OFFICERS OF FEDERAL RESERVE BANKS

1 Controller.
MANAGING DIRECTORS OF BRANCHES OF FEDERAL RESERVE BANKS

## SUBSGRIPTION PRIGE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The Bullerin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, $\$ 2.60$; single copies, 25 cents.

# FEDERAL RESERVE BULLETIN 

## REVIEW OF THE MONTH

Increased demand for bank credit in recent weeks carried the volume of loans and investments of member banks in

Bank credit and money rates October to the highest level on record. The growth in member bank credit has been composed in part of increases in loans for commercial and agricultural purposes, as is usual at this season of the year, but in larger part it has reflected an increase in investments and especially in loans on securities. The increase in commercial loans since midsummer has been smaller than for the same period last year, while the rapid growth of loans on securities is in contrast to a decline in this type of loans in the autumn of 1926. Deposits of member banks, and particularly their demand deposits, have also increased, and consequently there has been a considerable increase in the member banks' reserve balances at the reserve banks. Increased reserve requirements of member banks and some seasonal demand for currency have resulted in a growth of reserve bank credit, and there has also been an export of gold. As a consequence, the volume of reserve bank credit outstanding in October was larger than at any time since January. Conditions in the money market, however, have continued to be easy, and open-market rates for money, though some of them have had slight seasonal advances in October, are considerably lower than in midsummer. In foreign money markets there has been a more pronounced rise in money rates, reflecting the influence of seasonal requirements superimposed upon the continuous strong demand for bank credit. During October two of the important European central banks, the German Reichsbank and the Netherlands Bank, established higher rates for their discounts and advances, and on November 1 the Bank of Norway also raised its rate.

In Germany the rate at the Reichsbank had been reduced in January to 5 per cent, the lowest rate since 1922. This

Credit conditions in Germany open-market rates. Demand for credit, however, increased rapidly after the early weeks of the year, owing to the growing financial requirements of industry and trade, as well as to the large volume of activity in the security market. At the Reichsbank the demand for additional funds was reflected in a constant growth of notes in circulation, partly to replace rentenmarks which were being retired, but chiefly to supply the increased currency needs of the public. At the same time there was a large demand for foreign bills, both to pay for goods purchased abroad and to transfer funds for temporary investment in foreign markets. These demands gave rise to a large increase in the volume of domestic bills discounted by the commercial banks at the Reichsbank. Changes in the position of the Reichsbank between January 22 and May 7 are shown in the table below:

Germain Reichsbank
[rn millions of dollars]

|  | $\begin{gathered} \text { Jan. } 22, \\ 1927 \end{gathered}$ | $\operatorname{May}_{1927}^{7}$ | $\begin{aligned} & \text { Increase } \\ & (+) \text { or de- } \\ & \text { crease }(-) \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Gold reserves. | 437 | 441 | $+4$ |
| Foreign exchange reserves. | 119 | 30 | -89 |
| Bills and cheeks.. | 329 | 460 | $+131$ |
| Notes in circulation | 709 | 835 | $+126$ |

The growing demand for credit at the Reichsbank arising in part out of a continuous large volume of loans
Credit restrictions and rate adrances made by commercial banks on the stock exchange led to an announcement on May 12 by these banks, supported by the Reichsbank, that by mid-June they would reduce their loans
on the stock exchange by 25 per cent. The purpose of this measure was to limit loans on the stock exchange and thus to increase the volume of bank credit available for trade and industry. But, notwithstanding the fact that this program was carried out, demands upon the Reichsbank continued to grow, its foreign exchange reserve declined further, and there was a rapid rise in open-market money rates. Consequently, on June 10 the Reichsbank advanced its discount rate from 5 to 6 per cent. This measure was followed by a slowing down in the rate of growth of the Reichsbank's domestic portfolio and in some growth of its reserves. But the demand for circulation continued, and between June 15 and October 7 changes in the principal items of the Reichsbank statement were as follows:

German Reichsbank [In millions of dollars]

| . | $\text { June } 15$ | $\begin{aligned} & \text { Oct. } 7, \\ & 1927 \end{aligned}$ | Increase |
| :---: | :---: | :---: | :---: |
|  | 430 | 441 | 11 |
| Foreign exchange reserves | 18 | 37 | 19 |
| Bills and cheoks.....- | 504 | 620 | 116 |
| Notes in circulation. | 796 | 954 | 158 |

This growth in Reichsbank credit was accompanied by an advance in open-market rates, the rate on acceptances rising from 5 to 6 per cent. In these circumstances the Reichsbank on October 4 advanced its discount rate from 6 to 7 per cent and its rate for advances from 7 to 8 per cent.

