## OFFICERS OF FEDERAL RESERVE BANKS

1 Controller.
${ }^{2}$ Assistant deputy governor,
MANAGING DIRECTORS OF BRANCHES OF FEDERAL RESERVE BANKS

## SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. It contains, in addition to the regular official announcements, the national review of business conditions, detailed analyses of business conditions, research studies, reviews of foreign banking, and complete statistics showing the condition of Federal reserve banks and member banks. The Bullerin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents Outside of the United States, Canada, Mexico, and the insular possessions, $\$ 2.60$; single copies, 25 cents.

## FEDERAL RESERVE BULLETIN

VoL. 12
SEPTEMBER, 1926

## REVIEW OF THE MONTH

In recent weeks the volume of member bank credit, which has been growing since the early spring, increased further, partly

## Volume of bank

 credit in response to the seasonal demand for currency and credit in connection with the harvesting and marketing of crops. This increase has carried the volume of credit to the level that prevailed at the close of 1925. When the first eight months of 1926 are considered as a whole, it appears that the fluctuations in the volume of member bank credit have been smaller this year than in other recent years, and that the period has been characterized primarily by the continued large volume of member bank credit outstanding. At the reserve banks the volume of credit in use has also shown a recent increase and throughout the past eight months has been at a level about $\$ 100,000,000$ above that prevailing a year ago. This larger use of member bank and reserve bank credit has been reflected in the money market in a level of interest rates continuously above that in 1925.The growth of member bank credit since last spring has been general throughout the country, and occurred at member banks
Bank credit in in New York City as well as at New York City those outside of the financial center. When the entire period from the close of 1925 is considered, however, reporting member banks in New York City show a decrease of about $\$ 250,000,000$ in loans and investments, while the reporting banks in other cities show an equivalent increase. When a still longer period is considered and the changes in member bank credit during 1925
and the first eight months of 1926 are combined, it appears that loans and investments of New York City banks in the middle of 1926 were at about the same level as at the peak reached after the rapid rise during 1924 , while the loans and investments of member banks in other leading cities were about $\$ 1,160,000,000$ larger than at the close of 1924. Changes in the total volume of loans and investments and, separately, of security loans, commercial loans, and investments, for member banks in New York City and in other leading cities between the end of 1924 and the middle of August, 1926, are shown in the following table:

For the period of about 20 months taken as a whole, there has been relatively little change ${ }^{\circ}$ in the different classes of loans and investments of member banks in New York City. At banks outside of New York City the volume of security loans increased by about $\$ 700,000,000$ and the volume of commercial loans by nearly $\$ 300,000,000$, while investments increased by about $\$ 175,000,000$. A comparison of changes in the volume of security loans at member
banks in New York City and outside is presented in the chart. At New York City banks the growth of security loans was large in 1924 and in the latter part of 1925. At banks outside of New York City security loans increased rapidly from the middle of 1924 to the end of 1925, and showed some further growth, on a much smaller scale, in the first eight months of 1926. During the early months of 1926, however, the drop in security prices was accom-

Figures are for loans on securities as reported by weekly reporting member banks in New York City and in other leading cities
panied by a decline of about $\$ 500,000,000$ in loans on securities at New York City banks to a level as low as at any time last year. More recently the volume of this class of loans at New York City banks has increased by about $\$ 200,000,000$.

Changes in the volume of security loans in New York City reflect chiefly the movement in the volume of loans extended
Security loans and brokers' loans dealers. The chart shows that this class of loans by the New York City banks on their own account, as distinguished from brokers' loans on account of out-of-town banks and of other customers, comprises about onehalf of the total security loans of these banks, and accounts for the larger part of the fluctuations in total loans on securities. The decline
in security loans of New York City banks early in the year appears to have been due entirely to a reduction in brokers' loans. In fact, during March security loans to others than brokers and dealers increased sharply, an increase that was generally ascribed at the time to the fact that investors and traders in securities were financing their operations to a larger extent directly through the banks rather than through brokers. Since the middle of April the volume of security loans other than to brokers and dealers has changed relatively little for New York City banks, and fluctuations in the total volume of security loans have reflected largely changes in the volume of brokers' loans.

The relationship between loans to brokers extended by New York banks for the account

of their correspondents and the total of security loans by these correspondents can not be definitely established, because the group of banks that report their condition weekly does not include all the banks for which the member banks in New York City act as agents in placing loans on the security market. In so far, however, as the figures are comparable they indicate that the decline this year in loans placed by out-of-town banks in the New York market has been more than compensated by an increase in their other security loans, and the total of security loans by all reporting member banks combined was larger in August of this year than at any previous time except at the seasonal peak last December.

When the movement of the total volume of loans to brokers and dealers in the New York security market is considered since the beginning of 1926 , the period for which figures have

## Course of brokers' loans

 been published, it appears that between January 6 and May 19 this class of loans declined from $\$ 3,141,000,000$ to $\$ 2,409,000,000$, a reduction of about $\$ 732,000,000$, of which the larger part was in the loans placed by New York banks for their own account. Between May 19 and August 18 brokers' loans increased by about one-half of their previous decline, or $\$ 165,000$,000 , and of the increase about one-half represented a growth in bank loans of member and nonmember banks, the other half being an increase in the volume of funds placed by the New

Loans to brokers and dealers in securities, secured by stocks and bonds, made by weekly reporting member banks in New York City
York banks for account of their customers and foreign correspondents. These funds belong largely to corporations having temporarily idle funds available for short-time investments. The growth during the past three months in the funds of corporations used in the security markets apparently reflects the strong cash position resulting from profitable operations of industrial establishments during the present year. The following table shows changes in the volume of loans to brokers and dealers between January 6 and May 19, the low point for the year, and between that date and August 18, and the chart shows the weekly movement in 1926 of the loans placed by the

New York City banks for their own account, for account of out-of-town banks, and for account of others.

Relative stability in the demand for bank credit during the present year has been accom-
Capital flotations panied by an active demand for long-term funds, as indicated by a large volume of security flotations. During the first half of 1926 new securities floated in this country totaled $\$ 3,500,000$,000 , or about $\$ 500,000,000$ more than for the preceding six months. The following table shows the volume of domestic and foreign securities issued during the first six months of 1926, as compared with equal periods of 1924 and 1925. These figures are exclusive of refunding issues.

The first half of 1926 showed a record volume of flotations by domestic corporations, amounting to over $\$ 3,000,000,000$. The volume of foreign securities offered in the American market has also continued large. More than $\$ 500,000,000$ were sold during the half year, of which about $\$ 200,000,000$ were Euro-
pean securities and the remainder represented borrowing by Canadian and South American interests. Three-fourths of the securities floated for European account during the period were securities of municipalities and industrial enterprises in Germany. Nearly one-half of the total corporate issues, both foreign and domestic, was offered by public utility companies, which in April, May, and June issued more new securities than all industrial companies combined. This is in contrast with the situation in 1925, when industrial issues were considerably larger than those of public utilities in almost every month of the year. In the first quarter of 1926 certain groups of industrial concerns, including iron, steel, and copper companies, manufacturers of motors and motor accessories, and oil companies, made very large additions to their capital through security issues, but in the last three months the flotations of these groups have been comparatively small. A large volume of new corporate capital has continued to go into the building industry and a wide variety of industrial concerns have put new securities on the market throughout the half year. The railroads have increased their capital at about the same rate as in 1925 . The table below shows the capital issues of the principal classes of corporations during the last year and a half, excluding refunding issues.

| SECURITIES ISSUED By |
| :--- |
| [In millions of dollars] |

${ }^{1}$ Including issues of unclassified corporations.

Flotation of a record volume of securities in the investment market of this country during the first half of 1926 did not result in a rise in long-term money rates. Abundance of investment funds was indicated by the fact that the absorption of the securities offered was accompanied by a rise in bond prices, and a consequent decline in bond yields to the lowest level since 1917. Security holdings of all member banks increased by about $\$ 200$,000,000 during the first half of the year, a larger increase than for any other six-months' period since 1924. ${ }^{1}$ Most of the banks' purchases of securities were made in the first quarter of the year during the period of liquidation of security loans, and weekly reports of member banks in leading cities indicate that since the middle of the year the increased demand for credit to finance trade and industry has been accompanied by a gradual decline in the security holdings of member banks.

In general, the banks of the country are entering the season of increased demand for

Condition of money market credit to finance the moving of crops and the requirements of autumn trade after a period of four months of growth in the demand for bank credit, which has carried its volume to a level as high as at the seasonal peak of last year. The volume of reserve bank credit has also increased during this period and has remained at a considerably higher level than in 1925. In the money market the increasing volume of bank credit accompanied by a larger amount of borrrowing at the reserve banks, has been reflected in firmer interest rates as compared with the corresponding periods of last year. Since the beginning of August money rates in the open market have advanced, and on August 13 the discount rate at the Federal Reserve Bank of New York was raised from $31 / 2$ to 4 per cent, the rate prevailing at all the other reserve banks.

[^0]
# BUSINESS CONDITIONS IN THE UNITED STATES 

## NATIONAL SUMMARY

Production in basic industries and factory employment and pay rolls declined slightly in July, but the decrease in production was smaller than is usual at this season. Wholesale prices, after a further decline in July, were at the lowest level in nearly two years.

Production.-The Federal Reserve Board's index of production in basic industries, which is adjusted for seasonal variations, increased about 1 per cent in July. Declines in the output of iron and steel and anthracite and in the activity of textile mills were larger than the usual seasonal reductions, while the production of flour, copper, zinc, cement, and petroleum

Index of 22 basic commodities adiusted for seasonal variations. $\quad(1919=$ 100.) Latest figure, July, 119
increased. The manufacture of automobiles declined further and was smaller than a year ago. Factory employment and pay rolls showed the usual seasonal decline in July, which is due largely to closing for stock taking and repairs and to summer vacations. Declines were noted in nearly all the important industries for which reports were received, with the exception of leather and shoes and certain food products and building materials. Building contracts awarded in 37 States east of the Rocky Mountains declined in July for the fourth consecutive month and, as in June, were smaller than a year ago. Figures for the first three weeks in August were also below those for the corresponding period of last year. The principal decreases were in the New York and Atlanta districts.

The composite condition of all crops, as reported by the Department of Agriculture,
shows an improvement of 2 per cent in July, owing largely to the increase in the expected production of wheat. Cotton production, on the basis of August 16 condition, is estimated at $15,248,000$ bales, compared with an output of $16,104,000$ bales in 1925.

Trade.-Volume of trade at wholesale and retail showed a further seasonal decline in July, but continued to be large. Retail trade was larger than a year ago, while wholesale trade was slightly smaller. Sales of department stores and mail-order houses declined less than is usual at this season and were 4 per cent and 13 per cent, respectively, larger than in July of last year. Merchandise inventories at department stores continued to decline in July and at the end of the month were in about the same volume as last year. Stocks of meat, dry goods, and shoes carried by wholesale firms were smaller than a year ago, but stocks of groceries, hardware, and drugs were larger.

Shipments of goods by railroads were maintained at a high level during July for nearly all types of commodities. Loadings of grain were larger than for any month since October, 1924, and were in record volume for July.

Prices.-The Bureau of Labor Statistics index of wholesale commodity prices declined about 1 per cent in July to the lowest level

Index of United States Bureau of Labor Statistics. $\quad(1913=100$, base adopted by bureau.) Latest figure, July, 150.7
since September, 1924. Price declines were shown for most commodity groups, particularly farm products and foods, while prices of steel and other metals advanced. In the first three weeks of August the prices of grains, cotton, and rubber declined further, while
cattle, hogs, potatoes, coal, and coke advanced in price.

Bank credit.-Between the middle of July and the middle of August total loans and investments of member banks in leading cities increased slightly, reflecting a growth in the seasonal demand for credit for commercial purposes. Loans on securities on August 18 were in about the same volume as a month earlier, while the banks' investments declined.

Monthly averages of weekly figures for banksin 101 leading cities. Latest figures are averages for first three weekly report dates in Angust

Between July 21 and August 18 discounts for member banks and the holdings of accept-
ances increased considerably, while United States security holdings were somewhat reduced, with the consequence that the total volume of reserve-bank credit increased by about $\$ 50,000,000$.

Weekly rates in New York money market: Commercial-paper rate on 4 to 6 months ${ }^{\top}$ paper and acceptance rate on 90 -day paper
Money-market conditions became firmer in August. The rate on commercial paper, which was 4 per cent in June and July, increased to 41/4-41/2 per cent, and the rate on 90 -day bankers' acceptances advanced to $33 \frac{4}{4}$ per cent. The discount rate of the Federal Reserve Bank of New York was advanced on August 13 from $31 / 2$ to 4 per cent.

## MONEY RATES

Money rates increased in August with the growth in demand for credit and at the end of the month were about at the levels prevailing through last fall and winter and somewhat higher than in August of last year. Prime commercial paper, which was quoted at 4 per cent during June and most of July, advanced to $41 / 4$ and at the end of August to $41 / 2$ per cent. Demand has remained inactive, partly on account of the unsettlement of rates, but supplies in the hands of dealers have also been limited, with only moderate amounts of new paper coming into the market. Rates on bankers' acceptances of all maturities advanced by one-fourth of 1 per cent soon after the increase in the discount rate of the Federal Reserve Bank of New York, on August 13, from $31 / 2$ to 4 per cent, and later by $1 / 2$ per cent more, so that 90 day bills, which were offered at $33 / 8$ per cent in July, sold at $33 / 4$ per cent at the end of August. Prices of short-term Government securities reflected the firmer money conditions, and 4-6 months' maturities brought higher yields than at any time since last January. There was also an increase in the yields of Liberty bonds as their prices fell to March levels. Both call and time rates on security loans averaged about $1 / 4$ per centhigher in August than in July. The following table shows money rates prevailing in the New York open market during the last three months. A table showing rates of interest charged customers by banks in various cities of the United States will be found on pages 700-701 of this issue of the Bulletin.

Money Rates in New York City

${ }^{3}$ Issues maturing Sept. 15, 1926.
4 Issues maturing Dec. 15, 1926.

In the London market money rates advanced in August, and three months' bank bills were quoted at $41 / 2$ per cent in the middle of the month, as compared with $41 / 4$ per cent at the end of July.

## ACCEPTANCE MARKET

The market in bankers' acceptances was dull in all of the principal centers during the last half of July and the first half of August, a period during which the bill market is usually less active than at any other time of the year. Very few new bills came into the market, and the weekly volume of purchases by reporting dealers in New York was the smallest since September of last year. The demand for bills was also slack, although there was an increase in purchases for foreign accounts. Largely as a result of these foreign purchases and of sales to Federal reserve banks, New York dealers' portfolios were reduced by August 18 to the lowest figure reported for a year. The bills purchased by the reserve banks were based chiefly on importations of sugar, wood pulp, rubber, wool, and coffee, and on exports of cotton and grain. Immediately after the advance in the discount rate of the Federal Reserve Bank of New York on August 13, market rates on bills of all maturities, most of which had remained unchanged since June, increased by oneeighth of 1 per cent and on August 16 by a further one-eighth per cent when the Federal reserve bank advanced its buying rates; but these advances were followed by no notable change in the condition of the market. The table below shows the rates in effect on bills of various maturities at the beginning and end of the reporting period.
Acceptance Rates in the New York Market

CAPITAL ISSUES
The volume of new domestic securities issued in the United States in July amounted to $\$ 411,500,000$, as compared with a monthly average of about $\$ 500,000,000$ during the preceding six months and of $\$ 450,000,000$ in 1925. The decline from the June total in the volume of new issues is accounted for by an unusually small amount of municipal flotations, as those of corporations were larger in July
than in June. Among corporate issues, including those of foreign corporations, public utilities were larger than in June, industrials were slightly smaller, and railroads about the same. The following table shows the domestic securities, both new and refunding, issued in July, 1925, and in June: and July, 1926.

