## FEDERAL RESERVE BULLETIN

(FINAL EDITION)

ISSUED BY THE
FEDERAL RESERVE BOARD
AT WASHINGTON

JULY, 1921

WASHINGTON
GOVERNMENT PRINTING OFFICE

## FEDERAL RESERVE BOARD.

EX OFFICLO MEMBERS.
A. W. Mellon, Secretary of the Treasury, Chairman.
D. R. Grissinger,

Comptroller of the Currency.
W. P. G. Harding, Governor.

Edmund Platt, Vice Governor.
Adolpei C. Miller.
Charles S. Hamuin.
John R. Mitchell.
W. W. Hoxton, Secretary.
W. L. Eddy, Assistant Secretary.
W. M. Imlay, Fiscal Agent.
J. F. Herson,

Chief, Division of Examination and Chief Federal Reserve Examiner.
J. E. Crane,

Acting Director, Division of Foreign Exchange.

Walter S. Logan, General Counsel. R. G. Emerson, Assistant to Governor. H. Parker Wilmis, Director Division of Analysis and Research. M. Jacobson, Statistician.
E. A. Goldenweiser, Associate Statistician.
E. L. Smead,

Chief, Division of Reports and Statistics.

SUBSCRIPTION PRICE OF BULLETIN.
The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It is printed in two editions, of which the first contains the regular official announcements, the national review of business conditions, and other general matter, and is distributed without charge to the member banks of the Federal Reserve System. Additional copies may be had at a subscription price of $\$ 1.50$ per annum.

The second edition contains detailed analyses of business conditions, special articles, review of foreign banking, and complete statistics showing the condition of Federal Reserve Banks. For this second edition the Board has fixed a subscription price of $\$ 4$ per annum to cover the cost of paper and printing. Single copies will be sold at 40 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board.

No complete sets of the Bulletin for 1915, 1916, 1917, or 1918 are available.

## TABLE OF CONTENTS.

General summary: Page.
Review of the month ..... 767
Business, industry, and finance, June, 1921 ..... 781
Condition of the acceptance market ..... 791
Index numbers of exchange values of foreign currencies ..... 794
American bank acceptances ..... 800
Business and financial conditions abroad: England, France, Italy, Germany, Sweden, Netherlands ..... 802
Official:
Rulings of the Federal Reserve Board ..... 815
Law department ..... 816
State banks admitted to system ..... 814
Fiduciary powers granted to national banks ..... 814
Banks granted authority to accept up to 100 per cent of capital and surpus ..... 814
Charters issued to national banks. ..... 814

# FEDERAL RESERVE BULLETIN 

## REVIEW OF THE MONTH.

For the third successive season the Federal Reserve Board presents in the
Mid-year statistical issue. July issue of the Bulletin
a mid-year statistical number. The purpose this year, as in previous statistical numbers, is to continue the review of current financial history, bringing it down to June 30, 1921. As noted on former occasions, the annual report of the Board supplies a general description and outline of existing conditions by calendar years. It has been thought best, however, to furnish a critical analysis from the statistical standpoint, covering the intermediate periods ending June 30. The analysis published a year ago in July, 1920, reviewed the development of conditions up to what has since turned out to be practically the "peak" of the post-war expansion in banking, currency, finance, and business. Developments during the past year carry the so-called "deflation" movement to what seems to be practically its limit, at least for the time, and exhibit in their full effect the factors whose consequences were seen only in an incomplete form at the time of the Board's last annual report. The figures herewith submitted show the character of the conditions which have developed during the past year and illustrate the situation as affected by the process of restoring banking and financial soundness.

Five main periods in the history of the Federal Reserve System were recognized at the outset of the last annual statistical review: November, 1914-December, 1916; January, 1917-April, 1917; May, 1917-November 11, 1918; November 12, 1918-June, 1919; and July, 1919-June, 1920. The better perspective in which past events can now be viewed would apparently indicate that the last period should be merged with the fourth or preceding epoch, making the dates November 12, 1918, to May, 1920, while the fifth period in the history of the system now appears as June, 1920, to
the present date, or later as subsequent events may determine. The fourth period is thus an "expansion" or "inflation" period, within which may be recognized, if desired, certain subperiods marking changes in credit control, while the fifth period is a time of readjustment. Characteristics of this latest period have been, on the banking side, reduction of loans and bills held, retirement of note circulation, gain in gold, and liquidation of investments; while on the business side there has been lowering of production, growth of unemployment, falling ofl of foreign trade, and reaction of prices.
Although the fact was not at the time realized in its full significance,
A turning point prices, physical volume of proin trade and in- duction, trade and business in general had reached their peak during May and June, 1920. As is usually the case, the high point in banking accommodation came somewhat later. The year 1920-21 may, in fact, be divided into three subperiods, the first extending from shortly before the middle of 1920 to early autumn. During these months there was hesitation, reluctance to recognize the fact that a time of recession had arrived, and a strong effort to hold prices, wages, and values in general at the level which had then been reached. From early autumn until practically the opening of spring (1921) there was a steady recession of prices, values and wages, and a period of corresponding readjustment throughout almost all branches of industry and in almost all countries of the world. In fact, the downward movement had set in earlier in some foreign countries than in the United States, many persons regarding Japan as having been the first country to feel the effect of the new business factors which were later to make themselves felt elsewhere. The spring months of 1921 would seem, in the light of information now available, to be a period of approach to equilibrium in certain lines of business and of preparation for recovery from the depressed
conditions that had developed. The changes referred to have, in fact, been practically worldwide. If anything, they have been less extreme or violent in the United States than elsewhere, not only in banking and credit, but in production and trade generally. The year 1920-21 has been a period of reorganization. This reorganization, with its effects, has, like all great business changes, been directly reflected in our banking position and in the corresponding position of banking systems the world over. While it would appear at the present time that the period of readjustment is drawing to a close, this does not necessarily mean that there will be no further movement or recession or that the readjustment process has completed itself. On the contrary, there are many factors which seem to make it sure that still further work in the direction of readjustment must be accomplished before even approximate stability can be arrived at. The facts now available, however, would indicate that the main elements in business and industrial recession have made their effects manifest, and that there have been in the majority of lines fairly extensive realignments of relationships. In all this process there has been nothing more noteworthy than the effect of readjustment upon our banking institutions.

Comparison between conditions existing dur-
Change in re- ing 1920 with those which sources.
have been attained at the close of June, 1921, exhibit the following results:
Reserves, earning assets, and total resources of Federal Reserve Banks.
[In thousands of dollars.]

|  | June 25,1920. | $\begin{aligned} & \text { Oct. } 15, \\ & 1920 . \end{aligned}$ | $\begin{aligned} & \text { June } 29, \\ & 1921 . \end{aligned}$ | Percentage change. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | June 25Oct. 15, 1920. | $\begin{gathered} \text { Oct. } 15, \\ 1990- \\ \text { June } 29, \\ 1921 . \end{gathered}$ |
| Total reserves. . | 2,108, 605 | 2, 154, 911 | 2, 625,458 | +2.2 | $+24.5$ |
| Total earning assets. | 3, 183, 275 | 3,421,976 | 2,060, 495 | +7.5 | -35.3 |
| Total resources. | 6, 074, 713 | 6,610, 250 | 5,242,041 | +8.8 | $-13.7$ |

As stated a year ago, the capital of the Federal Reserve Banks was figured as $\$ 94,500,000$ and total resources as $\$ 6,075,000,000$, whereas
at the present time the corresponding figures are $\$ 102,184,000$ and $\$ 5,242,041,000$. The change in capital for the year has thus amounted to 8 per cent, reckoning the condition at the close of June, 1920, as a basis, while the aggregate of resources has fallen by approximately 14 per cent. The advance in capital has, as in former years, been due to the gradual growth of the actual capitalization of the members of the Federal Reserve System already admitted, and in part to the movement of new members into the system. The net number of new national-bank members admitted during the year ending June, 1921, has been approximately 251 , while their contribution to capital stock may be figured as $\$ 813,050$. To this may be added the sum of $\$ 1,112,900$ subscribed by the 268 newly admitted State bank and trust company members, the remainder of the increase in capital of Federal Reserve Banks being due to the automatic enlargement of the stock ownership of former members due to additions to their capital stock and surplus.

The fact that the system has steadily increased in numbers and in strength is in striking contrast with the decline in total resources which, although moderate, shows, as already remarked, the reaction from the peak level. This decline in resources has been due to the gradual reduction of the amount of reserve bank advances and is best reflected in the change in the item of total earning assets, which was reported at the close of June, 1920, as $\$ 3,183,275,000$, a figure which must be compared with a figure at the present time of approximately $\$ 2,060,495,000$. The decline of approximately $\$ 1,120,000,000$ thus reflected as the outgrowth of the year's operations in connection with earning assets should be compared with the increase in the same item during the year ended June 30, 1920, amounting to $\$ 829,000,000$. The volume of earning assets is therefore now very little less than it was at the close of June, 1919. It is an interesting fact that the rate of reduction during the second half of the two-year period in question has been so nearly identical with the rate of expansion during the first half of the period. The position of the system has thus been
brought well back toward the point at which it stood when the war restrictions upon financial and productive activity began to be eliminated, not long after the armistice. Of special interest in this connection is the fact that the reduction in the amount of bills held by the Federal Reserve System has been so noteworthy. Bill holdings at the close of June, 1920 , were not far from $\$ 3,000,000,000$, while the situation at the close of June, 1921, showed slightly more than $\$ 1,800,000,000$ in bills on hand. A falling off in round numbers of over one-third, or $\$ 1,200,000,000$, in bills held represents the results of operations during the past year. Included in this reduction, it should be noted, has been a decline in the bills secured by Government obligations, which have fallen from approximately $\$ 1,300,000,000$ at the close of June, 1920, to approximately \$648,000,000 a year later. Other bills discounted amount, at the present moment, to a little less than they did a year ago, the net conclusion being, therefore, that to date the process of credit accommodation, so far as the Federal Reserve Banks are concerned, has altered but little the amount of commercial paper discounted, but has taken effect primarily in the restriction of the loans collateraled by Government war obligations.

Of special interest to the general student of banking in connection with the

Notes and deposits. operations of the Federal Reserve System during the past year are the changes in the volume of outstanding Federal Reserve notes as contrasted with changes in the deposit liabilities of the Federal Reserve Banks. Comparing the figures given a year ago with those now compiled, it will be found that whereas at the end of June, 1920, the volume of Federal Reserve notes in circulation was approximately $\$ 3,117,-$ 000,000 , the total now in actual circulation is approximately $\$ 2,634,000,000$-a falling off in round numbers, therefore, of over $\$ 480,000,000$. As contrasted with this reduction in the circulating currency of the system is to be noted a fall in total deposits from approximately $\$ 1,916,000,000$ a year ago to $\$ 1,686,000,000$ on

June 29, 1921. Since there has been but little change in the volume of Government deposits during the year, the reduction which is thus shown to have occurred has taken place primarily in member bank reserve deposits and may be regarded as amounting to about $\$ 191$,000,000 . The remainder of the decrease is partly due to the withdrawal of foreign Government deposits. This should be contrasted with a growth in deposits during the preceding year amounting to about $\$ 14,000,000$ and a growth in notes of approximately $\$ 617,000,000$. Attention was called a year ago to the fact that the immense increase in the note circulation during the year 1919-1920 was undoubtedly due in some measure to the fact that a larger amount of circulating currency was required because of the great advance in prices and the consequent necessity of carrying a larger supply of money in pocket with which to meet ordinary requirements. The recession in the total amount of notes in circulation may be ascribed to a movement exactly parallel but opposite in direction. As prices have fallen, the factors already referred to have lost in intensity, while other factors which had tended to enlarge the circulation of Federal Reserve notes-such as the process of substituting them for gold and silver and of exporting them in large amounts to Central American and West Indian countries-have ceased to operate. Indeed, in some cases the reverse flow has doubtless set in. The significance, therefore, of the situation is found in the fact that the reduction in outstanding circulation which has occurred represents a corresponding change in the actual use of notes by the public. The movement of the items "notes" and "deposits" may be followed to good advantage in the brief table which is herewith submitted.
[In thousands of dollars.]

| Dates. | Federal <br> Reserve notes in actual circulation. | Total deposits of Federal Reserve Banks. | Net demand deposits of reporting member banks. |
| :---: | :---: | :---: | :---: |
| June 25, 1920. | 3,116,718 | 1,916,086 | 11, 347,041 |
| Oct. 22, 1920 | 3,356, 199 | 1,816,289 | 11,240, 588 |
| June 29, 1921. | 2,634,475 | 1,685,788 | 10,046, 398 |

As already observed, perhaps the most interesting element of change in the

Discount of war
paper. paper. portfolios of reserve banks during the past year has been the lessening of the volume of war paper, or, to use the technical expression, "bills discounted secured by United States Government obligations." These, as already seen, have fallen off to approximately $\$ 648,000,000$. A gratifying feature of the post-war development of the Nation's investment and financial mechanism has been the ability that has been shown on the part of the public to absorb the outstanding obligations of the Nation, both in short and long term form. The existence of substantial investment capacity has laid the foundation for the absorption of Government bonds and certificates, while the policy of the Treasury Department in meeting market rates of interest has enabled both member and reserve banks, which had become large holders of "war paper," to reduce this element of their portfolios in very material degree. The situation has been well illustrated by the statement made by the Secretary of the Treasury on June 8 in which he showed that the amount of Treasury certificates pledged with Federal Reserve Banks was only $\$ 55,000,000$, while of a total of over $\$ 4,000,000,000$ of Victory notes only $\$ 188,000,000$ were in the hands of member banks in leading cities. The wholesale transfer of the evidences of Government indebtedness from the banks to the people has been aided by the Federal Reserve System, which no longer encourages the carrying of such paper by preferential treatment of loans collateraled by public obligations. During the year such preference, originally granted in aid of the placement of Liberty bonds, has practically disappeared.

The disposition of investors to absorb and "digest" Government obligations, taken in conjunction with the policy of the Federal Reserve System already referred to, has tended strongly to curtail the large holdings of paper collateraled by Government obligations which had been built up during the war and post-war expansion period in the Federal Reserve Banks. The progress during the year 1920-21 may be contrasted with changes during the year

1919-20. At the close of June, 1919, the total volume of paper secured by Government war obligations held by Federal Reserve Banks was about $\$ 1,573,000,000$, and operations during the following year had reduced the amount by only $\$ 300,000,000$. Progress during the past year has thus been more than twice as rapid. The situation is reflected in the following table:

| Holdings of bills discounted by Federal Reserve Banks. |
| :--- |
| [In thousands of dollars.] |

Although tendencies in trade and prices in foreign countries have been in
Banking situation abroad. many respects parallel to those which have been observed in the United States, the situation has been widely different in respect to banking and credit. Foreign banking institutions have not shown the reduction either in notes or in deposits which has been observed in the United States, and such changes as have occurred have apparently been sporadic and in a far less degree governed by definite influences. This is probably due to the fact that in many European countries it has been necessary for the Governments to rely much more steadily and more largely on banking aid than has been true in the United States, so that the conditions prevailing in the central banks of those countries have not, as in this country, directly reflected the condition and needs of business. The two items which stand out in foreign bank reports as of special interest to observers in this country are those of notes and deposits.
The considerable reduction in the circulation of bank notes (amounting to more than 15 per cent in the case of Federal Reserve notes between June 25, 1920, and June 29, 1921), already observed, has not been paralleled abroad. In England, currency notes to the extent of some $£ 15,000,000$ have been with-
drawn in the course of the year, but bank notes have been increased by $£ 5,000,000$, with a resulting net decrease of $£ 10,000,000$, or 2 per cent in the total paper circulation. In France and Italy there has been an increase in the circulation during the year, amounting to 8 per cent in the first-named and 11 per cent in the last-named country. In Germany the total of Reichs und Darlehnskassenscheine in circulation amounted to $63,600,000,000$ marks at the end of May, 1920, and 80,900,000,000 marks on May 28, 1921, or an increase of 27 per cent for the year.

${ }^{1}$ End of March, 1921.
The note circulation is a more significant factor in the study of credit conditions on the Continent than in England or the United States. During the past year deposits of member banks reporting to the Federal Reserve Board have decreased almost 12 per cent and earning assets of the Federal Reserve Banks 35 per cent. In England no reduction is shown between the end of May, 1920, and May, 1921, in the deposits at the Bank of England, while Government and other securities held have been increased by almost $£ 11,000,000$.

As during the year 1919-20, so during the past year, the primary changes in the reserve situation of the Reserve changes. United States have been due to alterations in gold holdings. The striking feature of the year has been the resumption of gold movement into this country, with the result that the gold reserves of Federal Reserve Banks have been increased to the extent of about $\$ 493,000,000$. The following brief table shows the movement of reserves as between the close of June, 1921, and the corresponding date a year earlier.
(000 omitted.)

| 1920. |\(\left|\begin{array}{r}June 29, <br>

1921 .\end{array}\right|\)| Per cent of |
| ---: |
| increase. |

Changes in the gold position of the United States were of such significant importance as to call for special review in the June, 1921, issue of the Bulletin, where they were fully set forth, and they need receive only brief treatment at this point. As was then explained, the specie history of the United States since the end of November, 1918, approximately the date of the armistice, may be divided into two periods, the first extending from that date through August, 1920; the second from the close of August, 1920, to approximately the present time. During the first of these periods gold was moving largely out of the United States, although from April to August, 1920, the movement was somewhat irregular, while during the second of the periods the movement has been reversed. Roughly speaking, therefore, the year now under consideration coincides with the dates within which the reversal of this gold movement has occurred. The total net importations of gold from the close of June, 1920, to June 10, 1921, may be stated as $\$ 483,607,213$.

Imports and exports of gold.

Speaking of the entire period since the armistice, the survey in the June issue of the Bulletin stated the situation as follows:
For the period as a whole, the United States imported $\$ 744,000,000$ of gold and exported $\$ 700,000,000$, so that the net addition to the country's stock of gold is $\$ 44,000,000$. It should be noted that this is a comparatively small amount; that the gains in gold since the recent gold movement set in have not much more than offset the losses of gold between the removal of the gold embargo in June, 1919, and September, 1920. It should further be noted that imports of gold have come from one group of countries, while exports have gone to another group. From the armistice to August, $1920, \$ 375,000,000$ of gold (net) left the United States, going largely to Japan, Argentina, China, British India, Hongkong, Spain, and Mexico. From September, 1920, to the present time, $\$ 419,000,000$ (net) was imported, largely from England, France, Srreden, and Canada.

These figures require some modification, due to the fact that two months have elapsed since the final date to which they refer. Making this allowance, it may be said that the net addition to the country's stock of gold from the armistice to June 10, 1921, is approximately $\$ 120,000,000$. As will be seen from comparison with figures already given, the bulk of the importation of gold during the past year has been added to the reserves of the Federal Reserve Banks, and, since there has been but little demand for gold for actual circulation, it has remained there.

The great shipments of gold to the United States have been the result of the slackening and disorganization of trade and the disturbance of financial relationships. In consequence of these influences it has been necessary to find some means of making settlement for the most necessary shipments of commodities, and gold shipments have proved to be the most available method of liquidating a part at least of current obligations. How far the inward gold movement will go can not now be predicted, but it should be noted that such importations, even when entirely deposited in the Federal Reserve Banks, are by no means the sole measure of their increasing liquidity. The improvement in the reserve ratio resulting from such deposits of gold shows a technical increase in banking strength, since it results in the enlargement of the supply of specie available for meeting any demands that may be
brought to bear upon the reserve banks. In the following table are shown the average monthly reserve ratios during the last six months of 1920 and the first six months of 1921, with figures computed for purposes of comparison and designed to show the movement of the ratio as it would have been had no increase in reserves taken place since June 25, 1920.
dverage monthly reserve ratio.

${ }^{1}$ With reserves remaining unchanged at the June 25, 1920, total of $82,108,605,400$.

During the past year emphasis has shifted from the productive to the dis-
Production and business. tributive aspects of industry. The period has essentially been one of readjustment. In leading industries there has been a tendency toward lower price levels, as well as to a new and more stable relationship between forces which affect conditions in marketing. In certain industries this tendency has apparently gone further than in others. This is noticeable in textiles. Thus there has been a marked increase in cotton consumption, in wool consumption, and in the importation of raw silk. Similarly, there has been an improvement in boots and shoes during the present spring, in particular in the women's branch of the industry. On the other hand, in some lines the situation continues to have many elements of uncertainty. In the iron and steel industry, pig-iron production during April was the lowest since June, 1908, while May production was but slightly better. Steel-ingot production has shown a similar tendency. The nonferrous metal industries have experienced a radical decrease in prices, together with great curtailment of production schedules.

Varied tendencies are shown in the fuel industries. Bituminous coal production reflects the change in the industrial situation, and has shown a steady decrease during the present
year, until in May it amounted to only 66 per cent of the figure for December, 1920. On the other hand, crude petroleum production during the year has shown an equally steady increase. Anthracite coal production on the whole has been well maintained. The construction industries have reported an increase during the past spring, although this has been due in a measure to seasonal influences. After a considerable decline in production and shipments during the past winter, which was likewise partly seasonal, the lumber industry has also experienced considerable increase in activity.

The agricultural situation has felt the same influences. In general, the yield of the various crops during the past year was large. The cotton crop in particular was the largest on record since 1914, the final estimate being $13,197,775$ bales. Until recently prices have tended to decline, and as a consequence there was a general disposition on the part of the growers to hold stocks in anticipation of more favorable marketing conditions, as well as in certain cases a tendency to leave the lower grade portions of the crops ungathered. Grain stocks on the farms remain very large, the Department of Agriculture reporting the amount of wheat on farms on March 1 as 26.4 per cent and the amount of corn as 48.6 per cent of the 1920 crop. On March 1, 1920, only 17.6 per cent of the wheat and 37.5 per cent of the corn crops of 1919 remained on the farms. The receipts of grain at 17 interior centers during the present crop year were 5 per cent greater than they were a year ago, while sight receipts of cotton were only 82 per cent of those in 1919-1920. Marketing has been somewhat delayed and the movements thus far have been heavier during the later months of the season than a year ago. The shipment of live stock to market has likewise been considerably lower than last year, although it should be noted that the movement during the season 1919-1920 was extraordinarily heavy. The live-stock industry has also been seriously affected by the low levels toward which prices have tended.

Corresponding to the general industrial situation, the volume of wholesale trade has shown considerable dearease in various lines.

During the present spring some revival in general has been noted. The volume of retail trade, on the other hand, has been better sustained, although measured in money values it has been less to date this year than during the corresponding period last year, in particular in the South and West.
The figures of traffic movements also indicate that industrial and commercial readjustment is in progress. From March, 1920, to March, 1921, net ton-miles decreased 29.1 per cent. After some months of alternate increase and decrease, the decline commenced about last November.

The situation relative to production which has been sketched above is indicated more fully in the following table, giving the total figures for the first five months of the present year, as compared with the same period a year ago, and with the last five months of 1920.

It is impossible to trace in equal detail the situation as to the production and distribution of commodities in foreign countries, as statistics on these subjects are very limited. Foreign trade figures, however, furnish a basis for studying the changes which have occurred in the value of exports, and thus may be used (if due provision be made for the effect of price changes on trade values) as an indication of
general trade conditions. The decline in the value of foreign trade has been a general world-wide phenomenon similar to the decline in wholesale prices. In the case of the United States and European countries the reduction in the value of exports did not become pronounced until late 1920 or January, 1921; in fact the post war peak of the export trade of practically all leading countries except Japan was reached in the summer or autumn of 1920. Since the beginning of the new year, however, there has been a serious shrinkage in the value of exports from the United States, Great Britain, and Sweden. French trade has shown less extreme depression and Japanese exports have improved in the most recent months. The following table contrasts the situation at the present time as compared with a year ago.

- February, 1921 ${ }^{5}$ April, 1921.

Production of basic commodities in England has been heavily curtailed in recent months, partly as a result of trade depression and partly because of the strike of coal miners. No coal was produced in May of this year. The production during May last year was about $22,000,000$ tons. Pig-iron and steel-ingot production for May was less than half that of a year ago, and shipments of cotton yarn and cloth in the first quarter of 1921 were less than two-thirds as large as shipments during a similar period in the preceding year. Coal is the only commodity for which production statistics are available for France and Germany. In both cases the present situation appears to be more favorable than a year ago.

A year ago complaints of a shortage of labor, especially in the rural districts,
Labor and industry. were still common, although the alarming increase in cancellations of orders placed with manufacturers, together with fuel shortage and transportation
hindrances, had already produced a considerable measure of unemployment. During the latter part of June and in July the decreasing demand for factory labor was the subject of quite general comment. The New England textile mills and the leather and shoe industries were among the first to be seriously affected by cancellations of orders, leading to a sharp curtailment of output. Despite price concessions in some lines, notably textiles, there was little evidence of a revival of business activity during the fall months, and in consequence the new year opened with a serious lack of employment still manifest in the eastern districts of the United States. At the opening of the year these conditions became more pronounced, although there was some resumption of activity in the industries which had been the first to feel the effects of depression, and opportunities for employment in such industries increased as time went on. The iron and steel industry and transportation interests, however, began to be affected by lack of business.
A special inquiry into conditions of employment and changes in rates of wages undertaken by the twelve Federal Reserve Banks at the request of the Federal Reserve Board showed that establishments having $1,737,000$ persons on their pay rolls on April 1, 1920, were employing only $1,303,000$ on April 1, 1921. An exceptionally high degree of unemployment existed in reporting automobile lines ( 55.2 per cent), in building construction ( 60.4 per cent), and in iron and steel ( 41.5 per cent). Although considerable decreases were shown in the average weekly earnings, a very considerable part of this loss was undoubtedly due to reductions in working time. The reports indicated, however, that rates of pay had been reduced in the textile mills among others, and that such reductions had been especially pronounced in the South. Common labor had everywhere had its rates of pay sharply cut. Wage rates had also been revised downward by the independent steel mills, but the United States Steel Corporation did not follow this example until the middle of May. At the date of the special inquiry (April 1) the majority of the organized skilled groups had not yet been affected by rate reductions, but subsequently such reductions
were very extensively announced, with a resultant temporary increase in voluntary unemployment due to strikes.

Changes in industrial and financial conditions which have been general throughout the world, have been reflected in Federal Reserve discount rates. Conditions in May, 1920, were such as to lead to the establishment of a general advance in discount rates throughout the Federal Reserve System coinciding with a more than equivalent advance in the current value of capital. The 7 per cent rate on 90 -day commercial paper which was put into effect by the Federal Reserve System in May, 1920, or practically at the beginning of the year which is now under consideration, continued to be maintained until April-May, 1921, when it was reduced by those banks which had applied it to 6 or $6 \frac{1}{2}$ per cent, according to choice. At the same time some of the banks raised the rates which they had been charging for paper collateraled by Government obligations, thus eliminating the differential which had existed in favor of such paper. It has, of course, been obvious that the high rates which have been charged in some quarters have not been due to the policy of the Federal Reserve Banks, particularly as such high rates have frequently been asked by institutions which were in no way dependent on Federal Reserve Banks for accommodation, while on the other hand not a few which have been largely accommodated have seen fit in some cases to continue their old rates to customers who were thus carried at a charge which was distinctly less than that of the Federal Reserve Banks themselves. The Board in a recent statement (June 4) on the credit situation expressed the following view of existing conditions:
It is the opinion of the Federal Reserve Board that the country is approaching a new crop season with underlying conditions far sounder than they were a year ago. While there are still large amounts of staple products being carried over, financed partly on bank credit, the reserves of the twelve Federal Reserve Banks are nearly 40 per cent higher than they were at this time last year. The Federal Reserve Board is gratified to know that the Federal Reserve Banks are prepared to extend liberal credits to member banks and through them to nonmember banks for productive requirements of their customers.

