This report is prepared in the Statistical Indicators Division of the Bureau of Economic Analysis. Technical staff and their responsibilities for the publication are-

Barry A. Beckman-Technical supervision and review
Brian D. Kajutti-Composite indexes
Betty F. Tunstall-Data collection and compilation (Phone: 202-523-0541)
The cooperation of Government and private agencies that provide data is gratefully acknowledged. Agencies furnishing data are indicated in the list of series titles and sources at the back of this report.

This publication is prepared under the general guidance of a technical committee consisting of the following persons:

Ronald E. Kutscher, Acting Chairman, Bureau of Labor Statistics, U.S. Department of Labor
Ahmad AI-Samarrie, Office of Management and Budget
Lincoln F. Anderson, Council of Economic Advisers
John H. Auten, U.S. Department of the Treasury
Edward K. Snnith, Bureau of Economic Analysis, U.S. Department of Commerce
Charles A. Waite, Bureau of the Census, U.S. Department of Commerce
Helmut F. Wendel, Board of Governors of the Federal Reserve System

## ABOUT THIS REPORT

BUSINESS CONDITIONS DIGEST (BCD) provides a monthly look at many of the economic time series found most useful by business analysts and forecasters.

The original BCD, which began publication in 1961 under the title Business Cycle Developments, emphasized the cyclical indicators approach to the analysis of business conditions and prospects. The report's contents were based largely on the list of leading, roughly coincident, and lagging indicators maintained by the National Bureau of Economic Research, Inc.

In 1968, BCD was expanded to increase its usefulness to analysts using other approaches to business conditions analysis. Principal additions to the report were series from the national income and product accounts and series based on surveys of busine:ssmen's and consumers' anticipations and intentions. The composite indexes were added at that time, and the report's present title was adopted.

The dominant feature of the current BCD is the cyclical indicators section, in which each business cycle indicator is assigned a three-way timing classification according to its behavior at peaks, at troughs, and at all turns. This section is supplemented by a section containing other important economic measures. The method of presentation is explained in the introductory text which begins on page 1.

Most of the data contained in this report also are published by their source agencies. A series finding guide and a complete list of series titles and sources can be found at the back of the report.

Cyclical Indicators are economic time series which have been singled out as leaders, coinciders, or laggers based on their general conformity to cyclical movements in aggregate economic activity. In this report, cyclical indicators are classified both by econornic process and by their average timing at business cycle peaks, at business cycle troughs, and at peaks and troughs combined. These indicators have been selected primarily on the basis of their cyclical behavior, but they also have proven useful in forecasting, measuring, and interpreting short-term fluctuations in aggregate economic activity.

Other Economic Measures provide additional information for the evaluation of current business conditions and prospects. They include selected components of the national income and product accounts; measures of prices, wages, and productivity: measures of the labor force, employment, and unemployment ${ }^{\text {e }}$ economic data on Federal, State, and local government activities; measures of U.S. international transactions; and selected economic comparisons with major foreign countries.

NEW FEATURES
AND CHANGES
FOR THIS ISSUE

## Changes in this issue are as follows:

1. Appendix $C$ contains historical data for series 50 , 200, 213, 217, 220, 224, 225, 227, 230-233, 235-243, 245, 247253, 255-257, 260-263, 265-268, 280, and 282-284.
2. Appendix $G$ contains cyclical comparisons for series $1,12,19,30,41$, and 50.

The November issue of BUSINESS CONDITIONS DIGEST is scheduled for release on December 4.

A limited number of changes are made from time to time to in. corporate recent find. ings of economic research, newly available time series, and revisions made by source agencies in concept, composition, comparability, coverage, seasonal adjustment methods, benchmark data, etc. Changes may result in revisions of data, additions or deletions of series, changes in placement of series in relation to other series, changes in composition of indexes, etc.

## SIX BEA PROJECTS FOR ECONOMIC ANALYSIS

For further information (including prices and ordering instructions) on any of these items, please write to the Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

## BUSINESS CONDITIONS DIGEST A monthly report for analyzing economic fluctuations over a short span of years.

This report brings together many of the economic time series most useful to business analysts and forecasters. In the cyclical indicators section, each of about 110 business cycle indicators is assigned a three-way timing classification according to its cyclical behavior at peaks, troughs, and all turns. This section also includes important analytical measures, such as composite indexes of leading, coincident, and lagging indicators and selected diffusion indexes. A second section contains other important economic data on prices, wages, productivity, government and defense-related activities, U.S. international transactions, and international comparisons.

About 300 time series are shown in analytical graphs that help to evaluate business conditions and prospects. Current data are shown in accompanying tables. Appendixes provide historical data, seasonal adjustment factors, measures of variability, cyclical comparisons, and other useful information. A computer tape containing data for most of the series is available for purchase.

## HANDBOOK OF CYCLICAL INDICATORS A reference volume containing valuable background information for users of Business Conditions Digest.

This recurrent report provides descriptive and analytical information on the economic time series presented monthly in Business Conditions Digest. Included are series descriptions, historical data, and measures of variability. For the cyclical indicators and composite indexes, special tables show detailed scoring measures and average timing at cyclical peaks and troughs. Verbal and algebraic explanations of the composite index methodology are also provided.

## LONG TERM ECONOMIC GROWTH A report for the study of economic trends over a long span of years: 1860-1970.

This report provides a comprehensive, long-range view of the U.S. economy by presenting relevant statistical time series in easy-to-follow analytical charts and convenient data tables. It is a basic research document for economists, historians, investors, teachers, and students, bringing together in one volume a complete statistical basis for the study of long-term economic trends. A computer tape file of the time series included in the report is available for purchase.

## COMPUTER PROGRAMS FOR TIME SERIES ANALYSIS The source statements for FORTRAN IV programs used by BEA in its analysis of time series are available on a single computer tape.

SEASONAL ADJUSTMENT PROGRAMS—Two variants of the Census computer program measure and analyze seasonal, trading-day, cyclical, and irregular fluctuations. They are particularly useful in analyzing economic fluctuations that take place within a year. The X-11 variant is used for adjusting monthly data and the $\mathrm{X}-11 \mathrm{Q}$ for quarterly data. These programs make additive as well as multiplicative adjustments and compute many summary and analytical measures.
INDEX PROGRAM—This program computes composite and diffusion indexes and summary measures of the properties of each index.

