## FEDERAL RESERVE BULLETIN

ISSUED BY THE
FEDERAL RESERVE BOARD
AT WASHINGTON

## FEBREUARY, 1919

WASEITNGTON
GOVERNMENT PRINTING OFFICE

## FEDERAL RESERVE BOARD.

## EX OFFICLO MEMBERS.

## Carter Glass,

Secretary of the Treasury, Chairman.
John Sketton Wiliiams,
Comptroller of the Currency.

## W. P. G. Harding, Governor.

 Albert Strauss, Vice Governor.
## Adolph C. Miller.

## Cearles S. Hamlin.

M. C. Elliott, General Counsel.
H. Pareer Whlis,

Director, Division of Analysis and Research.
F. I. Kent,

Director, Division of Foreign Exchange.

## SUBSCRIPTION PRICE OF BULLETIN.

The Federal Reserve Bulletin is distributed without charge to member banks of the system and to the officers and directors of Federal Reserve Banks. In sending the Bulletin to others the Board feels that a subscription should be required. It has accordingly fixed a subscription price of $\$ 2$ per annum. Single copies will be sold at 20 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board. Member banks desiring to have the Bulletin supplied to their officers and directors may have it sent to not less than ten names at a subscription price of $\$ 1$ per annum.

No complete sets of the Bulletin for 1915, 1916, or 1917 are available.

## TABLE ON CONTENTS.

Page.
Review of the month ..... 99
Business conditions in January ..... 109
Development of acceptance movement ..... 114
Report of Committee on Financial Facilities, presented to the British Parliament ..... 114
Reports by British and American committees appointed to study gold production ..... 123
Decimal system of coinage, weights, and measures ..... 126
Directors of branch banks ..... 126
Fiduciary powers granted to national banks ..... 127
Banks granted authority to accept up to 100 per cent of capital and surplus ..... 127
Charters issued to national banks during the month ..... 128
Commercial failures reported. ..... 128
State banks and trust companies admitted to the system during the month. ..... 129
Extract from annual report of the Federal Farm Loan Board ..... 129
Earnings and expenses of the Federal Reserve Banks for the year 1918 ..... 130
Movement of excess reserves ("free gold") during the year 1918 ..... 136
Chart showing. ..... 138
Decrease in Federal Reserve note circulation ..... 139
Gold reserves of principal banks of issue, 1000-1918 ..... 140
Silver production of the world ..... 141
Rulings of the Federal Roserve Board ..... 142
Gold settlement fund transactions during 1918 ..... 144
Chart showing ..... 146
Bank transactions during January ..... 1.47
Index of wholesale prices. ..... 150
Discount and interest rates prevailing in various cities ..... 154
Physical volume of trade ..... 157
Discount operations of the Federal Reserve Banks. ..... 1.64
Resources and liabilities of the Federal Rescrve Banks ..... 172
Federal Reserve note account of Federal Reserve Banks and agents. ..... 174
Interdistrict movement of Tederal Reserve notes during year 1918. ..... 176
Member bank condition statement ..... 177
Imports and exports of gold and siller. ..... 180
Estimated steck of money in the United States ..... 181
Operation of the Federal Reserve clearing system ..... 181
Discount rates in effect ..... 182
Foreign exchange rates. ..... 182
Abstract of condition of member banke ..... 183

## REVIEW OF THE MONTH.

Two issues of short-term certificates of indebtedness have been placed

## Public finance in <br> January.

 by the Treasury Department during the month of January, the first on January 2, the second on January 16. The first, of which $\$ 750,000,000$ was offered, amounted to $\$ 751,684,500$, and the second, of which $\$ 600,000,000$ was offered, amounted to $\$ 600,101,500$. With the sale of these two certificate issues the aggregate now outstanding, which constitutes a claim upon the proceeds of the forthcoming loan, is approximately $\$ 2,538,000,000$. Tentative announcement has definitely fixed the period for the flotation of the next loan at the first three weeks of April, 1919, and has made it evident that the bonds then to be offered, preliminary estimates of which vary from five billion to six billion dollars, will be the last that will be offered in the open market under the general plan of financing which has thus far been in vogue. The designation of April as the period for the offering of the nem bonds will involve continuation of the present method of financing through the issue of certificates of indebtedness for approximately three months longer, a fact which will practically require almost the entire proceeds of the new loan for the purpose of funding the outstanding certificates. The war revenue bill, which has been so long pending in Congress, is now on the point of passage, and this insures collection of taxes upon the now basis, much of the proceeds from which will begin to flow into the Treasury by the end of April.Public expenditures will continue on a diminishing though high basis, the outlays for December having been $\$ 2,100,000,000$, while those for January are reported as slightly below $\$ 2.000,000,000$. A further decline in the gross
amount of these heavy demands may doubtless be expected from this time forward, due to the gradual demobilization of the troops and the cancellation of outstanding Government contracts and sales of war materials. It will continue to be true, however, for some time to come that the costs of the war carried over from the period of active hostilities and not yet provided for must be met and that they will maintain the necessary expenditures of the Treasury Department upon a bigh level. Annual reports of Federal Reserve agents filed with the Federal Reserve Board show confidence in practically all of the banks that the war paper necessarily growing out of the fifth loan, as out of its predecessors, will not remain for an undue length of time in the hands of the banks, but will be steadily reduced. In some districts progress is reported in disposing of the heavy commitments growing out of the fourth Liberty loan. Some banks are raising the rate of interest charged to subscribers at each successive renewal period in order to discourage unnecessary delay in payment. In some instances subscribers are succeeding in settling their obligations for the fourth issue of bonds sooner than they had thought they could. The outstanding amount of war paper in the mombor banks in 100 selected cities reporting to the Board was $\$ 1,189,267,000$ on January 24, as against $\$ 1,269,409,000$ about a month earlier. It is probably true, as stated by some of the Federal Reserve agents in their annual reports of fiscal operations, that with each successive Liberty loan conservative banking policy has invariably forced a material reduction in outstanding commitments on war paper, the recurring cycle of finance in every case passing a peak of high indebtedness and eventually sinking to a low point, from which it tends upwaid as the next loan is launched. A feature
in the situation has been the progressive raising of this low point from period to period, indicating as it has the necessity of continuously greater permanent absorption of war paper by the banks in one form or another.

The following table shows in compact form the character of the payments made in the process of placing the fourth Liberty loan:

Total payments to Dec. 19, 1918, on account of fourth Liberty loan.

The Secretary of the Treasury, in his

Debt and interest situation.
address before the bankers of New York on January 13, set forth with great clearness the main factors by which the Treasury Department is now confronted in connection with its financing. As Mr. Glass then made apparent, the offering and sale of so great a volume of bonds as must be placed upon the market before the end of the fiscal year can not be carried through upon a purely commercial footing. It must necessarily succeed through the cooperation of all interests in the com-
munity determined to make the operation a success, and through the continued application of financial self-denial and restraint in connection with the use of capital in other directions. To those who have been expressing in positive language the belief that the next public loan must necessarily be sold upon a basis which would yield definitely competitive rates of return, this statement of opinion will serve as a reminder of the essential character of fiscal operations. The Secretary of the Treasury, however, was equally clear in his forecast that the rate of interest to be borne by the new bonds must accommodate itself to the recognized conditions in the financial market and must be such as to yield a reasonable rate of return upon the funds furnished by the investors who come forward to take up the securities. What this rate is to be is still to be determined, but whatever it may be, in this period of transition and change it will evidently be subject to comparatively early revision, as circumstances become more favorable for Government financing, hence the distinct announcement already proviously made on other occasions that the new securities will be issued on a distinctly short-term basis, running perhaps two or three years. Within the lapse of that period of time it should be possible for the Treasury Department to complete the revision of war financing which necessarily follows upon the conclusion of the struggle, and to consolidate the outstanding indebtedness upon a definite basis which will provide for its regular amortization and eventual extinguishment. The address is thus an important official forecast and an outline of a comprehensive policy with respect to the handling of this loan. Taken in conjunction with the later announcement made by the Secretary that he desires Congress to extend the period within which the 4 per cent bonds, heretofore deprived of the conversion privilege, may be converted by their holders into $4 \frac{1}{1}$ per cent bonds, it represents distinct progress toward the establishment of a uniform debt policy.

Congress having failed to grant the permission which had been requested
Flotation of for the continuation of advances to be made by the Treasury Department to foreign Governments, the logical consequence has been a renewal of offerings of such loans in the American market. On January 21 announcement was made by the firm of J. P. Morgan \& Co., acting as fiscal agents for the British Government, that a syndicate had been formed for the purpose of refunding the maturing $5 \frac{1}{2}$ per cent notes of the British Government due February 1. These $5 \frac{1}{2}$ per cent notes are now to be converted into the issue of 20 -year bonds already outstanding, while those which are presented for payment will be purchased by the syndicate at par and accrued interest. Financing on the part of other foreign countries intended to meet their requirements as these develop during the period of reconstruction may shortly be expected. This renewal of the flotation of foreign securities in the American market represents a return to the conditions which existed prior to the date when the United States became a belligerent. It was an essential element in our financial policy during the war that the Government should practically monopolize the control of and access to the financial market of the country, regulating the allowances made to domestic necessities through the operation of its Capital Issues Committee, while regulating and controlling the access to be allowed to foreign Governments through its own advances made through the machinery of the Treasury Department. The latter class of advances were those neccssarily guaranteed by the Treasury Department, inasmuch as they were provided out of the proceeds of Liberty bond sales, the Department itself receiving in exchange the obligations of the foreign countries to which the funds were allotted. The termination of this period of Government guarantees is a natural and necessary concomitant of the restoration of normal financial conditions and, taken in conjunction with the suspension of the
operations of the Capital Issues Committee, may be regarded as the first important step toward the reestablishment of freedom of financial transactions.

The readiness with which the financial markets have accommodated them-

## Private financ-

 selves to the new conditions is seen in the success that has attended the placing of various issues of notes and bonds offered on the market, either for refunding or for the purpose of obtaining new capital. Concurrently with the comparatively ready and successful absorption of these issues, there has been exhibited a tendency toward the increase of bank balances at financial centers. Easier rates for money have accompanied this inward movement of funds, although the price paid for longer term capital for industrial use has not been lowered, while rates for call loans and other prime commercial paper have fallen but slightly. The tendency, however, has been downward and may be taken as indicative of distinct recuperative power on the part of the financial community. These indications of capacity to reestablish normal conditions explain the tendency to a decline in the amount of war paper, both at Federal Reserve Banks and at member banks. This decline has notbeen as rapid as has been true after the close of former Liberty loans. The expiration of the installment period of the loan with the close of January has, however, seen the successful liquidation of most of the installment accounts, while there are encouraging indications that borrowers who obtained accommodation for a 90 -day period are either reducing or canceling their indebtedness, thereby offering a proportionate amount of bank funds for use in financing new enterprises.Thus far there has been little more than a beginning of industrial financing for foreign countries, and the scope of such operations will depend much upon the outcome of the peace conference. So much at least seems clear-that the United States will have a larger amount of
new capital available for use in industrial development than will other nations. Our problem will be the determination of the basis upon which this capital is to be divided between domestic and foreign demands and the conditions under which it will be found advisable to enlarge our holdings of foreign industrial obligations. However this problem may be worked out, it is already plain that a fundamental and essential aid in its solution will be the accumulation of as much fluid capital as possible. The requirement that saving be furthered and promoted is therefore again emphasized. There is already a tendency in many quarters toward a relaxation of the restraints upon expenditure imposed while the war was still in progress. The call for moderation in outlay and actual accumulation of funds is, however, as urgent as ever if real soundness in national and individual finance is soon to be restored.
It must, however, be borne in mind that the tendency toward the accumu-
Accumulation lation of funds in financial cenof funds. ters is in part the result of a natural contraction consequent upon the termination of war activities. One of the most prominent features of the currency situation in January has been the material reduction in the outstanding amount of Federal Reserve notes. This reduction has amounted in the aggregate to over $\$ 200,000,000$ and represents the most extensive reduction that has occurred since the organization of the system. Contemporaneous with this reduction in outstanding Federal Reserve notes there has been observable a tendency, not yet statistically measurable, toward the reduction of other forms of currency in circulation. It is a noteworthy fact that at many banks the over-thecounter deposits are beginning to include a considerable amount of gold coin and gold certificates. This return of funds to the financial centers is in part the outgrowth of greator confidence due to the termination of the war, which has called forth much hoarded currency
from its hiding places, but it is also due in no small degree to the slackening of business activity and in lesser measure to the falling of prices already noted. The decline in business activity lessens the amount of cash required by individuals for their personal transactions, by firms and corporations for the maintenance of their counter or vault cash as well as provision for pay rolls, and even by country banks for the current meeting of calls of depositors. Lowered volume of business has in years past always given rise to a flow of actual currency and money toward the financial centers, and under present conditions this flow is in no small degree eventually a flow toward the Federal Reserve Banks, resulting in the ultimate cancellation of outstanding note currency.

The movement thus observable will afford no ground for surprise to those familiar with the underlying principles of the Federal Reserve note system, demonstrating as it does the elastic quality of the Federal Reserve note, and showing that, with reduced business requirements, the circulation will reduce itself with the same facility as it had previously shown in its prewar expansion to meet the increased requirements. That it should return to its prewar amount is not to be expected, especially in view of the fact that so large a volume of Federal Reserve notes has been issued in substitution for the outstanding gold certificates which have been impounded for the purpose of strengthening the reserve of member and Federal Reserve Banks. Remembering, however, that, as shown in the Federal Reserve BulLetin for October, 1918, the real "inflation" or abnormal expansion of currency in the United States is less than the figures nominally representing the growth of the circulation, the contraction which has already occurred within the short space of a month or a little more suggests that it may not be long before this excess expansion will be materially reduced. The movement of Federal Reserve notes back to the banks is only in part paralleled by an increase in the reserve deposits of member banks. So far
as such a parallel increase has occurred it signifies that Federal Reserve notes outstanding in the hands of the community have been converted into the book obligations of Federal Reserve Banks or, in other words, that one form of bank liability has merely been exchanged for another to the extent that they are not used to liquidate the obligations of member banks to Federal Reserve Banks. The ultimate test of the inflation situation is found in part in the volume of obligations of both kinds taken in the aggregate, and in large degree also through an analysis of the character of the assets held by the banks themselves. Judged even on this basis there has, however, been a real liquidation. So far as these indications go, they show that abnormally active or inflated business conditions and correspondingly inflated credit are finding their natural corrective through the forces of financial prudence.
${ }^{7}$ Business recession, indeed, is the primary

Business recession. economic phenomenon of the moment in banking as well as in industry. That the process of liquidation has begun is not to be doubted by any close observer of existing conditions, Prices, although still high, are showing an unmistakable tendency to drift to lower levels. The month of January has witnessed striking reductions, both in textiles and in some of the metals, the textile cuts being in some instances the greatest ever made at any time since the close of the Civil War. Food products continue high in price, but affected as they are by wholly abnormal conditions, this is not surprising. The prospect for the harvest of 1919, as predicted by the Agricultural Department, anticipates as clearly as can be expected the advent of lower food prices. Meanwhile, the process of readjustment and conversion of industry to a peace basis is necessarily bringing some inconvenience and suffering. Unemployment unquestionably exists at a considerable number of industrial points throughout the United States, and even if it be true that the demand for labor in other parts of the
country is sufficient to absorb the labor released in war industries, if possessed of sufficient mobility to pass readily from one industry into another, there would still be an unavoidable period of transition during which labor would be confronted with some serious problems of readjustment. Capital, too, is in a transition stage, various plants finding that it is now necessary to them to reconvert their machinery back to the manufacture of commodities required on a peace basis, or to cease production entirely. The great quantity of supplies accumulated by the Government prior to the conclusion of the armistice remain to be disposed of, and no matter how gradually they may be placed upon the market, will still continue to exert an effect upon the future course of prices and of employment, since it can not be absorbed into consumption, however grâdually, without giving rise to a corresponding reduction in the volume of demand. One striking evidence of this condition of affairs is afforded by the difficulty of various industries working on basic products, such as textiles, in maintaining a full weekly schedule of hours, notwithstanding the desire of employees that this full working schedule be maintained, or in some cases, that overtime with corresponding higher wages, be continued if practicable.
The Bureau of Labor Statistics received and tabulated reports concerning the volume of eraployment in December, 1918, from representative establishments in 13 manufacturing industries. Comparing the figures of December of this year with those of identical establishments for December, 1917, it appears that in four industries there was an increase in the number of people employed and in nine a decrease. Car building and repairing shows the largest increase, 25.4 per cent, and the greatest decroase, 19.1 per cent, is shown in woolens. Eleven of the thirteen industries show an increase in the total amount of the pay roll for December, 1918, as compared with December, 1917. The most important increase, 98.5 per cent, is shown in car building and repairing,

[^0]which is probably due principally to the wage increases granted by the Director General of Railroads. Respective increases of 38.7 and 32.4 per cent are shown in iron and steel and paper making. The decreases, 9.4 and 5.2 per cent, appear in woolens and men's ready-made clothing, respectively.

