## FEDERAL RESERVE BOARD.

Ex officio members:

A. W. Mellon, Secretary of the Treasury, Chairman.<br>Henry M. Dawes, Comptroller of the Currency.

D. R. Crissinamr, Governor.<br>Edmund Platt, Vice Governor.<br>Adolph O. Miller.<br>Charles S. Hamlin.<br>George R. James.<br>Edward H. Ounningham.

OFFICERS OF FEDERAL RESERVE BANKS.

1 Controller.

* Assistant to governor.
${ }^{5}$ Assistant deputy governor.

## MANAGERS OF BRANCHES OF FEDERAL RESERVE BANKS.

## SURSCRIPTION PRICE OR BULLETTN.

The Federal Reserve Bulqemin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It contains, in addition to the regular official announcements, the national review of business conditions, detailed analyses of business conditions, research studies, reviews of foreign banking, and complete statistics showing the condition of Federal Reserve Banks and member banks. The Bulletwn will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents.

Vol. 10
JANUARY, 1924.
No. 1

## REVIEW OF THE MONTH.

In the business and banking developments of the year 1923, the outstanding fact has been

The year 1923.
the high level of industrial and agricultural output and the demand for bank credit to finance a volume of production and trade never previously equaled. Throughout the year the buying power of consumers, arising out of practically full industrial employment and increased income of farmers, has been reflected in a growth of retail trade and in a more active distribution of merchandise than in any other year. The increase in the demand for commercial credit, which began in the middle of 1922, continued at a rapid rate during the early part of the year, when there was an unusual degree of industrial activity, and the demand was maintained at a high level, with a further rise during the months of crop moving and fall trade. Taking the year as a whole, the credit situation was characterized by a growth of credit to meet the renewed demand of active business.

The extent of the demand for bank credit is shown by the fact that the total loans of all member banks increased about
Growth in bank three-quarters of a billion durcredit.
ing the first nine months of the year. This increase of about 4 per cent followed upon a more rapid rate of adrance during the last nine months of 1922. In that year the growth of loans was accompanied by an even more rapid growth in investments; in 1923, however, investments declined slightly, while loans continued to increase. Changes in the position of all member banks from the beginning of 1920 to September, 1923, are shown on the chart. The growth of member bank credit since the spring of 1922 has been
at a rate more rapid than the previous loan liquidation, so that by the middle of 1923 total loans and investments were greater than in November, 1920. In 1922 the increase in loans was exceeded by the increase in demand deposits, while during the first nine months of 1923 there was a decrease in demand deposits.

Figures are for all member banks of the Federal reserve system call dates.
The chief source of increase in member bank funds during 1923 was the growth in time deposits, supplemented by additional borrowings at the Federal reserve banks.
The growth in member bank credit in the agricultural districts during the period was to
a much larger extent than in the industrial districts financed by borrowings at the reserve banks. The discounts at the six Federal reserve banks located in the agricultural districts (Richmond, Atlanta, St. Louis, Minneapolis, Kansas City, and Dallas) increased by 69 per cent between January and September, while discounts at all other reserve banks increased by 31 per cent. Loans increased more rapidly in industrial districts, and this increase was met in part through the sale of investments, while in the agricultural districts investments continued to increase. In the financial centers funds available for commercial loans were also increased through a reduction in loans secured by stocks and bonds. The volume of commercial borrowing at member banks in leading cities declined slightly after the first week in October and the lessened demand for credit was also reflected in somewhat easier money rates.

At the Federal reserve banks discounts increased rapidly during the year, but there was a corresponding decline in open-

> Constancy of reserve bank credit.
try steadily used from $\$ 1,000,000,000$ to $\$ 1,200,000,000$ of reserve bank credit. In view of this relatively constant demand, the years 1922 and 1923 afford an opportunity of observing the effect of changes in the volume of open-market holdings upon the volume of member bank discounts. This changing relationship was commented on in the May and July issues of the Bulletin, and it now seems appropriate, at the close of the year, to make a more complete review of the relation between the two elements of Federal reserve credit policy-rediscount operations and open-market operations.

In the early part of 1922 the reserve banks purchased a considerable volume of shortterm Government securities in the open market, partly for the purpose of obtaining earnings, and in 1923 they greatly reduced their holdings of these securities. In the absence of change in the aggregate demand for reserve bank credit, the increases in openmarket purchases during 1922 were offset by a corresponding decline in the volume of discounts, and in 1923 the reduction in securities was accompanied by a substantially equivalent increase in discounts.

In 1922, when the reserve banks bought securities, the funds which they paid to the sellers found their way into member banks and permitted these banks to repay an equal amount of their rediscounts. The aggregate amount of reserve bank credit in use was not increased or even materially changed; a certain amount of their "rediscounts" were merely thus converted into "securities." But the effect on the member banks, particularly in the large centers, was to add to their loanable funds or to enable them to reduce their indebtedness at the reserve banks. Under such conditions banks are likely to lend more freely to their customers and others.

In 1923, on the other hand, when the reserve banks reduced their security holdings, they withdrew from the market an equivalent amount of funds. Following the withdrawal, the market borrowed substantially the same amount from the banks; and the banks, in
turn, rediscounted substantially the same amount at the reserve banks, so that there was no material change in the total volume of Federal reserve bank credit in use.

The volume of open-market holdings with which the reserve banks entered the year 1923 put them in possession of an

## Open-market policy.

 admirable instrument for testing the degree of dependence of the credit structure upon Federal reserve bank accommodation and for placing the initiative upon member banks to determine the volume of reserve bank credit required to meet the needs of business and industry. For in rediscount operations the initiative is taken by the member banks, which borrow from the reserve banks at the established discount rate, while in open-market operations the initiative may be taken by the reserve banks, which buy or sell short-term securities in the market largely at their own volition and at market rates. The fact that the reduction of open-market holdings during 1923 was accompanied by an amount of discounting by member banks approximately equal to the volume of funds withdrawn from the market by Federal reserve banks indicated that the total volume of reserve bank credit outstanding was not in excess of requirements.Federal reserve credit policy during the year has been reflected chiefly in open-market operations. As the aggregate demand of the country for reserve bank credit may be met either through rediscount or through openmarket operations, the Federal Reserve Board felt that these two methods of extending credit should be brought into harmony. The board, therefore, in April, 1923, appointed a committee of officers of reserve banks to act in conjunction with the board in effecting a more complete coordination of all open-market operations of the reserve banks, both on their own account and in the execution of orders in Government securities for the Treasury as fiscal agents of the Government.

At the time the committee was appointed the Federal Reserve Board adopted the principle "That the time, manner, character, and volume of open-market investments pur-
chased by Federal reserve banks be governed with primary regard to the accommodation of commerce and business and to the effect of such purchases or sales on the general credit situation."
As the act provides that discount rates shall be fixed "with a view of accommodating commerce and business," the adoption of this principle definitely established open-market policies on the same basis as discount policies. Open-market operations provide a cushion of credit between the direct borrowings of member banks and the money market, and have facilitated the flow of credit into and out of the reserve banks in such a way as to exercise a steadying influence in the market and to reduce the tendency toward periodical tightness of money formerly felt by business in the spring and by agriculture in the autumn. Indeed, open-market operations, particularly sales of securities, have proved to be a valuable adjunct to discount policy. The minor influence which sales of securities by reserve banks exerts may at times avoid the necessity for resorting to the major influence of a change in discount rates.

Discount rate changes in 1923 were fewer than in any other year in the history of the system. Advances in discount rates from 4 per cent to $4 \frac{1}{2}$ per cent at the Federal reserve banks of Boston, New York, and San Francisco were made early in the year, and since that time the level of rates has been the same at all the reserve banks. With the growth of discounts, however, which accompanied the reduction in the holdings of Government securities, the influence of existing discount rates was extended to a larger proportion of the total Federal reserve bank credit in use, and the cost of obtaining reserve bank credit was borne more directly by member banks. Changes of discount rates made with a view of influencing the demand for rediscount accommodation from Federal reserve banks are better understood by the general public than open-market transactions. The experience of the past year, however, shows that changes in the volume of securities held by the reserve banks, when such changes are well timed, are capable
of exerting an important and useful influence on credit conditions. The weekly statements of condition of the Federal reserve banks show the amount and composition of open-market holdings and make it possible for the public to follow these changes from week to week.

In view of the importance during 1923 of the open-market operations, a detailed statement of the changes during

Open-market operations during 1923. the year in the composition of open-market holdings and of their relation to total earning assets is shown in the table below:
Earning Assets of Federal Reserve Banks in 1923.

Of the two principal types of securities eligible for purchase by reserve banks-acceptances and United States securities-the volume of acceptances held by the reserve banks increased by about $\$ 100,000,000$ during the year, while Government securities declined by over $\$ 400,000,000$. The increase in Federal reserve bank holdings of acceptances since the middle of October reflected in part the seasonal growth in the volume of acceptances created in connection with the financing of crop exports. The reduction in holdings of United States securities, chiefly certificates of indebtedness, continued almost without interruption throughout the year, though during November and December there was a slight increase in the holdings of Treasury certificates. A comparison of the composition of earning assets shows that the reduction in open-market holdings between the middle of January and the
middle of December was somewhat larger than the increase in discounts, with the result that for the period the total volume of reserve bank credit decreased slightly.
Stability in the other principal items of the reserve bank statement has also characterized the year's operations. Reserves remained at about $\$ 3,200,000,000$; Federal reserve note circulation, after a seasonal decline early in the year, continued at about $\$ 2,200,000,000$; deposits, consisting largely of member banks' reserve balances, declined somewhat, reflecting the decrease in demand deposits with member banks; and the reserve ratio throughout the year remained near 76 per cent. This absence of change in the reserve bank statement during a year of growth in business activity and of increasing credit and currency demand is closely related, as was pointed out last month in this review, to the use made of the imported gold. During 1923 the inflow of gold continued in somewhat larger volume than during the previous year, net imports of $\$ 262,000,000$ for the first 11 months exceeding the total of $\$ 238,000,000$ for 1922 . This additional gold was not reflected in an increase in the reserves of the Federal reserve banks because certain of these banks met the demand for currency by putting gold certificates into circulation. Thus the increase of the total money in circulation of $\$ 307,000,000$ between December, 1922, and December, 1923, was largely in gold certificates rather than in Federal reserve notes.

The trend of member bank credit during the year, rather than of Federal
Course of business. reserve bank credit, has reflected the course of business developments. The period of most rapid increase in the demand for credit was the first quarter of the year, when trade was active and the volume of production in basic industries was greater than at any previous time. Production reached its peak for the year in May, and after that time the growth in the demand for credit for commercial purposes slackened. The recession in industrial activity during the summer months, however, was not accompanied by a decline in the distribution of merchandise, and in the autumn
the demand for additional credit, largely frous agriculture, resulted in a further increase in commercial loans at reporting member banks. The slackening in trade activity during the latter part of the year arose more largely from the hesitancy of business concerns in placing forward orders than from a lessened demand on the part of ultimate consumers; and the price declines of the period were chiefly in materials used in industry rather than in consumers' goods. The year as a whole was characterized by a large industrial output, practically full employment, a sustained consumers' demand for goods, and a level of prices more stable than in any year since 1915.

A national income larger than in 1922, arising both out of increased earnings of factory workers and larger proceeds from the sale of farm products, furnished the buying power to absorb the year's increased output of goods. The income of industrial workers, as the result of a volume of employment approximately 13 per cent larger than in 1922 and of wage advances, greatly exceeded that of the previous year. The total value of agricultural production was about $\$ 900,000,000$ greater than in 1922. This increase in income was not accompanied by a corresponding rise in the cost of living and the large growth in savings deposits indicates that there was a considerable margin of income above expenditures. The increased buying during the year is reflected in the volume of retail trade, which was larger for every month of 1923 than of 1922 so far as monthly figures are now available, and the total of department-store sales for the 10 months exceeded those for the corresponding months of last year by 13 per cent. The distribution and marketing of goods was facilitated by the improvement of transportation facilities and the volume of railroad traffic was the largest on record. Business developments during the closing months of the year are discussed in the summary of business conditions in the United States elsewhere in the Bulcemin, and the charts on pages 10 and 11 show the level of production, employment, and prices in 1923 compared with earlier years.

In agriculture the final estimates for the year indicate a physical volume of production larger than the year before, and at the prevailing level of farm prices the total value of the year's crops is about 12 per cent above that of 1922. Furthermore, a larger proportion of farm income was available for current expenditure, since less of the income than in preceding years was used in the repayment of loans. Sales of mail-order houses, representing chiefly purchases in rural communities, increased by 31 per cent in 1923. The recovery of agriculture, however, is still incomplete, particularly in the wheat and livestock industries, and the unusual business growth of the year has been chiefly in the industrial sections. It is the demand on the part of industrial workers which, even with the decreased foreign demand, has resulted in a better market for agricultural products. A discussion of agricultural developments in 1923 appears elsewhere in this Bulletin.

In addition to the large purchases of goods for immediate consumption there was also an exceptionally heavy demand for houses and automobiles, as indicated by the growth in the construction of buildings and the manufacture of motor cars. The automobile output of the year will total nearly $4,000,000$, an increase of more than 50 per cent over 1922. The building activity, which had been at a high level during 1922, reached a maximum in the spring of 1923 and then slackened somewhat, owing to the rapid advance in wages and in prices of materials. With the subsequent decline in construction costs activity was renewed, and for the 11 months ending in November contracts awarded totaled more than for the corresponding months of 1922 . Building operations on a considerable scale were general throughout the country, and residential building not only increased more rapidly than construction for business and industrial purposes but constituted a larger proportion of the total than in the four previous years. The large volume of construction not only led to increased production of building materials, but also resulted in large sales of furniture and other household goods, and was an important factor in the demand in many lines of trade.

Prices of building materials and house furnishings, while they declined during the latter part of the year, re-
Price readjustments. mained, nevertheless, considerably above the average for all commodities. The general price level, as measured by the wholesale price index of the Bureau of Labor Statistics, after advancing somewhat during the first three months of the year, declined by November to a point below that of November, 1922, but the average for the 11 months of 1923 was slightly higher than the average for the year 1922. More significant than these changes in the general level, however, are the readjustments which have taken place between various groups of commodities, particularly the increases in the prices of certain agricultural products and the continued decline in fuel prices. Prices of farm products, as a whole, were higher in November, 1923, than at any time since December, 1920. This rise was due entirely to the higher prices of crops, as the prices of livestock and animal products were lower in November than at any time during the year.