TIME SERIES PROCESSOR-This program, through simple commands, performs a varie.'y of arithmetic, statistical, and manipulative operations on time series data.

## SURVEY OF CURRENT BUSINESS A monthly report for analyzing current economic developments.

Features include a review of current economic developments; articles pertaining to BEA's work on the national, regional, and international economic accounts and related topics; quarterly national income and product accounts tables; and over 1,900 major economic series obtained from other public and private sources.

BUSINESS STATISTICS A reference volume containing statistical series reported currently in the Survey of Current Business.

This report provides historical data on statistical time series. The series are accompanied by concise descriptions of their composition, methods of compilation, comparability, revisions, and availability. Also listed are the names and addresses of organizations that provide the data for the series.

## METHOD OF PRESENTATION

This report is organized into two major parts. Part I, Cyclical Indicators, includes about 150 time series which have been found to conform well to broad fluctuations in comprehensive measures of economic activity. Nearly three-fourths of these are individual indicators, the rest are related analytical measures: Composite indexes, diffusion indexes, and rates of change. Part II, Other Important Economic Measures, covers over 140 series which are valuable to business analysts and forecasters but which do not conform well enough to business cycles to qualify as cyclical indicators. (There are a few exceptions: Four series which are included in part I are also shown in part II to complete the systematic presentation of certain sets of data, such as real GNP and unemployment.) The largest section of part II consists of quarterly series from the national income and product accounts; other sections relate to prices, labor force, government and defense-related activities, and international transactions and comparisons.

The two parts are further divided into sections (see table of contents), and each of these sections is described briefly in this introduction. Data are shown both in charts and in tables. Most charts begin with 1959, but those for the composite indexes and their components (part I, section A) begin with 1948, and a few charts use a two-panel format which covers only the period since 1972. Except for section F in part II, charts contain shading which indicates periods of recession in general business activity. The tables contain data for only the last few years. The historical data for the various time series are contained in the 1984 Handbook of Cyclical Indicators.

In addition to the charts and tables described above, each issue contains a summary table which shows the current behavior of many of the series. Appendixes present seasonal adjustment factors, measures of variability, specific cycle turning dates, cyclical comparison charts, and other information of analytical interest. An index appears at the back of each issue. It should be noted that the series numbers used are for identification purposes only and do not reflect precise relationships or order. However, all series considered as cyclical indicators are numbered in the range 1 to 199.

## Seasonal Adjustments

Adjustments for average seasonal fluctuations are often necessary to bring out the underlying trends of time series. Such adjustments allow for the effects of repetitive intrayear variations resulting primarily from normal differences in weather conditions and from various institutional arrangements. Variations attributable to holidays are usually accounted for by the seasonal adjustment process; however, a separate holiday
adjustment is occasionally required for holidays with variable dates, such as Easter. An additional adjustment is sometimes necessary for series which contain considerable variation due to the number of working or trading days in each month. As used in this report, the term "seasonal adjustment" includes trading-day and holiday adjustments where they have been made.

Most of the series in this report are presented in seasonally adjusted form and, in most cases, these are the official figures released by the source agencies. However, for the special purposes of this report, a number of series not ordinarily published in seasonally adjusted form are shown here on a seasonally adjusted basis.

## MCD Moving Averages

Month-to-month changes in a series are often dominated by erratic movements. MCD (months for cyclical dominance) is an estimate of the appropriate span over which to observe cyclical movements in a monthly series. (See appendix A.) It is the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. The more erratic a series is, the larger the MCD will be; thus, MCD is 1 for the smoothest series and 6 for the most erratic. MCD moving averages (that is, moving averages of the period equal to MCD) tend to have about the same degree of smoothness for all series. Thus, a 5 -term moving average of a series with an MCD of 5 will show its cyclical movements about as clearly as the seasonally adjusted data for a series with an MCD of 1 .

The charts in this report generally include centered MCD moving averages for those series with an MCD greater than 4 . The seasonally adjusted data are also plotted to indicate their variation about the moving averages and to provide observations for the most recent months.

## Reference Turning Dates

The historical business cycle turning dates used in this report are those designated by the National Bureau of Economic Research, Inc. (NBER). They mark the approximate dates when, according to NBER, aggregate economic activity reached its cyclical high or low levels. As a matter of general practice, neither new reference turning dates nor the shading for recessions will be entered on the charts until after both the new reference peak and the new reference trough bounding the shaded area have been designated.

The historical reference turning dates are subject to occasional reviews by NBER and may be changed as a result of revisions in important economic time series. The dates shown in this publication for the 1948.70 time period are those determined by a 1974 review. Since then, NBER has designated turning points for recessions in 1973-75, 1980, and 1981-82.

## Part I. CYCLICAL INDICATORS

Business cycles have been defined as sequences of expansion and contraction in various economic processes that show up as major fluctuations in ag. gregate economic activity-that is, in comprehensive measures of production, employment, income, and trade. While recurrent and pervasive, business cycles of historical experience have been definitely nonperiodic and have varied greatly in duration and intensity, reflecting changes in economic systems, conditions, policies, and outside disturbances.

One of the techniques developed in business cycle research and widely used as a tool for analyz. ing current economic conditions and prospects is the cyclical indicators approach. This approach identifies certain economic time series as tending to lead, coincide with or lag behind the broad movements in aggregate economic activity. Such indicators have been selected and analyzed by NBER in a series of studies published between 1938 and 1967. During the 1972-75 period, a new comprehensive review of cyclical indicators was carried out by the Bureau of Economic Analysis (BEA) with the cooperation of the NBER research staff. The present format and content of part I of $B C D$ are based on the results of that study.