Among important recent developments has been the announcement of a

Live-stock financing. plan initiated by the Secretary of the Treasury to assist the live-stock industry. The details of the plan were developed at conferences held during the past month. The essential feature is the raising of a pool of $\$ 50,000,000$, half to be supplied by eastern and half by western banking interests. The Bankers Live Stock Loan Corporation will be formed with a nominal capital to facilitate the handling of the business. Loans will be made by the corporation with and without recourse on banks and established live-stock loan companies. It is contemplated that each State in which the loans are to be made will have a committee of at least three who are to pass upon the applications, after which they are to be forwarded to Chicago for final approval by the managing committee. Preliminary announcements indicate that loans will be for 75 to 80 per cent of the present market price of the live stock, and the notes will run for not more than six months, with provision for four renewals if necessary. It is also stated that the loans will be made at the current market rates plus 1 per cent bonus, but it is believed that interest in no case will exceed 8 per cent. It is expected that the corporation will commence operations not later than July 15.
The course of development during the year 1920-21 with respect to bank-
Acceptance deers' acceptances has been almost precisely the reverse of the experience of the preceding year. Not only has the volume of acceptances offered in the markets of the country fallen off very decidedly, but the amount held by the Federal Reserve Banks has likewise receded. According to figures prepared by the Federal Reserve Board the total amount of bankers' acceptances growing out of both domestic and foreign trade operations held at all Federal Reserve Banks was at the close of June, 1920, about $\$ 400,-$ 000,000 ; the total of trade acceptances held at the same time was $\$ 30,000,000$; while, according to the computations of the Board, the total of member bank acceptance liabilities outstanding on May 4, 1920, was approximately $\$ 673,852,000$. Corresponding computations
made for the end of May, 1921, show that the total amount of bankers' acceptances held by Federal Reserve Banks was $\$ 84,732,000$, while of trade acceptances the amount was $\$ 14,332,-$ 000 . As contrasted with the acceptance liability figure which is given above, the total amount for the current year (April 28) is figured as $\$ 504,169,000$. With these figures prepared for the Federal Reserve Board there may be associated, as offering an interesting comparison, figures prepared by the American Acceptance Council. The council recently sent out inquiries to a list of banks doing an acceptance business, receiving, in reply to 482 inquiries, 417 answers. This investigation revealed a total of bankers' acceptances outstanding on April 1, 1920 , amounting to $\$ 799,000,000$, while for April 1, 1921, the total was $\$ 664,000,000$. The discrepancies between these figures and those already given as the result of the inquiry made by the Federal Reserve Board in 1920 are mainly due to the inclusion by the American Acceptance Council of nonmember banks and private bankers doing an acceptance business. But even allowing for this lack of identity in the base of computation, the degree of harmony in the returns is decided. The American Acceptance Council investigation thus shows a decline of 18 per cent for the entire country as against 25 per cent exhibited by the figures of the Federal Reserve Board. When the figures are divided as between New York City and the remainder of the country, it appears that the total acceptances of New York banks have shown but little reduction during this period, standing at about \$446,000,000 . Outside of New York, however, a decline from $\$ 352,000,000$ to $\$ 218,000,000$, or 41 per cent, was noted.

It is worthy of comment also that even to maintain the acceptances outstanding at their present figure it has been necessary to include a large volume of bills drawn to create dollar exchange. If to these are added acceptances drawn for the purpose of carrying commodities such as sugar, it will be seen that the volume of acceptances actually created to facilitate the movement of goods has very decidedly fallen off. The decline in the total amount of acceptances held by Federal Reserve Banks is not, however, primarily due to a falling off in
the total outstanding, but is rather due to the fact that a much larger number of the individual banks now hold acceptances as an investment. The Acceptance Council has found that whereas on April 1, 1920, 55 per cent of all outstanding acceptances were held by Federal Reserve Banks, only 19 per cent were so held on the corresponding date in 1921. This must be accounted an encouraging development in the discount market which in some measure offsets the discouragement due to the reduction in total volume of acceptances outstanding. The latter reduction is by many ascribed not to a disinclination on the part of banks to employ this paper, but simply to the fact that the country's foreign trade has shrunk very greatly during the past year, so that the acceptances required in financing it would naturally undergo a somewhat similar or parallel decline. Of notable interest in connection with the development of the acceptance is the action of the Federal Reserve Board recently taken in raising the maturity of acceptances eligible for purchase from 90 days to 6 months. This action may reasonably be expected to increase the total holdings of acceptances by Federal Reserve Banks in very considerable degree, although thus far sufficient time to demonstrate its effects has not been afforded.

Wholesale prices in practically all countries of the world were at their post-
Prices and war peak or had just begun to
credit. recede from those levels at the close of June, 1920. During the summer of that year the decline was gradual (except in the case of Japan) and in the leading European countries was followed by another upward movement in the early autumn. In the United States prices began to fall at an unprecedented rate in August and continued to decline rapidly throughout the remainder of the year, the decrease between July, 1920, and January, 1921, amounting to between 30 and 35 per cent. Reductions prior to the close of 1920 were greatest in the case of the United States, Japan, the United Kingdom, and France, and least in the case of Germany and Italy. Since the beginning of 1921 the earlier recession has continued, although in Japan and India prices have recently moved slightly upward once more. The uneven reduction in prices has resulted in a change in the price relationships
existing among countries as compared with a year ago. At present American prices are nearer their prewar level than those of other countries. They are also lower as compared with those of other countries than they were a year ago.
General level of wholesale prices in different countries in May, 1920, and May, 1921.

${ }_{2}$ July, $1914=100 . \quad{ }^{3}$ Dec. 31, 1913-June 30, 1914=100.
${ }^{2}$ Beginning of June.
The year 1920-21 has been, on the whole, a favorable period in the man-

Movement
public finance. of agement of public finance and indebtedness. A net surplus of approximately $\$ 509,000,000$ was shown for the fiscal year ending June 30, accompanied by a net reduction of outstanding indebtedness amounting to approximately $\$ 514,000,000$. Revenues for the year were $\$ 5,625,000,000$ and disbursements (both on ordinary account) were $\$ 5,116,000,000$. The methods of Treasury financing have continued subject to but little change, issues of short-term certificates being made from time to time for the purpose of taking up old issues and of providing current funds for use in intervals between periods of tax receipts. The most striking event of the year in Treasury practice was the announcement by the Secretary of the Treasury on June 8 of his plan for issuing three-year notes whose proceeds should be used to meet current maturities, including the Victory notes as the latter fall due. As was then stated by the Secretary, "Through the operation of the bond-purchase fund and the cumulative sinking fund, and the miscellaneous retirements of the public debt, the amount of Victory notes outstanding on May 31, 1921, had been reduced to $\$ 4,022,116,555$, according to the preliminary statement of the public debt for that date. This means a total reduction to date in the amount of the Victory loan of about half a billion dollars. As similar retirements of

Victory notes are effected from time to time pursuant to the Treasury's program, there should be important further reductions in the Victory loan maturity. The result of this and succeeding issues of short-term notes, and of the debt retirements which the Treasury expects to make from time to time out of its current surplus, should be to spread the $7 \frac{1}{2}$ billions of short-dated debt, which is now concentrated in relatively few maturities, into a progressively smaller aggregate amount of better diversified maturities extending over the period from 1923 to 1928." The effect of Treasury operations upon banking and financial conditions during the year has been less pronounced than at any previous time since the beginning of the war. This has been due to the fact that the Treasury has been practically upon a basis of equality of revenue and expenditure, while the offerings of securities which it has made in the market have not withdrawn a quantity of funds greater than was necessary to meet outstanding maturities, income on debt account being thus approximately equal to outgo. Since the department, under the Federal Reserve Act, is now operating upon a bank credit basis as distinguished from the theoretical cash basis of the older independent Treasury system, the transactions of the Government are automatically carried through upon the books of the banks and result in but little disturbance to business and financial operations. Slight stringency or "tightness" of the money market prior to the quarterly dates of income and excess-profits tax payments, with corresponding relaxation when the funds so received are paid out, afford the chief visible indication of the current consequences of Government collections and disbursements.
As in many other particulars, the past 12 months have witnessed a re-
Investment versal of the tendencies which had previously been in evidence with respect to the issue of new securities. Total issues of securities for the year 1920 have been unofficially estimated at $\$ 3,106,930,500$, while those for the first half of 1921 aggregate $\$ 1,442,252,100$, as against $\$ 1,800,000,000$ during the first six months of 1920 . The same factors which had begun to show themselves in a limited way comparatively early in 1920 continued during the latter part of that year and
have been even more pronounced during the first six months of 1921. Stringent conditions in the credit market and high rates for money have been the dominating factors throughout the year. On the other hand, the relative stagnation of industry during the past eight months, the falling off in export trade, and the comparative limitation of domestic demand have resulted in reduction or suspension of dividends by many enterprises and have made it obviously unwise to attempt the issue of securities which in other circumstances would probably have been offered and marketed. There has been no lessening of the need for capital for the development of industry and for the bringing up to date of investment in enterprises which had been retarded by the war. Some increase in building within recent months has been observed, but for the most part the conditions surrounding the investment of capital have not been favorable. The year has been equally unproductive of recovery in the values of securities. On June 22,1920 , quotations of 20 listed industrial stocks on the New York Stock Exchange stood at 90.16. By December 21, 1920, they had reached the lowest level touched for several years preceding, standing at 66.75; and although during the early spring of 1921 some recovery was noted, recent reactions have restored the average level to a point near that of December, 1920, or 67.63 on June 28, 1921. Prices, too, have continued irregular, being unavoidably influenced by the depression in industry and also by the continued high market value of investment funds. The Government's own securities have varied comparatively little, showing an average increase of only 1.37 points in the case of selected issues of Liberty bonds between June 26, 1920, and June 27, 1921, while the rate of interest paid by the Government on short-term borrowings, although slightly reduced, has not been markedly different from that of a year ago.

On the basis of estimates of our foreign trade for the fiscal year end-

## Foreign trade.

 ing June, 1921, total exports for the 12 months are approximately $\$ 6,500$,000,000 , compared with $\$ 8,109,000,000$ for the fiscal year 1920. Exports have thus fallen off in value about 20 per cent from the previous fiscal year, and by about the same amountfrom the overlapping period covered by the calendar year 1920. Measured on the basis of volume, with price changes eliminated, the showing is more satisfactory. But the outstanding fact remains that the reduction in both the value and volume of our export trade has been most marked in recent months, having steadily declined in every month of the present calendar year. Indeed, if our export trade for the coming 12 months should continue at the rate reported for May, it would amount in value to less than one-half that of the fiscal year 1920 and to but little more than one-half the figure for the fiscal year just past. A somewhat similar tendency in our import trade to move toward lower levels may also be noted, with this difference, that while for exports the tendency became strikingly evident in the figures reported for February and March of this year, a radical decline in imports started with September, 1920. This decline was checked about the beginning of this year, and, considering price changes, the volume of imports has expanded noticeably since then. Our trade has thus in recent months readjusted itself on a basis more nearly approaching an equilibrium between exports and imports than was the case a year ago. Notwithstanding the readjustment which has taken place recently, another large export balance has been added during the fiscal year to the amounts already due us from abroad. On merchandise account the excess of exports over imports in the 11 months ending with May was $\$ 2,710,000,000$, as against $\$ 2,794,000,000$ for the period ending May, 1920. That balance has been offset in part by net importations of gold and silver in the last 11 months to the amount of $\$ 475,000,000$. Our "visible balance" with the rest of the world has therefore been increased during these months by $\$ 2,233,000,000$. Just what sum has been added during the fiscal year to our unfunded balance is difficult to say. Taking into account, however, the additions to the visible balance that are due to such items as shipping services, and, on the other hand, the deductions which must be made for the export of capital in various forms, a theoretical unfunded balance of perhaps $\$ 1,500,000,000$ is found to have resulted during the fiscal year.

Notwithstanding the smaller volume of many lines of our export trade compared with last
year, a number of commodities show significant increases. Among these are corn and wheat, as well as the whole group of "foodstuffs in crude condition." Especially to be noted, also, is the position which the United States has assumed as the world's leading coal exporter, taking the place held for so many years by the United Kingdom.

These changes in foreign trade should be regarded as affording a basic
Foreignexchange. factor for the study of changes in foreign-exchange quotations. During the year the general tendency of exchange rates has on the whole been less favorable. There was a sharp reduction in the values of nearly all European currencies during the latter part of 1920, and although this was succeeded early in 1921 in many of them, particularly in sterling, francs, and lire, by a recovery, the progress made has not been sufficient to carry the general level of values back to the point it had reached at the middle of 1920. Comparatively little improvement has developed in any branch of foreign exchange during the year, while, with some parts of the world, trade has come almost to a standstill on account of the extreme reduction of demand for goods and the inability to pay under existing conditions. Moratoria have been established in not a few countries, while in others conditions similar to a moratorium have developed. This has greatly reduced the volume of remittances and banking business transacted with several of the South American countries as well as with a considerable number of oriental nations. The following table furnishes a brief comparison between the exchange rates of representative European nations for 1920 and 1921:

During the month ending June 10 the net
inward movement of gold was
Gold and silver imports and exports. a net inward movement of $\$ 88,020,000$ for the month ending May 10. England, France, Sweden, and British India, combined, furnished over 70 per cent, or $\$ 37,192,570$, of the $\$ 52,731,000$ of gold imported during the monthly period ending June 10, other countries of Europe and the Orient furnishing most of the remainder. Of the gold exports, amounting to $\$ 928,000$, over threefifths, or $\$ 568,000$, was consigned to Hongkong, and the remainder to Mexico and Canada.

Net imports of gold since August 1, 1914, were $\$ 1,191,943,000$, as may be seen from the following exhibit:

Since the beginning of the present year net gold imports totaled $\$ 317,725,000$. The largest gains are shown through imports from the following countries: England, $\$ 91,364,000$; France, $\$ 69,290,000$; and Sweden, $\$ 42,554,000$.

Gold exports during the present year were consigned chiefly to the following destinations: Mexico, \$3,430,000; Hongkong, \$1,184,000; Canada, $\$ 1,042,000$.
Since the removal of the gold embargo on June 7, 1919, total gold imports and exports have amounted to approximately $\$ 772,802,000$ and $\$ 681,878,000$, respectively, the net gain being approximately $\$ 90,924,000$. Of the total exports, $\$ 195,414,000$ was consigned to Japan, $\$ 146,555,000$ to Argentina, $\$ 72,767,000$ to Hongkong, $\$ 67,396,000$ to China, and the remainder principally to British India, Spain, Mexico, and South American countries.
During the same monthly period the net inward movement of silver was $\$ 3,005,000$, as compared with a net inward movement of $\$ 2,644,000$ for the month ending May 10. Mexico furnished over 76 per cent, or $\$ 3,971,000$ of the $\$ 5,208,000$ of silver imported during the monthly period ending June 10, the remainder coming principally from Peru, Canada, and

Honduras. Silver exports, amounting to $\$ 2,203,000$, were consigned principally to England, Hongkong, China, Japan, and Canada.

Net exports of silver since August 1, 1914, were $\$ 449,951,000$, as may be seen from the following exhibit:

Changes shown in the condition of reporting member banks for the four
The banking situation. operations connected with the collection about that date of the second installment of income and excess-profits taxes. In connection with these operations, the reporting banks show a total investment on June 15 of $\$ 152,000,000$ (out of a total of $\$ 311,000,000$ allotted) in the newly issued 3 -year Treasury notes, an increase during the report period of over $\$ 60,000,000$ in their holdings of Treasury certificates, and the further reduction by about $\$ 50,000,000$ in their loans to customers secured by Government obligations. "All other," i. e., largely commercial, loans at the close of the period were about $\$ 170,000,000$ less than on May 18, while accommodation of reporting banks at the Federal Reserve Banks decreased by about $\$ 161,000,000$, or from 8.7 to 7.6 per cent of the reporting banks' total loans and investments. The main changes in the condition of the reporting member banks are shown in the following exhibit:

| Date. | Number of report ing banks. <br> 1 | Loans and discounts and investments. $2$ | Rediscounts and bills payable with <br> Federal Reserve banks. | Ratio of accom-modation (3-2). | Net demand deposits. <br> 5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| May 18. | 821 | 15,447 | 1,314 | 8.5 | 10,156 |
| May 25.. | 820 | 15,346 | 1,329 | 8.7 | 10, 153 |
| June 1.. | 818 | 15, 287 | 1,385 | 9.1 | 10, 276 |
| June 8. | 818 | 15, 179 | 1,358 | 8.9 | 10, 213 |
| June 15....... | 817 | 15, 418 | 1,168 | 7.6 | 10,384 |

Developments in the Federal Reserve field during the 4 -week period ending June 22 include reductions of $\$ 136,000,000$ in the holdings of paper secured by United States Government obligations and of $\$ 47,600,000$ in the amount of acceptances on hand, a gain of $\$ 57,600,000$ in gold and of $\$ 61,800,000$ in total cash reserves, besides practically a continued reduction in Federal Reserve note circulation, which at the close of the period stood at $\$ 2,639,300,000$, or 22.5 per cent. below the maximum of $\$ 3,404,900,000$ reached on December 23 of last year. Rediscounting with other Reserve Banks is reported by the Richmond, Minneapolis, and Dallas banks, though the accommodation accorded is quite moderate, $\$ 41,700,000$ on June 22, compared with about $\$ 125,000,000$ on the corresponding date last year.

Although subject to some fluctuation, reflecting temporary increases in Federal Reserve note circulation and in reserve deposits, the reserve ratio shows a further rise for the period from 57.6 to 60.4 per cent. This increase is due to almost exactly the same extent to an increase of $\$ 61,800,000$, or 2.4 per cent, in reserves and to a decrease of $\$ 104,200,000$, or also 2.4 per cent, in Federal Reserve note and deposit liabilities combined.

Principal changes in the condition of the Federal Reserve Banks are shown in the following exhibit:

## BUSINESS, INDUSTRY, AND FINANCE, JUNE, 1921.

Conflicting economic tendencies have been at work during the month of June. Of these some have tended to lower the level of business activity, while others have tended to advance the movement of recovery which has set in during the past few months. The indications at the close of the month are accordingly not as conclusive with respect to probable future developments as would otherwise be the case. Good conditions have continued in several branches of domestic trade, and in these such recession as has occurred is evidently only seasonal. The month of June is usually a period of relative quiet and of temporary reaction marking the close of spring demands, while arrangements for the autumn trade have not yet been completed. This has been true during the past month. In some lines of business, however, it has become even more evident than heretofore that the close of the readjustment period has not yet been reached and in these the recession of business during June has been an actual decline and not merely a seasonal fluctuation.

Prices, whose movement has been watched with special interest for some time past, had up to very recently given evidence of "stabilization." The downward movement during May was the smallest since the decline first began, the index number of the Bureau of Labor Statistics showing a falling off of less than 2 per cent. Bradstreet's index has declined only from 154 to 151. The index of the Federal Reserve Board, compiled for use in international comparisons, showed a decline of only one-half of 1 per cent during May. Current unofficial reports for the month of June, however, indicate that there has been a recent acceleration of the price decline. Such changes as have taken place during the past month have been due to falling off in the value of agricultural commodities and nonferrous metals, excepting copper. During June, price recessions in bituminous coal, cotton, wheat, and grain have been general, while somewhat the same has been true of corn, rubber, and oils, but hides and leather have shown a slight upward movement and the same is true of some other commodities.

Unemployment continues practically unchanged, with slight tendencies to betterment in some industries, particularly in agriculture, and with tendencies to increase here and there, especially in basic industries such as iron and steel. In the farming regions there is at this season always a larger demand for labor and this demand is making itself felt on account of the good crop outlook, although hampered by the necessity of more economic production. The agricultural prospect is improving, the composite condition of all crops as of June 1 being 93.2, compared with 94.8 a year ago. Conditions in the Northwest have been especially encouraging, with the spring wheat crop probably larger than for four or five years past. The cotton crop outlook has been poor to date, while as is generally known a marked reduction in acreage has taken place.

It continues to be true that there is hesitation in purchasing and consequent lack of speedy distribution, retailers tending to buy only from hand to mouth in order to avoid loss due to variation of prices. This prevents manufacturers from booking orders far in advance and tends to prevent them from buying heavily of raw materials, their indifference accordingly leaving the raw material market uncertain and depressed.

Little improvement in export conditions has been observed. There has been no marked advance in demand, while foreign exchange has been as unsettled as heretofore, and practically no relief has been obtained from the disturbances which in South America and the East have prevented trade from going steadily forward.

The situation may be summed up by saying that the month of June has been a period of transition, with seasonal recession in many industries and continued downward readjustment in others; while with productive prospects favorable and prices in some lines apparently reaching a condition of greater stability the outlook for the autumn trade appears to be reasonably encouraging.

## AGRICULTURE.

Agricultural conditions in all sections of the country have shown marked improvement during May and June. The estimated total production of all wheat amounted to 830,000 ,000 bushels, as compared to a production of $787,000,000$ bushels in 1920. A slight increase in production of rye is also indicated, but the estimates of production of oats and barley are somewhat lower than the figures for 1920. District No. 10 (Kansas City) reports that very heavy rains retarded farm work during June, but have supplied the moisture needed to "make" the wheat, rye, barley, and oats crops. The total acreage of winter wheat in that district is larger than in 1920, but the estimated production is considerably lower, as the crop has suffered from frost, rust, and insects. The condition of spring wheat, rye, and corn is generally satisfactory. In district No. 9 (Minneapolis) agricultural conditions are more favorable than for a number of years. Although spring wheat acreage in that district is 6 per cent less than in 1920, it is estimated that the production will show an increase of $36,000,000$ bushels. A decided improvement in agricultural conditions has occurred. in district No. 11 (Dallas), although crops in southern Arizona and New Mexico have been injured by drought. District No. 12 (San Francisco) states that the wheat crop of the Pacific Northwest promises to be the largest on record.

## COTTON.

The condition of the cotton crop in the United States on May 25 was 66 per cent of a full normal, as compared with 62.4 per cent a year ago and a ten-year average of 76.6 per cent. A comparison by States shows that the May condition of the cotton crop was lowest in Alabama and Louisiana and highest in Arizona. The generally poor condition of the crop is due principally to the scanty use of fertilizers. Reports also indicate that boll weevils are already active in Texas. Complete estimates of cotton acreage are not yet available, but large reductions in acreage are reported from many sections. District No. 8 (St. Louis) states that "acreages are universally under those of 1920 , recent reports placing the decrease from 20 to 40 per cent." District No. 6 (Atlanta) reports that in Georgia continuous cold weather in April and May killed much of the young cotton and that some of these fields are being planted with other crops. However, the Oklahoma crop is in better condition than last year, and district No. 11 (Dallas) reports that the Texas crop is
growing vigorously as a result of excellent weather conditions prevailing since May 15. The Department of Agriculture estimates that world stocks of cotton on May 1 amounted to 9,200,689 bales in the United States and 4,647,304 bales in all other countries. Exports of raw cotton from the United States in May totaled 477,000 bales, as compared with 320,000 bales in April and 365,000 bales in May, 1920.

## TOBACCO.

It was noted last month that in district No. 8 (St. Louis) and in district No. 5 (Richmond) (with the exception of South Carolina) the acreage has been reduced. A similar situation is now reported with respect to the Burley tobacco section of district No. 4 (Cleveland). The Kentucky crop is backward, both in the case of Burley and the western dark types. Planting of Burley has been delayed because of the absence of favorable weather conditions. The farmers are making an effort to improve the quality of the present crop. Planting of the 1921 crop has begun in the Lancaster County cigar type section of district No. 3 (Philadelphia), where the weather has been ideal and the soil in good condition. Practically all manufacturers of cigars in district No. 3 (Philadelphia) report a slight improvement in sales, although they are still much smaller than at the same period last year. Factories in that district which were closed are being reopened as sales increase and old stocks are disposed of. Operations throughout the industry average absut 80 per cent of capacity.

## FRUIT.

The condition of the various fruit crops on June 1 differed widely. Grapefruit, limes, pineapples, cantaloupes, and oranges showed a condition higher than their ten-year average for that date; while the condition of cherries, peaches, pears, apricots, and apples was far below the ten-year average. District No. 3 (Philadelphia) reports that the 1921 crops of cherries and plums were almost entirely destroyed by frosts, and that crops of apples and peaches are only about 20 per cent as large as in 1920. The strawberry crop matured early this year, and 890 carloads of strawberries were shipped from Delaware and New Jersey during May, as compared with 68 carloads in 1920. The apple crop in district No. 2 (New York) is only 35 per cent as large as in 1920. The commercial acreage of cantaloupes planted in 10 early producing States amounts to 39,595 acres in 1921, as compared with 43191 acres in 1920,
and an average of 32,926 acres in the years 1917, 1918, and 1919. During May the Texas peach crop declined to 50 per cent of normal, indicating a probable production of $1,421,000$ bushels.

## GRAIN MOVEMENTS.

Movement of wheat to market during May in the country as a whole continued in about the same volume as in the three preceding months, while receipts of corn and oats show an increase over the April figure. Receipts at the four leading markets of district No. 10 (Kansas City) were much heavier than in April, amounting to $11,964,000$ bushels, and were 62 per cent above the receipts for May, 1920. The large surplus of wheat on farms in that district has been materially reduced, and with the continued liberal receipts reported during June, it is indicated that by the time the new 1921 wheat begins to arrive, stocks of old wheat will have been reduced to but little above the normal carry over. Receipts of wheat at Minneapolis and Duluth during May were, however, 20.6 per cent less than during April and 12.4 per cent less than during May, 1920. Receipts of corn, oats, and barley at these two centers during May increased over the April figures, and, with the exception of oats, which shows a decrease of 5.8 per cent, were in excess of the May, 1920, figures. May receipts of oats at the four leading markets in district No. 10 (Kansas City) totaled 1,152,000 bushels, or 475,000 bushels less than in May, 1920. Stocks of all grains in terminal elevators in Minneapolis and Duluth at the close of May were 18 per cent less than at the close of April, but were 33 per cent larger than at the end of May, 1920. This was due to the fact that Duluth stocks were nearly three times as large, although Minneapolis stocks were slightly smaller than in May, 1920. The May average price of wheat and oats was considerably higher than the April average, although there was a recession during June. The average for the first three weeks of June was lower than the May figure, although still higher than the April figure. In the case of corn, however, the average for the first three weeks of June was in excess of the May average, which in turn was in excess of the April average.

