## SUBSCRIPTION PRICE OF BULLETIN.

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It is printed in two editions, of which the first contains the regular official announcements, the national review of business conditions, and other general matter, and is distributed without charge to the member banks of the Federal Reserve System. Additional copies may be had at a subscription price of $\$ 1.50$ per annum.

The second edition contains detailed analyses of business conditions, special articles, review of foreign banking, and complete statistics showing the condition of Federal Reserve Banks. For this second edition the Board has fixed a subscription price of $\$ 4$ per annum to cover the cost of paper and printing. Single copies will be sold at 40 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board.

No complete sets of the Bulletin for 1915, 1916, or 1917 are available.

## TABLE OF CONTENTS.

Business, industry, and finance, October, 19201135
Condition of wholesale trade ..... 1143
Production of knit goods ..... 1145
Production oi finished cotton fabrics ..... 1145
Report of the gold committee of the American Bankers' Association upon the McFadden gold bill ..... 1147
Terms of sale in the principal industries ..... 1149
Foreign exchange rates in New York on belligerent, neutral, and silver-standard countries. ..... 1158
Economic and financial conditions in Cuba ..... 1162
The investment trust as a channel for investment abroad ..... 1168
Official
State banks and trust companies admitted to system ..... 1174
Banks granted authority to accept up to 100 per cent of capital and surplus ..... 1175
Charters issued to national banks ..... 1175
Fiduciary powers granted to national banks ..... 1174
Rulings of the Federal Reserve Board. ..... 1176
Regulations of the Federal Reserve Board, series of 1920 ..... 1179
Miscellaneous
November crop report ..... 1175
Commercial failures reported ..... 1175
Statistical:
Retail trade index ..... 1195
Foreign trade index. ..... 1197
Wholesale prices abroad ..... 1198

# FEDERAL RESERVE BULLETIN 

Vol. 6
No. 11

## REVIEW OF THE MONTH.

The situation in public finance during October has shown no striking de-
treasury inance.
velopments. For the month as a whole total ordinary receipts were $\$ 220,034,805$, while total ordinary disbursements were $\$ 426,497,372$, the deficit on ordinary account being thus $\$ 206,462,567$. On October 18 it was announced that the total amount of subscriptions received for the issue of Treasury certificates of indebtedness dated October 15 and maturing March 15 next was $\$ 185,076,500$, the total amount of subscriptions allotted under this offering being $\$ 124,252,500$. Ten of the Federal Reserve districts oversubscribed their quota. An important survey of the present situation in connection with the public debt was given by the Secretary of the Treasury in an address before the American Bankers' Association on October 20, in which he said:
"On the basis of daily Treasury statements, the gross debt of the United States on August 31, 1919, was slightly over $26 \frac{1}{2}$ billion dollars, of which nearly 4 billions represented loan and tax certificates maturing within the year. On September 30, 1920, the gross debt was $\$ 24,087,000,000$, a reduction of over $2 \frac{1}{2}$ billions, while the floating debt was $\$ 2,347,000,000$, or approximately $\$ 1,600,000,000$ less than on August 31, 1919. These reductions were offected chiefly by the application of the proceeds of taxation and salvage and were made possible to some extent by the reductions of Treasury balances effected as a result of reduced expenditure and the retirement of large amounts of loan certificates. The Treasury expects that further reductions in both gross and floating debt will be shown at the end of the current month and that by the close of the current quarter there will be a much more substantial decrease. * * * Sound fiscal policy dictates that the receipts from taxes and salvage be kept sufficiently high not only to meet current bills, including interest and sink-
ing-fund charges, but also to retire the floating indebtedness and a considerable part of the Victory notes before the close of the fiscal year 1923. Earlier plans and expectations were disarranged by the unexpectedly large burdens placed upon the Treasury by the transportation act. According to the estimates there will be paid on account of the railroads during the current fiscal year probably a billion dollars, of which one-quarter billion has already been called for and paid. It is obvious that these payments will limit the progress which the Government had expected to make in the retirement of the floating debt. It is expected, however, that perhaps the heaviest payments on this account will have been completed by the spring of next year, and then for the remaining months of the fiscal year the Treasury looks forward to a more rapid reduction of the floating debt. By the end of the fiscal year, in the absence of unforeseen contingencies, it will probably be reduced below two billions and it may be brought as low as a billion and a half. The balance should be retired during the fiscal year 1922. By the end of that year the Victory loan should have been reduced by perhaps a half billion dollars as a result of sinking-fund operations. The remainder, say, $3 \frac{3}{4}$ billions, will then have become substantially a floating debt, as it will mature during the following fiscal year. Provision should be made, therefore, under proper Treasury regulations, for the acceptance of Victory notes during the fiscal year 1923, before maturity, in payment of income and profits taxes. In this way and through sinking-fund operations it should be possible to reduce the Victory loan so that at maturity it would stand at approximately three billions of dollars."

During the past few weeks the Federal Reserve Board has held its usual
Condition of Reserve System autumn conferences with the Federal Advisory Council and the chairmen and governors of Federal Reserve Banks. The Federal Advisory Council met in Washington on September 20-21, while conferences with Federal Reserve agents and governors of Federal Reserve Banks took place on

October 13-15. At this series of conferences much attention was devoted to credit conditions throughout the country, the reports made to the Board showing that the process of converting relatively nonliquid credit secured by Government obligations into liquid credit was proceeding satisfactorily. During the period from July 2 to October 15 the following changes have occurred in some of the principal items of Federal Reserve Banks.

| [Amounts in thousands of dollars.] <br> [Increase or decrease indicated by + or - sign.] |  |  |  |
| :---: | :---: | :---: | :---: |

During the past month the Federal Reserve Board has heard statements
The credit situ- from representatives of farmers' organizations relative to the general condition of credit and the volume of it available for the moving of crops. After canvassing the whole situation thoroughly the Board on October 16 issued a statement to the press, in which it stated the situation as follows:

In view of the representations which have recently been made to the Board as to the unavailability of credit in agricultural sections, the Board requested information concerning credit conditions throughout the country from the chairmen and governors of Federal Reserve Banks at their usual autumn conference here this week. The Board is advised that credit has been steadily available for the successive seasonal requirements of agriculture, as well as for the needs of commerce and industry, and that there is no ground for expecting that its availability for these purposes will not continue. The present improved credit situation is due in part to the timely steps taken last spring, following conferences between the Board and governors and directors of Federal Reserve Banks to provide credit for crop-moving requirements, and in part to the subsequent improvement in transportation reported from all districts, except in a few localities.

Between January 2 and October 1 of the present year about 800 leading member banks from all sections of the country, which report their condition to the Board weekly and which represent approximately 70 per cent of member bank resources, have increased their loans for agricultural, industrial, and commercial purposes by an amount exceeding $\$ 1,800,000,000$. This great increase in the credit extended to their customers has in the main been made possible by the accommodation extended member banks by the Federal Reserve Banks.

During the same period the twelve Federal Reserve Banks have increased their holdings of agricultural and commercial paper by more than $\$ 500,000,000$, and from January 23 to October 1, 1920, increased their issues of Federal Reserve notes by over $\$ 460,000,000$. At the same time Federal Reserve Banks having surplus funds have extended accommodation to Federal Reserve Banks in agricultural and livestock districts by means of discounts, aggregating on October 1 over $\$ 225,000,000$.

The disturbances in price and demand which have recently manifested themselves in markets for various agricultural and other commodities, not only in the United States but in other countries as well, are inevitable and un-
avoidable consequences of the economic derangements occasioned by the World War. The United States continues to have a heavy volume of exports, although foreign demand for certain agricultural staples has somewhat decreased. But the chief market for our raw and manufactured products is at home, and our present huge crops of immense value may be expected gradually and in regular course to move from producers to consumers. The recent census, reckoning our population at 105,000,000 , emphasizes anew our own capacity as consumers, irrespective of the demands of other countries.

An important feature of the meeting of the

- American Bankers Association. American Bankers Association, which occurred in Washington on October 19-25, was the statement contained in the address of the Secretary of the Treasury already referred to, in which he outlined the general position assumed by the department in conjunction with the Federal Reserve Board with reference to the extension of credit for the accommodation of various branches of industry. On this subject the Secretary said:
"The Treasury has no money to lend and no money to deposit except for Government purposes. It is not in the banking business and should not be. It is borrowing money periodically to meet current obligations in the intervals between large tax payments, at a cost of about 6 per cent. On several occasions before the Federal Reserve System was instituted the Secretary of the Treasury, at a time when the Treasury had a surplus, did deposit small sums of money in banks in various sections of the country to meet emergencies; but this necessity is obviated by reason of the existence and practices of the Federal Reserve System, and it is interesting to note that at this time Reserve Banks in certain sections of the country are rediscounting for banks in crop-moving sections approximately six times as much as was ever deposited for crop-moving purposes by the Secretary of the Treasury. * * * From the member and nonmember banks of the Nation, aided by the wise action of the Federal Reserve Banks, must relief be sought and furnished. The Federal Reserve Board can not furnish it. It has no lending power and no money to lend. It is a supervisory body and not a bank. The Federal Reserve Banks have no money to lend to individuals, but can assist in the creation of credit through the rediscount of eligible paper from banks. Neither the Board nor the Reserve Bank has any discretion
as to the loans which member or nonmenber banks may make or decline to make, or the rates at which they extend their accommodation to customers. * * * All the authorities of the Federal Reserve System, including the member banks, have a keen and sympathetic appreciation of the difficult problem. They will, in my judgment, do everything in their power to promote the orderly distribution of products, and I believe that they will succeed,'although not to the satisfaction of every individual. Facts widely published and well known to you evidence this disposition and they refute the assertion that there has been a contraction of credits."
The substantial agricultural yields which
Production and had been forecast at the opeling of October have been in process of realization in most parts of the country. Business in most sections has continued upon a fairly active basis, although there has been in some parts of the country and in sundry lines of manufacturing industry a sporadic shrinkage or change in the volume of production. The Board's production statistics for the month show the following results:

|  | Aug., 1920. | Sept., 1920. | Sept., 1919. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

With respect to retail trade conditions, the monthly tabulations, published elsewhere in
this issue, show that demand has been tolerably maintained. This reflects the large production of primary wealth growing out of the heavy crop yield in nearly all parts of the country. While it is true that in some parts of the country there has been a retardation of the movement of crops to market, partly due to the continuation of rather unsatisfactory transportation conditions and partly to the disposition on the part of some groups of producers to hold back their goods in the hope of higher prices, these influences have been sporadic and do not represent any general check of the movement of goods to market. On the contrary, as already noted, the transportation outlook has shown very decided improvement, taking the country as a whole, and the congestion of agricultural products in warehouses at distributing points has in some measure at least been reduced.

Business conditions during the month continued to exhibit a transitional
The business situation. aspect. Changes in the direction of production have already been referred to. The employment index of the Bureau of Labor shows a shifting of men between industries, which indicates a redistribution of demand and leaves the net situation somewhat in doubt. In the steel trade, despite some decline in unfilled orders, industrial leaders look forward to prosperous conditions and predict only a wholesome and reasonable readjustment. In other lines of trade there is some uncertainty and maladjustment of demand and supply. This situation is seen in particular in the textile industry, where some mills have either closed down or are working on part-time schedule. In the agricultural regions, on the other hand, the large crop yields have served to emphasize the problem of marketing and have taken a position by the side of the industrial situation in the public mind. This process of industrial and commercial readjustment is reffected in the relative decline of exportation. Coupled with the comparative falling off in exports there has also come a somewhat lessened necessity for transportation. On a number of railroads there has been a reported
decline in the number of men employed, partly due to rearrangements and economies of staff but partly also to a rather lower intensity of transportation demand. This situation has, however, tended to further the process of securing a better movement of freight and a reduction of congestion on railways. Goods have been shipped more steadily and in much larger volume to points of destination, and there is less accumulation of goods awaiting shipment at the primary points of distribution. All of these factors have combined to produce a better balance between production and consumption and a more effective distribution of output both geographically and between the varying branches of trade and industry.

The factors which have made in an important way for progress in readjustment during the month of October have been seen in the investment market in a growing and considerably more active investment demand for securities of all descriptions. One effect of this demand has already been that of materially advancing the quotations of Liberty bonds by an average of about $1 \frac{1}{2}$ points during the month. In corporate bonds the tendency toward advancing prices has been even more marked, owing to the considerably larger demand for them by individuals with savings which they desire to place. Especially noteworthy has been the advance in the price of railroad bonds, some issues which previously sold upon an exceptionally low basis of value being in special request for investment purposes. Until recently there was also to be included among the factors which have been tending to work toward more normal conditions the approach to a more normal relationship between the home and foreign trade and the equalization of exports and imports in this country, coupled with the growth of exporting power in other countries. The British coal strike inaugurated on October 18 and the troubles preceding it constitute a notable movement of reaction against the tendency toward improvement in export power abroad and had the strike continued long would have gone far toward neutralizing the improvement already gained.

The decline in the prices of building materials, which has been in evidence in most parts of the country and in many lines of production, should tend to stimulate the resumption of building operations upon a larger scale. Thus far, however, the actual issue of building permits has not shown the effects of this influence.
The price movement during the month of
October has been of exceptional
Readjustment of interest. On the whole, while prices.
the price movement in the United States has continued downward, it would seem that in some foreign countries the tendency toward reduction which had gained ground during recent months had been checked. The following table of index numbers continues that previously furnished in the issue of August for some of the principal countries.

For September the Board's price index shows a decline of 3.4 per cent, while that of Sauerbeck indicates a fall in British prices of 2 per cent, that of the Economist pointing to a reduction of 1.3 per cent.
In studying agricultural prices it should be noted that they show the effects of exceptionally large production or output in various lines and that this exercises a special influence in their case, which is hardly to be given the same amount or kind of weight in dealing with retail or wholesale prices of manufactured or prepared goods. On the whole, however, the price level has apparently approached a relaitvely greater degree of stability than it had possessed during September, and to that extent indicates a further progress toward a condition of readjustment. The problem of complete financial readjustment now centers around the
placing of goods and accumulated stocks upon a banking basis corresponding to the new level of prices which has been established. It may be expected that, as older accumulations are disposed of and new goods at the revised price levels take their places, a more normal situation will gradually develop.
During the month of August the favorable trade balance of the United
Foreign trade situation.

States fell to $\$ 65,000,000$. By some observers it was believed that this reduction indicated a distinct turn of the tide toward a more evenly balanced relationship between export and import. September figures made public on October 26 now show that this expectation has been disappointed. The exports in September amounted to $\$ 605,000,000$, against $\$ 579,000,000$ in August of this year and $\$ 595,000,000$ in September of last year. For the nine months' period ended with September, 1920, the exports were $\$ 6,081,000,000$, as compared with $\$ 5,867,000,000$ for last year. The September imports amounted to $\$ 364,000,000$ against $\$ 514,000,000$ in August, 1920 , and $\$ 435,000,000$ in September, 1919. The pronounced drop of over $\$ 150,000,000$ in the imports of September of this year as compared with August is accounted for to the extent of only about onetenth by diminished importations from Europe; it is mainly accounted for by diminished importations from North America, Cuba, and Asia, sugar alone accounting for almost fivetenths of the total decline noted, and rubber, coffee, silk, and hides and skins for two-tenths. The excess of merchandise exports over imports for September, 1920, was $\$ 242,000,000$, as against $\$ 65,000,000$ for August, 1920, and $\$ 160,000,000$ for September, 1919. For the nine months' period ended with September of this year the imports were $\$ 4,358,000,000$, against $\$ 2,697,000,000$ during the corresponding period last year. The imports of gold in September amounted to $\$ 39,000,000$ and exceeded those for August by $\$ 24,000,000$. For the nine months ended September of this year the imports of gold amounted to $\$ 199,000,00,0$ compared with $\$ 56,000,000$ in the same period of last year. Exports of gold during September totaled $\$ 17,000,000$, while gold exports for
the nine months ending September were $\$ 259,000,000$, leaving a net balance of $\$ 60$,000,000 exported during the period. Since the publication of the Board's estimate in September that there was a favorable unfunded balance growing out of our post-armistice trade with the world at large, and amounting to $\$ 3,000,000,000$ or upward, other investigators have pursued studies relating to the same subject. Data for the precise determination of the balance are, as was explained in the Bulletin at the time, not likely to be fully available in the near future. This is due to the unavoidable presence of conjectural elements in any such trade balance. It is, therefore, of interest to note that the other compilations to which reference has just been made have afforded an even larger figure than that which was put forward in the September issue. A recent estimate has placed the balance due to the United States from the European countries alone at not less than $\$ 3,500,000,000$ and probably nearly $\$ 300,000,000$ more than that.

The development of trade since these figures and those of the Board previously published were prepared has shown a further growth in the unfunded balance due to the United States from Europe, owing to the renewed exportation of our agricultural and other staple products. The rate of this growth, until recently, was smaller than at any time since the armistice, due to the larger volume of importations. This does not alter the fact that a great body of obligations due to the United States is being carried upon the books of foreign banks and business houses and that as a result the exchange situation will necessarily continue for a good while to come to be a subject of interest, while fluctuations in the exchanges may at any time be severe because of the large unfunded balance of indebtedness which overhangs the market. The influence of this condition of affairs has been clearly seen in the sensitiveness of exchange during the past month or two, it being evident at times that an upward movement of quotations could not long maintain itself because of the disposition of owners of foreign balances to dispose of them whenever improved conditions seem to offer a prospect of a better return. As a result sterling exchange has fluctuated during the month within com-
paratively narrow limits and has shown little ability to gain ground, while the Continental currencies have been almost continuously weak. The following table presents the situation of the principal exchange quotations during the period in question:

In the oriental field the important influence of the month has been the decline in the price of silver, which has undoubtedly operated powerfully to unsettle Eastern exchange quotations. As shown by the Eastern currencies which are cited in the foregoing table, the falling off has been practically continuous throughout the month. With these quotations, however, may to advantage be compared the price of silver on corresponding dates during October, which may be presented as follows:

Silver in New York.

In connection with the exchange situation, attention has been largely concentrated upon the settlement of the Anglo-French loan, French maturities. amounting to $\$ 500,000,000$, which fell due on October 15. This large settlement had apparently no direct effect upon the money market of the month, because of the elaborate preparations which had been carefully made for many weeks preceding on behalf both of the British and of the French Governments. In preparation for the settlement of the bonds the French Government placed in the New York market a loan of $\$ 100,000,000$, while there had been imported and deposited in the Federal Reserve Bank during the preceding weeks considerable quantities of gold. There remains of the $\$ 500,000,000$ which was due a substantial sum which had to be provided for by the accumulation of dollar balances through purchase of exchange or by the sale of securities in the American market. It is around the latter point that much of the interest involved in this transaction centers. When analyzed it appears that the operation amounted largely to a mere shifting of credits. American investors who previously held bonds of the AngloFrench loan surrendered these bonds and received in exchange new bonds issued by the French Government or else were paid in cash realized by the debtor Governments under the loan, or from the sales in our market of stocks and bonds of American corporations which had hitherto been held by their nationals. The rearrangement of obligations resulting from this method of settlement amounted in one sense to a "cancellation" of debt directly owed by the British and French Governments to American citizens through the medium of a change in ownership which resulted in canceling the debt owed by American citizens and American enterprises to English and French investors. The absorption of these obligations by American investors, however, amounted to a demand upon this market for an equivalent amount of capital which would have been rendered available here had the loan been paid in some other form. The payment of the loan by means of such a redistribution of claims was thus to be viewed as an indirect or potential draft upon our supply of
liquid capital. It was an international clearing of obligations which, except in so far as actual gold moved from one country to another, left matters as they were before. In the opinion of not a few capable students of the situation it was much to be desired that this process of substitution or mutual cancellation of credits might have been brought about in a degree sufficient to avoid any movement of specie. Be this as it may, it is undoubtedly true that the preparation for meeting the maturity of these bonds had an important influence in preventing an advance in sterling and francs in the New York market which otherwise might have occurred. The demand for dollars which originated with the British and French Governments in order to provide funds for making the adjustment tended to further the fall in the value of the pound sterling which had brought that currency down to a point but little higher than $\$ 3.40$.

The financial conference, including represent-

The Brussels conference. days, and which continued its activity with intervals up to October 9, resulted in a thorough canvassing of the general financial and banking situation as it exists in the principal countries of Europe at the present time. The work of the conference clearly showed that there is no general remedy which can be applied to the solution of foreign exchange problems at the present moment, but that, as has been believed by most persons, the eventual adjustment of existing conditions will be attained only through the slow process of saving and reinvesting capital. It probably accomplished all that could reasonably be expected, since it made a beginning of harmonious discussion and cooperation between the nations concerned. As concrete suggestions, however, the conference recommended consideration of the pooling of the gold and credit resources of the participating countries in a general fund whose resources shall be used in effecting the exchanges upon some common basis or unit of interchange, while valuable detailed suggestions are made as to uniformity in bills of exchange, reciprocity of treatment in regard to branch banks in different countries, and a variety of
others. So far as immediate action is concerned, the conference thus results chiefly in the recommendation that as soon as possible a body of competent business men shall be convened to discuss on behalf of the participating nations the conditions under which the suggested plan of central organization or "pooling" may be put into operation. What could be done with reference to such a suggestion would doubtless depend in no small degree on the form in which it might be presented and the character of the details with which it was worked out. Although the Brussels conference has thus laid the foundation for future discussion, it has apparently done little more than that. The United States was not officially represented at the conference, but it was in touch with the work undertaken there through an unofficial representative, Mr. Roland W. Boyden, who presented the views of the United States at one or two sessions. In so doing Mr. Boyden called attention to the principles laid down in the letter which Secretary of the Treasury Glass issued in February, 1919, outlining the policy of the United States with respect to further advances to European countries.

In closing, the conference adopted a resolution which, as reported by cable, sketches the general credit situation and recommends the adoption of a plan for the extension on an international basis of a system guaranteeing credits for exports. This was in accord with the recommendation of the committee on credits. The committee also favored plans whereby raw materials in process of being worked up into completed products would serve as security for advances either by the banker or exporter, the proceeds of the sale of the manufactured article going first to the repayment of the credit.
"Realization of this system," says the resolution, "has met with serious obstacles in many countries by reason of the absence of legislation adequately protecting the exporter during the stages of import, manufacture, reexport, and sale. The committee recommends that the council of the league draw attention of the various governments to this question and that it intrust to a committee of legal and business experts the task of proposing legisla-
tive measures suitable for attaining the end in view in each of the countries interested." The committee on international credits also states that 'the outstanding financial questions resulting from the war must be made the subject of definite settlement and put into execution. Finances can be restored, but the revival of credits requires these primary conditionsthe restoration of order in public finances, purging of. currencies, and freedom of commercial transactions."

The conference, however, has been of very considerable interest as afford-
Proposals be- ing a forum of discussion and fore conference. thus as tending to analyze and rectify the ideas of those in attendance. Of the many and various proposals brought before the organization four general groups stand out prominently. Of these the first is represented and characterized by the proposal of M. Delacroix, Belgian Prime Minister and Minister of Finance, for the establishment of an international bank. Such a bank would be designed to promote the international development of credit. On presenting it, M. Delacroix said:
"* * * it is urgent, indeed essential, to set up an international bank of issue, in which all States, without distinction, would be represented, and which would be managed by a committee consisting of a number of delegates. The objects of this bank would be to issue interest-bearing gold bonds in exchange for genuine securities. The committee of this bank would decide in each case whether the securities offered were satisfactory; only after thorough investigation of the proposed guarantees would it consent to issue to any State requesting a loan, bonds to the value of these securities. The guarantees would involve, in certain cases, a direct control over the yield obtained from the securities.
"The situation is so critical in certain parts of Europe that common humanity calls for intervention and for loans to prevent the populations dying of want. Yet these countries in nearly every case still possess resources which they can not immediately make use of.
"The bank of issue would give them the means of using these assets, during a period to be defined, and would permit them to obtain at once the funds necessary to buy essential supplies.
"There are some States, especially in Europe, whose financial resources are at an end, but
who, nevertheless, possess considerable natural wealth. The international bank, by means of the financial control which it would introduce, would be the means of saving them from ruin."

A second group of plans before the conference had for object the establishment

Regulation of credit.
of a steady flow of capital and business credit into the European nations most seriously embarrassed and injured by the war. Of these probably the best representative was the plan of Herr Meinl, put forward especially for the purpose of restoring business in Austria, although the same machinery would hold good for other nations if desired. This plan contemplated the organization of an international syndicate for the purpose of building up trade.
"The business of the syndicate would be confined to that of investigating, organizing, and controlling the transactions entered into by the participants. It would be empowered by the participants to act as security holder in much the same way as a local agent or banker acted formerly, only in this case it would represent the joint and several interests of all the participants. The latter might either take the initiative themselves in entering into transactions or leave it to the syndicate to make proposals and recommendations.
"The object of combining the representation of these interests into one agency is (1) to secure greater authority in negotiating with the various Governments and business groups in Austria; (2) to insure the cooperation of prewar creditors with the new interests. This is most important, and satisfactory arrangements for the settlement of these debts would be an essential preliminary to any new business.
"The participants in the syndicate will be free to accept or refuse any proposed business, and if they accept they may do so on any lines they choose and not only on those recommended by the syndicate, but in order to secure for the syndicate the necessary authority in conducting negotiations, it would be desirable that participants should intrust the syndicate with the widest possible powers to act on their behalf.
"The participants would make their own financial arrangements, as it is not proposed that the syndicate should have a large capital such as would be required for the giving of credits. The capital of the syndicate would be limited to what is required for the expenses of management.
"The economic revival of the countries of the former dual monarchy is only possible if economic union and free traffic between the succes-
sion States are reestablished, and this can only be brought about by a powerful combine which can hold out the bait of a certain supply of raw materials, on the condition that all restrictions which might prejudice the successful working of the business be removed."

Third among the general groups of plans offered are to be classed the various

Control of exchange. schemes for an international control and organization of exchange.
One of the representative examples of such a plan for exchange control is seen in the proposal for an "International Valuta Association" put forward by the Swiss League for Free Economy. According to this the chief elements in the plan for a uniform standard of value would be as follows:
(1) Countries desiring to join the International Currency Stabilization Association (International Valuta Association "Ira"), adopt the "Iva" unit of currency standard.
(2) The monetary systems of the Iva countries remain national, but are based on unified principles, valid in all circumstances and for all stages of development.
(3) This unified national currency policy removes the chief cause of disturbances in the balance of trade and of the resulting fluctuations of the exchanges.
(4) Small disturbances in the balance of trade, caused, for instance, by the varying yield of harvests, are still possible.
(5) To eliminate completely the effect of these disturbances upon the exchanges, a special international note is issued, guaranteed by all the Ira States, which is imported and exported without hindrance by all the countries of the Association and is recognized by them as legal tender at par with the national currency.
(6) This international note is issued at a center-the Iva Office at Berne-to the countries of the Association and under their supervision. The notes are issued free of cost, except for the expense of printing and administration.
(7) The quantity of Iva notes is determined solely by their regulating effect upon the exchanges, about 20 per cent of the national issues being required for this purpose.
Finally, there was before the conference a

Guaranteed loans.
loan. The suggestion TerMeulen, of Holland, was possibly the most interesting of the proposals in this group.
M. TerMeulen recommended that any government whose citizens have found themselves unable, because of disturbed economic conditions, to get raw material on personal credit may segregate certain assets or revenues and that against these such a government may issue bonds. These bonds would then be given to the citizens who had put up the security for use as collateral in obtaining credit for importation of goods. Such transactions would be required to meet the approval of the government concerned, while all such transactions would be approved by a central commission acting under the direction of the League of Nations.

One set of facts developed at the Brussels conference which has thrown
Foreign financial situation.
valuable light upon the problem of financial reconstruction in Europe is seen in the statements filed by the various countries with respect to their financial position. The bulk of the information furnished was already common property, although the Brussels conference succeeded in developing some information which is relatively new. What chiefly stands out as a result of the compilation of these data, however, is the depressed financial prospect and the condition of inflation of currency and credit which prevails approximately throughout Europe to-day. It would appear from the figures made available at the conference that expenditures for military and naval purposes are still on a high level and that in some countries at least the development of a system of taxation which is adequate to take care of the present volume of expenditures has not proceeded very far. In these circumstances it seems doubtful whether the immediate future of European finance and banking is likely to result in very decided progress, least of all in the development of a condition of affairs that will permit the early settlement or adjustment, much less cancellation, of any considerable fraction of the indebtedness now outstanding. The plan to have Great Britain cancel its claims upon France, while the United States in turn cancels an equal amount of claims upon Great Britain and accepts in lieu thereof a share in the German indemnity, was not officially proposed but evidently reappeared as an element in the discussions, at least unofficially. In this
aspect the Brussels conference has merely resulted in a new demonstration that far greater effort to equalize budgets and to develop a system of taxation that will provide for meeting expenditures will be essential as a condition of financial settlement prior to the adoption of any international plan either of currency issue or of refunding. It is worthy of note, also, that the conference was greatly handicapped from the very start by the fact that there had been no earlier attempt to fix the amount and terms of the German indemnity. There was on the whole throughout the Brussels conference a more general recognition than might have been expected of the fact that the United States can not finance the whole world and that the various countries must first of all help themselves.

During the month ending October 10 the net inward movement of gold

Gold and silver movements.
was $\$ 56,503,000$, as compared with a net outward movement of $\$ 9,342,000$ for the month ending September 10. Net imports of gold since August 1, 1914, were $\$ 753,710,000$, as may be seen from the following exhibit:
[In thousands of dollars.]

${ }^{1}$ Excess of exports over imports.
England furnished $\$ 51,161,000$, or over 70 per cent, and France $\$ 14,843,000$ of the $\$ 72,981,000$ of gold imported during the monthly period ending October 10; Argentina, Russia in Europe, Canada, and Colombia furnishing most of the remainder. Of the gold exports, amounting to $\$ 16,478,000$, over one-half, or $\$ 8,398,000$, was consigned to Japan, $\$ 5,000,000$ to China, $\$ 1,439,000$ to Hongkong, and the remainder principally to Mexico and Canada. Since the removal of the gold embargo on June 9, 1919, total gold
exports have amounted to approximately $\$ 618,556,000$. Of this total, $\$ 146,555,000$ was consigned to Argentina, $\$ 146,465,000$ to Japan, $\$ 68,728,000$ to Hongkong, $\$ 64,396,000$ to China, $\$ 40,804,000$ to British India, $\$ 29$,778,000 to Spain, and the remainder principally to Mexico, Uruguay, the Dutch East Indies, the Straits Settlements, Canada, and Venezuela.

During the same monthly period the net inward movement of silver was $\$ 1,308,000$, as compared with a net outward movement of $\$ 1,765,000$ for the month ending September 10. Net exports of silver since August 1, 1914, were $\$ 454,289,000$, as may be seen from the following exhibit:
[In thousands of dollars.]

Mexico furnished $\$ 4,395,000$, or about 68 per cent, of the $\$ 6,477,000$ of silver imported during the monthly period ending October 10 , most of the remainder coming from Peru, Chile, Canada, and Honduras. Of the silver exports, amounting to $\$ 5,169,000$, about twothirds, or $\$ 3,434,000$, was consigned to China, and the remainder principally to Hongkong, Japan, Cuba, Canada, and Mexico.

Continued loan expansion, accompanied by a more than commensurate in-
The banking crease in borrowings from the situation. Federal Reserve Banks, is indicated by the weekly condition statements of about 820 member banks in leading cities.

Holdings of United States bonds and Victory notes show but nominal changes, while those of Treasury certificates declined by about 54 millions between September 17 and October 15 , notwithstanding the considerable increasein this item shown on the latter date. A notable development during the period is the increase by 123 millions in loans supported by corporate
securities-apparently the result of the calling of street loans in anticipation of the redemption of the Anglo-French bonds by the fiscal agents of the respective Governments and the assumption of a large portion of these loans by reporting members in Boston and New York City. Loans secured by Government war obligations declined by about 32 millions, while other loans and investments, composed largely of commercial loans and discounts, show an increase of 191 millions. In consequence of the above changes, loans and investments of all reporting institutions on October 15 were 226 millions larger than four weeks before, the corresponding increase for the New York City member banks being 92 millions. Accommodation of reporting member banks at the Federal Reserve Banks shows an increase for the period from 1,972 millions to 2,249 millions, representing 11.6 and 13 per cent, respectively, of the banks' total loans and investments. For the member banks in New York City an increase in this ratio from 11.7 to 14.6 per cent is noted.

For the four weeks between September 24 and October 22 the Federal Reserve Banks report a decrease of over 21 millions in their holdings of bills secured by United States war obligations and Treasury certificates (so-called war paper) and an increase of 66 millions in the holdings of other discounted paper, the share of war paper in the total discounts held showing, in consequence, a further decline to less than 44 per cent. Holdings of acceptances purchased in open market declined by 7 millions, while Treasury certificates on hand show an increase from 271 millions on September 24 to 302 millions on October 15, when six of the Federal Reserve Banks held 26 millions of special certificates to cover temporary advances to the Government. By the following Friday the amount of such special certificates had declined to 10 millions held by four Federal Reserve Banks, while the total amount of Treasury certificates held by the Federal Reserve Banks had declined to 281 millions.

Interbank discounting shows further growth in volume, the total of paper held under discount for other Federal Reserve Banks showing an increase from 226.9 to 243.1 millions, reported by the Boston, Philadelphia, and Cleveland banks. The latter bank on October

22 reports a total of 137.9 millions of paper discounted for other Federal Reserve Banks, compared with 79.3 millions of paper held under discount for its own members, while over 40 per cent of the Boston bank's discounts carried on the same date was for other Federal Reserve Banks. At the close of the period under review the list of accommodated Federal Reserve Banks includes, besides the seven banks in the South and Middle West shown, the month before, also the New York bank. Interbank accommodation through the purchase of acceptances is reported by the Boston, Philadelphia, and San Francisco banks, their aggregate holdings of such paper on October 22 being 24.3 millions, all acquired from the New York bank.

Net deposits increased from 1,658 millions on September 24 to 1,710 millions on October 8, but declined to 1,624 millions during the following two weeks. Federal Reserve note circulation shows a further expansion during the four weeks from 3,280 millions to 3,356 millions, or at an average weekly rate of over 19 millions, substantial increases in the circulation reported by the New York and Atlanta banks being due partly to shipments to Cuba of newly issued notes.

The amount of gold held with foreign agencies shows a decline for the period from 111.5 to 80.4 millions, as a result of physical transfer to the Federal Reserve Banks of part of the gold held earmarked for them by the Bank of

England since September of last year. Total gold reserves show a gain for the period of 4.8 millions, while total cash reserves show a slightly larger gain of 5.7 millions.

The banks' reserve ratio declined almost continuously, from 43.6 per cent on September 24 to 42.7 per cent on October 15. On the following Friday, largely because of the liquidation in some volume of bills and Treasury certificates and a corresponding reduction in deposit liabilities, the ratio shows a rise to 43.3 per cent.

The Federal Reserve Board, on October 14,

## Personnel

 made the following announcement of changes in its staff: Mr. W. T. Chapman, secretary, has resigned, effective November 1, 1920. Mr. W. W. Hoxton, executive secretary of the Board, has been appointed secretary, effective November 1, 1920, and has been designated acting secretary for the period October 16 to November 1. Mr. R. G. Emerson, assistant secretary of the Board, has been appointed assistant to the governor, effective October 16, 1920. Mr. Walter L. Eddy has been appointed assistant secretary of the Board, effective October 16, 1920. Mr. James F. Herson, chief Federal reserve examiner of the Board, has been appointed chief of the Division of Examination, succeeding Mr. W. W. Paddock, resigned. Mr. Herson will have the dual titles of chief Federal reserve examiner and chief of the Division of Examination.
## BUSINESS, INDUSTRY, AND FINANCE, OCTOBER, 1920.

October has been a month of continued transition in business. Economic and business readjustment, which has been much in evidence in recent months, is still in process. The factors involved in the present readjustment process are essentially the same as those which have been observed and noted in the past in periods of acute transition, and include, conspicuously, price changes, uncertainty regarding future market conditions, and slackening or suspension of activity in important lines of industry. In a national survey of conditions, however, it may fairly be said that the economic and business situation in the United States is showing much inherent strength and an ability to attain a position of relative stability through an orderly transition. Considering the industrial dislocations, the commercial disorganization, and the financial derangements occasioned by the Great War everywhere throughout the world in one degree or another, recovery and restoration are proceeding apace in the United States, and the natural forces in evidence which make for stabilization carry assurance for the future.

Price revisions in textile lines and in other branches of wearing apparel, as well as in numerous staple commodities, have been the outstanding elements in the situation, just as during the preceding month. Caution in buying, due to a belief that price readjustment is not yet complete, has been a noteworthy factor, and in some quarters has tended to slow down the activity of retail trade, although more apparent in wholesale trade. Crop yields have on the whole justified the expectations expressed at the opening of the month. Banking reserves have held their own during the month and there has been a steady improvement in the liquidity of paper. Labor is less fully employed. Notwithstanding some sporadic cuts in wages here and there the general position is about as good as it has been so far as actual payments or rates of wages are concerned.

In district No. 1 (Boston) there is some curtailment of production due to the uncertainty of prices, mills in various cases maintaining their lessened schedule of hours. Nevertheless there is a general undercurrent of conviction that present conditions are temporary.

District No. 2 (New York) reports improvement in investment outlook, enlargement of savings deposits, advance in Liberty bond prices, a broader bill market, better new financing, slow expansion in demand for stocks, decline in many exports, lower prices, and a tondency to recession in employment.

District No. 3 (Philadelphia) states that there is a diminution in demand for goods and that little new business is being booked. Fluctuation of prices has interfered with the restoration of stable business conditions.

District No. 5 (Richmond) states that the price recession movement has broadened and that, due to this situation and its extension to farm products, there has been some hesitation in business.

In district No. 6 (Atlanta) there is active retail trade, but the crop outlook has become less favorable for certain products, while variation in lumber prices has been reduced to a minimum and coal and iron are somewhat harassed by strike conditions.

In district No. 7 (Chicago) the business situation is still confused by countercurrents of opinion, with buying somewhat restricted and price readjustments presenting some problems to be overcome by producers and traders.

District No. 8 (St. Louis) finds fundamental conditions satisfactory, but in all lines there is hesitancy in purchasing goods for future requirements. Uncertainty as to future prices is the chief obstacle in the way of recovery.

In district No. 9 (Minneapolis) crops are large, grain is moving steadily to market and railroad efficiency has improved, but there have been declines in copper and iron production, in building permits, and in lumber output. Crop-moving needs have required large note issues.

In district No. 10 (Kansas City) price recessions and readjustments have been steady but without serious disarrangements, while retail trade and consumption are proceeding quietly and the labor outlook is favorable. The coal supply is somewhat larger.
In district No. 11 (Dallas) abundant confidence in underlying conditions and in the future of trade are expressed, while the seasonal peak of credit has been passed. There has been some shrinkage in wholesale trade, but retail trade is larger, transportation is better, and the labor outlook improved.

In district No. 12 (San Francisco) business conditions indicate a period of transition. Retail trade is stable, despite a waiting attitude among the public. Good crops have been grown, but in the wool and cotton regions there is dissatisfaction with prices, while lumber is in less demand than heretofore. Grain markets have been sluggish and declining.

The agricultural situation may be characterized as one of large yields and falling prices for the principal crops, accompanied by a spirit of dissatisfaction among a large part of
the farming community, with a disposition in many cases to hold crops rather than to sell them at prevailing levels. The Government estimate of corn production has been further increased as of October 1 to $3,216,000,000$ bushels, which is the largest crop on record. Some increase in the yield of oats is indicated, the estimate now being $1,444,000,000$ bushels, but a decrease in the case of spring wheat from the September 1 estimate brought the figure to $751,000,000$ bushels, which is below the 1919 estimate. Threshing is in progress, and seeding is well under way.

District No. 9 (Minneapolis) "has produced the largest corn crop in its history," estimated at over $260,000,000$ bushels, and the forecast of the oats crop, $28,000,000$ bushels, is also large, the combined crops thus being "a more important factor in the agricultural prosperity of the West than the total wheat crop," which is estimated at only $148,000,000$ bushels. Conditions in general are reported as favorable for fall plowing and seeding. In district No. 10 (Kansas City) most of the corn was mature enough to escape any great damage from the early frosts during the last week of September. Seeding of winter wheat has progressed rapidly under favorable weather and soil conditions. Threshing of this year's winter wheat from the stack is progressing slowly, while harvesting of spring wheat was generally completed in Colorado and Wyoming, and threshing is in progress. In district No. 7 '(Chicago) "production has been stimulated by the seasonable weather that has prevailed everywhere, except in southern Michigan." In district No. 4 (Cleveland) "the agricultural year has been very favorable," wheat being the only principal crop below the average, but "there is rather a strong undertone of dissatisfaction among farmers at the present time over the price situation." "Preliminary forecasts of good crops" in district Nc. 12 (San Francisco) "have been justified by the harvest, which is now practically complete." Farmers have been holding grain for better prices, while buyers have been slow to accumulate stocks.

A decrease of $75,000,000$ pounds from the September 1 figure brings the October 1 estimate of tobacco production to $1,479,000,000$ pounds. Prospects for the crop in district No. 8 (St. Louis) are reported "fair" and "there is less apprehension relative to yield than to marketing conditions." The tobacco crop in district No. 5 (Richmond) is estimated at 22 to 36 per cent larger than last year's yield. Low prices at the opening of the markets caused many farmers to show a strong tendency to hold their crops, but prices advanced steadily during September and early

October. It is stated that the best tobacco is being purchased freely, but low grades are not in demand.