This rise in central bank rates in Germany was followed by rate advances at the Nederlandsche Bank. The discount
Rate ad- rate in Netherlands at $31 / 2$ per vance in the Netherlands cent had been much lower than the level prevailing at other European central banks, with the exception of the Swiss National bank, and the open-market rates in Amsterdam had been correspondingly below the rates in other international money markets, as will be seen from the chart. This condition caused a movement of funds out of the Netherlands, resulting in an increased recourse by the commercial banks to the central bank and a decline in the gold and foreign exchange holdings of that bank. Changes in the principal items in the condition
statement of the Netherlands Bank between January 24 and October 10 are shown below:

Netherlands Bank
[In millions of dollars]

|  | $\begin{gathered} \text { Jan. } 24 \\ 1927 \end{gathered}$ | $\begin{aligned} & \text { Oct. } 10, \\ & 1927 \end{aligned}$ | $\begin{aligned} & \text { Increase } \\ & (+) \text { or de- } \\ & \text { crease }(-) \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Gold reserves. | 167 | 155 | -12 |
| Foreign bills | 78 | 50 | -28 |
| Loans and discounts. | 81 | 124 | +43 |
| Notes in circulation. | 319 | 331 | +12 |

The movement of funds out of the Netherlands increased further after the advance in the Reichsbank rate, and the exchange value of the guilder declined close to the gold export point. On October 13 the rate at the central bank on bills was advanced by one full per cent from $31 / 2$ to $41 / 2$ per cent, the level prevailing at the Bank of England.

In Great Britain the rate at the Bank of England, which had been maintained at 5 per cent since December, 1925, was

Money rates in England and France the the relatively easy condition in the short-term money market in the spring. On the day following the reduction of the bank rate, the Bank of France, out of its holdings of London balances, repaid a debt of about $\$ 160,000,000$ to the Bank of England and thus regained control of $\$ 90,000,000$ in gold which had been held under pledge as partial security for this debt. The gold thus released was acquired by American interests, and $\$ 30,000,000$ of it was exported to New York on private accoun $t$, while $\$ 60,000,000$ was purchased by the reserve banks and temporarily kept on deposit abroad. Subsequently the reserve banks sold this gold in Europe. In the meantime the strength of French exchange, and expectations of its further rise, attracted a large volume of foreign funds to Paris, and since the foreign exchange bills arising from the movement were sold to the Bank of France its holdings of foreign currencies increased rapidly. The accompanying abundance of short-term money in Paris put the Bank of France, which maintained a discount rate of 5 per cent, out of touch with the market.

At the same time an increasingly large proportion of the central bank's portfolio was converted into foreign bills. These developments caused the Bank of France to convert a part of its exchange holdings, in London and elsewhere, into gold. The consequent withdrawal of gold from the London market was an influence in tightening money conditions there, and rates for bankers' bills advanced sharply to within a small margin of bank rate, and have remained near this level since that time. Movements since the beginning of 1926 in open-market rates for bankers' acceptances in the principal foreign money markets and in in New York are shown on the chart.