## FLOUR.

Wheat flour production during May is estimated at $8,406,000$ barrels, as compared with $9,368,000$ barrels in April, but was in excess of the figure of $8,244,000$ barrels for May, 1920. Buyers in district No. 8 ( St . Louis) "are disposed to hold off for arrival of the new wheat
crop," and while "there is a fair immediate business, virtually nothing is being sold ahead." Stocks in all hands are stated to be very light, and the present rate of production not such as to augment them rapidly. There is a fair export business in clears, but the demand for the better grades of flour is slow, and foreign buyers still show a preference for wheat instead of the milled product. May exports of flour from Minneapolis mills were 4 per cent greater than in April, and for the first five months of 1921 fully 50 per cent larger than exports during the corresponding period in 1920. The influence of a steady export demand in district No. 12 (San Francisco) has caused flour prices to show a slight advance above eastern market quotations. A decrease in stocks of wheat on hand, reported by 19 of the largest mills in that district, from 1,060,505 bushels on May 1 to 818,314 bushels on June 1, as compared with 1,886,661 bushels on June 1, 1920, reflects the tendency to export wheat rather than flour. Flour prices have shown an increase. The May average was considerably above the April average and the gain was further increased during June, the average for the first three weeks being considerably greater than that for May. This is the case with lower grade flour such as clears, as well as with patents.

## LIVE STOOK.

Live stock in general continues in good condition. Meadows and pastures in district No. 10 (Kansas City) are thriving, while as a result of rains in Texas early in June, ranges are now in fine condition in all sections of that State, with grazing greatly improved and cattle taking on weight. In New Mexico recent rains have given grass a new start and improved the condition of live stock, although drought has continued in Arizona. The loss of lambs, calves, and pigs has been small in district No. 10 (Kansas City), while in district No. 12 (San Francisco) exceptionally heavy yields of lambs are reported from all sections except Arizona. Of interest in this general connection is the plan for a national pool of $\$ 50,000,000$ to assist in financing the industry. It is hoped in this manner to care for the needs of the cattle and sheep raiser, and this in turn will aid the feeding districts, which finish the stock for the market. Receipts of each of the three principal classes of live stock during May show an increase over receipts during April, but in the case of sheep alone are they greater than the May, 1920, figures. Receipts of cattle and calves at 15 western markets during May were 1,062,988 head, corresponding to an index number of 105 , as compared with 994,916 head
during April, corresponding to an index number of 99 , and $1,209,656$ head during March, corresponding to an index number of 120. Receipts of hogs during May were $2,401,246$ head, as compared with $2,279,495$ head during April and 3,128,249 head during May, 1920. The respective index numbers were 109, 104, and 142. Receipts of sheep increased from 1,077,806 head in April to 1,097,976 head in May, as compared with 796,160 head in May, 1920. The respective index numbers were 79 , 80 , and 58. The average prices of cattle and hogs during the first three weeks of June were lower than the average prices for May, which in turn were lower than the averages for April. The May average price for sheep, however, was slightly greater than the April figure, but a considerable fall was shown in the average for the first three weeks of June. Prices of hogs in the Pacific Northwest continue to range above the prevailing prices in large middle western markets, but show a slight decline as compared with April. Prices at Fort Worth during May were more irregular than usual and at the close of the month were under those at the opening, due to the falling off of outside buying, as well as in the case of calves to the fact that receipts were the heaviest for that month in any of the past 18 years. Some improvement in May in the packing industry in district No. 10 (Kansas City) is reported.

## PETROLEUM.

Production of petroleum in the country as a whole continued throughout May and the first two weeks of June at the record rate attained in March and April. The average daily output in district No. 12 (San Francisco) fell from 338,981 barrels in April to 337,101 barrels in May, while the average daily output in district No. 11 (Dallas) declined from 386,249 barrels in April to 372,596 barrels in May. These decreases were more than offset by an increase in the average daily production of the KansasOklahoma fields from about 378,000 barrels in April to 402,000 barrels in May. Stocks of oil continue to increase and are necessitating the construction of additional storage facilities. District No. 12 (San Francisco) reports that stocks at the close of May amounted to $28,054,710$ barrels, as compared with $25,356,769$ barrels at the close of April. Despite this apparent overproduction, there was an increase in drilling operations during May. District No. 10 (Kansas City) reports 714 wells, with a daily new production of 87,461 barrels, completed in May, as compared with 588 wells with a daily output of 65,147 barrels completed in April. Fifty-nine new California wells,
with an initial daily production of 21,130 barrels, were completed in May, as compared with 58 wells with a daily production of 18,470 barrels in April. In district No. 11 (Dallas), on the other hand, only 192 wells, with an initial daily production of 75,574 barrels, were completed in May, as compared with 256 wells, with an initial daily output of 97,176 barrels, in April. There have been further reductions in prices of crude petroleum and of leading refinery products during May and the early part of June. Pennsylvania crude oil has declined from $\$ 6.10$ per barrel on January 1 to $\$ 2.75$ per barrel on June 14, and similar declines have occurred in the other producing fields. Prices of fuel oil, kerosene, and lubricating oil have also declined sharply in recent months, while the price of gasoline has receded more slowly.

## COAL.

Demand for bituminous coal is still very restricted. Exports increased somewhat in May, as a result of the British coal miners' strike, but this European demand slackened during June. Production during May amounted to $32,919,000$ tons, as compared with $27,553,000$ tons in April and $38,993,000$ tons in May, 1920. The respective index numbers are 89,74 , and 105. District No. 3 (Philadelphia) reports that prices have weakened materially, and virtually all business is spot. "Public utilities have taken advantage of the present low prices to increase their supplies considerably, but industrial consumers and railroads are buying only for immediate requirements." District No. 10 (Kansas City) states that the railroads show no disposition to renew the contracts which expired on April 1, but are buying sufficient coal for their needs in the open market. The demand for bituminous coal from Tennessee fields increased during May and resulted in an increase in the number of mines in operation and in the number of coal cars loaded. Anthracite production declined slightly in May and amounted to $7,668,000$ tons, corresponding to an index number of 103.6 , as compared with 7,703,000 tons during April, corresponding to an index number of 104.1, and 7,946,000 tons during May, 1920, corresponding to an index number of 107 . District No. 3 (Philadelphia) reports that company mine prices of all sizes have remained stationary and that most retail dealers have refrained from announcing the usual monthly increase. Demand for steam sizes is still very slack. The beehive coke industry has reached a state of almost complete paralysis, but the output of byproduct coke continues at a considerably higher rate than that of beehive, as a result of the demand for gas and other by-products.

## IRON AND STEEL.

During May operations in the iron and steel industry were at not over 25 to 30 per cent of capacity, and during June they show a tendency to taper off still further. District No. 3 (Philadelphia) states that "June has been the dullest month ever experienced in the history of the industry." Pig-iron production during May amounted to $1,221,221$ tons, corresponding to an index number of 53 , as compared with 1,193,041 tons during April, corresponding to an index number of 51 , although the average daily production showed a decrease. A similar situation was found in the case of steel ingots, as production increased from $1,213,958$ tons in April to 1,265,850 tons in May. The respective index numbers were 52 and 54 . There was a net loss during May of six furnaces in blast, so that 90 were active on June 1. The unfilled orders of the United States Steel Corporation showed a decrease for the tenth consecutive month, from 5,845,224 tons at the close of April, corresponding to an index number of 111, to $5,482,487$ tons at the close of May, corresponding to an index number of 104 . Recent reductions in prices by the leading interest and readjustments by the independent producers have not stimulated purchasing, and as competition has grown keener price concessions have been made by the individual manufacturer. At present they are found in the case of the larger as well as the smaller producers. Buyers, however, continue to confine their purchases to small lots for immediate needs. On the other hand, stocks are not accumulating, and neither producers' nor consumers' reserves are large. Recently some minor expansion of railroad buying has taken place, and some inquiries which have been made have raised the question of the possibility of increased business in connection with repair of equipment. Some increase in inquiries from oil interests and for structural steel is also reported, though the actual volume of business is small. The Lake Superior iron-ore market opened for the season on June 18 by initial sales at $\$ 1$ per ton under the 1920 schedule. This was the latest date in 20 years. Movement of ore from the docks to interior furnaces is very light and stocks at the lake front are much heavier than a year ago.

## AUTOMOBTLES.

May shipments of automobiles by factories producing three-fourths of the total output of the country show a falling off from the April figures. May shipments amounted to 18,608 carloads, as compared with 20,087 carloads during April, although driveaways increased from

14,197 machines in April to 15,200 machines in May. Thus far this year carload shipments have been greater than last year only during April, but driveaways have been much less in every case and during May were only slightly over 2 per cent of the May, 1920, figure. Manufacturers of popular standard makes who build their own cars are able to make a fair profit and do a good business at present prices, but assemblers, as well as some of the smaller and weaker companies, find their overhead increasing as competition to supply the restricted demand becomes keener. The effect of recent price reductions is being watched with interest.

## NONFERROUS METALS.

Copper production during May continued to be much curtailed, as the large mines which closed in March and April have not yet resumed operations. The output of refined copper by reporting companies in district No. 9 (Minneapolis) amounted to $4,685,641$ pounds during May, as compared with $4,816,453$ pounds in April and $20,817,776$ pounds in May, 1920. The price of copper (New York, net refinery) rose to 13 cents in the latter part of May as a result of a number of foreign orders, but a decline to 12.75 cents occurred in the early part of June, due to a cessation of export demand. Lead and zinc prices also declined during June and are at present quoted at about the same level. Zinc production during May amounted to 18,026 tons, as compared with 16,550 tons in April and 45,415 tons in May, 1920. Stocks of zinc on May 31 totaled 83,721 tons, as compared with 79,581 tons on April 30. District No. 10 (Kansas City) reports that several properties which mine both zinc and lead were reopened during May. Some drilling is being done in that district to locate shallow deposits of lead ore, which can be mined profitably at present prices. Gold, silver, and lead mines in district No. 12 (San Francisco) report that they are operating at from 90 to 100 per cent of capacity.

## COTTON TEXTILES.

The market for cotton textiles continues to display the characteristics that have been so generally commented upon during the past few months. Certain kinds of goods, notably ginghams and print cloths, continue in active demand and manufacturers of sheetings are refusing to promise deliveries before August. On the other hand, other gray goods, ducks, and drills are in very slight demand. The market for yarns manifests no great activity and the demand for tire yarns is reported by
district No. 1 (Boston) to be especially weak, due to the failure of the automobile industry to sustain the increase in activity recently apparent. District No. 3 (Philadelphia) states that several combing yarn mills have recently closed down because of a lack of sufficient orders, although, on the whole, the demand for combed yarns is greater than that for carded yarns. In the southern districts mill activity appears to be greater than in the northeastern sections of the country, although there have been some stoppages in district No. 5 (Richmond) due to labor troubles. Otherwise, it is said, most of the Carolina mills are running nearly full time. Special reports from cotton-goods mills located in district No. 6 (Atlanta) show a slight increase in the amount of cloth produced in May as compared with April, namely, 7.8 per cent for 18 concerns, and an increase of 18.9 per cent in orders on hand at the end of May. Production was, however, 57.8 per cent below that of May, 1920. Nine representative yarn mills produced 41.4 per cent more yarn in May than in April, with orders at the end of the month practically the same as at the end of the preceding month. The output was only 11.6 per cent below that of a year ago.

Consumption of raw cotton during May amounted to 440,000 bales, as compared with 409,000 bales in April, a total of 19 per cent below that of a year ago and 22 per cent below the average of the last five years. Despite the steady though not pronounced increase in consumption, the disturbed foreign situation, uncertainty as to the size of the next crop, and the large stock already on hand are factors preventing an upward price movement. In fact, the spot-cotton market registered sharp declines during June, and New York spot cotton closed at 10.85 cents per pound on June 20, one-half a cent below the previous low record of the year.

## FINISHING OF COTTON FABRICS.

Thirty-four of the 58 members of the National Association of Finishers of Cotton Fabrics reported total finished yards billed during the month at $91,033,535$ yards, as compared with $86,311,438$ yards in April. The total average percentage of capacity operated was 68 per cent for all reporting districts, as compared with 66 per cent during the preceding month. The total gray yardage of finishing orders received amounted to $86,754,055$ as compared with $92,920,824$ in April. The total average work ahead at the end of the month amounted to 10 days for all reporting districts, the same as for the preceding month.

## WOOLEN TEXTILES.

All reports indicate that the market for woolen textiles has been well sustained during the past month and that woolen and worsted mills are operating at an increased percentage of capacity. This is evidenced by Government statistics of activity based on reports of 917 manufacturers, which show that wide looms were operated at 80 per cent of capacity during May, narrow looms at 70 per cent, cards at 80 per cent, combs at 98.6 per cent, woolen spindles at 81 per cent, and worsted spindles at 90 per cent. District No. 3 (Philadelphia) states that orders placed for woolen and worsted yarns are extremely conser cative and in many cases purchases are made only after they have been covered by sales. Prices remain stable, except in knitting yarns, which have fallen 10 to 15 per cent from contract prices made earlier in the year. The result has been cancellation of orders in cases where spinners have refused to make concessions. Increased manufacturing is reflected in the growth in total wool consumption as reported by the Bureau of Markets for the first four months of 1921. Each month has shown an increase, April consumption amounting to $53,071,000$ pounds, as compared with $47,181,000$ pounds in March. During the latter part of May the Boston wool market strengthened somewhat but by the middle of June a downward tendency was again manifest. The mills have of late not bought heavily and it is probable that uncertainty as to prospective tariff duties is a factor in limiting sales. District No. 12 (San Francisco) reports that during May several sales of new clip wool were made to buyers for eastern mills at prices of 16 cents to 18 cents a pound in the grease, as compared with 11 cents a pound in the grease a month ago in the Yakima Valley. It is said that "reduced rates by water from Pacific to Atlantic ports through the Panama Canal have stimulated wool shipments from points in Utah and Idaho by rail to Los Angeles and thence by water to the Atlantic seaboard. One hundred and fifty carloads have been dispatched at San Pedro since January 1, at a reported saving over railroad rates of $\$ 3$ to $\$ 20$ per ton."

## men's clothing.

A special investigation of the men's clothing industry in district No. 7 (Chicago) shows in the case of 19 tailors-to-the-trade a reduction in orders for suits as compared with the same month a year ago of 28.5 per cent. There was a reduction of 20.1 per cent in the
number of suits made during the month and of 23.1 per cent in the number of suits shipped. In the case of nine clothing manufacturers, the orders for suits for fall taken since January, 1921, as compared with the same season of 1920 , fell off 27 per cent. The number of suits made during the month of May as compared with the same month a year ago was 52 per cent less and the same percentage holds for shipments.

## SILK.

Silk mills in district No. 2 (New York) report diminished activity in June, as operations only averaged 54 per cent of capacity as compared with 62 per cent in May. However, this reduction is no doubt due to the fact that the present time is between seasons. Spring and summer business is about over and orders for the fall have not yet been placed in any considerable quantity. According to the figures compiled by the Silk Association of America, the consumption of raw silk declined slightly from 28,900 bales in April to 27,200 bales in May. Stocks in warehouses at the end of the month remained virtually unchanged. Prices of raw silk have advanced somewhat, and district No. 3 (Philadelphia) reports that the thrown silk market has strengthened since June 1.

## HOSIERY.

The hosiery industry exhibits marked contrasts, with practically no demand for certain lines, while in other cases, notably that of full fashioned silk hosiery, premiums have been offered forimmediate delivery. Theshortagein this grade of goods is due to the long drawn-out strike, and many of the mills still operating are booked to capacity until the first of the year. There is a demand for seamless silk lines in consequence, although orders are placed in very restricted quantities for future delivery. Very slight interest is shown in staple cotton hosiery, however. Reports from 24 hosiery firms selling to the wholesale trade in district No. 3 (Philadelphia) show an increase in the product manufactured during May as compared with April of 8.8 per cent. Finished product on hand May 31 had fallen 10.9 per cent, while orders booked during May increased 103.3 per cent, and unfilled orders on hand May 31 were 39.8 per cent above those for the end of the preceding month. Similar information for eight firms selling to the retail trade show an increase in the product manufactured of 19.5 per cent, a decrease of finished product on hand of 9.3 per cent, a diminution in orders
booked during May of 28.1 per cent, and an increase in unfilled orders on hand of 16.1 per cent.

## UNDERWEAR.

Reports received from underwear mills located in district No. 3 (Philadelphia) indicate that production averaged only about 40 or 50 per cent of capacity and that orders received thus far are only about one-third the amount that would usually be on hand at this season. The demand for light-weight goods for immediate delivery has been active, but cancellations of orders have been frequent as a result of delay in deliveries and unwillingness of jobbers to risk carrying such late deliveries until another season. The 21 firms which make regular reports to the Federal Reserve Bank of Philadelphia showed a negligible increase in output during May of 1.7 per cent as compared with the month of April; finished products on hand May 31 had increased by 3.3 per cent; raw materials, however, had been reduced 39.9 per cent. Both orders booked during May and unfilled orders on hand May 31 declined by 15.6 per cent and 11.7 per cent, respectively.
The 62 mills making reports to the Knit Goods Manufacturers' Association of America had an output in May of 239,924 dozens of winter underwear, which was 48.5 per cent of normal. The production of summer underwear amounted to 265,423 dozens, or 63.6 per cent of normal. Thirty-three representative mills which furnished data for both April and May had a production of 317,385 dozens during the latter month, as compared with 292,274 dozens in April. Unfilled orders on the 1st of May rose from 410,526 dozens to 533,057 dozens. New orders received during the month of May fell from 364,364 to 283,313 dozens. There was a slight increase in cancellations, which rose from 4,022 dozens to 5,812 dozens.

## SHOES AND LEATHER.

Prices of leading classes of raw skins and hides have increased somewhat further during June, after a rather sharp advance in May. District No. 3 (Philadelphia) states that tanners are fearful that a further advance in raw stocks would force such an increase in leather prices as to retard trade. Stocks of goat, kid, and cabretta skins have shown a downward tendency since September, 1919, and are now only about one-half as large as at that time. Demand for all upper leathers was well maintained during June. Export demand has not kept pace with domestic business, but a few foreign sales of patent side leather and glazed
kid have been made. Demand for sole leather has slackened somewhat during June, but the higher grades continue to be sold in considerable volume. Stocks of belting and harness leathers are still large, and sales have been at a low level for many months. Trunk and bag manufacturers in district No. 3 (Philadelphia) report a steady improvement in volume of business, but at prices materially lower than in 1920. The upward tendency of the shoe industry, which was first noted in January, continued without interruption throughout May and the early part of June. Shoe factories in district No. 1 (Boston) continued to operate at about 50 per cent of capacity during May for the fourth successive month, but, as a rule, shipments from factories exceeded production, and orders on the books on June 1 were considerably higher than on May 1. District No. 3 (Philadelphia) reports that shoe manufacturers have been kept busy filling late spring orders, as the volume of spring business proved much larger than was expected. Many orders for the fall trade have been received from retailers, but jobbers are hesitant on account of their stocks of staple goods. Both wholesale and retail trade is reported good, and an increasing demand for black shoes and patent leathers has been noted. Factory operation in district No. 8 (St. Louis) is at from 95 to 100 per cent of capacity, and orders booked in May for immediate shipment were from 90 to 105 per cent of those in May, 1920. Retail stocks in that district have been greatly reduced, and the consumers' demand is greater than at any time since last summer. In district No. 7 (Chicago) factories are operating at about 70 per cent of capacity and unfilled orders amount to about six weeks' production.

## LUMBER.

An increase in lumber output due to seasonal causes was quite generally reported during May, but orders had not in all cases kept pace with the larger output. Since June 1 yellowpine sales have fallen below current production, as the demand for lumber for structural purposes has steadily fallen off. In district No. 6 (Atlanta) the 139 mills belonging to the Southern Pine Association reported an average production per mill for the week ending June 3 of 506,823 feet as compared with 492,014 feet for the last week in April. Shipments, on the other hand, fell from an average of 571,946 feet for the last week in April to 537,327 feet for the week ending June 3. Similarly, orders for the same dates dropped from an average of 697,049 feet to 456,538 feet. In district No. 11 (Dallas) the

32 reporting mills belonging to the Southern Pine Association likewise showed an increase in production, which was only 27 per cent below normal as compared with 39 per cent below normal for the month of April. In district No. 9 (Minneapolis) the lumber cut of 25 reporting companies was $29,576,000$ feet during the month of May, an increase of 40 per cent as compared with April and of 20 per cent as compared with the same month a year ago. Shipments amounted to $17,814,000$ feet as compared with $22,221,000$ feet a year ago, a decided improvement, as in recent months shipments have not been more than one-half those of the preceding year. The four lumber associations in district No. 12 (San Francisco) reported an increase in the May cut such as was to be expected at this season. Production during the four weeks ending May 28 totaled 360,075,000 board feet, which was 23.6 per cent above the April figures. Both orders and shipments also increased in amount, but fell behind the cut for the first time this year, as shipments only totaled $335,805,000$ feet as compared with 334,199,000 feet in April, while orders amounted to $342,724,000$ feet. The report says that although inland mills showed renewed activity, "business was curtailed at tidewater and river mills during the month, high water in the Willamette and Columbia Rivers and enforced inactivity due to strike conditions in the shipping and building trades causing the closing of a large percentage of river mills in the Pacific Northwest."

## BUILDING

Building operations during May show decreases from April in some districts, but in the majority of districts increases are shown. As a whole, building has continued about steady from April to May this year, in the face of a large drop last year, and has thus not been affected by seasonal developments. The value of contracts awarded in district No. 1 during May ${ }^{1}$ was about $\$ 18,000,000$, a slight increase over the April figure. Of this, $\$ 6,900,000$ represented residential construction. In district No. 2 (New York) the value of contracts awarded during May likewise increased to $\$ 58,800,000$, of which $\$ 37,000,000$ was for residential construction. In district No. 3 (Philadelphia) an increase of over 50 per cent was shown, and the May figure stood at $\$ 23$,400,000 , of which $\$ 6,800,000$ was for residential construction. District No. 4 (Cleveland), however, showed a slight decrease in the total value of contracts awarded, although those for residential construction showed a small in-
${ }^{1}$ As reported by F. W. Dodge Co.
crease. The two figures for May were, respectively, $\$ 33,900,000$ and $\$ 9,200,000$. District No. 5 (Richmond) also shows a decrease in the value of contracts awarded, in particular in the case of residential building. The value of building permits showed little change in district No. 6 (Atlanta), but large increases were recorded in Atlanta and Birmingham. Contracts awarded in district No. 7 (Chicago) increased from $\$ 53,700,000$ in April to $\$ 54,-$ 900,000 in May, but the value of residential contracts declined from $\$ 13,000,000$ to $\$ 9$,800,000 . In four reporting cities of district No. 8 (St. Louis) the value of building permits increased from $\$ 2,403,557$ in April, to $\$ 2,696,521$ in May. In district No. 9 (Minneapolis), excluding Montana, the value of building contracts declined from $\$ 9,100,000$ in April to $\$ 8,800,000$ in May, but residential contracts increased from $\$ 2,000,000$ to $\$ 2$,300,000 . The value of permits in 14 cities of district No. 10 (Kansas City) increased from $\$ 5,167,969$ in April to $\$ 6,096,407$ in May. Nine cities of district No. 11 (Dallas) report 2,473 permits, valued at $\$ 4,190,778$, in May, as compared with 2,588 permits, valued at $\$ 5,633,649$, in April. The value of building permits in 20 cities of district No. 12 (San Francisco) declined from \$19,907,621 in April to $\$ 17,763,732$ in May. This decline was due principally to a complete suspension of building operations in San Francisco which has been caused by a strike in the industry.

## EMPLOYMENT CONDITIONS.

Taking the country as a whole, unemployment increased slightly during May. Although in district No. 12 (San Francisco) the reductions in numbers employed were attributed to strikes in the marine and building trades, it appears that elsewhere such reductions are the result of a further contraction of the scale of manufacturing operations. The Massachusetts Department of Labor and Industries, however, in its survey covering 192 representative manufacturing establishments, reported a slight increase in numbers employed, the totals being 197,000 (May 27) as compared with 192,000 on April 30. In May the only increase in opportunities for employment was afforded by a gradually enlarging activity of the textile mills. In New Hampshire and Vermont conditions were similar. Granite and marble-working establishments in these States have greatly reduced their forces or have closed down entirely. In Rhode Island and Connecticut unemployment is most pronounced in the metal-working trades, especially in brass production, machinery, and tools in

Connecticut, and tools and jewelry in Rhode Island. In both States increased demand for labor in textile industries has to a certain extent offset the unemployment occurring in other lines. The New York State Industrial Commission reports a decline of 2 per cent in numbers employed in the factories of that State. Iron, steel, machinery, and automobile plants reduced working forces because of a lack of new orders, and the railroads also cut down forces somewhat. There were no serious labor troubles during the month. The end of the marine strike still left many seamen idle as a result of conditions in the shipping industry. Following the settlement of the strike in the clothing industry, the number employed in men's clothing establishments increased. In the case of women's clothing the usual seasonal decrease has set in. It is reported that there has been little change in the numbers employed in the building trades. A slight increase has probably occurred in New York City, but in other parts of the State activity is at a standstill.

The very restricted scale of operations in the iron and steel industries would obviously result in widespread unemployment in certain parts of districts No. 3 (Philadelphia) and No. 4 (Cleveland). District No. 5 (Richmond) reports that there was an increase in construction work, which decreased the number of unemployed, especially in the case of unskilled laborers. On the other hand, a strike centering in the textile mills around Charlotte and resulting from a proposed $22 \frac{1}{2}$ per cent reduction in wage rates led to an increase in numbers out of work in that section. The supply of farm labor likewise continued to be excessive. District No. 7 (Chicago) obtained returns from 177 concerns showing that the total numbers employed at the end of May as compared with the end of the preceding month fell 4 per cent, from 114,490 to 109,967. The reduction as compared with a year ago amounted to 33.3 per cent. The amount of the May pay roll was 6.5 per cent below that of April and 40.4 per cent below that of May, 1920. District No. 8 (St. Louis) says that "labor conditions failed to show improvement during the period under review." Strikes in district No. 12 (San Francisco) in the marine and building trades and a slight reduction in numbers in manufacturing establishments, as recorded by the United States Employment Service, account for the increase in unemployment in May. On the other hand, seasonal activities in lumbering and in agriculture have taken off some surplus labor, although the demand is below normal.

