## LETTER OF TRANSMITTAL

The White House, January 18, 1961.

## To the Congress of the United States:

I present herewith my Economic Report, as required by Section 3(a) of the Employment Act of 1946.

The Report was prepared with the advice and assistance of the Council of Economic Advisers, who, in turn, have had the assistance of the heads of the executive departments and independent agencies directly concerned with the matters discussed. Pursuant to the requirements of the Employment Act, the Report summarizes the economic developments of the year and the policy actions taken to promote balanced growth of the economy, appraises the economic outlook, and puts forward a number of legislative proposals designed to help achieve the purposes of the Act. The Report also reviews the performance of the economy under the Employment Act, and particularly during the period of this Administration, and discusses policies for the future in the light of this experience.

The major conclusions and recommendations of the Report are set forth below, in part in the words of the Report itself.

As the year 1960 came to a close, the Nation was producing goods and services at an annual rate of $\$ 503.5$ billion, the same as in the third quarter of the year, though slightly less than in the second quarter. For the year as a whole, the total output of our economy, in dollars of constant buying power, was 2.6 percent greater than in 1959.

Production and employment declined in the latter part of 1960, and unemployment rose, owing in large measure to an inventory adjustment. In the first quarter, inventories were being built up at an annual rate of $\$ 11.4$ billion, but in the fourth quarter they were being reduced at an annual rate of $\$ 4.0$ billion. It is encouraging, however, that the declines in production and income were moderate. And it is especially important that final demands for goods and services-that is, the sum of the Nation's expenditures except those resulting in inventory change-rose without interruption during the year and in the final quarter reached the level of $\$ 507.5$ billion.

The achievement of a reasonable equilibrium in the Nation's international transactions continued to be a goal of our policies in 1960. The over-all deficit in the United States balance of payments last year remained close to that in each of the two preceding years, but the structure of the deficit
changed markedly. Short-term capital outflows accelerated, mainly in response to a widening of the margin by which interest rates abroad exceeded those in this country. But the deficit on all other transactions diminished greatly, as a result of a rapid rise in exports.

The underlying strength of our economy, manifested in final demand for goods and services, is a distinctly favorable element in appraising the economic outlook. So, also, is the fact that economic conditions today are free of maladjustments and imbalances which, to be corrected, would require prolonged contraction. Businessmen and consumers have kept their use of credit within reasonable limits, and speculative excesses have been generally avoided. Inflationary pressure has been restrained. While this may have affected inventory policies and, perhaps, other demands for goods and services, it has helped to prepare a solid foundation for a resumption of sustainable growth. Because action to maintain balance and to consolidate gains was taken in good time, we can look forward, provided public and private policies are favorable, to a period of sound economic growth from a firm base.

The Federal policies needed to promote balanced growth can, to a considerable extent, be applied under existing administrative authority. But there are certain areas in which legislative action is needed.

First, funds appropriated by the Congress for the fiscal year 1962 should be held within the limits of expected revenues. A budget conforming to this standard has been presented to the Congress. It makes certain suggestions for revenues to cover projected expenditures, including necessary extensions of taxes that would otherwise terminate or be reduced on July 1, 1961; an increase in the highway fuel tax to $41 / 2$ cents per gallon, to supply needed funds in the Highway Trust Fund; the rescinding by the Congress of action taken in 1959 which would divert funds from the general fund of the Treasury for road construction; and a rate increase to place the postal system on a self-supporting basis.

Second, Congress should give the Secretary of the Treasury authority to raise funds in the long-term capital market when, in his judgment, this is in the public interest, even if the cost of the funds is above $41 / 4$ percent. The existing ceiling remains an important impediment to the Treasury's flexibility in achieving significant debt lengthening.

Third, as I have pointed out to the Congress each year since 1955, legislation is needed to enable the Federal Government to give constructive assistance to areas where there is high and persistent unemployment. The character of the legislation needed is described in the Economic Report, and an Administration proposal drafted to meet the standards indicated has been placed before the Congress.

Fourth, legislative needs in the areas of health, education and welfare, antitrust enforcement, long-term agricultural adjustment, unemployment compensation, and housing and community development are outlined in the Report. These are also described in the Budget Message.

Finally, I recommend again that Congress amend the Employment Act of 1946 to make reasonable price stability an explicit goal of national economic policy, coordinate with the goals of maximum employment, production, and purchasing power now stated in the Act. The amendment proposed is limited to a change in the language of the Act's declaration of policy and would accomplish its aim without placing restrictions on the effective operation of economic markets. It would strengthen the Employment Act which, as the Economic Report shows, has been a useful statute under which our citizens have made notable further advances in their welfare.

Dwight D. Eisenhower.

## INTRODUGTION

This Economic Report is the eighth prepared by this Administration pursuant to the provisions of Section 3(a) of the Employment Act of 1946. Since the eight Reports cover a period that embraces more than half of the lifetime of the Act, the present occasion seems an appropriate one for a brief survey of the performance of our economy since 1946 and an exploration of the challenges and opportunities of the years ahead. Accordingly, these topics are treated here, as well as the required review of 1960 and the examination of issues that will more immediately concern the new President and the new Congress.

The first chapter in the Report reviews the outstanding economic developments of 1960, describes the policies pursued by the Federal Government during the year to help achieve the purposes proclaimed in the Employment Act, and appraises the economic outlook for the next year. The second chapter considers the Nation's economic performance during the entire period since 1946, and in particular during the eight years spanned by the present Administration. In the light of this experience we can appreciate more fully the vigor of the American economy and its promise for further improvement of the welfare of our citizens. The third chapter identifies major problem areas to which attention should be directed in the future and for which effective policies and programs should be devised within our proven economic, political, and social framework. In addition, Chapter 3 presents proposals for the legislation needed to help achieve the purposes of the Employment Act. These include some items which were presented in last year's economic program of the Administration and on which action has not yet been taken; they merit renewed consideration in the current economic context.

It is not amiss here to mention an observation made several times in this Report: the history of the past 15 years offers a solid basis for confidence in the continued efficacy of the American system of complementary private and public endeavor. This concept of shared responsibility for economic growth and improvement, so clearly reflected in the declaration of policy of the Employment Act, points the way to sound achievement, in a changing domestic and international environment, of the common economic purposes of all Americans.

## Chapter 1

## Economic Developments and Policies in 1960

EMPLOYMENT, production, and income in the United States attained in 1960 levels well above those of 1959. The advances, however, were concentrated in the first half of the year; in the second half, production and employment declined and unemployment rose. For the year as a whole, the gross national product in current prices was 4.4 percent higher than in 1959; in constant prices, the increase was 2.6 percent.

The improvement in the first part of 1960 was an extension of the advance that had begun in the spring of 1958; this expansion had been aided by the fact that consumer income and outlays had fallen very little during the preceding contraction. Before mid-1958, personal income began to rise, and consumers increased their spending. These developments helped to restrain, and later to reverse, the severe inventory liquidation that had been in progress. Subsequent impulses came from an upward turn in outlays on residential construction followed by a renewed advance in plant and equipment expenditures. Throughout 1958, Government expenditures for goods and services continued to rise fairly steadily. With a substantial Federal deficit and an easing of monetary policy, the expansion of the economy proceeded vigorously, supported by steadily mounting consumption.

Expansionary forces continued to show strength in 1959, although they were distorted by the effects of the steel strike. As prices began to rise after a year of approximate stability and more serious inflationary pressures threatened, Federal Reserve authorities increased the degree of monetary and credit restraint that had been initially applied in the summer of 1958. Moreover, the gap between Federal cash receipts and expenditures (seasonally adjusted) was being steadily reduced in accordance with the program for a balanced budget.

In the early part of 1959 , the rise in economic activity was accelerated by the anticipation of a steel strike and by the further build-up of inventories which this tended to promote. The long strike that marked the second half of 1959 reversed this process in some measure. Inventory investment dropped markedly, and employment and income declined. In response to these developments, the rise in final demands-the sum of the Nation's expenditures on goods and services except those resulting in inventory change-slackened during the second half of 1959. However, with continued strength in the underlying expansive forces, economic
activity fell less drastically than might have been expected in the face of this stoppage in one of the major industries of the Nation.

The halting of the steel strike by a Federal court injunction in November brought an upsurge in economic activity. Steel users rushed to rebuild depleted inventories, and automobile production was stepped up sharply. By the end of 1959, demands that had accumulated during the strike led to widespread expectations of a strong boom and further inflationary pressures.

Fears of inflation, however, were lessened by other developments. Monetary authorities had brought credit expansion under effective control. The budget proposed for the fiscal year 1961 showed a substantial surplus. The terms under which the steel strike had been halted were believed to be favorable to stable prices for steel and other products; and the competition from abroad that was felt by a widening range of American industries also served as a restraint on prices. Inventories were restored rapidly in early 1960, and industrial capacity generally was found to be ample.

As 1960 progressed and as stocks approached or exceeded the volume deemed appropriate to the sales actually experienced, the high rate of inventory investment declined. On the other hand, expenditures for fixed investment and for consumption, as well as the export balance, increased. In the second quarter, gains in final demand outweighed the drop in inventory investment, and gross national product (GNP) continued to advance, albeit more slowly than in the first quarter (Table 1 and Chart 1). Employment and income also showed good gains.

In the second half of the year, expenditures on business plant and equipment, as shown in the Securities and Exchange Commission-Department

## Gross National Product

Final purchases advanced in 1960. Inventory accumulation was substantial early in the year but lessened thereafter and gave way to liquidation.

SOURCES: DEPARTMENT OF COMMERCE ANO COUNGIL OF EGONOMIC ADVISERS.
of Commerce survey, began to decline, reflecting adequate productive capacity, diminishing profits, and a slowing down in the growth of demand. The advance in consumer expenditures slackened despite a further, though more moderate, rise in disposable income, and the rate of saving increased accordingly. Housing activity continued the decline that had begun in the second half of 1959. Inventory expenditure continued to be a contractive force, as liquidation took place toward the end of the year. These negative factors outweighed the major positive elements of demandrising exports and Government purchases-and GNP dropped slightly in the third quarter. In the final quarter of the year, however, GNP remained at its third quarter level.

## Pringipal Segtors of Demand

## Inventories

The rapid restocking of inventories in the early part of 1960 and the subsequent reversal of this movement were the principal factors shaping the course of the economy during the year. In the first quarter, manufacturers of durable goods accounted for 60 percent of the total inventory accumulation of more than $\$ 11$ billion (annual rate), and automobile retailers accounted for another 25 percent (Tables 1 and 2). In the second quarter, the build-up continued, but the rate of accumulation was reduced to about $\$ 5$ billion, as producers found their needs more adequately covered. The steel industry, in particular, accumulated sizable supplies of finished steel and materials during that quarter.

1 Change in book value of inventories at end of periods; differs from net change in business inventories component of GNP which relates to all industries and which includes an adjustment for inventory valuation.
${ }^{2}$ Change from end of third quarter to end of November.
Note.-Detail will not necessarlly add to totals because of rounding.
Source: Department of Commerce.
At midyear, total inventories in relation to sales were not large, measured by historical standards. They were more substantial for some durable goods manufacturers and for automobile retailers and relatively less so for many producers of nondurable goods. As early as midyear, there was evidence that manufacturers' inventories of purchased materials, notably steel, were being reduced. Meanwhile, businessmen's holdings of finished products increased further, a development which in part may not have been intended, especially with regard to consumer durable goods lines. As the year progressed, inventory policies in some lines of business underwent modification in response to declining sales, less optimistic expectations, and ample capacity of suppliers in many industries. The reduction in profits provided another incentive for more cautious inventory policies. Additional

## Growth of Credit

The growth in business loans slowed down in 1960, while new issues of securities increased slightly.

There was also less demand for credit by individuals and by various levels of government.

sourges: various government and private agencies.
contributing factors may have been the greater confidence in price stability and improving techniques of inventory control. As a result, inventory reductions developed in some industries during the third quarter and became more extensive in the final quarter of the year.

The changes in inventory policy were reflected in the business loans of banks (Chart 2). During the early months of the year, bank credit of this type increased more than seasonally, but subsequently, as businessmen slowed their inventory accumulation and later shifted to inventory liquidation, the expansion in credit was reduced markedly. Some easing occurred in the availability of credit, and in August the prime rate for bank loans was lowered from 5 percent to $41 / 2$ percent.

## Plant and Equipment Expenditures

Outlays for business plant and equipment, as reported by the SECCommerce survey, which had started to advance in the fourth quarter of 1958, continued to rise in the first half of 1960, the most significant gain occurring in the manufacturing industries. Total outlays in the six-month period were 13 percent higher than in the first six months of 1959. During the second half of the year, however, these expenditures began to decline. For the year as a whole, they exceeded expenditures in 1959 and approached, but did not quite equal, the record level attained in 1957.

The financing in 1960 of the larger volume of plant and equipment expenditures by corporations proceeded in an environment of generally easing capital markets. Corporations other than sales finance companies relied somewhat less heavily upon new issues of securities than in 1959, although, in the aggregate, offerings were expanded. With lower interest rates, the volume of bond flotations rose substantially. Offerings of stocks, however, declined as stock prices fell. The flow of internal funds appears to have been slightly below that in 1959, because rising depreciation and amortization allowances were not fully sufficient to offset reduced profits. But the expanded capital outlays were met without strain, since requirements for funds to finance additions to inventories were less than in 1959 and liquid holdings of cash and Treasury obligations were used more intensively.

## Residential Construction

Expenditures on residential construction in 1960 were 10 percent below those in 1959. The number of new starts dropped somewhat more sharply than expenditures, but the effect of this reduction upon the home building industry was mitigated by the improvement in the volume of activity in additions and alterations.

The decline in housing activity was tempered by an increase in the availability of mortgage credit and, to a much lesser extent, by lowered borrowing costs. Another favorable factor was the rise in income. However, the response to these stimuli was less than in 1958. Vacancy rates in rental units rose from 6.6 percent in the third quarter of 1959 to 7.6
percent in the third quarter of 1960. Reflecting developments in housing activity, outstanding mortgage debt on 1 - to 4 -family homes rose by $\$ 11$ billion in 1960, compared with a net increase of $\$ 13$ billion in 1959 .

## Net Exports

The mounting favorable export balance was an expansive factor throughout 1960. After showing an excess of imports over exports of $\$ 2.2$ billion (annual rate) in the second quarter of 1959, the Nation's export balance improved rapidly, and by the fourth quarter of 1960 it was $\$ 4.0$ billion. Exports of goods and services rose during the year while imports fell slightly. (The balance of payments is discussed in a later section of this chapter.)

## Government Expenditures

Government expenditures on goods and services increased throughout the year, and in the final quarter they were $\$ 5$ billion (annual rate) higher than a year earlier. The rise reflected principally the steady advance in State and local expenditures following their brief decline late in 1959, which was occasioned in part by the impact of the steel strike upon public construction. Government transfer payments and interest, which are not included in expenditures on goods and services, rose from $\$ 33.6$ billion in the fourth quarter of 1959 to $\$ 36.9$ billion in the fourth quarter of 1960 , thus making a very material contribution to final demand.

Federal expenditures, which had reached a peacetime high of $\$ 54.3$ billion (annual rate) in the fourth quarter of 1958 , fell to $\$ 51.7$ billion in the second quarter of 1960. Smaller inventory acquisitions by the Commodity Credit Corporation and lower expenditures for defense accounted for most of this drop. However, Federal expenditures began to advance in the second half of the year, owing largely to a pay increase for Government employees and rising defense spending, and reached $\$ 53.2$ billion in the fourth quarter.

## Consumption and Income

Consumer expenditures on services in 1960 continued the rise which has been uninterrupted during the years since the war. However, this long advance reflects in part pronounced and persistent price increases in this sector. Expenditures on nondurable goods were especially strong just prior to midyear, but weakened thereafter, as the rise in consumer income slackened. Outlays on consumer durable goods changed little in the first half of the year and declined in the second half. Sales of domestically produced new automobiles totaled 6.1 million for the year as a whole, a volume unequaled since 1955 though still below industry expectations expressed in the early months of 1960 . The increase in volume, however, does not represent a fully proportionate gain in dollar value of sales; for the first time, a considerable part of the total-at least 25 percent-consisted
of lower-priced compact cars. Meanwhile, the demand for durable household goods exhibited weakness, reflecting in part the decline in the number of new homes built.

The rise in consumer expenditures was supported by the growth of personal income to a level 5 percent above that of 1959 (Chart 3). However, aggregate consumption in 1960 did not fully keep pace with the increase in individual incomes; consequently, saving increased, as a proportion of income, from 6.6 percent in the strike-affected second half of 1959 to 7.7 percent in the second half of 1960 . This increase in the rate of personal saving was another important factor contributing to the declines in the economy during the second half of the year and was reflected in the larger accumulation of liquid assets by individuals, as well as in their more restricted use of credit.

The advance in personal income that accompanied the rise in economic activity during the early part of 1960 became less marked after the middle of the year. Labor income benefited from the rise in basic wage rates of approximately 3 percent per year, reflecting major collective bargaining settlements, deferred wage increases, and cost of living adjustments. However, labor income was adversely affected by a decline in employment which was especially marked in the more highly paid durable goods manufacturing industries, and by a lower average workweek of production workers. After the middle of the year, labor income as a whole rose more slowly and then declined, dropping more sharply as the year ended. Some other forms of personal income-notably interest and transfer paymentscontinued to increase during most of the year.

In the first half of the year, consumers made fairly extensive use of instalment credit, causing the total debt outstanding to expand at a substantial rate. Thereafter, the marked slowing down of the rise (seasonally adjusted) was one of the factors that contributed to the increase in the saving rate: for 1960 as a whole, the growth in consumer credit was substantially less than in 1959. While the growth rate in automobile and certain other consumer goods paper fell off markedly from the first to the second half of the year, the rate of growth in personal loans was more nearly maintained.

In contrast to personal income, corporate profits declined early in 1960 (Chart 4). In the first quarter, corporate profits before taxes were at an annual rate of $\$ 48.8$ billion, compared with the record figure of $\$ 51.7$ billion in the second quarter of 1959 , and by the third quarter they had dropped to $\$ 41.5$ billion. A shift from profits to other forms of income can help sustain a high level of over-all demand in the short run, although over a longer period a shrinkage of profits relative to output may be expected to reduce both the means and the incentive for business investment. In the second half of 1960 , however, the higher saving rate largely forestalled the favorable effect that such a shift might have had, through higher consumer income, upon consumer buying.

## Personal Income, Spending, and Saving

Disposable personal income rose strongly during the first half of 1960 but more moderately thereatter. Since spending did not keep pace, personal saving tended to rise. billions of dollars

## Employment and Unemployment

After the steel industry resumed operations in November 1959, total civilian employment expanded rapidly and by December had almost recovered to its pre-strike figure, seasonally adjusted, of 66.2 million (Chart 5). The expansion was largely in the employment of workers in durable goods producing industries; most of the increase in employment was reflected in a drop of unemployment, from 4.2 million in October 1959, when the strike was still in progress, to 3.8 million in December 1959. During the period of recovery from the strike, higher demand for labor also resulted in longer workweeks and increased overtime in durable goods industries.

## Civilian Labor Force

The labor force expanded substantially in 1960. Employment declined and unemployment increased during the second half of the year.

PERCENT OF CIVILIAN LABOR FORCE

* 14 YEARS OF AGE AND OVER.

SOURCE: DEPARTMENT OF LABOR.

Civilian employment continued to expand with the increase in economic activity during the first half of 1960; by June, the seasonally adjusted figure was 67.4 million. Meanwhile, the civilian labor force also increased at about the same rate, so that the change in unemployment was minor.

For 1960 as a whole, employment averaged 66.7 million and the civilian labor force averaged 70.6 million. These were record numbers, representing gains above average 1959 levels, after allowance for the inclusion of Alaska and Hawaii.

Total payroll employment in nonagricultural establishments expanded moderately during the first half of the year and reached 53.4 million, seasonally adjusted, in June. Widely divergent trends appeared, however, in important industries. Total employment in manufacturing changed very little in the half year. Employment in durable goods industries decreased after February, as work forces were sharply reduced in industries producing primary metals and transportation equipment, but this decrease was largely offset by a moderate expansion in nondurable goods manufacturing. In nonmanufacturing industries, employment increased without significant interruption, especially in trade, finance, service, and government.

Total payroll employment began to decline in August as additional manufacturing industries curtailed work forces, the automobile industry shut down earlier than usual for its annual model changeover, and construction firms restricted operations. In most major industry groups except finance, services, and government, employment fell after midsummer (Chart 6). Declines in aggregate employment continued to the end of the year, with the declines being particularly marked in the final months. Through December 1960, the total reduction of payroll employment from the July peak amounted to about 951,000. Payroll employment in December 1960 totaled 52.5 million, compared with 52.9 million in December 1959.

The average workweek of production workers in manufacturing industries declined from 40.4 hours in January to 39.6 hours in April, both seasonally adjusted (Chart 7). This contraction was due, in part, to temporary and noneconomic factors. After a recovery to 40.1 hours in May, the average again fell as increasing numbers of workers in manufacturing industries went on part-time schedules.

Unemployment, seasonally adjusted, declined to 3.5 million in May, but then rose over the remainder of the year, to 4.9 million, or 6.8 percent of the labor force, in December. Insured unemployment, which covers persons eligible to draw unemployment benefits, increased sharply, after seasonal adjustment, in the second half of the year.

Employment in Nonagricultural Establishments
Manufacturing, mining, and transportation accounted for nearly all of the decline in payroll employment after the middle of 1960.

The turnover of the unemployed group remained high in 1960; during most months of the year, from two-fifths to one-half of the total number had been seeking work for less than 5 weeks. Nevertheless, long-term unemployment-the number of persons seeking work for 15 weeks or more-increased after May, and in December amounted to 1.2 million, after seasonal adjustment, compared with 1.0 million in December 1959. The unemployment rate for married men also increased during the second half of the year; for 1960 as a whole, however, it averaged 3.7 percent of their number in the labor force, about the same as in 1959.

The increase in unemployment was reflected in the Department of Labor's classification of the Nation's 147 major labor market areas according to adequacy of labor supply. In November 1960, 48 major areas were classified as having "substantial labor surpluses" (unemployment of 6 percent or more of the labor force), compared with 28 in January. A large proportion of total unemployment, and an even larger part of longterm unemployment, remains concentrated in the 19 major labor market areas having "substantial and persistent labor surpluses," most of which are located in the northeastern part of the country. In May 1960, before the downturn of total employment, the unemployment rate in these areas averaged 7.9 percent, compared with 4.7 percent for all the remaining areas.

Semiskilled, unskilled, and inexperienced workers were reported to be in surplus supply in nearly all sections of the country, but many labor market areas continued to report shortages of professional, technical, secretarial, clerical, and skilled workers.

## Prices

Prices in different sectors of the economy followed divergent trends in 1960. The net result of these movements was an increase in the consumer price index of 1.4 percent and an unchanged level for the index of wholesale prices.

The increase in the consumer price index was about the same as during 1959 (Table 3). This outcome conceals, however, an important difference between the two years in the role of consumer goods prices, both of durables and nondurables, which in the past have contributed importantly to upward movements. Whereas in 1959 both of these sectors showed noticeable advances, in 1960 the prices of nondurable goods, excluding food, rose only very moderately, while those of durable goods declined. Food prices, on the other hand, which tend to move partly in response to special factors, increased in 1960, while they had fallen in 1959. Prices of services advanced, as they have done in earlier years (Chart 8).

Investment goods prices also reflected an easing of upward pressures. Prices of producer finished goods rose until September 1959, but thereafter

fluctuated within a narrow range. Since the turn of 1960, construction costs have shown a similar stability.

Wholesale prices in general have remained steady since early 1958 (Chart 9). In the earlier part of the period, there was a moderate increase in industrial prices, but this was offset by lower prices of farm products and processed foods. The reverse was true in 1960, as prices of farm products and processed foods rose noticeably and industrial prices drifted down a little. However, prices of certain basic items, such as metals and their products, electrical machinery, and especially lumber, declined more markedly. Prices of crude industrial materials as a group fell considerably; but at intermediate stages of processing, declines in industrial prices have not been large.

The weakening in the upward tendency of prices reflected the combined impact of several factors. Monetary and fiscal policies served to avoid speculative excesses and pressures of demand upon capacity and helped to create attitudes on the part of businessmen and consumers favorable to price stability. As 1960 progressed, evidence of ample supplies and the slackening of the economic advance strengthened these attitudes and gave rise to keener competition as well as more careful buying habits. Wage increases of only moderate amount likewise contributed to greater price stability. Average hourly earnings of production workers in manufacturing,
adjusted for interindustry shifts, which had advanced by more than 5 percent in 1956 and 1957, gained only 3.4 percent in 1959 and about the same amount in the past year. However, such increases in manufacturing and industries other than agriculture, viewed as part of the long-term trend in hourly wage rates, are still somewhat greater than the average annual improvement in productivity in the past decade.

CHART 8

## Consumer Prices

The 1960 rise in consumer prices was due largely to an advance in food prices and to the continuing increase in prices of services. Prices of durable goods fell markedly.

CHART 9

## Wholesale Prices

The over-all wholesale price index continued steady in 1960, but prices of crude industrial materials declined substantially.

SOURGE: DEPARTMENT OF LABOR.

## Agriculture

Agricultural output in 1960 reached a record high for the third year in succession. Output, especially of field crops, was stimulated by incentive price supports for several commodities, the more extensive use of fertilizers, and favorable weather. Production of corn and grain sorghums set new records, and output of wheat and soybeans was exceeded only in 1958. Total livestock production decreased slightly, as hog, poultry, and egg production declined early in the year in response to unsatisfactory prices prevailing toward the end of 1959, and cattle production continued the expansion phase of its typically long cycle.

Prices and incomes received by farmers, which had declined in late 1959, improved by mid-1960 with better market conditions. Later, substantial advances by the Commodity Credit Corporation (CCC) on loans on wheat, corn, and other price-supported crops from the 1960 harvests helped to sustain income. Gross income of farm operators, estimated at $\$ 37.9$ billion, was $\$ 400$ million larger than the 1959 income. Farm production expenses changed very little, as lower costs for expense items originating in the farm sector, notably feed and feeder livestock, all but offset the higher costs of certain other production goods and services. Tax and interest costs were substantially greater than in 1959. Farm wage rates were somewhat above those in 1959, but fewer workers were employed.

With their gross income slightly higher and production expenses nearly the same as in 1959, farm operators' net income from farming in 1960 was a little greater than in 1959 (Chart 10). Realized net income, which excludes inventory change, rose from $\$ 11.3$ billion in 1959 to an estimated $\$ 11.6$ billion in 1960. Whether reported exclusive or inclusive of inventory change, net income in 1960 was about the same as the average for the five preceding years; but, since the number of farms has decreased steadily, net income per farm in 1960 was about 5 percent higher than the 1955-59 average.

Hired farm workers living on farms received about $\$ 1.8$ billion in farm wages. Income of all farm people from nonfarm sources, including in particular wages earned from part-time work off the farm, was a little larger in 1960 than in 1959, rising to a record $\$ 6.9$ billion.

Market values of farm real estate leveled off and then receded a little during 1960 after an almost uninterrupted upward trend that started before World War II. There were moderate declines in the Corn Belt and Northern Plains, and further small increases occurred in most of the Southern, Mountain, and Pacific States. Total farm assets at the end of 1960 amounted to $\$ 199.3$ billion, 2 percent less than a year earlier. Farm indebtedness continued to increase. By the end of the year, indebtedness reached $\$ 25.7$ billion, or 13 percent of assets, leaving an equity in farm investment of $\$ 173.6$ billion, 3 percent less than the equity 12 months earlier.

## Indicators of Agricultural Conditions

Incomes of farmers, from farm and nonfarm sources, rose
slightly in 1960. Farm proprietors' equities declined.

billions of oollars

I income of farm operators, including government payments
$\varepsilon$ income of all farm people.
SOURCE : DEPARTMENT OF AGRICULTURE.