The course of discussion since the conclusion of the armistice with Germany
Prices and in- has brought many indications dustrial transition. of an expectation on the part of the business and banking community that readjustment of prices is to be looked for. It is probably because of such expectation, indeed, that representative business concerns have already taken positive steps toward the restoration of a more moderate price level for their output. Reports of business conditions made to the Board by Federal Reserve agents show that the return of active production and consumption is being retarded by high expenses of production. Uncertainty, not only among consumers, but also among those who would ordinarily be in the market for raw materials with which to manufacture goods, concerning the possibility or probability of a further drop in values, tends in the same direction. It is argued that any such decline will be carried by those who are at the moment in possession of the stocks of goods which are thus tending to move toward lower levels. Producers of secondary articles involving the application of large quantities of primary raw materials are reluctant to absorb the loss threatened, although some business men are showing a disposition to treat such losses as one of unavoidable charges upon business in the process of a speedy readjustment. The great volume of our export trade during the month of December furnishes a measure of foreign demand, but it remains true that this export trade is in large part concerned with raw materials, foods, and the like, and that we are still facing the problem of finding or making a market for our manufactured goods in foreign countries, a process in which we can hardly hope to make the desired success so long as
prices continue upon a level higher than that existing in other countries. Those countries which first succeed in readjusting their costs of production and restoring their industry to a normal level of values will be most successful in developing their exports and securing a foothold in the markets of consuming nations the world over. The facts in the case appear to be understood abroad, as is indicated by the content of the reports of the various boards and commissions which have lately been looking into the banking and credit situation and which have expressed their opinions with reference to the course properly to be followed in bringing about a return to stable conditions.

That the policy of British banking is likely to follow as rapidly as may be Liquidation along the lines marked out in abroad. the recent investigations completed in that country, is suggested by the recent changes in the condition of the Bank of England. Its percentage of reserve to liabilities has risen, the figure reaching 20.13 per cent at the close of January, as compared with 15.78 per cent about a month earlier. That the increase is not wholly due to an accumulation of gold in the Bank of England is shown by the statement of reserves held by it at different dates. The result is partly due to liquidation and consequent contraction of liabilities. At the same time, the situation which is being experienced in floating popular loans among British buyers in general upon a basis which calls for the steady exertion of sating power and the exhibition of temporary or sporadic. buying financed by the banks seems to point to a-disposition on the part of the British people to assist in the elimination of war inflation and in the process of restoring currency and banking conditions in that country to a reasonable and moderate basis, approaching as soon as may be the sound and stable conditions which existed prior to the war. This effort also is being made more effective by the renewed control of foreign trade. Much time will be required in effecting a return to a stable economic and financial status. The immediate
problem, it should be understood, is that of beginning as soon as practicable the process of a return toward more normal conditions, however much time may be required for that completion. The working out of this problem in the United States will require the careful adjustment of our loan and discount policy to the varying needs of trade.

It has not thus far been deemed advisable to increase the rates of discount at Federal Reserve Banks, for reasons already fully stated in Discount and
interest rates.
about 60 per cent. In addition the Federal Reserve Banks held--

Nonmomber trust company aceoptances...... $32,949,000$
Nonmember State bank acceptances........... 11, 669, 000
Private bank acceptances..................... . . . . 30, 242,000
Foreign bank acceptances . . . . . . . . . . . . . . . . . 14, 006, 000
Total................................................. . . $58,866,000$
Upon the assumption that the Federal Reserve Banks held 60 per cent of the total outstanding acceptancos of nonmember banks, the latter amount may be estimated as $\$ 98,110,000$, which is probably an extreme high figuro, while the amount of $\$ 58,866,000$ held by the Federal Reserve Banks is a minimum. There is thus obtained an estimated total of acceptances outstanding which is not less than $\$ 580,689,000$ and which may run as high as $\$ 620,000,000$. About the end of October the total acceptance holdings of the Federal Reserve Banks, as shown above, were as follows:

Member bank acceptances. . . . . . . . . . . . . . . $\$ 314,719,000$
Nonmember bank acceptances.............. $58,866,000$
Total.......................................373,585,000
In addition the Federal Reserve Banks held-

Acceptances discounted ior member banks, about.
. $\$ 1,000,000$
Trade acceptances purchased................... $9,004,000$
Trade acceptances discounted................ . . . 20, 273,000
Total.
30,277, 000
Governor Harding, in an address before the Areerican Aceeptance Council
Development on January 21, took oceasion to set forth the present position with respect to acceptances, both trade and bankers'. He pointed out that the application of the acceptance principle is practically a necessity in the successiul development of our foreign trade and that the more extensivo use of the principle in domestic trade will prove of great benefit to the economic financing of that branch of our business. Wir. Harding fully recognized the abuses that may exist in comnection with the trade acceptance
and noted that it was not strange that such errors should have occurred in connection with the introduction of a new instrument. He was of the opinion, however, that in considering the acceptance critically we must assume that its use is to be developed along the line of the greatest soundness and most correct principles, and that eventually temporary errors or misapplications of the instrument will be eliminated. The great development in the use of bankers' acceptances which is now in progress he regarded as of special significance to the foreign trade, and in order that it might proceed unhampered suggested to the Acceptance Council consideration of a plan for the enlargement of the acceptance powers of banks. He said in part:
"In the development of an open discount market there are two essentials. First, there must be a disposition on the part of exporters and importers to draw their bills in dollar exchange. Second, there must be a ready market for the bills when drawn. In discussing the vast exchange and bill business done in the London market, we must not forget that for many years there has been a vast accumulation of money in that city. These funds have always been used for the purchase of bills, which have been regarded as the soundest and safest investment.
"The difference in rates between the open discount markets of London and New York will be equitably cared for in time. The great thing now is to make the purchase of these bills so widespread in this country that a tremendous and continuous buying power will always be at hand.
"The function of this council is to arouse interest in acceptances so that large amounts of money will be attracted to them because of their safe and liquid character. The Federal Reserve Banks will then only be needed as a sheet anchor for the market. We may expect at that time that the going market rate will be considerably lower than the bank rate. The main thing is to build up such a strong market that all bills offered will be certain of being taken up."

The Acceptance Council plans to embark upon a campaign of educating the financial public to the broader use of the acceptance.

Further description of its purposes and methods will be found elsewhere in this issue of the Federal Reserve Bulcetin.

During the five weeks between December 20, Operations of 1918, and January 24, the the Federal Re- Federal Reserve Banks were serve Banks. instrumental in placing two additional issues of Treasury certificates in anticipation of the coming fifth war loan, totaling over 1,350 million dollars. These large war finance operations are accompanied by an increase of nearly 200 millions in the holdings of war paper, the New York bank alone reporting additional holdings of over 129 millions of this class of paper. On January 3, immediately following the placing of the 750 million issue, the Federal Reserve Banks show the record total of $1,545.3$ millions of war paper on hand. Two weeks later these holdings had declined to 1,347 millions, to be followed by an increase of 151.3 millions subsequent to the placing of the January 16 issue of 600 millions of certificates. Other discounts on hand declined from 306.8 to 263.7 millions. As the result the share of war paper in the total discounts on hand rose from about 80 to 85 per cent. For each of the eastern banks this percentage is in excess of 90 per cent.

Some liquidation of acceptances is indicated, the holdings of this class of bills showing a decline from 340.7 to 284.5 millions, Chicago reporting a decrease of 58.7 millions under this head. Both the New York and Boston banks report some increases in acceptances on hand.

Redemption of Treasury certificates held by the New York bank to cover temporary advances to the Treasury practically accounts for the reduction from 325.1 to 147.4 millions in the totals of United States short-term securities shown, the latter figure representing largely 1-year 2 per cent certificates, deposited with the Treasury to secure Federal Reserve bank notes in circulation. No material changes are shown in the amounts of United States bonds, largely circulation bonds, likewise on deposit with the Treasury. Total earning
assets, as the result of the changes above noted, show a decline from 2,301 millions on December 20 to $2,174.7$ millions on January 17, and an increase to $2,222.5$ millions in the following week.

For the period under review the Federal Resorve Banks increased their gold holdings from 2,079 to $2,101.3$ millions and their net deposits from $1,549.7$ to 1,686 millions. Federal Reserve notes in circulation reached the high level of $2,685.2$ millions on December 27 of the past year. Since then a marked return movement of these notes to the issuing banks has set in, the total outstanding circulation on January 24 being 218.6 millions less than the arnount shown 4 weeks before.
Aggregate liabilities of the banks on Federal Reserve bank notos in circulation increased during the 5 weeks under review from 111.9 to 126.8 millions. Mainly as a result of the considerable reduction in Federal Reserve note liabilities the banks' reserve percentage shows a rise from 50.6 to 52.2 per cent.

Between December 20 of the past year and January 17, reports from mom-
Condition of member banks.
some decrease in these holdings may have taken place on January 2 and 16, when two series of certificates issued on Soptember 3 and 17 in anticipation of the fourth Liberty loan fell due.

Loans secured by United States war obliga_ tions declined from $1,266.8$ millions on December 20 to $1,182.7$ millions on January 17, the banks in the 12 Foderal Reserve cities roporting net liquidation of such loans to an amount of 57.8 millions. Other loans and investments feil off 162.7 millions, also largoly at the banks in the 12 Federal Reserve cities. Aggregate holdings of United States war securities and loans supportod by such socurities increased from $3,100.2$ to $3,475.3$ millions, and constituted on the latter date 25.1 per cent of the banks' total loans and investments, compared with 22.7 per cent on December 20 of the past year. For the banks in the 12 Federal Reservo cities a riso in this ratio from 24.0 to 26.6 per cent and for the New York city banks alone an even larger rise from 26.7 to 30.2 per cent are noted.

No great change is shown in the amount of Government deposits, the January 17 total of 65.9 millions exceeding the December 20 total by 34.5 millions. A large reduction in these deposits is noted on December 27, more than mado up, howevor, by the incroase shown on January 17. Greater concentration of theso deposits in Federal Resorve cities is noted, tho banks in the 12 Federal Reserve cities reporting total gains of 73.6 millions. Other demand doposits show an upward movement until January 3 , when a total of 10,145 millions is shown, an increase since December 20 of 223.1 millions. At the end of the following week a decline of 78.6 millions is shown, while the total for January 17 was 158.2 millions above the total for the initial week. Time deposits show a steady growth from 1.451 .3 to $1,605.1$ millions, all classes of banks reporting substantial gains under this head.

An incroase from $1,276.9$ to $1,298.8$ millions is shown in aggregate reserve balances (with the Federal Rescrve Banks) while cash in
vault declined from 404.2 to 386.6 miliions. For the banks in the 12 Federal Reserve cities the ratio of deposits to loans and investments shows an increase from 85.1 to 85.6 per cent. For the New York City banks, because of the relatively larger invostment in certificates, this ratio declined from 91.7 to 90.9 per cent.
"Wxcoss reserves" have moved within fairly narrow limits, the total for the banks in the 12 Federal Reserve cities on January 17 being 82.3 millions, or 3.8 millions less than on Decomber 20 of the past yoar.

During the month ending January 10 the net outward movement of gold
Gold imports and exports. was $\$ 93,000$, as compared with a net inward movement of $\$ 1,280,000$ for the month ending December 10 .

Gold imports for the month amounting to $\$ 1,595,000$, came largely from Canada, Mexico, and Colombia, while gold exports totaling $\$ 1,688,000$, were consigned chiefly to Colombia, Mexico, and Canada.

Attention is called to the report of the British Gold Production Committee, addressed to the Lords Commissioners of the Treasury under date of November 29, an abstract of which is printed elsewhere in this issue. It furnishes much additional light upon the gold
production situation and the trend of British opinion upon this important question.

The gain in the country's stock of gold since August 1., 1914 was $81,071,576,000$, as may be seen from the following exhibit:

Gold imports and exports.

1 Excess of exporis ove imports.
Secretary Glass announced on January 17
Financial that, with the approval of representation the President, Mr. Albert abroad. Strauss and Mr. Thomas W. Lamont would shortly leave for Europe for the Treasury in an advisory capacity in connection with the armistice discussions and other financial questions arising at the Peace Conference. Mr. Strauss has been voted a leave of absence by the Federal Reserve Board to enable him to undertake these duties.

## BUSINESS CONDITIONS IN JANUARY, 1919.

Practically throughout the country the month of January has been characterized by the uncertainty incident to a period of transition in business. In some cases more readjustment than had been expected has proved to be necessary. Favorable developments which some had thought would present themselves immediately after the conclusion of the armistice with Germany have been delayed. There has therefore been "hesitation" in business, but no essential loss of confidence in the future of the general situation. Vast changes are now occurring in industry and extensive readjustments in labor. Slackening in productive effort is reported from manufacturing districts, but retail trade has as yet shown only moderate decline, and in some cases little or none. Such dullness as exists is attributed to the usual after-holiday reaction, and it is the general opinion that the influence of changes in manufacturing and wholesaling lines have not yet reached the retailer and consumer.

In the manufacturing field the changes that are taking place are affected primarily by alterations in the prices of raw materials and changes in the direction of demand. The extensive cancellation of Government war contracts has resulted in modifying the plans of many producers, while the withdrawal of Government restrictions upon the movement of raw materials has led others to the adoption of a conservative policy, pending the "settling down" of prices upon a stable basis. The changes that have taken place are, however, described as being productive of less disturbance than might reasonably have been expected, while the tone of the business community and its expectation of prosperous conditions to develop in the near future is strong. There has been some disappointment over the failure of export trade in manufactures to develop promptly, but confidence in the capacity of export demand to develop vigorously is still felt.

In a variety of lines in which the Government has controlled the bulk or a large part of the stock of a commodity, the process of bringing about readjustment is not proving easy. The wool auctions, for example, which were first held seemed to be on too high a price basis, but subsequent revisions of prices have brought about better buying and stronger demand. The large supply of wool now available has limited buying in South America. Producers of dry goods, however, find trade slack, while in the cotton trades reductions of prices which have already occurred are the largest at any time since the Civil War, and the profits at the mills have been correspondingly curtailed. Nevertheless, buyers are still reluctant to take the product off the hands of the manufacturers at existing levels. In the consuming parts of the country purchases of retailers are nevertheless reported about normal, although in many places buyers are cautiously operating upon a cash basis, so far as practicable. In leather and shoes prices continue high and retailers' stocks are reported low. The steel business has been unsatisfactorily small, and as a rule the industry has not much more than a month's orders ahead. Although a reduction of prices ranging from $\$ 4$ to $\$ 6$ per ton on finished materials had been recommended before the close of 1918, demand has not been enlarged, while the purchases by the shipbuilding companies and the railroads have fallen off materially. Purchases for building purposes have been small and would-be consumers who had made contracts at high prices have demanded a revision of the rates charged them.

Price movements show, on the whole, a general tendency to decline, which has become more marked since the opening of the new year. While the general index number of the Bureau of Labor Statistics remains unchanged at 206, the number for producers' goods, as computed by the Federal Reserve Board, shows a falling off from 205 in November to 199 in December. In raw materials there is a slight increase from 197 to 198, due to an
increase in the prices of farm products, from 234 in November to 237 in December. Animal products remained unchanged at 208, as did forest products at 150 , while mineral products declined from 183 to 182. On the other hand, consumers' goods showed a continued increase, rising from 214 in November to 216 in December. During the early part of January there was a sharp downward tendency in many classes of prices, particularly in staple woolens, cottons, iron and steel, and finally in some classes of farm products. The movement toward price reductions is now fully under way. From the second district it is reported that producers of raw materials and manufacturers generally express the belief that prices will hold about as they are now, at least for a considerable time to come, and that those which are holding off from purchasing in the hope that prices will be lower soon are likely to be disappointed. Retailers and jobbers, however, take the view that prices must come down, and that while there has been a seller's market for the past four years, the situation is now entirely changed and we are having a buyer's market. An interesting evidence of this is given by an important firm dealing largely in dry goods, which states that those who speculated too freely in piece goods have been obliged to cut prices sharply, so that woolens and worsteds are offered to-day on a lower basis than mills can manufacture them.

The volume of business during the month, as already indicated, has shown a decided slackening in most productive lines. Information received by the Board's business index reporting section, covering returns up to the end of December, indicates an upward movement in total receipts of grain at primary and secondary markets, while shipments from these same points show a further slight decrease. Stocks on hand in these markets at the close of the month are not materially changed, the aggregate reported at the end of December being $427,000,000$ bushels of total grains. The movement of grains, both to and away from the markets, was practically parallel, figures showing substantially the same increases and
declines expressed in terms of percentages as to wheat, oats, corn, barley, and rye. Flour production has increased about 20 per cent during the month, the stocks on hand at the close of the month, however, remaining practically unchanged. In the coal trade, bituminous production shows recovery, but has not yet reached the high normal level established during the month of October. Anthracite production still shows a decline as compared with October and even with November, when the influenza epidemic was at its worst. The production of beehive coke for the month of December was $2,255,000$ tons, which is lowest since February, 1918. The by-product, however, shows an increase over November, the figure being practically the same as for October, which was the high month of the present year. Conditions during the early part of January indicate continued increase in the production of anthracite and bituminous coal, as compared with the low point reached during the holidays, and are practically back to the standard of the first half of December. In iron and steel, production during December shows an increase in pig iron and a slight falling off of about three points in steel ingot production, the index number (1911-1913 average being taken as a basis) being 128 for November and 125 for December. The corresponding index numbers for pig iron were 145 for November and 148 for December. Unfilled orders of the United States Steel Corporation at the close of December were $7,380,000$ tons, as against $8,125,000$ tons a month earlier, the index number being 154 for November, as against 140 for December.