## Section A. Composite Indexes and Their Components

All cyclical indicators have been evaluated according to six major characteristics: Economic significance, statistical adequacy, consistency of timing at business cycle peaks and troughs, conformity to business expansions and contractions, smoothness, and prompt availability (currency). A formal, detailed weighting scheme was developed and used to assess each series by all of the above criteria. (See articles in the May and November 1975 issues of BCD.) The resulting scores relate to cyclical behavior of the series during the period 1947-70. This analysis produced a new list of indicators classified by economic process and typical timing at business cycle peaks and troughs. (See tables on page 2 and text below relating to section B.)

This information, particularly the scores relating to consistency of timing, served as a basis for the selection of series to be included in the composite indexes. The indexes incorporate the best-scoring series from many different economic-process groups and combine those with similar timing behavior, using their overall performance scores as weights. Because they use series of historically tested usefulness and given timing characteristics (for example, leading at both peaks and troughs), with diversified economic coverage and a minimum of duplication, composite indexes give more reliable signals over time than do any of the individual indicators. Furthermore, much of the

independent measurement error and other "noise" in the included series are smoothed out in the index as a whole. The indexes include only monthly series that are acceptable in terms of relatively prompt availability and reasonable accuracy.

The main composite indexes are distinguished by their cyclical timing. Thus, there is an index of leading indicators, series which historically reached their cyclical peaks and troughs earlier than the corresponding business cycle turns. There is an index of roughly coincident indicators, consisting of series which historically reached their turning points at about the same time as the general economy, and an index of lagging indicators, which includes series that typically reached their peaks and troughs later than the corresponding business cycle turns.
The leading index contains series with long as well as short leads, but each series leads on the average over time and shows a frequency of leads at the individual turns exceeding that attributable to chance, given the historical distribution of cyclical timing. (An analogous statement applies to the components of the lagging index.) Since 1948, leads were generally more frequent and longer at peaks than at troughs of business cycles, while lags were generally more frequent and longer at troughs than at peaks. The adopted system of scoring and classifying the indicators takes into account these well-established differences in timing. Consequently, rough coincidences include short leads (-) and lags ( + ) as well as exact coincidences ( 0 ). (For monthly series, the range is from -3 through +1 at peaks and from -1 through +3 at troughs, where minus denotes leads and plus denotes lags in months.)

For purposes of constructing a composite index, each component series is standardized: The month-to-month percent changes in a given series are divided by the long-run average (without regard to sign) of those changes. Thus, the more volatile series are prevented from dominating the index. The coincident index is calculated so that its long. term trend (since 1948) equals the average of the trends of its four components. This trend, which is similar to that of GNP in constant dollars, can be viewed as a linear approximation to the secular movement (at an average growth rate) in aggregate economic activity. The indexes of leading and lag. ging indicators have been adjusted so that both their trends and their average month-to-month percent changes (without regard to sign) are approximately equal to those of the coincident index. (For a more detailed description of the method of constructing the composite indexes, see the 1984 Handbook of Cyclical Indicators.)

In addition to these principal composite indexes, differentiated according to cyclical timing, there are five indexes based on leading indicators which have been grouped by economic process. Taken together, these additional indexes include all 12 component series of the overall leading index, plus a few related series. Also shown in this section is the ratio of the index of roughly coincident
indicators to the index of lagging indicators, a series known to have a useful pattern of early cyclical timing. Numbers entered on the charts of the composite indexes show the length, in months, of leads $(-)$ and lags $(+)$ at each of the reference turning dates covered.
The next set of data consists of series included in the principal composite indexes. These are the 12 components of the leading index, the 4 components of the coincident index, and the 6 components of the lagging index. Following the title of each series, its typical timing is identified by three letter symbols in a small box. The first of these letters refers to the timing of the given indicator at business cycle peaks, the second to its timing at business cycle troughs, and the third to its timing at all turns, i.e., at peaks and troughs combined. " $L$ " denotes a tendency to lead, " $C$ " a tendency to roughly coincide with the business cycle turns (as represented by the NBERdesignated reference dates), and " Lg " a tendency to lag. Since these series have been selected for the consistency of their timing at both peaks and troughs, all components of the leading index are denoted "L,L,L," all components of the coincident index " $C, C, C$," and all components of the lagging index "Lg,Lg,Lg." It should be remembered that these classifications are based on limited evidence, namely the performance of the indicators during the business cycles of the $1948-70$ period, which included five peaks and five troughs. While the timing classifications are expected to agree with the patterns prevailing in the near future, they will not necessarily hold invariably in every instance. The timing of the series in the period since 1970 can be determined by inspection of the charts, where the recessions of 1973-75, 1980, and $1981-82$ are shaded according to the dates of the NBER reference cycle chronology.

## Section B. Cyclical Indicators by Economic Process

This section covers 111 individual time series, including the 22 indicators used in the construction of the composite indexes. The peak and trough timing classifications are shown on the charts in the same manner as described above, but this section includes series with different timing at peaks and at troughs, as well as series where the timing is not sufficiently consistent to be classified as either $\mathrm{L}, \mathrm{C}$, or Lg according to the probabilistic measures and scoring criteria adopted. Such series are labeled $U$, i.e., unclassified as to timing at turning points of the given type. Eight series are unclassified at peaks, one series at troughs, and 19 series at all turns (of the 19, 15 have definite but different timing at peaks and at troughs). No series that is classified as $U$ both at peaks and at troughs is included in the list of cyclical indicators.
The classification scheme which groups the indicators of this section by economic process and cyclical timing is summarized in the two tabulations on page 2. Cross-classification $A$ is based on the observed behavior of the series at five business cycle peaks (November '48, July '53,

August '57, April '60, and December '69); crossclassification B , on their behavior at five business cycle troughs (October '49, May '54, April '58, February '61, and November '70). Each tabulation distinguishes seven major economic processes and four types of cyclical timing. The titles in the cells identify subgroups of the given economic process with the given timing characteristic. The number of series in each such group is given in parentheses following the title. Complete information on how individual indicators are classified by timing at peaks, troughs, and all turns, along with selected measures and scores, is provided in the 1984 Handbook of Cyclical Indicators.

