# FEDERAL RESERVE BULLETIN 

(FINAL EDITION)

ISSUED BY THE
FEDERAL RESERVE BOARD
AT WASHINGTON

DECEMBER, 1921

## FEDERAL RESERVE BOARD.

EX OFFICIO MEMBERS.
A. W. Mellon,

Secretary of the Treasury, Chairman.
D. R. Crissinger,

Comptroller of the Currency.
W. P. G. Harding, Governor.

Edmund Platt, Vice Governor.
Adolpe C. Miller.
Charles S. Hamlin.
John R. Mitchell.
W. W. Hoxton, Secretary.
W. L. Eddy, Assistant Secretary.
W. M Imlay, Fiscal Agent.
J. F. Herson,

Chief, Division of Examination and Chief Federal Reserve Examiner.

Walter S. Logan, General Counsel.
H. Parker Willis, Director, Division of Analysis and Research. M. Jacobson, Stutistician.
E. A. Goldenwelser, Associate Statistician.
E. L. Smead.

Chief, Division of Reports and Statistics.

## SUBSCRIPTION PRICE OF BULLETIN.

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It is printed in two editions, of which the first contains the regular official announcements, the national review of business conditions, and other general matter, and is distributed without charge to the member banks of the Foderal Reserve System. Additional copies may be had at a subscription price of $\$ 1.50$ per annum.
The second edition contains detailed analyses of business conditions, special articles, review of foreign banking, and complete statistics showing the condition of Federal Reserve Banks. For this second edition the Board has fixed a subscription price of $\$ 4$ per annum to cover the cost of paper and printing. Single copies will be sold at 40 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board.
No complete sets of the Bulletin for 1915, 1916, 1917, or 1918 are available.

## TABLE OF CONTENTS.

General summary: ..... P'ipe.
Review of the month ..... 1377
Business, industry, and finance, November, 1921 ..... 1387
Foreign exchange operations, 1918-19 ..... 1400
Tobacco financing ..... 1413
Business and financial conditions abroad-England, France, Germany, Italy, and Scandinavia ..... 1420
Official:
Rulings of the Federal Reserve Board ..... 1435
State banks admitted to system ..... 1434
Fiduciary powers granted to national banks. ..... 1434
Banks granted authority to accept up to 100 per cent of capital and surplus. ..... 1434
Charters issued to national banks. ..... 1436
Price movement and volume of trade:
Domestic-
Wholesale prices in the United States ..... 1437

# FEDERAL RESERVE BULLETIN 

Vol. 7
DECEMBER, 1921.
No. 12

## REVIEW OF THE MONTH.

Current developments are making it increasingly clear that economic

Foreign trade and budgets. recovery must await restoration of foreign trade, and that improvement in foreign trade will involve two factors-a rectification of currency and exchange conditions as between countries and a decided improvement in budgetary conditions abroad. These two elements in the problem are, of course, not independent one of another, but call for joint and if possible simultaneous correction. The Brussels Financial Conference reached the conclusion that foreign exchange stabilization and rectification must be considered almost out of the question in the absence of very much better budget arrangements than existed at that time. The conclusions then reached, in the autumn of 1920, are even more cogent at the present moment, since there has been little or no betterment in the foreign exchanges during the intervening months. The situation is in some respects worse. During the past year a large amount of national revenue in most countries has continued to be devoted to the development of armaments, thereby preventing the various Governments from restoring their budgets to equilibrium and compelling them to rely largely upon shortterm borrowing in the effort to meet current obligations. In this issue of the Bulletin there is furnished a review and summary of existing financial and banking proposals designed to relieve present difficulties of international finance as affected by the budgetary outlook. A study of present conditions both as affecting plans to promote international financing and the granting of credit, and as to efforts toward budget betterment, will disclose the obstacles which must be encountered in effecting a return to stable conditions, as well as the degree of progress that is being attained. In the last issue of the Bulletin the continued existence of a great international balance still unfunded, in favor of the United States, was explained, while it was also shown
that commercial banking provision for the protection and carrying of our trade is declining in adequacy. These must be taken as basic data in the further discussion of the situation.
First, as to the foreign exchange situation at the moment. Comparison is
Course of foreign exchange. made in the following table with conditions of a year ago as regards quotations in terms of the dollar, both as to averages of actual rates and in terms of the percentage of par for the principal currencies of the world.

Average Rates of Exchange of Principal Formign Currencies at Netf York.

As appears from the figures, the general movement of foreign exchange quotations has shown no broad or uniform improvement. A recovery of sterling at the middle of November to $\$ 4$ placed it for the time in a more satisfactory position than it had occupied, and there has been some improvement in the exchanges of the former European neutrals. But the currencies of other countries, and particularly that of Germany, have not only tended toward lower levels but have been increasingly unstable in their quotations. Two factors may be mentioned as contributing to the uncertainty of the foreign exchange situation--the continuously large foreign trade balance of the United States which has raised the nominal unfunded in-
debtedness of the country to a figure in the neighborhood of $\$ 3,400,000,000$, as was estimated in the last issue of the Bulletin, and to the continuously unfavorable domestic budget conditions prevailing in the several countries or lack of balance between receipts from taxation and expenditures. The difficulty of reducing Government outlays has proven to be very great in nearly all countries, partly as a result of postwar readjustment operations of various kinds, including allowances for unemployment and continued outlays for public objects. Debt charges have also proven to be even more severe an economic burden than had been expected, owing to the fact that rapid decline of prices and the stagnation of business has in effect made the interest charge on debts contracted at a much higher level of prices a larger proportion of the current income of the several countries.

As in commercial banking so in the various

The Ter Meulen plan. proposals for governmental or semigovernmental financing, only minor progress has been made during 1921, save in the matter of discussion and development of detail. Renewed interest in the Ter Meulen plan for the establishment of international credits has, however, been aroused by the recent visit to this country of Sir Drummond Fraser, appointed as organizer, following the adoption of the Ter Meulen proposals by the Council of the League of Nations. Certain outstanding features were emphasized by Sir Drummond Fraser in his address before the convention of the American Bankers Association early in October. He pointed out that as the usual means of obtaining payment for exports to countries whose credit systems have been disrupted by war are now either lacking or else entirely inadequate, the logical recourse is to payment by the use of long-term bond issues with acceptable security behind them. The Ter Meulen plan would provide for the issue of such secured bonds upon application by countries having specific assets to assign as security for commercial credits needed by their citizens. An international commission would have to appraise the gold value of the pledged assets in order to determine the amount of bonds that could be safely issued against them, and the bonds themselves would then be transferred to responsible importers to be used as collateral
for loans made to them by foreign sellers of goods. If the importer is unable to pay the loan made to him by the exporter, the latter (who is in possession of the bonds) may either hold them as investments or sell them if the issuing Government does not exercise its option to repurchase within a limited period of time. However, when the importer makes payment to the exporter at the time agreed upon, the bonds are to be released and returned to the issuing Government.

It is evident, even from this cursory review Banking agen-
cies required. of the plan, that under the cies required. most favorable circumstancesthat is, assuming that the exporter is provided with unimpeachable security through possession of the bonds--there is need for the intervention of other financial agencies, if the exporter is unable or unwilling, as would usually be the case, to wait any considerable length of time to be paid for his shipment. For this reason Sir Drummond Fraser emphasizes the valuable services that can be performed by corporations of the type provided for under the Edge Act. Such corporations by granting accommodation to exporters against the pledge of Ter Meulen bonds would enable the exporters in turn to grant longer terms of credit to foreign purchasers of their goods. It should be said at this point that as Edge Act corporations are empowered to secure funds through the sale of long-term debentures, they are peculiarly fitted to make advances intended to be employed in investment and nonliquid commercial operations. The introduction of the Ter Meulen plan would, therefore, accommodate itself to the type of financing which it was hoped to foster by the passage of the Edge Act, since it would give the Edge corporations an acceptable type of security which would enable them to expand the scope of their operations with greater facility and less risk.
Apparently there is an increasing disposiInvestment tion to believe that the maoperations most chinery which it is proposed essential. to set up under the Ter Meulen plan and under various other credit schemes to rehabilitate foreign trade will be chiefly employed to finance investment rather than short-time commercial operations. This belief is held by Sir Drummond Fraser, and it was also expressed by Prime Minister Lloyd-

George in a speech recently delivered in the House of Commons in which he urged certain amendments to the act guaranteeing British export credits--guaranties which would not be required if the Ter Meulen plan, or some similar arrangement, were in operation. Mr. LloydGeorge stated that, in his view, credit should be extended for five or six years to cover capital equipment of various sorts, such as engineering orders, while Sir Drummond Fraser says that his experience so far leads him to believe that countries resorting to the issue of the Ter Meulen type of bond will largely issue them to importers desiring to obtain materials for production. Furthermore, many contemplated loans against the pledge of the Ter Meulen bonds, even if not intended to be of a long-time investment sort, would nevertheless be wanted for a longer period than would be regarded as desirable by banks doing a strictly commercial business. For that reason such banks would not be in a position safely to extend all the necessary accommodation desired by the foreign trade even if satisfactory security could be had. However, corporations established under the Edge Act are in a position to make advances both for short-time banking and for long-period financing operations, and since in the disorganized state of European finance and industry it would often be difficult to classify loans with respect to their purpose or liquidity there is need for the establishment of that type of banking institution.

It is possible to exaggerate the advantages that will grow out of the estab-
Limit of relief. lishment of special agencies for financing foreign trade. One should not lose sight of the fact that such agencies do not create capital in the sense of making purchasing power where it did not exist before. The most that can be done legitimately is to divert purchasing power from less effective to more necessary purposes. Edge Act corporations, for example, in selling debentures would have to depend upon investment funds which would otherwise find different outlets. The immediate result of an expansion of activity on the part of these corporations would be a transfer of purchasing power from investors to exporters who in their turn are sending goods out of the
country. The domestic consumer must, therefore, to a certain extent pay a price for the rehabilitation of the credit of the foreign importer. This is a fact to be recognized but not to be regretted, since in the end it leads to a desired consummation, namely, a wider market for the sale of many commodities whose prices have been unduly depressed by the loss of foreign custom. The indirect benefits would, moreover, be great, since, to the extent that European industry is reestablished, it will be able to re-create a demand for our products through a direct offer of goods in place of requests for credit. Under the best of circumstances, a onesided credit device can only offer a provisional basis for the carrying on of foreign trade. Unless the proceeds of new loans, whether secured by a pledge of bonds or in some other way, are made effective in reestablishing orderly industrial processes, they can but be an instrument for adding new indebtedness to existing indebtedness.

Whereas Edge Act corporations are intended to be permanent institutions
American expe- which will provide fresh credit dients. to meet current demands for loans whose proceeds are to be used in financing foreign trade, the sphere of action assigned to the War Finance Corporation is of a rather different sort. It is essentially concerned with the problem of making temporary advances to domestic agricultural producers whose products have become for the time being unsalable largely as a result of the enforced cessation of foreign demand. Hence the amendment to the act creating the War Finance Corporation, passed August 24, makes provision for advances not only to exporters of agricultural products but also, when the corporation believes that the public interest requires it, to banks and cooperative associations of producers which need extensions of credit for agricultural and live-stock purposes. The corporation is likewise authorized to purchase acceptances issued by Edge Act corporations to assist in exporting manufactured as well as agricultural products. As the War Finance Corporation is empowered to secure funds by issuing bonds or notes having several years to run, it is in a position to employ its resources in the financing of the live-stock industry and
other enterprises requiring accommodation for a longer period of time than the usual commercial loan.

The amendment to the War Finance Corporation act, passed in August, grew out of an acute situation, but it is nevertheless true that it is at all times necessary to give attention to the adaptation of our financing mechanism to this intermediate type of loan. The War Finance Corporation announces that from the passage of the amendment on August 24 up to November 6 it has extended credit in excess of $\$ 22,600,000$ to farmers and stockmen. These credits have been established with about 82 financial institutions located in 19 States. The loans range from a few thousand dollars to $\$ 15,000,000$, granted to a cooperative grainmarketing association. Funds have so far been obtained from the corporation's balance with the Treasury and no attempts have been made to appeal directly to the investment market for funds. For the period from January 1 to November 15, 1921, inclusive, total advances made by the corporation for export purposes have amounted to $\$ 68,964,707$ and for agricultural purposes to $\$ 50,118,076$.

Statement Showing, by Commodities, Advances Approved by War Finance Corporation from Jan. 4, 1921, to Nov. 15, 1921, Inclusive.

Export advances approved by War Finance Corporation:

| Cotton. | \$47, 527, 598. 00 |
| :---: | :---: |
| Tobacco | 2, 399,369.00 |
| Wheat. | 11,500, 000.00 |
| Condensed milk | 1,000,000.00 |
| Canned fruit and vegetables. | 400, 000.00 |
| Dried fruit. | 1, 250, 000.00 |
| Meat products | 1, 000, 000.00 |
| Railroad equipment. | 2, 925, 000.00 |
| Copper. | $145,600.00$ |
| Sugar-mill machinery | 317, 140.00 |
| Agricultural machinery. | 500, 000.00 |
| Total. | 68, 964, 707.00 |

Admitting the adequacy of the financial Financial ma- mechanisms just described for chinery no pana- meeting the peculiar needs of cea. a disorganized foreign trade, if they could be practically applied under favorable conditions, it must, nevertheless, not be forgotten that no machinery, however nicely adapted to the ends sought, can function effectively until the persistent fundamental causes of disorganization are removed. Budgets must be balanced and internal financial solvency achieved before those countries most in need of credit will be in a position to release and pledge assets to the repayment of further loans. Moreover, in the case of the countries of central Europe subordination of the liens on State assets for reparations and relief credits would be required before the proposed Ter Meulen bonds could become acceptable security. The process of valuing pledged assets on a gold basis (for example, State revenues, real estate, forests, etc., as proposed by Austria) would in any case be most difficult, even if such assets were entirely unencumbered by prior claims. With continuing inflation, fixation of values is made virtually impossible. Rehabilitation of revenue and currency systems become, therefore, the immediately pressing problem whose solution is antecedent to effective functioning of any machinery devised to finance the international movement of goods.

Hon. Herbert Hoover, Secretary of Commerce, in a recent letter to Sir Drummond Fraser, referring to the Ter Meulen plan, has summarized the general situation as to financial relief of every kind as follows:
Economic recovery of the States in eastern and southeastern Europe (and consequently a considerable fraction of our own and of world commerce) is dependent upon each State erecting (1) a balance in taxation and expenditure; (2) currency reorgamization and stabilization; (3) wise control of their exports and imports; (4) credits for reproductive purposes.
It is hopeless to expect that private capital will extend credits for exports to these States upon any systematic basis until the first three have been complied with. Furthermore, attempts to secure these three vital reforms by action through various Governments foreign to them risks being wrecked on the rocks of conflicting political objectives of such Governments.
The Ter Meulen plan proposes to facilitate credits for exports by the ordinary processes of business free from political action, when these three primary reforms have
been initiated. This should act as a great pressure to secure the reforms and if accomplished is at once ninetenths of the battle for rehabilitation of credits and commerce with these States.

I have the feeling, however, that something more is needed than export credits to these countries if the three primary reforms are to be accomplished, i. e., some assistance must needs be found to these States in credit for purposes directly of currency reform. I have already sug gested in another place that some action might be taken by the great banks of issue of the principal countries looking to formulation of a plan to facilitate solution of this portion of the problem; thus again keeping away from political action in the economic and financial affairs of each of these States. Such a plan in no way replaces the Ter Meulen plan as the two plans would supplement each other.

I may say I believe also that vital as all such steps are (to which the Ter Meulen plan would be an admirable contribution), yet again until there can be brought about some financial stabilization in Germany, all other European States will be adversely affected despite every effort implied in any of these ideas.

Progress toward sound budgetary conditions

Budgetary con-
ditionsin England and the United States. has been greatest in the United States and in England during 1920 and 1921. In the United States ordinary receipts up to November 12, for the fiscal year beginning July 1, 1921, exceeded ordinary disbursements by about $\$ 155,000,000$. As compared with a year ago this shows an excess of receipts approximately three times as great as for the corresponding period in 1920. The British budgetary situation has been less satisfactory during the current year than during 1920-21. Total expenditures during the first six months of the current year (that is, between Apr. 1 and Sept. 30, 1921) amounted to $£ 498,000,000$, while during the same period revenue amounted to $£ 456$,000,000 , leaving a balance of $£ 42,000,000$, which has had to be raised by borrowing. This contrasts unfavorably with the situation a year ago, when there had been accumulated a balance of about $£ 80,000,000$ for debt reduction. As a result of this budget situation, there has been an increase during the six months ending September 30 of $£ 45,260,000$ in the floating debt. It must be remembered, however, that the main factor in tax policy which accounts for this unfavorable balance is the reduction in receipts from the excess profits tax. Although certain funds are still coming in on this account
from excess earnings during earlier years, there has been a decrease during the first six months of this year of $£ 82,336,000$ irom the corresponding period last year.

In most of the continental countrics the Budgetary con- budget situation during the ditions on the Con- past year has, on the contrary, tinent. shown no real improvement; in fact, the reverse, although in the case of France and Italy a certain amount of relative advance has been scored. In other words, the total amount of outgo of these countries which has had to be made, not from the proceeds of taxation, but either from short-term bank borrowing or the issuing of currency, has increased rather than diminished. Figures for Italian finances for the fiscal years ending June, 1921, and June, 1922, are still in the form of estimates, the actual accounts not being available as yet. According to the latest estimates, however, it appears that the deficit for the current year will be only about one-half that for the year ending last June. In other words, the estimated deficit for 1920-21 amounts to $10,300,000,000$ lire, while the estimated deficit for 1921-22 works out at $5,000,000,000$ lire. Of value, as showing that Italian finances are on a somewhat firmer basis now than a year ago, are the statistics showing the comparative size of the note circulation of the banks of issue for the account of the State at the end of July of this year, and at the same time last year. At the end of July, 1920, the circulation for the account of the State amounted to something over $10,000,000,000$ lire, while a year later it had been reduced to about $8,500,000,000$ lire. The French Government contemplated an expenditure for this year amounting to $42,412,-$ 000,000 francs, as contrasted with receipts of $23,312,000,000$ francs, thus leaving a deficit of about $19,000,000,000$ francs to be procured by the flotation of loans. Of this deficit, about $16,000,000,000$ francs are regarded as eventually recoverable from Germany under the terms of the peace treaty. Of the ordinary receipts, $14,558,000,000$ francs were expected from indirect taxes and monopolies. However, from January 1 to September 30 receipts from these sources were $856,000,000$ francs below the budget estimates.

It is reported that receipts from direct taxes have also been unsatisfactory, but no separate figures on this phase of the subject are available for 1921. The decline in receipts from indirect taxes and monopolies is relatively small, and it is quite possible that it may be offset by a decline in Government expenditures, resulting from the decrease in prices which has taken place in France this year. During the first half of 1921 the total public debt of France rose from $245,000,000,000$ francs to 264,000 ,000,000 francs, calculating in both instances the foreign debt at par. This figure does not include loans floated by the cities and industries in the devastated regions, although the Government is responsible for their interest and repayment. In the case of Germany it is extremely difficult to estimate the total amount of Government expenditures for the current year. No budget has been voted by the Reichstag for 1921-22, and the Government continues to cover the difference between receipts and expenditures by discounting treasury bills with the Reichsbank. The consequent increase in prices has made it necessary to revise completely estimates of Government expenditures made last spring. For the first six months of the fiscal year beginning April 1, 1921, the difference between income and outgo has amounted to $44,000,000,000$ marks, and, in a recent speech before the Reichstag, Finance Minister Hermes estimated that before the year was over the deficit would reach $110,000,000,000$ marks.
There has been a prevailing belief for a long time past that the principal ele-

War expenditures. ment in the existing fiscal difficulties of many countries is to be found in their great outlay for war. This statement is true in broad terms, but requires to be qualified and limited in its application. In some countries, such as the United States, the outlay for war, while a very large part of the total outlay, is in large measure an expense which serves to carry the cost of past wars in the form of interest on public debt. While naval and military expenditure is large in such countries, it is a relatively moderate part of the entire budget. In other countries, like France, the current cost of military support still constitutes a very important fraction of the bud-
getary outgo. It has, therefore, been thought worth while to compile statements designed to show the comparative situation of the budget in several of the principal countries, with a view to ascertaining approximately how each one of them stands in this matter of expenditure for national defense, especially as compared with the prewar years.