An outstanding feature of agricultural developments in 1960 was the strong expansion of exports of farm products. The volume of these exports reached a new high in the fiscal year 1960, and their value, at $\$ 4.5$ billion, was second only to the record $\$ 4.7$ billion attained in the fiscal year 1958. Since the major export crops are given Government price support, the large exports, which are partly subsidized, served chiefly to ease the financial burden on the Commodity Credit Corporation; however, they also helped to sustain farm income.

Despite extensive efforts in food distribution and other surplus removal activities, 1.8 billion bushels of corn, 1.5 billion bushels of wheat, 5.3 million bales of cotton, and substantial quantities of several other products remained in CCC inventory or under CCC loan at the end of 1960. Accumulated investment of the Corporation in price-supported commodities amounted to $\$ 9.1$ billion.

## Monetary and Fiscal Areas

Early in 1960, inflationary forces were being brought under control. Efforts to bring the budget into balance were meeting with success, and the emerging surplus, augmented by seasonal factors, permitted some debt retirement. Under these circumstances, the Federal Reserve authorities moved to reduce monetary restraint.

As the year proceeded, developments increasingly called for an extension of this policy, and the Federal Reserve accordingly took a variety of steps toward more positive promotion of monetary ease. At the same time, pressure upon corporate profits reduced prospective tax revenues from this source. The budget surplus for the fiscal year 1961, which had been estimated at $\$ 4.2$ billion in January, was revised to $\$ 1.1$ billion in the fall; an approximate balance is now estimated. The restraining effect of the budget on the economy diminished in this period. In view of the decline in residential construction, Federal housing programs were adjusted to provide additional stimulus. Advantage was taken of the possibility of accelerating the Federal highway program, as well as some other Federal programs.

## Monetary and Credit Policy

As the year began, interest rates on Treasury bills were just reaching a peak, although net borrowed reserves had passed their high point in early August 1959. The money supply (demand deposits and currency, seasonally adjusted) had been declining since July 1959.

Demand for most forms of bank credit, however, began to slacken early in 1960. Business loans, which reflected the strong pace of inventory accumulation, were the major exception in this downturn. With the demands of the Federal Government on the financial markets also reduced, interest rates eased rapidly during the early months of the year. Total

note: beginning december 1959, reserves include vault cash allowed. SOURCE: BOARD OF GOVERNORS OF THE fEDERAL RESERVE SYSTEM.
loans and investments of commercial banks, as well as total bank reserves and the money supply, fell more than they normally do early in a year.

Through April, Federal Reserve open market operations had the effect of easing the position of the banks, although not on a scale sufficient to prevent a more than usual shrinkage in total reserves. By late spring, net borrowed reserves of banks approached zero (Chart 11) and the rate on three-month Treasury bills dropped below 3 percent. The demand for business loans meanwhile fell short of its increase in most recent years, as the rate of inventory accumulation diminished. The demand for other loans also reflected some slackening in economic activity. These developments were further highlighted by a general decline in stock prices (Chart 12). Thus, further monetary easing was clearly called for, and, accordingly, open market operations became more aggressive. Beginning in May, growing monetary ease was reflected in a greater than usual rise in total reserves of banks, and after midyear the downward trend in the money supply was reversed.

In June, the Federal Reserve Banks reduced discount rates from 4 percent to $31 / 2$ percent, and in August and early September rates were cut again,

CHART 12

to 3 percent. In two successive steps taken in September and December, reserve requirements against demand deposits for central reserve city banks were reduced from 18 percent to $16 \frac{1}{2}$ percent. Most important, from the point of view of providing reserves, all vault cash was made available for meeting reserve requirements. As a partial offset, requirements for country banks were raised from 11 percent to 12 percent.

As the year progressed, the expansion of loans continued to be moderate. Funds supplied through Federal Reserve actions were used by banks primarily to purchase United States Government securities; such purchases from June through December amounted to $\$ 7.1$ billion. The expansion in bank loans and investments produced only a small rise in the money supply, because the resultant deposits predominantly took the form of time deposits.

Beginning in late October, Federal Reserve purchases of United States Government securities were extended to short-term securities other than Treasury bills for the first time since 1958. The action was considered appropriate in the light of the outflow of capital, stimulated in part by the sharply lower yield on short-term United States securities in comparison with the rate on equivalent securities in other countries.

For 1960 as a whole, the money supply decreased by $\$ 1.0$ billion, against a rise of $\$ 600$ million in 1959. Time deposits, however, increased much more than in 1959, the gain amounting to about $\$ 5.9$ billion (Chart 13). Bank credit rose by $\$ 8.4$ billion, moderately more than in 1959. But loans rose by only $\$ 5.8$ billion, against an increase of $\$ 11.9$ billion in the preceding year. The slower pace of bank lending, despite the larger volume of funds available, was due to the lessened demand for total credit by all major sectors of the economy. Banks, therefore, were able to add about $\$ 2.4$ billion to their holdings of United States Government securities, thus reversing the heavy liquidation of such securities that had taken place in 1959 (Table 4).

[^0]With both an easier monetary policy and reduced demands for credit, interest rates declined over the year. For United States Government bonds and municipal bonds, the declines were relatively substantial; they were less so for commercial bank loans and corporate bonds. Rates on mortgage loans declined very little (Chart 14).

## Interest Rates and Bond and Mortgage Yields

Short-term interest rates fell in 1960 after having risen sharply during 1959.

Long-term interest rates also declined during 1960 after increasing during most of 1959.
PERGENT PER ANNUM

SOURCES: BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, TREASURY DEPARTMENT, FEDERAL HOUSING ADMINISTRATION, AND MOODY'S INVESTORS SERVICE,

Total liquid assets, including the money supply, which had expanded at a relatively slow pace in late 1959, changed very little during the first half of 1960 , if account is taken of seasonal factors. There was a decline in the money supply and some reduction in marketable United States Government securities maturing within one year. As the year progressed, however, purchases of consumer goods lagged, and personal type savings, such as time deposits and savings and loan shares, began to expand rapidly. Demand for these types of assets appears to have been stimulated also by more favorable returns available on them relative to those on marketable securities. As a result, total liquid assets expanded in the latter part of the year (Table 5).

Table 5.-Changes in selected liguid assets held by the public, 1957-60

Sources: Board of Governors of the Federal Reserve System and Treasury Department (except as noted)
The response of the financial mechanism during 1960 to Federal Reserve policies was generally typical of a period in which a policy of restraint gives way to one of ease. The easing was first reflected in reduced net borrowed reserves and sharp declines in short-term interest rates, and only later in the expansion of total bank reserves, bank credit, and deposits. Commercial banks were inclined to reduce their high indebtedness to the Federal Reserve System before employing available reserve funds to expand credit further. The low return on Treasury bills in relation to the discount rate prevailing during the late winter and spring, as well as subsequently during the year, probably influenced banks in these decisions. The response of bank credit was also affected by the tendency for an especially large amount of excess reserves to be concentrated during the late summer and fall in country banks while other banks remained under pressure. Since country banks employ their surplus funds less actively, this factor may have impeded a more rapid response of total bank credit and the money supply to Federal Reserve action. The expansion of the money supply in turn tended to lag behind credit expansion because the latter reflected primarily an increase in time deposits.

A somewhat analogous development was observable with respect to the major types of savings institutions, including life insurance companies, savings and loan associations, and mutual savings banks. The larger flow of funds generally available to these institutions led to only a very gradual decline in interest rates on mortgages, and the yield on corporate bonds also was slow in being reduced. The behavior of lenders of long-term funds appeared to reflect the experience of earlier periods of declining interest rates, which were quickly followed by a return to higher levels.

## Fiscal and Debt Management Policies

Fiscal policy during 1960 was oriented toward maintaining over-all stability in the economy in conjunction with the more flexible operations of the monetary authorities. For the fiscal year 1960, the Federal budget attained a surplus of $\$ 1.2$ billion. It is presently expected that the budget for the fiscal year 1961 will show a very close balance (Chart 15). The improvement in the budgetary outcome for 1960, following a deficit of $\$ 12.4$ billion in the preceding fiscal year, reflected increasing revenues as a result of the expansion of the economy and, to a lesser extent, a reduction in Federal expenditures.

Expenditures in the fiscal year 1960 were $\$ 3.8$ billion lower than expenditures in the fiscal year 1959 (Table 6), while budget receipts rose by $\$ 9.9$

Table 6.-Federal budget expenditures, 1959-62
[Fiscal years, billions of dollars]

Sources: Treasury Department and Bureau of the Budget.
billion. The reduction in total expenditures was made possible in part by the termination of certain expenditures incurred for antirecession purposes in the previous year, as well as of some nonrecurring expenditures. Expenditures were lower for housing, owing to the termination of the special mortgage purchase program of the Federal National Mortgage Association authorized in 1958, and for international affairs and finance, because the 1959 expenditures had included nonrecurrent increases in the United States subscription to the International Monetary Fund. Farm income support expenditures also declined considerably in

the fiscal year 1960. The advances to States for financing the temporary extension of unemployment benefits were discontinued, and expenditures for military assistance diminished. On the other hand, there were increases in some expenditures, particularly those related to natural resources development, research, and space exploration. Interest payments on the public debt increased sharply as rates advanced during the first half of the fiscal year.

The sharp increase in Federal receipts in the fiscal year 1960 reflected the strong sensitivity of Federal revenues to fluctuations in the economy. Of the total increase, corporate income tax receipts accounted for $\$ 4.2$ billion and individual income taxes for $\$ 4.0$ billion (Table 7 ).

Sources: Treasury Department and Bureau of the Budget.
For the fiscal year 1961, budget expenditures are estimated as $\$ 2.4$ billion higher than in the preceding fiscal year. Outlays for all major functions except interest payments on the public debt are expected to rise. The increases are attributable in varying degree to new legislation, primarily the pay raise to Federal civilian employees; to increases in relatively uncontrollable expenditures, such as grants to States for public assistance and payments for veterans' compensation, pensions, and medical care; to past commitments for such purposes as water resources projects, space exploration, and civilian aviation; and to higher Congressional appropriations for defense and other programs.

The increase in revenues in fiscal 1961 is now estimated at $\$ 1.2$ billion, substantially less than the expected increase in expenditures. Most of this rise is due to an increase, estimated at $\$ 2.6$ billion, in receipts from individual income taxes, reflecting higher personal incomes. Corporate tax receipts, however, are expected to decline. Receipts from excise taxes will probably increase, but a decline in all other receipts is foreseen, partly because of the transfer of Federal unemployment tax receipts from general revenues to the unemployment trust fund, in accordance with the Social Security Act Amendments of 1960.

A number of tax revenue measures were recommended by the President last January and acted upon by the Congress. Both the corporation income tax rates and certain excise tax rates scheduled for reduction or repeal on July 1, 1960 were extended for one year. The Congress also enacted legislation that had been recommended in order to prevent unintended and excessive deductions in the computation of depletion allowances on certain mineral products. On the other hand, the Congress again failed to take action on a number of revenue recommendations, but enacted certain unrecommended measures that will reduce 1961 revenues by at least $\$ 100$ million.

The change in the Federal budgetary picture between the fiscal years 1959 and 1960 is even more striking if the transactions are considered on a consolidated cash basis, which includes the trust funds. Following a consolidated cash deficit of $\$ 13.1$ billion in the fiscal year 1959, there was a cash surplus of $\$ 800$ million in the fiscal year 1960. A cash surplus of $\$ 1.1$ billion is expected in fiscal 1961.

The effect upon economic conditions of changes in the financial position of the Federal Government during the fiscal year 1960 becomes clearer when stated in terms of the national income accounts, which reflect tax liabilities as they are incurred and present the Government's activities in terms more directly related to the over-all level of economic activity. In these terms, there was a surplus of $\$ 5.2$ billion (seasonally adjusted) in the second half of the fiscal year 1960. In recent months, however, the surplus has been considerably reduced. The restraining effect of the budget on the economy thus was substantially lessened in the course of 1960 .

At the State and local level, receipts during fiscal 1960 continued their advance, which over the past decade has proceeded at a faster rate than the gain in Federal revenues. State tax collections increased by $\$ 2.2$ billion, more than twice their growth in 1959. This reflected both the strength in underlying economic conditions and a number of legislative changes in the base, rate, or collection-timing of particular major taxes. These enactments were exceptionally numerous in 1959 and became effective mainly in fiscal 1960.

State and local expenditures also continued to rise during the fiscal year 1960 , and somewhat more than receipts. The increase was mostly in payrolls. Expenditures for new construction remained fairly stable for the fiscal year as a whole, but they have been increasing recently. Long-term borrowing by State and local governments during the first half of the calendar year 1960 was about 10 percent less than in the corresponding period of 1959, but the pace quickened in the third quarter.

For the calendar year 1960, the surplus in the Federal budget permitted a reduction of $\$ 425$ million in the public debt, in contrast to the rise of $\$ 7.9$ billion in 1959 . This, along with the easing in credit markets, facilitated the Treasury's management of the public debt. The Treasury's ability to lengthen the average maturity of the outstanding debt was still limited,
however-especially in the first half of the year-by the legal $41 / 4$ percent interest ceiling on securities of more than 5 years' maturity.

The Treasury continued to develop new techniques of debt management in order to improve the marketing of United States Government securities and to contribute toward achievement of the broader goals of economic growth and stability. A considerable amount of short-term borrowing was put on a regular basis, thus minimizing the impact of refunding shortterm issues on the credit markets. The Treasury also used, for the first time, the provisions of a law passed in September 1959 that makes possible the exchange of securities under advance refunding without the immediate recognition of any gain or loss for Federal income tax purposes. The use of this provision, a major improvement in debt management, lessens the market impact of long-term debt offerings and provides an incentive for present owners of United States securities to retain them. As a result in part of advance refunding, the average maturity, which had been 4 years and 4 months in December 1959, was extended to 4 years and 7 months in December 1960.

## Federal Housing and Home Finanging and Aid for Highways

Further policy actions bearing on the level of economic activity were taken in the areas of housing and highways. Residential construction, which had started to decline in the final quarter of 1959, was aided by several administrative measures in 1960. In February, the Federal Housing Administration (FHA) announced new procedures designed to facilitate the sale of existing houses traded in on the purchase of new homes; in April, the downpayments required on FHA-insured home loans were reduced to the minimum permitted by law; and in July, the purchase of FHA-insured loans by the general public was authorized under new procedures. The Veterans Administration increased by more than $\$ 100$ million the amount of direct home loans made to veterans in rural areas and small communities during 1960; in July, legislation was enacted continuing for two years both the eligibility of World War II veterans to obtain guaranteed home loans and the availability of direct home loans.

The Federal National Mortgage Association (FNMA) raised the prices paid for loans purchased through its secondary market operations as the availability of mortgage funds in private markets improved. Two price increases of $1 / 2$ point were announced, the first in July and the second in August. The maximum size loan per dwelling eligible for purchase under the secondary market program was raised by FNMA from $\$ 15,000$ to $\$ 20,000$ in January; and in October the issuance of stand-by commitments for the purchase of existing houses was authorized.

Interest rates charged by the Federal Home Loan Banks on advances to member institutions were lowered during the year. The latter generally took advantage of an increase in share deposits to reduce their outstand-
ing advances from the Federal Home Loan Banks coincident with a slackening in the demand for mortgage credit. In the context of the college housing program, priority was given to loan applications for construction that could be commenced quickly. Administrative procedures were inaugurated in connection with urban renewal activities to aid localities in expediting the planning, execution, and completion of their projects.

After being relatively low in the early months of 1960, highway construction was increased in the second half of the year, as higher revenues resulting from the one cent per gallon increase in the tax on motor fuels made possible, first, the avoidance of a deficit in the Highway Trust Fund in consequence of legislation passed in 1958, and, thereafter, the apportionment to the States of the full amounts permitted by legislation and the more rapid obligation by the States of the apportioned funds.

Earlier-than-usual enactment of enabling legislation made possible an acceleration of procurement contract awards, and steps were taken to start at once Federal construction projects for which funds were made available at a relatively early date.

## International Economic Developments

The over-all deficit in the United States balance of payments in 1960 remained close to that in each of the two preceding years. The structure of the deficit, however, changed markedly (Chart 16). Short-term capital outflows accelerated, mainly in response to the widening of the margin by which interest rates abroad exceeded those in this country. The deficit on all other transactions, on the other hand, diminished greatly, as a result of a rapid rise in exports. In the first half of the year, the over-all payments deficit was relatively low; it became sharply higher in the third quarter; and in the last quarter it appears to have declined again (omitting one large transfer of private direct investment capital), as the surplus on goods and services increased further and outflows of liquid capital seem to have decreased. The decline in the United States gold stock, which had slowed down in the first half of the year, accelerated in the second half, along with the increase in the over-all payments deficit.

The year's improvement in the balance on transactions other than movements of liquid capital was, in part, the result of high economic activity in Western Europe and Japan, which stimulated exports, and of the slackening of activity in the United States, which tended to limit imports. This divergence of economic conditions likewise accounted for the enlarged differential between the relatively high interest rates abroad and the relatively low rates in the United States, which led to outflows of liquid funds. The achievement of a reasonable equilibrium in United States international transactions on the average over a period of years continued to be a goal of this country's policies, domestic and international, in 1960.

## U. S. Balance of Payments

The surplus on goods and services increased sharply in 1960, but the over-all payments deficit remained large as recorded and unrecorded capital outlows rose.

## Economic Expansion Abroad

The United States balance of payments in 1960 was heavily influenced by developments abroad. As foreign barriers to international transactions have been reduced and as Western Europe and Japan have regained their earlier positions in the world economy, the links among the major economies of the free world have become much closer than in earlier years.

The boom that got under way abroad in 1959 continued in varying degree during 1960 in most industrial countries outside North America. However, during the year some slowing down was noticeable-in a number of countries because of capacity limitations-and scattered soft spots appeared. Some countries on the European Continent which continued to experience boom conditions nevertheless had sizable export surpluses that were not offset by long-term capital outflows. Economic activity in Canada, which is the largest individual market for United States exports and which had been one of the first industrial countries to recover from the 1957-58 recession, turned down after the first of the year.

Economic policies in Western Europe and Japan were in general directed toward restraining excess demand throughout 1960; exceptions were France and Italy, where mild expansionary measures (including a reduction in the discount rate in France) were instituted in the second half of the year. Restraint was exerted mainly through monetary and credit policies, and interest rates rose in a number of countries; there were particularly sharp increases in short-term rates in the United Kingdom up to August and in Germany until October. In continental Europe, the authorities of several countries were faced with the problem of dealing with inflows of funds from abroad, which helped to enlarge bank liquidity. Special restrictions on such inflows were introduced during the summer in Germany and in Switzerland (which had attracted funds despite its relatively low interest rates). In November, the German central bank reduced its discount rate in a further effort to stem the inflow. Discount rates were also reduced in Japan (in August) and in the United Kingdom (in October and December) ; the economic policies of these countries remained otherwise unchanged. Short-term market rates tended to reflect these discount rate reductions, and the gap between United States short-term interest rates and those abroad was reduced in the last months of the year.

With the slowing down of the expansion in the industrial countries, the rise of world trade also slowed down. While exports of the United States and Japan continued to rise, those of other industrial countries declined somewhat in the second quarter and rose only moderately thereafter (Table 8). Exports of the nonindustrial countries in the aggregate remained at about the level reached in the second half of 1959, and many of these countries continued to be seriously affected by the price weaknesses of many primary commodities-both agricultural and mineral productswhich became more pronounced in the second half of the year. time, however, comprehensive economic stabilization programs helped to put the economies of many of the nonindustrial countries on a sounder footing and thus to assure better balanced growth. The United States continued to participate actively in international studies of the trade problems of these countries.

## United States Payments Deficit

After showing sluggishness in 1958 and the early part of 1959, United States exports staged a rapid comeback in 1960. By the third quarter, merchandise exports reached an annual rate of $\$ 20$ billion (seasonally adjusted), 30 percent above their early 1959 low, and the high rate continued in October and November (Chart 17). Imports declined in the third quarter to an annual rate of less than $\$ 15$ billion and fell further in the closing months of the year. Much of the increase in the merchandise trade surplus reflected the high level of economic activity in Western Europe and Japan and the slowing down in this country. Exports, in addition, received a temporary stimulus from special demand conditions relating to jet aircraft and to cotton in the first part of the year. Export and import trends indicate that many United States manufacturers are successfully

adjusting the prices and designs of their products to meet foreign competition. (For a more detailed discussion of United States Foreign Trade and Payments, see Appendix B.)

The United States continued its generally nonrestrictive import policy in 1960. Only one restrictive action was taken under the safeguarding provisions of our trade agreements legislation, and the Tariff Commission disposed of eight other cases without finding of injury. At the close of the year, final decisions had not yet been taken on two cases in which the Tariff Commissioners were equally divided in their findings. The United States also announced a new set of tariffs on wool fabrics, to replace a tariff quota system, and extended for three years the existing quota on imports of tung oil and tung nuts. Preparations were made for United States participation in the general round of tariff negotiations to be held in 1961 under the auspices of the General Agreement on Tariffs and Trade (GATT).

In contrast to the rapid improvement of the merchandise trade surplus, the net deficit on service transactions in the first three quarters of 1960 changed little from the $\$ 1$ billion rate of both 1958 and 1959, although both payments and receipts continued to grow. Net outflows of Government loans, grants and pensions, private remittances, and United States private long-term capital, which together have ranged from $\$ 5$ billion to $\$ 6$
billion a year since 1956, changed little in the aggregate between the first three quarters of 1959 and of 1960.

Government assistance to the less developed countries retained its high priority. During the 12 months ended September 1960, dollar disbursements under the Mutual Security Program for economic and technical assistance totaled $\$ 1.6$ billion. Of this amount, $\$ 200$ million was disbursed by the Development Loan Fund, which at the end of the period had undisbursed commitments of $\$ 1.2$ billion. Under Public Law 480, agricultural surpluses were disposed of against local currencies to the amount of $\$ 740$ million, and, in addition, grants amounting to $\$ 170$ million were made. The Export-Import Bank disbursed $\$ 407$ million in loans and committed $\$ 495$ million, while receiving repayments of $\$ 656$ million. The United States also paid $\$ 80$ million in June 1960 on its subscription to the newly established Inter-American Development Bank, and $\$ 74$ million in November 1960 on its subscription to the new International Development Association.

Flows of liquid funds shifted dramatically against the United States in 1960. This change was reflected in both recorded outflows and unrecorded transactions, so-called "errors and omissions"; for the year as a whole, it appears to have offset much of the improvement in United States trade accounts. The outflow, which increased after midyear as interest rate differentials widened further, took various forms, including short-term investments, bank loans, and repatriation by foreigners of liquid holdings in the Ünited States. Some of the bank loans, however, were not related so much to changing money market conditions in major centers abroad as to needs of certain less developed countries for balance of payments support. Some United States and foreign funds moved into longer-term interest-bearing securities abroad, particularly after the first months of the year. There also were shifts of funds invested in equities, in response to changing market conditions on the two sides of the Atlantic. The flows of some funds were influenced, during the summer and fall, by heightened uncertainties in the political situation in some areas and in world economic conditions. Much of the year's outflow of liquid funds went to the United Kingdom and several countries in continental Europe, which hold a large proportion of their official reserves in gold, and thus increased the pressure on the gold supply of the United States.

Short-term capital outflows enlarged the payments deficit only to the extent that these outflows were exports of short-term funds by United States residents. The repatriation by nonresidents of recorded short-term foreign funds held in the United States did not increase the recorded payments deficit, but by adding to foreign official dollar balances it swelled the demand for United States gold. Outflows of United States owned short-term funds increased the payments deficit, even though they were matched by a rise in United States liquid claims on other countries. Under United States balance of payments accounting, the payments deficit is measured by the increase in liquid dollar liabilities and the decline in the gold stock.

## Policies for Reducing the Payments Deficit

To help speed the attainment of a reasonable equilibrium in the United States balance of payments, the Administration in 1960 intensified policies instituted earlier when the recovery by the once war-devastated nations of their competitive strength had become evident. The effort centered on measures to increase United States exports and to reduce the balance of payments impact of Government military and economic programs abroad in a manner consistent with our responsibilities and long-standing policies. Underlying these steps were equally important policies relating to the domestic economy. Fiscal and monetary policies had as one of their major objectives the maintenance of confidence in the dollar as a sound and reliable currency. In this connection, the Administration continued to emphasize the importance of appropriate action by management and labor to insure the competitiveness of United States goods at home and abroad.

To support the efforts of private business in enlarging sales abroad, the Federal Government, with the cooperation of private business, instituted early in 1960 a National Export Expansion Program-a series of coordinated measures to improve and expand Government services in private industry. Measures were adopted to gain the help of existing national and local business groups, to assist and encourage businessmen newly entering the export field, and to strengthen contacts with business groups abroad. To place United States exporters on a more equal basis with exporters in other industrial countries, the Export-Import Bank introduced a new program of guarantees of noncommercial risks for short-term credits and expanded its existing facilities for medium-term export credits and guarantees. The United States also continued to urge other countriesparticularly the economically and financially strong ones-to eliminate remaining discriminatory restrictions on United States goods and services and to lower tariffs and other barriers to trade.

Toward the end of the year, the United States initiated a number of coordinated measures designed to obtain substantial foreign exchange savings in its Government expenditures abroad without reducing its military strength or impairing its international commitments. Steps were formulated to reduce gradually and then limit the number of dependents abroad of Defense Department personnel, particularly in the highly industrialized countries with strong currencies, and to cut back Defense Department procurement of foreign goods and services and other expenditures abroad. Other departments and agencies which have personnel abroad and which engage in procurement abroad were instructed to institute similar programs. In addition, the question of the cost of the United States troops in Germany came under discussion by the United States and German Governments. To minimize the balance of payments effects of our economic aid programs, the International Cooperation Administration was instructed to place primary emphasis on financing goods and services of United States
origin in all of its foreign aid activities, and as far as practicable to discontinue offshore procurement in 19 countries with strong currencies. Similarly, the Development Loan Fund, which had adopted a similar policy in October 1959, was instructed to reduce procurement outside of the United States to the lowest possible figure.

In addition, efforts were increased to ensure that sales under the agricultural surplus disposal and related programs do not reduce cash dollar sales of United States products. International institutions were urged to use currencies other than dollars as fully as possible, and other strong countries were encouraged to permit borrowing in their capital markets by these institutions and by other borrowers, where appropriate. On January 14 , the regulations that have been in force for a number of years prohibiting the holding of gold in the United States were uniformly extended to holdings of gold abroad by persons and business organizations subject to the jurisdiction of the United States.

## International Economic Policies

Most countries continued in 1960 to move toward the free and multilateral trade and payments system which has been the goal of the United States since the end of the war and for which the United States has pressed with particular vigor in the last few years. By now, discrimination against United States exports has diminished very substantially; the major remaining quantitative trade restrictions on United States exports are against agricultural products, particularly in Western Europe. Foreign restrictions on capital transactions, however, continue to be considerable. The United States Government expects that there will be continued progress in the dismantling of restrictions on world trade and payments. In particular, the great economic strength of the countries belonging to the European Economic Community and the European Free Trade Association should facilitate a significant lowering of tariff barriers during the forthcoming Geneva GATT negotiations.

The institutional framework of world finance was improved in 1960 through the establishment of the International Development Association and the Inter-American Development Bank. The United States announced new aid programs for Latin America, and further advances were made in the area of ad hoc multilateral cooperative efforts for development, most notably the Indus River Basin project.

The United States continued to stress the need for a strengthened determination by all the industrial countries to share in providing funds to the less developed parts of the free world. At the initiative of the United States, the major industrial countries early in 1960 formed a Development Assistance Group to discuss methods for providing such aid. It is planned to incorporate the work of this group in the Organization for Economic Cooperation and Development (OECD), the successor organization to the Organization for European Economic Cooperation (OEEC), which
is scheduled to come into existence in 1961, following ratification of its convention, and which is to comprise the 18 Western European members of the reconstituted OEEC together with Canada and the United States. The objectives of this organization will be to achieve the highest sustainable economic growth in member countries, to contribute to sound economic expansion in countries in the process of development, and to contribute to the expansion of world trade.