Section C. Diffusion Indexes and Rates of Change
Many series in this report are aggregates compiled from numerous components. How the individual components of an aggregate move over a given timespan is summarized by a diffusion index which indicates the percentage of components that are rising (with half of the unchanged components considered rising). Cyclical changes in these diffusion indexes tend to lead those of the corresponding aggregates. Since diffusion indexes are highly erratic, they are computed from changes measured over 6 - or 9 -month (or 3 - or 4 -quarter) spans, as well as 1 -month (or 1 -quarter) spans. Longer spans help to highlight the trends underlying the shorter-term fluctuations. Diffusion indexes are shown for the component series included in each of the three composite indexes and for the components of some of the aggregate series shown in section B.
Diffusion measures can be derived not only from actual data but also from surveys of anticipations or intentions. Indexes based on responses of business executives about their plans and expectations for several operating variables are presented, along with the corresponding indexes based on actual data, as the last set of diffusion series.

This section also records rates of change for the three composite indexes (leading, coincident, and lagging) and for four indicators of aggregate economic activity: GNP in constant dollars (quarterly), industrial production, employee hours in nonagricultural establishments, and personal income less transfers in constant dollars. Rates of change are shown for 1 - and 3 -month spans or for 1-quarter spans.
Although movements in diffusion indexes and in rates of change for the same aggregates are generally positively correlated, these two measures present information about two related but distinct aspects of economic change. Diffusion indexes measure the prevailing direction or scope of change, while rates of change measure the degree as well as the overall direction. As is the case for diffusion indexes, cyclical movements in the rates of change tend to lead those of the corresponding indexes or aggregates, and thus, they tend to lead at the business cycle turns as well.

## Part II. OTHER IMPORTANT ECONOMIC MEASURES

This part is divided into six sections which cover a wide range of quarterly and monthly time series measuring various aspects of economic activity. Some of these series are very comprehensive, pertaining to the U.S. economy as a whole, others have to do with particular sectors or markets, and still others relate to U.S. international transactions or to selected foreign countries. The represented variables include incomes, outputs, and expenditures; prices, earnings, and productivity; labor resources; government receipts, expenditures, and defense-related activities; exports and imports; and selected indicators for a few key foreign countries.

## Section A. National Income and Product

The national income and product accounts, compiled by BEA, summarize both receipts and final expenditures for the personal, business, foreign, and government sectors of the economy.

Section Al shows the gross national product, final sales, and personal and disposable personal income. The four major components of the gross national product--personal consumption expenditures, gross private domestic investment, government purchases of goods and services, and net exports of goods and services-are presented in sections A2 through A5. Most of the series in section $A$ are presented in current as well as constant dollars. There are also a few per capita series. The national income and product accounts, briefly defined below, are described more fully in the Survey of Current Business, Part I, January 1976.

Gross national product (GNP) is the market value of final goods and services produced by the labor and property supplied by residents of the United States, before deduction of allowances for the consumption of fixed capital goods. It is the most comprehensive measure of aggregate economic output. Final sales is GNP less change in business inventories.

Personal income is the income received by persons (individuals, owners of unincorporated businesses, nomprofit institutions, private trust funds, and private noninsured welfare funds) from all sources. It is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, dividends, personal interest income, and transfer payments, less personal contributions for social insurance.

Disposable personal income is the personal income available for spending or saving. It consists of personal income less personal taxes and nontax payments to government.

Personal consumption expenditures (A2) is goods and services purchased by individuals, operating expenses of nonprofit institutions, and the value of food, fuel, clothing, rent of dwellings, and financial services received in kind by individuals. Net purchases of used goods are also included.

Gross private domestic investment (A3) is fixed capital goods purchased by private business and nonprofit institutions and the value of the change in the physical volume of inventories held by private business. The former include all private purchases of dwellings, whether purchased for tenant or owner occupancy. Net purchases of used goods are also included.
Government purchases of goods and services (A4) is the compensation of government employees and purchases from business and from abroad. It excludes transfer payments, interest paid by government, and subsidies. It includes gross investment by government enterprises but excludes their current outlays. It includes net purchases of used goods and excludes sales and purchases of land and financial assets.

Net exports of goods and services (A5) is exports less imports of goods and services. Exports are part of the national production; imports are not, but are included in the components of GNP and are therefore deducted. More detail on U.S. international transactions is provided in section E .
National income (A6) is the incomes that originate in the production of goods and services attributable to labor and property supplied by residents of the United States. Thus, it measures the factor costs of the goods and services produced. It consists of the compensation of employees, proprietors' income, rental income of persons, corporate profits, and net interest.
Saving (A7) is the difference between income and expenditures during an accounting period. Total gross savirg includes personal saving, business saving (mainly undistributed corporate profits and capital consumption allowances), and government surplus or deficit.

Shares of GNP and national income (A8).-The major expenditure components of GNP (consumption, investment, etc.) are expressed as percentages of GNP, and the major income components of national income (compensation of employees, corporate profits, etc.) are expressed as percentages of national income.

## Section B. Prices, Wages, and Productivity

The important data on price movements include the monthly consumer and producer price indexes and their major components. Based largely on these series are the quarterly price indexes from the national income and product accounts, notably the GNP implicit price deflator (with weights reflecting the changing proportions of different expenditure categories in GNP) and the fixedweighted price index for the gross business product. Data on both levels and percent changes are presented for the period since 1972.

The group of series on wages and productivity consists of data on average hourly earnings and average hourly compensation (including earnings and other benefits) in current and constant dollars, output per hour of work in the business sector, and rates of change for most of these measures.

Section C. Labor Force, Employment, and Unemployment

This section contains measures of the civilian labor force and its major components: Total numbers of employed and unemployed persons. The number of unemployed is subdivided into selected categories defined by sex, age, and class of worker. Also included are data on participation rates for a few principal segments of the labor force.

## Section D. Government Activities

Receipts, expenditures, and their balance (surplus or deficit) are shown quarterly on two levels: (1) Federal Government and (2) State and local government. Also shown is a selection of series from the discontinued Defense Indicators. These series measure defense activities which influence short-term changes in the national economy. Included are series relating to obligations, contracts, orders, projuction, shipments, inventories, outlays, and employment. These series are grouped according to the time at which the activities they measure occur in the defense order-production-delivery process. Series measuring activities which usually precede production, such as contract awards and new orders, are classified as "advance measures of defense activity." Series measuring activities which tend to coincide with production, such as employment, and activities which usually follow production, such as shipments, are classified as "intermediate and final measures of defense activity."