The fact that the year, taken as a whole, has been one of unparalleled industrial and trade activity has been some-

Attitude of
business. business. what obscured by the recession from the unusually high levels reached during the first quarter. The growth during the early months was a continuation of the expansion which had been under way for a year and a half, and carried the volume of production to a record level. Stocks of materials had been replenished, the available supplies of labor and equipment were being utilized near to capacity, and manufacturers began to feel some uncertainty about the possibility of marketing at profitable prices the large current output. The wide recognition that there had been a rate of advance which could hardly be maintained gave rise to hesitancy, and the recession which followed was an expression of the conservative attitude taken by the business community. In the fall months, however, with the continuance of active trade and an undiminished demand from consumers busi-
ness became more confident. Throughout 1923, a year when business volume, prices, and credit were adjusting themselves to new levels, it was primarily the attitude of business which moderated both the upward and the downward movements and exercised a stabilizing influence upon trade and industry.

## NOTES.

Federal Reserve Bulletin.
Beginning with the current issue of the Federal Reserve Bulletin the "first" and "final" editions will be consolidated and all member banks and subscribers will receive current copies of the consolidated edition. The subscription price of the Bulletin will be $\$ 2$ per annum instead of $\$ 4$, as formerly.
Address by Mr. Cunningham.
Mr. Edward H. Cunningham, member of the Federal Reserve Board, addressed a meeting of the American Farm Bureau Federation held in Chicago on December 12.
Publication of Digest of Rulings.
The Digest of Rulings, a preliminary announcement of which was made in the Bolletin for November, 1923, is expected to be ready for distribution on or before February 1, 1924. The digest will be published in book form of convenient size ( 6 by 9 inches), bound in durable buckram, and will contain approximately 400 pages. The price will be $\$ 2$ per copy, postpaid. Orders will now be received by the Federal Reserve Board.

The Digest of Rulings has been compiled with the thought of making it a complete and ready reference book to all questions concerning the interpretation and administration of the basic principles under which the Federal reserve system operates. The digest is designed for the use of the busy man who has not the time or the opportunity to consult the Federal Reserve Bulletin or who has not access to the text of the various laws and regulations involved and to that end it has been made comprehensive and complete in itself. It is confidently believed that it will fill a great need and will be a very useful handbook on Federal reserve matters for bankers and business men throughout the country.

As previously announced, the general scope and character of the Digest of Rulings may be briefly described as follows:

The main part of the digest is given over to digests or summaries of all the board's rulings,
opinions of its counsel and of the Attorney General, court decisions, and similar matters which have been published in the Federal Reserve Bulletin from its inception, on May 1, 1915, to January, 1924. These digests give in brief and accessible form the gist of the rulings and opinions which have interpreted the various provisions of the Federal reserve act and other legislation affecting the operation of the Federal reserve system, and they state the salient facts and the conclusions reached in sufficient detail to make it unnecessary in most cases to refer to the full text of the rulings as published in the Bulletin. The digests are numbered and arranged according to the sections of the Federal reserve act and other acts to which they primarily relate, and are further grouped under appropriate headings and subheadings for more ready reference. A complete index and frequent cross references have been provided, and a table of rulings in their order of publication in the Bulletin, together with their digest numbers, is included. In this respect the digest is substantially an annotated edition of the Federal reserve act.

In addition to this, the digest will constitute a handbook or manual of the Federal reserve system. The attempt has been made to put under one cover not only the interpretation of the law, but also the text of the law in its original and amended forms, and other like material which might be helpful as a reference to the development and administration of the Federal reserve system. Thus, the digest will include the regulations of the Federal Reserve Board; the full text of the Federal reserve act, with appendices and index as published in the 1923 edition; the act as originally enacted December 23, 1913, followed by a composition showing by italics and canceled words the textual changes made; a nontechnical summary of all these amendments; a list of officers of the Federal Reserve Board and of the Federal reserve banks, and the Federal Advisory Council; and a map of the Federal reserve system.

## Election of Directors.

The following directors of Federal reserve banks have been elected for the three-year term beginning January 1, 1924:

## CLASS A DIRECTORS.

Alfred L. Ripley, Boston (reelected). Robert H. Treman, New York (reelected).
Joseph Wayne, jr., Philadelphia (reelected).
Robert Wardrop, Cleveland (reelected).
L. E. Johnson, Richmond (reelected).
P. R. Kittles, Atlanta (reelected).
E. L. Johnson, Chicago (reelected).

John G. Lonsdale, St. Louis (reelected).
J. C. Bassett, Minneapolis (reelected).
E. E. Mullaney, Kansas City (reelected).

Howell E. Smith, Dallas (reelected).
J. S. Macdonnell, San Francisco.

CLASS B DIRECTORS.
Philip R. Allen, Boston (reelected).
Theodore F. Whitmarsh, New York.
Edwin S. Stuart, Philadelphia (reelected).
George D. Crabbs, Cleveland.
D. R. Coker, Richmond (reelected).

Leon C. Simon, Atlanta (reelected).
Robert Mueller, Chicago (reelected).
LeRoy Percy, St. Louis (reelected).
N. B. Holter, Minneapolis (reelected).

Harry W. Gibson, Kansas City (reelected).
J. J. Culbertson, Dallas (reelected).
A. B. C. Dohrmann, San Francisco (reelected).

```
                                    class c directors.
```

Frederic H. Curtiss, ${ }^{1}$ Boston.
Willam L. Saunders, ${ }^{2}$ New York.
R. L. Austin, ${ }^{1}$ Philadelphia.
D. C. Wills, ${ }^{1}$ Cleveland.

William W. Hoxton, ${ }^{1}$ Richmond.
Joseph A. McCord, ${ }^{1}$ Atlanta.
James Simpson, ${ }^{2}$ Chicago.
John W. Boehne, ${ }^{2}$ St. Louis.
John H. Rich, ${ }^{1}$ Minneapolis.
M. L. McClure, ${ }^{\text {K Kansas City. }}$

Clarence E. Linz, Dallas.
John Perrin, ${ }^{1}$ San Francisco.
Appointment of Chairmen and Deputy Chairmen.
The following have been designated as Federal reserve agents and chairmen of the board of directors of the Federal reserve banks for terms of one year, expiring December 31, 1924:

Boston-Frederic H. Curtiss.
New York-Pierre Jay.
Philadelphia-Richard L. Austin.
Cleveland-D. C. Wills.
Richmond-William W. Hoxton.
Atlanta-Joseph A. McCord.
Chicago-William A. Heath.
St. Louis-William McC. Martin.
Minneapolis-John H. Rich.
Kansas City-M. L. McClure.
Dallas-Lynn P. Talley.
San Francisco-John Perrin.
The following have been designated es deputy chairmen of the Federal reserve banks for terms of one year, expiring December 31, 1924:

Boston-Allen Hollis.
New York-William L. Saunders.
Philadelphia-H. B. Thompson.
Cleveland-L. B. Williams.
Richmond-Frederic A. Delano.
Atlanta-W. H. Kettig.
Chicago-James Simpson.
St. Louis-John W. Boehne.
Minneapolis-Homer P. Clark.
Kansas City-Heber Hord.
Dallas-W. B. Newsome.
San Francisco-Walton N. Moore.

[^0]
## TREASURY FINANCE.

Recent Treasury operations centered about December 15, when the fourth quarterly installment of income taxes fell due. On the same date the Government redeemed about $\$ 350$,000,000 of maturing Treasury certificates and paid about $\$ 75,000,000$ of interest on the public debt. New financing included an offering of two series of Treasury certificates, both dated December 15, aggregating $\$ 300$,000,000 , or thereabouts, the first series, at 4 per cent interest, being for six months and the second series, at $4 \frac{1}{4}$ per cent interest, for one year. No heavy interest payments fall due during January and Feburary, 1924. On the first of the new year about $\$ 60$,000,000 of war-savings certificates of the series of 1919 mature, a part of which, it is expected, will be exchanged for new Tressury savings certificates. Income-tax payments during the December period are estimated at $\$ 330,000,000$, and this total, together with the proceeds of the new offering of Treasury certificates, and balances on hand, are expected to provide for payments coming due in December and the following months, until March 15, 1924, when the Treasury will once more make arrangements for the transactions connected with the quarterly income-tax dates.

The new issue was oversubscribed, total subscriptions amounting to $\$ 765,505,500$, of which $\$ 109,180,500$ represented exchanges of Treasury certificates maturing on December 15. All exchange subscriptions wére allotted in full, while allotments on other subscriptions were made on a graduated scale, preference being given to smaller subscriptions.

Total allotments, including exchanges, were $\$ 349,277,500$, and their distribution by Federal reserve districts is shown in the following table:

|  |  | Subscriptions allotted. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Treasury and Federal reserve districts. | Total subscriptions received. | Treasury certiofcates, series TJ-1924, maturing June 15, 1924. | Treasury certificates, series TD-1924, maturing Dec. 15, 1924. | Total. | Exchanges, both series, included in total allotments. |

## UNITED STATES SECURITLES AND THE BANKS.

During the current year United States security holdings of the reporting member banks in the larger cities have shown a practically uninterrupted decrease amounting for the 11 months ending November to about $\$ 270,000,000$ as contrasted with an increase of $\$ 1,157,000,000$ during the preceding year. Outside of the larger cities member bank holdings show a moderate increase for the present year. During the same period the gross amount of the interest-bearing Government debt was reduced by over $\$ 700,000,000$, from $\$ 22,483,000,000$ to $\$ 21,780,000,000$. Of these totals the reporting member banks held $\$ 2,548,700,000$, or 11.3 per cent, about the close of 1922, and $\$ 2,279,000,000$, or 10.5 per cent, at the close of November, 1923. Government security holdings of all member banks show a decrease from $\$ 3,788,400,000$ at the close of 1922 to $\$ 3,722,400,000$ about the middle of September of the year just closed.

Treasury certificate holdings of the member banks, which at the close of the war constituted over one-third of the entire amount outstanding, have been greatly reduced owing to the large reduction in the volume of certificates outstanding (from over $\$ 6,000,000,000$ on March 31, 1919, to less than $\$ 1,000,000,000$ since August of the present year), also because of the great demand for this class of securities by corporations and investors.

Federal reserve bank holdings of United States securities show a large and rapid decline from the maximum of $\$ 630,000,000$ attained on June 14, 1922, to a level of less than $\$ 100,000,000$ during the second half of 1923. This reduction was due in part to the redemption of Pittman certificates in connection with the retirement of Federal reserve bank notes, but chiefly to the open-market policy of the Federal reserve system during the period.

In addition to Government securities owned by the banks they hold such securities as collateral for loans. Loans secured by United States obligations, however, which aggregated a large amount during and after the war, are now in relatively small volume, and the total of United States securities held by member banks as collateral on June 30, 1923, was only $\$ 348,000,000$. At the reserve banks loans secured by United States obligations are still considerable, their total at the close of November being about $\$ 400,000,000$, or about one-half of the total discounts beld by the reserve banks.

## INDEBTEDNESS OF FOREFGN GOVERNMENTS.

Announcement was made by the Treasury that the British Government on December 15 paid $\$ 92,000,000$ under the terms of the debt settlement approved by the act of February 28, 1923. Of this total, $\$ 69,000,000$ represents the second semiannual payment of interest at the rate of 3 per cent per annum on a principal indebtedness of $\$ 4,600,000,000$ and $\$ 23,000,000$ the first installment on account of principal. As authorized by the terms of the settlement, payment was made in Liberty bonds, which were accepted at par and accrued interest with a small cash adjustment. The bonds were $\$ 91,678,850$ face value of second Liberty loan converted $4 \frac{1}{4}$ 's, the accrued interest being $\$ 321,127.84$ and the cash adjustment $\$ 22.16$. During the year the British Government also paid $\$ 61,000,000$, which completes payment in full of balance of indebtedness regarded as having been given for purchase of silver under the Pittman Act.

Under the terms of a settlement made under the provisions of the same act the Treasury
received also a payment of $\$ 180,000$ from the Republic of Finland. This total was made up of $\$ 135,000$ of semiannual interest, at the rate of 3 per cent, on a principal indebtedness of $\$ 9,000,000$ and of $\$ 45,000$ on account of principal. Payment was also made in Liberty bonds- $\$ 179,350$ face amount of second Liberty loan $4 \frac{1}{4}$ 's, with $\$ 628.22$ of accrued interest and $\$ 21.78$ of cash adjustment.

The Treasury announced that the bonds thus accepted had been canceled and retired and the public debt reduced accordingly.

In addition to the above debt reductions by foreign governments, the Cuban Government during the latter part of August repaid the balance of its war debt to the United States, which originally totaled $\$ 10,000,000$.

Aggregate amounts of obligations of foreign governments (with separate figures for principal and accrued interest) held by the United States on December 15, after deduction of the payments on account of principal received from the British and Finnish Governments, are as follows:

Obligations of Foreign Governments held bi THE UNITED STATES TREASURY, TOGETHER WHTE Interest Accrued as of December 15, 1923.

## SUMMARY OF BUSINESS CONDITIONS IN THE UNITED STATES.

Production of basic commodities and factory employment decreased in November. Distribution of merchandise by wholesalers and retailers was somewhat less active, and wholesale prices showed a slight further recession.

Production.-Production in basic industries decreased about 2 per cent in November. The decline was due chiefly to reduced production of iron and steel and smaller sugar meltings. The Federal Reserve Board's new index of factory employment, which is shown by the accompanying chart, also declined, due to lessened activity at iron and steel plants and large seasonal reductions at clothing establishments. The volume of employment is now 2 per cent smaller than in the spring, but 3 per cent larger than a year ago. Contract awards for new buildings were smaller in November than in October in all reporting districts except New York, but were 20 per cent larger than a year ago.

Final estimates by the Department of Agriculture show larger yields of corn, oats, tobacco, and cotton than in 1922, and smaller yields of wheat, hay, and potatoes. The total value of agricultural production at December 1 prices was 12 per cent larger than in 1922. Each of the 10 principal crops, except wheat, showed an increase in value.