Along with these advances, the problem of shifts of short-term funds from one international center to another came to the fore during 1960. Now that freedom for international short-term capital movements has been substantially enlarged, and the economies of the major countries abroad have been greatly strengthened, it appears that interest rate considerations may have an increasing influence on short-term capital flows. However, the international financial mechanism today seems strong and flexible enough to allow solutions to the resulting difficulties to be worked out.

International payments, other than short-term capital movements, also have continued to show an imbalance. As a result of this over-all lack of balance in world payments, the substantial increases of international reserves of recent years continued to be concentrated in a small number of countries, particularly in continental Europe. Originally, this inflow was justified by the extremely low level of reserves of these war-devastated countries, but today the reserves of most of them, by and large, seem ample.

The United States has many responsibilities in the world economy. These include keeping the dollar strong, in view of its key role in international trade and payments, maintaining liberal commercial relationships with other countries, contributing to the defense of the free world, and supplying a share of the capital resources needed by less developed countries. The United States can meet these responsibilities because of its resourceful and flexible economy and its international reserves which, with an available gold stock of about $\$ 171 / 2$ billion, are large. But the United States cannot play its part fully unless other industrialized nations pursue policies required by their positions in the world economy. This fact is now increasingly recognized. A helpful start has been made in the sharing of development costs and other burdens and in the cooperative reduction of existing payments imbalances, but further efforts are needed if the international financial mechanism is to work properly and the free world's economy is to move ahead steadily.

## Outlook

As pointed out in this chapter, economic activity continues high as the year 1961 begins, despite the declines in production and employment that have occurred since the middle of 1960 . The Nation's total output of goods and services is below the level reached in the second quarter of 1960, but the difference, in constant prices, is only slightly more than 1 percent. And the decline is less than the effect on gross national product accounts produced by inventory changes; final demand for goods and services, which is
the total of expenditures in the economy exclusive of inventory adjustment, has continued to move upward. It rose $\$ 4.6$ billion, on an annual rate basis, in the last quarter of 1960 , to a total of $\$ 507.5$ billion.

There have been production declines in a wide range of industries, but the greatest declines have been in those industries affected by inventory changes, which were in part a result of the extended steel strike of 1959. Thus, while total industrial production in December 1960 was 7 percent below the January high, output of iron and steel was 45 percent lower, and the decline in industries other than steel was less than 5 percent. After midyear, employment also declined, as did wage and salary disbursements. These tendencies became more pronounced in December, and unemployment rose sharply. Total income payments to individuals, which had been relatively well maintained, declined in December.
The fact that aggregate output has been fairly steady despite the large inventory adjustment-from accumulation at the annual rate of $\$ 11.4$ billion in the first quarter of 1960 to liquidation at the rate of $\$ 4.0$ billion in the fourth quarter of the year-reflects the underlying strength of the current situation and is a distinctly favorable factor in the economic outlook at this time. It is also favorable to the outlook that major maladjustments which, to be corrected, would require prolonged contraction have not been created in the period of advance that began in 1958, or in recent months when activity has been either stable or moderately declining. Businessmen and consumers have kept their use of credit within reasonable limits and appear to have avoided commitments that might lead to significant corrective changes. Inflationary pressure has been restrained; while this restraint may, for a time, have affected inventory policies and perhaps other demands for goods and services, it has helped prepare a solid foundation for a resumption of sustainable growth.

The principal adjustment still in process is in the inventory area. Further reductions will probably occur during the early part of 1961; but if consumer expenditures are well maintained in the coming months, as they typically have been during recent periods of business hesitancy, the rate at which this inventory reduction is carried forward should soon diminish. A return to inventory accumulation may take somewhat longer, but stocks in some lines already appear low and, even with a reduced rate of liquidation of existing holdings, an increase in production would be required.

The export balance may continue for some time to add strength to the economy. It showed an additional increase in the final quarter of 1960, but the impulses emanating from the boom in Europe and Japan are not likely to continue indefinitely without some slackening.

Government outlays may be expected to rise materially during 1961. Federal budgetary expenditures proposed for the fiscal year 1962 are $\$ 1.9$ billion higher than for fiscal 1961; and State and local expenditures are likely to continue their rise in response to the needs of our growing population.

Housing expenditures, which tended to level off toward the end of 1960 from a decline that began in 1959, should become an expansive factor in 1961. The volume of construction has benefited from an easier availability of credit, but not substantially, so far, from a cheapening of its cost. Recently, however, the flow of funds into major savings institutions has materially increased, which should eventually lower borrowing costs and exert an expansive influence on all aspects of construction.

It is unlikely that business expenditures for fixed investment will contribute to an increase in demand and production in the immediate future. Capacity is being utilized at less than optimum rates in many industries and, what is of major importance, the trend of corporate profits has not been favorable. Surveys of business capital investment plans and of appropriations for such investment suggest that, for a while, these expenditures may continue to decline moderately from the near-record levels reached in 1960. But they will rise as advances occur in other sectors of the economy and as accelerating activity in research and development creates new opportunities for enterprise.

Consumer outlays may be expected to increase as the factors of expansion raise personal income, and especially if the prices of consumer goods remain free from inflationary pressures.

An increase in general economic activity should not, accordingly, be long delayed. It will be aided by actions already taken in areas of public policy. Credit conditions have been eased materially by the Federal Reserve authorities. A number of steps have been taken by the Executive Branch to stimulate home building. And prompt legislative action on appropriations in 1960 made possible an acceleration of Federal construction and procurement generally. Highway construction was also accelerated. An increase in production, to which these actions contribute, may well become evident prior to a resumption of gains in employment and reductions in unemployment.

The outlook for the United States balance of payments has become dependent not only on changes in exports and imports, but also, in considerable measure, upon the movement of liquid capital. In the balance of trade, some further improvement may be ahead, at least in the early part of 1961. Exports of manufactured products are expected to rise moderately, in response partly to the strong demand in many industrial economies abroad, some of which are operating close to full capacity. Greater domestic procurement under our economic aid programs should also be reflected before long in export gains. At the same time, however, exports of some materials for which demand was particularly strong in the middle of 1960 may continue to decline. An easing in economic activity in the industrial countries abroad would, of course, react unfavorably upon United States exports.

Merchandise imports may be expected to reflect developments in the domestic economy and to increase with a resumption of our general economic advance-though perhaps with some lag. Circumstances that tended to
limit imports of automobiles, petroleum, and foodstuffs in 1960 may continue to exert a restraining influence upon total imports in 1961.

Although the measures taken to curtail United States military expenditures abroad point to a further decline in these outlays, the net deficit on services is unlikely to be much reduced, owing to compensating changes under other headings. Private capital transactions, particularly those of a short-term character, may well show considerable improvement, provided inflationary developments are avoided. Direct investments abroad may be lower than in 1960, and an advance in the domestic economy may attract equity funds to the United States. Most importantly, a resumption of advancing activity here may reduce the margin by which shortterm interest rates in leading foreign centers exceed those in this country. Although some of the favorable factors may not continue throughout the year, present prospects favor a reduction in the over-all balance of payments deficit in 1961 as a whole.

As expansion is resumed, there is a good chance to realize more fully our economy's potential for growth. The basis for advance has been laid in recent years in the enlargement and improvement of our productive capacity and in policies that have brought the forces of inflation under control. Some temporary acceleration of growth might have been achieved if expectations of price increases had been allowed to persist and to become firmly rooted. But the unsustainable nature of such growth would now be confronting the economy with the need for far-reaching and painful correction. Because action to maintain stability and balance and to consolidate gains was taken in good time, the economy can now look forward, provided public and private policies are favorable, to a period of sound growth from a firm base.

## Chapter 2

## Experience Under the Employment Act of 1946

THE REVIEW of developments in our economy is extended in this chapter to the whole period covered by the Employment Act, and particularly to the interval spanned by this Administration. In this connection, it is appropriate to recall the background and meaning of the Employment Act, and to point to some of the lessons that may be drawn from experience in administering it.

## Background and Meaning of the Employment Act

From its beginning, the United States economy has been organized on the basis of maximum opportunity for private competitive enterprise and the widest possible latitude for personal choice in making a living and spending one's income. Any narrowing of the horizons for individual initiative is alien to the nature of our enterprise system; and when controls and unusual restrictions on personal action have had to be introduced during an emergency, their abandonment at the end of the temporary period of crisis has been awaited impatiently.

In this tradition, the Nation approached cautiously the problem of Federal intervention respecting employment and the maintenance of economic activity generally. Appeals for such intervention were resisted, for example, during the sharp economic downturn in 1921, when occasional depressions were still regarded as inevitable and the belief that they could be significantly moderated through governmental action had not taken hold. But a step taken that year was important for later developments: the President's Conference on Unemployment was established to make studies that would increase understanding of the operation of our economy and thus help to avoid the recurrence of widespread joblessness. The work of this Conference, which made its final report only shortly before the Great Depression began, was reflected in the Employment Stabilization Act of 1931, which sought to provide for "advance planning and regulated construction of public works, for the stabilization of industry, and for aiding in the prevention of unemployment during periods of business depression."

Despite a series of countermeasures, the heavy unemployment of the 1930's persisted until the tremendous increase in production required in World War II and the service of $111 / 2$ million persons in the Armed Forces reduced it to a minimum and created even a degree of overemployment. With the
turn in the tide of war, however, memory of deep depression in the 1930's and the expected demobilization of the Armed Forces heightened concern for the Nation's economic future and aroused a keen interest in measures to help avoid the widespread unemployment that it was feared would result from demobilization and reduced spending on arms.

It was in this atmosphere of concern that the Congress turned its attention to legislative measures to cope with unemployment, should it emerge as a serious postwar problem. Congressional staff committees made comprehensive studies of the incidence and duration of unemployment and of possible methods for dealing with it. Extensive hearings were held, and a bill, the Full Employment Act of 1945, was introduced in Congress, providing for a considerably broader attack on unemployment than the public works program envisioned in the Employment Stabilization Act of 1931. The bill failed of enactment, but subsequently a revised version, the Employment Act of 1946, was passed overwhelmingly with bipartisan support in both houses of the Congress.

At the time it was approved, the Employment Act represented a major extension of our traditional concept of shared private and public responsibility for the Nation's economic growth and improvement. It gave explicit expression to a continuing interest on the part of the Federal Government in aspects of economic life that, outside the sphere of monetary policy, had previously received deliberate Federal attention only in such emergency conditions as depression and war.

It is useful to recall the language of the Act's declaration of policy: "The Congress declares that it is the continuing policy and responsibility of the Federal Government to use all practicable means consistent with its needs and obligations and other essential considerations of national policy, with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power."

Thus, the Employment Act states that it shall be the policy of the Federal Government to promote conditions under which there will be afforded employment opportunities by methods that are consistent with the traditional American philosophy of individual freedom and competitive enterprise. Although the Act enlarges the area of explicit Federal concern to include the quality of our current and expected economic accomplishment, it does so without diminishing the scope of private, State, and local responsibility. Far from seeking to centralize economic decisionmaking in the Federal Government, or even to confer predominant respon-
sibility for economic growth and improvement on the Federal Government, the law explicitly acknowledges the multiple sources of economic strength in private individuals and groups and at the several levels of government. The theme of the Act is captured in a phrase used in the Economic Report of 1960 and in the present one: "shared responsibility for economic growth and improvement." This principle, manifest in our economic life as in other aspects of the American way, has carried us to the highest material wellbeing ever achieved, without hobbling the human spirit and without impairing our political freedoms.

The framers of the Act proposed high standards of economic achievement. They wisely omitted, however, any requirement that economic goals be publicly stated as fixed quantitative targets, although this fact gives no ground for indifference to failure to attain the best levels of production, employment, and income that are feasible and sustainable for any period. Such a requirement could invite broad, irreversible intervention by the Federal Government if the projected targets were not reached. The Act instead contemplates a framework in which the mainsprings of private individual initiative continue to function in behalf of brisk economic activity, and in which the individual retains a wide freedom of choice. In our economic system, the level of achievement is everyone's responsibility and cannot be guaranteed by the Federal Government acting alone.

It should be noted, also, that the Act states that the Nation's economic objectives should be pursued with due regard to other Federal objectives and obligations, which must include a stable currency and protection of the value of the dollar. The goals of economic policy, furthermore, are not ranked. They have to be pursued coordinately; emphasis on one to the neglect of others would soon prove self-defeating.

## Adjustment From Wartime to Peacetime Egonomy

When the Employment Act was passed in 1946, our economy was making the extensive readjustments required of a Nation in transition from war to peace. A year earlier, economic resources were still extensively committed to war and defense. Of the Nation's total output of about $\$ 215$ billion, expressed in current values, roughly one-third was for military purposes; and $111 / 2$ million Americans, nearly one out of every twelve in our population, were in the Armed Forces. Within a year's time, the proportion of our national output devoted to defense had been cut to less than 10 percent, and 8 million men and women had been demobilized.

Although this sweeping readjustment was not made without difficulty, it was completed with but a small rise in unemployment and with a relatively small drop in the Nation's output of goods and services. Sharp increases in the production of consumer goods and services, a quadrupling of the rate of expenditures on home building, and a great surge of investment by businessmen in new productive capacity and in the rebuilding of depleted inventories came close to offsetting the large cutback in defense
output. The year 1946, in which the Employment Act was passed, marks the beginning, therefore, of a period in which the central economic problem has been that of sustaining stable, inflation-free economic growth despite still large defense and defense-related burdens. It is, for this reason, a good starting point from which to review the performance of our economy against the standards implicit in the Employment Act.

## Expansion of National Output

The postwar years have witnessed an enormous expansion of the Nation's annual output. Measured in current prices, the value of goods and services produced-gross national product-expanded from $\$ 234$ billion in 1947 to more than $\$ 500$ billion in 1960 . After adjustment of these values to eliminate the effect of price rises, which were persistent and substantial during most of this period, it is seen that output rose by nearly 60 percent, or at an average rate of approximately $31 / 2$ percent a year. By this broad measure, our economy's rate of expansion in the period of the Employment Act has exceeded by a significant degree the rate of growth from the beginning of this century to World War II.

All major components of output expanded at a high rate. Business fixed investment, which is largely for constructing and equipping new or improved productive facilities, increased rapidly as wartime deferrals were made up and extensive modernization programs were carried out. Nearly $\$ 650$ billion (in 1960 prices) was invested for these purposes in the 1946-60 period, equaling, in real terms, almost three times the investment of the previous 15 years. The output of consumption goods and services rose more than 50 percent. Home construction increased at a rate of about 7 percent per year; almost 20 million dwelling units were completed, a number equal to about half the supply of homes available when the war ended. By the end of the 15 -year period, the housing shortage which had been so acute when war ended had been eliminated, and-what is especially important for the vitality and strength of our free institutionssome 60 percent of all dwelling units are now occupied by home owners.

Total purchases of goods and services for use by or through government also increased markedly. Federal, State, and local government purchases, as a total, almost tripled between 1946 and 1960; currently, they comprise almost one-fifth of the Nation's total output. In the years since 1952, State and local expenditures for education have more than doubled; and those for public health and sanitation, for highway construction, and for general government purposes have increased almost as rapidly.

Although the amount of the Nation's total output of goods and services that was directed to defense purposes remained high throughout the 15year period, and especially after 1950, the proportion in 1960 was lower than in 1952; reflecting this, the output of goods and services for civilian use increased at a higher rate than total output. Thus, while total output increased from 1952 to 1960 by close to 25 percent, or at a rate of 2.7
percent per year, the use of goods and services for consumption, which includes private expenditures on education and medical care as well as all other consumer purchases, rose about 30 percent, or 3.6 percent a year. Expenditures on residential construction rose more than 40 percent, or 4.4 percent a year. Purchases of goods and services by State and local governments, through which community needs that cannot be met by private effort are traditionally satisfied, rose nearly 60 percent, or 5.9 percent a year, more rapidly than any other single major component of national output.

## Growth of Resources for Production

This impressive expansion of output illustrates the high and rising productive capability of our enterprise economy. Whether comparable or superior gains in real output occur in the future will depend in good part on the extent to which the resource base of our economy is maintained and strengthened through balanced growth. Therefore, it is a good augury for the future that significant increases and improvements in the quality of our productive resources have been registered in recent years.
First, our total labor force has increased at a rapid rate, substantially above what was expected when the Employment Act was passed; increases since 1946 have averaged about 850,000 a year. And there has been a marked improvement in the educational background and training of the labor force. In 1940, about 30 percent of the labor force 18 to 64 years of age had graduated from high school and 5 percent were college graduates; in 1959, the respective proportions were more than 50 percent and 10 percent. And in the age group 18 to 34 , the representation of high school graduates rose during this period from 40 percent to 60 percent, and of college graduates from 5 percent to 10 percent. Since 1952, increases in school enrollments and in the numbers receiving college degrees have been especially large. The proportion of all persons 5 to 34 years of age enrolled in school rose from 47 percent in 1952 to 56 percent in 1960. As would be expected, educational enrollment increases were most rapid in the older age groups, reflecting the national trend toward wider participation in college and postgraduate studies. Also important has been the increasingly frequent establishment of on-the-job education and training programs by business firms, private trade schools, and labor organizations.

Second, as mentioned above, the Nation's stock of capital has been enlarged by substantial annual investments in new plant and in new machinery and equipment. As a result, the productive capacity of our economy has been greatly increased. This was especially true in the years immediately after World War II, when deficiencies that had developed during the war were made up, but the rate of increase has been high also in the past eight years. Increases since World War II in the capacity for producing steel, refining petroleum, and manufacturing paper range from 60 to 80 percent, and in other industries, such as aluminum, the growth
has been even more rapid. The capacity of our transportation system has likewise been greatly expanded.

Third, the Nation's intangible capital has been greatly augmented through heightened activity in research and development. Total expenditures for these purposes can be estimated only very roughly, but they are placed at about $\$ 13.5$ billion a year at the present time, having risen sharply from about $\$ 1.8$ billion in 1946. Even though somewhat more than one-half of this cost is Government financed and much of it is oriented toward military purposes, the benefits to private industry and to civilian objectives are real, persistent, and large.

Such increases in the Nation's stock of tangible and intangible capital, together with the improved skills of our working people and improved methods of business management, have been reflected in substantial improvements in productivity. Although there is no clear evidence that the rate of this improvement has accelerated in the years since 1946, it appears to have been higher, on the average, since the end of World War I than in the 30 years prior to 1919. The volume of output per man-hour of labor performed, one measure of productivity, continues on an upward trend, though year-to-year changes remain irregular and occasionally are downward.

## Strengthening of Our Enterprise System

The continuing vigor of the competitive enterprise system, which Government is called upon to foster and strengthen under the Employment Act, is clearly manifest in developments since 1946.

The rate of formation of new businesses was especially high in the closing years of World War II and the years immediately following, and it has continued high since then. Although the rate of discontinuance of businesses, including the termination of enterprises by failure, has tended to rise, the business population has made significant gains. The number of operating businesses has risen since 1946 by nearly 1.5 million, reaching more than 4.7 million in 1960. This rapid increase bespeaks the continuing openness of our enterprise system.

Two other sets of facts reflect the opportunity for entry into business, for innovation, and for success in business operation. First, recent studies have shown no clearly defined general tendency toward greater concentration in American industry, despite growth in the size of many individual concerns. While concentration has increased in some industries, the opposite trend is visible in others. Second, there has been a marked increase in the rate at which new products and new processes have been introduced, doubtless reflecting the greatly increased accent on research and development noted above. Large companies are in a good position to conduct research and development activities on an intensive basis, but small firms also play an important part in the introduction of new products and new technology, drawing on their independent research and development efforts
and, through licensing arrangements and participation in Government contract work, also on the research results of other firms. Companies of small and medium size have been aided in this connection, as well as in normal business operations, by the ready availability of private advisory and technical services and financing arrangements especially suited to their needs. Steps taken by Government in the last eight years to assist small businesses, and in this way to strengthen our enterprise economy, are described in the Third Progress Report by the Cabinet Committee on Small Business, issued in December 1960.

## Improvement of Personal Security and Welfare

These advances in output and productive capability have made it possible to maintain the large military forces needed for our national security, to assist in the reconstruction of the war-ravaged countries of Europe and the Far East, and to aid in the peaceful development of the less industrialized nations of the world. They also have made possible remarkable improvements in the material well-being, culture, and economic security of the American people.

Since the passage of the Employment Act of 1946, the population of the United States has increased nearly 30 percent; in the same period, disposable personal income (in 1960 prices) has risen from $\$ 231$ billion to $\$ 354$ billion, or about 50 percent, and per capita disposable income (also in 1960 prices) from $\$ 1,635$ to $\$ 1,969$, or 20 percent. Since 1952 , these increases in income have been 30 percent and 15 percent, respectively. Improvements in well-being are also reflected in changes in the distribution of families according to income in constant prices. Thus, 47 percent of all families had incomes of less than $\$ 4,000$ in 1947, but this proportion had dropped to 35 percent by 1959; at the upper end of the income scale, families with real incomes of $\$ 8,000$ and over increased during this period from 14 percent of the total to 24 percent.

Means for protecting income and personal financial security have been greatly strengthened. The number of life insurance policy holders rose from 77 million in 1946 to 94 million in 1952 and 118 million in 1960, and the amount of life insurance per family increased from $\$ 3,600$ to $\$ 5,300$ and $\$ 10,200$. Between 1952 and 1959, the number of shareowners in public corporations increased from 6.5 million to 12.5 million.

A rapid extension of private and public systems of insurance has broadened measures to provide personal security in old age and to meet emergencies caused by unemployment, ill health, and death. The number of workers (including farmers and other self-employed persons) covered by the Federal Government's system of old-age, survivors, and disability insurance increased from 36.7 million in 1946 to 50.2 million in 1952 and to 59.0 million in 1960 , and the percentage of paid workers covered rose in these periods from 65 to 79 and 87 . The total amount paid to those eligible for benefits was $\$ 378$ million in 1946, $\$ 2.2$ billion in 1952, and
$\$ 11.3$ billion in 1960. The number of beneficiaries, which had been 1.6 million in 1946 and 5.0 million in 1952, was nearly 15 million in 1960.

Private insurance to meet health emergencies has also been extended and improved at a rapid rate. The number of persons covered by hospital insurance rose from 42 million in 1946 to 132 million in 1960. At the beginning of this period, 18.6 million persons were insured under private systems for the coverage of surgical expenses and 6.4 million for regular medical expenses; at the end of the period, the coverage of these two types of health expenses was 120 million and 86 million, respectively. Private insurance for major medical expenses has shown the most spectacular increase-from 700,000 persons in 1952 to 25 million in 1960.

Finally, unemployment insurance coverage under the Federal-State system rose from 31.9 million persons in 1946 to 37.0 million in 1952 and 44.0 million in 1960 , and the percentage of those employed in nonagricultural establishments who are covered increased from 77 in 1946 and in 1952 to 83 in 1960. Average weekly payments to those out of work were $\$ 18.50$ in 1946; the average for 1952 was $\$ 22.79$, and it increased to $\$ 32.75$ in 1960.

## Greater Economic Stability

Although personal security is strengthened by insurance systems both private and public, it depends primarily on a high level of employment, the development of job opportunities for our increasing labor force, and the avoidance of sharp fluctuations in production and employment. The persistence of unemployment in some areas and the recent increase in the total allow no room for complacency, but the record of the past 15 years also shows good performance in maintaining high employment and avoiding wide swings in economic activity.

A large increase in jobs has been achieved since 1946. Total civilian employment rose from 55 million in 1946 to 61 million in 1952 and increased further, to nearly 67 million, in 1960. The number of persons unemployed and the rate of unemployment were somewhat higher, however, in the peacetime years of the 1950's than in the late 1940's. The contractions in economic activity since the Employment Act was passed have proved to be relatively moderate when compared with earlier cyclical adjustments. For example, the contraction that began in August 1957 lasted only 9 months; and the two previous ones, beginning in December 1948 and in August 1953, were ended in 13 and 11 months, respectively. However, the principal improvement in this respect lies in the fact that the declines were less severe than on most earlier occasions. Thus, personal income dropped less than $1 / 2$ of 1 percent in the contractions beginning in 1953 and 1957, contrasting with declines of 11 percent and 50 percent in the downturns that began in May 1937 and August 1929, respectively. Declines in employment and production were also appreciably smaller than in most earlier cyclical downturns.

The mildness of recent contractions relative to earlier experience reflects, in part, the stabilizing features of our tax system, the automatic operation of governmental programs that help to sustain income when production and employment recede, and a shift in the pattern of employment toward jobs that are relatively less affected by recessionary tendencies. It also reflects deliberate steps taken by the Government to offset the declines, and the greater stability of business enterprises.

While this record presents evidence of good progress, the further moderation of economic fluctuations remains a major challenge to Government and industry. In the contraction that began in August 1957, for example, industrial production fell by 14 percent and total employment by about 2 million even though the decline in personal income was small. The best thought and most determined action are needed to find constructive ways to make further advances in reducing this persisting problem of the enterprise economy.

## Lessons of Experienge Under the Employment Act

These developments in our economy and the experience gained in administering the Employment Act teach certain lessons that must be kept in mind continually as we strive to attain our national economic objectives.

First, although great strides have been made toward understanding and moderating the cyclical behavior of our economy, difficult problems of diagnosis and prescription remain. Experts disagree on the meaning of unfolding events, and action to counter adverse developments cannot be finely predetermined, either in kind or degree. Moreover, the repercussions of countermeasures cannot be accurately foretold. Experience underlines the importance of the close surveillance of economic developments that is a responsibility of the Council of Economic Advisers, created by the Employment Act. It also emphasizes the need for constant review of administrative actions and legislation, to determine their potential or actual impact on the growth and stability of our economy. In addition, this experience shows the need for up-to-date, accurate, and comprehensive facts on economic developments as a basis for wise policy decisions by private groups as well as government.

Second, a tendency for prices to rise has persisted in the period since World War II, even after prices reflected the inflationary pressures generated by war and even though our resources have not always been utilized to the full. To arrest this tendency, as we have largely succeeded in doing of late, and to attain our national economic goals in an atmosphere of reasonably stable prices must continue to be a major objective of private and public policy. Apart from the other adverse effects of inflation, its seriousness has been underlined by the growing recognition that reasonable stability of costs and prices is essential to balanced economic growth and to the maintenance of our competitive position in world markets.

Third, competing objectives must be taken into account in economic policy, and action in pursuit of any one goal must be taken with a recognition that to press it too far or too rapidly may prejudice other values that are in reach or in hand. Considerations of long-run benefit must be weighed against short-run advantage. The rate of economic growth cannot be properly evaluated without regard to its composition and balance or its sustainability. On the contrary, the unwholesome accompaniments of a forced, too-rapid expansion may impede further growth and even induce setbacks.

Fourth, it should be clear from the experience under the Employment Act, as it is from the longer history of our country, that Government action is not the principal, let alone the sole, determinant of the rate of economic growth. In our competitive enterprise system, growth requires that productive job opportunities be created in private employment. The creation of jobs, in turn, requires the presence of adequate incentives to private action and the availability of private capital and other needed resources, and it is heavily influenced by the state of demand, prices, and costs, and the desires and interests of the people. The Federal Government promotes economic growth mainly by the contributions that it makes to conditions favorable to the exercise of private, individual initiative and effort, and by facilitating and encouraging the execution of their respective responsibilities by private individuals and groups and by State and local governments.

