr. TEAGUE. I do not think that compulsion would be necessary, because I think they would have to come in or close their doors if we had a Federal guarantee.

Senator HARRISON. The House has already passed a Federal guarantee bank bill, and there is another bill pending that applies to time deposits.

Mr. TEAGUE. Yes. That is not law, however.

Senator HARRISON. No.

Mr. TEAGUE. It is generally conceded that the present depression in agriculture is primarily due to an overproduction of agricultural lands brought about by bringing into production, during the high prices of the war, most of the agricultural lands capable of crop production. There has been much discussion in recent years of some plan looking to the control of surplus production, among them the equalization fee plan, the debenture plan, and later, domestic allotment. Practically all of these plans have been condemned for the reason that they only look to dealing with the surpluses on a few specified products in agriculture without looking to the fundamental thing of removing the total agricultural surplus and because of almost impossible administration features.

There is an increasing school of thought that this question must be approached from a broader point of view which looks to the control of the total surplus of agriculture, and bringing up the general level of all agricultural prices by some method of taking out of production the acres of land that are producing the surplus. The most practical plan in this direction that has been suggested is some plan of leasing the surplus acres, and it is to that suggestion that this memorandum is directed.

It is proposed that there shall be by Federal legislation a board or commission created with power of taxation which would be empowered to levy either a manufacturers' excise tax or a tax upon the products of all of the annual crop land that pass through the hands of the original handlers, the amount of this tax to be determined by an investigation as to the number of acres of land that would have to be taken out of production to raise the general level of agricultural prices to some predetermined level, and the taxing, therefore, be flexible enough to permit of the raising or lowering of the tax so as to take out additional acres or to release them as the need becomes apparent to maintain the level of prices determined upon.

Senator WALSH of Massachusetts. Would you tax all manufactured products or only those products that are the result of agriculture?

Mr. TEAGUE. My thought is that the tax should apply to the products of the annual crop lands.

Senator WALSH of Massachusetts. Such as textiles and cereals, and so forth?

Mr. TEAGUE. Yes.

Senator KING. All sorts of fruits, tomatoes, peaches, apples, deciduous fruits, oranges?

Mr. TEAGUE. Well, that is a question for determination. I reach that question a little later when I speak of what is proposed in regard to orchard lands.

The commission, then, through the established agencies of the Government would determine the quantity of land that should be taken out of production in the various States, and allot to the States for leasing this quantity of land. The commission would then advertise for bids to lease lands from the owners of each State requiring that every bidder specify under oath the number of acres that he offered for lease, its location, the crop to which it had been planted, the average production of said land for the past three years, and the price at which he would be willing to lease. The commission would then have in its possession a picture of what this surplus land had been producing, and then could award leases in such manner as to take out of production the required number of acres to establish a proper balance between supply and demand.

Senator WALSH of Massachusetts. The award would be by mutual consent?

Mr. TEAGUE. Yes, sir.

This plan should be in effect for at least five years. It would probably be advisable to lease a certain percentage of the land for five years, as there is no probability that all of the products of all of the agricultural lands will be needed in that length of time. A certain percentage of the land would be leased on annual leases, so as to permit of flexibility in the balancing of production, and so that it could be released if there were evidences of the price structure getting too high.

Advantages of the bidding system are that there would be a natural grading of the productive value of the lands in the price that the various applicants would place upon their leases. It would not require a large army of men to contact all of the farmers and bargain for leases. It would not require policing as the land could be posted, and no man would dare to plant leased land to crops because he would know that the crop would be taken away from him.

The advantage of the plan is that it does not look to benefiting some particular class in agriculture at the expense of other classes.

Assuming that it might be necessary to remove 15 per cent of the total lands in agricultural production by the lease system it would only be necessary to contact with that percentage of the producers—owners of the surplus acres—inasmuch as the selections of the leased land would probably be largely made from the large owners, so as to leave the small producers on the farm, it would only be necessary to contact a still smaller percentage of the farmers.

Assuming that there are 300,000,000 acres devoted to the production of annual crops, and assuming that it was necessary to withdraw 15 per cent of these acres from production, the number of acres withdrawn, if they were of average production, would be 45,000,000 acres. This land could probably be leased at from $100 up, based on its productive value. A tax levy of $150,000,000 to $200,000,000 would probably withdraw all of the land necessary to balance production and demand.

Senator GORE. Right at that point let me ask you a question, Mr. Teague.

Mr. TEAGUE. Yes.

Senator GORE. Our textile mills, cotton and woolen mills, are capable of producing more than the requirements of the country at present. Would you lease this surplus?

Mr. TEAGUE. Lease the mills?

Senator GORE. Yes.

Mr. TEAGUE. No. I am only dealing with acres of land.

Senator SHORTRIDGE. Mr. Teague, could I interrupt your statement?

Mr. TEAGUE. All right.

Senator SHORTRIDGE. May I ask you this question right here?

Mr. TEAGUE. Yes.

Senator SHORTRIDGE. What would become of the land taken out of production?

Mr. TEAGUE. I will reach that in a moment, Senator.

Senator SHORTRIDGE. Very well.

This 150,000,000 to 200,000,000 is a bagatelle compared with the present value of agricultural crops of something like $5,000,000,000 and $10,000,000,000 to $12,000,000,000 in normal times, and compared with the enormous sums of money that the Government is spending in its relief programs.

After the total surplus acres were removed, the producers would be free to plant the balance of the land to any crop that they desire to produce, relying on the proper adjustment between producers as to the crops they would produce, based upon the differential that would, of course, be inherent upon the higher level of prices established.

It might be advisable to insert a clause in leases pledging the owner not to increase his production from any other acres from which he was not then producing. Leases could provide that owner could occupy any buildings on the premises; also that the owner would have the right to fallow land to keep down weeds, and grow no crops.

The CHAIRMAN. Would you make a penalty for violation of that?

Mr. TEAGUE. For growing no crops?

The CHAIRMAN. For growing no more than they had agreed.

Mr. TEAGUE. The land would be under lease to the Government, and the Government could step in and take the crop at any time. There would be no need of a penalty.

Senator WALSH of Massachusetts. Do you think you could get all this amount of leased land on an average basis of $4.50 an acre?

Mr. TEAGUE. I think so, without any question.

Senator WALSH of Massachusetts. That is about what it would amount to?

Mr. TEAGUE. Yes.

Senator SHORTRIDGE. Of course that could not apply to walnut crops?

Mr. TEAGUE. No; I will reach that in a moment, Senator.

The livestock and dairying industry would be benefited because a large percentage of the livestock and dairy products are produced on the highly developed lands where the feed comes from the production of such land, or from the lands under rotation, and the taking out of surplus acres would probably proportionately reduce the livestock and dairy cattle on said farms.

This plan, by bringing up the general price level of this large section of the agricultural producers, should very materially affect the general economic conditions of the country as every one recognizes that the depressed condition of agriculture and the low buying power of the farmer is a very important factor in the present depression. It would not be feasible to attempt to deal by this plan with the agricultural lands planted to orchards for the reason that the orchard must be taken care of, cultivated, sprayed and pruned, and the crop will be produced in any event; and it would be difficult to police it so as to keep it out of production. The orchardists could rely upon a very substantial benefit coming from the general improvement in the economic situation by reason of the increased buying power of the farmer and the improved economic condition.

Just two very short suggestions in addition, Mr. Chairman. There must be a lowering of taxes through severe cuts in the cost of government, Federal, State, county, and municipal, and budget plans, along the lines of that which has been done in the State of Mississippi where the budget was cut, I understand, about 30 per cent, and the Government operated within the budget.

I might add that the tax bill of the farmer is greater than his interest bill. So the question of taxation is very important.

Senator SHORTRIDGE. Just say that again, please.

Mr. TEAGUE. The tax bill of the farmer is very much greater than his interest bill.

Some way should be found of reestablishing foreign trade through stabilizing foreign exchange on a gold standard basis.

Senators, that is all I have to present.

Senator CONNALLY. Right there: How are you going to do that?

Mr. TEAGUE. I think it would be possible in many ways. By perhaps some form of international agreement, or perhaps the formation of some gold pool by the principal countries operating on the gold standard. It would not take anything like the quantity of gold under a gold pool and agreement, with the combined gold standards of all participating countries, that it does separately——

Senator CONNALLY. I think we have done about as much advancing of gold to Europe as we want to do.

Senator KING. I take it from your last observation that you are in favor of this means that seems to have a rather continental character, of cutting off our trade with foreign nations. You believe in international trade?

Mr. TEAGUE. I think, so far as it can be maintained, that it certainly should be. Nevertheless, I do not think it should be maintained at the expense of sacrificing our domestic markets which take 90 per cent of all of the things we produce.

Senator KING. Assume that our exports exceed by between $300,000,000 and $500,000,000 our imports: Would you favor an embargo established to keep out the rest of the imports?

Mr. TEAGUE. I do not think an embargo would be necessary, if you can establish your foreign exchange on a stabilized exchange basis.

Senator KING. You do believe that we are a part of the world and that we can profit by shipping our surplus products abroad?

Mr. TEAGUE. I do, certainly, as far as we can do it without opening up our markets and getting the worst of it in the trade.

Senator KING. You do not assume we could ship our goods abroad unless we received some in return, do you?

Mr. TEAGUE. Oh, no; we certainly would receive some things in return. It is unthinkable that we would close up our markets entirely to trade with the whole world. I think it is extremely desirable that we trade; but I do not see how we can do it unless we do reestablish our foreign exchange, because we are going to get into a barrier situation against each other.

Senator SHORTRIDGE. Mr. Teague, I just want to emphasize the thought that you expressed, with which I unqualifiedly agree. Interstate trade among 48 States, with one hundred and twenty odd millions of people, is far more important than our foreign trade, however important that may be?

Mr. TEAGUE. Yes.

Senator SHORTRIDGE. And we must not surrender our home market to the cheap goods coming from certain foreign countries?

Mr. TEAGUE. I would not think anybody would quarrel with that principle, Senator. I do not see how they could.

Senator SHORTRIDGE. There was a time when I was scoffed at and sneered at and ridiculed by the newspapers of this country because I stood up for adequate tariff protection. It was said that I was erecting a barrier around America, a Chinese wall around America. Now I perceive, however, that certain of my critics and calumniators are out-Heroding Herod—are now demanding that we buy in America, with which I agree.

Senator HARRISON. I resent the statement that the Senator from California was ever scoffed at.

Senator SHORTRIDGE. Yes, I was; by some of these unconvicted newspaper boys. I have defended more of them in the Senate than any other Senator.

The CHAIRMAN. Have you any further statement to make, Mr. Teague?

Mr. TEAGUE. That is all, Mr. Chairman.

Senator GORE. Oklahoma was the first State to initiate such a system as you have mentioned, Mr. Teague, but it failed. I do not think that necessarily condemns the system, however. I have given it a great deal of thought, and the principle that occurs to me is this, that there should be some system that will guarantee deposits, that will not treat the honest and the dishonest bankers as though they were the same.

Mr. TEAGUE. Of course, Senator, I am not proposing that you shall guarantee the capital and surplus of a bank; I am merely proposing that you guarantee the deposits of the people in that bank.

Senator GORE. I understand that.

Mr. TEAGUE. Do you want the people to suffer because of some banker that you say is dishonest in his conducting of banking? Check him in another way.

Senator GORE. Here is what I am getting at. A dishonest bank fails. The banker defrauds his depositors. The honest banker has got to guarantee the dishonest banker. That is the point that occurs to me. There are 45,000,000,000 bank deposits in this country to-day?

Mr. TEAGUE. Yes.

Senator GORE. That means that the banks owe $45,000,000,000 to their depositors?

Mr. TEAGUE. Yes, sir.

Senator GORE. The system of guaranteeing deposits takes the president of each bank by the hand and makes him "sign on the dotted line" and say, "I undertake to pay $45,000,000,000 of other banks' debts." That is the thing that gives me pause.

Mr. TEAGUE. You spoke of these experiments in other States. I do not think that they necessarily form a precedent, for the reason that——

Senator GORE. I do not think so either.

Mr. TEAGUE. It covers one particular territory, and it probably was established after the banks had gotten unsound.

Senator GORE. You know that a great many people have gotten into trouble by going on other people's notes and having them to pay?

Mr. TEAGUE. Yes.

Senator GORE. Even when they exercised their own discretion and judgment as to whether they should go on those notes or not. You propose passing a law which makes every banker in the United States sign a note of every other banker in the United States, just like he signed his name on a promissory note, agreeing to pay $45,000,000,000 of debts to their depositors.

Mr. TEAGUE. Oh, no; I do not think that.

Senator GORE. Would it make all banks secure or unsecure?

Mr. TEAGUE. No; I say we would levy a tax on all banks that would be estimated to pay any losses that might be incurred——

Senator GORE. I understand your proposition.

Mr. TEAGUE. Well, all right.

Senator GORE. In the last two years the deposits in these failed banks amounted to something like $4,500,000,000. All the capital of all the national banks in the United States is $1,500,000,000. Their capital and surplus is $3,000,000,000. The deposits in those failed banks are about $1,500,000,000 more than the entire capital stock and surplus of every national bank in the United States.

Mr. TEAGUE. And why did they fail? Because the people all demanded their money at once; and no banker can meet that condition.

Senator GORE. Oh, no. A good many failed because of the fact that they had frozen assets and could not carry on.

Senator BARKLEY. One of the biggest banks in western Kentucky failed, to the surprise of everyone. There had been no run and no suspicion.

Mr. TEAGUE. I do not think that is an invariable rule. Many of them have failed, you know, because of runs.

Senator GORE. There is a large bank in Texas which enjoyed universal confidence, and yet it failed, and the president is now in the penitentiary. Are you going to make a banker out in Salt Lake City pay for his crookedness? It is that point that I want to find some way of getting around.

The CHAIRMAN. It may be that the bank did not have a run on it, but you will find it more than likely that there was a steady withdrawal for months and months, and that is what brought about the failure.

Mr. TEAGUE. Yes. If there had been confidence, Senator, and the people had transacted their business with those banks, they would not have failed.

Senator GORE. The president of the bank under the law could have borrowed $55,000. He had borrowed $300,000 in one way or another. He was crooked.

Senator SHORTRIDGE. He is in jail now, is he not?

Senator GORE. Yes; but that does not help the depositors. Should honest bankers be made to pay for his crookedness?

Mr. TEAGUE. Here is what is bothering me, Senator—some way of protecting the people. There are nearly a third of our population affected on account of these failed banks, and we are making Bolsheviks of them, and if we do not do something to protect them I do not know where we are going.

Senator GORE. One third of the banks have failed. I appreciate the gravity of the problem.

Senator CONNALLY. With regard to this farm matter, you say they pay a rent on the credit that will be liberated?

Mr. TEAGUE. I say, what you do would be to lease the land at a fixed rental basis established by the owners themselves, based upon their productive value.

Senator CONNALLY. I understood you to say that the remainder of the land that was leased he could do with as he pleased?

Mr. TEAGUE. The remainder of the land not under lease he could do what he pleased with.

Senator CONNALLY. That is all.

The CHAIRMAN. The committee will adjourn now until 10 o'clock to-morrow morning.

(Whereupon, at 4.20 o'clock p. m., the committee adjourned until to-morrow, Tuesday, February 14, 1933, at 10 o'clock a. m.)

159450—33——6

# INVESTIGATION OF ECONOMIC PROBLEMS

---

**TUESDAY, FEBRUARY 14, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met at 10 o'clock a. m., pursuant to adjournment on Monday, February 13, 1933, in room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Reed, Shortridge, Couzens, La Follette, Harrison, King, George, Walsh of Massachusetts, Barkley, Connally, and Gore.

Also present: Senator Coolidge.

The CHAIRMAN. The committee will come to order. We will first hear this morning Mr. Paul Block.

## STATEMENT OF PAUL BLOCK, NEW YORK CITY

The CHAIRMAN. Mr. Block, you may proceed now with whatever statement you desire to make, but make it as brief as possible.

Mr. BLOCK. Mine will take 10 minutes, Senator.

The CHAIRMAN. Mr. Block, whom do you represent?

Mr. BLOCK. Myself.

The CHAIRMAN. Proceed.

Mr. BLOCK. Mr. Chairman and gentlemen, a great deal of study has been given on how to get out of this depression; what we need now is prompt but constructive action.

There are some basic things which have been under discussion for some time, and I wish to express my viewpoints on these.

First in importance is the balancing of our budget. To accomplish this I favor immediate drastic reduction in the cost of government and a small manufactuers' sales tax which may be eliminated once repeal of the Eighteenth Amendment is adopted. We could cut cost of government very materially if Congress and the President would, among other things, provide for a reduction in bonus payments now being made to veterans of the World War. No one has greater respect or sentiment for our veterans than I have, but our country can not afford bonuses and pensions to those who either never went overseas or were not injured in actual service. Congress would be doing not only its duty in providing for such a reduction, but would help a vast majority of the people by using this means of cutting down the terrific burden of taxation. Later I will speak of a method of providing help for these veterans.

Next in importance, is for the Government to remain on a gold basis and for the new administration to make it clear to all of our citizenship, and to the entire world, that we are firm in our determination not to debase our currency, and that there will be no change from it, because if our people and the peole of the world were to lose confidnence in the American dollar, the withdrawal of invested money and the hoarding of gold would be so great it would bring chaos to our financial system. Credit would be further restricted, deflation would be accelerated, unemployment would be increased, the standard of living would be lowered, and such business as still is profitable, in my opinion, would virtually stop.

Another vital factor, at least according to my views, is the settlement of the foreign debts. Perhaps, as has been suggested, these debts should be reduced a certain percentage for each million dollars spent with us by the debtor nations. Possibly a further percentage of discount should be given for each million dollars of armament reduction made by the debtor country. We should seek agreements with foreign nations which are now off the gold standard to return to it so that all of us would be on a more nearly equal basis in international trade.

I do not pretend to be able to judge just how much further reduction we should give to our debtor nations for a final settlement; but whatever agreement is made, I believe it should definitely include concessions either in trade or disarmament, or both, and their return to the gold standard. I do not claim that it is just for our foreign debtors to request these further reductions, but it is my best judgment that the great majority of them will never be in any position to meet their obligations to us in full. I believe that clearing up this debt situation will, in the long run, be both beneficial and profitable to us.

The repeal of the eighteenth amendment should be hurried because of the large excise tax this would bring to our treasury, which would permit us to reduce many of our present-day taxes, including, perhaps, the manufacturers' sales tax, if adopted. It is not necessary to add how much the repeal of this amendment would also mean to the morale of our entire citizenship.

I would suggest a coalition cabinet, but I fear that our 2-party political system is in the way of this, and more is the pity. In these days of anxiety and despair politics should be forgotten. Perhaps an active advisory board having certain defined power could be appointed by the President, to include a half a dozen of our leading citizens, no matter what their political affiliations may be, but whose names would bring confidence to our people and who would confer with the President and the cabinet, as well as with the chairmen of various committees in Congress, to devise ways and means to obtain measures which would be helpful to all the country.

I regard it as imperative to undertake public works on a large scale to provide a way for a general revival of business and to expand the credit of the country. I believe that the money which thousands of people are now hoarding and that some of the money which is now almost overburdening our savings banks, which are unable to employ it profitably, would be released for the purchase of 10 or 20 year bonds yielding a moderate interest, possibly 2½ per cent or 3 per cent at the outside. Such funds would be put into circulation immediately and they would not, in my opinion, affect investment in good municipal, real estate, or business issues. Further, such a bond issue which could be sold the same way we marketed Liberty bonds, would help to stop the agitation for inflation of the currency, which is too dangerous to be attempted. Commercial banking houses, however, should not have the privilege, if it is possible to withhold it from them, of purchasing these bonds except for customers. Otherwise, they might invest in this issue funds which they should loan to business. I believe the Government is entirely justified in issuing such bonds at this time. During the war we did not hesitate to float bonds, which the people bought readily, to pursue the war. I consider the present emergency just as great as in war time. The Government debt is now less than it was at the end of the war. Our resources are greater than they were then. We are, I believe, justified in increasing our national debt to help regain prosperity for our people.

A way should be provided to help the unemployed veterans, and I would suggest that this be done through giving them preference on Federal public works.

I have no doubt that there are some reductions that should be made in our tariff schedules, but I am very much opposed to changes being considered except with nations which are definitely on a gold basis. In fact, I consider it necessary to raise tariffs against the products of countries which use depreciated currencies.

A way should be found to reduce the number of working days and working hours. I do not know whether this can or should be done by Federal action, but until more work is staggered there will always remain a large percentage of unemployed people, due to improved methods of machine production.

A plan must, of course, be found to help the farmers; but I do not believe in a dole system for them or for anyone. I am not enough of a student of agricultural economics to suggest what particular system would be best to help the men and women of the agricultural districts. However, moratoriums for farm mortgages, it seems to me, are essential. I believe also that the creditors of farmers should adjust their claims on a basis more in keeping with the present value of farm lands. I believe it will be necessary to fix lower interest rates on farm mortgages, and the same considerations should be given to small home owners everywhere.

As to prices of agricultural products, if a legal way could be found to limit the production of wheat and cotton and to place a minimum price on them that could be successfully worked out, without Federal subsidy, and without too great cost for administration, this may be the method to pursue. Other farm products would benefit indirectly if the plan succeeded.

In conclusion, I would like to add just this word. These are desperate and discouraging days. Mere talk and more talk will not help; only action, prompt action—to-day and not to-morrow—will meet the situation.

Senator King. Mr. Block, may I ask you a question?

Mr. Block. Yes, sir.

Senator King. You suggested the importance of getting nations back on to the gold standard. Evidently you believe that there should be a metallic base to support the currencies and credits of the world?

Mr. Block. A gold base.

Senator King. In view of the fact that silver for many years, indeed for centuries, was a part of the metallic base, that it was primary money the same as gold, do you not think that if the nations by international agreement should remonetize silver or agree upon a ratio between gold and silver and should coin silver bullion or gold bullion upon the ratio agreed upon that that might stabilize prices and give greater stability to the monetary systems of the world?

Mr. BLOCK. Personally I do not think so. Silver is used for so many purposes, and its value keeps changing so that I fear that it will all be turned into gold as quickly as gold can be bought with it, and the gold would be hoarded and we would go into an inflation which would eventually bring chaos to our monetary and business system. That is my best viewpoint.

Senator KING. When silver was a part of the monetary system of the world the danger which you presage did not occur.

Mr. BLOCK. The conditions, I do not believe, existed that exist to-day. I am speaking of the present day and the immediate future which I see ahead of me.

Senator KING. You do not believe, do you, that $11,000,000,000 of gold for monetary purposes for all the world is adequate, do you?

Mr. BLOCK. I do, yes. Because it is there as a safeguard, and it is plenty for the purposes for which it remains in the treasuries of the world.

Senator KING. Would you regard it as a disaster if by some freak of nature or by some providential act a great gold deposit amounting to billions of dollars were uncovered and that golden treasury poured into trade and commerce?

Mr. BLOCK. Well, I would not be able to answer that, Senator, I can not answer that.

Senator KING. Another question. You suggest that additional bonds might be issued by the Government. And you refer to the fact that during the war we issued more bonds than are presently outstanding. The facts are that we have approximately forty billion of bonds outstanding, that is Federal, State, and their political subdivisions. Do you not think that by a persistent or a constant issue of bonds aggregating billions of dollars we might ultimately impair the credit of the country and reduce the value of the bonds in the market?

Mr. BLOCK. Not for the amount of bonds which I would issue had I the power to issue them. I do not think three, four, five, six billion dollars worth of bonds would impair our country. As I say, our Federal Government is in better condition to-day than it was after the war.

Senator KING. We have issued approximately five billion of bonds to meet deficits during the past three years, and in addition the cities and counties and States have issued bonds, and the Federal Government now is the only purchaser of the Reconstruction Finance Corporation debentures which are issued, and is the only purchaser of the bonds which are issued by the home loan bank and by the Federal farm bank, so that we are under obligation, apparently, to purchase from organizations created by the Federal Government not millions but possibly billions of bonds. Do you not think that with this tremendous outpouring of bonds, of securities by the Federal Government, by the Reconstruction Finance Corporation, and the other organizations to which I have referred, that there may be a time when the credit of the Government may be impaired?

Mr. BLOCK. There is not any question there may come a time, but I do not think it is here if you will balance your budgets and if you will cut the cost of administration not only in Federal Government but in States and counties and cities that you mentioned, and pass the repeal bill so that we will take in taxes which now the Government does not get, and in this way reduce other taxes, all of which will be helpful to business.

Senator KING. You regard it as indispensable, however, for the maintenance of the credit of the Government in view of this prodigious bond issue which will continue, that we balance the Budget?

Mr. BLOCK. That we balance the Budget.

Senator KING. Yes?

Mr. BLOCK. That should come first.

Senator GEORGE. Mr. Block, I assume that you hold to what we know as the quantitative theory of money? I judge you do by insisting on gold and gold alone.

Mr. BLOCK. I do not know that I understand, Senator, the question of the quantitative money. Meaning that we should all have a lot of money?

Senator GEORGE. No, meaning that we should not have very much money for fear that the governments may be tempted to overissue. In other words, that the price of your money is limited necessarily by the amount of gold in the world; is that your theory?

Mr. BLOCK. No.

Senator GEORGE. And as long as that base is maintained that you can not run to excessive issues?

Mr. BLOCK. You can not run to excessive issues if you do not balance your budget, if you are continuously spending more money than you are taking in.

Senator GEORGE. I am speaking of the money theory. You insisted that there be but one metallic base, and that is gold?

Mr. BLOCK. Yes.

Senator GEORGE. Just what is your idea in insisting that you just have gold?

Mr. BLOCK. Because I fear that an inflation would occur which would bring chaos.

Senator GEORGE. In other words, you are looking for a limited base?

Mr. BLOCK. Well, let me call it the present gold limit base.

Senator GEORGE. Yes. That is what I had in mind.

Mr. BLOCK. Yes.

Senator GEORGE. That is what I apprehended was back of your statement. Of course, you do not think that the Lord made money?

Mr. BLOCK. Some people——

Senator GEORGE. You know it is purely the creature of law?

Mr. BLOCK. Yes; I agree in that.

Senator GEORGE. Absolutely.

Mr. BLOCK. I believe that.

Senator GEORGE. And so far as money is concerned, there would not be any better money than paper money if you always hold that issue within bounds?

Mr. BLOCK. And if you could not get it through other channels.

Senator GEORGE. Yes. That is what I mean. If you could not start the printing presses. So your idea is——

Mr. BLOCK (continuing). And could not use it for a million other purposes, thereby changing the value all the time.

Senator GEORGE. Well, you do not think that the value of gold changes like other commodities also? Not so rapidly?

Mr. BLOCK. No, sir; I do not.

Senator GEORGE. Not so widely?

Mr. BLOCK. I do not think so; no, sir.

Senator GEORGE. You do not have an idea at all that perhaps our monetary system may be partially responsible for the value of gold at this moment?

Mr. BLOCK. I do not think so. I do not pretend to be so wise that I know it all, but I do not think so.

Senator GEORGE. You do not go back to the old theory of the intrinsic value of gold, do you, Mr. Block?

Mr. BLOCK. I have studied it and I am giving you my best judgment in my statement.

Senator GEORGE. Yes; I am curious to know, though, just what is back of it, because everybody that comes, of course, is going to say that we must not get off the gold standard, and personally I agree with you, but then I haven't any such idea as a great many other of the witnesses no doubt are going to express here from time to time. I do not see any reason for saying that there should be but one metallic base unless you go farther back and say that you can not have two standards. But the real value of gold is a base, and as long as you maintain reserves and have a proper relation to the currency that is tied to it, that will prevent, of course, any undue inflation. It will prevent you from just simply setting your printing presses in use and working if you have got a paper currency altogether.

Mr. BLOCK. The value of silver, according to my mind, will change no matter what the Government may say about it, because it is used for so many other purposes besides money.

Senator George. Well, undoubtedly it will change more than gold.

Mr. BLOCK. Yes.

Senator GEORGE. I grant you that, because it has a wider commercial use.

Mr. BLOCK. Yes, that is right; and that is the danger.

Senator GEORGE. Yes.

The CHAIRMAN. We thank you.

Mr. BLOCK. Thank you.

The CHAIRMAN. Dr. Herman F. Arendtz.

## STATEMENT OF DR. HERMAN F. ARENDTZ, ECONOMIST OF THE UNITED BUSINESS SERVICE, BOSTON, MASS.

The CHAIRMAN. You may proceed, Doctor.

Doctor ARENDTZ. In treating the current depression it has been my belief that we are dealing with two depressions, one superimposed upon the other.

Senator BARKLEY. Mr. Chairman, might we know the identity of the witness?

Senator KING. Doctor Arendtz, of Harvard.

Doctor ARENDTZ. Economist of the United Business Service at present.

The first is the familiar credit crisis that we have had in this country again and again resulting from the collapse of overextended credit. The second is a long and grinding world depression caused by falling world prices. The first struck us in the stock market. When we seemed to be getting over that in the spring of 1930 the heavy weight of the world depression bore down on it, and since then we have suffered in common with the world from that.

As to the first, it is due to the money credit system which we have. We talk about the United States being on a gold standard. Actually it is a managed credit system with a gold façade. The reason I say that is this, because the chief instruments of conducting transactions are bank deposits subject to check. Eighty-five to ninety per cent of all transactions are done with checks normally. Probably somewhat less now because so many banks have failed that people use more currency. The question of whether you peel a note off a roll, as they do in Europe, and pay a bill, or whether you write a check against your bank account, is merely a matter of method. The actual volume of currency includes not only ordinary paper and coin, and so forth, but bank deposits subject to check.

Now, if you figure that way—and I do—the actual gold cover in 1929 was not the 60 or 70 per cent that the Federal reserve gold ratio reports, but against the whole of that currency was only 18 and a fraction per cent. And to-day it is about 21.6 per cent. I do not think that is too much gold. It is so little that the value of gold does not determine it. It is the expansion and contraction of credit that does it and carries the gold with it.

Now we expanded credit steadily in 1927, 1928, and 1929, in fact really since 1922, and then the thing got so top heavy it just collapsed.

As to the world depression, the whole debt situation was built up during and following the war to a point where it could not stand any more debt inflation of any sort. And then we got a series of years in which the gold output was steadily increased at a steadily smaller percentage than the normal volume of goods and services produced for sale. That would have caused a gradual decline in world prices if it had not been for the credit expansion here and the tremendous investments of Americans in foreign securities which overflowed this credit expansion here out into the rest of the world and filled up the gap that failing gold production had left. Then when we broke down and failed the whole thing came down together.

The CHAIRMAN. Approximately $10,000,000,000 of foreign investments held by Americans.

Doctor ARENDTZ. Yes; I should say. And as that went on year by year it filled up the gap that the failing gold production had left and prevented a decline in world prices which would have come otherwise, and then when we failed, when American investment and credit expansion collapsed the whole thing came together—crashed at once.

Now, that at least is the theory that I believe to be sound with regard to the primary underlying causes. I have here, for instance, Doctor Harwood's book on "Cause and Control of Business Cycles," in which he treats the credit expansion side in the United States alone. But I do not think that is adequate, because the world depression arising from the other cause I mentioned ultimately became more important, and still is.

Remedies one can divide into two or three groups. First is immediate. Immediate relief is obviously necessary. Relief to prevent the banks from collapsing, relief to prevent insurance companies from collapsing, to keep railroads functioning, and to keep people from starving. Those things are absolutely necessary. Apparently the greater part of that has got to be done on Federal credit, on Federal Government credit one way or another. It would look so.

Senator KING. Not State or municipal?

Doctor Arendtz. Yes; State too. But I think perhaps the greater part of it has to be Federal. I may be wrong there, but certainly a very large part of it has got to be done on Federal Government credit one way or the other.

Senator Couzens. May I ask a question at that point?

Doctor Arendtz. Yes.

Senator Couzens. Do you believe that in keeping the railroads functioning and the banks functioning that you have got to maintain an unstable capital structure?

Doctor Arendtz. Temporarily maybe you have.

Senator Couzens. What is the use of doing it temporarily if it later collapses?

Doctor Arendtz. Well, the only hope is that if you do it temporarily you may in the meantime be able to create better conditions so it will not collapse.

Senator Couzens. Well, we have been doing that in Detroit for a long time and the State of Michigan has collapsed.

Doctor Arendtz. Well, that is the danger, but relief is principally necessary. Can Federal credit stand it or will that collapse? That is one way of putting your question, is it not?

Senator Couzens. That is what I am asking you.

Doctor Arendtz. Yes.

Senator Couzens. Whether Federal credit can maintain this unsubstantial credit structure that now exists?

Doctor Arendtz. Nobody in the world, I think, can answer that. It depends on how much of it becomes necessary. Ultimately if it has to go on and on even Federal credit will collapse too, without any question.

Senator Couzens. Would you be willing to take the hazard of Federal credit collapsing so as to maintain an unsubstantial credit that now exists in private concerns and State and railroads, and others?

Doctor Arendtz. I would try to avoid that by every possibility.

Senator Couzens. Yes. But immediate action is necessary. I am trying to get your experienced judgment as to how far we should go in trying to maintain an excessive overcapital structure.

Doctor Arendtz. The capital structure has got to be reduced, and I think that the bankruptcy bill now pending is useful to that end, and I think that ought to be done to make every effort to make the Federal relief as small as possible.

Senator Couzens. Well, assume that that could not be done in the next few months, would you suggest that the Government continue to extend its credit and hazard its credit to maintain that structure?

Doctor Arendtz. What is the alternative? Let them all go?

Senator Couzens. I am asking you.

Doctor Arendtz. The alternative seems to be to let them all go, and since there is no reasonable hope of reforming the structure and making it sound without complete chaos and a general collapse, my answer would be, "Yes, I would."

The Chairman. In other words, if the Government did not assist at this time the collapse would come quicker than if it did?

Doctor Arendtz. Precisely.

Senator Couzens. What is the use of sustaining it if it is going to go anyway? The Senator from Utah says that to sustain it you prevent it from going earlier.

The CHAIRMAN. I said, "if" Senator Couzens. I did not say that it will. But my question was "if." I did not say that it will go. But I think perhaps the only way to prevent it from going would be through the Government assistance. I do not believe it ever will.

Senator COUZENS. Do the Senator and the economist mean that the Government should sustain it without any plan of reducing the structure?

Doctor ARENDTZ. No; I do not mean that by any means.

The CHAIRMAN. No; I would not think of that at all.

Senator COUZENS. What are you going to do if Congress does not adopt effective ways of reducing and strenghtening the structure? Are you going to take the hazard of jeopardizing Federal credit?

Doctor ARENDTZ. I see nothing else possible. If the temporary relief is let ride as that and nothing else, and nothing else is done, your collapse will come anyhow.

Senator COUZENS. What effect is that going to have on the Federal credit any differently than a failure to exactly balance the Budget at this time? In other words, how can the Federal Budget be balanced if you are going to extend this aid to the present capital structure and count it in as an effective pressure upon Government credit?

Doctor ARENDTZ. I was coming to that in just a minute.

Senator COUZENS. All right. I beg your pardon.

Doctor ARENDTZ. Next to the matter of immediate relief it seems to me comes the question of balancing budgets, not only Federal but State, municipal, business, and every kind. There has got to be a readjustment. I do not think there is any reasonable possibility by any practicable method of restoring the price level all the way. Now I will speak more about that. But there has got to be a readjustment.

Government is costing the people more than they can afford to pay. With a national income of $85,000,000,000 in 1929 it might be possible, and was, to support it, but with that cut from $85,000,000,000 to $37,500,000,000 we can not afford to pay the price for Government that we paid when we had $85,000,000,000. And that means that there have got to be cuts. And the budget should be balanced by cutting expense. Not by putting new taxes on an impoverished people. I think that plan of increasing taxation on an impoverished people is one that would shame an oriental despotism. I do not think it is possible.

Senator COUZENS. Have you analyzed the Treasury bookkeeping system?

Doctor ARENDTZ. Not closely. I have seen the Budget and those estimates, but I have not analyzed the bookkeeping system as such.

Senator COUZENS. Then you have not discriminated between the Government advancing $500,000,000 to the Reconstruction Finance Corporation and the $125,000,000 more to the Federal land banks and some more to a liquidating banking corporation being placed in Government expenditures?

Doctor ARENDTZ. Yes; I have faced that one.

Senator COUZENS. And you believe that with the present system of bookkeeping then that should be balanced each year?

Doctor ARENDTZ. I do not think it is possible to balance it this year. But we should aim to balance it just as quickly as possible.

Senator COUZENS. Yes. Well, of course everybody agrees with that. But do you mean that we should attempt to raise out of taxation or reduce other expenses to the point where we can balance expenditures like $500,000,000 to the Reconstruction Finance Corporation in one year or two years?

Doctor ARENDTZ. As I say, I do not think that is possible, but I think that we should come as near to it as we can, and in every case should provide in the budget for interest on any new loans sinking funds on it.

Senator COUSENS. Yes, and in the meantime you should prefer to cut wages and dismiss employees and cut expenses so as to pay interest on the money which we borrow to put into the Reconstruction Finance Corporation?

Doctor ARENDTZ. I am not very strong for dismissing too many employees, but I am for cutting wages and salaries of Government employees from the President down, well, somewhat in proportion—perhaps not quite as much, but somewhat in proportion to the extent to which they have been slashed in private industry.

Seanator COUSENS. So that in effect we may pay the interest on some billion dollars that we put into the stock investments to maintain the capital structure of the country?

Doctor ARENDTZ. I think that is necessary.

Senator BARKLEY. Aside from any money put into the capital investment for reconstruction, or for the Reconstruction Finance Corporation, or for any other of these extra governmental activities, at the present rate of income and outgo we would have to reduce the expenses about a billion dollars to balance the budget now if we do not pay out any more for any of these things.

Doctor ARENDTZ. Well, do you want me to suggest possibilities in that respect?

Senator BARKLEY. If you have possibilities.

Doctor ARENDTZ. Well, here is one. It happens that when I was 16 years old I went in the Massachusetts Naval Reserve in the Spanish War, and as I understand the matter I am entitled to free hospitalization. All I did was get some good training and have a good time and paid what I was worth for it. Now I do not see any sense in that. I think that veterans' remunerations for sickness or injuries not connected with war service should be cut off. That is one thing.

Then I think that all pensions can properly and should be reduced in this way. The purchasing power of the dollar is much higher than it was in 1929. Now if a pension of so many dollars was adequate in 1929 a smaller one will have the same purchasing power to-day and does not represent any real reduction.

Senator BARKLEY. You are going on the assumption that whatever allowance was made to veterans was an exact justice to them at the time and that therefore it is more than justice to them now?

Doctor ARENDTZ. No. I would not say that. I am going on the assumption that whatever was made to them at the time was then considered reasonably adequate—without raising the question of too precise justice—was considered reasonably adequate. And it would be equally reasonably adequate if it were reduced.

Senator BARKLEY. Those allowances were not based upon the cost of living. They were based upon the proportion of a man's injuries to his earning capacities, of course assuming that he was normal and could receive normal wages.

Doctor ARENDTZ. Very well. His earning capacity has declined.

Senator BARKLEY. Of course the earning capacity with everybody has declined, whether he was in the service or out of it, and regardless of his degree of disability for any cause.

Senator KING. Senator, that would not be true of pensions because pensions were granted in many instances without any disability at all.

Senator BARKLEY. Yes, service pensions.

The CHAIRMAN. There are $400,000,000 of that kind of pensions paid to-day.

Senator BARKLEY. Well, I do not care to go into a detailed discussion of that. But what other item have you?

Doctor ARENDTZ. General reduction of salaries, as I suggested, somewhat like the reductions that have been made in private industry.

Senator KING. And States and counties?

Doctor ARENDTZ. I think if the Federal Government set the example the local pressure on the States would make the States and municipalities follow suit pretty rapidly.

Senator KING. Do you not think the States and municipalities are setting the precedent for the Government?

Doctor ARENDTZ. In fact they are.

Senator BARKLEY. Is it not a fact that public offices of municipalities and counties and States are much closer to the people and are much more immediately responsive to them than those in the Federal Government, and if there is any example to be set the States and counties and municipalities should not sit around waiting for the Federal Government to set the example; they ought to set it themselves?

Doctor ARENDTZ. Well, they are in some places.

Senator COUZENS. I assume then on your theory that the purchasing power is much greater, that we ought to cut also all the interest charges on our securities, because they are getting the same interest rates that they did previously and they are getting much more purchasing power?

Doctor ARENDTZ. Is that possible?

Senator COUZENS. Well, I think it is just as possible as it is to take the food out of babies' mouths.

Doctor ARENDTZ. With a lower purchasing power the lower wages do not do that.

Senator COUZENS. It would not do it with the man who was receiving interest on bonds either, would it?

Doctor ARENDTZ. Quite so. I am not questioning the matter of abstract justice in the matter. I think you are right. But practically it may not be possible, that is all.

Senator KING. However, Senator Couzens, interest rates have fallen during the past years.

Senator COUZENS. I am talking about the securities that were issued——

Senator GEORGE. Fixed rates.

Senator COUZENS (continuing). During the prosperous periods. And the securities that the Government now has are drawing 4 and 4½ per cent, which were sold at what we might call inflationary periods, and if those salaries and compensations to veterans were fixed at that time it is assumed that they were all fixed on the relative value of things. If you are going to take it out of one group then take it out of all groups.

Senator KING. What do you say as to the effect upon the ability of municipalities, States, and the Government to issue securities and find a market for them if it is understood that there will be a constant reduction in the interest rates if there should be a decline in business and in prices?

Senator COUZENS. Why treat dollars different from what you do individuals?

Senator KING. I am just asking the question.

Senator COUZENS. I do not know. I do not think you can treat them any different.

The CHAIRMAN. I think, however, that there is hardly a city or county or a State but what has borrowed up to the limit now. If they do anything they ought to reduce them rather than increase them.

Senator COUZENS. The Senator from Utah has said what I have in mind. That every agency that can come to the F. R. C. is increasing their indebtedness, and I am opposed to it.

Senator KING. Hear! Hear!

Senator COUZENS. It is time now for the Federal Government to stop trying to maintain excessive and ridiculous capital structures and paying the interest to a special group and at the same time urging and campaigning with all sorts of propaganda to balance the Budget out of the hides of veterans and employees. There is no justice in that. If the Government is going to be just it ought to treat all alike. You can not do it any other legal way. If you can not reduce legally, as the witness says, interest on bonds, why, let us default.

The CHAIRMAN. Proceed.

Doctor ARENDTZ. That covers the first point; that is the matter of cutting down cost of Government to the price level which exists.

The second line of attack is that of building up the price level more toward—it will not be built back to it in any case, but more toward the level which it was. That is largely a world problem. I mean to say that to build the price level up in this country alone, if it could be done, would simply result in making this country a wonderful place to sell goods in and a very poor place to buy them in, with a resulting draining out of the gold in payments for a surplus of imports until the price level was brought down.

The CHAIRMAN. And that would be the natural result.

Doctor ARENDTZ. Yes; the plans for building up the price level are generally those of inflation in some form. Now inflation is wanted primarily in order to furnish more purchasing power. Purchasing power is what is down. It is not overproduction, it has been pretty well shown, that lies back of this depression, but decline in demand. It is not overproduction in the sense of a sudden and great excess of production. It is overproduction in the sense that more is produced than can be sold at a profit, but that is because the demand has fallen, not because the increase in supply is so great.

Senator COUZENS. Does the witness intend to imply that at no time during the period around 1929 was there any excess production?

Doctor ARENDTZ. In 1929 there was a comparatively small excess in production, but nothing that would account for any such collapse as we have to-day.

Senator COUZENS. That is perhaps true, but was there not a constant desire on the part of every one to increase production by capital expenditures?

Doctor ARENDTZ. Yes; but in spite of that the figures of industrial production, of crops and so forth, as I brought out in my little book there, did not show any extraordinary increases. They do in a few items. There are a few items that do. The rest did not. Rather steady normal increase, one might say. It is the purchasing power that collapsed rather than the sudden outburst of supply.

Senator COUZENS. Well, what caused the purchasing power to collapse?

Doctor ARENDTZ. The fundamental reason I believe to be the fact that gold production proceeded at a rate of less than 2 per cent through a number of years, while the production of goods and services for sale increased at the rate of over 3 per cent. Now most economists agree that is a normal rate.

Senator BARKLEY. Is that an annual increase you speak of?

Doctor ARENDTZ. Yes; and that, most economists agree, is a normal rate. Of course had it been possible to constantly increase the credit money structure it might have moved them on that, but it was not done except in this country.

Senator COUZENS. I will agree with you that the increase was not so substantial, but if you will watch the graph of the increase in manufactures, and then if you compare that with the graph of the rise in credits and debts you will find it is enormous.

Doctor ARENDTZ. I am speaking of credit money. Of cdebts you are right. But of credit money I am speaking.

Senator COUZENS. What I was getting at, though, was this: What effect do you think the fact that the manufacturing graph shows along like that, a very gradual increase, and the debts up like this, almost twice as much? I ask you what effect the increase in the debt structure had upon the purchasing power and the welfare of the country as a whole?

Doctor ARENDTZ. The increase in the debt structure—that is so far as it was interest-bearing debt—would not have direct effect except so far as those securities became the basis for loans which would go into bank deposits subject to check, and therefore into actual purchases.

Senator COUZENS. Of course that is a rather complicated answer for a layman to get.

Doctor ARENDTZ. I know it. I agree with you.

Senator COUZENS. But at the same time it was certainly taking out of the purchasing power an enormous amount for interest charges which went back, if you please, into bank deposits and otherwheres, but not into consumption.

Doctor ARENDTZ. I am not so sure about that not going into consumption.

Senator COUZENS. Well, I am quite sure about that.

Doctor ARENDTZ. When people get interest they have to do something with it. They do not bury it in the ground. It works out somewhere.

Senator COUZENS. Oh, they get it back and put it into more investments, put it into more debts, and more interest is the result.

Doctor ARENDTZ. All of which creates a very top-heavy speculative structure.

Senator COUZENS. Now you have come to the point.

Doctor ARENDTZ. Quite so.

Senator COUZENS. That is just what I wanted to develop. So that in effect the whole situation, at least a great percentage of it, is due to the absurdity of building up a debt structure such as we did during the period referred to.

Doctor ARENDTZ. Well, I will have to come back to my original distinction between the two depressions, the one characteristically American, which is what you say, the expansion of speculation on credit, and the other the long world depression, which is not primarily connected with that at all. Now so far as this country goes you are absolutely right. It is that speculative pyramid built on credit that tipped over. And we have had it before; we have had it time and again before.

Senator COUZENS. And when that terrible pyramid of debts topples over what effect does that have on the rest of us? What effect does it have on commodity prices?

Doctor ARENDTZ. Well, it results in a lot of liquidation and the wiping out of bank currency; by that I mean demand deposits subject to check; and the wiping out of a lot of bank currency helps to bring down prices.

Senator COUZENS. And of course it curtails purchasing power?

Doctor ARENDTZ. Because it curtails purchasing power in fact.

Going back to the possibilities of raising the price levels, there are three ordinarily spoken of. One is the reflation of bank credit. Now, the Federal Reserve for the past year has been trying to effect a reflation of bank credit by buying Government securities and putting excess reserves at the banks' disposal hoping that that would expand their loaning policies. But solvent borrowers have already got as much money as they need to finance what little business they can do. And borrowers who merely want to be carried and can not show profit-making possibilities bankers are not interested in. And so it has simply failed to expand, that is all. It has been impossible to expand it.

And there I want to call attention to the unsatisfactory character of our currency system, which I repeat is primarily a bank-managed currency system. It is bank deposits and checks. What we call ordinary money currency is only a very small part of it. We will say, perhaps 20 per cent.

Senator COUZENS. Not that much.

Doctor ARENDTZ. At the most. I want to be liberal about it.

Senator COUZENS. It will not be 20 per cent.

Doctor ARENDTZ. Maybe it will not. But somewhere between, anyway, 10 and 20 per cent.

Senator COUZENS. As a matter of fact, the currency question is not the important factor in this whole collapse, is it?

Doctor ARENDTZ. Why, I think if it had not been possible to expand the bank credit currency—if they had not been able to finally set up deposits and make loans they never could have flown so high and they consequently would not have fallen so far.

Senator COUZENS. That is true, but that does not exactly answer my question. I ask you if it is not a fact that the currency question in itself and by itself has not been the reason for the great crisis?

Doctor ARENDTZ. I am not quite sure I understand what you mean there. It is impossible to disassociate it, pick it away from the rest.

Senator COUZENS. Well, it does not seem to me that it should be so very difficult when you can reduce it to percentages.

Doctor ARENDTZ. Percentages of what?

Senator COUZENS. Percentages of the relation to currency and the kind of credit that you have just been speaking about. In other words, if you concede that currency had somewhere from a 10 to a 20 per cent relationship to the whole debt structure and the whole business structure.

Doctor ARENDTZ. No; I do not mean that. I mean to say that of the actual currency that is used as purchasing power there at are least \$4 in checks—that is, bank credit currency used as money—to \$1 in what we call pocket money or paper bills or coin or what have you. Now that sort of currency we have found expands, and expands too freely when confidence is high. People want to borrow, and it looks good. And the banks are willing to lend. And it expands when it ought not, perhaps. Then anything that happens to chill confidence, things turn down, it looks bad, it immediately contracts violently. The bankers have to in their own defense. I am not blaming them any. If I were a banker I would do the same thing for my own protection. I would have to.

Senator COUZENS. What is the prevention of that?

Doctor ARENDTZ. I was going to suggest one thing, and that is higher bank reserves; and I think all the banks should be brought under Federal jurisdiction, and every bank taxed out of existence that does not join the Federal reserve system where it can be controlled, and higher reserve ratios required in the future. That is looking ahead a ways, but that seems to me necessary. I do not believe a cover of 18 or 20 per cent is adequate in times when confidence is threatened. Most any cover, or none, will work when confidence is high. If nobody wants to get gold—if you substituted pigs of lead and they did not know the difference it would work just the same as long as confidence ran high. But the structure has got to stand the strain and not merely work in good times.

The purpose, as I say, of inflation, is to increase purchasing power—to go back to that. And this expansion of bank credit is apparently not possible until confidence returns.

Senator CONNALLY. Mr. chairman, may I ask the witness a question right there?

The CHAIRMAN. Senator Connally.

Senator CONNALLY. Is it not the purpose of the Federal reserve law to do that in a measure now through the raising of the rediscount rate?

Doctor ARENDTZ. They tried to control the credit structure that way. That is one of the ways. Open market purchases is another.

Senator CONNALLY. Your idea is that either it has not been exercised properly or does not work?

Doctor ARENDTZ. No; my idea is this: I do not think at the present time it is possible to reflate bank credit.

Senator CONNALLY. Yes, but I am talking about the other way. You said you wanted larger reserves?

Doctor ARENDTZ. Yes.

Senator CONNALLY. So as to prevent too much inflation in times of confidence and prosperity?

Doctor ARENDTZ. Yes.

Senator CONNALLY. Now, Doctor Arendtz, the theory of the Federal reserve was that in a period of that kind they would reach the situation by raising the rediscount rate.

Doctor ARENDTZ. That is the theory.

Senator CONNALLY. And you don't think that that has worked, or is it because the Federal Reserve Board has not exercised that power?

Doctor ARENDTZ. Well, it obviously has not worked, and the reason is, I take it, that they would not, as I would not want, to stand before the country in the position of stopping, checking, reversing a period of good business. When business is booming and going strong the Federal Reserve Board—suppose they had put the screws on, had raised interest rates, sold Government securities, a great howl would go up from the country, attacking the board for slowing down business. That is the difficulty always with a managed currency, the difficulty of management. It is easy enough to expand it. For instance, if it is paper bills you can print more of them but when it comes to checking the thing, apparently no human power is ever wise enough or strong enough, or even willing, to say no to an eager nation. I could not be, I am quite willing to admit.

Senator CONNALLY. In 1929, when we had the gigantic debauch in stock-market speculation, if the Federal Reserve Board and the authorities had put on the interest rate a little earlier that would have had the tendency of slowing such things down, wouldn't it?

Doctor ARENDTZ. Yes. It would have slowed business down along with speculation.

Senator CONNALLY. Well, business would have been better off if it had been slowed down before it went off the cliff, wouldn't it?

Doctor ARENDTZ. Yes. But at such a time it seems to be humanly impossible for any board of men to stand up and face the country and tell them: No, you shall not. You see, the people will say: We are on the high road to prosperity. We are in a new era. No, you must not do it. And so it is that I say: Who will put the brakes on at such a time? Who can do it?

Senator CONNALLY. well, they did finally put the brakes on, didn't they?

Doctor ARENDTZ. Yes, but it was after it had got too far. And not even then, you might say, for all practical purposes. So the situation is that I have just lost faith in humanly-managed systems.

Senator CONNALLY. Well, how are you going to get any other kind of system by legislation?

Doctor ARENDTZ. Well, by means of more hard money and less credit. That is the answer. That is the thing I suggest, hard money for use.

Senator CONNALLY. Well, as to the matter of gold, we certainly can not make any more gold by law.

Doctor ARENDTZ. No, but you can add a silver supply to it. You can remonetize silver. That will help some.

Senator CONNALLY. Possibly.

Doctor ARENDTZ. In connection with the matter of management may I say this: I feel that we are threatened with something that will ultimately turn out even more disastrous than what we have had in the past, and that is this: Is it a conspiracy or what? This plan or program of a number of economists and international bankers to create an international facade, a gold base but an internationally-managed credit currency. That is, that you will put certain international bankers and their economists in control at Basle, a bank of international settlements for example, and they will shuffle and manipulate world credit, and fix prices stable based theoretically on a gold system. But that gold base is only a gold facade for a managed gold credit currency. And it will not work. It has not worked.

The CHAIRMAN. Oh, that is only a dream. It has made no headway so far as the governments of the world are concerned.

Doctor ARENDTZ. Yes, Mr. Chairman, it is a dream. But it is a dream that will be raised in the forthcoming economic conference. And it will be backed by some very powerful names, and a big effort will be made to put it across. I think the thing is the most dangerous we have been faced with at all. What we have to do, and it may not be nice or easy, is to get back to less managed credit and more hard money. Every managed credit system so far has turned into a mismanaged system, and I do not believe that with these new people it would be any different.

Senator KING. Doctor Arendtz, your theory, as announced in your admirable little book, is that nature has furnished approximately 3 per cent accretion to the metal base of the world for an indefinite period, that production has been substantially between 3 and 4 per cent. There must be a relation between any increase in metallic base and the production of the world. And you have shown there in your little book that the world's gold supply is diminishing—or as it was for a number of years, although there has been a slight increase I believe this year, and there is bound to be a fall in price in that case. And if gold shall continue to diminish in production the prices inevitably must fall, if they rest solely upon a gold basis. Therefore you suggest that it would be wise to strengthen the metallic base because gold production is inadequate to furnish the 2 or 3 per cent necessary for stabilization of prices as measured by production.

Doctor ARENDTZ. Precisely. There will be one of three things: Either falling prices owing to inadequacy of gold, or a managed credit to supply a constantly higher credit money base, or else a reinforced metallic base.

The first we do not want. And the second is bound to be mismanaged and disastrous and cause a collapse. War will break it, has in the past without any question, and other conditions might.

I do not believe, I have not confidence enough in the wisdom and moral strength or whatever you may call it, of any group of men to sit on a pedestal and manage world credit and currency for us. And that is so even if the world would put confidence in them, and it won't, and you won't get international cooperation. When you want central banks to cooperate with this thing what do you get? Even if there were not the world's fear of it, when it comes to the matter of the cooperation required it may be considered, by some, contrary to the national interest, we will say of France, or of Great Britain, or of the United States, or of somebody else. Central reserve banks can not cooperate against the interests of their own nationals. They would be removed at home if they did it, and they just will not do it.

Senator COUZENS. Isn't it a fact that in 1927 the public relied very much on the advice of President Coolidge and Secretary Mellon?

Doctor ARENDTZ. I suppose so. At any rate, they tried to cooperate in the interest of world welfare and to stop the speculative orgy that in the main we are now trying to untangle. So far as a reflection of bank credit demand is concerned it comes only after confidence returns and it therefore becomes profitable to borrow money for business purposes, when one thinks he can make a profit out of it. I do not believe that confidence can be restored by just saying: Have confidence; nor by any psychological treatment.

Senator COUZENS. Which means, what guarantee will you have to put confidence in, is that it?

Doctor ARENDTZ. Well, in 1929 business confidence was never higher. Lack of confidence did not do it. Lack of confidence and the fear complex came afterwards, when the downward spiral had got started. Then that stimulated fear and produced lack of confidence. Some concrete physical cause is going to be necessary, like the primer in an engine if you will, such a thing as that is necessary in order to restore confidence.

Senator HARRISON. Doctor Arendtz, won't you elaborate a little on that?

Doctor ARENDTZ. Say, an influence to bank credit reflation, which I think is not possible until confidence comes. The paper money program I think is a delusion and a snare. In the first place, paper money inflation will raise prices in the United States only, and there has got to be a lot of it to do that. There must be a lot of paper money issued to do that. And it will not raise world prices because it does not circulate outside of this country. The only way it would contribute toward raising world prices, if we are to maintain redemption in gold, would mean just putting out gold in exports constantly, and gold would do some good in that particular, but it won't last.

Senator HARRISON. You say it would take a lot of paper money. How much would you say?

Doctor ARENDTZ. Oh, not less than $2,000,000,000.

The CHAIRMAN. And that would not do it?

Doctor ARENDTZ. I doubt if it would. I said not less even than that. And I do not mean to say that that would certainly be enough. The thing is this: If you start prices up, if you succeed in stopping the downward trend and start even a small upward trend, the change in sentiment will do the rest very often. You do not have to produce it positively. What you need is a primer. Or, in other words, you do not have to put enough gas in the engine to run it for all time, but you do have to get it started.

The CHAIRMAN. And do you think that would do it?

Doctor ARENDTZ. That would start it along the road.

Senator HARRISON. In the last three years and a half we have had an expansion of $3,500,000,000 in circulating money, and at the same time prices have continued to go down. What has been the cause of that?

Doctor ARENDTZ. That was because half of that, in management, has simply replaced bank deposits, which were formerly used. There are considerable sections of the country now using currency that used to write checks.

Senator HARRISON. We would still have to increase it by half a billion dollars.

Doctor ARENDTZ. Yes. The most of that may have gone into hoarding as a result of fright.

Senator HARRISON. So that the amount of money theoretically in circulation, and the most of it now is theoretically so, because it is not working or turning over, is that it?

Doctor ARENDTZ. The most of it is either hoarded or being used to draw checks on.

Senator HARRISON. And any amount of money, currency, or any other kind of money, that we printed or coined, probably would find its way ultimately into the same hoarding places where it is now.

Doctor ARENDTZ. I think not, not if you put in enough to check the fall in prices and start a turn upward. As soon as it becomes evident that the price level has turned up, instead of down, then people want to buy, and the existing purchasing power would be released.

Senator HARRISON. That will happen in any event after prices start up, without any increase in money. That is, what money is in existence now would start its daily dozen, so to speak.

Doctor ARENDTZ. That is true when prices start up. My own thought about the inflation is what is wanted to make that start, is a primer.

Senator HARRISON. You are against paper inflation?

Doctor ARENDTZ. I am. And another reason is this: That when you once put an issue of paper money into circulation you never can get it out. It stands indefinitely as a liability against the Government. That during Civil War days we had a large crop of greenbacks. The idea was that it would be a noninterest bearing loan and would save the Government interest, to issue paper money. The same idea is being advanced now, that it would save interest on bonds if the Government would print that kind of paper money, and then retire it at some later time. But you can not retire it, and for this reason, that when they tried to retire the Civil War greenbacks, and there were some $70,000,000 retired, a great howl went up that the Government was making money scarce and injuring business. And of course it was true to this extent, that they were taking current purchasing power out of business and putting a pressure on prices.

And the same thing has been true in the matter of world experience. Any country that has put a lot of paper into circulation has been unable to get it out. That was true of France, although it was controlled to some extent. Italy did the same thing. In Germany it went down and went out of control. And I would say that that would happen here. It might be quite possible to control it here, to restabilize it at some lower level, as France and Italy did. It has been done at other times, but you can not get it out of circulation.

Senator HARRISON. They only attempted to stabilize it after it had become so enormous as to be almost worthless, especially in Germany.

Doctor ARENDTZ. Yes; but I am now talking about France and Italy, that did stop it on a lower level. But it might get out of control and go down and out like Germany. But it is not at all sure that you can do that. It is only fair to assume that it might be stabilized at a lower level. Nevertheless it does not help world prices at all, and once it was in circulation you could never get it out. And if you face a subsequent crisis that paper money circulation is a limit on your Government credit. It stands there like a sickle, around the neck of the Treasury always. That is the main trouble with it.

Senator COUZENS. You would not recommend that we attempt to do anything like that in this country, would you?

Doctor ARENDTZ. No. I do not like the idea of putting that sort of thing out if it can possibly be helped. Conditions might come to the point where it was the only thing that could be done in order to pay Government expenses, and that was so in the Civil War.

Senator COUZENS. Are you going to make any suggestion as to how we might somewhat regulate the purchasing power of the dollar?

Doctor ARENDTZ. Well, I don't know. I doubt if——

Senator BARKLEY (interposing). Senator Couzens, before he does that I should like for him to discuss the different plans of inflation. He started a while ago to discuss seriatim that matter, if I am correct about it, and I should like to have that discussion preliminary to an answer to your question.

Senator COUZENS. Then I withdraw my question.

Senator BARKLEY. Doctor Arendtz, suppose you answer that preliminary to your answer to Senator Couzen's question.

Doctor ARENDTZ. The other plan which I have advocated is the remonetization of silver. Now, the reasons have been to some extent stated. For centuries the world output of silver and gold together met the situation in fact. This idea of a single gold standard is only about 50 years old to all practical purposes. It ignores the fact that the actual money of half the people of the world is still silver, although they admit that the market is not as great as their population by any means, but such is the case nevertheless. We can not create gold at will, and the only way in which metallic money can be supplied adequately is by a remonetization of silver, which ought to be an international job.

Senator COUZENS. At what ratio would you suggest?

Doctor ARENDTZ. Well, in my book I have suggested 30 to 1. But since that was written the price level has gone much lower, the need for reflation is greater, and I think I would lower the ratio. Any kind of ratio within reasonable limits, anywhere from 16 to 25, and it does not make much difference if it is an international job. Just so it is a reasonable ratio, and a number of the leading countries do it at the same time.

Senator KING. Don't you agree with Mr. Darling of the Bank of England, that 20 to 1 with the production during the past 300 or 400 years, would not be a sufficient value with regard to gold, but rather a return to 16 to 1 would be more like the natural situation?

Doctor ARENDTZ. Sixteen to one is more in harmony with nature. But I do not think that is necessarily a determining factor in the case.

Senator LA FOLLETTE. Why do you think a remonetization of silver would tend to stop the violent price fluctuations. We had them then, didn't we, when silver was a part of the metallic base of money?

Doctor ARENDTZ. Not as violent by any means.

Senator LA FOLLETTE. Fluctuations were pretty violent during the Napoleonic period and in 1860 and 1870, were they not?

Doctor ARENDTZ. In the Napoleonic period paper money prices fluctuated violently. But the matter of credit money expansion there comes in. Now, the fact, for instance, that China and other silver standard countries, have not suffered as the so-called gold world has from depression, is not due to the fact that it is just because it is silver. But silver has been more stable, a more stable measure of value, over the past two years. In other words, the purchase value of an ounce of silver has fluctuated less than an ounce of gold. China is prosperous where it has not been smashed by war or floods. Anyone who has traveled in China knows that. But the reason is not that silver is superior to gold as a measure of value. Gold would be as good if it were not for its top-heavy credit situation. The silver nations have not raised that top-heavy credit structure, and their price level has gone along, not absolutely stable, no, but without violent fluctuations that have characterized ours.

Senator LA FOLLETTE. How are you going to prevent these excesses of credit structure being superimposed upon your double basis as well as upon your single base?

Doctor ARENDTZ. I suggested a while ago that the bank reserve requirements should be higher, and that the banks should be under the discipline of the Federal reserve system always. And that is worth something. I do not say it could stand against everything but it would be worth something. Then another feature of that is that I would make the reserve requirements gold only and not stand on a bimetallic reserve.

Senator LA FOLLETTE. That remedy could be applied to the money now, if it still stood on the gold standard?

Doctor ARENDTZ. Yes. But what are you going to do for reflation in that case? In other words, instead of reflecting up and expanding bank credit that would tend to hold it down. Some reflation that would be reasonable, but rather than let that go wild again, try to hold that down and substitute silver for bank credit.

Senator BARKLEY. That would not have any effect upon the so-called check credit facilities, would it?

Doctor ARENDTZ. The banks have to hold a certain amount, a certain percentage of their deposits.

Senator BARKLEY. Then they would have to hold it and not loan it out to the public.

Doctor ARENDTZ. Yes.

Senator BARKLEY. But they could not put any restrictions on the checking power of a man with money in bank.

Doctor ARENDTZ. Bank depositors must rest on loans, to a certain extent, although they can not loan where they are below the legal ratio. It would stop the accretion of check deposits through excessive loans. It seems to me that that method of silver remonetization offers the only possibility of increasing the metallic base.

Senator THOMAS of Idaho. Just how would you do that in the United States in event that other countries of the world would not join?

Doctor ARENDTZ. Well, there is only one way it could be done by the United States alone without endangering the gold standard, at least so far as I know it is the only one. I have suggested to Mr. Somers, of the House Coinage Committee, a bill along that line. That is, if the Treasury were to issue certificates, legal tender, at the market value. That is, if you have 1,000 ounces of commercial bar silver 99.99 fine, that upon a deposit of that; and suppose the current price were 25 cents an ounce, you would get 250 silver token dollars, or silver certificate dollars, legal tender, redeemable not in gold, but in gold dollars' worth of bar silver at time of redemption. Now, that would mean that deposits could be made at any time and certificates given at the current market rate, and redeemed at the current market rate at time of redemption, so that your silver dollar could never be worth any different than your gold dollar.

The CHAIRMAN. Would you limit this to American production of silver?

Doctor ARENDTZ. No, sir. Of course, that opens wide the door of speculation, to form a pool and run the silver up and unload it on the Treasury and let the Treasury hold the bag. But the remedy that I offered suggested two arrangements: One would be to put a ceiling on, that is, a certain price per ounce, above which no certificates would be issued. And if you say no certificates would be issued at any time at a price exceeding that represented by an increase of one-half of 1 per cent per month, at a 25-cent base at the first of this year, that would take it out of circulation. That would prevent speculation.

Now, that proposition was criticized. I had a talk with Senator Wheeler, and he criticized that on the ground that while it was economically sound, and might be a desirable way to do it, that it did not provide a sufficient immediate inflation. I agree to that. The result would be slow. But it would provide steadily a full weight of silver currency, standing on its own legs, and not a hard and fast gold standard. The bank reserves would be the same. It would not be hurried.

Senator CONNALLY. Of course you want to make that legal tender.

Doctor ARENDTZ. Yes.

Senator CONNALLY. It would not be tenderable on contracts calling for gold of the present weight and fineness.

Doctor ARENDTZ. No, sir; not legally so. But suppose you have——

Senator CONNALLY (interposing). I know what you are going to say, that you can go to the Treasury and get an ounce of silver or of gold. But legally it would not be tenderable in payment of obligations calling for gold of the present weight.

Doctor ARENDTZ. No. But all you have to do is to put in an order to sell enough silver to supply the gold you want on the New York metal market.

Senator CONNALLY. Oh, I understand what you mean, the same as any commodity. For instance, if you have a bushel of wheat you can sell it and get gold and pay your debt.

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. But it does not meet the objection that has been urged here to have plans for revaluing the dollar?

Doctor ARENDTZ. No, sir.

Senator LA FOLLETTE. How do you meet the argument of those who want a remonetization of silver with the fixing of a ratio which is arbitrary and which is subject to the same human reactions as apply in the case of managed currency to which you refer.

Doctor ARENDTZ. The fixing of the ratio is of course arbitrary. But if it is fixed by international agreement I can see no possible reason why any reasonable ratio could not be maintained indefinitely. I have heard that the opinion has been given by people high in authority—well, not in authority, but who are authorities on the subject, that I can not name, that the United States could hold a ratio alone indefinitely. But I do not feel convinced of that.

Senator LA FOLLETTE. Assuming that the United States could alone hold a ratio, why wouldn't there be the same pressure accompanying fluctuations in the business cycle; I mean, to change the ratio, that you predict would be the case if we attempted a managed currency.

Doctor ARENDTZ. I think if you simply increased your metallic base and then put the brakes on credit inflation, you would not get the violence of cycles.

The CHAIRMAN. In that case how would you limit inflation? How could it be done?

Doctor ARENDTZ. I suggested that the bank system be brought entirely into the Federal reserve, so that there would not be any banks that were nonmembers. And, secondly, that the reserve requirements should be raised.

The CHAIRMAN. Supposing that were done, and supposing they conformed to all the rates necessary, and all the provisions that you mention now, when that limit was reached then what would happen?

Doctor ARENDTZ. If they ran up to that limit you would get a certain amount of inflation. I do not think it is avoidable.

The CHAIRMAN. That is exactly what would happen.

Dr. ARENDTZ. Yes. You can not keep an absolute level.

The CHAIRMAN. And we would be back into an inflation period at once.

Senator KING. If there should be through some act of providence an outpouring of gold in the United States, $350,000,000 or $400,000,000 worth to-day, and then a substantial production new, and say it should be a $1,000,000,000 a year, there would be a tremendous inflation in the sense that we are using the word now.

Doctor ARENDTZ. Quite so.

Senator KING. For centuries gold and silver circulated in all countries of the world, until 1893 practically, at a ratio of 14½ to 16 to 1.

Doctor ARENDTZ. Yes, sir.

Senator KING. While there were some differences they were brought about by paper money issued in the Napoleonic wars and other conditions. But by and large wouldn't there be a proper relation between the two metals, largely the result of natural laws, the production of about 14½ ounces of silver to 1 ounce of gold, which has been the situation ever since the days of the discovery of America in 1492?

Doctor ARENDTZ. Yes, that is true. But if you take that bimetal base and then raise a corresponding credit structure higher upon it, you would have the same trouble again, wouldn't you But if you held down the credit expansion by increasing bank reserves, keeping gold alone as reserve metal, that is required for reserves, silver not legal, the legal tender in circulation but not permissible for reserve purposes, then you have a metallic currency upon which you can not build a top-heavy credit structure, and you have got the possible limits of credit expansion, setting board reserves. Now, I am not arguing that you can prevent expansions and contractions of credit. I am not arguing that at all. I do not think you can prevent or entirely smooth out business cycles by any one thing at any time, but I think the violence of them can be greatly curtailed by curtailing credit.

Senator COUZENS. At that point let me ask you: Would it be possible and would it be effective to increase the reserves necessary by edict of the Federal Reserve Board, in order to stop an expansion of credit, instead of changing the rediscount rate?

Doctor ARENDTZ. At the present time I do not understand that the Federal Reserve Board has authority to do that.

Senator COUZENS. No. But I am asking you in case they were given that authority by law, if when an expansion of credit is in evidence the bank reserves might be increased.

Doctor ARENDTZ. There comes in the same difficulty that they had in 1928, when, in order not to hurt business, they refrained from using the powers they then had of checking credit expansion. Now you are going to give them some more powers to check credit expansion, and in a like situation will they use it?

Senator COUZENS. Is it possible to make it mandatory upon the Federal Reserve Board when commodity prices reach a certain level to increase the reserves so as to decrease expansion?

Doctor ARENDTZ. It might be possible to make it manatory, but it may not be a matter of commodity prices. Commodity prices do not go up much in such a period. For instance, they were very stable in the period from 1922 to 1929. The thing would not have acted at all. It was security prices that went wild. It was the matter of securities upon which the speculative fervor impinged as it were, not commodities. So that would not fit the case at all.

Senator COUZENS. Have you any suggestion as to how the Federal Reserve Board could by law be given a mandate to prevent what occurred in 1929?

Doctor ARENDTZ. Well, perhaps it might be said that it had a mandate then, but did not exercise it to a certain extent.

Senator COUZENS. What was its mandate then?

Doctor ARENDTZ. For example, it could have raised interest rates in 1928. It might have sold securities. It might have taken on open market operations.

Senator COUZENS. As a matter of fact, we were so mad in 1928 that anything like a reasonable rediscount rate would not have affected the situation, would it?

Doctor ARENDTZ. No, not anything. But when interest rates got up high it turned it. But I think that brings us to the crux of the whole thing, and that is, when you get into a period where the mentality is a mentality of speculation, a new era, prosperity is going onward and upward, no powers that you give to human beings will be exercised. If you have a hard and fast law that a bank can not loan unless it has 25 per cent, for instance, of reserves against its deposits, it gets to a limit that it can not pass.

Senator REED. Doctor Arendtz, you are telling us how to stop the next boom. What I want to know is, how to start it.

Doctor ARENDTZ. I spoke of that a while back. We ought first to cut governmental expenditures down to what the public can afford to pay, and balance the Budget. Secondly, we ought to make an effort to lift the price level somewhat.

Senator REED. Wouldn't the price level lift itself if we could restore confidence?

Doctor ARENDTZ. Yes, that is true. If you could restore confidence it would. But, again, wouldn't the very primer that restored confidence itself bring about an increase of purchasing power? It would raise the price level. Could you restore confidence by edict?

Senator REED. You can restore confidence by balancing the Budget and making sure there will be no inflation.

Doctor ARENDTZ. That would help undoubtedly.

Senator REED. It would stop hoarding instantly.

Doctor ARENDTZ. I think so. But it will not probably be possible to entirely do it. It would not seem so with the amount that has got to be spent for relief, it would not seem that in addition to the general governmental expenditures the giving of this relief would permit of the Budget being absolutely balanced. You can not let people starve in the streets.

Senator REED. Certainly not, and I am not proposing that.

Doctor ARENDTZ. That will mean that anyway for the time being budgets can not be balanced entirely.

Senator COUZENS. You can not go out and feed crowds of people and balance the Budget, because these are extraordinary times, and you can not raise enough money to balance the budgets.

Doctor ARENDTZ. But if you will cut costs in the way I have suggested you will approach that as nearly as possible.

Senator COUZENS. What confidence are you going to restore whan the people are undoubtedly terrorized of having their incomes cut off? How are you going to get confidence by that procedure?

Doctor ARENDTZ. Well, as to facing having their incomes cut off, as I stated before, I do not think the solution lies in firing a lot of people and keeping the rest at the same salaries. I think it consists in increasing employment at the expense of lower wages. Now, that is one thing, and beyond that I think a primer is going to be necessary.

Senator REED. What primer do you suggest?

Doctor ARENDTZ. I have suggested the remonetization of silver as the only practicable one, and that it ought to be done on a fixed ratio by international agreement.

Senator REED. The present ratio of silver to gold is about 80 to 1 on the markets of the world.

Doctor ARENDTZ. Yes, sir.

Senator REED. If we tried to stabilize silver at 16 to 1 or 20 to 1, what would prevent our becoming the recipient of all the silver in the world?

Doctor ARENDTZ. Well, not all of it, but the available surplus, probably. You understand that China can not send us all the money they have. That is impossible. And India can not send us the only money they have. Silver which is in actual use can not be sent over here.

Senator REED. They have 400,000,000 ounces of silver by way of surplus at this time, haven't they?

Doctor ARENDTZ. I would say that were Senator Wheeler's bill enacted into law, and the United States attempted to remonetize silver at a ratio of 16 to 1, the result would be something like this: In the first place, the thought that silver is disastrous has been instilled into the minds of business men, so much so that you might get a run on gold to start with. I do not know how far, but it might do some damage. But firm measures that gold would be paid on demand, and without limit, would probably stop such a run. But beyond that the first effect would be to raise the price of silver to $1.28 an ounce

Now, the second effect would be a flood of orders for lumber, wheat, cotton, and copper from the Orient. That is, oriental trade would come to the United States. For instance, if lumber is at $12 a thousand feet, and you translate that into the Chinese silver dollar, which is now five times that, but if you tell him he can pay for that lumber with 12 silver dollars in his money, he will order the goods from us. Now, I do not mean permanently and forever, but there would be a temporary stimulation, a rush of orders from the Orient. No other country could get any orders under those conditions, and America would have them. And we would get their silver for that. And to what extent, you say?

Senator REED. Yes.

Doctor ARENDTZ. Well, figuring that the Indian government would take that opportunity to sell some of its silver—and there is another reason why they could not sell very much—and the surplus stocks in Shanghai would come, I would figure that perhaps 600 million dollars to 650 million dollars' worth would be dumped on the United States within a six months' period, or a year anyway. And it would come at the point of time when there would be new orders for our goods.

The CHAIRMAN. How much did you say?

Doctor ARENDTZ. I said $600,000,000 to $650,000,000. That is only an estimate. The story about huge stocks of silver waiting to be dumped on the United States is simply a myth. There aren't any such stocks of silver.

The CHAIRMAN. There are about 11,000,000,000 ounces produced in the world.

Senator KING. Not produced, Mr. Chairman, but in existence.

The CHAIRMAN. No; that has been produced.

Senator KING. That is, in existence to-day?

The CHAIRMAN. Yes.

Senator COUZENS. How much per annum?

Doctor ARENDTZ. That has varied a good deal. At the highest it was 262,000,000 ounces, and at the present time about 160,000,000 ounces.

Senator COUZENS. Would it be practicable to put a limit on silver without putting a limit on production, or the amount of silver produced?

Doctor ARENDTZ. No; I do not think so. The minute you do that you get a bullion value in your coin out of line with the value outside and uncoined.

Senator KING. Might I interrupt you right there? Isn't it a fact that in the Pittman bill, when silver was worth $1.38 an ounce, and in Great Britain $1.72 an ounce, there was no export of silver from China or India? We had no invasion or inundation of silver in this country?

Doctor ARENDTZ. No.

Senator KING. And isn't it true that when Germany and two or three European countries, after the discovery of gold in California and Australia, and they believed that gold was the cheap money, and they demonitized it, and went to the silver standard, that there was no great export of silver into those countries that had demonitized gold and made silver their sole standard?

Doctor ARENDTZ. When did they make silver their sole standard?

Senator KING. In 1857, Great Britain——

Doctor ARENDTZ (interposing). No; not Great Britain.

Senator KING. I meant Germany, and one or two countries there, I think including Belgium.

Doctor ARENDTZ. As to the supplies that would come out, that is the point at issue?

Senator KING. Yes.

Doctor ARENDTZ. The portions that are undoubtedly held in India and in China in private hoards would not come out. Of that I feel no doubt whatever, because those savings are the savings of the poor and middle-class people. They are kept not for speculative purposes, but, like savings deposits of the poor and middle-class people here, a man there will accumulate a little silver by way of ornaments or of silver bullion, against the marriage of his daughter, or a death in the family, or his own death, or famine, and all experience has shown that that comes out only when the contingencies arise, and never because of a change in the gold value of the silver they have hoarded. A price of $1.35 or $1.38 in 1919, which we had, brought no more than 50,000,000 ounces out of China. I think that shows pretty clearly that those hoards will not come. They are performing their function, and it will stay there. You won't get those.

Now, future production would be stimulated, we will say. I have the figure in that $600,000,000 to $650,000,000 possibly, of Spain selling a lot of silver, of their saying: Here is a good chance to sell it. And the Indian Government, although there are good reasons why they would not, of doing the same thing. Taking the situation all over probably it would be somewhat less than that figure that has been mentioned.

Senator COUZENS. How long a time would it take for silver to run from its present price up to $1.28.

Doctor ARENDTZ. Well, if it were receivable at the American mint at that rate I would say it would jump to it almost over night.

Senator COUZENS. In other words, could they bring it out and make delivery so as to raise it from 25 cents to $1.25 over night?

Doctor ARENDTZ. Well, over night is a bit exaggerated, but within a week or two.

The CHAIRMAN. The price would rise over night?

Doctor ARENDTZ. Yes, sir; but delivery might be postponed. The question would come as to holding it there.

Senator COUZENS. But what about delivery. which might mean that it would come out rapidly enough to jump the price from 25 cents to $1.25?

Doctor ARENDTZ. I think if the United States Mint stood there offering that price; regardless of the amount that came out the price would go up, amounts would flow in, in other words. But I can not see any possible way by which anyone can find such huge silver stocks as they talk about inundating the country. That is impossible.

Senator COUZENS. It would not make much difference to what price it went, so far as deliveries were made, how long it took to make deliveries.

Doctor ARENDTZ. Do you mean in the matter of the flow of silver to the United States?

Senator COUZENS. Yes; because it does not make much difference as long as you do not get a quantity.

Doctor ARENDTZ. I would say that it would flow in in about a six months' period. Then you would settle down to taking the surplus production.

Senator COUZENS. And if it did not have a beneficial effect we could repeal that law?

Doctor ARENDTZ. Yes. But if you did you would have that currency on your hands. It would let it go down.

Senator COUZENS. No, if we agreed to buy it at a certain ratio.

Doctor ARENDTZ. Pardon me. What was that question?

Senator COUZENS. If we bought it from the stocks of silver of the world, taken over a period of six months when you said the deliveries might occur.

Doctor ARENDTZ. Suppose you have taken 600 dollars of silver and coined it, then you would have 600,000,000 dollars of silver or of certificates in circulation.

Senator COUZENS. Yes.

Doctor ARENDTZ. How can you get rid of that except by redeeming it and selling it in the open market? And if you do you bring the price down again and injure what you have in service.

Senator COUZENS. I mean retaining the 600,000,000 dollars of silver and issuing certificates therefor; so that the 600,000,000 dollars of silver would always be on hand with which to redeem the certificates.

Doctor ARENDTZ. Yes, but the price would no longer be sustained once you closed the mints.

Senator COUZENS. If the holders did not cash in the silver certificates it would not be particularly necessary so long as we had the value of it.

Senator KING. We have more than $400,000,000 of certificates circulating, based upon what we have. In addition to that, we have $200,000,000 of half dollars, quarter dollars, and dimes, perhaps not of silver actually coined but the silver certificates are circulating.

Doctor ARENDTZ. The bullion value is about 20 cents.

Senator KING. Or 25 cents.

Dr. ARENDTZ. No, I think about 20 cents now, to be accurate.

Senator CONNALLY. It gets its value bacause redeemable in gold.

Doctor ARENDTZ. Yes, obviously.

Senator CONNALLY. Doctor Arendtz, how about the relative increase of gold in the world and other wealth. You said gold increased about 2 per cent annually.

Doctor ARENDTZ. The figures I have from the World Almanac show a very small increase. In 1923 it was 17.8, in 1924 it was 19, in 1925 it was 19, in 1926 it was 19.4, and in 1927 it was 19.5.

Senator CONNALLY. What do you mean by that?

Doctor ARENDTZ. Million ounces, these are.

Senator CONNALLY. What percentage of that is over the volume of gold in existence.

Doctor ARENDTZ. I can not tell you offhand.

Senator CONNALLY. Has gold been increasing in production in about the same ratio as other production?

Doctor ARENDTZ. No, less.

Senator CONNALLY. Exactly. In other words, one reason why gold is so dear now is because it has not increased in volume of production in the same ratio as other wealth.

Doctor ARENDTZ. That is one reason, the reason that started it. The other reason is that a collapse of credit started a great demand for it.

Senator CONNALLY. As long as that goes on in that sort of ratio gold will get dearer and other commodities will get cheaper.

Doctor ARENDTZ. If that continues.

Senator CONNALLY. Italy and France did in fact revalue their money, didn't they?

Doctor ARENDTZ. Yes.

Senator CONNALLY. You say that gold and silver have been increasing since 1492 on a ration of about 14½ to 1.

Doctor ARENDTZ. Silver has been more than 14½ to 1 of gold on the average, but it has been that average in that period.

Senator CONNALLY. Then the average for the period has been 14½ to 1?

Doctor ARENDTZ. Yes.

Senator CONNALLY. Gold to-day is worth out of all proportion to that relationship, about 80 to 1, although the volume of silver and gold is about 14½ to 1. Now, isn't it true that the reason gold is worth so much more than silver is because the demand for gold as money has created an artificial value for gold?

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. Otherwise if they were both purely commodities, and neither one had any money value, it would have some fair relationship of value in proportion to their volume?

Doctor ARENDTZ. They might, depending upon the relative demand for both of them.

Senator CONNALLY. To be sure. But I say if in the arts and sciences they were purely commodities. So that by reason of being coined by the Government as money gold has obtained a value out of proportion to silver.

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. Your idea in remonetizing silver is to bring down the value of gold?

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. You want to cheapen gold money, and your plan is to make it, arbitrarily by law, cheaper by lifting up silver.

Doctor ARENDTZ. Diluting it with silver is a good word.

Senator CONNALLY. Or, bringing in silver means the same thing. So your idea is that the value of gold ought to be reduced and you are going to reduce it by saying that instead of its being worth 80 to 1 it is 20 to 1, and your purpose is to make the gold dollar cheaper.

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. And any other reduction in the value of gold which would be practicable would have the same effect, wouldn't it?

Doctor ARENDTZ. Yes, sir.

Senator CONNALLY. But your silver dollar, as you said a while ago, would not be tenderable in payment of debts which had a gold clause, except on account of their interchangeability with gold.

Doctor ARENDTZ. Quite so.

Senator CONNALLY. Now, your idea is to make silver money, but you want to prevent the importation of as much of it as possible from other countries.

Senator CONNALLY. If it is desirable to make silver money why not have it all?

Doctor ARENDTZ. Do you mean to attract importations?

Senator CONNALLY. Yes.

Doctor ARENDTZ. The only reason is this, that ultimately, if we stand as the only nation maintaining a fixed ratio, that as production increased——

Senator CONNALLY (interposing). But we would have all the silver and other countries would have all the gold.

Doctor ARENDTZ. They might very readily say: Here is a chance for us to increase our gold reserves at the expense of America, and proceed to do that.

Senator CONNALLY. If silver is worth 25 cents an ounce and by law you made it worth $1.25, every country on earth that could get silver over here would get it over here and swap it for gold.

Doctor ARENDTZ. I think you exaggerate that.

Senator Connally. Well, if a Chinaman had some tea, and it was worth only 20 cents a pound in the United States, but we arbitrarily made it go to $1.29 a pound, he would send all of his tea over here, wouldn't he?

Doctor ARENDTZ. As much as he could.

Senator CONNALLY. Wouldn't he do the same thing with silver?

Doctor ARENDTZ. As much as he could, but he cannot send all the money he has.

Senator CONNALLY. If he swaps it for gold he would then do that?

Doctor ARENDTZ. They would never do that.

Senator CONNALLY. Well, a Chinaman even knows the difference between 20 cents and $1.29, doesn't he?

Doctor ARENDTZ. That is quite true, but when silver is worth $1.29 there is no benefit in his swapping it for gold. And, besides, the East will never turn to gold. It is impracticable. Any man who has lived in the East knows it. But Europe might do it.

Senator CONNALLY. Well, I have never lived there.

Doctor ARENDTZ. Is it your idea that he has a dollar worth 20 cents that he can get $1.29 for?

Senator CONNALLY. That is your proposition, that he can bring it over and have it minted into a dollar.

Doctor ARENDTZ. Then it becomes a dollar, and he has a dollar, and why exchange it for gold?

Senator CONNALLY. Because the only way he can get such a value is to exchange it in this country.

Doctor ARENDTZ. He may use it with which to buy goods.

Senator CONNALLY. To be sure. And he might sell it to buy silver.

Doctor ARENDTZ. That is true.

Senator CONNALLY. Your idea is that by the recoinage of silver we would benefit ourselves by making the property and money of other countries more valuable than it is.

Doctor ARENDTZ. It would certainly get a sheaf of new orders. Now, whether the subsequent effect would be undesirable is another question. But there is no question about its bringing, in my judgment, a temporary rush of new orders.

Senator LA FOLLETTE. What would happen to prices in China?

Doctor ARENTDZ. Chinese prices would move slowly. The country is so vast, the number of people there so great, the customary scale of prices prevail, and it is only very slowly they could lower wages and prices to suit that change in what is to have the price of the American dollar in their markets. That is quite a complicated question, international exchange, but the upshot of it I think is this: That actually it would end by lowering the value of gold really more than—that is, the purchasing price, more than it raised the purchasing power of silver. It is only very slowly that the East could change its price level.

Senator La Follette. If you had a large stimulation in production of silver, which is a by-product of other metals mined more largely, what would happen to prices of the primary product?

Doctor Arendtz. Unquestionably remonetization of silver at a higher price level would stimulate production. How much I do not know, nor does anyone know. The highest it has gone was 262,000,000 ounces, no higher. Now, under this plan whether it could be pushed higher I can not say. Probably it might, and how much I do not know, nor does anyone else know. But obviously an increase in production of silver would tend to increase the production of these metals, largely by-products, and some two-thirds or three-quarters of the production is a by-product production of silver, and it would increase their production too, without any doubt.

Senator La Follette. And prices might tend to come down.

Doctor Arendtz. Unquestionably that would tend to influence the prices of those particular metals. For instance, copper, zinc, and lead, which are the only ones involved, might go more downward.

The Chairman. It is now time to recess.

Senator Barkley. Just one question, Mr. Chairman, before you recess: Doctor Arendtz, to sum up your suggestions, if I may, your remedy for this situation is three-fold: First, balance the budget, second, remonetize silver, and, third, raise the reserve requirements of banks, and provide that they shall all be compelled to come under the Federal reserve system.

Doctor Arendtz. Yes. The last is not so much a remedy for this situation as it is a prevention of a repetition of it.

Senator Walsh of Massachusetts. A public check on credits?

Doctor Arendtz. Yes.

Senator Barkley. Is that a fair summation of your suggestions?

Doctor Arendtz. I would say so.

The Chairman. It is now about 12 o'clock and we must recess.

Doctor Arendtz. I thank you gentlemen.

The Chairman. The committee will now rise to meet again at 2 o'clock in this same room.

(Thereupon, at 12 o'clock noon the committee recessed to meet at 2 o'clock p. m. the same day.)

## AFTER RECESS

The committee reconvened at 2 o'clock p. m. Tuesday, February 14, 1933, at the expiration of the noon recess.

The Chairman. The committee will come to order. Is Mr. Peek present?

Mr. Peek. Yes, sir.

## STATEMENT OF GEORGE N. PEEK, MOLINE, ILL.

The CHAIRMAN. Give your name and address for the record, Mr. Peek.

Mr. PEEK. George N. Peek, Moline, Ill.

The CHAIRMAN. Whom do you represent, Mr. Peek?

Mr. PEEK. I represent no organization at the present time.

The CHAIRMAN. You are here personally?

Mr. PEEK. Yes, sir.

The CHAIRMAN. You may proceed.

Mr. PEEK. In appearing before your committee in response to your invitation, I want to say in advance of my regular remarks that I started my studies of the agricultural question largely from the industrial angle. I was engaged in a line of business, the manufacture of agricultural implements, depending wholly upon the farmer for its market.

Senator HARRISON. What firm is that?

Mr. PEEK. Dependent largely upon the American farmer.

Senator HARRISON. I mean what firm are you connected with?

Mr. PEEK. I was president of the Moline Plow Co., at that time, and previous to that time I had been with Deere & Co., except during the period of the war when I was a member of the War Industries Board. My investigations led me very soon to the close relationship between agriculture and all American business and the importance of agriculture to our whole social and economic structure. I want to bring that out because frequently in discussing the farm question a great many people conclude that that is something off by itself and more or less unrelated to our national economy.

In discussing the causes of the existing depression and possible legislative remedies, upon the invitation of your committee, I shall review primarily the relation of the prolonged agricultural depression to the general depression which followed, and suggest in some detail the principles of legislation which I consider necessary to incorporate into law to relieve the depression in agriculture in so far as prices are concerned.

If time permits I shall comment briefly also upon some other agricultural legislation which now seems imperative. Legislation is required:

1. To correct price disparity and to prevent or minimize its recurrence.
2. To remove some of the burden of debt and interest charges.
3. To restore foreign outlets for American products.
4. To reduce local, State, and Federal expenses, in order that taxes may be brought into proper relation to reduced earnings and incomes.
5. To provide short-term credit and banking facilities where they are now lacking.
6. To provide a more adequate and better adapted rural credit system to remove discrimination between agricultural and other borrowers.
7. To inflate the currency if the foregoing are insufficient.

In my judgment this unparalleled depression is due in large part to mistaken national policy throughout the last 12 years. Unfortunately for the Nation, we followed the insular English policy of three-fourths of a century ago and attempted to become a financial and commercial Nation. Apparently this was done without due regard to agriculture and without a clear conception of the fact that we are a great continental Nation capable of sustaining a standard of living peculiar to ourselves by maintaining a fair relationship between our major economic groups. Our banking and industrial leaders seem to have lost sight of the vastly greater importance to the Nation of the purchasing power of some 70,000,000 to 80,000,000 of our people dependent directly and indirectly on the basic industry of agriculture than the relatively meager foreign trade in industrial commodities we have enjoyed.

Our national policy for the expansion of foreign trade in industrial products, without taking into account its effect upon agriculture and related industries, was a mistaken one. We have been trying to maintain our industrial war-time facilities at a capacity above peace-time demands. We have loaned abroad more money than is represented by our entire war debt upon the theory, I assume, that it would be used particularly to buy our industrial products. We have put the facilities of our gigantic Department of Commerce behind the movement to expand foreign trade, just as though we were a debtor nation as we were before the war, instead of a creditor nation as we emerged from the war. We had nearly held the gold supply of the world, so that foreign nations could not pay us in gold, and we prevented their paying us in goods and services by our tariffs, while at the same time we have insisted upon the payment of war debts. We have gone further, to the extent that we have captured foreign markets we have interfered with the normal relations of other countries between themselves. Under such conditions it is not surprising that many nations have erected trade barriers aimed to protect their own interests.

This deliberate and urgent expansion of foreign trade in industrial products either consciously or unconsciously ignored the greater importance of foreign trade to agriculture than to other industry. It ignored also the greater importance of our domestic trade from which we obtain 92 per cent of our whole national income. In the 23 years from 1910 to 1932 the total income from all exports averaged 7.45 per cent of the whole national income, but the proportion of agricultural income attributable to agricultural exports was 17.86 per cent, while the proportion of industrial income attributable to industrial exports was only 5.21 per cent. (Details for these figures are given in Exhibits 1 and 2.)

In the recent national campaign the President elect recognized the necessity to our general business recovery of restoring the purchasing power of agriculture. In Atlanta, on October 24, 1932, he said:

> * * * let me make clear in as emphatic words as I can find the fundamental issue in this campaign. Mr. Hoover believes that farmers and workers must wait for general recovery, until some miracle occurs by which the factory wheels revolve again.
>
> No one knows the formula of this miracle.
>
> I, on the other hand, am saying over and over that I believe that we can restore prosperity here in this country by reestablishing this gigantic purchasing power of half the people of the country, that when this gigantic market of 50,000,000 people is able to purchase goods, industry will start to turn, and the millions of jobless men and women now walking the streets will be reemployed.

Again, in Boston, the week before election, he said:

We need to give 50,000,000 people who live directly or indirectly on agriculture a price for their products in excess of the cost of production. That will give them the buying power to start your mills and mines to work to supply their needs. They can not buy your goods because they can not get a fair price for their products.

The CHAIRMAN. I suppose you will tell us in this article how that can be done, will you not?

Mr. PEEK. I will give you my views; yes, sir.

Let no one doubt that the results of the election meant general approval of the views expressed above. Having thus quoted the President-elect himself defining his position, it is important briefly to review what has happened to agriculture.

### DEFLATION OF AGRICULTURE

The conscious deflation of agriculture began in 1920 when the Federal Reserve Board determined to reduce commodity prices.

Congress became disturbed at the severity of the agricultural depression which immediately resulted, and in June, 1921, appointed a joint commission of agricultural inquiry to determine the cause of the agricultural depression.

The commission made its report in October, 1921, but it failed to report the cause of the agricultural depression. The depression continued and in January, 1922, President Harding called a national agricultural conference. This conference brought to the attention of Congress and the President the disparity between the prices of agricultural and industrial commodities in the following language:

### PRICE ADJUSTMENT

Agriculture is necessary to the life of the Nation; and, whereas the prices of agricultural products are far below the cost of production, so far below that relatively they are the lowest in the history of the country; therefore, it is the sense of this committee that the Congress and the President of the United States should take such steps as will immediately reestablish a fair exchange value for all farm products with that of all other commodities. (From H. R. Document, No. 195, Report of the National Agricultural Conference, January 23–27, 1922, p. 171.)

No immediate action was taken either by Congress or by the President on this unqualified finding and recommendation. In the spring of 1924, at the instance of Secretary Henry C. Wallace, legislation was introduced in Congress addressing the discriminatory situation as to farm prices. This legislation was defeated in the House of Representatives.

The disparity continued in varying degree, but only in 1925 did the farm dollar recover as much as 92 per cent of its pre-war purchasing power. (The detail of that information is given on exhibit No. 3, column 2.)

The farm depression continued despite feverish activity in many industries and sections of the country. In 1927 and again in 1928 Congress passed legislation addressing the disparity between agricultural and industrial prices and aimed to correct this disparity. This legislation was twice vetoed.

In 1929 the agricultural market act, creating the Farm Board, became a law. It has failed completely to correct this disparity. I may say that the sponsors of that act never intended that it should raise farm prices, and that it was not proposed by leaders of farm thought. Some farm leaders, however, accepted it on the theory that a half loaf is better than no bread at all. I shall be glad to supply information on this point in greater detail if it is desired.

The farmer did everything in his power to carry on. He increased his efficiency in every possible way. He bought tractors, combines and other labor-saving devices to the value of hundreds of millions of dollars. He doubled his fertilizer purchases. He improved his crops, livestock, and farming practices, all to meet the cry of the business fraternity that he must become a more efficient producer. His only means of meeting his problem was to produce more units at a lower unit cost to meet his constantly rising expense in the face of lower prices.

By 1929 agriculture had practically exhausted its accumulated resources if it was to continue as a normal purchaser of industrial products.

Farm income fell from almost $17,000,000,000 in 1919 to $5,240,000,000 in 1932, a drop of 70 per cent. (Details of these figures are given in exhibit 3, column 1.)

A computation that I have made from Government data indicates that if the farmer had received for his products only the same relative prices from 1920 to 1932 inclusive that he received in the prewar period (1909–1914), which is generally accepted as a normal one, he would have received $27,500,000,000 more than he did receive. (That data is given in exhibit 3, column 3.)

This vast sum reflects only the shortage in exchange value of all agricultural commodities in relation to industrial commodities, computed for the period from 1920 to 1932. It does not reflect the price relations of particular commodities within the agricultural group. (As shown on exhibit 4.)

Some of these have been almost unbelievably low in their returns (grain and livestock, for example), while others have held up fairly well. The result of this discrepancy as between different agricultural commodities is evidenced by the varying depths of the depression in the different sections of the Nation where they are produced.

### AGRICULTURE'S SHARE OF THE NATIONAL INCOME

In 1910 agriculture received 22.6 per cent of the total national income. In 1919 this had risen to 27.5 per cent. In 1921 it dropped to 15.3 per cent, while the average for the three years 1930 to 1932 was 13.3 per cent. (The details are given in exhibit 5.)

As an average for the 5-year period 1910 to 1914, agriculture received 21.5 per cent of the national income. (See exhibit 5, column 3.) In the period from 1920 to 1932, inclusive, the total national income was $900,685,000,000. Had agriculture received a ratable share of this income its receipts would have been $193,687,000,000. They were $135,128,000,000, or $58,519,000,000 less than its ratable share, had the 21.5 per cent of the pre-war period been preserved. This comparison assumes a fair relation to have existed in the period 1910 to 1914.

### MORTGAGE DEBT AND CAPITAL ASSETS

In addition to the great disparity in the exchange value of his commodities, the farmer's mortgage debt increased from $3,320,000,000 in 1910 to $7,858,000,000 in 1920, and to $9,468,000,000 in 1928. Then the volume of farm foreclosures began to evidence itself in a decreasing total mortgage debt which is now estimated to stand at about $8,500,000,000. In the face of a catastrophic fall in his income, he has had to pay interest on an enormously increased debt.

The CHAIRMAN. Have you any fingures to show what caused that increase? The cause of the increase from $3,320,000,000 in 1910 to $7,858,000,000 in 1920?

Mr. PEEK. Only as I reflect the figures that show the decreased income to the farmer.

Senator SHORTRIDGE. No, the increase of the debt.

The CHAIRMAN. What I want to know is this: Have you analyzed it and seen just exactly why, and what was the source, and the reasons for it?

Mr. PEEK. Do you refer, Senator, to the possible increased value of land?

The CHAIRMAN. No. You say "the farmer's mortgage debt increased from $3,320,000,000 in 1910 to $7,858,000,000 in 1920."

Senator REED. Because there was a boom in farm land prices.

The CHAIRMAN. I wanted to know whether you have analyzed that and whether it was on account of purchases that he made, or the investment in lands.

Senator SHORTRIDGE. Why, of course.

The CHAIRMAN. And whether it came about from change in his living conditions. I simply ask you whether you have analyzed it and whether you have the figures to present.

Mr. PEEK. I have analyzed it from the standpoint, Senator, of the decreased relationship of the prices of his commodities and the prices that he had to pay.

The CHAIRMAN. No, that is not what I mean. In other words, was the standard of living between those years such that it would make the difference between the figures quoted in your statistics?

Mr. PEEK. Well, I can not give you an exact application of that.

Senator SHORTRIDGE. You allude to that on page 6. You say he improved his crops.

Mr. PEEK. If I may complete my analysis, Senator, I will be glad to get any further data that I can which you desire.

The CHAIRMAN. Very well.

Mr. PEEK. A further measure of the progressive impoverishment of agriculture is the decrease in the value of its capital assets that has accompanied the increase in its mortgage debt, as follows:

*Relation of capital value to mortgage debt*

| Year | Value of plant ($1,000)[1] | Mortgage debt ($1,000) |
|---|---|---|
| 1910 | $34,801,126 | $3,320,470 |
| 1920 | 66,316,003 | 7,857,700 |
| 1930 | 47,879,838 | 9,241,390 |
| 1932 | 37,000,000 | [2] 8,500,000 |

[1] Land and buildings.

[2] Approximately.

The decrease in mortgage debt between 1930 and 1932 is due almost wholly to wiping out debt and farmer alike by foreclosure. Recourse to foreclosure proceedings apparently is rapidly coming to an end as evidenced by recent occurrences in Iowa, Arkansas, and many other agricultural States.

TAXES

Farm real estate and personal property taxes alone have increased from $292,000,000 in 1914 to nearly $777,000,000 in 1930, an increase of 166 per cent. The average amount of taxes per acre in 26 states has increased so that in 1930 they stood 245 per cent of 1913, according to the figures of the Department of Agriculture.

Senator KING. Have you any figures showing the valuation per acre throughout the United States for taxable purposes?

Mr. PEEK. I have no figures here.

Taxes and interest, which amounted to about 20 per cent of farm production expenses in the pre-war period, had risen to 40 per cent in 1930.

MIGRATION FROM THE FARMS

A great exodus from the farms started with the 1920–1921 agricultural breakdown. For ten years, beginning in 1920, migration was at the rate of about 2,000,000 people a year. But about one-third of this number found their way back to the farms after milling around in the cities looking for jobs and adding to the army of unemployed. (The details of that figure are given in Exhigit 6.) Many cities regarded this influx as new population, and built hotels, apartment houses, office buildings, and homes to take care of it, many of which now stand nearly empty as a monument to mistaken judgment.

INDUSTRIAL PRICES HELD UP

During this period since 1920 while the tide was running so strongly against the farmer, the cost of the things he had to buy was prevented from declining proportionately to the things he had to sell. This was due to the organization of industry and labor which enabled them to carry on behind successive tariff acts, as follows: The emergency tariff act of 1921; the Fordney-McCumber Tariff Act of 1922, and the Hawley-Smoot Tariff Act of 1930. (See exhibit 7.)

Senator SHORTRIDGE. The farmer was protected by that also, was he not?

Mr. PEEK. I prefer to discuss that later, please, if you will let me finish my statement, Senator.

Senator SHORTRIDGE. Very well.

Mr. PEEK. I will be glad to take it up.

Senator KING. You and I will have a controversy over that, Senator.

Mr. PEEK. I do not believe I will have so much of a controversy with you on some angles.

In addition to these general enactments, there were frequent increases under the flexible provisions of the tariff laws.

It is constantly stated that the things the farmer buys are not subject to duty. To disprove this we need only to point to the duties on such basic raw materials as iron, steel, copper, aluminum, lumber, coal, and petroleum, which in the form of raw, semimanufactured, and finished products are used in large quantity by the farmer.

Other protective devices have been put into effect in the interest of industry and labor which assisted them in resisting inflation, with the ultimate result that while agricultural prices as of January 15, 1933, stand at 51 per cent of pre-war, prices paid by farmers stand at 105 per cent, according to the figures of the Department of Agriculture on January 30.

### TWO POSSIBLE METHODS FOR CORRECTING DISPARITY

There are only two ways of correcting the disparity between agricultural and industrial prices: (1) Raise agricultural prices, or (2) reduce industrial prices to the level of agricultural prices. Farm leaders consistently have urged the first method. Responsible leaders of labor have supported them. Most of our leaders in big business and finance have opposed them. If the second method were adopted, it would mean cutting industrial prices to half or less than half of their present levels. This would mean complete chaos in labor, industry, and finance.

May I suggest to your committee that in your deliberations you give full consideration to the views and motives in the past of those who now or hereafter appear before you to suggest the way out of our present difficulties.

### PRICE DISPARITY

Before considering provisions for legislation that are essential to correct price disparity, let us note certain facts concerning prices of a few commodities in the United States in different years and in Europe; and in the case of wheat the situation in world markets. These facts will throw a good deal of light upon the present situation. My statements are based on data prepared by the Bureau of Agricultural Economics, United States Department of Agriculture.

### WHEAT, FLOUR, AND BREAD PRICES

In 1914 No. 2 hard winter wheat sold at Kansas City at $0.93 a bushel.

Flour sold at Kansas City at $4.36 a barrel.

Bread sold at Kansas City at $0.061 a pound.

In December, 1932, No. 2 hard winter wheat sold at Kansas City at $0.423 a bushel; flour sold at Kansas City at $3.40 a barrel; bread sold at Kansas City at $0.067 a pound.

These comparison for the pre-war and present situations are highly significant. With a wheat price in 1932 54.5 per cent below 1914, we have a flour price 22.2 per cent below and a bread price 9.8 per cent above. Just these simple facts demonstrate that so far as wheat is concerned price levels have been brought down at the expense of the farmer and the consumer. The spread between them has increased; the farmer gets less, the consumer pays more. Kansas City bread prices are of particular significance, for both in 1914 and in December, 1932, they were identical with the average for the United States.

A comparison of wheat, flour, and bread prices in foreign countries has added significance. In making international comparisons of prices, it is obviously impossible to make them absolutely identical because of different milling and baking practices. However, they disclose the general picture with sufficient accuracy.

On September 19, 1932, wheat sold in Paris at $1.24 a bushel, flour sold in Paris at $5.58 a barrel, bread sold in Paris at $0.04 a pound.

Kansas City figures for December, 1932, compared with the Paris figures for September 19, 1932, show the more favorable situation in Paris for both the farmer and the consumer:

| Commodity | Kansas City | Paris |
|---|---|---|
| Wheat | $0.423 | $1.24 |
| Flour | 3.40 | 5.58 |
| Bread | .067 | .04 |

That is 4 cents a pound loaf.

Senator REED. Mr. Peek, may I interrupt you?

Mr. PEEK. Yes.

Senator REED. In other words, our farmers are getting less and our consumers are paying more?

Mr. PEEK. Exactly.

Senator REED. Who is getting the greater part of that split?

Mr. PEEK. I think that the spread is absorbed in the general distributive system between the farmer and the consumer.

Senator REED. Well, somebody must be making an extortionate profit there.

Mr. PEEK. I think that the profits are largely expended in the costs of carrying on the business.

Senator REED. In other words, we have a wasteful system of distribution?

Mr. PEEK. Yes, sir.

Senator REED. From which nobody profits?

Mr. PEEK. Well, I would not say nobody profits. I think perhaps a great many people are employed in that wasteful system of distribution.

Senator REED. Well, if the French can distribute so much more efficiently, why can not we?

Mr. PEEK. I think that we can come more nearly approximating their prices.

Senator REED. If we did, would we not benefit both the farmer and the consumer?

Mr. PEEK. It would if the price was reflected to the farmer.

The CHAIRMAN. Well, there is a difference in the wage, of course, between this country and France.

Mr. PEEK. I say if it were reflected to the farmer; the difference between the price paid to the farmer and the price paid by the consumer; the difference in the distribution—the relative difference between those two.

Senator KING. Have you discovered, Mr. Peek, whether or no there is a monopolistic control in many sections of our country of the products of wheat—that is, of bread and of flour? The reason I ask the question is because complaints have come to me that in this city a number of the bakeries—I do not know whether that is the proper term—a number of the corporations that have been engaged in the production of bread and other cereal products have coordinated or cooperated or consolidated, and that has brought about a sort of a monopolistic control of the bread supply of this district. And I am told that similar situations exist throughout the United States, and there is a sort of a baking trust. Have you made investigations to determine whether that information that has been brought to my attention is accurate?

Mr. PEEK. No. I have no definite facts on that. I have my own views of it, Senator, which I shall not hesitate to express when I complete my paper, if you care to have me do so.

Senator KING. Yes; I would be glad to get your views on that.

Senator REED. It must be a pretty inefficient trust, because a number of them have recently gone into receivership.

Mr. PEEK. I did not understand that, Senator.

Senator REED. I say a number of these big baking companies have recently gone into receivership, have they not?

Mr. PEEK. I do not think that proves anything necessarily.

Senator KING. Senator, some of those trusts, like other corporations where monopolies are formed, have issued an enormous quantity of watered stock and they have paid extortionate prices to destroy the competing small man. I say they have just pyramided their stockholdings and their bonds, and have got watered conditions that were not conducive to economy or to the continued solvency of the corporation.

Senator REED. I am not assuming to defend them, Senator.

Senator KING. I know that.

Senator REED. But if they have a monopoly and have gone into receivership they must have been very inefficiently managed.

Senator KING. You know many of these monopolies, Senator, have been very inefficiently managed and the corporation has gone out, like the Insull Corporation, to acquire all of those engaged in that activity, and issued watered stock, and the result is they have come to a precipice and have been pushed over.

Mr. PEEK. Senator, what influence do you think is behind them?

Senator KING. You are on the witness stand.

Mr. PEEK. You almost said what I said I would say at the conclusion of my remarks, but you did not finish them.

Few people know the great discrepancy in relative prices of wheat and bread that have prevailed as between Europe and the United States for many years. I wish, therefore, to elaborate a little on this subject. The following comparisons are based on data compiled by the United States Department of Agriculture.

I will ask you if you will follow these tables, because it is a little easier to follow them than it is to read them.

Senator REED. I have already read them.

Mr. PEEK. Following is a table of comparative prices of wheat, flour, and bread.

*Comparative prices of wheat, flour, and bread*

| | Berlin | Paris | Kansas City |
|---|---|---|---|
| *1909-1913 average* | | | |
| Wheat (bushel) | $1.355 | $1.416 | $0.95 |
| Flour (barrel) | 4.97 | 6.01 | 4.38 |
| Bread (pound) | | .0558 | .06 |
| *1931 average* | | | |
| Wheat | 1.716 | 1.871 | .755 |
| Flour | 7.01 | 7.96 | 4.86 |
| Bread | | .042 | .083 |
| *1932 average* | | | |
| Wheat | 1.524 | 1.717 | .469 |
| Flour | 6.56 | 6.92 | 3.85 |
| Bread | [1] .078 | .039 | .067 |

[1] Wheat rolls.

The 1909–1913 average. Wheat in Berlin was $1.355 a bushel. In Paris it was $1.416. In Kansas City, 95 cents a bushel.

Flour in Berlin was $4.97 a barrel; in Paris, $6.01; in Kansas City, $4.38.

Senator REED. What was the German and French tariff on wheat at that time?

Mr. PEEK. I do not have those figures in this document. I will undertake to get them for you.

Senator REED. All right.

Senator SHORTRIDGE. Have you undertaken to give the reasons for that so-called disparity of prices?

Senator REED. Well, that is evident, Senator. The French and German wheat supply is not adequate to the demand.

Senator SHORTRIDGE. I, of course, had that in my mind. Due to the supply and the demand.

Mr. PEEK. Well, I would say hardly that. I cover that a little bit later in my conclusions.

Senator SHORTRIDGE. All right.

Mr. PEEK. While bread per pound, the figures were not obtainable for that period for Berlin, but in Paris they were $0.0558 per pound loaf, and in Kansas City $0.06. In other words bread was selling at less in Paris than it was in Kansas City, when wheat in Paris was $1.41 a bushel and in Kansas City it was 95 cents a bushel.

The CHAIRMAN. Of course wages and everything else here were higher than they were in Paris.

Mr. PEEK. I am not talking about anything except agriculture, Senator, at this particular juncture. The relation of agriculture to these particular commodities.

Senator REED. It is worth remembering that our farmers have to pay higher wages here than the French and German farmers pay over there.

Senator SHORTRIDGE. Labor is necessary there and here.

Mr. PEEK. You mean the farm labor?

The CHAIRMAN. The farm labor, and also in the milling of the wheat, and every time it is touched.

Mr. PEEK. Well, after you leave the farm the rest of the things are beyond the farmer's control. So we must look elsewhere. After we leave the point of local markets we must look elsewhere quite largely for the difficulty.

Senator REED. The price he has to pay for labor on his own farm is largely beyond his control, too.

Mr. PEEK. Yes.

Senator REED. So he is being ground between two circumstances he is not able to correct or control.

Mr. PEEK. It is very largely due to the prices of industrial labor, Senator, because if they are beyond a certain point there would be no labor on the farm, if the labor in the city goes too high.

Senator REED. Yes.

Mr. PEEK. That was the 1909-1913 average I just read.

In 1931 wheat in Berlin was $1.71 a bushel; in Paris, $1.87 a bushel; and in Kansas City, 75 cents a bushel.

Flour in 1931 in Berlin was $7.01 a barrel; in Paris, $7.96 a barrel; and in Kansas City, $4.86.

For bread in 1931 there are no figures for Berlin, but in Paris the price of bread was $0.042 and in Kansas City it was $0.083.

In other words, wheat in Paris was $1.87 a bushel, in Kansas City, 75 cents; bread in Paris was 4 cents and in Kansas City 8 cents.

The 1932 average for wheat in Berlin was $1.52; in Paris, $1.71; and in Kansas City, 47 cents.

Flour in Berlin was $6.56 a barrel, in Paris it was $6.92, and in Kansas City it was $3.85.

Bread (wheat rolls), which are not exactly comparable, in Berlin were $0.078, in Paris bread was $0.039, less than 4 cents, and in Kansas City, $0.067.

While the pre-war price of wheat in Berlin was $1.35 a bushel, the 1932 average price was $1.52 a bushel, or 13 cents higher. In Paris the pre-war average price was $1.42, while the 1932 price is practically $1.72, or 21.1 per cent higher; while in Kansas City the pre-war price was 95 cents and the 1932 price was practically 47 cents, or 51 per cent lower.

The average price of bread in Kansas City has increased from 6 cents a pound loaf pre-war to 6.7 cents a pound loaf in 1932, or 9 per cent higher. In Paris the average price of a pound loaf has dropped from 5.58 cents to 3.9 cents, a drop of 30 per cent.

When wheat was $1.87 a bushel in Paris in 1931, it was 75 cents a bushel in Kansas City. But bread was 8.3 cents in Kansas City and only 4.2 in Paris. (For further details, see Exhibit 8.)

It must be clear that the whole burden of giving justice to the American wheat farmer need not fall upon the consumer.

Senator HARRISON. Mr. Peek, that price that you stated was charged in Kansas City, was that pretty general over the country?

Mr. PEEK. I stated before, Senator, that in previous periods I give the data at two separate dates where the Kansas City price was the exact average of the whole United States.

WORLD WHEAT MARKETS

A general impression prevails that the world's trade in wheat has been declining and that it has become necessary for the United States to restrict its production of wheat as a permanent policy.

For many years I have protested against the expressed view of those who advocate the restriction of agricultural production to the demands of the domestic market, and I have pointed out the unfavorable effect such a policy would have not only upon the farmer but upon our whole economic structure—commerce, transportation and finance. The social effects, too, would be far reaching and destructive.

I have pointed out also that the vacuum created in the world's agricultural market by our withdrawal would be—in fact is being—filled by other exporting countries such as Canada, South America, and Australia. Such withdrawal would dry up our own resources to the direct advantage of foreign nations.

Recently the leading boards of trade and produce exchanges published a pamphlet entitled "A Survey of the Farm Question" (January 4, 1933), from which I quote:

> It may be here pointed out that, contrary to general impression, our loss of a market for our wheat is not the result of an increased production through a nationalistic program in importing countries. Actually the world is buying more wheat, but it is coming from our rival surplus producing countries. During the two postwar years of our 23 per cent tariff the world export trade in wheat averaged 675,000,000 bushels, of which we furnished 41 per cent. During the seven years of our 38 per cent tariff, the international world trade in wheat averaged 791,000,000 bushels and we furnished 21 per cent of it. In the two years under our 53 per cent tariff, the world wheat trade reached 814,000,000 bushels, and we supplied only 15 per cent of it. The importing countries of the world still want wheat in increasing quantities, but they are buying it in countries where commerce is permitted to flow in both directions.

That is page 17 in the pamphlet to which I have referred, and that is published under the auspices of the leading boards of trade and produce exchanges of the country.

The CHAIRMAN. Do you speak for the farm organizations?

Mr. PEEK. Do I speak for them?

The CHAIRMAN. Yes.

Mr. PEEK. I do not. I tried to make that clear in the beginning of my remarks, that I represent no organization except myself. You may perhaps recall, Senator, that from 1924 to 1928 I was president of the American Council of Agriculture, that was an organization of farm leaders, and during two years of that period I was chairman of the executive committee of 22, which was made up at the meeting of governors of 11 States, from 11 Middle Western States, 2 from each State.

The CHAIRMAN. You recognize, do you not, that the farm organizations of the United States had their representatives here at the time that the tariff bill was under consideration, and that every rate in that tariff bill was supported by the respresentatives of the farm organizations in this country?

Mr. PEEK. That has no influence upon my opinion, Senator.

The CHAIRMAN. No.

Mr. PEEK. I am merely expressing my views.

The CHAIRMAN. No, but I ask you whether you were aware of that fact?

Mr. PEEK. Oh, yes. I am aware of the general discussion in a general way.

Senator KING. May I ask my colleague, does he mean by that broad statement that he just made that the farmers supported every schedule in that tariff bill?

The CHAIRMAN. Every agricultural schedule.

Senator KING. I thought you were referring to the whole tariff bill.

The CHAIRMAN. No; I spoke about the agricultural schedules, and I asked him if he recognized that the farm organizations of the United States supported them.

Senator KING. I wanted to state that many of the farmers did not and do not support many of the schedules in that bill.

The CHAIRMAN. Agricultural?

Senator KING. No. I am not speaking of that.

The CHAIRMAN. I am talking about the agricultural schedules in the tariff bill.

Senator KING. If you limit it to agriculture, that is one thing.

The CHAIRMAN. Yes.

Senator SHORTRIDGE. Before you conclude, do you undertake to account for the falling off of our foreign wheat trade?

Mr. PEEK. I think so; yes.

Senator SHORTRIDGE. Very well.

Mr. PEEK. Time forbids referring in detail to the great body of facts touching the question of international trade in wheat. However, in the 8-year fiscal period from 1922–23 to 1929–30 United Kingdom imported an average of 218,283,000 bushels of wheat from all sections of the world. Our average proportion of their imports for that period was 33,991,000 bushels, or 15.6 per cent.

In 1931–32 United Kingdom imported 245,000,000 bushels, or 12.2 per cent, more than the 8-year average, but took only 18,679,000 bushels from the United States. In other words, our share of the wheat trade of United Kingdom fell from an average of 15.6 per cent to 7.6 per cent.

Senator REED. Let me interrupt you. Was not that very largely due to the dumping in Great Britain by the Soviet?

Mr. PEEK. I think not. If I may go on, Senator, I think I will perhaps answer your question.

Senator SHORTRIDGE. They buy from their own people.

Senator REED. Very well.

Mr. PEEK. The total world trade in wheat during the period of the Fordney-McCumber bill (1922–1930) averaged 735,882,000 bushels yearly. The average during the period of the Smoot-Hawley bill (1930–1932) has been 869,263,000 bushels, an increase of 18.1 per cent.

During the same period the United States' share in the world wheat trade dropped from an 8-year average of 186,193,000 bushels under the Fordney-McCumber Act to 133,667,000 bushels under the Smoot-Hawley Act, a decrease of 28.2 per cent.

The CHAIRMAN. Is there that difference in the rate of duty in the two bills?

Mr. PEEK. I beg your pardon?

The CHAIRMAN. Is there a difference in the rate of duty in the two bills of that percentage? If it is because of the duty then of course the higher rate has decreased with the importations. Was there 18 per cent difference in the rates? That is what you are trying to point out, is it not, that the rate of duty was what prevented the exportation of our wheat abroad and the use by foreign countries?

Mr. PEEK. I am merely trying to point out the facts in relation to it and at this juncture not to state the cause of it.

The CHAIRMAN. Well, that is all right. Just so we understand that.

Senator SHORTRIDGE. That is what I wanted him to develop, if he has views upon that subject.

The CHAIRMAN. Yes. Because that is very easily explained.

Mr. PEEK. I am merely submitting official data on what has happened at this point.

The CHAIRMAN. Very well. Proceed.

Mr. PEEK. During the same period the United States' share in the world wheat trade dropped from an 8-year average of 186,193,000 bushels under the Fordney-McCumber Act to 133,667,000 bushels under the Smoot-Hawley Act, a decrease of 28.2 per cent. Our share in world wheat trade, expressed in percentages, has dropped from 25.3 per cent to 15.4 per cent, despite an increase in total world wheat trade of 18.1 per cent. (See Exhibit 9.)

A study of our sales of wheat to foreign countries during periods covered by different tariff acts is very enlightening. During the Payne-Aldrich period of 1909–1913, all importing countries obtained 14.3 per cent of their wheat imports from the United States. While the Underwood law was in effect pre-war they obtained 44.5 per cent. In the postwar period, while the Underwood Act was in force, this percentage increased to 53.3. In the eight years of the Fordney-McCumber bill it dropped to an average of 25.3 per cent, and under the Hawley-Smoot bill it dropped to 15.4 per cent. Obviously due allowance must be made for the fact that European countries had not fully reestablished their agriculture during the period of the Underwood law. Nevertheless, the showing is significant of what has happened to our wheat export trade. (For further details see Exhibit 10.)

The picture as to our part of international trade is incomplete without some disclosure as to exports of wheat from the United States and other chief exporting countries.

Our export trade dropped from a 2-year average in 1920 and 1921 of 331,646,000 bushels to a 2-year average in 1930–31 and 1931–32 of 133,667,000. Comparing the same paid of 2-year periods, the exports of all exporting countries rose from an average of 784,889,000 bushels to an average of 869,263,000, an increase of 10.7 per cent. (For further details see Exhibit 11.)

For convenience of reference the average exports of the United States, other important exporting countries, and all exporting countries are shown in Exhibit 12.

Senator HARRISON. That gives the percentage of increase from each of the countries?

Mr. PEEK. Yes.

### HOG AND PORK PRICES

Turning our attention to hogs and hog products, we find similar discrepancies. So little corn moves from the farm as corn that the most practical way to increase corn prices is to deal with hogs. A study of the following prices shows many peculiarities of price behavior after the product leaves the hands of the farmer. December, 1932, is used for comparison as it is the latest month conveniently available.

*Average Chicago prices*

| Commodity | 1914 | December, 1932 | Per cent decrease |
|---|---|---|---|
| Heavy hogs | $8.36 per hundredweight wholesale | $3.05 per hundredweight wholesale | 63.52 |
| Dressed pork | $13.30 per hundredweight wholesale. | $5.90 per hundredweight wholesale | 55.64 |
| Pork chops | $0.198 per pound retail | $0.176 per pound retail | 11.11 |
| Bacon (sliced) | $0.317 per pound retail | $0.216 per pound retail | 31.86 |
| Ham (sliced) | $0.326 per pound retail | $0.303 per pound retail | 7.06 |

Available data on European livestock and meat prices are not complete, but they are very significant.

| Commodity | Year | Price per hundredweight wholesale | |
|---|---|---|---|
| | | United States | Germany |
| Hogs | 1913 | $8.37 | $12.64 |
| Pork | do | 12.60 | (1) |
| Hogs | September, 1932 | 4.12 | 8.68 |
| Pork | do | [2] 8.60 | [3] 13.89 |

| Commodity | Year | Price per hundredweight wholesale | |
|---|---|---|---|
| | | United States | England and Wales |
| Hogs | 1914 | $8.36 | $14.48 |
| Do | 1931 | 6.58 | 16.34 |
| Dressed pork | do | [2] 12.30 | [4] 17.69 |

[1] Not available. [2] Chicago. [3] Berlin. [4] London.

Now, if you refer to that table, you will see that heavy hogs in 1914 in Chicago, the average price was $8.36 per 100 pounds. In December, 1932, $3.05 per 100 pounds. A percentage of decrease of 63.52 per cent in price.

The CHAIRMAN. You have not got the price for 1929, have you?

Mr. PEEK. Not there. In other places here the prices occur.

The CHAIRMAN. That will make quite a different picture, will it not?

Mr. PEEK. Not so different as you would think. We will turn to that shortly.

The CHAIRMAN. We will see.

Mr. PEEK. Dressed pork in 1914, $13.30 per 100 at wholesale; December, 1932, $5.90, or 55.64 per cent decrease.

Pork chops at retail in 1914 were 19.8 cents per pound, and in 1932, 17.6 cents per pound, or a decrease of 11.11 per cent.

The CHAIRMAN. Have you any tables showing what they were in 1910 in comparison? This is when the war began, you know.

Mr. PEEK. I have some figures here in just a minute showing the average of 1909 and 1914; yes.

Sliced bacon in 1914 was 31.7 cents per pound at retail, and in 1932, 21.6 cents per pound, a decline of 31.86 per cent.

Ham (sliced) in 1914 was 32.6 cents, and in December, 1932, 30 cents, or 7.06 per cent decrease.

In other words, hogs declined 63.52 per cent, dressed pork declined 55.64 per cent, pork chops declined 11.11 per cent, bacon (sliced) declined 31.86 per cent, and ham (sliced) declined 7.06 per cent. Again reflecting the fact that the relative decline in the price of the hog is not reflected in the price of meat to the consumer.

Available data on European livestock and meat prices is not complete, but they are very significant. Hogs in 1913 in the United States, $8.37; Germany, $12.64.

Pork in 1913 in the United States, $12.60; Germany not available.

Hogs, September, 1932, $4.12 in the United States; in Germany $8.68.

Pork, September, 1932, Chicago, $8.60; Berlin, $13.89.

Hogs in the United States at wholesale in 1914 were $8.36, and in England and Wales, $14.48.

Hogs in 1931 in the United States were $6.58, and in England and Wales, $16.34.

Senator KING. That is reduced to the gold values, is it not?

Mr. PEEK. Both expressed in American money, yes, sir.

Dressed pork in 1931, $12.30 in Chicago, and $17.69 in London.

We have available also certain other comparisons of hog and pork prices. The Department does not give figures covering comparable cuts. The data are averages for 1909–1913, and 1931 and 1932. (See bottom of exhibit 8.) Hog prices were as follows:

| | 1909–1913 | 1931 | 1932 |
|---|---|---|---|
| Berlin (220 to 265 pounds) | $11.63 | $10.02 | $8.20 |
| Chicago (all weights) | 7.77 | 6.16 | 3.83 |
| Difference | 3.86 | 3.86 | 4.37 |

Clearly, as is the case with wheat, the whole burden of giving justice to the American hog producer need not fall upon the consumer.

It is apparent that foreign prices for hogs and their products do not determine our domestic prices. The large export business in hog products has been in lard, and it is quite probable that accumulating surpluses of lard in our markets and protection Germany is giving her agriculture are having a depressing effect upon the prices for hogs. This would seem to be borne out by a comparison of price behavior for a few selected years on lard, as follows:

| | 1925 | 1929 | November, 1932 |
|---|---|---|---|
| Chicago | $17.90 | $12.97 | $6.19 |
| Liverpool | 18.29 | 13.23 | 7.26 |
| Hamburg | 18.78 | 13.79 | 8.59 |
| Chicago-Liverpool spread | .39 | .26 | 1.07 |
| Chicago-Hamburg spread | .88 | .82 | 2.40 |

The spread is greatly increased, as is shown.

The CHAIRMAN. In favor of the United States?

Mr. PEEK. I would say against the United States. The Chicago-Liverpool spread in 1925 was 0.39; in 1929 was 0.26; and in November, 1932, was 1.07. While the Chicago-Hamburg spread in 1925 was 0.88, in 1929, 0.82 and November, 1932, $2.40.

COTTON

The expressed theory held by some that we should relinquish our agricultural export markets and increase our industrial exports at the same time, overlooks, as has been pointed out, the importance of agriculture to our whole economic structure—commerce, transportation, and finance.

In the case of cotton the pursuance of this theory is particularly murderous as we produce 57.36 per cent of the world crop (1924–1930 7-year averages; world crop, 25,620,000 bales; United States crop, 14,700,000 bales). Furthermore, we export 54.43 per cent of what we produce (1924–1930 7-year averages: production, 14,700,000 bales; exports, 8,002,000). These facts are from Bulletin 169, United States Bureau of the Census.

Hitherto we have enjoyed practically a world monopoly in production, producing some 57 per cent of the world's supply, and exporting about 55 per cent of what we produce. We have failed in the matter of prices, however, to take advantage of our peculiar opportunity to exercise a proper influence on world prices.

Senator SHORTRIDGE. Have you undertaken to explain that point? You make a positive statement there which may be correct.

Mr. PEEK. I think I explain a good many of the points that you raise, Senator, later.

Senator SHORTRIDGE. All right, sir.

Mr. PEEK. We have allowed our cotton producers to remain at the mercy of the buyers of cotton (foreign nations), while at the same time these producers, as consumers like the rest of our consumers, have been compelled to purchase the products of cotton in a highly protected market.

To force our cotton growers to curtail substantially their production would merely drive them into grain and livestock. The producers of grain and livestock (except lambs) have suffered more since 1920 than the cotton growers themselves. (See Exhibit 4.) (See also Exhibit 13.)

Cotton is grown on nearly 2,000,000 farms and is peculiarly a crop employing a large amount of human labor. If we drive, say 400,000 cotton farms out of production, what can their operators do except further break down the general farm structure, or migrate to the cities where we already have 12,000,000 unemployed workers?

Senator SHORTRIDGE. Does anybody propose to drive 400,000 cotton farmers out?

Mr. PEEK. What would they do?

Senator SHORTRIDGE. Why do you use those figures and make that statement about them? I am merely asking for information.

Mr. PEEK. I am giving my view of it, Senator. I think that would be the effect that they would do one or the other of two things. They would break down other sections of the farm picture or move away from the farm. They would have to be employed somewhere.

Senator HARRISON. They would have to raise some other stuff.

Mr. PEEK. Yes; or move away—one or the other—or get out.

LEGISLATIVE REMEDIES REQUIRED

If the foregoing statements and figures, with the information contained in the exhibits, are accepted as substantially reflecting the facts, it is clear that America has neglected her agriculture and that European countries hold their agriculture in higher esteem than we hold ours. Practically every important European nation gives special assistance to its agriculture.

Our farmers can not and will not continue to feed and clothe the Nation for less than it costs them.

The CHAIRMAN. In this statement of yours, do you tell Congress what to do in order to remedy that?

Mr. PEEK. I am making some suggestions in order to remedy it, Senator. I am leading right to that now.

From a purely business standpoint it is folly to ignore the great purchasing power of one-fourth of our population living on the farms. and perhaps considerably more who are directly dependent upon them.

Any plans for the restriction of agricultural production to the demands of the domestic market involving substantial curtailment of acreage, except occasionally in case of great emergency, as in case of cotton at present, should be considered in the light of our whole national and international economy, and should not be adopted as a permanent national policy. Our national effort should tend toward making the farm a satisfactory place for more not less people.

In the past the independent land-owning farmer has been among the most conservative of our people and our greatest bulwark against radicalism. With him the capitalistic system is secure. Without him anything may happen.

I wonder if we may not draw an analogy between the present situation in America and Europe about 1780, when Edward Gibbon, in his third volume of the Decline and Fall of the Roman Empire, wrote of Europe:

> One great republic, whose various inhabitants have attained almost the same level of politeness and cultivation. The balance of power will continue to fluctuate, and the prosperity of our own and neighboring kingdoms and the prosperity of our own and neighboring kingdoms may be alternately exalted or depressed; but these partial events can not essentially injure our general state of happiness, the system of acts and laws and manners which so advantageously distinguish, above the rest of mankind, the Europeans and their colonies.

And then came the French Revolution in 1789.

At the outset I indicated my purpose to confine my discussion primarily to the relation of the agricultural depression to the general depression. The former began in 1920; the latter, generally speaking, 10 years later with the stock-market crash at the end of 1929.

In considering suggestions for legislation, we should keep in mind the extent and duration of the injustice to which agriculture has been subjected in different sections, its present condition, and the importance of agriculture in our national economy. Furthermore, we should consider well the social aspects as affected by legislation which will be referred to later. Far more than ecomonic justice and business restoration are involved in the restoration of agriculture. The whole capitalistic system of government now is on trial. The future of the Nation depends upon a wise solution of the problems now confronting government.

As stated at the outset, legislation is required:

1. To correct price disparity and to prevent or minimize its recurrence.
2. To remove some of the burden of debt and interest charges.
3. To restore foreign outlets for American products.
4. To reduce local, State, and Federal expenses in order that taxes may be brought into proper relation to reduced incomes and earnings.
5. To provide short term credit and banking facilities where they are now lacking.
6. To provide a more adequate and better adapted rural credit system to remove discrimination between agricultural and other borrowers.
7. To inflate the currency if the foregoing are insufficient.

The CHAIRMAN. How do you intend to reduce local and State and Federal expenses? How would you have Congress do it?

Mr. PEEK. I do not think the National Government can reduce local taxes, of course. But I think that the action of Congress itself can set a very good example with respect to that.

The CHAIRMAN. It has not been followed by the States of late.

Senator HARRISON. Some of the States have followed it. I know my own State has cut the expenses of the State one-third this last year.

The CHAIRMAN. Well, I suppose you got into the position where you had to, did you not?

Senator HARRISON. Yes. They were in a bad state.

Mr. PEEK. Iowa started out to reduce its expenses $25,000,000, to effect that saving in its taxes this year.

Senator SHORTRIDGE. Pardon me before you proceed. On page 27 you have suggested some seven different plans or propositions or suggestions. Do you propose before you get through to point out how you expect to do that?

Mr. PEEK. Yes; I am coming now to the first one, Senator.

Senator SHORTRIDGE. Thank you.

Mr. PEEK. 1. Principles of legislation necessary to correct price disparity and to prevent or minimize its recurrence.

Emergency agricultural legislation is necessary and imperative pending the development of a comprehensive national program for agriculture and the opening of normal export markets through international trade agreements, reciprocal tariffs, application of foreign debt to payment in whole or in part for our exports, stabilization of international currencies, and such other important subjects.

Other emergency legislation is necessary pending these other things.

This emergency legislation should cover only such commodities (and, if necessary, competitive substitutes therefor) the prices of which in our domestic markets are influenced largely by the prices in foreign markets or which are directly affected by the conditions in foreign countries. I should say wheat, cotton, hogs, and possibly tobacco. I include hogs because that is the only way I know of to reach corn. Provision should be made to include, if necessary, grains that may be substituted for wheat and other livestock substitutable for hogs.

The period of duration should be one year, subject to extension, in whole or in part, from year to year, upon proclamation of the President, until a comprehensive national program for agriculture is developed.

Senator SHORTRIDGE. The President has no power to do that, has he?

Mr. PEEK. If he had the power given him by Congress he would have it, would he not?

Senator SHORTRIDGE. I do not know that Congress has the right to give such a power.

Mr. PEEK. Perhaps not.

Senator HARRISON. You mean to write some law and in that law give to the President the right to extend that law by proclamation?

Mr. PEEK. Yes, sir; exactly.

The importance of the processor must be recognized as he performs a necessary service between the farmer and the consumer.

Agreements should be authorized between the proper governmental bodies and existing agencies, including processors and associations of producers. The aim to be accomplished by these agreements should be to dispose of existing surpluses and to keep the channels of trade open through every instrumentality at our command; that is, governmental, producers, processors, and exporters (private or cooperative).

Prevention of burdensome supply in future should be provided for by decreasing prospective production before harvest in the areas where it is excessive, compensating the farmer for so decreasing production. Such action can be fully justified as a contribution to the general welfare.

Reduced production should be effected in areas of surplus production. Reduction should not take place in sections or areas where the particular products are deficient in supply. To do otherwise would be wasteful and uneconomic and would create dissatisfaction and unrest.

Senator HARRISON. The House allotment bill does not do that, does it?

Mr. PEEK. No. It merely curtails acreage.

Senator HARRISON. Yes; but it curtails acreage everywhere, whether or not there is a surplus in a particular product for a State.

Mr. PEEK. Yes. Well, I come to it later.

Senator SHORTRIDGE. Is that made mandatory, Senator, by that?

Senator HARRISON. No; the House bill is not mandatory. Is it, Mr. Peek?

Mr. PEEK. If they participate in the benefits.

Senator HARRISON. Oh, yes. But they do not have to go into it.

Senator SHORTRIDGE. Yes. Then in a sense it is not mandatory.

Mr. PEEK. For example, why should South Carolina decrease her corn production when she imports corn and the surplus of corn originates in the Middle West?

I may say right there, I was in South Carolina the latter part of November. A gentleman with whom I talked had just shipped in a carload of corn for which he paid 62 cents a bushel delivered at Georgetown. The farmer in Iowa got 10 cents for that corn and the 52 cents was absorbed between the farmer and this man who bought it for distribution at 62 cents. Now why ask South Carolina to curtail its production of corn when the Middle West is reducing it?

Senator SHORTRIDGE. Yes; it is perfectly absurd.

Mr. PEEK. Or why should New York State reduce her wheat production of 5,000,000 bushels when she is forced to import millions of additional bushels each year, and the surplus is made in Kansas, North Dakota, and a limited number of additional States?

For example, in 1931 New York State raised 5,000,000 bushels of wheat. Kansas raised 240,000,000 bushels. Kansas raised about one-third of our total production, and Kansas alone accounted for our total supply of surplus.

Senator HARRISON. There would be no reason to make California, for instance, decrease her cotton supply when they do not produce a surplus out there?

Senator SHORTRIDGE. But I may add right there, for I know its great importance appeals to my friend, we raise the best—now notice—the best long-staple cotton raised in the United States, and I have the authority of a Senator from the South who is an expert in the matter of cotton who says that it is better than the Egyptian.

Senator HARRISON. I am not one that will contest that California can not raise the best of everything.

Senator SHORTRIDGE. That covers the whole field.

Mr. PEEK. I believe that desired results can not be accomplished by attempting control of acreage planted, because the variation in yield of all growing crops from year to year depends 75 per cent upon weather and pests, which are largely beyond human control, and only 25 per cent upon acreage planted. According to figures compiled by the Department of Agriculture many sections of the country are deficient all of the time, and many part of the time, in supply of some crops. (See the first three columns, Exhibit 13, for cotton example.)

Market prices should respond almost immediately to an announced national policy of restricting supply, if necessary, in order to obtain fair prices for producers, and a determination of Government to assist producers equitably to adjust supply to demand.

Funds to cover the cost of giving the farmer a fair return should be provided by a tax on the processor, as provided by the Jones bill (H. R. 13991), which has already passed the House.

Not only is this a convenient method of protecting the Treasury, but it would have the added advantage of stimulating the processors to pay the farmers a fair price in order to avoid paying an equivalent amount in taxes added to the price.

If, as a result of agreements authorized to be made with processors and others, prices do not rise to a fair level then the difference between such fair-price level and prevailing market prices should be paid to the farmer by the Government, and the Treasury should be reimbursed by means of an adequate tax on the processor.

A fair price may be considered an amount which bears to the price for all commodities bought by producers, during a predetermined period (say, three months), the same ratio as the price for the commodity paid producers, during the pre-war period (1909–1914) bore to prices for all commodities bought by producers during such pre-war period.

At the present time this would mean at local markets a price for wheat of 93½ cents, cotton 12½ cents, and hogs 7½ cents a pound for the proportion required for domestic consumption.

In my opinion these prices are too low, considering the increased interest burdens and increased taxes, as well as the price injustice to which the farmer has been subjected at least 12 years. We should consider adding to such a fair price in future years a percentage (say

10 per cent) as soon as general business conditions improve. Reference to prices of wheat, cotton, corn, and hogs in previous years in this country is made in Exhibit 14.

That is the information you asked for a few minutes ago, Senator.

In addition to tariffs imposed by existing law and those included in the Jones bill, duties should be laid also on jute and black strap molasses. That bill should be amended also in other particulars.

The principles that should govern this legislation are well defined in my mind. If your committee, or any other committee of the Congress having jurisdiction, desires, I will prepare amendments to the pending legislation and submit them for consideration.

Emergency legislation is essential at the earliest possible date. The situation has been drifting from bad to worse in recent months. This is evidenced by the farmers' holiday strikes, by interference with legal processes and foreclosure proceedings, by tax demonstrations at county courthouses in many sections of the country, by continuing bank and commercial failures, and in other ways.

### COMMENTS ON OTHER LEGISLATION SUGGESTED

Legislation is now under consideration covering the lightening of the burden of debt, reduction of Federal expenses and hence taxes, and providing for extending the activity of the Reconstruction Finance Corporation to provide short-term credit.

Your committee understands that many communities are entirely without banking facilities. Large banks are reluctant to make loans for the usual conduct of business. Smaller banks are unable to do so. It would seem, therefore, that there must be given to the Reconstruction Finance Corporation or some other Government agency authority to extend credit for productive enterprise in order that business may go on pending general business recovery.

Restoration of foreign outlets for American products must in large measure await announcement of the policies of the new administration and action thereon by the Congress. It is not necessary to emphasize again the importance of foreign markets for our surplus agricultural products.

At the earliest possible date consideration should be given to an adequate and better adapted rural credit system in order that agriculture may have on as favorable terms as ready access to the credit resources of the Nation as that enjoyed by other lines of essential endeavor.

### CONCLUSION

Farming is a mode of living as well as a business. It should be the most secure of all lines of endeavor so far as it lies within the power of government to make it. Actually as now conducted it is one of the most hazardous occupations of man. It is subject not only to the whims of nature but to the machinations of market speculators throughout the so-called civilized world.

The rural community should be a haven of refuge for those weary of the confusion of busy cities. It should be a place to which people may return with relative security. What industry except agriculture could absorb in three years 2,000,000 of the surplus population of cities in such a time of depression?

A vigorous agriculture is the greatest customer for our large industries. It is our greatest national resource. Cotton alone has accounted for $20,000,000,000 of the $120,000,000,000 total value of exports of the past 38 years. Given fair treatment, the independent land-owing farmer is protection against radicalism of every kind.

I hope that your committe will invite refutation of these conclusions by any witness who appears before you.

(The exhibits to Mr. Peek's statement are here printed in the record in full, as follows:)

EXHIBIT 1.—*Relation of income to export trade, 1910–1932*

| Year | Percentage of income attributable to exports | | |
|---|---|---|---|
| | Total | Agricultural | Nonagricultural |
| 1910 | 5.83 | 13.12 | 3.70 |
| 1911 | 6.79 | 16.18 | 4.22 |
| 1912 | 6.83 | 15.48 | 4.48 |
| 1913 | 7.27 | 16.11 | 4.94 |
| 1914 | 7.01 | 15.85 | 4.64 |
| 5-year average | 6.77 | 15.35 | 4.42 |
| 1915 | 7.83 | 19.96 | 4.54 |
| 1916 | 10.52 | 17.03 | 8.69 |
| 1917 | 12.89 | 15.33 | 12.00 |
| 1918 | 10.30 | 15.10 | 8.56 |
| 1919 | 11.49 | 21.14 | 7.83 |
| 5-year average | 10.80 | 17.69 | 8.47 |
| 1920 | 11.61 | 28.46 | 7.44 |
| 1921 | 10.95 | 29.21 | 7.66 |
| 1922 | 6.04 | 19.27 | 3.48 |
| 1923 | 5.61 | 16.29 | 3.58 |
| 1924 | 5.87 | 16.46 | 3.89 |
| 5-year average | 7.94 | 21.99 | 5.14 |
| 1925 | 6.24 | 19.05 | 3.87 |
| 1926 | 5.80 | 16.48 | 4.01 |
| 1927 | 5.87 | 16.42 | 4.15 |
| 1928 | 5.67 | 15.46 | 4.09 |
| 1929 | 6.20 | 15.50 | 4.69 |
| 5-year average | 5.95 | 16.59 | 4.17 |
| 1930 | 6.50 | 15.91 | 5.07 |
| 1931 | 5.61 | 14.91 | 4.24 |
| 1932 | 5.09 | 14.35 | 3.59 |
| 3-year average | 5.88 | 15.21 | 4.45 |
| 23-year average | 7.45 | 17.86 | 5.21 |

Percentages are based on data from Foreign Commerce and Navigation and on the Statistical Abstract (agricultural section).

EXHIBIT 2.—*Relation of agricultural to nonagricultural and total exports, 1910–1932*

| Year [1] | Total exports [2] | Agricultural exports [2] | | Nonagricultural exports [3] | |
|---|---|---|---|---|---|
| | Thousands of dollars | Thousands of dollars | Per cent of total | Thousands of dollars | Per cent of total |
| 1910 | 1,710,084 | 871,158 | 50.9 | 838,926 | 49.1 |
| 1911 | 2,013,549 | 1,030,794 | 51.2 | 982,755 | 48.8 |
| 1912 | 2,170,320 | 1,050,627 | 48.4 | 1,119,693 | 51.6 |
| 1913 | 2,428,506 | 1,123,652 | 46.3 | 1,304,854 | 53.7 |
| 1914 | 2,329,684 | 1,113,974 | 47.8 | 1,215,710 | 52.2 |
| 5-year average | 2,130,429 | 1,038,041 | 48.7 | 1,092,388 | 51.3 |
| 1915 | 2,716,178 | 1,475,938 | 54.3 | 1,240,240 | 45.7 |
| 1916 | 4,272,178 | 1,518,071 | 35.5 | 2,754,107 | 64.5 |
| 1917 | 6,227,164 | 1,968,253 | 31.6 | 4,258,911 | 68.4 |
| 1918 | 5,838,652 | 2,280,466 | 39.1 | 3,558,186 | 60.9 |
| 1919 | 7,081,462 | 3,579,918 | 50.6 | 3,501,544 | 49.4 |
| 5-year average | 5,227,127 | 2,164,529 | 41.4 | 3,062,598 | 58.6 |
| 1920 | 7,949,309 | 3,861,511 | 48.6 | 4,087,798 | 51.4 |
| 1921 | 6,385,884 | 2,607,641 | 40.8 | 3,778,243 | 59.2 |
| 1922 | 3,699,909 | 1,915,866 | 51.8 | 1,784,043 | 48.2 |
| 1923 | 3,886,682 | 1,799,168 | 46.3 | 2,087,514 | 53.7 |
| 1924 | 4,223,973 | 1,867,098 | 44.2 | 2,356,875 | 55.8 |
| 5-year average | 5,229,151 | 2,410,257 | 46.1 | 2,818,895 | 53.9 |
| 1925 | 4,778,155 | 2,280,381 | 47.7 | 2,497,774 | 52.3 |
| 1925 | 4,653,148 | 1,891,739 | 40.7 | 2,761,409 | 59.3 |
| 1927 | 4,867,346 | 1,907,864 | 39.2 | 2,959,482 | 60.8 |
| 1928 | 4,773,332 | 1,815,451 | 38.0 | 2,957,881 | 62.0 |
| 1929 | 5,283,938 | 1,847,216 | 35.0 | 3,436,722 | 65.0 |
| 5-year average | 4,871,184 | 1,948,530 | 40.0 | 2,922,654 | 60.0 |
| 1930 | 4,617,730 | 1,495,907 | 32.4 | 3,121,823 | 67.8 |
| 1931 | 3,031,557 | 1,038,034 | 34.2 | 1,993,523 | 65.6 |
| 1932 | 1,909,123 | 752,141 | 39.4 | 1,156,982 | 60.6 |

[3] By difference.

EXHIBIT 6.—*Migration to and from farms*

| Year | To farms | From farms | Year | To farms | From farms |
|---|---|---|---|---|---|
| 1920 | 560,000 | 896,000 | 1928 | 1,698,000 | 2,120,000 |
| 1921 | 759,000 | 1,323,000 | 1929 | 1,604,000 | 2,081,000 |
| 1922 | 1,115,000 | 2,252,000 | | | |
| 1923 | 1,355,000 | 2,162,000 | Total, 10 years | 13,140,000 | 19,436,000 |
| 1924 | 1,581,000 | 2,068,000 | 1930 | 1,740,000 | 1,723,000 |
| 1925 | 1,336,000 | 2,038,000 | 1931 | 1,683,000 | 1,469,000 |
| 1926 | 1,427,000 | 2,334,000 | 1932 (first 3 months) | 564,000 | 432,000 |
| 1927 | 1,705,000 | 2,162,000 | | | |

*Total farm population*

| | | | | | |
|---|---|---|---|---|---|
| 1910 | 32,076,960 | 1924 | 31,056,000 | 1929 | 30,257,000 |
| 1920 | 31,614,269 | 1925 | 31,064,000 | 1930 | 30,169,000 |
| 1921 | 31,703,000 | 1926 | 30,784,000 | 1931 | 30,585,000 |
| 1922 | 31,768,000 | 1927 | 30,281,000 | 1932 | 31,241,000 |
| 1923 | 31,290,000 | 1928 | 30,275,000 | 1933 | 32,000,000 |

Data from the U. S. Department of Agriculture.

EXHIBIT 7.—*Dutiable and free imports and rates of duty under different tariff laws*

[Emergency act of 1921 omitted]

| Tariff and date | Period selected | Average rate of duty | | Per cent free |
|---|---|---|---|---|
| | | On dutiable | On all | |
| Payne-Aldrich, Aug. 6, 1909 | 1910–1913 (fiscal) | 40.77 | 19.34 | 52.55 |
| Underwood (pre-war) Oct. 4, 1913 | 1914–15 (fiscal) | 35.75 | 13.77 | 61.45 |
| Underwood (postwar) | 1920–21 (calendar) | 20.75 | 8.07 | 61.08 |
| Fordney-McCumber, Sept. 22, 1922 | 1923–1929 (calendar) | 38.28 | 13.89 | 63.71 |
| Hawley-Smoot, June 18, 1930 | 1931 (calendar) | 53.21 | 17.73 | 66.57 |

The average rate of duty on the dutiable articles was computed by dividing the total duties collected for the period by the value of the dutiable goods imported during the period and multiplying by 100.

The average rate of duty on all goods was determined by dividing the total duty collected for the period by the total value of goods imported, both free and dutiable, during the period and multiplying by 100.

The per cent of goods entering free was determined by dividing the total value of free goods for the period by the total value of imports for the period and multiplying by 100.

With the exception of the year 1931, the figures are therefore all weighted averages.

(Compilation based on valuation of imported dutiable and nondutiable goods and on customs receipts.)

EXHIBIT 8.—*Prices of specified commodities at certain foreign and domestic markets. 5-year average 1909–1913, annual 1931 and 1932*

| Commodity and description | Year beginning July 1 | | | | |
|---|---|---|---|---|---|
| | Market | Unit | Average 1909–1913 | 1931 | 1932 |
| Wholesale prices: | | | | | |
| Wheat— | | | | | |
| Domestic | Berlin | Cents per bushel | 135.5 | [1] 171.6 | [2] 152.4 |
| Do | Paris | do | 141.6 | [1] 187.1 | [2] 171.7 |
| Red | Liverpool | do | 112 | [3] 79.9 | [3] 58.7 |
| No. 1 Northern spring | Minneapolis | do | 99 | [1] 82.8 | [2] 68.4 |
| No. 2 Hard winter | Kansas City | do | 95 | [1] 75.5 | [2] 46.9 |
| Do | Chicago | do | 97.1 | [1] 84.5 | [2] 52.9 |
| Flour— | | | | | |
| Spring wheat, family patents | Minneapolis | Dollars per barrel | 4.97 | 5.36 | 4.56 |
| Hard winter patents | Kansas City | do | 4.38 | 4.86 | 3.85 |
| Do | Chicago | do | 4.63 | 4.35 | 3.67 |
| | Year beginning Jan. 1 | | | | |
| "000" duty free | Berlin | Dollars per barrel | 5.97 | 7.01 | [4] 6.56 |
| No description | Paris | do | 6.01 | 7.96 | [4] 6.92 |
| Straights | London | do | 4.87 | 3.49 | [5] 3.06 |
| Retail prices: | | | | | |
| Bread— | | | | | |
| Rye | Berlin | Cents per pound | [6] 3.03 | 4.1 | 3.8 |
| Wheat rolls | do | do | | | 7.8 |
| White, first quality | Paris | do | [7] 5.58 | 4.2 | [5] 3.9 |
| No description | United Kingdom. | do | | 3.3 | 2.6 |
| Baked weight | Minneapolis | do | [8] 5.6 | [1] 8.2 | [2] 6.7 |
| Do | Kansas City | do | [8] 6.0 | [1] 8.3 | [2] 6.7 |
| Do | Chicago | do | [8] 6.1 | [1] 9.0 | [2] 8.2 |
| Wholesale prices: | | | | | |
| Hogs— | | | | | |
| 220–265 pounds | Berlin | Dollars per 100 pounds | [9] 11.63 | 10.02 | 8.20 |
| Average price, all weights | Chicago | do | 7.77 | 6.16 | 3.83 |

| Retail prices: | | | | | |
| Pork— | | | | | |
| Fresh | Berlin | do | | 18.60 | [10] 15.56 |
| Chops | Chicago | do | [8] 19.0 | 29.6 | 21.3 |

[1] July, 1930, to June, 1931.
[2] July, 1931, to June, 1932.
[3] Liverpool parcels, 1930–31 and 1931–32.
[4] Average for 10 months.
[5] Average for 9 months.
[6] Average for 1913–14.
[7] Average for July, 1914.
[8] Average for 1913.
[9] Weight not stated.
[10] Average for 6 months.

DIVISION OF STATISTICAL AND HISTORICAL RESEARCH

Compiled as follows:

United States prices—Records of the division of statistical and historical research.

Foreign prices—

Wheat—

Berlin—1909–1913, Vierteljahrschafte Zur Statistik des Deutschen Reichs; 1931–32, Wirtschaft und Statistik. (Continued.)

Paris—1909–1913, Statistique Agricole Annule, France, 1914; 1931–32, Bulletin de la Statistique Generale de la France, quarterly.

Liverpool—1909–1913, Corn Trade News, weekly; 1931–32, Corn Trade Yearbooks.

Flour—

Berlin—1909–1913, Vierteljahrschafte Zur Statistik des Deutschen Reichs, 1914, vol. 1, p. 81; 1931–32, Institut International de Statistique Bulletin Mensuel de l'Office Permanent.

Paris—1909–1913, Annuaire Statistique, 1931, p. 116*; 1931–32, Institut International de Statistique Bulletin Mensuel de l'Office Permanent.

London—1909–1913, The Economist, London; 1931–32, Institut International de Statistique Bulletin Mensuel.

Compiled as follows—Continued.
  Foreign prices—Continued.
    Bread—
      Berlin—1913–14, Statistisches Jahrbuch, 1932, p. 253; 1931–32, Wirtschaft und Statistik.
      Paris—July, 1913, Annuaire Statistique, 1931; 1931–32, Bulletin de la Statistique General de la France et du Service d'Observation des Prix.
      United Kingdom—1931–32, Ministry of Labour Gazette, Monthly. (Prices for first of each month.)
    Hogs—
      Berlin—1909–13, Monatliche Nachweise; 1931–1932, Cable reports of weekly averages from Agricultural Attaché L. V. Steere, Berlin.
    Pork—
      Berlin—1913, Statistisches Jahrbuch, 1928; 1931–32 (wholesale prices) Wirtschaft und Statistik, Part II (monthly); 1931–32 (retail prices), Report of Agricultural Attaché, Berlin, dated October 17, 1932, p. 8, as compiled from Institut fur Konjunkturforschung.

EXHIBIT 9.—*Total imports of wheat, including flour, by chief importing countries, and quantity and percentage purchased from the United States under different tariff acts*

Source: Bureau of Agricultural Economics, U. S. Department of Agriculture.
Method: Multiply the annual index of prices paid by farmers by the 1910–1914 average of annual actual prices to producers.

AVERAGE PRICE OF CORN

| Year, October to November: | Cents per bushel |
|---|---|
| 1909–1914 average | 64.2 |
| 1922 | 75.0 |
| 1923 | 82.3 |
| 1924 | 107.3 |
| 1925 | 71.4 |
| 1926 | 74.1 |
| 1927 | 85.3 |
| 1928 | 84.5 |
| 1929 | 80.9 |
| 1930 | 60.2 |
| 1931 | 32.1 |
| 1932 (December) | 18.8 |

Senator HARRISON. Mr. Peek, you say that you would offer any suggested amendments to the Jones bill.

Mr. PEEK. Yes.

Senator HARRISON. Have you offered those suggestions to the Agricultural Committee that has studied that proposition?

Mr. PEEK. I have not offered them in that form. I have discussed with the chairman of the Agricultural Committee in the Senate the general question of this form of legislation, and since that discussion and since the hearings have been going on I have crystallized my views a little more definitely in the form of amendments to the pending legislation which I could present to Congress at any time.

Senator HARRISON. Well, I think that either that committee or this committee ought to have it, and preferably that committee, because I understand they are going to bring out some legislation within the next day or so.

Mr. PEEK. Yes; and, Senator, what they are proposing to do is beyond comprehension when they eliminate the corn and the livestock areas from consideration and confine the bill to cotton and wheat. They overlook the areas in which the greatest distress has occurred, and that is the great livestock belt of the Middle West. And if you will refer to Table 4 in this statement you will see the relative position of the different commodities over the period of the last 10 years and at present, which is conclusive of the importance of legislation affecting those great middle-western sections.

Senator SHORTRIDGE. They omit livestock, do they, in the proposed bill?

Mr. PEEK. Yes; the committee omits livestock in the bill.

Senator SHORTRIDGE. Entirely?

Mr. PEEK. It is confined to wheat and cotton.

Senator HARRISON. Their theory is to experiment with two propositions, I understand. I agree with you that they ought to deal with the corn proposition. I can understand why they deal with cotton on a different plan from that with which they would deal with wheat.

Mr. PEEK. Yes.

Senator HARRISON. But certainly I think they ought to deal with the corn situation.

Mr. PEEK. Well, if they are going to experiment they had better err on the other side.

Senator HARRISON. I think they ought to deal with that situation.

Mr. PEEK. I want to give you a picture, if I may——

The CHAIRMAN (interposing). Before you do that, Mr. Peek, let me ask you a question: In your statement you say:

> At the present time this would mean at local markets a price for wheat of 93½ cents, cotton 12½ cents, and hogs 7½ cents for the proportion required for domestic consumption. In my opinion these prices are too low, considering the increased interest burdens and increased taxes, as well as the price injustice to which the farmer has been subjected at least 12 years.

How would you support a price for wheat of 93½ cents?

Mr. PEEK. How would I get for the farmer that price?

The CHAIRMAN. Yes.

Mr. PEEK. I think, in the first place, that immediately upon the announcement by the Congress of the United States to the country that it is hereafter proposed to see that the farmer gets a fair price, and would remove the necessary proportion of supply so that an excessive surplus could not break down the market, the market price for wheat would rise, and the difference between the market price and that price I would give to the farmer in the form enacted by the Jones bill.

The CHAIRMAN. I have not any question but what the price would rise if the production were restricted to just what we would use in this country. But without doing that and so long as we have an overproduction I don't see how you are ever going to raise the price.

Mr. PEEK. Overproduction of what?

The CHAIRMAN. Of wheat, in this case.

Mr. PEEK. I am not willing to say that we have an overproduction of wheat with millions of hungry people in this country, and in every nation of the world, and even when the export markets under these conditions have been taking more than before, and we have been getting our proportion.

Senator SHORTRIDGE. Are you suggesting a way by which we can get greater exports of wheat?

Mr. PEEK. I am suggesting reciprocal national agreements, and an application of foreign debts in part in order that they may purchase some of our surplus supplies, as a means of again stimulating our export markets.

The CHAIRMAN. Well, Mr. Peek, do you think we ought to cancel the foreign debts?

Mr. PEEK. No, sir; I do not. Positively, I do not.

Senator SHORTRIDGE. And they are made payable in gold, too, aren't they?

Mr. PEEK. And perhaps that is a good reason for not canceling the debt.

Senator HARRISON. Your remarks apply to wheat. They do not apply in the present situation to cotton.

The CHAIRMAN. Yes, they do.

Mr. PEEK. I say in my remarks except in great emergencies, and I think you have such a great emergency existing to-day in the case of cotton.

The CHAIRMAN. In other words, there ought to be a present curtailment of cotton production until it meets the normal supply and demand.

Mr. PEEK. Yes; but not necessarily as to the acreage planted. If you should go out and try to cut the acreage you would get what the old lady got who bought a horse from a boy, blind and spavined.

Senator SHORTRIDGE. As a practical farming operation how would you proceed to restrict the production of cotton?

Mr. PEEK. I would not attempt it. That is my whole point. I would restrict the supply and not the production. I would go in and take it out of production. If it were apparent that we were going to mature an oversupply I would cut it down if necessary, if we could not get rid of it in any other way, at any kind of price. And if it was going to cut down our whole national economic situation I would take it out of the market.

The CHAIRMAN. Do you mean you would burn it up?

Mr. PEEK. Yes, or do anything.

Senator SHORTRIDGE. Who would do the cutting down?

Mr. PEEK. The Government would pay for doing it. But the people of the country would pay the Government through a tax on the processor. And there is no use of talking about marketing a hog as a hog because you have to market it as pork; nor of marketing wheat as wheat, because the consumer buys bread and not wheat. The processor is the essential factor in between the farmer and the consumer. The farmer's product stops at the local market, and the consumer, over here, eats the finished product.

Senator SHORTRIDGE. In other words, we will say here is a farmer who has 200 acres of growing cotton.

Mr. PEEK. Yes, sir.

Senator SHORTRIDGE. Good growing cotton, on fertile soil, and with climatic conditions satisfactory, and——

The CHAIRMAN (interposing). In California, for instance.

Senator SHORTRIDGE. Yes, you might say that. But the greatest cotton-producing State is that of the Senator from Mississippi, and next to ours is the best.

Mr. PEEK. And if there were a Texas man present you would have a row on your hands at once about that.

Senator SHORTRIDGE. I am sticking to Mississippi now. Here is a good old honest farmer in Mississippi who has 200 acres of growing cotton, maturing and which looks fine. Now, somebody says: There is going to be surplus of cotton, and some one comes to that farmer and suggests that he destroy or tear up or burn 100 acres of it. Is that your idea?

Mr. PEEK. No, pay for it.

Senator SHORTRIDGE. Who is going to pay him for it?

Senator HARRISON. The consumer.

Mr. PEEK. The Treasury of the United States in the first instance, to be reimbursed by a tax on the consumer.

Senator SHORTRIDGE. Very well. I see your point.

Senator HARRISON. But the processor makes the initial payment and then the Treasury pays, and the consumer in the end.

Mr. PEEK. The Treasury makes the initial payment.

Senator SHORTRIDGE. Does the same Government official go to the individual, the several farmers, and suggest that a certain acreage be destroyed?

Mr. PEEK. Government officials will go into the areas where the production is excessive. He might go into Mississippi this year and into Texas next year, and——

Senator SHORTRIDGE (interposing). But supposing the farmer refused and would say: "I do not want you to destroy my field of cotton. What then?"

Mr. PEEK. You will have cases like that, but the farmer will hardly refuse when he sees it is going to raise the price of his whole production by removing a limited proportion of it and that he is going to be paid for it.

Senator SHORTRIDGE. Yes, if he sees it and gets it.

Mr. PEEK. Well, Senator Shortridge, all my business life had been put in with the farmer. I do not mind saying that as between groups of farmers, groups of business men, and groups of bankers, I had rather leave my interest in posterity to the fairness and consideration and understanding of the farmer than any of the rest of them.

Senator SHORTRIDGE. Well, that is a good sentence and true. You were born between two rows of corn, as I understand it.

Mr. PEEK. So to speak; yes. Now, I want to refer to this bank situation for just a minute. My home is in Moline. That is a part of the tri-cities (Moline, Rockland, and Davenport), a community of 150,000 people. On December 31, 1929, we had bank deposits in the three towns of $114,275,000. On December 31, 1932, we had bank deposits of $42,000,000. And for four weeks we have been going along under a holiday program inaugurated by the mayors on the Illinois side of the river, with no banking facilities, with no business of any kind being conducted. Davenport a few years ago had one institution, which has since failed, which had the largest savings deposits per capita of population of any city in the United States. But that is the condition there to-day.

In the morning paper that I picked up I noticed a bulletin——

Senator SHORTRIDGE [interposing]. We ought not to give publicity to those facts. That is publicity that ought not to be given.

Mr. PEEK. I contend that publicity should be given to those facts, and that the country should have an understanding of what the real situation is.

Senator SHORTRIDGE. Well, such publicity given in the newspapers will wreck the country.

Mr. PEEK. All right. Here is one from the newspaper this morning saying that a 10-day moratorium has been given for Michigan banks.

I am emphasizing the situation to point out that the banking structure of this country is not performing the function for which it was created. Somebody somewhere must step into the breach if you are not to wreck the country, and that somebody must be the Government. There is nobody else. Banking facilities must be extended through some governmental function in order that the people may live and exchange their usual commodities and services, as between each other, pending the period when a national policy can be determined.

Senator HARRISON. Mr. Peek, would you mind giving to this committee those amendments that you suggest in your statement?

Mr. PEEK. I will be very glad to give them to you.

The CHAIRMAN. In relation to the banking business I think it ought to be said that the action was taken on account of one man.

Mr. PEEK. In Detroit, do you mean?

The CHAIRMAN. Yes, in Detroit.

Senator SHORTRIDGE. That is what they say, and as long as you have brought up the subject that should be added.

Senator HARRISON. Well, that is a collateral question.

The CHAIRMAN. I do not think it ought to be discussed at all, but as long as it was I thought I should make that statement.

Mr. PEEK. I will say that the reason for action in my community was that we have hardly turned a wheel for three years. People have withdrawn their savings from banks in order to live. No amount of money loaned by the R. F. C. will put one man back to work. Nothing will put a man back to work except some business coming into the plants, and the plants there are largely railroad shops and farm implement factories. Only those men who can go back to work can again become depositors instead of withdrawing what is left of their savings. Otherwise we will continue to slide downhill.

Senator LA FOLLETTE. Mr. Peek, I notice in reading over your statement that you do not make any reference to the effect of freight rates in the matter of discrimination against agriculture.

Mr. PEEK. Not very definitely, but I made extended statements covering the difference between the price the farmer receives at the farm and the price the consumer pays. That is a part of it, the transportation that you refer to.

Senator LA FOLLETTE. It is quite a big part of it, isn't it?

Mr. PEEK. No. I think if the entire transportation cost was wiped out, so that there was no cost of transportation from farm to consumer, the farmer would still be at very great disadvantage as compared with other industries.

Senator LA FOLLETTE. Well, I agree with that. But nevertheless——

Mr. PEEK (interposing). It is an important part, of course.

Senator LA FOLLETTE. It is an important factor in the discrimination against agriculture, is it not?

Mr. PEEK. That is true, but I do not want to create the impression that I consider that the major one by any means.

Senator La Follette. I do not want to create the impression that I consider it to be the primary factor, either. But in any analysit of this situation that has confronted agriculture, it seems to me that you leave out one of the important factors if you do not point ous the fact that the farmer is the only producer in the United States who can not add the cost of transportation to the selling price of his product. On the contrary, it is deducted from the selling price of his product.

Mr. Peek. That is right.

Senator La Follette. To-day a farmer who wants to ship, say, from Omaha to Chicago, has to pay 5 cents in cash on top of every bushel of wheat sent into that market.

Mr. Peek. Yes, sir.

Senator La Follette. And yet the farmer pays the added freight cost on everything he buys for the use of his family or on his farm.

Mr. Peek. Yes.

The Chairman. The same thing applies to cattle and sheep.

Senator La Follette. I am talking about farmers.

Senator Shortridge. I fully agree with you, Senator La Follette, and let me emphasize your thought: For instance, our Government spent millions of dollars; yes, millions of dollars in encouraging the raising——

The Chairman (interposing). Well, we ought to get along if we can. We still have another witness here.

Senator Shortridge. I want to get this into the record: The Government spent millions of dollars encouraging farmers of California horticulturists, and I suppose we will treat them as farmers, in the planting of grapes, and particularly urging upon us the planting of wine grapes, and they spent millions of dollars in propaganda, or rather legitimate information, as to soil, as to type of vine, and then along came a certain constitutional amendment, which has been mentioned more or less, and what is the upshot, what is the situation as respects the price a man gets for his grapes? In the old days he sold them right there, in San Francisco or Los Angeles or at other points, and they were converted into harmless wine. Now the grapes must be shipped, those fresh grapes, mind you, must be shipped from Santa Rosa and other towns in California, 3,000 miles to New York, where they are disposed of by auction. And a lot of criminals there in that city have a combination and they will not bid for the grapes, and they must be sold within a few days or they are ruined. But the price of transportation there from Sacramento, Calif., in many instances exceeds the price for which the grapes are sold in New York. That is one reason perhaps why some people have thought instead of making the poor and poisonous wine in New York, a harmless beverage might be made in California, and thereby help the farmer, for we were quite prosperous in those days and now we are broke.

Mr. Peek. Well, there is legislation before the Congress now addressed to your problem, is there not?

Senator Shortridge. There is.

Mr. Peek. And I assure you I am in sympathy with its passage.

Senator Shortridge. I thank you.

The Chairman. Is there anything else you desire to say, Mr. Peek?

Mr. Peek. Nothing else, Mr. Chairman.

The Chairman. All right. We will excuse you.

## APPENDIX TO STATEMENT BY GEORGE N. PEEK, OF MOLINE, ILL.

Pursuant to the request of the committee, there are set forth below amendments to the pending bill H. R. 13991, entitled "An act to aid agriculture and relieve the existing national economic emergency," as passed by the House of Representatives January 12, 1933.

These amendments have been framed to carry out the principles set forth in the foregoing statement. In formulating the amendments it has been borne in mind that by the time legislation can possibly be enacted the planting season will be so far advanced as to make impractical any general control of acreage planted for the current year.

[H. R. 13991, Seventy-second Congress, second session]

[Omit part struck through and insert part printed in italic]

AN ACT To aid agriculture and relieve the existing national economic emergency

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "National Emergency Act."

DECLARATION OF POLICY

SEC. 2. It is hereby declared—

(a) That the depression in prices for that portion of our agricultural commodities for domestic consumption, and the effect of unsettled world conditions upon foreign markets for that portion of our agricultural commodities for consumption abroad, and the inequalities between the prices for agricultural and other commodities, have given rise in the basic industry of agriculture to conditions that have affected transactions in agricultural commodities with a national public interest, that have burdened and obstructed the normal currents of commerce in such commodities, and that render imperative the enactment of this Act for aiding in the relief of the present national economic emergency in agriculture and thereby facilitating the recovery of industry, transportation, employment, and finance.

(b) That is the policy of Congress to encourage agricultural planning and readjustment to meet changed world conditions and to aid in restoring the parity between agriculture and other industries and in correcting the inequalities between the prices for agricultural and other commodities.