Trade.-Railroad freight shipments in November showed about the usual seasonal decline from October, but were in heavier volume as compared with previous years. Wholesale trade was 13 per cent less in November than in October, which is more than the usual decrease at this season, but sales continued to be slightly larger than a year ago. Sales of hardware, drugs, and meat were larger than in November, 1922, while sales of shoes were smaller. Retail business was smaller than in October in most lines. Sales of mail-order houses declined more than sales of department stores, but were 11 per cent larger than a year ago.

- Prices.-The Bureau of Labor Statistics index of wholesale prices declined in November to a point 4 per cent lower than last spring and about 3 per cent lower than a year ago. The chief reductions occurred in prices of animal products, fuel, and house furnishings. Prices of clothing and crops, on the other hand, increased and the latter group averaged higher than in any month since 1920. During the first half of December prices of sheep, beef, sugar, cotton, silk, and rubber declined, while quotations on crude oil, wheat, and wool were slightly higher.

Bank credit.-The total volume of credit extended by member banks in leading cities showed but little change between the middle of November and the middle of December. A seasonal reduction in commercial and agricultural loans in most districts was accompanied by increased loans on securities, with the result that total loans remained practically constant.

During the same period borrowings at the Federal reserve banks were also practically unchanged. Holdings of acceptances increased somewhat, partly in connection with the financing of cotton exports. The increased demand for currency for holiday trade was reflected in both a moderate expansion in Federal reserve note circulation and a reduction in gold certificates held by the reserve banks.

Rates of commercial paper sold in the open market continued to show an easier tendency, as indicated by increased sales at 43 per cent, particularly in interior districts. The December issues of one-year $4 \frac{1}{4}$ per cent and six-month 4 per cent Treasury certificates, compared with $4 \frac{4}{4}$ per cent on a six-month issue sold in September, were largely oversubscribed.

## State Banks and Trust Companies.

The following list shows the State banks and trust companies which were admitted to membership in the Federal reserve system during the month ending December 28, 1923, on which date 1,625 State institutions were members of the system:

|  | Capital. | Surplus. | Total resources. |
| :---: | :---: | :---: | :---: |

| Buffalo, N. Y. |,

## Acceptances to 100 Per Cent.

Since the issuance of the December Buluetin the following member institution has been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of its capital and surplus: Illinois Merchants Trust Co., Chicago, Ill.

## Fiduciary Powers Granted to National Banks.

During the month of December the Federal Reserve Board approved applications of the national banks listed below for permission to exercise one or more of the fiduciary powers named in section $11(\mathrm{k})$ of the Federal reserve act as amended, as follows:

1. Trustee.
2. Executor.
3. Administrator.
4. Registrar of stocks and bonds.
5. Guardian of estates.
6. Assignee.
7. Receiver
8. Committee of estates of lunatics.
9. In any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located.

The numerals opposite the name of each bank indicate the power or powers it is authorized to exercise, as given below:

| Place. | District No. | Tame of bank. | Powers granted. |
| :---: | :---: | :---: | :---: |
| Nantucket, Mass | 1 | Pacific National Bank | 1 to 9. |
| Darby, Pa..... | 3 | First National Bank. | 1 to 9. |

| Galveston, Tex.......... | 11 | South Texas National Bank. | 1, 2 ands |
| Lewiston, Idaho........ | 12 | Lewiston National Bank. | 1 to 9. |

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from November 24 to December 21, 1923, inclusive:

## AGRICULTURAL DEVELOPMENTS DURING 1923.

Agriculture during 1923 made further progress in its recovery from the depression which had characterized the years 1920 and 1921. Prices of certain products, however, are still below the general level and certain sections of the country have suffered partial crop failures, so that not all farming communities have shared in the general improvement in agricultural conditions which has characterized the year. By the end of December, with harvesting completed and marketing well advanced, more accurate information became available regarding the final yields and the returns to farmers for their year's work. It is therefore possible at this time to make a survey of farming developments for the purpose of determining the position of agriculture at the close of the year.

Production.--The volume of agricultural production in 1923 was larger than in either of the two preceding years, though not as large as in 1920. While the production of wheat was materially below that of last year, yields of cotton, corn, and tobacco were larger. The corn crop was one of the five largest in the history of the country and slightly exceeded $3,000,000,000$ bushels. Cotton has not recovered as rapidly as other crops since 1920, and, although the yield in 1923 was approximately 300,000 bales larger than in 1922, it constituted the third relatively small crop in succession, and as a result the supply of raw cotton has been considerably reduced. With small supplies and an active demand from domestic and foreign consumers, the price has advanced since the beginning of the harvesting season to the highest level in recent years, with the exception of the spring of 1920. The yield of tobacco was one of the largest in history and was exceeded only by the record yield in 1920. The accompanying table

| Crops. | Unit. | Production (000 omitted). |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

shows the production of the principal crops in 1920, 1921, and 1922, compared with final estimates of yields in 1923, and the table on page 16 shows yields in the different Federal reserve districts.

Prices.-Prices of agricultural commodities have advanced almost continuously since the beginning of the year, with a slight recession in the summer months and a subsequent recovery during the marketing season to a level higher than in either of the two preceding years. Prices of wheat, however, are lower than a year ago and corn prices, although higher than in either of the last two years, declined in November under the influence of heavy marketing. Livestock prices have continued to be much below crop prices, as is shown on the accompanying chart, which compares the

trend of farm prices of 10 leading crops and 6 kinds of livestock since 1921. It will be noted that livestock prices at the present time are only slightly above the 1913 level and lower than in 1922.

Higher prices for crops prevailing during the year were accompanied by increased cost of production. Wages of farm labor were higher than in 1922 in all sections of the country, and the greatest increases were in districts where the demand for industrial labor caused a movement of farm workers to the cities. In the cotton-growing States fertilizer, which is a major item of expense, was used in greater quantities than in 1922, both because a greater acreage was fertilized
and because the average use per acre was greater than in the preceding year. Wholesale prices of all commodities were slightly higher during the growing season of 1923 than of 1922, and although these prices are not an accurate measure of the level of farm expenses, they are indicative of the fact that the farmer had to pay more for supplies and equipment in producing the 1923 than the 1922 crops. On the other hand, the rise in prices of agricultural commodities during the year has not been accompanied by a corresponding rise in the prices of other commodities, and as a consequence the buying power arising from the sale of the farmer's products increased steadily throughout the year and reached in November the highest level since the spring of 1922. This general increase in purchasing power of farm products has not been felt in the livestock industry, as livestock prices have been below the level prevailing a year ago. The total value of the 1923 crops was $\$ 8,323,000,000$, an increase of approximately $\$ 900,000,000$ over 1922.

Consumption.-Increased agricultural production during 1922 and 1923 was accompanied by a large volume of consumption and this has resulted in considerable reduction in stocks of the principal crops. At the close of 1923 the stocks, with the exception of those of wheat, were the smallest since 1921.

Stocks at End of Crop Years.

| Year. | Corn <br> (bu.), <br> Nov. 1. | Wheat (bu.), July 1. | Barley (bu.), Aug. 1. | Oats <br> (bu.), <br> Aug. 1. | Cotton (exclusive of linters), Aug. 1. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1921. | 285,769 | 56,707 | 13,487 | 161,108 | 6,534 |
| 1922. | 177, 287 | 32,359 | 7,497 | 74,513 | 2,832 |
| 1923. | 83,357 | 35, 634 | 6,961 | 70,082 | 2,088 |

The increase in the volume of consumption of agricultural products during 1922 and 1923 was due chiefly to an increase in the domestic demand, which for some of the principal commodities was larger in 1923 than in any previous year. The number of animals slaughtered during the first 11 months of the year was the largest on record. All classes of meat animals were slaughtered in large numbers and the number of hogs slaughtered monthly was considerably more than $4,000,000$ head, the largest volume in the history of the meatpacking industry. This was due in part to an exceptionally heavy production of hoge and the consequent low level of hog prices. The
demand for meat products was heavy throughout the year and the volume of sales by meat packing companies exceeded month by month the volume in 1922. Cotton consumption during the crop year ending July 31 was the largest on record, with the exception of 1917, and for the 11 months ending November 30 it was approximately 500,000 bales larger than in the same period in 1922. Activity in the cotton-spinning industry was unusually large during the spring months and reached a peak in May. After that period consumption was curtailed somewhat, but it continued larger than in either of the two preceding years. The volume of wheat which passed into domestic consumption was also larger for the 11 months than a year earlier.

The following table shows the domestic consumption of agricultural products for the 11 months ending November 30, 1922 and 1923:

Domestic Consumption of Agricultural Products in 11 -Month Period Ending November 30.

|  | 1922 | 1923 |
| :---: | :---: | :---: |
| Cotton consumption . . . . . . . . . . . . . . . . . bales. . | 5,556,765 | 6,051,418 |
| Flour production....................... barrels. | 114, 616, 000 | 114,980,000 |
| Tobacco, manufactured. . . . . . . . . . . . pounds. . | 358,523, 587 | 349,378,003 |
| Hogs, slaughtered....................thousands.. | 37, 892, 192 | 47, 429, 864 |
| Cattle, slaughtered. . . . . . . . . . . . . . . . . . . do.... | 7,899,071 | 8, 406, 266 |
| Sheep, slaughtered. . . . . . . . . . . . . . . . . . . . do.... | 3,872,923 | $4,176,795$ |
|  | 10,071, 330 | $10,550,869$ |

In contrast with the large volume of domestic consumption, exports of farm products were smaller in 1923. Grain exports during the year have been larger than in pre-war years, but smaller than in 1920. Cotton exports have been less than before the war and in recent years. During the crop year ending August 31 the volume was the smallest of the decade with the exception of 1918. Meat products, on the other hand, have been going abroad in large volume and were exported in greater quantities during the first 11 months of 1923 than in the same period in 1922. The following table shows the volume of agricultural products exported during the first 11 months of 1922 and 1923:
Exports of Agricultural Products in 11-Month Period Ending November 30.

-Includes bacon, hams, shoulders, and other meats.

Cooperative marketing.-The year witnessed a further development in cooperative marketing by agricultural producers. For many years dairy products in the West Central States and the fruit crops on the Pacific coast and in other sections of the country have been marketed cooperatively, and in more recent years the cooperative movement has spread to other crop-producing sections. In 1919 some sales by farmers through cooperative organizations were made in practically every State in the United States, and the total volume of business done in that year was approximately $\$ 1,000,000,000$. Since 1919 further progress has been made in the efforts of producers to increase the size of existing cooperative organizations and to form new ones for marketing other products. Particularly significant has been the recent growth of the cooperative movement in the staple cropproducing areas. As the marketing of the 1923 crop requires a number of months and is not yet completed, it is difficult to determine accurately the volume of business that will be handled through cooperative agencies. But as the number of producers who have formed cooperative associations is larger and more commodities are being marketed cooperatively, the total amount of produce distributed through cooperative organizations will undoubtedly exceed that of former years. The following table shows the latest available data relating to the number, size, and volume of produce marketed in 1923 by the State or regional cooperative associations which distribute commodities on a large scale in the principal staplecrop sections of the country:

| Commodity. | Number of organizations. ${ }^{1}$ | Members. ${ }^{1}$ | Volume of produce marketed. ${ }^{2}$ |
| :---: | :---: | :---: | :---: |
| Cotton.. | 13 | 227, 442 | 749,924 bales. |
| Tobacco | 8 | 259, 840 | 602,486,000 pounds. |
| Wheat. | 14 | 43, 196 | 25,206,000 bushels. |
| Rice.. | 5 | 4,090 | 428,395,000 pounds. |
| Fruit..... | 667 |  | 100,519 cars. |
| Livestock | 21 |  | 81,772 cars. |

2 Includes volume of produce distributed from the 1922 production.
Although the table does not show all of the small cooperative marketing associations which in many instances are affiliated with the larger
ones, it includes the organizations operating on a large scale in the different crop-producing sections. In the case of cotton, tobacco, wheat, and rice the figures represent generally the State or regional organizations which distribute those commodities. The livestock organizations are the cooperative livestock commission companies which operate in the principal livestock terminal markets. Operations of terminal grain marketing organizations and national sales organizations to distribute the products of local associations are not shown in the table. The larger organizations are usually federations of a number of the smaller associations.

Agricultural credit.-An important development of the year has been the organization of new credit institutions authorized by the agricultural credits act of March 4, 1923. Intermediate credit banks have been established in connection with each of the 12 Federal farm land banks. These banks extend credit to financial institutions which lend funds for agricultural or livestock purposes and to cooperative marketing associations. From the passage of the act to November 30, 1923, the banks loaned a total of $\$ 36,551,000$, of which $\$ 27,863,000$ was advanced directly to cooperative marketing associations and $\$ 8,688,000$ was loaned through rediscounts to banks which had extended credit for agricultural and livestock purposes.
Since the long-term credit requirements of the farmer for the purchase of land, for equipment, and for permanent improvements are supplied by private institutions, insurance companies, mortgage companies, Federal land banks, joint-stock land banks, and other banking institutions, it is difficult to trace the total volume of long-term borrowing that was done in 1923. Available information which discloses the volume of long-term loans made by the Federal farm loan system and life insurance companies indicates that the loans by joint-stock land banks and life insurance companies for the 10 -month period ending October 31 were considerably larger than the total volume extended in the previous year. Loans by Federal land banks during the same period in 1923 were smaller than in 1922. Total loans extended by both joint-stock land banks and Federal land banks, as shown in the following table, amounted to $\$ 362,820 ; 000$ in

1922 and $\$ 338,816,000$ during the 10 -month period ending October 31, 1923 :

Loans by Federal Farm Loan System.

|  | 1922, total. | 1923, Janu-ary-October, inclusive. |
| :---: | :---: | :---: |
| Federal land banks: |  |  |
| Number of loans. | 73,995 | 51,552 |
| Amount of loans... | \$224, 135, 000 | \$161,624, 000 |
| Joint-stock land banks: Number of loans. |  |  |
| Amount of loans. | \$138, 685, 000 | \$177, 192,000 |
| Total: |  |  |
| Number of loans. | 8362, 89,991 | 76,908 |
| Amount of loans. | \$352, 820, 000 | \$338, 816,000 |

Summary.-Agricultural developments during the year 1923 were characterized by a further emergence of the farmer from the depression
of 1920-21. Yields were generally larger, although in a few sections unsatisfactory growing and harvesting seasons resulted in almost complete crop failures. Domestic consumption of agricultural products was in large volume and ofiset the curtailed foreign demand. Stocks of agricultural commodities showed reductions and prices were higher than in either of the two preceding seasons. In the absence of a corresponding rise in general prices the purchasing power of farm products increased, owing to higher crop prices, while those of livestock were lower than in the previous year. Cooperative marketing showed further development during the year, which also witnessed the organization of new credit facilities for supplying the farmer's financial requirements.