## Section E. U.S. International Transactions

This group includes monthly series on exports (excluding military aid) and general imports, plus a few selected components of these aggregates. Also shown are the balances between receipts and expenditures for goods and services, merctiandise, and investment income.

## Section F. International Comparisons

This section is designed to facilitate a quick review of basic economic conditions in six of the nations with which we have important trade relationships. The U.S. business cycle shacing has been omitted from these charts. Data on industrial production, consumer prices, and stock prices for Canada, the United Kingdom, France, West Germany, Japan, and Italy are compared with the corresponding U.S. series. Also included is an industrial production index for the European countries in the Organization for E.conomic Cooperation and Development (OECD). The industrial production series provide cyclically sensitive output measures for large parts of the economies covered. Changes in consumer price indexes (plotted for the period since 1972) provide important measures of the rates of inflation in the major industrialized countries. Stock prices (also shown beginning in 1972) tend to be significant as leading indicators.

Peak (P) of cycle indicates end of expansion and beginning of recession (shaded area) as designated by NBER.

Solid line indicates monthly data. (Data may be actual monthly figures or moving averages.)

Broken line indicates actual monthly data for series where a moving average is plotted.

Solid line with plotting points indicates quarterly data.

Parallel lines indicates a break in continuity (data not available, extreme value, etc.).

Solid line indicates monthly data over 6- or 9-month spans.

Broken line indicates monthly data over 1 -month spans.

Broken line with plotting points indicates quarterly data over 1-quarter spans. Solid line with plotting points indicates quarterly data over various spans.

Diffusion indexes and rates of change are centered within the spans they cover.

Solid line indicates percent changes over 3 - or 6 -month spans.

Broken line indicates percent changes over 1 -month spans.

Solid line with plotting points indicates percent changes over 3 - or 4-quarter spans.

Diffusion Indexes

Rates of Change

Trough ( T ) of cycle indicates end of recession and beginning of expansion as designated by NBER.

Arabic number indicates latest month for which data are plotted. (" 9 " = September)

Dotted line indicates anticipated data.
Roman number indicates latest quarter for which data are plotted. ("IV" = fourth quarter)

Various scales are used to highlight the patterns of the individual series. "Scale A" is an arithmetic scale, "scale $\mathrm{L}-1^{\prime \prime}$ is a logarithmic scale with 1 cycle in a given distance, "scale L-2" is a logarithmic scale with two cycles in that distance, etc.
Arabic number indicates latest month for which data are used in computing the indexes.

Roman number indicates latest quarter for which data are used in computing the indexes.

Dotted line indicates anticipated quarterly data over various spans.

Arabic number indicates latest month used in computing the changes.

Broken line with plotting points indicates percent changes over 1 -quarter spans. Roman number indicates latest quarter used in computing the changes.

## how to locate a series

1. See ALPHABETICAL INDEX-SERIES FINDING GUIDE at the back of the report where series are arranged alphabetically according to subject matter and key words and phrases of the series titles, or-
2. See TITLES AND SOURCES OF SERIES at the back of the report where series are listed numerically according to series numbers within each of the report's sections.

NOTE: Figures are the percent of series components rising. (Half of the unchanged components are counted as rising.) Data are centered within the spans: 1 -month indexes are placed on the $2 d$ month, 6 . month indexes on the 4 th monlt, and 9 -month indexes on the 6 th month of the span; 1 -quarter indexes are placed on the 1 st month of the $2 d$ quarter and 4 -quarter indexes on the $2 d$ month of the 30 quarter. Series are seasonally aldjusted except for those, indicated by (u), that appear to contain no seasonal movement. Series numbers are for identification only and do not reflect series relationships or order, Complete titles and sources are listed at the back of this issue. The " $r$ " indicates revised; " $p$ ", preliminary; " $e$ ", estimated; " $a$ ", anticipated; and "NA", not available.
Graphs of these series are shown on page 36.
"Figures are the percent of components declining.
${ }^{2}$ Excludes series 36 , for which data are not available.
${ }^{9}$ Excludes series 57 , for which data are not available.
"Excludes series 77 and 95 , for which data are not available.

NOTE: To facilitate interpretation, the month-to-month directions of change are shown along with the numbers: $(+)=$ rising, ( 0 ) a unchanged, and ( - ) $=$ falling. The " $r$ " indicates revised; " $p$ ". preliminary; and "NA", not available.
${ }^{1}$ The index is the average for October 1 through 23 ; component prices are averages for October 2, 9, 16, and 23.
${ }^{2}$ Data are not seasonally adjusted. These series are based on copyrighted data used by permission; they may not be reproduced without written permission from Commodity Research Bureau, Inc. Components are converted to metric units by the Bureau of Economic Analysis.

NOTE: Series are seasonally adjusted except for those, indicated by (2), that appear to contain no seasonal movement. Series numbers are for identification only and do not reflect series relationships or order. Complete titles and sources are listed at the bach of this issue. The " r " indicates revised; " p ", preliminary; " e ", estimated; " $a$ ", anticipated; and "NA", not available.
Graphs of these series are shown on pages 40 and 41.