Information for the first two weeks of January, which was transmitted by one of the principal producing centers, indicates that the production of steel mills in the district is about 65 per cent of capacity, such production, however, being equal to about 90 per cent of the prewar production of the plants. In the nonferrous metals, reports from various producing districts are unfavorable. In Colorado the value of gold, silver, copper, lead, and zinc was only $\$ 33,000,000$ for 1918 , a falling off of $\$ 10,000,000$
from the previous year. In the Joplin district the end of the war brought an end of the price agreement on high-grade zinc ores, and the price of all grades of zinc blende was $\$ 44.60$ in December against $\$ 56.20$ in November. Sales were about stable, or 26,000 tons per month. In spelter the docline in prices brought an increased production in December the output being 47,000 tons, the largest figure since April, 1918. The stocks on hand at the close of the year increased slightly over the figures for the close of October and the close of November. Lead showed the sharpest reduction in prices yot recorded, going down from $\$ 100$ per ton to $\$ 80$ early in December, and $\$ 65$ at the close of the month. Wages were cut correspondingly.

Cattle roceipts at the six markets of the Kansas City district have been about 43 per cent larger than in January a year ago and here shown a highor level of prices than prevailed at the beginning of last year. The supply and movement of meat animals is more extensive than at the opening of 1918 and receipts of hogs as well as of sbeep are particularly heary. Packers report a continued run of the heaviest business they have erer handled. Cotton consumed during the month of December was slightly larger than during November, the relative index numbers being 101 and 105, respectively. During the carly part of January there has, howover, been a tendency of cotton consumption to decline. The number of active spindles during December was slighty more than during November, but since the opening of January has also shown a tendency to fall off. Both cotton and woolen mills are rigidly curtsiling their production for the first time in three or four years.

Labor is passing through a period of redistribution. Demobilization is proceeding rapidly and is alveady liberating a cousiderable quantity of men available for employment, while it is also bringing about a redistribution of men, many deciding not to return to their original places of residence. On the other hand, many employees are being set free in
the so-called "war industries." The process of absorbing the labor made available in these two ways into other lines is still relatively slow. In spite of the existence of unemployment at some points, this condition has not become sufficiently general to cause serious difficulties thus far, and the carly restoration of full activity in business, if accomplished, may result in absorbing the surplus supply of labor from the market comparatively soon.

The labor situation varies very greatly from place to place, and in some of the eastern sections of the country where returned soldiers have been domobilized in large numbers unemployment presents a problem of difliculty.
The following table prepared by the United States Employment Service gives a general estimate of the situation beginning with the week ending November 30, 1918:

| Week anding. |  | $\begin{aligned} & \text { Nuuber cities show- } \\ & \text { ing shortage. } \end{aligned}$ |  |  |  | Number cilles showing industrial relations as: |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | 苍 |  | نٍ |
| 1918. |  |  |  |  |  |  |  |  |
| Nov. 30 | 115 | 29 | 33, 878 | 12 | 11, 11.4 | 90 | 12 |  |
| Dec. 71 | 122 | $\stackrel{29}{ } 3$ | 48, 47.130 | 16 | 22, 300 | 9 | 7 |  |
| Dec. 21 | 120 | 25 | 41,002 | 37 | 66,359 | 88 | 7 |  |

| 1919. |  |  |  |  |  |  |  |  |
| Jan. 4. | 121 | 27 | 33, 307 | 48 | 120,682 | 87 |  | 6 |
| Jan. 11. | 122 | 22 | 20,033 | 47 | 176, 14\% | 81 | 8 | 8 |
| Jan. 18 | 122 | 18 | 18,644 | 5 | 211,700 | 8 | 12 | 12 |
| Jan. 25 | 122 | 18 | 14,350 | 31 | 258,332 | 83 | 14 | 8 |

At Cleveland the unemployed, as reported by the United States Komployment Service, for the week ending Jenuary 25, 1919, amount to 65,000 , as compared with 55,000 for the preeding week; Detroit, 33,000 , as compared with 30,000 ; Bufialo, 17,000 , as compared with 15,000; Seattle, 10,000, as compared with 8,000 ; and Milwaukce, 10,000 , as compared with none. Other cities showing a considerable surplus are the following: Toledo, 9,000 ; Dayton, 8,000; Pittsburgh, 8,000; Butte, 7,500; Bridgeport, 7,000; Portland, Oreg., 6,500; New

Haven, 6,000; Worcester, 6,000; Minneapolis, 5,000 ; and Syracuse, 5,000 .
There has been some measure of industrial unrest evidenced by strikes, but several of these have already been settled, among them that of the Now York City workers in men's and boys' clothing, who, to the number of over 50,000 , have been out for three months. They returned to work on January 23, the employers having granted thoir demand for a 44 -hour working week. A strike of 23,000 employens of the General Electric Co. at Schenectady began December 19 and ended January 11. About 15,000 members of the Marine Workers Union quit work January 9, tying up practically all shipping in New York harbor, but returned to work January 12, and the Federal War Labor Board is conducting hearings on the matters in dispute, which include wages and hours. The only large strike pending in the New York district is that called on January 21 and involving about 35,000 garment workers in the Now York City waist and dress trade. In Connecticut the labor situation is bad and there is an oversupply due to the discharge of employees from munitions factories. Somewhat the same situation exists throughout the manufacturing district of New England, with some few exceptions, the most favorable position being found where progress has been made toward the readjustment of industry to peace conditions, and whero consequently demobilized labor has been readily reabsorbed. In the agricultural regions labor is still scarce and expensive. On the Pacific coast there is some unemployment, but the bulk of the labor available has been rapidly reabsorbed. It is still too soon to state with any degreo of certainty how the labor situation will develop after industry has returned to its normal basis.

It had been expected that building would almost immediately expand with the removal of restrictions which had been imposed upon the movement of materials, but in most districts it would seem that recovery has been thus far very small. There is still considerable
confidence that building must promptly be resumed on account of the shortage of accommodations for business and for dwellings, but the high prices which still prevail have prevented would-be builders from embarking on any large operations thus far. In lumber and other articles classed as materials, prices have in some sections advanced even above war levels since the removal of Government restrictions, while mon employed in the building trades are in some cases asking higher wages than they received during the war period. These factors tend to prevent recovery in construction.

Financially it is reported that banking conditions are encouraging. Money is flowing back to the financial centers, and there has been a shrinkage in the outstanding volume of Federal Reserve notes at a number of banks. United States Troasury certificates have generally been satisfactorily disposed of, although some banks have had trouble in absorbing their quota. This has led to some increase in rediscounting at a number of banks. During the past 10 days, however, thore has been an easier tendency in money and rates have been lower. In some sections banks have not taken up their entire quota of Treasury certificates. Commercial paper is markedly easier, especially for the prime varieties, but rates for collateral loans are but slightly changed. The rate tends to become firm as tho period of the papor increases. Financing in the form of short-term notes and bonds has been successful, but rates have been firm to strong. Foreign loans sold in the New York market during the month of December were offered on terms very favorable to the investor, the conditions indicating clearly approciation on the part of borrowers that the supply of available capital is not overabundant. In New York call loans have fallen from 6 per cent to 5 per cent, and occasionally a renewal rate of 4 per cent was made. Time money is not only somewhat lower in the Now York market, ruling toward the end of January at 5 per cent to $5 \frac{1}{2}$ per cent, but is distinctly moro abundant.

## SPECIAL REPORTS.

## COTTON TEXTILE INDUSTRY.

## [Reported by First Federal Reserve District.]

The market for cotton is the dullest it has beon for years and brokers report very few sales. Mills are inclined to reduce the amount on hand rather than to make purchases. As in the case of woolen mills, buyers of goods are roluctant to commit themselves for future orders until they feel sure that prices are to be maintainod. As a consequence, mills are curtailing as much as possible and roducing pricas as much as costs will permit. Everybody connected with the cotton textile industry, realizes that there is no surplus of goods and oventually a good demand is bound to develop, but the question is, at what price level. In the meantime, mill owners are unwilling to accumulate goods manufactured at the present high cost of production, with mill labor recoiving the highest wages on record. Some manufacturers claim to be much discouraged both because of the drop in price of their product and because of the small demand for it. They claim that the margin of profit is very small, if it exists at all, due to the decline in prices for the products and curtailment of part of thoir machinery, theroby causing an increase in proportionato overhead charges. The larger intorests, however, and thoso experienced over a long term of years, feel that they will have a big demand for they output as soon as a price lovel can be found satisfactory to buyer and seller, and this, their foel, will come within a month or so.

## IRON AND STREEL.

[Reported by the Third Fedoral Reserve District.]
In the iron and steel industry a waiting policy by both buyers and sellers has apparently been pursued. A fow weeks before the end of the year the gencral committee of the American Iron and Steel Institute recommended certain reductions in prices, ranging from $\$ 4$ to $\$ 6$ per ton on finished materials. These prices were suggested for the free market which was to hold sway after the first of the year, when price restrictions were all removed. The turn of the year did not bring as much activity as was expected, as many of the largest sellers were unwilling to cut prices while costs remained at so high a level. After the holidays, in keeping with the small quantity of iron and steel being ordered, many mills resumed operations with reduced working forces. The two largest consumers of iron and steel products are the shipbuilding companies and the railroads. Re-
cently they have been small purchasers and the demand for structural iron and steel also has been small. Many customers who had contracted at high prices insisted that prices be lowered. At first mills were not disposed to grant their requests or to offer reduced prices on new orders, but there is now a tendency to make some concessions, with the result that inquiries and orders have increased somewhat. Production of steel mills in the district is now about 65 per cent of capacity, but such production is equal to about 90 per cent of the prewar capacity of the plants.

## ZINC AND LEAD ORES.

[Reported by the Tenth Federal Reserve District.]
In the Joplin district the end of the war brought an end to the price agreement on high-grade zinc ores, and once more these ores are practically on the open market, with heary reductions in prices. The average price for all grades of zinc blende in December was $\$ 44.60$ against $\$ 56.20$ in November, sales being about 26,000 tons, or about the same as in November. Calamine ores remained steady, the average price being $\$ 33.86$. Lead took a dramatic tumble early in December to $\$ 80$ per ton, after holding steady for months at $\$ 100$, and with a further decline closed the month at $\$ 65$ per ton, a reduction of 35 per cent in 30 days. To meet this, operators revised the scale of wages downward, the cut amounting to 50 cents per day for day men and 4 cents a ton for piecework shovelers, effective January 1. But, aside from a small reduction in the price of powder and steel, mining supplies are the same in cost. Producers are making efforts to adjust themsolves to this new condition. Coal mining operations were generally more satisfactory in 1918 than in the previous year, although restricted by labor shortage and sickness; production from the mines in this district in 1918 were about $1,400,000$ tons more than in 1917. Indications are that the output will be larger this year with the improvement in conditions.

## OII DEVELOPMENT.

[Reportcd by the Eleventh Federal Reserve District.]
The activity caused by oil development is spreading like wildfire, and a genuine "boom" exists in many of the smaller towns in Eastland, Erath, Comanche, Stephens, and other counties in the central west portion of the State, where wells are being brought in daily. All sorts of rumors are being circulated to entice investors; principally those, of course, which chronicle
the making of fortunes overnight. As a result of this activity, local business at the smaller towns in the counties mentioned is the heaviest of record. The influx of oil men, the resultant increase in the population of the oil centers, and the business resulting has caused a dearth of housing facilities, and locations for new business are greatly sought. Tho overflow contributes to the business of the largor towns adjacent to the fields. Oil exchanges are being opened daily in Dallas and Fort Worth.

## Development of Acceptance Movement.

Two events of interest to the establishment of a discount market have occurred during the month of January-the formation of the Acceptance Council and the opening of the New York Discount Corporation.

At a meeting held at the rooms of the New York Merchents' Association in New York City on January 21, there was formed a body to be known as the American Accoptance Council, to succeed the American Trade Acceptance Council. The purpose of the organization is set forth in Article I of its articles of association, as follows:
The American Acceptance Council is hereby organized for tho purpose of conducting and directing a nationwide educational campaign designed to inform the husiness people and bankers as to the merits of trade and bankers' accepteaces, the method of their use in toreign and domestic morchandising, and for the further purpose of aiding in the establishment of a comprehensive open discount marict and to assist in other matters that wili improve the credit system and strengthen the financial position of America.

In line with these efforts to develop a sound diseount market is the work of the Discount Corporation of New Iork which began business on January 2. The company will devote its resources and energies to the development and maintonance of a stable, open discount market and will discount, purchase, and distribute bills originating in foroign and domestie trade. Its policy will be to direct to its bank customers attractive acceptance business originating with sound commercial and industrial enterprises and to furnish to or purchase from its customers bills desirable both as to quality and maturity:

## Providing Increased Financial Facilities in Great Britain.

Herewith is reprinted for convenience of reforence and as an important official contribution to the discussion of after-war policies dealing with the problem of trade, industry, and finance, the report of the Committce on Financial Facilities, presented to Parliament under date of November 21, 1918. The committee was appointed by the chancellor of the exchequer, jointly with the minister of roconstruction, on Novomber 26, 1917, and consisted of the following: Sir Richard V. Vassar-Smith, Lloyd's Bank (chairman); Sir John Bradbury, K. C. B., Secretary of the Treasury; Mr. A. E. L. Chogiton, of Ruston, Proctor \& Co. (Ltd.), Mr. E. Brocklehurst Fielden, deputy chairman, Lancashire \& Yorkshire Railway Co.; Mr. Algernon F. Firth, president of the Associated Chambers of Commerce of the United Kingdom; Mr. Robert Fleming; Mr. A. C. D. Gairdner, Union Bank of Scotland; Mr. Frederick C. Goodenough, of Messrs. Barclay \& Co. (Ltd.) ; Sir Alexander McDowell, K. B. E.; Sir Aloxander Roger, Ministry of Reconstruction ; Mr. John Sampson, as represcotative of the Controlled Establishments Association; Mr. A. W. Tait, of Messrs. G. A. Touche \& Co., with Mr. R. C. Smallwood as socretary.

The committee was instrueted "to consider and roport whother the normal arrangernents for the provision of financial facilities for trede by means of existing banking and other financial institutions will be adequate to meet the needs of British industry during the period immediately following the tormination of the war; and, if not, by whet emergency arrangement they should bo supplemonted, regard being had in particular to the special assistance which may be necessary -
"(a) To facilitate the conversion of worls and factories now engaged upon war work to normal production;
"(b) To meet the exceptional demands for raw materials arising from the dopletion of stocks."

The report of the committee follows:
Introductory.

1. We have now tho honour to submit our report upon the matters reforred to us. In the
course of our enquiry we have held serenteen meetings and cxamined eleven witnesses; we hare also considered a large amount of documentary evidence, together with the reports of certain departmental committees dealing with various branches of trade and industry.
2. Although the provision of financial facilities is undoubtedly an important factor in the reconversion of trade and industry, we do not think that it is by any means the primary factor. The remedy for the wastage of capital during the war lies mainly in increased production and genuine saving. A rapid return to normal conditions will depend primarily on the amount of raw material and labour available, and should there be a shortage in either case, upon the efficient, distribution of the available supplies to the most urgent national needs of production. This problem is intimately bound up with questions such as the amount and utilisation of the available slaipping tonnage, the rectifcation and maintenance of the forcign exchanges, and the manner in which the curroncy note issue will be dealt with. Mueh dependis upon the successiful solution of these problems, which form the foundations upon whioh financial policy rests ultimatoly, particularly in connotion with the granting of credit facilities.
3. The terms of reficrence which have been submittod to us appear to fall naturally into two main divisions-
(1) The financial needs of trade immediately after the war, and the respect in which these needs will diffor from the needs under normal conditions.
(2) The provision of financial facilities to meet thess needs.

In the first part of our report we propose, therofore, to deal with the financial requirements of trade and industry.

## Part I.-The financial needs of trade and industry after the war..

4. In the course of our enquiry wo came to the conclusion that it was not possible to obtain information upon which to frame an estimate of the total cost involved in the reconversion of industry from a war to a peace footing. And, as the special circumstances of many of the more important trades and industries have been, or are now, the subject of enquiry by special committees appointed by various departments of State, we determined, after a review of all the circumstances, to rely mainly upon documentary evidence in connection with this section of our enquiry.

