## FEDERAL RESERVE BULLETIN

(FINAL EDITION)

ISSUED BY THE
FEDERAL RESERVE BOARD
AT WASHINGTON

JULY, 1923

## FEDERAL RESERVE BOARD.

Ex officio members:
A. W. Mellon, Secretary of the Treasury, Chairman.

Henry M. Dafeg,
Comptroller of the Currency.
D. R. Crissinger, Governor.

Edmund Platt, Vice Governor. Adolpi C. Miller.
Charles S. Hamlin.
George R. James.
Edward H. Cunningham.
W. W. Hoxton, Secretary.
W. L. Eddx, Assistant Secretary.
W. M. Imlay, Fiscal Agent.
J. F. Herson,

Chief, Division of Examination and Chief Federal Reserve Examiner.

Walter Wyatt, General Counsel.
Waler W. Stewart,
Director, Division of Research and Statistics.
M. Jacobson, Statistician.
E. A. Goldenweiser, Associate Statistician.
E. L. Smead, Chief, Division of Bank Operations.

FEDERAL ADVISORY COUNCIL.
(For the year 1923.)

## MANAGERS OF BRANCHES OF FEDERAL RESERVE BANKS.

## SUBSCRIPTION PRICE OF BULLETIN.

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It is printed in two editions, of which the first contains the regular official announcements, the national review of business conditions, and other general matter, and is distributed without charge to the member banks of the Federal Reserve System. Additional copies may be had at a subscription price of $\$ 1.50$ per annum.

The second edition contains detailed analyses of business conditions, special articles, review of foreign banking, and complete statistics showing the condition of Federal Reserve Banks. For this second edition the Board has fixed a subscription price of $\$ 4$ per annum to cover the cost of paper and printing. Single copies will be sold at 40 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board.

No complete sets of the BULLETIN for 1915, 1916, 1917, or 1918 are available.

## TABLE OF CONTENTS.

General summary: Page.
Review of the month ..... 767
Business conditions in the United States ..... 775
Special articles:
Statistical work of the Federal Reserve Board in 1922-23 ..... 794
Deposits of all member banks. ..... 795
Banking developments in the United States during the first quarter of 1923 ..... 796
Official:
Law department-Supreme Court decisions in par clearance cases ..... 788
State banks admitted to system ..... 793
Fiduciary powers granted to national banks ..... 825
Charters issued to national banks. ..... 793
Business and financial conditions abroad:
International trade and economic conditions in Europe ..... 800
Trend of business abroad-Statistical summary ..... 801
French banking in 1922 ..... 802
Recent developments in Japanese banking ..... 804
Price movement and volume of trade:
International wholesale price index ..... 812
Wholesale prices of individual commodities in the United States ..... 813 ..... 813
Comparative wholesale prices in principal countries. ..... 815
Comparative retail prices and cost of living in principal countries. ..... 818
Indexes of industrial activity-United Kingdom, France, Germany, Sweden, Canada, and Japan ..... 819
Foreign trade of principal countries ..... 822
Foreign trade index ..... 824
Ocean freight rates ..... 825
Report of Associated Knit Underwear Manufacturers of America ..... 825
Production and shipments of finished cotton fabrics ..... 826
Physical volume of trade ..... 827
Building statistics. ..... 832
Wholesale and retail trade ..... 833
Commercial failures ..... 787
Banking and financial statistics:
Domestic-
Discount and open-market operations of Federal reserve banks ..... 836
Condition of Federal reserve banks ..... 840
Federal reserve note account ..... 844
Condition of member banks in leading cities. ..... 845
Savings deposits ..... 824
Bank debits. ..... 849
Operations of the Federal reserve clearing system ..... 853
Gold settlement fund ..... 856
Gold and silver imports and exports. ..... 855
Money in circulation ..... 854
Discount rates approved by the Federal Reserve Board ..... 854
Discount and interest rates in various centers ..... 857
Federal reserve and member bank developments during year ending June 30, 1923 ..... 859
Foreign exchange rates ..... 866
Foreign-
England, France, Italy, Germany, Sweden, Canada, Argentina, and Japan ..... 867
Charts:
Member bank loans and investments ..... 768
Changes in condition of Federal reserve banks ..... 770
Index of production in basic industries and wholesale prices in the United States ..... 775
Bank credit ..... 776
Hog receipts compared with hog prices ..... 779
Production and shipments of lumber ..... 784
Increases in number of employees and size of pay rolls in various manufacturing industries. ..... 786
International wholesale price index-Federal Reserve Board ..... 811
Volume of domestic business ..... 827
Wholesale hardware sales. ..... 833
Department-store sales in the New York and Dallas districts ..... 833

# FEDERAL RESERVE BULLETIN 

VoL. 9 JULY, 1923.

No. 7

## REVIEW OF THE MONTH.

Midsummer is ordinarily a season of somewhat slackened business activity and low
 credit demand and a time when the credit position derives its importance from the fact that the banks are approaching the season of largest currency and credit requirements for crop moving. It is partly for this reason that, following the practice of earlier midyear statistical issues, the July review surveys banking and credit developments for the 12 -month period ending in June, 1923, and compares present banking conditions with those prevailing a year ago. July, 1922, marked the turning point in the demand for bank credit for commercial purposes and from that time until quite recently the volume of commercial loans has steadily increased. This larger demand for bank credit followed a growth in business activity which had started at least a year earlier. The rate of industrial recovery during the past two years has seldom been equaled in the business history of the country, and while it has been primarily industrial in character and has affected various lines of economic activity in differing degrees, it has been felt in all sections of the country. In agriculture, recovery from the 1920-21 depression came later and was less complete. In fact, the liquidation of indebtedness incurred during the two preceding years was effected by the use of a portion of the profits from the crops of 1922 , and it was not until the end of 1922 that loan reduction at banks in agricultural districts came to an end. Differences between the extent and time of recovery in industry and in agriculture are reflected in differences in business conditions in various sections of the country, and since industrial sections are sufficiently distinct from agricultural sections, these differences may be brought out by geographical comparisons.

Increased activity in the industrial sections of the North and East during the year gave

> Credit demand of industry and of agriculture. rise to a larger demand for bank credit. Member banks in leading cities in the eastern sections, with the exception of New York, increased their loans by between 10 and 14 per cent between June, 1922, and June, 1923, while in the agricultural districts loans increased by about 8 per cent. Loans by country banks in the St. Louis, Minneapolis, Kansas City, and Dallas districts actually decreased during the last half of 1922, at a time when the total loans of all member banks showed a rapid growth. Net loan reduction in agricultural districts did not begin until the second quarter of 1921, six months later than in industrial districts, and continued six months longer, until the end of 1922. This lag not only reflects the slower recovery of the farmer, but is related also to the fact that farmers realize upon the sale of their crops only at the end of a growing season, while in industry the turnover is much more rapid. Changes in the volume of business in merchandising and manufacturing are followed more promptly by corresponding changes in credit demand, and thus by the middle of 1922 new borrowing to finance the larger volume of current business exceeded the liquidation of outstanding indebtedness, and the total volume of loans in industrial districts increased. It was not until the profits of 1922 crops were available, however, that farmers were generally in a position to repay the obligations incurred during the two preceding years. During the first quarter of 1923 loans in agricultural districts, partly in response to credit demands in connection with the spring planting, showed a net increase.

Further evidence of loan liquidation in rural districts during the past year is shown by decreased rediscounting at Federal reserve banks by member banks in small cities and
towns, while banks in larger cities have increased their borrowings from the reserve banks at a rapid rate. During April, 1922, 42 per cent of the total volume of paper discounted by the reserve banks was discounted for banks in cities having a population of 100,000 and over, and about the same proportion for banks in cities of less than 15,000 population, while by April of this year these proportions were 75 per cent for the large cities and about 16 per cent for small cities and towns. Recently there has been an increase in the amount of borrowing at the reserve banks by member banks in smaller cities, just as there has been an increase in member bank loans in agricultural districts.

That industrial sections of the United States benefited earlier than agricultural sections from the expansion in the volume of business is indicated by the relative volume of check payments in various sections during the past year. A year ago bank debits in industrial sections were at about the same level as in 1919, while debits in agricultural regions were about 10 per cent smaller. This difference in relative volume has widened during the last year, since the growth of check payments has been much greater in the eastern industrial sections (except New York) than in the western and southern agricultural sections. Wholesale trade and retail trade have increased during the past year more rapidly in manufacturing than in agricultural sections, and although mail-order sales, which largely represent buying in rural communities, have almost doubled in monthly volume since the summer of 1922, they are still on a relatively lower level, when related to the volume of sales prior to the depression, than sales at department stores in large cities.

In general, therefore, there is shown for the year a rapid growth of industrial production and of demand for bank credit in manufacturing districts, while in agricultural sections the recovery started later and a growth in the demand for credit began to manifest itself only in response to the requirements of the planting season of this year.

Taking the country as a whole, the principal banking development of the year has been the

Increased loans by member banks.
rapid increase in the volume of loans, chiefly for commercial purposes ("all other loans"). Between the end of July, 1922, and the middle of June, 1923, these loans made by member banks in leading cities increased by $\$ 750,000,000$ and total loans and investments increased by $\$ 1,283,000,000$. Two-thirds of the increase in commercial loans has occurred since the opening of the year, while loans secured by stocks and bonds and investment holdings have declined somewhat during this period, so that total loans and investments of the banks have remained relatively constant between the end of March and the middle of

Figures for member banks in leading cities for the last report date of each month. Data for total loans, other loans, and investments are not available prior to 1921.

June. During the latter half of 1922 the increase in loans was accompanied by a corresponding growth in demand deposits, but during recent months demand deposits have decreased and the ratio of loans to deposits has increased, as is usual after a period of increasing credit and currency demand has been under way for a considerable time. At such a time a larger proportion of loans made by banks is
withdrawn in cash to meet enlarged currency requirements, resulting in a rising ratio of loans to deposits. The relationship between bank deposits and currency requirements is discussed more fully elsewhere in this review.

The large growth in time deposits during the past year has been accompanied by a corresponding growth in investment holdings. The table below shows for March 10, 1922, and April 3, 1923, the volume of time deposits and of different classes of investments held by all member banks, by class of cities:

Time Deposits and Investments of All Member Banks.

${ }^{1}$ Decrease.
Between March 10, 1922, and April 3, 1923, the increase both in time deposits and in investments of member banks amounted to about $\$ 1,500,000,000$. This close correspondence in the aggregates does not, however, appear in each class of cities. In central reserve cities the increase in investments was considerably larger than the increase in time deposits, while in country banks the increase in time deposits exceeded the growth of investments. There is also a marked difference in the character of the investments held by member banks in the different classes of cities. The increase in investments by central reserve city banks is confined to Government securities, while in country banks the increase in other securities exceeds the growth in their holdings of Government securities.

While at member banks the most important developments of the year have been the rapid Stability of increase of loans and investreserve bank ments and of demand and time credit. deposits, the chief characteristic of Federal reserve banking has been the relative stability of the volume of reserve bank credit in use, of note circulation, and of cash reserves.

The following table shows the net changes during the year in the principal items in the reporting member bank and Federal reserve bank statements:

Ceanges in Condition of Federal Reserve Banks and Reporting Member Banks.

1 Decrease.
2 Including loans secured by United States obligations.
Between June, 1922, and June, 1923, total earning assets of the reserve banks have changed but little, while during the same period the loans of member banks in leading cities increased by $\$ 900,000,000$ and their combined loans and investments by over $\$ 1,200,000,000$. Changes in the volume of reserve bank credit in use during the year have been largely seasonal in character, the increase during the latter half of 1922 being followed by a corresponding reduction since
the turn of the year. While the total volume of reserve bank credit has thus remained fairly constant, there have been important changes in the composition of reserve bank earning assets. During the latter half of 1922 discounts for member banks increased rapidly and acceptance holdings also advanced, while investments in Government securities showed a large reduction. At the turn of the year there was a seasonal reduction in discounts and a temporary increase in Government security holdings. From the middle of January, however, the earlier movement of increasing discounts, accompanied by declines in security holdings, was resumed and on June 20 discounts had advanced to $\$ 731,000,000$

Figures for the twelve Federal reserve banks combined for the last report date of each month.
from a low point of $\$ 500,000,000$ in the middle of January, while Governmentsecurities declined from $\$ 500,000,000$ in the middle of January to $\$ 121,000,000$, the lowest figure reported since 1918. Movements of the principal items of the reserve bank statement since 1919 are shown in the chart.

It has been the policy of the reserve banks during the past year gradually to reduce their holdings of Government securities in order to have demands for additional reserve bank credit take the form of discounts, that
is, of a direct demand by member banks for reserve bank accommodation. As has been previously noted in the Bulletin, the Federal Reserve Board has taken the view that in their open-market operations the reserve banks shall be governed "with primary regard to the accommodation of commerce and business" and has thereby made open-market operations rest upon the same general principles as those laid down in the Federal reserve act with respect to discounts.

Demand deposits of reporting member banks, as indicated in the table and the chart, show a decrease for the year, largely because there has been a considerable decline in these deposits during the past four months. In this respect the member banks in leading cities are not altogether representative of the banking situation as a whole, since the growth in the demand for funds in the interior has resulted in the withdrawal of balances from city correspondents, so that demand deposits of all member banks show a considerably larger growth than that reported for the member banks in leading cities. The growth in time deposits of the member banks for the year was about $\$ 667,000,000$.

There is a close correspondence between the growth of deposits of member banks and the growth of members' reserve balances with the Federal reserve banks, so that the ratio between the two remains constant. This stability of the ratio is due to the legal requirements as to reserve and to the practice of the banks of not keeping as reserves more than the minimum required by law. The law provides that member banks must keep as balances with the Federal reserve banks a reserve of 7,10 , and 13 per cent of their demand deposits, depending on the class of city in which they are located, and 3 per cent of their time deposits. The following table shows the relationship between deposits and reserves for all member banks for call dates beginning with June 30, 1919.

Ratio of Member Bank Reserves to Their Deposits.

Stability of the ratio throughout a period of credit growth and liquidation is brought out

Constancy of ratio between member bank reserves and deposits. by the table. The ratio as presented is calculated on the basis of net demand deposits, to which are added time deposits reduced to a demand deposit basis. A 10 per cent ratio, therefore, indicates that the banks keep on the average 10 per cent against demand deposits and 3 per cent against time deposits. That the ratio rarely falls below 10 per cent is to be expected in view of the fact that the legal reserve requirements for banks in different classes of cities average about this percentage. It is notable, however, that in practice the actual ratio rarely rises above the legal minimum. The difference between periods of increased demand for credit for commercial purposes and of relative relaxation in the demand is reflected not in the extent to which the member banks' own available reserves are utilized, but in the distribution of member bank funds between various types of loans and between loans and investments. Thus the aggregate amount of member bank credit extended, as reflected in their deposits, is constantly up to the limit of
their power to lend from their own resources. Increases and declines of the demand for credit are also reflected, in the absence of gold imports, in the extent to which member banks depend on the reserve banks for keeping their balances up to the legal requirement and for meeting a growing demand for additional currency.

Increasing demand for hand-to-hand currency generally follows upon the growth of bank deposits, which reflects increasing business activity and use of bank credit. The growth of money in circulation, however, generally lags behind the growth in deposits, which begin to increase as soon as the volume of business activity starts upward and is reflected in a growing demand for bank accommodation by manufacturers and wholesale merchants whose credit requirements increase with the growth of their operations. Increased demands for currency in turn follow advances in retail prices and in pay rolls, which generally lag behind expansion of business and wholesale price increases. While, therefore, there tends to be a definite sequence of changes in the volume of deposits and of money in circulation, the former measuring the available means of payments by check, and the latter the means available for cash payments, the ratio between the two is not constant. In the early periods of business expansion the ratio of deposits to currency is relatively high, because deposits grow faster than money in circulation. When, however, increased business activity becomes translated into larger pay roll, till money, and hand-to-hand currency requirements, the ratio of deposits to currency declines as cash requirements increase. During the past year, which was the second year of growing business activity, the increase of currency in use, as shown in the circulation statement of the United States Treasury, amounted to $\$ 336,000,000$, or approximately at the rate of $\$ 1,000,000$ a day. The following table shows the amount of different kinds of currency in circulation on June 1, 1922, and June 1, 1923, and the changes for the period.

Money in Circulation.
[In millions of dollars.]

|  | $\begin{aligned} & \text { June 1, } \\ & 1922 . \end{aligned}$ | June 1, 1923. | Increase. | Decrease. |
| :---: | :---: | :---: | :---: | :---: |
| Gold and gold certificates. ... | 595 | 746 | 151 |  |
| Silver and silver certificates.. | 548 | 670 | 122 |  |
| United States notes... | - 2.1294 | 306 2,228 | 12 |  |
| Federal reserve bank notes... | 79 | 22 |  | 57 |
| National bank notes........ | 725 | 734 | 9 |  |
| Total. | 4,370 | 4,706 | 336 |  |

Of the increase in money in circulation for the year, somewhat less than one-half represents a growth in the circulation of gold and gold certificates and less than one-third represents additions to Federal reserve note circulation. This relatively small proportion and amount of Federal reserve notes in the total money added to circulation has resulted in a lower percentage of Federal reserve notes to total money in circulation than has existed at any time since 1918. Relatively small increases are shown for United States notes and national bank notes and a considerable increase has occurred in the circulation of silver and silver certificates, only about one-half of this increase representing the replacement of Federal reserve bank notes retired from circulation, as silver purchases under the Pittman Act were effected. Of the total increase of $\$ 336,000,000$ in circulation only $\$ 42,000,000$ represents a net addition to Federal reserve currency in use. It is the inflow of gold which largely accounts for the growth in total money in circulation without additions to Federal reserve note circulation. Net gold imports between June 1, 1922, and June 1, 1923, aggregated $\$ 227,000,000$, two-thirds of which was added to circulation and the remainder mostly to the reserve balances of member banks. The inflow of gold during the year has thus been sufficient not only to take care of the growing reserve requirements of member banks, but also to satisfy the larger currency requirements. It has enabled member banks to go through a period of rapidly growing business activity and credit and currency demand without making use of a larger volume of reserve bank credit as measured by total earning assets of the reserve banks.

During the early months of 1923 , beginning with February, gold imports were on a much smaller scale than during the preceding two years, and for the first four months of the year total net imports of gold amounted to about $\$ 45,000,000$. This net addition was equaled during the single month of May, when payment by the German Government of part of its obligations to Belgium, together with receipts of gold from England in connection with the payment of the first installment on its debt to the United States Government, brought the total net gold imports for the month to $\$ 45,000,000$ and the total for the 12 months to $\$ 227,000,000$. A sufficient amount of this increase in the country's gold supply has been added to the reserves of Federal reserve banks to balance the relatively slight growth in deposit and note liabilities, with the result that the reserve ratio has remained fairly constant at a level above 75 per cent.
With the volume of reserve bank credit in use at about the same level as a year ago, and the volume of member bank credit at a considerably higher level, the banking position prior to the more active demand for credit at crop-moving time also differs from last year's in the greater liquidity of bank loans now outstanding. Payment of accumulated indebtedness which took place later in the agricultural districts than elsewhere has now largely restored the liquidity of banks in rural districts, and the recent increase in their loans to customers and in their borrowings from the reserve banks has been in response to a growth in current business.

For some time the Federal Reserve Board has been considering the matter of the use of Federal reserve and other cur-

Federal reserve bank agency in Cuba. rency of the United States in Cuba. Our relations withCuba are unique, because of the provisions of the Platt amendment, and also because the currency of the United States has been made legal tender by act of the Cuban Government, but no adequate machinery has ever been set
up by which unfit paper currency could be sent back to the United States for redemption and replacement.

The board has finally decided to approve a plan agreed upon by the Federal Reserve Banks of Atlanta and Boston by which they are to open agencies in Habana, working cooperatively along certain definite lines. It happens that a considerable part of the paper currency in Cuba consists of notes issued by the Federal Reserve Bank of Atlanta, and the plan is expected to continue these notes in circulation. It is expected that currency will be presented to the agencies for the purchase of cable transfers and that the currency so received will be at once sorted, so that the unfit bills can be sent back to this country for replacement by new currency. The new money will then be put into circulation through the purchase by the reserve agencies of bills of exchange from the banks operating in Cuba.

This, it is expected, will result not only in replacing unfit paper money with new currency but will have a tendency to stabilize banking conditions. Banks operating in Cuba will be enabled to carry on their business without the necessity of holding abnormal reserves and will be able at any time to obtain currency by selling prime bills of exchange originating in import or export transactions. The board's regulations have undertaken in some detail to safeguard these transactions.

It was on the application of the Boston Reserve Bank that the matter first came definitely before the board, and it was through agreement between the Atlanta Reserve Bank and the Boston Bank that it was worked out in detail. Some changes in detail may become necessary when the agencies get into operation, as the establishment of such agencies is an entirely new thing, and the board has reserved the right to terminate the agencies at any time if it deems such action advisable.