~~(c) That the provisions of this Act are made applicable solely with respect to wheat, rice, cotton, peanuts, tobacco, butterfat, and hogs by reason of the fact that the prices for these basic commodities are a controlling factor in establishing prices for other domestic agricultural commodities.~~

*(c) That the provisions of Title I, II, and III of this Act are (subject to section 3) made applicable solely with respect to wheat, cotton, tobacco, and hogs by reason of the fact that the prices for these basic commodities are a controlling factor in establishing prices for other domestic agricul-*

*tural commodities, that exportable surpluses of these commodities or products thereof are ordinarily produced, and that substantially the entire production of these commodities is processed prior to ultimate consumption.*

*EXTENSION OF ACT TO COMPETITIVE COMMODITIES*

*Sec. 3. If the Secretary of Agriculture at any time finds that the operations under this Act with respect to wheat or hogs are ineffective in establishing a total return to the producer substantially equal to the fair exchange value for wheat or hogs, then the Secretary shall report such finding to the President. If the President determines that in order to correct such situation it is necessary to extend the operation of this Act to other grains or livestock, he shall by proclamation specify the grains or livestock to be covered. Commencing at such time as shall be specified in the proclamation, but not later than 30 days after the issuance thereof, the provisions of Titles I, II, and III shall become applicable to the grain or livestock specified.*

*FAIR EXCHANGE VALUE*

*Sec. 4. The fair exchange value for any commodity shall be an amount which bears to the national average price for all commodities bought by producers at local markets during the three preceding calendar months, the same ratio as the national average price received for the commodity by producers at local markets during the period commencing August, 1909, and terminating July, 1914, bore to the national average price for all commodities bought by producers during such period. Such value shall be determined by the Secretary of Agriculture on the basis of price statistics computed and published by the Department of Agriculture.*

## ~~TITLE II—DISTRIBUTION OF COMMODITY BENEFITS~~

~~ADJUSTMENT CERTIFICATES~~

~~Sec. 3. (a) The Secretary of Agriculture shall determine a marketing year for each of the following commodities: Wheat, rice, cotton, peanuts, tobacco, and hogs. The marketing year for butterfat shall be the period of twelve months beginning July 1; and there shall be an initial marketing period for wheat, butterfat, rice, cotton, peanuts, and hogs, commencing thirty days after the date of approval of this Act and terminating at the commencement of the 1933–1934 marketing year for the respective commodities.~~

~~(b) Adjustment certificates shall be issued for the initial marketing period for wheat, butterfat, rice, cotton, peanuts, and hogs, and for the 1933–1934 marketing year for wheat, butterfat, rice, cotton, peanuts, tobacco, and hogs; and in the case of butter fat adjustment certificates shall be issued monthly. If this Act is extended with respect to any commodity for an additional year pursuant to proclamation of the President under section 28, then adjustment certificates shall be issued for the 1934–1935 marketing year for the commodity.~~

~~(c) Each producer of wheat, butterfat, rice, cotton, peanuts, tobacco, or hogs shall be entitled, subject to the conditions of this Act, to have issued to him adjustment certificates covering the~~

~~domestic consumption percentage of the commodity of his own production marketed by him during any period for which adjustment certificates may be issued with respect to the commodity: *Provided*, That as to cotton, adjustment certificates may, in the discretion of the Secretary, be issued to the producer when the cotton is ginned or the unginned cotton sold. For the purpose of this subsection the domestic consumption percentage in the case of butterfat shall at all times be 80 per centum.~~

~~(d) For the purposes of this title a commodity shall be deemed to be marketed by a producer when sold or otherwise disposed of by or for him for processing or resale, but hogs shall not be deemed to be marketed when sold or otherwise disposed of to a feeder of hogs who is not also a processor of hogs.~~

~~(e) No adjustment certificate, or part thereof, shall, while in the possession of the producer to whom it was issued, be subject to attachment, levy, or seizure under any legal or equitable process.~~

~~(f) In administering the provisions of this section in respect to butterfat the Secretary of Agriculture shall permit cooperative associations of producers, when in the judgment of the Secretary such associations are qualified to do so, to act as agents of their members and patrons in connection with the issuance of adjustment certificates to which such members are entitled.~~

## ~~DOMESTIC CONSUMPTION PERCENTAGE~~

~~SEC. 4. (a) The Secretary of Agriculture—~~

~~(1) In the case of wheat, rice, peanuts, and cotton, shall, within thirty days after the date of the approval of this Act, estimate, as nearly as practicable, and proclaim the percentage of domestic wheat, rice, peanuts, and cotton to be marketed during the respective initial marketing periods therefor, that will be needed for domestic consumption.~~

~~(2) In case of wheat, rice, peanuts, cotton, and tobacco, shall, at least two weeks prior to the commencement of each marketing year with respect to which this title is in effect for the commodity, estimate, as nearly as practicable, and proclaim the percentage of the total domestic production of the commodity during the then current calendar year that will be marketed and needed for domestic consumption.~~

~~(3) In the case of hogs shall, within thirty days after the date of approval of this Act, estimate, as nearly as practicable, and proclaim the percentage of domestic tonnage of hogs to be marketed during the initial marketing period for hogs that will be needed for domestic consumption.~~

~~(4) In case of hogs shall, at least two weeks prior to the commencement of each marketing year with respect to which this title is in effect for hogs, subsequent to the initial marketing period for hogs, estimate, as nearly as practicable, and proclaim the percentage of domestic tonnage of hogs to be marketed during such year that will be needed for domestic consumption.~~

~~(b) Any such percentage proclaimed for any period shall be based on statistics of the Department of Agriculture and other Federal agencies as to the average domestic consumption of the commodity for the five preceding periods of like duration.~~

~~FACE VALUE OF CERTIFICATES~~

~~SEC. 5. The face value of any adjustment certificate per unit of any commodity covered thereby shall be equal to the fair exchange allowance per like unit of the commodity in effect with respect to such commodity at the time of its marketing, less a pro rata share of administrative expenses as estimated by the Secretary of Agriculture.~~

~~ISSUANCE OF CERTIFICATES~~

~~SEC. 6. The Secretary of Agriculture shall designate officers, employees, or agents of the Department of Agriculture (or with the approval of the President, of any other department or independent establishment; or with the approval of the appropriate State authority, of any State or political subdivision thereof) for the issuance of adjustment certificates. Such certificates shall be issued upon application by the producer and proof satisfactory to the Secretary that the producer is entitled thereto pursuant to this Act and the regulations thereunder.~~

~~REDEMPTION OF ADJUSTMENT CERTIFICATES~~

~~SEC. 7. (a) Each adjustment certificate shall be issued in two parts, each to be at one-half the face value of the certificate. Title to either part of an adjustment certificate shall be transferable by delivery. One part of an adjustment certificate may be presented by the bearer for redemption at any time during the year commencing one month after the date of issuance thereof, and the other part may be presented by the bearer for redemption at any time during the second six months of such year. Certificates shall be accepted for redemption at the United States Treasury or at such fiscal agencies of the United States as the Secretary of the Treasury shall designate.~~

~~(b) The action of any officer, employee, or agent in issuing and fixing the value of any adjustment certificate and in redeeming such certificate shall not be subject to review by any court or by any officer of the Government other than the Secretary of Agriculture.~~

~~ACREAGE CONTROL~~

~~SEC. 8. (a) Nothing in this Act shall be construed as affecting or controlling in any way the freedom of any producer to produce and sell as much as he wishes of any commodity; except that the issuance of adjustment certificates shall be subject to the following conditions and limitations:~~

~~(1) No adjustment certificates shall be issued in respect of wheat, rice, cotton, peanuts, or tobacco of any producer marketed during the 1933-1934 marketing year for the commodity, unless the producer's acreage of wheat, rice, cotton, peanuts, or tobacco of 1933 production is 20 per centum less than his average acreage for such preceding period as the Secretary deems representative of normal production conditions in the area; but this paragraph shall not apply to acreage planted to wheat in the fall of 1932.~~

~~(2) No adjustment certificate shall be issued in respect of any lot of hogs of any producer marketed during the initial marketing period for hogs unless the producer's tonnage of hogs for market during such~~

~~period is or will be 20 per centum less than his tonnage for the same period during the preceding year.~~

~~(3) No adjustment certificates shall be issued in respect of hogs of any producer marketed during the 1933–1934 marketing year for hogs, unless the producer's tonnage of hogs for market during such year is or will be 20 per centum less than his tonnage for the preceding year, nor unless his acreage of corn, if any, of 1933 production is 20 per centum less than his average acreage for such preceding period as the Secretary deems representative of normal production conditions in the area: *Provided*, That the words "acreage of corn" shall not be construed to include acreage of corn harvested before maturity for silage or fodder feeding purposes.~~

~~(4) In the event that this Act is, by proclamation of the President made pursuant to section 28, extended for an additional year with respect to wheat, rice, cotton, peanuts, tobacco, or hogs, no adjustment certificate shall be issued to any producer in respect of such commodity marketed by him during the 1934–1935 marketing year for the commodity, unless the producer's acreage, in case of wheat, rice, cotton, peanuts, or tobacco, or in case of hogs, his acreage of corn, if any, and his tonnage of hogs, has been reduced in such amount as the Secretary of Agriculture has found necessary in order to prevent abnormal surpluses or carry-overs in the commodity.~~

~~(5) No adjustment certificates shall be issued in respect of wheat, rice, cotton, peanuts, hogs, or tobacco in any case where reduction of acreage is required by this Act, if the land representing such reduction is utilized, during the year in respect of which such reduction occurs, for the production of any commodity of which, in the opinion of the Secretary, there is normally produced or is likely to be produced an exportable surplus, nor in case the producer during that part of the initial period or the then current marketing year for the commodity, as the case may be, which has elapsed, has increased his production of milk or milk products for sale over his production thereof for sale for the same period during the preceding year. It shall be the duty of the Secretary of Agriculture to determine and make public the commodities that may be produced in various regions upon land representing acreage reductions under this Act without violating the requirements of this paragraph.~~

~~(6) In the event that this Act is, by proclamation of the President made pursuant to section 28, extended for an additional year with respect to butterfat, no producer who produces for sale more butterfat during any month in the 1934–1935 marketing year than was produced for sale by him during the corresponding month of the preceding marketing year shall receive any adjustment certificate under this Act for such month.~~

~~(b) The Secretary of Agriculture shall by regulation provide for the application of the provisions of this section with respect to producers not engaged in the production of the commodity prior to the particular year.~~

~~FAIR EXCHANGE ALLOWANCE~~

~~SEC. 9. (a) The fair exchange allowance for any commodity shall be the difference between the price received for the commodity by producers at local markets and the fair exchange value for the commodity, as hereinafter determined.~~

~~(b) The fair exchange allowance per unit for each commodity shall be proclaimed by the Secretary of Agriculture on the day following the date of approval of this Act. Thereafter the fair exchange allowance shall be proclaimed at such intervals as the Secretary may from time to time deem necessary to keep in effect a fair exchange allowance which, together with the price received for the commodity by producers at local markets during the last three months for which index numbers are available, will substantially equal the fair exchange value for the commodity.~~

~~(c) The fair exchange allowance shall be determined by the Secretary on the basis of the index numbers for prices as computed and published by the Department of Agriculture.~~

~~(d) The fair exchange allowance specified in the first proclamation for any commodity made by the Secretary under this Act shall take effect on the day following the date of approval of this Act. The fair exchange allowance specified in any subsequent proclamation for the commodity shall take effect at such date as is specified in the proclamation.~~

~~(e) Except as provided under subsection (f), the fair exchange value for any commodity shall be an amount that shall bear to the price for all commodities bought by producers during the last three months' period for which index numbers are available, the same ratio as the price for the commodity paid producers at local markets during the base period bore to prices for all commodities bought by producers during such base period. The base period shall be the period commencing September, 1909, and terminating August, 1914, except that in the case of tobacco, the base period shall be the period commencing September, 1909, and terminating August, 1919.~~

~~(f) During the following periods the fair exchange value in the case of wheat, rice, butterfat, cotton, peanuts, and hogs shall be as follows:~~

~~(1) In the case of wheat, 75 cents a bushel during the initial marketing period.~~

~~(2) In the case of rice, 75 cents a bushel during the initial marketing period.~~

~~(3) In the case of butterfat, 26 cents a pound during the initial marketing period.~~

~~(4) In the case of cotton, 9 cents a pound during the initial marketing period.~~

~~(5) In the case of peanuts, 3 cents per pound during the initial marketing period.~~

~~(6) In the case of hogs, 5 cents a pound during the initial marketing period; and beginning with the 1933–1934 marketing year for hogs, 6 cents a pound, plus an additional one-half cent a pound for each ten points increase that exists in the index number for factory employment over the index number therefor on the date of approval of this Act, as published by the Federal Reserve Board, until such time as the fair exchange value for hogs so computed first equals such value as computed under subsection (e). Thereafter the fair exchange value for hogs shall be computed under subsection (e).~~

## *TITLE I.—DISTRIBUTION OF COMMODITY BENEFITS*

### *GENERAL*

*SEC. 5. (a) Titles I, II, and III of this act shall, in accordance with the terms thereof, apply to wheat, cotton, tobacco, and hogs, commencing on the date of approval of this act; and shall apply to other grains or livestock specified in any proclamation of the President under section 3 commencing at such time as is specified in the proclamation.*

*(b) The Secretary of Agriculture shall determine the marketing year for each commodity to which Titles I, II, and III have become applicable.*

### *DOMESTIC CONSUMPTION PERCENTAGE*

*SEC. 6. The Secretary of Agriculture shall within 30 days after the date of approval of this Act, and may from time to time thereafter as crop condition reports of the Department become available, estimate as nearly as practicable and proclaim the percentage of the domestic stocks on hand, plus the domestic production for the current calendar year of each commodity to which this title is applicable, that in his judgment will be needed for domestic consumption. Any such percentage is hereinafter referred to as the domestic consumption percentage for the commodity. The amount that will be needed for domestic consumption shall be based on statistics of the Department of Agriculture and other Federal agencies as to the average domestic consumption of the commodity for the five preceding years; and the amount of domestic stocks on hand and domestic production for the current calendar year shall be based on the best available data of the Department of Agriculture and other Federal agencies.*

### *ADJUSTMENT CERTIFICATES*

*SEC. 7. (a) Adjustment certificates shall be issuable during the period commencing 30 days after the date of approval of this act, and terminating at the expiration of the 1933–34 marketing year for the commodity. If this act is extended with respect to any commodity for an additional year pursuant to proclamation of the President under section 30, then adjustment certificates shall be issuable for the 1934–35 marketing year for the commodity.*

*(b) Each producer of the commodity shall be entitled, subject to the conditions of this act, to have issued to him adjustment certificates covering the domestic consumption percentage, then in effect, of the commodity of his production marketed by him during any period for which adjustment certificates may be issued with respect to the commodity.*

*(c) For the purpose of this title, a commodity shall be deemed to be marketed by the producer when it is sold or otherwise disposed of by him for processing or resale; but hogs shall not be deemed to be marketed when sold or otherwise disposed of to a feeder who is not also a processor of hogs.*

*(d) The face value of an adjustment certificate, per unit of any commodity covered thereby, shall be equal to the benefit payment per unit in effect with respect to the commodity at the time of its marketing, less a pro rata share of administrative expenses as estimated and proclaimed by the Secretary of Agriculture.*

*(e) The benefit payment with respect to any commodity shall be the difference between the current national average price received for the*

*commodity by producers at local markets, and the fair exchange value of the commodity, computed to the nearest one-half cent per pound or bushel. Such current national average price received by producers shall be determined by the Secretary on the basis of such price for the last three months for which statistics of the Department of Agriculture are available.*

*(f) The benefit payment shall be proclaimed at such intervals as the Secretary may from time to time deem necessary to keep in effect a benefit payment which, together with such current national average price received by producers, will substantially equal the fair exchange value for the commodity. The benefit payment specified in any proclamation shall take effect at such date as is specified therein.*

*ISSUANCE OF CERTIFICATES*

*SEC. 8. (a) Adjustment certificates shall be issued upon application by the producer and proof satisfactory to the Secretary of Agriculture that the producer is entitled thereto pursuant to this Act and the regulations thereunder prescribed under section 23.*

*(b) The Secretary of Agriculture shall designate officers, employees, or agents of the Department of Agriculture (or, with the approval of the President, of any other department or independent establishment; or, with the approval of the appropriate State authority, of any State or political subdivision thereof) for the issuance of adjustment certificates.*

*(c) No adjustment certificate, or part thereof, shall, while in the possession of the producer to whom it is issued, be subject to attachment, levy, or seizure under any legal or equitable process.*

*REDEMPTION OF ADJUSTMENT CERTIFICATES*

*Sec. 9. (a) Title to any adjustment certificate shall be transferable by delivery. Any adjustment certificate, when presented by the bearer at any time after 30 days and not more than one year from the date of the issuance thereof, shall be redeemable at its face value. Adjustment certificates shall be accepted for redemption at the United States Treasury and at such fiscal agencies of the United States as the Secretary of the Treasury shall designate.*

*(b) The action of any officer, employee, or agent in issuing and fixing the value of any adjustment certificate and in redeeming such certificate, or in making any payment under section 20, shall not be subject to review by any court or by any officer of the Government other than the Secretary of Agriculture or the Secretary of the Treasury.*

*(c) In administering the provisions of this title the Secretary of Agriculture shall permit cooperative associations of producers, when in the judgment of the Secretary such associations are qualified to do so, to act as agents of their members and patrons in connection with the issuance and redemption of adjustment certificates to which such members or patrons are entitled.*

## TITLE II—ADJUSTMENT CHARGES

### PAYMENT OF ADJUSTMENT CHARGES

SEC. 10. (a) There shall be levied, assessed, and collected an adjustment charge on the first domestic processing of any ~~wheat, rice, cotton, peanuts, tobacco, butterfat, or hogs,~~ *commodity with* *respect to which adjustment certificates are issuable,* whether of domestic production or imported, to be paid by the processor. Adjustment charges shall at any given time be at the same rate per unit of the commodity as the ~~fair exchange allowance~~ *benefit payment* then in effect with respect to the commodity~~;~~ ~~except that in the case of hogs, during the periods specified below, the adjustment charge shall be the difference between the price received for hogs by producers at local markets and the following amounts:~~

~~(1) For the period commencing the day following the date of approval of this Act and terminating April 30, 1933, 3½ cents a pound.~~

~~(2) For the period commencing May 1, 1933, and terminating June 30, 1933, 4 cents a pound.~~

~~(3) For the period commencing July 1, 1933, and terminating at the beginning of the 1933–1934 marketing year, 4½ cents a pound.~~

~~The price received for hogs by producers at local markets shall be determined and proclaimed by the Secretary of Agriculture from time to time, for the purposes of this section, as may be necessary in order to keep in effect an adjustment charge substantially equal to the difference between such price and the amounts above specified. Such price shall be determined by the Secretary on the basis of index numbers for prices as computed and published by the Department of Agriculture.~~

~~(b) Adjustment charges shall commence on the day following the date of approval of this Act and shall terminate with respect to any commodity one month after the end of the 1933–1934 marketing year for the commodity; except that if this Act is extended with respect to any commodity for an additional year, pursuant to proclamation of the Secretary of Agriculture under section 28, then adjustment charges with respect to the commodity shall terminate one month after the end of the 1934–1935 marketing year for the commodity.~~

(*b*) *Adjustment charges with respect to any commodity shall commence on the day on which adjustment certificates first become issuable with respect to the commodity and shall terminate at such time as the Secretary of the Treasury finds and proclaims that the Treasury has been fully reimbursed for all expenditures made or to be made pursuant to this Act with respect to the commodity, but in no case earlier than the date on which adjustment certificates cease to be issuable with respect to the commodity.*

~~(c) Each processor required to pay any adjustment charge imposed by this section shall procure and keep posted a certificate of registry in accordance with regulations prescribed by the Secretary of the Treasury. Any processor who fails to register or to keep posted any certificate of registry in accordance with such regulations shall, upon conviction thereof, be subject to a fine of not more than $1,000.~~

~~(d) In order to protect the processors of cotton against disadvantages in competition, during any period for which an adjustment charge is in effect with respect to cotton, there shall be levied, assessed, and collected upon the first domestic processing of silk or rayon an adjustment charge equal to the adjustment charge then in effect as to cotton, per like unit of the commodity, to be paid by the processor. No such charge shall be collected with respect to rayon derived from processed cotton subject to an adjustment charge with respect to its processing.~~

*(e) Any person delivering any product to the American National Red Cross (or other organization designated by the American National Red Cross) for charitable distribution or use, pursuant to Act of Congress, shall, if such product is under this Act, subject to tax or processed from a commodity with respect to which there is in effect an adjustment charge at the time of processing, be entitled at the time of delivery to a refund of the amount of any tax or adjustment charge paid under this Act with respect to such product, or the commodity from which it was processed, as established by conversion factors prescribed by regulations of the Secretary of the Treasury. The Secretary shall prepare forms for filing claims for such refunds and shall certify to the Treasury of the United States claims which have been approved for payment.*

FLOOR STOCKS

SEC. 11. (a) Upon the sale or other disposition of any article processed wholly or in chief value from ~~wheat, rice, cotton, peanuts, silk, rayon, tobacco, butterfat, or hogs that (on the date any adjustment charge, or increase or decrease therein, takes effect or terminates)~~ *any commodity with respect to which adjustment certificates are issuable, that on the date any adjustment charge takes effect with respect to the commodity,* is held for sale or other disposition (including articles in transit) by any person other than a consumer or a person engaged solely in retail trade, there shall ~~be made a tax adjustment as follows:~~

~~(1) In case an adjustment charge takes effect or is increased, there shall~~ be levied, assessed, and collected a tax to be paid by such person equivalent to the amount of the adjustment charge ~~or increase~~ which would be payable with respect to the commodity from which processed if the processing had occurred on such date.

~~(2) If the adjustment charge is terminated or decreased, there shall be refunded to such person a tax (or if the tax has not been paid, the tax shall be abated) in an amount equivalent to the adjustment charge or decrease with respect to the commodity from which processed.~~

~~(3)~~ Such equivalent amounts shall be established by conversion factors prescribed by regulations of the Secretary of the Treasury.

(b) The proceeds of all taxes collected under this section shall be covered into the Treasury, and there are authorized to be appropriated amounts necessary for the payment of refunds under this section.

~~(c) For the purpose of this section the term "retail trade" shall not be held to include the business of an establishment which is owned, operated, maintained, or controlled by the same individual, firm, corporation, or association that owns, operates, maintains, or controls any more than two other establishments of the same character.~~

~~(d)~~ *(c)* Notwithstanding the provisions of subsection (a) such subsection shall apply to flour in excess of ~~25~~ *10* barrels held for sale or other disposition by any person engaged solely in retail trade.

EXPORTATIONS

SEC. 12. (a) Upon the exportation to any foreign country (including the Philippine Islands, the Virgin Islands, American Samoa, and the island of Guam) of any product with respect to which an adjustment charge or tax has been paid under this Act, the exporter thereof shall be entitled at the time of exportation to a refund of the amount of such charge or tax, as established by conversion factors prescribed by regulations of the Secretary of the Treasury. The Secretary shall prepare forms for filing claims for such refunds and shall certify to the Treasurer of the United States claims which have been approved for payment.

(b) Upon the giving of satisfactory bond for the faithful observance of the provisions of this Act requiring the payment of adjustment charges or taxes, and of such regulations as may be prescribed thereunder, any person shall be entitled, without payment of the adjustment charge or tax, to process for such exportation any commodity with respect to which an adjustment charge is imposed by this Act, or to hold for such exportation any article processed wholly or in chief value therefrom. The Secretary of the Treasury shall prescribe necessary regulations for such processing or holding in bond or in such other manner as may be necessary to carry out such provisions.

PROCESSING FOR PERSONAL USE ~~AND LIMITED SALE~~

SEC. 13. No adjustment charge shall be required to be paid on the processing of any commodity by the producer thereof for consumption by his own family, employees, or household~~, or on the processing of hogs by the producer thereof, for sale during any year for which such charge would otherwise be payable, if his sales of the products resulting from such processing of hogs do not exceed $100 during such year, or on the processing of butterfat by a producer for direct sale to consumers, during any year for which such charge would otherwise be payable, if his sales of the products containing such butterfat do not exceed $75 during such year~~.

GOVERNMENT INSTRUMENTALITIES

SEC. 14. No processor or other person shall be exempt from any adjustment charge or tax under this Act by reason of the fact that the products of the processed commodity are purchased by the United States, or any State, Territory, or insular possession thereof (except the Philippine Islands, the Virgin Islands, American Samoa, and the island of Guam), or the District of Columbia, or any agency or instrumentality thereof.

EXISTING CONTRACTS

SEC. 15. (a) If (1) any processor, jobber, or wholesaler has, prior to the date of approval of this Act, made a bona fide contract of sale for delivery after such date of any article in respect of which an adjustment charge or tax is imposed under this Act, and if (2) such contract does not permit the addition to the amount to be paid thereunder of the whole of such charge or tax, then (unless the contract prohibits such addition) the vendee shall pay so much of the charge or tax as is not permitted to be added to the contract price.

(b) Charges or taxes payable by the vendee shall be paid to the vendor at the time the sale is consummated and shall be collected and paid to the United States by the vendor in the same manner as other adjustment charges or taxes under this Act. In case of failure or refusal by the vendee to pay such charges or taxes to the vendor, the vendor shall report the facts to the Commissioner of Internal Revenue who shall cause collection of such charges or taxes to be made from the vendee.

COLLECTION OF ADJUSTMENT CHARGES

SEC. 16. (a) The adjustment charges and taxes provided in this Act shall be collected by the Bureau of Internal Revenue under the direction of the Secretary of the Treasury. Such adjustment charges shall be paid into the Treasury of the United States.

(b) All provisions of law, including penalties, applicable with respect to the taxes imposed by section 600 of the Revenue Act of 1926, and the provisions of section 626 of the Revenue Act of 1932, shall, in so far as applicable and not inconsistent with the provisions of this Act, be applicable in respect of adjustment charges and taxes imposed by this Act: *Provided*, That the Secretary of the Treasury is authorized to permit postponement, for a period not exceeding 60 days, of the payment of adjustment charges covered by any return.

*(c) In order that the payment of adjustment charges may not impose any immediate undue financial burden upon processors, any processor subject to such charges shall be eligible for loans from the Reconstruction Finance Corporation under section 5 of the Reconstruction Finance Corporation Act.*

LOW-VALUE PRODUCTS

SEC. 17. If the Secretary of the Treasury and the Secretary of Agriculture jointly find that any class of products of any commodity is of such low value compared with the quantity of the commodity used for their manufacture that the imposition of the adjustment charge would prevent in whole or in large part the use of the commodity in the manufacture of such products and thereby substantially reduce consumption and increase the surplus of the commodity, then the Secretary of the Treasury may abate or refund the adjustment charge with respect to such amount of the commodity as is used in the manufacture of such products in accordance with regulations prescribed by the Secretary of the Treasury.

IMPORTATIONS

SEC. 18. (a) During any period for which an adjustment charge under this Act is in effect with respect to cotton there shall be levied, assessed, collected, and paid upon the following articles when imported from any foreign country into the United States the following duties:

(1) On cotton having a staple of less than one and one-eighth inches in length, 5 cents per pound; and

(2) On all dutiable articles wholly or in chief value of cotton having a staple of less than one and one-eighth inches in length, an additional duty of 5 cents per pound on such cotton contained therein, as established by conversion factors prescribed by regulations of the Secretary of the Treasury.

(b) During any period for which an adjustment charge is in effect with respect to ~~wheat, rice, cotton, peanuts, tobacco, butterfat, or hogs,~~ *any commodity*, there shall be levied, assessed, collected, and paid upon the importation, from any foreign country into the United States of goods processed or manufactured from such commodity which, if domestically processed, would be subject to an adjustment charge a duty equal to the amount of the adjustment charge which would be payable with respect to such domestic processing at the time of importation, as established by conversion factors prescribed by regulations of the Secretary of the Treasury. Such duty shall be in addition to any other duty imposed by law.

(c) During any period for which an adjustment charge is in effect with respect to ~~butterfat,~~ ~~and~~/~~or~~ ~~cotton,~~ ~~and~~/~~or~~ *cotton or* hogs, there shall be levied, assessed, collected, and paid upon the importation from any foreign country into the United States of animal, marine, and vegetable oils or fats, and upon the oil content of the raw materials from which such oils and fats are extracted, a duty of 5 cents per pound*; and upon such importation of molasses not imported to be commercially used for the extraction of sugar or for human consumption, 6 cents per gallon*. Such ~~duty~~ *duties* shall be in addition to any other duty imposed by law.

(d) The duties imposed by this section shall be levied, assessed, collected, and paid in the same manner as duties imposed by the Tariff Act of 1930, and shall be treated, for the purposes of all provisions of law relating to the customs revenue, as duties imposed by such Act.

(e) As used in this section the term "United States" means the United States and its possessions, except the Philippine Islands, the Virgin Islands, American Samoa, and the island of Guam.

## *TITLE III—MARKETING AGREEMENTS AND CONTROL OF SUPPLY*

*SEC. 19 (a) To aid in the administration of this Act, to meet the situation caused by the existence of abnormal surpluses, and to prevent accumulation of new or further increase of old surpluses pending the opening of normal export markets, the Secretary of Agriculture, the Attorney General, and the Secretary of Commerce are jointly authorized to enter into marketing agreements with processors, associations of producers, and other agencies engaged in the handling of any commodity to which Titles I and II have become applicable or in handling the products of such commodity. No such agreement shall be entered into unless, in the judgment of the Secretaries, the execution of the terms thereof will aid in maintaining for producers of the commodity a return therefor at local markets substantially equal to the fair exchange value for the commodity. Such agreements shall provide for the marketing of the commodity, including the storage or other disposition thereof, and for the disposal of any net profits arising out of such marketing operations. Except as provided in section 30, marketing operations under such agreements shall be applicable only to the 1933 production of the commodity and prior accumulated surpluses of the commodity.*

*(b) For the purpose of carrying out any such agreement, the parties thereto shall be eligible for loans from the Reconstruction Finance Corporation under section 5 of the Reconstruction Finance Corporation Act, but not in excess of such amounts as may be authorized by the agreement.*

*Sec. 20. (a) If the Secretary finds from the crop condition reports of the Department of Agriculture that the domestic stocks on hand of wheat,* *cotton, or corn plus the prospective production thereof for the current year are in excess of the estimated consumption requirements of the domestic markets and the potential foreign markets for the commodity, then the Secretary shall determine and publish the amount by which it is desirable to reduce such production in order not to exceed the requirements of such markets. The Secretary shall ascertain and proclaim the production areas in which the prospective production will exceed the normal proportion of the total production of such areas. The Secretary shall proclaim in each such production area the percentage by which producers therein shall, in order to be entitled to the payments under subsection (b), reduce their production of the crop theretofore planted.*

*(b) Under regulations prescribed by the Secretary of Agriculture and the Secretary of the Treasury, there shall be paid to each producer promptly upon proof satisfactory to the Secretary of Agriculture that his production has been so reduced, an amount equal as nearly as possible to the price of the estimated amount of the commodity so removed from production, less the cost of completing the production and harvesting of the commodity and its preparation for and hauling to local markets.*

*(c) No adjustment certificate shall be issued any producer of wheat or cotton for the marketing year for any crop with respect to which the producer has failed to reduce his production in accordance with the percentage, if any, prescribed for his production area under this section.*

*(d) To assist in the efficient administration of this section, the Secretary of Agriculture is authorized to designate in each State lying wholly or in part in any production area proclaimed under subsection (a), a committee composed as follows: The head of the department of agriculture of the State; the head of the agricultural extension service of the State; and such person as is recommended to the Secretary by the Governor of the State to represent the farmers of the State, preferably the executive head of the leading farm organization of the State.*

*(e) The payments made to producers under this section shall be paid out of the Treasury from receipts derived from the duties levied under section 18.*

## TITLE ~~III~~ *IV*—GENERAL PROVISIONS

### DEFINITIONS

SEC. ~~19~~ *21*. As used in this Act—

(1) In case of wheat or *other grain* ~~rice~~, the term "processing" means the milling or other processing (except cleaning and drying) of wheat or *other grain* ~~rice~~ for market, including custom milling for toll as well as commercial milling, but shall not include the grinding or cracking thereof not in the form of flour for feed purposes only.

(2) In case of cotton, silk, and rayon, the term "processing" means the spinning, manufacturing, or other processing (except ginning) of cotton, silk, or rayon; and the term "cotton" shall not include cotton linters.

(3) In case of tobacco, the term "processing" means the manufacturing or other processing (except drying) of tobacco.

(4) In case of hogs *or other livestock*, the term "processing" means the slaughter of hogs *or other livestock* for market.

~~(5) In case of peanuts, the term "processing" means the cleaning, polishing, grading, shelling, crushing, or other processing thereof.~~

~~(6) The term "butterfat" as used herein means the amount of fat content of milk and products made from milk. In the case of butterfat, the term "processing" means all manufacturing of milk or cream into products and also all steps taken in the handling and sale of milk or cream as such after the product leaves the farm where produced; also, in case of direct sales by producer to a consumer, all steps in preparing the product for market, whether or not taken on the farm where produced.~~

### ADMINISTRATIVE EXPENSES

SEC. ~~20~~. *22.* (a) Amounts appropriated for the payment of administrative expenses under this Act shall be expended by or under the direction of the Secretary of Agriculture, but the amounts to be expended for such expenses under this Act shall not exceed in the aggregate a sum equal to 2½ per centum of the total amount to be collected in adjustment charges and taxes under this Act.

(b) The Secretary of Agriculture is authorized (subject to the limitations provided in subsection (a) with respect to the amounts available for the payment of administrative expenses) to transfer to the Treasury Department and other agencies of the Federal Government, and to any agency of any State or any political subdivision thereof, such sums as are required to pay the additional expenses incurred by such agencies in the administration of this Act: *Provided,* That a statement of all transfers of appropriations made hereunder shall be included in the annual Budget for the fiscal year 1936, and a statement of all transfers of appropriations made hereunder up to the time of the submission of the annual Budget for the fiscal year 1935, and all contemplated transfers during the remainder of the fiscal years 1933 and 1934, shall be included in the annual Budget for the fiscal year 1935.

### REGULATIONS

SEC. ~~21~~ *23.* The Secretary of the Treasury and the Secretary of Agriculture are authorized to prescribe such regulations as may be necessary to the efficient administration of the functions vested in them, respectively, by this Act, including regulations by the Secretary of Agriculture as to proof which the Secretary will deem satisfactory as a basis for issuing adjustment certificates *or making payments under section 20.* Copies of regulations under this Act shall be published and distributed without cost to producers and other interested persons.

### CLASSIFICATION AND TYPES OF COMMODITIES

SEC. ~~22~~ *24.* Whenever any agricultural commodity has regional or market classifications, types, or grades (*including classification by weight, in the case of hogs*) which the Secretary of Agriculture finds are so different from each other in use, grade, or marketing methods as at any time to require their treatment as separate commodities under this Act the Secretary may determine upon and designate one or more such classifications, types, or grades for such treatment. Such classification, type, or grade shall, so long as such determination remains in effect, be treated as a separate commodity under this Act in accordance with regulations to be prescribed jointly by the Secretary of Agriculture and the Secretary of the Treasury.

INFORMATION TO BE MADE PUBLIC

SEC. ~~23~~ *25*. When any adjustment charge, or increase or decrease therein, takes effect in respect of a commodity the Secretary of Agriculture, in order to prevent pyramiding of the adjustment charge and profiteering in the sale of the products derived from the commodity, shall make public such information as he deems necessary regarding (1) the relationship between the adjustment charge and the price paid to producers of the commodity, (2) the effect of the adjustment charge upon prices to consumers of products of the commodity, (3) the relationship, in previous periods, between prices to producers of the commodity and prices to consumers of the products thereof, and (4) the situation in foreign countries relating to prices to producers of the commodity and prices to consumers of the products thereof.

PERSONNEL

SEC. ~~24~~ *26*. The Secretary of Agriculture and the Secretary of the Treasury may each appoint such experts and, in accordance with the Classification Act of 1923 and all Acts amendatory thereof, and subject to the civil service laws, such officers and employees as are necessary to execute the functions vested in them, respectively, under this Act: *Provided*, That no salary in excess of $7,500 per annum shall be paid to additional employees necessary to carry out the provisions of this Act.

PENALTIES

SEC. ~~25~~ *27*. (a) Any person who makes any false statement for the purpose of fraudulently procuring, or shall attempt in any manner fraudulently to procure, the issuance or redemption of any adjustment certificate *or any payment under section 20*, whether for the benefit of such person or any other person, shall upon conviction be fined not more than $2,000 or imprisonment not more than one year, or both.

(b) Adjustment certificates issued under authority of this Act shall be obligations of the United States within the definition in section 147 of the Act entitled "An Act to codify, revise, and amend the penal laws of the United States," approved March 4, 1909, as amended.

AUTHORIZATION OF APPROPRIATIONS

SEC. ~~26~~ *28*. There are hereby authorized to be appropriated such sums as may be necessary for the purposes of this Act.

APPLICATION OF ACT

SEC. ~~27~~ *29*. The provisions of this Act, except section 18, shall be applicable to the United States and its possessions, except the Philippine Islands, the Virgin Islands, American Samoa, and the Island of Guam.

EXTENSION OF ACT

SEC. ~~28~~ *30*. Prior to the commencement of the planting of wheat, ~~rice,~~ cotton, ~~peanuts,~~ and tobacco, respectively, for production during the calendar year 1934 and prior to the commencement of the period for breeding hogs which normally will be sold during such year, ~~and prior to the 1934-1935 marketing year for butterfat~~ the Secretary of Agriculture shall investigate and report to the President whether the inequalities between the prices for any such commodity and other commodities have been, or are likely to be, corrected without extending the provisions of this Act. If the President determines that it is necessary to ~~place~~ *continue any of* the provisions of this Act in operation in order to correct any such inequality with respect to wheat, ~~rice,~~ cotton, ~~peanuts,~~ tobacco, ~~butterfat,~~ or hogs he shall thereupon issue a proclamation setting forth such determination. Upon the issuance of any such proclamation with respect to any commodity, the provisions of this Act shall be in operation for an additional year with respect to the commodity covered by the proclamation.

Senator HARRISON. Mr. Chairman, Mr. Rand is next on the calendar, and I understood he wanted to speak confidentially to the committee.

The CHAIRMAN. That is what the calendar says.

Senator HARRISON. There is another gentleman present. Could he be given 10 minutes, and then we might go into executive session to hear Mr. Rand?

The CHAIRMAN. What is his name?

Senator HARRISON. Mr. Anderson. Or he could file a brief.

The CHAIRMAN. Well, he may come around and be heard.

## STATEMENT OF S. W. ANDERSON, OF THE EQUITY CORPORATION, NEW YORK CITY

The CHAIRMAN. Whom do you represent?

Mr. ANDERSON. I do not represent anybody, Senator. I have just developed some ideas that I talked to Senator Harrison about.

Senator HARRISON. He talked to me, Mr. Chairman.

The CHAIRMAN. Have you it in the form of a statement to submit?

Mr. ANDERSON. Yes, sir.

Senator HARRISON. Suppose you try to finish in 10 minutes and then file it if you can not.

Mr. ANDERSON. It will take about 20 minutes for me to make my statement.

The CHAIRMAN. You understand that you are not on the calendar at all.

Mr. ANDERSON. Yes.

Senator HARRISON. Suppose you just go ahead.

Senator LA FOLLETTE. What is your name?

Mr. ANDERSON. S. W. Anderson.

Senator LA FOLLETTE. Where do you live?

Mr. ANDERSON. I live in New York. I am the head of an investment trust.

Senator LA FOLLETTE. What is the name of it?

Mr. ANDERSON. The Equity Corporation.

The CHAIRMAN. All right. You may proceed.

Mr. ANDERSON. I term this a plan for raising prices without altering the convertibility of our currency.

In the present situation in the world, I believe that the single, most desirable end to be achieved is a rise in the commodity price level in an atmosphere of confidence. I think everyone would agree that such a rise would make it far easier to solve our many remaining vexation problems as well as cause a number of our most pressing difficulties to disappear. If prices rise in an atmosphere of confidence, the burden of our debt structure will be substantially reduced, our Budget can be balanced with comparative ease, credit will begin to turn out more rapidly and new credit can be created because the demand for it will appear. In short, the deflation will be stopped.

I believe that the most effective way to accomplish this desired result would be, if possible, some relatively simple, very dramatic step which would convince the largest part of the American public that the value of gold had reached its peak and was about to decline while assuring them simultaneously that our currency is to continue to be convertible into gold on demand at the present rate of $20.67 per ounce in minted coins.

How can this be done? I will outline how I believe this combination of events can be accomplished and return in a few moments to a further consideration of the reasons for believing that the suggested steps will lead to the broad objections mentioned.

At the moment, aside from that consumed in the arts, the only buyers of bullion gold are the mints and central banks in the countries still on a gold base; that is, United States, France, Switzerland, Holland, Belgium, Italy, Germany, Austria, and now Poland. England is also a spasmodic buyer.

My plan suggests that all of the countries be induced, in a manner I will specify in a few moments, to withdraw their bids for gold by altering their fiscal laws removing the obligation on the part of their central banks or mints to purchase gold at a given price. For example, in the United States it would take the form of a simple amendment to the Federal reserve act—and such other acts as applied—removing the obligation of the mint and of the reserve banks to purchase bullion gold at $20.67 per ounce. The legislation would not specify when, or if so, at what price the mint or the reserve banks would resume their purchases of gold bullion.

It should be emphasized that this legislation does not alter in any manner whatsoever the gold content of the dollar nor does it relieve the reserve banks, or the central banks of other countries still on a free gold basis, from the obligation of paying minted gold coins of the present weight and fineness across their counters to holders of their notes at all times. It will, in fact, tend to emphasize the continued convertibility of our currency as will appear later on.

Before considering the reasons in back of the plan, I would like to suggest a means by which the cooperation of the other countries involved could be obtained. Austria, Belgium, Czechoslovakia, France, Italy, and Poland, owe us a total of $6,738,000,000 and England an additional $4,500,000,000, or a total of over $11,200,000,000. Without raiding the controversy of a settlement of these debts, I am assuming that we may be able to settle them by some lump-sum payments partially in dollars and perhaps partially in other currencies. My suggestion is that we use a settlement for a lump sum as a means of obtaining from these countries and others, cooperation with, and delegation of leadership to, the United States in handling the world's gold and exchange problems. It is also contemplated that the lump-sum payments obtained in settlement of the debts—say, $2,000,000,000, to $3,000,000,000 or their equivalent——

Senator SHORTRIDGE. How much did you suggest that we should settle for?

Mr. ANDERSON. I simply took a figure of, say, $2,000,000,000 to $3,000,000,000.

Senator SHORTRIDGE. And the principal now is $11,000,000,000?

Mr. ANDERSON. Yes; but whatever is the best settlement that can be developed.

Senator SHORTRIDGE. All right. I just wanted to be sure that I understood you.

Mr. ANDERSON. It is also contemplated that the lump-sum payments obtained in settlement of the debt—say $2,000,000,000 to $3,000,000,000 or their equivalent—be placed in a special fund under the control of an international committee headed by an American with a veto power, for the purpose of bringing order and stability in the foreign exchanges of the world. I will return to this phase of the plan later.

Reasons in back of the plan: With a brief outline of the plan in mind, let us turn to a consideration of the reasons why it fits the realities of the present tragic situation.

Since the war, the scale on which international payments have been required has been so large that an unprecedented strain has been placed upon the gold supply of the world in attempting to take up the slack of the huge balances of such payments, many of which, such as reparations and war debts, had no foundation in commercial transactions. In the 1920's there was added to this strain the increase in demand for gold due to the reestablishment of the gold standard in England, France, and Central Europe. So long as international credit flowed freely, the strain on gold was held in check, but when international credit collapsed with the failure of the Credit Anstalt in Vienna in 1931, the burden of the world's balance of payments fell upon gold. It remained the only commodity which was freely received in creditor countries in payment of commitments. There ensued a "scramble for gold" carrying with it suspension of specie payments in practically all debtor nations. The result has been a practical corner on gold with 68 per cent of the existing monetary supplies in the vaults of the four central banks of United States, France, Switzerland, and Holland.

This scramble for gold may perhaps be more aptly designated as a bull market in gold. Let us think of it as such and see where we arrive.

The fact that the price of gold in gold standard countries does not change, should not be allowed to obscure the fact that its value does change greatly—due, as I see it, to sudden changes in the demand for it, just as in the case of all other commodities. The expression of such changes in value, as we all know, is to be found inversely in the general level of commodity prices, and we are all keenly aware at this time that the value of gold has risen steeply in the last three years in response to the increase in the demand for it, which I have described above.

I believe that the largest part of the fundamental cause for the drastic decline in commodity prices—as well as all other prices—has been the bull market in gold mentioned above. I also believe that if some means can be found to bring this bull market in gold to a conclusion, and to initiate a bear market in gold, we will have taken the most important step possible toward an improvement in commodity prices.

Let us examine the history of past bull markets and corners in other commodities. We all know that they have been broken in the end either by the appearance of a large additional supply of the commodity in question or by the withdrawal of the bids on the part of those who had established the corner—as in the corner in Northern Pacific stock. What can we expect from the supply side of the gold equation? Beyond the amounts hoarded in the vaults of central banks in creditor countries or in countries in which specie payments have been suspended, there is little available. There is perhaps still $1,000,000,000 in private hoards in India, but it has taken 16 months to draw about $250,000,000 from that source due to sterling depreciation. There are $478,000,000 of United States gold coins privately hoarded in the world. There is also new production which in 1932 was less than $500,000,000, and of which about 40–45 per cent was utilized in the arts. All together, in comparison to world supplies of over $11,000,000,000 and in the face of just our own favorable international balance of about $600,000,000, it seems rather hopeless to expect much help from the supply side of the equation in breaking the back of the bull market in gold soon enough to do any good.

There remains available to us, then, the one infallible way to break any corner. Those who are bidding must stop bidding. This is precisely what the plan embodies.

Results of the plan: The three most important questions to examine in connection with the operation of the plan are:

1. Would it tend in any way to destroy confidence in our currency—or any other currency on a gold base?

2. Would it tend to cause commodity and other prices to rise?

3. Would it create an unmanageable problem in the foreign exchanges?

Let us take these in order:

1. I do not see that the plan would in any way call into question confidence in our currency. It should perhaps be repeated that Federal reserve notes and other currency would continue to be redeemable in minted gold coins, as at present.

The plan would in fact tend to strengthen confidence in our currency by emphasizing that the Government believed that we have now too much gold, rather than too little, and hence it proposed to cease buying gold. It should also be pointed out that on the day the legislation became effective, there would spring up an open market in bullion gold. It would in fact be wise to have this market all planned and ready for action. Gold would, of course, sell in the open gold market at a price less than the statutory price of $20.67 per ounce. This fact alone would tend very greatly to discourage anyone who, through a misunderstanding of the situation, might think that the currency was being tampered with. He would, of course, observe that he could actually buy gold more cheaply in the open market than he could buy it by redeeming his currency at the reserve bank. It should also be pointed out that the present restrictions on the issuance of currency and credit by the reserve banks would continue in force and no one would be entitled to believe that this step had in any way lifted the lid upon the creation of central bank credit. I believe there would also be a tendency for privately hoarded gold coins to flow back into the banks, because the hoarders would realize that the metallic content of their hoards is not the fact which gives them their value, since gold would be selling in the open gold market at less than $20.67 per ounce, but that the Government imprint making them legal tender is the factor which keeps gold coins at a parity with currency. The case of silver dollars illustrates the point. No one who holds a silver certificate thinks of asking for the silver dollar behind it, because he knows that the silver contained in a silver dollar is selling at less than a dollar. As a result, most of the silver dollars which used to be circulated freely have been turned into the banks for bills.

In short, I have been unable to see any respect in which the plan would tend to frighten people so far as money is concerned.

2. Let us now consider the most important aspect of all—the main goal of the plan. Will it tend to increase commodity prices?

The adoption of the legislation itself would not, of course, increase the amount of outstanding credit or currency at all. The reasons for my belief that it would tend to increase commodity prices, however, are on three counts.

First. The plan takes advantage of a psychological phenomenon which constitutes to-day one of our greatest obstacles, namely, the reverence for gold as an independent measure of value. It is a very widely held belief that whatever may happen in the world, gold has an independent hard cash value when all else fails. Hoarding of gold is a manifestation of this. We know, of course, that the root of this phenomenon lies in the fact that the principal countries of the world have adopted gold as their standard, and have thereby imparted value to it by buying it at all times. Reverence for gold, as I term it, is, nevertheless, a very real thing. Furthermore, so long as money or currency are convertible into gold at a given rate, as they would continue to be under the plan, there is a very strong popular tendency to identify money with gold. I believe, therefore, that as soon as visible evidence appears—and there would be plenty—that gold is not going to continue to go up in value, a very large number of people in the world will conclude that commodity prices should rise and they will seek to protect themselves by ceasing to hoard gold or money and will buy something else—commodities, real estate, stocks, bonds, and so forth. This argument is not subject to direct proof, because it is based on a psychological factor, but it is none the less of the very greatest importance.

The second reason I believe the plan would tend to increase commodity prices is that it embodies a settlement of the war debts on a basis so that the quid pro quo for the American people, as well as for the whole world, is definite control and leadership of world monetary policy. In my opinion a settlement of the war debts on some basis capable of fulfillment would almost in itself turn the tide of confidence and if such settlement should include a comprehensive program for monetary reform and rehabilitation of world currencies, it would unquestionably prove a powerful stimulant to the price level.

Senator HARRISON. Do you think they would sell gold and buy commodities?

Mr. ANDERSON. I think the hoarders who have gold abroad would sell it in the open market and buy something else.

Senator SHORTRIDGE. What is the value of gold per once?

Mr. ANDERSON. It is $20.67 at the mint bid by the Federal Reserve Board.

Senator SHORTRIDGE. And it varies very little from time to time?

Mr. ANDERSON. Yes.

Senator HARRISON. It is fixed by statute.

Mr. ANDERSON. Yes.

Senator SHORTRIDGE. Suppose there should be a great increase in the volume of gold at any time resulting from new discoveries.

Mr. ANDERSON. That would do the same thing.

Senator SHORTRIDGE. Would do what?

Mr. ANDERSON. That would decrease the value of gold, not the price but the value, and would thereby in my judgment tend to put commodity prices up. But I see no possibility of that, and therefore I am looking at the other side of the equation, the buying side, and suggesting that we pull that up.

Senator SHORTRIDGE. A few years ago, of course, we did not expect discoveries of gold in Alaska.

Mr. ANDERSON. Yes.

Senator SHORTRIDGE. But they were made.

Mr. ANDERSON. Yes. And I have every hope that some phenomenon like that will turn up. But I do not think we can count on it.

Senator SHORTRIDGE. Well, I have in mind certain sections of the country where I have reason to believe there is a good deal of gold.

Mr. ANDERSON. If we should have a major gold discovery, its effect will be so slow as not to be useful in this particular crisis.

The CHAIRMAN. You may go ahead with your statement.

Mr. ANDERSON. The third reason why the plan would tend to lift prices is its effect on the distribution of gold over the next few years. As the world moves on its road to recovery, it will, without doubt, prove desirable to restore specie payments and adequate gold backing for many currencies now off gold entirely. We have visualized under the plan the existence of open gold markets in numerous countries, as in London now. As gold sinks in price, due to the absence of buyers, it will become less and less burdensome for countries with insufficient reserve to add gradually to their holdings under the guidance of the international committee. With gold in the rôle I have described, furthermore, it will be far easier to consider such sound monetary doctrine as symmetalism on its merits because gold and silver will both command a market value as commodities, and we will not have to deal with the fear element which is now present in any discussion of such policies.

Senator SHORTRIDGE. Harking back to what you said a while ago, do you mean to officially cancel the foreign debts?

Mr. ANDERSON. No, not to cancel them. But to work out as good a settlement as we can, and to utilize those funds.

Senator SHORTRIDGE. They would want a substantial reduction, of course.

Mr. ANDERSON. Yes. I am simply taking a realistic view that I do not think the debts can be paid in full under any circumstances.

Senator SHORTRIDGE. But they could pay them if they would stop spending billions of dollars for armies and navies.

Mr. ANDERSON. Well, if we could get the $11,000,000,000, so much the better.

Senator SHORTRIDGE. All right. Pardon me.

The CHAIRMAN. You may go ahead.

Mr. ANDERSON. Third, let us now turn to the foreign exchange picture. If there is no control in the market we would have a foreign exchange situation just as if all currencies in the world were not redeemable in gold. The rates, in other words, would simply reflect the demand and supply of each currency in relation to others. We know that this is an unsatisfactory situation, but perhaps not necessarily a disastrous one. If the settlement of war debts I have suggested be worked out, however, we would have a large fund of perhaps an equivalent of $3,000,000,000 partly in dollars and partly in francs, sterling, zloties, and so forth, which would be managed as a stabilization fund to adjust rates in an orderly manner—to such levels as would fairly accurately reflect the true balance of payments with regard to each country. It would, of course, be of the greatest possible importance to the effective use of such a fund if trade barriers and restrictions could gradually be done away with, so that the private credit and national credit could once more be rehabilitated to take the place ultimately of a controlled exchange market.

The fund would, of course, remain the property of the United States Government, and it would be brought home when its usefulness had been fulfilled, and when it could safely be transferred entirely into dollars.

The managing committee, as I see it, should consist of one expert from each country involved, with the American acting as chairman with an unassailable veto as well as dictatorial powers if the committee reaches an impasse. I realize this concentration of power is strong medicine, but it merely reflects the fact that the United States to-day holds the economic power in the world.

MISCELLANEOUS COMMENTS

I shall not attempt in this memorandum to discuss or even touch upon many of the effects of the plan which would occur to anyone considering it. There are a few points, however, that should be at least mentioned.

One of the most practical considerations is to examine who would be damaged by the program. It is obvious that the gold-mining industry and the holders of gold bars would be seriously hurt by the amount of discount at which gold would sell in the open market from the statutory price. I do not believe that this is a serious matter politically or morally. I can not see how any other of the politically powerful groups in the world would be entitled, in their own self-interests, to a legitimate protest. A rise in commodity prices is practically universally desired. The chief difficulty with all the plans for such a rise, however, has been the fear on the part of certain sections of the community that the cure was worse than the disease, and that the means proposed to bring about such a rise, such as currency inflation, greenbackism, and so forth, would cause ultimately difficulties even greater than we now face. I have been unable to think up any arguments of a similar character which could be advanced in opposition to this program. It should be borne in mind that the program does not depreciate, in anything except purchasing power, the value of the large gold hoards held by the large central banks of the world, because those central banks have the power to stamp that gold with the appropriate legal tender imprint and to pass it out as demanded over the counter. In other words, so long as we do not alter the legal tenderability of gold coins and continue to honor the Government's stamp thereon as imparting the value to the coin, we have not in any way depreciated, from a monetary point of view, the value of our vast gold holdings or that of France.

The long-range implications of this program are of the most profound importance. If the position I have taken is correct, that the price level of the world is primarily a reflection of the demand for and the supply of gold over long periods of time, then we would be initiating a new monetary philosophy in the world, the focal point of which would be not controlled currency but a controlled demand for gold. If out of this plan there could be developed in the end an international cooperation in bidding for gold, we would, in my judgment, have a world monetary policy which would be of enormous help in attempting to correct the great swings in the general price level which have proven so catastrophic ever since modern money has been in use.

Senator SHORTRIDGE. How much gold is there in the world?

Mr. ANDERSON. About $11,000,000,000.

Senator SHORTRIDGE. Is it all minted?

Mr. ANDERSON. No. A great deal of it is in bars.

Senator SHORTRIDGE. About how much has been minted into coins of different denominations by the nations of the world?

Mr. ANDERSON. I could not say as to that. I do not know offhand.

The CHAIRMAN. Not more than one-third.

Senator SHORTRIDGE. Then about two-thirds of it is in bars?

The CHAIRMAN. Yes. They ship it always in bars, you know.

Senator SHORTRIDGE. Yes; but I wanted to know if Mr. Anderson had the figures how much had been minted.

Mr. ANDERSON. Of course each country mints or not as is demanded.

Senator SHORTRIDGE. Certainly.

The CHAIRMAN. We will now excuse you.

Mr. ANDERSON. I thank you.

(Thereupon, at 4 o'clock p. m., Tuesday, February 14, 1933, the committee resolved itself into executive session, and after a time adjourned until 10 o'clock the following morning.)

# INVESTIGATION OF ECONOMIC PROBLEMS

---

**WEDNESDAY, FEBRUARY 15, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met at 10 o'clock a. m., pursuant to adjournment on Tuesday, February 14, 1933, in room 335, Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Reed, Couzens, La Follette, Harrison, King, George, Walsh of Massachusetts, Barkley, Connally, Gore, and Costigan.

The CHAIRMAN. The committee will come to order. Mr. Leon, will you take the stand?

## STATEMENT OF RENE LEON, NEW YORK CITY

The CHAIRMAN. Mr. Leon, whom do you represent?

Mr. LEON. I represent no one but myself, Mr. Chairman.

The CHAIRMAN. What is your business?

Mr. LEON. I have no occupation. I retired from business about two years ago.

The CHAIRMAN. What was your former business?

Mr. LEON. I have been in finance all my life.

The CHAIRMAN. You may proceed, Mr. Leon.

Mr. LEON. Mr. Chairman, I have prepared a comparatively short statement covering one point alone on which I feel qualified to speak, and I respectfully request that I be permitted to complete the reading of the statement uninterrupted, after which time I will be glad to answer such questions as occur?

The CHAIRMAN. That will be the course we will follow.

Mr. LEON. A much greater volume of business has been transacted in America with a much smaller stock of gold than the present one, and with much less currency in circulation than is now outstanding. Hence we have no shortage of currency.

Money market rates for all maturities, quotations for short-term Government obligations, and large banking reserves, all bear testimony to the fact that credit is superabundant. Hence we have no shortage of credit.

Having neither currency nor credit problems, it follows that our dollar needs no alteration. But we have a problem which is basic and fundamental; one upon which our welfare depends and which requires immediate solution: it is the problem of prices.

Our well-being depends upon the level and stability of prices, without which our present system must collapse and give way to a new order, which may be better or which may be worse, but which certainly will be different. If reversion to prehistoric barter is an indication of progress, then we are justified in believing that it will be better. Many communities have already reverted to barter because their price system had broken down. If this condition spreads, Government as we conceive it, can no longer function. Government is purely administrative; upon price and volume of taxable units is predicated the income which it derives from taxation, and which is indispensable to its very life. If we revert to barter, we shall have volume without price, so that Government will be left without a basis for taxation, and, therefore, without income, unless it undertakes to levy taxes in commodities. Having no income, how could Government function, let alone meet its obligations?

When mankind supplanted barter by the price system, and adopted instruments of exchange, it took the longest step forward in the development of civilization. Of all price-measuring instruments of exchange ever used by man, there are two which, by common consent, have out-lasted all others. Either or both of them form the basis of all currency systems, of all credit systems and, where redeemability still exists, they represent ultimate redeemability for all instruments of credit. Gold and silver are their two basic price-measuring instruments of exchange.

In the game of trade the world uses yellow and white chips to figure the prices which measure and regulate every human activity. In approaching the price problem we can not permit our judgment to be restricted by the notion that the chips which we use to figure prices constitute the true values; because if we do, we will merely continue to waste time "preserving the integrity of gold" or attempting to "do something for silver," the while prices crumble about our ears, carrying with them our whole price system.

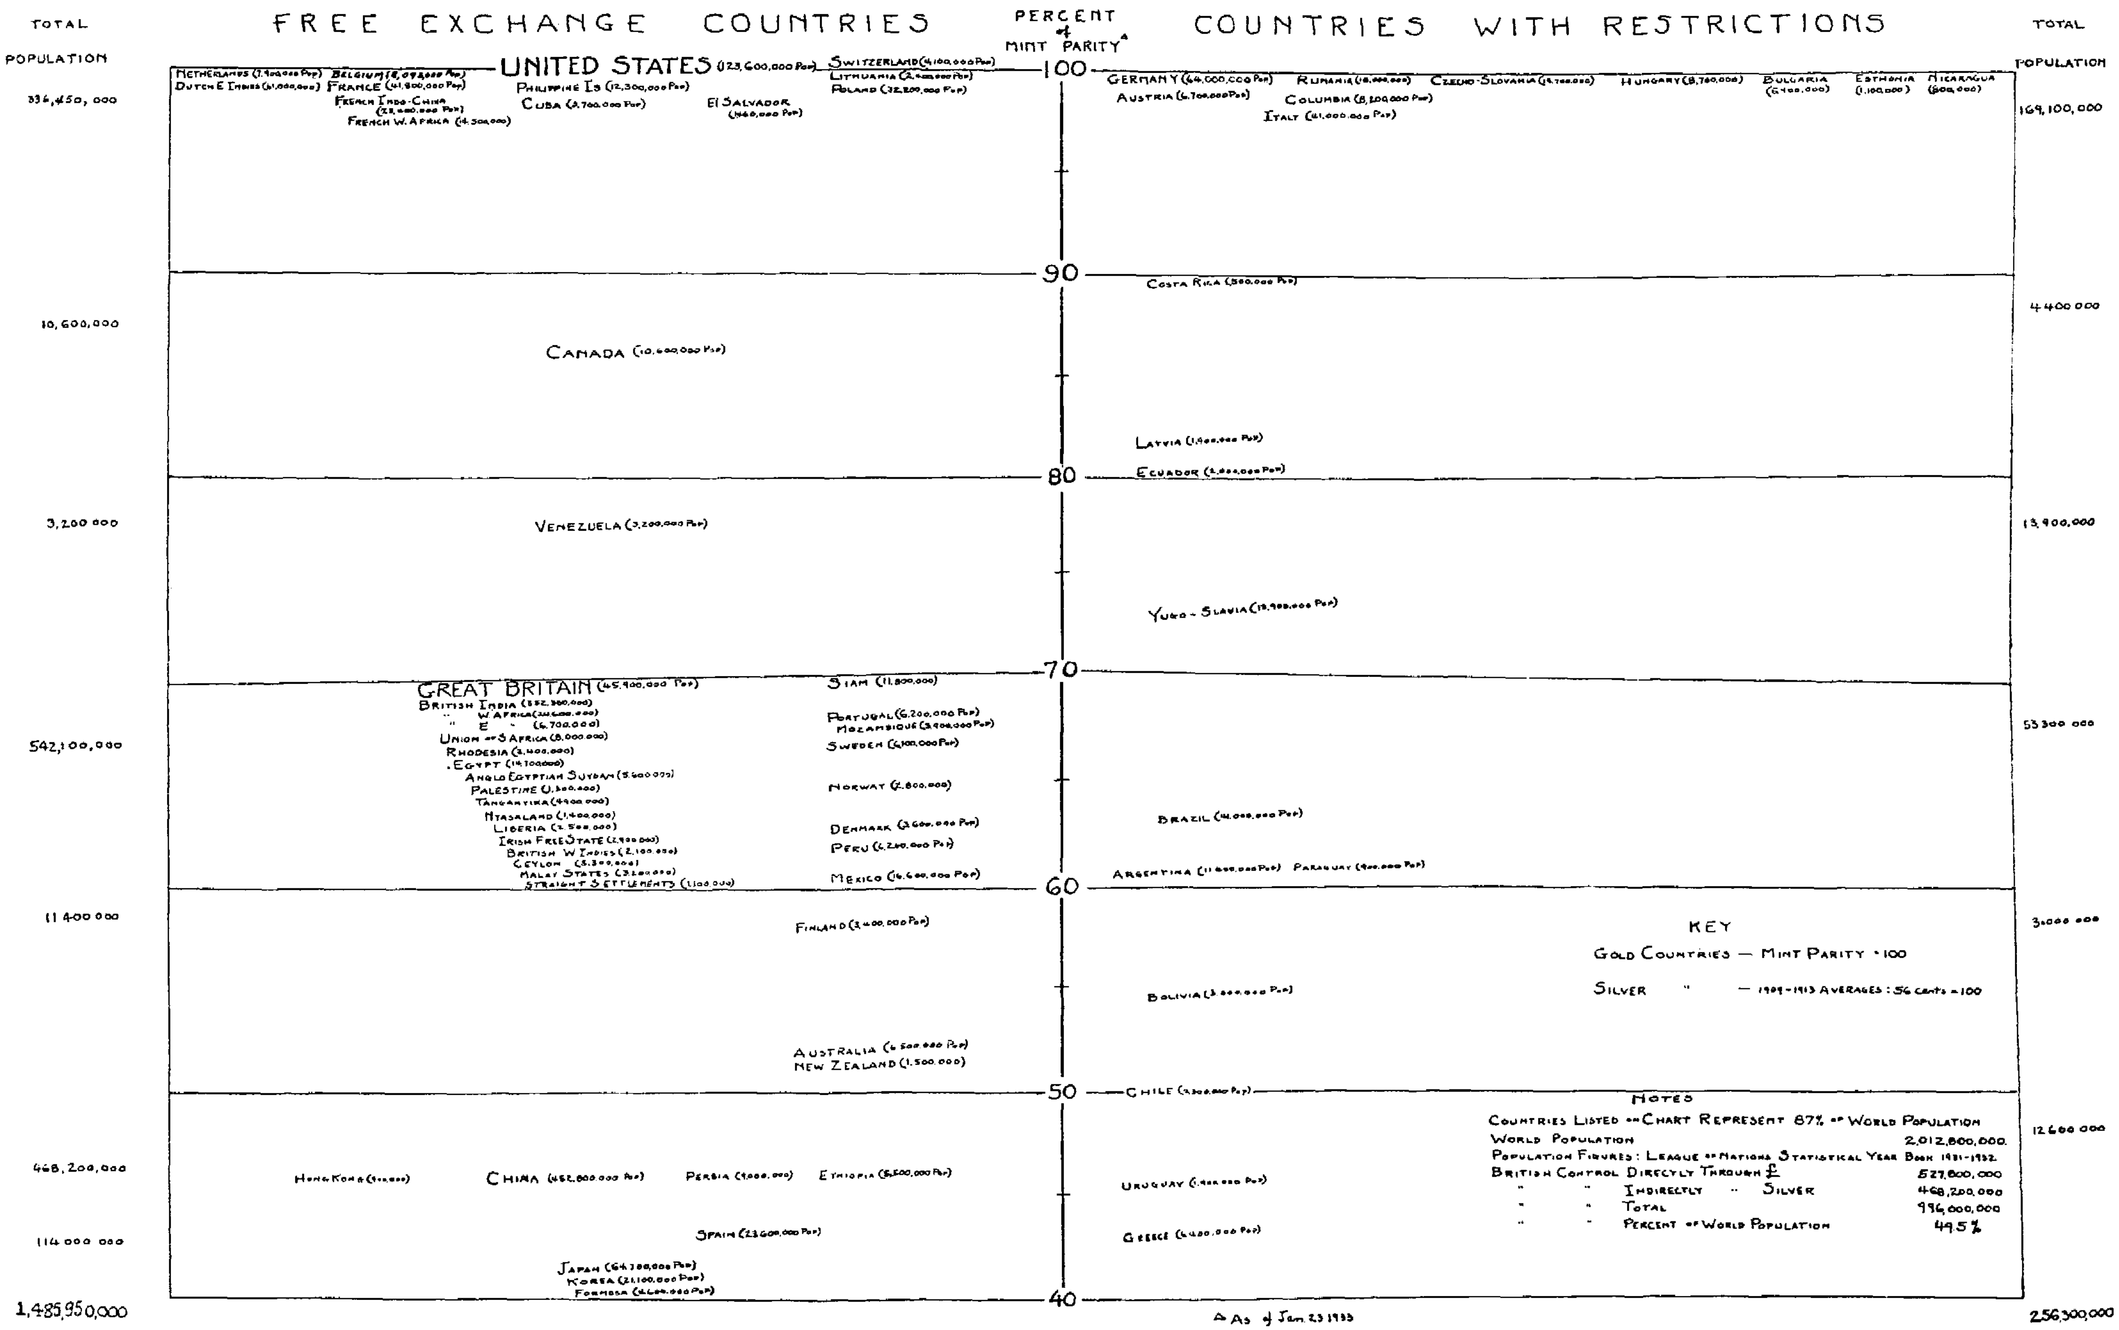
To-day our prices suffer, from the dollar's position of inequality or disparity, in its relation with the currencies of over four-fifths of the world's population. This disparity between home and alien currencies also creates a disparity between home and alien prices which results in our inability sucessfully to compete in the world's markets with those whose currencies and prices are depreciated, thus causing our normal exports to back up onto our local market and depress our prices. It also results in the flooding of our market with goods produced in those countries where depreciated currencies are the bases of prices. This, in turn, forces the readjustment downward of our home prices, which carries us further from our debts and taxes which are payable in the dollar proceeds of our commodities, our labor and our services.

I submit to your committee a chart illustrating the position of the dollar in the markets of the world.

The CHAIRMAN. It may be put in the record at this point.

(The chart, together with supporting data, is here printed in the record, as follows:)

# DISPARITY OF EXCHANGES



159450—33. PT. 2 (Face p. 172.)

*Free Exchange Countries*

| | Population (millions) | Mint par of exchange | Rate of Jan. 23, 1933 | Rate per cent of par |
|---|---|---|---|---|
| Switzerland | 4.1 | $0.192948 | $0.193341 | 100.3 |
| United States | 123.6 | 1.00 | 1.00 | 100 |
| Lithuania | 2.4 | .10 | .10 | 100 |
| Cuba | 3.7 | 1.00 | 1.00 | 100 |

| Total | 1,485.96 | | | |

[1] Rates supplied by New York foreign exchange traders.
[2] Price of silver per fine ounce, 56 cents, equals roughly 1909 to 1913 average.

## Disparity of Foreign Exchange

### COUNTRIES WITH EXCHANGE CONTROL

The tabulation of countries with exchange control is based upon the following:

1. Data released by the United States Department of Commerce.
2. Bulletin of January 19, 1933, on foreign exchange prepared by the Guaranty Trust Co.
3. Review of principal foreign exchange restrictions throughout the world on December 5, 1932, by the District Bank (Ltd.), Manchester, London, and Liverpool.
4. Verbal information from foreign exchange traders.

| | Population (millions) | Mint par of exchange | Rate of Jan. 23, 1933 | Rate per cent of par |
|---|---|---|---|---|
| Czechoslovakia | 14.7 | $0.0296 | $0.0296 | 100.0 |
| Bulgaria | 5.9 | .0072 | .0072 | 100.0 |
| Estonia | 1.1 | .268 | .268 | 100.0 |
| Nicaragua | .8 | 1.00 | 1.00 | 100.0 |
| Germany | 64.0 | .2382 | .237858 | 99.9 |
| Hungary | 8.7 | .1749 | .17425 | 99.7 |
| Rumania | 18.0 | .00598 | .005977 | 99.8 |
| Austria | 6.7 | .1407 | .13973 | 99.1 |
| Colombia | 8.2 | .9733 | .9524 | 97.8 |
| Italy | 41.0 | .0526315 | .05117 | 97.2 |
| Costa Rica | .5 | .25 | **.2222 | 88.9 |
| Latvia | 1.9 | .192948 | **.16 | 82.9 |
| Ecuador | 2.0 | .20 | **.16 | 80.0 |
| Yugoslavia | 13.9 | .0192948 | **.014036 | 72.7 |
| Brazil | 41.0 | .1196 | .07635 | 63.8 |
| Argentina | 11.4 | .9648 | .585835 | 60.8 |
| Paraguay | .9 | .4244 | .2580 | 60.8 |
| Bolivia | 3.0 | .365 | .1975 | 54.1 |
| Chile | 4.3 | .1196 | .06025 | 50.4 |
| Uruguay | 1.9 | 1.0342 | .47333 | 45.7 |
| Greece | 6.4 | .013 | .005435 | 42.6 |
| Total | 256.3 | | | |

Mr. LEON. By their surpluses of imports all nations make their contribution to the international price level, to which they are thus tied and which, under natural conditions, should reflect a normal balance of goods and services between them all. No such condition now exists. To-day the natural forces are either impeded or unduly stimulated by a series of local measures designed either to protect local markets from external competition, or artificially to stimulate exports at the expense of competing nations. Tariffs, quotas, exchange restrictions, and so forth, are merely different expressions of the same desire to achieve favorable balances at some one's else expense.

The more recent and, let it be recognized, the most effective artificiality devised to achieve favorable balances, is the deliberate depreciation of exchange. Its effectiveness is the more complete because it is the most insidious and deceptive instrument of price destruction hitherto conceived. The principle of low exchange as a stimulus to exports through the reduction of local costs of production would, if reduced ad absurdum, carry both exchanges and costs to the vanishing point. To establish this principle is to challenge competition in the same way, and this competition, by seeking still lower levels of exchanges and costs, would ultimately drive all concerned to the zero level. The gold standard countries are particularly vulnerable to this system because their obligations, which are fixed in gold, become the more onerous as prices fall.

This system must be broken up at all costs if we are to avoid a general collapse. It can be terminated by international action, failing which, local measures of protection must at once be adopted.

Sometime prior to December 15, last, the suggestion was put forth that the British Government pay its debt installment in pounds sterling. It was suggested that, by converting these pounds into dollars as opportunity offered, the problem of transfer would be facilitated and the exchange market subjected to a minimum of disturbance. The British demurred on the ground that (1) substantial holdings of pounds sterling by the United States would constitute an interference with British control of exchange and, (2) that if Britain were to guarantee the dollar equivalent of these pounds sterling, payment in the latter fashion would be tantamount to a payment in actual gold. The British objections, which were eminently proper, were sustained and payment in gold effected.

If the American Secretary of the Treasury were to issue $500,000,000 in Treasury notes and, with the proceeds were he, an American official, to enter the exchange markets and buy pounds sterling, thus lifting the rate of exchange of British currency, Britain would have every right to resent our intrusion, because it interfered with British control of British currency and, through it, with their control of the British price level. Yet, without so much as a by-your-leave, Britain has placed at the disposal of the British Treasury a £150,000,000 secret exchange equalization fund (about $500,000,000) through which Britain, by purchasing gold currencies in the exchange market, dollars included, gives to England the control of dollar exchange and, consequently, the control of American prices.

Senator HARRISON. Do you know what their status is now with reference to that 150,000,000 pounds?

Mr. LEON. I should like to answer the question later, if I may, Senator.

Because of their noncommercial character, all exchange transactions for the account of the equalization fund are artificial in their influence upon the reciprocal relations of the pound sterling and the gold currencies, the dollar included, as well as upon the reciprocal relations of prices within the sterling area on the one hand, and the prices of the gold standard nations on the other. They constitute an artificial interference by Britain with the economy of the gold standard countries, America included, whose prices are thus controlled by Britain through exchange.

That which Britain would not for one minute countenance from America, she practices every minute upon America with disastrous consequences to every phase of our economy. Every man, woman, and child in this country is the victim of this ruthless policy.

The control of the dollar exchange and, through it, of American prices, depends entirely upon Britain's ability to complete these artificial noncommercial exchange operations whereby she realizes her objectives. It is only by our leave that Britain is enabled to complete them. Because we maintain a free international gold market, and thus grant her free entry into and free exit from our money markets, we allow her, together with other aliens, to use the dollar as a lever for the intensification of this condition of disparity, or inequality, existing between the depreciated currencies and the gold standard currencies and, consequently, between their prices and the prices of the gold standard nations. We thus become a party to the crime and the coauthors of our own destruction.

It now remains for us to decide whether we shall continue to maintain a free international gold market for the benefit of alien exploiters, at the expense of our prices and at the sacrifice of our economy, or whether, by maintaining a free internal gold market for Americans, we shall raise American prices, save the American economic structure, and thus return control of American affairs to American hands.

It also remains for Great Britain to decide whether she will force us to adopt defensive measures, or whether she will abandon her attempt at price control and join with us in a common effort to raise world prices, and thus help to restore international trade. Before engaging with Britain in a bargain involving trade advantages and disarmament in return for a readjustment of debts, we might both usefully bear in mind that the short road to prosperity and to disarmament is the lifting of the economic pressure created by low prices; because this very pressure, as expressed by punitive and retaliatory measures affecting trade, engenders the suspicion which grows to hatred, and leads to armament and to war.

Let us now examine the factors underlying Britain's deflationary policy; debt cancellation is avowedly Britain's immediate objective, because, if America can be saddled with the debts, American industry must foot the bill through future taxes which, thereafter, will have to be figured in the American cost of production. With this cost of production thus presently raised, American industry would henceforth be permanently handicapped when competing with British industry in the world's markets.

If the debt cancellation policy is to succeed, debts must be made to appear to Americans to be the one insurmountable obstacle in the way of their prosperity. By way of superinducing this feeling among Americans, British policy is intensifying the American depression by driving down gold (dollar) prices. Gold and silver being the only two international instruments of exchange, Britain uses them as her implements of price destruction through the exchange equalization fund in the West, and the Indian silver dumping policy in the East.

The exchange equalization fund was ostensibly created for the purpose of adjusting the pound sterling to the British price level. British economy was in need of such adjustment; but the very proportions of the equalization fund are conclusive evidence of a desire not alone to achieve equilibrium between the British currency and the British price level, but to control world prices as well, and to wield that control for political ends. However acute may have been the pressure of self-preservation it never did and never could justify Britain's attempt to control world prices. Moreover, Britain's Indian silver dumping policy is absolutely indefensible on any grounds.

The deliberate depreciation of one of the two principal money metals, by shifting upon the other the whole burden of world finance, has merely succeeded in rarifying it, and has initiated the mad rush for gold which is still raging, and which is disrupting the economic structure of the entire world. Times without number Britain was warned of the consequences of such action. No less eminent figures than the governors of the two principal central banking institutions of the Empire have issued the warnings. Both Mr. Montagu Norman, of the Bank of England, and Sir Osborne Smith, of the Imperial Bank of India, are on record.

I submit to your committee the statements of these two gentlemen.

The CHAIRMAN. They may be placed in the record at this point.

(The statements referred to are as follows:)

STATEMENT BY MONTAGU C. NORMAN, GOVERNOR OF THE BANK OF ENGLAND, MADE BEFORE THE ROYAL COMMISSION ON INDIAN CURRENCY AND FINANCE, MARCH, 1926

The immediate effect of the announcement that the Indian Government contemplated the sale of a large quantity of silver would be to throw out of gear the exchange with China and, for a time, to paralyze trade with that country. There would be a tremendous disturbance of internal prices in China, a shock to public confidence, I should fear, unwise and panicky attempts to get out of the difficulty by resort to what, in present circumstances, would, I think, be unsuitable to China, namely a gold exchange standard. All those things would react upon this country very seriously. I think that one has also to bear in mind the interaction between gold and silver prices. There is a reaction upon gold prices when an extreme rise or fall takes place in the value of silver, which is none the less serious because it is indirect and not very apparent on the surface. The consequential changes in prices generally and in trade conditions, which would be produced, the disturbance to the world's economic peace and confidence, the interfering with the long-established social habits of the people of India in the use of silver, the shock to the reliance of a great country like China upon silver as a medium of currency and a common store of value, could not fail to have important effects upon the gold prices of countries in Europe and indeed in America.

---

STATEMENT BY SIR OSBORNE SMITH PRINTED IN THE LONDON TIMES, JANUARY 20, 1932

At the fourth ordinary general meeting of the Indian Institute of Bankers, held recently in Bombay, Sir Osborne A. Smith, governor of the Imperial Bank of India, made the following statement on the silver question:

"Before I close perhaps I may briefly touch on the economic crisis through which India and the world is passing. This crisis is engaging the whole-time attention of the greatest economic leaders of all countries, but there seems to be no unanimity among these leaders as to the cause or the remedy, though most agree that maldistribution of the world's standard of value, gold, and overproduction of commodities have largely contributed to the slump. When one realizes that the teeming millions of India and Asia are half-starved and less than half-clad one can scarcely agree that there is any overproduction in regard to requirements, but there is certainly overproduction relative to purchasing power. If this is conceded, the question then arises as to how purchasing power can be stimulated, and one answer readily presents itself—by the rehabilitation of silver, through a reasonable stabilization of its value in relation to gold. If this could be accomplished, I feel sure the improvement would be immediate and lasting, and it would not be long before surplus commodities were absorbed and some measure of prosperity restored."

Mr. Leon. Added to these are innumerable Britons of distinction who constantly are calling their Government's attention to the frightful conditions which it has brought about, and which it persists in perpetuating. Yet not a word is spoken by the responsible Government officials in justification of their action. Those who profit by low silver, because they control the China trade, seem firmly entrenched in the British treasury and in the India office. There are also British officials who believe that low silver makes for better control of Indian affairs. Be they interested slave drivers or misguided politicians, the result is the same. By their action, white men the world over, Britons and Americans alike, are being subjected to the ruinous competition of the coolie. By injecting into our price system the powerful factor of price destruction which low silver constitutes, they are wrecking the world's industrial machinery, and of the once imaginary yellow peril they are making a reality.

Enlightened America, viewing the plight of a world torn asunder by retaliation, and realizing that retaliation is a losing game for all concerned, should be the last to retaliate. But our very existence demands an immediate correction of these conditions, failing which we must lose no time in adopting measures of self-protection.

The instruments of self-defense are in our lands; were the Executive, in whom power is vested, to exercise his prerogative, one-half the program of defense would be effectually established within 24 hours. A prohibitive fee on the export of gold would achieve this result. The President's authority to act is vested in him under section 5, subdivision (b), title 50, United States Code Annotated, pages 204 and 205.

I submit to your committee learned counsels' opinion on the validity of the President's power.

Senator George. Let this go in, Mr. Chairman.

The Chairman. It may be made a part of the record.

Senator Gore. Did you say section or page 204?

Mr. Leon. Pages 204 and 205, Senator.

(The opinion of Evarts, Choate, Sherman & Leon is here printed in the record in full, as follows:)

Evarts, Choate, Sherman & Léon,
*New York, February 3, 1933.*

René Léon, Esq., *New York City.*

Dear Sir: You have requested our opinion concerning the powers of the President to regulate or prohibit transactions involving the export of gold without reference to the existence of a state of war.

There is a provision contained in section 5 of the act of October 6, 1917, as amended (known as the trading with the enemy act), the construction of which will be examined in this memorandum.

Section 5 is entitled "Suspension of provisions relating to ally of enemy; regulation of transaction in foreign exchange of gold or silver." It consists of two subdivisions (a) and (b). The provisions of subdivision (a) are not pertinent to the question under discussion. Subdivision (b) begins as follows:

"(b) The President may investigate, regulate, or prohibit, under such rules and regulations as he may prescribe, by means of licenses or otherwise, any transactions in foreign exchange and the export, hoarding, melting, or earmarkings of gold or silver coin or bullion or currency, transfers of credit in any form (other than credits relating solely to transactions to be executed wholly within the United States), and transfers of evidences of indebtedness or of the ownership of property between the United States and any foreign country, whether enemy, ally of enemy, or otherwise, or between residents of one or more foreign countries, by any person within the United States."

The question presented is whether the powers conferred upon the President by the foregoing provision ended with the war or are still vested in him, and may now be validly exercised.

In construing this first clause, it will be useful to consider in connection with it the entire remainder of the subdivision whch reads as follows:

"And, for the purpose of strengthening, sustaining, and broadening the market for bonds and certificates of indebtedness of the United States, of preventing frauds upon the holders thereof, and of protecting such holders, he may investigate and regulate, by means of licenses or otherwise (until the expiration of two years after the date of the termination of the present war with the Imperial German Government, as fixed by his proclamation), any transactions in such bonds or certificates by or between any person or persons: *Provided*, That nothing contained in this subdivision (b) shall be construed to confer any power to prohibit the purchase or sale for cash, or for notes eligible for discount at any Federal reserve bank, of bonds or certificates of indebtedness of the United States; and he may require any person engaged in any transaction referred to in this subdivision to furnish under oath, complete information relative thereto, including the production of any books of account, contracts, letters or other papers, in connection therewith in the custody or control of such person, either before or after such transaction is completed."

Thus, while transactions in Government bonds or certificates are subject to regulation within a limited period only, i. e., until two years after the war, no limitation of any kind is specified with reference to the broader powers conferred in respect to foreign exchange and gold or silver or currency export transactions including earmarkings, as also transfers of evidences of indebtedness or of the ownership of property between the United States and any foreign country or between residents of one or more foreign countries or by any person within the United States.

(Section 2 of the act contains the following definition: "The word 'person,' as used herein, shall be deemed to mean an individual, partnership, association, company, or other unincorporated body of individuals, or corporation or body politic.")

Reference is made to subsection (b) of the trading with the enemy act in the act approved April 23, 1918, being chapter 63 United States Statutes at Large entitled "An act to conserve the gold supply of the United States; to permit the settlement in silver of trade balances adverse to the United States; to provide silver for subsidiary coinage and for commercial use; to assist foreign governments at war with the enemies of the United States; and for the above purposes to stabilize the price and encourage the production of silver." This act authorized the Secretary of the Treasury to melt or break up and to sell as bullion a maximum of 350,000,000 standard silver dollars at a price not less than $1 per fine ounce.

The act concludes with section 9 which provides that: "the powers conferred upon the President by subsection (b) of section 5 of an act approved October 6, 1917, known as the 'trading with the enemy act' shall, in so far as applicable to the exportation from or shipment from or taking out of the United States of silver coin or silver bullion, continue until the net amount of silver required by section 2 of this act shall have been purchased as therein provided."

This was obviously a precautionary provision, intended to assure the completion of the transaction and forestall any contention that the completion of the transaction was subject to the continuance of a state of war.

While, as already pointed out, the entire act was enacted as a war measure, there was nothing to prevent Congress from incorporating in it a provision vesting in the President powers which not only would survive the end of the war, but continue until abrogated by new legislation.

After the end of the hostilities, a number of cases arose in which the contention was made that the powers conferred upon the President and those to whom he had delegated them under the trading with the enemy act had come to an end with the proclamation of peace. This very question was dealt with by the Supreme Court of the United States in Commercial Trust Co. *v.* Miller (262 U. S. 51), as shown by the unanimous opinion of the court, from which the following is taken:

"The next contention of the trust company is that the act being a provision for the emergency of war, it ceased with the cessation of war, ceased with the joint resolution of Congress declaring the state of war between Germany and the United States at an end, and its approval by the President, July 2, 1921, and the proclamation of peace by the President August 25, 1921. The contention, however, encounters in opposition the view that the power which declared the necessity is the power to declare its cessation, and what the cessation requires. The power is legislative. A court can not estimate the effects of a great war and pronounce their termination at a particular moment of time, and that its consequences are so far swallowed up that legislation addressed to its emergency had ceased to have purpose or operation with the cessation of the conflicts in the field. Many problems would yet remain for consideration and solution and such was the judgment of Congress, for it reserved from its legislation the trading with the enemy act and amendments thereto, * * *." (P. 57.)

Applying the reasoning of the Supreme Court to the question here under discussion, it is plain that when Congress conferred upon the President the broad powers contained in the first clause of subdivision (b), it can not have intended that these powers should expire immediately upon proclamation of peace.

Thus the act stands to-day as the law of the land and except where the powers which it confers on the President are expressly limited, he is still enabled to exercise them. Especially must this be true where the situation which confronts him arises from great disturbances in world monetary conditions due to the war. Major disturbances and dislocation of monetary conditions having their origin in the war have continued and persisted in such a way as to vitally affect the welfare of the American people. Once the power to deal with them was conferred upon the President, only Congress could decide when, in respect of some particular situation as to which power is not subject to an express limitation, the situation no longer justified the retention of the power.

Congress has amended the trading with the enemy act as lately as March 10, 1928. Amendments of that date are contained in a number of sections, including sections 9, 10, 20, 22, 23, 25, 26, 27, 28, 29, 30, and 31. The fact that Congress left the first clause of subdivision (b) intact speaks for itself. While the powers conferred by the remainder of that subdivision have expired by their own terms, the powers conferred in the first clause of subdivision (b) are still vested in the President. By failing to repeal the clause in question, Congress has treated this situation as requiring that the powers conferred upon the President shall remain vested in him. Courts, in considering the effect of subdivision (b) at this time, would properly take judicial notice of the conditions to which the Supreme Court referred in Commercial Trust Co. *v.* Miller, supra, and which continuing down to the present time are affecting adversely the economic life of the country, hence causing damage to the foundations on which sound currency rests.

Of the cases involving the survival of the President's powers under the trading with the enemy act notwithstanding the proclamation of peace, there is one which is of special interest because it involved acts by the President's authority which took place subsequent to the proclamation of peace on August 25, 1921, in which the validity of those acts was challenged. This is Munich Reins. Co. *v.* 1st Ins. Co. of Hartford (circuit court of appeals, second circuit, April 6, 1925), 6 Fed. (2) 742. In that case the complainant alleged that the Alien Property Custodian on October 20, 1922—hence more than a year after the proclamation of peace—had without the complainant's consent effected a payment the validity of which depended on whether or not the powers vested in the President and delegated by him to the custodian survived in October, 1922, notwithstanding the proclamation of peace. The opinion of the court on this point states concerning the trading with the enemy act:

"The act was not terminated by the cessation of hostilities, by the joint resolution declaring the state of war between Germany and the United States at an end, or by the President's proclamation of peace." Commercial Trust Co. *v.* Miller (262 U. S. 51). (At page 745.)

The validity of the payment was upheld, and subsequently the Supreme Court refused to disturb the decision, dismissing the appeal, 273 U. S. 666.

See also Hicks Alien Property Custodian *v.* Baltimore & Ohio Railroad Co., 10 Fed. (2) 606 (U. S. district court, Maryland, February 3, 1926), in which the opinion (Soper, D. J.) states at page 609:

"(4) The railroad company further contends that, since the war is over, the custodian may no longer take any action which would affect the possible rights of those whose rights were not affected by what he did during the war, and that, if the trading with the enemy act or the joint resolution of Congress of July 2, 1921, (42 Stat. 105), should be regarded as conferring such power upon the custodian, the act or resolution to this extent is unconstitutional. * * * Moreover, the contention is contrary to the decision of Commercial Trust Co. *v.* Miller. (262 U. S. 51, 43 S. Ct. 486, 67 L. Ed. 858.) It was there contended that the act, being a provision for the emergency of war, ceased with the joint resolution of Congress of July 2, 1921, declaring the state of war at an end. But the court held that the power which declared the necessity is the power to declare its cessation, and what the cessation requires. The power is legislative and not judicial."

Thus until Congress shall legislate otherwise there is nothing to prevent the President, if in his judgment the public interest requires it, from exercising a power validly vested in him by act of Congress without time limit as to its exercise.

The clause in question which by its terms confers powers, the exercise of which is not limited to conditions arising by reason of a state of war is therefore, apparently, still in force, unless Congress lacked the power to enact it. The constitutionality of the clause as a grant of powers to be exercised after the end of the war may perhaps be questioned on two grounds: First, as a taking, without due process of law, of the property of those who are directly affected; and, second, as an unlawful delegation of legislative power to the President.

The first objection can not be sustained. The power of Congress under the commerce clause is plenary, extends to the complete prohibition of dealings in any kind of property, and is not limited by the requirements of due process. (See Gibbons *v.* Ogden, 9 Wheaton, 1, 189, 194; Lottery case, 188 U. S. 321 at page 347; Buttfield *v.* Stranahan, 192 U. S. 470 at pages 492, 493; Leisy *v.* Hardin, 135 U. S. 100 at page 108.)

The second objection (that the power conferred on the President is an unlawful delegation) presents a more doubtful question. It must be conceded that the power to prohibit could not be delegated without limitation, leaving the President wholly free at his discretion to apply an export embargo whenever he might desire to do so. If, however, the act could be so construed as to prescribe, even in indefinite terms, the conditions under which the power is to be exercised, leaving to the President only the determination as to if and when the prescribed conditions exist, no unlawful delegation could be held to exist. Literally, of course, the act prescribes no such conditions. Its purpose, however, is abundantly made clear. Each of the granted powers confers control over transactions, of different kinds, which might tend to impair the basis of the currency. This purpose is so distinct, and so limited, that a court might well hold it equivalent to a limitation on the granted power: construing the section as authorizing action only when the President should find that free commerce in gold and exchange was, in fact, likely to impair the foundation of the Nation's money. Thus limited, the delegation would be permissible; and in view of the recognized duty of the courts to construe statutes, when possible, in such manner as to sustain their validity, the construction suggested might well be adopted.

It was held in Field *v.* Clark (143 U. S. 649), that the act of Congress approved October 1, 1890, authorizing the President to suspend "for such time as he shall deem just" the provisions of that act allowing the free importation of sugar, molasses, tea, coffee, and hides as to any countries which imposed upon the products of the United States duties which "he may deem to be reciprocally unequal and unjust" can not be considered a delegation of legislative or treaty-making power, especially in view of the fact that from the foundation of the Government, Congress has frequently invested the President with similar discretion.

Likewise, the Supreme Court in Ford *v.* United States (260 U. S. 715), held that the Lever Act, approved August 10, 1917, authorizing the President to regulate the production and prices of coal, was not unconstitutional as a delegation of legislative power. No case appears to have reached the Supreme Court where any delegation of power by Congress to the President was held unconstitutional.

The grant of the power to investigate is, of course, not open to objection as a delegation. On the other hand, the grant of the power to "regulate" is less easily sustainable than the grant of the power to prohibit except with the limitation "by licenses." In so far as by the words "or otherwise" it is so broadened as literally to be exercised at will, it could not be sustained. But by construing it as exercisable only when the President finds that certain dangerous conditions exist and then by prohibition, licensing, or both during the time when such conditions continue it might reasonably be sustained in a period of national emergency.

If the act were now to be amended by incorporating therein expressly a provision such as we have suggested might be read into the act by a court construing the same so as to sustain its constitutionality, this would insure that the authority of the President could not be successfully challenged in any respect.

Very truly yours,

EVARTS, CHOATE, SHERMAN, & LEON.

Mr. LEON. Let us now analyze the consequences of such action on our economy; the founders of this country did not create the dollar as an international currency, but as the currency of the people of the United States. The duty of Government is to maintain its redeemability, in accordance with the law of the land, for the benefit of American citizens. The application of a license fee on shipments of gold for export would in no wise threaten the redeemability of the dollar. On the contrary, it would insure it by removing certain destructive foreign elements which, because they undermine our economy, threaten our currency system. Under the new condition any citizen could redeem his notes in gold on demand.

Deprived of free exit from our market, gold would no longer take free entry into it, thus effectively stopping its concentration, sterilization and consequent appreciation. Aliens could no longer buy a free "call" on gold by buying dollars in the exchange market. This is another way of saying that they could no longer freely sell and depreciate their currencies by the purchase of dollars through exchange and, by the operation, also widen the disparity existing between their prices and our own. As a result the value of gold at once would fall when measured in terms of all commodities and depreciated foreign exchanges which, once again, is another way of stating that all the commodities and depreciated foreign exchanges would rise in terms of the dollar. This rise in the foreign exchanges would be the measure of the rise of all external costs of production in their relation with our own, thus eliminating external dumping from our home markets without recourse to increased tariffs. Our prices would rise at home and fall abroad, thus facilitating both our home and export markets.

The rate of dollar exchange in the foreign markets would, henceforth, alone be fixed by the supply of and demand for dollars resulting from commercial transactions. The utilization of the dollar by aliens as a lever on their prices and on our own would be terminated once and for all. The few remaining gold-standard countries

UNITED STATES GOVERNMENT FIGURES

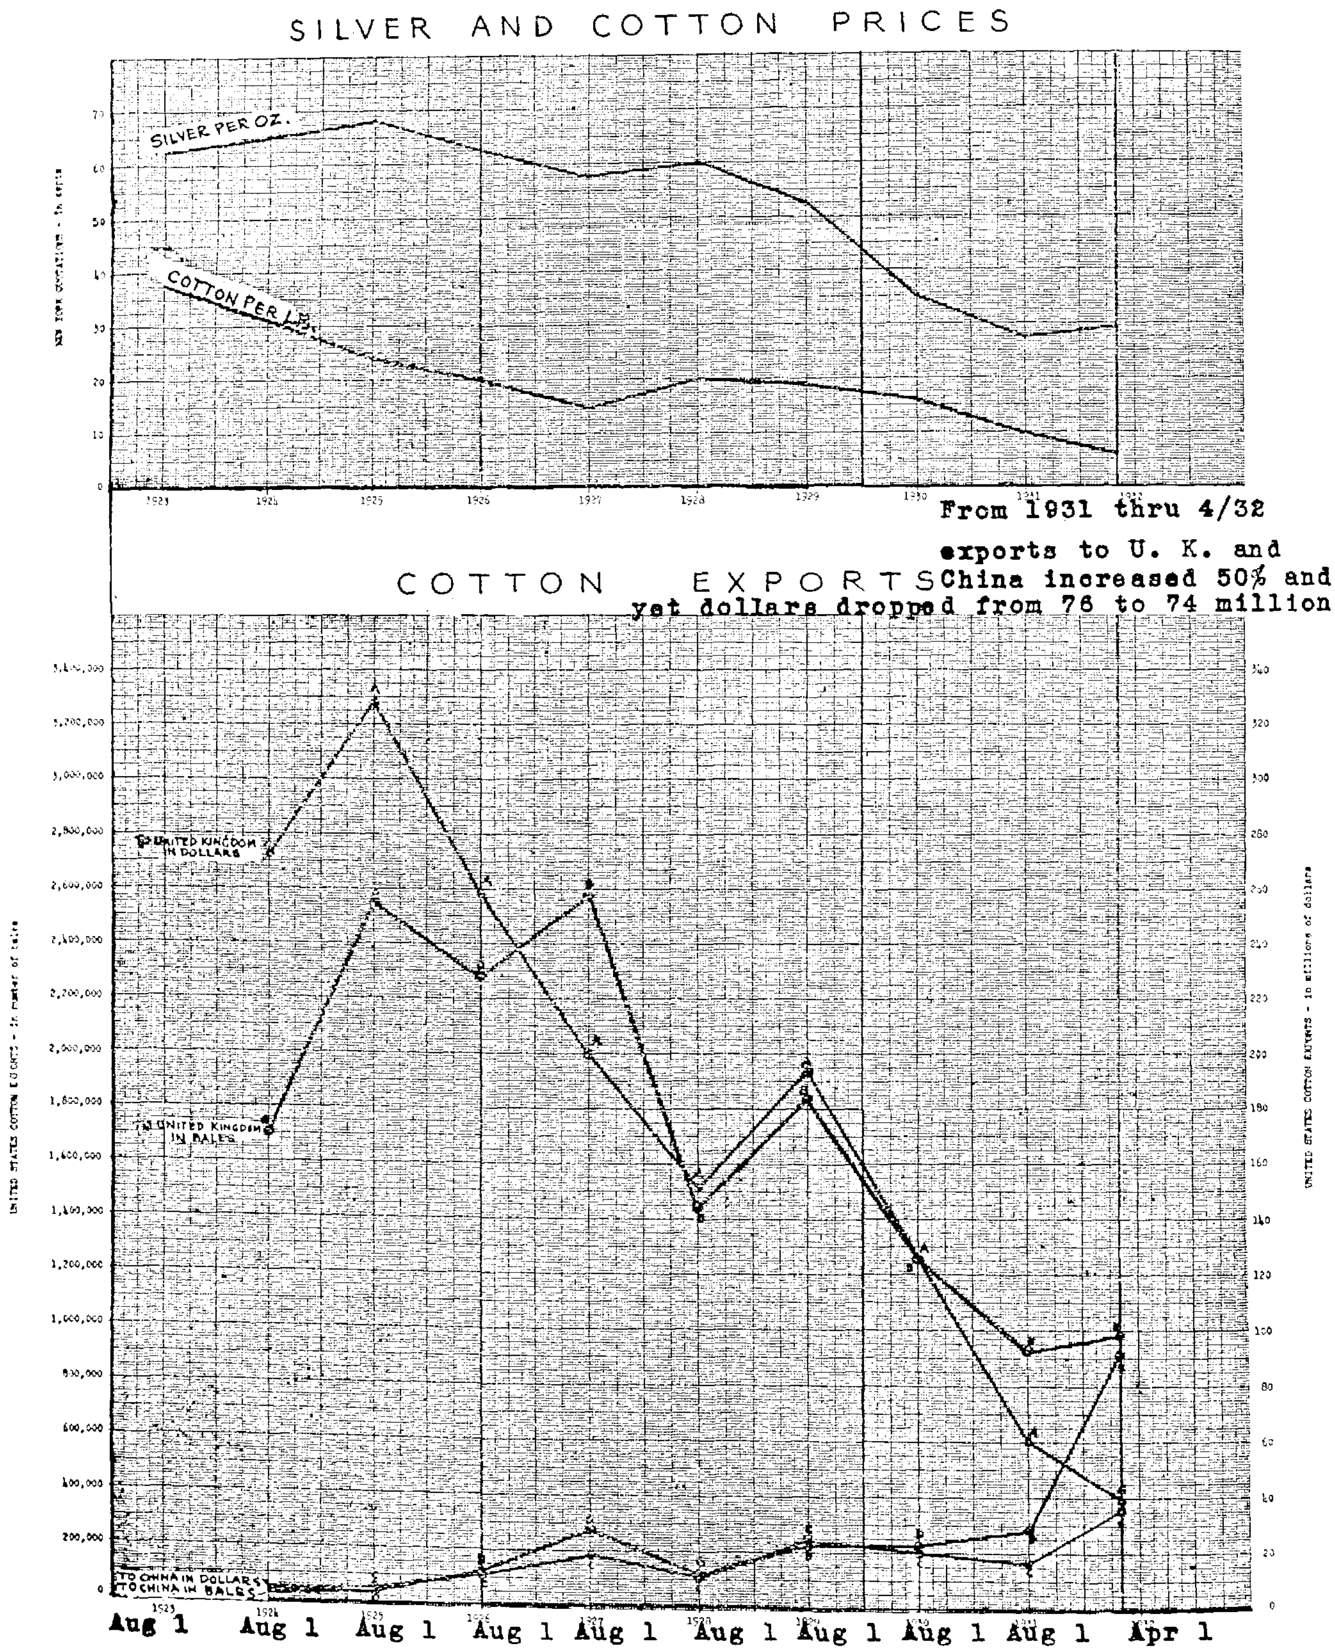
# CHART SHOWING RELATION OF COTTON EXPORTS TO SILVER PRICE



would be likely to follow suit, thus paving the way for the establishment of a sound international money system. This is now being retarded because certain nations find it profitable at the moment to remain off the gold standard which they exploit for selfish ends in utter disregard of the devastating effect of their actions upon the price structure of the gold-standard nations. Our own country is especially affected because the credit system is more fully developed in America than in other gold-standard countries; hence the undermining of our price level threatens a greater structure.

Once freed from external pressure on our prices, our commodity and security markets would definitely reverse their downward trend, and, by gaining in price and volume, would furnish to Government that basis for taxation which is indispensable to its function. Credit expansion as an aid to prices has been tried and has failed because the instrumentality was local in its nature; adverse international factors were unaffected thereby and, therefore, remained uncorrected.

Some may object to this procedure on the ground that we would lose prestige as a free gold market; but what is prestige? Webster defines it as "a weight or influence derived from past success." Let us, therefore, review the past and squarely face our achievements. For the sake of maintaining a free gold market for aliens we have sacrificed our price level, and thus upset the normal basis of economic relation between our creditor and debtor classes. Our debts and taxes having become unbearable, we are now facing all manner of unsound legislation designed to relieve us of the intolerable burden which is breaking our backs. If this be the price of such prestige as we derive from the maintenance of a free gold market for aliens, then, together with the Romans, we can well exclaim, "Venenum in auro bibitur" because we are indeed drinking poison from a golden vessel.

The second half of the program consists in further correcting the disparity of the dollar in its relation with the important silver exchanges. The influences of silver-using countries on world economy has been consistently underestimated by pointing to their relatively small contribution to the total of world trade. No greater blunder could be made. If artificial stimulus through low exchange is given to oriental exports, then the coolie will drag the white man down to his level. He is doing it now, as evidenced by the statistics of foreign trade which show that the dollar volume of Chinese trade has shrunk less than that of any one of the leading nations. Were this trade to be translated in terms of its physical volume, it would be found that it had grown enormously, while our own unemployment has grown apace.

I submit to your committee a chart.

The CHAIRMAN. It will be put in the record at this point.

Mr. LEON. That chart shows takings of cotton by China as they have grown in the past few years.

(The chart showing relation of cotton exports to silver price, together with tables on the back thereof. is here printed in the record, as follows:)

EXPORTS TO UNITED KINGDOM AND CHINA IN BALES AND DOLLARS

United Kingdom, 926,753 bales, $60,000,000; approximate average price, $64 plus.

China, 280,831 bales, $16,000,000; approximate average price, $56 plus.

Total, 1,207,584 bales, $76,000,000.

United Kingdom, 983,056 bales (eight months to April 1, 1932), $39,000,000; approximate average price, $39 plus.

China, 913,119 bales (eight months to April 1, 1932), $35,000,000; approximate average price, $38 plus.

Total, 1,896,175 bales (eight months to April 1, 1932), $74,000,000.

Approximately 50 per cent increase in bales, 3 per cent less in dollars.

Wall Street Journal figures of July 20, 1932, editorial: Total exports for first six months, 1932, 3,917,061 bales; total exports for first six months, 1931, 2,600,000 bales. Increase 1,317,061 bales or 50 per cent over 1931.

Rough calculation in dollars: Total exports from January through June, 1932, $160,000,000; average price, $40; total exports from January through June, 1931, $145,000,000; average price, $55. Increase of $15,000,000 or only 10 per cent over 1931.

Mr. LEON. China has been forced into an export position by the artificial depreciation of the (silver) Chinese exchanges. Had the purchasing power of the Chinese remained unimpaired, their indispensable import needs would not have forced them into this export position at the expense of the Western labor. Hence the imperative necessity of doing something through silver for American agriculture, American industry, and American labor, instead of merely "doing something for silver."

Authority should be given the Treasury to purchase $200,000,000 in silver at a cost not to exceed 50 cents per ounce, purchases to be made in the world's markets and not restricted to American production. The financing of this operation could be effected by expanding by an equal dollar amount our issue of silver certificates now outstanding in the sum of approximately $500,000,000, or by utilizing part of the gold now held as reserve for gold certificates and United States notes combined, now outstanding in the sum of approximately $1,500,000,000. The gold thus thrown upon the world's markets could not fail to affect its value when measured in terms of all other commodities. Our gold certificates and United States notes would be left with a gold coverage of approximately 85 per cent which should be considered as adequate. On completion of this operation we would have less silver in this country in proportion to gold stocks than we had in 1914. As a powerful influence on world prices and on American trade, this measure would have incalculable consequences. The last important available stock of silver, now held in the Indian Treasury, and said to approximate 200,000,000 ounces, would be removed from the world's markets. Faced by this vast sale of gold and by a reduced production of silver, the precious metals would regain a measure of equilibrium. Meanwhile the fall in the Chinese internal price level, caused by the rise of the China exchange, would cause little disturbance owing to the limited size of the Chinese credit structure, while further compensation would be found in the restoration of the purchasing power of the Chinese currency. Dumping on our market from that quarter would be terminated.

While unemployment and misery stalk this land of plenty, many measures of relief are being offered. While well inspired, they are usually inadequate because their sponsors fail to grasp the true nature of our basic problem. How can we ask bankrupt industry to rescue bankrupt agriculture? How can the bankrupt white-collar class be asked to support those in uniform who are also bankrupt, all because of low prices. No, class legislation will never do. We must find a remedy which will bring relief to all classes, one which will lift the burden from the backs of all our people. Low prices are diffusing poverty among us all. The distribution of wealth can only come through the raising of prices, which, by first creating wealth, will lead to its distribution among all classes.

While no country can pretend to a monopoly of the control of prices, it is equally true that no nation alone can succeed in raising world prices. However, an Anglo-American understanding will constitute a force of such numerical proportions as will insure the realization of our objective. Therefore, the part of wisdom is for the United States to assume an attitude of enlightened selfishness, by adopting a policy of give and take toward our friends across the sea. Provided Britain will work with us to raise prices and to restore international trade, we should work with her to enable her to put the pound back to its former time-honored gold parity, and assure stable monetary conditions for England which can only come about if the burden of her debts to our Treasury is not such as to constitute a constant menace to her currency.

If we are resolute in pursuing this aim, those enlightened and influential Britons, to whom I have already referred, will do their part, so that certain success will crown our joint effort.

Senator KING. I suppose you refer to Sir Robert Horne as among the enlightened Britishers?

Mr. LEON. Yes.

Senator KING. And others who recently signed the British manifesto in regard to silver?

Mr. LEON. Yes, sir.

Senator KING. Was there a little inconsistency, Mr. Leon, in your statement that there ought to be an interdiction upon the export of gold, followed by your statement that we ought to sell considerable gold and thus distribute gold throughout the world?

Mr. LEON. No.

Senator KING. Do you see any incompatibility between those two statements?

Mr. LEON. No; none whatever. For the reason that the exchange operations which caused the disparity between the dollar and the depreciated currencies are only initiated because the dollars so purchased are a call on gold. If they are no longer a call on gold nobody indulges in the operation.

Senator KING. What would be the immediate effects, if you care to elaborate your statement, of a measure adopted under the law to which you referred, or by an independent act passed by Congress preventing the export of gold?

Mr. LEON. The immediate effect, in so far as viewed from the United States, would be the sudden rise of the foreign exchanges, because the rate for dollars in the exchange markets would respond only to the supply and demand of dollars. Whereas to-day they are responding not alone to that supply and demand of dollars based on commercial operations, but also to the enormous volume of these artificial operations on account of the exchange equalization fund and similar funds for account of other nations.

Senator KING. Would not, however, the rise in the value of dollars—of course gold dollars—throughout the world, according to the philosophy which you have been enunciating, cause a reaction upon prices and cause them to seek a lower level?

Mr. LEON. On the contrary, Senator, the dollar would not rise, the dollar would fall in terms of foreign exchanges.

Senator KING. It would mean that the dollar, the gold dollar, would rise in value measured by commodities and human labor?

Mr. LEON. No; just the contrary. Just the contrary.

Senator KING. Elaborate that.

Mr. LEON. To-day there is only one commodity which needs stabilization. That is gold. It requires stabilization downwards. If you will look at the price of all commodities measured in terms of each other, with the exception of gold, you will find that they are all pretty well in line.

Senator KING. Including silver?

Mr. LEON. Including silver. They are all selling at subnormal prices. Now, we have tried to stabilize all other commodities but the one which requires stabilization. We require stabilization of gold downward.

Senator KING. Do you think that your criticism of Great Britain—and I do not know that I differ from it—is entirely warranted, or, rather, do you think that you ought to isolate Great Britain and direct those shafts of your logic against her, when we find that France, and particularly Russia, Czechoslovakia, Poland, Germany—especially Germany, in her South American activities—have sought to increase their exports, and in so doing, of course, have been willing to cut prices and possibly thus to secure greater export trade than otherwise they might have?

Mr. LEON. Senator King, the British control to-day 49½ per cent of the currencies of the world. The details of it are in these figures. They control directly or indirectly through the sterling area and the Indian silver policy approximately 1,100,000,000 people.

Senator KING. They do not control the currency of Russia?

Mr. LEON. No. I am trying to describe their control. Any control of approximately 50 per cent of the world's currency constitutes the control of world prices. I do not care to say that it would not be very highly desirable to bring all currencies into line, but I say that if you can bring at one fell swoop 50 per cent of the currencies of the world into line you have done the better part of the job. In other words, if an Anglo-American understanding can be arrived at that understanding will constitute the bandwagon which everybody has got to board.

Senator KING. That would mean undoubtedly, then, that if the United States and Great Britain should enter into an agreement regardless of the rest of the world for the use of silver at a certain ratio with gold, that it would be effective?

Mr. LEON. I will express it the other way, Senator. If the United States and Great Britain come to an agreement about the desirability of lowering the price of gold through any instrument that they can think of—the only reason why I pick silver as the only instrumentality whereby that can be achieved is because there is no other international instrument known to man. All of the other instrumentalities of exchange are local in their nature. The sterling exchange covers 600,000,000 people. Gold covers the entire population of the globe, and so does silver, in that they have a market everywhere. Furthermore, they are both deeply embedded in human psychology as money metals. They are both subject to the same legal fiat, and therefore can be created as reciprocal equivalents of each other. If there is any other instrument whereby the lowering of gold can be achieved, I will take it with my eyes shut; but I do not know of any other.

Senator King. You read, I suppose, the admirable address of President Hoover night before last in New York, in which he refers to silver, and one of the uses to which it might be put which might ameliorate conditions was to increase its use as subsidiary coin. What other policy or plan would you suggest for the utilization of silver for the purpose of increasing prices in harmony with the report of the McMillan committee of Great Britain which insisted that prices should be rehabilitated and increased throughout the world if we are to be lifted out of this depression?

Mr. Leon. Senator, if we could achieve an international money system, it would be a very ideal sort of thing. It would be just about as ideal as a universal language or a universal religion. But it is not quite as easy as all that. Now, the world is divided into about two parts; and in what we call the occidental world gold functions admirably, or should. I mean it is best suited to our needs. In the other half, the oriental world, the lowly individual status of people does not permit them to think in the same terms as we do. In other words, they can not reach up to the gold basis, and gold can not be successfully minted in the small——

Senator King. Units.

Mr. Leon (continuing). In the small units, you see, which are adequate to the very modest individual transactions of the people. When a Hindoo or a Chinese gets through working for a whole month at a very few cents a day he has just so much, and he can not command gold, but he can command silver; therefore, silver is especially suited to his needs.

If we recognize in our currency systems, either by means of fractional currency, if you like, or in any other way, the money of these other people with whom we trade, and whose importance is particularly great when we think of their ability to affect prices; in other words, if the instrument of exchange of the East is lowered, the costs are lowered. The costs of production are lowered, and all that is produced—this production being predicated upon not alone cheap labor but also cheap exchange, and enters the world market in successful competition with all goods produced in the occidental world and therefore destroys prices.

The Chairman. Mr. Leon, have you anything in mind, any plans whereby anyone could assist England in bringing back her pound to $4.86? I ask that because of statements which you have already made as to the actual necessity of it before conditions in this world are right. What is your idea as to what England can do to place her pound back to $4.86?

Mr. LEON. Senator, I am glad you asked me that. I am going to show you some figures which have gone recently in the fixing of the sterling rate. These figures I culled out of the London Economist of January 28, 1933. The floating debts of Great Britain on March 31, 1932, were 611,000,000 pounds, roughly.

The CHAIRMAN. Is that gold pounds?

Mr. LEON. Pounds sterling; there are no gold pounds; pounds sterling.

The CHAIRMAN. Pounds sterling?

Mr. LEON. The floating debt on January 21 1933——

Senator BARKLEY. Do you mean by the floating debt the debt of all the people or the Government?

Mr. LEON. No, no; the treasury's debt.

Senator GORE. The unfunded debt.

Mr. LEON. That is it. On January 21, 1933, it was £927,000,000, an increase of £315,000,000 in approximately 10 months. The British treasury accounts for it by a deficit of £157,000,000. There are two small items, one, loans to road fund of approximately £8,000,000; and, the other, bonds for war-loan conversion, of £18,000,000. Which leaves for the exchange equalization fund investment £129,000,000.

Senator KING. That is subtracted from the £150,000,000?

Mr. LEON. In other words, the British treasury has sold in the past 10 months £129,000,000. And that has kept the rate down.

The CHAIRMAN. You say sold that amount of sterling?

Mr. LEON. Yes.

The CHAIRMAN. Was it sold to the English people? Were the individual Englishmen the purchasers of that amount, or from what source was the money raised to purchase that sterling?

Mr. LEON. The money is raised in London by means of sales of British treasury notes. The proceeds of these pounds sterling belonging to the treasury are immediately utilized to purchase gold currencies, dollars, francs, Dutch guilders, Swiss francs, Belgian francs. So that the British Government borrowed from its people £129,000,000 and sold them in the exchange markets.

The CHAIRMAN. I wanted the record to show it. That is the only way that it could be done.

Mr. LEON. I submit this for the record.

The CHAIRMAN. Put it in the record at this point.

(The statement presented by Mr. Leon is here printed in the record in full, as follows:)

*Great Britain, financial year 1932–33; April 1 to January 21, 1933*

| | | |
|---|---|---|
| Floating debt: | | |
| Jan. 21, 1933 | | £927, 370, 000 |
| Mar. 31, 1932 | | 611, 955, 000 |
| Increase | | 315, 415, 000 |
| Deficit | | 157, 717, 000 |
| | | 157, 698, 000 |
| Less loans to road fund | £8, 807, 000 | |
| Less war loan conversion | 18, 975, 000 | |
| | | 27, 782, 000 |
| Exchange equalization fund investment | | 129, 916, 000 |

Source: The Economist, January 28, 1933.

Mr. LEON. Now, if you consider the volume of trade has contracted so much, and that the exchange market, of course, is much thinner than it would be under normal volume of trade, then you will realize what a weight of 129,000,000 pounds sterling is to all exchange. In other words, in my estimation the pound sterling would, if left alone, be selling at well upwards of $4 to-day. Well upwards. And by way of proof, or, rather, by way of——

Senator KING. Elaborating.

Mr. LEON. By way of elaborating, if you will, Britain is not the only Government indulging in these purely artificial operations.

Senator REED. What is the motive for it?

Mr. LEON. I explained it, Senator, in which I showed that the short-term objective is the creation of a price condition such that politically we will be more amenable in this country to such arguments for the reduction of debt as may be offered.

On January 7, this year, the New York Times published the following dispatch from Tokyo, January 6:

Yunosuke Yasukawa, director of the great Mitsui Bussam Kaisha, one of Japan's largest corporations, predicts in his review of business prospects for 1933 that President-elect Roosevelt may place an embargo on gold exports from the United States.

Mr. Yasokawa says:

"President Hoover's inflation policy has not ameliorated the distressing conditions in the United States. For this reason I expect that Mr. Roosevelt, after assuming office, may impose an embargo on gold.

"If he does so, the effect on Japan will be the abrupt rise of the yen to between 30 and 40 cents. This will give a shock to our financial world. We must keep the possibility in mind and prepare for it."

The CHAIRMAN. What is this from?

Mr. LEON. This is from the New York Times, January 7.

Senator GORE. The yen could not rise that much, could it? It is only 30 cents below par now.

Mr. LEON. The yen is now selling at about 21.

Senator GORE. Yes.

Mr. LEON. The weight which is maintaining the yen down is twofold. One is a very large credit expansion. And the other, operations similar to the operation of the equalization funo. It is a combination of both. You will recall this. The British have not indulged in a sixpence worth of currency expansion. And all of their credit expansion is completely offset by holdings of gold currencies.

Senator KING. Does that report from which you read indicate the debts due the British Government from France, Belgium, Italy, Poland?

Mr. LEON. That has nothing to do with debts.

Senator KING. I know it does not, but I wondered if it did.

Mr. LEON. No, indeed.

Senator KING. I was wondering if Great Britain had anticipated, in view of the deficits to which you referred, payments from her debtors and had failed to realize her anticipations?

Mr. LEON. No; I think the deficit naturally includes the $95,000,000 which they paid us in December.

Senator KING. Undoubtedly.

Mr. LEON. No question about that.

Senator KING. Have you any other suggestions to make, Mr. Leon, with reference to the present economic situation in the United States that would be calculated to relieve the depression?

Mr. LEON. Senator, there is only one thing that can relieve us all and that is a higher price level.

Senator KING. And you have indicated the measures to be adopted in order to secure that result?

Mr. LEON. I know of no other way to relieve the situation here for the reason that as long as Government is administrative it must have a price basis upon which to administer. If it does not possess it it can not administer.

Senator KING. Is there any danger that if there shall be a continued issue of bonds and the assumption by the Federal Government of obligations which may be denomiated as private in character, this attempt to bolster up railroads and banks and other organizations—is there any danger of the credit of the United States being impaired?

Mr. LEON. There is every rason why the credit of the United States will be impaired, because the railroads will never be bolstered up by anything except car loadings.

Senator KING. You might reduce the capital structure and that might contribute somewhat.

Mr. LEON. I am not a proponent of the reduction of anything.

Senator KING. If they went through the wringer and the capital structure was devaluated and brought into a proper juxtaposition with the real value some good might be accomplished by that?

Mr. LEON. I do not think so, Senator. We can go on deflating everything in sight. Every time we deflate anything we are contracting purchasing power. I am not a proponent of cutting anybody's salaries, including Government officials. I am for raising everybody's salaries, everybody's prices, because that will bring us up nearer to our debts.

Senator KING. You would raise us up by our boot straps, would you?

Mr. LEON. No, sir; I would not raise us up by our boot straps.

Senator BARKLEY. By whose boot straps?

Mr. LEON. By no one's boot straps.

Senator KING. If your policy were merely to increase prices and salaries, Government as well as private individuals, without increasing production and the productive enterprise of the country you would not get anywhere, would you?

Mr. LEON. Of course I would not try to do that.

Senator KING. No.

Mr. LEON. What I would try to do is to bring the price level somewhere near the debt level. In other words, if we permit a purely deflationary condition to be perpetuated the result is obvious.

Senator BARKLEY. Mr. Leon, I did not hear your full statement, I am sorry to say, but I gather that the substance of your final recommendation is for the Treasury to purchase $200,000.000 worth of silver and sell about the same amount of gold?

Mr. LEON. Yes.

Senator BARKLEY. How much silver is there in the world, do you know?

Mr. LEON. The estimates of either gold or silver stocks are nothing but guesses on the part of any one.

The CHAIRMAN. Well, you know how many ounces of silver have been produced in the world? You know that, of course.

Mr. LEON. Well, the best estimates, Senators, are good guesses. I have been in the bullion and exchange business all of my life, and I can assure you that having spoken to most authorities who get up interesting statistics there is nothing quite exact about that.

Senator BARKLEY. Give the result of these guesses.

Mr. LEON. The generally accepted figures for the gold stocks of the world were approximately 12,000,000,000 dollars, and the generally accepted figures for the stocks of silver are approximately 10,000,000,000 ounces.

The CHAIRMAN. Eleven billion ounces.

Senator BARKLEY. Eleven billion ounces?

Senator KING. Ten, he says.

Senator BARKLEY. At 50 cents an ounce, that would be about five billion dollars.

Mr. LEON. About five billion dollars.

Senator BARKLEY. Of course I suppose that your theory about this solution is that by the purchase of $200,000,000 worth of silver, which would be about one twenty-fifth of the amount of silver in the world, it would bring the price of silver up to a certain point, and by selling practically the same amount of gold it would drive the price of gold down on one end of the scale so that they would approximate each other?

Mr. LEON. Yes.

Senator BARKLEY. Do you think that the purchase of that comparatively small amount of silver and the sale of that comparatively small amount of gold would result in approximately a meeting of the two metals in relative prices?

Mr. LEON. I do, for this reason, Senator, that a thing of this sort would have a power of leverage far exceeding anything that we can conceive, for this reason. We know approximately what stocks are weighing on silver. The Indian stocks are virtually the only one on the face of the earth of any consequence which are weighing on silver and ever since these stocks have been placed for sale, that is to say, in early 1926, every incentive has been given to the normal users of silver to no longer take their profits in their money, because they knew that money was doomed, but instead to take it in gold. And there has been a flight from silver to gold. If you can induce or superinduce all normal users of silver to reverse these operations I feel certain that we will not be able to buy a single ounce of silver at 50 cents.

Senator BARKLEY. Upon what basis do you predicate your suggestion that $500,000,000 in new silver certificates be issued based upon $200,000,000 worth of silver?

Mr. LEON. I am not speaking of $500,000,000 of silver certificates, sir. I say $200,000,000 in silver certificates.

Senator BARKLEY. You use the figure here of approximately $500,000,000 in your statement.

Mr. LEON. I say that there are now outstanding approximately $500,000,000 in silver certificates.

Senator BARKLEY. I though you said you would increase them by that.

Mr. LEON. No; I merely suggest I would increase by $200,000,000 the issue of silver certificates, which are now outstanding in the sum of $500,000,000.

Senator BARKLEY. The net result, as far as money is concerned, would be a net increase in circulation of our money of $200,000,000?

Mr. LEON. Yes.

Senator BARKLEY. There would be no increase of certificates or Treasury notes payable in gold which now amounts to about $1,500,000,000? You would not lower or raise it by that operation?

Mr. LEON. I have given two suggestions for the financing of the purchasing of the silver: Either the issue of silver certificates in the sum of $200,000,000 or the utilization of part of the gold now held as reserve for gold certificates and United States notes, now outstanding in the sum of $1,500,000,000.

Senator BARKLEY. Do you think that the mere bringing together of the price of gold and silver to approximately a parity by this operation, which seems simple enough on paper, would be the magic wand by which the economic conditions of the world would start back uphill?

Mr. LEON. If there was any magic wand about it, sir, I would not talk about it. I am a very practical exchange person, you see.

Senator BARKLEY. Well, I should not describe it that way.

Mr. LEON. I am going to show you that the power of leverage can function. In 1924 when the franc was in full flight the then Prime Minister of France, Mr. Poincare, got a credit in America of $100,000,000 for the purpose of stopping the flight of the franc. He put the franc from 2 cents to 8.20, utilizing but a fraction of this $100,000,000. I am informed the sum was $36,000,000. I am merely indicating that because there is a power of leverage. To-day there exists a technical short interest in silver on the part of the normal users of silver who would only be too glad to reverse their operations if they were placed on notice that silver was not a doomed metal or a doomed exchange.

Senator BARKLEY. Does the increase in the circulating medium due to the printing of $200,000,000 worth of silver certificates based upon those new purchases play any important part in this restoration, in your mind?

Mr. LEON. In my assumption, sir, the price system is threatened entirely by the fact that to-day the world is measuring all values, all prices, in terms of a cornered metal—gold. And that to a very large extent the present stocks of gold are sterilized. And that by reversing the operations initiated in 1926 through the Indian silver policy, that would not alone bring back equilibrium in the important exchanges and through them in cost prices, but that would also take out of sterility such gold as is to-day locked up.

Senator BARKLEY. And it would be used, of course, only as the basis for currency? If it is sterilized the process of unsterilizing it would result presumably in increasing the circulating money in the world?

Mr. LEON. No doubt.

Senator BARKLEY. Assuming that that is true, how do you explain the fact that the increase in our circulating medium in the last three years by over $1,000,000,000 has been contemporaneous with the constant fall in prices and the depression in business and everything in the country?

Mr. LEON. Senator, I am sorry that you did not hear my statement, because I explained it fully there.

Senator BARKLEY. I will not ask you to repeat it.

Mr. LEON. I will repeat it in this wise; I think it bears repitition. Prices, that is to say world prices, can not respond to local instruments. They can only respond to international instruments. If you extend credit/or currency locally you are really attempting to raise one corner of the pond. To increase the whole pond you have got to use an international instrument. Gold and silver are the only two international instruments that we know of.

Senator BARKLEY. Well, there is also danger of all the water running to the lower end of the pond if you raise your own corner.

Mr. LEON. I do not say that we should raise our corner, sir; I say that we ought to try to raise the world level.

Senator GORE. Are you through, Senator?

Senator BARKLEY. Yes; I will suspend here for a moment.

Senator GORE. I did not hear the first part of your statement, Mr. Leon, but I inferred from what you were saying when I came in that you regard as one of the first indispensible conditions to world recovery some sort of international standard or measure of value?

Mr. LEON. I did not make myself clear, sir. I do not think that is possible.

Senator GORE. You do not think that is possible?

Mr. LEON. No, sir.

Senator GORE. And you think that you can not stabilize exchanges without some sort of common unit or common standard so that everybody would be talking about the same thing at the same time and know what they are talking about? I mean the leading commercial nations?

Mr. LEON. Yes. Everybody does talk about the same thing at the same time. And I might prove it to you in this wise. Britain to-day is saying that she is not going to go back to the gold standard except in her own good time. And yet by the operations on account of the exchange equalization fund she is now the possessor of a stock of gold for account of the British Treasury which is in excess of the total gold held by the Bank of England.

Senator GORE. I understood you to say that the depreciated currencies and controlled currencies and the fluctuating exchanges were obstacles in the way of world recovery?

Mr. LEON. Yes, sir.

Senator GORE. Then are they thinking about and talking about the same things or not? And if so, what is the standard and what is the word they use when they compare international prices so as to know what each other are talking about to-day, and that they mean the same thing three months from now when payments should be made in that one thing, whatever it is?

Mr. LEON. Senator, you can translate one in terms of another.

Senator GORE. Yes.

Mr. LEON. In other words, if you sit in London the only thing that fluctuates——

Senator GORE. Now you can do that day by day.

Mr. LEON. Yes.

Senator GORE. But you can not calculate three months ahead when all your standards are fluctuating up or down, crosswise or otherwise?

Mr. LEON. Oh, I admit that.

Senator GORE. Now, then, the world, the civilized commercial world, has come by common consent to accept gold heretofore as the international standard of value, has it not, in the measure and expression of prices?

Mr. LEON. I think that applies to the occidental world; yes.

Senator KING. Senator, when you said "heretofore" you did not mean back in 1816 when, in the Napoleonic time, they demonetized silver, because up to that time there had been the double standard?

Senator GORE. Yes; I mean the main civilized world. A sort of double standard that never did work.

Senator KING. Well, I disagree with you there.

Senator GORE. Now, then, one of the conditions precedent to the working of the gold standard has been the free flow, or the ebb and flow of gold between different countries in response to supply and demand—or in response to demand. That is indispensable to the working of the gold standard, is it not?

Mr. LEON. Yes.

Senator GORE. But you do not think that the restoration of the gold standard is essential, but some other standard or substitute would take its place?

Mr. LEON. On the contrary, I am all for the gold standard.

Senator GORE. You are?

Mr. LEON. Yes.

Senator GORE. And the world is too, for the present. But you do not regard that as one of the causes of existing disorder and trouble?

Mr. LEON. I do not understand you, Senator. I am sorry.

Senator GORE. You say you are for the gold standard, and the world is off the gold standard.

Mr. LEON. Yes; very largely.

Senator GORE. Does that account in anywise for the disorder that prevails and reigns in these disordered exchanges?

Mr. LEON. No doubt.

Senator GORE. Then, if the United States should lay an embargo on the export of gold would not that aggravate the existing disturbance and add to it?

Mr. LEON. On the contrary, the present intensification of disparity in the exchanges is due to purely artificial measures affecting the gold standard.

Senator GORE. Yes, sir; and would you not recommend, Mr. Leon, our embargo on gold as an additional artificial lever exercised with the ultimate view of coercing other countries to agree to some sort of international standard?

Mr. LEON. On the contrary, I look upon the artificialities represented by the exchange equalization fund as coercion on the part of aliens upon us.

Senator GORE. Yes; and this would be retaliation, would it not, in a sense?

Mr. LEON. No; it would be a measure of self-defense, but no retaliation.

Senator GORE. Well, it would be an additional artificial force, whether defensive or offensive? And exercised to bring about a different attitude on the part of other countries?

Mr. LEON. Well, I think that you can define self-defense any way you like. If somebody come to me with a stick and I have got a pistol I certainly do not want to use that pistol.

Senator GORE. Well, now, is your point for us to get more pistols and other countries get more pistols, or try to bring about some sort of truce and lay aside our weapons and carry on commerce on peace principles?

Mr. LEON. I stated in my statement, Senator, that I look for cooperation first. That is the thing that I want. But that if I can not get it, then I have to defend myself.

Senator GORE. Is not your suggestion for us to lay an embargo on export of gold simply going East with the ultimate view of getting West? You can go West and come back to the Atlantic coast here. And is not that the same theory that is involved in that suggestion?

Mr. LEON. I do not think so, sir.

Senator GORE. Well, that settles that. I inferred that you wanted to embark upon a silver policy in order to raise the price of silver in the Orient.

Mr. LEON. No, sir.

Senator GORE. Or in the world.

Mr. LEON. No. I want to use any instrument that I know of to get the price of gold down.

Senator GORE. Yes.

Mr. LEON. And I know of no other instrument that will do it except silver.

Senator GORE. Except to get silver up. Yes, sir. Now silver is cheap in the Orient, is it not? It is cheap everywhere.

Mr. LEON. It is cheap everywhere measured in terms of gold.

Senator GORE. Yes. And cheap in the silver-using countries of the Orient. That is true, is it not?

Mr. LEON. I do not know. That is not true. It is not cheap measured in terms of any commodity other than gold.

Senator GORE. That is what I am getting at.

Mr. LEON. Yes.

Senator GORE. But cheap silver in China means relatively high prices of their products, does it not?

Mr. LEON. Relatively high prices for their products, yes.

Senator GORE. Yes. Money is cheap in the Orient and prices are high. In the United States money is dear and prices are low. Now, then, does that principle work differently in the eastern and western hemispheres? You want to reduce the value of gold here and raise prices. You want to raise the price of silver in the Orient and reduce prices?

Mr. LEON. Right. In other words, bring about equilibrium.

Senator GORE. Now, then, ought we to sacrifice the Orient by giving them dear money—what we have got and do not want—and give them low prices instead of high prices in order that we can get high prices instead of low? My point is that it seems to me like there is something wrong when you want to invoke a principle that does in the Orient the reverse of what you want to do here. Now we are complaining that money is too dear and the prices are too low. I think that is true. You can talk about it in the abstract or in the concrete. Now you want to make prices high and money low here by making money dear in the Orient and prices low. It somewheres does not click.

Mr. LEON. Senator, you may forgive me for looking at the situation as an American citizen, from the American angle.

Senator GORE. I see.

Mr. LEON. I can not possibly break out crying about the situation in China when the situation is such as it is here.

Senator GORE. If you want to sacrifice the Orient on that altar, that is a definite policy that we can all understand, economic and moral as well, for that matter.

Mr. LEON. I do not want to sacrifice them.

Senator GORE. How much has gold appreciated?

Mr. LEON. The best way to look at appreciation of gold is to take a sort of a general commodity index as measured by gold, and you might say that gold has increased 100 per cent.

Senator GORE. Yes. It has doubled. Now then, gold is like any other commodity. It responds to the same law of supply and demand respecting value, the rise and fall of value, does it not?

Mr. LEON. Yes.

Senator GORE. Now, there are just two things that will make gold become dearer, as it has become dearer. One is an increase in the demand for gold; the other is a decrease in the supply of gold. The demand for gold in the world has not doubled, has it?

Mr. LEON. I should say that it must have as expressed in terms of all commodities or it would not have gone up.

Senator GORE. Do you not know, Mr. Leon, that under the business conditions of the world to-day there is not any demand for gold hardly, as compared with what it was several years ago?

Mr. LEON. I fail to agree with you.

Senator GORE. You think the demand for gold has increased in the world 100 per cent?

Mr. LEON. Yes.

Senator GORE. Then you would not attribute any of it to a decrease, of course, in the supply of gold, because the physical supply of gold has not decreased. Would you suggest and I rather inferred that you did, though I could not quite understand whether you thought the sterilization of gold would increase or decrease its efficiency. On what do you base your conclusion that the demand for gold has increased when international trade, for instance, is only one-third of what it was a few years ago, and our own business in this country is about 50 per cent? How do you reach the conclusion that the demand for gold has increased?

Mr. LEON. Because gold is a primary metal and the basis of a price system and of a credit structure. If you disturb the credit structure and the price structure, then every one will want the commodity of ultimate redeemability in all currency systems.

Senator GORE. Mr. Leon, is not the point in this whole business the collapse in credit, and is not that the reason the prices have gone down?

Mr. LEON. Well, I go further than that, Senator.

Senator GORE. And that we went perfectly wild in the use and abuse of credit and brought on an explosion, and that the depression to-day is a collapse of that credit structure? And the absence of confidence? Is that not the point?

Mr. LEON. Well, I try to go back of that, sir. I mean I just do not think that confidence is something which is quite so indefinite. And if credit has collapsed there must be a good reason for that collapse.

Senator GORE. Yes.

Mr. LEON. Now, there are a number of reasons, but I believe that the fundamental one has been the basic one of a disruption of your money systems.

Senator GORE. Do you not think that it was the excessive use of it that caused that?

Mr. LEON. There are many contributory factors, sir. A great many. But the basic factor is still there. Up to 1925, say, before it was decided to destroy this great mass of gold equivalent, gold was plentiful. Prices did respond in a very large degree to purely natural laws. But the very minute that you permitted——

Senator GORE. Now, Mr. Leon, you say that prices responded to a perfectly natural law. From 1923 to 1929 securities and real estate went up nearly 100 per cent—went up over 75 per cent. Commodity prices went down 11 per cent during that same period. Now, your law was not operating equally on all its subjects, because securities which were responding to this speculative period and your inflation of credit went up. Real estate went up—not during the whole period, but during a good deal of it. But commodity prices went down. Now, why should they behave in that sort of a fashion if it is a law? And does not that confirm the conclusion that it was the inflation of credit which finally blew up and brought us down in this crash and in this wreck, and it is a credit crisis and a credit collapse instead of an increased demand for gold or decreased supply of gold?

Mr. LEON. Senator, our credit expansion was a local expansion.

Senator GORE. You think it was?

Mr. LEON. Well, local in the sense that it was an American bull market in securities, if you like. I mean, the same thing did not exist in all parts of the world. Commodities, on the other hand, respond to international supply and demand; not local.

Senator GORE. And they went down because gold did what?

Mr. LEON. Because a certain large amount of gold equivalent was destroyed, thus rarifying the total stock of gold and/or gold equivalent as represented by gold and silver.

Senator GORE. Do you not think if we could bring about some sort of relationship to restore the international gold standard that would be the best thing to do?

Mr. LEON. That is what I am trying to do.

Senator GORE. Yes.

The CHAIRMAN. Mr. Leon, I want to ask you a simple question, and if you can answer it just answer it in as few words as possible. Supposing you were dictator, had absolute power in your hands affecting the currency and the trade of the country, what would you do in relation to silver and gold?

Mr. LEON. I would approach the British Government, which controls 49½ per cent of the people of this world through exchange.

The CHAIRMAN. That is the first.

Mr. LEON. And then I would say this: You have price control. We have the creditor position. All right; let us adopt the give-and-take policy, and first raise prices. Once prices are raised, international trade reestablished, capacity to pay both at home and abroad re-created, let us readjust the debts on the basis of a capacity to pay. Whereas to-day we are asked to accept the principle of the capacity to pay when there is no capacity to pay.

The CHAIRMAN. You are speaking now of foreign debts to our Government?

Mr. LEON. I do. International debts.

The CHAIRMAN. Well, they were settled on the capacity to pay once. Now, what would you do right to-day under the situation existing in the world to-day if you were dictator of our country?

Mr. LEON. I repeat, I would get an Anglo-American agreement for the purpose of raising the price level and restoring international trade, and I would not talk about anything else until that was restored.

Senator WALSH of Massachusetts. How can that be done? How can you get international agreement to raise price levels?

Mr. LEON. Senator, here is a chart of the disparity of exchanges, and here is your United States dollar [exhibiting the chart]. The gold countries totaling 336,000,000 people, and here are the numerical numbers of consumers weighing upon them. The control lies here. Here is the population of the world. The British control through exchange, through sterling exchange that many [indicating], and through silver that many [indicating], or 49½ per cent.

Senator GORE. How much silver and how much gold? Can you tell? Have you got those figures?

Mr. LEON. The British control of consumers and producers numerically is 49½ per cent of the world's population. If you can get an agreement between the control of 49½ per cent of the world's population and the creditor nation, you have got the control of the world.

Senator WALSH of Massachusetts. I do not see how you can get the agreement.

Mr. LEON. Well, we can only get agreements by trying to get agreements.

Senator WALSH of Massachusetts. That is true. You have got to have something concrete, though.

Senator KING. Let me say to Senator Walsh about that, that recently 100, or perhaps 200, of the leading statesmen, bankers, and members of Parliament have issued a manifesto in which they practically suggest this proposition, namely, that there should be an agreement between the United States and Great Britain with a view to stabilizing prices, and one of the methods to accomplish that is to rehabilitate silver. And they say that the United States and Great Britain and her Dominions getting together could accomplish that result.

Senator WALSH of Massachusetts. Following out the question of the chairman, I understood you to say that you did not accept the principle of deflation; that is, that if you were dictator you would not reduce any salaries and you would not reduce any employees in the Government service. Is that true?

Mr. LEON. Yes.

Senator WALSH of Massachusetts. So that if the post-office receipts of the country fell off by 25 per cent and there was not the need of the number of carriers and clerks that were formerly required, you would not reduce any of their wages or reduce any of their numbers?

Mr. LEON. Oh, no, Senator; no, indeed; no.

Senator WALSH of Massachusetts. What would you do? Increase taxes?

Mr. LEON. No, indeed.

Senator WALSH of Massachusetts. How are you going to avoid that, if you keep the expenses of the Government the same to-day as they were in prosperous times?

Mr. LEON. The way in which you are going to avoid raising taxes—there is not going to be anything in the world to raise taxes on unless you do change the fundamental conditions.

Senator WALSH of Massachusetts. I know, but there is a period of time when you have either got to borrow money to pay the current expenses or you have got to increase your taxes.

Mr. LEON. Yes.

Senator WALSH of Massachusetts. Which would you do?

Mr. LEON. I would do neither. I would try to raise prices first and try to do what I could about walking the tight wire until I had raised them.

Senator WALSH of Massachusetts. In other words, you would not increase taxes, you would not reduce taxes; you would let the Government drift along?

Mr. LEON. No, indeed. I am not for a drifting policy on the part of anybody. But I am for attacking the basic problem instead of everything else.

The CHAIRMAN. Mr. Leon, have you anything further?

Senator CONNALLY. May I ask the witness one question, Mr. Chairman?

The CHAIRMAN. Yes.

Senator CONNALLY. Mr. Leon, I did not have the advantage of your early testimony, but I shall not ask you to repeat anything about that. Your idea, as you said a while ago, is that gold has appreciated in value, regardless of causes, about 100 per cent?

Mr. LEON. As measured in terms of all commodities, approximately that.

Senator CONNALLY. As measured in terms of all commodities. Here in the United States a gold dollar will now buy twice as much as it would formerly.

Mr. LEON. Right you are.

Senator CONNALLY. Have you considered the matter of debtors and creditors and the inequity that results to the debtor by reason of that condition?

Mr. LEON. I have, sir.

Senator CONNALLY. Your view is that the only way prices can be raised is by international action, because the price level, according to your idea, is international?

Mr. LEON. Right.

Senator CONNALLY. Debts, however, are not international, necessarily?

Mr. LEON. Right.

Senator CONNALLY. Have you any plan to suggest that would aid the debtor in the inequalities that the Government has forced upon him by the undue appreciation of gold compared to his commodities which he must sell and with which he has to pay his debts?

Mr. LEON. I know of no other way excepting the raising of prices.

Senator CONNALLY. The raising of prices. Well, that is easily said. That is like restoring confidence; you press a button and restore it. What have you to say, so far as the United States alone is concerned, about reducing the value of the gold dollar so that debtors will have some method by which they can discharge in a fair degree of equity and justice their debts?

Mr. LEON. Senator, I have made the practical suggestion that the only commodity which needs stabilization is gold. It needs stabilization downward.

Senator CONNALLY. Certainly.

Mr. LEON. As we are the possessors of gold, we are obviously in a position of effecting the stabilization downward better than anybody else.

Senator CONNALLY. What have you to say about the Government of the United States reducing the value of the gold dollar by cutting down its content?

Mr. LEON. I have everything to say about that, because that follows the principle of depreciation.

Senator CONNALLY. Certainly.

Mr. LEON. Which everybody else can follow until we all reach zero.

Senator CONNALLY. Do you not think that it would be fair to bring the dollar down to commodity levels with other prices?

Mr. LEON. You could not possibly do it, Senator, for this reason: That if the principle of depreciation is established and further confirmed by us, then Japan or Great Britain or somebody else will attempt to achieve a further disparity by going still lower, and then we will be adjusting the commodity price level downwards by first cutting the dollar in half, and then cutting it again in half until we all reach zero.

Senator CONNALLY. Well, no. If we tie the value of the gold dollar to the commodity price level, why would it not stay there?

Mr. LEON. You can not tie the dollar to the commodity price level because they are both fluctuating units.

Senator CONNALLY. All right. If you varied the redeemability of the dollar from time to time in so many grains; not coin the gold into money, but put the bullion in the Treasury and redeem the gold certificates from time to time in certain variable grains in the dollar, depending upon the average price level of other commodities, why would not gold then be valued fairly and justly as a commodity and not attain this undue value by reason of action of the Government?

Mr. LEON. Well, Senator, I can not conceive a system, either a currency system or an economic system of any sort, which is going to vary monthly, daily, weekly, or——

Senator CONNALLY. Well, they did do it, did they not?

Mr. LEON. No; they did not.

Senator CONNALLY. Commodity values change, do they not, from time to time?

Mr. LEON. Commodity values change, right. We have to have some sort of a system which is going to be fairly lasting.

Senator CONNALLY. One more question: According to your idea, then, unless we do something internationally the debtors in the United States will have to pay $2 for $1 on their debts?

Mr. LEON. No; I think the debtors of the United States would pay nothing on their debts.

Senator CONNALLY. In other words, they would be absolutely liquidated or bankrupt, would they not?

Mr. LEON. Yes.

Senator CONNALLY. The creditors will either get twice as much or the debtors will pay nothing?

Mr. LEON. If the debtors pay nothing——

Senator CONNALLY. If the debtors pay nothing the creditors will not get anything, of course.

Mr. LEON (continuing). The creditors will get nothing.

Senator CONNALLY. But it means absolute wholesale bankruptcy for the debtors, or if it is collectable it means $2 for $1 for the creditor, does it not?

Mr. LEON. Yes.

Senator CONNALLY. That is inevitable?

Mr. LEON. Inevitable.

Senator CONNALLY. And your plan is to let it go?

Mr. LEON. No. My plan is to raise commodity prices so that the debtor can pay something; is in position to pay something. And that if readjustment is necessary he can readjust on the basis of the risen price level.

Senator CONNALLY. In other words, you would devaluate the present gold dollar by lifting commodity prices 100 per cent?

Mr. LEON. Yes; I would.

Senator CONNALLY. There are hundreds of commodity prices and gold on the same level?

Mr. LEON. Right.

Senator CONNALLY. You are in favor of bringing prices up to gold but you are not in favor of bringing gold down to commodity levels?

Mr. LEON. Just the reverse of the process. You can express it any way you like.

The CHAIRMAN. Thank you, Mr. Leon. Mr. Jackson Reynolds. At this point, however, before you begin, Mr. Reynolds, I desire to place in the record here a letter from Mr. Daniel Willard, president of the Baltimore & Ohio Railroad Company.

(The letter from Mr. Daniel Willard is as follows:)

BALTIMORE & OHIO RAILROAD CO.,
*Baltimore, Md., February 10, 1933.*

Hon. REED SMOOT,
*Chairman Committee on Finance,*
*United States Senate, Washington, D. C.*

MY DEAR SENATOR SMOOT: Your letter of the 8th instant, inviting me to appear before your committee and to give my views concerning the present depression and possible legislative remedies, is received, and I appreciate very much the compliment paid me by your invitation. I doubt very much if there is anything that I can add to what has already been said in this same connection that would be of any real help to your committee. I am willing, of course, to appear if you should still wish me to do so.

Responsive, however, to a suggestion contained in the third paragraph of your letter, I might say this: Naturally I have given the general situation much thought and I have read and listened to many suggestions as to what ought to be done or might be done to improve the existing conditions. It seems to me that whatever is done should be done primarily because it is hoped and believed that the doing of it will contribute towards relief of the unemployment situation, and by "relief" I do not mean a dole, but work for the men who are anxious and willing to work, but unable to obtain work.

With this in mind it has seemed to me that there could be no doubt about the desirability, in fact the importance, of taking early steps to balance the Budget. No individual can go on indefinitely living beyond his means, nor do I think a government can follow such a course with impunity. If we may believe the statements made in Congress and elsewhere, it would appear that the expense of government in this country during the present year will be upwards of, if not above, $15,000,000,000, and it is now being estimated that the Nation's income may be as low as $40,000,000,000, but even if it should be as high as $50,000,000,000 it would appear that 30 per cent of the Nation's income will be required to pay for the cost of government. If these statements are true it ought to be possible to reduce such costs by at least 25 per cent. Of course, the process will be difficult and painful, but we have all had to meet the same problem in connection with all other activities and it seems to me it ought to be met resolutely by those whom the people have selected to represent them in the several representative bodies authorized to deal with such matters.

If in addition to a substantial reduction in the cost of government it is deemed necessary to increase the amount to be raised by taxation, it seems to me that a sales tax uniformly applied, naturally small in terms of percentage, would be the best course to follow. Income taxes are already so high that we hear men constantly speaking somewhat as follows: "What is the use of risking my money in business in the hope of securing attractive profits when if I succeed in making profits they will be largely taken away by the government? A much easier course would be to invest my money in tax-free securities and escape all risk and worry."

The next and only other recommendation which I would make has to do with our so-called governmental debts. Personally I believe it would be better for us and better for the world, or that part of the world in which we are particularly interested, if all such debts relating to the war could be canceled. I have two reasons which seem to me to justify this conclusion.

My first reason is this: Certainly the Great War was our war after the 6th of April, 1917, whatever it may have been before that date, but it was upwards of a year later before we were able to make any substantial contribution in support of our Allies by furnishing soldiers for the battlefield. In the meantime we could assist them and did so by loaning them large sums of money with which to secure the things necessary to carry on the war with their own boys while ours were being trained. It so happened that I had a son in the Harvard Law School when our country entered the war. He left the school at once, entered the training camp at Fort Myer, received his commission as second lieutenant and was sent abroad in September, 1917. Most of the time he served in a battery in the Twenty-Sixth Division at the front. Happily he returned in 1919 without injury and in good health. My son was only one of the 2,000,000 sent abroad, but the fact that he and so many others came back without injury was due in part at least to our inability to send trained soldiers and equipment over in the spring of 1917, immediately after we entered the war, and to the further fact that English and French boys, among others, were bearing the shock of battle and losing their lives at a time when the only thing that we could do was to furnish money, much of which was spent in our own country. For these reasons and others I have always felt that the money which we advanced for the purpose of winning the war really meant that we were sending our money to the battlefield instead of our boys, and so far as I am concerned I do not want any part of whatever my share would be of any payments if made to our Government in that connection. That is my first reason for feeling that such debts ought to be canceled.

My second reason is this: It has seemed to me that probably nothing would do more to restore orderly conditions in those countries, particularly with which we ordinarily have close economic relations, than to wipe out as completely as possible all intergovernmental debts, and if this could be done it has seemed to me that that of itself would have a tendency to stimulate trade and commerce, broaden the market for our agricultural products, and also lead to additional employment for some of the men now unable to find it.

On the assumption that it would be impracticable and perhaps undesirable to simply cancel such debts as I have in mind, it seems to me that we should at least be willing to go as far in that direction as our associates in the war were willing to go and did go at the Lausanne Conference. Personally, however, I would prefer to accept the formula which was announced by Governor Smith some months ago. He may not have been the originator of the idea, but he was the first one to state it, so far as I know. I would favor first a moratorium so far as interest payments are concerned, for 10 or 20 years. In the meantime if any country increased its purchases from this country above the present basis, I would favor reducing that country's debt to the extent of one-fourth of such increased purchases, and it would be my hope that the result of such an arrangement would stimulate our foreign trade and lead ultimately to the extinguishment of all such governmental war debts.

There are undoubtedly many other things that ought to be done responsive to our serious economic and political conditions, but if the responsibility rested wholly upon myself to decide what to do first and now, I would do the two things I have mentioned and in the order in which I have mentioned them. I do not see how we can reasonably expect any return of confidence in this country to the extent necessary to stimulate a revival in business or how we can expect to see any substantial increase in our trade and commerce and in our consuming markets unless and until both of the things I have referred to above shall have been accomplished. Concerning these two matters I feel clear and certain in my conclusions. If I were to appear before your committee I could not add to what I have already said in this letter, and if it is agreeable to you I would be glad if you would accept this letter as my statement and excuse me from appearing in person.

Very truly yours,

Daniel Willard.

Senator Harrison. Mr. Chairman, in that connection, before Mr. Reynolds starts, I move that these answers from these persons who have been invited to appear before the committee, unless their answers are strictly confidential, go in the record, and that the clerk give them to the press.

The Chairman. Yes. Without objection, that will be the rule.

## STATEMENT OF JACKSON REYNOLDS, NEW YORK CITY

The Chairman. Mr. Reynolds, we will be glad to hear from you.

Mr. Reynolds. Mr. Chairman, I am at a loss to know exactly why I have been asked to attend here, but I am attending here in response to the summons to answer any questions. I have not presumed to prepare a statement for the information of this committee, because I am sure the committee is better informed than I am.

The CHAIRMAN. We would like to get the views, you know, of any of our leading men, not only of one industry but all of the industries of the country, and we did think, Mr. Reynolds, that you had some ideas, knowing the conditions in the country as they exist to-day, that you would be willing to express to the committee. Of course, you can make it as long as you want to or as short. But whatever ideas you have concerning the conditions that we find ourselves in or affecting the world conditions.

Senator WALSH of Massachusetts. Of course, he is at liberty to put his views in writing if he wants to.

Senator KING. As you know, there is a very serious depression in this country, and Congress wants to deal with it if it can. I am sure that any suggestions that you or other men are willing to offer would be welcomed by the committee.

Mr. REYNOLDS. Well, it is not from any reluctance to state what I think, that I am diffident about this, but a very modest estimate of my own competence and of my own view of the horizon. I do not know very much about the world. I do not know anything about this intricate exchange problem that you have listened to just now. I work in a bank and see some of the difficulties that confront the Nation and the customers of the bank in the present conditions.

Senator GORE. Have you any solutions for those difficulties that you could suggest?

Mr. REYNOLDS. I have not, and I do not believe anybody has except day to day work within his own jurisdiction to better the conditions within his own control. Subject to the application to Government affairs of very much the same principles.

Senator GORE. I infer then that you do not believe in the fairies?

Mr. REYNOLDS. I do not. I do not believe in the fairies.

Senator GORE. I agree with you.

Mr. REYNOLDS. And I do not believe in the omniscient capacity of any one man to point the way to recovery in this complex situation.

Senator REED. Do you think that can be corrected by Government action, Mr. Reynolds?

Mr. REYNOLDS. In my work in the limited sphere in which it takes place I am repeatedly impressed with two things that are a great deterrent apparently, to recovery, and I think one of them is more or less the corollary of the other. The corollary is somewhat in the negative. The principle is in the affirmative. But one stems from the other.

From my observation there was a terrible destruction in the war. We did not pay for it as we went along except with I. O. U's. All of which appear to be heading this way. And now we have got to pay for them. It will be a very long process, and I doubt if legerdemain or formulae will produce the payment.

My predecessor in this chair quoted the Romans about drinking poison from a cup of gold. I would like to quote one word from the Romans which is the infinitive *credere*, meaning to have trust in, believe in, to have faith in, to have credit in, from which we derive the word "credit".

I assume you have heard it so often from other witnesses that there is plenty of money in this country that you believe it in the medium of exchange. I believe it. There is plenty of credit in the world for those who maintain their credit. There is plenty of credit in this country for those who maintain their credit. And it seems to me that the keystone of this difficult arch with so many other stones in it is the growing belief that the highest credit is beginning to be dealt with in such a way that people are beginning to lose faith in it, beginning to disbelieve in it and beginning to discredit it.

If we take an individual, we none of us have very much faith or give much credit to the extravagant, spendthrift, prodigal man. I think it is the same with the Government, and I think that the Government appears to many of its thoughtful citizens as being on the road to spendthrift, prodigal dealings with its affairs.

And I come, therefore, to the major premise of my feeling of the difficulty as being that of the failure of the Government to live prudently within its income. And that until we do that we shall not get out of this difficulty. We shall not get out of it immediately if we do do it, but we shall make a greater contribution to getting on the road to recovery by doing it, in my opinion, than any other expedient we might adopt. That is the affirmative action to which I referred.

The negative corollary is that I think the Government should not create a new fear in the people that its currency is not entitled to faith and trust and credit. I said in the beginning that I did not believe any man could point out the way to recovery. I certainly can not. There are hundreds of contributing factors. The gentleman who preceded me reduces it all to one. And he may be right. I can not dispute him. But I think the situation is very much like that of the man who was interested in what particular tooth of a buzz-saw cut off his wrist. There are a great many teeth in the buzz-saw that produced that result. And it seems to me that with the very moderate equipment of brains that men have—all men, any man—that the simplest thing to do is to try and correct the thing that is most obvious and that we are most familiar with, and that we can do something about, and it is therefore that I have taken the very simple and homely suggestion of applying to the Government what I apply to my personal affairs, and have all my life, of living within my income. And while it is simple now to live within my income it was not always so. And I nevertheless do, and did when it was very difficult.

I do not think that I have any nostrum or necromancy for the problem, or anything further that I would add on my own initiative.

Senator GORE. Mr. Reynolds, with reference to your philosophy, which seems reasonable to me, do you not think if the Government of the United States would lend money to everybody that needs it or wants it, whether public or private, and would fix it so that nobody who had lent money in the past would collect it—do you not think that would revive confidence and restore credit and bring business and prosperity back?

Mr. REYNOLD:. I should not suppose so.

Senator GORE. Well, that is our theory here.

Senator WALSH of Massachusetts. You say that is a theory in the Senate?

Senator GORE. Well, Senator I do not want to get in the category of Barry, so this deponent will not say anything further.

The CHAIRMAN. Was that all, Mr. Reynolds?

Mr. REYNOLDS. Yes.

Senator BARKLEY. Mr. Reynolds, let me ask you this. Desirable as it is that we shall live within our income, from the standpoint of the Government—and I think it is just as necessary to do it as it is for a corporation or an individual to do so—it is more difficult to do it, I will say, because you have absolute control of your expenditures in your household; you can give the word and nothing is bought—but it is not quite that simple with reference to the Government. There are so many heads of the family, and so many calls upon it from otherwise legitimate sources which in normal times are respected, and in times like these almost all demands are legitimatized by propaganda on the one hand and by sincere effort on the other. But assuming that we could like within our income, which, to use the common expression, is to balance the Budget, will that of itself, without other actions, without other influences and agencies here and abroad, start the country or the world up the hill again? Is there any magic to the mere balancing of the Budget alone that will turn the tide? I am asking purely for information, because I agree with you entirely as to the limitation of our brains. That applies to all of us.

Senator KING. Especially the Senate.

Senator BARKLEY. Well, it is a cross-section, I imagine, of the country. More cross than a section.

Mr. REYNOLDS. I am not a soothsayer, and I, of course, have no more confidence in what I am now about to say than you will have when I have said it. I do not believe that balancing the Budget will immediately and in and of itself without any other concomitant reorganize the world on the old basis. I appraise largely what will follow from balancing the Budget by the knowledge of what has followed by the failure to balance the Budget, and repeated promises to do so without performance, the result of the discouragement over that prospect on the part of prudent, thrifty, thoughtful men. And I believe that if you put that process into reverse you would climb the hill that you descended very nearly to the height from which you started.

Again I say I would not think that would happen merely because of the balancing of the Budget, although a great deal of it would through the restoration of trust and confidence and faith that the Government was well run. But I think that it would have a reflex on other countries, on States, on cities, the cumulative effect of which would be almost as of the square of the direct incidence of that one balanced budget of this country.

I believe that a great deal of the difficulty of the exchange situation is due to the fact that other countries have not balanced their budgets. And this is a terrible example to other countries. If this great, rich country, which could balance its Budget—it is not impossible—does not, of course those countries which are poor and have more difficulty in balancing their budgets, will not do so, and the whole international situation is in a morass and will be until everybody does it. But we are in the best position to make the start on that road, and I believe if we did make the start we would have followers both here and abroad, and a very great change for the better would ensue.

Senator BARKLEY. We adjourned Congress at the last session with the announcement that we have balanced the Budget by the passage of a tax bill, which, so far as we knew, so far as any expert opinion that we could obtain from those that had a right to know and from whom we expected the knowledge—which so far as we knew had been balanced. But it was not balanced by any appreciable reduction in expenses, but by an effort to tax the people enough to bring the income up to what we were spending.

Is there any balancing of the Budget that can produce such a result that does not contemplate first the most drastic reduction of which we are capable before there is any effort to tax the people more in order to balance it?

Mr. REYNOLDS. I do not think there is.

Senator BARKLEY. And if we were able to balance it by an increase in taxes alone, would that bring about any appreciable improvement in the condition of the country merely from the knowledge that we were spending no more than we would bring in? Except to the extent that probably the bond market would not have to be burdened by any further Government financing?

Mr. REYNOLDS. I do not believe you can balance the Budget by any device of taxation. I do not think you can levy enoug taxes to balance your Budget.

Senator KING. You mean now? At present?

Mr. REYNOLDS. I mean now. Under present conditions.

Senator GORE. And the constantly declining price levels?

Mr. REYNOLDS. Everything.

Senator BARKLEY. I do not want to detain the witness. But there is one phenomenon that is difficult for me to understand. We talk about the so-called prosperous era and the great delusion, and the great illusion, and the great mirage, and all of those things that transpired from along about 1922 to about 1929, when everybody was feeling that we were in a wonderfully prosperous age, and that there would never be any end to it—except in agriculture. I do not think agriculture felt any such phenomenon. But during that so-called era of seven or eight years of increased prices and increased production and increase in everything, we increased our total indebtedness in this country until it is to-day anywhere from $150,000,000,000 to $175,000,000,000, involving an annual interest charge upon our net income of over $8,000,000,000, which, added to the Government expenses of about $15,000,000,000, takes $23,000,000,000 out of our total income now of about $40,000,000,000.

How do you explain the apparently paradoxical increase in our total indebtedness coincident with our increase in prosperity and the enjoyment of the results of all of our increased prices and increased production and increased trade with the world?

Mr. REYNOLDS. How do I explain the great increase of everything?

Senator BARKLEY. Of indebtedness especially? Why should not we then have been paying off our debts instead of increasing them?

Mr. REYNOLDS. Well, I should say that about ninety-nine out of a hundred haven't got sense.

Senator GORE. Do you not think you are kind of overestimating at that?

Senator BARKLEY. A little high.

Senator KING. Yes.

Senator BARKLEY. I will accept it in principle.

The CHAIRMAN. Senator, you had no reference to the reduction of the debts of the United States?

Senator BARKLEY. I am not talking about the United States debts. I am talking about the total debt of everybody in this country.

Mr. REYNOLDS. That is what my answer talks about. Everybody went into debt.

Senator BARKLEY. Everybody was increasing in prosperity, evidently—we were told that many people were—and at the same time their debts were increasing, their total indebtedness increased enormously during the 7-year period from 1922 to 1929.

Senator KING. It was intoxication, was it not?

Mr. REYNOLDS. Well, it was dementia without doubt, but a very normal dementia the way men's alleged minds are constituted. And there were opportunities then of vast profits, in very short times. And a man by borrowing $100,000 might be able to make $20.000 in two or three days. Therefore he borrowed them. And if he borrowed along toward the end of October he was left stranded.

Senator GORE. Is it not an historic fact, Mr. Reynolds, that people get into debt in good times and get out in bad?

Mr. REYNOLDS. That is it. And you can not get anybody to borrow now except in institutions for feeble-minded.

Senator BARKLEY. I have a feeling that one of the greatest agencies of depression, not only financially but spiritually and mentally and morally in this country to-day is debt and taxes. By debt I mean interest as well as principal. I do not like to ask a man who is as well recognized as you are in the financial world to answer a question of this sort unless you want to, but do you believe that we can pay these debts? That the people at large can ever get out from under this load of debt that is now existing? And we might, if we wanted to, take in the whole world. Is the world ever going to be able to pay its debts? Assuming that we could start back up the hill again and arrive at the peak where we were in 1929?

Mr. REYNOLDS. Well, I haven't a philosophical or a comprehensive mind. I think I can pay my debts. I have been very careful not to get very far in debt. I know a great many people who never will be able to pay their debts. Whether the second class or group outnumbers all those in the first class or not I do not know. I am inclined to believe that there is going to be, necessarily, a considerable revision of debts and a failure of the creditors to realize the amount stated in the bond.

Senator KING. Is it not a fact, though, Mr. Reynolds, that so many of the debts are in a circle; A owes B, and B owes C, and it goes around in a circle, and the dollar started out to pay the debt of A to B would discharge when it got around the debts of a large number of individuals? So that many of our debts will be simply washing out? Transfers?

Mr. REYNOLDS. Of course, that is axiomatic. But the difficulty is to get the dollar to start with. And that is going to be difficult.

I do not think I can generalize in answer to Senator Barkley's question. I think it will be a case of each debt having to be considered on its own basis. A coal mine may have a bonded indebtedness that looks high. If prices of coal are not brought back to the old levels, they can not pay that debt. Because the only way they can pay it is to mine the coal and sell it at a profit and work it down. So as to a debt on a farm. If an Iowa farm was sold at prices at the high and mortgaged for 66 per cent on that basis of prices, and the product can not be sold at enough to reap a profit over a term of years to pay on those high prices of that mortgage and original valuation, that debt will not be paid. Well, I do not know how much to the total part is contributed by the coal mine and the farm that may not or can not pay its given debt.

Senator BARKLEY. As a matter of fact, one of the things from which we are suffering now is the whirlwind reaped from the wind of too much credit. Do you agree to that?

Mr. REYNOLDS. I should say it was from the lunatic use of that credit in a great many cases. I do not think the existence or nonexistence of credit has very much to do with a given situation, except as it is employed. There is a statement frequently made that there is no credit now. There is plenty of credit, but it is not used. It can not be used—and I do not know that there was too much credit then—but it was employed by people that used it recklessly.

Senator BARKLEY. Well, of course, that is the very point. The fact that we are overwhelmingly in debt is evidence of the fact that there was credit. Otherwise we would not owe anything.

Mr. REYNOLDS. Yes.

Senator BARKLEY. What I want to ask in that connection is: Is there any way to regulate the use of credit so as to prevent the recurrence of the same thing at any time in the future?

Mr. REYNOLDS. I hold a rather heterodox view on that. Probably if I had more enlightenment I would not hold it, but my own view is that there is no way to regulate that. If you have credit it will never be used unless and until the user sees that he can make money out of the use.

Senator GORE. Or fancies he can.

Mr. REYNOLDS. Yes; fancies he can. On the other hand, it is very difficult, and I believe under our organization of society of laissez faire it is impossible to prevent people using credit when they do think they can make money out of it.

The CHAIRMAN. The demand has a great deal to do with it, does it not, and also the supply?

Mr. REYNOLDS. The hope of great profit or the despair that there are no profits produces on the one hand the use of credit and on the other the failure to use it.

Senator BARKLEY. Do you think that plus the balancing of the Budget, which has come to be a rather stereotyped term, an increase in the amount of our circulating money would contribute anything to the solution of this problem?

Mr. REYNOLDS. No, sir; I do not.

Senator BARKLEY. You do not adopt the theory that Gov. Bob Taylor is said to have had when he is said to have said in 1896 that he was for a little more gold, a little more silver, a little more greenbacks, and a sprinkling of counterfeit?

Mr. Reynolds. No. I think there is plenty of money in the sense of currency and the medium of exchange for all the operations.

Senator King. I want to ask a question of Mr. Reynolds. I do not know whether you care to answer it, Mr. Reynolds. Assume that the Government with its $5,000,000,000 of deficit during the past three years and an unbalanced Budget for the next year, should issue bonds, two or three or four or five billions more, to meet the demands of the R. F. C., these various corporations which have been set up, or perhaps new buildings, for furnishing food and clothing, and so on, to 12,000,000 unemployed, would there be a point at which the credit of the Government might be impaired so that its bonds might not readily be sold, or if sold, sold at a discount and a high rate of interest demanded? In other words, do we not face the possibility with continuous bond issues of impairing the credit of the country, particularly if the Budget is not balanced?

Mr. Reynolds. I believe you do.

Senator King. There is a limit to the Government's credit?

Mr. Reynolds. There is.

Senator King. And if the credit of the Government of the United States should now be impaired, or even psychologically, to say nothing of directly and really, would not the effect be disastrous to the whole economic fabric?

Mr. Reynolds. It would certainly be very discouraging to all thoughtful men.

Senator Couzens. May I ask Mr. Reynolds what he considers belongs in the budgetary items of the Government? I do not want him to be misled, but he knows more about making a budget than most of us do. Would you put in a budget nonrecurring items and attempt to balance them each year?

Senator Reed. Such as public buildings?

Senator Couzens. Yes; such as money advanced to the R. F. C. and to the home loan bank and to the Federal land bank? Would you put those in a 1-year budget or in the year that they were advanced?

Mr. Reynolds. I should have, Senator, a great struggle between my major premise of thrift and prudence on the one hand and the doctrine of theoretical accounts on the other.

Senator Gore. Of what?

Mr. Reynolds. Theoretical accounts on the other. If you ask me what I would do, I would do in the Government, if I had the whole control, just what I do about my personal affairs, and I would not spend in any one year more than I brought in that year, whether I built a house or bought an automobile or loaned money to my brother. I would not put out any more than came in. Now, that is what I would do if you ask me what I would do. And that is what I would do in the Government.

On the other hand I recognize the theoretical defensibility of the accountancy theory; that a physical structure like a Federal court building or a navy yard should be built out of an issue of bonds and amortized over the depreciation period. And that if money were temporarily raised by the Government to reloan on good loans which would be returned and at a rate which was in excess of the rate paid on the bonds, that you could create a sinking fund out of the payment of the loans to redeem the Government bonds that were made collectible against that kind of enterprise. And I think that is defensible accounting.

Senator COUZENS. Then you think it would be defensible if the Government were to eliminate from its Budget the sum of $500,000,000 advanced to the R. F. C. for stock?

Senator KING. For what, Senator?

Senator COUZENS. For stock in the R. F. C.; and $125,000,000 to the Federal land bank, and $125,000,000 to the home loan bank? You would be in favor of taking those out of the Budget and not try to balance those expenditures all in one year?

Mr. REYNOLDS. I would regard that theory as defensible. I think my practical, thrifty prudence would overcome my personal indorsement of that theory by practice. But if I were so far driven as to adopt the theory in spite of my practice of thrift and prudence, I should want to look at each one of those cases pretty critically and see just how justifiable it was to count on the return of that money to the Government. I would think you might not count on 100 per cent return, and I would want to have some margin of safety even on that theory.

Senator COUZENS. That might be true, but would it be fair to the taxpayers of 1933 to take out of them money to balance the Budget with those items in it, and the next year when it is refunded credit the taxpayers of the following year? They may not be the same taxpayers. I mean, is there any justice in trying to collect in one year all of the emergency advances that we are making, whether they are sound or not, on which we expect to have return in future years?

Mr. REYNOLDS. The mere statement of the argument demonstrates it. Of course I as an individual taxpayer to-day am getting the benefit of the great millions of expenditures that were made on my theory before my time. And so I am personally much more in favor of having my tax bill larger and continuing the present method, personally. But it is a very peculiar and unorthodox attitude, I presume.

Senator COUZENS. Well, I was not so concerned about the orthodox attitude as I was about the matter of justice between the taxpayers of one period and the taxpayers of another period.

Mr. REYNOLDS. Well, I could only look at it selfishly and personally. As a taxpayer I would rather adhere to our present method, although there is much to be said against it, and pay as I go, and pay my tax bill. And I would be perfectly willing to do that if you balance the Budget, on that theory.

Senator COUZENS. Of course, if we followed out your theory we would not have had any railroads, and we would not have had any great developments in industry and utilities; we would not have had them if we had not postponed to some later date the payment of the debts incurred to construct the properties, would we?

Mr. REYNOLDS. That is perfectly true as to individual financing.

Senator COUZENS. Yes. Of course, we assume when we advance these hundreds of millions of dollars and billions of dollars to the R. F. C. and so on, that we are going to get it back, the same as the railroad investors, the utility investors expected to get theirs back when they made their investments.

Mr. REYNOLDS. I can not answer your argument. Your argument is a complete demonstration. But you asked me my opinion.

Senator COUZENS. Yes.

Senator REED. Mr. Reynolds, if that method of accounting were adopted which Senator Couzens suggests would it not be only ordinary prudence to set up as current expenses very large depreciation funds each year?

Mr. REYNOLDS. Oh, certainly. Certainly. I stated that in my answer three or four answers back. You have got to amortize your expenditures on the depreciation basis.

Senator BARKLEY. Of course that would not apply to a loan.

Senator REED. We have got to provide for default.

Senator BARKLEY. Unless you assume that some of it is not going to be paid.

Senator REED. I assume that some of it is not going to be paid, that is, I do in all human experience.

Senator COUZENS. You might charge off some of the business as bad debts.

Senator CONNALLY. I want to ask two very brief questions, if no other Senator has any question. Mr. Reynolds, you spoke about balancing the Budget. Of course you meant to include also all State governments and the cities and counties and every tax-gathering unit, did you not?

Mr. REYNOLDS. No. I was addressing myself alone to the functions of this committee, as a Federal matter, but I did say that I was confident that it would be a great example; it would be adopted by all those bodies.

Senator CONNALLY. You realize, though, that the great load of taxes now on the average man is in the form of State, municipal, and county taxes, rather than Federal taxes, do you not?

Mr. REYNOLDS. I should think it was on the classification of men who owned property but did not have high incomes.