PRODUCTION OF CROPS, BY FEDERAL RDSERVE DISTRICTS.
[Final estimates (Dec. 1, 1922 and 1923) of the Department of Agriculture.]
[In thousands of units.]

[^2]2 In addition the following amounts were estimated grown in Lower California (Mexico): 1923, 86,000 bales; 1922, 58,000 bales.

THE TREND OF RETAIL TRADE，1919－1923．
In view of the important influence of the volume of retail trade upon the demand for bank credit，the Federal Reserve Board and the 12 Federal reserve banks in 1919 commenced the collection of retail trade data．The scope of these data has steadily increased during the past four years until the Federal reserve sys－ tem now receives monthly reports from de－ partment stores，mail－order houses，and seven groups of chain－store organizations，which together have annual sales of almost \＄3，－ 000，000，000．

The best available measure of retail business is the dollar value of sales，and this information is reported monthly by all cooperating dealers． Among the important factors which influence the value of monthly sales are seasonal and cyclical variations in the volume of business， price fluctuations，long－time growth，changes in methods of retailing，and fortuitous circum－ stances，such as weather conditions，strikes， and changes in the number of working days． Since the volume of retail trade is particularly subject to seasonal fluctuations，it was deemed advisable to provide for seasonal corrections in presenting the monthly figures．

For this purpose the link－relative method was adopted，since it is best adapted to data

Seasonal distribution of trade at department stores and mail－order houses．
covering only a short period of time．The steps involved in the use of the link－relative method are：（1）Conversion of the monthly data for the four years，1919－1922，into a series of link relatives－i．e．，percentages of the previous month；（2）determination of the
median link relative for each calendar month from the figures for that month in each of the years of the series；（3）conversion of these medians of link relatives into a continuous chain by expressing them as percentages of the median for January；（4）adjustment of the resulting differences between relatives for consecutive Januaries by distributing these differences evenly over the 12 months，and（5） division of each adjusted relative by the average of the 12．The final series of percentages constructed by this method shows the typical distribution of a year＇s sales over the 12 months．The table below shows this monthly distribution of trade for various lines of retail business，and the accompanying chart compares the seasonal distribution of trade at department stores with that at mail－order houses：

TABLE I．－SEASONAL VARIATIONS IN RETAIL SALES．
［Average month $=100$ ．］

|  | 葛 |  |  | 号 | 会 |  | 宫 |  |  | L ¢ O U O |  |  |

| $\begin{gathered} 5 \text {-and-10-cent } \\ \text { chains............. } \end{gathered}$ | 72 | 75 |  |  |  |  |  |  |  |  |  |  |
| Drug chains． | 97 | 91 | 100 | 98 | 98 | 98 | 101 | 100 | 99 | 102 | 94. | 122 |
| Cigar chains．．．．．． | 88 | 86 | 96 | 96 | 101 | 96 | 99 | 97 | 99 | 107 | 100 | 135 |
| Shoe chains． | 75 | 68 | 96 | 121 | 116 | 106 | 95 | 79 | 92 | 113 | 110 | 129 |
| Music chain | 84 | 85 | 93 | 86 | 82 | 78 | 75 | 88 | 102 | 119 | 121 | 187 |
| Candy chains．．．． | 84 | 85 | 96 | 102 | 97 | 92 | 98 | 101 | 100 | 103 | 95 | 147 |

It will be noted that there is a pronounced seasonal movement in the sales of all types of retail business except grocery chains．In most lines business is rather dull in January and February，is maintained in considerable volume throughout the spring months，becomes dull again in July and August，increases in volume during the fall，and reaches a peak in Decem－ ber．The period of winter inactivity is most pronounced in the case of shoe stores and 5－ and－10－cent stores，while the midsummer dull－ ness particularly affects department stores， mail－order houses，and music stores．Candy and drug stores，on the other hand，have a large volume of hot－weather business which causes some growth in their sales during the summer months．Shoe stores have a large expansion of sales in the spring months，and department stores，mail－order houses， 5 －and－10－cent stores， and candy stores also show a marked increase in volume of business at that season．Fall
buying is large in all reporting lines, and Christmas trade causes a sharp December peak in sales of music stores, 5 -and-10-cent stores, and department stores.

In the calculation of the final index numbers for each reporting line the monthly relatives of sales on a 1919 base have been corrected by the use of the seasonal coefficients described above. The adjusted index numbers for each line of retail trade are published in Table II at the end of this article. Indexes of departmentstore sales are available for 10 Federal reserve districts and are combined to form a national index by weighting the relatives for each district by the total number of persons employed in retail stores in that district according to the 1920 census.
Comparison of retail sales in different lines since January, 1919, shows some differences in trend. Business was dull in all reporting lines during the early months of 1919, but sales expanded steadily throughout the year. This uniformity of trend ended in February, 1920,

Department-store sales corrected for seasonal variations. Monthly average $1919=100$.
however, when sales of mail-order houses reached a peak. The business of department stores, cigar stores, grocery stores, and drug stores continued to increase until July, 1920, while sales of mail-order houses, music stores, and candy stores showed a downward tendency. During the last six months of 1920 sales of mailorder houses, department stores, music stores, and grocery stores declined in gross value, but there was little change in the level of buying at other reporting stores. Sales continued to decline at most retail stores throughout 1921, although in March there was a large volume of buying at shoe stores, reflecting the development of new styles of women's shoes, and in
the last five months there was a general improvement in sales of musical instruments. The decline in value of sales in 1920 and 1921 was due in large part to reductions in retail prices rather than to a decrease in the physical volume of commodities sold.
The expansion of employment and of earnings of industrial workers, together with some advance in prices, caused an increase of sales at most retail stores throughout the year 1922 and in the early months of 1923. Sales of department stores continued to increase during the last half of 1923, but sales of many other classes of retailers were slightly smaller in volume than in the first half of the year. Much of the expansion in chain-store sales during the last two

Sales of drug-store chains corrected for seasonal variations. Monthly average $1919=100$
years has been due to the opening of new stores, but it is difficult to estimate quantitatively the effect of this factor.
A review of the trend of sales for the nine types of retailers during the past five years indicates that sales of cigar stores and drug stores have fluctuated but little after allowance is made for seasonal changes in demand, whereas sales of chain grocery stores, chain candy stores, and chain 5 -and-10-cent stores have shown a steady upward trend throughout the post-war period, largely because of the opening of new unit stores. Sales of mail-order houses and music stores have closely reflected changes in industrial activity and employment, and this is true in a less marked degree of departmentstore sales. Sales at chain shoe stores have been more irregular than at any other reporting retail establishments, owing to the fact that changes in weather conditions and in styles had
a large effect on the volume of buying of footwear.

Data for geographical comparisons on a comparable basis are available for department stores. A comparison of the adjusted indexes of department-store sales in 10 Federal reserve districts, published in Table III, indicates that there has been quite a close correspondence in the month-to-month trend of sales in different sections, although the magnitude of these fluctuations has varied considerably. There was a rather steady expansion in

Sales of 5 -and-10-cent store chains corrected for seasonal variations. Monthly average $1919=100$.
volume of department-store business from January, 1919, to July, 1920, in all of the reporting districts except Chicago and Minneapolis. In the Chicago and Minneapolis districts sales were
maintained on a fairly even level during 1919, but showed a remarkable expansion in January, 1920, and the increased rate of buying was maintained throughout most of the following year. In August, 1920, the dollar value of trade commenced to decline and there was a downward trend until March, 1922, in most sections of the country. Although some reduction in sales occurred in all districts during this period, the amount of decrease varied greatly. Sales were reduced by about one-third in the Dallas, Atlanta, and Cleveland districts, where the decrease in retail business was most marked. The decrease in the southern districts may be largely ascribed to the great reduction in the Value of the cotton crop, while an important factor in the reduced sales of the Cleveland district was the reduction in employment and wages at steel plants, rubber factories, and other manufacturing establishments. Trade showed very little decrease in value during 1920 and 1921 in the San Francisco district and probably actually increased in physical volume.
Throughout most of the years 1922 and 1923 there has been an upward trend in sales of department stores in all sections of the United States far in excess of the increase in retail prices, so that it is apparent that there has been an expansion in the physical volume of business. The largest increases in sales have occurred in the Chicago, Cleveland, and Philadelphia districts, and in general there has been since 1919 a considerable increase in sales in the industrial sections of the East and Middle West, while sales in southern districts and in the agricultural sections of the West are at about the same level as four years ago.

## JAPANESE INDEX OF WHOLESALE PRICES IN 1919 AND 1920.

The index of wholesale prices in Japan as originally constructed began with January, 1921, since strictly comparable prices previous to that date were not available. It was felt, however, that an index which would indicate the general trend of prices for the two previous years would be of value, even though based on fewer commodities.

With the cooperation of the Bank of Japan, 1919 and 1920 prices have recently been secured for 62 of the 90 quotations used at present and a series of index numbers constructed for the back years, which were linked in January, 1921, to the current series.

The same method of construction was used that the board has employed in all its index numbers-that is, the index is a weighted arithmetic average with 1913 as a base. An index number was constructed for each group of commodities by applying to the new 1919 and 1920 prices the same weights as were used in the original series, and using as a base the 1913 prices of only those commodities included in the new series. The new indexes were linked to the original series by raising or lowering their levels to join those of the current series in January, 1921. This adjustment was made on a percentage basis, the percentage change for each group being determined by the position of the index in January, 1921, in relation to the position of the corresponding index in the original series. The percentage adjustment was then applied uniformly to each point of the index, so that the shift was greater, measured in actual points, when the index was high than when it was low.

These adjustments were, as a matter of fact, relatively slight, for in spite of the fact that there were 28 fewer commodities in the new series, the levels of the various groups were close to the fuller series.

In January, 1921, the following percentages of the current series were represented by the new figures:

Per cent.

Consumers' goods
90
Goods produced
91
Goods imported
66
Goods exported.
98
All commodities
87
Goods imported was the least well represented group in the new series, and in January, 1921, the level of prices of imported goods was about 4 points below the level of the original
series in that month. The new series was therefore shifted by 2.6 per cent. Although 90 per cent of consumers' goods were used, it happened that the prices of those commodities for which data were not available were consistently lower than the general level of finished goods, so that there was a discrepancy of 5.1 per cent in January, 1921, and the level of 1919 and 1920 was lower by that amount. The all-commodities level was lowered by 1 per cent. Smaller adjustments were made in the other groups. Among producers' goods cotton yarns have always had the heaviest weight and, since in the new series this commodity was one of a fewer number, its importance was unduly emphasized. To give it the same relative importance in the new series as in the old the weight used for 1919 and 1920 was somewhat reduced.

The 1920 peak of prices in Japan occurred in March instead of in May, as in the other four

countries, and was not reached at the same time by all the major groups of commodities. The decline from the peak, on the other hand, was much sharper in Japan, so that when prices in other countries were at their highest points, Japanese prices had fallen nearly to the level of early 1920. Although Japanese prices as a whole reached their highest point in March, the group indexes show that the high prices prevailed in some classes of commodities from December, 1919, to March, 1920. Raw materials reached their peak of prices in January,
owing to sudden increases in raw silk, copper, cotton, and wheat in that month. The two last commodities declined in February and rose again in March.

Prices of producers' goods reached their high point in March, although cotton yarn prices rose out of proportion to other items in this class of goods in October and November, 1919. The general price level of producers' goods in the earlier years was some 40 points above that for other classes of goods. This high level
was caused by prices of certain articles in this group which had increased disproportionately over the 1913 price. Among domestic goods in this class were paper, glass, and mineral oil. But this condition was particularly pronounced among imported goods, such articles as imported steel products, indigo, and potash being in January, 1919, from 325 to 600 per cent higher than in 1913. The prices of these items in later years returned to a level more nearly in line with that for other goods.

In December, 1919, prices of consumers' goods reached a figure only 7 points below the March, 1920, peak. Such articles of food as rice, wine, soy, salt fish, and fowl eggs, and also cotton cloths reached their highest price earlier than March.
In comparing the indexes of goods produced and goods imported the influence of the imported articles mentioned before under producers' goods is seen in the higher price level of imported goods. The close correlation between the indexes for goods imported and raw materials suggests that it is the influence of raw
materials imported that accounts for the low level of the raw materials group in 1921 and 1922, and it is in fact found that imported cotton prices have much to do with the trend of all raw materials. A few domestic agricultural products, like soy bean, rye, and barley, showed the same tendency to decline until August, 1921, and then to rise. The list of commodities in the Japanese index for 1921 to date may be found in the Federal Reserve Bulletin for September, 1922, page 1052. Of these, the following are included in the 1919 and 1920 series:

## GOODS PRODUCED.

Raw Materials:
Wheat.
Barley.
Rye.
Soy bean.
Hemp.
Raw silk.
Pinas family.
Japanese cedar.
Coal.
Coke.
Pig iron.
Copper.
Prodocers' Goods:
Bricks.
Cement.
Plate and sheet glass.
Roofing tile.
Cotton yarn.
Leather.
European paper.
Fish manure.
Indigo.
Soy-bean cake.
Mineral oil.
Mats for floor.
Flour by machine.
Consumers' Goods:
Cotton fabric mixed with silk.

Consumers' Goods-Con. Woolen cloth and serges.
Silk fabric.
Silk crepe.
Muslin.
Whitenankeen (broad).
Whitenankeen (narrow).
Sugar.
Rice.
Tobacco.
Salted fish.
Beef. ${ }^{1}$
Fowl eggs.
Sake (wine).
Kerosene. ${ }^{2}$
Salt.
Tea.
Miso.
Soy.
Small red bean.
Bonito, dried.
Rapeseed oil.
Firewoods.
Charcoal.
Japanese paper. Matches.

GOODS IMPORTED.

Raw Materials:
Cotton, ginned.
Coal. ${ }^{3}$
Producers' Goods:
Steel bars, rods, and angles.
Steel, plate and sheet.
Leather.
Potash.
Indigo.