## RECONVERSION OP WORKS.

5. One of the largest factors in the demand for assistance undoubtedly will be the necessity for reequipping factories and works, and altering machinery only usoful for war production, to machinery suitable for peace-time production. The volume of the demand will differ in various industries in accordance with the magnitude of the displacement which has taken place, and the degree in which the character of the war output is removed from the normal peace-time output of the firms concerned. During the reconstruction poriod the manufacturer will be conironted by two scparate calls upon his financial resources, operating more or less at the same time. In the first place, he will have to provide for the expenditure necessary for the reconversion of bis plant and works, and secondly, in order to produce the same amount of output after the war as was produced before the war, a larger amount of working capital will be reguired to mete tho onhanced cost of labour and materials and the general increase in standing charges. Stocks of faw materials have been depleter and stocks of the manufactured article have likewise been depleted, or have disappeared altogethor. Raw material must be acquired, generally speaking, at substantially higher prices; while interrupted industries are in the process of being reestablished, stocks, both of raw material and semimantuctured articles, may have to be carried for longer periods than under normal conditions. There will be, moreover, in many of these industries, a more or less unproductive period by reason of the shortage of matcrials, during which standing charges will have to be provided for. This will rary, but it will obviously be greater in those industries which are subsidiary in the sense that the raw material required is the finished article in one or more previously applied manufacturing processes. This unproductive period will, in many cases, have to be bridged by means of increased financial facilities. We anticipate an increased demand for loans to meet the circumstances which we have just described, which are abnormal in character and unprecedented in dimensions.
6. The very great increase in the volume of production which has taken place-notably in the engineering and steel trades-must also be taken into account. Tho increased demand for war material of all descriptions has resulted in the establishment of many entirely new firms, and necessitated very large extensions of plant and works on the part of established
firms. The situation will, therefore, be complicatod by the formation, in many industries, of an enlarged basis for a greatly increased commercial output compared with the prewar output. This will necessitate seeking new markets, and the establishment of new industries, and consequently an increased demand for credit facilities and additional capital.

## REPAIRS AND RENEWALS.

7. The necessity for undertaking, at higher prices, repairs which have been in abeyance owing to the war and which are now much in arrear, constitutes a large item of expenditure which will affect industrics at present engaged upon supplying the needs of the civil population, as well as those industries engaged upon war work.

GENERAL CHARACTER OF THE DEMAND.
8. Owing to the unprecedented nature and dimensions of the change, the general character of the demand for assistance will differ from the demand in normal times, in that it will consist of a greater percentage of demand for loans secured upon capital goods, i. e., constructional material, etc., compared with loans secured upon consumable goods.
9. These demands may be summarized briefly as follows:
(a) For a considerable period after the war a greater demand for working capital, owing to the increased cost of labor and materials, the necessity for giving longer credit, and the anticipated expansion in the volume of trade.
(b) A greater demand for extended credits for the purpose of replacing, at higher cost, machincry and plant which has fallen into disrepair on account of the war.
(c) Requirements for reconversion of plant and works which may, in many cases, be on the bordor line between working credit facilities and new capital requirements in respect of permanent outlay.
(d) New fixed capital requirements in respect of permanent outlay.

ABILITY TO MEPT FINANCIAL REQULIREMENTS.
10. It remains for us to consider the ability of trade and industry gencrally to meet their financial needs during the reconstruction period. Some of our witnesses have given expression to fears of a general shortage in the supply of money and credit for financing
post-war trade and industry. We think that these fears are exaggerated.
11. The ability to meet the requirements for the reconstruction of factories and works is dependent mainly upon the amount of reserves which it has been possible to accumulate out of past profits. Speaking generally, in this connection, trade and industry may be grouped into three main divisions.
12. In the first place, there is undoubtedly a large group of firms, previously established in various industries, who have been engaged upon the manufacture of war materials from a date soon after the commencement of the war. These firms have been able to do a very considerably increased amount of business, and have made large profits. In spite of the increased taxation, we think that a very large number of these firms will have been able to accumulate reserves sufficient for the needs of reconstruction. Speaking of those established firms, the evidence submitted indicates that their financial position has improved to an extent which should enable them to raise any new capital which may be required, and to obtain from their bankers any increased facilities, which may be necessary during the reconstruction period.
13. The second group consists of a number of firms who became engaged on war work at a later period of the war, when taxation was on a higher level, and the opportunity for accumulating rosorves was, consequently, not so great. Many of these firms have been called upon to make large extensions to their works in order to cope with the incroased demand for war material of every description. In cases where extensions have been made, we understand that in the majority of instances these extensions have been written down to the estimated post-war value, to the controlled owner, and that the writing down has gencrally been on a liberal scale. Although it is true that, in many cases, this may result in the bulk of their liquid resources being locked up in bricks and mortar and fixed plant, it must also be taken into consideration that alteration by way of readaptation to a different class of output, or by way of reduction in size, is a much less expensive matter than an extension.
14. The third group comprises a number of entirely new firms, which have come into existence owing to the increasing demand for war material of all kinds, without any previous commercial history and with no trade or industry to which to revert after the war. From our own knowledge and experience, and from
the evidence which has been placed before us, we are of opinion that the chief financial difficulties will be experienced in connection with this group. It has been urged upon us that it is not in the national interests that these firms should be allowed to peter out after the war, and that every inducement should be given them to continue in business and undertake commercial manufacture, if necessary even to the extent of granting them State financial assistance. We feel that, even if State financial aid is desirable, there are many difficulties in granting such aid. Apart from the fact that it might be regarded as unjust were these firms enabled, by means of State aid, to compete in established industries with firms previously employed in the same industry, it will be difficult, if not impossible, to guard against wastefulness and inefficient managoment, and to insure that the money was properly and economically employed.

The solution in these cases appears to us to lie mainly in the establishment of new industries. Everything will depend, however, upon the economic soundness of the industry undertaken, and the ability to meet and maintain the industry in the face of possible future competition. It is not possible to formulate any specific scheme for providing financial assistance for cases of this kind; the capital required for establishment of these industries must necessarily be furnished by the investor or by the individual partners engaged in the business. Each case must be judged on its individual merits, and the ability to attract the capital necessary for its establishment will depend upon the inherent soundness of the proposition and its future prospects.

## FUTURE GOVERNMENT POLICY.

15. An uncertain outlook for the future is one of the greatest deterrents to industry and finance alike. Whilst we recognise the difficulty at the present time of laying down in detail the future policy to be adopted in this country in connexion with trade and industry, there are certain questions upon which we think the Government might make known their policy at an early date. It would, undoubtedly be of great assistance to manufacturers and others in laying down their plans for the future, if the policy to be adopted with regard to the following were made known:
(a) The future fiscal policy of this country.
(b) The rationing of raw materials, and priority of essential industries and urgent requirements.
(c) The break clause in connexion with the termination of contracts for munitions of war.
(d) The disposal of State owned factories and surplus stores.

We have already drawn your attention, in a letter dated 1st November, 1918, to the necessity for immediate action in connexion with the break clause. Judging by the evidence placed before us, there existed a great deal of apprehension with regard to the effect of those clauses. Stress was laid by witnesses, not only upon the dislocation and financial loss which would result from too sudden a termination of these contracts, but also upon the effect which such a step would have upon the labour market through a great number of hands being thrown out of employment. They urgo the desirability of continuing contracts on a gradually reducing scale, rather than imposing an abrupt termination, wherever this can be done without serious economic objection. We understand that steps have been taken to encourage manufacturers to undertake commercial contracts as quickly as possible, and we think that, wherever possible, steps should also be taken to secure in advance adequate supplies of raw material for essential industries, either by immediate purchase or by forward contracts.
16. As the question of providing assistance for the reconstitution of the small one-man businesses is, we understand, under consideration by the civil liabilities demobilisation committee, and the question of providing financial assistance for housing by the housing (financial assistance) committee, we consider these questions are outside of the scope of our enquiry, and also that the question of providing financial assistance for the acquisition of land and the promotion of agriculture does not come within our terms of reference.
Part II.-The provision of fnancial facilities.
the credit system before the war.
17. To arrive at a correct understanding of the financial position after the war, it is necessary to describe, very briefly, the credit system before the war, and the changes which have occurred during the intervening period. In normal times, the necessity for maintaining an effective gold standard acted as an automatic check upon the undue expansion of credit. As the balance of indebtedness of this country with foreign countries became unfavourable and the exchanges moved against us, it became profitable to export gold to meet foreign claims. This export caused a gradual shrinkage in the available
supplies, and the consequent reduction in the Bank of England ratio of reserve to liabilities, and so necessitated a rise in the bank rate, which, in turn, caused a general rise in interest rates. This rise in interest rates had a twofold effect. In the first place, it attracted gold to this country and induced gold which otherwise would have been exported to remain, and secondly, it induced people to pay off loans, and discouraged new loans being sought for and created. If the drain of gold was severe money became "tight" and it became difficult to renew existing loans; this caused the sale of goods and produce upon which the loans were secured, and so brought about a fall in prices which encouraged exports and discouraged imports, and so gradually adjusted the situation.
18. But, apart from the external or international aspect, the internal currency also consisted of gold (or notes secured upon gold) which was the only legal tender for the settlement of debts. It is true that gold was unnecessary for the settlement of commercial transactions, and that the majority of these transactions were settled by cheques, but every depositor, with money lying to his credit at his bank on current account, besides the right of transferring the amount by cheque, had also the right, at any time, to withdraw the whole or any portion of the amount in gold. As the manufacture of banking credit by the process of granting loans albo involves a corresponding increase in the deposit liabilities, the amount of additional loans which it was safe to grant had to ber a relation to tho supply of, and possible demand for, gold.
19. There was also the further check that whilst a great expansion in credits causod an increased activity in trade it also caused a rise in the price of commodities, owing to the increased competitive demand due to the creation of additional purchasing power; this in turn caused a rise in wagos, and so, in one way or another, brought about an increased demand for gold for currency purposes, which resulted in a larger amount remaining in circulation with a consequent reduction in the reserves. This set of circumstances thus acted in the same manner as an adverse forcign exchange, and brought into play the same remedial measures.
20. It will be seen, therefore, that the gold standard not only maintained the whole financial structure in a state of equilibrium, but through finance it exerted a powerful influence upon, and kept the general level of domestic prices in equilibrium with gold or world prices. It acted as a wholesome restraint upon over-
trading, and often adjusted situations which, had they remained unchecked, might have developed into severe commercial crises.

## THE POSITION TO-DAY.

21. Owing to the war, the conditions prevailing to-day are entirely diffcrent. There is no free international market in gold, the natural operation of the foreign exchanges has been intorrupted, and the internal gold circulation has been replaced by a currency note issue. There is no legal limit to the amount of currency notes which may be issued, and there is, therefore, no automatic check upon the expansion of credit.
22. The total deposits of the banks of the United Kingdom (other than the Bank of England), which amounted on the 31st December, 1913, to $£ 1,070,000,000$, are now approaching $\mathfrak{x 2 , 0 0 0 , 0 0 0 , 0 0 0 \text { . These figures are }}$ an indication of the very great expansion of credit which has taken place up to the prosent time, and which still remains unchecked. The enormously increased purchasing power thus created has, in our opinion, been one of the main factors contributing to the rise in prices which has taken place.

## THE POSITION AFTER THE WAR.

23. The financial situation during the reconstruction period will be infiuenced profoundly by the prevailing financial conditions at the termination of the war. Having regard to the fact that the very great expansion in credits which has taken place during the war will probably persist for a considerable period after its termination, wo are unanimously of opinion that, if the reconstitution of industry and commerce is to be achieved on permanent and sound economic lines, some restriction must be imposed at as early a date as possible upon the creation of additional credit by the restoration of an effective gold standard. To attempt to rebuild industry by means of a further indiscriminate expansion of credit would not oniy endanger our position as the financial centre of the world but would inevitably lead before long to grave disaster.
24. For this reason we think that State borrowing should cease as soon as possible after the conclusion of the war. It must be borne in mind that new commercial capital issues have been largely in abeyance since the commencement of the war, and that, consequently, there will be a great demand from trade and industry
for additional capital. State borrowing can only be undertaken in competition with these demands. We are also of opinion that any Government guarantee to bankers to enable them to provide, by means of credits for fixed capital expenditure nccessary for the reconstitution of industry is undesirablo as being likely to cause a further expansion of credit together with an additional rise in prices.
25. On the contrary, we believe that the restoration of sound financial methods will necessitate the institution, at an early date, of measures to reduce gradually the undesirable credit inflation arising out of the present enormous volume of short-dated Government debt, and that it will be necessary for the State to undertake funding operations for this purpose.
26. The objects to be aimed at in order to achieve the reconstitution of industry on sound financial and economic lines may be summarized briefly as follows:
(1) To reestablish a sound financial basis by means of an effective gold standard.
(2) To check any undue expansion of credit which can only be reflected by a further rise in prices.
(3) To take stops to reduce to more normal proportions the inflation of credit due to the war.

## BANKING FACILITIES.

27. By banking facilities we mean the normal requirements for carrying on the ordinary business of the country which assumes the granting of loans which do not constitute a lock-up of funds such as would impair the liquidity of the resources of the banks.
28. In order to obtain from bankers themselves an opinion as to the ability of the banks to meet these demands, a meeting of representatives of the London clearing banks was held on June 20, 1918, under the auspices of our chairman, at which the representative of the country bankers' association and others were also present. This meeting was unanimously of opinion that the banks would be able to provide all the facilities of this character required by trade and industry during the transition period. In addition to this, banking witnesses have given evidence before us, and we have also examined evidence given by similar witnesses before the committee on financial risks attaching to the holding of trading stocks. From the evidence thus submitted to us, we are of opinion that, so far as demands of this character are concerned, the situation may be leit safely in the hands of the banks.

## EXTENDED CREDIT FACILITIES.

29. By extended credit facilities we mean loans involving a lock-up of funds for a more or less extended period and secured upon assets not readily realizable, including loans required for giving "long trading" credit, either at home or abroad, and loans secured against capital goods which are either dependent upon future profits for repayment or will be replaced ultimately by an issue of new capital. The provision of adequate facilities of this character, if the demand be upon a great scale, which in many quarters is thought will be the case, presents one of the chief difficulties with which we have to deal. It is clear that the banks, as at present constituted, however willing they may be, will only be able to assist in a limited degree, owing to the necessity for keeping a large proportion of their funds in a liquid state.
30. We have already stated (pars. 5-9) that, in our judgment, the character of the demand for assistance during the reconstruction period will differ from that of normal times. This difference is likely to be of a temporary nature. To meet these demands, we are of opinion that, in the first place, the banks will, for the time being, have to depart in a measure from traditional customs when judging the character of the risk involved. It will be necessary to exercise discretion upon rather broader lines. And secondly, to enable them to do this with greater safety and confidence, we are strongly of opinion that a substantial increase in their paid-up capital is desirable. Apart from the necessity for being in the strongest possible position to meet the demands which we have foreshadowed, such a measure is in our opinion also necessary to enable the banks to grant the extended credit and generally wider facilities which will be required in the future, if trade and industry is to be in a position to compete successfully' with the foreigner. Moreover, in view of the decline in recent years of the ratio of paid-up capital and reserves to deposit liabilities, and increase is eminently desirable. From the evidence which has been placed before us and from the trend of recent events in the banking world, we beliove that bankers themselves are, genorally speaking, agreed upon the desirability of this increase. We recommend, therefore, that every facility should be given by the Governmont to enable the issue, at the earliest possible moment. of any new share capital which may be found necessary.
31. During the period immediately following the war it is essential that the available supply
of capital and credit should be devoted in the first place to the assistance of the most urgent national needs for production, and, whilst it will be necessary for the banks to take a liberal view of the requests for loans, we think that, in order to check any outburst of speculation and prevent the inception of enterprises of an unessential character, it will also be necessary to exercise some discretion as to the purpose for which the money is required. The rationing of the available supplies of raw material, if it be found necessary, will furnish a measure of guidance in this connection.
32. To enable the banks to do more in the direction of granting long trading credits, we are also of opinion that it is desirable that bankers should make more widely known their willingness to accept deposits for long periods, at fixed rates of interest. We beliere that, if they were encouraged to do so, a number of depositors would be willing to deposit their money at fixed rates of interest, for periods of from one to five years, without the right of withdrawal. The removal of the liability to withdrawal would thus enable the banks to grant loans for longer periods.
33. In the foregoing paragraphs we have recommended the only practical remedies which appear to us to be possible at the present time. It must, however, be borne in mind that the efficient organisation of trade and industry on up to date lines is, in itself, an important factor when considering financial assistance. We welcome, therefore, the policy of trade organisation and co-operation which has recently become manifest, as furnishing greater financial security, and a sounder basis for the granting of credit facilities. A well balanced capital account without an undue proportion of debenture debt compared with the share capital is also of the greatest importance when considering long credits. It is obvious that a bank cannot be expected to take the risk of advancing money for long periods in cases where there is already a prior lien upon the assets in the form of a large debenture issue.

The principal manufacturing establishments of this country (although their capitals are small compared with those of Germany and the United States) are now organised on a jointstock basis, and have access through their shareholders (who, in individual cases, number many thousands) to the source from which new capital can be obtained. The war has placed them, generally speaking, in a position where issues of new capital are likely to be well responded
to; and we suggest that they should, by increasing their capitals-thereby increasing their available resources not only by the increased capital itself but also by the improved credit facilities which it will enable them to com-mand-put themselves in a stronger position to meet the hoped for extension of production, to carry stocks abroad, to furnish longer credits to their customers where necessary and advisable, and to take a part in the financing of large contracts which they may obtain for their manufactures, either within the Empire or elsewhere.