Senator CONNALLY. Yes. What I was going to get at was this: Do you not regard it as a fatal policy for the Federal Government to be financing counties and cities out of the Federal Treasury, as we are doing now under certain advances of the Reconstruction Finance Corporation?

Mr. REYNOLDS. Yes, sir.

Senator CONNALLY. Is that not fatal to their financial independence, and does it not encourage improvident expenditures, when counties feel that they can vote new bond issues, incur extravagant public expenditures, and then come up to the Federal Government and get the Federal Government to take over those bonds and finance them?

Mr. REYNOLDS. My judgment is, there is no doubt about that.

Senator CONNALLY. Do you not think we ought to discontinue that policy even in this critical period?

Mr. REYNOLDS. I hesitate to tell you what you ought to do.

Senator CONNALLY. Well, if you were doing it, what would you do?

Mr. REYNOLDS. I would discontinue it.

Senator CONNALLY. You would discontinue it?

Mr. REYNOLDS. Yes.

Senator CONNALLY. I think you are exactly right. I think the Federal Government when it embarks on financing States, counties, and municipalities is simply entering upon the road to ruin not only for the Federal Treasury but for the counties, the cities, and the taxpayers themselves.

Senator GORE. It takes away their incentive to economize or to reduce taxes.

Mr. REYNOLDS. Or their self-reliance or independence.

Senator KING. I hope you will use your powerful influence to restrain the State of New York from coming here and trying to borrow $95,000,000 from the R. F. C. when the State of New York pays 25 per cent of the taxes and ought to have the greatest credit of any State in the Union.

Mr. REYNOLDS. I have already exerted all the suasion I am capable of in that direction.

Senator GORE. If the officers and directors of the bank were elected by the borrowers from the bank and those who draw salaries from the bank it would exert a sort of a restraining influence on the officers and directors of the bank in policies of economy and retrenchment and so on. That is a practical difficulty here. We men have to get elected. And a great many men think their highest duty is to be kept in public life.

The CHAIRMAN. We thank you, Mr. Reynolds.

Senator REED. Are you going to hear Mr. Taylor before we adjourn?

The CHAIRMAN. Yes.

## STATEMENT OF MYRON C. TAYLOR, CHAIRMAN OF THE UNITED STATES STEEL CORPORATION, NEW YORK CITY

The CHAIRMAN. You may proceed, Mr. Taylor.

Mr. TAYLOR. Senator Smoot and gentleman of the committee: I am very much like Mr. Reynolds. I came this morning without any prepared statement. I was at some loss to know along just what lines to prepare myself. Naturally, my experiences in business life at the present time would be somewhat different than those of both of the gentlemen who just addressed you.

Senator GORE. Will you state your name and business?

Mr. TAYLOR. Myron C. Taylor. Chairman of the United States Steel Corporation.

In industry, that branch of industry in which I am principally concerned, the manufacturing branch, distinguished in many particulars from the agricultural or the railroad branches of industry, we adhere to certain old doctrines that have proven in the past to be worthy of respect, and are guided very much in our activities by the law of supply and demand.

We all know the effect of the war upon industry; its rapid development during war days. We know the heights to which the value of all manufactured commodities rose during that period. We are very familiar with the reaction that occurred early in 1921 and 1922, and in that reaction we learned a very good lesson.

If you recall, at that time industry was burdened with very heavy inventories on very high price levels. And, but for factors which intervened to limit the term of that depression industry would have received a blow from which it could not very well have recovered, except for more general and more drastic reorganizations than took place. Those which took place were severe and widespread.

The reaction which occurred in 1929 was slow in gaining momentum in industry, and it was not until well into 1930 that we felt the full effects of it. But inventories had largely been liquidated. And the prosperous years that intervened between 1922 and 1929 were generally taken advantage of by industrialists to correct their capital structure where it was top-heavy and to conserve its quick assets.

And so industry came into the depression well fortified, speaking generally, to withstand a considerable siege. We have withstood three years of that siege. We have retreated from one position involving price of commodities, cost of production, distribution of resources to stockholders and readjustment of wages only as conditions forced that readjustment. Industry is undertaking at the present time to hold its present position. It is undertaking to hold it with confidence. Confidence born in part from the experience through previous similar depressions that when the basic conditions in this country particularly, and in a secondary sense, as we believe, in the world, right themselves, industry will forge ahead.

In our two related industries, agriculture and railroading, we have a very great interest. Agriculture is not governed by the same rules that manufacturing is, because apparently overproduction does not decrease the effort to produce. Overproduction and declining prices in manufacturing tend to reduce production and to stabilize prices, within reason.

Our fear in respect to agriculture, which we look upon as the source from which all our lives gain inspiration in an economic sense, is that it does not take quite seriously enough the problem which faces it, and it looks more to relief through finding funds to purchase at rising prices its overproduction than it does in going to the root of the difficulty and limiting production.

I have always been influenced by Joseph's interpretation of Pharaoh's dream and similar events at different periods in history, which have always recurred in due course, and which I think, in spite of serious effort by the producers themselves, may in due course repeat themselves in our day, and solve, for the time being at least, this difficulty.

A combination of conditions has produced large crops——

Senator BARKLEY. If I may interrupt to ask you a question there, Mr. Taylor. Is it not a fact that falling prices in agricultural products frequently stimulate overproduction in order that the farmer may obtain a certain amount of money needed, and the more he produces the nearer he can approximate it?

Mr. TAYLOR. I am afraid it is. But this miracle that we are hoping for, though it may work harm to that particular individual whom you desribe, might restore the value of the product and therefore relieve that situation.

Senator COUZENS. Mr. Taylor, have you given any thought to any way whereby over the years commodities might have some relation to the purchasing power of the dollar?

Mr. TAYLOR. I have thought a great deal about it, sir. But I think, so far as I have been able to explore the subject, that the law of supply and demand as related to commodities generally determines that question. The medium by which products are exchanged follows in due course.

Senator COUZENS. Is there any justification in the difference between what a person having a dollar in 1929 could get for his dollar and what he can get to-day? Is there not something wrong with our system that permits that wide range, and is there not something that can be done to remedy it? I am just looking for information.

Mr. TAYLOR. I have no remedy in mind, sir, of an artificial character.

Senator COUZENS. I am not concerned particularly with whether it is artificial or whether it is natural. If it could not be by artificial methods, let nature work so that that great discrepancy would not occur?

Mr. TAYLOR. I know of none.

Senator BARKLEY. Do you think that any artificial situation produced this result, either in legislation or governmental policy or the attitude of the people?

Mr. TAYLOR. I think the attitude of the people during the period of our great prosperity produced this result. I think it would again.

Senator BARKLEY. Do you think that the artificial barriers raised by nations against the exchange of products has had anything to do with it?

Mr. TAYLOR. I think it has something to do with it, at the present time particularly.

Senator BARKLEY. If we could remove whatever artificial handicaps had been imposed, not in this country alone, but all over the world, it might help, might it not?

Mr. TAYLOR. That would be by a stabilization in all countries on a particular level.

Senator BARKLEY. You say a stabilization——

Mr. TAYLOR. A stabilization of exchange upon a satisfactory level.

Senator REED. I think Senator Barkley was speaking rather of tariff than exchanges.

Senator BARKLEY. Well, I know how dangerous a subject that is to even hint at. But still if we are going to deal with realities we ought to deal with it. We ought not to avoid something that has to do with this situation because it is unpleasant. I do not want to avoid it.

Senator REED. I was only injecting the suggestion because Mr. Taylor was speaking of one thing and you were speaking about another.

Senator BARKLEY. I had in mind other things besides tariffs. I know that that is a word that is verboten now almost, in connection with an investigation intended to get facts. I thought it probably would not be improper to entertain the idea.

Mr. TAYLOR. I understood you to stress the fact that through foreign competition increasing quantities of goods were invading our markets, because of the exchange situation. It was that to which I referred.

Senator KING. Of course, we are invading the markets of other countries to the extent of more than $300,000,000 in our favor last year.

Mr. TAYLOR. Yes.

Senator COUZENS. Mr. Taylor, have steel prices gone down in the same relative amount as other commodities have?

Mr. TAYLOR. Yes, sir.

Senator COUZENS. They have gone down in the same relative amount?

Mr. TAYLOR. Not to the same relative extent as products of the farm, because the products of the farm are all under the 1914 level. Substantially under it. Steel prices are at 135 as compared with 100 per cent in 1914.

Senator COUZENS. Is that not too high when other prices are lower than the 1914 scale?

Mr. TAYLOR. It is the lowest of any other commodity with relation to 1914, sir.

Senator LA FOLLETTE. How is it, Mr. Taylor, in relation to the 1923 to 1926 average which is taken as 100 by the Bureau of Labor in its estimates and also by the Federal Reserve Board?

Mr. TAYLOR. Well, it is substantially lower. I am carrying in my mind always the relation between steel prices and wages at the varying times when the price of wages fluctuated. Those periods were 1914, 1922, and 1929.

Senator LA FOLLETTE. But in the statistics publihsed by the Government agencies that attempt to chart the fluctuations in prices, most of them accept the 1923 to 1926 average as 100 in their index.

Mr. TAYLOR. We are very much below the 1922 price base in the steel industry.

Senator CONNALLY. Are you as much below it as agriculture?

Mr. TAYLOR. No, sir.

Senator CONNALLY. You are not?

Mr. TAYLOR. No, sir.

Senator COUZENS. Why is it, Mr. Taylor, that the railroads continue to complain about the maintenance of the price of rails at $40 a ton? I have talked with railroad officials and they have spoken about the maintenance of that rate and the uniformity of it.

Mr. TAYLOR. Well, that is an old question, sir; it is rather an involved one; but I may say to you that as long as my relation to the company has existed the price has fallen or risen with the price of labor. And to-day our labor is on the basis of prices of 1922. Our labor is 156 per cent of the 1914 base. Our rails are at the same.

Senator COUZENS. I understood you to say that steel prices were at 135?

Mr. TAYLOR. Yes.

Senator COUZENS. And that rails were at 156. Is that it?

Mr. TAYLOR. The prices of all steel products are at 135.

Senator COUZENS. But the rails are at 156?

Mr. TAYLOR. Yes, sir; I was speaking of all steel products in the country. That takes in products of all plants of all sorts.

Senator GORE. Did you say rails or wages are at 156?

Mr. TAYLOR. Wages are at 156, Senator Gore.

Senator GORE. That is what I thought you said.

Senator COUZENS. And he said rails also.

Senator GORE. I thought he said they were back——

Mr. TAYLOR. Back to the 1922 price.

Senator GORE. That is what I understood.

Mr. TAYLOR. Yes.

Senator BARKLEY. How does that 156 compare with the purchasing power of the laboring man's dollar? In the necessaries of life, I would say?

Mr. TAYLOR. Do you mean by that food only, or clothing?

Senator BARKLEY. No, I mean everything. If you take an average comparison of the cost of those things to-day and in 1914, how do they compare? Just as a matter of information. I was wondering how that 156 compares with the purchasing power of the laboring man's dollar.

Mr. TAYLOR. I think in all necessary commodities we are slightly above the 1914 base. On food alone I think we are below it.

Senator BARKLEY. Do you mean that the price of the necessaries of life for the average home has gone down more than the price received by the wage earners?

Mr. TAYLOR. Yes, sir. Substantially.

Senator REED. The purchasing power of the day's wage is higher to-day than it has ever been, is it not?

Senator LA FOLLETT. But that does not give any real reflection of purchasing power unless you know what is in the pay envelope at the end of the week.

Mr. TAYLOR. That is quite true. But what is in the pay envelope at the end of the week is determined by the amount of work that can be distribued among the workers.

Senator LA FOLLETTE. Yes, I appreciate that. But in making a statement as to the purchasing power of the wage it has always seemed to me that the figure of what the base is or what the rate is, is not as important in these days as is the amount that is in the pay envelope.

Mr. TAYLOR. Well, one is a method of calculating used by industry in arriving at our conclusions. The other is a fact for which we have sought in vain for a remedy.

Senator LA FOLLETTE. I appreciate that. I am not wanting to get into a controversy with you, Mr. Taylor.

Mr. TAYLOR. I realize that.

Senator LA FOLLETTE. I simply wanted to bring that fact out, because after all it seems to me that purchasing power is in part a very important factor in this situation.

Mr. TAYLOR. Unfortunately the condition you describe exists. And to remedy it industry has quite generally given relief. Our corporation last year in its welfare work spent $16,000,000. In its direct relief in administering food to the needy among its employees we spent between five and six million dollars.

Senator CONNALLY. May I ask one question? What percentage of the total output of steel rails in the country does your company and its subsidiaries total?

Mr. TAYLOR. I should think 38 per cent.

Senator CONNALLY. Your company and its subsidiaries control about 40 per cent of the total output of rails?

Mr. TAYLOR. Of course in the last year or two, Senator, we have not produced any to speak of.

Senator CONNALLY. Well, your ratio would still be the same?

Mr. TAYLOR. I think so.

Senator CONNALLY. I was asking if the ratio was not the same. You said that since you have been connected with the company the prices of rails and wages have maintained the same relative level?

Mr. TAYLOR. Yes.

Senator CONNALLY. When one goes down the other goes down?

Mr. TAYLOR. Yes.

Senator CONNALLY. That would seem to indicate a control, would it not? In other words, if your company is able to maintain the price of rails in the same ratio as its wages it would seem to indicate that other factors which have operated on the reduction of other commodity prices did not affect your company to the same extent as it has other companies? In other words, would that not seem to raise the implication that you were able to control your price of rails by just figuring what your wages would be and fixing it accordingly?

Mr. TAYLOR. We make a price based upon that reasoning.

Senator CONNALLY. That is what I say.

Mr. TAYLOR. If the customer does not purchase, why, we are very much out of luck, you might say.

Senator CONNALLY. In other words, you have the economic power and ability to fix the price of your rails where you want to fix them, and in doing that you fix them on the basis of your wages?

Mr. TAYLOR. Well, I should not say that we have any power to fix prices at all, Senator.

Senator CONNALLY. Well, you have fixed the price of your own rails?

Mr. TAYLOR. We make the price as respects our own product.

Senator CONNALLY. Yes, certainly.

Mr. TAYLOR. But we do not go beyond that.

Senator CONNALLY. No. I mean your own prices for rails are fixed, based on what your wages are costing you?

Mr. TAYLOR. Naturally, in part.

Senator CONNALLY. Yes.

Senator KING. And in competition with other companies that may bid against you?

Mr. TAYLOR. Well, we estimate the cost—I am speaking now of an estimated cost—and competition naturally controls the business in the last analysis.

Senator CONNALLY. But the fact that rails have not gone down as low as other steel products, and the fact that you have been able to maintain this ratio exactly between prices of rails and wages, would seem to indicate that other factors had not operated on your concern in the same way that they have on other commodities?

Mr. TAYLOR. Well, there has not been any business. That is the answer, sir. We have not had any business offered to us.

Senator CONNALLY. Well, that does not change the facts? Those are the facts, are they not?

Mr. TAYLOR. The fact is that the asking price to-day is as it was in 1922, having been reduced from the 1929 estimate.

Senator GORE. What was the peak price, Mr. Taylor?

Mr. TAYLOR. The peak price was $44.

Senator CONNALLY. And rails are $40 now?

Mr. TAYLOR. Yes, sir.

Senator CONNALLY. Other commodities have gone down, as testified by other witnesses, 50 per cent measured in the average commodity level of the dollar, and yours have declined about 10 per cent, from $44 to $40.

Mr. TAYLOR. That is as it stands at the moment.

Senator CONNALLY. That is what we are talking about—at the moment.

Mr. TAYLOR. Yes.

Senator BARKLEY. Did you say that you were not selling any steel rails now?

Mr. TAYLOR. We have not been doing any business, so to speak, for the last two years.

Senator BARKLEY. So you are in the same position as the farmer. You do not know what the price is?

Mr. TAYLOR. We do not know. We do not get a chance to compete.

Senator BARKLEY. Then you naturally take what the market will stand?

Mr. TAYLOR. Yes, naturally.

Senator KING. I would like to ask you one question, Mr. Taylor, if you care to answer it. In the light of the existing depression and with the problems before Congress, the demands for inflation and demands for large appropriations for the unemployed and for municipalities and States, and the demands of the Reconstruction Finance Corporation to extend credit to a multitude of activities—if you care to express an opinion, what suggestions would you have to make as a guide to Congress to determine a national policy, or to be calculated to help us to get out of this depression? That is a big order, if you care to answer that.

Mr. TAYLOR. I would not care to answer it just that way, but I do believe that at the present moment uncertainty is playing a great part and is a great factor in the revival of our affairs. I believe that, as Mr. Reynolds said, if the Government would put its own house in order as an example to the community, balance its budget, and live within its income, it would go a long way towards reviving public confidence. I think the fear of tampering with the money system is one that spells a good deal of uncertainty in the public mind. I do not believe many people know really what is meant by inflation. And so many forms of it are suggested that even discriminating people may have doubts.

Senator BARKLEY. Mr. Taylor, right there let me ask you about this budget balancing theory. I agree with you as to the desirability of that from an economic, political, and moral standpoint. But as a matter of fact the Government was not only balancing its budget, but it was more than balancing the Budget when this debacle began. When we started down hill we were balancing our budget, and had been for a long time. Now if the balancing of the budget did not prevent the beginning of this decline, how is that alone going to start us back up? That is the thing I would like to know. I am for it if that is the secret of it.

Mr. TAYLOR. Well, I referred to it as an element of uncertainty in the public mind. I think Mr. Reynolds demonstrated very clearly the action of an individual with respect to his private affairs, and how sound and sane that is. I think that is true with respect to our corporations. I think it is true with respect to our Government.

Senator BARKLEY. Well, that is a sound principle anywhere in the world, not to spend any more than you take in, unless like in the case of the railroads, in their early history, and I imagine in the case of your own corporation, that it had to borrow money with which to make capital investments and build plants, and the industrial development of the country would not have progressed as rapidly if everybody had paid as they went. We understand that. I appreciate fully the soundness of the theory always where it is possible, of spending no more than you take in. But I have not been able yet—it may be I am obtuse on the subject—to vision just how the mere fact that we spend no more from the Government standpoint than we take in is going to start everybody else's business, turn it around and start it back up the hill again and restore prosperity. If I thought that is the only thing that was wrong with this country I would be much happier than I am.

Mr. TAYLOR. I do not believe that is the only thing that is wrong, Senator.

Senator GORE. Mr. Taylor, on that point. I figure that if the Government abuses its credit, sooner or later its bonds will go down.

Senator KING. That is it. That is the point.

Senator GORE. And when United States bonds go down, State, county, municipal, and corporation bonds will go down. When their bonds go down sooner or later their stocks will go down in a distress market. Now, it sometimes happens that bonds go up and stocks go down and sometimes stocks go up and bonds go down. But in a distress market like this, if bonds continue to decline stocks will decline, and if stocks decline commodities will continue their decline. Now, that is the way I relate this balancing of the Budget to the return of prosperity.

Senator KING. Surely.

Senator GORE. We have got to stop this decline, and not only stop it, but reverse it. And we can not do that if the Government abuses its credit and its bonds go down. That aggravates it. That is the way I figure it out. I may be wrong.

Senator LA FOLLETTE. I would like Mr. Taylor or anybody else to tell this committee how you can balance the Budget of a corporation or government when you are on a slide.

The CHAIRMAN. Only by taxation.

Senator LA FOLLETTE. If your national income, production of wealth, shrinks as much in the next year as it has in the last year, any estimates that you make for balancing this Budget will be just as cock-eyed as the ones that were made by the Treasury last spring. And it seems to me that the horse is before the cart. Have you not got to get a bottom into this situation somewhere before you can begin to predicate estimates upon a balanced Budget or how to balance a Budget? I would like to get the witness's suggestion on that point of view.

Mr. TAYLOR. I think the surpluses of raw materials are our greatest menace. I think the carry-over of our crops is a great menace to the stabilization of values. That is a very difficult thing to correct.

Senator LA FOLLETTE. Well, I simply want to point out that that does not answer the question. We have been on a slide ever since 1929, and every little while people come out and tell us that we have reached the bottom, and that we are going to start back, and apparently it has been predicated on the theory that there is some theoretical point marked "X" where this constant see-saw comes to rest and that you do not descend any further. But until that point is reached I am unable to understand how a government, however willing to accomplish the purpose and to apply a broadax to its expenditures, can get its budget into actual balance.

Senator REED. The important thing, Mr. Taylor, is, is it not, that we show a real intention to balance the Budget as far as possible? Whether we actually accomplish it in any year seems to me to be of less importance.

Senator LA FOLLETTE. Well, we showed a very clear intention to balance it last spring.

Senator REED. That is true.

Senator LA FOLLETTE. We tore our hair in this committee to find ways and means of balancing it, and we thought we had balanced it, after the Treasury had adjusted its estimates no less than three or four times while the bill was going through the Congress.

Senator REED. That is right.

Senator LA FOLLETTE. If that is the answer for this depression it seems to me that those who advance it as the primary objective to be attained in the midst of this crisis are under necessity of demonstrating why it did not have the desired effect last spring and why and how it can be accomplished now while we are still on the toboggan going 60 miles an hour.

Mr. TAYLOR. It seems to me that the simple rules that we apply in our own lives are those to apply here. When our resources begin to shrink and our obligations begin to press upon us—that we live more simply, that we curtail expenditures, that we try to bring ourselves into a state of balance.

Senator BARKLEY. Strict adherence to that rule, however, would have prevented the organization of the Reconstruction Finance Corporation, which was a thing that was pressed upon us by business of all kinds. It would have prevented whatever we have done in the way of construction to give employment to labor. And I am somewhat confused as to just at what point the Government shall cease to lend its credit, which means money ultimately, to take the place of private credit agencies in normal times.

Now, if you had been a Member of Congress, would you have carried your theory to the extent of voting against the Reconstruction Finance Corporation organization; would you have voted against the $500,000,000 that we gave it outright out of the Treasury and the $3,000,000,000 that we gave it potentially by the sale of Government securities from which it has obtained all the money which it has lent to business, because it has not sold a single debenture of its own? Would you have voted against the $125,000,000 to be pumped into the stock of the farm-loan system, and all these other business agencies which were aided by the Government, on the recommendation of the business men of the country that it would tend to stop bank failures and receiverships of railroads, insurance companies, and all that? Would you carry your theory of balancing the Budget to the extent that the Government should do nothing along the lines we have been attempting to do in the last year?

Mr. TAYLOR. I should have voted in favor of the organization of the Reconstruction Finance Corporation.

Senator REED. We have been fighting a rear-guard action too, Mr. Taylor, just as you say industry has. We have voted public buildings, hoping that that would provide employment. Most of us realize now that it was ineffective and that it really raised our debt and did not make much difference in the employment situation. We voted money for the Reconstruction Finance Corporation. I personally am sorry. I think we have merely postponed the day of clearing up the sore spots.

Mr. TAYLOR. Yes, but at that time you would have had a crisis on your hands.

Senator REED. Yes, that is right. At that time it seemed to be the wise thing to do.

Mr. TAYLOR. You would have had disaster.

Senator LA FOLLETTE. But, Mr. Taylor, that was based upon the theory that there was a bottom somewhere, and that it was not too far off. The same arguments were made in favor of the Reconstruction Finance Corporation that are now made in favor of balancing the Budget. I am as anxious to get out of this depression as any man, of course. But what I am anxious to have demonstrated to me is first of all whether this new objective that has now been set up as the next thing we must attain is actually going to accomplish the results, and if so, how it may be done while we continue to have a constant decline in purchasing power, in commodity prices, and a diminution in the total turn-over of business?

Mr. TAYLOR. Well, Senator, I can only answer you as to the attitude of mind of industrialists generally. They are confident people, hopeful people. They believe in the future. They believe in the future of this country. They believe in its inherent strength. And they are going to use every ounce of their energy to pull this thing out so far as it lies within their power to do it.

Senator LA FOLLETTE. Well, they have been doing that all the time, have they not?

Mr. TAYLOR. Now, I do not believe that you should at this moment show lack of faith in the future.

Senator LA FOLLETTE. I am not showing any lack of faith, if you will excuse me, Mr. Taylor. What I am trying to do is to be a realist in this situation. We have been told that psychology would remedy this depression business, and I am getting a little bit skeptical of that technique, and I want to have something more than the mere assurance that it is going to help to restore confidence, and also I am interested to know how it may be done while the slide keeps on.

Mr. TAYLOR. Well, we are all of us trying to find the remedy.

Senator BARKLEY. In our efforts to make the income and outgo equal would you limit that to the ordinary, normal expenses of the Government, and set aside these extraordinary emergency expenses as being a little different, and pay for them over a period of years by the issue of either long or short term Government obligations, or would you pile them on top of the normal expenses of the Government and try to balance all of it year by year as you go?

Mr. TAYLOR. No; I think you would have to amortize a certain portion of that.

Senator BARKLEY. You think that in the nature of capital investment?

Mr. TAYLOR. Yes.

Senator BARKLEY. I agree with you.

Senator LA FOLLETTE. I would like to ask Mr. Taylor one more question, if he will suffer the interruption.

Mr. TAYLOR. Yes.

Senator LA FOLLETTE. In reading some of the things which you said during the course of this depression, Mr. Taylor, I have gotten the impression that you believe that all costs should be deflated to the point where there is a profit at the present prices. Is that a fair statement?

Mr. TAYLOR. At the present prices of certain commodities. But I do not think that applies to agriculture.

Senator LA FOLLETTE. No. Well, let us except that. I would be interested to know upon what theory you assume that more goods would be sold, assuming that all costs were deflated to make a profit at the present price level, when all manufacturers are unable to sell the goods which they now produce?

Mr. TAYLOR. I do not believe in a radical readjustment, and have not so acted. Ours has been an orderly, rather slow, you might say, readjustment in our costs. There has been a school, very active during the past two years, in favor of a more radical readjustment. And I have not believed in that.

Senator LA FOLLETTE. Well, I may be dumb. But assume that it takes place and that you now have got all costs deflated down to the point where there is a profit at the present price level. Upon what theory, or what are the reasons for assuming that more business will be transacted when at this very time all manufacturers that I know much of anything about are having difficulty in selling their goods?

Mr. TAYLOR. The theory is that by reducing the price sufficiently you can inspire buying even under this condition.

Senator LA FOLLETTE. But has that not been exploded in this whole experience that we have been through since 1929? Is it not a fact that people, instead of buying at the reduced price, wait to buy because they think the price is going lower, and that people really buy when prices start in the other direction in order to make a profit?

Mr. TAYLOR. Well, that has happened.

Senator BARKLEY. May I ask Mr. Taylor one question. With reference to balancing the Budget. I believe that last year your company paid a dividend, although it had a considerable deficit?

Mr. TAYLOR. Yes, sir.

Senator BARKLEY. What was the theory of it? And does that harmonize with your theory now?

Mr. TAYLOR. The theory was that our resources were adequate to continue the dividend, probable future demands of the company considered.

Senator BARKLEY. Rather than withhold it as a further reserve for the future?

Mr. TAYLOR. We felt that our reserves, unless the depression lasted interminably, would be sufficient to carry us through.

Senator BARKLEY. Of course, as a corporation, you can accumulate these reserves.

Mr. TAYLOR. Yes.

Senator BARKLEY. But as a Government we can not do that.

Mr. TAYLOR. Yes; I realize that. I realize your difficulty. It is very difficult for us who have only a fragment of your great problems in our minds to frame an answer that would be a solution. I am very sorry I can not give you a better one.

Senator BARKLEY. You are not by any means alone in that situation.

The CHAIRMAN. The committee will now adjourn and will meet in executive session at 2 p. m.

(Thereupon, at 1 o'clock p. m. Wednesday, February 15, 1933, the committee adjourned to meet in executive session at 2 o'clock p. m.)

# INVESTIGATION OF ECONOMIC PROBLEMS

---

**THURSDAY, FEBRUARY 16, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met at 10 o'clock a. m., pursuant to adjournment on Wednesday, February 15, 1933, in room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Watson, Reed, Couzens, La Follette, Thomas of Idaho, Harrison, King, George, Walsh of Massachusetts, Barkley, Connally, Gore, and Costigan.

The CHAIRMAN. The committee will come to order. Hon. John F. Hylan. If you will be as brief as possible, because we have about 200 witnesses that would like to be heard, and, of course, our time is limited. March 4 is not so very far off.

Mr. HYLAN. But, Senator, I want to go into it, because I have tried here to work out something which I consider constructive.

The CHAIRMAN. We will be very glad to hear you.

## STATEMENT OF HON. JOHN F. HYLAN, FORMER MAYOR OF NEW YORK CITY

Mr. HYLAN. In response to your request, it gives me pleasure, both as a duty and as a privilege, to appear before the Finance Committee of the United States Senate, which has been directed to study and analyze the causes of the present industrial depression, and to suggest possible legislative remedies to meet the trying conditions which the people of this country and of the whole world are now facing.

We are in the midst of the greatest depression in human history, although the banks have a superabundance of currency and credit while millions of people have no work, money or credit with which to purchase food or clothing or to pay their debts and taxes.

The primary cause of the depression, as I see it, is a scarcity of currency and credit money caused by the maladministration and defective operation of our monetary system. Whether such unjust operation was executed designedly, I do not know, but it has left bankruptcy, misery, and beggary in its wake.

In addition to appearing personally, I am authorized to represent the World Monetary Reform League as its president. The World Monetary Reform League takes the position that modern progress has outgrown our present monetary system which we condemn as grossly inadequate and improperly administered by the big bankers for the needs of industry, trade, and commerce. We take the position that business stagnation, industrial depression, unemployment, and starvation are the direct results of a world need of a sufficient, scientific medium of exchange administered for the benefit of the masses and not for the private profit of any group.

In my statement, I may use the ideas, language or phrases of others. I do not claim them as my own, but merely utilize them combined with my views, in a desire to give to the Senate committee all information available, to aid, if possible, in the solution of the economic condition which has brought us so much human suffering.

I want to say at the outset that I am not an economist; I am just an ordinary citizen trying to dope out the cause of the depression and the remedy for it. I read the stabilization report in the Sixty-ninth and the Seventieth Congress, and most everything I could get on the question of money and the depression.

Studying the ill effects flowing from the Federal laws, we find the basic evil to be the private control of our currency and the operation of our present monetary and banking system, tolerated, permitted, and fostered by laws intended to be beneficial and for the good of the people, but which in their operation, have been twisted and diverted from their original purposes, resulting in an oppressive and intolerable situation, that must be immediately corrected and remedied.

The CHAIRMAN. I suppose in this statement of yours you refer to each one of them and tell the action necessary to overcome the difficulties?

Mr. HYLAN. Yes, sir.

When the constitutional convention granted to the Federal Government the right to "coin money, regulate the value thereof, and of foreign coin," it certainly intended that this power should be exercised by the Federal Government direct, and not farmed out to private profit-making corporations.

Money, in ample volume and circulation, is one of the greatest of all human necessities, and its issue and control is therefore essentially a governmental function. It should function without any hope or desire for profit by those administering it. The private banking system has complete control of our cash and credit circulation, with few governmental restrictions. This is the economic life of the Nation. Control of the cash and credit circulation of a country is the master of its people. This control should never be placed in the hands of any private or corporate group operating for profit.

In the two great crises of this country gold money fled into hiding. It was only by resorting to other kinds of money that the soldiers of the Revolution and the Civil War were paid.

During the Civil War the "Gold Ring" cornered gold and attempted to force the Federal Government to pay extortionate prices for it, but Lincoln's administration resorted to the issuing of greenbacks, which by increasing the volume of money eased the financial stress and enabled our Government to prosecute the war to a successful conclusion.

THE WORLD'S SUPPLY OF GOLD

The so-called "gold standard" is based on an utter fiction. As a matter of fact, there is not enough gold available on earth to redeem all our own paper money issues in gold much less those of other countries.

The entire quantity of gold is not sufficient for monetary purposes. According to the statistics of the United States Mint, there is only about $22,500,000,000 worth of gold in the world. Of this, $11,000,000,000 has been used in the arts and manufacture, leaving available for all monetary purposes only approximately $11,500,-000,000.

As a result of this gold shortage the bankers have supplemented gold with paper or fiat money which the public is led to believe can be redeemed in gold. If the holders of the other forms of money should decide to call on the Government or the Federal Reserve Bank for the redemption of same in gold, the public would then realize how they have been deluded by the so-called "sound money" propaganda of the banking control.

While this country legally maintains the gold standard, neither the United States nor any other country ever has been, or can be, on an actual gold basis. The assumption is that no matter what form of currency we have now in circulation, we can demand and receive gold for it. This is absolutely untrue or incorrect.

The fact is that the amount of gold would not be sufficient to redeem the other forms of money, and the big bankers who cry loud for sound money know it. The bankers know that this country is not, strictly speaking, on a gold basis and never has been; but its monetary system is based mainly on "fiat" bank deposit credit money out of which they are making tremendous profits.

The volume of gold, the basis of our monetary system, is not large enough to support the superstructure of the paper money issued by and printed by the United States Government for the bankers at their request and for their profit.

The easy money policies adopted by the Federal Reserve Bank during 1926–27 were intended not only to influence the domestic situation, but also to assist the European central banks to maintain the gold standard, which had been impaired by the tremendous inflation which followed the adoption of the gold exchange standard in 1922, the subterfuge adopted by the international bankers to allow European countries having no gold to make paper money and to operate under the gold standard. That is, the issuing of additional paper money having as a reserve currency of other countries payable in gold on demand or approved paper payable in gold at maturity, was used to bolster up the crumbling gold standard.

In explanation I wish to say that there was a conference held in Europe in 1922 where all the representatives of the larger banks congregated, and they wanted to take in some of these European countries under the gold standard, but they did not want to distribute any part of the gold that they controlled, so they made an arrangement whereby they took them in under what they called the gold exchange standard, where they had no gold as a reserve. But the currency they issued there was based on paper of the Federal reserve payable in gold at maturity, or currencies of other countries payable in gold on demand. The Federal reserve——

The CHAIRMAN. Before you proceed with that. What countries have you reference to?

Mr. HYLAN. Well, I have reference to Poland and Austria and some of those central European countries.

The CHAIRMAN. That grew out of the war, did it not, the World War?

Mr. HYLAN. No; it was after the war.

The CHAIRMAN. Yes; but was not the cause of it? Was that not the principal cause of it?

Mr. HYLAN. No; not necessarily so.

The CHAIRMAN. All right.

Mr. HYLAN. They wanted to extend the gold standard to the other countries. Get more trade and business.

The CHAIRMAN. There is no need of going into it now. You may proceed.

Mr. HYLAN. They took these countries in under the gold exchange standard, and they had no gold as a basis for the money that they issued there, no reserve like in the gold standard countries. That is, they inflated the so-called gold standard. And this paper approved by the Federal reserve, payable in gold at maturity, for which they issued Federal reserve notes to different banks, they took that paper out of one pigeon hole and put it into another, and earmarked it, and sent a cablegram to Austria or to Poland, and they would issue $3 of paper over there for every dollar that paper represented here. That is just a narrative of this idea of bringing these countries in under the gold exchange standard. They had no reserve for the issuing of this paper money there.

Senator KING. In Russia, in 1923, when I was there, the Soviet authorities, seeing the futility and the unwisdom of the continuation of the paper money, the ruble having gone down to the vanishing point, conceived the importance of trying to have a gold standard, because it was the standard employed in the world. They acquired by the sale of goods and by other processes a considerable amount of paper money, that is, they showed me their huge piles of American gold notes, British pounds, and French francs, and so on. And upon that paper money which called for gold—they treated that as gold—they acquired some gold, some silver, and they then said, "We are going to the gold standard and base the future issue of our currency upon the gold standard." And they did. They issued the chervonetz, the new gold coin—they coined a few of them—and the chervonetz paper money. They only issued against that gold reserve 40 per cent paper. It was all right and held its parity in relation to the world as long as they did not issue other paper money. But when later on they began to issue their fiat money and disregarded the limitations imposed by the gold and the paper money which was gold exchange of other countries then the chervonetz, which had circulated at par, went down to the vanishing point.

So Russia was not forced to the gold standard by any conference in Geneva or elsewhere, but they saw the necessity of stabilizing the exchange if they wanted to trade, and therefore they established the gold standard.

Mr. HYLAN. I am not opposed to the gold standard, but the administration of it by the bankers.

Before the breakdown (which forced many countries to go off the gold standard) gold coin and gold certificates had been withdrawn from circulation and monetary gold had been concentrated largely in the big banks. Such gold was converted into gold bullion and stored in bank vaults, cutting down enormously the volume of gold currency.

Senator WATSON. Mr. Mayor, you made a rather significant statement: That you are not opposed to the gold standard, but its administration by the bankers. Are you elaborating on that in your statement?

Mr. HYLAN. Sir?

Senator WATSON. Are you elaborating on that point? And if you are not, what did you mean by that?

Mr. HYLAN. Well, I am not opposed to the gold standard. I mean this, that they are pyramiding credits on a pin point of gold. They are issuing too much paper money for the reserve that they have in gold.

The CHAIRMAN. That is not the banks. That is the Government.

Senator WATSON. Do the banks control that?

Mr. HYLAN. Well, I know the banks are more or less connected with it through governmental channels.

The CHAIRMAN. All right.

Mr. HYLAN. During the last 10 years the gold standard has been maintained only by a gold-economizing or gold-stretching policy, if I may so term it; that is, a policy of substituting for gold reserve something other than actual gold as an excuse to issue paper money. But when France and our own Federal reserve began to withdraw gold from circulation on a large scale and when the United States ceased to export capital to foreign countries, the drain on the gold reserve of other countries caused the breakdown of the international monetary system, forcing many countries off the gold standard.

The great demand for gold for reserve and for the payment of obligations payable in gold caused the sudden increase in the value of gold. This caused a corresponding fall of the entire general level of commodity prices.

### INFLATION BY CENTRAL BANKERS

A committee of international experts at Geneva, on February 8, 1933, suggested a world economic conference to further camouflage the machinations of the gold manipulators and delude the American people and others in an attempt to effect a redistribution of world gold stocks by calling upon nations which held large amounts of gold, particularly the United States and France, to part with a portion of their gold stocks for the benefit of nations not so well supplied with this monetary metal, to bolster up and reinstate the gold standard in the bankrupt European countries. The scheme is to reduce the reserves, the gold backing for their currency note issues, from a 40 per cent reserve to 25 per cent reserve, thus further increasing the volume of paper or fiat money. This scheme of the central bankers to make additional paper money, based on a pin point of gold, is to frustrate the activities of those who are fighting for real sound money. It is a subtle form of inflation on a world-wide scale for the benefit of the bankers only.

The greatest sham of the age, successfully operated all over the world, which has made all mankind its victim has been the plan of inducing foreign governments to adopt the gold standard under the pretense of establishing their currencies, making them large loans at high rates of interest. This has already brought many of these countries to the verge of bankruptcy and greatly contributed to our present ruinous plight.

This scheme of big bankers is sufficient proof of the shortage of gold, as well as of their utter selfishness in its control and manipulation.

The great industrial scientists, economists, and thinkers of the past, such as John Locke, David Hume, and John Stuart Mill, spoke in no uncertain language as to the cause of depressions and the effect of money conditions upon industry, trade, and commerce. Lessening the quantity of money, these authorities point out, inevitably increases the quantity of commodities required for its exchange. Prices and commodities rise and fall in proportion to the increase or diminution of money. When gold goes up, everything else goes down.

Sir William Dampier-Whetham, in Lloyds Bank (Ltd.) Monthly Review for July, 1931, in an article on the connection between business depression, unemployment, commondity-price drop, and money, says:

> The practical effects of rising or falling prices are easily analyzed, and have been clearly illustrated by the history of the last 30 years. If prices are rising faster than costs, goods become more valuable while being made or stored; fixed charges, defined in terms of money, become less onerous in terms of goods and services; profits are made, enterprise encouraged, and wealth increased.
>
> If prices fall owing to a cheapening of production, the result depends largely on the elasticity of the market. If prices fall owing to a scarcity of money, or to a failure of new investment to keep pace with the savings—that is, if the value of money grows greater—the effects of rising prices are reversed.
>
> People with fixed incomes from bonds or sheltered wages gain as prices fall; but the farmer, the manufacturer, and other active producers find the market always against them; costs lag behind prices, charges fixed in terms of money, whether public debt or private loans, need a larger and larger fraction of the produce of industry to pay them, profits are turned into losses, enterprise is checked, and unemployment becomes rife. These effects react on their causes, lowering demand and thus prices.

Edward Owings Towne, in his recent book on monetary economics, setting forth the cause and cure of industrial depressions, entitled "Wake Up World," states:

> In modern practice where bank-deposit credits have in great measure, particularly in the United States, superseded the use of actual cash currency, the rule is exactly the same, viz: The greater the amount of such credits the higher the price of commodities. When deflation of bank credit takes place the inevitable result is to lower the prices of the products of industry. By deflation is meant a forced diminution of credit by refusal of creditors to extend maturing or callable obligations or to make new loans without prohibitive increase in interest rates, or by other devices to reduce the amount of the currency-credit substitute for actual basic money in circulation. When credit crumples up, or currency is curtailed, the purchasing power of consumers is diminished, business activities are halted, and industrial paralysis follows as a necessary consequence.

PANICS, PRICES, CONTRACTION OF CURRENCY, AND CREDIT

In the United States in 1837 a serious panic occurred, followed by an industrial depression that lasted for many years. The immediate cause of the panic of 1837 was a drastic order by President Andrew Jackson requiring all payments for public lands to be made in gold and silver. This destroyed confidence in the circulation of bank notes, which were the principal media of exchange. Bank notes contracted from $149,000,000 in 1837 to $58,000,000 in 1843. Every bank in the country suspended specie payments. Accompanying prices and falling land values came business stagnation and all the other symptoms of trade disruption that follow in the wake of monetary stringency. In 1849 important gold discoveries in California, and a little later in Australia, brought an increase in the world's circulating medium and an enormous revival in industry occurred. Prices rose, business became profitable, enterprise found an outlet in railway and steamship building and in the opening up of new territories to agriculture and attendant development. Remarkable industrial progress was made, until it seemed that at last the world had attained permanent prosperity.

But in 1871 Germany adopted the gold standard; the United States in 1873 demonetized silver; France, Switzerland, Belgium, Italy, and Greece in 1873 limited the coinage of silver; and in 1875 Holland, Sweden, and Norway adopted the gold standard. The consequent growing need of gold reserves, with inadequacy of decreasing supply, caused a gold scarcity followed by a most serious industrial and trade depression that continued for 8 or 10 years and in England and the United States was without precedent.

Later came the disastrous panic of 1893. There was no relief until 1897–98, when the gold discoveries in Alaska and South Africa started a world revival and brought about a financial normalcy that lasted, with temporary setbacks, until 1914.

To the careful student of the history of monetary panics and their attendant circumstances, it is easily observable that no monetary crash ever occurs that does not follow a curtailment or diminution of the medium of exchange, or the undue expansion of credits upon too narrow a base of real money. If the monetary basis is too small and credit is piled upon credit, the day of reckoning will surely come. The structure will topple and fall with a crash, and with stunning suddenness the country will find itself overwhelmed by financial disaster. Slowly, and with great pains and care, must the structure be rebuilt on a broader basis and with more substantial superstructure, before industry resumes its normal conditions and sanity and prosperity take the place of misery and despair.

AS GOLD RISES COMMODITY PRICES FALL

Let me quote from the interim reports of the gold delegation of the League of Nations:

> A persistent and world-wide price decline of commodities may be taken as a fairly conclusive evidence that the course of prices is positively and undesirably affected by an inadequate supply of gold (p. 39).

The report further declares that their figures on the state of the gold-mining industry were derived from the opinions of experts who say that there is a prospect of a slight increase in production for the next few years, then a gradual decline up to 1940 and thereafter a rapid reduction in gold output. The report further states that in all probability there will be a gold shortage by 1934.

If we measure the value of the dollar by wheat, there are two factors to be considered to determine the value of the dollar. One is the number of cash and credit dollars in circulation, the other is the number of bushels of wheat offered for sale. With a given quantity of wheat on the market, the price of the wheat may be increased by increasing the amount of money, cash, or credit in circulation. Or the price of wheat may be decreased by increasing the amount of cash and credit circulation. The same rule will apply if you take any other product as an example.

While I know this proposition is elementary, the masses have trusted the bankers so long in the manipulation of their money and the regulation of the value of their property and the prices of the commodities they produce, that it will do no harm to refresh the memory of those interested in industry and agriculture who are more seriously affected by the contraction of currency.

We often hear well-informed people says that there is an "overproduction of commodities" and that there are "more men than jobs."

There is, in fact, no overproduction of commodities, nor are there too many human beings born to do the work of the world. But there is an underproductin of money with which to purchase commodities, the products of farms and factories, and to pay labor for the work that is needed. The representatives of 125,000,000 people go out of their homes in the United States daily for money, the greatest of all necessities, the possession of which means comfort and stability to the family.

If each one had a little more money, or some means of earning it, he or she would purchase more of the commodities produced, thereby increasing the demand for commodities, and business would become more active.

The amount the average person consumes is determined by the amount of cash or credit he has with which to pay for the things he wants. Give him more cash or credit and he will consume more. The average citizen of this country has never reached the limit of his consuming power because he has never had sufficient means to meet it.

It is difficult to convince people that too much wheat is produced while millions are hungry and in actual want of food.

## FEDERAL RESERVE ACT AND ITS RESULTS

The passage of the Federal reserve act in 1913 was clearly in response to a demand for a more flexible currency; one that would meet more adequately the demand for an expanded currency and credit and afford a means of discounting commercial paper, which would, domestically at least, expand and contract approximately according to the amount of wealth available for distribution and to establish a more effective supervision of banking and currency in the United States and for other purposes, such as safeguarding against panics and money stringency.

The results of the passage of this act have been so great and portentious as to be almost immeasurable. It is very doubtful whether President Wilson and his advisors had any conception of the consequences that were to flow from this gigantic concession to the banking powers.

Let us recall, in outline, the magic wrought by the Federal reserve system that the bankers have worked out by experience and practice.

The reserve bank has authority to issue Federal reserve notes to member banks in the ratio of $2.50 of notes to $1 of reserves. So when a member bank deposits $100 cash with a reserve bank, the latter must retain $35 as a reserve against the deposit and may lend on the basis of the remaining $65 in the form of Federal reserve notes two and a half times that amount—$162.50, or in the form of deposits 2.85 times the amount $185.25.

But this is not all. Money borrowed from the reserve bank may in turn be loaned to a customer by the member bank. Thus a member bank having received a cash deposit from a customer, may deposit it with the reserve bank and thereby increase the latter's lending power of $162.50, which the member bank may then borrow and lend to its customers.

The lending power of the member bank may be increased still further, if the loan to its customer merely gives rise to a deposit account and not a cash payment, for against a deposit the member bank needs to keep on the average only a 10 per cent reserve with the reserve bank. Thus the $100 in cash deposited, by being turned over to the reserve bank enables the member bank to lend $1,000 additional to its customers in the form of deposit credit.

At the same time, this addition of $100 to the reserves of the reserve bank increases the latter's own lending power, for after setting aside the $35 as reserve against the $100 deposit, the reserve bank can lend in the form of deposit credit an additional $185 (2.85 times $65). This additional loan of $185 will increase the member bank's reserves by this amount and the latter in turn will be able to increase its own lending of deposit credit by 10 times this amount, that is, by $1,850. So that the $100 deposited in cash with the member bank has increased its lending power directly by $1,000 and through borrowing at the reserve bank $1,850 more, the total increased lending power thus amounts to $2,850. The difference between the $1,000 and the $2,850 represents the additional lending power introduced into the situation by the Federal reserve bank.

The commercial paper discounted for a customer, except for a farmer, must mature within 90 days. This enables the banks to take the interest discount out in advance every 90 days and loan it to another customer, which gives compound interest every quarter, instead of yearly.

Although probably unforeseen by the originators of the Federal reserve legislation, by a reasonable construction of the act, the law permits the commercial banks to function as savings banks under the time-deposit provision of the law.

There are approximately 1,500,000 persons in New York State who have time deposit "thrift accounts" in commercial banks. The "thrift department" is now a feature of almost all the commercial banks functioning as member banks of the Federal reserve banking system. This is a direct invasion of the field of legitimate savings banks whose depositors' funds are safeguarded by much more stringent provisions of the law than those of the commercial banks.

Hundreds of millions of savings deposits are held by commercial banks, whose deluded depositors think that they are fully protected the same as they would be in a legitimate savings bank.

It requires a colossal failure, like that of the Bank of the United States, to open their eyes and reveal to them that the so-called thrift department, where they have been cajoled into placing their savings, is only a delusion and a snare, and that in case of the bank's failure, they must take their position in line with the ordinary commercial depositors and receive no preferred or greater dividends in the settlement of the bank's affairs. In the meantime their deposits have been entered on the books of the bank as time deposits, and as such have enabled the banks to loan their bank deposit credits to the extent of thirty-three times the amount of the depositors' savings. In other words, on the deposit of $100 in cash in the thrift department, the member bank is allowed to loan its credit for $3,300.

No one, at that time, knew or realized what powers were granted to the individuals who were to compose the Federal Reserve Board. No one realized that this powerful board, through its control of currency and credit, could by the inflation of credit and interest rates on loans, encourage and, in fact, aid the orgy of Wall Street speculation such as that experienced in 1929, taking from thousands of people their ready cash and savings and almost every available asset they could turn into money. On the other hand, no one could anticipate that, through deliberate deflation of the quantity of money and credit currency, all kinds of property would lose its value, causing ruin and destruction to those who had invested their life savings in property, stocks, and bonds.

Who will contend that the Federal reserve system has been administered in the interest of legitimate business and industry?

Who can deny that the Federal reserve administration, in cooperation with the central bankers of Europe, was utilized to secure control of gold and regulate circulation of all kinds of money, currency, and credit in this country and abroad?

The volume of gold and its production being limited, the basic monetary metal was easily controlled. According to the report of the United States Mint, approximately $22,500,000,000 worth of gold has been produced since Columbus discovered America in 1492. This figure does not include the gold which may have been hoarded in India and some of the other Asiatic and African countries of which there seems to be no record. Eleven billion dollars' worth of this amount had been utilized in the arts and manufacture of commodities, leaving less than $12,000,000,000 in monetary metal for the people of the world to do business with operating under the gold standard. And along with that in contracts and other obligations payable in gold there are between four hundred and five hundred billion dollars of contract that are supposed to be paid in gold.

After the Federal reserve legislation became operative, credits were easily obtained and widely used. From 1915 to 1920, despite the destructive influence of a World War, America never saw such an era of prosperity.

In every department of human life, from the lowest to the highest, there was a miraculous improvement. Never before in the history of civilization were the necessities and luxuries of life so abundantly and so easily obtained.

The cost of living during this period was high, but the means of meeting that cost were adequate and satisfactory. Enterprise was stimulated throughout the country. Labor was employed, wages the highest on record. In a word, credit and capital were abundant to move profitably the wealth produced by the teeming masses of America. Nearly everybody was making money; everyone was prosperous.

Bankers were more than generous in their loans. They inflated credit, collected interest and bonuses, until practically all of the real primary money was owned and controlled by them, and the gold safely stored away in the vaults of the big banks.

## BANKS' DEALINGS WITH THE AVERAGE MAN

In order to understand how the masses were fleeced in the stock-market crash in 1929, and what caused the closing of 10,000 banks of all kinds in the United States with losses of billions of dollars to the people, let us briefly outline banking operations beginning with the man who earns the dollar. The laborer, the mechanic, and the housewife, in our well-organized system of banks and branch banks under the Federal reserves, seldom go to the commercial discount and collection departments. They go straight to the window marked "Savings." They receive credit for their deposits in their bank books and the amounts received are recorded in the time-deposit book of the bank.

The people who go to the windows marked "Teller" are in a somewhat different class. They represent local trade, commerce, and industry. Their accounts are current, called checking accounts or credit balances. They bring both cash and checks to deposit; and besides making deposits they may often tender their own checks to be cashed at the same time. At the end of the day, the man at the "Teller" windows count up what they have received and what they have paid out, and the difference is recorded in the bank's books as an increase or decrease of demand deposits.

A bank pays interest, so that bank lends its deposits. For each actual dollar of other people's money on demand deposits received, a bank may lend from seven to thirteen times as much bank deposit credit money. In actual operation, in normal times, bank deposit credit loans average about ten times as much as the money deposited by the bank's customers.

Lending to local people is the safest kind of lending but the first thing the local bank does with a part of its surplus credit is to deposit it in a big New York City bank. The New York bank, in turn, may either lend it to a broker on the Stock Exchange who lends it to a speculator, or it may lend it to a foreign bank where the interest rate is very high or the bank may buy foreign Government bonds. It is used then for any purpose the foreign Government may see fit.

Big and little banks all over the country perform the same act of multiplication, all in the same general way, lending their surplus until, in many instances, too much has been loaned on things which afterward turn out to be bubbles.

If the bank has multiplied credit in the ratio of 10 for 1 and its depositors begin to withdraw their cash, the little local bank must call in loans and deposits with the big banks. It calls upon the New York bank to return the amount the local bank has sent it in loans or deposits.

The New York bank has loaned that money on call to the big Wall Street brokers and must call in their outstanding loans. If the banks that supply the Stock Exchange with credit all call at the same time for that credit to be returned, because thousands of local banks all over the country, where the credit came from, are calling upon them to return it, the Stock Exchange brokers are sunk. They must say to their customers: "We can not carry your securities any longer on credit. If you can not pay for them in cash immediately we shall have to sell them for what they will bring to save ourselves."

This causes panic on the Stock Exchange, similar to the one in 1929. The broker's loans collapsed first; in the stampede to sell in order to pay debts, stocks crashed and this started the long train of events which is still going on, including the fall of commodity prices. Selling, at first normal, soon turns into distress selling, which is forced selling to preserve one's solvency. The more stocks and commodities are sold because of lowering prices, the more prices sink and compel further selling.

In many instances, the New York bank has loaned the credit to a bank in Berlin or some other part of Europe, or perhaps to South America, and can not get it back. It is obliged to return the credit to the small local bank. In that case the New York bank must sell some securities out of its own reserve investments. But if all the New York banks are doing the same thing at the same time, the effect on the Stock Exchange is even worse. The banks will be selling bonds where speculators would be selling stocks, and the effect upon the mind of the country from a fall in bonds is much more distressing.

The local bank may get its credit back from the New York bank and find that it is not enough because its depositors continue to withdraw their money.

Then the local bank begins to sell its foreign bonds, which were purchased through the solicitation of expert salesmen and the New York investment banks. It finds quoted at 30 the same bonds for which it paid 90. If the bank sells them at 30, it will lose forever two-thirds of its credit loaned to the foreign government through its purchase of such bonds.

The bank must then sell its United States Government bonds. Even these prime securities have declined in price under the selling by thousands of other banks, all in the same dilemma.

Having sold its United States Government bonds, the local bank continues for a while, paying off its depositors, telling them everything will be all right, hoping for the best. The bank examiners from the Comptroller's office come unexpectedly to look at the books. They find that the bank has sold its best assets and, to make the books balance, it is carrying bad assets at the values it paid for them; the foreign bonds now selling at 30 or even less still valued on the books of the bank at 90 or 95. The examiners decide the bank is not solvent and that it will have to close.

Pyramiding of credit and collecting profits in interest by the banks with too small a deposit or base of real money is a most dangerous policy for the welfare of those who deposit real money. Pyramiding paper money on too small a volume of gold reserve and the bolstering up of bankrupt foreign countries with the wealth of the people of this country have resulted in the breakdown of the people's wealth. That is the fundamental cause of this depression.

The business of creating paper money and credit on a pinpoint of gold and setting it free in the hands of big bankers and others is one of the most dangerous schemes of money manipulation that has ever been foistered upon the producing business interests and the people of any nation.

Senator REED. Mayor Hylan, we have a number of other witnesses who have come from considerable distances, and we can not give a witness more than an hour, if we are to let the other witnesses be heard; and there are only five minutes left of the first hour.

Mr. HYLAN. This is very important. I would like you to hear this.

Senator REED. I know; but what the other witnesses have to say is also very important. So I am going to ask you to come down to your concrete suggestions. You can put that all in our record, and we will read it and the country will read it; but it is not fair to the other witnesses to take a portion of their time.

Senator WAGNER. I hope that you will give the mayor a little more time. He has an important message.

Senator BARKLEY. Considerate to him as well as to the others.

Senator HARRISON. We were a little late getting started this morning, it is true; but we have on the calendar for to-day five people who are here to be heard. But if the mayor can eliminate some of these details.

Mr. HYLAN. I will hurry along as rapidly as I can, because there are facts here at least that you ought to hear, whether you agree with me or not.

SAVINGS SUNK IN SPECULATION

During the recent years of prosperity every possible means was employed by the investment bankers to induce the producers to part with their savings. High-pressure salesmen, through alluring and misleading propaganda, induced them to invest in stocks and bonds of all kinds. New issues, split-ups in corporations, capital increases and rights to buy stock, all expanded and inflated the number of shares that represented the real value of the corporations in which the people were advised to invest. In many instances the bankers and brokers encouraged the public to borrow in order to make additional investments.

In these instances all that the people received for their paper money, which they believed could be exchanged for or redeemed in gold in countries under the gold standard, was nicely engraved paper stocks and bonds. To get the paper money away from them so they could not demand gold for it, they were induced to part with this paper money for stocks and bonds on which the Government stamp was lacking and on the presentation of which they could not demand gold.

Loans upon loans were made; commissions, interest, and bonuses were collected by banks and bankers; debts accumulated; obligations were refinanced, until at the present time there are international obligations, Federal debts, State, municipal, and public obligations totaling over $500,000,000,000.

Foreign countries and their people owe to our Government, the money lenders, and the people of the United States more than $17,000,000,000.

### A DEBT BURDEN OF $220,000,000,000

The monetary obligations of the people of the United States, Federal, State, and municipal governments, along with private debts and interest-bearing obligations, have increased to the enormous total of $220,000,000,000. Each year, each month, each week, each day adds to the growing mass of interest-bearing obligations, all of which are promised to be paid in monetary gold, of which the world possesses at the present time less than $12,000,000,000.

The speculative orgy in Wall Street absorbed most of the people's money. They took money out of the savings and other banks. They pledged their industrial and other good securities which they had purchased at high prices and bought additional stock on margin.

Of the Latin American bond issues that had been recommended to investors by the very best Wall Street banks and their bond-selling affiliates—of these alone, I am informed, 56 issues, aggregating more than $800,000,000, are in default, and the fate of others not actually in default is very uncertain.

One by one the international bankers appeared before committees of inquiry of the United States Senate, all saying that at the time they were issued they thought the bonds were good, and all alike disavowing further responsibility. They had not guaranteed the bonds or the validity of them. They were not responsible for how the money was spent or misspent; the borrowers were responsible. And as for the foreign-bond delerium in this country, that was something the people, the private investors, had done to themselves.

These international and investment bankers call themselves "merchants," with respect to the sale of bonds and stocks to the public. All they have to offer now are disavowals and regrets—very cold comfort to the investors who lost billions through their urging and advice.

A member of the most powerful private international banking house in giving testimony said to the Senate committee:

> We are merchants. That is what we are, just like any merchants in the grain business, in the cotton business, or anything else.

He said:

> Speculation was in the air, and the speculators wanted to buy, buy, buy, and the bankers and brokers dealing in securities supplied that demand. I think they were trying to supply what the customers wanted. I think the banker is like the grocer; he supplies what his customers want.

It is a sad state of affairs in our country when men of a trusted group, as the bankers were, can sell the public gold bricks and then in an endeavor to evade responsibility hide under the assumed title of "merchant."

American investors did not demand that the investment banker search the world for foreign borrowers. It was the big bankers and their foreign allies who initiated these foreign bond issues and reaped huge profits from them. Foreign bonds were extensively advertised. The big banks forced them on the smaller banks. They pressed upon the investor through costly selling organizations, by house-to-house canvass, even by radio ballyhoo, their merchandise, stocks, and bonds beautifully engraved.

The people are amazed at the recklessness of American bankers in selling to the public foreign and other securities in which millions of trusting investors lost their lifetime savings, and then these bankers ask the people to have confidence in them by parting with more of their savings. So long as the Government did not object, Wall Street went on bringing out German bond issues faster and faster, for German industry, German agriculture, German ports. It kept hundreds of representatives in Germany soliciting all of these sources for bonds to sell to the American public.

The investment bankers bankers had solicitors in almost every country in the world, bartering away American credit for the commissions and bonuses they could get out of such deals.

### LENDING OUR BILLIONS TO EUROPE

While the banks were lending money to Europe to extend European agriculture they were also extending credit for economic engineering to restrict the products of American manufacturers, plunging them into debt; they were loaning billions to European countries to build up their plants and factories to compete with us in foreign trades. These huge loans made the people of foreign countries debtors of American investors to the extent of billions and bound the borrowers to pay nearly a billion dollars annually in tribute money. Having gotten our money—some $17,000,000,000 of it—they now default, saying they can not pay principal or interest, leaving us with the bag to hold.

The American bankers in lending American credits to Europe did not insist upon—did not demand—an increase in the American export trade. The most extraordinary act was the lending of our credit to our debtors in order that they could make payments to us on their debts. American loans to Germany enabled Germany to pay reparations to the Allies. Reparations from Germany enabled the Allies to pay interest on their war debts to the United States, hardly touching their own pockets. We were the victims of this vicious circle.

Nations which borrow American money actually needed for constructive purposes seldom incur obligations beyond their capacity to handle. They may be expected to pay their debts. But doubtful or inadequately secured foreign loans are extremely risky. Here the responsibility rests heavily upon the investment banker. The banker should never be lured either by the desire for profit or the desire for reputation to recommend an investment which he does not have every reason to believe is good and will be paid.

Because of the argument for endless world prosperity as a product of unlimited credit bestowed upon foreign trade, the banks loaned billions of American credit to our debtors, to our competitors, and to our customers. They loaned credit to competitors, who loaned it to their customers. The bankers loaned credit to Germany, who loaned credit to Russia for the purpose of enabling Russia to buy German commodities.

Railroad and other bonds were about to mature. The central and investment bankers saw an opportunity to get back dollars with a purchasing power worth from 62 to 80 cents more than the dollar they originally loaned so that refused to extend the loans. Then some one suggested the Reconstruction Finance Corporation to substitute public credit for private credit. The people's money was loaned by the Government through the Reconstruction Finance Corporation to the railroads and others to pay these obligations to the banks when they matured. The banks thus were enabled to unload on the Government many undesirable loans and get rid of a big burden of frozen assets or unprofitable issues. They rode the Reconstruction Finance Corporation for hundreds of millions.

After many years of floundering and only a short time before the World War, the formula for the most efficient credit and national wrecking machine—if viciously operated—that was ever invented was discovered. This was the Federal reserve system, diverted from its original purpose and manipulated so as to give us a financial government of the banks, by the banks, and for the banks.

### THE DISTRESS OF DEFLATION

The industrial, agricultural, or economic equilibrium program was inaugurated and, from the viewpoint of its powerful sponsors, the big bankers, worked to force prices of commodities and the value of property far below real values and cost of production. To-day we have the highest valued dollar and the lowest property and commodity values in history. Bankruptcy, business failure, unemployment, and misery prevail.

In enforcing their economic equilibrium policy by the forcible reduction of the prices of commodities, the international bankers and their allies are reducing the wages of American workmen to the level of the pauper labor of Europe, thereby depriving labor of its just wage and lowering the standard of living in the United States. The distributing and giving of doles seems to be a part of the scheme to keep the people quiet and subservient while the economic equilibrium surgeon is performing the operation.

Under this scheme a large part of the money in circulation has been withdrawn. Deflation is in progress. The price of practically everything has fallen below the cost of production. The value of the dollar went up and the prices of commodities, farm lands, real estate, and property generally have fallen to extremely low levels, spreading financial distress and bankruptcy throughout the land.

The confidence of the people in the financial institutions of this country has been destroyed. They have lost faith not only in the bankers and brokers, in stocks and bonds, but also in the laws upon which they had fondly believed their prosperity was firmly fixed.

Woe to those who have betrayed this trust! When the unemployed and those who have lost the result of their life's labor and the savings put aside for their families, understand how it was done and who did it they will drive out those who betrayed them even as Christ himself drove the greedy money changers from the temple.

Senator REED. What would you do about it, Mayor?

Mr. HYLAN. I will give you the remedies in a few minutes—my idea.

### A CHANGE OF POLICY IS IMPERATIVE

This depression has blasted the hopes of millions of Americans. The 1929 stock speculative orgy was the revival of the same kind of scheme as the French people experienced when John Law put over his Mississippi Bubble and the Earl of Oxford put over on the British people the South Sea Bubble, where the investors lost all their savings and the governments became involved in their financial frauds.

The governors of the Federal Reserve Board, their officers and advisory council in May, 1920, met in executive session and decreed that the circulating medium must be restricted, credits must be drastically curtailed, that all temporary currency must be withdrawn.

When this was determined upon, the bank officials did not call an international conference to determine that there should be deflation. They met in the United States. The conference was composed wholly of American bankers. There was established by them, for the banks of the country, a maximum or what they termed a base line of credit beyond which a progressive and graduated discount rate should be applied. There followed the deflation which drove down values by billions and caused thousands to lose their stores, factories, farms, and homes. Far more disastrous results have followed the deflation caused by the panic and depression of the past three years.

We are told from time to time that there is more money in existence in America to-day than there was during the time of prosperity and that there should be no attempt to increase the currency supply and the circulation of it or expand the credit of the country.

If the volume of money in the United States is as great to-day as it was from 1915 to 1920, where is it and why is it not put in circulation to relieve distress?

VALUES DESTROYED, THEY WOULD NOT RESTRICT PRODUCTION

After unloading upon the people stock and bonds at highly inflated prices and getting real money for this paper, the policy was changed. Those responsible brought about the destruction of market values of all kinds of property and commodities. Through their equilibrium policy, they aim to compel the producer to produce only the volume and quantity of goods which the public now have money to purchase. They want them to maintain an equilibrium between production, distribution, and consumption. By this policy the producers will be prevented from making things that the people need because there will be too many things to sell rather than because there will be too many things to use. The people who need them must do without because they have no money with which to buy.

At a luncheon of the English Speaking Union held in London in June, 1931, Professor Sprague, economic adviser to the Bank of England, said that there were two ways of overcoming the depression; one way, by increasing the volume or quantity of the metallic medium, gold money; and that the Bank of France, the Bank of England, and the Federal Reserve of New York were against this method, and added: "The central banks could do that if they were convinced that it was advisable." The other method was the industrial, agricultural, or economic equilibrium plan favored by the central bankers, which would require a world dictator to carry out.

Not satisfied with control of the monetary metal, gold, the big bankers have set out to secure control of the production and distribution of the necessities of life. And I regret that I haven't time to go into that more carefully.

Interest has played a great part in bringing the world to its present plight. To one who gives a little thought or attention to this subject the result of figuring interest, compounded and recompounded, would be astonishing. It is largely through accumulations of interest that the financial obligations of the world have increased to the enormous total (according to reliable economists) of over $500,000,000,000.

ABRAHAM LINCOLN'S WARNING

Abraham Lincoln, in a speech in the hall of the house of representatives, Springfield, Ill., December, 1839, discussing the subtreasury scheme as a means of collecting, safekeeping, transferring, and disbursing the revenue of the Nation as contrasted with a national bank for the same purpose, contended that the subtreasury would keep the money collected in iron boxes, locked up in idleness (thereby taking it out of circulation) while if it was deposited in the national bank the money could be kept in circulation among the people by making loans to those wishing to borrow it until such time as the Government was obliged to use it.

In referring to the policy of the subtreasury, he said:

> More than half of all the specie belonging to the fifteen millions of souls who compose the whole population of the country, is thrown into the hands of the public officeholders, and other public creditors, composing in number perhaps not more than one quarter of a million, leaving the other fourteen millions and three-quarters to get along as best they can, with less than one-half of the specie of the country, and whatever rags and shin plasters they may be able to put and keep in circulation. * * *

When one hundred millions, or more, of the circulation we now have shall be withdrawn, who can contemplate without terror the distress, ruin, bankruptcy, and beggary that must follow. The man who has purchased any article—say, a horse—on credit, at $100, when there are two hundred millions circulating in this country, if the quantity be reduced to one hundred millions by the arrival of pay day will find the horse but sufficient to pay half the debt; and the other half must either be paid out of his other means, and thereby become a clear loss to his creditor.

What I have here said of a single case of the purchase of a horse will hold good in every case of a debt existing at the time a reduction in the quantity of money occurs, by whomsoever, and for whatsoever, it may have been contracted. It may be said that what the debtor loses the creditor gains by this operation; but on examination this will be found true only to a very limited extent. It is more generally true that all lose by it—the creditor by losing more of his debts than he gains by the increased value of those he collects; the debtor by either parting with more of his property to pay his debts than he received in contracting them, or by entirely breaking up his business, and thereby being thrown upon the world in idleness. * * *

Dr. Nicholas Murray Butler, in an address delivered before the Economic Club of Chicago, on April 15, 1932, said:

Deflation has gone on to an extent which is without parallel, and every day the value of what we do and of what we own is falling not only in those countries which are without a supply of gold but in those like France and the United States, which have gold in superabundance.

If Doctor Butler had applied the same logic to the superabundance of gold he referred to—which is deposited in the vaults, in iron boxes, locked up in idleness in the Bank of France and the Federal Reserve Bank of the United States, out of circulation—as Abraham Lincoln did to the people's money locked up in idleness in the United States Subtreasury and out of circulation, he would then realize why the value of what we do and of what we own is falling in France and the United States as well as in those countries which do not have as large a supply of gold.

If Congress would profit by the sound reasoning of Abraham Lincoln, with reference to the quantity of money and its actual circulation, and enact proper laws, the hoarding; the locking of it up in idleness by the banks; the revelry in high finance; the orgy of profit making; the carrying out of the industrial, agricultural, or economic equilibrium program of the international bankers to curtail and control farm and industrial products; and the resultant unemployment, distress, ruin, and beggary would end. Such a return to common sense and sound reasoning would bring prosperity again to our millions. There is only one way to stabilize the general level of prices and restore and continue prosperity, and that is through honest monetary regulation, if the gold standard is to be continued.

### FAIR INCREASE IN CURRENCY IS NOT INFLATION

There is an equitable limit to the quantity or volume of currency that should be maintained to keep a proper ratio between money and commodities, commerce and population. Increase beyond this normal or equitable limit would be "inflation" so far as regards the volume of money, but "deflation," so far as the purchasing power of the money is concerned. Decrease in the quantity of money below this normal or equitable limit would be "deflation" in the quantity or volume of money, but "inflation" in its purchasing power.

The volume of primary money is not now sufficient to stabilize the price of commodities; therefore a reasonable increase in this volume would not be inflation and could not fairly be construed.

The stock argument of those who are opposed to a proper volume of currency and its circulation among the people, as a means of restoring confidence and commodity prices to normal conditions is that of Germany's inflation of the mark. The answer is that Germany was a defeated, bankrupt, and debtor nation without a gold reserve or other national resources on which to base her currency. Prior to and during the war, many of the wealthy took their gold and other valuables out of Germany and deposited such securities in other countries. After the war, realizing her deplorable condition, she began to issue marks to pay her obligations, and as the obligations increased, she continued to print additional marks. It has been said that Germany deliberately inflated its currency. It was part of German strategy to dispose of her war debts by repudiation, just as France did to the extent of four-fifths, and Italy to the extent of three-fourths.

We can profit by one lesson from the expansion of currency in Germany, France, and Italy. Commodity values increased with the volume of inflated money.

The situation in the United States is entirely different. One-third of all the monetary metal in the world is in the vaults of the bankers and the United States Treasury. We have a superabundance of wealth and commodities, raw materials, and other national resources, and are the world's greatest creditor Nation. Our dollar and the manipulation of it by the Federal reserve, under its policy and that of the central bankers is utilized destructively, resulting in unemployment, suicides, loss of homes, farms, foreclosures, bankruptcies, and unbalanced budgets. It compels the debtor to produce three times the volume of commodities to secure that dollar to pay what he justly owes.

Any further taxation on earned incomes as a means of balancing the Budget will retard the restoration of prosperity instead of hastening it. We will never be able to balance the Budget until commodities, raw materials, and other values are restored in proper ratio to the dollar.

Senator HARRISON. Do I understand from that that you do not favor an increase in taxes if it is necessary to balance the Budget?

Mr. HYLAN. Some taxes, yes. But I do not favor placing any further burden on the man who produces. The producer of the country. The man who goes out and extends his business and employs help and builds up the country. He ought not to be taxed to death.

The irresistible conclusion must be reached that, fundamentally, the present industrial and trade depression was caused and still exists by reason of an insufficient and inadequate world and national medium of exchange, and by the attendant circumstances of the deflation of currency and credit resulting from the control which the Federal Reserve Board has exercised over currency and credit.

President Hoover, in his address at the Lincoln Day dinner in the Waldorf Astoria Hotel, New York City, on February 13, said:

> If the world is to secure economic peace, it must break vicious fiscal and financial circles.

I agree with him, and I think that the 12,000,000 people out of employment, and millions of others who are affected by the depression, are beginning to realize the viciousness of this financial circle. Central bankers and other big bankers, their control over the monetary metal, gold, their control over currency and credit and the circulation of it, along with the contraction of credit currency as well as the new scheme inaugurated by them to secure control and regulate production of the necessities of life, through their industrial, agricultural, or economic equilibrium programs, are the links in the vicious circle which must be broken before economic peace and prosperity can be restored.

If any one questions the power exercised by the central banking group, I refer them to the report of the gold delegation of the League of Nations, page 15, paragraph 34, which reads as follows:

> The successful operation of any banking system, whether central or commercial banking, must depend upon the acceptance of certain common principles and conventions by all its members. Thus, if an important commercial bank decides suddenly to modify its average cash reserve ratios, it may force on the whole system an inflation or deflation of deposit currency proportionate to the extent of that change and to its own importance in the banking community. In central banking, the greatest influence is exercised by the banks of those countries which are large exporters of capital, for they are able to influence both the flow of funds to or from, and the rates of interest in, other money markets. In recent years, this power has rested mainly with the United States of America, the United Kingdom, and France.

There are, of course, numerous other contributory and incidental causes of the depression, such as trade, exchange and tariff restrictions and the tremendous burden of public debts.

The battle for the possession and control of the monetary metal, gold, among the international bankers will continue and the people will be obliged to suffer because of depression as they now suffer until the people through government channels take control of the currency system of their country.

## REMEDIES

What then can be done to remedy the manifest evils of our present condition? What measures must be taken if we are to be rescued from the ruinous monetary policy and the economic equilibrium program of the central bankers?

The first thing to be considered is the need of a substantial and adequate supply of currency and credit, and its proper circulation among the people.

I agree with former Senator Owens. The remedy is to expand and control the expansion of currency and credit and to counteract the unjust, the unsound, the ruinous contraction of currency and credit which has taken place, thereby restoring the peoples' confidence not alone in the monetary system but in our Government as well.

The Federal Reserve banks could have given the country relief by the vigorous expansion of credit and currency since the man-made catastrophe of November, 1929, took place. Instead they contracted credit and currency. This policy has exerted its ruinous consequences upon the people of the United States. It is indefensible and, if persisted in, may lead to remedies much more drastic than the public interest requires.

The Secretary of the Treasury could remedy this deplorable condition, if he would, by issuing legal tender Treasury notes, not redeemable but interchangeable with gold, and using such notes to redeem or purchase United States bonds and pay other governmental obligations. This would afford a saving of interest on bonds and would furnish an adequate medium of exchange which can not be cornered but which can be definitely and positively controlled by Government action in behalf of the people of the country.

These Treasury notes could be put in circulation by redeeming the bonds aforementioned and by paying the current expenses of the Government in lieu of levying additional taxes upon the people or further penalizing honest business interests.

When this money flows into the hands of the people, some of it, of course, would go into banks. If it did, it would go into the banks as demand deposits of the people, subject to check, which would add to the volume of available currency. Such deposits could not be canceled by calling loans. If the banks would deposit it with the Federal reserve banks it would add to their reserves and entitle them to issue approximately ten times as much new credit as they deposit; so that credit conditions would be made still easier for the banks and their fear of not being able to get currency against the demands of depositors would be abated.

The real value of the proposed remedy is to reestablish confidence in the country, to cause the value of commodities to rise, and to make people understand that the hoarding of currency, however justified for private reasons or otherwise, is against the public interest and, ultimately, against the interest of the hoarders themselves.

If it is clear that the policy of the Government is to expand the currency then those people who have put their investments in such form as to secure the advantage of a rising market would invest in stocks and bonds and in property. Those waiting to see if the expansion of credit and currency is going to take place and who have been keeping their funds liquid for a rising market would invest when the stability of the market becomes assured.

The United States, through the medium of Congress, should appoint a committee to make a survey and study of the monetary question to determine if there is enough gold available in the world to produce the volume of real money and credit required to meet the needs of the Government and incidentally, those nations operating on the gold standard.

Such a committee could invite the representatives of the gold standard and gold exchange standard countries to participate if they wish.

If it is found that there is enough gold available and it is deemed wise to continue to operate under the gold standard, there are four outstanding suggestions which will help to restore our prosperity and to maintain stable property values and commodity prices:

First. Actual possession, control, and regulation by the Government directly of a sufficient quantity of monetary metal to establish and maintain such a volume of currency and reserve for credit money as is decided upon and to redeem all kinds of paper or token money issued.

Second. A larger volume or quantity of standard, primary, or basic money, as well as bank credit currency, to maintain a proper ratio between currency, property, and commodities, and to meet the needs of an ever-increasing population and the tremendous expansion of world and domestic commerce to maintain in so far as possible a stable level of prices.

Third. A wider and more active circulation of such currency among the masses—those who do not borrow from banks, those who must have some real money in their possession—thereby creating a greater purchasing power among the masses.

Fourth. A stronger, more stable credit basis of reserve, and the control by Congress (not by bankers) of the expansion and contraction of currency and credit, if possible.

If it is found that there is not sufficient available gold to maintain a proper ratio between the necessary volume of money and commodities and the additional uses for money (as well as the maintenance of a proper redemption base and credit reserve for international and domestic purposes) and it is deemed advisable to continue a commodity money basis, then another metal should be given the same recognition as gold (through an act of Congress) so that a proper equilibrium can be maintained between money, property, commodities, and the expansion of commerce, and also to provide for a proper redemption base and credit reserve.

If this is not done, then the only remedy would seem to be a reduction of the metallic content of the gold dollar. That is, a decrease in the number of grains to below 25.8 now contained in the dollar. This would presuppose that the Government should obtain the ownership and control of all monetary gold in the country before the decrease in the metallic content should be put into effect, as otherwise the great banks which own the gold would profit to the extent of billions of dollars by such operation.

Federal reserve notes are issued to the Federal reserve banks and national-bank notes are issued to the national banks by the Government upon deposit of Government bonds which, issued by the Government and sold to the people, bear interest, burdening the people with millions of dollars of interest annually. The people buy these bonds from the Government, realizing that the Government is the security back of these bonds, and no one seems to be afraid to purchase them. Why should they fear to take at face value any currency issued by the Government, behind which is precisely the same security, which has the full backing of the Government and people of the United States, and which carries no interest-bearing obligations, placing no further interest debt upon the Government and its taxpayers?

To put money into circulation, great public works—Federal, State, and municipal—should be instituted, putting to work millions of people. Instead of issuing interest-bearing bonds, the Government could issue a sufficient amount of Treasury notes to enable it to extend credit to States and municipalities taking part in the public works program and could pay the labor of millions of people now out of work who would gladly accept the Treasury notes in exchange for their labor and services. Trust to the unemployed in this country to take this money from Uncle Sam and convert it into food and clothing for their children and dependents.

The unemployed will secure work through such a plan and will take these Treasury notes in payment for their service, inasmuch as the Government is behind them. This money can be made legal tender to pay obligations such as income tax, taxes to be paid to the municipalities and to the State governments, and when this money finally gets back to the Federal authorities it can be cancelled or reissued, according to the necessities of the situation. In the meantime, the people will be put to work. They will be able to purchase food, clothing, and other necessities of life, which will help the producers and business interests to make a profit.

The debt of the country during the World War was increased to over forty billions in the sale of interest-bearing bonds and other ways to help Europe win the war. Won't the bankers let the Government help the 12,000,000 unemployed Americans with a Treasury note issue which will save millions in interest and help balance the Budget, as well as send millions back to work?

The suggested remedies would help to stabilize property values and commodity prices. Producers, the manufacturers, and the farmers can then operate at a profit and be assured that the value of their property and their savings, measured in basic, yardstick money, will not disappear or evaporate as the sun melts the snow.

### CONCLUSION

In conclusion, may we not hope that the incoming Congress will see that the control of currency and credit shall be taken away from the banks and bankers in the United States and that such control be restored to the Government; that ample currency and credit may be made abundantly available for the American people, enabling them to build up industry, employ labor, stabilize the prices of property and commodities, and relieve the present depression and distress; and that tariffs may be so adjusted that trade barriers may be removed, and markets found for our surplus, restoring profitable trade with our own people and other nations, and that our country resume its leadership among the nations in progress and civilization?

I thank you for giving me so much time.

The CHAIRMAN. Thank you.

We will next hear Mr. E. D. Duffield, Newark, N. J.

## STATEMENT OF EDWARD D. DUFFIELD, SOUTH ORANGE, N. J., PRESIDENT OF THE PRUDENTIAL LIFE INSURANCE CO.

The CHAIRMAN. Give your full name and address for the record.

Mr. DUFFIELD. Edward D. Duffield. South Orange, N. J.

Senator REED. You are president of the Prudential Life Insurance Co., are you not?

Mr. DUFFIELD. I am president of the Prudential Life Insurance Co.

Senator REED. And acting president of Princeton University?

Mr. DUFFIELD. Yes, sir.

Mr. Chairman and members of the committee, at the outset I want to say that in accepting the invitation of the committee to appear here I had a real feeling of diffidence because I realize how little I can contribute to the problem which you are seeking to solve. I am not a political economist, and I do not claim to be an authority on international finance, or, indeed, an authority on economics.

Senator HARRISON. We may get some good out of you then.

Mr. DUFFIELD. I really felt that the best service that I could render the committee was to discuss in an informal way the problem which is presented to you in the light of such business experience as I may have and in connection with the situation that presents itself to us during the period of this depression. And I have more hesitancy because I realize the difficulty and possibly the impossibility of the task which is presented to this committee. We have grown so accustomed to expect Government to take care of everything that we are, I suppose, generally looking for Government to provide a means to escape from the dilemma in which we find ourselves which possibly and indeed probably it can not do solely and by itself.

It seems to me, Mr. Chairman, that the fundamental difficulty which prevents a resumption of ordinary activities is a general lack of confidence. What we are faced with is a fear of the unknown. We are fearful of what may happen in the future, and as long as that situation continues it is impossible, in my opinion, for business to advance, for industry to become active and for agriculture to secure the fruits of its endeavor. People are fearful, and when people are fearful they are not willing to risk the future, and yet all business, all commerce depends, as I see it, upon a stabilized situation, at least to a degree.

When men are confident of what may happen they face that situation, meet it and proceed. And therefore it seems to me that the problem that presents itself not only to legislative bodies but to individuals, is a restoration of confidence and a dissipation of fear.

Therefore in the few words that I want to say I want to address myself to that subject. I realize that much that I may say you are familiar with quite as well as I, and I say so, I trust, with a full recognition of the fact, but nevertheless with a purpose to indicate where to some degree, at least, confidence may be restored and fear may be dissipated.

I want to suggest to you three matters, two of which I desire to treat of very briefly, and the third which possibly by reason of the business in which I am engaged I might develop at somewhat greater length.

I will say at the outset, and I say this with a great degree of hesitancy, that I believe the thing of primary importance is the balancing of the Federal Budget. I say that, as I said, with hesitancy, because I do not question that every member of this committee agrees with me. I do not question that, speaking generally, every Member of Congress agrees with me as to the necessity and desirability of balancing the Budget. But it is a factor in the uncertainty which confronts the country that the Federal expenditures have for a period of years now exceeded their receipts. And that has not been unique with the Federal Government. It has been the same with the State governments, it has been the same with the municipalities, it has been the same with private organizations and individuals. And the necessity of that being accomplished is not merely to regulate Federal finances, as I see it, but it is also to act as an example to State governments, to municipal governments, and, to corporations and individuals.

My hesitancy is due to the fact that I believe an honest effort has been made not only in Congress but in the State legislatures to solve this problem. The difficulty with the problem arises out of a lack of agreement as to the methods to be pursued, and that again I think on analysis was almost inevitable. What must be done, of course, is either to reduce expenditures or to increase receipts or to do both.

Now, the minute that that problem is stated you have the situation that what you, sir, might think is a necessary feature of government I might think is unnecessary, and therefore I would be in favor of dropping that or curtailing that, while you would be in favor of continuing it. On the other hand, there may be some proposal of curtailment of some governmental feature in which I was interested and which you might thing was unessential, and therefore I would not be in favor of curtailment in that particular..

The same thing is true with regard to the raising of taxes or the increasing of revenues. Nobody is in favor of taxing themselves. Everyone is in favor of taxing some one else. No increase in revenue is possible without being burdensome to some one, and as long as some one finds that it is burdensome some one objects to that particular form of increased governmental revenue.

Therefore, as I say, in referring to this I am not doing it in a critical attitude, but I merely feel that I should refer to that as one of the causes which is occasioning the present uncertainty, the present lack of confidence, and the present unrest which prevents a restoration, as I see it, of commerce and through commerce an increase in the activities of business and industry.

The CHAIRMAN. And those are the very questions that we desire you to discuss. And we appreciate it greatly.

Senator HARRISON. We are glad you know our difficulties.

Mr. DUFFIELD. Well, I certainly do.

Senator REED. Most people do not, Mr. Duffield.

Mr. DUFFIELD. I think it is perfectly obvious, Senator, and the only suggestion that I can make to this committee to meet that is that I think that a repetition of the necessity of a give and take policy in order to arrive at the conclusion which all will agree is desirable, is quite essential.

I will say further that I do not believe that the ready solution which is always offered of a curtailment of salary furnishes any solution to the problem either in the State or Nation. A certain amount can be done, but you can not balance the Budget by reducing the salaries paid to those who are working for the Government. You can cut off activities. You can remove those and find that they are unnecessary. But I do not believe that the solution which is so readily and universally offered, of a reduction of salary as meeting this whole problem, is any solution at all.

I suggest as the second matter which it seems to me is causing public unrest and public uncertainty is the fear that in some way our monetary system will be radically changed. You can not expect business to develop where those who are engaged in it are uncertain as to what will be the value of the circulating medium at the time in which the business is transacted. There must be some reasonable certainty as to conditions existing in the future in order to enable business to be conducted and in order to enable men to risk their capital in the hope of a profit and a return.

And so I say again that the discussion, the fear that there is in the minds of many that some radical change will be made in our whole monetary system and that there will be an alteration in the value of the dollar is another cause of uncertainty which in my opinion interferes with a resumption of normal activity.

Senator La Follette. Mr. Duffield, how are you ever going to eliminate that fear when the constant decline of business and the increased suffering increased the agitation for some monetary approach to this problem?

Mr. Duffield. Well, Senator, frankly I can not discuss with you, because you are more familiar than I with the technical question of the effect, or the method, or those matters which go into the gold standard, and the continuance and maintenance of it, and the importance of it. I would be glad to do it, but I am quite sure that it would be ineffective. The point I want to make is——

Senator La Follette. I am not trying to argue about inflation, as to whether it is desirable or undesirable. But it has been the history of all past depressions, and it is showing itself in this depression, that as the situation becomes more critical the agitation and discussion of this thing which you think creates uncertainty and fear increases; and what could Congress do to allay or prevent that public discussion? I can not see anything that we could do about it.

Mr. Duffield. Well, the difficulty with that is, Senator, as it seems to me, that if it were once assumed that we were to begin inflation—we hear a great deal about controlled inflation—but the difficulty is, Where will you control inflation? For the basis of my argument it might be that a stabilized dollar at 70 cents would allay and would create a condition in which, if business were assured that it would remain at 70 cents indefinitely, would enable the business man to risk his money and buy his goods and start with the hope of making a profit. The difficulty, as I see it—and I am speaking now as a layman and not as an expert—is, Where do you stop? The minute that you reach the basis of 70 cents the debtors are not relieved. The pressure increases.

Senator La Follette. You misunderstand my question, Mr. Duffield. I do not care to argue with you about the desirability or the undesirability of inflation as an attack upon this depression. But you have mentioned it as one of the factors of fear and uncertainty which ought to be eliminated, and the point which I am trying to bring out and to bring to your attention is that as the situation becomes more desperate there is more and more agitation—even if it did not occur in Congress it occurs in the public mind—for an inflationary approach. I can see it in my own mail, and I am sure my colleagues would bear me out, that more and more indication of the wide-spread interest in inflationary procedure is coming in to us. Now, we can not do anything to stop the public from thinking about inflation and talking about it.

Mr. Duffield. No, Senator, but I think that if Congress could assure the country that the pledges in the two platforms for sound money would be carried out without alteration or change, and that the monetary system would not be radically changed, confidence would be restored, that business would be conducted on a monetary system where the same value which exists to-day would exist six months from now. I think under those circumstances the fear which now exists would be relieved, and I believe that hoarding which now is being accomplished would be eliminated. And I believe that the draft upon us made now by foreign countries would be lessened to a degree that the strain would be removed. And I believe that the extension of credit which would result by such a declaration from Congress would expand credit to a point which would alleviate the situation of tight money which may be created by reason of the fear which has been occasioned, by reason of the very pressure to which you refer.

That is the best answer I can give you, Senator.

Senator LA FOLLETTE. Assuming that everything you say is true, for the sake of the argument, Congress might pass a resolution to-morrow reaffirming the position taken in the party platforms, but that is not going to prevent the same Congress or the next Congress from taking up a serious discussion of monetary procedure. And in the meantime the agitation goes on over the radio and in the public prints and in meetings and discussions. I do not quite see how we are going to stem the tide of this discussion about the monetary inflation.

Mr. DUFFIELD. Senator, do not misunderstand me. I said at the outset that I do not believe Congress in and by itself can cure this, nor do I blame Congress nor criticize Congress for the creation of this uncertainty. But I do believe it is something which Congress should have in mind, and I believe that Congress in cooperation with the individual citizen could allay this appeal for a varying currency instead of a constant one, and if it would do that it would go far to restore credit, which in turn would meet the needs of the country with its present circulating medium.

Senator LA FOLLETTE. You are expressing a wish rather than giving us any means of carrying it out.

Mr. DUFFIELD. Well, I think you have indicated very clearly, Senator, the limits to which Congress can go. And I, for one, do not expect Congress to accomplish every result necessary to the restoration of prosperity.

Senator REED. Mr. Duffield, you have suggested that Congress could do something to allay this agitation. I want to ask you what you have done? Have you explained to your policyholders that any of these schemes of inflation would mean that the value of their dollars would shrink? That they, who have paid you good dollars would get back bad dollars? Have you?

Mr. DUFFIELD. Well frankly, Senator, I have not. I am not sure that I should not have. The reason that I have not has been that it seems to me that this whole discussion creates a situation which is disastrous and injurious, and I have felt that so far at least, it was unwise to endeavor to enter into the field of argument. But I think you are perfectly correct, and at a later stage of what I have to say I would desire to cover that point.

Senator REED. We talk about inflation as being a levy on the creditor class, and most of the people who write to me I am sure do not realize that the big creditor class of this country are the people who get paid on Saturday night and the people who have insurance policies and the people who have bank accounts.

Mr. DUFFIELD. Of course, Senator, the life-insurance business is the largest debtor there is in the country. There is no question of that.

Senator REED. $103,000,000,000 of life insurance in force somebody told me. Is that right?

Mr. DUFFIELD. I should say that that is approximately correct.

Senator HARRISON. Mr. Duffield, may I ask you, as I understand, your first suggestion here is to balance the Budget?

Mr. DUFFIELD. Yes.

Senator HARRISON. To draw in our expenditures to meet our receipts, and so forth. That that is what ought to be done first. What would you think would be the effect on business generally and the restoration of confidence if we assume that during these remaining days of this Congress there is not a great deal of legislation to be passed; that certain matter must go over; and assume that an extra session of Congress will be called quite early; if in this extra session of Congress there should be a constructive program laid down and the Budget should be really balanced, mostly through cutting with an ax and retrenching, and so forth, and then passed these constructive measures we might agree upon whether we did agree upon them or not, but passed them quickly, in two months' session; take up just that program, take up nothing else, and adjourn Congress quickly—do you think that it would have any effect upon business and the restoration of confidence?

Mr. DUFFIELD. I think, sir, that nothing that could be done could have a greater effect. I think that a factoı at least is the fear of attempting to do by legislation what necessarily must be done by economic laws. Or in other words, an interference. I believe that if, as you say, this Budget were balanced, that business would then have a chance to recognize the factors as its problem and could prognosticate a future with a fair degree of certainty. Have I answered your question?

Senator LA FOLLETTE. Is it a fair assumption from your statement, Mr. Duffield, that you are in favor of letting this depression run its course?

Mr. DUFFIELD. Well, Senator, it is difficult to answer that question yes or no. And after all, it will or will not, without regard to whether I favor it. I believe that there are certain things which can be done by legislative enactment, and I believe that there are certain things which necessarily must happen by reason of economic law.

Senator LA FOLLETTE. Did you favor the creation of the Reconstruction Finance Corporation?

Mr. DUFFIELD. I did, for the purpose for which it was created.

Senator LA FOLLETTE. Well, that was an interference with the process of deflation, was it not? It was an attempt to maintain the capital and debt structure of certain institutions.

Mr. DUFFIELD. I think the Reconstruction Finance Corporation creation was justified upon the ground that I do believe that by legislation we should endeavor to prevent unnecessary injury from what in the broader sense must be cured by economic law. And there the question of time is of the greatest importance. For example, if you take a perfectly solvent institution which may not speedily be able to liquidate its assets, but can, if given time—I believe that governmental aid to that institution is thoroughly justified.

I see little or no advantage in aiding an institution which under no circumstances or conditions can avoid a final bankruptcy. And, therefore, between those two it seems to me that there is a clear function.

Furthermore, I believe that Government may properly extend aid to the States or to the municipalities who necessarily are burdened with the care of the unemployed. I believe that the extension by Government of aid to those who during this period find themselves out of employment and unable to support themselves is not only a proper governmental function but a governmental obligation.

Senator LA FOLLETTE. I am assuming, for instance, that the administration of the Reconstruction Finance Corporation has been very conscientious. I am not seeking to criticize it in any way at all. But it was an agency created for the purpose of maintaining the solvency of institutions of various kind which at the time that the loans were extended were assumed to be in the category that you have indicated were eligible for governmental assistance. And yet the constant downward trend of business conditions has entirely altered that situation, as witness the fact that many banks which the Reconstruction Finance Corporation thought at the time could be saved received loans and have failed. The same is true of railroad corporations. And I do not quite see how anyone is going to be in possession of sufficient vision into the future to carry out the sound suggestion as to the determination of which group of institutions should be helped and which should not.

Mr. DUFFIELD. Well of course, Senator, that is the difficulty with the administration of any matter which is entrusted to human beings. We all make mistakes, and I assume that looking back at it the Reconstruction Finance Corporation would realize that possibly it had made some mistakes. My question was merely directed to the justification of the creation of that institution.

Senator LA FOLLETTE. What it comes down to is this, is it not: That we have constantly proceeded here upon the theory that some time or other these various economic factors would come into balance, and that that would be the bottom of the depression. And usually we have estimated that it was a month or two months or three months away. But that time has not come yet. Here we are, for instance, confronted with the situation so far as the capital debt structure of the railroads is concerned. How long should Congress go on, in your judgment, tailing up and trying to support that capital structure? When is the time going to be reached when you would have Congress or the executive agency created to administer the act say: "It is perfectly obvious that we can not sustain the structure forever, and we might just as well let it proceed through the wringer of deflation and reorganization"?

Mr. DUFFIELD. Well, the difficulty in answering that question, Senator, is that I do not think that you can apply a universal rule to any particular railroad, for example. I do not think you can say that all railroads should be denied aid because some railroads possibly can not weather the storm. I think you have got to use the best judgment that you have at the time as to whether with a reasonable anticipation of the future of the road to which aid is granted can, if aid is granted, carry through. You have got to use the best judgment that you have in administering that fund to determine whether or not another road can not under any circumstances carry through. And undoubtedly if either you or I were administering that fund we would make mistakes, but I think that our obligations would be to use the best judgment that we can.

If I may use an illustration, Senator—I think that the service of the Reconstruction Finance Corporation is exactly that in a situation where some one is sick of pneumonia, for example, where you would bring in oxygen in order to keep the patient alive. The oxygen does not cure pneumonia. Now I think the purpose to utilize the Reconstruction Finance Corporation was to keep the patient alive during the disease until the economic situation had cured, and that I think for that purpose it served a very useful end, and still does.

Now you ask me how long, and I do not know how long. I can not tell you. I doubt if any one can tell you.

Senator COUZENS. Could you estimate the amount of money that the R. F. C. was justified in putting up before that determination could be reached?

Mr. DUFFIELD. I think this committee is far more competent than I to determine how great a strain the credit of the United States can stand in order to keep this economic structure of ours in status quo.

Senator COUZENS. Would you say that we were justified in advancing up to twenty billions of money to maintain that structure?

Mr. DUFFIELD. I hesitate, Senator, to make any statement as to amount. I have tried to indicate the question of principles, but I am not, as I said at the outset, an economist, neither am I familiar with the details of governmental business, and I would hesitate to say as to the amount.

Senator COUZENS. What is the extent of money that you have in your corporation that you control?

Mr. DUFFIELD. In railroad securities, sir?

Senator COUZENS. No, in all.

Mr. DUFFIELD. Do you mean the amount of our assets?

Senator COUZENS. Yes.

Mr. DUFFIELD. Something over $2,500,000,000.

Senator COUZENS. And from that wide experience you could not advise us how far we were justified in going and issuing Government securities to maintain capital structure?

Mr. DUFFIELD. I really do not think I could, sir.

Senator COUZENS. Well, you are imposing a great deal of responsibility upon a lot of us poor laymen if you can not advise us how far we are justified in going.

The CHAIRMAN. I think that there may be a wrong impression drawn from what was said in relation to the R. F. C. It is true that there have been a few cases, but we must stop and think of the many cases—100 to 1 cases—that if they had not received the assistance, more than likely they would have failed. And I think the results of the Reconstruction Finance Corporation, as far as successful loans are concerned, are as great as any of us anticipated they would be.

Mr. DUFFIELD. I entirely agree with you, Senator.

Senator COUZENS. I would like to point out to the witness and the chairman also that no determination can yet be reached, because we have not yet reached the end, as to the estimate of these loans.

The CHAIRMAN. That is true, Senator. And that would happen, and would have happened long before now, in my opinion, if it had not been for the R. F. C. and Government assistance.

Senator COUZENS. Well, maybe we would have been better off if it had happened, Senator.

The CHAIRMAN. I do not think so.

Senator COUZENS. Sometimes we had better have a leg off early than wait until gangrene sets in.

The CHAIRMAN. I think we would have had our head off instead of a leg.

Senator KING. Mr. Duffield, do you not think that the loans which have been extended by the R. F. C. in the past and those which may be extended in the future would have secured better results, and will secure better results in future, if they contemplate, or rather if they are more interested in, giving jobs to men than in bolstering up capital structure?

May I say, just so that you may understand my view, that I have rather felt that if we could put men to work we would put dollars into circulation, increase the purchasing power, and the celerity, as you know, of the circulating medium is what contributes to the vitalization of our industries, and therefore that the loans which may be extended in the future ought to be rather with the view of furnishing work than for the purpose of bolstering up insolvent organizations?

Mr. DUFFIELD. Well, if you limit it to insolvent organizations, Senator, I will agree with you.

Senator KING. Well, those the capital structure of which concededly needs to be scaled down and reorganizations ought to be effected.

Mr. DUFFIELD. I will say certainly, Senator, that where any organization is so capitalized that it is practically certain that it can not meet its obligations that there is no value in adding to its obligations, and that where a man is hopelessly in debt you are not helping anybody by increasing his debt.

Now, with that limitation it is as near as I can come to definitely answering your question, because where you are talking about capital structures I can conceive of a local bank the saving of which would be more important than the erection of a post office or even than the erection of a dam, which would employ labor in the town. Therefore, unless you have an individual case, I can not answer your query in a more definite way than I have tried to do it.

Senator REED. Each case has to stand on its own merits.

Mr. Duffield. I think so, Senator.

Senator Reed. Where a bank is helped merely to postpone its ultimate closing up, certainly it is a wrong to the depositors for the Reconstruction Finance Corporation to take all its good assets as collateral.

Mr. Duffield. I entirely agree with that statement, Senator.

Senator King. Mr. Duffield, is there not a limit to the credit of the Federal Government?

Mr. Duffield. I believe there is.

Senator King. Of course, as you know, whenever the R. F. C. makes a loan it has got to get the money from the Government of the United States. Your company has not taken any of the securities issued by the R. F. C.?

Mr. Duffield. No, sir.

Senator King. Nor has any organization in the United States.

Mr. Duffield. None whatever.

Senator King. In other words, the Treasury has had to carry the entire load of all of the debentures, or whatever you denominate them, that have been issued by the Reconstruction Finance Corporation?

Mr. Duffield. Yes.

Senator King. And it is obvious that if additional issues are given out by the Reconstruction Finance Corporation the Government will have to purchase those. Now, if that should continue indefinitely, and if these deficits of the Government, which are now approximately $5,000,000,000 in five years, should continue indefinitely, will there not come some period when the credit of the Government will become impaired?

Mr. Duffield. I should say so. Assuming, of course, that this depression continues.

Senator King. Yes; sure.

Mr. Duffield. Assuming that, and that the demands on the Reconstruction Finance Corporation are continuing, I should say that there could not be any argument.

Senator King. Do you not think then that one of the obligations resting upon Congress is, so far as they possibly can, to determine what further issues might be made of Government bonds without reaching the limit of the strength of the Government to bear the structure?

Mr. Duffield. I think that not only should it be done but I think it is quite essential it should be done.

The difficulty I had in answering the question of the Senator some time ago is that I think that that is a question which the political economist or one who is capable of analyzing government credit far more efficiently than I could best assist you in.

The Chairman. Would not the ultimate purchaser finally decide that question, as to whether the Government bond was going to be good or not, in his judgment?

Mr. Duffield. I suppose that is true, Senator. But when it comes to that, as far as I am concerned, I would take counsel. I mean to say frankly that if the question of purchasing Government securities were presented to me as the head of my own institution I would not rely on my judgment, and for that reason I had hesitancy in answering that question. I would seek the advice first of those who I felt could intelligently advise me, and I would be governed accordingly.

The CHAIRMAN. And that is about the same that every purchaser of Government bonds does now. In other words, he is not going to purchase any Government bonds unless he has gone into the ability of the Government to redeem those bonds, and if in his opinion the Government has not that ability he will not buy the bond.

Senator REED. Well, the present quotations of the United States Government bonds indicate that nobody has lost faith in us yet.

Mr. DUFFIELD. Absolutely, Senator. There is no question about that.

Senator COUZENS. Has your company borrowed from the R. F. C. at all?

Mr. DUFFIELD. No, sir.

Senator COUZENS. Have you any record there of the number of farm mortgages that you have foreclosed?

Mr. DUFFIELD. Yes, sir.

Senator COUZENS. Have you given it to the committee?

Mr. DUFFIELD. No. But if you will permit me, Senator, the next point I want to discuss will cover the whole mortgage question, and if I might be permitted to present my views I will be glad to answer that.

Senator REED. May we not have Mr. Duffield take that up at 2 o'clock? It is almost 12. Some of us have to be on the floor when the Senate convenes.

Mr. DUFFIELD. That will be entirely satisfactory to me. But I merely want to suggest that I would like in the presentation of this question of the mortgages, which of course we are vitally interested in, to present my views, and I think I have some data here that will, I believe, answer the inquiry of the Senator.

The CHAIRMAN. You have that right, Mr. Duffield.

We will adjourn until 2 o'clock.

(Thereupon, at 12 o'clock noon an adjournment was taken until 2 o'clock p. m. the same day, Thursday, February 16, 1933.)

AFTER RECESS

The committee resumed its session at the expiration of the recess.

The CHAIRMAN. The committee will come to order. Mr. Duffield, I would like to have you proceed now.

## STATEMENT OF E. D. DUFFIELD, REPRESENTING PRUDENTIAL LIFE INSURANCE CO., NEWARK, N. J.—Resumed

Mr. DUFFIELD. Senators, I endeavored to suggest this morning certain things which seemed to me have affected the confidence and that create fear in the way of uncertainty. I want to suggest a third ground which is, in my opinion, even more important, and that is the fear that through legislative enactment the binding effect of a contract may be destroyed. I think our whole economic structure largely rests upon the fact that there shall be no impairment of a contract once made.

By that I do not mean, of course, to say that the creditor should in all instances and in all cases enforce his contract to the letter. There are many cases in which not only leniency but consideration and even self-interest would require a modification or alteration of the original obligation. But to destroy or modify or change or weaken the binding effect of a contract once entered into, in my opinion, might even destroy the basis on which our whole economic structure is built.

And of course I speak in this connection largely from the situation in which I am, as the head of an institution which has been a large investor in the obligations of individuals and the obligations of corporations. But I am in no different position than I would be if I were the trustee of the estate of a single woman or the guardian of a single child. The fact is that a life insurance company does act as a trustee for more than half of the people of the United States, and the funds which have been entrusted to it are in the highest degree charged with a trust. The position, as I view it, of the life insurance companies is exactly the position of a common-law trustee, and the primary obligation is to safeguard and conserve the trust estate which has been committed to their care. That I think will not be disputed by anyone.

I do want to call attention to the fact that wheher an individual trustee or whether a corporate trustee or whether a trustee such as a mutual life insurance company, an aggregation of individuals, is handling trust funds which have been restricted by statutory enactment and by policy annunciated not only by the Federal Government but by the State governments in the handling of their trust funds to obligations of indebtedness, whether it be bonds of corporations, whether it be bonds secured by mortgage on private property, statutory enactment has wisely limited them to a certain definite class of investments.

That was done, I take it, for a purpose. It was done in order that the corpus of the estate might be safely protected. It was done to prevent speculation with trust funds. It was done to require the trustee to surrender that income which he might have obtained by investing in common stocks or equities or by buying real estate and borrowing money from others in order to finance it, so that at all times the corpus entrusted to him by his cestui que trust should be safe and secure.

When I speak to you to-day I speak in the position of a trustee, and I speak not only as the representative of my company which stands as a trustee for perhaps one out of six individuals in the United States, but for the life insurance business which stands as trustee for more than half of the people, for banks and trust companies and private executors and trustees, all of whom have been limited to a certain definite form of investment with the purpose of safeguarding against all hazards the corpus of the estate committed to their care.

We hear frequently a discussion of a readjustment of the debt and the scaling down of the debt. I am not sure that I know what that means. If it means scaling down all debts, it, of course, means the scaling down of the debts which, for example, our company owes to the millions of people who have entrusted their funds to us, who have made sacrifices of their own interest in order to protect those who are dependent upon them. I do not think it is suggested that that should be done. I trust it is not. But you can not scale down the debt of one class and refrain from scaling down the debt of another class, without creating a situation which would render it impossible for the trustee, whether he be individual or corporate, to discharge his trust and fulfill his obligation.

As I have said, that does not mean that the trustee might not be obligated in the discharge of his trust to give consideration to the situation in which the debtor finds himself. It does not mean that the trustee should not use that wisdom which he has in order to protect a situation which will enable the debtor to discharge his debt in full. It does not mean that he is not in a position to, at times, compromise that debt in order that the debtor and creditor may both be conserved; but it does mean that his position as creditor should be recognized as such, and that his position as trustee should not be invaded by a suggestion that the property of his cestui que trust should be treated in one way and his obligation to his cestui que trust treated in another.

The difficulty with the situation, I think, and one thing that has disturbed investment, is that by legislative enactment a uniform rule should be applied; in other words, that the necessitous debtor, the one who finds it difficult to meet his obligation, should be treated in exactly the same way as the man who is thoroughly competent and capable of meeting his debt in full; that uniform aid should be extended to those who need it and to those who do not need it at all. And while I would be the last to belittle the situation which exists in connection with the mortgage question in the country to-day, and while certainly no one in my position can be oblivious to the distress and disaster which have occurred to those who have been required in the past to acquire loans, nevertheless I think we ought to have a clear perception of exactly what happens. Figures can show just what proportion of our people are in that situation.

I want to suggest to you, therefore, that my strong feeling is that these are cases which should be dealt with individually; and I do not think there is any danger in doing so. I do not believe a trustee, whether, again, he be representing an individual and protecting the estate of a single woman, or whether he be corporate and protecting the estate of a large number of people, wants to acquire these properties. This money was not loaned for the purpose of purchasing real estate. It was loaned for the purpose of having interest paid on it during the time it was not needed to meet the obligations which it seeks to provide.

And, therefore, I suggest that the real problem in the case of the needy debtor is to provide him adequate time in which to fulfill his obligation and adequate opportunity to develop, if it is a farm, or to pay if it is a home, the debt which he has created. I think his interest regulates that. I do not believe it would be seriously urged that where individuals have gone, for example, into an investment for profit and are thoroughly capable of meeting the loan which they have made in order originally to finance this enterprise, who have adequate security in the real estate that they have, should be relieved of that obligation either as to the postponement of the time in which the debt is to be paid or a reduction of the interest to which they agree.

Senator KING. Then, as I understand you, a general law, for instance, by the State of New York or any other State, granting a moratorium upon all mortgaged property; that is, obligations secured by mortgages or trust deeds, granted for one or two years, you think would not be just?

Mr. DUFFIELD. I think it would not be just; that is, a general moratorium. I think that the interest accomplishes that result.

If I may be pardoned for referring to my own company with which, of course, I am much more familiar than I am with others, although I think what I shall say will apply generally, in the summer of 1931, before there was any suggestion of legislative moratorium, we reached the conclusion that the financial condition of many of those who had mortgaged land was such as rendered it wise for us to adopt a general policy; and I will give you some figures in detail; but I want to impress you with the fact that this was done in 1931, and it was not done from a philanthropic motive; it was done because we believed it economically a wise thing to do and which we could do with a due regard to our obligation as trustee.

What we did was to decide in each individual case where the mortgage was maturing and the mortgagor was unable to meet his interest installments or his taxes—what we did was to discuss his situation with him. In large areas we removed the intermediary of the agency and used our own branch offices there in order to deal directly with the debtor, and I think I may say without fear of contradiction that in every case where the individual was the owner of the farm and where he showed an ability to utilize that farm and to operate it, and where he did not himself say that he wanted to abandon the plan, we refinanced him by paying his taxes, by writing a new mortgage covering his installments of interest, and starting him off again from scratch.

The result of that has been that we have had substantially little difficulty, notwithstanding that we are in the fourth year of the depression. I may say—and I want to go somewhat into detail—that out of over a billion dollars invested in mortgages, 89 per cent of those mortgages are paid up on interest within six months. In other words, there are only 11 per cent that are in distress at all.

The CHAIRMAN. Is that of to-day? According to a report that I received six months ago, it was the fact then.

Mr. DUFFIELD. That is true as of December 31, Senator.

Senator KING. Are most of those mortgages to which you referred and which are included in that billion dollars, on farms?

Mr. DUFFIELD. No, sir. Possibly I had better quote these figures and then we will have a basis for discussion.

Senator KING. It has been intimated to me during the past two or three days that there is a concerted movement on the part of a certain number of persons with large means to take advantage of this situation, particularly in respect to business buildings and apartment houses, and that many business properties and apartment houses are being foreclosed and acquired by small groups pursuant to this concerted plan. Have you found any evidence to support the contention that there are persons organized to take advantage of this unfortunate situation?

Mr. DUFFIELD. I have not, Senator; and yet I am not certain that I would be in a position to know, for this reason: I have always felt that the best service that we could render in the investment of our funds was the encouragement of the individual to acquire property; and of this billion odd dollars that I am speaking of, our average loan is only six thousand odd dollars. We have encouraged people to buy farms; we have encouraged people to purchase their own homes; we have believed in the private ownership of property and that it has been conducive to a better citizenship, and we have therefore developed our whole local plan on the small loan to the owner-owned and occupied farm and the owner-occupied home; and while we have a few large loans, I think, if my memory serves me correctly, at least 93 per cent of all of our loans are of the character that I have indicated, and the balance would be of the other kind. So that while I know of nothing of that character, Senator, I really would not be, probably, in a position to know if it were true.

Senator KING. A general moratorium throughout the United States upon all obligations, especially mortgage indebtedness, say, of two years, you think, if I apprehend your position, would rather impair the ability of many of these trustees, such as insurance companies, to meet their dues?

Mr. DUFFIELD. It would interfere, of course, Senator, with the whole structure. There is no question about that.

Senator KING. And the value of the insurance policy held would not have its face value, and it would lead to a great deal of apprehension on the part of these holders as to the value of their own life-insurance policies which they have sacrificed, perhaps, to obtain and to maintain.

Mr. DUFFIELD. Exactly, Senator; and I can think of nothing that would be more disturbing.

Of course, I am not prepared to say, nor do I believe it to be a fact, that a 2-year moratorium would prevent the meeting of obligations by some companies. I think that there would still be honest men who would pay their interest even though they were not compelled to do so. I still believe that there are honest debtors who would want to discharge their debts, and I still believe that we would be able to secure an income. But what would inevitably happen would be that the cost of insurance would be radically increased in every case of a mutual life insurance company. It certainly would be radically increased in any attempt to arbitrarily reduce the interest rate.

I think it might be helpful to you if I gave you a few figures in order that you may see the situation, because our picture is not different. It might vary slightly.

We have at present 163,965 loans. Of this number 37,568 are on farms and 126,397 are what we call city loans, which means urban or suburban homes and houses. Of course, included in that are some large loans where we have loaned on buildings of a larger character. But, as I say, over 90 per cent of all our loans are of the character that I have described. So when I speak of " city " you will know I mean the small home, and when I speak of the farm I mean the owner-occupied farm.

Those loans on farm lands amount to $201,419,000. The city loans amount to $908,666,000, making a total of $1,110,085,000.

The percentage of mortgage loan investment is 18.2, invested in farm mortgages, and 81.8 per cent invested in city mortgages.

The number of loans delinquent in interest six months or more are 4,000, or 11 per cent; 2,100 of the city loans, or 1.6 per cent, and 3.8 per cent of the total.

The number of loans in the course of foreclosure to total holdings is 2,400, or 6.5 per cent of farms; 3.3 per cent of city property, and 4 per cent of the total.

The per cent of loans in satisfactory condition on farm lands is 82.5 per cent. That means that interest is not in arrears over six months. Of the city loans, 94.6 per cent, or a total of 92 per cent.

The 89 per cent quoted previously referred to volume of loans as translated in dollars, whereas the 92 per cent refers to the volume as translated in numbers.

The CHAIRMAN. Have you a report on delinquencies?

Mr. DUFFIELD. As I say, Senator, I think it may be said that where a foreclosure has been made it had been made either on a showing by the mortgagor on his recognition that the situation was hopeless, or where he has deliberately disregarded any question as to mortgaged property and has failed to exercise that reasonable care in its conservation which should mark it.

The CHAIRMAN. In other words, he lost hope and lost all faith in the property himself?

Mr. DUFFIELD. Yes. The point that I am making is this, Senator, that with 92 per cent of this large amount of loans in a satisfactory condition, any arbitrary rule of dealing with it, with the resultant serious consequences which are obvious, is one that certainly would destroy confidence to a higher degree than it has yet been destroyed. In other words, it seems to me that whether you are dealing with the bond of a railroad or whether you are dealing with a mortgage on a single piece of property, the recognition that the trustee purchasing that obligation purchased it in order to safeguard the corpus of his estate should be taken into consideration.

What would happen if that were not true? Supposing that the securities were scaled down in order to meet the situation of the individual debtor. In the case of the corporation it would be an enhancement in value of the common stock. But if this depression terminates, as I believe it will terminate, what is then the situation? The speculator, the man who has invested for income without regard to safety, is restored not only to his original position, but has the advantage of any gain in property. But the obligation once scaled down remains there, and the trustee is left with his security fixed on a depression basis from which he can never recover. So therefore it would seem to me, Mr. Chairman, that no more serious question can be met in this discussion or taken into consideration when we discuss the situation of the debtor than what is also the situation of the creditors. Who are the creditors? That scaling of debts has not been shown by any figures here apparent to afford benefit to a large enough percentage of the entire class of debtors to indicate any real need therefor. With those cases self-interest will compel that they shall be treated with leniency in order to provide a means and an opportunity for them to restore their situation in order that they can, and as they will when they can, meet the obligation that they have assumed.

The CHAIRMAN. That is very plainly put and is a very sensible conclusion.

Mr. DUFFIELD. There is nothing more that I can suggest, Senator.

The CHAIRMAN. Thank you very much, sir.

## STATEMENT OF DR. H. C. DICKINSON, PRESIDENT OF THE SOCIETY OF AUTOMOTIVE ENGINEERS, WASHINGTON, D. C.

The CHAIRMAN. You live in Washington, do you not?

Doctor DICKINSON. Yes, sir.

The CHAIRMAN. What is your business?

Doctor DICKINSON. I am an engineer and scientist. I am at present the president of the Society of Automotive Engineers. However, I come to you as a private individual with no interest other than the interest of the general public, so far as I can say.

The CHAIRMAN. You may proceed. Make your statement as brief as you can, because we have a very long list of witnesses.

Doctor DICKINSON. Gentlemen, in order to make this statement as brief as possible, I have prepared a portion of it, which I shall ask the opportunity of reading because it can be done more quickly than I can do it extemporaneously. I want to say in advance, however, that the material here presented was presented in the form of a presidential address in Detroit to this society about three weeks ago, and I have copies of that material. Also, I wish to say this, that as an engineer I have taken the utmost pains to see that everything that is said and recorded here is correct. It is the result of a study of basic economic problems for the past several years and has been checked carefully by consultation with perhaps a hundred or more of the best thinkers I could find; and as a result I may say that I am certain, as is everyone who has been over the material, of the essential soundness of what I shall give you. I am much more certain of that than I am of my ability in a very short time to make it clear to you; but as the material is written and in more or less extended form, I shall trust to that to make anything clear that I can not make clear myself.

We should get nowhere in science or engineering if problems were handled in the manner in which economic problems have always had to be handled. Progress in science has always been based upon the simple statement and use of basic laws. No such laws, with perhaps one exception, are generally recognized in economics.

It is my purpose to show that the competitive economic system of a nation is in fact a mechanism, following, as does a machine, certain general laws; that severe inflations and depressions arise from a definite instability in the balance between capital goods and consumables, and that this instability can be controlled through adjustment of the mechanism itself without disturbing the present competitive system and with far less intereference with personal freedom of action than we are accustomed to at present——

Senator KING. And without involving technocracy?

Doctor DICKINSON. Absolutely. This offers a means of securing throughout the population, continuous prosperity, stabilized at any scale of living which the population desires to maintain by its hours of labor.

A clear view of the existing economic situation requires first the statement of a few fundamentals some times overlooked.

The primary economic object of any system of society is to promote the efficient production and distribution of goods and services, the products of industry. Otherwise, aside from the purely social advantages, there would be no factor tending to concentrate population.

The law of supply and demand in its general sense appears to be universal so long as there is competition. The few exceptions are fancied. Despite all efforts to the contrary, through attempts to control competition, and so forth, the relationship between supply, demand, and price is always controlled in the long run by competitive factors.

Any economic unit or social unit such as a city or a nation which is mainly selfcontained as regards outside trade, can be considered for certain purposes as a single industrial plant, with the difference, however, that both the producers and the consumers of the product constitute the same population.

In Figure 1 the United States is represented as such an economic unit. It consists of a population of some 123,000,000, of which normally about 40 per cent, or 48,000,000, are producers, i. e., "gainfully employed"; these and the remaining 60 per cent are the consumers. The latter consist mainly of those members of the family or group who are not working for direct wages; typically the mothers, children, and old people.

The total product of this industry, expressed in 1929 dollars as net income, was then worth some $86,000,000,000. Expressed in terms of present price levels this product would be worth about $60,000,000,000 as compared with $40,000,000,000 for the net incomes of 1932.

This is substantially a self-contained system, for although there is a considerable amount of foreign trade, amounting at times to 10 per cent of the total business, the net outgo of goods and services in the nine years between 1922 and 1931, inclusive, was less than 0.8 per cent. This represents a net export of the products of industry of less than 1 per cent during a period of maximum export.

To this degree of exactness the population of the United States over this period consumed exactly the equivalent of what it produced in the way of goods and services. The currency mostly has remained in circulation or in hiding. The liquid credits which constitute a considerable part of the "money" have contracted with decreased demand.

However, it should be emphasized that wherever goods or services were produced and exchanged for money all the goods and services and all the money remained in the United States except for the fraction of 0.77 per cent which represented the net foreign business. This was a net export of goods and services in exchange mostly for foreign loans, not for money, and represented the amount of such product produced but not consumed within the United States.

It should be noted here that we do not overlook the important effect of foreign commerce, representing at times the exchanges of goods and services to the extent of 10 per cent of the total national product. This effect comes about through the reaction of foreign trade on the distribution of incomes, which we shall discuss in the next paragraph.

It will be seen that such disturbances are not important, so long as national and international conditions are reasonably stable; but, like taxes and interest charges, they may become very serious when price levels and industrial conditions are changing with abnormal rapidity. In any case, however, the disturbance effects of foreign competition are of exactly the same sort as those of competition within the Nation.

Distribution of incomes, which is a measure of the distribution of goods and services among the population, is determined under present competitive system by a complex array of economic forces involving a large measure of chance or accident. The net result is a distribution of incomes which is closely analogous to the natural probability curve familiar in the physical sciences.

In Figure 2 is shown such a probability curve. The small circles represent the relative number of incomes in each income class as shown by the best data at hand. These data are not very reliable, and the departure of the points from the curve are as likely to represent errors in the data as departure of incomes from the probability curve.

Money as used in all modern countries is a means whereby this general distribution of product is accomplished. For this purpose money serves primarily as a medium of exchange. It is closely analogous to what are known as catalysts in chemistry. Money is not consumed or used up in the process of exchange, but simply passes from one person to another.

This characteristic of money strongly suggests two of the most important "laws" of the physical sciences, viz, the "conservation of matter" and "conservation of energy"; and without the knowledge that when a given amount of matter or of energy disappears at one point an exact equivalent necessarily appears somewhere else, many of our engineering problems would not be solved.

"Conservation of money," with certain limitations stated below, is an equally essential element in the solution of most problems of national economics.

This leads, for instance, to the often repeated and but rarely accepted fact that taxation is solely a process of redistribution.

Senator KING. By "conservation of money" you do not mean to say that it must be gold or silver or paper or any particular creation by legislation?

Doctor DICKINSON. No, sir. I have defined that very carefully in a paper which I will give you a copy of.

(The paper referred to by the witness was subsequently filed with the committee.)

Senator KING. You accept the academic definition, do you not, that money is real purchasing power?

Doctor DICKINSON. Oh, yes; certainly.

In fact, taxation constitutes only one of the multitude of processes whereby incomes are distributed, as explained above. Taxation neither directly increases or decreases money. It may be grossly unjust or unwise in the process of redistribution, or again it may be highly advantageous. Taxes also may be so collected and spent as to avoid redistribution or to promote a distribution which is highly advantageous to the entire population.

In any modern monetary system money consists of currency and liquid credits. The latter includes all sorts of negotiable paper, such as checks, drafts, and so forth, which circulate as money in exchange for goods or services. Thus the total amount of money in circulation at any time is variable through the expansion or contraction of these credits, and no accurate figures can be given for this total amount without drawing some arbitrary line between credits which circulate as money and fixed credits such as make up the bulk of "frozen assets" in times like the present. A sharp distinction, however, is not necessary for this discussion, as will be seen later.

It is a familiar fact that money as a medium of exchange must serve two other purposes: (a) As a standard of value, and (b) as a symbol of value.

A standard of value is necessary, for instance, to permit of keeping accounts and quoting or standardizing prices.

As a symbol of value money can be kept in hand for periods of time before exchanging it for goods or services. This makes possible the hoarding of money.

Both these functions are essential to modern business processes, but both are the source of serious difficulties, not the least of which are due to frequent lack of clear understanding of what money really is. In any modern system money is practically devoid of any intrinsic value. Even gold owes its value almost entirely to its monetary status. This use of gold being pretty much world-wide, however, its value is thereby better standardized than that of currency resting on the credit of a single country.

Referring again to the manner in which the product of goods and services is distributed as incomes, Figure 3 is a typical curve of income distribution. It is calculated directly from the probability curve shown in Figure 2. I have dotted the portion which represents a rough approximation of the percentage of savings which are a part of our income. The bottom of this income curve comes out at about $3,000 salaries for present purposes. The shaded portion represents the amount of savings. This portion of the curve [indicating] represents savings.

There are two things that can be done with savings. I have pictorialized this because it was presented to an audience of engineers. Savings can be utilized for what I have termed as social capital—for things that do not draw interest, such as our own individual houses, our personal property, our national roads, national parks, our schools, and public buildings. They are all social capital. They do not pay interest, in general, except in the process of acquiring them. If we put our savings into social capital, they no longer enter into economics, because they do not draw interest.

In this figure is shown, on a relative scale, the total of all incomes in each income class. The highest point of the curve represents the sum total of all incomes in the particular class plotted on the horizontal scale. This maximum point occurs at about $2,200 incomes. The total area under the curve indicates the total income of the country.

For the present purposes this income is assumed to contain the sum of all net incomes plus any payments of interest which are deducted before net incomes are computed.

The shaded portion of the curve represents total savings from incomes of different classes as estimated by the insurance companies.

The use to which these savings are put is one of the most vital elements in the problem of national economics.

In Figure 4 are represented two leaky jugs, representing the necessary depositories of all savings except such as may be hoarded in kind.

The contents of the jug marked "economic capital" represents the total accumulated savings which are represented by capital, i. e., capital goods on which interest is obtained. Those of the jug marked "social capital" represent all those things such as roads, parks, schools, public buildings, and personal property which have resulted from savings devoted to personal or general social purposes, and on which no interest charge is made.

It is clear that savings, unless hoarded in kind, necessarily go, so to speak, into one of these two jugs. Both jugs are shown as leaky to represent the fact that capital goods of all kinds wear out or become obsolete. The contents of these jugs may increase or decrease depending upon how much is put in and how much leaks out.

Senator KING. Your social capital, as you denominate it, is an expense as well as an ultimate loss?

Doctor DICKINSON. It is an expense.

Senator KING. An annual expense for the maintenance of it?

Doctor DICKINSON. Not necessarily.

Senator KING. For these schoolhouses and churches and what not there is expense incident to the maintenance of those buildings.

Doctor DICKINSON. That is all a part of our investment in social capital. That is, it requires a certain amount in every case. It includes the cost of keeping them going.

Social capital which does not earn interest does not come directly into the economic problem. Economic capital, however, is an essential element, and needs to be evaluated. So far as we can determine there are two definable values of the total of national economic capital, i. e., capital goods, as here defined. One is the capitalized value of its earning power at some accepted rate of interest and the other is its sale value. These two figures may or may not be equal and their relative amounts are important as will appear later.

For the present purpose interest is used to designate the returns on capital as such, exclusive of profits or losses which may result from good or bad management. In other words, it is what one would have to pay for the use of money for long periods without the element of risk as to principal. So defined the interest rate taken as an average throughout the Nation does not vary greatly in the absence of any serious economic disturbances.

In fact the normal interest rate is, we believe, determined over long periods of time through the operation of the law of supply and demand and can not be greatly modified by artificial measures, except locally or temporarily.

For any total amount of income as depicted on Figure 3, there is necessarily some total amount which can be used to pay interest on the total amount of capital in the Nation.

There are just two ways, so far as I can see, of stating value. One is, how much can it earn; how much can we receive in the way of interest for it? The other is, how much can we sell it for? And that is an important distinction which I shall emphasize later, namely, how much will the capital earn, and how much can it be sold for?

I have expressed this situation in the form of an equation which perhaps may not be so apt to this purpose as the same thing expressed in words. The amount that can be received in the way of interest for capital is absolutely fixed by the amount of income which we can earn; that is, by the amount which we can take out of earned income to put into interest, or by the amount of use which somebody can make of the total capital. Beyond that point capital is of no more value, no matter what we do with it. In other words, I have assumed that for this purpose when we have reached a point where all the use is being made of capital that can be made of it or we are paying all the interest that we can pay on it, this jug is full.

What happens if we save more than can be used? Obviously something must be done with those savings. Putting them into this jug [indicating] does not increase our income at all. In other words, it is useless. And here is where the fundamental difficulty in our economic system lies, and this can be remedied if we attempt to put more into this jug [indicating].

In other words, if we attempt to buy securities beyond the point where there is room for them, the price of securities rises, and that means that we acquire additional savings.

Of course, it is a matter of actual fact that those savings accrue very largely to the people in the upper brackets of this curve (indicating) who can not spend it all for consumables and must reinvest them. Therefore the reinvestment further increases the value of capital, and we have a system that is distinctly unstable. As we say in mechanics, it is unstable like a trunk standing on its edge. It is all right when you hold it in its place, but if it is allowed to drop, that is another matter.

Prices reach a point where people begin to realize that they are buying securities at a price such that the actual earned return on those securities is much below an acceptable rate of interest, maybe 2 or 3 per cent instead of 5 per cent, as might be normal. When that occurs, then we have the beginning of a panic which we had in 1929. Panics of that kind have occurred throughout history, and they will continue to occur if we allow this thing to take place.

Senator KING. All of which means, if I understand you, and reducing it to very commonplace phraseology, we went on a wild spree with surplus, with anticipated profits and with some real profits, and bought a lot of worthless securities that had reached high market values, and when securities fell the so-called capital vanished.

Doctor DICKINSON. Senator, I should not quite say we bought useless securities. We did buy some useless securities and we paid a great deal more for them than they were worth.

Senator KING. We bought a great many securities that were valueless.

Doctor DICKINSON. Yes. That was part of the program.

If more savings are put into the jug the total real value of the contents is not increased unless the total amount of incomes is increased, or else a larger percentage of the total income is paid out as interest. As there is a limit to this process there is likewise a limit to the value, based on earnings, of total capital. This we may designate as a full jug. If more savings are poured in, the jug overflows or leaks faster and the savings are lost; not necessarily the same savings, but a like amount.

Thus we arrive at a very important postulate now emphasized by various eminent economists but apparently totally neglected in practical economics. This is, that the total real value of capital can never exceed that on which current incomes or business can pay returns. When economic capital has reached this maximum the jug is full.

The inherent instability about this matter, however, seems to have been generally overlooked.

Suppose that there is a small excess of savings over what is needed to offset the leak in the jug and provide the 4 per cent or so required annually for normal growth of industry (in the United States). This surplus will be invested, unless the owners hoard it or put it into social capital; but there is no more room for it in the "economic" jug, so this runs over. No one finds this out immediately, though, for the following reasons: The act of investment in capital beyond that normally needed raises the price, though not the earning power of capital. This rise in price permits sale of capital at a profit which profit in turns goes partly to increase apparent savings which demand further investment. This process takes place through expansion of credit and represents not a real rise in value but an unearned increment of capital value above its earning power. This process, therefore, is highly cumulative, increasing in intensity as times goes on.

The CHAIRMAN. Doctor Dickinson, I want to call your attention to the fact that we have to leave in about five minutes in order to vote.

Doctor DICKINSON. I did not know that the time would be so short. I shall not be able to give you, then, the definite proposal which I have. I can not begin to tell you the whole story in five minutes, Senator. But I have plotted here from the figures available two curves which represent the present situation. An analysis of this whole problem simmers down to a conclusion that the present situation is brought about mainly by a lack of distribution resulting very largely in or at least accompanying an unemployment of personnel.

Therefore in order to see where we stand at the present time I have plotted these two curves, one of which is in terms of gold dollars and one of which is in terms of purchasing dollars, showing where we stood in the 20 years previous to 1929 as regards the proportion of our people employed. About 39 per cent at least of the population was employed on an income in gold dollars of $750 per year per individual in the United States, or in terms of present purchasing dollars, about $460. At present our income has dropped to about $350.

Senator HARRISON. That is, per capita?

Doctor DICKINSON. Yes, sir. It is a little less than that, because we have gone far below this.

The other possible solution at the present tme, other than the scaling down of debts, about which you have just heard a discussion, is to bring back this employment situation along the same curve.

There is one way in which that can be done. Individual companies can not increase their employment. The nature of this curve [indicating] is such as to show that at this point [indicating] when an employee was discharged the loss in national income was exactly equal to his salary. When this point [indicating] was reached the loss in national income when a man was discharged was twice his salary. When this point [indicating] was reached the loss in national income was three times his salary. If we reach this point [indicating] the loss in national income is four times the salary. In other words, there is a tremendous margin between the cost of employing people and the amount of net income which we experienced if they are unemployed.

That offers the key to a complete and certain method of recovery. The only necessity for recovery is to see that employment is increased. Any number of people have proposed means whereby that can be done; any number of proposals have been given. The first thing we must do to stop unemployment is to prevent any further decrease in employment anywhere. The next thing that we must do is to increase employment through any means whatever——

The CHAIRMAN. Can you tell us how to do that? You say it ought to be done.

Doctor DICKINSON. I can tell you various ways. One method is to employ the private employing agencies, such as the various companies, to increase their employees——

The CHAIRMAN. You may proceed here with your statement, and it will be in the record. The reporter will take it and we will recess at this time. The balance of the day will be spent in hearing Mr. Wood, who has a confidential statement to make.

Doctor DICKINSON. May I ask one favor? The importance of this is recognized by some two or three hundred people who have read it and who consider it the most important thing that has been proposed yet. That is not my evaluation of it, but theirs. I would like to ask if it would not be the pleasure of this committee to suggest or appoint a small group of the best men that you have who may be able to sit down with me and let me give them a complete statement.

The CHAIRMAN. The committee will take that up later. Anything further that you want to state you may state now, and the reporter will place in the record.

(The committee then recessed until 4 o'clock p. m., and the witness continued his statement as follows:)

Doctor Dickinson. The proposal which I have to make contemplates not only the recovery from the present depression but a complete system of treating the economic situation in such a way that we can be sure of not falling into another difficulty of the same kind. And this is the key to the situation.

The annual income of the individual and the Nation is made up of net earnings plus or minus the increase or decrease in the value of our capital as a whole. The result may be positive or negative, depending upon whether earnings are going up or down. When an inflation occurs the selling price of capital increases above its earning power; and a remedy for an inflation can be found in preventing that increase.

Such a remedy would consist in determining by means of a public agency, nonpolitical in character, when this condition occurs and, at such time, levying a special stabilization tax on the difference between the real value of capital and the sales value of capital. Such a levy would amount at most to 50 per cent of the difference and should not exceed a fraction of a per cent of capital value. Such a levy must be expended for such things as social capital, and such expenditure for social capital should be encouraged. Those who are taxed should be encouraged to spend for social capital of their own account. In other words, the tax should be remitted to anyone who will so spend the surplus which can not be invested. It might be, for instance, in bonuses to employees or in public works or in any accepted form of social capital.

If a panic occurs, the price of capital falls below its earning power. This situation is not a serious matter and has often occurred, resulting in what have been known as Wall Street panics, without having any appreciable effect on the general welfare. If this condition cures itself promptly, no remedy is necessary. If it does not cure itself promptly, we fall into a cumulative depression. Such depression is cumulative because the loss of net national income exceeds the gain in individual income by the discharge of personnel.

Such a point was reached in the present depression early in 1930. Early in 1931 this differential was 2 to 1. At this point the discharge of employees to the extent of a million dollars reduced the national income by $2,000,000. Near the beginning of 1932 the factor was 3 to 1.

This factor, by the way, results purely from an analysis of statistics, contains no theoretical deductions whatever, but contains the assumption that the fall in prices was the result of reduced employment. This assumption is not entirely correct, because the fall in prices was partly the result of international conditions.

If we assume that the fall in prices was solely a matter of international conditions, and not at all dependent upon conditions within the United States, the factor at the middle of 1932 was 2 to 1 instead of 3 to 1. The actual factor necessarily lies between these two figures.

It results, therefore, that any process whereby funds can be spent for the reemployment of personnel will yield a net profit to the

Nation of from two to three times the expenditure. Such funds can be secured by any one of several means. We suggest that for this purpose funds be borrowed from the surplus of several billion dollars now available in the banks at a rate of possibly from half a billion to $700,000,000 a month, and employ any of the various acceptable means for increasing total employment or for the purchase of consumable commodities, which amounts to about the same thing, and this process will necessarily with mathematical certainty result in an increase in national income of the order of two to three times the amount expended.

It therefore constitutes a form of investment which the National Government can make, but which no individual business can make of itself, which will yield a net profit of from 200 to 300 per cent. This loan should not be amortized by bonding, because Government bonding will increase the total net national indebtedness which at the present time probably is far higher than is safe. Therefore these loans should be amortized as rapidly as possible from the profits of the transaction which accrue to the public.

These profits accrue in two ways: As an increase in net national income of two or three times the expenditure, and also as an increase in the real value of capital to the extent of probably many times the expenditure. Therefore these two sources of income should be used for amortizing the temporary loans necessary to bring about recovery.

This can be done through the medium of a nonselective tax on earned increments plus a levy on the increase in the sales value of capital.

It is indeterminate how much of the money expended in reemployment will accrue as net income or how much will accrue as increase in capital values. Therefore the proportion of the expenditure to be amortized from these two sources should be determined from the results of the process.

In any case the cost of recovery will be borne in the form of a comparatively small percentage of the accruing gain to the country and, if properly distributed, can be done without entailing an expense to any individual. The results in profit to the Nation should shortly bring about a return to normal prosperity. So far as we are able to estimate, at the rate here suggested, the normal prosperity should be restored in about 18 months' time.

The plats which have been shown of the trend of unemployment as related to national income suggest that the Nation is reaching the danger point beyond which a drastic decrease in fixed indebtedness will be necessary. The proposed method of rehabilitation would avoid the necessity of any such drastic change.

There are two other points which I wish to emphasize. One is that the underlying cause leading to all national disasters, such as those of Rome and Spain and Europe during the dark days, has come about through an increasing burden of debt which has reached such dimensions that the earnings of business were all absorbed in the payment of returns on capital.

In relation to this matter it should be emphasized that the only reason why a burden of debt of this kind can become destructive is that it is related to the use which is made of interest. If it were possible to prevent the overinvestment of interest or to share that interest on indebtedness so that all or nearly all is expended for consumables, the destruction of national integrity through a burden of debt would become impossible.

The method proposed above for preventing inflation carries with it a means for controlling this situation.

The proposals here made, taken together, constitute, I believe, a complete system whereby disastrous inflations and deflations can be controlled and made to retain an equilibrium. We believe also that the means necessary for accomplishing this result could be incorporated in a permanent form of legislation put in the hands of an administrative body without giving them individual discretion and could be so administered as automatically to accomplish the results here stated.

We believe, also, that if this can be accomplished it necessarily makes possible complete recovery from the present depression and also the realization of permanent stabilized prosperity.

Taxation as a means for accomplishing a result of this kind must be looked upon as a method which can not be utilized by individuals because of the nature of competition between individuals but can be utilized by the National Government or could be utilized by all industries together through common consent.

(The charts and graphs referred to by the witness in the course of his remarks were filed with the committee.)

(The committee, then, at 4 o'clock p. m., met in executive session.)

×

# INVESTIGATION OF ECONOMIC PROBLEMS

---

**FRIDAY, FEBRUARY 17, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met, pursuant to adjournment on Thursday, February 16, 1933, at 10 o'clock a. m., in room 335, Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Couzens, La Follette, Metcalf, Harrison, King, George, Walsh of Massachusetts, Barkley, Connally, and Gore.

The CHAIRMAN. The committee will come to order. Mr. Houston.

## STATEMENT OF DAVID FRANKLIN HOUSTON, PRESIDENT OF THE MUTUAL LIFE INSURANCE CO. OF NEW YORK, NEW YORK CITY

The CHAIRMAN. Mr. Houston, give your full name and address for the record.

Mr. HOUSTON. David Franklin Houston; 34 Nassau Street, New York City.

Senator HARRISON. Let the record show that Mr. Houston is ex-Secretary of Agriculture and ex-Secretary of the Treasury. What is your present business?

Mr. HOUSTON. President of the Mutual Life Insurance Co. of New York.

The CHAIRMAN. You may proceed in your own way.

Mr. HOUSTON. Mr. Chairman and Senators, I am greatly honored by your request to come before the committee to-day, and I accepted not so much because I thought I could be of any assistance to you gentlemen but because you asked me to come and I did not see how I could decline.

In your telegram you asked me for some views on the causes of the present depression and some suggestions as to courses of action.

I need scarcely say that it seems obvious that the background of the present depression is the Great War; the enormous financial costs to the leading nations of the war, the direct costs alone exceeding $186,000,000,000, the indirect costs exceeding $81,000,000,000, the total more than $286,000,000,000 during the war. Added to that I think we must take note of the enormous destruction of human life. More than 9,900,000 known dead. Over 6,000,000 men seriously wounded. Fourteen million other men wounded. Making a total of 30,000,000 men.

We must add to those figures the estimated losses in other directions. The upsetting of governments. The dismemberment of nations and the setting up of a number of new nations.

We might also add as an item which has complicated the situation advances which have caused disruption of international exchange by certain of the Allies to others and by Germany to some of her allies. The total of those advances was $22,000,000,000.

The CHAIRMAN. That is outside of the advances made by Germany?

Mr. HOUSTON. The total, as I have the figures—and these are not, probably, complete; I took them as of the latest date available—the advances of the Allies, the United States, Great Britain, and France, were about $19,700,000,000, and of Germany about $2,375,000,000, making a grand total as of the date for which I have these figures of over $22,000,000,000.

The CHAIRMAN. I stated that because I always understood our advances were about $22,000,000,000.

Mr. HOUSTON. Of loans?

The CHAIRMAN. Not only the loans, but what was advanced in other ways. I did not mean the cost.

Mr. HOUSTON. Now, you gentlemen are quite familiar with the mounting burdens that this Government had. In 1916, before we entered the war, the ordinary receipts of the Government were about $782,000,000. And by 1920 they ran to about $6,700,000,000. The ordinary expenditures mounted from about $742,000,000 in 1916 to nearly $19,000,000,000 in 1919.

It has been stated that in the three years following our entry into the war this country spent in the neighborhood of twelve or fourteen billion dollars more than it had spent in its entire preceding national history. And our debt, as you know, increased from approximately a billion dollars to over $26,000,000,000. And State and local receipts and expenditures correspondingly increased.

That picture, I think, gives a hint not only as to the political disruptions but as to the economic burdens that the world has been called upon to assume, which are still with us in a great many directions.

Following the armistice, as is, I think, always the case after a war, there was a period of hope, of optimism, it being generally assumed that when the fighting had ceased the war was over, instead of assuming that the war had left us with a legacy that we would be struggling with for generations. This spirit was manifested, I remember, in a conference that was held in Washington in December. It was apparent that men in industry, thinking that peace had come, were ready to set up again. Of course, during the war many plants had been unduly expanded. Prices had greatly increased—had doubled, very nearly—and wages in many directions had more than doubled. Other plants set up at an undue rate. And yet, it seemed clear pretty early in 1919—in fact, in the latter part of 1918—that world trade would be greatly decreased and that there would be a decline of price, not only for industrial things, but for agricultural products. It was quite obvious that Europe would not have the money to pay for what she really wanted or for what she had been buying. And that as the submarine was out of the way she would begin again to seek things from other nations from which she could not get them during the war, and from which she had been accustomed to get them.

Some warnings were issued to that effect but, notwithstanding that, the expansion both of agriculture and of industry continued.

The farmers of the Nation especially had been urged to produce, to increase their acreage in leading cereals and in animals, during the war, and they responded very nobly. But after the armistice came, instead of returning to pre-war practices as they were urged to do, they continued to produce an undue amount, especially of wheat and cotton and some other things.

In the period of 1911–1915, for instance, the acreage of cotton was 35,000,000.

Senator HARRISON. In the United States?

Mr. HOUSTON. Yes. That is the average. In 1916–1920, 35,000,000. In 1921–1925, 37,600,000. In 1926–1930, 44,700,000.

As to wheat, 1911–1915, the acreage was 52,000,000; 1916–1920, 58,000,000; 1921–1925, 57,000,000; 1926–1930, 60,000,000.

Agricultural exports which had run to $3,800,000,000 in 1920 began to recede, until in 1922 they were $1,900,000,000, and dropping in 1931 to $1,000,000,000.

All exports which in 1916 were $5,500,000,000, rose to over $8,000,000,000 in 1920, dropped to $4,500,000,000 in 1921, and $3,800,000,000 in 1922.

There was an unmistakable land boom.

Senator HARRISON. Have you the pre-war figures there on exports?

Mr. HOUSTON. Yes, sir. In 1913 it was $2,450,000,000. In 1916 (the European war having broken out in 1914) it was $5,500,000,000; had risen to $5,500,000,000, and then rose, as I said, by 1920, to $8,200,000,000. Would you care for the imports?

Senator HARRISON. No. I just wanted to get the pre-war exports?

Mr. HOUSTON. Farmers continued their activities on a large scale. Many of them began to buy lands at very high prices. Values mounted enormously, and they went into debt for very large amounts.

In 1910 the values that I have taken from the statistical abstract were $6,300,000,000. In 1920, $13,800,000,000. Dropping about 1925 to $10,800,000,000 and by 1930 to $10,300,000,000.

And the debt on the farms which incurred debt—and I may say that I am now speaking only of farms operated by owners—was reported at $1,700,000,000 in 1910, at $4,000,000,000 in 1920, four and one-half billion dollars in 1925, receding slightly to $4,100,000,000 in 1930. And the largest increases were in the section of the country that is normally regarded as one of the most prosperous and the best farm section, the North Central States. I may say that these States showed the largest increase in the land values, and also in the debts incurred.

The CHAIRMAN. Can you give us the percentage of increase?

Mr. HOUSTON. I think I can give that in a moment.

I have seen a recent statement by Doctor Englund of the Department of Agriculture giving his estimate of the total mortgage debt. As I said a moment ago, those figures were for farms owned and operated by the owners. Total mortgage debt in 1910 of $3,300,000,000. That includes the debt on farms operated by the owners, on tenant farms and farms operated by managers. In 1920, $7,800,000,000. In 1925, $9,300,000,000. Receding by 1930 to eight and one-half billion dollars.

The North Central States to which I referred—for those States I have the estimate of the same authority—had 59 per cent of the total debt, 33 per cent of the number of farms and 51 per cent of the value of lands and buildings. And it is estimated that of the total debt 56 per cent was on farms operated by owners, 40 per cent on tenant farms, and 4 per cent on farms operated by managers.

If the committee has not the figures it may be interesting to note his estimate of the creditors. The Federal land banks in 1928—that is the last year for which he gave the figures—had 12.1 per cent of the mortgages for $1,146,000,000; the joint-stock land banks, 7 per cent, for $667,000,000; commercial banks, 10.3 per cent, for $1,020,000,000; mortgage companies, 10.4 per cent, for $988,000,000; insurance companies, 22.9 per cent, for $2,164,000,000; retired farmers, 10.6 per cent, for $1,000,000,000; active farmers, 3.6 per cent, for $339,000,000; other individuals, 15.4 per cent, for $1,453,000,000; and other agencies, 7.2 per cent, for $685,000,000, making a total as of that date—which has since decreased—of $9,463,000,000.

Senator HARRISON. Doctor Englund testified before a subcommittee of the committee on banking and currency, and I think that proportion is about maintained up to date.

Mr. HOUSTON. Yes.

Now, Mr. Chairman, it is rather important to note, I think, that the number of individual holders of these mortgages is very large. Outside of the owners of the insurance companies, who number perhaps sixty-odd millions, the other individual holders are about 750,000. So that they, together with the owners of the mutual insurance companies own about $4,900,000,000, or nearly half. And, of course, I need not say that the policyholders, of whom there are more than 60,000,000, are the owners of those companies.

There came the slump, the decline of foreign trade, marked decline in agricultural exports, falling prices—industrial prices beginning to fall in the preceding December and continuing through 1919.

Then there followed another period of expansion, of reckless speculation and gradual weakening of the financial structure. Money rates, as you recall, for secured time loans went to 10 per cent, and from 6 to 7 per cent for commercial paper. And the reserve ratio in 1920 dropped to the minimum required by law for the system, and in the case of some of the reserve banks below the minimum. There was, of course, the large dip in agricultural prices in 1920.

After 1922, and especially after 1923, a period of recovery began. It mounted rapidly until October, 1929. It was characterized by the things that usually characterize these depressions—over expansion of industry—not only of industry, but of agriculture. Large credits extended, not only here but abroad. Large loans to foreign countries. And a mounting of expenditures, especially in State, local, and city units, public and private.

The CHAIRMAN. Have you the percentage there of increase during the period from 1925 to 1929 on the expansion of State, county, and city expenditures?

Mr. HOUSTON. I am sorry to say that I have not got complete figures for that.

The CHAIRMAN. I thought perhaps you could give the percentage.

Mr. HOUSTON. I can not give you that, Senator. But take a few indices of the mounting of production. Automobile production in 1915 was 895,000. By 1918, the year of the armistice, it had risen to 943,000. In 1919, 1,650,000. In 1920, 1,900,000. In 1923, 3,750,000; 1928, 4,000,000; 1929, 4,800,000; dropping in 1930 to 2,900,000.

The registration of automobiles in 1915 was 2,446,000. In 1920, 9,223,000. In 1928, 24,500,000. In 1929, 26,500,000. In 1930, 26,500,000. And the most recent hint that I have had as to the present registration is about 23,500,000, or enough to carry the entire population of the United States in one trip.

Another hint I think may be found in a direction in which expansion was needed but which perhaps proceeded more rapidly than was wise, and that was in highway building. In 1914, $24,000,000 in highway construction. In 1919, $107,000,000. In 1921, $397,000,000; 1925, $649,000,000; 1926, $622,000,000; 1927, $707,000,000; 1928, $827,000,000; 1929, $910,000,000; and in 1930, $1,140,000,000. Or in that period a total of $4,500,000,000.

Senator HARRISON. That is State, local, and Federal government?

Mr. HOUSTON. Federal aid and State and local. Now of course I need not say that I was very much in favor of improved highways, and I administered the Federal aid road act for some years, but you can overdo even a good thing, or do it too rapidly.

Take another hint. Building construction. I am sorry that I have not the figures for the war or preceding periods, but in 1925 it was $6,000,000,000. In 1926, $6,400,000,000; 1927, $6,300,000,000; 1928, $6,600,000,000; 1929, $5,750,000,000. Or a total in five years of $31,000,000,000.

Now, unquestionaly, human nature and human wisdom were weak in that field. There are many communities in America, from New York City, Chicago, Los Angeles, down to smaller cities, that I might mention, that greatly overbuilt, overbuilt ahead of any need, and of course complicated the situation.

Coincident with this began a period of speculation which was amazing. Prices even of good stocks and other securities mounted far beyond what they should have reached on any basis of earnings or reasonable prospects, and on some other securities far beyond that, and it was nation-wide; so far as I have been able to ascertain there were few communities in America in which people of all classes were not speculating, and many of them on margins, and it was practically impossible to head them off, and there were some people who were not disposed to try to head them off. As in many other fields of course there was high-pressure salesmanship, but aside from that, even when you tried to stop them it was difficult to do so. Some of us who urged caution in the latter part of 1928 and during 1929 were told that we were out of date; that we were in a new economic era, and that economic law had been set aside, but they found to their sorrow that they were mistaken.

The thing ran its course, and then came the collapse of stock prices in October of 1929.

Senator LA FOLLETTE. Mr. Houston, before you get any further in your historical analysis. Assuming for the sake of the argument that all that you say concerning the overenthusiasm which characterized the building industry and highway development is true, do you or do you not believe that the expansion of the construction and the expansion of the highways and the expansion of the automobile industry contributed to pulling us out of the slump of 1920–21?

Mr. HOUSTON. I think that is a difficult question to answer. It helped to set up trade activity, but going beyond what seems to me to be a reasonable point it simply precipitated a worse situation, as overexpenditures either on the part of private individuals or Government agencies always do.

Senator LA FOLLETTE. I was anxious to know whether or not you felt that those industries expanding construction, the automobile, the building of highways, contributed to the turn which came after the slump of 1920–21, or not?

Mr. HOUSTON. I should rather think, Senator, that they were a reflex of the fact that the turn had come.

Senator LA FOLLETTE. In other words, it is your opinion that if there had been no expansion in the automobile industry and in highways and in construction of all kinds that we would have come out of the slump anyway?

Mr. HOUSTON. Yes. We would have worked out of it anyway. And if we had proceeded with due caution we might have gone on without anything like the phenomenon that we witnessed in 1929. But human nature, of course, is fallible, and human wisdom is limited, and it is very easy to see the mistake after the event.

Senator LA FOLLETTE. In your opinion did the automobile industry expand too rapidly?

Mr. HOUSTON. I think so. I think most things did. I am not criticising the automobile industry as such, but I think that most things did. I think we as individuals and public servants throughout the Nation overdid expenditure in an excellent thing like highway construction. Did it too fast. But that is nothing new. We have always done it.

Mr. Chairman, it may not be entirely without value if I were to remark here that the public seems to think, and perhaps naturally, that this is about the only period in which the Nation has been in trouble. Now, I do not underestimate the difficulties that individuals are in to-day, that enterprises are in, and that governments are in, or the problems that you gentlemen have to solve. But we have had one or two other depressions ranking pretty close to this and in some respects presenting difficulties that we have not yet had to encounter. May I just briefly refer to them?

The CHAIRMAN. We will be glad to have you do so.

Mr. HOUSTON. Let us go back to the good old days of the 1830's. There we had a course of reckless overexpansion, internal improvements, canals, the taking up of public lands, reckless speculation in public lands, and coincident with that, as you gentlemen remember, the fight on the Second United States Bank. In that period, especially with our State banking system, which was the only thing we had aside from the Second United States Bank, our laws and our banks were even weaker than they are to-day. And, furthermore, that depression, like most others, was world-wide and not local. Europe was in trouble. Her people became frightened as to what was happening in this country and began to withdraw their American securities. The farmers were in trouble. There had been several years of cereal-crop failures. They had little or nothing to sell. Land values collapsed. And this was accentuated by the action of the Government in issuing the specie circular which withdrew specie from where it was needed to where it was not needed. The sales of public lands fell off from $25,000,000 in 1837 to $900,000 in 1843. It is stated by an economist that 50 per cent of all land in the country changed hands; and all the land in Alabama.

Senator HARRISON. Did that affect one section more than it did another, or was it pretty generally universal?

Mr. HOUSTON. No; it was universal. I have just spoken of the land troubles. Nine-tenths of the factories in the East, it is estimated, closed down. Fifty-thousand men in Massachusetts alone in the shoe factories were thrown out of work. New York City was characterized as a dead city, with 20,000 idle people, and the militia was called out to suppress riots.

The CHAIRMAN. What was the population of New York at that time, do you remember?

Mr. HOUSTON. I do not remember. It was relatively small.

Senator HARRISON. The proposition, though, of unemployment at that time was as large as it is to-day?

Mr. HOUSTON. I should think so.

Senator BARKLEY. But life was much simpler.

Mr. HOUSTON. That is true.

Senator BARKLEY. That was before the steam engine and the steamboat had come into use, or soon after they were brought into use. Of course, the whole social structure was much more primeval than it is at present, and to that extent was not so complicated.

Mr. HOUSTON. That is true. But, on the other hand, the people had less reserves than they have now. I will touch on that if I may a little later.

It has been stated that from one-half to two-thirds of the clerical force in the city of Philadelphia were thrown out of work. Some of the Western States, what were then Western States, were on the verge of bankruptcy, and several States repudiated their indebtedness.

Of course, there was a banking collapse. The banks in New Orleans went first, and then those in New York City and Philadelphia. And in 1837 the country had 758 banks, and 680 of them suspended. There was a partial resumption in 1838, and in 1839 840 banks were in the country and 759 of them suspended.

The currency of the Nation contracted from $149,000,000 to $83,000,000. The Government, as you remember, could find no safe place in which to put its money, and founded the independent treasury system which has only recently been transferred to the Federal Reserve.

Now, I shall not go into the panic of 1857.

Senator HARRISON. How long did that panic in the 1830's last?

Mr. HOUSTON. From 1837 to 1842. Five years.

The panic of 1857 ran the same course. Had very many of the same incidents. The only peculiarity about it was that it was characterized by overexpansion of railroad building, the taking up of lands, speculation in lands, stimulated in no small part by the discovery of gold in California coincident with the discovery of gold in Australia.

And there was this interesting thing. The banks assumed that the gold from California was going to stay in this country. I happened to make a special study of that, and of all the volume—I can not remember the exact amount, but it was large—that poured out from the California mines between 1848 and 1857 only $10,000,000 stayed in this country. You can trace it to England, and through England to France, where it displaced silver, which went to India.

Senator HARRISON. Was that not due largely to the fact that London at that time was the great financial center?

Mr. HOUSTON. And because of her trade relations; yes, sir.

Senator HARRISON. This one in the 1850's lasted how long?

Mr. HOUSTON. That lasted only a very short time. And we had hardly begun to recover from it when the Civil War came on.

Now came four years of fighting. Our own people engaged in the most serious struggle, I suppose, up to that time in the world's history. We had hardly started the fighting in the North before there was a suspension of specie payments. And there was the same mounting of expenditures, in proportion I think approximately as great as during the late war. Our Federal expenditures in 1860 were only $60,000,000. The average between 1861 and 1865, in the Union alone, was approximately $700,000,000 and the receipts $161,000,000.

And of course the debt mounted. In 1860 it was $64,000,000. In 1865 it was $2,700,000,000. And at the beginning of the war the total wealth of the Nation was only $16,000,000,000.

Prices, of course, had mounted. The war had been financed largely by borrowing. Greenbacks were issued, I think, up to about $432,000,000. And the South was left with her economic strength impaired 60 per cent, and a disruption of her social and economic system.

Now, again, after the peace a wave of optimism swept over the Nation. This was followed by a period of expansion, enormous railway undertakings, and a riot of speculation.

Senator HARRISON. What year did that start after 1865?

Mr. HOUSTON. There were symptoms of trouble as early as 1870.

Senator HARRISON. But the expansion started immediately after the war?

Mr. HOUSTON. Yes. Just as it did after the late war. And railways were built ahead of the need of the moment and of population. The cost of this construction between 1867 and 1873 is estimated to have been $1,700,000,000. The railway construction in that period was 32,000 miles, or more than the Nation had in 1859.

Now, it had some good aftereffects, because if those railroads had not been extended to the Mississippi, as they were, we would not have had poured out the subsequent flood of products from the

Middle West which made the resumption of specie payments possible. But there was overexpansion in iron, steel, and textiles and oil refineries and flour mills, and in State, city, town, and county expenditures.

There was the same reckless issue of securities. This country and Europe were flooded with them. There was much borrowing in the East. And again warnings were unheeded. And I have no doubt that those who gave warnings were told that they were in the new economic era.

In 1872 the reserves in New York City were deficient. On September 8 nine New York banks failed. On September 20 the New York Stock Exchange closed for the first time in its history. And then there was a suspension within the suspension. Specie payments had already been suspended and again, as in 1861, they had to resort to the use of clearing-house certificates. Checks had to be made payable through the clearing house. In New York City limits were placed on the amounts of deposits that could be drawn out. Then Boston, Philadelphia, Baltimore, Washington, Chicago, St. Louis followed, and then the rest of the country.

Senator BARKLEY. What year was that?

Mr. HOUSTON. In 1873. By September 27 it had become general throughout the Nation.

Senator HARRISON. September 27, 1873?

Mr. HOUSTON. That was 1872—September 27, 1872. The people were alarmed. They began to hoard, they began to try to draw out of the banks, and in the next year, 1873, there were 5,000 commercial failures, for $228,000,000; in 1878, 10,000; and in the period from 1873 to 1878, 47,000. And it appears that in proportion the number of commercial failures at that time—in 1878, I think it was—was approximately the same as in 1932, in proportion to the number and wealth.

It has been stated that 89 railroads went into the hands of receivers. Trade fell off from 25 to 50 per cent. Five hundred thousand railway men alone were out of work. That from 300 to 700 iron and steel plants closed down. And that in a population of approximately 38,00,000, 3,000,000 of men were out of work. Relatively few women were working in industry then. That is the proportion, 3,000,000 to about 38,000,000.

And during that period we had the reverse of the situation that we are now in. The country was struggling to get a sound money system. The national banking system had been created, but had never had a chance to get started satisfactorily. We had no gold. And the Congress provided in 1875 that specie payments should be resumed in 1879. And by reason of the fact that our exports for several years exceeded our imports, and we imported gold, we resumed specie payments in 1879, and then prosperity began to reappear.

Senator HARRISON. So that panic lasted about six or seven years?

Mr. HOUSTON. With symptoms in 1870, but acute in 1873, it lasted through 1878. About five years in the acute stage.

Senator LA FOLLETTE. Do you know what happened to production? Have you any data on that period of how much it fell off?

Mr. HOUSTON. I am sorry that I have not the figures for that, Senator. But of course the North was not as hampered in that field as the South was, but I should think that the decline was considerable. I could get the figures and supplement those if you wish.

Senator LA FOLLETTE. I will be glad to have you do so. I have seen data—I do not know how accurate it is—to indicate that we have never had in these previous depressions such decline in the percentage of production, and I wondered whether you had looked into that aspect of it?

Mr. HOUSTON. That is true in certain industries. I will take that statement back. I was then thinking of a great enterprise which did not exist as such at that time; but I should be very much surprised if in the main the decline was not fairly comparable.

You are more familiar with 1893. That also did not appear without warning. There was a good deal of speculation here and abroad. Failures appeared in England. The Baring Brothers failed in November of that year. In this country a number of private bankers and brokers failed. Resort was again had to clearing-house certificates.

The CHAIRMAN. That was coming for two years, though, was it not?

Mr. HOUSTON. Yes. I will come to that.

The CHAIRMAN. People in the world, I suppose, knew that it would arrive, though they did not know how soon.

Mr. HOUSTON. Prices of agricultural staples were low. The farm debt was heavy. There was again reckless financing of railroads and many went into receivership.

There had been an agitation for cheap money. And then the passage, as you remember, of the silver purchase act in 1890. That caused apprehension here and abroad, and the usual phenomenon followed.

This depression was world-wide. Our exports dropped $14,000,000 in six months in 1890. Gold began to go out of the country. The circulation contracted $29,000,000 in six months. And Europe began to call for her securities. Railroads began to fail. The stock market collapsed on May 4. In six months 3,400 commercial failures for $169,000,000. Banks began to suspend, and on June 15 clearing-house certificates were resumed. And there was little improvement in the situation until 1896.

In 1907 we had a bankers' panic, but that does not——

Senator HARRISON. Before you leave the other. This depression in the nineties lasted about four or five years?

Mr. HOUSTON. It began in 1890. The symptoms of trouble appeared in 1890. And it disappeared after 1896.

Senator BARKLEY. Do you attribute its disappearance mainly to the discovery of gold in Alaska?

Mr. HOUSTON. I am speaking of 1893.

Senator BARKLEY. I thought you said it disappeared after 1896. Maybe you have not reached that point.

Mr. HOUSTON. 1896.

Senator BARKLEY. Are you going to discuss that in your statement, as to whether the discovery of gold in Alaska in 1896 had anything to do with that?

Mr. HOUSTON. No; I have not followed that, Senator.

Senator HARRISON. You have gotten down, Mr. Secretary, to 1907?

Mr. HOUSTON. Yes.

Senator HARRISON. Had you finished with that?

Mr. HOUSTON. Yes.

Senator HARRISON. That lasted how long?

Mr. HOUSTON. That was very short. I do not remember the exact time.

Senator HARRISON. Would you be able to tell the committee during these series of depressions what, if anything, stands out preeminently that was done by the Government to help to bring about economic normalcy?

Mr. HOUSTON. I am going to touch on that.

Broadly speaking, there was nothing different in the course of these depressions from the course of the depression that we are now in. There was the same overexpansion, the same speculation, the same proposal for relief—similar proposals for relief—I should not say the same—of spending of more money and attempts to tamper with our monetary system, some of which were more or less successful.

Senator BARKLEY. You mean the tampering was successful?

Mr. HOUSTON. Yes. There were even proposals for changes in our governmental system, our social system, as we have at all times. And in this, of course, for planning boards to plan for the Nation, groups of men. I have not found so many who know how to plan for their own individual enterprises as to justify me in thinking that they could plan for all the activities of the Nation. And many of these proposals come from people who have made no particular success of their own individual plans and have not been charged with large responsibilities. They have even proposed the overturning of our system of Government without telling us where we are to look for a better or giving us any concrete suggestion that would certainly bring improvement.

I am not one of those, Mr. Chairman, who think that this country is in quite as desperate a situation as some people think it is. I do not think it is the worst time in the history of the world, and I do not think, broadly speaking, it is as bad in some respects as the country has been in preceding depressions.

Of course if we compare this country with Europe we find it in so much better condition in most respects as to admit of no comparison. Our wealth still exceeds that of perhaps the four leading nations of Europe. Our savings in savings banks and in time deposits are somewhere between twenty-four billions and twenty-eight billions of dollars are very much larger in proportion than those of any other people. And we have around from 50 to 70 per cent of many of the most valuable things in the world, with only 6 per cent of the population. Nearly 50 per cent of our people live in homes which they own, and more could live in them but many of them prefer to rent. And at the last date for which I have the figures, 60 per cent of the arable land was still cultivated by owners. Now those figures can not be duplicated in any other country in the world.

Another fact that has interested me as bearing on what we try to do for the people. I suppose the only way to try to bring about equality of opportunity, or one of the most effective ways, is to try to increase equality of capacity, and it seems to me that we have omitted nothing to do that. This Nation, so far as I can get the figures, examining the budgets of all the nations in the world, with 6 per cent of the population spends more for education than all the rest of the world put together.

Senator BARKLEY. Do you think we are getting our money's worth?

Mr. HOUSTON. Not in all directions. I think we are trying to educate many people who are not educable. I used to be rather innocent in that field. I used to think that everybody could become educated. I have come to doubt it. While I believe in keeping the door of opportunity open, I think after a boy or girl demonstrates that he or she can not or will not profit by the opportunities the door ought to be closed. And I think we are wasting a good deal of money in that field. Still I prefer to err on that side than on the other.

I might add that the people of this nation are covered by 73 per cent of the insurance of the world. They are covered by more than $103,000,000,000, which, of course, so far as the companies are concerned, is a liability to be paid over 25 or 30 years. The companies having assets of around $19,000,000,000, and as a little hint of what the people still can do, they took out $14,000,000,000 of insurance last year. They paid in premiums $3,500,000,000. And they received in policy loans, which shows one of the resources which I referred to a moment ago, over $2,000,000,000. Their beneficiaries received $1,925,000,000.

Senator BARKLEY. Right there. I suppose that those figures could not be considered as net? I imagine that many of the policy loans were obtained for the payment of premiums and that there would be an overlapping there?

Mr. HOUSTON. These are cash payments. Those are net cash payments.

Senator BARKLEY. Can you tell whether after a man borrowed money on a policy he used part of it to pay his premium?

Mr. HOUSTON. Well, he might, of course, if he gets the cash.

Senator BARKLEY. Yes. Of course it would be cash payments.

Mr. HOUSTON. Yes.

Senator BARKLEY. But it may be that a considerable portion of that $2,000,000,000 that was borrowed was used also to pay the $3,500,000,000 of premiums.

Mr. HOUSTON. Some of it, but I do not think a very large per cent.

Senator HARRISON. In the case of certain people that I know—and a number of the members of this committee—a large proportion.

Mr. HOUSTON. Yes; in many cases. The beneficiaries received $1,925,000,000, and living policy holders in all forms, including the policy loans, dividends, and so forth, $4,250,000,000.

I simply cite those things to indicate that we are not in the condition that I think some people think we are.

There are three or four things that seem to me to be somewhat more striking in this depression. In the first place, for some reason or other, the people have either been induced to look or do look to the Federal Government and the Federal Treasury for their salvation. That is almost a new phenomenon. They have been taught to believe that prosperity can be implemented from Washington, and that the Federal Treasury in some mysterious way, without going broke, can take care of all of them.

Then, I think it is also true that, perhaps, there are more and better organized minorities assaulting you gentlemen than we have ever had before in the history of the Nation.

Senator BARKLEY. The word "assaulting" there is well advised.

Mr. HOUSTON. Yes. I have watched it. And it seems to me, gentlemen, if these tendencies are not held in check it will become not only more menacing but must of necessity, if it is yielded to, result in the wrecking of the Federal Government.

The CHAIRMAN. I wish you were on the Appropriations Committee.

Mr. HOUSTON. I am glad I am not. I know something about the problems that you gentlemen have had in the past and some of the difficulties you have now, and I can only say that you have my sympathy.

I think that is all I care to say in the way of trying to sketch the causes of the present depression, the character of former troubles, and some of the incidents.

Senator LA FOLLETTE. Mr. Houston, may I ask you whether you feel that the activity of the Government through the Reconstruction Finance Corporation was justified or not?

Mr. HOUSTON. I think perhaps in larger measure than that of almost any other of the agencies.

Senator LA FOLLETTE. You think then, there are certain devices which the Federal Government should employ to aid in the situation?

Mr. HOUSTON. I think on account of the increasing decline of confidence among the people and the threatened runs on banks, that some aid of that kind carefully extended on proper security was a step in the right direction. I think that the answer would depend—and I have no knowledge of my own—on whether it was properly done.

Senator LA FOLLETTE. I am not seeking to go into that aspect of it. But it just occurred to me that if, for instance, there had not been some action by the Government in that connection some of these reserves which you indicate as available at this time might not now be available.

Mr. HOUSTON. I quite agree with you. I do not mean to say that there were not certain things that the Federal Government could do and there were not things that it had done that were not desirable. I think they have been—some of them.

Senator LA FOLLETTE. Well, I thought your statement might be taken as a sweeping statement.

Mr. HOUSTON. It might have been, yes. I am glad you asked the question.

I have nothing new, I think, to tell you gentlemen. I believe that it is of the utmost importance that the credit of the Federal Government shall be maintained at all hazards. I know it is easy to say that the Budget ought to be balanced. It is another problem to do it, and I am sure that you gentlemen realize that as fully as anybody, and that you will omit nothing in the way of reducing expenditures and increasing receipts, where it is possible, to maintain the credit of the Federal Government. And, incidentally, so far as possible, avoid any unnecessary appropriations. I do not need to dwell on that. It would be offensive to the intelligence of the committee.

I am equally convinced that there would be nothing quite so harmful and that would so quickly precipitate even greater chaos than any tampering with our monetary system. We are very fortunate, I think, in the main. This is the only time in any great depression when the country has carried on as long as it has in a depression with what might be regarded as a reasonably sound monetary and banking system. It is the only time in which practically all of our banks have not suspended. Now, we have had bank failures, unfortunately. But if one were to wake up in the morning and find that every bank in every city and town in America had suspended we would begin to think we were in trouble. And that happened in preceding depressions.

Senator La Follette. May I ask you right on that point, Mr. Houston, as to whether or not there was any difference in the situation so far as the use of credit for the transaction of business is concerned between the earlier depressions and this one?

Mr. Houston. No; I think that broadly speaking the mounting use of bank credit was the same in each instance.

Senator La Follette. You think proportionately there was no difference?

Mr. Houston. No real difference. They were less able to stand any strain than they are to-day.

Senator La Follette. It has been my impression that to a certain extent bank failures were less significant per se in the previous depressions than now because of the larger employment of credit as a means of transacting business.

Mr. Houston. Well, of course, you are quite right in suggesting that the use of credit—bank credit and checks as a medium of exchange—has grown. But I should say considering the relative strength of the banking system to-day and in former periods the number of failures is less significant, considering the relative strength of the banking systems in the different periods.

Senator La Follette. Well, yes; but what I had in mind was that an entire collapse of the banking structure now, in view of our greater reliance upon bank credit as a means of transacting business, would have a more devastating effect than it had, say in the panics of the early eighteen hundreds. That is the point that I had in mind, and I wanted to get your reaction to it, as to whether or not, in other words, the use of bank credit has not become a very important factor in our transactions?

Mr. Houston. It has. But it has always been important, and it was very marked during the period from 1923 to 1929, and that meant a very rapid turn-over. But since 1929 the use of checks has tended to decline, because the banking operations have slowed down very markedly. And most of the banks of which I have any personal knowledge are in very strong position, in very liquid position, and are ready and anxious to take care of good loans if they can find them. But the difficulty they encounter is in finding loans that prudent bankers should accept. Now, perhaps, they make mistakes in conservative directions just as in other times they make them in optimistic directions.