## Domestic Capital Issues <br> [In millions of dollars]

|  | 89.0 | . 4 | 131.0 | 5.2 | 132. 1 | 12.4 |

A moderate volume of foreign securities were floated in July, about equal to the average for the preceding six months, according to the compilation of the Federal Reserve Bank of New York. More than one-half of the total were issued by corporations, notable among which were the Silesian-American Corporation of Poland and Germany, the Gatineau Power Co. of Canada, and the Toho Electric Power Co. of Japan. The largest single issue, however, was one of $\$ 18,330,000$ by the Mortgage Bank of Chile. The table below shows the foreign issues during May, June, and July, classified geographically:

## SECURITY PRICES

Prices of representative common stocks, as measured by the index of the Standard Statistics Co., reached the highest average on record early in August, and thereafter declined somewhat. The increase in prices of railroad stocks over the high point of last winter was considerably greater than that for industrial stocks, and they advanced further at the end of August, while prices of industrial stocks remained below their early August average. Automobile and steel stocks led the advance in industrial stock prices and were among those showing the largest declines later in the month. The market showed unusual activity during the first week in August, but later the volume of sales was considerably smaller. Bond prices were relatively stable, only slightly below the high levels of the year which prevailed in May and June. The following table gives indexes of stock prices computed by the Standard Statistics Co., of New York, the average price of 40 bonds computed by Dow, Jones \& Co., and the average number of shares of stock sold daily on the New York Stock Exchange, for the last six months and for August a year ago:

Index Numbers of Security Prices

## COMMODITY PRICES

The general level of wholesale commodity prices, according to the index of the Bureau of Labor Statistics, declined about 1 per cent from June to July, with the declines affecting both agricultural and nonagricultural commodities and all of the principal groups of commodities except metals and building materials. The table shows the changes from June to July, and the index numbers for the past 13 months are given on page 686.

Index Numbers of Commodity Prices [1913=100]

|  | July | June | $\begin{gathered} \text { Percent- } \\ \text { age } \\ \text { change } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| All commodities. | 150.7 | 152.3 | -1.1 |
| Agricultural | 148.2 | 150.8 | -1. 7 |
| Nonagricultural | 152.3 | 152.9 | -0.4 |
| Farm products | 140.8 | 143.7 | -2.0 |
| Foods: | 153.6 | 156.6 | $-1.9$ |
| Clothing materials | 173.3 | 175.1 | -2.0 |
| Fuels | 177.0 | 179.2 | -1.2 |
| Metals and metal prod | 126.2 | 125.1 | $+0.9$ |
| Building materials | 171.5 | 171.2 | +0.2 |
| Chemicals and drugs. | 130.9 | 131.1 | $-0.2$ |
| House furnishing good | 161.1 | 161.7 | -0.4 |
| Miscellaneous. | 122.5 | 122.5 |  |

The index for all commodities was in July the lowest since September, 1924, and about 6 per cent below that of July of last year, but was close to the level which has prevailed during the last five months. During this period the general level of wholesale prices has varied within the limits of 151 and 152 , a range of less than 1 per cent, while the indexes for the various groups of commodities have varied within the limits of about 4 per cent for cloth and clothing to 2 per cent for metals and metal products. The net change in wholesale prices during the period has been upward for agricultural commodities and downward for nonagricultural commodities, with the consequence that these two groups were in closer adjustment in June and July than in other recent months and closer than a year ago.

In the first three weeks of August the prices of grains, cotton, and rubber declined further, while cattle, hogs, potatoes, coal, and coke advanced in price.

## AGRICULTURAL CREDIT

Announcement has been made by the Federal Farm Loan Board of a reduction in interest rates on farm mortgages in the Wichita (Kans.) and Houston (Tex.) Federal land bank districts from $5 \frac{1}{2}$ per cent to 5 per cent. The

St. Paul Federal land bank is the only other bank with a 5 per cent rate, although the St. Louis Federal land bank maintains this rate in a part of its territory. The Omaha bank loans at $5 \frac{1}{4}$ per cent, while all other districts continue to maintain the $51 / 2$ per cent rate.

The consolidated statement of all the Federal intermediate credit banks shows an increase in rediscounts during July of but $\$ 574,000$, which was slightly increased in the first two weeks in August, making a total of $\$ 43,962,000$ of rediscounts outstanding on August 14, 1926. The increase during this period is represented almost entirely by additional advances to agricultural credit corporations.
Direct loans of Federal intermediate credit banks during July were decreased approximately $\$ 6,000,000$ and during the first two weeks in August were reduced by nearly $\$ 2,000,000$ additional, leaving net outstanding loans on August 14, 1926, at $\$ 25,644,000$. During July the largest reductions were made at the Houston and New Orleans banks, while the Spokane bank showed a substantial increase. During July and the first two weeks of August loans based on cotton were reduced more than $\$ 9,000,000$, loans based on tobacco about $\$ 2,000,000$, and loans based on raisins $\$ 650,000$. Material increases were made in loans based on wheat, wool, and canned fruits and vegetables, with advances on wheat totaling $\$ 2,450,000$ and approximately $\$ 1,000,000$ each on wool and canned fruits and vegetables.

Loans based on eligible commodities and rediscounts for the different financial institutions for the latest available date in August are shown in the following table:

Net outstanding farm mortgage loans of Federal land banks increased approximately $\$ 4,200,000$ during July, and this figure was exceeded in the case of joint-stock land banks, which increased their net outstanding loans by $\$ 5,500,000$. Outstanding loans of reporting life insurance companies increased $\$ 4,000,000$ during the same period. The following table shows the outstanding volume of net mortgage loans at the end of April held by 12 Federal land banks, 54 joint-stock land banks, and 41 life-insurance companies owning more than 82 per cent of the assets of all life insurance companies.

Net Farm Mortgage Loans Outstanding [In thousands of dollars]

Manufacturing operations were reduced during July, as is usual at midsummer, but a slight increase in the board's adjusted index of production in basic industries indicates that the decrease for the greater part of industry was smaller than the customary seasonal reduction. Mining output was in large volume, owing to recent increases in bituminous coal and petroleum output and the maintained high rate of copper production. The unadjusted index of manufacturing declined in July and factory employment and pay rolls were likewise reduced. Much of the decrease in wage payments may be attributed to summer vacations and to closing for inventory taking and repairs, customary in July.
Increases in employment and pay rolls occurred in the ice-cream, flour, shoe, and paper-box industries, and in addition employment was larger in the leather, cement, and brick industries. Production data likewise showed greater activity in flour, cement, and brick. Production of iron and steel, lumber, and sugar, and the number of livestock slaughtered was slightly smaller in July than in June. There were marked decreases in the activity of textile mills and in the output of automobiles and rubber tires. Operations in many textile industries were at close to the low point of the summer of 1924, and the production of lumber, automobiles, and rubber tires was smaller than in July, 1925, but the volume of output for industry as a whole
continued at a higher level than for the same period of previous years. For index numbers of production, employment, and pay rolls, see pages 669-670.

Textiles.-In textile industries during July and August production was curtailed, but the volume of buying showed some improvement over that of the early summer, and prices were more nearly stable than at any time in several months. Prices of some products, in fact, advanced. Cotton consumption by mills was considerably reduced in July, totaling only 460,918 bales, the smallest figure for any month except last August since September, 1924, and the number of active spindle hours was without exception the lowest in the same period of time. Operations in the cottongrowing States are greater than a year ago, while those in New England are smaller. Markets for cotton yarns and fabrics continued steady during August with buying at the moderate rate noted in July, which was an improvement over immediately preceding months. Prices of cloths, according to the Fairchild indexes, increased in July and yarn prices were advanced in the first week of August.

Woolen mill activity during July in some lines was smaller than in any month since the early part of 1921, according to statistics of factory employment and pay rolls and of number of active hours of operation for looms and woolen spinning spindles. Carpet and rug looms and worsted spindles, while relatively inactive, continued to operate at higher rates than in 1924. New lines of woolen and worsted cloths for the spring and summer of 1926 were opened during July and August at prices lower than those of last year. Prices of these goods, as indicated by the Fairchild indexes for August 15, which reflect the result of new openings by most but not by all mills, averaged 7 per cent below those of a year before. The index for worsted goods was the smallest since 1922 and that for woolens lower than at any time since 1923. Raw-wool prices, which in the spring fell to the lowest levels since 1922, have within recent weeks remained relatively steady, with occasional small advances. Stocks of raw wool in the hands of dealers increased considerably between March 31 and June 30, owing to large receipts of domestic wool. Imports of raw wool in the first seven months of the year were in approximately the same volume as in the corresponding period of 1922, 1924, and 1925, although much smaller than in 1923. Consumption of wool by mills during the same
seven months totaled less than in any year since 1921. Sales of men's clothing and of women's coats and suits at wholesale in the New York Federal reserve district were seasonally greater in July than in June, but those of men's clothing were 5 per cent and of women's clothing 70 per cent less than in July, 1925. The strike in the women's cloak and suit industry continued into August.

Raw-silk imports during July were larger than in any month this year. According to statistics of the Silk Association of America, however, deliveries to mills were somewhat greater, and warehouse stocks were reduced to the lowest level in two years. Stocks in Yokahama, however, are reported to be unusually large. Raw-silk prices have been relatively steady for several weeks. Buying of silk goods has been in only fair volume. Sales of silk goods by wholesalers in the New York Federal reserve district were in about the same volume in July as in June, and showed little change as compared with July, 1925. Silk goods prices declined slightly between July 15 and August 15 to the lowest level since early last year. Reports indicate more active buying and production of rayon since the price reduction on July 1. Except in the case of women's full-fashioned silk lines, hosiery production was smaller in June than in the same month of 1925. Total orders and shipments increased in June and were greater than a year ago. Preliminary data indicate decreases in production, orders, and shipments during July. Orders for underwear in June exceeded those of the two preceding months, and production and shipments were larger than in May.

Leather and shoes.-Increased volume of business noted in the leather and shoe industries during June was fairly well maintained in July and August, without any appreciable further increase. Preliminary reports indicate that sole-leather production was reduced in July as compared with June and stocks in process showed no increase. Buying of leather has been in moderate volume with some expansion of deliveries as shoe manufacturers begin their busy season. Leather prices have declined since March and in July, according to the index of the Bureau of Labor Statistics, were as low as at any time in recent years. Hide prices were higher in July than in June, but declined slightly during the early part of August as the packer hide market became less active. Production of shoes continued in July at about the same rate as in June, which likewise corresponded approxi-
mately with that of July, 1925. Sales of shoes at wholesale, although showing seasonal declines in July, continued at a higher level than in either 1924 or 1925. Wholesale stocks, on the other hand, were considerably smaller than a year ago.

Metals.-Demand for iron and steel has been greater this summer than in the same period of any recent year, and production has been correspondingly large. Output of pig iron and of steel ingots was smaller in July than in June, but larger than in July of recent years. The rate of production during August has been about the same as or a little higher than in July-around 80 per cent of capacity for ingot output. There was a net loss of four blast furnaces in operation in July, and more have been blown out in August, but others in turn have resumed operations. Ironore shipments from the upper Great Lakes region for both June and July were larger than for any month since 1923. Prices of iron and steel have generally remained steady for several weeks. Scrap steel has risen some in price, and quotations on structural shapes were advanced in July. Contracting for structural steel has continued fairly large, although July bookings were smaller than a year ago. Shipments in July were the largest on record. Demand for sheets has been active, and July sales reported by independent manufacturers were larger than in any month since last November. Production, shipments, and sales all far exceeded recorded figures for July of previous years. Automobile manufacturers have recently been actively buying steel products. Railroad buying, however, has been relatively light.

Mine production of copper continued in July at approximately the same daily rate as in June, and larger than in July of recent years. Smelter output, on the other hand, decreased for the third month and was in about the same volume as during last July. Zinc output was about the same in July as in June. Although shipments decreased, they were larger than output and stocks were reduced. Production of lead increased slightly during July. Copper zinc, and lead prices advanced a little in June and July, but were fairly steady in the first three weeks of August.
Fuels.-Bituminous coal production showed an increase in July, and the seasonal upward trend continued during the first half of August at a level higher than in the two preceding years, but lower than in 1923. Anthracite was mined in slightly smaller volume in July than in June, but output totaled more than
in any previous July since 1918. Demand for soft coal has expanded and prices have risen. Buying for export has continued large. Exports of bituminous coal in July totaled $3,240,000$ tons, the largest for that month since 1920. Total exports for the three months since May 1, when the British coal strike began, totaled $6,900,000$ tons, as compared with $4,440,000$ tons in the same period last year. Stocks of bituminous coal in the hands of consumers, according to estimates of the Bureau of Mines, totaled $39,000,000$ tons on July 1, as compared with $36,000,000$ on May 1, $40,000,000$ on April 1, and $38,000,000$ tons on June 1, 1925. Retail dealers had stocks of anthracite estimated to be sufficient to last 40 days, less than on corresponding dates in 1924 and 1925. Production of both beehive and byproduct coke increased in July. Demand for coke improved in August and prices were advanced.

Production of petroleum has increased steadily since June, and weekly output in August was greater than at any time since June, 1925. The number of new wells completed also increased. According to estimates of the American Petroleum Institute, pipe-line and tank farm gross domestic crude oil stocks east of the Rocky Mountains decreased by over $3,000,000$ barrels in July. Stocks of gasoline at refineries decreased, while gas and fuel-oil stocks increased considerably during July. Gasoline production and consumption has been at a high rate this season. During August, according to the index of the Oil, Paint, and Drug Reporter, refinery prices of gasoline were reduced following increases in July.

Automobiles and tires.-Automobile production was reduced during July for the third successive month and for the second month was less than a year earlier. A number of new models and changes in details of models have been announced since June 1. Although some price changes were made, there has been no definite general upward or downward trend of prices. Trade reports indicate some increases in manufacturing schedules during August, owing to operations on new models. Sales of new cars at wholesale, according to reports received by the Federal reserve banks of Philadelphia and Chicago, were smaller in July than in June and also below those of last July. Retail sales, although seasonally less than in June, were greater than in July of last year. Stocks of new cars in the less expensive makes were slightly smaller than a year ago. Used-car sales and stocks continued to be larger than last year.

Shipments of automobile tires during July were greater than in any previous month except June, 1925. Tube shipments were also large. Production, however, was curtailed. As a consequence, the large stocks of tires and tubes held by manufacturers were considerably reduced, although they continued much larger than at this season of previous years. Crude-rubber imports were increased considerably in July. Prices of crude rubber remained steady during July at around 42 cents a pound, and averaged for the second quarter slightly above this figure, which was the minimum set by British officials to prevent a change in the export quota for the third quarter under the Stevenson law. The quota for the third quarter, therefore, remains unchanged at 100 per cent of standard production. After August 1 the rubber price declined to about 38 cents a pound.