Producers' Goods-Con. Soy-bean cake.
Consumers' Goods: Woolen cloth and serges.
Rice.
Fowl eggs.
Salt.
Kerosene.

## GOODS EXPORTED.

Raw Materials:
Raw silk.
Coal.
Copper.
Prodvcers' Goods: Cement. Plate and sheet glass.
Cotton yarn.
European paper.
Consumers' Goods:
Silk fabric.
Silk crepe.
Muslin.
${ }^{1}$ Begins July, 1920.
${ }^{2}$ Begins January, 1920.
${ }^{*}$ Begins September, 1919.

Consumars' Goods-Con. White nankeen (broad).
Whitenankeen (narrow)
Sugar.
Rice. Tea.
Sake (wine). Rapeseed oil. Matches. Soy.

The accompanying tables and charts show the Japanese index from 1919 to date:

## BUSINESS CONDITIONS IN THE UNITED STATES.

## AGRICULTURE.

Harvesting was completed in November or early December, except in the southernmost areas of the country, where winter fruit harvesting began and truck crops planted in the early fall were being shipped. Mild weather aided farm operations in most sections of the country, and although rains delayed plantings of fall grains in sections of the Atlanta, St. Louis, and Dallas districts, they were generally advantageous to the growing cereals, and the condition of the winter wheat and rye crops were better on December 1 than in recent years. Prices of agricultural commodities, after increasing during the early autumn months and remaining at a higher level than in any harvesting season since 1920, declined slightly during November, when the markets weakened under the burden of seasonal distribution. Crop prices are still higher than in either of the two preceding years, but livestock declined in November to the lowest point since

January, 1922. As a result of greater declines in prices of farm products (crops and livestock) than in other commodity prices the purchasing power of farm products declined during the month to the levels existing at the beginning of the harvesting season.
Notwithstanding the slight declines in recent weeks, higher prices during the harvesting season than in 1922, together with larger yields in most of the principal crops, increased the total
value of agricultural production to approximately 12 per cent more than in 1922. All of the principal crops, with the exception of wheat, as shown in the chart, had a greater value than last year. The final yields of the principal crops in the different Federal reserve districts are given in the table on page 16.

## Grain.

Final estimates of the total grain yields in 1923 showed but little change from earlier forecasts. One of the outstanding developments during the year was the large increase in the yield of flaxseed, which resulted from an increased acreage, especially in the Minneapolis Federal reserve district, where producers planted the crop in lieu of wheat. All grains, with the exception of wheat and rye, had a greater value than in 1922. Under favorable weather conditions during November and early December winter wheat and other fall-sown grains made good progress, especially in the Kansas City district. Although the excessive rains delayed sowings in the Dallas district and caused smaller acreage than originally intended, they were very beneficial to the growing crop. As a result of exceptionally favorable seasons to date, the condition of winter wheat and rye, as shown in the following table, is considerably better than a year ago. The acreage, however, is somewhat smaller than in 1922.

|  | Acreage sown. |  | Condition Dec. 1- |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1923 | 1922 | 1923 | 1922 |
| Winter wheat. | 40,191,000 | 45,950,000 | 88.0 | 79.5 |
| Rye.... | 4,377,000 | 5,157,000 | 89.9 | 84.3 |

The marketing of corn prior to November 1 was delayed by unfavorable weather for husking, but during November harvesting progressed rapidly and the volume distributed was considerably larger than in October. All other grains except rye were marketed in smaller volume than in October. The distribution of grain in November is usually less than in October, but the volume this November was also considerably smaller than a year ago. Exports of wheat have been in small volume since the beginning of the harvesting season, reflecting the unwillingness of the American
producers to dispose of their crops in the world markets at prevailing prices and in competition with other producing countries.

## Cotton.

During November and December harvesting and ginning of the cotton crop neared completion and final estimates indicated a yield of $10,081,000$ bales, valued at $\$ 1,563,347,000$. The year was of particular significance in all branches of the industry. The small yields and high prices in 1922 resulted in exceptionally large plantings in the spring of 1923, but under the effect of unfavorable weather during the growing season and unusual weevil damage the crop deteriorated rapidly and the output was small for the third successive year. Domestic consumption of raw cotton was in exceptionally large volume during the spring months and reached a peak in May. Since that period the monthly consumption has fallen below that of the corresponding months in the previous year, but the total consumption of the year was larger than in 1922. Exports, on the other hand, were considerably reduced in the spring and summer, but since the beginning of the crop year they have increased and for the four months ending November 30 were greater than during the same period a year ago. Following the large volume of consumption in the spring months the price adranced rapidly and reached a peak in March. The curtailment in mill operations in the second quarter of the year and large plantings were reflected by declining prices until August. At the opening of the harvesting season a greater foreign demand and the effects of unfavorable weather and weevil damage on the final yield were reflected in higher prices and, with the exception of the early weeks of October, the market advanced rapidly until the first of December, when spot cotton, middling grade, reached 35.80 cents in the New Orleans market. Since that period prices declined slightly, reaching 34.80 cents on December 14. With the exception of the spring of 1920, the recent levels in the cotton market have been the highest since the period immediately following the Civil War.

## Tobacco.

Weather conditions were generally favorable during November and early December for harvesting tobacco in all sections except

Wisconsin, where stripping progressed slowly on account of the dry weather. The total crop is the second largest in the history of the country, being exceeded only by the record crop in 1920. Although the average farm price on December 1 was 20.3 cents compared with 23.2 cents a year ago, the total value of the crop exceeds that of the previous year. The quality of the crop is somewhat lower than a year ago, and this is largely responsible for lower prices, but the yield per acre was larger than in 1922, which offsets in part the lower returns from the inferior quality. During the year cooperative marketing associations in the tobacco sections were further developed, and a larger proportion of the crop is now being distributed through cooperative channels.
The volume of tobacco products manufactured in November was less than in October. All products, with the exception of cigarettes, were produced in smaller quantities than in November a year ago. The slackening in production in November is seasonal, as orders for the holiday season were generally filled in September and October. Production of cigars during the first 10 months of the year was greater than in the same period in 1921 and 1922. Cigarette production during the 10 -month period was the heaviest on record.
Fruit.
With the exception of unseasonably low temperatures prevailing in California during the second week in December, weather conditions were generally favorable during the late weeks of November and early December for harvesting and distributing the fruit crops. The California Valencia orange crop was injured somewhat by the low temperature, but the extent of the damage will not be known until about January 1. The harvesting of apples continued in all sections, and early in December packing was completed in Georgia. Although the total apple crop is slightly smaller than last year, the quality is higher and a larger proportion of the crop will be marketed than in 1922. As a result, the total value of the crop is larger than last season. The yields of peaches and pears, as will be noted in the table showing the yields and value of the principal fruit crops, were smaller than in 1922 and oranges larger.

| Size and Valde of Principal Frutt Crops. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Yield (000 omitted). |  | Value (000 omitted). |  |
|  | 1923 | 1922 | 1923 | 1922 |

| Peaches............bushels.. | 45,702 | 55,852 | 64, 043 | 74, 717 |
| Pears............................ | 17,390 34,800 | 20, 30200 30 | 21,053 $\mathbf{6 4 , 0 8 0}$ | 62, 9314 |

${ }^{1}$ Figures include only California and Florida.
The marketing of citrus fruits was in exceptionally large volume in November. Total shipments of oranges and grapefruit from Florida for the season ending November 30 were the largest on record, amounting to 11,614 cars, compared with 8,083 cars a year ago. The great increase was due to the heary movement of oranges.

## Livestock.

Pastures and ranges in all sections of the country were very favorably affected by autumn precipitation and mild weather in November and December, and as a result livestock are generally in good condition. Very little severe winter weather has been noted to date and relatively little feeding has been necessary. Considerable improvement in range conditions as compared with last year has materially benefited the range stock and they are going into the winter in better condition than in several years.

Marketing of livestock during November was characterized by a continuation of the exceptionally heavy movement of hogs to market and a slackening in the distribution of cattle, calves, and sheep. The record-breaking marketing of hogs during November was a continuation of the unprecedented distribution that has been significant throughout the year. Reports early in the autumn of the spread of cholera in principal swine-producing sections aided the large volume of selling, and the November receipts exceeded those of any previous month in the year and was one of the largest monthly totals in the history of the livestock industry. Cattle and sheep were marketed in smaller volume in November than in either the preceding month or November a year ago. The early autumn runs of range-fed cattle were abated in November, as the stock had been shipped into country districts for feeding. The large volume of hogs marketed resulted in further declines in prices in November and the early weeks of December, and they are now near the 1913 level.

Coal and coke.
Gradual declines in the production of bituminous coal during November and December reflected the influence of inactive demand, large stocks, and falling prices. Total production for the month of November was the smallest since last April, and about the middle of December daily output averaged less than at any time since September, 1922. The large commercial stocks on hand September 1, the rather mild weather prevailing during the fall, curtailing domestic consumption, and the declining output of coke have been important factors in the reduced demand for coal. The fall in prices brought the Coal Age index of bituminous coal prices in the first week of December to $\$ 2.18$, the lowest point since 1915 , excepting a short period early in 1922. Increased interest and a better tone was reported in several markets the following week and some quotations were raised slightly.

Weather has also affected the demand for anthracite, although not to the same extent as that of bituminous coal. November production of anthracite was the smallest of all months this year except September, the month of the strike, but output increased a little in December. Total production to date in 1923, however, has been larger than for any previous year except 1917 and 1918. The anthracite market has been rather weak in December, and quotations on some grades have been lowered by independent producers.

Reduced output of coke continued during November and December, accompanied by poor demand and falling prices. Total production of beehive and by-product coke in November was about the same as during the same month of 1922. Quotations on beehive coke for next quarter contracts have been announced, and some contracts have been renewed at from $\$ 4.25$ to $\$ 4.40$ a ton, but many consumers seem unwilling to pay over $\$ 4$.

## Metals.

Production of all the important commercial metals has been larger in 1923 than in any other year since the war. Shipments of iron ore from Lake Superior totaled $59,000,000$ tons this year, which was only exceeded in the war year 1918. Mine production of copper has been maintained in every month since February at a higher rate than in any corresponding month of the past four years. November copper production amounted to $127,000,000$ pounds, which indicated that the daily rate of output was about the same as in October. A slight
surplus of workers has developed at the copper mines, due to recent immigration of miners from Europe, release of skilled miners by other industries, and a somewhat smaller demand. It is estimated that November shipments of copper were the largest of any month on record and exceeded the refinery output, which was less than in October. Demand, however, slackened in the first two weeks of December, as a result of the approach of the annual inventory period, and prices have shown little change.
Zinc and lead mines in the Joplin section were closed during the first week of November and the first week of December. Shipments of zinc ore reached the second largest monthly total of the year, and the average price per ton was about $\$ 2$ higher than in October. Lead ore shipments from the Joplin mines also increased, but the average price continued to decline. Production of slab zinc totaled $88,600,000$ pounds in November, which was 5 per cent more than in October, and stocks at the end of the month totaled $61,800,000$, the largest aggregate since May, 1922. Zinc stocks, however, are only equal to a threeweeks supply at the current rate of shipments.

Silver production in the United States declined from 5,428,000 ounces in October to $4,894,000$ ounces in November. Due to this curtailment in domestic production and the hindrance to imports from recent developments in Mexico, the price of bar silver increased from 64.1 cents to 65.3 cents per ounce during the first half of December.

## Petroleum.

A further reduction in the daily average output of crude petroleum was the outstanding development in the oil industry in November. Production increased throughout the year until the first week in September, when the record figure of $2,280,700$ barrels was reached. After that week the output declined until the third week in October, when the Powell field in Texas came into bearing. Production in that field, after reaching a peak of 355,000 barrels a day, declined rapidly, and in the week ending December 15 the Nation's daily volume was $1,943,000$ barrels. The Powell field has been the center of interest during recent months, but the continuous decline in production in that area relieved much of the uncertainty in the industry and as a result the petroleum market has become much firmer. Prices have been advanced in most fields, the increases amounting to 25 cents per barrel for Pennsylvania crude and from 5 to 30 cents in the north

Texas fields. Stocks which had been accumulating month by month since January continued to increase in November and amounted to $323,366,000$ barrels compared with $315,356,000$ at the end of October.

Although the consumption of gasoline was larger than expected in November, there was no effect on prices, which declined to a new low point for the year. Both domestic and foreign consumption of gasoline was in larger volume during the 10 months ending October 31 than in 1922, but they were not large enough to absorb the increased production, and as a result stocks have been greater each month than a year ago and prices have declined constantly since March. Exports of gasoline during the first 10 months of the year were 47 per cent greater than during the same period a year ago, but on account of lower prices the value was only 11 per cent greater.

## mandfacturing.

## Food products.

During the first seven months of the yearproduction of flour exceeded month by month the output in 1922, but following the harvesting season in August activity in the milling industry failed to increase as rapidly as in the preceding season, and since that month the volume of production has been less than a year ago. Production in November showed a decline of 8 per cent from the high point of the year reached in October and a decrease of 14 per cent from November a year ago. While fewer working days than in October were partly responsible for the reduced output in November, curtailment of mill operations followed the downward movement in wheat prices, which began in the third week in October and continued throughout November. Flour prices declined to the lowest point of the year in November and, with the exception of July, were lower than in any period in recent years. Early in December, when reports of food loans to Germany were discussed, wheat and flour prices became firmer and recovered some of the losses in November. Under the influence of declining prices both domestic and foreign trade in flour were less active than inOctober. Buyers were reluctant to place future orders and purchased only for immediate purposes. Exports of flour, although less than the large volume in October, were greater than in November a year ago. Since the beginning of the crop year in August, flour exports have exceeded the monthly volume of
the same period in 1922 and have somewhat offset the decline in wheat exports.

Meat packing was in exceptionally large volume during November and exceeded the output in any month since January, 1919. The number of hogs slaughtered was the largest on record with the exception of January, 1919, and was 23 per cent greater than in October. All other animals were slaughtered in smaller numbers than in October and, with the exception of cattle, more animals were slaughtered than in November a year ago. Although domestic trade in packing-house products showed a seasonal decline of 21 per cent in November, it was larger than a year ago and, notwithstanding the large volume of packing, stocks of meat products are not exceptionally large. Some wholesale meat prices, especially for pork products, made further declines in November under the effect of a larger volume of production, and in a few cases they were lower than in 1913.