The Government forecast on October 1 of the yield of cotton for the country as a whole was $12,123,000$ bales, as compared with a September 1 forecast of $12,783,000$ bales. The deterioration is stated to have been largely the result of the activity of weevils and worms, following "an unusually wet growing season," although in certain sections, such as Florida, it is ascribed more largely to the adverse weather conditions. In many sections there is practically no top crop. Nevertheless, it is reported from district No. 11 (Dallas) that the "most of the new crop is much superior in quality to last year's crop." Fifty-seven of 76 Texas counties from which data were obtained, representing 40 per cent of the estimated total production for the State, report marked improvement in the quality of the 1920 crop. Very little of the early ginnings were withheld from the market, but during October the decline in the price of the staple gave " a distinct check to the marketing movement." A goodly portion of the South Texas crop was sold before the heavy decline in the market: Picking has been practically completed in the southern tier of counties in the district and in the central zone half has been gathered, but in the northern tier the crop is about 30 days late, and picking has only "Just fairly started." Little shortage of pickers is reported. Picking is proceeding well in most sections of districts Nos. 6 and 8 (Atlanta and St. Louis). In Mississippi "ginning is slow and farmers generally are holding for better prices." In district No. 8 the crop "has moved slowly to date and at a sharp reduction in prices." September cotton on 18 markets in North and South Carolina brought about 7 cents less than four weeks previously, but cotton seed brought an average of $\$ 40$ a ton as against $\$ 30$ a month ago.
In connection with agricultural products, however, interest at this season of the year now centers more largely in the movement of crops to market and the prices realized. Grain in district No. 9 (Minneapolis) is "moving to market more rapidly." It is estimated that $38 \frac{1}{2}$ per cent of the new wheat crop in South Dakota, 22 per cent in Montana; 21 per cent in Minnesota, and 20 per cent in North Dakota had moved from the farms by October 1, and shipments from country elevators increased because of better railroad conditions. "The movement of grain from the Northwest," says the Minneapolis report, " may best be measured by combined grain receipts at Minneapolis and Duluth. During September these were 37,-

336,975 bushels, or double those of August and of September, 1919. These figures indicate that there has been a very satisfactory movement of grain from the Northwest in the month of September, and considering the fact that a very large part of the Minneapolis receipts in August and September, 1919, were made up of southwestern winter wheat, the comparative showing for the Northwestern States in the total movement for the season since August 1 is exceptionally favorable. The wheat receipts at Duluth from August 1 to September 30 included $7,564,084$ bushels of durum, $2,150,606$ bushels of spring wheat, and only 125,720 bushels of winter wheat. It is estimated that between 70 and 90 per cent of the durum wheat produced in this country is exported to Europe. In view of this fact, it is plain that the European demand has fixed the durum price, and through the European demand for durum wheat the price of spring wheat has also been influenced. The continuous demand of the European market for our products is one of the most important factors for us to consider now in connection with the agricultural and business situation in the Northwest. As Europe is still buying very largely with credit, the sale of wheat will inevitably be affected by the degree of success attending the purchase of European securities in this country."
"The large production of all crops, the increased volume of grain receipts, and the difficulties attending the financing of European credits in this country have all had their effect in depressing the price of the grains. Price changes for the month in grains and flour were uniformly downward, as is shown in the following table:

The grain markets in district No. 10 (Kansas City) during September were "erratic and unsettled because of wide sweeps in prices, in which wheat, corn, and oats declined to the lowest levels since the war." Due principally to a disposition on the part of farmers, as a result of the declines, to hold wheat, September wheat receipts at markets in the district were 10 per cent below August and 25 per
cent below September, 1919. "Declines in corn prices were no less remarkable than the decline in wheat prices." In district No. 11 (Dallas) September showed a heavy increased wheat movement, and it was estimated that by October 1, 71 per cent of the crop had been marketed. Slow movement of crops is reported in most of the States of district No. 7 (Chicago). Very little small grain has been moved in Iowa, while in Indiana restricted transportation facilities and declining markets are retarding the movement.

Flour production in district No. 9 (Minneapolis) during the four weeks ending September 25 was the same as during the four weeks ending August 28, although only two-thirds of the output a year ago. In district No. 10 (Kansas City) production during the same period was likewise less than a year ago, although the decline was only 25.9 per cent. The latter district ascribes the slowing down of milling operations "largely to the general decline of the wheat market late in September and at the beginning of October." Short patents made from hard winter wheat were quoted on October 5 at Kansas City at $\$ 10.90$ to $\$ 11.10$ per barrel, as against $\$ 12.60$ to $\$ 12.75$ on September 7 .

Live-stock movements are well under the heary figures of last year, which were swelled by the drought conditions then existing. Receipts of cattle at 15 western markets during September were $1,736,009$ head, as compared with 1,459,565 head during August and 1,871,042 head during September, 1919, the respective index numbers being 172, 145, and 186. Receipts of sheep at the markets during September were 1,893,312 head, corresponding to an index number of 139 , as compared with 1,688,719 head during August, corresponding to an index number of 124 , and $2,890,831$ head during September, 1919, corresponding to an index number of 212. Receipts of hogs during September amounted to 1,597,622 head, as compared with 1,818,245 head during August and $1,704,944$ head during September, 1919, the respective index numbers being 73,83 , and 78. "A seasonal increase in the movement of grass cattle and continued relative scarcity of corn feds" are reported from Kansas City. Grass-fed cattle were anywhere from $\$ 1.50$ to $\$ 3$ lower at Kansas City than at the close of August. The movement of stockers and feeders to the country was the heaviest of the year, and materially greater than a year ago. The light receipt of hogs during September is attributed by stock men in the district to the large corn crop. Declines in cattle prices, as well as in sheep and lambs, were reported during September. In district No. 11 (Dallas)
there was a notable increase in the supply of hogs., The cattle market was "weak and listless." Hogs and sheep were in brisk demand, but at the close of the month the prices of the former declined as a result of the drop in the corn market. During September "there were heavy runs of grass cattle of mediocre quality," at St. Paul, stockers and feeders moved to the country in large numbers early in the month but later decreased, and prices as compared with August "exhibited mixed tendencies." Range and pasture conditions in district No. 10 (Kansas City) " are generally excellent for this season of the year," and all live stock is reported in favorable condition. There has, however, been some deterioration in range conditions in certain parts of district No. 11 (Dallas) due to continued dry weather, but on the whole stock men in the district "are well equipped to carry their cattle through the winter, having, as a rule, an adequate supply of stock water and an abundance of feed." Live-stock men in district No. 12 (San Francisco) "have experienced an unsatisfactory year," and there has been a tendency to decrease the supply of stockers, but "some movement in the opposite direction is now evident, with cheaper feed in prospect."

In the lumber industry cancellation of orders continues and there have been further price reductions. On October 1, 135 mills reporting to the Southern Pine Association stated orders to be $44,480,224$ feet, shipments $63,735,239$ feet, and production 62,769,563 feet. Normal production of these same mills was given at $87,674,183$ feet. In district No. 11 (Dallas) the 28 mills belonging to the Southern Pine Association located in that district report production about equal to that of August. Shipments increased as a result of an improvement in transportation. Unfilled orders of these mills amounted to only $58,448,655$ feet on October 1 as compared with $75,778,485$ (August 27). It should be said, however, that four additional mills are represented in the larger total. Excepting the California redwood mills, there was a heavy falling off in amount of new business taken on by the mills in district No. 12 (San Francisco) during the week ending October 2. "The market is reported to remain generally dull, and several mills are preparing to cease operations." For the four weeks ending September 25, 32 mills belonging to the Western Pine Manufacturers' Association report orders at the close of the period of only $33,075,000$ feet, against a cut of 102,763,000 feet. Corresponding figures for the West Coast Lumbermen's Association (123 mills) are
orders, 202,008,000 feet, and cut, 286,440,000 feet, while the California Redwood Association ( 10 mills) shows orders amounting to $19,388,000$ feet, and a cut of $26,029,000$ feet. District No. 9 (Minneapolis) states that returns from a selected list of eight lumber manufacturers show September shipments and sales about three-fourths those of August and only slightly more than one-half those of September a year ago. Reduced building activity and lessening of demand in agricultural regions are the causes most frequently•assigned for the falling off in demand.

Production of crude oil in Kansas and Oklahoma in September was estimated to be $12,023,250$ barrels, an increase of 30.5 per cent as compared with September, 1919. Production in the Rocky Mountain fields, amounting to about $1,600,000$ barrels, showed a slight increase. The total production of the MidContinent field for the first nine months in 1920 amounted to $104,980,717$ barrels, an increase of $22,870,471$ barrels, or 27.8 per cent over the output for the same period in 1919. Fewer wells were completed in September in the Kansas, Oklahoma, and Wyoming fields than in the same month last year; nevertheless there was an increase in new production of 83,917 barrels, as against 75,296 in September, 1919. Crude oil prices remained virtually stationary in the district. In district No. 11 (Dallas) there was a decrease in production as compared with August, the September total amounting to $11,489,510$ barrels, which was 854,376 barrels less than the August total. The Central West Texas field made the best showing. The output of the Texas Coastal field was affected by the falling off in output of one of the largest wells, whose yield dropped from 20,000 to 7,000 barrels per day. Also, fewer completions of new wells were recorded, and the output was less in the district as compared with August. A total of 636 wells were completed, 435 of which proved to be producers having an output of 80,587 barrels. In August there were 441 new producers, with an output of 103,205 barrels. Rainy weather, unfavorable to drilling operations, is reported to be responsible for the decline. Crude oil prices remained steady in the district. In district No. 12 (San Francisco) a record production of petroleum is reported from California, the daily output amounting to 304,340 barrels. The highest previous figure was recorded in June, 1914, when the daily average was 302,400 barrels. The increase resulted from new production in the Elk Hills. The following figures were furnished by the Standard Oil Co. of California:

Production of anthracite coal is now being accelerated with the return of the miners to work, and, with a speeding up of transport activities, the movement of coal is becoming more satisfactory. The output during September, was $5,125,000$ tons, as compared with $7,332,000$ tons during August and $7,333,000$ tons during September, 1919, the respective index numbers being 69, 99, and 99. The report from district No. 2 (New York) says that the Lehigh Valley Railroad, a heavy anthracite carrier, reports an increase of 37 per cent in coal movement in the first 15 days of October over the first 15 days of September. and 6.3 per cent over the same period last year. The production of bituminous coal for September was $51,093,000$ tons, as compared with $48,389,000$ tons during August, and 47,402,000 tons during September, 1919, the respective index numbers being 138,131 , and 128 . The output of bituminous coal in September was the largest for any month since October, 1919, and while prices remain high, slight decreases are reported. According to the report of district No. 3 (Philadelphia), highest grade coals are selling at about $\$ 11$ to $\$ 12$ and lower grades at $\$ 8.50$ to $\$ 9$ per ton f. o. b. at the mines. Bituminous coal receipts at lake ports in district No. 4 (Cleveland) were promising, amounting to $4,138,533$ tons loaded into vessels as compared with $2,505,827$ tons in September, 1919. But the movement for the season is still behind that for 1919, being only 15,469,783 tons as compared with 18,514, 130 tons in 1919. Commercial distribution within the district, however. is stated to be far from satisfactory, reasons alleged being priority orders for lake shipments and for public utilities and lack of cars. District No. 5 (Richmond) reports better output, freer car movements, and fewer labor troubles.
In district No. 6 (Atlanta), however, mining is interfered with by the continuance of the strike called September 8 in the Alabama district. In district No. 7 (Chicago) production is increasing with improved car supply and the same is true in district No. 8 (St. Louis). There was an increase of 2,262 cars of coal moved through St. Louis in. September, 1920, over September, 1919. District No. 10 (Kansas City) also reports increase in efficiency of distribution. Notwithstanding the speeding up
of lake shipments, coal receipts at Lake Michigan ports are not only below 1919 totals, but the percentage of the total going to Lake Superior ports is less than last year, according to the report from district No. 9 (Minneapolis), which says that the average tonnage received per day at Duluth-Superior Harbor during September, 1920, was 39,243 tons. To equal the tonnage received during 1919 would require an average of 60,639 tons per day, and to equal the average for the 5 -year period would require daily receipts of 76,642 tons. Moreover, stocks were heavier at the beginning of 1919 than 1920. In district No. 10 (Kansas City) weekly reports show that mines in Missouri and Oklahoma operated in September at about 75 per cent of full capacity, while the Kansas mines operated at 55.5 per cent. Transportation difficulties and mine disability are the reasons given for the greater part of time lost, and in addition labor shortage, which was more pronounced in the Kansas field than elsewhere. The retail price of coal has advanced generally throughout the district, prices of bituminous coal reaching $\$ 10$ to $\$ 11.50$ for best grades of lump in Kansas City during the first week in October. From district No. 11 (Dallas) come reports of a fuel shortage of a serious nature in western Texas, the Interstate Commerce Commission having been petitioned to assign rolling stock to the Colorado mines in order to supply the needed coal for winter.
Increased shipments from the Joplin district in September somewhat reduced surplus stocks of zinc and lead ores in district No. 10 (Kansas City), but severe drops in the prices of both metals are recorded, leading to further curtailment of production. During the month zinc-ore prices ranged from $\$ 50$ as a maximum base to $\$ 40$ as a minimum. Base prices for calamine ores were $\$ 30$ to $\$ 35$. Lead ores fell in price from $\$ 110$ at the beginning of the month to $\$ 80$ at the close, the drop being attributed to importations of lead ore from Australia and Mexico. In district No. 9 (Minneapolis) copper production fell below the August figures and was less than that for September, 1919. Reports from companies producing about 75 per cent of the district output were as follows:

Pounds of refined copper.

New business in the iron and steel industry has decreased, and "for the first time in many months the market now shows some of the mills in earnest quest of orders." A decrease, first remarked in the demand from the automobile industry, has been reflected in "a generally growing conservatism" on the part of purchasers. From district No. 4 (Cleveland) it is stated that "efforts are now being concentrated by the consumers on the reduction of inventories. Cancellations and holding back of specifications, as well as the decrease in new purchasing, have resulted in a material curtailment of production by some steel companies. At the same time there has been a decided improvement in the movement of iron and steel products." Prices have reflected this general situation and have also been influenced by the drop in the price of coke. A tendency exists toward easing of prices by certain independent producers in the heavier lines, such as plates, structural shapes, large bars, etc. Some purchasers, in particular automobile manufacturers, have obtained a revision of prices on existing contracts, but it is stated from district No. 3 (Philadelphia) that "in the main the producers are insisting upon the completion of the contracts." In district No. 4 (Cleveland) " the market still shows a condition of large demand and sustained prices in some other lines, notably those of a lighter character." As a result of improved transportation conditions in district No. 6 (Atlanta), "there have been heavy movements of pig iron, cast-iron pipe, iron and steel products out of the district." The unfilled orders of the United States Steel Corporation at the close of September had declined to $10,374,804$ tons, corresponding to an index number of 197, as compared with $10,805,038$ tons at the close of August, corresponding to an index number of 205 . Pig-iron production during September was $3,129,323$ tons, as compared with $3,147,402$ tons during August, the respective index numbers being 135 and 136, but daily average production in September was in excess of August. Steel-ingot production during September was $2,999,551$ tons, as compared with $3,000,432$ tons during August, the index number for both months being 124.

Cotton mills continue to operate on parttime schedules due to lack of orders, and while there are not many complete shutdowns, the percentage of operating capacity in the industry is low. District No. 1 (Boston) reports that Lowell cotton mills are operating at about 60 per cent of capacity. Some mills in the district are said to be manufacturing for stock in the absence of orders. Census figures show that, with the exception of Rhode Island, the consumption of cotton by New England mills was less in September than in August, dropping
from 168,167 bales to 148,442 bales for the district. The active spindleage fell from 17.447,879 in August to 17,056,046 in September, while the cotton held in the mills declined from 610,311 bales in August to 531,453 in September. District No. 5 (Richmond) reports no change in the textile situation in September. The mills were then working on back orders and finding it very difficult to get new ones even at the much lower quotations prevailing. Data secured from 33 firms belonging to the National Association of Finishers of Cotton Fabrics, which represent about 70 per cent of the white goods industry, 60 per cent of dyed goods, and 30 per cent of printed goods, show an average percentage of capacity operated amounting to 41 per cent for all districts, the percentages for district No. 1 (Boston) being 36 per cent and for No. 2 (New York) 33 per cent. The average number of days of work ahead at the end of September for all districts was 6.9 days- 5.3 days in district No. 1 (Boston) and 8 days in district No. 2 (New York). In district No. 1 (Boston) woolen manufacturers are said to be "in a state of waiting." Uncertainty prevails as to when mills which have partially closed will be able to resume on a full-time basis. At present very few orders have been received and price reductions have failed to stimulate buying for the 1921 spring season. The effect of the absence of buying demand is found in the market for raw wool, representative dealers agreeing that prices for standard grades have declined since May 1 about 35 per cent to 40 per cent. District No. 3 (Philadelphia) reports that woolen yarn spinners are receiving practically no orders, although September and October are usually the busiest months. Mills in the district are variously reported to be operating at from 10 per cent to 80 per cent of capacity, those more fully employed running on back orders. One factory, working at 30 per cent of its capacity, stated that from 30 per cent to 40 per cent of the work was being done for stock. Mills engaged in the manufacture of underwear in district No. 3 (Philadelphia) are also either shutdown or running at a small fraction of capacity.
Twenty-eight representative mills reporting to the Association of Knit Goods Manufacturers of America state that unfilled orders, which amounted to 882,880 dozen on August 1, had dropped to 493,006 dozen by September 1 . New orders during the months of August and September were 28,378 dozen and 19,648 dozen, respectively. Shipments amounted to 401,225 dozen in August, while production was 322,417 dozen. In September shipments totaled 307,145 dozen, production 318,128 dozen. Cancellations rose from 35,598 dozen
during August to 44,617 dozen during September. Thirty-three mills state their production in September to have been 352,385 dozen, or 69.9 per cent of normal production.

In the shoe and leather industry, as in textiles, reports bring news of curtailed operations, and in some cases complete shutdowns have occurred. Data from 15 representative boot and shoe manufacturers in district No. 1 (Boston) indicate that operations are at from 40 per cent to 60 per cent of normal capacity with little spring business placed. In Auburn, Me., the shoe factories have been running full time, employing one-half to two-thirds the usual force. In district No. 8 (St. Louis) there are increases both in shipments and in current business in boot and shoe lines, but marked falling off in future orders has reduced manufacturing activity. Plants within the district are estimated to be operating at from 55 per cent to 65 per cent capacity, the larger plants being more active than the smaller ones. Manufacturers are buying little leather, with consequent reductions in the prices of both upper and sole leathers. Tanneries have still further reduced the scale of operations or have closed down during the month. District No. 8 (St. Louis) reports that wet salted hides which sold in St. Louis at 41 cents per pound October 15, 1919, were being quoted at 9 cents on the same date this year. District No. 3 (Philadelphia) says: "Tanners report an absence of demand for their product, which, following the ever-increasing lack of interest of the last few months, is now at its lowest ebb. Both sales of finished stock for immediate use and orders for future delivery are decreasing and all concessions in price fail to stimulate the trade."

Reports from 8 of the 12 Federal Reserve districts, giving changes in the monthly volume of net sales for several important wholesale lines, show somewhat divergent tendencies, but in wholesale dry goods and in boots and shoes the statistics fairly well reveal the lack of demand which has been responsible for the inactivity in allied manufacturing lines. In dry goods the tendency has been downward, comparing sales with the previous month in the 4 reporting districts-No. 5 (Richmond), No. 6 (Atlanta), No. 11 (Dallas), and No. 12 (San Francisco). As compared with a year ago, sales show reductions in 3 reporting districts, namely, districts No. 5, No. 6, and No. 11. But in district No. 12 an increase of 14.3 per cent is estimated to have occurred on the basis of statistics compiled from the returns made by 12 firms. In district No. 7 (Chicago) sales showed a negligible increase. Reductions in sales of wholesale shoe houses have taken place, ranging from 17.6 per cent in district No. 12 (San Francisco), 15 firms report-
ing, to 43.2 per cent in district No. 5 (Richmond), 6 firms reporting. District averages, based on returns from 135 wholesale grocery firms, indicate increases in 6 out of 8 reporting districts as compared with September, 1919, excepting district No. 6 (Atlanta), 7 firms reporting, and district No. 11 (Dallas), with 5 reporting establishments. Generally speaking, there have been considerable increases in wholesale hardware sales over September a year ago. In district No. 11 (Dallas), with 3 reporting firms, sales show a decline. Obviously price changes, especially in lines in which pronounced reductions have been experienced, make it impossible to estimate changes in the physical volume of business done by the reporting groups of wholesalers.

The retail trade situation shows a moderate increase of net sales over the same period last year, but it does not show the usual fall activity. The unseasonable weather conditions throughout the country have had an appreciable effect upon the buying of certain articles, such as men's clothing. Accompanying this relatively light demand is a tendency on the part of the retailer in many cases to reduce prices in order to stimulate buying. This, it is reported in certain districts, has had some effect. On the whole, however, "the consumer is not buying very actively." In some of the agricultural sections the unsettled price situation relative to the principal crops, as well as the tendency often found to hold instead of marketing, has helped retard fall purchasing. Reports from almost all districts state that the retailer is purchasing very conservatively, outstanding orders being very small, in spite of the fact that at this time of the year "many" fall and winter goods are ordinarily received."

Information received from the several Federal Reserve districts brings evidence of further recessions in building activity for the country taken as a whole. In district No. 12 (San Francisco), however, the situation is exceptional, in that local reports show that, both in number and in value of permits issued, September was ahead of August, and for the 19 principal cities the total valuation of permitswas 50 per cent greater than in September a year ago. But the Northwest is not sharing in these increases, both Portland and Seattle showing marked reductions in the value of permits as compared with a year ago, amounting to 41.7 per cent and 35.4 per cent, respectively. On the other hand, Los Angeles registered a 195.5 per cent increase and San Francisco 62.1 per cent. In the other districts, with the possible exception of district No. 6 (Atlanta), however, there is fairly universal testimony to a general decline in both number and in value of building permits as compared with September, 1919.

Although there is an increase in building activity in district No. 6 (Atlanta) as compared with a year ago, in a majority of the 18 cities from which reports are received it is noticeable that three large cities-New Orleans, Atlanta, and Nashville-report decreases in value of permits. In district No. 1 (Boston) the value of permits for new construction amounted to only $\$ 2,580,313$ in September, 1920, against $\$ 5,673,930$ in September, 1919, for the same cities. Boston showed a decline from $\$ 1,273,157$ to $\$ 592,115$ in new construction, but there was an increase in other permits over the same month of the preceding year, the respective totals being $\$ 1,455,270$ and $\$ 637,767$. For the rest of the district the totals for other construction remained almost the same.

In district No. 2 (New York) little change in the building situation is reported. Building projects in contemplation decreased in number and value, although the value of contracts awarded rose largely because of expenditures for public works and public utilities. The estimated cost of permits issued in district No. 3 (Philadelphia) in September, 1919, was $\$ 8,633,-$ 827, while the total was $\$ 4,936,379$ in September, 1920. The number of permits likewise declined from 2,268 to 1,943 . There is also less building in progress in district No. 4 (Cleveland), although labor is more plentiful and the transportation situation is improved. In 12 leading cities of the district, with the exception of Columbus, declines are recorded both in number and in value of permits issued. In Cincinnati and Toledo slight increases in value of permits for alterations are more than offset by reductions in value of projected new construction. In district No. 5 (Richmond) the decrease in the value of building permits in 23 cities amounted to 13.5 per cent as compared with September of the preceding year, the total figures being $\$ 1,000,599$ less than the total for September, 1919. There was likewise a decrease in number of permits issued both for new buildings and for alterations and repairs. The decline in valuation of permits from the preceding month- 23.4 per cent-was in part due to seasonal factors. District No. 7 (Chicago) also reports little building in progress, and in the five leading cities of district No. 8 (St. Louis) a shrinkage occurred in number and value of permits as compared with September a year ago. The heaviest decreases took place in St. Louis, where new construction permits in September, 1920, amounted to only $\$ 519,010$, as compared with $\$ 2,662,430$ in September, 1919. In district No. 9 (Minneapolis) all important cities show a decline in the valuation
of permits, except Fargo and Grand Forks. As compared with a year ago, the decline in valuation amounted to 44.3 per cent, and there was a reduction of 31.3 per cent from the preceding month. District No. 10 (Kansas City) reports severe declines in the value of building permits as compared with September, 1919, the reduction being 53.4 per cent.

On the other hand, building operations for the first nine months of 1920 were ahead of those for the corresponding months of last year in district No. 11 (Dallas). Although Shreveport, Beaumont, and El Paso show an increase in the value of building permits as compared with September a year ago, six other cities from which reports are received record declines, especially marked in the case of Fort Worth and Houston. The opinion most generally advanced as to the causes of hesitancy in undertaking new construction in the face of the prevailing need is, first, uncertainty regarding the prices of building materials; secondly, existing high labor costs; and finally, difficulty in securing capital for financing new projects and the prevailing high interest rates.

Financially the month has shown comparatively few outstanding developments. There has been an upward tendency in the prices of bonds, including both the Liberty issues and corporate securities. Discount rates have continued practically unaffected in most parts of the country. Movements of gold into the United States have been accelerated through the action of the Federal Reserve System in bringing home deposits which have been held "earmarked" abroad. Some inward shipments of gold have occurred as a result of the operations connected with the Anglo-French maturities. One or two small foreign government offerings have been successfully made in the New York market, but the cost has continued around 8 per cent. There has been a somewhat broader demand for prime acceptances by outside banks and a rather better distribution of commercial paper. Corporate financing has somewhat revived, but the stock market has been during most of the month in a rather depressed condition. Call-money rates have been steady, most of the time around 7 per cent, but during the latter part of the month have at times risen to 9 per cent and 10 per cent. Foreign exchange has been not far from stable, but rather depressed, with a declining tendency, which is attributed to the large outstanding balance of unfunded indebtedness, which gives rise to offerings on the New York market from time to time whenever quotations show improvement.

## SPECIAL REPORTS ON BUSINESS CONDITIONS.

CONDITION OF WHOLESALE TRADE.
Percentage of increase (or decrease) in net sales in September, 1920, as compared with the preceding mon th.

Percentage of increase (or decrease) in net sales in September, 1920, as compared with September, 1919.

In district No. 3 (Philadelphia) "general conditions in the grocery trade during September show some improvement, with the business fast
recovering from the setback brought on by the break in sugar. Buying was slightly better than in the preceding month, although it is still very conservative. There is an unwillingness to anticipate future needs and a tendency to purchase in moderate quantities not ahead of actual and pressing requirements. The natural consumptive demand is the main support of the market."

Reporting wholesale grocery firms state that accounts outstanding at the end of September were 2.6 per cent greater than at the end of the preceding month and 9.2 per cent above the amounts outstanding a year ago. The ratio of the accounts outstanding at the end of the month to net sales during the month was 88.1 per cent.

Recorting wholesale hardware firms announce an increase of 3.1 per cent in accounts outstanding at the end of September as compared with the previous month and 27.9 per cent as compared with a year ago. The ratio of outstandings at the end of the month to net sales during the month was 151.9 .

The reports from district No. 6 (Atlanta) are based upon individual returns showing wide variations according to the location of reporting establishments. In dry goods all reporting firms irrespective of location show a decrease as compared with the previous month, but in other lines reported decreases from firms located in one part of the district are frequently more or less offset by increases elsewhere.

District No. 10 (Kansas City) states that "wholesale dealers report purchases of dry goods and kindred lines slow and below the volume of last year. Early orders for fall shipments have been completed and there are practically no unfilled orders and no advance orders yet taken for spring delivery. Wholesalers are not buying on account of unsettled condition of manufacturing prices. They report that retailers are buying from hand to mouth, but do not hesitate to buy for current wants, which in the aggregate exceed sales for the same period last year. Reductions of about 20 per cent have been made on prices of well-known brands of staple cotton goods. As foreign demand for manufactured goods is somewhat reduced during recent months, there is nofear among buyers regarding scarcity of goods in the future."

District No. 11 (Dallas) comments as follows: "Measured in dollar amounts, the September sales of nearly all lines of wholesale trade reporting to the Federal Reserve Bank of Dallas showed a diminished volume of trade both as compared with August, 1920, and September, 1919. Reduced prices, of course, had something to do with the showing made by groceries and dry goods, as these lines bore the brunt of the price-cutting wave which set in about the 1st of September. Our reports almost unanimously agree that the retailers are still restricting orders to present necessities, postponing the matter of their future needs until the probable demands and buying power of their customers take more definite form.
"Collections made by the wholesale trade during the month of September showed varied progress, the reports varying with different lines of merchandise and with geographical districts. On the whole, payments were slower than usual for the month, as evidenced by an unusual number of requests for extensions of account.
"The disturbed condition of business, reflected in the reports reaching us from wholesale houses, is attributed by them largely to the discouraging outlook now confronting the district's cotton producers as a result of the recent decline in the price of that staple. To meet the situation wholesale merchants have resolutely set themselves to overcome the inertia of the demand. A number of them have tried special sales and price reductions with varying degrees of success. In most instances these measures have effectively stimulated sales, while in some cases they are said to have had the opposite effect by creating the belief among buyers that further reductions were imminent.
" Wholesale dry-goods firms report a shrinkage in sales and a heavy reduction in prices during the past month. Large stocks are generally held by wholesalers in this line, who are frank to admit that in order to turn some of the goods they purchased before prices started downward they will be compelled to absorb a loss. It is significant of the general strength of their condition, however, that they seem, as a rule, determined to use replacement values if necessary instead of cost values as a basis of their future selling prices, even though it means a loss. Apparently they are both able and willing to shoulder their share of the trade's price-adjustment burdens in order to hasten the arrival of a stabilized situation.
"In contrast with other lines of wholesale activity, the drug trade reported an increased
volume of transactions for the month of September. Following a rather quiet trade during August, buying took an upward turn, and the average sales for September showed an increase of 9.3 per cent over August, 1920, and 21.3 per cent over September, 1919. Retail buying in this line manifested a spirit of increased confidence on the part of the merchants. Price trends are reported to be downward on drugs and chemicals, but on drug sundries the quotations generally have ruled firm and unchanged to higher."

In district No. 12 (San Francisco) "reports from 131 wholesale firms show a general increase in volume of trade during September over the same month last year, except in the wholesale shoe and automobile tire business, which showed a decrease of 17.6 per cent and 23.5 per cent, respectively.
"Collections during September show little change over last month, the majority of firms still reporting collections good. Reports are unanimous that the tendency of the trade is to buy cautiously and only for current consumption. An increasing number reported an even greater preference than has recently prevailed for staples as against fancy goods.
"Demand in general is reported weak, buyers tending to hold off in anticipation of further price reductions. This tendency is most noticeable among dealers in hardware, dry goods, groceries, and rubber goods, while furniture and stationery dealers notice it only to a limited extent.
"General improvement in transportation conditions is noted by nearly all firms, only a few reporting any delays in shipments during the past month.
"Prices are reported as steady during September by hardware dealers, while wholesale furniture and stationery firms report a slight increase in prices over last year. Reductions in prices are generally reported by dealers in shoes, dry goods, and groceries."

The detailed report for district No. 12 (San Francisco) is given as follows:

Percentage of increase or decrease in net sales for September, 1920, over September, 1919.

Percentage of increase or decrease in net sales Jan. 1-Sept. 30, 1920, over same period last year.

Twenty-eight representative mills reporting for August and September furnished the data for the following table:

## FINISHED COTTON FABRICS.

The National Association of Finishers of Cotton Fabrics, at the request of the Federal Reserve Board, have arranged for a monthly survey within the industry. The results of the inquiries are herewith presented in tabular form. Mr. H. E. Danner, secretary of the association, makes the following statement concerning the tabulation:

The accompanying figures are compiled from statistics furnished by 33 out of 59 members of the National Association of Finishers of Cotton Fabrics.

It is probably fair to state that in the absence of having specific detail at hand, but according to our best estimate, it is probably well within the fact that the figures given for the various classes of work would cover approximately the following percentages of the entire industry: White goods, 70 per cent; dyed goods, 60 per cent; printed goods, 30 per cent. The figures given represent reports from exactly the same finishers for the two months, both for the totals and for the subdivisions, and therefore are strictly comparable.

Production and shipments of finished cotton fabrics, by Federal Reserve districts.

Note.-Many plants were unable to give details under the respective headings of white goods, dyed gocds, and printed goods, and reported their totals only; therefore the column headed "Total" does not always represent the total of the subdivisices but is a correct total for the district

## Report of the Gold Committee of the American Bankers' Association.

Herewith is reprinted the report of the gold committee of the American Bankers' Association upon the so-called McFadden gold bill (H. R. 13201), introduced in the last session of Congress, "to provide for the protection of the monetary gold reserve by the maintenance of the normal gold production of the United States to satisfy the requirements of the arts and trades, by imposing an excise upon all gold used for other than monetary purposes, and the payment of a premium to the producers of newly mined gold, and providing penalties for the violation thereof."
The membership of the committee consisted of Lawrence E. Sands, A. Barton Hepburn, and George M. Reynolds, chairman.
The McFadden bill, so called, provides for a tax of 50 cents per pennyweight of fine gold for all gold manufactured, used, or sold for other than coinage or monetary purposes, including jewelry and other purposes of ornamentation and dentistry (with some exceptions for children and charity cases). From such funds thus collected and "any other funds in the Treasury of the United States not used for specified purposes" there shall be paid a bonus to the producers of new gold in the United States of $\$ 10$ per fine ounce down to May 1, 1925, and that thereafter both the tax and the premium shall be readjusted annually by certain Government officers in accordance with the commodity price index number, as determined by the Bureau of Labor Statistics. The tax and the premium are both to rise or fall after May 1, 1925, according as the index number rises or falls. In behalf of the bill it is argued that the general increase in prices and wages in the United States has raised the cost of gold production, while the price of gold is fixed at $\$ 1$ for every 23.22 grains of fine gold; that as a consequence of the fixed price and rising costs the profits of gold production are cut, and the mines where low-grade ore is worked are in some cases being forced to close, with the result that gold production in the United States, which stood at about $\$ 89,000,000$ in 1913, was cut to $\$ 58,488,000$ in 1919-a reduction of around $\$ 30,000,000$-whereas the industrial consumption of gold which stood at about $\$ 45,000,000$ in 1913, increased to over $\$ 80,000,000$ in 1919. The result is that whereas we had a large surplus for monetary purposes in 1913, we were obliged to draw on our monetary stock of gold for industrial purposes in 1919 to the extent of about $\$ 22,000,000$. It is urged that this consumption of gold money for industrial purposes, cutting into our gold reserve, constitutes a national emergency, and that a measure both to reduce the industrial consumption of gold (by taxation) and to increase the production of gold (by a bonus) is called for. It is further argued that if relief is not given to gold miners by some such measure some gold mines will be abandoned permanently, particularly the deep mines which will fill with water and other mines where timbering will deteriorate to"such an extent that the mines will become unsafe for operation.

## CREDIT DEfLATION THE CURE.

It can hardly be contended that the loss of $\$ 22,000,000$ of gold per year from our monetary stock of around $\$ 3,000$,000,000 constitutes a national emergency. When the gold embargo was removed the United States had the largest gold supply of any country in the world's history, a supply so abnormally great that every banker and economist knew that it could not be permanently held, and practically all students were agreed that it was desirable that a substantial part of it should leave the country. Its presence made possible an overexpansion of credit in the United States and the outflow which has since taken place of three or four hundred millions has actually made our situation far safer than it was, by imposing a check upon credit expansion. The best banking opinion of the country looks forward to a progressive and far-reaching contraction of our credit fabric and regards it as the only alternative to such a disastrous disruption of the credit system as Japan has recently seen. The proper course to take is not by artificial methods to seek to expand the gold basis of our credit system, but rather to contract the superstructure of credit to a point where it can be safely maintained under conditions of a normal distribution of the world's gold supply. The problem of gold production is an international and not a national problem. Our national stock of gold is dependent not upon the difference between gold production and gold consumption in the United States, amounting to a few tens of millions, but rather upon the world-wide consumption and production of gold, and upon the course of international trade. If at any time the banking situation calls for more gold in the United States, we can purchase it in the international gold markets far more cheaply than we can obtain it by the doubtful method of an expensive bonus on new gold produced in the United States, which could at best make a difference of only two or three tens of millions per annum. Gold imports and exports of the United States in the first four months of 1920 , running between two and three hundred million dollars, were far more significant than any difference that could be made by the gold bonus plan in our stock of gold would amount to in several years.

The increased industrial consumption of gold, following the armistice, was partly temporary, a phenomenon growing out of the relaxation of war-time economies. Our people who had repressed their desire for luxuries during the war, turned suddenly extravagant and bought jewelry of all kinds lavishly. This tendency may be undesirable, and probably is. Extravagance of all kinds should be suppressed. The policy of a general tax on luxuries may be commended, and a tax on jewelry, as part of such a general tax, may well be advisable, but a differential tax on gold as a raw material of production is a different matter, and one which no national emergency calls for.
The essential elements of the gold standard are: (1) The instant convertibility of all forms of representative money in gold on demand; (2) the free coinage of gold bullion; (3) the unrestricted melting down of gold coin into bullion; (4) the uninterrupted flow of gold from money into the arts, and the uninterrupted flow of gold from the arts into money; (5) the free export and import of gold. A tax of this kind, interfering with the free flow of gold into the arts,
thus violates one of the basic elements of the gold standard.

From the outbreak of the great war in Europe our industrial system has been under an increasing strain. Our markets have been drained increasingly of goods and supplies for Europe. The one-sided flow of commodities to Europe has been financed from the beginning, in considerable part, by expanding bank credit in the United States; the resultant shortages of goods, together with expanding bank credit, have raised prices high, and as a consequence costs of production of all kinds have risen. These conditions were intensified by our own entry into the war. Our Government spent many billions of dollars, raised by taxes, bond issues, and borrowing from banks, resulting in increased shortages of goods and increased prices, which increased the strain on our industrial system. During the war $4,000,000$ or $5,000,000$ able-bodied men were withdrawn from the ranks of industry and entered the military and naval service of the United States, while many more millions were diverted from the production of ordinary goods to the production of war-time materials and supplies. A labor shortage necessarily resulted, with a material increase in wages.

While some industries, owing to the rise in war-time prices, have made very large profits, many others have suffered. Among these were the gold mines producing low-grade ore. A number of these. because of the increased cost of production and labor shortage, were obliged to suspend. This was true, however, of copper and iron as well as gold. The well-known Treadwell mine, possessing a large volume of low-grade ore, was obliged to suspend. Others very likely suspended production from the same cause. Some continued, hoping for a change in conditions. But gold miners are not the only ones who have suffered. Traction companies, for example, having a stipulated fare, usually a nickel, have suffered severely. The different States have refused to make it possible for the traction companies to earn expenses by allowing them increased compensation for their service, somewhat in proportion to the general advance in costs. The steam railways have a just claim upon the public for increased compensation in order to enable them to maintain efficiency and to render the public good service. Universities and charitable instutions, with income derived largely from bonds, have found themselves in many cases in desperate plight as a consequence of the rise in prices, with no increase in income. Widows and orphans, trust funds, public officers and in general all recipients of fixed incomes have suffered.

A large body of other industries whose costs have risen faster than their prices have similarly suffered.

Recognizing that no national emergency exists calling for special treatment of the gold-mining industry it is difficult to make a case for singling out the gold-mining industry for special relief from the Government. That it has suffered is unfortunate, but it is one of the costs of the war. It is one among a large class of those which the war has injured.

Gold mining, however, though suffering under present conditions, enjoys a peculiar advantage which few other industries enjoy. As a consequence of the fact that gold
is the standard of value, the price of gold in terms of gold money is necessarily fixed. The demand for gold, however, is always unlimited. The gold miner can always sell at a fixed price as much gold as he can possibly produce. He finds his costs rising in periods of boom and prosperity, and he suffers as a consequence. On the other hand, periods of adversity, depression, and falling prices bring to the gold miner, as to no one else, increased profits. He has an unlimited market in the worst depression, and the more severe the depression the lower his costs of production tend to be. He is at present suffering in an intensified form from the upswing of prices and costs. He has in the past, however, enjoyed periods of prosperity when the rest of the community was suffering, and in the natural course of things he may look forward to the recurrence of similar situations.
In reality, the propaganda in favor of doing something for gold is exactly on a par with the propaganda in favor of doing something for silver, about which we heard so much a generation ago. It has no more stable foundation than did the silver propaganda. There is nothing to justify Government interference in behalf of this industry, or to justify a Government bounty upon the production of virgin gold. Per contra, there is very much to be said against such action on the part of the Government .
arguments against bonus.
We may pass briefly over the difficulties of administration of such an act; the danger that frauds would be practiced upon the Government; the difficulty of distinguishing virgin from old gold melted down. Gold which differs from other gold merely in having a special history, and which, by virtue of that special history rather than its intrinsic qualities, commands a high premium, presents an anomaly inconsistent with the normal functioning of a free gold market and the normal functioning of the gold standard. The temptation to manufacture history instead of mining gold would be very great.

Again, the provisions in the McFadden bill introducing the index number of commodity prices as a basis for fixing the rate of taxes on gold manufacture and of premium on gold mining constitutes an opening wedge for the general introduction of the index number as a standard of value in the United States, in accordance with Prof. Irving Fisher's plan for "Stabilizing the dollar." It is beyond the province of this paper to deal with that plan in extenso. Your committee believes in the gold standard and does not believe in tampering with it or interfering with it in the pres. ent critical condition of the world's monetary affairs. There is, moreover, another committee of the American Bankers' Association, which is to make a detailed report upon the project. We shall content ourselves, for the present, with pointing out that if this index number standard is to be adopted it should be considered on its own merit, and not introduced "by the back door" as a feature of the McFadden bill

The greatest objection of all, however, lies in the danger which this measure would involve in the gold standard itself. Nearly all of the European States are on a paper basis. Only a: ew of the smaller countries of Europe are even approximately maintaining the gold
standard. The United States, par excellence, and Japan as well, stand out conspicuously as nations maintaining the gold standard. All the world believes that our dollars are as good as gold. All the other nations of the world are struggling and hoping to get back to the gold standard. We enjoy a proud preeminence in this respect, and it should be zealously guarded and maintained. The belief which obtains in the world to-day that our dollars are as good as gold must be maintained. The whole world must be convinced that money can be deposited in this country at any time and withdrawn at any time in any form which the depositor may elect.

Offering to pay a premium for the production of gold in this country instead of strengthening our position would weaken it. Instead of assuring the world that the gold standard would be maintained by the United States, it would raise a doubt. Public sentiment throughout the world would at once assume that our position is weak, that we are in danger of going on a paper basis, and that in order to guard against this we regard it as expedient to pay a premium on the production of gold. Great Britain, with far greater difficulties than we are facing, has resolutely refused to do anything of the sort in reply to the petition of her South African gold miners. Unable to maintain the gold standard in its integrity, she has frankly permitted an open gold market in which the depreciation of her paper money could be measured. The so-called "premium" on gold in London represents not a real premium on gold bullion in standard gold coin, but rather merely a "discount" on British paper money. Action of the kind proposed by the United States would be a red flag to the commercial world. The passage of the McFadden bill instead of strengthening confidence in the position of the United States would weaken it. It would be considered as a confession of weakness. The McFadden bill should be opposed by every well-wisher of this country's credit and commercial and financial prosperity.
The present situation of high costs of production is abnormal and temporary. When our wholly abnormal balance of trade is reduced, leaving $\$ 300,000,000$ or $\$ 400$, 000,000 worth of goods per month for our domestic markets to absorb, which they have not been absorbing; when labor gets over its illusion that prosperity can be maintained by the shortening of hours and by reduced efficiency, accompanied by higher wages; and when the strain in our money market is relaxed through reduced extravagance and increased savings on the part of our people and their Government, most of the present derangements in our industrial system will disappear.