Building materials.-Production, shipments, and orders reported by manufacturers of various building materials were in general seasonally large in July, and all reflected the present high rate of building activity. In general, there was little change in the volume of business as compared with a year ago, which was also a period of great activity. Production of lumber was slightly greater in July than in June, while shipments, although larger than production, decreased. For softwoods, according to weekly data from representative firms, shipments for the eight weeks ending August 21 have slightly exceeded cut and orders, which in turn have approximately equaled each other. For hardwoods, in the same period the three items were in about the same volume. For the year to date the cut of softwoods has been smaller than both shipments and orders, whereas the reverse has been true in the case of hardwoods. Prices of lumber have declined slightly during recent months, and in August further reductions were made in softwoods. Hardwoods, on the other hand, about the middle of August were advanced in price. Little change of importance occurred in the flooring industry during July, and the volume of business was not appreciably different from that of last year. Cement production was at a new high record in July, but shipments were smaller than in June. Face-brick output was seasonally large, exceeding that for all previous months. Production and shipments of sanitary ware were smaller than a year ago. July production of plate glass made another new high record.
Food products.-The production of meat products in July was slightly less than in the
preceding month, due largely to reduced receipts of livestock. The total value of sales billed to domestic and foreign customers during the month by 41 slaughtering establishments, as reported by the Chicago Federal Reserve Bank, decreased 6 per cent from the total of June and was approximately in the same amount as in July of last year. Storage holdings of beef and lamb and mutton decreased from July 1 to August 1, while holdings of pork and lard increased. Storage holdings, which during recent months have been materially under the amounts held on comparable dates of 1925 , are now nearly on the same level as a year ago. Quotations on most meat products declined in July and early August as a result of a lower level of prices in the livestock market. Flour production during July was the largest for any month since October, 1925, and mill output in the Southwestern States was particularly active as a result of plentiful supplies of new winter wheat available at a lower level of prices. Mill demand has been based largely on domestic trade and a large volume of orders has been booked for future delivery. Flour exports for July were approximately 125,000 barrels larger than in June and were also above the totals of July, 1925. Sugar meltings for July were lower than in June and also below the total for July, 1925. Stocks at the end of the month showed a reduction of more than 100,000 long tons, and the trade reports a fairly active demand. Shipment against contracts has been large, indicating that consumption is apparently being maintained at a high level. Trade reports point out that the exceedingly large fruit crop of this year will be a sustaining influence in maintaining this high rate of consumption. Refiners are quoting selling prices at 5.70 to 5.80 cents a pound.

## BUILDING

Measured in estimated cost, the volume of construction brought under contract fell off in July, as in each of the three preceding months, the decreases from month to month being principally seasonal in character. For this period the record has, however, been exceptional in that the peak valuation for construction awards was recorded in March, fully a month in advance of the usual peak season. Although the July decrease of more than 5 per cent over the month was less than the usual seasonal decrease, it was widely distributed, as is evidenced by the totals for the 11 Federal reserve districts comprising the 37 States east of the Rocky Mountains for which construction data are regularly reported to the F. W.

Dodge Corporation. In comparison with June, total decreases over the month were shown for 7 of the 11 districts comprising this area. In July, as in June, awards this year in the area covered by the data fell below 1925, following an unbroken record throughout the past year of increases month by month over the same month of the preceding year. Decreases recorded for residential building-of 22 per cent over the month and of 20 per cent in comparison with July of last year-were relatively greater than for all classes of construction combined. It may be noted also that a smaller valuation for "contemplated projects" was reported for July than for either June of this year or July, 1925.

Comparisons with 1925, by districts, however, indicate diverse trends of activity in the construction industries in different sections of the country. While, for example, July awards this year in the 37 States as a whole represented an estimated construction cost less in the aggregate than the amount contracted for in this area last year in July by $\$ 27,000,000$, or 5 per cent, this net decrease covered increases in four middle western Federal reserve districtsChicago, St. Louis, Minneapolis, and Kansas City, totaling $\$ 60,000,000$, and decreases in the seven eastern and southern districts-Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, and Dallas-totaling $\$ 87,000,000$.

During the seven months ended with July the amount of construction contracted for this $\dot{y}$ ear exceeded the amount contracted for in the same period of 1925 by $\$ 336,000,000$, or 10 per cent. The accumulated excess over 1925, which increased from month to month to a maximum in May, was reduced in June by some $\$ 13,000,000$ and further reduced in July by $\$ 27,000,000$. Reports for the first three weeks of August indicate a further reduction of the margin of excess over 1925. For this sevenmonth period ended with July the excess over 1925 reported for the New York district alone exceeded $\$ 260,000,000$ (in the total excess of $\$ 336,000,000$ for the 11 Federal reserve districts combined), but large margins of excess over last year were reported also for the Atlanta, Kansas City, and Dallas districts, and increases less considerable in amount for the Chicago, St. Louis, and Minneapolis districts. In the Boston, Philadelphia, Cleveland, and Richmond districts awards this year to the end of July ran below 1925. If the period of comparison is extended to embrace a full year, it is found that the amount of construction contracted for during the 12 months ended with July totaled $\$ 6,343,000,000$, ex-
ceeding the amount contracted for in the preceding 12 months by $\$ 1,172,000,000$, or 23 per cent.

Both the number and the valuation of building permits issued in 168 selected cities decreased in July, the decrease in valuation amounting to more than 10 per cent over the month and to 12 per cent in comparison with July of last year. In each of the 12 Federal reserve districts net decreases over the month are shown for these cities and also, except in the Dallas district, net decreases over the year in comparison with July, 1925. Reports to the F. W. Dodge Corporation from the building departments of 208 cities show decreases in the cases of 112 cities in valuation of July permits this year in comparison with 1925, and increases in the case of 96 .

Wages in the construction industries continued through July generally at the level of the preceding month, and only a slight shifting in the cost of building is indicated by the Bureau of Labor Statistics index of wholesale prices of building materials, which advanced fraction-ally-from 171.2 in June to 171.5 in July.

## WHOLESALE AND RETAIL TRADE

In July trade at wholesale and retail firms reflected regular midsummer seasonal declines. Reductions in retail sales, however, were not as large as those which usually occur in July, and total retail sales were considerably larger than in July, 1925. Trade at wholesale firms was somewhat smaller than in July of last year, but this decline was due partly to a lower level of wholesale prices than last summer, which was particularly significant for textiles and dry goods. Merchandise stocks carried by wholesale dealers increased slightly between June and July, in anticipation of the usual expansion of trade that occurs in late summer and early autumn, but at the end of the month they were somewhat smaller than a year ago. Depart-ment-store stocks showed more than the usual seasonal decline in July and at the end of the month were in about the same volume as last year. The rate of stock turnover in department stores was larger than in July a year ago, and for seven months ending in July the rate of turnover was about 1.5 per cent higher than for the corresponding period in 1925.

Wholesale trade.-Trade at wholesale firms reporting to the Federal reserve system was seasonally smaller in July than in June. Sales were smaller in all leading lines except dry goods, which were slightly larger. Compared with July a year ago, sales of shoes were some-
what larger, but those of meats, groceries, dry goods, and hardware were smaller. For all reporting lines combined the volume of trade this year was slightly less than in July, 1925, largely because sales of dry goods were 8 per cent less than last year. The decrease in sales of dry goods, which reflects in part lower prices, was general throughout the country. Sales of grocercies were smaller in most Federal reserve districts but larger in the Boston, Chicago, Kansas City, Dallas, and San Francisco districts.

Sales of agricultural machinery and farm equipment, as indicated in reports by manufacturers to the Chicago Federal Reserve Bank, averaged 15 per cent larger in July than in the corresponding month of last year. Statistics recently prepared by the Department of Commerce of sales of farm equipment by manufacturers for domestic use for the year 1925 indicate that total sales amounted to $\$ 332,845,000$, as compared with $\$ 277,925,000$ in 1924 and $\$ 311,976,000$ in 1923.

In anticipation of the growth in trade that usually begins late in the summer and early autumn, the value of stocks of merchandise carried by wholesale dealers increased slightly between June and July. Stocks of dry goods were 9 per cent larger than at the end of June, the largest increase for any one line, and stocks of shoes were 5 per cent larger. This growth in the stocks of dry goods and shoes occurred in nearly all sections of the country. Notwithstanding this increase in stocks in July the volume of merchandise carried by wholesale dealers was in general slightly smaller at the end of the month than in July, 1925. Stocks of groceries, hardware, and drugs were larger, but those of meats, dry goods, and shoes were smaller. Stocks of dry goods and shoes at the end of July were for that date the smallest in the past three years. Accounts receivable outstanding at the end of the month were generally smaller than a year ago.

Retail trade.-In July retail trade generally declines to the smallest volume for any month of the year, but this year the decline was less than is usual, and sales were considerably larger than a year ago. Sales of department stores were 4 per cent larger than in July of last year, those of mail-order houses 12 per cent larger, and those of all reporting chain stores were also larger. For the seven months ending in July department-store sales were 4 per cent larger than in the corresponding period of 1925.

Increases in department-store sales from July of last year occurred in all sections of the country; but the most substantial increases were in
the New York, Minneapolis, Dallas, and San Francisco Federal reserve diṣtricts. Statistics reported from 45 separate departments by stores in seven Federal reserve districts indicate that sales were larger at 28 and smaller at 17 departments.

Stocks of merchandise carried by department stores were further reduced in July, and at the end of the month they were in about the same volume as a year ago. In the Boston, Philadelphia, Cleveland, Minneapolis, and Dallas Federal reserve districts stocks were smaller than a year ago, but in all other districts, except San Francisco, they were slightly larger. Reports from 45 separate departments indicate that the volume of stocks carried by 33 departments was smaller and that of inventories at 12 departments was larger.

With a volume of stocks in July practically no larger than a year ago and a volume of sales 4 per cent larger, the rate at which stocks were turned over was faster than in July, 1925, and for the seven months ending in July the rate of turnover was higher than last year. In anticipation of the usual growth in the volume of retail trade in the autumn months orders by department stores outstanding at the end of July for merchandise were 25 per cent larger than at the end of June.

## TRANSPORTATION

From week to week freight-car loadings have run this year almost continuously in record volume. On the average in the period of 33 weeks ended August 14 the roads loaded 985,000 cars per week, the corresponding average for 1925 being 951,000 cars.

Loadings of miscellaneous freight, including less-than-car-lot shipments, covering principally the distribution of manufactured products, were in nearly the same volume in July as in June, and exceeded July loadings for this class of freight in any earlier year. Increases over the month and over 1925 are shown for loadings of grain and grain products, livestock, coal, and ore, decreases over the month being recorded for forest products and coke, although July loadings of forest products, were in record volume for the month and loadings of coke were well in excess of 1925.

In each of the seven transportation districts for which separate totals are compiled loadings in July for all classes of freight combined exceeded loadings last year in this month, and in four of these districts (Allegheny, Pocahontas, central western, and southwestern) they were in record volume for the month.

The surplus of freight cars available for service, which averaged 223,000 cars (including 116,000 box and 66,000 coal cars) in July, fell off to 180,000 cars in the first quarter of August. On August 1 the percentage of cars (92.8) and of locomotives (86.1) in serviceable condition exceeded the five-year averages (88.6 and 79.1, respectively), as computed by the Bureau of Railway Economics for this date.

Operating revenues of class I railways in June were 6.5 per cent, operating expenses 3.8 per cent, and net railway operating income 16.5 per cent greater than in June of last year. For the six months ended June 30 corresponding increases over 1925 amounted to 4.6 per cent for the operating revenues of these roads, to 2.7 per cent for their operating expenses, and to 12.6 per cent for their net railway operating income. The relatively greater increase over last year of operating revenues in comparison with the increase of operating expenses of class I railways for the month of June as for the half year ended June 30 is reflected in decreases of the operating ratio (percentage of operating expenses to operating revenues) from 74.17 to 72.28 per cent for the month of June and from 77.33 to 75.94 per cent for the half year. Rate of return earned on the book investment of carriers in this half year, as computed by the Bureau of Railway Economics, was equivalent on an annual basis to 4.94 per cent, the corresponding percentage for 1925 being 4.49. Carriers in the eastern district earned at the rate of 5.71 per cent this year and 5.17 per cent in 1925, carriers in the southern district at the rates of 5.65 and 5.60 per cent this year and last, and carriers in the western district at the rates of 3.79 and 3.31 per cent.

## AGRICULTURE

The month of July was marked by a general decline in the prices of agricultural products taken as a whole. The Department of Agriculture's index of farm prices of 30 selected agricultural commodities declined from 139 in June to 135 in July, and continued the decline to 132 in August. This is the lowest level that this index has reached since September, 1924, and the index is now 20 points lower than in August a year ago. The department's index of relative purchasing power of farm products, which has been fairly constant at 87 for the last 10 months, declined 2 points in July, which is the lowest point reached by that index since December, 1924.

Production of leading crops, according to official estimates, indicate decreased yields of
corn, oats, cotton, and tobacco, as compared with last year, while increased production of wheat, potatoes, and the principal fruit crops is indicated. A general improvement in the condition of most crops occurred in July, the composite condition of all crops on August 1 being 4.2 per cent below the 10 -year average condition of crops on that date. A month earlier the composite condition was 6.4 per cent below the 10 -year average. Livestock throughout the United States is generally in good condition, although some forced marketing has resulted from too dry ranges in certain areas.

Grains.-Early crop estimates of wheat have been revised upward as threshing reports indicate a higher yield than had been anticipated. The winter wheat production on a basis of August 1 conditions was placed at $626,000,000$ bushels by the United States Department of Agriculture, an increase of $58,000,000$ bushels over the July 1 estimates. The spring wheat production was also increased from $200,000,000$ bushels to $213,000,000$ bushels. The increased crop of winter wheat was due largely to the high average yield of 17 bushels per acre on an acreage 19 per cent larger than in 1925, according to the same report. This high average yield per acre has not been equaled since 1914. The quality of the winter wheat crop is also reported to be good, with indications that 94.5 per cent of the crop will be of a high medium grade.
The North American production this season is estimated at slightly in excess of last year, the decrease in this year's Canadian estimate being exceeded by the increased production in the United States. The estimated production of Canadian wheat has been placed at $317,000,-$ 000 bushels, which is only 77 per cent of the amount produced in 1925. The total world's crop, excluding Russia, is estimated at slightly larger than that of last year, but the increase is offset by the small carryover at the beginning of the present crop year. The new crop in the Southwest has moved to market at a rapid rate, and the milling trade has absorbed a very large amount of this grain. Export movement was active at the beginning of the crop season, but has not been maintained at as high a level since that time.

Unfavorable weather in the soft-wheat section of the Middle Western States and in parts of the spring-wheat belt delayed harvesting and threshing operations, and some deterioration in the quality has been reported. Practically all of the winter wheat in the Southwest has been threshed, and the Federal reserve banks
at Dallas and Kansas City report a considerable liquidation in sections of their districts where the wheat crop has been marketed. The reports coming from the spring-wheat section indicate fair yields in some areas, but, on the whole, the production has been greatly reduced as a result of the too dry weather. The crop in South Dakota, particularly, has suffered much damage.