## Textiles.

Among the textiles, demand was generally fair in November and December, production schedules were maintained, and prices were either steadier than in previous months or were rising.

Demand for cotton products varied somewhat with the fluctuations in raw material prices. Buying, particularly of gray goods, improved rather considerably in November, when the price of raw cotton reached its high level, but quieted down upon later recessions in the cotton market. Prices of yarns and cloth have continued the rise commenced in August, and the Fairchild cotton goods price index was 18.114 on December 15, compared with 18.196, the previous high record of the year, attained April 7. The week of December 22 it dropped to 18.059 . The general level of cotton cloth and yarn prices is now about up to that of last March, the highest since the fall of 1920. Mill consumption of raw cotton in November was 531,631 bales, slightly less in total but greater in daily average than during October. Neither in buying nor in manufacturing operations is the industry as active as it was early in the year. Reports indicate that future buying is limited and production is in excess of orders being received. Cotton finishers reported slightly less business in November than in October.

Increased buying of raw wool in November, following several weeks of unusually large reexports and higher prices prevailing in foreign markets, have resulted in an upward move-
ment of prices of raw wool in domestic markets. The following table gives some idea of the recent decrease in imports and accompanying increase in reexports, which in the six months from May to October by far exceeded any previous yearly totals. It must be remembered, however, that imports in the 12 months ended June 30 were the largest on record and evidently exceeded the requirements of the country. In November reexports began to decline.
[Pounds, 000 omitted.]

|  | Imports. | Reexports. |
| :---: | :---: | :---: |
| 1919-monthly average | 37, 158 | 474 |

| Average, May-August. | 25, 253 | 2,187 |
| September............ | 7,883 | 3,398 |
| October... | 9,565 | 6,220 |
| November. | 9,815 | 2,722 |

Buying of woolen and worsted goods has continued inactive, as this is a between-seasons period before the opening of 1924 heavy-weight lines. The light-weight season now closing was not an entirely satisfactory one. Operating schedules were only slightly reduced during November, as shown by statistics of active machinery and of raw wool consumption. In fact, consumption by many New England manufacturers actually increased, and the per cent of machinery hours active was slightly greater than in October. Clothing manufacturers reduced operations considerably in November and employment indexes fell from 94 in October to 87 in November for men's clothing and from 83 to 75 in the case of women's clothing. These indexes for November, 1922, were 94 and 78 , respectively, for men's and women's lines. Sales by wholesalers in the New York district were considerably less than during October, but above those of November, 1922.

Activity in the silk industry continues to decline. Deliveries of raw silk to mills were only slightly less in November than during October, but were 29 per cent below those of last November, and active loom hours in New Jersey mills decreased from 2 to 5 per cent between November 15 and December 15. Buying of both thrown and broad silks is light. Prices of raw silk strengthened somewhat in the latter part of November, but in December they fell to the lowest level in the period since the Japanese earthquake. Warehouse stocks of raw silk increased 8 per cent during November.

Production of knit underwear during November was somewhat less than in October. New orders booked for winter underwear declined and were smaller than shipments, consequently the volume of unfilled orders fell off. Shipments of winter underwear exceeded production and stocks were reduced. Producers of summer garments in the Philadelphia district reported an increase in orders. Certain southern mills announced prices on hearyweight underwear for next year's contracts somewhat earlier than usual, filled their order books for several months in advance, withdrew their lines, and reopened later at higher prices. Orders for hosiery in the Philadelphia district increased rather substantially in November and shipments declined. On the other hand, manufacturers of cotton hosiery in the Atlanta district reported a material reduction in orders and an increase in shipments. The unsettled situation in the raw cotton market has affected sales of cotton hosiery.
Iron and steel.
Despite reports of increased buying of iron and steel products during November, the various statistical indexes of the industry declined in that month. Total and daily average production of pig iron and steel ingots decreased-pig iron to the lowest point since November, 1922, and steel to the lowest since September of the same year. Furthermore, unfilled orders of the United States Steel Corporation declined for the eighth consecutive month, and on November 30 were the smallest since February 28, 1922, the post-war low point. The output of steel ingots increased slightly early in December, only to be diminished further the following week because of reduced activity among the independent producers, while blast-furnace operation continued to decline throughout the period. Prices became rather firm the latter part of November, and basic valley pig iron rose from $\$ 20$ a ton to $\$ 22$, but later it fell again to $\$ 20$. The Iron Trade Review's composite index of iron and steel prices was $\$ 43$ on December 19, as compared with $\$ 42.63$ on November 21, the low point of the year.

Consumption of iron and steel products during the past year has been heavy and production has consequently exceeded all previous records; the 1923 output of pig iron will total nearly $40,000,000$ tons and that of steel ingots exceeded that amount in 11 months. Among important users of these products, building construction and automobile manufacturing have had record-break-
ing years and continue active. Locomotive production was likewise large throughout the year, but in recent months new orders have been few and unfilled orders consequently have decreased rapidly and are now the smallest since June, 1922. Railroads continue to be farly active buyers of rails and other equipment.

## Automobiles.

Substantial declines occurred in the production and distribution of automoblies during November as compared with October. Output and shipments remained, however, relatively large and were over 30 per cent greater than during November of the previous year. Reports indicate continuation of the high rate of production well up into December. Combined output of passenger cars and trucks for this year will total approximately $4,000,000$, an increase of more than 50 per cent above the 1922 total, heretofore the record figure. A number of price changes in both directions have been announced recently by manufacturers. Dealers' sales of new cars in the Middle West, as reported to the Federal Reserve Bank of Chicago, were 30 per cent less during November than in October. The number sold by retailers was slightly above that of November, 1922, whereas wholesalers reported a decline. Stocks of both new and old cars increased and were considerably larger than a year ago. Dealers are evidently beginning to stock up for the spring demand.
October production of pneumatic tires and inner tubes was the largest since early in the summer, and tire shipments likewise increased, causing a further decline in stocks. Inner-tube shipments, however, were smaller and stocks consequently increased. Nostatistics are available for more recent months.

## Leather and shoes.

Hide markets were somewhat more active in December than during the previous month, price declines were stopped, and some advances occurred. Export, as well as domestic demand, has improved. Dullness continued, however, in the leather markets-in fact it was perhaps increased by the desire of buyers to have inventories as low as possible at the end of the year. Sole-leather output was further curtailed and was the smallest monthly total, with one exception, since June, 1922. Some buyers, however, have taken advantage of lower prices and bought fair-sized lots of heavy leathers. Sales of upper leathers have been limited and kid leather production has been curtailed.

Production of shoes declined rather considerably in November and totaled less than for November, 1922. Declines were largest in the Boston, Philadelphia, and St. Louis districts. Reports from the Philadelphia district indicate that retailers are buying little at present and wholesalers are cautious in their purchasing for spring needs. Statistics compiled by the Federal reserve banks of Boston, Philadelphia, and Chicago from shoe manufacturers show substantial increases in unfilled orders and stocks during November. Orders, however, were much smaller than a year ago. Shipments were less than last year in the Boston district, but larger in Philadelphia and Chicago. Wholesale shoe sales during November decreased as compared both with October and with November a year ago. Retail shoe stores reported increases in sales over those of November, 1922.
Lumber.
Orders, shipments, and production of lumber declined during November and December in accordance with usual seasonal trends. Throughout November orders were smaller than shipments, which in turn were exceeded by cut; consequently stocks increased and unfilled orders declined. But in December weekly orders began to exceed both shipments and production. As compared with this time last year, sales and output have been generally higher. Production and shipments during November, as reported by the National Lumber Manufacturers' Association, totaled, respectively, $1,332,054,000$ and $1,229,874,000$ feet, as compared with $1,235,748,000$ and 1,149,736,000 feet in November, 1922.

Softwood prices, as shown by Lumber's index, fluctuated somewhat during November and December, but on December 21 was a little larger than on November 23. The hardwood index declined rather steadily and reached the low point of the year in the week of December 14, but a small advance during the following week wiped out all of the preceding month's drop.

## BUILDING.

The building industry has been very active throughout 1923, and the value of new construction reached a larger total than in any previous year on record. Contract awards for new buildings, according to statistics collected by the F. W. Dodge Co., declined during November in all reporting districts except New York. The most important reductions were in the St. Louis and Chicago districts and
amounted to 27 per cent and 25 per cent, respectively. Value of contract awards increased 8 per cent and value of new permits increased 12 per cent in the New York district during November, due to an exceptionally large amount of new building in New York City.

The floor space of new buildings for which contracts were awarded in 27 northeastern States aggregated $51,972,000$ square feet in November, as compared with $54,258,000$ square feet in October and $46,946,000$ square feet in November, 1922. Contracts for residences, business buildings, hospitals, churches, and educational buildings were in smaller volume than in October, while there was a considerable increase in awards for new industrial buildings. Statistics of new construction, classified by geographical districts and by purpose of structures, are published on page 42.

Prices of building materials showed a further slight decline during November and averaged 11 per cent less than at their peak for the year in April. Cement production was much larger than in November of any previous year, and output of brick, lumber, and other building materials was unusually large, considering the season of the year. Sales of structural steel were larger than in October.

## TRANSPORTATION.

Railroad shipments during the first 11 months of 1923 were 17 per cent larger than in the corresponding period of 1922 and were also at a higher rate than in any earlier year. The railroads were able to handle this great volume of traffic without congestion as a result of large purchases of new rolling stock and a great reduction in bad-order equipment. The number of new freight cars put in service during the first 11 months of 1923 totaled 178,000 , as compared with 86,000 in the entire year 1922; while the number of new locomotives put in service prior to December 1 was 3,704 , as compared with 1,379 in the year 1922. As the number of freight cars awaiting repair on December 1 was over 70,000 less than a year previous, the supply of available cars has increased by almost 250,000 during the past year. As a result of this large increase in car supply there was an average net surplus of 88,000 cars in November, 1923, as compared with an average net shortage of 150,000 cars in November, 1922.

Car loadings in November were smaller than in any month since April, but this is the usual development in the late autumn. Total load-
ings for the month were 4 per cent larger than a year ago, although loadings in the last week of November fell below the total for the corresponding week of 1922. Shipments of miscellaneous merchandise, forest products, livestock, and ore were larger than in November, 1922, while shipments of coal, coke, and grain were smaller. Analysis by railroad operating districts indicates that November loadings were larger than last year in southern and western districts but were slightly smaller in the East.

## TRADE.

Wholesale trade.
Wholesale trade was less active in November than in any month since July. The index of the Federal Reserve Board shows that sales were 13 per cent less than in October, although 5 per cent larger than a year ago. Trade was smaller in November in all important lines and in all Federal reserve districts. Sales of shoes were also less than in November, 1922, in all reporting districts except Atlanta, but sales of hardware, drugs, groceries, and meat were considerably larger. The accompanying chart

shows the average weekly value of packers' sales in each month of the past three years. It will be noted that meat sales have been larger in each month of 1923 than in the corresponding month of 1922 and that the packing business has shown a distinct upward trend, after allowance for seasonal variations, for a period of two years.

Stocks of merchandise held by wholesalers, according to reports to the Federal reserve banks of Chicago and Dallas, decreased during November, but continued to be larger than a year ago. Dry-goods dealers reported the
largest reductions of inventories as compared with the end of October-16 per cent in the Chicago district and 12 per cent in the Dallas district. Collections in most lines were smaller than in October, but larger than in November, 1922.

## Retail trade.

Retail business was smaller in November. After correction for seasonal variations, depart-ment-store sales were 4 per cent less than in October, while mail-order sales decreased 7 per cent. Chains handling musical instruments, candy, cigars, and 5 and 10 cent articles, on the other hand, showed less than the usual seasonal declines in sales. Sales in all reporting lines were larger this November than a year ago.

Department-store trade was less active in November in all Federal reserve districts except Boston and Philadelphia, whereas there is usually an increase in buying at that season of the year. The largest decreases, after allowance for seasonal changes, occurred in the Dallas and Atlanta districts and amounted to 11 and 9 per cent, respectively. Analysis of the November sales in the New York district indicate that sales were larger than a year ago in all major departments except silk goods. Sales of men's and boys' wear were 15 per cent larger than in November, 1922, and sales of the hosiery, cotton goods, women's and misses' ready-to-wear, and woolen-goods departments showed increases ranging from 7 per cent to 5 per cent. Sales of silk goods were 6 per cent less than in last November.

Merchandise stocks at 286 department stores increased slightly during November and were 15 per cent greater than a year ago. This accumulation of stocks continues to be most pronounced at stores located in the Chicago, Cleveland, and San Francisco districts. Statistics which show the trend of wholesale and retail trade by lines and districts are published on pages 43 and 44.

## PRICES.

Commodity prices declined during November, according to the index of the Bureau of Labor Statistics. The chief reductions occurred in the prices of house furnishings and fuel and amounted to 4 per cent and 3 per cent, respectively. Prices of farm products resumed their upward movement and reached the highest level of the year, but there was a further divergence of trend between prices of crops and prices of animal products. Prices of field crops in November were 12 per cent higher than a year ago, while prices of animal
products declined 11 per cent in the same period.

Analysis of price changes of commodities, grouped according to stage of manufacture, indicates that prices of raw materials and semifinished products decreased in November, while there was no change in the price level of consumers' goods. Comparisons with prices in November, 1922, show that prices of raw materials and semifinished products have become adjusted closer to their pre-war relationship, but prices of semifinished products are still relatively low. The relationship between prices of raw materials and prices of consumers' goods is at present about the same as in 1913.
Most of the changes in price quotations during the first half of December continued to be reductions. Among the commodities which showed decreases were sheep, beef, sugar, silk, coke, and rubber. Prices of wheat, wool, and silver advanced.

## EMPLOYMENTM.

Factory employment declined 1 per cent in November, according to the index of employment in manufacturing industries, ${ }^{1}$, which dropped from 101 in October to 100 in November, the smallest figure since last January. This decrease was due chiefly to lessened employment in the iron and steel, car building and repairing, clothing, flour, and baking industries. Increases were noted in many important industries such as cotton, dyeing and finishing textiles, knit goods, meat packing, tobacco, cement, and printing. The index was 3 per cent higher than it was in November, 1922, at which time employment was increasing rapidly in practically all industries. In textiles, leather and shoes, and tobacco there were fewer employees than on the same date last year.