${ }^{1}$ Total expenditures.
Compared with 1913, the last prewar year, the amounts of money expended for national defense by the Governments of France, Italy, and Germany show enormous expansion, but it should be remembered that the purchasing power of the currencies of these countries has undergone varying degrees of depreciation, and that the larger amounts for the more recent years, when reduced to 1913 monetary equivalents, will not show the same degree of expansion as is indicated in the table. During the war years the proportion of the total expendi-
tures made for war purposes was in excess of 80 per cent in all three of these countries. In 1920 the proportion had declined to 60 per cent in Germany, to about 50 per cent in France, and, according to preliminary figures not included in the table, to less than 40 per cent in Italy; in Great Britain and the United States the proportion for the fiscal year 1921 was 26 and 24 per cent, respectively. Nevertheless, the financial burden upon the taxpayers of these countries due to military expenditures is much heavier at present than before the war, since national production and income have suffered severely, and fiscal requirements for rehabilitation and reconstruction are an additional drain on national resources and income. While the proportion of total expenditures devoted to military purposes is, according to the fiscal returns, smaller in some countries at present than before the war, these expenditures undoubtedly constitute a larger proportion of the diminished national incomes and are, therefore, a more crushing load on the financially weakened countries of Europe.

In view of these conditions it can be seen that an effective reduction in
Reduction of naval outlay, if carried through
aval outlay. to success, would result in very material betterment at the present time, while a reduction in military outlay would probably furnish in many countries an even more important means of budget limitation. It can further be appreciated that this step is the necessary first approach toward the restoration of banking soundness and economic stability with, as an eventual result, the stabilization of foreign exchange or an approach thereto. The program of Secretary Hughes, as announced at the Conference on the Limitation of Armament which is meeting in Washington, would provide for a capital saving estimated, in the case of the United States, at probably from $\$ 200,000,000$ to $\$ 250,000,000$ on the present building program, while in the case of Great Britain and Japan the reduction of outlay would probably be as great for each as it would for this country. With such a beginning it might be expected that a lightening of the burden of taxation and a better handling of the public debt would result at an early date, with the
natural effects to be expected from such a policy in producing a better banking situation and a more evenly balanced foreign trade.

In several European countries a substantial
Banking condipart of Government expenses tions. has during the past few months continued to be covered by the short-term loans at banks already referred to, while these loans have themselves given rise to issues of bank notes with the consequent effects upon prices that must always be expected from such action. The following tables have been compiled for the purpose of showing the relative increases of outstanding bank notes and other currencies in the principal countries as contrasted with the volume of bank deposits and of gold reserves held therein:

In the following table are presented the Board's usual indexes of cur-
Index of busi- rent production and marketing conditions. The figures show that the heavy movement to market of agricultural products and live stock has continued, while output in certain branches of manufactures indicates a marked increase over the previous month.

[^0]

During the month ending November 10 the net inward movement of gold
Gold and silver movements. was $\$ 41,236,000$, as compared with a net inward movement of $\$ 54,529,000$ for the month ending October 10. England and France combined furnished over 71 per cent, or $\$ 34,528,000$, of the $\$ 48,160,000$ of gold imported during the monthly period ending November 10, other countries of Europe, the Orient, and Canada furnishing most of the remainder. Of the gold exports, amounting to $\$ 6,924,000$, over 78 per cent, or $\$ 5,372,000$, was consigned to Hongkong and the remainder to British India, Canada, Straits Settlements, and Mexico.

Net imports of gold since August 1, 1914, were $\$ 1,479,102,000$, as may be seen from the following exhibit:
[In thousands of dollars.]

|  | Imports. | Exports. | Excess of imports. |
| :---: | :---: | :---: | :---: |
| Aug. 1, 1914, to Dec. 31, 1918. | 1,776,616 | 705,210 | 1,071,406 |
| Jan. 1 to Dec. 31, 1919.... | 76,534 | 368, 185 | ${ }^{1} 291,651$ |
| Jan. 1 to Dec. 31, 1920. | 417,068 | 322,091 | 94,977 |
| Jan. 1 to Nov. 10, 1921. | 625,737 | 21,367 | 604,370 |
| Total. | 2,895,955 | 1,416,853 | 1,479,102 |

1 Excess of exports.
Since the beginning of the present year net gold imports totaled $\$ 604,370,000$. The largest gains are shown through imports from the following countries: England, $\$ 177,546,000$; France, $\$ 176,392,000$; and Sweden, $\$ 60,109,000$. Gold exports during the present year were con-
signed chiefly to the following destinations: Hongkong, \$9,264,000; Mexico, \$5,352,000; Sweden, $\$ 2,643,000$; and Canada, $\$ 2,563,000$.

The net inward movement of silver during the monthly period under review was $\$ 871,000$, as compared with a net inward movement of $\$ 458,000$ for the month ending October 10. Mexico furnished over 81 per cent, or $\$ 5,161,000$, of the $\$ 6,332,000$ of silver imported during the monthly period ending November 10, the remainder coming principally from Peru, Chile, and Canada. Silver exports, amounting to $\$ 5,461,000$, were consigned principally to China, England, and Canada.

Net exports of silver since August 1, 1914, were $\$ 444,351,000$, as may be seen from the following exhibit:
[In thousands of dollars.]

|  | Imports. | Exports. | $\begin{aligned} & \text { Excess of } \\ & \text { exports. } \end{aligned}$ |
| :---: | :---: | :---: | :---: |

| Total. | 434,230 | 878,581 | 444,351 |

1 Excess of imports.
Substantial loan liquidation, as against a
The banking situation. moderate increase in the investment account of reporting member banks, and a corresponding reduction of borrowings from the Federal Reserve Banks, are indicated by the weekly reports of over 800 member banks in leading cities for the period between October 11-12 and November 16. Further reduction of the discount rates adopted by the reserve banks during the early part of November, while undoubtedly affecting the investment market, has not yet become reflected in a larger volume of discounting or rediscounting.

Total outstanding loans and discounts of reporting banks on November 16 were about $\$ 250,000,000$ less than four weeks before, the decrease affecting loans secured by Government obligations (so-called Government paper) as well as ordinary loans and discounts. Member banks in New York City report an increase by $\$ 34,000,000$ in their advances on
corporate securities, but this increase is partly offset by liquidation in Chicago and in other large cities. An increase of $\$ 29,000,000$ is shown in the reporting banks' holdings of United States bonds and Victory notes, as against a reduction of $\$ 17,000,000$ in Treasury notes. Treasury certificate holdings show considerable fluctuations in connection with the October 15 redemption operations and the issuance of two new series at the beginning of the following month, November 16 holdings being about $\$ 10,000,000$ larger than five weeks earlier. A slightly larger increase is shown in the volume of corporate securities held. Total loans and investments of the reporting banks indicate net liquidation for the five weeks of about $\$ 215,000,000$. In keeping with this substantial decrease in their earning assets, the reporting banks show a steady reduction of $\$ 198,000,000$ in their borrowings from the Federal Reserve Banks, which constituted 4.7 per cent of their total loans and investments on November 16, as against 6 per cent five weeks before. These reductions are accompanied by larger net withdrawals of Government balances and substantial increases in demand and time deposits.

Weekly changes in the leading accounts of the reporting member banks are shown in the following exhibit:

${ }^{1}$ Including rediscounts with Federal Reserve Banks.
Federal Reserve Bank figures, which cover the five-week period between October 19 and November 23, indicate a gradual decrease during the first four weeks of $\$ 27,800,000$ in the holdings of Government paper, followed
by an increase during the subsequent week of $\$ 35,300,000$, largely in the shape of member banks' notes secured by Liberty bonds, this increase being in sequence to the substantial increase in United States bond holdings reported by the member banks. Other discounted bills show a continuous decline totaling $\$ 132,100,000$ for the period, holdings of acceptances purchased in open market increased by $\$ 15,100,000$, and total bill holdings of the reserve banks show a reduction of $\$ 109,500,000$ for the period under review. Rediscounting operations of the Richmond, Atlanta, Minneapolis, and Dallas banks show a considerable decrease for the period, the amount of bills held under rediscount with the Boston, New York, and Cleveland banks declining from $\$ 42,700,000$ to $\$ 19,700,000$. The Minneapolis bank was able to redeem all of its bills held under rediscount with the New York bank early in November and no longer figures among the borrowing banks.

Pittman certificates show a further decline of $\$ 25,900,000$, other Treasury certificates, largely held under repurchase agreements by the New York Reserve Bank, increased by $\$ 34,000,000$, while other United States securities declined by about $\$ 600,000$. Total earning assets, in consequence of the above changes, show a reduction for the five weeks of $\$ 102,000$,000 , and on November 23 stood at $\$ 1,475$,900,000 , or about 57 per cent below the peak figure reported on October 15 of last year. Federal Reserve note circulation, with the exception of one week in November, shows a continuous decline, the November 23 total of $\$ 2,389,900,000$ being $\$ 51,000,000$ below the

October 19 total and lower than any total published since October 4, 1918. The banks also report a reduction of $\$ 18,200,000$ in their net liabilities on Federal Reserve Bank notes in circulation, though the amount outstanding, according to Treasury records, shows a decrease of only $\$ 6,400,000$ for the period. Reserve deposits fluctuated within the narrow limits of $\$ 1,650,700,000$ on November 2 and $\$ 1,675,100,000$ on November 16, while total deposits varied between $\$ 1,717,700,000$ on October 19 and $\$ 1,742,300,000$ on November 2.

Gold reserves show a further gain of $\$ 62,500$,000 , offset by a loss of $\$ 6,100,000$ in other cash reserves. For the present year the banks report a gain of $\$ 772,400,000$ in gold and a loss of $\$ 47,900,000$ in other reserve cash. The reserve ratio, mainly because of the gain of gold, shows a further rise during the five weeks from 70.3 to 72.3 per cent.

Weekly changes in the principal assets and liabilities of the reserve banks are shown in the following exhibit:

Federal Reserve Banks.
[In millions of doltars.]

## BUSINESS, INDUSTRY, AND FINANCE, NOVEMBER, 1921.

Improvement in business conditions in November has not been as pronounced as during the preceding two months. Several factors are responsible for this relative "slowing down." The seasonal peak of demand has, for the time being, been reached and passed. Uncertainty regarding prices of staples, particularly of cotton, has interfered somewhat with trade buying, while the possibility of further reductions of freight rates has apparently tended to unsettle prices and to retard the activity of industry in some of the chief manufacturing sections. Recovery in the steel and iron trade has come to a halt for the time being, and stability has not yet been achieved in that branch of production.

Nevertheless, the progress toward normal conditions achieved during November has been continuous, as may be seen by a comparison with the corresponding month of a year ago, or with the general movement of economic conditions since the beginning of this year. Cotton and woolen textiles in some of the principal producing districts are almost on a normal basis. Steel and iron, while working at about 50 per cent of capacity, are in much better condition than was true a few months ago. In some industries which had accumulated large surplus stocks, such as zinc, demand has been sufficient to carry off a part of the oversupply. Unemployment has at least slightly decreased. Export trade continues in substantial volume, showing an increase during October, and while laboring under many handicaps due to unsettled exchanges, shows the result of strong foreign demand, especially for staples. This is particularly noteworthy when it is remembered that the prices at which cotton and cereals are now being shipped are so much lower than those of a year ago. Banking conditions are reported slightly improved practically throughout the United States.

Reduction of prices for cereals and failure of cotton to maintain the level attained in September-October have proven a serious handicap to farming interests. Results of this relatively low return for output have been a reduction in the demand of farming communities in some parts of the country for consumable goods and a simultaneous tendency to check somewhat the process of liquidating loans at banks. Nevertheless, retail business continues to improve, taking the country as a whole, and has been materially helped by the improvement which has taken place in employment conditions during the past few months. Improvement is also observable in wholesale trade, sales comparing favorably with a year ago. Prices continue to maintain a substantially stable position. The Federal Reserve Board's index for October shows a recession of less than two points, and it is evident that the price changes which are now occurring do not represent any extensive movement toward modification of the average level.

Important financial developments have taken place during the month. In addition to a general reduction of Federal Reserve discount rates, there has been a distinct tendency toward decline in the level of market rates both for short and long term funds. This has been accompanied by a decided advance in the prices of bonds, and particularly of standard securities. New offerings of capital issues have, in many cases, been readily absorbed, and the general condition of credit has become easier. The one point at which financial conditions have shown little or no improvement is in foreign exchange, where the German mark has continued its downward movement, while other European currencies have been generally unsettled, with only sporadic tendency to improvement.

The general situation of trade and industry is unmistakably more hopeful, and is improving as steadily as can be expected, in view of the slowness of economic progress in other parts of the world, particularly in western Europe. Another handicap to complete readjustment continues to be the failure to bring about a proper coordination and mutual relationship of prices. This is responsible for no small part of the slowness of economic recovery in certain branches of business. On the whole, the best opinion now looks to a steady, even if locally interrupted, progress back to normal conditions, although no immediate or sudden expansion or "boom" is now in sight.

## AGRICULTURE.

The preliminary estimates for the crops of 1921, issued as of November 1, indicate that total agricultural production in 1921 will be much lower than in 1920, and also considerably less than the average production in the years 1915 to 1919. The estimated volume of every important crop is smaller for 1921 than that of 1920 , but the 1921 production of corn, sugar beets, sweet potatoes, and kafirs exceeds the average production in the preceding five-year period. The preliminary estimate for corn production is $3,151,698,000$ bushels, which is 2.5 per cent less than the crop of 1920 , but 12.6 per cent greater than the average outturn in the years 1915 to 1919. Both district No. 10 (Kansas City) and district No. 8 (St. Louis) report that corn husking has made rapid progress and that a considerable portion of the crop has been cribbed. Reports from district No. 8 ( St . Louis) indicate that corn is well matured and the yield for both silage and grain is good. The stock of old corn on farms in the United States was estimated at $281,472,000$ bushels on November 1, which is over three times the average hold-over during the past five years. The condition of the white-potato crop continued to improve during October, but the estimated production on November 1 was 16.9 per cent smaller than the crop of 1920 and 4.1 per cent less than the average total yield in the years 1915 to 1919 . District No. 9 (Minneapolis) states that over 60 per cent of the current potato crop was shipped from the farms by the end of October, whereas only 28 per cent of last year's crop was marketed at the corresponding date in 1920 . Reports from district No. 7 (Chicago), on the other hand, indicate that a large portion of the Wisconsin potato crop is being stored. The estimated production of sugar beets on November 1 amounted to $7,480,000$ tons, which was 12.5 per cent less than in 1920, but 20.3 per cent more than the average production in the previous five years. Reports from district No. 6 (Atlanta) indicate that the Louisiana cane sugar yield will amount to about 223,000 tons, as compared with a production of 169,127 tons in 1920. The new winter wheat crop has made good progress in most sections, but has suffered from a lack of rain in Kansas, Nebraska, Oklahoma, and Colorado. District No. 8 (St. Louis) states that winter wheat is in prime condition to enter cold weather, although unofficial reports indicate that the acreage will be slightly less than last year. The winter wheat and rye crops are well advanced in district No. 7 (Chicago), and it is reported that a larger acreage has been sown in Wisconsin than in 1920.

## COTTON.

Cotton ginned prior to November 14 amounted to $7,270,575$ bales, as compared with $8,914,642$ bales in the corresponding period of 1920 . Considering the percentage of the crop ginned to this date in previous years, this indicates that the cotton crop of 1921 will probably exceed $8,000,000$ bales, whereas the last Government estimate, as of September 25, predicted a crop of $6,537,000$ bales. As a result of this increase in the known supply of cotton, the price of spot cotton at New York has declined from over 20 cents in September to 18.4 cents on November 23, but is still about 50 per cent higher than the prices prevailing in August. District No. 5 (Richmond) states that the crop in the southern half of South Carolina was practically a failure, whereas a fair crop was gathered in the section north of Columbia and in North Carolina. Reports from district No. 6 (Atlanta) indicate that cotton cultivation during the past season was relatively much more successful in Mississippi, Alabama, and Tennessee than in the eastern section of the district. Continued dry weather has been favorable to the harvesting of the cotton crop in district No. 11 (Dallas) and very little cotton remains to be picked in any part of that district.

## TOBACCO.

The November 1 estimate for tobacco showed an increase to $1,020,874,000$ pounds, but the crop is still only about two-thirds that of last year, the reduction being found very largely in the manufactured and export types. The markets of North Carolina and Virginia were active during October, but still larger sales were witnessed during the first two weeks of November because of better weather for the preparation of leaf for market. Better prices, averaging $\$ 30.87$ per 100 pounds, were realized during October than during either September, 1921, or October, 1920, and grades coming on the market during November have shown some further improvement, so that still better prices have been realized. Medium and fine grades are advancing steadily, and buyers appear to be anxious to secure all good leaf offered, but the demand continues poor for low-grade tobacco, which comprises a large part of this year's crop. In the western districts of Ken-tucky-Tennessee, whose tobacco moves to market later than in the east, the outstanding feature has been the announcement that the Burley Tobacco Growers Cooperative Association had signed up about 85 per cent of this year's crop and can now proceed with marketing arrangements. The cigar leaf tobacco market in district No. 3 (Philadelphia) has had the dullest fall it has experienced for years,
and the question of prices is a stumbling block to recovery. October was the best month experienced this year by the cigar manufacturing industry in that district, but there are now some evidences of diminishing demand, although the majority of manufacturers continue to receive orders faster than they can fill them. The demand for manufactured tobacco in district No. 5 (Richmond) has been as strong during October as during any earlier month this year, although export trade continues light, most of the orders coming from Latin America. In both cigars and manufactured products the offering of new brands at prices lower than those for established goods continues.

## FRUIT.

The apple crop continued to deteriorate during October, and the estimated production is only $102,290,000$ bushels, which is 58 per cent less than the production in 1920. The crop has been a failure in almost all States east of the Rocky Mountains, whereas apple production in States west of the Rocky Mountains will amount to about $41,392,000$ bushels in 1921, as compared with $30,952,000$ bushels in 1920 . Apples matured so rapidly in district No. 12 (San Francisco) that storage facilities were inadequate, and a temporary glut of the markets ensued. Total production of citrus fruits in 1921 will probably be considerably larger than in 1920, despite the destruction of about 10 per cent of the Florida crops by a recent storm. District No. 6 (Atlanta) reports that more grapefruit will be shipped from Florida this year than last year, but there may be some diminution in the shipments of oranges. Reports from district No. 12 (San Francisco) indicate that shipments of the new crop of oranges and lemons from California should be larger than during the crop year ending October 31. Prices of between $\$ 6$ and $\$ 7$ a box are being paid for the better grades of Florida oranges, while small and poorly colored fruit hardly fetches a sufficient price to cover freight charges. Production of wine and table grapes in California amounted only to about 388,000 tons during 1921, as compared with 540,000 tons in 1920 , but shipments totaled 29,515 cars up to November 5, as compared with 25,809 cars in the corresponding period of 1920 . The California production of raisins was also unusually light during 1921, but the quality is exceptionally good, due to a favorable drying season.