Increase of gold mining will return with normal conditions. It must not be forgotten, however, that part of the automatic working of the gold standard depends upon an increase in gold production when prices are low and upon a decrease in gold production when prices are high. Increased gold production in a period of low prices and low costs makes it easier for prices to rise again, while diminished gold production in periods of high prices and high costs tends to reduce prices and costs again.
Moreover, the industrial consumption of gold tends to increase in a period of high prices, since the price of gold
does not rise as other prices rise, while in a period of low prices the prices of gold manufactures are relatively high, and purchasers of gold manufactures consequently tend to diminish. Variations in the consumption of gold thus also work toward diminishing the supply of free gold when prices are too high and toward increasing the supply when prices are too low, thus tending to correct both the rise and the fall of prices. In this feature of gold production and consumption we have one of the stabilizing factors in the gold standard. The McFadden bill proposes to strike at this automatic regulator and corrective. It would aggravate the very conditions which it seeks to remedy.

## TERMS OF SALE.

The following is the eighth and last of a series of articles giving data as to current practice and recent history of terms of sale in the principal industries. Acknowledgment is due the various branches of the Government and the business houses, individuals, and trade associations who have courteously furnished the information.

## AGRICULTURAL IMPLEMENTS. ${ }^{1}$

The ordinary method of distribution in the industry is from manufacturer to branch house, to retail dealer, to farmer, and the great bulk of farm implements is marketed in this manner. Smaller manufacturers, however, frequently sell to jobbers, who in turn sell to the retail dealers. These jobbers in certain cases act as agents instead of purchasing the implements outright. Many manufacturers distribute a comparatively large amount of their implements through other manufacturers' branch houses, in sections remote from the former's central offices, or where the sales are too small to support their own branch houses. At the same time, the system of thus jobbing noncompeting lines has the advantage of giving the manufacturers' branch houses a complete line of implements. In some centers, e. g., Dallas, it is stated that this has largely disappeared, while there is little handling of such business in certain sections, e. g., California. The branch house system is found especially in the upper Mississippi Valley. A recent study ${ }^{2}$ shows that one-half the branch houses of 27 leading manufacturers, having 282 branch houses and selling to 140 jobbers, are located in nine States-Ohio, Indiana, Illinois, Michigan, Wis-
${ }^{1}$ In the preparation of this statement, extensive use has been made of the following reports: Report of the Commissioner of Corporations on The International Harvester Co., Mar. 3, 1913. Report of the Commissioner of Corporations on Farm-Machinery Trade Associations, Mar. 15, 1915. Report of the Federal Trade Commission on the Causes of High Prices of Farm Implements, May 4, 1920. These have beed suppleNational Implement and Vehicle Association, and by inguiry of some leading manufacturers and of jobbers in the various sections of the country.
${ }^{2}$ The 1920 report of the Federal Trade Commission.
consin, Minnesota, Iowa, Nebraska, and Missouri. In these States sales are made to only 28 jobbing houses. Jobbing houses are mostly located in the far Western and Southern States. The above study shows that eight States, namely, Oregon, California, Texas, Louisiana, Arkansas, Kentucky, Georgia, and Virginia, have 59 jobbing houses and only 47 branch houses. It is stated that "perhaps more tractors are sold through independent jobbers or distributors than any other class of farm machinery." One authority states that west of the Mississippi River there is a tendency for the manufacturer to do business through branch houses, whereas east of the river he is more likely to handle his goods direct from factory to dealer or through transfer arrangements at convenient shipping points. As a result of the shortening of terms which will be considered below, as well as the fear of possible price declines, it is stated that dealers do not place as large initial stock orders as formerly, and direct shipments from factories to dealers have decreased, so that manufacturers are required to carry larger stocks at distributing points. The two outstanding changes in distributive methods during recent years have been the decrease in the consignment of goods and the increase in the number of branch houses, especially in the territories such as California, where formerly they were less frequent.

In order to simplify the discussion, the principal kinds of agricultural implements, the terms on which will be considered below, may be conveniently classified as follows: Farm wagons; seeding machinery, including planters, grain drills, etc.; harvesting and haying machinery, including binders, mowers, hay rakes and hay loaders; tillage implements, including plows, harrows, and cultivators; and thrashing machinery and tractors.

The history of terms in the industry may be divided into two periods, the line of division being the year 1916. Since that time the standards of terms in the industry are represented by the set of terms prepared annually by a committee of the National Implement and Vehicle Association, which was appointed in October, 1915. The terms on which implements are sold were a favorite competitive device with manufacturers in the past, additional credit being granted as a means of increasing the volume of business. Machines have been sold to the farmer on credit through retail dealers, who act as local agents for the manufacturer. The farmer usually paid part cash at the close of the harvesting season and gave a promissory note in payment for the remainder in one or two annual installments. With the
change from a commission to a sale basis, dealers give their own notes to the manufacturer, whereas formerly a large amount of farmers' notes were taken by the latter. Long terms have been most prominent in the case of harvesting machinery, and are stated to have been established early in the fifties on reaping machines. In 1902 it was stated that the usual harvesting machine terms were onethird in the fall of the year when purchased (called cash), one-third the fall of the following season, and one-third the fall of the second season. Excessive competition, however, frequently extended the time to three years, while it also resulted in the grant of one year's extra time without interest when crop conditions were unfavorable. Machines were also sold at the close of the harvest on what was called "next year's time" without interest, the first payment then only being due the following fall. Plows and special tools were, however, sold on short time or cash, while twine was sold principally for cash in the fall of the year when sold. About 1905 price differentials were quoted as between payment in cash and in two or three installments, while interest was added on the notes, but subsequently only time prices were quoted, subject to specified cash discounts for prior payment. Terms prevailing in 1911 for several leading types of implements are shown in the following table:

The system of long credits is stated to have been extended to products other than harvesting machinery, such as manure spreaders and wagons. The increase in the percentage which credit sales are of total sales in the domestic business of the International Harvester Co. during the period 1904-1911 is as follows:

| Year. | Percentage of sales for cash. | Percentage of sales for notes and accounts. |
| :---: | :---: | :---: |
| 1904 I. | 70.9 | 31.1 |
| 1905. | 74.4 | 25.6 |
| 1906. | 70.3 | 29.7 |
| 1907. | 67.3 | 32.7 |
| 1908. | 69.4 | 30.6 |
| 1909. | 68.9 | 31.1 |
| 1910. | 66.4 | 33.6 |
| 1911. | 64.2 | 35.8 |

Percentages as in original statement; do not equal 100.

The data in the following table, giving the percentage each year of the total amount of notes which matured the first year, second year, etc., also bear on this matter. It is seen that, while notes for the longer terms have shown an almost uninterrupted decline, notes maturing the first year have decreased slightly, and those maturing the second year show a great increase.

| Year. | Percentage maturing first year. | Percentage maturing second year. | Percentage maturing third year. | Percentage maturing fourth year. | Percentage maturing fifth year. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1904. | 34.7 | 48.0 | 14.4 | 2.9 |  |
| 1905. | 36.0 | 50.4 | 12.2 | 1.4 |  |
| 1906. | 30.5 | 58.3 | 10.2 | . 9 | 0.1 |
| 1907. . . | 29.6 | 63.0 | 7.0 | . 4 |  |
| 1908. . | 26.9 | 66.3 | 6.4 | . 4 |  |
| 1909. | 26.5 | 66.7 | 6.2 | . 6 |  |
| 1910. | 25.9 | 67.7 | 6.0 | . 4 |  |
| 1911. | 28.9 | 64.2 | 6.5 | . 4 | ............ |

The efforts of the committee of the national association have been along the line of more uniform and shorter terms. A leading purpose has been to reduce the amount of capital invested in relation to the volume of business done; that is, to increase the rate of turnover. The terms represent maximum terms only, and it is stated in the committee's reports that "it is recommended that shorter terms should be adopted in many instances, especially where States are divided by trade centers." In the construction of these terms, the country since 1916 has been divided into four zonesthe central, northern (all that portion of the United States lying north of the southern boundary lines of Oregon, Idaho, Wyoming, South Dakota, Minnesota, Wisconsin, Michigan, and New York), southern (the States of North Carolina, South Carolina, Tennessee, Arkansas, Louisiana, Mississippi, Alabama, Georgia, and Florida), and the Texas. The time granted differs in the various zones, according to the type of implement, the conditions of use in the particular zone, and the time when crop returns are received. There has been a gradual restriction of the use of the "carry clause," granting additional time on the portion of the original order or shipments during the season unsold at the close of the selling season for the implement in question.

In 1916 and 1917 the committee also provided "standard net terms" to apply to all goods for all territories except the southern zone. These were substantially on the basis of 2 per cent 10 days, net 60 days, with certain datings, as follows: Shipments between December 1 and March 1, 2 per cent March 10, net May 1. Shipments between March 1 and June 1, 2 per cent 10 days, net 60 days from date of shipment. Shipments in June, 2 per
cent July 10, net September 1. Shipments between July 1 and December 1, 2 per cent 10 days, net 60 days from date of shipment. For payment within 10 days after discount or net due date, an extra 5 per cent trade discount was permitted on first orders, understood to be dated prior to dated ahead dates, and 3 per cent on second orders. For certain types of implements the dates were changed somewhat, and in the northern zone were 30 days later throughout.

The terms reports thus are exceedingly complex. It will be possible to select here only a small number of implements representative of the various classes.

Wagons.-Until recent years farm wagons were manufactured largely by firms producing this product only, and where manufacturers have extended their efforts to other lines, this has generally been in connection with motor vehicles. In 1913 usual terms were "about six months except in straight car-load lots, which could be carried for a period of nine months or a year," while some manufacturers required one-half the amount in four months and the other half in six months, or 5 per cent 30 days, with an April 1 dating on shipments made during earlier months. In some cases 5 per cent 60 days was granted on the second carload. Long terms were customary in the South prior to 1916. One manufacturer stated terms as "in extreme cases in carload lots to good customers, 5 per cent off for cash in six months or nine months net; and in addition to this, sometimes about the first of March we begin giving October 1 dating." These long terms caused much dissatisfaction, and in 1915 certain southern manufacturers attempted to reduce terms to 5 per cent 30 days to 4 months, net 4 to 8 months, the longer periods, both for cash discount and net terms, applying on larger quantity shipments. At a joint conference meeting of the wagon department of the National Implement and Vehicle Association and the Southern Wagon Manufacturers' Association in October, 1916, it was stated that "it was evident that terms are being shortened," due largely to the cash terms then in force on articles purchased by the manufacturers, and the latter's narrow margin of profit.

In November, 1916, the National Implement and Vehicle Association recommended terms on local shipments of 5 per cent 30 days, net 4 months, with datings on car, half car, and mixed shipments of 5 per cent June 1, net September 1, 5 per cent one-half September 1, one-half October 1, net December 1, 5 per cent December 1, net February 1, on shipments in December-March, April-August and September-November, respectively, ex-
cept in cotton territory, where the months bearing net due date of December 1 were from February to August, and the months bearing net due date of September 1 were only Decem-ber-January. As an alternative, the use of terms of 5 per cent 30 days, net 4 months, with April 1 dating on December-March shipments and the same datings as in cotton territory, was provided. In 1916, replies to a question indicated that the recommendation of the terms committee were being followed, "practically, without exception." Subsequent discussions were had relative to further shortening of terms, and in 1918 the question was referred to a special committee of the wagon department, but practically no changes in terms were made from those recommended the previous year, and the reports for 191920 and 1920-21 made no change from those for 1918-19. The less than carload terms now recommended are 5 per cent 30 days, net 4 months, with terms on car, half car, or mixed car shipments of 5 per cent June 1, net September 1, 5 per cent September 15, net November 15, and 5 per cent December 1, net February 1, on December-March, April-July, and August-November shipments, respectively, in the central zone, or the shorter terms of the wagon department of 5 per cent 30 days, net 4 months, on car-load quantities, and 5 per cent 15 days, net 60 days, on less than car-load lots, December-March shipments taking April 1 dating.

Seeding machinery.-In March, 1916, the following terms were recommended for grain drills and bar seeders for the central zone: Spring terms-Net September 1, 5 per cent cash discount May 1, 4 per cent June 1. Fall terms-Shipments after June 1 net December 15,5 per cent cash discount October 1. Twenty five per cent of original spring purchases on hand May 1 to be carried over to fall terms. In such territories as have no fall trade, there apply the following spring terms securing note settlement. Twenty-five per cent of original fall purchase remaining on hand October 1, note due same maturity and discount dates following year.

Discount dates were extended 30 days in the northern zone and in the cotton States. Some dissatisfaction was expressed by certain manufacturers in view of the earlier net due dates and the absence of a carry clause on plows and tillage implements. Certain changes were made in subsequent years. The terms recommended in 1920 vary from zone to zone. Spring terms are as follows: Central-5 per cent May 1, net September 1. Northern-5 per cent June 1, net November 1, for shipments after November 1. Southern
and Texas-5 per cent April 1, net July 1. Fall terms are as follows: Central- 5 per cent October 1, net December 1 for shipments after May 1. Northern-5 per cent October 15, net December 1 for shipments after June 1. Southern-5 per cent, November 1, net January 1, for shipments after May 1. Texas-5 per cent October 1, net January 1, for shipments after April 1.

The carry clause, applying to all zones, provides that "any portion of original spring drill orders if on hand May 1, may be settled by note on fall terms in such territories as have both spring and fall drill trade," except that in the northern zone the date is June 1 instead.

Harvesting and haying machinery.-Little change has occured in the terms noted on this class of implements. The terms recommended by the association vary somewhat between the different zones. Thus, while grain binders and reapers in the central and southern zones bore terms in 1917 of 5 per cent September 1, net November 1, with a carry clause covering 25 per cent of the original order unsold on September 1, which might be settled for by note due November 1 of the following year, less 5 per cent on September 1, in the Texas zone the dates were one month earlier, namely, August 1 and October 1, and in the northern zone one month later, namely, October 1 and December 1. The only changes in the 1920 report related to the carry clause, which now covers 25 per cent of shipments during the season in all zones other than the northern, where it applies to 50 per cent of the original order. Terms and carry clauses on mowers in 1916 were similar, with the exception of a July 1 discount date in the Texas zone. In the 1920 report the net date in the northern zone had been changed to November 1, and the carry clause applied to 25 per cent of the season's shipments unsold on October 1.

Terms on hay tools (sulky rakes, sweep rakes, stackers, loaders, and side-delivery rakes) also vary somewhat between the different zones. While in 1917 in the central zone they were 5 per cent July 1, net September 1, in the northern zone for shipments after November 1 and in the southern zone they were one month later or 5 per cent August 1, net October 1, and in the Texas zone 5 per cent July 1, net October 1. No carry over was permitted. In the 1920 report two exceptions were introduced covering loaders and side-delivery rakes used in peanut crop territory in the southern zone and hay tools in the Texas zone shipped after June 1.

Tillage implements.-In this class of implements relatively slight changes have occurred in the recommended terms, and a recent re-
port states that they "appear to be receiving the substantial support of members of the plow and tillage implement department," and that "it appears that even shorter terms are favored." These terms for three types of implement in 1917 were as follows:

Steel and chilled walking plows: CentralSpring, shipments after November 1, 5 per cent April 1, 4 per cent May 1, net July 1; fall, shipments after May 1, 5 per cent September 1, net November 1. Northern-Sping, shipments after November 1, 5 per cent May 1, 4 per cent June 1, net September 1; fall, shipments after June 1, 5 per cent October 1, net December 1. Southern-Spring, shipments after October 1, February 1 dating 5 per cent 30 days, net 4 months; fall, shipments June 1-September 30, September 1 dating 5 per cent 30 days, net 4 months. Texas-Spring, shipments after October 1, January 1 dating 5 per cent 30 days, net 4 months; fall, shipments after April 1, September 1 dating 5 per cent 30 days, net 4 months. In 1920 the only change was the elimination of the 4 per cent discount in the central and northern zones.

Lever and disk harrows: Central-Spring, shipments after November 1, 5 per cent May 1, net July 1; fall, shipments after May 1, 5 per cent September 1, net November 1. North-ern-Spring, shipments after November 1,5 per cent June 1, net September 1; fall, shipments after June 1, 5 per cent October 1, net December 1. Southern and Texas--Same as for plows above. There was no change in 1920.

Wheel cultivators: Central- 5 per cent June 1, 4 per cent July 1, net September 1. Northern- 5 per cent July 1, 4 per cent August 1, net October 1. Southern-March 1 dating 5 per cent 30 days, net 4 months. Texas-February 1 dating 5 per cent 30 days, net 4 months. In 1920 the only changes were the employment in the northern zone (other than in New York and New England) of discount dates one month earlier, and the addition in all zones of a clause covering alfalfa wheel cultivators for fall trade.
Thrashing machinery and tractors.--The manufacture of thrashers was developed by a few large firms, which gradually extended "their business into other lines, particularly into tractors and portable engines." Thrashing outfits, including engine and separator with an attachment for stacking straw and chaff, have been usually sold to thrashermen, who thrash grain on contract. Due to the expense of the outfits, credit sales have been required, assignment of earnings being taken as security. The manufacturers early were interested in the credit problem, and it was the principal prob-
lem considered at their first meeting in 1884. In November 1909, a resolution was passed by the Thrasher Manufacturers' Association limiting the cash discount for the year 1911 to 6 per cent, and on single sales fixing a maximum discount to agents of 5 per cent 30 days. Nc cash discount was to be allowed after 90 days from delivery, and the date for the agent's cashing all his season's business was to be fixed in the contract. In November, 1910, the maximum cash discount date was fixed at October 1, the maximum agent's cashing date at December 1, and his cash discount at not over 6 per cent plus interest from October 1. In 1912, it was reported that more complaints had been received than ever before about selling on extremely long terms, and in the following year "resolutions were adopted recommending that members endeavor to increase cash payments and bring about shorter terms. In 1917 the National Implement and Vehicle Association established a tractor and thrasher department, and terms have been regularly considered by a committee. In 1919 the committee again recommended the terms adopted in 1918 for the year 1919, but inasmuch as two members had modified them, recommended that the modified terms be made known to all the members, and that the adopted terms be changed to meet these modifications. It was also recommended that one week's notice to the committee of adoption of more liberal terms by any member be required. The present recommended terms are as follows:
Class I (of specified power, or costing not over $\$ 1,500$ to dealer).-To consumers: Cash on delivery or one-half on delivery and one-half in 6 months. Deferred maturity December 1. Future dating shipments after November 1 and before April 1 bear April 1 (northern zone May 1).
To dealers: Class I.-Shipments after April 1 , cash deposit of $\$ 50$ on first tractor and $\$ 25$ on each additional one. Note for balance due October 1 or earlier. Small separators-if necessary, 25 per cent on delivery, balance in fall of that or next year.
Class II ( $\$ 1,500-\$ 2,500$ ).-Not over two falls. Class III ( $\$ 2,500$ and over).-Not over three falls. Deposit required on all orders in Class I sold for cash on delivery, of $\$ 50$ on first and $\$ 25$ on each additional tractor. Discounts for cash on delivery, or on first fall, not over 6 per cent; or by dealer during first fall, not over 10 per cent, for payment by the following dates: In southern zone, September 1; central, October 1; northern and Texas, November 1. Reports from various sources state that tractors are now sold largely on a cash basis.

Inasmuch as long terms have prevailed in the implement industry, the usual practice has been to take a promissory note to cover the net period, rather than to have it run on open account. These notes have varied in length from a few months to three or four years. During the last few years there has been a strong advocacy of the trade acceptance by the National Association. In 1916 a recommendation of the National Association of Credit Men was indorsed "that sellers send notes or acceptances for purchaser's signature with all invoices." There has also been an advocacy in some quarters of the elimination of the cash discount. In February, 1918, the wagon department recommended to the terms committee that it "work along the lines of the elimination of the cash discount, with the wider use of the trade acceptance." Accompanying these efforts has been an attempt to have the retail dealer in turn obtain paper, either note or trade acceptance, from the farmer, rather than to permit the account to run along on open account. It has been stated from Dallas that branch houses are reported to make very little use of the trade acceptance, employing notes instead, while jobbers use notes for the more expensive implements and to a growing extent trade acceptances in the case of "net goods" (small implements, tools, etc.), "amounting to from 20 to 25 per cent of the total business." Although the acceptance is used only to a limited extent, reports recently received indicate that the users are generally satisfied with it.

During the last few years greater uniformity of terms and lessening of the credit period has existed. The financing burden has been shifted "from the manufacturer to the retail dealer and the local country bank." This change is reflected in the greater rapidity of turnover of capital invested by manufacturers, as is shown by the following table covering 22 companies:

The reduction of the length of the credit period not only increased the rate of turnover, but also decreased the amount of bills and accounts receivable, as well as the amount of capital required to carry on a given volume of
business. This is illustrated in the following table, showing the annual amount of notes and bills receivable in the case of the above manufacturers:

| Year. | Bills receivable. | Accounts receivable. | Total. |
| :---: | :---: | :---: | :---: |
| 1913.. | \$95,947,970 | \$64,549,983 | \$160,497,953 |
| 1914... | 96, 180, 296 | 68, 627,542 |  |
| 1915. | 83, 865,7858 | $51,397,723$ <br> 45 | 134, ${ }^{1063,281,551}$ |
| 1917. | 46,419, 128 | 44, 744, 801 | 91, 163,929 |
| 1918. | 42,538,712 | 44,512,811 | 87,051,523 |

It will be observed that from 1913 to 1918 the receivables have decreased almost 50 per cent, notwithstanding the increased prices of implements and the fact that gross sales of these companies increased during the period from $\$ 229,000,000$ to $\$ 339,000,000$. The decrease, it has been suggested, may be due partly also to improved business conditions, which make it possible for farmers and retail dealers to pay cash for larger amounts of their goods. The achievements of some concerns are indicated in the following statement of a leading authority: "For a period of 20 years prior to 1915 it was not an unusual thing for large branch houses here to have outstanding at the close of their fiscal year accounts and notes receivable equivalent to 60 per cent of their sales for the year. During the last few years it has not been an unusual thing for branch houses to close their year's business with the total amount of accounts and notes receivable not exceeding 20 per cent of the sales for the year, and some of us closed with less than 10 per cent outstanding. Prior to 1915 only about 50 per cent of our total sales were discounted; during the last few years more than 80 per cent of our sales to dealers were discounted."

The data which have been received relative to jobbers' operations indicate that in this, as in other industries, the jobber purchases largely on a cash basis, while selling on credit to a considerable extent. Terms are cited as frequently sight draft with bill of lading attached, but on larger sized orders sale may be made on time instead. While in a considerable number of cases it was stated that there is no difference in terms made by manufacturers to jobbers and to manufacturers' branch houses, it is stated from a number of sources that there is some difference. While in a majority of cases no specific information on this point was obtained, from Richmond it was stated that "terms to jobbers are usually shorter than those given to manufacturers' branch houses." Jobbers' terms to dealers are stated generally to follow closely those made by manufacturers, the latter providing the standard. In certain
cases it was stated, however, that jobbers' terms frequently were more liberal than were manufacturers' terms, although from Portland, Oreg., it was stated that manufacturers' branch houses in some cases gave very long terms on tractors and thrashing machines, which the independent jobbers were unable to do because of their smaller financial ability.

## DRUGS AND MEDICINES.

Manufacture and import.--The drug business as a whole may be generally divided into four classes: (1) Drugs and chemicals; (2) proprietary articles; (3) druggists' sundries, and (4) druggists' and hospital supplies and utensils. The first class may be subdivided into the following groups: (1) Pharmaceutical, including pills, tablets, fluid extracts, etc.; (2) biological, including vaccines, bacterins, antitoxines, etc.; (3) medicinal and technical chemicals; and (4) crude drugs and essential oils. Perfumes, rubber goods, soaps, soda fountain supplies, cosmetics, brushes, combs, etc., are included in the general classification of sundries. Surgical dressings, plasters, bottles, corks, funnels, filters, mortars, pestles, scales, balances, bones, etc., properly belong to the classification of druggists' and hospital supplies and utensils. Proprietary articles include generally speaking all so-called patent medicines advertised and sold under trademarks. The method of distributing the greater proportion of all these classes of goods is from the first hands, either manufacturer or importer, to the wholesale druggist, who in turn sells them to the retail druggist.
Crude drugs and essential oils are assembled in the main by houses importing them as well as distributing domestic goods of this character. Terms on crude drugs, medicinal and technical chemicals and essential oils are almost without exception 1 per cent 10 days, net 30 days.
The same terms apply generally in the surgical dressing field, although the maturity date is frequently extended to 60 days on shipments to the far southwest and to the Pacific coast and Rocky Mountain territory.
While a large part of the general pharmaceutical line goes direct to the retail druggist from the manufacturer, there are some manufacturers who market their entire line exclusively through the wholesale druggist. Of the total volume of the drug business to-day, the pharmaceutical branch, including pharmaceutical specialties (semiproprietary and noncompetitive in character), aggregates not more than from 15 to 20 per cent. The larger proportion, probably 85 per cent, of pharmaceutical specialties is sold to the retail druggist through the wholesaler, while about 25 per cent of the
general pharmaceutical line goes through the wholesaler, the balance going direct from the manufacturer to the retailer. The following are the results of a survey made in 1917:

Private formula business, that is, the manufacture of specialties under formulas owned by others, carried instead 1 per cent 10 days, net 30 days, except for two houses giving net terms of 60 days. As a small number of the larger houses, however, extend terms of 2 per cent 10 days, net 60 days, some of the firms having 30 day terms occasionally extend 60 days when insisted upon. It is estimated, however, that 90 per cent of the number of wholesalers discount their bills, while in the case of retailers from 40 to 50 per cent discount, although one of the largest manufacturers shows 75 per cent. One authority states that the percentage of retailers discounting varies with the season of the year, the percentage for his house during the first six months averaging a little over 40 per cent, falling to almost 25 per cent during the summer months, and then increasing during the latter part of the year to almost 50 per cent. Due to the frequency and small size of purchases, the trade acceptance is not employed by the majority of manufacturers.
Sales of proprietary medicines are made by manufacturers to wholesalers and to retailers, the individual manufacturer usually confining his entire business to one of the two methods. Sales to wholesalers, it is stated, in genera, carry a cash discount of 2 per cent 10 daysl although a limited number grant 1 per cent, some 3 per cent, and quite a number 5 per cent. Sales to retailers carry the same net terms as those to wholesalers, maturity usually being in 30,60 , and 90 days, with a discount for cash varying from 1 to 5 per cent if invoice is paid within 10,20 , or 30 days. In the case of seasonable preparations, longer time to the retailer is required in off seasons, and up to 4, 6 , and 9 months may be given at times. The general average for the industry has been estimated at 45 days.
Sales of druggists' sundries are made by manufacturers to both wholesalers and retailers. Terms for some years have been largely 2 per cent 10 days, net 30 days, from date of invoice, but Pacific coast customers may be given 2 per
cent 30 days, net 60 days. Several leading manufacturers report that from 50 to 70 per cent of their customers discount their bills. It is stated that the trade acceptance is not employed in the industry.

Wholesale.-Since January 1, 1905, recommended terms of the National Wholesale Druggists Association, to apply to mixed invoices, have been 1 per cent 10 days, net 30 days. These terms prevail practically over the entire country, with the exception of the ontire State of Texas and a narrow belt running east from Texas to the Atlantic coast and including parts of Arkansas, Tennessee, Alabama, and Georgia, where, with a few exceptions, the cash discount is 2 per cent, although net terms are 30 days. It is stated, however, that in these territories the discount is gradually being changed to a universal 1 per cent. An increasing tendency toward proximo terms was reported some years ago and found in particular in the East and Southwest. In 1915 data obtained from 135 houses of dates for the discounting of city bills showed 88 houses which specified the 10 th, 26 the 15 th, 6 the 5 th, and 1 the 20 th, while 2 required settlement any time during the following month, 10 twice a month and 2 four times a month.

In a few lines, when sales are large enough to be billed separately, 2 per cent 10 days, net 30 days, is allowed. On druggists' sundries the cash discount now ranges from 1 per cent to 2 per cent. There has been a movement in various sections to include the item in the general terms of 1 per cent 10 days, net 30 days, which is meeting with some success. New England and the Middle States in 1914 already showed quite uniformly 1 per cent 10 days, net 30 days, while on the Pacific coast all houses have for the last three or four years employed these terms. In 1916 data obtained from 130 houses were as follows:

This is not representative, however, of present conditions, as terms have been shortened as indicated in the preceding paragraph and the discount reduced. The figures given in the tables herewith, showing the increase in the
percentage of accounts taking the cash discount and the decrease of the average number of days' business outstanding, are of interest in this connection. This change in terms reflects the movement for the abolition of separate billing of different classes of items, and 80 per cent of the replies in the recent survey of the credits and collections committee of the National Wholesale Druggists' Association favored uniformity.

In connection with this item, difficulty is experienced with competition from jobbers of stationery and school supplies who also carry druggists' sundries. The situation in this regard appears substantially as follows: The retailer has expanded his business to include side lines handled by other retailers also, and a similar change is noted in the wholesaler's business. The latter, however, in this development comes to handle certain lines which are distributed only to a small extent through the drug trade, and thus reaches out to sell these items to exclusive retailers as well as to retailers of drugs. In consequence, a measure of diversity is introduced into the terms on which merchandise is purchased by the wholesale druggist, which is reflected as well in the terms on which he sells. He therefore has undertaken, as in the case of stationery, to induce the members of the other industries to employ the regular drug terms of 1 per cent 10 days, net 30 days. In pursuance of this policy, a committee was appointed in 1915, and reported in 1916 that since January first of that year many leading stationery houses had reduced their cash discount from 5 or 6 per cent to 2 per cent. Terms favored were 1 per cent 10 days, net 30 days, on the item, with the exception that where competition from wholesale grocers, book, stationery and school supply houses did not permit, 2 per cent might be granted. In 1917 employment of the regular terms was recommended on sundries ordered in the regular course of business, leaving it to the discretion of those who employed special salesmen to make the cash discount 2 per cent instead.

As the retail drug trade is overcrowded, and there is a lack of financial responsibility on the part of its members, the enforcement of terms by wholesalers is rendered more difficult. It has recently been stated that 44.5 per cent of the 50,000 retail druggists in the country have either no capital rating or one of not over $\$ 2,000,23.5$ per cent a rating of from $\$ 2,000$ to $\$ 5,000$, and 14 per cent a rating of from $\$ 5,000$ to $\$ 10,000$. Ninety-two per cent of those in the first-mentioned class hare a second or third grade credit rating or no capital and credit rating at all, while two-thirds of those in the second class have a second or
third grade credit rating. In 1919 it was estimated that, of annual sales of $\$ 420,000,000$, wholesalers carried past due accounts of about $\$ 20,000,000$. The practice of charging interest on past due balances, or the use of interest bearing notes, has been consistently advocated, and all Pacific coast jobbers are now doing so. The practice also prevails in Texas, Virginia, and in isolated parts of other southern States, although not all collect the full interest charged. One house reports that it collects all interest on past due accounts by adding it to the invoice. Interesting in this connection also are the following figures showing percentage loss by bad debts.

|  | 1909 | 1914 | 1919 |
| :---: | :---: | :---: | :---: |
| New England and Middle States | 0.37 | 0.33 | 0.172 |
| Middle Western States. | . 314 | . 35 | . 219 |
| Southern States. | . 56 | . 713 | . 248 |
| Pacific Coast States | . 38 | . 382 | . 16 |
| General average. | . 40 | . 442 | . 2 |

While all sections show a considerable decrease, that for the South is particularly pronounced. As would be expected, the percentage of cash discounters has been in the past relatively small, the average in 1916 being reported as approximately 20 per cent, but there has been a substantial increase since that time. An indication of the change in the actual length of terms employed is afforded by the following figures of number of days' sales outstanding:

| States. | 1909 | 1914 | 1919 |
| :---: | :---: | :---: | :---: |
| New England and Middle States. | 55 | 53.7 | 39.3 |
| Middle Western States | 43 | 48.0 | 37.8 |
| Southern States. | 67 | 68.0 | 42.6 |
| Pacific coast. | 52 | 56.0 | 40.5 |
| General average | 54 | 55.2 | 40.0 |

The greatest decrease is again evident in the case of the southern States.
In view of the interest expressed by a few members, the National Wholesale Druggists Association appointed a special committee which carefully considered the trade acceptance. A referendum vote was later held which, however, "clearly demonstrated that the trade in general does not look with favor upon the use of the trade acceptance in the industry."

## chemicals.

For the present purpose, the most satisfactory classification of chemicals will be into "heavy" chemicals and organic chemicals. The latter include drugs and pharmaceuticals (which were considered above), and dyestuffs and intermediates. The great majority of chemicals are sold by manufacturers direct to industrial consumers. It is estimated that on
the basis of money value about 60 per cent of all the dyes of domestic manufacture are sold direct by manufacturers to consumers, while perhaps 15 per cent are sold to dealers for resale, and the remaining 25 per cent are sold for export. Prior to the war about 90 per cent of the dyestuffs sold in America were sold by importers. As a result of the shortage during the war, dealers received little consideration, as producers, it is stated, felt themselves obligated to supply their established consuming trade. Several leading producers of alcohol report approximately one-half their output sold to wholesalers, all or a majority of the remainder going to industrial consumers. In the case of heavy chemicals, the situation varies with the particular chemical in question. Thus it is stated that the output of sulphuric acid is sold almost entirely direct to the consumer, whereas probably one-half the production of caustic soda, soda ash, etc., is sold through jobbers. A considerable amount of heavy chemicals is imported, and distributed by the importing house. Jobbers in many cases handle also apparatus and laboratory supplies.

The general terms in the several branches of the chemical industry are 1 per cent 10 days, net 30 days. Most manufacturers report that there has been no general change in terms during the past decade, but several leading manufacturers report previous use, in one case prior to about the opening of the present year and in the other case prior to 1914, of a cash discount of 2 per cent, the former with net terms of 60 days. It is stated from one source that sellers since about August have been quoting cash terms, even to responsible purcbasers. This is ascribed to present financial conditions, merchandise being sold under cost, "merely to convert inventory into cash." Longer terms are granted in certain cases on shipments to a distance. Thus while proximo terms are at times granted by one manufacturer on such shipments, 1 per cent 30 days, net 60 days, is granted by another manufacturer to Pacific coast purchasers. In some sections of the country, states a leading manufacturer, "local conditions have brought about a situation where the terms are standard on practically all chemicals in the form of net cash 30 days, no discount."

For certain chemicals, different terms are employed. Thus one manufacturer quotes a discount of only one-half per cent on potash, as against 1 per cent on the other products. While denatured alcohol carries the regular terms, ethyl or tax-paid alcohol is sold on cash terms, specified as net cash 3 days or spot cash (within 10 days). Some manufacturers and dealers in dyes are stated to have allowed a 2 per cent discount as a concession to draw trade.
but the majority have employed the regular terms.

Little use of trade acceptances in general is reported in the industry. From one source, however, they are reported to have become popular in certain quarters about two years ago, but were gradually abandoned until recently, when they have again been employed. Last spring the majority of manufacturers from whom data were obtained reported collections prompt, with the majority of accounts taking the cash discount. It was recently estimated that normally perhaps two-thirds of the total sales of dyestuffs to consumers in the country are discounted, many purchasers, however, running 2 or 3 days over the 10-day period. At the present time it is estimated that "two-thirds of the invoices for dyestuffs sold to consumers or dealers are not discounted, and perhaps one-third of the total invoices run beyond the 30-day period, some of them to 60 days or more."

Terms of jobbers handling also apparatus and supplies vary somewhat. While certain houses employ the regular chemical terms of 1 per cent 10 days, net 30 days, others either omit the cash discount entirely, or else quote it only to a small number of accounts. Special terms may be granted to educational institutions, ranging in one case from 30 days to 12 months, and averaging 90 days. While several houses report no change in terms during the past decade, one notes a decrease in the cash discount on laboratory apparatus from 2 per cent to 1 per cent, and a tendency to closer collections. Very little use of the trade acceptance is reported. One house, selling a considerable amount of goods to retail druggists, estimates that 15 per cent of accounts are discounted, 50 per cent paid promptly, 25 per cent paid slowly, 9 per cent paid extremely slowly, and 1 per cent losses or collections requiring legal aid. A middle western house practically granting no cash discount and selling largely to educational institutions reports onethird of receivables under one month old, 23 per cent under two months, $12 \frac{1}{2}$ per cent under three months, 11 per cent under four months, and the remainder under eight months old, being distributed in point of age between the intervening months.

## Foreign Exchange Rates.

In the following tables and charts are shown the movements of monthly exchange rates in New York on (1) principal former belligerent countries (rates on London, Paris, Milan, Yokohama, Rio de Janeiro, Berlin, and Vienna), (2) the principal centers in neutral
countries (Amstordam, Copenhagen, Stockholm, Zurich, Madrid, Buenos Aires, and Valparaiso), and (3) the principal centers in countries having a silver standard (Bombay, Hongkong, and Shanghai) ; also the average New York price of silver per fine ounce. In the tables actual rates and percentages of par are shown, while the curves are plotted on the bases of percentages of premium or discount at which the currencies of the different countries were quoted in the New York market.

Similar information is shown for the period from the beginning of the war to the summer of 1918 in the Federal Reserve Bulletin for September, 1918, pages 837 et seq., and for the calendar years 1918 and 1919 in the Federal Reserve Bulletin for January, 1920, pages 49 et seq. Explanations as to the bases of calculations made in the earliest study apply to the present table and charts which cover the two-year period from October, 1918, to October, 1920. Attention is called to the fact that only the highest quotations for each month are shown, and that in the case of many of the currencies the low quotations for the month are considerably below those given in the tables.

As is well known, the quotations on sterling, francs, and lire began to decline when in March, 1919, the respective Governments discontinued their support of exchange. In the case of sterling, the high rate dropped from 4.758 in March, 1919, to 3.4525 in February, 1920; in the case of francs, from 18.30 in March, 1919 , to 6.93 in April, 1920; and in the case of lire, from 15.72 in March, 1919, to 4.91 in April of the current year. All the three currencies rallied somewhat in the spring and early summer of 1920 , but declined again in the most recent months, the latest high quotations of sterling being only slightly above the February, 1920, level, and those of francs and lire having fallen below the low points reached last spring. Japanese exchange showed a general downward tendency, falling from 54.75 in November, 1918, to 48 in March, 1920; by May it had improved to 52 , but declined again to 51.25 in October. Brazilian exchange fluctuated considerably during the period under review, rising from 25 in October, 1918, to 30.875 in December of the following year, but declining to 18.375 in October of the current year.

German marks were quoted in New York at 8 cents in July, 1919, when dealings in German currency were resumed; since that time the quotations declined, the lowest figure of 1.14 being shown for last February; in October marks were quoted as nigh as 1.65 cents. Austrian crowns, worth 20.26 cents at par and quoted at 3.5 cents in July, 1919, declined to 0.44 cent in October.

Movement of exchange rates (highest rates for sight drafts during month) in New York on principal financial center during period from October, 1918, to October, 1920.

Movement of exchange rates (highest rales for sight drafts during month) in New York on principal financial centers duting period from October, 1918, to October, 1920--Continued.
III. RATES ON MARKETS IN SILVER COUNTRIES.
[All currency quotations are in cents.]

a Price of domestic silver 99.535 cents per fine ounce.

Exchange rates on neutral countries were all above par at the beginning of the period under review, and all, except the rate on Valparaiso began to decline at about the time when the artificial link between the dollar and the pound sterling was removed in the spring of 1919 ; in October of this year all of the currencies in this group were quoted at considerable discounts. This is true of the European as well as of the South American currencies. Argentine pesos, which were quoted at about par a year ago, declined in value to about 86 per cent of par in October, while Chilean pesos declined from 20.6 cents a year ago to 16 cents in October last.

Exchange rates on silver standard countries moved in substantial accord with changes in the price of silver, which in January of this year reached $\$ 1.32875$ per ounce, or about 219 per cent of its average price in 1913. It may be noted that the widest fluctuations occur in the value of the Shanghai tael, which is a silver unit whose market value is not influenced by governmental action; in the case of the Hongkong dollar, and, to a much larger extent, of the Indian rupee regulations and actions by the British Government have narrowed the range of fluctuations in value.

## ECONOMIC AND FINANCIAL CONDITIONS IN CUBA.

Recent developments in Cuba, particularly the banking crisis, resulting in the proclamation of a fifty-day moratorium, make a brief study of Cuba's economic resources, her place in the world's sugar market, and the effect of the World War on Cuba's commerce, industry, and finance appropriate at the present time.

Sugar is the basis of Cuba's prosperity. The soil of the island is so fertile that sugar cane needs to be planted only once in every 7 to 12 years, and the land needs cultivation only once in a decade. Furthermore, the cane also suplies the fodder for the oxen which do the field work, and after the sugar has been pressed out of the cane the dry stalks supply a part of the fuel for the operation of sugar mills. These conditions place Cuba, with its three millions of population, in a position to supply a large part of the world's sugar requirements.

As a consequence of Cuba's concentration on this one crop, with tobacco as a secondary but much less important resource, economic and financial conditions on the island are extremely responsive to the price of sugar. During the war a falling off in the beet-sugar production in Europe, where large sugar-producing areas were in the zone of military operations, together with the constantly growing demand for sugar
in the United States, which normally consumes by far the larger portion of Cuba's production, resulted in a large increase in sugar acreage and production in Cuba. From about $2 \frac{1}{2}$ million tons before the war Cuba's production increased to nearly 4 million tons for the season 1918-19, and nearly $3 \frac{3}{4}$ millions for the most recent season. The price of sugar, while the war lasted, was kept within reasonable limits by the action of the United States Government through the Food Administration and later through the Sugar Equalization Board, which in 1917-18 purchased the entire Cuban crop at $5 \frac{1}{2}$ cents per pound, allotting about one-third of the amount to Great Britain. In 1918-19 the United States did not accept the offer of the sugar producers to sell the year's crop at $6 \frac{1}{2}$ cents, and consequently the price began to respond directly to world conditions. Europe continued to be short of sugar and was clamoring for the surplus product of the American tropics. Prohibition in the United States increased the consumption of soft drinks and candy, both of which require large quantities of sugar, and these conditions resulted in a runaway market for sugar in Cuba. General prosperity, accompanied by much extravagance, and speculation in real estate were the chief features in Cuba during the past year. In the middle of the past summer the tide turned and the price of sugar, which had been lifted not only by market conditions but also by speculators in Cuba and abroad, began to decline, the collapse of the speculative boom in this country and Cuba and the decline of the purchasing power of European countries being among the important causes.

The wholesale price of raw sugar in New York by months is shown below for the period January, 1914, to October, 1920:
Average monthly price of raw sugar ( $96^{\circ}$ centrifugal), spot or prompt, duty paid, in cargo lots at New York.
[Cents per pound.]