On June 11 the Supreme Court of the United States rendered two decisions on par clearance
cases, the full text of which is
Board's statement on par clearance. published elsewhere in the BuLletin. The Federal Reserve Board on June 29 amended the regulations governing the par clearance system
and sent the following letter to the governors of the 12 Federal reserve banks:
Effective August 15, 1923, the Federal Reserve Board has amended regulation $J$, which governs the par clearance system of the Federal reserve banks, by inserting these new conditions:
(6) No Federal reserve bank shall receive on deposit or for collection any check drawn on a nonmember bank which refuses to remit at par in acceptable funds.
(7) Whenever a Federal reserve bank receives on deposit or for collection a check drawn by, indorsed by, or emanating from any nonmember bank which refuses to remit at par in acceptable funds, it shall make a charge for the service of collecting such check of one-tenth of 1 per cent, the minimum charge to be 10 cents for each item.
The board has made public its reasons for this action as follows:
"The provisions of the Federal reserve act which authorize the establishment of a Federal reserve collection system were designed wholly for the benefit of the banking and commercial interests of the country. The system is now in operation between banks which in number are about 92 per cent of all banking institutions and which have approximately 98 per cent of the total banking resources of the country. The Federal reserve collection system has become a necessary instrumentality in effecting the country's domestic exchanges, its operation, including final payments through the gold settlement fund, has been of inestimable value and has resulted in enormous saving to those actively engaged in carrying on the commerce of the country, and there are no other facilities for operating a collection system which could approximate it in economy of operation. It has eliminated a very large portion of the time formerly consumed in the collection of checks and has cut down the cost of making the country's exchanges to the minimum. Even though an involuntary collection system may not be imposed upon the Federal reserve banks by the Federal reserve act, as interpreted by the Supreme Court of the United States in its recent decision, the system has fully justified its operation and is of such value to the banking and commercial interests of the country that its continuance as a voluntary system is of vital importance. Certain changes in the basis of the par clearance system are advisable in view of the recent decision of the Supreme Court.
"The board believes that participation in the par clearance system should be based upon the principle of reciprocity and that hereafter Federal reserve banks should not receive for collection checks on any nonmember bank which will not agree to remit in acceptable funds without deduction. The recent opinion of the Supreme Court makes it certain that the Federal reserve banks are not permitted by law to pay exchange. It must be clear that the more inclusive a collection system is the more efficient it will be and the greater will be the service it can render alike to the business and banking community. Therefore, since it is the object of the Federal Reserve Board to maintain an efficient system of par collection, which must at the same time be a voluntary system as far as nonmember banks are concerned, the concessions involved and the resulting benefits should be made and received by all participating banks. It is clear that those nonmember banks which are unwilling to remit without deduction for checks drawn on themselves have no right to share in the advantages of the par collection system.
"The Federal Reserve Board, therefore, in the exercise of its legal authority, has amended regulation J, series of 1920, in such a way as to prohibit any Federal reserve bank from receiving on deposit or for collection an y check drawn on any nonmember bank which refuses to remit
at par in acceptable funds and to require Federal reserve banks to make a collection charge for their services in collecting checks which bear the indorsement of, or are drawn by or emanate from any nonmember bank which refuses to remit at par in acceptable funds, such collection charge to be at a rate of one-tenth of 1 per cent, the minimum charge to be 10 cents for each item."

## NOTE.

On July 1 the Board's Division of Analysis and Research and the Office of Statistician were consolidated into one division

Consolidation of divisions. Research and Statistics. Mr. W. W. Stewart, who has been director of the Division of Analysis and Research since September 15, 1922, is the director of the new division.

## TREASURY FINANCE.

Financial operations of the Government during June centered largely about the middle of the month, when the second quarterly installment of income and profits taxes fell due. About $\$ 200,000,000$ of Treasury certificates matured on June 15, and on the same date interest on the public debt became payable in the amount of $\$ 75,000,000$. To complete its financing program for the fiscal year, the Treasury on June 11 announced an offering of $\$ 150,000,000$, or thereabouts, of six months' 4 per cent tax certificates, dated June 15 and maturing December 15 of this year. Since there are no maturities of the public debt between June 15 and September 15, and since interest payments in July and August are light, the Treasury expects the income-tax receipts during June, which are estimated to yield about $\$ 350,000,000$, together with existing balances and the proceeds of the new offering of Treasury certificates, to provide for all current requirements during the summer months and to carry the Treasury until the next quarterly tax payment in September. The new issue was largely oversubscribed, the total subscriptions amounting to $\$ 342,462,800$, of which about $\$ 38,000,000$ represented exchanges of Treasury certificates maturing June 15, 1923. All exchange subscriptions were allotted in full, while allotments on other subscriptions were made on a graduated scale, preference being given to smaller subscriptions.

In the table below are shown the subscriptions and allotments distributed by Federal reserve districts:

| Federal reserve district. | Total subscriptions received. | Total subscriptions allotted. |
| :---: | :---: | :---: |
| Boston. | \$28,630, 000 | \$22,480,000 |
| New York | 157,330, 500 | 74, 855, 500 |
| Philadelphia | 34, 848, 000 | 16, 189, 500 |
| Cleveland | 18, 973,500 | 8, 895, 500 |
| Richmond | 8,449,500 | 6,095,500 |
| Atlanta. | 9, 459,500 | 7, 579,500 |
| Chicago. | 29,991,800 | 21, 839, 500 |
| St. Louis. | 7, 329,500 | 5,699,500 |
| Minneapolis. | 5, 323, 500 | 5,323, 500 |
| Kansas City | 6,926,000 | 3, 381, 000 |
| Dallas... | 8, 886,500 | 4,576,500 |
| San Francisco. | 26,314,500 | 12,918,000 |
| Total. | 342,462,800 | 189, 833,500 |

On June 15 the Treasury also announced receipt of the first semiannual interest payment on the funded indebtedness of Great Britain to the United States under the terms of the debt settlement approved by the act of February 28, 1923. As stated in the March Bulletin (p. 71), the capital amount of this indebtedness was fixed at $\$ 4,600,000,000$, and semiannual interest upon the unpaid balance is to be paid at the rate of 3 per cent per annum for the first 10 years following December 15,1922 . The amount of interest due on June 15 was $\$ 69,000,000$, and as authorized by the terms of the setilement, was made in Liberty bonds, which were accepted at par and accrued interest, with a small cash adjustment. The bonds were $\$ 68,502,950$ face amount of second Liberty loan $44^{\prime}$ 's and $\$ 250,000$ face amount of fourth Liberty loan $4 \frac{1}{4}$ 's, the accrued interest being $\$ 247,022.56$ and the cash adjustment $\$ 27.44$. The Treasury announced that the bonds thus accepted have been canceled and retired and the public debt reduced accordingly.

On the same date the first semiannual payment of interest, amounting to $\$ 135,000$ on a principal indebtedness to the United States of $\$ 9,000,000$, was made by the Republic of Finland. This is the amount fixed by the funding agreement recently made, subject to the approval of Congress, under the provisions of the foreign debt funding act of February 28, 1923.
On June 19 the formal proposal of the British Government for the funding of the British debt to the United States, pursuant to the agreement already reached, was accepted by the Government.

## BUSINESS CONDITIONS IN THE UNITED STATES.

Production and shipment of goods continued in heavy volume during May; the volume of employment was sustained, and many wage advances were reported. Wholesale commodity prices declined during May and the early weeks of June.

Production.-Production of iron and steel, cement, and petroleum was larger in May than in any previous month, and mill consumption of cotton was close to maximum. The high level of production in these industries, together with increases in practically all other reporting lines, are reflected in an advance of 2 per cent in May in the Federal Reserve Board's index of production in basic industries. In the building industry there was a further decline in principal cities in the value of permits granted which represent prospective building operations. Contract awards, however, which represent actual current undertakings, continued to increase, though declines are reported in the New York and Chicago districts.

This industrial activity has been accompanied by a slight increase of employment at industrial establishments. The demand for labor was also reflected in a larger number of wage advances during the 30 -day period ending May 15 than in any earlier month this year, and average weekly earnings in all reporting industries increased by 3.8 per cent. The advances were most general in the cotton, steel, meat packing, and sugar refining industries.

In agriculture the condition both winter and spring wheat is reported less favorable than a year ago, while the condition of the cotton crop is slightly better than last year, owing entirely to more favorable growing conditions in Texas. A shortage of farm labor is reported from most sections of the country.

Trade.-Active distribution of commodities is indicated by heavy movement of merchandise and miscellaneous freight, and car loadings continued to exceed all previous records for this season. In certain lines of trade a decline in the volume of manufacturers' orders for future delivery is reported. The volume of both wholesale and retail trade was larger in May than

in April. Among the wholesale lines sales of meat, hardware, and shoes showed particularly large increases, while sales of clothing and dry goods decreased. The Federal Reserve Board's index of wholesale trade, which makes no allowance for seasonal changes, was 5 per cent higher than in April, and 14 per cent higher than a year ago. Sales of department stores increased about 8 per cent in May, and all reporting lines of chain-store business reported increases. Mailorder sales were 6 per cent less than in April, but were larger than in any previous May.

Wholesale prices.-Price declines were reported during May and the first three weeks of June for a large number of commodities. All of the nine groups in the Bureau of Labor Statistics index, except food and housefurnishings, show decreases for May and the average for all commodities declined by 2 per cent.

Bank credit.-Loans of reporting member banks in principal cities, which had been increasing since the early part of the year, declined by $\$ 115,000,000$ between May 16 and June 13. Bank holdings of Government securities, which increased by over $\$ 100,000,000$ in connection with the Treasury transactions of May 15, later declined as the securities were distributed by the banks.

These decreases in loans of member banks and the receipt during May of $\$ 45,000,000$ of gold from abroad were accompanied by a decrease in the earning assets of Federal reserve banks by $\$ 120,000,000$; for the four weeks ending June 21. At that time the volume of Federal reserve bank credit in use reached the lowest point since the opening of the year and approached the low point reached in August, 1922. Reserve bank holdings of bankers' acceptances and Government obligations are now lower than at any time since early in 1922.

The total volume of money in circulation increased by $\$ 38,000,000$ between May 1 and June 1, the increase being chiefly in gold and silver certificates, rather than in Federal reserve notes.

Money rates continued to show a slightly easier tendency. The June 15 issue of $\$ 150,000,000$ 6 -months Treasury certificates carried a rate of interest of 4 per cent, compared with 41 per cent on a similar issue sold in March.

## AGRICULTURE.

During the early weeks of May conditions continued generally favorable in most agricultural sections of the country. The last two weeks in the month were accompanied by low temperatures, excessive precipitation, and floods in many low-land areas, all of which were retarding factors to the progress of spring crops. General improvements were noted during the first two weeks of June, as a result of warmer and dryer weather in most Federal reserve districts. Spring plantings, with few exceptions, are practically completed and in many districts spring and summer fruits are moving to markets. In the St. Louis district excessive moisture and unseasonably low temperatures retarded crop progress, especially in the bottom lands, which are generally planted in cotton and corn. Replanting of considerable acreages of these crops was necessary. In some sections of the Chicago district unfavorable weather and a shortage of labor delayed farm operations and resulted in slightly less corn plantings. Crop conditions in the Minneapolis district were generally favorable in the middle of June; all grains showed a healthy color and a good stand, and fields were free from excessive weed growths. While the heavy rains in the Kansas City district were generally beneficial to most crops in the uplands, germination and growth were somewhat retarded on account of the wet soil. In the river valleys considerable damage resulting from overflow of the streams was reported. In general, the weather during May resulted more in a delay of crops rather than in universal damage. In Louisiana the acreage of sugar cane shows a slight increase over that of 1922 and also over the average acreage of five years, 1918-1922. Labor shortage in some agricultural sections was noted during May, but efforts are being made by official employment bureaus in the grain States to distribute the available supply of labor to areas where it is most needed.

According to the Department of Agriculture, prices of the principal crops failed to continue the upward movement that was evident in earlier months of the year and decreased about 0.8 per cent during May, but were 17 per cent higher than a year ago. Compared with the average for the past 10 years prices were 17 per cent lower. The decrease during May from the preceding month was contrary to the general trend of farm prices, which have shown an increase of about 2 per cent during May for the past 10 years.

## Grain.

During May the effects of the long period of drought which prevailed in many sections of the winter-wheat areas became evident. Although rains reached these areas in May and early in June, they were too late to save the crop in many sections. The condition of the winter-wheat crop for the entire United States on June 1 was 76.3, compared with a condition of 80.1 on May 1 and 82.3, the $10-$ year average condition on June 1. The estimated yield is $581,000,000$ bushels, which is below the final production of $586,000,000$ bushels in 1922 and the five-year average production (1917-1921) of $590,000,000$ bushels. Weather conditions, with few exceptions where seeding was delayed, continued favorable in springwheat areas of the Chicago and Minneapolis districts. Timely rains accompanied by warm days and cool nights have aided in bringing the crop forward rapidly. The condition of the crop on June 1 was 90.2 , which was only slightly below the condition of 90.7 on June 1 one year ago. The condition of barley and rye was below that of June 1, 1922, but oats showed a slight improvement. The total yield of both winter and spring wheat is estimated at $817,000,000$ bushels, compared with a yield of $856,000,000$ bushels in 1922. The following table shows the final grain yields in 1922 and the estimated yields in 1923:

Harvesting of winter wheat has begun in the Dallas and Kansas City districts and oats are being harvested in the Atlanta district. In some sections of the Kansas City district reports indicate damages by the Hessian fly and chinch bugs. Corn planting is nearing completion in all districts, but cultivation has been delayed somewhat by persistent rains.

The marketing of grain during May, as indicated by receipts of all grains at 17 interior centers, was in smaller volume than in April, 1923. The total movement during May amounted to $48,544,000$ bushels, compared with $63,365,000$ bushels in April and $86,458,000$ bushels in May, 1922. The table on page 829 gives in detail the movements of all grains.

Since the beginning of the year prices of wheat have been characterized by fluctuations within narrow margins, but the general trend has been downward in recent months. Corn prices have moved upward and the average price reached the highest figure in May since November, 1920. On June 19 a conference called by the governors of seven wheat-growing States convened in Chicago to discuss methods of relief to the wheat growers who are suffering from a depressed wheat market. Among the methods discussed were cooperative marketing, reduction of wheat acreage, and reduction of the annual carry-over.

## Cotton.

In all sections of the Cotton Belt unsatisfactory weather conditions retarded progress of the cotton crop during the greater part of May. In all districts the crop is reported about two weeks late. Wet and cold weather were the principal factors adversely affecting the young plants, but in the western cotton States the heavy rains resulted in floods in the lowland areas, and the crops in those sections were in many cases destroyed. According to the report released on June 1 by the Department of Agriculture, the condition of the cotton crop on May 25 showed improvement over the condition on the same date for the two preceding years, but was not as high as that of 1920 or the 10 -year average condition on May 25. Compared with the preceding year, increases were indicated for Florida, Texas, California, and Arizona. The greatest increase was in Texas, where weather conditions have been generally favorable. The greatest decreases as compared with the preceding year were in Missouri, Virginia, Alabama, and Arkansas. In the Atlanta district planting has been delayed in many sections, and bollweevil damage has been general. In the western counties of the Dallas district considerable increases in acreage have been made in counties where cotton is a new crop. Boll weevils have appeared in many of the old cottor counties, and destructive activity of other pests is pronounced. In the Southeastern States of the Richmond and Atlanta districts the labor shortage due to the exodus of negro workers has induced farmers to cultivate larger acreages per plow and use fertilizer in larger quantities. The use of calcium arsenate is very much more general than last year.

The marketing of the old cotton crop, as indicated by sight receipts and spinners' takings, was in greater volume than in the pre-
ceding month, when the low point of the year was reached. Compared with May, 1922, sight receipts were considerably smaller, but spinners' takings increased. The small takings by spinners in May, 1922, were due to the textile strike in New England mill centers. Stocks at mills and warehouses were smaller on May 31 than at the end of the preceding month and on the same date one year ago. Combined stocks at mills and warehouses amounted to $3,201,000$ bales on May 31, compared with $3,855,000$ bales on April 30 and 3,979,000 bales on May 31, 1922. Exports, which have been decreasing since November, 1922, continued to decline in May and reached the lowest monthly total since August, 1920, amounting to only 160,000 bales. Export demand for cotton improved slightly early in June and came largely from Liverpool, following somewhat more favorable developments in the European economic situation. The trend of spot cotton prices in May and June has been somewhat uncertain, as the price is influenced largely by conditions of the growing crop. The price of upland spot cotton, middling grade, at New York declined early in May to 25.30 cents per pound on May 11, butincreased after that time to 29.90 cents on June 11. Since that time it has fluctuated around 28 cents.

## Tobacco.

With the exception of some of the cooperative marketing associations which are still distributing the products of their members, the season for marketing leaf tobacco has closed. In the Richmond district most markets closed in April, but a few remained open until May. The season was in general satisfactory, as greater yields combined with higher prices than in the previous season resulted in farger returns to the growers. In the St. Louis district the burley and dark tobacco associations have functioned satisfactorily. Returns from the season's crop are being distributed among the producers as the pools are sold. Regarding the new crop, the season has been backward on account of unfavorable weather and scarcity of plants have delayed plantings. In the northern sections of the Richmond district dry weather delayed transplantings of tobacco plants in May, but rains in June enabled the work to progress, although the crop is approximately two weeks late. In South Carolina the crop is making normal growth.

Production of manufactured tobacco was in greater volume in May than in the preceding
month and, with the exception of small cigars, all types of manufactured tobacco increased over the same month a year ago. Detailed statistics of the several types of manufactured tobacco are given in the table on page 829. In the Philadelphia district the demand for cigars during June was only slightly better than in June, 1922. Production has been curtailed somewhat and is at an average of only 65 per cent of capacity. High-grade cigars were in best demand. In general, cigar prices remained unchanged during May and June. Stocks of cigars held by manufacturers are generally moderate and are remaining stationary or decreasing slightly.
Fruit.
Following the unseasonably low temperatures, excessive precipitation, and damaging winds during May in a large part of the fruit areas of the country, all of which wereinjurious to growing fruit crops, conditions became generally favorable in June. Peaches began to move from Georgia during the third week in May; harvesting of the berry crops was well advanced during the early weeks of June in sections of the Richmond and St. Louis districts; and gathering of the Valencia orange crop was well advanced in the San Francisco district early in June. In the Atlanta district the citrus fruit crop showed unusual improvement during May, as the customary dry weather in that month was not as serious this year as in previous years. On June 1 the condition of oranges was 92 per cent of normal, grapefruit 90 per cent, and limes 90 per cent, compared with 84 per cent, 80 per cent, and 79 per cent for the respective crops on June 1, 1922. Shipments of oranges and grapefruit were greater during May than in the same month in 1922 and amounted to 42,008 cars for the season through May, compared with 32,874 cars for the corresponding period a year ago. In the Pacific Northwest the apple crop is reported to be in excellent condition, with the commercial yield of apples in Washington forecasted at 23,991,000 boxes, compared with $21,312,000$ boxes produced in 1922. The indicated yield in California is less than the final production in 1922. Shipments of oranges for the season have exceeded those of the previous season, but lemon shipments are 20 per cent less than in the corresponding period a year ago. The Valencia orange crop is expected to total over $10,000,000$ boxes, and approximately 15 per cent of this crop had been shipped by June 1.

## Live stock.

Pastures and ranges in most live-stock sections of the country continued to improve in May as the result of warmer weather and welldistributed rains. In Texas excellent range conditions have enabled the stockmen to fatten their animals at home and few shipments are being made to northern pastures. In some sections of New Mexico and Arizona seasonal dry weather was unfavorable to the industry, but the situation has not become serious. The marketing of live stock, as indicated by receipts at 57 markets, was in large volume during May, exceeded the preceding month, and reached the largest volume since January. Compared with the corresponding month in the previous year the total number of animals received was greater, but the receipt of sheep were slightly less. Compared with April, receipts of all animals, with the exception of horses and mules, which declined 45 per cent, were greater. In the Kansas City district the receipts of calves for May were the largest for any May figure in the previous five years. In the San Francisco district the bulk of the lambs raised in California has been marketed, but in the Northern States the lamb-shipping season did not begin until about the 1st of June. Detailed figures showing the movement of live stock for May, 1923, April, 1923, and May, 1922, are given in the table on page 829.

During the past year the marketing of hogs has been in large volume and has been accompanied by a declining price, which reached its lowest point in May since December, 1921. The accompanying chart shows the movement of hogs to market and the average monthly prices since January, 1921.

Hog prices compared with receipts at 57 markets from Janusry, 1921,

## MINING.

Coal.
Conditions in the markets for anthracite and bituminous coal continue to be very different. Production is large in both branches of the industry, but demand for hard coal is insistent, while demand for soft coal is unusually dull. Mine output of anthracite aggregated 8,573,000 tons in May, which was 6 per cent more than in April. Most mines are working at capacity, although some are hampered by a shortage of miners and miners' helpers. Prices of domestic sizes have been firm, and orders for stove coal have been especially large. Steam sizes are in poor request and have registered some price declines.
Production of bituminous coal amounted to $46,076,000$ tons in May, which was 8 per cent higher than in April and over twice as large as in May, 1922, during the miners' strike. Weekly production reports have shown further increases during June, although some mines have closed on account of lack of market. The removal of embargoes to New England has not yet resulted in large rail shipments, as much coal had previously been shipped by water. Average prices of 14 coals compiled by the Coal Age on June 19 were 5 per cent less than on May 22 and 43 per cent lower than at the beginning of this year.

Coke production showed further expansion during May and established a new maximum. By-product ovens manufactured $3,328,000$ tons, an increase of 4 per cent over April, while beehive ovens produced $1,829,000$ tons, an increase of 3 per cent.