No. 1 northern wheat of Minneapolis reached the highest level of the year about the middle of July but decreased during the balance of the month and in the first half of August. Both hard and soft winter wheat also reached lower levels during the first half of August, No. 2 hard winter at Kansas City being quoted at $\$ 1.35$ on August 19 and No. 2 red winter at St. Louis at $\$ 1.35$. On the same day No. 1 dark northern at Minneapolis was quoted from $\$ 1.49$ to $\$ 1.56$.

Reports from the corn-growing States indicate that the crop in most places is from 10 days to 2 weeks late. Growing conditions have been generally favorable, with the exception of parts of Kansas and Nebraska, where serious damage from drought has been reported. The August 1 estimates of the Department of Agriculture place the 1926 corn crop at $2,577,000,000$ bushels, a decrease of $328,000,000$ bushels from last year's large crop. The loss in estimated production for the month of July, as a result of unfavorable weather conditions, was $84,000,000$ bushels, but the loss was even more marked in six of the leading corn States, where the estimates showed a reduction in yield of $166,000,000$ bushels. The influence upon the market of the smaller crop, which was 11 per cent below that of last year, according to the Department of Agriculture, was largely offset by the large stocks still on the farms and in trade channels, as well as the probability of a large carryover from the 1925 crop.

A reduction of about $200,000,000$ bushels from the production of last year is indicated in the August 1 estimate of the 1926 oats crop, which has been placed at $1,311,159,000$ bushels. The carryover on farms of last year's crop totaled approximately $110,000,000$ bushels, a figure which has been exceeded but twice-in 1916 and 1921. Stocks of old oats at the principal markets continue large and much of the new crop which is being marketed is of light weight.

A reduction in the estimated production of rye, flax seed, and barley, as compared with last year, is also reported by the Department of Agriculture. Some strength has been dis-
played in the flax market, and prices in the Minneapolis market advanced approximately 20 cents per bushel during July.

Livestock.-Hot dry weather in several of the Western States resulted in a lowering of the condition of the ranges during July, the Department of Agriculture reporting a reduction from 92 to 87 per cent of normal. The effect of the drought has been most marked in eastern Montana, northeastern Wyoming, and the western Dakotas. Parts of western Kansas and Nebraska, as well as eastern Colorado, have also suffered material injury. The conditions in the Southwest, with the exception of a few local areas, continues good.
Range cattle, as a whole, are reported to be in generally excellent condition. There has been some forced marketing and movement to other sections as a result of the drought in certain areas, and indications are that numerous localities will find it necessary to ship from the dry ranges earlier than usual, according to the same report. Sheep and lambs are reported to be in generally excellent condition, except that lambs are expected to be lighter than last year, as a result of the hot dry weather. Dry ranges have necessitated an early and rapid movement to market of lambs from Idaho and Nevada.

The results of 1926 lamb survey conducted by the United States Department of Agriculture indicate a crop exceeding that of last year by about $2,200,000$ head, or approximately a 10 per cent increase. In 13 of the western lamb States an increase of 16 per cent took place, while the crop in other States showed a decrease of about 2 per cent. The total crop of lambs saved in the 13 western lamb States was $16,819,000$, as compared with $14,420,000$ last year. Contracting of lambs for fall delivery has shown activity in Nevada and Utah, sales being reported at about 10 cents per pound off the ranges.

In the central markets, heavy types of beef cattle have been selling on a considerably lower level than last year, and many feeders who stocked their pastures in the spring at the high level of prices prevailing at that time have been forced to take considerable losses. July prices of beef cattle were slightly lower than in June and more than $\$ 2$ lower than July of last year. Lamb prices, which reached their high level of the year in June, have declined almost continually since that time, July prices being $\$ 1.85$ less than the average price for June, and a further decline of 40 cents took place in the first two weeks in August.

Receipt of hogs at the principal markets in July was in excess of the number marketed in the same month last year, but less than the amount marketed in June of this year. Prices declined approximately $\$ 1.40$ during July and a further reduction of approximately a dollar took place during the first half of August.

The average prices of livestock at the Chicago market for July, with comparisons, are reported by the Chicago Federal Reserve Bank as follows:

| Average Prices of LaIVESTOCK |
| :--- |
| [Per hundred pounds at Chicago] |

Dairy products.-Cold-storage holdings of butter at the end of July were 50 per cent greater than the amount held on the same date a year ago. The increase for the month of July, which was approximately $44,000,000$ pounds was slightly less than in the comparable period last year, however. The average price of July butter showed but little change from that of the preceding month, but was approximately 2 cents below the average price of July; 1925. The market situation, however, has tended to show some strength, as pasture and crop conditions have been adverse to favorable production in many areas of the dairy section.

The production of cheese during 1926 has been maintained at a slightly higher level than in the same period of last year. While storage holdings, which totaled $73,579,000$ pounds on August 1, 1926, were slightly larger than a year ago, the decrease in storage holdings for July was greater than in the same period a year ago. July prices for cheese were practically on the same level as the preceding month and approximately 2 cents below that of 1925 .

Cotton.-Estimates by the Department of Agriculture, based upon the condition of the cotton crop on August 16, indicated a final yield of $15,248,000$ bales. This is a reduction of 373,000 bales from the expected yield of $15,621,000$ bales at the beginning of the month. In all States except North Carolina,

South Carolina, and Tennessee the condition of the crop was lower than at the beginning of the month, but the largest reductions were in Texas and Oklahoma. More recent reports indicate that a large part of the growing areas was adversely affected by excessive rains and unfavorable weather in the late weeks of August. The crop is generally later than last year, and ginnings prior to August 16 amounted to only 181,752 bales, compared with 579,291 bales last year and 135,901 bales in 1924. Marketing thus far this season has been larger than in either of the two preceding seasons, although current reports indicate that both domestic and foreign buyers are hesitating to cover their requirements because of the general uncertainty that still prevails as to the probable production.

Final statistics issued by the Bureau of the Census in the middle of August showing the supply and distribution of the crop for the year ending July 31, 1926, are as follows:

Aggregate supply
17, 933, 406
Distribution

| Net exports (total exports less reimports) |  |
| :---: | :---: |
|  |  |
| Burned |  |
|  |  |
| In consuming establishments |  |
| In public storage and at compresses |  |
| lsewhere (partially estimated) ${ }^{1}$ |  |

Aggregate distribution $\qquad$
8, 042, 433
6, 450, 987
50, 000
3, 543, 183
n consuming establish-
ments------------1 compresses.----...... mated) ${ }^{1}$------------ 510,000

Excess of distribution over supply ${ }^{2}$--------------------------

[^2]Comparison of the data in the above table with those for the previous year shows that domestic consumption was 258,000 bales greater than in 1925 and that exports were 43,000 bales larger. This increase, however, in consumption and exports was not sufficient to absorb the increase in production, and the total amount of cotton remaining in the United States on July 31 was approximately $2,000,000$ bales larger than in 1925. When the carry over is considered in relation to the probable yield, the total supply of cotton available for consumption during the present season is the largest in the past five years.

A more detailed comparison of the total supply of the cotton in recent years with the indicated supply this year is shown in the chart:

Figure for $1926-27$ is estimated on basis of official forecast of production and is exclusive of import

Tobacco.-A tobacco crop of $1,203,000,000$ pounds was indicated by the Department of Agriculture on the basis of the condition of the growing crop on August 1. This compares with anestimated yield of $1,139,000,000$ pounds at the beginning of July and a final harvest of $1,374,000,000$ pounds last year. A smaller crop than last year is expected in all of the leading growing States except Tennessee. Harvesting in Georgia and South Carolina began late in July and marketing progressed rapidly in August. Prices in the local markets in both of these States were considerably higher than a year ago and are expected to partly offset the declines in yield.

At the beginning of July stocks of leaf tobacco held by manufacturers and dealers showed a seasonal decline from the high levels of last April, but they continued in a volume larger than in the preceding year, according to
the quarterly report by the Department of Commerce. This growth of stocks of tobacco has continued for several years, and stocks at the beginning of July were larger for that date than in any previous year for which statistics are available. The following table shows in detail statistics of stocks of principal types of tobacco on July 1, 1926, 1925, and 1924.

Stocks of Principal Types of Tobacco in Hands of Dealers and Manufacturers
[Millions of pounds]

Fruits and vegetables.-Car-lot shipments of peaches in July exceeded all previous records with a movement of 21,069 cars. While prices continued at a fairly satisfactory level during most of July, the continued heavy marketing during the first half of August was accompanied by a much lower range in prices.

Prospects for all fruit crops, with the exception of California prunes and olives, according to the Department of Agriculture, are uniformly good. The pear and grape crops, according to the same source, will break all records, while the peach yield will exceed all records since 1915, and the apple crop is expected to be the largest since 1920.
The 1926 potato crop has been estimated at $345,569,000$ bushels, which is about $20,000,000$ bushels more than the very short crop of 1925. The condition of sweet potatoes has been materially improved in all producing areas with the exception of California. The current crop is estimated at $73,140,000$ bushels, which would be $11,000,000$ bushels more than last year's crop.

## BANK SUSPENSIONS AND COMMERCIAL FAILURES

Bank suspensions.-During July 138 banks, with deposits of $\$ 52,164,000$, were reported to the Federal reserve banks as having been closed on account of financial difficulties. This is the largest number of suspensions for any month since January, 1924, and compares with a total of 77 banks, with deposits of $\$ 41,737,000$,
closed in June and 29 banks, with deposits of $\$ 5,882,000$, closed last year in July. The increase for July this year is accounted for by the increase in the number of suspending nonmember banks. Of the total number of suspensions, only 5 , with deposits of $\$ 1,978,000$, were member banks-four of them national banks and one a member State bank-while 133, with deposits of $\$ 50,186,000$, were nonmember banks. More than two-thirds of the total number of suspensions during the month were nonmember banks in the States of Georgia and Florida-banks in most cases associated in a chain system the head of which became insolvent.

The largest number of suspensions was in the Atlanta district, where 97 banks (not including about 22 branches which were operated by three of the banks) were closed, only one of them a member bank. The number of suspensions in July was larger than in June in the Richmond, Atlanta, and San Francisco districts and smaller in the Philadelphia, Chicago, St. Louis, Minneapolis, and Kansas City districts. Seventeen banks which had previously been closed were reported to have resumed operations during the month- 1 in the Atlanta district, 1 in the St. Louis district, 13 in the Minneapolis district, and 2 in the Kansas City district. The number and deposits of banks closed during July, 1926, are shown in the following table, by class of bank; the figures for closed banks represent, so far as can be determined, banks which have been closed to the public by order of supervisory authorities or by the directors of the bank, on account of financial difficulties, and it is not known how many of the institutions thus reported may ultimately prove to be solvent.

Bank Suspensions During July, 1926

|  |  |  |  |  |  |  |
| San Francisco.- | 2 | 2,042, 000 |  |  | 2 | 2,042,000 |

[^3]During the first three weeks of August 5 member banks and 36 nonmembers-a total of 41 banks having deposits of $\$ 9,641,000-$ were reported as having been closed during the month; the largest number in any one district was 24, reported by the Federal Reserve Bank of Minneapolis. During the same period 17 banks which had previously been closed were reported to have resumed operations.

Commercial failures.-During the late spring and summer months there has been a downward trend in the number of commercial failures, a usual occurrence for this time of year, and in July failures numbering 1,605, with liabilities of $\$ 29,680,009$, were reported by R. G. Dun \& Co. The number of failures was the smallest for any month of the year, comparing with 2,296 in January and 1,984 in March, and was somewhat smaller than the total for the month of July in the two preceding years. Although the liabilities involved in these failures were slightly larger than the total for June, they were the smallest July total since 1920. The decline in the number of failures from July, 1925, reflected decreases in the number of failed manufacturing enterprises and of failed trading organizations; the number of insolvent agents, brokers, etc., showed a slight increase for the year. The decline in liabilities was largely in the liabilities of the latter class of enterprise, although there was a decrease also for the trading group. Liabilities of the manufacturing group showed a slight increase for the year. Failures during

July, 1926, are shown in the following table, by class of enterprise:

Commercial Failures During July, 1926

| Class of enterprise | Number |  | Liabilities (000 omitted) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1926 | 1925 | 1926 | 1925 |
| All classes.. | 1,605 | 1,685 | \$29,680 | \$34, 505 |
| Manufacturing: | 396 | 418 | 11,167 | 10, 932 |
| Trading.- | 1, 122 | 1,184 | 14, 614 | 15, 961 |
| Agents, brokers, etc. | 87 | 83 | 3,899 | 7,612 |

The number and liabilities of commercial failures during July, 1926, by Federal reserve districts, are presented in the following table:

Commercial Failures During July, by Federal Reserve Districts

| Federal reserve district | Number |  | Liabilities |  |

## CHANGES IN MEMBERSHIP IN THE FEDERAL RESERVE SYSTEM APRIL 12, 1926, TO JUNE 30, 1926

Between April 12 and June 30, 1926, the number of member banks in active operation in the Federal reserve system decreased by 37, as indicated by the periodic reports required of these banks; national banks showed a decrease of 22 and member State banks a decrease of 15. Total resources of both classes of members increased during the period, the increase for all member banks taken together amounting to about $\$ 770,000,000$. The decline in the number of member banks was the net result of 40 additions to membership, for the most part newly organized national banks or existing State institutions admitted to membership, as against 77 losses, resulting chiefly from mergers and suspensions. Gains and losses in membership between April 12 and June 30, 1926, are classified for national and State members in the following table:
Changes in Membersitp in the Federal Reserve
System, by Class of Member, April 12, 1926, to June 30, 1926

| 8 | Member banks |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

| Net change..-.-- | -22 | -15 | -37 | ${ }^{6}+769,749$ |
| Active member banks-June 30, 1926 , | 7,972 | 1, 403 | 9,375 | 40, 845, 189 |

${ }_{1}$ Succession between members of one class and members of the other,
without effect on the number of banks in the system.
${ }^{2}$ Succession of a national bank by a State bank which was nonreporting in the previous quarter, involving a temporary decrease of 1 bank in
that quarter and an offsetting increase in this quarter.
${ }^{3}$ Member banks succeeded by member banks of the same class during an earlier period, the succeeding banks not reporting until this quarter. 4 Includes compulsory withdrawal of one bank with resources of $\$ 273,000$.
${ }^{5}$ Includes changes in resources due to reorganization, growth, contraction, etc., in addition to changes enumerated.
Since the end of 1925 there has been a net decline of 114 in the number of member banks
in active operation in the system. This decline is the result of losses which, for the most part, were incidental to mergers, suspensions, etc., and did not reflect the exercise by banks of their option regarding the retention or relinquishment of membership. There were 86 banks that joined the system during the half year and 66 member banks that withdrew. Of the banks that joined the system, 56 were newly organized national banks, 8 were nonmember banks that converted into national banks and so became members of thesystem, 18 were nonmember banks that were admitted to membership with the status of State institutions and 4 were banks previously closed which were found or made solvent and permitted to resume operations again. The 66 banks that relinquished membership in the system included 28 State banks that withdrew after advance notice to the Federal Reserve Board, 10 member banks that were succeeded by nonmember banks organized for that purpose, and 28 banks that were absorbed by already existing nonmember banks.

As against the voluntary accession of 20 banks resulting from the above changes, 136 other banks were lost to membership (see footnote 2 of the following table). Of these, mergers between member banks accounted for the loss of 63 banks- 54 of them national and 9 of them State banks-and suspensions accounted for 60 banks- 47 national and 13 State banks. There were also 12 voluntary liquidations and one compulsory withdrawal of a member State bank. In the following table changes in membership for the first half of the year are classified to show separately such changes as were incidental to the loss of identity by merging member banks or by member banks that failed or that entered voluntary liquidation.