## GRAIN MOVEMENTS.

The volume of grain movements showed some further curtailment during October, but total shipments of 1921 crops from the
farms have been very heavy. Wheat receipts at leading primary markets in October were smaller than in September, but were slightly larger than in October, 1920. Receipts of wheat at Minneapolis and Duluth amounted to $27,744,836$ bushels in October, as compared with $32,108,426$ bushels in September and $26,278,983$ bushels in October, 1920. At the four principal markets of district No. 10 (Kansas City) 12,653,800 bushels of wheat were received in October in comparison with 21,981,400 bushels in September and $12,394,150$ bushels in October, 1920. Receipts at these four markets from July 1 to October 31 were about 32 per cent greater than in the corresponding period of 1920. Corn receipts showed a, slight decline in October, but were very much larger than in October, 1920. District No. 10 (Kansas City) reports that new corn is beginning to move to the markets, but that receipts continue light, due to the low price at which it has been selling. Movement of other important grains was also somewhat abated in October. Stocks of grain at 11 interior centers were, however, further augmented during the month. At Minneapolis and Duluth stocks of wheat increased 43 per cent, corn 124 per cent, oats 15 per cent, barley 13 per cent, and rye 21 per cent. The most noteworthy change in volume of grain stocks at eight seaboard centers was an increase of 73 per cent in the stocks of corn.

FLOUR.
Output of mills representing 75 per cent of total production in district No. 9 (Minneapolis) was $2,989,089$ barrels during October, an increase of 7 per cent as compared with 2,788,421 barrels during September, and an increase of 23 per cent as compared with 2,427,749 barrels during October, 1920. Production of mills in district No. 10 (Kansas City), representing 65 per cent of the total output of that district, amounted during October to $2,295,789$ barrels, an increase of 53 per cent over the October, 1920, figure of $1,502,721$ barrels. In district No. 12 (San Francisco), production of 63 mills during October was 997,325 barrels, an increase of 2.8 per cent over the September figure of 970,632 barrels for 64 mills. Price declines were reported on all grades of flour during October, but a partial recovery was noted during November. The trade is stated to have been somewhat depressed by the decline in wheat prices. This was evidenced in district No. 10 (Kansas City) by reports of curtailment of shipping instructions on old orders, as well as by the slowing down of new orders. Business in district No. 8 (St. Louis)
has been irregular and unsatisfactory to the seller. Domestic demand continues in fair volume, but is on a hand-to-mouth basis. Some export business is reported in the district, mainly to western Europe, but export demand in district No. 12 (San Francisco) dwindled to small proportions in October. Millers in that section are reported to be awaiting further developments in the wheat market before buying stocks of wheat and expanding operations.

## LIVE STOCK.

Heavy movement of live stock to market was reported during October. Receipts of cattle and calves at 15 western markets during that month were $1,712,917$ head, corresponding to an index number of 170 , as compared with $1,417,259$ head during September, corresponding to an index number of 141 , and $1,621,295$ head during October, 1920, corresponding to an index number of 161 . Receipts of hogs increased from 1,783,827 head during September to 2,057,231 head during October, as compared with $1,791,881$ head during October, 1920, the respective index numbers being 81,94 , and 82 . October receipts of sheep were $1,842,148$ head, as compared with $1,651,659$ head during September and $.1,864,728$ head during October, 1920, the respective index numbers being 135, 121, and 136. October shipments of stocker and feeder cattle and calves from 34 markets were 57 per cent larger than during September, although shipments of sheep and lambs were slightly less, but in both cases the figures were very much less than a year ago. Southern cattle have been shipped to Montana this fall for winter feeding, due to the abundance of good winter range and the large forage supply of high quality hay. Practically all cattle and sheep in district No. 11 (Dallas) have been driven to winter ranges and grazing conditions are reported above normal, although rainfall is now needed to start growth of winter and spring feed. The activities of the War Finance Corporation in that district have engendered better feeling among cattlemen.

Twenty-five representative packers report an increase of 6.3 per cent in October sales (measured in dollars) over those during September, but a decline of 29.6 per cent as compared with October, 1920. Fresh meats and fard for domestic trade have been moving well, and there has been an improvement in the demand for cheaper cuts of beef and pork in many localities. There was improvement in November in the demand from Great Britain and the Continent for packing-house products. The fresh-meat trade was reported generally slow during October in district No. 10 (Kansas

City), and conditions were more stable than in September, although retailers bought only for the immediate requirements of their trade.

## COAL.

Production of bituminous coal in October was larger than during any month of the current year. The steady improvement evident during September and October was materially accelerated during the last 10 days of October, when, under the threat of the strike, heavy demands for spot deliveries appeared. After the strike call was rescinded activity in the market ceased. Production increased from 35,105,000 tons in September to $43,741,000$ tons in October, which was, however, below the October, 1920, production of $52,144,000$ tons. The respective index numbers are 95, 118, and 141. District No. 3 (Philadelphia) reports that although prices rose somewhat when the strike threatened they have gradually reacted and are now at the levels prevailing during early October. District No. 7 (Chicago) reports that the reduction in the production of domestic sizes has caused a decrease in the amount of screenings in the hands of operators, so that the price in the open market has remained throughout October at a level higher than during September. District No. 10 (Kansas City) states that generally the coal situation is considered dull, although the October percentage of loss of activity at the mines on account of "no market" was very materially reduced in Colorado, Missouri, and Oklahoma, as compared with the month of September.

The increased production of anthracite coal during October was no doubt caused by the speeding up at the time of the threatened railroad strike. Production was lower, however, than in any month of October for the last eight years. The output this October was $7,580,000$ tons, as compared with the September figure of $7,124,000$ tons. The respective index numbers are 102 and 96 . Although the demand was stimulated temporarily, consumers are now willing to purchase only in small lots. District No. 3 (Philadelphia) reports that the demand for steam coal is greater than it was in the summer, but orders are small, and, due to the installation of oil heating plants in many hotels and office buildings, the market may be permanently narrowed.

The improvement in the iron and steel industry in September and October continued to be reflected in an increased production of coke. Beehive coke production increased from 289,000 tons in September, corresponding to an index number of 11 , to 416,000 tons in October, corresponding to an index number of 16 . By-
product coke production increased similarly, from $1,423,000$ tons in September to $1,734,000$ tons in October, the respective index numbers being 161 and 197.

## PETROLEUM.

During October there was a further narrowing of the slight margin between domestic production of crude oil and its consumption. Reports for the several important oil fields indicate that output is still curtailed. It is reported that the demand for and price of gasoline weakened considerably, due mostly to the bad weather prevailing in the North and Northwest and the normal falling off of consumption at this time of the year. The price of crude petroleum advanced in practically all fields.

District No. 10 (Kansas City) reports that October development operations show a slight decrease in the number of wells completed and also in the number of barrels daily new production as compared with September, while drilling operations during October show a gain of 36 new rigs as compared with September, but were 35 per cent less than a year ago. Stocks of crude oil held in Kansas and Oklahoma aggregated $65,936,148$ barrels at the end of September, an increase of $1,097,643$ barrels during the month. Production of petroleum in Kansas and Oklahoma during the month of October averaged approximately 404,125 barrels daily, according to unofficial reports. As compared with a year ago this indicates a reduction of 7,750 barrels in average daily production and a total decrease of 240,250 barrels for the month.

Production of crude petroleum in district No. 11 (Dallas) continued to decrease. The total output during October was 9,941,748 barrels, which represented a 20,282 barrel decrease from September production. New completions in this district numbered 192 wells, only 92 of which were producers, as compared with 116 producers out of 171 completions for September. Due to the rise in prices, there has been a resumption of drilling in this section. After nearly two months of dispute over wage adjustments and working rules in the California fields, a settlement has been obtained and work has been resumed on all leases. On account of the strike the low figure of 227,957 barrels of average daily production was reported. Although consumption during October decreased, it was still considerably in excess of output, and stored stocks were further reduced by 555,039 barrels, only $33,116,456$ barrels being held at the end of October. Thirty-two new wells, with an initial daily production of 14,825 barrels, were completed during the month.

## IRON AND STEEL.

During October distinct improvement was evident in the iron and steel industry. Pigiron production during that month amounted to $1,233,232$ tons, corresponding to an index number of 53 , as compared with 985,529 tons during September, corresponding to an index number of 43. Steel-ingot production showed a somewhat greater increase, from 1,174,740 tons during September to $1,616,810$ tons during October, the respective index numbers being 51 and 70. On November 1, 95 furnaces were in blast, as compared with 84 furnaces on October 1. The unfilled orders of the United States Steel Corporation, however, not only failed to respond, but actually showed a decrease, from $4,560,670$ tons at the close of September to $4,286,829$ tons at the close of October, the respective index numbers being 87 and 81, the lowest since May 31, 1919. November does not show a continuance of the improvement during the previous month, but indicates that conditions at best are merely holding their own. In fact, district No. 3 (Philadelphia) reports "a distinct, though slight, reaction from the steadily increasing activity that occurred during September and October." Prices reflect the slackening of demand. After a spirited advance during September and October, they have again weakened on practically all products. The advance of $\$ 5$ on sheets, which was made some time ago, has been lost, and the lower figure itself has been shaded. Lessening of demand has been most conspicuous in the lighter products, such as sheets and wire, which contributed greatly to the recent increase in steel production. The heavier products which have been lagging up to this time are reported from district No. 4 (Cleveland) to be making a better showing under demands originating with some increase of general business construction, oil field work, and railroad buying, both for car repairs and rails. In district No. 3 (Philadelphia) output at present is somewhat in excess of current deliveries. The policy of purchasers is to carry over as little material as possible into the new year, as lower freight rates and production costs would necessitate writing off inventories. Many inquiries for 1922 delivery are, however, being received.

## AUTOMOBIIES.

Some of the larger manufacturers of automobiles in district No. 7 (Chicago) further curtailed production during the latter part of October, when they discovered cars piling up in the hands of distributors and dealers, pending the presentation of new models. In fact,
reduction of production schedules to conform to approaching winter conditions, with their lessened sales, has been general. Manufacturers' shipments during October were 17,323 carloads, as compared with 19,002 carloads during September, but were slightly in excess of the October, 1920, figure. October driveaways were 11,257 machines, as compared with 13,840 machines during September. Business in trucks during the past few months has not been relatively as large as in passenger cars.

## NONFERROUS METALS.

The nonferrous metal markets are generally quiet, with no unusual demand expected for the remainder of the year. The October average prices show uniform advances over the figures for September, and lead, zinc, and tin averages were the highest since May or June. The price of copper (New York, net refinery) was 13 cents per pound on November 16, as compared with 12.75 cents per pound on November 1, while the price of lead at New York remained at 4.65 cents throughout the latter part of October to the middle of November. The demand for zinc has shown little improvement, and the price of 4.70 cents at St. Louis has been maintained during the month. Copper production in October amounted to $21,157,754$ pounds in comparison with a production of 20,926,554 pounds in September. October production of copper in district No. 9 (Minneapolis), as indicated by the figures of companies producing about 75 per cent of the refined copper in that district, continued at the same low level which has prevailed since the spring of 1921. Zinc production during October remained at almost the same figure as for September. Shipments of zinc for October were 10,311 tons more than the amount produced, so that stocks on hand were reduced from 81,135 tons at the beginning of the month to 70,824 tons on October 31. District No. 10 (Kansas City) reports that there was heavy shipment of zinc ores during October, due in some measure to a radical increase in the value of the ore. A comparison of statistics for 1921 to the end of October with the same period in 1920 reveals that shipments of zinc ores have been about one-half in amount and less than one-third in value, while lead ore shipments have decreased approximately one-third in amount and two-thirds in value. District No. 12 (San Francisco) states that no further improvement in the gold and silver mining industries was reported during October, and the copper mining industry continues greatly de-
pressed. In this district the demand for lead is stated to be strong, consumption outrunning production.

## COTTON TEXTILES.

The unsettling effect of a drop in the price of raw cotton, following upon the initiation of new price adjustments growing out of the previous advance, has resulted in a slightly lessened activity in the industry during October. The uncertainty manifested itself, however, rather in a hesitancy on the part of buyers to place new orders than in any immediate curtailment of mill activity. An examination of cotton statistics makes it apparent that mill activity was sustained during the month, as consumption amounted to 494,745 bales in October, a gain of 2.1 per cent as compared with September and an advance of almost 25 per cent over the October figures of the preceding year. In New England consumption was stated to be larger in October than at any time during the past year. At present, mills in that section are operating at about 80 per cent of capacity, while in district No. 3 (Philadelphia) the goods mills show a lesser degree of actirity, estimated at from 60 to 65 per cent. Orders in most cases are said to be no more than sufficient to cover six weeks' operations on the present running basis in the case of the mills in the Philadelphia district. But spring business in ginghams and fancy fabrics offers a contrast to the general market and is reported to be excellent. Yarn prices have fallen somewhat, since weavers and knitters covered their requirements very largely in September, and few new orders are being placed at the present time. The yarn mills in district No. 3 (Philadelphia) showed a slight reduction in activity, operating at about 65 per cent of capacity. As orders booked will be filled within the next six weeks, reduction in the scale of operations is being contemplated by some manufacturers.

Activity in the southern mills continues to be greater than in other sections of the country. In district No. 6 (Atlanta) mills generally throughout the district are operating on full time and some are running night shifts. Cloth production of 48 mills reporting to the Federal Reserve Bank of Atlanta showed an increase of 3.5 per cent in yardage in October as compared with September and of 17.4 per cent as compared with October, 1920. Cloth shipments increased 7.5 per cent for the month and 73.2 per cent over those for a year ago. Orders on hand at the end of the month had declined 5.2 per cent, but were 28.4 per cent above those
for the end of October, 1920. A majority of yarn as well as cloth mills are operating at full capacity or even running overtime, although reporting establishments said that a cessation of orders had followed the recent drop in cotton prices. Yarn production in pounds for 44 mills was 1.6 per cent less in October than in September, but 33.6 per cent above the output during October, 1920. Yarn shipments advanced 12.9 per cent and 62.1 per cent, respectively, as compared with the preceding month and with the same month a year ago. Orders on hand were 5.4 per cent above those for the end of September and 85.8 per cent above the totals for the end of October, 1920.

## COTTON FINISHING.

Reports from 35 of the 58 members belonging to the National Association of Finishers of Cotton Fabrics show that during the month of October there was an increase in finished yards billed, the total amounting to $105,286,414$, as compared with $101,824,795$ for September. However, a drop in finishing orders received during the month was recorded, the figure for October being $100,909,965$, as compared with 107,336,429 for the preceding month. The percentage of average capacity in operation rose slightly from 73 to 77 for all districts. The average work ahead at the end of the month fell from 11 to 10 days.

## WOOLEN TEXTILES.

The strike of the New York garment workers came at the end of the period covered by the reports, and its effect upon the activity of the mills manufacturing dress goods could not therefore be gauged. In New England the woolen and worsted industry has been running on a normal basis in spite of the fact that the goods market at the present time is dull. In district No. 3 (Philadelphia) dress-goods mills have been operating at about 80 per cent capacity. The manufacturers of knitting yarns in district No. 3 (Philadelphia) continue to do a good business, and many of them have orders sufficient to enable them to run at full capacity well into 1922. In district No. 4 (Cleveland) reporting textile mills have not had as good business in October as in September. In the former month they were operating near capacity, but since then orders have fallen off, and in October operations averaged only about 70 per cent of normal. The census figures showing the percentage of idle machine hours to the total hours reported indicated a slight improvement for the month of October as compared with September. On November 1, for ex-
ample, the percentage of idle hours for looms wider than 50 -inch reed space had dropped to 24.9 per cent as compared with 25.8 per cent for October 1. The corresponding figures for looms for 50 -inch reed space or less were 27 per cent and 27.5 per cent, respectively. The percentage of idle hours in the case of woolen spindles dropped from 20.9 per cent to 18.3 per cent, but the figure for worsted spindles showed a slight increase from 7.8 to 8.1 per cent. The market for raw wool showed an upward tendency, with a slight increase in volume of sales during the period covered by the report. Wool consumption for the month of October was $67,287,000$ pounds, as compared with 62,131,000 pounds for September, an increase of 8.3 per cent. District No. 1 (Boston) says that "dealers report that there has been an appreciable reduction in the stocks of the more popular wools and that it is sometimes difficult to buy large quantities of the kinds desired without causing the prices to advance."

## CLOTHING.

The strike of approximately 50,000 members of the International Ladies' Garment Workers' Union, which began November 14, has wholly tied up some of the larger women's apparel factories of New York, although numbers of the smaller factories have signed contracts with the union and are beginning to operate again. The strike occurs between seasons and a speedy settlement would mean that output would consequently be only slightly affected so far as loss of time is concerned. Statistics of production for men's clothing from district No. 7 (Chicago) and wholesale sales of both men's and women's clothing in districts No. 2 (New York) and No. 8 (St. Lovis) indicate that conditions in the industry were favorable during October. In district No. 7 (Chicago) returns from six large manufacturers of men's clothing showed that production and shipments had fallen off 16.4 per cent and 38.5 per cent, respectively, as compared with September, but as a result of the very late season the production figures were 45.5 per cent ahead of those for last year and shipments were 30.2 per cent larger. Orders placed for spring from the opening of the season to date were 41.9 per cent greater than for the corresponding period in 1920. In the case of 15 tailors-to-the-trade, the number of suits made in October as compared with September increased 29 per cent, but totals were 1.7 per cent below those for October, 1920. Shipments rose 26.8 per cent as compared with September, but were 7.9 per cent below last year. Orders were 27.4 per cent greater in October than in September and
eight-tenths of 1 per cent below those for October, 1920. The figures for the five large cut-trim-make concerns show the same trend, but "the improvement here is less marked than it is in the other branches of the clothing industry." The figures are as follows: For number of suits ordered, an increase of 16.3 per cent as compared with September and a decrease of 10.5 per cent as compared with October, 1920 ; for number of suits made, an increase of 19.7 per cent as compared with September and a decrease of 7.9 per cent as compared with October, 1920; for number of suits shipped, an increase of 18.8 per cent as compared with September and a decrease of 8.5 per cent as compared with October, 1920. Sales of 11 reporting wholesale clothing firms in district No. 2 (New York) showed an advance of 44.3 per cent in October as compared with September, and of 5.3 per cent as compared with October of the preceding year. In district No. 8 (St. Louis) sales of 23 leading clothing firms were from 4 per cent to 12.5 per cent greater than in September and from 7 per cent to 16 per cent above sales for a year ago. It was stated, however, that buying in that district was dull in the early part of November.

## SII.K.

Reports from the different sections in which silk mills are located testified to a surprising degree of unevenness within the industry. In Paterson, N. J., as in previous months, operations remained at low ebb. The percentage of active loom hours to total available was only 18.5 per cent, on November 5, as compared with 24 per cent on October 8. In North Hudson, the corresponding figure for November was 50.8 per cent, which contrasts unfavorably with the October figure of somewhat more than 62 per cent. Returns made by 16 manufacturers of broad silk located in district No. 3 (Philadelphia) are of a conflicting nature, although decidedly greater activity is indicated than that prevailing in the centers just mentioned. Half of the manufacturers state that business is poor and demand decreasing, while the others assert that the reverse is true. The former group are averaging about 56 per cent of operating capacity; the latter, 67 per cent. Prices of raw silk have advanced, creating a considerable amount of indecision among prospective buyers. Imports fell from 4,597,642 pounds in September to $3,140,516$ pounds in October.