## Petroleum.

Production records for crude petroleum continue to be broken each week, and daily output for June averaged over $2,000,000$ barrels. Production during May totaled 61,962,000 barrels- 33 per cent more than was produced in May, 1922. Consumption remains below output, and stocks, which previously were taxing available storage space, again grew larger. Despite efforts to curtail production, the number of new wells completed totaled 1,871, the largest figure recorded for any month since 1920 . Crude-oil prices remained fairly firm for about a month after the middle of May, but on June 18 quotations in a number of eastern fields were cut from 10 to 25 cents a barrel, and reductions in other fields followed. The gasoline supply is also very large, and prices of gasoline and of other refined products have moved lower.

Production increases occurred in all the principal fields during May, but daily average output was cut down in some sections as a result of efforts to curtail. In Oklahoma and Kansas daily average production was slightly less than in April, but increases occurred in all Texas and Louisiana fields, owing to great activity in drilling new wells. A determined effort to curtail production by operators in California held daily output in May at a point only slightly above the April level. Shipments of petroleum from California increased during May, but still were smaller than output, and stocks increased further.

## Metals.

Production of all metals is being maintained at close to a maximum, although prices have shown a downward tendency during May and June. Mine production of copper in May totaled $124,785,000$ pounds, which was 6 per cent greater than in April and 36 per cent more than in May, 1922. Copper-mine operations have been expanding for a year and a half and are now at the highest rate since January, 1919. The price of refined electrolytic copper delivered at New York declined to 14.75 cents per pound at the end of May, but has advanced during June to a range of from 15 to 15.125 cents. There was a considerable volume of both domestic and foreign buying in the second week of June, which has been followed by a period of inactive demand.

Production of silver amounted to $6,835,000$ ounces in May, the largest monthly total in the post-war period. Silver purchases under the Pittman Act at $\$ 1$ an ounce ceased at the end of May. The present market price is only about 67 cents an ounce, but no sudden cessation of mining is probable, as most silver mines also produce either gold, copper, or lead.

Lead production in May was 9 per cent larger than in April and 40 per cent larger than in May, 1922. Prices at New York continued unchanged at 7.25 cents per pound during the first three weeks of June. During May prices of both lead and zinc ores declined in the Joplin district, but mining continued active. Production of slab zinc amounted to 47,300 tons, which was slightly larger than in April and has only been exceeded in March, 1923. Zinc shipments declined slightly and stocks were increased by about 4,000 tons. This was only the second month since July, 1921, to show an increase in zinc stocks.

## MANUFACTURING.

Food products.
Activity in the flour-milling industry during May was at a slightly higher level than in April, but failed to reach the level of any other month of the year. Compared with corresponding months in previous years, the May output was the largest of any May since 1919. During the month under review the total wheat-flour production amounted to $9,007,000$ barrels, compared with $8,969,000$ barrels in April and 10,463,000 barrels in May, 1919, the record figure for any May. Mill operations varied from 42 per cent of capacity in the Chicago district to 56.1 per cent of capacity in the Kansas City district, compared with 42.1 per cent and 54.2 per cent in the respective districts during April. The flour trade for both domestic and foreign consumption was characterized by dullness, as consumers and dealers were hesitant in placing new orders pending the market developments at the opening of the winter wheat harvesting season. The downward trend of wheat prices during the month was accompanied by lower quotations for flour. Exports of wheat flour continued to decline during May and reached the low point of the year, amounting to only 983,000 barrels, compared with $1,167,000$ barrels in April and 1,089,000 barrels in May, 1922.

Meat packing during May, as indicated by animals slaughtered under Federal inspection, was in greater volume than in the preceding month and in May, 1922. Slaughter of all animals increased, and at six centers in the Kansas City district the total slaughter was heavier than during any previous May in five years. The number of cattle slaughtered was greater than any month since December, 1922, and the number of calves slaughtered was the largest on record. The number of all animals slaughtered in May, 1923, April, 1923, and May, 1922, are shown in the table on page 829. Domestic trade in packing-house products during the month under review was in large volume, as dollar sales by 41 meat-packing companies, reporting to the Chicago Federal Reserve Bank, increased 22 per cent over April and were 16 per cent greater than in May, 1922. The demand from abroad continued good during May for lard and some meat products, but a slowing up in export demand was evident early in June, partly on account of the unsatisfactory condition of German exchange.

## Textiles.

Although buying of textile products continued to be relatively slow throughout May
and June, statistics of manufacturing activity indicated that total production was maintained at a high rate during May despite curtailment by some companies. Mills undoubtedly were working upon business previously received, as a few months ago many manufacturers reported sufficient orders booked to insure the continuation of operations until well into the summer. A number of mills, however, announced further curtailment of operations in June. Prices of many textile raw materials and products were weak throughont May and June, and steady declines occurred in some instances.

Cotton consumption during May totaled 620,965 bales, less than 3,000 bales below the record-breaking total for March. Although some New England plants reduced operations in May, consumption in that district was greater than during April, as other mills increased production and furthermore the output of certain lines which were in particular demand was greater. Activity in the Southern States during May, as indicated both by consumption of raw cotton and by active spindles, exceeded all previous records. All districts, however, reported dullness in buying during May and June, with a slight improvement in the Fall River piece-goods market in the latter part of June. Reasons for this inactivity were largely seasonal, but it has also been attributed to unfavorable weather and to the price disparity between old and new crop cotton. The Philadelphia Federal Reserve Bank reports that yarns have been practically neglected, particularly combed yarns. In the Atlanta district manufacturers reported declines during May in orders on hand for both goods and yarns and also a drop in shipments of goods but increases occurred in output. Cloth shipments and orders were likewise below those of last May. Finishers of cotton fabrics reported decreases in business for the country as a whole during May. In fact, new orders received were 20 per cent below the Anril figure. Cotton-goods prices, according to the Fairchild, index number, declined rather steadily from early in April until the middle of June. More recently they have been fairly steady.

Buying activity in wool-growing sections has subsided somewhat since the middle of May, partly because the greater part of the clip has been sold and partly because dealers were unwilling to pay the prices desired by the growers. According to the San Francisco Federal Reserve Bank, about 75 per cent of the wool clip had been sold by June 15 and at prices generally higher than any received since 1918 and 1919. As a result of dullness
in the eastern markets, some foreign wools have been offered at concessions in price and some have been reexported. The demand for woolen and worsted products was seasonally light during May and June. Production, however, continued at a high rate during the former month, with moderate recessions noted in the percentage of spindle-hours active. Manufacturers of suitings in the Philadelphia district reported some recent cancellations of orders and postponement of deliveries, together with curtailment of loom operations. Prices of both yarns and cloth have generally been firm.

Curtailment of activity in the silk market reported last month was reflected in statistics for May. Imports fell off slightly, but deliveries to American mills declined 36 per cent to 24,509 bales, the lowest figure since April, 1922. Stocks increased. The percentage of loom-hours operating in the Paterson and North Hudson sections also declined during May and early June. They are still considerably more active, however, than they were a year ago. According to the Philadelphia Federal Reserve Bank, the sale of broad silks was curtailed because of high prices and because of unsteadiness in the raw silk market in the face of the approaching crop. Manufacturers of goods and throwsters in that district have reduced operations considerably.

Sales of clothing by wholesalers were less during May than during April, according to reports to the Federal reserve banks of New York and St. Louis, but were substantially greater than those for last May. In fact, sales of women's clothing in the New York district showed an increase of nearly 50 per cent within the year. Tailors to the trade in the Chicago district reported that the number of suits made, shipped, and ordered during May remained practically unchanged as compared with the corresponding figures for April, but exceeded those of last May by over 20 per cent.

Production of knit underwear and new orders received during May were larger than the corresponding items for April. Shipments were practically the same and unfilled orders declined. Production and shipments were greater than during last May and unfilled orders on hand were substantially larger, but new orders booked declined considerably. Buying, therefore, was below that of a year ago, but mills were engaged in filling orders previously booked. The greatest productive activity was in the heavy-weight branch of the industry, but, according to data collected by
the Philadelphia Federal Reserve Bank, summer underwear was more active as regards orders and shipments.
Production and shipments of hosiery, according to statistics compiled by the Federal reserve banks of Philadelphia and Atlanta, were greater during May than in April, but the volume of orders booked declined. As shipments exceeded new orders, unfilled orders on hand likewise fell off during the month. Production, shipments, new orders, and unfilled orders were all larger than the corresponding items for May, 1922. The Philadelphia bank reported that warm weather in June increased sales of hosiery by wholesalers and retailers, and manufacturers were beginning to feel the improvement. Prices of many mercerized and cotton lines have been lowered.
Iron and steel.
New orders for iron and steel products are still much smaller than shipments from mills. As a result the unfilled orders of the United States Steel Corporation declined 4 per cent during May. New orders of structural steel were 29 per cent less in May than in April, while orders for steel castings declined 37 per cent. A strong feature of the present situation is the absence of cancellation of orders. The average price of 14 iron and steel products decreased in each of the first three weeks of June and on June 20 was 3 per cent below the 1923 peak reached on May 2.
Despite the decline in new orders, production of both pig iron and steel ingots in May reached the highest totals on record. Pigiron production amounted to $3,868,000$ tons, which was 9 per cent more than in April, while production of steel ingots by 30 companies (representing about 84 per cent of the industry) totaled $3,538,000$ tons, which was 7 per cent more than in April. Railroad buying is still large and rail mills are booked to capacity to the end of the current year. Automobile companies, on the other hand, have somewhat curtailed their purchases, and a large number of sheet mills have announced that they will close during July for a period of one or two weeks.

Reports from the Cleveland Federal reserve district indicate that unfilled orders for tin plate, wire products, and tubular goods are still so large that mills are hesitant in accepting bookings. It is also difficult to secure prompt delivery of plates, shapes, and bars. In the Philadelphia district buying of pig iron is small, but machinery, machine tools, and power equipment are in fair demand.

## Automobiles.

The number of automobiles produced and shipped both established new record totals in May. Passenger-car output aggregated 350,073, which was 2 per cent more than in April, while the output of trucks totaled 42,373 , an increase of 15 per cent. Shipments from factories were slightly larger in May than in April and were over three times as large as in May, 1922. Some curtailment is reported in the volume of manufacturing during June, but many large factories are still operating at capacity.

The Cleveland Federal Reserve Bank reports that large orders for future delivery of automobile bodies are being placed. Owing to the increased use of closed cars, the industry expects less curtailment in winter months than in the past. Reports from the Chicago district indicate that the supply of closed cars is not yet equal to the demand. A slight decline in the orders for industrial trucks and tractors is reported from the Cleveland district, but the demand is still heavy. Reports from 230 automobile dealers in the St. Louis district state that sales declined sharply in May, but were 15 per cent larger than a year ago. Trade was less active than in April in the country districts on account of the prevalence of unseasonable weather. Demand for accessories and tires has declined and some price reductions have resulted. The Federal Reserve Bank of San Francisco reports that purchases of automobiles in its district were almost twice as large in the first four months of 1923 as in the corresponding period of 1922.

## Leather and shoes.

Quietness noted last month in the hide, leather, and shoe markets continued during June. The demand for hides has been particularly light, and prices have been weak with some recessions, as tanners have shown little inclination to purchase supplies for more than current needs. Tanners themselves have reported a small and decreasing demand since March, and curtailment in production has begun. The output of sole leather in May was fractionally less than in April, whereas a rather substantial increase ordinarily occurs at that time. Tanners in the Chicago district reported a decline in the volume of new business booked during May, and production was also curtailed. An active demand for special lines of upper leathers suitable for prevailing styles of women's shoes was reported by the Philadelphia Federal Reserve Bank.

Demand for shoes recently has been limited largely to novelties, which rather discourages the placing of orders for future delivery because of the variability of styles. Producers of women's shoes in the Philadelphia district have taken few if any orders for shipments beyond August, and the great bulk of the fall business in all lines is yet to be placed. Shoe production was fractionally less in May than in April, declines occurring in all districts except New York. Shipments fell off in the Philadelphia district, according to reporting firms, but increased slightly in Chicago. Unfilled orders at the end of May were greater in both districts than at the end of April and substantially above those reported for a year ago. Sales in the wholesale and retail shoe trades showed a substantial recovery during May from the slump which occurred in April, and were likewise better than during May, 1922.

## Paper.

Newsprint production and shipments, after a drop in April, rose in May to the highest figures for any month on record. Stocks on hand increased slightly, but were still unusually low. Seasonal increases also occurred in production, consumption, and stocks of wood pulp during May, and likewise for the principal kinds of paper other than newsprint. They were also larger than during last May. Reports from the Philadelphia and Cleveland reserve districts indicate a slight slackening in the demand for many grades of paper during May and June. This is largely seasonal and the demand is generally still fairly satisfactory. Some. manufacturers have curtailed production, but most book-paper and wrapping-paper plants are running at capacity. Wholesalers report that sales have fallen off since March. Contract prices have remained practically unchanged.
Lumber.
Total production of lumber, as indicated by statistics of the National Lumber Manufacturers' Association, equaled 1,536,817,000 feet during May. This figure has been exceeded within the past 11 years only once-in May, 1917. Shipments during May amounted to $1,448,215,000$ feet, and were greater than in April but less than in March. As shown by the accompanying chart, production exceeded shipments in May for the first time since last November. This chart shows that mills began shipping to customers much earlier this season than they did last year, and that dealers made preparations during the winter for the large demand expected this spring. It should be
noted, however, that shipments fell below production somewhat earlier this year than last. Comparable monthly figures for orders are not available, but weekly data show that the peak in buying this season was reached in January and that the volume of orders received fell below shipments and production in March, whereas laśt year orders reached a maximum in May and fell off in June. During June of this year, both orders and shipments ran well below the cut in volume. Current production is greater than at this time last year, shipments are about the same size, and orders are much smaller. Manufacturers' stocks as a whole have increased recently, but are generally smaller than they were a year ago. The greatest recent increase in activity has been among mills on the Pacific coast.

Production and shipments of lumber from January, 1922, to May, 1923, according to statistics of National Lumber Manufacturers' Association.
Manufacturers and wholesalers in practically allidistricts reported a slackening of demand during May and early June, but retailers were generally busy filling orders. Yellow pine was in less demand than earlier in the year, and prices receded somewhat. Current indexes of lumber prices indicated a decline in softwoods of over 7 per cent between the weeks of April 27, the highest this year, and June 23, the lowest. The hardwood index fell off less than

4 per cent within the same period, and prices of hardwoods were much firmer in June than softwoods.

## BUILDING.

Actual construction operations continue to be maintained at a record rate, although the permit statistics indicate that there has been a moderate curtailment in the plans for new buildings. Building material prices registered a decline of over 1 per cent in April, following a steady upward movement since March, 1922. Production of building materials, however, continues to be very large and manufacturers' stocks are considerably lower than a year ago.

During May contract awards in 10 Federal reserve districts (compiled from statistics gathered by the F. W. Dodge Co.) reached a total value of $\$ 426,804,000$, which was 7 per cent greater than in April. Increases were recorded in all reporting districts except New York, Philadelphia, and Chicago. The expansion in new operations was particularly pronounced in southern sections, amounting to 81 per cent in the Atlanta district, 25 per cent in the St. Louis district, and 11 per cent in the Richmond district. May contracts for seven reporting districts were 6 per cent larger than a year ago. Contracts for residential buildings were 2 per cent less in May than in April, due to a substantial curtailment in the New York district. The number and value of building permits issued in May decreased in 168 reporting centers by 1 per cent and 18 per cent, respectively. Statistics of building contracts and building permits are published on page 832.

## TRANSPORTATION.

The chief features of the railroad situation continue to be a record volume of traffic for the season of the year, improvement in the supply of cars and locomotives, and an increase of both gross and net earnings. Car loadings in May totaled 4,713,000, which was 20 per cent more than in April and 41 per cent more than in May, 1922. Loadings in the week ended May 26 reached the third highest total on record and the largest aggregate for any week outside of the crop-moving season. Loadings of miscellaneous merchandise, coal, ore, live stock, and grain continue to increase.
Freight-car shortage has been reduced further and amounted to only 12,978 cars in the week ended June 8, as compared with 35,282 in the week ended April 30. During this period the shortage of box cars was reduced 87 per cent, while there was a 49 per cent decline in the shortage of coal cars. Less than 20 per cent of the locomotives of United States railroads were
awaiting repair on June 1, as compared with 22 per cent on May 1, while the number of bad cars showed a very small increase-from 210,505 to 211,766.

The net railway operating income of all Class I railroads in the United States totaled $\$ 83,201,000$ in April, as compared with $\$ 49,974,000$ a year ago, according to the Bureau of Railway Economics. If allowance be made for seasonal variations, the April earnings amounted to a return of 6.50 on the tentative valuation of the carriers, as compared with a return of 3.99 a year ago. For the first four months of 1923 the return averaged 5.49 per cent, as compared with 4.44 per cent in the corresponding period of 1922. The Interstate Commerce Commission has fixed 5.75 per cent as a fair return on railroad property

## TRADE.

## Wholesale trade.

The total volume of wholesale trade in the United States during May was greater than in April and with the exception of March was greater than in any month since November, 1922. Dollar sales by wholesale firms during each month this year have exceeded the sales during the corresponding months in 1922, and the total volume of trade during the first five months of this year has been greater than the total volume for the corresponding months in the preceding year. While the increases were due in part to higher wholesale prices, the actual volume of trade was greater, as a result of full employment and improved economic conditions throughout all sections of the country. Total sales in all lines were 5 per cent greater in May than in the preceding month and 14 per cent greater than in May, 1922. Most of the reporting lines except dry goods and clothing increased in May, and as compared with May, 1922, all lines showed increases. Sales of meat and shoes showed the greatest increases over April. Compared with May, 1922, the greatest increases were noted in the sales of hardware, meat, and shoes. Increases in the sale of shoes compared with April were noted in all Federal reserve districts from which reports were received and the greatest increases were in the southern districts of Richmond and Atlanta and in the western districts of St. Louis and Minneapolis. The increases ranged from 2 per cent in the San Francisco district to 71 per cent in the St. Louis district. The demand from the building trade and agricultural interests was in part responsible for the greater volume of hardware sales than in May, 1922. Increases in sales of hardware were indicated in all districts from which reports were
received, but were greater in the districts of Minneapolis, Dallas, St. Louis, Atlanta, and Cleveland. Decreases in the sales of dry goods, as compared with the preceding month were noted in all districts except in the Philadelphia, St. Louis, Dallas, and San Francisco districts, where small increases occurred. Factors which were largely responsible for declines in dry goods sales were uncertain conditions in the raw cotton markets and unfavorable weather during May in most districts, which delayed summer buying. The table on page 834 shows in detail the trend of wholesale trade in the United States and changes in wholesale trade by Federal reserve districts.
Retail trade.
Retail distribution during May was well maintained and increases over April were noted in all lines except in mail-order sales, where a decline of 7 per cent was indicated. Sales by department stores, cigar, and music chain stores reached the highest point of the year, but others failed to reach the volume that was evident in March, when most sales reached their highest point of the year. Distribution in all lines was in greater volume than during the same period a year ago. Department-store sales throughout all sections of the United States were 8 per cent greater than in April and 11 per cent greater than in May, 1922. Increases over May, 1922, were noted in all Federal reserve districts and were greatest in the industrial districts of Philadelphia and Cleveland and smallest in the Kansas City and St. Louis districts, where unseasonable weather resulting from low temperature and excessive rainfall somewhat retarded distribution in the agricultural sections. Increases ranged from 4 per cent in the Kansas City district to 18 per cent in the Cleveland district. Although the volume of mail-order sales was smaller than in April, sales increased 37 per cent over May, 1922, representing in part the increased purchasing power in the agricultural sections of the country. All chain-store sales increased during May compared with both the preceding month and May, 1922. The greatest increases over April were noted for shoe and cigar chains. Compared with May, 1922, the greatest increases were in the sales by music, grocery, and 5-and-10-cent chains.
Stocks of department stores, which had been increasing each month since January, declined 3 per cent in May from the preceding month, but were 10 per cent greater than in May, 1922. The table on page 835 shows in detail figures for retail trade by Federal reserve districts for May, 1922 and 1923.

## PRICES.

The wholesale price index of the Federal Reserve Board for the United States declined 2 points in May, from 169 to 167, and that of the Bureau of Labor Statistics 3 points, from 159 to its January figure of 156.
The decline was chiefly a matter of a decided drop in prices of certain raw materials, although producers' goods also declined slightly, the index of consumers' goods remaining stationary. The prices of grains, coal, metals, cotton, and petroleum fell, while among raw materials only those of cattle, hides, and lumber rose during the month. Most producers' goods showed little change, but steel products continued to rise, as did worsted yarns and acetate of lime, partly counteracting the effect of declines in gasoline, rubber, and copper-wire prices upon the group index. Among consumers' goods, price movements were various and partly seasonal, citrus fruits and potatoes rising and wheat flour, milk, and butter declining. The price of cotton cloth, like that of raw cotton, declined, and shoe prices, like those of hides, increased.

The price index of goods exported fell 7 points as compared with a decline of 3 points in goods produced in the United States, and of 1 point in goods imported, these movements bringing the three groups into closer relation with one another than before.