Additional capital so raised would also enable leading concerns to develop new lines of enterprise, more or less allied to their existing business, with much less risk and more prospect of ultimate success than by the formation of new and independent concerns.

If a portion of any such issue of shares of a preferential character, and giving a good return in dividends, were reserved for their workpeople, it would materially assist financially and in other equally important directions.
34. In our opinion, institutions are necessary to provide additional assistance for trade and industry by developing similar facilities to those which have been provided by the German banks. In this connexion we have to notice the formation of the British Trade Corporation. This institution was formed as a result of the deliberations of the committee appointed by the Board of Trade to investigate the question of financial facilities for trade. Its constitution and functions were laid down by the committee as follows:
(1) It should have a capital of $£ 10,000,000$. The first issue should be from $£ 2,500,000$ to $£ 5,000,000$, upon which, in the first instance, only a small amount should be paid up, but which should all be called up within a reasonable time. A further issue should be made afterwards, if possible, at a premium.
(2) It should not accept deposits at call or short notice.
(3) It should only open current accounts for parties who are proposing to make use of the overseas facilities which it would afford.
(4) It should have a foreign exchange department where special facilities might be afforded for dealing with bills in foreign currency.
(5) It should open a credit department for the issue of credits to parties at home and abroad.
(6) It should enter into banking agency arrangements with existing colonial or Britishforeign banks wherever they could be con-
cluded upon reasonable terms, and where such arrangements were made, it should undertake not to set up for a specified period its own branches or agencies. It should have power to set up branches or agencies where no Britishforeign bank of importance exists.
(7) It should inaugurate an information bureau.
(8) Itshouldendeavour no winterfere in any business for which existing banks and banking houses now provide facilities, and it should try to promote working transactions on joint account with other banks, and should invite other banks to subait to it new transactions which, owing to length of time, magnitude, or other reasons they are not prepared to undertake alone.
(9) Where desirable, it should co-operate with the merchant and manufacturer, and possibly accept risks upon joint account.
(10) It should become a centre for syndicate operations, availing itself of the special knowledge which it shall possess through its information bureau.
35. We have had the advantage of an interview with Lord Faringdon, chairman of the above-mentioned committee, and now governor of the British Trade Corporation. Lord Faringdon explained the work which will be undertaken, and gave us particulars of some of the plans which have been laid down for the future. The corporation was designed to fill a gap in the financial machinery of this country and to supply needs which have long been felt by trade and industry. Apart from the assistance which it will be able to render in connexion with overseas contracts, the development of existing markets and the securing of new ones, its sphere of usefulness is large, and one of great importance to the development of trade and industry.

But, as the business which the corporation was formed to undertake exists to-day only to a limited extent, owing to the restrictions imposed upon trade in consequence of the war, it is difficult for us to estimate either the volume of demands which will be made upon it, or its competency to meet them in their entirety. Obviously its power to do so will be limited by the means now at its disposal and by its ability to raise additional capital. Additional institutions of this choracter may be required in the future. The corporation has, however, not yet had adequate opportunity for demonstrating its usefulness, which we believe will be great, and is not yet firmly established as an integral part of our financial machinery.
36. Several suggestions have been laid before us for the formation of trade banks or cooperative credit associations of other types than those already referred to, but after careful consideration of all the circumstances we have come to the conclusion that it will be better to utilise the machinery already available rather than to create now, to meet a set of unknown circumstances, new types of institutions.

## NEW ISSUES.

37. We have already alluded to the fact that commercial issues of new capital having been largely in abeyance since the commencement of the war, it is reasonable to expect a very large number of appeals for new capital, and that if the State is also under the necessity of borrowing, it will create a further element of competition which is likely to force up money rates to a high level. But it is also most essential for the future prosperity of this country that the available supply of capital should flow, in the first place, to essential industries, and not to the support of enterprises of a speculative or unessential character. The increased cost of living and high taxation will induce many people to seek a high return on their capital with less consideration for safety, and will consequently encourage the issue of onterprises of the latter character. Whilst we are in favour of an early removal of all measures of State control of finance and industry alike, at the same time we are of opinion that it will be advisable to maintain, after the war, some control over new issues, at any rate until such time as State borrowing in connection with the war is completed.

For these reasons we are also of opinion that it will be necessary for the same period to exercise, as far as possible, superyision over the export of capital, and the objects for which such export may be dosired. Apart, however, from control of new issues during the reconstruction period, we are of opinion it is most desirable that, if possible, permanent measures should be taken to prevent, or make more dificult, the promotion and issue of unsound propositions. Consideration of the subject in this wider aspect does not come within the scope of our enquiry, but we think it might be possible to strengthen the companies' acts so as to achieve this purpose, and we hope that this may be carried out.
38. We are impressed by the enormous potential increase in the number of small investors, which is shown by the figures pub-
lished by the National War Savings Committee. The continuance on the part of the people of this country of the habit of investing their savings constitutes a most important factor in the provision of the capital necessary for the rapid reconversion of trade and industry.

The destruction of capital during the war can only be made good by genuine saving. An increase in the habit of saving on the part of the community in general means an increase in the real capital wealth of the country which is bound to benefit trade and industry.

It is impossible to overestimate the value of the work done by the National War Savings Associations throughout the country in encouraging habits of thrift and coonomy. Government securities furnish by far the best and safest medium for the investment of small sums of money, and we are glad to notice that steps are to be taken, by means of saving associations, to continue the policy which has proved so successful during the war.
39. The provision of the capital required for the reconversion of trade and industry is dependent largely upon the machinery for promoting enterprises, and offering for public subscription new issues of capital which will be required by commercial and industrial concerns. In Germany the great banks undertook a large amount of this class of business; they were willing to take a hand in any promising industrial enterprise, and furnish money at an early stage in its career, ultimatcly, if the concern proved successful, themselves making the issue to the public. For this purpose, and in order to spread the risk during the initiatory stages, they surrounded themselves with a secondary group of industrial banks, syndicates, \&c., who participated with thom in the business. There were many advantages in this system. In the first place a channel was provided through which the business could flow, and secondly the customer of the bank was able, through the branch of his own bank, to obtain an opinion upon any enterprise or contemplated extension to his works or business without having to go further afield, and this, too, with the additional knowledge that if his project was a sound one he would receive their assistance in raising the necessary capital.
40. A second important point is that the German method furnished a greater degree of protection to the investor, as the banks were in a measure responsible for the bona fidos and sound character of the proposition. This led to a more careful examination of the prospects,
and ensured that enterprises were not offered for public subscription until they were more or less found to be successful as going concerns. There is also the further substantial advantage that the bank was able to maintain a measure of control through the banking account of the business, and thus was able to prevent overtrading, and ensure that the business was conducted on sound lines.
41. We do not suggest that the deposit banks in this country should adopt the German method of conducting this class of business. We believe that the machinery, to which the British Trade Corporation should form a valuable addition, is already in existence. It consists of a group of financial houses, comprising investment trust companies, well-known issu:ing houscs, merchant bankers, and others. There will be many openings in this country, after the war, for the remunerative employment of capital. We think that it is within the power of this important group, without neglecting enterprises abroad which would be likely to be advantageous to trade, to render further assistance, by identifying themsclves with productive industries in this country and rendering financial support in the earlier stages of development, ultimately undertaking the placing of the issue of new capital with the investor.
42. The institution of a system of working arrangements between the members of this group and the various joint stock banks Would, we think, be of great assistance. It would form a well-defined channel through which the business could flow and would combine, on the one hand, the knowledge gained by the bank of the past history, integrity, and ability of the customer and, on the other hand, the financial knowledge and experience of the trust company or issuing house. And further, if means can be deviscd by which the banks can undertake some responsibility for the bona fides, not necossarily the future success of the undertakings on behalf of which they agree to accept subscriptions, it will add a very considerable measure of protection to the investor.

## STATE ADD.

43. We have considered carefully the necessity for State aid, more particularly as applied to banking. We have discussed schemes for the issue of industrial securities guaranteed by the Government wholly or partially, as to interest only and as to both principal and interest, and also the possibility of making
direct advances to individual firms. We have already stated (par. 24) that we do not recommend any assistance to bankers; and in paragraph 14 we have discussed the difficulty of granting such aid to individual firms. Speaking generally, State aid by means of advances implies also a measure of State control. From the evidence that has been placed before us we believe that manufacturers and traders are unanimously in favour of the romoval of all State control of industry at as early a date as possible. This being the case, it is clear that applications for assistance by means of a loan from Government would only be made after refusal in other quarters. Obviously the majority of applications would therefore be an invitation for the State to step in where experts had already refused, and would hardly form suitable investments for public funds.
44. We think, however, that cases of hardship may arise, more particularly in connection with firms who have undertaken, under considerable pressure from the Government, the manufacture of munitions of war. This hardship is likely to be accentuated in cases where a great change in plant or the building of large extensions has been necessary. It is possible that in many cases, owing to high taxation and other causes, the fuil significance of the change and the expenditure necessary for reconversion of plant and machinery has not been realised by the manufacturers in question, actuated as they may have been by patriotic motives or under pressure from a Government department. We think that it is only just that the Government should give sympathetic consideration in all such cases. We do not think it is possible to design any scheme for dealing with them on general lines, either by means of loans or otherwise.
45. We understand, however, that individual cases already reccive sympathetic treatment at the hands of the department, but we are of opinion that it would facilitate the investigation of them and create an additional measure of confidence if a small committee were formed, consisting of Government officials and business men in leading industries, either to consider them in the first instance or to act as a tribunal to which appeal could be made when the applicant considered that he had not received adequate consideration at the hands of the State.
46. Circumstances may arise in connexion with certain key industries which will necessitate the granting of State financial assistance in some form or another. It may that the
issue of securities with some form of a Government guarantee will be found to be the best means of raising the necessary capital in cases of this character, but we do not think this method could be adopted with advantage as a means of assisting the ordinary commercial and manufacturing enterprises in this country.
47. It has been urged upon us that the present high rate of excess-profits duty has prevented the formation of adequate reserves and has resulted in many cases in the depletion of the liquid resources necessary to furnish working capital and provide for reconversion expenditure during the reconstruction period. Whilst this subject is under more intimate consideration by the committee on financial risks attaching to the holding of trading stocks, we are of opinion that it would be of great assistance to manufacturers and others who find themselves in this position if arrangements can be made by which a portion of the tax can be retained for a period in the form of a loan. The rate of interest to be charged and the terms and conditions upon which it is granted, whilst not of a penal character, such as might render the concession useless, should be so framed as to secure early repayment, protect the Government from loss, and prevent applications of a frivolous nature.

## Gold Output Question.

Two reports-one British, the other Ameri-can-relating to the general question of gold production and supply, have been rendered available to the public during the past month. One of these is the work of the Department of the Interior committee named sometime ago; the other the product of a special committee under the ohairmanship of Lord Inchcape, charged with the duty of reporting to the British Treasury.

## [RRITISH COMMITTEE REPORT. ${ }^{1}$

The committee presided over by Lord Inchcape, which was appointed last September to consider and report upon the effect of the war upon the gold production of the British Empire, with reference particularly to the treatment of low-grade ores and how far it may be of importance to the national interests to secure the continuance of the treatment of

[^1]such ores, and generally how to stimulate the production of gold, has submitted its report to the treasury. The committee says it is not prepared to recommend any bounty or subsidy for the purpose of stimulating the gold output of the Empire. Gold being the standard of value, no more can properly be paid for it than its value in currency.

In 1917 there was a reduction as compared with the previous year in the value of the gold produced in the Empire of $£ 3,429,415$, and in 1918 a further fall of $£ 4,652,207$, as compared with the 1917 production, is anticipated. The decline in the Transvaal last year was due to a combination of shortage of explosives and shortage of labor and in 1918 mainly to the shortage of labor, not due to any large extent to the war. The decline in Australasia in 1917 and 1918 was normal and due in the main to natural causes, but it was accelerated by the increase of costs and docrease in the efficiency of labor caused by the war up to the date of the committee's appointment.

The treatment of low-grade ore in the Transvaal has not to any extent which could be determined been reduced by the war. From the point of view solely of gold production the abandonment of the treatment of low-grade ore in favor of higher grade ore will not within any measurable period reduce the total output of the Empire, and the continuance of the working of low-grade mines which are unable to work at a profit to themselves is not therefore a matter of any great importance to national interests.

## SUBSIDY WOULD ENHANCE PRICES.

A subsidy for the production of gold appears to the committee to be fundamentally unsound. Gold has been adopted as the standard of value because by reason of the operation of natural causes it is available in such quantities and at such a cost of production in terms of other commodities as to give it a more or less stable value. Its value in terms of commodities is directly influenced by the laws of supply and demand. Periods of increased gold production, following on the discovery of further deposits of gold capable of extraction at a low cost, have been marked by an increase in the price of commodities. The exhaustion of these sources of supply has been accompanied by a decline in the price of commodities. The intention of the subsidy suggested by the gold producers is to enable gold to be produced
which otherwise would not, conformably with the economic laws of supply and demand, be produced at all. Other things being equal, the result would be that the purchasing power of the whole of the world's gold would be diminished pro tanto. The value in terms of gold of the commodities for which it is exchanged would rise.

## GOLD RESERVES AND FOREIGN TRADE.

It is undoubtedly desirable, the committee go on to say, that considerable gold reserves should be held in this country, but in our view the most important function of a gold reserve is that it should be available for export at the standard price when required to meet foreign indebtedness. We think it essential to preserve a free mariket in gold, but clearly it would not be a business proposition to do so if we had to pay $£ 410 \mathrm{~s} .3 \mathrm{~d}$. for an ounce of gold in order to export it at $£ 317 \mathrm{~s}$. $10 \frac{1}{2} \mathrm{~d}$. We can only maintain our gold reserves if the value of our exports, visible and invisible, exceeds on the balance the value of our imports.

The London Chamber of Commerce apprehend that prices may fall rapidly at peace, with disastrous results to industry, and contend that it might be in the public interest to take steps to prevent the rapid fall in the price of commodities by stimulating the production of gold at the expense of the taxpayer. We neither share their apprehension nor accept their contention. We have no reason to believe that there will not be forthcoming from the British Empire on a parity basis as much gold as we shall need for the purpose of strengthening our reserves, but in any case the additional amount of gold which at best we could hope to secure by a subsidy would, in the opinion of our witnesses, be of no advantage to this country for building up reserves unless we can afford to keep it.

## american commatee report.

The indings of the committee appointed in July, 1918, by the Secretary of the interior to investigate the gold-mining situation in the United States, consisting of Hennen Jennings, chairman; J. H. Mackenzie and Charles Janin, of the Bureau of Mines; and H. D. McCaskey and F. L. Ransome, of the United States Geological Survey, are set forth in the following abstract of the committee's report.

The status of the industry and the conclusions and recommendations of the committee,
as presented therein, may be briefly summarized as follows:
Statistics of production dating from the discovery of America in 1492 show that the annual average output was small until 1850, when the discovery of gold in California and Australia marked the beginning of great gold output. The figures show a slight decline from 1855 to the opening of the mines in the Transvaal in 1887; then there was a very large increase in the yearly output until 1910, since which date there have been irregular fluctuations until 1915, when a serious decline took place.

Though the increase in the output of gold has been rapid during the past 25 years, it has not kept pace with the output of coal, iron, copper, or petroleum, or with the rapid growth of bank deposits.
The present decrease in gold production demands serious consideration, as the maintenance of a sufficient gold reserve is essential to the security of our national finance and credit. The United States is at present the most favored nation in regard to gold reserves, holding over $\$ 3,000,000,000$ or more than onethird of the gold stock of the world, but it has contracted debts on a gold basis many times that existing before the war.
The principal causes of the decline in gold mining in this country are the shortage of labor and higher wages due to the war, lower efficiency of available labor, the great increase in the cost of supplies, and the higher cost of power. In addition, the depletion of certain deposits and the lower grade of ore mined in others have contributed to reduction of output.
Bankers and political economists nearly all agree that the gold standard should be maintained in principle.
The war has changed the United States from a debtor Nation into a creditor Nation.
Since the outbreak of the war, prices of all commodities have increased greatly except that of gold, which as the standard of value is fixed at $\$ 20.67$ per ounce. Thus the purchasing power of gold has diminished, the prices of other commodities have risen.
The great increase in the cost of gold mining has discouraged new enterprises and curtailed existing operations. Many mines have been compelled to close and await more farorable conditions. Those mines that have continued operations have been able to do so only by practicing the most rigid economies and by the curtailment of development work. The average operating cost of producing a dollar's worth of gold at the large and most-favored quartz mines in 191.7 was 70 cents as compared
with 57 cents for 1915. Gold mining under present conditions offers little inducement for capital.

Various means of stimulating the production of gold in the United States have been proposed. The committee reports on them as follows:

Payment by the Government of a bonus on newly mined gold has many advocates. The committee does not believe that the granting of a bonus would be beneficial at this time.

The United States Employment Service can, if properly authorized, be of great help in diverting labor to the gold industry. Gold mining has been officially declared an essential industry, and in the opinion of the majority of the committee should rank in this respect with other preferred industrios. Exemption from draft and deferred classification of gold labor has already been granted to a certain extent by the War Department.
The furnishing of supplies to gold mines at prewar or cut prices does not seem to be feasible.