## HOSIERY.

Manufacturers of silk hosiery in district No. 3 (Philadelphia) continued to do an excellent
business, and practically all the mills are sold ahead for two or three months. There is a demand for novelty lines for the holiday trade, but fewer inquiries for mercerized hosiery have been made, following price advances. Twentyfive firms in district No. 3 which sell to the wholesale trade showed an increase in number of pairs of hose manufactured during October of 16.8 per cent as compared with September. Shipments during the month increased 14.7 per cent, and unfilled orders at the end of the month were 27.1 per centabove those on hand at the end of September. The nine reporting firms which sell to the retail trade produced 4 per cent less in October than during the preceding month, and shipments and unfilled orders also fell off by 12.1 per cent and 2.8 per cent, respectively. There has been further improvement in the manufacture of cotton hosiery in district No. 6 (Atlanta), where reporting mills are operating at the rate of 80 to 100 per cent of capacity. The output of these mills is larger than for the same period in 1920. There has been a decrease in stocks on hand and an increase of unfilled orders.

## UNDERWEAR.

The comparative reports received from 36 mills engaged in producing underwear continue to show marked improvement for October as compared with the September returns for the same mills. Production rose from 445,825 dozens in September to 487,996 dozens in October, a gain of 9.5 per cent. Unfilled orders rose from 809,996 dozens September 1 to 1,171,960 dozens October 1, a gain of 44.7 per cent. New orders fell off from 865,492 dozens received during September to 537,928 dozens for October, a loss of 37.8 per cent. Shipments decreased from 497,854 dozens in September to 477,810 dozens in October, a loss of 4 per cent.

Forty-one mills showing an actual production of 518,264 dozens for the month of October report unfilled orders on October 1 at 1,191,688 dozens and new orders received during the month at 602,212 dozens, so that, allowing for shipments and cancellations, the balance of orders on hand amounted to 1,284,718 dozens on November 1, or nearly two months actual product sold. Shipments rose from 418,258 dozens in September to 503,261 dozens in October. The actual production of 56 mills reporting for October amounted to 675,205 dozens, or 87.3 per cent of normal, as compared with 84.4 per cent of normal production for the 55 mills that reported in the preceding month, and 50.4 per cent for the 61 mills that reported in October, 1920. One mill opened up in October, leaving four mills still closed. Production
continues to increase slowly, despite the higher prices due to advances in cotton and the fact that there has been little or no reduction in labor costs.

## SHOES AND LEATHER.

Sales of hides and skins declined somewhat during October, although prices were well maintained. The market for packer hides became very active in the third week of November, and prices registered a slight advance. This activity has not as yet been reflected in the market for country hides. Demand for heavy leather continued to improve during the first three weeks of November, and quotations for heavy backs increased at both New York and Chicago. District No. 3 (Philadelphia) reports that the upper-leather market is more active than it has been, the business being chiefly in medium and lower grades. Exports are steadily increasing, due to increased purchases by Great Britain, Spain, and Japan. A slight improvement in demand for leather belting is reported from both district No. 3 (Philadelphia) and district No. 7 (Chicago).

Shoe manufacturing continued on a large scale during October, although activity still appears to be more general in the West than in the East. October production was greatly in excess of October, 1920, but that was a month of extreme depression in the shoe industry. The output of shoes during October reported by nine large manufacturers in district No. 1 (Boston) was 5.7 per cent less than in September, but 80 per cent greater than in October, 1920. New orders were about 15 per cent in excess of those received in September, and 13 per cent larger than in October, 1920. The slight slackening of activity in production is ascribed to the change in seasons. Forty-five reporting firms in district No. 3 (Philadelphia) produced 2.7 per cent less shoes in October than in September, while shipments declined 1.6 per cent. Orders booked increased 28.7 per cent, and were 60.5 per cent in excess of the orders booked in October, 1920. Although a few large plants have booked orders for spring delivery, most shoe manufacturers are working on orders for immediate shipment. Reports from 27 manufacturers in district No. 7 (Chicago) show an increase of 5.9 per cent in production during October. Unfilled orders at the end of the month were 11.1 per cent greater than at the close of September and 58.2 per cent greater than at the close of October, 1920. Eleven firms in district No. 8 (St. Louis) report sales ranging from 32 to 40 per cent larger than a year ago. Demand centers principally on moderate and low-price shoes, and
factories in district No. 8 (St. Louis) producing such grades are operating at capacity. Shoe prices were unchanged during October, but were from 35 to 45 per cent less than in October, 1920.

LUMBER.
A marked improvement in demand, particularly for upper grades of lumber, is indicated by the reports for October from the various districts. District No. 6 (Atlanta) reports some irregular improvement during the month, with only a slight increase over the September total in production for the district as a whole. The threatened strike caused both orders and production to decline toward the end of the month. The statement of the Southern Pine Association for the week ending October 28 showed actual production of the 130 reporting mills to be 20.5 per cent below normal production. Stocks at mills are low and badly broken and buyers find it difficult to cover their requirements in high-grade finish and flooring, and as to dimension. Prices continue to rise despite the numerous recent advances.

Operations of the Northern Hemlock and Hardwood Manufacturers' Association, most of whose members are located in district No. 7 (Chicago), show that for October shipments were 214 per cent and that orders were 219 per cent of production. Reports from district No. 8 (St. Louis) indicate a heavy demand for hardwoods and for structural lumber, advancing prices, heavy shipments, and depleted stocks. The general price level of yellow pine showed a gain of approximately 25 per cent during the month. The volume of yard buying diminished, but demand on the part of railways for car-repair materials and the wood consuming industries increased. In district No. 9 (Minneapolis) the October lumber cut of $8,-$ 930,564 feet was 17 per cent less than in September and 53 per cent less than in October, 1920. October shipments totaled 15,699,808 feet, about the same as the September figure, but orders booked during the month were 20 per cent larger than the September total and 35 per cent larger than in October last year. Thirty-five mills in district No. 11 (Dallas) report an average weekly production of 13,577,480 feet, which was 32 per cent below normal. Average weekly shipments amounted to $18,329,625$ feet. In production no noticeable increase over the September total is shown, but shipments have increased in volume. Prices of low-grade lumber have been steadily increasing, while prices of upper grades remained fairly constant.

In district No. 12 (San Francisco) the demand for lumber continued to strengthen dur-
ing October and showed a marked increase over the previous months of the year. Price advances were generally maintained. Four factors contributed to the strength of the October lumber market -an expansion of demand in the woodworking industries, larger buying of car material for repairs, increased yard buying, sustained by an active demand for building materials, and increased export shipments to Japan. Statistical statements of the four lumber associations of this district show a volume of orders received during October which was 18.9 per cent greater than actual production and 12.2 per cent in excess of shipments, and which represents the largest amount of business booked in any month since March, 1920. The October cut of the 161 reporting mills was $380,406,000$ feet and shipments amounted to $392,970,000$ feet. Production, which, in September, was 75 per cent of normal, is now estimated as 85 per cent of normal. From 75 per cent to 80 per cent of the normal output of logs is being produced and it is expected that all available rafts of logs will be sold before camps close. Curtailment of production is reported in the shingle industry.

## BUILDING.

During the month of October the valuation of building permits issued in 166 selected cities showed a slight increase over September in districts No. 1 (Boston), No. 6 (Atlanta), No. 7 (Chicago), and No. 9 (Minneapolis), and a substantial increase in districts No. 2 (New York), No. 3 (Philadelphia), No. 4 (Cleveland), No. 10 (KansasCity), and No. 12 (San Francisco). The percentage of increase ranged from 0.4 per cent in district No. 6 (Atlanta) to 33.3 per cent in district No. 2 (New York). Decreases from the September totals occurred only in districts No. 5 (Richmond), No. 8 (St. Louis), and No. 11 (Dallas). These decreases were 11.4 per cent, 38.5 per cent, and 36.7 per cent, respectively. In comparison with the corresponding period of 1920, the October statistics showed increases in districts No. 2 (New York), No. 3 (Philadelphia), No. 4 (Cleveland). No. 5 (Richmond), No. 7 (Chicago), No. 8 (St Louis), No. 9 (Minneapolis), No. 10 (Kansas City), No. 11 (Dallas), and No. 12 (San Francisco). These increases vary from 27.1 per cent in district No. 9 (Minneapolis) to 230.5 per cent in district No. 2 (New York). Districts No. 1 (Boston) and No. 6 (Atlanta) show decreases from October last year of 37.4 per cent and 25.5 per cent, respectively.

While the total valuation of permits issued thus increased from $\$ 151,974,000$ to $\$ 172,204,-$ 000, the value of contracts let in seven Federal Reserve districts, prepared by the F. W. Dodge

Co., decreased from $\$ 227,473,000$ in September to $\$ 203,954,000$ in October. Increases were shown in districts Nos. 1 and 3, while the figures were practically unchanged in districts Nos. 5 and 9 , and decreased considerably in districts Nos. 2,4 , and 7.

District No. 3 (Philadelphia) reports that building operations are not so extensive as the number of permits granted would indicate, and that the volume of contracts let has not increased correspondingly. The reduction in wages and costs of some materials has resulted in increased building of residences in district No. 4 (Cleveland). All States of district No. 7 (Chicago) and most of the cities participated in the increase of the number of permits granted in that district, and all of the States except Michigan showed an increase in estimated cost. In district No. 8 (St. Louis) there has been considerable growth in the construction of dwellings. The rural districts and smaller towns have taken a much more important part in this development. Further minor reductions are reported in costs of clay products, cement, and metal goods, while lumber prices have advanced. Construction activities in district No. 12 (San Francisco) surpassed all records, both in the number and value of permits granted during October. This was due chiefly to the declining prices of many building materials and the reduced labor costs:

## EMPLOYMENT.

The United States Employment Service reports an increase of 1.6 per cent in numbers employed in 14 selected industries of the United States in October. Such local reports as are available indicate that increases in numbers employed are slightly in excess of decreases. Generalizations are, however, difficult because of the marked variations in employment conditions within the same community as well as between different regions, which grow out of the unequal degrees of activity prevailing in the several industries. For example, district No. 1 (Boston) reports that unemployment is serious in the shoe industry in Lynn and Haverhill and also in the centers of the jewelry and of the metal industries. Reports from metal goods centers are said to show a decrease of nearly 50 per cent in numbers employed as compared with a year ago. On the other hand, the situation in the cotton and woolen textile industries is good and probably there has been a moderate increase in the number of employees in most New England industries. The New York State Department of Labor reports a gain of 2.5 per cent in numbers employed in factories in October. Moderate gains in employment in textile mills were coun-
terbalanced by losses in the manufacture of clothing, but railroad-car building and repair shops and railroad equipment factories took on a larger number of workers. In district No. 3 (Philadelphia) the Pennsylvania State Department of Labor reported a slight improvement in employment conditions in the six cities of Altoona, Harrisburg, Johnstown, Philadelphia, Scranton, and Williamsport. The numbers unemployed were estimated at 198,635 on November 15, a decrease of 1.4 per cent as compared with October 31. Reports from other parts of the district also indicated improvement in employment conditions. In district No. 5 (Richmond) a slight increase in numbers unemployed was noted in the cities, but in the rural sections of the Carolinas the demand for labor strengthened with the resumption of a number of important lumber plants and other establishments. In district No. 7 (Chicago) 271 firms employing 150,607 persons at the end of October reported an increase of 2.5 per cent in numbers of employees as compared with the preceding month. The most conspicuous increases took place in iron and steel, railway repair shops, and in the factories producing boxes and containers. The chief decreases were in construction work and in automobile and automobile accessory plants. While the United States Employment Service figures revealed some improvement for the firms employing over 500 men in Minneapolis and St. Paul, it is stated in the report from district No. 9 (Minneapolis) that clerical and domestic workers and those engaged in other lines of employment are idle in increasing numbers. Outside of the cities and larger towns unemployment is also growing, following the completion of harvesting. In Montana, coal mining and lumbering operations are more active, but in copper mining and allied industries, depression exists. In district No. 12 (San Francisco) the completion of harvesting and cessation of work on highways and public improvements in October has resulted in increasing unemployment among unskilled workers in certain sections. On the other hand, there have been increases in numbers employed in the manufacturing and building trades.

## WHOLESALE TRADE.

Seasonal factors are in large part responsible not only for the quite general reduction in the sales of wholesale dry goods during October, but also for the equally pronounced increase in the sales of hardware. In the case of dry goods it is a striking fact that the value of sales was above that of October, 1920, in seven of the nine reporting districts, ranging from a
minimum increase of 7.3 per cent in district No. 4 (Cleveland), with five firms reporting, to 28.5 per cent in district No. 5 (Richmond), with 18 firms reporting. In district No. 9 (Minneapolis) and district No. 12 (San Francisco) sales were still below the levels of a year ago, with decreases of 20.8 per cent, with five firms reporting, and 9.3 per cent, with 11 firms reporting, respectively. As compared with September, however, a seasonal falling off in demand brought about a drop in sales in seven out of nine districts. Decreases ranged from 3.7 per cent in district No. 2 (New York), with three firms reporting, to 20.3 per cent in district No. 9 (Minneapolis), with five firms reporting. District No. 11 (Dallas) showed a slight increase of 1 per cent in sales for 12 reporting firms.
Hardware sales increased in October as compared with September in eight of the ten reporting districts. Advances varied from 1.6 per cent in district No. 10 (Kansas City), with 5 firms reporting, to 21.9 per cent in district No. 11 (Dallas), with 10 firms reporting. District No. 11 states that the demand for small building hardware and for automobile accessories was particularly strong. City sales have been heavy, but country buying quite limited in amount. District No. 3 (Philadelphia) also calls attention to the fact that automobile accessories and electric and heating supplies have been selling well, but states that builders' hardware has been in lesser demand. In district No. 7 (Chicago) there was a slight increase in inquiries for builders' hardware, and in district No. 8 (St. Louis) this was also the case. The decreases in sales in districts No. 9 (Minneapolis) and No. 12 (San Francisco) were negligible, being only 0.4 per cent in the former case, with 11 firms reporting, and 0.7 per cent in the latter case, with 23 firms reporting.

Wholesale grocery sales remained relatively steady during October, with slight advances in all reporting districts except district No. 7 (Chicago), in which 26 reporting firms showed an average decrease of 1.1 per cent. Increases ranged from 0.6 per cent in district No. 6 (Atlanta), with 29 firms reporting, to 17.3 per cent in district No. 2 (New York), with 9 firms reporting. Making due allowance for price differences, sales compared favorably with those for October, 1920, the maximum reduction being 31.6 per cent in district No. 6 (Atlanta), with 29 firms reporting. In that district October sales this year were probably anticipated in good part by September business, which was stimulated by the influence of a substantial rise in the price of cotton, followed by a price sag in October which, together with two or three weeks of warm
weather, "caused business to drag." A fairly substantial advance in sales occurred in the two other southern districts, district No. 5 (Richmond) reporting an increase of 2.2 per cent, with 57 firms reporting, and district No. 11 (Dallas) an increase of 3.4 per cent, with 14 firms reporting. District No. 11 says that business has been very uneven, decreases having occurred in sections where the cotton yield has been poor, while in regions where oil activity has been renewed business is excellent. City sales in this district have remained fairly constant.

In districts No. 2 (New York), No. 5 (Richmond), No. 6 (Atlanta), and No. 7 (Chicago), increases in wholesale sales of boots and shoes have taken place during the month, the percentages of increase beginning with 1.7 per cent in district No. 2 (New York), with 8 firms reporting, and rising to 13.3 per cent in district No. 6 (Atlanta), with 11 firms reporting. In district No. 12 (San Francisco), on the other hand, a decrease of 7.6 per cent was recorded, with 17 firms reporting. In every district for which records are available for a year ago, sales were above the totals for October, 1920, with the exception of district No. 12 (San Francisco), in which the sales averaged 9.1 per cent less, with 17 firms reporting. However, there was a substantial advance of nearly 30 per cent in September sales in district No. 12 (San Francisco) as compared with August, a fact which would help to explain the drop in October sales. Actual increases as compared with a year ago ranged from 2.1 per cent in district No. 7 (Chicago), with 9 firms reporting, to 44.2 per cent in district No. 5 (Richmond), with 18 firms reporting.

## RETAIL TRADE.

Retail trade, as shown by sales of 365 representative department stores throughout the country, showed a substantial improvement in October as compared with the previous month. The change is, however, less noticeable in the southern sections of the country, and district No. 8 (St. Louis) reports that 'in the southern sections the activity in retail trade which accompanied the rise in raw cotton prices has subsided in a noticeable degree." When compared with the October, 1920, figures, sales for the country as a whole showed a decrease of 6.7 per cent. In districts No. 1 (Boston) and No. 2 (New York) increases amounting respectively to 4.4 per cent and 2.8 per cent were, however, shown, but these were more than offset by decreases of 3.2 per cent in district No. 3 (Philadelphia),
15.2 per cent in district No. 4 (Cleveland), 5.6 per cent in district No. 5 (Richmond), 15.1 per cent in district No. 6 (Atlanta), 9.9 per cent in district No. 7 (Chicago), 8.7 per cent in district No. 8 (St. Louis), 12.8 per cent in district No. 9 (Minneapolis), 7.4 per cent in district No. 10 (Kansas City), 16.7 per cent in district No. 11 (Dallas), and 6.3 per cent in district No. 12 (San Francisco). All districts report that demand continues to be confined to actual necessities. Accordingly, ready-to-wear clothing, cotton fabrics, and trimmings are in most active demand, while the movement of heary knit goods has been unexpectedly slow, due to the continued warm weather. Although stocks on hand are lower than a year ago, they show a slight increase over stocks at the close of September. The amount of outstanding orders is, however, slightly lower than a month ago, while the same is true of the rate of stock turnover.

## PRICES.

Prices in the United States were slightly lower in October than in September. The index of the Federal Reserve Board, constructed primarily for international comparisons, showed a drop of 2 points, from 143 to 141 (with prices in 1913 considered as 100), while the index of the Bureau of Labor Statistics showed a similar change, from 152 to 150. There were appreciable decreases in the prices of leading agricultural commodities with the exception of sheep, cattle, dairy products, and wool. Lumber prices were only very slightly lower, and minerals and metals higher.

During the first three weeks of November prices of many leading commodities continued to decline, although the nonferrous metals, corn, oats, wool, and some grades of cattle hides showed small increases. It seems probable, however, that an average of prices during this period would show a reduction from the October level. In the cereal group, wheat averaged lower than in October, but was slightly higher in the third week of November than in the first; corn and oats showed slight gains over the October average. Cotton has reacted downward from the September and October levels, but is still approximately 5 cents higher than in August, the average of upland middling at New Orleans being $17 \frac{1}{2}$ cents a pound in the first three weeks of November as compared with $12 \frac{1}{4}$ cents in August. Sheep and hogs also declined heavily during the early weeks of November, but steers have been quoted slightly higher than in October.

Cotton yarns and cloth have followed the trend of the raw material and were dquoted in
many cases at about the same point as during September. In spite of the relative strength of raw wool prices, yarns have not advanced during November.

An average of the prices of several types of steel products works out somewhat lower for the third week in November than for October. Steel billets have also been reduced. The nonferrous metals, on the other hand, including copper, tin, and zinc, have been rising in price for the past several months. Bituminous coal is practically unchanged from the September and October quotations.

Retail price statistics are not yet available for November. During October, however, the retail food index of the Bureau of Labor Statistics showed practically no change (0.3 per cent decrease) from the September average.

## SIIIPPING.

The ocean freight market displayed distinctly firmer tendencies in November, the demand from charterers for steamers in the West Indian and Mediterranean trades being particularly active. At the same time, the rates on a number of commodities, including grain and cotton, were reduced during the month to bring them into line with lower quotations on other goods which had previously been announced. American ships have been carrying in recent months a smaller proportion of our foreign trade-whether this is measured in terms of value or weight-than was the case a year ago. According to the records of the United States Shipping Board, in September, 1920, American vessels carried 41 per cent of this country's sea-borne exports and 59 per cent of our sea-borne imports, by weight. In September of the present year our ships carried but 33 per cent of our seaborne exports and 40 per cent of our seaborne imports, foreign ships carrying the remainder. In these figures cargoes of oil in bulk are not included. Much the same story is told by the value statistics of the Department of Commerce, according to which American ships are credited with carrying 38.6 per cent of our water-borne exports and 31.6 per cent of our water-borne imports in September, 1921, compared with 41.7 per cent and 42.7 per cent, respectively, a year ago.