Falling sugar prices resulted in a heavy shrink. age of the value of sugar lands, bank loans based on these lands, or on the sugar itself, be. came somewhat doubtful, the credit situation became strained and was aggravated by the
congestion in Havana harbor where vast quantities of goods were tied up thus preventing the liquidation of commercial bills. These developments brought about a financial crisis which caused the President to declare on October 10 a moratorium for 50 days. According to the terms of this moratorium, the full text of which is printed on page 1165, notes, bills of exchange, orders and other documents of credit which are due or may become due up to December I will not be collectible until that date. Mortgage credits or deeds of trust are also extended to that date. Only 10 per cent on checking accounts and 12 per cent on fixed deposits below $\$ 2,000$ can be drawn by depositors. However, sums necessary to pay customs duties or taxes may be drawn against the creditor's current account. This action gives the banks time to rearrange their affairs, and it is expected that some of the inflated values will now be deflated and that Cuba will settle down to the sober business of producing sugar, which under present world conditions can be marketed at a price sufficient to make sugar growing profitable.

## SUGAR PRODUCTION AND EXPORTS.

The following table shows the world production of sugar and Cuba's share in it for the past five years and indicates the importance of the island in the sugar markets of the world.

Sugar production of the world, exclusive of India.
[In thousands of long tons.]

${ }^{1}$ Including production of United States, Porto Rico, and Hawaiian Islands, also exports from Philippine Islands.

The importance of Cuban sugar in international commerce is even greater than production figures alone would indicate, because Cuba with her small population can export nearly all the sugar she produces, while much of the sugar produced in other countries is retained for domestic consumption. The United States consumes about one-fourth of the world's sugar and produces on the mainland and its outlying possessions about one-half of its own requirements, the other half being supplied by Cuba
and affording a market for the larger part of Cuba's output. Note the great decline in sugar production in Europe, which, however, is expected to recover to $3,870,000$ tons in the year 1920-21.

The table below shows the value of merchandise exports from Cuba and the value of sugar and tobacco exports for the years 1914 to 1918:

Cuba's exports of merchandise, 1914-1918.
[In thousands of dollars.]

| Year. | Total. | Sugar and other cane products. | Tobacco and tobaceo products. | All other merchandise. |
| :---: | :---: | :---: | :---: | :---: |
| 1914. | 174,041 | 133,363 | 27,487 | 13,191 |
| 1915. | 236,229 | 197,521 | 24,414 | 14, 294 |
| 1916. | 321, 790 | 274, 705 | 25,888 | 21,197 |
| 1917. | 356,429 | 305,341 | 29,397 | 21,691 |
| 1918. | 407,283 | 347,881 | 36,838 | 22,564 |

Sugar, together with other cane products, such as molasses and candy, constitutes about 85 per cent of Cuba's total merchandise exports, and tobacco, with its products, about 8 or 9 per cent more, so that all but a small fraction of the foreign trade of the island consists of these two products. It is not surprising, therefore, that variations in sugar prices are immediately reflected in Cuba's economic condition. Cuban soil and climate are well adapted to the production of many other important crops, such as sisal and fruits, and also to the raising of cattle, but up to date the other industries have been subordinated to the two principal staples of the island. Whether the present financial crisis will tend to induce the Cubans to diversify their production in order not to be too much dependent on the market for one or two products remains to be seen.

A table is also presented showing Cuba's exports to and imports from the different foreign countries. It will be noted that the United States, which enjoys preferential customs treatment of 20 to 40 per cent on all merchandise imported from this country into Cuba and grants reciprocal concessions of 20 per cent on the duties on sugar, tobacco, and other imports from Cuba, receives about three-fourths of Cuba's exports and supplies about the same proportion of her imports. Exports to Great Britain show a large increase, as Cuban sugar took the place of sugar previously imported from Germany, Austria, and Russia. Cuba's total exports consistently exceed her imports, thus giving the island a favorable balance of merchandise trade. In 1919 exports aggregated 573 millions, and imports 358 millions, leaving a balance in favor of Cuba of about 215 millions.

Cuba's trade balance with principal foreign countries for the years 1914-1918.

MONETARY SYSTEM.
Before the American occupation, the monetary circulation of Cuba was composed largely of Spanish gold and of various silver coins; there was no paper money. As Cuba's industries developed, the need for a more modern currency became urgent, and on October 29, 1914, a monetary law was enacted by which the Cuban gold peso, equal to the American dollar in weight and fineness, was made the standard, and all owners of the then existing currencies were required to turn them in at the National Bank of Cuba to be shipped abroad. The total amount so shipped during the years 1914 to 1917 was about 64 million dollars. The portion shipped to America was melted and recoined into the new Cuban currency at the United States mint and about 31.2 millions of the new money was sent to Cuba. The composition of the currency so shipped was as follows: Gold coins, 23.8 millions; silver coins, 6.7 millions; nickel coins, 0.7 million. Recently Cuba has ordered another $2 \frac{1}{2}$ millions in silver and nickel coins. In addition to this circulation of hard money Cuba uses American paper currency, largely Federal Reserve notes, which are supplied to it by American banks. It was estimated that at the end of last year there were about 60 millions of American paper money in Cuba; during the current year up to the middle of June about 43 millions more were shipped, and shipments of about 50 millions were made during the most recent weeks. There is no record of the amount of this currency returned to the United States, but it may be estimated that the total amount in circulation in Cuba is approximately 150 million dollars. The gold, of which there is about

24 millions, is held largely by the treasury and in the banks, while the active circulation consists of paper money and silver and nickel coins.

BANKS.
Cuba has no official or semiofficial banks, although the National Bank of Cuba, which has an associated institution in New York City under the name of the Bank of Cuba in New York, acts as Government depositary and fiscal agent. This bank was organized in 1901 with a capital of $\$ 1,000,000$; increased to $\$ 3,000,000$ in 1904 and to $\$ 5,000,000$ in 1905 . In addition, the bank had in June of the current year a surplus and reserve fund of $\$ 9,000,000$. The rapid growth of the bank's loans and discounts and of its deposits is notable, especially for the period between December, 1919, and June of the present year.
The big banks in Cuba follow a system of branch banking and have branches scattered throughout the island. The banks' chief functions consist of financing sugar and tobacco production and exports, of handling foreign exchange, and of distributing currency throughout the island, as well as of extending credit to other commercial and industrial interests. Balance sheets of some of the important banks for the past few years are shown in the attached tables. Of the domestic banks the Banco Español is next in importance to the National Bank of Cuba. The great increase in the volume of business of this bank is seen from the attached statement. Attention is also called to the fact that among the assets of that bank about $\$ 19,000,000$ are in stocks and bonds, indicating that in addition to commercial banking this institution is a participant in many Cuban enterprises. The Banco Internacional, organized about three years ago, has over a hundred branches, with a comparatively small capital, and has been the hardest hit by the recent financial crisis, being obliged to suspend payments. The banking houses of H. Uppman \& Co. and N. Gelats \& Co. are the most important private banks which have been operating in Cuba for many years and have close connections with the sugar and tobacco interests.

In recent years foreign banks have opened branches in Cuba, the most important being the Royal Bank of Canada and the Bank of NovaScotia among the Canadian banks, and the National City Bank, the Mercantile Bank of the Americas, and the American Foreign Banking Corporation among American institutions. The National City Bank has about 25 branches in Cuba; the Mercantile two branches, and the American Foreign Banking Corporation one branch.
These banks, although primarily engaged in financing exports from and imports into Cuba, have also participated to a large extent in the domestic affairs of the island. The increasing need of credit and shortage of capital in Canada
and the United States during the last year have doubtless caused a more conservative credit policy on the part of these institutions and thus contributed to the financial stringency in the island. During the recent expansion of sugar production American capital has been invested in Cuba, largely in sugar machinery, to an amount estimated at about 350 millions, the American banks being the intermediaries in these transactions. In view of the fact that American money is legal tender in Cuba and is supplied to Cuba through the Federal Reserve Banks, American banks are intimately connected with the financial structure of the island and American capital is largely represented in the island's industries.
The very close connection between the United States and Cuba in economic and financial affairs is apparent. During the recent crisis Cuba turned to the United States for assistance. Conferences were held in New York and Washington, and plans for arranging a loan of 50 to 100 millions by a group of American banks to the Cuban Government or for extending credits directly to Cuban mill owners were discussed. The Cuban banks are expected to form a clearing house association for the purpose of handling the proposed American loan. Cuban producers are organized into a general committee which seeks to stabilize the sugar market. A plan is on foot in Cuba for the organization of a bank of issue and rediscount along the lines of the Federal Reserve Banks, but so far no legislative action in that direction has been taken.

## PUBLIC FINANOE.

Revenues of the Cuban Government in 191213 amounted to about 37.9 million dollars and rose to 64.5 million dollars in 1918-19, the expenditures each year being below the revenues. A large part of the revenue, about 37 millions, is derived from customs duties, about 15 millions from taxes on land, other sources of revenue being the national lottery, the special loan tax, telegraphs and post offices, consular dues and harbor dues.
Cuba has a foreign debt amounting to about 51 million dollars floated through the banking houses of Speyer and Morgan in the United States and held largely in this country. In addition, it has a domestic debt of about 39 million dollars. ${ }^{1}$ Cuba's revenues are amply adequate to take care of her interest and amortization payments; and her international and domestic credit is in good condition. Cuban municipalities impose taxes on trade and industry, on purchases, on commercial establishments, and on arts and crafts. Taxes are
comparatively light, and municipal expenditures are not considerable.

FULL TEXT OF CUBAN MORATORIUM DECREE.
The following is the official decree as printed in the Official Gazette:
Considering that important banking institutions of this city, represented by their directors and managers, have called on this presidency to explain the extraordianary and critical situation in which they find themselves with deposits on current accounts amounting to over $\$ 400,000,-$ 000 and with an actual capital represented by cash, bonds, stocks, valuables, sugar, properties and credits amounting to $\$ 1,000,000,000$, although the present price of sugar is lower, all of which demonstrates the solvency of these institutions and their financial capacity to guarantee depositors; and,
"Considering that an unexpected situation of alarm from the exaggerated rumors about the banking situation has arisen in the past few days, said alarm being due largely, as stated, to the large amount of business transacted and adverse action regarding credit by foreign bankers and the drop in the price of sugar; and,
"Considering that it is a well-known fact that depositors of current accounts and creditors have rushed the demand for their funds, urged by the exaggerated rumors, in the belief that their interests were end angered, and a situation was created that could not be withstood by any banking institution, and that is enough reason in any country to force a temporary suspension of banking operations; and
"Considering that, although the price of sugar has dropped, it is a fact that nine out of ten portions of the sugar crop sold at high prices, and the movement of exports of all other products of the country show an era of considerable prosperity, present difficulties being transitory and merely a question of circulation and without any reflection on the vitality of the country, therefore the appeal from banking institutions has been taken into consideration; and
"Considering that such an exceptional measure in connection with the hand ling of public moneysis only justified whenever social interests of superior order, such as when the organization and operation of public and private credit transactions are endangered, since a panic of this nature would lead to a great business crisis, and as such would undoubtedly be the case should the Government fail to adopt a rapid and energetic disposition that will serve to safeguard all interests; and
"Considering that it is generally recognized that great prosperity favors our agriculture, industry, and commerce, to the extent that Cuba ranks first in the list of countries exporting to the United States and third among those importing from the same place, therefore the measures sug-
gested and accepted by this Government will not end anger any legitimate interest.
"Having heard the statements at the cabinet meeting held in extraordinary session, I resolve
" 1 . That letters of exchange, drafts, notes, obligations, orders and other credit documents due or that may be due up to the 1st of December, next, will not be paid until that date.
" 2 . Mortgage credits, transferable or simply deed binding, due and that may be due within the term referred to in above paragraph will not be paid and are extended until the Ist of next December.
"3. The auctions specified in court or administrative proceedings are hereby suspended and may be fixed after the lst of December, next, until after which date neither auctions or compulsory sale of any kind can be made.
"4. Within the term stated, from the date this decree is issued, depositors with banks or bankers in the republic can draw only 10 per cent on current accounts and 12 per cent on savings accounts below $\$ 2,000$, unless the commission appointed as per paragraph 6 of this decree will grant extension of that percentage in accordance with the stated accounts.
" 5 . This moratorium does not affect the obligations of the National Bank of Cuba as fiscal agent and depositary
of government funds, as per contract, or the current account of the Lottery Department.
" 6 . A commission composed of the secretaries of the interior, finance, agriculture, commerce and labor will have charge of inspection and supervision of banks for the proper execution and fulfillment of this decree and will, to that effect, practice suitable measures, undertaking examination of values of deposits, inventory of safes and realization of the current accounts.
"7. Creditors of current accounts may draw against their accounts the necessary sums for the payment of customs duties, taxes, fiscal revenues, and other taxations from the Province or muncipality, in the names of the respective collectors of customs, fiscal zones, and other authorities concerned thereby.
"Said checks will be cashed by public officials within 24 hours of their issuance.
" 8 . The Government reserves the right to waive this concession should public convenience so demand.
"Signed in the President's Palace, this 10th day of October, 1920.
M. G. Menocal,
"President.
"E. Sanchez Agramonte
"Secretary of Agriculture, Commerce and Labor."

## The Investment Trust as a Channel for Investment Abroad.

By means of the amendment to section 25 of the Federal Reserve Act (sec. 25A, Public Act 106,66 th Cong., approved Dec. 24, 1919), there is provided the machinery for the profitable and secure investment abroad of the surplus capital of the United States. This amendment, familiarly known as the Edge Act, vests in the Federal Reserve Board the administration of its provisions.

European countries have long been familiar with the process of issuing domestic securities against a well-selected assortment of foreign securities as one of the safest forms of profitable investment in foreign public utilities, mineral, and agricultural enterprises, and shipping, commercial, and industrial establishments. A survey of the methods and experience of the European countries in which this form of investment has been most commonly and successfully used will not, therefore, be lacking in interest. It is based upon a collection of material assembled for the use of the Secretary General of the United States Section of the Inter-American High Commission in the Treasury Department. Thefacts were gathered in connection with the Second Pan American Financial Conference, in which it was expected that considerable discussion of the volume,
conditions, and general attractiveness of LatinAmerican investment would take place. ${ }^{1}$

The investment trust company is an organization issuing its own long-term debentures against dependable securities of governments, public utilities, mining, agricultural, shipping, banking, commercial, and industrial establishments, domestic or foreign. The fundamental principle of the investment trust is the distribution of risk by the investment of funds in the securities and bonds of a great number of enterprises, investments in any one security usually being limited to a fraction of the capital, say, 10 per cent. Such distribution of risk seems to be one of the most practical forms yet devised of affording the investor a secure channel for profitable investment. The security offered is usually a 20 per cent margin, such as banks require of gilt-edge paper.

The investment trust enjoys many advantages not usually available to the individual investor. A company formed for the purpose of investment is in a position to investigate the financial condition of undertakings in which funds may profitably be invested. The officers of such a company develop the habit of forming dependable judgments of economic conditions in foreign countries and the conditions of the investment market. Moreover, a company enjoys the advantage of having available a large amount of funds for investment purposes, while the individual investor usually deals only with small amounts.

It goes without saying that no investment trust company can be successful except under the most careful management and with the assurance of expert reports on all its holdings. On the other hand, the margin of return can not be counted upon as great enough to support too large an organization; so that the most successful type of investment trust will get along with relatively small technical and clerical staff, all, however, necessarily being of unusual caliber as to judgment and accuracy, and having a background of wide knowledge of international financial conditions.

The field of investment depends upon the purpose for which the investment trust company is formed. Some companies restrict their business to foreign countries, while others are practically unlimited as to field; some companies restrict their business to particular kinds of enterprises in which they invest their funds. for instance, exclusively to railways or electrical enterprises or mining enterprises. The same considerations are a guide in each

[^0]case, namely, that the investments must be safe and that ample returns from investments must be assured.

The institution of an investment trust has found extended application in England, Scotland, and on the Continent, varying to some degree according to the requirements of the local inrestors. The investment trust companies in England and Scotland are largely purely investment trusts - that is, the company may not invest more than a certain percentage of its capital in any one security-while the continental investment trust companies are of a more speculative character and are also holding and financial companies--that is, they acquire large quantities of stock in a few corporations so as to exercise control over their affairs, create subsidiaries, and finance new enterprises.

It is the purpose of the following survey to show briefly the development of the idea of the investment trust in Europe, to point out the differences in the character of investment trusts in different countries, and also to indicate the success attained by them in recent years.

## GREAT BRITAIN.

The principle of substitution of domestic for foreign securities was first applied in Great Britain. Institutions contemplating the acquisition of a variety of securities and the distributions of risks were created in Scotland about 1860. They were formed because at that time British Government bonds paid only a little over 3 per cent interest. By investing in obligations of foreign Governments and particularly in various obligations of railroads, an interest of 5 per cent or 6 per cent or even a higher rate could be secured, inyolving, of course, greater risk. While a capitalist was able to reduce this risk by appropriate distribution of his investments, small investors were not in a position to make such distribution of their investments. The latter began, therefore, to form associations and to combine their capital.
The object of practically every one of thes new associations at the time of formation was to provide trustworthy means whereby British investors could lend their surplus funds for purposes of investment and at the same time feel assured both that the principal would be safe and that an attractive rate of interest would be maintained. These companies thus invested the funds intrusted to them, collected the interest and premiums paid thereon, and after making the necessary deductions for reserve and sinking funds, distributed the balances as dividends.

The legal form which was adopted by such companies was the institution of the old English trust. A few persons were appointed as trustees, to whom a certain amount of capital was entrusted for the purpose of acquiring securities. Individual members received shares in proportion to their investment, and a fixed percentage of interest, about 5 or 6 per cent per annum, was paid on such shares. Any surplus profit, effected by the sale of obligations, was used for the amortization of the stock certificates. It was provided that after a period of 15 or 20 years such trust would be liquidated. The trustees were, as a rule, restricted to buying only particular kinds of securities. Furthermore, not more than onetenth of the capital could be invested in any one type of security. There was also a limit to the capitalization of the trust. If the authorized capital were oversubscribed, a second trust under the same name, management, and by-laws would frequently be created, separate, however, from the first trust. Thus, for example, we find that there exists of the Foreign Colonial Trust a first, second, third, and fourth trust, and of the Scottish American Trust a first, second, and third.

From the very start, it was realized that since the directors of a trust and the trustees had the power to acquire and to sell securities, there presented itself a great opportunity for speculation, with the restriction merely to keep within the prescribed limit of investing not more than the fixed percentage of the capital in any one type of security.
Gradually the class of investment securities was enlarged. While the first trusts which were created possessed only about 18 different Government obligations, trusts subsequently formed acquired the obligations of cable, shipping, mining, and railroad companies. The range of investments is perhaps fairly shown by the following list of foreign and colonial companies and corporations, whose securities are at present among the holdings of English and Scottish investment trusts:
Abitibi Power \& Paper Co.; Advance Rumely (o.; Alabama, New Orleans, Texas \& Pacific Junction Railway Co.; Alaska Steamship Co.; American Association (Inc.); American Cities Co.; American Ice Co.; American Writing Paper Co.; Anglo-Argentine Tramways Co.; Argentine Tramways \& Power Co.; Arizona Copper Co.; Assets Realization Co.; Associated Drygoods Corporation; Au-gusta-Aiken Railway \& Electric Corporation; Australian Mercantile Land \& Finance Co.; Bahia Tramway Light \& Power Co.; Barcelona Traction, Light \& Power (o.; Bitter Root Valley Irrigation Co.; Bolivar Railway (o.; British Canadian Lumber Corporation; Buenos Aires Central Railway; Buenos Aires Lacrose Tramways ('o.; Buenos Aires Western Railway; Buffalo \& Lake Erie Traction Co.: Cambria Fuel Co.; Canada Cement Co.: Cape Town \& District Gas, Light \& Coke Co.; Central Argentine Railway Co.; Chattanooga Gas \& Coal Products Co.; Ohicago, Duluth \& Georgian Bay Transit Co.; Chicago

Seaboard Air Line Railway; South African \& General Investment Trust Co.; South Barracas (Buenos Ayres) Gas \& Coke Co.; Southern Pacific Railway Co.; Southern Railway Development \& General Mortgage Bonds; Superior Rolling Stock Co.; Tampa \& Jacksonville Railway Co.; Tennessee Power Co.; Tennessee Railway, Light \& Power Co.; Toledo, St. Louis \& Western Railway Co.; Union Pacific Railway Co.; United British Oilfields of Trinidad; United Electric Tramways Co. of Caracas; United Railways Investment Co.; Victor American Fuel Co.; Victoria Fails \& Transvaal Power Co.; Virginia Land Co.; Wabash Railway Co.: Western Canada Flour Mills Co.; Western Dry Dock \& Shipbuilding Co.; Western Light \& Power Co. Wichita Falls \& North-Western Railway Co.

A considerable increase in the number of investment trusts is noticeable after 1870. In 1886 there were only 12 investment trust companies, with a capital of $£ 6,500,000$, entered at the London Stock Exchange. But it may be
assumed that a far greater number existed, and that not all of them were listed at the exchange. At that time the character of investment trusts was somewhat changed. They acquired more and more a speculative character. The directors could easily find the assent of the stockholders to change the securities and to realize a great profit with a rising market.
The general characteristics of investment trust companies do not essentially differ either in respect to constitution or methods

The scope of business carried on by these companies may best be illustrated by a brief outline of the purposes of a typical company, the British Investment Trust (Ltd.), of Edinburgh. This company was organized in 1889 under the Companies Acts of 1862 and 1886, and has been successful from the start.
I. Objects.-In the memorandum of association are set forth the following objects:
(1) To raise money by share capital, on such terms and conditions as may be thought desirable, and to invest the amount thereof in or upon, or otherwise acquire and hold, any of the securities or investments following, videlicit the shares and stocks, whether preference, ordinary or deferred, and whether fully paid or not, bonds, obligations, debentures, debenture stock, scrip, and securities of any company, corporation, or trust carrying on, or formed to carry on, business in the United Kingdom, or the colonies, or in any foreign country or State, or in the stocks, bonds, debentures, scrip, or securities of any British, colonial, or foreign Government, or authority supreme, municipal, local, or otherwise: Provided always, That no investment imposing unlimited liability on the company shall be made.
(2) To borrow or raise money by the issue or sale of any bonds, mortgages, debentures, or debenture stock of the company, whether perpetual or otherwise, or in any other manner, and to invest any money so raised in any such securities or investments as aforesaid: Provided, That the total amount outstanding at any one time on the company's debentures, or debenture stock, shall not in the aggregate exceed a sum equal to the nominal amount of the share capital of the company, for the time being issued and subscribed.
(3) To acquire any such securities or investments by original subscription, tender, participation in syndicates or like negotiations, or otherwise, and to make payments thereon as called up or in advance of calls, or otherwise to acquire such securities or investments in excess of the monies for the time being proposed to be invested, and to sell or otherwise dispose of any excess thereof; and generally to sell, exchange, or otherwise to dispose of, deal with, or turn to account, any of the assets of the company, or any securities or investments of the company, and to invest in or acquire by repurchase or otherwise any securities or investments of the kinds before enumerated, and to vary the securities and investments of the company from time to time.
(4) To make advances upon, hold in trust, buy, sell, and dispose of on commission or otherwise, any such securities or investments as aforesaid, and upon the securities of landed property, buildings, and hereditaments, in any British, colonial, or foreign country or State, and to act as agents or trustees for any of these purposes.
Then follow the ordinary, essential provisions for transacting the business of the company, for increasing its capital from time to time, if desired, etc.
II. Share capital.-In the articles of association the nominal capital of the company is $£ 1,000,000$ in 100,000
shares of $£ 10$ each, and the first issue of the shares was $£ 600,000$ in 60,000 shares of $£ 10$ each, and the directors were empowered to make, from time to time, any additional issue of share capital beyond the first issue until the whole original share capital of $£ 1,000,000$ had been issued. It was provided that the shares of the company when and as fully paid up should be converted into preferred stock and deferred stock, in the proportions of three-fifths preferred stock and two-fifths deferred stock; the preferred stock to be entitled to a preferential charge as to capital, and to receive a cumulative preferential dividend at the minimum rate of 4 per cent per annum, and also to receive one-half of the surplus profits that might be divided after the deferred stock had received a dividend of 8 per cent, the deferred stock receiving the other half; but the preferred stock should in no event receive more than 5 per cent (being 1 per cent, contingent on the profits of each year and noncumulative, in addition to the aforesaid 4 per cent which is cumulative), the deferred stock receiving any further surplus profits that might be divided.
III. Debenture capital.-The directors were authorized to raise debenture capital by the issue of debentures or debenture stock, at such price and on such terms and conditions as they might think fit, but no debenture stock could be raised or issued by the directors to bear interest at a rate exceeding 4 per cent per annum. The debenture capital was made a charge upon the whole undertaking and property of the company. All amounts received by the company in respect to such debenture capital were required to be invested in some of the securities or investments authorized by the memorandum of association. It is a fundamental principle of the constitution of the company that the total amount of debenture capital outstanding at any one time shall not exceed the amount of share capital for the time being issued; and this provision is not capable of being altered.
IV. Powers of directors.-Far-reaching authority in the management of the company is vested in the directors. There is little qualification or limitation of their general powers. They (a) commence, conduct, and manage all or any of the business of the company mentioned in the memorandum of association, as they from time to time think expedient, and in particular carry on and settle, at their discretion, all the details of the business of the several concerns for the time being carried on by the company, and obtain all powers, and make all agreements and arrangements incidental or conducive thereto; $(b)$ allot and issue the shares of the company, and exercise their discretion as to the registration of or refusal to register, transfers of shares, and all other discretions having reference to the shares of the company; (c) make calls on shares not fully paid, accept payment in advance of calls, determine the terms of such acceptance, issue shares as fully or partially paid up, credit shares with moneys as if paid up, and make and issue share warrants; (d) settle and determine upon the investment of the company's capital, whether share or debenture, in the securities or investments authorized by the memorandum of association, and purchase and pay for the same; ( $e$ ) appoint and remove, and determine the duties, and fix the salaries and other remuneration of the secretary, clerks, agents, and other officers and servants of the company; ( $f$ ) institute, conduct, defend, take part in, compromise, refer, or abandon legal proceedings by or against the company; $(g)$ do and carry on all such acts and things as the company is by the memorandum of association authorized to do and carry on, except any requiring, under the statutes, the sanction of a special resolution; ( $h$ ) acquire, upon any terms the directors think fit, any rights, privileges, or property which the company can under the memorandum of association acquire or become possessed of, and use the same for the purposes of the company, and, in particular, have transferred into or registered in the names of the company or of the directors,
or of any two or more of them, any shares or stock in any company purchased, acquired on behalf of, or for the purposes of the company; (i) enter into, rescind, vary, and carry into execution any agreements, arrangements, or compromises for the purposes of the company, and enforce the performance of the same; ( $j$ ) make and give receipts, releases, and other discharges for moneys and debts payable to the company, and for the claims and demands of the company, and compound for the same; ( $k$ ) form a reserve fund out of the moneys of the company, and manage, appropriate, and dispose of such reserve, and declare the amount of the profit of the company; ( $l$ ) refer any claims and demands of and against the company to arbitration, and perform and observe the awards thereon; $(m)$ from time to time provide for the management of the affairs of the company abroad in such manner as they think fit, and in particular appoint any persons to be attorneys or agents of the company, with such powers and upon such terms as may be thought fit; $(n)$ do all things requisite for compliance with the requirements of the statutes; (o) execute in the name of the company, in favor of any director or other person who may incur, or be about to incur, any personal liability, whether as principal or surety, for the benefit of the company, when required by such director, sufficient bonds of indemnity, mortgages of or charges on the company's property; ( $p$ ) negotiate and make arrangements for and carry into effect any lawful amalgamation or combination of the interest of the company with any other company, corporation, or persons, but not so as to amount to a complete amalgamation of the company, except with the sanction of a special resolution.
V. The placing of money.-The directors are required to invest or otherwise deal with the moneys of the company in accordance with the memorandum of association: Provided, That no purchase or acquisition of any particular security, other than Government stocks, public funds, or securities of the United Kingdom, shall be made, by which, at the current market value at the time of such purchase or acquisition, the holding of the company in such security would exceed in value one-twentieth of the issued share and debenture capital of the company for the time being. No investment shall be made in shares of companies upon which there is unlimited liability and not more than onetwentieth of the capital in all shall at any time be invested in shares of companies with limited and uncalled liability, and then only with the unanimous consent of the directors.
The directors must, on making any change of investment or other financial transaction of the company, maintain as strictly as possible the relative rights of separation between capital moneys and income and deal with the same accordingly and have power to make all apportionments pecessary in that behalf.
VI. Dividends.-The profits made during the financial year are applicable to payment of dividends: Provided, That if any new shares or capital are issued with any preference, priority, or guaranty, regard must be had thereto in the distribution of the net income. Before recommending any dividend, the directors shall set apart such sums or sum as in their judgment may be necessary to meet any claims or contingent liabilities against the company or which they may think it expedient to set apart for any purpose of the reserve fund, or other purpose, or they may retain any part of the profits of the company as an undivided balance of revenue account without specially setting the same apart. The company in general meeting may declare a dividend to be paid to the members or any class thereof, according to their respective rights and interests; but no larger dividend shall be declared than is recommended by the directors. The declaration of the directors as to the amount of the profit shall be conclusive. When in the opinion of the directors the income of the company, as shown by a balance sheet made out to the end of the half year, permits half-yearly payments on
account of dividend, such interim dividends may be declared and paid by the directors for such half year, and may be so paid on both the preferred and deferred stock of the company; and if the net income for the whole year shall in such case prove insufficient to pay the full minimum dividend of 4 per cent for such year on the preferred stock, the holders of such preferred stock shall be entitled to have such deficiency made up out of subsequent profits up to the rate of 4 per cent for such year.
VII. Expenses of management.-A sum equal to onehalf per cent upon the first $£ 500,000$ of the share capital and debenture capital of the company subscribed, and one-quarter per cent upon all such capital subscribed beyond $£ 500,000$ during any financial year shall be set aside and received by the directors out of the revenue of the company for ordinary expenses of management. This sum includes the remuneration of the directors. This remuneration is divided among the directors as they may think fit. The ordinary expenses of management shall not be deemed to include law costs, nor expenses of the issue of the share and debenture capital, nor the expenses and charges connected with the purchase or sale of securities.
VIII. Growth of the company and character of holdings.In February, 1890, there was a new issue of 30,000 shares of £10 each. In March, 1900, the then capital of the company was increased to $£ 1,500,000$ by the creation of 50,000 shares of $£ 10$ each. In December, 1907, the share capital was increased to $£ 2,000,000$ by the creation of 50,000 new shares of $£ 10$ each. The report of the directors for the year ended December 31, 1918, showed that the number of the company's investments was 274, and they were distributed as follows:

Bonds of United States railways........ $1,093,447$| $£$ | 0 |
| :---: | :---: | Guaranteed and preference shares of

United States railways.................
Common shares of United States railways.
Bonds, debenture stocks, and guaranteed and preference shares of railways other
than in United States.....................
Ordinary shares of railways other than in
the United States........................
Total in railways, including street
rotail in railways, inchaing street $494,435 \quad 2 \quad 2$
Bonds and debentures $£ \quad s . d$.
of other companies... $\quad 919,928 \quad 15 \quad 4$
Stocks and shares of
other companies.....
Foreign, State, and city
loans..................
British Government se-
curities................ 1, 100, 080 $13 \quad 6$
Investments as per balance sheet. . $\frac{5,410,455.17 .7}{7}$
The company paid dividends in that year of 5 per cent on $£ 1,200,000$ preferred stock and 14 per cent on $£ 800,000$ deferred stock. Since 1898, when the dividend on deferred stock was 5 per cent, till 1912, when the present rate of 14 per cent was reached, there were only two years when the dividend was not increased. In 1910 the valnation of the capital showed a rise of about 4 per cent. There was a market depreciation of $£ 473,250$ against which the company has the reserve and carry forward, amounting in all to $£ 1,206,369$. The revenue for the year, after providing for interest on temporary loans, income tax, expenses of management, etc., was $£ 187,7523 \mathrm{~s}$. 3d. Deducting therefrom interest on debenture stock and debentures for the year ( $£ 55,425 \mathrm{ss}$. 10 d .) there remained a balance of $£ 132,32614 \mathrm{~s}$. 5 d ., which, added to the balance brought forward from the preceding year ( $£ 66,593 \mathrm{4s} .4 \mathrm{~d}$.) makes the amount carried forward to next year $£ 76,369$ 18 s . 9 d .

The powers granted to the trust just reviewed are apparently as broad as could be desired for such an organization. There are, however, additional powers exercised by other companies, e. g., to establish and carry on the business of a bank, to negotiate loans for Governments, to promote companies, etc. In the case of one organization the articles of association provide for an advisory board in North America, and the powers of that board shall be cited in full in order to indicate the exact relation of its members to the home organization:

Art. 119. A body called in these presents the advisory board is constituted in the manner and for the purposes herein mentioned.

Art. 120. The advisory board shall consist of not more than seven members or less than three. The qualification of any member of the advisory board shall be the same as that of a director. Any member of the advisory board shall be entitled to be present and speak. but not to vote at all meetings of the board held whilst such member shall be in England, and also, upon giving to the secretary an address for service in the United Kingdom, to have sent by post to him at such address notice of all board meetings in the same manner as if he were a director. A director may be a member of the advisory board.

Art. 121. The advisory board shall superintend and assist in the conduct of the company's business by any managing director or manager or agent or agents in North America, and no investment shall be made by such managing director or manager, or agent or agents unless the same shall have been previously approved by resolution of the advisory board, evidenced in writing under the hand of the secretary and of the chairman of the meeting at which such resolution was passed.

Art. 122. The advisory board shall in all respects observe and conform to such directors as may from time to time be given to it by the board, who may from time to time and at any time intrust to and confer upon the advisory board such of the powers exercisable under these presents by the board as it may think fit, and may confer such powers for such time and upon such terms and conditions and with such restrictions as it thinks expedient. and it may confer such powers either collaterally with or to the exclusion of and in substitution for all or any of the powers of the board in that behalf, and may from time to time revoke, withdraw, alter, or vary all or any such powers.

Art. 123. The advisory board at any time may act, notwithstanding any vacancy in its body.
Art. 124. Except where otherwise expressly provided all the provisions of these presents, with reference to the rotation of directors and proceedings of the board, shall mutatis mutandis apply to the rotation and proceedings of the members of the advisory board, except that the members of the advisory board shall in no case be elected by the company, but every vacancy on such board shall be filled by the appointment thereto of such person as the continuing members for the time being of the advisory board may nominate with the previous approval of the board.
Two members of the advisory board, other than the managing director or manager, present in person, shall form a quorum.

Art. 126. The advisory board may from time to time appoint any person to be its secretary, and subject to the terms of such appointment may from time to time remove such secretary and appoint another in his place, or otherwise act in relation to such secretary, as the advisory board in its discretion may think fit. The remuneration of such secretary shall be from time to time fixed by the board.

A variation in the organization of investment trusts is to be found in another company. Its revenue is derived from three sources: First, interest and dividends from investments. These, after deducting interest on money borrowed and loaned during the year, aggregated $£ 47,061$. Secondly, trusteeships, registrarships, and secretaryships. The company is now acting as trustee for sums involving $£ 64,292,107$, as well as registrar for securities and shares having a total nominal value of $£ 10,880,380$. The revenue during the year derived from these sources amounted to $£ 10,383$. Thirdly, carrying on the business of an industrial branch, arranging and financing industrial undertakings, underwriting, issuing new capital.

This company says that of its investments at the end of a recent financial year over 61 per cent were in railways, electric railways, electric light, and gas or water power companies, and over 60 per cent were quoted on the London Stock Exchange. The scope of this company is restricted to that of an investment trust company, but in normal times a large and profitable general financial business in which privacy is an essential element is carried on.

In their annual reports some of the trusts give full lists of their holdings of securities, which show widespread and varied dealings. As a rule, however, the companies do not publish this detailed information, which, of course, is useful only to holders of shares or debenture stock or to intending investors. The directors of these corporations are somewhat proud, and rightly so, of their success in the past, in a department of finance requiring accurate knowledge of conditions abroad, a nicely balanced scheme not only attractive to investors but also affording ample security to share and debenture holders, and a certain subtlety in working out the averaging process and in providing and utilizing to the best advantage the reserve fund.

It must not be understood from the foregoing survey that all investment trusts had uniformly good results from their investments. During the years of the war, particularly, investment trust companies in Great Britain have passed through critical times, owing to the serious fall in values. The degree of seriousness depended, of course, upon the kind of securities and the particular country in which a company was interested. An organization dealing mostly in Russian securities, for example, has had a very interesting and sad history to relate in progressive degree during the war. The company was organized November 1, 1909, and devoted most of its attention to invest-
ments in Russia. In 1912 the investments at middle market prices had an aggregate value, as stated in the assets, of $£ 1,482,000$. In the year 1913 the assets had increased to some $£ 2,000,000$. In May of 1913, in conjunction with a powerful syndicate, this trust issued Russian-South Eastern Railway Co.'s government guaranteed bonds to the amount of $£ 3,096,300$. For the period January to June, 1914, the trust had earned substantial profits, a large part of which was absorbed in the second half of the year by losses caused by the war. The directors recognized that the war would lead to reduced revenues, necessitating drastic reduction in the trust's expenditures, but such reduction could only be made gradually. The assets in the balance sheet of 1915 were carried at middle market prices of December 31, 1913, and those subsequently acquired were carried at cost, making a total amount of investment of over $£ 2,000,000$. The directors were able to report an increase in the trust investments in 1916, owing to the liquidation of syndicates which had in the previous year been included in the list of debtors, but the gradual falling off in revenue and the noninterest paying investments of the trust were affected generally by the war conditions. The latter reports of the trust do not enter into any of the peculiar conditions of the turmoil in Russia, but continue the statement of investment in the trust owned debenture stock at costs, while the other investments are taken at middle market prices at the 31st of December, 1913.

The prewar position enjoyed by investment trust companies in Great Britain was to a large extent retrieved during 1919 by the substantial rise which took place in prices. One effect of the war on the business of these companies is, however, noticeable. Prior to the war there was available in Great Britain every year a large surplus of funds for foreign investment. Owing to the tremendous expense to which the country has been put in connection with the prosecution of the war, which has brought the national debt up to $\$ 40,000$,000,000 and has obliged the British Government to avail itself of every possible expedient not only to keep money in the country and to attract it into Government coffers, but to obtain money and credit from abroad as well, the surplus funds available for foreign investment have dwindled, and the directors of these investment trusts have been forced to reverse their former methods of business and to endeavor to push the sale of British securities abroad. In this endeavor, however, they have met with considerable difficulty on account of the present British income taxes.

## State Banks and Trust Companies Admitted.

The following list shows the State banks and trust companies which have been admitted to membership in the Federal Reserve System during the month of October, 1920
One thousand four hundred and forty-six State institutions are now members of the system, having a total capital of $\$ 506,068,000$, total surplus of $\$ 499,149,680$, and total resources of $\$ 10,129,881,264$.

|  | Capital. | Surplus. | Total resources. |

## WTTHDRAWALS.

Elizabeth State Bank, Elizabeth, Ill.
Oyster Bay Bank, Oyster Bay, N. Y.

## CHANGE OF NAME.

Farmers Savings Bank, Walla Walla, Wash., to The Farmers and Merchants Bank of Walla Walla.

## CONVERSION

The Marine Bank of Seattle, Seattle, Wash., to The Marine Nation Bank of Seattle

Fiduciary Powers Granted to National Banks.
The applications of the following banks for permission to act under section 11 ( k ) of the Federal Reserve Act have been approved by the Board during the month of October, 1920:

District No. 1.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics:
The Third National Bank of Springfield, Springfield, Mass.
The New Haven Bank, N. B. A., New Haven, Conn.

## District No. 2.

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics: The Peoples National Bank of Hudson Falls, Hudson Falls, N. Y. The Wyoming County National Bank of Warsaw, Warsaw, N. Y. The First National Bank of Garfield, Garfield, N.J.

District No. 3.
Guardian of estates, assignee, receiver, committee of estates of lunatics: The First National Bank of Lansdale, Lansdale, Pa.
The Southwark National Bank, Philadelphia, Pa.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics: The First National Bank of Port Allegany, Port Allegany. The Chelsea National Bank of Atlantic City, Atlantic City, N. J. The First National Bank of Camden, Camden, N.J. The Ephrata National Bank, Ephrata, Pa.

## District No. 4.

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of hunatics:
Brotherhood of Locomotive Engineers Cooperative National Bank of Cleveland, Ohio. District No. 5.

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics: The Huntington National Bank, Huntington, W. Va.

District No. 6.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of Iunatics:
The Whitney-Central National Bank of New Orleans, New Orleans, La.

District No. 7.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics: The Manufacturers National Bank of Racine, Racine, Wis
The First National Bank of Ripon, Ripon, Wis.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver:
The First National Bank of Paulina, Paulina, Iowa.
DIStrict No. 9.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics:
The First National Bank of Windom, Windom, Minn.

District No. 10.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics: The Southwest National Bank of Oklahoma City, Okiahoma City, Okla.

District No. 11.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committce of estates of lunatics: Dallas National Bank, Dallas, Tex. The Citizens National Bank of Waxahachie, Waxahachie, Tex. The State National Bank of El Paso, El Paso, Tex.
Trustee, executor, administrator, registrar of stocks and bonds, guardian The First National Bank of Brenham, Brenbam, Tex.

## Foreign Branches.

A branch of the National City Bank, New York City, was opened at London, England, on October 1, 1920.

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from September 25 to October 29, 1920, inclusive:

|  | Banks. |  |
| :---: | :---: | :---: |
| New charters issued | 21 |  |
| With capital of. |  | \$2,660,000 |
| Increase of capital app | 2 h |  |
| With new capital of ${ }^{1}$ |  | 2,975,000 |
| Aggregate number of new charters and banks increasing capital | 47 |  |
| With aggregate of new capital authorized........... |  | 5,635,000 |
| Number of banks liquidating (other than those consolidating with other national banks under the act of June 3, 1864) | 4 |  |
| Capital of same banks... |  | 775,000 |
| Number of banks reducing cap Reduction of capital. | 1 |  |
| Reduction of capital. <br> Total number of banks going into liquidation or reducing capital (other than those consolidating with other national banks under the act of June 3, 1864) | 5 | 75,0 |
| Aggregate capital reduction | 5 | 850,000 |
| Consolidation of national banks under the act of Nov. 7, 1918. | 1 |  |
| Capital........................................ |  | 1,000,000 |
| The foregoing statement shows the aggregate of increased capital for the period of the banks embraced in statement was. |  | 5,635,000 |
| Against this there was a reduction of capital owing to liquidation (other than for consolidation with other national banks under the act of June 3, 1864), and reductions of capital of. |  | 850,000 |
| Net increasse. |  | 4,785,000 |

${ }^{1}$ Includes an increase in capital of $\$ 100,000$ incident to a consolidation under act of Nov. 7, 1918.