Changes in Membership in the Federal Raserve System, December 31, 1925, to June 30, 1926

|  | Number of banks |
| :---: | :---: |
| Active banks, Dec. 31, 1925 | 9,489 |
| Banks joining the system. | $\overline{86}$ |
| Banks withdrawing from the system | 166 |
| Net increase from banks joining and withdrawing --...... | 20 |
| Banks lost to membership through mergers between member banks, suspensions, etc. | 2134 |
|  | 114 9,375 |

1 Includes 28 withdrawals which were incidental to the absorption of member banks by existing nonmember banks.
2 Against an actual total of 136 such incidental losses to membership (see text) have been offset two additions resulting from two instances of succession between member banks, prior to Dec. 31, 1925, in which the succeeding banks were nonreporting until after Dec. 31, 1925.

## CONDITION OF ALL MEMBER BANKS

The accompanying tables cover the condition of all member banks for a series of years ending with June 30, 1926, the latest call date, for which figures have recently become available. They show that the loans and investments of member banks, after decreasing during the first quarter of the year, increased during the second quarter to about $\$ 31,400,000,000$ and were at the middle of the year somewhat above the previous high point reached at the end of 1925. Time deposits continued to increase, while demand deposits declined further. The chart shows the course of the principal items during the last eight years.

The tables, which are more extensive than those which have heretofore appeared in the Bulletin, give comparable figures for a series of call dates, by Federal reserve districts, as well as for the system as a whole. For the latest call, figures are given by States and by cities and a table is included showing the reserve computations for all member banks by
classes. This table shows that on June 30, 1926, the reserves of member banks, approximating $\$ 2,240,000,000$, amounted to 7.5 per cent of their net demand plus time deposits, approximating $\$ 30,000,000,000$, which are the deposits against which reserve balances to be held with the Federal reserye banks are prescribed by the Federal reserve act.

Some of the tables give the total resources and total liabilities of the member banks in full detail, as shown by the summarized condition statements, while other tables give the principal resources and liabilities. The latter have been selected with a view to including the items most relevant to the general credit situation and to the position of the member banks in relation to the Federal reserve banks. Total loans and investments and total deposits are shown by classes. While total loans and investments are an accepted measure of the volume of member bank credit outstanding, the figure for total deposits, though useful for some purposes, includes considerable duplication, largely on account of the fact that total deposits include in the aggregate a considerable volume of deposits due to banks. A better measure than total deposits, for the purpose of following the credit situation, is net demand plus time deposits, from which has been eliminated, through the prescribed method of computing net demand deposits, a part of the duplication represented in total deposits. Net demand plus time deposits, furthermore, are the deposits against which reserve requirements are computed. The tables give net demand deposits, and net demand deposits plus time deposits, and the reserves which are maintained against them in the form of balances with the Federal reserve banks. Bills payable and rediscounts, most of which represent borrowings from Federal reserve banks, are also given. Since changes in bankers' balances frequently reflect important changes in the general credit situation the amounts due to and due from banks are included among the selected items. Amounts due to banks, as given in the table, are inclusive of amounts due to foreign banks, as well as due to member and nonmember banks, but amounts due from banks are exclusive of foreign items.

## REPORT OF THE ROYAL COMMISSION ON INDIAN CURRENCY AND FINANCE ${ }^{1}$

The Royal Commission on Indian Currency and Finance, appointed August 25, 1925, published its report on August 4, 1926. Following is a summary of the more important parts of the report:

## I. Indian Currency Systen

Historical retrospect.-Before 1893 India had a monometallic system with silver as the standard of value. In 1893 the mints were closed to the free coinage of silver, and five years later the Fowler Committee was appointed to consider how the establishment of a gold standard for India could best be secured. This committee recommended making the British sovereign a legal tender and a current coin in India, and opening the Indian mints to the unrestricted coinage of gold. Gold, however, never became a substantial part of the circulation; and the standard which evolved, commonly known as a gold exchange standard, was, so far as it amounted to a definite standard at all, a standard of sterling exchange. It was in operation at the beginning of the war in 1914.

The Chamberlain Commission, appointed in 1913, abandoned the ideal of a gold standard based on a gold currency, and accepted in its place an exchange standard with an excrescent currency of sovereigns not essential to the working of the system. Owing to the outbreak of the war, no action was taken on these recommendations.
The war put the currency system of India to a severe test. The rise in the price of silver, the keen demand for Indian exports, the exceptional disbursements to be made on behalf of the British Government, caused the value of the rupee, so long anchored at 1s. $4 \mathrm{~d}_{2}$, to rise in December, 1919, to 2s. 4 d . sterling. The Babington-Smith Committee, appointed in 1919, directed its attention to the reestablishment of stability under the then existing exchange standard, a stability which had suddenly been overthrown by the unprecedented rise in the price of silver and by the divorce of sterling from gold. They further recommended that during periods of exchange weakness the Government of India should be authorized to announce, without previous ref-

[^9]erence to the Secretary of State, their readiness to sell weekly a stated amount of reverse councils.

These recommendations were accepted, and steps were taken to maintain the new exchange rate of 2 s . gold recommended by the committee. These attempts were not successful, and the Government thereupon tried to maintain it at 2 s . sterling. This attempt also failed. The Government of India was at this time unable to contract currency in India as rapidly as world prices were falling. All it could do was to avoid further inflation and to effect some measure of contraction. This was insufficient to arrest the falling tide of exchange, which early in 1921 fell below the low level of 1 s .3 d . sterling and 1 s . gold. The 2 s . ratio, adopted in 1920 , remained on the statute book, but was ineffective for purposes of tender of gold to the currency office. By January, 1923, the tide had definitely turned; exchange recovered to 1 s . 4 d . sterling, and showed a tendency to move upward. It reached the level of 1 s .6 d . sterling in October, 1924, at which time this was equivalent to about 1s. 4 d . gold. From that time till March, 1926, the upward tendency of exchange continued, but it was prevented from rising above 1s. 6d. by free purchases of sterling on the part of the Government. Meanwhile sterling was restored to parity with gold about the middle of 1925, and during the 12 months which have since elapsed the value of the rupee has been in the neighborhood of 1s. 6d. gold.
The existing system.-At the present time Indian currency consists of two kinds of tokens, paper notes and silver rupees, which are mutually convertible. The paper note is in form a promise by the Government of India to pay to the bearer on demand a specified number of rupees. In addition to these two kinds of tokens, the so vereign is by statute legal tender for 10 rupees, and the Government is under an obligation to pay 10 rupees, when sovereigns are presented for encashment. As, however, the price of gold is considerably above this parity, the sovereign has disappeared from circulation and is not issued by or tendered to the Government.

The value of both forms of token currency in relation to sterling is at present being maintained between the gold points corresponding to a gold parity of 1s. 6d. No obligation has been assumed, but the Govërnment has freely purchased sterling when the rate has stood at 1s. $6^{\frac{3}{16}} \mathrm{~d}$., and recently, in April, 1926, authorized the Imperial Bank to make
an offer on its behalf to sell sterling at 1 s . $53 / 4 \mathrm{~d}$. The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government.

Reserves and functions of reserves.-For the purpose of maintaining the value of the token currency, the Government of India holds two reserves--the paper currency reserve and the gold standard reserve. The former is composed of the proceeds of the note issue and is held as a backing against the notes in circulation; the latter has been accumulated from the profits of the coinage of silver rupees and is designed primarily to maintain the external value of those coins. The gold standard reserve at present amounts to £40,000,000 . It is invested in British treasury bills and other sterling securities.

The automatic working of the exchange standard is not adequately provided for in India and never has been. Under the Indian system, contraction is not and never has been automatic. On occasions, the obligation to buy sterling exchange has been discharged by the Government without any corresponding expansion of domestic currency; the purchases have in the first instance been made against treasury balances and the currency expansion has been left to be effected subsequently at the discretion of the Government. More serious has been the absence of contraction on occasions when the currency authority has had to sell sterling exchange.

Control of currency and credit.-India is perhaps the only country among the great trading countries of the world in which the Government exercises direct control over currency in general and over the note issues in particular. The banking and currency reserves of the country are thus separated, which diminishes their capacity to effect their specific purpose of stabilization in the most economical and efficient manner. In other countries this is effected by concentrating these reserves at a central bank. Moreover, Government control of currency results in a dual control of monetary policy. The Government controls the currency. The credit situation is controlled, so far as it is controlled at all, by the Imperial Bank. With divided control there is likelihood of divided counsels and failure to coordinate. In fact, difficulties have arisen owing to the existence of two distinct authorities controlling currency and credit. The only certain way to secure coordination is to
concentrate the controls in one hand. In other countries the single controlling hand is that of a central bank.

Summary.-The commission summarizes the present state of affairs and its defects as follows:
(1) The system is far from simple, and the basis of the stability of the rupee is not readily intelligible to the uninstructed public. The currency consists of two tokens in circulation, with the unnecessary excrescence of a third full-value coin which does not circulate at all. One form of token currency (into which there is an unlimited obligation to convert the other) is highly expensive and is liable to vanish if the price of silver rises above a certain level.
(2) There is a cumbrous duplication of reserves, with an antiquated and dangerous division of responsibility for the control of credit and currency policy.
(3) The system does not secure the automatic expansion and contraction of currency. Such movements are too wholly dependent on the will of the currency authority.
(4) The system is inelastic. The utility of the provision for elasticity made on the recommendation of the Babington-Smith Committee is affected by the methods of financing Indian trade.

Alternative proposals for reform.-After exhaustive inquiry the commission has found that the possible methods by which the defects in the present system might be remedied may be reduced to three. These are (1) the perfection of the sterling exchange standard, (2) the adoption of a gold exchange standard, and (3) the adoption of a gold standard proper, with or without a gold currency.

Sterling exchange standard.-Although it would be possible to amalgamate the two reserves and to provide elasticity, the system would still have grave defects. The silver currency would still be subject to the threat implied in a rise in the price of silver. Were sterling once more to be divorced from gold, the rupee, being linked to sterling, would suffer a similar divorce. Should sterling become heavily depreciated, Indian prices would have to follow sterling prices to whatever heights the latter might soar, or, in the alternative, India would have to absorb some portion of such rise by raising her exchange. There is undoubted disadvantage for India in dependence on the currency of a single country, however stable and firmly linked to gold. For these reasons, were the standard of India to be an exchange standard, it should
undoubtedly be a gold exchange standard and not a sterling exchange standard.

The gold exchange standard.-This system also has serious defects. There would be danger that the silver rupee would vanish as soon as the price of silver rose above the melting point of the coin. A more serious defect is that although it secures stability, it has not the simplicity which is essential to secure the confidence of public opinion for any currency system under present conditions in India.

A proposed scheme for a gold currency.The principal scheme for a gold standard and gold currency for India that was placed before the commission had two chief objects: (1) To eliminate the threat to the currency inherent in the possibility of a rise in the price of silver, by dethroning the rupee from its position as a standard coin of unlimited legal tender, and thus also to enable the constitution of the reserves to be simplified by eliminating the silver, therefrom; and (2) to cure the uneconomic habit of the people of holding the precious metals as a store of value, by assuring them, through the instrumentality of a gold currency, that the same measure which they mete out, in gold value, by way of investment or deposit with a bank, will be meted to them again, in gold value.

This scheme also has serious defects. The additional demand for gold by India would seriously depress world prices, interfere with the requirements of various European and other countries which are trying to return to the gold standard, and, most important of all, would react to the detriment of the silver market. The future of the silver market must at all times be shrouded in obscurity. Probably the production of silver in the next 10 years will be sufficient to meet the demand. But if, as contemplated in the scheme, silver should be demonetized in India, and if for several years India should meet her own normal demand for silver by melting rupees, it would not be surprising to see silver fall much below the level of 24 pence assumed in the scheme, especially if, as is not improbable, the action of India had the effect of making other silverusing countries follow suit. The Government's policy in regard to gold would also react on the silver position. If the policy of introducing the gold currency were adopted, it would, by largely augmenting the already extensive demand for a metal that threatens to be in increasingly short supply, result in further depression of the gold price of silver. The amounts of silver hoarded from time immemorial by the people of India would be
greatly depreciated in value; heavy losses would be inflicted on the poorer classes, who would find their stores of silver depreciated by the action of the Government. Furthermore, China, which is now the only great silver standard country, has for a long time been trying to find some means of substituting gold or some form of gold standard as the basis of her currency. A catastrophic fall in the price of silver in terms of gold, which would take place on the bare announcement that surplus silver equal to the world production for three years was for sale, would undoubtedly tend greatly to accelerate the movement in China and might induce her immediately to set about securing the gold needed as a basis for instituting some form of the gold exchange standard. That would in turn magnify the effect which had already been produced on silver by the Indian announcement, both by the reduction in demand and to some extent by the increased supply of silver that might come into the market. Moreover, the adoption of the gold standard by China would produce a further new demand on the world's gold supplies, and this demand would tend to appreciate gold and thus still further depress the price of silver.

## II. A Gold Standard for India

The commission has arrived at the conclusion that, in order to secure public confidence in India, the currency of the country must be linked with gold in a manner that is real and conspicuously visible, or, in other words, that it is necessary to èstablish a true gold standard. It should be understood that this does not necessarily imply a gold currency. The essence of the proposal which the commission proceeded to develop is that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever.

Gold in circulation.-The economic reasons against putting gold into circulation are simple and clear. If the gold in the reserve is transferred to, the circulation, the structure of credit that can be built on that reserve is pro tanto reduced. The greater the proportion of gold in circulation, the less the elasticity of the currency system. The war has taught Europe to do withoút gold coins and experience has aroused doubts of their utility. In
returning to the gold standard the nations do not aim at a return to the gold currency. Great Britain has hitherto avoided the reintroduction of gold into circulation. In the United States gold, which circulates in theory, does not circulate in practice. It may well be that when India is in a position to introduce gold into circulation she will reject it as an obsolete ideal.

The gold bullion standard.-The currency system which the commission recommends for the present needs of India may be described as a gold bullion standard. It proposes that an obligation should be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The fulfillment by the currency authority of this obligation will secure the stability of the gold value of the rupee, and the stability of exchange within the gold points corresponding to the selected parity. Gold is thus made the standard of value. The rupee is linked to gold and not to sterling or to any other currency or group of currencies.

Since gold bars are to be given in exchange for notes or silver rupees, not for export only, but for any purpose, this is not an exchange standard; it is an absolute gold standard. Nevertheless the compensatory mechanism of the exchanges is preserved, because gold bars are not currency. When gold bars are given by the currency authority for notes or rupees, the currency is contracted, while, on the other hand, when gold bars are given to the currency authority for notes or rupees, the currency is expanded.

For the purposes of India this standard fulfills the essential condition, that it should be not stable only, but simple and certain. It provides the token currency with a right of convertibility that is intelligible to the uninstructed, and with a backing that is tangible and visible. In short, it has the characteristics necessary to inspire confidence in the Indian people, to promote the habits of banking and investment, and to discourage the habit of hoarding precious metals. The statutory obligation to buy and sell gold for rupees without limit at a prescribed parity for the first time in the history of the rupee will base it on gold firmly and in a manner that is conspicuously visible. It establishes the principle that gold is the standard of Indian currency at a fixed ratio, and that the
currency authority admits it, and must maintain it.