## FOREIGN TRADE.

Small increases in the value of both exports and imports are recorded for October as com-
pared with September. The increased value of exports is more than accounted for by an expansion of cot ton shipments from 522,000 bales in September to 875,000 bales in October, the value of cotton exports rising by almost $\$ 50,000,000$ in the latter month, while exports of all commodities rose only $\$ 20,000,000$, to a total of $\$ 346,000,000$. Total imports in October were valued at $\$ 183,000,000$, an increase of $\$ 4,000,000$ over the month preceding. Both imports and exports, however, show very decided declines in value as compared with a year ago. This is due in no small measure to the lowered prices of practically every commodity entering into our foreign trade, although contractions in the actual quantities of merchandise shipped have also had their effect.

As an indication of the volume of our foreign trade in recent months compared with the same months a year ago, reference may be made to the statistics now compiled by the United States Shipping Board ou the actual weight in long tons of our water-borne commerce. According to these figures, in the three months ending September, 1920, total water-borne imports to the United States amounted to $8,996,363$ tons, while in the same three months of the present year they were $5,484,808$ tons, a decline in weight of 39 per cent. The weight of water-borne exports declined in the same months from $16,778,124$ tons to $13,513,269$ tons, a reduction of about 20 per cent. If shipments of oil in bulk and Great Lakes cargoes are omitted from the comparison, the remaining sea-borne cargoes show a far greater contraction in the last few months than do the foregoing totals. The figures for imports then become $5,081,095$ tons in the third quarter of 1920 and $2,346,998$ tons in the same quarter of 1921, a decline of 54 per cent. Sea-borne exports, excluding oil in bulk, are given as $15,530,787$ tons in the third quarter of 1920, compared with $8,152,327$ tons in the same period this year, the decline in the weight of these exports being therefore 47 per cent. Similar figures for prewar months are not available. A compilation of the weights of the principal commodities imported and exported in 1913 seems, nevertheless, to justify the conclusion that exports in recent months have been substantially greater than in the same months of 1913, while imports have been close to the prewar level. If oil is disregarded, however, the present volume of all other imports is materially less than in corresponding prewar months.

## FOREIGN EXCHANGE OPERATIONS, 1918-1919.

## I. Balances on Open Account.

A chapter in war-time finance, which hitherto has been left unwritten, is that relating to transactions in foreign exchange during the period of governmental control. The Federal Reserve Board has felt that much of the statistical data on this subject, which was regularly reported to it and kept on file during the war for confidential use in the regulation of exchange operations, has permanent value from an historical point of view, and more particularly because of the light it throws upon certain aspects of the balance-of-trade situation. ${ }^{1}$ The Division of Analysis and Research has therefore prepared a résumé of such reports of the Division of Foreign Exchange as seemed of general interest at this time. This is the first of three articles giving the facts contained in those reports.

## WAR-TIME CONTROL OF EXCHANGE.

The espionage act, approved June 15, 1917, among its provisions prohibited the export of coin, bullion, etc., except under regulations to be issued by the President. By Executive order of September 7, 1917, the President directed that such regulations should be administered by the Secretary of the Treasury. The trading-with-the-enemy act, approved October 6, 1917, extended the Government's executive control so as to include the regulation of transactions in foreign exchange and the transfer of credit in any other form for the account of foreign persons. By the President's Executive order of October 12, 1917, such regulatory authority was vested in the Secretary of the Treasury, who was furthermore given the power to demand from any dealer in foreign exchange complete information relating to all transactions, including the production of books of account and other documents. An Executive order dated November 23, 1917, contained the administrative procedure for carrying out the order of October 12, and designated the Federal Reserve Board as the agency of the Secretary of the Treasury to administer it.

The Federal Reserve Board was vested with additional administrative authority in the Executive order of January 26, 1918, in which were prescribed the detailed orders and regulations to govern all foreign exchange dealings, the exportation of bullion, and international transfers of credit in any form. Dealers in

[^1]foreign exchange were divided into three classes according to the character of their dealings, all dealers being required to file applications for registration certificates on or before January 31, 1918 (time extended to Feb. 5). The regulations prohibited any dealer from engaging in foreign exchange transactions without a registration certificate after February 10, 1918 (time extended to Feb. 15). Reports from all dealers were required weekly-or monthly, in some cases - by the Division of Foreign Exchange of the Federal Reserve Board, covering dealings throughout the week or month preceding the date of each report. In order to keep more closely in touch with foreign exchange dealers, the Division of Foreign Eixchange opened an office in New York City, the market in which about 97 per cent of forcign exchange business in this country was being transacted.

The purpose of thus regulating exchange transactions was, of course, to make sure that there should be no transfer of funds that would directly or indirectly benefit the enemy. At the same time every effort was made not to interfere with the legitimate business of American banks and business houses. The work of the Division of Foreign Exchange, it may be noted, was altogether distinct from operations of the Treasury desigued to stabilize the rates of dollar exchange. The period of active control really commenced February 20, 1918, and was terminated June 25, 1919. The President, by proclamation of June 26, 1919, abrogated the Executive order of January 26, 1918, with certain exceptions, thereby terminating governmental control of foreign exchange and of the exportation and importation of coin, bullion, currency, etc.

## SCOPE OF THE REPORTS.

The statistical data collected by the Division of Foreign Exchange cover the following points:
(1) Total net balances between United States and foreign countries.
(2) Purchases of exchange.
(3) Sales of exchange.
(4) Debits and credits to dollar account.
(5) Arbitrage transactions.
(6) Foreign exchange transactions in securities.
(7) Securities held abroad for American account.
(8) Securities held abroad for foreign account.
(9) Securities held in United States for foreign account.

Some of these call for more detailed consideration than others, but the principal findings, at least, on each subject will be summarized. The
present article is concerned with the subject of net balances.

The Division of Foreign Exchange compiled each week, from the reports received, the total net balances of each foreign country as they stood on the books of American banks and business houses engaging in foreign exchange transactions. All institutions which either held balances in the United States for banks or individuals abroad or which maintained balances in foreign countries were required to report the amounts of such balances on February 20,1918 , the beginning of governmental control over exchange operations, and regularly thereafter to record all purchases and sales of exchange. In this way the additions to and deductions from each reporting institution's balance with or for each country could readily be ascertained. By consolidating these individual reports the total balance of the United States with or for each country was drawn up weekly. These reports were designed to approximate as nearly as possible the true unfunded balance each week, including all items which could be obtained from bank transactions. Thus the figures take account of the great bulk of international payments during the period in question. A few items, such as currency carried abroad by travelers and soldiers, have not been included in the reports. These items, however, do not affect the essential validity of the figures.

In preparing these balances for publication the last week in each month has been chosen throughout the period of control. The everchanging situation is thus thought to be adequately pictured, space preventing the publication of the balance in complete detail for each of the entire 70 weeks. To show the condition of affairs immediately after the armistice the net balance on November 13, 1918, has also been included. This material is shown by countries in Tables I and II at the end of this article. In addition, the total balance with the world and with several of the more important countries is presented for each week in Table III. Net balances owed by the United States to foreign Governments are shown separately in Table IV and are included also in Tables I to III as part of the total balances.

## BALANCE WITH WORLD AT LARGE.

There is so much of value and interest in these figures that it seems worth while to examine them in detail. Consider first the total net balances between the United States and the world at large. Beginning with a balance of $\$ 773,882,376$ owed by the United States on February 27, 1918, the figures rose steadily
until a maximum of $\$ 1,065,598,994$ was reached on August 21, 1918. Thereafter the sum declined consistently, aside from upward movements in November, 1918, and March, 1919, to their lowest point of $\$ 643,047,223$ at the termination of control on June 25, 1919. The amount of the net balance owed by the United States to the rest of the world on the date nearest to the armistice was $\$ 927,446,517$ on November 13, 1918. At the close of 1918 the total had been somewhat reduced to the figure of $\$ 882,135,870$. While it is not the purpose of this article to attempt an explanation for all of the movements shown in the tables here presented, a number of things stand out very clearly. The chief reason for the large sums owed by the United States to foreign countries as unfunded balances was due to the fact that the United States Government had extended large credits to Europe, most of which were availed of through credits on the books of American banks. It is these credits which either directly or indirectly have given rise to by far the largest share of the balances just described. It will be noticed that these balances attained their highest figure a little before the armistice. The reduction in the size of the outstanding balance, which took place beginning with September, 1918, is undoubtedly to a considerable extent to be accounted for by payments of foreign countries for the seasonal shipments of agricultural products, which naturally assumed large proportions at that time of the year. The reason for the continuance of this decline after the armistice seems clear. Adrances by the United States Government, while not ceasing immediately, were nevertheless granted in decreasing amounts, while at the same time the various Governments continued to draw upon their dollar balances in this country for the settlement of war-time indebtedness.
distribution of balances by geographical GROUPS.

When the total balance is analyzed into its component parts, it is seen, just as would naturally be expected, that our transactions with the European allies constituted the determining factor in the changes in the total of the world balance; that is, the peak was reached about the same time and the declines were very much in the same proportion as for the total. As a matter of fact, the net balances in favor of the European allies over practically the entire period under consideration formed one-half or more of the balances due to the world. Slight differences which may be noted between the movement in this balance and the total world balance are that, for the Euro-
pean allies, the maximum was reached in July, 1918, and following the armistice the decline in the balances owed by the United States to the European allies was somewhat greater than the reduction in the total owed to the world. The balance in favor of the European allies ranged from a minimum of approximately $\$ 300,000,000$ to a maximum of about $\$ 600,000,000$ during the period.

The balance owed to European neutrals shows a very different movement from our balance with the European allies. In the case of the neutrals' balance, the fluctuations were of comparatively minor importance, and although the balance grew slightly until April, 1919, there is nothing striking in the changes. This situation seems natural in view of the fact that the United States granted no loans to the European neutrals, with the result that such balances as were built up by them at this time seem to have been the result of foreign trade operations with the addition of credits transferred from the European allies in the settlement of their debts with the neutral countries. The size of this balance is next below that of the European allies and at the end of the period was almost as large, since the allies' balance had been reduced very materially while the balances of the neutrals had been well maintained. At one point, in February, 1919, the net balances on the books of American banks in favor of the neutrals actually exceeded that due to the European allies. In the case of the Central Powers, the records of American banks show that there was a small balance due to the United States throughout the period.

If now Europe is regarded as a unit, it is seen that immediately after the armistice European countries had net dollar balances with this country aggregating about $\$ 807,000,000$, which had been reduced to $\$ 733,000,000$ at the close of 1918 and to $\$ 550,000,000$ by the end of June, 1919. The balances with the rest of the world are much smaller, though the proportionate changes in them have been just as great if not greater than those already mentioned. In particular, Asia shows a large increase in the two or three months preceding the armistice on account of balances built up in this country by Japan. The balance due to Asia fell off with extreme rapidity toward the end of the period of exchange control, and on June 25, 1919, there was a balance of $\$ 3,235,467$ owed to the United States. The North American balance shows some wide fluctuations, but the total outstanding at any one time did not exceed $\$ 100,000,000$, and in the summer and fall of 1918 was especially low. Our balance with

South America discloses some unusual fluctuations. Beginning with only $\$ 2,499,153$ at the outset of the period, it rose rapidly to nearly $\$ 50,000,000$ in May, 1918, and then fluctuated back and forth, ending the period at $\$ 15,830,812$. Our balance with Africa and Australasia was comparatively unimportant, and throughout practically the whole time there was a small balance due to the United States.

## balances with european countries.

Taking up now the principal countries in each group, France's financial position among the European allies appears, according to the figures, as perhaps the most unusual. At the beginning of the period of exchange control the net balance owed by the United States to France was the largest owed to any country in the world, a situation which obtained consistently until after the armistice. An important factor in bringing about this situation was the arrangement of the United States Government whereby dollar credits were opened in this country in favor of France in return for French francs to be used in paying the expenses of the American Army abroad. Loans to France direct as well as credits granted to Great Britain and later transferred to France have, of course, played a large part in creating such a balance on open account. The fall in France's balance immediately after the armistice was very sudden, when she used up the greater part of her former balances in the course of two or three months, ending the period with a balance less than one-third that which she had during the summer of 1918. This is explained by the fact that France was cleaning up wartime indebtedness with the credits which the United States had granted during the war, while she was in no position to replace such balances through her export trade. In actual size, the French balance started at $\$ 141,679,586$, reached a maximum of $\$ 250,400,877$ on June 5, 1918 , and closed the period at $\$ 68,852,622$.

Great Britain's balance, which during much of the period was less than that of France, shows some decided differences from the movements of the French balance. For one thing, Great Britain had no need to build up an unusually large balance with American banks, inasmuch as her facilities and resources for meeting obligations as they matured were more adequate than those of France. This, no doubt, is the explanation of the much lower balance kept in the United States by Great Britain, although at the same time, by reason of the magnitude of the settlements which were constantly being made, the balance on open
account shows considerable fluctuation from week to week. In January, 1919, on account of the falling off in the French balance, the British balance became the highest for any country, which position it retained for the remainder of the period. Like France, Great Britain drew very largely on her balance immediately following the armistice, but in the course of a month or so it was back at its former level. The net amounts owing to Great Britain by this country ranged from a minimum of $\$ 32,935,687$ on March 6,1918 , to a maximum of $\$ 206,924,877$ on September 4 of the same year.

Italy's balance commenced with a figure of $\$ 42,050,559$, increasing during the summer of 1918 to $\$ 89,164,877$ on July 31, though even earlier it was slightly in excess of that sum for a single week only. During the rest of the period it varied between approximately $\$ 50,000,000$ and $\$ 88,000,000$, and near the end of the period it was slightly above the balance due to France. The only balance of any size among the other European allies was that of Greece, which remained very nearly constant from week to week. After the armistice the Greek balance fell off somewhat, from an average of between $\$ 50,000,000$ and $\$ 60,000,000$ to a little over $\$ 40,000,000$ for the rest of the period.

The net balances on the books of American banks owing to the individual European neutrals disclose little that is striking. In general they each follow fairly closely the movement of the total balance of the European neutrals. Holland's balance was perhaps the steadiest of this group, even increasing a little in April and May, 1919, when that of the others was declining. In the first part of the period of control, three of the neutral countries, namely, Denmark, Norway, and Holland, had balances not far from one another, ranging from about $\$ 55,000,000$ to $\$ 80,000,000$. Spain, Sweden, and Switzerland had balances considerably less than this in the first part of 1918. Toward the end of the period Sweden's balance, which began at $\$ 23,895,040$, had grown by steady increases to over $\$ 50,000,000$. The balance owed to Switzerland shows some rather decided fluctuations, but at no time did the balance much exceed $\$ 30,000,000$.

## ASIA.

The story of Asia's balance runs parallel with that of Japan, which constituted very nearly Asia's total. Beginning with August, 1918, Asia's total balance was less than Japan's, because of the sums owed to the United States by India which count as an offset. The records disclose that the fluctuations in Japan's balance
were extremely wide. Thus on March 27, 1918, her net balance is recorded as only $\$ 33,249$, but during the summer and early fall this rapidly increased to a maximum of $\$ 169,426,703$ on September 11, 1918. In October, however, this balance was largely reduced through shipments of gold from the United States to Japan, the net balance declining from over $\$ 150,000,000$ near the close of September, 1918, to slightly over $\$ 80,000,000$ a month later. In February, 1918, the United States owed India a net balance of something over $\$ 6,000,000$, which, however, was soon wiped out; and beginning with May up to the end of the period India owed us a balance ranging from $\$ 5,000,000$ to about $\$ 16,000,000$, the maximum being reached in November, 1918. The other Asiatic countries do not call for comment here, except to note that in the space of several weeks their balances frequently fluctuated back and forth between net credit and net debit sums. China and the Straits Settlements are good illustrations of this point. Normally China is indebted to the United States through importing more merchandise than she exports to us. Owing to the high price of silver during the war, however, China was enabled more readily to pay her debts to the United States in silver, a situation which is clearly reflected in China's small balances with the United States on open account.

## NORTH AMERICA.

Canada and Mexico, as would be expected, are the important factors in North America's balance with the United States. The sums owing to Canada were large at times, but throughout most of October, 1918, there was a small net balance on open account which Canada owed to the United States. The maximum amount owed to Canada (a litthe over $\$ 71,000,000$ ) occurred at the beginning of the period, and, as has just been indicated, the balance was very greatly reduced during the summer of 19:8, increasing, however, to $\$ 55,435,236$ on June 25, 1919. Canada has for many years been a borrower from the United States, and has been in the habit of using part of the proceeds of louns floated in the United States to pay for the excess of exports over imports that we were sending her. The net balance shown by the records of the Division of Foreign Exchange may thus be explained as arising from Canadian loans placed in the United States, much of the proceeds from which was subsequently employed in settling Canada's debts incurred in this country. The balance to the credit of Mexico was much steadier than Canada's
balance and during most of the period remained at a lower figure. The Mexican balance fell somewhat in December, 1918, but increased during the early months of 1919 to a maximum of about $\$ 38,000,000$ in May and June, 1919.

## SOUTH AMERICA.

With the exception of Argentina, and Bolivia on a much smaller scale, balances of the United States with South American countries were chiefly owed by them to the United States, in contrast with the situation for the countries of Europe. The balances owing to the United States were not large, although Brazil and Chile together owed us sums ranging from $\$ 17,000,000$ to $\$ 42,000,000$. Argentina, on the other hand, by reason of large dollar credits of the Argentine Government on the books of American banks, and also as a result of grain shipments to Europe, paid for by drafts on New York, had a large balance on open account for the entire period. This balance stood at $\$ 28,662,502$ on February 27, 1918, and increased rapidly to over $\$ 80,000,000$ in May, after which it remained fairly steady at a somewhat reduced figure for the rest of the period. Because of the large amount of Argentina's balance due from the United States, the balances owed us by the other South American countries merely served to offset in part the total due to Argentina, so that the United States still owed a considerable balance to South America taken as a whole.

## FURTHER ANALYSIS OF NET BALANCES.

For the benefit of those who may wish to study in greater detail the net balances between the United States and foreign countries, as given in Table I, the net debits and credits from which the net balances have been derived are presented in Table II. This data for Great Britain, France, Canada, Japan, total Europe, and total world appears in graphic form in the chart on page 1405. The net balances owed by the United States on open account, which have been dealt with in preceding paragraphs, represent net differences between sums owed by the United States to foreign countries and sums owed by foreign countries to the United States. The first column of Table II is accordingly devoted to dollar credits of foreign concerns carried with concerns in the United States, and the second column to amounts which American concerns carried in foreign currencies abroad. Wherever overdrafts by foreign concerns are greater than the credits to dollar account, no credits to dollar account are shown in the table, but instead the amount by which the overdrafts exceed the dollar credits. Such amounts are indicated in Table II as overdrafts. The
net balances shown in Table I take these overdrafts into account as additions to the opposite column of Table II. Similarly, in arriving at net balances, overdrafts by American concerns on their accounts abroad may be counted as additions to sums owed by the United States.

The net balances arrived at by offsetting the sums owed to the United States against the sums owed by the United States do not take into consideration the question whether American credits abroad could in reality be availed of to reduce the balances owed by the United States. As a matter of fact, the balances held by Americans abroad were in many cases speculative holdings of foreign currencies, and in other instances they constituted holdings forspecial purposes, such as the purchase of commodities. On the other hand, the dollar balances held by foreigners in this country represented to a great extent purchasing power which those countries were waiting to exercise when commodities should become more available, and in part they represented suspended demand for gold which became effective upon the raising of the gold embargo. The dollar balances represented also unemployed sums which were held in the United States as being in that form less subject to fluctuation in value than balances held in other currencies. In the light of these facts, the dollar credits of foreign countries shown in Table II assume new significance, since with the removal of the gold embargo they may be regarded as constituting the gold debt of the United States.