In the United States money rates in the spring and early summer were at a fairly constant level, slightly higher than

$$
\begin{aligned}
& \text { Rate } \begin{aligned}
& \text { policy } \\
& \text { in the } \text { United } \\
& \text { States }
\end{aligned}
\end{aligned}
$$ in the preceding year. This level was maintained largely by the continuous growth in the demand for bank credit from the securities market, since there was no considerable growth of commercial loans owing to the somewhat reduced rate of industrial activity. Toward the end of July, however, and during the month of August open-market money rates declined sharply following upon the reduction of the discount rates at the Federal reserve banks

from 4 to $31 / 2$ per cent and the corresponding reduction of the reserve banks' buying rates for bankers' acceptances. The decline in the rate on bankers' acceptances is shown on the chart. The reductions of discount rates at the reserve banks were accompanied by purchases of United States securities, and money rates in the open market declined to the lowest level since the spring of 1925. The reserve system's policy of rate reduction and open-market pur-* chases adoptedinJuly anditsrelation to domestic and international credit conditions was discussed in the review of the month for September. The increased holdings of Government securities by the reserve banks have enabled the member banks to meet the seasonal demands for credit and currency without materially increasing their borrowings at the reserve banks, with the consequence that the volume of discounts for member banks was smaller in October of this year than at the same period of either of the two preceding years. The smaller indebtedness of the member banks at the reserve banks, together with the lower level of discount and bill rates of these banks, has been an important factor in maintaining an easy condition in the money market during the autumn. The relatively lower level of rates in this country than abroad has also had the effect of strengthening sterling and other foreign exchanges and thus facilitating the financing of our exports. At the same time the movement of gold, which had been into the United States in considerable volume earlier in the year, changed in direction, and during the past six months there has been a small decrease in the country's stock of monetary gold.

## EARNINGS OF STATE MEMBER BANKS

A statement showing the earnings and expenses of State member banks during the first half of 1927 is given on page 794. Corresponding figures for the first half of last year were given in the Bulletin for last November, and for the last half of 1926 in the Builetin for May, 1927. Annual figures for the period 1919-1926 are given in Table 96 of the board's latest annual report.

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

Industrial and trade activity increased less in September than is usual at this season of the year and continued to be in smaller volume than a year ago. The general level of wholesale commodity prices showed a further rise, reflecting chiefly price advances for agricultural commodities.

Production.-The Federal Reserve Board's indexes of both manufacturing and mineral production, in which allowance is made for usual seasonal variations, decreased between August and September. Production of iron and steel was in smaller volume in September

Index number of production of manufactures and minerals combined, adjusted for seasonal variations. (1923-1925 average $=100$.) Latest figure, September
than in any month since 1925. There were also decreases from August to September in the output of nonferrous metals, automobiles, and rubber tires, while the textile and shoe and leather industries continued active. The production of bituminous coal showed about the usual seasonal increase in September and October, but continued in smaller volume than during the same period of other recent years. The output of anthracite was considerably reduced during September and the first half of October, following an increase in August, and the weekly output of crude petroleum has decreased slightly since the early part of August. The value of building contracts awarded continued somewhat smaller during September and the first three weeks of October than during the corresponding period of 1925 or 1926; declines occurred in contracts for residential, commercial, industrial, and educational buildings, while contracts for public works and public utilities were larger in September than in the corresponding month of any previous year.

Crop conditions improved in September, and the Department of Agriculture's estimates for October 1 indicate larger yields of most grain. crops than were expected a month earlier. The estimate for the corn crop was increased by $146,000,000$ bushels and was only $43,000,000$ bushels smaller than the yield in 1926. Wheat production is expected to be $34,000,000$ bushels larger than last year, while the estimated cotton crop of $12,678,000$ bales is more than $5,000,000$ bales below last year's yield.

Trade.-Trade of wholesale and retail firms increased in September by somewhat less than the usual seasonal amount. Compared with a year ago, sales of wholesale firms in nearly all lines, except shoes and drugs, were smaller. Sales of department stores were in about the same volume, and those of mail-order houses and chain stores were somewhat larger. Inventories of merchandise carried by reporting wholesale firms in leading lines were reduced in September and continued smaller than last year. Stocks of department stores, on the other hand, increased slightly more than is usual in September and at the end of the month were somewhat larger than a year ago.

Freight-car loadings were in smaller volume during September and the first week of October than in the corresponding period of last year for all groups of commodities, except grain and grain products, of which loadings were larger than in the same period of any previous year since 1924.