Net Contributions of Individual Components to the Leading, Roughly Coincident, and Lagging Composite Indexes

| Series title <br> (and unit of measure) | Basic data |  |  |  | Net contribution to index |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { June } \\ & 1984 \end{aligned}$ | $\begin{aligned} & \text { July } \\ & 1984 \end{aligned}$ | $\begin{aligned} & \text { Aug. } \\ & 1984 \end{aligned}$ | $\begin{aligned} & \text { Sept. } \\ & 1984 \end{aligned}$ | June to July 1984 | July to Aug. 1984 | Aug. to Sept. 1984 |
| LEADING INDICATORS |  |  |  |  |  |  |  |
| 1. Average workweek, production workers, manufacturing (hours) | 40.6 | 40.5 | 40.4 | p40.5 | -0.08 | -0.08 | 0.08 |
| 5. Average weekly initial claims, State unemployment insurance ${ }^{1}$ (thousands) | 350 | 365 | 358 | 368 | -0.12 | 0.05 | -0.08 |
| 8. New orders for consumer goods and materials in 1972 dollars (billion dollars) | 36.65 | r37.86 | r37.90 | p36.08 | 0.16 | 0.01 | -0.26 |
| 32. Vendor performance, companies receiving slower deliveries (percent) . | 66 | 60 | 54 | 58 | -0.24 | -0.24 | 0.18 |
| 12. Net business formation (index: 1967=100). | r116.6 | r116.8 | r119.4 | p120.8 | 0.02 | 0.31 | 0.18 |
| 20. Contracts and orders for plant and equipment in 1972 dollars (billion dollars) | r15.97 | r15.41 | r15.45 | p15.43 | -0.08 | 0.01 | -0.01 |
| 29. New building permits, private housing units (index: 1967=100) | 142.8 | 126.4 | 121.6 | 116.3 | -0.36 | -0.12 | -0.14 |
| 36. Change in inventories on hand and on order in 1972 dol., smoothed ${ }^{2}$ (ann. rate, bil. dol.) | r26.75 | r18.85 | pl3.66 | NA | -0.44 | -0.29 | NA |
| 99. Change in sensitive materials prices, smoothed ${ }^{2}$ (percent) | -0.13 | -0.64 | -1.05 | -1.06 | -0.20 | -0.16 | -0.01 |
| 19. Stock prices, 500 common stocks (index: 1941-43=10) | 153.12 | 151.08 | 164.42 | 166.11 | -0.08 | 0.53 | 0.07 |
| 106. Money supply (M2) in 1972 dollars <br> (billion dollars) | 918.0 | 919.1 | r918.6 | p921.4 | 0.04 | -0.02 | 0.11 |
| 111. Change in credit--business and consumer borrowing (annual rate, percent). | r22.1 | r14.1 | 10.1 | p12.4 | -0.42 | -0.21 | 0.13 |
| 910. Composite index of 12 leading indicators ${ }^{3}$ (index: 1967=100). | r166.9 | r164.1 | r164.0 | p164.6 | -1.68 | -0.06 | 0.37 |
| ROUGHLY COINCIDENT INDICATORS |  |  |  |  |  |  |  |
| 41. Employees on nonagricultural payrolls (thousands) | 94,135 | r94,350 | r94,532 | p94,671 | 0.19 | 0.16 | 0.16 |
| 51. Personal income less transfers in 1972 dollars (annual rate, billion dollars). | 1,181.8 | r 1, 183.0 | r1, 183.6 | p1,188.7 | 0.05 | 0.03 | 0.28 |
| 47. Industrial production, total (index: 1967=100) | r164.4 | r165.9 | r166.1 | p165.1 | 0.25 | 0.03 | -0.22 |
| 57. Manufacturing and trade sales in 1972 dollars (million dollars) | 178,417 | r176,566 | p176,556 | NA | -0.23 | -0.01 | NA |
| 920. Composite index of 4 roughly coincident indicators ${ }^{3}$ (index: 1967=100) . . . . . . . . | 155.5 | 155.7 | r155.7 | p155.8 | 0.13 | 0.00 | 0.06 |
| LAGGING INDICATORS |  |  |  |  |  |  |  |
| 91. Average duration of unemployment ${ }^{1}$ (weeks) . | 18.6 | 18.1 | 17.3 | 17.1 | 0.20 | 0.33 | 0.12 |
| 77. Ratio, constant-dollar inventories to sales, manufacturing and trade (ratio) | 1.51 | 1.54 | pl. 55 | NA | 0.40 | 0.13 | NA |
| 62. Labor cost per unit of output, manufacturing-actual data as a percent of trend (percent). | 84.7 | 83.6 | r 83.4 | p 83.1 | -0.40 | -0.07 | -0.16 |
| 109. Average prime rate charged by banks (percent) . . . . . . . . . . . . . . . . . . | 12.60 | 13.00 | 13.00 | 12.97 | 0.28 | 0.00 | -0.03 |
| 101. Commercial and industrial loans outstanding in 1972 dollars (million dollars) | r116,244 | r117,268 | r118,087 | p119,806 | 0.23 | 0.18 | 0.56 |
| 95. Ratio, consumer installment credit to personal income (percent) | 14.31 | 14.45 | p14.56 | NA | 0.54 | 0.42 | NA |
| 930. Composite index of 6 lagging indicators ${ }^{3}$ <br> (index: 1967=100) | r117.4 | r118.8 | r120.0 | p 120.7 | 1.19 | 1.01 | 0.58 |

NOTE: The net contribution of an individual component is that component's share in the composite movement of the group. It is computed by dividing the standardized and weighted change for the component by the sum of the weights for the available components and dividing that result by the index standardization factor. See the February 1983 issue of BUSINESS CONDITIONS DIGEST (pp. 108-109) for the weights and standardization factors. NA, not available. p, preliminary. r, revised. e, estimated.
${ }^{1}$ This series is inverted in computing the composite index; i.e., a decrease in this series is considered an upward movement.
${ }^{2}$ This series is a weighted 4 -term moving average (with weights $1,2,2,1$ ) placed on the terminal month of the span.
${ }^{3}$ Figures in the net contribution columns are percent changes in the index. The percent change is equal (except for rounding differences) to the sum of the individual components' contributions plus the trend adjustment factor. The trend adjustment factor for the leading index is 0.139 ; for the coincident index, -0.175 ; for the lagging index, 0.018 .

## TITLES AND SOURCES OF SERIES

Series are listed below according to the sections of this report in which they appear. Series numbers are for identification only and do not reflect relationships or order among the series. "M" following a series title indicates monthly data; " $Q$ " indicates quarterly data. Data apply to the whole period except when indicated by "EOM" (end of month) or "EOQ" (end of quarter).

To save space, the commonly used sources listed below are referred to by number:

Source 1-U.S. Department of Commerce, Bureau of Economic Analysis; Source 2-U.S. Department of Commerce, Bureau of the Census; Source 3-U.S. Department of Labor, Bureau of Labor Statistics; Source 4-Board of Governors of the Federal Reserve System.