## FOREIGN GOVERNMENT BALANCES.

Included in the balances which have been discussed in preceding paragraphs are credits in favor of foreign Governments on the books of American banks. These credits largely grew out of the adrances made to foreign Governments by the United States Government after our entry into the war. The amounts of the resulting balances due to foreign Governments in the last week of each month from June, 1918, to June, 1919, will be found in Table IV.

It will be observed that the total foreign Government balances with American banking houses ranged from a little over $\$ 200,000,000$ to nearly $\$ 400,000,000$ in the 12 months ending June, 1919. A maximum of $\$ 387,170,354$ was reached on November 13, 1918, immediately after the armistice. From January to June, 1919, the balances owed to foreign Governments declined steadily, on June 25, 1918, amounting to $\$ 210,345,520$. The fluctuations in the total Government balance are due almost entirely to changes in the sums owed to the European allies. The amounts owed to the

Hote: Cross hatched areas for Great Britain for March, April, and May, 1919, indicate that figures are inclusive of overdrafts.
78092-21—3

Argentine Government varied but little during the 12 -months period, being not far from $\$ 90,000,000$ throughout. The fact that this figure is greater than the net balances shown for Argentina in Table I is accounted for by overdrafts or offsets that reduce the total net balance below the balance owed to the Argentine Government. Aside from the European allies and Argentina, other foreign Governments had comparatively small balances in this country, and therefore call for no particular comment here.
Among the Governments of the European allies, the British Government had the largest balance, although in March and April, 1919, her balance fell slightly below that of France. The British balance attained a maximum of $\$ 136,198,215$ on November 13, 1918, and thereafter followed much the same course as has been indicated for the allied Governments as a group. In the early part of 1918, and again in November of the same year, the net credit
balance of the Italian Government on open account was above that of the French Government. After the armistice the Italian Government balance declined very rapidly from its peak of $\$ 70,000,000$ in the middle of November, 1918, to a fairly even level of about $\$ 20,000,000$ throughout the first six months of 1919. The net balance of the French Government at no time exceeded $\$ 60,000,000$, the high point being reached in November, 1918. From March to June, 1919, the French Government steadily reduced its balance with banking institutions in this country, and at the end of June had a balance to its credit of only $\$ 28$ 000,000 , the lowest point to which this balance was allowed to fall during the period for which the records of the Division of Foreign Exchange are available.
Detailed figures covering both total net balances and foreign Government balances, classified by countries and by groups of countries, will be found in the tables which follow.
table i.-NET balances on open account between united states and foreign countries on specified dates. [Balances owed by foreign countries to United States are marked by minus ( - ) sign; balances not so marked are owed by United States to foreign countries.]

## TOBACCO FINANCE.

The following is the fourth of a series of articles describing the financing methods which are employed in the tobacco industry. The first, second, and third articles appeared in the September, 1921, October, 1921, and November, 1921, issues. Data were obtained partly through the cooperation of the Federal Reserve Agents in the various districts, and partly direct from banks and persons interested in the industry in various capacities, as well as from other Government organizations. To all of them acknowledgment is due.

## IV. Leaf Sales Warehouses.

As has been indicated in previous sections of this study, the methods by which the cigar types of leaf tobacco move to market differ in important respects from those by which the manufactured and export types do. This makes it necessary to consider separately the financing of the marketing process for each of these types. In considering the manufactured and export types, moreover, it is necessary to give considerable attention to the leaf sales warehouse, inasmuch as this organization has a considerable number of special problems of its own. A previous section considered the methods by which the leaf sales warehouseman extends accommodation to the grower. In the present section are surveyed instead the methods by which the warehouseman himself in turn provides for his own financial requirements, and the arrangements which he consequently makes with his bank. These requirements are twofold--(1) with respect to paying off his daily sales, i. e., paying daily those for whom he sells tobacco at auction on the warehouse floor, and (2) with respect to obtaining funds for this purpose, as well as in certain cases to loan direct to growers.

## A. PAYING OFF SALES.

A major part of the leaf sales warehouseman's financial and banking problem (and in certain sections his entire problem) concerns paying off his sales. The universal custom is to pay the grower daily, i. e., on the day on which the tobacco is sold. This is done in the great majority of cases by giving the grower a check on a bank made out in general to himself or bearer. In two of the Virginia markets, however, he is given cash instead, while in five markets in the North Carolina old bright belt, one market in South Carolina, and three markets in the burley territory of Kentucky, including Lexington, the largest
burley market, he is given instead by some of the warehousemen a bill of sale with coupon or check attached. The coupon or check is detached when he is paid. Arrangements are made by the warehouseman with a bank to cash the checks or coupons. Local stores generally also cash these checks, e. g., after the bank has closed, while in a few instances in the past a warehouseman has made regular arrangements with a store instead of a bank. Prior to several years ago the system was found in Winston-Salem, N. C. Its use at present is reported by one of the smaller markets in the Virginia old bright belt, at which there is no bank. Where it is employed, and there is a local bank, the warehouseman draws his check on the bank in the morning and obtains currency, which he gives to the store paying off the sales. The seller in such cases receives a sales slip.

Where a bank pays off the sales, the warehouseman in certain cases signs an agreement releasing the bank from liability in cashing the checks. For its services the bank frequently makes what is termed an exchange charge, stated either as a percentage or as so many dollars and cents per thousand dollars, and figured on the amount of the checks which are cashed. The warehouseman pays this in addition to the interest on his loans. The charge had its origin in the fact that it was frequently necessary in the past for a bank to ship currency, so as to have a supply on hand sufficient to pay off the sales. In the larger centers, with diversified business, there was thus not the same degree of difficulty experienced. Accordingly, where the tobacco business in a given center plays a relatively minor rôle, no charge in general is made. As will be seen from the table herewith, no charge is made.in almost all the markets in the Virginia dark section. Similarly no charge is made in any market in the western territory (KentuckyTennessee).

A charge is, however, customary in the old and new bright belts in the east, and is found in all the leading markets in that section. It is most frequently one-eighth of 1 per cent, and to a lesser extent one-tenth or one-fourth of 1 per cent. In infrequent cases one-sixth or one-fifth of 1 per cent, or $\$ 1.50$ per $\$ 1,000$, is specified. Two warehouses report a charge of one-twentieth of 1 per cent, which differs from that given by the majority of the houses in the centers in question, and one bank gives a charge of 55 cents per $\$ 1,000$, increased from 40 cents. The charges in general, however, are uniform in any one market, although some other minor differences are reported, and one banker in the North Carolina old bright belt
states that the charge varies with the size of the amount involved, from one-tenth to onefourth of 1 per cent. The variation occurs to some extent where the warehouses apparently employ similar methods, although it may be noted that in one South Carolina market, two of the warehouses report that no charge is made, while another which does not borrow reports a charge of one-fifth of 1 per cent. In one North Carolina market, when the warehouseman has arranged with a store to cash the check, 40 cents per $\$ 1,000$ is now charged by the bank. One North Carolina bank states that the charge is figured monthly.

While it is impossible to generalize concerning the length of time taken before checks are cashed by the growers, and the extent to which currency is withdrawn, instead of leaving the amount on deposit, some interesting information along these lines has been obtained. The experience of individual banks appears to differ considerably. Some state that the grower generally carries home the funds left after paying his bills and only later deposits the balance. On the other hand, various bankers state that they favor warehouse accounts, as they result in contact with many growers, and in consequence a considerable number of accounts are obtained. It is generally stated that the bank retained a much smaller portion during the sales season 1920-21 than would normally be the case, one banker in eastern North Carolina, e. g., placing the figures at 5 per cent and 25 per cent.

In the eastern districts less than one-half usually remains with the bank. Several banks in the old and new bright belts of Virginia and North Carolina place the usual figure at 20 to 25 per cent, while several show as high as 40 and 50 per cent, and some as low as 10 per cent. A leading banker in one of the largest markets in the Virginia dark section estimates that roughly one-third of the amount of growers' checks is deposited, and states that during the height of the season there is a considerable increase in the deposits of the banks in his cen-ter-almost entirely in the savings department. A leading warehouseman in one of the principal markets of the new bright belt of western North Carolina estimates that onefourth of his checks are not cashed for about two weeks, or are deposited by the growers in their local bank, and take some time to return to the bank in the market on which they are drawn. A considerable part of the tobacco sold on his floor is, however, shipped in rather than hauled in by the grower. One South Carolina banker believes that there has been a gradual increase in the amount retained.

In the western districts, a considerable number of banks show percentages in excess of onehalf, especially in the case of burley. One bank in the latter district, however, states that, in place of a normal figure of 75 per cent, it retained only 25 per cent last year. Another banker observes that, while the check is usually deposited, it is in general rapidly checked out, and most tenant's accounts are closed in three to four months.

The warehouses in any market in general have similar customs as to the time when the buyer of tobacco pays the warehouseman. In the larger markets the buyer pays daily, i. e., payment is made to-day for yesterday's purchases. The warehouseman deposits the funds thus received in his bank to take care of the checks cashed for the growers for whom he sold the tobacco yesterday at his warehouse. In the smaller markets, however, payment is usually required only once (in some cases twice) a week instead. It should be noted, however, that three of the four reporting warehouses in Lexington, Ky., the leading burley market, permit payment within seven days from date of sale (although one states that the larger buyers actually pay in from one to three days). Where weekly payment is required, a given day, in general either Monday or Saturday, is often specified. In the western dark districts, Saturday is almost universally specified where such weekly payment is the custom. Practice is not rigid in all cases, however. Some warehousemen state that payment is supposed to be made daily, but that often buyers do not pay on time. Buyers in some cases pay when they have checked up purchases. In some markets no time is specified when payment shall be made, and one warehouseman in the burley section of Kentucky stated that a few buyers in the past have not paid until the close of the season. In other markets some buyers pay daily, while others pay weekly. A prominent Richmond banker estimates that warehouses in the eastern districts have bills outstanding on the average amounting to four days' sales.
In general larger buyers are stated to pay daily, while smaller buyers pay weekly. Some warehousemen state that commission buyers pay weekly. (or when returns are received), while salaried buyers pay daily. In the former case buyers act on order for firms located elsewhere, and invoices are rendered to the principal, who compares them with the shipment, and then sends a check to the buyer. Similarly in the bright belt several of the larger companies pay from a central point, such as Durham, N. C., or Florence, S. C.,
for their purchases in some markets, and statements are then rendered to the office at the central point. Several days' time thus elapses, so that it is necessary, states one South Carolina warehouseman, "for the warehouseman to carry a little heavier balance at the banks." In general, however, it is stated that the practice of these companies is to keep their local buyers supplied with funds sufficient for the next three or four days' purchases, these funds being furnished regularly from the center for that particular territory, such as Richmond, in which the principal balance of the company is kept.

It may be noted in passing that drafts are used in certain cases. Some order buyers draw sight drafts on their principals, which are then put through the banks. A banker in the burley district states that at times checks are drawn on the bank and accompanied by drafts on banks at other points holding the drawer's funds, which take some time to collect. A warehouseman in one of the markets in the Virginia old bright belt states that with a buyer who is not in a position to pay cash he uses a 5 or 10 day trade acceptance, which the bank places to his credit as if it were cash. A bank in the North Carolina old bright belt reports the use, in the case of heavy sales which make it necessary for warehousemen to check beyond their balance, of acceptances which the buyers execute and the warehousemen in turn rediscount with their banks.

This problem does not exist at Mayfield, in the Paducah district of western Kentucky, where "chute" sales are employed. The buyer at that market pays the grower himself as soon as the tobacco is delivered with a check on a local bank for the amount of the tobacco, and the warehouseman does not participate at all in this aspect of the transaction.

With the regular method which has just been indicated, collections from buyers by the warehouseman are slow in many cases. This often means a considerable gap between the time when the bank pays the checks given to sellers of a lot of tobacco and the time when the warehouseman, through collection from the buyer of the amounts in question, places in the bank funds to cover these checks. In other words, the warehouseman must borrow to bridge the gap. The shorter the gap is, the less he borrows. Another method accordingly is employed at six markets in North Carolina, in four of them, however, only by some of the warehouses. In one of the other two markets, which is located in eastern North Carolina, the warehouse on the morning
following the sale gives the bank a statement of the amounts due from the buyers, together with drafts it has drawn on these buyers. The board of trade rule requires payment by the buyers by a specified time that day, although the warehouse may extend the time for payment, which is done in rare cases. The buyer then pays the bank instead of the warehouse. Under this system collections are prompter than where the warehouseman himself makes collections, and thus the warehouseman's borrowings from the bank are reduced. On the other hand, more work on the part of the bank is entailed, and thus the bank's charge may be greater.
In the market in question the general charge is reported to be one-fourth of 1 per cent, i. e., $\$ 2.50$ per $\$ 1,000$, although an officer of a bank in that market stated that in the case of a warehouseman who also borrowed the charge would probably be reduced. The charge in the other markets differs somewhat. In two other markets in the new bright belt, where the method is employed only by certain of the warehouses and not by others, the charge is given as one-eighth of 1 per cent, and it is stated that the charge is the same irrespective of whether the buyer pays the warehouseman or the bank. In two markets in the old bright belt of North Carolina, where the method is likewise employed only by certain of the warehouses, the charge is again given as one-eighth of 1 per cent. In a third market in that section the charge is variously given by different warehouses as one-fifth or one-fourth of 1 per cent. In that market, toc, it does not appear that drafts are drawn by the warehouseman, but a list of buyers' bills is merely furnished to the bank at the same time that the buyers receive their statements. Several of the other warehousemen from whom data were obtained favor the use of a system of drafts. The following statement of a South Carolina warehouseman is typical: "If the warehouse could draw on the buyers for each day's sales and let the buyers pay the bank, it would be a great saving to the warehouseman. As it is here, the warehouseman has to carry the buyers."

The frequency with which each of the various methods indicated above is employed is summarized in the following table. In certain cases the classification has been somewhat arbitrary. The prevailing practice in each market has been considered, and no cognizance has been taken of the exceptions which are found in those markets where practice differs among the several warehousemen. As data were not obtained on bank charges in certain markets, the total number of markets in any given district shown under this head in the table does
not in all cases correspond to the figure shown in the first column of the table.
[Number of markets.]

a Daily or weekly, less than weekly, or no specified time.
1 In one of these centers charge is reported from several sources as onetwentieth and by one bank as one-twentieth and one-fortieth.
${ }^{2}$ Includes 2 markets where buyer pays bank in case of certain ware-
${ }_{3}$ Inses.
${ }^{3}$ Includes 1 market where buyer pays bank in ease of certain warehouses.
${ }^{1}$ Includes Wake County, N. C

- Includes Bladen, Columbus, and Robeson Counties, N. C. (6 ware-
houses in 5 markets).
6 Includes 1 market where buyer pays seller directly by check.

## B. BORROWING.

The borrowing which the leaf sales warehouseman must do is of two principal kinds(1) in the spring or at harvest to provide funds for direct loans to growers (where this is done, instead of merely indorsing grower's notes), and (2) in the fall and winter, during the sales season, to provide funds to be used in paying off sales and for running expenses. As many warehouses do not make direct advances to growers, frequently no accommodation of the first kind is required. Some houses finance themselves, but the great majority borrow the larger part of their working capital. In South Carolina, however, the owners of the warehouse are frequently local men, while the manager merely operates it, and stays in the community only during the sales season. The owner then often provides the necessary financial arrangements. In the other districts, however, no use of this practice has been reported, with the exception of one burley market where two of the houses are owned by Cincinnati firms, who advance small sums for local needs.

Where direct advances are made by warehousemen to growers, bank borrowing will
naturally be relied upon to a considerable extent to obtain these funds.- On the other hand, while several of the burley warehouses state that small direct loans were made to growers during the past season, only one Lexington house mentions bank borrowing to provide these funds. It states that "the money to loan to farmers is generally borrowed in August, September, and October, as a rule to about one-third the value of the warehouse." Only one South Carolina warehouse states that it loans direct to growers, and borrows for this purpose as well as to obtain funds to pay off sales. This borrowing may take place either in the spring or at harvest, funds being provided to cultivate or house the crop. The greater part of borrowed funds, however, are used for the purpose of paying off sales.

In general the leaf sales warehouseman confines his borrowing entirely to his local bank. This is natural in view of the fact that the major part of the accommodation is required in order to pay off sales, and arrangements must be made with the local bank in any event to pay off these sales, while the amounts required moreover vary considerably from day to day according to the volume of sales. In certain leading markets, however, local banking facilities are inadequate for heavy marketing and the local bank in some cases arranges with other banks for a loan to supply the funds which the local bank uses in paying off sales. Funds are generally obtained from a leading center, in particular Richmond in the East and Louisville in the West, although a warehouse in a smaller market may borrow in a neighboring center. A Richmond banker told the writer that he loaned warehouses in three of the four leading markets in eastern North Carolina. On the whole, however, borrowing from banks located elsewhere takes place in considerable measure in connection with funds to be used for direct loans to growers. In either case, such loans are made for fixed periods, as will be indicated below. Turning to the several districts in detail, only one warehouse in one of the smaller markets of the Virginia dark district reports that it borrows in Richmond as well as locally, and it purchases about, 25 per cent of the tobacco offered for sale on its floor. One banker in a leading market in that district stated to the writer that several years ago he loaned to a warehouse at a smaller market which now borrows locally. A warehouse in Danville, the leading market in the Virginia old bright belt, states that some years ago it borrowed in Richmond as well as locally, but has since discontinued outside borrowing. Warehouses in two of the smaller markets in the North Carolina old bright belt also borrow elsewhere,

Durham and Greensboro, N. C., being the points specified as sources of such funds, and a warehouse in another market in that district borrows elsewhere for 5 to 10 days when sales are heavy. In the new bright belt of eastern North Carolina, warehouses in five markets report that they borrow outside as well as locally, three of them being among the four leading markets in that district. One of the latter specifies Richmond as the additional source of funds and the other that center and Norfolk (on a note expiring Mar. 15 or Apr. 1). One of them, however, purchases considerable tobacco. A warehouse in one of the other two centers states that it borrows elsewhere only when the local bank is "loaded." Warehouses in four markets in the South Carolina belt, which do not loan directly to growers, state that they borrow elsewhere as well as locally, while a warehouse in another market, which loans direct to some extent, also borrows elsewhere. One authority states that the South Carolina warehouseman in many cases deposits a check on his home bank in Virginia or North Carolina, and against this draws the checks to pay off his sales. He may borrow this sum from his home bank.
In the case of the western districts, warehouses in five burley markets state that their local bank arranges with city banks, chiefly in Louisville and to a lesser extent Cincinnati, for the funds required. Warehouses in three Kentucky western dark markets and in two Tennessee markets also borrow other than locally, one of the Tennessee warehouses specifying Nashville. Six of the warehouses in these western districts state explicitly that they borrow for fixed periods.

As is the case with loans to the grower and the local store, the bank in the great majority of cases obtains indorsed notes from the warehouseman. Where warehouses are incorporated the officers, directors, or stockholders may indorse. A warehouse corporation in one of the leading markets in the old bright belt borrows for each of its warehouses at the opening of the season on a note (for 30,60 , or 90 days) reading "pay to the order of ourselves," which it indorses. Subsequently, each manager gives his demand note with his own individual indorsement for such additional funds as he needs. A warehouse in the Kentucky burley district states that its stockholders place notes in the bank, while the warehouse pays the interest on the loan. A few warehouses in various sections report that they borrow on their unindorsed and unsecured note. In many cases collateral is given as either supplementary to, or in lieu of, indorsement. For this purpose real estate, bonds, in particular United States
bonds, and bank stock have been stated to be used, as well as crop liens or growers' notes in the Virginia dark and ClarksvilleHopkinsville districts.