Senator Barkley. Mr. Houston, are you able to make any comparison with reference to bank suspensions in the panic of 1837 and in this one as to the ability of the bank to reorganize and open up for business again?

Mr. HOUSTON. May I come to that in a moment?

Senator BARKLEY. Yes.

Mr. HOUSTON. I was speaking of what seemed to me to be the necessity of maintaining the integrity of our monetary system, and I said that I thought we are quite fortunate in the position in which we found ourselves. We have, as you know, about 40 per cent of the world's gold—around $4,000,000,000. And we have even to-day 2.3 billions of dollars more money in circulation than we had before the war. And as much as we had, I think at the peak.

Senator BARKLEY. If you will permit me right there, Mr. Houston. In to-day papers there is a statement issued by the Treasury showing that on February 15 the amount of money in circulation was $5,854,000,000, which is the highest amount ever in circulation in the history of the United States. That represented an increase of $149,000,000 in one week.

Mr. HOUSTON. That is a later date than the one that I used here.

There are those who have suggested that we go off the gold standard. We worked very hard for a good many years in the seventies to get back on it, and with the strength of our present position I should deem that highly unwise, and I know of no nation in Europe that would not be glad to return to it if it could, and which does not envy us our present position. And there are some gentlemen in one country in particular who have been very insistent, for reasons that one can easily imagine, to get us off the gold standard.

The CHAIRMAN. Have you any objections to naming the parties?

Mr. HOUSTON. One of the gentlemen, who has been rather partial to our inflating since Versailles, was Mr. Keynes, and another was the former Chancellor of the Exchequer, Mr. Reginald McKenna. I happened to see him in 1923 and he was then insistent that we ought to, and he has been at it ever since. I could understand his reasons.

The CHAIRMAN. I think others do.

Senator HARRISON. For the benefit of the record, will you not give us the reasons?

Mr. HOUSTON. Well, if they could pay what they owe us for about one-tenth of the price, they would like it very much.

Senator BARKLEY. Who would not?

Mr. HOUSTON. Who would not! I remember when I happened to be in Germany in 1923, just across the border, as a souvenir I bought a billion-dollar mark for 75 cents.

Senator BARKLEY. I got a $100 bill changed there in 1921 and it took three wheelbarrows to get it back to the hotel.

The CHAIRMAN. I saw a mortgage in Berlin for $25,000 paid by $1.65 United States money.

Mr. HOUSTON. Well, Senator Harrison knows that in our own section of the country, in the latter days of the Confederacy you could not haul enough in a wheelbarrow to pay for a meal.

We have had, as I said a moment ago, in spite of our general strength, quite a number of bank suspensions. I think the public naturally pays more attention to the suspensions than it does to those that continue. In 1931 we had 2,290 banks to suspend, with deposits of $1,700,000,000 in round numbers. Of these 1,781 were State banks with deposits of $958,000,000. But at the end of the year we had nearly 20,000 banks still going, with deposits around

$50,000,000,000. And I think if the public realized those facts they would be a little less panicky than some of them are.

Senator BARKLEY. How did those deposits compare with the highest amount of deposits at any other one time?

Mr. HOUSTON. I do not recall any amount higher than $54,000,000,000. I would not like to state that as the maximum. That is my recollection.

Senator BARKLEY. We have close to $48,000,000,000 now?

Mr. HOUSTON. Between $48,000,000,000 and $50,000,000,000. I do not know the exact figures. It is hard to get accurate figures.

And I think the Secretary of the Treasury is right in suggesting that if we can be certain of maintaining the credit of the Federal Government—and I think we can—and that we are going to continue with a sound monetary system, that we ought to have a refunding operation to reduce the interest charges.

Then I think that it is of the utmost importance that the people of this Nation must realize that by hook or crook they must get a stronger banking system.

Now, of course, we speak of a banking system, and we pride ourselves on having passed the Federal reserve act. I need not remind you that that covered only a fraction of the banks, and only around—well, I do not remember the exact fraction, but the smaller fraction of the bank resources. So that we have the picture of a smaller number of the banks but with large resources under the direction of the Federal Government, and the larger number of the banks with immense resources under 48 other jurisdictions. And I think it is clear that some of those laws are not as strong or never have been as strong as they should have been, and I have no doubt that they could greatly strengthen, as I think they should do, their banking control and inspection.

I do not believe that we have as much banking talent in the Nation as we have banks. And the banking talent is quite as important as the financial set-up of the bank itself. I think we have entirely too many small, weak banks.

Now I know it is a very difficult matter. The Federal Government has not jurisdiction over all of them. The States are very slow to act. There is a very strong lobby always against any attempt to lessen the number of small banks, to extend branch banking with strong banks, but I am thinking of the small depositor, who perhaps would lobby against it with the others, and he is the one most intimately concerned. I can not see why this Nation has not enough intelligence in its verious governmental authorities to establish a banking system in the interest of the small man, especially so we will not have utter collapse as we have had in preceding depressions, or numerous suspensions, as we have had in this depression.

It is difficult to take the requisite action, but in some way we must do it. Canada was harder hit by the war than we are, and was weaker. Great Britain was harder hit by the war than we are, and her trade was shot to pieces. And yet they have not had a bank suspension during this depression. That means two things: A sound banking system with sufficiently strong banks, and somehow higher requirements for banking talent. Or at least they seem to have it.

Senator HARRISON. You have studied the Glass banking bill. Do you think that will improve the banking structure?

Mr. HOUSTON. That, while it has many good features, naturally could not attack the whole problem. It would still leave a large gap.

Senator HARRISON. You think it is in the right direction?

Mr. HOUSTON. Yes.

Mr. BARKLEY. Is the answer to your suggestion unified banking system?

Mr. HOUSTON. Either that—I do not see any other answer to the question, to be frank.

Senator BARKLEY. Of course we all shy away from that suggestion——

Mr. HOUSTON. So do I.

Senator BARKLEY (continuing). Because of the difficulty of ever accomplishing it and of the unpopularity of attempting it among all those who pride themselves on the maintenance of local control over local credit and banks. But if that is the answer, the sooner somebody breaks loose on it and is bold enough to suggest it the better it will be. I do not know that I would ever espouse that cause, but if that is the only answer I at least want to consider it.

Mr. HOUSTON. I think it is worth considering it. I am not prepared to say how it can be done or that it should be attempted. But I think we ought not to have any independent bank that is not strong enough at least to be a member of the Federal Reserve System.

Senator BARKLEY. When we think about our banking system we all know that it is a ridiculous position that our people are in here in the strongest nation in the world financially, and from nearly every other standpoint, but we have had more bank collapses than have occurred in all the rest of the world combined.

Mr. HOUSTON. Well, I think it is a reflection on our intelligence and courage.

Senator HARRISON. Are we to infer, Mr. Secretary, when you talk about protecting the depositors, that we ought to have a guarantee of bank deposits?

Mr. HOUSTON. No. I think that any guarantee of deposits is a premium on bad banking at the expense of good banks. I think the remedy lies in another direction, and in the direction that I have tried to point. I think it has usually worked badly wherever it has been attempted.

Another subject that I approach and really do not see the need of discussing, because I am not optimistic that we shall get anywhere, is some attempt somehow to break down the water-tight economic compartments in which the world is increasingly attempting to operate, and it can not be done.

Senator LA FOLLETTE. You mean you can not break it down or they can not operate?

Mr. HOUSTON. You can not do it; not with benefit to the people. Of course since the war there have been a number of new nations created. Europe has 14 nations that have the average area of South Carolina, which is of the same size as Scotland, and the average population of Ohio. And each of them has its nationalistic set-up, its barriers of every kind. And other nations since the war have increasingly imposed barriers of one sort and another. Of course if a person does not believe in international trade I have no argument with him. But if he does, if he thinks that there are advantages, I will say to him that I think the sooner the world realizes that it can not restore full prosperity by continuing to attempt to operate in water-tight economic compartments, the better. If it prefers that, why then they will have to take their medicine.

Senator HARRISON. Plainly speaking, you think there ought to be a revision of our tariff laws and an enlargement of our trade?

Mr. HOUSTON. Efforts should be made as far as possible in attempting to secure revision of restrictions abroad which have been mounting and which are even more depressing there because of the small units. In our country, operating over a large continent with a population of 122,000,000, we can get away with it in some measure, although I still believe for us an expansion of trade would result ultimately in benefit not only to industry but also the farmers.

The CHAIRMAN. Are we not holding our percentage of trade, our foreign trade, as compared with the foreign trade of the world?

Mr. HOUSTON. I think so.

The CHAIRMAN. I think you will find it is a greater percentage—I mean, taking into consideration the amount of trade of the world, our foreign trade has held better than any other country in the world.

Mr. HOUSTON. Well, of course, they have been badly shot to pieces.

The CHAIRMAN. Certainly.

Mr. HOUSTON. And the times are abnormal. But, without desiring to argue the matter, Senator, I still believe that there must be some breaking down of these water-tight compartments.

Senator HARRISON. You had better get off of that subject.

Mr. HOUSTON. Yes. We have been debating that subject for 144 years, have we not?

The CHAIRMAN. All I wanted to call your attention to was that, as far as percentage of trade of the world is concerned, we are better off than any other country in the world.

Senator BARKLEY. Well, is it a fact that we want the facts about this whole situation except on one subject, and that we have got to steer clear of that?

Mr. HOUSTON. No.

Senator BARKLEY. I hope not.

Senator HARRISON. Are you going to discuss stabilization of exchanges in your statement?

Mr. HOUSTON. No.

Senator HARRISON. Have you anything to say about stabilization of exchanges?

Mr. HOUSTON. Nothing except that they will become stabilized when trade becomes more normal, and that is the only way I know of doing it.

The CHAIRMAN. I do not know of any other.

Mr. HOUSTON. You can use artificial devices and they will break down, but if you can once return trade toward some degree of normalcy the exchanges will rectify themselves, and I know of no other way of doing it.

I believe that it is urgent that there be some legislation, Federal and State, in respect to the railroads, along the lines, broadly speaking, of the report of the recent agency, and especially to place their competitors on a just basis of competition. Now, I am not attempting to say what it is, but in respect to convenience and necessity, in respect to burden of taxation, in respect to service, and in respect to rates, I think legislation in that direction will be helpful.

There is one thing at least that I should do in respect to agriculture.

The CHAIRMAN. Before you get on to the question of agriculture, have you any suggestion as to the competition of railroads with the trucks using the public domain?

Mr. HOUSTON. If the conditions of competition are equitable; no. The only thing I am suggesting—and I am not trying here to indicate the terms of equity—is that it should be equitable. My own personal opinion is that the trucks are not as heavily taxed. They run on highways, rights of way which the public generally provides. They pay license taxes and gas taxes which help to provide the highway, but of course the railroads have to provide their own rights of way and maintain them, and then have enormous taxes in addition. But I shall not try to settle that. You require of the railroads a certificate of convenience and necessity. I do not see any reason why a truck, a bus, should not have the same requirement. You regulate the railroad's charges. You prevent rebates. Undoubtedly the trucks take commodities at lower rates, and the cream of it in many cases. Now, I realize the necessity of these things. We have got to have them. But all I suggest is that they be put on a comparable or proportionately just basis with respect to regulation.

Senator BARKLEY. Do you believe, Mr. Houston—if you do not want to answer this you do not have to—do you believe that the railroad situation can be permanently solved and the railroads pulled out of their present difficulties on the basis of present capitalization?

Mr. HOUSTON. Some of them; no.

Senator BARKLEY. On the whole, your answer would be in the negative?

Mr. HOUSTON. Some of them may. Undoubtedly there has got to be a readjustment in many directions. Nor do I believe that in the main they can be saved by Federal relief any more than other people are going to be saved, in the long run. Some of them have got to go by the board.

Senator LA FOLLETTE. How long do you think we should keep on tailing-up this unsound debt and capital structure?

Mr. HOUSTON. Well, I think the sooner some of them reorganize the better. I can not answer without looking over the list of them.

There is one thought in my mind, Mr. Chairman, as to the farmer. In one section of the country, of course, the problem is the large indebtedness. In other sections it is a problem of better farming. If every farmer in this country did what the best farmer does and makes it a point to be self-sufficient first of all, produce what he eats and feeds, and then puts his surplus labor and capital into special crops we would not have much of a problem. He can be the most independent class in society at all times. Now they are not doing that.

I have statistics here, prepared for me by the Department of Agriculture, showing the production of a number of States of leading crops and the percentages per annum. I asked for that when I first went to the Department of Agriculture in 1913, and I had it checked up in 1930. In very many States it shows a very pathetic situation. I do not want to take time to read that.

The CHAIRMAN. I would like to have it put in, because that is one of the most important questions in this country to solve. I do not know whether it can be as long as the farmer wants to raise just what he wants to raise no matter what the market may be for it. Of course there may be something that he can be shown that would be of benefit to him and to the country at large.

Mr. HOUSTON. I can give a hint without taking much time. Take my own State of North Carolina. These statistics were as of 1930, so I do not know the figures later. The department gives me cattle per farm per annum in North Carolina, 1.9. Dairy cows per farm per annum, 1. Hogs, 2.9. Sheep, three-tenths of 1 per cent. Chickens, 31. Eggs, 1,458.

Now, if you contrast that with some of the States out your way you will see there is a difference. Iowa, of course, is in rather a serious situation, mainly because of the indebtedness on many of her farms, but as against 1.9 cattle per farm Iowa had 18.

Senator BARKLEY. That is not in percentages but in cattle?

Mr. HOUSTON. That is the number per farm per annum.

In North Carolina the cattle, as I said, 1.9. Iowa, 18.

Dairy cows, North Carolina 1; Iowa, 6¼.

Hogs, North Carolina, 2.9; Iowa 46½.

Sheep, North Carolina 0.3; Iowa 5¼, round figures.

Chickens, North Carolina 31⅓; Iowa, 160.

Eggs, North Carolina, 1,458; Iowa, 9,530.

Those people have their living.

Before the war the Department of Agriculture in contact with the land grant colleges and certain leading farmers had begun to work out a program for balanced farming, especially in the section of the Nation where the farming was not sufficiently diversified, and they were getting ready to put that program over when the war came and short-circuited it. I would like to see the Department of Agriculture and the land grant colleges and the best farmers checking it up, the agricultural press and other agencies launch such a program to induce the farmers to become independent by producing what they eat and feed, and then putting their surplus labor and capital in special crops, and then they would not glut the market. I do not know any other broad program that is going to do very much good.

The CHAIRMAN. That has been understood for years past and preached to the farmer and no result as yet.

Mr. HOUSTON. I know that. But I still think it would be worth while putting on that kind of a program.

I think the matter of allied debts has been given undue prominence. I think it has been a relatively small factor in the whole situation. I know that it has complicated the exchanges. They have had difficulty in paying in goods and they haven't the gold. I personally would not cancel those debts, but I would be willing to discuss adjustments of them provided they can show that America can have any compensation out of it.

Senator LA FOLLETTE. Do you have in mind something more specific than the contribution to improvement of world conditions?

Mr. HOUSTON. Well, that is the main thing I had in mind. One of the things.

Senator LA FOLLETTE. As I understand it they argue now that if we would readjust or cancel, that we would participate in the benefit of the improvement of world conditions.

Mr. HOUSTON. So would they. Most of their arguments make me very weary.

Senator LA FOLLETTE. Well, I just wanted to bring that out.

Mr. HOUSTON. For instance, Mr. Chamberlain argues that if we would cancel our debt to England they would cancel an equal amount of their debts. That is very fine for England, who would stay even while we would hold the bag for the whole amount. And so with the other nations. I am not prepared to attempt to suggest what considerations we might ask for, and I doubt whether it would be wise at this time to attempt them.

Senator LA FOLLETTE. I am not suggesting that you do.

Mr. HOUSTON. That is about all that I have in mind, Senator.

The CHAIRMAN. We thank you very much.

Senator BARKLEY. Did you discuss inflation at all? I was a little late in getting in here and did not hear all you said. Did you discuss that in your remarks?

Mr. HOUSTON. Only indirectly by suggesting that we maintain the integrity of our monetary system.

Senator BARKLEY. Yes; but have you given thought to the various plans for inflation, like the remonetization of silver, or the reduction of the gold basis for the issue of money from 40 to 25 per cent, or the revaluation of the gold ounce, or any of those?

Mr. HOUSTON. I have given for a good while thought to suggestions at any time for inflating our currency, and I can not think of anything that would more quickly precipitate a crash and a collapse than efforts in that direction. And I think the talk about it, which, as was said yesterday I think by some member of the committee, is by no means confined to Congress, but is rampant throughout the Nation, is already doing a vast amount of harm.

Senator BARKLEY. Yes. Take my own situation. I am getting more letters on that subject than any other subject, except for applications for office. And they are serious letters. They are from people who are in desperation, and they are honest letters. I made a statement in reply to one, for instance, on the subject of what we were talking about a while ago—the scarcity of money—that we have more money in circulation now than ever before. That it has increased over a billion dollars since 1929. It is more than a billion dollars greater than it was in 1928 when we were supposed to be most prosperous. And the reply to that suggestion was in perfectly good faith, that that is true, there is more money in circulation theoretically, but it is all locked up in the banks, which is true. But if we were to increase our circulating medium by two or three or five billion dollars more would it or not find its way to the same place where the money is now locked up that is in circulation or is supposed to be?

Mr. HOUSTON. Well, of course in the first place it would not correct the inequality of price. If it had the effect of raising prices, which under certain conditions it might not do, but normally would do, the prices that were still too low would remain too low relatively; the prices that are high would remain high, and temporarily the only tihng it would do would be to help the debtor at the expense of the creditor, and ultimately to wreck the debtor as well as the creditor, because if it were politically an expanded monetary system it would lead to chaos. I have no doubt that if there were serious danger of legislation of that kind going through, that we would have a collapse that would make this look like 30 cents.

Senator LA FOLLETTE. Is it a fair assumption that your position, Mr. Secretary, is that you feel that the best thing that can be done is to let the natural course of business run on uninterfered with and unchecked?

Mr. HOUSTON. Broadly speaking.

Senator LA FOLLETTE. Thank you.

Senator GEORGE. Mr. Houston, does that not involve deflation all along the line? Does it involve deflation throughout the whole credit structure—fixed debt?

Mr. HOUSTON. Deflation?

Senator GEORGE. Yes.

Mr. HOUSTON. Well, I hope not.

Senator GEORGE. Or reductions?

Mr. HOUSTON. I hope not. I hope that if the action that is likely to be taken, the course of action that has been suggested before this committee by a number of people is followed, that the decreasing inventories and other things will soon lead to an upturn and, broadly speaking, the individuals and institutions of the Nation will work upward as they always have in the past. How much longer this is going to last at this bottom I am not prophet enough to make a prediction, but I think we will come through it, and I think we will come through it very much as we have formerly done.

The CHAIRMAN. Thank you, Mr. Houston. We appreciate greatly your statement.

Mr. HOUSTON. Thank you.

The CHAIRMAN. You have here two articles showing the situation in the past depressions and how nearly comparable they are to present conditions.

Mr. HOUSTON. The state of mind of the people and statements that were being made about the depressions at that time.

The following article was recently brought to my attention and I am passing it on to you as a matter of interest. This article is reprinted from Harper's Weekly, volume 1, page 642, of the issue dated October 10, 1857.

### 74 YEARS AGO; THE LESSON OF THE DAY

It is a gloomy moment in history. Not for many years—not in the lifetime of most men who read this paper—has there been so much grave and deep apprehensions; never has the future seemed so incalculable as at this time. In our own country there is universal commercial prostration and panic, and thousands of our poorest fellow citizens are turned out against the approaching winter without employment, and without the prospect of it.

In France the politlical cauldron seethes and bubbles with uncertainty; Russia hangs, as usual, like a cloud, dark and silent upon the horizon of Europe; while all the energies, resources, and influences of the British Empire are sorely tried, and are yet to be tried more sorely, in coping with the vast and deadly insurrection, and with its disturbed relations in China.

It is a solemn moment, and no man can feel an indifference (which, happily, no man pretends to feel) in the issue of events.

Of our own troubles no man can see the end. They are, fortunately, as yet mainly commercial; and if we are only to lose money, and by painful poverty to be taught wisdom—the wisdom of honor, of faith, of sympathy, and of charity—no man need seriously to despair. And yet the very haste to be rich, which is the occasion of this widespread calamity, has also tended to destroy the moral forces with which we are to resist and subdue the calamity.

Good friends, let our conduct prove that the call comes to men who have large hearts, however narrowed their homes may be; who have open hands, however empty their purses. In time of peril we have nothing but manhood, strong in its faith in God, to rely upon; and whoever shows himself truly a God-fearing man now, by helping wherever and however he can, will be as blessed and beloved as a great light in darkness.

And also this:

OH, WE OF LITTLE FAITH!

Bear in mind the date of this—1886, 45 years ago. From the first report of the United States Commissioner of Labor:

The rapid development and adoption of machinery have brought what is commonly called overproduction, so that machinery and overproduction are two causes so closely allied that it is quite difficult to distinguish the one without taking the other into consideration.

In England, Belgium, and France railroads and canals that are really needed have been built, Germany is provided with a full network of railroads, and in the United States railroad construction has been out of all proportion to the increase of products to be carried.

Harbors and rivers are sufficiently developed, and warehouses, water and gas works, tramways, etc., are largely provided for; the Pyrenees and Alps are tunnelled. And the Suez Canal has been built.

Terrestrial and transoceanic lines of telegraph have been laid and the merchant marine has been transformed from wood to iron. The nations of the world have overstocked themselves with machinery and manufacturing plants far in excess of the wants of production.

This full supply of economic tools to meet the wants of nearly all branches of commerce and industry is the most important factor in the present industrial depression.

It is true that discovery of new processes of manufacture will undoubtedly continue, and this will act as an amelioration influence, but it will not leave room for marked extension, such as has been witnessed during the last 50 years, or afford employment to the vast amount of capital which has been created during that period.

The day of large profits is probably past.

In 1886, then, we were fed up. We were through. From the surfeit there could be no recovery. Everything had been thought of.

"Technological unemployment" was with us for good. Invention and discovery had reached their limit. Industrial progress was stymied. Maybe a few things might be conjured up, but not enough to count.

In that year New York was a city of less than two and a half millions; Chicago, of less than a million. The preceding census showed Cleveland at 160,000, Detroit at 116,000 and Los Angeles at 11,000.

It would take a volume to describe the things that have come into the life of America since then.

What one can't foresee is hard to believe, so to-day, as then, we have the feeling that the Commissioner of Labor had back there—the feeling that we're stopped.

And 45 years from now some viewer of the past will smile, as we smile now, at the shortsightedness of a generation that was.

The CHAIRMAN. The statement of agricultural statistics for specified States, calendar year 1930, may be printed in the record at this point.

(The statement above referred to, presented by Mr. Houston, is here printed in the record in full, as follows:)

*Agricultural statistics for specified States, calendar year, 1930*

The data for this table have been compiled from the following sources: Number of farms from press release of Bureau of Census dated Oct. 15, 1930. Value of crops and value of livestock from the September, 1930, issue of Crops and Markets, which are the latest available. Wheat, cotton, corn, and tobacco production and value from the Dec. 1, 1930, crop report of the Bureau of Agricultural Economics, Department of Agriculture. Livestock on farms from the Jan. 1, 1931, livestock report of the Bureau of Agricultural Economics, Department of Agriculture. Chickens and eggs from records of the Division of Crop and Livestock Estimates.

The data per farm were computed by dividing the number of the particular class of livestock on farms or production of eggs by the actual number of farms reported as of Apr. 1, 1930.

The CHAIRMAN. We will next hear Mr. John L. Lewis.

## STATEMENT OF JOHN L. LEWIS, PRESIDENT OF THE UNITED MINE WORKERS OF AMERICA, INDIANAPOLIS, IND.

The CHAIRMAN. Mr. Lewis, will you give the reporter your name?

Mr. LEWIS. John L. Lewis.

The CHAIRMAN. Whom do you represent?

Mr. LEWIS. President of the United Mine Workers of America. Residence, Springfield, Ill. Office address, Indianapolis, Ind.

The CHAIRMAN. You may proceed, Mr. Lewis.

Mr. LEWIS. Mr. Chairman and gentlemen of the committee: The political stability of the Republic is imperiled. In excess of 12,000,000 wage earners are unemployed. In certain industrial States the percentage of unemployed equals 40 per cent of the enrolled workers. Of the remaining 60 per cent a large number are employed on a part-time basis, and are the victims of a continuous schedule of wage cutting. Those who are employed, directly or indirectly, must inevitably bear the burden of supporting the millions to whom employment is unavailable. The cost of maintenance of government, and the support of nonproductive institutions is, therefore, day by day being passed to the continuously decreasing number of citizens who are privileged to work.

Our Republic and our institutions can not be expected to exist under the progressive accumulation of ills which result from our inability to properly organize our economic processes. Manifestations of widespread unrest and discouragement almost akin to despair, are daily becoming more violent. Over wide areas insurance companies and other investors find the population in rebellion against the usual processes of recovery from debt defaulters. Violent resistance to evictions for rent default is daily more evident. Disorder and rioting, because of the inadequacy of public relief, is increasingly prevalent. Continuing bank failures, with their consequent train of human tragedies, add to the sum total of bitterness of a population sick with waiting and deferred hope for intelligent economic and financial leadership. A student of history will find, in many respects, a duplication of these appalling conditions in the misery of the French people antedating the French Revolution. The Bourbons of France, like some of the modern Bourbons in our own country, indulged themselves in idle chatter and continued to believe in their own security, notwithstanding the suffering and degradation of the masses. They paid for their error and their inaction with their heads.

The appalling social and political problems arising from the present emergency are of a fundamentally economic concept. The restoration of order in our economic and industrial household is primarily essential to any intelligent dispositon of the social and political problems of the nation. We are victims of our own national short-sightedness, by failure in the halcyon days of prosperity to intelligently plan for the future. A horde of "small-time" leaders in industry and finance, like the freebooters of old, vied with each other, looted the purse of the population, and diverted the proceeds to their own interests.

Now that the day of adversity has come, these same leaders are destitute of competent suggestion to safeguard the present or the future, and they expect the population of this country to remain quiescent while they utter ponderous platitudes about balancing the Budget and the necessity for further wage reductions. The very application of their wage-cutting fallacy further reduces the national income to a point where the population can not sustain itself and the National Budget can not remain balanced. The balancing of the Budget will not in itself place a teaspoonful of milk in a hungry baby's stomach or remove the rags from its mother's back. It must be obvious to any thoughtful person that the National Budget can never be permanently stabilized in the face of ever-growing unemployment, shrinkage in business volume, mounting inability to pay taxes, and consequent depreciation of national income.

If democracy and corporate participation in industry are to survive in America, labor must have an opportunity to exercise its industrial rights for the protection of itself and our democratic and economic institutions. An emergency now exists which is more critical than would be the case if a fleet of a foreign power were at this moment bombarding the defenses of one of our major ports. The very foundations of democracy and integrity of American institutions is threatened. Labor should be granted the right of collective bargaining, with representatives of its own choosing in those major industries of the country where this right is now withheld.

In large areas of the coal, textile, lumber, and steel industries workers are denied the rights of collective bargaining and are treated more or less as serfs, compelled to accept any wage, no matter how inadequate, declared by a harassed employer existing on the verge of financial bankruptcy. Democracy in these industries is supplanted by an industrial autocracy.

Senator WALSH of Massachusetts. Has the depression resulted in reducing the policy of collective bargaining in the coal industry?

Mr. LEWIS. To a very great extent, Senator.

Senator WALSH of Massachusetts. Practically wiped it out, has it not?

Mr. LEWIS. In large areas of the bituminous coal industry where collective bargaining was formerly recognized, the increased pressure on the operating end of the industry and the financial end of the industry has caused them to drive out the union wherever possible in order to reduce their wage to try to keep their mines out of the hands of the sheriff.

Senator WALSH of Massachusetts. That is pretty general throughout the whole industrial life of the country, is it not?

Mr. LEWIS. I think that is a fair assumption, Senator.

Legalized collective bargaining will permit the workers of America to exercise their birthright of participation in the fixation of the prices of their services and the conditions of employment.

Labor should be given greater recognition in the affairs of government, and its spokesmen should be given representation upon boards and commissions exercising governmental functions. During the period of the World War labor was given such recognition, and inasmuch as the Nation is now confronted with an emergency even more grave than was the case during the years of 1917 and 1918, labor should again be given its seat at the council table.

If given the right to organize in our major industries, labor can police those industries against Communism, or any other false and destructive philosophy, more efficiently than can the Government itself. American labor has in the past demonstrated its patriotism and its desire to stand behind and protect the accredited institutions of our land.

If labor is accorded its fundamental rights it can render great service in the present crisis.

EMERGENCY ACTION

In consideration of the obvious circumstances, Congress should pass a joint resolution declaring a state of national emergency, to effectuate intelligent organization of the industrial and financial activities of the Nation.

A board of emergency control should be created. It should be composed of representatives of industry, labor, agriculture, and finance. It should be given plenary emergency power, under the direction of the President.

The board should be instructed to reduce the hours of labor, and the number of days in the work week, to a point where the industrial machinery of the Nation can substantially take up the slack of unemployment, and under conditions where labor is accorded the right of collective bargaining through representatives of its own choosing.

This board should also be instructed to stabilize the prices of agricultural products and other commodities to a point that will express reasonable return to the producers thereof.

The board should be given such other instructions as to fundamental economic planning and other matters, in accordance with the judgment of the Congress.

The foregoing recommendations may be criticized by some as being a form of dictartorship repugnant to the American concept of government. Nevertheless it is the form of procedure resorted to by our Nation during the crisis of the World War, when the enemy was 3,000 miles from our shore. To-day the enemy is within the boundaries of the Nation, and is stalking through every community and every home, and, obviously, this proposal is the most democratic form of internal regulation that can be devised to deal with our economic and industrial collapse.

The CHAIRMAN. Are there any questions of Mr. Lewis?

Senator BARKLEY. Mr. Lewis, I am very much interested in your suggestions, especially with reference to agriculture and the stabilization of agricultural products to the point where the producers can obtain a profit. Would you care to go into some detail about how that would be brought about?

Mr. LEWIS. I have dealt here, Senator, with the principle which I think is an entirely practical arrangement. Obviously commodity prices, agricultural prices and prices of certain other commodities, have decreased to the point where there is no return to the producer thereof and he finds himself involved in circumstances which are gradually driving him to despair. I have in mind that in the coal industry an emergency board of control could stabilize the price of coal in the coal industry at a point that would enable the operator to pay a reasonable wage for his labor and enable the producer of the coal to procure a reasonable return upon his investment through the establishment of minimum prices.

I have in mind that substantially the same principle can be followed in the agricultural industry. As to the details of the application of that principle in the agricultural industry I would much prefer that advice be sought from the farm leaders and the spokesmen for the agricultural industry who, of course, are naturally much more versed in the details than I would be myself.

Senator BARKLEY. Congress attempted to do what you had in mind in some respects by setting up the Farm Board, and it was called the agricultural stabilization act, with the results of whose operations you are familiar, and its failure. I am not saying that as a criticism of the personnel of the board or its policies. I felt from the beginning that the law itself was fundamentally inadequate. They probably did the best they could with what they had to work with. But taking that as an example of the effort to stabilize farm products I was wondering whether you had worked out in your own mind any method by which it could be done?

Mr. LEWIS. Of course, the attempt at stabilization of the farm prices through the action of the Government board and subsidy brought the Farm Board in competition with the lesser prices of all other commodities, and it was simply a question of the Government going into the open market and purchasing what might be called a surplus of the farm production, and in the face of the general situation affecting the commodity markets of the nation and the world it was found to be not as effective as had been anticipated.

I think, however, that within the proposals made in this memorandum we are suggesting another principle, that plenary powers be given an Emergency board that would promulgate minimum prices. During the war period our emergency board promulgated maximum prices of certain commodities, with respect to wheat, coal, cotton, and other things. In this instance we are not suffering from maximum prices or a robbing of the public or the excessive prices charged by producers, but the Nation is suffering from the inability of the producer of the commodity to receive a fair return. I think that we have a slightly different principle involved.

Senator BARKLEY. Such a board as you suggest, with plenary power as you suggest, would involve the conferring upon that board complete control of all industrial, agricultural, financial, and labor operations of the country?

Mr. LEWIS. Within the necessary limits of the suggestion made. I have this in mind, Senator——

Senator BARKLEY. Would you confer upon such a board the power to say to a farmer that he should not raise more than a certain acreage of wheat or corn, or not more than a certain number of cattle, so as to lessen the production or the surplus that he may have, or of cotton and things of that sort?

Mr. LEWIS. If it were found after competent investigation that such an action was beneficial and necessary to the stabilization of farm prices I can conceive that with the cooperation of the agricultural industry such authority might well be given an emergency board of control.

Senator BARKLEY. Would that involve the same policy towards industry; that if the board found that there was a surplus of steel products or of clothing or shoes, would you confer then upon them the power to bring about a lessening of that production?

Mr. LEWIS. I would if the rationalization of industry would require that action.

Senator BARKLEY. How would you take up the slack in the increased unemployment brought about by the curtailment of production in such case?

Mr. LEWIS. I rather think it would operate in the reverse direction, Senator. For instance, I suggest here that one of the first responsibilities given the board of control would be to reduce the hours of labor and the number of work days in industry.

Senator BARKLEY. I am fully in sympathy with that and have been for some time. The situation is bad enough now, and I am wondering whether if such a board were given power to curtail employment where they found that there is already enough of any particular product on hand, if that would not accentuate the unemployment situation and make it necessary to spread out still farther among those available for work the work that could be done?

Mr. LEWIS. I doubt whether it would, Senator, because in the final analysis it is a fair assumption that after all no more steel will be produced than the country will consume within a definite period of time, and no more coal will be produced than will be burned, and no more corn or wheat can be raised after all than the country can consume or hold in storage.

Senator BARKLEY. I think that is more true with relation to clothing and shoes than it is wheat and corn.

Mr. LEWIS. I think you are right there.

Senator BARKLEY. Because each farmer may hope that the other farmer is going to cut down his acreage while he may increase his if it is necessary to raise a certain amount of money, and the cheaper the price the more of the product is necessary to get that amount. It is not an organized industry.

Mr. LEWIS. That is true. May I point out this fact, Senator, that the rationalization of industry by the cutting down of the hours per day and the number of days per week will spread all employment.

Senator BARKLEY. Of course. It will also spread purchasing power, which is very important.

Mr. LEWIS. It will spread purchasing power. And approximately ten or twelve million workers who are now unemployed and almost completely out of the market as buyers and consumers will again come back into the market with their families and dependents, and we will have a situation where practically 48,000,000 people of this country of high and low degree will begin to consume farm products, which in itself will be a tremendous contribution to the agricultural industry.

Senator BARKLEY. Going to the coal industry, with which you are more personally identified——

Mr. LEWIS. Quite so.

Senator BARKLEY. And I am, of course, coming from Kentucky, concerned with the coal industry, from the standpoint of the coal miner—it is a long story, but could you in a few words give the cause of the collapse of the coal industry in the United States?

Mr. LEWIS. Yes. Overdevelopment of the industry during the war period, when demand for coal was inflated. The diminished demand for coal due to the development of the fuel-oil industry, the natural gas industry, the extensive pipe-line systems of the country, hydroelectric power, and due to the tremendous strides made in the improved internal combustion, more power being derived from a pound of coal than ever before. All of those things have contributed to diminish the demand for the bituminous coal products throughout the country, with competition intensified by this idleness thrown on the industry through lessened demand and the six or eight thousand corporate entities producing coal all fighting with each other and cutting the ground from under each other in a competitive way, to sell their coal in the market.

Senator BARKLEY. Putting aside the questions arising out of the depression and accentuated unemployment, but taking the normal stretch of time, what can the Government do specially to aid the coal industry with its relationship to these other activities like oil and gas and hydroelectric power without repressing those developments? Is there any legitimate field in which the Government can aid the coal industry without correspondingly repressing the others?

Mr. LEWIS. I am quite certain that the coal industry can be stabilized without reflecting unduly upon the interests of the oil industry or the gas industry or the hydroelectric power industry. If the coal industry were rationalized, it could operate with some return to the operators in the industry for the tonnage they produce. As it is now, the bulk of the tonnage has actually been sold at less than the cost of production. We have pending in Congress at the present time a coal stabilization bill which provides for two things as an aid to the coal industry. The right of the operators in the industry to form coal sales agencies for selling coal so as to increase their realization, cut down their selling expense, and be free from prosecution under the antitrust laws for forming these coal sales agencies under certain checks and limitations that will protect the public. On the other hand it permits the employees of the industry to organize and collectively bargain with the employers, which would stabilize from 60 to 70 per cent of the major labor cost of the industry and enable the operators to stabilize their production costs, and in the end get a return upon their investment.

Senator BARKLEY. In view of the overdevelopment of the coal industry during the war, which, of course, had its effect upon the overdevelopment of both ends of it, from the operator as well as the labor standpoint and assuming there is a surplus of labor in the coal fields, would you spread out whatever labor there is available among all those now available for coal mining or would you attempt to divert some of that surplus coal labor into other channels?

Mr. LEWIS. Well, we would have to permit labor to work out its own destiny, as it always has. A miner can not stay in the coal industry unless he is employed by some operator in that industry who is trying to operate a mine. And if that operator relinquishes the attempt to operate the mine the individual miner is detached from the industry and must make his own way in the world.

Senator BARKLEY. As a matter of fact, the shorter hours and less week days is almost an academic question now in the coal fields.

Mr. LEWIS. That is true, sir.

Senator BARKLEY. Because they are not getting much work at any time.

Mr. LEWIS. That is true, Senator.

The CHAIRMAN. If that is all, we thank you, Mr. Lewis. We meet at 2 o'clock, when Mr. Taber will be before the committee.

(Thereupon, at 12.15 p. m., an adjournment was taken until 2 o'clock p. m. of the same day, Friday, February 17, 1933.)

AFTER RECESS

The committee reconvened at the expiration of the recess, at 2 o'clock p. m.

The CHAIRMAN. The committee will come to order. Is Mr. L. J. Taber present? Take the chair, Mr. Taber.

## STATEMENT OF L. J. TABER, COLUMBUS, OHIO, MASTER THE NATIONAL GRANGE

The CHAIRMAN. Mr. Taber, you are a resident of the District of Columbia, are you?

Mr. TABER. My name is L. J. Taber. I am master of the National Grange, Columbus, Ohio.

The CHAIRMAN. You may proceed.

Mr. TABER. The causes of this depression are many, some of them intricate and some not yet revealed, but the fundamental cause is apparent to all. We have violated the laws of God and the laws of economics, and are paying the penalty. The measures necessary to restore normal conditions are some of them still shrouded in mystery, but the essential step is that with common sense we apply economic justice to all groups alike.

Any nation expanding with the rapidity with which ours developed must inevitably make mistakes, grant undue privileges, and fail to provide machinery to equitably distribute the wealth created in such a prodigal amount and with such great rapidity. A part of the price of national expansion has been permitting unsound distribution and the exploitation of our natural resources. Inevitably a day of reckoning would have overtaken our Nation, but world conditions greatly hastened the penalties inescapable to a people of our rapid growth and expansion.

The prime cause of all our troubles can be traced back to the World War. This fire started by ambition and hate that burned in Europe until it consumed their accumulated savings of a century and burdened the world with debt and was extinguished only with the blood of millions of the best young men of the world. The aftermath of geographic dislocation, unwise territorial distribution, unsound burdens of debt and reparations created economic conditions such that retribution was almost certain to overtake us.

A debt-ridden and almost bankrupt world went on a drunken orgy of speculation. In this country, overcapitalization and speculation were rampant, many believing that playing a bull market was the easy road to wealth and that the old-fashioned virtues of thrift, economy and toil had become obsolete.

The maldistribution of wealth increased our difficulties. Millionaires grew like mushrooms and fortunes sprang up as if by magic. Combination, mass production, chain merchandising and installment buying made their appearance. The report of the Commissioner of Internal Revenue for 1929 shows that 504 men had an aggregate net taxable income greater than the total farm value of the cotton crop grown upon 45,000,000 acres and the wheat crop produced upon 55,000,000 acres during the ensuing year. Clearly the inequitable distribution of wealth was a major factor in precipitating the depression.

The machine age inventive genius and scientific development caused productive ability to outrun consumptive capacity. We have learned well how to produce and in part how to distribute, but have forgotten that unless mass consumption and mass production go hand in hand, disaster is inevitable.

The failure to provide a stable medium of exchange has remained the root of many of our difficulties. An honest dollar must mean a dollar's worth, 100 cents, no more or no less; one just a debtor and creditor alike. A fundamental cause of the collapse of 1929 and the three years of disaster that have overtaken the Nation was the failure of America to do justice to agriculture. The farm problem was allowed to grow more acute until the purchasing power of agriculture was almost destroyed and a large group of our people were brought to the verge of bankruptcy while the Nation was yet in seeming prosperity.

As master of the National Grange, an organization that for 67 years has sought equality for the farmer and at the same time the good of all, I shall address myself specifically to the problems of the farmer. Agriculture has been basic in every civilization. It produces the food, the clothing, and most of the shelter of mankind. No amount of invention, no amount of scientific discovery, no amount of congesting in cities ever has or ever will enable a nation to get away from its direct relation upon the soil. Farm prosperity is synonymous to national well-being. Prosperity and stability can not return until the farmer purchasing power is restored.

Mr. Chairman, I would like at this point to put in the record the resolutions adopted by the National Grange dealing with this problem, marked "Exhibit A."

The CHAIRMAN. They may be put in the record.

(The resolutions referred to are as follows:)

POLICIES ADOPTED BY THE NATIONAL GRANGE AT ITS SIXTY-SIXTH ANNUAL SESSION, WINSTON-SALEM, N. C., NOVEMBER 16–25, 1932.

COOPERATIVE MARKETING AND SURPLUS CONTROL

Whereas the American Nation has led the world in agricultural exports, more than one-half of the Nation's exports having been agricultural products, the farmer has beyond question proven his efficiency in production but has suffered by the necessity of buying in a highly protected market while selling the products of his efforts on a basis of foreign competitive prices; and

Whereas the records show that during the years 1919 to 1929 when practically all other industries enjoyed the greatest prosperity in the history of the Nation, agriculture lost over 30 per cent of its wealth, and from the years 1921 to 1929 bank failures increased from 43 per year to 583 per year; and

Whereas the failure to protect agriculture destroyed the purchasing power of 40 per cent of our people engaged in agriculture or directly dependent thereon, thereby causing material losses to industry, commerce and labor; and

Whereas if agriculture is given adequate protection and encouragement, national prosperity will be hastened: Therefore be it

*Resolved*, That we reaffirm our faith in the principle of cooperative marketing and properly administered cooperative agencies under farm control.

We heartily approve that portion of the agricultural marketing act which encourages cooperative marketing and commend the action of the Federal Farm Board in giving assistance to the cooperative organizations.

We believe that a public board or commission can better serve agriculture if bipartisan in character.

We urge the adopton of a sound policy of surplus control, including debenture, a simple form of domestic allotment, or some other practical plan designed to relieve the evils of agricultural surplus, and authorize the executive committee of the National Grange to cooperate with representatives of other organizations and groups in developing such a policy for agricultural relief.

### LAND-GRANT COLLEGES

Whereas the land-grant colleges through the extension service have rendered outstanding service to American agriculture; and

Whereas under stress of tax reduction and the opposition from commercial interests there is danger of the Federal act being so amended as to handicap this service through reductions of funds or congressional restrictions: Therefore be it

*Resolved by the National Grange*, That we favor the continued Federal financing to the extent that this service shall not be impaired in rendering a uniform public service to agriculture. Be it further

*Resolved*, That the extension service in the various States be financed solely from public funds.

### VOCATIONAL TRAINING

Believing that the broadening of the offerings of public education in America so as to provide practical vocational training for the millions of boys and girls, men and women who can never take advantage of a college education, has been one of the great developments in education in the twentieth century, we desire to go on record as favoring the teaching of vocational agriculture, home making, and trades and industries by the public schools of the country.

We urge the extension of this program until every boy, girl, man, and woman in the rural areas is given an opportunity to take courses, preparing them to more effectively meet the intricate problems of home and farm.

### PHILIPPINE INDEPENDENCE

*Be it resolved by the National Grange*, That we reaffirm our support for legislation granting at an early date independence to the Philippine Islands.

### MOTOR TRANSPORTATION

1. The interest and safety of the public require enforcement of proper restrictions regarding the size, weight, and speed of all vehicles moving over the public highway.

2. Such regulations should be uniform as between the several States and there should be reciprocity between the States based on such uniformity.

3. The power to regulate is a police power lodged with the States. As a basis of regulation, we commend to all the States adoption of the uniform code for the regulation of traffic recently approved by the American Association of State Highway Officials and the United States Bureau of Public Roads.

4. Each motor vehicle should be taxed its fair share of the cost of the highways which it uses. The State should be the sole taxing agency.

5. Every special tax collected for highway improvement should be conserved for that purpose alone. Consequently, no gasoline tax diversion should be permitted.

6. No taxation or regulation of motor vehicles should be permitted which has for its purpose any increase in cost or restriction in use, in order to equalize competition between motor transportation and other forms of transportation.

#### FEDERAL TAXATION

1. No reduction in the Federal income tax.
2. Maintain and increase the estate tax, and allow the States to retain a portion of the tax collected.
3. The collection of a limited tax on luxuries.

#### STATE AND LOCAL TAXATION

1. Utilization of a State income tax as a means of better distribution of the tax burden.
2. Limitation of all special assessments against real estate.
3. Laws to control the debt incurred by taxing units.
4. A study of budgetary control laws now in force, to the end that more local governments might utilize such to advantage.
5. Utilization of the gasoline tax and motor vehicle license revenue for the reduction of the local general property tax by applying a portion of such State funds for local road purposes, except that in such States as have substituted a license fee for a property tax on automobiles, a portion of such license proceeds may be used for general tax purposes.
6. Special commodity taxes, particularly on luxuries, where such additional revenue is necessary to replace large delinquencies existing in property taxes.
7. The elimination of inefficient and unnecessary units of Government and the introduction of better business practices in all Governments.

We oppose:

1. Issuing bonds to cover current expenses.
2. General sales taxes.
3. The diversion of gasoline taxes to purposes other than highways.

#### TAX ON TOBACCO

Whereas there is duplication, overlapping and pyramiding, in the field of taxation as between the Federal Government and the several States; and

Whereas a subcommittee of the Ways and Means Committee of Congress is now making a study of this subject in the hope of pointing the way to needed reforms in this connection; and

Whereas many States are now taxing manufactured tobacco products, already taxed by the Federal Government to the extent of approximately $400,000,000 a year: Therefore, be it

*Resolved*, That in the interest of simplicity and economy in the collection of these taxes, to prevent evasion, and to effect a fairer and more equitable distribution of the proceeds of Federal taxes on manufactured tobacco, we recommend that taxes on manufactured tobacco products should be collected by the Federal Government, that one-sixth of the sum thus realized should be returned to the States on the basis of population, and that in the allocation of such funds to the States there be deducted the amount of all money collected by the States on manufactured tobacco products.

#### VETERANS' RELIEF AND TAXATION

In considering ways and means of reducing taxation, the welfare of the Nation demands that we should scrutinize carefully our disbursements for the relief of veterans and their dependents. Therefore, be it

*Resolved*, That the National Grange is opposed—

1. To the payment of the cash bonus at this time.
2. To the paying of benefits to veterans who have no service-connected disability.

#### POSTAL REGULATIONS

Whereas during the last Congress there were a number of measures sponsored by the Senate economy committee and others that threaten to seriously curtail the service of our rural mail; and,

Whereas among suggested measures are a revival of the old contract system, the suspension of equipment, maintenance allowance for one year; a flat reduction of 10 per cent in the postal appropriation bill that would mean the dismissal of from thirty to forty thousand postal employees; the consolidation of 8,000 rural routes, and the placing of 9,000 rural routes on the triweekly instead of daily service; and, Whereas during the last hours of Congress a special Senate economy committee was appointed that will continue to make recommendations through the coming Congress; and,

Whereas there has been a consolidation of rural routes resulting in a saving of nearly $4,000,000 annually since August, 1925: Therefore, be it

*Resolved*, That we are opposed to any movement, intent or practice, that will in any way endanger, hinder, or interfere with the regular and efficient distribution of mail to rural communities, and that we oppose the free use of the mail to other than postal employees in the discharge of mail service.

### AGRICULTURE FINANCE

Whereas existing credit facilities have broken down, resulting in excessive tax and mortgage delinquencies and foreclosures with untold loss and suffering; and,

Whereas one of the greatest needs of agriculture is a sound system of credit providing amply for the needs of production, marketing and capital investment, at a rate of interest comparable to farm prices, we believe that the problem demands two types of treatment, one dealing with the emergency which exists, and the other designed to improve and perfect the agricultural credit facilities so that they can operate to the best advantage in normal times: Therefore, be it

*Resolved*, That we recommend the following:

### EMERGENCY LEGISLATION

1. Loans through the Reconstruction Finance Corporation to existing private loan agencies where necessary and with satisfactory guaranty that money will be used for purposes intended, sufficient to enable them to carry deserving borrowers through the period of ruinous prices.
2. Sufficient appropriations be made for the reserves of land banks to enable them to carry deserving borrowers through the period of ruinous prices.
3. Establishment of an emergency holding corporation to acquire, hold, and dispose of lands now owned or hereafter acquired by Federal land banks, such corporation to operate under the supervision of the Federal Farm Loan Board.
4. A Federal guaranty of Federal farm loan bonds, with provision for refunding existing loans at the lowest rate of interest possible and strengthening the democratic control of the system through increasing the responsibility of associations to prevent any possibility of political domination.
5. Permitting land banks under original or subsequent appraisal, to consolidate the debts of the borrower, arising from the mortgage, under a new mortgage, such mortgage to be acceptable by the registrar, upon approval of the Federal Farm Loan Board, when adequate reserves are set up for all such additions.

### PERMANENT PROGRAM

Legislation for a permanent program consisting of amendments to the Federal farm loan act to provide—

1. For the elimination of duplication in governmental agencies making farm loans, including the joint-stock land banks whose assets should be merged with the Federal land bank system as rapidly as can be done with full justice to the borrowers, the bondholders, and the stockholders, in such manner as to preserve the cooperative features of the system under farmer control.
2. For the removal of certain restrictions from the requirements concerning mortgages as follows:

(*a*) More flexible amortization terms should be provided, permitting short-term loans with irregular or balloon principal payments, to make possible handling loans on properties not suitable as security for long-term regular amortization loans.

(*b*) The terms of eligibility should be broadened to permit a farmer-producer to borrow upon land which he is not personally operating.

(*c*) The purposes of the loan should be broadened to permit the use of the proceeds of the loan to meet any debts of the borrower within the discretion of the Federal land bank.

(*d*) The final discretion as to the acceptability of loans should be left to Federal Land Bank Board in all matters excepting as to the value of the physical security.

3. For increasing the permissive spread between bond rate and interest rate to 1½ per cent, using substantial portion of increase to augment the

income of associations. It is suggested that not less than one-eighth of 1 per cent be paid to associations to enable them to function as intended under the act, and increasing the reserves of both Federal land banks and farm loan associations.

4. For amending or ruling to provide that the words "agricultural purposes" as used in subdivision 5, section 12, of the act with reference to determining the value of the land shall be construed as including horticulture and all types of farm production, provided that where specialized crop returns are used as a principal factor in determining value a satisfactory record of production over a term of years must be shown.

5. For class B stock in associations whose capital is impaired to the point where new loans through the association have become impossible; such stock to be issued when five or more qualified borrowers are available with acceptable applications totaling $10,000. Such stock to constitute a separate issue to be subject to assessment for losses incurred from class B loans only, and to be issued only upon approval of the Board of Directors of the Federal Land Bank and the Federal Farm Loan Board.

6. For more flexible provisions with reference to initial loan charges so that associations may be permitted to collect enough from applicants to cover appraisal costs on small loans.

7. That upon completion of the above program, the bonds of any land bank under Federal charter be accepted as legal tender at face value in lieu of cash in payment or balances on mortgage loans made through it bearing the same or lower rate of interest, where the loan is being paid in full, whether such banks are solvent or in the hands of the receiver and whether the borrower is in default or not.

### INTERMEDIATE CREDIT

We favor amendments to Federal intermediate credit act expressly providing for the establishment of cooperative agricultural credit associations with rediscount privileges and for rediscounting acceptable agricultural paper of credit unions.

### MONETARY STABILIZATION

The report of last year on monetary stabilization directed attention to the serious situation of agriculture by reason of fluctuation in monetary values. It was recommended that steps be taken to secure restoration of the wholesale price average of 1926 as computed by the United States Bureau of Labor Statistics and the stabilization of the price level as nearly as practicable at that point. In order to accomplish this, the following recommendations were made:

1. An increased purchase in large volume of securities in the open market by the Federal reserve banks.
2. Reduction of rediscount rates by the Federal reserve banks.
3. Reduction of the legal minimum gold reserve ratios of the Federal reserve banks to point materially below the present 35 to 40 per cent legal ratios, to the end that the surplus gold in the United States may be exported without endangering the gold standard.
4. An international monetary conference for the purpose of (*a*) stabilizing the gold price of silver and (*b*) stabilizing the purchasing power of gold in terms of the average of wholesale prices of commodities.

Subsequent events indicate the soundness of the above recommendations: Therefore, be it

*Resolved*, We demand that Congress take proper steps to expand the currency to such an extent as to raise the commodity prices to the average level obtaining from 1921 to 1929, to the end that both public and private debts may be justly liquidated, and to furnish us with a medium of exchange whose value shall be stable from year to year.

Mr. TABER. While the depression is only a little more than three years old, so far as it relates to industry and finance, it is necessary to emphasize the fact that agriculture has been in serious distress for 12 years. In order to get a clear perception of unparalleled difficulties confronting the farmer to-day, we must go back to the time of the World War.

The period of 1914 and 1917 found American agriculture in a fairly prosperous condition, because prices of farm products had been gradually advancing since the beginning of the century. The consuming power of our own people was overtaking farm production. From the time when the United States entered the war, in April, 1917, the highly important part devolving upon the farmer was emphasized in governmental and military circles.

Attractive posters bearing the legend, Food will win the war, were on display throughout the agricultural sections of the country. Prices were lifted and appeals were made to the patriotism of the farmer, and production campaigns were waged in every nook and corner of rural America. Every possible effort was made by the Government to convince the farmer that it was his duty to expand his acreage, purchase improved machinery, and produce the largest possible amount of food. The farmers responded in the most magnificent manner to this call for increased production, and in addition furnished more than one-fourth of the fighting men for the Army. The food produced under great difficulties and at high cost on American farms helped save the cause of democracy and bring victory to the Allies.

While the war was in progress, the farmers were assured again and again that they need have no fear of overproduction, and that even if hostilities should cease, there was a starving world overseas which would take all they could produce. This speeding up of production resulted in the accumulation of large supplies of foodstuffs which after the close of the conflict had to compete with commodities that had piled up in Argentina, Australia, and other distant lands, and which were now moved to the markets of the world.

With domestic markets glutted with food, and confronted with a rapid decline in foreign demand, prices for farm products took a drop, and this tendency was accelerated by a general clamor for lower costs of living. A crusade was launched through the office of the Attorney General to bring down the prices of farm products. Leaders of farmers' cooperative associations in many sections of the country were placed under arrest and prosecuted under the antitrust laws. Government stocks of food were advertised at bargain prices through the agency of the Post Office Department, and Government wool was sold at auction to the highest bidder. It was announced that these supplies would not be exported, but would be thrown on the home market, while retailers were encouraged to dispose of them at cost.

All this was in marked contrast to the treatment accorded industry by the Government. After the war, the Government paid claims aggregating more than $500,000,000 to the holders of war contracts. But there was no indemnity paid to the farmer. To add to the difficulties confronting agriculture under these circumstances, the Federal reserve system inaugurated a policy of deflation through successive advances in discount rates, which, to all practical intents and purposes, left the farmer without credit and compelled him to throw his crops on the market for anything they would bring. Hundreds of thousands of farmers went bankrupt through no fault of their own during 1921–22. With slight interruptions, the agricultural depression continued until the crash of 1929. Since then what had been a depression has become a disaster.

The oldest unanswered problem confronting the American people is that of doing justice to the farmer. In the famous document submitted by Alexander Hamilton to Congress in 1791, he recommended a protective tariff as an agency of developing our infant industries and providing revenues for the Government. He also pointed out that tariff legislation might handicap the producers of raw material, especially agriculture. To correct this inequality, he recommended that a portion of tariff revenue should be used as a bounty on agricultural exports as a means of offsetting increased costs to agriculture. Congress adopted the first portion of Hamilton's recommendation, later adding provisions for the drawback and for manufacturing in bond, so that they need not handicap American manufacturers in their efforts to compete in the markets of the world.

Unfortunately, the second part of Hamilton's recommendation, the providing of some offset or means of doing justice to agriculture, was not enacted.

Senator KING. Would a debenture measure up to that recommendation?

Mr. TABER. A debenture is that recommendation. I will proceed, Senator, and show that in just a moment.

Thus, with this complement to our tariff structure ignored, we have maintained a lopsided policy, leaving the products of the major portion of the plowlands of the Nation without direct tariff protection.

The opening up of new and cheap land, the limitless fertility of our soil and the improvement in agricultural machinery enabled the American farmer to hold the export market for approximately a century without serious difficulty. In the nineties this issue again made its appearance in the form of what was then called the Lubin idea, which found only partial recognition in sugar bounties, proposals for reciprocity, and similar minor amendments to tariff legislation. But in the nineties, as back in the very beginning of the Government, nothing was done to reach the heart of this problem.

The CHAIRMAN. I did not quite understand your statement that agricultural products had no protective tariff, at the beginning of your statement.

Mr. TABER. This was my statement. I will repeat it, Senator.

> Thus, with this complement to our tariff structure ignored, we have maintained a lopsided policy, leaving the products of the major portion of the plowlands of the Nation without direct tariff protection.

The CHAIRMAN. They have got all they asked for.

Senator HARRISON. On some of them you got protection.

The CHAIRMAN. Then you ought to have used different words than that.

Senator HARRISON. He says "lopsided." That is a very appropriate word.

Mr. TABER. I think it is appropriate, but I am perfectly willing to state that——

The CHAIRMAN. If you can find out what "lopsided" means.

Mr. TABER. All right, Senator. I will define what lopsided means by saying any system that directly reaches one portion of our citizens and does not directly reach the other portion is lopsided.

The CHAIRMAN. That has reference not only to agriculture. That may apply to anything, or any law.

Mr. TABER. Senator, I can not withdraw my belief——

The CHAIRMAN. I do not ask you to withdraw it.

Mr. TABER. I can not withdraw my belief that our tariff policy has been lopsided. I can not understand why Congress, composed primarily of Representatives from the rural districts in 1791, took the first part of the Hamiltonian philosophy and failed to take the second part, which provided that part of the tariff revenues should be used for compensating benefits to agriculture. The only answer I have ever been able to find, in the writings of the times, was this, that the wars of Napoleon, the high prices of farm products, and the unsettled conditions in Europe made a market such that this was not an issue. But be that as it may——

Senator KING. Without desiring to project a partisan tinge to this testimony, may you not explain the failure to relieve this lopsded situation during the past years since the Civil War, by reason of the fact that nearly all the farmers persisted in accepting the orthodox theory of tariff and supported people who voted the highest tariffs?

Mr. TABER. Senator, I shall not answer your question as you want me to.

Senator KING. I want the facts.

Mr. TABER. I will simply say, however, that some farmers, and some of their representatives, have gone to the fountain source of protection, and to their amazement have found the apostles of this fountain source have not followed it to its ultimate conclusion.

Senator HARRISON. Why do you point to the chairman of this committee when you say, "the apostles of this fountain source"?

Mr. TABER. I did not intend to point to him.

The CHAIRMAN. All the chairman can say is that in the Smoot-Hawley tariff law, the farmer got exactly what the farmers' representatives asked for.

Mr. TABER. Except the debenture.

The CHAIRMAN. That is not a tariff.

Mr. TABER. The debenture is as much drawback as is a part of the tariff, Senator. They are complements.

I shall proceed, to save time.

The struggle for the equalization fee, the determined fight made by the Grange for the export debenture and the discussion of the domestic allotment legislation in this Congress are all chapters in this century and a half old struggle to do justice and bring equality to the American farmer.

Ever since the first session of Congress, our Government has been constantly tinkering with economic laws through patent grants, tariff acts, restrictive, permissive, and protective legislation, and during this century and a half most of these benefits have gone to others than the farmer.

I will say to my distinguished friend across the table that it has not made any difference which party has been in power.

We have been spending hundreds of millions of dollars in river and harbor development. This has benefited the Nation. Millions of dollars have been expended in locks and experimental barge service. Large sums are spent in lighting airways across the continent. High prices are given for the carrying of mail in the hope of developing the merchant marine. The Government delegated some of its constitutional authority of issuing money to the national banks and the Federal reserve system. This may have been sound, but others have benefited more than the farmer. Our Government has granted the right of eminent domain, has given large tracts of land, and has set up special machinery for the development of railroads and interstate commerce. In the way of protecting our ideals, we have set up stringent immigration restrictions. Authors and inventors have been protected by copyright and patent privileges. Thus for a century and a half our Government—and I might say practically without interruption—has interfered with the operation of economic laws and in this program, others have been benefited more than the farmer. In seeking to maintain on American soil a higher standard of living than obtains in the rest of the world, we have built such a fabric of protective, restrictive, and permissive legislation, and administration, that it can not be destroyed without affecting national welfare. Agriculture must secure the same privileges and opportunities that others enjoy.

The first step in the Grange program for stability and prosperity is lifting farm prices and increasing farm purchasing power. We have no choice in the matter. We are compelled to either demand the same type of price lifting machinery and governmental assistances that is given to other interests or we must seek a lowering of tariffs and a readjustment of all restrictive legislation granting special favors to other groups.

Senator HARRISON. As between the two, which is the better plan, in your opinion?

Mr. TABER. Senator, if I thought it possible, I think it would be infiinitely better to remove every vestige of restrictive, permissive, and special legislation. But, as I have indicated, we have built such a fabric over such a long period of years, and we have done it with the determined purpose, as I shall show later, of maintaining a higher standard of living in America than obtains in the rest of the world.

Senator KING. Something like a fibroid tumor that ramifies all through the physical body?

Mr. TABER. That is hardly a good comparison. It is the same in one way, but in another way, if those special privileges go to all, none are injured.

If we are going to build this artificial standard, we must include all in the artificial standard, and that is my plea, and the point I am trying to stress.

As to the first step in the farm program, I can only speak for the Grange, but I am glad to say that the Farm Bureau, the Farmers' Union, and organized agriculture are in fine agreement on the main principles, and I think we all agree that the first step is lifting prices.

Senator KING. Without desiring to interrupt your statement, if you are going to treat this later I shall not press it, but have you reached a conclusion as to the importance or necessity, in the proper rehabilitation of agriculture, of foreign markets for agricultural products?

Mr. TABER. I will handle that later, if it suits you just as well.

Senator KING. Very well.

The CHAIRMAN. Then, as I understand your position, it is this, that if they have free trade in everything else, the farmer is perfectly willing to have free trade on his products?

Mr. TABER. You are right; and if others are protected, we are going to fight, as long as there is a vestige of strength left in us, to have protection for ourselves.

Senator HARRISON. If every other industry uses stilts, you want stilts too?

Mr. TABER. Yes; and if they have a parachute, I want a parachute, too.

We must bring equivalent tariff benefits to surplus-producing commodities either through the export debenture, through a simplified domestic allotment, the equlization fee or a combination of these methods. Foreign markets must be restored, and new markets found. Through research we must develop new uses for farm products and guide production with intelligence and information.

Another step in lifting prices will come through reduction of distribution costs and giving the farmer a larger share of the consumers' dollar. Cooperative marketing is yet in its infancy. The final solution of our marketing problems will not come until our major farm crops find their way to market through farmer-owned and farmer-controlled marketing agencies, beginning with the farmer producer and approaching as near the ultimate consumer as conditions will permit.

Supporting figures to prove the necessity of lifting farm prices are unnecessary. However, we submit the fact that the value of our farms and their equipment shrank from $79,000,000,000 in 1919 to approximately half that figure at present-day levels. Farm income has declined from approximately $12,000,000,000 in 1929 to $5,000,000,000 to-day. The latest price index of the Department of Agriculture places all farm commodities at 51 per cent and the things the farmer buys at 105 per cent of the pre-war level. In other words, the farm dollar to-day is worth approximately 49 cents—and some people wonder what is the matter with the farmers.

The second step is to bring stability to agriculture, the Nation, and the world is a stable and honest monetary system. Agriculture demands a dollar worth 100 cents, no more and no less. A dishonest dollar is one that requires more than 100 cents with which to pay a dollar's debt, or one that permits the payment of the same debt for less than 100 cents. Uncontrolled inflation will lead to greater suffering and disaster than deflation. We must recognize the fact, however, that we will either reflate or repudiate. Inexorable economic laws require reflation of our volume of currency and credit or the tragedy of bankruptcy and possible repudiation will stalk through the land.

We hear much of rubber money. It is my understanding that rubber will contract the same as expand. Agriculture is suffering from iron debts and rubber money. What has happened to agriculture in the way of debt paying ability at the present level of commodity prices is graphically told in the subjoined table. The Bureau of Agricultural Economics of the United States Department of Agriculture is authority for the statement that the farm barometer in January, 1933, stood at 51. Comparing to-day's farm prices with the former price index, the table below shows in terms of what the farmer has to sell just how much he has to pay in the way of farm crops for each dollar borrowed during each of the years indicated in the table. [Reading:]

| A dollar borrowed in the year— | If paid in January, 1933 |
|---|---|
| 1916 | $2.29 |
| 1917 | 3.45 |
| 1918 | 3.92 |
| 1919 | 4.10 |
| 1920 | 4.02 |
| 1921 | 2.27 |
| 1922 | 2.43 |
| 1923 | 2.65 |
| 1924 | 2.63 |
| 1925 | 2.88 |
| 1926 | 2.67 |
| 1927 | 2.57 |
| 1928 | 2.73 |
| 1929 | 2.71 |
| 1930 | 2.29 |
| 1931 | 1.57 |
| 1932 | 1.12 |

(January, 1933, equals 100.)
(Compiled from records of Division of Statistical and Historical Research.)

Senator King. Of course, labor would be subjected to the same pressure. It would take several days' labor now, aside from some of the building trades, to pay the obligation which was contracted in the period you have indicated.

The Chairman. A carpenter who is getting $11 a day is not hurt at all.

Senator King. I say, except for these building trades. Some say they are a special class.

Mr. Taber. The third step in our program is the reduction of interest rates and the providing of an ample reservoir of credit to take care of the needs of agriculture in this crisis.

The wholesale foreclosures of farm mortgages, which has been darkening our land and wrecking the homes and lives of our people must stop. The full power of the Federal Government must be invoked to bring this about in an orderly and effective way.

By reason of conditions for which in the main he is not responsible and which are utterly beyond his control, the American farmer to-day finds himself in the most difficult financial and economic situation that has confronted agriculture since the founding of the Republic.

The alarming increase of tax sales and foreclosures during recent months threatens the very foundations of American institutions. In the last six years, every tenth farmer in the United States has lost his farm through mortgage foreclosure, tax delinquency, or bankruptcy.

The last census indicates that there is a farm mortgage debt of about $9,241,000,000, with an average rate of interest of 6.1 per cent. All other farm debts approximate $3,000,000,000 and the interest rate on this additional debt ranges from 6 to 12 per cent—and I know of cases where it runs to 20 per cent. The total annual outlay for interest on the farm debt is more than $800,000,000.

The two chief cash crops of the American farm, wheat and cotton, were valued at approximately $600,000,000 for the year 1932, a sum just about sufficient to pay the interest on the mortgage debt alone.

A reduction of one-third in the interest rate on an amortized loan running for 35 years has the same effect as a reduction of more than one-third in the total face of the debt, and yet it will not adversely affect general security values.

In other words, if we reduce the interest charge on a debt of $10,000 from 6 per cent to 4 per cent, if that is an amortized 33-year loan, we are doing the same service for the farmer as though we marked his mortgage down from $10,000 to $6,000, and we have done none of the dangerous things of continuing instability and difficulty along that line.

Senator HARRISON. The committee on Banking and Currency brought out a bill, as I understand, to carry out that idea to some extent, is not that true?

Mr. TABER. Of course, I am not discussing particular bills, Senator, but in the main the purpose of the Hull bill, as I understand it, which is to provide a reservoir of credit to prevent foreclosures, and at a rate of interest not to exceed 4 per cent, is a step in the right direction. The bill may need further amendments. I have not seen it in its completed form.

It is apparent that the farmer can not continue to pay 6, 7, and 8 per cent interest at prevailing commodity prices. Farm prices must come up or interest charges must come down, and the first step toward security is a 30 or 40 per cent reduction in interest charges to carry farmers through this period of ruinously low prices. This can be done through emergency loans, through the reamortization of loans and through the postponement of principal payments.

The increased farm mortgage indebtedness in the United States has been estimated on the basis of special studies at various earlier dates as follows:

| | |
|---|---|
| 1910 | $3,320,470,000 |
| 1920 | 7,857,700,000 |
| 1925 | 9,360,620,000 |
| 1928 | 9,468,526,000 |
| 1930 | 9,241,390,000 |

This debt is distributed as follows:

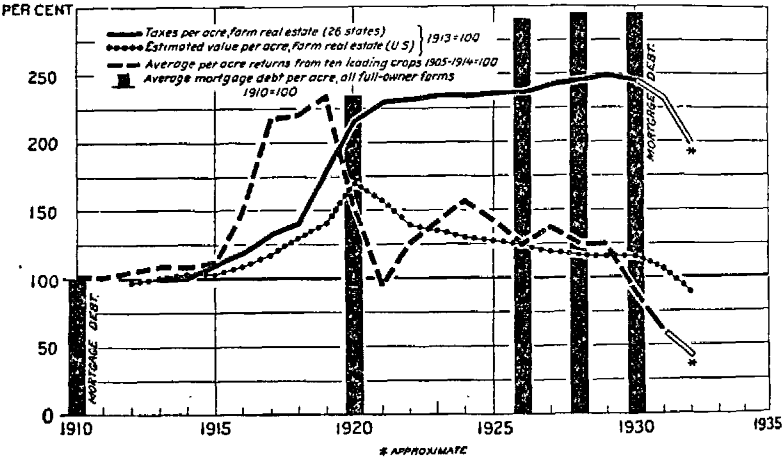
| Lending agencies | Percentage held by each agency | Amount held by each agency |
|---|---|---|
| | *Per cent* | *Millions of dollars* |
| Federal land banks | 12.1 | 1,146 |
| Joint-stock land banks | 7.0 | 667 |
| Commercial banks | 10.8 | 1,020 |
| Mortgage companies | 10.4 | 998 |
| Insurance companies | 22.9 | 2,164 |
| Retired farmers | 10.6 | 1,006 |
| Active farmers | 3.6 | 339 |
| Other individuals | 15.4 | 1,463 |
| Other agencies | 7.2 | 685 |
| Total | 100.0 | 9,468 |

(Bureau of Agricultural Economics.)

I have here a table or chart showing the returns per acre of 10 leading crops and taxes, land values and mortgage debt per acre of farm real estate.

(The chart referred to is as follows:)

RETURNS PER ACRE OF TEN LEADING CROPS AND TAXES, LAND VALUES AND MORTGAGE DEBT PER ACRE OF FARM REAL ESTATE



The CHAIRMAN. Do you think the Government can pass legislation affecting a private loan to a farmer?

Mr. TABER. Senator, of course we can not—and I think we all rejoice in the fact that in America we can not pass legislation changing contracts, but the Government does have a very definite responsibility and opportunity. We can, in the condition in which we find ourselves to-day, reduce interest rates to the farmers. We can protect the borrower, and we can protect the Government. The Grange resolutions on that point which are in the record, I think, clearly point out the steps that our organization wants taken, and in the main we are in harmony with the other farm organizations, although we may differ in details.

Here is what we propose: First, let us unify the farm loan system. Second, let us issue low interest rate bonds, guaranteed by the Government, and substitute those for the present high interest rate bonds that have doubtful Government responsibility, by having printed across the back of them something to the effect that, "This bond is an instrumentality of the Government."

Then we can reduce the interest charge to the farmer from 6 per cent to 4 per cent. At the same time, we can set one-half of 1 per cent aside as a reserve to protect the Government, and I have figured, since the beginning of the farm-loan system, that if we had set aside one-half of 1 per cent, all the losses on farm mortgages could have been absorbed out of that one-half of 1 per cent.

In other words, we can do justice to agriculture by giving it a lower interest rate. We can do justice to the bondholders, who have a certain misunderstanding, at least, of Government responsibility as to bonds issued under the Federal Land Bank system; and lastly, we can do all of this without danger of financial obligation to the Government.

Senator HARRISON. Did you read or hear the testimony of Mr. Baruch with reference to the mortgage situation?

Mr. TABER. I did not hear Mr. Baruch's testimony, but the newspaper story would indicate something very similar. He proposes 3 per cent bonds, and I propose 2½. He would propose a spread of one-half of 1 per cent, which is not sufficient. I would set aside one-half of 1 per cent spread for the Government, and 1 per cent for the institutions.

Senator HARRISON. But the principle is the same.

Mr. TABER. The principle is the same. It is a matter of detail.

Senator KING. You mean that there will have to be some governmental agency set up which, as far as possible, would bring into one organization the various agricultural loans, so that, instead of having half a dozen Federal agencies, extending credit to the farmers, you would have one Federal organization through which the loans and credits to the farmers might be handled.

Mr. TABER. Yes, Senator. You are using my exact words later in that discussion.

This farm mortgage crisis can be relieved and in time corrected by providing an ample reservoir of credit from the Reconstruction Finance Corporation or otherwise to make immediate loans to farmers to pay delinquent interest and taxes and prevent foreclosures, through the unifying of the farm-loan system, the issuance of low-rate Government guaranty bonds and exchange them for the higher interest bearing unguaranteed bonds, reducing the interest rate on outstanding mortgages from approximately 6 to 4 per cent. Payment on principal should be withheld for a 2-year period. Mortgages should be reamortized where the farmers have a sound investment, and a reservoir of credit provided for new loans. This will stabilize farm values and give the farmers of the Nation a fighting chance to save farms and homes.

Here is a farmer who has had taxes and delinquencies pile up. The law is too inelastic. Under the law, we have difficulty in taking care of this farmer. What we should be allowed to do is to write this farmer a new mortgage, if his investment is still sound, taking care of some of these deficiencies and delinquencies, and reamortizing it over a longer period, which would give lower interest rates and lower principal payments. Then we should provide by law that there need be no principal payment until prices lift.

This is a very simple, constructive program. I do not want to seem facetious, but it is so simple that I am just afraid it will not be done. It is very apparent that we can take the steps to avert a tremendous crisis, and render great service.

Senator KING. Mr. Taber, do you not underestimate the magnitude of the task which you impose on the Government if your plan is carried out, in view of the fact, as you have indicated, that the farm mortgages are approximately $7,000,000,000? I am making no criticism at all of your plan, but your plan would contemplate that there must be a readjustment. Many of these organizations have extended credit, and Eastern moneys have been loaned, as you know, in many of the agricultural States. In my State, a great deal of money has been loaned upon farms by organizations which have furnished the money and taken mortgages and then sold the mortgages in the East, which would mean an approach to, or a contact with all the mortgagees in the United States, those who are private persons, and these Federal banks and joint-stock land banks. It would really mean a reformation, in a way, or modification of existing contracts which relate to $7,000,000,000 of indebtedness, the lowering of the interest, and perhaps the granting of moratoria with respect to many of these loans. Have you appreciated the magnitude of that situation, and that task?

Mr. TABER. I certainly have, Senator, but the trouble with us is that we try to do everything the hard way. We can make this a very difficult problem, and we can make it a rather simple problem. I have put into the record, and I will now read, the distribution of these $9,400,000,000 mortgages:

Federal land banks, 12.1 per cent; joint-stock land banks, 7 per cent; commercial banks, 10.8 per cent; mortgage companies, 10.4 per cent; insurance companies, 22.9 per cent; retired farmers, 10.6 per cent; active farmers, 3.6 per cent; other individuals, 15.4 per cent; other agencies, 7.2 per cent.

Now, Senator, we are going to commence our program entirely on the 17 per cent. It becomes effective automatically without difficulty, and we will start on the 17 per cent without impossible difficulty, now in the Federal farm-loan system by revamping that system and providing the machinery, that will automatically expand. There is no difficulty about it at all. It simply means cooperation between the farmer borrower and the lending bank. Bonds are substituted. The people that do not substitute will wish they had. There is no worry about that, because the unguaranteed, uncertain, high-rate bonds will be exchanged for the low interest rate Government guaranteed bonds.

The CHAIRMAN. Take the joint-stock land banks. The Government is not responsible for them at all. You would include those, and let the Government take all those loans they have made, some of which are worthless.

Mr. TABER. I would not do that, Senator.

The CHAIRMAN. That is what your proposition is.

Mr. TABER. No, Senator. I have not taken the time to go into details. That is not the proposition. The proposition would be that the Federal land-bank bonds—begin, first, with the Federals.

The CHAIRMAN. The Government is responsible, in a way, for them. They were set up. The Government is not responsible at all for the joint-stock land banks that you put in there, making the 17 per cent.

Mr. TABER. That is true, but they were each organized under Government control and supervision. Every farm loan has been made by a Government-appointed inspector, and the bonds are issued by the Government, and have on the back of them, "This bond is an instrumentality of the Government." Whether it is 12 per cent, or 17 per cent, we shall not bother to discuss, because, if there is not a provision that protects the Government, of course, we are hoping that no action be taken. No good American wants anything done that does not protect the Government.

Senator KING. You would not ask for the redemption of those joint-stock land bank bonds which have been taken in by the various organizations at 30 cents on the dollar?

Mr. TABER. I would give actual value for them.

Senator KING. Not par value?

Mr. TABER. No. That, again, will make it easy to carry out this plan. I would give the value. If they have sold for cash for 50 cents, we would assume that is somewhere near their value. If they have sold for cash at 90 cents, we would assume that that is somewhere near their value. That matter of adjustment is not the fundamental thing I am emphasizing. I am emphasizing the fact that these bonds are now out; they now bear approximately 5 per cent interest; and they now have on the back of every one of them, "This bond is an instrumentality of the Government."

These bonds now have back of them farm mortgages held in the registry for the district in which the bank is located. The farms were appraised by an appraiser appointed by the Federal Farm Loan Board. The mortgages were submitted to the Federal Farm Loan Board for approval. They are held by an instrumentality of the Government, and there is, an indirect if no direct responsibility. I am not saying that there is a direct responsibility. I am saying that there is a moral responsibility. Let us forget that phase of it. That is not what I am discussing. I am discussing the principle of doing justice to the farmer, and finding a way whereby we can bring in a lower rate of interest in an orderly manner, without the dangers that we do not like to discuss, that are in evidence.

I want to give the farmer, Senator, the advantage of these depreciated bonds, and there is an orderly way to do it. It can not be done by some of the proposals that have been made, because the speculator would get the benefit. I want the farmer to get the benefit, and this program reaches the farmer and not the speculator.

Senator KING. Permit me to say, by way of parenthesis, that I think the Federal Government, when it learned that those bonds, upon the back, bore the authentication to which you have referred, that they were Government bonds, was derelict in failing to enjoin the issue of those bonds in that form.

Mr. TABER. A constitutional lawyer like you, Senator, knows why that was done. It was done to continue the tax-free permission. You have read, of course, Judge Hughes's opinion, and you have also read the words of Woodrow Wilson relative to encouraging people to buy this type of investment.

But the point I am trying to make, Senator—and I want it clearly understood—is that I am not trying to make the point of protecting any bondholder. I am trying to make the point that we have the stage set to give the farmer, without loss to anybody, a lower rate of interest. Whether the percentage is 12 or 17 per cent, I shall not enter into a discussion of that with the distinguished Senator. I think it is 17 per cent, and you think it is 12, but we will pass that. We take care of this group.

Then, through the issuance of more bonds, through the providing of a reservoir of credit, insurance companies, banks, and others will either find a method of reducing interest rates to their farmer borrowers, or these farmers, as conditions may be, will transfer themselves from commercial banks and from these other classes, and find themselves in the cooperative farm-loan system, a revamped organization, revitalized and put in shape to serve agriculture.

Agriculture has not gone to the dogs, bad as conditions are, and there is some value in farm lands, and that is going to come back more quickly than we realize, if we will be just to the farmer.

What I want to give to the farmer is a fighting chance to save his farm and home.

These three essential steps of lifting prices, providing an honest dollar and reducing interest rates are emergency steps that can not be postponed if agricultural conditions are to be stabilized. They alone will not cure all farm ills, but they are fundamental to recovery and can be enacted into law at this session of Congress or in a special session later to be called.

It is apparent that there will be no stability or permanent recovery in prices until the discussion of foreign war debts is brought to a stop and a definite policy is established.

I agree with some speakers who have preceded me, and certainly disagree with others.

These debts are honest; they should be paid, and should not be canceled. On the other hand, we were foolish to allow these debts to stand in the way of returning prosperity. Nations that can not pay should be given credit on purchases of farm products or other commodities in the United States. Payments from the war debt should be used to open markets and promote international trade.

There is too much discussion and thought of the foreign situation and a failure to recognize that America's greatest market is at home. Bring back the purchasing power of the millions of farmers and they will absorb many times as much goods as was exported from the United States in our greatest year.

We talk about finding a new market, with the equivalent of a nation of 40,000,000 in population in agriculture, just waiting for a chance to buy billions of dollars of the products of industry, if we only give them something to buy with.

Of equal importance is the fact that more than 12,000,000 unemployed and their dependents, aggregating approximately 30,000,000, are not now consumers. In other words, a market greater than any potential market in the world is here at home and can be developed by a sound program of reconstruction. It must not be forgotten that there will be no enduring prosperity until all groups prosper. We will all go up or go down together.

In reference to our home market, it is well to remember that restrictive quotas, embargoes, and high tariff rates in many nations are starting a mad race of nationalism that if continued will in reality put a Chinese wall around each of the nations of the world. We can probably stand this better than others, but we should seek by treaty arrangement and by world conferences to develop world cooperation. If this can not succeed, as a last resort we must put a high tariff on every commodity of ever kind and sort coming into this country.

The program of national readjustment must give first emphasis to a stable banking structure, and the revamping of the credit machinery of the Nation. We should give careful consideration to a system of Federal depositories where the public will know that its money is safe or some other system of protecting deposits. It may be necessary to separate the functions of deposit from the loaning facilities of banking. It is believed that through the Reconstruction Finance Corporation and other steps, bank failures are largely a thing of the past but it must not be forgotten that the darkest picture in this depression has been written by the failure and collapse of our banking leadership and facilities. There can not be enduring prosperity without amendment and adjustments to our banking system.

In this same connection, it will be necessary to revamp the rural credit structure of the Nation. It is unsound to have 8 or 10 separate agencies making loans to agriculture. The Federal seed loan function should be removed from the Department of Agriculture and lodged in the central credit agency when established. It is unsound to prostitute a research and educational department to the functions of loaning and collecting money. Agriculture will be better served when all loaning facilities dealing with agriculture are brought under one head.

Senator KING. May I interrupt you right there?

Mr. TABER. Certainly, Senator.

Senator KING. Suppose that Congress—wisely, I think—should pass a law to-morrow suspending the further operations of the Agricultural Department in the loaning of this $80,000,000 or $90,000,000 which we provided for a few days ago, for several weeks, until there could be a unified organization for the purpose of extending these credits. Do you think postponing it for three or four weeks or a month would involve serious injury to the farmers?

Mr. TABER. It would in some sections, especially in the South. When I was in New Orleans recently, and in South Carolina, I saw them planting gardens, in southern South Carolina.

Senator KING. Evidently they are planting without recourse to this seed loan organization, then?

Mr. TABER. That is true, Senator.

I feel strongly that there ought to be a unification—so strongly that I would be willing to make a very substantial sacrifice to bring it about. I think perhaps we could find some way that this regrouping could be accomplished. Think of the Reconstruction Finance Corporation, the Federal farm loan agency, the joint-stock land banks, the intermediate credit banks, the Department of Agriculture, and all of these other ramifications that are developing. It means duplication, working at cross purposes, and an unsound loaning policy. We ought to set up a great central agency to which we would take all loaning agencies from the Farm Loan Board, the Reconstruction Corporation, the Farm Board act, and all other agencies.

Reduction in the cost of government, efficiency, and economy must keep pace with progress. Hundreds of millions of dollars can be saved and efficiency can be increased by further regrouping and reoroganization. Agriculture has as much or more at stake than any other group in this reorganization, however. We must demand that all departments dealing with the surface use of land be brought under the Department of Agriculture so that land use, conservation, reforestation, and sound national development can go forward in harmony with present and future needs of agriculture.

I want to pause to say that I believe that reorganization of the functions of government is the greatest challenge of the present, but I can see tremendous injury done to agriculture unless we intelligently keep in the Department of Agriculture those agencies that deal with the use of land. For instance, the Bureau of Irrigation and Reclamation ought not to be in a different department from the department that discusses problems of markets and agricultural welfare. It all ought to be brought into the Department of Agriculture. Until we do that, we are going to have continual waste, continual duplication, and we will be working at cross purposes, to the injury of agriculture.

Senator KING. Of course, you would not supersede the effective agricultural organizations within the States, for example, such as that in the State of Pennsylvania and the State of New York, particularly in Pennsylvania? The agricultural organization of Pennsylvania has done effective work, and the farmers of Pennsylvania generally speaking, are better off than the farmers, perhaps, in any other part of the United States, and there has been less of Federal bureaucracy manifested there than in any other State.

Mr. TABER. Yes. I am very familiar with that Pennsylvania situation. The director of agriculture there is a former master of the Pennsylvania State Grange, and a personal friend of mine.

Senator KING. Perhaps that accounts for the improved condition there.

Mr. TABER. I would not say that, Senator. He is a good fellow, just the same. He belongs to your political faith, however.

Senator KING. That is to his credit.

Mr. TABER. Transportation costs remain a continuing burden upon the farmer. It must not be forgotten that the farmers' transportation bill is gerater than his tax bill, and while the farm dollar is at 51 per cent of pre-war, rail transportation costs are at 155 per cent. Agriculture must be protected in its right to enjoy the cheapest and most efficient methods of transportation that science and inventive genius can provide. Instead of burdening motor transportation with new and restrictive legislation, it may be well to relieve burdens now imposed upon the railroads.

One of the greatest causes of the continuation and severity of the depression is the loss of confidence of many of our citizens. While there have been disappointments and severe losses and heartbreaking suffering, yet we must remember that fundamentally there has been nothing lost in the resources of the Republic. Many of us do not now have property that we once thought we had, but the resources of soil, forest, mines, lake, and stream all remain. There has not been lost anything that is fundamentally worth while to the welfare of America a quarter of a century or a half century hence, unless we permit ourselves to lose confidence, courage, and hope.

No amount of reflation or protective legislation, no amount of artificial stimulation will bring permanently better times unless we restore and maintain the confidence of the people of this country in our resources, in our Government, and in the ability of ourselves to complete the difficult task of readjustment and reconstruction.

Our difficulties are not insoluble, our readjustments can be made, and while there is no time to delay because of the gravity of the situation confronting us, yet there should go forth from this committee and the men here assembled a clear understanding that in this greatest crisis of our history the indomitable spirit that has created the Nation and carried it through other struggles will bring it again to a time when prosperity and well-being and happiness of our citizenship will be greater than ever before known.

Senator, if I may, I would like to submit, as an appendix to my discussion, a partial report of the executive committee of the National Grange dealing with Federal depositories. We have had Mr. Albert S. Goss, of our committee, make a study of whether there is any possibility of expanding the suggestion I made a while ago of seeking banking stability, if there is a solution in providing for banks of deposit, and separating the functions of deposit from the loaning functions of our banking structure.

Senator KING. That is, to have commercial banks separate from savings banks and investment organizations?

Mr. TABER. This report looks into the possibility of going further than that, to see if we can provide a system of Federal depositories.

Senator KING. You mean to expand the Postal Savings banks?

Mr. TABER. Somewhat along that line.

The CHAIRMAN. Under the control of the Government?

Mr. TABER. Under the control of the Comptroller of the Currency.

The CHAIRMAN. That would be the Government.

Senator HARRISON. Mr. Taber wants to put it in the record.

The CHAIRMAN. I have no objection to that.

Mr. TABER. I would like to introduce that as an appendix.

(The report referred to is here printed, as follows:)

### PARTIAL REPORT ON FEDERAL DEPOSITORIES

The 1931 session of the National Grange passed the following resolution:

"Whereas during financial depression the confidence of the public in our banking institutions becomes shaken, requiring the banks to pursue a rigid collection policy in order to attain a safe margin of liquidity, and

"Whereas such a policy at a time when obligations are hardest to meet tends to hamper and curtail industry, still further shaking public confidence and adding to a vicious circle of causes of depression, and

"Whereas our present banking system has proved utterly inadequate to cope with widespread depression, resulting in unprecedented bank failures with hundreds of millions of dollars loss to innocent depositors, and

"Whereas rural communities have been particularly hard hit, due to the nonliquid character of the credit needed for agriculture, and agriculture is in urgent need of a system of credit calculated to meet its needs:

"*Resolved*, That the executive committee of the National Grange make or cause to be made a special study of the Government depository system of banking under which the accepting of deposits and making of direct loans shall be separated, the Federal Government to operate all banks of deposit, making loans to banking institutions only, which institutions shall receive no deposits, but confine their operations to lending money, rediscounting the securities received through the Federal depository bank in a manner similar to that of the intermediate credit system, and that said committee be instructed to report its findings to the 1932 session of the National Grange."

The difficulties and expense attendant upon such a study, if conducted by one committee made up of representatives from all sections, caused the executive committee to appoint 3 study committees, 1 in the Atlantic States, 1 in the Central States, and 1 in the far West. Even though thus localized, none of the subcommittees have been able to meet frequently enough to complete their studies or render any final report, but the data received from them has been of material assistance to the executive committee in conducting its studies which are not complete.

The studies of the Federal depository system soon developed the fact that the banking question was inseparably linked with the problem of monetary stabilization for approximately 90 per cent of our medium of exchange consists of bank credits. The following table shows the amount of money in actual circulation, and the amount of deposits in National, State, and private banks, loan and trust companies, and in mutual and stock savings banks, on June 30 of each year as shown:

| | Money | Deposits | Ratio deposits to money |
|---|---|---|---|
| | | | *Per cent* |
| 1922 | $4,463,172,111 | $40,234,704,000 | 89.0–11.0 |
| 1923 | 4,823,274,772 | 42,872,868,000 | 88.8–11.2 |
| 1924 | 4,849,307,433 | 46,432,714,000 | 89.5–10.5 |
| 1925 | 4,815,207,508 | 50,304,176,000 | 90.5– 9.5 |
| 1926 | 4,885,266,064 | 52,411,616,000 | 90.7– 9.3 |
| 1927 | 4,851,321,131 | 54,634,449,000 | 91.2– 8.8 |
| 1928 | 4,796,626,257 | 56,603,578,000 | 91.5– 8.5 |
| 1929 | 4,746,296,562 | 55,934,569,000 | 91.5– 8.5 |
| 1930 | 4,521,987,962 | 57,571,121,000 | 92.2– 7.8 |
| 1931 | 4,821,933,298 | 54,017,551,000 | 91.1– 8.9 |
| 10-year average | | | 90.6– 9.4 |

It must be borne in mind that hoarding has caused a large, but unknown, amount of money in circulation to go into hiding during the last three years. So the ratio of bank credit to money in actual circulation has been far larger than the figures shown, being estimated by some to be as high as 94 per cent.

It can readily be seen that if over 90 per cent of our medium of exchange consists of bank credits, anything which restricts the free use of such medium is of utmost importance in considering the whole monetary problem, and unquestionably an unsound banking system is one of the basic causes of the instability of the purchasing power of the dollar. The importance of stabilizing the purchasing power of the dollar is apparent when we realize that we must pay our debts with a gold dollar or its equivalent, while the means of acquiring that gold dollar have decreased with the fall of commodity prices. This is effectively illustrated by the condition of the agricultural industry.

Agriculture has debts of nearly $15,000,000,000 which were incurred to enable production to proceed, with the expectation that the debts would be paid through the sale of the crops produced. The lowering of commodity prices makes it more difficult to pay these fixed debts. The impossibility of paying these debts out of the proceeds of crops sold at present prices is realized through a study of the following table which shows, in terms of the average farm commodity values, the amount the farmer would have to produce to-day to pay debts contracted in the years shown. The average farm commodity price for June is taken, for this is the season when crops begin to move to market and when liquidation of debts begins:

| Index | Year | Equivalent payment required to-day | Index | Year | Equivalent payment required to-day |
|---|---|---|---|---|---|
| 103 | 1913 | $1.98 | 142 | 1924 | $2.73 |
| 101 | 1914 | 1.94 | 143 | 1925 | 2.75 |
| 104 | 1915 | 2.00 | 129 | 1926 | 2.48 |
| 146 | 1916 | 2.81 | 138 | 1927 | 2.65 |
| 192 | 1917 | 3.69 | 137 | 1928 | 2.63 |
| 203 | 1918 | 3.90 | 133 | 1929 | 2.56 |
| 220 | 1919 | 4.23 | 117 | 1930 | 2.25 |
| 152 | 1920 | 2.92 | 80 | 1931 | 1.54 |
| 119 | 1921 | 2.29 | | | |
| 130 | 1922 | 2.50 | Average | | 2.65 |
| 132 | 1923 | 2.54 | | | |

Interest at 6 per cent equivalent to 15.9 per cent.
Interest at 7 per cent equivalent to 18.5 per cent.
Interest at 8 per cent equivalent to 21.2 per cent.

It must be obvious to all that there is no hope of agriculture paying back $2.65 for every dollar borrowed, or even of paying from 15.9 per cent to 21.2 per cent interest on debts which on their face bear interest of from 6 to 8 per cent. Such a condition, if not remedied, means bankruptcy for the industry.

This condition has destroyed the normal purchasing power of the farmers and those directly dependent upon agriculture. It is estimated that these constitute 45 per cent of our population. It is impossible to destroy the purchasing power of 45 per cent of any people without bringing down disaster upon the whole people. It is significant that 85 per cent of the bank failures in America have occurred in towns of less than 5,000 population. It is estimated that prior to 1929, approximately 95 per cent of the failures were in rural areas. The farmer can not pay his debts unless he can farm profitably and unprofitable prices have caused an epidemic of bank failures. Bank failures restrict the free movement of bank credit, which is over 90 per cent of our money. Restricted money means high-priced money, which is another way of saying low-priced commodities. The whole money problem is so inextricably interwoven in this bank problem that no comprehensive study of our banking system can be conducted without viewing the whole problem of monetary stabilization and its effect upon the economic life of the Nation.

A dollar of stable purchasing value is essential to the orderly conduct of agriculture, commerce, and industry. Since over 90 per cent of our money is bank credit, a stable banking system is at the root of the stabilization problem. The following table of bank failures shows clearly the failure of our banking system to provide stable bank credit:

| | | | |
|---|---|---|---|
| 1916 | 56 | 1924 | 912 |
| 1917 | 41 | 1925 | 542 |
| 1918 | 28 | 1926 | 946 |
| 1919 | 45 | 1927 | 662 |
| 1920 | 47 | 1928 | 491 |
| 1921 | 364 | 1929 | 642 |
| 1922 | 394 | 1930 | 1,345 |
| 1923 | 290 | 1931 | 2,298 |

In addition to the failure of our banking system to provide stable bank credit, it is estimated that over $2,000,000,000 of direct losses have been suffered by a public compelled to use the only facilities provided and we have suffered a loss of untold billions through the failure to provide adequate credit for carrying on the normal business of the Nation. No other major nation on earth has a record of failures remotely approaching this. It is suggested that this record and the dire consequences justify the conclusion that some fundamental changes in our banking system are essential to the establishment and maintenance of stable business conditions.

Such changes should be designed to accomplish the following purposes:

1. Provide a place where our people can keep their money with the best possible assurance that they can get it when wanted.

2. Provide a dependable source of credit for individuals and industry on a sound basis.

3. Maintain a supply of money and credit sufficient to meet legitimate regional and seasonal requirements.

4. Curb or control speculation with other people's money.

5. Prevent investment of other people's money in questionable securities. both domestic and foreign.

6. Avoid foreign complications through financing with other people's money for profit of private bankers without regard to international complications which might result therefrom.

It at once becomes apparent that protecting the money of our people and the life blood of commerce is as much a public function as protecting their physical property or their persons, which is the primary purpose of government. Any system of intrusting the protection of our lives, our homes, our factories or other property to private interests in order that they might profit thereby, interests which might fail to function when most needed, is unthinkable.

In its essence, government consists of a group of people who band themselves together to protect their lives and property and to guarantee freedom of individual action. The founders of the Nation recognized this principle when they wrote into the Constitution a provision giving Congress the power "to coin money and regulate the value thereof." (Art. I, sec. 8 (1).) Any government which protects the lives and physical property of its citizens without protecting their money, or the value of their money, fails of its main purpose. The unprecedented bank failures and the disastrous break in commodity prices clearly indicate that the Federal Government has failed to provide an adequate system of banking, first, to protect the money of our citizens, and, second, to regulate the value thereof so that it performs the functions intended. This is essentially a governmental function.

To bring about these results, the resolution under study proposes the following changes in our banking system.

1. The separation of the two functions of our banking system: (*a*) The custody of funds of depositors, (*b*) the lending of money.
2. The establishment of Federal depositories to assume the custody of depositors' money and to conduct the checking business.
3. The lending of depositors' money by Federal depositories only to properly capitalized rediscount agencies upon approved securities.
4. Banks, as now operating, to receive no money on deposit for their own account, but only as agents for the Federal depository.
5. Banks to constitute the lending agency of our banking system, lending their own capital and rediscounting their paper through the Federal depositories.
6. Federal depository to be a bureau of the Treasury Department under the supervision of a Federal depository board similar in make-up and powers to the Federal Reserve Board. Such bureau to issue currency under regulations similar to those now in effect in our Federal reserve system.

The essential differences between the operation of such a system and the existing banking system would be as follows:

Little or no change would be required in the physical property of existing banks or the relations of depositors or borrowers with bank officials or employees. Under proper contracts and bonds, banks would act as fiscal agencies for Federal depositories receiving deposits, and conducting the checking departments of the system, holding all money so deposited for the account of the Federal depository. The same personnel would probably handle the funds as at present, the banks performing these functions as agents for the Federal depository for a compensation stipulated in a contract with the Federal depository board.

Instead of lending the depositor's money direct, banks would have available for lending only their own capital and surplus, plus what money they would borrow. These borrowed funds would be obtained chiefly through rediscounting the notes of their customers with the Federal depository in a manner similar to that now in practice in rediscounting through the Federal reserve system.

Banks would be compelled to pay a rate of interest on all borrowings sufficient to maintain the system, but as offsetting features would be freed from the expense of (*a*) maintaining the checking and depository branch of their business; (*b*) maintaining reserves sufficient to meet the demand of depositors through normal or unusual withdrawals.

It is suggested that the following improved conditions would result:

1. The depositors' money would be held in trust by the Treasury of the United States. Loans therefrom would be made only under regulations of the Federal depository board and the laws of Congress. This condition now prevails in discounting with the Federal Reserve System where losses have been held to a negligible amount. The depositor would thus be protected from (*a*) wildcat banking; (*b*) exceptional regional demand for money in excess of

regional deposits; (c) bank runs by a public which has lost confidence in local management or local conditions.

2. The borrower who is entitled to credit would be protected from untimely curtailment of credit caused by the need for establishing a high degree of liquidity to meet prospective bank runs, unexpected withdrawals, adverse local crop conditions, or other causes likely to affect the amount of local deposits.

3. All deposits being under control of one board, money could be made available when and where legitimate demand required. This is particularly true in rural sections where seasonal production or marketing demand often exceeds the facilities of local banks whose lending capacity depends chiefly upon the amount of deposits. Many rural communities are entirely without local credit facilities because the fluctuating nature of deposits makes local banking unprofitable. Under the Federal depository system, agencies with capital to lend would undoubtedly occupy this field, providing needed credit facilities with profit to all concerned. Lack of such credit is now largely responsible for early crop dumping and other unsound marketing practices.

4. Speculation with other people's money could be controlled. The wild flight of money to Wall Street for speculative purposes is too recent to require extended comment. Legitimate credit for agriculture and industry was severely crippled by banks lending money to Wall Street on call in order to get exorbitant rates of interest, frequently running in excess of 15 per cent. The legitimate business and commerce of the Nation, which is dependent upon the supply of money, was hampered, and in many cases ruined, by diverting this money from needed channels to speculative channels for private profit. Under the Federal depository system, none could profit by such diversion and any such shifting of credit on a large scale would be under the control of the Federal depository board, whose sole interest would be to keep the credit facilities of the Nation in balance with the Nation's needs.

5. Investment of other people's money in questionable securities could be prevented. The practice of many of our banks in underwriting questionable securities, both domestic and foreign, then unload on the public, through rigging the market, is also too recent to require extended comment. Such practices have no place in any institution intrusted with the custody of the people's money and could not longer be conducted with the depositors' money under the Federal depository system.

6. Foreign complications due to large-scale financing by private bankers could be avoided. Complications arising from loans made by our so-called international bankers have at times brought the Nation to the verge of war, and at the present time are complicating the problem of repayment of our foreign war loans. No private bankers for private profit should be permitted to lend the people's money to foreign interests when such loan might complicate the relations between nations, or when the money so loaned is needed at home to promote legitimate business and hold interest rates at a reasonable level. The Federal depository system would correct these abuses.

The Federal-depository plan presents possibilities for curing many of the most serious defects in our present banking system—defects which have been largely responsible for the financial debacle which has brought so much distress to America. There are some questions of doubt in the minds of your committee, which it is believed should have further study.

It is essential to preserve the private interests of bankers, or money lenders, as a buffer between the borrowers and the Federal depository, in order to prevent the play of politics from affecting the consideration of credit. The extension of credit must be completely divorced from any political pull or favoritism. Further study is necessary to determine whether the private banker or money lender would find in the proposed system sufficient inducement to employ his funds for lending purposes under the provisions of the proposed plan.

Your committee believes that there should be greater control by the Federal Government over the lending of other people's money, but has some doubt about the ability of the small and needy borrower with little more than his character as security, to secure needed loans under the proposed system. Means must be found for caring for this type of credit.

Your committee believes that if such legislation is enacted, it should be made permissive rather than compulsory so that its workability could be fully demonstrated in practice before being made compulsory. Your committee, therefore, recommends that this material be printed in pamphlet form and that the study of the proposed system be continued.

Senator HARRISON. Mr. Taber, before you finish, you talked about sound money. I take it you are not in favor of this country going off the gold standard?

Mr. TABER. I believe, Senator, that we can do justice without going off the gold standard. I am rather amused at people that talk about the glories of what we have done, and come back and say, "We are still on the gold standard."

I want to say this, Senator: If there is nothing we can do toward bringing a more stable dollar; if there is no solution, other than what one of the speakers suggested this morning—continued deflation—civilization is not worth while. If there is not wit enough in the people of this civilization to prevent the continued recurrence of depressions and difficulty and disaster, and if we know nothing more than to let deflation go to its final conclusion—disaster—and then seek to build up, we just are not statesmen—financially, politically, economically, or otherwise.

Senator HARRISON. If I understand you, you think these suggestions you have made, if they could be worked out rationally, would be so helpful that we would not have to go to the other extreme?

Mr. TABER. That is what I believe, Senator.

Senator HARRISON. And that applies also to bimetallism?

Mr. TABER. I am rather compelled, in a hearing of this kind, Senator, to stick to my bible, which is the journal of proceedings of the National Grange, and follow its policy as outlined in the Grange resolutions.

Senator HARRISON. That is a pretty good bible; is it not?

Mr. TABER. It is a pretty good bible. It is not as good as the Bible I take to Sunday school, but it is a pretty good one.

The Grange proposal is that we should at once call an international conference to try to stabilize the value of silver. The greatest tragedy, outside of the things happening in the United States, was changing the money of a thousand million people in the Orient to a commodity. There is some way that we can use silver in supporting our standard.

Senator HARRISON. It has been suggested here that if France, England, and the United States could act together and purchase a certain amount of silver, $200,000,000 or $500,000,000—or various amounts have been suggested—that might help the situation. Would that be your viewpoint?

Mr. TABER. I think, Senator, that will help. I still think, Senator, we will have to do more than that. I am not quite ready to go the full length of such legislation as the Rankin-Thomas bill. Neither do I find myself permitted by the Grange resolutions to go quite as far as those who would cut the grains of the gold dollar in two. But when we recognize that every great nation except ourselves, without a single exception, is either off the gold standard or managing its currency, it looks as though we can not possibly set ourselves up on such a pedestal, and have anything but low prices and disaster.

The other day I told the man at the bank, when I got some money, not to give me any bad money. He said they never had any in the bank, but I noticed I had two greenbacks, one silver certificate, a Federal reserve note, bank notes, and some other types of currency in my change. I think we have been unnecessarily fearful about adulterating, as they say, the quantity of our money. I take a greenback, that has no promise to pay in gold, with the same cheerful desire that I take a silver certificate, or one of those more ornate bills that says, "Payable in gold coin."

Senator KING. Mr. Taber, Congress passed three bills, one under Mr. McKinley, as I recall, one under Mr. Roosevelt, and one on the last day Grover Cleveland sat in the White House, each one of which declared in favor of international bimetalism and maintenance of gold and silver at a parity, and declared in favor of the calling of an international convention for the purpose of establishing bimetallism. One of the bills appropriated $100,000 for the purpose of meeting the expenses of such a convention. The last session of Congress passed a resolution requesting the President of the United States to call an international conference for the purpose of dealing with the silver question. The Democratic platform drawn at Chicago pledged its nominee to call an international silver conference at Washington for the purpose of rehabilitating silver.

Do you not believe—if you care to express an opinion, which you might be prevented from expressing by the action of your organization—do you not believe that if such an international convention were called, and the nations of the world, particularly the commercial nations of the world, should agree at that convention, for the rehabilitation of silver, to open their mints to the free coinage of any silver bullion that might be presented, at the ratio of 16 to 1 or 20 to 1, and the silver was coined, or the silver certificates issued where bullion was deposited, with the provision that they should be legal tender, that that would largely increase, and perhaps nearly double the basic metallic structure of the world, and furnish additional money, and thereby tend to increase prices? Do you not think that would be a wise thing?

Mr. TABER. Senator, that is almost in harmony with Resolution No. 4 that I put into the record, that we recommend the calling of an international conference for the purpose of stabilizing the price of silver and stabilizing the purchasing power of gold in terms of the average wholesale prices of commodities. We believe in such a conference. We have declared again and again for it, and we see no reason why it should not only be called, but we feel that a disaster has been permitted to be accelerated, because the Government itself has failed in its responsibility of doing everything humanly possible to bring the stabilizing influences of a broader metallic base.

Senator KING. On which to rest the currencies and credits of the world.

Mr. TABER. Yes. Senator, if there are no other questions, in conclusion I want to reemphasize the belief of our organization in economy, in reorganization and in the reduction of the expenses of the Government; but we do not believe that it is economy to destroy essential services.

We believe that such institutions as agricultural extension, vocational education, agricultural research, and activities of that character pay dividends over such a long period, and are so essential in maintaining morale and well-being, that the Government ought not to make the mistake of being penny wise and pound foolish in its desire for economy. Agriculture will take its share of economy.

We expect to be cut the same as other groups are being cut, but we do not expect to be cut more severely than others are being cut. We do insist that that type of service must be maintained.

Senator KING. Mr. Taber, you certainly can not complain about the appropriations made by Congress for the agricultural department. A number of years ago when I was in the House four or five million dollars per annum was all that was appropriated for agriculture. We have appropriated as high as $300,000,000. Of course, a considerable part of that was for roads, but the direct appropriations for agriculture exceed $100,000,000.

Mr. TABER. I was not complaining, Senator. I was simply pointing out that in our program of economy and readjustment which we favor, we do insist that there are some things we can not afford to do without, such as health, education, safety, and protection of property, which are fundamental whether the Budget is balanced or not.

I know the Senators will not agree with me, but I take real satisfaction in the fact that the National Grange, before this committee and the committee in the House, opposed tax reductions during the period of prosperity until our war debt was extinguished.

The CHAIRMAN. We thank you. The committee will adjourn to meet to-morrow morning at 10 o'clock.

(Whereupon, at 3 o'clock, p. m., the committee adjourned, to meet to-morrow, Saturday, February 18, 1933, at 10 o'clock, a. m.)

# INVESTIGATION OF ECONOMIC PROBLEMS

SATURDAY, FEBRUARY 18, 1933

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met, pursuant to adjournment on Friday, February 17, 1933, at 10 o'clock a. m., in room 335, Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Watson, Shortridge, Couzens, Keyes, La Follette, Harrison, King, George, Walsh of Massachusetts, Barkley, Gore, and Costigan.

The CHAIRMAN. The committee will come to order and will hear Mr. Loree.

## STATEMENT OF L. F. LOREE, PRESIDENT THE DELAWARE & HUDSON RAILROAD CORPORATION

The CHAIRMAN. Mr. Loree, will you give your full name?

Mr. LOREE. L. F. Loree.

The CHAIRMAN. Of New York City?

Mr. LOREE. My business address is 32 Nassau Street, New York City.

The CHAIRMAN. You may proceed.

Senator HARRISON. I think the record better show some designation of Mr. Loree's position.

Mr. LOREE. I am president of the Delaware & Hudson Railroad Corporation.

The CHAIRMAN. You may proceed.

Mr. LOREE. My subject is:

### THE RAILROADS—THEIR RELATION TO THE CAUSES AND CURES OF THE COMMERCIAL DEPRESSION

Only about three-tenths of the world's surface is dry land, and no more than the one-hundredth part of the surface could support a dense population. About half of the land surface has no more inhabitants, taken together, than now live in the two cities of London and New York. The world's population is now about 2,000,000,000 human beings. Three hundred million Hottentots, Eskimos, and others have no more than the barest necessities of life. Some 320,000,000 live by hoe culture and upon native fruits. Eight hundred and seventy-five million live by rice culture, requiring constant irrigation. Some 125,000,000 live in scattered areas, raising millet in Africa, corn and wheat in South America.

The 370,000,000 people of North America and Northwestern Europe are the result of an age-long process of migration and natural selection. The basis of their life is the wheat type of agriculture. They possess three-fourths of the world's wealth, eleven-twelfths of its steamships, manufacture nine-tenths of its goods, govern two-thirds of the world's habitable territory, and have a controlling voice in the remainder.

The citizenship of the United States is almost one-third and the English-speaking people somwhat more than one-half of this superior group.

In the United States, with no more than 6 per cent of the population of the world and 5.7 per cent of its land area, we produce 72 per cent of the oil, 37 per cent of the coal, 42 per cent of the iron ore, 45 per cent of the finished steel, 51 per cent of the copper, 54 per cent of the cotton, 64 per cent of the corn, 20 per cent of the wheat, and hold 45 per cent of the gold, the medium of international exchange. Many consider us the pampered pets of the world's population.

Our national wealth makes our outstanding problem the national defense, for which one indispensible thing is a defensible frontier. Are we giving this matter the consideration it deserves?

We have built ourselves up into our present commanding position by the use of an industrial organization. People of thrift, willing to practice self-denial, accumulate wealth and set much of it aside to be used as capital; the managerial staff is far-seeing, inventive, and resourceful; the workmen are healthy, intelligent, and efficient. In the main, the relations of these three groups are cordial and mutually supporting.

The rate of progress is not uniform. There have been many periods of severe disturbance. One of great severity followed the Revolutionary War, another following the Civil War, there were others in 1819, 1837, 1857, 1893, 1907, and the one (1929) in which we are now involved.

These disturbances would appear to be caused by profound dislocations—the results of a great war, the opening of new avenues of trade, the operations of the investment trusts, the introduction of new industries, an exaggerated or too rapid change in the associated relations of management, capital, and labor. The period required in which to restore ordered relations usually runs from three to six years. Much in the way of readjustment has already been accomplished.

Our progress is definitely marked by the development of transportation from the early days when man packed his own burden, followed by the domestication of the pack animal, the bringing into use of the cart, the wagon, the stage coach, the sail boat, the steamship, the railroads, the automotive vehicle, and now the airplane.

The railroads have been an essential factor in our rapid growth and development. A modern locomotive will move in one train a volume of business that 175 years ago required the service of 97,500 pack horses. To-day the railroads are faced with changing conditions which must be recognized and dealt with effectively.

The short-haul passenger business, I believe, is permanently lost to the passenger automobile. On the Delaware & Hudson we are handling 18 passengers where once we handled 100 and, by the same, comparison, on the Kansas City Southern only 9.

The automobile bus has a very limited field for operation. About one-half are used to transport school children. I look to see the mileage of those used to transport school children increase. The mileage of the rest will, I think, very largely disappear. The number of auto busses on December 31, 1931, was reported to be about 95,000.

Senator KING. Mr. Loree, has there been any diminution in the number so far?

Mr. LOREE. It has just begun, sir. I will add that I do not know of any company in this country, and I know there is no company in Canada, paying a dividend.

Senator KING. These continental bus lines and semicontinental bus lines, then, have not been profitable?

Mr. LOREE. I think not.

The CHAIRMAN. You may resume.

Mr. LOREE. The auto truck will increasingly absorb the movement of package freight, perishable goods, and livestock, but only over limited distances, probably those which will enable the driver to be at home at night. The traffic has been obtained by their replacement of the horse-drawn vehicle, the creation of new traffic, and by the absorption of a part of the freight heretofore carried by the railroads. For the most part, this diverted traffic is of the less-than-carload class, which is only 2½ per cent of the ton-mileage handled and has required the use of 25 per cent of the car equipment. Expensive stations must be provided, the freight requires trucking both ways across the station platform, stevedoring in the car, the loss and damage is relatively heavy, it must be weighed and a multitude of waybills made out. It is questionable if the traffic ever yielded a profit. There is now a good deal of " wild-cat " traffic being handled by the trucks, but this will disappear with changed industrial conditions. These trucks divide 6 per cent in common-carrier business; 9 per cent as contract carriers and 85 per cent as privately owned. The number of trucks in use December 31, 1931, was reported as 3,466,303. It would not seem that control could be looked for through supervision of the traffic charges.

To my mind the problem of automobile traffic is the problem of policing the highway. The blood-letting in movement as now conducted is appalling. In 1931 there were brought to their death by automotive vehicles 34,400 persons, and nearly a million received injuries ranging from slight contusion to maiming and crippling for life. Forty-one per cent of these injuries were classed as serious.

It is an instrument more dangerous than was the World War. During the 18 months of the World War 50,150 members of the A. E. F. were killed in action or died of their wounds. During the 18 months ended December 31, 1931, 53,650 were killed in automobile accidents in the United States or died of their wounds. The corresponding figures for the same period of time were for members of the A. E. F., wounded 182,674, for citizens 1,576,840 injured by motors, not fatally.

It is reported that during the months of mild weather there are killed by motor vehicles in excess of 100,000,000 birds. Nature maintains a rather delicate balance. What we may suffer from this upsetting experience is yet to be determined.

As I have said, the matter seems to me to be one of police control. We must look to restriction of length, height, and width, to the elimination of the full trailer and the automobile carrier, to limitation of weight of vehicle and load, to mechanical limitation of speed, to proper couplings, to full braking, to higher standards in the training and skill of drivers, and to other like control to markedly lessen the appalling danger now attending this traffic.

Senator KING. Will you pardon an interruption, Mr. Loree?

Mr. LOREE. Certainly.

Senator KING. Does that envisage control by the Federal Government, or of the States alone, or joint control over the policing and regulation of motor-truck and motor-bus traffic?

Mr. LOREE. My own opinion is that it is a police matter for the States.

Senator KING. You think that the Federal Government ought to put the busses and trucks that are engaged in interstate traffic under the control of the Interstate Commerce Commission, or not, and subject them to such regulations as might be deemed proper?

Mr. LOREE. I do not. First, for the reason that the traffic that is being diverted from the railroads produces very little net revenue; and, secondly, that I think shortly the most of it will disappear.

Senator KING. Many complaints have been made about the excessive speed of trucks, their increasing size, the fact that they are destructive to the highways, and are paying an inconsequental amount to the maintenance of the highways, and therefore that they ought to be subjected to interstate regulation and control, and probably some system devised by which they should pay a reasonable amount of taxes for the maintenance of the highways.

Mr. LOREE. I think all that is true, except that I think it is a State activity rather than a national one.

Senator KING. Then you would not be in favor of legislation which would seek to put all these trucks and busses under the Interstate Commerce Commission or some other Federal agency?

Mr. LOREE. I would not.

Senator BARKLEY. You are an optimist standing alone among railroad men, as it seems to me, in taking that position.

Mr. LOREE. I think I am.

Senator WATSON. You are the only one I know of. Why, Mr. Loree, do you say this bus and truck traffic will shortly disappear?

Mr. LOREE. Well, as business gets better and many of the people now engaged in it can find jobs at full wages I do not think they will be able to run trucks in competition with the railroads.

Senator GORE. And you say there are about three and one-half million trucks.

Mr. LOREE. Yes, sir.

Senator GORE. I have been wondering about this proposition: Whether the people who are operating them are making provision for the necessary replacement if they are to continue in the business.

Mr. LOREE. Many of them do not do that.

Senator GORE. I did not suppose they did; and probably that will break down that competition.

Mr. LOREE. Yes, sir.

Senator BARKLEY. Mr. Loree, did not the increase in trucks and motor-truck traffic, and the increase in competition by trucks and busses with railroads, develop almost altogether while we were in the so-called prosperous era, when business was good? And if that is true, how do you figure that that business, or that competition, will disappear when good business returns again?

Mr. LOREE. Well, many of them have gone out of business, failed. And from talks that I have had with the owners I get the information that the ultimate limit of operation is one that will bring the driver home at night. At the present time, say, a man will start out from Louisville with a load and go to Milwaukee, and then perhaps will come back to Chicago in the hope of getting a load as far as Indianapolis on the way back home. They are wild-catting the business all the way round.

The railroads, unfortunately, are not in position to compete with them because of the difficulty of adjusting rates. I heard last night of a shipment of 165,000 barrels of cement that was going from a point on our line to Boston, which had been taken by trucks. But I look upon that just as I look back upon the interurban trolley lines. The people that I succeeded had bought lines in the neighborhood of Albany and Troy and the Hudson Valley, and they lost $11,000,000. And finally they took a part of them out and abandoned them.

Senator BARKLEY. Isn't it a fact that the interurban trolley line was put out of business by the automobile?

Mr. LOREE. By the passenger automobile.

Senator BARKLEY. And, of course, interstate busses had something to do with that.

Mr. LOREE. Yes, sir.

Senator BARKLEY. It has never meant a great amount of freight, as I understand it, but has been largely a matter of passengers.

Mr. LOREE. Yes, sir.

Senator BARKLEY. So that the motor-truck situation has not affected the trolley lines very much.

Mr. LOREE. No, sir. But we lost $11,000,000 in that venture, and I am leary about investing in anything else in which I may lose money.

Senator BARKLEY. You are leary about investing in something that will soon be supplanted by something else?

Mr. LOREE. Yes, sir.

Senator GORE. I want to ask this: Our present situation of railroad-rate structure as established by the Interstate Commerce Commission was put into effect when the railroads were what we all termed a natural monopoly. In other words, they had practically no competition. Has that situation changed, and do the railroads now have competition such as would call for a change in our mode of regulating rates, so as to enable the railroads to make flexible changes from time to time as occasion may demand?

Mr. LOREE. I think the railroads ought to be allowed to make very prompt changes, instead of having to go through quite a long-drawn out process to do it.

Senator GORE. The process is perfectly rigid now, is it?

Mr. LOREE. Yes; it is perfectly rigid.

The CHAIRMAN. You may resume, Mr. Loree.

Mr. LOREE. For example, I could have taken the business involved in that shipment of cement, could have held that trade, if I could have made an across-the-table bargain.

Senator GORE. Let me interject at this point, Mr. Chairman, if I may.

The CHAIRMAN. Certainly.

Senator GORE. There was a demand made by shippers in Oklahoma for a change in oil rates on railroads. It was two years before that matter was decided by the Interstate Commerce Commission, and when it was finally decided by that commission it was no longer a matter of concern to anybody.

Senator KING. Mr. Loree, would it be a good idea to so modify the interstate commerce act as that local boards might be established and which could be called into activity at a moment's notice, and to have plenary authority—of course, subject to review on appeal—to make modifications and to grant reductions within a limited area?

Mr. LOREE. I have given that matter a good deal of thought, and my own conclusion is, if I were chargeable with the disposition of the matter, I would keep three or five commissioners at Washington, and put six or eight commissioners on circuit, and allow Washington to have any matter referred up to them, just as the United States Supreme Court has matters referred up to it from the circuit courts. To ask people to come on here from Dallas, Tex., or San Francisco, or Chicago, to work out the details of their cases, when it might just as well be done in the neighborhood, seems to me to work a hardship. I think the business would be done such more expeditiously and perhaps more intelligently, if done in the way I have suggested.

Senator KING. Apropos of what the Senator from Oklahoma said: Last summer we had about 1,500 carloads of fine peaches ready for shipment in two weeks from my State. We made application to the Interstate Commerce Commission, but before they could get around to the matter and have a hearing and perhaps make a modification, the peaches all rotted.

Mr. LOREE. Yes, sir.

The CHAIRMAN. You may resume your statement, Mr. Loree.

Mr. LOREE. In conditions such as now envelop the railways, the first recourse is to eliminate waste. The railroads are divided into three groups—Class I, having annual operating revenues above $1,000,000; Class II, having annual operating revenues from $100,000 to $1,000,000; and Class III, with annual operating revenues below $100,000. Measured by traffic moved, the total ton-mileage, 311,072,637,318, divides as follows: First, about one-half is carried upon 26,000 miles, or on about 10 per cent of the total mileage of some 260,000 miles of first main track. Less than 2 per cent of the ton-mileage is carried on 73,311 miles of first main line tracks, being about 30 per cent of the total mileage. Of this mileage, 57,742 miles are distributed upon 2,094 branch lines and parts of lines of Class I railroads, 15,569 miles are distributed upon 483 Class II and Class III railroads. For the year ended December 31, 1930, 441 of these latter lines reported a corporate deficit of $78,241,049. The losses sustained upon the lines of this type owned by Class I railroads can not be determined from their reports.

These lines were built to serve a variety of interests, to bring out lumber now cut off, to bring out the product of mines now exhausted, to develop territory that proved disappointing, some are ruined by the construction of other lines more favorably situated. Not only is the tonnage carried by them insignificant; but it is moved at an out-of-pocket loss and keeps in service as an economic waste a large amount of line mileage and equipment. Each separate element in this group should be carefully examined and as rapidly as possible those that can not be justified should be abandoned and their salvage value recovered.

Some of the Class II and III railroads are characterized as "plant facilities" and perform a dual service, most of the work done being of a private character in the service of the plant of which they are a part and some of the services being classified as those of a common carrier upon which a division of the rate is allowed. They should be classified as plant facilities and so treated, division of the rate being prohibited and no longer allowed to masquerade in the two guises.

A further anomaly is the "privately owned freight car." Their numbers has grown from 183,474 in 1921 to 282,522 in 1932.

If we are to have a uniform treatment of shippers, then the servives of the railroads now held to be "affected with a public use" should be solely within their own control and not participated in by private persons or corporations.

Senator BARKLEY. Who owns the private freight car?

Mr. LOREE. Pipe-line companies, and refrigerator lines, and various other companies.

Senator BARKLEY. How did the custom of private refrigerator lines begin, instead of such cars being owned by the railroads?

Mr. LOREE. It began in England, and were transported to some extent from place to place on the street car line.

Senator BARKLEY. How did it begin in this country?

Mr. LOREE. In the same way.

Senator BARKLEY. Of course it had to be done more or less with the consent of the railroads. For instance, they were not required to take anybody's private car at the beginning.

Mr. LOREE. I suppose that is so.

Senator BARKLEY. Did they then consider it cheaper to let somebody else do it and get a tonnage or a toll of some kind for hauling such a car?

Mr. LOREE. I think in the main they have always been trying to get rid of them. But they have never been strong enough to do it, partly by reason of competition among themselves, and partly by reason of the strength of the position of the shipper, who might ship his business one way or another.

Senator KING. It was never held that the Interstate Commerce Commission could impose upon the railroads the duty of hauling private cars, or has such a thing ever been held?

Mr. LOREE. I do not know. When the Interstate Commerce Commission came into existence those private cars were in existence, and I suppose they took them over as a part of the picture.

Senator BARKLEY. Has that tended to increase the cost of hauling freight?

Mr. LOREE. Yes, sir.

Senator BARKLEY. The fact that a public owner and a private owner participates in the profit?

Mr. LOREE. Yes, sir; as a rule.

Senator GORE. Would you include Pullman cars in that category?

Mr. LOREE. I think they might well be taken over, just as the express business was.

The CHAIRMAN. You may resume, Mr. Loree.

Mr. LOREE. When the railroads were built the highways were, for the most part, dirt roads and the vehicles were horse-drawn. Under these conditions the stations were spaced at intervals of about five miles. With hard-metaled highways and the use of automotive vehicles, intervals of 15 miles would be quite as convenient. The small villages are drying up as traffic producers. The former patrons of the railroads now want to see the movies and shop at larger stores. Doubtless the total number of stations might be reduced by 20,000.

Senator GORE. How many altogether are there now?

Mr. LOREE. I think about 92,000.

During the last 10 years there has been the substantial increase of 20 per cent in empty freight-car mileage. This is the accumulated result of many factors. There seem to be two main causes (1) a disproportionate increase in one-way traffic moving in specialized equipment; (2) with an improvement in operating efficiency, a surplus of equipment was created and the movement of empty cars to their home roads was increased. The supply of home-line cars being ample at all important points, foreign cars are moved promptly off the property to avoid per diem charges.

The railroads have at the present time a great surplus of freight equipment, owning 2,200,000 cars, of which 646,733 were reported idle on December 31, 1932. Many could be rebuilt to advantage, while the lighter capacity cars and those of inferior construction might be torn down.

Senator WATSON. How many were idle in 1928 and 1929?

Mr. LOREE. I think at that time not many, sir.

Senator WATSON. I thought not.

Mr. LOREE. It should not be overlooked that the continuous growth in freight car capacity from 28 tons in 1900 to 47 tons in 1932 has made possible much of our industrial growth. It is the foundation of the modern blast furnace and of many manufacturing plants, and is the base upon which rests the modern practice of mass production. It bears the same relation to mass production that the elevator does to the modern office building.

A locomotive of the best type will contain about 15,000 separate parts, of which 6,639 are frictional. A 55-ton freight three-hopper gondola car will contain 4,441 parts, of which 817 are frictional. The units require daily attention and a general overhauling at comparatively short intervals. This condition can be radically improved.

Much waste can be eliminated by the abandonment of outlying shops and roundhouses, by a modernization of the machinery and tools, and by the intelligent use of the "piece work" method of wage compensation. There is a strong growing increment in the speed with which the machinery and tools are undergoing changes and radical improvements are in sight. Further, these changes would permit of tearing down the buildings made useless by these and other causes perhaps 33 per cent in number though not in importance.

Now, as an example of that, we began building locomotives and casting cylinders integral with the frame, and we reduced the parts by 834. Substituting four drawn seamless steel drums for the conventional fabricated drums, reduced the number of parts by 660. In the matter of the freight car, we built 25 cars last year and reduced them by 2,435 parts, or more than half of the parts of the car.

Senator HARRISON. Does that apply generally to railroads?

Mr. LOREE. No, sir. But I think it will soon apply to all of them.

Senator KING. You have been very much interested in improving railroad conditions, I believe.

Mr. LOREE. It is my great diversion.

Senator WALSH of Massachusetts. Isn't it a fact that these improvements that are being constantly made do not result in any reduction in the charges to the public?

Mr. LOREE. They have not as yet; no, sir.

Senator WALSH of Massachusetts. One of the singular things about our age is that while we have moved very rapidly in new inventions, and of great importance, it has not resulted in reducing the cost of living very much.

Mr. LOREE. Oh, very much. But it has not in the railroad business.

Senator WALSH of Massachusetts. But you say it has in other lines?

Mr. LOREE. Yes, sir.

Senator WALSH of Massachusetts. For instance, what?

Mr. LOREE. I should say that foodstuffs can be purchased very much cheaper; that textiles can be purchased very much cheaper; that shoes can be purchased very much cheaper. Things that are still high are railroad rates and fares.

Senator WALSH of Massachusetts. And telephone and telegraph rates.

Mr. LOREE. And telephone and telegraph rates, and anthracite coal, and things of that character that are held up and still need readjustment.

Senator COUZENS. Power and light rates also?

Mr. LOREE. Power and light rates.

Senator COUZENS. Do you mind an interruption at this point?

Mr. LOREE. Not at all.

Senator COUZENS. I have to leave in a few minutes to attend another meeting and I should like the opportunity to ask you a few questions now that I will not have the opportunity to propound later.

Mr. LOREE. Certainly.

Senator COUZENS. I am anticipating a comment you are probably going to make later on with respect to watered stock. Assuming for the instant the railroads were fairly valued at $25,000,000,000.

Mr. LOREE. Yes, sir.

Senator COUZENS. Due to the change in economic conditions, and to other means of transportation, would you say they are still worth $25,000,000,000?

Mr. LOREE. My conception of value is the old-fashioned one that a thing is worth what it will fetch, and to-day the railroads won't fetch much, but probably in three or four years they will fetch a great deal.

Senator COUZENS. I was not trying to get you to commit yourself to a figure during these depressed times, but I was trying to get you to express your views with respect to the difference in the value of railroads in normal times, taking into consideration the diversion of traffic, and what they were worth when they were valued by the Interstate Commerce Commission.

Mr. LOREE. Well, the funded debt of the railroads is $10,735,000,000. Their equities, consisting of common stock, of which they have $6,390,000,000, and preferred stock, of which they have $1,882,000,000; premiums that they received in the sale of stock, $52,958,000. Corporate surplus, $4,396,000,000, and depreciation reserves, $2,209,000,000. That would make equities of $14,930,000,000. So that the bonds would bear a ratio to the equities of about 41.8 per cent.

Senator COUZENS. That is, 41.8 per cent bonds, and the rest you put in stocks.

Mr. LOREE. Stocks and equities. I think it would appear favorably by comparison with most other businesses.

Senator COUZENS. I was not contending that. What I had in mind was: Do you believe, assuming that the railroads are now worth $25,000,000,000, under fair business conditions, that in the next few years you would be able to earn a return upon $25,000,000,000?

Mr. LOREE. Yes, sir; although I think we will probably charge off maybe $2,500,000,000 in eliminating waste.

Senator COUZENS. That is $2,500,000,000 of capital assets?

Mr. LOREE. Useless lines, equipment and buildings, stations, and all that sort of thing.

Senator COUZENS. Of course, each individual corporate entity is not itself standardized by any means with all others.

Mr. LOREE. It is not.

Senator COUZENS. And I understand that your particular property is not quite comparable with all the other railroad properties.

Mr. LOREE. Well, no one is quite comparable with any other.

Senator COUZENS. Some are rather worse but none better, is that it?

Mr. LOREE. Well, possibly so. At any rate, we have not let our equipment run down. It is in normal condition.

Senator COUZENS. All right. I thank you.

Senator KING. Notwithstanding the increase in transportation charges during the past 10 or 12 years, earnings of railroads have diminished during the past 6 or 7 years, have they not?

Mr. LOREE. It has been all eaten up by taxes and wages.

Senator KING. Wages constitute what part of your income?

Mr. LOREE. I am coming to that a little later on.

Senator KING. Very well. That question, then, might just as well be stricken out.

The CHAIRMAN. You may resume your statement, Mr. Loree.

Mr. LOREE. The results from the operation of the passenger business in 1931 were:

| | |
|---|---|
| Operating revenue: | |
| Passenger | $551,047,482 |
| Mail | 105,423,203 |
| Express | 82,774,883 |
| Milk, excess baggage, sleeping, parlor, and chair cars, and other miscellaneous | 85,713,000 |
| | 824,958,568 |
| Operating expenses relating solely to passenger and allied service | 917,091,825 |
| Loss from passenger-train operation | 92,133,257 |

From 1890 to 1900 the passenger traffic increased at the rate of 3.5 per cent annually; from 1900 to 1910 the rate of increase was 10.2 per cent annually; from 1910 to 1920 the rate of increase was 4.6 per cent annually. The traffic of 1920 had in 1931 declined at the rate of 4.9 per cent annually.

| | |
|---|---|
| In 1920 the number of passengers carried 1 mile was | 46,848,667,987 |
| In 1931 the number was | 21,894,420,536 |
| The decrease was | [1] 24,954,247,451 |
| In 1920 the number of miles run by passenger trains was | 561,633,392 |
| In 1931 the number of miles run by passenger trains was | 480,367,309 |
| The decrease was | [2] 81,266,083 |

It would seem that here, by reduction in the service, there is an opportunity to save perhaps $400,000,000 annually.

Senator GORE. Mr. Loree, the railroads would have been better off, I take it, if everybody had stayed at home.

Mr. LOREE. Do you mean if the railroads could have taken off their passenger transportation?

Senator GORE. Yes.

Mr. LOREE. Well, I do not know that they have ever really paid in the past.

Senator WATSON. You mean that passenger traffic has not as a general thing been paying?

Mr. LOREE. My own feeling is that it has always resulted in an out-of-pocket loss.

Senator WATSON. Does that include both local and through passenger traffic?

Mr. LOREE. That would include both local and through traffic, except for three railroads—the New York Central, the Pennsylvania, and the New York, New Haven & Hartford—which handle over one-third of the passenger business of the United States; and possibly some railroads like the Atchison, the Burlington, and the Union Pacific, which handle large amounts of mail.

Senator WATSON. Through passenger traffic and mail?

Mr. LOREE. Yes, sir.

Senator WATSON. It is the through passenger traffic that pays, if any pays?

[1] 53.27 per cent.
[2] 14.47 per cent.

Mr. LOREE. Oh, yes. The rest is carried surely at a loss.

Senator WALSH of Massachusetts. That figure that you gave as a decrease—53.27 per cent—is astounding.

Mr. LOREE. Yes, sir. We are operating trains to-day on total gross receipts of 1 cent a mile in one direction and 2 cents in the other.

Senator WALSH of Massachusetts. Is that number of passengers hauled by railroads still decreasing?

Mr. LOREE. Yes, sir.

Senator GORE. You have not tried to proportion that loss as between bus lines and private automobiles?

Mr. LOREE. No, sir. I think it is very largely due to the private automobile. And I have no quarrel with the private automobile. I think it is a very desirable type of transportation, that it suits the people very well.

The CHAIRMAN. You may resume, Mr. Loree.

Mr. LOREE. The results from the operation of the freight business in 1931 were:

| | |
|---|---|
| Gross revenue | $3,345,898,214 |
| Expenses | 2,302,768,313 |
| Profit from freight operation | 1,043,129,901 |

The freight traffic from 1890 to 1900 increased 8.6 per cent annually; from 1900 to 1910 it increased 8 per cent annually; from 1910 to 1920, with the disturbance of the World War, it increased 6.2 per cent annually. The traffic of 1920 had in 1931, with the disturbance of the panic of 1929, declined at the rate of 2.3 per cent annually.

Out of this profit of about $1,000,000,000 the railroads had to meet taxes and hire of equipment, losses sustained in conducting the passenger business, interest on money borrowed and invested in the plant, interest and sinking fund payments on equipment bought through the issue of car trust notes, and other liquidating debts. The result was that in 1931, 82 out of the 142 Class I railroads failed to earn their fixed charges. The return distributable to the equity (stock) interest is now so small that only one road is paying its normal dividend and only four of importance are declaring any dividends whatever.

Senator GORE. Will you name those railroads?

Mr. LOREE. Union Pacific, Chesapeake & Ohio, Norfolk & Western and Pennsylvania.

Senator WATSON (interposing). And your own?

Mr. LOREE. We paid on the Delaware & Hudson Co., but not on the railroad.

Senator GORE. The Norfolk & Western seems to be a sort of unique exception to them all.

Mr. LOREE. The Norfolk & Western and the Chesapeake & Ohio are both profitable railroads.

Senator GORE. What is the railroad that is to-day paying its normal dividend?

Mr. LOREE. The Chesapeake & Ohio.

The CHAIRMAN. You may resume, Mr. Loree.

Mr. LOREE. With the "Granger" legislation beginning in 1871, there was imported into the law, by a misquotation from an old English treatise written by Sir Matthew Hale in 1670, the novel idea "affected with a public interest" and the encroachments since then upon this private property have been almost continuous. The heavy grain exports from 1875 to 1890 set the Granger movement at rest, but it had a sharp revival in 1905.

The most significant contentions were:

1. Land grants: Such railroads as benefited received from the United States and individual States 155,500,000 acres of land, of which they have patented only 132,000,000 and which when given them was being sold by the grantors at from 41 cents to $1.67 an acre. The average selling price for the lot during the 20-year period covered by the grants was 94 cents per acre, a total value of perhaps $125,000,000. The land-grant railroads were obligated to handle Government freight and passengers at one-half the commercial rates and mail at four-fifths the going rates for mail paid by the Government under contracts. This annual saving is estimated at $5,000,000. So that every 25 years without end the Government gets back the full value the land had when the qualified donation was made. And this land cost the Government nothing. The general practice was to double the sales price of the Government-owned land in the land-grant area so that the Government sustained no out-of-pocket loss. Competition spread the effect of the rate reductions upon all competing carriers. It could not be confined to the land-grant roads.

2. Specialties: Charges were pressed that railroad officers had a closed mind against the use of new or improved appliances. An appointed Government board made five annual reports upon this matter, 1908 to 1912. They examined 1,146 devices and systems, but found few devices of enough merit to warrant even an inquiry. With the introduction of the automobile, with its "accessories," the mystery which brought the "specialty" into consideration disappeared. Some devices are still taken on by the railroads under pressure of commissions or legislative action, providing a market for devices that could not be sold upon their merits.

3. The "commodities clause," effective May 1, 1908: This prohibited a railroad from shipping over its own rails any commodity in which it had an interest, with the grotesque exception that railroads owning timber lands might continue to lumber, saw, and transport the commodity they owned. The act does not work both ways. Stockholders in road A can not have it own a coal mining corporation B and ship the output over its rails, but stockholders in the mining operation B may have its own railroad A and ship over it the output of the mine.

4. Passes: From the beginning the railroads issued free transportation evidenced in a form known as a "pass." On January 1, 1906, the railroads ceased to issue passes to other than railroad employees. The Hepburn bill was immediately introduced, making further issues illegal.

5. Eminent domain: This is exercised only by express statutory grant, is not confined to railroads, but has a wide application in industrial life—milling, mining, irrigation, etc.—where the ownership is in private hands.

6. Rebates and extended credits. In the conduct of most business discounts in price to buyers who take large deliveries as against

those who take small deliveries are still the common practice. Had the "rebate" been called a "discount," which it was, we may wonder whether the question would ever have arisen. Extended credits which are still common in commercial practice were suspended July 1, 1920. Collection of charges must now be made in 96 hours, or where disputes arise as to rates or service, in 30 days.

7. Watered stock: The valuation being made by the Interstate Commerce Commission has wiped out this fiction. It is generally conceded that the railroads could not now be reproduced for the par value of their issued securities.

It proved a calamity that the evidence of equities, the stocks, should have been given a stated (or par) value on the face of the certificate. Their value, of course, fluctuates from day to day, and the prices at which they are bought and sold has no relation to the amounts printed on the certificates. The share is evidence only of an ownership, of a definite fraction, of an undivided interest in the whole property.

8. The basis of the freight rate: The railroads fixed their rates and fares as commercial people fixed their prices upon the "value of the service rendered." Following the "Granger" excitement the court in Smythe *v.* Ames opened the door to the insistence of the shipper that the rate must be based upon the "cost of the service rendered."

We still have these two opposite viewpoints: The shipper seeks the "cost of service" at the level of confiscation; the railroads seek the "value of the service" out of which they hope to reap a profit. Over this field, delimited on the one hand by bankruptcy, on the other by prosperity, the battle still fiercely rages, exciting jealousy, arousing rivalry, inviting attack.

Senator WATSON. And what do you think about that?

Mr. LOREE. I think the value of the service rendered is the only basis upon which to compute a rate. And that reminds me of a story I read in an English magazine the other day. An English farmer was going out over his field and he said to an employee: "Jock, what are you thinking about"? The employee said, "What I don't understand, Squire, is that when a dentist pulls my wife's tooth he gets 10 shillings, and when I pull a turnip I get a penny." The English farmer said, "Well, don't bother your head about that. The thing is worth what it will fetch."

The CHAIRMAN. You may resume your statement.

Mr. LOREE. 9. Long and Short Haul: The law of 1887 prohibited a greater charge for an intermediate haul than for a longer haul over the same line in the same direction, where the movements were "under substantially similar circumstances and conditions." The Interstate Commerce Commission held in 1887 that the railroads were to be the judges in the first instance. They reversed this position in 1892. The Supreme Court approved the first interpretation in 1901. Congress struck out the qualifying words in 1910. Probably nothing in the law has had such far-reaching effect or been so provocative of complaint and litigation. This attempt to substitute a crude "cost of service" method of rate making for the commercial "value of the service" method involves difficulties as great as to make water run up hill.

10. Pooling: The earliest important pool was formed in 1870 and applied to both passenger and freight traffic between Chicago and Omaha. The practice became quite general until forbidden by the law of 1887. It was again legalized in the transportation act of 1920. Since then there has been a small amount of pooling in passenger service, but practically none in freight service.

Senator WALSH of Massachusetts. Just what do you mean by pooling?

Mr. LOREE. Agreements among railroads that they will divide the profits on business; whether they carry the business or the other fellow does.

Senator WATSON. Pooling does not have reference to passenger traffic alone?

Mr. LOREE. Oh, no; to both passenger and freight.

Senator WATSON. That is what I supposed. Go ahead.

Mr. LOREE. 11. Affected with a public interest: In Munn *v.* Illinois and following cases Mr. Justice Field, in his dissenting opinion, said:

> If this be sound law, if there be no protection, either in the principles upon which our Republican government is founded, or in the prohibitions of the Constitution, against such invasions of private rights, all property and all business in the State is held at the mercy of a majority of its legislature.

In Budd *v.* New York (143 U. S. 517), decided in 1891, the United States Supreme Court held a New York act, regulating charges for elevating grain, valid on the ground that the business was "affected with a public interest." Mr. Justice Brewer wrote a dissenting opinion, concurred in by Mr. Justice Field and Mr. Justice Brown, in which he said:

> It is suggested that there is a monopoly and that that justifies legislative interference. There are two kinds of monopoly; one of law, the other of fact. The one exists when exclusive privileges are granted. Such a monopoly, the law which creates alone can break; and being the creation of law justifies legislative control. A monopoly of fact any one can break, and there is no necessity for legislative interference * * *.
>
> * * * I believe the time is not distant when the evils resulting from this assumption of power on the part of government to determine the compensation a man may receive for the use of his property, or the performance of his personal services, will become so apparent that the courts will hasten to declare that government can prescribe compensation only when it grants a special privilege * * *. (143 U. S. 517, 550–2.)

It is regrettable that Mr. Justice Brewer's prophecy in 1891 has not been fulfilled.

Senator WATSON. You are at least an optimist.

Mr. LOREE. I am taking the same view he did.

Rate regulation has at different times been assumed to rest: (1) Upon the exercise of the power of eminent domain, and (2) enjoyment of a monopoly. Both these bases of regulation have been denied by the Supreme Court.

During the long 50 years of controversy many of these catchwords have lost their hypnotic effect. Potency would now seem to be limited to "basis of the freight rate," "the long and short haul," and "affected with a public interest." The hope is that they, too, will soon pass.

The Commission on Transportation reported to the American Economic Association in 1887:

Many of the charges where they relate to serious evils, and are undoubtedly true, involve, of course, no moral turpitude on the part of the railroad authorities, as many people seem to think. Railroad officers are much like other men and act much as other men act under like circumstances * * *. The evils of our present railroad management are, in other words, to a large extent, the result of carelessness, shortsightedness, and selfishness of the American people, and particularly of its representatives, and they will not disappear until the opposites of those qualities are exercised by our legislators.

Senator WATSON. When you say "representatives" that does not include Senators.

Mr. LOREE. Oh, certainly not. That refers to minor legislators.

Senator WATSON. Well, that is all right. [Laughter.]

Mr. LOREE. In the last analysis, the Nation's prosperity, growth, and very existence depend upon transportation. If we omit the business handled through the Panama Canal and upon the Great Lakes, then we find:

*Commercial freight traffic in the United States in 1930*

| | Ton-miles | Per cent |
|---|---|---|
| Steam railroads | 385,815,000,000 | 84.1 |
| Pipe lines | 31,729,000,000 | 6.9 |
| Inland waterways (canals and rivers) | 9,088,000,000 | 2.0 |
| Motor trucks (interurban movements) | 31,352,000,000 | 6.8 |
| Electric railways and airplanes | 1,039,000,000 | .2 |
| Total | 459,023,000,000 | 100.0 |

The steam railroads furnish the United States the best and cheapest transportation service available anywhere in the world. They were the means with which we opened up and developed the country; they remain the means upon which we must depend not alone for the future success or failure of this country as an economic entity, but for our very existence in the long future. We can not contemplate their destruction without ruin to ourselves.

If now we look to the further outstanding matters still unadjusted, I should place—

1. Taxes: Prodigality is reflected in the taxes levied upon the people. We have an anthracite coal company in Pennsylvania. In 1892 taxes were levied upon its property at the rate of $13 per coal-foot acre and only upon the coal veins actually being worked. In 1932 these taxes were levied at the rate of $300 per coal-foot acre and upon all coal in the ground, whether or not the veins can ever be profitably mined, so that this company's taxes from 1892 to 1932 were increased by 1,791.5 per cent; and this in spite of the fact that meanwhile it had mined 277,871,488 tons of coal.

Senator WATSON. Does that include all taxes?

Mr. LOREE. State and local taxes.

Senator HARRISON. What was the increase in the price of coal during that time?

Mr. LOREE. Very much.

Senator HARRISON. Was it proportionately as much as the increase in taxes?

Mr. LOREE. It has all been absorbed by the increase in wages.

Senator WALSH of Massachusetts. Which is the largest factor in the tax, the coal-foot acre or the local taxes?

Mr. LOREE. Oh, I should say the local taxes. They practically support the local communities.

Senator WALSH of Massachusetts. That is what I assumed. It is in the nature of a real estate tax. It corresponds to a real estate tax in the large cities.

Mr. LOREE. Take, for example, this situation: We have an iron ore operation in the Adirondacks. We built a schoolhouse to accommodate the people who work for us, and it cost us $15,000, which we rented to the school board for a dollar a year. They have finished a new schoolhouse, last year, at a cost of more than $100,000, and we pay 94 per cent of the taxes.

The CHAIRMAN. You may resume, Mr. Loree.

Mr. LOREE. In the State of New York the taxes from Federal and State sources for the public-school system increased from 1900 to 1930 by 2,278 per cent, while the population had increased by only 73 per cent. The railroads of the United States, with an increase of 148 per cent in the investment in road and equipment, have had their taxes raised from $44,445,145 in 1900 to $402,698,333 in 1929, or by 806.1 per cent.

2. Wages: From 1900 to 1929 the number of tons carried 1 mile increased 217 per cent, and of passengers 94.3 per cent, while the freight-train mileage was held down to an increase of but 21.5 per cent, and that of passenger trains to an increase of but 56.3 per cent, and the number of employees was increased by 66.5 per cent.

All the improvement brought about by managerial skill and all the benefits of technological advancements were, however, wiped out by the vast increase in railroad wages from $577,264,841 in 1900 to $2,940,206,163 in 1929—a difference of $2,362,941,322, or of 409.3 per cent. Over practically the same mileage, with about 148 per cent increase in facilities. Nor is the whole story told by the increased payments; labor restrictions, usually known as "featherbed" practices, have proved wasteful, burdensome, and, in the last analysis, expensive to labor itself. Inasmuch as the rewards of labor, capital, and management have to be earned by joint effort, anything that decreases the effectiveness and economy in operation works against each.

3. Accounting: With a thorough overhauling of the antiquated and, in many respects, restrictive prescribed accounting practices, much could be done to improve the railroads that is now financially impossible.

Senator WATSON. Whose fault is that?

Mr. LOREE. The Interstate Commerce Commission.

Under the present practice for the year 1932 the income of class I carriers available for fixed charges was about $492,713,239, while the fixed charges were themselves $658,614,190, reflecting a deficit of $165,900,951. But the expenses contained purely fanciful entries for what the authorities are pleased to call "depreciation" of $214,-451,563; had this figure been omitted, the fixed charges would have been covered with a credit remainder of $48,550,612. These depreciation reserves, as they now stand on the books, amount to $2,209,226,833 and bid fair shortly to pass the profit and loss credit balance of $3,272,304,596.

If now we look for a remedy we must point (1) to the excessively restrictive control imposed by National and State Governments; (2) similar restrictions by the pressure of union-labor organizations; and (3) fundamental and radical mechanical and economic changes that must, even in normal times, materially modify and divert demand, supply, and means of transportation.

The troubles in which we are now involved are not to be cured by poulticing, where the use of the knife is essential. We must face them with the attitude of the laboratory method.

In an industry as far flung and as diversified as is railroading, and one covering so long a period of development, the need for adjustments is apparent on every hand. Intelligently made, the railroads might rapidly assume their old-time efficiency and usefulness.

To adapt the railroads to the changing conditions, we must, among other things, look to—

1. The adjustment of taxes, wages, and working conditions.
2. Elimination of waste through the abandonment of all unused service, obsolete facilities, and mileage no longer justified by the traffic.
3. The development of the essential railroad facilities to the highest state of efficiency through the improvement of grades, reduction of curves, shortening of lines, application of heavier rail and ballast, strengthening of bridges, and improvement in equipment.
4. Amelioration of the five major hazards of the employee, i. e., sickness, accident, death, unemployment, and superannuation, or the incapacity of old age.

Senator WALSH of Massachusetts. All of those remedies, changes, except the first, can be made by the railroads themselves?

Mr. LOREE. Yes, sir. Well, take the elimination of waste. If we want to abandon a station or take up track we have to apply to the State commissions or to the Interstate Commerce Commission.

Senator WALSH of Massachusetts. That is true.

Mr. LOREE. 5. The following are changes that it is suggested might be considered in a recasting of the Interstate Commerce Commission's activities:

(*a*) Extend regulation to all commerce and all carriers which the Federal Government has power to regulate.

(*b*) Separate the conflicting and inconsistent powers of prosecutor and judge, neither of which can be adequately exercised when both functions are in the same hands; vesting the former fully in the Interstate Commerce Commission; and leaving the latter to the courts.

In regard to this intermingling of powers Lord Hewart, Lord Chief Justice of England, in 1929, said:

> The whole system of self-government is being undermined, and that, too, in a way which no self-respecting people, if they were aware of the facts, would for a moment tolerate. * * * The old despotism which was defeated offered Parliament a challenge; the strategy is different, but the goal is the same.

Now, that led to the appointment by the government of a committee on ministers' powers, with Lord Sankey, the Lord High Chancellor, as chairman, with power to select 14 associates, and

Lord Sankey, the Lord High Chancellor of England, as the chairman of this committee on ministers powers, reported in 1932:

The first and most fundamental principle of natural justice is that a man may not be a judge in his own cause. * * * But qualifying interest is not confined to pecuniary interests. * * * Indeed we think it is clear that bias from strong and sincere conviction as to public policy may operate as a more serious disqualification than pecuniary interests. * * * But the bias to which a public-spirited man is subjected if he adjudges in any cause in which he is interested on public grounds is more subtle and less easy for him to detect and resist. * * * Parliament would do well in such a case to provide that the minister himself should not be the judge but that the case should be decided by an independent tribunal.

And that report was unanimously signed by all the members of the commission.

(*c*) Omit section 15a of the interstate commerce act, which, while affording less protection than the constitutional provision against confiscation, provides for recapture of so-called excess earnings. This repeal for the future and retroactively has been recommended by the Interstate Commerce Commission.

(*d*) Omit section 19a, which provides for valuations. Although enacted on March 1, 1913, the valuations have not been completed, and all work so far done is condemned by decisions of the Supreme Court.

Senator GORE. And the variation of the general values nullifies all of them.

Mr. LOREE. I think so.

Senator HARRISON. How much has that cost? Have you any figures on that cost up to date?

Mr. LOREE. To the end of 1931 it had cost Class I railroads $138,000,000 and the Government about $40,000,000.

(*e*) Omit the commodities clause, section 1 (8), which prevents any carrier from moving in interstate transportation any commodities, except timber and its products, in which it has an interest.

(*f*) Leave to the courts the power to award damages.

(*g*) Prevent the compulsory and misleading enhancement of operating expenses by including estimates of depreciation.

(*h*) Repeal the Hoch-Smith resolution.

(*i*) Remove restrictions upon control and operation of boats and other accessory services by railroads.

Senator HARRISON. Explain just what the Hoch-Smith resolution is.

Mr. LOREE. That was a general resolution affecting agriculture, as I understand.

Senator WATSON. Agricultural products.

Mr. LOREE. Yes.

Senator HARRISON. Where you had to give preference to agriculture.

Senator WATSON. Yes.

Mr. LOREE. (*j*) Omit the power to fix rate divisions except when the commission has fixed a joint rate and the participating carriers are unable to agree.

Senator WALSH of Massachusetts. Mr. Chairman, I want to put in the record that that is a clear, concise, and challenging presentation of the railroad problem.

The CHAIRMAN. I am quite sure the committee will agree with that.

Senator WATSON. I would like to ask Mr. Loree a question or two. What has your company done to stabilize employment?

Mr. LOREE. We have not discharged a man since this trouble began. We have probably got 300 or 400 men who could be discharged without affecting the service. Our annual wastage from death, sickness, and superannuation, change of employment, is about 5 per cent a year. By not employing anybody and by taking great pains to shift men about, fill vacancies as they occur, we have gotten along without making any discharges.

Senator WATSON. That is what you have done, then, to solve the problem of labor in your service?

Mr. LOREE. Yes.

Senator WATSON. I wanted to ask one or two questions, if you please, Mr. Chairman.

The CHAIRMAN. Proceed.

Senator WATSON. I was much interested in the statement by Mr. Loree that he did not think any legislation was necessary to place the bus and truck traffic under the Interstate Commerce Commission.

Mr. LOREE. I do not think so; no, sir.

Senator WATSON. First, as the chairman of the Interstate Commerce Committee of the Senate, and then as a member of the committee under the chairmanship of Senator Couzens, we had hearings for weeks and weeks, and everyone appearing before us thought it was absolutely essential that it be done on account of the competition.

Senator HARRISON. I did not understand Mr. Loree though, to say that they should not be regulated by the State commissions.

Senator WATSON. How can that be done on interstate traffic?

The CHAIRMAN. They could not do that.

Senator WATSON. The trouble was with what we call the tramp trucks; not those company owned. For instance, if, Senator Harrison, you wanted to move, as I shall shortly after the 4th of March from Washington to Indianapolis, the truck backs up to my door and gets my household goods and puts them out at my house in Indianapolis. Now, that may not be a company-owned truck; it is an individual-owned truck. They do an immense amount of work in the country, but we could not find out how much by any investigation we made; we could not find out just how much they did haul. Yet it was manifest from all the testimony we have had that they did furnish a great deal of competition to the railroads.

The CHAIRMAN. You speak of Indiana.

Senator WATSON. Everywhere.

The CHAIRMAN. They want to deliver mine back to my home in Salt Lake City.

Senator WATSON. Yes; everywhere throughout the country.

Mr. LOREE. I think that is a passing phase though, Mr. Chairman.

Senator WATSON. You think it is?

Mr. LOREE. Yes. The trucking back and forth for delivery to and from the stations has been an incident of the English practice since the railroads were first organized. They had truck companies, horse-drawn vehicles from London to Birmingham and Liverpool, the largest of which truck companies was the Pickford Co. Now the London & North-Western, when it was organized, bought a half interest in the Pickford Co., and many people never found out that there was any change in the hauling. The collecting stations were still there; the wagons were seen driving through the streets; they made the deliveries. But last year the English railroads lost $6,000,000 in the conduct of that collection and delivery service.

Senator WATSON. Do you think it would help any if the railroads were permitted to own and operate in connection with the rail operations, busses and so forth?

Mr. LOREE. I do not; no, sir.

Senator WATSON. You do not?

Mr. LOREE. No, sir. I think it is a passing phase.

The CHAIRMAN. You think that with the wear and tear on the busses in their operation, the actual expense attached to them, and particularly if they had to pay any tax to speak of, that the railroads could more than compete with them?

Mr. LOREE. Yes, sir. Our embarrassment is that we can not handle the rate situation, as I said with regard to the shipment of cement.

The CHAIRMAN. And they can.

Mr. LOREE. They can.

Senator WATSON. Wherein do you think that the rigidity of the Interstate Commerce Commission's hold on railroad operations and financing could be relaxed? How far should you go back to the individual management?

Mr. LOREE. Just as far as you can.

Senator WALSH of Massachusetts. Mr. Loree, I observe in your treatment of this subject that you have not discussed or given any indication of fear over the development of aviation so as to be a competing factor in your passenger and freight business.

Mr. LOREE. I think that it is very important that the Government as a military matter should develop as rapidly as possible aviation. I think it might very well subsidize or itself conduct a line of operation along the Pacific coast, along the Atlantic coast, perhaps from Chicago to New Orleans, and across the continent. But I think it ought to stop subsidizing all other aviation lines. And when it does that they all go out of business.

Senator WALSH of Massachusetts. For instance, mail, you mean?

Mr. LOREE. Well, they pay excessive prices for that.

Senator WALSH of Massachusetts. Do you not think there is a possibility of aviation being developed to such an extent as to become a factor in lessening your freight haulage?

Mr. LOREE. No, sir.

Senator WATSON. Not freight, but passenger. How about passenger?

Senator WALSH of Massachusetts. I think there is even a possibility of freight.

Senator HARRISON. You do not elaborate on it but I notice that you suggest that you think the railroads should be able to own, in some circumstances, boat lines.

Mr. LOREE. Yes, sir.

Senator HARRISON. You think that would add to the economic situation?

Mr. LOREE. I think so; yes, sir.

Senator GORE. Mr. Loree, I would like to ask whether you think it would be feasible, and if feasible, whether it would be desirable for the Government to encourage and patronize what I would call an integrated system of transportation, a national system of transportation; whether under united, federated, or associated ownership, including railroads, steam and electric railroads, inland waterway transportation, ocean transportation, including the Panama Canal, trucks, busses, and aviation.

Senator HARRISON. Pipe lines.

Senator GORE. And pipe lines; yes, sir.

Mr. LOREE. It would be very highly dangerous, I should think. You would soon be faced with the question whether you were the boss or the transportation company was the boss.

Senator GORE. You do not think it would be feasible to do it?

Mr. LOREE. I do not think it would be feasible politically, and I do not think it would be feasible practically. There is not proportionately very much business moving between the so-called traffic regions of the country. The eastern region between St. Louis and Chicago on the west, the Hudson River on the east, the Potomac and Ohio and the Great Lakes, is practically a self-contained territory. The amount of business moving between that and the western region, the region west of St. Louis and Chicago, is relatively very small. The same thing is true of the Southeast and Southwest. The amount of business interchanged at St. Louis and Memphis and New Orleans is relatively very small. They are self-contained territories.

Senator GORE. The thing that has concerned me is the apparent inability of the railroads to earn their fixed charges. If they can not do that there is bound to be, it seems to me, a general chaos and breakdown on the part of the railroads, and that will involve every other economic activity. I was wondering whether if these other lines of transportation would pay, a system could not be evolved that will enable the railroads to share in those profits? Some general system that would be nation-wide.

Mr. LOREE. I think the railroads, if they were turned loose, would very soon straighten themselves up.

Senator GORE. If this bookkeeping requirement in regard to depreciation were changed you say they would be able now to earn their fixed charges and to apply the earnings to the payment of the fixed charges?

Mr. LOREE. That was true in 1932. Those are the 1932 figures.

Senator GORE. Is there any special reason as a matter of public policy or otherwise, so far as the railroads themselves are concerned, why this depreciation charge should not be set aside?

Mr. LOREE. Well, the depreciation first started on the London & Northwestern in the eighteen-forties. They kept it in use for two years and then abandoned it as not justified economically and said in their report that the moneys, if the board saw fit, might be distributed as dividends. All property has a very short life, and all property is kept in existence only by continued reproduction. We reproduce the entire capital value of the permanent way and the equipment on the railroads every 28 years by reproduction process.

Senator GORE. And you would do that by way of repairs and reproduction independent of this depreciation charge?

Mr. LOREE. Entirely so. Entirely so. It just muddles up the bookkeeping.

Senator GORE. As a matter of income-tax return, would it make any difference with that?

Mr. LOREE. I think not.

Senator WALSH of Massachusetts. Have the operations of the Reconstruction Finance Corporation been helpful to the railroads during this depression?

Mr. LOREE. It has kept some railroads out of the hands of the receiver; yes, sir.

Senator WALSH of Massachusetts. What have you to suggest that can be done further by the Reconstruction Finance Corporation to be helpful?

Mr. LOREE. Well, I am a good deal worried, Senator, about the financial situation.

Senator WALSH of Massachusetts. Many others are.

Mr. LOREE. The Government owes $20,000,000,000. Eleven billion dollars of that is in the banks. It is not distributed. I remember very well when I was a small boy that you could go into the corner grocery store and buy a United States bond at 50 cents on the dollar in gold. Government bonds did go to 34½. You can not fool with Government credit any more than you can with private credit. I look upon it with a good deal of apprehension.

Senator WALSH of Massachusetts. Do you look upon that as an activity that the Government ought to be careful about venturing into?

Mr. LOREE. I do; yes, sir.

Senator GORE. Do you not look on anything with apprehension that extends Government credit to various private activities, clogs up the only fair reservoir of credit, and everybody is trooping here to get it, and we fix it so other people who do advance money can not collect their debts, and that drives people to come to the Government to get credit, and this increased demand on it, of course, contributes to its exhaustion? I think it is a menace; that it threatens an ultimate breakdown.

Mr. LOREE. Of course one of our serious difficulties is that we have no weeding out process. At my place, I am in the chicken business and have a thousand chickens. At the beginning of the season I start to trap nest them, and those that do not lay eggs as I think they ought to go to the table. But we have no such weeding process in our general affairs except as the bankruptcy court deals with the elimination of the persons or the corporations whose businesses are not successfully conducted.

Senator WALSH of Massachusetts. What would be the effect of the continuation of the policy of issuing short-time notes by the Treasury or of putting a large number of Government bonds on the market?

Mr. LOREE. I think we are pretty well exhausting our credit now.

Senator GORE. If the banks had to unload these Government short-term notes that they have been acquiring would that bring on a pretty serious situation?

Mr. LOREE. Very.

Senator WALSH of Massachusetts. The Senator from New York and the Senator from Wisconsin are urging, one a $2,000,000,000 and the other a $5,000,000,000 bond issue for public works. What effect upon the Federal credit would such an issue have?

Mr. LOREE. Well, I do not see any reason whatever why the Government should not be liberal in its construction program for worth-while things.

Senator WALSH of Massachusetts. Do you not think we would have difficulty in selling these bonds?

Mr. LOREE. Not those; no, sir.

Senator GORE. In some of the Western States they are using Government money to cut the Russian thistle.

Senator WATSON. I want to ask this question: You made a significant statement a while ago when the Senator asked you about the financial situation. You said if the railroads were turned loose you would not have so much difficulty. What do you mean by "turned loose"?

Mr. LOREE. Well, we are restricted in almost everything we undertake to do, either by State or national commissions. By laws.

Senator WATSON. Yes; I understand that.

Mr. LOREE. For instance, I start a train out from Oneonta to go south. I run down the valley of the north branch of the Susquehanna on a 15-foot grade. The New York law compels me to put three brakemen on the train. When I get to the State line I stop the train and take one of the brakemen off. Then I go on a 75-foot grade over the Moosic Mountain with two brakemen. Now, I could better pay that fellow to stay at home, because I have to furnish him with a lamp and torpedoes and all the rest of it.

Senator WATSON. Does the fact of having three men add to the safety?

Mr. LOREE. Not a particle. There are 18 States requiring it.

Senator WATSON. That is the full-crew law?

Mr. LOREE. That is the full-crew law. I might say, Mr. Chairman, that I made an address to my agents last summer, and I have a copy here that I might file with your secretary in case you ever want to look at it.

Senator WALSH of Massachusetts. On what subject was that?

Mr. LOREE. Just a general talk about the railroad situation on our own line and in the country generally.

Senator WALSH of Massachusetts. It might go in the record if it is not too long.

The CHAIRMAN. Yes.

Senator GORE. Do you think it is better to liberalize the laws with respect to the railroads, particularly with respect to depreciation, rather than to advance money of the Reconstruction Finance Corporation to these distressed roads?

Mr. LOREE. I think so. I have no criticism to make of the Interstate Commerce Commission.

Senator GORE. I appreciate that.

Mr. LOREE. What I am trying to suggest is that the time has come when we ought to take a new point of view.

Senator GORE. I look upon these reconstruction advances as a medicine, when what the railroads need is food.

The CHAIRMAN. Thank you, Mr. Loree.

(The address of L. F. Loree at the annual meeting of the Delaware & Hudson Railroad Corporation Freight and Ticket Agents' Association is here printed in the record in full, as follows:)

CONDITIONS OF DELAWARE & HUDSON RAILROAD

We are, as you so sadly know, in the midst of a business depression which, in its intensity, exceeds anything in the experience of men now living. The following figures are the gross earnings of the Delaware & Hudson Railroad Corporation for the first six months of the last seven years:

| | |
|---|---|
| 1926 | $21,167,447 |
| 1927 | 20,914,948 |
| 1928 | 18,971,098 |
| 1929 | 20,038,548 |
| 1930 | 18,667,576 |
| 1931 | 15,753,848 |
| 1932 | 11,875,377 |

While in some of these years the net was highly gratifying, it has to-day quite disappeared.

The operating conditions of this property are very severe. We cross several ranges of mountains and, looking over the helper mileage for properties similarly experienced, I find that among the Class I roads there are only four where this mileage is 20 per cent or more of the total—Bessemer & Lake Erie, 33.6 per cent; Buffalo & Susquehanna, 30.4 per cent; Delaware & Hudson, 22.1 per cent; and the Buffalo, Rochester & Pittsburgh, 21.4 per cent. On the other hand, we stand proportionately high in the maximum locomotive axle loads now in use, the range from the top down being Chesapeake & Ohio, 77,500 pounds; Pennsylvania, 76,000; Bessemer & Lake Erie, 75,810, and Delaware & Hudson, 75,000.

In the movement of freight, the total number of tons in the high year of 1920 was 27,260,256, and this fell off in 1931 to 22,105,829, a decrease of 5,154,427, or 18.9 per cent, and this year, of course, the decline has, for the first six months, been much greater, 32.3 per cent.

In the movement of passengers in the top year of 1914 we handled 9,154,355, and this had fallen so that is 1931 we handled only 1,667,938, a loss of 7,486,417 passengers, or 81.8 per cent. I think we must consider this loss of passengers to be a permanent loss and should adjust our service and facilities accordingly. It is a painful ordeal. What we could do in a few hours as a business concern takes months, if successful, in dealing through the politicians' instruments, and often proves impossible. The loss to the automobile bus is not large, and that method of transportation, I think, has seen its peak and will from now on decline rapidly; but the loss to the privately owned motor car is the real factor which is significant, and that, I believe, has come to stay.

To partially meet this changed condition, the number of passenger-carrying cars (excluding those in the passenger-train service hauling milk, baggage, mail, and the dining cars) has been reduced from 305 in 1906 to 199 in 1931, or by 106 in all, or 37.75 per cent.

The number of freight cars, excluding caboose and service cars, has been reduced from 19,554 in 1913 to 15,099 in 1931, or by 4,455, or 22.78 per cent.

The number of locomotives has been reduced from 491 in 1920 to 433 in 1931, or by 58, or 11.81 per cent.

We have as idle equipment to-day 4,773 freight cars and 212 locomotives. All of the equipment is in good condition; no more than a low normal percentage of 3.3 of freight cars and 9.4 per cent of locomotives are held for repairs.

When the roads were returned to their owners by the Government after the war consideration was given to the equipment then in very bad shape and it was recommended that the percentage requiring repairs be reduced to freight cars 5 per cent, locomotives 15 per cent. We are well within these figures. Our practice has always been in laying up locomotives to white lead those coming out of the back shop, so that the engine, when needed, would be in the best possible condition, and this practice was followed in laying up the locomotives now out of service, so that we have a considerable reserve of fat.

*Elimination of waste.*—In adjusting ourselves to these new conditions, some things stand out as of prime significance. Ten years ago we began a serious and systematic effort to clear the property of all items of waste and to abandon wasteful practices. There were found to be in existence 1,835 buildings, including stations. They differed widely in character and size, varying from a box-car toolhouse of slight value to a building carried on the books at a value of $30,000. By the close of 1931 we had dismantled and disposed of 421 of these buildings, or of, say, 23 per cent, and while succeeding progress will be slow, yet we hope to continue it from year to year. This has effected a saving generally of all those items entering into maintenance, and as well much expense in operation, such as heat, light, and insurance. Most significant in this respect in the disuse of some 40 stations. When the railroads were the almost sole reliance for travel, and access thereto was by horse-drawn vehicles over dirt roads, it suited the convenience of the public to have stations at intervals of about 5 miles. Now, with motor vehicles and hard-surfaced roads, an interval of 15 miles between stations still keeps them more convenient of access than formerly. Some thirty odd years ago I made a careful analysis of the income and outgo of the 310 stations on the Northwest system of the Pennsylvania lines west of Pittsburgh. I found that at the end of a year's operation 97 of them did not show a dollar of income for a dollar of outgo and were the source of a constant out-of-pocket loss. Certainly conditions now are not as good as they were then. In this field considerable yet remains to be done.

*Automatic train control.*—On June 13, 1922 (modified December 26, 1922, at our insistence), the authorities, in a misguided effort to promote safety, ordered this corporation to install on one division a newly developed and untried system of automatic train control, and later, by order January 14, 1924 (modified April 3, 1924, at our insistence), required its installation on another division. It is now generally recognized that this device is a failure, and with the disappearance of the passenger business even a perfect one would not be justified. We may regard the cost of installation, $400,000, as a total loss, but could authority be had for its removal, an annual saving in maintenance and operation of $42,000 might be secured. There would also be eliminated the profanity now accompanying the preparation of the reports of operation which are still required.

*Mileage abandoned.*—It is obvious that there must be a point where the traffic may be so light as not to repay in its earnings the cost of movement. In our own experience this mileage has not been of prime significance. We have secured the abandonment of the Mooers Branch, 12.76 miles in length, the major portion of the Honesdale Branch, 23.62 miles, and all that portion of the Greenwich and Johnsonville road lying between the towns of those names, 14.09 miles. The time consumed in getting these several authorities from the public bodies was, respectively, 1 year 1 month 18 days; 4 years 16 days; and 8 months 23 days. There is some further mileage which should be taken up, which we shall make every effort to do.

*Grade reduction.*—I spoke of the large percentage of helper engine mileage. We have prosecuted exhaustive surveys of the grades involved in crossing the Moosic Mountains between Carbondale and Nineveh. As you know, we use northbound two helpers from Carbondale to Ararat, and southbound one from Lanesboro to Ararat. These grades can be reduced by relocation of the line so as to eliminate all the helper service between Carbondale and Lanesboro, except the push up to Forest City, at a cost of about $3,810,000, yielding through the economy of movement a return of 7.8 per cent.

The investigations of the grades between Richmondville Summit and Delanson, where we cross the Schoharie Valley, and the grade between the New York Central over crossing west of Schenectady and Glenville Summit, involve the use of helper engines in both directions over the entire division. These can be eliminated, involving the construction of some new line, at a cost of $5,936,000, yielding through economy of movement a return of 11.1 per cent, or upon the total investment of $9,746,000 a return of 9.8 per cent.