Decreases in employment during November, with corresponding declines in pay rolls in most cases, were reported in practically all States collecting such statistics, but in no case was the total change large. The decreases reported by the United States Bureau of Labor Statistics for the country as a whole were 0.5 per cent in number employed, 1.4 per cent in total pay rolls, and 0.9 in average weekly earnings. Average earnings are a fairly accurate measure of average hours worked by employees, as practically no changes occurred in wage rates. Declines in this item were reported by 34 out of 51 industries.

[^3]Furthermore, establishments operating on a full-time schedule were 4 per cent fewer than in October. Of those industries running full time, however, a slightly larger percentage were operating at capacity than during the preceding month. Yet the declines in total number employed, pay rolls, per capita earnings, and percentage of full-time operations indicate that productive activity was at a somewhat smaller rate in November than in October.

## COMMERCIAI FAILURES.

Commercial failures for November, reported by R. G. Dunn \& Co., numbered 1,704 , somewhat above the October figure but below that of November of last year. Liabilities totaled $\$ 50,291,708$, which was less than that for the previous month but larger than that for the same month of last year. The size of the liabilities was again accounted for in considerable measure by a number of large manufacturing failures. For the first three weeks of December the number of failures is reported at 1,318 , which compares with 1,293 for the same period of 1922.

Compared with that in November, 1922, the number of insolvencies for November, 1923, was smaller in all districts except New York, Minneapolis, Kansas City, and Dallas, whereas liabilities were larger in all except New York, Cleveland, Richmond, and San Francisco. District figures comparing November of this year with last are given below:

MONEY RATES.
Money rates remained practically unchanged in the New York market during the first three weeks in December. Commercial paper continued easy at 43 to 5 per cent, with a larger volume sold at $4 \frac{3}{4}$ per cent in the interior than during the previous month. The rate on
prime bankers' acceptances remained at $4 \frac{3}{4}$ per cent, although a seasonal increase in the supply of acceptances based on exports, with larger purchases by the Federal reserve bank and a decrease in foreign money offered in the discount market gave a slightly firmer tone to the bill market. The yield on 4 to 6 months Treasury certificates of indebtedness, figured on the offering prices of dealers, declined somewhat early in December, but during the last week reported rose approximately to the November average. Liberty-bond yields also declined slightly the first week and then continued without change. The table below shows the rates prevailing in the New York market during the past two months compared with the corresponding months of 1922:

|  | Prime commercial paper, 4-6 months. | Prime bankers' acceptances, 90 days. | Yield on certif- cates of indebted- ness, $\frac{\text { i- }}{}$ months. | A verage yield on 4 4 per cent Liberty bonds. |
| :---: | :---: | :---: | :---: | :---: |
| 1922. |  |  |  |  |
| November, monthly average. | 4 | 4 | 3.66 | 4.43 |
| December, monthly average.. | 4 | 4 | 3.65 | 4.42 |
| 1923. |  |  |  |  |
| November, monthly average. | 5 | $4{ }^{4}$ | 3.94 | 4.44 |
| December 1, weekly average. . | 43-5 | $4 \frac{4}{8}$ | 3.87 | 4.43 |
| December 8, weekly average.. | 43-5 | $4 \frac{1}{8}$ | 3.84 | 4.41 |
| December 15, weekly average. | 433-5 | $4 \frac{18}{18}$ | 3.86 | 4.41 |
| December 22 , weekly average. | 4 4 -5 | $4 \frac{1}{8}$ | 3.92 | 4.41 |

Rates on commercial paper in western markets showed a somewhat easier tendency during this period.

## acceptance market.

Since the beginning of the crop-moving season the acceptance market has been characterized by an increased supply of bills drawn to provide funds for financing the distribution of agricultural commodities. During the period ending December 12 the supply continued large, as seasonal drawings to finance the marketing and exportation of cotton were particularly heavy. Bills were also drawn in considerable volume against grain, sugar, silk, coffee, wool, and to provide dollar exchange. The demand for bills has not increased in recent periods to the same extent as the supply, and as a result dealers' aggregate portfolios have been larger than in any preceding month during the year. There was, however, a slight reduction on December 12 from the volume held on November 14. The demand during the latter part of November came principally from banks in the interior where funds resulting from crop returns had accumulated, and centered in bills
with short maturities, but in December requests for longer maturities were noted. As a result of the large supply of bills which has come upon the market in the recent periods offerings to the Federal reserve banks have been larger and their portfolios showed a substantial increase at the close of the period. Rates continued firm and unchanged at $4 \frac{1}{8}$ to $4 \frac{1}{4}$ bid and 4 to $4 \frac{1}{8}$ offered for 30 to 90 day bills, while bills of 120 days ranged from $4 \frac{1}{4}$ to $4 \frac{3}{8}$ bid and $4 \frac{1}{8}$ to $4 \frac{1}{4}$ offered. These are practically the same levels that have been maintained throughout the year.

## SAVINGS DEPOSITS.

According to statistics furnished by 889 banks distributed throughout the United States, savings deposits increased nearly onehalf of 1 per cent between November 1 and December 1, 1923, and 10 per cent between December 1, 1922 , and December 1, 1923, about the same percentages of increase as were shown by November 1 statistics compared with those of the previous month and year. The total deposits reported amounted to $\$ 6,776,859,000$ on December 1, 1923, to $\$ 6,746,089,000$ on November 1, 1923, and to $\$ 6,158,540,000$ on December 1, 1922. The only decrease during the month of November, 1923, occurred in the Cleveland district, which had shown the largest increase during the month of October, and amounted to less than one-tenth of 1 per cent. The greatest increase, 1.15 per cent, took place in the Chicago district. A comparison of savings deposits by Federal reserve districts on December 1, 1923, with deposits on November 1, 1923, and December 1, 1922, is shown in the following table. The figures for the Boston and New York districts are those of large mutual savings banks, but in all other districts reports of other banks are included to make the figures representative.

## FOREIGN TRADE.

Foreign trade figures for November show an increase over October of $\$ 3,000,000$ in exports and a decline of $\$ 16,000,000$ in imports. The continued rise in exports is due in part to the seasonal movement abroad of raw cotton, which reaches its peak in October and November, and partly also to the higher price of cotton as compared with a year ago. The decline in imports has been continuous since May, with the exception of the month of October.

## GOLD MOVEMENTS.

## UNITED STATES.

Gold imports during the month of November totaled $\$ 39,757,000$, compared with $\$ 29,858,000$ for the preceding month and an average of $\$ 25,038,000$ for the first 10 months of 1923. About 85 per cent of the total gold imported during the month came from England; over three millions of gold was brought in from Canada, and substantial gold imports were credited to France, Mexico, the Dutch East Indies, and New Zealand. Gold exports for the month totaled $\$ 747,000$, leaving the net gold imports for the month at $\$ 39,011,000$, compared with $\$ 28,551,000$ for October. For the 11 months of the present year gold imports were $\$ 290,137,000$, compared with $\$ 248,730,000$ in 1922. Of the 1923 total, $\$ 134,537,000$, or 46.4 per cent, came from England, $\$ 49,614,000$, or 17.1 per cent, from Germany and, $\$ 47,493$,000 , or 16.4 per cent from Canada. Combined imports from these three countries account for about 80 per cent of the total gold imports for the period. Gold imports from Germany for the

11 months of the past year are but slightly in excess of the amountsstated to have beenshipped to this country by the Reichsbank during 1923 (about $200,000,000$ gold marks up to September 7). Gold exports for the 11 months of the past year totaled $\$ 27,932,000$, compared with $\$ 34,165,000$ in 1922. Over one-half of the gold exported during the year was consigned to British India, Mexico and Hongkong being the next largest destinations.

Silver imports for November, $\$ 5,269,000$, fell considerably below the imports for the preceding months and the average of $\$ 6,101,000$ for the 10 months of the past year. Silver imports from Mexico were $\$ 4,190,000$, compared with $\$ 5,230,000$ for October and $\$ 5,397$, 000 for September, and silver imports from Perv, which averaged in excess of $\$ 1,000,000$ for the three preceding months, declined to $\$ 88,000$. November exports of silver, $\$ 8,775,-$ 000, were larger than for any month since April, 1920. China, British India, England, and Hongkong were the principal destinations of the silver shipped out of the country during the month.
Gold imports and exports by principal countries for November and the 11 months ending November, 1923, are shown in the following table:
Gold Imports into and Exports from the United States.

| Country. | $\begin{aligned} & \text { November, } \\ & 1923 . \end{aligned}$ | $\begin{aligned} & 11 \text { months } \\ & \text { ending No- } \\ & \text { vember, } 1923 . \end{aligned}$ |

## GREAT BRITAIN.

Imports of gold to Great Britain during October rose by about $£ 143,000$ as compared with September, the greatest increase being shown in imports from the Transvaal. Exports during October rose by about $£ 1,840,000$, the
greatest increase being shown in exports to the United States, which increased 76 per cent over the corresponding amount shown for September. The export balance of gold has risen from $£ 4,000,000$ for the 9 months ending September to $£ 6,870,000$ for the 10 months ending October. Following is a table showing the gold movement into and from Great Britain during the current year:
Gold Imports into and Exports from Great Bripain.

## FOREIGN EXCEANGE.

Comparative stability, with a slight downward tendency, marked the leading foreign exchange rates during December. Sterling declined from $\$ 4.39$ on the 5 th to $\$ 4.35$ on the 21 st and stood on the last day of the month at $\$ 4.32$. French francs declined from 5.41 cents per franc on the 1st to 5 cents on the 26th.

Italian lire fluctuated between 4.31 and 4.36 cents per lira. Other European exchanges remained fairly steady.

Of the South American exchanges, the Argentine peso and the Brazilian milreis showed moderate improvement, while the Chilean peso fluctuated around 10.6 cents per peso.

The Shanghai tael rose slightly during December and the Indian rupee and the Japanese yen showed slight recessions.

## INDUSTRIAL STATISTICS.

Industrial activity was at a somewhat lessened rate during November than in October, according to statistics of employment, production, orders, shipments, and building construction given on the following pages. Declines occurred in all three of the indexes shown on the chart below, representing movements of agricultural commodities, output of mines, and production of manufactured goods. Decreases in a number of instances were partially seasonal, as not only does November have fewer working days than October, but also fall activity generally begins to slacken in November. Yet the index of production in basic industries, in which allowance is made for such customary seasonal changes, also fell about 2 per cent. Factory employment decreased about 1 per cent.

Substantial declines in the receipts of cattle, sheep, oats, and cotton were more than sufficient to offset advances in corn and hog receipts and in sales of tobacco at warehouses, and therefore the agricultural index declined.

Among minerals, declines were noted in the November output of all the chief products except zinc. Anthracite and bituminous coal production and lead output were less than a year ago. Lessened activity in iron and steel was reflected by declines in employment in that industry, in unfilled orders of the United States Steel Corporation, and in the production of pig iron, steel ingots, and coke. Seasonal recessions occurred in the output of certain food products, of tobacco, and of lumber and other building materials. Declines in total output of textile fabrics may be largely attributed to the fewer working days in November, as employment in cotton, wool, and knit goods increased. Large seasonal decreases of employment occurred in the clothing industries. Output of leather and shoes was considerably less than in October and also lower than during November, 1922. Building permits issued and contracts awarded declined less than is usually expected in November, and increases were noted in some sections of the country.

${ }^{1}$ This table contains for certain months of 1922 and 1923 the index numbers of employment which are shown in the chart on page 11, together with group indexes for its importart industrial componeats. The general index is a weighted average of relatives for 33 individual industries. The method of construction was described in detail, and indexes for the above groups since January, 1919 , were problished on pages 1272-1279 of the Bulletin for December, 1923. Revised. Preliminary.
INDEX OF PRODUCHON HN BASIC INDUSTRHES. 1
[Index and relatives for each industry adjusted for seasomal variations. Monthly average 1919=100.]

[^4]INDEXES OF INDUSTRIAL ACTIVITY.
[No seasonal correction. Monthly average, 1919=100.]

## WHOLESALE AND RETALL TRADE STATISTICS.

Sales of both wholesale and retail dealers were considerably smaller in November than in October. This was partly due to a less number of working days and other seasonal influences in November. The size and importance of these influences is discussed in an article on pages 17 to 21 , while a discussion of trade developments in the month of November is published on page 32. Indexes of wholesale and retail trade by lines and districts, follow:

WHOLESALE TRADE IN THE UNITED STATES, BY LINES.

## PRICE MOVEMENTS IN PRINCIPAL COUNTRIES.

## INTERNATIONAL WHOLESALE PRICE INDEX.

In November the price index was unchanged in the United States, rose in England and France, and declined in Canada. The 5-point advance in England reflects the rise in cotton and the decline of sterling exchange, which left the gold index unchanged at 154. In France the 12-point rise in prices did not fully compensate for the fall in exchange, with the result that the gold index fell 6 points, to 119 . The figures necessary for compiling the Federal reserve index for Japan have not been received since August, but the October and November index numbers of the Bank of Japan show that since the earthquake there has been a violent rise in prices.

A marked tendency of the commodity groups-raw materials, producers' goods, and consumers' goods-to return to the same relationship as 1913 has appeared during the year in the British and French as well as the American index. In the American index this trend was distinct as early as last April. In the British index it was not perceptible until August and still has not progressed so far as in the United States. The tendency is evident in France, although the groups respond in varying degrees to the fluctuations of the exchange.

The movement of the British gold index with relation to the American index in 1923 has been strikingly similar to that of 1922. During the first half of 1922 the two indexes ran close together; from July to October they diverged until the British index was materially below the American. From November, 1922, to March, 1923, under the influence of rising exchange, British gold prices advanced until they practically coincided with American prices, remaining practically identical until July. In August and September British gold prices, with the fall in sterling, dropped well below the American level, but in October and November ran parallel to it, the spread being only about half as great as last year.

The tables below give the all-commodities and group index numbers of wholesale prices in the five countries included in the Federal Reserve Board's international index. In the first table the all-commodities index for each country is shown both in terms of the actual
currency and "converted to a gold basis." The latter figure takes into account the depreciation of the foreign currency in terms of the American dollar and the series indicates relative price levels in the several countries when all prices are expressed in dollars.