## WHOLESALE TRADE.

Conditions in the wholesale grocery business remained substantially unchanged during May, although the downward trend in sales was arrested. In all reporting districts except district No. 5 (Richmond) slight advances were recorded from the preceding month, rising from 0.6 per cent in district No. 11 (Dallas), with 11 firms reporting, to 4 per cent in district No. 6 (Atlanta), with 27 firms reporting. As compared with a year ago reductions ranged from 33.8 per cent in district No. 11 (Dallas), with 11 firms reporting, to 43.4 per cent in district No. 3 (Philadelphia), with 50 firms reporting. In district No. 11 (Dallas) there was a negligible increase in the amount of dry goods sales during May, and in district No. 7 (Chicago) an increase of 4 per cent in the sales of 9 reporting shoe firms, but otherwise all districts making returns showed declines in dry goods, hardware, boots and shoes, following upon very general sales reductions in April. In the case of dry goods these declines ranged from 12.6 per cent in district No. 6 (Atlanta), 15 firms reporting, to 17.4 per cent in district No. 12 (San Francisco), 9 firms reporting. In hardware lines the minimum sales decrease amounted to 6.3 per cent in district No. 12 (San Francisco), 23 firms reporting, and reached a maximum decrease of 14.7 per cent in district No. 3 (Philadelphia), 24 firms reporting. In boots and shoes declines varied from 6.5 per cent in the case of district No. 6 (Atlanta), with 7 firms reporting, to 18.2 per cent in district No. 5 (Richmond), 8 firms reporting. As compared with May, 1920, reductions in all lines were pronounced, ranging from 13.6 per cent in district No. 4 (Cleveland) to 38 per cent in district No. 12 (San Francisco), for dry goods; from 22 per cent in district No. 4 (Cleveland) to 43.7 per cent in district No. 6 (Atlanta), for hardware; and from 7.3 per cent in district No. 7 (Chicago) to 45.6 per cent in district No. 5 (Richmond), for boots and shoes. The fact that the shoe sales for district No. 7 (Chicago) are only 7.3 per cent below the totals for a year ago is attributed to the great increase in the number of orders, resulting from mark downs and also from the necessity of replenishing retailers' stocks.

## RETAIL TRADE.

Retail trade as measured in dollar values continues to decline. The value of net sales was lower in every district during May than in the corresponding month a year ago. However, these declines in total value appear to be
less than the average decline in retail prices during the past year, which shows that the volume of trade has been well maintained. Reporting department stores show a decrease in net sales from the same month a year ago of 4.5 per cent in district No. 1 (Boston), 10 per cent in district No. 2 (New York), 7.8 per cent in district No. 3 (Philadelphia), 5.5 per cent in district No. 4 (Cleveland), 3 per cent in district No. 5 (Richmond), 16.8 per cent in district No. 6 (Atlanta), 12.5 per cent in district No. 7 (Chicago), 1.6 per cent in district No. 8 (St. Louis), 14.9 per cent in district No. 9, (Minneapolis), 5.3 per cent in district No. 10 (Kansas City), 17.4 per cent in district No. 11 (Dallas), and 4.1 per cent in district No. 12 (San Francisco). In eleven districts there was a decline of stocks on hand during May. Stocks at the end of May were lower than a year ago for every district. These declines varied from. 11 per cent in district No. 8 (St. Louis) to 25.8 per cent in district No. 5 (Richmond). Considering the decline in retail prices, it is doubtful whether there has been much change in the physical volume of stocks. Stock turnover continued at about the same rate in May as in April. The percentage of outstanding orders of retail merchants at the end of May to total purchases during the calendar year 1920 decreased in eight districts. This indicates that retailers are continuing the same purchasing policy as heretofore, preferring to purchase goods in smaller amounts as needed, rather than to make extensive future commitments.

## WHOLESALE PRICES.

During May wholesale prices in general continued to fall, but according to all indications at a less rapid rate than at any time since the downward movement began. In June, however, the decline seems to have become more pronounced again. The index number of the Bureau of Labor Statistics for May shows a reduction of about 2 per cent as compared with 5 per cent in the preceding month. That of the Federal Reserve Board, constructed primarily for international comparison, declined only one-half of 1 per cent during May as compared with a 5 per cent decrease in April, and Bradstreet's and Dun's show tendencies similar to these.
The rise during May in the price of a large number of important agricultural commodities such as cotton, wheat, corn, oats, etc., nonferrous metals, coal, and raw hides in part neutralized the effect of declines in certain other raw materials and in manufactured goods. As a result, the index numbers show raw ma-
terials as a whole to have averaged the same or somewhat higher than in the preceding month, while manufactured goods continued to be reduced.

In June many of the important raw materials which had advanced in May declined again, but in most cases not to the April level. Leading agricultural commodities except corn, bituminous coal, nonferrous metals, with the exception of copper, as well as live stock, petroleum, iron and steel products, and building materials continued to be reduced. A considerable number of important food commodities, such as dairy products, meats, etc., were materially reduced during May, but reductions in finished textiles and boots and shoes were not so general.

## SIIIPPING.

The outstanding events in Americar shipping circles during June were the appointment by President Harding of the new Shipping Board and the settlement of the strike of the marine engineers which had been in progress ever since the 1st of May. The terms of the agreement signed by the Shipping Board and the unions provide for a reduction of 15 per cent in wages and the elimination of all overtime pay at sea. The agreement, announced June 16, runs until January 1, 1922, during which time no further wage cuts are to be made.

The movements of ocean freight rates during the month have been mixed. At the beginning of June, with a reduction of about 30 per cent in grain rates to the United Kingdom, the general tendency was distinctly toward lower levels. Toward the middle of the month, however, French Atlantic rates were raised about 10 per cent to the level of rates to other continental ports, and a little later the extensive chartering of coal boats to the United Kingdom brought about a decided advance in charter quotations. Reports indicate that at that time many coal buyers abroad placed orders in this country to fill their immediate requirements regardless of the outcome of the British coal strike. The fundamental conditions affecting the shipping and shipbuilding industries are, however, substantially the same as reported for some months past. American shipyards continue merely to complete tonnage already on the ways, and no new orders of any size have been booked for months. There can obviously be no change in this situation until world trade revives sufficiently to absorb and put into profitable operation the vast fleets of vessels now lying idle in ports all over the world.

## The Acceptance Market.

The following reports have been received from the Federal Reserve Banks concerning the condition of the acceptance market in their respective districts:

$$
\text { DISTRIOT NO. } 1-\text {-(BOSTON). }
$$

The inactivity of the bill market which was in effect during the week ending May 21 continued throughout the balance of May, but with a slight improvement during the last few days of the month. The market in the last 10 days of May was probably as poor in this district as at any time for many weeks. Not many bills were made which saved the market from being choked.

After the turn of the month a better market developed, but there was a hesitancy on the part of the investors, especially among the banks, due to the fear of heavy withdrawals covering the quarterly tax payments. This combined with the new issue of certificates of indebtedness and the new three-year Treasury notes, caused some cautiousness.

Money rates on call were high and there seemed to be a scarcity of funds for carrying bills early in June which disappeared, together with the feeling of uncertainty regarding the certificate and note issues and tax payments, and by the 15 th the conditions were so improved that most dealers marked their rates for 1-90 day bills to $5 \frac{1}{2}$ per cent. One of the large dealers in Boston took out all bills being carried here on repurchase agreements and, in fact, all of the dealers found their portfolios very much reduced and were in excellent position to buy bills. The supply was not plentiful and the period ending on June 20 found the dealers with very few bills on hand, with rates generally $5 \frac{1}{2}$ per cent. Our own portfolio decreased considerably and there was no volume offering of bills to us.

## DISTRICT NO. 2-(NEW YORK).

Rates in the New York market for prime unindorsed 90 -day bills increased in late May in common with other money rates, reaching $5 \frac{7}{3}$ per cent. By the middle of June the rate fell gradually to $5 \frac{5}{8}$, and the demand quickly reduced the dealers' portfolios, causing a shortage of prime bills. Subsequently rates on 30, 60, and 90 day bills were at a common level of $5 \frac{1}{2}$ per cent.

A survey of the bill market recently made by the American Acceptance Council places the volume of bills outstanding in the United

States on April 1, 1921, at $\$ 664,000,000$, as compared with $\$ 799,000,000$ on April 1, 1920, a reduction of 18 per cent. A comparable figure for 4 to 6 months' commercial paper tabulated by this bank from the reports of 11 dealers shows a reduction of 28 per cent during the same period. In New York City the shrinkage in the volume of bills held was less than 1 per cent, while outside this city it amounted to 41 per cent. A factor in the maintenance of the volume of bills here was the large amount of import bills reccived as well as the great increase in bills drawn to create dollar exchange.

New bills coming into the New York market include those covering the importation of silk from the Far East, and bills drawn under several large sugar import credits recently established.

The minimum buying rates of the Federal Reserve Bank of New York have remained unchanged at $5 \frac{3}{4}$ to 6 per cent for indorsed prime bills ranging up to 90 days' maturity.

## DISTRICT NO. 3-(PHILADELPHIA).

Reports received from five dealers in bankers' acceptances show that sales in this district during May increased more than 11 per cent, as compared with sales in April. Not all of these dealers were handling acceptances in May, 1920, but comparing the figures of those who were, the increase is in excess of 800 per cent.

The great majority of acceptances sold during May arose from transactions involving the importation and exportation of merchandise, the principal articles covered being sugar, silk, cotton, and grain. Transactions involving warehousing of staple commodities account for most of the others. In nearly all instances the commercial banks are the buyers. This is partly because under the laws of Pennsylvania savings banks are not authorized to invest in this class of securities.

Reports of twelve Philadelphia district member banks that execute acceptances may be summarized as follows:

| 1921 | Executed during preceding month. | Outstanding on given date. |
| :---: | :---: | :---: |
| March 10. | \$5, 325,000 | \$14, 127,000 |
| April 10. | 4,555, 000 | 13, 234,000 |
| May 10. | 5, 711,000 | 12,892,000 |
| June 10. | 2,795, 000 | 10,798,000 |

The purposes of these acceptances are the same as of those reported by dealers, but the total represents a reduction of 50 per cent, as compared with the previous month, whereas
the sales by dealers, as stated above, show an increase.

The banks in this district apparently have felt the falling off in our foreign trade more acutely than those in other districts, but the insufficiency in the supply of acceptances seems to be general.

Purchases by the Federal Reserve Bank of Philadelphia for the first five months of the last three years are:

|  | 1919 | 1920 | 1921 |
| :---: | :---: | :---: | :---: |
| January . | \$883,390 | \$3, 723, 290 | \$6,671, 629 |
| February. | 1,541,652 | 2, 250, 264 | 11,001, 774 |
| March | 1,828,063 | 1,387, 821 | 9, 022,991 |
| April. | 1,918,792 | 992,076 | 9, 859,528 |
| May. | 534,512 | 503,727 | 11,037,622 |
| Total | 6,706,409 | 8,857,178 | 47, 593, 544 |

After an advance in late May, selling rates have declined, and are at the present writing as follows:

DISTRICT NO. 4.-(CLJVELAND).
Bank acceptances for the month showed decided indications of following the New York call money rates. During the early part of the month, call money rates were around 7 per cent, and there was little demand for bills with the exception of such orders as came from country localities.

During the latter part of the month, with the easing of call money, an active demand arose and prime bills were absorbed as readily as offered by the brokers.

## DISTRICT NO. 6.-(ATLANTA).

Out of approximately 35 inquiries sent to the principal accepting banks in the district, reports were received from 14 member banks regarding acceptance conditions during May. Eight of these reports showed no dealings of any kind in acceptances during the month. Four banks reported domestic acceptances executed during May in amounts approximately 3 per cent in excess of those executed during April. Two of these reports showed no domestic acceptances executed during May, 1920, and figures shown in the other two indicated a decrease of a little more than 50 per cent compared with May of last year. Two banks reported foreign acceptances executed during May approximately 25 per cent less than in April, and 21 per cent less than during May, 1920.

The amount of acceptances rediscounted with and purchased by the Federal Reserve Bank of Atlanta during May was larger than for February and March, but about 61 per cent less than for April, which was the highest since Jonuary

May, 1921.

## Bankers' acceptances <br> 60 to 90 days: <br> Indorsed........ $8 \quad 6 \quad 7 \quad 6 \frac{1}{2} \quad 6 \frac{3}{8} \quad 6 \frac{1}{2}$

DISTRICT NO. 7.-(CHICAGO).
Comparative results of reports on acceptance transactions received from dealers and banks for May and for April, as revised, are shown below:
[In thousands of dollars.]

Returns showed about 75 per cent of the purchases of 90 -day maturity and the balance equally divided between 30 and 60 days.

A comparison of the composite of returns from banks show increases in bills bought, bills sold, and bills held at the close of the month of 5,72 , and 34 per cent, respectively, and a decrease in bills accepted of 17 per cent. Reporting dealers show a decrease in bills bought of 7 per cent and increases in bills sold and in bills held at the close of the month of 52 and 64 per cent, respectively.

Comparative statistics for acceptances at the Federal Reserve Bank of Chicago for April and May are as follows:

| May. | April. | Per. <br> centage <br> change <br> in May <br> from |
| :---: | ---: | ---: | ---: |
| April. |  |  |

DISTRICT NO. 8-(ST. LOUIS).
Up to 30 days ago there was a fairly well sustained market for bankers' acceptances in this district. The demand has fallen off, however, in the last two weeks and the market has been extremely quiet. There is little demand for bills and it is difficult to sell even prime names at present rates.

|  | St. Louis. | Louisville. |
| :---: | :---: | :---: |
| Bankers' acceptances of 60 to 90 days: | H. L. C. | H. L. C. |

| Unindorsed... | $6 \quad 5 \frac{3}{4} 6$ | 86 |

DISTRICT NO. 9-(MINNEAPOLIS).
The most interesting event in the local acceptance market during May was the organization of the Montana Wool Acceptance Company to finance the sale and shipment of wool which has been moving very slowly during the last year.

```
DISTRICT NO. 11-(DALLAS).
```

It is estimated that on May 31 the total amount of outstanding acceptances, created in in this district, was $\$ 1,491,000$, of which acceptances aggregating $\$ 1,033,000$ were drawn against domestic shipments and storage of goods, the remainder being against import and export transactions, the average maturity period for the outstanding paper being estimated at 60 days.
The total amount of acceptances held by the Federal Reserve Bank of Dallas on May 31 was only $\$ 170,906.70$, all of which were based on export transactions; $\$ 150,000$ of our holdings were executed by Eleventh District banks.

## DISTRICT NO. 12 - (SAN FRANCISCO).

Demand for bankers' acceptances has continued to increase throughout the month. Country bankers, with few exceptions, have been the principal buyers. Buying in Washington and Oregon has been very spotty while in California, although in small volume, it has been very evenly distributed.

Due to general tightening of money in the early part of June the rate on bankers' acceptances rose from $5 \frac{3}{4}$ per cent to $5 \frac{7}{8}$ per cent. It hung at that level for about a week and then dropped back to $5 \frac{3}{4}$ and $5 \frac{\pi}{3}$ and is to-day, June 16 , at $5 \frac{1}{2}$ per cent. This low rate is due to the extreme ease of the call-money market which prevails at the present time, and also to the fact that there is an unusual scarcity of prime bills.

## INDEX NUMBERS OF EXCHANGE VALUES OF FOREIGN CURRENCY.

The international interest manifested at the present time in the restoration of normal conditions in the exchange market has given rise to a new statistical inquiry abroad-the construction of index numbers measuring the general trend in exchange values of foreign currencies. A number of European journals and economic publications including the London Statist, the Frankfurter Zeitung, the Norwegian periodical Farmand, and the Swedish official organ Kommersiella Meddelanden recognized almost simultaneously the importance of discerning the direction and amount of movement in their respective national currencies as related to the collective currencies of other countries. In the midst of the daily fluctuations and disturbances ruling in the exchange market, the difficulty heretofore of ascertaining the general position abroad of the currency of a country is apparent. Studied in conjunction with the index numbers for wholesale prices of commodities the index of foreign exchange rates affords comparison of the changes which occur both in the internal and external value of a country's currency and gives a perspective of its purchasing power both at home and abroad.

## STATIST INDEX.

Of the European indexes, the index of the foreign exchange values of the pound sterling abroad as calculated by the Statist is the most reliable and scientific from the standpoint of strict and careful computation. As explained in the Statist of February 19, 1921, the index is constructed on a basis of the "average of the daily cable quotations of 28 of the most important countries taken for each month since the armistice and expressed as a percentage of the old par value of the pound sterling in terms of the foreign currency." Special cognizance is taken of the question of weighting the various exchanges according to their relative influence in denoting variation in the pound sterling. Obviously a rise in the exchange on a South American or Oriental country would not indicate as important a shift in the pound sterling as a similar movement in the New York or Paris exchange. To make the exchanges influential, therefore, according to their relative importance, the total volume of trade between the United Kingdom and the different foreign
countries is used as an external criterion of weight. These exchange transactions include not only imports, exports, and reexports of commodities of commerce but also the movement of gold and silver and "invisible" exports, such as freight, insurance, and interest earnings. The allocation of shipping earnings is made in accordance with the proportion of British tonnage cleared with cargoes to the various countries, while the determining factor in allocating interest earnings is the amount of capitalinvestments. Arbitrage and speculative transactions, although an important element in exchange operations, are omitted owing to the paucity or lack of reliable data. The weights thus assigned to the various exchanges from the estimate of the total volume of transactions are changed by the Statist each quarter according to the fluctuations in trade. Periodic adjustment of weights, instead of the adoption of a constant and uniformly fixed system, is thought necessary in order to obtain a more accurate measure of the comparatively rapid modifications which have occurred in the relative values of trade since the armistice, and which still are taking place. Finally, in computing the index, the geometric mean is adopted in an effort to prevent the exertion of undue influence on the final result by the German, Portuguese, and Turkish exchanges in which the pound sterling stands strikingly high.

## VALUE OF STERLING.

The accompanying table on page 796 shows the movements favorable and adverse to the value of sterling in the 28 exchange centers during 1920 and the first five months of 1921. The table below presents the index numbers of the foreign exchange values of sterling for each month since the armistice.

Index Numbers of Foreign Exchange Values of the Pound Sterling Abroad.
[Par value of the foreign currencies=100.]

|  | 191.8 | 1919 | 1920 | 1921 |
| :---: | :---: | :---: | :---: | :---: |
| January. |  | 98.9 | 98.5 | 122.4 |
| February |  | 99.1 | 94.9 | 120.9 |
| March... |  | 99.2 | 102.9 | 123.0 |
| April. |  | 100.3 | 109. 7 | 120.0 |
| May |  | 101. 2 | 107.5 | 119.1 |
| June. |  | 100.4 | 106.3 | .-.... |
| July . |  | 101.7 | 100.2 | ........ |
| August |  | 101.6 | 100.1 |  |
| September |  | 100.7 | 100.2 | .... |
| October. |  | 100.3 | 108. 7 |  |
| November. | 98.7 | 100.2 | 111.2 |  |
| December. | 98.7 | 98.3 | 114.5 | ........ |

As will be noted, the general value of the pound was below parity at the close of hostilities in 1918 and so continued until April, 1919, when it rose to par.

In February, 1920, sterling dropped to the lowest value since the armistice, the pound being at a discount of 5.1 per cent. Recovery to a position above par, however, immediately followed and, with the exception of a sharp decline in July, sterling since has shown rapid and steady appreciation.

## SWEDISH INDEX.

The Swedish foreign exchange index is constructed on the same general priaciple with certain differences in details of technique. In the first place, the Swedish index is based on the average of the daily rates of 12 exchanges instead of 28 . Secondly, a weighted arithmetic average is used on account of statistical convenience. The weighting, moreover, is constant and based on the volume of trade transactions for 1919, the latest year for which Swedish trade statistics, classified by countries, are available in published form. For statistical reasons periodic adjustment of weights are possible only annually in the case of the Swedish index.

The weights assigned to the various exchanges including not only exports and imports of commodities and precious metals, but also an estimate of invisible items is set forth in the following table:

Estimated Volume of Transactions Between Sweden and 12 Foreign Countries, 1919.

|  | Million kronor. |  | Million kronor |
| :---: | :---: | :---: | :---: |
| Holland.. | 150 | Denmark | 425 |
| Germany. | 370 | England. | 1,600 |
| Switzerland | 10.5 | Spain. | 65 |
| Belgium. | 40 | United St | 750 |
| Finland. | 105 | France. | 260 |
| Norway. | 275 | Italy. | 25 |

The two series of indexes computed by Kommersiella Meddelanden show (1) the exchange value of foreign currencies, Swedish kronor $=100$; (2) the foreign exchange value of the Swedish krona abroad, foreign currencies $=100$.
These figures show that the Swedish krona remained well above prewar parity throughout 1920, and in May, 1921, stood 23.3 per cent higher than the collective value of the 12 foreign currencies.

The results are indicated below:
Index Numbers of the Foreign Exchange Values of the Swedish Krona.

|  | Exchange value of foreign currencies (Swedish kronor= 100 ). | Foreign exchange value of the krona abroad. (foreign currencies $=100$ ). |
| :---: | :---: | :---: |
| 1920. |  |  |
| January.. | 90.9 | 110.0 |
| February. | 94.0 | 106.4 |
| March. | 91.6 | 109.2 |
| April. | 88.1 | 113.5 |
| May. | 89.4 | 111.8 |
| June. | 88.3 | 113.3 |
| July. | 86.4 | 115.8 |
| August. | 86.6 | 115.4 |
| September | 85.7 | 116.7 |
| October. | 86.8 | 115.3 |
| November. | 87.9 | 113.8 |
| December. | 87.6 | 114.1 |
| 1921. |  |  |
| January. | 86.2 | 116.1 |
| February. | 85.9 | 116.4 |
| March. | 82.2 | 121.7 |
| April. | 79.7 | 125.5 |
| May... | 81.1 | 123.3 |

NORWEGIAN INDEX.
The Norwegian index constructed by Farmand, like the Swedish index, is a weighted arithmetic mean of the average quotations of 12 exchange centers expressed as a percentage of parity. The weights, however, are based on trade transactions for the years 1910-1913 plus an allowance for invisible exports. In view of the fact that the unsettled postwar conditions have created very rapid and striking changes in the relative trade importance of the various countries, these weights based on prewar trade are not truly indicative of the existing status of the exchanges.

The monthly index obtained is shown in the subjoined table:
Index Numbers of the Foreign Exchange Value of the Norwegian Krone.
[Par value of the foreign currencies $=100$. 1920.

As indicated by the figures above, the Norwegian krone has exhibited extreme unevenness of movement in relation to the collective value of the foreign currencies.

## GERMAN INDEX.

The least reliable foreign exchange index is that of the Frankfurter Zeitung. No attempt is made at weighting the exchanges owing to the lack of current foreign trade statistics. The figures are presented below:
Index Numbers of the Exchange Value of the German Mark.

|  |  | Exchange value of foreign currency (German mark= 100). | Exchange value of the mark abroad (foreign currencies -100 ). |
| :---: | :---: | :---: | :---: |
|  | 1920. |  |  |
| January |  | 744 | 13.4 |
| February. |  | 1,229 | 8.2 |
| April..... |  | 990 | 10.1 |
| May. |  | 780 | 7.3 |
| June. |  | 547 | 18.3 |
| July. |  | 549 | 18.2 |
| August. |  | 579 | 17.2 |
| September |  | 647 | 15.5 |
| October. |  | 780 | 13.1 |
| November. |  | 952 | 10.5 |
| December. |  | 850 | 11.7 |
|  | 1921. |  |  |
| January. |  | 900 | 11.1 |
| February. |  | 857 | 11.6 |
| March... |  | 820 | 12.2 |
| April. |  | 840 | 11.9 |
| May. |  | 922 | 10.8 |

The indexes constructed in England, Sweden, Norway, and Germany are presented below in juxtaposition. The four indexes, however, are not comparable because of variations in method of construction. The English index, because of the use of the geometric average, is considerably lower than would have been the case had the arithmetic mean been employed. Calculated on the basis of the arithmetic average, the English index number for February, 1921, would have given the result 161.5 instead of 120.9 .

Index Numbers of the Exchange Value Abroad of the Currincies of England, Sweden, Norway, and Germany.
[Par value of the foreign currencies=100.]

|  | England. | Sweden. | Norway. | Germany. |
| :---: | :---: | :---: | :---: | :---: |
| 1920. |  |  |  |  |
| January. | 98.5 | 110.0 | 118.2 | 13.4 |
| February | 94.9 | 106.4 | 134.7 | 8.2 |
| March.. | 102.9 | 109.2 | 123.6 |  |
| April | 109.7 | 113.5 | 119.5 | 10.1 |
| May. | 107.5 | 111.8 | 102.8 | 7.3 |
| June. | 106.3 | 113.3 | 91.2 | 18.3 |
| July. | 100.2 | 115.8 | 87.7 | 18.2 |
| August | 100.1 | 115.4 | 87.7 | 17.2 |
| September | 100.2 | 116.7 | 89.0 | 15.5 |
| October. | 108.7 | 115.3 | 94.7 | 13.1 |
| November. | 111.2 | 113.8 | 97.6 | 10.5 |
| December. | 114.5 | 114.1 | 104.3 | 11.7 |
| 1921. |  |  |  |  |
| January. | 122.4 | 116.1 | 113.3 | 11.1 |
| February. | 120.9 | 116.4 | 106.6 | 11.6 |
| March... | 123.0 | 121.7 | 101.8 | 12.2 |
| April. | 120.0 | 125.5 | 100.3 | 11.9 |
| May. | 119.1 | 123.3 | 97.3 | 10.8 |

## LIMITATIONS OF THE INDEXES.

The indexes should be considered with a certain degree of reservation. It is impossible to weight such indexes with more than approximate accuracy. In the first place, the difficulty of obtaining statistics on the invisible exports and imports, such as freight, insurance, banking, and interest earnings, makes these items in exchange transactions only rough estimates. Moreover, the character of the international balance of trade is only one of several important factors in the exchange situation at the present time under the special conditions existing as a result of the war. The index numbers, nevertheless, are useful and of interest in analyzing the effects of the present deflation process on the purchasing power of currencies abroad.

Average Monthly Values of the Pound Sterling Abroad Expressed as a Percentage of Parity.
[Par value of the foreign currencies $=100$.]

## FEDERAL RESERVE BOARD INDEX.

A foreign-exchange index has also been worked out by the Federal Reserve Board for the United States. The method of computation and nature of the Board's index number are discussed in the following paragraphs:

Taking the average value of the daily quotations on 18 leading countries for each month, the Board reduced these quotations to percentages of par and then weighted then by the total volume of merchandise and gold and silver imports and exports from and to each respective country for the preceding month. The index represents the weighted geometric average of cable transfer rates on the different countries. Weighting the quotations on the basis of the previous month's commerce has the advantage of giving each country the relative importance it possessed on the most recent available date. The proportion of our total foreign trade with each of the principal countries does not change materially from month to month, but in so far as gradual changes take place they will be reflected in the weights. On account of the lack of definite information about invisible exports and imports no allowance is made for them in the weighting. It is believed that the final index would be modified but slightly even if additional data regarding invisible items of the trade balance were available and were included in the weights.

In the following table are given rates for November, 1918, and for January to June, 1921. It is proposed to calculate the exchange index for every month beginning with November, 1918; and to publish the figures in an early issue of the Bulletin, together with a chart showing the fluctuations in the index as compared with fluctuations in rates on some of the leading countries.

Foreign Exchange Index Numeers, November, 1918 and January to June, 1921.

${ }^{1}$ Average value of peso for 1912 ( $\$ 0.1953$ ) is taken as par.
${ }^{2}$ Shanghai tael. Silver content at average price in 1913 ( $\$ 0.6685$ ) is taken as par.