A variety of methods are open to the leaf sales warehouseman with respect to the maturity of his borrowing from the bank in order to obtain the funds with which to pay off sales. Unlike the situation with respect to borrowings to obtain funds for direct advances to growers, which are entirely for fixed periods, practice accordingly is exceedingly complex. Arrangements may be made at the opening of the sales season for a loan sufficient to cover approximate requirements, and a note given for this amount for a fixed period of time, or else the amount may be obtained in several stages. Thus a warehouse in one of the largest markets in the Virginia old bright belt states that the regular amount of $\$ 15,000$ borrowed at the opening of the season was divided the past season into three lots of $\$ 5,000$ each, and $\$ 5,000$ was merely borrowed at first, then another $\$ 5,000$ when it was found necessary, and finally a third $\$ 5,000$, making loans of $\$ 15,000$ in all outstanding. This practice in fact points to one of the difficulties inherent in financing the leaf sales warehouseman. His requirements fluctuate greatly during the season, according to the amount of sales, ${ }^{1}$ as well as considerably from day to day within any given week. In fact, after the period of heaviest sales, buyers will be withdrawn from the eastern markets and shifted to the western districts, and sales will be small in the eastern markets for some time prior to the close of the season. Moreover, the warehouseman expects, as the commissions which he receives for selling the tobacco ac ?umulate, that he will not find it necessary to borrow for some time prior to the closing of the market.

The length of time for which the warehouseman's notes are made accordingly varies somewhat with the size of the market, although $60-90$-day notes are most frequent. Some warehouses, however, make 30 -day notes, while some borrow for from four to six months. The latter maturities will naturally not be employed where the season is short, as in the South Carolina belt, where borrowing occurs, it is stated, from July 1 to September 15. Borrowing in the eastern districts will occur earlier than in the west in accordance with the difference in the sales seasons, borrowing in the Kentucky burley district, for example, being stated by several warehouses to take

[^3]place from December 1 or January 1 to April lor 15. The same warehouse in some cases may give notes of several different maturities, such as 15 and 30 days or 60 and 90 days, according to its requirements. The maturity of the note in certain cases may be merely nominal, as the warehouseman may take it up when he is able before the maturity date (interest being rebated), or, on the other hand, may have it extended if he finds this necessary.

It may be observed that the problem of providing for a volume of accommodation fluctuating in amount from day to day is substantially similar in many ways to that of certifying broker's loans in New York, which was raised some years ago. In that case arrangements were made daily between the broker and his bank for his probable requirements in place of the former practice of overcertification. The overdraft might be used for the warehouseman's requirements. Thus one bank in a market in the Virginia old bright belt states that it simply agrees to take care of daily sales and then charges interest on all overdrafts. Two warehouses in one of the western dark districts state that they employ overdrafts, which they settle each Saturday, on which day buyers pay them. Demand notes may be given instead from time to time as required, or notes for very short periods, such as one, two, three, or up to six days. In a market in the Virginia old bright belt where weekly settlement prevails, the warehouse gives its note each week. More frequent, however, is a combination of borrowing for a fixed period at the opening of the season, with temporary borrowing later, when sales are heavy, for exceptional requirements. The former then gives a working balance, such as, e. g., $\$ 7,000, \$ 10,000$, $\$ 15,000$, or $\$ 20,000$, varying according to the amount of sales. The additional borrowing may take a variety of forms. A straight overdraft may be used or else a demand note or a note running several days may be given. One warehouse in the South Carolina belt states that, in addition to its borrowing at the opening of the season, it gives "what is known as an overdraft note, paying interest on all overdrafts at the end of each month." By means of this combination of fixed period and temporary borrowing there is a closer adaptation of the amount of borrowing to the actual needs of the warehouseman. A similar result is achieved in one of the leading markets in the North Carolina new bright belt, where one warehouse gives the bank a note for $\$ 25,000$ or $\$ 30,000 \mathrm{at}$ the opening of the sales season, but pays interest each month merely on what-
ever part of this sum it has used, while, if it has overdrawn, it is charged interest also on the overdraft. Only in very rare instances, however, does this practice prevail, and practically all the warehouses making notes for fixed periods pay interest on the face of the notes. It may be remarked that a warehouse in one of the leading markets in the North Carolina new bright belt, in which the buyer of tobacco pays the bank rather thanthe warehouseman, states that whereas several years ago the bank required it to borrow $\$ 10,000$ to $\$ 15,000$ at the opening of the season, this is no longer required.

The warehouseman at times has tobacco on hand which he has bought, due to the fact that he himself bids in order to obtain the best price for the seller. The usual practice is either to ship the tobacco to a larger market (in the event that it is bought on a smaller one) or to resellitshortly, say the next day. The amount of tobacco purchased in this manner is small. Many warehouses stated that no tobacco was bought. The percentage estimates which have been obtained from houses which thus purchase tobacco ranged from 1 per cent to 30 per cent in the case of individual warehouses. The latter figure was found in only a few cases, and some of the higher percentages were reported by those who made it a regular practice to buy tobacco on their own account. By far the most frequent percentage reported was 10 . No conspicuous difference on the whole is apparent between the larger and smaller markets with respect to the prevalence of the practice. The warehousemen themselves by no means favor the practice in all cases, as is evident from the following statement of a warehouseman in the North Carolina new bright belt:

It, in my judgment, is the only liability in the warehouse business, and if it could be eliminated it would benefit the business from all standpoints, ${ }^{*}{ }^{*} *$ as it helps the farmers very little and often breaks the warehouseman. This very practice caused the warehouse business a loss of at least $\$ 7,500$ to $\$ 10,000$ in - this year, with the market only selling $6,000,000$ poun.ds.

The percentage of the crop which is so purchased and the difficulty experienced by the warehouseman in disposing of his purchases has been increased during the 1920 season because of the general conditions existing.

The tobacco purchased in this manner in general does not provide a considerable financing problem. The warehouseman, however, may not find it possible in all cases to dispose of this tobacco promptly, and at the close of the season may find himself with a stock on hand, often of low grade. He may then borrow from his bank (usually the one which pays off his sales, states
a South Carolina warehouseman), which he does either on an indorsed note or by placing the tobacco in public storage and using the warehouse receipts as collateral. These notes may run for from two to six months, states the South Carolina warehouseman just quoted. Very rarely, however, is a warehouseman also an active purchaser of tobacco. This varies somewhat, of course, between the different districts. Thus some burley warehousemen say that the warehouses purchase freely, although
one remarks that most articles of incorporation prohibit speculation in tobacco. The number stating that they purchase tobacco in the eastern districts is very small, although in a few cases warehousemen are also interested in separate firms of leaf tobacco dealers. In connection with regular leaf tobacco purchases, however, the leaf sales warehouseman faces merely the same financial problems as confront the regular leaf tobacco dealer, which will be indicated in the next section.

## BUSINESS AND FINANCIAL CONDITIONS ABROAD.

Considerable contrast is to be found in business conditions in the various European countries. In England, the situation is somewhat better than last summer, industrial output is greater, unemployment less prevalent, foreign trade larger, and wholesale and retail prices and wages lower. But depression is still acute, the construction industries being in the worst condition. In Norway and Sweden, also, conditions continue depressed, although unemployment seems to be on the decrease in Sweden. Denmark has apparently suffered less from the industrial depression than the other two Scandinavian countries. In France, industry is in a rather more active condition than a few months ago. The volume of French exports has been steadily increasing during the past three months, prices are no longer consistently on the decline, and employment is improved, partly as a result of the adjustment of the textile strike in the District of the North. In Italy, in spite of the fact that there has been a rise in prices, a fall in foreign exchange, and considerable speculation in stocks, industrial conditions remain inactive except for a slight improvement in the textile trades. The unemployment situation continues serious. In Germany another "catastrophe boom"' is in process, prices are soaring, speculation is rampant, and there are all the other indications of a period of excessive inflation.

## ENGLAND. ${ }^{1}$

## REDUC'IION IN FOREIGN TRADE.

It is hardly necessary to emphasize the importance of foreign trade to British industry, nor the fact that the present international situation has led to a serious reduction in British exports. The extent of the reduction since the war as compared with the prewar period, and in 1921 as compared with 1920, is indicated in the following table, which shows the volume of exports of certain leading industries in 1913, 1920, and 1921:
Volume of Exports of United Kingdom for Certain Leading Commodities.

| Commodity. | Unit. | Monthly average. |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1913 | 1920 | $9 \text { months }$ |
| Coal. | Tons. | 6,116,677 | 2,077,654 | 1,483,506 |
| Iron and steel and their products..... |  |  |  |  |
| Cotton yarns.......... | Pounds | 17,50S, 000 | 12,295, 000 | 10,066,000 |
| Cotton cloth. | Yards... | 589, 604,000 | 2369,713,060 | ${ }^{2} 205,538,000$ |

## NEW Trade facilities bill.

It was with a view to the necessity of reviving foreign trade that when Parliament reconvened on October 19, Premier Lloyd George in his opening speech outlined the purpose of a new Government bill in aid of foreign trade. The so-called "trade facilities bill," in addition to amending the overseas trade act, 1920, and overseas trade amendment act, 1921, provides for a Government guarantee of interest and capital on foreign loans on the condition that the proceeds are spent for British manufactures. The terms of the original export credit scheme and of last June's amendment have been described in various issues of the Bulletin. ${ }^{1}$ With the amendments made last summer, it was possible for an exporter to be guaranteed up to 85 per cent of the selling price of his goods, on condition that he would be responsible for one-half the loss in case the transaction was not successful. It was customary for the export credit office of the Board of Trade to require security from the importer of the goods. In case of failure to remit, these securities could be sold and the exporter reimbursed to this amount. If the selling value of the securities did not cover the cost of the goods, the Government was responsible for one-half the loss and the exporter for the other half. Banks might also receive Government guarantees on the same terms, up to 70 per cent of the value of the goods. In the original act, there was another arrangement whereby the exporter might receive a cash advance from the Government for 80 per cent of the cost of the goods. According to the terms of the overseas trade act, loans had to be liquidated by September, 1925. The countries to which the scheme applied were mostly eastern European nations, although the British Empire was added to the original list at the time of the amendment of the act. It has been widely commented on in the British press that in spite of these very favorable terms, the scheme has not been used. The consensus of opinion seems to be that the Board of Trade lacks the facilities for determining the validity of a credit operation; also that short-term arrangements can always be made through ordinary channels, if there is an effective demand.

The new trade facilities bill goes further and offers exporters a guarantee of 100 per cent of the invoice value of the goods, allows for the same recourse from the exporter in case of loss as was provided under the terms of the 85 per cent guarantee (in other words, up to $57 \frac{1}{2}$ per

[^4]cent of the bill), extends the terms to all countries, and the time limit for the liquidation of the guarantees and advances to September 28, 1927. The same sum, $£ 26,000,000$, is still available for the purposes of the act. This means that with six years to run, certain of these credits will be for capital expenditure. It is also provided in the new bill that once a firm has been approved by the export credits office, it may obtain " floating" guarantees or a line of credit, without going through the formality of having each individual transaction approved by the export credits office.

In view of the reception given the earlier scheme by traders (total credits extended during two years amount to less than $£ 1,500,000$ ), it seems problematical whether there will be any large increase in industrial activity as a result of this extension of the scheme. It is important, however, as an indication of British policy in connection with the whole question of stabilization of the international credit situation, and since this plan for the extension of trade credits has been followed up by a Government scheme for guaranteeing interest on capital loans, it represents an all-around scheme for giving aid to poor or undeveloped countries which may react very significantly upon British domestic industries.

The Government plan for guaranteeing interest and capital of loans to the colonies and foreign countries on condition that the proceeds of the loans be spent on British manufactures is also embodied in the trade facilities bill. This scheme is apparently being entered into on a rather modest scale, since $£ 25,000,000$ only may be borrowed. This means that the liability on the part of the Government for interest is a relatively small sum.

The terms of the bill are in part as follows:
(1) If the Treasury is satisfied that the proceeds of any loan proposed to be raised, whether within or without the United Kingdom, by any Government, any public authority, or any corporation or other body of persons, are to be applied toward or in connection with the carrying out of any capital undertaking, or in, or in connection with, the purchase of articles manufactured in the United Kingdom required for the purposes of any such undertaking, and that the application of the loan in the manner proposed is calculated to promote employment in the United Kingdom, the Treasury may, subject to the provisions of this section, guarantee in such manner and form and on such terms and conditions as they think proper the payment of the interest and principal of the loan or of either interest or principal: Provided, That the aggregate capital amount of the loans the principal or interest of which is guaranteed under this section shall not exceed the sum of $£ 25,000,000$.
(2) No ruaranty shall be given by the Treasury under this section after the expiration of 12 months from the commencement of this act.
(3) In this section the expression "capital undertaking" means an undertaking involving capital expenditure.

Several foreign loans are being floated in London now, or their flotation is under consideration there. A $£ 5,000,000$ loan has just been raised for Kenya Colony in East Africa, a $£ 3,000,000$ loan is being floated for western Australia, and it is reported that $£ 15,000,000$ will probably be raised for railroad construction in Jugo-Slavia. It is also understood that the Government of Siam is trying to raise $£ 2,000,000$ there. It is possible that the loan to Jugo-Slavia may be guaranteed by the British Government.

## INTERNATIONAL DEBT READJUSTMENT.

British policy with regard to interallied debt cancellations and the revision of the terms of the reparations agreement is linked with her policy of stimulating trade revival. In the course of the past few months several organizations and individuals of prominence have declared themselves in favor of the cancellation of a part or the whole of debts owed to Great Britain by her allies. At the same time there has been a repudiation of the suggestion that the United States cancel Great Britain's obligations to her. Among others the British National Committee of the International Chamber of Commerce has sent a resolution to the Government urging debt reduction or cancellation on conditions to be determined. What these conditions might be are not indicated, but it may be assumed that Great Britain would exact some such conditions as were indicated as desirable for financial and economic rehabilitation by the Brussels Conference if she offered to cancel foreign obligations.

During the past month the developments with regard to reparations have not been encouraging. Discussion of the Wiesbaden agreement between the French and German Governments and the visit of the Reparations Commission to Berlin will be found on page 1429. The attitude of the British member of the Reparations Commission with regard to the Wiesbaden agreement has been published officially in England. It is not altogether favorable to the scheme. Although recognizing the desirability of France receiving payments in kind from Germany, Sir John Bradbury objects to her receiving more than her share-the equal
of 52 per cent-of the next four annual reparations payments (even though they be payments in kind), because he fears as a consequence that the other Allies may not receive their annual payments in full. He therefore recommends "that a provision should be inserted for the payment by France to the general reparation account from time to time (within the limits of the deferred debits for the time being outstanding) of any amounts which may be necessary to assure that the other Allies shall receive their proper proportions of the amounts due from Germany under the schedule of payments." In other words, the British member recommends that in case Germany defaults in her payments to Great Britain, Belgium, or Italy at the same time that she makes deliveries in kind to France, more than equal to the value of the French share of payments, France apportion to the other Allies their ratio of her receipts. The suggestion on the part of Germany that a method of reparations payments in kind be developed for England, as has been done for France in the Wiesbaden agreement, has not met with approval in England. Declaration of a moratorium for Germany after the payment of February 15 seems to be more favorably received.

PRICES.
It is generally recognized in England that British export prices are as a rule higher than those of other leading European countries. It is doubtless to neutralize the effect of this, especially as it applies to the iron and steel industry, that the Government has offered to guarantee foreign capital loans if the funds borrowed are spent on British manufactures. Measured in terms of international value (taking the dollar as a basis) British prices in October may be estimated at an index of 145, French, 125, Italian, 123 , and German, 77 , as compared with 141 for the United States in the same month. These figures do not indicate the international competitive position of individual commodities but the approximate relationship of general prices in these different countries in terms of gold.

Considering the price level within the country, even with the reduction in wholesale prices which has occurred during the past 18 months, British internal prices are still between 75 and 100 per cent higher than before the war. In the following table present prices of certain leading commodities are compared with their prewar and postwar peak prices:

Prices for Individual Commodities, Оctober, 1921.
[In pence.]

|  | Unit. | $\begin{gathered} 1913, \\ \text { average. } \end{gathered}$ | Peak. | $\begin{aligned} & \text { October, } \\ & 1921 . \end{aligned}$ | October, 1921, per cent of prewar. |

| Cotton cloth, 35inch, 38 yards, 16 by $14 .$. | Yard. | 2.41 | 13. 84 | 5.76 | 239 |

During the past month prices have continued to decline, the index of the Board of Trade for October showing a reduction in all commodities of 3.9 per cent, the Statist one of 7.4 per per cent, and the Economist, which in the three months immediately preceding had shown increases, a reduction of 6.8 per cent. Iron and steel and other building materials prices have continued to decline in November. Cotton has been weak, and manufacturing on such a reduced scale that talk of an organized scheme of short-time operation has been renewed. Prices established at the November wool auction were somewhat lower than the October level.

The increase of approximately $£ 7,000,000$ in the value of the export trade for October is accounted for to the extent of over $£ 3,000,000$ by exports of cotton yarns and cloth. There were increases also in the exports of woolen manufactures and other textiles as well as in iron and steel products, but the value of coal exports declined from the September average. Reexports were also larger in October than in September, cotton and wool showing the greatest increases over the preceding month. Imports were slightly lower in value in October than in September, due to decreases in food imports.

Production statistics for coal and iron and steel indicate an improvement in coal and pigiron production as compared with the preceding month, but a reduction in the production of semifinished steel.

${ }^{1}$ Revised figures.
${ }^{2}$ Average of 4 quarterly estimates.
35 weeks.
${ }^{4}$ Work suspended on all but $2,952,000$ tons.
${ }^{3}$ First week in April.
${ }^{6}$ Production from Apr. 4 to July 4.
$\uparrow$ Work suspended on all but 2,351,000 tons.
${ }^{8}$ Includes 731,000 tons on which work has been suspended and 457,000 tons delayed in completion.

The index of the cost of living constructed by the Ministry of Labor decreased from 210 during September (as compared with 100 in July, 1914) to 203 during October. Employment conditions were worse in October than in September, however, the percentage of tradeunion members out of work averaging 15.6 at the end of October, as compared with 14.8 at the end of September. The percentage of unemployed among those people who are insured under the unemployment insurance act increased from 12.2 at the end of September to 12.8 at the end of October. There were 1,611,000 people registered at employment offices on October 28, as compared with $1,405,000$ on September 30.