Fifth, the language of the Act affords a fair degree of flexibility in its administration, which our experience shows to be necessary if economic policy is to accommodate new priorities and meet new challenges. Routine diagnosis and administration have no place in economic policy for growth and stability. The policy appropriate in one situation is not necessarily suitable in a later one, even when the circumstances are alike in many respects. Thus, in 1954, when the economy was undergoing a contraction, it was possible to execute a substantial reduction of taxes, and thereby to increase the purchasing power of individuals and of business firms, because governmental expenditures, previously expanded as a result of the Korean conflict, were being cut back. In the contraction of 1958, on the other hand, different actions were called for and taken: monetary and credit policies were adjusted; Government expenditures were maintained and in some areas increased, at the same time that revenues declined, and a substantial deficit was incurred; administrative actions fostered a higher rate of home building; the Federal-aid highway program was accelerated; and unemployment benefits were extended.

Actions and policies adopted during the period of the Employment Act have not insured against economic contraction, but they have proved effective in moderating setbacks. The Act has fostered a keener awareness of approaching downturns and a determination to meet them by positive action rather than by passive acceptance. And this change in attitude on the
part of the Federal Government has created an atmosphere of public confidence which in itself has helped to arrest recessions before they have become cumulative downward spirals.

Sixth, the remarkable advance achieved in the welfare of our citizens provides a basis for confidence in the future growth and improvement of our economy. From this experience it is clear that the same diffusion of power for economic decision-making which would render foolhardy the sole reliance on Federal effort to achieve the Act's objectives assures the broad public and private cooperation needed to attain maximum practicable economic progress. While neither the public nor the private sector can guarantee the final outcome of their policies, the results of their efforts can provide a basis for improving future decisions and performance. Greater public understanding of economic issues, and a better appreciation of the consequences of past decisions and action, help the citizens of a democracy to evaluate proposals to promote the growth and stability of the economy. For the Federal Government, which is the agent of all the people, this evaluation may point to the need for new or revised laws. Also, fulfillment of the Federal role may often be aided by positive statements of principles, needed policies, and goals. For the achievement of the common economic aims of a democratic society, it would be as much a mistake to ignore the value of this manifestation of leadership as to rely upon it solely. Psychological factors should not be overlooked in the emphasis on automatic and deliberate stabilizing and stimulating policies and actions.

In sum, experience has proved the Employment Act to be a helpful instrument for achieving important common economic goals in a framework of free institutions. Confidence that the concepts of economic organization and action embodied in the Act will serve us well in the future has been strengthened. The Act is a living document, adaptable to changing circumstances. Though improvements might be made, as suggested in the next chapter, the Act, even without amendment, can provide a useful guide for policy and action in new and unforeseen circumstances.

## Chapter 3

## Policies for the Future

ARAPID growth of the labor force and a significant improvement in the Nation's productivity will provide the opportunity and also a challenge to raise output in the next decade at a still higher rate than has been experienced in the years since the Employment Act was passed. Success in accelerating production and providing the needed employment opportunities will depend, of course, on both private and public policies. The gains made in recent years in containing inflationary pressures and stabilizing prices and in avoiding the development of other imbalances in the economy provide a good foundation for achieving the desired rapid and sustainable economic advance. In some areas, however, new Government policies will be needed and existing legislative provisions will have to be strengthened.

It is impossible to say in advance how large the increase in the labor force will actually be, but it is clear that an unusually large number of younger persons will reach working age in the next decade. Indeed, the annual increase in the labor force may average as much as 1.4 million during the decade, compared with an annual growth of 850,000 in recent years. If it is assumed that in the next ten years the average unemployment rate will be equivalent to that for the past decade and that the size of the Armed Forces will remain unchanged, an annual increase of 1.4 million persons in the labor force would raise the number of persons in civilian employment in 1970 to more than 80 million, or 20 percent above the present employment figure.

A gain of this magnitude in employment would imply a still larger advance in output as productivity continues its historic upward course. Our output per man-hour is now substantially higher than that of any other industrialized economy in the world, and it has tended to increase at a long-term average annual rate of 2 percent or more. There are forces at work that could speed the actual gain in the next 10 years. The cost pressures of our enterprise system today and the intensive competition faced in world trade provide spurs to the more rapid achievement of greater productive efficiency. Continuing high expenditures on new plant and equipment and heavy emphasis on research and development are also favorable to a marked advance in productivity.

Fuller realization of our Nation's rising productivity potential could also be fostered by the elimination or reduction of arbitrary impediments of long standing. For example, many rules, codes, and practices that restrict
output and hinder the introduction of more efficient techniques deserve to be modified in the national interest, while providing reasonable safeguards for workers. The reduction of deterrents to productivity is an end to which labor and management, with the help of Government, if necessary, should work more intensively in the years ahead. The recent decision to establish a commission concerning railroad work practices has properly been hailed as a step in the right direction.

Although the signs are promising, the rate of economic growth cannot be predicted accurately, since the future size of the work force, the level of employment and hours of work, and the rate of actual productivity advance are themselves uncertain. However, if we succeed in the next 10 years in holding unemployment rates to their average in the 1950 's, and if the long-term average rate of increase in productivity persists, the growth of national output would exceed by a significant margin the rate achieved since the Employment Act was passed. A more rapid advance of productivity would yield a still higher rate of growth. This is the opportunity inherent in the present position of our economy and in its longer-term prospects.

## Government and Private Policies

In our free economy, economic growth and the improvement of living standards depend not primarily on what government does but mainly on what is done by individuals and groups acting in their private capacities. In this system of shared responsibility, the tempo of economic activity is especially sensitive, for example, to the plans and actions of large firms and powerful labor organizations whose operations are national and international in scope.

Government makes its basic economic contribution not through the volume of its own expenditures but by promoting conditions favorable to the exercise of individual initiative and private effort. Accordingly, a dominant purpose of government at every level must be the preservation and invigoration of institutions that favor and support enterprise. In particular, the Federal Government should encroach no more than necessary on the province of private action. Indeed, it should expand as broadly as possible the opportunities for private decision-making; strengthen incentives for businessmen, workers, savers, and investors; and promote a vigorously competitive environment in domestic and international markets. And within the area of public action, the Federal Government must avoid encroachment on the province of State and local units. The expected increase in the demand for public investment and the emergence of new regional and area problems will require efforts on the part of State and local authorities and of citizens in general to render more effective the instruments of government located close to home. A proper sharing of governmental responsibility may require a strengthening of the capacity of State and local entities to meet their emerging and increasingly heavy burdens.

## Maintenance of Price Stability

In administering fiscal and monetary affairs, the Federal Government makes a signal contribution to growth to the extent that it strengthens confidence in the stability of prices. The threat or experience of inflation tends to undermine thrift, even apart from the inequities inflicted and the hazards raised to sustainable growth of production. A steady and ample flow of savings and a growing volume of productive investment have been crucial to the development of our economy and will be needed more than ever in the years ahead if greatly increased numbers of workers are to be supplied with adequate tools and equipment.

Among Government efforts to maintain a reasonably stable price level, special importance must be assigned to the noninflationary conduct of Federal budgetary and fiscal affairs. Rising Government expenditures can put a direct upward pressure on costs and prices-especially when employment is already high-either because of their very magnitude or because they may concentrate demand on economic sectors in which personnel or supplies are relatively limited. Thus, inflationary pressures can be created throughout the economy, encouraging cost and price increases that do not appear directly traceable to Government action. A significantly large budgetary deficit, too, can impair the effectiveness of an anti-inflationary monetary and credit policy. Furthermore, the example set by Government in the conduct of budgetary and fiscal matters influences public attitudes and the psychology of the marketplace.

The second major Government instrument for controlling inflationary tendencies is monetary policy, for which the independent Federal Reserve System is responsible. Increases in credit, deposits, and currency are required to accommodate the rising volume of payments accompanying higher levels of production and employment, even when prices are generally stable. But these increases must be moderated so that they do not directly or indirectly contribute to the erosion of purchasing power.

The specific goals of monetary policy in particular situations and the best means for achieving them must be determined on the basis of long experience and a deep understanding of economic and financial developments at home and abroad. Experts may well differ on paramount short-term objectives, methods, and timing, especially since a wide variety of national interests have to be taken into account; but there should be no difference of opinion as to the unworkability of a policy of forcing interest rates to artificially low levels and keeping them there. Such a policy would be self-defeating, leading eventually to unbridled inflation or to a network of direct controls of wages, prices, and the use of credit.

Another factor bearing on the maintenance of price stability for sound economic growth is the control of unit production costs-a responsibility that in our free society rests primarily with private individuals and groups. An important aspect of cost control is the achievement and maintenance of a proper relationship between wage and productivity changes in the
economy as a whole. In general, if average increases in wages and salaries are inconsistent, over the long run, with average improvements in productivity, prices may be expected to trend upward. Wage settlements negotiated by management and labor should not preclude price reductions in parts of the economy where productivity rises especially rapidly. High wages provide a dependable source of increased economic demand only to the extent that they are justified by productivity performance. In the last analysis, the only way to assure that, for the economy as a whole, maximum employment and maximum production also mean maximum purchasing power is to keep wage improvements generally within the range of productivity advance.

The prolonged shutdown of the steel industry in the latter half of 1959 emphasizes another important implication of labor-management negotiations. Failure to achieve prompt, as well as reasonable and realistic, settlements of outstanding differences can lead to imbalances in production rates and inventories. These imbalances, and the attendant uncertainties and disappointments of expectations, can have a harmful effect on economic stability and on the general level of employment. It is important for labor and management to conduct their negotiations and settle their differences in a responsible manner and thus avoid inviting new Government controls and new limitations on their initiative.

The maintenance of price stability is significantly affected also by Government price and income support policies for agriculture. In this area, policies that would raise consumer food prices and tend to increase production costs through compensating wage adjustments must be avoided.

## Tax Policy

Taxation is another major area in which Government can contribute significantly to the speed of economic growth. A tax system must, of course, provide the revenues needed to cover governmental expenditures over reasonable periods, though a balance is not required every year. A budgetary surplus in prosperous times helps curb inflationary pressures, and a deficit during a period of recession may help reverse the downturn. More positively, a selective revision of our tax structure is needed to promote incentives and to maintain the vigor of the enterprise system. But it is important that the full benefits of tax revision should not be jeopardized by the hasty improvisation of reductions in the hope of countering cyclical downturns in economic activity.

Opportunities for effective tax revision will be afforded more readily as tax revenues increase with the growth of the economy. Thus, economic expansion at a rate comparable to that achieved in the period since 1946 would yield several billion dollars of additional receipts annually within the existing tax structure. However, the full amount of these potential increases in tax revenues would not be available for new expenditure programs or tax relief, inasmuch as programs undertaken pursuant to legisla-
tion already enacted will require increasing outlays in the future. The large veteran population is aging and, under present laws, expenditures for pensions, compensation, and medical care may be expected to grow. The annual cost of the medical care program for the aged enacted in 1960 will take some time to reach a maximum. Many public works projects are still in the early stages of construction, and their annual costs have not yet reached a peak. The civilian space program is expanding, and current appropriations exceed current expenditures. Although anticipated increases in expenditures, such as those just outlined, may be offset by the reduction or termination of some programs, a continuing upward trend in Government spending is foreseen.

Clearly, tax relief depends not only upon the rapid growth of the private sector but also on continuing budgetary discipline; and the chief objective of such relief, with due regard to equity considerations, should be the acceleration of the growth of the national product, especially through the sharpening of incentives for private investment. Government must keep a constant watch over its expenditures and at the same time look for opportunities to effect tax changes that will provide both the greater means and a greater stimulus to economic growth. Many features of the tax revision enacted in 1954 were designed with this dual purpose in view.

## Measures to Reduce Unemployment

As the opening section of this chapter implies, further advance toward moderating cyclical fluctuations in the volume of employment could contribute significantly to more rapid economic growth. Maintenance of reasonable price stability would give strong support to other efforts in this direction. Federal and State governments must be prepared to take positive steps to counteract or moderate the impact of declines. In addition to making prior provision for automatically cushioning economic contraction, they may have to enact emergency measures, if these are warranted, or to incur temporary budgetary deficits.

Steadier and fuller employment of the labor force, which presents the greatest and most complex challenge to public and private policy, is a problem that has structural as well as cyclical aspects. The problem cannot be resolved only by the moderation of fluctuations in economic activity as a whole; a continual, more effective matching of labor supply and demand in specific geographic areas, industries, and occupations is also required. Such matching must be as smooth as possible in order to overcome dislocations incident to technological change, the transition from agriculture to industry, long-term shifts in product demand and industry location, and international competition. While corrections of these conditions are found most readily in a stable and prosperous economy, special remedial measures also are required. Although the Federal Government cannot assume the major responsibility for such measures, it can participate effectively in a joint, many-sided program.

Above all, well directed local efforts must be made to develop new industries in areas of relatively high and persistent unemployment and underemployment. Technical assistance is currently available from the Federal Government, but legislative authority to extend and strengthen existing programs and to make available a new program of financial assistance is urgently needed.

The Economic Report of January 1960 pointed out that legislation to facilitate structural adjustments should meet several tests. It should be designed to stimulate and complement the efforts of local communities and citizens' groups to help themselves, promoting as much direct participation as possible on the part of private financial institutions and of State and local agencies. It should concentrate on areas in greatest need of assistance and avoid dispersing funds over wide regions with little lasting effect. It should encourage the creation of new job opportunities, not merely the transfer of jobs from one part of the country to another. It should include provision for technical aid in the economic diversification of rural low-income areas and of single-industry communities, as well as assistance for communities of a predominantly industrial character. And it should encourage programs of vocational training and retraining to upgrade the qualifications for new jobs of residents in areas of persistent unemployment and underemployment.

More general measures are needed to ease existing hardships and to limit the spread of distress to other areas not now affected. Thus, greater attention must be given to the change in the pattern of employment opportunities in the direction of occupations and professions requiring higher levels of education and training. The trend away from heavy, unskilled labor may be expected to continue or even quicken as our technology progresses. Therefore, maximum future employment depends in part on the timeliness and success of private and public efforts to adapt our labor force by improving job counseling and placement, by strengthening vocational education and training, by eliminating discrimination in the labor market, by raising standards of educational achievement, and by increasing the number of competent teachers.

## Education and Health Services

Advances in education are, of course, important from more standpoints than the enhancement of employability. Along with improvements in health, they raise the Nation's productivity potential, provide a key to greater individual well-being and security, and add to the quality and diversity of social life.

Though standards and performance in the fields of education have steadily progressed, much remains to be accomplished. Our educational institutions must prepare for much greater numbers of high school, college, and graduate students. While enrollment in public elementary schools may rise by nearly 2.9 million, or 12 percent, over the next eight years, the
number of students in public secondary schools is expected to increase by 3.8 million, or about 30 percent. Furthermore, the number of students attending colleges and universities, now about 4.0 million, may increase by another 2.3 million, or nearly 60 percent.

This growth will require a huge expansion of the Nation's commitment to education. Primary responsibility for meeting the demand should remain with local and State governments and with private groups, as the Federal Government provides important supplements. Federal financial assistance to education will reach about $\$ 1$ billion in 1962 , and this amount does not take into account educational benefits from Federal outlays of billions of dollars a year for research and development. Our educational institutions also derive large financial benefits from the tax treatment of contributions made to them.

Like education, health activities will provide both supports and outlets for accelerated economic advance. Basic studies of the emerging needs in these areas and of public and private roles in meeting them have been made under Government sponsorship. As the population continues to grow rapidly and living standards rise, the Nation's demands for health services will greatly expand. More than $\$ 25$ billion-three fourths from private sources-is being expended annually on health. Federal expenditures, including outlays of the National Institutes of Health for medical research and training and the medical program of the Veterans Administration, will amount to about $\$ 2.2$ billion in the fiscal year 1962, compared with $\$ 2.0$ billion in the current fiscal year and $\$ 1.8$ billion in fiscal 1960 ; within the 1962 total, Federal expenditures for hospital construction, mainly grants, are estimated at $\$ 236$ million, an increase of 7 percent over such expenditures in the current fiscal year. Important Government action was taken last year to improve health services for needy older people, but more remains to be done under private as well as public auspices. Especially, increasing attention has to be directed toward augmenting the number of doctors and dentists as the population expands. A new 5 -year, $\$ 100$ million program of grants for the construction of medical and dental schools has been proposed.

Some improvements will be needed in Government programs of social insurance that supplement private provisions for protection against the hazards and hardships of income loss through unemployment, old age, disability, and death. In addition to their value in alleviating personal hardships, these programs have demonstrated their usefulness in helping achieve economic growth and stability. Minimum wage laws also, when carefully designed and administered, help safeguard wage standards for workers at the fringes of competitive labor markets and encourage the spread of more efficient productive techniques.

## International Responsibilities

Economic growth requirements must be viewed in the light of our international responsibilities as well as our constant striving for domestic im-
provement. Despite the great contributions made toward the progress of the less developed countries, further vast efforts are required to help raise their living standards. We hope that, in the future, the nations we helped in their time of critical need and which have now regained their economic strength will participate more fully in bilateral and broader joint programs of investment, grants, and technical aid.

For our part, we can discharge our international obligations most effectively if we achieve sound as well as rapid economic growth. This means that public and private efforts to speed the expansion of our national product should avoid inflation, aim at solution of our balance of payments difficulties, maintain world confidence in the value of the dollar, and strengthen our competitive position in world markets. We may expect our allies to play a major role in the common defense and in the expansion of the world economy, but the principal burden of leadership in the quest for peace with justice will still be ours. To carry this burden, we must be prepared to follow policies, private and public, that will keep our economy strong and vigorous.

## Statistical Information

In an economic and social system organized around the principle of shared responsibility, a need of a technical order arises, namely, to make reliable statistics and other information broadly available in order to facilitate private and governmental decision-making, forecasting, and action. The variety of our economic and social life and the very pace of change require constant re-examination, expansion, and revision of the body of statistical and nonstatistical information designed to meet current and anticipated needs. Consistently with the objectives of the Employment Act, the Council of Economic Advisers has, in statistical appendixes to the Economic Report of the President and in Economic Indicators, facilitated wider access to needed economic data. The Executive Branch in general, and also the Congress, have participated in numerous undertakings to extend, diversify, and renovate the Federal contribution to the supply of published statistics and basic reports. Further improvements that will be needed include strengthening the national economic accounts, particularly the development of better estimates in terms of constant dollars; achieving more comprehensive coverage, as well as speedier collection of certain key data in the balance of payments; increasing the number of weekly series, so important to the appraisal of economic conditions and outlook at critical points in the business cycle; providing better information on inventories, the importance of which was dramatically illustrated during the steel strike of 1959 and its aftermath; enlarging available information on new orders, businessmen's and consumers' intentions, and other indicators useful in appraising the economic outlook; and expanding the supply of regional and area information to facilitate the planning and administration of private and public activities.

## Legislative Proposals

To a considerable extent, the Federal policies needed to help achieve sound and rapid economic growth can be applied administratively and require no legislative action by the Congress. However, there are important matters on which action is needed.

First, total funds appropriated by the next Congress for the fiscal year 1962 should be held within the limits of expected revenues. The budget presented to the Congress conforms to this standard and at the same time makes adequate provision for needed programs. It provides for an increase of $\$ 1.5$ billion for major national security programs, and an additional $\$ 200$ million for economic and financial assistance under the mutual security programs. It also provides for substantial increases in research and development activity and in other programs that have a significant bearing on the welfare of our citizens and on the rate and stability of economic growth: the development of natural resources, assistance to areas of high and persistent unemployment, the improvement of health and housing, and medical care for elderly persons.

Second, the budget for fiscal 1962 makes certain suggestions for revenues to cover these expenditures. It is recommended there that the present tax rates on corporation income, and the excise taxes scheduled for reduction or termination on July 1, 1961, be extended for another year. Unless these tax rates are extended, Federal Government revenues in the fiscal year 1962 will be $\$ 2.6$ billion less than estimated and $\$ 3.7$ billion less on a full year basis.

To obtain additional revenues in the coming fiscal year and later years, it is proposed that measures be enacted to charge users for special benefits which they derive from particular Government activities. Thus, the highway fuel tax should be raised to $41 / 2$ cents per gallon to provide funds in the Highway Trust Fund sufficient for construction of the interstate highway system on schedule; and the action taken by the Congress in 1959, which would divert funds from the general fund of the Treasury to build this road system, should be rescinded.

It is also recommended that Congress raise the excise tax rate on aviation gasoline from 2 cents to $41 / 2$ cents per gallon, impose the same tax on jet fuels, and retain the receipts from these taxes in the general fund to help defray the cost of the Federal airways system.

The request for a rate increase which will put the postal system on a selfsupporting basis, apart from soecified public services, is renewed. It is unreasonable that the system s'oould operate at a deficit of nearlv $\$ 900$ million a year. Those who use postal services should pay prices sufficient to avoid deficits on this scale.

Third, the request is again made that the Congress give the Secretary of the Treasury authority to raise funds in the long-term capital market when, in his judgment, this is in the public interest, even if the cost of the funds is above $41 / 4$ percent. Some long-term borrowing may be possible
under current conditions without lifting this interest-rate ceiling, but the ceiling remains an important impediment to the Treasury's flexibility in achieving significant debt lengthening.

Fourth, the request for legislation to enable the Federal Government to assist areas that experience high and persistent unemployment is again repeated. The Administration's proposal is drafted to meet the standards described earlier in this chapter. Eligibility requirements for assistance under the proposed new program would direct funds to localities of greatest need and avoid spreading available Federal funds too thinly over a larger number of areas.

Fifth, it is again urged that steps be taken to promote long-term agricultural adjustment and to make effective use of accumulated agricultural surpluses. Specifically, the price support laws should be modified to reflect unit cost reductions resulting from increasing technological efficiency on commercial farms and thereby reduce budget expenditures for the stabilization of farm prices and support of farm income. Energetic administration of the Rural Development Program is the most promising means for assisting readjustment of that part of the farm population which has neither sufficient productive farm resources nor adequate employment opportunities off the farm. Maximum efforts should also be made to use more of our accrued agricultural surpluses in the Food-for-Peace Program.

Sixth, Congress failed last year to pass legislation to supplement the Federal Government's established programs for assisting education by aiding States and local communities and institutions of higher education to provide needed educational facilities. Legislative proposals which constitute a sound approach to this problem were put before the last Congress by the Administration; they are again recommended for favorable consideration.

Seventh, as proposed in earlier Economic Reports, the Congress should enact legislation to extend coverage of the unemployment compensation system to about 3 million additional workers, most of whom are employed in firms having fewer than four employees. With appropriate action by the States to raise the level and to increase the duration of benefits, this legislation would make the system more effective in helping to stabilize our economy during periods of rising unemployment and in alleviating personal hardship. The States are again urged to increase benefits to make the great majority of covered workers eligible for payments equal to at least half their regular earnings, and to increase the maximum duration of benefits to 26 weeks a year for all eligible workers who remain unemployed that long. Under our Federal-State system, primary responsibility for the level and duration of benefits rests with the States; however, in periods of especially high rates of unemployment that have been prolonged, the Congress should give consideration to a program which would temporarily supplement regular benefits in some such manner as was done with good effect in 1958.

Eighth, to enhance the progress being made for equalizing economic opportunity for all citizens, the Congress is again urged to establish a statutory commission on equal job opportunities under Government contracts and to enact legislation for carrying out the proposal of equal pay for equal work without discrimination because of sex.

Ninth, it is again recommended that the coverage of the Fair Labor Standards Act be extended to several million workers not now receiving its protection, and that a moderate adjustment be made in the minimum wage provided in the Act.

Tenth, the program under which Mexican workers are brought into the United States for agricultural work terminates at the end of 1961, unless extended. Legislation to extend this program should include improvement of the present law's provisions to ensure that employment of Mexican agricultural labor will not adversely affect the wages and employment opportunities of our own farm workers.

Eleventh, the Congress is also urged to remedy the serious defects in the legislation enacted in 1958 to protect the interests of the Nation's working men and women in private pension and welfare plans; and to revise the outmoded provisions of the 8 -hour laws applying to Federal and certain federally assisted construction projects.

Twelfth, the last Congress enacted a program of Federal assistance for medical care for older persons under the regular old age assistance program and a new program of medical assistance for needy older people who are not recipients of public assistance. This voluntary program under Federal-State-local auspices is sound in principle. However, under the law enacted, many older people will not be able to obtain needed protection to cover major hospital and medical costs incurred because of serious illness. It is recommended that the Congress give further consideration to the recommendations made last spring by the Administration.

Thirteenth, existing programs for housing and community development are no longer experimental, and their successful operation in future years will be enhanced by the repeal of statutory termination dates and the removal of limitations on authorization amounts that can more properly be regulated through the normal appropriation process. Similarly, statutory maximum permissive interest rates should either be eliminated or adjusted to levels that will not bring about a restriction from time to time in the flow of investment funds. Permanency and flexibility in the basic housing programs will permit communities and industry to plan and regulate future activity without the burden of depending on, and adjusting to, the provisions of annual legislative enactments. To this end, the present authorization limitations should be removed on the amount of mortgages that can be insured by the Federal Housing Administration; similarly, legislative limits on grants for urban renewal projects should be removed and permanent authority for annual appropriations substituted. Also, the program to insure loans on home improvements should be made permanent. Present ceilings on
interest rates should be eliminated or substantially raised for loans made or guaranteed by the Veterans Administration and for mortgages insured by the Federal Housing Administration on rental housing, especially housing for the elderly, and on family housing built for occupancy by members of the armed services.

Fourteenth, suggestions made in previous years for amendment of the antitrust laws, to improve the competitive quality of our economy, are repeated: (1) Firms of significant size engaged in interstate commerce and proposing to merge should be required to notify the antitrust agencies of their intention. (2) The Federal Trade Commission should be given authority to seek a preliminary injunction in the case of mergers likely to violate the antitrust laws. (3) The Attorney General should be given the power to issue civil investigative demands for the necessary facts when civil procedures are contemplated in antitrust cases. This last recommendation, which passed the Senate in the 86th Congress, would simplify and greatly speed up all such proceedings.

Finally, the recommendation that the Congress amend the Employment Act of 1946 to make reasonable price stability an explicit goal of national economic policy is renewed. As pointed out in the Economic Report of January 1960, this goal already appears to be implied in the declared objectives of the Act, but an amendment such as the one proposed would increase public awareness of the price stability problem and strengthen the Government's hand in pursuing effective policies to help prevent inflation. The proposed amendment is limited to a change in the language of the Act's declaration of policy and would accomplish its aim without placing restrictions on the effective operation of economic markets.

These proposals, like others placed before the Congress by the Administration, have been designed to promote the sound growth of our economy on the principles set forth in this Economic Report. They indicate routes along which we may move ahead confidently within our system of shared responsibility, in a manner that fosters private competitive enterprise and recognizes the obligations of State and local government, to achieve the purposes proclaimed in the Employment Act.

## Appendix A <br> REPORT TO THE PRESIDENT ON THE ACTIVITIES OF THE COUNCIL OF ECONOMIC ADVISERS <br> DURING 1960

## Letter of Transmittal

Degember 31, 1960.
The President.
Sir: The Council of Economic Advisers submits this Annual Report for calendar year 1960 in accordance with the requirements of Section 4(d) of the Employment Act of 1946.

Respectfully,
Raymond J. Saulnier, Chairman
Karl Brandt
Henry C. Walligh

Federal Reserve Bank of St. Louis

## Report to the President on the Activities of the Council of Economic Advisers During 1960

The year 1960 marked the eighth in which the Council of Economic Advisers has operated under Reorganization Plan No. 9 of 1953. It will be recalled that in the Appropriation Act for Fiscal Year 1953 the Congress provided funds sufficient for continuation of the Council only through March 1953; and that the Supplemental Appropriation Act approved at the end of that month provided for an Economic Adviser to the President and a small staff to perform the functions previously assigned to the Council. The functions remained with the new Economic Adviser until the end of July 1953, when they were restored to the Council as reconstituted under the Reorganization Plan transmitted by the President to the Congress on June 1. In accordance with this Plan, the Council has operated during the past $71 / 2$ years as a source of professional advice to the President and the Administration generally.