*Grade-crossing elimination.*—You will recall that an amendment to the constitution of the State of New York was adopted January 1, 1926, which provided the sum of $300,000,000 for the elimination of grade crossings. Under the then laws of the State, the expenses of these eliminations were divided—the railroads one-half, the State one-quarter, and the local town or district one-quarter. The astonishing fact was then revealed that there were no highway crossings in the State that were considered dangerous by the local authorities. They made loud outcries of distress, folded their hands, raised their eyes to Heaven and swore to the truth of their intimate local knowledge.

At the session of the legislature, January 1, 1928, the law fixing the incidence of the expense was changed. The railroads were still to be responsible for one-half, the State assumed 49 per cent, and the local community was left with the insignificant fraction of 1 per cent. The result was to work a miracle. All the crossings now were found to be points of extreme venture not to be endured in a civilized community and rainbows of expenditure were stretched across the sky in all directions regardless of the position of the sun.

At the end of the year 1931 we had eliminated 44 crossings by altering their location or by abandoning the highway or by overhead or underpass construction. The expense to us was a capital charge of $791,000 and a charge to expenses of $39,800. When the work now in progress, including the expensive changes at Whitehall and Albany, and that contemplated in the future, particularly at Saratoga, are completed, our portion of the work on this corporation's lines will have absorbed $6,980,000, and our capital charges will be some $6,870,000, on which we can not expect a larger return than 1.5 per cent, while the money will cost us about 4 per cent for interest and sinking fund payments. payments.

If you contrast this anticipated economy of 1.5 per cent on our investment of $6,870,000 in grade-crossing elimination with a return of 9.8 per cent on an investment of $9,746,000 in grade reduction you get some idea of the difference between public and corporate management of private property.

In building fences on the lines dividing farms the expense is divided by the owners half and half. But if the fence separates private lands from railroad lands the entire expense must be borne by the railroad. The laws of some of the States prescribe that these division fences must be "horse high, bull strong, and hog tight." The politicians have bettered this practice and have enveloped the privately owned railroads with a still stronger enclosure.

*Shop machinery and tools.*—During the period of 1925–1931 eight outlying light repair points were abolished and operations concentrated at fewer points. In 1927 the freight car repair shops at Oneonta were reconstructed and open to top car repair work transferred to that point. Similarly, box-car work was transferred to Green Island, where it could be performed under cover, and in consequence heavy repair work was discontinued at Carbondale and Colonie. Since 1927 such major activities as wheel work, air-brake triple-valve repairs and journal-box oil and waste reclamation have been concentrated at Oneonta; likewise modern brake-beam repair and knuckle reclamation plants have been installed at this point, resulting in substantial economies.

Since 1926, 3,719 freight cars were reconditioned, and during the past three years 1,100 42½-ton coal cars and 100 40-ton box cars were built new. In the period 1926 to August, 1932, 1,786 obsolete units were retired. Since 1926, 82 passenger-train cars were reconditioned, including remodeling of 6 dining and parlor café cars.

Over many years the shop tools had become antiquated and, with the revision of the shops themselves, it was arranged to bring the tool equipment up to date and to take advantage of the great improvements in machinery and tools brought about by the war and the introduction of new industries like the automobile industry.

A careful review brought us to feel that if we did not push this program faster than by the expenditure of $100,000 per annum that no workman would be displaced, the natural wastage of the forces by death, accident, sickness, superannuation, and change in employment being about 5 per cent per annum. This program was within two years of completion when it was suspended by the business depression. The changes in the car department were completed; what remains to be done is all in the locomotive and maintenance of way departments.

*Wage bases.*—The practice theretofore maintained in the shops of payment on an hourly rate we changed to a piecework scale of payments. The effect of this change was very marked. You will recall that after the reorganization of the shop forces following the strike of 1922, we organized a series of car-reconstruction competitions by selected gangs from the different shops and carried these on until 1927. They attracted much attention, and at the last one held more than 300 officers from other railroads attended. Such has been the influence of improved methods and new tools that the average workman to-day makes more money than did the men of the winning team in 1923. At first it was considered advisable to apply trial prices, which from time to time were adjusted until workmanship and speed could be accurately determined. As against the car shops of other companies where, in eight hours, their mechanics earn $5.18, our men are earning $7.66.

There are the further very gratifying results following the introduction in 1922 of what we have called the "elastic day." The shop forces were organized on the basis of the minimum work to be done in an 8-hour day. As business increased through seasonal demands or other causes, the workday was lengthened to 10 hours, at the normal rate per hour, time and a half being paid for work after the 10-hour period. This enabled, without penalty and without increase in force, an increase in labor time of 25 per cent, with corresponding increase in earnings, during periods of demand. With experience the working of the plan improved greatly and, so far during this depression there has been no man discharged for lack of work in the shop forces. It has now been necessary to reduce the labor time to four days per week of eight hours each. On the other hand, the men are relieved from anxiety in regard to employment, and under their piecework system the earnings in four days exceed the amount that would be earned in five days under the hourly price generally prevailing.

Work in maintenance of way does not lend itself so readily to a piecework basis, but we have been fortunate in stabilizing the force and none have been discharged.

We have worked out an arrangement with the four groups involved in the train service, which, while we believe fully protecting them, gives the management a free hand in the exercise of its functions. The experiment is definitely for a year, but the officers feel confident, with every disposition to treat the matter with uniform justice, that it will work out to the very definite advantage of both parties.

*Track structure.*—This corporation is among the leaders in developing a more permanent track structure. The important improvements under way are as follows:

Replacement of 90-pound open hearth with 130-pound manganese rail; light single-shoulder tie-plates with heavy double-shoulder tie-plates; cut spikes and rail anchors with spring steel clips and bolts; cinder ballast with stone ballast; untreated ties and bridge timber with prebored, preframed, treated ties and timber; wood ties in yards with steel ties; plain rigid frogs with manganese rail-bound frogs and self-guarded frogs (the latter eliminating guard rails and clamps); installation of lag screws attaching tie-plates to ties; curve oilers prolonging the life of rail; bituminous material replacing crossing plank, ballasted decks replacing open-deck bridges; improvements to roadbed facilitating drainage and snow removal; installation of culverts closing roadbed openings; the annual detection of defective rails by Sperry car inspections. All these are effective measures productive of economy in themselves as to materials and appliances and lending themselves to the improvement in the organization of our forces.

*Locomotives.*—The outstanding matters with which we have been experimenting and have brought to successful issue in the development of the locomotive are:

(1) High boiler pressure, 500 pounds indicated.
(2) Water tube fire box boiler construction.
(3) Exhaust steam feed-water heating and mechanical pumping.
(4) Poppet and Uniflow valves in combination with linear valve gear.
(5) Roller-bearing applications to main driving axles.

We have improved the springs somewhat and lubrication very much, and are now building a four outside cylinder, triple-expansion engine, which we hope will, besides effecting economy, improve the adhesion and hauling capacity.

This corporation was the first to experiment with powdered fuel for locomotive use. We hope to bring this to a successful conclusion, eliminating smoke and cinders, the arduous labor of hand firing, and the expensive substitute of mechanical stoking, at the same time having a fire box that will burn either lignite or powdered coal, or fuel oil, or a colloid of powdered coal and fuel oil.

There is a good deal of promise in the waste gas economizer to raise still further the temperature of the boiler-feed water. It is felt, also, that the combustion air may be preheated, further increasing the thermal efficiency, and that a mechanical draft can be used, reducing the cylinder back pressure, as well as increasing the hauling capacity. Much may also be hoped for from the use of an improved type of superheater, raising the present limitation on temperature and increasing the boiler capacity, as well as avoiding the now very undesirable condition of the final passing of the superheated steam through the coldest part of the boiler, which removes a substantial portion of the heat that has been so expensively supplied.

The locomotive consists of some 15,000 separate and distinct pieces. Much labor is involved in keeping these all in proper adjustment. When the Delaware & Hudson Corporation introduced the practice of casting the cylinders integral with the frame we substituted 1 piece for 834 pieces.

In substituting in the 1403 the 4 drawn seamless steel drums for the conventional fabricated drums, we reduced the dead weight 5,750 pounds and reduced the number of pieces by 660. A great opportunity still presents itself for eliminating seams, joints, and rivets.

It would seem possible to remove much dead weight that now performs no useful service in the process of combustion, the generating of the steam, or in its superheating. The static load and the dynamic augment are controlling factors and increases in sustained boiler horsepower capacity require an adequate and free steaming boiler. The limitation of space and weight have always greatly retarded the development of the locomotive. We ought not then on our road to lay new rail lighter than 130 pounds to the yard nor build new bridges of lighter capacity than the Cooper E–80 standard.

The old engines had a thermal efficiency of about 4 per cent, the locomotive 1402 has a thermal efficiency of 10½ per cent. It is believed that the 1403 will have a thermal efficiency of 14½. To this may, we believe, be added:

| | Per cent |
|---|---|
| Preheated air | 0.5 |
| Pulverized fuel | 1.0 |
| Waste gas economizer | .5 |
| Increased temperature in superheater | 1.0 |
| Mechanical draft | .5 |
| Adding the above to the anticipated performance of the 1403 | 14.5 |
| Completed locomotive program | 18.0 |

Even with the proposed locomotive program, as we now see it, of 18 per cent thermal efficiency in terms of the heat value of the fuel as fired, we will still be far behind modern central power stations which at the present time develop a thermal efficiency of 25 per cent.

It is interesting to contrast the effect of these improvements with earlier history. After the successful trial of the "Rocket" in 1829, many improvements were made in the years immediately following. The cylinders were placed horizontal; the fire box was built integral with the boiler; the tender was changed from a truck and barrel to the present type; the smoke box was added; but the outstanding improvement was the securing, in 1839, of an exhaust clearance by a lap in the valves, reducing the back cylinder pressure and increasing the use of the expansive properties of the steam. The improvement in the use of coke in gross tons (2.240 pounds) per train-mile was:

| | Pounds |
|---|---|
| The old valves, no lap | 49 |
| Improved service by encouraging competition among the crews | 40 |
| Valves with three-eighths inch lap | 36 |
| Valves with three-fourths inch lap | 32 |
| 1-inch lap, old passages | 28 |
| Same, with increased care in firing | 22 |
| New locomotive, 1-inch lap, enlarged passages, etc | 15 |

This reduction of about 70 per cent in the fuel consumed in the performance of the same work is one of the most remarkable incidents in locomotive history. Following this approximately 10-year period of rapid improvements, changes were introduced from time to time, with long intervening periods of quietude. The most significant were: Fire box baffle walls; the compound engine, at first impracticable with the saturated steam, but now again coming into use with the dry steam created by superheating; the articulated engine of Fairlie, further improved by Mallet, for narrow-gage practice, which I developed for standard-gage practice and introduced on the Baltimore & Ohio in 1904, and which is now in very general use; and the very notable addition of the superheater by Schmidt, since greatly improved, drying out the steam and raising its temperature; the introduction of the piston valves and of the automatic stoker. The results we have so far obtained in reducing fuel consumption in moving 1,000 tons (gross load) 1 mile on an 0.8 per cent grade are:

| | Pounds |
|---|---|
| Standard consolidation locomotive of 1916 | 84.5 |
| Boiler pressure raised to 275 pounds | 63.3 |
| Boiler pressure raised to 350 pounds with water tubes in fire box and compound cylinders | 48.8 |
| Similar locomotive steam pressure 400 pounds | 45.9 |
| Similar locomotive steam pressure 500 pounds, and heating feed water | 40.0 |

or a reduction of 53 per cent. With the further improvements now under way or in contemplation, we may hope to equal the achievements of the early years and reduce the fuel consumption by at least 70 per cent.

*Port of Albany.*—In the matter of commercial development of immediate interest to us, the most outstanding single item is the improvement of the port of Albany with the 27-foot channel to the ocean—a navigation that can without much difficulty be maintained throughout the entire year. For the first seven months of this year 50 ocean vessels have arrived at Albany compared with 11 last year. The shipping was from foreign countries as well as from Atlantic and Pacific coastal points. The grain elevator now approaching completion has a capacity of 10,500,000 bushels, quite the largest in the world, and the other facilities of the port are on a corresponding basis.

With this development now nearing completion, it seems incredible that anyone should think of promoting an enterprise to shift this advantage from the cities of New York and Albany to a city in a foreign country. To gild the idol with the golden promise of hydro-electric power is a daydream. One has only to consider the ghastly failure at Muscle Shoals.

*Taxes and wages.*—Our taxes have been sharply increased. The wage rate is high compared with that existing before the war; or with the pre-war rate adjusted upon the basis of the increase in the rates at which the service to the public is performed, or when compared with the cost of living as affected by the fall in prices. Last year the corporation earned its interest charges with the very small margin of $8,788.46. Had the taxes been assessed and the wages paid on the basis of 1913, instead of there being no return to the stockholder there would have been a surplus so large as to have made possible the declaration of a dividend of 22 per cent. This year we will not be able to earn all our interest. The extent to which we can limit the losses will depend upon the hearty cooperation of everyone on the pay roll to bring about that very necessary and desirable result.

## Conditions of Railroads of the United States

I have spoken to you of conditions on our own property. Let us to-day consider conditions upon the railroads of the United States with which we are enmeshed.

The gross earnings of the Class I roads with a total operated mileage in 1931 of 242,175 miles have been during the past seven years:

| | |
|---|---|
| 1925 | $6,122,509,856 |
| 1926 | 6,382,939,546 |
| 1927 | 6,136,300,270 |
| 1928 | 6,111,735,511 |
| 1929 | 6,279,520,544 |
| 1930 | 5,281,196,870 |
| 1931 | 4,188,343,237 |

Making the comparison for the first six months only of the last four years, the gross earnings have been for:

| | |
|---|---|
| 1929 | $3,030,214,660 |
| 1930 | 2,660,113,196 |
| 1931 | 2,162,485,014 |
| 1932 | 1,582,771,591 |

The contrast between years of prosperity and poverty is startling. The falling off from 1929 to 1932 of 48 per cent is quite unparalleled in railroad experience.

The panic of 1893 began in June. Its effect did not appear in the traffic after the following year. Taking 1894 as a base at 100 per cent, the ton-mileage in 1895 was 107 per cent; for 1896, 119 per cent; and with the defeat of the effort to secure the free coinage of silver at the ratio of 16 to 1, the effect of which would have been to debase the currency, and with the activities growing out of the Spanish War in 1898, business resumed its normal stride.

The panic of 1907 began in March. Its effect did not appear in the traffic after the following year. Taking 1908 as a base at 100 per cent, the ton-mileage in 1909 was 100 per cent; in 1910, 117 per cent; and thereafter business resumed its normal stride.

The experience we are now having does not parallel these. The panic began in October, 1929. Taking 1930 as a base at 100 per cent, the ton-mileage in 1931 was 81 per cent and in 1932, using the first five months of each year for comparison, it has been 61 per cent. The fall in traffic has been much greater and the period of depression much longer than in the two preceding panics.

If experience of the past can still be taken as a guide, the movement in 1933 may show to much greater advantage.

John Stuart Mill pointed out that all we have in the way of wealth is maintained solely by perpetual reproduction and that except for a few monumental structures it had a life of no more than 20 years.

On our railroads we spend in reproduction in the two maintenance departments in 28 years the entire capital cost of their construction.

Many things such as shoes and textiles have relatively a very short life and here we may watch for the first signs of improvement.

*Passenger Business.*—For the year 1931 the results were as follows:

| | |
|---|---|
| Operating revenue: | |
| Passenger | $551,047,482 |
| Mail | 105,423,203 |
| Express | 82,774,883 |
| Milk, excess baggage, sleeping, parlor and chair cars, and other miscellaneous passenger train revenue | 85,713,000 |
| Total | 824,958,568 |
| Operating expenses relating solely to passenger and allied service | 917,091,825 |
| Indicated loss from passenger train operation | 92,133,257 |

From 1890 to 1900 the passenger traffic increased at the rate of 3.5 per cent annually; from 1900 to 1910 the rate of increase was 10.2 per cent annually; from 1910 to 1920 the rate of increase was 4.6 per cent annually. The traffic of 1920 had in 1931 declined at the average rate of 4.9 per cent annually.

The passengers carried 1 mile by the several transportation agencies in the United States are about as follows:

| | Number of passengers | Number of passengers for year 1931 |
|---|---|---|
| Steam railroads, 1920 | 47,369,906,000 | 21,948,988,000 |
| Common carrier busses, 1926 | 7,825,000,000 | 10,880,000,000 |
| Private autos, 1918 | 38,000,000,000 | 397,312,000,000 |
| Electric railways, 1925 | 48,000,000,000 | 35,500,000,000 |
| Airplanes, 1926 | 1,445,500 | 116,232,150 |
| Total | 141,106,351,500 | 465,757,220,150 |

There are 95,000 automobile busses, of which about 50 per cent are common carriers, the balance, for the most part, utilized in transporting children to and from consolidated schools.

I do not know of a common carrier bus line in the United States or Canada that is declaring a dividend. It is probable that the business will, as time goes on, tend to be confined to the short hauls to the suburbs of the large cities. The automobile bus does not appear to be a competitor to which serious consideration must be given.

I think the travel by the privately owned automobile has come to stay. It will be a lasting substitute for the railroads and for the horse-drawn vehicles.

The interurban electric railways have largely been driven out of business. The urban properties now struggle for existence with the automobile busses.

The airplane is an expensive luxury and can apparently only be kept in service by subsidies from the Government.

The total increase in travel has reached unlooked-for proportions. Where the mileage made by these agencies in 1918 (horse-drawn vehicles not estimated) was perhaps 135,000,000,000 miles, it had in 1930 been up to 489,000,000,000 miles.

Certainly no people has ever before been so much given to going about.

*Freight business.*—For the year 1931 the results were as follows:

| | |
|---|---|
| Gross revenue | $3,345,898,214 |
| Expenses | 2,302,768,313 |
| Profit | 1,043,129,901 |

The freight traffic from 1890 to 1900 increased 8.6 per cent annually; from 1900 to 1910 it increased 8 per cent annually; from 1910 to 1920, with the disturbance of the Great War, the rate of annual increase fell to 6.2 per cent. The traffic of 1920 had in 1931 declined at the rate of 2.3 per cent annually, the change being substantially affected by the panic of 1929.

Out of this profit of about a billion dollars must be met the taxes and hire of equipment, the losses sustained in the conducting of the passenger traffic, the interest on the moneys borrowed and invested in the plant, and interest and sinking fund payments on equipment bought through the issue of car trusts, other liquidating debts, and such returns as may be made, if any, to the equity (stock) interests.

The growth in the number of motor trucks has been:

| | |
|---|---|
| 1925 | 2,440,854 |
| 1926 | 2,764,222 |
| 1927 | 2,914,019 |
| 1928 | 3,113,999 |
| 1929 | 3,379,854 |
| 1930 | 3,486,019 |
| 1931 | 3,466,303 |

Along with the increase in numbers has grown an increase in carrying capacity. About 85 per cent of all these motor trucks are used by the owner only; about 9 per cent are used by the owner solely in handling the business of those with whom he has contractual relations. Somewhat less than 6 per cent are common carriers and this number is so insignificant as to make any effort toward their control by rate legislation scarcely worth while.

Another way of looking at the importance of this matter is in the mileage of surfaced highways in the United States. These State, county, and local systems in 1921 aggregated 387,760 miles. In 1931 they aggregated 730,000 miles, an increase of over 88 per cent.

Relief must be looked for through the police power of the State to insure safety upon the highways. The blood-letting in the business as now conducted is appalling. In 1931 there were brought to their death by automotive vehicles 34,400 persons and nearly a million received injuries ranging from slight contusions to maiming and crippling for life. Forty-one per cent of these injuries were classed as serious. It is an instrument more dangerous than was the Great War. During the 18 months of the Great War 50,510 members of the American Expeditionery Forces were killed in action or died of wounds. During the 18 months ended December 31, 1931, 53,630 were killed in automobile accidents in the United States or died of wounds. During the 18 months of the Great War 182,674 members of the American Expeditionery Forces were wounded, not mortally. During the 18 months ended December 31, 1931, 1,576,840 were wounded, not fatally, in automobile accidents in the United States.

It is said that during the months of mild weather each year in excess of 100,000,000 birds are killed by motor vehicles. Nature maintains a rather delicate balance. What we may suffer from this upsetting experience is yet to be determined.

We must then expect restriction of length, height, and width, combination of truck and trailer, limitation of load, mechanical limitation of speed, a higher standard in the character and skill of chauffeurs and other controls to markedly lessen the appalling danger now attending this traffic.

*Capital investments.*—The annual capital expenditures by Class I railways in recent years have been:

| | Amount |
|---|---|
| 1921 | $557,035,000 |
| 1922 | 429,273,000 |
| 1923 | 1,059,149,000 |
| 1924 | 874,744,000 |
| 1925 | 748,191,000 |
| 1926 | 855,086,000 |
| 1927 | 771,552,000 |
| 1928 | 676,665,000 |
| 1929 | 853,721,000 |
| 1930 | 872,608,000 |
| 1931 | 361,912,000 |
| Total | 8,089,936,000 |

*Operating results.*—Of the Class I railroads, 82 failed in 1931 to earn their fixed charges and this year it has been much worse. For the first six months of 1932, 114 (out of 145) have been in that class. For this 6-month period 31 roads operated with net income of $38,753,159 and 114 roads operated with net deficits of $165,515,434, so that there was for all these properties a failure by $126,762,275 to earn their interest charges and keep from the threat of receivership. Of the 145 Class I railroads in 1932, no more than three had from the operation of their properties after interest charges a net sufficient to pay their dividends at the present rate of declaration. The net income for the first six months of 1932 has declined $158,619,457, as compared with the same period of 1931, and $484,424,809, as compared with first six months of 1929.

In such circumstances our first resource is the reduction of expenses. Upon a much larger scale, with greater variety and with some added features the railroads of the country must proceed along the general lines which I have outlined to you as the activities of our own road. They must search out and eliminate every wasteful practice, tear down obsolete buildings, close nonpaying stations, and abandon useless mileage. They must seek to reduce where possible the expense involved in the elimination of grade crossings, especially by securing the closing of many and by avoiding others through relocation of the highway. For example, one of the southern railroads in 1930 relocated 660 grade crossings, 149 of which were entirely eliminated and 511 were relieved of through traffic.

Notwithstanding the tremendous amount of expense to which the railroads have been placed in the elimination of grade crossings, the report of the National Association of Railroads and Utilities Commissioners, issue of 1930, indicates a steady net increase in the number of grade crossings of highways with railways, the net increase being for—

| | |
|---|---|
| 1926 | 195 |
| 1927 | 245 |
| 1928 | 270 |
| 1929 | 321 |

Probably the most favorable opportunity for the elimination of waste is the elimination of the mileage operated normally at a loss. There are in the three classes in which the Interstate Commerce Commission divides the railroads some 260,000 miles of first main tracks. This, having reference to the traffic handled, divides into three significant groups.

About one-half the total ton-mileage moved is carried on 26,000 miles of line, or on about 10 per cent of the total mileage, and these roads are of prime significance. Here in many cases the grades can be improved, the curves reduced, and the lines shortened; the drainage perfected; ample ballast applied; the rail made heavier, at least to 130 pounds to the yard; the bridges brought up to an increased loading, at least to the standard of Cooper E-80; and the equipment modernized.

From such incomplete study as I have been able to make, we might increase the investment in these lines of heavy traffic by several billion dollars, bringing them up-to-date and through economies offsetting the increased cost of the investment, while insuring their commanding position as the chief transportation reliance of the country with a valid claim for participation in the fruits of its growth.

Less than 2 per cent of the ton-mileage moved is carried on 73,311 miles of line, being about 30 per cent of the total mileage. Not only is this movement insignificant but it is made at an out-of-pocket loss and keeps in service as an economic waste a large amount of line. Of this mileage, 57742 miles are distributed upon 2,094 branch lines and parts of lines of Class I railroads. Fifteen thousand five hundred and sixty-nine miles are distributed upon 483 Class II and Class III railroads. For the year ended December 31, 1928, 459 of these latter lines reported a corporate deficit of $63,282,963. Each separate element in this group should be carefully examined and as rapidly as possible these portions that can not be justified should be abandoned and their salvage value recovered.

The lines in the intermediate group, 161,000 miles, should be carefully gone over, everything promoting waste removed, and all possibilities looking to expansion of traffic or reduced cost of operation thoroughly worked out.

*Abandonments.*—The abandonment of railroad lines, with applications filed with and authorizations by the Interstate Commerce Commission from 1920 to 1931, inclusive, were:

| Year | Applications | | | |
|---|---|---|---|---|
| | Filed | | Authorized | |
| | Number | Miles | Number | Miles |
| 1920 | 9 | [1] 125.00 | | |
| 1921 | 40 | [1] 824.00 | 31 | 701.94 |
| 1922 | 47 | 808.46 | 30 | 526.53 |
| 1923 | 36 | 964.94 | 19 | 523.41 |
| 1924 | 52 | 949.82 | 30 | 453.84 |
| 1925 | 57 | 883.21 | 46 | 651.98 |
| 1926 | 46 | 937.19 | 49 | 592.56 |
| 1927 | 56 | 792.26 | 52 | 830.61 |
| 1928 | 53 | 752.21 | 61 | 587.05 |
| 1929 | 69 | 834.92 | 48 | 539.54 |
| 1930 | 75 | 980.83 | 71 | 925.81 |
| 1931 | 88 | 1,075.53 | 89 | 1,019.31 |
| Total | 628 | 9,928.37 | 526 | 7,352.58 |

[1] Estimated.

At this rate it will take a hundred years to complete the job.

*Plant facilities and privately owned freight cars.*—Some of the Class II and III roads are characterized as "plant facilities" and perform a dual service, most of the work done being of a private character in the service of the plant of which they are a part and some of the services being classified as those of a common carrier upon which a division of the rate is demanded. It would seem that they should be defined definitely as a plant facility and stripped of all common carrier services or rewards. A further anomaly is the "privately owned freight car." Their numbers have grown from 183,474 in 1921 to 282,522 in 1932. The reasoning that led to the forbidding of the issue of private passes to individuals by the railroads would seem to apply to the use of the "privately owned freight car." If we are to have a uniform treatment of the shippers then the services of the railroads now held to be "affected with a public use" should be solely in their control and should not be participated in by private persons or corporations.

*Empty freight car mileage.*—During the last 10 years there has been the substantial increase of 20 per cent in empty car miles. This is the accumulative result of many factors. There seems to be two main causes: (1) A disproportionate increase of one-way traffic moving in specialized equipment; (2) with an improvement in operating efficiency a surplus of equipment is created, accompanied by an increase of empty cars moving to their home roads. The supply of home line cars being ample at all important points, foreign cars are moved promptly off the property to avoid per diem charges.

*Improved equipment, machinery and tools.*—The freight equipment with 2,200,000 cars, of which number 763,560 were reported idle as of July 31, 1932, could be overhauled to advantage, the lighter cars and those of inferior construction torn down and some new cars secured more definitely adapted to varieties of use to be served.

The changes in the freight car equipment, with its concentrated load, has made possible the development of the modern blast furnaces and manufacturing plants and forms the base upon which rests the modern practice of mass production. The freight car bears the same significance to mass production that the elevator does to the modern office building.

The passenger-train equipment should be sharply reduced and air-conditioned cars used on all through runs.

The locomotives should have very concentrated and sustained attention. If a tithe of the effort that in the past 10 years has been expended in developing the automobile had been expended in the development of the locomotive we should now have a machine that would discredit and make obsolete the larger number of our present stock of 55,400 engines.

The machinery and tools in the back shops and engine houses, in the car shops and maintenance of way shops, should be brought up-to-date and in many cases the buildings remodeled or replaced.

The profit and loss credit balance of the class I roads was, at the close of 1931, $3,273,304,596. It is to-day the greatest frozen asset in the business of the United States. Intelligently and courageously used under an accounting system reflecting modern business practice, it would go far in making possible abandonments, replacements, and improvements in these properties.

*Accounting methods.*—With a thorough overhauling of the antiquated and in many respects restrictive accounting practices prescribed by the Interstate Commerce Commission, much could be done to improve the railroads that is now financially impossible. It is not to an occasional favor doled out to some applicant appealing on bended knee but to a modernized readaptation that we must look for aid.

*Traffic adjustments by the railroads.*—It has been suggested that the railways may reform terminal operations and reduce terminal costs; enter into arrangements which will give to all carriers and shippers the use of facilities which will best serve the shippers and carriers; handle traffic between remote important points by the lines of greatest efficiency and economy with a saving in transportation costs; pool or divide the traffic and eliminate waste of competitive solicitation; reduce train-miles and increase tonnage per train-mile and per train-hour. These changes contemplate the submersion of much of private ownership and are expected to be accomplished by a high-class man as representative and adviser of all to consider plans from the standpoint of the common good. The right to do these things is held to be embodied in the transportation act; the failure to do them is held to invite charges of inefficiency, lack of economy, and disregard of the interests of the public and of the security holder.

It must always be kept in mind that in the steam transportation field real economies can only result from a policy of reconstruction, carefully planned and relentlessly carried out; first, prune; second, improve the old; third, bring in things that are new.

*Taxes and wages.*—Taxes, which absorbed in 1920 4.4 per cent of the gross earnings, had in 1931 so increased as to absorb 7.25 per cent. These are allocated between the Federal, State, and local governments.

Wages, which absorbed in 1920 55.42 per cent of the gross earnings, reflecting the control of the railroads by the Government from January 1, 1918, to March 1, 1920, in 1931 absorbed 46.42 per cent, reflecting the attention of private management.

The embarrassment of the railroads would seem to be fully explained in these two items.

*The rate situation.*—On December 1, 1916, the Interstate Commerce Commission, in its thirtieth annual report to Congress, said:

"All rates, fares, and charges have been open to complaint for a period of more than 10 years, within which the commission had power to fix the future maximum rates. For a period of more than six years all proposed increased rates have been subject to protest and suspension before becoming effective. Obviously there should come a time when as to the past the general level of the rates and the relationship of rates should be fixed as reasonable. We are convinced that the best interests of the entire public, of the system of governmental regulations of rates, and of the railroads will be served by the enactment of a statute which as of a specified date fixes the existing interstate rates, fares, classifications, rules, regulations, and charges as just and reasonable for the past, and which provides that after that date no change therein may be made except upon order of the commission."

On December 1, 1920, the Interstate Commerce Commission, in its thirty-fourth annual report to Congress, said:

"For the reasons stated in previous annual reports, we renew our recommendations to the effect:

"That the power to award reparation be placed wholly in the courts; that a condition precedent to an award of reparation by a court for unreasonable rates or charges be that we have found such rates or charges unreasonable as of a particular time; that the law affirmatively recognize that private damages do not necessarily follow a violation of the act; that provision be made that sections 8, 9, and 16 of the interstate commerce act shall be construed to mean that no person is entitled to reparation except to the extent that he shows he has suffered damage; and that the law should provide that if a rate is found to be unreasonable the rule of damages laid down in the International Coal Case, 230 U. S. 184, should control."

Because Congress took no action upon the commission's recommendation there has grown up a body of practitioners who work on contingent fees—not only are they parasitic, and add much to the expense of the railroads, but they keep the entire rate structure in a state of turmoil and consume nearly half the time of the commission.

Notwithstanding its report to Congress in 1916, the Interstate Commerce Commission has, in the past 10 years, made many changes in the freight rates which have seriously affected the revenues of the carriers. Of major importance were their dockets, Nos. 13494, 13535, 15879, 16746, 17000 (pts. 2, 4, 5, 6, and 7), and 18744.

In the Grain Rate case the United States Supreme Court set aside the commission's order on the ground that the case was decided on a record 2 years old, and has refused the carriers further hearings to show changes in the financial situation.

There are two methods of looking at the freight rate structures, both fully set out in the well known case of Smythe *v.* Ames. Under these the politicians search for a "cost of service" at the level of confiscation; the railroads seek for a "value of service" out of which they hope to reap a profit. Over this narrow field, delimited on the one hand by bankruptcy, on the other by prosperity; exciting jealousy, arousing rivalry, inviting attack, the battle rages fiercely. A third method is sometimes used to take from road A and give to road B for no other reason than that road B needs it.

If governments are to continue in direct control of such matters of management as I have discussed, you and I, all who are engaged in this great industry, are entitled to receive and should insist upon obtaining the cordial cooperation and support of all public authorities in working out the necessary adaptations to vitally changed and changing conditions.

*Employment.*—One of the greatest fields for improvement is in the stabilization of employment. When the panic broke the railroads were employing 1,660,920 individuals; in May, 1932, this had been reduced to 1,065,159, or by 35.8 per cent. approximating but not fully commensurate with the decline in traffic. If we assume that full advantage had been taken of the natural wastage of the force, 12.5 per cent, during this period, the number thrown out of employment would be 23.3 per cent, a matter of the most serious character. Nor does this tell the whole story. In addition to those employed directly by the railroads, it has been estimated that at least as many, and probably more, are indirectly dependent upon the railroads through employment in those industries dependent to a greater or less extent upon the railroads for their business, so that more than 3,000,000 men and women with their families—approximately 13,500,000 people, the United States Labor Bureau estimating four and one-half persons per family—may be regarded as dependent on the economic welfare of the railroads.

I think we must all rejoice in the measure of success that has attended our common effort on the Delaware & Hudson Railroad to deal with this vital problem.

*The indispensable service of the railroads.*—If we disregard the water-borne business moving through the Great Lakes and the Panama Canal, then we find the commercial freight traffic wholly within the United States in 1930 moved as follows:

| | Ton miles | Per cent |
|---|---|---|
| Steam railroads | 385,815,000,000 | 84.1 |
| Pipe lines | 31,729,000,000 | 6.9 |
| Inland waterways (canals and rivers) | 9,088,000,000 | 2.0 |
| Motor trucks (interurban movements) | 31,352,000,000 | 6.8 |
| Electric railways and airplanes | 1,039,000,000 | 0.2 |
| Total | 459,023,000,000 | 100.0 |

Our steam railroads are the private property of approximately 852,318 stockholders, who have borrowed money from more than 1,000,000 individuals to whom they have issued bonds as security.

They furnish the best and cheapest land transportation service available anywhere in the world. They were the means with which we opened up and developed this country. They remain the means upon which we must depend not alone for the future success or failure of this country as an economic entity, but for our very existence in the long future. We can not contemplate their destruction without anticipating ruin to ourselves; nor can we promote our own interests more directly than by assuring their prosperity.

### The Point of View

I venture to suggest that one of the things that makes it so difficult to deal with the problems involved in a major depression such as we are now undergoing is that in the main we lack "a point of view." George Moore has said: "You may do a lot with your talent and your life but not until you have developed a point of view." Let us try what we can do in securing that necessary steering apparatus.

Oswald Spengler has written a book from which I made the following extracts:

"In the eighteenth century men affected to scarcely believe in war and held it to be but a relic of bygone barbarism."

"The sentimentalist pictured no more war; no more destructions of law, peoples, states or religions; no criminals or adventurers; no conflicts arising out of superiorities and unlikenesses; no more hate or vengeance, but just unending comfort through all time."

"The trivial optimism of these imbecilities makes one shudder."

"The free-moving life of the animal is struggle, and nothing but struggle; always it is a matter of purposive activity, never of things. They are all just sides of an active, fighting, and changed life. This battle is life, a grim, pitiless, no-quarter battle of the will to power."

"A plant lives, it breathes, it feeds, it multiplies, but it does not move itself, it is moved by wind and warmth and light."

"Above this grade of life there is the freely mobile life of the animals."

"Those animals that live upon vegetation seek safety in running away from danger, their life is a defensive life, one of flight, cutting of corners, evasion. But the carnivore which live on other animals get their living by killing. They rule with the eye. With it they apprehend the horizon, they determine position and distance, they measure up the objects and conditions of attack. And it is to this kind and not the other than man belongs. He lives by attacking, and killing and destroying. He may be brave, crafty, cruel, but he has a brain and a hand and with these he dominates the world of life. With his hand, his weapon, and with his personal thinking man became creative."

"And through the long process of time man developed speech and enterprise."

"So," at last Spengler reasons out that—

"two kinds of men were developed; men whose nature is to command and men whose nature is to obey, subjects and objects of the political or economic process in question. These are the leaders and the led."

"The northern countryside, northwestern Europe and North America, by the severity of the conditions of life in it—the cold, the continuous privation—has forged hard races, with intellects sharpened to the keenest, and the cold fires of an unrestrained passion for fighting, risking, thrusting forward."

"From Copernicus and from Galileo our technical processes followed one another thick and fast, all with the same object of extracting the inorganic forces from the world around and making them, instead of men and animals, do the work."

"All great discoveries spring from the delight of strong men in victory. They are the expressions of personality and the consequences are immense."

"It is common knowledge that the number of necessary hands grows with the number of machines, and the condition of living also improves as we should see were we to compare 1700 with 1900."

And then comes his note of despair. He sees "our railways and steamships as dead as the Roman roads and the Chinese Wall, our giant cities and sky-scrapers in ruins like old Memphis and Babylon. And in the end he advises a short life, full of deeds and glory rather than a long life without content. That he believes is greatness. That is what it means to be a thoroughbred. The honorable end is the one thing that can not be taken from a man."

There is much in this in which I think we may agree, but not at all with the conclusion he reaches. I see no application for his note of despair. We have worked out a solution.

The social will is expressed in the law, which is regularly upheld by the organized physical force of the group. The goal of the law is peace, and the means to achieve it is struggle.

James A. Lawrence has written a book from which I have made the following extracts:

"It was in a way accidental that steam power and machines sprang out of the minds of men first in England and that the British nation, therefore, had temporarily a monopoly."

"They sent out to bring in the essential raw materials from the ends of the earth to England in order to fabricate them there, and then after fabrication, shipped them out again to other ends of the earth."

"Eventually four nations became so engaged, Great Britain and Germany, the United States and Japan. In the development of this progress of mutual interdependence, involving world-wide trade in the simple necessities of life, the four have marched but they have marched alone. The whole world is now in on the secret of machine production, and the secret no longer exists. The British Empire, built up on the idea that a temporary monopoly could be made permanent, is in a serious condition, perhaps crumbling. The German nation is a disturbed and troubled entity. The Japanese nation is trying the world-old cure for economic disaster, that of looting the area belonging to someone else—and we are not doing so well ourselves."

"What had upset the world is the emergency in our lives of new and puzzling environmental factors, power, machines, new basic raw materials, Bessemer steel, oil and rubber and still later cellulose, coal tar products, and aluminum."

"We must maintain our confidence in the flowering of the human mind; the immediate challenge before us is a heartening and stimulating call to understand our own recent past and to give ourselves vigorously and imaginatively to hastening the transition away from mutual interdependence toward the largest amount of self-sufficiency. Individual functioning must be developed. We have just bet our first white chip, and it is going to be a blue-chip game."

"In the midst of to-day's confusion we can, I believe, at least hope for a better understanding of what is going on if we see the necessity for going forward to simplification where technical progress shall be the handmaiden of happiness, and mechanism shall be the servant of increasing usefulness to men who are again beginning to find the fruits of increasing self-sufficiency."

"The objective for all of us is not fewer satisfactions, but more—a higher standard of living than any yet known, with prices paid by ultimate consumers working to steadily lowering levels."

There is much in this analysis and this concluding optimistic note that appeals to me strongly. All men love security, most of all those that are led; some love liberty and will endure much to secure it; some love power and will take great risks to make it their own. These last two are the leaders. The first and much the largest group is the led.

What, then, is "the point of view" that we may follow? That we are killers; yes. That we must fight for what we want and fight to keep what we get; yes.

But that we are finishing the race in the course that is set before us; no. Rather that we shall go on discovering new resources, simplifying our mechanical processes, increasing the number, variety, and potency of our mechanical servants, and growing into a standard of living better than any we have ever dreamed of. Not a decline of the west, as Spengler pictures, but an expanding self-sufficiency such as Lawrence suggests. This is the "point of view" we can feel safe to follow.

*Our unexampled progress.*—As an illustration of what has happened and the distance we have come along the route we are traveling, let us take an example from our own business, that of steam transportation:

Even as late as 1750 almost the whole land-carriage was conveyed on the backs of pack horses. A moderate sized horse would weigh about 1,120 pounds. Working for 8 hours or 10 hours per day he might transport on his back 224 pounds at the rate of 25 miles a day over an average level country.

When carting began, in the coal districts 1,904 pounds was the regular load for a horse with a cart upon the common roads.

When the railed roads first came into use the rails were of wood and on a well-leveled road 4,704 pounds were assigned as the ordinary weight to be pulled by one horse. With the metaling of the wooden rails with iron plates the load was increased to 5,936 pounds, and when iron rails and wheels of iron came (about 1767) this weight was increased to double the quantity therefore taken upon the wooden rail, or, say, 9,400 pounds.

Trevthick constructed a steam carriage engine acting only by the expansive force of steam which made its first successful run Christmas Eve, 1801. It was supposed that the adhesion of the wheels to the rail would be insufficient to enable the engine to be moved by its own power. Trevithick advised that the wheels should be roughened by headed nails. Blenkinsop in 1811 applied an additional rail with cogs. But Hedley in 1813 first proved by his experiments that the adhesion of the wheels upon the flat rails was sufficient to give motion on a level or slightly ascending track.

In 1829 the steam railroad had definitely established itself.

The power of a horse was taken as 33,000 pounds raised 1 foot in one minute and the power of the 6-ton engine then put in service was figured as equal to 41½ horses.

The horsepower is a purely arbitrary unit, but was supposed to represent the animal's average power, working over a considerable period. The real power of a horse is about three-quarters of the horsepower used as the measurement of the working rate.

Contrasting the Stourbridge Lion with 6.5 indicated horsepower at 3 miles per hour with the James Archbald developing 572 indicated horsepower at the same speed the modern engine has a capacity eighty-eight times that of the early engine. The maximum horsepower performance of the Stourbridge Lion has been calculated at 11 horsepower at a speed of 5 miles an hour; the maximum horsepower performance of the James Archbald is 3,207 horsepower at a speed of 35 miles an hour, the capacity of the latter over the former representing an increase of two hundred ninety-one times.

The James Archbald, our consolidation type engine carrying 500 pounds steam pressure and weighing 300,000 pounds upon its four pairs of coupled driving wheels, exerts a tractive effort upon a level road of 75,000 pounds, or the equal (assuming a revenue tonnage of 10,920 is carried in 156 fully loaded 70-ton capacity cars weighing 4,080 tons on a straight level track at a speed of 15.6 miles per hour) of 97,500 pack horses.

The gross weight of the engine, tender, cars, and lading gives a ratio of pay load to dead weight of 250 to 100, while in the case of the pack horse the ratio was 20 to 100, an advantage of 12.5 times.

There is further the great advantage of a speed of 15.6 miles per hour upon the class I roads of the country for the first six months of this year as against 3 miles per hour for the pack horse, or 5.2 times as fast.

To summarize, our speed has increased by 5.2 times. Our ratio of pay load to dead weight has improved 12.5 times, while we have one instrument of transportation, the locomotive, doing the work of 97,500 instruments of transportation, the pack horses.

*The depression.*—If you should be on the parade ground at West Point and see the cadet battalion march from one end to the other, you would find the troops when halted in almost perfect alignment. But should that battalion be marched across a plowed field its alignment would be sadly disarranged.

So it is with business. Over a period of a score of years, with the immense changes brought about by new inventions and industries, and the development of new leadership, the mass involved is thrown into great disorder, progress is arrested, nor can it be resumed until order is restored.

In considering these matters the "point of view" is of vital importance. We must govern ourselves by observed facts and not allow ourselves to be diverted by fancies as to the matters with which we are concerned.

The Duke of Wellington, writing in 1820, expressed the belief that the then deprivation of employment was produced by a long course of prosperity and the flattery of self-esteem by the politicians. It is hard at the best to keep things in order and for many years now the politicians have been doing everything in their power, by speeches, by writings, and by law to relax the discipline by which alone men can be kept in order.

In our present troubles the two outstanding dislocations are taxes and wages. Since 1913, which is generally considered a normal year preceding the Great War, the taxable property of the railroads of the United States has been increased by 56.4 per cent, while the taxes have been increased by the abnormal amount of 156.4 per cent. At once a reduction of at least one-fourth of the present tax burden should be secured when we can again look about to see what further must be done. This can only be done in the Government service by decreasing wages, elimination of unnecessary employees, discontinuance of Government competition with business, and the bringing of order and simplicity in the conduct of its affairs.

While in many callings the fall in wages has been marked, in others little has as yet taken place. Railroad wages, where a dollar sufficed in 1913, had been increased by 118 per cent in 1931. To state it in another way, the average payment to the individual railroad employee was in 1913 $760.94 and in 1931 it was $1,661.70, an increase of 118.37 per cent, or for each dollar paid to the individual before the Great War there is now paid $2.18. Further, the work day has been shortened from 10 hours to 8 hours, or by 20 per cent. This change may well be compared with that in the cost of living, which is now computed to be in excess of 1913 by no more than 32 per cent. Credit was sharply affected. Deposits expanded by $13,500,000,000, loans and discounts by $14,500,000,000, of which last $1,000,000,000 went into increased bank capital. There was an unsurpassed use of credit which obscured the abnormalities, trade restrictions, steadily rising terms, choking exchange (these covered by foreign loans), real-estate booms, installment selling, spending in the purchase of normal goods of speculative profits. One caustic wit has expressed it, "The Federal reserve bank was issuing credit, the American Bank Note Co. was printing securities. When the American Bank Note Co. won out, the crash came."

There remain two other items significant but not so influential:

Germany undertook certain payments to the Allies—in which we did not participate—spoken of as reperations, and the allied powers reached an agreement with the United States as to the amount of money they had borrowed from us which, when liberally scaled down, was spoken of as war debts, the time for the payment of which was extended over a period of 60 years at a very low rate of interest. These two terms, "reparations" and "war debts" are often carelessly used as though they described the same thing. In fact, each stands for a thing by itself, each has its own localized meaning. In addition to the reparation payments the Allies took from Germany, and now holds title to, much territory widely scattered. The administration of these lands is committed to so-called mandatory powers under the oversight of the League of Nations. The allied powers are now willing to largely forego further reparation payments made to them by Germany and will ask us to forgive them the debts they owe us. It seems possible that we may in large measure do so. But it is of the first importance that we receive from them in partial settlement some of the territories formerly German to which they now hold title. Among these are the islands in the Pacific. Some intervene between us and our Philippine possessions, and one is 500 miles nearer Hawaii than is San Francisco.

"The problems of empire," Lord Curzon tells us, "are the problems of a defensible frontier." Our Pacific frontier can be made defensible beyond hazard by our taking over and developing these Pacific islands. We forewent that opportunity at the close of the Spanish War; it would be an act of childish imbecility to overlook it now.

The other matter is the one of tariffs. During the period 1890 to 1925 the foreign trade of the United States has varied from 10 to 23 per cent in its ratio to its domestic trade. The sale of goods abroad is very considerable, and the exchange does much to sweeten the whole, and acts as a balancing factor, as in the movement of cotton.

There is a wide difference between the vital significance of the first two items and the relatively minor significance of the two latter, but none the less to fail to correct all four is to delay recovery and to promote and continue the disorder.

*Political experiments.*—As an example of the colossal effect of the mistakes of the politician let us consider his handling of the problem of immigration.

Up to the time of the Civil War, say from 1790 to 1860, the total population increased at a practically constant geometric rate of growth, doubling approximately every 25 years. Had we never opened the doors and never encouraged immigration we should now, in all probability, have a homogeneous Nordic population of at least 225,000,000 as against present heterogeneous population of 122,775,046. So greatly may the blunders of the politician move to modify or destroy a condition of great promise.

*Advance and related confusion.*—The two matters that perhaps most sharply fix our attention are, first, the great improvement in our condition as compared with earlier periods, and, second, the confusion into which our affairs have been thrown. As to the first, I have tried to give you one picture on the change in the land transport. Let me give you another in the volume of business moved. It is estimated that two modern freight cars would hold the entire flow of traffic for any year prior to 1500 through the St. Gothard Pass in both directions between Italy and the north countries. The advertisements of the Red Star Lines say that their steamship, the *Belgenland*, docking at Antwerp to-day, brings more merchandise into that city in a single voyage than the highest estimated tonnage ever reported to have been brought into that port in any whole year of its greatest medieval trading activity. There has been in the last 100 years more and wider progress in every respect than has ever before been witnessed in a thousand years.

The benefit to the workman has been enormous. The early conditions have been grossly misrepresented. He did not go from his work to his bed exhausted but rather to do chores about his home and especially to cultivate his kitchen garden. Nor has the farmer participated to any considerable extent. The advantages have all gone to the workmen in industry. His working time has been reduced from a normal of 84 hours per week in 1825 to 44 hours per week in 1930. His wages have been multiplied several times, he lives in a much more comfortable house, sets a better table, and wears better clothing. Possibly the modern provision of recreation is an even more marked improvement in his life. Meanwhile he participates in the enjoyment of a multitude of facilities, wholly or largely provided at the communities' expense, to which his contributions are very small—municipal gas, street lighting, electricity, water, sewers, paved, lighted, and cleaned streets, fire stations, markets, public halls, parks, libraries, museums, and schools. The publicly owned wealth enjoyed by all the citizens in common is nearly 20 per cent of all the wealth of the country.

*The politician.*—The position of the politician is most unhappy. The competition for his place is severe; his term of office is far too short; his numbers far too many; his preparation for his job too inadequate; his pay, were his numbers greatly reduced, too small. He must make a frequent appeal to his public, and this is most effective if expressed in catch words. Many of these potent in dealing with the railroads are now no longer useful; but he is still able to confuse thought by declaiming upon eminent domain bases of the freight rate, the long and short haul, and affected with a public use. For years the railroad has been the sport of politicians; upon its shoulders they have climbed into office; for its torture they have continuously invented new instruments. The railroads may well complain that the Government has treated them no better than it formerly treated the Indian tribes.

*The outlook.*—What we must always keep prominently as a point of view is that the wheels of industry are turned by management (that is, by those like the group here to-day) and by management alone. In our own interest we should give management every freedom possible, encourage and sustain it, liberally reward it, render it support and respect.

Character is formed upon ethical discrimination, a sense of obligation, and a disciplined will power. Railroad legislation whether National or State may be searched in vain for any recognition of these qualities. It is not too much to say that the whole body of this legislation is a reproach to a free country. It was acts similar to this legislation that led to the Puritan Revolution, that drove the Stuarts from the throne, that won the freedom of the subject from arbitrary tyranny and established the whole body of practices summed up in the rule of law under which it is our proud boast that we live, shutting our eyes to the glowing mistreatment of the railroads by the rule of men.

*The remedies.*—In seeking for a remedy we should look rather to a recasting of our methods of administration than to changes in the Constitution. The Constitution is really a most remarkable instrument. Daniel Webster, when a boy, purchased at the village store a pocket handkerchief, on the two sides of which the Constitution was printed. It then contained 5,481 words. An amendment regarding the election of the President and the three amendments made necessary by the Civil War added 988 words. Since then we have adopted four amendments containing 358 words and are now in the process of adopting an amendment with 64 words. The additions since the Civil War constituting 5.24 per cent of the total, to a considerable extent are thought by many to have been meddlesome and in some cases harmful. If we find practicality in the repeal of the eighteenth amendment (the prohibition amendment), we might well consider a similar disposition of several others, but the really practical improvement lies in administration changes. As examples I suggest:

1. The exercise of the franchise shall be suspended for all persons on the public pay rolls and the dependent members of their families.
2. A universal but graduated suffrage, in one place only, on major issues and for important offices. The graduation might well be based upon educational qualifications.
3. A right to vote on local issues and for local offices in several places based on payment of taxes, or rent of a fixed amount.
4. A poll tax; exhibition of tax receipt essential to voting and taking the effect of registering.
5. The graduated income tax is purely socialistic and offensive to our Republican form of government. The tax should be imposed at equal rates on all incomes above the minimum at which the cost of collection would exceed the tax collected.
6. Death duties, i. e., estate of legacy taxes, to be limited to not more than one year's income of the property received and to be at a flat rate based upon amounts received by legatees or distributees with no exemptions above the minimum at which cost of collection would equal the amount of the tax. The proceeds should be used only to retire debts or for capital in construction.
7. Thoroughly remodel and reduce the 10 departments and 150 bureaus now governing at Washington and correspondingly in the several States. They represent the fond dream of the tyrant, unlimited authority with freedom from any responsibility.
8. Abolish all administrative commissions empowered to meddle with the management of industry. Fix the standards of conduct by law and leave the enforcement of the law to the courts.
9. Repeal all laws giving statutory recognition to political factions or parties. This would include direct primaries. This would doubtless restore the old convention practice.
10. Whenever any unit of Government undertakes to go into business on its own account it should definitely segregate that business so that neither directly nor indirectly can the operation affect the interest of the taxpayer proper. Further, a system of accounts should be kept that will make the results plain.

The men who drafted the Constitution, probably better than any others who have ever lived, understood the principles of government. Our practice is to ignore principles and look only to expediency. Persisted in, it will bring us to ruin.

## STATEMENT OF FLINT GARRISON, DIRECTOR GENERAL OF THE WHOLESALE DRYGOODS INSTITUTE, NEW YORK

Mr. GARRISON. Mr. Chairman and gentlemen of the committee: My name is Flint Garrison. My address is 40 Worth Street, New York. My office is that of director-general of the Wholesale Drygoods Institute, an association embracing in its membership practically all of the large wholesale dry goods houses in the United States.

I appear before you not as a representative of that organization, but as a private citizen, who for more than 20 years has made a special study of political economy—not as it is taught to the classes from text books—but as it may be observed in its operation in industry and trade.

I have presumed to appear before you because it happens that for the past year or more I have been making an analysis and report of the causes of the present economic depression and of possible lines of action which may be undertaken to end it, which report in the opinion of a number of business and professional people contains material which should be brought to the attention of this committee.

This specific study was undertaken as a result of my contact with a member of the President's Committee on Unemployment in the fall of 1931. This gentleman called on me for the reason that certain statements I had made to the committee aroused his interest and he wished to discuss them more in detail. It developed in our conversation that within the committee itself at that time there appeared to exist no clear-cut idea as to the cause of our widespread unemployment, nor was any definite plan or program then being formulated with a view of bringing this condition to an end.

I outlined to him my conception and understanding of the forces which had been at work to bring about widespread unemployment and he declared that outline to be the first comprehensible explanation of the phenomenon which he had been able to secure.

As a result of this and later conferences with this member of that committee whose name for the present I must ask you to permit me to conceal—I decided to undertake the task of assembling the fact and organizing them into the report which I am now completing.

We must agree that we shall act somewhat blindly if we undertake to apply a remedy before we understand the nature of the disease. I shall, therefore, presume to first offer to you my analysis of the influences which have brought this Nation to its present economic predicament, and from this analysis you can judge if you would care to hear my proposed measures of relief.

The facts clearly indicate that the present economic plight of the United States may be chiefly—if not solely—credited to our mechanism of finance, which term I use to designate our money and credit system and the banks which control it. This mechanism has been allowed to manufacture and impose upon our national economy a debt or capital burden larger than our national wealth and national income can support. In 16 years from 1915 to 1929 the fixed long-term interest-bearing debt of the country grew from $37,000,000,000 to $121,000,000,000, or an increase of approximately 300 per cent. In three years since 1929 the long-term interest-bearing debt of the Nation has been increased by another $10,000,000,000.

When we add to this the short-term debt represented by bank loans, installment debt, personal and other forms of short-term debt, which in 1929 reached an aggregate of $60,000,000,000, and further add to this the capital debt represented by the preferred and common stocks of corporations, which by 1929 had reached a market price of $90,000,000,000, we have an aggregate of close to $300,000,000,000 of long term, short term and corporation debt upon which our financial mechanism was endeavoring to secure an interest return in 1929.

When we realize that the total wealth of the United States has been placed by various estimates at approximately $300,000,000,000, and further realize that a vast portion of this wealth is still unmortgaged and uncapitalized, it becomes at once apparent that our financiers by 1929 had built up a debt and capital structure many billions greater than the tangible wealth which lay behind it.

The principal items of long-term debt, and the growth of these items from 1913 to 1932, are presented in the following table:

*Debt outstanding in the United States—Long-term debt*

[Millions of dollars]

| | 1913 | 1921 | 1929 | 1932 |
|---|---|---|---|---|
| Federal Government | 1,028 | 23,155 | 16,301 | 18,600 |
| State, county, municipal | 3,820 | 8,688 | 17,100 | 19,700 |
| Total Government | 4,848 | 31,843 | 33,401 | 38,300 |
| Steam railroads | 10,842 | 11,357 | 12,459 | 13,081 |
| Street railways | 1,600 | 2,300 | 2,200 | 2,000 |
| Public utilities | 2,124 | 4,152 | 9,569 | 10,410 |
| Total utilities | 14,566 | 17,809 | 24,228 | 25,491 |
| Industrial | 3,600 | 8,300 | 15,631 | 16,600 |
| Unclassified | 555 | 1,950 | 3,950 | 4,700 |
| Total corporate | 23,569 | 59,902 | 77,210 | 85,091 |
| Farm mortgage | 4,900 | 8,232 | 9,500 | 9,400 |
| Urban real estate (including real-estate bonds) | 8,800 | 15,120 | 33,125 | 35,625 |
| Total mortgages | 13,700 | 23,352 | 42,625 | 45,025 |
| Federal land banks | -------- | 420 | 1,181 | 1,184 |
| Joint-stock land banks | -------- | 77 | 577 | 544 |
| Total, quasi-public | -------- | 497 | 1,758 | 1,728 |
| Total long-term indebtedness | 37,269 | 83,751 | 121,593 | 131,844 |

Mr. GARRISON. I will not read the entire table, but the principal items are, of course, the Federal Government, from $1,028,000,0000 in 1913 to $18,600,000,000 in 1932, and I understand it is closer to $20,000,000,000 at the present time.

Senator GORE. Above $20,000,000,000.

Mr. GARRISON. Above $20,000,000,000?

Senator GORE. Yes.

Mr. GARRISON. State, county, and municipal, in 1913, $3,820,000,000. In 1932, $19,700,000,000.

Steam railroads, the lowest increase of all, from $10,842,000,000 in 1913 to $13,081,000,000 in 1932.

Public utilities, $2,000,000,000 in 1913 to $10,000,000,000 in 1932.

Farm mortgages, from $4,900,000,000 in 1913 to $9,400,000,000 in 1932.

Urban real estate, from $8,800,000,000 in 1913 to $33,000,000,000 in 1929 and $35,500,000,000 in 1932.

The total of all forms of long-term interest-bearing debt increased from $37,000,000,000 in 1913 to $131,000,000,000 by 1932.

This great increase in the overriding burden of debt was not occasioned by the cost of the war. Total governmental appropriations for all war purposes of every nature whatsoever, including advances to our associates in that great enterprise, were considerably less than $50,000,000,000, approximately half of which was paid off through taxation within three years of the close of the war, and all of which could have been easily retired within another 5-year period by a proper application of the Government's taxing power.

The great growth of interest-bearing debt was occasioned by the method employed in financing the war itself and likewise the method employed in financing all public and private undertakings since the war.

The effect of this debt burden on our national economy can be traced by considering the nature of our society, its industrial and financial organization, the relation of people to one another, their sources of income, what they do with their income, and the effect of their expenditures on industry. Its general and specific effect I have endeavored to trace in the report available to the members of this committee if they are sufficiently interested in my summary to desire particulars.

Phrased in the briefest and simplest possible terms, the conclusions reached in this report may be thus expressed:

Roughly speaking, our entire population may be divided into two great categories:

1. The great majority of the people who derive income primarily from work performed; that portion of the people who are paid for what they do.

2. A small minority of the people who derive income chiefly from investments; that portion of the population who are paid for what they own.

The ratio of these two categories may be as low as 95 to 5, or possibly as high as 99 to 1.

The sums which are paid to these two groups of people constitute the national income. This national income in turn is expended for the goods and services which the national economy produces. If all the income is expended all of the goods and services are bought and used. If a portion of the national income is not expended then a portion of the national industrial product accumulates as a surplus; industrial operations must be checked, and industrial unemployment must develop as an inevitable consequence.

Increasing the debt or capital charge on all industry increased the share of the national income which was received by the minority group who are paid for what they own. This owing group receiving more income than it can expend on subsistence utilizes its income for reinvestment purposes. Investment opportunity depends upon the constant expansion of industry, which in turn depends upon a constantly expanding market, which in turn depends upon a constant increase in the buying and consuming power of people.

If the buying power of people does not keep pace with the producing power of industry, then industry produces a surplus of goods which it can not sell and must cease production. This creates unemployment which serves to further curtail the buying power of people, narrows the market for industry, and curtails or destroys the opportunity for the investment of accumulated capital.

The balance between the buying power of the people and the producing power of industry, between the capital income and the investment opportunity of the capitalists, was destroyed, as I have stated, by the method of financing the war, the profits to industry which resulted from that financing, and the speculative and promotional activities which have taken place since the close of the war.

War financing and the manipulation of capital and capitalization incident to and since the war has brought into existence the vast burden of interest-bearing debt, which must now be carried by industry and, therefore, by society as a whole. This burden is now more than four times as great as was the capital and debt burden existing prior to the war, and is steadily growing greater.

The interest on this vast debt and capital burden represents a subtraction from the purchasing power of people who are paid for what they do and an addition to the income of the people who are paid for what they own, thus shrinking the market for the consumers' goods of industry and at the same time decreasing the opportunity for the purchase or investment in capital or producers' goods.

The weight of this burden was not felt during the period immediately following the war, because the accumulating capital was expended through four chief outlets which then remained open:

(*a*) In expanding the manufacturing facilities of the country.

(*b*) In transforming and rearranging urban and rural social and industrial facilities made necessary by the development of the automobile.

(*c*) In great speculative ventures, particularly urban and suburban real-estate developments.

(*d*) Foreign loans.

All these enterprises, however, were so financed that each was made to add to the general social burden of fixed interest-bearing debt.

The limit of such expansion was ultimately reached. The normal demands of the market were provided for, and the expectations of the future in some important lines were anticipated for a generation or more. Every American industry, without exception, now has plant capacity anywhere from 100 per cent to 500 per cent in excess of the demands of the existing market measured in terms of the normal income of the people who buy the consumer's goods produced by industry. The excess capacity is now even greater, due to the reduced national income arising from unemployment and lowered wages.

Our internal economic difficulties have been further intensified by the derangement of our previously normal international balance of trade. Prior to the war we were a debtor nation, owing money to Europe and making our annual interest and dividend payments on that debt by an excess of exports over imports. This excess of exports caused our agricultural industry to organize itself on the basis of a great annual surplus, which surplus could be disposed of at normal prices in Europe without deranging the rate of monetary exchange.

The war reversed the financial relations of the United States and Europe, and instead of annual payments due to Europe from the United States, payments are now due from Europe to the United

States. The acceptance of payments in goods has been minimized by further increasing the tariff, and the effect of payments other than in goods has depressed the price of European money below its normal ratio to the dollar and has made export business increasingly difficult for American manufacturers and agricultural prices still lower for American farmers.

The price or value of all industrial products is measured in terms of actual or potential demand. As Mr. Loree very wisely expressed it a while ago, things are worth what they will fetch. The surplus over and above the demands of the market has a tendency to depress the price of the entire production. If the surplus is excessive prices are demoralized.

This is true not only of commodities but also of facilities. With the great excess of national equipment in factories, stores, loft and office buildings, hotels, apartment houses, the values or prices of all such facilities are steadily declining, and this decline in price is undermining our entire property structure as well as our structure of finance, for a vast part of the credits now outstanding—the liquid circulating money of banks—is based on property values which for three and a half years have been and still are steadily shrinking.

The outstanding fact which must now be squarely faced by industry, finance, and government alike is that all values within the Nation must now be measured by the size of our domestic market—literally by the buying power and consuming power our people have at home.

For an indefinite period of time we shall be fortunate if we succeed in keeping our exports equal to our imports. This means that American industry can sell no more products than the American people can buy and consume. Unless American industry can profitably dispose of its products the value of industrial investments will decline and the capital structure built upon this development will tend to disappear.

American industry can not profitably dispose of its product with the national income at its present level. Unemployment and low wages have developed to such a high degree that the national income has been approximately cut in half since 1929.

Industry itself is powerless to check this decline or add to the national income. Although all industry needs to have increased buying power in the hands of the people in order to profitably dispose of its product, each industrialist in his effort to meet competition and lower his operating costs, is forced to reduce wages, thus reducing the national buying power and narrowing the market for all industry. The process is as though all industry needing more people to buy the industrial product was progressively putting more people out of existence.

Meanwhile, as the national income declines, the fixed burden of interest-bearing debt does not decline with it, but instead continues to increase, and as it increases subtracts more and more from the income of the major portion of the population who are paid for what they do, and who as a consequence can buy less and less of the national producer, while adding relatively more and more to the income of the minor portion of the population who are paid for what they own and who because of a steadily shrinking market can find less and less investment opportunity in industry.

Interest on debt absorbed 10 per cent of the national income in 1929 and approximately 20 per cent in 1932. The ratio is now steadily rising.

Senator GORE. The interest charge was that per cent of the national income, is that what you mean?

Mr. GARRISON. Yes, sir. The total national income derived from all sources whatsoever, that portion was absorbed in interest on capital debt in one form or another.

Senator GORE. Yes.

Mr. GARRISON. This process, if unchecked, could theoretically progress to a point of complete absorption, where interest on debt could take all the national income, as it has already absorbed the total income of a large section of agriculture.

The process is now being checked to a limited degree by deflation or liquidation. In this process a great accumulation of debt is being written off through foreclosure and default, but in this process a vast shift is occurring in the ownership of property, and if permitted to continue will wipe out the equities of the majority of people now owning property in the United States and will concentrate the ownership of all property into still fewer hands.

The Government can no longer continue in its efforts to hold up the capital structure of the Nation while seeing the national income steadily decline. If it persists in the effort it will bankrupt itself. It, therefore, has two alternatives presented by the conditions:

(*a*) Shall the process of liquidation and deflation be permitted to continue without check, with all the financial, economic, and political hazard which this process entails, or

(*b*) Shall the Government utilize its credit creating power to expand the income of the people to a point necessary to utilize the industrial product and sustain the capital structure that has been created on our present industrial development.

The facts accumulated seem to clearly indicate that the latter course can be followed without any derangement whatever to our monetary system and with widespread satisfaction to all our citizens.

Senator HARRISON. How would you do it?

Senator SHORTRIDGE. Yes, how would you do it? You say it is easy to do it. Now tell us how.

Senator GORE. Present your miracle.

Mr. GARRISON. First, Senator, are we agreed as to the disease? My opening statement was that there would not be much object in our proposing a remedy unless we were agreed as to the disease.

Senator GORE. I understand that.

Senator SHORTRIDGE. What is the trouble? What is the disease? How do you term it? What do you call it?

Mr. GARRISON. The disease as I have termed it is first an excess accumulation of capital charge on all industry, on all industrial processes, which capital charge is accumulated at too great a share of the national income.

Senator SHORTRIDGE. You mean the increased indebtedness and the consequent interest charge on that indebtedness?

Mr. GARRISON. Well, did you hear my description of the various forms of capital charge which industry now sustains?

Senator WATSON. Yes.

Mr. GARRISON. Approximately in 1929 an endeavor to secure an interest return on a capital charge of 300 billions of dollars.

Senator GORE. Now, we have got to increase employment and raise prices on the one hand or cut down debt on the other.

Senator SHORTRIDGE. In your closing statement you hinted that we must inflate to some extent. What is your way of doing that? Various suggestions have been made. What is your idea about it? How would you proceed?

Senator GORE. That is the point.

Senator SHORTRIDGE. You have got a very splendid paper there upon true conditions.

Senator GORE. You have got to raise prices or cut down debts. Which are you going to do?

Mr. GARRISON. I think we have got to do both. We have got to raise prices and cut down debts. We can only raise prices by increasing the consumption of goods. We can only increase the consumption of goods, by putting the purchasing power in the people who consume goods.

The CHAIRMAN. Now go one step further.

Senator WATSON. Yes, go the other step.

Senator GORE. Yes, theoretically we keep pace with you there.

Mr. GARRISON. I will just read one section of this report. I will preface it by saying we frequently hear the remark made that another war would lift us out of our difficulties.

Senator SHORTRIDGE. But it means suicide.

Senator GORE. War got us into this. Maybe it might get us out.

Mr. GARRISON. That remark is frequently made.

Senator WATSON. Eliminate that. We are not going to war.

The CHAIRMAN. Yes.

Senator HARRISON. Yes. We have got to leave here pretty soon.

Mr. GARRISON (reading):

> If we as a people should become greatly exasperated or highly excited by the agitations of newspapers, Congress might be led into a declaration of war against some great military power. No one, I think, could seriously question our ability to finance such a war. We would at once proceed to issue United States gold bonds at the rate of one or two billions of dollars per month, would deposit these for sale in banks, and the proceeds of such sales would be expended on the purchase of the supplies and munitions of war. We would increase the income, excess profits, and inheritance taxes in order to provide for the ultimate retirement of these bonds. Although we would send overseas several millions of our finest and most carefully selected boys, many hundreds of thousands of whom would be slaughtered, the rest of us would enjoy another period of great prosperity.

The CHAIRMAN. Mr. Garrison, do you think there is any need of that at all?

Mr. GARRISON. Well, briefly, Senator, if you would like to have this, I think this. I will phrase it this way. I think the Federal Government can now undertake to finance a war on economic stagnation by precisely the process it would undertake if it would finance a war upon another nation. First by employing the technique of war finance to expand the credit and expenditures of the Nation, through sources which would find its way into the consumption of goods and the employment of people.

The two main avenues are, first, the undertaking of great public developments of one sort or another, which are perfectly clear, logical, and feasible.

The second is through loans to municipalities and others for like developments.

But both of those would require some period of time before they could get into operation. It would take two or three years before we could get spending money into the hands of people sufficient to take up this slack of goods which is now lowering the level of all property values.

The CHAIRMAN. That is, you mean, through State agencies?

Mr. GARRISON. No. I mean that there is hardly a city in the land but what has undertakings which should be undertaken at the present time.

The CHAIRMAN. Well, that is within the States.

Senator HARRISON. Do you mean to broaden the principle laid down in the reconstruction finance legislation with regard to self-liquidating concerns?

Mr. GARRISON. I do not think that.

Senator SHORTRIDGE. Do you mean that the Federal Government as such should advance or loan to States, municipalities, or quasi-public enterprises the money? If so, where is the Federal Government going to get the money?

Mr. GARRISON. Senator, let me give you a few figures here. Going back to the Federal Government financing during the war and the effect of that financing upon industry as a whole. The Government expanded in three years from 1917 to 1920 its credit to the extent of about $36,000,000,000. The Federal Government expanded its credit $36,000,000,000 in three years.

Senator SHORTRIDGE. Borrowed the money, is that what you mean?

Mr. GARRISON. Sold bonds.

Senator SHORTRIDGE. It sold bonds. Borrowed money from the people.

Mr. GARRISON. Borrowed money from the people. It expanded its credit $36,000,000,000 and recovered half of it within three years after the close of the war, or approximately that. And that expenditure upon industry as a whole stimulated all industry to such a great degree that it doubled the national income, raising it to an average of $72,000,000,000, which continued for a period of 12 years.

The CHAIRMAN. That was done by war.

Mr. GARRISON. That was done by war.

The CHAIRMAN. Now, tell us how you are going to do the same thing here in peace time?

Senator GORE. Just a minute. That was in terms of value and not volume.

The CHAIRMAN. Both.

Mr. GARRISON. That was in terms of current value, Senator.

The CHAIRMAN. The war brought on a demand for goods all over the world. Exportations. Now, how about peace time? How do you propose to do it in peace time?

Mr. GARRISON. I propose to use precisely the same technique. By expanding credit, placing money out where it will consume goods and do for industry at the present time what we did in 1918, 1919, and 1920 in war enterprise.

I am at present studying and I will give you later the report on how I think money can be put into the hands of people quickly. That is what you want to know.

Senator SHORTRIDGE. We have outstanding now in round figures $20,000,000,000 of interest-bearing obligations, have we not?

Mr. GARRISON. Yes, sir.

Senator SHORTRIDGE. Is it your idea that we should issue say two, three, four, five billion dollars additional interest-bearing obligations, lending the money or advancing the money then to States, municipalities, quasi-public corporations?

Mr. GARRISON. Senator, please bear this in mind, that the Government has borrowed and lent in the last year or more a great many billions of dollars, not a dollar of which has recorded itself in the purchase and consumption of goods. All of it has been for the purpose of holding up the capital structure. For instance, you have lent more money to the railroads but have done nothing to increase the traffic to the railroads. You have lent the money to bankers whose securities were depreciated, but have done nothing to increase the value of those securities. Do you get my point?

Senator SHORTRIDGE. Yes.

Senator WATSON. Let me ask you this question: How do you propose to put these 12,000,000 idle people back to work and increase their consuming capacity?

Mr. GARRISON. I would not want to make offhand the most radical proposal, and which would be the simplest and most natural and most quickly effective way, and that would be to directly put into the hands of people money to spend and tell them to spend it. That would shock all of you, don't you see?

Senator GORE. Yes, it would.

Mr. GARRISON. That would shock you. And that would be too extreme. But I should like to give you later on a carefully worked out program by which that thing can be accomplished, in addition to these two other major outlets that I have named.

Senator GORE. Mr. Garrison, I think a good deal of your diagnosis of the disease. You say the disease is excess of credit. Excess of debt.

Mr. HARRISON. Excess accumulated capital.

Senator GORE. Excess interest charges that have to be paid by the people. Now then, you propose to remedy that disease by further extension of credit and a further wading into debt. That is true, is it not?

Mr. GARRISON. No; I do not. Senator Gore, I think it is entirely possible, if we will, for the Nation to expand its credit——

Senator GORE. Well, is or is not your remedy to have the Government extend credit to the people and incur more debt?

Mr. GARRISON. I think it is entirely possible for the Nation to extend its credit without incurring any interest-bearing debt whatsoever.

Senator GORE. That will be interesting. I will revert to that in just a moment. Since the war we have left billions of dollars to foreign countries to buy our goods, and we had prosperity while we did that. Would it not be a good idea for us to revive that and continue to lend money to people to buy goods?

Mr. GARRISON. We lent industry $36,000,000 in the three years I referred to, and we did not recapture it. We could have recaptured it. The national income increased over $36,000,000 per year. Out of that increase we could have recaptured all that we lent, but we did not.

Senator GORE. Which was largely an increase in value and not in volume.

Senator SHORTRIDGE. Senator Gore, pardon me. You said, Mr. Garrison, that we could, but we did not?

Mr. GARRISON. We did not.

Senator SHORTRIDGE. You say we could. How could we? It is so easy to say those things. Now tell me how?

Mr. GARRISON. Senator, you will recall that all during the war period and also following the war there were two conflicting opinions running through Congress on the subject of taxation. Two very definitely conflicting opinions. One group of the Members in Congress here advocated very much higher income-tax rates, higher excess-profits rates, and higher inheritance-tax rates than were imposed. Very much higher. That was during the war. That same group advocated the maintaining of the existing rates after the close of the war. But their voice was not heard. There was the counteropinion which said, "We must let capital accumulate, for through the accumulation of capital we develop industry, give employment, and keep our industries going."

Senator GORE. Would you have raised those rates?

Mr. GARRISON. I would have raised those rates, absolutely, and would have sustained them after the close of the war.

The CHAIRMAN. And what would the Government have done with the money?

Mr. GARRISON. The Government would have paid off its debt. Would have prevented some of this further accumulation of capital debt which has since been imposed upon all industry.

The CHAIRMAN. In other words, you would have taken money out of circulation here by taxation on the part of the Government and the Government collect that money and then pay their obligations?

Mr. GARRISON. Well, that would have taken it out of circulation at the time when we had too much in circulation.

Senator SHORTRIDGE. Too much money in circulation?

Mr. GARRISON. During the war years we had vastly too much in circulation; so much in circulation, in fact, that we had to control industry, we had to set up the War Industries Board which said what industries could run and what should not run. We had an overstimulation of industry at that time.

Senator GORE. I think your recommendation to maintain higher taxes at the time is a good one. This is a peace period, though, and I want to get this in the record. Senator LaFollette, Senator Thomas, and myself filed a minority report from this committee recommending that policy for this purpose.

Mr. GARRISON. Senator Gore, at the present time with industry declining, profits on industry declining, income declining, the sources of taxation of the Government are drying up. You see that.

Senator GORE. Oh, I do see that.

Mr. GARRISON. Yes, sir. The point I am making is that the Government would profit if it would now extend loans in the direction that would increase its source of taxation. It has been extending loans in a direction that will not increase their sources of taxation. You have been extending loans, don't you see, to maintain these fixed debts. You have not been extending loans that will result in the consumption of goods and the increase in values.

Senator GORE. If you think any of these loans that are made to these municipalities ever will be repaid you are certainly an optimist. And if the general Government can borrow money and lend to these cities, why can not the cities raise money for that purpose?

Mr. GARRISON. The Federal Government has the power of creating money, which the municipalities do not have.

Senator GORE. Creating money?

Mr. GARRISON. Yes, sir.

Senator SHORTRIDGE. State that again.

Mr. GARRISON. The Federal Government has the power——

Senator SHORTRIDGE. To do what?

Mr. GARRISON. To create money. In other words, it can manufacture money. And the municipalities do not have that power.

Senator GORE. That might lead to debate that the Government can create money. It can create promises to pay money.

Senator SHORTRIDGE. Mr. Garrison, what is your definition of money? What is money?

Mr. GARRISON. I have quite an extended definition of money, Senator.

Senator SHORTRIDGE. Give us a more or less concise definition of money as you visualize it.

Mr. GARRISON. The simplest definition of money, of course, is a medium of exchange. Through which medium of exchange or in which medium of exchange there is set up a unit of value.

Senator SHORTRIDGE. Gold as a metal is not money, is it?

Mr. GARRISON. No.

Senator SHORTRIDGE. You note my question: Gold as a metal is not money?

Mr. GARRISON. We are using credit as money.

Senator SHORTRIDGE. Is silver, as a metal, money?

Mr. GARRISON. No. It can be used as money. You can coin silver and use it as money. You can coin gold and use it as money. But we use very little coined gold and very little coined silver as money. We use many forms of credit as our money, and we measure that credit in units of gold.

Senator SHORTRIDGE. So you say the Government can create money?

Mr. GARRISON. The Government can create money in precisely the same way, Senator, that industry or finance or our banking structure creates money.

Senator GORE. But you are using "money" there in the sense of credit after all, are you not?

Mr. GARRISON. That is what 90 per cent of our money is.

Senator GORE. If you call credit and money the same thing, that is true. It fulfills the function of money to a great extent.

Mr. GARRISON. We are using credit to the same extent as money.

Senator GORE. And credit has shrunk in the last year thirteen billion.

Mr. GARRISON. Yes.

Senator GORE. Do you know any way that we can force the banks to re-create this credit?

Mr. GARRISON. My point is that finance can not expand the credit, because industry can only put its money into something that will pay a profit. And you can not find an opportunity in industry to invest money and pay a profit. Industry has been brought to a stalemate. It can not move at the present time. You can not find an industry in this country that can absorb an additional dollar of investment for the expansion of the industry. And you are hoping that some day we can begin to expand industry in order that we can put the people to work. Now, if you can only expand your industry after you put your people to work, and you can only put your people to work by expanding industry, where will be get in that situation?

Senator GORE. That is just the point. Exactly so. It looks like it takes a miracle or time, one or the other, to solve it.

Mr. GARRISON. Well, you have the means at your command.

Senator SHORTRIDGE. You made some statements in regard to exports and imports.

Mr. GARRISON. Yes.

Senator SHORTRIDGE. And their bearing upon conditions. We continue to export now, do we not?

Mr. GARRISON. We are continuing to export, but our excess of our exports over imports has decreased precisely in the ratio of our decrease in foreign loans. For 10 years we made foreign loans at the rate of about a billion dollars a year—since the war. While those loans were being made our exports exceeded our imports by about that degree. Now we can not go on shipping more goods outside of the country than we received into the country unless we continue to build up a continuing debt outside of the country.

Senator SHORTRIDGE. How about imports? What effect have they on our internal, domestic condition, in your opinion, briefly stated? We have certain imports from European countries. Increasing imports from Asiatic, Far East countries. What effect, if any, have those increased imports on our domestic condition?

Mr. GARRISON. The effect is like this: You have to consider agriculture which embraces about one-quarter of our entire population. Agriculture has a great exportable surplus. We export 20 per cent of our wheat and approximately 50 to 60 per cent of our cotton. The price we receive in foreign markets on that surplus, whatever it may be, fixes the price of the total products here in the United States. Now, if we do not receive enough imports to pay for those exports—do you get the point?

Senator SHORTRIDGE. Yes; but I do not agree with you at all. I have a different theory. I may be all wrong.

Mr. GARRISON. Then the issue is clear-cut between you and me on that proposition.

Senator SHORTRIDGE. Yes. We must not prolong this colloquy. We have certain industries in the United States—farming, mining, manufacturing. They employ men and women to create certain articles, which, in turn, are sold and purchased here in America. My immediate question is this: Do you think it advisable that we should continue to receive vast quantities of like goods manufactured in the Orient, or should we by some fair, equitable arrangement limit those imports to the end that our own people here might manufacture the things we use?

Mr. GARRISON. My answer to that is, Senator, that if by receiving a dollar's worth of imports we can enhance the value of $5 of our agricultural products, we can probably profit by the receipt.

Senator SHORTRIDGE. Take the far West, the Pacific coast from the Washington line, British Columbia, to the Mexican border, taking in the three State of Washington, Oregon, and California. We have out there in those States, particularly in the latter, a great poultry industry. Do you think it is advisable that we increase poultry imports from China—would that be advantageous, do you think—to California, or to the Union as a Union?

Mr. GARRISON. Let us take the alternative of that, Senator. Let us suppose we exclude all imports whatsoever.

Senator SHORTRIDGE. Yes.

Mr. GARRISON. Suppose we exclude all imports whatsoever, then what will happen?

Senator SHORTRIDGE. I think we would all be pretty busy.

Mr. GARRISON. What would we do with the excess production of wheat and cotton? Do you know?

Senator SHORTRIDGE. Well, it would not necessarily follow that we would export.

Senator GORE. Over half of the cotton that we raise in this country goes abroad.

Mr. GARRISON. Yes; over half of our cotton goes abroad. What would you do with that?

Senator SHORTRIDGE. It would continue to go abroad.

Mr. GARRISON. How could it?

Senator SHORTRIDGE. Why, it would be bought and paid for.

Mr. GARRISON. With what?

Senator SHORTRIDGE. I beg your pardon?

Mr. GARRISON. With what? What would it be paid with?

Senator SHORTRIDGE. With money.

Mr. GARRISON. Who would get the money?

Senator SHORTRIDGE. We would get the money.

Mr. GARRISON. What kind of money? Dollars?

Senator SHORTRIDGE. Why I would hope so.

Mr. GARRISON. It would be paid in dollars?

Senator SHORTRIDGE. I would hope so.

Mr. GARRISON. Where would they get the dollars to pay for it?

Senator SHORTRIDGE. Where do they get the money now?

Mr. GARRISON. That is what is the difficulty to-day that exists between the rate of British exchange and the United States exchange.

Senator SHORTRIDGE. Oh, I grant you the depreciated currency has upset things.

Mr. GARRISON. The British are trying to buy dollars now to pay the balance, the unfavorable balance. They can not ship goods. And the more they try to buy dollars without goods the more dollars go up and the pound goes down. You will agree with that, will you not?

Senator SHORTRIDGE. Yes.

Mr. GARRISON. All right. As the pound goes down and the dollar goes up, what happens to cotton? Do you understand the marketing of cotton?

Senator SHORTRIDGE. Well, I know a little bit about it. I know we raise the best cotton in the United States in California. You will admit that, will you not?

Mr. GARRISON. Yes. Well, the world price of cotton, as you know, is fixed in Liverpool, England.

Senator SHORTRIDGE. It ought not to be.

Mr. GARRISON. No matter whether it should be or not, the fact remains that you must go to the market to market your goods.

Senator SHORTRIDGE. Why does Europe buy cotton of us? Because she needs it and must have it. Not because she loves us, because she does not.

Mr. GARRISON. Europe buys cotton from us because she does not produce it.

Senator SHORTRIDGE. Precisely.

Mr. GARRISON. But she does use it. She uses cotton. We produce it. She buys it and we have got to go to the market to sell it. The world market for cotton is Liverpool, England.

Senator SHORTRIDGE. Well, we have sort of surrendered our power.

Mr. GARRISON. It is not a question of our surrendering our power, Senator; it is a question of a trade development which has taken centuries to bring about.

Senator SHORTRIDGE. We will admit that for the moment.

Mr. GARRISON. The fact is that the world price for cotton is fixed in Liverpool, England, and is expressed in terms of English pounds and pence, and if you will check up on the cotton market, you will discover that before the decline in the British pound you could take the Liverpool quotations expressed in pence and multiply them by two and get the price for American cotton. If the price was 5½ pence you could figure that the price in American money was about 10½ to 11 cents. Since the decline in the British pound cotton is still being quoted in Liverpool at about 5½ pence, but the price in American money now translates into about 6 cents a pound.

Now, if you exclude all imports whatsoever that disparity in exchange will increase, and the price of your American cotton expressed in American dollars will decrease accordingly. Therefore, I say that it might be advantageous to admit an occasional dollar of foreign production in order to enhance the value of three or four dollars' worth of our domestic production. We will begin by that process.

Senator SHORTRIDGE. I do not wish to put a Chinese wall around the United States, though every nation in Europe is erecting such a wall around itself. One thought I wish to invite your attention concerning is this. We raise cotton in the United States. A vast quantity of cotton. Europe needs that cotton. If we organized properly could we not measurably fix the price of the cotton which they demand from us?

Mr. GARRISON. I think it might help. But I question the ability to fix it.

Senator GORE. But that would encourage the production of cotton in Egypt and India and Mexico and southern Russia.

Senator SHORTRIDGE. That is true, Senator.

Senator GORE. That would be encouraged if we fixed a price above the world price.

Senator SHORTRIDGE. That is true. But they have been raising cotton in Egypt since the Paraohs, and somehow they do not develop greatly.

Mr. GARRISON. We would be working in a direction of a wiser solution and a more permanent solution if we governmentally studied the ways in which our people could be put in position to consume more cotton. The fact is that since this great decline in the price of cotton goods which has taken place since 1929 the per capita consumption of cotton goods has not increased. It has decreased. The earning power of people has decreased more rapidly than the price of finished cotton goods. In 1929 we were consuming about 68 square yards of cotton cloth per capital. In 1932 we were consuming about forty-some odd yards.

Senator SHORTRIDGE. Do you not attribute that to the change of style of the ladies?

Mr. GARRISON. Not at all.

Senator SHORTRIDGE. Do you not attribute that rather to the shortening of the garments?

Mr. GARRISON. Oh, I think that is all hooey.

Senator SHORTRIDGE. I beg your pardon.

Mr. GARRISON. That is pure hooey. If you go through certain sections of the country you will find millions of people that are half naked now. Style is not affecting them.

Senator SHORTRIDGE. It is not so at Palm Beach.

Mr. GARRISON. Just that one-half of 1 per cent of the people in Palm Beach; and I am speaking of 99½ per cent of the people who will buy the bulk of the cotton goods.

Senator SHORTRIDGE. A constituent of mine is urging the buying of American goods. "Buy in America." I refer to my constituent, Mr. Hearst.

Mr. GARRISON. Yes.

Senator SHORTRIDGE. If you care to express your opinion in regard to the philosophy of that slogan "Buy in America," "Buy American goods made by American men and women," you may express yourself.

Mr. GARRISON. I think it is an exceedingly provincial view. If America were 100 per cent self-contained, it would be correct.

Senator SHORTRIDGE. Well, now, we spread across the continent, 48 States, one hundred and twenty-odd millions of people.

Mr. GARRISON. I agree with you, sir, that if we could quickly readjust our entire agriculture to the basis of producing only a supply sufficient for the use of the United States, then the "Buy America" would be perfectly logical and would work.

Senator GORE. Well, it is not "Buy in America" alone; it is sell in America alone.

Mr. GARRISON. Precisely. Exactly so. One follows the other.

Senator GORE. Goods that are shipped abroad must be paid for in other goods or gold in the long run; is that not true?

Mr. GARRISON. Either that or continue to pile up debt.

Senator GORE. That is not paying for them.

Mr. GARRISON. I mean in the long run, if you want to get paid for them they must be either paid for in goods or gold, or in the continuing of investments in those countries.

Senator GORE. Yes.

Mr. GARRISON. Exchange can be effected by investing in a foreign country.

Senator GORE. A while ago you said we had the means in our own hands. What are those means? And if you were dictator, what use would you make of them?

Mr. GARRISON. Senator, I hesitate to, in cold blood, enunciate a principle which to me is perfectly sound, and which I think if we were not too conventional in our thinking we would be willing to accept. But we have a great many illusions and a great many prejudices with regard to economics and finance. And we have to avoid shocking our conventional attitudes and try if possible to avoid dispelling our illusions concerning money.

Senator GORE. I take it all Senators, including myself, get in every mail ready-made, specific, universal solutions for this situation. My own consists, 9 out of 10, in some suggestion about money. Mostly to increase the amount of money. To get the Government to print money, print promises to pay, and get it in circulation somehow or some other how. That then the dawn would come and everything would be lovely.

Mr. GARRISON. The great thought everyone has is the need for increasing money. We do not need to increase money. We have a superabundance of money. But it is in the wrong place.

Senator GORE. We have more than we had in 1929.

Mr. GARRISON. The great central banks are gorged with money at the present time, the owners of which have no way of getting it out. They can not invest it. What we need is to get money into the hands of people to purchase goods. And recreate industry. Now, the Government could go to the banks and borrow the money, and in so doing it would create an interest-bearing debt, which interest-bearing debt would multiply itself in time and require that it be paid over two or three times, you see, before it was finally liquidated. My claim is that the Government has it within its own power, by the use of its own credit, to create money without borrowing at interest at all, if it merely will exercise that power which it has within itself.

Senator GORE. I just do not know what you mean, Mr. Garrison.

Senator SHORTRIDGE. Nor do I.

Mr. GARRISON. I will show you now.

Senator SHORTRIDGE. How will you do it?

Mr. GARRISON. We issued bonds during the war, did we not?

Senator SHORTRIDGE. Yes.

Mr. GARRISON. We sold those bonds to banks. And to-day we are buying back those bonds through the Federal reserve bank and issuing currency in its stead. We have gone all around Robin Hood's barn, don't you see, to get some currency into circulation. You will admit that is happening, will you not?

Senator GORE. In a way.

Mr. GARRISON. In a way it is happening. Now, suppose instead of selling bonds to banks and then buying them back again, you do not go around all through that circuitous process; that you short cut that whole business. And in order that we would not shock our sensibilities we would say, let us issue a certain number of billions of dollars in gold bonds bearing interest, and deposit those bonds in the Treasury of the United States—not in banks, but in the Treasury of the United States. Perfectly safe place—the safest I know of. And against those bonds issue currency of precisely the same form which the Federal reserve banks are issuing to-day when they buy a bond.

Senator GORE. Mr. Garrison, is that not like you would make out a promissory note for a thousand dollars and then lock it up in your safe, and then you issue other notes based upon that promissory note? You are protesting against illusions, and I agree with you. If a Government issues its own gold bonds, an obligation to pay, and locks it up in the Treasury of the United States, and then issues Treasury notes based on it—it seems to me like the other illustration. What is the point?

Mr. GARRISON. There isn't any point. I am merely preserving the illusions which we have concerning money. The Government could issue the notes directly instead if it so wishes, but we would be shocked by that process.

Senator GORE. Let us look at the danger now. You are trying to preserve an illusion. If the Government issued and sold the bonds, that would be the Government's promise to pay at a fixed date in the future. It could regulate the amount of interest, could set aside the sinking fund, and when pay day would come, if necessary, it could refund that loan.

Mr. GARRISON. Yes.

Senator GORE. A Treasury note is the Government's promise to pay on demand, and it has got to pay those notes on demand in whatever amount tendered, or else it is in default and is off the gold standard. That is what happened in the nineties. Treasury notes were issued, confidence was destroyed, people gathered up these promises to pay on demand and brought them here and demanded payment on the instant, drained the gold reserve, shattered confidence, and precipitated the panic.

A government no more than an individual can afford to have too many promises to pay on demand outstanding at one and the same time. It is not in control of its own financial destiny then. It is in somebody else's hands. And when the Government redeemed these Treasury notes that you speak of, it would have to raise the gold by selling the bonds, and then it would reissue the Treasury notes, which would be gathered up the next time and presented again and payment on demand would take place and the Government would issue more bonds. In the nineties in two years we issued $250,000,000 of bonds trying to maintain a gold reserve of $100,000,000. You do not get anywhere. That is the worst illusion that we could indulge.

Mr. GARRISON. Senator, consider what is being done to-day in our whole money system by banks. Mr. Paul Mazur made the statement last Friday or Saturday at some economic conference, I think it was in Cleveland, that there existed in the United States at the present time various forms of what he called tokens, things which he classed as money, represented by bank deposits, bank checks, and a thousand and one various forms of credit that are now circulated as money. He made the estimate that there was a total of $102,000,000,000. I do not know where he placed it. I can not find more than half of that. He indicated that behind that vast flow of money there existed only $4,000,000,000 in gold. So that each dollar of circulating money as we now have it contained somewhere between 5 cents and 10 cents in gold, according to Paul Mazur's theory. And it does have 90 to 95 cents of other forms of value, of other commodities which do have value.

Senator GORE. You are right when you call it theory. The Government has issued its perfectly good gold bonds and locked them up in the Treasury of the United States. It has issued the Treasury notes against that security.

Mr. GARRISON. Yes.

Senator GORE. Now then, we have issued a billion dollars' worth of bonds and we have issued a billion dollars' worth of Treasury notes. A half a billion of those Treasury notes are brought here to Washington and payment of gold demanded. The Government pays it, has got to pay it or default. Now then, it would reissue those Treasury notes, but it has to sell the bonds to get the $500,000,000 to redeem these Treasury notes. It reissues the Treasury notes, paying for one service or another, gets them back into circulation. The people bring $500,000,000 more and demand payment. The Government sells these gold bonds to raise the money to get the gold to redeem these Treasury notes on demand. So they are redeemed. They are reissued. People bring them back the next time. You do not avoid the issuance of bonds by that sort of policy. You just create the necessity of issuing bonds and more bonds time after time. Now, when you have got a bond outstanding you know what you owe. But this system is that somebody else forces you to issue these perfectly good bonds and they present these Treasury notes and demand payment. You just get in a quicksand and geet deeper and deeper in.

Mr. GARRISON. Well, Senator, I think you will have to recognize that no financial undertaking that the United States might enter into could succeed or would succeed unless it had the complete sympathy and support of the large central banks of the United States.

Senator GORE. Some of these railroads are in heavy welter. They get money to operate from the Reconstruction Finance Corporation. Suppose they issued their perfectly good gold bonds and locked them up in their own strong box and then issued notes based on those?

Mr. Garrison. The banks do precisely the same thing. It circumvents it in a way, but they do that in the last analysis.

Senator Gore. The banks issue notes against gold and United States bonds or commercial paper.

Mr. Garrison. That is exactly what I am speaking of. They do the same process through banks.

Senator Gore. But when they redeem their notes they do not have to reissue them again unless there is some demand for them.

Senator Shortridge. Unless you wish to pursue the matter, Senator——

Senator Gore. No.

Senator Shortridge. Mr. Garrison, you have devoted thought to the problem, you have analyzed conditions and have suggested remedies to cure us of the disease. Have you considered the bearing of the foreign debts due us and their payment?

Mr. Garrison. That is the point I raised, Senator, when I said we must realize the fact that in view of the foreign debts we shall be lucky if we succeed in keeping our exports equal to our imports; we will be very lucky if we succeed in that.

Senator Gore. That is almost impossible for a creditor nation to do, is it not?

Mr. Garrison. I think it is practically impossible, Senator, for a creditor nation to do.

Senator Shortridge. In the aggregate from these several nations who owe us there is due or to become due from time to time over a period of 62 years some $11,000,000,000.

Mr. Garrison. Yes, sir.

Senator Shortridge. Bearing certain rates of interest. I do not suppose you think it would help us if we canceled those debts, do you?

Mr. Garrison. You see, if you canceled those debts which are owed the Government, there would still remain a large body of debts which is owed to private citizens in the United States. Payments on that private debt would be called for, and it would have the same derangement on international exchange that the collective debts now have. You might possibly slightly mitigate the circumstances. You would not remove it at all.

Senator Shortridge. If there be no further questions, we thank you, Mr. Garrison.

Senator Gore. I want to add, as I have submitted a number of questions, that I think Mr. Garrison has made one of the best and most searching analyses of our economic conditions. I am a little bit afraid that the remedy is like that of the Indians out in our country beating a tom-tom by the bedside of a sick person.

Senator Shortridge. Doctor Barker is not present. There has been a little misunderstanding as to engagements. The committee will stand in adjournment until Monday, when we will hear Doctor Barker, who was to be heard to-day.

(Thereupon, at 12.30 p. m., Saturday, February 18, 1933, an adjournment was taken until 10 o'clock a. m., Monday, February 20, 1933.)

# INVESTIGATION OF ECONOMIC PROBLEMS

---

## MONDAY, FEBRUARY 20, 1933

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met, pursuant to adjournment, on Saturday, February 18, 1933, at 10 o'clock a. m., in room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Reed, Shortridge, Thomas of Idaho, Metcalf, Harrison, King, Walsh of Massachusetts, and Gore.

The CHAIRMAN. The committee will come to order. Is Doctor Barker present?

Doctor BARKER. Yes.

## STATEMENT OF LEWELLYS F. BARKER, M. D., BALTIMORE, MD.

The CHAIRMAN. Doctor, give your full name and your address.

Doctor BARKER. Lewellys F. Barker. Baltimore, Md.

The CHAIRMAN. Your business?

Doctor BARKER. Physician.

The CHAIRMAN. You may proceed.

Doctor BARKER. If the Senators would permit, I would like to make a brief statement, and then answer any questions afterwards.

The CHAIRMAN. That is all right.

Doctor BARKER. The symptoms and causes of our economic maladies, with suggestions for treatment.

Six and ten point programs for economic relief have been promulgated, but a leading financial journal has recently proposed a one-point plan, namely that any college professor "the moment he bestrays symptoms of an intention to open his mouth or take his pen in hand, be immediately gagged, strait-jacketed, and immured in a padded cell." I shall, therefore, address you neither as a professor nor as a trained economist but merely as a physician who, like other citizens, is interested in the severe illness that his country manifests. Nor can I be expected to make proposals that have not already been made by others; I can only lay emphasis on those that seem to me to be most important.

As a medical man, it is natural to approach the subject by studying the symptoms and the possible causes of the malady and, upon the findings, to base a multidimensional diagnosis and suggestions for cure or relief.

The symptoms are so obvious as scarcely to need enumeration. They include profound business depression, paralysis of the productive activities of industries with widespread unemployment, a prodigious fall in the prices of farm products, of other commodities, and of real estate and securities, a crisis for the railroads and other transportation facilities, multiple bank failures and threatened collapse of insurance companies and of merchandising agencies, enormous reduction of the value of the assets and of the incomes of corporations and individuals with rapidly increasing bankruptcies, a marked lowering of the standard of living due to lack of purchasing power in the midst of plentiful supplies, and almost universal mental anxiety and despondency with regard to the possible effects of the further liquidation that seems to be inevitable.

The symptoms have continued so much longer than in an ordinary cyclical depression that the situation has even caused talk of social revolution and of the possible downfall of the capitalistic system. These symptoms have been aggregavated by the departure of many foreign countries from the gold standard, by forced sales of American securities by foreign holders, by defaults of foreign debts and by war and threats of further war in South America, Asia, Europe; we have to deal not only with a sick America but with a sick world. And, finally, as symptoms of the prolongation and the severity of the depression, we observe the prevalence of certain forms of agitation that always appear in the late stages of such a malady, demands for the application of fiscally heterodox remedies, for procedures that would almost certainly prove not only futile but provocative of further collapse.

Looking for the causes of the present economic situation, the primary factor is found in the development of the colossal indebtedness that accompanied the tremendous expansion of economic activities after the war. This continued until in the years from 1927 to 1929 the credit structure had become enormously inflated, huge amounts had been invested on borrowed money in new plants for production, markets had begun to be oversupplied with products, interest rates had risen to unprecedented heights, and speculation on margin in the stock exchanges had become rampant driving prices to levels at which the income return was minimal. High pressure salesmanship and installment plans of buying added to the great debt structure. The costs of Government, too, had undergone extraordinary expansion with corresponding rise in the burden of taxation. Early in 1929 the rate of investment began to decline, profits diminished, commodity prices fell and credit became restricted.

As we review that period it seems surprising that the approaching crash should not have been more widely foreseen and that adequate preventive measures were not resorted to. The great general public at such times of exaltation is always carried away by the belief in a continuance of prosperity and by the lure of speculation, but it must be admitted that students of economic history, our great bankers, and the supposedly skilled advisers of business leaders either did not fully recognize the dangers or failed to sound efficient warnings and to take drastic steps of correction early enough to avert the catastrophe. Instead, we were told that we were in a "new era" and that supposed laws of economics had become antiquated. Even after the bottom fell out in 1929, we were led to believe that we were merely in the depressive phase of an ordinary trade cycle and that the situation would automatically correct itself after a reasonable time as in previous depressions. Throughout 1930 the majority of business and financial forecasters prophesied that the end of the depression was near, but they were 100 per cent wrong. In the summer of 1931 came new collapse in Europe and, after it, subjection of the whole world to unprecedented financial strain; by 1932 the problem was no longer that of overcoming an acute slump in business and the restoration of normal conditions of profitable production and distribution; we were confronted by the tasks of avoiding a most far-reaching financial crisis and of averting the threats of complete breakdown of the financial structure of capitalism. The whole world had reached a level of extreme depression comparable on a national and international scale with the worst form of melancholy ever reached by a patient suffering from a manic-depressive psychosis.

What are the remedies for this terrible malady? Must the cure be left to Nature, the patient bearing his ills as best he can while he awaits the upturn, or can effective curative and ameliorative measures be applied through legislation or through well-directed efforts devised by the patient himself or by selected economic advisers?

There are great differences of opinion even among the best-informed and masses of prescriptions have been written, many of them by " orthodox " economists, more of them, unfortunately, by " quack healers " of social and economic ills. Luckily, the patient has a fairly good constitution and we must hope for ultimate recovery, despite much mismanagement in the way of treatment. Personally, I am of the opinion that barring " suicide " or unforeseen complications that might prove fatal, the malady will. in due time, " run its course " and the patient can be aided in the slow process of recuperation. Though business conditions are less good than a year ago, the financial situation is, perhaps, a little better, and the people are adjusting to the difficult circumstances with less fear, without repining, and with a fine exhibition of fortitude.

There is much clamor for " inflation " of the currency by one or another method. But inflation is like alcoholism or drug addiction; give a chronic alcoholic some whiskey or a morphine addict a hypodermic and each will say the amount is insufficient; he must have more until he is intoxicated. Any inflationary measure adopted to prevent further " deflation " should be so cautious and so rigidly controlled that they do not exceed in degree a desirable " reflation."

Our Governments (National, State, and municipal) could do much harm by the adoption of ill-advised measures but they can be of genuine help by following wise programs of cutting costs of operation, of distributing tax burdens equitably, and of refunding debts at lower levels of interest. They must recognize that no panacea is available; there should be no attempt to perform miracles or to do what experience has shown to be impossible; this depression can not be cured by the waving of any magic wand.

As far as planning for the long pull is concerned, the social, financial, and economic problems of the world as a whole are of the utmost importance; and a good summary of these problems and of the possible methods of solving them will be found in the excellent book by Salter, entitled "Recovery: The Second Effort," with which you are no doubt all familiar.

How much can be done rapidly by negotiation toward the settlement of war debts, the revision of tariffs, disarmament, and the stabilization of currencies abroad is problematical—almost certainly much less than most people think. We must, I believe, rely chiefly upon (1) methods for reducing or deferring payment of the debts of farmers, railroads, and other individuals and corporations in this country, by private negotiation as far as possible without confiscations or costly receiverships, (2) methods for stopping all unnecessary governmental expenditures, (3) measures for keeping Federal credit absolutely sound and unassailable, (4) measures of governmental intervention (local, State, and National) for the prevention of starvation and distress among the unemployed and for safeguarding the existence of vitally essential structures during any further period of liquidation, and (5) measures for restoring and maintaining the confidence of our people until the necessary deflationary process has been completed. We should do from month to month the obviously desirable and possible things, rather than attempt prematurely the execution of plans for the far-distant future. Interest rates are falling markedly so that, in time, liquid assets will become less attractive, confidence of lenders and borrowers will increase, and ultimately the rate of investment will rise again and prosperity will return.

All will agree that one thing is now of paramount importance for the promotion of the aims mentioned, namely, the taking of steps immediately in the direction of improving the fiscal position of the Federal Treasury so as to assure our people that within a reasonable period of time there shall be a true balancing of the Federal Budget—not a "sham" balancing. Without this, domestic economic stability, the fortification of the credit of the Government, the restoration of more normal conditions in the money markets, and the revival of public confidence would seem to be extremely difficult or impossible. We dare not continue indefinitely to incur deficits of two or three billions of dollars per year. To move toward a balance of the Budget, the executive and the legislative divisions of the Government must undoubtedly arrange for great lowering of governmental expenditures; it dare not expect too much yet from increase of governmental income, though a beer excise tax and a small sales tax might help some.

How can governmental expenditures (which for Federal, State, and local governments amounted last year to one-third of the total income of the American people) be drastically diminished? Some reduction of Federal expenses can be made by refunding the higher coupon Government bonds; much by the repeal of the eighteenth amendment and the abandonment of prohibition enforcement; more by eliminating extraordinary outlay in the form of money spent for futile experiments for stabilization, for emergency loans, and for construction subsidies (except for the actual prevention of starvation and distress); but most of all, perhaps, by reduction of the amounts now being spent for the war veterans.

Let me say at once that no one has more sympathy than I for the disabled war veteran and his dependents, whether the disability was service connected or not. In the Philippine Islands for a few months in 1899, I myself wore the United States Army uniform. In my work as consultant to the Veterans' Bureau Diagnostic Center at Mount Alto, I have seen and studied many disabled ex-soldiers. For several years I have been chairman of the medical council of the United States Veterans' Bureau and have long been in close touch with the bureau's medical activities. For those reasons, I may, perhaps, be permitted to speak to you especially about expenditures for war veterans.

Our country desires to be, and has been, extremely generous to its war veterans. The combined casualties of Great Britain and France were more than twenty-seven times as many as those in America, but the World War veteran cost to America for the year 1932 (exclusive of loans) is said to have been approximately one and a half times as great as the aggregate cost for Great Britain and France, or over forty times as much per casualty. I am told that in the fiscal year ending June 30, 1932, actual net disbursements for veterans amounted to $869,000,000 and if bonus loans be included the amount was over $1,000,000,000 or approximately one-half the total actual revenue (aside from borrowings) of the Federal Government for the same period.

For the fiscal year 1933, some $204,641,848 is for disability compensation for injury or disease caused by service; $100,000,000 is for the adjusted-service certificate fund (the bonus fund) and $104,-277,554 is for disability allowances, that is, for diseases or injuries resulting in 25 per cent or more permanent disability due to diseases or injuries incurred in civil life after the war (that is to say, non-service connected). These amounts are in addition to the costs of all the medical care and hospitalization required by the veterans.

Under section 202 (10) of the World War veterans act, the hospitalization of patients for treatment of nonservice connected diseases was authorized, and since 1925 there has been a steady annual increase in the percentage of such nonservice connected cases. At the end of June, 1932, there were 23,472 such cases under treatment in hospitals, making up no less than 59.8 per cent of the total hospital load. Still more interesting is the fact that this same group accounted for 85.48 per cent of the general medical and surgical patients, and for 65.3 per cent of the tuberculous patients, whereas the percentage of neuropsychiatric cases was only 37.5. It is quite evident that the occupancy of beds in veterans hospitals is tending more and more to be by patients with nonservice connected maladies. The new hospital construction that has been required in recent years has been for these cases; some years ago there were quite enough hospital beds for all service-connected cases, without supplying more. If hospitalization is to be a mandatory right of the nonservice-connected cases, which from now on will rapidly increase in numbers, a material increase in hospital beds beyond the 45,000 authorized by the act of March 4, 1931, will be necessary after 1935. The expenditure for new hospital facilities for World War veterans since 1919 has already amounted to more than $100,000,000. That is for new hospital facilities alone.

Generosity to veterans who were diseased or injured because of the war, and, when necessary, to their dependents is highly laudable. No American would think for a moment of depriving the war-torn soldier of adequate compensation and good medical care. Sympathy for veterans who incurred no disability as a result of military service but who in civil life afterwards became more or less disabled is, of course, also in place, but no more in place than sympathy for members of the nonveteran population similarly disabled. If this be true, then the disability allowance law (for nonservice-connected disease or injury) should be repealed; the amendment to the veterans act which allows free hospitalization to veterans of all wars without regard to the nature or origin of their disabilities should be repealed; and no further appropriations for the construction of veterans' hospitals or homes should be made. That there should be no prepayment of the adjusted-compensation certificates (bonus) ought to go without saying. To continue all these special favors on an enormous scale to veterans with nonservice-connected disease or disability to whom the country is under no greater obligation than to its other loyal citizens is a great injustice; they should, I believe, be discontinued through legislation at the earliest possible moment.

The CHAIRMAN. An injustice of $400,000,000 a year.

Doctor BARKER. Yes, sir. An enormous amount.

Senator KING. Doctor, have you made any investigation to determine the number who were overseas that are now beneficiaries of these acts of Congress?

Doctor BARKER. I have not the exact numbers, but a large proportion were not overseas at all.

Senator KING. That is my information. I was wondering if you had any information so as to determine the number who were in actual combat and are receiving compensation?

Doctor BARKER. That, also, of course, is very much smaller than those who went overseas as a whole.

Senator KING. Then, as a matter of fact, a considerable number of those who were never overseas are receiving these benefits to which you have referred?

Doctor BARKER. Undoubtedly; yes, sir. And there has been a great deal of unfortunate presumptive injury, presumptively due to the war itself.

Senator KING. Have most of the examinations under which these benefits are being received been made by men who had been in the Army? That is to say, have not the examinations been made by ex-service doctors?

Doctor BARKER. The tendency of the bureau, of course, has been to favor ex-service men in the personnel. But there are a great many in the personnel who were not in the service.

The CHAIRMAN. Well, we had better repeal the law, preventing the payment of compensation to that class of soldiers. I have introduced a bill for that purpose. I have not any apprehension what is going to happen to it at this short session.

Doctor BARKER. You mean the disability allowance?

Senator KING. Yes.

The CHAIRMAN. But if I were going to be in Congress at the next session of Congress I would see that we would get a vote on it anyhow.

Doctor BARKER. It seems to me scarcely thinkable that the American people, when they know these facts, will stand for anything else.

Based upon figures that are reported to be as reliable, it would appear—and I am making this amount much lower than most estimates—that some two hundred or three hundred million dollars per year could, by such legislation, be saved almost at once——

The CHAIRMAN. $400,000,000.

Doctor BARKER. Some thing $500,000,000 or $600,000,000, but I have put it low, because I would rather err on the side of conservatism than on the side of overstatement. Much larger sums will be involved later on. They are so enormous that we can not contemplate them.

Unless legislation to bring this about is promptly enacted, expenditures will steadily increase and probably the mass of citizens other than veterans will demand free medical care and hospitalization!

The ultimate balancing of the Budget is so important for the welfare of the country that delays in arranging for it would seem to be exceedingly dangerous. The enactment of legislation, even when urgently required, appears to be a slow process. For our present emergencies some suggestions recently made are of interest. It has been proposed that, without interference with real liberty of speech in the Senate, the Presiding Officer be permitted to hasten proceedings by means of a new rule through which, in debates, remarks must be germane to a subject under discussion.

Again, it has been hinted that, if it could be made legal, it might be wise to assign, temporarily, certain autocratic powers to the President until the emergency has passed. And, finally, majorities in the Senate and House might enter into a "gentlemen's agreement" for the prompt passage of any legislation that the President (after consultation with experts) thought was of immediate urgency. I am no politician and these suggestions may not merit consideration. But, at a time like the present, avoidable obstacles should not be permitted to prevent quick action when it is of very great importance for public welfare.

You, yourselves, know the fiscal situation of the Federal Treasury well and you will doubtless learn of many practical measures of economy to which I have not referred at all. But those that I have mentioned would seem to be definitely indicated—above all stringent restriction of expenditures for war veterans. The American Government must be brave and refuse to yield to sectional pressure against general public interest.

The CHAIRMAN. Is that all you have to say, Doctor?

Doctor BARKER. Yes.

The CHAIRMAN. We thank you for your statement.

The next witness is Edward A. O'Neal.

## STATEMENT OF EDWARD A. O'NEAL, PRESIDENT AMERICAN FARM BUREAU FEDERATION, WASHINGTON, D. C.

The CHAIRMAN. State your name and address for the record, Mr. O'Neal.

Mr. O'NEAL. Edward A. O'Neal. I am president of the American Farm Bureau Federation. Munsey Building, Washington.

The CHAIRMAN. You may proceed with your statement.

Mr. O'NEAL. The depression—its causes and remedies.

The committee has asked to receive suggestions concerning the causes of the depression and possible legislative remedies. In responding to that invitation, it shall be my purpose to point out first what I conceive to be the fundamental causes of our present economic distress, and secondly, to suggest remedies to correct the difficulties and prevent their recurrence.

Two serious mistakes have been made. First, there was the failure to recognize the seriousness and the far-reaching character of the depression. Second, no adequate attempt was made to check the deflation. Relief measures which were passed were directed at alleviating the effects, rather than the fundamental causes of the depression.

Some leaders say that nothing fundamental can be done, deflation must continue to the bitter end. This means reduction of wages, salaries, taxes, and all fixed charges, bankruptcy, unemployment, and writing down of debts. Those who say nothing fundamentally can be done are willing to slow up the process by extending additional credit and other placatives. In other words, they offer in the way of relief death through slow torture instead of outright extinction. If we must choose between the two, I prefer the latter—it is less painful and less costly.

It is nothing short of national disgrace that we allow such conditions to develop, and it will be the greatest economic crime in history if nothing is done to check the process of deflation. We have learned how to harness Niagara, how to measure in millionths of an inch, how to treat and cure dreaded diseases, but when we are confronted with the economic problem, a collapse in commodity prices, some throw up their hands in despair, and say we can do nothing about it. I challenge this philosophy of despair and assert that, to a very large degree, this catastrophe was preventable and that it is now curable.

The fundamental cause of the depression was the collapse in the general price level. The decline in the general price level destroyed the purchasing power of agriculture, our basic industry, and undermined the purchasing power of the masses of consumers in urban and industrial centers.

To remedy these conditions and restore the Nation to prosperity, I propose the following remedies, first, rehabilitate agriculture and restore its purchasing power to a normal basis; by (*a*) the enactment of surplus control legislation to restore agriculture price parity with other groups; (*b*) tariff adjustment to restore foreign trade, and to give the benefit of the home market to agriculture as much as industry; (*c*) reduction of taxes and redistribution of the tax burden on a more equitable basis; (*d*) provision of adequate agricultural credit at rates as low as other groups enjoy; (*e*) reduction of transportation costs on farm products to a basis comparable with farm prices; (*f*) promotion of farmers' cooperative organizations; (*g*) guarantee of bank deposits in order to restore confidence and protect the public; (*h*) develop national planning for the rehabilitation of rural life.

The second basic remedy which I propose is the adoption of a national monetary policy which will raise commodity prices and stabilize the purchasing power of the dollar at the average level in the period 1921–1929.

In times of deflation agriculture and producers of other basic commodities are especially hard hit, because with deflation prices of agricultural products and other raw materials fall most. From 1919 to 1921 prices of farm products declined 44 per cent, while prices paid by farmers for commodities bought declined only 24 per cent.

Senator GORE. What were the dates, Mr. O'Neal?

Mr. O'NEAL. 1919 to 1921. From January, 1921, to January, 1933, farm prices declined 56 per cent, or to about one-half the pre-war level, while prices paid by farmers declined only one-third. Since 1921 farm prices have been low in relation to other prices. The fixed charges of agriculture have remained high. Interest and taxes are about two and one-half times the pre-war level. Freight rates on farm products are 50 to 60 per cent above the pre-war level.

In the years 1925 to 1932 agriculture, with 25 per cent of the total population, received only 13 per cent of the national income. From 1919 to 1932 the gross farm income declined from seventeen to five billion dollars. This decline has destroyed the purchasing power of agriculture, and paralyzed business of merchants, lawyers, doctors, clerks, bankers, and small factories in the country towns and villages.

This inequality of income, in part, is the result of various national policies.

Cotton, wheat, and hog farmers sell their products to a large extent on a world market basis, " a free-trade basis," because the tariffs, if any, on agricultural products which are exported are largely ineffective. Hog, cotton, and wheat farmers have to buy commodities which are highly protected by tariffs.

Another discrimination which has contributed to the inequitable distribution of income to agriculture is the inelasticity of fixed charges which agriculture has to meet. Freight rates, interest charges, and taxes have been out of line with farm prices for more than a decade.

Instead of building up the buying power of agriculture and labor, who constitute the main market for the goods of the country, we have allowed a concentration of wealth and income to go on unparalleled in our history. This concentration of income has been greatly aided by enormous concentration of capital through mergers, consolidations, and monopolistic control. Yet some of our business men are advocating the further weakening of our antitrust laws so bigger and more powerful monopolies can be formed and so they can operate with less restraint. I fear such a policy would ultimately drive the country to a state of socialism or something worse.

Agriculture has suffered more than most other groups from the inequitable distribution of income and deflation in commodity prices. When prices decline, distributive costs lag and an increasing proportion of the consumer's dollar is absorbed in distributive costs and a decreasing proportion is returned to the producer. Who can say that the wheat farmer receives a fair share of the consumer's dollar when he receives only 13 per cent of the retail price of bread and the cotton farmer when he receives only 2 to 5 per cent of the retail price of a cotton shirt.

Senator GORE. Pardon me, Mr. O'Neal. What per cent?

Mr. O'NEAL. Two to 5 per cent.

With the collapse in commodity prices, we are in the midst of the strange paradox of plenty in the midst of want and privation. Granaries are bulging with grain, but honest and able men are hungry and begging for food. Warehouses are filled with cotton and wool, but many are dressed in rags. Twelve million workers are unemployed. The equipment, the workers, the raw materials, the transportation facilities are all available, but the exchange of goods and services is at a standstill. The system of exchange has broken down.

Faced with this situation, many have resorted to scrip and barter whereby commodities and services are exchanged. To-day 144 communities in 29 States are using wooden money or scrip in place of currency. The Constitution of the United States says (Art. I, sec. 10, par. 1):

> No State shall * * * coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts. * * *

In order to rehabilitate agriculture and restore its purchasing power, a broad policy is required. First, we urge the enactment of a surplus control bill making it applicable to at least five basic commodities—wheat, cotton, hogs, tobacco, and butterfat—coupled with production control. This should constitute permanent legislation instead of being thought of as temporary emergency legislation. Such legislation would place over a billion dollars of additional purchasing power into the hands of the farmers, which in turn would be spent for commodities and services and create new employment. There would be further demand for farm products, thus reversing the present process of destruction of trade to stimulation of trade.

This legislation is based on the principle that the farmer is entitled to a tariff benefit on the basic farm crop, including at least wheat, cotton, tobacco, hogs, and dairy products. The plan should be self-supporting and not involve a Government subsidy. The costs should be equitably distributed over the entire crop benefited. There should be provision for control of production in order to prevent the accumlation of undue surpluses, which would defeat the purpose of the plan.

The CHAIRMAN. Mr. Witness, do you think that can possibly prove effective?

Mr. O'NEAL. I think so, Senator.

The CHAIRMAN. In all the history of the world it has failed so far. Why do you think it is going to be successful now?

Mr. O'NEAL. In the history of the world, Senator Smoot, it has not been tried on the basis which we are now suggesting. If you trace it and check it very carefully you will see that in this plan that is proposed there is a very fundamental principle involved that has not been used elsewhere. In other words, to control the situation there must be a plan of production and control, temporarily at least.

This sort of legislation has been agreed upon by all the major farm organizations. The general plan in the main conforms to the specifications for farm relief which Governor Roosevelt outlined in his Topeka speech. He has told me that he still stood for what he promised at Topeka. The farmers of the country are looking forward that the pledges for a new deal to American agriculture will be promptly fulfilled.

A second aid which we propose in the rehabilitation of agriculture is the adjustment of the tariffs to restore export markets for farm products and assure to agriculture the benefits of the domestic market to the same extent as enjoyed by industry. Tropical starches, jute, blackstrap molasses, vegetable, animal, and fish oils which are imported in great quantities and displace a large volume of domestic agricultural production.

Third. We must reduce farm taxes and redistribute the tax burden more equitably. Immediate tax relief is imperative.

Fourth. Agriculture must have more effective credit facilities. In addition to a long-time program of reorganization and consolidation of agricultural credit agencies under proper governmental regulation, there is an emergency situation which must be met immediately. A virtual state of revolt against orderly legal processes is under way in many sections of the country. To meet this emergency the farm groups have agreed upon a program designed to stop the wave of foreclosures. The plan proposes (*a*) to establish a debt conciliation commissioner in each county to secure voluntary adjustments of farm debts with little additional expense to the farmer and avoid the stigma of bangruptcy; (*b*) make available $1,000,000,000 at 3 per cent or less; (*c*) appropriation of additional funds to Federal land banks and national farm-loan associations; (*d*) liquidation of the joint-stock land banks. This program, in the main, is embodied in the bill (S. 5515) introduced by Senator Robinson of Arkansas and in proposed amendments to the bankruptcy act reported recently by the Senate Judiciary subcommittee.

Fifth. To restore confidence the banks must be made safe for depositors. To that end we favor the Steagall bill for the guarantee of bank deposits.

Sixth. We must reduce the cost of transportation.

Seventh. Cooperative marketing should be promoted, expanded, and strengthened until farmers are given control of the marketing of their own products.

Eighth. We propose the development of national planning in agriculture by bringing about closer cooperation between organized agriculture and all the governmental agencies set up to aid agriculture. Also, a new national land policy should be put into effect, a policy of conservation instead of expansion. The progress of civilization is a very slow and painful process. Progress comes only after experimentation, either individually or collectively. The land-grant colleges, the agricultural extension service, the agricultural experiment stations, and the Department of Agriculture are great fundamental institutions set up by our Government to promote the progress of agriculture. They should be coordinated more closely among themselves and with organized agriculture to formulate and carry into effect a broad program for the rehabilitation of rural life.

The primary cause of the present maelstrom in which the Nation finds itself is the collapse of commodity prices. The commonly accepted explanation of the collapse in commodity prices is overproduction and the only remedy is curtailed production.

From 1839 to 1914 the total production of food and feed crops in the United States increased at the rate of 3.02 per cent per year and from 1915 to 1929 increased 0.6 per cent per year. Production for the four years 1929 to 1932 was below normal.

The production of food and feed crops per capita in the United States increased from the sixties to the end of the century. From 1900 to 1914 production per capita was approximately constant and since that time has declined. The production of food and feed crops per capita in the United States in 1930, in 1931, and in 1932 was less than in any year since 1894. The low prices of farm products in the United States are not due to a general overproduction of farm products in this country.

If we do not find a satisfactory explanation for the low price of farm products in a general overproduction, the explanation of the low prices of individual products, such as wheat, corn, hogs, or cotton, might be overproduction. Let us see.

In 1932 the wheat production per capita in the United States was the lowest for any year since 1866. Furthermore, there is no striking increase in world production of wheat per capita. In fact, in 1932, the world production of wheat per capita was 18 per cent less than that in 1928. The low per capita production was the same as in 1920. The present low exchange value of the price of wheat, probably unparalleled in history, is not due to an overproduction of wheat in the United States or in the world.

The production of corn per capita in the United States does not indicate any excessive overproduction. The corn crop of 1932 is often referred to as a large crop, but the production per capita last year was less than in any year since 1875 except for the drought years, 1894, 1901, 1924, and 1930. The present low prices of corn are not due to overproduction.

In 1932 the production of cotton per capita in the United States was the lowest since 1877 except for the small crops from 1921 to 1923. The low prices of cotton are not due to overproduction. It is true that large stocks of cotton have been piled up but these large stocks of cotton are not the cause of the low price of cotton. They are the result of the low prices of cotton which was the inevitable accompaniment of the collapse of commodity prices. These low prices resulted in unemployment of untold millions of laborers who could not buy and consume their normal amount of cotton; and as a result stocks piled up.

The per capita production of pork and lard has not shown any marked change.

High production, therefore, is not the cause of the agricultural depression nor an explanation of the low price of corn, hogs, wheat, or cotton. Nevertheless, with the collapse of commodity prices, there has been a disarrangement of the world's international trade. Countries the world over have raised barriers to protect their own producers of farm products. The Ameican Farm Bureau Federation holds that this maladjustment should and can be corrected by the policies laid down in the farm-allotment plan.

Turning to the problems of our city cousins, we find no indication of overproduction in the cities.

In 1932 the production of lumber per capita in the United States, widely used in the construction industry, was about the same as it was in 1839, almost a century ago. The present low prices of lumber are not due to an overproduction of lumber.

The coal production per capita in the United States is at a very low level. The production of pig iron in 1932 was only one-fifth of that in 1929 and about the same as that in 1880. The present low prices for pig iron are not due to overproduction.

A careful study of the facts indicates that there has not been nor is there at the present time an overproduction in our urban cities. How can there be a general overproduction of products in the cities when there are more than 12,000,000 unemployed?

If we do not find a satisfactory explanation for the collapse in commodity prices in overproduction, then we must turn our attention to the monetary aspect of the problem. It has been clearly demonstrated beyond all reasonable doubt that the general level of commodity pricess has been controlled by the ratio of the world monetary stocks of gold to production of basic commodities in the world. The goods of the world are exchanged for the gold of the world, or for the currency or credit which rests upon the gold stocks. If goods come on the world markets more rapidly than monetary gold stocks increase, prices fall.

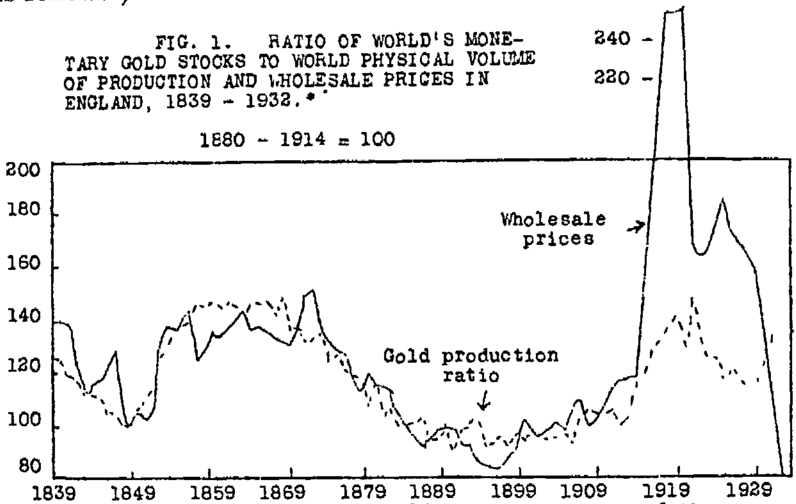
When gold stocks increase more rapidly than goods, commodity prices rise. This ratio held for 75 years before the World War. (Figs. 1 and 2.) When all the world left the gold basis during the World War, prices departed from this normal ratio. Due to the reduced demand, gold fell in value and commodity prices rose. As one after another of the various countries returned to the gold standard, the demand for gold increased; its value rose and commodity prices collapsed to the normal ratio that previously existed between world monetary gold stocks and the world physical volume of production of goods. We are not confronted with a theory. We are now confronted with a fact—commodity prices have returned to the normal ratio of gold to production that existed for three-quarters of a century prior to the World War. This ratio is the first and fundamental law of prices which we must understand if we are to explain the collapse of commodity prices; which, as I previously stated, is the primary cause of the present maelstrom.

Prices can not be raised by easy credits so long as we are on the gold basis. The expansion of credit by the Reconstruction Finance Corporation and the Federal reserve banks was predicated on the assumption that commodity prices could be raised by credit. A bale of cotton in New York sells for about 1.6 ounces of gold, and in Liverpool for about 1.7 ounces. Our great basic commodities sell at approximately the same price in terms of gold the world over, except for transportation and other charges arising from artificial barriers. Furthermore, the general level of commodity prices alway fluctuates about the level of basic commodity prices. Therefore, an attempt to raise commodity prices by expanding credit is an attempt to cheapen gold and raise the whole level of commodity prices. The attempt of a nation to expand credit sufficiently to restore commodity prices means making gold cheap.

(Figures 1 and 2 above referred to are here printed in the record, as follows:)[1]

FIG. 1. RATIO OF WORLD'S MONETARY GOLD STOCKS TO WORLD PHYSICAL VOLUME OF PRODUCTION AND WHOLESALE PRICES IN ENGLAND, 1839 - 1932.*

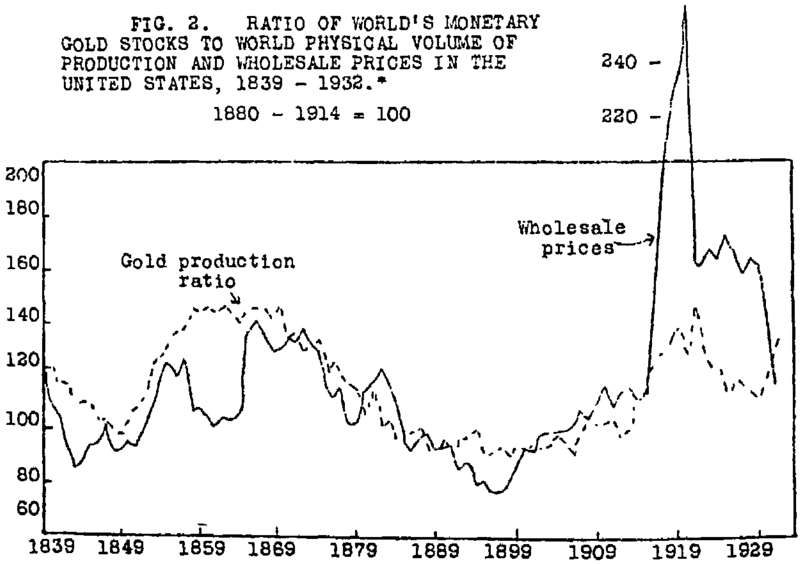
1880 - 1914 = 100



For the 75 years before the World War, prices rose if the world's monetary stocks of gold increased faster than the production of other things and fell if gold increased less rapidly.

FIG. 2. RATIO OF WORLD'S MONETARY GOLD STOCKS TO WORLD PHYSICAL VOLUME OF PRODUCTION AND WHOLESALE PRICES IN THE UNITED STATES, 1839 - 1932.*

1880 - 1914 = 100



Commodity prices in the United States have moved with the ratio of the world monetary stocks of gold to the world physical volume of production, except during the Civil War and during the World War periods. But in each case, after the wars were over, prices re-

[1] These charts were reproduced from Prices by G. F. Warren and F. A. Pearson, published by John Wiley & Sons, New York City.

turned to this normal ratio of gold stocks to production of basic commodities.

It is very easy to expand currency sufficiently to raise commodity prices to the debt level but it would be impossible to redeem these dollars with 23.22 grains of gold. The printing presses never changed materially the relative values of gold and commodities.

The bitter-end deflationist tells us to (1) Restore confidence; (2) Balance the Budget; and let nature take its course.

It is quite generally assumed that if we restore confidence that prices will rise. I insist that if we stabilize prices, confidence will be restored. Prices are the only guide to production and consumption. When they are stable, man knows how to act. When they collapse, we are like a gassed and wounded regiment on no man's land.

The bitter-end deflationist tells us that the first step is a balanced Budget. I think it is fair to assume that my constituents are also of the same opinion. Superficial judgment tells us that the Federal, State, municipal, and local government agencies, railroads, the manufacturers, banks, farmers, salaried classes, employed laborers, unemployed laborers and the butcher, baker, and candlestick maker should all and always balance their budgets. If a governmental agency, corporation, or individual do not balance their budgets, they borrow money or buy goods on credit, which is the same thing. The railroads of America are not balancing their budgets, so they borrow from the Reconstruction Corporation to balance their budgets; something has happened to the budgets of the banks and they have also borrowed from the Reconstruction Corporation. There are 12,000,000 unemployed, and there are at least 12,000,000 family budgets that are now unbalanced.

How shall we balance the budgets of these unemployed? There are only two ways, starvation or public and private charity. No one will loan money to industry, nor to railroads, nor to farmers, nor to the unemployed laborers. No one will lend much to the State, municipal, or local governmental agencies. Confidence is so shaken that Federal securities are the only method of providing the essential capital at this time. There is one and only one source of funds by which we can balance the budgets of untold millions of laborers, the railroads, corporations, and the like; and that is the United States Treasury. With this accumulation of burdens, is it possible for Congress to banance the Budget? I believe I can visualize, but hesitate to put into words, what would happen if we actually balanced the Federal Budget, say in 1933.

The fundamental cause of our unbalanced Federal Budget is the collapse in commodity prices. History tells us that when commodity prices decline sharply, the Federal Government has always had a deficit; and when commodity prices rise, these deficiencies fade away and surpluses occur.

The bitter-end deflationists tell us that we should let nature take its course. If we are to follow this policy, I think, we should face the task courageously and speed up the process; because when the deflation is completed we can once more move forward. Before attempting to complete the process, I think, we should stop and consider briefly the problems before us.

If we do not check this mad sweep of deflation, if we do not adopt a policy of inflation, what are the alternatives? Gentlemen, there is just one alternative. Those of us who are alive to the experiences of other generations in this kind of thing know that there is just one alternative. The alternative is complete liquidation, a wiping of the whole slate down to the deflated price level that now exists and which stretches out ahead of us for several years.

And I say to you that the vast bulk of that writing-down process now remaining lies ahead of us and is outside of agriculture. It will strain your industrial and urban community until the hoops cracks to do this thing; but you will have to do it. Neither agriculture nor the country can go ahead with any semblance of progress until it is done. The farmer has taken his licking for 12 long years. He has readjusted his business even down to the point of throwing overboard what he thought was a justly earned high standard of living. The farm business has largely made readjustments to this new low level.

The holders of common stocks have also been rather thoroughly liquidated. The wringer has worked very efficiently and very promptly.

City real estate, and the bondholder have not been thoroughly liquidated. Now it is the turn of these and other members of the industrial and financial community, and time will tell whether or not the country can go through with the process.

What does this scaling-down process mean? I am not certain that the eminent spokesmen for deflation know what it means. I am very certain that most of the folk do not realize what it means. If they did, we would settle this problem promptly. You will have to cut down the pay envelope of every worker. You will have to clip all salaries. You will have to scale down a large part of all private debt, for existing debts absolutely can not be paid at the low price level. You will have to put up with wholesale defaults of public debt; indeed, hundreds of public units are already bankrupt. You will have to reduce taxes drastically, and you may have to reorganize the whole structure of government.

You will have to write down all costs and capitalizations and while the process is going on it may be hoped that the load of corporate bankruptcies and failures will not drag the business ship completely under. You will have to endure the shocks of further waves of security declines, of wholesale bank failures, of the crash of great commercial concerns, and vanishing private fortunes. You will have to cut freight rates, whether you like it or not, and you will have to live through a chapter of railroad receiverships that might well appall a bank, university, or life-insurance president, to say nothing of the railroad men themselves. In short, you will have to scale down the entire structure of wages, charges, capitalizations, and costs of every kind until they are in adjustment with the lower price level that prevails.

Moreover, while these economic thumbscrews are being turned, you will have to hold down two hot kettles that are already in danger of boiling over. One of these is in the cities. We call it unemployment. If the starvation and misery which seethe within this unemployment problem ever get out of hand, inflation will need no further argument. The other thing that is near to boiling over is the mortgage and tax delinquency problem. You will have to keep always one jump ahead of these unemployment and tax-delinquency problems while the deflation program is being carried through; for if they ever overtake us, no man can predict the outcome.

But, finally, it is probable that the crowning futility of this program lies in the fact that the country will be forced off the gold standard before deflation runs its course.

So, in few words, this is the alternative to a sane and saving program of inflation. After the panic of 1837 and after the panic of 1873 our forefathers went through this hell of deflation. In each of those periods the deflationists triumphed. They put the entire country "through the wringer." The wiped the slate down clean and left it to their children to start over. Can we do this again? We can go through this purgatory, provided something does not boil over. The bitter-end deflationists tell us that in the past we have always been able to complete the process of deflation. This is true. But are past experiences an indication of the probability that we can complete this one? In the panic of 1837 and in the panic of 1873 commodity prices collapsed about as much as during the present maelstrom. This, however, is only a part of the story. The severity of the collapse depends not only on the amount of the collapse, but on the rate of the collapse. In the last three years commodity prices fell 36 per cent. During the panic of 1937 commodity prices fell 43 per cent in six years. And in the panic of 1873 prices fell 39 per cent in six years. Gentlemen, I am not certain that we can complete the process of deflation.

I do not want to dwell too long on the point of view of the bitter-end deflationists; but as I scan their literature I come to the inevitable conclusion that in their opinion there is no middle ground between a completion of the deflation process and a wild running of the printing presses of the country. This bogey frightened me until I looked into the matter. After careful consideration, I find that there are very few instances of a modern, first-class Nation running the printing presses until the money was "not worth a continental." During the revolution France had just such an experience. During the American Revolution we have another illustration of virtual repudiation. The Russian revolution and the German revolution are striking examples. The evidence indicates that this bogey has been greatly magnified and that monetary repudiation has gone hand in hand with revolution. I am firmly convinced that the destiny of this question is safe in the hands of Congress and that we will not run the printing presses unless the event that has always been associated with this bogey occurs—revolution. Our program is sound, conservative, controlled inflation, and will result in stability, not repudiation. We already see the first steps toward revolution in demonstrations of civil disobedience by the conservative element of the community—farmers and property owners.

The country is divided between those desiring inlation and those who desire that we complete the process of deflation. The northeastern corner of the United States is the financial center of the United States and at times it boasts that it is, or soon will be, the financial center of the world. The rest of the country figuratively speaking is in debt to this small area. The insurance companies, banks, trusts, private investors and others hold a goodly part of the mortgages, bonds, and other fixed obligations of the country. I believe that much more time is being devoted by the eminent spokesmen of the creditor class than by representatives of the debtor group. I do not want to be an alarmist, but this latter group will be heard from—if not here, then elsewhere—and I know not how, or when, or where.

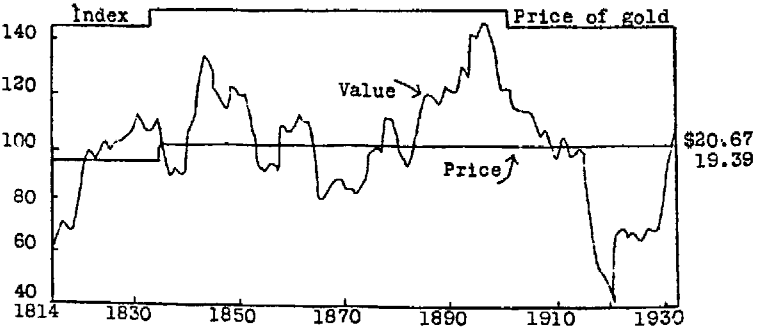
I am fearful that we can not complete the process of deflation. I believe that we can and we should raise commodity prices; and I further believe that if we act promptly and wisely that we need not fear the printing press bogey that has been used so effectively. My platform and the platform of the organization for which I speak is that we should immediately take steps to raise commodity price to the 1921–1929 level. That is the approximate level to which debts, taxes, wages, salaries, and all other human relationships are most nearly adjusted.

There is one and only one way of doing this, provided we maintain the gold standard. Since it appears to be the desire of a majority of the people that we maintain the gold standard, our primary problem is to manage the gold standard instead of the gold standard managing us.

The gold dollar contains 23.22 grains of fine gold. This is merely saying that the Government agrees to buy gold in unlimited quantities at a fixed price of $20.67 per fine ounce. The gold standard calls for a redemption of any of the substitute used for gold when there is such a demand.

The price of corn varies from time to time, and the value of corn, that is, the amount of comodities, taxes, and debts for which it will exchange, varies from time to time. In the case of gold, there is a striking difference. The price is fixed and the value of gold varies. (Figure 3.)

FIG. 3 PRICE OF GOLD AND VALUE OF GOLD IN THE UNITED STATES, 1786-1932
1910-14 = 100



The price of gold is fixed, but the value fluctuates violently.

The increase in the value of gold is the primary cause of the present maelstrom. In the last three years the value of gold has risen 45 per cent and we have no peacetime record of so drastic a rise in the value of gold. This being the cause of the difficulty, the problem is to deflate the value of gold, that is raise the price of gold. We propose that the price of gold be raised from $20.67 to $30 per fine ounce by reducing the weight of gold in the dollar from 23.22 to 16 grains. This will raise commodity prices 45 per cent—$30 divided by $20.67 equals 1.45 or 23.22 divided by 16 equals 1.45. A 45 per cent increase in the price level would restore prices to approximately the same level as the average for the period 1921 to 1929.

This is only the first part of our monetary program. Our organization maintains that it should be the policy of this Nation to establish a permanent stable measure of value; just as we have established stable measures of weight and length. We propose that since gold has always varied in value because of the fixed price, that we stabilize the value by varying the price of gold. Congress should authorize some governmental agency to raise or lower the buying price of gold; and that the changes shall not be based on the judgment of any person or group of persons, but shall be based on an index number of wholesale prices of commodities as calculated by the United States Bureau of Labor Statistics. This will make our money really a medium of exchange and not a commodity, the handling of which will make a profit to the manipulator.

It, therefore, becomes the policy of the United States Government to (*a*) establish and (*b*) maintain the price level existing from 1921–1929. This would require that all coinage of gold cease and that the gold be held by the Treasury in bars of convenient sizes. All old gold coins should be reclaimed at their bullion value.

There are two great objectives to this proposal. (1) If the price of gold is raised, who will profit from the advance in price? Obviously the holders of gold will sell it back to the Treasury at the new price. The maximum dollar advance in the value of the gold would be less than $2,000,000,000. The dollar advance in the property of America would exceed $100,000,000,000. The gold speculators would be pikers compared with the holders of physical goods. Gold can only rise 45 per cent; property will probably rise more.

If the price of gold is raised what will be the effect of all contracts carrying the gold clause? The price of all such securities will rise by 45 per cent unless Congress invalidates these contracts; and Congress can and should invalidate them. Why should we guarantee the bondholder a given amount of gold rather than a given number of dollars? No other first-class modern nation is confronted with this ridiculous problem. So long as the given amount of gold and the dollar are synonymous there is no problem. If the dollar is changed there is no justifiable reason for a debtor to sell his product in one kind of money and pay interest in terms of another. This gold clause is found in Federal, State, municipal, foreign, railroad, utility and industrial bonds. It is not found in land bank bonds nor in farm mortgages held by insurance companies; nor is it included in your insurance policy.

It is the policy of our organization that whatever dollar we use to pay wages and to buy and sell the commodities of agriculture and industry is good enough for the creditor; and we recommend the enactment of legislation that will invalidate this so-called gold clause and all contracts carrying it.

The fundamental thesis of our organization is the establishment of a stable measure of value by varying the buying price of gold. It is quite frequently, but unjustly, assumed that any departure from our present policy of maintaining a fixed price for gold, $20.67 per fine ounce, is unsound monetary legislation and is in violation of the "sound-money" principles laid down by the Republican and Democratic platforms. It has been further maintained that the "impregnable position" of the dollar must be maintained so that our dollar will "ring true on the counters of the world." These rather striking phrases send a patriotic tingle up the spinal column; the intention being to stiffen the backbone of those doubting Thomases who are about convinced that we should not continue to maintain a fixed price for gold.

The dollar that "rings true on the counters of the world" is nothing more than a dollar that is stable in terms of foreign currency, marks, francs, lira, and the like. This is a hard dollar with 23.22 grains of gold. This is sound money based on unlimited purchase of gold at $20.67 per ounce. There is a much more accurate interpretation of the phrase, sound money. We believe that sound money is a dollar that "rings true on our domestic counters." Our present dollar, which is fixed as to weight, is variable in value. The very fact that the amount of taxes, debts, services, and commodities that this dollar will exchange for is always changing prevents this dollar from "ringing true on the domestic counters" of America. The present so-called sound dollar is therefore in reality an unsound dollar. Our proposal makes our present unsound dollar a sound and honest dollar. We propose that the price of gold which is now fixed be varied; and the present value which is variable be fixed. This has been dubbed a "rubber dollar," and rightfully so; but the inference which I attach to that interpretation is quite different from those who oppose our program. I care not whether you are Jew or Gentile, Democrat or Republican, bitter-end deflationist, or inflationist, you will agree with me that our present money, which is based on the fixed price of gold at $20.67 per fine ounce, is hard and sound as to weight, and rings true on the counters of the world, but that fixed price makes it variable as to value and prevents it from ringing true on the counters of the Nation.

We have never had a dollar that was not variable in value that was based on a fixed price for the metal on which it was based, and it is highly improbable that it ever will occur. At present, we have a dollar that is rubber as to value and sound as to weight. The American farmer wants a dollar that is rubber as to weight but is stable in terms of debts, taxes, services, and commodities which he buys and sells. He wants an honest dollar.

At the present time there are only three countries that have been able to continuously maintain their pre-war fixed, legal, buying prices for gold—Netherlands, Switzerland, and the United States. Germany, France, and Italy are to-day on the gold standard. France and Italy have both raised their buying prices for gold.

Since 1929, 33 countries have found is impossible or inexpedient to maintain their respective fixed legal prices for gold and abandoned the gold standard. It is quite generally asserted that these countries have managed currencies. They are in reality varying the buying prices of gold and maintaining comparatively stable commodity prices.

Italy revalued the lira December 22, 1927—that is, raised the buying price of gold on the basis of about 4 to 1. Her internal price level is therefore about four times that in the United States. Since 1927, Italy has maintained her new buying price for gold. From 1929 to 1932, commodity prices in Italy and the United States have declined persistently. (Figure 4.) The steady decline in prices in both countries has resulted in a contraction of business and a persistent decline in freight-car loadings. (Figure 5.)

Right here I should like to observe that on yesterday I read in the little periodical called Time, a very pertinent statement along that line about Italy. That article goes on to say:

> As to the budget Il Duce boldy ordered the then Finance Minister, Antonio Mosconi, to state, last June, that for the present and during the economic process the Government can not balance the budget, being $158,080,000 or at $3.75 per capita, compared to the current French deficit of $9.85 per capita, or the United States per capita deficit of $12.22.

The United States has a dollar based on a fixed price of gold, a dollar which is sound and hard as to weight but variable as to value. The lira is likewise rubber as to value and fixed as to weight. The same principle is shown for Germany. Germany has a mark that is rubber as to value but fixed and sound as to weight. These countries maintain fixed legal prices of gold and prices in both countries have declined with remarkable similarity. (Figure 6.) In both there has been a slow, persistent and remarkably uniform decline in freight-car loadings. (Fig. 7.)

The same principle has been demonstrated for France. The franc, like the dollar, the lira, and the mark, is rubber as to value; and sound, hard, and fixed as to weight. In these countries, since 1929, the bitter-end deflationists have triumphed, prices have declined and business has slowly melted away.

When a country suspends gold payment, it can establish any price level it desires. Sweden suspended the fixed legal prices for gold September 29, 1931. Prior to that time, commodity prices declined. Since that time Sweden's internal price level has stopped declining and by varying the buying price for gold has managed her currency and maintained commodity prices at a comparatively stable level. This is in bold contrast to the persistent decline in prices in the United States. (Fig. 8.) Since Sweden has stabilized her price level by permitting the price of gold to vary, the decline in car loadings has been retarded. This again is in bold contrast to the persistently diminishing amount of freight carried by our railroads. (Fig. 9.) The Swedish krona is sound as to value but is rubber because the price of gold varies. This is the reverse of our dollar.

England suspended gold payment September 21, 1931, and the price of gold in England has varied. Since that time commodity prices have been maintained at a comparatively stable level, but our price level has continued to decline. (Fig. 10.) In both countries, pig iron production declined from 1929 to 1931. Since the suspension of gold payments, pig iron production in the United Kingdom has been comparatively stable at a relatively high level. (Fig. 11.) In 1932, England produced more steel than in 1931. During this period there has been a persistent tendency for production to decline in the United States. Since the suspension of gold payments, England has had a variable price for gold—a pound that was rubber as to price but sound as to value. The reverse of our dollar.

Senator GORE. I saw a statement the other day in the press that in England in terms of the pound sterling it had been fairly stable, but that gold prices in England had declined 23 per cent, and gold prices in Germany and in the United States had declined 15 per cent, and that gold prices in France had declined 13 per cent. Have you made any study or comparison between gold prices in England since they went off the gold standard and pound sterling prices?

Mr. O'NEAL. I have not. Of course, my main study of this thing, if you could follow these tables through, would give you an illustration exactly of what I am talking about, that prices of commodities follow gold also.

Senator GORE. All right. I do not want to interrupt you.

Mr. O'NEAL. Japan suspended gold payment December 13, 1931, and since then retail prices have been comparatively stable at a level which is relatively high compared to our constantly declining prices. (Fig. 12.) Employment in Japan has ceased to decline but our employment problem is becoming more acute. (Fig. 13.)

Gold payments were suspended in Canada October 19, 1931. Since that time commodity prices have followed a downward course which has been less rapid than that in the United States, but more rapid than in the United Kingdom. (Figure 14.). Industrial production has followed an intermediate course. Business in Canada is "not so bad" as in the United States but much worse than in England. (Figure 15.)

When a country suspends gold payment and permits the price of gold to vary, it can raise its internal price level and business conditions follow the respective price policies. Gold has long been the arbiter of the destiny of most of the world. At the present time, gold at its pre-war fixed price is regulating the destiny of only three countries, United States, Switzerland, and the Netherlands. The fluctuating price for gold is now guiding the destines of most of the world. The fluctuating price of gold has resulted in benefits to the citizens of those countries whether they live on farms or are engaged in industry.

(Figures 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 15 are here made a part of the record, as follows:)[1]

[1] These charts were reproduced from G. F. Warren and F. A. Pearson, Business Conditions in Various Countries, Farm Economics, No. 79, pp. 1830 to 1835, February, 1933.

FIG. 4. WHOLESALE PRICES IN U.S. AND ITALY, 1929-32*

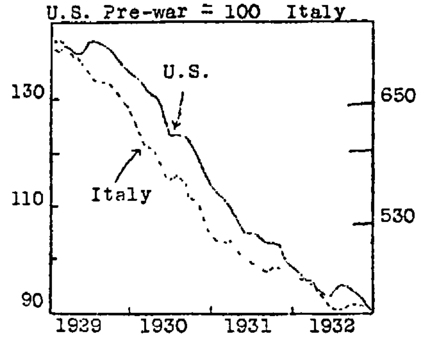


FIG. 5. FREIGHT CARRIED BY RAILWAYS IN U.S. AND ITALY. 1929-32*

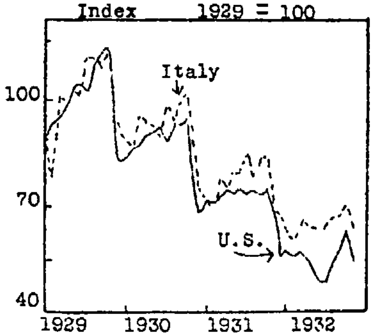

Since 1929, prices and railway traffic in the United States and in Italy have followed a similar course.

FIG. 6. WHOLESALE PRICES IN GERMANY AND U.S., 1929-32

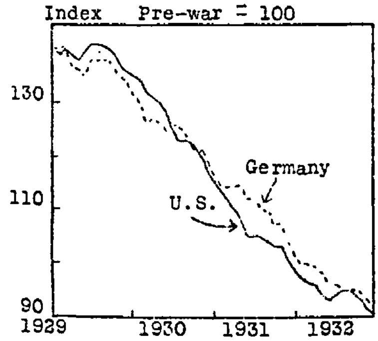

FIG. 7. FREIGHT CARRIED BY RAILWAYS IN U.S. AND GERMANY, 1929-32

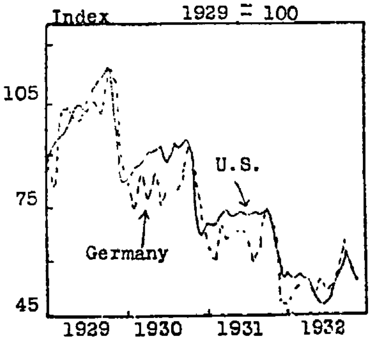

Since 1929, prices and railway traffic in Germany and in the United States have followed a similar course.

FIG. 8. WHOLESALE PRICES IN SWEDEN AND UNITED STATES, 1929-32

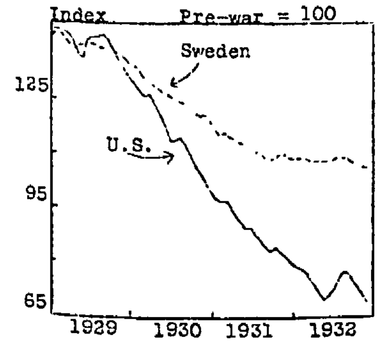

FIG. 9. FREIGHT CARRIED BY RAILWAYS IN U.S. AND SWEDEN, 1929-32

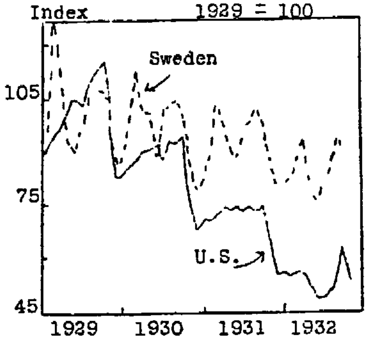

Prices and freight traffic declined continuously in the United States from 1929 to 1932. Prices and freight traffic in Sweden declined from 1929 to the fall of 1931. Since Sweden suspended specie payment September 29, 1931, prices and freight traffic have remained relatively stable at a comparatively high level.

FIG.10. WHOLESALE PRICES IN U.S. AND UNITED KINGDOM,1929-32

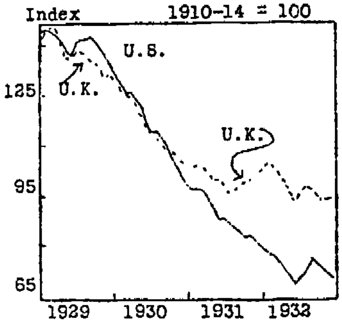

FIG.11. PIG IRON PRODUCTION IN U.S. AND UNITED KINGDOM, 1929-32

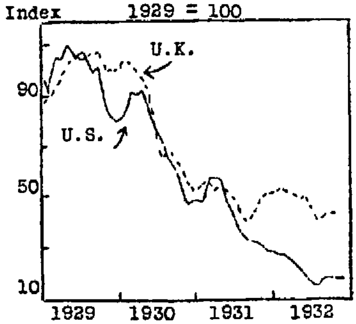

Prices and pig-iron production followed a similar course in both countries until the United Kingdom left the gold basis, September 21, 1931. Since then, prices and pig-iron production in the United Kingdom have been comparatively stable, but both have continued to decline in the United States. In 1932 the United Kingdom produced more steel than in 1931.

FIG.12. RETAIL PRICES IN THE U.S. AND JAPAN, 1929-32

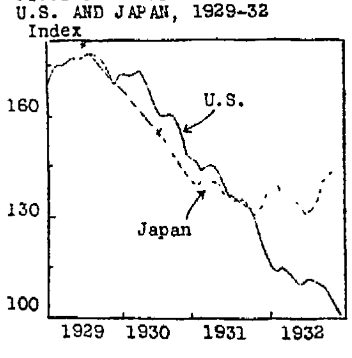

FIG.13. EMPLOYMENT IN THE U.S. AND JAPAN, 1929-32

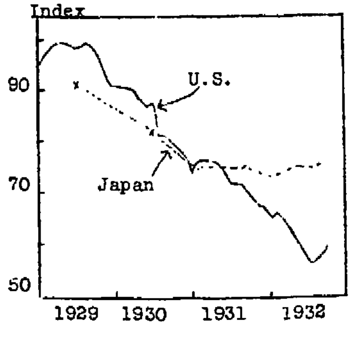

Prices and employment in the United States declined continuously from 1929 to 1932. Prices and employment in Japan declined from 1929 until Japan left the gold basis, December 13, 1931; since then, they have been relatively stable at a comparatively high level.

Since the suspension of specie payment in the fall of 1931, sterling exchange has been at a 25 to 35 per cent discount, and Canadian dollars 10 to 15 per cent. Prices and industrial production in Canada occupy an intermediate position.

The people of the United States are opposed to the present process of deflation and we recommend that a fixed price for gold should continue no longer to be the arbiter of our destiny and that we should establish a policy of varying the price of gold and make our dollar rubber as to weight and hones, sound, hard, and fixed as to value, instead of our present dollar which is hard, fixed, and sound as to weight and rubber as to value.

In conclusion, gentlemen, I want to reaffirm my strong faith in the purposes and in the ability of our elected representatives here in this Capitol. I do say this as a compliment.

There is a natural and perhaps quite human tendency on the part of many citizens to-day to take anything but a reverent attitude toward Congress. I do not need to tell you this. Your own mail tells you. The people are sorely pressed by this economic extremity. Our 6,000,000 farm homes, in particular, have for a dozen long years been places of privation and even suffering. Such conditions always find expression in dissatisfaction and in bittnerness toward the makers of the laws. But my contact with the Members of Congress has always given me ultimate reassurance. I know that Congress is not only one of the world's greatest deliberative bodies; it is also one of the world's greatest research organizations. I have faith that, in the final analysis, Congress will come to grips with this

FIG.14. WHOLESALE PRICES IN U.S., CANADA, AND U.K.,1931-32

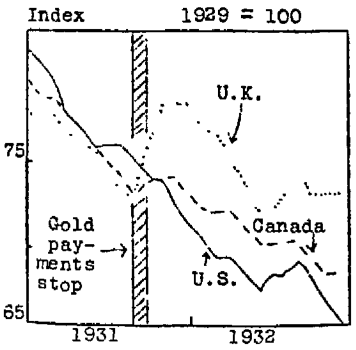

FIG.15. INDUSTRIAL PRODUCTION, U.S., CANADA, AND U.K., 1931-32

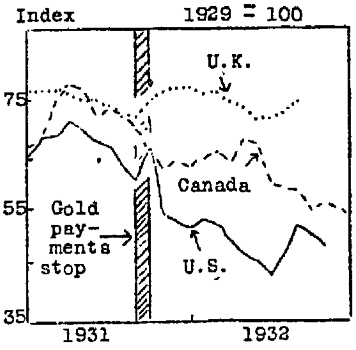

terrible price situation and will take the steps which will save our people from the unspeakable nightmare of deflation carried through to the bitter end.

I thank you, Mr. Chairman.

The CHAIRMAN. We thank you. I have a telegram from Mr. Leonard P. Ayres, Cleveland, Ohio, which he asks be read into the record. That telegram is as follows:

I have read with care the newspaper accounts of the views expressed by those who have appeared at the hearings before the Senate Finance Committee and the comments and questions of the committee members. I find that I have little to offer of fact or of theory or of economic history that has not already been placed before your committee by others and so I respectfully request you to excuse me from appearing. I am among those who hold that it is of the first importance for the Congress to take convincing steps toward balancing the regular operating budget and that if this were done funds could be secured through the sale of long-term bonds to meet the extraordinary depression relief expenses. Balancing of the operating budget would help restore public confidence and the history of all depression in all countries shows that increasing public confidence is prerequisite to recovery. I am opposed to inflation or devaluation because I believe that all the projects proposed would fail to produce the beneficial results claimed by their proponents. I favor legislation to facilitate and expedite debt readjustment for much writing down of debts appears inevitable. I favor measures designed to facilitate settlement of the war debts and measures to encourage international trade. I offer no panacea to cure the depression and I think Government can aid most effectively by supporting credit and removing barriers to business.

It is signed Leonard P. Ayres.

Senator HARRISON. I will say that I had a communication to that effect also.

Mr. CHAIRMAN. I notice that Mr. Hearst has found it impossible for him to get here, but he has expressed the hope that the brief he has filed should be read to the committee. I was going to suggest that in view of Mr. Hearst's station and his desire to appear but because of circumstances he could not appear, and his earnest request that it may be read, that if we could meet in the morning about 15 minutes before our usual hour, that the clerk of the committee then could read it. It is not a very long statement, and the calendar is full for to-day.

The CHAIRMAN. Without objection that will be done.

Now, the next witness is Mr. Cone.

## STATEMENT OF JULIUS W. CONE, GREENSBORO, N. C.

Senator REED. What is your occupation, Mr. Cone?

Mr. CONE. I am in the cotton mill business and in the cotton commission business.

Senator HARRISON. I will say that Senator Reynolds is very anxious that we get the benefit of Mr. Cone's views. He spoke very highly of his capacity and qualifications.

Mr. CONE. I appreciate that.

The CHAIRMAN. You may proceed.

Senator WALSH of Massachusetts. What is your company?

Mr. CONE. Proximity Manufacturing Co., of Greensboro.

Senator WALSH of Massachusetts. Is that a textile plant?

Mr. CONE. Yes, sir.

Senator WALSH of Massachusetts. How many persons are employed by you?

Mr. CONE. We have in our plant about 4,500 people.

Senator WALSH of Massachusetts. How many plants have you altogether?

Mr. CONE. We own about 10, and we represent about 15.

Senator WALSH of Massachusetts. All under the same corporation?

Mr. CONE. No; different corporations.

Senator WALSH of Massachusetts. Independent corporations?

Mr. CONE. Yes, sir.

Senator WALSH of Massachusetts. You are an officer in all of them, or stockholder?

Mr. CONE. I am a stockholder and director and an officer in several of them.

Senator WALSH of Massachusetts. All right.

Senator GORE. How many corporations altogether?

Mr. CONE. I would say there are about 15.

Senator GORE. How many spindles altogether?

Mr. CONE. Over 200,000.

The CHAIRMAN. You may proceed.

Mr. CONE. I appreciate the compliment you have extended in inviting me to appear before your honorable committee. I regret my inability to speak with confidence and certainty as to the best means of solving our present distressing problems, but I hope that what I say with respect to existing conditions and suggested solutions may be some slight help, when considered by you in connection with the other facts and suggested remedies which you are having presented to you.

I feel that it is a matter of paramount importance for our Government at the earliest opportunity to come to an understanding with our foreign creditors. These debts, like those of any other creditor, should be settled on a practical, business basis. Before making any compromise, the Government should ascertain the actual conditions existing in each of the debtor countries, and then arrange a settlement, the best settlement possible, in face of the financial condition of each of the foreign nations concerned.

The Government has faced the unemployment problem, and as we all known is extending Federal aid to great armies of the unemployed. I favor a broad plan of constructive public works, which, in addition to giving employment to those needing it, and in addition to aiding industry in furnishing the necessary materials and supplies for this work, would show improvements of permanent value to the Nation as a result of the immense expenditure necessary.

Senator GORE. How much money would you spend on public works?

Mr. CONE. Well, I would not spend any more than you have already allotted for unemployment relief.

Senator GORE. You would not favor a big bond issue of $2,000,000,000 or $5,000,000,000?

Mr. CONE. No; I would not.

Senator GORE. It would have to be paid finally.

Mr. CONE. Yes, sir.

The CHAIRMAN. All right. You may resume.

Mr. CONE. In addition to this, I favor some form of relief to that class of citizens who so far have had no relief extended to them. I refer neither to the farmer, nor to the unemployed laborer, but to the middle class and those men who a few years ago paid millions of dollars to the Federal Government in taxes on their profits, who find themselves now without businesses, without jobs, without homes, without resources of any kind. They are, in the last analysis, far more pathetic and helpless than the farmer. The farmer can make meat and bread, and he has, in most instances, a roof over his head which is his, rent free. But the manufacturer whose plant is closed, the real estate man whose business is gone, the merchant whose store is closed, the clerk who has lost his job—these men are absolutely helpless. It is estimated that 60 per cent of the farms of the Nation are not mortgaged. The farmer like everyone else now out of debt, is in an enviable position.

I do not believe that any relief measure will effect permanent results, unless and until this debt burden is adjusted. I do not believe that this debt can be paid with the present high value of money. It seems to me perfectly clear that one of two courses must be adopted. We must either inflate the value of the dollar, or we must deflate the value of the debt. I should like to go on record as unalterably opposed to paying these debts with cheap money. The history of this country, and of foreign countries likewise, has demonstrated most effectively and finally that every effort to liquidate heavy indebtedness by cheap money results only in disaster.

The CHAIRMAN. For instance, take Italy, and they pay 17 cents on the dollar. Do you think that 17 per cent ought to be canceled at this time?

Mr. CONE. No, sir; I do not.

The CHAIRMAN. Do you think that 17 per cent ought to be cut in two so as to make it, say, 8½ per cent, of what we advanced to them?

Mr. CONE. Well, I can not tell unless I would see their balance sheet and know just what they are able to pay.

The CHAIRMAN. Well, if they say they are unable to pay would you excuse them?

Mr. CONE. Well, I think you ought to make the best trade you can with them by bartering or some other trade.

The CHAIRMAN. We did that once.

Senator REED. Mr. Cone, what percentage of your spindles are actually turning at the present time?

Mr. CONE. At the present time we are running all of our spindles five days a week. But we are not selling our full production.

Senator REED. How many hours a day do you run?

Mr. CONE. We run 10 hours a day, 50 hours a week.

Senator REED. You are running 50 hours each week.

Mr. CONE. Yes, sir.

Senator REED. At your full capacity?

Mr. CONE. Yes, sir.

The CHAIRMAN. They are a long ways better off than most businesses. You may proceed, Mr. Cone.

Mr. CONE. And the disaster has always fallen most heavily on those needing the help which had been vainly expected from the adjustment. In my opinion, the best method of bringing about this greatly needed relief is the reduction of interest rates. Capital is obtainable for approved borrowers at rates of interest of unparalleled cheapness, while the unfortunate debtor is required to pay, in most cases, the highest rate of interest that the law permits to be colleced.

Senator HARRISON. Mr. Chairman, I understood Mr. Cone not to alude to the foreign debt a while ago but to the domestic debt in this country.

Mr. CONE. Yes; absolutely.

Senator HARRISON. I think the chairman misunderstood the witness.

The CHAIRMAN. No. I took his own word about it. He had spoken of the foreign debt before that.

Senator REED. Yes; he had spoken of the foreign debt before that.

Senator WALSH of Massachusetts. Yes.

Mr. CONE. I said in regard to the foreign debt that the best settlement possible should be made in the face of the financial condition of each of the foreign nations concerned.

Senator GORE. Would you apply that same rule to domestic debtors?

Mr. CONE. I think in the end we will have to do that.

Senator GORE. They either have to be scaled down or prices put up or both.

Mr. CONE. In some way. Or we have to extend their indebtedness until times do get right if that time comes in our lifetime.

Senator GORE. If I get your point, it was not so much to reduce the principal as the rate of interest.

Mr. CONE. At the present time, yes.

The CHAIRMAN. You may resume.

Mr. CONE. Another means to this end, which I consider sound—and that is referring to private debts of those poor unfortunate folks who have got heavy real estate mortgages and businesses that are not paying a profit—has been embodied in a bill introduced by Senator Hull. The bill, as you know, provides that over a period of years the Reconstruction Finance Corporation, or some other governmental agency, advance money for interest and taxes to those property owners whose collateral in normal times would be considered ample, thus enabling them to hold their property until conditions can again become stabilized. There should be no risk to the Government in such a measure, as these advances would take priority over the existing debt. I do not, however, mean to suggest that this step would affect any cure, for debts can not be liquidated by lending the distressed debtor more money—it would be merely a palliative, but a helpful one.

Senator WALSH of Massachusetts. Do you know how much money that would take; have you made any estimate?

Mr. CONE. To pay the taxes and interest?

Senator WALSH of Massachusetts. Yes. How much more money would the Reconstruction Finance Corporation have to have in order to meet those private obligations?

Mr. CONE. I have not made any estimate of that at all.

Senator HARRISON. I would say to the Senator from Massachusetts that that matter was heard before a subcommittee of the Committee on Banking and Currency, and purely on the question of advancements for taxes on farm lands they estimated it would only take something under $100,000,000.

Senator WALSH of Massachusetts. All right.

Senator GORE. The total farm taxes of the country are about $700,000,000, and the total interest on farm mortgages is about $500,000,000.

Senator HARRISON. I was not speaking of interest charges on that matter.

Senator GORE. But the whole trouble is, if they start out on this line, it will take over $700,000,000 for the one and over $500,000,000 for the other.

Senator WALSH of Massachusetts. Mr. Cone, your proposition was to have the Reconstruction Finance Corporation advance that amount of money for which loans could be made in normal times?

Mr. CONE. I mean for those who are in distress. Of course, everybody isn't in distress, because some people are still able to pay. But, then, there are a lot of folks who have gotten into a terrible muddle in the last few years by reason of this depression.

Senator WALSH of Massachusetts. But credit has dropped below what it was in normal times.

Mr. CONE. Yes.

Senator GORE. And if we start out by extending relief to those in tress? If you once start out on that line, we can not stop. I think and, secondly, won't we let the distressed decide who are in distress? If you once start out on that line, we can not stop. I think the Hull bill is the least objectionable of the plans proposed, but it covers both interest and taxes. I have had a sort of fundamental objection to the United States, to Uncle Sam, putting his shoulder under taxes, or for any other governmental institution to bear those burdens, like the maintenance of schools, or assumption of taxes. I just want to make my point. I do not want to make a thesis, Mr. Chairman, but I do think that taxes on farm lands and on other real estate in this country are too heavy. It is about 80 to 85 per cent of the total taxes in our States, counties, and municipalities. That is a disproportionate share of the burden of taxation on real estate. Farmers are taxed out of proportion to other classes. I think that is true. I think the farmers do demand not only a reduction in taxes per se but a redistribution of the burden of taxes. But, if the Government of the United States assumes to pay their taxes, I think it removes that incentive; and then, if Uncle Sam pays their taxes, that means really that they are paying it themselves. It is not a matter of getting somebody else to pay it, I mean somebody other than the taxpayers of this country. Now, then, if the United States assumes to pay taxes on real estate, either in country or city, it removes the incentive on the part of real-estate owners to demand that taxes be reduced and to demand that the burden of taxation be redistributed. Don't you think that is likely, Mr. Cone?

Mr. CONE. Well, of course, I think every case should be delved into to see whether, by past records, the party is worth saving. Some folks are going to impose on you and others not; some people are absolutely honest and mean well, while others are shiftless and don't care.

Senator GORE. But when you start out on this line, people will come in and say: You are going to discriminate against us, and this is a country of equality of its citizens.

Mr. CONE. Well, that is unfortunate. When we look backward and find that we were loaning to the farmers money on joint-stock land-bank mortgages when cotton and tobacco were four and five times what they are now, we might say that they did not need it then, that that was a mistake.

Senator GORE. Well, some of it was, wasn't it?

Mr. CONE. It certainly was.

Senator GORE. There is a proposition pending to make those joint-stock land banks take their own bonds in payment of their own debts, and they do not want to do it.

Mr. CONE. Well, I will tell you why: I am interested in a joint-stock land bank, and we would be tickled to death if all the people would do it. But when about half of them who are able to do that do it it leaves you with the other half, whose farms are not worth anything like what the bonds would be, and we would have those bonds on which we have to pay interest and have no earning power in the bank. You see, we are in the position where the good have to help take care of the spread. It would be fine if everybody would do that, if all the landowners would come to you and say, "Here are your bonds," it would tickle us to death. We could liquidate and say, "All right; we are glad to do it."

Senator GORE. I do not want to divert you, but on that point, Mr. Cone, let me ask, if you owed me a $100 note, which I held against you, and pay day came and you brought to me the $100 note that I had given to Senator Walshs and would say, "Here is $100 of your obligation that I tender you in payment of the $100 I owe you," don't you think I ought to take it?

Mr. CONE. If it is absolutely worth 100 cents on the dollar; yes, sir.

Senator GORE. Oh, now, is that the point?

Mr. CONE. That has to be the point.

Senator GORE. Well, say you owe me $100 and I owe Senator Walsh $100, and you buy that $100 note from me and tender it to him in payment of what you owe me?