It will be noted that the index in this table is given in two ways:
(1) The value of selected foreign currencies in terms of dollars, the index measuring the composite rate of appreciation or depreciation of these currencies with regard to the dollar, or to express it concretely, how many dollars and cents it will take at prevailing rates of exchange to buy in New York what at par would be one hundred dollars' worth of foreign currencies.
(2) The value of the dollar expressed in terms of selected foreign currencies, the index measuring the composite rate of depreciation or appreciation of the dollar with regard to these currencies, or speaking more concretely, how much foreign currency at prevailing rates one hundred dollars will buy in New York.

At the time of the armistice, the foreign exchange index was slightly above 100 per cent, i. e., the dollar stood slightly below par. This comparatively high level of the foreign exchange rates was due to the "pegging" arrangements by which the foreign exchanges were maintained by the allied Governments, together with the premiums existing on the currencies of neutral European countries and of South American and oriental countries. Since that time, rates on all of the countries show decided declines. In January, 1921, 54 cents would buy a dollar's worth of foreign currencies at par rates of exchange, and it took
$\$ 1.85$ of foreign currencies to buy one dollar. In February and March the exchange situation did not materially change, but in April, and especially in May, the value of the foreign currencies went up considerably and the value of the dollar showed a corresponding decline, this being due to the large gold shipments to this country and to the settlement of German reparations. It will be noted that French, Belgian, and Italian exchanges showed the largest gains in May as compared with April, while sterling exchange advanced less than 1 per cent. South American exchanges lost ground during May, while oriental ex-
changes remained comparatively stationary. A general decline of exchanges in June is attributable in part to the purchase by Germany of large amounts of dollar exchange in connection with the payment of the first installment of the reparations and also to unsatisfactory developments in the British miners' strike. Sterling exchange shows the largest decline in June as compared with May.

The following table shows the average of actual quotations for each month on which the percentages of par are based and the weights used in calculating the foreign exchange index:

## American Bank Acceptances.

A reduction of over 25 per cent in the volume of outstanding member bank acceptances between May 4, 1920, and April 28, 1921, is indicated by the condition reports of these banks received by the Comptroller of the Currency and the Federal Reserve Board. This shrinkage commenced during the latter part of last year, but became more accentuated during the present year. As may be seen from the tabular statement below, aggregate acceptance liabilities of all member banks on June 30, 1920, differed but slightly from those shown on May 4 of the same year, being in the neighborhood of $\$ 674,000,000$ on both dates. On November 15 the total had declined to about $\$ 647,800,000$, and on December 29 to $\$ 593,700,000$. A much larger decline, to $\$ 504,100,000$, is shown on April 28 of the present year, the downward movement gaining in impetus beginning with the fall of the past year. As pointed out in an earlier issue of the Bulletin (see p. 158 of the February, 1920, issue) this shrinkage affected at first only the acceptance liabilities of the banks outside of New York City, both national banks and trust companies in New York City reporting increasing figures up to November 15 of last year.

Since then the combined acceptance liabilities of the New York member banks declined from $\$ 361,200,000$ to $\$ 311,918,000$, though the rate of decline for the New York banks was considerably less than for member banks in other cities. Thus, member banks in Chicago report a decrease in their acceptance liabilities between November 15, 1920, and April 28, 1921, from $\$ 60,495,000$ to $\$ 45,553,000$; member banks in Philadelphia a decrease from $\$ 23,640,000$ to $\$ 12,062,000$; member banks in Cleveland from $\$ 14,168,000$ to $\$ 9,883,000$; member banks in San Francisco from $\$ 16,999,000$ to $\$ 14,337,000$; and member banks in Portland, Oreg., from $\$ 5,035,000$ to $\$ 3,557,000$. Even larger relative shrinkages are shown for the St. Louis member banks, viz, from $\$ 11,475,000$ to $\$ 1,996,000$, and for member banks in Minneapolis from $\$ 9,590,000$ to $\$ 1,819,000$. As the result of these developments, acceptance liabilities of the member banks in New York City on April 28 constituted 61.9 per cent of the acceptance liabilities of all member banks, compared with 55.8 per cent on November 15 and 47 per cent on May 4 of the past year.

In the following table are shown aggregate acceptance liabilities separately for the national banks and other member banks in the principal centers on all call dates between May 4, 1920, and April 28, 1921, in continuation of similar figures published on page 172 of the February, 1921, Bulletin:

Acceptance Liabilities of National and Other Member Banks.
[In thousands of dollars.]

Federal Reserve Bank holdings of bankers' acceptances show an even larger shrinkage than acceptance liabilities of the member banks. At the close of April total holdings of member bank acceptances (both purchased in open market and discounted for member banks) were only $\$ 68,670,000$, or less than 14 per cent of the total member bank acceptances outstanding on April 28, the nearest call date, compared with about $\$ 275,000,000$ of such paper held on May 4, 1920, and slightly over $\$ 250,000,000$ held at the close of November of last year. In addition, as shown in the subjoined exhibit, the Federal Reserve Banks
held $\$ 50,600,000$ of bills accepted by nonmember banks, including private banks and agencies of foreign banks, also by discount corporations.

${ }^{1}$ Figures for 1920 are as of last Friday in each month; separate figures of member bank acceptances and other bank acceptances held under discount by the Federal Reserve Banks are not available prior to 1921.

Market rates for bank acceptances continued fairly steady and at a relatively high level during the first quarter of the year. In April rates softened somewhat, and May rates are shown slightly lower than for the preceding month, while in June, due to the general rise in money rates, the acceptance rates show a slightly higher level. London rates on 90 -day bankers' bills continued higher, besides showing a wider spread than the American rates during the first six months of the present year as may be seen from the following table of monthly ranges of rates, taken from the American Acceptance Council's Monthly Bulletin:

|  | New York rates for prime eligible bank acceptances, 90 days. | London rate for 3-month bankers' bills. |
| :---: | :---: | :---: |
| Januar | 53-63 |  |
| Februa | $5 \frac{3}{3}-8 \frac{1}{2}$ |  |
| March. | $5 \frac{5}{-6 \frac{2}{3}}$ | $6 \frac{1}{7} 7 \frac{1}{2}$ |
| April. | $5 \frac{5}{3}-6$ | 64-7 |
| May.. | $5 \frac{5}{5}-5 \frac{7}{8}$ | $5{ }_{5}^{5}-7$ |
| June | 53 ${ }^{3}$-6 | $5 \frac{1}{2}-6 \frac{1}{2}$ |

No information is at hand of the total amount of nonmember bank acceptances outstanding and the proportion of such bills held by the Federal Reserve Banks. But assuming that the total amount of such bills-say $\$ 200,000$,000 to $\$ 250,000,000$, on November 15, 1920, decreased since then in about the same proportion as the amount of member bank acceptances, we may estimate roughly the amount of bank acceptances other than member bank acceptances outstanding at the end of April at about $\$ 150,000,000$ to $\$ 200,000,000$, and the total amount of bank acceptances outstanding on that date at $\$ 650,000,000$ to $\$ 700,000,000$, as against a total of $\$ 900,000,000$ or over on November 15 of last year.
This considerable decline in the volume of outstanding acceptances is not restricted to the United States, but reflects the general shrinkage in the volume and value of commercial dealings, largely of foreign trade transactions, characteristic of the more recent period. Thus acceptance liabilities of the English jointstock banks, according to the London Economist, declined during the calendar year 1920 from $£ 151,138,000$ to $£ 102,920,000$, or by nearly one-third, while during the present year the average weekly acceptance liabilities of the nine leading London clearing banks show the following changes:

| January, 1921 | £ $88,213,000$ |
| :---: | :---: |
| February | 77, 376, 000 |
| March | 69, 249, 000 |
| April. | 63, 033, 000 |
| May. | 62,957, 000 |

indicating an additional reduction for the first five months of the present year of over $£ 25,000,000$, or 28.6 per cent.

## BUSINESS AND FINANCIAL CONDITIONS ABROAD.

In the Review of the Month for this issue of the Bulletin a statistical summary is presented of the condition of the Federal Reserve System at the end of June, 1921, as compared with the same date in 1920. It has been thought desirable to make a somewhat similar statistical comparison of the conditions in the various foreign countries which are regularly discussed in the Bulletin. With the foreign countries it is impossible to cover the period June to June, however, as the statistics for June, 1921, are in most cases not yet available. Since the peak of the postwar boom was reached by May, 1920, a comparison between May, 1921, and one year previous is equally informing.

## ENGLAND.

In England changes in business conditions have been very similar to those in the United States, except that in recent months production has probably proceeded at a slower rate in England than in this country because of greater labor difficulties. So-called "deflation," or the reduction in wholesale prices, has been more rapid in the United States than in England, but has been so extreme in both countries that its general effects have been similar. Export trade in the case of both countries has been greatly curtailed, considered in terms of quantity as well as value, but the fluctuations in the American figures make it impossible to date the decline in foreign demand with any exactitude. On the whole, the dates of the changes in fundamental conditions have been remarkably similar in the two countries. In the United States official statistics show the peak of wholesale prices to have been reached in May, 1920. Index numbers published by Bradstreet date the peak somewhat earlier, but Dun's index dates it in May also. In England both the Statist and the Economist index numbers began to decline in April, and the new. Board of Trade, or official index, reached its highest level in May, 1920. In other words, the peak of prices in both countries was probably reached in the second quarter of 1920. The decline has been continuous throughout the year, but there are indications now that it is proceeding at a considerably less rapid rate than at any time since it began a year ago. The index number compiled by the Federal Reserve Board for the United States shows a change in prices between April and May, 1921, of only one-half of 1 per cent, while Bradstreet's shows a decline of less than 2 per cent during May, and the Economist
index for England shows a decline of less than one-half of 1 per cent. The index numbers of the United States Bureau of Labor Statistics, of the British Board of Trade, and of the Statist continue to show appreciable declines.

General production indexes are not available currently for either country. Comparing, however, the trend of production in certain important lines in which such figures are compiled, it would seem that the coal strike had made more serious inroads upon British production than have resulted here from lack of industrial demand. The trend of iron and steel production in the two countries was similar throughout 1920. Early in 1921, however, British production increased while American output continued to decline. The British increase was of very brief duration, however, as the strike of the coal miners occurred on April 1, and the iron industry was almost as seriously affected by it as the coal industry itself. At present British steel production is at a complete standstill, while the American industry is working at approximately 25 per cent of capacity. Conditions in the coal industry in the two countries can scarcely be compared because of the entirely abnormal situation in England during the past year. Although there has been a severe slump in the production of bituminous coal in the United States during 1921, this was preceded by a period of relatively high production. In England, on the other hand, no coal was produced during $3 \frac{1}{2}$ of the past 12 months and production was not at a high rate during the rest of the year. The textile industries in both countries have been seriously affected by the trade reaction. If wholesale prices have reached a point of relative stability, it is certain that production will begin to increase again, as the curtailment has been in the main due to lack of orders. The general price index wipes out variations in individual lines, however, and the improvement in production will probably be irregular just as the price movement is irregular.

The decline in production has meant serious involuntary unemployment in both countries. In England this type of unemployment has been greatly increased by strikes due to wage reductions, the most notable of which is the coal strike, beginning April 1, 1921. A year ago (in May, 1920), there was a high degree of industrial activity, the percentage of tradeunion unemployment amounting to only 1.1 per cent and in the trades coming under the act providing insurance for workers during unemployment amounting to 2.68 per cent. Dur-
ing the summer of 1920 there was no appreciable change in employment conditions, but as a result of the coal strike in October a large number of workmen in the iron and steel, the engineering, and textile industries especially were forced out of work or put on a part-time basis. Since that time unemployment has been steadily on the increase, the latest figures showing 22.2 per cent of trade-union members (excluding coal miners) out of work and 17.6 per cent of workers in the insured trades. Latest returns from employment exchanges give a registration of 2,122,000 on May 27, 1921.

Percentage of Unemployment.

${ }^{1}$ Excluding coal miners.
Public financing in England continues to be of considerable importance, although the emphasis has rather shifted during the course of the past year. In proposing a budget for the year beginning April 1, 1920, the chancellor of the exchequer increased the excess-profits duty from 40 per cent to 60 per cent. It was thought at that time that industry was in a position to pay the increased tax. In contrast with the situation a year ago the budget for the year beginning April 1, 1921, contains no provision for excess-profits duty, and the losses of many concerns during the past year were such as to require the Government to reimburse them (under the provision of the 1919 law, whereby the Government is responsible for repayment of excess-profits duties in case of subsequent loss by the business enterprise taxed). During the past few weeks revenue has been so much less than was estimated when the 1921-22 budget was voted, and expenditure on account of the coal strike and unemployment so much more, that temporary borrowing has been resorted to on a very large scale. In the brief table following figures are presented showing the condition of the treasury at the end of June, 1921, the first three months of the new fiscal year being thus covered.

| [In thousands of pounds sterling.] |
| :--- | :--- | :--- | :--- |

Partly as a result of this special drain of expenditures, the floating debt has been increasing during the new fiscal year. Treasury bills outstanding totaled $£ 1,222,000,000$ at the end of June, 1921, as compared with $£ 1,050,000,000$ at the same time a year ago, while temporary advances from the Bank of England have decreased $£ 30,500,000$. The total floating debt is $£ 80,000,000$ higher than a year ago.
In spite of this increase there has been a reduction in the total note issue. Currency notes have been reduced by $£ 33,472,000$ and Bank of England notes increased by $£ 2,898,-$ 000 between the end of June, 1920 and 1921.
Statistics for the joint-stock banks are available for June 30 and December 31, 1920, and on an average monthly basis for the year 1921. Considering only the five largest banks it appears that during the period from June 30, 1920, to May, 1921, total cash has been reduced by $£ 77,000,000$, advances by $£ 69,000$,000 , with a decline in deposits of $£ 6,000,000$. Bills discounted have increased very materially, probably because of the larger number of foreign bills that are now passing through London than was the case a year ago.

Five Largest Jornt Stock Banks.
[In thousands of pounds sterling.]

The discount policy of the Bank of England during the past year has been similar to that of the Federal Reserve Board. Rates of discount at the bank were increased from 6 to 7 per cent in April, 1920, and were kept at this point until April 28, 1921, when they were reduced to $6 \frac{1}{2}$ per cent. On June 23 they were further reduced to 6 per cent. During the period of the 7 per cent bank rate, rates on three-months bank bills varied from $6 \frac{1}{4}$ per cent to something over $6 \frac{3}{4}$ per cent, and with the reduction in the bank rate to $6 \frac{1}{2}$ per cent, commercial rates declined also. The extent of control exercised by the rate at the Bank of England over general credit conditions is exceedingly difficult to measure. As was pointed out above, the loans and advances of the joint-stock banks have been considerably reduced in recent months. To what extent this is due to a high bank rate, however, it is impossible to state.

Although present sterling-dollar exchange rates do not differ widely (by present standards) from those of the end of June, 1920, in the course of the past year there has been a very heavy decline in the value of sterling, followed by an increase of approximately the same dimensions, followed in turn by another serious weakening toward the end of May, 1921. The quotation for sterling during the last week of June, 1920, averaged about $\$ 3.97$. Very soon after that, however, it began to depreciate and was quoted at something above or below $\$ 3.50$ for several months during the fall and early winter of 1920. Between January and May, 1921, there was more or less steady improvement, the quotation on May 21 averaging approximately $\$ 4$. The heavy purchase of dollars on German account in connection with the June 1 reparations payment had, however, combined with the decline in British exports and the strike of the coal miners, a serious effect upon sterling, and consequently the quotation for June 30 averaged only $\$ 3.72$.

The coal strike was not settled until the end of June. On the 28 th of that month representatives of the mine owners and the miners agreed upon terms of settlement, which subsequently proved satisfactory to all the parties concerned. These terms represent concessions by both sides; the mine owners agree to operate the mines upon a profit-sharing plan; the miners abandon their demand for a pooling of profits; the Government agrees to a subsidy of $£ 10,000,000$ to tide the industry over the period of readjustment. The chief clauses of the new agreement may be summarized as follows:

National and district wage boards are to be established with equal representation of both sides and independent chairmen.

District wages are to be in the form of a percentage upon the district basis rates, periodically adjusted, and determined by the proceeds of the industry in each district ascertained after a joint audit. The sum to be applied in each district to the payment of wages above the standard wage shall be a sum equal to 83 per cent of the surplus of such proceeds remaining after deduction therefrom of the amounts of the following items during the period of ascertainment: ( $a$ ) The cost of the standard wages; ( $b$ ) the costs of production other than wages; (c) standard profits equivalent to 17 per cent of the cost of the standard wages.
If in any period the ascertained proceeds, after deduction of costs other than wages and the cost of the standard wages, prove to have been insufficient to meet the standard profits, the deficiency shall be carried forward as a first charge to be met out of any surplus (ascertained as above) in subsequent periods.
The minimum rate will be the standard wage plus 20 per cent. The standard wage will be the basis rate existing in each district on March 31 last, plus district percentages payable in July, 1914, or equivalents necessitated by subsequent adjustments.

A subsistence wage for low-paid day workers will be decided by the district wage board or, failing agreement,
by the independent chairman. Items of cost are to be decided by the national board or, failing agreement by July 31, by the independent chairman.

During the temporary period of three months, the costs of production will be based on the first quarter of the year. The reductions in wages during this period are not to exceed 2s. per shift in July, 2s. 6d. in August, and 3s. in September, providing that the balance of the Government grant is sufficient. The Government will give a grant not exceeding $£ 10,000,000$ in subvention of wages.

It is agreed that every man shall be entitled to return to his place when that place is available for him, and that men temporarily occupying places during the stoppage shall give way to the men working in those places before the stoppage. It is agreed on the other hand, that there shall be no victimization of men who have been kecping the collieries open, not in the sense that they are to remain at the jobs they filled during the stoppage, but that they shall not be prevented from going back to their own jobs, or from working subsequently at the collieries.
The coal fields are to be divided into 13 districts for the purposes of this agreement.
The agreement is to last until September, 1922, and thereafter only to be terminated by three months' notice on either side.

The so-called antidumping or safeguarding of industries bill is under consideration by the House of Commons. The principles upon which the act is based were commented on in the Bulletin for May, 1921. The complete list of articles to which the bill applies may be found in the Board of Trade Journal for March 31, 1921.

## FRANCE.

Of the problems which have confronted France during the past 12 months those of a fiscal nature have been of prime importance. The 1920 budget was not passed until the last days in June of that year, and a whole series of new taxes went into effect upon July 1. When the Chamber of Deputies returned from its summer recess the proposed budget for the current year was placed before it, but expenditures for 1921 , on account of the ordinary and extraordinary budgets, were not finally decided upon until May 1, 1921, and the expenditures for "the recoverable budget" were not authorized until June 1.

The following table gives a survey of the expenditures authorized in the two years.

French Government Budget.
[In millions of francs.]

|  | Calendar year. |  |
| :---: | :---: | :---: |
|  | 1920 | 1921 |
| Ordinary budget. | 21,761 | 23, 263 |
| Extraordinary budget............................... | 5, 420 | 3,236 |
| Expenditures recoverable from Germany under the peace treaty. | 20,751 | 15,913 |
| Total. | 47,932 | 42,412 |

As will be seen from these figures there is a decrease of about $5,500,000,000$ francs in the expenditures contemplated in 1921. This decrease is, however, largely due to a revision in the estimates of money to be spent on the reconstruction of the devastated regions, rather than to any important curtailment of the expenditures to be made on account of the ordjnary and extraordinary budgets, which totaled 27,181,000,000 francs in 1920 and 26,499,000,000 francs in 1921. M. Doumer, the French finance minister, has already presented proposals for the 1922 budget to the Chamber of Deputies, which contemplate more drastic revisions in expenditures on ordinary account.

It is anticipated that the Government will draw upon the following sources for meeting 1921 expenditures:
French Government Receipts Estimated for 1921. [In millions of francs.]

The amount to be raised by long-term loans will be reduced by the amount of payments received from Germany during the year. It is estimated that such payments will not amount, however, to more than $750,000,000$ gold marks, or about $2,025,000,000$ francs, this year.

In his discussion of the "recoverable budget" for 1921, M. Henry Cheron, rapporteur général on the budget for the French Senate, estimated that the amount of money yet to be spent in rebuilding the northeast district of France is $79,000,000,000$ francs, and payments yet to be made on pensions will amount to $48,000,000,000$ francs. As $60,000,000,000$ francs have already been spent on reconstruction and pensions, the total cost of these two items was placed by M. Cheron at $187,000,000,000$ francs. Under the reparations agreement, France is to receive $68,640,000,000$ marks gold in return for war losses (or at present exchange rates, about $151,000,000,000$ francs, according to M. Cheron's figures). It seems probable, therefore, that unless the future cost of reconstruction can again be revised downward, part of the amount to be spent will eventually have to be furnished by the French themselves.

On March 1, 1921, the total French public debt amounted to $302,304,000,000$ francs, according to a statement recently published by the ministry of finance. Although the floating foreign debt has been somewhat reduced since March 1, the total debt has been increased by the issue of a new series of 2-year Treasury bonds in France and the 20-year loan floated in the United States. The proceeds from the latter loan amounted on June 14 to almost $\$ 90,000,000$, or about $720,000,000$ francs at current exchange rates. Subscriptions to the issue of internal bonds were closed June 21 (four days before the date originally announced), and according to cable reports receipts amounted to $5,000,000,000$ francs. No limit had been set for subscriptions to these bonds.

During the final stages of the debate on the 1921 budget, M. Loucheur, minister for the devastated regions, outlined his plans for reconstruction. He wishes to leave the work to private initiative and enterprise as much as possible, and to that end favors regional and industrial loans, such as those floated by the city of Albert and by the "Coal Operators of the North and Pas de Calais Districts" last month. As to the employment of German labor and materials in the devasted districts, M. Loucheur speaks with reservations. He thinks that the employment of German labor may in some instances be advisable, but he does not believe that those instances will be very frequent. On the other hand, he advises the use of German raw materials and of other payments in kind, because he thinks that Germany's capacity to pay will be increased and that the settlement of the war debt will be facilitated by such payments. On June 12 and 13, M. Loucheur had a preliminary conference at Wiesbaden with Dr. Rathenau, the German minister for reconstruction, in regard to the method by which materials shall be transferred from Germany to France, and according to cable dispatches a satisfactory working arrangement was agreed upon.

French tax receipts for May amounted to $1,004,000,000$ francs, $121,000,000$ francs less than budget estimates. Receipts from the tax on total business turnover reached $147,000,000$ francs, $11,000,000$ francs less than in April, and $95,000,000$ francs less than budget estimates. Early in June the Chamber of Deputies began to discuss a revision of this tax in order to increase its yield. Two methods of revision were proposed, one to double the rate of tax, the other to subject to this tax sales of agricultural products. The sales of the agricultural cooperative societies, which are very important in France, are exempt from the
total business turnover tax. The first proposal is very unpopular with business men and with the public generally, as it is felt that it would tend to increase the cost of living, which has at last begun to decline.
According to the figures of the French General Statistical Office the decline in retail prices in Paris during May amounted to 3 per cent. However, the retail price index shows that prices are still 217 per cent above what they were in 1914.

During the past year there has been a much more striking change in wholesale than in retail prices. In April, 1920, the wholesale price index number of the French General Statistical Office reached its peak. On that date it registered 588, as compared with 100 in 1913. In May, 1921, this index has fallen to 328.

In this connection it is interesting to compare prices for representative commodities in France last spring with the prices in May of this year, which have been recently cabled to the Federal Reserve Board by the American consul in Paris.

Wholesale Prices in France.

| Commodity. | Grade. | Unit. | Market. | $\begin{gathered} \text { April, } \\ 1920 . \end{gathered}$ | May, <br> 1921. | Per-centage of decrease. |

| Wine. . . | Ned........ | Hectoliter. | Beziers | 117.1 | 38. 12 | 67.4 |

The change in the situation of the Bank of France during this interval has been less striking than the change in prices. A table on page 891 of this issue of the Bulletin shows the gold reserve, the note circulation, and the deposits of the bank at the end of May in both years, and brings out the fact that the most important change has been an addition to the gold reserve. Although the note circulation has increased more strikingly at times during the interval, at the end of May, 1921, it was not quite 1 per cent larger than at the end of

May, 1920, and it is the announced intention of the present government in France tol keep it from further increases.

The change which has taken place in the French foreign trade situation in the past year is well illustrated by the following table which reviews imports and exports for the first five months of 1920 and 1921:

## Foreign Trade of France.

[Comparison of the first five months of 1920 and of 1921 in millions of francs and in 1919 value units.]

|  | January through May. |  | Change <br> from 1920 <br> ( +in - <br> crease; - <br> decrease). |
| :---: | :---: | :---: | :---: |
|  | 1920 | 1921 |  |
| imports. |  |  |  |
| Food. | 4,092 | 1,998 | -2,094 |
| Raw materials.. | 7,244 | 4,269 | -2,975 |
| Mantfactured articles. | 4,386 | 2,417 | -1,969 |
| Total. | 15,722 | 8,684 | -7,038 |
| Food. | 688 | 852 | + 164 |
| Raw materials. | 1,891 | 2,178 | + 287 |
| Manufactured articles. | 4,890 | 5,507 | + 617 |
| Parcel post | 359 | 512 | + 153 |
| Total. | 7,828 | 9,049 | +1,221 |
| Excess of imports. | 7,894 | 365 |  |

The figures in these tables are provisional, as the French department of customs has not yet revised its system of trade evaluation and is still using 1919 value units in stating current trade. The peak of French import trade was reached early in the spring of 1920 . Since that time there has been a more or less steady decline. The export trade was at its height in the midsummer of 1920. It began to decline perceptibly in November of that year, and has reached its lowest point so far in May, 1921. It exceeds at present, however, the import trade, and this fact is especially significant for France.

The falling off in foreign trade last summer is symptomatic of the general slowing down of industrial activity in France at that time. The slowing down has not been as serious in France as in some of the other European countries, however. The work to be done in the devastated regions, and the activities of the French army have prevented unemployment from becoming as serious as it might otherwise have been. A recent dispatch from France reports the number of those receiving unemployment relief from municipal and departmental funds as less than at the same time last month.

## ITALY.

The index number of wholesale prices in Italy for all commodities in the month of May of this year was 88, against 106 in May, 1920, the monthly average in 1920 being taken as a basis. In other words, in the course of the year there has been a decline of about 17 per cent. The largest decline took place in the prices of textiles (from 105 to 47), of minerals and metals (from 113 to 62), and of chemicals (from 123 to 76). In the case of textiles the peak of high prices was reached in the midsummer of 1920, the textile industries having been the first to be affected by the industrial depression in foreign countries; in the other groups the downward movement of prices did not definitely set in before the end of last year; it has been continuous since then for nearly all groups, as may be seen from the table on page 844.