It is useful to recall also that the President's message to the Congress, which accompanied Reorganization Plan No. 9 of 1953, announced the establishment of an Advisory Board on Economic Growth and Stability, under the chairmanship of the Chairman of the Council of Economic Advisers. This Board, composed of high officials of those Federal departments and agencies having a major responsibility in economic matters, was designed to enhance the effectiveness of the Council at the top policy level of the Executive Branch by providing a forum for regularly scheduled interdepartmental discussion of economic policy questions. The Board has met weekly with the Council for this purpose; and for the past year and a half, it has included in one meeting each month the heads of all major Federal lending, loan insuring, and loan guaranteeing agencies. These monthly meetings have given the heads of Federal credit agencies, who are responsible for transacting financial business that runs into many billions of dollars annually and has a profound effect on the economy, an opportunity to exchange views with senior policy officials of other Federal departments on the state of the economy and on the most effective orientation of their agencies' policies.

Member agencies of the Advisory Board on Economic Growth and Stability are presently represented by the following officials:

Department of State-Edwin M. Martin, Assistant Secretary for Economic Affairs
Department of the Treasury-Julian B. Baird, Under Secretary

Department of Agriculture-True D. Morse, Under Secretary
Department of Commerce-Philip A. Ray, Under Secretary
Department of Labor-James T. O'Connell, Under Secretary
Department of Health, Education, and Welfare-Bertha Adkins, Under Secretary
Board of Governors of the Federal Reserve System-Abbot L. Mills, Member of the Board
Bureau of the Budget-Elmer B. Staats, Deputy Director
Export-Import Bank of Washington-Samuel C. Waugh, President
The White House Office-Don Paarlberg, Special Assistant to the President
Council of Economic Advisers-Raymond J. Saulnier, Chairman

## Council Activities

As prescribed in the Employment Act of 1946, the Council continued in 1960 to analyze economic developments for the President, reviewed and evaluated many different legislative proposals and administrative actions for their effect on the stability and growth of our economy, made recommendations from time to time to the President for policies that would help promote high levels of employment, production, and purchasing power, and assisted the President in the preparation of his annual Economic Report to the Congress.

The Chairman of the Council, accompanied by the other Council members, testified before the Joint Economic Committee of the Congress on the 1960 Economic Report of the President. At this Committee meeting, the character and effectiveness of economic policies in 1959 were reviewed, the economic prospects for 1960 were appraised, and the President's recommendations for policies to promote economic growth and price stability in 1960 were examined.

The Chairman, accompanied by the other members of the Council, also testified on S. 64, a bill which would have amended the Employment Act to make relative stability of prices an explicit aim of Federal economic policy, and on S. 2382 which would have amended the Employment Act to give the President authority to hold hearings on proposed price and wage increases and to report, and make recommendations, on such increases; in the testimony, the possible adverse consequences of the changes proposed in the latter bill were pointed out.

Participation in international meetings here and abroad continues to be an important part of the Council's activities. In the past year, two members of the Council and members of the Council's staff took part in meetings held in Paris under the auspices of the Organization for European Economic Cooperation (OEEC), and prepared, as in previous years, a report, for use in the OEEC's annual review, of economic conditions in the United States. All members of the Council participated in preparatory work for the new Organization for Economic Cooperation and Development. The Council and members of its staff received various visiting
groups of economists and officials from other countries and international organizations, and two members of the Council staff held a number of seminars for foreign businessmen, educators, students, and Government officials.

As the law prescribes, in performing these functions the Council drew heavily on the resources of the operating departments and agencies of the Federal Government and availed itself fully of the information and counsel of private individuals and groups. The Council met during the year with representatives of industrial, commercial, and financial concerns, and with university economists, representatives of agriculture, industry, and labor, and various other groups and individuals to consider business conditions, the economic outlook, and policies affecting the growth and stability of our economy. Throughout the year, Council staff members were in touch with experts in other Government departments and agencies and with private individuals and groups. Through its Chairman, the Council reported frequently to the President on current economic developments and their implication for the achievement of the objectives of the Employment Act.

## Council Membership

The Council membership remained unchanged during the year.
Dr. Saulnier has served as Chairman of the Council since December 1956. He is on leave of absence from Barnard College, Columbia University, where he is Professor of Economics, and from the National Bureau of Economic Research.

Dr. Brandt, who has been a member of the Council since November 1958, is on leave of absence from Stanford University, where he is Professor of Economic Policy and Associate Director of the Food Research Institute.

Dr. Wallich has served as a member of the Council since April 1959. He is on leave of absence from Yale University, where he is Professor of Economics.

## Council Staff

The Council is assisted by a staff of 12 senior economists and statisticians who are experts in their fields. Each staff member is responsible for obtaining the cooperation of other Government agencies and of business, labor, and other private groups in analyzing and evaluating economic developments in his assigned areas, and for keeping the Council advised of current and foreseeable developments. The full-time staff members are Bernard S. Beckler, Harold F. Breimyer, Henry W. Briefs (on leave from Georgetown University), Samuel L. Brown, Robert C. Colwell, Peter G. Fousek (on leave from the Federal Reserve Bank of New York), Frances M. James, Marshall A. Kaplan, David W. Lusher, Walter F. Stettner, and Collis Stocking, who is also Administrative Officer of the Council. Charles A. Taff, of the University of Maryland, serves as a Consultant to the Council. Irving H. Siegel, who served as a Consultant in the preparation of this Report, resigned
from the Council Staff in September 1960, to join the Operations Research Office of Johns Hopkins University. Hal B. Lary resigned from the Council staff in July 1960, to join the National Bureau of Economic Research as Associate Director of Research.

## Committees and Task Forces

The Council members and staff participated during the year in the work of a number of important committees and task forces within the Government. The Chairman of the Council served as a member of the Cabinet Committee on Price Stability for Economic Growth, chaired by the Vice President of the United States. He also served as a member of the informal group which discussed problems of financial policy with the President; the other members were the Secretary of the Treasury, the Chairman of the Board of Governors of the Federal Reserve System, and the Special Assistant to the President with responsibilities in the economic area.

The Chairman of the Council regularly attended Cabinet meetings, special meetings on legislative matters, and meetings of the National Security Council at which economic matters were discussed. Members of the Council and its staff participated in the work of the Planning Board of the National Security Council.

The Chairman of the Council served as Chairman of the Cabinet Committee on Small Business, was a member of the Board of the Federal National Mortgage Association, represented the Council on the Civil and Defense Mobilization Board and on the President's Special Committee on Financial Policies for Postattack Operations, and served on the Interagency Task Force for Implementation of the Program for Increases in the Export Sales of the United States.

Dr. Brandt served as a member of the interdepartmental Committee for Rural Development Program, under the chairmanship of the Under Secretary of Agriculture, and as a member of the interagency work group on research and analysis of the Federal Council on Aging; on a panel of the Annual Outlook Conference of the Department of Agriculture; on a panel of the National Conference on Water Pollution called by the Surgeon General; and as Chairman of an interdepartmental working party of experts on long-term economic projections to assist the Department of State in formulating the United States position on this subject in the United Nations. He also attended regularly the meetings of the Council on Foreign Economic Policy.

Dr. Wallich participated in the work of the National Advisory Council, attended the first meeting of the Board of Governors of the Inter-American Development Bank in San Salvador, and participated in the negotiations with representatives of the German Government in Bonn in November 1960. He also served as a member of the interdepartmental Committee to Coordinate Federal Urban Area Assistance Programs, under the chairmanship of the Under Secretary of Commerce.

## Publications Work

In keeping with its responsibilities under the Employment Act, the Council assisted the President in the preparation of his annual Economic Report to the Congress. Copies were distributed to members of the Joint Economic Committee, all other members of the Congress, departments and agencies of the Government, representatives of the press, and depository libraries throughout the country. There was a large demand for the 1960 Report. The Superintendent of Documents sold to the general public his entire supply of 21,000 copies.

The Council prepares Economic Indicators, a monthly compendium of current economic statistics published by the Joint Economic Committee of the Congress. During the year, the Council, in cooperation with the staff of the Joint Economic Committee, completed an extensive revision of Economic Indicators, to make greater use of seasonally adjusted data and present additional information on a number of topics, including unemployment and the balance of payments. Copies of Economic Indicators are distributed to all members of the Congress and to depository libraries. In addition, 10,000 copies of each monthly issue are sold by the Superintendent of Documents to subscribers and others.

The Council participated in the preparation of the Third Progress Report by the Cabinet Committee on Small Business. The Report was published and issued by the Council for the Committee.

## Council Funds

For the fiscal year 1961, the Congress appropriated $\$ 390,000$ for the Council's activities. This total was $\$ 5,000$ less than the amount appropriated for the fiscal year 1960. Since the date of Congressional approval of the appropriation, there has been an additional annual cost of $\$ 21,000$ as a result of Public Law 86-568, which increased Federal employees' salaries. This amount is being included in a supplemental budget request to be presented to the Congress.

## I. Employment and Earnings

Demand for labor was generally high during the first half of 1960, and in the second quarter of the year total civilian employment expanded to a record, seasonally adjusted figure of 66.9 million. For the year as a whole, employment averaged 66.4 million, nearly 800,000 above 1959. Growth of the labor force was about as large as the increase of employment, and unemployment, accordingly, averaged 5.6 percent of the civilian labor force for the year, approximately the same as in 1959 (Table B-1). (For comparability with earlier years, the 1960 data used here do not include the new States of Alaska and Hawaii.)

Table B-1.-Growth of the labor force, by employment status, 1959-60 [Millions of persons 14 years of age and over]

Note.-For comparability with earlier periods, data for 1960 have been adjusted to exclude Alaska and Hawail.
Detail will not necessarily add to totals because of rounding; in addition, seasonally adjusted totals may differ from sum of components because totals and components have been seasonally adjusted separately.

Source: Department of Labor.

After the middle of 1960, however, employment tended to decline. In the third quarter the average was 66.7 million, and in the fourth quarter it was 66.2 million; the December figure, after allowance for seasonal influences, was 66.0 million. Unemployment, seasonally adjusted, increased from 3.6 million, or 5.1 percent of the civilian labor force, in the second quarter to 4.6 million, or 6.5 percent of the labor force, in the fourth. Hours worked in manufacturing industries declined through the year, and the workweek averaged 39.7 hours, compared with 40.3 hours in 1959.

Hourly earnings of production workers in manufacturing industries increased slightly during the year, averaging $\$ 2.32$ in December, against $\$ 2.27$ in December 1959. Average weekly earnings, reflecting the reduced workweek and lower employment in the more highly paid metalworking industries, tended to decline slightly in the course of the year, and real weekly earnings, adjusted for the change of consumer prices, also were lower. Basic wage rates, however, rose by somewhat more than 3 percent per year, as wage increases were put into effect for about 7 million employees, nearly 90 percent of those covered by major collective bargaining agreements.

## Growth of the Labor Force

The labor force expanded markedly during the first half of 1960, paralleling the increase of civilian employment. As Table B-2 indicates, growth

was larger than in 1959, and moderately above the average for the past ten years.

Over the past decade, important structural changes have taken place in the age and sex distribution of the working population, and even more significant changes are to be expected in the next ten years. The proportion of women in the labor force has been increasing continuously, and the average age of the working population has been rising. Of the total labor force growth of 8.1 million in the decade of the 1950 's, 4.8 million were women, most of whom were 35 years of age or older. A large part of this change occurred during the great expansion of employment from 1954 to 1956 , when nearly 2 million women entered the labor force, but increasing participation in the labor force by women has characterized the entire
decade. In 1960, nearly three-fourths of the increase of the Nation's work force consisted of women.

Important shifts have also occurred in recent years in the age structure of the labor force. The number of workers 20 to 24 years of age has declined, while the number of those 25 to 34 years of age has remained practically unchanged. This was due to the low level of births during the 1930's. Workers 35 to 44 years old increased by 2.4 million, or 17 percent, from 1950 to 1960 , while the number of those 45 and older expanded by 5.3 million, or at a rate nearly twice that for the labor force as a whole. The proportion of workers under 35 years of age is now 40 percent, compared with 44 percent in 1950, and the number 45 or older is now 38 percent, compared with 34 percent in 1950. However, the number of teenage workers started to rise in 1955 as the more numerous generation of the 1940's began to reach working age. In 1960 about 240,000 teenagers were added to the labor force, compared with 170,000 in the preceding year.

Under favorable economic conditions, the rising tide of young people and high labor force participation among older women may expand the labor force by more than 13 million over the course of the next decade. This would represent the greatest numerical expansion in the history of our country. Although a larger proportion of young people are expected to be in school, the number of members of the working population under 25 may increase by 6 million. There may be an especially great inflow of teenagers into the labor force in the middle of the decade as the large numbers born in 1946 and 1947 become 18, the usual age of high school graduation. The number of older workers will also rise sharply. Those over 45 may increase by $51 / 2$ million despite further declines of labor force participation by men over 65 . The highly productive group 35 to 44 years of age, on the other hand, may decline slightly, and a relatively small increase of the number 25 to 34 is expected.

Thus, workers under 25 years of age and those 45 years and over will probably account for almost 90 percent of the total growth of the labor force between 1960 and 1970. With nearly half of the total increase in the younger group, they will comprise 23 percent of the total labor force in 1970, compared with 19 percent in 1960. At the same time the proportion that will be 25 to 44 years old will decline from 43 percent to less than 39 percent in 1970. These impending changes constitute both an impressive challenge and a great opportunity for the maximum development and utilization of our human resources.

## Changes of Employment

The total number of employees on nonagricultural payrolls expanded rapidly after the end of the long steel strike in November 1959, and continued to grow at a more moderate rate during the first six months of 1960, reaching a record level of 53.1 million, seasonally adjusted, by the
middle of the year. Early in the year, however, divergent trends began to appear in various industries.

Employment in durable goods manufacturing turned downward in March, as work forces were reduced in the transportation equipment and primary metals industries. As the year progressed, work force reductions occurred in other durable goods sectors. Considered as a group, durable goods manufacturing industries registered employment declines, after February, in nearly every month of 1960 . In the manufacture of nondurable goods, employment increased until June; but after midyear, declines appeared also in this sector. In the latter months of the year, reductions of work forces continued in most of the 21 major manufacturing industries. In the group of nonmanufacting industries, employment continued to expand until September, but moderate declines appeared during the final months of the year.

In December, total payroll employment, seasonally adjusted, in nonagricultural industries amounted to 52.2 million, which was 920,000 below the crest at midyear and about 500,000 below the December 1959 figure. The decline of employment has been concentrated in manufacturing industries, while there have been some offsets in other industries, especially those producing services rather than goods (Table B-3).

Events in the labor market of 1960 are better understood in the light of the longer-term changes which have been taking place in the industrial and occupational structure of employment in the United States. Since the passage of the Employment Act of 1946, the growth of nonagricultural jobs has increased total employment by more than 11 million. Agricultural employment, on the other hand, has continued to decline, dropping from 8.3 million, or 15 percent of the total, in 1946 to 5.7 million, or $81 / 2$ percent of total employment, in 1960. This shrinking of employment on farms extends a long-run trend that began generations ago when the United States economy was almost exclusively agricultural. The decline has continued as more power and machinery have been introduced into agriculture in partial replacement of farm labor, and as the national trend toward specialization in enterprise has lifted more procurement and marketing functions out of agriculture.
Nearly all of the growth of employment since World War II is accounted for by the gain in service type activities and industries, including education, distribution, finance, and business and personal services. Employment in State and local governments has increased very sharply, with 55 percent of the expansion occurring in the school systems of the country. Trade, finance, and other services have also afforded expanding job opportunities. An interesting parallel to this trend is found within manufacturing industry, where the numbers of salaried or "nonproduction" employees engaged in service functions have increased in every major industry, while employment of production workers has fluctuated widely and shown a tendency to decline. These areas of expanding employment have continued to grow, or at least have remained relatively steady, even during periods of recession. Producing

services, they have been relatively immune to the employment impact of the wide inventory fluctuations which have characterized postwar business cycles. Consequently, the growing proportion of workers in service types of employment has strengthened the resistance of the economy to cumulative business downturns (Table B-4).

Analogous trends are clearly evident in the changing occupational structure of the employed labor force. "White-collar" occupations have grown in importance as manual occupations have relatively declined. The growing occupational groups have also been those in which employment has been relatively steady over the business cycle (Table B-5). It is perhaps even more important that developments of recent years have resulted in a general upgrading of the level of skill in the labor force. There has been

[^1]a trend away from jobs requiring heavy, arduous, unskilled labor and toward those which require broad education and training. For professional and technical workers, for example, employment opportunities have increased dramatically. Heavy expenditures in industry as well as in educational institutions for research and development, and rising demands for scientists, engineers, teachers, and technicians have strengthened this trend. Employment of unskilled or semiskilled manual workers, on the other hand, has expanded very little, or has actually declined, and has fluctuated with the business cycle. High and rising levels of education and training required for employment in the occupations where ample job opportunities are most likely to be found emphasize the great importance of good secondary and higher educations for the large numbers of young people who are entering the labor force. These occupational and industrial trends make more difficult the problem of unemployment for unskilled and semiskilled workers in fluctuating or declining industries.

## Unemployment

For the year 1960 as a whole, unemployment amounted to 3.9 million persons or 5.6 percent of the civilian labor force, about the same as in 1959. This was lower than in the recession year of 1958, when unemployment reached a postwar peak of nearly 7 percent of the labor force, but higher than in the period 1955 to 1957, when it averaged a little over 4 percent.

In the course of the year 1960, unemployment changed markedly. With the recovery of employment after the long steel strike, unemployment declined from about 4 million in the closing months of 1959 to 3.5 million in the early part of 1960 , or from about 6 to 5 percent of the civilian labor force, seasonally adjusted. When in the second half of the year employment declined, unemployment increased, reaching an average of 4 million in the third and of 4.6 million in the final quarter. In December 1960, unemployment amounted to 4.9 million, or 6.8 percent of the labor force, compared with 3.8 million, or 5.5 percent of the labor force, in December 1959. The increase during the second half of the year mainly affected adult men and women, reflecting job cutbacks in manufacturing and related industries.

The number of persons who normally work full time but for economic reasons are working only part time is a measure of one form of underemployment. In 1960 such part-time workers averaged 1.2 million, compared with 1 million in 1959 and 1.6 million in 1958. The rise of part-time employment in 1960 occurred mainly among factory workers, and was especially marked during the late months of the year. A second group of underemployed, those who work part time primarily because of inability to find full-time work, averaged 1.3 million in 1960, the same as in 1959, but about 375,000 higher than the average in 1956-57. Most of these were women and teenagers in the trade and service industries.

## Characteristics of the Unemployed

The movement into and out of the unemployed group, or the turnover among persons without jobs, was comparatively large in 1960. Almost half of those unemployed in any month were no longer seeking work in the following month either because they had found jobs or had left the labor market. Consistent with this substantial turnover, persons seeking work for less than 5 weeks accounted for nearly half of total unemployment during 1960. This proportion was higher than in 1958 or 1959, but lower than in the years before the 1957-58 recession. Long-term unemployment, defined as persons seeking work for 15 weeks or more, averaged about 1 million in 1960. While this average was about the same as in 1959, it was nearly 500,000 lower than in the recession year of 1958, yet almost twice as high as in 1956-57. Long-term unemployment was reduced during the first half of 1960 , but afterward increased. In December, the number of longterm unemployed amounted to 1.0 million, compared with 800,000 in December 1959. Extended periods of unemployment are most commonly found among the following groups: older persons; blue-collar workers generally; non-white workers; and workers laid off in industries manufacturing durable goods.

For most of the age-sex groups of the labor force, rates of unemployment in 1960 did not differ much from those in 1959, considering the year as a whole. Unemployment was, as usual, highest among teenage workers who are likely to change jobs more frequently than older persons. The rate of unemployment among married men living with their families, who account for about one-third of all unemployed persons, averaged 3.7 percent in 1960, about the same as in 1959; however, this rate was increasing during the second half of the year. For non-white men, the rate of unemployment averaged 11 percent, and it was as usual more than twice the rate for white male workers. Non-white workers are concentrated in unskilled and semiskilled occupations where unemployment rates are generally high. Unemployment in various occupations and industries also averaged about the same in 1960 as in 1959. Significant increases occurred, however, during the third and fourth quarters of 1960 in durable goods manufacturing and among the occupation groups important in this industry, such as metal craftsmen, semiskilled factory operatives, and factory laborers.

In the past decade there has been little change in the ranking of occupations by rates of unemployment. Highest rates prevail among laborers, followed by operatives and service workers. White-collar workers, in 1960 as in the past, were least affected by unemployment.

## Trends in Major Labor Markets

Less vigorous demand for labor became apparent after the spring of 1960 in most of the Nation's 147 major labor market areas, which account for about 70 percent of all nonagricultural wage and salary employment
in the country. In January 1960, labor market surveys conducted by State employment security agencies for the Department of Labor found demand and supply of labor in reasonable balance in 118 of the major areas; in 93 of them, unemployment ranged between 3 and 6 percent of the local labor force, while in 25 areas unemployment was below 3 percent. The remaining areas had substantial labor surpluses, that is, unemployment rates of 6 percent or higher, for other than seasonal or temporary reasons. Through the year, the number of major labor markets having an unemployment rate of less than 6 percent gradually diminished to 99 in November 1960,11 of which had a rate of less than 3 percent. At the same time, the number of areas having substantial labor surpluses increased to 48 , compared with 29 a year earlier.

These changes in labor markets in 1960 mainly reflect lower employment in durable goods industries. Many places with substantial labor surpluses have, however, had persistent problems of unemployment for many years, although they are not, primarily, centers of durable goods production. In November 1960, 19 major labor markets in the United States were classified as areas having "substantial and persistent labor surpluses," that is, unemployment rates of 6 percent or higher for other than temporary reasons and jobless rates substantially above the national average for extended periods of time. All but 4 of these had had substantial labor surpluses in September 1957, before the effects of the 1957-58 recession. In only 6 of the 19 major areas were employment losses in durable goods manufacturing the cause of persistent problems of local unemployment. In the remaining areas, which are all located in the northeastern part of the country, longterm declines of the mining, textile and apparel manufacturing, and railroad equipment maintenance industries have caused chronic unemployment. At mid-1960, before the downturn of total employment, about 11 percent of the unemployment in major labor markets was accounted for by areas with chronic and persistent labor surpluses, although they have only 7 percent of the labor force. At that time, the average rate of unemployment in these areas was estimated at 7.9 percent, compared with 4.7 percent for the other major areas.

Despite higher unemployment during the latter months of 1960, continuing shortages of professional, technical, clerical, and skilled workers were still noted in most labor market areas. In many places, available workers were not considered by employers to be qualified for existing job openings with respect to the required training, experience, and skill. At the same time the semiskilled, the unskilled, and persons without work experience were reported in surplus supply in nearly all sections of the country.

## Trends of Insured Unemployment

Insured unemployment, the number of persons out of work and eligible to receive unemployment benefits, declined slightly (seasonally adjusted) in the early months of 1960 . Beginning in June, however, their number
began to increase, and in the later months of the year it was sharply higher. In December, the number of persons eligible for benefits averaged 2.8 million, compared with 2 million in December 1959. Most of the increase over the year resulted from job cutbacks in industries manufacturing durable goods. Payments of unemployment insurance benefits increased rapidly, and in December 1960 amounted to about $\$ 350$ million, compared with $\$ 251$ million in December 1959. These insurance payments, together with other government transfer payments, and augmented by the private supplements negotiated in collective bargaining in the steel and other industries, were a substantial support to labor income in 1960.

## Hours of Work and Earnings

With moderately declining use of labor in many important industries, and more frequent adoption of reduced weekly work schedules, the average workweek of production workers in manufacturing industries tended downward in 1960 and reached 38.5 hours (seasonally adjusted) in December, compared with 40.2 hours in December 1959. Reduced workweeks and less overtime, together with lower employment in the more highly paid metalworking industries, meant that the general average of hourly earnings in manufacturing industries increased little in 1960, despite a continued rise of basic wage rates. Average hourly earnings were $\$ 2.32$ in December, compared with $\$ 2.27$ in December 1959. Average weekly earnings, reflecting the reduced workweek, receded slightly in the course of the year, and were $\$ 90.02$ in December, compared with $\$ 92.16$ in December 1959. When adjusted for the rise of consumer prices, weekly earnings in manufacturing showed a slightly larger decline; however, the annual average for real weekly earnings was practically unchanged from 1959. In nonmanufacturing industries, weekly earnings rose in 1960 by an average of about 3 percent. Salaries of civilian employees of the Federal Government were increased by legislative action. For employees of the postal service the increases averaged 8.4 percent; for other employees the average increase was 7.5 percent. By this action, total wage and salary payments were increased by about $\$ 750$ million annually.

Lower employment and earnings in several industries stemmed the increase of labor income in the latter months of 1960 . After rising by $\$ 10$ billion from December through June, labor income was steady at an annual rate of $\$ 286.2$ billion through the third quarter of the year. During the fourth quarter, it declined to $\$ 282.1$ billion in December.

## Developments in Collective Bargaining

Basic wage rates advanced in 1960 by somewhat more than 3 percent, about the same average rate of increase as in 1959. Wage increases, including cost of living adjustments and deferred increases negotiated in earlier years, were put into effect for about 7 million employees, nearly 90 percent of those covered by major labor agreements (Table B-6).

Source: Department of Labor.

Major collective bargaining settlements were concluded in 1960 in the steel industry, railroads, electrical equipment manufacturing, aircraft, rubber, textiles, chemicals, and other manufacturing and nonmanufacturing industries. These agreements affected about 4.3 million workers, all but 3 percent of whom received or were scheduled to receive wage-rate increases within 12 months of the effective date of the contract. These negotiated wage adjustments most frequently averaged either 5 to 6 cents or 9 to 10 cents per hour. New or liberalized supplementary benefits were negotiated for 80 percent of employees covered by agreements concluded in 1960. Health and welfare plans, pensions, and vacations continued to be the most frequent kinds of supplementary benefits established or improved in bargaining negotiations.

In addition to wage and benefit improvements negotiated in 1960, about 2.7 million workers covered by major agreements received deferred wage increases, cost of living adjustments, or in the majority of cases both, as a result of contracts signed before 1960. Typical of these dual adjustments were those in the automobile and farm equipment industries, where deferred increases averaged 6 to 7 cents, supplemented by 4 cents more in automatic cost of living adjustments. Other industries in which deferred increases were put into effect included trucking and meatpacking (where workers also received cost of living increases), the cement industry, and various metalworking and chemical firms. Before renegotiation of agreements in the course of the year, cost of living adjustments were made in the railroad, aircraft, and electrical equipment industries. Cost of living escalator clauses were eliminated from important wage agreements in railroads and in electrical manufacturing, and were narrowly limited in their
operation in the steel and related industries. During the year, the number of workers covered by labor agreements containing such clauses was reduced from 4 million to less than 2.8 million.

In the construction trades, about 85 percent of union wage scales were increased in 1960, a slightly smaller proportion than during the preceding three years. The average increase for all scales was about 14 cents per hour, compared with 16 cents in 1959 and 15 cents in 1958 and in 1957.

Labor disputes were infrequent and generally of short duration in 1960. Both the number of employees involved in work stoppages and the number of man-days of idleness were very low, judged by the record of the years since World War II. There was evidence of increasing recognition of the need for constructive study and resolution of the serious economic issues being raised in negotiations by rapid technological change and by competitive pressures. In the railroad industry, the long-standing and complex dispute over changes in working rules was referred, by agreement of the parties, to a Presidential commission for study, recommendations, and mediatory assistance in the resolution of the issues. The commission's study and recommendations, which will not be binding upon the parties, are to be completed by December 1, 1961. Study groups and committees were also established in the steel and construction industries and by national labor and business groups.

## II. Agriculture

Agriculture in the United States consists of two parts that are becoming more and more distinct: (1) commercial farm enterprises and (2) noncommercial holdings, many of which are little more than farm living units. Each is composed of numerous types. Commercial farms vary in area under operation from small vegetable farms to very large western cattle ranches; noncommercial units comprise backyard cow-and-garden farms, farms of retired and semiretired people, part-time farms, and others.