The group index numbers of the Bureau of Labor Statistics show how generally distributed was the downward price movement. Fuel and lighting materials, which declined somewhat in April, declined more rapidly in May, and farm products continued downward; foods, cloth and clothing, metals and metal products, building materials, and house furnishings, which rose in April, declined or showed no change in May, while chemicals and drugs which did not change in April started downward in May.

## EMPLOYMENT.

The volume of employment showed a further slight increase during May, wage increases were more numerous than in any earlier month this year, and pay rolls of reporting factories reached a record total. Reports from 6,075 industrial establishments to the Bureau of Labor Statistics indicate that employment in May increased 0.3 per cent as compared with April, while average weekly earnings increased 3.8 per cent and total pay rolls increased 4.1 per cent. Twenty-seven out of 47 reporting industries reduced the number of their employees during May, but these losses were more than offset by
gains in the other 20 industries, which included tobacco, petroleum refining, steel, sawmills, and many types of building materials. The curtailments were of a seasonal nature and were particularly important in the fertilizer, women's clothing, and millinery industries. Wage advances were reported by 1,279 establishments in May as compared with 800 establishments in April. These increases ranged from 4.7 per cent to 14.6 per cent, and were most general in the cotton, steel, meat-slaughtering, and sugarrefining industries.

Total length of bars represents percentageincreases in pay rolls for May, 1923, compared to May, 1922, for leading industries as reported by Bureau of Labor Statistics. Solid portions of bars represent increases
in number of employees.
The accompanying bar diagram illustrates the relative increases in number of employees and size of pay roll in various important manufacturing industries. It is worthy of note that the largest increases in pay rolls have occurred in the textile industries, the iron and steel industry, car building and repairing, and automobile manufacturing. The growth in volume of employment, represented by the solid section of the bars, has accounted for much of the increase in pay rolls, particularly in the automobile industry. The increase in pay rolls of steel companies, on the other hand, is largely due to increases in wage rates.

Reports from State departments of labor and Federal reserve banks indicate further slight decreases in employment in New England and New York as compared with steady expansion in other sections of the country. The New York State Department of Labor reports that the volume of employment during May was 1 per cent smaller than in April, due to seasonal decreases in activity in the clothing
and food industries and some reduction in the forces of textile mills and metal plants which have been expanding very rapidly during the past year. In the Philadelphia Federal reserve district employment increased about 1 per cent during May, while earnings increased 5 per cent. The largest increases in employment occurred at tanneries, sugar refineries, and car-repairing plants, while cotton textile mills considerably curtailed their forces. . Reports from the Chicago district show a 0.7 per cent increase in employment and a 2 per cent increase in pay rolls during May. The construction and building material industries reported the largest gains in employment. Railway-equipment and lumber plants curtailed their forces, but the latter industry increased the average hours of work per man to such an extent that there was no decrease in man-hours. The Kansas City Federal Reserve Bank reports a shortage of farm labor but states that employment bureaus have done much to secure the most efficient use of harvest workers. A shortage of metal miners is still reported from the Rocky Mountain States.

## COMMERCIAL FAILURES.

Commercial failures throughout the country did not show the decline in number during May that usually occurs during that month, as they were slightly more numerous than in April. Liabilities, on the other hand, fell off 20 per cent to $\$ 41,022,277$, the smallest figure for any month since last February. As compared with May of last year there was a substantial decrease in the number of failures and a smaller decline in liabilities. The number of insolvencies during the first three weeks of June totaled only 976, compared with 1,082 during the same time in May and 1,238 for a corresponding period last June.

In every Federal reserve district except that of San Francisco the number of failures during May were fewer than in May, 1922, but liabilities were larger in six districts out of the 12. In five districts-Philadelphia, Cleveland, Richmond, Atlanta, and Minneapolisthe volume of liabilities in May exceeded those of April, and in seven districts the number increased. The larger number in May than in the preceding month was due to an increase in the number of manufacturing failures from 388 to 401. On the other hand, manufacturing liabilities fell off nearly 50 per cent, whereas the amount involved in the trading insolvencies was over 20 per cent greater than during April.

Commercial Fallures During May.

| District. | Number. |  | Liabilities. |  |

| Total. | 1,530 | 1,960 | 41, 022, 277 | 44, 402, 886 |

## FOREIGN TRADE.

Preliminary figures of the Department of Commerce indicate the continuance of a heavy import balance during May. Exports for that month are reported at $\$ 319,000,000$, while imports amounted to $\$ 370,000,000$, an excess of $\$ 51,000,000$ on the side of imports.

The analysis of imports and exports by countries of origin and destination, which has been completed through April, discloses a number of points of special interest. As compared with the first four months of 1922, the greatest proportional increase this year in our trade with any of the grand divisions was with South America, our trade with that continent in both directions having increased very much more than our trade as a whole. Thus, imports from Argentina so far this year have been 148 per cent higher than in the same months of 1922, while our total import trade with the world has risen 54 per cent. Imports from all South American countries together have very nearly doubled in value. With Europe our import trade has risen 45 per cent, which is somewhat less than the increase indicated for our trade with the world.

Less striking changes have taken place in exports, which in the first four months this year were 11 per cent higher than in the same period last year. Exports to Europe increased only 4.5 per cent, the amount going to Germany decreasing 10 per cent and exports to most of the other countries of Europe showing only slight changes. The most conspicuous exception is Italy, which so far this year has received American goods valued at 65 per cent more than those a year ago. Exports to South America are up 39 per cent when the same four months of this year and last are compared.

## LAW DEPARTMENT.

## Supreme Court decisions in par clearance cases.

## SUPREME COURT OF THE UNITED STATES.

No. 717.-October Term, 1922.
\(\left.\begin{array}{c}American Bank \& Trust Co. et <br>
al., Appellants, <br>

v s .\end{array}\right\}\)| Appeal from the United |
| :--- |
| States Circuit Court |
| of Appeals for the |
| Fifth Circuit. |

[June 11, 1923.]
Mr. Justice Brandeis delivered the opinion of the Court.

After the decision in this case reported in $256 \mathrm{U} . \mathrm{S} .350$ an answer was filed which denied, in large part, the allegations of the bill. Then, by an amended answer, the Federal Reserve Bank disclaimed any intention of demanding payment in cash, when presenting checks at the banks, and averred its willingness to accept payment in drafts, either on the drawee's Atlanta correspondent or on any other solvent bank, if collectible at par. The District Court heard the case upon the evidence. It found that the Federal Reserve Bank was not inspired by any ulterior purpose to coerce or to injure any nonmember bank which refused to remit at par. It found that the evidence was insufficient to sustain any charge that the Federal Reserve Bank was exercising its rights so as to injure or oppress plaintiff banks. And it found, specifically, that the evidence did not sustain the charge that the Federal Reserve Bank accumulated checks upon non-member country banks until they reached a large amount and then caused the checks to be presented for payment over the counter, in order to compel plaintiff banks to keep in their vaults so much cash that they would be obliged either to agree to remit at par or to go out of business. With regard to publication on the par list of the names of non-assenting banks, the District Court held that the evidence did not justify a finding that such publication was made in order to injure or oppress plaintiff banks. But it was of opinion that insertion of their names might lead to the belief that the plaintiff banks had agreed to remit at par. An injunction was, therefore, granted against inclusion of their names on the par list. The relief sought was in all other respects denied. The decree left the Federal Reserve Bank free to publish that it would make collection at par of checks upon any bank in any town, thus including those in which plaintiffs had their respective places of business. 280 Fed. 940 . These findings were approved by the Circuit Court of Appeals; and the decree was affirmed, 284 Fed. 424.

The case is here on an appeal taken by the plaintiffs. The evidence was conflicting. No adequate reason is shown why the concurrent findings of fact made by the two lower courts should not be accepted by us. Luckenbach v. W. J. McCahan Sugar Refining Co., 248 U. S. 139, 145. Whether on the undisputed facts plaintiffs were entitled to additional relief is the main question for decision. In órder to decide that question it is necessary to consider the course of business formerly prevailing and the changes wrought by the attempt to introduce universal par clearance and collection of checks through the federal reserve banks.

A large part of the checks drawn on country banks are sent to payees who reside in places other than that in which the drawee bank is located. Payment of such a check is
ordinarily secured through the payee's depositing it in his local bank for collection. This bank ordinarily used, as the means for presenting the check to the drawee, a clearing house and/or correspondent banks. Formerly when the check was so presented, the drawee ordinarily paid, not in cash, but by a remittance drawn on his balance in some reserve city or by a credit with some correspondent. This process of collection yielded to the country bank a two-fold profit. It earned some profit by the small service charge called exchange, which it made for the remittance or the credit. And it earned some profit by using the depositor's money during the period (sometimes weeks) in which the check was travelling the often circuitous route, with many stops, from the payee's bank to its own, and also while the exchange draft was being collected. These avenues to profit are, in large measure, closed by the federal reserve banks' course of action. These banks do not pay any exchange charges to the drawee. And their superior facilities so shorten the time required to collect checks that the drawee bank's balances available for loans are much reduced. Largely because of the fact that the reserve banks thus make the collection without any deduction for exchange, most checks on country banks are now routed through the reserve banks. Although there is, as the District Court found, no intentional accumulation or holding of checks in order to embarrass, the advantages offered by the federal reserve banks have created a steady flow in increased volume of checks on country banks so routed. That the action contemplated by the Federal Reserve Bank will subject the country banks to certain losses is clear. ${ }^{1}$ In order to protect them from the resulting loss it would be necessary to prevent the federal reserve banks from accepting the checks for collection. For these banks can not be compelled to pay exchange charges or to abandon superior facilities.
The contention is that the injunction should issue, because it is ultra vires the federal reserve banks to collect checks on banks which are not members of the system or affiliated with it, through establishing an exchange balance, and which have definitely refused to assent to clearance at par. It is true that Congress has created in the reserve banks institutions special in character, with limited functions and with duties and powers carefully prescribed. Those in respect to the collection of checks are clearly defined. The original act (Act of December 23,1913 , c. 6 , sec. 13,38 Stat. 251, 263) authorized the reserve banks to
"receive from any of its member banks, and from the United States, deposits of checks
upon solvent member banks payable upon presentation; or solely for exchange purposes may receive from other Federal Reserve Banks deposits of . . . checks upon solvent member or other Federal reserve banks payable upon presentation.'

By the amendment to Section 13 of September 7, 1916, c. 461,39 Stat. 752 , the class of checks receivable was extended to "checks payable upon presentation within the district." By the amendment to Section 13 of June 21,1917, c. 32 , sec. 4,40 Stat. 232,235 , the class of banks from which checks might be received' 'solely for collection" was extended. By the latter amendment the facilities offered by the federal reserve banks were made available also to such non-members as became affiliated with the federal reserve system by establishing the required balance "to offset items in transit." It is true, also, that

[^0]in practice this amendment might result in excluding checks on particular banks from the class collectible through the federal reserve banks. For it enacted the clause which prohibits payment of exchange charges by federal reserve banks. And as this prohibition would prevent reserve banks from using the usual channels in making collection of checks drawn on those country banks which insist upon exchange charges, the reserve bank might find it impossible or unwise, as a matter of banking practice, to collect such checks at all. But the class of checks to which the reserve bank's collection service might legally be applied, was left by the amendment as those "payable upon presentation within its district." Wherever collection can be made by the Federal Reserve Bank, without paying exchange, neither the common law, nor the Federal Reserve Act precludes their undertaking it; if it can be done consistently with the rights of the country banks already determined in this case, 256 U. S. 350 .

Federal reserve banks are, thus, authorized by Congress to collect for other reserve banks, for members, and for affiliated non-members, checks on any bank within their respective districts, if the check is payable on presentation and can in fact be collected consistently with the legal rights of the drawee without paying an exchange charge. Within these limits federal reserve banks have ordinarily the same right to present a check to the drawee bank for payment over the counter, as any other bank, state or national, would have. For Section 4 ( 38 Stat. 251, 254) provides that the federal reserve banks shall have power:
"Seventh. To exercise by its board of directors or duly authorized officers or agents, all powers specifically granted by the provisions of this Act and such incidental power as shall be necessary to carry on the business of banking within the limitations prescribed by this Act."
The findings of fact negative the charges of wrongful intent and of coercion. The Federal Reserve Bank has formally declared that it is willing, when presenting checks, to accept in payment a draft of the drawee bank upon its Atlanta correspondent or a draft upon any other solvent bank-if collectible at par. Country banks are not entitled to protection against legitimate competition. Their loss here shown is of the kind to which business concerns are commonly subjected when improved facilities are introduced by others, or a more efficient competitor enters the field. It is damnum absque injuria. As the course of action contemplated by the Federal Reserve Bank is not ultra vires, we need not consider whether lack of power, if it had existed, would have entitled plaintiffs to relief. Compare National Bank v. Matthews, 98 U. S. 621 ; Blair v. Chicago, 201 U. S. 400 , 450.

Some minor objections are urged. The Federal Reserve Bank of Atlanta serves, directly, only the Sixth Reserve District, which includes Georgia. It is contended that the decree should be reversed because the District Court refused to allow the intervention as plaintiffs of banks located outside of that district; because that court refused to admit evidence of the activities engaged in by other federal reserve banks in other districts under the approval of the Federal Reserve Board; and because the court admitted certain joint answers to interrogatories propounded under Equity Rule 58. We cannot say that the trial court abused the discretion vested in it, or erred, in so ruling.

Affirmed.

Clerk, Supreme Court, U. S.

## SUPREME COURT OF THE UNITED STATES.

No. 823.-October Term, 1922.

Farmers and Merchants Bank of
Monroe North Carolina et al., Petitioners,
vs.
Federal Reserve Bank of Richmond, Virginia.
[June 11, 1923.]
Mr. Justice Brandeis delivered the opinion of the Court.
The Legislature of North Carolina provided by Section 2 of Chapter 20, Public Laws of 1921, entitled "An Act to promote the Solvency of State banks'":
"That in order to prevent accumulation of unnecessary amounts of currency in the vaults of the banks and trust companies chartered by this State, all checks drawn on said banks and trust companies shall, unless specified on the face thereof to the contrary by the maker or makers thereof, be payable at the option of the drawee bank, in exchange drawn on the reserve deposits of said drawee bank when any such check is presented by or through any Federal Reserve Bank, postoffice, or express company, or any respective agents thereof."
Section 1 authorizes banking institutions chartered by the State to charge a fee not in excess of one-eighth of one per cent. on remittances covering checks, the minimum fee on any remittance therefor to be ten cents. Section 4 exempts from the operation of Sections 1 and 2 all checks drawn in payment of obligations to the federal or the state government. Whether this statute conflicts with Section 13 of the Federal Reserve Act (December 23,1913 , c. 6,38 Stat. 251, 263; as amended September 7, 1916, c. 461, 39 Stat. 752; June 21, 1917, c. 32, Section 4, 40 Stat. 232, 234) or otherwise with the Federal Constitution is the question for decision.

The legislation arose out of the effort of the Federal Reserve Board to introduce in the United States universal par clearance and collection of checks through federal reserve banks. See American Bank \& Trust Co. v. Federal Reserve Bank of Atlanta, 256 U. S. 350. The Federal Reserve Bank of Richmond serves the Fifth Federal Reserve District which includes North Carolina. Upon the enactment of this statute the bank gave notice that it considered the legislation void under the Federal Constitution; that, when presenting checks to North Carolina state banks for payment over the counter, it would refuse to accept exchange drafts on reserve deposits as required by Section 2; and that it would return as dishonored checks for which only exchange drafts had been tendered in payment. Some checks were returned thus dishonored; and to enjoin such action, this suit was brought in a court of the State by the Farmers and Merchants Bank of Monroe and eleven other state banks. Two hundred and seventy-one more joined later as plaintiffs. So far as appears, none of them was a member of the federal reserve system or was affiliated with it. The trial court granted a perpetual injunction. The Supreme Court of the State reversed the decree, 183 N. C. $546 ;$ and the case is here on writ of certiorari, 261 U. S. Defendant admits that, if the North Carolina statute is constitutional, plaintiffs are entitled to an injunction.

To understand the occasion for the statute, its operation, and its effect the applicable banking practice must be
considered. ${ }^{2}$ Par clearance does not mean that the payee of a check who deposits it with his bank for collection will be credited in his account with the face of the check if it is collected. His bank may, despite par clearance, make a charge to him for its service in collecting the check from the drawee bank. It may make such a charge although both it and the drawee bank are members of the federal reserve system; and some third bank which aids in the process of collection may likewise make a charge for the service it renders. Such a collection charge may be made not only to member banks by member banks, national or state, but it may be made to member banks also by the federal reserve banks for the services which the latter render. The collection charge is expressly provided for in Section 16 of the Federal Reserve Act ( 38 Stat. 268) which declares that:
"The Federal Reserve Board shall, by rule, fix the charges to be collected by the member banks from its patrons whose checks are cleared through the Federal reserve bank and the charge which may be imposed for the service of clearing or collection rendered by the Federal reserve bank."
Par clearance refers to a wholly different matter. It deals not with charges for collection, but with charges incident to paying. It deals with exchange. Formerly, checks, except where paid at the banking house over the counter, were customarily paid either through a clearing house or by remitting, to the bank in which they had been deposited for collection, a draft on the drawee's deposit in some reserve city. For the service rendered by the drawee bank in so remitting funds available for use at the place of the deposit of the check, it was formerly a common practice to make a small charge, called exchange, and to deduct the amount from the remittance. This charge of the drawee bank the Federal Reserve Board planned to eliminate and, in so doing, to concentrate in the twelve federal reserve banks the clearance of checks and the accumulation of the reserve balances used for that purpose. The Board began by efforts to induce the banks to adopt par clearance voluntarily. ${ }^{3}$ The attempt was not successful. The Board then concluded to apply compulsion. Every national bank is necessarily a member of the federal reserve system; and every state bank with the requisite qualifications may become such. Over members the Board has large powers, as well as influence. The first step in the campaign of compulsion was taken in the summer of 1916, when the Board issued a regulation requiring every drawee bank which is a member of the federal reserve system to pay without deduction, all checks upon it presented through the mail by the federal reserve bank of the district. The operation of this requirement was at first limited in scope by the fact that the original act (Section 13) authorized the reserve banks to collect only those checks which were drawn on member banks and which were deposited by a member bank or another reserve bank or the United States. Few of the many state banks had then elected to become members. In September, 1916, Section 13 was amended so as to authorize a reserve bank to receive for collection from any momber (including other reserve banks) also checks drawn upon non-member banks within its district. Thereby, the Federal Reserve Board was enabled to extend par clearance
${ }^{2}$ See Annual Reports of the Federal Reserve Board, 1914, pp. 19, 20 , 174; 1915, pp. 14-17; 1916; pp. 9-12; Regulation I, Series of 1916, p . 169 ; 1917, pp. 23, 24; Regulation J, Series of 1917, pp. 181-183; 1918, pp. 74-77 204-206; $810,811,817,821 ; 1919$, pp. 40-44; 222-228; 1920, pp. 63-69; 1921 68-73; 228-230; Letter from the Governor of the Federal Reserve Board of January 26, 1920 , Senate Document No. 184, 66th Congress, 2d Session; also "Par Clearance of Chécks," by C. T. Murchison, 1 No. Car. Law Review 133.
${ }_{8}^{2}$ See Report, Federal Reserve Board, 1915, pp. 14-17; ibid, 1916, pp. 9-11.
to a large proportion of all checks issued in the United States. But the regulation (J) then issued expressly provided that the federal reserve banks would receive from member banks, at par, only checks on those of the nonmember banks whose checks could be collected by the federal reserve bank at par. It was recognized that nonmembers were left free to refuse assent to par clearance. By December 15, 1916, only 37 of the state banks within the United States, numbering about 20,000 had become members of the system; and only 8,065 of the state banks had assented to par clearance.

Reserve banks could not, under the then law, make collections for non-members. It was believed that if Congress would grant federal reserve banks permission to make collection also for non-members, the Board could offer to all banks inducements adequate to secure their consent to par clearance. A further amendment to Section 13 was thereupon secured by Act of June 21, 1917, c. 32 , section 4 , which provided, among other things, that federal reserve banks:
"Solely for the purposes of exchange or of collection, may receive from any non-member bank . . deposits of checks . . . payable upon presentation: Provided, Such non-member bank . . . maintains with the Federal reserve bank of its district a balance sufficient to offset the items in transit held for its account by the Federal reserve bank."

To this provision, which embodied the legislation proposed by the Federal Reserve Board, there was added, while in the Senate, another proviso, relating to the exchange charge, now known in a modified form as the Hardwick Amendment, which declares:
"That nothing in this or any other section of this Act shall be construed as prohibiting a member or non-member bank from making reasonable charges, to be determined and regulated by the Federal Reserve Board, but in no case to exceed 10 cents per $\$ 100$ or fraction thereof, based on the total of checks and drafts presented at any one time, for collection or payment of checks and drafts and remission therefor by exchange or otherwise; but no such charges shall be made against the Federal reserve banks."