## Dollar Exchange.

Under the provisions of section 13 of the Federal Reserve Act, which provides that member banks, with the approval of the Federal Reserve Board, may accept drafts for the purpose of furnishing dollar exchange, drawn upon them by banks or bankers located in foreign countries or dependencies or insular possessions of the United States in which it is determined that the usages of trade require such acceptance facilities, the Board has designated as such the following countries and insular possessions: Argentina, Bolivia, Brazil, British Guiana, British Honduras, Chile, Colombia, Costa Rica, Cuba, Dutch Guiana, Ecuador, French Guiana, Guatemala, Honduras, Nicaragua, Panama, Paraguay, Peru, Porto Rico, San Salvador, Santo Domingo, Trinidad, Uruguay, and Venezuela.

## Commercial Failures Reported.

Continuance of the increase in the country's business mortality is reflected in the 576 commercial failures reported to R. G. Dun \& Co. during three weeks of October, as against only 297 in the corresponding period of 1919. The returns for September, the latest month for which complete statistics are available, disclose 677 defaults for $\$ 29,554,288$ of liabilities, whereas in September of last year there were but 473 insolvencies, involving $\$ 8,791,319$ of indebtedness. Excepting the 681 reverses of July of the present year, the September failures exceed in number those of any month since December, 1918, and the liabilities, owing to an unusual number of large defaults, are the heaviest of any month, excepting June of this year,
back to April of 1915. When separated according to Federal Reserve districts, the September statement reveals more failures than in that month of 1919 in each of the 12 districts, aside from the third district, and only in the fourth and sixth districts is there any reduction in the indebtedness. In several instances, notably in the second and seventh districts, the September liabilities are very much above those of that month of last year.

Failures during September.

| District. | Number. |  | Liabilities. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1920 | 1919 | 1920 | 1919 |

| Second. | 145 | 92 | 14, 551,283 | 2, 335,120 |
| Third... | -25 | 29 | 1,417,524 | - 816,230 |
| Firth... | 65 54 5 | 42 | 1, $1,648,414$ | 1,559, 307 |
| Sixth.. | 44 | 40 | -500,371 | 771, 880 |
| Seventh. | ${ }^{67}$ | 48 | 5,679,728 | 661,371 |
| Eighth.. | 35 | 18 | 352,873 | 210,616 |
| Ninth. | 16 | 9 | 99, 730 | 90,282 |
| Tenth. | 26 | 20 | 466,451 | 152,458 |
| Eleventh. | ${ }_{3}^{36}$ | 7 | 864,924 | 48,883 |
| Twelfth. | 91 | 68 | 1,265,544 | 403,274 |
| Total. | 677 | 473 | 29, 554,288 | 8,791,319 |

## Acceptances to 100 Per Cent.

Since the issuance of the October Bullétin the following banks have been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

National Bank of Commerce, Detroit, Mich
Manufacturers \& Traders National Bank, Buffalo, N. Y.
Citizens Commercial Trust Co., Buffalo, N. Y.
First National Bank, Greensburg, Pa.

## November Forecast of Corn Production.

November crop reports do not differ from October forecasts for any of the principal crops, with the exception of corn. Figures of corn production issued by the Bureau of Crop Estimates as of November 1 are shown by Federal Reserve districts in the table below. Although the corn crop is expected to be about $17,000,000$ bushels below the October forecast, yet it is the largest crop ever produced. November forecasts are lower than those of the previous month for all the important corn-producing districts. except the Chicago district, where an expected increase of $25,000,000$ bushels is shown. The corn crop of the Chicago district in the statement reaches $965,000,000$ bushels, a larger total than the crop raised in the entire United States in any year prior to 1870.

Production of corn by Federal Reserve districts.

## RULINGS OF THE FEDERAL RESERVE BOARD.

Eligibility of paper incident to cotton factorage business,
On page 1054 of the Federal Reserve Bulletin for November, 1919, the Federal Reserve Board published a ruling to the effect that the note of a cotton factor, the proceeds of which are used by the cotton factor, to lend to a third party, is finance paper rather than commercial or agricultural paper and is, therefore, ineligible for rediscount, even though the third party to whom such loan is made may use the proceeds for a commercial or agricultural purpose. The Federal Reserve Board has recently been requested to reconsider this ruling.

This ruling has, in effect, been incorporated in the regulations of the Board, Series of 1920, which have just been issued. Section A, Paragraph II of Regulation A provides in part as follows:

The Federal Reserve Board, exercising its statutory right to define the character of a note, draft, or bill of exchange eligible for rediscount at a Federal Reserve Bank, has determined that-
(a) It must be a note, draft, or bill of exchange which has been issued or drawn, or the proceeds of which have been used or are to be used in the first instance, in producing, purchasing, carrying, or marketing goods in one or more of the steps of the process of production, manufacture, or distribution, or for the purpose of carrying or trading in bonds or notes of the United States.

The words "in the first instance" did not appear in the Board's previous regulations and were inserted in Regulation $A$ of the series of 1920 for the express purpose of making it clear that the making of loans to third parties is a finance rather than a commercial or agricultural purpose, even though it appears that the third parties are to use the funds for commercial or agricultural purposes.

After a very full and careful review of the facts which have been presented to the Board, and of the questions of law involved, the Federal Reserve Board is of the opinion that the ruling as published and as in effect incorporated in the Board's regulations is correct in principle, and that under the terms of the Federal Reserve Act as it now stands a contrary ruling is not possible. It is urged that since the loans made by a cotton factor to his customers are merely incidental to the main business of the factor which is the marketing of cotton, and since the marketing of cotton is a commercial business, a cotton factor's note should be considered eligible commercial paper even though the proceeds are loaned to the factor's customers. Under the terms of
section 13 of the Federal Reserve Act, however, the test of eligibility is not the character of the business of the borrower, but is the use of the proceeds of the particular instrument. Inasmuch as the loaning of money is in itself a finance rather than a commercial operation, a note, the proceeds of which are loaned by the borrower to a third party, is ineligible for rediscount, irrespective of the general character of the borrower's business.

The Board desires to call attention to the fact that the ruling does not preclude cotton factors' notes from being eligible under some circumstances. In the first paragraph of the ruling it was said:

*     *         * In view of the fact that it is apparent from all the evidence on hand that the circumstances and conditions under which so-called cotton factors' paper is issued vary so much in different cases, it is impossible to give any categorical answer to the question presented, or to make any general ruling that cotton factors' paper, as such, is eligible or ineligible for rediscount.

In reiteration of this statement the Board points out again that the fact that a cotton factor is the maker of a note does not of itself determine the eligibility or ineligibility of the note for rediscount. The test of the eligibility of paper is whether it complies with the terms of the Federal Reserve Act and the Board's regulations, and this in turn involves the question of the use of the proceeds. In last analysis this is a question of fact, and it is the function of the Federal Reserve Banks, rather than of the Federal Reserve Board, to determine questions of fact in the light of the circumstances of particular cases. As was said in the last paragraph of the ruling in question:
In order to ascertain the necessary facts it may be proper for a Federal Reserve Bank to require statements or affidavits from the maker of the note as to the exact nature of the transaction out of which it arises. With these principles as a guide, the Federal Reserve Bank must determine the eligibility of any particular paper in the light of the circumstances in which it was issued, and its proceeds disposed of.

In connection with the request made to the Federal Reserve Board that it reconsider its previous ruling, the argument was made that section 13 of the Federal Reserve Act makes notes of cotton factors eligible for rediscount when secured by cotton, irrespective of whether or not the proceeds have been, or are to be, used for commercial or agricultural purposes. It was urged that this is the effect of that part of section 13 which immediately follows the definition of eligible commercial and agricultural paper and which provides that-

Nothing in this act contained shall be construed to prohibit such notes, drafts, and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise from being eligible for such discount; but such definition shall not include notes, drafts, or bills covering merely investments or issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, except bonds and notes of the Government of the United States.
The Board is of the opinion that the word "such," qualifying notes, drafts, and bills of exchange, in the sentence quoted must necessarily be construed as referring to notes, drafts, and bills of exchange defined above-that is, notes, drafts, and bills of exchange which are eligible by reason of the fact that the proceeds have been or are to be used for agricultural, industrial, or commercial purposes. The Board is of the opinion, therefore, that the provision quoted is merely a declaration that paper which is eligible for rediscount by reason of the use of the proceeds is not made ineligible by reason of being secured, and that the provision can not be construed, as the Board was urged to construe it, to make eligible for rediscount paper which is secured in the manner specified but which is not eligible commercial or agricultural paper as defined in the preceding part of the section.
This being so, the precise meaning of the phrase "covering merely investments"' is of no importance in the case under consideration. The clause in which this phrase appears provides in effect that "notes, drafts, and bills covering merely investments" shall under no circumstances be eligible. This can not, of course, be construed as an affirmative enactment making eligible all paper other than that "covering merely investments." The clause merely adds another condition with which paper must comply in order to be eligible for rediscount. Since the Board has determined that paper the proceeds of which have been used to lend to a third party does not meet the requirement as to the use of the proceeds for a commercial or agricultural purpose, such paper is ineligible irrespective of whether or not it is paper "covering merely investments."
The Federal Reserve Board has frequently suggested that if the cotton factor's loans to customers were evidenced by the customers' notes, these notes could be indorsed and discounted by the factor and might then be eligible for rediscount by Federal Reserve Banks upon satisfactory evidence that the proceeds of the loans represented by the notes have been, or are to be, used for agricultural or commercial purposes. The Board has also had occasion to rule recently that drafts drawn by
cotton growers, accepted by a cooperative marketing association organized for the purpose of marketing the cotton delivered by the growers, and discounted by the growers at their banks, may be eligible for rediscount by Federal Reserve Banks when it is shown that the proceeds of the accepted drafts have been, or are to be, used by the growers for agricultural purposes. The principle of this ruling is, of course, applicable to cotton factors as well as to cooperative marketing associations, so that under it drafts of cotton producers or owners drawn upon and accepted by the cotton factors may be eligible for rediscount by Federal Reserve Banks when discounted by the drawers. This would not be true, however, if the factor should retain the drafts after acceptance and should discount them at his bank. In that case the factor and not the producer would be the borrower in the first instance and the use of the proceeds by the factor would determine the eligibility of the drafts.

The Board understands that it has always been the practice in the cotton factorage business for the factor's loans to his customers to be evidenced merely by open accounts, and it has been said that it is not possible to change that practice, established by long custom, so as to require customers to give their notes to evidence these loans. The Federal Reserve Board can not help but feel that this difficulty will not prove as great as is feared. This is not the first time that the plea has been made that business usage does not permit of compliance with requirements which those administering the Federal Reserve System consider mandatory as a matter of law or essential as a matter of banking prudence, and in many instances, notably with respect to the requirement of borrowers' statements, what has at first seemed impossible has proved by experience to be both practicable and beneficial.

Another suggestion has been made by one of the Federal Reserve Banks which may be of assistance to the cotton factors. When the factor sells cotton on credit terms which are customary and which are not unnecessarily or unreasonably long, if the purchaser gives a note, or accepts a draft drawn on him by the factor, for the amount of the purchaser's obligation, that note or accepted draft will have been "issued or drawn" for a commercial purpose within the meaning of section 13 of the Federal Reserve Act and will be eligible for rediscount by Federal Reserve Banks if it complies in other respects with the law and the Board's regulations.

## Member banks required to vote for Federal Reserve Bank directors.

The Federal Reserve Board has designated Tuesday, November 16, 1920, as the date for the opening of the polls for the coming election of Class A and Class B directors to succeed the directors whose terms will expire on December 31, 1920. Heretofore comparatively few ballots have been cast in such elections, and in order that each member bank belonging to a group which is to elect a Class A or Class B director will participate in the coming election of such directors the Federal Reserve Board desires to point out that the terms of the Federal Reserve Act are mandatory with respect to the authorization by member banks of officers to cast the votes of member banks and with respect to the casting of proper ballots by the officers so authorized.

Under the terms of section 4 of the Federal Reserve Act as amended September 26, 1918, each member bank is permitted to nominate to the chairman of the board of directors of the Federal Reserve Bank of the district one candidate for director of Class $A$ and one candidate for director of Class $\bar{B}$, and the candidate so nominated shall be listed by the chairman indicating by whom nominated, and a copy of said list shall, within 15 days after its completion, be furnished by the chairman to each member bank. Section 4 then provides that-

Each member bank by a resolution of the board or by an amendment to its by-laws shall authorize its president, cashier, or some other officer to cast the vote of the member bank in the elections of Class $A$ and Class $B$ directors.

Within 15 days after the receipt of the list of candidates the duly authorized officer of a member bank shall certify to the chairman his first, second, and other choices for director of Class A and Class B, respectively, upon a preferential ballot upon a form furnished by the chairman of the board of directors of the Federal Reserve Bank of the district. Each such officer shall make a cross opposite the
name of the first, second, and other choices for a director of Class A and for a director of Class B, but shall not vote more than one choice for any one candidate.

Any candidate having a majority of all votes cast in the column of first choice shall be declared elected. If no candidate have a majority of all the votes in the first column, then there shall be added together the votes cast by the electors for such candidates in the second column and the votes cast for the several candidates in the first column. If any candidate then have a majority of the electors voting, by adding together the first and second choices, he shall be declared elected. If no candidate have a majority of electors voting when the first and second choices shall have been added, then the votes cast in the third column for other choices shall be added together in like manner, and the candidate then having the highest number of votes shall be declared elected.

While it is optional with member banks whether or not they shall nominate candidates for Class A or Class B directors, under the terms of the provisions just quoted it is mandatory upon each member bank to authorize, by a resolution of the board of directors or by an amendment to its by-laws, some officer to cast a vote in behalf of the bank, in the election of such directors, and upon the officer so authorized to certify to the chairman of the Federal Reserve Bank his first, second, and third choices for such directors. Inasmuch as each Class A or Class B director is elected by one group of member banks, nominations may be made and ballots shall be cast only by those member banks which belong to the group which is to participate in the particular election.

The law also makes it mandatory upon the officer casting the ballot to designate his first, second, and other choices, and provides that under some circumstances votes for second and third choices may determine the election. The Federal Reserve Board has heretofore ruled that when there are three or more nominees no ballot is valid unless the first, second, and third choices are designated thereon.

## REGULATIONS OF THE FEDERAL RESERVE BOARD.

Washington, October 6, 1920.
The Federal Reserve Board transmits herewith a new issue of all of its regulations of 1917 applicable to member banks. Regulation L, relating to "Interlocking bank directorates under the Clayton Act," is entirely new. Regulation F of the new series supersedes Regulation F, Series of 1919, and Regulation K of the new series supersedes Regulation K, Series of 1920 , issued in March of the present year. The other regulations of the new series supersede the corresponding regulations of the 1917 series.

Regulations A, B, and I have been materially amended. Regulation C has been amended only by the insertion of two sentences in the first paragraph with reference to the question of when trust receipts and bills of lading drafts may be considered "actual security" within the meaning of section 13 of the Federal Reserve Act. There have been no amendments to Regulation $D$ with the exception of two changes intended to make clear that in the case of "time deposits, open accounts," the 30 days' written notice of withdrawal must be actually required by the bank, whereas in the case of "savings accounts" and "time certificates of deposit" the requirement of notice will be complied with if the bank reserves the right to demand 30 days' written notice of withdrawals. The only substantial change in Regulation K is an amendment to the paragraph entitled "Acceptances," which permits corporations organized under the provisions of section 25a of the Federal Reserve Act to accept, subject to substantially the same conditions as are imposed by law upon member banks, drafts drawn by banks or bankers located in foreign countries, or dependencies or insular possessions of the United States, for the purpose of furnishing dollar exchange as required by the usages of trade in those countries, dependencies, or possessions. There have been no substantial changes in Regulations $F$ and $H$, and Regulations $E$ and $G$ are identically the same as in the 1917 series.

Regulation J, relating to "Check clearing and collection," has not been changed in substance except that certain provisions have been struck out which are no longer applicable. Nothing has been added to this regulation and it contains only very general provisions. At the present time conditions vary so much in the different districts that it is impracticable to formulate detailed regulations on this subject to be applied in all districts. The Federal Reserve Board will consider a revision of this regulation if and when future developments make it seem practicable and advisable to issue a more comprehensive regulation.

Instructions which concern only Federal Reserve Agents or Federal Reserve Banks will be covered in separate letters or regulations, as in the past.
W. P. G. Harding, Governor.

## W. T. Chapman, Secretary.

## REGULATION A, SERIES OF 1920.

(Superseding Regulation A of 1917.)
Rediscounts Under Section 13.
A. Notes, drafts, and bills of exchange.

## 1. General statutory provisions.

Any Federal Reserve Bank may discount for any of its member banks any note, draft, or bill of exchange, pro-vided-
(a) It has a maturity at the time of discount of not more than 90 days, exclusive of days of grace; but if drawn or issued for agricultural purposes or based on live stock,
it may have a maturity at the time of discount of not more than six months, exclusive of days of grace.
(b) It arose out of actual commercial trasactions; that 1s, it must be a note, draft, or bill of exchange which has been issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used or are to be used for such purposes.
(c) It was not issued for carrying or trading in stocks, bonds, or other investment securities, except bonds and notes of the Government of the United States.
(d) The aggregate of notes, drafts, and bills bearing the signature or indorsement of any one borrower, whether a person, company, firm, or corporation, rediscounted for any one member bank, whether State or National, shall at no time exceed 10 per cent ${ }^{1}$ of the unimpaired capital and surplus of such bank; but this restriction shall not apply to the discount of bills of exchange drawn in good faith against actually existing values.
(e) It is indorsed by a member bank.
$(f)$ It conforms to all applicable provisions of this regulation.

No Federal Reserve Bank may discount for any member State bank or trust company any of the notes, drafts, or bills of any one borrower who is liable for borrowed money to such State bank or trust company in an amount greater than 10 per cent ${ }^{2}$ of the capital and surplus of that State bank or trust company, but in determining the amount of money borrowed from such State bank or trust company the discount of bills of exchange drawn in good faith against actually existing value and the discount of commercial or business paper actually owned by the person negotiating the same shall not be included.

Any Federal Reserve Bank may make advances to its member banks on their promissory notes for a period not exceeding 15 days, provided that they are secured by notes, drafts, bills of exchange, or bankers' acceptances which are eligible for rediscount or for purchase by Federal Reserve Banks, or by the deposit or pledge of bonds or notes of the United States, or bonds of the War Finance Corporation.
II. General character of notes, drafts, and bills of exchange eligible.
The Federal Reserve Board, exercising its statutory right to define the character of a note, draft, or bill of exchange eligible for rediscount at a Federal Reserve Bank, has determined that-
(a) It must be a note, draft, or bill of exchange which has been issued or drawn, or the proceeds of which have been used or are to be used, in the firstinstance, in producing, purchasing, carrying, or marketing goods ${ }^{3}$ in one or
1 Under the terms of section $11(m)$ as amended by the act of Mar. 3 , 1919, a Federal Reserve Bank may, until Dec. 31, 1920, rediscount for any member bank, whether State or National, notes, drafts, and bills bearing the signature or indorsement of any one borrower in an amount not to exceed 20 per cent of the member bank's capital and surplus, prothan a like face amount of bonds or notes of the United States issued since A pr. 24, 1917, or certificates of indebtedness of the United States. since Under the terms of section $11(m)$ as amended by the act of Mar. 3 , 1919, a Federal Reserve Bank mav, until Dec. 31, 1920 , rediscount for a member State bank or trust company paper of any one borrower secured by not less than a like face amount of bonds or notes of the United States issued since Apr. 24, 1917, or certificates of indebtedness of the Umted States, even though such State bank or trust company may already have loaned to the borrower under his regular line of credit in excess of the 10 per cent limit defined above. If, however, the member State bank or trust company has loaned to one borrower in excess of that 10 per cent rediscount for that State bank or trust company any of the paper of that borrower taken under that regular line of credit, but may rediscount any paper so secured by Government obligations of the kinds specified up to an amount not in access of 20 per cent of the capital and surplus of such State bank or trust company.
${ }^{3}$ When used in this regulation, the word "goods" shall be construed toinelude goods, wares, merchandise, or agricultural products, including live stock.
more of the steps of the process of production, manufacture, or distribution, or for the purpose of carrying or trading in bonds or notes of the United States.
(b) It must not be a note, draft, or bill of exchange the proceeds of which have been used or are to be used for permanent or fixed investments of any kind, such as land, buildings, or machinery, or for any other capital purpose.
(c) It must not be a note, draft, or bill of exchange the proceeds of which have been used or are to be used for investments of a purely speculative character or for the purpose of lending to some other borrower
(d) It may be secured by the pledge of goods or collateral of any nature, including paper, which is ineligible for rediscount, provided it (the note, draft, or bill of exchange) is otherwise eligible.

## III. Applications for rediscount.

All applications for the rediscount of notes, drafts, or bills of exchange must contain a certificate of the member bank, in form to be prescribed by the Federal Reserve Bank, that, to the best of its knowledge and belief, such notes, drafts, or bills of exchange have been issued for one or more of the purposes mentioned in II (a), and, in the case of a member State bank or trust company, all applications must contain a certificate or guaranty to the effect that the borrower is not liable, and will not be permitted to become liable during the time his paper is held by the Federal Reserve Bank, to such bank or trust company for borrowed money in an amount greater than that specified in I above.

## IV. Promissory notes.

(a) Definition.--A promissory note, within the meaning of this regulation, is defined as an unconditional promise, in writing, signed by the maker, to pay, in the United States, at a fixed or determinable future time, a sum certain in dollars to order or to bearer.
(b) Evidence of eligibility and requirement of state-ments.-A Federal Reserve Bank must be satisfied by reference to the note or otherwise that it is eligible for rediscount. The member bank shall certify in its application whether the note offered for rediscount has been discounted for a depositor other than a bank or for a nondepositor and, if discounted for a bank, whether for a member or a nonmember bank. The member bank must also certify whether a financial statement of the borrower is on file with it.

A recent financial statement of the borrower must be on file with the member bank in all cases, except with respect to any note discounted by a member bank for a depositor other than a bank or another member bank if-
(1) It is secured by a warehouse, terminal, or other similar receipt covering goods in storage, or by bonds or notes of the United States; or
(2) The aggregate of obligations of the borrower rediscounted and offered for rediscount at the Federal Reserve Bank by the member bank is less than a sum equal to 10 per cent of the paid-in capital of the member bank and is less than $\$ 5,000$.
The Federal Reserve Bank shall use its discretion in taking the steps necessary to satisfy itself as to eligibility. Compliance of a note with II (b) may be evidenced by a statement of the borrower showing a reasonable excess of quick assets over current liabilities. A Federal Reserve Bank may, in all cases, require the financial statement of the borrower to be filed with it.

## V. Drafts, bills of exchange, and trade acceptances,

(a) Definition.-A draft or bill of exchange, within the meaning of this regulation, is defined as an unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay in the United States at a fixed or determinable future time a sum certain in dollars
to the order of a specified person; and a trade acceptance is defined as a draft or bill of exchange, drawn by the seller on the purchaser of goods sold, ${ }^{1}$ and accepted by such purchaser.
(b) Evidence of eligibility and requirement of state-ments.-A Federal Reserve Bank shall take such steps as it deems necessary to satisfy itself as to the eligibility of the draft, bill, or trade acceptance offered for rediscount and may require a recent financial statement of one or more parties to the instrument. The draft, bill, or trade acceptance should be drawn so as to evidence the character of the underlying transaction. but if it is not so drawn evidence of eligibility may consist of a stamp or certificate affixed by the acceptor or drawer in a form satisfactory to the Federal Reserve Bank.

## VI. Six months' agricultural paper.

(a) Definition.-Six months' agricultural paper, within the meaning of this regulation, is defined as a note, draft, bill of exchange, or trade acceptance drawn or issued for agricultural purposes, or based on live stock; that is, a note, draft, bill of exchange, or trade acceptance the proceeds of which have been used, or are to be used, for agricultural purposes, including the breeding, raising, fattening, or marketing of live stock, and which has a maturity at the time of discount of not more than six months, exclusive of days of grace.
(b) Eligibility.-To be eligible for rediscount, six months' agricultural paper, whether a note, draft, bill of exchange, or trade acceptance, must comply with the respective sections of this regulation which would apply to it if its maturity were 90 days or less.

## B. BANKERS' ACCEPTANCES.

(a) Definition.-A banker's acceptance within the meaning of this regulation is defined as a draft or bill of exchange, whether payable in the United States or abroad and whether payable in dollars or some other money, of which the acceptor is a bank or trust company, or a firm, person, company, or corporation engaged generally in the business of granting bankers' acceptance credits.
(b) Eligibility.-A Federal Reserve Bank may rediscount any such bill having a maturity at time of discount of not more than three months, exclusive of days of grace, which has been drawn under a credit opened for the purpose of conducting or settling accounts resulting from a transaction or transactions involving any one of the following:
(1) The shipment of goods between the Linited States and any foreign country, or between the United States and any of its dependencies or insular possessions, or between foreign countries. While it is not necessary that shipping documents covering goods in the process of shipment be attached to drafts drawn for the purpose of financing the exportation or importation of goods, and while it is not essential, thereiore, that each such draft cover specific goods actually in existence at the time of acceptance, nevertheless it is essential as a prerequisite to eligibility either (a) that shipping documents or a documentary export draft be attached at the time the draft is presented for acceptance, or ( $b$ ) if the goods covered by the credit have not been actually shipped, that there be in existence a specific and bona fide contract providing for the exportation or importation of such goods at or within a specified and reasonable time and that the customer agree that the accepting bank will be furnished in due course with shipping documents covering such goods or with exchange arising out of the transaction being financed by the credit. A contract between principal and agent will not be considered a bona fide contract of the kind required above,

[^1]nor is it enough that there be a contract providing merely that the proceeds of the acceptance will be used only to finance the purchase or shipment of goods to be exported or imported.
(2) The shipment of goods within the United States, provided shipping documents conveying security title are attached at the time of acceptance, or
(3) The storage of readily marketable staples, ${ }^{1}$ provided that the bill is secured at the time of acceptance by a warehouse, terminal, or other similar receipt, conveying security title to such staples, issued by a party independent of the customer, and provided further that the acceptor remains secured throughout the life of the acceptance. In the event that the goods must be withdrawn from storage prior to the maturity of the acceptance or the retirement of the credit, a trust receipt or other similar document covering the goods may be substituted in lieu of the original document, provided that such substitution is conditioned upon a reasonably prompt liquidation of the credit. In order to insure compliance with this condition, it should be required, when the original document is released, either (a) that the proceeds of the goods will be applied within a specified time toward a liquidation of the acceptance credit or (b) that a new document, similar to the original one, will be resubstituted within a specified time, and a Federal Reserve Bank may also rediscount any bill drawn by a bank or banker in a foreign country or dependency or insular possession of the United States for the purpose of furnishing dollar exchange, as provided in Regulation C, provided that it has a maturity at the time of discount of not more than three months, exclusive of days of grace.
(c) General conditions.-(1) Acceptances in excess of 10 per cent.-In order to be eligible, acceptances for any one customer in excess of 10 per cent of the capital and surplus of the accepting bank must remain actually secured throughout the life of the acceptance. In the case of acceptances of member banks this security must consist of shipping documents, warehouse receipts or other such documents, or some other actual security growing out of the same transaction as the acceptance, such as documentary drafts, trade acceptances, terminal receipts, or trust receipts which cover goods of such a character as to insure at all times a continuance of an effective and lawful lien in favor of the accepting bank. Other trust receipts are not security within the meaning of this paragraph if they permit the customer to have access to or control over the goods.
(2) Maturity,-Although a Federal Reserve Bank may legally rediscount an acceptance having a maturity at the time of discount of not more than three months, exclusive of days of grace, it may decline to rediscount any acceptance the maturity of which is in excess of the usual or customary period of credit required to finance the underlying transaction or which is in excess of that period reasonably necessary to finance such transaction. Since the purpose of permitting the acceptance of drafts secured by. warehouse receipts or other such documents is to permit of the temporary holding of readily marketable staples in storage pending a reasonably prompt sale, shipment, or distribution, no such acceptance should have a maturity in excess of the time ordinarily necessary to effect a reasonably prompt sale, shipment, or distribution into the process of manufacture or consumption.
(3) Renewals.-While a national bank may properly enter into an agreement having more than six months to run by which it obligates itself to accept drafts of the kinds described in Regulation C , each individual draft accepted under the terms of that agreement must, in order to be eligible, conform in all respects to the provisions of the law

1A readily marketable staple within the meaning of these regulations may be defined as an article of commerce, agriculture, or industry of mach uses as to make it, the subject of constant dealings in ready markets with such frequent quotations of price as to make ( $a$ ) the price easily and definitely ascertainable and ( $b$ ) the staple itself easy to realize upon by sale at any time.
and these regulations. Inasmuch as each individual acceptance must itself conform to the terms of the law, no renewal draft whether or not contracted for in advance, can be eligible if at the time of its acceptance the period required for the conclusion of the transaction out of which the original draft was drawn shall have elapsed. The question of the eligibility of renewal drafts, therefore, must necessarily depend upon the stage of the transaction at the time the renewal drafts are drawn.
(d) Evidence of eligibility.-A Federal Reserve Bank must be satisfied either by reference to the acceptance itself or otherwise that it is eligible for rediscount. The bill itself should be drawn so as to evidence the character of the underlying transaction, but if it is not so drawn evidence of eligibility may consist of a stamp or certificate affixed by the acceptor in form satisfactory to the Federal Reserve Bank.

## REGULATION B, SERIES OF 1920.

(Superseding Regulation B of 1917.)
Open-Market Purchases of Bills of Exchange, Trade Acceptances, and Bankers' Acceptances Under Section 14.

## I. General statutory provisions.

Section 14 of the Federal Reserve Act provides that Federal Reserve Banks under rules and regulations to be prescribed by the Federal Reserve Board may purchase and sell in the open market, at home or abroad, from or to domestic or foreign banks, firms, corporations, or individuals, bankers' acceptances and bills of exchange of the kinds and maturities made eligible by the act for rediscount, with or without the indorsement of a member bank.

## 1I. General character of bills and acceptances eligible.

The Federal Reserve Board, exercising its statutory right to regulate the purchase of bills of exchange and acceptances, has determined that a bill of exchange or acceptance to be eligible for purchase by Federal Reserve Banks under this provision of section 14-
(a) Must conform to the relative requirements of Regulation A, except that a banker's acceptance growing out of a transaction involving the storage within the United States of goods which have been actually sold, may be purchased, provided that the acceptor is secured by the pledge of such goods and, provided further, that the bill conforms in other respects to the relative requirements of Regulation A.
(b) Must have a maturity at the time of purchase of not more than 90 days, exclusive of days of grace, unless it is a bill drawn on a banker, when it may have a maturity of three months, exclusive of days of grace.
(c) Must have been accepted by the drawee prior to purchase by a Federal Reserve Bank unless it is either accompanied and secured by shipping documents or by a warehouse, terminal, or other similar receipt conveying security title or bears a satisfactory banking indorsement.

## III. Statements.

A bill of exchange, unless indorsed by a member bank, is not eligible for purchase until a satisfactory statement has been furnished of the financial condition of one or more of the parties thereto.

A bankers' acceptance, unless accepted or indorsed by a member bank, is not eligible for purchase until the acceptor has furnished a satisfactory statement of its financial condition in form to be approved by the Federal Reserve Bank and has agreed in writing with a Federal Reserve Bank to inform it upon request concerning the transaction underlying the acceptance.

REGULATION C, SERIES OF 1920.
(Superseding Regulation C of 1917.)
Acceptance by Member Banks of Drafts and Bills of Exchange.
A. ACCEPTANCE OF DRAFTS OR BILLS OF EXCHANGE DRAWN AGAINST DOMESTIC OR FOREIGN SHIPMENTS OF GOODS OR SECURED BY WAREFOUSE RECEIPTS COVERING READILY MARKETABLE STAPLES.

## I. Statutory provisions.

Under the provisions of the fifth paragraph of section 13 of the Federal Reserve Act, as amended by the acts of September 7, 1916, and June 21, 1917, any member bank may accept drafts or bills of exchange drawn upon it, having not more than six months' sight to run, exclusive of days of grace, which grow out of transactions involving the importation or exportation of goods; or which grow out of transactions involving the domestic shipment of goods, provided shipping documents conveying or securing title are attached at the time of acceptance; or which are secured at the time of acceptance by a warehouse receipt or other such document conveying or securing title covering readily marketable staples. ${ }^{\text {i }}$ This paragraph limits the amount which any bank shall accept for any one person, company, firm, or corporation, whether in a foreign or domestic transaction, to an amount not exceeding at any time, in the aggregate, more than 10 per centum of its paid-up and unimpaired capital stock and surplus. This limit, however, does not apply in any case where the accepting bank remains secured either by attached documents or by some other actual security growing out of the same transaction as the acceptance. A trust receipt which permits the customer to have access to or control over the goods will not be considered by Federal Reserve Banks to be "actual security" within the meaning of section 13 . A bill of lading draft, however, is "actual security" even after the documents have been released, provided that the draft is accepted by the drawee upon or before the surrender of the documents. The law also provides that any bank may accept such bills up to an amount not exceeding at any time, in the aggregate, more than one-half of its paid-up and unimpaired capital stock and surplus; or, with the approval of the Federal Reserve Board, up to an amount not exceeding at any time, in the aggregate, more than 100 per centum of its paid-up and unimpaired capital stock and surplus. In no event, however, shall the aggregate amount of acceptances growing out of domestic transactions exceed 50 per centum of such capital stock and surplus.

## II. Regulations.

1. Under the provisions of the law referred to above the Federal Reserve Board has determined that any member bank, having an unimpaired surplus equal to at least 20 per centum of its paid-up capital, which desires to accept drafts or bills of exchange drawn for the purposes described above, up to an amount not exceeding at any time, in the aggregate, 100 per centum of its paid-up and unimpaired capital stock and surplus, may file an application for that purpose with the Federal Reserve Board. Such application must be forwarded through the Federal Reserve Bank of the district in which the applying bank is located.
2. The Federal Reserve Bank shall report to the Federal Reserve Board upon the standing of the applying bank, stating whether the business and banking conditions prevailing in its district warrant the granting of such applications.
3. The approval of any such application may be rescinded upon 90 days' notice to the bank affected.

[^2]B. ACCEPTANCE OF DRAFTS OR BILLS OF EXCHANGE DRAWN for the purpose of creating dollar exchange.

## I. Statutory provisions

Section 13 of the Federal Reserve Act also provides that any member bank may accept drafts or bills of exchange drawn upon it having not more than three months' sight to run, exclusive of days of grace, drawn, under regulations to be prescribed by the Federal Reserve Board, by banks or bankers in foreign countries or dependencies or insular possessions of the United States for the purpose of furnishing dollar exchange as required by the usages of trade in the respective countries, dependencies, or insular possessions.
No member bank shall accept such drafts or bills of exchange for any one bank to an amount exceeding in the aggregate 10 per centum of the paid-up and unimpaired capital and surplus of the accepting bank unless the draft or bill of exchange is accompanied by documents conveying or securing title or by some other adequate security. No member bank shall accept such drafts or bills in an a mount exceeding at any time in the aggregate one-half of its paid-up and unimpaired capital and surplus. This 50 per cent limit is seperate and distinct from and not included in the limits placed upon the acceptance of drafts and bills of exchange as described under section $A$ of this regulation.

## II. Regulations.

Any member bank desiring to accept drafts drawn by banks or bankers in foreign countries or dependencies or insular possessions of the United States for the purpose of furnishing dollar exchange shall first make an application to the Federal Reserve Board setting forth the usages of trade in the respective countries, dependencies, or insular possessions in which such banks or bankers are located.
If the Federal Reserve Board should determine that the usages of trade in such countries, dependencies, or possessions require the granting of the acceptance facilities applied for, it will notify the applying bank of its approval and will also publish in the Federal Reserve Bulletin the name or names of those countries, dependencies, or possessions in which banks or bankers are authorized to draw on member banks whose applications have been approved for the purpose of furnishing dollar exchange.
The Federal Reserve Board reserves the right to modify or on 90 days' notice to revoke its approval either as to any particular member bank or as to any foreign country or dependency or insular possession of the United States in which it has authorized banks or bankers to draw on member banks for the purpose of furnishing dollar exchange.

REGULATION D, SERIES OF 1920.
(Superseding Regulation D of 1917.)
Time Deposits and Savings Agcounts.
Section 19 of the Federal Reserve Act provides, in part, as follows:
Demand deposits, within the meaning of this act, shail comprise all deposits payable within 30 days, and time deposits shall comprise all deposits. payable after 30 days, and all savings accounts and certificates of deposit which are subject to not less than 30 days' notice before payment, and all postal savings deposits.

## Time deposits, open accounts.

The term "time deposits, open accounts" shall be held to include all accounts, not evidenced by certificates of deposit or savings pass books, in respect to which a written contract is entered into with the depositor at the time the deposit is made that neither the whole nor any part of such deposit may be withdrawn by check or otherwise, except on a given date or on written notice which must be given by the depositor a certain specified number of days in advance, in no case less than 30 days.

## Savings accounts.

The term "savings accounts" shall be held to include those accounts of the bank in respect to which, by its printed regulations, accepted by the depositor at the time the account is opened-
(a) The pass book, certificate, or other similar form of receipt must be presented to the bank whenever a deposit or withdrawal is made, and
(b) The depositor may at any time be required by the bank to give notice of an intended withdrawal not less than 30 days before a withdrawal is made.

## Time certificates of deposit.

A "time certificate of deposit" is defined as an instrument evidencing the deposit with a bank, either with or without interest, of a certain sum specified on the face of the certificate payable in whole or in part to the depositor or on his order-
(a) On a certain date, specified on the certificate, not less than 30 days after the date of the deposit, or
(b) After the lapse of a certain specified time subsequent to the date of the certificate, in no case less than 30 days, or
(c) Upon written notice, which the bank may atits option require to be given a certain specified number of days, not less than 30 days, before the date of repayment, and
(d) In all cases only upon presentation of the certificate at each withdrawal for proper indorsement or surrender.

REGULATION E, SERIES OF 1920.
(Superseding Regulation E of 1917.)

## Purchase of Warrants.

## Statutory requirements.

Section 14 of the Federal Reserve Act reads in part as follows:

Every Federal Reserve Bank shall have power-
(b) To buy and sell, at home or abroad, bonds and notes of the United States, and bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months, issued in antioipation of the collection of taxes or in anticipation of the reseipt of assured revenues by any State, county, district, political subdivision, or municipality in the continental United States, inoluding irrigation, drainage, and reclamation districts, such purchases to be made in accordance with rules and regulations prescribed by the Federal Reserve Board.

For brevity's sake, the term "warrant" when used in this regulation shall be construed to mean "bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months,' and the term "municipality" shall be construed to mean "State, county, district, political subdivision, or municipality in the continental United States, including irrigation, drainage, and reclamation districts."

## Regulation

I. Any Federal Reserve Bank may purchase warrants issued by a municipality in anticipation of the collection of taxes or in anticipation of the receipt of assured revenues, provided-
(a) They are the general obligations of the entire municipality; it being intended to exclude as ineligible for purchase all such obligations as are payable from "local benefit" and "special assessment" taxes when the municipality at large is not directly or ultimately liable;
(b) They are issued in anticipation of taxes or revenues which are due and payable on or before the date of maturity of such warrants; but the Federal Reserve Board may waive this condition in specific cases. For the purposes of this regulation, taxes shall be considered as due and payable on the last day on which they may be paid without penalty;
(c) They are issued by a municipality-
(1) Which has been in existence ${ }^{1}$ for a period of 10 years;
(2) Which for a period of 10 years previous to the purchase has not defaulted ${ }^{1}$ for longer than 15 days in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it:
(3) Whose net funded indebtedness ${ }^{1}$ does not exceed 10 per centum of the valuation of its taxable property, to be ascertained by the last preceding valuation of property for the assessment of taxes.
II. Except with the approval of the Federal Reserve Board, no Federal Reserve Bank shall purchase and hold an amount in excess of 25 per centum of the total amount of warrants outstanding at any time and issued in conformity with provisions of section 14 (b) above quoted, and actually sold by a municipality.
III. Except with the approval of the Federal Reserve Board, the aggregate amount invested by any Federal Reserve Bank in warrants of all kinds shall not exceed at the time of purchase a sum equal to 10 per centum of the deposits kept by its member banks with such Federal Reserve Bank.
IV. Except with the approval of the Federal Reserve Board, the maximum amount which may be invested at the time of purchase by any Federal Reserve Bank in warrants of any single municipality shall be limited to the following percentages of the deposits kept in such Federal Reserve Bank by its member banks:

Five per centum of such deposits in warrants of a municipality of 50,000 population or over;

Three per centum of such deposits in warrants of a municipality of over 30,000 population, but less than 50,000 :
One per centum of such deposits in warrants of a municipality of over 10,000 population, but less than 30,000 .
V. Warrants of a municipality of 10,000 population or less shall be purchased only with the special approval of the Board.

The population of a municipality shall be determined by the last Federal or State census. Where it can not be exactly determined the Board will make special rulings.
VI. Opinion of recognized counsel on municipal issues or of the regularly appointed counsel of the municipality as to the legality of the issue shall be secured and approved in each case by counsel for the Federal Reserve Bank.
VII. Any Federal Reserve Bank may purchase from any of its member banks warrants of any municipality, indorsed by such member bank, with waiver of demand, notice, and protest, up to an amount not to exceed 10 per centum of the aggregate capital and surplus of such member bank: Provided, however, That such warrants comply with provisions I and III of these regulations, except that where a period of 10 years is mentioned in I (c) hereof a period of 5 years shall be substituted for the purposes of this clause.

## APPENDIX TO REGULATION E.

## "Net funded indebtedness."

The term "net funded indebtedness" is hereby defined to mean the legal gross indebtedness of the municipality (including the amount of any school district or other bonds which depend for their redemption upon taxes levied upon property within the municipality) less the aggregate of the following items:
(1) The amount of outstanding bonds or other debt obligations made payable from current revenues;
(2) The amount of outstanding bonds issued for the purpose of providing the inhabitants of a municipality with public utilities, such as waterworks, docks, electric plants, transportation facilities, etc.: Provided, That evidence is submitted showing that the income from such utilities is sufficient for maintenance, for payment of interest on such

See appendix to this regulation.
bonds, and for the accumulation of a sinking fund for their redemption;
(3) The amount of outstanding improvement bonds, issued under laws which provide for the levying of special assessments against abutting property in amounts sufficient to insure the payment of interest on the bonds and the redemption thereof: Provided, That such bonds are direct obligations of the municipality and included in the gross indebtedness of the municipality;
(4) The total of all sinking funds accumulated for the redemption of the gross indebtedness of the municipality, except sinking funds applicable to bonds just described in (1), (2), and (3) above.