Prices.-Wholesale commodity prices advanced in September for the fourth consecu-

Index of United States Bureau of Labor Statistics. $\quad(1926=100$, base adopted by bureau.) Inatest figure, September
tive month, and the Bureau of Labor Statistics all-commodities index rose to the highest level
since last January. There were large increases between August and September in the prices of livestock, meats, and cotton, and small advances in the prices of leather, coal, and chemicals, while prices of grains, building materials, and rubber declined. During the first three weeks in October the prices of spring wheat, corn, cotton, coal, and iron and steel declined, while prices of livestock, raw wool, and rubber advanced.

Bank credit.-Total loans and investments of member banks in leading cities showed a further increase for the four weeks ending October 19 and on that date were about $\$ 660,000,000$ larger than in midsummer. Of this growth in member bank credit about $\$ 325,000,000$ represented an increase in commercial loans, a considerably smaller increase than for the same period last year, and about $\$ 335,000,000$ increase in investments and loans on securities.

At the reserve banks total bills and securities increased during the four weeks ending October 19, as is usual at this season, but were on the average about $\$ 60,000,000$ below the level of the corresponding period last year. The increase, which was largely in the form of additions to the banks' holdings of acceptances,
reflected chiefly an increase in member-bank reserve requirements and an export demand for gold.

Monthly averages of weekly figures for banks in 101 leading eities. Latest figures are for October

Some seasonal firmness in the money market in October was reflected in an increase from $31 / 8$ to $3 \frac{1}{4}$ per cent in rates on 90 -day bankers' acceptances. The rate on commercial paper remained unchanged at 4 per cent.

Nore. -This table contains for certain months general index numbers of employment and pay rolls, together with group indexes for important industrial components. The general index is a weighted average of relatives for 34 individual industries. The method of construction was deseribed in detail and indexes for the above groups since January, 1919, were published in the Bulletin for May, 1925. See also p. 668 of Bulletin for September, 1925, for certain revisions.

## FOREIGN BANKING AND BUSINESS CONDITIONS

## CURRENCY AND BANKING REFORM IN POLAND

Adoption by the Polish Government of a program of currency and banking reform was announced on October 13. The program provides for the legal stabilization of the currency at approximately 11.22 cents per zloty; that is, on the basis of $5,924.44$ zlotys per kilogram of pure gold. The actual exchange value of the zloty has been close to the level of its new parity for more than a year. The program includes also the appointment of an American adviser to the Government and the Bank Polski and the flotation of an international loan to be known as the stabilization loan of 1927.

The stabilization loan.-The stabilization loan, which was floated simultaneously in the principal money markets of the world, amounts to $\$ 72,000,000$, carries an interest rate of 7 per cent, and matures in October, 1947. The bonds are direct obligations of the Republic of Poland and will be retired by semiannual payments from a sinking fund. For the service of the loan the Government will assign the gross customs revenues, which will be paid into a special account of the fiscal agents of the loan with the Bank Polski. The proceeds of the loan will be available only for the purposes of the program of reform.

The American adviser will be elected to the board of directors of the Bank Polski for three years; at the end of that time he may continue for a further period at his own discretion and with the approval of the bank. Charles S. Dewey, former Assistant Secretary of the United States Treasury, has been selected as financial adviser.

In addition to the stabilization loan to the Polish Government, an international credit has been extended to the Polish Central Bankthe Bank Polski-by 14 other banks of issue. Under the terms of these arrangements the Federal Reserve Bank of New York, with the participation of the other Federal reserve banks, has agreed, if desired, to purchase from the Bank Polski up to a total of $\$ 5,250,000$ of prime commercial bills. The terms of this arrangement are similar to those made with the Bank of Belgium in 1926.

Currency reform.-The currency reform measures provide that the Bank Polski shall have the exclusive privilege of note issue and that the Government shall renounce its right to issue currency notes. One-half of the outstanding treasury notes are to be replaced by notes of the Bank Polski and the other half will be converted into silver coin. The notes of the Bank Polski are made redeemable in gold or in foreign exchange.

Bank reform.-The Bank Polski, as stated above, is given the exclusive privilege of note issue.