Thus a federal reserve bank was authorized to receive for collection checks from non-members who maintained with it the prescribed balance; and strenuous efforts were then made to induce all state banks to so arrange. But the law did not compel state banks to do this. Many refused; and they continued to insist on making exchange charges. On March 21, 1918, the Attorney General, 31 Ops. Atty. Gen. 245, 251, advised the President:
"The Federal reserve act, however, does not command or compel these State banks to forego any right they may have under the State laws to make charges in connection with the payment of checks drawn upon them. The act merely offers the clearing and collection facilities of the Federal reserve banks upon specified conditions. If the State banks refuse to comply with the conditions by insisting upon making charges against the Federal reserve banks, the result will simply be, so far as the Federal Reserve Act is concerned, that since the Federal reserve banks cannot pay these charges they cannot clear or collect checks on banks demanding such payment from them."

The Federal Reserve Board and the federal reserve banks were thus advised that they were prohibited from paying an exchange charge to any bank. But they believed that it was their duty to accept for collection any check on any bank; and that Congress had imposed upon them the duty of making par clearance and collection of checks universal in the United States. So they undertook to bring about acquiescence of the remaining state
banks to the system of par clearance. 4 Some of the nonassenting state banks made stubborn resistance. ${ }^{5}$ To overcome it the reserve banks held themselves out as prepared to collect at par also checks on the state banks which did not assent to par clearance. This they did by publishing a list of all banks from whom they undertook to collect at par, regardless of whether such banks had agreed to remit at par or not. This resulted in drawing to the federal reserve banks for collection the large volume of checks which theretofore had come to the drawee bank by mail from many sources and which had been paid by remittances drawn on the bank's balance in some reserve city. If a state bank persisted in refusal to remit at par, the reserve banks caused these checks to be presented, at the drawee bank, for payment in cash over the counter. The practice adopted by the reserve banks would, if pursued, necessarily subject country banks to serious loss of income. It would deprive them of their income from exchange charges; and it would reduce their income-producing assets by compelling them to keep in their vaults in cash a much larger part of their resources than theretofore. That such loss must result was admitted. That it might render the banks insolvent was clear. But the federal reserve banks insisted that no alternative was left open to them, since they had to collect the checks and were forbidden to pay exchange charges. The state banks denied that the federal reserve banks were obliged to accept these checks for collection; and insisted that federal reserve banks should refrain from accepting for collection checks On banks which did not assent to par clearance.

It was to protect its state banks from this threatened loss, which might disable them, that the legislature of North Carolina enacted the statute here in question. ${ }^{\circ}$ It made no attempt to compel the Federal Reserve bank to pay an exchange charge. It made no attempt to compel a depositor to accept something other than cash in payment of a check drawn by him. It merely provided that, unless the drawer indicated by a notation on the face of the check that he required payment in cash, the drawee bank was at liberty to pay the check by exchange drawn on its reserve deposits. Thus the statute merely sought to remove (when the drawer acquiesced) the absolute requirement of the common law that a check presented at the bank's counter must be paid in cash. It gave the drawee bank the option to pay by exchange only in certain cases; namely, when the check was "presented by or through any Federal Reserve bank, postoffice or express company, or any respective agents thereof." The option was so limited, because the only purpose of the statute was to relieve state banks from the pressure which, by reason of the common-law requirement, federal reserve banks were in a position to exert and thus compel submission to par clearance. It was expected that depositors would cooperate with their banks and refrain from making the prescribed notation; and that when the reserve banks were no longer in a position to exert pressure by demanding payment in cash, they would cease to solicit, or to receive, for collection checks on non-assenting state banks. Thus,
${ }^{4}$ North Carolina was placed on the par list on November 15, 1920. There were on January 1, 1921, in the United States, 30,523 banks, state and national. Of these 1,755 state banks had refused to enter the par list. About 250 of the banks so refusing Were in North Carolina. During the year 1921 the number which refused to consent to par clearance increased to 2,353. Annual Report of Federal Reserve Board, 1921, p. 71. ${ }_{5}$ See American Bank \& Trust Co. v. Federal Reserve Bank of Atlanta, supra; Brookings State Bank $v$. Federal Reserve Bank of San Francisco, 277 Fed. 430; 281 Fed. 222; Farmers \& Merchants Bank of Catlettsburg, Ky. o. Federal Reserve Bank of Cleveland, 286 Fed. 610 .
Statutes similar in purpose were enacted in Alabama, Florida, Georgia, Louisiana, Mississippl, South Dakota and Tennessee. See Loc. Acts, 1920, No. 35; Florida, Laws, 1921, c. 8532; Georgia, Laws, 1920, p. 107; Louisiana, Acts, 1920, No. 23; Mississippi, Laws, 1920, c. 183; South Dakota, Laws, 1921, c. 31; Tennessee, Pub. Acts, 1921, c. 37.
these would be enabled to earn exchange charges as theretofore. Such was the occasion for the statute and its purpose. Whether this legislative modification of the com-mon-law rule which requires payment in cash violates the Federal Constitution is the question for decision. That it does is asserted on five grounds.
First. It is contended that in authorizing payment of checks by draft on reserve deposits Section 2 violates the provision of Article I, Section 10, clause 1 of the Federal Constitution, which prohibits a State from making anything except gold and silver coin a tender in payment of debts. This claim is clearly unfounded. The debt of the bank is solely to the depositor. The statute does not authorize the bank to discharge its obligation to its depositor by an exchange draft. It merely provides that, unless the depositor in drawing the check specifies on its face to the contrary, he shall be deemed to have assented to payment by such a draft. There is nothing in the Federal Constitution which prohibits a depositor from consenting, when he draws a check, that payment may be made by a draft. And, as the statute is prospective in its operation, Denny v. Bennett, 128 U. S. 489; Abilene National Bank v. Dolley, 228 U.'S. 1, 5, there is no constitutional obstacle to a State's providing that in the absence of dissent, consent shall be presumed. Laws which subsist at the time and place of the making of a contract, and where it is to be performed, enter into and form a part of it, as fully as if they had been expressly referred to or incorporated in its terms. This principle embraces alike those laws which affect its construction and those which affect its enforcement or discharge. See Ogden v. Saunders, 12 Wheat. 213, 231; Von Hoffman v. Quincy, 4 Wall. 535, 550. If, therefore, the provision of Section 2 authorizing payment by exchange draft is otherwise valid, it is binding upon the drawer of the check. Since it binds the drawer, it binds the payee and every subsequent holder, whether he be a citizen of North Carolina or of some other State, and wherever the transfer of the check was made. Brabston v. Gibson, 9 How. 263. For the holder of a check has, in the absence of acceptance by the drawee bank, no independent right to require payment under the general law. Bank of The Republic v. Millard, 10 Wall. 152. He takes it subject to the construction and with rights conferred by the laws of North Carolina, the place of the bank's contract and of performance. Pierce v. Indseth, 106 U. S. 546. Compare Rouquette v. Overmann, L. R. 10 Q. B. 525.
Second. It is contended that Section 2 violates the due process clause. The argument is that defendant is a federal corporation authorized to engage in the business of collecting checks payable upon presentation within the district, a business common to all banking institutions; that the right to engage in this branch of the business is a valuable property right; that while defendant has, in the past, not made any charge for such collections, it has the right to do so, and could make this branch of its business an important source of revenue; that to compel defendant to accept in payment of checks exchange drafts on reserve deposits, whether good or bad, deprives it of liberty of contract, and in effect of an important branch of its business, since that of collecting checks cannot be conducted under such limitations. To this argument the answer is clear. The purpose of the statute, as its title declares, was to promote the solvency of state banks. We should, in the absence of controlling decision of the highest court of the State to the contrary, construe the statute not as authorizing payment in a "bad" draft, but as authorizing payment in such exchange drafts only as had customarily been used in remitting for checks. So construed the statute is merely an exercise of the police power, by which the banking business is regulated for the purpose of protecting the public, and promoting the gen-
eral welfare. Noble State Bank v. Haskell, 219 U. S. 104, 575. The regulation here attempted is not so extreme as inherently to deny rights protected by the due process clause. Compare Chicago, Burlington \& Quincy R. R. Co. v. MfGuire, 219 U. S. 549, 567, 568; Central Lumber Co. v. South Dakota, 226 U. S. 157, 162 . If the regulation exceeds the State's power to protect the public, it must be because some other provision of the Federal Constitution is violated by the means adopted or by the manner in which they are applied.

Third. It is contended that the statute is obnoxious to the equal protection clause. The argument is that the Federal Reserve Bank of Richmond is obliged to accept payment in exchange drafts, whereas other banks with whom it might conceivably compete may demand cash, except in those cases where they present the check through an express company or the postoffice. It is well settled that the legislature of a State may (in the absence of other controlling provisions) direct its police regulations against what it deems an existing evil, without covering the whole field of possible abuses. Lindsley v. Natural Carbonic Gas Co., 220 U.S. 61, 81; Missouri Pacific Ry. Co. v. Mackey, $127^{\prime}$ U. S. 205 . If the legislature finds that a particular instrument of trade war is being used against a policy which it deems wise to adopt, it may direct its legislation specifically and solely against that instrument. Central Lumber Co.v. South Dakota, supra, p. 160. If it finds that the instrument is used only under certain conditions, or by a particular class of concerns, it may limit its prohibition to the conditions and the concerns which it concludes alone menace what it deems the public welfare. The facts recited above disclose ample ground for the classification made by the legislature. Hence, there was no denial of equal protection of the law. There remains to consider whether Section 2 exceeds the State's power, because Congress has imposed specifically upon federal reserve banks duties, the performance of which Section 2 obstructs; and that in this way, it conflicts with the Federal Reserve Act. This is the ground on which the invalidity of the North Carolina Act has been most strongly assailed.

Fourth. One contention is that Section 2 conflicts with the Fsederal Reserve Act because it prevents the federal reserve banks from collecting checks of such state banks as do not acquiesce in the plan for par clearance. The argument rests on the assumption that the Federal Reserve Bank of Richmond is obliged to receive for collection any check upon any North Carolina state bank, if such check is payable upon presentation; and is obliged to collect the same at par without allowing deductions for exchange or other charge. But neither Section 13, nor any other provision of the Federal Reserve Act, imposes upon reserve banks any obligation to receive checks for collection. The Act merely confers authority to do so. The class of cases to which such authority applies was enlarged from time to time by Congress. But in each amendment, as in Section 13, the words used were "may receive"-words of authorization merely. It is true that in statutes the word "may" is sometimes construed as "shall". But that is where the context, or the subject matter, compels such construction. Supervisors v. United States, 4 Wall. 435 . Here it does not. This statute appears to have been drawn with great care. Throughout the Act the distinction is clearly made between what the Board and the reserve banks "shall" do and what they "may" do. ${ }^{7}$

[^1]Moreover, even if it could be held that the reserve banks are ordinarily obliged to collect checks for authorized depositors, it is clear that they are not required to do so where the drawee has refused to remit except upon allowance of exchange charges which reserve banks are not permitted to pay. There is surely nothing in the Act to indicate that reserve banks must undertake the collection of checks in cases where it is impossible to obtain payment except by incurring serious expense; as, in presenting checks by special messenger at a distant point. Furthermore, the checks which the Act declares reserve banks may receive for collection are limited to those "payable on presentation." The expression would seem to imply that the checks must be payable either in cash or in such funds as are deemed by the reserve bank to be an equivalent. A check payable at the option of the drawee by a draft on distant reserves would seem not to be within the limited class of checks referred to in the Act. The argument for the Federal Reserve Bank is not helped by reference to the incidental power conferred by Section 4. It is only "such incidental powers as shall be necessary to carry on the business of banking within the limitations prescribed by this [the Federal Reserve] Act" which are granted. No duty or right of the Federal Reserve Bank to collect checks is obstructed by the North Carolina statute which merely gives to the drawee bank the right to pay in the customary exchange draft, where its depositor has, by the form used in drawing the check, consented that this be done.

Fifth. The further contention is made that Section 2 conflicts with the Federal Reserve Act because it interferes with the duty of the Federal Reserve Board to establish in the United States a universal system of par clearance and collection of checks. Congress did not in terms confer upon the Federal Reserve Board or the federal reserve banks a duty to establish universal par clearance and collection of checks; and there is nothing in the original act or in any amendment from which such duty to compel its adoption may be inferred. The only sections which in any way deal either with clearance or collection are 13 and 16 . In neither section is there any saggestion that the Reserve Board and the reserve banks shall become an agency for universal clearance. On the contrary Section 16 strictly limits the scope of their clearance functions. It provides that the Federal Reserve Board: "may at its discretion exercise the functions of a clearing house for such Federal reserve banks . . and may also require each such bank to exercise the functions of a clearing house for its member banks."

There is no reference whatever to "par" in section 13, either as originally enacted or as amended from time to time. There is a reference to "par" in Section 16; and it is so clear and explicit as to preclude a contention that it has any application to non-member banks; or to the ordinary process of check collection here involved. Section 16 (38 Stat. p. 268) declares:
"Every Federal reserve bank shall receive on deposit at par from member banks or from Federal reserve banks checks and drafts drawn upon any of its depositors, and when remitted by a Federal reserve bank, checks and drafts drawn by any depositor in any other Federal reserve bank or member bank upon funds to the credit of said depositor in said reserve bank or member bank. Nothing
tricts and may be designated by number"; Sec. 3: "Each Federal reserve bank shall establish branch banks within the Federal reserve district in which it is located and may do so in the district of any Federal reserve bank which may have been suspended"; Sec. 5: "outstanding capital stock shall be increased. . as member banks increase their capital stock . . and may be decreased as member banks reduce their capital stock ..."; Sec. 13: "... may receive... deposits time exceed"; Sec. 16: "Every Federal reserve bank shall maintain reserves . .."; "Every Federal reserve bank shall receive on de posit."
herein contained shall be construed as prohibiting a member bank from charging its actual expense incurred in collecting or remitting funds, or for exchange sold to its patrons.'
The depositors in a federal reserve bank are the United States, other federal reserve banks, and member banks. It is checks on these depositors which are to be received by the federal reserve banks. These checks from these depositors the federal reserve banks must receive. And when received they must be taken at par. There is no mention of non-member banks in this section. When, in 1916, Section 13 was amended to permit federal reserve banks to receive from member banks solely for collection other checks payable upon presentation within the dis-trict;-and when, in 1917, Section 13 was again amended to permit such receipt solely for collection also from certain non-member banks-Section 16 was left in this respect unchanged. In other respects Section 16 was amended both by the Act of 1916 and by the Act of 1917. The natural explanation of the omission to amend the provision in Section 16 concerning clearance is that the section has no application to non-member banks,-even if affiliated.

Moreover, the contention that Congress has imposed upon the Board the duty of establishing universal par clearance and collection of checks through the federal reserve banks is irreconcilable with the specific provision of the Hardwick Amendment which declares that even a member or an affiliated non-member may make a limited charge (except to federal reserve banks) for "payment of checks and . . remission therefor by exchange or otherwise." The right to make a charge for payment of checks, thus regained by member and preserved to affiliated non-member banks, shows that it was not intended, or expected, that the federal reserve banks would become the universal agency for clearance of checks. For, since against these the final clause prohibited the making of any charge, then if the reserve banks were to become the universal agency for clearance, there would be no opportunity for any bank to make as against any bank a charge for the "payment of checks." The purpose of Congress in amending Section 13 by the Act of 1917 was to enable the Board to offer to non-member banks the use of its facilities which it was hoped would prove a sufficient inducement to them to forego ex change charges; but to preserve in non-member banks the right to reject such offer; ${ }^{8}$ and to protect the interests of member and affiliated non-member banks (in competition with the non-affiliated state banks) by allowing also those connected with the federal system to make a reasonable exchange charge to others than the reserve banks. The power of the Federal Reserve Board to establish par clearance was, thus, limited by the unrestricted right of unaffiliated non-member banks to make a charge for exchange and the restricted right of members and affiliated non-members to make the charge therefor fixed as reasonable by the Federal Reserve Board. No bank could make such a charge against the federal reserve banks-because these were prohibited from paying any such charge. Member and non-member affiliated banks, because they were such, performed the service for the federal reserve banks without charge. Unaffiliated nonmember banks were under no obligation to do so. Thus construed, full effect may be given to all clauses in the Hardwick Amendment as enacted. It in no way interferes with the right of a depositor in a non-affiliated state bank to agree with bis bank that the checks which he might draw should (unless otherwise indicated on their

[^2]face) be payable, at the option of the drawee, in exchange in certain cases.

The North Carolina statute here in question does not obstruct the performance of any duty imposed upon the Federal Reserve Board and the federal reserve banks. Nor does it interfere with the exercise of any power conferred upon either. It is therefore consistent with the Federal Reserve Act and with the Federal Constitution.

Reversed.
Mr. Justice Van Devanter and Mr. Justice Sutherland dissent.

## State Banks and Trust Companies.

The following list shows the State banke and trust companies which were admitted to membership in the Federal reserve system during the month ending June 30, 1923, on which date 1,645 State institutions were members of the system:

|  | Capital. | Surplus. | Total resources. |
| :---: | :---: | :---: | :---: |
| District No. S. <br> Guardian Trust Co., York, Pa.... District No. 4. | \$300,000 | \$225,000 | \$2,381, 272 |
| Lake Erte Trust Co., Cleveland, Ohio. District No. 6. | 1,000,000 | 250,000 | 1,253,972 |
| Bank of Elberton, Elberton, Ga... District No. 7. | 100,000 | 25,000 | 631,962 |
| Twenty-sixth Street State Bank, Chicago, III. | 200,000 | 30,000 | 1,864,576 |
| Brown City Savings Bank, Brown City, Mich. | 40,000 | 8,000 | 660,623 |
| District No. 10. <br> The Sedan State Bank, Sedan, Kans. | 30,000 | 50,000 | 463, 224 |

Change of name.-The Citizens Bank, Pocatello, Idaho, to Citizens Bank \& Trust Co., Pocatello, Idaho.
Converted into national bank.--First State Bank, Leonard, Tex.; Citizens Bank of Renton, Renton, Wash.; Merchants \& Miners, State Bank, zens Bank of Renton, Renton, Wash.; Merchants \& Miner
Ironwood, Mich.; International Trust Co., Boston, Mass.
Insolvent. - Banking Corporation of Montana, Helena, Mont
Taken over by national bank.-Jefferson State Bank, Menan, Idaho, taken over by First National Bank of Rigby, Idaho.
Voluntary liquidation. Farmers State Bank, Coule
Voluntary liquidation.-Farmers State Bank, Coulee City, Wash.

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from May 26 to June 22, 1923, inclusive:

|  | Num. ber of banks. | Amount of capital. |
| :---: | :---: | :---: |
| New charters issued. | 21 | \$4,330,000 |
| Restored to solvency. | 0 |  |
| Increase of capital approved. | 20 | 2,765,000 |
| Aggregate of new charters, banks restored to solvency, and banks increasing capital.... | 41 | 7,095,000 |
| Liquidations. <br> Reducing capital. | 10 0 | 800,000 0 |
| Total liquidations and reductions of capital. . | 10 | 800,000 |
| Consolidations of national banks under act of Nov. 7,1918. | 1 | 500,000 |
| Aggregate increased capital for period. Reduction of capital owing to liquidations, etc..... |  | $\begin{array}{r} 7,095,000 \\ 800,000 \end{array}$ |
| Net increase. |  | 6,295,000 |

## STATISTICAL WORK OF THE FEDERAL RESERVE BOARD IN 1922-23.

Chief among the new statistical services established by the Federal Reserve Board during the year from July, 1922, to June, 1923, are the construction of a production index, of price indexes for Canada, France, and Japan, and of an index of wholesale trade for the United States.
The index of production in basic industries was developed by the Federal Reserve Board with the cooperation of the Federal Reserve Banks of Boston, New York, and Philadelphia. It was made by combining 22 separate series of monthly data. After correcting them to make allowance for customary seasonal variations in output the series were weighted according to production reported by the Bureau of the Census for the year 1919, which was used as a base. As most of the series were available since January, 1913, the index was computed from that date, so that it is a measure of monthly production activity in the United States for a period of over 10 years. The methods used in this study, together with complete results, were published in the Bulletin for December, 1922. Considerable work has also been done upon an index of annual production from the year 1890 to date, but no results of this study have yet been published.

The three new price indexes were prepared in continuation of the work of constructing indexes for international price comparisons, index numbers for the United States and Great Britain having been compiled before. For each country the commodities included in the index were selected in such a way as to be representative of its domestic and foreign trade. Two systems of grouping were used, one classification by goods produced, goods imported, and goods exported, and a second classification by raw materials, producers' goods, and consumers' goods. The new price indexes were described in the issues of the Federal Reserve Bulletin for July, August, and September, 1922.
The index of wholesale trade developed during the year is a decided innovation. Prior to 1922 the only data available on this subject were certain series of percentage changes for groups of reporting firms in a few Federal reserve districts. During 1922 all of the 12 Federal reserve banks commenced collecting monthly data of dollar sales for from 1 to 11 lines of wholesale business, and reports are now being received regularly from about 1,200 firms. Most of these firms have also reported annual sales for the years commencing with 1919 and their monthly sales from January,

1919, to date. From these data the Federal Reserve Board has compiled an index of wholesale trade based on sales of firms in 10 Federal reserve districts and in 6 lines of business. The base for this index is the year 1919, and it is weighted both by districts and by lines of trade. Indexes of sales of department stores and stocks of department stores since January, 1919, have also been constructed. The wholesale trade index was described in the Bulletin for April, 1923, and the index of department store stocks in the Bulletin for February, 1923.
Beginning with February, 1923, the Federal Reserve Bulletin has carried a table entitled "The trend of business abroad." This table brings together in condensed form the principal available items relating to credit, prices, foreign exchange, production, and trade for the United Kingdom, France, Germany, and the United States.