## "Existence" and "Nondefault."

Wariants will be construed to comply with that part of I (c) of Regulation $E$ relative to term of existence and nondefault, under the following conditions:
(1) Warrants issued by or in behalf of any municipality which was, subsequent to the issuance of such warrants, consolidated with or merged into an existing political division which meets the requirements of these regulations, will be deemed to be the warrants of such political division: Provided, That such warrants were assumed by such political division under statutes and appropriate proceedings the effect of which is to make such warrants general obligations of such assuming political division and payable, either directly or ultimately, without limitation to a special fund from the proceeds of taxes levied upon all the taxable real and personal property within its territorial limits.
(2) Warrants issued by or in behalf of any municipality which was, subsequent to the issuance of such warrants, wholly succeeded by a newly organized political division whose term of existence, added to that of such original political division or of any other political division so succeeded, is equal to a period of 10 years, will be deemed to be warrants of such succeeding political division: Provided, That during such period none of such political divisions shall have defaulted for a period exceeding 15 days in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it: And provided further, That such warrants were assumed by such new political division under statutes and appropriate proceedings the effect of which is to make such warrants general obligations of such assuming political division and payable, either directly or ultimately, without limitation to a special fund from the proceeds of taxes levied upon all the taxable real and personal property within its territorial limits.
(3) Warrants issued by or in behalf of any municipality which, prior to such issuance, became the successor of one or more, or was formed by the consolidation or merger of two or more, preexisting political divisions, the term of existence of one or more of which, added to that of such succeeding or consolidated political division, is equal to a period of 10 years, will be deemed to be warrants of a political division which has been in existence for a period of 10 years: Provided, That during such period none of such original, succeeding, or consolidated political divisions shall have defaulted for a period exceeding 15 days in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it.

## REGULATION F, SERIES OF 1920.

(Superseding Regulation F of 1919.)
Trust Powers of National Banks.

## I. Statutory provisions.

The Federal Reserve Act as amended by the act of September 26, 1918, provides in part:
SEc. 11. The Federal Reserve Board shall be authorized and empow. ered:
(k) To grant by special permit to national banks applying therefor,
when not in contravention of State or local law, the right act as trustee when not in contravention of State or local law, the right to act as trustee,
executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics, or in any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located. Whenever the laws of such State authorize or permit the exercise of any or all of the foregoing powers by State banks, trust companies, or other corporations which compete with national banks, the granting to and the exercise of such powers by national banks shall not be deemed
to be in contravention of State or local law within the meaning of this act.
National banks exercising any or all of the powers enumerated in this subsection shall segregate all assets held in any fiduciary capacity from the general assets of the bank and shall keep a separate set of books and . records showing in proper detail all transactions engaged in under authority of this subsection. Such books and records shall be open to inspec-
tion by the State authorities to the same extent as the books and records tion by the State authorities to the same extent as the books and records of corporations organized under State law which exercise fiduciary powers, but nothing in this act shall be construed as authorizing the state authorities to examine the books, records, and assets of the natio
bank which are not held in trust under authority of this subsection No national bank shall receive in its trust department deposits of $c$ rent funds subject to check or the deposit of checks, drafts, billis of exchange, or other items for collection or exchange purposes. Funds deposited or held in trust by the bank awaiting investment shall be carried in a separate account and shall not be used by the bank in the conduct of its business unless it shall first set aside in the trust department United States bonds or other securities approved by the Federal Reserve Board.
In the event of the failure of such bank the owners of the funds held in trust for investment shall have alien on the bonds or other securities so set apart in addition to their claim against the estate of the bank.
capacity to deposit securities with the State authorities for a the proteccapacity o deposit securities with the State authorities for the protec-
tion of private or court trusts, national banks so acting shall be required to make similar deposits and securities so deposited shall be held for the protection of private or court trusts, as provided by the State law. National banks in such cases shall not be required to execute the bond usually required of individuals if State corporations under similar circumstances are exempt from this requirement.
National banks shall have power to execute such bond when so required by the laws of the State.
In any case in which the laws of a State require that a corporation acting as trustee, executor, administrator, or in any capacity specified vice president, cashier, or trust officer of such national bank may take the necessary oath or execute the necessary affidavit.
It shall be unlawful for any national banking association to lend any officer, director, or employee any funds held in trust under the powers conferred by this section. Any officer, director, or employee making sucn loan, or to whom such loan is made, may be fined not more than $\$ 5,000$ or imprisoned not more than five years, or may be both fined and imprisoned, in the discretion of the court.
In passing upon applications for permission to exercise the powers enumerated in this subsection, the Federal Reserve Board may take into consideration the amount of capital and surplus of the applying bank wnether or not such capital and surplus is suificient under the cirand other facts and circumstances that seem to it proper, and may grant and other facts and circumstances that seem to it proper, and may grant
or refuse the application accordingly: Provided, That no permit shall be issued to any national banking association having a capital and surplus less than tne capital and surplus required by State law of State banks, trust companies, and cor porations exercising such powers.

## II. Applications.

A national bank desiring to exercise any or all of the powers authorized by section 11 (k) of the Federal Reserve Act, as amended by the act of September 26, 1918, shall make application to the Federal Reserve Board, on a form approved by said Board, for a special permit authorizing it to exercise such powers. In the case of an original application-that is, where the applying bank has never been granted the right to exercise any of the powers authorized by section 11 ( $k$ )-the application should be made on F. R. B. Form 61. In the case of a supplemental application-that is, where the applying bank has already been granted the right to exercise one or more of the powers authorized by section 11 ( $k$ )-the application should be made on F. R. B. Form 61-b. Both forms are made a part of this regulation and may be obtained trom the Federal Reserve Board or any Federal Reserve Bank.

## III. Separate departments.

Every national bank permitted to act under this section shall establish a separate trust department, and shall place such department under the management of an officer or officers, whose duties shall be prescribed by the board of directors of the bank.

## IV. Custody of trust securities and investments.

The securities and investments held in each trust shall be kept separate and distinct from the securities owned by the bank and separate and distinct one from another. Trust securities and investments shall be placed in the joint custody of two or more officers or other employees designated by the board of directors of the bank and all such officers and employees shall be bonded.

## V. Deposit of funds awaiting investment or distribution.

Funds received or held in the trust department of a national bank awaiting investment or distribution may be deposited in the commercial department of the bank to the credit of the trust department, provided that the bank first delivers to the trust department, as collateral security, United States bonds, or other readily marketable securities owned by the bank, which collateral security shall at all times be equal in market value to the amount of the funds so deposited.

## VI. Investment of trust funds.

(a) Private trusts.-Funds held in trust must be invested in strict accordance with the terms of the will, deed, or other instrument creating the trust. Where the instrument creating the trust contains provisions authorizing the bank, its officers, or its directors to exercise their discretion in the matter of investments, funds held in trust may be invested only in those classes of securities which are approved by the directors of the bank. Where the instrument creating the trust does not specify the character or class of investments to be made and does not expressly vest in the bank, its officers, or its directors a discretion in the matter of investments, funds held in trust shall be invested in any securities in which corporate or individual fiduciaries in the State in which the bank is located may lawfully invest.
(b) Court trusts.-Except as hereinafter provided, a national bank acting as executor, administrator, or in any other fiduciary capacity, under appointment by a court of competent jurisdiction, shall make all investments under an order of that court, and copies of all such orders shall be filed and preserved with the records of the trust department of the bank. If the court by general order vests a discretion in the national bank to invest funds held in trust, or if under the laws of the State in which the bank is located corporate fiduciaries appointed by the court are permitted to exercise such discretion, the national bank so appointed may invest such funds in any securities in which corporate or individual fiduciaries in the State in which the bank is located may lawfully invest.

## VII. Books and accounts.

All books and records of the trust department shall be kept separate and distinct from other books and records of the bank. All accounts opened shall be so kept as to enable the national bank at any time to furnish information or reports required by the Federal or State authorities, and such books and records shall be open to the inspection of such authorities.

## VIII. Examinations.

Examiners appointed by the Comptroller of the Currency or designated by the Federal Reserve Board will be instructed to make thorough and complete audits of the cash, securities, accounts, and investments of the trust department of the bank at the same time that examination is made of the banking department.

## IX. Conformity with State laws.

Nothing in these regulations shall be construed to give a national bank exercising the powers permitted under the provisions of section $11(\mathbf{k})$ of the Federal Reserve Act, as amended, any rights or privileges in contravention of the laws of the State in which the bank is located within the meaning of that act.

## X. Revocation of permits.

The Federal Reserve Board reserves the right to revoke permits granted under the provisions of section $11(k)$, as amended, in any case where in the opinion of the Board a bank has willfully violated the provisions of the Federal Reserve Act or of these regulations or the laws of any State relating to the operations of such bank when acting in any of the capacities permitted under the provisions of section $11(\mathbf{k})$, as amended.

## XI. Changes in regulations.

These regulations are subject to change by the Federal Reserve Board; provided, however, that no such change shall prejudice any obligation undertaken in good faith under regulations in effect at the time the obligation was assumed.

REGULATION G, SERIES OF 1920.
(Superseding Regulation $G$ of 1917.)

## Loans on Farm Land and Other Real Estate.

Section 24 of the Federal Reserve Act provides in part that-
Any national banking association not situated in a central reserve city may make loans secured by improved and unencumbered farm land situated within its Federal reserve district or within a radius of one hundred miles of the place in which suoh bank is locaten, irrespective of district lines, and may also make oloans secured by improved and unencumbered real est te lsated within one hundred miles of but no loan made upon the security of such farm land shall be made for a lon"er time than five jears, and no loan made upon the security of such real estate as distinguished from farm land shall be made for a longer time than one year nor shall the amount of any such loan, whether upon such farm land or upon such real estate, exceed fifty per centum of the actial value of the property offered as security. Any such bank may make such loans, whether secured by such farm land or such real estate, in an aggre ates sum equal to twenty-five per centum of its capital and surplus or to one-third of its time deposits and such banks may interest on the same.

National banks not located in central reserve cities may, therefore, legally make loans secured by improved and unencumbered farm land or other real estate as provided by this section.

Certain conditions and restrictions must, however, be observed-
(a) There must be no prior lien on the land; that is, the lending bank must hold an absolute first mortgage or deed of trust.
(b) The amount of the loan must not exceed 50 per cent of the actual value of the land by which it is secured.
(c) The maximum amount of loans which a national bank may make on real estate, whether on farm land or on other real estate as distinguished from farm land, is limited under the terms of the act to an amount not in excess of one-third of its time deposits at the time of the making of the loan, and not in excess of one-third of its average time deposits during the preceding calendar year: Provided, however, That if one-third of such time deposits as of the date of making the loan or one-third of the average time deposits for the preceding calendar year is less than one-fourth of the capital and surplus of the bank as of the date of making the loan, the bank in such event shall have authority to make loans upon real estate under the terms of the act to the extent of onefourth of the bank's capital and surplus as of that date.
(d) Farm land to be eligible as ser urity for a loan by a national bank must be situated within the Federal reserve district in which such bank is located or within a radius of 100 miles of such bank irrespective of district lines.
(e) Real estate as distinguished from farm land to be eligible as security for a loan by a national bank must be located within a radius of 100 miles of such bank irrespective of district lines.
(f) The right of a national bank to "make loans" under section 24 includes the right to purchase or discount loans already made as well as the right to make such loans in the first instance: Provided, however, That no loan secured by farm land shall have a maturity of more than five years from the date on which it was purchased or made by the national bank and that no loan secured by other real estate shall have a maturity of more than one year from such date.
(g) Though no national bank is authorized under the provisions of section 24 to make a loan on the security of real estate, other than farm land, for a period exceeding one year, nevertheless, at the end of the vear, it may properly make a new loan upon the same security for a period not exceeding one year. The maturing note must be canceled and a new note taken in its place, but in order to obviate the necessity of making a new mortgage or deed of trust for each renewal, the original mortgage or deed of trust may be so drawn in the first instance as to cover possible future renewals of the original note. Under no circumstances, however, must the bank obligate itself in advance to make such a renewal. It must, in all cases, preserve the right to require payment at the end of the year and to foreclose the mortgage should that action become necessary. The same principles apply to loans of longer maturities secured by farm lands.
( $h$ ) In order that real estate loans held by a bank may be readily classified, a statement signed by the officers making a loan and having knowledge of the facts upon which it is based must be attached to each note secured by a first mortgage on the land by which the loan is secured, certifying in detail as of the date of the loan that all of the requirements of law have been duly observed.

## REGULATION H, SERIES OF 1920.

## (Superseding Regulation H of 1917.)

Membership of State Banks and Trust Companies.

## I. Statutory requirements.

Section 9 of the Federal Reserve Act, as amended by the act approved June 21, 1917, which authorizes State banks and trust companies to become members of the Federal Reserve System, is quoted in the appendix to this regulation.
II. Banks eligible for membership.

A State bank or a trust company to be eligible for membership in a Federal Reserve Bank must comply with the following conditions:

1. It must have been incorporated under a special or general law of the State or district in which it is located.
2. It must have a minimum paid-up unimpaired capital stock as follows:
In cities or towne not exceeding 3,000 inhabitants, $\$ 25,000$.
In cities or towns exceeding 3,000 but not exceeding 6,000 inhabitants, $\$ 50,000$.

In cities or towns exceeding 6,000 but not exceeding 50,000 inhabitants, $\$ 100,000$.

In cities exceeding 50,000 inhabitants, $\$ 200,000$.

## III. Application for membership.

Any eligible State bank or trust company may make application on F. R. B. Form 83a, made a part of this regulation, to the Federal Reserve Board for an amount of capital stock in the Federal Reserve Bank of its district equal to 6 per cent of the paid-up capital stock and surplus of such State bank or trust company. This application must be forwarded direct to the Federal Reserve Agent of the district in which the applying bank or trust company is located and must be accompanied by Exhibits I, II, and III, referred to on page 1 of the application blank.

## IV. Approval of application.

In passing upon an application the Federal Reserve Board will consider especially-

1. The financial condition of the applying bank or trust company and the general character of its management.
2. Whether the corporate powers exercised by the applying bank or trust company are consistent with the purposes of the Federal Reserve Act.
3. Whether the laws of the State or district in which the applying bank or trust company is located contain provisions likely to prevent proper compliance with the provisions of the Federal Reserve Act and the regulations of the Federal Reserve Board made in conformity therewith.

If in the judgment of the Federal Reserve Board an applying bank or trust company conforms to all the requirements of the Federal Reserve Act and these regulations, and is otherwise qualified for membership, the Board will issue a certificate of approval subject to such conditions as it may deem necessary to insure compliance with the act and these regulations. When the conditions imposed by the Board have been accepted by the applying bank or trust company the Board will issue a certificate of approval, whereupon the applying bank or trust company shall make a payment to the Federal Reserve Bank of its district of one-half of the amount of its subscription, i. e., 3 per cent of the amount of its paid-up capital and surplus and upon receipt of this payment the appropriate certificate of stock will be issued by the Federal Reserve Bank. The remaining half of the subscription of the applying bank or trust company shall be subject to call when deemed necessary by the Federal Reserve Board.

## V. Powers and restrictions.

Every State bank or trust company while a member of the Federal Reserve System-

1. ShaH retain its full charter and statutory rights as a State bank or trust company, subject to the provisions of the Federal Reserve Act and to the regulations of the Federal Reserve Board, including any conditions embodied in the certificate of approval.
2. Shall maintain such improvements and changes in its banking practice as may have been specifically required of it by the Federal Reserve Board as a condition of its admission and shall not lower the standard of banking then required of it; and
3. Shall enjoy all the privileges and observe all those requirements of the Federal Reserve Act and of the regulations of the Federal Reserve Board made in conformity therewith which are applicable to State banks and trust companies which have become member banks.

## VI. Examinations and reports.

Every State bank or trust company, while a member of the Federal Reserve System, shall be subject to examinations made by direction of the Federal Reserve Board or of the Federal Reserve Bank by examiners selected or approved by the Federal Reserve Boara.
In order to avoid duplication, examinations of State banks and trust companies made by State authorities will be accepted in lieu of examinations by examiners selected or approved by the Board wherever these are satisfactory to the directors of the Federal Reserve Bank and where, in addition, satisfactory arrangements for cooperation in the matter of examination between the designated examiners of the Board and those of the States already exist or can be effected with State authorities. Examiners from the staff of the board or of the Federal Reserve Banks will, whenever desirable, be designated by the Board to act with the examination staff of the State in order that uniformity in the standard of examination may be assured.

Every State bank or trust company, while a member of the Federal Reserve System, shall be required to make
in each year not less than three reports of condition on F. R. B. Form 105. Such reports shall be made to the Federal Reserve Bank of its district on call of such bank, on dates to be fixed by the Federal Reserve Board. They shall also make semiannual reports of earnings and dividends on F. R. B. Form 107. As dividends may be declared from time to time, each State bank or trust company member shall also furnish to the Federal Reserve Bank of its district a special notification of dividend declared on F. R. B. Form 107a. F. R. B. Forms 105, 107, and 107a are made a part of this regulation.
appendix to regulation h.
Section 9 of the Federal Reserve Act as amended by the act approved June 21, 1917, provides that:
Any bank incornorated by special law of any State, or organized under the general laws of any State, or of the United States, desiring to become a member of the Federal Reserve System, may make applica-
tion to the Federal Reserve Board, under such rules and regulations as tion to the Federal Reserve Board, under such rules and regulations as
it may prescribe, for the right to subseribe to the stock of the Federal it may prescribe, for the right to subseribe to the stock of the Federal Reserve Bank organized within the district in which the applying bank is located. Such application shall he for the same amount of stock that The Federal Reserve Board, subiect to such conditions as it may prescribe, may permit the applying bank to become a stockholder of such Federal Reserve Bank.
In acting upon such applications the Federal Reserve Board shall consider the financial condition of the applying bank, the general character of its management, and whether or not the corporate powers exercised are consistent with the purposes of this act.
Whenever the Federal Reserve Board shall permit the applying bank to become a stockholder in the Federal Reserve Bank of the district its stock subscription shall be payable on call of the Federal Reserve Board, and stock issued to it shall be held subject to the provisions of this act. shall be required to comply with the reserve and captial requirements shatibe required to comply with the reserve and captial requirements banks which prohibit such banks from lending on or purchasing their own stock. which relate to the withdrawal or impairment of their cabital stock, and which relate to the payment of unearned dividends. Such banks and the officers, agents, and employees thereof shall also be subject to the provisions of and to the penalties prescribed by section fiftytwo hundred and nine of the Revised Statutes, and shall be reouired to make reports of condition and of the payment of dividends to the Federal Reserve Bank of which they become a member. Not less than three of such reports shan be made anmally an call of the Federal Reserve Bank on dates to be fixed by the Federal Reserve Board. Failure to make
such reports within ten days after the date they are called for shall subject the offending bank to a penalty of $\$ 100$ a day for each day that it ject the offending bank to a penalty of $\$ 100$ a day for each day that it
fails to transmit such report: sueh penalty to be collected by the Federal Reserve Bank by suit or otherwise.
As a condition of membership such banks shall likewiso he subject to the Federal Reserve Bank by examiners selected or approved by the Federal Reserve Board.
Whenever the directors of the Federal Reserve Bank shall approve the examinations made by the State authorities, such examinations and the reports thereof may be accepted in lies of examinations made by examiners selected or approved by the Federal Reserve Board; Provided, however, That when it deems it necessary the board may order special examinetions by examiners of its own selection and shall in all cases approve the form of report. The expenses of all examinations, and paid by the banks examined.
If at any time it shall appear to the Federal Reserve Board that a member bank has failed to comply with the provisions of this section or the regulations of the Federal Reserve Board made pursuant thereto, it shall be within the power of the boarr after hearing to require such bank to surrender its stock in the Federal Reserve Bank and to forfet all rights and privileges of membership. The Federal Reserve Board may restore membership upon due proof of compliance with the conditions imposed by this section.
ship in a Federal Reserve Bank may do so, after six months' written Ship in a Federal Reserve Bank may do so, after six months' written
notice shall have been filed with the Federal Reserve Board, upon the surrender and cancellation of all of its holdings of capital stock in the Federal Reserve Bank: Provided, however, That no Federal Reserve Bank shall, except under express authority of the Federal Reserve Board, cancel within the same calendar vear more than twenty-five per contum of its capital stock for the purpose of effecting voluntary withdrawals during that year. All such applications shall be dealt with in the order in which they are fled with the board.
eral Reserve Bank, or shall be ordered to do so by the Federal R Federal Reserve Bank, or shall be ordered to do so by the Federal Reserve
Board, under authority of law, all of its rights and privileges as a memBoard, under authority of law, all of its rights and privileges as a mem-
ber bank shall thereupon cease and determme, and arter due provision has been made for any indebtedness due or to berome due to the Federal Reserve Bank it shall be entitled to a refund of its cash paid subscription with interest at the rate of one-half of one per centum per month
from date of last dividend, if earned, the amount refunded in no event from date of last dividend, if earned, the amount refunded in no event

the Federal Reserve Bank.

No applying bank shall be admitted to membership in a Federal Reserve Bank unless it possesses a paid-up unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated under the provisions of the national bank aet
Banks becoming members of the Federal Reserve System under
authority of this section shall be subject to the provisions of this section authority or this section shaic be subject to the provisions of this section shall not be subject to examination under the provisions of the first two paragraphs of section fifty-two hundred and forty of the Revised Statutes as arhended by section twenty-one of this act. Subject to the provisions of this act and to the regulations of the board made pursuant thereto, any bank becoming a member of the Federal Reserve System shall retain its full charter and statutory rights as a State bank or trust company, and may continue to exercise all corporate powers granted it by the state in which it was created, and shall be entitled to all privileges of member ball be permitted to discount for any State bank or trust company notes, drafts, or bills of exchange of any one borrower who is liable for borrowed money to such State bank or trust company in an amount greater than ten per centum of the capital and surplus of such State bank or trust company, but the discount of bills of exchange drawn against actually cxisting value and the discount of commercial or business paper actually owned by the person negotiating the same shal
not be considered as borrowed money within the meaning of this secnot be considered as borrowed money within the meaning of this sec-
tion. The Federal Reserve Bank, as a condition of the discount of tion. The Federal Reserve Bank, as a condition of the discount of notes, dratits, and bills of exchange ior such state bank or trust company, not liable to such bank in excess of the amount provided by this section and will not be permitted to become liable in excess of this amount while such notes, drafts, or bills of exchange are under discount with the Federal Reserve Bank.
It shall be unlawful for any officer, clerk, or agent of any bank admitted to membership under authority of this section to certily any check drawn upon such bank unless the person or company drawing the check has on deposit therewith at the time such check is certified an amount of money equal to the amount specified in such check. Any check so certified by duly authorized officers shall be a good and valid obligation against such bank, but the act of any such offcer, clerk, or of its membership in the Federal Reserve System upon hearing by the Federal Reserve Board.

## REGULATION I, SERIES OF 1920.

(Superseding Regulation I of 1917.)
Increase or Decrease of Capital Stock of Federal Reserve Banks and Cancellation of Old and Issue of New Stock Certificates.

## I. Increase of capital stock.

1. New national banks.-Each newly organized national bank (including any nonmember State bank which shall have converted into a national bank) ${ }^{1}$ shall file with the Federal Reserve Bank of its district an application on F. R. B. Form 30, made a part of this regulation, for an amount of capital stock of the Federal Reserve Bank of its district equal to 6 per cent of the paid-up capital stock and surplus of such national bank. When such application has been approved by the Federal Reserve agent and by the Federal Reserve Board, the applying national bank shall make a payment to the Federal Reserve Bank of its district of one-half of the amount of its subscription, i. e., 3 per cent of the amount of its paid-up capital and surplus, and upon receipt of this payment the appropriate certificate of stock shall be issued by the Federal Reserve Bank. The remaining half of the subscription of the applying bank shall be subject to call when deemed necessary by the Federal Reserve Board.
2. State banks becoming members.-Any State bank or trust company desiring to become a member of the Federal Reserve System shall make application as provided in Regulation H, and when such application has been approved by the Federal Reserve Board and all requirements of Regulation H have been complied with the Federal Reserve Bank shall issue an appropriate certificate of stock as provided in Regulation H.

[^3]3. Increase of capital or surplus by member banks.Whenever any member bank shall increase the aggregate amount of its paid-up capital stock and surplus, it shall file with the Federal Reserve Bank of which it is a member an application on F. R. B Form 56, made a part of this regulation, for an additional amount of the capital stock of the Federal Reserve Bank of its district equal to 6 per cent of such increase. After such application has been approved by the Federal Reserve agent and by the Federal Reserve Board, the applying member bank shall pay to the Federal Reserve Bank of its district one-half of the amount of its additional subscription, and when this amount has been paid the appropriate certificate of stock shall be issued by the Federal Reserve Bank. The remaining half of such additional subscription shall be subject to call when deemed necessary by the Federal Reserve Board
4. Consolidation of member banks.-Whenever two or more member banks consolidate and such consolidation results in the consolidated bank acquiring by operation of law ${ }^{2}$ the Federal Reserve Bank stock owned by the other consolidating bank or banks, and which also results in the consolidated bank having an aggregate capital and surplus in excess of the aggregate capital and surplus of the consolidating member banks, such consolidated bank shall file an application for additional stock, as provided in the preceding paragraph.
5. Certifying increases of Federal Reserve Bank stock.Whenever the capital stock of any Federal Reserve Bank shall be increased the board of directors of such Federal Reserve Bank shall certify such increase to the Comptroller of the Currency on F. R. B. Form 58, which is made a part of this regulation. Such certifications shall be made quarterly as of the last days of December, March, June, and September of each year. A duplicate copy of each certificate shall be forwarded to the Federal Reserve certificat

## I1. Decrease of capital stock.

1. Reduction of capital or surplus by member bank.Whenever a member bank reduces the aggregate amount of its paid-up capital stock and surplus and, in the case of reduction of the paid-up capital of a national bank, such reduction has been approved by the Comptroller of the Currency and by the Federal Reserve Board in accordance with the provisions of section 28 of the Federal Reserve Act, it shall file with the Federal Reserve Bank of which it is a member an application for the surrender and cancellation of stock on $F$. R. B. Form 60, which is made a part of this regulation. When this application has been approved by the Federal Reserve agent and the Federal Reserve Board, the Federal Reserve Bank shall accept and cancel the stock which the applying bank is entitled to surrender and shall refund to the member bank the proportionate amount due such bank on account of the stock canceled.
${ }^{2}$ Section 5 of the Federal Reserve Act provides that "Shares of the capital stock of Federal Reserve Banks owned by member banks shall not be transferred or hypothecated." This provision pre. ents a transfer of Federal Reserve Bank stock by purchase, but does not pre' ent a
transfer by operation of law. When there is a merger of member banks involving the liquidation of one of such banks and the purchasing of the assets of the liquidating bank by the bank continuing in existence, it is necessary for the liquidating bank to surrender its Federal Reser e Bank stock and for the purchasing bank to apply for new stock. On the other hand, if member banks consolidate under a statute which does not require the liquidation of any of the consolidating banks, and the consolidted bank continues the corporate identity of one of the consolidating banks, and the assets and obligations of the other consolidating banks are transierred to the consolidated bank by oreration of law, stock of the other consolidating banks as soon as the consolidation takes effect and such stock technically need not be surrendered. The certificates of stock issued in the names of the consolidating banks, hove er should be surrende"ed and canceled, and a new certificate should be issued in lieu the eof, in the new name of the consolidated bank, as pro ided in the last parasraph of this re ulation. A consolidation of national banks under the act of Con'ress entitled "An act to pro ide for the consolidation of national banking associations," approved Nov. 7,1918 , meets all of these conditions.
2. Insolvency of member bank. -Whenever a member bank shall be declared insolvent and a receiver appointed by the proper authorities, such receiver shall file with the Federal Reserve Bank of which the insolvent bank is a member an application on F. R. B. Form 87, which is made a part of this regulation, for the surrender and cancellation of the stock held by such insolvent member bank, and for the refund of all balances due to it. Upon approval of this application by the Federal Reserve agent and the Federal Reserve Board, the Federal Reserve Bank shall accept and cancel the stock surrendered, and shall adjust accounts between the member bank and the Federal Reserve Bank by applying to any indebtedness of the insolvent member bank to such Federal Reserve Bank all cash-paid subscriptions made by it on the stock canceled with one-half of 1 per centum per month from the period of last dividend, if earned, not to exceed the book value thereof, and the balance, if any, shall be paid to the duly authorized receiver of such insolvent member bank.
3. Voluntary liquidation of member bank.-Whenever a member bank goes into voluntary liquidation and a liquidating agent is appointed, such agent shall file with the Federal Reserve Bank of which it is a member an application on F. R. B. Form 86, which is made a part of this regulation, for the surrender and cancellation of the stock held by and for the refund of all balances due to such liquidating member bank. Upon approval of this application by the Federal Reserve agent and the Federal Reserve Board, the Federal Reserve Bank shall accept and cancel the stock surrendered, and shall adjust accounts between the liquidating member bank and the Federal Reserve Bank by applying to the indebtedness of the liquidating member bank to such Federal Reserve Bank all cash-paid subscriplions made by it on the stock canceled with one-half of 1 per centum per month from the period of last dividend, if earned, not to exceed the book value thereof, and the balance, if any, shall be paid to the duly authorized liquidating agent of such liquidating member bank.
4. Consolidation of member bank.-Whenever there is a consolidation of two or more member banks which results in the consolidated bank acquiring by operation of law (see note 2) the Federal Reserve Bank stock owned by the other consolidating banks, and which also results in the consolidated bank having a paid-up capital and surplus less than the aggregate paid-up capital and surplus of the consolidating member banks, the consolidated bank shall file with the Federal Reserve Bank of which it is a member an applicaticn for the surrender and cancellation of stock on F. R.B. Form 60a, which is made a part of this regulation. Upon the approval of this application by the Federal Reserve agent and the Federal Reserve Board, the Federal Reserve Bank shall accept and cancel the stock which the applying bank is entitled to surrender, and shall refund to the applying bank the proportionate amount due such bank on account of the stock canceled.
5. Certifying reductions of Federal Reserve Bank stock.All reductions of the capital stock of a Federal Reserve Bank shall, in accordance with the provisions of section 6 of the Federal Reserve Act, be certified to the Comptroller of the Currency by the board of directors of such Federal Reserve Bank on F. R. B. Form 59, which is made a part of this regulation. Such certifications shall be made quarterly as of the last days of December, March, June, and September of each year. A duplicate copy of each certificate shall be forwarded to the Federal Reserve Board.

## III. Cancellation of old and issue of new stock certificates

Whenever a member bank changes its name or, by consolidation with another member bank acquires by operation of law (see note 2) the Federal Reserve Bank stock previously held by such other member bank, it shall surrender to the Federal Reserve Bank the certificate of Federal Reserve Bank stock which was issued to it under its old name, or which was issued to such other member.
bank. The certificate so surrendered shall be indorsed by the member bank surrendering it or by the member bank to which it was originally issued and shall be accompanied by proper proof of the change of name or consolidation. Upon receipt of such certificate of stock so indorsed, together with such proof, the Federal Reserve Bank shall cancel the certificate so surrendered and shall issue in lieu thereof to and in the name of the member bank surrendering it a new certificate for the number of shares represented by the certificate so surrendered, or if the member bank is entitled to surrender some of the stock which is represented by the surrendered certificate, and an application for the surrender and cancellation of such stock is at the same time made in accordance with this regulation, the new certificate shall be for the number of shares represented by the surrendered certificate less the number of shares canceled pursuant to such application. All cases where certificates of stock are surrendered and new certificates issued in lieu thereof and in a different name shall be reported to the Federal Reserve Board by the Federal Reserve agent.

## REGULATION J, SERIES OF 1920.

(Superseding Regulation J of 1917.)

## Check Clearing and Collection.

Section 16 of the Federal Reserve Act authorizes the Federal Reserve Board to require each Federal Reserve Bank to exercise the function of a clearing house for its member banks, and section 13 of the Federal Reserve Act, as amended by the act approved June 21, 1917, authorizes each Federal Reserve Bank to receive from any nonmember bank or trust company, solely for the purposes of exchange or of collection, deposits of current funds in lawful money, national-bank notes, Fed eral Reserve notes, checks and drafts payable upon presentation, or maturing notes and bills, provided such nonmember bank or trust company maintains with its Federal Reserve Bank a balance sufficient to offset the items in transit held for its account by the Federal Reserve Bank.
In pursuance of the authority vested in it under these provisions of the law, the Federal Reserve Board, desiring to afford both to the public and to the various banks of the country a direct, expeditious, and economical system of check collection and settlement of balances, has arranged to have each Federal Reserve Bank exercise the functions of a clearing house for such of its member banks as desire to avail themselves of its privileges and for such nonmember State banks and trust companies as may maintain with the Federal Reserve Bank balances sufficient to qualify them under the provisions of section 13 to send items to Federal Reserve Banks for purposes of exchange or of collection. Such nonmember State banks and trust companies will hereinafter be referred to in this regulation as nonmember clearing banks.
Each Federal Reserve Bank shall exercise the functions of a clearing house under the following general terms and conditions:
(1) Each Federal Reserve Bank will receive at par from its member banks and from nonmember clearing banks in its district, checks ${ }^{1}$ drawn on all member and nonmember clearing banks and on all other nonmember banks which agree to remit at par through the Federal Reserve Bank of their district.
(2) Each Federal Reserve Bank will receive at par from other Federal Reserve Banks, and from all member and nonmember clearing banks, regard less of their location, for the credit of their accounts with their respective Federal

1 A check is senerally defined as a draft or order upon a bank or banking house, purporting to be drawn upon a deposit of funds, for the payment or to him or his order, or to bearer, and payable instantly on demand.

Reserve Banks, checks drawn upon all member and nonmember clearing banks of its district and upon all other nonmember banks of its district whose checks are collected at par by the Federal Reserve Bank.
(3) Immediate credit entry upon receipt subject to final payment will be made for all such items upon the books of the Federal Reserve Bank at full face value, but the proceeds will not be counted as part of the minimum reserve nor become available to meet checks drawn until such time as may be specified in the appropriate time schedule referred to in subdivision 7.
(4) Checks received by a Federal Reserve Bank on its member or nonmember clearing banks will be forwarded direct to such banks and will not be charged to their accounts until sufficient time has elapsed within which to receive advice of payment, as shown by the appropriate time sched ule referred to in subdivision 7 .
(5) Under this plan each Federal Reserve Bank will receive at par from its member and nonmember clearing banks checks on all member and nonmember clearing banks and on all other nonmember banks whose checks can be collected at par by any Federal Reserve Bank. Member and nonmember clearing banks will be required by the Federal Reserve Board to provide funds to cover at par all checks received from or for the account of their Federal Reserve Banks: Provided, however, That a member or nonmember clearing bank may ship currency or apecie from its own vaults at the expense of its Federal Reserve Bank to cover any deficiency which may arise because of and only in the case of inability to provide items to offset checks received from or for the account of its Federal Reserve Bank. ${ }^{1}$
(6) Section 19 of the Federal Reserve Act provides that-

The required balance carried by a member bank with a Federal Reserve Bank may, under the regulations and subject to such penalties as may be prescribed by the Federal Reserve Board, he checked against and withdrawn by such nember bank for the purpose of meeting exist-
ing liabilities: Provided, however, That no bank shall at any time make ing liabilities: Provided, however, That no bank shall at any time make
new loans or shall pay any dividends unless and until the total balance now loans or shall pay any divid
required by law is fully restored.

Items can not be counted as part of the minimum reserve balance to be carried by a member bank with its Federal Reserve Bank until such time as may be specified in the appropriate time schedule referred to in subdivision 7. Therefore, should a member bank draw against items before such time, the draft would be charged against its reserve balance if such balance were sufficient in amount to pay it; but any resulting impairment of reserve balances would be subject to all the penalties provided by the act.

Inasmuch as it is essential that the law in respect to the maintenance by member banks of the required minimum reserve balance shall be strictly complied with, the Federal Reserve Board, under authority vested in it by section 19 of the act, has prescribed as the basic penalty for any deficiency in reserves a sum equivalent to an interest charge on the amount of the deficiency of 2 per cent per annum above ninety-day discount rate of the Federal Reserve Bank of the district in which the member bank is located, and has announced that it will prescribe for any Federal Reserve district, upon the application of the Federal Reserve Bank of that district, as an additional progressive penalty for any subsequent deficiency by the same member bank during the same calendar year a sum equivalent to an interest charge on the amount of the subsequent deficiency at a rate increasing one-half of 1 per cent for each such subsequent deficiency.
(7) Each Federal Reserve Bank will determine by analysis the amounts of uncollected funds appearing on its books to the credit of each member bank. Such analysis will show the true status of the reserve held by

[^4]the Federal Reserve Bank for each member bank and will enable it to apply the penalty for impairment of reserve. Each Federal Reserve Bank will publish time schedules showing the time at which any item sent to it will be counted as reserve and become available to meet any checks drawn.
(8) In handling items for member and nonmember clearing banks, a Federal Reserve Bank will act as agent only. The Board will require that each member and nonmember clearing bank authorize its Federal Reserve Bank to send checks for collection to banks on which checks are drawn, and, except for negligence, such Federal Reserve Bank will assume no liability. Any further requirements that the Board may deem necessary will be set forth by the Federal Reserve Banks in their letters of instruction to their member and nonmember clearing banks. Each Federal Reserve Bank will also promulgate rules and regulations governing the details of its operations as a clearing house, such rules and regulations to be binding upon all member and nonmember banks which are clearing through the Federal Reserve Bank.

## REGULATION K, SERIES OF 1920.

(Superseding Regulation K of 1920, issued in Mareh, 1920.)
Banking Corporations Authorized to do Foretgn Banking Business under the Terms of Section 25 (a) of the Federal Reserve Act.

## I. Organization.

Any number of natural persons, not less in any case than five, may form a Corporation ${ }^{1}$ under the provisions of section 25 (a) for the purpose of engaging in international or foreign banking or other international or foreign financial operations or in banking or other financial operations in a dependency or insular possession of the United States either directly or through the agency, ownership, or control of local institutions in foreign countries or in such dependencies or insular possessions.

## II. Articles of association.

Any persons desiring to organize a corporation for any of the purposes defined in section 25 (a) shall enter into articles of association (see F. R. B. Form 151 which is suggested as a satisfactory form of articles of association) which shall specify in general terms the objects for which the Corporation is formed, and may contain any other provisions not inconsistent with law which the Corporation may see fit to adopt for the regulation of its business and the conduct of its affairs. The articles of association shall be signed by each person intending to participate in the organization of the Corporation and when signed shall be forwarded to the Federal Reserve Board in whose office they shall be filed.

## III. Organization certificate.

All of the persons signing the articles of association shall under their hands make an organization certificate on F. R. B. Form 152, which is made a part of this regulation, and which shall state specifically:

First. The name assumed by the Corporation.
Second. The place or places where its operations are to be carried on.
Third. The place in the United States where its home office is to be located.
Fourth. The amount of its capital stock and the number of shares into which it shall be divided.

1 Whenever these regulations refer to a Corporation spelled with a capitaic, Federal Reserve Act.

Fifth. The names and places of business or residences of persons executing the organization certificate and the number of shares to which each has subscribed.

Sixth. The fact that the certificate is made to enable the persons subscribing the same and all other persons, firms, companies, and corporations who or which may thereafter subscribe to or purchase shares of the capital stock of such Corporation to avail themselves of the advantages of this section.

The persons signing the organization certificate shall acknowledge the execution thereof before a judge of some court of record or notary public who shall certify thereto under the seal of such court or notary. Thereafter the certificate shall be forwarded to the Federal Reserve Board to be filed in its office.

## IV. Title.

Inasmuch as the name of the Corporation is subject to the approval of the Federal Reserve Board, a preliminary application for that approval should be filed with the Federal Reserve Board on F. R. B. Form 150, which is made a part of this regulation. This application should state merely that the organization of a Corporation under the proposed name is contemplated and may request the approval of that name and its reservation for a period of 30 days. No Corporation which issues its own bonds, debentures, or other such obligations will be permitted to have the word "bank" as a part of its title. No Corporation which has the word "Federal" in its title will be permitted also to have the word "bank" as a part of its title. So far as possible the title of the Corporation should indicate the nature or reason of the business contemplated and should in no case resemble the name of any other corporation to the extent that it might result in misleading or deceiving the public as to its identity, purpose, connections, or affiliations.

## V. Authority to commence business.

After the articles of association and organization certificate have been made and filed with the Federal Reserve Board, and after they have been approved by the Federal Reserve Board and a preliminary permit to begin business has been issued by the Federal Reserve Board, the association shall become and be a body corporate, but none of its powers except such as are incidental and preliminary to its organization shall be exercised until it has been formally authorized by the Federal Reserve Board by a final permit generally to commence business.
Before the Federal Reserve Board will issue its final permit to commence business, the president or cashier, together with at least three of the directors, must certify (a) that each director elected is a citizen of the United States; (b) that a majority of the shares of stock is owned by citizens of the United States, by corporations the controlling interest in which is owned by citizens of the United States, chartered under the laws of the United States, or by firms or companies the controlling interest in which is owned by citizens of the United States; and (c) that of the authorized capital stock specified in the articles of association at least 25 per cent has been paid in in cash and that each shareholder has individually paid in in cash at least 25 per cent of his stock subscription. Thereafter the cashier shall certify to the payment of the remaining installments as and when each is paid in in accordance with law.

## VI. Capital stock.

No Corporation may be organized under the terms of section 25 (a) with a capital stock of less than $\$ 2,000,000$. The par value of each share of stock shall be specified in the articles of association, and no Corporation will be permitted to issue stock of no par value. If there is more than one class of stock, the name and amount of each class and the obligations, rights, and privileges attaching thereto shall be set forth fully in the articles of association. Each class of stock shall be so named as to indicate to the in-
vestor as nearly as possible what is its character and to put him on notice of any unusual attributes.

## VII. Transfers of stock.

Section 25 (a) provides in part that-
A majority of the shares of the capital stock of any such corporation shall at all times be held and owned by the citizens of the United States, of the United States, chartered under the laws of the United States or of a State of the United States, or by firms or companies the controlling interest in which is owned by citizens of the United States.
In order to insure compliance at all times with the requirements of this provision after the organization of the Corporation, shares of stock shall be issuable and transferable only on the books of the Corporation. Every application for the issue or transfer of stock shall be accompanied by an affidavit of the party to whom it is desired to issue or transfer stock, or by his or its duly authorized agent, stating-

In the case of an individual.-(a) Whether he is or is not a citizen of the United States and if a citizen of the United States, whether he is a natural born citizen or a citizen by naturalization, and if naturalized, whether he remains for any purpose in the allegiance of any foreign sovereign or state; (b) whether there is or is not any arrangement under which he is to hold the shares or any of the shares which he desires to have issued or transferred to him, in trust for or in any way under the control of any foreign state or any foreigner, foreign corporation, or any corporation under foreign control, and if so, the nature thereof.