Against both note and deposit liabilities the bank is required to maintain a minimum reserve of 30 per cent in actual gold and of 40 per cent in gold or foreign exchange. Another measure provides that the capital of the bank shall be increased by 50 per cent; that is, to $150,000,000$ zlotys.

Budget reform.-The reform program provides for balanced budgets and for the control of departmental expenses through the establishment of monthly budgets. The budget for the year ending March 31, 1927, according to official figures, showed a surplus of about $\$ 17,-$ 500,000 , as compared with a deficit of $\$ 26,500,-$ 000 during the previous year, while estimates for the fiscal year 1927-28, based on returns for the first five months, indicate that the current year will show a surplus of about $\$ 39,000,000$. The floating debt of the treasury is to be redeemed, and a working fund for the treasury of $75,000,000$ zlotys is to be created for the purpose of enabling the Government to meet any seasonal or temporary deficits. The Government will not borrow at long term for budgetary purposes.

Unification of the currency.-The present currency reform is the final step in the unification of the currency which began during the war. Prior to the war the Russian ruble, the German mark, and the Austrian crown circulated in the portions of Poland under the control, respectively, of Russia, Germany, and Austria-Hungary. When the Germans occupied the country in 1916, they established
the Polish National Loan Bank and authorized it to issue paper money in terms of Polish marks. Early in 1920 these Polish marks were declared legal tender and gradually replaced all other currencies in Poland. These marks, however, depreciated to such an extent that in 1924, in accordance with the recommendations of the Hon. Hilton-Young, Poland's British adviser, a new currency unit-the zloty-was adopted, having a par value equal to that of the French gold franc, namely, 19.30 cents in United States currency, and Polish marks were made redeemable in zlotys at the rate of $1,800,000$ Polish marks per zloty. At the same time a new central bank--The Bank Polski-was organized with the exclusive right of note issue. ${ }^{1}$

Shortly after the opening of the Bank Polski on April 28, 1924, it had a reserve of gold and stable foreign exchange aggregating $286,000,000$ zlotys and a note circulation of $245,000,000$ zlotys. The fiduciary issues of the Government outstanding after the liquidation of the Polish StateLoanBank amounted to 195,000,000 zlotys, and by the end of 1924 their volume had been reduced to $125,000,000$ zlotys. For more than a year the zloty remained practically at par.

The financial crisis of 1925.-During the latter part of 1925 , which was a year of poor crops and financial disturbance, the value of the zloty declined rapidly, and the foreign exchange reserve of the Bank Polski fell from 259,000,000 zlotys in March, 1925, to $49,000,000$ zlotys by the end of March, 1926. During this period the bank withdrew from circulation a considerable amount of the notes presented for redemption, reducing its note circulation from $563,000,000$ zlotys at the end of March, 1925 , to $389,000,000$ zlotys at the end of March, 1926. During the same period, however, the Government increased its fiduciary issues from 192,000,000 zlotys to $460,000,000$ zlotys, with the result that the total monetary circulation increased. The decline in the exchange value of the zloty continued until May, 1926, when it reached its low point of 9.03 cents. The

[^1]accompanying chart shows the movement of the exchange value of the zloty from June, 1924, to September, 1927.

Recovery from the crisis.-Beginning with the summer of 1926, the foreign exchange reserve began once more to advance, and at the end of September, 1927, the foreign exchange holdings of the bank amounted to $243,000,000$ zlotys. On the same date the gold reserves of the bank were $182,000,000$ zlotys, having increased steadily from about $70,000,000$ zlotys in April, 1924. The fiduciary issues of the Government were reduced by about $50,000,000$ zlotys, while the note issues of the Bank Polski increased considerably. The percentage of gold and foreign exchange reserves against the note circulation of the Bank Polski alone at the end of September was about 50 per cent, and against the aggregate circulation of the bank and of the Government, about 35 per cent. The exchange value of the zloty began to appreciate during the summer of 1926 and in August of that year reached about 11 centsa level which it has since maintained with slight fluctuations.

A table showing movements of the reserves of the Bank Polski and of currency in Poland since May, 1924, is given on the following page.