There is no reason to suppose that the obligation to sell gold bars will result in any sudden or substantial drain on the reserves for the conversion of rupee hoards. Holders of such hoards can convert them into gold at present by buying that metal in the open market; and there is good reason to believe that large quantities of hoarded rupees* have already been converted in this way. Since it is not proposed that the rupee should cease to be a legal tender, there will be no greater incentive to convert under the new system than there is now; and, as will be observed from the detailed proposals below, it is not intended that gold should be given by the currency, authority at a rate cheaper than the market rate.

Buying and selling rates for gold.-A sound gold standard postulates a statutory obligation upon the currency authority to buy and sell gold at a price equivalent to the par value of the monetary unit. This obligation constitutes the cardinal condition and compelling force for the maintenance of monetary stability in relation to gold, and, through gold, in relation to all monetary systems similarly linked to gold or gold exchanges. In order to achieve this object the commission proposes to fix the selling prices of gold at rates which will enable the bank to replenish its stock of gold without loss by importation from London. Thus, when exchange is at the upper gold point the selling price for delivery at Bombay will be the par value, i. e., Rs. 21 as 3 ps .10 per tola. ${ }^{1}$ When exchange is below this point, the bank will be required to sell gold for delivery in London or Bombay, at the option of the purchaser at certain notified prices. These prices will be determined by the cost at which gold could be respectively purchased in London or laid down in Bombay from London when exchange is at the lower gold point. The option to the purchaser, on the other hand, to buy gold for delivery in London at the prices determined leaves the margin between the upper and lower gold points of the exchange as narrow as it could be, having regard to the cost of moving gold to and from its most convenient gold center.

Removal of the legal-tender quality of the sovereign.-The legal-tender quality of the sovereign and half sovereign should be removed. Although these coins are legal tender under the coinage act, they have, owing to the

[^10]existence of the 2 s . rate in the statute book, long ceased to function as currency.
Introduction of savings certificates payable in gold.-It some further and more direct and visible means for bringing it home to the masses that gold is the standard of value of the rupee and that the one is convertible into the other. Such a means might be found in the offer by the Government "on tap" of savings certificates, redeemable in three or five years, in legal-tender money or gold at the option of the holder. They might be issued in denominations of 1 tola and integral number of tolas, and sold for legal tender money, rupees and notes, at a price which would give the holder an attractive yield in interest. It would add to the attractiveness of the certificates if the holder were given facilities to obtain payment therefor at any time during their currency at a discount reckoned at varying rates according to the date of the encashment, but until the date of maturity it would be paid in legal-tender currency and not in gold. Thus gold for delivery in three or five years would be sold at a substantial discount in relation to the cash price. As regards the relation between these certificates and the amount of the reserve, the gold standard, of which this proposal is a useful auxiliary, and which it confirms, does no doubt necessitate a strengthening of the gold holding in the currency reserve, as proposed below. ${ }^{1}$

Convertibility of notes into silver rupees.The termination of the anomalous provision by which one form of note, the paper note, is convertible by law into another form, the silver note, is an essential step in Indian currency reform which must be taken sooner or later. The existence of this obligation has in the past placed, and may conceivably again place, the currency system of the country completely at the mercy of the price of silver. Prudence clearly demands that such a risk, however remote, should be provided against if possible. Moreover, it entails keeping in the currency reserve, for purposes of internal convertibility, a large stock of silver which for external purposes is of little value. When most needed it is liable to prove incapable of realization. No opportunity for the termination of this obligatory convertibility is likely to be so favorable as the present, when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver

[^11]ceased to be a reliable standard of value. The obligation must continue in relation to the present currency notes so long as those notes remain in circulation, because the Government's promise to redeem them in rupees must be religiously kept. But no legal obligation for conversion into silver rupees should attach to the new notes, the issue of which is proposed below. At the same time it is essential to provide facilities for the free exchange of notes for rupees so long as the people desire to obtain metallic rupees in exchange for them.

Since there are at present approximately $850,000,000$ rupees of silver coin and bullion in the reserves and further quantities of rupees may be expected to come out of hoard in due course, a long period must elapse before there is any possibility of the slightest practical difficulty in converting any note that is presented into silver rupees. Practically, therefore, the change in the legal status of the notes should be quite unfelt, and before the present stock of rupees runs low the stabilization of the rupee in terms of gold will have had time to establish confidence in the note issue on a basis too firm to be shaken.

Issue of 1 -rupee notes.-It is recommended that the currency authority should concurrently, with the first issue of notes of the new status, reintroduce 1-rupee notes, which should be full legal tender and which, like other notes of the new status, should not be convertible by law into silver rupees. The reintroduction of $21 / 2$-rupee notes is not recommended.

Convertibility of other notes into legal-tender money.-When the present legal right to obtain silver rupees in exchange for notes is withdrawn, it will be necessary to give the public a right to obtain change for the notes in some other form; and it is proposed to impose a statutory obligation on the currency authority to convert all notes, other than the 1-rupee note, on demand into legal tender money, i. e., into notes of smaller denominations or silver rupees at the option of the currency authority. This statutory provision would in form leave it optional with the currency authority to determine the form of legaltender money to be supplied, but, as explained elsewhere, all reasonable demands of the public for metallic currency shall be met in practice.

Any alteration in the legal-tender character of the silver rupee is wholly opposed. The reasons which have been urged for the withdrawal of its legal-tender character are overcome, in so far as they are valid, by the above provisions.

Composition of the combined reserve.-In the first place, the proportions and composition of the combined reserve should be fixed by statute. It should also be laid down that gold and gold securities should form not less than 40 per cent of the reserve. In view of the nature and extent of the obligations with regard to the provision of gold which should be placed on the currency authority, that authority should strive to work toward a reserve ratio of from 50 to 60 per cent. In the event of the proposed gold savings certificates proving a popular form of investment, the possible demands for gold by Government for payment of these certificates on maturity would no doubt necessitate a further strengthening of the gold holding in the reserve, but to what extent experience alone can show. The holding of gold, which now stands at about 12.8 per cent, should be raised to 20 per cent as soon as possible, and in any case in not more than five years, and to 25 per cent in 10 years, with a minimum of $300,000,000$ rupees from the outset. This would give a minimum of $600,000,000$ rupees after 10 years on the basis of the present circulation. During this period no favorable opportunity of fortifying the gold holding in the reserve should be allowed to escape. The commission, therefore, make a recommendation which will have the effect of insuring the gradual reduction of the silver holding in the reserve, during a transitional period of 10 years, from the present figures of $850,000,000$ rupees to $250,000,000$ rupees on the basis of the present circulation.

The commission recommends that the balance of the reserve be held in Government of India rupee securities and self-liquidating trade bills. For reasons which will be explained later, it is desirable to limit the holding of Government of India rupee securities to 25 per cent of the reserve, or to $500,000,000$ rupees, whichever is less.

## III. A Central Bank for India

The commission is of the opinion that India, profiting by the experience of other nations, should perfect her currency and credit organization by setting up a central bank with a charter framed on lines which experience has proved to be sound.

The proper course to take, therefore, is to intrust the central banking functions to a new organization endowed with a charter which wholly conforms to the requirements of a true central bank. That new bank would no doubt take over from the Imperial Bank such part
of its organization and staff as under the new order of things may become redundant to the purposes of the Imperial Bank, and from the Government a number of officials whose experience in the management of the currency would be of particular help to the new central bank.

The future relations between the Government of India, the central bank, and the Imperial Bank, must be matters for negotiation between the parties concerned, and for that reason the commission refrained from making detailed recommendations under this heading. The banking organization which India requires must be based, not upon a central bank alone as elsewhere, but upon a central bank and a great commercial bank which has Government countenance to inspire confidence in it amongst an uninstructed public, and whatever Government assistance is needed to enable it to perform the function of the initiator of banking facilities. As to the extent of that assistance, it should be designed to enable the Imperial Bank to maintain and develop its essential work of the provision of new branches.

The commission outlines the organization and functions of the proposed reserve bank in detail. ${ }^{1}$

Time table.-The above proposals can not, of course, all be brought into operation at once. The existing agreement with the Imperial Bank of India, for instance, is not due to expire until the 27th of January, 1931, and the contract with the Bank of England for the supply of Government notes is not due to expire until the 30th of June, 1929. The earlier termination of either agreement could no doubt be negotiated. On the assumption that the necessary arrangements are made, the following time table can be used for the chief changes:
The transfer of assets from the currency reserve to the reserve bank should be made as soon as the reserve bank notifies that it is in a position to issue its own notes, but not later than the 1st of January, 1929.

The obligation to buy and sell gold should come into operation on a date to be approved by the Governor General in council on the proposal of the bank, but not later than the 1st of January, 1931.

Transitory provisions.-During the transition period the currency authority must be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the accepted gold parity of the rupee.

[^12]It should take whatever steps are required to convert in the safest and most gradual manner a portion of the sterling balances into gold bullion, and should pursue a policy calculated to strengthen the position of the bank in relation to gold when it assumes charge of the currency and the reserve.

Interdependence of recommendations.- In conclusion, the commission emphasizes its opinion that the recommendations in the preceding sections of this report should be regarded as a comprehensive whole; and that modifications of any of their integral parts involve the danger of destroying their balance and so preventing the efficient and smooth working of the whole.

## IV. Stabilization of the Rupee

Time for stabilization.-After considering all foreseeable circumstances, it is safer to stabilize now than to wait.

The ratio of stabilization.-The legislation of 1920 has fixed the statutory value of the rupee at 2 s .; but that rate is absolutely ineffective, and the Government has declared that it does not seek to regain it. The present market rate is about 1 s . 6 d . It has been at that level in relation to gold since June, 1925, and in relation to sterling since October, 1924, and should be stabilized in relation to gold at a rate corresponding to an exchange rate of 1 s .6 d . for the rupee.

## V. Miscellaneous Recommendations

Means to promote banking development.The commission urged emphatically that nothing should be left undone which would tend to facilitate and encourage banking progress in India. One measure which appears likely to be particularly fruitful is the abolition of the present stamp duty on checks.

## Summary of Recommendations

The commission summarizes its recommendations as follows:
(1) The ordinary medium of circulation should remain the currency note and the silver rupee, and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.
(2) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a central banking system.
(3) The central banking functions should be entrusted to a new organization, referred to as the reserve bank.
(4) Detailed recommendations are made as to the constitution and functions and capacities of the bank.
(5) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the reserve bank.
(6) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the reserve bank should be paid over to the Government.
(7) The bank should be given the sole right of note issue for a period of, say, 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government treasuries.
(8) The notes of the bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor General in council. A suggestion is made as to the form of the note.
(9) An obligation should be imposed by statute on the bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.
(10) The conditions which are to govern the sale of gold by the bank should be so framed as to free it in normal circumstances from the task of supplying gold for nonmonetary purposes. The method by which this may be secured is suggested.
(11) The legal-tender quality of the sovereign and the half-sovereign should be removed.
(12) Government should offer "on tap" savings certificates redeemable in three or five years in legal-tender money or gold at the option of the holder.
(13) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the bank to maintain the free interchangeability of the different forms of legal-tender currency, and of the Government to supply coin to the bank on demand.
(14) One-rupee notes should be reintroduced and should be full legal tender.
(15) Notes other than the 1-rupee note should be legally convertible into legal-tender money, i. e., into notes of smaller denomina-
tions or silver rupees at the option of the currency authority.
(16) No change should be made in the legaltender character of the silver rupee.
(17) The paper currency and gold standard reserves should be amalgamated, and the proportions and composition of the combined reserve should be fixed by statute.
(18) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the reserve as soon as possible and to 25 per cent within 10 years. During this period no favorable opportunity of fortifying the gold holding in the reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.
(19) The silver holding in the reserve should be very substantially reduced during a transitional period of 10 years.
(20) The balance of the reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within 10 years.
(21) A figure of $500,000,000$ rupees has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.
(22) The issue department of the reserve bank should be kept wholly distinct from its banking department.
(23) The reserve bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The bank should be left free at its discretion to employ such method or methods of remittance as it may find conducive to smooth working.
(24) During the transition period the Government should publish a weekly return of
remittances made. A trial should be made of the system of purchase by public tender in India.
(25) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralized in the hands of the reserve bank. Section 23 of the Government of India act should be amended accordingly.
(26) The transfer of reserve assets should take place not later than the 1st of January, 1929, and the bank's obligation to buy and sell gold should come into operation not later than January 1, 1931.
(27) During the transition period the currency authority (i. e., the Government until the transfer of reserve assets and the bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.
(28) Stabilization of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1 s .6 d .
(29) The stamp duty on bills of exchange and checks should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.
(30) Measures should be taken to promote the development of banking in India.
(31) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

## Minute of Dissent by Sir Purshotamdas Thakurdas

Sir Purshotamdas Thakurdas signed the report of the commission, subject to dissent on several points. After a lengthy historical review of the development of Indian banking, currency, and finance, he objected to the demonetization of the sovereign and half sovereign on the basis that these are the only gold coins legally current in India since 1893. He believed that it would be advisable to develop the Imperial Bank of India into a full-fledged central bank rather than to create a new bank of issue. He recommended that the rupee be stabilized at the rate of 1 s .4 d . gold instead of at 1s. 6 d .

## RULINGS OF THE FEDERAL RESERVE BOARD

## Eligibility of notes of cold-storage and warehouse company.

The Federal Reserve Board has been requested to rule upon the eligibility of certain notes of a cold-storage and warehouse company for rediscount at a Federal reserve bank.
It appeared that this company is regularly engaged in the finance business through the making of loans to customers against the security of goods stored with the company. It issues two classes of paper: (1) Collateral trust notes secured by the pledge to a trustee of customers' notes payable to the company, representing advances made to customers on the security of goods stored; and (2) straight unsecured notes payable to banks. It conceded that its collateral trust notes are ineligible for rediscount; but contended that its straight unsecured notes are eligible, on the ground that they are issued to finance its current operations. In support of this contention it was stated that the company's quick assets (exclusive of advances to customers) are in excess of its current liabilities (exclusive of its liability on collateral trust notes); that its current accounts receivable consist of accrued storage charges billed to customers but not yet paid and bills rendered to customers for services, ice, and material; and that its current operating expenses consist of labor, electric power, material, interest on bonds, administrative expenses, and other usual expenses incident to a going business. On the other hand, it was admitted that the company's bills receivable representing advances made to customers sometimes exceed its collateral trust notes outstanding by as much as 10 or 15 per cent, although the usual practice is to deposit customers' notes in the hands of the trustee, and issue collateral trust notes against them as soon as possible, and the amount of customers' notes pledged to the trustee is approximately the amount of the collateral trust notes outstanding, the only margin required being represented in the value of the goods in storage against which advances have been made.

The board has given careful consideration to the question presented, and is of the opinion that these notes are not properly eligible for rediscount at a Federal reserve bank.