Retail prices of the necessities of life continued, however, to advance up to March, the last month for which information is available. The following table gives the monthly index numbers of the cost of living of an average worker's family in the most important cities, the figures for July, 1920, being taken as the basis:

Cost of Living in Certain Italian Cities.

| [July, 1920=100.] |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Date. | Rome. | Milan. | Florence. | Venice. | Genoa. | Turin. |
| Iuly 1920. |  |  |  |  |  |  |
| December. | 100.00 | 1100.00 | 100.00 119.20 | 100.00 | 1100.00 | 100.00 |
| 1921. |  |  |  |  |  |  |
| January. | 121.70 | 124.43 | 121. 26 | 114.61 | 120.10 | 118.95 |
| February | 123.82 | 125.60 | 121. 42 | 115.45 | 118.68 | 119.04 |
| March..... | 125.74 |  | 126.91 | 118.23 |  | 122.26 |

The actual advance in the cost of living in March was even larger, as the figures given above do not take into account the rise in the price of bread due to the enactment of the new law on the supply of grain.

It was likewise in the last months of 1920 that the first symptoms of the beginning of a general business depression appeared, which became more pronounced early in the spring of this year. Thus, outstanding loans of the four leading private banks decreased from 1,560,000,000 lire on December 31, 1920, to $1,407,-$ 000,000 lire on March 31, 1921, or nearly 10 per cent, reflecting the slackening of transactions on the stock exchanges. Another symptom of the contraction of business activities may be seen in the diminished yield from stamp duties, which fell from $34,000,000$ lire in February to $24,000,000$ lire in April.

While no official-figures regarding unemployment are available for recent months, the number of unemployed at the end of March was estimated on the basis of reports from labor exchanges, trade unions, and other sources, at about 120,000 , with an additional 300,000 working part time. The silk and woolen industries have been most seriously affected, many of the spinning mills having been completely closed down, while the weaving plants have been operating only four days in the week. In the cotton industry part-time work has likewise been introduced. In the metal trades, machine construction, and automobile industries the number of unemployed varied between 20 and 50 per cent, and most of the plants have been running on a part-time basis. Plants working on rolling stock for the railways and on electrical machinery are the only ones that have not decreased production. Considerable unemployment has been reported in the rubber and leather trades, as well as among seamen, workers on secondary railways and street railways, and in the luxury trades. The latter industries have been especially seriously affected because of the heavy taxation of luxury goods.

Provisional figures of Italy's foreign trade in the months of January and February of the current year show an increase of imports from 2,083,000,000 lire during a similar period last year to $2,486,000,000$ lire this year, and a decrease of exports from $1,116,000,000$ lire to $1,069,000,000$ lire during the same period. As the figures for both years are based on 1919 value units, this difference represents a real change in the physical. volume of imports and exports. The figures for imports do not include the goods delivered by Germany on the reparations account. The increase in imports is particularly pronounced for grain, cotton, coal, metals and metallic goods, colonial goods, drugs, and tobacco. The decrease in exports was largest in silk and hemp.
An investigation of the condition of the Italian railways made in the month of March by the union of chambers of commerce showed that the main cause of the crisis in transportation was the shortage of locomotives. While the number of cars available increased from about 90,000 in 1914 to over 120,000 at the time of the report, the number of locomotives had decreased from 4,400 to 4,200 . In the meantime, the mileage of the railways had increased by 1,500 kilometers, and railway traffic had become much heavier as a result of the decrease in coastwise shipping. At the time of the investigation there were 1,675 locomotives waiting for major repairs, and orders for 540 new ones had not been executed owing to financial difficulties, lack of raw
materials, shortage of labor, disorganization of transports, etc. It was found, however, that conditions were improving and that the number of new and repaired locomotives that were daily turned out had increased in the preceding two months, following the enactment of a law authorizing the railway administration to make advances to contractors.

## GERMANY.

Among the statistics dealing with economic developments in Germany during the past year not the least interesting are those on the tax receipts of the German Government for the year ending March 31, 1921. Germany's system of taxation was completely revised in 1919 and the early months of 1920, but it took some time for the new taxes to become effective, and tax receipts for March, 1921, were more than eight times as large as those for April, 1920. Total tax receipts for the year amounted to $46,100,000,000$ marks, as compared with $8,400,000,000$ marks in the fiscal year ending March 31, 1920. Neither of these figures includes receipts from the postal, telegraph, or railway monopolies. Tax receipts for the year 1920-21 exceeded the anticipations of German Government officials themselves, and were more than 13 per cent larger than the revised (and enlarged) budget estimates. Part of this difference is probably due to the increase in monetary values which took place during the year, largely as a result of continuous currency inflation. In spite of these unexpectedly large tax receipts, however, Government operations showed a deficit for the fiscal year, and the floating debt increased $74,860,000,000$ marks in the period from April 1, 1920, to March 31, 1921. This fact, combined with the necessity for providing funds for payments on reparations account, makes it evident that new taxes must be devised and tax receipts increased in the near future. Various schemes for accomplishing this end have been proposed, but no definite decision as to the method to be employed has yet been reached. One of the financial experts of the Reichstag has estimated that Germany's deficit for the current year will be as follows:

Estimated German Goybrnment Deficit for Year Ending March 31, 1922.
[In millions of marks.]
Estimated deficit on extraordinary budget........ 33, 000
Railway and postal deficits.
12,500
Cost of the armies of occupation not already provided for in the budget. ............................
Probable value in paper marks of payments on reparations account.

9,000

Total
42, 000
96,500

The most important of the taxes already in force in Germany and their yield during the past fiscal year are given in the following table.

German Tax Receipts, Year Ending March 31, 1921.
[In millions of marks.]

| Tax. |  |  |
| :---: | ---: | ---: | ---: |
| Yield. | Increase <br> over <br> previous <br> fiscal |  |
| year. |  |  |

In Germany's present situation, her export trade is not less important than her tax receipts. It is impossible, however, to review the foreign trade situation as accurately as the tax situation. The official statistics published at present assign no value to German imports beyond July, 1920. The most recently published statistics on the subject place the total weight of German imports from January through October, 1920, at $15,078,877$ metric tons, as compared with exports weighing $16,283,114$ metric tons in the same period. The value of exports from January through October, 1920, is given as $53,753,890,000$ marks. It is interesting to compare these figures with the relative weight and value of German imports and exports in 1913.

German Foreign Trade, January Through October, 1913 and 1920.

|  | Imports. |  | Exports. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | In thousands of metric tons. |  | In thousands of metric tons. | ```In of marks.``` |
| 1913. | 60,686 | 9,185 | 61,168 | 8,409 |
| 1920. | 15,079 |  | 16,283 | 53, 754 |

The trend of prices in Germany continued downward in May, and the Frankfurter Zeitung index number for June 4, 1921, stands at 1,376 , marking the low point so far this year. The high point for this index was reached in the 1 st of May last year, but it fell sharply during the month, so that the Jume 4 index is lower than any other in 1920, excepting January and February.

The following table gives the group index numbers for the first of June this year and for May 1 last year:

Frankfurter Zeitung Wholesale Price Index Number.
[Middle of $1914=100$.]

|  | $\begin{gathered} \text { May 1, } \\ 1920 . \end{gathered}$ | $\begin{gathered} \text { June } 4, \\ 1921 . \end{gathered}$ |
| :---: | :---: | :---: |
| All commodities. | 1,690 | 1,376 |
| Foods, etc. | 1,178 | 1,116 |
| Textiles and leath | 3,243 | 1,907 |
| Minerals. | 1,860 | 1,524 |
| Sundries. | 1,417 | 1,633 |

Retail prices and the cost of living in Germany have not fluctuated as widely during the last 12 months as have wholesale prices, but the net change has been an important one. The following table shows the cost of living in Greater Berlin, for a family of four, in May this year and in the corresponding month last year:

Cost of Living in Greater Berlin.
[In marks.]

It is, in all countries, difficult to estimate the changes which have taken place in real wages since 1914. The Frankfurter Zeitung has recently added to its other indexes dealing with economic phenomena in Germany an index of wages per hour paid in Frankfurt. The statistics used in this index represent 23 different trades. It was possible, however, to obtain comparable rates in 1914 for only nine of these trades, so that the index number uses January 1, 1920, as a base. It is computed by averaging the monthly relatives obtained for each industry. The figures do not take into account unemployment in the various industries represented and do not therefore give any indication of the actual earnings of wage workers in Frankfurt.

The following table presents the wage index of the Frankfurter Zeitung and the index number compiled by Dr. Elsas on the cost of living in Frankfurt, computed upon the basis of January 1, $1920=100$ :

Frankfurt-am-Matn.

${ }^{1}$ Compiled by the Frankfurter Zeitung.
2 Compiled by Dr. Elsas.
${ }^{3}$ Since the beginning of the year.
It will be seen from the above table that wages in Frankfurt have continued to rise since the beginning of the year, while the cost of living in that city has fallen from the peak of 186 in November to 164 at the 1st of May. It is also clear from these two compilations that wages rose faster in Frankfurt during 1920 than did the cost of living. It is not clear, however, whether wages have yet been increased enough to make up for the change which has taken place in the cost of living since 1914. According to the index number of Dr. Elsas the cost of living in Frankfurt on January 1, 1914, was 26.5, and in May, 1921, 280 (using April 1, 1919, as 100); that is, living costs have increased not quite 11 times since before the war. The following table gives the index numbers for wages in the industries for which the Frankfurter Zeitung could obtain 1914 rates:

Relattve Wages per Hour in Frankfurt-am-Main.
[Jan. 1, 1920=100.]

| Industry. | 1914 | Jan. 1, 1920. | JuIy 1, 1920. | Beginning of 1921. | $\begin{gathered} \text { May } 1, \\ 1921 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Building. | 22 | 100 | 195 | 226 | 233 |
| Metallurgical | 22 | 100 | 206 | 230 | 230 |
| Soap...... | 16 | 100 | 190 | 208 | 221 |
| Food | 16 | 100 | 169 | 211 | 257 |
| Shoe. | 22 | 100 | 157 | 174 | 222 |
| Decorating | 22 | 100 | 203 | 242 | 265 |
| Rubber. | 21 | 100 | 238 | 255 | 272 |
| Chemicals | 22 | 100 | 250 | 279 | 291 |
| Mining . . | 17 | 100 | 159 | 180 | 200 |

In the majority of these cases the increase in wages has been approximately the same as the increase in the cost of living. In dealing with these figures, however, it should be remembered that living costs have been kept as low as they are by the Government regulation of rents and of the prices of some foodstuffs.

## SWEDEN.

As compared with conditions existing a year ago, the present economic situation in Sweden shows changes very similar to those which have taken place in other countries. Price recessions, greatly curtailed production, and a decreased foreign trade are outstanding features of the year.

The turning point in the boom period in Sweden was reached in the summer and early autumn of 1920. Wholesale prices reached their peak in June, but the downward movement did not gain any appreciable momentum until October. Since that month commodity values have fallen on an average of 5 per cent per month, or about 40 per cent up to June. An upward price trend was noted in several commodity lines during May of this year, but as yet there are no significant indications of a stabilization of values or convincing evidence that the price decline is drawing to a close. The prices of hides and leather now stand very near their pre-war level. Textiles and metals have fallen until they are about 50 per cent above pre-war prices, but all other commodity groups for which index numbers are computed are still more than twice as high in value as in 1913. The price recessions which have occurred in the various groups of commodities show extreme irregularity. Comparing the prices in May, 1921, with the peak prices of 1920, the most drastic drop is apparent in the case of coal, which has declined nearly 80 per cent. According to the group indexes of the Svensk Handelstidning, textile prices have receded 65 per cent from the peak, wood pulp 64 per cent, hides and leather 61 per cent, metals 53 per cent, building materials 39 per cent, oils 30 per cent, animal foods 30 per cent, raw materials for agriculture 23 per cent, and vegetable foods 19 per cent.

During the past year, production of lumber, the most important industry in Sweden, has reflected the change in the general industrial situation. Due in a large measure to the brisk foreign demand, general expectation of a building revival, and the favorable seasonal influences for timber-floating operations and early navigation, lumber production and trade were of considerable promise in the first half of 1920. In the latter half of the year, however, continental demand almost completely ceased, particularly in France and Holland, which were affected by adverse exchange rates. Germany, which before the war ranked next to Great Britain and France as the largest importer of Swedish wood products, practically ceased to be a customer and became a competitor of Sweden. Eren in England and the colonies which remained the only important
and dependable markets for Swedish lumbe there was a falling off in demand. This was due not alone to the industrial slackness but also to the competitive exchange advantage enjoyed by Finland which permitted Finnish exporters to underbid on c.i.f. terms the f. o.b. quotations of Swedish manufacturers.

The total export of lumber in 1920, however, amounted to over a million standards, which compares satisfactorily with the figure for 1913 and exceeds by substantial margins the total exports in either 1918 or 1919 . A real indication of the decreased demand for lumber is furnished, however, in the export figures for 1921. The official export statistics for unplaned boards, deals, scantlings, battens, etc., are given below:

Swedish Exports of Unplaned Boards, Deals, Planks, Scantlings, Etc.
[In thousands of cubic meters.]

|  | 1913 | 1920 | 1921 |
| :---: | :---: | :---: | :---: |
| January | 78.2 | 139.6 | 43.3 |
| February | 39.9 | 90.1 | 19.0 |
| March. | 44.1 | 164.6 | 22.0 |
| April. | 154.3 | 214.3 | 15.7 |
| May. | 640.0 | 347.1 | 43.6 |
| Jume | 476.1 | 395.5 |  |
| July. | 493.6 | 659.3 |  |
| August | 428.9 | 509.7 |  |
| September. | 432.1 | 421.0 |  |
| October.. | 509.9 | 341.1 |  |
| November. | 410.1 | 228.6 |  |
| December. | 230.6 | 155.8 |  |
| Total | 3,937. 8 | 3,666. 7 | 143.6 |

As the consumption in the lumber importing countries has not improved and as exchange difficulties still remain, the present situation is bringing an automatic reduction in production, which is estimated at more than 35 per cent.

In the paper-pulp industry, the second largset in Sweden, demand was unusually heavy in the first half of 1920, due to the great international paper shortage. In August and September, however, a setback occurred as great as it was sudden. In France and England, as well as in Scandinavia, paper production by the close of 1920 had decreased to less than 50 per cent of normal capacity, and this curtailment reacted seriously upon the pulp industry. Throughout the fall orders from the United States maintained the market, but since the beginning of the year the industry has come to almost a complete standstill. Production has been curtailed not only by the voluntary closing of mills but also by a strike of nearly two months' duration, involving 22 mills with a combined yearly output of 360,000 tons. Competition with Norwegian and Finnish pulp producers who are favored in the
foreign markets by the low exchange rates has also affected Swedish exports of pulp. The drop in pulp exports during the first five months of 1921 is apparent in the following table, which presents the monthly export figures of 1913 and 1920 for comparison:

Swedish Exports of Paper Pulp Calculated by Dry Weight.
[In thousands of tons.]

|  | 1913 | 1920 | 1921 |
| :---: | :---: | :---: | :---: |
| January. | 43.7 | 48.7 | 12.5 |
| February | 21.0 | 33.9 | 6.3 |
| March. | 20.9 | 42.9 | 6.0 |
| April. | 60.1 | 62.8 | 10.1 |
| May. | 103.7 | 112.9 | 18.2 |
| June. | 69.9 | 99.2 |  |
| July.. | 83.6 | 107.0 |  |
| August. | 70.4 | 68.0 |  |
| September | 76.3 | 94.0 |  |
| October. | 94.0 | 86.4 |  |
| November. | 106.9 | 68.5 |  |
| December. | 96.6 | 57.4 |  |
| Total | 847.1 | 881.7 | 53.1 |

A considerable decline has also been experienced by the Swedish iron and steel industries during the past year. The output was affected not only by the depression in the latter half of 1920, but by the revival of peace-time production abroad, labor unrest, the installation of the eight-hour day, heary freights, taxes, and the high prices and inferior quality of the fuel available. Compared with the figures for 1913, production in 1920 was exceptionally small. The following table indicates the decline in output:

Swedish Production of Iron and Steel.
[In thousands of tons.]

|  | 1913 | 1919 | 1920 |
| :---: | :---: | :---: | :---: |
| Iron ore. | 7,480.0 | 4,987.0 |  |
| Pig iron. | 730.2 | 493.7 | 452.3 |
| Blooms. | 158.5 | 63.6 | 59.0 |
| Ingots. | 590.9 | 491.2 | 426.6 |
| Rolled iron | 345.6 | 312.3 | 281.0 |

Exports of pig iron and ingots in 1920 were greater than in the nearest preceding years, but below the prewar volume. Throughout the present year iron-ore exports have exceeded the amount exported in the corresponding period of 1920. Ore exports in March and April, 1921, also surpassed the prewar quantities in the same months. On the other hand, the export of pig iron in May, 1921, was only about 32 per cent of the exports in the same month of the preceding year and only 35 per cent of the May, 1913, volume. The tables below present the monthly export statistics for ore and pig iron:

| Swedish Exports of Iron Ore. [In thousands of tons.] |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1913 | 1920 | 1921 |
| January. |  | 338.3 | 136.0 | 244.1 |
| February. |  | 354.8 | 173.0 | 289.3 |
| March... |  | 314.3 | 241.7 | 356.4 |
| April. |  | 418.3 | 296.9 | 427.9 |
| May.. |  | 527.5 | 257.6 | 391.2 |
| June. |  | 545.1 | 399.7 |  |
| July.. |  | 785.3 | 394.7 |  |
| August. |  | 925.6 | 469.5 |  |
| September |  | 755.4 | 451.5 |  |
| October. |  | 698.1 | 442.0 |  |
| November. |  | 469.3 | 302.6 |  |
| December. |  | 307.9 | 171.1 |  |
| Total |  | 6,439.9 | 3,736. 3 | 1,708.9 |
| Exports of Pig Iron. [In tons.] |  |  |  |  |
|  |  | 1913 | 1920 | 1921 |
| January |  | 9,695 | 3,178 | 8,464 |
| February |  | 8,533 | 5,541 | 7,510 |
| March.... |  | 7,009 | 6,981 | 1,441 |
| Aprıl. |  | J6,868 | 7,801 | 4,016 |
| May. |  | 12,828 | 14,916 | 4,772 |
| June. |  | 21, 630 | 14,575 |  |
| July. |  | 20,839 | 12,943 |  |
| August |  | 19,415 | 10,899 |  |
| September |  | 19, 441 | 9,648 |  |
| October. |  | 26, 130 | 8,686 |  |
| November. |  | 15,607 | 9,289 |  |
| December |  | 14, 617 | 10,959 |  |
| Total |  | 192,612 | 115,416 | 26,203 |

The total foreign trade of Sweden reached its peak in July, 1920, and by May, 1921, had declined approximately 70 per cent. Imports and exports in May were about 40 and 42 per cent, respectively, of their value in the corresponding month last year. An improvement in the balance of trade was a noteworthy development of the past year. In the first quarter of 1920 the excess of imports amounted to $438,000,000$ kronor, while in the first three months of 1921 the excess diminished to $82,000,000$ kronor. The following table shows Sweden's commodity balance of trade:

From this table it can be seen that in a normal year an excess of exports usually occurs during the summer months or the timbershipping season. The excess imports take place in the first third, and the last quarter of the year. In 1920 there was no period whatever of excess exports.
An easier position in the money market is apparent from the Riksbank returns for May.

A contraction in the loans and discounts of the joint-stock banks has been in progress since December, and up to June it amounts to about 4 per cent of the December figure. Aggregate loans, discounts, and rediscounts at the end of May, 1921, had declined about 2 per cent from the figure for the corresponding period of 1920. The total outstanding note circulation of the Riksbank at the end of May amounted to $651,000,000$ kronor, which is the lowest since July, 1918. It represents a falling off since a year ago of about 8 per cent and a decline from the peak circulation of December, 1918, of approximately 20 per cent. Gold holdings have remained at practically the same level for the past six months, and in May were about 8 per cent higher than the corresponding period last year.

The business transacted on the stock exchange has declined heavily in the past year. The May volume of business was less than one-half of the total transactions in the same month in 1920.

## NETHERLANDS.

The crisis in industry, trade, and shipping through which the Netherlands has been passing continues. Every branch of industry, except special enterprises, such as ship repairing, reflects the depression which prevails likewise in trade and in the securities market. Unemployment continues, and in many instances is increasing. There is evidence, however, that the economic structure of the Netherlands, supported as it is by a diversified international trade, enables it to withstand the crisis with less hardship than is the case in countries of more specialized production. Revenue returns for the first four months have been on the whole more satisfactory than was anticipated and somewhat in advance of receipts for the corresponding period last year, so that the treasury has not suffered from the effects of the depression.

Though the guilder held its international exchange value well into 1920 , it necessarily reacted to the cumulative effects of undue expansion of currency and credits and of an increasingly. adverse trade balance. The excess of imports over exports rose from $145,000,000$ florins in 1917 to $1,631,000,000$ in 1920, and was $254,000,000$ for the first quarter of 1921. The increase in the note circulation of the Netherlands Bank for the last half of 1920 amounted to approximately $73,000,000$ florins, and during this period the decline of the exchange value of the guilder followed more or less closely the rise in the note circulation, together with the increase in the bank's bill holdings. In recent months the exchange
value of the florin has risen from the low point of 29.25 cents in November, 1920, to 39.29 cents, the high point in May, an upward movement which may be associated with the improved position of the bank with regard to its note issue.

During the war the Netherlands Bank followed a policy, which it has since continued, of maintaining gold balances abroad, and of issuing bills against these balances whenever occasion arose, an expedient which has enabled the bank to exercise a stabilizing influence on the exchange value of the florin without resorting to the export of gold. As a consequence of this policy, the bank's foreign balances have gradually decreased to approximately $20,000,-$ 000 florins. Recently, however, the bank has decided to build up these balances once more, and to this end has begun the export of gold. The weekly statements show that during the period from March 29 to May 2, inclusive, the bank's gold holdings decreased by $30,000,000$ florins and that its "Sundry accounts," which include foreign credits, increased by an almost equivalent amount.

A reduction in silver holdings has also taken place as a result of the decision of the Government to withdraw the silver notes of 2.50 -forin and 1 -florin denominations from circulation. The bank has accordingly effected a gradual reduction in the stock of silver which it holds as cover for these notes. Holdings have decreased from $22,600,000$ florins the first of February, when the reduction began, to $13,000,000$ florins on the last of May.

A table showing the principal asset and liability items of the Netherlands Bank for 1920 and the first five months of 1921 is attached.
Principal Asset and Ltability Items of the NetherLaNdS Bank.
[In thousands of florins.]

| Date. | Metallic reserve. |  |  | Loans, discounts, and advances. | Advances to Gov-ernment bearing nointerest. | Foreign bills. | $\begin{gathered} \text { Notes } \\ \text { in circu- } \\ \text { lation. } \end{gathered}$ |

Continuing the figures on wholesale prices in the Netherlands, which appeared in the April Bulletin, the following price index for 49 general commodities and for 31 articles of food (included in the 49), prepared by the Dutch Central Bureau of Statistics, shows a decline of 20 points in prices in general from December, 1920, to January, 1921, and a drop of 13 points in February. Retail prices on the other hand show only a small and by no means proportionate reduction.

Wholesale Prices in the Netherlands.

The foreign trade of the Netherlands for the first quarter of the current year shows little change from that of the corresponding quarter of 1920. There has been a decline in the export of most raw materials and an increase in the export of some manufactures, especially in manufactures of cotton. The trade movement for the quarter by groups of commodities may be seen from the following table:

Foreign Trade of the Netherlands for the First Quarter of 1921 Compared With the Corresponding Quarter of 1920.
[In thousands of guilders.]

| Grand total | 683,255 | 606, 918 | 325, 050 | 366, 835 |

In March the balance of trade for the month shows an excess of imports amounting to 107,000,000 florins, in February there is a similar excess of $49,000,000$ florins, and in January $98,000,000$ florins, compared with an average monthly balance of $136,000,000$ florins in 1920 and of $117,000,000$ florins in 1919.

In the Dutch East Indies foreign trade is light, and the financial and economic situation shows little improvement over past months. The florin of the colony has been weak compared with that of the Netherlands, and a sharp fall in most commodity prices has been witnessed.
Though the 1920 sugar crop was better than expected and the yield per unit of cane for the year was very high, the world sugar crisis involved the Java market and forced sales sent prices down to 14 florins per picul ( 3 cents per pound), the high for the year having been 51 florins per picul. The outlook for 1921 is not satisfactory. Of the estimated crop of $1,600,000$ tons, as compared with $1,500,000$ in 1920 , less than one-third has been sold, the price being considerably less than that quoted for current shipments of the 1920 crop. Numerous strikes at the sugar mills and of longshoremen have called for concessions from employers.
The Netherlands Parliament has recently authorized a $250,000,000$ florin loan to the Dutch East Indies. Because of increasing deficits in the colonial budget, additional taxes and duties have been imposed to balance the revenue and expenditure, which in the past nine years have increased 72 per cent and 143 per cent, respectively.

As a factor in its international trade, and especially in the economic status of the Netherlands, the position of its shipping is important. Shipping under the Netherlands flag was comparatively prosperous at the close of the war. Those lines whose ships were not chartered at fixed rates to some one of the belligerents had reaped very large profits from the general scarcity of shipping. The Dutch shipowners had a considerable amount of new tonnage ready to promote extension of service and the past two years have witnessed a steady gain in the establishment of regular lines. At present the volume of Dutch shipping is nearly back to normal, the total net tons leaving Rotterdam being approximately five-sixths of 1914 figures, and at Amsterdam about fourfifths of the normal tonnage has been registered. The Dutch Parliament has recently granted a subsidy of $1,000,000$ florins annually for five years to a Netherlands South African line which is formed jointly by the Rotterdamsche Bank, the Netherlands Indian Bank, the Netherlands Trading Co., the Twentsche Bank, and two important shipping firms.

## State Banks and Trust Companies Admitted.

The following list shows the State banks and trust companies which have been admitted to membership in the Federal Reserve System during the month of June, 1921.
One thousand five hundred ninety-six State institutions are now members of the system, having a total capital of $\$ 554,364,645$, total surplus of $\$ 527,696,294$, and total resources of $\$ 10,236,149,929$.

|  | Capital. | Surplus. | Total resources. |
| :---: | :---: | :---: | :---: |
| District No. 2. |  |  |  |
| Claremont Bank of Jersey City, Jersey City, N. J. | \$200,000 | \$50,000 | 85,517, 836 |
| District No.6. |  |  |  |
| Bank of Dawson, Dawson, Ga. | 100,000 | 35,000 | 365,471 |
| Royston Bank, Royston, Ga......... | 60,000 | 30,000 | 416,097 |
| Parish Bank \& Trust Co., Opeiousas, $\qquad$ | 50,000 | 10,000 | 128, 199 |
| District No. 7. |  |  |  |
| State Bank of Armstrong, Armstrong, Iowa. | 25,000 | 5,000 | 270, 123 |
| Moorhead State Bank, Moorhead, Iowa. | 30,000 | 30,000 | 456,242 |
| American State Bank, Highland Park, Mich | 200,000 | 50,000 | 2,112,445 |
| District No. 8. |  |  |  |
| Farmers State Bank, Conway, Ark... | 60,000 | 10,000 | 824,333 |
| Bank of Eastern Arkansas, Forrest City, Ark. | 50,000 | 50,000 | 743,126 |
| Peoples Savings Bank \& Trust Co., Pine Bluff, Ark. | 100,000 | 50,000 | 1,075, 115 |
| District No.9. |  |  |  |
| Mercantile State Bank, Minneapolis, Minn. | 300,000 | 80,000 | 2,847, 398 |
| First State Bank of Clyde Park, Mont. District No. 11. | 25,000 | 2,000 | 95, 554 |
| Caddo Mills State Bank, Caddo Mills, Tex. | 30,000 | 21,000 | 187,726 |
| Wharton Bank \& Trust Co., Wharton, Tex. | 50,000 | 150,000 |  |
| First State Bank, Coahoma, Tex..... | 25, 000 |  | 126,997 |
| Security State Bank, Cooper, Tex.... | 100,000 |  | 909,449 |
| District No. 12. |  |  |  |
| Security Bank \& Trust Co., San Francisco, Calif. | 500,000 | 325,000 | 5,340,549 |

## LIQUIDATIONS.

First Trust \& Savings Bank, Des Moines, Iowa.
Glynn County Bank, Brunswick, Ga.
Burley State Bank, Burley, Idaho.
Bank of Duchesne, Duchesne, Utah.