The distinctions between the two broad parts are real and meaningful for any attempt at weighing the economic and social problems of agriculture. Commercial and noncommercial agriculture differ in economic status, in the nature of their problems, and in the trends they exhibit. Commercial farms outnumber the noncommercial holdings in a ratio of almost two to one; the two groups together total roughly 3.7 million units, most of them family operated.

Commercial agriculture produces more than nine-tenths of all farm output, earns the major part of all net farm income, and holds most of agriculture's proprietary assets. Aggregate statistical measures, which seldom distinguish between commercial and noncommercial agriculture, must therefore be interpreted as pertaining chiefly to the commercial portion. Because of the differences in the economic performance of the two types of farms and their changing relative numbers, a conversion of aggregate totals into averages per farm tends to be misleading.

Since commercial agriculture contributes so much of all market supplies of farm products and absorbs even more of the capital resources used, its problems are essentially those of commodity markets. National concern with adjustment problems of underdeveloped and underemployed human resources in agriculture is associated with low income farms-those in noncommercial agriculture and the smallest-sized fringe of commercial agriculture.

## Production and Income in 1960

The commercial part of agriculture accounted for the rapid expansion in farm output during the last few years and for the record high production in 1960-a record attained despite the reduction of the planted acreage, brought about chiefly by the Conservation Reserve Program, to the smallest area since 1916. While the index of livestock production dropped 1 point, to $129(1947-49=100)$, the index of crop production rose to a new high
of 122 and caused a rise of 3 points, to 129 , in the all-products index (Table B-7).

Source: Department of Agriculture.
During the course of the year there was relative improvement in agricultural prices and incomes. Both had declined late in 1959 to their lowest points in several years; by December 1959, the index of prices received by farmers for all commodities had fallen to $230(1910-14=100)$, from 244 in the first quarter of that year. The same factors responsible for that decline, principally a cyclical change in output of poultry products and hogs, were also responsible for the rise. As production of both decreased in
early 1960 their prices improved, lending strength to the average of allproduct prices; by April the price index had risen to 242. Small declines after April were followed by a new recovery, and the index in December was again 242.

Price advances underpinned a rise in gross income in agriculture to an appreciably higher level in the second quarter of 1960 than in the second half of 1959 and first quarter of 1960. The increased income of the second quarter was sustained later by the harvest of large crops of pricesupported grains. The movement of wheat into Commodity Credit Corporation loans in the fall of 1960 was greater than a year earlier, and the loan advances were an addition to gross income. For the entire year, gross farm income exceeded the $\$ 37.5$ billion of 1959 by $\$ 0.4$ billion, according to preliminary data.

Production expenses in 1960 were about the same as in 1959. Their near-stability ended a steady and marked 4 -year rise, and was due largely to lower prices for feed and feeder livestock. Prices of most commodities bought from nonfarm sources were as high as in 1959, or slightly higher, and interest, taxes, and wage rates increased substantially.

As gross income was up and expenses of production were almost unchanged, realized net income of farm operators from farming increased a little-from $\$ 11.3$ billion in 1959 to $\$ 11.6$ billion (preliminary) in 1960. Income received from nonfarm sources, which has increased to about a third of the total income of the farm population, was up slightly in 1960 , to a new record of $\$ 6.9$ billion. Total net income received by the farm population from all sources, which also includes the $\$ 1.8$ billion of farm wages received by workers who live on farms and the net change in value of farm inventories, rose to $\$ 20.7$ billion, from $\$ 20.4$ billion in 1959.

The previous uptrend in values of farm land came to a halt during 1960. As a consequence, total assets in agriculture were reduced by 2 percent during the year, to $\$ 199$ billion on December 31, 1960. Several of the factors that had sustained the previous uptrend in land values had run their course, as values reached or exceeded a historical ratio to current income. Moreover, rising taxes on the increased capital value, and higher interest charges on new mortgages, contributed to the downturn in values. Farm debts continued to rise slowly during 1960; yet at $\$ 25.7$ billion on December 31, they were only 13 percent of assets.

Current indebtedness in agriculture appears especially small in relation to the very sizable rise in the value of assets that has taken place during the last 20-25 years. Since 1940, for instance, assets in agriculture have increased three times, or by $\$ 146$ billion. While these values include farm assets held by nonfarm landlords, the larger part of the rise has accrued to operators of commercial farms. Capital gains have been one of the major elements of financial strength of commercial agriculture during the last quarter century.

## Net Income of Selected Commercial Farm Types

Although reported data on total farm income unfortunately do not distinguish between commercial and noncommercial agriculture, statistical series have been developed by the Department of Agriculture to describe trends in organization and income on typical commercial family-operated farms of 32 selected types. Preliminary data presented in Table B-8 for

Table B-8.-Net farm income of selected types of commercial family-operated farms, 1953, 1956, and 1958-60

Source: Department of Agriculture.
eight of these types illustrate the wide variation between different types of farming-both in size of income and in fluctuations in income from year to year. In 1960, for instance, net farm income for half of the eight types was higher than in 1959; for the other half, it was lower. Bumper crops of wheat in 1960 which sold at or near support prices boosted the income of wheat farms. A moderate cyclical decline in the price of cattle reduced the income of cattle ranches from the very favorable level of the preceding two years. Recovery in prices of hogs during 1960 did not fully restore the previous year's income to hog-dairy farms of the Corn Belt. Dairy farms of the Northeast apparently experienced a small decline in income. The stability of dairy incomes in the Northeast, in comparison with the sharp variability for some other types of farm income, is brought out by the data in Table B-8.

It should be noted that net farm income as reported in Table B-8 includes returns on both capital and family labor. Large differences between farm types in the amount of capital invested, as well as in the amount of family labor utilized, account for a part of the differences in the amount of net income.

## Ingreasing Importange of Commercial Farms

The proportion of all farms that are operating on a commercial scale, and the share of such farms in the national output of farm products, are increasing. Also, commercial farms are employing an increasing percentage of all persons engaged in agriculture. Hence commercial farming
represents a growing part of United States agriculture as a whole. In 1959, the Census of Agriculture reported that about $2: 1$ million commercial farms had sales of $\$ 2,500$ or more. This number was almost the same as in 1950 and 1954, and was 56 percent of all farms reported in 1959. Comparisons of this relative proportion with earlier censuses are complicated by a new definition of a farm introduced in the 1959 Census. In that year, approximately 232,000 units then in existence which would have been counted as farms according to the 1954 definition were excluded by the more restrictive new definition. If, for purposes of comparison, the 1954 definition is applied to the 1959 Census, commercial farms with sales of $\$ 2,500$ or more would have constituted 52.5 percent of all farms in 1959, a gain of 14 percent from 1950 (Table B-9).

Table B-9.-Number of farms, by economic class, 1950, 1954, and 1959

4 Not available.
Note.-The number of farms in this table is as reported in the Census of Agriculture. The total is smaller than that estimated annually by the Department of Agriculture (Table C-70) because of adjustments for underenumeration.

Sources: Department of Commerce and Department of Agriculture.

Moreover, within the 2.1 million commercial farms having sales of $\$ 2,500$ or more, those with sales of $\$ 10,000$ or more have increased as those with sales of less than $\$ 10,000$ have decreased. In $1959,800,000$ farms were in the larger category- 64 percent more than in 1950. Those with sales of $\$ 2,500-\$ 5,000$ decreased by 30 percent, and those in the $\$ 5,000-\$ 10,000$ class decreased by 9 percent.

Above-average growing conditions during 1959 contributed somewhat to the increased number of farms achieving a higher sales volume.

Although expenses of production have been rising gradually, so that gross sales are not an exact measure of relative net income, it nevertheless seems likely that more and more commercial farms have succeeded in increasing their business to a volume that improves the chances of returning a satisfactory net income to the farm family. The 10 -year increase of almost twothirds in the number of farms having sales of $\$ 10,000$ or more is evidence that this is true.

All these data apply to commercial farms selling farm products valued at $\$ 2,500$ or more during the Census year. They omit those farms selling less than $\$ 2,500$ of products that are technically classed as commercial owing to lack of any other sizable income. This classification of farms was chosen both because farms selling less than $\$ 2,500$ of products are clearly inadequate as sources of farm income, and in order to facilitate statistical comparisons between Censuses.

## Decrease in Number of Small Farms

According to the Census of 1959, there were $1,639,000$ farms in the United States which sold less than $\$ 2,500$ worth of farm products. This number included 348,000 so-called "midget" commercial farms-those for which the small volume of sales of farm products nevertheless was the primary source of family income. It also included 883,000 part-time and 405,000 part-retirement farms. The total of $1,639,000$ was 44 percent of all farms, as enumerated according to the new definition.

All the farms omitted in the 1959 Census because of a more restrictive definition were small farms-those with less than $\$ 2,500$ of sales. When these omissions are added, in order to make comparisons with data of earlier Censuses, the number of small farms becomes 1.9 million, a substantial reduction from the 2.7 million of 1954 and 3.3 million of 1950 (Table B-9).

These reductions in numbers of small farms doubtless reflect some amelioration of the problem of low-income farms. Progress has been made in either enlarging the production resources on small farms, or in supplementing the farm income from sources off the farm. Yet also evident in recent trends is a gradual disappearance of units that have qualified as farms only by virtue of sideline "backyard" farming, a time-consuming occupation yielding minimum returns to labor.

On the other hand, the Conservation Reserve has probably shifted a number of farms of sizable acreage into the small-farms category, because of the small value of products now sold from their idled acreage.

## Decline in Total Number of Farms

The total number of all farms reported in the 1959 Census, according to preliminary data, was 3.7 million. By use of the same definition as in 1954, the number in 1959 would have been reported as 3.9 million, compared with 4.8 million in 1954 and 5.4 million in 1950 (Table B-9).

This 10-year decrease amounts to no less than 27 percent, and occurred, as noted above, exclusively in small farms-those selling less than $\$ 2,500$ worth of farm products per year. While a later revision of these Census data may increase the reported number of farms slightly, owing particularly to the inclusion of idled Conservation Reserve farms, it is unlikely that the basic changes as shown will be affected significantly.

## Ingrease in Agreage and Assets of Farms

Year by year, commercial agriculture has become an increasingly technical enterprise demanding a high degree of managerial skill and requiring a larger acreage and investment base. Not only does the inventory of farm equipment and machinery on a typical farm now make it possible for each farmer to till more acres, but the accompanying heavy capital investment makes a larger acreage mandatory if efficiency in operation is to be achieved. The modern commercial farm uses capital in the same mannerand in larger amount per person employed-as do nonfarm manufacturing enterprises.

Between 1950 and 1959, the number of farms in every size class below 500 acres decreased (Table B-10). The percentage reductions were greatest for the smaller farms; the number having 50-99 acres was reduced by 37 percent, and the $100-139$ acre group by 32 percent. Farms above 500 acres in size increased in number--to 336,000 in 1959 from 303,000 in 1950.

The quantity of assets other than land used in agriculture has risen substantially-generally faster than have land assets. From 1940 to 1960,

Note.-The number of farms in this table is as reported in the Census of Agriculture. The total is smaller than that estimated annually by the Department of Agriculture (Table C-70) because of adjustments for underenumeration.

Detail will not necessarily add to totals because of rounding. Virtually all the farms excluded from the 1959 Census (new definition) because of more restrictive deffition were smaller than 50 acres in size.
Source: Department of Commerce.
when improvements on land raised the physical real estate assets in agriculture by 22 percent, the amount of machinery employed increased by 151 percent. Although livestock inventories increased by only 19 percent, all other assets combined-primarily crop inventories and demand deposits in banks-increased by 46 percent. Total production assets in agriculture increased by 30 percent during the 20 -year period. These are estimated quantities, valued at constant (1947-49) prices (Table B-11).

Table B-11.—Production assets used in agriculture, 1940, 1950, and 1960

Source: Department of Agriculture.
As the number of farms has decreased, real production assets per farm have increased considerably. Valued in constant dollars, assets per farm advanced 82 percent between 1940 and 1960. Assets per farm worker increased even more: their average doubled during the 20 years, to $\$ 14,700$ in 1960, valued in 1947-49 dollars. Valued in 1960 dollars, farm assets per farm worker in 1960 averaged $\$ 21,300$, considerably more than the average investment of $\$ 15,900$ per employee in manufacturing in the same year. Data on average assets per farm pertain to all farms, commercial and noncommercial, as reported by the Department of Agriculture according to the pre-1960 Census definition (see Table C-70) ; they doubtless overstate the rate of increase, but underreport the present average size, of assets held on commercial farms alone.

## Farmer Cooperatives in Commercial Agriculture

Today's agriculture in all its complexity, particularly its commercial part, rests on three kinds of supporting services. One is technical and educational; it begins with public elementary and secondary education, including vocational training, and ends with the broad programs of
research and education carried out by the Land Grant Colleges, Agricultural Experiment Stations, and the Federal-State Extension Service. The second is the assistance provided by Government in fields ranging from aid in soil conservation to regulation of markets for farm products, and to certain assistance in maintaining prices and incomes of farmers.

The third supporting service, one also essential to agriculture of the 1950's and 1960's, is self-provided by agriculture-the joining of individual producers in many types of cooperative associations. Farmer cooperatives, designed in manifold ways for a multitude of purposes, are in many respects a bridge between the technological and management demands of modern commercial agriculture and its decentralized, small-unit, family-farm organizational structure. As a form of business enterprise, the cooperative associations perform for agriculture what is done by corporate organization in industry and commerce.

Farmers make wide use of cooperatives in obtaining essential services ranging from marketing of farm products to purchasing of farm supplies, and including organized mortgage and production credit, electric power, telephone service, medical service, insurance, irrigation, and dairy herd improvement. In 1957-58 farmers held over 3.8 million memberships in 6,102 marketing cooperatives, and 3.5 million in 3,381 farm supply associations. The 13 banks for cooperatives, in which farmers are developing substantial ownership equities, served cooperatives with farmer memberships totaling more than 3.6 million. Memberships and participants in rural electric cooperatives number over 4.4 million (Table B-12).

$$

cooperative must be farmer owned and controlled, must do virtually all of its business with farmers and a major part with members, and must meet several other criteria. About 60 percent of all cooperatives currently elect to take advantage of the right to exemption.

In 1957-58, the 9,700 marketing, farm supply, and service cooperatives did an aggregate business volume of $\$ 10.7$ billion, exclusive of intercooperative sales (Table B-13). The average volume of a little over $\$ 1$ million

per cooperative, however, masks the diversity in size and scope of individual associations; whereas some are small and localized, others are large nationwide federations. It is estimated that for each of more than 80 percent of all cooperatives the annual business volume is less than $\$ 1$ million. Yet for each of about 100 cooperatives the annual business exceeds $\$ 20$ million. A number of the larger cooperatives have resulted from mergers and consolidations. Many regional or national federations of cooperatives also have been established.

Recently, farmers have turned to cooperative action as a means of forestalling loss of management control of their farming through vertical integration. Vertical integration has increased in some sectors of agriculture, such as the production of commercial broilers.

Farmers have also found cooperatives helpful in connection with the adoption of marketing agreements under agricultural price support legislation and the operations authorized by them.

As of January 1, 1960, farmers had slightly over $\$ 4$ billion invested in marketing, farm supply, telephone, irrigation, insurance, and rural electric cooperatives, cooperative production credit associations, and the Federal land bank system.

## Adjustment of Farm Produgtion Through the Conservation Reserve Program

Programs of the Federal Government to support prices of farm products are of significance chiefly to commercial farmers. Small farmers benefit from them only in proportion to the volume of produce they have to sell, which invariably is small.

Price-support programs have been accompanied by an accumulation of huge stocks of wheat and corn and smaller quantities of cotton, small feed grains, tobacco, and other commodities by the Federal Government, despite aggressive efforts to make food available in distribution programs at home and in both distribution and sales programs abroad. In an effort to relieve the condition resulting from surpluses and the accumulation of stocks, Soil Bank programs were introduced beginning in 1956. About 12.2 million acres of cropland were placed in the Acreage Reserve of that year. Participation increased to 21 million in 1957, then declined to 17 million in 1958 , the final year of the program (Table B-14).

The Acreage Reserve applied only to crops subject to acreage allotments, and only those farmers who complied with allotments were eligible to participate. The Conservation Reserve was originally a supplement to the Acreage Reserve, and later supplanted it. The Conservation Reserve is not confined to allotment crops; all cropland is eligible. In recent years emphasis has been placed on obtaining participation by entire farms. The leased land must be protected by adequate conservation practices, for which cost-sharing payments are made available under specified conditions. Participation increased to 28.7 million acres on 306,000 farms in 1960. The average rental per acre was $\$ 11.85$. Obligations for payments for both rental and cost-sharing practices were $\$ 368$ million in 1960.

Since the Congress did not authorize any further increase, the Conservation Reserve in 1961 will be confined to land already under contract. Because only about 100,000 acres of contracts are due to expire, 28.6 million acres will remain under Reserve. In the absence of new authority, the Reserve acreage would decline slowly until 1963, and more rapidly thereafter (Table B-15).

In 1960 a total of 17 million acres of land that would otherwise have grown wheat, corn, and small feed grains were removed from production by the Conservation Reserve contracts. This amounted to only 9 percent of the combined acreage of the three crops. Since the quality of land

under Conservation Reserve lease was somewhat below average, the actual adjustment achieved in output was less than 9 percent.

## Changes in Low-Income Farms

On the 1.6 million small farms reported in the 1959 Census (Table B-9), the income earned from farming alone is low by any standard. Persons living on those farms can be divided into three groups: (1) those of working age who receive an income from nonfarm sources that is satisfactory, either of itself or when combined with the net income earned on the farm; (2) those past working age whose income status depends in large measure on retirement income available to them, derived from social security, private retirement plans, or private investments; and (3) those of working age who depend principally for their income on the operation of units with very small economic resources.

This third group faces more serious economic problems than do the other two, and from the standpoint of the national economy it represents a pool of human resources that is partially wasted. This group is a principal focus of the Rural Development Program. Since 1955 that program has coordinated and directed the efforts of various departments and agencies of the Federal Government, in cooperation with State and local organizations, toward rural betterment. In addition to five departments of the Federal Government, the Small Business Administration has been particularly active in assisting development of low-income areas.

The primary objective of the Rural Development Program is to build up local economic resources of low-income areas and to provide job opportunities for rural people. In some low-income areas where local resources are inadequate or have not been developed sufficiently to alleviate serious underemployment or unemployment, regional decreases in population are taking place. The 1960 Census of Population shows that within the national pattern of geographic shifts in distribution of the population, resulting primarily from internal migration, a number of localities previously designated as low income have increased their population in the last decade, some at more than the national average rate, others at less than the national rate. Usually these increases reflected new opportunities that developed for local employment. In other low-income localities the resident population remained constant or declined.

The Atlantic Coast and Piedmont regions were the main ones with aboveaverage population gains. There, vigorous industrial development or expanded military installations contributed to growing local employment. Regions in which the population decreased were primarily those of the upper Appalachian and the South Central areas extending from eastern Oklahoma and Texas to Mississippi.

The decade of the 1950's lowered, in general, the population density in the rural low-income areas relative to the rest of the country. As indicated by Table B-16, the total population of the Nation increased by 18.4 per-

cent from 1950 to 1960, while the increase in the low-income farming areas was only 5.2 percent. In the areas with serious social and economic problems, the increase was a mere 1.3 percent. The nonmetropolitan population of the Nation as a whole increased by 9.7 percent, but in all lowincome farm areas it increased only 3.2 percent. In the serious problem areas, the nonmetropolitan population actually decreased by 1.3 percent. Data in Table B-16 are broad totals developed for areas as described in a special report prepared for the 84th Congress, published in 1955.

Of the low-income areas for which data are presented in Table B-16, only one, that surrounding the fast-growing city of Albuquerque, had a total population growth during the 1950's that exceeded the national average rate.

While notable improvement made it possible for a number of areas to retain their local population during the $1950-60$ period of high level performance of the economy, there is still a problem of underemployment in many areas, i.e., an excessive potential supply of labor and a need for more opportunities for employment, particularly off the farm.

## III. United States Foreign Trade and Payments

In 1960, the United States merchandise trade position improved substantially. This improvement, however, was largely offset by increased outflows of short-term capital, mainly in response to more attractive interest rates abroad. The over-all balance of payments thus showed a sizable deficit for the third consecutive year. As the capital outflow accelerated during the year, the over-all deficit in the balance of payments increased from a seasonally adjusted annual rate of $\$ 2.6$ billion in the last quarter of 1959 to a rate of $\$ 4.1$ billion in the third quarter of 1960 (Table B-17).

In the closing months of the year, the deficit-omitting one large transfer of private capital for direct investment abroad-appears, on the basss of incomplete data, to have diminished somewhat. The surplus on goods and services rose further. The outflows of liquid capital, which were

still large in October, the time of the speculative flurry on the London gold market, seem to have fallen off following the reductions in short-term rates in several European countries and the announcement of various measures to reduce the payments deficit which confirmed United States determination to defend the dollar.

The increase in the over-all deficit in the balance of payments in the second half of the year was accompanied by a rise in foreign acquisitions of gold from the United States. The drop in the United States gold stock during 1960 amounted to $\$ 1.7$ billion, against $\$ 2.3$ billion in 1958 and $\$ 1.1$ billion in 1959. The 1960 reduction was moderated, as was that of 1959 , by the sale of $\$ 300$ million of gold to the United States by the International Monetary Fund, designed to enlarge the income earning assets of the Fund. Despite its decrease during the year, the United States gold stock of $\$ 173 / 4$ billion at the end of 1960 was almost one-half of the total held by all countries of the free world.

## Improvement in Current Account Surplus

The surplus of United States transactions on goods and services improved steadily throughout 1960. By the third quarter it reached a seasonally adjusted annual rate of over $\$ 4$ billion, a shift of more than $\$ 5$ billion from the sizable deficit recorded in the second quarter of 1959. The improvement occurred chiefly in the merchandise trade account; the combined movement in service transactions remained small. Among the service receipts, income on investments increased for the second consecutive year, following a small decrease in 1958. On the payments side, military expenditures abroad, which had already fallen somewhat in 1959, declined slightly, although they still were at an annual rate of about $\$ 3$ billion. Payments on transportation and travel, however, continued to rise rapidly.

The merchandise trade surplus rose to a seasonally adjusted annual rate of more than $\$ 5$ billion by the third quarter of 1960. Except during the 1956-57 period of the Suez crisis, the surplus had not been so large since the early postwar years, when Marshall Plan aid swelled exports. For 1960 as a whole, it probably exceeded $\$ 4.5$ billion, far above the $\$ 0.9$ billion of 1959 .

Exports made the largest contribution to the improvement in the trade surplus. From an annual rate of $\$ 15.3$ billion in the first quarter of 1959 they rose to an annual rate of $\$ 20.0$ billion in the third quarter of 1960 , and continued at a high rate in the fourth quarter. A higher export level had been achieved only in the Suez-crisis months of early 1957, when fuel exports were at a record annual rate, about $\$ 1.5$ billion above that for 1960. The near record rate of exports in the second half of 1960 , moreover, was achieved despite weakness in two of our major export markets, Canada and Latin America.

The year's upsurge in exports covered a broad range of commodities, but the sharpest increases, on the whole, were recorded by a variety of crude
and semimanufactured materials (Table B-18). Coal was an exception, as import restrictions on coal continued to prevail in several countries of Western Europe. The advance in total exports was the result of a combination of circumstances: the boom in business activity in most industrial countries outside of North America; the removal of many foreign import restrictions on United States goods; an increase in sales of surplus farm products for foreign currencies; and, finally, some improvement in our competitive position in world markets.

In addition, increases from 1959 to 1960 in exports of four major categories of commodities reflected special circumstances that had depressed exports in 1959. Exports of raw cotton in 1960 were substantially larger than in 1959, when foreign purchasers awaited an increase in the United States Government export subsidy and a consequent lowering of price. However, the heavy volume of cotton exports in 1960 also reflected the boom abroad. Similarly, aircraft shipments, which had dropped in 1959 as deliveries of piston aircraft fell and production of jet aircraft was not
fully under way, mounted rapidly in 1960 as a result of an unusual backlog of orders for jet aircraft. In 1959, domestic stockpiling in anticipation of strikes in the steel and copper industries, and small output during the strikes, reduced supplies of those products available for export that year; in 1960, shipments were at a more normal level. The increase in steel and copper exports in 1960 also reflected the high economic activity in Western Europe and Japan, although these exports fell off somewhat after the third quarter, with the easing in demand pressures in some of these countries. In addition, the rise in copper exports in 1960 was in part a byproduct of the uncertainties surrounding supplies from African and Latin American sources.

The impact which the business upswing abroad had on United States exports in 1960 can be gauged by the geographical distribution of the year's export gains: three areas of the world experiencing the most pronounced industrial boom-Western Europe, Japan, and Australia-which took somewhat more than one-third of our exports in 1959 were responsible for over four-fifths of the rise in exports in the first 10 months of the year. On the other hand, exports to two of our other major markets-Canada and Latin America-which in 1959 absorbed almost one-half of our exports,

[^3]declined slightly. Sales to Canada had expanded quite rapidly in 1958-59, but began to fall early in 1960, reflecting the dip in economic activity there. The small decline in total sales to Latin America in 1960, compared with 1959, was due to sharp drops in shipments to Cuba and Venezuela, caused by the political and foreign exchange crises in those two countries. Exports to most of the 18 other Latin American countries rose in 1960.

Changes on the import side of the trade accounts were less marked than those on the export side. Merchandise imports edged down from late 1959 and in the third quarter of 1960 were at an annual rate (seasonally adjusted) of just below $\$ 15$ billion, nearly $\$ 1$ billion less than a year earlier. All major economic categories accounted for this decrease. In the closing months of the year, total merchandise imports declined further. The year's slight change in the import total was the result of generally small changes, upward and downward, in the various import categories (Table B-19). Special nonrecurring factors worked in both directions. Imports of meat declined as domestic supplies of beef increased from the rather low levels obtaining in 1958 and 1959. On the other hand, the steel and copper strikes led to a temporary rise in imports of these commodities in the first part of the year. Changes in other import categories reflected the easing of domestic demand (declines in imports of some materials), the weakness of primary commodity prices (e.g., coffee and wool), and the shifting competitive position of manufactures (e.g., increases in imports of textile manufactures and the decline in automobile imports), which is discussed below.

## Sharp Increase in Capital Outflows

The divergence between cyclical developments in most foreign industrial countries and in the United States, which contributed to the improvement in the United States trade position in 1960, also contributed to the sizable capital outflows that increased both the deficit in the over-all balance of payments and the drain on the United States gold stock. Some of this movement of capital reflected the attractiveness in 1960 of stock market investments in a number of Western European countries, compared with the United States. The greater part of it, however, appears to have resulted from the enlarged margin by which interest rates abroad, particularly in the short-term area, exceeded those in this country, and some of it was probably caused by increased international political and economic tensions.

The combined total of net outflows of Government loans and grants, of pensions and remittances, and of United States private long-term investment, on the other hand, changed little between the first three quarters of 1959 and of 1960 . While the net outflow of Government loans and grants increased somewhat-because of smaller repayments (including repayments ahead of schedule) on United States Government loans, the $\$ 80$ million subscription to the new Inter-American Development Bank, and larger acquisitions of foreign currencies as payment for United States Govern-
ment sales of surplus agricultural commodities--the net recorded outflow of private long-term United States capital declined slightly.
The outflow of liquid capital funds gathered force slowly in 1960; in the third quarter, however, it reached sizable proportions as interest rates declined and monetary conditions eased further in the United States, while interest rate increases and monetary tightening abroad continued. Largescale movements of liquid funds between international money centers in response to interest-rate changes have taken place in other recent years; but owing to a combination of circumstances resulting mainly from the economic recovery of industrial countries outside North America, this latest movement was much greater. The revived strength of Europe's major currencies, capped with the establishment of convertibility at the close of 1958, made it possible for private European holders in 1959 greatly to increase their short-term dollar assets. Monetary tightening in Europe and easing in the United States in 1960 then led to the repatriation of sizable amounts of these funds. At the same time, fear of a possible weakness of Europe's currencies and of an inability to repatriate funds because of foreign restrictions disappeared as a deterrent to United States corporations and other investors interested in taking advantage of higher interest rates abroad. Moreover, United States corporations, having become accustomed to investing temporarily surplus funds in United States Treasury bills and other marketable instruments, rather than just in bank deposits, had less hesitation than previously in purchasing higher-yielding foreign Treasury bills.