The financial statement showing an excess of quick assets over current liabilities is valu-
able only as indicating that the borrower is in a liquid condition and that the borrowing is not for capital purposes or for permanent or fixed investments of any kind. In order to be eligible for rediscount under the terms of section 13 of the Federal reserve act, a note must arise out of an actual commercial transaction; that is, it must have been issued or drawn for agricultural, industrial, or commercial purposes or the proceeds must have been used or must be intended to be used for such purposes. The eligibility of the notes in question therefore depends upon the character of the transactions out of which they arise or the use made of the proceeds, and the mere fact that the company's statement shows an excess of quick assets over current liabilities is not alone sufficient to establish the eligibility of the notes.
It appeared that this corporation is regularly engaged in the finance business through the making of loans to other parties against the security of goods stored with the company by such parties, and that it finances the major portion of this business through the issuance of collateral trust notes secured by the notes of its customers. It conceded that such collateral trust notes are ineligible for rediscount, because they clearly are finance paper under the terms of section II(b) of the board's Regulation $A$ and the ruling published on page 308 of the March, 1921, Bulletin.

This company, however, borrows some money from banks on its own straight unsecured notes and desired to have such notes declared eligible for rediscount, on the theory that the proceeds of such notes are used exclusively for its current operating expenses. The company's current operating expenses, however, are necessarily incidental to its principal business, and their character must be determined by the character of its principal business. Even if its borrowings for current operating expenses could be completely segregated from its borrowing of funds to be . advanced to other parties, therefore, it would seem that its borrowings for current operating expenses should be classed as a borrowing for finance purposes, because it arises out of the finance business and not out of a commercial, agricultural, or industrial business within the meaning of the Federal reserve act and the board's regulations.

Moreover, a corporation engaged in the finance business necessarily must have some working funds to enable it to make advances to its customers in the first instance and to carry paper resulting from such advances until it can refinance itself by the issue and sale of collateral trust notes secured by such paper. The proceeds of the unsecured notes made by such a corporation, therefore, would almost certainly be used to some extent in making advances to its customers, and this corporation admits that the amount of advances made to its customers occasionally exceeds the amount of collateral trust notes outstanding by as much as 10 or 15 per cent. It is clear that the borrowings of the company on its straight unsecured notes payable to the bank would, at least to the extent of such excess, be for the purpose of making loans to third parties. As a practical matter, it is almost certain that the proceeds of all borrowings made by the company either on collateral trust notes or on straight notes payable to the banks go into a common fund out of which advances to customers as well as current operating expenses are taken, and it would be impossible to distinguish the proceeds of one class of loans from the proceeds of the other, even if the borrowings of a finance company for its current operating expenses could be considered a borrowing for a commercial instead of a finance purpose.

In view of these considerations the board is of the opinion that the notes of this corporation can not properly be considered eligible for rediscount at a Federal reserve bank.

Bankers' acceptances drawn to finance the storage of cottonseed.
The Federal Reserve Board has been requested to rule upon the eligibility for rediscount at Federal reserve banks of bankers' acceptances drawn to finance the storage of cottonseed under the following circumstances:

Certain cottonseed-oil mills own warehouses which they propose to lease to independent warehouse corporations under bona-fide leases, the corporations to assume full control and management of such warehouses and to operate them as public warehouses which will be bonded and licensed under the United States warehouse act. It is proposed that such prime seed as is received by the mills-that is, seed which is in such condition that it may be safely stored for an indefinite period of time-will be stored by the mills in these warehouses until it can be processed into various cotton-seed prod-
ucts, and the mills desire to finance such storage by means of bankers' acceptances secured by warehouse receipts for such seed. The owners of the cottonseed thus stored to have access to it at proper time for purposes of inspection.

The Federal Reserve Board has heretofore ruled that cottonseed, when stored under proper conditions, is a nonperishable, readily marketable staple agricultural product within the meaning of the Federal reserve act and the board's Regulation A, and that therefore a bankers' acceptance secured by a warehouse receipt. for cottonseed is eligible for rediscount at a Federal reserve bank, provided the cottonseed upon which the acceptance is based is stored under such conditions as to protect it adequately from deterioration and provided the acceptance complies in all other respects with the requirements of the law and the board's regulations. This ruling may be found in the 1925 Federal Reservi Bulletin at page 737.

The board has also had occasion to rule upon the right of member banks to make acceptances issued against goods stored on premises owned by the owner of the goods but leased to an independent lessee who issues warehouse receipts covering the goods in storage. The board held in this ruling, published on page 634 of the 1918 Bulletin, that if the premises in question were actually turned over to the lessee on a bona-fide lease, the lessee being independent of the borrower and having entire custody and control of the goods, a member bank could properly accept drafts drawn against warehouse receipts issued by the lessee; but held further that the borrower should not have access to the premises and should exercise no control over the goods stored. Such drafts eligible for acceptance by member banks would also be eligible for rediscount at Federal reserve banks, if of proper maturity.

Under the ruling of the Federal Reserve Board just mentioned access to the premises where the goods are stored is not permitted to the owner of the goods for inspection or for any other purpose. This condition of the previous ruling can not be met in the storing of cottonseed. Due to the fact that cottonseed is subject to deterioration from heating, cottonseed owners storing their seed in warehouses are accustomed to visit these warehouses from time to time for the purpose of inspecting the seed. In order, therefore, that bankers' acceptances drawn to finance the storage of cottonseed may be eligible for rediscount, a modification of the principle stated in the board's previous ruling with reference to the owner's access to the goods is necessary.

After a consideration of these questions the board now rules that-

Bankers' acceptances secured by cottonseed stored in a warehouse owned by the owner of the cottonseed but leased to an independent public warehouse corporation under bona fide lease, the corporation assuming exclusive control and management of such warehouse and operating it as a public warehouse bonded and licensed under the United States warehouse act, may be eligible for rediscount at a Federal reserve bank, although the owners of the cottonseed are permitted access to the seed in storage at proper and reasonable times for the purpose only of inspecting the condition of the seed, provided that on all such occasions the consent of the independent warehouse corporation is first secured and that the owner of the seed or his representative is accompanied by a proper representative of the warehouse corporation.
It should be understood that such acceptances must be of proper maturity and must
in all other respects comply with the pertinent provisions of the Federal reserve act and the board's Regulation A. In addition, it is necessary that the cottonseed upon which such acceptances are based be stored under such conditions as to protect it adequately from deterioration.

The Federal Reserve Board is informed that the Department of Agriculture is soon to issue a special regulation governing the storage of cottonseed by warehouses licensed under the United States warehouse act. This regulation, a tentative draft of which has been carefully considered at a conference between representatives of the Department of Agriculture and the Federal Reserve Board, will, it is believed, provide adequate safeguards. If the storage of cottonseed complies with this regulation which is to be promulgated by the Department of Agriculture, it will be deemed by the board a storage under such conditions as to protect the cottonseed adequately from the deterioration within the meaning of this ruling.

The question whether bankers' acceptances are desirable from the credit standpoint is, properly, a question for determination by the Federal reserve bank to which the paper is offered for rediscount rather than by the Federal Reserve Board.

## Changes in State Bank Membership

The following list shows changes affecting State bank membership during the month ended August 21, 1926, on which date 1,399 State institutions were members of the system:

| ADMISSIONS |  |  |  |
| :---: | :---: | :---: | :---: |
|  | Capital | Surplus | Total resources |
| District No. 1 |  |  |  |
| Phoenix Bank, Hartiord, Conn..- | \$1,000, 000 | \$1,000,000 | \$18, 072, 850 |
| District No. 2 |  |  |  |
| Guardian Trust Co. of New Jersey, Newark, N. J | 5,000,000 | 2,500,000 | 7,552, 525 |
| Bank of Yorktown, New York, N. Y | 1,000,000 | 250, 000 | 1,250,000 |
| District No. 8 |  |  |  |
| Bank of La Plata, La Plata, Mo. | 50,000 | 10,000 | 379,566 |

## CHANGES

| District No. 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Merged with State member: Greempoint Bank, Brooklyn, N. Y | \$200, 000 | \$300, 000 | \$3, 714,687 |
| District No. 6 |  |  |  |
| Closed: Bank of Louisville, Louisville, Ga | 25,000 | 55, 000 | 453, 460 |
| District No. 8 |  |  |  |
| Reopened: Bank of Versailles, Versailles, Mo. | 40, 000 | 15,000 | 406, 125 |

| District No. 11 |  |  |  |
| Change of title: Guaranty State Bank, Trenton, Tex., has changed its title to First State Bank of Trenton. |  |  |  |
| Converted to national bank: <br> First State Bank, Post City, Tex | 25,000 | 5,000 | 225, 223 |
| Caddo Mills State Bank, Caddo Mills, Tex | 30,000 | 5,518 | 229, 764 |
| Voluntary withdrawals: |  |  |  |
| Trent State Bank, Goldthwaite, Tex | 100,000 | 50,000 | 917, 275 |
| Citizens State Bank, Luling, Tex. | 25,000 | 10,000 | 421,420 |

## Fiduciary Powers Granted to National Banks

During the month ended August 21, 1926, the Federal Reserve Board approved applications of the national banks listed below for permission to exercise one or more of the fiduciary powers named in section 11 (k) of the Federal reserve act as amended, as follows: (1) Trustee; (2) executor; (3) administrator; (4) registrar of stocks and bonds; (5) guardian of estates; (6) assignee; (7) receiver; (8) committee of estates of lunatics; (9) in any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located.

| Location | $\begin{aligned} & \text { Dis- } \\ & \text { trict } \\ & \text { No. } \end{aligned}$ | Name of bank | Powers granted |
| :---: | :---: | :---: | :---: |
| Waltham, Mass | 1 | Waltham National Bank. | 7 and |
| Englewood, N. J | 2 | Citizens National Bank | 1 to 9 |
| Massena, N. Y | 2 | First National Bank | 1 to 9 |
| New York, N. Y | 2 | Capital National Bank | 1 to 8 |
| Blackwood, N. J | 3 | First National Bank | 1 to 9 |
| Independence, Iow | 7 | Peoples National Bank.....- | 1 to 9 |
| Story City, Iowa | 7 | First National Bank........- | 5 to 9 |
| St. Charles, Mo | 8 | do | 1 to 9 |
| Raton, N. Mex | 10 | First National Bank. | 1 to 7 |
| Olympia, Wash | 12 | Capital National Bank | 1 to 9 |

## Changes in National Bank Membership

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from July 24 to August 20, 1926, inclusive.

|  | Number of banks | Amount of capital |
| :---: | :---: | :---: |
| New charters issued. | 15 | \$1,930, 000 |
| Restored to solvency | 0 |  |
| Increase of capital approved. | 10 | 1,925,000 |
| Aggregate of new charters, banks restored to solvency, and baniss increasing capital... | 25 | 3, 855,000 |
| Liquidations. Reducing capital ${ }^{1}$ | 15 3 | $\begin{array}{r} 1,920,000 \\ 850,000 \end{array}$ |
| Total liquidations and reductions of capital | 18 | 2,770,000 |
| Consolidation of national banks under act of Nov. 7, 1918 | 2 | 3,100, 000 |
| Aggregate increased capital for period....-.-. Reduction of capital owing to liquidations, |  | 3, 855,000 2, 770,000 |
| Net increase |  | 1,085,000 |

## BUSINESS STATISTICS FOR THE UNITED STATES

INDEX OF PRODUCTION IN BASIC INDUSTRIES ${ }^{1}$
[Index and relatives for each industry adjusted for seasonal variations. Monthly average 1919=100]

${ }^{1}$ This table contains for certain months the index numbers of production in basic industries together with the series of relatives used in constructing the index. In making the final index the relatives are adjusted to allow for seasonal fluctuations and are weighted. The metbo ds of construction were described in detail and all relatives for each series since January, 1913, were published on pages 1414-1421 of the Bullttin for December, 1922.

INDEX OF EMPLOYMENT IN MANUFACTURING INDUSTRIES 1
[No seasonal adjustment. Monthly average, 1919-100]

| Year and month | General index | Metals and products |  | Textiles and products |  |  | $\begin{aligned} & \text { Lum- } \\ & \text { ber } \\ & \text { and } \\ & \text { prod- } \\ & \text { ucts } \end{aligned}$ | Railroad vehicles | Automobiles | Paper and printing | Foods and products | $\begin{gathered} \text { Leather } \\ \text { and } \\ \text { prod- } \\ \text { ucts } \end{gathered}$ | Stone, clay, 'and glass | Tobaceo prod ucts | $\begin{aligned} & \text { Chem- } \\ & \text { ieals } \\ & \text { and } \\ & \text { prod. } \\ & \text { uets } \end{aligned}$ |

${ }^{1}$ This table contains for certain months index numbers of pay rolls, together with group indexes for important industrial components. The general index is a weighted average of relatives for 34 individual industries. The method of construction was described in detail and indexes for the above groups since January, 1919, were published on pp. $324-325$ of the Bulletin for May, 1925. See also p. 668 of Bulletin for September, 1925 , for certain revisions.

INDEXES OF INDUSTRIAL ACTIVITY 1
[No seasonal adjustment. Monthly average 1919-100]

[^14]
## COMMODITY MOVEMENTS

The following statistics are secured from various sources and compiled in the form given below by the Board's Division of Research and Statistics. Earlier figures (in most cases since 1919) can be obtained from previous issues of the Bulletin or upon application to the Division of Research and Statistics, Federal Reserve Board.

# FOREIGN BANKING AND BUSINESS CONDITIONS consolidation of italian note issue 

On June 30 of this year the Bank of Italy by royal decree became the sole bank of issue in the Kingdom. Prior to that there had been three banks of issue, the Bank of Italy, the Bank of Naples, and the Bank of Sicily. The decree superseded the law of September 27, 1923, which extended the note-issue privilege of the other two banks to December 31, 1930.

Method of unification of currency.-By the terms of the decree the Bank of Italy is authorized to issue new notes to an amount equivalent to the notes of the other two banks of issue, outstanding on June 30, 1926, which will be gradually withdrawn from circulation and replaced by notes of the Bank of Italy. In retiring the notes the three kinds of notes now in circulation will be withdrawn in the following order: (1) Those resulting from the operation of the consortium to support industrial securities; (2) those representing advances to the State, and (3) those issued for commercial purposes. To insure speedy withdrawal the notes of the Banks of Naples and of Sicily will cease to be legal tender on June 30, 1927.
The exchange of notes issued for account of the consortium and the State offered no difficulty; the Bank of Italy was debited with the amount of notes issued for these purposes and credited with an equal amount representing. loans and advances made to the consortium and to the State. In exchange for taking over the notes issued for commercial purposes the gold and foreign exchange reserve of the Bank of Sicily and the Bank of Naples was transferred to the Bank of Italy on July 1, 1926. The commercial credits, however, on which the circulation for account of trade is based, were not transferred but were retained by the two banks. The gold and foreign exchange reserve was temporarily appraised at the average price for gold prevailing during April, 1926, and the two banks were credited with its value on the books of the Bank of Italy. The paper value of the gold and foreign exchange reserve will be fixed definitely by a special agreement aqmong the three banks concerned and the treasury. The, gold and foreign exchanges transferred to the Bank of Italy will constitute a special reserve against notes issued by the Bank of Italy in exchange for the notes of the two other banks.

Notes outstanding and the gold, silver, and foreign exchange reserve of the Bank of Sicily and the Bank of Naples, as of June 20, 1926, were as follows:

```
Notes in circulation:
Lira
Bank of Naples
Bank of Sicily
\(2,945,448,000\)
730, 722, 000
Total
3, 676, 170,000
Reserve:
```

Although abrogating their right to issue notes, the decree does not curtail the commercial operations of the Banks of Sicily and of Naples. Both institutions have an extensive banking business and will continue to exercise their functions as ordinary commercial banks. The statutes of the two banks, as well as the capital and reserves, will be determined by subsequent decree. For the time being they will continue their discount and loan operations and participate in the affairs of the consortium.