## DESCRIPTION OF WHOLESALE PRICE INDEXES

Thirty index numbers of wholesale commodity prices in 29 countries are published regularly in the Federal Reserve Bulletin. These index numbers are obtained from current publications or received by letter or cable directly from the various foreign statistical offices compiling them. Indexes of commodity groups for 9 of these 29 countries are currently published in the Bulletin and for 10 more they are available in the office of the Division of Research and Statistics of the Board, from which they may be obtained at any time upon
request. A brief description of these various index numbers-base period, source, number of commodities, and period of month to which the figures refer-is given below.

United States.-Index number compiled by the Bureau of Labor Statistics, including 550 commodities or price series; base, average for $1926=100$; prices are monthly averages, usually of weekly quotations. Index numbers from January, 1923, to July, 1927, for all commodities and for 10 major groups were published in the October Federal Reserve BulLetin, page 699, and the same figures together with indexes for subgroups, a list of commodities and weights, and information regarding methods of computation are given in Bureau of Labor Statistics Bulletin No. 453, September, 1927.

Austria.- Official index number of the Federal Bureau of Statistics; 42 price series, base, average for first six months of $1914=100$; prices are as of the 15 th of the month.

Belgium.-Official index number of the Ministry of Industry and Labor Statistics; 128 price series; base, April, $1914=100$; prices are as of the last half of the month.
Bulgaria.-Official index number of the General Statistical Office; 38 price series; base, average for $1913=100$; the index refers to the month as a whole.

Czechoslovakia.-Official index number published by the Statistical Office of the Republic of Czechoslovakia; 69 price series; base, July, $1914=100$; prices are as of the 1st of the month.
Denmark.-With this issue of the Bulletin, the official index number of the Government Statistical Department is substituted for the Finanstidende index formerly published. The official index includes 118 price series; base, average for $1913=100$. Prices are monthly averages of weekly quotations except for certain articles for which quotations are used for the 25th of the month. Monthly index numbers are available from January, 1925

England.-Index number of the Board of Trade; 150 price series; base, average for $1913=100$; prices are monthly averages.

Finland.-Official index number of the Central Statistical Office; 135 price series; base, corresponding month of $1913=100$; the index refers to the month as a whole; gold basis.
France.-Official index number of the Statistique Generale; 45 price series. For publication in the Bulletin, the index has been recomputed from its original base (average, 1901-
$1910=100$ ) to a new base, average $1913=100$. Most prices are as of the end of the month.

Index number of the Federal Reserve Board compiled by the Division of Research and Statistics; 98 price series; base, average for 1913 $=100$; prices are monthly averages of weekly figures.
Germany.-Official index number of the Federal Statistical Bureau; 400 price series; base, average for $1913=100$; prices are monthly averages.

Hungary.-Official index number of the Central Statistical Office; 52 price series; base, average for $1913=100$; prices are as of the end of the month.
Italy.-With this issue of the Bullemin, Prof. Riccardo Bachi's revised index number of wholesale prices for Italy is substituted for his old series. The new index is a geometric average of relatives for 100 series and the base of the index published in the Bulletin is the average for $1913=100$; prices are as of the end of the month. The index is also computed by Professor Bachi by means of an arithmetic average.

Netherlands.-Official index number of the Central Bureau of Statistics; 48 price series. For publication in the Bulletin, the index has been recomputed from its original base (average 1901-1910 $=100$ ) to a new base, average $1913=100$. Prices are as of the end of the month.

Norway.--Okonomisk Revue index number; 93 price series; base, average for December, 1913, to June, $1914=100$; prices are as of the end of the month.

Poland.-Official index number of the Central Statistical Office; 73 price series; base, January, $1914=100$; prices are as of the last week in the month. Beginning January, 1926, a new series has been used. It is computed from average gold prices for the last week of the month for 73 commodities.

Russia.-Official index number of the Conjuncture Institute of the State Planning Commission; 69 price series; base, average for $1913=100$; prices are as of the 1st of the month.

Spain.-Official index number published by the Institute of Geography and Statistics; 74 price series; base, average for $1913=100$; prices are as of the 1st of the month.