The elimination of the excess-profits tax on gold mining and the encouragement of a maximum output thereby might result in larger revenues than with the tax outstanding, as larger dividends paid to shareholders would mean greater revenue for general taxation. As the profits of a gold mine, no matter how large, can not be ascribed to war conditions, but, on the contrary, are diminished by them, the remission of this tax is just and logical.

Gold mining as an essential industry is entitled to preferred classification for railroad freight, etc., and should receive the benefit of any modification of freight rates granted any other preferred industry.

When electric power is used, gold mines should have a high-class rating with regard to power consumption, and power should be curtailed only when necessary.

The privilege of free export and of sale to manufacturers would stimulate production and might also be a safeguard against inflation. The committee recommends the removal of restrictions on the export and sale of gold.

The committee suggests that gold and other mining companies might properly be required by law to furnish to the Government with such frequency as may be desirable statistics of their costs, production, and profits, and these should be available for publication.

The Government should, through the Bureau of Mines, assist in improving methods of mining and metallurgy of gold ores, particularly in the treatment of complex and low-grade ores. A wide field of work is presented here.

Some aid in reducing costs might be obtained by cooperative buying of supplies by mining companies through central agencies in each State or district, but the organization of a general system of cooperative buying would be difficult.

Possible methods of maintaining the visible gold reserve, apart from mine production, are: (1) The curtailment of the use of gold for manufactures, and (2) making a call on the public to turn in hoarded gold. In France voluntary contributions by the populace since the war began have amounted to more than $2,000,000,000$ francs.

Further relief might be obtained by amending the war minerals bill to include gold and voting an appropriation to be used in directing the search for new deposits.

## The Decimal System of Coinage, Weights and Measures. ${ }^{1}$

Changes to a decimal system of British coinage have recently been proposed. The information the author ${ }^{1}$ gives us in regard to it is taken from a publication of the Decimal Association, which together with the Institute of Bankers and the Association of Chambers of Commerce has been responsible for the introduction of a bill into Parliament. This led to the appointment of a Royal Commission, with Lord Emmet as chairman, including Sir Richard V. Vasar-Smith among its members.

The arrangement proposed retains the pound sterling as monetary unit, it being universally recognized in the settlement of international transactions. The tabular form in Palgrave's article is self-explanatory.

Table of coins.

## Directors of Branch Banks.

Directors of branches of Federal Reserve banks to serve for the year 1919 have been named as follows:

## BALTIMORE BRANCH.

(Federal Reserve Bank of Richmond.)
Manager.-M. M. Prentis.
Directors.-M. M. Prentis, Charles C. Homer, Williant Ingle, Waldo Newcomer, H.'B. Wilcox.
birmingham branch.
(Federal Reserve Bank of Atlanta.)
Manager.-A. E. Walker.
Directors.-W. H. Kettig, Oscar Wells, T. O. Smith, W. W. Crawford, John H. Frye.

CINCINNATI BRANCE.
(Federal Reserve Bank of Cleveland.)
Manager.-L. W. Manning.
Directors.-Judson Harmon, Charles A. Hinsch, W. C. Procter, W. S. Rowe, I. W. Manning.

## DENVER BRANCH.

(Federal Reserve Bank of Kansas City.)
Manager.-C. A. Burkhardt.
Directors.-C. C. Parks, A. C. Foster, C. A. Burkhardt, John Evans, Alva Adams.

## DETROIT BRANCE.

(Federal Reserve Bank of Chicago.)
Manager.-R. B. Locke.
Directors.- John Ballantyne, Emory W. Clark, Julius H. Haas, Chas. H. Hodges, R. B. Locke.
el paso branch.
(Federal Reserve Bank of Dallas.)
Manager.-Sam R. Lawder,
Directors.-U. S. Stewart, A. F. Kerr, Sam R. Lawder, W. W. Turney, A. P. Coles.

JACKSONVILLE BRANCH.
(Federal Reserve Bank of Atlanta.)
Manager--Geo. R. De Saussure.
Directors.-John O. Cooper, E. W. Lane, Bion H. Barnett, Giles L. Wilson, Fulton Saussy.

## LItTLE ROCK BRANCH.

(Fedoral Reserve Bank of St. Louis.)
Manager.-John M. Davis.
Directors.-Ed. Cornish, John M. Davis, Moorhead Wright, G.W. Rogers, C. A. Pratt.

## LOUISVILLE BRANCH.

(Federal Reserve Bank of St. Louis.)
Manager.-W. P. Kincheloe.
Directors.-Geo. W. Norton, W. C. Montgomery, W. P. Kincheloe, F. M. Sackett, C. E. Hoge.

MEMPHIS BRANCH.
(Federal Reserve Bank of St. Louis.)
Manager.-John J. Heflin.
Directors.-R. Brinkley Snowden, John D. McDowell, John J. Hefin, T. K. Riddick, S. E. Ragland.

NEW ORLEANS BRANCH.
(Federal Reserve Bank of Atlanta.)
Manager.-Marcus Walker.
Directors.-J. P. Butler, jr., John E. Bouden, jr., P. H. Saunders, Frank Roberts, H. B. Lightcap, A. P. Bush, James E. Zunts.

OMAHA BRANCH.
Federal Reserve Bank of Kansas City.)
Manager.-O. T. Eastman.
Directors.-Luther Drake, J. C. McNish, O. T. Eastman, P. L. Hall, R. O. Marnell.

PITTSBURGH BRANCH.
(Federal Reserve Bank of Cleveland.)
Manager.-Geo. De Camp.
Directors.-Chas. W. Brown, James D. Callery, T. H. Given, R. B. Mellon, George De Camp.
portland branch.
Federal Reserve Bank of San Francisco.)
Manager.-C. L. Lamping (acting).
Directors.-E. A. Cookingham, J. C. Ainsworth, C. I. Lamping, Nathan Strauss, Everett Ames.

SALT LAKE CITY BRANCH.
(Federal Reserve Bank of San Francisco.)
Manager.-Chas. H. Stewart.
Directors.-L. H. Farnsworth, Chas. H. Stewart, Chapin A. Day, G. G. Wright, Lafayette Hanchett.

SEATTLE BRANCH.
(Federal Reserve Bank of San Francisco.)
Manager.-C. J. Shepherd.
Directors.-M. F. Backus, M. A. Arnold, C. J. Shepherd, C. H. Clarke, Chas. E. Peabody.

## SPOKANE BRANCH.

(Federal Reserve Bank or San Francisco.)
Manager.-Chas. A. McLean.
Directors.-D. W. Twohy, R. L. Rutter, Chas. A. McLean, Peter McGregor, G. I. Toevs.

## Fiduciary Powers Granted to National Banks.

The applications of the following banks for permission to act under section 11 ( k ) of the Federal Reserve Act, as amended September 26, 1918, have been approved by the Federal Reserve Board during January:

$$
\text { District No. } 2 .
$$

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, recciver, and committee of estates of lunatics:
Jefferson County National Bank, Watertown, N. Y. Seaboard National Bank, New York City.
National Bank of Norwich, Norwich, N. Y.
First National Bank, Port Chester, N. Y.
Paterson National Bank, Paterson, N. J.

First National Bank, Morristown, N. J.
Gity National Bank, Gloversville, N. Y.
National Exchange Bank, Lockport, N. Y.
National City Bank, New York City.
Guardian of estates, assignee, receiver, and committee of estates of lunatics:

National Newark \& Essex Banking Co., Newark, N. J.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, and receiver:

National State Bank, Elizabeth, N. J.

## District No. 3.

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:

National Iron Bank, Pottstown, Pa.
Reading National Bank, Reading, Pa.
First National Bank, Sunbury, Pa.
First National Bank, West Chester, Pa.
Union National Bank, Philadelphia, Pa.
Distriot No. 4.
Trustee, and registrar of stocks and bonds:
First-Second National Bank, Akron, Ohio.
Second National Bank, Ravenna, Ohio.
Distriot No. 6.
Guardian of estates, assignee, receiver and committee of estates of lunatics:

First National Bank, Tampa, Fla.
District No. 7.
Guardian of estates, assignee, and receiver:
Cedar Rapids National Bank, Cedar Rapids, Iowa.
Trustee, executor, administrator, guardian of estates, assignee, receiver, and committee of estates of lunatics: Langlade National Bank, Antigo, Wis.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee and receiver:

Commercial National Bank, Oshkosh, Wis.
Distriot No. 9.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:

American Exchange National Bank, Duluth, Minn.
City National Bank, Duluth, Minn.
First National Bank, Owatonna, Minn.
Goodhue County National Bank, Red Wing, Minn.

## Acceptances to 100 Per Cent.

Since the issue of the January Bucletin the following banks have been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

Guardian Savings \& Trust Co., Cleveland, Ohio.
National Bank of Commerce, Norfolk, Va.
Illinois Trust \& Savings Bank, Chicago, Ill.

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number of national banks and the capital of national banks during the period from December 28, 1918, to January 31, 1919, inclusive:

## Commercial Failures Reported.

With the beginning of 1919 the country's business mortality reflects the same favorable features which have characterized the insolvency statistics for so long a period, commercial failures in the United States during three weeks of January, as reported to R. G. Dun \& Co., numbering only 492 , against 770 in the corresponding weeks of 1918 . The statement for December, the latest month for which complete figures are arailable, discloses but 683 defaults for $\$ 12,249,483$ of liabilities, as contrasted with 1,055 for $\$ 14,043,716$ in December of 1917. In point of number the December, 1918, exhibit is the best for that month in more than two decades, while the indebtedness is smaller than in any December since 1906. Separated according to Federal Reserve districts, the December returns disclose fewer insolvencies than in that month of 1917 in all of
the 12 districts, the reductions being marked in most instances, but only in the second, third, sixth, eighth, and twelfth districts are the liabilities less than in the earlier period. The decreases, however, more than offset the increases, the second district alone showing a contraction of $\$ 1,600,000$.

Failures during December.

| District. | Number. |  | Liabilities. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1918 | 1917 | 1918 | 1917 |
| First. | 88 | 127 | \$1,749, 269 | \$1,661,705 |
| Second. | 129 | 212 | 3,805,610 | 5,456,864 |
| Third.. | 27 | 62 | 433, 203 | -969, 155 |
| Fourth. | 49 | 98 | 1,045,883 | 1,030,496 |
| Fifth. | 39 | 53 | 662,400 | 486, 386 |
| Sixth. | 29 | 36 | 284, 320 | 325, 861 |
| Soventh. | 93 | 155 | 1,317,234 | 1,251,615 |
| Eighth. | 36 | 50 | 173,388 | 372,682 |
| Ninth. | 30 | 40 | 276, 666 | 232,356 |
| Tenth. | 29 | 41 | 483, 042 | 388,011 |
| Eleventh | 33 | 50 | 1, 191, 850 | 380,506 |
| Twelfth | 101 | 131 | 826,618 | 1,488,079 |
| Total | 683 | 1,055 | 12,249,483 | 14,043,716 |

Failures for year 1918.

## State Banks and Trust Companies Admitted.

The following list shows the State banks and trust companies which have been admitted to membership in the Federal Reserve system during the month of January.

Nine hundred and sixty State institutions are now members of the system, having a total capital of $\$ 350,663,471$, total surplus of $\$ 402$, 804,242 , and total resources of $\$ 7,360,703,683$.

|  | Capital. | Surplus. | Total resources. |
| :---: | :---: | :---: | :---: |
| District No. 1. |  |  |  |
| Market Trust Co., Boston, Mass. . . . . | 8250,000 | \$200,000 | \$3,980,874 |
| District No.2. |  |  |  |
| Northern Westchester Bent, Katonah, N. Y. | 50,000 | 25,000 | 75,000 |
| District $\mathrm{K}^{7} \mathrm{O}, 3$. |  |  |  |
| Peoples Savings \& Trust Co., Hazleton, Pa. | 125,000 | 50,000 | 2,303,022 |
| District No. ${ }^{\text {a }}$. |  |  |  |
| Farmers Saviugs \& Trust Co., Mansfield, Ohio. | 100,000 | 100,000 | 1,269, 994 |
| Merchants Trust Co., Grcousburg, Pa. | 188, 600 | 100,000 | 1,584, 055 |
| The Shiloh Savings Bank Co., smioh, Ohio.. | 25,000 | 26,000 | 379,115 |
| District No. ${ }^{\text {ar. }}$ |  |  |  |
| The Overlea Bank, Overlea, Md. | 50,000 | 20,000 | 585, 084 |
| District No. 7 , |  |  |  |
| The Elizabeth State Bank, Elizabeth, Ill. | 40,000 | 13,600 | 423,731 |
| Whiteside County State Eank, Rulton, | 50,000 | 5,000 | 432,947 |
| Peoples Savings Bank of Grand Rapids, Grand Rapids, Mich | 200,000 | 100,000 | 2,340,373 |
| Indiana Bank \& Trust Co., Rochester, |  |  |  |
| Farmers sarings Bank, Grant, iowa.. | 25,000 | 5,000 | 284,255 |
| Armada, State i3ank, Armada, Mich.- | 25,000 | 14,000 | 442,855 |
| District No. 9. |  |  |  |
| Commercial and Sarings Bank, Mitchell, S. Dak... | 100,000 | 10,000 | 1,194,908 |
| District No. 10. |  |  |  |
| Fort Lupton State Bank, Fort Lupton, Colo. | 25, 000 | 4,000 | 398,501 |
| District No. 11. |  |  |  |
| Farmers \& Merchants State Bank, Ferris, 'Tex. | 50,000 | 9,000 | 410,251 |
| Continental Bank \& Trust Co., Shreve- | 300,000 | 30,000 | 1,982,747 |
| First State Bank, Bomarton, Tex.... | 25,000 | 2,000 | 135,868 |
| Gray County state Bank, Pampa, Tex | 25,000 |  | 113,186 |
| Guaranty state Bank \& Tr.Co., Rails, Tex. | 60,000 |  | 214,371 |
| District No. 12. |  |  |  |
| Buckeye Valley Bank, Buckeye, Ariz. | 25,000 | 2,000 | 163, 104 |
| Bank of Southern Utah, Cedar City, Utah. | 75,000 | 61,000 | 618,367 |
| Twin Fails Bank \& Trust Co., Twin |  |  |  |
| Falls, Idaho....................... | 100,000 | 30,000 | 1,540,287 |
| Farmers State Bank of Almira, Almira, Wash | 25,000 | 5,000 | 337,162 |

## Second Annual Report of Federal Farm Loan Board.

The second annual report of the operations of the Federal Farm Loan Board was transmitted to Congress by the Secretary of the Treasury under date of December 27, 1918. The following is an extract taken therefrom:

Our previous annual report described the financial operations incident to the system down to the introduction December, 1917, of the amendment necessitated by the disturbed financial conditions then prevailing. This amendment, approved January 18, 1918, authorized the Secretary of the Treasury, upon the request of the Farm Loan Board, to purchase from any Federal land bank, atpart and accrued interest, farm loan bonds issued by such bank, such purchases not to exceed in the aggregate $\$ 100,000,000$ in each of the fiscal years ending June 30 r 1918, and June 30, 1919. It was further provided that any bonds so purchased might at any time be repurchased by the issuing bank at par and accrued interest for the purpose of redemption or resale, and that any bonds held by the Treasury one year after the termination of the pending war should be redeemed or repurchased upon 30 days, notice from the Secretary of the Treasury. Under author. ity of this amendment there were sold to the Treasury, in the fiscal year ending June 30, 1918, bonds to the amoun\$ of $\$ 64,160,000$, of which bonds to the amount of $\$ 8,190,000$ were subsequently repurchased by the banks, leaving in the Treasury bonds to the amount of $\$ 55,970,000$, purchased out of the authorization of $\$ 100,000,000$ for that fiscal year. From July 1, 1918, to November 30, 1918, there have been bonds sold to the Treasury to the amount of $\$ 4,500,000$ out of the authorization of $\$ 100,000,000$ for the current fiscal year.

Bonds issued from the institution of the system up to April 30, 1918, bore interest at the rate of $4 \frac{1}{2}$ per cent. To allow time for the engraving and execution of the bonds to be dated May 1., 1918, it was necessary to decide, some time in advance of that date, what interest these bonds should bear. It was problematical whether they would sell at the $4 \frac{1}{2}$ per cent rate. If it had been possible to make the experiment, and then change to 5 per cent in the even* of failure, it would have been the part of widsom to have done so. It was not possible, however. The subscription period for bonds of the third Liberty loan extended to May 4, and it was deemed inadvisable to make any offering: of farm loan bonds until subsequent to that date. A fourth Liberty loan campaign was known to be necessary in the early fall, and was actually made on September 28. It was necessary that offerings of farm loan bonds should cease before that date. The extreme possible period for their sale was therefore limited to about four months. The $4 \frac{1}{2}$ per cent bonds were unsalable when the decision hac to be made; the time was too short to permit of a possibly unsuccessful effort, and it was felt to be essential that the

Treasury of the United States should be relieved of the necessity of buying farm loan bonds and that the offering of them should be made in such a way as to assure success and reestablish them as securities that would command the confidence and approval of the investing public. The decision was therefore reached to make the rate 5 per cent. The fact that the bonds were redeemable in five years made any possible generosity in the interest rate less important than it would have been if the banks had obligated themselves to pay that rate for a long period of years. In anticipation of the possibility of such an increase in the interest rate on the bonds the rate charged to borrowers had been advanced to $5 \frac{1}{2}$ per cent in December, 1918, this increase, however, applying only to loans which had not already been appraised and approved.