The resulting outflow of United States private capital in the second and third quarters of 1960 was considerably larger than in the first half of 1958, when interest-rate differentials also favored investment abroad but when the general climate was less favorable to such capital movements. However, in the recent period, the capital that moved was primarily of a short-term type. In 1958 there had been a relatively large outflow of funds resulting from the flotation in the United States of new bond issues of foreign and international borrowers. In 1960, this type of outflow was much smaller. Both the International Bank for Reconstruction and Development and various Canadian corporations, provinces, and municipalities, which in 1958 borrowed heavily in the United States, had less need to obtain funds in this country. More important perhaps, long-term United States interest rates did not decline in 1960 to the levels reached in early 1958. In addition, purchases of outstanding foreign bonds by United States investors in 1960 were probably motivated not only by considerations of yield but also by the expectation of capital gains, since long-term interest rates abroad were thought to be headed down again.

Another difference between 1960 and the earlier period-also related to reductions of fears about leading foreign currencies-appears to have been the relative importance attained by so-called uncovered movements of funds. Investors interested in taking advantage of higher short-term yields abroad can cover themselves, at the time they make the investment, from
the foreign exchange risk by entering a forward foreign exchange contract to sell the foreign currency that they purchase. Such covering usually involves a cost which may substantially reduce the incentive to invest short-term funds abroad. In 1960, this cost was quite high for short-term investment in several countries. At the same time, interest-rate differentials were frequently so large that some investors reportedly felt that the profit of uncovered movements of funds was sufficiently great to compensate for the risk of exchange losses. The fluctuations in the interest-rate incentive to invest short-term funds abroad-on both a covered and an uncovered basisare indicated in Table B-20 in terms of Treasury bill rates for the United Kingdom, which appears to have been a major recipient of interest arbitrage funds from the United States in 1960, and for Canada, toward which the incentive shifted several times.

Table E-20.-Treasury bill rates in the United States, Canada, and the United Kingdom, 1958-60

${ }^{1}$ New York foreign exchange rates received through the Federal Reserve Bank of New York.
Note.-Because of significant rate fluctuations, averages of weekly rates often conceal wider differentials that may exist at one particular time. The figures presented above thus are at times only an approximate indication of actual y ield differentials.
Sources: International Monetary Fund and Federal Reserve Bank of New York.
Interest-rate differentials in favor of foreign countries declined somewhat toward the close of 1960 , and the outflow of funds appears to have diminished. While gaps in the collection of balance of payments data prevent the making of accurate estimates of many types of capital flows, the outflow of liquid capital in the third quarter may have been as high as $\$ 1$ billion, or
only slightly less than the over-all payments deficit in that quarter. Some of this outflow probably was recorded in the payments category of direct investments in Europe, the amount of which almost doubled between the second and third quarters of 1960 . There are indications that this reflected in part increased short-term investments abroad by foreign affiliates of domestic corporations. A sizable part of the liquid capital outflow was not recorded as such because of deficiencies in the available data, but it appears in the balance of payments as "unrecorded transactions." In the third quarter of 1960 , there was an outflow of almost $\$ 300$ million in these transactions, compared with an average quarterly inflow of $\$ 150$ million during the preceding five years. A large part of these unrecorded movements probably occurred in response to interest-rate differentials, and may include unrecorded shifts due to leads and lags in commercial payments.

It is noteworthy that, under the definition of the United States over-all balance of payments deficit, increases in our liquid liabilities to both private and official foreign holders enlarge the deficit, but increases in our liquid claims on foreigners do not reduce it; that is, outflows of short-term United States funds increase the payments deficit, even though they are matched by an increase in United States liquid assets. Since these assets are privately owned and are not necessarily available to meet the country's international obligations, they are not considered the equivalent of gold. Our liquid liabilities, on the other hand, are potentially, at least, alternatives to gold as a form in which foreign countries can keep their international assets; therefore, in measuring the United States deficit, their changes are included with changes in the United States gold stock.

It should also be pointed out that the recent large outflow under unrecorded transactions exaggerated the apparent size of the over-all payments deficit to the extent that the funds in question were foreign-owned short-term funds. If these funds had been recorded at the point in the past when they moved into the United States, they would have increased the recorded deficit at that time, instead of enlarging recorded receipts; their subsequent repatriation would have been registered merely as a shift in foreign ownership, mainly from private to official hands. This is, of course, what occurred in the case of recorded repatriation of short-term foreign funds. This repatriation did not affect the size of the total deficit, but added to official dollar balances and thereby enlarged the demand for United States gold.

## United States Payments in Longer Perspegtive

Beginning in 1950, the United States balance of payments has been in deficit every year except 1957. In each of the last three years, moreover, the deficit was more than twice the average of the preceding seven deficit years. Initially, the deficit was related to United States efforts to speed the recovery of the war-shattered economies of the free world, and to help these countries rebuild their reserves. In the last few years, however, the continuation of a deficit on such a large scale could no longer be explained on those grounds.

It is extremely difficult to connect the deficit with any particular category of payments, since the interactions of the various components of the balance of payments are very complex. By and large, however, the deficit has reflected the postwar economic comeback of Western Europe and Japan together with continued large expenditures for defense and foreign aid which the United States has made in discharging its international responsibilities. Since the end of the war, the total of Government payments under military expenditures and nonmilitary grants and loans has changed relatively little, except for a sharp rise in 1947 and a moderate decline in the early 1950's; since the early postwar years, an increase in military expenditures abroad has been about as large as the decline in nonmilitary grants and loans, but it must be noted that the former have a greater impact on the deficit than the latter. Total United States economic assistance to foreign countries nevertheless remains large, and most of it is now directed to less developed countries. United States Government expenditures on economic assistance to less developed countries during 1956-59, as well as United States private loans and investments in these areas, are shown in Table B-21, together with such outlays by other industrial countries.

[^4]Among nongovernmental transactions, net private long-term capital outflows have risen substantially since the end of the war. At the same time, there has been an increase of about the same size in net earnings on services other than military transactions. Within this service total, net expenditure on travel has been rising, but net earnings on investments have increased by a greater amount. In the last two years, net private income on investments abroad has approximately equaled private United States long-
term investment abroad. The merchandise trade surplus has changed quite sharply from year to year during the postwar period, and the fluctuations in the over-all payments balance have roughly paralleled these swings, except in 1956 and in the last two years when capital movements also fluctuated sharply.

Although the increase in aggregate merchandise exports since the early postwar years has been uneven, the amount of the increase has been substantial. The total of almost $\$ 19.5$ billion estimated for 1960 compares with an annual average of $\$ 13.3$ billion in the first four postwar years when exports were boosted by heavy relief and aid shipments. In the whole period since the war, the advance in exports has been slower than the growth of GNP, but since the early 1950's exports have risen at about the same rate as GNP. In 1960, merchandise exports were equal to 3.9 percent of GNP, the same proportion as in 1950-52, but somewhat below the proportion of 1956 and 1957.

Agricultural exports have increased somewhat less rapidly than aggregate exports since the war, but in 1960 , when they were at an estimated $\$ 1$ billion above the 1946-49 average, they still accounted for almost one-fourth of the export total. Shipments aided by Government subsidy or Government financing, including sales for foreign currencies, continue to be a significant part of total agricultural exports. In the fiscal year 1960, agricultural exports within the Public Law 480 and Mutual Security programs, under which the United States donates or exchanges farm products or sells them for local currencies which find only restricted use, amounted to $\$ 1.3$ billion, or 29 percent of total agricultural exports. Sales for dollars that were aided by export payments or similar programs, including Government loans, were another 29 percent of the total. It must not be forgotten, however, that United States agricultural exports still face stringent restric tions abroad.

Since the first postwar years, exports of finished manufactures have expanded by about the same rate as total exports, and those of industrial materials at a somewhat faster rate. In 1960, finished manufactures (excluding Mutual Security program shipments) accounted for about 55 percent of United States nonmilitary exports, and industrial materials for about 30 percent. Capital equipment and industrial supplies and materials, products that are very sensitive to business fluctuations abroad, accounted for more than 70 percent of total exports.

As was to be expected, the share of the United States in world exports of manufactures has declined from the very high level in the first postwar years. Since the economic recovery of Western Europe and Japan was a major goal of United States postwar foreign economic and mutual security policies, it was inevitable that, with the success of these policies, the countries whose exports had suffered most by the war and its aftermath would improve their position in world markets. Nevertheless, despite the persistence of some restrictions against our products, our share of world exports of manufactures remains above prewar (Table B-22).

The postwar decline of the United States share of exports of manufactures reflects in the main the fact that manufactured products are once again available from our competitors in quantities and quality. During 1960, the United States share improved again, despite the weakness in the Canadian and Latin American markets where we are by far the largest supplier, in part because of the business upswing in Europe and Japan. A variety of products, but particularly metals and transport equipment, which had figured so prominently in the 1959 deterioration in our relative trading position, appear to have contributed to the improvement in our share. Exports of passenger cars, however, remained at about their 1959 level, considerably below exports in earlier years. This decline in passenger car exports appears in part related to the fact that United States production has not been geared more closely to the types of cars demanded abroad, although within the domestic market United States automobiles have improved their position relative to that of foreign cars.

The measures toward trade liberalization recently taken by a number of foreign nations undoubtedly contributed to the improved position of the United States in the market for manufactures. Exports of those consumer manufactures which were freed in 1959 from discriminatory quota restrictions abrcad increased noticeably in 1960. The same appears to have been true of machinery exports. When the effects of liberalization are considered from the point of view of the geographical distribution of export gains, it is seen that exports to countries that had recently reduced or lifted discrimination against United States products (e.g., the United Kingdom) expanded, by and large, more rapidly than did exports to other countries
which also experienced high economuc activity but had liberalized dollar imports much earlier (e.g., the Netherlands).

Now that much progress has been made in dismantling quota restrictions, with the principal exception of agricultural products, attention has focused on tariff barriers; in this regard United States manufactures still face relatively difficult obstacles in many countries abroad. For example, in 1960 the import duties on passenger cars in France were 29 percent, in Germany 13 percent, in Italy $32-41$ percent, and in the United Kingdom 30 percent, compared with the tariff of only 8.5 percent in the United States.

The recent performance of United States exports to Western Europe deserves special attention. Between the first three-quarters of 1959 and the first three-quarters of 1960 , our shipments to that area increased by more than 50 percent, against an increase of only 20 percent in the area's total imports. The 1960 upturn in United States exports to Western Europe was more broadly based than the previous rise to a peak in early 1957, at the time of the Suez crisis, as the commodity composition of sales to Europe indicates. Five commodities-raw cotton, steel scrap, iron and steel-mill products, copper, and aircraft-exports of which have fluctuated very sharply in recent years, had accounted for more than 70 percent of the rise between the first half of 1956 and of 1957 in exports to Europe (other than fuels, which were exceptionally large in 1957 and fell steeply thereafter). In the 1959-60 movement, in contrast, these five commodities accounted for less than half of the increase (Table B-23). Other exports, excluding fuel, to Europe rose by 33 percent in the latter period, but by only 7 percent in the earlier one.

Merchandise imports have increased at a higher rate than exports since the first postwar years. However, in relation to GNP, imports in 1960 re-

plies and materials have shown a decline in relation to domestic output, compared with prewar years. Imports of finished manufactures, on the other hand, have increased in relation to domestic output and expenditure and to total imports; like the postwar reduction of the United States share in exports, this was, in part, a natural outcome of the economic recovery abroad and was facilitated by the lowering of United States tariffs under the reciprocal trade agreement legislation, even though on some products United States tariffs remain high, compared with foreign tariffs.

Imports of some foreign products-especially textile manufactures, rubber and leather goods, and various small electrical appliances-have continued to increase particularly rapidly. But in international trade, as in domestic trade, comparative advantage continually shifts from one product and producer to others. For many products, there are increasing signs that United States producers are successfully enlarging their efforts to hold domestic demand. The recent sharp drop in automobile imports (after mid-1960 these were running at one-half of the rate in comparable months of 1959), following the introduction of "compact" cars by United States manufacturers, is the most striking example.

In the domestic market, however, just as in the export field, United States industries must continue their efforts to keep their products competitive. As was pointed out in Chapter 1, the Administration has intensified its measures to support the efforts of private business to enlarge our sales abroad. The Administration has likewise undertaken vigorous measures on other fronts to help speed the achievement of a reasonable equilibrium in the United States balance of payments. This enterprise is a responsibility shared by both the public and the private sector of the economy.

${ }^{1}$ See Table C-7 for major components.
${ }^{2}$ See Table C-8 for more detail and explanation of components
${ }^{8}$ For 1929-45, net exports of goods and services and net foreign investment have been equated, since foreign net transfers by Government were negligible during that period
${ }^{4}$ This category corresponds closely to the major national security classification in the Budget of the United States Government for the Fiscal Year ending June 30, 1968. See Table C-52.

5 Less than $\$ 50$ million.

- Preliminary estimates by Council of Economic Advisers.

Note.-Detail will not necessarily add to totals because of rounding.

${ }^{1}$ Gross national product less compensation of general government employees, 1. e., grose product accruing from domestic buslness, households, and institutions, and from the rest of the world.
${ }^{2}$ See Survey of Current Business October 1958, for description of series and estlmates in current and constant prices and impifelt deflators for 1910-57.

- Includes compensation of general government employees and excludes compensation of employees in government enterprises. Government enterprises are those agencles of government whose operating costs are at least to a substantial extent covered by the sale of goods and services, in contrast to the general activities of government which are financed mainly by tax revenues and debt creation. Government enterprises, in other words, conduct operations essentlally commercial in character, even though they perform them under governmental auspices. The Post Office and public power systems are typlcal examples of government enterprises. On the other hand, State universities and public parks, where the fees and ad. missions cover only a nominal part of operating costs, are part of general government activities.
${ }^{4}$ See footnote 1, Table C-2
${ }^{5}$ Prellminary.
Note.-Detall will not necessarlly add to totals because of rounding.

${ }^{1}$ For explanation of conversion of estimates in current prices to those in 1954 prices, see U. S. Income and Output. A Supplement to the Survey of Current Business, 1958 . See Table C-5 for implicit price deflators. 2 For 1929-45, net exports of goods and services and net forelgn investment have been equated, since foreign net transfers by Government were negligible during that period.
${ }^{3}$ Net of Government sales.

- Gross national product less compensation of general government employees.
- Preliminary estimates by Council of Economic Advisers.
- Not available.
${ }^{7}$ Less than $\$ 50$ million.
Note.-Detall will not necessarily add to totals because of rounding.
Source: Department of Commerce (except as noted).

1 Undistributed corporate profts, corporate inventory valuation adjustment, capital consumption allowances, and excess of wage accruals over disbursements.
${ }^{2}$ For 1929-45, foreign net transfers by Government were negligible; therefore, for that period, net exports of goods and services and net foreign investment have been equated.
${ }^{3}$ Government transfer payments to persons, foreign net transfers by Government, net interest paid by govern ment, and subsidies less current surplus of government enterprises.

- Preliminary estimates by Council of Economic Advisers.
$s$ Data for corporate profits are approximations for the year as a whole; they do not derive from, nor imply, specific estimates for the quarters. All other data incorporating or derived from these figures are correspondingly approximate.
${ }^{6}$ Less than $\$ 50$ million.
${ }^{7}$ Not available.
Note.-Detail will not necessarily add to totals because of rounding.

1 National income is the total net income earned in production. It differs from gross national product mainly in that it excludes depreciation charges and other allowances for business and institutional consumption of durable capital goods, and indirect business taxes. See Table C-10.

3 Wages and salaries and supplements to wages and salaries (employer contributions for social insurance; employer contributions to private pension, health, and welfare funds; compensation for injuries; directors' fees; pay of the military reserve; and a few other minor items).
${ }^{3}$ Excludes income resulting from net reductions of farm inventories and gives credit in computing Income to net additions to farm inventories during the period. Data for $1929-45$ differ from those shown in Table C-65 because of revisions by the Department of Agriculture not yet incorporated into the national income accounts.

4 See Table C-57 for corporate tax liability (Federal and State income and excess profits taxes) and corporate profits after taxes.
${ }^{5}$ Less than $\$ 50$ million.

- Preliminary estimates by Council of Economic Advisers.
${ }_{7}$ Data for corporate profts are approximations for the year as a whole; they do not derive from, nor imply, specific estimates for the quarters. All other data incorporatling or derived from these figures are correspondingly approximate.
${ }^{8}$ Not available.

${ }^{1}$ The total of wage and salary disbursements and other labor income differs from compensation of em. ployees in Table C-9 in that it excludes employer contributions for social insurance and excludes the excess of wage accruals over wage disbursements.
${ }_{2}$ Excludes income resulting from net reductions of inventories and glves credit in computing income to net additions to inventories during the period.
${ }^{2}$ Data for $1929-45$ differ from those in Table $C-65$ because of revisions by the Department of Agriculture not yet incorporated into the national income accounts.
${ }^{4}$ Nonagricultural income is personal income exclusive of net income of unincorporated farm enterprises,
farm wages, agricultural net interest, and net dividends paid by agricultural corporations.
'Prellminary estimates by Council of Economle Advisers.
NOTE.-Detall will not necessarlly add to totals because of rounding.

Table C-15.-Financial saving by individuals, 1939-601
[Billions of doliars]

'Individuals' saving, in addition to personal holdings, covers saving of unincorporated business, trust funds, and nonprofit institutions in the forms specified.
${ }^{2}$ Inclides shares in savings and loan associations and shares and deposits in credit unions.
${ }^{3}$ "Other government" includes U.S. Government issues (except savings bonds), State and local government securities, and beginning 1951, nonguaranteed Federal agency issues, which are included in "corporate and other" for years prior to 1951.
${ }^{4}$ Includes insured pension reserves.
${ }^{5}$ Includes Social Security funds, State and local retirement systems, etc.
6 Mortgage debt to institutions on one- to-four family nonfarm dwellings
7 Consumer debt owed to corporations, largely attributable to purchases of automobiles and other durable consumer goods, although including some debt arising from purchases of eonsumption goods. Policy loans on Government and private life insurance have been deducted from those items of saving.
${ }^{8}$ Change in bank loans made for the purpose of purchasing or carrying securities.
9 Less than $\$ 50$ million.
10 Preliminary.
Note.-Figures beginning 1957 have been revised since the Economic Report of the Presidenl, January 1963.

In addition to the concept of saving shown above, there are other concepts of individuals' saving, with varying degrees of coverage, currently in use. The personal saving estimates of the Department of Commerce are derived as the difference between disposable personal income and expenditures. Conceptually, Commerce saving includes the following items not included in Securities and Exchange Commission saving: Housing, farm and unincorporated business investment in inventories and plant and equipment, net of depreciation, and increase in debt. Government insuraner is excluded from the Commerce saving series. For a reconciliation of the two series, see Securities and Exchange Commission Statistical Bulletin, July 1960, and Survey of Current Business, July 1960.
The Federal Reserve Board's flow-of-funds system of accounts includes capital investments as well as financial components of saving and covers saving of Federal, State and local governments, businesses, financial institutions and consumers. While the Federal Reserve Board's estimates of consumer saving in finaneial form are similar to the Securities and Exchange Commission estimates of individuals' saving, there are some statistical and conceptual differences in the two sets of data.

Revisions for 1947-56 in the consumer credit statistics of the Board of Governors of the Federal Reserve
System have not yet been incorporated into these estimates.
Data for Alaska and Hawaii included for all periods.
Detail will not necessarily add to totals because of rounding.

${ }^{1}$ Data for 1940-52 revised to include about 150,000 members of the armed forces who were outside the United States in 1940 and who were, therefore, not enumerated in the 1940 Census and were excluded from the 1940-52 estimates.
${ }^{3}$ See Note.

- Not available.
${ }^{4}$ Beginning January 1960, monthly figures include data for Alaska and Hawaii.
s Seasonally adjusted totals may differ from the sum of components because totals and components have been seasonally adjusted separately.
Note.-Civilian labor force data beginning with May 1956 are based on a 330 -area sample. For January 1954-April 1956 they are based on a 230 -area sample; for $1946-53$ on a 68 -area sample; for 1940-45 on a smaller sample; and for 1929-39 on sources other than direct enumeration.

Effective January 1957, persons on layofi with definite instructions to return to work within 30 days of layoff and persons waiting to start new wage and salary jobs within the following 30 days are classifled as unemployed. Such persons had previously been classified as employed (with a job but not at work). The combined total of the groups changing classification has averaged about 200,000 to 300,000 a month in recent years. The small number of persons in school during the survey week and waiting to start new jobs are classified as not in the labor force instead of employed, as formerly. Persons waiting to open new businesses or start new farms within 30 days continue to be classified as employed.

Beginning July 1955, monthly data are for the calendar week ending nearest the 15th of the month; previously, for week containing the 8th. Annual data are averages of monthly figures.
For the years 1940-52, estimating procedures made use of 1940 Census data; for subsequent years, 1950 Census data were used. For the effects of this change on the bistorical comparability of the data, see Annual Report on the Labor Force, 1954, Series P-50, No. 59, April 1955, p. 12.
Detail will not necessarily add to totals because of rounding.
Source: Department of Labor.

Table C-18.-Employment and unemployment, by age and sex, 1942-60
[Thousands of persons 14 Fears of age and over]

${ }^{1}$ See Note, Table C-17 for explanation of differences between the old and new deffnitions.
${ }^{2}$ Beginning January 1960, data for Alaska and Hawaii are included.
Note.-Data are not available prior to 1942 for all the age/sex groups above.
See Note, Table C-17 for information on area sample used and reporting periods.
Detail will not necessarlly add to totals because of rounding.

${ }^{1}$ Includes persons waiting to open new businesses or start new farms within 30 days.
${ }^{1}$ Under the old deanitions of employment and unemployment, these groups were included in the "employed but not at work" category.
${ }^{3}$ Persons on layoff with definite instructlons to return to work within 30 days of the layoff.
4 Persons scheduled to start new wage and salary jobs within 30 days. Under the old definitions, the
"new job or business" group included these persons as well as persons waiting to open new businesses or start new farms within 30 days (see "all other" category in this table) and persons in school during the survey week and waiting to start new jobs (these are now classified as "not in the labor force").

- See Note, Table C-17 for explanation.
- Not available.

T Beginning January 1960, data for Alaska and Hawail are included.
Note.-See Note, Table C-17 for information on area sample used and reporting periods.
Detail will not necessarily add to totals because of rounding.

${ }^{1}$ Includes persons under the State, Federal employee (UCFE) (effective January 1955), and Railroad Retirement Board (RR) programs; beginning October 1958, also includes members of the armed forces, covered under the program of unemmloyment compensation for ex-servicemen (UCX).
${ }^{2}$ Includes State, UCFE, RR, UCX, UCV (uneraployment compensation for veterans, October 1952 January 1960), and SRA (Servicemen's Readjustment Act, September 1944-September 1951) programs.
${ }^{3}$ Covered workers who have completed at least 1 week of unemployment.
${ }_{3}{ }^{4}$ Individuals receiving final payments in benefit year.
${ }_{8}$ For total unemployment only.
${ }^{6}$ Preliminary.
7 March 1960 is latest month for which data are available for all programs combined; workers covered by State programs account for about 87 percent of the total.

Note.-Data for Alaska and Hawaii included for all periods.

${ }^{1}$ Includes all full- and part-time wage and salary workers in nonagricultural establishments who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. Excludes proprietors, self-employed persons, domestic servants, and unpaid family workers. Not comparable with estimates of nonagricultural employment of the civiltan labor force (Table C-17) which include proprietors, self-employed persons, domestic servants, and unpaid family workers; which count persons as employed when they are not at work because of industrial disputes, bad weather, etc.; and which are based on a sample survey of households, whereas the estimates in this table are based on reports from employing establishments.
${ }^{2}$ Beginning with 1939, data are not strictly comparable with data shown for earlier years because of the shift of the automotive repair service industry from the trade to the service division.

Not available.
${ }^{4}$ Incliding data for Alaska and Hawail, the number of wage and salary workers in 1959 was $52,205,000$ and in 1960,53,135,000. Monthly data, seasonally adjusted, for 1960 are (in thousands):

| January...-...- 53, 108 | April.-...-.-.-.- 53, 362 | July............- 53, 407 | October |
| :---: | :---: | :---: | :---: |

1 Averages are based upon monthly data (exclusive of switching and terminal compantes) summarized in the $\mathbf{M}-300$ report by the ICC and relate to all employees who received pay during the month, except executives, officials, and staff assistants (ICC Group I). Beginning September 1949, data reflect a reduction in the basic workweek from 48 to 40 hours.
${ }_{2}$ Prior to A pril 1945, data relate to all employees except executives; from A pril 1945 to May 1949, mainly to employees subject to the Fair Labor Standards Act; and beginning June 1949, to nonsupervisory employees only.
3 Not a vailable.

- Data beginning with January of year noted are not comparable with those for earlier periods.
${ }^{3}$ Nine-month average, April through December, becauie of new series started in April 1945.
- Preliminary.

Note.-Data are for production workers in manufacturing and mining, construction workers in building construction, and for nonsupervisory employees in other industries (except as ncted). Data are for pay period ending nearest the 15th of the month.
The annual figures for 1860 are simple arithmetic averages of the monthly figures shown and are not strictly comparable with the averages for earlier years, which have been weighted by data on employment. See Table C-26 for unadjusted average weekly hours in manufacturing.

${ }^{1}$ Not available.
${ }_{3}$ Eleven-month average; August 1945 excluded because of VJ Day holiday period.
${ }^{3}$ Preliminary.
Note.-Data relate to production workers and are for pay period ending nearest the 15 th of the month.
The annual figures for 1860 are simple arithmetic averages of the monthly figures shown and are not strictly comparable with the averages for earlier years, which have been weighted by data on employment (in the case of hours) and man-hours (in the case of earnings).
See Table C-23 for seasonally adjusted average gross weekly hours.

${ }^{1}$ Excludes agriculture.
${ }^{2}$ Commercial and other includes trade, service, finance, communications, and construction.
${ }^{3}$ Annual total is the sum of unadjusted quarterly expenditures; it does not necessarily coincide with the average of seasonally adjusted figures. See footnote 4.
4 Estimates for fourth quarter 1960 and first quarter 1961 based on anticipated capital expenditures reported by business in late October and November 1960. The quarterly anticipations inciude adjustments, when necessary, for systematic tendencies in anticipatory data.

Note.-These figures do not agree precisely with the plant and equipment expenditures included in the gross national product estimates of the Department of Commerce. The main difference lies in the inclusion in the gross national product of investment by farmers, professionals, and institutions, and of certain outlays charged to current account.
This series is not available for years prior to 1939 and for 1940 to 1944.
Detail will not necessarily add to totals because of rounding.
Sources: Securities and Exchange Commission and Department of Commerce.

${ }^{1}$ For expenditures classified by ownership, combine "Federal aid" and "State and local" columns to obtain State and local ownership. "Direct" column stands as it is for Federal ownership.
${ }^{2}$ Includes nonresidential building other than educational and hospital and institutional (industrial, commercial, public administration, social anio recreational, and miscellaneous), public residential buildings, and publicly owned parks and playgrounds, memorials, etc.
${ }^{8}$ Beginning with 1959, data include estimates for Alaska and Hawaii. Comparability with earlier data is not seriously affected since these two States accounted for less than one-half of one percent of total new public construction in 1959.
4 Preliminary.