The Bank of Italy is also authorized to grant to these institutions, under the control of the Minister of Finance, the privilege of rediscounting and borrowing at a preferential rate not to exceed 1 per cent below the official discount rate.
The following are the more important provisions of the decree, translated from the original text:
(Royal decree-law No. 812, May 6, 1926)
Regarding the Unification of the Bank Note Issue

## ARTICLE 1

The right of the Bank of Naples and of the Bank of Sicily to issue bank notes or other equivalent currency payable to bearer at sight, which, in accordance with royal decree-law of September 27, 1923, No. 2158, expires December 31, 1930, ends on June 30, 1926.

ARTICLE 2
The gold reserve and other reserve equivalent to gold, designated to guarantee the bank-note circulation of the Bank of Naples and of the Bank of Sicily, will pass, on July 1, 1926, to the Bank of Italy.

The above reserves will be deposited provisionally to the credit of the banks at the average official rate of gold prevailing during the month of April. The definitive rate to be applied to the said money will be
determined by a separate agreement between the State Treasury, the Bank of Italy, and the two above-mentioned banks.

## ARTICLE 3

The Bank of Italy is authorized to issue its own notes to an amount equal to the notes of the Bank of Naples and of the Bank of Sicily in circulation on the evening of June 30, 1926.

## ARTICLE 4

The bank notes of the Bank of Italy issued in accordance with the preceding article will serve to replace gradually, beginning with July 1, 1926, the bank notes constituting the circulation of the Bank of Naples and of the Bank of Sicily. They will be used, in the first place, to decrease the credit of these banks with the special autonomous section of the consortium for subventions on industrial securities until such credit is covered in full; in the second place, they will be used for the reduction of the circulation of the two banks for the account of the State until this circulation is withdrawn; and, finally, they will be used to absorb the remaining circulation of the two banks for the account of commerce.

## ARTICLE 5

The gold and equivalent values, as specified in article 2, will constitute a special reserve for the guaranty of the circulation of the bank notes to be issued by the Bank of Italy according to articles 3 and 4.

## ARTICLE 7

Bank notes of the Bank of Naples and of the Bank of Sicily, which on the evening of June 30, 1926, were in the possession of the two institutions of issue, shall no longer be available for circulation. * * *

The bank notes of the two banks which gradually find their way from circulation into their possession will be withdrawn from circulation. * * *

## ARTICLE 8

The bank notes which the Bank of Italy shall issue in accordance with article 3, excluding those relating to the operations of the two banks with the special autonomous section of the consortium for subventions on industrial securities, will not be subject to taxation nor to any other dues, and shall not be included within the normal limit indicated in article 14 following. * * *

## ARTICLE 9

Dating from July 1, 1926, the amounts which constitute the credits of the special autonomous section of the consortium for subventions on industrial securities belonging to the Bank of Naples and to the Bank of Sicily, resulting from the bank notes issued by them, shall be recognized by the section itself as belonging to the Bank of Italy. * * *

## ARTICLE 10

Beginning with July 1, 1926, the bank notes of the Bank of Naples and of the Bank of Sicily which return to the possession of the Bank of Italy through operations with the public shall be replaced daily by bank notes of the Bank of Italy by using the notes provided for by article 3 above.
The Bank of Naples and the Bank of Sicily have the right to continue to open credits and to issue bills of exchange. For the latter, the right shall expire on December 31, 1930. The present agreements existing among the three institutions for the reciprocal acceptance of bearer instruments issued by them will cease to be effective as of that date.

ARTICLE 11
The bank notes of the Bank of Naples and the Bank of Sicily shall cease to be legal tender as of June 30, 1927.

The Bank of Italy and the two aforesaid banks shall effect the exchange of their notes with those of the Bank of Italy before December 31, 1930. After this date the bank notes of the two banks which have not been presented for exchange shall be canceled. The amount of the bank notes canceled shall be appropriated by the State.

## ARTICLE 12

The status of the Bank of Naples and the Bank of Sicily, the amount of their capital, and provision regarding their reserves shall be determined in a future decree.

## ARTICLE 13

Until new arrangements are made, the Bank of Naples and the Bank of Sicily shall continue the discounting and loaning operations of the character now authorized.

They shall continue to participate, under rules now existing in the ordinary section of the consortium for subventions on industrial securities.

## ARTICLE 14

The normal limit of the circulation of the Bank of Italy for the account of commerce may be extended by royal decrees up to a maximum of the sum total of the limits at present authorized to the three institutions of issue.

## ARTICLE 15

Under the control of the Minister of Finance, the Bank of Italy is accorded the right to grant to the Bank of Naples and to the Bank of Sicily rediscounting and loaning privileges at a preferential rate not to exceed 1 per cent below the official discount and interest rate. * * *

ARTICLE 18
The operation of the clearing houses, beginning July 1, 1926, shall be conducted exclusively by the Bank of Italy.

## GOLD BALANCE SHEETS OF AUSTRIAN BANKS

Before the war Vienna was the financial center of central Europe and the Viennese banks ranked among the foremost financial institutions of the world. With the collapse of Austria-Hungary a great change took place. The field of operations of the banks was greatly curtailed and their branches, located in the various succession States, were either sold or reorganized under the laws of these States. Depreciation of the currency and other losses incident to the war still further altered the financial condition of the banks. So long, however, as they continued to publish their balance sheets in depreciated crowns, not even Austrian experts were able to draw reliable conclusions from the annual bank statements.

Amounts in crowns of different gold values were put together at various times in the ledgers and were added up as if they had been crowns of the same value. The result was that the balance sheets of the Austrian banks threw little light on changes in their condition. The recent publication of the gold balance sheets, therefore, is an important step toward the establishment of normal conditions in Austria and makes it possible to understand better the present position of the banks.

Analysis of balance sheets.-The following table shows the principal items of the seven leading Austrian banks as of January 1, 1925, together with comparative figures for 1913:

## Gold Balance Sheets of Leading Austrian Banks <br> ASSETS <br> [In millions of schillings]

1 Does not include mortgage business .

The law ordering the publication of the balance sheets in gold values left the banks free as to their methods of computation. The statements, therefore, are influenced to a certain extent by the policy of the individual banks. It should also be noticed that the item "reserve" (surplus) in the new gold balance sheets differs in significance from that of 1913. Before the war surplus represented partly undivided profits and partly premiums obtained in issuing new shares, and could be applied to the payment of dividends, while in the new balance sheets it represents an arbitrary amount which is actually part of the banks' capital and can not be used for dividend purposes. The fixing of the capital at a comparatively low figure reflects primarily the policy of the banks as regards future dividends, for a low capitalization makes possible a higher rate of dividends and thus makes bank shares a more attractive investment.

The table shows that the leading Austrian banks have lost approximately three-fourths of their pre-war capital and surplus. If the capital issued during and after the war be added, the loss is still greater and may be estimated at about 90 per cent. This loss of capital may be ascribed to the following causes: The depreciation of the krone, which reduced the capital invested in domestic business; the obligation of the banks to revalue their debts to creditors in ex-enemy countries; the seizure of the banks' assets located in the former allied countries; and, finally, the forced sale of securities of companies located in the succession States. The actual amount of capital funds at the disposal of the banks, however, is not so low as the figures in the condition statements would indicate, since a part of them are included in the items "securities and participations" and "real estate and inventory." These items comprise large blocks of foreign securities, bank premises, and other realty carried on the books of the banks at a very low value.

The above table also accentuates the difference between the big banks and the smaller institutions, a difference which disappeared almost completely during the period of depreciation. Thus the Verkehrsbank and the Mercurbank are in no sense large banks, and the difference between their capital and surplus and that of the other banks is larger to-day than before the war. The other institutions, however, maintain their standing as important international credit organizations. They still to a considerable extent control the industries of Austria and are important sources of credit in central Europe. The international character
of the Viennese banks manifests itself in the composition of their deposits and loans. Of the total loans and deposits of the Österreichische Credit-Anstalt, the largest financial institution in Austria, 65 per cent is reported in foreign currency. In the case of the other banks, loans and deposits in foreign currency amount to about 45 per cent. Inasmuch as Austrian currency has maintained a fixed relation to the dollar since the end of 1922 and there was: therefore, no object for the banks to keep their accounts in foreign currency, it may be assumed that these items represent deposits and loans of foreigners.

An interesting development revealed by the new gold balance sheets is the relation of capital and surplus to deposits. In 1913 the capital and surplus of the seven banks under consideration amounted to about 34 per cent of total deposits, while at the beginning of 1925 they amounted to only about 20 per cent. This indicates that the banks to-day are operating to a much larger extent than before the war with funds received from depositors. Since a considerable part of the deposits represents foreign short-term credits the banks are obliged to invest these funds in liquid assets even at a sacrifice in yield.

The item "acceptances and drafts" shows the greatest decline, amounting at the beginning of 1925 to only about 3 per cent of the 1913 volume. This decrease indicates chiefly that acceptances in central European bank practice are to-day of less importance than before the war. At present it is the custom of the banks not to incur a large volume of acceptance liabilities, but rather to indorse commercial bills, which are sold in the open market, as acceptances were formerly.

A comparison of the total resources of the seven leading Austrian banks as of the beginning of 1925 with those at the end of 1913 shows that total assets have shrunk from about $\$ 900,000,000$ in 1913 to about $\$ 268$,000,000 on January 1, 1925. They increased, however, by more than 14 per cent during 1925, and amounted at the end of the year to about $\$ 304,000,000$. In order to decrease overhead expenses there is at present a tendency toward amalgamations. The CreditAnstalt recently absorbed the Austrian branches of the Anglo-Austrian bank and the Bodencredit Anstalt acquired a controlling interest in the Verkehrsbank. Other mergers are still pending.

Operations during 1925.-The position of the large banks at the end of 1925 as compared with the beginning of the year may be seen from the following table. These figures indi-
cate that, while the resources of the banks have increased, their gross earnings have decreased. The decrease in gross earnings has been due to the substantial reduction in the rate of interest and commissions, the dullness of the stock market, and the fact that foreign exchange operations have been less profitable than during previous years. Notwithstanding the general decline in gross earnings the net profits of three of the largest banks show an increase over the past year.

Net profits of the other banks, however, declined more rapidly than gross earnings. The increase of net profits by some of the banks in the face of decreasing gross earnings was made possible by the general reduction in overhead expenses, mainly the decrease in the number of employees, and partly by the reduction of the profit tax. The yield of the shares of the banks under consideration for the past year, based on the market value as of June 24, 1926, ranged from 5 to 8.5 per cent.

CANADA

## PRICE MOVEMENTS IN PRINCIPAL COUNTRIES wholesale prices

ALL COMMODITIES
$[$ Pre-war $=100]$

[^16]${ }^{2}$ Revised index.
The foreign index numbers of wholesale prices are cabled to the Federal Reserve Board by the various foreign statistical offices. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and statistics of the Board, and may be had upon request.

Wherever possible the indexes have been shifted from original bases to a 1913 base. Further information as to base periods, sources, number of commodities, and period of the month to which the figures refer may be found on page 48 of the January, 1924, issue of the Bulletin.

MONEY RATES PREVAILING IN FEDERAL RESERVE BANK AND BRANCH CITIES
The following table shows the prevailing rates charged customers on various classes of loans as reported by representative banks in the cities indicated. These rates are not averages but are those rates at which the bulk of the loans of each class are made by reporting banks. Since the publication of the rates for May, the forms used in making the reports on which the table is based have been modified and certain classifications have been omitted.

| District and city | Year and month | Prevailing rates charged customers during week ending with the 15th day of the month |  |  |  |  |  |

1 Including bankers' acceptances drawn for an agricultural purpose and secured by warehouse receipts, etc.
Changes during the month.-Discount rate at Federal Reserve Bank of New York from $31 / 2$ per cent to 4 per cent on August 13.

[^0]:    1 Reports of condition of all member banks as of June 30, 1926, appear on pages 644-656 of this Bulletin.

[^1]:    1 Renewal rate.

[^2]:    1 Includes cotton for export on shipboard but not cleared; cotton coastwise; cotton in transit to ports, interior towns, and mills; cotton on farms, etc. (agents and trade reports).
    \& Due principally to the inclusion in all distribution items of the "city crop," which consists of rebaled samples and pickings from cotton damaged by fire and weather.

[^3]:    ${ }^{1}$ Comprises 4 national banks with deposits of $\$ 1,678,000$ and 1 State member bank with deposits of $\$ 300,000$.
    ${ }_{2}$ Figures represent deposits for the latest available date prior to the suspensions, and are subject to revision when information for the date of suspension becomes available.

[^4]:    1 Exclusive of securities borrowed by national banks, except on June 30, 1920.

[^5]:    For footnotes see p. 648

[^6]:    ${ }^{1}$ Including rediscounts and overdrafts.
    ${ }^{2}$ Includes demand deposits, certified and cashiers' checks outstanding, time deposits, U. S. deposits, and due to banks.
    Including certified and cashiers' or treasurers' checks outstanding.

[^7]:    ${ }^{1}$ Including rediscounts and overdrafts.
    2 Includes demand deposits, certified and cashiers' checks outstanding, time deposits, United States deposits, and due to banks.
    ${ }^{\circ}$ Including certified and cashiers' or treasurers' checks outstanding

[^8]:    1 Exclusive of certified and cashiers' or treasurers' checks outstanding.
    ${ }^{2}$ The amounts in this column represent the total of the excess of amounts due to banks over amounts due from banks as determined for individual banks having such excess, and do not agree with the difference between aggregate amounts due to banks and due from banks. In this calculation the amounts due to banks include due to Federal reserve banks, due to banks, bankers, and trust companies, and certified and cashiers' or treasurers' checks outstanding, and amounts due from banks include items with Federal reserve banks in process of collection, due from banks bankers, and trust companies, and exchanges for clearing house, also checks on other banks in same place.
    ${ }^{3}$ Deficit.

[^9]:    1 Currency conditions and currency reform in India have been discussed in the Federal Reserve Btllietin; October, 1919, pages 945-950; wherein is given the substance of the report of the Chamberlain Commission of 1913; March, 1920, pages 253-258, the report of the BabingtonSmission of 1913; March, 1920, pages 253-258, the report of the BabingtonSmith Committee of 1919; January, 1921, pages 29-32, further monetary establishment of the Imperial Bank of India, and the regulations govestablishment of the Imperial Bank of India, and the regulations govlater discussions regarding the silver situation as it affects India.

[^10]:    ${ }^{1}$ A tola is a weight of 180 grains troy of goid or silver.

[^11]:    1 See page 662.

[^12]:    ${ }^{1}$ A summary of this part of the report will appear in a later issue of the Bulletin.

[^13]:    general index is a weighted average of relatives for 34 individual industries. The method of construction was described in detail and indexes for

[^14]:    1 For description and early flgures see Bullefin for March, 1924, and for certain revisions see p. 739 of the October, 1925, Bullemp.
    Less than one-half of 1 per cent. ${ }^{3}$ Revised.

[^15]:    ${ }^{1}$ Not including gold held abroad.

[^16]:    1 First of month figures.