Following the source for each series is an indication of the pages on which that series appears. The "Series Finding Guide" also lists chart and table page numbers for each series.

## I-A. Composite Indexes

910. Composite index of twelve leading indicators (includes series $1,5,8,12,19,20,29,32,36,99,106,111)$ (M).-Source 1
$(10,39,60)$
911. Composite index of marginal employment adjustments (includes series $1,2,3,5$ ) (M).-Source 1
912. Composite index of capital investment commitments (includes series $12,20,29$ ) (M).-Source 1 ( 11,60 )
913. Composite index of inventory investment and purchasing (includes series 8, 32, 36, 99) (M).-Source 1
$(11,60)$
914. Composite index of profitability (includes series 19, 26, 80) (M).-Source 1
$(11,60)$
915. Composite index of money and financial flows (includes series $104,106,111$ ) (M).-Source 1
$(11,60)$
916. Composite index of four roughly coincident indicators (includes series $41,47,51,57$ ) (M).-Source 1
( $10,39,60$ )
917. Composite index of six lagging indicators (includes series 62, 77, 91, 95, 101, 109) (M).-Source 1
(10,39,60)
918. Ratio, coincident composite index (series 920) to lag. ging composite index (series 930) (M).-Source 1
$(11,60)$

## 1-B. Cyclical Indicators

1. Average workweek of production workers, manufacturing (M).-Source $3 \quad(12,16,61,77)$
2. Accession rate, manufacturing (M).-Source 3
3. Layoff rate, manufacturing (M).-Source 3
4. Quit rate, manufacturing (M).-Source 3
5. Average weekly initial claims for unemployment insurance, State programs (M).-U.S. Department of Labor, Employment and Training Administration; seasonal adjustment by Bureau of Economic Analysis
(12,16,61)
6. Value of manufacturers' new orders, durable goods industries, in current dollars (M).-Source $2(21,64,77)$

$(27,68)$
66. Consumer installment credit (EOM).--Source 4
$(35,73)$
67. Bank rates on short-term business loans $(Q)$.-Source 4
$(35,73)$
68. Labor cost (current dollars) per unit of gross domestic product (1972 dollars), nonfinancial corporations-ratio of current-dollar compensation of employees to real gross corporate product ( $Q$ ).-Source 1
$(30,70)$
69. Manufacturers' machinery and equipment sales and business construction expendifures (industrial and commercial construction put in place) (M).-Source 2
$(24,67)$
70. Manufacturing and trade inventories in 1972 dollars (EOM).-Sources 1, 2, and 3
$(27,68)$
71. Manufacturing and trade inventories, total book value (EOM).-Sources 1 and 2
$(27,68)$
72. Commercial and industrial loans outstanding in current dollars (M).--Sources 1 and 4
$(35,73)$
73. Index of industrial production, durable manufactures (M).-Source 4
$(20,63)$
74. Index of industrial production, nondurable manufactures (M).-Source 4
$(20,63)$
75. Index of industrial production, consumer goods (M).Source 4
$(22,65)$
76. Index of industrial production, business equipment (M).-Source 4
$(24,67)$
77. Ratio, constant-dollar inventories (series 70) to sales (series 57), manufacturing and trade, total (M).Sources 1, 2, and 3
$(15,27,68)$
78. Stocks of materials and supplies on hand and on order, manufacturing (EOM).-Source 2
$(27,68)$
79. Corporate profits after taxes with inventory valuation and capital consumption adjustments in current dollars (Q).-Source 1
$(29,69)$
80. Corporate profits after taxes with inventory valuation and capital consumption adjustments in 1972 dollars (Q).-Source 1
$(29,69)$
81. Ratio of profits (after taxes) with inventory valuation and capital consumption adjustments to total corporate domestic income (Q).-Source 1
$(29,70)$
82. Rate of capacity utilization, manufacturing (Q).-Source 4
$(20,64)$
83. Rate of capacity utilization, manufacturing (EOQ).Source 1
$(20,64)$
84. Rate of capacity utilization, materials (Q).-Source $4 \quad(20,64)$
85. Change in money supply M1 (M).-Source 4 (31,71)
86. Gross private domestic fixed investment, total nonresidential, in 1972 dollars ( $Q$ ).-Source $1(25,67)$
87. Gross private domestic fixed investment, nonresidential structures, in 1972 dollars ( $Q$ ).-Source $1 \quad(25,67)$
88. Gross private domestic fixed investment, nonresidential producers' durable equipment, in 1972 dollars ( Q ).Source 1
$(25,67)$
89. Gross private domestic fixed investment, total residential, in 1972 dollars (0).-Source 1 (25,67)
90. Ratio, civilian employment to total population of working age ( $M$ ).-Sources 1,2 , and 3
$(17,62)$
91. Average (mean) duration of unemployment in weeks (M).-Sources 2 and 3
$(15,18,62)$
92. Free reserves (member banks excess reserves minus borrowings) (M).-Source 4
$(33,72)$
93. Member bank borrowings from the Federal Reserve (M).-Source 4
$(33,72)$
94. Ratio, consumer installment credit to personal income (M).-Sources 1 and 4
$(15,35,73)$
95. Manufacturers' unfilled orders, durable goods industries (EOM).-Source 2
$(21,64)$
96. Backlog of capital appropriations, 1,000 manufacturing corporations (E0Q).-The Conference Board $(24,66)$
97. Change in producer prices for 28 sensitive crude and intermediate materials (M).-Sources 1 and 3 (28.69)
98. Change in sensitive materials prices (smoothed) (M)Sources 1, 3, and Commodity Research Bureau, Inc.
$(13,28,69)$
99. Commercial and industrial loans outstanding in 1972 doliars (M).-Sources 1, 3, and 4
$(15,35,73)$
100. Change in money supply M2 (M).-Source 4 ( 31,71 )
101. Change in total liquid assets (smoothed) ( $M$ ).-Sources 1 and 4
$(31,71)$
102. Money supply M1 in 1972 dollars (M).-Sources 1,3 , and 4
(31,71)
103. Money supply M2 in 1972 dollars (M).-Sources 1,3 , and 4
$(13,31,71)$
104. Ratio, gross national product to money supply M1 (Q).-Sources 1 and 4
$(31,71)$
105. Ratio, personal income to money supply M2 (M).Sources 1 and 4
$(31,71)$
106. Average prime rate charged by banks (M).-Source 4
$(35,73)$
107. Total funds raised by private nonfinancial borrowers in credit markets ( $Q$ ).-Source $4 \quad(32,72)$
108. Change in credit outstanding (business and consumer borrowing) (M).-Sources 1, 4, and Federal Home Loan Bank Board
( $13,32,72$ )
109. Net change in business loans (M).-Sources 1 and 4 $(32,72)$
110. Net change in consumer installment credit (M).-Source 4
$(32,72)$
111. Discount rate on new issues of 91 -day Treasury bills (M).-Source 4
112. Yield on long-term Treasury bonds (M).-U.S. Department of the Treasury
$(34,73)$
113. Yield on new issues of high-grade corporate bonds (M).-Citibank and U.S. Department of the Treasury
$(34,73)$
114. Yield on municipal bonds, 20-bond average (M). -The Bond Buyer
$(34,73)$