In the case of a corporation.-(a) Whether such corporation is or is not chartered under the laws of the United States or of a State of the United States. If it is not, no further declaration is necessary, but if it is, it must also be stated ( $b$ ) whether the controlling interest in such corporation is or is not owned by citizens of the United States, and (c) whether there is or is not any arrangement under which such coropration will hold the shares or any of the shares if issued or transferred to such corporation, in trust for or in any way under the control of any foreign state or any foreigner or foreign corporation or any corporation under foreigu control, and, if so, the nature thereof.
In the case of a firm or company.-(a) Whether the controlling interest in such firm or company is or is not owned by citizens of the United States and, if so, (b) whether there is or is not any arrangement under which such firm or company will hold the shares or any of the shares if issued or transferred to such firm or company in trust for or in any way under the control of any foreign state or any foreigner or foreign corporation or any corporation under foreign control, and, if so, the nature thereof.

The board of directors of the Corporation, whether acting directly or through an agent, may, before making any issue or transfer of stock, require such further evidence as in their discretion they may think necessary in order to determine whether or not the issue or transfer of the stock would result in a violation of the law. No issue or transfer of stock which would cause 50 per cent or more of the total amount of stock issued or outstanding to be held contrary to the provisions of the law or these regulations shall be made upon the books of the Corporation. The decision of the board of directors in each case shall be final and conclusive and not subject to any question by any person, firm, or corporation on any ground whatsoever.

If at any time by reason of the fact that the holder of any shares of the Corporation ceases to be a citizen of the United States, or, in the opinion of the board of directors, becomes subject to the control of any foreign state or foreigner or foreign corporation or corporation under foreign control, 50 per cent or more of the total amount of capital stock issued or outstanding is held contrary to the provisions of the law or these regulations, the board of directors may, when apprised of that fact, forthwith serve on the holder of the shares in question a notice in writing requiring such nolder within two months to transfer such shares to a citi-
zen of the United States, or to a firm, company, or corporation approved by the board of directors as an eligible stockholder. When such notice has been given by the board of directors the shares of stock so held shall cease to confer any vote until they have been transferred as required above and if on the expiration of two months after such notice the shares shall not have been so transferred, the shares shall be forfeited to the Corporation.
The board of directors shall prescribe in the by-laws of the Corporation appropriate regulations for the registration of the shares of stock in accordance with the terms of the law and these regulations. The by-laws must also provide that the certificates of stock issued by the Corporation shall contain provisions sufficient to put the holder on notice of the terms of the law and the regulations of the Federal Reserve Board defining the limitations upon the rights of transfer.

## VIII. Operations in the United States.

No Corporation shall carry on any part of its business in the United States except such as shall be incidental to its international or foreign business. Agencies may be established in the United States with the approval of the Federal Reserve Board for specific purposes, but not generally to carry on the business of the Corporation.

## IX. Investments in the stock of other corporations.

It is contemplated by the law that a Corporation shall conduct its business abroad either directly or indirectly through the ownership or control of corporations, and it is accordingly provided that a Corporation may invest in the stock, or other certificates of ownership, of any other corporation organized-
(a) Under the provisions of section 25 (a) of the Federal Reserve Act;
(b) Under the laws of any foreign country or a colony or dependency thereof;
(c) Under the laws of any State, dependency, or insular possession of the United States;
provided, first, that such other corporation is not engaged in the general business of buying or selling goods, wares, merchandise, or commodities in the United States; and second, that it is not transacting any business in the United States except such as is incidental to its international or foreign business.
Except with the approval of the Federal Reserve Board, no Corporation shall invest an amount in excess of 15 per cent of its capital and surplus in the stock of any corporation engaged in the business of banking, or an amount in excess of 10 per cent of its capital and surplus in the stock of any other kind of corporation.
No Corporation shall purchase any stock in any other corporation organized under the terms of section 25 (a) or under the laws of any State, which is in substantial competition therewith, or which holds stock or certificates of ownership in corporations which are in substantial competition with the purchasing Corporation. This restriction, however, does not apply to corporations organized under foreign laws.

## X. Branches.

No Corporation shall establish any branches except with the approval of the Federal Reserve Board, and in no case shall any branch be established in the United States.
XI. Issue of debentures, bonds, and promissory notes.

Approval of the Federal Reserve Board.-No Corporation shall make any public or private issue of its debentures, bonds, notes, or other such obligations without the approval of the Federal Reserve Board, but this restriction shall not apply to notes issued by the Corporation in borrowing from banks or bankers for temporary purposes not to exceed one year. The approval of the Federal Reserve Board
will be based solely upon the right of the Corporation to make the issue under the terms of this regulation and shall not be understood in any way to imply that the Federal Reserve Board has approved or passed upon the merits of such obligations as an investment. The Federal Reserve Board will consider the general character and scope of the business of the Corporation in determining the amount of debentures, bonds, notes, or other such obligations of the Corporation which may be issued by it.

Application.-Every application for the approval of any such issue by a Corporation shall be accompanied by (1) a statement of the condition of the Corporation in such form and as of such date as the Federal Reserve Board may require; (2) a detailed list of the securities by which it is proposed to secure such issue, stating their maturities, indorsements, guaranties, or collateral, if any, and in general terms the nature of the transaction or transactions upon which they were based; and (3) such other data as the Federal Reserve Board may from time to time require.

Advertisements.-No circular, letter, or other document advertising the issue of the obligations of a Corporation shall state or contain any reference to the fact that the Federal Reserve Board has granted its approval of the issue to which the advertisement relates. This requirement will be enforced strictly in order that there may be no possibility of the public's misconstruing such a reference to be an approval by the Federal Reserve Board of the merits or desirability of the obligations as an investment.

## XII. Sale of foreign securities.

Approval of the Federal Reserve Board.--No Corporation shall offer for sale any foreign securities with its indorsement or guaranty, except with the approval of the Federal Reserve Board, but such approval will be based solely upon the right of the Corporation to make such a sale under the terms of this regulation and shall not be understood in any way to imply that the Federal Reserve Board has approved or passed upon the merits of such securities as an investment.
Application.-Every application for the approval of such sale shall be accompanied by a statement of the character and amount of the securities proposed to be sold, their indorsements, guaranties, or collateral, if any, and such other data as the Federal Reserve Board may from time to time require.

Advertisements.-No circular, letter, or other document advertising the sale of foreign securities by a Corporation with its indorsement or guaranty shall state or contain any reference to the fact that the Federal Reserve Board has granted its approval of the sale of the securities to which the advertisement relates.

## XIII. Acceptances.

Kinds.-Any Corporation may accept (1) drafts and bills of exchange drawn upon it which grow out of transactions involving the importation or exportation of goods, and (2) drafts and bills of exchange which are drawn by banks or bankers located in foreign countries or dependencies or insular possessions of the United States for the purpose of furnishing dollar exchange as required by the usages of trade in such countries, dependencies, and possessions, provided, however, that, except with the approval of the Federal Reserve Board and subject to such limitations as it may prescribe, no Corporation shall exercise its power to accept drafts or bills of exchange if at the time such drafts or bills are presented for acceptance it has outstanding any debentures, bonds, notes, or other such obligations issued by it.

Maturity.-Except with the approval of the Federal Reserve Board, no Corporation shall accept any draft or bill of exchange which grows out of a transaction involving the importation or exportation of goods with a maturity in excess of six months, or shall accept any draft or bill of exchange drawn for the purpose of furnishing dollar exchange with a maturity in excess of three months.

Limitations.-(1) Individual drawers: No acceptances shall be made for the account of any one drawer in an amount aggregating at any time in excess of 10 per cent of the subscribed capital and surplus of the Corporation, unless the transaction be fully secured or represents an exportation or importation of commodities and isguaranteed by a bank or banker of undoubted solvency. (2) Aggregates: Whenever the aggregate of acceptances outstanding at any time (a) exceeds the amount of the subscribed capital and surplus, 50 per cent of all the acceptances in excess of the amount shall be fully secured; or (b) exceeds twice the amount of the subscribed capital and surplus, all the acceptances outstanding in excess of such amount shall be fully secured. (The Corporation shall elect whichever requirement $(a)$ or (b) calls for the smaller amount of secured acceptances.) In no event shall any Corporation have outstanding at any one time acceptances drawn for the purpose of furnishing dollar exchange in an amount aggregating more than 50 per cent of its subscribed capital and surplus.

Reserves.-Against all acceptances outstanding which mature in 30 days or less a reserve of at least 15 per cent shall be maintained, and against all acceptances outstanding which mature in more than 30 days a reserve of at least 3 per cent shall be maintained. Reserves against acceptances must be in liquid assets of any or all of the following kinds: (1) cash; (2) balances with other banks; (3) bankers' acceptances; and (4) such securities as the Federal Reserve Board may from time to time permit.

## XIV. Deposits.

In the United States.-No Corporation shall receive in the United States any deposits except as are incidental to or for the purpose of carrying out transactions in foreign countries or dependencies of the United States where the Corporation has established agencies, branches, correspondents, or where it operates through the ownership or control of subsidiary corporations. Deposits of this character may be made by individuals, firms, banks, or other corporations, whether foreign or domestic, and may be time deposits or on demand.
Outside the United States.-Outside the United States a Corporation may receive deposits of any kind from individuals, firms, banks, or other corporations: Provided, however, That if such Corporation has any of its bonds, debentures, or other such obligations outstanding it may receive abroad only such deposits as are incidental to the conduct of its exchange, discount, or loan operations.

Reserves.-Against all deposits received in the United States reserve of not less than 13 per cent must be maintained. This reserve may consist of cash in vault, a balance with the Federal Reserve Bank of the district in which the head office of the Corporation is located, or a balance with any member bank. Against all deposits received abroad the Corporation shall maintain such reserves as may be required by local laws and by the dictates of sound business judgment and banking principles.

## XV. General limitations and restrictions.

Liabilities of one borrower.-The total liabilities to a Corporation of any person, company, firm, or corporation for money borrowed, including in the liabilities of a company or firm the liabilities of the several members thereof, shall at no time exceed 10 per cent of the amount of its subscribed capital and surplus, except with the approval of the Federal Reserve Board: Provided, however, That the discount of bills of exchange drawn in good faith against actually existing values and the discount of commercial or business paper actually owned by the person negotiating the same shall not be considered as money borrowed within the meaning of this paragraph. The liability of a customer on account of an acceptance made by the Corporation for his account is not a liability for money borrowed within the meaning of this paragraph unless and
until he fails to place the Corporation in funds to cover the payment of the acceptance at maturity or unless the Corporation itself holds the acceptance.
Aggregate liabilities of the Corporation.-The aggregate of the Corporation's liabilities outstanding on account of acceptances, average domestic and foreign deposits, debentures, bonds, notes, guaranties, indorsements, and other such obligations shall not exceed at any one time ten times the amount of the Corporation's subscribed capital and surplus except with the approval of the Federal Reserve Board. In determining the amount of the libilities within the meaning of this paragraph, indorsements of bills of exchange having not more than six months to run, drawn, and accepted by others than the Corporation, shall not be included.

Operations abroad.-Except as otherwise provided in the laiv and these regulations, a Corporation may exercise abroad not only the powers specifically set forth in the law but also such incidental powers as may be usual in the determination of the Federal Reserve Board in connection with the transaction of the business of banking or other financial operations in the countries in which it shall transact business. In the exercise of any of these powers abroad a Corporation must be guided by the laws of the country in which it is operating and by sound business judgment and banking principles.

## XVI. Management.

The directors, officers, or employees of a Corporation shall exercise their rights and perform their duties as directors, officers, or employees, with due regard to both the letter and the spirit of the law and these regulations. For the purpose of these regulations the Corporation shall, of course, be responsible for all acts of omission or commission of any of its directors, officers, employees, or representatives in the conduct of their official duties. The character of the management of a Corporation and its general attitude toward the purpose and spirit of the law and these regulations will be considered by the Federal Reserve Board in acting upon any application made under the terms of these regulations.

## XVII. Reports and examinations.

Reports.-Each Corporation shall make at least two reports annually to the Federal Reserve Board at such times and in such form as it may require.

Examinations.-Each Corporation shall be examined at least once a year by examiners appointed by the Federal Reserve Board. The cost of examinations shall be paid by the Corporation examined.

## XVIII. Amendments to regulations.

These regulations are subject to amendment by the Federal Reserve Board from time to time: Provided, however, That no such amendment shall prejudice obligations undertaken in good faith under regulations in effect at the time they were assumed.

## REGULATION L, SERIES OF 1920.

Interlocking Bank Directorates Under the Clayton Act.

## I. Definitions.

Within the meaning of this regulation-
The term "member bank" shall apply to any national bank and any State bank or trust company which is a member of the Federal Reserve System.

The term "national bank" shall be construed to apply not only to national banking associations, but also to all
banks and trust companies doing business in the District of Columbia, regardless of the sources of their charter.
The term "resources" shall be construed to mean an amount equal to the sum of the deposits, capital, surplus, and undivided profits.

The term "State bank" shall include any bank, banking association, or trust company incorporated under State law.

The term "private banker" shall apply to any unincorporated individual engaging in one or more phases of the banking business as that term is generally understood and to any member of an unincorporated firm engaging in such business.
The term "Edge Act" shall mean section 25 (a) of the Federal Reserve Act, as amended December 24, 1919.
The term "Edge Corporation" shall mean any corporation organized under the provisions of the Edge Act.

The term "city of over 200,000 inhabitants" includes any city, incorporated town, or village of more than 200,000 inhabitants, as shown by the last preceding decennial census of the United States. Any bank located anywhere within the corporate limits of such city is located in a city of over 200,000 inhabitants within the meaning of the Clayton Act, even though it is located in a suburb or an outlying district at some distance from the principal part of the city.

## II. Prohibitions of Clayton Act.

Under section 8 of the Clayton Antitrust Act-
(1) No person who is a director or other officer or employee of a national bank or Edge Corporation having resources aggregating more than $\$ 5,000,000$ can legally serve at the same time as director, officer, or employee of any other national bank or Edge Corporation, regardless of its location.
(2) No person who is a director in a State bank or trust company having resources aggregating more than $\$ 5,000,000$ or who is a private banker having resources aggregating more than $\$ 5,000,000$ can legally serve at the same time as director of any national bank or Edge Corporation, regardless of its location.
(3) No person can legally be a director, officer, or employee of a national bank or Edge Corporation located in a city of more than 200,000 inhabitants who is at the same time a private banker in the same city or a director, officer, or employee of any other bank (State or national) located in the same city, regardless of the size of such bank.
The eligibility of a director, officer, or employee under the foregoing provisions is determined by the average amount of deposits, capital, surplus, and undivided profits as shown in the official statements of such bank, banking association, or trust company filed as provided by law during the fiscal year next preceding the date set for the annual election of directors, and when a director, officer, or employee has been elected or selected in accordance with the provisions of the Clayton Act it is lawful for him to continue as such for one year thereafter under said election or employment.

When any person elected or chosen as a director, officer, or employee of any bank is eligible at the time of his election or selection to act for such bank in such capacity his eligibility to act in such capacity is not affected by reason of any change in the affairs of such bank from whatsoever cause, until the expiration of one year from the date of his election or employment.

## III. Exceptions.

The provisions of section 8 of the Clayton Act-
(1) Do not apply to mutual savings banks not having a capital stock represented by shares.
(2) Do not prohibit a person from being at the same time a director, officer, or employee of a national bank or Edge Corporation and not more than one other national bank, Edge Corporation, State bank, or trust company, where the
entire capital stock if one is owned by the stockholders of the other.
(3) Do not prohibit a person from being at the same time a class A director of a Federal Reserve Bank and also an officer or director, or both an officer and a director, in one member bank.
(4) Do not prohibit a person who is serving as director of a national bank, or Edge Corporation, even though it has resources aggregating over $\$ 5,000,000$, from serving at the same time as director of any number of State banks and trust companies, provided such State institutions are not located in the same city of over 200,000 inhabitants as the national bank or Edge Corporation, and do not have resources aggregating in the case of any one bank more than $\$ 5,000,000$.
(5) Do not prohibit a person from serving at the same time as director, officer, or employee of any number of national banks, provided no two of them are located in the same city of over 200,000 inhabitants and no one of them has resources aggregating over $\$ 5,000,000$.
(6) Do not prohibit a person who is not a director, officer, or employee of any national bank or Edge Corporation from serving at the same time as officer, director, or employee of any number of State banks or trust companies, regardless of their locations and resources.
(7) Do not prohibit a person who is an officer or employee but not a director of a State bank from serving as director, officer, or employee of a national bank, or Edge Corporation, even though such State bank has resources aggregating over $\$ 5,000,000$, provided both banks are not located in the same city of over 200,000 inhabitants.
(8) Do not prohibit a person who is an officer or employee but not a director of a national bank or Edge Corporation from serving at the same time as director, officer, or employee of a State bank, even though such State bank has resources aggregating over $\$ 5,000,000$, provided both banks are not located in the same city of over 200,000 inhabitants.
(9) Do not apply to persons who have obtained the consent or approval of the Federal Reserve Board under the provisions of the Kern amendment, section 25 of the Federal Reserve Act, or the Edge Act, as hereinafter provided

Exceptions cumulative.-The above exceptions are cumulative.

## IV. Permission of the Federal Reserve Board under Kern amendment.

By the Kern amendment, approved May 15, 1916, as amended May 26, 1920, the Clayton Act was amended so as to authorize the Federal Reserve Board to permit any private banker or any officer, director, or employee of any member bank or class A director of a Federal Reserve Bank to serve as director, officer, or employee of not more than two other banks, banking associations, or trust companies coming within the prohibitions of the Clayton Act, provided such other banks are not in substantial competition with such private banker or member bank.

Substantial competition.-If the institutions involved are not in substantial competition, the Board is authorized, in its discretion, to grant, withhold, or revoke such consent; but if they are in substantial competition, the Board has no discretion in the matter and must refuse such consent.

When obtained.-Inasmuch as the Kern amendment excepts from the prohibitions of the Clayton Act only those "who shall first procure the consent of the Federal Reserve Board," it is a violation of the law to serve two or more institutions in the prohibited classes before such consent has been obtained. Such consent should be obtained, therefore, before becoming an officer, director, or employee of more than one bank in the prohibited classes. Such consent may be procured before the person applying therefor has been elected as a class A director of a Federal Reserve Bank or as a director of any member bank.

Applications for permission.-A person wishing to obtain the permission of the Federal Reserve Board to serve banks coming within the prohibitions of the Clayton Act should:
(1) Make formal application on F. R. B. Form 94, or, if a private banker, on F. R. B. Form 94d. Each of these forms is made a part of this regulation.
(2) Obtain from each of the banks involved a statement on F. R. B. Form 94a, which is made a part of this regulation, showing the character of its business, together with a copy of its last published statement of condition, and, if a private banker, make a statement on F. R. B. Form $94 a$ showing the character of his or his firm's business.
(3) Forward all these papers to the Federal Reserve agent of his district, who will attach his recommendation on F. R. B. Form 94b, which is made a part of this regulation, and forward them in due course to the Federal Reserve Board.

Approval or disapproval.-As soon as an application is acted upon by the Board, the applicant will be advised of the action taken.

If the Board approves the application, a formal certificate of permission to serve on the banks involved will be issued to the applicant.
Rehearing.-If the Board decides that the banks are in substantial competition and that it can not approve the application, it will, upon petition of the applicant, reconsider its decision and afford him every opportunity to present any additional facts or arguments bearing on the subject.

Effect of permits.-Permission once granted is continuing until revoked, and need not be renewed.

Revocation.-All permits, however, are subject to revocation at any time in the discretion of the Federal Reserve Board. The issuance of a permit to any person shall have the effect of revoking any or all permits which may have been issued previously to that person.

## V. Permits under section 25 of the Federal Reserve Act.

With the approval of the Federal Reserve Board, any director, officer, or employee of a member bank which has invested in the stock of any corporation principally engaged in international or foreign banking or financial operations or banking in a dependency or insular possession of the United States, under the provisions of section 25 of the Federal Reserve Act, may serve as director, officer, or employee of any such foreign bank or financial corporation. Applications for approval. - The approval of the Federal Reserve Board for such interlocking directorates may be obtained through an informal application in the form of a letter addressed to the Federal Reserve Board either by the officer, director, or employee involved, or in his behalf by one of the banks which he is serving. Such application should be sent directly to the Federal Reserve Board.

## VI. Permits to serve Edge corporations.

With the approval of the Federal Reserve Board-
(1) Any officer, director, or employee of any member bank may serve at the same time as director, officer, or employee of any Edge Corporation in whose capital stock the member bank shall have invested.
(2) Any officer, director, or employee of any Edge Corporation may serve at the same time as officer, director, or employee of any other corporation in whose capital stock such Edge Corporation shall have invested under the provisions of the Edge Act.
Applications for approval.-Such approval may be obtained through an informal application in the form of a letter addressed to the Federal Reserve Board either by the director, officer, or employee involved, or in his behalf by one of the banks or corporations involved. Such applications should be sent directly to the Federal Reserve Board.

## RETAIL TRADE.

In the following tables is given a summary of the results obtained during the past few months in the 12 Federal Reserve districts on the regular retail trade index form from representative department stores. In districts Nos. $1,5,11$, and 12 the data were received in (and averages computed from) actual amounts (dollars). In districts Nos. 2, 3, 4, 6, 7, 8, 9 , and 10 the material was received in the form of percentages, the averages for the cities and districts computed from such percentages be-
ing weighted according to volume of business done during the calendar year 1919. For the month of September, the tables are based on reports from 24 stores in district No. 1, 14 in district No. 2, 35 in district No. 3, 19 in district No. 4, 24 in district No. 5, 10 in district No. 6, 6 in district No. 7, 8 in district No. 8, 5 in district No. 9, 13 in district No. 10, 16 in district No. 11, and 31 in district No. 12. The number of stores vary somewhat, due to the inclusion of new stores from time to time in the reporting list.

${ }^{1}$ Decrease.

## FOREIGN TRADE INDEX.

There is presented below a series of indexes designed to reflect movements in foreign trade of the United States, with fluctuations due to price changes eliminated. The commodities chosen for these indexes are those for which prices are compiled by the Federal Reserve Board in the preparation of its international price index. The list includes 25 of the most important imports, the value of which in 1913 formed 47.7 per cent of the total import values, and 29 of the most important exports, the value of which in 1913 formed 56.3 per cent of the total export values. The list of the commodities is given in the July Bulletin. ${ }^{1}$

After their decline in August total exports, as measured in physical quantities of goods rather than in values, again showed a slight increase during September, though they were still considerably less than for July. The exports of producers' goods again showed a decrease, but this was more than compensated for by the increase in raw materials, due to the seasonal movements of agricultural products. Total imports showed a further decline, being the lowest point reached during the year 1920. A very large decrease is noticeable in every class of imports, though the largest decrease is shown in producers' goods.

Value of exports and imports of selected commodities at 1913 prices.
[In thousands of dollars; i. e., 000 omitted.]
[Monthly average values, 1913=equal 100.]

1 The index numbers printed in this article are constructed by the various foreign statistical offices according to methods descriked in the Bulletin for January, 1920. In all cases except that of the United States the original basis upon which the index numkers have keen computed has been shifted to the 1913 base. The monthly and yearly index numkers are therefore cnly approximate. The latest fures are received by cable and are subject to correction.
${ }^{2}$ July 1, 1913, to June $30,1914=100$.
3 July, $1914=100$.
${ }^{4}$ End of July, $1914=100$.
${ }_{5}$ Last six months of 1917.

Current price studies of foreign countries show that with the exception of Australia and India, the present level is in each case below that of last spring. In France and Italy, however, the decline which marked the summer months has been reversed, and prices are again rising. Japanese prices have fallen by almost one-third from the high point of March, but in the last two months the recessions have been less marked than in the period just previous. Although declines have occurred in prices in Canada, the United Kingdom, and Sweden, they have been less pronounced than in the United States.

## ENGLAND.

The coal strike inaugurated on October 16 exceeds in importance any event of a strictly economic nature which has occurred in England since the armistice. Called originally for September 25, by a vote of 606,782 for and 238,865 against, it was temporarily avoided at that time by the suggestion of the Prime Minister that wages be fixed according to national output. The earlier proposal of the Government for an impartial tribunal to decide upon wages had been rejected by the miners' delegates. Wages
fixed according to output apparently appealed to the mine leaders but there was some difficulty in deciding upon the "datum line"-i. e., the point of production above which wage increases would be made. However, after conferences between mine owners, the miners' delegates, and Government representatives, the "datum line." was decided upon, and the wage increases to be allowed for output above this point agreed to. Annual output of $240,000,000$ tons, it was agreed, would allow for an increase of 1s. per day, $244,000,000$ tons an increase of 1s. 6 d . per day, and so on up to $256,000,000$ tons, which would provide an increase of 3 s . a day. This proposal was put to the miners but was rejected by them by a vote of 635,098 against, and 181,428 for. Meanwhile, some of the miners' leaders, such as Robert Smillie, had come out frankly in favor of accepting the proposal. In view of the fact that the vote was so strikingly against the suggestion of the Government, however, the strike was called October 16.

The strike continued until November 8, although the basis for adjustment was agreed upon on October 28. Delay in returning to work was caused by the fact that the terms of the agreement entered into by the mine owners
and the miners' delegates had to be submitted by ballot to the miners themselves. The agreement provides for an immediate wage increase of 2 s . a day. September output is made the basis or datum line of production; 6d. will be added to the daily wage if this output is exceeded, subtracted from it if output falls short of this figure. The 2 s . increase is to be effective until January 1, when output will be under review again. For the future the rate of increase during a given month will be fixed according to output for the preceding month. The increase in wages is to be financed from export coal profits. To this extent the adjustment is along the lines suggested by the Prime Minister prior to the strike. New features which have been introduced are the arrangement for owners' profits to increase or decrease with output and for the creation of the national wages board. The latter can not begin functioning until the end of March, but after that time will handle all questions connected with the adjustment of wages. If output falls below the datum line, owners' profits will be reduced as well as miners' wages. In this way a stimulus is given to all factors in the industry to increase production.

Financial conditions during September were substantially unchanged as compared with August. The ratio of reserves to deposit liabilities of the Bank of England declined from 14.3 per cent for the week ending. August 25 to 11.07 per cent for the week ending September 29. Coin and bullion held by the bank and the treasury fluctuated somewhat above £151,000,000 . Bank-note circulation increased approximately $£ 2,500,000$ during the month, but the currency note circulation was decreased by $£ 2,200,000$, leaving the issue with a margin of $£ 14,000,000$ under the limit fixed by law. With the increase in the sale of treasury bills,
temporary advances by the bank to the Government were materially decreased. The total floating debt, however, was $£ 32,000,000$ higher at the end of September than a month earlier. Repayment of the Anglo-French loan accounts for the increase.

Failure of the funding operations initiated by the treasury in the spring has revived the old issue of how to handle the floating debt. Some appear to favor a forced loan. Press reports indicate the possibility of 4 per cent bonds with the income exempt from supertax. As was reported in the Bullerin for September, powerful commercial interests oppose any action likely to decrease the floating debt at the risk of higher taxes, or tighter money.

Discount rates were slightly easier during the week ending September 24 than in the preceding weeks, 3 -months' bank bills being quoted at $6 \frac{11}{16}$, as compared with $6 \frac{11}{16} \frac{3}{4}$ during the week before. As the end of the quarter approached, however, money was very scarce and higher rates were obtainable.

A survey of the foreign-exchange situation and the trade of England with her former allies since the armistice discloses some interesting facts regarding the extent of the financial support which England has given the Continent during the past two years. It will be remembered that in making its final report in December, 1919, the committee on currency and the foreign exchanges after the war recommended that preference be given to exports to countries which could pay for them currently, since England herself would be expected to pay for her imports on the usual short-term basis. This view was not concurred in by all interests, however, and it seems clear that traders and bankers have done considerable long-time foreign financing.

${ }^{1}$ Less notes in currency notes account.
2 Held by the Bank of England and by the Treasury as note reserve.
In 1913,12 per cent of the value of British | In contrast with this small ratio for 1913, for exports went to France, Belgium, and Italy. the 18 months from January, 1919, wo July

1920, 26 per cent of her export values went to these same countries. In other words, over one-fourth of British exports, when expressed in terms of money values, went to France, Belgium, and Italy in the 18 months following the close of the war.

Imports from these three countries into England did not figure largely in the prewar trade, amounting to only 10 per cent in 1913. In the 18 months following the armistice, however, when England was sending a comparatively large proportion of her goods to these countries, she was receiving only 6 per cent of her imports from them. In the table below are presented, on a quarterly basis, the value of the goods exported by the United Kingdom to each one of these countries between January, 1919, and July, 1920.
Value of exports from the United Kingdom to France, Bulgium, and Italy, quarterly, January, 1919, to July, 1920.

| Imports from. | 89.6 | 34.0 | 25.3 |
| Balance of exports. | 197.5 | 71.8 | 33.3 |

Exports to France have been made on a large scale ever since the armistice and show little sign of diminishing in later months. The total for the period amounts to $£ 287,000,000$, which gives England a so-called favorable balance of $£ 197,500,000$. It is impossible to state how this trade balance has been financed, but it undoubtedly has taken from England a large volume of current funds.

Belgium has received goods to the value of $£ 105,800,000$ from the United Kingdom, and has sent in return goods to the value of $£ 34,-$ 000,000 , leaving a balance to be credited to the United Kingdom of $£ 71,800,000$. Italy has taken a far smaller amount than France or Belgium, and her unfavorable balance with England is appreciably smaller, amounting to only $£ 33,300,000$.

Some light is thrown on England's prospect of repayment by the figures showing her imports from these countries by quarters. Imports from France and Belgium have increased steadily since the armistice. In the case of Italy, the same rate of increase has not been attained. On the other hand, Italy's debts to Great Britain are smaller than those of France.

While England has been accumulating a large favorable balance with her former allies on the Continent, amounting to something over $£ 300,000,000$ for the 18 months between January, 1919, and July, 1920, her unfavorable balance with the United'States has been rapidly increased. Her total imports from the United States during the period were valued at $£ 854,-$ 000,000 , her exports to the United States at $£ 146,000,000$. Detailed quarterly figures are presented below.

As has been pointed out by practically all investigators of the foreign exchange situation since the war, the exchanges do not correctly reflect the trade balances between countries, but are greatly influenced by domestic credit expansion. Speculative buying of exchange likewise has been so prevalent in London and New York that certain exchanges have at times been maintained at a level higher than either the financial or trade position of the country justified. When such has been the case, however, the improvement caused by fictitious demand has usually been of short duration. With these facts in mind it may be worth while to review the fluctuations of francs, lire, and dollars in London. Pegging of the French, British, and Italian exchanges ceased toward the end of March, 1919. The pound sterling began to depreciate almost at once in the New York market, although various favorable factors partially supported it during the spring of the year. The movement was downward, with occasional reactions, until February,

1920, when it reached its lowest value. It began to improve following the announcement that the British would repay their share of the Anglo-French loan and under the influence of gold shipments from London. The upward movement continued until July, when another reaction set in, and since that time the movement has been generally downward. Although the seasonal demand for dollars had some influence in causing the reaction it was by no means entirely responsible for it.

With the removal of Government control in March, 1919, lire and francs depreciated in
terms of the pound and the dollar, and continued their downward course until May, 1920. They improved again for two or three months following the conference at Lympne and prospects of the payment of the indemnity, but have been depreciating since then.
In view of the situation as disclosed by the trade figures for France, Italy, and Belgium, it has become increasingly important to London that conditions on the Continent should improve. The financing which is being done for other European countries in less favorable circumstances makes the problem even more difficult.

The English commodity price situation con- sales have again been begun in Australia after trasts with the American in that, although in many ways trade conditions are similar in the two countries, price reduction has gone further on this side of the Atlantic than in England. According to the Statist index number, the decline from the peak of April amounts to 7 per cent in England; the Board's index for the United States shows a decline of 14 per cent since May. Cable advices from England seem to show, however, that price reductions have been widespread there during October, so it is possible that in industries where a deadlock existed during earlier months concessions have been made which will lead to lower prices and more active trade. The coal strike intervening, however, may lead to a retardation in the fall of prices.
Price trends during September were largely in the same direction as in August. Those industries which were most depressed and in which prices appear to have been weakest are cotton and wool. In the latter, free auction
a period of five years of Government control. Prices for certain grades of wool have declined in England from $33 \frac{1}{3}$ to 50 per cent from the high levels of last spring, and inactivity prevails in many branches of the industry. Some sections of the fine wool trade are apparently still working full capacity, reports from the west of England stating that most of the firms in that section have orders to occupy their mills for from 4 to 12 months. The spinning and weaving trade as a whole, however, reports considerable inactivity. Conditions in the cotton trade are equally depressed, and the Cotton Spinners' Association has recommended a limitation in output, to be made effective by shorttime work on Saturday and Monday for a month following October 23. Prices for Egyptian as well as American cotton have declined radically from former high levels. The boot and shoe industry is, on the whole, doing little, although reports from some regions show a certain amount of trading.

With the exception of sugar, coffee, and tea, September food prices were not strikingly different from August prices. Vegetable foods, according to the Statist index, increased slightly and animal foods declined. British sugar prices are now at approximately world levels, having declined from the somewhat higher levels of last spring. Due to the fact that sugar had been bought by the Government before the boom in prices occurred, the exorbitant American level was never reached there.

As a result of the decline in the price of tea, the Indian Tea Association is recommending that the crop for next year be no greater than 90 per cent of the average crops 1915-1919 or as an alternative that proprietors cease plucking on November 15, 1920. A scheme for the restriction of rubber production is likewise receiving the support of growers' associations in London and the east.

Stocks of coal throughout England were reported reasonably ample at the time the strike was called. Nevertheless, the Government gave out orders for decreased personal consumption of coal, exports were prohibited, and lighting restrictions which were effective during the war were reestablished. No statistics are available showing the extent of coal supplies held by metal industries and the railroads. On these depend the future activity in these lines. A press report of October 19 states that the iron and steel trades of the country will be closed by the end of the week. On October 17 another press report stated that the
majority of textile mills held less than two weeks' coal supply.

In striking contrast with the situation in the United States, where tonnage under construction has been steadily decreasing, in the United Kingdom there was an increase of 153,000 tons in the shipping under construction between June and September.

Foreign trade figures for September were only reasonably favorable. Imports were slightly less than for August and exports slightly more. The trade balance was more favorable than that of any month of the year with the exception of July. Comparing exports for September, 1920, with those for the same month last year, it is found that in spite of the inactivity complained of by the textile trades, exports of cotton yarns and manufactures were over twice as large in terms of money this year as last. Exports of woolen and worsted yarns and manufactures were 50 per cent greater, and an increase of almost 100 per cent had been made in the exports of iron and steel and manufactures thereof during the same period. Exports of these three groups of commodities and of rubber manufactures were more important in the September returns than were coal exports. The value of the coal exported was $£ 6,600,000$ for the month, the value of iron and steel, etc., $£ 10,900,000$; cotton yarns and manufactures, $£ 37,900,000$; woolen yarns, etc., $£ 10,900,000$, and rubber manufactures, $£ 10,900,000$,
$£ 7,800,000$.

${ }^{1}$ A verage of four quarterly estimates. Figures following are estimates taken at the end of each quarter.
2 Five weeks in the month.

The index number of the cost of living compiled by the ministry of labor increased three points in September as compared with six points in August. An increase in the price of bread, resulting from the removal of the Government subsidy, occurred in October.

Trade union unemployment shows a rather pronounced increase during the month of Sep-
tember, but even so does not give an accurate picture of total labor unemployment, since it covers only something over a million and a half workers. It represents full-time unemployment only, whereas much idleness has been caused in the textile and mining industries by part-time employment. The miners' strike forced something like a million men out of work
in the coal industry alone, and probably caused a reduction in employment in many other lines in which production had not already been curtailed. Three hundred forty-four thousand men and women were registered with the employment exchanges of the labor ministry on September 24.

## FRANCE.

Prices continued to fluctuate in France during September, but the general trend was again upward. Purchasers who had refused to buy during the summer were obliged to do so, and they found stocks lower than had been anticipated. This fact brought about more competition and higher prices, although there were few markets where trading was really active.

Just after the 1st of October, however, the coal controller announced decreased prices for metallurgical coke and some grades of coal. This reduction was immediately followed by the announcements of some of the most important iron and steel manufacturers in France reducing prices of their products from 140 to 250 francs a ton. If price decreases are maintained in this basic industry they will ultimately have a very important effect upon prices in general in France.

There was a distinct change in the position of the Bank of France during September. Gold holdings of the bank declined steadily throughout the month, and note circulation steadily increased. The decline in the gold reserve, representing a net decrease of $81,000,000$ francs, was due to shipments to the United States to meet the Anglo-French loan which matured in October. Weekly figures on holdings of gold and on note circulation are as follows:

Bank of France.
[In millions of francs.]

|  | Gold reserves. | Note circulation. |
| :---: | :---: | :---: |
| Sept. 2, 1920 | 3,612 | 38,333 |
| Sept. 9, 1920. | 3,592 | 38,622 |
| Sept. 16, 1920. | 3,542 | 38,666 |
| Sept. 23, 1920. | 3,533 | 38,690 |
| Sept. 30, 1920. | 3,531 | 39,208 |

The following table presents the financial situation of the Bank of France and the French Government in 1920.

French financial situation.
[In francs.]

[^5]As the table indicates, returns from indirect taxation and Government monopolies were smaller in August than in July, in spite of the newly enacted taxes which went into effect July 1st. The August returns were, however, 203,000,000 francs greater than the budget estimate for that month. Receipts for September exceed those for August by $238,000,000$ francs, but they fall $322,000,000$ francs below the budget estimate for September. This difference is due to the fact that the new tax on total business turnover brought in only 292,791,000 francs during September instead of the estimated monthly yield of $700,000,000$ francs. As this tax has only been in force three months it seems probable that receipts will increase when it is fully understood and thoroughly enforced. Receipts from the registration tax and from some of the Government monopolies exceeded expectations and partly made up for the small returns from the tax on total business turnover.

The discussion of the 1921 budget is now under way. The original estimates for 1921 expenditure total $50,000,000,000$ francs, but the finance minister, M. Francois Marsal, and the rest of the cabinet are at work on a reduction of the estimates. The French Parliament will meet in the middle of November to vote upon the budget.

Meanwhile subscriptions are being received for the 19206 per cent internal loan, although they are not regularly open until October 20. The treasury offered to pay interest on subscriptions sent in after August 25 at the rate of 5.75 per cent a year until November 30, 1920 (the date when subscriptions close). This offer resulted, it is said, in the immediate payment of several billion francs to the treasury. The offering of this latest issue of bonds at 6 per cent has depressed the price of 3 per cent rentes (which are not convertible into the new loan) during September, and they were quoted as low as 53 francs 15 on the 28 th of the month.

French exchange fluctuated slightly throughout September, with the general level on the last Thursday of the month slightly less favorable to France than on the last Thursday of the month previous.

From the point of view of the French consumer, the most serious of the price increases which took place in France during September were those of foodstuffs. Government control of sugar was removed September 1, and prices rose, although it was hoped that the price would not continue excessive because of the large beet-sugar crop this season. (The Government still sells a limited amount of sugar at lower prices for the use of aged persons, children, and invalids.) The Government also transferred part of the bread subsidy to the shoulders of the public on September 1. There is a distinct
shortage of meats in France this fall, and meat prices are very high. The Government is urging the people to reduce meat consumption and is also arranging for a large importation of frozen meats and for increased consumption of fish. The sale of veal has been prohibited in order to increase the beef supply next year. By the middle of October the food situation in France was becoming so serious that exports of fish, milk, butter, cheese, and potatoes were prohibited by cabinet order.

All coal prices in France are still controlled by the Government, and different rates are charged to different classes of consumers. Coal for domestic purposes is sold at the lowest price, coal for central heating plants, small shops and factories, and for hygienic or food services at a somewhat higher price, and coal for other purposes at higher rates still. The price paid by French consumers for German coal and coke is fixed by the Government. The purchaser of French, Saar, or Belgian coal has to pay, beside the original purchase price, a surtax to the Government, which varies from 75 to 125 per cent of the price, according to the grade of coal. The buyer of English or American coal, of the other hand, receives a drawback on each ton of the coal he purchases. The drawback on English coal is 100 francs a ton, but that on American coal has recently been increased to 150 francs. In this way the price paid for coal from all sources is made as nearly equal as possible. In the case of special industries, however, the Government fixes coal prices at slightly lower rates. The grapegrowers of southern France who ferment their own wine have just received such a reduction, and a
decree of the last of September decreases the price of metallurgical coke from 245 francs a ton to 175 francs. At the same time the price of "boulets" and of lignite briquettes was reduced for family use, and the price of all grades of coal for use by central heating plants, small shops and factories, and hygiene and food services was decreased 60 francs a ton.
These reductions were possible because on October 1, France was better'supplied with coal than at any other time since the beginning of the war. At the July conference it was agreed that Germany should deliver to the allies $2,000,000$ tons of coal a month for the ensuing six months. She is, according to the terms of the Versailles Treaty, to be credited for this coal by the Reparations Commission at the rate of the prevailing market price in Germany. It was arranged at this conference, however, that the allied countries were to receive the kinds and qualities of coal which they should specify, and in return were to pay a premium of 5 gold marks per ton of coal. This premium is invested in food for the German miners. The allies also declared their willingness to make advances to Germany equal in amount to the difference between the market price of coal in Germany and the export price of coal in German ports, or in Engtish ports, whichever should be higher. If the total deliveries from Germany to the allies for August, September, and October have not reached $6,000,000$ tons by November 15, the allies announced at this same conference that they would proceed to occupy the Ruhr, or some other portion of German territory. This arrangement seems to have brought about the desired results. The Reparations Commission announces that during August $1,975,000$ tons of coal, coke, and lignite briquettes were do-
livered by Germany to the allies and during September $1,936,865^{1}$ tons. Of these amounts France received about $1,555,000$ tons in August, and about $1,478,000^{1}$ tons in September. In addition to the increased deliveries of coal from Germany, France is receiving more from her own mines. Reconstruction is proceeding satisfactorily in the departments of the Nord and Pas de Calais. The first delivery of coal from one of the rebuilt pits in Lens was made in September, and an output of from 30 to 40 tons a day is expected from it before long. It will probably take three or four years, however, to bring the mines back to their prewar level of production.
M. Le Troquer, French Minister of Public Works, has recently announced that stocks of coal carried by the railroads have risen from 180,000 tons in January to 800,000 tons in September and that other stocks have increased proportionately.
The most recent statistics on coal (not including coke or lignite) available in France follow:

[^6]? Calculated in 1913 value units.
${ }^{3}$ Calculated in 1918 value units.
4 January-June, 1920 , figures are calculated in 1918 value units. French foreign trade figures are originally recorded in quantity units only, and the value of the trade is calculated by applying official value units to the quantities imported and exported. Normally the monthly statements of trade appear computed at the rates of the year previous, and only at the end of the year is the trade evaluated at the prices prevailing during that year. Because of the disturbed price conditions in France this year, however, it was not until July that the 1919 price units were decided upon and applied.
give sepay french foreign trade figures are published only in cumulative form, and as the value rates used were changed in July it is impossible ${ }_{6}$ Calculated in 1919 value units

## GERMANY.

There is no index number by which price fluctuations in Germany may be traced for the period of the war or the period since the armistice, nor has it been easy since 1914 to find complete series of price quotations. There is, however, some interesting material available on the prices which have been fixed by the German Government since the beginning of the war. The most valuable sources available on this subject are articles on "Laws affecting the Economic Situation" by Johannes Müller, and other articles in the Jahrbücher für Nationalökonomie und Statistik, articles in the Frankfurter Zeitung, and decrees published in the Reichsanzeiger. Unfortunately, however, the files of these periodicals are incomplete for 1916 and 1917 and there are gaps which it is impossible to fill.