WHOLESALE PRICE LEVELS IN PRINCIPAL COUNTRIES.
ALL-COMMODITIES INDEX NUMBERS.

The foreign index numbers of wholesale and retail prices are cabled to the Federal Reserve Board by the various foreign statistical offices. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics of the board and may be had at any time upon request.

Sources of information, number of commodities included, and base periods for the index numbers of the different countries and period of month to which figures refer are as follows: Belgium-Ministry of Labor, 128, April, 1914, last of half month; Bulgaria-General Statistical Office, 38, 1913, monthly average; Czecho-slovakia-Central Bureau of Statistics, 126, July, 1914, beginning of month; Denmark-Finanstidende, 33, July, 1912-June, 1914, beginning of month; England-Board of Trade, 150, 1913, monthly average; EnglandStatist, 45, 1913, end of month; France-Statistique Générale, 45, 1913, end of month; Germany-Federal Statistical Bureau, 38, $1913=1$, monthly average; Italy-Riccardo Bachi, 107, 1913, end of month; Nether-lands-Central Bureau of Statistics, 53, 1913, monthly average; Norway-Okonomisk Revue, 92, December, 1913-June, 1914, end of month; Poland-Central Statistical Office, 58 , January, $1914=1$, end of month; SpainInstitute of Geography and Statistics, 74, 1913, middle of month; Sweden-Gotesborgs Handelstidning, 47, July, 1913-June, 1914, middle of month; Sweden-Kommers-Kollegium, 160, corresponding month in 1913, monthly average; Switzerland-Dr. J. Lorenz, 71, July, 1914, first of month; United States-Bureau of Labor Statistics, 404, 1913, monthly average; Canada--Dominion Bureau of Statistics, 238, 1913, middle of month; Australia-Bureau of Census and Statistics, 92, July, 1914, end of month; China-Ministry of Finance, 147, February, 1913, last Wednesday in month; Dutch East Indies-Statistical Bureau, 17, 1913, end of month; India-Department of Statistics, 75, July, 1914, end of month; Japan-Bank of Japan, 56, 1913, monthly average; New Zealand-Department of Statistics, 106, 1913, middle of month; Egypt-Department of Statistics, 23, January, 1913-July, 1914; South Africa-Office of Census and Statistics, 188, 1913, monthly average.

The retail price indexes have been shifted wherever possible from original bases to a July, 1914, base.

# BUSINESS AND FINANCIAL CONDITIONS ABROAD. 

## MONEY RATES, CURRENCY VALUES, AND COMMODITY PRICES ABROAD.

Interest and discount rates in Europe during the second half of the year 1923 showed an upward movement, indicating an increasing demand for funds. In some continental countries there appeared, in fact, to be an acute shortage of funds resulting in unusually high levels of interest rates. The movement of gold to the United States continued in larger volume than in 1922, but exchange rates on nearly all the countries declined during the year. These declines in exchange rates, which have been due in part to political causes, have not been reflected in commensurate price advances in most foreign countries, with the consequence that at present price levels in these countries, when expressed in terms of gold, are lower than a year ago.

Interest and discount rates.-High interest rates have prevailed in those European countries where currencies are greatly depreciated, while throughout the last three quarters of 1922 and the first half of 1923 in England and in other countries with currencies of relatively high value liquid funds have been abundant and money rates low. The monthly average rate on 3-month bankers' bills in the London market decreased from about $5 \frac{3}{4}$ per cent in 1921 to about $3 \frac{1}{2}$ per cent in 1922, and during the first half of 1923 these bills were quoted below 2 per cent. Short-term treasury bills and 6 -month trade bills showed the same tendency. After July, 1923, however, interest rates hardened, the rate on 3-month bankers' bills rose to above 3 per cent, and 6-month trade bills during October and November commanded a rate of 5 per cent, the highest since the beginning of 1922. Treasury bills, whose average rate was about 1.80 per cent for the first half of the year, fluctuated between $2 \frac{3}{4}$ and 3 per cent during the past six months.

Money rates on the Continent were high throughout the second half of the year, and in many countries, such as Austria, Hungary, Rumania, and Poland, the rates reached unusually high levels. The rise in interest rates has been reflected in the discount rates of several banks of issue. On November 9 the Bank of Sweden advanced the bank rate from $4 \frac{1}{2}$ per cent, which had prevailed since July, 1922, to $5 \frac{1}{2}$ per cent, the first increase in the Swedish discount rate since September 17, 1920. On November 10 the Bank of Norway followed with an increase in the discount rate from 6 to 7 per cent, the second advance during the year. The high rates of interest prevailing in surrounding countries and the large demand for credit induced the banking department of the Czechoslovalk Government on November 29 to increase its discount rate from $4 \frac{1}{2}$ to $5 \frac{1}{2}$ per cent. The Bank of Issue of Poland on October 1 raised its discount rate from 12 to 24 per cent, and on November 12 doubled it again to 48 per cent. The Bank of Finland, which on September 13 raised its rate from 8 to 9 per cent, decreased it on October 29 to 8 per cent, but on November 30 raised it again to 10 per cent, the highest rate ever reached during the past 15 years. The National Bank of the Netherlands, whose discount rate had been reduced to 4 per cent on July 18, 1922, advanced its rate to $4 \frac{1}{2}$ per cent on December 13, 1923.

Exchange rates and price levels.- Exchange rates on foreign countries have shown declines for the year, the exchange index of the Federal Reserve Board falling from 70 for December, 1922, to 61 for November, 1923, a reduction of 13 per cent. Sterling declined 5 per cent; French francs, 24 per cent; Italian lire, 13 per cent. South American exchanges have shown similar weakness. In contrast to these declining rates the Oriental exchanges have been firm. The Shanghai tael, whose value depends upon the price of silver, closed the year at about the same figure as at the beginning, as did the Japanese yen and the Indian rupee.

Among other exchanges, the Swedish krona, which in December, 1922, was at a slight premium over the dollar, was firm near par, as was the Netherlands florin, except for a break in November from which it partially recovered. Austrian exchange was stable throughout the year, and that of Czechoslovakia and Finland practically so.

In countries with relatively steady exchanges, commodity prices have moved parallel with prices in the United States. As a result, their prices measured in gold now bear about the same relation to the American price index as they did a year ago. On the other hand,
in countries whose exchanges have depreciated severely during the year, commodity prices have not risen to a compensating degree, and gold prices in those countries are further below American prices now than they were at the beginning of the year. For example, in Italy, where, between December, 1922, and November, 1923, the exchange rate dropped 13 per cent, actual prices fell about 2 per cent, while prices converted to a gold basis declined 14 per cent. The Norwegian exchange fell 22 per cent, currency prices rose 10 per cent, and gold prices fell about 10 per cent.

The following tables present the Federal Reserve Board's index numbers of the monthly volume of foreign trade of the United States, and monthly fluctuations in ocean freight rates prevailing between this country and principal European trade regions. For methods of construction of these indexes, reference may be made to the Federal Reserve Bulletins for July, 1920, and August, 1921.

## CHANGES IN MEMBERSHIP IN THE FEDERAL RESERVE SYSTEM.

Changes in membership in the Federal reserve system for the month of December, 1923, are given in the accompanying table. There were 7 additions to State bank and trust company members and a loss of 11, which included 1 merger of member banks, 1 voluntary liquidation, 1 voluntary withdrawal, and 8 banks closed. The latter, which do not necessarily represent a permanent reduction in membership, were principally in the ninth district. Of the 10 national banks added during the month, 5 were newly organized, 4. were converted from nonmember banks, and 1 was restored to solvency after temporary suspension. The loss of 20 national banks occurred principally on account of 12 insolveneies (largely in the ninth and tenth districts) and 4 successions by nonmembers. The net result was a decrease in total membership of 14 and an increase in capital and surplus of $\$ 914,200$.

Gains and losses were included in the data in accordance with the dates on which the changes actually became effective and the result shows as nearly as possible the number of members in the system having the status of reporting banks.

1 Affects State bank and trust company capital and surplus, and not number, and is included among national bant decreases.
3 Includes 1 merger of trust companies affecting number only.
Includes 1 absorption of $\$$ national bank by national bank,

## CONDITION OF ALL BANKS IN THE UNITED STATES ON SEPTEMBER 14, 1923.

vomparative figures showing the condition of all banks in the United States, other than mutual savings banks and private banks not under State supervision, which have been compiled by the board and are presented herewith, indicate that between June and September loans and discounts increased $\$ 197,000,000$ or from $\$ 26,793,000,000$ to $\$ 26,990,000,000$. During this period, however, the banks' investments fell off $\$ 128,000,000$, so that the total loan and investment account of all the banks included in the tabulation show an increase of $\$ 69,000,000$ and aggregated at the middle of September $\$ 37,429,000,000$. In keeping with the increase in loans and investments, demand and time deposits, exclusive of bank deposits, increased $\$ 94,000,000$ for all banks. The increases reported in loans and discounts by both State banks and national banks were met in part by increased borrowings. The total rediscounts and bills payable of the banks increased from $\$ 1,308,000,000$ in June to $\$ 1,397,000,000$ in September. The following table shows in summary form the changes in loans and investments, deposits, and borrowings of the banks for recent dates for which figures are available:

${ }^{1}$ Exclusive of mutual savings banks and private banks not under State supervision.

In continuation of the plan followed in the October, 1923, Bulletin, there are given below figures of principal assets and liabilities for State banks located in seven Federal reserve districts and in five territorial groups more fully described in the October Bulletin.

PRINCIPAL RESOURCES AND LIABILITIES OF ALL STATE BANKS AND TRUST COMPANHES BY FRDERAL RESERVE DISTRICTS, ON SEPTEMBER 14, 1923,

${ }^{1}$ Exclusive of the eastern part of Kentucky.
2 Exclusive of the southern part of Mississippi and including all of Tennessee.
3 Including all of Illinois and Indiana
1 Exclusive of the southern parts of Jlinois and Indiana and the western part of Tennessee, and including all of Kentucky, Mississippi, and Missouri.

Exclusive of the western part of Missouri

Calls for condition reports by the banking departments of several of the States were not made as of the same dates as the calls made by the Comptroller of the Currency, consequently in compiling the figures shown in the following table it has been necessary to use the last figures available. In each instance where
the figures do not represent the condition of State banks and trust companies on September 14, 1923, the date to which the figures for national banks relate, the date of the condition reports used has been indicated in a note at the bottom of the table showing the condition of the State banks and trust companies.

PRINCIPAL ASSETS AND LIABILATIES OF ALL STATE BANES AND TRUST COMPANIES ON JUNE 30, 1023, AND SEPTEMBER 14, 1923, OR DATES NEAREST THERETO FOR WHYCH FIGURES ARE AVAILABLE.

## EARNINGS, EXPENSES, AND DIVIDENDS OF ALL MEMBER BANKS.

Earnings and expenses and dividend payments of all member banks in each Federal reserve district for the fiscal year ending June 30,1923 , are presented in the following table. Gross earnings of all member banks were $\$ 1,683,512,000$, exceeding the total for the preceding year by $\$ 14,083,000$ but falling short of those for 1921 by $\$ 146,159,000$. Interest and discount collected accounted for 85.8 per cent of total earnings, being $\$ 7,852,000$ in excess of the amount received from the same source during the 12 months ending June, 1922. Exchange and collection charges show a reduction of $\$ 4,861,000$, while miscellaneous earnings increased by $\$ 11,092,000$.

Current expenses amounted to $\$ 1,189,732,000$, of which amount 44.7 per cent went to pay interest on deposits and 27.3 per cent salaries and wages. The increase during the year in the cost of salaries and wages was $\$ 16,493,000$ and in interest paid on deposits $\$ 48,261,000$, while interest paid on borrowed money and taxes paid show reductions of $\$ 32,451,000$ and $\$ 15,726,000$, respectively.

Total current expenses were $\$ 33,315,000$ higher than during the year preceding, and the amount of dividends paid.
as a consequence current net earnings were $\$ 19,232,000$ less than for the earlier year, despite the fact that gross earnings increased. Charge-offs o account of losses sustained were smaller, hov :ver, and this, together with increased recuveries of amounts previously charged off, more than offset the reduction in current net earnings for all member banks combined. The net addition to profits during the year, $\$ 345,137,000$, exceeded the total for the previous year by $\$ 45,988,000$.
Dividends paid in the year ending June 30, 1923, aggregated $\$ 270,862,000$ and exceeded dividend payments for the previous year by $\$ 24,812,000$. Dividends declared ranged from 10.5 per cent of the aggregate capital of member banks in the Dallas district to 16.8 per cent in the Philadelphia district. In consequence of heavy charge-offs on account of losses, net additions to profits in the four western Federal reserve districts were relatively low, as is evidenced by the fact that in the Minneapolis, Kansas City, and Dallas districts such net profits were much less and in the San Francisco district slightly less than

ABSTRACT OF EARNINGS AND DIVIDENDS REPORTS OF ALM MEMBER BANKG OF THE PEDERAL RESERVE SYSTEM FOR THE FISCAL YEAR ENDING JUNE 30, 1923.

${ }^{1}$ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Includes moner held by the Caban agencies of the Federal reserve banks of Boston and Atlanta.

B Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.
${ }^{1}$ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.
${ }_{s}$ Includes gold held in trust against gold certificates and standard silver dollars held in trust against silver certificates and Treasury notes of 1890, the aggregate of which should be deducted from the sum of money held by the United States Treasury and the Federal reserve system and money in circulation to arrive at the stock of money in the United States. The amounts of such gold and silver held in trust as of the date of this statement are shown in parentheses in the first column.

## DISCOUNT AND INTEREST RATES.

Interest and discount rates prevailing in the various Federal reserve bank and branch cities during the 30 -day period ending December 15 showed a declining tendency in many cases, as compared with those of the previous 30 days. Open-market rates on commercial paper were renerally lower and among the cities where changes occurred in ouner rates doans, and collateral loans in some western cities increased, how-

## over. 1922.

The actual discount and interest rates prevailing during the 30 -day period ending December 15, 1923, in the different cities, are given in the following table. A complete description of the several types of paper for which quotations are given will be found in the September, paper for which quotations are given will be found in the

DISCOUNT AND INTEREST RATES PREVAILING IN VARIOUS CTTIES DURING THE 30-DAY PERIOD ENDING DECEMBER 15.1923.