Mr. CONE. But when you tender to me a bond that you paid 40 cents on the dollar for you are only doing what I can do. One unfortunate situation with this joint-stock land bank matter is: One bank's bonds are selling at 26, and another at 15, while yours are selling at 40, which enables the bank whose bonds are selling at 26 to sell property to people who want to buy it a whole lot cheaper than we can sell it for. We have hundreds of thousands of dollars worth of real estate that has come back on us, on which we are paying taxes, and it is a very heavy burden on the bank. And at the present rate, if the depression is not over, I do not see any hope for the joint-stock land banks, unless the Federal Government comes to their rescue, because people, especially since all of this agitation about the Government helping out, the people who could have paid, have stopped paying their interest and taxes on property.

Senator GORE. Exactly, and that is the vice of this whole business. You invite them to do it, and when you extend leniency to one side, another crowd comes and says: I am as much entitled to your help as they are. And you can not say no. And Congress won't say no. This is a bottomless pit that we have groped into, and we have groped into it more or less with our eyes open. But you may go ahead.

Mr. CONE. I am convinced that your body should take some action in regard to idle capital. By idle capital I mean the hoarded money which is represented by tax-free securities. But there are two kinds of tax-free securities. There is a great difference between the tax-free securities held as backlogs for industry—the securities which are held to carry surpluses that are to be used for expanding industry or for paying dividends when the earnings are not sufficient—and the tax-free securities held for no other purpose than to perpetuate great fortunes, escape taxes, and avoid paying a fair proportion of income to the support of the Government that protects these very holdings. It is my belief that some adequate form of taxation on this last class of holdings should be enacted.

I submit that the Government should so liberalize its control of the railroads of the country as to permit them greater freedom of contract and more adequate control of their own business. The railroads could then introduce such economies as would permit them to meet more adequately the unfair and unsound competition with which they are now competing.

By that I mean, trucks.

It is my belief that the Sherman Act should be modified to relieve legitimate business from restraints which are unreasonable and destructive. Price-fixing should be allowed when it is done in the public interest. This would result in increased employment, and would tend to stabilize legitimate industries. In this connection, if the Federal Government will investigate it will find that the difference in wages being paid in manufacturing plants engaged in the same line of business in the various sections of the country is unfair and economically unsound. This unfair adjustment of wages is disastrous in its effect both on the laborers and the manufacturers.

Now, right there: One of the products we manufacture largely are denims, which go into overalls, and we are paying our people wages that are, in some instances, at least 50 per cent more than are being paid by companies in other parts of the country manufacturing goods of the identical class.

Senator HARRISON. Is that because of the difference in the laws of the various States?

Mr. CONE. There is no law about the price you will pay your laborer in the cotton industry.

Senator GORE. Have you any advantages in the way of water power?

Mr. CONE. No, sir. We manufacture our own power by way of steam.

Senator HARRISON. But certain States may have requirements that other States do not have?

Mr. CONE. Yes; as to hours. You take in the cotton country, where you can hire labor to do the thing for 50 cents a day, or in some cases just what it costs to feed them, and, of course, where cotton mills are right around in that immediate section, why, that basis of wage is reflected in what the cotton mills pay. At that the cotton mills are not making any money. We are over-producing. The industry is in very bad shape financially.

The CHAIRMAN. You may resume.

Mr. CONE. War is always to be deprecated, but as long as it is an evil which must be endured, those who have been injured in the service, and those who incurred illnesses and disabilities directly traced to active service, must be the charges of the Government they have protected. I do not believe that any citizen would question the obligation of the Government to this class of ex-service men. But the payment of a single bonus or disability claim for any other cause should be immediately and finally discontinued.

I am convinced that the Congress should immediately set itself to the task of balancing the Budget. Instead of piling taxes mountain high to meet the ever mounting Federal expenses, the taxes should be reduced, and with their reduction should come a similar reduction in Government costs. There should be an apportionment of the Federal income from these reduced taxes to the various governmental departments, with the requirement that each department live within its incom. The States of the Nation are following this procedure, as are private corporations. The same business principle can be applied to the Federal Government that can be applied to any corporation or any State.

I have reluctantly come to the conclusion that on account of dwindling taxes from both personal and corporate sources that the Government should immediately adopt a form of sales tax. This tax should be collected at the retail end of business, and as the States are going to have to come to this suorce of revenue also, the Federal Government should be empowered to collect the tax and apportion a specific percentage of receipts to the State in which it is collected.

If we have to have a sales tax, and it would seem that that is one of the forms of revenue we must get to, why, the tax should be collected by one head.

This country has recently by an overwhelming majority elected Mr. Roosevelt the next President of these United States. Without regard to politics or party, it seems to me as a business man, that the wise thing to do is to give to the incoming Chief Executive all the power permissible under the Constitution, and all the support that disinterested statesmanship and patriotism can give. I believe it would be wise to empower him to form an emergency economic council, composed of representatives from industry, business, banking, the railroads, labor, education, and other phases of our national life. The economist, too, should have a place in this group. These men should form an advisory committee with whom the President would consult and who, with him, would plan in a large and comprehensive manner the adjustment of all economic forces to meet present conditions, and the changes which must necessarily follow the present crisis.

Gentlemen, I thank you very much.

The CHAIRMAN. Next will be Mr. R. E. Flanders. Come forward and give your name and business and address.

## STATEMENT OF RALPH E. FLANDERS, PRESIDENT JONES & LAMSON MACHINE CO., SPRINGFIELD, VT.

Mr. FLANDERS. My name is Ralph E. Flanders. I am president of the Jones & Lamson Machine Co., of Springfield, Vt., makers of machine tools for this country and abroad.

Senator GORE. Did you say Vermont?

Mr. GLANDERS. Yes, sir. Mostly for abroad in the last two years. I have also been president of the National Machine Tool Builders' Association; and am at present chairman of the committee on economic balance of the American Engineering Council. It is in the latter capacity that I am speaking. The American Engineering Council is a federated body of national and local engineering societies, representing about 60,000 engineers. And it undertook, about 2 years ago, a study in the same type as that which your committee is engaged in; and it wishes to present to you the results of its work to date. I am not going to read this, because it is too voluminous.

The CHAIRMAN. And you desire to have it made a part of your statement, do you?

Mr. FLANDERS. Yes, sir.

The Chairman. That will be done. And if you want to put it in now that may be done, or you may put it in at the conclusion of what you say, just as you like.

Mr. Flanders. I will put it in at the conclusion. But I wish to say a few words about it.

The Chairman. You may proceed.

Mr. Flanders. We were led to make this study on economic matters for two reasons: First, because there was widespread a popular laying of the faults of our economic order at the doors of the engineers for the reason of their devising of new and efficient methods of production and of mechanism; and, secondly, because we were persuaded that an application of the engineering method of study might result in a new view.

I wish to say that we investigated and have made a tentative proposal of some 46 different commonly assigned factors for economic unbalance. I will not even take your time to read all these, but will give you the general headings: Psychological factors, technological factors, business factors, factors resulting in savings and investment, financial factors, agricultural factors, and governmental factors.

Now, the interesting thing about our study was that we did not find, of all these 46 different causes which had been contributing, that any of them could be safely neglected. There was some valuable viewpoint in every one of them; and not merely was that the case but that they had interrelations with each other, so to speak.

The first results of the study of the sort that this committee undertook, was to tend to show the complexity of the problem, and that I think was a perfectly normal result over the two years of study. But there was more than that to it. The complexity, I think, as our work proceeded, has tended to resolve itself into separate particular groups and factors, with more or less common remedies and common characteristics. So that the situation does not look as hopeless as the statement of that number of 46 factors might indicate on the face of it.

Now, that was the first part of this committee's work. The second part was an analysis of the various plans that have been suggested for business stabilization. Our files contain something like one hundred and odd plans, and those plans have been coming in at the rate of several a day for the last two months. I do not know what the number amounts to now, but probably about 150 or 180 different plans.

We, of those plans, took 24 which were typical, and analyzed them on a common basis, which, in the first place, classified them as to their nature, giving the author and origin, stating the objective where possible in the words of the author, the theory or principle on which they were based, the method advanced, the authors' evaluation to the status of the plan, and the tentative comments of the committee.

Senator Gore. Was there any theory common more or less to the whole 24, or did each one rest on an independent foundation?

Mr. Flanders. No; they separate into groups more or less. Some groups, for instance, on the basis of what is required as industry organization to stabilize prices and adjust output to demand. Others are based on the idea of the monetary factor as being predominant and relate to stabilizing the value of the dollar, and so on.

Senator GORE. Are there a good many of that type?

Mr. FLANDERS. There are a good many of that type; yes, sir.

The CHAIRMAN. You may go ahead.

Mr. FLANDERS. And thus, with the hope that this work which has been going on for two years with the committee might be helpful to you, we offer these documents to your committee as a source of codified and I might say digest of many thousand pages of manuscript and talks.

Senator HARRISON. Are they brought up to date?

Mr. FLANDERS. Yes; they have been brought up to the 1st of January of this year. And you can not bring the plans up to date because they come in faster than it is possible to digest them.

The CHAIRMAN. I am quite sure the committee appreciates your labor, and we will put this in the record at this point.

Mr. FLANDERS. I thank you.

(After Mr. Flanders had completed his oral statement permission was given him by the committee to re-edit his prepared statement and have it ready to be printed about March 1. So it will likely be found in another volume of the print.)

The CHAIRMAN. You may proceed.

Mr. FLANDERS. Now I wish, if I may, to give you a few words of personal comment on some personal conclusions after going through these matters. This is not official from the committee because the committee has not arrived at its conclusions. This is a purely personal statement.

The CHAIRMAN. Very well.

Mr. FLANDERS. In the first place, I derive from this mass of material a distinctly hopeful feeling. I believe there is less mystery about the whole situation than there appears to be on first glance at it. There is nothing cataclysmic or irreparable about it as we are led to believe by another group which has recently been developed, the technocracy group, which also had taken upon itself to speak for engineers in general.

It seems to me there is one definite major cause, and that is, that we are recovering from the normal war inflation. No great war has ever been financed except by inflation, and no recovery from war inflation has ever taken place without going through exactly the situation we are going through to-day. That is one great outstanding fact that we should keep in mind.

Senator GORE. I think you are right.

Mr. FLANDERS. That is a thing that we have to recognize. And it also seems reasonable that if we balance all the misery, and the decline of morale, and the breaking up of family, and the destruction of ambitions and hopes, that has gone on with this 10 or 15 or 20 year process following the World War, and such as have followed all wars, with the actual physical suffering of the countries, we will be in doubt as to whether this long drawn-out process of recovery isn't on the whole more painful than the actual physical miseries of the battlefield. Historically the matter of financing a war other than by inflation has never been solved. The only solution we know of at the present moment is never to have any more wars. And the only alternative to a long drawn-out recovery from war-time inflation that has ever been successfully floated is that of devaluation, as was practiced by the Italians and the French after the period of runaway in Italy and France. But I might say that I believe that remedy is not applicable to our case.

Now, the war time rested with particular weight on agriculture. If we remember the war-time measures taken to increase the growing of wheat, for instance, we will remember that the Government by every means within its power urged on the production of wheat, and maintained by means of inflation its price, and produced conditions in general which tended to urge the young and the strong among wheat farmers to undertake obligations in the wheat-raising districts, the incurring of mortgages, which permitted the older generation to retire to Los Angeles and Florida.

Now, that burden undertaken at the height of the war inflation, lasts through until this time, and that is typical of war inflation in general. War inflation, whether in agriculture or industry, results in the undertaking on a tremendous scale of obligations at artificially high price levels, and the grim necessity for retiring them at a later time at a lower price level and under almost impossible conditions.

Senator GORE. And that is what breaks their bones.

Mr. FLANDERS. Yes, sir. Now, there was a major contributing cause, and that was the typical business cycle during the time of recovery, and which was typical but of unusual and almost unprecedented severity.

Now, that phenomena lies, I am convinced, almost completely within your banking and financial policy, the inflation of the typical boom, of the typical business cycle, and puts on all of us in the way of paper instruments, securities of some sort, an amount in excess of the actual volume of goods, the solid material goods, which they pretend to represent.

Of course, this excessive valuation of securities of various sorts, particularly stocks, was hopefully based on a new and increased earning power. Unfortunately, however, there was no provision made for distributing the goods which would have been produced under the expanded production. The only conditions under which the increased volume of goods could look forward to, if its earning power could have been moved, was by making a spread between wages and prices—in other words, increasing the standard of living. That might have been done by raising wages and lowering prices, by holding wages and lowering prices, or anything by way of a combination of the two, that would meet the relative spread. That was not done. so that the hoped-for increase in earning power did not appear. That meant that for the average of the securities which were put on the market at that time there was no value in them, except in the senior securities, which represented actual physical plants and normal operations. For the average of the other, or I will say for the flood of other types of securities, based upon mergers, holding companies, and so forth, we will have to lay the blame, I think, between the investment banker on the one side and the speculative public on the other. Neither the bankers nor the public can put the total blame on the other.

There is another hopeful feature, it seems to me, about the situation we are in. The first hopeful feature was that it is not an incomprehensible mass. It is comprehensible even if difficult.

The second hope is, that we are now at this moment at the bottom of the depression. That is indicated, for instance, in the various curves and indices ordinarily published in the papers, like The Business Week, and The Analyst, and others, where these various curves, whether relating to stock prices or an index of business activity, or other things, have for a number of years past been of the type of a series of descending parallel lines. They have ceased to take on that character and are now moving, very irregularly it may be, either at a lower rate of decline or substantially on a parallel line with considerable ups and downs, but indicating that a sort of dragging along the bottom is under way, which is expressive of that situation.

There are, furthermore, statistical reasons for believing that deflation is complete as a whole. Now, that does not mean that there is not yet, as several other speakers this morning have indicated, a large mass index which has yet to be liquidated. All that means is that the flow of unspent income is now greater than the demands made by the liquidation of bank credits. In other words, the situation is moving sideways rather than down. That process is painful, it is even dangerous, but it is not disastrous.

Another hopeful thing is this: We need have, I am sure, no fear that the rate of production and distribution and consumption and enjoyment of material goods which a large class of the population had in 1927, 1928, and 1929, is something that we can not return to. It was not abnormal. It was not of an essentially unstable volume in itself. There are two rational limitations to that volume of production and enjoyment of physical goods. One is production and use of a flood of goods too great to be rationally enjoyed. And the second is production of a flood of goods so great that we draw on our reserves.

Now, the first, obviously, was not true except for individuals. It was not true for the great mass of the population. There were millions of farmers and workers who were living substandard lives, subnormal lives, so far as their enjoyment of material goods was concerned.

Senator Gore. That was particularly true of farmers.

Mr. Flanders. Yes, sir; and particularly true of working classes in large areas, but more particularly true of the farmers. Tens of millions of our population were not adequately housed, were not adequately clothed, and were not eating the proper food. If those standards could be raised, and it is physically possible to raise them, we could look forward to a volume of production and distribution and consumption and enjoyment of physical goods that is greater than anything we have known.

Now, the second question is as to whether that volume was so great as to draw dangerously on our reserves. I am convinced that that was not true. It did not, for instance, draw on goods laid up by our ancestors. We were not in the sense of the word dissipating the heritage. What we made and distributed and used and enjoyed, we made at the time, and what we made we had the right to enjoy. We were not drawing on goods laid up by our forbears. But the question may still further be raised as to whether we were using all of our irreplaceable natural resources.

Senator Gore. Before you touch that, Mr. Flanders. Do you not think that our borrowing of money to buy, for the consumption of goods, was a little beyond what was wise?

Mr. FLANDERS. Yes. I was going to leave that question along with a dozen of others which would make my remarks too long, but I would just say in passing that that was the expedient undertaken by the manufacturers and sellers of goods to move their product in the absence of sufficient buying power.

Senator GORE. That is just the point. Let me ask you this: A good many of our people spent all they earned and spent all they could borrow, and mass production kept up to the artificial demand based on borrowing and based on credit. The people borrowed to buy as long as they had any credit left, and finally they reached the end of their tether and stopped borrowing to buy, and then mass production found itself without a market, and then came the crash.

Mr. FLANDERS. That situation, I think, can briefly be put in these terms, that too large a percentage of the returns from industry went into the manufacture of capital goods, into the buying of equipment, into the erection of plants and factories, and not enough into purchasing power. That gets back to the original statement I made that there was not a sufficient spread between wages and prices.

Senator GORE. And did not a good deal of it go into the manufacture of goods that were not indispensable, and when the strain came people stopped buying that class of goods?

Mr. FLANDERS. Yes. I am going to touch on that.

Another point on which I think we can look with some hope is that in spite of the predictions and the analyses made by the group which had called itself technocracy, there is no indication, so far as any reliable figures are concerned, of any decrease in the total number of those gainfully employed. Now, that is an old alibi for our protective system, for our mechanized system. And it is not water-tight.

But what did happen is this: That while the number of those gainfully employed did not increase, there was a tendency for them to shift from more or less stable occupation into unstable occupations. And if mechanism has had any harmful effect it is that.

In agriculture, for instance, there has been a shift from subsistence agriculture to staple agriculture, which is in the direction of instability. There has been a shift from agriculture to industrial occupations; from subsistence agriculture to industrial occupations, which is in the direction of instability.

There has been a shift from the industries manufacturing the staples of existence, which are those highly mechanized, with the exception of the automobile industry, to those making luxuries and accessories, and that is just what you refer to.

Senator GORE. Yes.

Mr. FLANDERS. And there also has been an increase in the percentage of those engaged in making capital goods, machinery, mechanism, equipment, and structures, which again is an element of instability. And there has been an increase in those engaged in sales and services, occupations of various sorts, which again is a drift toward a somewhat more unstable type of occupation. These might be compared with regard to their stability with subsistence agriculture as the most stable occupation known to man.

The CHAIRMAN. How much more time will you want? A quorum has now been called for in the Senate.

Mr. FLANDERS. I was going to speak a bit on remedies. I should ask about 10 or 15 minutes. Is that too much?

Senator GORE. I would like to hear what he has to say about remedies.

The CHAIRMAN. Senator Gore, I am compelled to go. Will you adjourn the hearing until 2 o'clock when Mr. Flanders has completed his statement?

Senator GORE (presiding). Yes. You may continue, Mr. Flanders.

Mr. FLANDERS. Let me say first that as a protected manufacturer I can see no objection to one form of the domestic allotment plan for agriculture, which is applicable to wheat and cotton, which would set the allotment at some fraction well below the normal consumption, and thus remove domestic wheat prices from the influence of world prices and make the tariff effective. As a Republican and a manufacturer, I do not see that I could justly object to that particular form of the allotment.

Senator GORE. Mr. Flanders, you are just a little afraid to expose your flank, are you not, on that side?

Mr. FLANDERS. Yes, sir; a little bit, sir.

Senator GORE. Yes. I come from a cotton State. We raise a million bales of cotton a year in Oklahoma. I do not figure out how you relate this allotment plan to cotton in connection with the tariff, when we export 55 per cent of all the cotton we raise, and have not got any tariff, never did have, on short staple cotton.

Mr. FLANDERS. If an allotment of say 80 per cent of the normal consumption of cotton in the country were set and distributed—more difficult on cotton than on wheat, because in the old south the cotton patches are smaller, but still probably possible—if a tariff were applied to it, and if any cotton consumed, even though raised domestically, above that total allotment were required to pay a tariff before it was sent to the mill, then the tariff is effective.

Senator GORE. You call it a tariff, but it is not a protection at all. It is just an artificial contrivance, is it not, to bring the cotton within this scheme?

Mr. FLANDERS. It brings the cotton within the scheme. It does not require the appropriation of money for the allotment but gets it by an artificial rise in price the same as is effected by the tariff.

Senator GORE. And in a way commits the cotton farmer to the general scheme of the high tariff.

Mr. FLANDERS. Yes; if you want to look at it that way.

Senator GORE. Yes. I hate to look at it that way, but that is true.

Mr. FLANDERS. With agriculture, as with the suggestions I am to make later with regard to industry, it is not all governmental. I believe that in your neighboring State of Texas there has been within the last few years—about Oklahoma I do not know so much—a tremendous increase in subsistence farming along with the staple crop, and I have been told that as the result of this in Texas the farm mortgage situation in Texas is in much better shape than in other States similarly situated.

Senator GORE. That might be due to their homestead law, that they can not mortgage it so easily.

Mr. FLANDERS. That might be. I will now just touch on the one most critical thing, so as not to prolong this hearing.

Senator GORE. It is very interesting.

Mr. FLANDERS. The critical thing is that burden of debt which is the normal result of war-time inflation, and has been intensified by the extreme violence of the credit inflation of 1927, 1928, and 1929.

Senator GORE. Exactly. Now I think you have put your finger on two causes, war-time inflation and peace-time inflation in the use of credit.

Mr. FLANDERS. Yes. That leaves a burden of debt. I have no easy remedy for that burden of debt. But I do have some suggestions for carrying what I believe to be a considerable share of it. A considerable share has been liquidated. Another share of it is in process of liquidation. Very painful process indeed. But there is a considerable share of it that does not need to be liquidated if the volume of business can increase slightly but steadily. And among those in particular are certain parts of the burden of debt which the Government through the Reconstruction Finance Corporation has assumed.

In my belief, which is a personal belief, Congress and the President were wise last summer in passing the various elements of the relief bill which provided for putting governmental support under a large amount of this indebtedness. But further it seems to me the event has shown that it was unwise in restricting itself largely to that purely defensive action. At the same time that the Government backs with its credit a large amount of that remaining and intractable indebtedness it, by its policies, continuously reduces the volume of business going through the channels of trade in the country at a time when the only hope of making that indebtedness good is by increasing the volume of business.

Senator GORE. Right there I just want to interject this, that this cutting down of debt may be indispensable, but that is medicine or surgery. Increasing business I look on as food.

Mr. FLANDERS. Yes; that is it exactly.

Now the particular point at which it seems to me the Government could wisely stimulate an increase in business which would make good a large share of the debts which it has assumed is in connection with public works in a way which I think has not had adequate discussion or publicity. And that is in connection with a long-time budgeting policy. We have been confusing economy of Government operations with scale of Government operations. Economy of Government operations requires that necessary work, work which is going to be done anyway, should be done at a time when wages and materials are most favorable; when construction of various sorts is cheapest.

Senator GORE. On that point, Mr. Flanders. There has been a little controversy in this town as to whether the carpenters should receive $11 or $8. I do not know whether it has been finally decided or not, but the preliminary decision was in favor of $11 as against $8 a day. Your theory is that the Government should carry on indispensable construction?

Mr. FLANDERS. I would not say indispensable.

Senator GORE. Well, work that it would otherwise do now or soon?

Mr. FLANDERS. Work that it would otherwise do now.

Senator GORE. Or soon?

Mr. FLANDERS. Yes.

Senator GORE. In order to take advantage of reduced prices on material, and reduced wages, for that matter.

Mr. FLANDERS. Yes. That would be governmental economy in the strict sense of the word. It would not be a reduction in the scale of operations, which, to my mind, is another thing.

Now, those economical operations which should be undertaken at this time should not be financed by taxation, because taxation, again, tends to slow up the processes of business. It should be the normal thing to borrow in times of this sort, and it should be the normal thing to repay borrowing in times when taxing is good. That policy of taxing when taxing is good, building and constructing when construction is less expensive, carries with it a number of remedial features. In the first place, taxation for the retirement of bonds during an inflation tends to put a brake on inflation. Borrowing to do constructive work at the bottom of a deflation tends to put a brake on deflation. They are remedial measures for the extremes of the situation.

Senator GORE. At that point, Mr. Flanders. Your theory is fine. But you have got to deal with politics and politicians. I think during the boom period we had five tax reductions, which we ought not to have had. They were easily paid and ought to have been collected and applied to the reduction of the debt.

Mr. FLANDERS. Yes, sir.

Senator GORE. I think each of the five was made on the eve of an election, for political reasons.

Mr. FLANDERS. Yes.

Senator GORE. Now, then, I think you are getting to the point there that public buildings ought to be carried as capital account and not paid for out of current receipts. Is that not your point?

Mr. FLANDERS. Yes; they ought to be carried as a capital account, built under the most favorable conditions, and paid for when the conditions for payment are the most favorable.

Senator GORE. Yes. I think that is sound in theory. But there is at least one limitation and only one limitation on the amount Congress will spend, and it is not a very fixed or rigid one, and that is the receipts of the Government. Heretofore we have constructed public buildings and paid for them out of current receipts, more or less. If you ever stop that and ever construct these buildings by the issuance of bonds instead of out of current receipts the last anchor is gone. Now I am talking about this Government—these men who have to get elected here.

Mr. FLANDERS. Is it not evident that we have got to behave differently than we have behaved in the past?

Senator GORE. It is evident that we ought to behave differently from what we have behaved in the past. But there are a lot of people here, Mr. Flanders, who think that their highest duty is to keep a good man in public life.

Mr. FLANDERS. The good men probably think so.

Senator GORE. Yes. You can not cut down Government expense. You can not cut down taxes. It can not be done. The taxpayer is unorganized. If he were organized as a group and threatened these people to vote against them if they did not cut down taxes, taxes would be cut down. But you take three charwomen here, and if there is any threat to reduce their wages they will come up here and besiege Congress, and they would not cut them down.

Mr. FLANDERS. Senator, there is no easy way to do what needs to be done.

Senator GORE. Leave out of your equation anything which contemplates any material reduction of Government expenditures. They are not going to do it. It can not be done.

Mr. FLANDERS. We did succeed in reducing the indebtedness by some six or seven billion dollars. We can incur some more indebtedness—not too large an amount—the amount, I am not prepared to state—for public works of the desirable sort expended at this time, and by that expenditure assist in making good the indebtedness that the Government has assumed.

Senator GORE. We cut down the public debt from $25,000,000,000 to $16,000,000,000, but we have run it back up to $22,000,000,000.

Mr. FLANDERS. Yes; we are on the way back, certainly.

Senator GORE. Yes.

Mr. FLANDERS. But my criticism is that too much of that has gone to the purely defensive measure of assuming obligations and not enough of that to the constructive measure of putting some solid business under the repayment of those debts we have assumed.

Senator GORE. But I think a good deal of it has been misused.

Mr. FLANDERS. There are just two other points that I will mention briefly that relate to morale primarily, though with other good results. I believe that the body of people engaged in industry as well as in agriculture are in a poor state so far as their morale is concerned. And there are two measures which are useful and desirable in themselves which will prove, I believe, to be so in the long run, which if undertaken at this time will greatly help that. And again I just want to make sure that it is understood that I am giving only personal views.

Senator GORE. Yes. They are very interesting.

Mr. FLANDERS. One of these is the passage of a law, if it can be done by law, or a Federal amendment, if an amendment is necessary, giving Congress the right to determine hours of labor on goods that pass in interstate commerce and are used in interstate commerce.

Senator GORE. On what?

Mr. FLANDERS. On all goods that enter into interstate commerce. That, of course, is a matter of current discussion. I am not clear, nor do I think anyone is clear, as to it being a fundamental economic remedy. But it is a thing we can certainly safely and wisely do from two or three standpoints. If our mechanized civilization has any worth to society as a whole it is in the production of more goods and more leisure. And we are ready at this moment to declare a dividend of leisure on our mechanical development and advance.

It would have the immediate effect also of distributing the labor as between those who are working and those who are not working more effectively than any of the voluntary undertakings have done. And it would also be a tremendous reassurance to many millions of people who feel that there is a serious cause of economic unbalance in the hours of labor at present commonly worked. It can not be done by industry, it can not be done by State governments, as the history of the textile industry in the last two or three years has shown.

The second and last point is this——

Senator GORE. May I interrupt you right there?

Mr. FLANDERS. Yes, sir.

Senator GORE. We spoke a moment ago about medicine and surgery and food.

Mr. FLANDERS. Yes.

Senator GORE. Is not that suggestion an opiate?

Mr. FLANDERS. I doubt if it is an opiate.

Senator GORE. Here is what I have in view. I have been very much interested in your statement, and I was hoping that you would not embrace what I regard as the doctrine of the defeatist. I believe in mechanization, and I want it carried on until everybody on this globe has everything they need. I might go as far as to say—everything they rationally wanted. For that reason I have not been able to favor as a permanent policy cutting down production—that reason for reducing the days in the week and the number of hours in the day, because I think that is the doctrine of the defeatist. That is negation. That is not getting things that people want to use and wear and enjoy. And I think it is back-tracking. I am afraid it is.

Mr. FLANDERS. I agree with you, sir, on the unwisdom of cutting down production in general. I am, for instance, convinced that it is unwise to give us manufacturers power to organize the hours, and, to use the euphemistic phrase, adjust production to consumption. We had better be adjusting consumption to production. That is the more desirable end.

Senator GORE. Here is the point. Of course you have in mind a flexible scheme in regard to regulating the days in the week and the hours in the day, and when there is an increased demand for goods to increase the days in the week and the hours in the day, have you not?

Mr. FLANDERS. The details of just what the hours should be are not clearly determinable at this present moment.

Senator GORE. I was not talking about details of any fixed point. But the contention that the hours in the day and the days in the week ought to be reduced, cut in certain circumstances, involves the admission that in reverse conditions they ought to be increased, does it not? That the days in the week and the hours in the day ought to be increased?

Mr. FLANDERS. Very likely.

Senator GORE. Now, do you imagine for one moment, Mr. Flanders, that any power on this globe—unorganized power, just consisting as public necessity, public welfare—could ever prevail on this Congress to increase the days in the week or the hours in the day when they have once been limited, when they have once been fixed?

Mr. FLANDERS. It is doubtful if they would need to be greatly increased.

Senator GORE. Do you not know that organized labor would not let Congress increase them?

Mr. FLANDERS. It is doubtful, if that figure really were not set too low, if it really would need to be increased. You see, we are really accustomed to think of how many hours in the day or how many days in the week, when we ought to be thinking of how many months a year or how many years a decade we ought to work. We work a very small number of months a decade compared with the nominal numbers of hours a week.

Senator GORE. I want to improve distribution and restore purchasing power so the people can have what they need and so the things can be available and be in existence at a reasonable price based on cost, plus a profit, and so on. Go ahead, though. Do not let me deter you.

Mr. FLANDERS. I will leave that and go on, owing to the shortness of the time, to my final point, and that is this: You see I am an industrialist, not so much as a farmer, and with not so much knowledge of the farmers' problems. That will account for my referring in most of these points to industrial conditions. We are going to be compelled to undertake, probably, industrial insurance in some form unless we find some better way out of the situation. Industrial insurance to my mind would be a disaster. It is actuarially uncalculable, and it is humanly undesirable, and it is economically unsound.

Senator GORE. If you mean that the Government should put its shoulder under it I agree with you. Is that what you have in mind, or do your statements stand without reference to government auspices?

Mr. FLANDERS. They stand without reference to whether it is under government auspices or the burden fully borne by the industry itself.

Senator GORE. Shared with labor or not?

Mr. FLANDERS. As to share with labor, that takes off some of the objectionable features from the human standpoint, but does not completely remove them.

Senator GORE. Well, go ahead. I am anxious to hear you on that point.

Mr. FLANDERS. Now what an industrial society does owe to its workers is a subsistence wage at all times. That it owes. No more than that. And that subsistence wage should be to my mind paid for out of an income tax. We assume that subsistence wage, the necessity for giving subsistence at the present time. We do it by charity. It is paid by the tender-hearted. It is as much a burden on the social machine as a whole as any burden can be, because these various elements of instability which I described do inhere in a mechanized civilization. And it at least owes that much to those who have come under the conditions of a mechanized civilization.

Now, that subsistence wage means the paying of a wage for work. And that work should be on socially useful projects. It is self-liquidating, because no one will work for that subsistence wage after other work is obtainable. It is humanly right, because the man delivers value received for what he gets in socially useful work.

Senator GORE. Do you mean the Government should impose an income tax and to pay this, what you call subsistence wage, out of the Public Treasury?

Mr. FLANDERS. It now comes out only from a section of the public.

Senator GORE. The soft-hearted.

Mr. FLANDERS. Yes.

Senator GORE. Yes; but there is some incentive to economy and to efficient administration now, is there not?

Mr. FLANDERS. Yes.

Senator GORE. Do you think there would be if the Government ever assumed to do that?

Mr. FLANDERS. It would not be so good, but, on the other hand——

Senator GORE. Mr. Flanders, whenever you put anybody on the pay roll in that capacity they will spend their lives doing two things: Getting the age reduced at which they can go on the Government pay roll, and getting this subsistence wage increased and liberalizing conditions on which they can attach themselves to the Government pay roll.

Mr. FLANDERS. Again you speak as a man with more experience in politics than myself. My interest in this thing has grown from the way in which it is being applied in the town in which I live, in which men instead of being handed dollars in relief are given work at wages which will just provide for food and shelter, and for not much more, for their families. And the condition is infinitely preferable to anything we have ever had from any standpoint. That condition will not continue indefinitely, because they prefer better work at higher wages, and will take it as soon as it comes.

Senator GORE. The people there who constitute your town council know the condition of the people and they know what is going on, and they are in constant touch and association with the taxpayers, they are taxpayers themselves, and they will cut it down if they can.

Mr. FLANDERS. I doubt if it could be a Federal undertaking. It should be a State and local undertaking.

Senator GORE. I am glad to hear you say that. I see no theory on earth why the Federal Government should organize that.

Mr. FLANDERS. It is too big to be organized by the Federal Government.

Senator GORE. It is just an old-age pension; that is all it is.

Mr. FLANDERS. I speak of it here because there is danger that eventually we may have Federal industrial insurance laws, as they have in England and Germany, and in other places.

Senator GORE. I think we will.

Mr. FLANDERS. And this is infinitely preferable to that from any standpoint.

Senator GORE. There is not any doubt of that.

Mr. FLANDERS. I think that concludes what I had in my mind, sir.

Senator GORE. That raises one point that I was hoping you were going to touch on. I have thought a good deal about this unemployment business, and it occurred to me that the burden ought to devolve on industry and the employees, some reasonable and ratable share of the burden being borne by each. Do you think that would be unfair?

Mr. FLANDERS. I can tell you one of the difficulties with that. That is, that there are some comparatively stable types of industries, and some highly unstable types, as we were mentioning before, and those unstable types, with regard to their stockholders or their management, are more the victims of our economic situation, its ups and downs, than they are the causes of it. And that puts the burden of carrying its workers through on the victims themselves.

Senator GORE. Yes; I see your point. It is a very serious social problem. And I do not want a solution that is worse than the problem.

Mr. FLANDERS. The causes, so far as the typical business cycle is concerned, lie in the area of banking and finance, and they would go scot free.

Senator GORE. Here is the thing I want to speak particularly about. That is the rule that seems to prevail in industry of retiring a man at 45 in the meridian of life, when he has accumulated experience and ought to be more fit and efficient, and yet on account of the increasing burden of carrying insurance he is just fired and cast in the heap. Something has got to be done with that fellow by the town, the State and the general Government if industry is going to cast aside men who are perfectly fit and who have no charge against them except advancing years. Something has got to be done to meet that situation sooner or later.

Mr. FLANDERS. Is that not a pretty good argument for shorter hours?

Senator GORE. I do not know whether it is or not. What do you do with him anyway? Then you do not let him work at all. Whether he works 10 minutes or 10 hours he is in the junk heap either way. If you let these other fellows work longer hours and put aside an hour or two for the sake of this fellow I can see where you get somewhere. But if you cast him into the waste-basket and then reduce the hours of the other people you cut down the reserve which might be capable of helping this fellow.

Mr. FLANDERS. I believe there would be a better distribution on the age basis with shorter hours than there is at present.

Senator GORE. Well, I do not relate the two. That is your statement, Mr. Flanders?

Mr. FLANDERS. Yes.

Senator GORE. Thank you. The committee will adjourn until 2 o'clock, at which time it will meet in executive session.

(Thereupon, at 12.35 p. m. an adjournment was taken until 2 o'clock p. m. the same day, Monday, February 20, 1933.)

# INVESTIGATION OF ECONOMIC PROBLEMS

**TUESDAY, FEBRUARY 21, 1933**

United States Senate,
Committee on Finance,
*Washington, D. C.*

The committee met at 9.45 a. m., pursuant to adjournment on Monday, February 20, 1933, in Room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Reed, Shortridge, La Follette, Metcalf, Harrison, King, Walsh of Massachusetts, Barkley, and Gore.

The Chairman. The committee will be in order. We have a communication from William Randolph Hearst, which will be read to the committee by the clerk.

(Mr. Truman R. Young, the assistant clerk, thereupon read Mr. Hearst's communication, as follows:)

February 11, 1933.

Hon. Reed Smoot,
*Chairman, Senate Finance Committee,*
*Washington, D. C.*

My Dear Senator: As it seems impossible for me to be in Washington during the lifetime of the present Congress, I am mailing my views on cures for the depression.

Briefness in this statement, I imagine, is the first essential.

The cause of the crash seems to have been due to a speculative fever on the part of the public, accompanied by general overexpansion and overcapitalization on the part of industry, and aggravated by the promotion and sale of securities which were more or less obviously worthless, and probably known by the promoters to be worthless.

In the full flood of prosperity there was a continually growing demand for products. Industries, meeting and anticipating this demand, expanded to the danger point, and expanded largely on borrowed capital.

The capitalization of business also increased unwarrantably.

It is observable from the records that business rises to the crest of a wave of prosperity and then sinks to the trough of depression, and repeats this process with singular certainty and regularity, but not with the same degree of intensity.

It must be expected, however, by those who are mindful of the records, that business will first rise to a certain degree of prosperity and then sink to a corresponding degree of adversity.

Therefore, prosperity should not be capitalized at its face value.

To illustrate, if a business is making a comfortable 8 or 10 per cent on the investment in ordinary times, and a period of prosperity raises that income to 25 or 30 per cent, the customary process is to capitalize the business on the basis of this higher income, and to issue securities and sell them to the public, until the business which is paying 30 per cent on its original capitalization is reduced to 8 or 10 per cent on its excess and excessive capitalization.

This additional stock is easy to dispose of in times of prosperity, because everything in those times is on a boom market and the public is in a buying mood.

This process, however, leaves out of consideration the fact that periods of high prosperity are not permanent.

Not only is a return to normalcy inevitable, but as the records show, these periods of high prosperity are generally followed by periods of low depression.

As a consequence, when the period of low depression is reached, these businesses are no longer able to pay dividends on securities based on a period of high prosperity.

So the water is squeezed out of the capitalization, which means that the public is squeezed out, and the public's money is lost.

The investing public generally, in prosperous periods, have been estimating their wealth and their income on a false basis, and have been spending accordingly; and consequently when the crash comes and their securities depreciate to little or nothing, and their incomes disappear, they are compelled to adopt an ultraeconomical system of living and to stop buying.

Production and consequent prosperity depend fundamentally upon the ability of the public to buy, and the willingness of the public to buy.

When the people cut down drastically their expenditure at the shops, the shops of course suffer proportionately in their volume of business and in their volume of profits.

The shops discharge help, and this creates an unemployment problem.

The shops drastically reduce their orders from the factories.

The factories reduce production and profits and discharge help and add to the unemployment problem.

Then the factories drastically cut down their consumption of the products of the mines and the farms, thus reducing the use and price of raw materials, and further reducing employment.

And so the vicious circle rotates, each revolution adding to the severity of the depression.

The essential question in the cure of the depression, then, seems to be how to overcome this tendency downward.

And the crucial point seems to be how to restore the purchasing power of the community, and to make the people not only able but willing to spend money and buy products, and so stimulate production and employment.

I have continually urged that one very important way to accomplish this is for the Government during periods of depression to make exceptional expenditures in public works, and not only give direct employment to some millions of unemployed, but indirectly to give employment to laborers in those industries which create the products employed in construction, and to salesmen and accountants; and also indirectly to give employment, through the increased consuming power of the public, to the workers employed generally in the shops and the factories, et cetera.

Of course, this proposal has been entertained and propounded by many, and by none more convincingly than Mr. Hoover and the President's Conference on Unemployment, of which he was chairman during the Harding administration.

Unfortunately, merely proposing the plan is not sufficient. In order to be effective, the plan naturally has to be carried into effect.

This has not yet been done to any adequate degree at any period of the present depression.

It would seem that the plan should be comprehensive enough to include a system, as was proposed by the Hoover conference, greatly to increase public works during periods of depression and to decrease them to a minimum during periods of prosperity; since in prosperous times not only is employment generally obtainable in private enterprise, but the cost of public construction is excessive; while in periods of depression, Government work takes up the slack of unemployment, and also has the advantage to the Government of being performed at lower cost.

A well-balanced system, therefore, of public construction would not mean, over any considerable period of years, any more public construction than would ordinarily take place in that period.

But the public construction would be, according to this system, increased in bad times and decreased in good times.

In order to provide for this increased construction in bad times, a reserve fund could be accumulated in good times; but since no such reserve fund has been accumulated, the only practicable plan is to issue bonds sufficient to pay for this extraordinary Government construction in bad times and redeem the bonds in good times.

The unfortunate part of the situation is that the Government not only does not proceed according to this comprehensive plan, but it proceeds to the contrary.

It spends its money freely for public works in good times, and cuts down on public works in bad times, thus aggravating instead of relieving the depression.

This is the record not only of the National Government but of the various State governments; and the reverse of the record would be the proper policy.

So much for the program of public construction.

Another question of very serious importance in times of depression is the question of taxation.

In times of depression, there is, of course, business dullness. Profits are less, incomes are less, business is less.

Consequently the governmental income from taxation is less, and consequently the Government proceeds to pile upon income and industry (already staggering under the burdens of adversity) additional burdens of taxation.

This naturally aggravates and intensifies the difficulties of every industry and every investor.

It also drastically reduces the general expenditure which, as I have said, is the fundamental basis of prosperity.

If well-to-do people with incomes have to reserve a great part of their incomes to turn over to the Government, they naturally have less for the purchase of products, and less for investment in enterprise and industry.

Consequently, through diminished expenditure the shops suffer, the factories suffer, and the producers of raw material suffer.

And consequently, through diminished funds for investment, the development of enterprise is retarded and employment is proportionately diminished.

Taxation, like construction, should be accommodated to good times and to bad times.

There should in bad times be more help to the community through construction, and less burden to the community in taxation.

As a matter of fact, let me make the radical and doubtless unacceptable statement that taxation should be diminished in bad times. But if taxation can not be diminished it should at least not be increased.

High taxation is as much responsible for bankruptcies in business, and foreclosures on properties, as the high interest rates of the usurers, or the relentless liquidating processes of the bankers.

In fact the Government, the mortgage holders, and the money lenders have been cooperating in perfect harmony to deflate and liquidate America.

In this combination for extortion the Government is the worst offender, because without any consideration of the obvious fact that dollars have been doubled in value and are doubly difficult to secure; it is extorting more dollars from a community prostrated by adversity than it demanded in times of prosperity.

The income tax especially has degenerated into a racket. It is a racket on the part of the Government, who positively plunder the public under coersion to the point of confiscation. It is a racket on the part of the rich, who disloyally evade taxation and take refuge in tax-exempt securities.

It is a definite damage to the community and the country, because it takes money out of investment and out of the every-day expenditure, which is the basis of prosperity, and hands it over to an extravagant government to be dissipated in bureaucracy.

It is an inequitable tax, an injurious tax; an undemocratic tax, creating class distinctions; an un-American tax, creating class antagonisms, dangerous to the peace and harmony of the Nation. The sales tax should be substituted for it; not added to it.

With the sales tax, a citizen pays in proportion to what he buys.

If he buys little he pays little; but those who buy a lot will not only increase the prosperity of the country by liberal purchasing of products, but they will increase the income of the Government.

An income tax decreases purchasing power. It decreases investment in industry, and consequently decreases employment.

It transfers money from active business into inactive tax-exempt securities. The shrewd evade it. The sincere pay doubly in consequence.

It is in every phase a vicious measure, and shares with prohibition the odium of the two great war-time mistakes.

These two evils—prohibition and income taxation—have been chiefly responsible for demoralizing our people and depressing and disheartening our Nation.

I repeat that excess expenditures of government, over and above income, should be met by bond issues, the proceeds of which to be expended in times of depression, and the bonds themselves to be redeemed in times of prosperity.

The money-lending element of the community will oppose these considerable bond issues with the statement that this means inflation of the circulating medium, and that inflation is dangerous.

On the contrary, these bond issues mean stabilization of the circulating medium, and reduction of the dollar's present $2 value to its legitimate $1 value.

Inflation is dangerous in good times, when the community is in a period of overcapitalization, overexpansion, and overspeculation; and when there is a great amount of natural inflation of bank deposit currency; that is to say, of the checks, drafts, and personal notes, which are actually employed as money in business transactions and are regarded scientifically as an essential part of the circulating medium.

In fact, this bank deposit currency is by far the greater part of the circulating medium.

Indeed, reliable figures seem to indicate that about four-fifths of the circulating medium employed in the transaction of business is this bank deposit currency and one-fifth actual currency; that is to say, metallic money and banknotes.

When a financial crash comes, such as precipitated the present depression, business transactions decrease enormously and bank deposit currency—the checks and drafts and personal notes which constitute the major part of the circulating medium—decrease proportionately. It is estimated by experts that in this depression they have decreased one-half.

This means, obviously, that if the whole circulating medium is five-fifths during times of high prosperity, and the four-fifths of it which is bank deposit currency decreases one-half, the total circulating medium in times of adversity is decreased to three-fifths of what it was in times of prosperity.

The total circulating medium, therefore, has been deflated to the extent of two-fifths of the whole.

We can not reflate at the moment the bank deposit currency, but we can increase the actual currency by increasing the bond issues and the Federal reserve notes based upon the issue of bonds.

Such inflation, or rather, reasonable inflation, is in no sense dangerous, but on the contrary natural, salutary, and indeed necessary to the restoration of prosperity.

In fact, the issue of bonds and Federal reserve notes is the conservative method of procedure.

It would be possible to increase the currency by a direct issue of Government notes and by increased coinage, but this, it is believed, would be disturbing to confidence, and possibly detrimental to the Nation's credit.

However, if the Federal banks should hesitate to absorb reasonable bond issues, the Government could have the direct issue of Government notes to fall back upon.

I am assuming here again that these Government notes, like the bonds, would be retired in times of prosperity, to prevent inflation in periods when inflation is not needed and when it actually would be dangerous as a stimulus to speculation, overexpansion, and overcapitalization, and all such evils attendant upon peaks of prosperity.

To sum up: I think the main cures for depression and stimuli to the return of prosperity are liberal Government expenditures in construction, reduced, or at least restrained, taxation, and reasonable reflation.

As prosperity returns we can diminish the public works, secure more income from taxation, and retire the bonds and bank notes which might in good times constitute undue inflation.

Let me say in conclusion, however, that no plan to increase employment and distribute wealth in wages, no plan to diminish taxation and leave intact the purchasing power of the community, no plan of reasonable inflation to make money easier and commodity prices higher, will be of value in stimulating industry and employment, if American home markets are to be left open to an influx of cheap foreign products, made by war-pauperized labor, under a system of depreciated currency which proportionately decreases the manufacturing cost of the goods.

Such an invasion of American markets by cheap foreign products will create unemployment here faster than any appropriations for public works can create employment.

Such an invasion of cheap foreign goods will put American industries out of commission faster than any favoring governmental legislation or any reduction of taxation can build them up.

Such an invasion of American markets by cheap foreign goods, paid for in their production by depreciated currencies, can only be competed with by an excessive inflation which would reduce our currency to the basis of depreciated foreign currencies, and by a reduction of the standards of living of our citizens; which would completely debase, as it has already partly debased, our American wage standards and living standards.

I believe that all citizens, regardless of politics, should unite in this emergency, to save the American market for American industry, and protect American labor and American standards of living.

The people of this country flatter themselves that they are alert and informed and progressive. Apparently we are not as much so as we think.

France, a great and rich country like the United States, and like the United States on a gold standard, has recognized the danger to her industries and her people in this influx of cheap-made foreign goods from countries which have depreciated currencies, and has established compensatory duties; which, as we all known, are duties in addition to the regular tariff duties upon goods manufactured in foreign countries, and imposed in proportion to the depreciation of the currencies in those countries.

France has furthermore created quotas in imports, as we in our country have created quotas in immigration.

Thus France will not allow her industry and her employment to be disturbed by the importation of cheap goods from foreign countries, beyond a certain definite limitation and allotment well within the amount likely to inflict injury on her people and her prosperity.

Our country was not alert enough, not informed enough, and not progressive enough to originate such measures, but it should be at least intelligent enough to duplicate them when the need for such protection is so obvious, and the condition of our industries and our working people so critical.

The condition of our country demands action by our Government.

We have had, in my humble judgment, ample discussion and ample theorization.

We should reach conclusions, and those conclusions should be followed by prompt and vigorous action.

I forward this message, however inadequate, because I believe the high purpose of your committee is to promote action of exactly this kind.

I have discussed four general propositions only, and have not gone into the details of farm relief and industrial relief, on account of the length to which such discussion would extend.

After all, the farmer is mainly a producer like the manufacturer and the important thing to each is a satisfactory market for his products.

The greater the consuming power of the public, the better the market for farm products, as well as manufactured products.

The more that wealth is distributed in wages, the greater the consuming power of the public and the greater the compensation of the producer.

High standards of living mean high prices. The chief duty of Government is in my opinion to stimulate high wages and high purchasing power.

Beyond creating as far as possible remunerative American markets for American production, the Government should finance the farmer at a low rate of interest and insure him in the possession of his farm over a sufficient stretch of years to nullify the destructive effects of periodic unfavorable climatic and economic conditions.

When the Government has gone that far in farm protection it should certainly have some further function with respect to the regulation and the transportation and the sale and distribution of crops in order to protect its own investment and insure the objective of its paternalism.

Reduced cost of transportation is just as important to the farmers as reduced cost of financing and of marketing.

The welfare of the consumer as well as the farmer demands cheap transportation.

The railroads under the present system, or lack of system, are in no condition to supply cheap transportation.

Railroad freight rates are extremely high when compared with the rates of motor transportation, and the railroads are continually asking for higher rates in the hope of being thus able to meet their obligations; while they should be establishing lower rates not only for the benefit of the community but in order to be able to meet the lower rates and more modern methods of competing transportation.

To come immediately to the point, it seems impossible that the railroads of the United States can pay a high rate for borrowed money, meet their fixed charges, and lower their rates to the point where they will be able to compete with modern methods of transportation, while operating under their present policy of ragged individualism.

Apparently the only way that the necessary complete reorganization and unification of the railroads can be accomplished is through Government ownership. Government ownership will administer the railroads economically in one coordinated system.

Government ownership would secure money to the railroads at half the rate of interest which the railroads now pay, and railroad securities could be retired with a three per cent Government bond. to the advantage and satisfaction of the security holders.

Under a unified railroad system, reorganized and refinanced by the Government, the railroads could economically transport freight of that character of weight and bulk which naturally belongs to them.

Farm products are of this weighty and bulky character, and consequently farm products would greatly benefit by the economical railroad transportation which Government ownership would secure.

Consumers would also benefit; and as the alternative to Government ownership seems to be nothing less than general railroad insolvency and bankruptcy, the whole country would be relieved by Government ownership from this impending disaster.

If the Government is to attempt to rescue the railroads through the Federal Reconstruction Corporation, it must pay out vast sums of money to save them from bankruptcy, yet, after it has done this, and practically paid for the railroads, it will not possess them, nor can be able to systematize them, unless we adopt a policy of Government ownership.

If the people's money is being paid out in sufficient quantities to buy the railroads, then the people should own the railroads and secure the full benefit that would accrue from Government refinancing, Government reorganization, Government unification, and Government operation.

Therefore, I beg to recommend Government ownership of the railroads as an important aid to general economic recovery and general economic stability.

And in this operation, benefit could be conferred upon the farmer without imposing burdens upon the consumer.

However, I am writing interminably. In fact, I must apologize for the length of this letter, which I promised in the beginning to make brief.

Perhaps I should also apologize for the vehemence with which I have expressed my opinions.

Very respectfully,

WILLIAM RANDOLPH HEARST.

The CHAIRMAN. Mr. Henry J. Haskell.

## STATEMENT OF HENRY J. HASKELL, EDITOR OF THE KANSAS CITY STAR

The CHAIRMAN. Mr. Haskell, give your full name and address for the record.

Mr. HASKELL. Henry J. Haskell. Editor of the Kansas City Star.

Senator, I have prepared a rather careful statement here which I suppose would be more orderly than what I have to say, but I do not want to read it because it is too long, and if possible we prefer to have it appear in the record.

The CHAIRMAN. It will appear in the record now without reading, and then anything supplementary thereto you may state now.

Mr. HASKELL. I thought I could give you an informal discussion of the high points.

The CHAIRMAN. You may proceed along that line.

Mr. HASKELL. I come before you, frankly, as a westener. I have lived from my boyhood in the great valley that feeds the Nation, and while I do not presume to speak for that valley, I feel that I at least know something of its needs and aspirations, and what I have to say is directed toward how those needs may be met and those aspirations fulfilled. And while I shall speak from the farm standpoint, what I conceive to be the farm standpoint, I hope that I shall urge nothing for the West which is not also for the national advantage.

The farm market constitutes at least one-third of the national market, and its deep depression is one of the major causes of the country's present plight. One of the major causes though not the sole cause. While the West is unable to buy the radios, the automobiles, the agricultural machinery which it needs, the eastern workman is walking the streets when he might be employed to meet these western needs.

I may venture to say something about the general relation of the western situation as I see it to the general situation. I suppose we all agree that the primary trouble is that our great industrial machine is out of balance so that there can be no free interchange of goods between different sections. Part of it I think is stuck up here on the 1929 level and part of it is down in the cellar of 1933 commodity prices.

On the 1929 level are taxes and, to a considerable extent, debts, interest, railroad rates, wages in some of the key industries like the railroad industry and the construction industries. Down at the low point are the farm prices and commodity prices generally.

Our prime endeavor, as I see it, is to get the machine back into balance where there can be a free interchange of rates, and I do not believe that it is necessary to get everything down to the cellar of the 1933 level. We can bring the high end down and the low end up to create this balance in industry, and that is what I have in mind.

The farm industry itself suffers internally from this maladjustment. Its prices are on the distress level, and its overhead, including chiefly taxes and interest—and I might mention railroad rates, though I am not going into those, are still nearly of the 1929 level.

How important this is I can tell you from the figures from the Department of Agriculture that before the war taxes and interest absorbed about one-twelfth of the farm income. Now they absorb about one-fifth of the farm income. So that there is very little left after the farmer has been able to make his payments—he may be able to get by by living on his land, but there is very little left over for him to buy the products which he needs and which would afford relief to the country.

The CHAIRMAN. In your prepared statement do you suggest how to bring the one down and advance the other?

Mr. HASKELL. I am going into that as I go on, Senator. I am taking up first the reducing of the overhead.

The CHAIRMAN. That is all I wanted to know.

Mr. HASKELL. So that as far as the farm industry is concerned—and this applies to a considerable extent to the rest of the country—this overhead—taxes and interest—must be gotten down. And then if anything can be done to bring prices up it must be considered.

The taxes amount to nearly as much as the interest on the farm country. And we are making very strenuous efforts there to bring the taxes down by State action and by action of local bodies. In Kansas the Democrats and the Republicans in the legislature are working together with the aim of reducing State expenditures by 30 per cent, though they were reduced very considerably last year.

And, if you will pardon me saying so, we in the West sometimes feel that Washington has hardly heard what has happened in dealing with taxes. Those of us who have observed the situation know what pressure you are under to keep up expenditures from various groups, and for that reason there is a very prevalent feeling that it may be necessary to invest the President elect with almost dictatorial power so far as the Budget is concerned in order to accomplish this 25 per cent reduction which is contemplated and which we very desperately need.

Turning to the interest rates, another tremendous item in the farm overhead, we find in the Department of Commerce estimates that the farm mortgages have been reduced somewhat. They now stand at about eight and one-half billion dollars. The other farm debts are estimated by the National Industrial Board at about $3,000,000,000. And the interest charges are a very heavy load.

The debts to a very considerable extent were contracted when wheat was selling at $1 a bushel, and simply can not be met by the wheat selling on the farms at 30 cents a bushel. So the farmer is faced with the very bitter possibility in very many cases of not only losing his home and his savings of a lifetime, but also his means of livelihood. His very job is at stake. So it is hardly to be wondered at that there have been occasional cases of forcible resistance to foreclosure of mortgages.

But while we must have the very greatest sympathy with the farmers who are impelled to such action we must not be stampeded by sporadic uprisings of that sort. They are sporadic. The great bulk of the farmers are steady and level-headed and are trying their best to meet their obligations.

In any program that we contemplate it would be a great mistake to make the farmer feel that he is not expected to meet his obligations, because he will need credit in the future, and we want to see him able to borrow on the same terms on which any other business man can borrow. We do not want him to be regarded as an undesirable risk. This is, I think, a very essential point to be considered.

Senator KING. Mr. Haskell, in discussing the very heavy burden of mortgages upon the farms, aggregating, as you say, about eight and one-half billion dollars, you do not forget, I suppose, that there are billions of dollars of mortgages upon the homes of people who are not farmers?

Mr. HASKELL. That is true.

Senator KING. And that they, too, are suffering from foreclosure proceedings.

Mr. HASKELL. Yes.

Senator KING. And they are suffering from their inability to meet interest payments and partial payments required under many of the contracts for the purchase of homes.

Mr. HASKELL. Yes; but I am speaking chiefly from the farm standpoint. I think we must meet the general situation as well, and I think the pending amendments to the bankruptcy act are very important.

I have no plan to propose on the general mortgage situation. And, in fact, on the farm mortgage situation I will just mention two or three general principles.

I believe, in the first place, that we must recognize the great variety between the individual mortgages. In some sections the loans are not nearly so heavy as in others in proportion to the value of the land. Some farmers can meet obligations. Some could meet them if they were eased off. A few, I am afraid, can not meet them at all.

But a very large amount of readjustment and adjustment is now going on through the insurance companies and the banks. I was informed the other day of a joint-stock land bank which had 5,000 mortgages, of which 1,000 were in default, and they had only foreclosed 13.

This process, as I say, is going on. But I do not know that it will be sufficient. I think that Government aid will be necessary in making these readjustments.

In the first place, I suppose the Federal land banks will have to have some further aid to give them the opportunity to make lenient settlements. It may be necessary to absorb the joint-stock land banks in the Federal system, though I believe if this should be done we should be careful not to give an artificial value to their bonds, at the expense of other taxpayers.

Senator KING. Where will the Government get the money to carry out that policy of absorption? The joint-stock land banks have more than $1,000,000,000 outstanding now. The farmers have, as you say, $8,000,000,000 of mortgage indebtedness. Assume that the Federal Government desired to or had the power constitutionally to take over those obligations; where will it get the money?

Mr. HASKELL. I do not believe it should be expected to take over the obligations. I think that enough easing can be done by selective action in individual cases so that a moderate amount of money and credit would take care of the thing. I would not have the Federal Government take over the whole thing. I would not have a blanket treatment, as I say. I think it may be necessary to set up an emergency corporation which would put some Government credit behind individual cases of easement in which the incentive might be offered to reduce the farmer's unsecured debts and perhaps his second mortgages, and perhaps to give him a little lower interest rate and a longer amortization period on his first mortgages.

Senator KING. I was wondering if you had considered the obvious fact that we are running behind three to five million dollars a day below our revenues; that the revenues for this calendar year will be less probably than for the last calendar year. That there will be a deficit this year of $2,000,000,000, a deficit last year of $3,000,000,000, a deficit the year before that of $1,000,000,000; that we have had to sell Government bonds to meet those deficits; we have to furnish the Reconstruction Finance Corporation approximately $3,000,000,000; the land banks have been furnished some credit. Have you envisioned the possibility of a continued drain upon the Treasury and the effects upon its credit? What the effects would be, if the Government bonds, with these constant demands, should not be sold? Would not our whole system be destroyed?

Mr. HASKELL. I think we should be careful not to bite off more than we can chew. I think, as I say, that we can ease the situation by substituting or by guaranteeing to some extent the bonds at a lower rate of interest in these individual cases in which we feel that the farmer can make the grade if his interest is reduced somewhat. The farmer has got to take a loss, of course, and the creditor has got to take a loss. I merely would have the Government as an intermediary to ease the transition period. And I would not expect the Government to make loans in which they would take any very considerable loss.

The CHAIRMAN. Do you go into any considerable detail and mention these specific items in your prepared statement?

Mr. HASKELL. What I have mentioned so far I give in the statement. I do not go into detail in discussing the various bills that I propose.

The CHAIRMAN. There is really no need of repeating what is in your statement unless it is a part of the explanation.

Mr. HASKELL. I am merely calling attention to the high points.

Senator HARRISON. In reading your statement I was interested in this point: You get out a farm supplement to your paper, the Kansas City Star?

Mr. HASKELL. Yes.

Senator HARRISON. And I understand you have about 500,000 circulation?

Mr. HASKELL. Yes.

Senator HARRISON. You get a great many letters?

Mr. HASKELL. Yes.

Senator HARRISON. And you said that about 5 to 1 of the letters are more favorable to mortgage changes, reduced taxes and interest reduction than they are to the farm-allotment plan?

Mr. HASKELL. Yes. What I said specifically was that of 50 letters received a couple of days before I left only 6 mentioned domestic allotment, 5 are against it and 1 was for it; and most of the rest were discussing taxes and interest. There was a little flurry of interest in possible promoting of trade by issuing scrip-bearing stamps, which is, of course, a part of the sales tax.

Senator HARRISON. You feel that the interest among the farmers in your section is more towards the reduction of interest charges?

Mr. HASKELL. I think so.

Senator HARRISON. More towards the reduction of interest charges and reduction of taxes than anything else?

Mr. HASKELL. From all our contacts I believe that is true, Senator.

The CHAIRMAN. Well, we could not do anything with taxes, to speak of, because that is almost entirely in your State and your cities, and your counties.

Mr. HASKELL. To a very considerable extent, except that on the general proposition of the Federal taxes they do constitute a heavy load on the country in general. Not so much as the others, of course. The total, I believe, is estimated at $15,000,000,000 by the Department of Commerce, in which the Federal Government is only $4,000,000,000.

Senator KING. I have a question apropos of what Senator Harrison asked you. In all these letters that you received do you find any very loud demands for the continuation of the Farm Board?

Mr. HASKELL. No. I should say that in general the farmers are pretty sour on that, as well as on all price-fixing schemes. I suppose that is the reason that the domestic allotment has not appealed to them. They are kind of sour on the whole thing as far as I can see.

Senator KING. They would be glad to have the Farm Board cease to function?

Mr. HASKELL. Well, I do not know that they express themselves that way. They are rather indifferent about it, I feel.

I have mentioned the two things that would get the tilt down. Now, on the matter of getting the down-tilted part up. We come to measures for increasing prices. And there are three that have been urged in our part of the country to considerable extent. One is inflation by devaluing the dollar, the second is domestic allotment, and the third is the withdrawal of marginal land from cultivation by Government rental.

On inflation, of course, I can not speak as an economist, but I will say this, that with the same gold content to the dollar we have seen wheat sell in Kansas City as high as $3.65 a bushel and as low as 40 cents a bushel, and we have seen hogs sold all the way from $23.40 to $1.90. So evidently there is something beside the gold content of the dollar involved in that.

The public mood affects the value of money just as it affects the value of Florida real estate. When you have everything depressed, whether the gold content of the dollar is up or down you have prices down.

I think England has shown what happens to the plain man in devaluing the dollar. I have taken some pains in examining the English situation. They devalued the pound of course by 30 per cent. They have not diminished their debt load one penny. The last figures show that wages went down in the last year about $8,000,000 a week. Unemployment increased by 12 per cent. Of course, they were forced to it, but when they were forced to it they demoralized international prices and sent them down.

I believe we should avoid any serious contemplation of inflation. That with inflation we would find none of the results expected, and we would find that we have contributed to the confusion of international trade. That we would then be holding things back instead of pushing them along. In fact I think it would be such a blow to confidence that it would be a very great impediment to recovery.

I have watched inflation in various countries in Europe. The only time they balk is when they get out of control, and then, as I have compared it sometimes before, it seems to me that the balky horse is the best illustration. You get on the horse and you apply whip and spur, but the horse does not budge. Finally he suddenly bolts, runs away, and you can not control him, and he stops abruptly and throws the rider and leaves him flat on the ground. That is the way it was in Europe. I hope we can avoid it here.

As to the domestic allotment, I was impressed by Professor Black in his book "Agricultural reform in the United States," and by Professor Wilson's very ingenious working out of the theory, but the more I came to consider it the more it seemed to me that they did not consider the farmer's psychology. The farmer has been taught to produce, and when his taxes and interest are high he is trying to produce on every acre he can. And I think it is simply impossible to get the farmer to reduce his acreage by giving him a bonus on production. You can not police him; you can not see that he reduces his acreage. And it tends to aggravate his problem instead of to help it.

A reasonable development of the land-use program, the adjustment to where things can be best raised, which the farmer is now carrying on, and if he can be allowed to carry it on in the free operation of supply and demand, will be the best solution of that. We want to produce wheat where we can produce it most economically and not on marginal land. And the domestic allotment would tend to freeze production horizontally where it is now on high cost lands as well as low cost lands. We want to raise our wheat, as I say, where it can be raised economically, and not on any artificial basis.

And here I want to register my feeling against our interfering with this by our crop-production loans. Our crop production loans last year on wheat, I am told at the department, enabled them to be subsidized in spite of the fact that we had a tremendous surplus of wheat; we subsidized about 100,000,000 bushels of wheat on 9,000,000 acres of marginal land where it ought not to be produced.

We are repeating the same mistake this year, with the same subsidy given on the condition that they should reduce acreage, but who is going to police them to see that they do? It is impossible to reduce acreage by giving higher prices.

And the same objections apply in principle to the proposal to rent marginal land. I was impressed in riding from Kansas City to Washington to see the enormous amount of marginal land which is out of cultivation which could be fed into cultivation just as soon as you began to take the marginal land out of cultivation. You would be pouring money into a rat hole. There is no reason why the farmer could not rent his marginal land to the Government and take it out of production, and put some of his pasture land into production and increase his production. I do not think you can get out that way.

As I say, the farmer, as far as we can see, is not interested in domestic allotment. He is making his adjustments, and it takes from 3 to 5 years to adjust your crops in rotation, and so forth. So we want to give him time and he will work out.

But in the meantime I believe that you can have a program for price recovery which will not necessitate our sweating the thing out. I think that if we abandon as far as possible uncertainty and fear, that we will have the same recovery that we started last summer. If we can approximately balance our Budget and if we can end the fear of inflation, if we can then cut international debts, settle and stabilize currencies, I believe that we will be surprised at the forward movement in prices.

Senator KING. Before leaving that, Mr. Haskell. You referred to these extensive loans made by the Federal Government for crop production. I agree absolutely with what you state. You have noticed, I presume, that Congress in its wisdom, or its folly—I emphasize the latter word—has recently passed a bill carrying $90,000,000 for additional crop production. Do you not think that that would prove a disadvantage, to say nothing of the expenditure of the money? There will be an army of Federal employees that will have to be fed out of the Public Treasury to enforce that.

Mr. HASKELL. Yes. It is impossible of enforcement. I can not see it.

Now, as a further thing, I get on controversial ground. I believe that we have got to open markets to the farm export, foreign markets to farm exports, and I see no way of doing that except through some reciprocal tariff reductions. Now, the whole policy, it seems to me, has been a mistaken policy in recent years, because we have kept raising our tariffs and that has had a tendency to shut off the purchasing power of Europe. And there is a widespread impression that our European farm markets have dried up through their efforts to become self-sufficient on food. That impression is only partly justified.

I have been very much interested in investigating the case of wheat lately. I had had the feeling that the introduction of new lands during the war and since the war had greatly increased the wheat production and so swamped the world with wheat. That is not true. The big increase in wheat production came a generation ago. I suppose it was with the development of the reaper abroad, and so forth. Wheat production in 15 years went up 40 per cent. The 15 years in the nineties and before the war. Whereas in the last 15 years it went up 20 per cent. In spite of the big crop of 1928 and 1929 and Russia getting into the market with export wheat unexpectedly, under normal conditions there would have been a disappearance of this surplus in Europe, but conditions were abnormal, and through underconsumption and through tariff restrictions largely to protect currencies, we had the surplus dammed up.

But in spite of these disadvantageous factors Broomhall estimates that this year the world will take 700,000,000 bushels of export wheat, and we will supply about 56,000,000 bushels—about 8 per cent of that. We ought to be supplying about 20 per cent of that as we did during the most of the decade before the crash. Of course part of our trouble has been due to our price pegging which in the light of experience I believe has proved to be a mistake. Part of it is due to the competition with depreciated-currency countries. But to a considerable extent I believe it has been because we have not allowed the foreigners to pay for what they took with goods.

The Government, of course, financed through the war days the great prosperity era of our export trade when workmen wore silk shirts, but after that the private investor took up the load, and then when the private investor stopped lending that was one of the contributing factors to the sudden fall of our trade.

You can see what happened to the farm industry. In 1920 it was virtually in balance. That is, the index figures of farm prices stood at 205 and of the things the farmer bought stood at 206. That was virtually balanced. After that the farm index constantly sagged until it got down to 94 in 1931, and it took a nose dive to 51 last year. At the same time the index of what the farmer had to buy went down to 105. So the ratio now instead of being balanced is now 49, which is to the great disadvantage of the farmer.

I am asked how it would be possible to decide what industries we might make reciprocal reductions on, and I talk about reciprocal reductions because the agenda for the world economic conference, recognizing the need of reducing trade barriers, suggests that no nation can afford to make tariff reductions by itself but there must be reciprocal reductions undertaken.

I have been asked just which American products I would sacrifice by reducing their protection, in order to promote export trade. The general principles of the answer are clear. We should make the reductions in uneconomic industries.

We sold in 1926 $1,600,000,000 of farm products abroad, and just the recovery of part of that market would very greatly stimulate our farm industry.

There are uneconomic industries which we are maintaining at too great cost, at the expense of our farms and other exporting industries. These include industries in which hand work enters to an unusual degree. Certain other products are uneconomically produced because of unsatisfactory natural resources.

I would urge that our Tariff Commision be empowered to make a survey to disclose which these economic industries are.

In France I have talked to business men who have told me that they felt it was a great hardship for us to undertake hand industries when they were prepared through their long training to supply hand-made goods while we could supply machine-made goods with greater efficiency. And every time I am over there I am impressed by the terror of the European people who talk about the efficiency of American production. Yet we are frightened at the appearance of even a trickle of foreign-made goods in this country. It seems that some of our great industrialists are like the girl who jumps on a chair and screams at the sight of a mouse.

I have been impressed with this, that we can see manufactures deteriorate, we can see men thrown out of work, and we are sorry, but we do not do anything, but if we suggest taking any action which will temporarily perhaps throw some men out of work but with the prospect of improving general conditions by improving our export trade and putting more men back to work we shrink back from it.

We are very much in the condition of the man who is sick, who could be cured by surgical operation, but he dreads the operation so that he would much rather keep on getting sicker and die than go through the operation. That is essentially the situation, it seems to me.

I believe we must settle the debts, stabilize currencies, and get some reciprocal reductions in order to promote our farm trade abroad.

The CHAIRMAN. Have you taken the time to figure out on pounds and yardage the goods that have come into this country under existing prices as compared with the pounds and yardages before the passage of the bill?

Mr. HASKELL. Senator, I have not gone into it in detail, but I have noticed that the gold-standard countries have not been very different from the others in their falling off of trade. And before I came away I got a very frantic protest from the salmon packers of the Northwest about the terrible condition of the salmon-canning industry from the Japanese imports. The Japanese imports have increased 2,500 per cent in nine months.

The CHAIRMAN. So you would like to have the tariff reduced on that?

Mr. HASKELL. No. But let me tell you, Senator, what happened. I came to Washington and looked them up and I found that we had started with 1,600 pounds of Japanese imports and we had increased those to 44,000 pounds, which was an increase of over 2,500 per cent. At the same time during that year we had packed—this other was for nine months, so the comparison is not quite true, but in the year we had packed over 300,000,000 pounds. Those 44,000 pounds were just a drop in the bucket. And I trust that we will not be stampeded by some instances of that sort to cut off the ability of the foreigner to buy our farm products still further and to make his currency situation still worse, which retard instead of hasten recovery.

I feel that the "Buy American" campaign is in the same category. It hurts our farmers, because if we are going to sell our export products abroad we must buy abroad. And I think it can be done without any damage as the thing is readjusted.

Gentlemen, that is essentially the thing. I mentioned getting the thing down. The machine that is tilted high, get it down from two angles, reduction of interest and taxes, and get it up by removing the element of fear and uncertainty, settling the debts, stabilizing currencies, and reciprocal tariff reductions.

Senator KING. I think you have made a very fine statement.

The CHAIRMAN. The settling of the debts in what way? Do you mean by cancelling them?

Mr. HASKELL. I should like to speak a word about the debts. I would not cancel them; I see no reason to cancel them; but I think we can get some compensating advantages for the sacrifices that we must inevitably make. With regard to those compensating advantages I believe we might be able to do some bargaining on their taking some farm products, but I should think they would come more in bargaining for them to stabilize their currencies and to make some reciprocal tariff reductions. I think if our farmer could be convinced that his foreign market was going to be opened up through the debt settlement, that he would not oppose a reasonable settlement.

The CHAIRMAN. Thank you.

(Mr. Haskell's prepared statement is as follows:)

### A 4-POINT PROGRAM FOR FARM AND NATIONAL RECOVERY

1. Radically reduce taxes.
2. Adjust and scale down farm indebtedness where necessary.
3. Depend for price recovery, not on domestic allotment or Government rental of marginal lands, but on an intelligent land-use program worked out voluntarily by farmers; combined with removal of elements of uncertainty and fear from the national situation by balancing Budget, rejecting inflation, settling international debts, stabilizing currencies; plus—
4. Lower trade barriers by reciprocal tariff revision to open foreign markets to surplus farm products.

I come before you frankly as a westerner, as a resident since boyhood of the great valley that feeds the Nation. I can not presume to speak for that valley. But I believe I know something of its needs and aspirations. What I shall have to say is directed toward how those needs may be met, those aspirations fulfilled. And, while I shall speak from what I conceive to be the farm standpoint, I shall urge nothing for the West which, in my view, is not for the national advantage as well.

The farm market makes up at least a third of the national market. Its deep depression is certainly a major factor, though not the only factor, in the country's present plight. Its recovery would be an immense stimulant to general business. There is an enormous dammed-up demand on the farms for goods produced in the East. But with the farmer's net income at the vanishing point, this potential demand for goods remains paralyzed, and the man in the East who might be at work satisfying it must walk the streets unemployed.

Before I speak on the specific farm problems, let me indicate briefly their connection with the general problem of the depression. We agree that the whole industrial machine is badly tilted. Some of it is stuck on the 1929 level, part of it is down at depression depths. So long as it is so out of balance there can be no free interchange of goods, and we founder along. Goods will begin to flow freely as we get it back in equilibrium. This will be attained, not by bringing the whole machine down to the 1933 level, but by lowering the uptilted part and at the same time raising the downtilted end.

On the high level are taxes, part of the debts, interest rates, railroad rates, wages in some key industries, such as railroads and the building trades, rents. On the low level conspicuously are commodity prices, including those of farm products. We face a situation in which manufacturing industry in distress seeks to curtail production and maintain prices, and in which the farm industry has been unable to curtail production and so has seen prices go to distress levels.

Our prime undertaking, then, from the national standpoint, is to get the high-level costs down and to raise the part of the machine that is down in the cellar, particularly the farm industry.

The farm industry itself suffers internally from this general maladjustment. It needs to get its overhead down, as well as its prices up. The main items in this overhead are taxes and interest.

### I. FARM RELIEF THROUGH REDUCING THE OVERHEAD—TAXES

The first and most direct measures for farm relief have to do with reducing the overhead of taxes and interest. Before the war these two items absorbed about one-twelfth of the gross farm income. To-day they are absorbing more than one-fifth. Evidently, even when the farmer can meet these charges, he has almost nothing left to spend for the things he ordinarily would buy.

The tax burden is a vital factor in depressing not alone the farm industry but industry in general. The Department of Commerce estimated it last year at nearly $15,000,000,000, of which $4,000,000,000 was national, the rest State and local. This was more than a third of the national income for 1932. Gentlemen, business can not stand this load.

States and local taxing bodies, at least in the West, are making strenuous efforts to bring down that share of taxes which they control. In Kansas, for instance, Republican and Democratic legislators are working together for drastic reductions. Expenditures were cut heavily last year. This year further reductions of at least 30 per cent in the State budget are in prospect.

If you will pardon my saying so, out in the West we sometimes feel that Congress has not yet heard that anything has happened. There is extreme resentment at the failure to accomplish substantial reductions at Washington. Those of us with experience in watching public affairs know the pressure to which Congress is subjected to maintain expenditures. In view of this pressure we doubt whether it is capable on its own of making the necessary reductions. I have found everywhere strong approval for the suggestion to invest the President elect with almost dictatorial powers to balance the Budget. We believe the eagerly expected 25 per cent cut can be made in no other way.

A real lightening of the tax load would be a direct and effective method to promote business recovery.

II. FARM RELIEF THROUGH REDUCING THE OVERHEAD—DEBTS

Turning to farm debts, we find the Department of Agriculture estimates farm-mortgage indebtedness at about eight and one-half billion dollars. Other farm indebtedness amounts to nearly $3,000,000,000. With existing low prices of commodities, interest and amortization charges can not be met by a large number of farmers, and they face the bitter possibility of losing not only their homes and savings of years but their jobs, their means of livelihood, as well. It is little wonder that in some instances there has been forcible resistance to mortgage foreclosure sales.

But great as must be our sympathy for farmers made desperate by their misfortunes, we must not allow ourselves to be stampeded by the sporadic farm uprisings that have occurred. Resistance usually has followed futile efforts to have loans extended, and the probability of facing deficiency judgments, that is, covering the difference between the mortgage and the amount brought by the farm at a forced sale.

The great bulk of the farmers are steady and level headed. They have no disposition to evade payment of their debts. They can be depended on to make every effort to meet their obligations.

In any program that is proposed especial care should be taken not to create the impression that the farmer is not expected to pay his debts. That would be an impossible as well as a demoralizing policy. We in the West know that the farmer is going to need credit when times become normal. We want him to be able to borrow on the terms open to other business men. There are inevitable losses in farm loans in the depression, as there are in industrial loans. But we must not promote the idea that the farmer is an undesirable risk and so impair his credit for the future.

Adjustments are constantly in progress between farm creditors and debtors. Many insurance companies, Government loaning agencies, banks, and individuals owning farm mortgages are meeting the situation realistically. They do not want to take over farms. So they are scaling down interest rates where necessary and making every effort to keep the farmer in his home. One joint-stock land bank, I am informed, with 5,000 farm loans, has foreclosed on only a dozen, although a quarter of the mortgages are in default.

Still, individual adjustments are not equal to the job. There is need for Government intervention to carry through the necessary compromises and to ease the general situation. Government credit may fairly and wisely be employed to help tide this debt-burdened farmer over the present emergency pending a rise in prices, which I shall discuss later.

Various measures have been proposed to Congress. I shall not undertake to discuss them in detail, but merely to emphasize general principles on which sound action can be taken.

Blanket proposals to refinance all farm mortgages seem to me unnecessary and unwise. We must recognize that there is a wide variety of mortgage indebtedness. In certain sections the mortgages represent a much higher proportion of the value of the land than in others. Some farmers are able to carry their indebtedness. Others are not. The mortgage treatment should be selective.

In the large majority of cases where mortgages are in trouble, the situation could be made bearable by a reduction in interest rate, with a longer amortization period—perhaps up to 40 years—and with principal payments suspended in the emergency for perhaps three years.

The Federal farm loan banks will need help to ease the situation and make lenient settlements with competent farmers who can not make the grade on present prices. It may be necessary to provide for taking over the joint-stock land banks into the Federal system—though not on a basis that will give an artificial value to their bonds at the expense of the taxpayers.

In addition, perhaps, the Government might set up an emergency corporation which would provide Government credit in individual cases to induce the creditor to allow the farmer to scale down his unsecured debts, or his interest rates, the creditor accepting a Government guaranteed security bearing a low rate of interest.

It would be necessary to set up rather extensive machinery to handle individual cases, but I see no sound alternative. The procedure would be akin to that proposed in the amendment to the bankruptcy act and there seem no insurmountable obstacles in the way. The cost to the Government would be moderate and the reduction in interest rates would ease the farm burden, put new hope into the farm industry, and put it in a position to contribute powerfully to general recovery when farm prices rise.

### III. INFLATION—A CURE THAT WILL NOT WORK

But it is not sufficient to get the farm overhead down through reduction in taxes and interest. Prices must rise as well to restore farm purchasing power.

Three major proposals have been urged to meet the situation. The first is inflation, the second domestic allotment, the third the withdrawal of marginal land from cultivation by Government rental.

It is agreed on behalf of inflation that it would not merely raise prices, but that it would relieve the debt burden everywhere. The method of inflation that has commanded the largest support in the Middle West involves altering the gold content of the dollar. Cut the value of the dollar in half, it is urged, and you have a controlled inflation that would automatically cut the debt burden in half.

I have no sympathy with the argument that this proposal is dishonest. It might just as well be argued that it is dishonest to require the payment of debts contracted with the cheap dollar of 1929 with the dear dollars of 1933. My objection to devaluing the dollar is that it would not work as its proponents expect; that it would make conditions far worse, instead of better. With the content of the dollar unchanged, wheat has sold in Kansas City as high as $3.65 a bushel and as low as 40 cents. Hogs have sold all the way from $23.40 to $1.90. These facts suggest that the gold content of the dollar is only one of many factors affecting its value.

The public mood affects the value of money just as it affects the value of Florida real estate. We have more money in the country now than we had in 1929. It is lack of velocity in circulation of money, and what is of immensely greater importance, credit in the shape of bank checks, that has depressed prices. And this lack of velocity reflects lack of business demand and impaired confidence.

England has given us an example of what happens by devaluing the money unit. She was forced to devalue the pound by 30 per cent. But that has not reduced the internal debt loan by a penny. Wages went down in the last year, according to official figures, about $8,000,000 a week. Unemployment increased by 12 per cent. The fall in sterling sent international prices down to new low levels. World recovery has been set back badly, not helped, by England's action.

If the United States were to add to the general price confusion by devaluing its currency, the world's plight would be even worse.

It is possible to depreciate the value of currency in a depression without producing inflation. But where currency inflation has really taken, I know of no case in which it has not got out of control with disastrous consequences.

If currency inflation is really to take in a time where there is a surplus of goods, it must go to a point where people lose all confidence in the value of money. Postwar Europe shows the disastrous outcome.

What seems to me the best illustration of what happens is the comparison of inflation to a balky horse. The rider applies whip and spur, but the horse does not budge. Finally, he suddenly bolts, runs away, stops abruptly, throws the rider, and leaves him flat.

Perhaps you will permit me on this point to digress for a moment from the farm application to more general considerations. Occasionally western business men tell me the country is simply sunk beneath the debt load and that it can not make the grade without such inflation as they believe devaluing the dollar would produce. I have cited reasons why I believe they are mistaken about the effectiveness of their remedy. But, they ask, what about the debts? My friend, Congressman McGugin, of Kansas, paints a black picture of what he calls "the sweating-out process" which he thinks would last for years, and which the country could not stand.

The National Industrial Conference Board estimates the indebtedness of the country in 1929 at $155,000,000,0000. A good share of this, including the debts of public agencies, can be met even at the present price level. We are apt to take too dark a view of the rest. A vast amount of liquidation and scaling down has been done in the last three years. More remains to be done. But the whole picture will change rapidly for the better with a moderate rise in prices.

Such a rise I believe is possible even without world recovery. Prices are now at an abnormally low level—a shock level—due to fear and lack of confidence. Given half a chance and they will move upward. Last summer when fears over inflation and an unbalanced Budget were quieted and when it was seen that reparations were approaching a settlement, there was a strong upward trend which was stopped only by political uncertainties.

Balance the Budget, so the banks will know they will not be called on to absorb billions more of Government securities; and fears of inflation which profoundly disturb all business confidence; settle international debts so that world currencies may be stabilized; and we will be amazed at the forward movement of business and prices.

For we have all the essentials to recovery, a great productive plant, the ability to finance it, and the unfilled wants of an intelligent and industrious population of 120,000,000 people.

## IV. DOMESTIC ALLOTMENT AS A REMEDY

Returning to the next plan proposed to raise farm prices, domestic allotment, I began its study with high hopes. Its exposition by Prof. John D. Black in his book Agricultural Reform in the United States, and the development of the plan of Prof. M. L. Wilson, were impressive. It looked as if they were working on promising lines of providing the farmer an incentive to reduce his production to manageable proportions.

Further consideration of the complicated problems involved, and of the habits and mind of the farmer, developed what seem to me insuperable objections.

I am not impressed with the contention that it is unfair to tax the whole population for the benefit of one class. That is precisely what the tariff does. What is sauce for the eastern goose certainly should be sauce for western gander.

The difficulties lie deeper. The farmer has been schooled to produce all he can. He is under especial compulsion to do this under pressure of meeting taxes and interest charges. I believe it is simply impossible to offer a bonus on production to groups each including a million or more farmers and then to police them to see that production is held down. Practically the payment of the allotment bonus would almost certainly increase production and so aggravate the problem. If we are to stimulate the reduction of acreage on surplus crops, we must find some way to do so without offering artificially high prices.

In an allotment plan it would be out of the question to include dairy products. The industry is too scattered and widespread to be subject to effective supervision. As to pork products, the packers already are selling all the market will absorb at present low prices. An increase in prices would curtail demand and so drive prices still lower. On hogs the allotment plan would produce results the absolute reverse of those intended.

There would be the same tendency in wheat and cotton, although I am not prepared to say whether it would produce results so pronounced as with hogs. Certainly if the experiment is to be tried it should be confined to these two major products.

Our intimate territory is more concerned with wheat than with the other products included in the plan. A further objection here is that an artificial price applied to all wheat would tend to freeze production in its present position—that is, it would keep uneconomical marginal land in production. What we imperatively need is a land-use program to be adopted voluntarily by farmers under the free play of economic forces, that would produce wheat and other products where they can be produced most efficiently and at the lowest cost. This adjustment is now going on. The allotment bonus would block it.

You must remember that it takes a farmer from three to five years completely to readjust his production. Farmers who already have made progress in readjustment would be unfairly penalized by the allotment plan.

Here I venture a protest against the scheme of crop production loans, especially for wheat, which go chiefly to keep uneconomic marginal land in production and so hold to distress levels the price of wheat on land where it can be produced economically. Last year, when we were seeking desperately to get wheat production down, Congress subsidized the production of about 100,000,000 bushels of wheat on 9,000,000 acres of marginal land. Is not that a perfectly foolish and destructive policy?

This year we are preparing to do the same thing, with the futile safeguard of allowing the Secretary of Agriculture to insist that production be cut as a condition to receiving the loans. Who will police the farms to see that this is done?

I may add that The Kansas City Star publishes a farm weekly with a circulation of 500,000, that goes to more farmers than any other single weekly publication. We have a constant stream of letters from our subscribers discussing their problems and only the smallest fraction of them show the slightest interest in the domestic allotment plan. They are concerned with taxes and interest—not with price-pegging plans on which they have gone sour since the futile efforts for stabilization of wheat prices. On a recent day about which I inquired, 50 letters had been received, of which one spoke favorably of domestic allotment and five opposed it. The rest were concerned chiefly with taxes and interest which are the farmer's pressing problems to-day, and with the possibility of stimulating trade by the issuing of script bearing stamps—a form of the sales tax.

A variant of domestic allotment is the proposal that the Government lease enough marginal land to bring the major crops toward manageable levels. This would be pouring money into a rat hole. Nobody can travel from Kansas City to Washington without being impressed by the amount of pasture and timber land that might be brought into production if the Government began to take some of it out of production. Under such a plan the Kansas farmer might rent part of his crop land to the Government and plant wheat on land he had been using for pasture.

No; there is no hope of getting farm production adjusted to a reasonable demand through the measures proposed. If we will let the farmer alone, he will work out a reasonable land-use program as he is working it out on a large scale to-day, that will be effective in producing results. There is one practical way in which the Government could promote this program. That is by helping abate taxes on land taken out of production.

As I have said, one reason why the farmer is under pressure to use every possible acre for production in spite of low prices is that he must meet taxes and interest. Let taxes be abated on land taken out of production and he will have a real incentive to push his program for the most effective use of his land. States could not do this generally without amendments to their constitutions. The bulk of farm taxes go to school districts and other local taxing units. But the Federal Government could reimburse the taxing units for their loss from tax abatement. The cost would be moderate. There would be no bargaining as there would be if the Government were attempting to rent the marginal land, and the effect on reducing excess production would be reflected back to the Nation through increased farm prosperity.

### V. RECIPROCAL TARIFF REVISION TO RAISE FARM PRICES

We now have surveyed the important possibilities of farm relief through a reduction of taxes and interest charges. We have considered next the proposed remedies of the domestic allotment plan and Government rental of marginal lands in order to take them out of production. Unfortunately, our discussion of these remedies has been chiefly destructive criticism. On the positive side, however, we have suggested tax abatement on marginal lands, and a rational program of land utilization.

But while we are waiting for this long-time program to develop, must the farm industry continue to sweat it out on the low price level? Is there nothing the Government can do to help the situation?

I have already suggested certain measures that would vastly improve the domestic situation, including farm prices, the balancing of the Budget, the ending of the fear of inflation, the settlement of international debts, and the stabilization of world currencies, to which I will refer later. Is there nothing more direct the Government can do?

I earnestly believe there is. It can take down the bars it has erected which block the expansion of our foreign trade. Our primary farm products—wheat, cotton, pork products, animal fats and oils, fruit and nuts, tobacco—require foreign markets. In the middle of the last decade we sold $1,600,000,000 worth of these products abroad in one year. If we could bring back a considerable fraction of this trade, our farm situation would be transformed.

There is a widespread belief that European nations have been taking such energetic measures to become self-sufficient on food that our great European market has largely dried up. There is a measure of truth in this, but it is far from the whole truth.

Take wheat. We generally assume that with the mechanization of the farm the war brought vast areas of new land into cultivation and that world wheat production increased so rapidly that it outstripped demand. Only part of this assumption is correct. It is true that large areas of new wheat lands came into production and that great dislocation of the industry resulted. But the big world expansion in wheat came a generation ago. The war caused an abrupt drop in world production and it was not until 1925 that the yield had reached 1913 figures. Even the abnormally large crops in America in 1928 and in Europe in 1929, with the addition of Russia as an exporting nation in 1930–31, would not have swamped the world had it not been for the depression, with underconsumption, and artificial trade restrictions, largely for the protection of currencies.

In spite of unfavorable conditions the world is still consuming a large amount of wheat. In this crop year of 1932–33 Broomhall estimates that the world will absorb more than 700,000,000 bushels of export wheat. But the United States is not getting anything like its fair share of the trade. It is expected to supply only 56,000,000 bushels—less than 8 per cent of the total.

In the 2 years immediately following the war, before Europe had got back into production, we supplied 41 per cent of the export wheat. With the readjustments toward normal, our percentage dropped. But for several years we averaged 21 per cent of the world exports. In the last four years our percentage has fallen sharply again. Part of the trouble lies in our attempt at price pegging which, in the light of experience, has proved a mistaken policy. We kept the domestic price above export levels. Now we are suffering from competition with depreciated currency countries. But these difficulties are not the whole story.

Our farm trouble goes back primarily, I believe, to a wrong tariff policy which has seriously affected all our great export industries producing petroleum, copper, motor cars, typewriters, sewing machines, locomotives, agricultural machinery, printing machinery, as well as farm products.

Here I am on ground with which you are familiar. Our enormous exports during the war, which produced the feverish prosperity under which day laborers wore silk shirts, were possible only because the United States Government lent the money to finance our sales abroad, through the war loans. In the subsequent decade the continuance of our profitable export trade depended on private loans abroad. That is, foreigners paid us with credits obtained from the sale of goods in the United States, from tourist expenditures, immigrant remittances, and various services. But these credits were not sufficient, and they borrowed the balance from us.

When we stopped lending in 1929 they were forced to cut their purchases. They could not pay in goods because of our tariff policy.

Our postwar tariff policy, as I see it, was an important factor in getting our general industrial situation out of balance. We were promoting the building of industries behind the tariff wall at home, as well as stimulating production of competing foodstuffs abroad, while our export farm industries could not be protected and were forced to sell in a world market. What happened is shown in the ratio of prices received by the farmer to the prices paid by him. In 1920 the ratio stood at 99. Then in the high-tariff era it sank. In January, 1933, it stood at 49.

In 1920 the index number of prices received by farmers stood at 205, compared with the 5-year pre-war average, while the index number of prices paid by farmers for commodities bought stood at 206. The situation was in balance. Since then the farm index has been declining until it took a nose dive to 94 in 1931 and to 51 in January of this year. In the same period the index of commodities bought has fallen to only 105. General commodity prices are almost back to the pre-war level, while farm prices as a whole are only half of pre-war, and in such fundamental products as wheat and hogs, they have touched record lows.

The facts seem to me to point irresistibly to the conclusion that our national policy tended to expand our industrial production on a high price level at the sacrifice of our farm industry, and thus to get our national machine out of balance, to the detriment of all industry.

### VI. How to Discover the Uneconomic Industries

What would be the immediate program to remedy this situation?

First, the farm industry, in common with our other export industries, needs currency stabilization throughout the world. So long as currencies are fluctuating trade is disorganized and farm exports come into unfair competition with products from depreciated currency countries.

The stabilization of currencies presupposes the settlement of international debts. England can not stabilize sterling, to which so many currencies are attached, until the debt situation is cleared up. Further payments in gold under existing conditions would simply weaken sterling and drive the world price level still lower, to the disadvantage of the farm market.

I see no reason for cancellation. But I believe we can adopt a businesslike attitude of enlightened self-interest, make the best of a bad situation and reach agreements with our debtors out of which we can get compensating advantages for the sacrifices we shall have to make.

If we can show our farmers that they will receive profit in expanded markets in return for debt concessions, I believe they will not oppose reasonable settlements.

These settlements should include or imply reciprocal tariff reductions which will open foreign markets for farm products. It is true the great industrial nations of western Europe are deliberately trying for self-sufficiency on food—France, with a tariff of 85 cents a bushel on wheat; Italy, with $1.07; Germany, with $1.62. Of course, this policy is uneconomic and results in artificial prices for bread. It would be worth while exploring the situation to see whether concessions could not be obtained.

In any event, there is a market in Europe this year for more than 500,000,000 bushels of wheat, according to Broomhall, and we should make tariff arrangements that would permit Europe to pay in goods for our share of wheat and other surplus products.

Now, this trade is going to other nations partly because their tariff policy permits such payments. We are quite needlessly and deliberately blocking ourselves off from world markets which our farmers and many manufacturers need.

Radical tariff reductions on the part of the United States would be unwise. The agenda for the world economic conference, recognizing the need of reducing trade barriers, suggests that no nation can afford to make reductions by itself. Reductions must be reciprocal.

I have been asked just which American products I would sacrifice by reducing their protection in order to promote export trade. The general principles of the answers are clear. We should make the reductions in uneconomic industries.

In most lines of manufacture, through the intelligence of our workers, the competence of our managers, the use of machinery and mass production, we can beat the world. I am constantly surprised at the timidity of many great industrialists. At a hearing of the Ways and Means Committee in Washington a quarter of a century ago I heard Andrew Carnegie say he believed steel tariffs generally were obsolete. "But," he continued, in effect, "most of my associates have been made so soft by protection that they are scared to death at any suggestion of lowering the tariff."

Every time I go to Europe I am impressed with the prevalence there of American exports in spite of high duties and with the fear of European business men of the terrible efficiency of American manufacturers. Yet many of our own manufacturers are frightened at the appearance of even a trickle of foreign-made goods in this country. They are like the girl who jumps on a chair and screams at the sight of a mouse.

So I would suggest that Congress bear this peculiar psychology in mind in dealing with the tariff.

But as I said a moment ago, there are uneconomic industries which we are maintaining at too great cost, at the expense of our farm and other exporting industries. These include industries in which handwork enters to an unusual degree. Certain other products are uneconomically produced because of unsatisfactory natural resources.

I would urge that the Tariff Commission, as an expert body, be empowered to make a survey for the purpose of congressional action, to disclose which these uneconomic industries are.

Let me say here that we are off on the wrong foot when we direct the Tariff Commission to use difference in cost of production at home and abroad as the criterion for judgment as to which industries should have more or less protection. On that basis we might establish tariffs so high that pineapples could be grown in Maine. If we are to provide adequate protection for any industry that desires to produce goods that can not be economically produced in this country, we could virtually kill our foreign trade. Of course that would lower our standard of living, and cause immense dislocation throughout our structure. There is no use fooling ourselves. We must have foreign markets to support essential industries in the United States.

Which hand industries are uneconomic would be roughly measureable by the relation between the number of men employed and the wages paid, and the amount of capital invested. The presumption would be, too, that industries that had failed to expand in spite of high protection, were uneconomic. The fact that natural resources and conditions were unfavorable in certain industries could readily be recognized.

In our tariff policy in recent years we have set up duties that would set 100 men to work in some industry, while by so doing we have thrown 125 men out of work in some other industry by cutting down the foreigner's capacity to buy its products.

Our feeling toward even moderate tariff adjustments to promote trade is human. We see trade deteriorate and men thrown out of work, without any great shock. But we are terribly perturbed by the suggestion that we take certain tariff action that may temporarily put some men in uneconomic industries out of work, but that will start an upward movement in farm prices and in business that will bring work to many more than are temporarily displaced.

Our attitude is much like that of the sick man who could be cured by a surgical operation. But he so dreads the thought of surgery that he is willing to continue to suffer and finally to die in order to avoid the operation.

Meanwhile we should avoid, if possible, any increase in tariff against goods from countries with depreciated currencies, until we can make reciprocal tariff adjustments. These imports help keep our export industries going. To be frightened into cutting them off not only would reduce our exports of farm products but would accentuate the currency depreciation abroad and thus militate against world recovery.

The prevalent "buy American" movement is in the same class with other high-tariff proposals. If effective, it would be harmful to the farm industry and the whole country by impairing foreign capacity to absorb our exports. If we would sell our wheat and cotton and pork products and automobiles abroad—and we must—we must be willing to buy abroad.

## VII. IN CONCLUSION

The picture I have sketched from the viewpoint of a midwesterner who appreciates the gravity of the farm situation in its bearing not only on the farm industry but on national recovery, is far from hopeless.

While certain proposals for relief seem to me unwise and impracticable, I do not believe we need to fall back on the desperate expedient of sweating the thing out.

I propose this concrete program:

1. Radically reduce all taxes; industry, including the farm industry, can not carry the 1929 load.
2. Adjust and scale down farm indebtedness where necessary, by selective treatment under which creditors and debtors should share unavoidable losses, avoiding wherever possible the crash of bankruptcy. In many cases of mortgage loans, interest rates must be reduced and the amortization period extended.
3. Depend for price recovery, not on domestic allotment or government rental of marginal lands; but first on the upward movement that would come immediately through removing elements of uncertainty and fear. Balance the Budget, reject inflation, settle international debts, stabilize currencies, encourage the farmer through abatement of taxes on land taken out of production

to continue to adjust his farm production to normal supply and demand conditions through an intelligent land-use program.

4. Depend further for price recovery on the lowering of trade barriers by reciprocal action so as to give the farmer his necessary and fair foreign market for his surplus products.

It is not necessary to go through a long period of distress liquidation. An energetic endeavor to work out such a program as I have sketched, I believe, would send the farm industry and the Nation on a rapid upward spiral out of the depression.

The CHAIRMAN. We will next hear Mr. Dexter Keezer, of Baltimore, Md.

## STATEMENT OF DEXTER M. KEEZER, BALTIMORE, MD., ECONOMIST AND ASSOCIATE EDITOR BALTIMORE SUN

The CHAIRMAN. Give your full name for the record, Mr. Keezer.

Mr. KEEZER. Dexter M. Keezer, Baltimore, Md.

The CHAIRMAN. What is your business?

Mr. KEEZER. I am economist on the Baltimore Sun; associate editor.

The CHAIRMAN. You may proceed with your statement, Mr. Keezer.

Mr. KEEZER. The present depression in the United States is compounded, in large part, of great dislocations in the price structure and a consuming state of financial fear. The contribution which the Federal Government, in the present state of public opinion, can make toward the ending of the depression must be directed largely toward getting the price structure straightened out and relieving this fear.

In seeking these ends there should be consideration of a general policy directed toward relief from enormous concentrations of economic power whose growth has far outstripped the capacity to manage them effectively.

The extent to which the price system has been thrown out of gear during the depression can be crudely indicated by what has happened since 1929 to the averages of the various groups of prices which go to make up the United States Bureau of Labor Statistics' Index of Wholesale Prices. From 1929 to 1932 (using yearly averages) there was a decline of 32 per cent in the general average of wholesale prices. The price of farm products, however, declined 54 per cent while the price of fuel and lighting declined 15.3 per cent, that for house furnishing goods 20.2 per cent, and that for building materials 25.1 per cent.

*Wholesale commodity prices*

| Commodities | Average of year 1929 | Average of year 1932 | Per cent of change |
|---|---|---|---|
| Fuel and lighting | 83.0 | 70.3 | −15.3 |
| Metals and metal products | 100.5 | 80.2 | −20.2 |
| House furnishing goods | 94.3 | 75.1 | −20.4 |
| Chemicals and drugs | 94.2 | 73.5 | −22.0 |
| Miscellaneous | 82.6 | 64.4 | −22.0 |
| Building materials | 95.4 | 71.4 | −25.1 |
| All commodities | 95.3 | 64.8 | −32.0 |
| Hides and leather products | 109.1 | 72.9 | −33.2 |
| Textiles | 90.4 | 54.9 | −39.3 |
| Foods | 99.9 | 61.0 | −38.9 |
| Farm products | 104.9 | 48.2 | −54.0 |

In the meantime long-term interest rates, fixed by contract, have declined none at all, taxes have frequently gone up, and many freight rates are even higher than they were in 1929. It is obvious that the farmers, receiving less than half of what they received for their products in 1929, when they were far from prosperous, can not get very far in buying house furnishings whose average price has declined 20 per cent, or in making debt payments which remain at the 1929 level. Similar price impasses, which might be multiplied almost indefinitely, paralyze the entire economic system in varying degrees.

The extent to which financial fear besets the country needs elucidation even less than the jam in the price system which contributes to it. Perhaps as good an index as any is the fact that well over a billion dollars of currency is being hoarded by people who are not willing to entrust it to the established financial institutions.

Unfortunately the Federal Government is frequently forced to work at cross purposes so far as the elimination of these major contributors to depression is concerned. In the effort to allay fear it has been necessary to take steps which work against a straightening out of the price system, essential to recovery; and it will presumably be necessary in the future. A case in point is provided by the action of the last Congress in levying taxes on manufactured products in an effort to protect the Federal credit and finance emergency relief, which tend to increase the disparity between the prices of raw materials and finished products. The emergency Federal crop loans also work in opposite directions as a measure of economic relief.

The necessity of employing contradictory measures in efforts to relieve the depression makes the position of the Federal Government peculiarly difficult. It might be helpful if more emphasis were placed upon the paradoxical situation into which the depression forces the Federal Government, than upon the too simple inconsistencies in the steps it takes. There are some custodians of financial institutions who seem to divide their time between preparing pleas for fierce retrenchment to protect the Federal credit, and wringing their hands while waiting for representatives of the Reconstruction Finance Corporation to arrive and make another draft upon that credit for their particular benefit. This hardly contributes to a useful public understanding of the complicated position of the Federal Government in dealing with the depression.

Although the Government is cast in a difficult rôle it should be possible to handle the situation more helpfully. With reference to protecting the Federal credit by balancing the Budget, which is widely urged as the most effective step the Government could take to relieve the depression, it is extremely difficult to convince most people that that credit is in such desperate condition when, on February 1 of this year, the Treasury received subscriptions of $7,802,843,600 for its offering of about $250,000,000 of 5-year notes, to pay 2⅝ per cent annually. In spite of careful explanations of the peculiar conditions surrounding such subscriptions many people tend to conclude, particularly in the light of their own difficulties in borrowing from banks, that the credit of the Federal Government is not so bad, or that the bankers are not so bright.

It would be very helpful, however, if the Federal Government, without attempting to effect an exact mathematical balance of its

Budget, as at present set up, would give the country a more convincing demonstration of its capacity to get its receipts and expenditures moving more surely toward the balance. This would aid in the conversion of a large share of the public debt, which is becoming to be decidedly in order, and in getting the Federal Government in shape for large ventures in economic enterprise which may become necessary in the effort to lift the depression. In the minds of many such a demonstration comes down primarily to reducing the expenditures on behalf of war veterans.

Some of the organizations at present agitating large cuts in these expenditures make it difficult for Congress to make headway along this line because their demands are not respectable. They ask that pensioners be thrown off the lists wholesale and at a time when neither they nor their friends and relatives have any alternative methods of support. That is an unwarranted procedure. It is difficult to see, however, why there should not be a general 20 per cent cut in the allowance to all veterans, which, judging from the Government figures on the cost of living, such as they are, would provide a standard of relief as high as it was three years ago while reducing Federal expenditures substantially. If this step were followed by repeal of the acts which have made possible the creation of a large roll of war pensioners who are not properly entitled to relief, and the establishment of review boards to weed out the beneficiaries of administrative laxity, budgetary relief could be accomplished on a reasonable basis, and public confidence would be much improved.

To further restore that confidence, and in continuance of the paradoxical rôle of the Federal Government in saving and spending to relieve depression, provision should be made in some completely convincing way for the adequate feeding of the unemployed and their families. There is nothing more devastating to the restoration of confidence on the part of the great body of the population than uncertainty as to whether or not the man who asks for a dime to get something to eat actually needs it to keep from starving in a country bulging with foodstuffs. And, judging from the hearings on the La Follette-Costigan unemployment relief bill, that uncertainty now exists in many places, including those where the unemployed are nominally being cared for.

In the light of recent newspaper reports of organized opposition to foreclosures as well as echoes of confidential on refusals to meet farm mortgage payments, the problem of relief for farm debtors has shifted considerably toward that of relief for their creditors. To promote creditor relief and orderly liquidation of farm debts the Federal Government might take a lead through the land banks by providing for the adjustment of debt payments which can not be met in full to payments geared to commodity prices. In relief of debtors, the plans at present before Congress to permit an orderly scaling down of the burden of debts contracted when prices were far higher would, if perfected, contribute greatly to the relief of the depression. It is hard, however, to see why Federal funds or credit should be poured directly into the readjustment of these debts, as is at present being proposed.

Relief of farm debtors, as well as debtors generally, could be secured by monetary inflation on a grand scale, but unless launched without advance publicity by one with dictatorial powers there is much reason to believe that it would create another wave of panic. More inflation of the type of which we have already had a considerable dosage, as a result of successive Federal deficits (aggregating about $4,000,000,000) would presumably be less immediately disturbing. But inflation employed on a surely effective scale would work a great injustice on a large share of the population, including particularly wage workers, who, in many cases, have already been very much deflated. For them it would be as though they had been put well through a wringer, only to go through again in reverse with inflation. And, most important, it would do relatively little to restore a workable balance between different sets of prices, which must be restored to break the depression. It would serve rather to boost the distorted structure to a higher level, and at great risk.

In an effort to restore this price balance the congressional imagination seems to be at present gripped largely by schemes to lift the prices secured by producers in unprotected industries toward the level of prices prevailing in the protected industries. The domestic allotment plan for farm relief is such a scheme. In spite of a movement from city to farm which suggests that agriculture is becoming, relatively, a preferred pursuit, there is widespread sympathy for any plan to relieve the farmer, who, willingly or not, has been one of the few practitioners of the "rugged individualism" we have heard so much praised in recent years.

Adoption of the domestic allotment plan, however, involves a solemn governmental declaration that in order to gain a decent livelihood under the economic system prevailing in the United States it is necessary to restrict the production of much-needed commodities. That is a shocking and dangerous declaration. And, perhaps more important, the domestic allotment plan would not do much to reduce the desparity between the prices of farm products and finished products. If it could be made to work along the lines originally contemplated it would raise the prices of certain farm products, but along with them the prices of finished products.

While it may be necessary to convert American agriculture into a great cartel, along the lines of the domestic allotment plan, such an indictment of our economic system should not be made until there has been further exploration of the possibilities of restoring a workable price balance through reduction of the prices of the things the farmer, as well as those in other unprotected industries, would like to buy.

In this connection it might be desirable to consider the advisability of having the beneficiaries of the "self-liquidation" projects financed by the Reconstruction Finance Corporation, undertake to study carefully the justification for the prices of their supplies. It would also be highly desirable to consider the possibility of securing more effective enforcement of the antitrust laws, as well as revision of these laws to restore some of their lost strength. The neglect of these laws, as well as their disastrous interpretation by the courts, was a very considerable contributor to the violence of the recent depression. If the incoming Democratic administration would fulfill its campaign pledge of "strict and impartial enforcement of the antitrust laws to prevent monopoly and unfair trade practices" quite a lot might be accomplished in the deflation of prices whose present altitude perpetuates depression.

Another desirable method of getting the price system into gear again, as well as to break the international trade impasse, built up over the past decade, is a lowering of the tariff on the products which have yielded relatively little in the downward movement of prices. There is also much reason to believe that a long postponement of war debts payments, if not outright cancellation, would relieve this international trade jam to an extent which, in its beneficial effects upon our economic life, would far surpass any immediate loss incurred. Relief of this type may well be in the category of "finished business" already, but, if not, it should be easier of accomplishment in this country now that plans are being advanced for domestic debtor relief.

A governmental program deliberately directed to deflation of that share of American enterprise now protected both by tariffs and vast corporate bulk would presumably be quite difficult politically at this juncture, and would, no doubt, have to be attended by the application of more financial poultices of the type administered by the Reconstruction Finance Corporation. If it could be accomplished, however, there is no doubt that the country would be better served than by trying to seek a workable balance of the price system by undertaking to put more stilts under the unprotected industries.

As matters stand we have permitted concentrations of economic power which far surpass the capacity to manage them effectively. And, for all we know, they far surpass the limits of economic efficiency under the most effective management which is their only possible justification. That competition, the traditional regulator of private profit-seeking in the public interest, is only a partial check upon such enterprises is obvious. And that we do not begin to understand how to regulate them effectively through public commissions is equally obvious from the recent course of regulation of the electric power industry, which permitted speculation in its excess profits, both earned and hoped for, to contribute substantially to the depth of the present depression.

The same lack of capacity to manage the concentrations of economic power we have devised is found in the decision of the Federal Reserve Board, in 1927, to make its credit more bountiful, largely in an effort to correct what was regarded as a "maldistribution of gold." This decision, which has been characterized by a member of the board as "one of the most costly errors committed by it or any other banking system in the past 75 years," eased the way for a disastrous flood of speculation, with attendant large-scale jobbery, which got entirely out of control, to our present misery. Tragically enough, however, that misery can not be relieved at this juncture by what might seem to be equally sweeping financial strokes in the right direction.

The very extent of the present economic disorganization may afford something of an opportunity to reconstitute our economic system more nearly along the lines of individual endeavor and responsibility about which we are still talking though the reality has largely departed. It may be possible to move out of this depression by moving toward a freer economic system instead of drifting, so far as general design is concerned, further into a structure of cartels and giant and necessarily semimonopolistic corporations which magnify the catastrophic effects of ignorance from which we are now suffering. The country would be benefited if this committee, in pursuing its inquiry, would consider this phase of the depression, by way of formulating a general policy, in addition to considering the measures which must be taken to get through next week, next month, or next year.

The CHAIRMAN. Thank you, Mr. Keezer. That is a very good statement.

Is Mr. Frank H. Simonds here?

(There was no response.)

The CHAIRMAN. Mr. J. J. Pelley.

Senator HARRISON. Mr. Pelley was here, but I thought these other gentlemen would occupy the whole of the morning and told him he could leave until this afternoon.

The CHAIRMAN. Then the committee will adjourn until 2 o'clock.

(Thereupon, at 11 o'clock a. m., an adjournment was taken until 2 o'clock p. m. the same day, Tuesday, February 21, 1933.)

AFTER RECESS

The hearing before the Senate Finance Committee was resumed at 2 o'clock p. m., Tuesday, February 21, 1933, at the expiration of the noon recess.

Senator HARRISON (presiding). The committee will be in order. You may proceed, Mr. Pelley.

## STATEMENT OF J. J. PELLEY, PRESIDENT OF THE NEW YORK, NEW HAVEN & HARTFORD RAILROAD, NEW HAVEN, CONN.

Senator HARRISON. Mr. Pelley, I wish you would give, for the record, your business.

Mr. PELLEY. I am president of the New York, New Haven & Hartford Railroad and its subsidiary companies.

Senator HARRISON. You may proceed.

Mr. PELLEY. Mr. Chairman, I would like to talk to the text of Senator Smoot's telegram. He asked that I talk about what caused the depression, and legislative remedies, and cures. I do not think I want to say anything about what caused the depression. There has probably been enough said about that.

Senator HARRISON. There has been a good deal said.

Mr. PELLEY. And on the legislative remedies I want to confine myself entirely to my own business, transportation.

Senator SHORTRIDGE. Of course, as it relates to the general conditions of the country.

Mr. PELLEY. Yes. I would say in connection with that that anything that can help the transportation situation will make a contribution to return of prosperity, because we are the largest concentrated industry and we are probably about one-sixth the total industry of the United States.

I have some specific suggestions to make for legislation that will be helpful to the railroads. Not a panacea in any sense of the word, but this legislation will be decidedly helpful to the railroads.

The first thing I suggest is the enactment into law of the present Hastings bill in the Senate as it was reported to the Judiciary Committee, which is an amendment to the bankruptcy law.

Senator HARRISON. As it was reported to the Judiciary Committee?

Mr. PELLY. Yes. I have a copy of it here.

Senator HARRISON. Yes; we are familiar with that.

Mr. PELLY. It was amended in the Judiciary Committee, as I understand it. And I favor it as it was reported in so far as it pertains to railroads.

Senator HARRISON. You have not analyzed it as to the other features?

Mr. PELLY. I have not analyzed it as to the other features of it. So far as I know I have no objections to it. But I do know that I am in favor of the railroad portion of the so-called Hastings bill as reported to the Judiciary Committee.

Senator SHORTRIDGE. You mean as he introduced it?

Mr. PELLEY. Yes.

Senator SHORTRIDGE. And before it was amended?

Mr. PELLEY. Right. And the purpose of that bill, as all you gentlemen know, is to make it possible for railroads to reorganize their capital structures expeditiously and inexpensively.

The second thing I have to suggest is a modification of the antitrust laws so as to permit of a reduction probably to the minimum of competitive waste on the railroads. And I think I can tell you why I suggest that quicker by reading a short statement that I have prepared on it. (Reading:)

The antitrust laws, beginning with the Sherman Act of 1890 and ending with the Clayton Act of 1914, were framed for the purpose of protecting trade and commerce against unlawful restraint and monopoly. They proceeded upon the theory that inasmuch as railroads were capable of exercising monopolistic control over transportation, it was essential that such control should be regulated, and that as a part of such regulation competition should be compelled.

This policy of Congress has persisted to date—the expression being contained in transportation act, 1920, wherein it was provided that in the consolidation of the railway properties of the continental United States into a limited number of systems, the several systems shall be so arranged that competition shall be preserved as fully as possible and wherever practicable the existing routes and channels of trade and commerce shall be maintained. The act went further and provided that the several systems shall be so arranged that the cost of transportation as between competitive systems and as related to the values of the properties through which the service is rendered shall be the same, so far as practicable, so that these systems can employ uniform rates in the movement of competitive traffic and under efficient management earn substantially the same rate of return upon the value of their respective railway properties.

Under the mandate contained in this and other paragraphs of transportation act, 1920 (not section 5 of the interstate commerce act), the commission endeavored for a number of years to prepare and adopt a plan for the consolidation of the railway properties of the continental United States into a limited number of systems. In the plan as finally filed and approved, the commission, pursuant to the requirements of existing legislation, endeavored so to arrange the systems that competition should be maintained, and this was the only basis upon which the railroads becoming parts of these groups could be relieved from the operation of the antitrust laws.

With the growth of other methods of transportation (notably of the highways) it is apparent that the railroads no longer monopolize transportation, and no reasons now exist for laws predicated upon the railroads being a transportation monopoly. This was strongly reflected in the Salt Lake City address of Governor Roosevelt on September 17, last, wherein he said:

"I believe the policy of enforced competition between railroads can be carried to unnecessary lengths. For example, the Interstate Commerce Commission should be relieved of requiring competition where traffic is insufficient to support competing lines, recognizing, of course, the clear and absolute responsibility for protecting the public against any abuses of monopolistic power."

In the same speech he stated:

"Proposed consolidations of railroads, which are lawful and in the public interest, should be pressed to a conclusion. At the same time the provisions of the law should be revised in line with the policies here proposed and with repeated suggestions of the Interstate Commerce Commission and of representatives of shippers, carriers and their employees, to insure further protection of public and private interests involved."

This idea was further developed in the report of the National Transportation Committee of February 13, wherein they stated:

"In earlier development, the railroad franchise created an effective and complete monopoly against which industrial and social segments had no defense. Rigorous governmental control was inevitable. It took two forms: first, an effort to foster competition among different railroads and to create and maintain, by Federal financial aid, other forms of competing transportation, such as waterways; second, an intense regulatory control of the railroads themselves. The latter has been practiced long enough and sufficiently extended to prove that it dominates competition or any other influence as the governing law of railroad practice. To the extent that the monopoly inherent in the railroad franchise was a menace, it is of the utmost importance to recognize that current railroad regulation safely controls it. Other safeguards have appeared. With increasing effect, new methods of transport are invading customary fields of railroad patronage."

And in the conclusion upon this paragraph the committee uses the following language:

"The development of regulation and of new methods of transport make it unnecessary for Government further to create and foster competition with or among railroads as a defense against monopoly."

Here are two authoritative recommendations against continuing unnecessary competition. What stands in the way of abolishing or diminishing this competition are the antitrust laws. They stand in the way of regional consolidation, and they stand in the way of the reduction of competitive waste.

I propose that consolidations may be effected and provision looking to a reduction of waste may be adopted, after approval of the Interstate Commerce Commission, and that as to such procedure the railroads shall be relieved of the prohibitions or penalties of the antitrust laws.

Senator SHORTRIDGE. Entirely relieve them?

Mr. PELLEY. Yes, if the commission approves it. I think probably you will find that the railroads will be agitating some such revision of the antitrust laws in the form of a bill. And I make this suggestion to you, that if the commission approves it—it first must be submitted to the commission—and if they approve it and find that it is a good thing for the railroads, and it is not adverse to the public interest, that we may then go ahead and that we will not be penalized if it happens to be in conflict with the antitrust laws. That is the suggestion I make to you.

Senator SHORTRIDGE. I see. That the law be amended giving the commission the power to pass on the question.

Mr. PELLEY. Yes, sir.

Senator SHORTRIDGE. And to that extent amend the existing law.

Mr. PELLEY. Right. My third suggestion—I would be glad to answer any questions as I go along with this. Anything that occurs to you.

Senator HARRISON. You mean to promote economies when you talk about the matter of waste?

Mr. PELLEY. Yes. There is the feeling that there is considerable waste in the operation of railroads that can be saved. Now there is some that can be saved without any legislation, and the railroad organization, the railroads as a whole I think are doing more in that direction than they have ever done before in my time. We have organized to do everything that we can to reduce competitive waste. But there are some things that——

Senator SHORTRIDGE. By that phrase "competitive waste" you mean, do you, that you should have the power, if you have not that power now, to so change your methods, your rates, your wages, and so forth, as to reduce expenses?

Mr. PELLEY. Right. Exactly what I mean.

Senator SHORTRIDGE. That is, to reduce the expenses of the company?

Mr. PELLEY. Of the companies.

Senator SHORTRIDGE. Or companies?

Mr. PELLEY. Yes.

Senator SHORTRIDGE. Without adding to the cost of transportation of merchandise or of passengers or freight?

Mr. PELLEY. Yes.

Senator HARRISON. And if in doing that it conflicts with the Sherman antitrust law now, that it will not, provided you get the approval of the Interstate Commerce Commission?

Mr. PELLEY. Yes. You see, we have been under the mandate of the Sherman Act since 1890, to maintain competition.

Senator SHORTRIDGE. Exactly.

Mr. PELLEY. Now, it might be interesting to you to know, and I believe this is a fact that can be verified, that in 1917, when the railroads were coordinating as much as they could to handle the traffic to help win the war, the Attorney General called attention to the fact that some of the things they were doing were in conflict with the law.

The third thing is the legislation covering interstate highway transportation. And I would be very glad to submit to you for your consideration a bill which I have prepared, to take care of the highway traffic.

Senator HARRISON. Has that bill that you have there been introduced?

Mr. PELLEY. I think not. I am quite certain that this bill in this form has not been introduced, Senator. And I would like to talk with you about that a little.

I represent a railroad that is in all forms of transportation.

Senator HARRISON. Let me ask you before you get into it. Do you agree with Mr. Loree's statement on that proposition?

Mr. PELLEY. What did he say, Senator?

Senator HARRISON. He does not believe that trucks and busses engaged in interstate shipment ought to be regulated by the Interstate Commerce Commission.

Mr. PELLEY. I do not agree with him.

Senator HARRISON. That is the way I interpreted his statement.

Mr. PELLEY. I certainly do not agree with him.

Senator HARRISON. He stated that in that position he was different from most of the railroad presidents.

Mr. PELLEY. Well, he certainly is different from me, I will say that.

Senator HARRISON. Go ahead and give your views, Mr. Pelley.

Mr. PELLEY. I just want to point out to you that the road that I represent is engaged in all forms of transportation except the air. It has not yet gone into the air service. But we operate busses and trucks, steamships, trolleys. We have got it all.

Senator SHORTRIDGE. Freight and passenger?

Mr. PELLEY. Freight and passenger. And I speak in this respect more as a highway operator, if you please, than a railroad operator. I know from my experience in conducting transportation on the highway that it must be regulated in order to stabilize it.

Senator SHORTRIDGE. Generally speaking what area of the country does your company operate in?

Mr. PEELEY. Southern New England. From Boston to New York. Connecticut, Rhode Island and Massachusetts and some of New York. Our main line is from New York to Boston. And we have a network of railroads all over that southern portion of New England.

The reason I say that this highway traffic should be regulated—and I know it can be with fairness to all interests—there are discriminations of all sorts, and, to say it quickly, in a few words, all of the conditions, or practically all, that obtained on the railroads at the time of the enactment of the interstate commerce law now obtain on the roads. This is a controversial question, I know. As far as I know all of the railroad men, except possibly Mr. Loree, think there ought to be some measure of regulation. And the regulation that I advocate, and I tell you in this bill specifically how it can be done—I place it so far as the National Government is concerned in the Interstate Commerce Commission, and I do not believe that the transportation situation is ever going to be stabilized until we have something just about what is in this bill.

Senator HARRISON. I wish you would hand the bill to the clerk, and it will be printed in the record.

(The motor bill presented by Mr. Pelley is printed in the record at the conclusion of his statement.)

Senator SHORTRIDGE. In other words you think that the Interstate Commerce Commission should have jurisdiction over an automobile truck carrying passengers or freight just the same as it has now jurisdiction over a railroad?

Mr. PELLEY. Just the same. I do not mean to say, Senator Shortridge, that everything that applies to the railroads——

Senator SHORTRIDGE. No; but I mean it would have jurisdiction and control over the automobile trucks?

Mr. PELLEY. Yes. And I leave a bill with you here that I think will do it with fairness to all interests and in the public interest.

I would be glad to talk to you some about this, because this is one of the most important things I am talking about. There is a great deal of damage being done now.

Senator SHORTRIDGE. To whom or to what?

Mr. PELLEY. One trucker with another, and to the railroads.

Senator SHORTRIDGE. The truck, if that be a proper term, comes in competition with the railroad.

Mr. PELLEY. Oh, yes.

Senator SHORTRIDGE. You have to meet that competition.

Mr. PELLEY. I have to meet that competition.

Senator SHORTRIDGE. You suffer from that competition?

Mr. PELLEY. Yes, sir. And I think probably all I need to say to you right there, unless you have some definite questions in mind—and I feel fully qualified to talk about this.

Senator HARRISON. Go ahead and express yourself, because Mr. Loree the other day expressed himself on that proposition. What the committee wants is to get your suggestions.

Mr. PELLEY. I say this, that it is impossible for a regulated transportation to compete with unregulated transportation. You certainly have a chaotic condition on the highway—and I am talking as a truck man when I say that.

You hear people say that we, the railroads, ought to get in the trucking business. Well, now we are in it. There are some things that we can not do as a railroad that truckers can do. No one has any control over their rates, their services. They are accountable to nobody. They are responsible to no one. They can start in business when they please and quit when they please. There is no stabilization there; there is no dependence with the service, which I think is quite essential to the public interest.

Now, I have no desire to do anything that would be unfair to trucking, because I am in it myself. And I think that until the whole transportation situation is stabilized, the bus doing what it can best do, the truck doing what it can best do, and the railroad doing what it can best do, and each of them quit trying to do what the other can do better—which I believe would be accomplished under this bill I am leaving with you—until that is done the thing will remain in a chaotic condition. So I advocate it very strongly, and I am very glad to leave with you that bill that would regulate it as I would have it regulated.

Senator SHORTRIDGE. It gives the power to the Interstate Commerce Commission to make detailed rules and regulations?

Mr. PELLEY. Yes, sir. It gives them power to issue certificates of convenience and necessity, permits, and to regulate their rates. It establishes their responsibility.

The next subject that I would present to you is a bill which takes the Government out of the Mississippi-Warrior River barge service. That has been talked of so much I doubt if you want to hear a great deal about it. But it does not seem fair to me to have the Government conducting a water transporation at a deficit in competition with rail transportation. There is already some private operation on the same river. To discontinue this does not necessarily mean that there will not be the barge service on the Mississippi River, because there is already a private company competing. I think it ought to be discontinued, and I have a bill here for that purpose.

Senator SHORTRIDGE. The Government is suffering a deficite now in the operation of that line?

Mr. PELLEY. Yes.

Senator HARRISON. Is there not some question about that, Mr. Pelley? Does not the Mississippi Barge line claim that they are showing a profit, but that the Warrior Barge line is showing a deficit? Of course, that does not take into consideration their exemption from taxes and the various other things. I imagine that you are of the opinion that if you apply all that cost on the proposition that they would be in the red?

Mr. PELLEY. That is exactly what I mean. When they pay their full way they would be in the red.

Senator HARRISON. I understand.

(The bill above referred to, presented by Mr. Pelley, is here printed in the record in full, as follows:)

AN ACT To provide for the discontinuance of the operation of the transportation and terminal facilities of the Inland Waterways Corporation and to provide for the disposition of its properties and for its liquidation

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That at midnight of June 30, 1933, the Inland Waterways Corporation (hereinafter referred to as the "corporation") shall discontinue the operation of the transportation and terminal facilities now being operated by it. From and after the passage and approval of this act the corporation shall not extend or enlarge its operations.

SEC. 2. At the earliest possible date the Secretary of War shall dispose of all properties of the corporation for the best price obtainable: *Provided, however,* That any contracts providing for the disposition of the property shall, before they become effective, be approved by the President: *And provided further,* That possession of the said property must in no event be given to the person or persons entitled to the possession thereof under said contracts until July 1, 1933.

SEC. 3. Immediately after the discontinuance of operations of the transportation and terminal facilities of the corporation, and after the disposition of its property, the Secretary of War shall proceed with the liquidation of said corporation, settling all claims against it and collecting all sums due it. All moneys remaining in the hands of the Secretary of War after the liquidation of the corporation shall be returned to the Treasury of the United States and the stock of said corporation owned by the United States shall be cancelled.

SEC. 4. All parts of the statutes of the United States known as an act to create the Inland Waterways Corporation for the purpose of carrying out the mandate and purpose of Congress as expressed in sections 201 and 500 of the transportation act, and for other purposes, approved June 3, 1924, and an act to amend the act entitled "An act to create the Inland Waterways Corporation for the purpose of carrying out the mandate and purposes of Congress, as expressed in sections 201 and 500 of the transportation act, and for other purposes," approved June 3, 1924, approved May 20, 1928, which are in conflict with the provisions of this act are hereby repealed.

Mr. PELLEY. My next suggestion is the regulation of the water transportation. There is a bill on the calendar now, House Resolution 11497, that provides for the regulation of common carriers by water. I indorse that bill, and I submit an amendment to it. That is a bill that is on the calendar. I do not know whether it has ever been heard or not. That regulates common carrier water service.

Senator HARRISON. Who introduced that bill?

Mr. PELLEY. Representative Lonergan. It is known as the Lonergan bill. I submit for your consideration an amendment to that bill, which will apply to the contract carrier by water the regulations that are proposed in this bill to the common carrier. The explanation so far as I know, and I think it is a correct one, as to why the contract water carrier was not included in the common-carrier bill is there was some question as to whether or not a contract carrier either on the highway or by water can be regulated, but the Supreme Court has since decided that it can be.

Senator HARRISON. That may be placed in the record.

(The proposed bill submitted by Mr. Pelley as an amendment to H. R. 11497, is here printed in the record in full, as follows:)

A BILL Amending the interstate commerce act, as amended, for the purpose of regulating carriers for hire by water, other than common carriers by water, engaged in interstate commerce, whether coastwise, intercoastal, or on the Great Lakes or inland waterways of the United States, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That paragraph (1) of section 1 of the interstate commerce act be amended by adding thereto the following paragraph to be designated "(d)":

"(d) (1) That the provisions of this act shall apply to carriers for hire by water (other than common carriers by water) engaged in the transportation of property by water, whether coastwise, intercoastal, or on the Great Lakes or inland waterways, or between ports of the United States (hereinafter referred to as contract carriers by water) between the points named in paragraph (1) of this section, but only in so far as the sections, subsections, paragraphs, or subparagraphs of this act are by appropriate reference to contract carriers by water made specifically applicable to such carriers."

"(2) The regulation of contract carriers by water to the extent that such carriers are herein regulated, is necessary and required in the national interest in order to preserve and maintain for the Nation an adequate system of transportation by common carriers subject to this act, in order to prevent the impairment and destruction of the transportation services that are now rendered by such common carriers, upon which the national welfare depe..ds, to prevent the destruction of the efficacy of the regulation herein provided for of such common carriers, and that the various agencies of transportation may be so adjusted and correlated as best to serve the national interest."

SEC. 2. That paragraph (7) of section 1 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 3. That paragraph (8) of section 1 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 4. That section 1 of the interstate commerce act be amended by inserting after paragraph (22a) the following paragraph to be designated "(22b)":

"(22b) (a) Within 60 days after the enactment of this act every contract carrier by water in interstate commerce shall file with the commission in full and complete detail and under oath a statement of all the transportation services engaged in by it, directly or indirectly, during the preceding three years; such statement to show specifically the ports between which such services are operated, the corporate name, or if not a corporation, the name of the owner or owners of the carrier operating each particular service, and the trade name or names, if any, used in connection therewith, the number of ships operated (including boats and barges of all kinds), the total carrying capacity in tons of all such ships, the frequency of the sailings to and from each port served during the said 3-year period, and with definiteness the character of the transportation services that were engaged in, such as whether of general cargo without restriction, or of a limited class of freight, or of refrigerator cargo, and any other information that the commission may require in order to enable it to inform itself respecting the nature, kind and extent of the transportation services rendered during the said 3-year period by such contract carrier by water.

"(b) From and after three months after the enactment of this act, no contract carrier by water, not now actually engaged in operating a ship or ships as contract carriers by water (including boats and barges of all kinds), shall inaugurate any such service, and no contract carrier by water now actually engaged in operating ships (including boats and barges of all kinds) as contract carriers by water, shall increase the number of such ships or the total carrying capacity in tons thereof that have been operated by it during the said preceding three years, or increase the number of ports that have been served by it during that period, unless and until upon application by such contract carrier by water the commission has issued a certificate that the public convenience and necessity require the inauguration of such service, or an increase in the number of such ships, or in the total carrying capacity in tons thereof, or an increase in the number of ports, as the case may be. From and after the date of the enactment of this act a contract carrier by water may decrease the number of such ships operated by it, or the total carrying capacity in tons thereof, or the number of ports served by it, without obtaining the consent of the commission, but such contract carrier by water may not thereafter either by the purchase of such ships or by the construction of such ships increase the number of such ships operated by it, or the total carrying capacity of such ships, or the number of ports served by it, without first obtaining a certificate that the present or future public convenience and necessity require or will require such increase in the number of such ships or an increase in the total carrying capacity in tons of such ships, or in the number of ports. From and after the date of the enactment of this act it shall be unlawful for any contract carrier by water to operate otherwise than in accordance with the statement and certificate filed or issued as provided for by this paragraph.

"The provisions of this paragraph (22b) (b) shall not apply to any contract carrier by water, all of whose ships (including boats and barges of every kind), have a total carrying capacity of less than 500 tons, or to any contract carrier by water who transports property for hire for distances less than 100 miles.

"(c) That subparagraphs (c), (d), (e), and (f) of paragraph (22a) of section 1 each be amended by adding thereto the following sentence: 'The provisions of this paragraph shall apply to contract carriers by water.'"

SEC. 5. That section 2 of the interstate commerce act be amended by inserting at the end thereof the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 6. That paragraph (1) of section 3 of the interstate commerce act be amended by inserting at the end thereof the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 7. That section 3 of the interstate commerce act be amended by inserting after paragraph (2) thereof the following paragraph to be designated "(2a)":

"(2a) No contract carrier by water subject to the provisions of this act shall deliver or relinquish possession at destination of any freight transported by it until all the rates and charges thereon have been paid, except under such rules and regulations as the commission may from time to time prescribe to govern the settlement of all such rates and charges of such contract carriers by water and to prevent unjust discrimination: *Provided*, That the provisions of this paragraph shall not be construed to prohibit any carrier from extending credit in connection with rates and charges on freight transported for the United States, for any department, bureau or agency thereof, or for any State or Territory or political subdivision thereof, or for the District of Columbia."

SEC. 8. That paragraph (1) of section 4 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 9. That the interstate commerce act be amended by inserting after section 6 a new section to be known as "section 6a" and to read as follows:

"SEC. 6a (1) That every contract carrier by water subject to the provisions of this act shall file with the commission and print and keep open to public inspection schedules showing the minimum rates and charges for transportation of property between different points on its own route and between points on its own route and points on the route of any other contract carrier by water when a through route and a joint rate have been established. If no joint rate over the through route has been established, the several contract carriers by water in such through route shall file, print and keep open to public inspection as aforesaid the separately established minimum rates and charges applied to the through transportation. The schedules printed as aforesaid by any such contract carrier by water shall plainly state the places between which property will be carried, and shall contain the classification of freight in force, and shall also state separately the minimum terminal charges, the minimum storage charges, the minimum icing charges, and all other minimum charges which the commission may require, all privileges or facilities granted or allowed, and any rules or regulations which in anywise change, affect, or determine any part or the aggregate of such aforesaid minimum rates and charges, or the value of the service rendered to the shipper or consignee. Such schedules shall be plainly printed in large type, and copies for the use of the public shall be kept posted in two public and conspicuous places in every depot, station, or office of such contract carrier by water where freight is received for transportation, in such form that they shall be accessible to the public and can be conveniently inspected.

"(2) Any contract carrier by water subject to the provisions of this act receiving freight in the United States to be carried through a foreign country to any place in the United States shall also in like manner print and keep open to public inspection, at every depot or office where such freight is received for shipment, schedules showing the through minimum rates established by such contract carrier by water to all points in the United States beyond the foreign country to which it accepts freight for shipment; and any freight shipped from the United States through a foreign country into the United States, the through minimum rate on which shall not have been made public, as required by this act, shall, before it is admitted into the United States from said foreign country, be subject to customs duties as if said freight were of foreign production.

"(3) No change shall be made in the minimum rates and charges or joint minimum rates and charges which have been filed or published by any contract carrier by water in compliance with the requirements of this section, except after thirty days' notice to the commission and to the public published as aforesaid. which shall plainly state the changes proposed to be made in the schedules then in force and the time when the changed minimum rates or charges will go into effect; and the proposed changes shall be shown by printing new schedules, or shall be plainly indicated upon the schedules in force at the time and kept open to public inspection: *Provided*, That the commission may, in its discretion and for good cause shown, allow changes upon less than the notice herein specified, or modify the requirements of this section in respect to publishing, posting, and filing of tariffs, either in particular instances or by a general order applicable to special or peculiar circumstances or conditions: *Provided further*, That the commission is hereby authorized to make suitable rules and regulations for the simplification of schedules of the minimum rates, charges, and the classification of contract carriers by water, and to permit in such rules and regulations the filing of an amendment of or any change in any minimum rate, charge or classification, without filing complete schedules covering minimum rates, charges, or classifications not changed, if, in its judgment, not inconsistent with the public interest.

"(4) That paragraphs (4), (5), and (6) of section 6 of the interstate commerce act be amended by adding thereto the following sentence: 'The provisions of this paragraph shall apply to contract carriers by water.'

"(5) No contract carrier by water, unless provided by this act, shall engage or participate in the transportation of property, as defined in this act, unless the minimum rates and charges upon which the same is transported by said carrier have been filed and published in accordance with the provisions of this act; nor shall any contract carrier by water charge or demand or collect or receive a less compensation for such transportation of property, or for any service in connection therewith, between the points named in such tariffs, than the minimum rates and charges which are specified in the tariff filed and in effect at the time; nor shall any contract carrier by water refund or remit in any manner or by any device any portion of the minimum rates and charges so specified, nor extend to any shipper or person any privileges or facilities in the transportation of property, except such as are specified in such tariffs. This paragraph is not to be construed as preventing a contract carrier by water from charging, demanding, collecting, or receiving a greater compensation for the transportation of property than the minimum rates and charges which are specified in the tariffs filed and in effect at the time, and which may be agreed to between such contract carriers by water and any shipper or person, it being the intent and purpose of this act that contract carriers by water may contract for the transportation of property by water at rates and charges that are greater than the minimum rates and charges specified in the tariffs filed and in effect at the time but that they shall not contract for the transportation of property by water at rates and charges that are less than the said minimum rates and charges.

"(6) Paragraphs (9) and (10) of section 6 of the interstate commerce act each be amended by adding thereto the following sentence: 'The provisions of this paragraph shall apply to contract carriers by water.'"

SEC. 10. That section 8 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 11. That section 9 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 12. That paragraph (1) of section 10 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 13. That paragraph (2) of section 10 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water, it being understood that the regular rates of the contract carriers by water shall be the minimum rates referred to in paragraph (1) of section 6a."

SEC. 14. That paragraph (3) of section 10 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water, it being understood that the regular rates of the contract carriers by water shall be the minimum rates referred to in paragraph (1) of section 6a."

SEC. 15. That paragraph (4) of section 10 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 16. That section 12 of the interstate commerce act be amended by inserting after paragraph (7) the following paragraph to be designated "(8)":

"(8) All the provisions of section 12 shall apply to contract carriers by water."

SEC. 17. That paragraph (1) of section 13 of the interstate commerce act shall be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 18. That section 14 of the interstate commerce act be amended by inserting after paragraph (3) the following paragraph to be designated "(4)":

"(4) All the provisions of section 14 shall apply to contract carriers by water."

SEC. 19. That paragraph (1) of section 15 of the interstate commerce act be amended by inserting after paragraph (1) the following paragraph to be designated "(1a)":

"(1a) That whenever, after full hearing upon a complaint made as provided in section 13 of this act, or after full hearing under an order for investigation and hearing made by the commission on its own initiative, either in extension of any pending complaint, or without any complaint whatever, the commission shall be of the opinion that any individual or joint minimum rate or charge whatsoever demanded, charged, or collected by any contract carrier by water or carriers subject to this act for the transportation of property as defined in the first section of this act, or that any individual or joint minimum classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this act, is or will be unreasonably low or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any provisions of this act, in so far as they apply to contract carriers by water, the commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint minimum rate or charge, or minimum rates or charges, to be thereafter observed as the minimum in such case, and what individual or joint minimum classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed as the minimum, and to make an order that the contract carrier or carriers by water shall cease and desist from such violation to the extent to which the commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate or charge for such transportation lower than the minimum rate or charge so prescribed, and shall thereafter observe as the minimum classification, regulation, or practice, the minimum classification, regulation, or practice so prescribed."

SEC. 20. That paragraph (2) of section 15 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 21. That paragraph (7) of section 15 of the interstate commerce act be amended by inserting immediately after paragraph (7) the following subparagraph to be designated "(7a)":

"(7a) The provisions of paragraph (7) of section 15 of the interstate commerce act shall apply to any schedule stating a new, individual, or joint minimum rate or charge or any new, individual, or joint minimum classification, or any new, individual, or joint minimum regulation or practice affecting any minimum rate or charge of contract carriers by water. But the power of the commission shall extend no further than to a determination of what would be a just and reasonable individual or joint minimum rate or charge, a reasonable minimum classification, or a reasonable minimum regulation or practice, and to the enforcement thereof by appropriate orders."

SEC. 22. That paragraph (11) of section 15 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 23. That paragraph (12) of section 15 of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 24. That paragraphs (1) and (2), subparagraphs (3) (a) to (3) (f), inclusive, and paragraphs (4) to (13), inclusive, of section 16 each be amended by adding thereto the following sentence: "The provisions of this paragraph shall apply to contract carriers by water."

SEC. 25. That subparagraph (3) (g) of section 16 of the interstate commerce act be amended by adding thereto the following: "except that in the case of contract carriers by water the term 'overcharges' ts used in this section shall be deemed to mean charges for transportation services in excess of those agreed to between the contract carrier by water and the shipper or other person."

SEC. 26. That section 16a of the interstate commerce act be amended by adding thereto the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 27. That paragraphs (1) to (10), inclusive, of section 20 of the interstate commerce act each be amended by adding thereto the following sentence: "The provisions of this section shall apply to contract carriers by water."

SEC. 28. That section 22 of the interstate commerce act be amended by inserting after paragraph (1) thereof the following paragraph to be designated "(1a)":

"(1a) The provisions of paragraph (1) of section 22, in so far as they relate to the carriage, storage, or handling of property, or the transportation of persons, shall apply to contract carriers by water."

Mr. PELLEY. Now, there is the same argument for the regulation of water transportation as highway transportation. I think it is decidedly in the public interest. There is not any doubt in my mind but what the regulation of the railroads has been in the public interest and in the interest of the railroads themselves, and being engaged in water transportation I recommend the regulation, and I am inclined to think most water operators are in favor of it.

Senator HARRISON. Does your railroad own any ships?

Mr. PELLEY. Yes, sir. We own the New England Steamship Co., the Sound line.

Senator HARRISON. Where does that operate?

Mr. PELLEY. It operates all over the Sound. Bridgeport to Fall River, New Bedford, Marthas Vineyard and New London, New Haven, New York.

My sixth and last suggestion is the repeal of the recapture provision of the transportation act. It is here now in H. R. 11642. That repeals the recapture provision, and I submit an amendment to it that will repeal the valuation provision of the transportation act.

Senator HARRISON. Have you got your amendment there?

Mr. PELLEY. Yes.

Senator HARRISON. Hand that to the clerk so he can put it in the record at this point.

Mr. PELLEY. Here is the amendment I suggest be made to H. R. 11642. I recommend provision merely for keeping up current physical inventories in place of present valuation requirements. This can be covered by the following amendment of pending legislation, involving modification of section 15 (a) of the interstate commerce act, H. R. 11642, now pending in the House:

That Section 19 (*a*) of said act be, and it is hereby, repealed. The commission shall carefully preserve in its archives all documents and papers connected with work so far done by it under said section and shall hereafter keep itself informed of all new construction, extensions, improvements, additions, betterments, and retirements and of all changes in investment therein.

I do not know whether you want any argument in favor of the repeal of the recapture provision or not. So far as I have been able to learn there is no opposition to repealing it.

Senator HARRISON. Has that bill been favorably reported by the committee?

Mr. PELLEY. I do not know the status of it, Senator Harrison. But I thought that it is a bill that will just come up and go through some day when they get around to it.

Senator HARRISON. Has the Interstate Commerce Commission taken any action on that proposition?

Mr. PELLEY. They have recommended it two or three times. I think at least twice in their annual report or probably by special recommendation.

Senator GORE. There is no opposition on the part of the weaker railroads that are supposed to profit by this?

Mr. PELLEY. So far as I know, Senator, there is no opposition to it. The railroads are in favor of it. The commission is in favor of it. I think the 21 labor organizations on the railroads have gone on record in favor of it. And you had a hearing on it here either in the House or Senate.

Senator HARRISON. Yes.

Mr. PELLEY. And as I recall the record, there was no one appeared to oppose the repeal of it.

Senator HARRISON. Mr. Pelley, you studied, of course, the report that was made the other day by the so-called Coolidge Commission. What was your reaction to it, generally speaking?

Mr. PELLEY. Well, I have read the report once, Senator Harrison. There are a number of good things in it, and there are some things that I do not subscribe to. I think I would have to say that as a whole it was a disappointment to me in that it was not more specific as to what ought to be done to the transportation situation. Personally, I had hoped that they would give us a specific and definite suggestion as to what is the cure, if there is one. And I believe there is.

Senator GORE. You have outlined in your statement what you think the solution is? I am sorry I arrived late.

Mr. PELLEY. Well, Senator Gore, this is all I have done, and this is all that it seemed to me that I should do at this time. You gentlemen asked me for suggestions or—well, I think the telegram that I have here says you would be glad to have me talk about what caused the depression, and what legislation I could suggest.

Senator HARRISON. That is what we wanted—constructive suggestions.

Mr. PELLEY. Yes. Now, I am making to you here six definite specific suggestions as to what this Congress can do to help this industry that I represent. I think most of them are not the subject of a great deal of controversy, except probably the regulation of highway traffic. Some people do not agree with that.

Senator GORE. I understood you to say that you favored the Federal system of regulating railroads in interstate commerce.

Mr. PELLEY. Yes.

Senator GORE. Mr. Pelley, the present system was instituted largely when the railroads were what we call natural monopolies and really not encountering any serious competition. The system was adapted to that state of circumstances. Has the state of circumstances changed so that the system itself ought to be changed, to adapt itself to the changed conditions?

Mr. PELLEY. I think so, Senator. I am suggesting here a modification of the antitrust laws that were made when we were a monopoly, and that monopolistic aspect of the railroad situation does not now exist, as it did then.

Senator GORE. No; it does not now exist. The point I had particularly in mind is this: You did not have any competition when the rate structure was set up. You do have competition now; whether serious or not you know better than I. Ought the railroads to have a little freer hand and ought the system to be a little more flexible so you can adjust your rates to meet this competition?

Mr. PELLEY. Well, yes. We ought to have some relaxation of our regulations. But what I am proposing is that these other agencies of transportation be regulated somewhat similarly to what we are regulated.

Senator GORE. Yes; I got that point. But whether to make them all rigid as the railway regulations are to-day, or whether they should all be more or less flexible? I hear a good deal of complaint that when an effort is made to change a rate now it takes so long to do it, even in the event they secure favorable action in the long run that the conditions have changed so that nobody is concerned in the new rate or regulation.

Mr. PELLEY. Well, I doubt if there is as much in that as you have heard.

Senator GORE. I had two specific cases in mind: The shipment of oil in Oklahoma, and perhaps glass.

Let me ask you this: Do you think it would be feasible, and if it were feasible would it be desirable for the Government to encourage what I will call a national system of transportation, embracing and integrating and trying to relate more or less the railroads, the inland waterway shipping, ocean-bound shipping, pipe lines, trucks, busses, air lines? Are the things too different and too unlike for there to be any sort of coordination brought about?

Mr. PELLEY. I think that coordination should be brought about. And what we are working for on our railroad system is a coordinated transportation system. We are already in all the forms of transportation there are except the air. And I think that our system in southern New England, where we are almost by ourselves, can not properly be coordinated until the other systems are regulated somewhat like we are, some of the restrictions taken off of us and some put on them. And after that is done then we, so far as our railroad is concerned, will be a coordinated system of transportation conducting all forms and giving the people what they want and what they are willing to pay for.

Senator GORE. You think that would be better than any effort to establish a national system, a sort of holding concern in which the railroads and all these other concerns could participate, and if there is a profit in one let all share it, and if there is a loss in one let all bear it, and try to have a national system? I do not know whether I make myself clear.

Mr. Pelley. You do, Senator. I think the accomplishment of that is impossible under private ownership.

Senator King. And it would not be desirable for the Government to undertake that, would it?

Mr. Pelley. Well, I would say no.

Senator King. I have not heard your testimony.

Mr. Pelley. I would certainly say no. Not desirable.

Senator Gore. I can see one objection to it. It would petrify the system. There would never be any more progress in either case, whether the Government owned it or private people owned it, if it once got set.

Mr. Pelley. Before I leave I would like to call your attention to the fact that I have made six definite, concrete suggestions as to what you gentlemen can do to help the industry that I represent. It will not cost the Government a cent to do all of this.

Senator Gore. That would recommend it to me.

Mr. Pelley. And all of it will be in the direction of stabilizing the general transportation situation, which is most essential.

Senator Gore. Does some one or more of your suggestions relate particularly to the point of bringing about that situation where you can earn your fixed charges of the railroads generally?

Mr. Pelley. I would answer that by saying this, Senator Gore: This will help us. Now, whether we will be able to make our fixed charges is more or less in the laps of the gods.

Senator Gore. I ask you that question in order to ask this further question. We had a gentleman before us the other day and he said that if the law and the requirements in regard to depreciation were relaxed or suspended that the railroads now for the most part could pay their fixed charges out of their earnings.

Mr. Pelley. Well, I do not see how that would make a great deal of difference to me on my railroad.

Senator Gore. I think he said the depreciation allowance was something like two hundred-odd millions a year, and I think they sell below earning their fixed charges by approximately the same amount. Of course I do not know enough about the way you conduct your business, your general set-up, to have an opinion about it as yet.

Mr. Pelley. Well, certainly it is proper to have some depreciation account on a railroad, in my opinion.

Senator Gore. I figure, Mr. Pelley, in that connection that these bus lines and truck lines some day through the very fact that they do not have, as I presume, generally speaking, a depreciation policy, will find that they have worn out their trucks and busses and have not set aside anything for replacement under the illusion that they were making a profit, that all that they took in was a profit.

Mr. Pelley. Well, that is true, Senator. And some of them pass out of existence, and some others come in.

Senator Gore. They use their equipment up and make no provision for replacing it.

Mr. Pelley. No.

I would like to take the time of you gentlemen to call your attention to this fact. To repeat what I have already said. Talking of my own railroad, we have no quarrel with any form of transportation. We are in all of it except the air. And probably the reason why we are not in that is that up to this time we have not seen any way of getting in it without a certain loss. Probably some day we will be in that. I think we will.

Senator GORE. You overlook the subsidy.

Mr. PELLEY. Sir?

Senator GORE. You overlook the subsidy that we give everybody.

Senator HARRISON. Well, he is going on the theory that he will not have the influence to get the mail contract.

Mr. PELLEY. Well, I do not want to talk about that. I can tell you a lot about that if you want to hear it.

Senator GORE. It would be interesting, but unavailing, I suppose.

Mr. PELLEY. Well, I do not know about that.

Senator KING. We were triumphant in the Senate in eliminating $19,000,000 for those air-mail subsidies but the House conferees, I am advised, very promptly restored it. So I think our efforts have been unavailing.

Mr. PELLEY. Well, I do not know how much longer the American people are wanting to go ahead spending seventeen or eighteen or nineteen million dollars a year to subsidize air mail service, since you bring that up, because we of the railroads think that is wrong.

Senator GORE. I think it is outrageous myself.

Mr. PELLEY. We think any subsidy is wrong. I saw some figures the other day that indicated that for every passenger the air-mail people carried last year it cost the Government $38.

Senator GORE. And they are not concerned, Mr. Pelley, about passenger service. And I want to put this in the record at this point. I have a friend who was a minister, under Wilson, to one of the South American countries, and he was talking to one of the Pan American men in one of these South American countries, and made suggestions as to how they could improve their passenger traffic, and he got the supercilious answer that they were not concerned about the passenger traffic; that the Government subsidy was sufficient. And that concern gets about $7,000,000 a year subsidy. And why should they worry about business?

Senator KING. May I ask whether you railroads have been asking for a subsidy the same as the shipping interests and the aviation interests?

Mr. PELLEY. We have not, and we have never had one. The railroads were never subsidized. Notwithstanding all the talk you hear now and then about the land-grant subsidies, they were never a subsidy, and they were a great investment for the Government. The Government is making some $4,000,000 a year now on their land grants to the railroads.

Senator GORE. Have you ever given any thought to this Inland Waterway Corporation that the Government has created and is financing and sponsoring in competition with the railroads?

Mr. PELLEY. Yes; and I am just definitely recommending here that it be stopped to-morrow if you can get to it, Senator Gore. That is one of my recommendations, to stop that.

Senator GORE. You mean to stop a Government subsidy?

Mr. PELLEY. Well, I mean to stop the operation of the Mississippi-Warrior barge line service.

Senator GORE. Mr. Pelley, if you will let me say so, I was taking you seriously, but if you are facetious I will keep that in mind.

Mr. PELLEY. Well, the thought I want to leave with you gentlemen is this. That notwithstanding what you hear to the contrary, on our railroad we have gone into every form of transportation. We are conducting each of these forms of transportation as best we can. We have many difficulties because of the fact that the water and the highway is not regulated.

Senator GORE. Neither as to service nor rates.

Mr. PELLEY. No. And we have done all the big things that we can do to help our general transportation situation so far as our company is concerned. And we now need some public support. We need some regulation. We want the interstate traffic regulated and placed under the Interstate Commerce Commission, and we want the intrastate traffic regulated and placed under the various commissions in our States. And we are seeking that legislation at this time.

Senator GORE. In that you include busses and trucks?

Mr. PELLEY. Yes, sir.

Senator KING. My recollection is that Mr. Loree, the railroad representative who spoke a few days ago, did not ask for busses and motor transportation to be placed under the control of the Federal Government.

Senator HARRISON. I called that to the attention of Mr. Pelley and he disagrees, and he said that the railroad presidents generally disagree with Mr. Loree on that proposition.

Mr. PELLEY. Senator Harrison said that Mr. Loree said that probably no other railroad man would agree with him, or some such point as that.

Senator HARRISON. Yes; he said that.

Senator GORE. That is the point.

Senator HARRISON. If that is all, Mr. Pelley, we are very much obliged to you. We have two other witnesses, Mr. Litchfield and Mr. Frank Simonds, this afternoon.

Mr. PELLEY. I am very much obliged to you gentlemen for this opportunity.

(The motor bill previously referred to, and presented by Mr. Pelley for the record, is here printed in the record in full as follows:)

A BILL To regulate the transportation of passengers and property in interstate and foreign commerce by motor carriers operating on the public highways, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*,

DEFINITIONS

SECTION 1. (a) As used in this act—

(1) The term "corporation" means a corporation, company, association, or joint-stock association.

(2) The term "person" means an individual, firm, or copartnership.

(3) The term "board" or "State board" means the commission, board, or official (by whatever name designated in the laws of a State) which under

the laws of any State in which any part of the service in interstate or foreign commerce regulated by this act is to be performed, has or may hereafter have jurisdiction to grant or approve certificates of public convenience and necessity or other form of permit to motor carriers, or otherwise to regulate transportation by motor vehicle, in intrastate commerce over the public highways of such State.

(4) The term "commission" means the Interstate Commerce Commission.

(5) The term "certificate" means a certificate of public convenience and necessity issued under this act to common carriers by motor vehicle.

(6) The term "permit" means a permit issued under this act to contract carriers by motor vehicle.

(7) The term "interstate or foreign commerce" means commerce between any place in a State and any place outside thereof; or between points within the same State but through any place outside thereof.

(8) The term "public highway" includes the public roads, highways, streets, and ways in any State.

(9) The term "motor vehicle" means any vehicle, machine, or trailer propelled or drawn by any power other than muscular power and used upon the public highways for the transportation of passengers or property, but does not include any vehicle, locomotive, or car operated on a rail or rails.

(10) The term "State" means any of the several States and the District of Columbia.

(11) The term "common ctrrier by motor vehicle" includes any carrier of passengers or property by motor vehicle for compensation in interstate or foreign commerce which undertakes or offers to transport passengers or property for the general public.

(12) The term "contract carrier by motor vehicle" means any carrier by motor vehicle engaged in the business of transporting passengers or property for compensation in interstate or foreign commerce under a contract, agreement, or arrangement, and which does not undertake or offer to transport passengers or property for the general public.

(13) The term "motor carrier" includes both a common carrier by motor vehicle and a contract carrier by motor vehicle.

(b) Nothing in this act shall be construed to include (1) motor vehicles employed solely in transporting school children and teachers; or (2) taxicabs, or other motor vehicles performing a bona fide taxicab service, having a capacity of not more than 6 passengers and not operated on a regular route or between fixed termini; or (3) motor vehicles owned or operated by or on behalf of hotels and used exclusively for the transportation of hotel patrons between hotels and local railroad or other common carrier stations; or (4) motor vehicles operated, under authorization, regulation, and control of the Secretary of the Interior, principally for the purpose of transporting persons in, into, and about the national parks and national monuments.

GENERAL DUTIES AND POWERS OF THE COMMISSION

SEC. 2. (a) It shall be the duty of the commission—

(1) To supervise and regulate common carriers by motor vehicle as provided in this act, and to that end the commission may establish reasonable requirements with respect to continuous and adequate service, transportation of baggage, a uniform system of accounts, records and reports, preservation of records, qualifications and maximum hours of service of employees, safety of operation and equipment, comfort of passengers, and pick-up and delivery points whether on regular routes or within defined localities or districts.

(2) To supervise and regulate contract carriers by motor vehicle as provided in this act, and to that end the commission may establish reasonable requirements with respect to systems of accounts, records and reports, preservation of records, qualifications and maximum hours of service of employees, safety of operation and equipment, and comfort of passengers.

(3) To administer all other provisions of this act relative to motor carriers and to prescribe rules and regulations for such administration.

(4) To inquire into the management of the business of motor carriers, to keep itself informed as to the manner and method in which the same is conducted, and to transmit to Congress, from time to time, such recommendations as to additional legislation relating to such carriers as the commission may deem necessary.

(b) Upon complaint in writing to the commission by any person, corporation, or State board, alleging a failure by any motor carriers to comply with any provision of this act, or with any requirement established pursuant thereto, or upon its own initiative without complaint, the commission may, after notice and hearing, investigate any such matter. If the commission finds upon any such investigation that the motor carrier has failed to comply with any such provision or requirement, the commission shall issue an appropriate order to compel the carrier to comply with such provision or requirement.

(c) After a decision, order, or requirement has been made by the commission in any proceeding under this act, any party thereto may at any time make application to the commission for rehearing of the same, or of any matter determined therein, and it shall be lawful for the commission in its discretion to grant such a rehearing if sufficient reason therefor be made to appear. Applications for rehearing shall be governed by such general rules as the commission may establish. No such application shall excuse any motor carrier from complying with or obeying any decision, order, or requirement of the commission, or operate in any manner to stay or postpone the enforcement thereof, without the special order of the commission. If, after such rehearing and the consideration of all facts, including those arising since the former hearing, it shall appear that the original decision, order, or requirement is in any respect unjust or unwarranted, the commission may reverse, change, or modify the same accordingly. Any decision, order, or requirement made after such rehearing shall be subject to the same provisions as an original decision, order, or requirement.

### ADMINISTRATION OF THE ACT

SEC. 3. (a) Except in case of a matter which is referred to a joint board as provided in subdivision (c), any matter arising under the administration of this act shall be heard and decided by the commission, or shall, by order of the commission be referred to a member or examiner of the commission for hearing and the recommendation of an appropriate order thereon. With respect to such matter the member or examiner shall have all the rights, duties, powers, and jurisdiction conferred by this act upon the commission, except the power to make the final order thereon. Any order recommended by the member or examiner with respect to such matter shall be in writing and be accompanied by the reasons therefor, and shall be filed with the commission. Copies of such recommended order shall be served upon the persons specified in subdivision (f) who may file exceptions thereto, but if no exceptions are filed within 20 days after service upon such persons, such recommended order shall become the order of the commission and become effective, unless within such period the order is stayed or postponed by the commisison. Where exceptions are filed as herein provided it shall be the duty of the commission to consider the same and, if sufficient reason appears therefor, the commission shall grant such review or make such orders or hold or authorize such further hearings or proceedings in the premises as may be necessary or proper to carry out the purposes of this act; or the commission may, on its own motion, review any such matter and take action thereon as if exceptions thereto had been filed as herein provided.

(b) Hearings by any member, examiner or joint board upon any matter referred to him or to such board shall be held at such convenient places within the United States as the commission may by rule or order direct.

(c) Whenever there arises under the administration of this act any matter that the commission is required to refer to a joint board, or that the commission determines, in its discretion, to refer to a joint board, as hereinafter provided, and if no joint board eligible to consider said matter is in existence, then the commission shall create a joint board to hear the matter when referred and recommend appropriate order thereon under such rules governing meetings and procedure of joint boards as the commission shall prescribe. Such joint board shall consist of a member from each State in which the motor-carrier operations involved in the matter are or are proposed to be conducted. The member from any such State shall be nominated by the board of such State from its own membership or otherwise; or if there is no board in such State or if the board of such State fails to make a nomination when requested by the commission, then the governor of such State may nominate such member. The commission is authorized to appoint as a member upon the joint board any such nominee approved by it. All decisions and recommendations by joint boards shall be by majority vote. If the board of each State from which a member of a joint board is entitled to be appointed shall waive action on any matter referred to such joint board, or if any joint board fails or refused to act or is unable to agree upon any matter submitted to it, or if both the board and governor of any State fail to nominate a joint board member when requested by the commission, when such matter shall be heard and decided as in the case of any matter not required to be referred to a joint board. Joint boards when administering the provisions of this act shall be agencies of the Federal Government, and members shall receive such allowances for expenses as the commission shall provide. A joint board shall continue in existence for the consideration of matters referred to it by the commission until such time as its existence may be terminated by the commission. A substitution of membership upon a joint board from any State may be made at any time by nomination and appointment in the same manner as an original nomination and appointment.

(d) The commission shall, when operations of common carriers by motor vehicle conducted or proposed to be conducted involve not more than three States, and the commission may, in its discretion, when operations of common carriers by motor vehicle conducted or proposed to be conducted involve more than three States, refer to a joint board for hearing and recommendations or appropriate order thereon, any of the following matters arising under the administration of this act with respect to such operations: Applicttions for the issuance of certificates of public convenience and necessity (except in so far as the action upon such applications is based solely upon answers to questionnaires and information furnished to the commission, as provided in section 5 (b)); the suspension, change, or revocation of such certificates; applications for the approval and authorization of consolidation, mergers, and acquisitions of control; complaints as to violations by motor carriers of the requirements established under section 2 (a); complaints as to rates, fares, and charges of motor carriers; and the approval of surety bonds, policies of insurance, or other securities or agreements for the protection of the public, required on the issuance of a certificate, application for which is referred to a joint board. The joint board to which any such matter is referred shall be a joint board composed solely of one member from each State within which the motor-carrier operations involved in the matter referred to are or are proposed to be conducted, unless it is necessary for the commission to appoint one of its own members or examiners in order to avoid a joint board with an even number of members. In acting upon matters so referred joint boards shall be vested with the same rights, duties, powers, and jurisdictions as are vested hereinbefore in this section in members or examiners of the commission while acting under its orders in the administration of this act. Orders recommended by joint boards shall be filed with the commission, and shall become orders of the commission and become effective in the same manner, and shall be subject to the same procedure, as provided in the case of orders recommended by members or examiners under this section.

(e) In so far as may be necessary for the purposes of this act, the commission and the members and examiners thereof and joint boards shall have the same power to administer oaths, and require by supoena the attendance and testimony of witnesses and the production of books, papers, tariffs, contracts, agreements, and documents, and to take testimony by deposition, relating to any matter under investigation, as though such matters arose under the interstate commerce act, as amended and supplemented; and any person subpoenaed or testifying in connection with any matter under investigation under this act shall have the same rights, privileges, and immunites and be subject to the same dutes, liabilities, and penalties as are provided in the interstate commerce act, as amended and supplemented.

(f) In accordance with rules prescribed by the commission, reasonable notice shall be afforded in connection with any proceeding under this act, to all parties of record and to the governor and the board of any State in which the motor carrier operations involved in the proceedings are or are proposed to be conducted, and opportunity for hearing and for intervention in connection with any such proceeding shall be afforded to all interested parties.

(g) The commission is authorized to confer with and/or to hold joint hearings with any authorities of any State in connection with any matter arising in any proceeding under this act. The commission is also authorized to avail itself of the cooperation, services, records, and facilities of any State, or any officials thereof, in the enforcement of any provision of this act.

(h) Any final order made under this act shall be subject to the same right of relief in court by any party in interest as is now provided in respect to orders of the commission made under the interstate commerce act, as amended and supplemented.

(i) All the provisions of section 17 of the interstate commerce act, as amended and supplemented, with reference to divisions of the commission shall apply to all proceedings under this act.

(j) The commission is authorized to employ, and to fix the compensation of, such experts, assistants, special agents, examiners, attorneys and other employees, and to create such administrative bureaus, as in its judgment may be necessary or advisable for the convenience of the public and for the efficient administration of this act.

APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

SEC. 4. (a) No corporation or person shall operate as a common carrier by motor vehicle in interstate or foreign commerce on any public highway or within any reservation under the exclusive jurisdiction of the United States unless there is in force with respect to such carrier a certificate of public convenience and necessity authorizing such operation: *Provided*, That any common carrier by motor vehicle in operation on the date of the enactment of this act may continue such operation for a period of ninety days thereafter without any such certificate, and if application for a certificate authorizing such operation is made to the commission within such period the carrier may, under such regulations as the commission may prescribe, continue such operation until otherwise ordered by the commission.

(b) Application for certificates of public convenience and necessity shall be made in writing to the commission, be verified under oath, shall state the number of motor vehicles proposed to be operated, and be in such form and contain such information as the commission shall require.

ISSUANCE OF CERTIFICATE

SEC. 5. (a) A certificate of public convenience and necessity shall be issued to any qualified applicant therefor, authorizing the whole or any part of the operations covered by the application if it is found that the applicant is fit, willing, and able properly to perform the service proposed and to conform to the provisions of this act and the requirements, rules and regulations of the commission thereunder, and that the proposed service is required in the interest of public convenience and necessity.

(b) If the corporation or person making application for a certificate of public convenience and necessity sets forth therein that it or any predecessor in interest was operating as a common carrier by motor vehicle in interstate or foreign commerce on any public highway on ———, and claims the benefits of this subsection, the commission upon receipt of such application shall serve such carrier with a questionnaire in respect to the matters on which the commission may require information. The applicant shall answer the questionnaire under oath within forty-five days from the receipt thereof. A copy of all questionnaires and answers thereto shall be furnished by the commission to the board of every State in which any part of the operations of the carrier shall be furnished by the commission to the board of every State in which any part of the operations of the carrier are conducted. If the commission is satisfied with the answers to the questionnaire or from the information otherwise furnished, (1) that the carrier or a predecessor in interest was in bona fide operation on ———, as a common carrier by motor vehicle in interstate or foreign commerce on any public highway and (except as to seasonal service or interruption of operations over which the applicant or its predecessors in interest had no control) continuously has so operated since that date, and (2) that such operations were bona fide for the purpose of furnishing reasonably continuous and adequate service at just and reasonable rates, and (3) that the applicant is fit, willing, and able properly to perform the service required, and to conform to the provisions of this act and the requirements, rules, regulations, and orders of the commission thereunder, then a certificate shall be issued to the applicant by the commission without further proceedings and without a finding that the public convenience and necessity will be served by such operations; otherwise, the question whether or not such facts appear shall be decided in accordance with the procedure provided in section 3 (including reference to a joint board in a proper case), and the certificate under this subsection shall be issued or denied accordingly. For the purpose of this subdivision a common carrier by motor vehicle furnishing seasonal service shall be deemed to qualify under clause (1) if such carrier or a predecessor in interest was in bona fide and continuous operation as a common carrier by motor vehicle in interstate or foreign commerce in 1931 during the season ordinarily covered by its operation, and during each such season thereafter, except as to interruption of operations over which the applicant or its predecessor in interest had no control.

(c) Nothing contained in section 500 of the transportation act, 1920, as amended, shall be construed as expressing a preference by Congress for rail or water transportation over transportation by motor vehicles or to affect in any manner the issuance of a certificate of public convenience and necessity under the provisions of this act; and nothing contained in this act shall be construed as a declaration by Congress of the relative importance to the public of the several kinds of transportation.

(d) No certificate of public convenience and necessity issued under this act shall be construed as conferring any proprietary or exclusive rights in the public highways.

(e) In the administration of this act, the commission shall so far as is consistant with the public interest, preserve competition in service.

TERMS AND CONDITIONS OF CERTIFICATE

SEC. 6. (a) Any certificate of public convenience and necessity issued under section 5 shall specify the routes over which, the fixed termini between which, and/or the territory within which, the carrier is authorized to operate; and there shall, at the time of issuance and from time to time thereafter, be attached to the exercise of the privileges granted by the certificate such reasonable terms and conditions as the public convenience and necessity may from time to time require, including terms and conditions as to the furnishing of additional service over the specified routes, between the specified termini, or within the specified territory, and the extension of the line or lines of the carrier, and such terms and conditions as are necessary to carry out, with respect to the operations of the carrier, the requirements established by the commission under section 2 (a) (1) and (3).

(b) A common carrier by motor vehicle operating under any such certificate may occasionally deviate from the route over which, and/or the fixed termini between which, it is authorized to operate under the certificate, for the purpose of complying with such rules, regulations, and orders as the public authority having jurisdiction over the highways along the route or between such termini, may prescribe from time to time.

PERMITS FOR CONTRACT CARRIERS

SEC. 7. (a) No corporation or person shall operate as a contract carrier by motor vehicle in interstate or foreign commerce on any public highway or within any reservation under the exclusive jurisdiction of the United States unless there is in force with respect to such carrier a permit, issued by the commission, authorizing such operation; except that any contract carrier by motor vehicle in operation on the date of the enactment of this act may continue such operation for a period of ninety days thereafter without a permit, and, if application for a permit authorizing such operation is made to the commission within such period, the carrier may, under such regulations as the commission may prescribe, continue such operations until otherwise ordered by the commission: *Provided*, That nothing in this section or act shall be construed to repeal, amend, or otherwise modify any act or acts relating to national parks and national monuments under the administrative jurisdiction of the Secretary of the Interior, or to withdraw such authority or control as may by law be held by the Secretary of the Interior with respect to the admission and operation of motor vehicles in any national park or national monument of the United States.

(b) Applications for such permits shall be made to the commission in writing verified under oath, shall state the number of motor vehicles proposed to be operated, and shall contain such other information as the commission may require. If it appears from the application or from the information otherwise furnished that the applicant is fit, willing, and able properly to perform the service proposed, and upon compliance with the provisions of section 12, a permit shall be issued to the applicant by the commission. The commission shall specify in the permit the operations covered thereby and shall attach to the permit, at the time of issuance and from time to time thereafter, such terms and conditions as are necessary to carry out, with respect to the operations of such carrier, the requirements established by the commission under section 2 (a), (2), and (3).

BROKERAGE PERMITS FOR PASSENGER TRANSPORTATION

SEC. 8. (a) No person or corporation shall sell any ticket providing for the transportation of any person in interstate commerce by motor vehicle, or make any contract, agreement, or arrangement to provide such transportation for compensation, or by advertisement or solicitation attempt to arrange for such transportation, unless the person or corporation selling such ticket, or contracting, agreeing, arranging, or attempting to arrange to furnish such transportation, has secured from the commission a brokerage permit, which shall be publicly posted, to engage in such transactions and complies with such rules and regulations as the commission may by order establish for the protection of travelers by motor vehicle, and the commission is hereby authorized to prescribe for this purpose reasonable rules and regulations, including requirements for bonds or other securities in such form and amount as will insure financial responsibility and the supplying of transportation in accordance with contracts, agreements, or arrangements therefor: *Provided*, That the provisions of this section shall not apply to any person or corporation who is a bona fide employee or agent of a person or corporation holding a certificate of public convenience and necessity, or permit, in conformity with the provisions of this act, as to transportation to be furnished wholly by such person or carrier or to be furnished through joint arrangements by such person or carrier and other carriers holding like certificates or permits.

(b) The commission and its special agents and examiners shall have the same authority as to accounts, reports, and records, including inspection and preservation thereof, of any person or corporation holding a brokerage permit issued under the provisions of paragraph (a) of this section, that they have under this act with respect to motor carriers subject thereto.