Sweden.-Official index number published by Kommerskollegium; 160 price series; base,
average for $1913=100$; prices are as of the 15th of the month.

Switzerland.-Index number compiled by Dr. J. Lorenz; 71 price series; base, July, $1914=100$; prices are as of the 1 st of the month.

Canada.-Official index number of the Dominion Bureau of Statistics; 236 price series; base, average for $1913=100$; prices are monthly averages of weekly figures.

Peru.-Official index number of the Direc-tor-General of Statistics; 58 price series; base, average for $1913=100$; prices are as of the 15th of the month.

Australia.-Official index number of the Bureau of Census and Statistics; 92 price series; base, July, $1914=100$; prices are as of the end of the month.

China.-Official index number of the Bureau of Markets; 147 price series; base, average for $1913=100$; prices refer to Shanghai and are as of the last Wednesday in the month.

Dutch East Indies.-Official index number of the Statistical Bureau; 92 price series; base, average for $1913=100$; prices are monthly averages of weekly figures.
India.-Official index number of the Department of Statistics; 75 price series; base, July, $1914=100$; prices refer to Calcutta and are as of the end of the month.

Japan.-Index number of the Bank of Japan; 56 price series. For publication in the Buluerin, the index has been recomputed from the original base (October, $1900=100$ ) to a new base, average $1913=100$. Prices refer to Tokyo and are averages for the month.

New Zealand.-Official index number of the Census and Statistics Office; 180 price series. For publication in the Bulletin the index has been recomputed from its original base (average 1909-1913 $=1,000$ ) to a new base, average for $1913=100$; prices are as of the 15th of the month.

Egypt.-Official index number of the Statistical Department of the Ministry of Finance; 26 price series; base, average January, 1913July, $1914=100$; prices refer to Cairo and are monthly averages of weekly figures.

Union of South Africa.-Official quarterly index compiled by the Office of Census and Statistics; 188 price series. For publication in the Brlletin the index has been recomputed from its original base $(1910=1,000)$ to a new base, average for $1913=100$; prices refer to the month as a whole.

# FINANCIAL STATISTICS FOR FOREIGN COUNTRIES CONDITION OF CENTRAL BANKS 

[Figures are for the last report date of month]

${ }^{1}$ Notes issued, less amounts held in banking department and in currency note account.
${ }^{2}$ Not lacluding gold held abroad.

Figures previous to Oct. 25, 1926, carried at par.
Figures previous to 1927 carried at par.

- Figures are for August, 1926.

## CONDITION OT CENTRAL BANKS-Continued

FOREIGN EXCHANGE RATES
[Monthly averages of daily quotations. ${ }^{1}$ In cents per unit of foreign currency]

${ }^{1}$ Based on noon buying rates for cable transfers in New York as certified to the Treasury by the Federal Reserve Bank of New York, in pursuance of the provisions of sec. 522 of the tariff act of 1922.

2 Rate on franc.
${ }^{3}$ Averages based on daily quotations of elosing rates as published by New York Journal of Commerce.
${ }_{4}$ Nominal.
${ }^{8}$ Silver currency. Parity represents gold value of unit in 1913 computed by multiplying silver content of unit by New York average price of silver for 1913. This average price was $\$ 0.61241$ per fine ounce, which compares with an average price of $\$ 0.56347$ for October, $1927, \$ 0.55757$ for September, 1927, and $\$ 0.54817$ for October, 1926. The corresponding London prices (converted at average rate of exchange) were $\$ 0.56533, \$ 0.55988$, and $\$ 0.55216$.

${ }^{1}$ New index-1926=100. Statistical offices which compile the index numbers and furnish them to the Federal Reserve Board. In severai cases, however, viz, France, Netherlands, Japan, New Zealand, and South Africa, they have been recomputed from original bases (1901-1910; 1901-1910; October, 1900; 1909-1913, 1910) to a 1913 base. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics and may be had upon request. Further information as to base periods, sources, numbers of commodities, and the period of the month to which the figures refer may be found on pages 769-770 of this issue of the Bullemin.