Commencing , with March, 1923, the items "due to banks" and "due from banks" were added to the statistical reports of member banks in leading cities as shown in the BuLletin. In the same issue of the Bulletin a monthly compilation of debits to individual accounts by Federal reserve districts was first published. These monthly figures are compiled from reports of 141 selected cities and are now being published regularly. Prior to this only weekly figures were made available. Banking statistics for all of the banks and trust companies compiled from reports of State bank commissioners as of December 29, 1922, were published in the Bulletin for April, 1923, and similar data as of April 3 of the present year are published in this issue. This is the only information available on which to base estimates of condition for practically all banks in the country and it will be published quarterly hereafter in the Bulletin. For the earlier period similar annual figures compiled by the Comptroller of the Currency are available, but only for the end of each fiscal year. Commencing with the present issue of the Bulletin, statistics of net demand deposits and time deposits for one date each month will be published for banks in each Federal reserve district, classified by the size of cities in which the banks are located.

Since July, 1922, additional series of wholesale price index numbers for four countries, retail food prices for 14 countries, cost of living statistics for 16 countries, 12 series of foreign industrial data, and statistics of imports and exports of five foreign countries have been added to the data published periodically in the Bulletin. Monthly tables of industrial statis-
tics for Canada and Japan have also been published regularly in addition to the countries already included. There have also been added 42 series of statistics for United States industries, and the number of reporting wholesale and retail firms has been largely increased. The board has also commenced to issue each month press releases dealing with the condition of wholesale trade, savings deposits, and foreign exchange rates.

## DEPOSITS OF ALL MEMBER BANKS.

In order to be able to follow more closely the credit developments in the different Federal reserve districts the Federal Reserve Board has arranged with the reserve banks to compile for one day near the end of each month figures of time deposits and demand deposits of all member banks in each district, classified by the size of cities in which they are located. These monthly figures will supplement the information available on call dates and will make it possible to compare every month the developments at banks in leading cities reporting weekly with those at banks outside of these cities.

The following statement shows for May 23,1923 , the number of banks and of time and demand deposits by size of city for the country as a whole:

| [Amounts in millions.] |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Panks in cities having population of- |  |  |  |  |
|  | Total. | Less than 5,000 . | $\begin{gathered} 5,000 \\ \text { to } \\ 14,999 \end{gathered}$ | 15,000 to 99,999. | $\begin{gathered} 100,000 \\ \text { or } \\ \text { over. } \end{gathered}$ |
| Number of banks. | 9,836 | 6,486 | 1,506 | 1,100 | 744 |
| Time deposits.... | 8,334 | 1,480 | , 918 | 1,707 | 4,230 |
| Net demand deposits........ | 15,927 | 1,600 | 1,070 | 2,060 | 11,197 |
| Percentage of total: <br> Number of banks. $\qquad$ | 100 | 6.5 .9 | 15.3 | 11.2 | 7.6 |
| Time deposits........... | 100 | 17.8 | 11. 0 | 20.5 | 50.7 |
| Net demand deposits.... | 100 | 10.1 | 6.7 | 12.9 | 70.3 |

It will be noted that nearly two-thirds of all member banks are located in towns having a population of less than 5,000 and that these banks have about 10 per cent of net demand deposits and about 18 per cent of time deposits. Member banks in cities of 100,000 population and over, on the other hand, constitute only 7.6 per cent of the total number, but hold about 70 per cent of net demand deposits and 50 per cent of time deposits. In large cities demand deposits are nearly three times as large as time deposits, while in the small cities the difference between the two classes of deposits is relatively small.

The ratio of net demand deposits to time deposits varies considerably in the several

Federal reserve districts, the two classes of deposits being approximately equal in the Minneapolis and San Francisco districts, while in the New York and Dallas districts net demand deposits are more than three times as large as time deposits. In the New York district the preponderance of net demand deposits is due chiefly to the banks located in cities of 100,000 population and over, while in the Dallas district time deposits are relatively small in each group of cities. In the Minneapolis district 800 banks out of 986 are located in towns of less than 5,000 inhabitants, and it is the preponderance of time deposits over net demand deposits in these small-town banks that accounts for the relationship between time and demand deposits in the district as a whole.
The following table shows the totals of net demand deposits and time deposits on call dates beginning with June 30, 1919, and on April 25 and May 23, 1923. This table presents a retrospective view of the growth of the two classes of deposits since the middle of 1919:
Demand and Time Deposits of all Member Banis.
[In thousands of dollars.]

| Date. | Net demand deposits. | Time deposits. |
| :---: | :---: | :---: |
| 1919: |  |  |
| June 30. | 14,700, 393 | 4,343,382 |
| Nov, 17. | $16,246,425$ | 5,049,493 |
| 1020. Dec. 31. | 16,563,421 | 5,304,793 |
| 1920: |  |  |
| June 30. | 16, 393,405 | 5,910,926 |
| Nov. 15. | 15, 906, 145 | 6, 144,064 |
| Dec. 29. | 15,326,865 | 6,187,921 |
| 1921: |  |  |
| Apr. 28. | 1-4, 370, 647 | 6,343,443 |
| June 30 | 14, 295, 227 | 6, 365, 632 |
| Dec. 31. | 14, 433,047 | 6,450,629 |
| 1922: |  |  |
| June 30. | 14, $15,509,071$ | 6,164, 670 |
| Dec. 29. | 16, 186,984 | 7, $5+4,581$ |
| 1923: ${ }^{\text {a }}$ (16,028,171 |  |  |
| Apr. 3. | 16,063,171 | 8,142,574 |
| Apr. 25. | 15, 800,089 | 8,257,274 |
| May 23. | 15,924, 897 | 8,334,471 |

The table brings out the fact that, while demand deposits increased by $\$ 1,225,000,000$, or about 8 per cent, in the period of approximately four years, time deposits increased by $\$ 3,991,000,000$, or about 92 per cent, during the same period. A further difference is that demand deposits increased rapidly during the latter half of 1919 , then declined until the middle of 1921, increased again until the end of 1922 and declined during the first three months of 1923; while time deposits show an uninterrupted growth throughout the period, though the rate of increase is not uniform.

Following is a table showing net demand and time deposits for April 25 and May 23, 1923, by Federal reserve districts and by size of cities:

TIME AND DEMAND DEPOSITS OF MEMBER BANKS IN EACH FEDERAL RESERVE DISTRICT, BY SIZE OF CITIES.

1 Includes 5 banks with scattered branches having combined deposits as follows: Net demand, $\$ 227,609,000$, and time, $\$ 440,812,000$.
2 Includes 5 banks with scattered branches having combined deposits as follows: Net demand, $\$ 265,211,000$, and time, $\$ 407,234,000$.

## BANKING DEVELOPMENTS IN THE UNITED STATES DURING THE FIRST QUARTER OF 1923.

In the tables below are shown comparative figures of principal assets and liabilities of banks in the United States as of December 29, 1922, and April 3 of the present year. For the earlier date there were available abstracts of condition of State banks and trust companies published by the banking departments of all States except New Hampshire. For the latter date the banking departments of New Hampshire, Indiana, and Kentucky had not issued calls for reports of banks subject to their supervision, while no reports had been
received from the banking department of Georgia at the time the compilation was completed. In arriving at totals for geographic sections and for the United States December figures were used for States for which no later data were available.

Since the State reports do not show separate totals for divisions of States falling within two Federal reserve districts, it is impossible to present the figures by reserve districts. But an attempt has been made to group the States so as to cover as nearly as practicable the terri-
tory of the Federal reserve districts. The States of Pennsylvania, Delaware, and Ohio were combined in one geographic group corresponding somewhat to the combined area of the Philadelphia and Cleveland districts. States located in more than one reserve district were placed in that territorial group which included the larger portion of the population. Thus the entire State of Illinois was placed in territorial group 6, corresponding more or less to the Chicago district. This group includes also the States of Wisconsin and Michigan, the southern parts of which are in the Chicago reserve district and the northern parts in the Minneapolis reserve district. A comparison of the estimated aggregate population of these State groups with the population of the corresponding Federal reserve districts is given herewith:

| [In thousands.] |  |  |  |
| :---: | :---: | :---: | :---: |
| Geographic group. | Population. | Federal reserve district. | Population. |
| Group 1-All New England States. | 7,663 | Boston. | 7,309 |
| Group 2-New York and New Jersey. | 14, 125 | New York. | 13, 723 |
| Group 3-Delaware, Pennsylvania, and Ohio. | 15, 341 | Philadelphia and Cleveland. | 17, 402 |
| Group 4-District of Columbia, Maryland, North Carolina, South Carolina, Virginia, and | 10, 297 | Richmond.. | 10, 120 |
| West Virginia. <br> Group 5-Alabama, Florida, Georgia, Louisiana, and Tennessee. | 10,660 | Atlanta. | 10,243 |
| Group 6-Illinois, Indiana, Iowa, Michigan and Wisconsin. | 18,864 | Chicago. | 16, 108 |
| Group 7-Missouri, Arkansas, Kentucky, and Mississippi. | 9,490 | St. Louis. | 9,245 |
| Group 8-Minnesota, Montana, North Dakota, and South Dakota. | 4,407 | Minneapolis......... | 5,299 |
| Group 9-Kansas, Colorado, Nebraska, Oklahoma, and Wyoming. | 6,457 | Kansas City......... | 7,230 |
| Group 10-Texas and New Mexico. | 5,271 | Dallas.. | 6,025 |
| Group 11-California, Arizona, Idaho, Nevada, Oregon, Utah, and Washington. | 7,380 | San Francisco. | 7,250 |
| Total. | 109,955 | Total | 109, 9 ¢5 |

As distinct from the compilation of December 29 figures, printed in the April Bulletin, the present compilation does not give a full balanced statement, but merely shows comparative figures of principal assets, including loans and discounts and investments, and principal liabilities, including individual deposits and rediscounts and bills payable. Totals of these items for State banks and trust companies as reported by the State banking departments, combined with corresponding figures for national banks, give totals for all member and nonmember banks (exclusive of mutual savings banks and those private banks which are not subject to State supervision), while, through combination with corresponding figures for member banks pub-
lished in the June Bulletin, it is possible to arrive at approximate figures for the nonmember banks.

A general picture of banking development during the first quarter of the present year may be had from the following table, showing totals as of December 29, 1922, and April 3, 1923, of the most important items for all banks, for member banks, and for nonmember banks:

| [Amounts in millions.] |
| :--- |

Total loans and investments of all banks included in the tabulation show an increase from $\$ 35,853,000,000$ in December, 1922, to $\$ 36,609,000,000$ in April, 1923. Of this increase, $\$ 621,000,000$ represents an increase in loans and $\$ 135,000,000$ an increase in investments. Individual deposits increased by $\$ 576,000,000$, while bank deposits showed a slight reduction. A comparison between the member and nonmember banks indicates that during the first quarter of 1923 the increase in loans was larger among member banks than among nonmember banks, while the increase in deposits was larger among non-members.
Loans and discounts of all reporting banks were larger on April 3, 1923, than at the close of 1922 in all the geographic groups, except groups 7 and 8, which correspond roughly to the St. Louis and Minneapolis reserve districts. Larger figures of security investments are shown for the banks in all the territorial groups, except group 2, which comprises the States of New York and New Jersey, and group 7. Increases in individual deposits were shown in most of the sections, but group 2, including New York and New Jersey, showed reduced deposits, and decreases are also shown for groups 7 and 10, corresponding roughly to the St. Louis and Dallas Federal reserve districts.
Comparative data for the more important asset and liability items covering all banks and State banks and trust companies (both member and nonmember) are shown in the following tables:

PRINCIPAL ASSETS AND LIABILITIES OF ALL BANKS ON DECEMBER 29, 1922, AND APRIL 3, 1923.
[In thousands of dollars.]

|  | Number of reporting banks. |  | Loans and discounts (including overdrafts). |  | Investments. |  | Total loans and investments. |  | Individual deposits, including dividends unpaid and postal savings. |  | Rediscounts and bills payable. |  |

## BUSINESS AND FINANCIAL CONDITIONS ABROAD.

Foreign trade and gold movements.-The monthly trade balance of the United States, which since March has been heavily on the side of imports, continued to be against this country in May, when imports were reported at $\$ 370,000,000$, exports at $\$ 319,000,000$, and the excess of imports at $\$ 51,000,000$. During the first five months of the year imports of goods have exceeded exports by $\$ 138,000,000$, and in addition there was a net inflow of gold amounting to $\$ 90,000,000$. Nearly half of this amount, or $\$ 44,532,000$, arrived during May, compared with $\$ 8,533,000$ for April, and a monthly average of $\$ 11,356,000$ for the preceding four months of the present year. Gold imports for May were the largest of any month since November, 1921. About $\$ 26,800,000$ of the gold came from England, apparently in connection with the June 15 interest payment of the British Government on its debt to the United States, and about $\$ 14,200,000$ from Germany in connection with reparation payments of the German Government to Belgium.

Foreign exchange.-Comparative stability in May and the greater part of June characterized the exchange rates of most foreign currencies, except the German mark, which after being supported at 0.0047 cent for over two months, dropped to 0.0033 cent in the latter part of April, and to 0.0006 cent on June 30. French and Belgian francs and Italian lire have also moved down from the levels reached in April and May. The pound sterling declined from $\$ 4.64$ at the beginning of May to $\$ 4.58$ at the end of June, compared with the year's maximum of $\$ 4.72$ in the middle of February. The Norwegian krone, after its abrupt break early in the year, has become steadier in recent weeks, and for several months the exchanges of Netherlands, Sweden, Austria, Czechoslovakia, and Finland have been practically stable. On the other hand, the Greek drachma, after a decline lasting many months, started to rise with great rapidity in May, and on June 2 reached 4.1 cents, a point over three times as high as the average rate in April. At the end of June the drachma was quoted at 2.9 cents.

Business conditions in Europe.-In Great Britain probably the most decisive recent evidence of the continuing gradual improvement in business is afforded by the foreign trade figures of April and May. Exports for May show an increase of 14 per cent compared with April and are higher than those in any month since January, 1921. Shipments of both raw materials and manufactures were greater, but the increase in the latter is especially noteworthy. Imports increased much less than exports, with the result that the current balance of trade against Great Britain has been considerably reduced as compared either with recent months or with May, 1922. Other data on the industrial situation in Great Britain, such as production and exports of key commodities, and the clearings of provincial banks afford additional evidence of the maintenance or increase of business activity. It may be noted, however, that the revival of business has not proceeded so rapidly nor so far in England as it has in the United States.

Available reports continue to indicate a high degree of business and industrial activity in France. Crop prospects have been reported good, with the wheat acreage considerably greater than in any year since the war. Freight car loadings reported through April are higher than in any similar period of last year. Iron and steel production, while running much lower than the average of last year, has shown a marked recovery from the low output early this year. The issue of French treasury bonds which closed in April is generally regarded as successful, although the Government was obliged to offer a high rate. Total receipts are given as $9,778,000,000$ francs, of which about $2,200,000,000$ francs were in cash, the remainder being in treasury bills or in the 2-year treasury notes which mature in June of this year.

Economic conditions in Germany during the past two months have been greatly influenced by the steady and precipitous decline of the mark, accompanied by a tremendous increase in prices. Prior to the occupation of the Ruhr, any new decline in the value of the mark was accompanied by a great demand for goods both at home and from abroad, which resulted in renewed business activity and greater employment. Now, however, restrictions and other factors connected with the Ruhr occupation have prevented to a large extent the revival of exports and unemployment has been steadily increasing. The industries especially affected are those which depend mainly upon foreign raw materials and which, owing to the low value of the mark abroad, are unable to import raw materials in sufficient quantities.

## FRENCH BANKING IN 1922.

While the year 1922 brought a remarkable recovery of French commerce, the extent to which the French banking system participated in the revival is uncertain. The annual reports of the great French commercial banks are brief and the balance sheets do not readily lend themselves to analysis. The combined accounts of the principal commercial banks as of December 31, 1922, show a material increase in deposits and an increase of nearly equal amount in loans, a large part of which consists of treasury bills.

French banks in 1922 continued to operate under peculiarly difficult financial and monetary conditions. Two factors in particular operate against normal development, and both of these must be borne constantly in mind in studying French banking during the past four years. The first are the wide and abrupt changes in the value of French currency, whether measured by exchange rates or by price averages; and the second is the urgent necessity of the State, principally for reconstruction. The former weakens the foundation of industrial and commercial confidence; the latter occasions a constant diversion of liquid capital from ordinary commercial channels. Term loans in frequent succession are offered by the Government, or under Government guaranty, at yields well above 6 per cent, while treasury bills, whether of the ordinary type or bons de la Défense Nationale, range from 3 to 5 per cent. These bills, of which about $60,000,000,000$ francs are outstanding, with maturities of from one month to one year, offer the threefold attraction of a good rate of interest, ready negotiability as bearer securities, and, in the case of those maturing within three months, the privilege of discount at the Bank of France. These two dominating factors go far toward explaining why a great part, if not the greater part, of the portfolios of the banks is composed of treasury paper, and also suggest a reason for the distinct decline since 1920 in "debits in current account."

The six great credit banks, whose combined balance sheet is presented below, represent perhaps one-half of the total banking resources of France. Not only because of their size, but because their numerous branches cover all of France, their statements may be taken to give a fair picture of banking conditions. The remainder of French banking facilities is provided by a large number of institutions. These include the two well-known underwriting banks, the Banque de Paris et des Pays-Bas
and the Union Parisienne. Among the others are establishments of considerable resources and numerous branches but with rather localized interests. Examples of these are the Crédit du Nord and the Banque Générale du Nord, both serving the industrial region about Lille; the Société Nancienne, the Banque de Mulhouse, and the Banque d'Alsace et de Lorraine in the industrial region of the east; and the Banque Privée of Lyons.

The six great credit banks considered in this article are the Crédit Lyonnais, the Société Générale, the Comptoir National d'Escompte, the Crédit Industriel et Commercial, the Banque Nationale de Crédit, and the Crédit Commercial. The Crédit Industriel differs from the others in that it has no branches outside of Paris and its vicinity, although it is interested in or controls a large number of regional banks scattered through the provinces. The last two, the Banque Nationale and the Crédit Commercial, were organized only shortly before the war, but their rapid development has entitled them to places in the group.

The following table shows the total resources of the six banks in recent years:

Total Resources of Six French Banks. [In millions of francs.]

| Banks. | 1913 | 1921 | 1922 |
| :---: | :---: | :---: | :---: |

| Crédit, Commercial | 1201 | 1,538 | 1,621 |

${ }^{1} 1914$.
The great increase in the figures since 1913 is primarily a reflection of the depreciation of the franc. Each of the four banks which led the list in 1913 has approximately doubled its resources, while the two newcomers have considerably exceeded this ratio. The increase noted in 1922 over 1921 is largely the result of expanding activities and aggressive policies. During the past year, for instance, the Banque Nationale absorbed the Banque Francaise pour le Commerce et l'Industrie; the Comptoir d'Escompte, which had opened no new agencies since 1914, in 1922 installed 6 branches and 40 part-time agencies; and the Crédit Lyonnais, 8 branches and 54 part-time agencies. The latter are open only on specified days for the purpose of extending banking facilities to communities in which the volume of business would not justify a regular branch. This aggressive policy in 1922 was not confined to
great establishments. The Crédit du Nord, mentioned above, opened 20 agencies during the year, while the Société Nancienne, which had 36 branches before the war, now has 148. This penetration into the rural regions extends banking facilities to the agricultural population, which has prospered in recent years and which hitherto has been greatly given to hoarding currency.

The operations of the banks comprise not only the usual activities of credit establishments, but also the underwriting of securities, which was also one of their principal functions before the war. Since 1913, and especially since 1919, the volume of new securities has been enormous, though by far the larger part has been issued by the Government or with Government guarantee, in connection with the reconstruction program. Other issues, though only a small fraction of the total, have yielded larger underwriting commissions. While the annual reports mention the importance of this phase of the banks' activity, they do not go into details of these operations, from which the banks derive no small proportion of their profits.

The consolidated balance sheet reproduced herewith is taken from "La Situation Economique et Financière" of May 18, 1923. To this has been appended an index showing the relative change in the various items between 1913 and 1922. In comparing these two years, it is necessary to take into account the great depreciation of the franc, which in December, 1922, retained only about one-fourth of its prewar ralue in terms of goods, and in gold less than one-half.

| Index for 1922 (1913=100)... | 321 | 130 | 39 | 147 | 121 |

The item of cash on hand or in banks, including the Bank of France, has more nearly kept pace with the depreciation of the purchasing power of the franc than any other item, its index being over 400 . For the six banks it represents a ratio of about 13 per cent to demand deposits, as compared with just under 10 per cent for 1913.

Very little comment can be made on the portfolio, which includes both commercial and treasury paper. The banks do not give the relative proportions held, but there is every reason to believe that the treasury bills exceed by far the commercial. The annual report of the Crédit Lyonnais states that the greater part of its portfolio is still treasury paper, though the number of commercial bills has largely increased over last year. M. Guebhard, in his article on the French money market in 1922 in the March-April "Revue d'Economie Politique," remarks that good commercial paper is scarce and that in its absence the banks are obliged to absorb treasury bills. It is not easy to explain the absence of "good commercial paper" in a year of increased business activity and rising prices, but probably it is the result of the fundamental factors mentioned earlier in this article, namely, the fact that prices are and have been since 1919 subject to sharp and wide fluctuations in both directions, thus rendering all commercial transactions with a time element distinctly speculative, and, second, that Government bills, paying a high rate, were available in unlimited quantities.