The same reasons which dictated the increase in the interest rate suggested the wisdom of once more enlisting the cooperation of bond houses in the selling campaign. Arrangements were made for a short and vigorous campaign by both the Federal land banks and a group of over 100 large investment houses scattered all over the country. The selling began on May 20 and closed on June 5. A combination of unexpectedly favoring conditions made it even a greater success than had been anticipated. Sales within these 16 days amounted to $\$ 56,000,000$, taking care of the loaning requirements of all the banks up to October 1. With the exception of these 16 days there have been no offerings of farm loan bonds by the Federal land banks during the past year. This method of selling bonds has been less advantageous to the banks than would have been the case if they had been free to choose their own times and methods, but the necessity of subordinating their interests to the exigencies of the Federal Treasury was cheerfully accepted by them as one of their contributions toward the winning of the war.

In our last report it was stated that a "spread" or "margin" of one-half of 1 per cent or even a full 1 per cent between the rate paid on bonds and the rate charged on loans, would not meet the expense of the banks during their first year, and that there would be an inevitable "deficit" or "impairment of capital" as the result of that year's operations. Confidence was expressed, however, in the belief that "as to almost, if not quite, every bank such impairment of capital would have ceased to grow at the close of the first year, and would be overcome in the second or third year, after which the business should prove to be very profitable." This expectation has been substantially realized. The total impairment of capital of the 12 banks on April 30, 1918, which was practically the close of their first year, was $\$ 411,954$. In the succeeding quarter it was reduced by $\$ 26,834$ to $\$ 385,120$, and in the four months ending November 30, it was reduced by $\$ 246,594$ to $\$ 138,526$. All but two of the banks-the two which have done the least aggregate business-are now showing satisfactory monthly profits, and these two are just about reaching the turning point.

Five banks have already overcome their initial losses, three of which show substantial surpluses. One other will show a balance on the right side of the ledger within a month or two. Two banks-those located at Spokane and St. Paul-having received subscriptions to capital stock from farm-loan associations to an amount in excess of $\$ 750,000$ have, in accordance with the provisions of the fifth section of the farm-loan act, begun to apply semiannually to the payment and retirement of the stock originally subscribed one-fourth of all sums thereafter subscribed. The bulk of the stock originally subscribed having been taken by the Secretary of the Treasury on behalf of the United States, the bulk of the payments on this account will be made to the Federal Treasury. The first payments on this account were made to the Treasurer of the United States in the month of November, being $\$ 74,583$ by the Federal Land Bank of Spokane, and $\$ 52,131$ by the Federal Land Bank of St. Paul. In May next second payments will be made by these two banks and first payments by the Federal Land Banks of Omaha, Wichita, and Houston.

The total payments due by borrowers to the banks up to October 31, 1918, exceeded $\$ 3,247,000$, and on that date only $\$ 86,073$ of this amount remained unpaid, of which only $\$ 10,730$ was 90 days or more overdue. We scarcely venture to hope that such an exceptional record as this can be permanently maintained, but the present figures bear testimony to the care with which loans have been made, and justify the belief that losses on defaults and foreclosures will be negligible in comparison with the great volume of business done.

## EARNINGS AND EXPENSES OF THE FEDERAL RESERVE BANIS FOR 1918.

Total earnings of the Federal Reserve Banks for the calendar year 1918 were $\$ 67,584,417$, compared with $\$ 15,438,858$ for the calendar year 1917, while total current expenses were $\$ 12,137,438$, compared witb $\$ 4,235,866$ for the earlier year. Current expenses for the year under review include besides $\$ 8,463,957$ of expenses of operation proper- $\$ 2,448,973$, the cost, including expressage, insurance, and other expenses incident to the issue and retirement of Federal Reserve notes and bank notes, $\$ 1,108,091$ depreciation on furniture and equipment, and $\$ 116,417$ the cost of alterations and repairs to bank buildings.
Total expenses shown above are exclusive of the expenses of the fiscal agent departments. The lattor are treated separately, being reimbursable by the United States Treasury Department. For the past year the Federal

Reserve Banks, as fiscal agents of the Government, mainly in floating the certificate issues and the last two Liberty loans, disbursed a total of $\$ 16,245,708$. In addition there was outstanding at the opening of the year a reimbursable amount of $\$ 1,697,220$ disbursed by the banks during 1917. Reimbursements received from the Government during the year totaled $\$ 8,377,983$, leaving thus a reimbursable balance at the end of 1918 of $\$ 9,564,945$.

Net earnings of the banks, i. e., the excess of earnings over current expenses, totaled $\$ 55,446,979$, or at the rate of 72.6 per cent on an average aggregate paid-in capital for the year of $\$ 76,342,000$, compared with an average rate of 55.9 per cent for the first six months of the year and 18.9 per cent for the calendar year 1917. New York shows net earnings for the year at the rate of 113.6 per cent, Kansas City at the rate of 78.4 per cent, San Francisco at the rate of 72.3 per cent, and Chicago at the rate of 67.7 per cent. Of the remaining banks six show net earnings at rates betweon 50 and 60 per cent and 2 at rates between 40 and 50 per cent. All arrears in dividends having been paid at the end of June, dividend payments at the close of the year covered only the six months ending December.

To the net earnings above shown should be added the net profits carricd over from 1917$\$ 1,158,715$, also net amounts credited during the year direct to profits- $\$ 74,772$. This gives total gross profits of $\$ 56,680,466$. Deductions from this total, $\$ 2,805,441$, comprise depreciation allowances on bank premises $\$ 1,609,537$, on vaults $\$ 40,500$, and on United States bonds $\$ 848,129$, also special reserves of $\$ 307,275$ set aside by the New York and San Francisco banks to take care of future contingencies. This leaves available for dividends, surplus, and franchise taxes a total of $\$ 53,875,025$, out of which were paid all dividend arrears and the maximum 6 per cent dividends for the year, totaling $\$ 5,540,684$. Of tho remaining amount one-half up to 40 per cont of the paid-in capital of each bank was carried to surplus, the total thus carried being $\$ 21,605,901$. The balance, $\$ 26,728,440$, was reserved for franchise tax to the Government. It will be noted that in the case of the New York bank the amount reserved for franchise tax is $\$ 12,795,215$, or more than $\$ 5,000,000$ in excess of the 40 per cent of the capital, the maximum which the bank is permitted at present to carry to surplus. For the other banks the ratios of surplus to average paid-in capital for the year stand as follows:

For the system as a whole the ratio of surplus to paid-in capital is 28.2 per cent.

Of the total earnings of the banks 71.5 per cent, as against 45 per cent the year before came from discounts largely of war paper. Bills purchased in the open market contributed 17.7 per cent of the total earnings, as against 32.2 per cent; United States securities, chiefly Treasury certificates, 5.7 per cent, as against 15.3 per cent; transfer operations yielded about 1.5 per cent of the total earnings, as against 3 per cent the year before, and the remainder came from penalties for deficient reserves, service charges, commissions, profits on foreign exchange operations, and sundry smaller profits. Expenses of operation of the banks proper, exclusive of their fiscal agent departments, totaled $\$ 8,463,957$, compared with $\$ 2,669,855$ in 1917. Of the larger total about 42 per cent, as against 28 per cent in 1917, went as compensation to the clerical staff, and 11.5 por cent, as against 23 per cent in 1917, as salaries to bank officers. Nearly 10 per cent of the total operating expenses went for postage and expressage and over 6 per cent for printing and stationery. Contributions of the banks for the support of the Federal Reserve Board aggregated $\$ 382,641$, as against $\$ 237,795$ the year before and constitute about 4.5 per cent of the total 1918 expenses of operation, as against about 9 per cent the year before. Rent paid by the banks is about double in amount that for 1917, though some of the banks own the promises or parts thereof occupied at present by them. This is true of New York, Philadelphia, Richmond, Atlanta, Dallas, and San Francisco. With the exception of Cleveland and Minneapolis, all the banks have purchased ground on which it is proposed to erect buildings for use as permanent banking quarters. Total book value of the investments in "bank premises" after allowing $\$ 1,609,537$ for depreciation, stood at $\$ 8,081,841$ at the end of the year, compared with $\$ 707,611$ at the beginning of the year.

Earnings and expenses of each Federal Reserve Bank and of the system as a whole for the calendar year 1918.
enrnings.

## Movement of Excess Reserves ("Free Gold") During the Year 1918.

In the following table and attached diagram there are presented data showing weekly changes during the past year in the amounts of minimum reserves required to be held by the Federal Reserve banks against their net deposits and Federal Reserve notes in actual circulation, also like changes in the total cash reserves held by the Federal Reserve banks and agents. By deducting from the total cash reserves held the amounts required to be held as reserves against net deposits and notes, there are obtained figures of excess reserves, or the "free gold," which may serve as basis for additional reserve deposit credits or additional reserve-note issues.

During the year total cash reserves of banks increased by 413.2 millions, required note reserves by 573.6 millions and required deposit reserves by 37.3 millions. As a result the amount of "free gold" shows a decrease for the year of 197.7 milions. Gains in cash reserves are composed largely of gold received in exchange for Federal Reserve notes taken either by the banks or the Government, and to much
smaller extent of reserve cash deposited with the Federal Reserve banks by newly admitted members. Of the total gain of 413.2 millions in actual reserves about 282 millions, or nearly 70 per cent, represents the gain for the first half of the year.
Required note reserves show an increase for the year of 573.6 millions, corresponding to an increase of over 1,434 millions in actual Federal Reserve note circulation. As distinct from the figures of cash reserves the required note reserve figures show a larger increase during the second half of the year, viz., 357.5 millions, or 62 per cent of the total gain shown for the entire year.

Net deposits and reserves required against such deposits show but a slight increase during the year, the end-of-December figures being below those reported about the middle of the year. It is evident thercfore that the decrease in "free gold" is due primarily to the large increase in note liabilities offset only in part by the gains in the banks' cash reserves. On December 27 the total of free gold amounted to $\$ 528,619,000$. On the basis of 40 per cent required reserves against Federal Reserve note liabilities and of 35 per cent required reserve
against deposit liabilities this amount would support additional reserve-note issues of $\$ 1,325,547,500$ or additional net deposits of $\$ 1,510,340,000$.

Since the close of the past year there has been a further gain of over 30 millions in the system's cash reserves, while the volume of

Federal Reserve notes in circulation has decreased 235 millions. As a result the amount of free gold on February 1 has increased to $\$ 618,544,000$. This amount will support an additional reserve-note circulation of $\$ 1,546$,360,000 or additional net deposits of $\$ 1,767$,269,000 .

Required reserves against net deposit and Federal Reserve note liabilities, and amounts of gold held in excess of required reserves.
[In thousands of dollars: i. e., 000 omitted.]

## DECREASE IN FEDERAL RESERVE NOTE CIRCULATION.

Since the beginning of the year there has been a continuous return flow of Federal Reserve notes to the issuing banks, with the result that the volume of Federal Reserve notes in actual circulation has decreased during the four weeks between December 27, 1918, and January 24 by $\$ 218,688,000$ or at a weekly rate of $\$ 54,672,000$.

In the following table are presented details of the Federal Reserve note movement during the month, showing the amounts of notes issued by the agents to the banks, amounts redeemed, excess redemptions, amounts on hand, and amounts in actual circulation reported by each bank. It is seen that while the volume of Federal Reserve notes outstanding has decreased through excess redemptions by $\$ 124,688,000$, the reduction in actual circulation has been 94 millions larger, the latter amount reprosenting the larger amount of own notes held by Federal Reserve Banks on

January 24 as compared with the last Friday of the past year. This return flow of notes seems more pronounced in the eastern sections, notably in the New York district, than in the western agricultural sections, including the Minneapolis, Kansas City, Dallas, and San Francisco districts.
For the last week under review the return movement of notes seems to have somewhat slackened. For the last week in January the decrease in circulation amounted to about 16 millions only, while daily figures for the first week in February indicate a practical cessation of the return flow. The short period covered by the figures does not permit of any but tentative conclusions and forecasts, but in connection with the recession of the general price level noted for January in another part of the Bulletin this back flow of notes acquires a certain significance.

## GOLD RESERVES OF PRINCIPAL BANKS OF ISSUE, 1900-1918.

In the table below are shown the amounts of gold reserves held by the leading banks of issue at the end of each year between 1900 and 1918. The figures represent actual vault holdings. The amounts of gold held abroad and foreign gold credits have been uniformly excluded. This affects chiefly the figures of the Bank of France and of the Bank of Russia. For the latter country the latest available data are those of October 29, 1917. For Italy, the figures given represent the amounts of gold in vault reported by all three banks of issue and not merely by the Bank of Italy. Swiss figures prior to 1908 represent gold holdings of all banks ot issue. Figures for 1908-1918 represent gold holdings of the Central National Bank organized in 1907.

Figures for the United States include-
(1) Amounts of gold held in the Treasury of the United States at the end of the calendar year and reported among the free assets of the Government; i.e., exclusive of gold cover for gold certificates outstanding; also of amounts of gold held for redemption of Federal Reserve notes.
(2) Amounts of gold held by the national banks and reported in their statements to the Comptroller nearest the close of the years 1900-1916. Of the clearing-house certificates reported by the national banks 60 per cent was estimated to represent gold.
(3) At the close of 1914-1918, gold holdings of the Federal Reserve Banks. These holdings are exclusive of the amounts of gold held by foreign agencies, but include amounts of the banks' and agents' redemption funds held in the Treasury.

Movement of the gold reserves of the principal central banks, 1900-1918.

SILVER PRODUCTION OF THE WORLD.
[Estimates of the Director of the Mint.]

${ }^{1}$ Preliminary estimate of the Federal Reserve Board.

## RULINGS OF THE FEDERAL RESERVE BOARD.

Below are published rulings made by the Federal Reserve Board which are believed to be of interest to Federal Reserve Banks and member banks. In connection with some of these rulings, the opinion of counsel upon which the ruling is based is also published.

## Trade acceptances.

A trade acceptance containing the statement that "the obligation of the acceptor hereof arises out of the purchase of goods from the drawer as per invoices, a record of which is given in the subjoined statement," is a valid and desirable acceptance when offered with the "subjoined statement" detached in accordance with directions in the form.
An acceptance to pay at a particular place different from the residence of the acceptor is a general acceptance, unless it expressly states that the bill is to be paid there and not elsewhere, and does not render the bill nonnegotiable.

The following is the opinion of the counsel:
December 20, 1918.
An opinion is asked on the following questions:

1. Whether a trade acceptance containing the statement that "the obligation of the acceptor hereof arises out of the purchase of goods from the drawer as per invoices; a record of which is given in the subjoined statement," is a valid and desirable acceptance when offered with the "subjoined statement" detached in accordance with the directions in the form?
2. Should a bank or bill house have any hesitancy now, in view of the variant legal rulings or decisions, in purchasing a bill payable in New York drawn on a firm in Cleveland, without the language suggested by the trade acceptance council to cover this point?

Considering these questions in the foregoing order, (1) Section 3 of the negotiable instruments law provides in part as follows:
"An unqualified order or promise to pay is unconditional within the meaning of this act, though coupled with * * * a statement of the transaction which gives rise to the instrument."

In accordance with this section, it has been held that the words "as per terms of contract," written after the words "value received" on the face of a promissory note by the maker before it is delivered, do not destroy the negotiability of the note or make its payment to a holder in due course conditional upon the performance of the contract intended to be referred to by the maker. (National Bank of Newbury $v$. Wentworth, 218 Mass., 30, cited with approval in Crawford's Annotated Negotiable Instruments Law, p. 18.)

By analogy, the "subjoined statement" referred to in the case under consideration may be treated as a part of the statement of the transaction giving rise to the draft. Such a statement, under the better authorities, is not an essential part of the draft, and to detach it should not, therefore, destroy its negotiability. It could not be treated as an unauthorized alteration of the acceptance, because the order of the drawer in the form submitted contains specific authority to "detach this memorandum from the trade acceptance before discounting or depositing it for collection." The drawee, therefore, assents to the order of the drawer, and in the opinion of this office such an acceptance may be treated as negotiable.

The Board has heretofore approved a form of trade acceptance containing the statement that it is drawn "in settlement of the purchase of goods as billed in our invoice No.
dated ." (See Federal Reserve BulLetin", May, 1917, p. 378.)

The same general principles seem to be involved in the present case.

In answer to question (2), this office, in an opinion published in the April (1917) Federal Reserve Bulletin, page 289, reached the conclusion that an acceptance to pay at a particular place different from that named in the draft is a general and not a qualified acceptance unless the acceptor expressly states that the bill will be paid at the place designated by him and not elsewhere.