## CONVERSION.

The Citizens Bank, Hohenwald, Tenn., has converted into a national bank.

## Acceptances to 100 Per Cent.

Since the issuance of the June Bulletin the following banks have been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

American Trust Co., Boston, Mass.
Ohio National Bank, Columbus, Ohio.
The City National Bank, Columbus, Ohio.
Brotherhood of Locomotive Engineers Cooperative National Bank of Cleveland, Cleveland, Ohio.

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from May 28 to June 24, 1921, inclusive:

|  | Banks. | Amount. |
| :---: | :---: | :---: |
| New charters issued | 9 |  |
| With capital of.. |  | \$950,000 |
| Restored to solvency | 2 |  |
| With capital of................ |  | 125,000 |
| Increase of capital approved With new capital of........ | 15 |  |
| Aggregate number of new charters, banks restored |  | 0 |
|  | 26 |  |
| With aggregate of new capital authorized | 12 | 3,815,000 |
| Capital of same bauks....... | 12 | 2,075,000 |
| Number of banks reducing cap | 1 | 2, |
| Reduction of capital...... |  | 700,000 |
| Total number of banks going into voluntary or involuntary liquidation or reducing capital. | 13 |  |
| Aggregate capital reduction......................... |  | 2,775,000 |
| Consolidation of national banks under the act of Nov. 7, 1918. | 4 |  |
| Capital................................................. |  | 40,460,000 |
| The foregoing statement shows the aggregate of increased capital for the period of the banks embraced in statement. |  | 3,815,000 |
| Against this there was a reduction of capital owing to liquidations, ete. |  | 2,775,000 |
| Net increase |  | 1,040,000 |

${ }^{1}$ Includes two increases in capital aggregating $\$ 250,000$ incident to consolidations under act Nov. 7, 1918.
${ }_{2}$ Includes one reduction in capital of $\$ 700,000$ incident to a consolidation under act of Nov. 7, 1918.

## Fiduciary Powers Granted to National Banks.

The applications of the following banks for permission to act under section 11 (k) of the Federal Reserve Act have been approved by the Board during the month of June, 1921:

District No. 2.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: National Trust Bank, Paterson, N. J.
Nassau County National Bank, Rockville Center, N. Y.
First National Bank, Waverly, N. Y.
District No. 3.
Trustee, executor, administrator, guardian of estates, assignee, recelver, and committee of estates of lunatics:
The Fourth Street National Bank, Philadelphia, Pa.
Guardian of estates, assignee, receiver, and committee of estates of lunaics:
First National Bank, Seaford, Del.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:

Second National Bank of Philadelphia, at Frankford, Philadelphia, Pa.

District No. 4.
Executor, administrator, guardian of estates, assignee, and receiver: City National Bank, Columbus, Ohio.

District No. 5.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: First National Bank, Weleh, W. Va.

District No. 7.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:

First National Bank, Belvidere, Ill.
Will County National Bank, Jolict. Ill.
Farmers National Bank, Sparta, Wis.
District No. 8.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: First National Bank, Mayfield, Ky.

District No. 9.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:
First National Bank, Fargo, N. Dak.
District No. 10.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: First National Bank ju Wellington, Wellington, Kans.

## RULINGS OF THE FEDERAL RESERVE BOARD.

Reserves against money paid by customer in anticipation
of acceptances and against balance due to foreign branch.
Inquiries have been received as to whether a member bank must maintain reserves against moneys paid to it by a customer in anticipation of the maturity of an acceptance made for the account of the customer, and whether it is necessary for a member bank to maintain reserves against balances due from it to one of its own foreign branches.

As to the necessity for a member bank maintaining reserves against moneys paid in anticipation of the maturity of an acceptance, the Board is of the opinion that the question depends largely upon the relationship between the bank and its customer. If upon receiving the money the member bank credits it to the customer's general deposit account subject to check, or if the customer is permitted to withdraw such money either by check or after a certain length of time, i. e., if the deposit is treated as a demand or time deposit subject to withdrawal, it would seem that the money deposited would constitute a deposit liability against which the member bank would be required to maintain reserves in accordance with the provisions of section 19 of the Federal Reserve Act. On the other hand, if the money deposited is not subject to withdrawal by check or otherwise but is received in full or part payment of the customer's obligation to put the bank in funds at the maturity of the acceptance, or if the money is received as a special deposit for the purpose of meeting the acceptance when it matures and the customer can not demand the return of the money but can require only that the bank apply the money in payment of the acceptance at maturity, it would seem that the deposit does not constitute a deposit liability within the provisions of section 19.
So far as the second question is concerned, the Board is of the opinion that a member bank is not required to maintain reserves against balances due from it to one of its own foreign branches. The Board has consistently ruled that branch banks have no separate existence distinct from the parent bank and that the parent bank and its branches are one legal entity. (1915 Bulletin, 125; 1917 Bulletin, 198.) It seems evident, therefore,
that a balance due to a foreign branch of a member bank from its parent bank, although shown as a liability on the books of the parent bank, does not constitute a deposit liability within the meaning of section 19 against which reserves must be maintained.

Acceptances against shipping documents covering cattle.
The question has been presented as to whether a plan whereby cattle feeders finance themselves by drawing bills of exchange on their local banks, which bills are accepted by those banks and then offered for discount to another bank, would be in accordance with the rulings of the Federal Reserve Board.

Certain farmers buy cattle in the fall, feed them for about three months, and then sell them in the market; and the custom of the farmers is to borrow money from the banks to enable them to carry the cattle for three months' time. In other words, they draw drafts on their local banks for three or four months' time secured by bills of lading covering the shipment of the cattle to the farmers. The local banks accept the drafts and the farmers send those acceptances to another bank, which discounts them. It is anticipated that within the period for which the acceptances are drawn the cattle will be resold by the farmers, and with the proceeds the acceptances are to be liquidated.

The Board has heretofore ruled that a national bank may accept a draft drawn upon it if secured at the time of acceptance by a bill of lading covering a shipment of cattle to a cattle raiser who has purchased them with the intention of fattening and reselling them. The period covered by the acceptance, however, should not be in excess of the period of credit which is usual and reasonably necessary to finance transactions of this character. Such acceptances when discounted and indorsed by a member bank, other than the accepting bank, are eligible for rediscount with a Federal Reserve Bank, provided they have maturities at the time they are offered for rediscount not in excess of three months and comply in all other respects with the provisions of the Federal Reserve Act and the regulations of the Federal Reserve Board.

## Exercise of fiduciary powers by national banks outside

 of State where located.The Federal Reserve Board has received a number of inquiries as to whether or not a national bank which has been granted fiduciary powers, under the terms of section 11 (k) of the Federal Reserve Act, may exercise those powers in States other than that in which it is located.

A permit issued to a national bank by the Federal Reserve Board under the terms of section $11(\mathrm{k})$ results in an extension of the corporate powers of the bank to include the power to act in the various fiduciary capacities mentioned in the permit. Whether or not the bank may exercise those powers in States other than that in which it is located is a question which depends upon the laws of each of those other States, since section 11 (k) expressly provides that the powers conferred by it may be exercised only "when not in contravention
of State or local law." The Board is of the opinion that there is no other provision in the Federal Reserve Act or the National Bank Act which should be construed to restrict the exercise of trust powers in behalf of residents of other States.

The Federal Reserve Board is of the opinion, therefore, that a national bank which has been granted permission to exercise fiduciary powers under the provisions of section 11 (k) may, without other authority, exercise the powers granted not only in the State where the bank is located but also in any other State the laws of which do not expressly or by necessary implication prohibit the exercise of those powers by national banks located in other States. The Board is of the opinion, however, that in any such case the national bank would have to conform to those laws of any State in which it is acting which relate to the exercise of fiduciary powers by foreign corporations.

## LAW DEPARTMENT.

## Limitations applicable to letters of credit.

The Federal Reserve Board was recently asked for its opinion as to whether the liability incurred by a national bank upon a commercial letter of credit, as distinguished from the liability upon the acceptances made under the letter of credit, is subject to the limitations of section 5202 of the Revised Statutes, and whether such a liability should be treated as subject to the limitations upon the aggregate amount of acceptances which a member bank may make under the provisions of section 13 of the Federal Reserve Act.

The Board has ruled that the limitations imposed by section 5202 on the aggregate liabilities incurred by a national bank do not apply to the outstanding acceptances of such banks, since such liabilities are incurred under the provisions of the Federal Reserve Act and so fall within the fifth exception to section 5202 as amended. (1916 Bulletin, 680.) Inasmuch as a commercial letter of credit is simply an agreement to make acceptances, and the authority of national banks to issue such letters of credit is incidental to the authority expressly granted by section 13 of the Act to make acceptances in certain transactions, and such letters may properly be issued only in connection with the kinds of transactions specified in that section, it seems clear that the liability of a member bank upon a commercial letter of credit is a liability incurred under the provisions of the Federal Reserve Act within the fifth exception to section 5202, and is not subject to the limitations of that section.

The Board is further of the opinion that the liability incurred upon a commercial letter of credit-that is, upon the agreement or letter itself, as distinguished from the acceptances made thereunder-should not be classified as an acceptance liability within the limitation imposed upon the aggregate amount of acceptances outstanding at any one time under the provisions of section 13 of the Federal Reserve Act. The Board has ruled that the six months' limitation upon acceptances in section 13 applies to the drafts drawn under a letter of credit but should not be construed as applying to the agreement or letter of credit itself. (1915 Bulletin, 269; 1920 Bulletin, 66. In other words, a member bank may issue a letter of credit by which it agrees within a specified time, which may be more than six months, to accept drafts aggregating certain amounts, although each individual draft drawn under the credit must not have a maturity of more than six months. Similarly, it would seem that a member bank may issue a letter of credit the aggregate amount of which may be in excess of the 50 per cent or 100 per cent of the bank's capital and surplus, provided that the aggregate amount of the acceptances made under the letter of credit and outstanding at any one time does not exceed, in addition to the bank's other outstanding acceptances, the aggregate limitation upon acceptances prescribed in section 13.

The Board does not mean to imply, however, that a member bank may obligate itself upon a letter of credit to accept drafts drawn there-
under entirely without regard to the limitations of section 13. Section 13 expressly prohibits a member bank from having outstanding at any one time acceptances in excess of 50 per cent of its capital and surplus, except that the Federal Reserve Board may authorize a member bank to accept up to 100 per cent of its capital and surplus. While, in the Board's opinion, the liability incurred upon a letter of credit should not be treated as a liability subject to the 50 per cent or 100 per cent limitation, nevertheless a member bank should not obligate itself to accept drafts under a letter of credit to such an amount that it is reasonable to anticipate that the aggregate amount of acceptances issued under that letter and outstanding at any time, together with other acceptances which may be outstanding, will exceed at any one time the limitation to which the member bank is subject.

## Amendment to the Federal Reserve Act.

Senate bill 86, amending section 25 (a) of the Federal Reserve Act, was approved by the President June 14, 1921. The text of the act, which is known as Public Act No. 17, 67 th Congress, is as follows:

AN ACT To amend the Act approved December 23, 1913, known as the Federal Reserve Act.
Be it enacted by the Senate and House of Representatives of the United States of America in Congress ussembiled, That section 25 (a) of the Federal Reserve Act, being the section added to said Act by the Act approved December 24, 1919, be amended so that the first sentence of the paragraph prescribing the amount of capital stnck a corporation organized under that section is required to have and prescribing also the manner in which such capital stock must be paid in, said paragraph being the fourth paragraph following subparagraph (c) of said section, shall read as follows:
"No corporation shall be organized under the provisions of this section with a capital stock of less than $\$ 2,000,000$, one-quarter of which must be paid in before the corporation may be authorized to begin business, and the remainder of the capital stock of such corporation shall be paid in installments of at least 10 per centum on the whole amount to which the corporation shall be limited as frequently as one installment at the end of each succeed-
ing two months from the time of the commencement of its business operations until the whole of the capital stock shall be paid in: Provided, however, That whenever $\$ 2,000,000$ of the capital stock of any corporation is paid in the remainder of the corporation's captial stock or any unpaid part of such remainder may, with the consent of the Federal Reserve Board and subject to such regulations and conditions as it may prescribe, be paid in upon call from the board of directors; such unpaid subscriptions, however, to be included in the maximum of 10 per centum of the national bank's capital and surplus which a national bank is permitted under the provisions of this Act to hold in stock of corporations engaged in business of the kind described in this section and in section 25 of the Federal Reserve Act as amended: Provided further, That no such corporation shall have liabilities outstanding at any one time upon its debentures, bonds, and promissory notes in excess of ten times its paid-in capital and surplus.

Approved, June 14, 1921.

## Commercial Failures Reported.

Some narrowing of the margin of increase over last year's failures is noted, but the 893 defaults reported to R. G. Dun \& Co. during three weeks of June largely exceed the 431 insolvencies of the same period of 1920 . The returns for May, the latest month for which complete statistics are available, disclose 1,356 commercial failures for $\$ 57,066,471$ of liabilities, as compared with only 547 defaults for $\$ 10,826,277$ in May, last year. With three exceptions, the insolvencies of May, this year, are the largest in number on record for the month, but a single failure supplied nearly one-third of the aggregate indebtedness. Separation of the May statement by Federal reserve districts shows that more defaults occurred in every instance than in that month of 1920 , while only in the fourth district were the liabilities smaller.

Failures during May.

## PRICE MOVEMENT AND VOLUME OF TRADE. WHOLESALE PRICES IN THE UNITED STATES.

Prices in general continued to decline in May, but at a slower rate than at any time since the recession gained headway about a year ago. The index number of the Bureau of Labor Statistics, based upon approximately 315 quotations, decreased about 2 per cent during the month, while that of the Federal Reserve Board, based on 90 quotations, declined only onehalf of 1 per cent. The increase during the month in the prices of a considerable number of important raw materials accounts in the main for the small percentage of change. Manufactured goods for the most part continued to be reduced in price or else were stable. Slight increases were reported, however, in certain grades of cotton yarn and cloth.

In June, prices fell perhaps slightly more than in May. The decline in the all-commodities index of both the Federal Reserve Board and the Bureau of Labor Statistics amounted to 2 per cent. Raw materials, with few important exceptions, declined again after showing considerable strength in May. Similarly the index of goods exported (including among other things important cereals and cotton) after showing a slight increase in May reacted downward in June. Manufactured goods as a whole were reduced rather less in June than in May. The index of the Federal Reserve Board for consumers' goods showed no change in June as compared with May, while that of the Bureau of Labor Statistics was lower by only 1 point.

The second table below shows the index number of the Bureau of Labor Statistics as reclassified by the Federal Reserve Board. ${ }^{2}$

INDEX NUMBERS OF WHOLESALE PRICES IN UNITED STATES-CONSTRUCTED BY THE FEDERAL RESEIRVE BOARD FOR THE PURPOSE OF INTERNATIONAL COMPARISON. ${ }^{1}$
[Average price for 1913=100.]

| 1921. |  |  |  |  |  |  |  |
| January.. | 166 | 114 | 142 | 164 | 166 | 159 | 163 |
| February. | 156 | 113 | 135 | 152 | 158 | 152 | 154 |
| March.... | 152 | 114 | 125 | 146 | 153 | 151 | 150 |
| April.. | 145 | 109 | 121 | 136 | 148 | 147 | 143 |
| May.. | 145 | 105 102 | 125 | 139 133 | 145 | 144 | 142 |
| June. | 141 | 102 | 122 | 133 | 140 | 144 | 139 |

${ }^{1}$ The index number of the Federal Reserve Board has been constructed primarily with a view to international comparisons of wholesale prices. Due to the difficulties connected with the collection of foreign prices, the foreign index numbers are still incomplete, but in spite of this it has seemed advisable to publish the American number, since it contains certain classifications of commodities not otherwise available, namely, the prices of the important goods imported into this country, and of goods largely exported, and compares them with the general price level in the United States. The number has been published monthly during a period of one year, but is computed for the years 1913, 1919, and the first of 1920 as well.

For detailed information regarding the makeup of the number, reference may be made to the Federal Reserve Bulletin for May 1920 , pages 499-503. The commodities included in the different groups are listed there with exact specifications and markets indicated. The "weights" assigned to the different commodities in constructing the index numbers are also given in detail. Revisions in prices or weights appear in Bulletins for June, 1920, and June, 1921.

The index of "goods produced"' consists of 74 quotations ( 30 raw materials, 24 producers' and 20 consumers' goods). These include agricultural products (such as grains, live stock, and textiles), minerals, and lumber, among the raw materials; yarns, leather, semifinished steel products, refined oils, chemicals, building materials, etc., among the producers' goods; and potatoes, meats, four, rice, dairy products, cotton and woolen cloth, boots and shoes, and kerosene among the consumers' goods.

The index of "goods imported" consists of 18 quotations ( 9 raw materials, 7 producers' and 2 consumers' goods). It includes Egyptian cotton, Australian and South American raw wool, Japanese and Chinese silk, South American hides, Straits tin, and Canadian lumber among the raw materials; plantation and Para rubber, Chilean nitrate, cane sugar, burlap, sisal, etc., among producers' goods; and tea and coffee for consumers' goods.

Leading American exports are included in the index of prices of "goods exported," which is made up of 40 quotations ( 17 raw materials, 12 producers' and 11 consumers' goods). Grains, tobaceo, cotton, copper, coal, pig iron, petroleum, and lumber make up the list of raw materials; vegetable oils, leather, semifinished metal products, refined oils, and chemicals the producers' goods; and wheat flour, refined sugar, pork products, coffee, cotton cloth, boots and shoes, and kerosene the consumers' goods.

The index numbers of "raw materials," "producers' goods," and "consumers' goods" consist of the commodities mentioned above which fall into these classes, whether they are of domestic or foreign origin. The raw materials group includes 39 quotations, the producers' goods 29 , and the consumers' goods 22 .

The "all commodities" index is obtained by combining the group indexes of domestic and foreign goods. It consists of 90 different quotations.
The quotations are obtained from representative trade journals and private firms. About half of them are the same that are used by the Bureau of Labor Statistics in its larger compilation of prices and are furnished to the Board by that bureau.
${ }^{2}$ As the index number of the Bureau of Labor Statistics (which is based upon 315 quotations) has been reclassified by the Federal Reserve Board, the raw materials group consists of approximately 76 quotations, the producers' goods of about 80 , and the consumers' goods of 158 . Raw materials have been subclassified into agricultural products (mainly grains, cotton, and tobacco), based upon 19 quotations, animal products based upon the same number, forest products based upon 11 quotations, and mineral products based upon 27 quotations. The Federal Reserve Bulletin for October, 1918, contains a list of the commodities in each group. The weights are the same as those used by the Bureau of Labor Statistics.

## INDEX NUMBERS OFWHOLESALE PRICES IN THE UNITED STATES, 1919-192I. AVERAGE PRICE LEVEL OF $1913=100$.

In order to give a more concrete illustration of actual price movements, there are also presented in the following table monthly actual and relative figures for certain commodities of a basic character. The prices shown in the
table have been obtained from the records of the United States Bureau of Labor Statistics, except in the case of bituminous coal, prices for which have been obtained from the Coal Age.

AVERAGE MONTHLY WHOLESALE PRICES OF COMMODITIES.

| Year and month. | Corn, No. 3 , Chicago. |  | Cotton, middling, New Orleans. |  | Wheat, No 1, northern spring, Minneapolis. |  | Wheat, No. 2, red winter, Chicago. |  | Cattle, steers, good to choice, Chicago. |  | Hides, packers, heavy native steers, Chicago. |  |

## FOREIGN TRADE INDEX.

There is presented below a series of indexes designed to reflect movements in foreign trade of the United States, with fluctuations due to price changes eliminated. The commodities chosen for these indexes are those for which prices are compiled by the Federal Reserve Board in the preparation of its international price index. The list includes 25 of the most important imports, the value of which in 1913 formed 47.7 per cent of the total import values, and 29 of the most important exports, the value of which in 1913 formed 56.3 per cent of the total export values. The classification of the original list of commodities used was given in the July, 1920, Bulletin. A classification of the 11 additional commodities of imports was given in the April, 1921, Bulletin.

Total exports showed a moderate increase during May, after four successive months of decline. This increase was entirely due to a considerable increase in the volume of raw materials exported. Exports of raw cotton and wheat showed a particularly large increase, and there was a considerable increase in the exports of bituminous and anthracite coal, due
presumably to the strike of the English coal miners. Total exports of producers' goods declined for the fourth consecutive month. Exports of cottonseed oil and of steel products have shown a continuous decline since January, and in May their volume was considerably less than 30 per cent of the volume in January. Exports of consumers' goods also registered a considerable decrease during May, due principally to the decline in the exports of wheat flour and boots and shoes.
The decline in total imports, which commenced in April, continued at a much accelerated pace during May. There was a particularly noticeable decline in imports of raw materials, due primarily to a continuance of the decline in wool imports from the high level reached in March. Imports of raw wool in May were only 15 per cent as large as in March. Imports of lumber showed an increase for the fourth consecutive month. Imports of producers' goods declined considerably, due to the seasonal drop in the importation of cane sugar, and consumers' goods showed a similar decline, due to a marked decrease in the volume of coffee imports as compared with the previous month.

INDEX OF VAlUE OF FOREIGN TRADE IN SELECTED COMMODITIES AT 1913 PRICES.

## PHYSICAL VOLUME OF TRADE.

Movements of agricultural products showed a moderate increase during May, after three successive months of decline. Total receipts and total shipments of live stock at 59 markets during May showed an increase, which was particularly pronounced in the case of sheep. There were slight decreases in the number of cattle and sheep slaughtered under Federal inspection, but these were more than offset by an increase in the number of hogs slaughtered. The movement of grain and flour was larger in May than in April at interior centers, but showed some falling off at seaboard centers. Stocks of wheat, corn, oats, barley, and rye at 11 interior centers continued to decline during May. Cotton sight receipts, port receipts, and American spinners' takings increased in May, while there was some decline in the overland movement of cotton. May shipments of citrus fruits from California were considerably smaller than April shipments.

The activity of the textile industry continued to increase during May for the fifth consecutive month. The volume of cotton consumption was greater than in any month since September, and there was a slight increase in the number of active spindles. Wool consumption has increased steadily from December to May, and there have been corresponding decreases in the percentages of idle machinery. Imports of raw silk during May were smaller than in April but larger than in any other month since January, 1920.

Production of bituminous coal registered a considerable increase in May, while anthracite production showed a slight decline. The output of crude petroleum reached a new high level during May and stocks continue to accumulate. The production of pig iron in June dropped to an even lower level than that reached in April and May.

The lumber cut of all five reporting associations increased during May for the fourth month in succession, and there was a further increase in shipments of lumber. Receipts of naval stores in May were larger than in April or than in May, 1920. The volume of sales of revenue stamps for manufactures of tobacco increased during May, except in the case of little cigars.
The May output of locomotives and cars was considerably lower than that of April, but was higher than the output in May, 1920. April figures for railroad ton-miles were considerably lower than those of March. The tonnage of commerce through the Sault Ste. Marie canals increased.during June, as compared with May, due to increases in shipments of iron and coal.

The following tables are a continuation of tables in the June, 1921, Federal Reserve Bulletin. The January, 1919, issue contains a description of the methods employed in the compilation of the data and the construction of the accompanying index numbers. New series of data will be presented from time to time as reliable figures are obtained.

${ }^{1}$ The National Association of Finishers of Cotton Fabrics, at the request of the Federal Roserve Board, has arranged for a monthly survey within the industry. The results of the inquiries are herewith presented in tabular form. The secretary of the association makes the following statement concerning the tabulation:

The accompanying figures are compiled from statistics furuished by 34 out of 58 member firms of this association. It is probably fair to state that in the absence of having specific detail at hand, but according to our best estimate, it is probably well within the fact that the figures given for the various classes of work would cover, approximately, the following percentages of the entire industry: White goods, 72 per cent; dyed goods, 62 per cent; printed goods, 30 per cent. The figures given represent reports from exactly the same finishers for the two months, both for the totals and for the subdivisions and, therefore, are strictly comparable.

Note.-Many plants were unable to give details under the respective headings of white goods, dyed goods, and printed goods, and reported their totals only, therefore the column headed "Total" does not always represent the total of the subdivisions but is a correct total for the district.

## KNIT-GOODS MANUFACTURES.

The total production of winter and summer underwear for the 6 months ending May 31 was as follows:

|  | Number of mills reporting. | Actual production <br> (dozens). | Percent of normal. |
| :---: | :---: | :---: | :---: |
| 1920. |  |  |  |
| December. | 61 | 98,671 | 11.0 |
| 1921. |  |  |  |
| Tanuary | 61 | 148,023 | 16.4 |
| February | 63 | 248, 431 | 23.0 |
| March. | 62 | 421,140 | 50.1 |
| April... | 61 | 401,938 | 49.6 |
| May. | 62 | 505,347 | 55.4 |

Order and production report for month ending May 31, 1921, follows. The number of mills reporting was 40 .

## RETAIL TRADE.

In the following table is given a summary of the data obtained from representative department stores in each Federal Reserve district, showing the activity of retail trade during the past several months. In districts Nos. 1, 2, 5, 6, 7, 9, 11, and 12 the data were received in (and averages computed from) actual amounts (dollars). In districts Nos. $3,4,8$, and 10 the material was received in the form of percentages, the 1921 averages for the cities and districts computed from such percentages being weighted according to volume of business done during the calendar year 1920, and the averages for the several months in 1920 by similar figures for the calendar year 1919. For the month of May the tables are based on reports from 341 stores in all, dis-
tributed as follows: 24 stores in district No. 1, 58 in district No. 2, 47 in district No. 3, 17 in district No. 4, 25 in district No. 5, 24 in district No. 6, 52 in district No. 7, 18 in district No. 8, 13 in district No. 9, 15 in district No. 10, 19 in district No. 11, and 29 in district No. 12. The number of stores varies somewhat, due to the inclusion of new stores from time to time in the reporting list.