While the portfolio was greater at the end of 1922 than at the end of any preceding year, the
next item of the statement shows contraction. This is true of "advances and reports," the former being loans secured by collateral and the latter loans on the stock exchange. This item shows a small decline in the last two years and an actual decrease since 1913. Such of the banks as distinguished between their "advances" and their "reports" showed last year a small decline in the former and an increase in the latter-an increase reflecting the advancing market in securities which was in progress in the latter part of last year. The "debits in current account," sometimes translated as "overdrafts," were also lower than in any other post-war year. In 1921, as compared with 1920, the item declined from $4,229,000,000$ francs to $3,316,000,000$ francs (over 20 per cent) ; in 1922, the decline continued, although from the statements of the individual banks it appears that there was some increase in this item in the later months of the year.

Demand deposits and credits in current accounts showed an increase in 1922, even over the figures of 1920. The increase over 1921 is interesting, in contrast with the decline in deposit liabilities of British banks during the same year. As was mentioned earlier in the article, the year's increase in deposits ( $1,232,000,000$ francs) is roughly equivalent to the increase in the portfolio ( $1,134,000,000$ francs).

The figures of demand deposits and credits in current account are particularly interesting when compared with changes in the volume of note circulation. In the March-April number of the Revue d'Economic Politique total deposits of 18 leading French banks are given as $20,756,100,000$ francs as of December 31, 1921. As the figures of the six great banks alone amounted to $16,532,000,000$ francs on that date, it is evident that this total includes the greater part of the total demand liabilities of the entire French banking system. On the same date the note circulation of France was $36,487,000,000$ francs. In other words, in France currency in circulation greatly exceeds the volume of bank deposits, a condition opposite to that obtaining in England and the United States, though not radically different from the relation between bank deposits and currency in France in 1913.

Of the remaining items, acceptances show only a small increase, and are actually less than one-half of what they were in 1913. Considering the advance in prices, it appears that they represent perhaps one-tenth of the volume of goods covered by such instruments before
the war. Time deposits decreased, and are only slightly larger than in 1913-a result probably of the diversion of savings into investments of greater liquidity, such as treasury bills. "Titres et participations" (securities owned and underwritings) indicate a nominal increase over 1913, the same being true of paid-in capital and reserves.

Each of the six banks showed Iarger profits in 1922 than in the preceding year, though in only one case (the Crédit Industriel) was the dividend increased. Compared with 1913, the total increase in profits was about 50 per cent-from $94,000,000$ to $148,000,000$ francs.

This review of French banking in 1922 brings out two important facts in the banking situation. The first is the relation between bank deposits and currency, which emphasizes how fundamentally French banking differs from that of England and the United States. The second is the large ratio of treasury paper to commercial paper in the portfolios of the banks. As was stated above, the exact ratio is nowhere stated, but it is agreed that the holdings of treasury bills exceed the commercial bills and that instruments of business credit are less commonly employed than before the war. In commenting on this situation, the 1922 report of the Bank of France notes with satisfaction that the public is again returning to the use of bank credit, and the report of the Crédit Lyonnais states that its commercial paper in 1922 was 30 per cent greater than in the preceding year, but that short-time treasury bills still formed by far the larger part of its portfolio.

## RECENT DEVELOPMENTS IN JAPANESE BANKING.

Business and banking developments in Japan since the outbreak of the European war are in many respects similar to those in the United States. Both countries went through a period of great business prosperity followed by a general depression, and both had an excess of merchandise exports accompanied by an inflow of gold unprecedented in modern history. The activities of the banks in both countries were to a large extent influenced by these developments. On the basis of their increased specie reserves the banks greatly increased their loans during the period of business expansion, and after the collapse of prices a portion of their loans was frozen, i. e., not paid at maturity, and some loans could not be paid at all. In the United States, however, after a certain period
the banks were able to liquidate their frozen loans and to write off bad debts, while Japanese banks are still to a certain extent suffering from the price decline of 1920, and the readjustment of business, although far advanced, is not as yet completed.

In this study Japan's financial structure will be surveyed, its development during the period of prosperity and depression reviewed, and the relation of banking in general and of the Bank of Japan in particular to the general business conditions of the country analyzed. Since foreign trade developments and the huge inflow of gold have in many ways affected the activity of the banks, these phases will also be considered.

Banking structure of Japan.-The development of Japanese banking in recent years and its relation to the general economic conditions of the country can be better understood if the general principles upon which these institutions rest are first surveyed. There is a fundamental difference between the status of banks in the United States and in Japan. In the latter country banks are not regarded as quasipublic institutions and are not subject to such close supervision by the Government as in the United States. Japanese banking laws have no definite provisions as to capital, surplus, par value of shares, or the character of incorporators. While Government control of banks in Japan has thus not been developed to the same extent as in the United States, the Government has endeavored through special legislation to create banks which would serve all classes of the population and the various business needs of the country.

Banks in Japan may be divided into two distinct classes, viz, those established under the general banking laws and those created by special charter of the Government. The number of special banks is 52 , the most important of which are the Bank of Japan, the Yokohama Specie Bank, the Industrial Bank of Japan, the Bank of Chosen, and the Bank of Taiwan. Forty-six of the 52 specially chartered banks are provincial, industrial, and agri-cultural-mortgage banks. A description of the more important special banks follows.

The central bank of issue of the country is the Bank of Japan, whose functions correspond more or less to those of other banks of similar character. The bank engages in all kinds of commercial banking transactions and is the fiscal agent of the Government. Its relation to the other banks and its activities during the last few years are discussed in a
subsequent part of this article. The Yokohama Specie Bank was founded in 1880 for the purpose of financing the country's foreign trade. This institution handles practically all the business of the Government connected with foreign loans and is also intrusted with the management of Government funds for international account. To facilitate the financing of foreign trade the bank has branches in almost all the important commercial centers of the world. The Industrial Bank of Japan is organized to finance industrial enterprises of the country. For this purpose it is authorized to make loans against stocks and bonds, to subscribe to securities of industrial concerns, and to make loans for a limited period on city real estate. The bank may issue its own debentures up to an amount not exceeding ten times its paid-in capital. The Bank of Chosen is the sole bank of issue for Korea (Chosen) and issues notes which are legal tender in that country. By an imperial order of November 27, 1917, the notes of the Bank of Chosen became legal tender also throughout the South Manchurian railway zone, and all notes of the Yokohama Specie Bank circulating in this territory have been replaced by notes of the Bank of Chosen. The main purpose of the Bank of Taiwan is to serve as a central bank for the island of Taiwan (Formosa). In addition to these functions, the bank engages in all kinds of foreign and domestic banking transactions and is at present one of the most important exchange banks in Japan, with a large number of branches at home and abroad. The rest of the special charter banks are landmortgage institutions, the most important of which is the Hypothec Bank of Japan. The main object of this institution is to make longterm loans upon mortgages on immovable property, which are redeemable in annual installments.

## banking developments, 1914-1919.

Developments in Japanese banking since 1914 are marked by a rapid and steady growth of all phases of banking activity and by a tendency toward concentration and amalgamation. Before the outbreak of the war there were in Japan 2,155 banking institutions. The reason for the large number of banks is to be found in the peculiar banking legislation of Japan, which, in accordance with the desire of the Government to spread banking facilities all over the country, made the opening of banks dependent upon very few requirements. The increase in
business activity since 1914 and the enhanced importance of JJapan in commercial and financial fields created a need for larger banking institutions, with the result that a number of banks amalgamated and others increased their capital and surplus. The number of banks in operation therefore decreased, and at the end of 1921 Japan had 119 fewer banks than at the end of 1913. This decrease in the number of banks occurred during a period of enormous increase in the business activity of the country. The huge increase of the business of banks can best be seen from the following figures of the Tokyo Clearing House Association. The number of bills cleared and their value increased from 4,658,000 bills, representing a value of $4,490,000,000$ yen in 1914, to $10,780,000$ bills, with a value of $32,691,000,000$ yen for 1920 .

While the number of independent banks decreased, the number of branches and agencies of the larger banking institutions increased rapidly. Previous to the war the number of branches and agencies of all banks was 3,153 , while at the end of June, 1921, the number was 5,277 . The decrease of independent banks and the increase of branches during the period 19131921 may be seen from the following table:

Number of Head Offices and Branches of Japanese Banks.

Bank resources show the same remarkable growth for the period. At the end of 1913, the paid-in capital of the 2,155 banks amounted to $616,000,000$ yen, while at the end of June, 1921, the capital of the 2,036 banks amounted to $1,712,000,000$ yen, an increase of 177 per cent. Figures of the surplus of the banks show a similar increase, from $218,000,000$ yen at the end of 1913 to about $594,000,000$ yen at the end of June, 1921.

With the continuous increase of the capital of banks both the relative and absolute number of the smaller banking institutions decreased. The number of banks with a capital of less than 500,000 yen decreased from 1,755
at the end of 1913 to 1,046 at the end of 1920 , whereas banks with a capital of more than $1,000,000$ yen increased during the same period from 165 to 496 and those with a capitalization of over $10,000,000$ yen from 14 to 43.
Not only did the Japanese banks increase their activity at home, but they also became important factors in international markets, especially in the Orient. Before the war, although some of the Japanese exchange banks already had a number of branches in the Far East, on the continent of America, and in Europe, a considerable proportion of Japan's foreign trade was still financed by branches of European and American banks. The European war and the fluctuation of most European currencies after the war restricted and hampered to a large degree the activities of the European banking institutions, with the result that their business was taken over by Japanese banks. To what extent the Japenese banks have replaced foreign banks in financing Japan's foreign trade can best be gauged from the following figures. ${ }^{1}$

Import and Export Bills Handled by Japanese Banks.
[In thousands of yen.]

When account is also taken of the amount of import and export bills of the other exchange banks, it is easily seen that a very large proportion of Japan's international financing is at present handled by native institutions. It is impossible to bring the figures of the above table up to date, for since 1918 the foreign exchange business of the other exchange banks has increased considerably and the exchange

[^5]banks do not publish separately the number and value of bills arising out of the trade of Japan proper and of different countries. With the increase in the participation of Japanese banks in the financing of Japan's foreign trade, the business of the branches of foreign banks decreased from about 40 to 50 per cent of Japan's total trade before the war to less than 20 per cent after the war.

Japanese discount market.-Another important change that has taken place in the Japanese money market since 1914 is the development of a discount market. Before 1914 surplus funds of Japanese banks were invested largely in Government or private securities which could be pledged with the Bank of Japan as security against advances. The rapid growth of the foreign trade of the country, coupled with the inflow of large funds from abroad, made the creation of a discount market urgent. In order to facilitate the financing of the country's foreign trade, the Bank of Japan encouraged the use of bankers' acceptances and, in cooperation with the exchange banks, a discount market was developed adequate to meet the needs of the country. Most bankers' acceptances dealt in in the open market in Japan are based on imports and only a comparatively small percentage represent export transactions.

## BANKING DEVELOPMENTS, 1919-1922.

Business prosperity in Japan and the continuous expansion of banking activities suffered a serious check early in 1920 . The conclusion of the armistice in 1918 was immediately followed by a decline in the demand for war materials, which resulted in a general decrease of business activity throughout the country, but the demand for other goods from the former European belligerents and especially from the United States caused a revival of industry and trade in 1919. Stimulated by the demand for foreign goods, speculation in securities and commodities grew rapidly and prices of manufactured goods as well as of raw materials rose steadily.

The money market reflected the general economic condition of the country. Money at the beginning of the year 1919 was comparatively easy and the ruling open-market rate in Tokyo was 1.9 sen for 100 yen per day, or 6.94 per cent per annum. From about the middle of May the demand for funds became brisk and after Juiy the open market rate rose to 7.3 per cent per annum. Loans of all banks,
and especially of the Bank of Japan, increased and the amount of notes in circulation rose from $816,000,000$ yen at the end of March, to $1,025,000,000$ yen at the end of August, 1919. The money stringency was somewhat alleviated by the removal of the gold embargo in the United States on June 9, 1919, which was followed by a large inflow of gold to Japan, as may be seen from the following table.

Importation of Gold into Japan.

| 1919-January-June. | Yen. None. |
| :---: | :---: |
| July.......... | 28, 173, 693 |
| August | 49, 997, 023 |
| September | 34,561,708 |
| October. | 30. 408, 910 |
| November. | 51, 348, 786 |
| December. | 131, 281, 339 |

Most business men took the influx of gold into Japan as a good omen for the future and further increased their speculative activities.

As a result of this speculation the demand for funds increased and money rates tightened. To curb speculation and to give warning to the public, the Bank of Japan raised its discount rate from 6.57 per cent to 7.3 per cent on October 6, and then again to 8.03 per cent on November 19, 1919. On November 22 the Government issued a statement to the banks throughout the country warning them to be careful in the granting of loans. Despite these warnings speculation continued during the first month of 1920 and the number of new companies increased more rapidly than ever before. The value of new securities floated in the first four months of 1920 amounted to $3,700,000,000$ yen, as compared with $2,678,-$ 000,000 yen for the entire year 1918 and $250,797,000$ yen for the year 1914. Imports increased greatly, and in 1919 for the first time since 1915 exceeded exports, and this unfavorable balance increased in 1920.

Business and speculative activity was suddenly checked in March, 1920, when a shortage of loanable funds developed. The money stringency was at first felt on the stock market, with sudden breaks in security prices, both in Tokyo and Osaka, the chief stock exchanges of the country. How great the slump in the value of securities was may be seen from the following figures. The index of 120 leading securities decreased from 250 in January to 165 in April, and the volume of securities traded in declined during the same period from 920,000 shares in January, 800,000 shares in February, and $1,150,000$ shares in March to 270,000 shares in

April. The fall in stock exchange values was quickly followed by a drop in prices of all commodities, but especially of silk and cotton. Banks which had already overexpanded their credit in many instances were unwilling to grant additional loans, and their reluctance increased with the failure of the Seventy-fourth Bank of Yokohama and the consequent run on other banks. As a result the money market became very stringent, many business enterprises were forced to liquidate, and a general business stagnation set in, followed by a slackening in the demand for credit. To prevent the crisis from becoming more serious, the Bank of Japan and the Government intervened to save those houses which had a good credit standing and were only in temporary difficulties. The Bank of Japan formed a syndicate of the most important banks in Osaka and Tokyo and extended liberal loans to banks whose customers were in distress, and the Government aided certain industries through the Industrial Bank of Japan.

Operations of the Bank of Japan, 1920-1922. ${ }^{2}$ Bank of Japan figures for the years 1920-1922 reflect the general credit and business conditions of the country. The collapse of the security and commodity markets in March, 1920, was followed by the liquidation of a large number of business houses, a stagnation of industry and trade, and a slackening demand for credit from the private banks. These banks were thus able to meet the credit demands of their customers without recourse to the Bank of Japan, whose commercial accounts in consequence show a decided decrease. As in the case of the United States, the decreased demand for funds upon the Central Bank was not simultaneous with the decrease in prices. While in the United States discounts of Federal reserve banks started to decrease about six months after the fall in prices occurred, advances and discounts of the Bank of Japan started to decline in June, 1920, or about three months after prices started to decline. (See table on p 810.)

The discount policy of the Bank of Japan during the period of depression was different from the practice followed by the Federal reserve banks and the Bank of England. While these institutions began to lower their discount rates early in 1921, the Bank of Japan has not up to the present time lowered its discount rate from the high level put in force in November, 1919.

[^6]A detailed analysis of the accounts of the Bank of Japan shows that there is a close relation between the volume of operations of the bank and the country's foreign trade. The general experience of Japan in recent years has been that a period during which the trade balance is unfavorable is characterized by an increase of bills discounted, by a decline in deposits, and by an increase of notes in circulation. Deposits are also influenced by the total volume of foreign trade, and a shrinkage both in imports and exports is usually followed by an increase in deposits of the Bank of Japan. From the au un if 1920 up to about October, 1921, Japane e foreign trade decreased about 50 per cent irom its 1919 value, and during the same period deposits showed a similar increase.
Similarly, the amount of advances of the Bank of Japan against foreign bills depends to a large extent upon the foreign trade of the country. An increase of imports and exports naturally gives rise to a larger number of foreign bills, which are then tendered by the exchange banks to the Bank of Japan as security against advances. During the first half of 1920, when the foreign trade of Japan was large, advances secured by foreign bills formed a considerable part of the assets of the Bank of Japan and at times were even larger than the total amounts of discounted bills. With the decline of Japan's foreign trade since the fall of 1920 to May, 1922, advances of the Bank of Japan against foreign bills decreased steadily, reaching their lowest point of $9,500,000$ yen in February, 1922. The recovery of Japan's exports and the favorable balance of trade which set in during the second half of 1922 resulted in an increase of the advances against foreign bills.

Private banks.-Operations of the private banks also reflect the general economic conditions of Japan. Total advances of all clearing banks in Japan decreased from $4,837,000,000$ yen at the end of March, 1920, to $4,377,000,000$ yen at the end of October. Advances did not show a greater decline, despite the stagnation of industry and trade, because of the large volume of frozen credits held by the banks even as late as the end of 1922. It was estimated by Japanese economists that during 1921-22 about 20 per cent of ałl outstanding loans and advances of private banks represented frozen credits granted before March, 1920, which could not be liquidated. Frozen credits were also regarded as one of the main causes of the failure of a number of banks of
local importance at the end of 1922, when a general banking crisis was avoided only by the quick intervention of the Bank of Japan. The assistance rendered by the bank is reflected in the amount of bills discounted and in the amount of notes outstanding. Bills discounted increased from $73,000,000$ yen on November 18 to 284,000,000 yen on December 16, 1922, while notes in circulation rose during the same period from $1,069,000,000$ yen to $1,345,000,000$ yen.

The gold and currency situation.-Notes in circulation in Japan, where payment by means of checks has not reached the same stage of development as in the United States, reflect to a considerable extent prevailing business conditions of the country. The increased business activity of Japan and the inflation that set in during 1915 caused the amount of notes in circulation to increase rapidly. The Bank of Japan is required by law to hold against notes outstanding a reserve of gold and silver, the total value of silver not to exceed onefourth of the entire cash reserve. In addition to notes fully covered by specie, the bank may issue notes to an amount not exceeding $120,000,000$ yen, covered by Government bonds, treasury notes, or commercial bills. The amount of notes not secured by specie may be further increased with the permission of the Minister of Finance, but a tax of at least 5 per cent must be paid against such notes in excess of $120,000,000$ yen.

Since the notes of the Bank of Japan in excess of $120,000,000$ yen must normally be secured by specie, an increase or decrease of notes outstanding depends mainly upon the gold stock of the bank. At the end of December, 1914, the Bank of Japan had a note circulation of $386,000,000$ yen, $219,000,000$ yen of which were covered by gold and $160,000,000$ yen by Government securities and commercial paper. Thus, of each 100 yen of paper notes outstanding, 57 were covered by gold and 43 by securities. Since the beginning of 1916 large amounts of gold were transferred to Japan by the Allies and the gold stock of the country increased very rapidly, as may be seen by the accompanying table.

The increase of the gold stock of Japan by $1,842,000,000$ yen up to the end of 1920 is due mainly to the country's large excess of exports over imports, which for the four years 1915 to 1918 amounted to $1,408,000,000$ yen. The
reason for the increase of gold held abroad by $869,000,000$ yen from the end of 1916 to the end of 1919 is largely to be found in the gold embargo imposed by the United States on September 7, 1917. A considerable part of the gold kept abroad was owned by the Government of Japan, which had acquired part of this gold by purchase from the exchange banks which were unable to utilize the large balances abroad for commercial purposes in Japan. The flow of gold to Japan from its balance accumulated during the war continued even during 1919-20, despite the large excess of merchandise imports.

${ }^{1}$ End of May figures.
After January, 1921, the gold stock of Japan started to decline, owing mainly to the unfavorable balance of trade and partly also to the purchase of British securities. The transfer of gold from Japan to other countries was effected first through the sale of gold owned by the Government, for the gold stock of the Bank of Japan continued to increase until May, 1921. Thus, while in 1921 the gold stock of the Bank of Japan decreased by $6,000,000$ yen, gold owned by the Government decreased by $93,-$ 000,000 yen. During 1922, however, the gold reserve of the Bank of Japan decreased by $126,000,000$ yen and that of the Government by $124,000,000$ yen, the total decrease for the year being $250,000,000$ yen. From December, 1920, to the end of April, 1923, the gold stock of Japan decreased by $381,000,000$ yen.