Price fixing in Germany began with a law of August 4, 1914, which authorized the Government to fix maximum prices for articles of daily necessity, especially food and fodder of all kinds, as well as for raw materials, and materials for heat and light. Violators of the price regulations were made subject to a fine of 3,000 marks or to 6 months' imprisonment. (The penalties were later increased.) Maximum prices were first set for the cereal crops, then for other agricultural products, and for metals. By the end of March, 1915, maximum prices were fixed for wheat, oats, rye, barley, bran, potatoes, sugar, wool and wool products, ammonia, aluminum, aluminum products, antimony, old bronze, copper, copper products, old brass, brass products, nickel, nickel products, bronze, and tin. Price regulations increased from that time on, and maximum prices were also fixed for butter and margarine, oil seeds and vegetables (peas, beans, lentils, cabbages, carrots, and so on), for meats, flour, macaroni, marmalade, fats, news print paper, matches, fertilizer, chemicals, cement, coal, and iron and steel products.

The Government tried in all cases to fix prices in relation to production costs. German writers on the subject, in criticizing the system of maximum prices, say that in some cases the set price was dictated from Berlin without proper consultation with experts in the industry concerned. In theory, however, the fixed price was based upon a "just price" submitted by the producers of the article in question. This "just price" was calculated as follows: The cost of production (including purchase of raw materials, management expenses, general charges, interest on capital, compensation for risk, and wages of management) was subtracted from
the proposed price, and if the difference (the net profit) did not exceed what was considered fair and suitable profit in the business before the war, the price was considered just. German business men have pointed out that interest on capital invested, the compensation for risk, and the wages of management are very difficult to define. In the case of commodities where it seemed impractical to set a maximum price, merchants were often required to prove their profits "just" before the courts upon the basis just explained. The care with which such prices were controlled is illustrated by a decree of January 25, 1917, which states that charges for shoe repairing may only be high enough to yield, in consideration of the costs, a suitable profit, and that excessive charges may be redressed by an appeal to the courts.

Of the prices fixed by the Government, those first and most thoroughly applied were the prices for the cereal crops. On November 6, 1914, the Bundesrat fixed prices for oats for 32 different cities, the price for different regions of the country to be that of the nearest city of the 32. In December prices for wheat, rye, and barley were also fixed by the same method. Prices for the region of Berlin have been as follows:

Wholesale cereal prices-Germany.

${ }_{2}^{1}$ Statistisches Jahrbuch für das Deutsche Reich.
${ }^{2}$ Minimum price.
Prices for the 1920 crop were originally fixed at 1,100 marks per ton for wheat, and at 1,000 marks for other grains, with the promise that an index number for costs of production should be calculated and prices revised, if increased costs warranted it. The index number was made, taking costs in January, 1920 , as 100 . It rose to 169.24 as of June 1, and the Government accordingly fixed the prices indicated in the above table.

Price regulations for agricultural products were as a rule enforced by "war committees" appointed for the purpose. Prices for industrial products were sometimes regulated simply by committees, but as the war progressed,
manufacturers were often forced to unite in associations regulated by "control committees" responsible to the Government. The earliest of these associations were established in the coal industry. In July, 1915, the State authorities were authorized to unite in associations the owners of hard or brown coal mines, either according to districts or kinds of coal produced. These associations regulated the output of the mines and marketed their product. Coal syndicates were formed for the Rhenish-Westphalian district, for lower Saxony, Saxony, Silesia, and central and east Germany. "Just selling prices" for coal were decided at meetings of these associations, and the Goverment fixed prices in accordance with their recommendations. The trend of the "just prices" of the Rhenish-Westphalian Syndicate has been as follows:

Coal prices (Rhenish-Westphalian Syndicate ${ }^{1}$ ).

${ }^{1}$ Frankfurter Zeitung and Deutscher Reichsanzeiger.
The completeness with which "essential" industries were regulated is illustrated by the forced associations in the shoe industry. In March, 1917, the Imperial Chancellor was authorized to unite manufacturers of every kind of shoe material in associations (with or without their consent) for the purpose of regulating the manufacture and sale of shoes, according to the raw materials available and the needs of the people. A decree of March 24 1917, established 11 of these associations and appointed a "control committee" for the purpose of giving detailed instructions as to production, sale, and selling prices. This committee was required to divide the available raw materials among the members of the association and adjust the apportionment of army and navy contracts. It could also demand that one member of the association give up stocks of raw materials, half-manufactured products, and finished products, as well as machinery, to another member. If necessary, it could confiscate property. In July, 1917, the chancellor was authorized to unite retail dealers in new shoes of all kinds into associations for the purpose of apportioning the stocks placed at their disposal by the "Shoe Manufacturing and Selling Association." The
members of this second association were required to take, pay for, and sell the stocks allotted to them according to the directions of the "main apportionment committee."

The effect of such forced associations upon German industry will not soon disappear. The Government has been authorized to "socialize" both the coal and potash industries. In the iron and steel industry the "Steel Works Union" has been succeeded by the "Eisenwirtschaftsbund," which is to regulate the production and marketing of iron and steel products through a committee consisting of 22 representatives of the producers (both the employers and employees), 8 of trade, and 14 of the consumers. In case the committee can not come to an agreement on any question, the Minister of Industry may decide the matter.
Government control of agricultural products is gradually being relaxed because of the urgent demands of the public. It is hard to say whether it ever was very successful. A writer ${ }^{1}$ in the Jahrbücher für Nationalökonomie and Statistik for 1918 says that an official estimate placed the number of dealers who systematically violated price regulations at 500,000 . "Can you wonder at it," says he, "when you remember that the official price of butter is 2.50 marks per pound, and that 15 to 18 marks are paid in the contraband trade?" As near as can be determined here, the following are the commodities which have already been released from control: Vegetables (except potatoes), fruits, coffee and tea, meats, margarine, fats, edible oils, fodder, nonferrous metals, leather, textiles (except linen and artificial silk). The control of bread, sugar, milk, and home-produced cheese will continue through the winter.

## JAPAN. ${ }^{2}$

According to reports from Yokohama, the silk market was remarkably firm during the first three weoks of September, and stocks of raw silk were increasing. The general attitude of dealers was still, however, one of uncertainty.
The improvement is due to the organization by representative dealers in raw silk of the Imperial Raw Silk Corporation. The new company has a capital of $50,000,000$ yen, and its purpose is to facilitate the financing of exports of raw silk. In order to assist in the recovery of the silk industry the Japanese Government has agreed to make loans from its Savings Bank Department through the Industrial Bank to the Raw Silk Corporation.

[^7]These loans are not to exceed $50,000,000$ yen, and will run for a period of two years. Interest is to be paid at the rate of 5.6 per cent per annum ( 5 per cent to the Savings Bank Department, and 0.6 per cent as the commission of the Industrial Bank). As this rate is very low, considering the present state of the market, silk dealers feel that the arrangement is a favorable one.

The following quotations for Yokohama raw silk spot (for 100 kin ) will be helpful in indicating the condition of the raw silk market.

Sept. 2............................................................ 1, 130
Sept. 16. ........................................................ 1, 180
Oct. 2. 1,500
0ct. 18........................................................ 1, 500

Cotton yarns are still weak. The price dropped steadily from the middle of September to the middle of October, but recently cabled figures for Osaka cotton yarn futures indicate slight improvement.

Osaka cotton yarn futures (bale of 400 pounds).

| Date of cable. | Yen. |
| :---: | :---: |
| Sept. 16. | 284.90 |
| Sept. 24. | 264.00 |
| Oct. 2. | 242.50 |
| Oct. 8. | 232.40 |
| Oct. 18. | 241.00 |
| Oct. 23. | 267.90 |

From January through July, 1920, the value of Japanese exports was less than that of imports into Japan. From May on, however, this "unfavorable" balance steadily decreased, and in August exports exceeded imports by almost $52,000,000$ yen. The September balance was also "favorable," the excess of exports being $36,000,000$ yen. The monthly trade figures are shown in the following table:

| [000 omitted.] |  |  |  |
| :---: | :---: | :---: | :---: |
| Month. | Exports. | Imports. | Excess of imports (-) or exports $(+)$ |
| 1920. | Yen. | Yen. | Yen. |
| January. | 176,347 | 204,701 | - 28,354 |
| February. | 174,288 | 270,630 | - 96,342 |
| March | 193,134 | 328,500 | -135,366 |
| April. | 218,792 | 296,520 | - 77,728 |
| May. | 192,918 | 293,533 | -100,615 |
| June.. | 183,407 | 218,317 | - 34,910 |
| July... | 154,320 | 156,658 | - 2,338 |
| August.. | 174,487 | 122,645 | + 51,842 |
| September. | 154,000 | 118,000 | + 36,000 |

Detailed figures in regard to Japanese foreign trade for August which are now available show that the increased exports of that month were largely caused by exports of cotton goods, for which the ministry of agriculture and commerce is now issuing permits. Cotton-yarn exports in August were valued at 20,970,000 yen and cotton cloth at $31,800,000$ yen. The total value of raw silk exported in August reached $33,700,000$ yen, as against $72,040,000$ yen for the same month last year.

## WHOLESALE PRICES IN THE UNITED STATES.

Extent of the price decline.-The Board's index number of wholesale prices declined less rapidly in September than in August. Prices as a whole were 150 per cent above the 1913 level during July, 134 per cent in August, and 126 per cent in September. The total decline from the peak of May, 1920, amounts to 14 per cent.

Decline in imported goods.-Prices of imported goods continue to decline more rapidly than those of exported goods. Among the imports, producers' goods felt the decline more than raw materials. This was probably due in large measure to the rapid fall in sugar and rubber prices. Although certain grades of silk continued to decline, some quotations showed an advance over August prices. In the same way, quotations for Australian wools showed a
considerable decline from those of the preceding month, but the South American grade used in making the index number was quoted at the same figure as for the preceding month. Foreign hides continued to decline, as did coffee, tea, and pig tin.

Export prices.-The accompanying chart shows clearly that the fall in the prices of goods which are exported is proceeding considerably more rapidly than the fall in the general domestic price level. Both in the upward swing of prices from April, 1919, to May, 1920, and in the downward swing since then, prices of export goods have fluctuated in advance of prices of home produced goods and of the all-commodities index. This seems to indicate the important influence of our export trade upon the general price level.

Among goods exported the greatest declines occurred in raw materials. Cotton is the most important commodity in the index, and with
the decline in the price of upland middling at New Orleans from $\$ 0.3456$ per pound in August to $\$ 0.2875$ in September, the index number as a whole was lowered. Other important exports to show weakness were wheat, lumber, and copper. Coal and pig iron advanced, and petroleum was unchanged in price.

Producers' goods do not figure as largely in our export trade as raw materials or consumers goods, and the price movement during September was not particularly noteworthy. Gasoline and cottonseed oil advanced; fuel oil, steel products (an average of four important heavy steel products), and copper wire declined slightly, and leather somewhat more heavily.

Finished consumable goods which we export did not decline in price, but instead showed a small increase. In this index wheat flour, lard, and kerosene, all of first-rate importance in our foreign trade, advanced in price. Other commodities, such as pork products, cotton fabrics, and shoes, declined.

Difference in index numbers, Federal Reserve Board and Bureau of Labor Statistics.-According to the Board's index, as well as the index of the Bureau of Labor Statistics, prices of consumers' and producers' goods are declining more rapidly than raw materials. The two indexes disagree somewhat as to the actual price level, the Board's index registering 226 for September, on the basis of 1913 prices $=$ 100, while the Bureau of Labor Statistics registers 242. This difference may be due in part to the difference in the size of the two indexes, and also to the difference in methods of weighting them. A large index, such as that of the Department of Labor, is apt not to be so sensitive to fluctuations in prices as a smaller one. Although larger, the index of the Bureau of Labor Statistics reached a level in the spring some 10 points higher than that reached by the Board's index. Certain commodities are given somewhat different weights in the two index numbers, and where this has occurred in the case of commodities whose prices have been abnormal, it has made for a difference in the two index numbers.

Consumers' goods decline more than raw materials.-Consumers' goods are leading the downward turn in prices, according to the Board's index. Raw materials as a whole
have declined less. This is because, in spite of declining prices in the agricultural field, prices of coal, pig iron, and oil have continued at old levels or are higher. Among consumers' goods practically all commodities, including food products, textile fabrics, and shoes, have receded in price.

During recent weeks the tendency in the steel industry has been to make price recessions. Decline in demand from the automobile industry gave the first impetus to the movement, but since then reductions in the demand from the building and shipping trades and from the railroads have caused weakening in the markets for heavy steel. The independent mills have made the concessions, as their prices were considerably higher than those of the United States Steel Corporation. Premium prices have disappeared along with abnormal demand. Prices of lighter steel products continue to be sustained.

With regard to coal prices the Federal Reserve Agent in Philadelphia reports that "prices are still high but have eased off" during recent weeks. Export demand continues heavy, but it is too early to judge of the effect of the British coal strike upon prices here.

Reports from oil districts show that prices are unchanged, although the Federal Reserve Agent at Dallas states that buyers of crude oil are showing an unwillingness to pay premiums. Posted prices are firm. As yet there is no evidence of the influence of the decline in automobile demand upon gasoline prices.

Agricultural prices.--Important agricultural products have almost uniformly declined during recent weeks. This statement applies to live stock as well as to cereals, although cattle and hog prices have not been so much affected as lamb prices.

Textiles and leather.-Prices continue to decline in the cotton, wool, and leather markets. The Boston Federal Reserve Agent reports wool prices during the current month more depressed than a month previous. The cotton crop in the Eleventh Federal Reserve District has suffered a 40 per cent depreciation in market value between seed time and harvest, according to the agent in Dallas. Sole and upper leather are both quoted at lower figures for October than for September and demand has not improved.

Index numbers of wholesale prices in United States-Federal Reserve Board.

## DISCOUNT AND INTEREST RATES.

In the following table are presented actual discount and interest rates prevailing during the 30 -day period ending October 15, 1920, in the various ities in which the several Federal Reserve Banks and their branches are ocated. A complete description of the several types of paper for which quotations are given will be found in the September 1918 , and October, 1918 Federal Reserve Bulletins. Quotations for new types of paper will be added from time to time as deemed of interest

As was the case during the previous period, changes in rates have occurred only in a relatively small number of centers, and there are approximately an equal number of increases and decreases. These changes in rates ar scattered and are not pronounced, either for particular centers or for particu lar types of paper. In the great majority of centers rates remain unchanged Present rates continue higher in almost all centers than rates during the same period of 1919 .

Discount and interest rates prevailing in various centers during 30-day period ending Oct. 15, 1920.

## PHYSICAL VOLUME OF TRADE.

In continuation of tables in the October Federal Reserve Bulletin, there are presented in the following tables certain data relative to the physical volume of trade. The January, 1919, issue contains a description of the methods employed in the compilation of the data and the construction of the accompanying index numbers. Beginning with this issue, stocker and feeder shipments are shown in addition to live-stock movements. Receipts and shipments of lumber at St. Louis have also been added and are combined with receipts and shipments of lumber at Chicago.

After showing some indication of increase in activity during August, the woolen industry during September showed signs of inactivity. The amount of wool consumed during the month was about 6 per cent less than that for August and about 40 per cent less than for September, 1919. However, there was a slight tendency for the percentage of idle woolen machinery to decrease on October 1 as compared with September 1. It is to be noted that in each case the percentage of idle woolen machinery is very mucn greater than during the corresponding month of last year. Cotton consumption showed a still further decrease during September from the August figure and was somewhat less than during September, 1919. There was a corresponding decrease in the number of cotton spindles active during the month. Imports of raw silk during September were almost one-fourth less than for August and less than one-third of imports during September, 1919.

The production of bituminous coal during September exceeded the August figure by about 6 per cent and the September, 1919, figure by about 8 per cent, while the production of anthracite coal during September was considerably less than for August, 1920, and for September, 1919. Crude petroleum production also showed a falling off during September, but still remains substantially above the figure for September, 1919. Pig-iron production showed a slight decline for September when compared with August, although the daily average for September was slightly greater, and showed a considerable increase over September, 1919, toward the close of which month the strike in the industry commenced. Pig-iron production showed a small increase during October. Steel-ingot pro-
duction during September was practically the same as during August, but increased slightly during October. The unfilled orders of the United States Steel Corporation at the close of September and October showed a decrease as compared with August, 1920, and a considerable increase over the corresponding months of 1919.

Receipts of lumber at Chicago and St. Louis showed a slight increase during the month of September but were considerably less than for September, 1919. The production of eastern white pine and North Carolina pine showed a substantial increase over August, 1920, and a very large increase as compared with September, 1919. Western pine showed a decrease during September, but is well above the figure for September, 1919 . A considerable decrease is shown in the production of Douglas fir and southern pine, both when compared with last month and the same month last year. California shipments of citrus fruits showed a further seasonal decline, the figure being considerably less than last month and for the same month last year. Shipments of deciduous fruits were marked by a seasonal increase, being considerably greater than for August, 1920, and for September, 1919. Receipts and meltings of sugar during September at North Atlantic ports showed a very great decrease, both when compared with August, 1920, and with September, 1919. 'Stocks of raw sugar at these ports, while substantially in excess of September, 1919, showed a decrease when compared with August, 1920.

Receipts and shipments of live stock at 15 western markets were in excess of those for August, but considerably less than for September, 1919. Stocker and feeder shipments from 35 markets during the months since February of 1920 showed a decrease every month when compared with the corresponding months of 1919, but it is to be remembered that 1919 shipments were far in excess of normal. Receipts of grain and flour at 17 interior centers during September, although considerably less than for September, 1919, showed a substantial increase over August, 1920.

The railroad net-ton mileage during August was considerably in excess of that for July, 1920, and for August, 1919. The tonnage of vessels cleared during September decreased materially when compared with August, but was considerably above the figure for September, 1919.

## BANK DEBITS DURING SEPTEMBER-OCTOBER.

Aggregate debits to individual account, as reported by 155 important clearing house associations, fluctuated between 8,069 millions for the week ending October 13, and $10,535 \mathrm{mil}$ lions for the following week. The weeks ending October 6 and October 20 saw a much larger volume of debits than the immediately preceding weeks, the reason being largely that the former included end-of-month and end-of-quarter payments, while during the latter heavy Government transactions, including interest payments on Liberty bonds of the fourth issue, took place.

A comparison with figures for corresponding weeks in 1919 is made in the statement below, separate totals being shown for New York City and for the other 154 centers. For the centers outside of New York City this year's figures are larger than last year's for every week included in the statement. The difference of two days in the dates included in each week, however, causes considerable variations in the weekly totals for 1920 as compared with 1919.

For New York City bank debits in 1920 were much smaller than in 1919 for each of the four weeks under review. No particular significance attaches to the changes in the differences between the two years from week to week, as these changes depend largely on the inclusion or exclusion of a particular date, such as October 1 or October 15. Thus in 1919, October 1 was included in the week ending on that date,
with the result that the 1919 total for that week exceeded that for the corresponding week of 1920 by more than a billion, while this year October 1 was included in the week ending October 6, with the consequence that the total for that week was only 416 millions less than the total for the corresponding one in 1919.

| Oct. 22, 1919.. | 5,227 | 4,651 | 576 |  | 5,712 | 404 |

In general, it should be kept in mind that the significance of the totals of debits appears only when a general trend over a comparatively long period is studied, as weekly totals are affected by many fortuitous circumstances, such as holidays and payment dates, which of ten result in radical changes in the volume of business for a given week, without being indicative of changes in economic conditions.

Debits to individual accounts at clearing-house banks.

## DISCOUNT AND OPEN-MARKET OPERATIONS OF THE FEDERAL RESERVE BANKS DURING SEPTEMBER, 1920.

Discount and open-market operations of the Federal Reserve Banks during September and August, 1920 and 1919, are shown in summary form for the system as a whole in the table below. Detailed figures for each Federal Reserve Bank for the most recent month are given on pages 1230 and 1231.

Summary of discount and open-market operations of Federal Reserve Banks in September and August, 1920 and 1919.

Discount operations of the Federal Reserve Banks in September aggregated 7,299 million dollars, or 684 millions less than the 7,983 millions reported the month before. During September and August, 1919, corresponding totals were 6,726 and 6,434 millions. These figures are exclusive of bills discounted for other Federal Reserve Banks, which totaled 440 millions during September and 298 millions during August of this year, and 189 millions during September and 196 millions during August, 1919.

The following statement shows the volume of discounts for each Federal Reserve Bank during September and August of the current year. The banks are arranged in two groupsthose extending accommodation to other Federal Reserve Banks and those receiving accommodation from other Federal Reserve Banks.

The amount of such accommodation extended or received is also shown.

The volume of member bank discounts by the Federal Reserve Banks granting accommodation to other Federal Reserve Banks was about 151 millions smaller in September than in August, the San Francisco bank being the only one in that group for which a larger volume of discounts is shown for the most recent month. At the same time the total accommodation granted by the four banks in this group to the eight other Federal Reserve Banks increased by 94 millions (net). On the other hand, the volume of discounts granted to their member banks by the Federal Reserve Banks receiving accommodation from other Federal Reserve Banks was larger in September than in August in the case of every bank, except those of New York, Atlanta, and Minneapolis. In the case of the New York bank it is to be noted that the volume of discounts declined by 680 millions.

Discounts of paper secured by Government war obligations, including Treasury certificates, were smaller by 769 millions in September than in August, while all other discounts increased by 85 millions. Trade acceptances discounted totaled 17 millions in September,
as against 14 millions in August; bankers' acceptances totaled 8 millions in September, compared with 5 millions in August; and all other discounts, including commercial, agricultural, and live-stock paper, aggregated 3,110 millions, as against 3,030 millions the month before, and 477 millions in September of last year.

The average maturity of all the paper discounted in September figures out at 14.27 days after discount by the Federal Reserve Banks, compared with 12.38 days in August of this year and 9.44 days in September of the year before. An advance from 6.19 to 6.33 per cent in the average rate of discount is noted, the average rates for the two corresponding months in 1919 being 4.12 and 4.18 per cent.

Total bills purchased in September were about 2 millions less than the month before, increases of about 7 millions in bankers' acceptances and of about 1 million in dollar exchange purchased being more than offset by a decline of 10 millions in trade acceptances bought in the open market. Of the bankers' acceptances purchased 53 millions were in the domestic trade and 196 millions in the foreign trade, while of the 2 millions of trade acceptances purchased all but about $\$ 200,000$ were in the foreign trade. The average maturity of all paper purchased by the Federal Reserve Banks in September was 41.71 days, compared with 36.78 days in August. The average rate charged on acceptances remained unchanged at 6.04 per cent.

During the month under review 28 banks were added to the membership of the system, the total number of member banks increasing from 9,487 on the last day of August to 9,515 on the last day of September, while the number of member banks accommodated through discount of paper further declined from 4,780 in August to 4,768 in September. The number of member banks in each district at the end of August and of September and the number accommodated during each of the two months are shown in the following statement:

| Federal Reserve Bank. | Member banks in district. |  | Member banks accommodated. |  |

${ }^{1}$ For discounted paper the figures are for the last Friday of each monthfor purchased paper, for the last day of each month.

Among the principal changes between August and September in holdings of discounted paper the following are to be noted: A decrease of 94 millions in paper secured by Government war oiligations and an increase of 132 millions in paper not so secured. Holdings of agricultural paper were about 4 millions larger at the end of September than at the end of August, the most recent amount of 121 millions being comparable with 33 millions shown for the end of September, 1919. Holdings of live-stock paper show an increase of 4 millions as compared with the end of August, 1920, and of 76 millions as compared with the end of September, 1919. Holdings of discounted trade acceptances were about 3 millions larger at the end of September than a month earlier, while holdings of discounted bankers' acceptances declined by about 1 million. Holdings of commercial paper proper increased from 1,108 at the end of August to 1,229 millions at the end of September, compared with 238 millions a year earlier.

Holdings of purchased acceptances at the end of September were about 301 millions, marking a fur ther reduction of 6 millions from the total of 307 millions shown for the end of August. Bankers' acceptances declined by about 2 millions from the end of August to the end of September and were about 1 million
larger at the latter date than at the end of September of the past year. Of the bankers' acceptances held at the end of the month 67.4 per cent were accepted by member banks, 14.1 per cent by nonmember trust companies and State banks, 10 per cent by private banks,
and 8.5 per cent by foreign bank branches and agencies. Holdings of trade acceptances decreased from 7 millions at the end of August to 3 millions at the end of September, all but $\$ 207,000$ of the latter amount being acceptances drawn in the foreign trade.

Total discount and open-market operations of each Federal Reserve Bank during the month of September, 1920.

OPERATIONS OF THE FEDERAL RESERVE CLEARING SYSTEM FROM SEPT. 16 TO OCT. 15, 1920.
[Amounts in thousands of dollars.]

* Note.-Number of business days in period was 25 in all Federal Reserve Bank and branch cities except in those marked with an asterisk, where the number was 26 .

1 Includes 7,078 items, amounting to $\$ 2,640,000$ forwarded direct to member banks in other Federal Reserve Districts
${ }^{2}$ Includes 7,210 items, amounting to $\$ 2,115,000$ forwarded direct to member banks in other Federal Reserve Districts.

## CHANGES IN CONDITION OF FEDERAL RESERVE BANKS.

During the four weeks between September 24 and October 22 the Federal Reserve Banks increased their holdings of discounted bills by about 45 millions, from 2,704 to 2,749 millions, the largest increase for the period occurring during the week ending October 8, when considerable net withdrawals of Government funds caused the member banks to rediscount more heavily with their Federal Reserve Banks. The increase in discounts held does not affect paper secured by United States war obligations (including Treasury certificates), the holdings of which, after a 34 million increase during the early part in October, declined to 1,199 millions on October 22, marking a decrease of over 21 millions for the period under review. Other discounted paper, on the other hand, shows continuous advances for the first 3 weeks to 1,581 millions, and on October 22 stood at 1,550 millions, or about 66 millions above the total reported four weeks before.

Fiscal operations of the Government included the payment on October 15 of the halfyearly interest on the fourth Liberty bonds, the redemption on the same date of the bulk of the outstanding balance of about 118 millions of loan certificates issued six months previous, and the issuance of over 124 millions of tax certificates, besides the gradual withdrawal from depositary institutions of balances due to the Government on account of the more recent certificate issues. On October 15 the AngloFrench bonds issued 5 years ago fell due, necessitating the redemption by the fiscal agents of the foreign Governments concerned of about 200 millions of these securities. The effect of these operations may be seen in an increase of 27.7 millions in the Federal Reserve Bank holdings of Treasury certificates between October 8 and 15, largely to cover overdrafts of the Government, and in an increase of $13: 8$ millions in the holdings of purchased bills, rather than in any increase of the amount of discounted bills held. Federal Reserve Bank holdings of paper secured directly or indirectly by Treasury certificates declined from 268 to 241 millions, constituting slightly over 20 per cent of all the war paper held on October 22, while holdings of paper secured by Government war obligations proper, i. e., Liberty bonds and Victory notes, show a slight increase from 952 to 958 millions during the four weeks under review. Of the total amount of discounted paper carried on October 22 by the Federal Reserve Banks, the share of paper secured by Government obligations was 43.6 per cent, compared with over 45 per cent shown four weeks earlier.

A summary of the weekly changes in the principal asset and liability items of the Federal Reserve Banks follows:

Principal asset and liability items of the 12 Federal Reserve
Banks combined on Fridays, Sept. 24 to Oct. 22, 1920.

From about 55 per cent on September 24, the share of 15 -day paper in the total discounts held increased to nearly 60 per cent on October 8. Two weeks later this class of paper had declined to 56 per cent of the total discounts held. Changes in the holdings of 30-day paper are in the reverse order, though changes in the holdings of 15-day paper are apparently due as much, if not more, to new short-term borrowing by the member banks as to the gradual maturing of 30 -day paper into the 15 -day class. Holdings of 90 -day paper show a slow but steady increase, while those of 6 -month agricultural and live-stock paper at the close of the period-about 23 millions-were 3.4 millions below the September 24 total.

Holdings of acceptances purchased in open market fluctuated between 319.5 millions on October 15 and 300.7 millions a week later. Treasury certificates on hand increased from 270.6 millions on September 24 to 301.7 millions on October 15, when six of the Federal Reserve Banks reported 26 millions of special certificates to cover advances to the Government pending receipt of funds from depositary institutions. By the following Friday the Treasury had outstanding only 10 millions of such certificates which were held by four reserve banks.

Interbank discounting shows further grow th in volume, the total of paper held under discount for other Reserve Banks showing an increase from 226.9 to 243.1 millions, held by the Boston, Philadelphia, and Cleveland banks. The latter bank on October 22 reports a total of 137.9 millions of paper discounted for other Reserve Banks, compared with 79.3 millions of
paper held under discount for its own members, while over 40 per cent of the Boston bank's discounts are for other Reserve Banks. The list of accommodated Reserve Banks includes, besides the seven banks in the South and Middle West shown about the close of September, also the New York bank. Among the rediscounting banks are found all the four banks which apply graduated discount rates. During the four weeks under review three of these banks, viz, those of Atlanta, St. Louis, and Kansas City, increased their member bank discounts from 473 to 490.7 millions, while their combined liabilities on account of paper rediscounted with other Federal Reserve Banks show but a slight increase, from 123.7 millions to 123.9 millions. In the case of the Dallas bank a reduction in tota! member bank discounts, from 113.8 to 108.7 millions, is accompanied by a decrease of interbank accommodation from 37.4 to 33.9 millions. Holdings of acceptances purchased from other Reserve Banks fluctuated between 19.9 millions on October 1 and 34.9 millions two weeks later. At the end of the period the total was 24.3 millions, composed of bank acceptances sold by the New York bank without indorsement to the Boston, Philadelphia, and San Francisco banks. No change is shown in the banks' aggregate guarantors' liabilities of 16.2 millions on bankers' bills purchased for account of foreign correspondents.

Government deposits show a decline during the period from 46.5 to about 15 millions. Mémbers' reserve deposits, after reaching a high of 1,868 millions on October 15, declined to 1,779 millions on the following Friday, while other deposits, composed largely of foreign Government credits and nonmembers' clearing accounts, declined during the period
from 34.9 to 21.9 millions. Calculated net deposits reached a high of $1,710.2$ millions on October 8, but declined to $1,624.5$ millions during the following two weeks.

Federal Reserve note circulation shows a further expansion during the four weeks from 3,280 to $3,356.2$ millions, or at an average weekly rate of over 19 millions. A considerable proportion of the increase in circulation is due to shipments of Federal Reserve notes to Cuba from the New York and Atlanta districts. Practically no change is shown in the circulation of Federal Reserve Bank notes.

During the period under discussion the amount of gold held with foreign agencies declined from 111.5 to 80.4 millions as the result of transfers to the Federal Reserve Banks of part of the gold held earmarked by the Bank of England since September, 1919. These transfers, while figuring among the gold imports of the period, do not affect the total gold reserves of the Federal Reserve Banks, since gold held with foreign agencies was always counted as part of the Reserve Banks' gold reserves. Total gold reserves, notwithstanding considerable withdrawals for export to the Far East, more than held their own, largely because of substantial receipts from England and France, and on October 22 stood at $1,994.6$ millions, or 4.8 millions above the September 24 total. Total cash reserves show a slightly larger increase during the period from 2,151.6 to $2,157.3$ millions.

The banks' reserve ratio shows an almost steady decline from 43.6 per cent on September 24 to 42.7 per cent on October 15. On the following Friday, largely by reason of the liquidation in some volume of bills and Treasury certificates and a corresponding reduction in deposit liabilities, the ratio rose to 43.3 per cent.

## CONDITION OF MEMBER BANKS IN LEADING CITIES.

Further increases in loans and investments, accompanied by commensurate increases in borrowings from the Federal Reserve Banks for the four-week period between September 17 and October 15 are indicated by the statements of condition of about 820 member banks in leading cities. A notable development during the period is the increase shown in loans sup-
ported by corporate securities, reflecting to some extent recent corporate financing and operations connected with the redemption of the Anglo-French loan. Loans secured by Government war obligations show a continuous reduction, while other loans and investments, composed largely of commercial loans and discounts, show the largest growth for the period.

Government operations, comprising chiefly the redemption and issuance of Treasury certificates on October 15, the payment of the semiannual interest on the fourth Liberty bonds, and the gradual withdrawal of balances on account of the more recent certificate issues, affect primarily total Treasury certificate holdings and the item of Government deposits, while the increase in loans on corporate securities reflects to a large extent the calling of
street loans by the fiscal agents in New York of the Governments concerned, preparatory to the redemption on October 15 of the Anglo-French bonds and the assumption of these loans by reporting members largely in Boston and New York City.
A summary of the weekly changes in the principal asset and liability items of all reporting member banks, also of corresponding figures for the first Friday in the year, follows:

Principal resources and liabilities of member banks in leading cities on Jan. 2, 1920, and on Fridays from Sept. 17 to Oct. 15, 1920.

As against nominal changes in their holdings of United States bonds and Victory notes the reporting banks show considerable fluctuation in the amounts of Treasury certificates held, a decline of about 98 millions during the first three weeks being followed by an increase of about 44 millions on October 15, the date of allotment by the Government of over 124 millions of 5 -month tax certificates. The total of certificates held by reporting banks at the close of the period under review, 361.7 millions, marks, however, an increase of 29.7 millions since the beginning of the year. For the member banks in New York City an increase for the four weeks of 5.4 millions in the holdings of United States bonds and Victory notes, as against a reduction of 34.5 millions in Treasury certificates, are noted.
Loans secured by Government war obligations show a slow but steady decline and on October 15 totaled 924 millions, a decrease of 32 millions since September 17 and of 365 millions since the beginning of the year. On the other hand total loans supported by corporate securities increased during the four-week period by 123 millions, this being the combined increase of the item for the New York and Bos-
ton banks. All other loans and investments, composed largely of commercial loans and discounts, show a further advance of 191 millions for the four weeks under review and an advance of 1,876 millions since January 2 of the present year. In consequence of the changes shown in the principal loan and investment accounts, total loans and investments on October 15 were 226 millions larger than on September 17 and 696 millions in excess of the corresponding January 2 total. For the New York City banks increases of 40.6 millions in other loans and investments and of 91.7 millions in total loans and investments are shown. The ratio of combined holdings of United States war securities and loans supported by such securities to total loans and investments shows a further decline from 12.7 to slightly over 12 per cent for all reporting banks and from 16.2 to about 15 per cent for the member banks in New York City.

As the result of gradual withdrawals of funds. from depositary institutions Government deposits with the reporting banks show a continuous reduction from the high level of 331.4 millions on September 17 to 188.4 millions on October 15. Other demand deposits (net)
fluctuated between $11,160.5$ millions on September 24 and 11,472.9 on October 15, the large increase on the latter date reflecting in part substantial transfers of deposit credits from Government to individual account, deposits of funds received in payment of matured home and foreign Government obligations, also additional credits to deposit account extended to borrowers on corporate securities. Time deposits show a moderate but steady growth during the period, the October 15 total, $2,808.3$ millions, being 27.6 millions larger than the September 17 total. For the New York City banks decreases from 199.9 to 86.9 millions in Government deposits and from 340.4 to 335 millions in time deposits, as against an increase from $4,629.2$ to $4,647.7$ millions in net demand deposits, are shown.

Accommodation of reporting member banks at the Federal Reserve Banks, as shown on the books of the latter, shows a continuous growth from 1,972 millions on September 17 to 2,249 millions four weeks later, the weekly increases in the borrowings of reporting member banks from their Federal Reserve Banks correspond-
ing fairly closely to the increases in the loan accommodation extended by these banks to their own customers. The ratio of member bank borrowings at the Federal Reserve Banks to total loans and investments of reporting banks, which affords a rough index of the extent to which the loan burden of these banks is shifted to the Reserve Banks, shows a rise during the four weeks from 11.6 to 13 per cent. For the New York City banks an even larger increase in this ratio, from 11.7 to 14.6 per cent is seen.

Reserve balances declined from $1,390.1$ millions on September 17 to $1,343.6$ millions on October 1. During the subsequent two weeks as a consequence of both the increase in the loans and deposits of the reporting banks and the larger borrowings from the Federal Reserve Banks, these balances went up to 1,422.1 millions. Cash in vault reached a total of 381.1 millions, marking an increase of 11.4 millions for the period. For the New York City banks increases of 14.7 millions in reserve balances and of 2.9 millions in cash on hand are shown.

Principal resource and liability items of member banks in leading cities, including member banks located in Federal Reserve Bank cities and in Federal Reserve Branch cities, as at close of business on Fridays from Sept. 24 to Oct. 15, 1920.

## INDEX.

The branches at Helena, Mont., and Oklahoma City, Okla., have been authorized by the Federal Reserve Board but are not yet open for business.

[^0]:    ${ }^{1}$ The statutes, by-laws, and annual reports of the various European investment trusts have been turned over to the Board and are now on deposit in the office of its counsel. The study was prepared by T. H. practicing law in New York.

[^1]:    ${ }^{\text {L A consignment of goods or a conditional sale of goods can not be }}$ considered "goods sold" within the meaning of this clause. The purchase price of goods plus the cost of tabor in effecting their installation may be included in the amount for which the trade acceptance is drawn.

[^2]:    ${ }^{1}$ A readily marketable staple within the meaning of these regulations may be defined as an artiele of commerce, agriculture, or industry of such uses as to make it the subject of constant dealings in ready markets with such frequent quotations of price as to make (a) the price easily and definitely ascertainable and (b) the staple itself edsy to realize upon by sale at any time.

[^3]:    ${ }^{1}$ Whenerer any state member bank is concerted into a national bank under section 5154 of the Revised Statutes, as amended by section 8 of the Federal Reserve Act, it may continue to hold as a national bank it shares of Federal Reserve Bank stock previously held as a state bank, less the not file any application for Federal Reserve Bank stock, une. ent it shogate amount of its capital and surplus is increased, in which paragraph III file an application for additional stock, as provided the member bank, however, should be surrendered and canceled, and a rificate should be issued in lieu thereof in the new name of the member bank, as provided in the last paragraph of this regulation.

[^4]:    ${ }^{1}$ In accordance with instructions issued by the Federal Reserve Board on Apr. 24, 1917, the various Federal Reserve Banks haveissued circulars on Apr. 24, $\operatorname{set}$ the forth the conditions under which their respective member banks may dra v drafts on their Reserve Bank accounts payable with or through any other Federal Reserve Bank.

[^5]:    ${ }^{1}$ Includes Treasury and individual deposits.
    2 Under the laws of Aug. 5 and Dec. 26, 1914, July 10, 1915, and Feb. 16, 1917.
    3 From indirect taxation and Government monopolies.
    4 Not including about 1,978 million francs held abroad.
    5 As of Dee. 31, 1919.
    ${ }^{5}$ Foreign debt calculated at par.

[^6]:    1 Not including gold, silver, or the reexport trade.

[^7]:    1 Jahrbücher für Nationalökonomie, 1918, vol. 55, p. 311
    2 The September BULLETIN contained a statement to the effect that
    the July excess of exports over imports amounted to $3,000,000$ yen. This was an error due to a mistake in the cable. The trade figures for the month of July were: Imports, $157,000,000$ yen; exports, $154,000,000$ yen

[^8]:    ${ }^{1}$ Flour reduced to its equivalent in wheat on basis of $4 \frac{1}{2}$ bushels to barrel.

[^9]:    Excess of gold imports over exports since August $\mathbf{1 , 1 9 1 4 , ~ \$ 7 5 3 , 7 1 0 , 0 0 0 . ~ E x c e s s ~ o f ~ g o l d ~ e x p o r t s ~ o v e r ~ i m p o r t s ~ s i n c e ~ J u n e ~ 1 0 , ~ 1 9 1 9 , ~} \$ 347,309,000$.
    1 Includes: Ore and base bullion, $\$ 13,793,000 ;$ U. S. Mint or Assay Office bars, $\$ 3,846,000$; other bullion, refined, $\$ 156,181,000$; U. S. coin, $\$ 14,775,000$; foreign coin, $\$ 50,120,000$.

    Iteludes: Domestic exports-ore and base bullion, $\$ 11,000$; U. S. Mint or Assay Office bars, $\$ 24,849,000$; other bullion, refined, $\$ 1,034,000$; csin, $\$ 237,820,000$. Foreign exports-brilion, refined, $\$ 498,000$; coin, $\$ 548,000$.

[^10]:    ${ }^{1}$ Inclutes reserve funds held against issues of United States notes and Treasury notes of 1890 and redemption funds held against issues of national-bank notes, Federal Reserve notes, and Feteral Reserve Bank notes, but excludes gold and silver coin and bullion held in trust for the redemption of outstanding gold and sil er certificates and Treasury notes of 1890 .
    mences but inclusive of agencies but inclusive of balances in gold settlement fund standing to the credit of the Federal Reserve Banks and agents

    4 Includes Treasury notes of 1890.

[^11]:    1 Discount rate corresponds to interest rate borne by certificates pledged as collateral, with minimum of 5 per cent in the case of Philadelphia, Atlanta, Kansas City, and Dallas, and 51 per cent in the case of Cleveland, Richmond, Chicago, and San Francisco.
    ${ }^{2} 5 \frac{1}{4}$ per cent on paper secured by $5 \ddagger$ per cent certificates and 5 per cent on paper secured by $4 \frac{3}{4}$ and 5 per cent certificates.
    Note.-Rates shown for St. Louis, Kansas City, and Dallas are normal rates, applying to discounts not in excess of basic lines flxed for each member bank by the Federal Reserve Bank. Rates on discounts in excess of the basic line are subject to a $\frac{1}{2}$ per cent progressive increase for each member bank by the Federal Reserve Bank. Rates on discounts in excess of the ba
    25 per cent by which the amount of accommodation extended exceeds the basic line.