Separate figures for Buffalo, Newark, Rochester, Syracuse, Pittsburgh, and Cleveland aro shown for the first time this month. May figures for "outside" stores in districts Nos. 2 and 4 therefore include only stores in other centers than those for which separate figures are given, and are not comparable with the figures for "outside" stores shown for earlier months

## CONDITION OF RETAIL TRADE IN THE FEDERAL RESERVE DISTRICTS.

COMPARATIVE WHOLESALE PRICE LEVELS IN PRINCIPAL COUNTRIES.

The foreign index numbers published below are constructed by various statistical offices according to methods described, in most cases, in the Bulletin for January, 1920. A description of the method used in the construction of the Swedish index number appeared in the Bulletin for February, 1921, for the new Italian index number in the April, 1921, issue of the Bulletin, and the method used by the Frankfurter Zeitung in the case of the German index number was described in the Bulletins for February and March, 1921. Complete information regarding the computation of the United States Bureau of Labor Statistics appears in the publications of that bureau, and a description of the index number of the Federal Reserve Board may be found in the Bulletin for May, 1920. Details as to the method used by the Okonomisk Revue in constructing its index of wholesale prices in Christiania are not available in this country. The Danish index has been constructed only recently, is based upon the prices of 33 commodities, and is roughly weighted according to consumption.

The new British index number, compiled by the Board of Trade, will be found on p. 843 of this issue of the Bulletin. It has been revised and now uses prices in 1913 as a base. In the case of the two American index numbers, 1913 is used as the basis in the original computations. In the other cases in which 1913 appears as the basis for the computation, the index numbers have been shifted from their original bases. The computations in these cases are, therefore, only approximately correct. In a few cases July, 1914, or the year immediately preceding that, is used as the base. The figures are for the most part received by cable, and the latest ones are subject to revision. In cases where the index numbers were available they have been published for the war years in various issues of the Bulletin in 1920.
In the following table the all-commodities index numbers for the whole series of countries appear together to facilitate the study of comparative price levels.

INDEX NUMBERS OF WHOLESALE PRICES (ALL COMMODITIES).

${ }^{1}$ Index numbers for 1920 and thereafter based upon prices of 76 commodities. Computations arrived at by the method described on p. 465 of
the Bulletin for April, 1921.
${ }^{2}$ Average for the month.
End of month.
${ }^{4}$ Beginning of mon
${ }^{6}$ End of year and end of month.
${ }^{3}$ First of month.
${ }_{8}^{7}$ July 1 , 1913 , to June $30,1914=100$.
In the following tables the index numbers for $/$ referred back to the 1913 base and it is thereindividual groups of commodities are given for each country separately. Reference should be made to the preceding table for the "all commodities" indexes. In the case of the Italian group index numbers, Prof. Bachi's new computations only are given. These can not be

9 Middle of $1914=100$.
${ }^{10}$ Dec. 31, 1913-June 30, 1914=100
${ }^{11}$ July 1, 1912-June 30, 1914= 100 .
$12 \mathrm{July}, 1914=100$.
13 Ead of Suls, $1914=100$.
${ }^{14}$ Last six months of 1917.
fore impossible to compare present levels with prewar levels in these cases. No group index numbers are compiled by the Bank of Japan and the Danish index published by the Finanstidende has only two group indexes, one
for food and one for "other commodities."

## COMPARATIVE RETAIL PRICES IN PRINCIPAL COUNTRIES.

In the following table are presented statistics showing the trend of retail prices and the cost of living in the United States and important European countries. Three of these index numbers-those for the United Kingdom, Paris, and Sweden-are constructed on the basis of prices in July, $1914=100$. In the case of the United States, the original base, that of the year 1913, has been shifted to the July, 1914, base. The German index uses the year ending July, 1914, as a base.

The American index number, constructed by the Bureau of Labor Statistics, was based upon the retail prices of 22 articles of food, weighted according to family consumption, until January, 1921 , when it was increased to 43 articles reported by dealers in 51 important cities. The method of weighting continues the same, although the actual "weights" applied have been changed.

The British index number of the cost of living constructed by the Ministry of Labor consists of the retail prices not only of foodstuffs but of other articles as well. Retail clothing prices, rents, and the cost of fuel, lighting, and miscellaneous household items are also taken into consideration. The index number is weighted according to the importance of the items in the budgets of working-class families.

The retail price index for Paris, compiled by the French General Statistical Office, consists of retail prices of 13 different commodities, weighted according to the average annual consumption of a workingman's family of four persons. Eleven of the commodities included in this index are foods, and the other two are kerosene and alcohol.

The Swedish index number consists of the retail prices of foodstuffs, fuel, and lighting and is based upon the prices of 51 articles in 44 towns (in 1920, 50 articles in 49 towns), weighted according to the budget of a workingman's family which before the war had a yearly income of 2,000 kronor.

The German index expresses upon a percentage basis figures compiled by Dr. R. R. Kuczynski of the statistical office at BerlinSchöneberg. Dr. Kuczynski bases his calculations upon the cost of living per week of a family of four in Greater Berlin.

Retall Prices in the United States, Paris, and Sweden; Cost of Living in United Kingdom and Berlin.

|  | United States, retail prices. 1 | United Kingdom, cost of living.? | Paris, retail prices. ${ }^{1}$ | Sweden, retail prices. | Berlin, cost of living. ${ }^{3}$ |

${ }^{1}$ A verage for the month.
: Beginning of month

August, 1913-July, $1914=100$.

## FOREIGN TRADE-UNITED KINGDOM, FRANCE, ITALY, SWEDEN, AND JAPAN.

In the following table are presented figures showing the monthly value of the foreign trade of a group of important European countries and Japan. Similar statistics for Germany are not available. Currencies have not been converted to a common unit, nor are methods of valuation the same in all countries. In England, imports are given current c.i. f. values in England; exports and reexports, current f.o.b. values. The same method is followed in Japan and Sweden. In France and Italy, on the other hand, the value of foreign trade is estimated not in terms of current prices but in terms of those of some earlier date, usually the preceding year.

None of the figures presented below include the import or export of gold and silver. In the case of England and France, group figures are given as well as total values, while in the case of the other countries, total values only are presented. This does not mean that group figures are not obtainable, merely that they are either delayed in publication or appear not to be of such general interest as the French and English material.

Japanese figures for recent months are received by cable and subject to revision.

## FOREIGN TRADE OF UNITED KINGDOM.

${ }^{1}$ Not including gold, silver, or the reexport trade.
2 Calculated in 1913 value units.
Calculated in 1919 value units.
4 August, 1920 , through April, 1921, figures calculated in 1919 value units. French foreign trade figures are originally recorded in quantity units only, and the value of the trade is calculated by applying official value units to the quantities imported and exported. Normally the monthly statements of trade appear computed at the rates of the year previous, and only at the end of the year is the trade evaluated at the prices prevailing during that year. Because of the disturbed price conditions in France last year, however, it was not until July that the 1919 price units were decided upon and applied.

${ }^{1}$ Discount rate corresponds to interest rate borne by certificates pledged as collateral, with maximum and minimum limits shown.
Note.-On July 1, 1920, progressive discount rates were in effect at the Federal Reserve Banks of Atlanta, St. Louis, Kansas City, and Dallas, and discounts in excess of a basic line fixed for each member bank by the Federal reserve bank were subject to a one-half per cent progressive increase for each 25 per cent by which the amount of accommodation extended exceeded the basic line.

The Federal Reserve Banks of Atlanta, St. Louis, and Dallas abolished the progressive discount rates effective Nov. 1, 1920, June 23, 1921, and Feb. 15, 1921, respectively. Effective July 1, excess borrowings in the Kansas City district are subject to a 1 per cent increase for the first 100 per cent by which the amount of accommodation extended exceeds the basic line, and thereafter to an increase of 2 per cent.

## DISCOUNT AND OPEN-MARKET OPERATIONS AND CLASSIFIED HOLDINGS OF THE FEDERAL RESERVE BANKS.

## DISCOUNTS.

Discount operations of the Federal Reserve Banks during May and April, 1921 and 1920, are shown in summary form for the entire system in the table below. Detailed figures for the most recent month are given on pages 859 to 861 .

Volume of Discount Operations. [In thousands of dollars.]

| Average rate (365-day basis), per cent. | 6. 20 | 6.32 | 5.74 | 5.67 |

Discount operations for the month of May show a further decrease in volume as compared with April, the total for May being $\$ 4,254,000,000$ and for April $\$ 4,913,000,000$. In 1920 also May figures were somewhat smaller than April figures. May totals were smaller than April totals for 7 of the 12 reserve banks, particularly heavy decreases being noted for the New York and Richmond banks, while the Boston, Chicago, St. Louis, Minneapolis, and San Francisco banks report a larger volume of business in May than in April, the increase being particularly marked for the San Francisco bank.

The following table shows the volume of discounts reduced to a daily basis, according to the method explained in the March Bulletin, page 350. It will be noted that the average maturity of paper discounted in April was somewhat higher than in May, and that consequently the volume of operations reduced to a daily basis shows a smaller relative decline than the total volume. On the daily basis only two of the Federal Reserve Banks show a larger volume of discount operations in May than in April, namely, the Boston and Minneapolis banks.

Volume of Discounts Reduced to Daily Basis.

| Federal Reserve Bank. | Volume of discounts (in millions of dollars). |  | Average maturity (in days). |  | Volume on daily basis (in millions of dollars). |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | May. | April. | May. | April. | May. | April. |
| All banks. | 4,254 | 4,913 | 16.76 | 15.66 | 2,300 | 2,565 |
| Boston. | 372 | 367 | 11.61 | 8.78 | 139 | 107 |
| New York | 1,861 | 2,470 | 10.87 | 9.59 | 653 | 789 |
| Philadelphia | 358 | 360 | 14.13 | 15. 48 | 163 | 186 |
| Cleveland. | 252 | 253 | 17.03 | 20.72 | 138 | 175 |
| Richmond. | 213 | 292 | 16.85 | 13.93 | 116 | 136 |
| Atlanta. | 145 | 151 | 26.81 | 26.55 | 125 | 133 |
| Chicago | 379 | 374 | 31. 54 | 35.07 | 386 | 437 |
| St. Louis. | 137 | 135 | 24.14 | 27.44 | 107 | 123 |
| Minneapolis. | 68 | 65 | 50.05 | 43.10 | 109 | 94 |
| Kansas City | 72 | 91 | 41.73 | 34.90 | 97 | 106 |
| Dallas.... | 60 | 65 | 40.06 | 36.05 | 78 | 78 |
| San Francisco. | 337 | 290 | 17.33 | 20.74 | 189 | 201 |

Discounts of paper secured by Government obligations decreased from $\$ 3,266,000,000$ in April to $\$ 2,711,000,000$ in May, while other discounts declined from $\$ 1,647,000,000$ to $\$ 1,543,000,000$. The volume of commercial paper discounted was about $\$ 106,000,000$ less in May than in April, and the volume of agricultural paper about $\$ 3,000,000$ less, while the volume of live-stock paper discounted increased by about $\$ 6,000,000$. A smaller volume pf discounts of bankers' and trade acceptances is shown for May than for April, though the volume of bankers' acceptances drawn in the foreign trade was larger by $\$ 1,000,000$ during the most recent month. The average rate of discount in May was 6.20 per cent, compared with 6.32 per cent in April and 5.74 per cent in May of last year.

Following is a summary of holdings of discounted bills at the end of May and of April, 1921 and 1920:

Holdings of Discounted Bills.

## BANKS ACCOMMODATED.

During the month of May 31 banks were added to the membership of the system, the total number of banks increasing form 9,739 to 9,770 . The number of banks accommodated through the discount of paper in May was 5,616, and in April 5,559, so that the precentage of banks accommodated increased slightly from 57.1 to 57.5 per cent. Increases in the proportion of banks accommodated are noted in all the Federal Reserve districts, except those of Boston, Chicago, and St. Louis:

| Federal ReserveBank. | Member banks in district. |  | Member banks accommodated. |  | Percentage accommodated. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | May 31. | Apr. 30. | May. | A pril. | May. | April. |

| San Francisco | 864 | 859 | 483 | 477 | 63.8 | 55.5 |

## ACCEPTANCES.

A summary of the open-market operations of Federal Reserve Banks in May and in April, 1921 and 1920, is shown in the following table. Detailed statistics for each Federal Reserve Bank are given on pages 859 to 861 .
Volume of Open-Market Purchases of Acceptances.
[In thousands of dollars.]

|  | 1921 |  | 1920 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | May. | April. | May. | April. |
| Total. | 138, 601 | 123, 511 | 274,237 | 247, 594 |
| Bankers' acceptances-total. | 137, 980 | 121,412 | 270,498 | 240,704 |
| Domestic | 27,245 | 28, 335 | 72,768 | 56,189 |
| Foreign....................... | 85, 187 | 75, 560 | 195, 295 | 182, 762 |
| Dollar exchange-............... | 25, 548 | 17,517 2,099 | 2,435 3,739 | 1,753 6,890 |
| Domestic............ |  | 2,099 | 1,015 | 6,890 388 |
| Foreign. | 621 | 2,099 | 2,724 | 6,502 |
| A verage maturity (in days) | 23.20 | 26.60 | 44.22 | 51.59 |
| Average rate (365-day basis), per cent. | 5.88 | 5.94 | 5.96 | 5.82 |

Open-market purchases of acceptances in May aggregated $\$ 139,000,000$, compared with $\$ 124,000,000$ the month before, and $\$ 274,-$ 000,000 in May, 1920. Purchases of bankers' acceptances increased from $\$ 121,000,000$ in April to $\$ 138,000,000$ in May, the increase being due to the larger volume of acceptances drawn in the foreign trade and of dollar exchange, the
volume of acceptances in the domestic trade being somewhat smaller than the month before. The volume of trade acceptances purchased during May was only $\$ 621,000$, compared with about $\$ 2,000,000$ the month before. The average rate on acceptances purchased in May was 5.88 per cent, compared with 5.94 the month before, and 5.96 in May, 1920.

Following is a table showing the volume of open-market purchases in May and April reduced to a daily basis:

Volume of Open-Market Purchases Reduced to Daily Basis.

| Federal ReserveBank. | Volume of purchases (in millions of dollars). |  | Average maturity (in days). |  | Volume on daily basis (in millions of dollars). |  |

## ${ }^{1}$ Less than $\$ 500,000$.

The next table gives a summary of the holdings of purchased and discounted acceptances at the end of April and of May, 1921:

Holdings of Purchased and Discounted Acceptances.
[In thousands of dollars.]

While the volume of open-market purchases was larger in May than in April, the average maturity declined from 26.6 days in April to 23.20 days in May, with the consequence that the volume reduced to a daily basis was smaller in May than in April. The only Federal Reserve Bank for which a larger volume of acceptances purchased is reported in May than in April is the Boston bank, at which the average maturity of acceptances increased from 14.6 days in April to 18.8 days in May. For that bank the average daily volume of acceptances shows an increase from $\$ 6,000,000$ in April to $\$ 16,000,000$ in May.

## VOLUME OF OPERATIONS.

## CONDITION OF FEDERAL RESERVE BANKS.

Moderate liquidation of bills discounted and purchased in open market, and further strengthening of the reserve position of the banks through additions to gold reserves, are the outstanding features of development in the Federal Reserve field during the period from May 25 to June 22. Federal Reserve Bank holdings of discounted bills during the first two weeks of the review period show, on the whole, a slight upward tendency. Redemption on June 15 of about $\$ 400,000,000$ of tax certificates enabled member banks to liquidate $\$ 188,700,000$ of discounted paper, of which 44 per cent was paper secured by Government obligations. During the following week, when checks and drafts in payment of the June 15 installment of income and excessprofits taxes began to be presented for collection, member banks resumed their borrowings at the Reserve Banks, and total discounts held by the latter on June 22 show an increase of $\$ 46,300,000$ for the week, though the total held, $\$ 1,754,000,000$ is $\$ 116,300,000$ below the corresponding total shown four weeks earlier. Net liquidation during these four weeks was restricted to paper secured by Government obligations only, other discounts showing an increase of $\$ 19,700,000$. Aggregate holdings on June 22 of paper secured by Government obligations were about $\$ 658,000,000$, a reduction of over 50 per cent from the maximum holdings of last year, due largely to the elimination from the Reserve Banks' portfolios of paper secured by Treasury certificates. The per cent share of Government paper to total discounts held shows a decline to 37.5 per cent from about 42 per cent on May 25 and from 52.6 per cent about a year before.

While member bank holdings of Treasury certificates increased substantially on June 15 , Federal Reserve Bank holdings of paper secured by certificates reached a low level of about $\$ 31,000,000$ on that date, and on June 22 stood at $\$ 35,400,000$, a decrease of $\$ 18$,000,000 since the last May report. There is also shown a reduction of $\$ 118,600,000$ in the holdings of paper secured by other Government obligations, mainly Liberty bonds and Victory notes, this reduction being continuous and reflecting in part Government purchases in connection with sinking-fund operations. The total of Government paper held by the Reserve Banks at the close of the report period includes also $\$ 2,700,000$ of paper secured by the newly issued three-year Treasury notes.

In the following exhibit there is given a summary of the weekly changes in the principal
asset and liability items of the Federal Reserve Banks for the four weeks under review:

| Movement of Principal Assets and Liabilities of the Twelve Federal Reserve Banks Combined. [In millions of dollars.] |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Reserve percentage..... | 57.8 | 57. | . 3 | 56.8 | 60.4 |

Some changes are shown in the distribution of discounted paper by maturities. Thus 15day paper shows the largest absolute and relative reduction for the period, the share of the shortest-term paper declining from 59 to 57 per cent of the total discounts held. As against a slight decrease in 30 -day paper and a $\$ 55$,000,000 decrease in 60 -day paper, the weekly statements indicate a slow but steady increase in the holdings of 90 -day paper, while the amount of 6 -month paper shows a further increase from $\$ 70,100,000$ to $\$ 84,800,000$.

Holdings of acceptances purchased in the open market declined steadily from \$87,100,000 to $\$ 39,500,000$, this decline reflecting both the lessened supply of 'bankers' bills, in consequence of the shrinkage in our foreign trade, as well as the much larger proportion of these bills absorbed by ultimate investors. Reduction of $\$ 11,000,000$ from $\$ 233,400,000$ to $\$ 222,400,000$ in the amount of "Pittman" certificates held by the Reserve Banks with the Treasury to secure Federal Reserve Bank note circulation is shown, this decrease being accompanied by a decrease of $\$ 9,800,000$ in the banks' aggregate liabilities on Federal Reserve Bank notes outstanding. Changes in other certificates reflect largely the amount of special certificates taken by the New York and other Reserve Banks on J゙une 15 to cover temporary

advances to the Government pending receipt of funds from depositary institutions. In consequence of the changes in the principal earning assets shown, total earning assets show a decline for the period of $\$ 180,700,000$ and on June 22 stood at $\$ 2,082,400,000$, or nearly 40 per cent below the peak figure reported on October 15 of the past year.

Rediscounting operations are reported by the Richmond, Minneapolis, and Dallas banks. During the period under review, the New York Bank increased its accommodation to the first two banks from $\$ 25,300,000$ to $\$ 37,600,000$, while the Boston bank reports on June 22 among its discounted bills $\$ 4,100,000$ discounted for the Reserve Bank of Dallas, or $\$ 500,000$ less than the amount carried for Dallas by the Boston and Cleveland banks four weeks before. Owing to investment operations of the New York bank in connection with the reparation payments of the German Government, aggregate contingent liabilities of the Federal Reserve Banks on bills purchased for foreign correspondents show an increase from $\$ 32,300,000$ to $\$ 61,700,000$.

Total deposits fluctuated between $\$ 1,929,-$ 200,000 on June 15 and $\$ 1,697,200,000$ a week later. Federal Reserve note circulation, except for one week, shows a steady decline from
$\$ 2,734,800,000$ to $\$ 2,639,300,000$, or at an average weekly rate of $\$ 23,900,000$, as against $\$ 24,400,000$ for the previous five weeks. Between December 23, 1920, when the maximum outstanding note circulation was shown, and June 22 of the present year, the reduction in Federal Reserve note circulation totaled $\$ 765$,600,000 , or 22.5 per cent. During the same period the Reserve Banks reduced also their liabilities on Federal Reserve Bank notes in circulation by $\$ 83,800,000$, or by nearly 38.3 per cent.

A further gain of $\$ 57,500,000$ in gold reserves is shown, while other cash reserves, i. e., silver and legals, increased by $\$ 4,200,000$. Since the beginning of the year the banks' gold holdings have increased by $\$ 387,700,000$, and the total cash reserves by $\$ 366,300,000$. The banks' reserve ratio because of the considerable changes in deposit liabilities, shows some fluctuations. On June 22, the ratio stood at 60.4 per cent, compared with 56.8 per cent the week before, and 57.6 per cent four weeks earlier.
In the following table are shown comparative figures of average daily cash reserves, deposits, Federal Reserve note circulation, and reserve percentages of the Federal Reserve Banks for the months of May and June of the present and of the two preceding years:

CASH RESERVES, TOTAL DEPOSITS, FEDERAL RESERVE NOTE CIRCULATION, AND RESERVE PERCENTAGES FOR MAY AND JUNE, 1921.

## CONDITION OF MEMBER BANKS IN LEADING CITIES.

Loan liquidation at reporting member banks continued during the four weeks ending June 15 at about the same rate as during the preceding five weeks, the total liquidation for the most recent period being about $\$ 219,000,000$. Owing to the fact that June 15 was the date on which extensive Government operations in connection with the redemption of tax certificates and the issue of new Treasury certificates and three-year notes were effected, the developments for the last week of the review period are different from the general trend during the preceding three weeks, and the discussion of the changes in the leading resources and liabilities may be divided into two distinct periods: May 18 to June 8, and June 8 to June 15.

Following is a table showing changes in the condition of member banks for the last four weeks, and a chart summarizing these changes for 1920 and 1921 to date:

Movement of Principal Assets and Liabilities of Reporting Member Banks.

${ }^{1}$ Including bills rediscounted with F. R. Bank.
Loans secured by Government obligations show a decline of about $\$ 58,000,000$ for the four-week period, while loans secured by corporate stocks and bonds increased by about $\$ 9,000,000$. All other loans, representing
largely commercial and industrial paper, show liquidation for the four weeks of about $\$ 170$,000,000 , practically all of which occurred during the first three weeks. No significant changes are shown in member bank holdings of United States bonds and Victory notes,

while their holdings of Treasury certificates, which had declined from $\$ 236,000,000$ on May 18 to $\$ 168,000,000$ on June 8, increased to $\$ 265,000,000$ on June 15. At the same time the June 15 statement shows holdings of $\$ 152,000,000$ of United States Treasury threeyear notes, which were issued for the first time
on that date, and are carried as a separate item in the reports. Member bank investments in bonds, stocks, and securities other than those of the United States Government show a moderate increase of $\$ 22,000,000$ for the four weeks. As a consequence of these changes, total loans and investments of the reporting member banks showed a decrease of $\$ 268$,000,000 for the first three weeks of the period under review, followed by an increase of $\$ 239$,000,000 for the most recent week. At the end of the period total loans and investments of member banks stood at $\$ 15,418,000,000$, as compared with $\$ 15,447,000,000$ four weeks earlier, and $\$ 16,921,000,000$ on June 18 of the past year. Total liquidation for the year thus amounts to approximately $\$ 1,500,000,000$, or about 9 per cent.

Accommodation of member banks at the Federal Reserve Banks showed increases for the first two weeks of the period, followed by a moderate reduction during the third week, and a large decline during the latest week, when redemption by the Treasury of tax certificates enabled the member banks to reduce by $\$ 190$,000,000 their borrowings from Federal Reserve Banks. The ratio of accommodation at Federal Reserve Banks to total loans and investments of reporting members, which had risen from 8.5 per cent on May 18 to 9.1 per cent on June 1, declined to 8.9 per cent on June 8 and to 7.6 per cent on June 15.

Government deposits were rapidly withdrawn from depositary institutions during the first three weeks of the period, and on June 8 stood at $\$ 26,000,000$, but on June 15 , as the result of credit given the Government on the books of member banks for new issues of certificates and notes allotted, the Government account shows an increase to $\$ 411,000,000$. Other demand deposits (net) show an increase of $\$ 57,000,000$ for the first three weeks and an increase of $\$ 171,000,000$ for the week ending June 15, these increases largely representing balances built up by customers to meet their income and excess profits tax checks. Time deposits show a decline of about $\$ 102,000,000$ for the period, apparently following the withdrawal of a similar amount previously held among time deposits for the purpose of meeting corporate obligations maturing early in June.

Reserve balances with the Federal Reserve Banks increased by about $\$ 27,000,000$ during the first three weeks of the period, and showed an increase of $\$ 162,000,000$ for the most recent week. This large increase represents credit given to member banks on the books of the Federal Reverse Banks in connection with the redemption by the Treasury of June 15 tax certificates, and withdrawn by the former only during the following week. Cash in vault, after increasing from $\$ 326,000,000$ on May 18 to $\$ 337,000,000$ on June 8, showed a decline to $\$ 318,000,000$ on the latest report date.

## BANK DEBITS.

For the period ending June 22 debits to individual accounts show an upward tendency, though the most recent week witnessed a slight decline in volume. For the week ending June 1 the aggregate amount of debits was $\$ 6,997,000,000$, a somewhat larger figure than for the preceding week, in spite of the fact that the later week included Decoration Day, a legal holiday in most of the Federal Reserve districts. A larger figure for the second week was followed
by a further increase for the third week, which included mid-month payments, while the latest week in the period showed a small decline.

The movement of debits for the four-week period was closely parallel to the movement for the corresponding period in 1920, though this year's figures were at lower levels. The lag between the two years varied from 17 per cent for the week ending June 1 to 14 per cent for the week ending June 22.

## DEBITS TO INDIVIDUAL ACCOUNTS AT CLEARING-HOUSE BANKS.

## DISCOUNT AND INTEREST RATES.

In the following table are presented actual discount and interest rates prevailing during the 30 -day period ending June 15, 1921, in the various cities in which the several Federal Reserve Banks and their branches are located. A complete description of the several types of paper for which quotations are given will be found in the September, 1918, and October, 1918, Federas Reserve Bulletins. Quotations for new types of paper will be added from time to time as deemed of interest.

Rates for all classes of paper, on the whole, tended to decline from the levels prevailing in the period ending May 15, 1921. These declines have been most general in the case of prime commercial paper purchased in the open market. Present rates for all classes of paper, except bankers' acceptances and prime commercial paper purchased in the open market, are higher in most reporting centers than rates during the same period of 1920
discount and interest rates prevailing in various centers during 30-day period ending june 15, 1921.

| District. | City. | Prime commercial paper. |  |  |  | Interbank loans. | Bankers' acceptances, 60 to 90 days. | Collateral loans-stock exchange or other current. |  |  | Cattle loans. | Secured by warehouse receipts, etc. | Ordinary loans to customers secured by Liberty bonds and certificates of indebtedness. |