The inflow of gold into Japan during and immediately after the war and the consequent increased gold reserve of the Bank of Japan is reflected in the rise of its ratio of gold to notes, in spite of the rapid increase in circulation, as may be seen from the following table:

Gold Ratios of the Bank of Japan.

| Year and month. | Ratio to notes out-standing. | Ratio of gold to notes out-standing, private and government deposits. | Year and month. | Ratio of gold to notes out-standing. | Ratio <br> of gold to <br> notes out- <br> standing, <br> private and <br> government deposits. |

| Novermber. | 107. 38 | 51.15 | November. | 102.60 | 58.30 |
| December | 96.31 | 50.71 | December. | 84.5 | 52.70 |

It is seen that with the exception of the period, 1919 to August, 1920, the notes of the Bank of Japan were almost entirely covered by gold. The decrease in the ratio of gold to notes in circulation of the year 1919 and the first half of 1920 was caused by the increase in note circulation required by the growth of business activity and speculation during the latter half of 1919 and the first quarter of 1920, and by the aid extended by the Bank of Japan after the collapse in prices in March, 1920. The continuous rise in the amount of notes outstanding atd the decrease in the reserve ratio were among the main factors which induced the Bank of Japan to increase its discount rate twice at the end of 1919 and caused the Government at the end of 1919 to increase the tax on unsecured notes in excess of $120,000,000$ yen from 6 to 7 per cent. Despite these measures the ratio of gold to notes continued to decline until May, 1920, when it turned upward and increased rapidly, so that in September of that year the notes were again fully covered by
specie. Since September, 1921, the ratio has remained more or less stable.

The ratio of total gold held by the Bank of Japan to deposits and note liabilities combined showed a continuous upward movement up to July, 1922, when it began to decrease. The upward and downward movements of the ratio are to a considerable extent influenced by Government deposits, which are much larger than private deposits.

## PRICE MOVEMENT AND VOLUME OF TRADE. <br> INTERNATIONAL WHOLESALE PRICE INDEX.

The general movement of wholesale prices in the United States and foreign countries during May was toward somewhat lower levels. In France the index number fell 5 points, in the United States and England 2 points, and in Canada 1 point. Japan was an exception, prices in that country having continued to advance.

When computed on a gold basis, prices in these foreign countries showed the same trends as in their respective currencies, since foreign exchange rates varied but slightly during May from the April averages.

As in April, the prices of those commodities which enter into foreign trade show a more marked decrease in all countries than domestic goods, although in France a decline in domestic goods was likewise noticeable. In the United States there was furthermore a marked decline in the raw-materials group, which was caused by the fall in prices of metals and farm products. Declines in the prices of metals and minerals in all countries, together with a fall in cotton, rye, and wheat prices, were the determining factors in the movements of the index numbers.

The tables below give the all-commodities and group index numbers of wholesale prices in the five countries included in the Federal Reserve Board's international index. In the first table the all-commodities index for each country is shown both in terms of the respective
currencies and "converted to a gold basis." The latter figures take into account the depreciation of the foreign currencies in terms of the American dollar and indicate relative price levels in the several countries when all prices are expressed in dollars.

## WHOLESALE PRICES OF INDIVIDUAL COMMODITIES IN THE UNITED STATES.

In order to give a more concrete illustration of actual price movements in the United States, there are presented in the following table monthly actual and relative figures for certain commodities of a basic character. The prices have in most cases been obtained from the records of the United States Bureau of Labor Statistics. This table is published in the Bulletin at quarterly intervals.
[A verage price for $1913=100$. ]

| Year and month. | Corn, No. 3, Chicago. |  | Cotton, middling, New Orleans. |  | Wheat, No. 1, northern spring, Minneapolis. |  | Wheat, No. 2, red winter, Chicago. |  | Cattle, steers, good to choice, Chicago. |  | Hides, packers, heavy native steers, Chicago. |  | Hogs, light, Chicago. |  |

2 Grade in 1918 is "standard war" instead of "standard patents."

COMPARATIVE WHOLESALE PRICE LEVELS IN PRINCIPAL COUNTRIES.
ALL-COMMODITIES INDEX NUMBERS. ${ }^{1}$

The foreign index numbers published on the preceding page are constructed by various foreign statistical offices and are sent to the Federal Reserve Board by cable. References to the Bulletins in which these are described may be found in the January, 1923, issue.
Index numbers showing the price levels of separate groups of commodities in the United States and a few foreign countries are presented below and on the following pages. Group index
numbers for the other countries are published only occasionally, but such figures may be obtained from the Division of Research and Statistics at any time upon request.
A comparative summary table showing the board's international index for the United States, England, France, Canada, and Japan appears on page 812. Group index numbers, computed as part of this international series, will also be found on that page.

## COMPARATIVE RETAIL PRICES IN PRINCIPAL COUNTRIES.

In the following tables are presented statistics showing the trend of retail food prices and cost of living in the United States and certain other countries. Descriptions of these index numbers were given in the Bulcetins for January and April, 1923. Wherever possible the index numbers have been shifted to a July, 1914, base, instead of being shown on the different bases used in the original computations.

3 Based on 1921 value units.
FOREIGN TRADE OF UNITED STATES, BY COUNTRIES. 1
[In thousands of dollars.]

1 In previous issues of the Bulletin the foreign trade of the $U$ uited States has been shown classified into groups of commodities according to stages of manufacture.
${ }_{3}$ Import figures cover period Sept. 22-Oct. 31, inclusive.

## FOREIGN TRADE INDEX.

There are presented below the Federal Reserve Board's series of index numbers designed to reflect relative quantity movements in the foreign trade of the United States. Changes in the level of prices have been allowed for by multiplying the quantities of selected commodities exported or imported each month by fixed 1913 prices. ${ }^{1}$

| Year and | Exporrs. |  |  |  | mpor |  |  |  |

In May the board's index of the volume of exports fell 2.6 points, or 3 per cent, as compared with April. The decline in raw materials was caused by a falling off in exports of cotton, barley, and tobacco, while the consumers' goods group was influenced by smaller shipments of wheat flour, cotton cloths, and illuminating oil. Producers' goods showed an increase of 7 points, which, was due to larger exports of gasoline, steel rails, and leather. The general export index and the groups of raw materials and consumers' goods have recently been much lower than in corresponding

[^10]months of 1922, but producers' goods have been higher.

The volume of imports showed a decline of 4.7 per cent in May. Raw materials decreased slightly as a result of a falling off in imports of wool, cotton, tin, and tobacco. The large decline in the consumers' goods index resulted from smalier imports of cocoa and coffee. Producers' goods rose 7.6 per cent, all commodities in this group having increased somewhat.

## SAVINGS DEPOSITS.

Savings deposits, as reported by 888 banks distributed throughout all sections of the United States, increased during May in all Federal reserve districts except in the St. Louis and Minneapolis districts, where slight decreases occurred. The greatest increases over April were in the San Francisco, Chicago, and Dallas districts. Compared with deposits on June 1, 1922, increases were noted in all districts. For the entire country the total deposits on June 1 were $\$ 6,547,792,000$, or 0.8 per cent increase over May 1 and 10 per cent increase over $\$ 5,950,871,000$ on deposit on June 1, 1922. A comparison of savings deposits on June 1, 1923, with deposits on May 1, 1923, and June 1, 1922, are shown in the following table. The figures for the Boston and New York districts are those of large mutual savings banks, but in all other districts reports of other banks are included to make the figures thoroughly representative.

Savings Deposits by Federal Reserve Districts.
[000 omitted.]

| District. | Number of banks. | $\begin{aligned} & \text { June 1, } \\ & \text { 1923. } \end{aligned}$ | $\begin{gathered} \text { May 1, } \\ 1923 . \end{gathered}$ | $\begin{aligned} & \text { June 1, } \\ & 1922 . \end{aligned}$ |

| Production. | 496, 549 | 525, 816 |  | 29,267 |

## FIDUCIARY POWERS GRANTED.

During the month ending June 30 the Federal Reserve Board approved applications of the national banks listed below for permission to exercise one or more of the fiduciary powers named in section $11(\mathrm{k})$ of the Federal reserve act as amended, as follows:

1. Trustee.
2. Executor.
3. Administrator.
4. Registrar of stocks and bonds.
5. Guardian of estates.
6. Assignee.
7. Receiver
8. Committee of estates of lunatics.
9. In any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the bank is located.
The numerals opposite the name of each bank indicate the power or powers it is authorized to exercise, as given below:

## INDEX OF OCEAN FREIGHT RATES.

The accompanying table shows the monthly fluctuations in ocean freight rates prevailing between United States Atlantic ports and the principal European trade regions. The figures are derived from the actual rates quoted on the following commodities: Grain, provisions, cotton, cottonseed oil, and sack flour. Rates in January, 1920, have been used as a base. For the methods used in constructing the index see the August, 1921, Bulletin, pages 931-934.

Relative Ocean Freight Rates in United States and European Trade.

[^11]
## PHYSICAL VOLUME OF TRADE.

Activity in many lines of business during May, as reflected in current statistics, recovered from the April seasonal slump, and reached record-breaking heights. In March the volume of business was considered large, but May figures of the production and movement of goods indicated equal or greater activity, despite reported declines in purchasing and recessions in prices. Movements of agricultural products increased only fractionally from the low point of the year, which is always reached in April, and the index was the lowest recorded for May in the past five years. Production of practically all minerals and manufactured goods, however, was materially greater in May than in April; in fact, the index of mining, shown on the chart below, advanced to a new high point, and that of manufacturing almost attained the March peak. Some of this upward trend was seasonal, but the index of production in basic industries, which allows for normal seasonal changes, rose above all previous levels, exceeding the war-time record of May, 1917, by about 4 per cent.

Agricultural products as a whole moved to market in practically the same volume during

May as in the preceding month, although a slight increase ordinarily occurs at that time. This retardation was due to the very small receipts of grain at principal interior markets. The total for all grains was the lowest recorded for any May within the last five years, and was less than the April figure, whereas it is ordinarily larger. Shipments of grain from interior points, however, increased, and stocks declined during May, in accordance with usual trends. With reduced receipts and increased exports, port stocks fell off during the month. In contrast tograin movements, live-stock receipts and shipments at principal markets were greater than for the same season of any of the four previous years. Cotton receipts, although larger than in April, were nevertheless exceptionally small, and tobacco sales were practically nil.

Production of the various mineral products was uniformly at a high rate during May, and the mining index exceeded the previous maximum attained in March. Crude petroleum and pig-iron output again reached new high points, copper and lead were produced at a greater rate than during any month within recent years, and the amounts of coal and zinc mined were large. Stocks of zinc and of petroleum increased during the month.

Manufacturing during May showed practically the same high rate of activity as in March. Records were made in the production of steel ingots, automobiles, cement, and newsprint. Most items were larger than in April. Silk deliveries, however, declined considerably and the textile-group index, shown in the table below, consequently moved downward, despite increases in cotton and wool consumption. Sole-leather output and shoe production also decreased slightly as compared with April. Lumber cut, on the other hand, recovered substantially from its April slump and was greater than for any month since 1917. Production of practically all building materials, in fact, was at a high rate, although slight recessions were noted in orders for some of these products. Gasoline refiners and rubber-tire manufacturers continued to operate at close to capacity, reflecting the enhanced demand for their products growing out of increased automobile sales. The number of animals slaughtered in May was rather large for that month, but output of other food products continued about as in previous months. A rather substantial increase occurred in the volume of tobacco products manufactured; in fact, the number of small cigarettes made exceeded previous records.
Index of Production in Basic Industries, wíth Allowance for Seasonal Varlation.

## WHOLESALE AND RETAIL TRADE.

Wholesale and retail business in May was substantially larger than in April or in May, 1922. The Federal Reserve Board's index of wholesale trade in May was 3 per cent higher than in April and 12 per cent higher than a year ago. Increases as compared with April were reported by all important lines of wholesale business except dry goods, clothing, machine tools, and stationery. Sales of meat, shoes, and hardware registered particularly large gains, which amounted to 11 per cent, 9 per cent, and 6 per cent, respectively.

Comparisons with a year ago indicate that wholesale trade is larger in all reporting lines and in all sections of the United States. Sales of machine tools, jewelry, hardware, clothing, and furniture were from 25 per cent to 220 per cent larger than in May, 1922. The accom-

panying chart contrasts the value of hardware sales in each month of 1923 with sales in 1920 and 1922. It is worthy of note that sales have been maintained at a much higher level this year than last year, but are still somewhat smaller in dollar value than in the first five months of 1920. If allowance be made for price changes, it appears that the physical volume of business during the current year has been higher than in the corresponding months of any other year of the post-war period.

Sales of all groups of reporting retailers, except mail-order houses, were substantially larger in May than in April, 1923, or May, 1922. The increase in volume of business was
due partly to an additional working day in the month, partly to the advent of warmer weather, and partly to the larger buying power of consumers resulting from increased employment and advances in wages. Department-store sales were 8 per cent larger than in April for the entire United States, due to increases in all reporting districts except Minneapolis. Business was exceptionally active in the Philadelphia, Dallas, and San Francisco districts, as compared with earlier months of 1923. De-partment-store stocks were reduced in all Federal reserve districts during May and averaged 2.5 per cent less on May 31 than on April 30. All of the six reporting groups of chain stores had larger sales in May than in April, the gains varying from 5 per cent for drug stores to 15 per cent for shoe stores. Mail-order sales were 6 per cent smaller than in April, but this decrease was less than is customary at this season of the year.

Reports of over 500 department stores showed that sales during May were 11 per cent larger than a year ago. The accompanying chart shows a comparison of changes in de-partment-store sales in the New York and Dallas districts since January, 1919, after eliminating the customary seasonal variations. This graph shows that there was little relative change in the dollar sales of these two groups of department stores during 1919 and 1920 , but
that since the beginning of 1921 sales have been distinctly lower in Dallas than in New York. An analysis of department-store sales in the eight Federal reserve districts reporting dollar sales shows that the trend of business in the Boston, Philadelphia, and San Francisco districts has been similar to that in New York, while the trend of sales in the Richmond, Atlanta, and Minneapolis districts have been similar to those in the Dallas district. Retail business during the past two years shows thus a distinctly larger increase in industrial districts than in agricultural districts.

Tables are appended showing the trend of wholesale and retail trade in the United States for all reporting lines of business.

## DISCOUNT AND INTEREST RATES.

Discount and interest rates prevailing during the 30 -day period ending June 15, 1923, in the various cities in which the Federal reserve banks and their branches are located, showed generally little change. Rates for prime commercial paper in some western cities were reported slightly lower, while in the eastern cities they remained unchanged. Compared with the 30 -day period ending June 15, 1922, rates on all types of paper, with the exception of prime commercial paper ranging from four to six months, open-market paper of four to six months' duration, and bankers' acceptances which demanded higher rates, were lower in almost all centers. Paper secured by
tock-exchange collateral vielded lower rates in many western markets and in some eastern markets than in the corresponding period in 1922. In most eastern cities the customary rates were unchanged.
The actual discount and interest rates prevailing during the 30 -day period ending June 15,1923 , in the various cities are given in the following table. A complete description of the several types of paper for which quotations are given will be found in the September, 1918, and October, 1918, Federal Reserve Bulletins.

0

[^0]:    ${ }^{1}$ It is said that introduction of a universal system of par clearance and collection of checks through the federal reserve banks would bring compensatory advantages to the country banks.

[^1]:    "In the original Federal Reserve Act (38 Stat. 251) "may" is used In Sections $2,3,4,5,8,9,10,11,12,13,14,15,16,18,19,21,22,24,25,26$, 28. "Shall"'is used in those sections and also in Sections 1,6, 7, 20, 23, 27, 29. Thus: Sec. 2: "The Secretary. . shall designate. . cities to be known as Federal reserve cities, and shall divide the Continental
    United States into districts. . The districts. . may be readUnited States into districts. . i The districts $\dot{\text { fusted. }}$ may be read-

[^2]:    - The Governor of the Federal Reserve Board stated in his letter to the Senate, January 26, 1920, Sen. Doc. 184, 66th Cong. 2d Session, p. 6: "That a relatively small number of non-member banks should not want to become members of the clearing system, or should not want to remit at par is, of course, their own concern, and the Federal Reserve Board and the Federal reserve banks have not and will not dispute their right to decline to do so."

[^3]:    1 Figures for April, 1923, not available
    2 Including June, 1922, figures for State banks, and April, 1923, figures for national banks in New Hampshire.
    3 Including December, 1922, figures for State banks, and April, 1923, figures for national banks in Georgia.
    ${ }^{4}$ Including December, 1922, figures for State banks, and April, 1923, figures for national banks in Indiana
    5 Including December, 1922, figures for State banks, and April, 1923, figures for national banks in Kentucky.
    6 Including December, 1922, figures for State banks, and April, 1923, figures for national banks in New Hampshire, Georgia, Indiana, and Kentucky.

[^4]:    ${ }^{1}$ A full explanation of this table, including a list of the sources employed, appears in the Bulletin (final edition) for February, 1923, pp. 182-185.
    2 Amounts stated in millions of pounds sterling, millions of francs, bilions of marks, and millions of dollars.
    ${ }^{3}$ Monthly average in 1913 is taken as 100 , except for Germany, in which case July, 1914=1
    ; United Kingdom and France-July, 1914 = 100; Germany-Oct. 15, 1913-June 15, 1914=1; United States-1913 average=100
    ${ }_{6} 1913=100$
    6 United Kingdom-percentage of unemployed in insured trades; France-number of unemployed in the city of Paris; Germany-number of applicants for every 100 available positions; United States-an index of employment in 12 representative trades with 1919 taken as 100 .

    7 United Kindom-total net ton-miles during the month, expressed in millions; France-average daily number of freight car loadings; Germany and United States-total number of freight car loadings during month, expressed in thousands
    ${ }^{8}$ Amounts stated in thousands of pounds sterling, millions of franes, millions of gold marks, and thousands of dollare

[^6]:    2 For operations of the Bank of Japan, 1914-1919, see Federal Reserve Bulletin, August, 1919, pp. 731-734.

[^7]:    ${ }_{1}$ Complete descriptions of these index numbers may be found in the following issues of the Bulletin: United States-May and June, 1920, June, 1921, and May, 1922; England-February, 1922; France-August, 1922; Canada-July, 1922; Japan-September, 1922.

[^8]:    $11913=100$.
    7 February, 1913=100.
    $8 \mathrm{July}, 191 \mathrm{i}=100$.

[^9]:    ${ }^{1}$ Not including reexport trade.
    'Calculated on 1019 value units.

    - Itraports calculated on basis of actual declared value.

    Value of exports not available. Beginning with June, exports calculated on 1021 value units.

[^10]:    1 The list includes 27 of the most important imports the value of which in 1913 formed 49.3 per cent of the totalimport values, and 29 of the most important exports the value of which in 1913 formed 56.3 per cent of the total export values. The classification of the original list of commodities used was given in the July, 1920, Bulletin. The classification of 11 additional commodities of imports was given in the April, 1921, BuLleTIN, and 2 additional commodities in the November, 1921, BULLETIN. Exports of gasoline have been altered to include naphtha.

[^11]:    1 The National Association of Finishers of Cotton Fabrics at the request of the Federal Reserve Board prepares a monthly survey for the industry. The results of the inquiries are herewith presented in tabular form. The secretary of the association makes the following statement concerning the tabulation

    The accompanying figures are compiled from statistics furnished by 32 out of 57 member firms of this association. It is probably fair to state that in the absence of having specific detail at hand, but according to our best estimate, it is probably well within the fact that the figures given for the various classes of work would cover, approximately, the following percentages of the entire industry: White goods, 70 per cent; dyed goods, 62 per cent; printed goods, 30 per cent. The figures given represent reports from exactly the same finishers for the two months, both of the totals and for the subdivisions, and, therefore, are strictly comparable.

    Nore-Many plants were unable to give details under the respective headings of white goods, dyed goods, and printed goods, and reported their totals only; therefore the column headed "Total" does not always represent the total of the subdivisions, but is a correct total for the district.

[^12]:    1 Montana not included
    2 Colorado, W yoming, and Arizona not included.
    Figures for Districts 6,8 , and 10 , not available for previous months, included in total.

[^13]:    ${ }^{1}$ Total discounts multiplied by ratio of average maturity of bills discounted by each bank to average maturity (9.45) for system.

[^14]:    ${ }^{1}$ Includes $\$ 18,093,291$ of acceptances purchased at 37 per cent.
    Note.-All Federal reserve banks use 360 days to the year in calculating interest on bills bought in open market.

[^15]:    ${ }_{1}^{1}$ Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.
    ${ }^{2}$ These amounts are not included in the total, since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.
    ${ }^{3}$ Includes gold held in trust against gold certificates and standard silver dollars held in trust against silver certificates and Treasury notes of 1890, the aggregate of which should be deducted from the sum of money held by the United States Treasury and the Federal reserve system and money in circulation to arrive at the stock of money in the United States. The amounts of such gold and silver held in trust as of the date of this statement are shown in parentheses in the first column.

[^16]:    ${ }^{1}$ Net deposits were used in calculating the reserve percentages shown for dates prior to 1921.

[^17]:    Note-Eigures shown in the first and second columns represent actual holdings plus accommodation received from other federal reserve banks, and leas accommodation extended to other Federal reserve banks
    ${ }^{1}$ Prior to 1921, figures represent net deposits.

[^18]:    1 Includes United States Government securities borrowed by national banks.
    2 Includes other bonds and securities borrowed by national banks.
    ${ }^{3}$ Includes amounts reserved for interest and taxes accrued.
    4 Includes acceptances executed by other banks for account of reporting banks.

[^19]:    ${ }^{1}$ Includes Banco de la Nación.
    : Figures for 1919 include $79,000,000$ pesos, and for succeeding years $4,000,000$ pesos, held in foreign legations.