REGISTRATION AND LICENSES FOR MOTOR CARRIERS

SEC. 9. (a) Every motor carrier shall, before operating any motor vehicle in interstate commerce, apply to the commission for and obtain the registration thereof: *Provided*, That any motor vehicle in such operation on the date of the approval of this act may be operated for a period of ninety days thereafter without such registration, and if application for registration thereof is made to the commission within such period the carrier may, under such regulations as the commission may prescribe, continue the operation of such vehicle until otherwise ordered by the commission.

(b) Application for registration of motor vehicles hereby required to be registered shall be made by the owner thereof upon the appropriate form approved or furnished by the commission and contain such information as the commission may require.

(c) The commission, upon registering a vehicle shall issue to the applicant a registration card which shall contain such information as the commission may deem necessary. The registration card issued for a vehicle required to be registered hereunder shall at all times while the vehicle is being operated upon a highway in interstate commerce be in the possession of the operator or carried in the vehicle and subject to inspection by any municipal, State, or Federal officer.

(d) The commission shall also furnish to every applicant whose vehicle shall be registered two number plates for every such motor vehicle and one number plate for each semitrailer. Such number plates shall have displayed thereon the registration number assigned to the vehicle and the year for which it is issued. Such number plates shall be attached to the front and rear of every motor vehicle, including trailers, and to the rear of semitrailers.

(e) Every motor vehicle registration under this section shall expire December 31 of each year and shall be renewed annually upon application and by payment of the fees required by law, such renewal to take effect on the 1st day of January of each year.

(f) For the purpose of defraying the expenses of administering this act every motor carrier now operating, or which shall hereafter operate in interstate commerce, shall, in addition to other fees and charges provided for by law, at the time of registration, or renewal thereof, pay a fee of $—— for each motor vehicle registered as a motor carrier of passengers, and $—— for each motor vehicle, including trailers and semitrailers, registered as a motor carrier of property.

(g) Payment of fees provided for in this section may be by United States postal money order or certified check or draft, made payable to the Treasurer of the United States. Said money orders, checks, or drafts shall be transmitted by registered mail to the Secretary of the Interstate Commerce Commission at Washington, D. C.

SUSPENSION, CHANGE, REVOCATION, AND TRANSFER OF CERTIFICATES AND PERMITS

SEC. 10. (a) Certificates of public convenience and necessity and permits shall be effective from the date specified therein, and shall remain in effect until terminated as herein provided unless otherwise provided by the commission. Any such certificate or permit may, after hearing, be suspended, changed, or revoked, in whole or in part, for failure to comply with any provision of this act, or with any lawful order, rule, or regulation of the commission promulgated thereunder, or with any term or condition of the certificate or permit.

(b) Except as provided in section 11, any such certificate or permit shall be transferable, upon approval by the commission. Applications for transfers shall be accompanied by a fee of $5 per motor vehicle proposed to be operated.

CONSOLIDATION, MERGER, AND ACQUISITION OF CONTROL

SEC. 11. (a) Any corporate consolidation or merger of two or more corporations, at least one of which is a common carrier by motor vehicle, and any acquisition of control of any common carrier by motor vehicle shall be invalid and unlawful unless approved and authorized as hereinafter provided. For the purposes of this section control of any common carrier by motor vehicle shall be deemed to be acquired if any person or corporation acquires (except pursuant to court order or by operation of law), directly or indirectly, through purchase, exchange, lease, gift, or corporate distribution, any right, title, or interest in (1) any certificate of public convenience and necessity of such carrier or (2) all or substantially all the properties of such carrier of use in its operations under any such certificate, or (3) voting stock or other voting evidences of interest in such carrier in an amount sufficient to obtain control of such carrier.

(b) Any person or corporation may apply to the commission for the approval and authorization of any such proposed consolidation, merger, or acquisition. The application shall set out the terms and conditions of the proposed consolidation, merger, or acquisition and such other information as the commission may require. If it is decided, in accordance with the procedure provided in section 3, that the proposed consolidation, merger, or acquisition will be in the public interest, an order shall be issued (1) approving such consolidation, merger, or acquisition upon the terms and conditions set out in the application, or with such modification thereof and upon such other terms and conditions as may be prescribed in the public interest, and (2) granting authority to any corporation or person involved in the consolidation, merger, or acquisition necessary to carry into effect the consolidation, merger, or acquisition as approved. Any such corporation or person, and any corporation or person to whom a certificate of public convenience and necessity is issued or transferred under this Act, shall be relieved from the operation of the antitrust laws, as designated in section 1 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 13, 1914, and from all other restraints and prohibitions of Federal or State law, in so far as may be necessary to enable such corporation or person to carry into effect the consolidation, merger, or acquisition as approved and to conduct the operations authorized by the certificate.

(c) no consolidation, merger, or acquisition of control shall be approved under this section if it involves the consolidation or merger of two or more carriers by railroad or the acquisition of control of any carrier by railroad by another such carrier.

SECURITY FOR THE PROTECTION OF THE PUBLIC

SEC. 12. (a) No certificate or permit shall be issued to a motor carrier, or remain in force, unless such carrier complies with such rules and regulations as the commission shall adopt governing the filing and approval of surety bonds, policies of insurance, or other securities or agreements, in such form and adequate amount and conditioned as the commission may require, for the payment, within limits of liability fixed by the commission, or any final judgment recovered against such motor carrier on account of death or injury to persons, or loss of or damage to property, resulting from the operation, maintenance, or use of motor vehicles under such certificate or permit.

(b) Upon the approval of any such bond, policy, security, or agreement, there shall be issued to the motor carrier a certificate of approval, and such copies thereof as may be necessary; and no such carrier shall operate, maintain, or use any motor vehicle under a certificate of public convenience and necessity, or a permit, unless there is posted in such motor vehicle, in accordance with such regulations as the commission may prescribe, a copy of such certificate of approval.

RATES, FARES, AND CHARGES

SEC. 13. (a) The rates, fares, charges, regulations, and practices of common carriers by motor vehicle shall be just and reasonable and free from unjust discrimination, undue preference, or undue prejudice; and every unjust and unreasonable, unjustly discriminatory, unduly preferential, or unduly prejudicial rate, fare, charge, regulation, or practice, is prohibited. Any person, corporation, or State board may make complaint in writing to the commission that any such rate, fare, or charge, in effect or proposed to be put into effect, is or will be in violation of this section or section 14.

(b) Whenever, after full hearing, upon complaint or in an investigation on its own initiative, the commission shall be of the opinion that any individual rate, fare, or charge demanded, charged, or collected by any common carrier by motor vehicle for transportation in interstate or foreign commerce within the United States, or that any regulation or practice whatsoever of such carrier, is or will be unjust or unreasonable, or unduly discriminatory or unduly preferential or unduly prejudicial, the commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable maximum or minimum, or maximum and minimum rates, fares, or charges thereafter to be observed in such case, and what regulation or practice will be just and reasonable to be thereafter followed, and to make an order that the carrier shall cease and desist from such violation to the extent to which the commission finds that the violation does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation in excess of the maximum or less than the minimum so prescribed, and shall observe the regulations and practices so prescribed.

(c) Whenever there shall be filed with the commission any schedule stating a new rate, fare, or charge for the transportation of passengers or property by a common carrier by motor vehicle, in interstate or foreign commerce within the United States, the commission is hereby authorized and empowered upon protest of interested parties or upon its own initiative at once and, if it so orders, without answer or other formal pleading by the interested carrier, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such rate, fare, or charge, and pending such hearing and the decision thereon the commission, by filing with such schedule and delivering to the carrier affected thereby a statement in writing of its reasons for such suspension, may from time to time suspend the operation of such schedule and defer the use of such rate, fare, or charge, but not for a longer period than seven months beyond the time when it would otherwise go into effect; and after hearing, whether completed before or after the rate, fare, or charge goes into effect, the commission may make such order with reference thereto as would be proper in a proceeding instituted after it had become effective. If the proceeding has not been concluded and an order made within the period of suspension the proposed change of rate, fare, or charge shall go into effect at the end of such period.

(d) In any proceeding to determine the justness or reasonableness of any rate, fare, or charge of any such carrier, there shall not be taken into consideration or allowed, as evidence or elements of value of the property of such carrier, either good will, earning power, or the certificate under which such carrier is operating; and in applying for and receiving a certificate under this act any such carrier shall be deemed to have agreed to the provisions of this subsection, on its own behalf and on behalf of all transferees of such certificate.

(e) Nothing in this section shall be held to extinguish any remedy or right of action under other law.

TARIFFS

SEC. 14. (a) Tariff charges of motor carriers shall be stated in money and shall be in effect only when properly filed and posted in such form and manner as the commission shall by regulation prescribe.

(b) No common carrier by motor vehicle shall charge or demand or collect or receive a greater or less or different compensation for transportation or for any service in connection therewith between the points enumerated in such tariff than the rates, fares, or charges specified in the tariffs in effect at the time; and no such carrier shall refund or remit in any manner or by any device any portion of the rates, fares, or charges so specified, nor extend to any person any privileges or facilities for transportation in interstate or foreign commerce except such as are specified in its tariff; except that any such carrier may issue or give free tickets, free passes, and free or reduced transportation to persons engaged in the service of such carrier.

(c) No change shall be made in any rate, fare, or charge specified in any effective tariff of a common carrier by motor vehicle, except after 30 days' notice of the proposed change filed and posted in accordance with paragraph (a) of this section. Such notice shall plainly state the change proposed to be made and the time when such change will take effect. The commission may, in its discretion and for good cause shown, allow the changes upon a less notice than that herein specified or modify the requirements of this section with respect to posting and filing of tariffs, either in particular instances or by general order applicable to special or peculiar circumstances or conditions.

(d) It shall be the duty of contract carriers to file with the commission, and keep open for public inspection, in the form and manner prescribed by the commission, tariffs, or schedules of the minimum rates, fares, and charges for the line-haul carriage of passengers or property in interstate or foreign commerce within the United States. No change shall be made in any such rate, fare, or charge except after 10 days' notice of the proposed change filed and posted in the aforesaid form and manner. Such notice shall plainly state the change proposed to be made and the time when such change will take effect. The commission may, in its discretion and for good cause shown, allow changes upon less than the notice herein specified, or modify the requirements of this section in respect to publishing, posting, and filing of tariffs, either in particular instances or by a general order applicable to special or peculiar circumstances or conditions. No such carrier shall demand, charge, or collect a less compensation for such line-haul carriage than the rates, fares, and charges filed in accordance with this paragraph, and it shall be unlawful for any such carrier, by the furnishing of special services, facilities, or privileges, or by any other device whatsoever, to charge, accept, or receive less than the minimum rates, fares, and charges so filed.

If at any time after full hearing, upon complaint or in an investigation on its own initiative, the commission finds that any rate, fare, or charge of a contract carrier is unduly low, in that such rate, fare, or charge (1) gives or causes any undue or unreasonable advantage or preference to those whom it serves as compared with the patrons of any common carrier, or (2) subjects the patrons of any common carrier to any undue or unreasonable discrimination or disadvantage, or (3) by unfair competition unduly impairs (a) the service or business, or (b) the regulation of the service or business of any common carrier in interstate commerce, the commission may determine, prescribe, and order the minimum rate, fare, or charge to be thereafter assessed and collected by such carrier. All complaints shall state fully the facts complained of and the reasons for such complaint and shall be made under oath. Whenever, in its judgment, the commission is of opinion that any complaint does not state reasonable grounds for investigation and action on its part, it may, in its discretion, dismiss such complaint.

(e) No motor carrier, unless otherwise provided by this act, shall engage in the transportation of passengers or property unless the rates, fares, and charges upon which the same are transported by said carrier have been filed and published in accordance with the provisions of this act.

INSPECTION OF FACILITIES AND RECORDS

SEC. 15. (a) The commission shall at all times have access to and shall have authority to inspect and examine all lands, buildings, equipment, accounts, records, and memoranda, including documents, papers, and correspondence now or hereafter existing, and kept or required to be kept by motor carriers subject to this act. The commission is also authorized to employ special agents or examiners for the purpose of carrying out the provisions of this subdivision.

(b) The commission shall also have authority by general or special orders to require motor carriers subject to this act, or any of them, to file periodical or special, or both periodical and special, reports concerning any matter about which the commission is authorized or required by this or any other law to inquire or keep itself informed, or which it is required to enforce. Such reports shall be under oath whenever the commission so requires.

(c) The copies of schedules and tariffs of rates, fares, and charges, filed with the commission as herein provided, and the statistics, tables, and figures contained in the annual or other reports of motor carriers made to the commission as required under the provisions of this act shall be preserved as public records in the custody of the secretary of the commission, and shall be received as prima facie evidence of what they purport to be for the purpose of investigations by the commission in all judicial proceedings; and copies of and extracts from any of said schedules, tariffs, or reports, made public records as aforesaid, certified by the secretary, under the commission's seal, shall be received in evidence with like effect as the originals.

ORDERS, NOTICES, AND SERVICES OF PROCESS

SEC. 16. (a) It shall be the duty of every motor carrier to file with the board of each State in which it operates under a certificate or permit issued under this act, and with the commission a designation in writing of the name and postoffice address of a person or corporation upon whom or which service of notices or orders may be made under this act. Such designation may from time to time be changed by like writing similarly filed. Service of notices or orders in proceedings under this act may be made upon a motor carrier by personal service upon it or upon the person or corporation so designated by it, or by registered mail addressed to it or to such person or corporation at the address filed. In default of such designation, service of any notice or order may be made by posting in the office of the secretary or clerk of the board of the State wherein the motor carrier maintains headquarters and in the office of the commission. Whenever notice is given by mail as provided herein the date of mailing shall be consdered as the time when notice is served.

(b) Every such motor carrier shall also file with the board of each State in which it operates a designation in writing of the name and postoffice address of a person or corporation in such State upon whom process issued by or under the authority of any court having jurisdiction of the subject matter may be served in any proceeding at law or equity brought against such carrier. Such designation may from time to time be changed by like writing similarly filed. In the event such carrier fails to file such designation, service may be made upon any employee of such motor carrer within such State.

UNLAWFUL OPERATION

SEC. 17. (a) Any corporation or person willfully violating any provision of this act, or any rule, regulation, requirement or order thereunder, or any term or condition of any certificate of public convenience and necessity or permit shall, upon conviction thereof, be fined not more than $100 for the first offense and not more than $500 for any subsequent offense. Each day of such violation shall constitute a separate offense.

(b) If any motor carrier operates in violation of any provision of this act, or any rule, regulation, requirement, or order thereunder, or of any term or condition of any certificate of public convenience and necessity or permit, the commission or any party injured may apply to the district court of the United States for any district where such motor carrier operates, for the enforcement of such provision of this act or of such rule, regulation, requirement, order, term, or condition; and such court shall have jurisdiction to enforce obedience thereto by a writ of injunction or by other process, mandatory or otherwise, restraining such carrier, its officers, agents, employees, and representatives from further violation of such provision of this act or of such rule, regulation, requirement, order, term, or condition and enjoining upon it or them obedience thereto.

(c) Any person or corporation whether carrier or shipper who shall knowingly offer, grant, or give, or solicit, accept, or receive any debate, concession, or discrimination in violation of the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof be fined not more than $100 for the first offense and not more than $500 for any subsequent offense.

POWER OF STATES

SEC. 18. Nothing in this act contained shall be construed to affect the powers of taxation of the several States or to authorize a motor carrier to do an intrastate business on the highways of any State. It is not intended hereby to interfere with the exclusive exercise by each State of the power of regulation of intrastate commerce by motor carriers on the highways thereof, and notwithstanding this act, motor carriers operating in intrastate commerce on the highways of a State shall continue to be subject to the laws of the State regulating such intrastate commerce; and motor carriers operating in interstate commerce shall be subject to the proper exercise by the State of its police powers.

EXPENSES OF ADMINISTRATION

SEC. 19. There are hereby authorized to be appropriated such amounts as may be necessary to carry out the provisions of this act. All moneys received by the commission from applicants for license plates or for the transfer of certificates or permits shall be held by it as a separate fund and used, so far as necessary, to defray expenses incurred in the administration of this act.

SEPARABILITY OF PROVISIONS

SEC. 20. If any provision of this act, or the application thereof to any corporation, person or circumstance, is held invalid, the remainder of the act, and the application of such provision to other corporations, persons, or circumstances, shall not be affected thereby.

RESERVATION OF RIGHT TO ALTER, AMEND, OR REPEAL

SEC. 21. The right to alter, amend, or repeal any provision of this act is hereby expressly reserved.

SHORT TITLE

SEC. 22. This act may be cited as the "Federal motor carrier act, 1933."

Senator HARRISON. Mr. Litchfield.

## STATEMENT OF P. W. LITCHFIELD, PRESIDENT THE GOODYEAR TIRE & RUBBER CO., AKRON, OHIO

Senator HARRISON. Mr. Litchfield, you are president of the Goodyear Tire & Rubber Co., are you?

Mr. LITCHFIELD. I am president of the Goodyear Tire & Rubber Co., of Akron, Ohio.

Senator HARRISON. Proceed, Mr. Litchfield.

Mr. LITCHFIELD. I have briefed some of my views on this. I suppose each one comes from a different section and is brought closer in touch with its situation than some others, and so I will try to brief it in about 10 minutes so you can see it from our standpoint.

DEPRESSION CAUSES

Major causes of the depression might properly be lumped together under the embracing title of extravagance.

Following the war there was a gapping void created by four years of nonproductivity on the part of the warring nations. To fill this void America's capacity to produce was stepped up enormously. Huge expenditures were made for additional facilities with which to meet the vastly but temporarily stimulated demand for our goods.

We erred in regarding this temporary situation as a new and permanent order. Producing more and more goods, paying more and more wages, we fancied we had attained a formula for a new prosperity which would never cease to grow. Senses of values were lost. The counsel of prudence was hooted.

In few words, we discounted the inexorable law of supply and demand. When export needs were satisfied, we continued to produce on the inflated scale, applied high pressure methods to our selling and stimulated domestic purchasing power through deferred payment plans. We used up current earning power and mortgaged that of the future.

By a series of loans to other nations we are not only stimulated a false demand for our goods but gave the foreigner means to establish industries on bases competitive with our own. Thus we exported and lost both the money and the products. In our domestic credit losses, we at least retained the products within our own domain.

The inevitable day of reckoning came. Since the fall of 1929 we have been engaged in the very painful process of paying for our mistakes.

EVILS OF SURPLUS

Since we attained dizzy heights of inflation it was inevitable that the reaction had to be severe. Unfortunately, the return to new, same levels could not be accomplished in an orderly manner; we could not deflate uniformly. Our production capacity, remaining at high potential, the proven theory that unit costs are lowered as unit production is increased, the unwillingness to recognize that deflation must be general, all conspired to bring about a resistance to the forces of deflation. The result is that our economic machinery has been thrown completely out of gear. We are plagued by a great mass of surpluses. It is this situation which confronts us now—the problem of the surplus must be solved before we can start to build anew.

Our most perplexing and vital surplus, in my opinion, is the labor surplus. A great mass of potential workers, although willing and able to work, are idle. Our capacity to produce on the farm, in the mines, and in the factories is far in excess of our needs.

SHORTER WORKING PERIODS

There is no point to producing more than we can legitimately consume. To do so would be extravagantly wasteful. Therefore, it seems to follow naturally that the work necessary to supply current demands should be spread to the number of workers who are available. Only in this way can we absorb the labor surplus and restore some measure of purchasing power to the millions who are now idle and, therefore, out of the market for our products.

From the viewpoint of general welfare it is far better to have all of our workers employed 75 per cent of the time than to have 70 per cent or 80 per cent of our workers employed 100 per cent of the time.

I believe that for the period of the emergency there should be fixed a work-week limit of 30 hours for what are classed as fatigue jobs and a limit of 40 hours for nonfatigue work. Ample flexibility should be allowed in agricultural work because of its seasonal nature.

AGRICULTURAL RELIEF

Farm surpluses should be reduced through some form of temporary subsidy which would include provision for bringing agricultural production into line with our needs.

SOUND CURRENCY

There should be no inflation of currency. Without sound money we can not cure our economic ailments. I do, however, favor a reasonable expansion of credit controlled along the lines now followed by the Reconstruction Finance Corporation.

UNBEARABLE TAXES

The present tax burden is not entirely necessary. All forms of tax spending should be sharply reduced. We can not now afford the governmental luxuries built into our system during flush times. Sweeping elimination of all but the primary and essential activities of government appears to me to be mandatory unless we care to face dire and immediate consequences.

The vast sums now collected from all and turned over by an indulgent Government to war veterans should be sharply reduced. I am not advising the withdrawal of relief for those who were actually injured by the war, but at that point we should stop.

The policy of singling out specific industries against which special taxes are levied is fraught with danger. In paying the special excise tax on tires for the last six months of 1932 Goodyear turned over to the Federal Government $2,260,000. We paid Government this sum and yet there was no profit made for the stockholders who own the business.

Senator SHORTRIDGE. How much, Mr. Litchfield?

Mr. LITCHFIELD. $2,260,000.

Senator SHORTRIDGE. In the way of taxes?

Mr. LITCHFIELD. Special excise taxes on tires alone on a business of $30,000,000. The automotive and allied industries are the particular target of the tax hunter. If the automotive industry is to be a big factor in our business recovery, it must be relieved of this excess burden.

A general manufacturer's sales tax is fair and scientific in principle. Such a method spreads the burden equitably. Where the income tax is a levy against thrift and initiative the general manufacturer's sales tax would be a levy on extravagance and ability to spend.

FOREIGN DEBTS

Reasonable downward adjustment of our loans to other nations is clearly indicated. In making such concessions, we should endeavor to improve our status in the matter of export trade and we should also promote the cause of international disarmament.

Senator SHORTRIDGE. Do you mean to cut down the amount now due or to become due?

Mr. LITCHFIELD. I mean we should negotiate with some of those foreign governments to see if in exchange for reduction we can not benefit our trade and promote international disarmament. I do not think they should be reduced without any compensating factor.

SELECTIVE IMMIGRATION

I believe that after we have obtained a good measure of recovery and the labor surplus is remedied, but before we have relaxed the suggested limits on working periods, we should encourage selective immigration. Only in this way can we step up the Nation's consuming capacity and resume employment of some of our excess agricultural and manufacturing facilities. This is the method by which the country overcame many previous depressions in our history.

NEW INDUSTRIES

The Government should extend a reasonable measure of encouragement to new industries which promise to improve the lot of mankind. I have particularly in mind the Zeppelin industry in America. In this case, large expenditures have been made for manufacturing and fabricating facilities, an efficient organization of builders has been assembled and trained. Two great airships have been built for the Navy. Similar vessels can be constructed for commercial operation between continents. This new industry offers complete safety and greatly increased speed in intercontinental hauling. The fact has been established that there is a definite place in the field of transportation for the giant airship and that it does not trespass upon or compete with existing methods. The commercial Zeppelin can not compete with heavier-than-air lines in their realm of fast flights over land. Nor can the Zeppelin compete with the merchant marine in carrying heavy freight and large numbers of passengers. It can, however, offer a fast, de luxe passenger service and a means of transporting trade samples, fast express and fast mail, because it reduces by 65 per cent the time now required for crossing the Atlantic. The very fact of increasing speed will stimulate trade and bring the peoples of the earth into better and more friendly relations.

To be commercially successful, the projected Zeppelin lines must be given the benefit of the postal contracts and the legal status America gives its merchant marine in other respects. Unless this legal status is given, through the passage of the McNary-Crosser bill now before the Senate, Zeppelin plant facilities will lapse into idleness and the construction organization will be broken up.

LAWS THAT HAMPER

Speaking from the viewpoint of the rubber industry—and I believe it applies to many other industries—certain Federal laws preclude any successful solution of the problem of destructive price cutting. Tires are now selling below production cost; workers and shareholders suffer. Were we permitted to establish fair and reasonable prices through group agreements, the best interests of the country, social and financial, would be served. I am not recommending the sacrifice of the public's right to governmental protection against extortionate price fixing but merely that the Sherman and similar acts be liberalized to meet an especially acute evil. Unless there is some form of immediate relief extended, the tire industry and its employees face a bad situation.

INCREASED PRESIDENTIAL POWER

In closing, this is not a time for consideration of selfish interests when they delay or make impossible the remedial steps which must be taken if we are to return to normal conditions. Our governmental machinery is too cumbersome to meet the immediate and rapidly changing situation. It is a time when quick, unhampered action is called for. I therefore urge that adequate latitude be given at once to the executive arm of our Government to take such measures as are needed to meet the crisis which now exists.

Senator HARRISON. Mr. Litchfield, when the tax was placed on tires was the price of the tire increased any?

Mr. LITCHFIELD. Very shortly afterwards.

Senator HARRISON. In other words, you try to draw up that gap by passing it on?

Mr. LITCHFIELD. The industry about two or three months afterwards were able to increase it, but since that time there has been a lot of price cutting so it is back to where it was about before.

Senator HARRISON. It was the thought of Congress when it was placed there, I think, that it would be passed on to the consumer.

Senator KING. Well, every sales tax is passed on to the consumer, Mr. Litchfield.

Mr. LITCHFIELD. I suppose it is. But everything that tends to increase the cost tends to shorten the market to some extent.

Senator KING. The prices of tires have been decreased generally during the past 10 or 15 years because of the increase in the consumption and in the technical improvements which have enabled the cheapening of production?

Mr. LITCHFIELD. That is true. And also the lower cost of material has more to do with it than anything else.

Senator HARRISON. You import your rubber here?

Mr. LITCHFIELD. Yes; all rubber is imported. None produced in this country.

Senator HARRISON. Where do you get it from?

Mr. LITCHFIELD. We get it mostly from Sumatra and the Malay Peninsula around Singapore.

Senator HARRISON. What per cent of your organization, your factory, is running now?

Mr. LITCHFIELD. About 25 per cent.

Senator KING. The production of tires and all rubber products is greater now than ever before, is it not?

Mr. LITCHFIELD. No, sir; it has been falling off very rapidly. The production of tires in 1928 and 1929 in this country was about 70,000,000 tires a year. Last year it was about 77,000,000, and in 1933 it will probably come down to 32,000,000.

Senator KING. Well, you do not expect that your business would continue to expand if other activities were slowed down?

Mr. LITCHFIELD. It can not. It must come down with the others. It must come down with purchasing power, naturally.

Senator KING. You have discovered that the people do not have as much money to purchase automobiles as they had in 1928.

Mr. LITCHFIELD. Quite true.

Senator KING. Of course, with the reduction in the output of automobiles there would be a reduction in the rubber production.

Mr. LITCHFIELD. Yes.

Senator KING. I understand from your statement that there ought to be a reduction in taxes of the automobile industry. The railroads of the United States are paying in the neighborhood of 700 or 800 millions of dollars of taxes a year. The automobile industry, as you know—trucks and automobiles for carrying passengers and so on—that industry has greatly diminished the earnings and the transportation of the railroads in the United States. Notwithstanding that fact it is stated that the railroads paid this enormous tax. You do not think that the automobile industry—including the tax on gasoline and so on—should be freed from taxation, do you?

Mr. LITCHFIELD. No; but they are paying about $1,000,000,000 in taxes at the present time. A little over $1,000,000,000.

Senator KING. You mean the automobiles?

Mr. LITCHFIELD. Yes.

Senator KING. With the tax on gasoline and so on?

Mr. LITCHFIELD. Yes. The direct and indirect taxes on the automotive industry alone, I believe, are well in excess of $1,000,000,000, which is about one-fourth as much as is spent on the Federal Budget, and about one-tenth of the total National, local, and State Budgets.

Senator KING. I know, but is not the greater part of that used for the construction of highways which are essential for the automotive industry?

Mr. LITCHFIELD. A great deal of it is; yes.

Senator KING. Whereas, the railroads have to buy their own right of way, pay for it, and maintain it, whereas the States and the Federal Government are acquiring the highways and maintaining them and building them and so on in order to increase the production of your industry.

Mr. LITCHFIELD. Yes; but they are being paid for indirectly by the industry through these taxes on the gasoline and so forth.

Senator KING. Yes; but a very large part of that $1,000,000,000 of which you spoke goes for the purpose of constructing roads that will expand the production of automobiles and thus increase the use of rubber?

Mr. LITCHFIELD. That is quite true.

Senator GORE. Did you say, Mr. Litchfield, that tires are being sold at less than cost?

Mr. LITCHFIELD. Yes; the tire industry would show that in the last few years they are sold at less than cost.

Senator GORE. You suggested that some sort of price fixing ought to be authorized by law. There has been a good deal of agitation along that line for some time now. We have had a great deal of antitrust legislation and court decisions to prevent monopolies from fixing prices, and it is going to be pretty hard to get Congress to authorize anybody to fix prices. Would it be of any service if we should pass a law going so far as to forbid them from selling, or reselling, rather, at less than cost?

Mr. LITCHFIELD. No, I do not think that would; no, sir. The antitrust laws were really designed to protect the public from paying undue prices for their goods. The trouble is that under the protection of the antitrust laws certain unfair practices in the industry can be brought about, and what you might call bootlegging under this protection, and to prevent the industry from constructively formulating policies which are not to the detriment of the public, but that would be favorable to the industry if they would be protected against minor interests. In other words, we think that they should be liberalized to such an extent that if the majority of the industry formulated policies which were fair in the opinion of a properly authorized Federal body, that they could compel a minority of one or two to abide by them.

Senator GORE. Well, that introduces a new point which is very important, that some authority should have power to revise or supervise these prices. Otherwise, if you allowed by law the fixing of prices the public would not get any benefit at all out of reduced cost without the consent of the manufacturers who are profiting by maintaining the fixed price.

Mr. LITCHFIELD. That should be regulated by the Government to the extent that unless it was approved by a properly appointed Federal body that it could not be done, that it could not become effective.

Senator KING. Would not that policy, Mr. Litchfield, standardize the conduct and the production of all commodities that were brought within the influence of that policy, lead to inefficiency, to poorer quality, stifle competition and lead to an increase in prices, or at least to a stabilization which would deny to the people the advantages of improved technological developments and scientific improvements?

Mr. LITCHFIELD. No; I do not think it would have that effect at all. I think the Federal body would have sufficient control to prevent that.

Senator GORE. Well, would it not petrify and peg the price level so that our inflationist friends could not raise the amount of money and reduce the amount of money and change the number of grains in the gold dollar ad libitum as fluctuations required?

Mr. LITCHFIELD. No; I do not think so.

Senator SHORTRIDGE. Mr. Litchfield, do you think the Federal Government should have the power, or that it has the power under our Constitution, to fix the price of flour, for instance?

Mr. LITCHFIELD. No.

Senator SHORTRIDGE. Or wheat or corn or cotton? Or a knife?

Mr. LITCHFIELD. No.

Senator SHORTRIDGE. Do you think the Federal Government under our system has the power to-day to regulate the price of merchandise generally?

Mr. LITCHFIELD. No; I do not think that it has. I think it should be left to supply and demand.

Senator SHORTRIDGE. That answers probably this question. You may have stated your view, but I will put it in this form. Do you think that the Federal Government has the power under the Constitution, or if as a legal matter it has the power it should exercise it to fix the price of automobile tires?

Mr. LITCHFIELD. It is not a question of fixing price. It is the question of preventing the small minority interests in an industry from taking advantage of a law which is designed to protect the public.

Snator SHORTRIDGE. I did not understand that answer.

Senator GORE. I think it is this, Senator, if you will pardon me.

Your point is that manufacturers ought to be allowed to enter into a contract with their retailers who handle their goods that they can not sell them at less than a fixed price, and what you want is to render that sort of a contract lawful and not in violation of the antitrust law. That is the point, is it not?

Mr. LITCHFIELD. Yes, very largely.

Senator SHORTRIDGE. You represent the Goodyear Tire and Rubber Co., with large capital. There are certain other rubber companies in the United States, are there not?

Mr. LITCHFIELD. There are.

Senator SHORTRIDGE. Some great and some small in capital. Your idea, if I grasp your answer, is that two or three big companies could bring about the fixing of price so that a new company coming in could not break into the field by underselling you?

Senator KING. He would be called a bootlegger.

Mr. LITCHFIELD. Not at all.

Senator SHORTRIDGE. Is not that what it amounts to? If the Government undertakes to fix the price of an article of merchandise, does it not prevent legitimate competition and freedom?

Mr. LITCHFIELD. The Government does not undertake to fix the price. I am taking an illustration, possibly, of a situation along these lines: At the present moment there is a large surplus of labor in the country. We are trying to share the work and spread it out. Some of the companies are doing that. They have shortened the hours, and spread the work over longer hours. On the other hand, some of the smaller companies are taking advantage of that situation to lengthen hours and lower the wages. In this particular situation, that could be considered unfair competition, and somebody could regulate that thing to prevent advantage being taken of a situation like that.

Senator SHORTRIDGE. That would be the death of individual freedom, would it not? Our forefathers fought for freedom, individual freedom. Now you propose to have the Government regulate the activities of men in the way you have indicated. However, it is all right.

Senator KING. One other question: Do you favor subsidies for the Zeppelin?

Mr. LITCHFIELD. With regard to the Zeppelin, if it is in the national interest to have airships in commerce, if they are really worth while, and they are in competition with a form of transportation which, in the opinion of the Government, should receive support of that nature, so long as that other form of transportation receives such support, I think it is proper that that should be extended to the airship, as well as to the merchant marine. The airship should not be penalized, but should have the same privileges which are given to similar forms of transportation—no more, and no less.

Senator KING. Your company has been building Zeppelins, has it not.

Mr. LITCHFIELD. We have built two.

Senator KING. You would like, of course, to have an opportunity to build more, naturally, and you would like a subsidy from the Government to aid you in the construction of them?

Mr. LITCHFIELD. If it is in the national interest that that should be done for the merchant marine.

Senator KING. Who is to determine whether it is advantageous for the general public? I am one of those who do not believe it is to the interest of the general public to pay subsidies for the airplane or for the merchant marine or for the Zeppelin. I am only one. Is it not a fact that these subsidies, as a rule, have been the result of powerful lobbying and influence being brought upon Congress?

Mr. LITCHFIELD. I do not think that is necessarily the case. With regard to the merchant marine, if it is desirable to have a merchant marine, and it is in the Government interest to have a merchant marine, it is proper for the Government to give it such support as is necessary to have a merchant marine, or else they would not be justified in doing it. If the airship is another form of transportation performing the same service, it should have the same form of help to the extent that the merchant marine has it, no more and no less. In other words, it should not be discriminated against. If national policy favors it for one, it should favor it for the other. If it does not favor it for one, there is no reason why the other should have it.

Senator KING. Then, one bad precedent justifies an additional bad policy?

Mr. LITCHFIELD. That is a question of whether the first one is a bad precedent, or not. Is it a bad precedent for the Government to encourage a national merchant marine?

Senator KING. Do you not think that as the needs of the Government develop, private capital, particularly with the initiative which has always characterized the American people, will be available for whatever legitimate needs there are for the welfare and the business development and the economic happiness of the people? It may not come all in a day.

Mr. LITCHFIELD. It will not come in a day. Oftentimes it has been the policy of this Government—and wisely so, I think—to encourage an infant industry to get on its feet and demonstrate its value, and to the extent that has been done in the past and things have developed which have been beneficial to our national interests, to that extent it has been justified.

Senator GORE. Do you not think subsidies breed, as a rule, inefficiency?

Mr. LITCHFIELD. That all depends upon the nature of the subsidy.

Senator GORE. And the nature of the management?

Mr. LITCHFIELD. And the management. For instance, private capital has got to have some assurance that there may be some future for its safe investment before it will enter into a business. If a form of transportation exists which carries certain privileges of that nature, and you are to compete with that, naturally you can not compete if the other form is discriminated against in that respect. It would have to have the assurance of the Government that it will not discriminate, but will treat one form of business the same as another.

Senator GORE. Suppose we subsidized our merchant marine until we had ships enough to carry every pound of outgoing freight, and that every other seafaring country did the same thing. Then every ship would come home empty, would it not?

Mr. LITCHFIELD. I suppose that would be the case. I have a little different idea from what the national policy is, as to how that thing should be regulated. It has always seemed to me that we protect our coastwise shipping, for instance, 100 per cent. We grant it a monopoly. We do not allow any foreign shipping; but, on the other hand, international trade in many respects is not favored at all. National traffic is 100 per cent protected, and international traffic is not protected at all. It would seem that international traffic is a 50-50 proposition, and in engaging in international traffic the interests of each end should be considered.

Senator HARRISON. Mr. Litchfield, the committee thanks you for your statement. Are there any further questions?

Senator SHORTRIDGE. Of course, you carry in mind that a subsidy given to the merchant marine has relation to possible national defense?

Mr. LITCHFIELD. Yes.

Senator SHORTRIDGE. And I assume that all Senators and all thoughtful people carry that in mind?

Mr. LITCHFIELD. And I assume also that that is true of the airship. That would be the reason for discrimination, but if it is true of the merchant marine, in the future development of air traffic between nations, it would bear the same relation as the merchant marine does on the surface transportation.

Senator SHORTRIDGE. We must bear in mind two things when we think of the merchant marine: First, that the United States may occupy the position of a neutral; and, again, may occupy the position of a belligerent, which I hope will never come.

## STATEMENT OF FRANK H. SIMONDS

Senator HARRISON. Mr. Simonds, will you give to the reporter some designation? You are a journalist, international writer, and so forth?

Mr. SIMONDS. Yes. If it is in accordance with your procedure, I would like to read this little statement into the record.

No single step in the direction of promoting American recovery from the depression of the present time can, in my judgment, be more important than that of settling the question of American policy in the matter of the foreign debts, and in this respect I am speaking alike of the amounts owed the United States Treasury and the American investor. Together, these sums aggregate $20,000,000,000, about equally divided into the two categories. Until a definite decision is made in respect of these vast sums, they must remain a shadow over all progress.

So far, however, the United States, the Congress, and the public alike has, since the making of the original debt settlement, resolutely refused on the one hand to consider canceling these debts, and on the other making any readjustment of American domestic economy in order to permit payment. Such payment, too, is possible only as the United States undertakes to buy more abroad, or sell less. It must, then, lower its own tariffs or restrict its own exports.

American opinion in the great debt controversy has so far been confused by the fact that the United States was suddenly, by the accident of the war, transformed from a debtor to a creditor Nation and from a self-contained country to a great trading country. In fact, it had been overnight thrust into the situation which Great Britain had won for itself in the century between Waterloo and he Marne by patient and sustained effort.

But in this hundred years, Britain had steadily transformed its domestic circumstances to correspond with its foreign mission. Thus it had abandoned its agriculture in favor of its industry, enabling the foreign peoples who bought British goods to pay in their own foodstuffs. It was then always able to collect what was owed abroad for one kind of goods by receiving others.

But although between 1914 and 1921 the United States had wholly changed its condition and where in the former year it owed $3,000,000,000, in the latter it was owed upwards of $15,000,000,000, it still remained a great exporter of manufactures and raw materials and by tariff prevented the entrance of competing products. Such a course reduced our foreign trade practically to the dimension of a 1-way street. The world could only buy from us to amounts equal to what it sold us, and it had no means by which to pay the debts. In fact, since we pushed out goods in high pressure manner, it could not even pay for all of them.

In this situation the only escape was for the United States to lend Europe and the world the money to pay its debts, and also its excess of American purchases over sales. And that was what we did between 1924 and 1929, lending Europe upwards of $5,000,000,000 and collecting from it $2,000,000,000 on account of debts. But when in 1929 we stopped lending, Europe stopped paying and reduced also its purchases to balance its sales.

Now it is always possible to start debt payments again by starting the lending process. It is equally possible to start it by buying more foreign goods, but to collect the debts, both public and private, we should have to buy annually something like $1,500,000,000 more foreign goods than we do now. The only other course would be to reduce our export by that amount, which is of course absurd. But these are the only three ways in which debts can be collected.

Now so far from being ready to buy more foreign goods, the United States is to-day going through a period of agitation to "Buy American." But the ironical circumstances about this is that the man who urges his fellow countrymen to buy American is really trying to make cancellationists out of them, wholly unintentionally, to be sure. On the other hand, the man who urges you to "Buy British" or to "Buy French" is really a collectionist in practice. The reason is clear. The former is depriving the debtor of means to pay the debts; the latter is supplying it.

Meanwhile, you hear on all sides the statement that to cancel the debts is to transfer the burden from European to American shoulders. And that is exactly true. What you hear less about is the alternative, because to collect amounts to transferring the burden to the shoulders of the American workingman. If you cancel the debt, you will increase the taxes. But if you collect it, you will reduce American employment, because you will substitute foreign for domestic goods in the home market. In a word, you have got to let the European debtor off, or provide him with the opportunity to get the American money with which to pay.

Now this fact is gradually becoming clear. And in this situation you hear more and more about trading in the debts for tariff favors. We, for example, are to reduce the British debt, and the British are to open their markets to our goods. But the trouble is that this will only mean that more American goods will flow into Britain, without providing the British with any new means to pay for them. Somehow they will have to get new business to pay for new purchases, but we shall not supply that by cancellation.

Well, then, it is argued that at least the French, with their vast gold supply, could pay. But in the first place, one-third of their gold is owned abroad by foreigners who store it in Paris. And of the balance a large part is necessary to support French currency. Thus to collect gold from France would eventually drive her off the gold standard, as Britain was driven. But we are now striving to get the British back on the gold standard, and thus to get rid of the unequal competition growing out of a depreciated currency. To push France off, then, would be to start this competition in a new direction.

In this situation it is urged that at least we might get disarmament in exchange for debts, but this is a dangerous illusion. Suppose we got France to abolish her army in return for debt cancellation. The result would be to lower French taxes enormously, and thus the costs of production in France correspondingly. And at that point France would become a dangerous competitor of ours in the world market in textiles and steel, for example.

The trouble is that on the one hand no one has ever been able to find in the light of economics how to collect these international debts, or on the other hand, in the light of politics, how to cancel them.

Senator Shortridge. I have a very simple method. I shall elaborate it in a day or two in the Senate. That method is to pay the debts, that is all.

Mr. Simonds. But everyone does see that until they are removed from the track of all international undertakings to restore world business, nothing is going to happen. They are a great, perhaps the greatest obstacle, not any more on the economic side, because no payments will ever be made on war debts beyond the instalment of last December, save as we lend the money for such payments in one form or another, but on the political side.

And that is why I said at the outset that it seemed to me one of the most essential steps toward recovery must be an American decision to cancel or collect the debts, a decision translated into appropriate action making receipt of payment possible, if the decision is to collect. Removal of the debt problem, either by cancellation or by possible collection, will not at once or directly start business, but it will make it possible at last to talk business.

Senator KING. With some modifications, would not the same principle which you have advocated here, or elaborated, extend to our relations with our debtor nations in Latin America?

Mr. SIMONDS. Oh, yes, Senator. I tried to make clear that, as a matter of practice, there is no difference between the debts in South America and Europe, and between the governmental debts and the private debts. The matter of payment is all that is involved.

Senator GORE. They have to pay in goods or gold.

Senator KING. Latin America owes us between five billion and seven billion dollars.

Senator SHORTRIDGE. As private debts?

Senator KING. Public and private—perhaps more than that. We have extended credit to the extent of more than five billions, or have made loans, rather, taking their bonds to the extent of more than $5,000,000,000 during the past few years. There are debts in excess of that five billions. As you know, those nations have either gone off the gold standard, or the gold exchange standard, or they have interdicted the export of gold, and they are unable to pay the obligations due the United States, by virtue of the tariff policies which we have pursued, and which later they have followed in part. They are not exporting to the United States very much, and we are not exporting to them very much, and we are losing our export market there by reason of the recent invasion of European nations.

Assuming that my statement of the premises is correct, then we are in the same attitude with South America in regard to being paid, as European nations are, except the European nations have the debts due our Government growing out of the war, and those in South America are debts growing out of trade relations and the unloading in the United States of their securities.

Mr. SIMONDS. The actual physical payment of all of them must be by the same method.

Senator KING. Yes. South America has neither the gold nor the silver—at least in sufficient quantities—to pay the debts due the United States. So, if we refuse to receive her commodities, or services, then it is obvious that she will be in default, and as she is in default, it affects her internal credit and stability, and is provocative of the political revolutions and the violence of which we have evidence from day to day. Is that an accurate statement?

Mr. SIMONDS. I would not like to say, Senator, what part of the economic depression is due to our foreign debt, and what is due to the domestic debt. Unquestionably, some of the economic troubles they are going through explain their political troubles.

Senator SHORTRIDGE. During the war we furnished supplies to certain European nations, and also advanced to them cash aggregating some $9,000,000,000, in round figures. After the armistice we advanced a large sum, did we not?

Mr. SIMONDS. Yes.

Senator SHORTRIDGE. We held what might be called the demand obligations of those nations. Then we sat up our funding commission, and the Chancellor of the Exchequer of the United Kingdom, the honorable Stanley Baldwin, came here to Washington, as did representatives from all these other debtor nations, and they sat down with us to agree as to the several sums due us for the supplies and for money advanced. Is that correct?

Mr. SIMONDS. Quite.

Senator SHORTRIDGE. Do you recall that the Chancellor of the Exchequer specifically stated that he wished to enter into commercial contracts—not political contracts—and that in the adjustment of these accounts the settlement should be regarded as a purely commercial account? Is that right?

Mr. SIMONDS. Right.

Senator SHORTRIDGE. There was no concealment on our part. There was no threat on our part, no coercion.

Mr. SIMONDS. None whatever.

Senator SHORTRIDGE. They were not under duress, and we gave them some 62 years within which to pay, is that right?

Mr. SIMONDS. Yes.

Senator SHORTRIDGE. Then later, and for certain reasons which we need not now go into, we extended or suspended the payment of one annual payment to all these several nations, did we not?

Mr. SIMONDS. Yes.

Senator SHORTRIDGE. And gave them 10 years, in installments, to pay that deferred annual payment?

Mr. SIMONDS. Yes.

Senator SHORTRIDGE. The amounts were definite and fixed and there was a low rate of interest, and it was understood by everybody.

Mr. SIMONDS. Quite true.

Senator SHORTRIDGE. In order to advance this money to those nations, and in order to supply them with goods, we, the United States, had to borrow the money, did we not?

Mr. SIMONDS. Undoubtedly.

Senator SHORTRIDGE. And issue our bonds?

Mr. SIMONDS. Quite right.

Senator SHORTRIDGE. And there are now outstanding some twenty-odd billions of our interest-bearing obligations, are there not?

Mr. SIMONDS. $12,000,000,000, or $11,000,000,000 and something, covering the European loans.

Senator HARRISON. Twenty-odd billion in all.

Senator SHORTRIDGE. We have outstanding now $21,000,000,000 or $22,000,000,000.

Senator HARRISON. Something over $22,000,000,000.

Senator SHORTRIDGE. Something over $22,000,000,000 of interest-bearing obligations.

Senator KING. It is fair to state, though, Senator, that four or five billions have been the result of—I will not say the extravagance of

Congress, but by reason of the deficit resulting from the large appropriations we have made.

Senator SHORTRIDGE. I will grant you that. That large indebtedness has arisen from various causes. What I am coming to is this: We owe this money. Does anybody suggest that Uncle Sam can pay that money other than by paying it? How are we going to pay our twenty-odd billion?

Mr. SIMONDS. Some people are beginning to suggest, Senator, that we will not even be able to pay that. The point I am trying to make in my statement is that I agree that any part that is cancelled would be transferring the burden to the shoulders of the American people. There is no question about that. I tried to be very clear in what I said, that any reduction, cancellation, or what you please, indulged in by the United States, vis a vis its foreign debt, would unquestionably be transferred to the shoulders of the American taxpayer.

Senator SHORTRIDGE. Beyond any question.

Mr. SIMONDS. But what I also tried to point out, was that so far no method of collection has been found which will not transfer the burden, instead of to the taxpayer, to the working man.

Senator SHORTRIDGE. Now, take Great Britain, France, Italy, Poland, or Czechoslovakia. They have a certain national debt, severally. They owe us. Is it your thought that we should cancel the debt?

Mr. SIMONDS. No, Senator.

Senator SHORTRIDGE. Or reduce the debt?

Mr. SIMONDS. My thought is that you should find a means of collecting it.

Senator SHORTRIDGE. Of course, we have no collateral. We have no mortgage on Czechoslovakia, or little Latvia. It is really their moral obligation as honorable nations.

Mr. SIMONDS. But they can not, by giving us morals, pay the debt.

Senator SHORTRIDGE. Of course, they can not, but if they have the honor of honorable men, or the honor of honorable nations, or the honor of an untutored savage, they will try to maintain their reputation as honorable nations, and pay the debt. Why not? They can do it.

Senator KING. How can those nations pay Great Britain? Great Britain has due her from France, from Italy, from Poland, from Czechoslovakia, from Austria, and from Greece, considerably more than she owes the United States. I am not justifying cancellation of debt, but she is perfectly willing to cancel all the obligations due from those countries to her, which, as I stated, in the aggregate, are larger than the obligations due the United States, because she believes it will stimulate business, and she can get more in trade than she would ever get in money. She knows she will never get the money from them.

I assume Mr. Simonds, in his illustration of this question—and he has done it so artfully and in such a statesmanlike manner—has in mind the same philosophy that actuates Great Britain in taking the position that she can not collect any money, because they have not got it, from those countries owing her, and she is perfectly willing to enter into trade relations with them and, by mutual trade concessions back and forth, she will get her pay in commodities and the profit from other business, rather than in gold, which she never can get.

Senator SHORTRIDGE. We have outstanding, let us say, $20,000,000,000 of interest—debt, represented in different forms. I have heard no one suggest how we are to pay that, other than by paying it in money. I have heard no Senator, no Representative, no newspaper, and no writer, suggest any other method for Uncle Sam to pay, other than to pay in money, and if that be true of him, in my simple way I think it is similarly and equally true of these several European nations.

Mr. SIMONDS. We will not take their money, Senator.

Senator SHORTRIDGE. We will take it, according to the contract, which said that it had to be paid in gold coin of the present weight and fineness. We stand upon the contract, not as a Shylock, but as an honorable Nation.

Mr. SIMONDS. The British have a limited amount of gold. If the British were to discharge their debt in gold to us, they would postpone their return to the gold standard by reducing their coverage of their money, and it is agreed, I think, very clearly by most observers, that one of the objectives of the new conversations that are to take place, is to get England back on the gold standard, so that our goods will not suffer from the unequal competition in the depreciated currency.

Senator SHORTRIDGE. True.

Mr. SIMONDS. You simply reduce the possibility of restoring Great Britain to the gold standard, thereby prolonging the period of her unequal competition in the world market, as you take her gold to fulfill the standard of honor, as you call it.

Senator SHORTRIDGE. I am not indifferent to the welfare of any of those nations, but I am thinking primarily of my own——

Mr. SIMONDS. Senator, forgive me. I am testifying, I hope, as an American taxpayer whose only desire is to get somebody else to pay his bills.

Senator SHORTRIDGE. The welfare of America is uppermost with us, of course.

Mr. SIMONDS. But if you want to get the British back on the gold standard, and at the same time you want to take the gold away from them to fulfill their contract, are you not rather moving around in a circle? You will want to get the British back on the gold standard only because you want to restore an equal chance for American goods in the world market. Therefore, you want England back on the gold standard, not for English reasons, but for American reasons.

Senator SHORTRIDGE. When I say the contract provides that they shall pay us in gold coin of the present weight and fineness, I should add that the contract provides that they may pay us in our United States bonds.

Mr. SIMONDS. But they have to use their gold to get them.

Senator SHORTRIDGE. Grant that; but our outstanding bonds may be scattered over the whole world. Many may be in England; many may be in Germany; many may be in France; and many may be in Italy, to-day. Those several nations can pay us by delivering the bonds.

Mr. SIMONDS. To the extent that the British might have those bonds, they could transfer those bonds to us and pay their own people in their own currency. There is no question about that. Nobody has made a statement of any considerable holding of the British at the present time in American securities.

Senator HARRISON. I want to ask Mr. Simonds this: Is there any sentiment in England to get back on the gold standard?

Mr. SIMONDS. Senator, there is, I think, a very considerable sentiment in certain sections to get back on the gold standard. My experience with the Englishmen I have talked with, is that they have a feeling that a return to the gold standard will not be safe for the English, until the circumstances which explain their going off it are removed. I think there is a school who are talking about that thing. If you could guarantee to the English that when they went back on the gold standard this time, they would not be driven off as they were driven off before, I do not think there would be any question about it.

Senator HARRISON. In other words, they are in a better position off the gold standard to-day to negotiate with reference to this debt, than they would be if they were now on the gold standard?

Mr. SIMONDS. I do not think that has anything to do with it, Senator, because as long as they are off the gold standard, they are being paid themselves for what is owed them abroad, in their own depreciated currency, and therefore they are losing more at that end, because they are owed more—infinitely more. If you take the sum of the things that are owed the British Government, and the things that are owed the British producers privately, you will see that there is going into England, as a result of the depreciation of their currency, vastly less than the amount of the debt would make if it were restored.

Senator HARRISON. I wanted to ask you this: I was very much interested in your discussion——

Senator GORE. Are you passing from this phase, Senator?

Senator HARRISON. Yes.

Senator GORE. I would like to ask one question on this particular point, because there are two views in this country, two suspicions in regard to England and the gold standard. One is, that England went off the gold standard deliberately; that she has depreciated her currency deliberately; that she has deliberately manipulated the machinery of depreciated currency and exchange, to her advantage and our disadvantage, with the ultimate end in view of coercing the United States into a more acceptable adjustment on these international debts. The other view is, that England is the victim of this set of circumstances, and that the horse is running away with her, and that she is not guiding it, and that she has not done it with the deliberate purpose to serve herself at our expense. What is your view? Was she coerced off the gold standard by necessity, and, if so, is she now taking advantage of her own calamity to our disadvantage?

Mr. SIMONDS. It is the latter, Senator, in my judgment.

Senator GORE. That she is not guiding the runaway horse?

Mr. SIMONDS. Anybody who was familiar with the circumstances which attended the British going off the gold standard, the events that took place at that period and the efforts that were made by the British to prevent going off, and the shock to British prestige and position in the world, and everything of that sort that resulted——

Senator GORE. It looked as though they skidded off.

Mr. SIMONDS. On the other hand, I am quite sure that now, being off, the British are making the best they can out of the situation, and, through the fact of depreciated currencies, they are, to a certain extent, able to undersell us in the world market. Having fallen off the roof, at least they are saved the trouble of going down the elevator.

Senator HARRISON. Do you not think, Mr. Simonds, that our policy with reference to these tariff increases in 1929, say, was a very wise policy with reference to stabilization of exchanges, and good relationships with the world, helping in the economic stability of the world?

Mr. SIMONDS. My own feeling is that it set the example and then supplied the excuse for the whole series of tariff raising, and so forth.

Senator HARRISON. I do not understand you to mean that after we had instituted that policy that other countries of Europe followed that policy.

Mr. SIMONDS. Perhaps they would be equally unwilling to admit they followed, but the effect of it was that.

Senator SHORTRIDGE. What nation in Europe recently has been on what we might call a free-trade basis?

Mr. SIMONDS. The departure of England from the free-trade basis was a perfectly enormous thing. For a century the English were a tariff country. When they made up their minds to undertake a kind of mission in the world, when they undertook to be a trading and lending nation, then they became a free-trade nation. When I was testifying a moment ago I said there is no difficulty about collecting the debts, if we are prepared to remove our tariffs and let the foreign goods come in to pay them.

Senator HARRISON. Do you not think that there are certain products that would not come in such great competition with the products of American labor, that might be able to come in, and which would help in the solution of this problem to some extent?

Mr. SIMONDS. Perhaps very little, Senator; but when you consider that in the first place Europe and the world are now buying all they can buy from us, and paying for it, you have one and a half billion a year that they will have to pay in addition. I do not think that by a little juggling around of this tariff schedule or that tariff schedule you can provide the way for the admission of enough to make any difference with the larger amounts. They might get in 1 per cent more, or 2 per cent more, and be able to pay $1,000,000 or $3,000,000 or $5,000,000.

Senator HARRISON. To whatever extent, it would help to that extent?

Mr. SIMONDS. It would help to that extent, but in my judgment the thing is so big that the larger thing would go on piling up—the multiplication of what they could not pay.

Senator SHORTRIDGE. You are engaged in the newspaper field, so to speak. I have in mind a great newspaper that claims to be a great protective tariff paper, getting its supply from Sweden, whereas if it bought from the State of Washington, it would help greatly. Would you have wood pulp or newsprint paper come in free?

Mr. SIMONDS. I would, Senator, if I were going to collect the debt, because in that way, by the newspaper buying it, pulp abroad, it would provide the country from which it bought it, with the means of paying the American debt.

Senator SHORTRIDGE. Put it this way: In the State of Washington, they have paper mills. I have in mind one great newspaper that buys its paper from that American mill, and to-day it costs the proprietor or owner of that great newspaper, say, $25,000 or $30,000 a month more than he could get his paper for from abroad. I have in mind another newspaper that shouts and bellows about its protective tariff notions, which, instead of buying from the American factory, thereby putting men to work in the State of Washington, is buying its paper from abroad. As between the two, having in mind the national debt, would it not be better to buy from our own people?

Mr. SIMONDS. You see, Senator, what you are asking me is a question rather off line. You are asking me about protection inside the domestic field.

Senator SHORTRIDGE. You connect it up with this question of the national debt.

Mr. SIMONDS. Yes; but in this sense: Suppose, for example, I were—as I never shall be—the owner of one of those great newspapers. Then I would have before me this question: Should I buy my paper abroad, and help the foreigner to pay his debt to my Government, or should I buy my pulp at home and contribute to American employment?

Senator SHORTRIDGE. With that problem, what would you do?

Mr. SIMONDS. Personally?

Senator SHORTRIDGE. Yes.

Mr. SIMONDS. Personally, I should have to say, "Shall I collect, or shall I cancel?" And I would say I would rather employ American workmen.

Senator GORE. Mr. Simonds, I do not want to get into any argument with you about protection, or with Senator Shortridge, but suppose this San Francisco publisher who buys his paper in Sweden pays for that with prunes and raisins and English walnuts raised in California.

Mr. SIMONDS. Yes.

Senator GORE. Did not the production of those raisins and prunes and walnuts give employment to American labor to exactly the same extent as if he had bought his wood pulp in the United States, which had, in turn, given the employment to American labor?

Senator SHORTRIDGE. I would like to have Senator Dill answer that question, Senator Gore, or the other Senator from the State of Washington.

Senator GORE. I do not want to get too far into this protection question because there is no shore to that sea.

Senator SHORTRIDGE. I would answer that it would be far better for America to buy the paper from the State of Washington mills than to buy it abroad.

Senator GORE. And give employment to the laborers in Washington to produce wood pulp and print paper, and put the laborers in

California out of business who produce prunes and raisins—and they are out of employment now.

Mr. SIMONDS. Senator, this is the point there, if I may say so: At the present time we are sending as many prunes and all the other things as we get paper for. This is the question now, whether you are going to get more, because you are not getting your debt. Now, you want to collect your debt. We have never collected in money for the debt. We are starting de novo. Already, the people are buying all they can pay for. We are going to start something new. We are going to try to collect more money. We can not give them any more prunes because they can not take them. They are taking all they can.

Senator GORE. But they would take less, Mr. Simonds, if we shut out print paper and would not let them trade print paper for prunes.

Mr. SIMONDS. That might be, Senator. I was trying to avoid going into the main question of the tariff.

Senator GORE. I think we will all agree that we had better waive that.

Senator SHORTRIDGE. I can not conceive that there is any exchange, as you say, or that the buying of less pulp or print paper from Sweden would affect the foreign trade in prunes.

Senator GORE. Senator, unless we buy from them, we can not sell to them.

Senator SHORTRIDGE. I grant you that, in a sense. I do not want to take up too much time, but let me say this for this record:

These foreign nations, Mr. Simonds, agreed to pay us a certain amount of money in cash or in bonds. We gave them 60-odd years within which to do so, at a very low rate of interest. As to France, of course, we gave her the best terms.

Senator KING. Not as fine as you gave Italy.

Senator SHORTRIDGE. That is true. I stand corrected. But we gave them excellent terms. Now, suppose I owed you $1,000,000, and you gave me 15, 20, 30, 40, or 50 years to pay, at a very low rate of interest. You or your successor would expect me, or those who follow me, to pay it.

Mr. SIMONDS. Exactly. But that has not anything to do with the foreign question.

Senator SHORTRIDGE. Why not? I see no difference at all. They are sovereign nations, obligated to make certain payments.

Senator KING. Mr. Simonds, we have a bankruptcy bill in the Senate which we may take up this afternoon, which provides that men who have made solemn contracts to pay their obligations in gold at the present weight and fineness, may be relieved of those obligations. We recognize their inability to pay, and we are providing a means by which they may escape payment by going before a court and, under certain procedure, their debts will be reduced, if not absolutely canceled. If the philosophy which is being contended for is immoral for a nation that is bankrupt, would it be immoral for Congress to pass this bill to aid the distressed debtors of the United States?

Mr. SIMONDS. If you can not collect, you can not collect.

Senator KING. That is all there is to it.

Senator SHORTRIDGE. I grant you, Senator, that is very thoughtful. If England or any one of those debtor nations should stand before the world and say they were bankrupt, and wanted to go through bankruptcy, it is conceivable that morally they might be relieved and that we might cancel the debt. But they do not take that attitude—not at all.

Senator GORE. Mr. Simonds, you say we are not collecting, and they are not paying. That is true; and I do not fancy for a moment that they ever will pay. I do not think they ever will pay.

Mr. SIMONDS. The point is, is it better to cancel or is it better to let them repudiate?

Senator SHORTRIDGE. I do not think they will dare to stand before the world and repudiate.

Senator GORE. I think they will, Senator. I do not think they will pay, and if they repudiate the situation would be the same. They would not be paying in either contingency, but it might affect their credit in the future, so that easy marks like the United States would not advance credit in such large amounts.

Mr. SIMONDS. In the first place, Senator, I think that that would not last very long. For example, in the matter of Russia, France loaned Russia billions of dollars before the World War, and lost it all in Russia, and is now prepared to lend to countries in the same situation, or even to lend money to Russia again. I do not think that lasts very long.

My impression is, very strongly, that the only question that remains about the debts at the present time, is the question of whether the debtors can persuade us to cancel, or whether, as a choice between another payment and default, they will default. No more money will ever be paid on the debts, except what we lend.

Senator SHORTRIDGE. That is what France said a long time ago, but there was then, thank God, an Andrew Jackson, and he said to France, in the end, " You pay," and France paid. You remember that, do you not, full well? If we had another Andrew Jackson to-day—I wish to God we had—we would not hear so much quibbling and talking about not paying that debt.

Senator HARRISON. This is a very admirable statement you have given to the committee, because of your great knowledge on this question from an international standpoint. Let me ask you, if you were in the position of President elect Roosevelt, or anyone else here that was going to negotiate upon this proposition, and try to effect a settlement on it and come to some terms of agreement that would meet the approval of the American people, with your knowledge of the sentiment in America, against cancellation, or any great modification of it, what would you suggest? What kind of trade could we make?

Mr. SIMONDS. I do not think any trade can be made, Senator.

Senator HARRISON. You do not think anything can be done? It is just a question of cancellation or repudiation?

Mr. SIMONDS. If the Senator will permit me, the situation is very nearly on all fours with the situation in respect to the French people and reparations. The French people set out to collect their reparations, firmly convinced that they had a moral claim to them. No government, no prime minister, and nobody during a period of 10 years could have lived who endeavored to tell the French people that they could not collect. They went so far—Poincare being another Andrew Jackson—as to occupy the Ruhr, but, occupying the

Ruhr, they did not get any money. All last summer, at the time of the conference of Lausanne, the French people at last realized that they could not get money. They could not get tariffs. They could not get securities, and then the public sentiment of France, recognizing the impossibility, the Government of France was told to make a realistic settlement, which was a practical cancellation, without any promise that amounted to anything about a return, because, if you will remember——

Senator SHORTRIDGE. You draw a distinction between a demand for reparations and a bona fide equitable debt, do you not?

Mr. SIMONDS. The Senator asked me about giving the American state of mind. The French state of mind in connection with reparations was identical with the American state of mind. The French Government was unable to do anything until at last the French people appreciated that, while to their minds those were sacred claims, they could not by bayonets, they could not by threats, they could not by politics, get anything out of it, and so finally, after 10 or 12 years, you had the agreement of Lausanne, which recognized the impossibility of collecting the debts.

Senator HARRISON. You do not think, then, that in the negotiations you could get England to agree to take a certain percentage more of some of our raw products that they need, which are produced here, such as cotton, for instance, or some percentage more of our wheat, of which we have a surplus, or some other products, which I might enumerate, and agree upon their part to make certain agreements with reference to their going back upon the gold standard, involving the stabilization of exchanges, and some payment, probably, in silver? You do not think that we would get anywhere upon any such proposition as that?

Mr. SIMONDS. You made two propositions, one about the tariffs, and one about the gold standard.

Senator HARRISON. I am just trying to get your viewpoint, as to whether or not there is any basis for a meeting of minds.

Mr. SIMONDS. Suppose, for example, the British do make certain tariff concessions that would allow us to sell more wheat, and so forth. It is still necessary for the British to get the necessary American exchange to pay for that.

Senator HARRISON. But if they get back upon the gold standard——

Mr. SIMONDS. If they go back on the gold standard, Senator, for the time being, they will sell less, not more, because they will lose this advantage that they now have.

Senator HARRISON. They would probably sell less.

Mr. SIMONDS. As to the gold standard, when our representatives go to talk with the British, the British will say, "The question of the debt was not responsible in any degree for our going off the gold standard, because at the time we went off the gold standard we were receiving, in reparations and our other debts, what we were paying you. We were driven off the gold standard by something quite different. Therefore, now to cancel the debt would not in any degree protect us against the things that drove us off before."

Therefore, in the matter of tariffs, when you come to discuss tariffs, the British, French, and everybody else would say, "Yes, let us talk tariffs, but it must be a reciprocal concession."

When you come to the question of the gold undoubtedly the United States will be asked to associate itself with France in guaranteeing to sustain England on the gold standard if she is again assailed and finds herself in a difficult situation.

Senator GORE. And if we get a tariff concession from Great Britain, so that more of our goods could go in there, we would have to admit more of her goods into this country to pay for them.

Mr. SIMONDS. Certainly. With reference to practically everything that you admit, you are then up against the domestic question. What they pay us now is for what they take. You would have to make new business on both ends, not on one side. If you made new business here, you would have to make new business to pay for it.

Senator HARRISON. In this country, for instance, we are trying to restrict the production of cotton. We believe that is one of the ways to stabilize the price of cotton. We have too much of a surplus. Could not England use its good offices in some of the other countries with reference to the restriction of their cotton, so that they might take a little more of ours?

Mr. SIMONDS. They could not do that. To give you one example, the French are engaged down in Senegal trying to start a cotton industry of their own. There is nothing the British could do to persuade them to do it.

Senator HARRISON. It seems, from your viewpoint, that we would have to give everything up, and get nothing in return.

Mr. SIMONDS. Senator, the point I have tried to testify to was the fact that so far as I have yet been able to see, no one has found a means for taking payment on a debt, because none of them want to pay the taxes themselves. I have not tried to testify that I believe in cancellation. I have tried to testify that it seems to me that until we make up our minds whether we are going to cancel or make the changes in our own system that would permit us to collect, this great obstacle to talk about anything else is there. I do not believe there will be an enormous recovery when the debts are removed, and I do not believe there will be any effect from talking about it until this obstacle is removed.

Senator KING. You have expressed your view as to the payment of debts by European nations. I suppose you referred to public debts, and not to private debts.

Mr. SIMONDS. I do not remember the connection in which I spoke, Senator.

Senator KING. My recollection is you said you did not believe that European nations would pay their debts.

Senator HARRISON. Foreign debts.

Senator KING. Pay their foreign debt to the United States. You referred to the debts which the nations owed the United States, and not the debt which individuals owe.

Senator HARRISON. The war debts.

Mr. SIMONDS. Senator, I do not think there is any difference. You have to invent some means of taking payment on your private debt, just as on your public debt.

Senator METCALF. Was there not a banker who came back a few years ago from Germany who said that our Government had to give up its debt so the private debts could be paid?

Mr. SIMONDS. Giving up the governmental debt will not contribute the least bit to collecting the private debts—not the slightest degree. Both of them can be paid only in goods.

Senator KING. As you know, a number of the cities of Germany have floated their bonds in the United States, and those bonds have been purchased, in the main, by private individuals.

Mr. SIMONDS. Yes.

Senator KING. Do you include, in your expression of your belief that the European debts will not be paid, the debts due from the municipalities to individuals who hold their bonds?

Mr. SIMONDS. With this qualification, Senator: I said I did not think they would be paid unless the United States provided some method of receiving; and in that I referred to everything, private and public, municipal and everything else that there is now standing to our account in Europe.

Senator KING. I understand that we have loaned probably two or three billions to European private corporations and individuals.

Mr. SIMONDS. We have two and a half billion in Germany alone. Some of that is municipal, and some of it is industrial, but it is all there.

Senator KING. Then, you include in the category of nonpayment, not only public debts, but private debts?

Mr. SIMONDS. Everything that we do not, Senator, by some action of our own, provide a method of receiving. The whole problem, as I see it, is the problem of receipt.

Senator GORE. We have to be paid in goods or in gold. They have not the gold, and we will not let them send the goods in.

Senator SHORTRIDGE. What is the difference, Mr. Simonds, between these two suggested situations? Let us say that a municipality in Germany issues bonds which are sold in America, and are now held in America; and a municipality in California issues its bonds, which are held by the citizens of the State of New York. Is there any difference in the matter of payment?

Mr. SIMONDS. A complete difference, Senator. There is no resemblance.

Senator SHORTRIDGE. Where is the difference? Does the intervening water make the difference?

Mr. SIMONDS. The intervening water in the money would.

Senator SHORTRIDGE. I grant you that. The debtor must find the money with which to pay the creditor, whether they be divided by a continent, or an ocean.

Mr. SIMONDS. The division has nothing to do with it, Senator.

Senator KING. They have free trade between California and New York, do they not?

Mr. SIMONDS. The American dollar has to be purchased by German money before the German can use it to pay his bills. If he tries to buy it with German money, the result would be to lower the value of the German money, so the German money will be steadily going down, so fast that he can not ever get the American money to pay.

Senator SHORTRIDGE. When the German municipality issued its bonds and sold them to American citizens, it carried the promise to pay, did it not?

Mr. SIMONDS. Every borrowing carries the promise of the borrower to pay.

Senator SHORTRIDGE. At what juncture does the debtor have the right to talk about tariffs, or anything else?

Mr. SIMONDS. At the time when he is no longer able to pay, as the Senator said about the western situation.

Senator SHORTRIDGE. Oh, of course, if a given nation goes bankrupt and takes advantage of some international bankruptcy law, and becomes relieved from its obligation, that is one thing.

Senator KING. Is a nation bankrupt when it is producing large quantities of commodities for consumption by its own people; when it produces, likewise, large quantities of commodities which it has been in the habit of exporting, and from which it derived a profit, and all at once its export trade is absolutely cut off? It desires to trade. It has outstanding obligations with other countries. It can not get the gold exchange to pay the obligations. It has no gold. It has the same houses, the same lands, the same internal wealth as it always had. It is not bankrupt, is it? It may not be able to get the gold to pay.

Mr. SIMONDS. Only in the sense, Senator, that we have a new situation. We have not a new word, so we use the word "bankruptcy."

Senator HARRISON. Thank you very much, Mr. Simonds.

The committee would like to have an executive session at this time.

(Whereupon, at 3.55 o'clock p. m., the subcommittee went into executive session, at the conclusion of which an adjournment was taken until to-morrow, February 22, 1933, at 10 o'clock a. m.)

# INVESTIGATION OF ECONOMIC PROBLEMS

**WEDNESDAY, FEBRUARY 22, 1933**

COMMITTEE ON FINANCE,
*United States Senate, Washington, D. C.*

The committee met, pursuant to adjournment, at 10 o'clock a. m., on Tuesday, February 21, 1933, in room 335, Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Watson, Shortridge, Couzens, Metcalf, Harrison, King, Walsh of Massachusetts, Barkley, and Gore.

The CHAIRMAN. The committee will come to order. We will first hear Mr. Aldrich.

## STATEMENT OF WINTHROP W. ALDRICH, CHAIRMAN OF THE GOVERNING BOARD AND PRESIDENT OF THE CHASE NATIONAL BANK OF NEW YORK

The CHAIRMAN. Mr. Aldrich, will you give your name to the committee?

Mr. ALDRICH. Winthrop W. Aldrich.

The CHAIRMAN. The position you hold?

Mr. ALDRICH. Chairman of the governing board and president of the Chase National Bank of New York.

The CHAIRMAN. You may proceed, Mr. Aldrich.

Mr. ALDRICH. Mr. Chairman: I am glad to appear before you in response to your invitation, not because I have any panacea to present, but because I think it eminently desirable that there should be frank interchange of opinion between those who are charged with responsibility for government and those who are charged with responsibility for finance and for other phases of the economic life of the country. It is in some ways unfortunate that the political capital and the financial capital of the country should be separated. Misunderstandings between the financial community and the Congress have created many needless difficulties. I feel sure that much of this misunderstanding would pass away and better cooperation would exist if we knew one another better personally and had the opportunity of talking more frequently and frankly with one another.

I understand that you wish me to present my views as to proper remedies for the present economic trouble. In order to do this it is necessary that I should first undertake to diagnose the situation, and I will ask you to bear with me, therefore, while I present something of the history of the events which led up to the existing situation. This will introduce the presentation of the remedies which I shall venture to propose.

CAUSES

The present depression has, of course, many features of preceding depressions. Any period of intense financial and business activity develops stresses and strains and maladjustments which compel liquidation and reaction. But the unprecedented severity—absolutely unprecedented as far back as good statistical records go—of the present depression, and the slowness with which the automatic restorative forces have worked, must be found in certain unprecedented circumstances which have preceded it. These are, I believe, as follows:

First. The immense shift produced by the war in international debtor and creditor relations, and, very specially, the great shift of the United States from a debtor to a creditor nation.

Before the war we owed Europe a great deal of money, represented largely by American stocks and bonds held abroad. During the war we repurchased most of those and we bought a great many European securities. Finally, following our entrance into the war in 1917, our own Government advanced roughly $10,000,000,000 to our European allies.

Before the war we paid interest and amortization on our debt to Europe by sending out an excess of exports over imports. In general, the normal thing for debtor countries is to have an excess of exports over imports, and for creditor countries to have an excess of imports over exports, or a so-called "unfavorable" balance of trade. England before the war regularly received about a billion dollars more imports than she sent out in exports, the difference being covered by her interest on foreign investments, her shipping services, banking services, and other items. France regularly received about half a billion dollars more a year than she sent out in goods. Germany, the Netherlands, and Switzerland all had import surpluses or unfavorable balances of trade, because the rest of the world, debtor to them, paid them in goods. The logical expectation following the war was that countries formerly creditor and now debtor would send out an excess of exports, and that countries formerly debtor and now creditor would receive an excess of imports.

Second. One of the worst legacies of the war was the existence of the intergovernmental debts, and especially the reparations. These debts involve both a budgetary problem and a transfer problem.

The budgetary problem is the problem of raising the money that has to be paid in the foreign government through taxation or other means in the debtor country, and in the currency of the debtor country. As all the principal debtor countries, very especially Germany, had exceedingly high taxes anyhow, taxes running far beyond anything we have experienced in the United States, the additional pressure on their budgets of raising the money for intergovernmental payments was very severe. This was softened for England, and eliminated for France, so long as Germany paid reparations. In the case of Germany herself, however, the pressure was so great as really to be endurable only in times of very active business, and it was a major contributing factor to the fiscal deficit which was so embarrassing to Germany in late 1928, in 1929, and in subsequent years. The existence of the huge reparation debt, moreover, greatly lessened the credit of the German Government, so that it was unable to make much use of the resource which a great government usually can use in times of depression of borrowing to fill in the gap between its revenues and its expenditures.

The CHAIRMAN. Mr. Aldrich, can you tell us whether France paid England on the amount that she owed England for war debts an amount equal to what England paid us?

Mr. ALDRICH. Doctor Anderson?

Mr. BENJAMIN M. ANDERSON, Jr. (economist of the Chase National Bank). The question is: Did France pay England?

The CHAIRMAN. Yes. Do you know how much France has been paying England on the French debt to the English Government, which was about $4,000,000,000?

Mr. ANDERSON. I have not the exact figures. I would be very sure that it was less than the British paid us.

The CHAIRMAN. It was less than the British paid us?

Mr. ANDERSON. It was less than the British paid us.

The CHAIRMAN. That is as I understand it, but I did not know but that you had the figures.

Mr. ANDERSON. I can get them for you, Senator, if your wish them.

The CHAIRMAN. I wish you would.

Mr. ANDERSON. Yes, sir.

Mr. ALDRICH. The other problem involved in intergovernmental debt payments, as in all international payments, is the transfer problem, the problem of exchanging the domestic currency for the foreign currency in which the debt payments have to be made. A debtor country can make payments in the currency of the creditor country to the extent that it can send out a surplus of exports over imports, or can entertain foreign tourists or can perform shipping services, and so forth, or to the extent that it can borrow foreign currencies, the latter being, of course, not a real solution but merely a deferment of the problem.

If there had been adequate freedom of movement of goods from country to country, the debtor countries could have solved this transfer problem by sending out goods. But the existence of the reparations and other intergovernmental debts was a great factor contributing to international fears regarding the movement of goods, and intensified the widespread policy of tariffs and other trade restrictions which the world has been engaging in on an increasing scale since the war. During the period when bank credit was expanding rapidly and foreign loans were placed easily, transfers were made without difficulty. But when there came a sudden cessation of foreign loans and debtor countries were suddenly called upon to pay, the problem of transition was a grave one. Germany herself did make the transition in 1929, and began to send out more goods than she took in, and some other countries made heroic efforts along these lines. But almost immediately a movement began to stop this by further trade restrictions and when we ourselves raised our tariffs still higher in 1930 there came a very general and widespread intensification of trade restrictions throughout the world. Tariffs are not the only, or even the worst, trade barriers. Quotas, vexatious inspections, exchange controls, and many others can be even more restrictive. The payment of intergovernmental debts became increasingly difficult, although they were continued down into the summer of 1931.

Third. Our own high protective tariff policy inaugurated in 1922, preceded by some increases in 1921, prevented our foreign debtors from sending us goods in adequate amount to pay interest and amortization on their debts and at the same time buy our exports in accustomed amount. This tariff policy would promptly have checked our export trade but for the extraordinary financial development next listed.

Fourth. The gigantic and unprecedented expansion of commercial bank credit in the United States from the middle of 1922 to early 1928, amounting to fourteen and one-half billion dollars in loans and investments and thirteen and one-half billion dollars in deposits, accompanied by great expansion of bank credit in many parts of the world. This expansion was due (*a*) to gold coming to us from other countries which were off the gold standard, and (*b*) to cheap money policies of the Federal reserve banks, both of which operated to create excess reserves in the member banks, with the resultant multiple expansion of member bank credit.

Perspective on the figures for expansion given above is gained by recalling that the expansion of bank credit required to win the war, from early 1917 to the end of 1918, was only 5,800,000,000 in deposits, and 7,000,000,000 in loans and investments.

The vastly greater expansion in the period from 1922 to 1928 was not needed by commerce and was not used by commerce, and went into (1) real estate mortgage loans in banks; (2) installment finance paper in banks; (3) stock and bond collateral loans in banks, including loans against foreign stocks and bonds; and (4) bond purchases by banks, including foreign bonds. The consequences of this great expansion of credit, used in these ways, were, of course, excess construction, including road building, real estate speculation on a great scale, overexpansion of installment buying, and an immense overissue of securities including many ill-considered securities, but including also many others which would have been good if the total overissue had not been so great, the rapid multiplication of bond houses, investment trusts, and other financial machinery and a progressive deterioration in the quality of bank credit. The 25,000 banks of the country were not in a position to prevent this expansion and their managements were inevitably led into many mistakes in policy because of it. The control of the expansion was in the hands of the Federal reserve system.

One very important incident of this expansion was the masking of the difficulties of international debt payments, including interallied debts and reparations, and the maintenance of our export trade despite trade barriers.

Senator King. You mean by extending credit?

Mr. Aldrich. By extending foreign credit.

This was particularly true following the Dawes plan in 1924. The Dawes plan was accompanied by an immense government security buying program on the part of the Federal reserve banks. Following this came a tremendous volume of foreign loans which offset the influence of the high protective tariffs upon our export trade. We were able to get out, especially following the summer of 1924, a great volume of farm products and raw materials at good prices which restored, in a precarious fashion, the balance between agricultural and raw material production on the one hand, and manufacturing on the other hand, giving us active business while the foreign loans went on.

The following table, which I shall not read, Mr. Chairman, unless some of you gentlemen would like to have me do so, exhibits the relationship between American exports, foreign loans and agricultural prices. I might say that that table is for the years 1922 to 1932, inclusive, and this shows the trend of it.

In 1922 our exports were $3,832,000,000 and our imports $3,113,-000,000. Or an excess of exports of $719,000,000. And the new foreign securities issued in that year were $630,000,000. And the index of agricultural prices at the farm, the yearly average 1910 to 1914 being 100, was in that year, 1922, 124.

In 1924 this increase in new foreign security issues commenced and in that year we floated $1,047,000,000 of new foreign security issues. And for the next five years in each year we floated more than a billion dollars of such securities, and in the year 1927 we floated $1,562,000,000.

In 1928 our exports were $5,128,000,000, imports, $4,091,000,000, or an excess of exports to the extent of $1,037,000,000. And at that time the index of farm prices was 139 as compared with 124 in 1922.

After 1930 the foreign lending dropped down in 1931 to $255,000,000, and in 1932 to $26,000,000.

At the same time the exports dropped down in 1931 to $2,424,000,000 and the imports to $2,091,000,000, or an excess of exports of $333,000,000, and the agricultural price index at that time, in 1931, was 80 as against 136 in the year 1926.

In 1932 our exports were $1,618,000,000 and our imports were $1,323,000,000, an excess of exports of $295,000,000, and the index for agricultural farm prices was 57.

(The table is as follows:)

*American exports, imports, foreign loans, and agricultural prices*

| | Exports | Imports | Excess of exports | New foreign security issues | Index of agricultural prices at the farm yearly average 1910-14=100[1] |
|---|---|---|---|---|---|
| 1922 | 3,832,000 | 3,113,000 | 719,000 | 630,000 | 124 |
| 1923 | 4,168,000 | 3,792,000 | 376,000 | 267,000 | 135 |
| 1924 | 4,591,000 | 3,610,000 | 981,000 | 1,047,000 | 134 |
| 1925 | 4,910,000 | 4,227,000 | 683,000 | 1,078,000 | 147 |
| 1926 | 4,808,000 | 4,431,000 | 377,000 | 1,145,000 | 136 |
| 1927 | 4,865,000 | 4,185,000 | 680,000 | 1,562,000 | 131 |
| 1928 | 5,128,000 | 4,091,000 | 1,037,000 | 1,319,000 | 139 |
| 1929 | 5,241,000 | 4,399,000 | 842,000 | 759,000 | 138 |
| 1930 | 3,843,000 | 3,061,000 | 782,000 | 1,010,000 | 117 |
| 1931 | 2,424,000 | 2,091,000 | 333,000 | 255,000 | 80 |
| 1932 | 1,618,000 | 1,323,000 | 295,000 | 26,000 | 57 |

[1] Year Book of Agriculture, 1932, p. 902. Crops and Markets, January, 1933, p. 31.

Senator KING. Mr. Aldrich, that table does not accurately, does it, represent all of the credit and loans made to foreign countries?

Mr. ALDRICH. No, sir; it does not.

Senator KING. Because in some years the loans made to private individuals, to municipalities and to governments in Latin America and in Europe greatly exceeded the maximum figures indicated in your table.

Mr. ALDRICH. That is a fact. These are the foreign security issues as we get the figures. In addition to that there are all kinds of credits granted that are not in there. The credits by an American manufacturer to a foreign buyer. The volume of credit is probably very much greater than is shown there.

Senator GORE. Does this undertake to include short-time loans as well as long-time loans, or is this limited to long-time loans?

Mr. ALDRICH. It is long time chiefly. Mr. Anderson can answer that.

Mr. ANDERSON. It is the Commercial and Financial Chronicle's record of new foreign securities. There is some short stuff in there, but chiefly long stuff.

The CHAIRMAN. Mr. Aldrich, you will notice there that about the same proportion of imports to exports continues from 1922 down to 1932. In other words, last year the exports were $1,618,000,000 and our imports were $1,323,000,000. In other words, as our imports decreased so did our exports decrease.

Mr. ALDRICH. That is correct. The whole volume of foreign trade has been diminishing.

The CHAIRMAN. The whole volume. The world trade has shrunk, I suppose, in just exactly the same proportion as here?

Senator ALDRICH. Yes.

The CHAIRMAN. Not only, as shown in this report, that between America and Europe, but that of every other country in the world?

Mr. ALDRICH. Yes; that is correct. The barriers to trade are having their effect in a worldwide way, not only in this country, but generally.

Senator KING. As barriers were raised and new impediments and barriers were erected the export trade and the import trade diminished.

Mr. ALDRICH. That is right.

Senator KING. In this and the other countries.

Mr. ALDRICH. That is true in a worldwide way.

The CHAIRMAN. And that is true in every country in the world.

Mr. ALDRICH. I think that is true.

The CHAIRMAN. Their trade does not amount to what it was before.

Mr. ALDRICH. Yes; that is correct.

Senator KING. I think you might modify that by saying that China's export trade, because of her low purchasing power, because she is on the silver basis, has not suffered the diminution that other nations have suffered.

The CHAIRMAN. Well, she has had so little in the past.

Mr. ALDRICH. I will take up that question about China in connection with the silver discussion.

The CHAIRMAN. Very well. You may proceed, then.

Mr. ALDRICH. Fifth. In these three factors, then, (*a*) intergovernmental debts, (*b*) high protective tariffs and other trade barriers, increasing in severity throughout the commercial world, including high protective tariffs on the part of our own great country, which had suddenly become creditor on a great scale, and (*c*) six years of cheap money and rapid bank expansions, we have the main explanation of the unprecedented financial boom, the unprecedented financial break, and the unprecedented severity of the depression.

The CHAIRMAN. I think we would have felt it more, would we not, had we allowed further importations here do displace the goods that were manufactured in this country? Supposing the imports had increased $1,000,000,000 in 1932, making them $2,323,000,000, what would we have done with our exports?

Mr. ALDRICH. The thesis that I am making here, Senator, is this, that the present situation is a matter of lack of balance, fundamentally between the producers of farm products and other raw materials which enter into our export trade and are governed by world prices, and the production of manufactured goods by our industries.

The CHAIRMAN. In other words, if we had imported a billion dollars more of manufactured goods it would have——

Mr. ALDRICH. It would have increased our exports. That is what would have happened.

The CHAIRMAN. You think it would?

Mr. ALDRICH. Yes.

The CHAIRMAN. What would become of the employees in the industries that make the goods?

Mr. ALDRICH. It would make the purchasing power of these farmers and producers of raw materials increase to such an extent that the employees of manufacturing concerns would have been sustained on a much higher level than now. That is the thesis of this discussion.

The CHAIRMAN. I judge so up to the present time.

Senator GORE. Those imports, Mr. Aldrich, would have been paid for with our exports, and those exports would have given employment to American labor just the same as if they had produced the stuff that was imported?

Mr. ALDRICH. That is the point exactly. The increased purchasing power of the farmer and the producer of raw materials would have gone directly to the benefit of the producer of manufactured goods and would have increased our total trade above exports and imports.

The CHAIRMAN. In other words, if we could have made goods cheaper then of course we could have exported more goods.

Mr. ALDRICH. Well, we would have increased our domestic market at the same time.

Senator GORE. We would have had a comparative advantage in production.

The CHAIRMAN. Of course I would rather have our local market than rely upon a foreign market.

Mr. ALDRICH. Well, the thesis of this discussion on my part is that the local market is improved as you improve the condition of the farmer and the producer of raw materials to a point which more than counterbalances anything that may come in from abroad, and that our foreign trade is a unit; that the export and import sides must come together, and these totals show that they do come together.

Senator KING. You would not disagree with the statement made by Mr. Hoover when he was running for the presidency four years ago, when he said in his speech in New Jersey that our exports furnished employment directly to more than four and one-half million of laborers, and employment indirectly to more than two and one-half million more? And the statement of Mr. Chapin a few months ago in his report as Secretary of Commerce that even now more than 18 per cent of those gainfully employed in the United States were employed in furnishing exports to foreign countries?

Mr. ALDRICH. I should think that those statements were unquestionably true. But I have not examined the figures as to employment in that connection.

Senator KING. If we were projecting the tariff discussion into this we would be ready to discuss that now. That is not necessary.

The CHAIRMAN. No, not necessary; but now that you have brought it up, I would rather look after the 82 per cent than the 18 per cent.

Senator KING. In looking after the 82 per cent you have to look after all.

Mr. ALDRICH. Senator, I have got here a discussion of the meaning of this statement that has been made—I think it is on the authority of the Department of Commerce—that 10 per cent of our trade is foreign trade. And I expect to give you some figures here that will show that that is probably erroneous in itself and completely misleading when you come to consider the effect on the country. Not from the point of view of employment, but from the point of view of the commodities involved and the percentage of those commodities in foreign trade, and the distribution of those commodities in production over the country.

Senator GORE. It certainly is misleading, because over half our cotton goes abroad and a third of the country depends on cotton, and the rest of the country depends indirectly upon the prosperity of the cotton States. But I am getting ahead of you; you have that farther on in your paper.

Mr. ALDRICH. You are anticipating exactly what I am going to say.

Senator GORE. Yes. I believe it would br a good idea to let you finish your paper, as far as I am concerned.

Mr. ALDRICH. The next point, Sixth, is artictiial price maintenance.

An important secondary factor was growing interference with natural competitive markets in the period preceding 1929, partly governmental and partly by private organizations. The efforts to valorize wheat by holding movements went on on a great scale from 1926 to 1929. Through the activities of the Canadian grain pool and holding movements under government auspices in Hungary and elsewhere, the world's visible supply of wheat was nearly doubled between the summer of 1926 and the summer of 1929. In the autumn of 1929 our own Farm Board stepped in. The net effect of these efforts to maintain the price of wheat was merely to defer the facing of facts. Production held up more than it would otherwise have held up, consumption was checked, and surplus was accumulated. A similar policy, with a similar result, appeared in the case of copper, though the business interests responsible for the policy were quicker to recognize their mistake and quicker to change their policy than was our Government in the case of wheat.

Seventh. The cheap money policy of the United States was part of a policy of cooperation between the Bank of England and the Federal Reserve Bank of New York. The British believed that cheap money and expansion of bank credit was all that was necessary to get good business going again, and that it could be used as a substitute for industrial readjustments, including the scaling down of prices and costs.

Senator GORE. That was the English theory, wasn't it?

Mr. ALDRICH. Yes, sir. They have gone very far with that.

Senator GORE. Yes. The managed-currency school of philosophy.

Mr. ALDRICH. Yes.

Without the strength in gold which we had in the United States, they tried to force the policy through anyhow. They failed to get good business by this policy, but they did succeed in getting credit so overexpanded that when the acute pressure came in the summer of 1931 they found themselves in a frozen position and without adequate gold reserves, and abandoned the fold standard.

The last chance the world had to call a halt on the overexpansion of credit and on the speculation based on the overexpansion of credit without an unmanageable reaction was in 1927. I am informed that the Bank of France and the Reichsbank in Germany did try to tighten up then, Paris warning London that it was having to buy too much sterling, that easy money in London was financing speculation in the French franc and that the Bank of France, though reluctant to pull gold out of the London money market, would have to convert sterling into gold unless the process stopped.

The conference of governors of the central banks held in New York in the summer of 1927 had a very momentous decision to make. Represented there were the Bank of England, the Bank of France, the German Reichsbank and the Federal Reserve Bank of New York. The representatives of the Reichsbank and of the Bank of France are understood not to have made any commitment regarding policy at this conference except a promise to communicate their intentions with respect to taking gold from London and New York in the future. They left the country before the governor of the Bank of England did. Following this conference in the early autumn of 1927, a renewal and an intensification of the cheap-money policy of the Federal reserve system came. The rediscount rate was first reduced by the Kansas City Federal Reserve Bank, followed shortly by most of the others. Several hundred millions of Government securities were purchased by the Federal reserve system. Bank expansion moved rapidly, and almost all of it went into the securities market, either in the form of bank investments in bonds or in the form of collateral loans against securities. Shortly following this began a very intense speculation in securities, with rising security prices, which ran through 1928 and into the late autumn of 1929.

Senator GORE. Right there, Mr. Aldrich, one question. Was not the rediscount rate made lower than the market rate for money in 1927?

Mr. ALDRICH. All through that year.

Senator GORE. Becoming acute in the Chicago controversies, as to whether it ought to be reduced that low or not. I suppose that meant that the banks could get money at the Federal reserve banks at one rate and could lend it in the markets at a higher rate.

Mr. ALDRICH. Yes. And of course the open-market policy was forcing credits into the banks.

Senator GORE. Yes; anyway.

Mr. ALDRICH. Which they naturally attempted to use in the most remunerative way, at the most remunerative rate that they could, and they got the highest rates in the security market.

Senator GORE. And one of the points in that was to help England from going off the gold standard.

Mr. ALDRICH. Yes.

Mr. ANDERSON. Keep on the gold standard.

Mr. ALDRICH. Yes.

Senator GORE. And they accumulated gold to stay on it.

Mr. ALDRICH. Yes. Point 8 is the gold exchange standard.

Beginning in the middle of 1926, there came an extraordinary development in the substitution of balances in foreign banks, for actual gold in the central banks, as reserve money. The so-called gold exchange standard, as distinguished from the strict gold standard, and in the two years that followed this went very far. In particular, dollars borrowed in the United States through the flotation of bonds was used by foreign central banks as a substitute for gold——

Senator GORE. Repeat that last sentence.

Mr. ALDRICH. In particular, dollars borrowed in the United States through the flotation of bonds was used by foreign central banks as a substitute for gold, and funds borrowed in London in the form of sterling balances in British banks were similarly used as the reserves of continental banks.

You see, they had a bank credit in this country in dollars, and this country being on the gold basis they used that foreign exchange in dollars as gold reserve in lieu of actual gold reserve.

Senator GORE. Yes.

Senator KING. Of course that foreign exchange was available for the purpose of drawing gold from the banks.

Mr. ALDRICH. Yes.

Senator KING. So it was just a matter of bookkeeping.

Mr. ALDRICH. No; because it had the effect of increasing the expansion of credit in this country, because the gold remained there.

Senator GORE. They thought that some things were gold in those countries that did not glitter.

Mr. ALDRICH. Yes. You see, they were borrowing money and getting a bank balance in this country which they were using as part of their own gold reserve.

Senator GORE. Yes; which would have been all right if the dream had continued and had not turned into a nightmare, possibly.

Mr. ALDRICH. Yes, possibly. I doubt even that.

This permitted the credit expansion at home and abroad to go much further than if each bank had carried its own gold. It created a very dangerous situation, the extent of which we realized in the winter of 1931 and the spring of 1932.

Events began to move very rapidly in 1931. First, Austria was pulled down, then Germany, though repaying gigantic sums to her creditors, was finally obliged to ask for moratorium and stand still, and then the run on England's gold reserve began. The gold exchange standard on a great scale is only a fair-weather proposition. When doubt arises regarding the goodness of balances in foreign markets, and different countries seek to convert their balances into gold and bring them home, a very difficult situation is created. England and Germany were unable to meet this situation. We ourselves were so strong in gold that we did meet it. But the liquidation in 1931 and 1932 of the gold exchange standard, which had been built up by the overexpansion in 1926–1928, was one of the big factors in intensifying the present depression and making it as severe as it is. We must never let international short-term credit relations get overextended to this extent in the future.

Senator GORE. I would like to interject right there, Mr. Chairman: I was reading in an old Economist of a long time ago an article written in 1893, when this gold exchange standard was just in the offing, and the writer said that these countries were contemplating the establishment of a phantom gold standard in the name of a gold exchange standard. And that is what it turned out to be, did it not?

Mr. ALDRICH. Yes. If confidence is absolutely unaffected it looks all right.

Senator GORE. A glass ship will stand fair weather; it won't stand a storm.

Mr. ALDRICH. Yes, that is it.

### INTERNATIONAL COOPERATION OF CENTRAL BANKS

This leads me to an observation regarding proposals that there be international central bank cooperation designed to regulate commodity prices or designed to keep cheap money throughout the world in ordinary times, with a view to making world prosperity. The experimence of recent years surely justifies grave reservations on this point. Our efforts to cooperate with England from 1924 on, and especially in 1927, was very largely responsible for the excess of cheap money which has made us so much trouble, and, incidentally, created a world situation which meant a breakdown of central bank cooperation in 1931 and 1932, when the central banks of the continent tried, unsuccessfully, to withdraw their balances from the Bank of England, and did successfully withdraw their balances from us. I firmly believe that the best policy is for each central bank, including the Federal reserve bank, to look after their own money markets in ordinary times and to reserve international cooperation for special limited purposes, and for times of emergency.

I might say paranthetically that what I have in mind when I say special limited purposes is in the case where a country is about to return to the gold standard, where cooperation is needed to make them feel the confidence that is necessary during the period of time to do that. But ordinarily I believe that the central banks should look after their own affairs and not try to cooperate with each other in some artificial way.

This was the rule in pre-war days, and it was a good rule. Any country, in pre-war days, which was expanding credit too rapidly, was very likely to find its expansion checked as other money markets pursuing a more prudent policy began to take some gold away from it. Booms did not go so far, and setbacks were not so violent.

Ninth. The international scare in the autumn of 1931 and the spring of 1932 regarding the standard of value itself, the fear lest we and other countries should abandon the gold standard, precipitated the severest of all the troubles. No other fear so terrible as this. The countries of Europe which had had, during and following the war, such cruel experiences with depreciating and fluctuating currency, reacted to it in an extreme way. Our own people very generally trusted the American dollar, in view of our unbroken record since the end of 1878 in keeping the dollar good as gold, but even they could not escape the pall of fear which pulled down the volume of business in this country by almost one-third from the middle of 1931 to the middle of 1932, which brought the greatest percentage decline of all in security values, and which pulled railroad traffic from the levels at which the railroads' credit was good to levels at which the railroads' credit has been gravely shaken, and which intensified the problem of unemployment to an appalling degree. I shall refer again to this point in discussing "inflation" as a possible remedy for the present trouble.

X. BROKEN EQUILIBRIUM

Business life goes on well when different kinds of production are in good balance, different types of goods being produced in right proportions, so that the sale of one kind of commodity produces income which can be used to purchase other commodities, so that goods can clear the markets of one another. The gravest effect of the breakdown of international trade, in the United States as in many other countries, is to throw out of balance the different kinds of production. At the present time nearly every country is geared up to do more export business than it can do under existing conditions, and has an undue percentage of its labor and resources directed toward foreign markets.

Every country is faced with the necessity of a radical shift in its activites, reducing its activities for export and increasing its activities for internal consumption, unless the trade barriers can be reduced and the foreign markets restored. In the United States, this means especially that agriculture and other raw-material production are greatly overexpanded in relation to manufacturing, which has meant so great a break in the prices of agricultural and raw-material commodities that the producers of these things can not buy even the relatively scant present output of the factories at prevailing prices. The balance among industries must be restored, and the only quick and sure way to do this is to restore the export market.

The importance of foreign trade in our economic life has been questioned on the basis of certain estimates by the Department of Commerce, which made foreign trade 9.9 per cent of the production of movable goods in 1927, and 9.8 per cent in 1929.

I must say first, that these figures of the Department of Commerce do not seem to me quite correct. In figuring the total of movable goods they have taken account of agricultural products, mining products, and value added by manufacture, which is right, and then they have added to the totals railway freight receipts, which I think is wrong when we are seeking a total to compare with exports. If we are going to consider freight receipts at all they should be divided between export business and domestic business and allowance should be made for the longer haul in the export trade. Further, the department should consider shipping and other items. But I think the simplest and best way is to consider merely goods produced and goods exported. When this is done the percentages rise somewhat, standing at 11.2 per cent in 1925, 11 per cent in 1927, and 10.8 per cent in 1929. I have before me the table which I shall put into the record, without reading, using the Department of Commerce figures but eliminating the freight receipts.

The table is as follows:)

*Production of movable goods and proportion exported (freight receipts eliminated)*

[Millions of dollars]

| Year | Agricultural products | Manufactures | Mining | Total | Exports United States merchandise | Per cent of total |
|---|---|---|---|---|---|---|
| 1899 | 3,355 | 4,831 | 600 | 8,786 | 1,253 | 14.3 |
| 1904 | 4,262 | 6,179 | 850 | 11,291 | 1,426 | 12.6 |
| 1909 | 6,472 | 8,385 | 1,238 | 16,095 | 1,707 | 10.6 |
| 1914 | 8,165 | 9,710 | 1,450 | 19,325 | 2,071 | 10.7 |
| 1919 | 17,677 | 24,809 | 3,158 | 45,644 | 7,750 | 16.9 |
| 1921 | 10,268 | 18,332 | 2,900 | 31,505 | 4,379 | 13.9 |
| 1923 | 12,382 | 25,850 | 4,300 | 42,532 | 4,091 | 9.6 |
| 1925 | 11,938 | 26,778 | 4,100 | 42,851 | 4,816 | 11.2 |
| 1927 | 11,616 | 27,585 | 4,000 | 43,201 | 4,759 | 11.0 |
| 1929 | 11,911 | 31,885 | 4,100 | 47,896 | 5,157 | 10.8 |

Source: Foreign Trade of the United States—Department of Commerce, 1931, p. 11.

Mr. ALDRICH. But I do not rest the argument on this percentage. 11 per cent of our total business is a big percentage, but the percentage of many highly important individual products is enormously greater. The following table shows the percentage of various important exports exported in 1929:

| | Per cent | | Per cent |
|---|---|---|---|
| Cotton | 55 | Gasoline | 14 |
| Tobacco | 41 | Typewriters | 40 |
| Lard | 33 | Printing machinery | 29 |
| Wheat | 18 | Sewing machines | 28 |
| Copper | 36 | Agricultural machinery | 23 |
| Kerosene | 35 | Locomotives | 21 |
| Lubricating oils | 31 | Passenger automobiles | 14 |

(Source: Moulton & Pasvolsky's "War Debts and World Prosperity," p. 409.)

Senator GORE. Some of those commodities represent whole industries too.

Mr. ALDRICH. Yes. I was about to say, not even these percentages, however, tell the whole story. For important great areas, the dependence on foreign markets is even greater. Bright tobacco in Virginia, and cotton in Texas, are cases in point. You can prostrate a whole State when the foreign market for its principal crop is cut off. No percentages can take adequate account of the organic interdependence of foreign and domestic business.

Senator GORE. I think there is one step further. Take this tobacco industry in Virginia. All the creditors of Virginia in New York and other markets are all directly affected by this shrinkage of the tobacco business in Virginia. Take the creditors of Texas, the bankers, the merchants, and the manufacturers in Texas that sell to the cotton farmers. They are all directly involved in this. There is a direct reaction.

Mr. ALDRICH. I agree with you.

Senator GORE. So with the wheat farmers and the copper producers.

Mr. ALDRICH. The whole country is an economic entity and a community, and if large sections of the country are in a condition where they have lost their purchasing power and can not pay their debts, obviously the country as a whole is very seriously affected, including the producers of manufactured goods.

159450—33—PT 5——2

Senator GORE. I think old Gregory King about 1680 figured out that one-tenth increase in supply would cause a fall in price of three-tenths. You see those ratios are not even. The fall in price is out of proportion to the increase in surplus.

Mr. ALDRICH. There is no doubt at all but what the prostration of these large sections of the country by reason of the loss of their export markets has an effect which it is impossible to exaggerate in the economy of the country as a whole.

## REMEDIES

I think that the foregoing analysis of the major causes of the present situation will justify my proposals as to remedies. Some of them I shall list briefly.

I. Prompt settlement of the interallied debts.

II. Prompt reciprocal reduction of tariffs and the moderation of other trade barriers.

The CHAIRMAN. In your remedies you say, first, prompt settlement of the interallied debt. Have you any idea that you would like to express to the committee as to how those settlements should be made?

Mr. ALDRICH. I have ideas about it, but I do not think it is appropriate to express them just at the moment when the whole thing is going into negotiation. I would say this, Senator, that I do not want to put any emphasis on these things by reason of the numerical way that I list them.

The CHAIRMAN. Well, I did not take it as such.

Mr. ALDRICH. They are all part of one problem.

These two things are basic to the restoration of our export trade, which, in turn, is basic to the restoration of balance in our own economic life, so that our farmers and other producers of raw materials, receiving good prices for their products, may be able to buy the products of our factories in adequate volume, restoring activity and employment in the cities and restoring an adequate volume of traffic for the railroads.

III. While these basic measures for restoration of normal activity are being put through, I would continue a policy of emergency credit relief, making use of the Reconstruction Finance Corporation. We must face the fact, however, that not all of the existing fabric of capital debt can be maintained in full. There are important cases where the capital structure is top-heavy, and where it is desirable to scale it down to conform to the existing facts. The Reconstruction Finance Corporation should not be called upon to validate capital structures which can not be maintained even when we get a moderate business revival. Instead, we should scale down fixed charges in a good many important cases. It is good credit policy to tide over in emergencies solvent institutions whose total assets exceed their total liabilities, but it is not good policy to undertake to validate the really inadequate assets of insolvent institutions.

Senator GORE. That is binding up the wound that is gangrenous, is it not?

Mr. ALDRICH. Absolutely. We must face the fact. We have lived too long in a state of illusion.

To facilitate reorganizations, the new bankruptcy legislation, that relating to corporations as well as that relating to individuals, should be enacted as soon as possible.

IV. I would extend emergency credit relief to the farm-mortgage situation, and also to certain city-mortgage situations when, in the judgment of the Reconstruction Finance Corporation—I mention that because it seems to be the instrumentality which is handling the matter—a general financial interest is involved. In connection with farm-mortgage relief—and in fact any credit relief—I would make every effort to deal with intelligent discrimination with individual cases, seeking to bring debtors and creditors into agreement with one another, seeking to limit the Government's financial commitments to what is necessary to persuade creditors to make the necessary adjustments but still doing the thing in a big enough way to make sure that an honest and competent farmer doesn't lose his farm. It is to the interests of the country and to the interests of the creditors, by and large, that that farmer, who, with his family, knows the farm, knows its potentialities, knows his local markets and has the home lover's interest in the farm, should be able to stay upon it and to control it.

I think that also applies to the home owner generally.

I think we ought to avoid sweeping legislation making a general rule for every farmer. There are some farm mortgages which are perfectly good, where the farm debtor is able to pay interest and amortization, where he needs no relief, and there is no reason why the contract should be altered. There are other cases where he needs a great deal of relief. The same thing is true in connection with city mortgages and other debts.

Senator GORE. Right there I want to get this in the record. I had a letter from a prominent insurance company the other day in which they said that only 15 per cent of the farm mortgages were really distress cases.

Mr. ALDRICH. I was talking to a banker the other day from the Middle West, and he gave me these figures, which he gave me from memory, and I have not got a memorandum of them, but I have great confidence in the gentleman and I think they are probably approximately accurate. He said that the farms owned by individuals are encumbered in the State which has the highest average of that kind to the extent of about 59 per cent in number of the farms. That is in the highest State, which would be in Iowa or some State like that.

Senator GORE. Yes, Iowa is the worst. That is the plague spot.

Mr. ALDRICH. Yes. That the average is less that that. That it is something over 50 per cent. That is to say that of the farmer-owned farms, 59 per cent is the highest percentage in any State of farms that are mortgaged. That of that 59 per cent, not over 50 per cent are in difficulties. Even in the worst States. That the average is somewhat lower. He would put the average of farm mortgages in difficulty as between 25 and 27 per cent.

Senator GORE. That is of the toal farm mortgages. The figures I had I believe related to all farms. Fifteen per cent of all farms represented distressed mortgagors.

Mr. ALDRICH. Yes.

Senator GORE. Which would make it work out about the same as yours.

Mr. ALDRICH. Yes. It would work out about that, yes. An he also pointed out that of the mortgages that were in distress a large percentage were not first mortgages. They were second mortgages. But the distress was caused by the liens on farm equipment which the farmer had bought, or other expenditures that he had made other than in connection with the purchase of his land. Of course that does not help the farmer any, but that is the fact. It simply illustrates the necessity of dealing with these cases on an individual basis.

Senator GORE. Theoretically that is true, Mr. Aldrich, and it would make the problem much simpler. But when a Government comes to deal with it, and men who have to get elected to office have to do with it, and they say that John Doe is entitled to have his mortgage burden ameliorated but Richard Roe is not, Roe is going to vote against the fellow that says that.

Mr. ALDRICH. I am getting rather beyond my depth I think, in talking about farm mortgages, but——

Senator GORE. I agree with you that there ought to be discrimination in the handling of this thing, but when it comes to the question of constituents that want favors I am not so certain that this discrimination will prevail.

Mr. ALDRICH. I would say that the sound way to handle the situation is to get right straight behind the farm loan banks. I have been told by people who know a great deal more about the situation than I do that the farm loan banks are handling the problem with great discrimination and wisdom.

Senator GORE. I think they were doing that until Congress appropriated $125,000,000, subscribed for new stock, setting aside $25,000,000 for extension purposes, and after that the bank presidents tell me that the good and the bad sought extensions and sought favors. It multiplied the demand for leniency. I knew that would happen. It could not be otherwise. That illustrates the evil.

Mr. ALDRICH. Of course the next two sentences I am going to read here——

Senator GORE. I beg your pardon for interrupting you. I apologize to you and the committee.

Mr. ALDRICH. I am only mentioning that because of the fact that this brings up a point that I am just going to cover.

Senator GORE. Proceed.

Mr. ALDRICH. I have said that these things should be treated on a case basis. Such relief as is given should be given to embarrassed debtors and not to debtors as a class. We must protect the commercial morality of the country in the interests of the future giving and taking of credit. We must seek to be fair to creditors as well as to debtors. If we establish a precedent of allowing men who are perfectly able to pay their debts to escape from them in part merely because other men are unable to pay their debts in full, we shall strike a very severe blow at the fabric of confidence in the future.

Now the worst thing for the credit of the farmer in the future that could possibly happen is to have the men who can pay their debts not obliged to pay them because of the fact that other men can not. We must discriminate to protect the creditor so that we do not destroy credit in the future. In fact the most important thing in this whole situation is to preserve the credit structure of this country.

Senator GORE. We are complaining here that banks will not extend credit, and other people who have money will not extend credit on the one hand, and on the other hand we are preparing to make it impossible for them to collect what they already have out, and that accounts for the necessity of the Government entering into the credit market and extending credit to everybody.

Mr. ALDRICH. Senator, I believe that if we are left alone in this situation to deal with these cases on an individual basis, that the wisdom and fairness of the creditor class of this country can be depended upon not to destroy the farm fabric or the home fabric of the country.

Senator GORE. You think the creditors would finally face the fact that they have suffered a loss, and would treat that loss as a fact?

Mr. ALDRICH. They have got to do it.

SENATOR GORE. They ought to do it.

Mr. ALDRICH. As a matter of fact, they will, on this basis, that if a man can not pay, he has got to be given accommodation which will enable him to pay, and still continue him on the farm if he is an honest man who desires to pay his debts. It seems to me that is the test, from the point of view of the creditor.

Senator GORE. I think you are right. If the committee will indulge me for a minute, I tried to work out a scheme of that sort, to get the 14 big insurance companies that hold most of the farm mortgages to agree on some sort of plan under which the Government would issue a Federal charter to these insurance companies as a sort of holding company, and let them turn their notes and mortgages over to this company, extending the time of payment, converting short-time farm loans into long-time farm loans, and letting the present interest rate, which is comparatively high, cover both interest payments and amortization in future.

I got this answer: They do not seem to be disposed to take these losses as facts, and they said they had four sorts of securities outstanding: Government securities, railroad securities, utilities securities, and farm mortgages, and that they had stipulated to earn, say, 4.60 for their policyholders. Their Government securities yielded about 3 per cent; the railroad securities, 4¼; the utilities 4.60, what they had stipulated to earn, and they told me that they had to preserve these 6 per cent farm mortgages in order to lift the average of the four up to the point where it would meet the obligations of their contracts with their policyholders, which I inferred to mean that they would not take the loss on these farm mortgages as a fact, because they are not getting the money from these farmers, and they are not going to get it. It is a loss which has been sustained, and much of it will never be recovered.

I just throw that in to show their reaction.

Mr. ALDRICH. My recollection is, Senator, that the last statement of the Metropolitan Life Insurance Co.——

Senator GORE. They do not have many farm mortgages.

Mr. ALDRICH. They do not have many farm mortgages.

Senator GORE. Very few.

Mr. ALDRICH. But I think the farm mortgages they have are probably of a similar character to other farm mortgages. Their statement showed that less than 2 per cent of those farm mortgages were in the process of foreclosure. Therefore, it would indicate that they had not been putting pressure on the farmer, which would result in his being taken off the land.

Senator GORE. They have a very small percentage of farm mortgages, and may be dealing with them very reasonably. They may all be.

Mr. ALDRICH. I think they are. Doctor Anderson is more familiar with the farm problem, because he has been out there. Don't you think that is a fair statement, Doctor, that they are dealing with this situation fairly?

Mr. ANDERSON. The local creditors are dealing with it very realistically, as far as I could judge from Central Missouri, where I know the situation best, from studying individual cases. Outside lenders are not quite so realistic, but in the case of the Metropolitan, to which Mr. Aldrich refers, I am told by the chairman that they are studying very closely the individual cases. In regard to the matter of going into a combination of 14 insurance companies, the Metropolitan would probably prefer to handle each case itself.

Senator GORE. That is one of the companies that I not only wrote to, but visited in person to discuss the matter.

Mr. ALDRICH. I now come to the subject of inflation.

My view is that we shall get out of this depression by removing its causes. The chief of these is a broken equilibrium, growing out of strangled international trade. This has made raw materials and farm products pile up unsold in the United States, even though offered at very low prices, and has led to an immense contraction in the volume of manufactured goods, and in manufacturing activity, though the prices of those things have not fallen nearly as much as farm prices and raw material prices have fallen. I would ease off the situation by giving emergency credit to prevent further forced liquidation of good assets at depression levels. And I would emphasize the necessity of undeviating adherence to sound money and to sound public finance as vitally important to alleviate the fears which have arisen with respect to our currency and our Government credit.

But I am aware that there is another view, or set of views, advanced by men who think that the trouble with the world is simply a shortage of money and credit, and who propose to bring about a revival of business by what they call "inflation."

The word "inflation" is a very unsatisfactory word. It covers a wide variety of meanings and I believe it best to distinguish among some of these different meanings and to talk about concrete proposals. Among the possible meanings are the following:

(1) The issue of irredeemable paper money.

(2) The debasement of the standard of the currency, (a) by reducing the gold content; (b) by introducing silver bimetallism.

(3) Going off the gold standard by suspending gold payments, which gives you practically the same situation, as (1), namely, the issue of irredeemable paper money.

(4) Some men would call a great increase in gold producion in the world leading to an increase in gold throughout the world, "inflation."

(5) Some have called the concentration of gold in a single country, "inflation." Thus Professor Fisher referred to the gold which we obtained during the war as causing "gold inflation."

(6) Some would call any expansion of bank credit, "inflation."

(7) Some would limit the word "inflation" to those changes in the currency and credit situation which raise commodity prices. This, for example, was Professor Cassel's view, and he denied pointedly

that there was any "inflation" from 1922 to 1928, because commodity prices didn't rise. The fact that credit expanded enormously and that we were having great speculative excesses and great price rises in real estate and in the stock market meant nothing at all to him, and he demanded even more credit when commodity prices softened a little. Mr. J. M. Keynes, in his recent treaties on money (Vol. II, p. 190), says with respect to the years 1926–1929:

Anyone who looked only at the index of prices would see no reason to suspect any material degree of inflation; whilst anyone who looked only at the total volume of bank credit and the prices of common stocks would have been convinced of the presence of an inflation actual or impending. For my own part, I took the view at the time that there was no inflation in the sense in which I use this term. Looking back in the light of fuller statistical information than was then available, I believe that while there was probably no material inflation up to the end of 1927, a genuine profit inflation developed some time between that date and the summer of 1929.

This confession of error on Mr. Keynes' part comes too late to do anybody any good. He was one of the men who were urging cheap money through the whole of the period from 1922 on, and he continued to do it after the stock market broke in 1929.

Senator COUZENS. Mr. Aldrich, I am obliged to leave to attend another meeting, but would you mind amplifying this statement on page 12, at the top of page 12, where you say the following:

I would ease off the situation by giving emergency credit to prevent further forced liquidation of good assets at depression levels.

Mr. ALDRICH. Senator, that goes back to the statement that I had made earlier in this analysis with regard to remedies, where I speak of the Reconstruction Finance Corporation. It is on page 10, at the bottom of the page, where I say:

I would continue a policy of emergency credit relief, making use of the Reconstruction Finance Corporation. We must face the fact, however, that not all of the existing fabric of capital debt can be maintained in full. There are important cases where the capital structure is topheavy:

And so forth.

Senator COUZENS. As I understand it, when you talk about the giving of emergency credit, you mean that to be given by the governmental agency.

Mr. ALDRICH. Through the Reconstruction Finance Corporation, for the purpose of permitting, as I say on page 11, solvent institutions whose total assets exceed their total liabilities, to mobilize their assets so that they do not have to dispose of them at deflated prices.

Senator COUZENS. You mean by that, then, that they should give credit to manufacturers direct, whose commodities have backed up?

Mr. ALDRICH. No, I do not.

Senator COUZENS. Then who is to extend this emergency credit to the manufacturer or producer?

Mr. ALDRICH. I think that that ought to be done through the banks, the ordinary banks.

Senator COUZENS. That is what I am wondering. Why don't they do it?

Mr. ALDRICH. I thnk they are doing it, as a matter of fact, whereever they have sound assets.

Senator COUZENS. Of course, there is always an "if" in all those things, Mr. Aldrich. Perhaps you can give me a definition of what you consider a sound asset, because my observations are that, notwithstanding the nearly $2,000,000,000 that has been advanced by the Reconstruction Finance Corporation, very little has gone back to the producers for the purpose of accomplishing the very thing that you suggest should be accomplished.

Mr. ALDRICH. By the producers, what do you mean?

Senator COUZENS. Manufacturers.

Mr. ALDRICH. I have to look at this from a personal point of view, as I see the thing myself. Take my bank, for example. Our lines to manufacturers have not been contracted. We have lines out to manufacturers all over the country, which are not being made use of.

Senator COUZENS. Is that emergency credit? Do you call that emergency credit?

Mr. ALDRICH. No, I do not.

Senator COUZENS. I am trying to get an amplification of what you call emergency credit.

Mr. ALDRICH. When I am talking about emergency credit, I am talking about a situation which would involve forced liquidation.

Senator COUZENS. Forced liquidation of what?

Mr. ALDRICH. Of commodities, or assets. I am talking about emergency——

Senator COUZENS. Just a minute. What kind of assets do you mean, outside of commodities?

Mr. ALDRICH. Assets of manufactured goods, if that were the case—liquidation of credit of various kinds of institutions; liquidation of railroad credit, for example. Take these banks that have been in difficulties. I think that certainly the Reconstruction Finance Corporation should advance credit to those banks, to the point where they can advance the credit on good assets. I do not think, myself, that corporations that are insolvent, whether they are banks, railroads, or anything else, should be maintained. I think they ought to be let go.

Senator COUZENS. What is the definition of "insolvency" at the present time?

Mr. ALDRICH. That is a difficult thing to determine.

Senator COUZENS. Then, so long as you are advising the Congress here, it seems to me you ought to define it for us. We are unable to define it for ourselves.

Mr. ALDRICH. Do you think it is possible to define it?

Senator COUZENS. I doubt it, but you are talking about it, and so long as you are talking about it, I want you to define it.

Mr. ALDRICH. Senator, there is a line where it is perfectly obvious one way or the other. Just how broad that line is I would not dare say. There is a twilight zone, undoubtedly, on either side of the line of solvency or insolvency.

Also, there is another difficult thing about it, to determine whether we are justified in believing—take the case of the railroads—that the economic situation is going to change with sufficient rapidity to enable a particular road to go on and do business and carry its capital structure in its present form. I do not think anybody can foresee exactly when a particular railroad would be determined, under the economic situation that we saw ahead of us, to be faced with reorganization. I think that is a question in which you have to look at all the circumstances surrounding the individual case. I think that is equally true of any institution to which the Reconstruction Finance Corporation is advancing emergency credit.

Senator COUZENS. While we are doing that, we have to speculate as to the future.

Mr. ALDRICH. Right.

Senator COUZENS. How far can we speculate as to the future with Government credit?

Mr. ALDRICH. I must say that is a very difficult question to answer.

Senator COUZENS. You are right in the heart of Wall Street, in the financial interests, and I would like to know, or I would like to get some advice as to how far you think the Federal Government can go in selling securities to finance all these projects and activities.

Mr. ALDRICH. I am afraid, Senator, that I am one of those who do not think they ought to go very far.

Senator COUZENS. We have approximately $21,000,000,000 out now. How much further do you think we could go?

Mr. ALDRICH. You mean of Government debt?

Senator COUZENS. Yes. That has all been built up—at least a couple of billion dollars have been built up to carry out the very policy you are recommending.

Mr. ALDRICH. I do not think it is possible to answer that question. In fact, Doctor Anderson and I discussed at great length whether we should attempt to answer it.

Senator COUZENS. Do you think we should go on, then, and do all you say here, furnish emergency credit for the manufacturers, and all of these other activities?

Mr. ALDRICH. I did not propose that, Senator.

Senator COUZENS. But you said you proposed to ease off by giving emergency credit to prevent further forced liquidation of good assets. That means——

Mr. ALDRICH. What have you been doing, as a matter of fact? You have been assisting the banks. You have been assisting the railroads. You have been assisting the institutions which the Conress has felt were fundamental to the economy of the country. That is what you have been doing, is it not?

Senator COUZENS. Yes.

Mr. ALDRICH. I would continue that.

Senator COUZENS. You would continue that?

Mr. ALDRICH. Yes.

Senator COUZENS. How far?

Mr. ALDRICH. I would continue that to the point—and I think this is the most difficult question that you have to decide, as a matter of fact——

Senator COUZENS. That is what we want your help on.

Mr. ALDRICH. I will give you my help, but I do not want to say something that I do not mean, or that is ill considered. Every time you try to determine whether any given institution is sound financially you have to study it against a background of economic conditions as they exist, and project that into the future, have you not, to come to any reasonable conclusion?

Senator COUZENS. I assume that is true; but how far into the future? Ten years, five years, or what?

Mr. ALDRICH. Personally, I would say that you would have to do it for at least a year.

Senator COUZENS. Only a year?

Mr. ALDRICH. At least a year.

Senator CLUZENS. If we could stop at a year, we would not make any more loans.

Mr. ALDRICH. I think some of these institutions you are loaning to, if conditions do not change within a year, are going to be faced with reorganization.

Senator COUZENS. Say that over again.

Mr. ALCRICH. I think some of the institutions to which the Reconstruction Finance Corporation is lending money, if conditions do not change within a year, will be faced with reorganization, because of the fact thay you will come to the conclusion that you do not want to go on supporting them any longer.

Senator COUZENS. Would you advise that we go on supporting them to the point where we could not sell all our Government securities, or at least the prices are so depressed——

Mr. ALDRICH. I would not go on supporting them to the point of jeopardizing the Federal credit, for a minute.

Senator COUZENS. Will you tell us just at what point you would stop? If you were operating as a financial czar in the Government, where would you stop selling Government securities?

Mr. ALDRICH. I do not think you have to be faced with that question, as a matter of fact. The public are going to answer that question for you. The only way you can sell Government securities in the volume you are doing it, and will have to do it—unless you go right bang into some kind of inflation, such as I am going to describe here in a few minutes, and sell your securities to yourself, is to sell them to the public. The public will be the judge of whether you are jeopardizing the credit of the Government by what you are doing, and the manner in which they judge is the fact that they will not continue to buy your bonds at the rate of interest that you will feel justified in selling them at.

Senator COUZENS. So that when we reach the point where we have to raise the interest substantially, then you think we ought to stop, is that right?

Mr. ALDRICH. I should suppose that was one test, but I think you will find that your own instinct will tell you when that time comes. It becomes obvious, when credit is so overextended that they are not going to absorb any more of your securites——

Senator COUZENS. Just what is the difference between instinct and woman's intuition? Is there any great difference?

Mr. ALDRICH. That is an unfortunate thing to say. I will withdraw that remark.

Of course, as a matter of fact, Senator, the whole thing depends on two factors, your taxation policy, the policy with regard to the Budget, and the policy which you are continuing with regard to Government expenditure. Obviously, you can not continue to spend money that you can not borrow. That policy is fatal. If you are impairing your own credit, the Government must stop.

Senator COUZENS. We have practically half of all the Government securities in the Federal reserve banks, and members of the Federal reserve system. Assuming the almost unbelievable situation, that business should start to recover rapidly, they would have to unload, would they not?

Mr. ALDRICH. I do not think so, no.
Senator COUZENS. What would they do?
Mr. ALDRICH. Whom do you mean by "they"?
Senator COUZENS. The Federal reserve banks, and the members of the Federal reserve system, if credit was needed by industry.
Mr. ALDRICH. You mean if we needed an expansion of credit and currency?
Senator COUZENS. No. I am talking about credit, not currency—expansion of credit. In other words, if there were a very prompt demand, even within a year, for money for industry, the member banks and the Federal reserve system would have to commence to unload the Government bonds, would they not?
Mr. ALDRICH. No, I do not think so.
Senator COUZENS. How could they carry both?
Mr. ALDRICH. Because of the fact that the Government bonds are available to the Federal reserve for rediscount, and a good many of them have the issue privilege now.
Senator COUZENS. But, as a matter of fact, just as soon as these banks commence to have any substantial withdrawals, even now, before any recovery is in sight, they have to unload these securities to pay off their depositors.
Mr. ALDRICH. No, that is not true. You do not have to unload them.
Senator COUZENS. What do they do with them?
Mr. ALDRICH. We have been carrying, as I am about to point out here, excess reserves. Banks have been carrying excess reserves to an extent which, I think, under present conditions, is unjustified. I think that they have been too great, but it is not necessary to sell those Governments. You can take them to the Federal reserve and rediscount them. You can use them as a pledge for an advance.
Senator COUZENS. But they have to pay more interest when they do that, than they do if they sell them.
Mr. ALDRICH. That is true.
Senator COUZENS. I know as a fact that banks that are having heavy withdrawals are selling their Government securities on the market to-day, rather than rediscounting them and losing the difference in interest rate, especially if they have any of these short-time, low-interest-rate notes. A process of that kind will obviously depress the value of Government securities, will it not?
Mr. ALDRICH. If the banks are obliged to liquidate their Government holdings, of course it will. There is no doubt about that at all. But the only point I am making is that primarily a Government security is a liquid asset of a bank, which is does not have to sell in order to realize on, because it can take it to the Federal reserve bank, and also national banks have wide latitude in connection with the issue of currency against Governments.
Senator COUZENS. Has your bank borrowed anything from the Reconstruction Finance Corporation?
Mr. ALDRICH. No.
Senator COUZENS. You have not borrowed anything?
Mr. ALDRICH. No, indeed.
Senator COUZENS. Here we are confronted with prospective loans, prospective requests for loans running up into $7,500,000,000, and collateral to be offered for those loans consists of real-estate mort-

gages—we will assume that most of them are not more than 90 days past due, either as to interest or principal—and notes collateraled by stocks of questionable value—and when I say that, I mean that they are questionable now, but I am not saying that they will not recover. Do you believe that the Government is justified in going out, for instance, and borrowing $100,000,000 on its own paper to lend to a banking institution with that kind of collateral?

Mr. ALDRICH. I think that it is, but that question requires a rather lengthy answer. I think it is an entirely proper function of the Reconstruction Finance Corporation to make liquid for a bank, an asset like a real-estate mortgage, which is frozen in its nature, which can not be realized on immediately, by advancing against it, provided that that real estate mortgage is a sound mortgage—and most of them are. Therefore, I should say that it was entirely proper to advance against real-estate mortgages, and thereby make liquid an asset which is frozen.

Senator COUZENS. Would you extend that view to real-estate mortgages on apartment houses, office buildings, and hotels?

Mr. ALDRICH. I think you have to use a great deal more discretion in the case of a hotel or an apartment house, than you would in the case of an office building, or seasoned piece of real estate which was not in the hotel or apartment-house business, because I think that those projects are having a great deal of difficulty to-day. Therefore, I think you have to use discretion in the individual instance, and I would approach that kind of a mortgage with a great deal more hesitancy than I would, perhaps, a more seasoned one. But I think that that is a proper loan.

Senator COUZENS. Have you any views concerning legislation which would authorize the national banks to sell preferred stock?

Mr. ALDRICH. I have, yes.

Senator HASTINGS. Just before you leave that other subject, may I inquire, Mr. ALDRICH, whether in your judgment the advancing of money by the Reconstruction Finance Corporation to banks that tender as security mortgages which are considered, as far as the banks are concerned, a frozen asset—is not that the greatest opportunity for the Government to aid the banks under these present conditions?

Mr. ALDRICH. This is exactly what I think, yes. In fact, I have said so in this memorandum. I think the proper function of the Reconstruction Finance Corporation is to permit the making liquid of good but slow assets.

Senator HASTINGS. All right. Thank you.

Senator GORE. May I ask one question, Senator Couzens?

Senator COUZENS. Certainly.

Senator GORE. First observing that it is easy to lay down a rule in the abstract to guide the Government in advancing credit, and that it is hard to apply that rule in the concrete. Of course, everybody would say the Government ought to advance credit to deserving debtors who are in distress, but who have a reasonable prospect of making payment in the long run. If we agree to any rule at all, we agree to that. You do that, and John Doe comes along and proves himself to be in that category and gets a loan. Richard Roe comes along and says, "Here, you have let Doe have a loan." Congress would say he deserved it. He is a good fellow. Roe says, "I need it." There are more members of the Roe family than there are of the

Doe family. I had this concrete case, and that is the reason I mention it. A representative of a group came to me the other day. He wanted the Government to advance them credit, and wanted the law changed so the Government could advance them credit. They did not undertake to make a case on their own merits. The only point they made was this, "Are you going to discriminate against us? You have loaned money to other people, and loaned money to our competitors. Now, are you going to discriminate against us?"

That was the only argument, and they put in the form of a question. I say that to bring you up against our practical difficulty here, Mr. Aldrich. It is not at all certain that when Congress votes to grant a favor to a citizen, or a group of citizens, that those citizens will vote for those Congressmen or Senators. If you refuse them a favor, they will vote against you. There is the psychology we have to combat, and that some do not combat successfully. Of course, I would not expect you to answer that point, but I would like to have you keep that in mind in all your recommendations. We are all human beings here.

Pardon me for one more remark. An engineer, in constructing a building, will not put any more stress and strain on a piece of steel that it will stand. He can calculate how much it will stand, and he will not put an excess burden on it. I think that in our policies here we ought not to put a stress or strain on human nature that we know it will not stand, but we constantly do it.

Mr. Aldrich. Senator, you asked me if I had considered the question of preferred stock for a bank.

Senator Couzens. Yes.

Mr. Aldrich. I have. In fact, I have a memorandum in my bag on that subject. I think it ought to be done.

Senator Couzens. I have a bill which I have had drafted, which I am considering introducing, but there is quite a difference of opinion as to it. I do not want to take you off your paper, but if you could briefly state what the possibilities were of selling any such preferred stock, I would be glad to have you do it.

Mr. Aldrich. I really could not express an opinion on that. The matter of selling preferred stock of any corporation is a question of the circumstances surrounding that particular corporation. I think it is desirable to permit banks to issue preferred stock in the future, and the question of whether that stock should be given such character as to make it particularly attractive to investors is one I would like very much to discuss with you. I think it is a very interesting problem.

Senator Couzens. It is. I have discussed it with Mr. Traylor of Chicago, and others, including Senator Glass, and there is some difference in view about it. I would be glad to discuss that later. I do not want to take up the time of the committee on that now.

There is one more question I would like to ask you, with respect to these loans to banks. Seven hundred banks, after having come and gotten money from the Reconstruction Finance Corporation, have closed, and hundreds more are going to close, which have already gotten money from the Reconstruction Finance Corporation. What happens is this: I have, for example, a deposit of $100,000 in a moderate bank—say a couple of hundred thousand capital. I go in, and I am a rather influential citizen in my town, and I say to the president or cashier, "I want to withdraw my money." "Oh," he says, "don't do that. We are in bad shape. We don't want any such substantial withdrawals now." So I say to him, "You go to the Reconstruction Finance Corporation and get the money. You have collateral." So he goes to the Reconstruction Finance Corporation and he gets the money, and I withdraw my $100,000, and the rest of the depositors and creditors have had their security substantially reduced, almost, perhaps, eliminated. I have my $100,000, and the rest are all high and dry. What can you do to prevent that?

Mr. ALDRICH. You cannot prevent it, under that system.

Senator COUZENS. I want you to suggest a system to prevent that, so long as you recommend that we continue to make those loans, because I know of an instance——

Mr. ALDRICH. Haven't you got pretty closely on the track of that yourself, as to how to do it?

Senator COUZENS. No; I do not know just how to do it. The only way I know how to do it——

Mr. ALDRICH. I think you know how to do it. I think your bill will do it.

Senator COUZENS. I know how they are doing it in Michigan.

Mr. ALDRICH. I would like to discuss that with you. I think you are on the right track.

Senator COUZENS. I am glad to hear you say that. That substantially means this, that there has got to be, in all of the States where there is a lack of liquidity, a partial moratorium, or a restriction on withdrawals?

Mr. ALDRICH. I would not go so far as to say that.

Senator COUZENS. How are you going to restrict withdrawals?

Mr. ALDRICH. I would say this, that where you have a bank that is insolvent, you simply creat preferences.

Senator COUZENS. I do not know hou you arrive at insolvency. I can not get an interpretation of insolvency during these days.

Mr. ALDRICH. The national bank examiners are pretty good at determining whether a bank is solvent or not.

Senator COUZENS. At present-day values, they are not solvent.

Mr. ALDRICH. Senator, that is a pretty broad statement, to say that at present-day values, they are not solvent.

Senator COUZENS. You say in this statement here——

Mr. ALDRICH. As a matter of actual fact——

Senator COUZENS. You say in this statement, "forced liquidation of good assets." Now, forced liquidation of good assets obviously wrecks the bank, does it not?

Mr. ALDRICH. If you go back to page 10, Senator, you will see that I feel exactly about this thing as you do.

Mr. ANDERSON. May I interject, Mr. Aldrich? That sentence on page 13 was one which you dicatated very hastily, designed to summarize what you had said on the bottom of page 10 and the top of page 11, and I think you might just withdraw that sentence at the top of page 12, and say that that means no more than what you have said in section 3.

Mr. ALDRICH. That, of course, is exactly what it is. I stated the thing fully, Senator. You did not hear what I said on page 10. You asked me to expand that. As a matter of fact, I had already fully said it on page 10. I think you and I are in accord on the wisdom of using the credit of the Reconstruction Finance Corporation to bolster up a situation which is inherently unsound. I would not put the statement anywhere near as broadly as you just did, about moratoriums, because I do not think it represents the facts. But I do think that proceeding along the lines of the bill which you have introduced, which, again, I would like to talk to you about, because I have some perfectly definite ideas about it, is a sound method of approach.

Senator COUZENS. Then, assuming that this bill is passed and becomes a law—this is a joint resolution—then how does it operate? How would it operate? It would have to operate, would it not, in accordance with the laws of any of the several States?

Mr. ALDRICH. That is the one thing about the bill I disagree with. I think what you are aiming to do is exactly right, but I think it should be a Federal law which is uniform.

Senator COUZENS. You can not draft a Federal law in these chaotic times which will act in all of the different circumstances that exist in the several States.

Mr. ALDRICH. I think you can.

Senator COUZENS. You are a banker, and I am a legislator.

Mr. ALDRICH. I do not think we can do it here, but I think it could be done.

Senator COUZENS. I want to come back to this question of borrowing again. How can you stop preferences or withdrawals under any circumstances? I mentioned the example that I just gave you as a concrete case. Assuming that you are a director of a bank, and you are also a great manufacturer, and you have $25,000,000, $40,000,000, or $50,000,000 of deposits, and you know that the rate of withdrawals is such that all of the deposits can not be paid, and so you, being on the inside, and having this knowledge, withdraw your money; or, if you do not withdraw it right away, you arrange it so that money is borrowed from the Reconstruction Finance Corporation, and then, as the days go by, you see the constant withdrawals, and you obviously get yours out. There are 50,000 other depositors in that bank who have not the same knowledge you have, and in the meantime the securities of that bank are hypothecated with the Reconstruction Finance Corporation, and the other 50,000 depositors have had their security weakened for the purpose of making preferential payments to depositors. How are you going to stop that by law?

Mr. ALDRICH. You can not.

Senator COUZENS. Then, I do not think we ought to go on assisting if it can not be stopped by law.

Mr. ALDRICH. When you use the word "preference," you assume insolvency.

Senator COUZENS. Not necessarily.

Mr. ALDRICH. You do. You can not get away from it. You assume ultimate insolvency, or there is no preference.

Senator COUZENS. Yes; there may be ultimate insolvency. No one knows as to that.

Mr. ALDRICH. If the bank is in condition where it ultimately pays all its depositors, there is no possiblity of preference.

Senator COUZENS. You are injecting another word into the discussion, and that is "ultimate."

Mr. ALDRICH. All right.

Senator COUZENS. I do not claim that these banks may not ultimately pay out, especially if we have any degree of recovery. I am not talking about what they may ultimately do. I am talking about the present situation. Whoever gets his deposits out of the banks now, speculates on whether the bank will ultimately be solvent. I do not propose, so far as the Government is concerned——

Mr. ALDRICH. To my mind, Senator, the solution of that is to give power to treat the situation along the lines that I know you have in mind, where it is necessary to do it, but not to do it in cases where it is not necessary. In the first place, you do not want to throw any cloud on the perfectly solvent institutions of this country.

Senator COUZENS. Certainly not.

Mr. ALDRICH. By any legislation which is general in nature.

Senator COUZENS. I understand that.

Mr. ALDRICH. It must be specific.

Senator COUZENS. But you talked about the twilight zone a while ago. There is a twilight zone, and nobody knows when the cloud is going to come over that twilight zone.

Mr. ALDRICH. If you approach that twilight zone, then the situation is such that some action protecting the depositors of the bank must be taken. I think I can show you how that can be done by legislation, but I think myself it should be Federal legislation which is uniform in its scope, rather than legislation which would result in the Comptroller of the Currency administering some 45 different kinds of law.

Senator COUZENS. This proposal of mine is only to last a year, and obviously we could not get any such program as you suggest through before this session expires. It would take too much study.

Mr. ALDRICH. As an emergency measure, I think you and I are in entire accord. It is a little difficult for me to talk about it.

Senator COUZENS. Be frank.

Mr. ALDRICH. I have to have in mind the fact that every statement that I make might be thought to be wider than I intended it to be.

Senator COUZENS. That happens with every Member of Congress. What is the difference between you and any Member of Congress?

Mr. ALDRICH. I think we are all probably embarrassed at times by making statements that are broader than we intended them to be.

Senator GORE. Here is the impossible main point: You are in favor of extending first aid to those who are injured, and need it. How can you do that without raising the suspicion that these people who do not need it and have not been hurt, really have been? In other words, without destroying confidence in those that deserve confidence?

Mr. ALDRICH. As a matter of fact, those that deserve confidence are not afraid of it. I personally do not believe that the banks that are in a perfectly sound position here have anything to fear whatever.

Senator COUZENS. I want to say this, that in my judgment—and I want to know if you differ—every bank that has to come to the Reconstruction Finance Corporation for a loan, is in the twilight zone.

Mr. ALDRICH. I do not think that is necessarily true.

Senator COUZENS. I have not observed any loan that they have made, where the bank was not in the twilight zone. I do not mean to carry the impression by that that they are not ultimately going to pay out, but I mean it is questionable, because it is in the twilight zone, and the cloud may pass over it, or it may not touch it at all.

Mr. ALDRICH. Obviously, Senator, if that statement were true, and you are going to publish the loans made by the Reconstruction Finance Corporation, a bank might much better close at once than get a loan from the Reconstruction Finance Corporation.

Senator COUZENS. In my judgment, 90 per cent of the banks had better close than to get money from the Reconstruction Finance Corporation.

Mr. ALDRICH. I would not agree with that. I think the Reconstruction Finance Corporation has done a great good in permitting banks to liquidate slow assets—banks that are perfectly sound, that have, perhaps, too heavy a commitment in real estate, which they can not liquidate. But I certainly do not think it is true that every bank that has borrowed money from the Reconstruction Finance Corporation is thereby committed to preference. I am sure it is not true, as a matter of fact.

Senator COUZENS. Do you believe the Reconstruction Finance Corporation should put a qualification on loans made by it, as to what they should do with the money, in the form of permitting a percentage of withdrawals?

Mr. ALDRICH. No. I prefer to see it done the way you are planning to do it. I think the evil you want to strike at is the giving of preferences.

Senator COUZENS. Yes.

Mr. ALDRICH. That question only comes up, not because of any loan from the Reconstruction Finance Corporation, but because of the financial condition of that institution. It is entirely conceivable that a bank might be clearly solvent, and might have slow assets, and might want to get a loan from the Reconstruction Finance Corporation. I think that to make the statement that every bank that has borrowed from the Reconstruction Finance Corporation is in the twilight zone, is absolutely erroneous. I know it is not true.

Senator COUZENS. I modify it to say, perhaps, 90, perhaps.

Mr. ALDRICH. I can not agree with that.

Senator COUZENS. I have gone into a lot of them. We will take a case in Michigan—and I am not going to mention any names, but they are not limited to the withdrawal of 5 per cent of their deposits. Supposing to-morrow the restriction is lifted, and a bank goes down to the Reconstruction Finance Corporation and gets a substantial loan, and by Friday or Saturday the loan is granted, and the bank opens up so that 100 per cent withdrawals may take place. And supposing a depositor has a very substantial deposit, and he, immediately after the Reconstruction Fianance Corporation loan has been granted, withdraws his deposit, and then there is a still continuing withdrawal. How is the bank saved?

Mr. ALDRICH. Of course, the bank is not saved, and if the bank is insolvent you have a preference.

Senator COUZENS. You come back to insolvency. I can not measure insolvency on the basis of present day values, and I do not think anybody can. It is just a guess. You may guess right or wrong.

Mr. ALDRICH. Your only alternative, in my opinion, is some such legislation as you are thinking of. I think you are absolutely on the right track.

Senator COUZENS. I am sorry to have interrupted the orderly procedure so long.

Mr. ALDRICH. I hope I have made my position clear, and I would like very much to talk to you about that legislation, because I really think I could be helpful.

Senator COUZENS. Thank you very much.

Mr. ALDRICH. I was just starting to discuss the question of inflation, and I had mentioned the various forms which inflation can take. I will go on to say that one very important distinction must be drawn in connection with these various ideas; (1) that of an impairment of the quality of the currency itself, and the other of mere quantitative increase either of money or of credit.

But then a further point comes up at once, that an increase in quantity, if it goes far enough, will impair quality. If paper money, redeemable in gold, is issued in such quantity as to raise doubt about the adequacy of the gold reserves on the part of the issuing authority, runs can be started which will either force a great contraction of the quantity or force suspension of gold payments and damage the quality.

Similarly, an overexpansion of bank credit impairs the quality of credit. We saw this on a great scale, running progressively from 1922 into 1929. Bank credit expansing in excess of commercial needs went into capital uses, speculative uses, and consumption loans, taking the form of real estate mortgages, installment finance paper, stock and bond collateral loans, and bank investments in bonds.

Moderate amounts of any of these would have been all right, but the total was so great that there came impairment of quality, and the capital values of securities and real estate which underlay the credit became topheavy and broke violently. Then there came loss of confidence in the assets of many banks, followed by a loss of confidence in their liabilities, namely, their deposits, which led to runs on banks, which took reserve money out of them and which forced even strong, solvent banks to contract credit. We thus ran through the scale whereby expansion or inflation of bank credit forced liquidation or "deflation" of bank credit.

When there is sufficient loss of confidence in the quality of credit, this can generate doubt also as to the goodness of the currency itself, and we saw this on a great scale in 1931–32. Foreign fears regarding the goodness of the American dollar led to withdrawals of hundreds of millions of gold from us and further quantitative contraction in bank credit in the United States, even though the dollar itself stood sound and strong.

Whatever else we may have in the matter of currency and credit policy, we must at all hazards protect the quality both of our currency and of our credit.

Paper money is, after all, a credit instrument—a promissory note. I know of no case where a government has actually issued such paper with an announced intention of never redeeming it. The value of irredeemable paper money rises and falls with the prospect of redemption. There is no mathematical rule relating quantity of issue to the extent of depreciation. Unpredictable events may cause the value to slump or recover violently—as the Battle of Gettysburg, which caused a great rise in the value of the greenbacks in three days. These fluctuations are disturbing to all business, and only a few reckless speculators gain.

Debtors are supposed to gain by currency depreciation. But Germany, 85 per cent of whose mortgage debt was wiped out by the disappearance of the mark, shows no gains as a result. Following stabilization, it was compelled to pay such fantastic rates of interest for all new credit that its debt burden was soon very heavy again.

That links in, Senator Gore, with what we were talking about, the destruction of credit for the future.

The issue of new paper money currency is futile. If it is redeemable and confidence in the gold standard remains unshaken, the paper will not stay in circulation, but will merely pile up in banks. If confidence, however, is shaken, the effect is either forced liquidation, or else the abandonment of the gold standard. In the latter case, you can't multiply quantity fast enought to keep up with depreciation. The gold value of the trillions in circulation in Central Europe in 1921 was a fraction of the value of the billions in circulation in 1913.

## DEBASING THE GOLD CONTENT OF THE DOLLAR

With respect to the quality of credit and to the efficiency of credit in accomplishing economic purposes, it is clear, of course, that there must be confidence. But confidence is not a vague general thing. It is a specific thing. Confidence in bank deposits means confidence that the bank will be able to pay cash on demand. Confidence in the currency means confidence that the Government or bank of issue will pay gold on demand, and the full amount of gold specified.

Two factors are involved in both these things: (1) Belief in the ability to pay, and (2), belief in the intention and good will of the bank or government. The latter is of absolutely vital importance.

The preservation of good faith, the keeping of contracts, even though it hurts, is absolutely vital. An honest man can go bankrupt and retain his reputation, if he has clearly done the best that he can and protected his creditors to the extent of his ability. Such a bankrupt can come back again and receive credit again in the future. But the man who has turned sharp corners, who has evaded obligations, whose word is not accepted because he has broken his word, must for the future either pay cash or offer excellent collateral with a big margin.

The proposal that our Government should deliberately debase the dollar by reducing its gold content, if carried out, would shock credit throughout the world for a prolonged period.

The shock to confidence, at home and abroad, of a deliberate breach of faith of the United States Government with respect to the gold standard of the present standard of value (meaning the present standard of weight and fineness) would be something we could not get over in years. Our Government has given its solemn promise on every Liberty bond to pay gold coin of the United States of the present standard of value. The same promise is on the Federal reserve notes and the laws relating to them. The law defines the standard of value as 23.22 grains of fine gold, or 25.8 grains of standard gold nine-tenths fine. The same promise is printed on vitually all our privately issued bonds and State and municipal bonds, and in a multitude of mortgages. We are bound by every promise.

These gold clauses in the Government bonds were put there because of the fears which had risen in investors' minds growing out of our greenback period and growing out of the silver agitation of the nineties. They were put there to assure our investors that, even if the Government should ever get into such a position that it could not redeem its paper money, it would still pay interest and principal on its public debt in gold, which the country did even in the years 1861–1879. It could not redeem its greenbacks in gold, but it could pay interest and principal on the public debt in gold, and it did so. For the greatest government in the world, without compulsion, deliberately to break these solemn promises would be an incredible shock to good faith everywhere. Excuse can be made for embarrassed countries like England for going off the gold standard that they couldn't help it, but no excuse could be made for us if we did it deliberately.

The result of an action of this kind on our part, from the standpoint of the volume of credit and revival of gold prices throughout the world in the future would be demoralizing in the extreme. The actual quantity of circulating money in the world constitutes a very small part of the world's buying power. The great bulk of it is credit. If we should do this thing, creditors, investors, and lenders everywhere would for years to come be timid and apprehensive. The experience of the French people with the depreciation of their own currency has already put them in this frame of mind. France with all her gold has done very little in the way of investing since the de facto stabilization in the winter of 1926–27, and when she has put out her cash she has done it for the most part on short term, constantly watching, frequently calling it back. The French people are continually apprehensive regarding currency. In the winter of 1931–32 they were hoarding gold. They could not get gold in small amounts from the Bank of France. The bank pays out only large gold bars, and the French people were constantly paying a premium over the French franc for American gold coin, and were paying a premium on small slices cut from gold bars. If we should deliberately debase our currency, as an act of choice, we should make general this kind of fear. Instead of getting easy and automatic expansion of credit in the near future, we should have a world much more reduced to a cash basis than it is even to-day.

This consideration should make it clear why those who would expect a doubling of commodity prices to follow a cutting in half of the gold dollar would be radically disappointed. The weight of purchasing now carried by gold and credit together would, in that case, be thrown back to a disproportionate extent on gold alone, and the value of gold would consequently undergo a real rise. Prices in terms of gold would fall. Prices in terms of the new 50 per cent dollar might rise a little, but not at all in proportion to the cut in its gold weight, and not certainly at all.

The prestige and the reputation for financial integrity of the American Government, of the United States Treasury, and of the Federal reserve banks, is one of the biggest capital values in the world, and is one of the most essential features of world financial organization. Wantonly to destroy it, quite apart from the question of morality, would be an act of economic destruction of fearful magnitude.

The worst of our whole trouble come from the end of September, 1931, into the middle of June, 1932. England's abandonment of the gold standard caused a great scare regarding the standard of value itself. Creditors and investors evereywhre called loans, refused new credits and sold investments. In two immense waves, foreigners pulled hundreds of millions of dollars out of the United States. Fear and hysteria drove the New York Times index of production down from 75 to 52 within 12 months. With a demonstration in the middle of June, 1932, that we could meet the foreign drain of gold, and with magnificent vote of the United States Senate on June 17 against the soldiers' bonus bill, an immense sigh of relief went up. Securities rallied, and then business bad its first real upward move in three years. Whatever else we do, we must not invite a repetition of this panic regarding the standard of value itself.

I want to say one further thing with respect to those who would advocate cutting the gold content of the dollar as a means of raising the farmer's prices. Quite apart from the moral and financial objections which seem to me so vital, I would observe that the plan doesn't do the farmer anything like enough good, even if it worked out perfectly. Suppose that the dollar were cut in two and suppose that all commodity prices should double. The farmer could then see his fat hogs rise from 3¼ cents a pound to 6½ cents a pound; but at the same time the prices of everything he buys are doubled. This doesn't help the farmer much. I would like to see the farmer get 9 cents or 10 cents for his hogs, and I want the price of his cotton double or more than double, without a rise in the prices of the manufactured goods which he buys.

That is the only thing that is going to do him any good. A horizontal rise of commodity prices would not do it.

Senator GORE. Except as to his debts, Mr. Aldrich, and that seems to be the point in the campaign.

Mr. ALDRICH. That, of course, ignores so many factors. As a matter of fact, in the first place, no debtor can benefit except at the expense of his creditor, and if you look at our economy as a whole, the damage of that alone is enormous. I do not think we have, in this paper, gone sufficiently, Dr. Anderson, into the effect of this thing on the wage earner. Any help that is given to the debtor by depreciation of the currency, is taken right out of the pockets of the wage earner. Suppose you increased your currency twice. You cut all wages, all fixed income, in half.

Senator GORE. There is no doubt of that, but the laborer is a creditor, and he is paid at the end of the week, or at the end of the month, as the case may be. Meantime, he is a creditor.

Mr. ALDRICH. The circle does not stop with the position of the creditor. It affects our entire economy. It affects the debtor. It affects the wage earner. It affects the reservoir of fixed income. I am not sufficient of an economist to be sure that I am covering every point on that, Doctor. Have you anything you would like to say in connection with it?

Mr. ANDERSON. I think you have covered it. The first point is that it would not raise prices, as assumed, because of the destruction of credit, which is so important in the price picture; but the second point is that it does not eliminate this disequilibrium. It does not give the farmer back his price relation to other prices. It does not give him his export market again.

Mr. ALDRICH. How about the Senator's remark about debt? Did I answer that as fully as I should have? Can you think of anything further on that point?

Senator GORE. That is the center of gravity in this problem here, and it is the burden of the farmer's complaint, that he is having to pay his debts two or three times over. There is a good deal in the complaint. There are only two ways out, of course. One is to cut debts down, and the other is to raise prices—or both.

Mr. ALDRICH. Of course, what we are advocating here, really Senator, is this, that the way to raise prices is to get back our export trade.

Senator GORE. I think we will have to trade ourselves out of this trouble, for that matter.

Mr. ALDRICH. That is one thing; and the other is that we should treat with this debt situation on a case system, to use the legal expression, by determining, as between the debtor and the creditor in each individual case, what is fair and proper.

Senator GORE. I look upon cutting debts down as medicine, narcotics, or smelling salts; and raising prices as food.

Mr. ALDRICH. I think that comes right back to the reestablishment of the export trade. I do not know any other way to do it.

Mr. ANDERSON. Our compromise, Senator, is that while we are getting the export trade restored, we have an acute debt situation, and we want to ease it off.

Mr. ALDRICH. That is the essence.

Senator GORE. To prevent wreckage until they get where they can stand the storm and pay their debts.

Mr. ALDRICH. As somebody said to me the other day, it does not do any good to light a match under the thermometer. What we are trying to do is to start the furnace.

Senator METCALF. Mr. Aldrich, it is just 12 o'clock. Would it be convenient for you to come back at 2.

Mr. ALDRICH. Yes, sir.

Senator GORE. Will you discuss the gold clause any further, Mr. Aldrich?

Mr. ALDRICH. You mean from a legal point of view?

Senator GORE. Yes.

Mr. ALDRICH. No, sir.

Senator GORE. Then I will ask you this question here, so that it will be in connection with what you have already said: There are some in Congress who contend that Congress should pass a law declaring the gold clause in existing contracts to be void, and that the courts would sustain the validity of such a law. I do not think that. I do not think Congress could directly impair the obligation of a contract. It can do so indirectly. But it has been suggested here that we pass a law prohibiting the making of contracts in the future that do contain the gold clause, or to make them unenforcible in the courts. Eliminating past contracts containing the gold clause, what would you think of it as a ploicy to be adopted now with reference to future contracts?

Mr. ALDRICH. I think the maintenance of the integrity of the Government and the gold standard, and the gold content of the dollar, are so important that I would deplore any legislation that would prohibit the entering into of such contracts in the future, and

I can not see that it would have any bearing on the present situation at all.

Senator GORE. The trouble is, you can not make the people who have the money lend it except on the terms on which they are willing to lend it.

Mr. ALDRICH. It would have that effect, of course, because the lender would not lend.

Senator GORE. The lender would not lend. He would come to Congress, and we would exhaust the Government credit making the loan. That is what I am afraid we are going to do, anyway.

Mr. ALDRICH. You are perfectly right.

Senator GORE. It is hard to put on the brakes.

Mr. ALDRICH. That would be absolutely futile. Personally, it is impossible for me to see how anybody can propose seriously a repudiation of the Government contract which is written on every bond and every piece of Federal reserve currency that is outstanding. To me, it is simply incredible.

Senator GORE. I do not think that will be done.

Mr. ALDRICH. I can not imagine such a thing.

Senator METCALF We will resume at 2 o'clock.

(Whereupon, at 12 o'clock, noon, a recess was taken until 2 o'clock, p. m.)

AFTER RECESS

The hearing before the Senate Finance Committee was resumed at 2 o'clock p. m., Wednesday, February 22, 1933, at the expiration of the noon recess.

The CHAIRMAN. The committee will come to order. Mr. Aldrich, you may proceed.

## STATEMENT OF WINTHROP W. ALDRICH—RESUMED

Mr. ALDRICH. Mr. Chairman, I would like to interject at this point an observation growing out of some of the things that were said this morning, if I may.

The CHAIRMAN. You may do so.

Mr. ALDRICH. It is in my judgment not correct that the mere fact that a bank has borrowed from the Reconstruction Finance Corporation justifies any suspicion as to its solvency. There are plenty of cases where banks have borrowed on slow but good assets from the Reconstruction Finance Corporation merely for the purpose of increasing their liquidity and for the purpose of making more loans to customers. If they had been content to give inadequate accommodation to customers they would have had no need to borrow from the Reconstruction Corporation. There are many cases where strong banks have borrowed temporarily, and some cases where strong banks have borrowed with a view to having a long loan from the Reconstruction Finance Corporation so that they might be liquid for emergencies.

It is my conviction that for the overwhelming bulk of the banks the liabilities of American banks are very substantially overtopped by the assets of the banks both in the aggregate and individually, even at these low levels of values, and there are many other cases where with consideration and nursing and a very moderate improvement in values the situation is perfectly safe.

I can not concur in the view that banks generally have been harmed by borrowing from the Reconstruction Finance Corporation. It has been definitely harmful to have their borrowings published and I think that it is generally recognized in the Congress to-day. Very many banks have borrowed from the Reconstruction Finance Corporation and have repaid their loans from the ReconstructionFinance Corporation. Very many others can speedily repay their loans.

The usefulness of the Reconstruction Finance Corporation, which it was hoped would permit many small banks in the interior to increase their loans to customers has, of course, been very largely impaired by the publication of the loans. Many banks which would have borrowed to relend have not done so since these figures have appeared. But I want to express with vigor and emphasis my conviction that the banking situation is thoroughly manageable, and that the great bulk of banking liabilities are adequately overtopped by assets, taking the figures bank by bank, and in the aggregate.

The CHAIRMAN. I think that is a very fair statement, Mr. Aldrich. I know some of the very strongest banks in the United States have made loans there for the purpose of carrying their customers, and if they had not done it in some cases, at least, a solvent institution would have failed.

Mr. ALDRICH. That is absolutely true.

The CHAIRMAN. And it simply made an advance to them for the purpose of carrying over.

Mr. ALDRICH. That is absolutely true, Senator.

Senator GORE. You stated this morning that your bank had not borrowed and would not borrow, of course, from the Reconstruction Finance Corporation. Notwithstanding that, do you think that it is in the interest of accelerating the return of prosperity and stabilizing conditions not to require these loans to banks to be made public, in the case of banks which have borrowed from the Reconstruction Finance Corporation?

Mr. ALDRICH. That is an absolutely correct statement, Senator.

Senator GORE. Yes; and that, at least, ought to be discontinued.

Mr. ALDRICH. I agree with that entirely.

The CHAIRMAN. You may proceed now with your statement, Mr. Aldrich.

Mr. ALDRICH. The manufacturer doesn't need higher prices—what he needs is volume—but the farmer must have radically higher prices. We must get the balance restored between the manufacturer and the farmer. This means that the farmer must get his export market again. I would strike at the export trade—not at the currency.

SILVER INFLATION

Testimony before your committee, and the cross examinations, have raised questions regarding the possibility of using silver, either under a bimetallic-system or in some other way, and I want to make some observations regarding that. First, let me say that, in my opinion, the suggestion that our foreign trade has been primarily damaged by a decline in the price of silver seems to me to have no merit. Our trade with the one great silver country, China, has kept up a great deal better than our trade with the world as a whole, as shown by the following figures:

*United States exports*

| | Total | Index | To China | |
|---|---|---|---|---|
| | | | Total | Index |
| 1929 | $4,814,444,000 | 100 0 | $114,437,000 | 100.0 |
| 1930 | 3,568,494,000 | 74.1 | 82,157,000 | 71.8 |
| 1931 | 2,240,219,000 | 46.5 | 84,193,000 | 73.6 |
| 1932 (11 months) | 1,481,750,000 | 30.8 | 52,165,000 | 45 6 |

The index figures of the United States exports as a whole have declined from 100 per cent in 1929 to 74.1 per cent in 1930, 46.5 per cent in 1931, and 30.8 per cent in 1932.

At the same time the index figures of our exports to China have declined from 100 per cent in 1929 to 71.8 per cent in 1930, 73.6 per cent in 1931, and 45.6 per cent in 1932. That is to, not by, those percentages. In other words, the Chinese trade has stood up better than the foreign export trade as a whole.

Silver bimetallism at 16 to 1, or any other ratio than the commercial ratio, would mean the debasement of the currency and the abandonment of the gold standard, but the adoption of bimetallism at the current ratio would still involve breach of contract under the gold standard and undermine confidence and good faith, and, moreover, would accomplish none of the purposes that the silver people have in mind, because what they want to do is to raise the price of silver.

I see no reason to go any further with silver than is proposed by the economic experts who prepared the agenda for the coming World Economic Conference. They rule out the use of silver, even in moderate amounts, as part of the reserves in central banks, saying that silver is unsuitable for such use because there is no fixed price at which it would be received by other central banks in settlement of balances on international account. They make a few minor concessions to the notion that certain countries might withdraw very small denominations of bank notes and substitute silver subsidiary coins for them, and that some other countries might enlarge the use of subsidiary silver coinage. But they accept none of the main proposals made by the silver advocates, and in this I think they are right. I recommend their view to your committee, and I submit for your records what appears to be a verbatim account of their recommendations.

This excerpt I will not read, Mr. Chairman, with your permission, because it is quite long.

The CHAIRMAN. It may be placed in the record.

(The excerpts referred to are as follows:)

EXCERPTS FROM REPORT PREPARED FOR WORLD ECONOMIC CONFERENCE—PAGE 8

(By Theodore C. Wallen)

WASHINGTON, February 8.—The official agenda for the World Economic Conference, containing the report of the preparatory commission of experts, was received to-day by the State Department.

[New York Herald-Tribune of February 9, 1933, pp. 1 and 8]

After keeping relatively stable from 1921 to 1929, the price of silver in gold currencies fell abruptly by more than one-half in less than three years. There is no doubt that this sudden decline must, in the main, be attributed to the same causes as have acted on the general level of prices, and may thus be said to illustrate in a particular case the incidence of the world depression. Some special factors can, however, be found which have accentuated the downward trend, and these were to some extent already operating before the depression set in. Such factors are the demonitization of silver, the reduction of the silver content of token coins, and also the disposal of surplus stocks.

We have considered a series of proposals which have been discussed in recent years with a view to raising the price of silver, and we wish, in this connection, to make the following observations.

(I) It has been suggested that some form of bimetalism should be introduced. We would point out that a bimetallic standard, which presupposes a fixed relation between the value of gold and that of silver, could be safely introduced only if the most important countries of the world agreed to such a measure. As the only international monetary standard which is at present likely to command universal acceptance is the gold standard, the idea of introducing bimetallism must be regarded as impracticable.

(II) It has been proposed that banks of issue should be allowed to hold increased quantities of silver in their legal reserves.

On the assumption that no form of bimetallism will prove acceptable, silver is unsuitable for extensive inclusion in the metallic reserves of a central bank, there being no fixed price at which it would be received by other central banks in the settlement of balances on the international account.

(III) It has also been suggested that governmental action should be taken for the purpose of improving the price of silver.

MIGHT ENLARGE USE OF SILVER

We would, in this connection, refer to the suggestion made in a previous part of this report, to the effect that, in countries where banknotes of small denominations are in circulation, these small notes might be withdrawn and replaced within proper limits by subsidiary coins, and we think that the conference should, in this connection, examine to what extent the use of silver in subsidiary coinage could be enlarged. Whatever sales of Government stocks of silver may be deemed desirable it is important to conduct these in such a manner as to avoid any unnecessary disturbance of the market.

The conference should also consider whether, and if so by what methods, the marketing of the metal by producers and currency authorities is susceptible of improvement. The question of developing new and enlarged industrial uses for silver is, in our judgment, also worthy of careful consideration.

From the point of view of commercial relations with silver-using countries, particularly China, trade interests would best be served, not by a rise in the price of silver, as such, but by a rise in the general level of commodity prices. Any action may be expected to have a favorable effect on the price of silver, and would, on general grounds, be welcome.

Mr. ALDRICH. "Inflation" by Government borrowing.

Among the many meanings of "inflation" is one that relates to public finance, and here there are many proposals, ranging from moderate notions of necessary Government borrowing, which I should favor, to extravagant notions regarding Government borrowing which would be dangerous in the extreme. Excessive borrowing by the Government can, of course, impair, first the credit of the Government, and then, ultimately, as the Government leans on the Federal reserve banks too heavily, can threaten the currency.

We must have sound public finance. This means: (*a*) Reduced expenditures and increased Federal taxation. I personally do not like a sales tax applied at a uniform rate to all manufacturers. A very moderate tax would bear very heavily on some lines where demand is highly elastic and a heavy tax would not make much difference in certain lines where demand is very inelastic. Necessities could stand much heavier percentage taxes than can articles which people can easily do without. Taxes could be put on tea and coffee, for example, and on such things as spices, of which small amounts are used in the individual's daily consumption, at much higher rates than on articles which make up a substantial part of the day's consumption. I don't pretend to have worked this out with any detail, but I do believe that a series of special sales taxes at different rates, classifying commodities with reference to elasticity of demand, would be less burdensome by far than one uniform flat rate.

The CHAIRMAN. You would have some difficulty in selecting the articles to impose that tax upon, and unless we did have a basis for rates covering nearly all the commodities we could not raise the necessary money.

Mr. ALDRICH. I think that would apply more to the rate than it would to the levying of the tax.

The CHAIRMAN. That is why I say the rate should be low, and being low, it should cover all the commodities. You can take a manufacturers' sales tax of say three-quarters of 1 per cent or 1 per cent, and you will raise a vast amount of money.

Mr. ALDRICH. I think that is a correct statement. I think that if you get the rate low enough that this criticism of the impinging of the flat rate rather than the graduated or differentiated rate is less.

The CHAIRMAN. Of course I have always been in favor of a sales tax, but a general sales tax rather than taxes that we are imposing upon certain articles at a higher rate.

Mr. ALDRICH. I think I would be inclined to agree with you on that; if your general rate is so low that it does not violate the principle of elasticity of demand.

The CHAIRMAN. I have figured out that the tax on nearly half of all the commodities at a low rate would never be passed on to the consumer.

Mr. ALDRICH. I think there is a great deal of truth in that, if your rate is low enough.

The CHAIRMAN. That they never would think of passing the tax on at all to the consumer.

Mr. ALDRICH. Yes.

Senator GORE. We can only judge the future by the past. We have had some experience in the sales taxes on gasoline, beginning at 1 cent, 2 cents, 3 cents, 4 cents, 5 cents, 6 cents, 7 cents. Then we have superadded 1 cent to the Federal Government. Mobile has a tax that aggregates 11 cents on sales. Now that is one infirmity of the sales tax. It will not ever stop.

The CHAIRMAN. On that one article, of course, on which you say there is a tax of 11 cents, that would be over 100 per cent. No general manufacturers' sales tax could be put on like that.

Senator GORE. The price that the refiner got was 3 cents.

The CHAIRMAN. Nearly 400 per cent.

Senator GORE. Yes.

The CHAIRMAN. No one thinks of putting on a general manufacturers' sales tax of more than 2 per cent.

Senator GORE. No; not to start with.

The CHAIRMAN. They would not have to.

Senator GORE. In France before the Revolution from the grape on the vine to the wine on the table there were 28 different taxes.

The CHAIRMAN. And they still drank wine.

Senator GORE. Yes; they still drank wine. In Mexico from the wheat in the fields to the bread on the table there were 32 different taxes. And Diaz abolished them. Now it is all right, but do not ever embark on it with the assumption that there is any stop to it and that the poor devil in the country who pays it will not have an increased burden. When you want more money you will add to his burden. He will grunt and groan and pant and struggle with it, but he never will get rid of it.

These nuisance taxes have one virtue—they are nuisance taxes. People that pay them are tax conscious, and they will get rid of them if they can, when they can. But take the man that you subject to a general sales tax—he will never get rid of it. Pardon this digression. The chairman and I do not agree.

Mr. ALDRICH. I go on to say that of course, taxes should not be pyramided, they should strike production only in one stage and not in successive sales.

I am very hopeful, too, quite apart from reasons of taxation, that you will soon be getting a good revenue from beer and from wines.

Senator SHORTRIDGE. From wine?

Mr. ALDRICH. That is my hope, Senator.

Senator SHORTRIDGE. The present bill calls for 3.2 by weight, and of course that is not wine.

Mr. ALDRICH. Well, I permitted myself to make a digression from the economic field and said, "quite apart from reasons of taxation" I hope that it will be so.

Let me add that more moderate tariffs, which will let goods in, instead of keeping them out, will be of real help to this problem of raising the Government's revenues. In pre-war days, the tariff was in fact our main source of Federal revenue, down to the time when the income tax came in.

But, in addition, expenses must be cut drastically. The discussion which has already taken place at these hearings has indicated possibilities of a saving of $400,000,000 in connection with the Government's outlay to veterans who have not suffered disabilities connected with service in the war, and the possibility of cutting that item very drastically is one which we can not afford, for political reasons, to ignore.

The CHAIRMAN. $400,000,000 could be saved there.

Mr. ALDRICH. That is what I understood.

The CHAIRMAN. I introduced a bill on that, but I do not think we can get it through.

Mr. ALDRICH. It is my understanding that very great reductions of expenditure can result from reorganization and consolidation of Government bureaus, and from the elimination of overlapping functions. The political difficulties of this are, of course, recognized, but, in a great fiscal difficulty, political difficulties must be overcome.

I think, too, that the reduction in prices which has taken place ought to make it possible for us to cut almost every item of Government expense except the fixed interest on public debt, and even there something can be done by refunding.

The Budget ought to be balanced in the sense that all ordinary expenses are covered by current taxes and that the borrowings for special and nonrecurrent purposes should be covered by additional taxes to the extent of current interest.

The orthodox canons of sound public finance would require, under anything like ordinary conditions, further taxes to cover current sinking fund on all new borrowings and also on existing debt. I have not consulted other bankers with respect to this point, but my personal view would be that, in a time of great depression, such as the present, it is entirely legitimate to borrow for contractual sinking fund requirements and to eliminate this item from the Budget proper. Taxes which under existing conditions are adequate to balance the Budget in the sense above described would, with any considerable improvement in business, be very much more than adequate for sinking-fund requirements. My personal view is that we need not count in the deficit any expenditure which does not actually increase public debt.

I understand that that is the way the Treasury is now reporting, and it seems to me personally that that is sound.

Senator SHORTRIDGE. That is to say, you would not insist upon the raising of money by taxing to provide for the sinking fund?

Mr. ALDRICH. Currently?

Senator SHORTRIDGE. Currently?

Mr. ALDRICH. Yes. In other words, if the current debt is not increased it does not seem to me that it is necessary to count the sinking fund in the deficit. In other words, if you borrow for that sinking fund.

Senator SHORTRIDGE. I think there is much in what you say.

Mr. ALDRICH. I think that at a time when there is such a drain on the Government credit it is a fiscal mistake to attempt to raise taxes to reduce the public debt by sinking fund.

Senator SHORTRIDGE. In other words, let it ride.

Mr. ALDRICH. Let it ride. Borrow to cover it. I think that saves out of the deficit $450,000,000, a year.

Mr. ANDERSON. $498,000,000.

Mr. ALDRICH. Was it as much as that?

Mr. ANDERSON. Yes.

Mr. ALDRICH. $498,000,000.

Senator SHORTRIDGE. That much was set apart for the sinking fund?

Mr. ALDRICH. Yes. As a matter of fact I think that the Treasury reports of the present time are both ways. But I think that the way I refer to is sound, under these conditions.

If the Congress and the Treasury give definite and convincing evidence of their intention of dealing with this problem with full responsibility, they will strengthen the credit of the Government and, in my opinion, the Government bond market will take what bonds are really necessary for the meeting of this emergency. If, on the other hand, there is an evasion or failure to grapple with the problem earnestly and courageously, or light-hearted adoption of a borrowing program without consideration of this point, the Government will speedily find its securities sinking in the market and the market wholly unreceptive to new issues except at very high rates. The credit of the Government is basic to every other credit, and we must protect it unflinchingly.