$(45,82)$
77. Rental income of persons with capital consumption adjustment as a percent of national income ( $Q$ ).-Source 1
$(47.83)$
78. Corporate profits with inventory valuation and capital consumption adjustments (Q).-Source 1
$(47,82)$
79. Corporate profits with inventory valuation and capital consumption adjustments as a percent of national income ( 0 ).-Source 1
$(47,83)$
80. Net interest (Q).-Source 1
$(45,82)$
81. Net interest as a percent of national income (Q).Source 1
$(47,83)$
82. Gross saving-private saving plus government surplus or deficit (Q).-Source 1
$(46.82)$
83. Personal saving ( $Q$ ).-Source 1
$(46,82)$
84. Personal saving rate--personal saving as a percent of disposable personal income ( Q ).-Source $1 \quad(46,83)$
85. Business saving-undistributed corporate profits plus capital consumption allowances with inventory valuation and capital consumption adjustments (Q).-Source 1
$(46,82)$
86. Government surplus or deficit, total (Q).-Source 1
$(46,83)$

## II-B. Prices, Wages, and Productivity

310. Implicit price deflator, gross national product ( $Q$ ).Source 1
$(48,84)$
311. Fixed-weighted price index, gross business product (Q).-Source 1
$(48,84)$
312. Index of consumer prices, all items (M).-Source 3
(49,59,84,95)
313. Index of consumer prices, food (M).-Source $3(49,84)$
314. Index of producer prices, all commodities (M).--Source 3
$(48,85)$
315. Index of producer prices, crude materials for further processing (M).-Source 3
$(48,85)$
316. Index of producer prices, intermediate materials, supplies, and components (M).-Source $3 \quad(48,86)$
317. Index of producer prices, capital equipment (M).Source 3
$(48,86)$
318. Index of producer prices, finished consumer goods (M).-Source 3
$(48,86)$
319. Index of producer prices, industrial commodities (M).Source 3
$(48,85)$
320. Index of average hourly earnings of production workers, private nonfarm economy-adjusted for overtime (in manufacturing only), interindustry employment shifts, and seasonality (M).-Source 3
$(49,87)$
321. Index of real average hourly earnings of production workers, private nonfarm economy-adjusted for overtime (in manufacturing only), interindustry employment shifts, and seasonality (M).-Source 3
$(49,87)$
322. Index of average hourly compensation, all employees, nonfarm business sector (Q).-Source 3
$(49,87)$
323. Index of real average hourly compensation, all employees, nonfarm business sector (Q).-Source 3
$(49,88)$
324. Negotiated wage and benefit decisions, all industriesaverage (mean) first year changes ( $Q$ ).-Source 3
$(50,88)$
325. Negotiated wage and benefit decisions, all industriesaverage (mean) changes over life of contract ( $Q$ ).Source 3
$(50,88)$
326. Index of output per hour, all persons, nonfarm business sector (Q).-Source 3
$(49,88)$
327. Index of output per hour, all persons, private business sector (Q).-Source 3
$(49,88)$

## II-C. Labor Force, Employment, and Unemployment

37. Number of persons unemployed, labor force survey (M).-Sources 2 and 3
$(18,51,62,89)$
38. Total civilian labor force, tabor force survey (M).Sources 2 and 3
$(51,89)$
39. Total civilian employment, labor force survey (M).Sources 2 and 3
$(51,89)$
40. Number unemployed, males 20 years and over, labor force survey (M).-Sources 2 and 3
$(51,89)$
41. Number unemployed, females 20 years and over, labor force survey (M).-Sources 2 and 3
$(51,89)$
42. Number unemployed, both sexes $16-19$ years of age, labor force survey (M).-Sources 2 and $3 \quad(51,89)$
43. Number unemployed, full-time workers, labor force survey (M).-Sources 2 and 3
$(51,89)$
44. Number employed, part-time workers for economic reasons, labor force survey (M).-Sources 2 and 3
$(51,89)$
45. Civilian labor force participation rate, males 20 years and over (M).-Sources 2 and 3
$(51,89)$
46. Civilian labor force participation rate, females 20 years and over (M).--Sources 2 and 3
$(51,89)$
47. Civilian labor force participation rate, both sexes $\mathbf{1 6 - 1 9}$ years of age (M).-Sources 2 and 3
$(51,89)$

## II-D. Government Activities

500. Federal Government surplus or deficit; national income and product accounts $(Q)$.-Source 1
$(52,90)$
501. Federal Government receipts; national income and product accounts (Q).-Source I
$(52,90)$
502. Federal Government expenditures; national income and product accounts (Q).-Source 1
$(52,90)$
503. State and local government surplus or deficit; national income and product accounts $(Q)$--Source 1 ( 52,90 )
504. State and local government receipts; national income and product accounts (Q).-Source 1
$(52,90)$
505. State and local government expenditures; national income and product accounts ( $Q$ ).-Source $1(52,90)$