As some counsel expressed some uncertainty as to the correctness of this view, the trade
acceptance council recommended that the drawer incorporate in the body of the draft authority for the drawee to make such an acceptance. This would, of course, remove any doubt that may exist on the subject, but after further considering the question involved I am still of the opinion that even without this authority incorporated in the draft the drawee might accept a draft as above outlined without destroying the negotiability of the instrument.

## Acceptances in excess of 10 per cent.

The acceptance by a bank of unsecured drafts to an amount exceeding 10 per cent of the capital and surplus of the bank would constitute a violation of the limitation contained in section 13 of the Federal Reserve Act, whether or not the customer of the bank guaranteeing the acceptance is the drawer of the draft, or some other person.

The following is the opinion of the counsel: December 23, 1918.
A bank having a capital and surplus of $\$ 2,000,000$ desires to accept drafts drawn by third parties aggregating more than $\$ 200,000$ under the guarantee of one of its customers.

Would the acceptance of such drafts constitute a violation of that provision of section 13 of the Federal Reserve Act which provides that-
"No member bank shall accept, whether in a foreign or domestic transaction, for any one person, company, firm, or corporation to an amount equal at any time in the aggregate to more than ten per centum of its paid-up and unimpaired capital stock and surplus, unless the bank is secured either by attached documents or by some other actual security growing out of the same transaction as the acceptance.',

This section prohibits a member bank from accepting for any one person, drafts aggregating more than 10 . per cent of the capital and surplus. The person who enters into an agreement with the bank to protect it against loss and to whom the bank lends its credit in the form of an acceptance, is obviously the persons referred to in the statute.

Accordingly in the case presented, unless the drafts are secured as provided by the statute, the acceptance of an amount in excess of 10 per cent of the capital and surplus of the bank, would constitute a violation of this provision whether or not the customer of the bank guaranteeing the acceptance is the drawer of the draft, or some other person.

January 7, 1919.
Increase of surplus by bank authorized to accept to 100 per cent.
Where a bank has been granted permission to accept in an amount not exceeding in the aggregate 100 per cent of its paid-up capital and surplus, it is not necessary for such bank to obtain additional authority from the Board each time it increases its surplus.

Jandary 7, 1919.
Investment by national banks of funds heid in trust.
Neither the provisions of the National Bank Act nor of the Federal Reserve Act which relate to investments that may be made by national banks of their own funds have any application to investments that may be made by a national bank of funds held in trust which do not belong to the bank. This subject will be covered by the regulations of the Board now in course of preparation.

January 7, 1919.
Acceptances in excess of 10 per cent.
A member bank may accept either in a domestic or foreign transaction for one person in an amount in excess of 10 per cent, provided the acceptance remains secured throughout the life of the draft. It can not accept in domestic transactions without being secured at the time of acceptance, but may release the security after acceptance upon the execution of a trust receipt or an agreement by the customer that so much of the proceeds of the sale of the goods covered by the security as may be necessary to pay the draft will be deposited with the accepting bank when available and will not be used for other purposes.

## GOLD SETTLLEMENT FUND.

The subjoined tables show the amounts of clearings, transfers, and combined clearings and transfers of the Federal Reserve system through the gold settlement fund, by weeks, during 1918; also for the New York Federal Reserve Bank, total debits in clearings, credit transfers, combined debits in clearings and credit transfers, net debits and credits in clearings, net debit and credit transfers and net debit or credit of combined clearings and transfers.

There has been a large increase in the volume of weekly operations through the gold settlement fund during the calendar year 1918, caused paxtly by Government war financing, including large transfers of funds received from sales of certificates of indebtedness and Liberty loan bonds and subsequent redistribution of these funds among the various centers in payment of munitions and supplies for account of the United States and Allied Governments, and partly by the large use of the collection and clearing facilities of the system.
Movements of funds during May and June were especially heavy on account of the Govermment fiscal operations in connection with the third Liberty loan and also during October and

November caused by operations in connection with the fourth Liberty loan.

Figures showing the total debits in the clearings and credit transfers for the Federal Reserve Bank of New York reflect the large proportion of the total volume of business handled by this bank. Heavy movements of funds away from New York through clearings caused principally by interior banks drawing on their New York correspondents in payment of Treasury certificates of indebtedness and Liberty loan bonds, have been largely offset by the return movement of these funds through transfers for account of the Government. The total weekly net debits in clearings of the New York bank amount to $\$ 2,612,000,000$, compared with credit transfers amounting to $\$ 2,443,000,000$, the resulting net loss through combined clearings and transiers for the year amounting to only $\$ 159,639,000$.
Figures of total weekly operations through the gold settlement fund, including both settlements and transfers, also corresponding data for the New York bank have been plotted on the accompanying diagram to illustrate more clearly the growing volume of these transactions and the high levels attained during the year in connection with the loan operations of the Government.

Weekly operations through the gold settlement fund during the calendar year 1918.

## BANK TRANSACTIONS DURING JANUARY.

Bank transactions for the last week in December and the first three weeks in January, as measured by the volume of weekly debits to deposit account of clearing-house banks in 148 leading centers, averaged over 9 per cent above like transactions in December.
Large increases in debits to individual account reported from all districts for the week ending January 8 are due in a large measure to the fact that the report covers a full six-day week, whereas reports for the two preceding weeks covered only five-day periods. Some of the increase over the figures
for the immediately preceding weeks undoubtedly represent also payments of interest and dividends and other quarterly and annual payments made at the beginning of the new year, also payments for Treasury certificates of the January 2 and 16 issues.
Debits to bank account on the whole show changes parallel to those affecting debits to individual account, the larger figures for the weeks ending January 8 and 16 reflecting probably even more than the corresponding debits to individual account the volume of financing in connection with the certificate issues named.

Weekly figures of clearing-house bank debits to deposit account.
[In thousands of dollars; i. $\theta ., 000$ omitted.]

Weekly figures of clearing-house bank debits to deposit account-Continued.

Recapitulation showing figures for clearing-house centers reporting for each of the four weeks.
[In thousands of dollars; i. e., 000 omitted.]

## WHOLESALE PRICES.

In continuation of figures shown in the January Bulletin there are presented below monthly index numbers of wholesale prices for the period January to December, 1918, compared with like figures for December of previous years, also for July, 1914, the month immediately preceding the outbreak of the great war. The general index number is that of the United States Bureau of Labor Statistics. In addition, there are presented separate numbers for certain particular classes of commodities in accordance with plans announced in previous issues of the Bulletin.

The quotation for canned salmon (Alaska red, New York) had to be omitted. On the other hand, quotations for hops (Pacific coast) and canned corn (New York standard), which had been dropped temporarily, have been secured for the months of November and December, and the commodities again included in the calculation of the index numbers for the latter month. Index numbers for December are provisional, due to the fact that certain data were not received in time to render them available in the calculations.

For the month of December the general index number of the Bureau of Labor Statistics remains unchanged at 206. Considerable diversity, however, is exhibited by the changes in the numbers for the various groups, the pronounced decrease in the index number for the group of producers' goods being offset by increases in the numbers for both the raw materials and the consumers' goods groups. The index number for the latter group shows a further increase for the month in question from 214 to 216. Decreases in price occurred in the case of certain commodities included in the group, in particular print cloths and cotton underwear, lard, citrus fruits and peanuts, as well as to a lesser extent for poultry, veal, and mutton. The decreases were however more
than offset by increases in the prices of other commodities, among which certain foodstuffs, especially milk, butter, cheese and eggs, coffee, potatoes, apples, beef (New York quotation), and bacon, hams, and salt mess pork should be noted.

The index number for the raw-materials group has increased slightly from 197 to 198. The increase is due entirely to the increase in the prices of farm products, the index number for the latter group having increased from 234 to 237. Decreases in the prices of cotton (New Orleans quotation), flaxseed, oats, hay and tobacco were more than offset by increases in the prices of cotton (New York quotation), corn, and winter wheat. The index number for the animal-products subgroup remains unchanged at 208, decreases in the prices of hogs and silk being offset by increases in the prices of cattle and poultry. The index number for the forest products subgroup likewise remains unchanged at 150 , slight increases in the prices of plain white oak and maple affording the only instances of change in price among the commodities included in the group. The index number for the mineral-products subgroup, however, has declined slightly, from 183 to 182, further increases in the prices of several sizes of anthracite coal being more than offset by decreases in the prices of copper ingots, pig lead, and pig tin.

A decrease of 6 points is shown in the number for the group of producers' goods, which now stands at 199. But few of the commodities included in the group have increased in price. Among these may be mentioned brick (New York quotation), lime, and oleo oil. On the other hand, decreases in price have occurred in many instances, among which are cotton yarn, rope, and jute, wood pulp, certain chemicals, such as alum and glycerin, California harness oak leather, tallow, naval stores, steel products, in particular billets, plates, and structural steel, and tin plate.

Index numbers of wholesale prices in the United States for principal classes of commodities.

## DISCOUNT AND INTEREST RATES.

In the following tables are presented actual discount and interest rates prevailing in the various cities in which the several Federal Reserve Banks and their branches are located, during the 30 -day periods ending December 15, 1918, and January 15, 1919. Quotations are given for prime commercial paper, both customers' and purchased in the open market, interbank loans, bankers' acceptances, and paper secured by prime stock exchange or other current collateral. Separate rates are quoted for paper of longer or shorter maturities in the first-named and last-named classes. In addition, quotations are given for commodity paper secured by warehouse receipts and for cattle loans, as reported from centers in which such paper is current.

Quotations are also given of rates charged on ordinary loans to customers secured by Liberty bonds and certificates of indebtedness. Assistance to customers to enable them to purchase such Government obligations has generally been extended at lower rates, either at the rate borne by such obligations or at a rate slightly higher. The table also shows quotations in New York for demand paper secured by prime bankers' acceptances, a type of paper which has made its appearance in the New York market during the past several months. Quotations for new types of paper will be added from time to time as deemed of interest.

During the period under reviers, the decrease in interest rates for the period ending December 15 has been continued. In certain cases, conspicuous among which are New York,

Philadelphia, Chicago, and Minneapolis, the decrease occurs for the majority of the types of paper for which quotations are given. On the other hand, rates in several centers, of which Atlanta is an instance, on the whole show an increase. In a considerable number of cities, rates are either practically unchanged, as for example among others in Cleveland, El Paso, and Portland, or afford an approximately equal number of instances of advance and decline. Rates for commercial paper afford the greatest number of instances of decline, especially paper purchased in the open market. Customary rates for the latter, as well as for acceptances, have declined in a considerable number of centers, while for the remaining types of paper they remain practically unchanged, movements in rates being confined with relatively few exceptions to changes in the high and low quotations. There is no general movement perceptible in rates on interbank loans, while rates on acceptances, both indorsed and unindorsed, in general have declined. Though rates charged on collateral loans have decreased in several of the larger centers, such as Chicago and New York, in the latter conter a low rate of 33 per cent being shown for demand paper as contrasted with $4 \frac{1}{2}$ per cent for the previous period, fewer changes in ratos for this type of paper are noted than in the case of rates on commercial paper, and there is an approximately equal number of instances of increase and decrease. Rates on paper secured by Liberty bonds and certificates, which on the whole are lower than on ordinary commercial loans, or on loans secured by other collateral, show little change.

DURING 30-DAY PERIOD ENDING DEC. 15, 1918.

$a$ Rates for demand paper secured by prime bankers' acceptances, high 6, low $4 \frac{1}{2}$.
o Secured by fourth Liberty loan bonds.

DURING 30-DAY PERIOD ENDING JAN. 15

$a$ Rates for demand paper secured by prime banks' acceptances, high 6, low $4 \frac{1}{4}$, customary $44-5$. b Secured by fourth Liberty loan bonds.

## PHYSICAL VOLUME OF TRADE.

In continuation of tables in the January Federal Reserve Bulletin there are presented in the following tables certain data relative to the physical volume of trade. The January issue contains a description of the methods employed in the compilation of the
data and the construction of the accompanying index numbers. Data concerning lumber movements at Chicago, tax-paid manufactured tobacco products, and output of locomotives and cars have been added in the present issue, and additional material will be presented from time to time as reliable figures are obtained.

Live-stock movements.

## DISCOUNT OPERATIONS ON THE FEDERAL RESERVE BANKS DURING DECEMBER AND THE CALENDAR YEAR 1918.

For the month of December discount operations of the Federal Reserve Banks reached the record total of $\$ 6,215,083,531$, compared with $\$ 5,154,592,221$ the month before and $\$ 937,433,413$ for December, 1917. Of the total bills discounted during the month under review the share of war paper, i. e., member banks' notes and customers' paper secured by United States war obligations was 92.7 per cent, compared with about 90 per cent the month before and less than 30 per cent for December, 1917. Over 65 per cent of the total war paper and a slightly smaller percentage of the month's total discounts are reported by the New York bank. Large increases in the amounts of war paper handled, as compared with November, are shown for the eastern banks and San Francisco.

Total discounts for the year were $\$ 39,763$,226,393 , compared with $\$ 9,014,186,454$ for 1917. While the total for 1918, much more than the 1917 total, is composed of members' collateral notes of the shortest maturities and the largest average liquidations, still a comparison of the figures conveys some idea of the additional volume of business handled by the Federal Reserve Banks during the past year. About 85 per cent of the larger total was composed of war paper, the New York bank alone accounting for 61.7 per cent of the total discounted and for about two-thirds of the war paper discounted during the past year.

Discounts of members' collateral notes secured by eligible paper totaled $\$ 51,586,141$, compared with $\$ 65,073,069$ for November, Boston, Chicago and Kansas City reporting the bulk of this class of paper. Trade acceptances discounted during the month aggregated $\$ 11,942,831$, compared with $\$ 16,312,995$ in November. Of the smaller total $\$ 900,850$ were based upon transactions in the foreign trade reported by the New York bank, the remainder being domestic trade acceptances. In addition, four banks report the discount of $\$ 719,812$ of bankers' acceptances, as against $\$ 900,110$ the month before. The above totals are exclusive of $\$ 3,995,162$ of foreign trade acceptances and $\$ 1,870,994$ of domestic trade acceptances bought during the month largely by the New York, Cleveland and San Francisco banks.

Trade acceptances discounted during the year aggregated $\$ 193,220,112$ compared with $\$ 37,771,132$ discounted in 1917, while trade
acceptances bought in open market during the year totaled $\$ 60,725,326$ as against $\$ 30,947,981$ bought during 1917.

Of the total paper discounted during December 96.5 per cent was 15 -day paper, i. e., maturing within 15 days from date of discount with the Federal Reserve Bank. For the New York bank, because of the relatively larger volume of collateral notes handled, this ratio runs as high as 98.2 per cent. Discounts of 6-months' paper totaled \$10,539,594, nearly 60 per cent of this amount being the combined share of the Kansas City and Dallas banks.

With the exception of the Minneapolis, Dallas, and San Francisco banks, all the banks show shorter average maturities of paper discounted during the month, the calculated average maturity for the system working out at 8.54 days for December as against 12.37 days for November. Because of the relatively larger volume of fourth Liberty loan paper at the preferential 4 per cent rate the average rate of discount for the system shows a decrease from 4.20 in November to 4.18 in December.
For the complete year the average maturity of all the paper discounted by all the banks works out at 11.83 days and the average rate of discount at 4.23 per cent.

On the last Friday of the month the Federal Reserve Banks held a total of $\$ 1,702,938,000$, as against $\$ 1,815,195,000$ on the last Friday in November, and $\$ 680,706,000$ on the corresponding date in 1917. Of the total discounts held about the close of the present year the share of war paper was 82.2 per cent, compared with 77.9 per cent about the end of November and 43 per cent about the end of 1917.

At the New York bank this percentage was nearly 94 per cent, slightly lower percentages obtaining for the other eastern banks. Discounted trade acceptances on hand totaled $\$ 15,985,000$ compared with $\$ 23,126,000$ about the end of November. Holdings of agricultural paper aggregated $\$ 29,384,000$, as against $\$ 27,492,000$ on the last Friday in November, while live-stock paper on hand totaled $\$ 27,335,000$, of which about 80 per cent represents the combined holdings of the Kansas City and Dallas banks.
During the month there was a net increase of 43 in the number of Federal Reserve member banks, the total membership at the end of the year being 8,711 , as against 8,668 at the close of November and 7,885 at the end of 1917.

The number of member banks discounting during December is given as 3,288 , compared with 3,667 the month before. It is notable that while most of the Federal Reserve Banks report considerable decreases since November in the number of accommodated members, the New York and Philadelphia banks show substantial increases in these numbers, corresponding in a general way to the large increases in the volurie of their monthly discount operations.

In the following exhibit are given the numbers of member banks at the end of November and December, also the number of banks accommodated during each month:

Total investment operations of each Federal Reserve Bank during the month of December, 1918 and 1917, and the 12 months ending Dec. 31, 1918 and 1917.

${ }_{2}^{1}$ Tncludes $\$ 250,253$ in the domestie trade.
${ }^{2}$ Includes $\$ 1,620,741$ in the domestic trade.

Average amount of earning assets held by each Federal Reserve Bank during December, 1918, earnings from each class of earning assets and annual rates of earnings on basis of December, 1918, returns.

Bills discounted for member banks during the month of December, 1918, distributed by classes; also average rates and maturities of bills discounted by each Federal Reserve Banl.