Apropos of that, Mr. Chairman, here is my answer to the question which Senator Couzens was raising as to how far the Government can go in borrowing. It can go a good deal farther if it cuts expenditures and increases revenues than it can if it does not. To say more than that is difficult. The market will tell you by its own behavior as you proceed. If you overdo it you will have to pay higher rates of interest and you will find the markets increasingly reluctant to take new issues even at higher rates of interest.

Government borrowing is necessary for emergency credit relief, and for loans to the States, to give direct unemployment relief. I recognize and would emphasize the responsibility of the whole country for the suffering millions who, through no fault of their own, are victims of this great depression.

But we must not overstrain the finances of the Government and we must not jeopardize the credit of the government by proposals of a great government borrowing program for new public works on the theory that this will start a business revival. The Government's credit can not stand a great deal of that in addition to its necessary borrowing.

Further, we do not need government borrowing for new public works to start a business revival. If we move promptly to restore our export market for farm products and raw materials, we shall get a business revival quickly, and such government borrowing will be unnecessary. If, on the other hand, we use government borrowing as a substitute for the restoration of the export market, in the hope that we can force a revival of business merely by spending borrowed money, in a country whose industries are badly unbalanced, the borrowing and the spending will be ineffective.

## INFLATION BY FORCED EXPANSION OF BANK CREDIT

I should avoid further artificial efforts to force an expansion of bank credit. It was forced expansion of bank credit from 1922 into 1928 which was responsible for a great part of the present trouble. The renewal of government security purchases by the Federal reserve banks following the break in 1929 and especially in early 1930 was responsible for the false stock market boom in early 1930, and the renewal of excessive security issues which complicated very much the difficulties in the period that followed.

I strongly sympathized with the Glass-Steagall bill, and with the Government security purchases by the Federal reserve banks in the panic of the spring of 1932, especially when the foreign run on our gold was on, as a means of preventing further forced liquidation. But heavy excess reserves, in the absence of confidence, will not force bank expansion. On the other hand, in times when confidence is normal and when borrowers (especially speculators) are ready to borrow at low rates, and when banks trust the security offered, excess reserves of from fifty to one hundred millions mean cheap money and rapid bank expansion. Excess reserves of five hundred or six hundred million dollars, in a period of reviving confidence, would be exceedingly dangerous.

The volume of bank credit in the country does not depend alone on the volume of bank reserves. It depends also on the temper of the business community, which is governed by the prospects of business, and on the movements of goods and on the prices at which goods move. Given the restoration of the export trade and revival of agricultural and raw material prices, credit will expand rapidly. There is no use trying further to force it from the other end by an artificial increase in bank reserves.

Nor is there any use in trying to increase the volume of currency in circulation by paying out more paper money. If the paper money is redeemable and confidence in the gold standard is not shaken by this, it will not stay in circulation but will merely pile up in banks. If the paper money is issued in such amount as to shake confidence in the gold standard, the effect would be forced liquidation and tightened credit.

### STATE AND MUNICIPAL TAXES AND EXPENDITURE

The Federal Government, even though reducing expenses sharply, will still have to have increased taxes in view of the present low returns from taxes and in view of the necessity of providing for interest for additional borrowing. The States and local governments, on the other hand, in many cases can reduce taxes, and this is particularly true of rural local governments, where the tax burden has grown so enormously in recent years, and where the farmer pays the bulk of his taxes. I am told of one farm in an upstate New York county where taxes in the last year have been reduced from $380 to $200, due to vigorous action by the county commissioners, who have cut salaries and sharply reduced the county expenses.

Our local government has been a haphazard growth rather than a businesslike adaptation of government to needs. Areas in many cases are altogether too small. They were set in horse and buggy days. There are many places where groups of small counties could be combined into one county, with the elimination of several sets of officers. There are many unnecessary road districts and school districts, each with independent sets of officers. There are immense possibilities of curtailed expenses in the cities. Even with the additional burden of direct unemployment relief which is thrown so heavily upon local government by this great depression, I am satisfied that the possibilities of saving are so enormous in the general field of local government that the total of the taxes can be radically cut. Much is being done in many States looking toward this development, and the Federal Government might very well use some of its existing instrumentalities for the study of what is going on, giving publicity to it, and acting as a clearing house for information regarding it.

I understand that the Ways and Means Committee of the House has just done that. I did not know that when I wrote that. That they are making a study of the whole tax situation.

Senator SHORTRIDGE. That is to say, consolidating counties, doing away with many individual counties and individual sets of officers?

Mr. ALDRICH. Well, that is the theory of this. But what the committee of the House is doing is studying the taxes as between the States, the municipalities and so forth, and the Federal Government.

The CHAIRMAN. And most of the States have got all the taxes they can pay now.

Mr. ALDRICH. Yes; that is true.

### INTERNATIONAL GOOD WILL

We should move as rapidly as possible and contribute as much as we can toward bringing about peaceful relations throughout the world, so that nations will be willing to go in for a thorough going lightening of the burden of armament. I do not think that we shall contribute to this by peremptory demands, that other nations disarm, because such demands may even intensify the fears that have led to the excessive armament. In general, it is far more fear than lust for dominion that accounts for excessive armament.

TYING TOGETHER VARIOUS REMEDIES

In connection with the programme which I have outlined above, the desirable thing seems to me to be to accomplish all of them as rapidly as possible. When it comes to doing one conditioned upon some country doing another, I would be thoroughly opportunistic, bringing them together if it facilitates the transaction, and separating them if the effort to tie them together creates difficulties.

In connection with tariff revision, I think that there is a great advantage in tying our reductions and reductions of other countries together by reciprocal tariff agreements. I believe that public opinion on both sides of the water will be much readier to move in this way.

I think it might be difficult to tie together the settlement of interallied debts with a disarmament programme, and that disarmament will be much easier to achieve when business recovery is already under way and when nations with a new economic hope are forgetting their fears and hatreds. It is noteworthy, for example, that, as between France and Germany, the era of good feeling was also the era of business prosperity, from 1924–25 down toward the end of 1928.

When it comes to international negotiations, it must be remembered that public opinion in every country is sensitive, that there are many points of national pride involved, that no country will accept dictation from any other country, and that public opinion in every country needs to be educated to make the necessary concessions to national pride in other countries.

The CHAIRMAN. Is there anything else you wanted to say, Mr. Aldrich?

Mr. ALDRICH. No, sir.

The CHAIRMAN. We thank you very much.

Mr. ALEXANDER LEGGE.

## STATEMENT OF ALEXANDER LEGGE, PRESIDENT INTERNATIONAL HARVESTER CO., CHICAGO, ILL.

Mr. LEGGE. Senator, I haven't any prepared statement; merely a few little notes on things that I thought you might be interested in. And if you desire to have a record of what is said you will have to depend on the reporter to get it.

The CHAIRMAN. He will get it all right.

Mr. LEGGE. I would first add to the many statements that have been made to this committee on the desirability of balancing of the Budget, based on the thought that what is wrong with us to-day is not so much a lack of money as a lack of confidence, and that as long as there are question marks passing around both at home and abroad with reference to the Government financing it has a very depressing effect on public confidence as a whole.

Following that, just one suggestion on the possibility of how to do it. I am not reaching this on quite the same basis as others. I do not think that the fact that the Government may be running behind a little in times like this is a matter that should cause alarm, if it does not last too long. Pretty much everybody else is running behind when they analyze their own business at the present time. But looking to the future it is my notion that we are facing a period of lower prices and lower earnings, and that perhaps too much of our Federal income is depending on one source—that is, the income tax. The incomes are constantly shrinking, many of them entirely vanished, and of course if there is not any income the tax does not avail us anything.

Now it has been my experience to transact business in a great many countries who are depending to a large extent on what has been so frequently discussed here, and so far always turned down, and that is the sales tax. They do not always call it the sales tax. It goes by various names in various places. But it is a large source of revenue in many countries of Europe, Germany, France, Italy, Belgium, in our neighboring country of Canada, and in most of the Latin-American countries, as we call them, to the south.

Senator WATSON. Have they a universal sales tax, as we understand that term, Mr. Legge?

Mr. LEGGE. No. It varies a great deal. In France it is practically a universal sales tax.

Senator WALSH of Massachusetts. That means a turnover tax, does it not?

Mr. LEGGE. Yes; turnover tax.

The difficulty with it, gentlemen, is where they pyramid it, and if such a thing would be considered to be adopted I would put in a plea to try to find some place where you collect at the same time for all, either at the source of production or at the place of final distribution.

Senator WATSON. Like an excise tax?

Mr. LEGGE. Yes. Because when we pyramid it, it results in all sorts of schemes to evade it, by setting up coopertaives, and buyers' associations wherein the manufacturer theoretically sells direct at retail, in order to avoid the jobbers' or intermediate turnover tax, and it is quite a trade-disturbing factor when that practice is followed out. Therefore, whether you go to an excise tax or manufacturers' tax or retailers' tax as is practiced in the State of Mississippi at the moment—either one extreme or the other appeals to me as being the soundest basis to apply.

Senator WALSH of Massachusetts. Do you not think, Mr. Legge, that regardless of our opinions on that question, that it is useless to spend any time proposing it as a remedial measure in view of the attitude of the President elect on that subject?

Mr. LEGGE. Of course I have not any close contact with the gentleman.

Senator WALSH of Massachusetts. You have read it in the press.

Mr. LEGGE. I have read his statements, but they can not all be true, Senator, because they are conflicting, a good many of them that we read, and so some of them must be a mistake.

Senator SHORTRIDGE. Are they authoritative, Senator?

Senator WALSH of Massachusetts. I thought he had made it rather clear that he was against the manufacturers' excise tax.

The CHAIRMAN. First he was for it and then after that he made a statement that he was not.

Senator WALSH of Massachusetts. However, that does not prevent your urging it and discussing it, but I mean, after all, we all have sense enough to know that no program of reform is going to go through here unless it has the support of the man who comes to the presidency with a new mandate from the people.

Mr. LEGGE. Certainly. The most frequent objection that I hear is the question of spreading it on to the lower earning group. That would be true if it were the sole tax. It is not. And I think that all taxes could be well considered together. In the income tax if we only had a normal, universal income tax that would also be true, but when you pyramid it some twenty-three times, as the income goes up, why you take care of the disparity between the lower earner and one of more liberal income.

Senator WALSH of Massachusetts. All the bills that have been before the Congress, Mr. Legge, with which you are undoubtedly familiar, in this session, or that were before the Congress in the last session, went to extremes in eliminating any burdens upon the mass of the people, on those of small incomes, from paying this tax. Of course the real objective in a manufacturers' sales tax is to tax luxuries, extravagances, and spendings.

Mr. LEGGE. That is correct. And yet perhaps the greatest source of revenue that is yet relatively untouched is the ability of many people to pay their little.

The CHAIRMAN. In 1925 I had the Senate vote upon the sales tax, a manufacturers' tax, and then a retail sales tax, and in that law we eliminated all farm products from any kind of a tax. And last year we eliminated a number of items. Of course at that time I only received a few votes for that bill in the Senate.

Senator WALSH of Massachusetts. In the proposal we had last year we eliminated all food, all clothing, farming tools, and supplies, in fact every single thing was eliminated that the small-income receiver provides himself with, except one item—furniture. And it seemed to be impossible to distinguish between a cheap piece of furniture and a mahogany table, and to eliminate that was allowing those who spend hundreds of thousands of dollars in elaborate furniture to go untaxed. We discovered that the average family in America refurnished their house about once in 20 years. And that the item allotted from his wages for furniture is a very small percentage.

The CHAIRMAN. Yes.

Senator GORE. Mr. Legge, Germany has a turnover tax.

Mr. LEGGE. Yes.

Senator GORE. It is an elaborate system. It is almost universal except as to luxuries. Germany does not tax luxuries under her system of taxing, on the theory that luxuries are voluntary con sumption and that a tax on voluntary consumption would diminish consumption, cut down manufacturing, turn labor out of employment. That is their theory.

Mr. LEGGE. France, on the contrary, Senator, reverses it. Their normal tax is from 2 to 4 per cent on most articles, but it runs up as high as 20 per cent on luxuries. They are exactly the reverse of the German.

Senator SHORTRIDGE. What do they define luxuries to be?

Mr. LEGGE. Well, silks and perfumery, and even your meals if they go above a certain price in the hotel are subject to a luxury tax.

The CHAIRMAN. And jewelry above a certain price.

Mr. LEGGE. If you have a room at a hotel that you pay more than a certain amount of money for there is a luxury tax on that. It is supposed to be a de luxe room.

Senator WALSH of Massachusetts. I can not see any objection to putting a heavy tax on luxuries.

The CHAIRMAN. We will come to it sooner or later.

Mr. LEGGE. Well, just passing that subject. I think you should give serious consideration to putting a very small rate on a large number of things. If you will try that. My judgment is that that is working better around the world than when they have a very high rate on just a few things. Our Canadian friends have changed theirs, as you probably know, very frequently. They exempt something this year and put it back on the tax list next year and exempt something else. They have been doing that constantly.

Senator WALSH of Massachusetts. What would you exempt? Would you exempt any great class or group of purchasable or usable things?

Mr. LEGGE. I would not. I would put a low tax on everything right straight along the line.

The CHAIRMAN. In 1929 I made an inquiry as to what kind of goods, if taxed at the rate of 1 per cent the tax would fall on the ultimate sale. There was at least one-third of goods on which it would never make a particle of difference to the consumer. For instance, just to mention one case. Patent medicines, with a 1 per cent tax, if the price of that medicine is 50 cents a bottle the consumer never would pay 50½ cents. It would be 50 cents. And there is a long list of them.

Senator WATSON. In other words, it would be absorbed by the manufacturer or the man who sells, and not passed on to the consumer.

The CHAIRMAN. Yes.

Senator WALSH of Massachusetts. There is $1,000,000,000 of money that is received in income by tax-exempt security holders constituting the rich and luxury-living portion of our population, and the only way you can ever reach it is to tax it when they spend it. Tax them heavily when they spend it for luxuries.

The CHAIRMAN. Yes.

Senator SHORTRIDGE. But under existing law they are exempt.

Senator WALSH of Massachusetts. Absolutely exempt.

Senator SHORTRIDGE. The bill you referred to provided for exemption of many things.

The CHAIRMAN. I said that. All the farm products.

Senator WALSH of Massachusetts. I feel we are unfair to you, Mr. Legge, by digressing so much.

Mr. LEGGE. Not at all. If it develops the subject, that is what we are all here for.

My next subject is that of banking, and I wish to appeal to the press over there not to make any black headlines of this particular statement. I want to talk frankly about it, but at the same time not pessimistically.

Senator GORE. Well, you are a good advertiser, Mr. Legge.

The CHAIRMAN. You have got it now.

Mr. LEGGE. That has not been my experience here. Don't try to fight with them.

Senator WALSH of Massachusetts. These boys have heard so much of troubles the last few weeks that they are getting tired of it.

Mr. LEGGE. The press have always treated me well. Don't put a loud speaker on some of the comments that I am going to make.

I think that next to the balancing of the Budget, and perhaps at the moment even more urgent than the balancing of the Budget, is to give us a better banking system, or a banking system. Perhaps up until two years ago we might have been justified in the belief that with the broadening of the Federal reserve and improvements we were making, that we would stand the test. I do not believe that anybody is justified in holding that opinion today. What has happened is chaos, and orderly liquidation, which is taking place in other countries, quite as severe as our own, as far as that is concerned, is intensified by the enormous amount of money that has been tied up in failing banks, plus the enormous amount of money that is being hoarded, and I fear that that is increasing today more rapidly than any time since the trouble started. To my way of thinking, our banking system has not stood up in the face of the conditions that we are now going through. And I think it is one of the most urgent things, and, fortunately, it is one of the things that is within the power of Congress to remedy.

Senator WALSH of Massachusetts. What is the remedy?

Mr. LEGGE. Well, there may be several, Senator. My own idea would be much along the recommendation of the Secretary of the Treasury—branch banking by natural trade areas.

Senator WALSH of Massachusetts. Pardon me, Mr. Legge. You are proceeding upon a course of remedies that should be worked out over a period of time. I would like you to direct our attention first, or some time in your testimony, to what immediate step to-day or to-morrow we can take to prevent the dangers that seem imminent in the banking world.

Mr. LEGGE. I can think of nothing, Senator, but a general moratorium such as has been put into effect in Nebraska and Iowa in the last two weeks, and I presume in Michigan to-day. That is what they were expecting. I have not seen whether that has occurred there or not.

Senator WALSH of Massachusetts. Thank you. Now proceed with the general development of the theory.

Mr. LEGGE. The theory of branch banking by States does not appeal to me, because trade areas do not follow State lines. For instance, a State like Missouri has two large cities, banking centers, one of them on each border. Much of their business is outside the State. Limiting it to State lines they could not properly care for it. I think a natural trade area is the best definition. Next to that the present Federal reserve district would be much better than State lines.

The situation is so serious that I would go further than anybody has gone yet.

Senator WALSH of Massachusetts. I appreciate, Mr. Legge, the arguments in favor of branch banking. But this has troubled me. In my humble opinion one of the chief causes of our present conditions in America can be summed up in one word—bigness.

Mr. LEGGE. Bigness?

Senator WALSH of Massachusetts. Bigness; yes. The expansion of corporate control, the consolidation, the reconsolidation of industries and businesses and banks and all our financial institutions, which has resulted in terrific overcapitalization and led to a great deal of the speculation that we have had. A good deal of the speculation has been merely through consolidations. Now, it seems to me, that that is a very serious problem, whether we have not gone altogether too far in creating these big units. And I am suspicious and distrustful of them. Yet the proposition that comes to us from the banking world is "Give use"; "Create bigness for us"; "Give us control of all the moneys of the people through a few powerful banks." I would like to get your reaction to that suggestion.

Mr. LEGGE. As far as my contact with the banks goes, Senator, they do not want it. The two classes—the small banker, who is more or less in distress and does not want to disclose his position perhaps, is opposed to it; the large banker, who feels that he is strong enough to weather the storm on his present basis, for selfish reasons does not want it. At least the majority of them do not want it.

I do not believe that regional, natural trade-area banking would result in institutions as large as many that you have at the present time, Senator. I think it would have a tendency to decentralize rather than further centralizing.

Senator WALSH of Massachusetts. But it would remove ruthless competition, you think, and would give the control of limited fields to banks that could be put upon pretty sound and secure bases, is that your theory?

Mr. LEGGE. Yes. They would have to be member banks, whether State or national, of the Federal reserve system, under Federal supervision.

And then I am prepared—since the last six months—to go still further: Having assumed the authority, that we follow it with at least a partial responsibility. In other words, a partial guarantee of deposits.

Senator WATSON. What do you mean by "partial," Mr. Legge?

Mr. LEGGE. Well, I go to three-fourths of the deposits. I would not like to take away from the depositor and from the initiative of the banker any incentive for improved methods or better service, or any reason on the part of the depositor to say that it did not make any difference where he put his money, that the deposits were all guaranteed so he might as well put it with Smith as with Jones. But I want to do away with a situation that ties up the depositors, as we have them tied up in our town to-day, having closed nearly 200 banks in the last three years. Thrifty people who have been accumulating savings for a lifetime, hoping to take care of themselves in their old days are out on the street, on charity, and their money is gone because the bank is gone. That is a disgrace to any civilization or any nation. And unfortunately we have had an awful lot of it, and we are still having more.

Senator WATSON. Do you know how you can word a law to guarantee three-fourths of the bank deposits and let the other one-fourth go unguaranteed?

Mr. LEGGE. Guarantee each depositor up to 75 per cent of the amount of his deposits.

Senator WATSON. That is as to the individual depositor and not the deposits as a whole?

Mr. LEGGE. Yes.

Senator GORE. You might guarantee in full the smaller deposits, say less than $1,000. It is those little depositors who put actual money in the bank that get frightened and start these troubles.

Mr. LEGGE. I was going to add, Senator, that in the case of the savings depositors, which comprise that class largely, I would go the whole distance on the small savings depositor and guarantee all of it. They tell us it has been tried out in three or four States and had failed. But it was doomed to failure. The people who had to pay the loss had nothing to say about granting the charter, they had nothing to say about the supervision; they were never called into action until the inquest after the bank had failed, and then it was too late.

Senator GORE. But State units would be too small, even if the principle were sound.

Mr. LEGGE. Yes; I think that is true. But I think that the smallest fraction of 1 per cent conceivable for a charge or tax on deposits would protect the Government against all loss under a properly supervised banking system.

Senator WALSH of Massachusetts. Of course there would have to be first the original organization, and the supervision would have to be very thorough and very rigid in order to compel all the taxpayers of the country to guarantee 75 per cent of the deposits.

Mr. LEGGE. Yes, sir; it should be.

Senator WALSH of Massachusetts. You would have to begin at the very beginning of the organization of these structures.

Senator WATSON. In other words, to keep our irresponsible men and fly-by-night operators who want to get into the business.

Mr. LEGGE. All these banking systems trace back to the old Scottish banking system, where the banking fraternity plus government officials comprised the banking board. Every application for a charter was passed upon by this board, of which other bankers were members. They had to show that there was an opportunity and a need for a bank, a sort of convenience and necessity certificate. They had to show that they had sufficient capital and management before a charter was granted. Then this same board handled the supervision.

Senator SHORTRIDGE. A continuing supervision.

Mr. LEGGE. A continuing supervision; and, believe me, the oldest inhabitant never heard of a bank failure in that country.

Senator WALSH, of Massachusetts. You would have to limit this guaranty to Federal banks, would you not?

Mr. LEGGE. That is a debatable question, Senator, as to whether State banks which may be members and subject to all the regulations of the Federal reserve and control, might not be admitted.

Senator WALSH, of Massachusetts. The trouble with the State banks, as I have observed it since I have been in public office in my own State, is that there exists in every State in the Union a group of political lawyers who make it a business, through influence, to get State bank charters, and a great many of these banks that are now in trouble are what you might call political banks, and there would be no way for the Federal Government to control that situation, would there?

Mr. LEGGE. No; except that they need not admit them to the Federal reserve system. Those that do not measure up to the standards need not be admitted, and would not come under the guaranty unless they were.

Senator GORE. A political bank is almost bound to fail.

Mr. LEGGE. We have them even worse than that.

Senator GORE. That was the trouble in Oklahoma. It was a political bank. An ex-State banking commissioner got in and got hold of the new bank, and the treasurer made the State deposit with it, and it broke down. The thing that puzzles me is some system under which you can place honest and competent bankers on a different footing from dishonest and incompetent bankers. That has defied every theory I have tried to work out. There is a difference there, and if you ignore it, you are doing an injustice.

Senator WALSH, of Massachusetts. You have been trying to get a civil service test in the ethics of individuals.

Senator GORE. Yes.

Senator WALSH, of Massachusetts. You can not do that.

Mr. LEGGE. In the average State bank to-day, you know, a man does not have to pass any examination of any kind, but just simply be a good fellow, and he gets his charter by asking for it. He has to pass an examination to drive a taxicab, but he can go and invest a few dollars in a roll-top desk and start a bank.

Senator GORE. He can start a bank and then get elected to Congress, without any preliminaries.

Senator WALSH of Massachusetts. My friend Senator Townsend suggests that the guaranteeing of deposits by the Federal Government would ultimately mean the elimination of all State banks.

Mr. LEGGE. If that is necessary in order to have a sound banking system, let us eliminate them. I do not know that it is, but if it is necessary in order to have an improved banking system, we had better take it.

Senator TOWNSEND. Would not that naturally follow, Mr. Legge, as a natural consequence?

Mr. LEGGE. Yes, unless State banks were admitted to the Federal reserve, and also the guaranty. Some of them might be if they qualified.

Senator WALSH of Massachusetts. The control of the currency is such an important Federal function that you think they would be justified in taking such action as might lead to the elimination of individual State banks from having the confidence of the public.

Mr. LEGGE. Yes. The trouble with us is not lack of money. It is lack of confidence to-day. We do our business in normal times on credit. Credit is not only shaken; it is broken.

Senator WALSH of Massachusetts. Proceed.

Mr. LEGGE. The next subject that occurs to me that you gentlemen were gathering information is this one of international debts. I do not think it is anywhere near as important as it is generally supposed to be, myself—nowhere near as important as putting our own house in order at home. If we get things right within our own boundaries, we might well pass over some of these things.

Senator WALSH of Massachusetts. I share that opinion.

Mr. LEGGE. I think at the time that these obligations were determined under the theory of capacity to pay, they were probably put too high, and some adjustment will eventually be necessary. But if you reduce them to-day on that same theory of capacity to pay, you would not get a cent, because they can all make a showing that they have no capacity to pay anything. In other words, I think any revision in the immediate future is apt to be far too low, as compared with a reasonable basis, just as they are now too high.

The CHAIRMAN. They were not too high when the settlement was made.

Mr. LEGGE. How is that?

The CHAIRMAN. Do you think they were too high when the settlement was made?

Mr. LEGGE. In view of subsequent events, I do not think they were based upon conditions that then prevailed, and what was ahead of us.

The CHAIRMAN. Everybody thought we were too liberal.

Senator WALSH of Massachusetts. The time to collect a debt, or to readjust it with one of your debtors, is not when the debtor is down and out.

Mr. LEGGE. No, sir.

Senator WALSH of Massachusetts. But it is better to postpone the question of readjustment and the question of settlement until he is in a financial position where it will be more profitable for you to understand his capacity to pay.

Mr. LEGGE. Absolutely. If it were my responsibility, I would decline to discuss it for a period, say, of five years. I would declare a definite moratorium and forget it, and when things quieted down and we got on a more normal basis, I would take up the subject and discuss it.

Senator WATSON. That means cancellation.

Senator SHORTRIDGE. You used the phrase "capacity to pay."

Mr. LEGGE. That was the basis of the adjustment, was it not, Senator? Theoretically?

Senator SHORTRIDGE. Yes; but these several nations agreed that, as of a certain time, they owed us so much money for supplies and so much for money advanced in cash. We took into consideration the capacity to pay when we gave them 62 years in which to pay, at a low rate of interest.

Mr. LEGGE. And reduced the amount somewhat.

Senator SHORTRIDGE. Certainly.

The CHAIRMAN. Somewhat? We got it down to 17 per cent.

Senator SHORTRIDGE. We took into consideration then this much-talked-of capacity to pay.

Mr. LEGGE. Yes. It was taken into account then.

Senator SHORTRIDGE. And we were more than generous. We were just extravagantly generous toward them.

Senator WALSH or Massachusetts. We think so. They do not.

Senator SHORTRIDGE. I am tired of hearing about this "capacity to pay." I want them to pay, and I think they could if they were disposed to do so.

Mr. LEGGE. If they were to cut down their military budgets about 6 per cent, they could meet their obligations without difficulty.

Senator GORE. France defaulted on the payment to us in December of about $19,000,000.

Mr. LEGGE. It would make a very slight reduction in the military machine in the case of most of them.

Senator TOWNSEND. Did you say 6 per cent?

Mr. LEGGE. I have seen that figure. I can not verify it, Senator. It is not large.

Senator WATSON. There is no question that the figure is not large.

Senator SHORTRIDGE. I hope our incoming President will harken to the wise suggestions of Senator Lewis, of Illinois, on this subject of international debts, and not commit himself and embarrass himself and embarrass the Democratic Senate in the days to come.

Mr. LEGGE. The next topic I have marked down is that of tariffs. By all the rules of the game I ought to be a free-trader. For forty-odd years I have been in business where we had no tariff protection within this country ourselves. Everything we make is on the free list, or has been, and yet we are up against tariff barriers every place we try to export our goods, or at least most of them, so my training has not been that of an advocate of extremely high tariffs.

The CHAIRMAN. So, free trade did not help the importation of foreign goods, did it?

Mr. LEGGE. No. Aside from all that, it is my judgment that the tariffs cut but little figure in the present debacle that we are going through. Somebody has to have an alibi, and they are a very convenient one. I have been dealing in foreign business for many long years, and I can not remember the time when you could not find somebody complaining about the American tariffs and what they were doing to his particular business somewhere else.

The real trouble is economic trouble, financial trouble. As Mr. Aldrich told you this morning, prior to the war they were creditor nations. They had an interest balance coming from us, with which they could very conveniently pay for raw materials and foodstuffs.

At the close of the war, they sat around the tables in Paris—I happened to be in the Government service at the time, and listened to much of this—discussing the question of how they were going to maintain the value of their currencies in view of the fact that they had not only to buy raw materials and food from abroad, but also send abroad interest. They started out from that day to try to become more self-contained, and they have done a very good job of it. They did not protect themselves from going off the gold standard, but they have become very largely self-contained. Two of the greatest importing countries of those days, France and Germany, are self-contained, or were self-contained in 1932. They did not have to import any grain.

The CHAIRMAN. A great deal of it is produced from American money, American investments.

Mr. LEGGE. Lots of it has been by American money. But, however it has been done, much of it is by substitution. They make them eat potatoes and rye, and Manchurian beans, and any old thing, by making the price of flour so high that the poor fellow can not buy it. It is a very simple process, but it has been going on constantly.

I differ with my friend Mr. Aldrich here as to the possibilities of getting back this foreign trade in farm commodities, aside from cotton and tobacco. Those, I think, we will get back. I think we can raise cotton in this country as cheaply as it is raised anywhere in the world, and when we have it raised, it is right close to the seaboard. In the case of wheat, of course, the situation is reversed. It is all raised far from seaboard, with a heavy carrying charge to get it on the dock and there are plenty of places where it can be raised on a standard of living that I hope the American producer will never have to face.

I happen to be quite familiar with what those standards are, because I have mingled with them and lived among them at various times. I do not believe we are going to get back that large export business we used to have, except on a few commodities, agriculturally.

Senator GORE. It is being raised in some countries where the standard of living is high, for example, in Canada and Australia, and yet they compete successfully with our farmers and put them out of business. We have high land, high taxes, and high labor. They have cheap land, lower taxes, but their labor is as high as ours.

Mr. LEGGE. Canada has cheap land, but their labor is not much different from ours.

Senator GORE. That is the point I make. Their labor is as high as ours, but the land and taxes are cheaper.

Mr. LEGGE. Their financial situation on that export is very serious, and they have not the way out that is open to us. They have only 10,000,000 people to feed, and they are producing half as much wheat as we do.

Senator GORE. They have less choice to diversify.

Mr. LEGGE. They have less choice to diversify.

Senator WATSON. What has been the effect of the Ottawa Conference in that respect, Mr. Legge?

Mr. LEGGE. They are giving a small preferential, Senator, but they have always had a preferential. Manitoba hard wheat, in itself, carries a preferential. It is the preferred grain on the part of the millers of the world. On top of that, they have now a little tariff preferential on what they ship to Great Britain—not very large.

Senator WATSON. Has it really added to the volume of commerce of the Dominion?

Mr. LEGGE. I think it has improved it somewhat. They have increased it somewhat.

Senator WALSH of Massachusetts. But you cannot measure, under present conditions, what that volume would be under better conditions.

Senator WATSON. That is quite true. I was speaking only of the present.

Mr. LEGGE. I think that is neough on that subject. I may be all wrong about it, but what bothers us worse than any tariff is this fluctuating currency. You do not know when you start a shipment what kind of money you are going to get for it when it arrives. In some places, you do not know whether you will be permitted to remit it, even if you do get it. In other words, there are exchange controls in practically every country in South America at the present time. You are not allowed to remit the money at any rate of exchange, except as a control board may feed you out a little percentage now and then, and it has been only now and then that we have been getting anything.

The CHAIRMAN. It is virtually an embargo.

Mr. LEGGE. It is virtually an embargo.

Senator GORE. In that connection, is it a fixed policy of your company, or even an incidental policy—you do not have to answer this if you do not want to— to sell your farm machinery cheaper in foreign markets than you do in the United States?

Mr. LEGGE. Senator, it never has been done. That is the greatest mystery in the way of a theory. To me, it is totally inexplainable. That has been investigated by this Congress at least twice, and by the Department of Commerce on the part of the Federal Government, and each and every time they found no foundation in fact for the statement, but the theory goes on.

Senator GORE. Regardless of their investigation, what do you say about it?

Mr. LEGGE. We never have done it, but if this money proposition continues, the disparity as between our value of money and those other countries, we will either have to produce the stuff somewhere else—we can not make it in this country and sell it anywhere else cheaper. That is impossible.

Senator GORE. I can appreciate the difficulties.

Mr. LEGGE. But we might be able to make it somewhere else rather than give up the trade, and supply it at that cheaper source of production.

Senator WALSH of Massachusetts. It is always possible for the retailer abroad to refuse to command as much profit as the retailer in this country.

Mr. LEGGE. That is not generally true, Senator. There is some liquidation, somebody goes broke, or something once in a while, but that happens anywhere around home.

Senator GORE. One thing that inspired my question was the fact that I remember reading an article in one of the Indianapolis papers which undertook to give figures about the selling of farm machinery manufactured in Indiana—I think Newcastle, Indiana—in Australia. They said the stuff was sold in Australia at about one-half of what it was sold for in Indiana. They not only alleged that as a fact, but justified it as a policy, and I remember the article wound up by saying that this policy "keeps the home fires burning." That is the way it was burned into my memory.

Mr. LEGGE. They could hardly have picked a worse illustration, because Australia proverbially, for the last 25 years at least, has been one of the highest-priced countries in the world. The tariffs were the highest of any nation I have known of.

Senator GORE. That might make it more possible, or easier to sell your stuff there and get rid of it.

Senator WATSON. I suppose if products are sold abroad, they must be sold in competition with the prices of the same products in the world, and in the country purchased. We could not send our machinery over there and sell it for twice as much as the same kind of machinery made in that country. It must meet competing prices.

Mr. LEGGE. The answer is that so far we have never had to make a price lower than the American farmer paid for his stuff.

Senator WATSON. You have not had to do that anywhere with the International Harvester Co.?

Mr. LEGGE. Absolutely nowhere, up to the present time.

Senator WALSH of Massachusetts. Has it not been possible, where they have set up factories abroad for assembling parts of machinery—I remember some years ago the sewing machine being used as an illustration, where they established branch factories and shipped parts, and they were able to put the sewing machines together and sell them cheaper abroad than in this country.

Mr. LEGGE. With that class of stuff, they manufacture it abroad mostly. In some of our plants abroad, Senator, we do make certain small tools, not similar to what are used in this country, that are sold at what would seem like very low prices. They are of simple, inexpensive construction. In our standard equipment, we have never had to sell it abroad at less money than here. The only foundation in fact for a thing like that is a case like that when England went off the gold standard. We had sold goods in pound sterling in perfect good faith on the basis of what the same thing was worth when the contract was made, but when we got the money home, it had shrunk 33 per cent. Theoretically, we sold that stuff cheaper. The returns were less, wholly because of the fluctuation of the exchange value in the country in which the goods were sold.

The CHAIRMAN. But since the depreciation of the currency in England, how are you selling the goods now?

Mr. LEGGE. We have to get our return on goods shipped from here on a gold basis. We have to do that to live.

Senator GORE. You are selling on the dollar basis now, instead of the pound basis?

Mr. LEGGE. We have to do that on everything made in this country, Senator, because we are strictly on a gold basis here.

Senator WALSH of Massachusetts. What is your suggestion about meeting this difficulty that you say exists by reason of the depreciated currencies?

Mr. LEGGE. I am hopeful that out of all these conferences and discussions, there will be some international agreement worked out, Senator. Short of that, an adjustible tariff schedule based upon the money value of the goods is the only way I can see out of it.

Senator WALSH of Massachusetts. You would tax all our imports and tariff rates based upon our gold standard?

Mr. LEGGE. Yes; but unfortunately in our particular case we have not any tariff rates, because everything we make is on the free list, and there is no adjustment for either the collector of customs or the Tariff Commission to work on. It is entirely an open season, and there is no possibility of any adjudication that would help us, because the goods are all on the free list.

Senator SHORTRIDGE. All that you import?

Mr. LEGGE. All that we make; everything that we manufacture here——

Senator SHORTRIDGE. Is on the free list?

Mr. LEGGE. On the free list; yes, sir.

Senator WATSON. But not in other countries?

Mr. LEGGE. No. We pay tariffs into those other countries.

Senator GORE. You have no serious competition from abroad in this country, have you?

Mr. LEGGE. Only on a few items. I would not call it serious. It might become so if this disparity in cost of production continues. Today, we could make goods abroad and ship them to this country cheaper than we can make them here. We are not doing it.

Senator GORE. Is there a tendency on the part of the American manufacturers to go abroad to do that sort of things?

Mr. LEGGE. I think there are very few American manufacturers that have produced anything abroad for importation to this country.

The CHAIRMAN. The shoe industry.

Mr. LEGGE. Perhaps in the shoe industry. There is nothing in our line of business.

Senator GORE. Henry Ford did it with tractors.

The CHAIRMAN. He is doing that now. He is making no tractors here at all now. They are all made in Ireland.

Mr. LEGGE. He is doing it to a little extent.

Senator WALSH of Massachusetts. Any number of American industries have branch factories abroad, and sell abroad.

Mr. LEGGE. We have several of those ourselves.

Senator SHORTRIDGE. Is there any free trade country that you know of to-day?

Mr. LEGGE. I think England was the last of any consequence that was strictly on a free-trade basis. They have departed from it now.

Senator SHORTRIDGE. Entirely.

Mr. LEGGE. Pretty much. It was largely a free trade country until quite recently.

Senator SHORTRIDGE. These several foreign industrial countries have not become protective tariff countries since the passage of our Act of 1930, have they?

Mr. LEGGE. Hardly.

Senator SHORTRIDGE. They have been protective tariff countries for years.

Mr. LEGGE. Thirty-odd years, to my knowledge.

Senator GORE. But this recent drift, Mr. Legge, began just after the war, when Germany was called upon to make so many reparations payments. She had to do that with increased exports, and every country in the world, nearly, took fright at this increased threat of German exports, and began to raise tariffs. That is when this modern movement started.

Mr. LEGGE. Yes; but that was accentuated by the matter I have just mentioned, the effort to become self-contained, and protect the value of her own currency.

Senator GORE. There is no doubt about that; and there are seven new countries created in Europe, with 12,400 miles of international boundary, each trying to become self-sustaining, adding productive capacity to a world supply that was over-produced.

Senator WATSON. And the world is living in compartments now.

Senator GORE. Yes.

The CHAIRMAN. Charge it up to the tariff.

Senator GORE. It had a lot to do with it, because a millman running a mill in one of these new countries gets his lumber where he has to pay a tariff now, whereas he formerly did not have to pay it.

Mr. LEGGE. You had a long discussion this morning on inflation. Are you able to stand any more?

The CHAIRMAN. I would like to have you give us your idea.

Senator WALSH of Massachusetts. His ideas are so concisely presented, it is helpful and refreshing to get them.

Mr. LEGGE. My idea is that if we restored confidence, we would discover that we had plenty of money, and would not need to inflate, in a nutshell.

The CHAIRMAN. That is absolutely true.

Mr. LEGGE. I would go further and say that any attempt to control currency with the present banking system we have in this country would be disastrous. It does not necessarily follow that it could not be done. I think it could be done. It is being done successfully in Great Britain to-day, but they have not had a bank failure since the depression started, or many years before. To have a controlled currency, you must have better control of the mediums through which the currency flows than we have in this country at the present time. I think it would be a terrific hazard.

I have been reading a lot of your discussions here. There was one element left out, and that is that the cause that led up to this depression was the switching of the Far East from a silver to a gold basis, which, in my judgment, was one of the important factors in what is happening. That was done just prior to the time these troubles started. Half of the world's population, or more, were depending upon white money as their money, and it did upset things pretty badly, at least for a time.

The CHAIRMAN. That began immediately after the action was taken in India.

Mr. LEGGE. Yes. My recommendation would be to find some way of planning that budget, to find some way of giving us a sounder banking system, and, having done that, you will not find it necessary to go further in that particular line, but if you did have to go further you could do it far more safely than we can as we are set up to-day,

Senator SHORTRIDGE. You say we have to get a safer or better banking system. What concrete specific law have you in mind, or can you suggest, which would bring that about?

Senator WALSH of Massachusetts. He suggested branch banking.

Mr. LEGGE. Branch banking by trade areas, under far more rigid supervision than has prevailed in the past.

Senator GORE. One of these banks, I think, or groups in Michigan, involves one hundred and forty-odd banks, and a little over a year ago, in Senator Shortridge's State, a very large instutition out there found itself in very heavy weather, and had to have a good deal of help. It has 300 branches.

Senator SHORTRIDGE. Approximately. Are you referring to the Bank of America?

Senator GORE. I was.

Senator SHORTRIDGE. The head of which is Mr. Gianini.

Senator GORE. That has caused an earthquake to run through the Nation, through our whole financial fabric, from Boston to Los Angeles. Everywhere the earth quaked and rocked beneath their feet. That is why we hurried up to pass this Reconstruction Finance Corporation law. The outside world did not know it at the time. That was the cause. When a bank like that does down, with 400 branches, it is pretty serious. The last bank that failed in Canada, 10 years ago, brought down 400 branches with it. They say there has been but one bank failure in Canada. That is true, but it brought down three or four hundred branches with it, which are left out of the calculation when you state the number of failures.

Mr. LEGGE. I have not touched, Senator, on the agricultural problem at all. I do not care to, particularly, unless you folks want me to.

The CHAIRMAN. Perhaps, you being so closely connected, for years, with the farming industry, you had better touch upon that subject.

Mr. LEGGE. My judgment is that the American farmer is to-day in a receptive frame of mind to do the necessary thing. Perhaps that is for the first time. I remember three short years ago when I first suggested the regulation of production was inevitable before we could get a solid foundation, I came nearly being chased out of the State. It aroused a terrible storm of indignation. It was heresy to talk about it. To-day the farm organizations are themselves seriously considering it. But there is one fundamental trouble.

In all these leading commodities, we have perhaps 2,000,000 producers of each—wheat, cotton, and various kinds of livestock. We have 2,000,000 people or more raising the same commodities. It is a very difficult thing to bring about any collective action with such a diversified base of operation. We have the spectacle to-day of many industries where there are not over a dozen large manufacturers, selling goods at a loss, indicating that they do not know where to stop when they have to stop. So, when you expect it from this widely diversified group, I think you are expecting too much. My thought is that that might successfully be put across to-day—I think it would be favorably received by the farmer—by the leasing, buying, and putting out of commission, the submarginal stuff, with funds to be provided by an excise or normal tax on the commodity itself, not making any drain on the Public Treasury, but letting the commodity itself be in some form taxed sufficiently to pay for the acreage retired.

I think the burley tobacco situation is the best illustration I know of. There was a very successful cooperative. I have talked to its members, hundreds of them. They admitted that during the period of its operation, they had received for their product nearly double what they had been getting prior to the organization. They also admitted that they were now getting considerably less than the average that they obtained under their organization activities, yet they suspended operations. Why? Because the fellow who did not contribute had the same benefit as the man who did, and personal feeling ran so strong that they said, "We would rather take a loss for what we raise than to help raise the other fellow's price at our expense."

All of which I think could be gotten away from on this theory of renting the surplus acreage, in other words, paying the man who did reduce, and letting the balance of the commodity produced contribute the money to pay the rental.

The CHAIRMAN. You mean the Government will pay the rental on the land upon which he does not produce?

Mr. LEGGE. Yes; and tax the commodity.

The CHAIRMAN. Have you had any estimate made as to what that would cost annually?

Mr. LEGGE. Yes; $50,000,000 would cure the wheat problem. There would be a very small tax on wheat—a processer's tax would raise $50,000,000. The proposal that was before you gentlemen here called for the raising of $200,000,000. The amount of the tariff would amount to over $200,000,000; 25 per cent of that amount would put out of production all the surplus producing acreage in wheat, and still the farmer would be happy with the rental he would get. It is a good deal more than he is getting now.

Senator GORE. Would you rent all the farmer's land if he would rent it, or would you fix the percentage?

Mr. LEGGE. I would fix the percentage somewhat higher than the average, so that the fellow who did not rent any would get the average amount—say 25 per cent, or 33⅓ per cent from those who wished to lease.

The CHAIRMAN. Would such a farmer produce any kind of crops on it?

Mr. LEGGE. None whatever. It would be out of commission. It might be thrown back into grass, or summer fallowed to preserve the fertility of the soil.

Senator GORE. You would not carry that same principle to manufacturers who were producing surpluses?

Mr. LEGGE. I only wish I could, but it does not work out so well when you try to do it. I wish it might be done.

Senator GORE. Do you think you could start with one class, and stop with another?

Mr. LEGGE. I do not think we are entirely without precedent in that, gentlemen.

Senator WALSH of Massachusetts. I was impressed with what you and others have said about handling the wheat problem in that direction, but my mind went back to the potato growers of Aroostook County, Me. They would be asking for the same principle, and so would the apple orchard people of New England, and so, I assume, would the lemon and orange growers of southern California, and the growers of other citrus fruits, as well as nuts, I suppose. I am sure they would be, if the Senator from California was still a Member of the Senate. The difficulty is, where shall we stop?

Mr. LEGGE. It is startling. I can see no serious difficulty on any annual crop. When you come to your citrus trees and apple trees, which involves leaving a tree stand idle, or tearing it out, you have a different proposition.

Senator SHORTRIDGE. It is ruined unless it is cared for, pruned, and properly cultivated.

Mr. LEGGE. I respectfully submit, Senator, that if we could cure the rest of the trouble, as far as the annual crops are concerned, it would make a far better market for the citrus grower and the apple grower than he has to-day. He would indirectly benefit by it.

Senator SHORTRIDGE. The result of that plan would mean an increase of——

Mr. LEGGE. Consumption.

Senator SHORTRIDGE. An increase in price to the consumer.

Mr. LEGGE. Absolutely.

Senator SHORTRIDGE. On the given article—wheat, for example.

Mr. LEGGE. Yes, sir.

Senator WALSH of Massachusetts. And he, in turn, would have more purchasing money.

Mr. LEGGE. I had a peculiar experience along that line last April. A group of banker friends were taking lunch with me in Paris, and they were commenting on the Tardieu government going too far in the tariff on wheat. I said, "What is the trouble?" Well, it was raising the cost to the consumer. They were smuggling bread across the Belgian boundary. It was rather ineffectual smuggling, as far as that is concerned. They could make only a few centimes. I said, "What does it all result in? What is the price of it?" We sent out and got a fair price circular issued by their Department of Commerce twice a month, and the price of a pound loaf of bread on that day was the same in Paris and Chicago—5 cents of our money. The average price of their wheat had been $1.73 for the preceding 12 months.

Senator GORE. In France?

Mr. LEGGE. In France; but the pound loaf of bread sold for the same nickel that you paid for it here, when you reduce it to a gold basis, on the same day, most of which is in distributing expense. We wrap it up in cellophane or wax paper and put it on the breakfast table——

The CHAIRMAN. Or slice it.

Mr. LEGGE. Or slice it. Over there, the maid goes down to the corner bakery and carries it home in an open basket, or under her arm, and there is not even a string attached to it. There is no expense to it whatever.

Senator GORE. That leads you to the conclusion that you could raise the price of wheat here to $1.70 without a material increase in the price of bread?

Mr. LEGGE. I would not go quite that far. I would say you could raise it to $1.40, and guarantee that there would be less than half a cent difference in the price of a loaf of bread.

Senator GORE. Bread handled in the bakeries.

Mr. LEGGE. Yes.

Senator SHORTRIDGE. In regard to leasing the land and retiring it from cultivation, is it assumed that the Federal Government has the constitutional power to do that thing?

Mr. LEGGE. I am not a lawyer, Senator, but why shouldn't it have? The Federal Government had the power to grant hundreds of millions of acres of that land to the railroads, who developed agricultural departments to sell it, under alluring terms, for settlement, without any regard to whether there was any income in sight for the man who bought it. They have opened it to homesteads, and encouraged them to homestead it all over the country, and created a situation, through their own cooperation or influence and sympathetic support, similar to an overbuilt factory. When we overbuild a factory, we have to dispose of some of it, because it is always a burden.

Senator SHORTRIDGE. The land referred to was then public domain.

Mr. LEGGE. Public domain.

Senator SHORTRIDGE. It is now in private ownership.

Mr. LEGGE. You might have to set up an organization for that purpose. I believe it could be done.

The CHAIRMAN. Thank you, Mr. Legge.

Mr. LEGGE. If you have no further questions, I will not take more of your time.

Senator GORE. One more question, Mr. Legge. Let me ask you this: In the farming implements you turn out now, are some of them the same, in detail, as they were in 1913, for instance?

Mr. LEGGE. No; I do not think we have anything that is the same in detail as it was in 1913.

Senator GORE. What I wanted to get at was this: You have heard and I have heard a great many statements about the price of farm implements going up as products went down; that they have not gone down since 1913, corresponding to other products. I always think the facts are the best things we can have in an investigation. I was going to ask if you could submit a schedule of farm implements, with their prices in 1913, and a corresponding list of implements now, with their current prices. One trouble is that the things have been altered, and you do not get a real comparison. Is that not the trouble?

Mr. LEGGE. That has been gone into by a bunch of college men from some of the large agricultural colleges quite recently and quite exhaustively, and I think they have filed, or are about to file, a report with the Department of Agriculture on that subject. I would recommend that as being disinterested, inasmuch as we did not make it. It was not an implement manufacturer that prepared it. But, broadly speaking, Senator, here are the facts: All automotive machinery, tractors, trucks, and that class of stuff, is selling to-day at far less than pre-war prices. With respect to horse-drawn tools, and especially small tools, they are not. They are substantially above pre-war prices. There has been some increase in the cost of design and cost of production, but that is not the big factor. The big factor is that the country is now consuming about 10 per cent, in quantity, of that class of stuff, compared with what it consumed in the pre-war days, and on that small turnover you simply can not get the cost you could with a large volume.

Senator GORE. If the farmer's purchasing power were increased through increased prices, he would undoubtedly be a customer for a large output, would he not?

Mr. LEGGE. We hope so. We certainly hope he will be.

## STATEMENT OF JOHN A. SIMPSON, PRESIDENT, NATIONAL FARMERS UNION, WASHINGTON, D. C.

Mr. SIMPSON. Mr. Chairman and gentlemen of the committee, it is my understanding——

Senator GORE. Do you hold any position in connection with any farm organization in the country?

Mr. SIMPSON. Yes. I am president of the National Farmers Union. I have given the reporter a copy of what I am saying, and it is headed that way.

Senator GORE. Have you a copy for each member of the committee?

Mr. SIMPSON. The newspaper men have got them all away from us.

Senator WALSH of Massachusetts. Tell us briefly what that statement is, of your own activities, your own background.

Mr. SIMPSON. For 14 years I was president of the State Farmers Union of Oklahoma, and now I am in the third year as president of the National Farmers Union. That covers about 30 States.

The CHAIRMAN. With headquarters here?

Mr. SIMPSON. With headquarters here in Washington when Congressmen and Senators are here. Our national headquarters are at Kankakee, Ill., where our national secretary keeps the office.

It is my understanding that you desire from those whom you have called before this committee to diagnose conditions in this Nation and suggest remedies.

Before I begin that part of my statement, I call your attention to the fact that the farmers and laborers of this Nation compose 75 per cent of the total population. I also call your attention to the fact that from this 75 per cent you have only asked four for their advice and counsel and we four received belated invitations. I do not know how many you have invited altogether, but the newspaper reports have given such statements as indicate that we four are not 5 per cent of the number invited, although we represent 75 per cent of the population.

Senator SHORTRIDGE. The chairman undoubtedly felt that you four were quite competent to represent the 75 per cent.

Senator WALSH of Massachusetts. The chairman is not a member of the committee. I think the difficulty was that the subcommittee was composed of men who have other interests than farming interests.

The CHAIRMAN. I want to say to the gentlemen here that I have sent the letters at the request of members of the committee. I have made no list up whatever, and I do not want you to think, Mr. Simpson, because you opposed me in the last campaign, that I had any objections to your coming here.

Mr. SIMPSON. I just wanted it to be known that farmers and laborers are rather looked upon as not counting so much.

Senator SHORTRIDGE. That is not so.

The CHAIRMAN. That is not true.

Mr. SIMPSON. Oh, yes.

Senator SHORTRIDGE. Oh, no, it is not, Brother Simpson.

The CHAIRMAN. If you will get that out of your head—the same kind of a statement was made in the campaign—it will be better for the farmers. I want to say that much to you now. I am just as much a friend of the farmer as you are.

Mr. SIMPSON. Listen; I want to say this——

The CHAIRMAN. I do not have so much to say about it.

Mr. SIMPSON. Senator, I want to say this, that farmers everywhere are treated as inferiors.

The CHAIRMAN. Not at all.

Mr. SIMPSON. Absolutely.

The CHAIRMAN. Every time they have come before the Finance Committee, they have received what they have asked for.

Mr. SIMPSON. Listen. The United States Chamber of Commerce over here has a committee on agriculture, as well as every little chamber of commerce in the United States. It is an insult to the intelligence of the farmers, as though they did not have sense enough to run their own business. We Farmers Union folks might just as well have a committee on banking.

Senator SHORTRIDGE. In all good nature, I think you are all wrong.

Mr. SIMPSON. I am good natured about it, but I am just telling how a farmer feels.

Senator SHORTRIDGE. I was born between two rows of corn, and I am a farmer.

Senator WALSH, of Massachusetts. Under the Democratic administration, things are going to be different for the farmers.

Mr. SIMPSON. That is what I think.

Senator SHORTRIDGE. Now we will listen.

Mr. SIMPSON. I also desire to call your attention to the fact that a great number of those invited are the ones responsible for present conditions. They are the ones who believe present policies are sound and are against any fundamental change in policies.

With no business of any kind in the last 18 years except contact work with the people of every State in this Nation, and especially the farm population, I offer the following as my brief diagnoses of the affairs, public and private, of the people of this Nation.

I mean for 18 years I have had no other business except working in contact with not only farmers, but other folks in every State in the Nation.

First. I find the general health of the people of the Nation is good. In fact, it never was better.

Second. I find the intelligence of the common people increasing to a considerable degree. This is not only in the matter of decreasing of illiteracy among the common people but also an increasing interest in public affairs that comes of an increase in intelligence. The common people of this country are thinking more and better than they have done in 50 years.

I can not say as much for the ultra-rich. I find that greed and avarice have almost completely destroyed their power to think clearly. Selfishness has made them as blind as Samson. They have no conception of the condition of the common people of this nation. They evidence no desire to inform themselves.

Senator SHORTRIDGE. I do not want to interrupt, because I am very much interested in what your are saying, but who are the common people in America?

Mr. SIMPSON. There are 125,000,000; and not more than 10,000 ultra-rich any more, because the ultra-rich are cannibals and they swallowed up about 10,000 of their own kind in the last 4 years.

Senator SHORTRIDGE. No one is poorer than I am, but who are the common people?

Mr. SIMPSON. Probably you and I, Senator.

Senator SHORTRIDGE. All right. I am much poorer than when I came here. I may be a little wiser.

Mr. SIMPSON. The only bad thing is when a common fellow thinks he belongs on the side of the ultra-rich. That is the worst feature of things.

Senator SHORTRIDGE. I know the disposition is to think that a man, if he be a millionaire, is necessarily wise. He is, in the accumulation of money, but he may not be in other matters.

Mr. SIMPSON. They can lose it, too, about as easily as the little fellow loses his.

They worship precedents and cling to false gods in a way that positively shows an alarming decreasing intelligence. They cling to error even unto self-destruction. A much higher per cent of the ultra-rich than common people are jumping out of windows.

Third. In the diagnoses I find business developed into a maze of complexities, intricacies, and duplicities that defies the understanding of even those who built them.

Mr. Charles Dawes and Mr. Owen D. Young, in recent statements, have admitted that the institutions with which they deal and help control are so complex that it is beyond their power to comprehend and understand their ramifications.

Mr. John P. Frey, secretary-treasurer of the metal trades department of the American Federation of Labor, testifying before a subcommittee of the Judiciary Committee of the Senate, Senator George Norris of Nebraska presiding, stated that a breakdown of the Chase National Bank showed directors of the Chase National holding directorships in subsidiary banks and directors on these subsidiary banks together with directors of the Chase National holding directorates in 12 insurance companies, 32 manufacturing corporations, 17 railroads, 19 public utilities and 21 miscellaneous corporations. In all the Chase National Bank has an interlocking connection with a total of 2,023 directorships in other banks, insurance companies, manufacturing concerns, transportation companies, and public utilities.

Senator GORE. Do you mean that many different concerns, or that many directors of the Chase Bank are on that many——

Mr. SIMPSON. They hold that many directorates. Some of them hold just one, and some two or three.

Senator GORE. That would mean 2,000 different entities?

Mr. SIMPSON. No. It would mean 2,023 directorships.

Senator GORE. Sometimes three or four on one?

Mr. SIMPSON. Yes.

The CHAIRMAN. Did you hear Mr. Aldrich testify to-day?

Mr. SIMPSON. Yes, sir.

The CHAIRMAN. Did you have any objections to his testimony on the farm question?

Mr. SIMPSON. Oh, yes. He looks at it from the big fellow's standpoint.

The CHAIRMAN. That does not amount to anything, in detail.

Mr. SIMPSON. Your thinking always comes from the approach you make. The basis you start to reason from determines what conclusions you come to. When people start from a different basis, they are not going to come to the same conclusions.

Mr. Frey also stated that a breakdown of the National City Bank shows they hold 7 directorships in aviation companies, 41 in other banks, 104 in miscellaneous companies, 44 in insurance companies, 102 in manufacturing corporations, 29 in transportation companies, 115 in public utility corporations. A breakdown of each of these 41 banks shows that the group under the National City Bank hold 4019 directorships in other banks, public utilities, insurance companies, transportation companies, manufacturing and miscellaneous corporations.

Senator SHORTRIDGE. And you think that is evil, of course, and brings about bad results?

Mr. SIMPSON. It developed the other day that through that maze of intricate and complicated systems, the Insull operations of some of those bankers out there amounted to stealing $50,000,000 from the people, when they knew that they were offering securities that were worthless.

Senator SHORTRIDGE. I gather that you think that is one of the evil results from these facts you have called to our attention.

Mr. SIMPSON. Yes, sir.

Somebody said a while ago that a thing can get too big.

Senator WALSH, of Massachusetts. I used the word "bigness" as being one of the evils of our day.

Mr. SIMPSON. Senator, you are absolutely correct. You can get a thing so big that it is not an economic or a safe or an honest unit. That is one of the things I am complaining of.

Mr. Frey said his investigation reveals these interlocking directorates, both in banking and industry, extend into foreign countries. It further reveals that it extends to every automobile concern with the exception of Ford. It shows it includes practically every railroad, ship company and avaiation company in the United States. It includes practically every public utility in the United States, hundreds of them, and also in foreign countries. It includes a majority of the insurance companies of the United States. It includes every line of manufacturing. It reveals there is scarcely such a thing as an independent concern in the United States. Just a few big bankers completely control commerce, industry and transportation.

Mr. Frey was putting this testimony on for the American Federation of Labor, to show why it was that labor could not sit down across the table now with their employers and deal, because their employers are slaves, and have to ask the big bankers what they can do. That is the purpose that he had in putting that testimony in the record.

Fourth. I find the morals of the country bad socially, politically, and commercially. Crime of all kinds, including murder and suicide, is continually increasing. Business, through control of a large per cent of the press of the country, has corrupted politics.

Senator WALSH of Massachusetts. Can we not put that on the prohibitionists, and not the bankers?

Mr. SIMPSON. I never like to speak about the dying, Senator.

Very little accurate information is available to the people of the country through the press.

It used to be said of honest men that their word was as good as their bond. In business to-day, I do not feel that I am exaggerating when I say my diagnosis shows that to a large extent neither the word nor bond of the average business man is dependable.

Senator SHORTRIDGE. Oh!

Mr. SIMPSON. I have had a hundred business men tell me that. They cancel their contracts when they would not think of doing such a thing formerly, if they found a place to buy cheaper, and so forth. Business is not what it used to be. Out in the west 50 years ago, a perfect stranger could ride up to a store and say, "I want a new saddle. I want a new blanket. I want a new suit of clothes." He would be asked, "Where do you work?" He would say, "I work at ranch so and so down here." The merchant would let him have them, and the storekeepers of those days will tell you that they seldom lost a penny. To-day you could not do that if you had the bond of the rancher.

Senator SHORTRIDGE. That is a mighty sad statement, that in spite of our churches, our schools and our preachments, we are becoming a dishonest people.

Mr. SIMPSON. Our word is not good, as it used to be.

Senator WALSH of Massachusetts. Our churches are diminishing. They are old-fashioned. Religion is going, like everything else.

Mr. SIMPSON. Fifth in a thorough examination covering the whole United States, I find the monetary system in use in this country has completely failed to furnish the people a medium of exchange. Positive proof of this statement is found in the fact that hundreds of municipalities and organizations of the people are issuing scrip because they have no medium of exchange with which to do the business required in their localities.

Senator WALSH of Massachusetts. Is that actually happening?

Mr. SIMPSON. Oh, yes. Right in Senator Smoot's town, Salt Lake City, I visited the Natural Development Association, that has over 40,000 members, and does business of every kind under the sun with scrip which they issue, to pay laborers, to pay farmers for their products, and so forth. They own their own coal mines, and a fleet of trucks that deliver the coal. They own 16 stores, four of them in Salt Lake City and others scattered out over Utah and other States. You can have anything you want with the scrip of the Natural Development Association in Salt Lake City. You can have an operation, from a shave at the barber's, to having your appendix taken out at a hospital, and it is putting men to work.

Senator WALSH of Massachusetts. How has that been kept out of the papers?

Mr. SIMPSON. How is that?

Senator WALSH of Massachusetts. Why has that information been kept out of the papers?

Mr. SIMPSON. Because these big bankers control the press, and they do not want those kind of storeis to get out. But you see little squibs of it. You see where towns are issuing scrip to start their people to work, and some of them are using it on a scrip basis.

Senator WALSH of Massachusetts. That is amazing to me. Did you know it before, Senator Gore?

Senator GORE. Yes. One hundred and forty-four towns are using money of their own.

Mr. SIMPSON. And every day it is growing in numbers.

Some of these organizations now have thousands of members and do millions of dollars of business with their own scrip as a medium of exchange. It has developed that wherever these organizations have sprung up or where municipalities have issued their own medium of exchange that it has resulted in putting hundreds of unemployed men to work.

I find that the present monetary system and policies of government are directly responsible for an army of unemployed numbering 12,000,000 and another army of 9,000,000 only partially employed. I find that our present monetary system and policies of government are directly responsible for 10 cents per bushel corn—that is the average price of corn over the United States to-day, to the farmer—5 cents per pound cotton, 30 cents per bushel wheat, 2½ cents per pound hogs, 8 cents per dozen eggs, 12 cents per pound butter fat and like ruinous prices for other farm products.

Senator SHORTRIDGE. Pausing right there, not to prolong the statement, you have called attention to the low prices of various farm products. You are attributing those prices to the lack of currency?

Mr. SIMPSON. The lack of medium of exchange. The people can not get along on barter, Senator. They have to have a medium of exchange, or else it ruins trade.

Sixth. I come to what I consider the most serious condition in this country and that is the thinking of the average public official and the men who conduct the large business institutions of the nation. It is the most serious for the reason that correction of all other ailments depends entirely upon our average public official and average business man approaching these subjects from an entirely different viewpoint than they have in the past.

You can not correct any of these things until, first, you get to thinking straight here in Washington.

Senator SHORTRIDGE. Truly.

Mr. SIMPSON. For 50 years we have been taught that it is honorable to accumulate great wealth. For 50 years the laws of this country have been such as to encourage the accumulation of great wealth.

Let me give a little personal experience. A stroke of lightning in 1878 widowed my mother. She was 28 years old. She had three little boys. I was the oldest, not quite 7. All through our childhood and young manhood, that good mother struggled to see that we got an education, and she taught us that she wanted us to get an education so that we could make more money and make it more easily. It is a false idea of what an education is for, and yet that is the prevailing education that has existed in this country during the last 50 years. It is all wrong. That is where the thinking is wrong.

There is not one thing in the laws of this Nation that prevents a man from accumulating and getting into his possession all the wealth of the Nation, leaving every other human absolutely propertyless. The accumulating process has gone on until to-day less than 4 per cent of the people own more than 80 per cent of the wealth of the Nation.

Our business men, our public officials, must change their position quickly on this question, or there will be revolution and overthrow of the Government. In 2,000 years, no nation ever reached the degree of concentration of wealth that we have in this country without revolution and overthrow of the government except that nation redistributed the wealth.

I made that statement a year ago in a hearing before the Ways and Means Committee, when they had the tax bill up, and when I had completed my statement Congressman Rainey, who was presiding, went into the detail of it, and he showed how, in each country from the days of Babylon down to Russia, that very thing had happened. I had not exaggerated.

Talking about taxation, there is only one fair basis for taxation and that is ability to pay. That is the only fair test, and the only fair test of ability to pay is net income at the end of the year. It is just as wrong as it could be, as Mr. Aldrich suggests in his statement, to tax the coffee that the poorest woman in the land drinks, or that the blind beggar who stands on the street corner to have you drop pennies in his tin cup, drinks. He goes to buy coffee to take to his hovel that he calls home, and he must pay the same tax that the richest man in the United States pays. There is no test of ability to pay at all. It is wrong. Through inheritance taxes, you gentlemen and the members of the House—the House must start it, of course—have a method by which you can correct the greed and avarice in a man piling up wealth when he passes out.

Senator WALSH of Massachusetts. It would also require stringent laws about gifts in anticipation.

Mr. SIMPSON. Gifts must be included.

Senator WALSH of Massachusetts. I think you agree, from what you have said, that some method should be devised for reaching the incomes that come from tax-exempt securities?

Mr. SIMPSON. Yes, Senator. I am going to say something now that perhaps you may not like. Most of these big moneyed interests that come in here asking for the repeal of the eighteenth amendment, and so forth, are not actuated because they care so much about the eighteenth amendment, but because they want to raise $125,000,000, or $150,000,000 off the poor people that drink beer, because it will relieve them of that much income tax.

Senator WALSH of Massachusetts. I have publicly stated that that motive, and the movement in this country against prohibition, began and developed largely out of the agitation over increased taxes a year ago.

Mr. SIMPSON. Accumulation of great wealth is based on greed and selfishness. Therefore, it should be considered dishonorable and the laws of the land should discourage it instead of encourage it.

You talk about the churches. I read an article to-day where a man said he was going to take his name off the church roll, because he still had an ambition to be rich, and he said, "I would rather go to Hell without my name on there, than to go there being a hypocrite."

Our public officials must realize that the present policies of government have developed because those motivated by greed and avarice have largely controlled legislation. I have plenty of Senator's speeches to justify that statement. You should get your thinking on straight and realize that the most of these big business men rob and steal by virtue of laws that they have promoted.

It is my impression, you should give very little weight to the advice of such men. You should get your thinking on straight and realize that a great many of the economists of this country are beneficiaries of Rockefeller and other foundations. Their advice should have very little weight in the matter of legislation.

An economist is just like an alienist. You can have a murder trial and have all the alienists you want on both sides. You may have a bill presented here, and you will have the highest class of economists in the United States on both sides.

With regard to remedies, The Farmers' Union recommends four bills that have been introduced in the House and Senate as remedies to the conditions prescribed.

First, the Frazier bill, S. 1197, I place this bill first, not as a permanent remedy, but as an emergency measure. Figuratively speaking, 40 per cent of the farmers of this Nation are financially sinking out in the middle of old River Mortgage.

I believe, Senator Gore, you said 15 per cent were distressed.

Senatore GORE. I think that, perhaps, meant 15 per cent of all the farms. Of course, 40 or 50 per cent of them are not mortgaged. There are various figures on the number that are mortgaged.

Mr. SIMPSON. Everyone of them has a mortgage to sink him. The condition of agriculture is such that if you were to give me the best 1,000 acres of land in Illinois and Iowa, the two greatest, richest producing lands of any State, clear of all encumbrance, and tell me, "You have to keep it 10 years, pay the taxes 10 years, and the prices of farm products are going to remain where they are," I would tell you, "I don't want it."

Senator GORE. Certainly.

Mr. SIMPSON. That is the condition. Land that was selling for $300 or $400 an acre, has no value at all to-day. It does not pay the taxes. So, anybody who has a mortgage is sinking because he can not even pay the taxes, and if he has interest to pay on top of that, he is hopeless.

Senator WALSH of Massachusetts. In other words, no farm property to-day under present conditions is worth paying the taxes.

Mr. SIMPSON. In the East, that would not be entirely true. The Eastern farmer did not know that there was a depression until 1929. We farmers out there in the mid-West knew it commenced in 1920. We have been going downhill ever since.

If we are to have small home-owning farms in this Nation in the future we must throw them, as a life-saver, the Frazier bill. This bill will get them to the bank.

It provides for the Government refinancing farm mortgages up to 80 per cent of the reasonable value of the farms on a basis of 1½ per cent interest and a payment each year on the principal of 1½ per cent. It is not immodest for the farmers of this Nation to ask for the passage of the Frazier bill, because this Government has made more favorable loans to other groups in the past.

By the way, the Frazier bill has the backing of farmers to a greater extent that any other bill for mortgage relief.

Senator WALSH of Massachusetts. What is the status of that bill?

Mr. SIMPSON. It has had its hearings, and the report of the committee has not yet been made known.

Senator WALSH of Massachusetts. You do not expect to get action between now and the 4th of March?

Mr. SIMPSON. No. This is just education now. We could not do much in this session.

Senator WALSH of Massachusetts. You are trying to get us to think straight?

Mr. SIMPSON. Yes. The State legislatures of the following States have memorialized Congress to pass this bill: Montana, Nevada, Wisconsin, Illinois, Minnesota, North Dakota, Nebraska, California, Oregon, Indiana, and Arizona, as well as Tennessee, Idaho, and South Dakota—14 States. There is a telegram Senator Frazier sent to a Congressman-elect out in North Dakota to-day, telling him about it.

Senator WALSH of Massachusetts. Do you want that in the record?

Mr. SIMPSON. Yes.

Hon. WILLIAM LEMKE,
*Bismarck, N. Dak.*

Montana, Nevada, Wisconsin, Illinois, Minnesota, North Dakota, Nebraska, Idaho, California, Oregon, Indiana, Arizona on record in Secretary of Senate's Office as having passed Frazier bill resolution. Tennessee, South Dakota passed but not reported to Secretary.

LYNN J. FRAZIER.

Senator WALSH of Massachusetts. Proceed.

Mr. SIMPSON. This Government has lent private steamship companies in recent years millions of dollars, much of it on 20 years time and some of it at less than 1 per cent interest. This Government settled with the European nations on the billions of dollars they borrowed during the war on a much more favorable basis than the Frazier bill provides for financing farmers.

That is the reason I say it is not immodest for us to ask for the Frazier bill. Surely farmers are of more importance to the perpetuity and the prosperity of this Nation than European countries and steamship companies.

Senator WALSH of Massachusetts. Before you leave that, can you tell us, in one sentence, what the Frazier bill provides?

Mr. SIMPSON. It provides for refinancing farm mortgages up to 80 per cent of the reasonable value.

Second. The McNary bill, S. 5027. This bill had the indorsement of the National Grange, the Farm Bureau and the Farmers' Union in the last session of Congress. It was reintroduced in this session.

It provides, first, that the Government shall take charge of the marketing of farm products on a basis of seeing that farmers get cost of production for that portion of their crops consumed in this country. Then the bill provides three ways that the Government may use, or any combination of those three ways, to get farmers cost of production for that part of their crops consumed in this country.

The Farmers' Union part of the bill will be found under title 3 and is headed, "The allotment plan."

The domestic allotment plan is a counterfeit of what ours was. The domestic allotment plan is an unsatisfactory substitute for the Farmers' Union allotment plan. The Farmers' Union allotment plan provides for cost of production for that portion of farm crops consumed in this country. The domestic allotment plan does not even pretend to secure cost of production to farmers. The Farmers' Union allotment plan deals only with the buyer of farm products. That is, the Government deals only with the buyer of farm products.

It provides for the Government licensing the buyers and regulating them on a basis of instructing the buyers what portion of each delivery of a farm crop purchased by them shall be settled for on the cost basis fixed by the Government. Of course, the portion of each delivery not needed for home consumption will be settled for by the buyer on the basis of the world price that day. The domestic allotment plan provides for regulating 30,000,000 men, women, and children on the farms, an impossible proposition, unsound in principle and already doomed to failure.

Senator Gore. Without any motive to police each other, they would wink at each other's violations?

Mr. Simpson. Let me tell you what happened with some of the cooperative commodity organizations. Take the cotton growers of Oklahoma—and it was a big one, and successful. They had a contract with the farmer that the farmer had to deliver all his crop. How did the farmer get out of doing that? The farmer quit farming all the place, and his wife farmed part of it, and it was not his crop—and if he was a pretty good-sized farmer, some of the boys farmed some of it.

Senator Walsh of Massachusetts. They need a little religion down in Oklahoma.

Senator Gore. Either that, or it will hurt the old bachelors. [Laughter.]

Senator Shortridge. Do they not have a community property principle down in Oklahoma?

Mr. Simpson. You would have to have 100,000 employees.

Senator Shortridge. I want to go on record as dissenting from your reflection upon the morals of the farmer. You seem to be appearing for the farmer, and yet you say he is essentially a dishonest man. I deny that.

Mr. Simpson. Senator, the farmer is a human being, like anybody else, and the only reason he is not as big a crook as the big fellow, is because he has not had the opportunity. I think there is a higher per cent of honest farmers than of any other class.

Senator SHORTRIDGE. That may be some palliative, or something in the nature of a defense.

Mr. SIMPSON. He has not had the opportunity, nor the experience.

Senator SHORTRIDGE. I deny it. I claim the farmer is, in general, an honest man.

Senator WALSH of Massachusetts. There are minorities everywhere who are uncontrollable.

Mr. SIMPSON. Certainly. But it would take an army of 100,000 to police the domestic allotment plan, Senator. I believe you will agree with me on that.

The Frazier bill, as I said before, is an emergency and life saver that gets the farmer to the bank. The McNary bill gives the farmer dry, warm clothes when he has reached the bank, and it is permanent legislation. The McNary bill is simply applying the interstate commerce law to agriculture. It has worked for 26 years for transportation. We see no reason why it will not work for agriculture.

Senator WALSH of Massachusetts. What is the status of that measure?

Mr. SIMPSON. That measure was up in the last session, and was sent to the floor of the Senate. It was discussed for three days, right at the last, and sent back to the committee for correction. Of course that meant the death of it. It has been reintroduced, just as a matter of keeping it alive, because we had to wait on these fellows with the domestic allotment plan, but in the special session we hope to get something that will give us cost of production.

Senator SHORTRIDGE. You favor both those bills, I take it?

Mr. SIMPSON. Yes.

Third, thinking men must admit that a monetary system under which, at least, 40,000,000 people are either entirely or partially objects of charity and under which farm products have dropped to less than one-third of cost of production, is not a sound system.

The Farmers' Union offers as a remedy for such a condition the Wheeler bill, S. 2487, which provides for the remonetization of silver at the ratio of 16 to 1.

The United States is the only major country trying to do business on the gold standard basis it had before the World War. All the major countries have either gone off the gold standard or changed their basis of gold standard since that time. All the major countries in the interest of the debtors have cheapened their money with the exception of the United States. Our Government has made our dollar grow in purchasing power until it is impossible for debtors to pay their obligations. Our Government has let our money go up in purchasing power until all other nations can sell their products in this country, but can not buy our products in return.

The Wheeler bill will do more to raise the price of products the whole world over than any other one piece of legislation Congress could pass. If the Wheeler bill were passed, it would mean every European country could pay what they owe us and thus a war menace would be removed.

If the Wheeler bill were passed, China's dollar would be enhanced to where Japan would be glad to cease hostilities. With China's dollar doubled in value, she could alone carry on a successful war against Japan. With China's present cheap dollar, there is great danger that eventually we will be drawn into that war. Here again, the Wheeler bill would avert another war menace. If the Wheeler bill were passed, it would mean three-fourths of the world that now use silver for money would immediately become purchasers of the products of this country.

Senator WALSH of Massachusetts. Before you leave the Wheeler bill, has that bill the support of the farmers' organizations generally?

Mr. SIMPSON. Not up to date. A good many years ago every farm organization and every labor organization in the United States indorsed the remonetization of silver, but at the present time, right up to date, the Farmers' Union is the only one of the farmers' organizations that is making that its specific measure. Some of the rest of them say, "Well, if we could get it, we would be in favor of it," but they think they could not get it, so they are recommending diminishing the number of grains in a gold dollar, and some other things.

Senator WALSH of Massachusetts. There appears to-day to be a movement prompted somewhat by the silver States—and I think that has given many people a prejudice against it, and prevents them from being open-minded in the consideration of it.

Mr. SIMPSON. This is what I find along that line, Senator: I find that the big banking interests, the big moneyed fellows of New York City, own the big silver mines, and they do not want free silver. They would like a little purchasing, but they do not want a bimetallic standard of money, because it makes it harder for them to control the basic money of the country, when there are two moneys, than when there is one.

Senator GORE. There is one point there, Mr. Simpson, that puzzles me. You say that if the price of silver were doubled, it would increase the purchasing power of the silver-using countries like China. That was your statement of it.

Mr. SIMPSON. It increases the cost of production in those countries. Of course, it increases Chinese purchasing power with us, and with any country that has a higher priced money.

Senator GORE. Here is the point that has always puzzled me, and always agitates me about silver: They say that to double the value of silver would increase Chinese purchasing power. The value of gold in the United States has doubled—just what we want to do with reference to silver in China. That has increased the purchasing power of the people who have the gold, but it has wrecked our country, in a way.

Mr. SIMPSON. It has increased our purchasing power. We can buy of China. It has decreased the purchasing power of those that do not have the gold. They cannot buy our products.

Senator GORE. If you double the value of silver in China, the Chinaman who has silver in his pocket would undoubtedly profit by it, but prices would go down as silver went up. That is just what we do not want to do here. Our money is too dear and our prices are too low. We want to cut down the value of money in this country in order to raise prices, and yet we are arguing that we ought to increase the value of money in China, which is what has happened here, in order to help the Chinese and increase their purchasing power, when here the very fact that our gold has doubled in value, we assign as one of the reasons for our troubles. I have thought about that a good deal, and I just can not reconcile the two viewpoints.

Mr. SIMPSON. Senator, there are always two things to keep in mind when you are studying that question. A lot of people get mixed on it.

Senator GORE. I confess I do.

Mr. SIMPSON. I was in France a little over a year ago, and just the other day a Congressman on the Ways and Means Committee said that France, by making the franc worth one-fifth its former value, had not increased prices in France. He said, "I was in France a year ago. I was there 20 years ago." He said, "I could get just as good a dinner for 40 cents in France when I was there this time, as I could 20 years ago." I said, "Congressman, 20 years ago, to get that 40-cent dinner, it took just 2 francs. When you got it a year ago, it took 10 francs. Measured in number of francs, the price of that dinner was five times what it was before. Measured in our money, it was the same, and the difference to the fellow serving that dinner would be only if he was in debt. Then that dinner would pay off five times as much debt as if they had kept the franc on the basis of 20 cents."

Senator GORE. There is no doubt that the deflation of the franc cut down the debts.

Mr. SIMPSON. It practically eliminated domestic debts.

Senator SHORTRIDGE. You believe in bi-metallism, under the Wheeler bill, at 16 to 1?

Mr. SIMPSON. Yes, sir.

Fourth, the Rankin bill, H. R. 13012, provides a medium of exchange with which the people of this Nation can carry on trade. It provides for an issue of paper money by the Government to be known as "Liberty notes." These notes are to be put out by the Government to the extent of bringing the general commodity index price up to the standard of 100. In putting out these Liberty notes, should the general commodity index price rise above 103, then the Government shall retire such Liberty notes until the price index goes back to 100. In retiring the Liberty notes, should the index price fall to 97, then the Treasury shall again put in circulation Liberty notes.

The bill would stabilize the general purchasing power of the dollar at the normal index of 100. It would give both debtor and creditor an honest dollar with which to deal with each other. It would mean that a farmer could pay his debt when due with the same number of bushels of wheat or pounds of cotton as it would have taken when he made the debt.

A dollar that takes a much greater number of bushels of wheat, pounds of cotton, or any other commodity to pay when due than when made, is a dishonest dollar. A dollar that takes a much less number of bushels of wheat, pounds of cotton, or any other commodity to pay when due than when made, is a dishonest dollar.

In one way it is a dishonest dollar to the debtor, and in the other way it is a dishonest dollar to the creditor.

In conclusion, let me say that the Democratic Party the 8th of last November entered into a solemn contract with the farmers of this Nation. In that contract they agreed to do three things:

First, to refinance farmers at lower rates of interest and long-time payment on the principal. It is in the platform. I presented it to the platform committee, and they put it in.

Second, to do everything possible to see that farmers get cost of production for their products. I was there and presented it. I was a delegate to the convention, too.

Third, they promised us a sound currency. We have been told by the party's leaders that the currency we have has too great a purchasing power, that the purchasing power must be reduced. In other words, we must have a cheaper dollar.

That is another contract we farmers had with the leaders at that time, right there at the convention.

The Farmers' Union expects the Democratic Party to completely fulfill each of these three provisions in the contract they made with us in the last election. We consider it a part of the remedy that the contract be carried out to the letter.

I would like to introduce in the record, Mr. Chairman, a letter which illustrates the discrimination practiced against the farmers.

Senator SHORTRIDGE. What is it you want to introduce?

Mr. SIMPSON. A letter from the Reconstruction Finance Corporation agricultural corporation set-up. It is amazing to think that this is all the credit a farmer has.

Senator GORE. What is the point?

Mr. SIMPSON. Let me read it. It is just a short letter. (Reading:)

HELENA BRANCH,
REGIONAL AGRICULTURAL CREDIT CORPORATION,
OF SPOKANE, WASH.,
*Helena, Mont., January 20, 1933.*

Mr. EMORY J. LAROCHE,
*Madoc, Mont.*

DEAR SIR: Please be advised that your application for a loan has had the careful consideration of our loan committee, and that it has seemed inadvisable to allow the loan in the amount for which you applied. However, they have approved a loan to you of $800, to be secured by a first mortgage on your 6 cattle, 2 horses, 7 tons of hay, 4,370 bushels of wheat in bin, your 1933 crops, and all machinery and equipment as listed by the inspector.

It will also be necessary that you give us a first mortgage on your real estate. We will require that your wife join you in signing the note and mortgage.

It will also be necessary that your cattle be branded with your recorded brand.

Trusting this meets with your satisfaction, and upon receipt of such information, the necessary papers will be prepared and forwarded to you for execution.

Yours truly,

P. B. MCCLINTOCK,
*Assistant Manager.*

(Whereupon, at 4.30 o'clock, p. m., the subcommittee adjourned to meet to-morrow, Thursday, February 23, 1933, at 10 o'clock, a. m.)

# INVESTIGATION OF ECONOMIC PROBLEMS

---

**THURSDAY, FEBRUARY 23, 1933**

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
*Washington, D. C.*

The committee met at 11 o'clock a. m. pursuant to adjournment on Wednesday, February 22, 1933, in room 335 Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Watson, Shortridge, Thomas of Idaho, Metcalf, Harrison, Barkley, and Gore.

Senator WATSON (presiding). The committee will be in order. We will first hear Mr. Garvan.

## STATEMENT OF FRANCIS P. GARVAN, PRESIDENT CHEMICAL FOUNDATION, NEW YORK CITY

Senator WATSON (presiding). State your name.

Mr. GARVAN. Francis P. Garvan.

Senator WATSON. Where do you live, Mr. Garvan?

Mr. GARVAN. New York City.

Senator WATSON. What is your business?

Mr. GARVAN. I am a lawyer.

Senator HARRISON. Mr. Garvan is the head of the Chemical Foundation.

Senator WATSON. Yes; I know that. I just wanted to ask what your present relations are with the Chemical Foundation?

Mr. GARVAN. I am still president.

Senator WATSON. Now you may proceed and make any statement you have in mind.

Mr. GARVAN. I know your time is very precious, and I am only going to take up just as little time as I can.

You have asked what I think is the main trouble today. I would say lack of arithmetic and lack of morality. And on those two propositions I have come prepared to speak.

I am convinced that one of the great causes of the panic in its inception, and the main cause of the long continuance and depth of our depression, is the fact that our credit system, the life-blood of the country, is in the hands of a few private individuals without restraint or regulation by the Government, and the further fact that these private individuals have now become controlled in their policies by foreign partners and foreign influences.

The first of these facts was elucidated and proven in the report of the Pujo committee in 1912, and perhaps even better than the report, the significance of the facts developed there was set forth by Mr. Justice Brandeis in a little book entitled "Other People's Money," which was published in 1914. That these facts are as true today as they were then is proven by the fact that Mr. Brandeis has just consented to a new edition of that book without the change of one word. That after his twenty years of rich experience he is willing to reiterate without change his findings in his early book.

159450—33—PT 5——6

These findings were neglected by Congress. The war may have been the excuse, but it is only an alibi. That book showed clearly a cancer in our affairs, and called for a surgical operation. Since that time palliatives and alleviatives may have been applied, but the knife was not used. I believe that the cancer has grown.

These private individuals first and immediately thereafter fed upon frightful war profits. These same individuals became the greatest profiteers of the war—one of the firms, it is said, to the extent of over $700,000,000. Their hold upon American business, American funds, American education, art, music, and ideas has grown steadily. And I believe it is now our duty to free our banking from private control. That it is a government function.

The gold dollar and our credit system—you can use them interchangeably—are our first and most important public utilities. There are two functions of deposit. One, it is the money of the depositor which he should have the right to repossess himself of at any time. Two, each deposit constitutes a part of the well of credit or the savings of the American people. The caring and policing of that well to see that it is not poisoned, to see that it is not run off into waste places, and to see that it is not used in hostility to the best interests of the people, to see that it is available to all those who properly need it, is the business of government, and without such supervision we will have hereafter an increasing and more intensified succession of troubles such as we suffer from to-day.

It is my recommendation, without making any reflection except the highest praise upon all the investigating committees of the Senate and the House and the Congress, which have been doing such splendid work, that we ask Mr. Justice Brandeis, in connection with this committee, and in connection with the new Attorney General, to form a committee which will bring the Pujo Committee's findings up to date. You can not investigate by a committee which can sit only a few hours a day with men like yourselves who are overcrowded and overwhelmed with the business of your Senatorial position, and yet that committee needs your ripe experience and your guidance. That the ripest and best mind to-day I believe is Mr. Justice Brandeis.

If the reports in the papers are true and your Senator Walsh is to be the Attorney General, the Attorney General office has all the facilities without further expense to make a complete investigation, only having public hearings when the facts have been collated and properly examined into and tested. So that we may, as I say, bring the Pujo Committee hearing up to date.

This becomes all the more important when we recognize the fact that the control of credit is not alone a domestic proposition, the control of domestic credit, but we have now got to take control of our international balances. These international balances are to-day in the hands of bankers who are English-American, French-American, German-American. The members of the American firms in many cases are members of the English firms. So that our international balances are something unknown, something secret; the transfers and the strains which are used before you as arguments for either cancellation of debt or other legislation, are an unknown quantity.

I do not want to be thought for a moment or to be considered as criticising or to reflect upon any of the investigating committees. Of course we all agree that they are doing splendid work. No committee did better work than Senator Johnson's committee on the foreign loans. But it stopped at the short-term loans. The cry was raised that that would affect business, if you went into the short-term loans. The result is your findings are only a piece of it. The next thing you know $800,000,000 is still halted in Germany. You do not know how much is anywhere else.

I picked up the report of the American Acceptance Council the other day, dated January 20, 1933, and I find an item there of short-term loans in these days of stress based on goods stored in or shipped between foreign countries, goods that we have no possible interest in whatever—$227,000,000 to-day.

In the first place the difficulty seems to be that the Government has no proper set of books. No balanced ledger has ever been made up. In 1922 the Department of Commerce started to make up a current account for the year, and that has been kept up, and of course is very useful. But no effort has been made to establish how we stood in 1922, and of course it is full of holes due to the private control of the sources of information.

As I say, your short-term loans are absolutely incomplete, and I attempted in coming before this committee to obtain the information as to how much of our money was being loaned abroad to-day.

Senator WATSON. When you speak of short-term loans, Mr. Garvan, do you speak of international loans?

Mr. GARVAN. International loans.

Senator WATSON. Not domestic?

Mr. GARVAN. Not domestic.

Senator WATSON. International?

Mr. GARVAN. Yes; international.

I was answered back that there was a statement made to the head of the Federal reserve bank, but that that was a secret statement. That it did not belong to the public. And therefore I can not judge of its completeness or incompleteness.

Senator WATSON. Of course you do not speak of national loans. You speak of individual loans?

Mr. GARVAN. I am talking about the banking loans.

Senator WATSON. Yes; loans to corporations.

Mr. GARVAN. Yes.

Senator GORE. And you classify as short-term, loans of less than a year?

Mr. GARVAN. Yes.

I have done my best to bring together into a balance sheet the current accounts of the past 10 years. And I have made up a copy for each of the Senators. I will explain it, Senator Gore, as I go along with the items.

Senator Harrison. This will be put in the record.

Senator WATSON (presiding). Yes.

(Condensed statement of the International account of the United States with the World, setting forth our net balance on current accounts, i. e., the balance to be settled by capital, long-term or short-term movements; or gold, for the 10-year period January 1, 1922, to December 31, 1931; and statement of excess of exports of goods and services over imports of goods and services, and comparison of net favorable balances with new foreign loans made and net export of capital through foreign long-term investments, United States with world, are here printed in the record, as follows:)

*Condensed statement of the international account of the United States with the world, setting forth our net balance on current account; i. e., the balance to be settled by capital long-term or short-term movements; or gold, for the 10-year period January 1, 1922, to December 31, 1931*

*Settlement of net balance on current account international balance of payments, United States with the world for the 10-year period January 1, 1922, to December 31, 1931*

| | 1922 | 1923 | 1924 | 1925 | 1926 | 1927 | 1928 | 1929 | 1930 | 1931 | Total |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Credit balance on current account (balance in our favor) | $557,000,000 | $208,000,000 | $802,000,000 | $513,000,000 | $205,000,000 | $588,000,000 | $661,000,000 | $389,000,000 | $716,000,000 | $257,000,000 | $4,896,000,000 |
| Deduct: Long-term investments abroad; net after deducting commissions, bond discounts, and repatriation of foreign securities by foreigners | 756,000,000 | 210,000,000 | 744,000,000 | 753,000,000 | 687,000,000 | 853,000,000 | 1,195,000,000 | 765,000,000 | 345,000,000 | *165,000,000* | 6,143,000,000 |
| Balance remaining in our favor after loans or excess of loans over credit balance on current account | *199,000,000* | *2,000,000* | 58,000,000 | *240,000,000* | *482,000,000* | *265,000,000* | *434,000,000* | *376,000,000* | 371,000,000 | 422,000,000 | *1,247,000,000* |
| These balances were settled as follows: | | | | | | | | | | | |
| By purchases by foreigners of American securities, in our markets | 3,000,000 | 240,000,000 | 11,000,000 | 193,000,000 | 147,000,000 | 158,000,000 | 477,000,000 | 446,000,000 | 50,000,000 | 53,000,000 | 1,778,000,000 |
| By net increase or decrease of short-term funds placed here by foreigners over short-term funds placed abroad by Americans | 375,000,000 | 3,000,000 | 216,000,000 | *61,000,000* | 359,000,000 | (1) | *226,000,000* | 13,000,000 | *485,000,000* | *765,000,000* | *571,000,000* |
| By miscellaneous international transactions not identified by the U. S. Department of Commerce | 15,000,000 | 4,000,000 | *49,000,000* | 36,000,000 | 48,000,000 | *47,000,000* | 11,000,000 | 37,000,000 | 320,000,000 | 124,000,000 | 499,000,000 |
| Net balance settled by gold shipments: To us or by us | 194,000,000 | 245,000,000 | 236,000,000 | *72,000,000* | 72,000,000 | *154,000,000* | *272,000,000* | 120,000,000 | 256,000,000 | *166,000,000* | 459,000,000 |

[1] Due to errors in compilation, the Department of Commerce did not publish this figure for this year. Omission, however, is adjusted through amount of short-term movements published for year 1928.

In other words, Germany's export trade to-day with her resources and only sixty millions of people approximate ours—she, the borrower—we, the lender.

*Excess of exports of goods and services over imports of goods and services and comparison of net favorable balances with new foreign loans made and net export of capital through foreign long-term investments—United States with world*

| | Credits | | Debits | | | New foreign loans and investments | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Merchandise exports | Motion-picture royalties, insurance, and other services | Merchandise imports | Freight paid | Net credit, excess of exports of goods and services over imports of goods and services | New securities publicly offered (net after refundings) | Direct investments abroad | Total new foreign loans and investments | Net export of capital through foreign long-term investment (net after repatriation bond, discounts, and commissions) |
| 1922 | $4,121,000,000 | $46,000,000 | $3,419,000,000 | $79,000,000 | $669,000,000 | $737,000,000 | (1) | $737,000,000 | $756,000,000 |

| 1931 | 2,285,000,000 | 1,488,000,000 | (1) |
| Total | | | 1,331,000,000 |

1 Unknown.

Mr. GARVAN. I feel that this poor attempt will go a good ways to answering a good many of the problems which are bothering you.

The first line is composed of credit which would be settled by an influx of gold to the United States. Arising from the excess of our exports (of goods and services) over our imports (of goods and services). In other words, I have included freight, insurance, and so forth, both ways.

That shows you that in 1922 that excess was $669,000,000.

In 1923, $180,000,000.

In 1924, $886,000,000.

In 1925, $623,000,000.

In 1926, $257,000,000.

Senator GORE. Is that favorable or unfavorable, so to speak?

Mr. GARVAN. That is favorable. That is in the black.

Senator GORE. Including visible and invisible?

Mr. GARVAN. No. Including just goods and services.

Senator GORE. Yes.

Senator HARRISON. Is that what we commonly call balance of trade?

Mr. GARVAN. Well, it all depends upon your terminology.

Senator BARKLEY. The balance of trade does not include services necessarily. Services on the goods.

Mr. GARVAN. I am only talking about the freight, the insurance; and-motion picture royalties go in there to; they are small. I have broken it up in the second schedule.

Senator HARRISON. In speaking generally of the balance of trade it is the exports over the imports?

Mr. GARVAN. Exports over the imports. But in order to simplify the figures I included the insurance and freight both ways, because they really balance, and the goods.

In 1927, $591,000,000.

In 1928, $857,000,000.

In 1929, $607,000,000.

In 1930, $757,000,000.

In 1931, $354,000,000.

That makes a total of $5,781,000,000 in ten years.

Without any other item that would have to be settled by the import of gold or some other form of payment to that amount. But the debits which would be settled by an outflow of gold from the

United States include tourist expenditures abroad, which are as follows:

In 1922, $305,000,000.
In 1923, $280,000,000.
In 1924, $373,000,000.
In 1925, $410,000,000.
In 1926, $406,000,000.
In 1927, $444,000,000.
In 1928, $617,000,000.
In 1929, $638,000,000.
In 1930, $605,000,000.
In 1931, $458,000,000.

Senator WATSON. That is tourist expenditures?

Mr. GARVAN. That is tourist expenditures.

Senator WATSON. Alone?

Mr. GARVAN. Alone.

Senator HARRISON. That is what is taken out of the United States and spent abroad by the tourists?

Mr. GARVAN. Yes. Total, $4,536,000,000. As against our favorable trade balance above of $5,781,000,000.

Then the immigrants' remittances, which is clear gold gone out of the country:

In 1922, $255,000,000.
In 1923, $229,000,000.
In 1924, $229,000,000.
In 1925, $235,000,000.
In 1926, $218,000,000.
In 1927, $206,000,000.
In 1928, $218,000,000.
In 1929, $216,000,000.
In 1930, $163,000,000.
In 1931, $163,000,000.

Making a total of $2,132,000,000 in immigrants' remittances.

Contributions by charitable, educational, and other organizations. There is no use of reading the years there. They amount to a total of $533,000,000.

Payments abroad by the United States Government. That means our naval expenditures in all ports, and so forth.

Senator HARRISON. Well, it means Government employees and other agencies of the Government also?

Mr. GARVAN. Yes. Wherever money has gone for a government purpose. That amounts to $632,000,000 in the 10 years.

Interest and dividend payments on foreign-owned American securities. Now I think I will read the years there, because the run of the years is quite important:

1922, $144,000,000.
1923, $180,000,000.
1924, $192,000,000.
1925, $229,000,000.
1926, $268,000,000.
1927, $281,000,000.
1928, $359,000,000.
1929, $414,000,000.
1930, $300,000,000.
1931, $126,000,000.

Senator HARRISON. It reached its peak in 1929?

Mr. GARVAN. Yes. In other words, a total of $2,493,000,000.

That makes a total of $10,326,000,000 against our favorable trade balance of $5,781,000,000. So that you see in reality for every year for 10 years, other things not being considered, which I will come to later, we have been in the red every year as follows:

1922, $156,000,000.
1923, $645,000,000.
1924, $16,000,000.
1925, $362,000,000.
1926, $730,000,000
1927, $418,000,000.
1928, $445,000,000.
1929, $802,000,000.
1930, $441,000,000.
1931, $530,000,000.

So that for those 10 years we have been in the red $4,545,000,000.

Now how is that settled?

Senator GORE. But all that time, Mr. Garvan, we had on blind bridles and thought we had a favorable balance of trade?

Mr. GARVAN. That is what I made this out for.

Senator GORE. Yes.

Mr. GARVAN. And I will tell you that you may have confidence in the figures. I have taken this to the Department of Commerce and they checked all errors that they could find, so that it is a sincere attempt to give you the best that there is in the Government.

Now how did we pay that unfavorable balance? First was the payment on our war debts. Credits arising through installment payments of interest and principal on war debts to the United States Government are as follows:

1922, $158,000,000.
1923, $259,000,000.
1924, $183,000,000.
1925, $186,000,000.
1926, $195,000,000.
1927, $206,000,000.
1928, $210,000,000.
1929, $212,000,000.
1930, $241,000,000.
1931, $113,000,000.

Or a total of $1,963,000,000.

Senator WATSON. That is the total?

Mr. GARVAN. Yes; that is the total. Now the one thing you want to consider is where you will be without that money coming in on your unfavorable trade balance which undoubtedly will persist.

Interest and dividends on our foreign investments. That means the private investments, long-term bonds, and all kinds of interest on short terms, whatever interest is coming in.

Senator HARRISON. It means location of American plants in foreign countries too?

Mr. GARVAN. Yes. They are included, but I can not tell you that that is accurately included. That amount is assumed to be, by the best figures that we can gather, about seven and one-half billion dollars. But lots of it does not go through our Government figures.

You take, for instance, a company like General Motors here. They can establish a credit with Morgan here. Morgan can telegraph that credit to his London house, and his London house extend it to the General Motors over there, and there is no Government transfer at all. Where you have the international private bankers you are utterly at sea as to those figures, you see. But wherever the transaction of sending plant abroad incurred the transfer of money, Senator, we would find it is somewhere in here. So that I think we can say as a whole it is in here.

Interest and dividends are as follows:

1922, $555,000,000.
1923, $594,000,000.
1924, $635,000,000.
1925, $689,000,000.
1926, $740,000,000.
1927, $800,000,000.
1928, $896,000,000.
1929, $979,000,000.
1930, $916,000,000.
1931, $674,000,000.

Which is a total of $7,438,000,000.

Then the credit balance on current account. That left something to be settled which was settled by long-term investments, short-term capital movements, and the import of gold. And that amounts to $4,896,000,000.

Long-term investments abroad——

Senator WATSON. What do you mean there by short-term capital movements?

Mr. GARVAN. Short-term dollar movements. Transfer of bank balances, or anything of that kind.

Senator WATSON. That is what I supposed it meant.

Mr. GARVAN. Yes. Long-term investments abroad—net after after deducting commissions and bond discount—and after repatriation by foreigners of their own securities amounts to $6,143,000,000.

Balance remaining in our favor after out loans or excess of loans over credit balance on current account, that shows you again in the red in the amount of $1,247,000,000.

Now that red balance was settled by purchases by foreigners of American securities to the amount of $1,778,000,000.

Senator GORE. During the 10 years?

Mr. GARVAN. During the 10 years.

By net increase or decrease of short-term funds placed here by foreigners over short-term funds placed abroad by Americans: We placed abroad $571,000,000 more than they placed here.

By miscellaneous international transactions not identified by the United States Department of Commerce, $499,000,000. We do not know what those are.

Net balance—settled by gold shipment to us of only—$459,000,000 over the 10 years.

Senator GORE. That is the net result, is it, of your preceding statistics?

Mr. GARVAN. Yes. The shipment of gold, $459,000,000.

Senator GORE. Now does that check with the actual record of shipments of gold in and out?

Mr. GARVAN. Oh, yes, sir; that has been carefully checked.

Now what does that position find you in? You find that the foreigners have a balance here of at least one and one-half billion dollars of our securities.

Senator WATSON. In what form is that, Mr. Garvan?

Mr. GARVAN. Well, they are owners of American securities.

Senator WATSON. Are they deposited in the United States?

Mr. GARVAN. Well, they could be taken back or held here in depositaries.

Senator GORE. Government and corporate bonds both?

Mr. GARVAN. Yes.

Senator GORE. And stocks also, I suppose?

Mr. GARVAN. Yes.

Senator GORE. Now Mr. Garvan, I do not want to divert you, but but in 1931 when England went off the gold standard and there was such a break in stock prices here, was that not due largely to dumping of these securities here in our markets?

Mr. GARVAN. Yes. That is what I am going to say, that through our policy of foreign loans, and so forth, and through our ignorance of this balance sheet and what it shows we are constantly at the mercy of the foreigner who has this big balance of securities and can throw them on our market and withdraw his gold, whereas our foreign investments are mostly frozen, and largely depreciated.

Senator GORE. Last July when stocks turned up and advanced for several weeks, that was due to Europe's buying our stocks, was it not?

Mr. GARVAN. It was so reported.

Senator GORE. Buying back the stocks they had dumped?

Mr. GARVAN. It was so reported. I could not say.

Senator GORE. The stocks they had dumped in the fall before.

Mr. GARVAN. That is what they said; there was much foreign buying.

Now you take your tremendous item of $674,000,000 in interest and dividends on foreign investments in 1931. We know now that our foreign investments are at least 50 per cent sour. About 27 per cent have defaulted. But their values have gone down about 50 per cent. So that where you got $674,000,000 to balance your National Budget in 1931 you must expect a large diminution during 1932. It was impossible for me to get those figures. I may be able to get them later. If I do I will add them to the diagram.

So that again your balance becomes much more endangered.

You know the foreign-debt situation.

Senator WATSON. I do not know whether we do or not.

Mr. GARVAN. So that when you hear the Englishman talking, and the Frenchman talking, of the difficulty of exchange, it does not exist. It is a fake. You know it is a fake when you hear their first remark, that they do not want to pay. And when a debtor says he does not want to pay, you know every other representation after that has got to be looked into with great care, and its truthfulness tested.

Senator GORE. I had a letter from a friend in London not long since, saying, with regard to these intergovernmental debts, that they are something the American people talk about and the English people laugh about.

Mr. GARVAN. We will not laugh about them if they come off our balance sheet, because, you must understand that it is an easy deduction to make, that if they succeed in canceling the public debts, the war debts, so-called, the next step will be cancellation of a large part of the private debts.

Senator GORE. A large part of these so-called war debts were incurred after the armistice.

Mr. GARVAN. Certainly.

Senator GORE. The rest having been canceled.

Mr. GARVAN. Even if they were incurred in the war, they saved the lives and the liberties and the homes and the integrity of England and France.

Senator GORE. But that has been charged off already, and forgiven.

Mr. GARVAN. That depends on how you figure your interest.

Senator GORE. Except as to England. She still owes part of the war debt proper.

Senator WATSON. What are the total foreign and private debts?

Mr. GARVAN. The total foreign and private debts are supposed to be $15,000,000,000.

Senator WATSON. Are they not greater than that?

Mr. GARVAN. $15,000,000,000 or $16,000,000,000. I am not talking about the national debt.

Senator WATSON. I am talking about both.

Mr. GARVAN. The whole thing would be about $26,000,000,000. When you are talking about canceling war debts—that is what you are talking about, canceling—you will find that in their mind also, it is not the $270,000,000 a year all the countries would owe us on the war debts. That is not the issue.

Senator WATSON. Mr. Garvan, I would like to ask you this question: I quite agree with the general statement you make, but I am wondering why you think the cancellation of foreign debts means the cancellation of private debts as well?

Mr. GARVAN. Because it means the destruction of integrity. They can not give you an honest reason for canceling their war debts. What are you going to say to Chile, for instance, in the terribly disastrous condition that they are in? Are you going to say to them that they should pay if the two richest creditors in the world, England and France, can get away with it? You inspire every debtor throughout the world to do it, particularly if we consent to it and do not denounce it as an immoral proceeding.

Senator WATSON. You think, then, as far as that is concerned, the two rest practically on the same basis from the moral standpoint?

Mr. GARVAN. I certainly do, except that the war debts are much more sacred than any trade debts. A debt incurred by me to save the roof over my home, and the lives of my children, and the liberty of my descendants is much more holy than a debt I owe for cigarettes.

Senator GORE. You think when you destroy the sense of obligation as related to one debt, you do it as to others?

Mr. GARVAN. I do; and I do not think your destruction of morality will stop at your foreign debts. I think it will go right over into your own domestic debt structure, because if the Englishman and the Frenchman does not have to pay his debts, how can you expect a poor farmer to pay his? You know how the people are struggling to pay their debts to-day, drudging and sacrificing and selling. These people are not asked to make one sacrifice.

Senator GORE. If you forgive these debts, then you tax these fellows who are struggling so hard to pay their debts here.

Mr. GARVAN. When you are considering foreign trade, you should not fail to consider the fact that immorality has been introduced into foreign relations; into the relations of trade. We do not know how far the present depreciation in foreign trade is due to the fact that the whole contract system is at stake in the settlement of these government obligations.

Senator GORE. It is a sort of creeping moral paralysis?

Mr. GARVAN. Yes. I ask permission to append to my statement remarks made by me February 1, 1933.

Senator WATSON. Permission will be granted.

There are two basic facts which we must understand thoroughly if we would build intelligently: First, immigration is at an end. To-day we have more emigrants than immigrants and I believe it be the fixed policy of the American people that this state of affairs continue for a long time to come.

Therefore, all the problems known as the foreign-born problems are either worked out or working themselves out. We are rapidly becoming a homogeneous American people. Of our 120,000,000 but 13,000,000 are foreign born, and of these all but four or five million are citizens. We have only about 750,000 foreign born under the age of 21. Foreign-language newspapers are disappearing rapidly. Political appeals to foreign born are now known to be entirely ineffectual. Foreign influence among our people is principally confined to the sycophancy of our so-called social classes and to the selfishness of our international bankers and the newspapers they control either through financial influence or social flattery.

I repeat, we are fast becoming a nation of over 100,000,000 American people, proud of our history, of our traditions, and our liberties; with all the possibilities of self-containment and contentedness; without envy or fear of the outside world, but determined to play our part honestly and sincerely in contributing to the moral and spiritual progress of the world.

The other great fact we must not lose sight of is the increase of education in America. Take the span of my own life. In 1890, about the time I graduated from high school, there were 357,813 children in our secondary schools. In 1930 there were 4,779,868 To-day over 55 per cent of our children, of high-school age, are attending high school, and this percentage is constantly increasing. In 1890 there were 156,755 boys and girls in colleges, to-day there are 1,085,798. In but a few years secondary education will be practically universal, and it is estimated that about 25 per cent of our oncoming youth will soon be enjoying college education.

For a moment it might be interesting to compare these figures with those of France and Germany and the United Kingdom. The population of France, Germany, and the United Kingdom to-day amounts to about 150,000,000, as against our own population of 125,000,000. We have, roughly, 5,000,000 high-school students; they have but 1,500,000. The colleges of the United States to-day have a million students; France, Germany, and the United Kingdom, even with their greater population of 25,000,000, have only one-fifth as many, or 210,000.

Considering these two great facts—and they must be always considered together—we find facing this country to-day a homogeneous population and a homogeneous universally educated population. Don't bother for the moment about the quality of that education, it will constantly improve with the supply of graduates. I have seen our chemists grow in 14 years from about 15,000 to about 30,000, and I know the improvement in chemical education during that time. In the four years ending June, 1933, 1,000,000 graduates of colleges have come on the market for teachers and from now on the supply will constantly improve the quality of teaching in all lines.

Thus, I repeat, we face a country of a homogeneous population of universal education of an ever-improving quality, a country of universal resources; to-day we could close our doors and produce everything necessary for our existence, our comfort, and our development, with the exception of coffee, tea, and tin—a country of universal resources of power—water, coal, natural gas, oil, petroleum, etc.; of fertilizers—nitrates, potash, and phosphates; of all metals except tin; universal means of communication—roads, railroads, water communication, air routes, telegraph, telephone, radio, and so forth and so on. * * *

Mr. Garvan. I would like to read just one paragraph from an old and admired colleague of yours, Senator Morrow, in an article which he wrote in Foreign Affairs in January, 1927. He says:

> There is no international sheriff, but there still remains our reliance upon good faith, our reliance upon that law which is older than statute law, the acknowledged custom of mankind. The credit of governments is not easily built up. It may easily be shattered, and it must never be forgotten that there are rules of conduct accepted by the silent approval of civilized man, the breach of which hurts the one committing the breach much more than the one against whom it is committed. If good faith can not be relied upon, it is better that the loan be not made. The words with which Hugo Grotius closed his great book more than three hundred years ago are true:
>
> "Not onlv is each commonwealth kept together by good faith, but that greater society of which nations are the members. If faith be taken away, the intercourse of men is abolished."
>
> I thought that might be appropriate.

Senator Watson. Assuming that all that is true—and a large part of it we must assume to be true—what do you propose to do about it?

Mr. Garvan. I will tell you what I propose to do. In the debt-funding agreement which was made and ratified by your body, those gentlemen headed by Senator Smoot attempted to do one thing, or two things. They attempted to be merciful. They attempted to figure out the capacity of these governments to pay, not to pay the first year, but to pay each year over 62 years, so that each year became a question of the solvency of those governments during that year. Then they said another thing: "These debts were incurred by borrowing from my American people. You have got other government debts incurred by borrowing from your own people. We insist, in these agreements, that they be put on exactly the same basis, and therefore we insist upon putting into those agreements, the following statement."

In the prior paragraphs, they had settled the thing by the payment of bonds of the denomination of some $4,000,000,000 each, but they said, upon the request of the United States Treasury, that those $4,000,000,000 bonds must be reissued in any denomination which we ask, any amount of them that we ask, as fits the necessities of America. And in the case of France, France had a further stipulation that she agreed to see that they were put on the marts of France in exactly the same position as her own bonds. If that had been done—for instance, in England's case, the agreement was signed in 1926—if those bonds had been reissued in the form and style of the English Government bond, and a market for a few of them had been established during the boom years, you would sit here to-day possessed of $11,000,000,000 of bonds of these foreign countries in a form and shape marketable in the markets of the world. You could place them on the marts of London or Paris just in proportion as they refused to pay, and just in proportion as raids were made on our international position in gold.

If there is any string to that, it is not in the four corners of the agreement. I asked Mr. Crisp of Georgia if there was any secret agreement. He said aboslutely no. You Senators knew of no secret agreement, or you would not have ratified it without making it public.

I wrote to Secretary Mills during the campaign and asked him why that had not been done, and he wrote back to me and called me a German hater, something which had nothing to do with the proposition. The only satisfaction I got is that he said my premises and my conclusions were unsound. That is not an answer to an American citizen.

Senator GORE. He did not challenge your reasoning?

Mr. GARVAN. He did not challenge my reasoning. I can put into the record his correspondence.

Senator GORE. It would be interesting. Put it in.

Mr. GARVAN. I waited until after the campaign was over before I published it, because it was not a campaign issue.

Senator GORE. Attach it to your statement.

Mr. GARVAN. I will attach his letter.

Senator GORE. It has already been published, I believe you said?

Mr. GARVAN. Yes.

Senator GORE. Then there would not be any objection to it going into the record.

Mr. GARVAN. No; there could be no objection.

OCTOBER 18, 1932.

Hon. OGDEN L. MILLS,
*Secretary of the Treasury, Washington, D. C.:*

I am about to issue comment on President Hoover's Des Moines speech in which he said that at some time between July 1, 1931, and June, 1932, the Nation was within two weeks of chaos and the destruction of our democratic institutions. He also said that this catastrophe would have been caused by our inability to remain on the gold standard owing to the power of Europe during that year to draw on our gold supply to the amount of over $1,000,000,000.

In that speech President Hoover states that he personally brought about the moratorium and the standstill agreement.

On June 20, 1931, President Hoover issued a statement as follows:

"From a variety of causes arising out of the depression * * * there is an abnormal movement of gold into the United States which is lowering the credit stability of many countries. These and the other difficulties abroad diminish buying power for our exports and in a measure are the cause of our continued unemployment and continued lowered prices to our farmers. * * * The essence of this proposition is to give time to permit debtor governments to recover their national prosperity. I am suggesting to the American people that they be wise creditors in their own interest and be good neighbors."

I assume the same reasoning applied to the President's bringing about the standstill agreement.

In other words, by the moratorium and standstill agreement, President Hoover halted what was owed to us abroad, 250,000,000 on the foreign debt payments, 650,000,000 short-term loans representing goods sold by Americans abroad, or 900,000,000 of the 1,000,000,000 drawn out by Europe and claimed to have brought us to our knees.

The annual report of the Secretary of the Treasury for the fiscal year ending June 30, 1931, shows, page 543, that in the Government's box on that date were bonds of the foreign governments to the amount of over $11,000,000,000, consisting of four billions of bonds of Great Britain, three billion eight hundred million of bonds of France, two billions of bonds of Italy, and the rest scattered. The debt agreements signed from 1923 to 1926 by the governments issuing these bonds provided that upon notice to these governments they are compelled to issue for the purpose of sale to the public replacing bonds in any small denominations the United States may require. This power has no strings on it, certainly not as between this Government and any foreign government. If there are any domestic regulations limiting or restricting this power to throw on the public such amount of these bonds as serves our interest, Congress by a joint resolution, if applied to, could remove any such conjured restriction. I intend to argue from these facts that by the President's deliberate action our safe position as a creditor nation on June 20, 1931, fully able to amply protect the gold standard, was deliberately changed by President Hoover in an endeavor to aid Europe and that his acts reversed our situation and brought on any possible menance which he claims came upon us during the succeeding year.

I also intend to charge that after he deliberately brought about the drain of gold he could have stopped it at any time by giving notice to France, England, Italy, and others that they must reissue their bonds in our Treasury in smaller denominations for sale in the public marts. The bonds of England and France were then selling in the public marts in the amount of twenty billions and ten billions of dollars, respectively, at par, at the rate of three and a half and four and a quarter per cent, respectively. The withdrawal by Europe of our gold could have been exactly offset by the sale of sufficient number of their bonds.

I have conscientiously searched for any unfairness in these propositions and before I publish them I am asking for your comments. If I am wrong, I certainly will not make the charge. If I am right, the American people are entitled to know it. In my statement, if I make one, I will publish your answer or my telegram and the lack of an answer.

FRANCIS P. GARVAN.

---

OCTOBER 19, 1932.

MY DEAR MR. GARVAN: I have your telegram of October 18 in which you inform me that you are about to issue a partisan attack on the President's policies, and ask me to comment on the character of the attack. This is a little unusual, but since you ask me I am only too pleased to state that your premises and conclusions are without justification.

May I add that you have probably been led to this faulty line of reasoning by the vindictive hatred which you have for Germany and everything German which impels you to resent the undoubted help rendered the distressed people of Germany and the world by the President's 1-year debt payment suspension proposal.

Sincerely yours,

OGDEN L. MILLS.

If there is any string that I know nothing about, which is covered by our own legislation, you gentlemen can cure it overnight; but that possession of those $11,000,000,000 of bonds in the United States Treasury's hands changes our position from the cringing one that it is to-day, into a position where you can dictate the policies of the world, if you want to, and where your gold standard is as safe as a church. It is the neglect of the Government to carry out the intent and purpose of those agreements, that is the whole answer to England's plea of inability to pay, because if those bonds were on the marts of the world, they would have the same value as the English bonds to her own citizens. The refunding commission intended that the American citizen should take the same lot in life as the British citizen who had loaned to his government. There are $10,000,000,000 of those English bonds to her own citizens out to-day, and they sell at par, at a modern refunded rate of less than 3 per cent, I think, or something very low. France has about $5,000,000,000 of her bonds to her own citizens, selling at par. I have forgotten the rate. I think it is figured at about 4 per cent. We have the bonds, and they are called worthless. So that, there should be no debt conference, or there should be no world economic conference until the representatives of America who sit in either hall, have in their pocket the full rights that they have under the sacred treaties which you have approved between France and America, and between England and America. It changes the face of the negotiations. They are not coming over here to discuss debt reduction. They are coming over here to discuss bond repudiation.

I just wanted to show you what a delicate thing that trade balance is. For instance, rubber can throw you right into the red, right away. Rubber is now selling at 3 cents. The import cost only $73,000,000 in the year 1931, but England has control of rubber when she gets together with Holland. In 1926, they had the Stephenson plan, and they sold us about the same tonnage, which cost us $505,-000,000. How do you know rubber is going to stay at 3 cents? If it goes back to what it was in 1925, it could throw $400,000,000 against your international balance sheet. The same thing is true of coffee.

The second recommendation I make is with respect to the stock exchange, for it is the capial account on the ledger, not only of our country, but of every individual or his job. I say that to allow it to be run as a private club, with no supervision, is a travesty on sound business. Make it an open and free market. Admit it is a gambling house. Gambling is not a sin, but enforce the fullest information and the strictest rules of play.

Senator GORE. It is just a mistake when you lose, is it not?

Mr. GARVAN. Yes. It is necessarily a gambling house, and those who conduct it are necessarily dealers. Eliminate marked cards, false faro decks, electric roulette wheels, and loaded dice. Make those who seek to invest on that mart or to gamble on the mart, gamble with their own money. Let us be honest, and call a spade a spade. Life is a gamble. All business is a gamble. Fluctuating values will always be gambled upon, but let us have the fullest sworn information on the cards that are being dealt there. Let the corporations be audited before admission, or continuing admission, and if we have no power in our Congress to set up such an exchange, I can guarantee the votes of two-thirds of the States in support of such an amendment to the Constitution.

Another suggestion I would make on this debt settlement, is this: You have my best attempt at a balance sheet here. I would like to see the balance sheets of France and England, and put them right alongside it. Then you can discuss intelligently as to whether they are in a financial position to pay.

One other suggestion I have, is to guard carefully your capital profits tax. It is said that $100,000,000,000 is the depreciation of our stocks and bonds.

Senator GORE. How much?

Mr. GARVAN. $100,000,000,000, they say. Of course that is not accurate, but, at any rate, figuring it on the loan value, I figure it at about $60,000,000,000—the difference between brokers loans in 1929 and brokers loans to-day, and figuring the percentage that they might be. Twelve per cent of the comeback will make your treasury position look much better.

A lot has been said about the Government in business. That is not the trouble. The trouble is banking in business and the trouble is not even so much banking in business as it is private bankers in business through the control of the banks. Government in business is not a dangerous thing. Government in banking is a necessary thing.

For 14 years, as you know, I have been connected with the chemical industry in America. We have always considered that we were a Government-controlled industry. We were founded by the Government, due to the emergencies of the war. We came to Congress and they gave us an embargo first and then high tariffs. You yourselves spent $100,000,000 developing nitrates. You spent $1,000,000 in discovering potash. We have always lived along, fighting our fights together, until to-day the chemical industry is the industry ministrant to all other industries. Can you think how you would be on that balance sheet if any foreign nation had a right to hold you up on salvarsan, or on nitrates, or on dyes, which in 1929 cost only $38,000,000 and governed $16,000,000,000 of American industry in their application?

Senator GORE. When you say $38,000,000, do you mean the output of the dye industry of America?

Mr. GARVAN. The sales were only $38,000,000. There may be a little variance between the output and the sales.

Senator GORE. What did you state was the aggregate into which dyes went?

Mr. GARVAN. $16,000,000,000.

We have always been open to you. You have heard of no wildcat stocks in the chemical industry. You yourselves, through the Tariff Commission, have had a yearly statement of what was going on in every company. We do not feel that it is irksome. We feel that we are partners with the Government, and that is an attitude which I do not think any other business could complain of. But certainly I insist that the banking belongs to you, as the greatest utility in America, for your 100 per cent control. I would not even be afraid of a national bank.

Senator GORE. There is a point I want to ask you about. In the beginning, you analyzed the credit situation and the credit disease, more or less, I think fairly well, as it struck me. As to your diagnosis, as I understood you, you thought the Government ought to control the use and extension of credits, and that the Government itself ought to make loans or control the making of loans.

Mr. GARVAN. No. It should control the banking system; whether by a national bank or by 100 per cent supervision and protection, I do not say. But it was my idea to get the ripe judgment of this committee, headed by Judge Brandies, after an examination of all the evils, and to get their recommendation as to the proper banking system under Government supervision. I am not banker enough.

Senator GORE. The point I am getting at is this, whether or not you would have the Government make or vise all loans. Here is what I have in mind: We do not want to put any more stress and strain on human nature than it will stand, any more than on a piece of steel. Alabama had a State bank from 1825 to 1835, or something like that. A member of the legislature in each county selected the bank official in that county who was to control loans. The election of members of the legislature turned on that point. A man to get elected would have to agree to see that these loans were made, and did, and finally the bank was involved so deeply in debt that it came down in a crash and ruined a great many people. My point is that you can not run a political bank, because John Doe can control his ward, and he comes to me and wants me to endorse him for a loan, or to see that the bank makes a loan. I have not any choice about it. I tell the bank to make this loan to John Doe, that he is a good fellow, and he can carry it.

Even under the transportation system during the war, I had this experience: I had a constituent that wanted to get some cars under the transportation administration. A Senator from an adjoining State and I were talking about it. I was rather criticizing Government ownership and the Goverment administration. He said, "I think it is a good thing, and, to prove it," he said, "I went down to the transporation bureau this morning. Some constituents of mine wanted some cars." It was out in a Western State. He said, "I went down this morning, and before I left there a telegram was sent out to the railroads to furnish my constituent these cars."

I said, "Senator, you think that is an argument in favor of the system. I think it is an argument against it. If an American citizen wants cars and needs them, he ought to be able to get them without having a United States Senator bring pressure to bear on anybody to furnish those cars."

That is what will happen. You have to keep that in mind all the time.

Mr. Garvan. But you can not let things go on as they are.

Senator Gore. No.

Mr. Garvan. There were just one or two other points I wanted to make.

Senator Gore. I thought you were through. I beg your pardon.

Mr. Garvan. A lot is being made about foreign loans increasing your exports. That, I claim, is an economic fallacy. Foreign loans are hostile to exports, and destructive of exports. In the first place, the people you loan to must pay twice. They have got to pay the interest on the loan, and the loan, and that generally amounts, in 20 years at 5 per cent, to double the amount of the loan.

Second. You build up your competitors.

Third. A certain percentage of them go bad.

Fourth. Your borrower borrows here, and buys in the cheapest market.

Fifth. It depletes your domestic market for credit. It raises the price on credit here.

I have here a schedule that I want to put in the record. I have sent the full book to your offices. This shows that in 1929, at the time of the boasted extension of credit, the credit to the consumer and the working man for everything he borrowed practically ran between 16 and 40 per cent. The rates of credit in Wall Street do not mean anything. It is the rate of credit to the consumer that the country ought to be interested in.

(Time, issue March 23, 1931, page 52)

Although conditions vary, the would-be small borrower faces this general situation:

| Agency | Annual rate under low cost | Annual rate under high cost |
|---|---|---|
| | *Per cent* | *Per cent* |
| Life insurance companies, policy loans | 6 | 6 |
| Share loans by building and loan societies | 6 | 12 |
| Chartered credit unions | 6 | 18 |
| Personal loan departments, commercial banks | 9 | 22 |
| Installment finance companies | 16 | 25 |
| Industrial banks | 17 | 34 |
| Remedial loan societies | 12 | 36 |
| Personal finance companies | 30 | 42 |
| Pawnbrokers | 12 | 120 |
| Salary buyers | 120 | 480 |

Sixth. Political complications.

Seventh. Endless new loans, because they demand further short-term loans to facilitate the marketing of their production.

Eighth. They buy them back in times of depression at depressed prices.

I want to put into the record a clipping showing that Germany has bought back $750,000,000 worth of her bonds this year for one-third of what she got for those bonds when she borrowed——

Senator WATSON. Of whom?

Mr. GARVAN. In the markets of Wall Street. She bought the bonds back for 33⅓ cents on the dollar. The article is from the New York Times.

(The heading of the article referred to by the witness is as follows:)

GERMANS SAVE 66 PER CENT BUYING BONDS BACK—REPATRIATION OF THEIR OWN DOLLAR ISSUES THIS YEAR IS PUT AT $750,000,000—ACTUAL COST $250,000,000—SOME BANKERS SAY STANDSTILL PLAN IS EVADED, OTHERS SEE SIGN OF RECOVERY IN GERMANY—PURCHASES HELP EXPORTS—REICHSBANK IS SAID TO MAKE CONCESSIONS REGARDING OPERATIONS IN ORDER TO LURE CAPITAL HOME

Exports are of less importance to us than any other country in the world.

Careful estimates made for the 3-year period 1927–1929 showed the following rough relationships between average annual exports and estimated national income:

| | Per cent | | Per cent |
|---|---|---|---|
| United States | 6 | Latin-American countries: | |
| Canada | 22 | Argentina | 34 |
| European countries: | | Brazil | 25 |
| Great Britain | 20 | Chile | 35 |
| Germany | 20 | Cuba | 65–70 |
| France | 22 | Mexico | 35 |
| Belgium | 55–60 | Japan | 20 |
| Italy | 15 | | |
| Czechoslovakia | 33 | | |
| Holland | 31 | | |

The shrinkage in values since this time has probably not seriously disturbed the relationships indicated, except that in those countries most dependent on foreign trade the shrinkage in national income, due to the drastic decline in the prices of international commodities, may have been somewhat greater than in other countries. It appears, therefore, that in those foreign countries which are most concerned about interallied debts and our American tariffs, export trade is usually many times as important relatively as in the United States. Conclusions regarding foreign trade which are valid for these countries may not be particularly applicable to the United States. Further, our crusaders for expanding foreign trade and lower tariffs seem to be unaware that almost half of the world's trade is normally carried on within the boundaries of the United States—the greatest free-trade area in the world.

### DOES TRADE FOLLOW THE LOAN?

Statement published by the Department of Commerce, in Bulletin The Balance of International Payments of the United States in the year 1929, on page 71:

"It is sometimes asserted as an axiom that trade follows the loan—that our new investments abroad, being dollar credits, can not be used by foreigners unless they buy American merchandise. Those who hold this statement to be an axiom virtually state as follows: 'Our purchases of foreign securities are an invisible import which exerts no detractive influence whatsoever upon any of the other imports (visible or invisible) and which promote our merchandise exports without promoting any of our other visible or invisible exports.' Thus stated, the axiom is seen to be faulty.

"Even the trade balance often fails to follow the loan. During the period when foreign countries were investing most heavily in the United States, say from 1876 to 1910, the United States had strongly favorable balances in trade. Again, our favorable balances of trade in 1923 and 1926 were, respectively, $375,000,000 and $378,000,000; whereas foreign securities publicly offered in the United States were $791,000,000 greater in 1926 than in 1923."

I have also placed in your offices a book by Doctor Hale, and I have taken the liberty of putting an elastic band around part of the book, which you need not waste your time in reading. The first part is too technical. Of course, you may read it if you want to, but it is about chemistry and it becomes a little technical. The last half of the book is on Chemistry and the Future of Agriculture and the Future of this Country. Doctor Hale was head of the National Research Council. He is a practical man. He is now at the head of the Dow Chemical Co. in Michigan; and the book is a beautiful sketch of what the chemist is going to do for the future in agriculture.

I just want to say one word about these general statements that are made about exports and imports. We have found that you have to take up each one and discuss each one separately. For instance, your cotton. Cotton is down low. A man told me last week that he saw in an English paper that the Lancaster mills were using 65 per cent as against 54 per cent, showing that the use of cotton is extended.

But I want to show to you how chemistry may solve the problem of the overproduction of cotton. In the first place, it has gone a long way toward it by making by-products from cottonseed; furthermore, to-day we have a trial plant in Savannah, Ga., showing how government can cooperate with business. It was paid for by a grant of $20,000 for five years by the Legislature of Georgia, $50,000 for equipment by the Chemical Foundation, the city of Savannah giving the building and the electric light company giving the power, and there we are working and demonstrating that we can produce for half the current cost newsprint out of the slash pine of the South.

It takes seven years to grow the same type of tree for wood for newsprint in Georgia that it takes 30 years to grow in Canada. There are a hundred million acres of waste land in the South. We have imported this year $100,000,000 worth of newsprint, as one of our largest importations. There in the South we have the sunshine and the waste land and the chemist and cooperation—decent cooperation between the Government and decent business, and that whole picture changes.

Senator HARRISON. What do you produce down there?

Mr. GARVAN. We are just making paper, now.

Senator HARRISON. How much are you making?

Mr. GARVAN. We are not making large amounts. We keep running test lots, testing the different pines——

Senator HARRISON. You are conducting a development proposition?

Mr. GARVAN. Yes.

Senator HARRISON. It is an experiment up to now?

Mr. GARVAN. Yes. In May all the paper makers of the country are going down there to see the finished results.

Senator HARRISON. It looks to be a certainty, does it?

Mr. GARVAN. The only problem we have left is the fact that the summer wood and spring wood are of different fiber, and we must adjust those two. But it is an absolutely certain success.

Senator WATSON. Are you just making newsprint?

Mr. GARVAN. Yes. We have not money enough to go on testing it for book paper and the other papers as yet.

Senator GORE. When you speak of the spring and summer wood, do you mean the spring and summer growth in the trees?

Mr. GARVAN. Yes.

Senator GORE. In the same trees?

Mr. GARVAN. Yes. It will be a different chemical composition, a practically different fiber.

Senator GORE. You can not keep those pines from growing down there.

Mr. GARVAN. No, sir. In 7 years we can grow what the northern European countries and what Canada will require 30 years to grow.

Senator WATSON. That you are sure of?

Mr. GARVAN. That we are sure of.

Senator WATSON. Is there anything else?

Mr. GARVAN. I do not think so.

Senator HARRISON. If you have any other ideas we would like to have them.

Senator WATSON. Oh, certainly; there is no desire to shut you off at all.

Mr. GARVAN. There is just one other thing that I would like to say about this fallacy that is thrown at you all the time. The bankers always said that you could not get payment on these debts except in goods and services. Well, they were not honest in that. When they produced their economists, the economists added weasel words, and the weasel words are "in the long run or as a last resort." England for 50 years has had a balance in her favor as compared with the rest of the world, and they have gradually taken securities backed by honest people throughout the world until they have to-day $20,000,000,000 of foreign securities which represent that payment and yet these economists now claim we can only be paid in goods and services.

This statement is only true when the debtor can not be trusted beyond the current year. Given wealth and integrity and the reestablishment of honesty in the world, the accumulation of a foreign balance would be a bulwark of national defense for it would support any adverse balance which might ensue in case of war and pay for necessary increased purchases abroad. What would you think of a domestic debtor who said he could only pay in goods, gold, or services and was not willing to sign a mortgage on his house or other productive property?

If we believe that England and France base their applications on a willingness and a wish to pay, we then could take their securities and market them any place in the world.

I just want to show you two or three ways that we can be paid. They have got $20,000,000,000 of foreign bonds. Why not assign to us some of those bonds? They are salable; there are good Argentine railroad bonds among them. There are many sound ones. They can be taken in by the English Government just as they did American securities in the World War. They called in all the American securities and issued their own scrip or their own notes for them, and shipped our securities over here.

Secondly, they can do it by giving us bonds of their own, public utilities, things not in competition with us. Also they hold two billions of our securities. They can sell those securities and pay us. The only thing is that they do not want to pay.

Senator WATSON. What is the effect of depreciated currency on the whole situation?

Mr. GARVAN. I think it has more effect on the quotation of lower prices against our domestic people. I do not think it is the amount of goods coming in. But being down there in Georgia I just saw a sample of it in the clays there that they make china out of, and paper.

Senator WATSON. Kaolin?

Mr. GARVAN. Yes. Their business has just been shot to pieces by the fact that the English representative or the foreign representative goes around and quotes a lower price, and then the American must come down to that lower price. I think, as far as England is concerned, she has gotten all the benefits she can get out of depreciated currency. I think that the idea of its being a great boon to us if she goes back on the gold standard is nonsense. She has either got to get back to the gold standard or go to the extent that the mark in Germany went to four or five years ago. Sooner or later and inevitably, the law of economics will work—going off the gold standard and depreciating their currency means inflation to their prices and suffering to their working people.

Senator GORE. It has to be a continuing process to get even a fallacious advantage, does it not?

Mr. GARVAN. Yes.

Senator GORE. Reverting back to this immediate payment: It seems that England, in the position of a creditor nation, has accumulated a good deal of experience and has exercised a good deal of prudence?

Mr. GARVAN. Yes, sir.

Senator GORE. I am inclined to think that our bankers or financiers in this country either have not acquired that experience or have not exercised prudence, one or the other or both.

Mr. GARVAN. I think that is true. I think it goes right back to the evil that I mentioned, that it is all in the hands of their partners——

Senator GORE. On that matter, can you put into the record, or can you state it now, some of the interrelations between foreign banks?

Mr. GARVAN. I can. I had it on a slip, but I did not bring it. I can send it to your secretary.

Senator GORE. I wish you would put it into the record. I would like to have it in the record.

Senator WATSON. Would it be too long for the record?

Mr. GARVAN. Oh, no; just two or three sheets.

Senator GORE. What was that bank that you mentioned? I can not pronounce the name of it.—Lazard——

Mr. GARVAN. Lazard Freres.

Senator GORE. Is that one of the banks you had in mind?

Mr. GARVAN. I am not quite sure of the constituency of that bank. It has not been so active.

Senator GORE. Could you check that?

Mr. GARVAN. Yes.

Senator GORE. I have been told that the Bank of England has a member on its board of directors who has a pretty high business connection in this company.

Mr. GARVAN. Don't be afraid of repudiation. In the first place, it will end foreign loans; second, it will once and for all prove the futility of the average propaganda. It will be a reassurance to the American people that the private banking firms of this country through their control of newspapers, magazines, and so forth, do not control the destinies and the thought of the American people——

Senator GORE. When they are in their sober moments.

Mr. GARVAN (continuing). It will discourage these countries before the world and hamper them in their world trade. They go out with a busted pound and a busted word of honor. It will be the greatest safeguard against war, for it will be a notification to them of the futility of expecting any support in a monetary way in any future war. It will restrict the outgo of our gold in travel, foreign freights and foreign insurance, and so forth. It will put our own destinies into our own hands and force us to clean house and have confidence in the enormous resources of our people and of our country.

We now have in our domestic trade about 50 per cent of the world's trade—domestic and foreign. With an honest dollar and an honest people, we can enjoy all our normal and proper share of foreign trade.

I have placed before each member of the committee, for your further information, the following books: Chemistry Triumphant, by William J. Hale; Other People's Money, by Louis D. Brandeis; Financing the Consumers, by Evans Clark; The Modern Corporation and Private Property, by A. A. Berle and G. C. Means.

(A letter subsequently received from Mr. Garvan is here printed in full as follows:)

FEBRUARY 24, 1933.

FINANCE COMMITTEE OF THE SENATE,
*Washington, D. C.*

GENTLEMEN: On yesterday I testified before your committee and showed that under the debt-refunding agreements, the United States was in possession of $11,000,000,000 of bonds of England, France, and other foreign countries, representing the compromise amount in the debt-refunding agreements. I showed that these bonds were in large denominations but that the agreement provided that upon notice by the Secretary of Treasury, these foreign countries bound themselves to reissue them in small denominations on the markets of the world as the exigencies of our Government demanded; that the purpose of these agreements was to place the bonds representing our foreign debt on the same basis as the outstanding Government bonds of each foreign nation held by its own nationals.

I further stated to you that it has been impossible to get any explanation from the Treasury of the failure to exercise this right of the American people, and I insisted that debt conversations or economic conferences should not be opened until these provisions of the agreements had been carried out and the United States was in full possession of its rights.

This morning's New York Times on page 6 states as follows:

"An opportunity to check the recent attempts to repudiate the debt lay in the refunding agreements made in 1926, he also told the committee, but the Secretary of the Treasury, he said, for some rason did not take advantage of it. This opportunity, he believed, was in the provision that the refunding bonds of large denominations should be reissued by the debtor country at the request of the United States in amounts that could be marketed to the public.

"Had that provision been invoked during boom years, said Mr. Garvan, it would have left this country holding $11,000,000,000 of marketable securities which would be sold in proportion to the refusal to pay or the refusal to prevent raids on United States gold. He had asked Secretary of the Treasury Mills why this was not done and had been told in reply that he was a 'German hater' which he did not consider an answer.

"TREASURY GIVES EXPLANATION

The British and French bonds issued under the refunding agreement were in denominations of $4,600,000 each in the case of Britain and in 62 units ranging from $1,370,000 to $116,928,195 in the case of France. It was said at the Treasury Department that this reissuance clause had never been exercised because the Victory Liberty loan act provided that securities of a foreign government sold by this country must be sold at par and the proceeds used to retire Liberty bonds. As foreign government securities could not have been sold at par at any time since the refunding agreements were made, it was said, this country was prevented by law from exercising its check up on repudiation."

This is the first explanation or even alibi that we have been able to obtain from the Treasury and in its fallacy it confirms my contention that some influence has caused the betrayal of the proper interests of our people.

The Liberty loan act in question was passed April 24, 1917. Sections 2 and 3 relate to the loans of foreign governments. The refunding agreements were approved as to England in 1923 and as to the other countries between 1923, concluding with France in 1929. They, therefore, repeal any provisions of the Liberty loan act inconsistent with their terms. This is such a well-known principle of statutory construction that it is needless to quote authority. This contention is confirmed by the fact that as Exhibit 114, page 312, official document of the United States entitled "Combined Annual Report of the World War Foreign Debt Commission" our refunding commission received in evidence the Liberty loan act in question and thus its final agreement must be held in law to repeal any part thereof which even our confirmed internationalists may deem contradictory.

It will be noted that the Treasury has acted on the basis that section 2 of the Liberty loan act was repealed by the refunding agreements, in so far as it is inconsistent therewith, but now claim that section 3 was not. Their contention is ridiculous. Why did not the Treasury call attention to this matter at the time the refunding agreements were before the Senate if it was honest? If their contention has any more consistency than a smoke screen, why did they not ask the Congress to modify the Liberty loan act in any of its provisions which prevented this country and the United States Treasury from turning $11,000,000,000 of bonds from a deadweight into living power and value? Even granted the full claim of the Treasury, it is no answer to the charge of neglect that the Secretary has not had the bonds reissued in proper form for public world-wide marketing, whether he believed he could have sold them for par or not. He should have placed us in a position of power to act, at any rate.

I repeat what I said in my testimony yesterday: That any limitation of this power to protect ourselves and collect our honest debts which rested in American legislation Congress would have gladly corrected overnight.

What is the influence that has caused the Treasury Department to so misuse the assets of this Government to the extent of $11,000,000,000? I beg to you of demand and search out the real reason behind this childish explanation. Was it that it would have been impossible to float the $15,000,000,000 of private loans by our German-American, French-American, and English-American private bankers if the Government was standing over the market with eleven billions of honest bonds which represented money contributed by our 120,000,000 people in the form of Liberty bonds? And is the main purpose of debt cancellation and repudiation now to get rid of this power in the United States Government to collect its debts, to protect its gold standard and foreign exchange, to protect us against Ottawa conferences, world-wide chemical cartels, European combinations, any any other foreign menace? To insist on peace and disarmament and true international cooperation?

I send with this letter copies of the Liberty loan act, copies of the English and French Agreements, and beg of you to insist upon further investigation.

Respectfully submitted.

Francis P. Garvan.

### Exhibit 8

### Agreement for the Funding of the Debt of Great Britain to the United States

#### PROPOSAL

Dated the 18th day of June, 1923, by His Britannic Majesty's Government (hereinafter called Great Britain) to the Government of the United States of America (hereinafter called the United States) regarding the funding of the debt of Great Britain to the United States.

Whereas Great Britain is indebted to the United States as of 15th December, 1922, upon demand obligations in the principal amount of $4,074,818,358.44, not including obligations in the principal amount of $61,000,000, representing advances deemed to have been made to cover purchases of silver under the act of Congress approved 23d April, 1918, of which $30,500,000 has been repaid in April and May, 1923, and the balance is to be repaid in 1924, pursuant to an agreement already made between the parties, and Great Britain is further indebted to the United States, as of 15th December, 1922 on account of interest accrued from 15th April and 15th May, 1919, on said $4,074,818,358.44, principal amount of demand obligations; and

Whereas Great Britain has power under the war loan act, 1919 (9 and 10 Geo. 5, cap 37) to issue securities in exchange for maturing securities issued under the war loan acts, 1914 to 1918 and

Whereas the demand obligations now held by the United States Treasury were so issued, and will become payable upon the request of the United States Treasury for their payment:

Now therefore Great Britain proposes, in the exercise of the powers above recited and in consideration and in faith of the statements, conditions, premises and mutual covenants herein contained, to issue to the United States, in exchange for the demand obligations now held by the United States Treasury, securities which shall be in their terms and conditions in accordance with the following provisions:

1. *Amount of indebtedness.*—The total amount of indebtedness to be funded is $4,600,000,000, which has been computed as follows:

| | | |
|---|---|---|
| Principal amount of demand obligations to be funded | | $4, 074, 818, 358. 44 |
| Interest accrued thereon from 15th April and 15th May, 1919, respectively, to 15th December, 1922, at the rate of 4¼ per cent per annum | $629, 836, 106. 99 | |
| Less payments made by Great Britain on 16th October and 15th November, 1922, on account of interest, with interest thereon at 4¼ per cent per annum from said dates, respectively, to 15th December, 1922 | 100, 526, 379. 69 | |
| | | 529, 309, 727. 30 |
| Total principal and interest, accrued and unpaid, as of 15th December, 1922 | | 4, 604, 128, 085. 74 |
| Paid in cash by Great Britain, 15th March, 1923 | | 4, 128, 085. 74 |
| Total indebtedness to be funded into bonds of Great Britain | | 4, 600, 000, 000. 00 |

2. *Issue of long-time obligations.*—The securities, which it is proposed to issue at par as promptly as possible, shall be obligations in the principal amount of $4,600,000,000, in the form of bonds to be dated 15th December, 1922, maturing 15th December, 1984, with interest payable semiannually on 15th June and 15th December in each year at the rate of 3 per cent per annum from 15th December, 1922, to 15th December, 1932, and thereafter at the rate of 3½ per cent per annum until the principal thereof shall have been repaid.

3. *Method of payment.*—The bonds shall be payable as to both principal and interest in United States gold coin of the present standard of weight and fineness, or its equivalent in gold bullion, or, at the option of Great Britain, upon not less than 30 days' advance notice indicating the minimum amount which it is contemplated to pay at next due date in gold, cash or available funds, in any bonds of the United States issued or to be issued after 6th April, 1917, to be taken at par and accrued interest to the date of payment hereunder: *Provided, however,* That Great Britain may at its option, upon not less than 90 days' advance notice, pay up to one-half of any interest accruing between 15th December, 1922, and 15th December, 1927, on any British bonds proposed to be issued hereunder, in bonds of Great Britain, maturing 15th December, 1984, dated and bearing interest from the respective dates when the interest to be paid thereby becomes due and substantially similar in other respects to the original bonds proposed to be issued hereunder.

All payments to be made by Great Britain on account of the principal or interest of any bonds proposed to be issued hereunder shall be made at the Treasury of the United States in Washington or, at the option of the Secretary of the Treasury of the United States, at the Federal Reserve Bank of New York and, if in cash, shall be made at the option of Great Britain in gold coin of the United States or in gold bullion or in immediately available funds (or, if in bonds of the United States, shall be in form acceptable to the Secretary of the Treasury of the United States). Appropriate notation of all payments on account of principal shall be made on the bonds proposed to be issued hereunder which may be held by the United States: *Provided, however,* That all payments in respect of any marketable obligations issued under paragraph 9 of this proposal shall be made at the office of the fiscal agents of the British Government in the city of New York.

4. *Exemption from taxation.*—The principal and interest of all bonds issued or to be issued hereunder shall be exempt from all British taxation, present or future, so long as they are in the beneficial ownership of the United States or of a person, firm, association, or corporation neither domiciled not ordinarily resident in the United Kingdom.

5. *Form of bonds.*—All bonds proposed to be issued hereunder to the United States shall be payable to the United States of America, or order, shall be issued, so far as possible, in denominations of $4,600,000 each, and shall be substantially in the form set forth in the exhibit annexed hereto, and marked "Exhibit A." The bonds shall be signed for Great Britain by the Councellor of His Britannic Majesty's Embassy at Washington.

6. *Repayment of principal.*—To provide for the repayment of the total principal of the debt before maturity of the $4,600,000,000 principal amount of bonds to be issued, it is proposed that the bonds shall contain provisions the effect of which shall be that Great Britain shall make to the United States payments, on account of the original principal amount of the bonds to be issued, in the amounts and on the dates named in the following table:

| Dec. 15: | | Dec. 15—Continued. | |
|---|---|---|---|
| 1923 | $23, 000, 000 | 1955 | $64, 000, 000 |
| 1924 | 23, 000, 000 | 1956 | 64, 000, 000 |
| 1925 | 24, 000, 000 | 1957 | 67, 000, 000 |
| 1926 | 25, 000, 000 | 1958 | 70, 000, 000 |
| 1927 | 25, 000, 000 | 1959 | 72, 000, 000 |
| 1928 | 27, 000, 000 | 1960 | 74, 000, 000 |

| 1939 | 37, 000, 000 | 1971 | 114, 000, 000 |
| 1940 | 42, 000, 000 | 1972 | 119, 000, 000 |
| 1941 | 42, 000, 000 | 1973 | 123, 000, 000 |
| 1942 | 42, 000, 000 | 1974 | 127, 000, 000 |
| 1943 | 42, 000, 000 | 1975 | 132, 000, 000 |
| 1944 | 46, 000, 000 | 1976 | 136, 000, 000 |
| 1945 | 46, 000, 000 | 1977 | 141, 000, 000 |
| 1946 | 46, 000, 000 | 1978 | 146, 000, 000 |
| 1947 | 51, 000, 000 | 1979 | 151, 000, 000 |
| 1948 | 51, 000, 000 | 1980 | 156, 000, 000 |
| 1949 | 51, 000, 000 | 1981 | 162, 000, 000 |
| 1950 | 53, 000, 000 | 1982 | 167, 000, 000 |
| 1951 | 55, 000, 000 | 1983 | 175, 000, 000 |
| 1952 | 57, 000, 000 | 1984 | 175, 000, 000 |
| 1953 | 60, 000, 000 | | |
| 1954 | 64, 000, 000 | Total | 4, 600, 000, 000 |

*Provided, however,* That Great Britain may, at its option, upon not less than 90 days' advance notice, postpone any payment of principal falling due as hereinabove provided to any subsequent 15th June or 15th December, not more than two years distant from its due date, but only on condition that, if Great Britain shall at any time exercise this option as to any payment of principal, the payment falling due in the next succeeding year can not be postponed to any date more than one year distant from the date when it becomes due, unless and until the payment previously postponed shall actually have been made, and the payment falling due in the second succeeding year can not be postponed at all unless and until payment of principal due two years previous thereto shall actually have been made.

In the event of Great Britain issuing bonds to the United States in payment of interest accruing between 15th December, 1922, and 15th December, 1927, as proposed in paragraph 3 above, the bonds so issued shall contain provision for the payment of their principal before maturity through annual installments on account of principal corresponding substantially to the schedule of payments on account of principal appearing in the table hereinabove set forth.

7. *Payments before maturity.*—Great Britain may, at its option, on any interest date or dates upon not less than 90 days' advance notice, make advance payments of principal, in addition to the payments required to be made by the provisions of the bonds in accordance with paragraph 6 of this proposal. Any such additional payments shall first be applied to the principal of any bonds which shall have been issued hereunder on account of interest accruing between 15th December, 1922, and 15th December, 1927, and then to the principal of any other bonds which shall have been issued hereunder. Any payments made to the United States under this provision shall be in amounts of $1,000,000 or multiples thereof.

8. *Calculation of interest.*—Notwithstanding anything herein contained, the interest payable from time to time on the bonds proposed to be issued shall be computed on the amount of the princpal outstanding on the previous interest date, with adjustments in respect of any payment on account of principal which may have been made since the previous interest date.

9. *Exchange for marketable obligations.*—Great Britain will issue to the United States at any time or from time to time, at the request of the Secretary of the Treasury of the United States, in exchange for any or all of the bonds proposed to be issued hereunder and held by the United States, definitive engraved bonds in form suitable for sale to the public, in such amounts and denominations as the Secretary of the Treasury of the United States may request, in bearer form, with provision for registration as to principal, and/or in fully registered form, and otherwise on the same terms and conditions, as to dates of issue and maturity, rate or rates of interest, exemption from taxation, payment in bonds of the United States issued or to be issued after 6th April, 1917, payment before maturity, and the like, as the bonds surrendered on such exchange, except that the bonds shall carry such provision for repayment of principal as shall be agreed upon: *Provided*, That if no agreement to the contrary is arrived at, any such bonds shall contain separate provision for payments before maturity, conforming substantially to the table of repayments of principal prescribed by paragraph 6 of this proposal and in form satisfactory to the Secretary of the Treasury of the United States, such payments to be computed on a basis to accomplish the retirement of any such bonds by 15th December, 1984, and to be made through annual drawings for redemption at par and accrued interest. Any payments of principal thus made before maturity on any such bonds shall be deducted from the payments required to be made by Great Britain to the United States in the corresponding years under the terms of the table of repayments of principal prescribed in paragraph 6 of this proposal.

Great Britain will deliver definitive engraved bonds to the United States in accordance herewith within six months of receiving notice of any such request from the Secretary of the Treasury of the United States, and pending the delivery of the definite engraved bonds will, at the request of the Secretary of the Treasury of the United States, deliver temporary bonds or interim receipts in a form to be agreed upon within three months of the receipt of such request. The United States before offering any such bonds or interim receipts for sale in Great Britain, will first offer them to Great Britain for purchase at par and accrued interest and Great Britain shall likewise have the option, in lieu of issuing to the United States any such bonds or interim receipts, to make advance redemption, at par and accrued interest, of a corresponding amount of bonds issued hereunder and held by the United States.

10. *Cancellation and surrender of demand obligations.*—Upon the delivery to the United States of the $4,600,000,000 principal amount of bonds proposed to be issued hereunder, the United States will cancel and surrender to Great Britain, through the British ambassador at Washington, or his representative, at the Treasury of the United States in Washington, the demand obligations of Great Britain in the principal amount of $4,074,818,358.44 described in the preamble to this proposal.

11. *Notices.*—Any notice, request or consent under the hand of the Secretary of the Treasury of the United States shall be deemed and taken as the notice, request, or consent of the United States, and shall be sufficient if delivered at the British Embassy at Washington or at the office of the permanent secretary of the British Treasury in London; and any notice, request, or election from or by Great Britain shall be sufficient if delivered to the American Embassy in London or to the Secretary of the Treasury of the United States at the Treasury of the United States in Washington. The United States in its discretion may waive any notice required hereunder, but any such waiver shall be in writing and shall not extend to or affect any subsequent notice or impair any right of the United States to require notice hereunder.

Signed on behalf of the Lords Commissioners of His Majesty's Treasury, this 18th day of June, 1923.

Washington.

A. GEDDES,
*His Britannic Majesty's Ambassador Extraordinary and Plenipotentiary.*

---

EXHIBIT "A"

(Form of bond)

THE GOVERNMENT OF THE UNITED KINGDOM

Sixty-two year 3–3½ per cent gold bond

Dated 15th December, 1922. Maturing 15th December, 1984.

$ No.

The Government of the United Kingdom, hereinafter called Great Britain, for value received, promises to pay to the United States of America, hereinafter called the United States, or order, on the 15th day of December, 1984, the sum of Four Million Six Hundred Thousand Dollars ($4,600,000), less any amount which may have been paid upon the principal hereof as endorsed upon the back hereof, and to pay interest upon said principal sum semiannually on the fifteenth day of June and December in each year at the rate of three per cent per annum from 15th December, 1922, to 15th December, 1932, and at the rate of three and one-half per cent per annum thereafter until the principal hereof shall have been paid. All payments on account of principal and/or interest shall be made at the Treasury of the United States in Washington, or, at the option of the Secretary of the Treasury of the United States, at the Federal Reserve Bank of New York. This bond is payable as to both principal and interest in gold coin of the United States of America of the present standard of weight and fineness or in its equivalent in gold bullion, or, at the option of Great Britain, upon not less than thirty days' notice indicating the minimum amount which it is contemplated to pay at next due date in gold, cash or available funds, in any bonds of the United States issued or to be issued after 6th April, 1917, to be taken at par and accrued interest to the date of payment hereunder: *Provided, however,* That Great Britain may at its option, upon not less than ninety days' advance notice, pay up to one-half of any interest accruing hereon between 15th December, 1922, and 15th December, 1927, in bonds of Great Britain dated and bearing interest from the respective dates when the interest to be paid thereby becomes due, and substantially similar in maturity and other respects to this bond.

The principal and interest of this bond shall be exempt from all British taxation, present or future, so long as it is in the beneficial ownership of the United States, or of a person, firm, association or corporation neither domiciled nor ordinarily resident in the United Kingdom.

In order to provide for the repayment of the principal of this bond before maturity, Great Britain will make to the United States payments of principal in the amounts, and on the dates shown in the following table:

| Dec. 15: | | Dec. 15—Continued. | |
|---|---|---|---|
| 1923 | $23,000 | 1955 | $64,000 |
| 1924 | 23,000 | 1956 | 64,000 |
| 1925 | 24,000 | 1957 | 67,000 |
| 1926 | 25,000 | 1958 | 70,000 |
| 1927 | 25,000 | 1959 | 72,000 |
| 1928 | 27,000 | 1960 | 74,000 |
| 1929 | 27,000 | 1961 | 78,000 |
| 1930 | 28,000 | 1962 | 78,000 |
| 1931 | 28,000 | 1963 | 83,000 |
| 1932 | 30,000 | 1964 | 85,000 |
| 1933 | 32,000 | 1965 | 89,000 |
| 1934 | 32,000 | 1966 | 94,000 |
| 1935 | 32,000 | 1967 | 96,000 |
| 1936 | 32,000 | 1968 | 100,000 |
| 1937 | 37,000 | 1969 | 105,000 |
| 1938 | 37,000 | 1970 | 110,000 |
| 1939 | 37,000 | 1971 | 114,000 |
| 1940 | 42,000 | 1972 | 119,000 |
| 1941 | 42,000 | 1973 | 123,000 |
| 1942 | 42,000 | 1974 | 127,000 |
| 1943 | 42,000 | 1975 | 132,000 |
| 1944 | 46,000 | 1976 | 136,000 |
| 1945 | 46,000 | 1977 | 141,000 |
| 1946 | 46,000 | 1978 | 146,000 |
| 1947 | 51,000 | 1979 | 151,000 |
| 1948 | 51,000 | 1980 | 156,000 |
| 1949 | 51,000 | 1981 | 162,000 |
| 1950 | 53,000 | 1982 | 167,000 |
| 1951 | 55,000 | 1983 | 175,000 |
| 1952 | 57,000 | 1984 | 175,000 |
| 1953 | 60,000 | | |
| 1954 | 64,000 | Total | 4,600,000 |

*Provided, however,* That Great Britain may, at its option, upon not less than ninety days' advance notice, postpone any payment of principal falling due, as hereinabove provided, to any subsequent 15th June, or 15th December, not more than two years distant from its due date, but only on condition that if Great Britain shall at any time exercise this option as to any payment of principal, the payment falling due in the next succeeding year can not be postponed to any date more than one year distant from the date when it becomes due unless and until the payment previously postponed shall actually have been made, and the payment falling due in the second succeeding year can not be postponed at all unless and until the payment of principal due two years previous thereto shall actually have been made.

This bond may be paid on any interest date before maturity, in whole or in part, in amounts of $1,000,000, or multiples thereof, at the option of Great Britain, on not less than ninety days' advance notice.

This bond is issued by Great Britain pursuant to the proposal, dated the 18th day of June, 1923, and to the acceptance of proposal, dated the 19th day of June, 1923.

In witness whereof, Great Britain has caused this bond to be executed in its behalf by the counsellor of His Britannic Majesty's Embassy at Washington, thereunto duly authorized.

For the United Kingdom:

Dated 15th December, 1922.

(Back)

The following amounts have been paid upon the principal amount of this bond:

| Date. | Amount paid. |

ACCEPTANCE

JUNE 19, 1923.

The right honorable SIR AUCKLAND GEDDES, G. C. M. G., K. C. B.,
*Ambassador Extraordinary and Plenipotentiary,*
*The British Embassy, Washington, D. C.*

MY DEAR MR. AMBASSADOR: I have the honor to acknowledge the receipt of your note of June 18, 1923, transmitting the proposal dated the 18th day of June, 1923, by His Britannic Majesty's Government to the Government of the United States of America regarding the funding of the debt of Great Britain to the United States. This proposal is agreeable to the World War Foreign Debt Commission, and I am writing for the commission and by its authortiy to advise you that the proposal is hereby accepted on behalf of the United States of America, pursuant to the authority conferred by the act of Congress approved February 9, 1922, as amended by the act of Congress approved February 28, 1923. In accordance therewith I am writing to ask that the bonds as contemplated thereby may be delivered as soon as possible to the Secretary of the Treasury of the United States, in exchange for the demand obligations amounting to $4,074,818,358.44 now held by him which are otherwise now payable.

Very truly yours,

A. W. MELLON,
*Secretary of the Treasury, and Chairman of the World War Foreign Debt Commission.*

Approved.

WARREN G. HARDING,
*President.*

JUNE 19, 1923.

EXHIBIT 9

LETTER FROM THE SECRETARY OF THE TREASURY, DATED JUNE 19, 1923, TO THE BRITISH AMBASSADOR, REGARDING ACCEPTANCE OF UNITED STATES NOTES AND CERTIFICATES ISSUED AFTER APRIL 6, 1917, IN PAYMENT OF PRINCIPAL OR INTEREST ON BONDS ISSUED BY GREAT BRITAIN UNDER THE TERMS OF THE DEBT SETTLEMENT

JUNE 19, 1923.

The right honorable SIR AUCKLAND GEDDES,
*Ambassador Extraordinary and Plenipotentiary,*
*The British Embassy, Washington, D. C.*

MY DEAR MR. AMBASSADOR: In connection with the proposal dated the 18th of June, 1923, by His Britannic Majesty's Government to the Government of the United States of America regarding the funding of the debt of Great Britain to the United States, the acceptance of which I am handing you simultaneously herewith, I am writing to say that the World War Foreign Debt Commission has been advised by the Attorney General of the United States that under the terms of the act of Congress approved February 9, 1922, as amended by the act of Congress approved February 28, 1923, notes and/or certificates of indebtedness of the United States issued after April 6, 1917, may be received upon the same terms and conditions as bonds of the United States issued after that date in payment of principal and/or interest on the bonds to be issued by Great Britain under the terms of the agreement for the settlement of the debt. This is likewise the view of the World War Foreign Debt Commission, expressed in a resolution duly adopted by the commission, and the Treasury will, therefore, be guided accordingly in acting under the agreement and will accept notes and/or certificates of indebtedness of the United States issued after April 6, 1917, on the same terms and conditions as bonds of the United States issued after that date will be accepted thereunder.

A. W. MELLON,
*Secretary of the Treasury, and Chairman of the World War Foreign Debt Commission.*

Approved:

WARREN G. HARDING,
*President.*

JUNE 19, 1923.

## Exhibit 93

### Agreement for the Funding of the Indebtedness of France to the United States

Agreement made the 29th day of April, 1926, at the city of Washington, District of Columbia, between the French Republic, hereinafter called France, party of the first part, and the United States of America, hereinafter called the United States, party of the second part

Whereas France is indebted to the United States as of June 15, 1925, upon obligations in the aggregate principal amount of $3,340,516,043.72, together with interest accrued and unpaid thereon; and

Whereas France desires to fund said indebtedness to the United States, both principal and interest, through the issue of bonds to the United States, and the United States is prepared to accept bonds from France upon the terms hereinafter set forth:

Now, therefore, in consideration of the premises and of the mutual covenants herein contained, it is agreed as follows:

1. *Amount of Indebtedness.*—The amount of indebtedness to be funded, after allowing for certain cash payments made or to be made by France is $4,025,000,000, which has been computed as follows:

| | | |
|---|---|---|
| Principal of obligations held for cash advanced under Liberty bond acts | $2, 933, 405, 070. 15 | |
| Accrued and unpaid interest at 4¼ per cent to Dec. 15, 1922 | 445, 066, 027. 49 | |
| | | $3, 378, 471, 097. 64 |
| Principal of obligations given for surplus war supplies purchased on credit | 407, 341, 145. 01 | |
| Interest at 4¼ per cent from the last interest-payment date prior to Dec. 15, 1922, to Dec. 15, 1922 | 6, 324, 940. 79 | |
| | | 413, 666, 085. 80 |
| Total indebtedness as of Dec. 15, 1922 | | 3, 792, 137, 183. 44 |
| Accrued and unpaid interest at 3 per cent per annum on this amount from Dec. 15, 1922, to June 15, 1925 | | 284, 410, 288. 75 |
| Total indebtedness as of June 15, 1925 | | 4, 076, 547, 472. 19 |
| Credits: | | |
| Payments received on account of interest between Dec. 15, 1922, and June 15, 1925 | $50, 917, 643. 13 | |
| Payments on account of principal since Dec. 15, 1922 | 230, 171. 44 | |
| Interest on principal payments at 3 per cent per annum from date of payment to June 15, 1925 | 12, 970. 73 | |
| | | 51, 160, 785. 30 |
| Net indebtedness as of June 15, 1925 | | 4, 025, 386, 686. 89 |
| To be paid in cash upon execution of agreement | | 386, 686. 89 |
| Total indebtedness to be funded into bonds | | 4, 025, 000, 000. 00 |

2. *Payment.*—In order to provide for the payment of the indebtedness thus to be funded, France will issue to the United States at par, bonds of France in the aggregate principal amount of $4,025,000,000, dated June 15, 1925, and maturing serially on the several dates and in the amounts fixed in the following schedule:

| June 15: | | June 15—Continued. | |
|---|---|---|---|
| 1926 | $30, 000, 000. 00 | 1934 | $36, 691, 906. 35 |
| 1927 | 30, 000, 000. 00 | 1935 | 42, 058, 825. 41 |
| 1928 | 32, 500, 000. 00 | 1936 | 52, 479, 413. 67 |
| 1929 | 32, 500, 000. 00 | 1937 | 63, 004, 207. 80 |
| 1930 | 35, 000, 000. 00 | 1938 | 68, 634, 249. 88 |
| 1931 | 1, 350, 000. 00 | 1939 | 74, 320, 592. 38 |
| 1932 | 11, 363, 500. 00 | 1940 | 80, 063, 798. 30 |
| 1933 | 21, 477, 135. 00 | 1941 | 51, 728, 872. 58 |

159450—33—PT 5——8

| June 15—Continued. | |
|---|---|
| 1942 | $57, 763, 450. 02 |
| 1943 | 58, 918, 719. 03 |
| 1944 | 60, 097, 093. 41 |

*Provided, however,* That France, at its option, upon not less than 90 days' advance notice to the United States, may postpone so much of any payment on account of principal and/or interest falling due in any one year as hereinabove provided after June 15, 1926, and prior to June 16, 1932, as shall be in excess of $20,000,000 in any one year, to any subsequent June 15 or December 15 not more than three years distant from its due date, and upon like notice France, at its option, may postpone any payment on account of principal falling due as hereinafter provided after June 15, 1932, to any subsequent June 15 or December 15 not more than three years distant from its due date, but any such postponement shall be only on conidtion that in case France shall at any time exercise this option as to any payment of principal and/or interest, the payment falling due in the third succeeding year can not be postponed at all unless and until the payment of principal and/or interest due three years, two years and one year previous thereto shall actually have been made. All such postponed payments shall bear interest at the rate of 4¼ per cent per annum payable semiannually.

3. *Form of bond.*—All bonds issued or to be issued hereunder to the United States shall be payable to the Government of the United States of America, or order, and shall be signed for France by its Ambassador at Washington, or by its other duly authorized representative. The bonds shall be substantially in the form set forth in the exhibit hereto annexed and marked "Exhibit A," and shall be issued in 62 pieces with maturities and in denominations as hereinabove set forth and shall bear no interest until June 15, 1930, and thereafter shall bear interest at the rate of 1 per cent per annum from June 15, 1930, to June 15, 1940; at the rate of 2 per cent per annum from June 15, 1940, to June 15, 1950; at the rate of 2½ per cent per annum from June 15, 1950, to June 15, 1958; at the rate of 3 per cent per annum from June 15, 1958, to June 15, 1965, and at the rate of 3½ per cent per annum after June 15, 1965, all payable semiannually on June 15 and December 15 of each year.

4. *Method of payment.*—All bonds issued or to be issued hereunder shall be payable, as to both principal and interest, in United States gold coin of the present standard of value, or, at the option of France, upon not less than thirty days' advance notice to the United States, in any obligations of the United States issued after April 6, 1917, to be taken at par and accrued interest to the date of payment hereunder.

All payments, whether in cash or in obligations of the United States, to be made by France on account of the principal of or interest on any bonds issued or to be issued hereunder and held by the United States shall be made at the Treasury of the United States in Washington, or, at the option of the Secretary of the Treasury of the United States, at the Federal Reserve Bank of New York, and if in cash shall be made in funds immediately available on the date of payment, or if in obligations of the United States shall be in form acceptable to the Secretary of the Treasury of the United States under the general regulations of the Treasury Department governing transactions in United States obligations.

5. *Exemption from taxation.*—The principal and interest of all bonds issued or to be issued hereunder shall be paid without deduction for, and shall be exempt from, any and all taxes or other public dues, present or future, imposed by or under authority of France, or any political or local taxing authority within France, whenever, so long as, and to the extent that beneficial ownership is in (*a*) the Government of the United States, (*b*) a person, firm, or association neither domiciled nor ordinarily resident in France, or (*c*) a corporation not organized under the laws of France.

6. *Payments before maturity.*—France, at its option, on June 15 or December 15 of any year, upon not less than ninety days' advance notice to the United States, may make advance payments in amounts of $1,000 or multiples thereof, on account of the principal of any bonds issued or to be issued hereunder and held by the United States. Any such advance payments shall be applied to the principal of such bonds as may be indidated by France at the time of the payment.

7. *Exchange for marketable obligations.*—France will issue to the United States at any time, or from time to time, at the request of the Secretary of the Treasury of the United States, in exchange for any or all of the bonds issued hereunder and held by the United States, definitive engraved bonds in form suitable for sale to the public, in such amounts and denominations as the Secretary of the Treasury of the United States may request, in bearer form, with provision for registration as to principal and/or in fully registered form, and otherwise on the same terms and conditions, as to dates of issue and maturity, rate or rates of interest, if any, exemption from taxation, payment in obligations of the United States issued after April 6, 1917, and the like, as the bonds surrendered on such exchange. France will deliver definitive engraved bonds to the United States in accordance herewith within six months of receiving notice of any such request from the Secretary of the Treasury of the United States, and pending the delivery of the delivery of the definitive engraved bonds will deliver, at the request of the Secretary of the Treasury of the United States, temporary bonds or interim receipts in form satisfactory to the Secretary of the Treasury of the United States within 30 days of the receipt of such request, all without expense to the United States. The United States, before offering any such bonds or interim receipts for sale in France, will first offer them to France for purchase at par and accrued interest if any, and France shall likewise have the option, in lieu of issuing any such bonds or interim receipts, to make advance redemption, at par and accrued interest, if any, of a corresponding principal amount of bonds issued hereunder and held by the United States. France agrees that the definitive engraved bonds called for by this paragraph shall contain all such provisions, and that it will cause to be promulgated all such rules, regulations, and orders as shall be deemed necessary or desirable by the Secretary of the Treasury of the United States in order to facilitate the sale of the bonds in the United States, in France or elsewhere, and that if requested by the Secretary of the Treasury of the United States, it will use its good offices to secure the listing of the bonds on such stock exchanges as the Secretary of the Treasury of the United States may specify.

8. *Cancellation and surrender of obligations.*—Upon the execution of this agreement, the delivery to the United States of the principal amount of bonds of France to be issued hereunder, together with satisfactory evidence of authority for the execution of this Agreement by the representative of France and for the execution of the bonds to be issued hereunder, the United States will cancel and surrender to France at the Treasury of the United States in Washington, the obligations of France held by the United States.

9. *Notices.*—Any notice, request, or consent under the hand of the Secretary of the Treasury of the United States, shall be deemed and taken as the notice, request, or consent of the United States, and shall be sufficient if delivered at the Embassy of France at Washington or at the office of the Ministry of Finance at Paris; and any notice, request, or election from or by France shall be sufficient if delivered to the American Embassy at Paris or to the Secretary of the Treasury at the Treasury of the United States in Washington. The United States in its discretion may waive any notice required hreunder, but any such waiver shall be in writing and shall not extend to or affect any subsequent notice or impair any right of the United States to require notice hreunder.

10. *Compliance with legal requirements.*—France represents and agrees that the execution and delivery of this agreement have in all respects been duly authorized and that all acts, conditions, and legal formalities which should have been com-

pleted prior to the making of this agreement have been completed as required by the laws of France and in conformity therewith.

11. *Counterparts.*—This agreement shall be executed in two counterparts, each of which shall have the force and effect of an original.

In witness whereof France has caused this agreement to be executed on its behalf by Hon. Henry Bérenger, its ambassador extraordinary and plenipotentiary at Washington, thereunto duly authorized, subject, however, to ratification in France, and the United States has likewise caused this agreement to be executed on its behalf by the Secretary of the Treasury as chairman of the World War Foreign Debt Commission, with the approval of the President, subject, however, to the approval of Congress, pursuant to the act of Congress approved February 9, 1922, as amended by the act of Congress approved February 28, 1923, and as further amended by the act of Congress approved January 21, 1925, all on the day and year first above written.

THE FRENCH REPUBLIC,
By HENRY BÉRENGER,
THE UNITED STATES OF AMERICA,

For the World War Foreign Debt Commission:

By ANDREW W. MELLON,
*Secretary of the Treasury and Chairman of the Commission.*

Approved:

CALVIN COOLIDGE, *President.*

EXHIBIT A

[Form of Bond]

THE REPUBLIC OF FRANCE

$ No.

The Republic of France, hereinafter called France, for value received, promises to pay to the Government of the United States of America, hereinafter called the United States, or order, on June 15, 19 , the sum of Dollars ($ ), and to pay interest upon said principal sum after June 15, 1930, at the rate of 1 per cent per annum from June 15, 1930, to June 15, 1940, at the rate of 2 per cent per annum from June 15, 1940, to June 15, 1950, at the rate of 2½ per cent per annum from June 15, 1950, to June 15, 1958, at the rate of 3 per cent per annum from June 15, 1958, to June 15, 1965, and at the rate of 3½ per cent per annum after June 15, 1965, all payable semiannually on the 15th day of December and June in each year. This bond is payable as to both principal and interest in gold coin of the United States of America of the present standard of value, or, at the option of France, upon not less than thirty days' advance notice to the United States, in any obligations of the United States issued after April 6, 1917, to be taken at par and accrued interest to the date of payment hereunder.

This bond is payable as to both principal and interest without deduction for, and is exempt from, any and all taxes, and other public dues, present or future, imposed by or under authority of France or any political or local taxing authority within France, whenever, so long as, and to the extent that, beneficial ownership is in (*a*) the Government of the United States, (*b*) a person, firm, or association neither domiciled nor ordinarily resident in France, or (*c*) a corporation not organized under the laws of France. This bond is payable as to both principal and interest at the Treasury of the United States in Washington, D. C., or at the option of the Secretary of the Treasury of the United States at the Federal Reserve Bank of New York.

This bond is issued pursuant to the provisions of paragraph 2 of an agreement dated April 26, 1926, between France and the United States, to which agreement this bond is subject and to which reference is hereby made.

In witness whereof, France has caused this bond to be executed in its behalf by its Ambassador Extraordinary and Plenipotentiary at Washington, thereunto duly authorized, as of June 15, 1925.

THE FRENCH REPUBLIC,
By ——— ———,
*Ambassador Extraordinary and Plenipotentiary.*