1 The series beginning in 1948 are not comparable with the previous years because of changes in definition for the wholesale series. Beginning in 1951, the estimates of retail sales and inventories are based on a new method of estimation adopted by the Bureau of the Census.
${ }^{2}$ Monthly average shown for year and total for month.
8 Seasonally adjusted, end of period.
4 Inventory/sales ratio. For annual periods, ratio of weighted average inventories to average monthly sales; for monthly data, ratio of inventories at end of month to sales for month.
${ }_{5}$ Where December data not available, data for year calculated on basis of no change from November.
${ }^{6}$ Preliminary.
${ }^{7}$ Beginning January 1960, retail sales include data for Alaska and Hawaii.
Note.-For a description of the series and their comparability, see Survey of Current Business, September and November 1952, January 1954, and June 1957 for retail, and August 1957 for manufacturing and wholesaie.
The inventory figures in this table do not agree with the estimates of change in business inventories included in the gross national product since these figures cover only manufacturing and trade rather than all business, and show inventories in terms of current book value without adjustment for revaluation.

1 End-of-year figures (except 1960) are for call dates. Other data (including those for December 1960) are for the last Wednesday of the month.

3 Data are shown net, i.e., after deduction of valuation reserves. Includes commercial and industrial, agricultural, security, real estate, bank, consumer, and other loans.
${ }_{2}$ Beginning with 1948, data are shown gross of valuation reserves, instead of net as for previous years. Prior to June 1947 and for months other than June and December, data are estimated on the basis of reported data for all insured commerclal banks and for weekly reporting member banks.

4 Figures in this table are based on book values and relate only to banks within the United States. Therefore, they do not agree with figures in Table C-49, which are on the basis of par values and include holdings of banks in United States Territories and possessions.

5 June data are used because complete end-of-year data are not available prior to 1935 for U.S. Government obligations and other securities.

- Not available.
; Beginning June 1959, business loans exclude loans to fnancial institutions.
8 Preliminary; December estimates by Council of Economic Advisers.
Note.-Between January and August 1959, this series was expanded to include data for all hanks in Alaska and Hawall.
Detall will not necessarily add to totals because of rounding.

${ }^{1}$ Rate on new issues within period. Issues were tax exempt prior to March 1, 1941, and fully taxable thereafter. For the period 1934-37, series includes issues with maturities of more than 3 months.
${ }^{2}$ Includes certificates of indebtedness and selected note and bond issues (fully taxable)
${ }^{3}$ First issued in 1941. Series includes bonds which are neither due nor callable before a given number of years as follows: April 1953 to date, 10 years; April 1952-March 1953, 12 years; October 1941-March 1952, 15 years.

4 Treasury bills were first issued in December 1929 and were issued irregularly in 1930.
Sot available before A ugust 1942.
Not available on same basis as for 1939 and subsequent years.
7 From October 30, 1942, to April 24, 1946, a preferential rate of 0.50 percent was in effect for advances secured by Government securities maturing or callable in 1 year or less.
8 Series revised to exclude loans to nonbank financial institutions.
Nore.-Yields and rates computed for New York City, except for short-term bank loans.
Sources: Treasury Department, Board of Governors of the Federal Reserve System, Moody's Investors Service, and Standard \& Poor's Corporation.

[^20]Table C-45.-Instalment credit extended and repaid, 1946-60
[Millions of dollars]

${ }^{1}$ Preliminary; December by Council of Economic Advisers.
Note.-See also Table C-44.
Series revised beginning January 1958. For details, see Federal Reserve Bulletin, December 1960.
Data for Alaska and Hawaii included beginning January and August 1959, respectively. Therefore the difference between extensions and repayments for January and August 1959 and for the year 1959 does not equal the net change in credit outstanding.

' Gross receipts less refunds of rcceipts and transfers of tax receipts to the old-age and survivors insurance trust fund, the disability insurance trust fund, the rallroad retirement account, and the highway trust fund.
${ }_{2}$ Excludes guaranteed obligations; therefore, differs from total shown in Tables C-48 and C-49. The change in the public debt from year to year reflects not only the budget surplus or deficit but also changes in the Treasury's cash balances, the effect of certain trust fund transactions, and direct borrowing from the public by certain Government enterprises.

3 Beginning with fiscal year 1948, net budget receipts and budget expenditures have been adjusted to exclude certain interfund transactions. The change does not affect the budget surplus or deficit. (Figures for calendar years have not yet been adjusted to exclude interfund transactions, and therefore are not shown in this table.)

4 Estimate.
Note.-Detail will not necessarily add to totals because of rounding.

${ }^{1}$ For derivation of Federal cash receipts and payments, see Budget of the United States Government for the Fiscal Year ending June 30, 196*, and Table C-55.
${ }^{2}$ Estimated by Council of Economic Advisers from receipts and expenditures in the national income accounts. Cash receipts consist of personal tax and nontax receipts, indirect business tax and nontax accruals, and corporate tax accruals adjusted to a collection basis. Cash payments are total expenditures less Federal grants-in-aid and less contributions for social insurance. (Federal grants-in-aid are therefore excluded from State and local receipts and payments and included only in Federal payments.) See Table C-54.
Less than $\$ 50$ million.

- Estimate.
${ }^{5}$ Preliminary.
Note.-Detail will not necessarily add to totals because of rounding.
Sources: Treasury Department, Bureau of the Budget, Department of Commerce, and Council of Economic Advisers.

Table C-54.-Government receipts and expenditures as shown in the national income accounts, 7955-60

${ }^{1}$ Preliminary estimates by Council of Economic Advisers.
${ }^{2}$ Approximation for the year as a whole. See footnote 4, Table C-57.
${ }^{3}$ Not available.

- These accounts, like the cash budget, Include the transactions of the trust aceounts. Unlike both the conventional budget and the cash statement, they exclude certain capital and lending transactions. In general, they do not use the cash basis for transactions with business. Instead, corporate profits taxes are included in receipts on an accrual instead of a cash basis; expenditures are timed with the delivery instead of the payment for goods and services; and CCC guaranteed price-support crop loans financed by banks are counted as expenditures when the loans are made, not when CCC redeems them.
Note.-Federal grants-In-aid to State and local governments are reflected in Federal expenditures and State and local receipts and expenditures. Total government recelpts and expenditures have been adjusted to eliminate this duplication.

Detail will not necessarily' add to totals because of rounding.
Source: Department of Commerce (except as noted).

${ }^{1}$ Federal and State corporate income and excess profits taxes.
${ }^{2}$ Less than $\$ 50$ million.
8 Prellminary estimates by Council of Economic Advisers.
4 Data for corporate profits are approximations for the year as a whole; they do not derive from, nor imply, specific estimates for the quarters. All other data incorporating or derived from these figures are corre-
spondingly approximate.
${ }^{5}$ Not avallable.
Note.-Detail will not necessarlly add to totals because of rounding.

${ }^{1}$ All United States corporations, excluding banks, savings and loan associations, and insurance companies. Year-end data through 1957 are based on Statistics of Income (Treasury Department), covering virtually ali corporations in the United States. Statistics of Income data may not be strictly comparable from year to year because of changes in the tax laws, basis for filing returns, and processing of data for compilation purposes. All other figures shown are estimates based on data compiled from many different sources, including data on corporations registered with the Securities and Exchange Commission, As more complete information becomes available, estimates are revised.
${ }^{2}$ Receivables from and payables to U.S. Government do not include amounts offiset against each other on the corporation's books or amounts arising from subcontracting which are not directly due from or to the U.S. Government. Wherever possible, adjustments have been made to include U.S. Government advances offset against inventorles on the corporation's books.

8 Includes marketable securities other than U.S. Government.
Note.-Detail will not necessarily add to totals because of rounding.

${ }^{1}$ Excludes firms in the flelds of agriculture and professional services. Includes self-employed person only if he has either an established place of business or at least one paid employee. Series revised beginning 1951. 2 Data through 1939 are averages of end-of-quarter estimates centered at June 30. Beginning 1940, data are for beginning of period. Quarterly data shown here are seasonally adjusted.

- Total for period.
- Commercial and industrial failures only. Excludes failures of banks and railroads and, beginning 1933,
of real estate, insurance, holding, and fnancial companies, steamship lines, travel agencies, etc.
- Failure rate per 10,000 listed enterprises. Monthly data are seasonally adjusted.
- Not available.
${ }^{7}$ Series revised; not strictly comparable with earlier data.
${ }^{8}$ Beginning January 1959, data for Hawaii are included. Total for 1958 including Hawail is 150,781.
- Prellminary.

NOTE.-Detail will not necessarily add to totals because of rounding.

1 Net income of farm operators from farming (including net inventory change) and farm wages as shown.
${ }^{2}$ Farm wages received by farm resident workers.
${ }^{8}$ Cash recelpts from marketings, Government payments, and nonmoney income furnished by farms.
4 Includes net change in inventory of crops and livestock valued at the average price for the year. Data prior to 1946 differ from farm proprietors' Income shown in Tables $\mathrm{C}-9$ and $\mathrm{C}-12$ hecause of revisions by the Department of Agriculture not yet incorporated Into the national income accounts of the Department of Commerce.
${ }^{6}$ Based on estimated number of farms as reported by the Department of Agriculturc according to 1954 Census defnition (see footnote 1, Table C-70).
${ }^{6}$ Income in current prices divided by the index of prices paid by farmers for family lling ftems on a 1960 base.
${ }^{7}$ Based on farm population as defined in 1950 Oensus of Population. See footnote 1, Table C-69.
Not available.

- Preliminary.

Note.-Detail will not necessarily add to totals because of rounding.

${ }^{1}$ Farm population as defined by Department of Agriculture and Department of Commerce, i.e., civilian population living on farms, both urban and rural, regardless of occupation, according to concept in us $\theta$ prior to 1960.
${ }^{2}$ Total population of United States as of July 1, excluding Alaska and Hawall; includes armed forces abroad.
8 Net change for year beginning in Aprll, estimated by Department of Agriculture. For 1940 and sub. sequent years, includes inductions and enlistments into the armed forces, and persons returning from the armed forces. For all years, includes persons who have not moved but who are in and out of the farm popu.
lation because agricultural operations have begun or have ceased on the place where they are living.
4 Includes persons doing farm work on all farms. These data. published by the Department of Agriculture, Agricultural Marketing Service, differ from tbose on agricultural employment by the Department of Labor (see Table 0-17) because of differences in the method of approach, in concepts of employment, and in time of month for which the data are collected. For further explanation, see monthly report on Farm Labor, September 10, 1958.
s Computed from variable weights for individual crops produced each year.
${ }^{6}$ Not available.
7 Prellminary.
Bources: Department of Agriculture and Department of Commerce.

Table C-70.—Selected indicators of farming conditions, 1929-60

[^28]

[^0]:    ${ }^{1}$ Structural changes in 1959 are excluded. On balance through August, these changes added almost $\$ 1$ billion in total credit; $\$ 600$ million in loans; $\$ 300$ million in U.S. Government securities; and $\$ 100$ million in other securities. Real estate loans increased about $\$ 300$ million; business loans, $\$ 100$ miilion; consumer loans, $\$ 100$ milion; and other loans $\$ 100$ million.
    ${ }^{2}$ Preliminary estimates by Council of Economic Advisers.
    ${ }^{3}$ Total loans are net of, and individual loans are gross of, valuation reserves.
    4 Includes estimate of loans to nonbank financial institutions on December 31, 1959.
    3 Excludes loans to nonbank financial institutions, shown separately, and is not strictly comparable with previous data.
    6 Less than $\$ 50$ million.
    TReported in business and "all other" loans prior to June 10, 1959, and estimated in business and "all other" loans on December 31, 1959.
    Note.-Changes are based on amounts outstanding at end of year.
    See Table C-41 for totals including interbank loans.
    Detail will not necessarily add to totals because of rounding.
    Source: Board of Governors of the Federal Reserve System (except as noted).

[^1]:    1 Data for 1930 pertain to the "economically active civilian population" 10 years of age and over and are similar, but not strictly comparable, to other annual data in this table.
    ${ }^{2}$ Figures shown for 1947 and 1957 are averages of data for January, April, July, and October since data prior to 1958 are available only for these months. These averages, therefore, will differ slightly from the annual averages shown in Table $\mathrm{C}-17$.
    Note,-These data represent nonagricultural employment of the civilian labor force. The figures for total nonagricultural employment will therefore differ from those shown in Tables B-4 and C-22. For explanation of differences, see footnote 1, Tabie C-22.

    For comparability with earlier years, data for 1960 have been adjusted to exclude Alaska and Hawaii.
    Detail will not necessarily add to totals because of rounding.
    Sources: Department of Commerce and Department of Labor,

[^2]:    1 Not available.
    3 Acreage of crop allotments idled under Acreage Reserve: estimated acreage under Conservation Reserve. Total acreage for Conservation Reserve expeeds Reserve acreage due to double-cropping and other multiple uses.
    ${ }^{3}$ Less than 50,000 acres.
    4 Includes acreage that had intermittently been idle, fallow, or a failure.
    ${ }^{5}$ Payments obligated for any year will be distiibuted during several years.
    Source: Department of Arriculture.

[^3]:    ${ }^{1}$ Excludes $\$ 34$ million which is included in commodity data.
    2 Inciudes latex.
    ${ }^{2}$ Excludes pig iron and scrap.
    4 Excludes office appliances and printing machinery.
    Note.-Detail will not necessarily add to totals because of rounding.
    Source: Department of Commerce.

[^4]:    ${ }^{1}$ Official net bilateral contributions (grants and loans, including assistance through sale of farm prodricts for foreign currencies, i.e., currency elaims acquired less currencies disbursed) and net contributions to multilateral agencies.
    ${ }^{2}$ Private net bilateral contributions (private lending and investment) and net contributions to multilateral agencies.
    ${ }_{3}$ Data for France are minimum and provisional and do not include reinvested earnings.
    4 Includes Austria, Denmark, Ireland, Luxembourg. Norway, Portugal, Sveden, and Switzerland.
    Note.--Detail will not necessarily add to totals because of rounding.
    Sources: Various national sources.

[^5]:    ${ }^{1}$ Excludes military aid and military sales.
    Note.-Detail will not necessarily add to totals because of rounding.
    Source: Department of Commerce.

[^6]:    1 These estimates represent an approximate conversion of the Department of Commerce serics in 1954 prices. (See Tables C-4 and C-5.) This was done by major components, using the implicit price indexes converted to a 1960 base. Although it would have been preferable to redefiate the series by minor components, this would not substantially change the results except possibly for the period of World War II, and for the series on change in business inventories.
    For explanation of conversion of estimates in current prices to those in 1954 prices, see U. S. Income and Output, A Supplement to the Survey of Current Business, 1059.

    - For 1929-45, net exports of goods and services and net foreign in vestment have been equated, since foreign net transfers by Government were negliglble during that perlod.
    ${ }^{3}$ Net of Government sales, which are not shown separately in this table. See Table C-1 for Government sales in current prices.
    - See footnote 4, Table C-1.
    - Not available separately.

    Less than $\$ 50$ million.
    1 Preliminary.
    Nore.-Detail will not necessarily add to totals because of rounding.
    Sources: Department of Commerce and Councll of Economic Advisers.

[^7]:    ${ }^{1}$ Quarterly data are estimates by Councll of Economic Advisers.
    ? Includes standard clothing issued to military personnel.
    ${ }^{8}$ Includes imputed rental value of owner-occupied dwellings.

    - Preliminary estimates by Council of Economic Advisers.

    Nore.-Detail will not necessarily add to totals because of rounding.
    Soure: Department of Commerce (except as noted).

[^8]:    Items for nonfarm producers' plant and equipment are not comparable with those shown in Table C-30 principally because the latter exclude equipment and construction outlays charged to current expense and also investment by nonprofit organizations and professional persons.
    ${ }_{2}$ Total producers' durable equipment less farm machinery and equipment and farmers' purchases of tractors and business motor vehicles.
    ${ }^{3}$ Industrial buildings, public utilities, gas- and oil-well drilling, warehouses, office and loft buildings, stores, restaurants, garages, miscellaneous nonresidential construction, and all other private construction.
    ${ }^{4}$ Farm construction (residential and nonresidential) plus farm machinery and equipment and farmers' purchases of tractors and business motor vehicles. (See footnote 2.)

    - Includes religious, educational, social and recreational, and hospital and institutional.
    - After inventory valuation adjustment.

    Less than $\$ 50$ million.
    Preliminary estimates by Council of Economic Advisers.

[^9]:    1 Accidental damage to fixed capital and capital outlays charged to current account.
    Less than $\$ 50$ million
    ${ }^{8}$ Preliminary estimates by Council of Economic Advisers.

    - Data for corporate profts are approximations for the year as a whole; they do not derive from, nor imply, specifc estimates for the quarters. All other data incorporating or derived from these figures are correspondingly approximate.
    ${ }^{3}$ Not available.

[^10]:    1 Preliminary estimates by Council of Economic Advisers
    2 Data for corporate profits are approximations for the year as a whole; they do not derive from, nor imply, specifc estimates for the quarters. All other data incorporating or derived from these figures are correspondingly approximate.
    ${ }^{2}$ Not available.
    Notr.-Detall will not necessarily add to totals because of rounding.
    Source: Department of Commerce (except as noted).

[^11]:    1 Net exparts of goods and services less foreign net transfers by Government. For 1929-45, net foreign investment and net exp?rts of g'ods and services have been equated, since foreign net transfers by Government were negligible during that period.
    ${ }^{2}$ Less than $\$ 50$ million.
    ${ }^{3}$ Preliminary estimates by Council of Economic Advisers
    4 Data lor corporate profits are approximations for the year as a whole; they do not derive from, nor imply specific estimates for the quarters. All other data incorporating or derived from these figures are correspondingly approximate.
    $s$ Not available.
    Note.-Detail will not necessarily add to totals because of rounding.
    Source: Department of Commerce (except as noted).

[^12]:    I See Note, Table C-17 for explanation of differences between the old and new definitions.
    ${ }^{2}$ For duration of less than 6 months, data are available only for under 3 months ( $1,568,000$ ) and 3 to 6 months ( 564,000 ).
    ${ }^{3}$ Not available.
    4 Beginnlng January 1960, data for Alaska and Hawaii are included.
    Nore--See Note, Table C-17 for information on area sample used and reporting periods.
    Detail will not necessarily add to totals because of rounding.
    Source: Department of Labor.

[^13]:    ${ }^{1}$ A verages are based upon monthly data (exclusive of switching and terminal companies) summarlzed in the M-300 report by the ICC and relate to all employees who received pay during the month, except executives, officials, and staff assistants (ICC group I). Beginning September 1949, data reflect a wage rate increase and reduction in the basic workweek from 48 to 40 hours.
    ${ }^{2}$ Prior to April 1945, data relate to ali employees except executives; from April 1945 to May 1949, mainly to employees subject to the Fair Labor Standards Act; and beginning June 1949, to nonsupervisory employees only.
    ${ }^{3}$ Weighted average of all farm wage rates on a per hour basis.

    - Not available.
    - Data beginning with January of year noted are not comparable with those for earlier periods.
    - Nine-month average, April through December, because of new series started in April 1045.
    ${ }^{7}$ Preliminary.
    Note.-Data are for production workers in manufacturing and mining, construction workers in building construction, and for all nonsupervisory employees in other industries (except as noted). Data are for pay period ending nearest the 15th of the month.

    The annual figures for 1960 are simple arithmetic averages of the monthly figures shown and are not strictly comparable with the averages for earlier years, which have been weighted by data on man-hours.
    Sources: Department of Labor and Department of Agriculture.

[^14]:    1 A veraqes are based upon monthly data (exclusive of switching and terminal companies) summarized in the $\mathbf{M - 3 0 0}$ report by the ICC and relate to all employees who received pay during the month, except executives, officials, and staff assistants (ICC group I). Beginning September 1049, data reflect a wage rate increase and reduction in the basic workweek from 48 to 40 hours.
    ${ }_{8}$ Prior to April 1945, data relate to all employees except executives: from April 1945 to May 1949, mainly to employees subject to the Fair Labor Standards Act; and beginning June 1949, to nonsupervisory employees only.
    ${ }^{3}$ Not available.
    4 Data beginning with January of year noted are not comparable with those for earlier periods.
    ${ }^{5}$ Nine-month average, April through December, because of new series started in April 1945.

    - Preliminary.

    NOTE.-Data are for production workers in manufacturing and mining, construction workers in building construction, and for nons'ppervisory employees in other industries (except as noted). Data are for pay period ending nearest the 15 th of the month.
    The annual figures for 1960 are simpie arithmetic averages of the monthly figures shown and are not strictly comparable wlth the averages for earlier years, which have been weighted by data on man-hours.

    Source: Department of Labor.

[^15]:    ${ }^{1}$ Excludes construction expenditures for crude petroleum and natural gas well drilling, and therefore does not agree with the new construction expenditures included in the gross national product. (See Table C-1.)
    ${ }^{2}$ Office buildings, warehouses, stores, restaurants, and garages.
    ${ }^{3}$ Farm, institutional, and all other.
    4 New series beginning January 1959 not comparable with prior data. In addition to major differences between old and new series, data for Alaska and Hawail are Included beginning January 1959. For details, see Construction Activity, C 30-13, Bureau of the Census, August 1960.
    ${ }^{5}$ Preliminary
    Source: Department of Commerce.

[^16]:    ${ }^{1}$ Military housing starts, including those financed with mortgages insured by FHA under Section 803 of the National Housing Act, are included in total private and public starts but excluded from total private starts and from FHA starts.
    ${ }^{2}$ Units in mortgage applications for new home construction.
    ${ }^{3}$ FHA program approved in June 1934; all 1934 activity included in 1935.
    4 Monthly estimates for September 1945-May 1950 were prepared by Housing and Home Finance Agency .
    6 Not available.
    ${ }^{6}$ In addition to major differences between old and new series arising from revisions in sources and methods, new serfes includes data for Alaska and Hawaii. For details, see Housing Starts, C20-11 (Supplement), Bureau of the Census, May 1960.
    ${ }^{7}$ Preliminary: December and year 1960 estimated by Council of Economic Advisers.
    Sources: Department of Commerce, Federal Housing Administration (FHA), Veterans Administration (VA), and Housing and Home Finance Agency (except as noted).

[^17]:    ${ }^{1}$ This does not replace the former index $(1926=100)$ as the official index prior to January 1952. Data beginning January 1947 represent the revised sample and weighting pattern. Prior to January 1947 they are based on the month-to-month movement of the former index.

    Not available.
    ${ }^{8}$ Preliminary.
    Source: Department of Labor.

[^18]:    1 Not available.
    ${ }^{2}$ January-November average.
    Source: Department of Labor.

[^19]:    1 January-November average.
    Bource: Department of Labor.

[^20]:    ${ }^{1}$ Includes all consumer credit extended for the purpose of purchasing automoblles and other consumer goods and seeured by the items purchased.
    I Includes only such loans held by flnancial institutions; those held by retail outlets are included in "other consumer goods paper.'
    ${ }^{2}$ Single-payment loans and service credit.

    - Not avallable.
    - Preliminary estimates by Councll of Economic Advisers.

    Note.-Series revised beginning 1958. For details, see Federal Reserve Bulletin, December 1960.
    Data for Alaska and Hawait included beginning January and August 1959, respectively.
    Source: Board of Governors of the Federal Reserve System (except as noted).

[^21]:    1 Net public and private debt outstanding is a comprehensive aggregate of the indebtedness of borrowers after elimination of certain types of duplicating governmental and corporate debt. For a further explanation of the concept, see Survey of Current Business October 1950
    ${ }^{2}$ Data for State and local government debt are for June 30.

    - Farm mortgages and farm production loans. Farmers' financial and consumer debt is included in the nonfarm categorles.
    ${ }^{4}$ Financlal debt is debt owed to banks for purchasing or carrying securlties, customers' debt to brokers, and debt owed to life insurance companiea by policyholders.

    1 Preliminary estimates by Councll of Economic Advisers.
    Note.-Revisions beginning 1958 in the consumer credit data of the Board of Governors of the Federal Reserve System have not yet been incorporated into this serles.
    Detall will not necessarily add to totals because of rounding.
    Sources: Department of Agriculture, Department of Commerce, Treasury Department, Board of Gover nors of the Federal Reserve System, Federal Savings and Loan Insurance Corporation, and Interstate C ommerce Commission (except as noted).

[^22]:    ${ }^{1}$ Total includes non-interest-bearing debt, fully guaranteed securities (except those held by the Treasury), Postal Savings bonds, prewar bonds, adjusted service bonds, depositary bonds, and armed forces leave bonds, not shown separately. Not all of total shown is subject to statutory debt limitation.
    ${ }^{2}$ Bills, certificates of indebtedness, and notes.
    3 Series A bonds and, beginning April 1951, Series B convertible bonds.
    4 Issued to U.S.Government investment accounts. These accounts also held $\$ 10.7$ billion of public
    marketable and nonmarketable issues on December 31, 1960
    ${ }^{5}$ Less than $\$ 50$ million.

    - The last series of Treasury savings notes matured in A pril 1956.

    Bource: Treasury Department.

[^23]:    1 United States savings bonds, series A-F and J, are included at current redemption value.
    ${ }^{2}$ Excludes guaranteed securities held by the Treasury. Not all of total shown is subject to statutory debt limitation.
    ${ }^{3}$ Includes commercial banks, trust companies, and stock savings banks in the United States and Territories and possessions; figures exelude securities held in trust departments. Since the estimates in this table are on the basis of par values and include holdings of banks in United States Territories and possessions, they do not agree with the estimates in Table C-41, which are based on book values and relate only ta banks within the United States.

    4 Exclusive of banks and insurance companies.

    - Includes trust, sinking, and investment funds of State and local governments and their agencies, and of Territories and possessions.
    - Includes partnerships and personal trust accounts.

    Includes savings and loan associations, nonprofit institutions, corporate pension trust funds, dealers and brokers, and investments of foreign balances and international accounts in this country. Beginning with December 1946, the international accounts include investments by the International Bank for Reconstruction and Development, the International Monetary Fund, and the International Development Association in special non-Interest-bearing notes issued by the U.S. Government. Beginning with June 30, 1947, includes holdings of Federal land banks.

    - Preliminary estimates by Council of Economic Advisers.

    Note.-Detail will not necessarily add to totals because of rounding.
    Bonrce: Treasury Department (except as noted).

[^24]:    1 Standard Industrial Classification.
    NOTE.-Data on a comparable basis are not available for earlier perlods. For details concerning compilation of the series, see Quarterly Financial Reports for U.S. Manufacturing Corporations, Federal Trade Commission and Securitles and Exchange Commission.

    Data for Alaska and Hawail included for all periods.
    Sources: Federal Trade Commission and Becuritles and Exchange Commission.

[^25]:    Based on 300 stocks.
    ${ }^{2}$ Based on 50 stocks for 1939-56 and 425 stocks beginning 1957. Ratio is obtained by dividing the stock price index as of the end of the period by the seasonally adjusted annual rate of earnings for the quarter then ending.
    ${ }^{3}$ As reported by member firms of the New York Stock Exchange carrying margin accounts. Includes net debit balances of all customers (other than general partners in tbe reporting firm and member firms of national exchanges) whose combined accounts net to a debit. Balances secured by U.S. Government obligations are excluded. Data are for end of period.

    4 Loans by weekly reporting member banks to others than brokers and dealers for purchasing or carrying securities except U.S. Government obligations. From 1953 through June 1950, ioans for purchasing or carrying U.S. Government securities were reported separately only by New York and Chicago banks. Accordingly, for that period any loans for purchasing or carrying such securlties at other reporting banks are included. Series also revised beginning July 1946, March 1953, and July 1958. Data are for last Wednesday of period. For details, see Federal Reserve Bulletin, August 1959.
    ${ }^{s}$ Loans by weekly reporting member banks for purchasing or carrying securities, including U.S. Government obligations. Series revised beginning July 1946, January 1952, July 1958, and July 1959. Data are for last Wednesday of period. For details, see Federal Reserve Bulletin, August 1959.