## FRANCE. ${ }^{1}$

## RAIL WAY REORGANIZATION.

On October 28 the Chamber of Deputies passed a bill which had already been approved by the Senate, reorganizing the railway system of France. In France, as in most of the belligerent countries, the problem of railroad finance became urgent as soon as the war was over. The Government owed large sums of money to the railroads and the railroads to the Government. The French situation is only in

[^5]part an outgrowth of the war. The debts of the railroads to the State originated in 1883. At that time the Government, in order to encourage the extension of railway systems into regions where the service would not be immediately profitable, guaranteed the interest on money loaned by private investors to the railroads. In 1913 part of the money advanced by the Government on these interest payments had been paid back, but the amount still owed by the Orleans, the Midi, and the Est railways totaled about $617,000,000$ francs. In that year three of the railroad companies, the Nord, the Est, and the Paris-Lyons-Mediterranée, made profits which totaled $23,500,000$ francs, the Orleans and the Midi had a deficit of 8,500,000 francs, and the State railway had a deficit of $84,000,000$ francs. With the outbreak of the war all profits disappeared and deficits, which, under a law of December, 1914, were met by the State, increased. From 1914 through 1920 the total deficit is placed at $5,570,000,000$ francs. The deficit for 1921 will be less than that for 1920, but it is estimated that it will amount to $1,500,000,000$ franes.
Under the new system the railways are fused into one financial organization which will pool their common resources. Each line will pay a fixed rate of interest on its stock and will receive a bonus for improvements and efficiency in management. Any surplus will be paid into a common fund. The debt of the railroads to the State is considered to be canceled by the State's debt for war services and war damages. Until 1927, if the operating expenses of the system are not met by its income, the difference will be provided for by the issue of bonds, the interest on which will be guaranteed by the State, and at that date a new set of regulations as regards rate-making will be drawn up.
The combined roads will be managed by a central railway council, which is to be composed of representatives of the management and the workers of each line and of the public, presided over by the Minister of Public Works. Each line will keep its own internal organization. Before the reorganization of the railroads can go into effect the plan must be approved by the stockholders of the various lines, but there seems to be every prospect of its being approved. It is thought that the new scheme will not only relieve the State finances but that it will improve the quality of French railway service. Plans for increasing the use of electricity in the operation of the roads are well under way. The Midi Railway began the electrification of its system before the war. The Orleans and the Paris-Lyons-and-Mediterranéen railroads have been proceeding with this work more recently. There are at the pres-
ent time about 9,000 kilometers of electrified railways in France, and the use of France's abundant water power in providing electricity for this work results in a great saving of coal and a proportionate reduction of expense.

Although the burden of railway finance is regarded as removed from the French budget for 1922, the Commission of Finance of the Chamber of Deputies has reluctantly decided that it will be impossible to balance receipts and expenditures in the French budget next year. The commission has been discussing the question with the Minister of Finance ever since late summer. Both took the position that the budget must be balanced, but the commission wished to achieve this end mainly by decreasing Government expenditures, the Minister of Finance mainly by increasing taxes. Decreasing public expenditures was a difficult task. One-half of next year's budget is taken by the charges on the public debt. One-half of the remainder is concerned with military expenditures which the French Government feels to be indispensable. On the other hand, the Commission of Finance is convinced that the industrial condition of France at the present time does not warrant any increase in taxes. On October 28, after the Government had reduced expenditures as far as it felt was compatible with public welfare, the Minister of Finance presented the following estimates for the 1922 budget to the commission:

## Francs.

Expenditures...................................... 24, 953, 000,000
Receipts... $23,328,000,000$

Deficit. $1,625,000,000$
However, these figures do not include cost-of-living bonuses for public employees, which have been abandoned in principle as of December 31. It is very likely that these bonuses will be returned to the budget by the Chamber of Deputies itself or the Senate. They will add $700,000,000$ francs to the public expenditures for the year. The Finance Commission found its way out of the dilemma presented by the deficit by voting to issue short-term bonds to the amount of $1,500,000,000$ francs, and increasing the tax receipts by improving the efficiency of the tax-collecting agencies. It is thought that bonds to this amount can be issued without increasing the public debt, since the war-profits tax is payable in Government rentes, and the Finance Minister estimates that rentes amounting to $1,500,000,000$ francs will be canceled during 1922 by payments on the war profits tax.

It is difficult to measure the extent of the industrial depression in France. It is impossible to tell from the statements of the private banks how the volume of commercial bills has
varied in the last year. Their statements do not separate commercial and treasury bills discounted, and though the combined item increased from $8,757,000,000$ francs to $9,665,-$ 000,000 francs from August 31, 1920, to August 31, 1921, it seems probable that the increase consisted of treasury rather than commercial bills. The situation as to acceptance liabilities and deposit accounts is clearer, however. Acceptance liabilities have decreased from $200,829,000$ francs to $107,330,000$ francs within the year. Ordinary deposits have remained at substantially the same level, but credits in current account have fallen from $8,036,000,000$ francs to $7,617,000,000$ francs. The decrease in acceptance liabilities has taken place since February, and the drop was particularly sharp in July and August. The following table gives in comparative form the consolidated statements of the three most important private banks in France for December 31, 1913, August 31, 1920, and August 31, 1921 :

Consolidated Statement for Le Orédit Lyonnais; Le Comptoir National d'Escompte de Paris; La Société Générale pouf: Favoriser le Developpement du Commerce et de l'Industrie en France.
[In thousands of franes.]

[^6]${ }^{2}$ Le Comptoir National d'Escompte de Paris.
a La Société Générale pour Favoriser le Developpement du Commerce et de l'Industrie en France.
IThis increase is due to the fact that the Comptoir National d'Escompte de Paris authorized an increase of $50,000,000$ francs in its capital, of which $32,038,000$ francs had been paid in on Aug. 31, 1920.

Foreign trade figures for October show a decrease in imports of $1,193,000$ metric tons and an increase in exports amounting to 68,000 tons. The value of imports for the
month exceeded exports by $468,000,000$ francs.
The following table gives a brief survey of business indexes for France:

1 End of month.
${ }^{2}$ End of minth. These figures represent only a relatively small proportion of the unemployed in France.
${ }^{3}$ Does not include Lorraine.
4 End of December, 1920.

- Provisional.

The general price level in France declined slightly during October. The index number of the French General Statistical Office decreased from 344 to 332 during the month. However, in France as in the United States, there is no general uniformity in the relation of commodity prices to their 1913 level. During October raw silk prices in France were four times as high as they were before the war; gasoline and kerosene prices stood at 350, meat prices at about 340, as compared with 100 in 1913, while the price of Para rubber in October was only 50 per cent of its 1913 price. Of the prices which were below the general level indicated by the General Statistical Office index number, metal prices make up the most conspicuous group. English pig tin in October cost only about 70 per cent more than it did in 1913, pig iron cost about 100 per cent more, copper 114 per cent, and lead 260 per cent more than it did before the war, while the general level was about 230 per cent above the prewar average. The following table summarizes commodity price indexes for France during the last two years. It uses 1913 prices as 100 and gives the highest price in 1920, the highest price so far in 1921, and the October, 1921, price in relation to the 1913 level. The prices upon which this table is based have been communicated to the office of the Federal Reserve Board by the American consul in Paris.

## ITALY. ${ }^{1}$

Between November, 1920, when wholesale prices in Italy were higher than at any time since the armistice, and June, 1921, prices steadily declined; in the latter month the Bachi index number for all commodities stood

[^7]at 81.49 , as compared with 107.33 in November, 1920, the average monthly prices in 1920 being taken as 100.

Beginning. with July, prices have increased again, the index number for October (96) being only four points under the 1920 average. The declime of prices between November and June was most important in the textile, minerals and metals, and chemicals groups, the index numbers for these groups standing at $45.8,60.4$, and 63.4 in June as compared with an average of 100 in 1920. If these group indexes are compared with those for the spring months of 1920 , when the peak of high prices was reached, it will be seen that the total decline of prices by June of this year had amounted to about 65 per cent for the textile group and about 48 per cent for both chemical products and minerals and metals.

Since June, the upward movement of prices has likewise been greatest in textiles. The index number for this group increased from 46 in June to 76 in October, or over 65 per cent. During the same period the index number for chemical products increased from 63 to 75 , or about 19 per cent, while that for minerals and metals remained practically stationary until September and showed in October an increase of less than 7 per cent over June.

For foodstuffs, both animal and vegetable, the lowest prices were likewise attained in June, and since then there has been an upward movement. For both of these groups, however, as may be seen from the table on page 1465, the lowest monthly indexes for this year were in the neighborhood of 100 , that is, approximately the same as the monthly average for 1920. By June, the decline from the maximum in the case of vegetable foods was about 10 per cent and in the case of animal foods about 20 per cent. Between June and October, however, the index numbers for vegetable foods advanced again from 97 to 116 , or about 20 per cent, and that for animal foods from 101 to 129 , or about 28 per cent. Wholesale prices for food, therefore, were at the highest point ever attained in October of this year.

The general and steady rise in prices in recent months does not appear to be connected with any change in the monetary or banking situation. The deflation of the bank-note circulation continued later than June, the circulation for September 10 being $17,879,000,000$ lire as compared with $18,158,000,000$ lire on June 30 . Preliminary and very incomplete figures regarding the note circulation at the end of September seem to indicate an expansion of circulation during that month, but,
if so, it was not on a scale sufficient to account for the complete change in the price trend. Neither do the latest available bank reports seem to indicate the beginning of a new period of credit expansion after the month of June.

The most important general factor has undoubtedly been the fall in value of foreign exchange beginning with the month of June. The close connection between the movement of foreign exchange rates and prices during the first 10 months of this year is clearly shown in the following table, which contains, on the one hand, the average monthly quotations of the lira in New York and, on the other, the monthly index numbers of prices in Italy:

|  | Average monthly <br> quotation of the lira in New York. | Bachi Index number of wholesale prices. |
| :---: | :---: | :---: |
| January, 1921 | \$0.036 | 103 |
| February, 1921 | . 037 | 98 |
| March, 1921. | . 039 | 97 |
| April, 1921 | . 046 | 94 |
| May, 1921 | . 053 | 88 |
| June, 1921. | . 050 | 81 |
| July, 1921 | . 045 | 83 |
| August, 1921. | . 043 | 87 |
| September, 1921 | . 042 | 93 |
| October, 1921. | . 040 | 96 |

In certain instances, notably among the chemical products, the rise in prices may be accounted for to a certain extent, at least, by the provisions of the new tariff which went into effect on July 1. As far as foodstuffs are concerned, a certain allowance has to be made for seasonal fluctuations in such commodities as potatoes and eggs. In other instances the rise in prices can be traced to deficient crops. This applies, however, only to a limited number of commodities, such as wine and olive oil. On the whole, as may be seen from the table below, the crop situation has been favorable this year, most of the crops having been larger than in the two preceding years and in some cases even exceeding the crops of the years immediately preceding the war:

Principal Italian Crops in 1921, 1920, 1919, and 1911-1913.
[In quintals.]

| Sugar beets. | 15,000,000 | 11,999,000 | 15,000, 000 | 20,858,000 |

The determining factor in the movement of food prices relates to the question of Government control and the adjustment of prices to new conditions of trade. During recent months there has been a gradual relinquishment of Government price control, accompanied by temporary provisions for the transition period. Rye and maize, for which Government control was discontinued on July 1, advanced 13 and 12 per cent, respectively, between June and September. Butter and cheese advanced during the same period 67 and 27 per cent, respectively, as the result of a decree authorizing the exportation abroad of a certain amount of these commodities.

As regards wheat, free trade in domestic wheat recommenced July 1 and the Government requisition of grain was discontinued with this year's crop. As may be seen from the table above, the wheat crop this year has been very good, with the result that it is estimated that foreign grain imports will not exceed $8,000,000$ quintals in 1921-22, while in 1920-21 it was necessary to import $20,000,000$ quintals. Moreover, according to a statement by Minister of Finance Soleri, the Government acquired abroad a considerable amount of grain when exchange rates were favorable to Italy. In spite of these factors, the price of soft grain advanced from 104.40 lire to 128 lire per quintal and that of hard grain from 119 lire to 160 lire per quintal between June and September. This resulted from various Government provisions which were designed to protect the interests of agriculturists. Thus, although compulsory requisition of grain had ceased, the producers were given the option of selling this year's grain to the provincial government commissions at the original requisition price which was fixed for this year's crop a year ago last May (i. e., in May, 1920). This price was considerably higher than the requisition price for last year. Although it appears that the amount of wheat actually sold by the producers to the provincial commissions has not been large, the privilege of doing so has tended to drive free market prices up to the level of the prices paid by the Government commissions. On September 1 foreign wheat was placed on the list of free imports, but the possible effect of this on the price of wheat is difficult to estimate in view of the depreciation of the lira abroad.

The advance in the price of textiles (which have increased more than any other group in the last few months) is due in the first place to the rise in the price of cotton in the international market, a fact which has been further aggravated for Italy by the depreciation of her exchange. Another factor leading to higher
prices of textiles is the shortage of raw silk. International demand for Italian silk has been greater than normal, because of the unfavorable position of the eastern currencies due to the rise in the price of silver. There has also been a large increase in the demand for woolens. The textile trades seem to be the only ones in which the advance in prices corresponds to an actual though limited revival of industrial activity following upon the liquidation of last year.
The latest official statistics of unemployment refer to September 1 and show a slight decrease in the number of unemployed in the textile industries as compared with August 1. The total number of unemployed in industries on September 1 was estimated at about 471,000 , an increase of 8 per cent over the number who were out of work on August 1 and of 88 per cent over those out of work on May 1. The largest increase during the month of August occurred in the building and construction trades, in the metal and machine industries, and in agriculture, absolute numbers of unemployed workers in these industries being $130,000,73,000$, and 69,000 , respectively, on September 1. Over 186,000 workers were employed in shifts and 34,000 were working part time.
Although no statistical data regarding industrial conditions during September and October are as yet available, reports from both employers and labor organizations seem to indicate a more serious business depression than at earlier dates rather than an industrial recovery. There has been widespread revision of wages, and it is stated by the Minister of Industry that 75 per cent of the workers had accepted by the end of October new agreements based on a lower wage scale.

At the request of the General Confederation of Labor, the Government has appointed a commission to investigate the industrial situation as regards the question of the cost of production, the cost of living, foreign competition, and tariff provisions. The commission, which consists of eight representatives of employers' associations, eight representatives of Iabor organizations of various political shades, and eight experts appointed by the Government, is to submit its report within one month's time. The creation of this commission has caused considerable apprehension among business groups, who see in it a new phase of State and labor control over industry. The Minister of Industries, on the other hand, has denied that the commission is to do more than study the general conditions of industry. Investigations of individual businesses are not to be made.

## GERMANY. ${ }^{1}$

The most important events of an industrial and financial nature in Germany during the last of October and the first of November were the partition of Upper Silesia, the fluctuation of mark exchange, and the spectacular rise in prices. The political consequence of the partition of Upper Silesia was the resignation of the Wirth Cabinet. On October 26 Dr. Wirth again appeared before the Reichstag as Chancellor, with the portfolio of the Minister for Foreign Affairs, and accompanied by a new Cabinet. Two Cabinet positions remain to be filled, however. The Minister for Food and Agriculture is at present also filling the post of the Finance Minister, and the post of Minister of Reconstruction is not being filled at all, in the hope that Dr. Rathenau, who acted as Minister of Reconstruction in the first Wirth Cabinet, may decide to return.

Conjectures as to changes in the terms of reparations payments have been rife during the month, and fluctuations in mark exchange have been extreme. During November the low quotations for the mark in New York were reached on November 7 and 26, when it was quoted at one-third of a cent. The average quotation for the month was 0.38 cent.

Part of this depreciation of the mark is attributed by officials of the German Government to speculation in exchange, and the Government is planning to introduce as one of its new tax measures a bill taxing every exchange transaction. In this connection there are also to be further attempts to restrict imports. The "gold-agio" by which customs rates are multiplied if payments are made in paper marks was increased to 3,900 on November 20 and more stringent measures are to be taken to restrict luxury imports.

Foreign trade figures for September show that the unfavorable balance in Germany's foreign commerce increased during the summer. Figures for the first four months of 1921 are not available, but the following table gives those for the succeeding five months of the year and shows the growing adverse balance:

German Foreign Trade. ${ }^{2}$
[In millions of paper marks.]

| 1921 | Imports. | Exports. | Excess of imporis. |
| :---: | :---: | :---: | :---: |
| May | 5,486 | 4,558 | 928 |
| June. | 6,409 | 5,432 | 977 |
| July .... | 7,580 | 6,212 | 1,368 |
| August | 9,418 | 6, 683 | 2,725 |
| September | 1),668 | 7,519 | 3,149 |

[^8]One reason that the value of the import trade exceeds that of the export trade is the disparity between German prices and those of the rest of the world. The Germans are selling cheap and buying dear, and the difference between prices at home expressed in terms of marks hes increased during the summer and fall. On page 1071 of the September issue of the Bulletin there appears a table comparing prices in the United States, England, and France, expressed in marks, with internal prices in Germany according to the index number of the Frankfurter Zeitung. Prices in the United States, England, and France in terms of marks were obtained by multiplying a wholesale price index number for each country by an index showing the appreciation of the currency of that country in terms of the mark. In the following table the compilation which appeared in the September Bulletin is brought to date, and the increase in the disparity between internal and external mark prices is made clear:

| 4 First of month figures. |  |  |  |  |

The effect of the unfavorable exchange rates on internal prices in Germany is well brought out by two group indexes of the wholesale price index compiled by the German Federal Statistical Office. These group indexes are similar to two of the group indexes of the wholesale price index which is computed by the Federal Reserve Board for the United States. They show the relative prices of goods produced in Germany as compared with goods imported into Germany. The following table
shows the movement of these two groups as compared with the movement of wholesale prices in general in Germany according to this index number.

Wholesale Price Index of the German Federai Statistical Office.
$[1913$ prices $=100$.

The panic of retail buying which has taken place in Germany within the last month has made it obvious that the difference between internal and external prices in Germany will probably not continue to increase. The decline in the foreign exchange value of the mark has made the whole German population want to possess goods rather than marks. According to cable dispatches retailers' stocks have been almost completely exhausted by the excited buying. This depletion of stocks will naturally result in an increase in wholesale prices which will bring German internal prices into closer harmony with prices abroad.

The latest figures available on the cost of living in Germany show that according to the index number of the Statistical Office in BerlinSchöneberg the cost of living rose from 1,212 in September to 1,340 in October, in each case using 1913 as 100. The index of the Federal Statistical Office shows an increase from 1,062 in September to 1,146 in October. This index uses 1913-14 prices as 100. Information recently made available in this country in regard to the weighting of the Federal cost of living index explains the difference between this index number and those of Dr. Elsas in Frankfurt and Dr. Kuczynski in Berlin-Schöneberg. The Federal index is weighted according to the present-day consumption of the working class in Germany and thus compares the cost of their present standard of living with what that same standard would have cost before the war. The other two indexes compute as nearly as possible the cost of the prewar consumption of the working class at the present time. In addition the Federal Statistical Office does not include
the cost of clothing, which is included in the other two indexes.

The increase in prices in Germany during the last few months and the fall in the exchange value of the mark have completely vitiated any plans made by the German Ministry of Finance early in the summer. On November 4 the acting Minister of Finance presented to the Reichstag new estimates of expenditure and revenue for the year which will end March 31, 1922.

| Estimates for the1921-22 Budget in Germant as of <br> Nov. $4,1921$. <br> [In millions ofmarks.] |
| :---: |

The ordinary receipts include revenue from taxes and Government monopolies, while the extraordinary receipts will consist exclusively of loans. It was estimated that new taxes proposed would yield from $40,000,000,000$ to $42,000,000,000$ marks in the fiscal year. From April 1 to September 30, 1921, the Government has received $33,144,000,000$ marks in taxes, and in the same period Treasury bills outstanding have increased 44,079,000,000 marks.
The new Government has not announced plans for meeting the installments due on reparations account on January 15 and February 15, 1922. Negotiations as to a loan from German industrials continue, but have not yet drawn to any definite conclusion, and efforts to raise a loan in London have as yet been without result.

In the second week in November the Reparations Commission went to Berlin to investigate the situation there at first hand. The outcome of this visit was a telegram sent to Berlin on December 2, urgently requesting the German Government to give its full attention to the steps immediately necessary to insure payments of the January and February installments due on reparations account. The telegram emphasizes the fact that the Reparations Commission is persuaded that the difficulties encountered by the German Govern-ment--difficulties which are closely connected with the recent fall of mark exchange-are of a financial rather than an economic character and are in great measure due to the failure of the German Government to balance its budget.

The Wiesbaden agreement has been approved only in principle by the Reparations Commission, and has been referred to the Allied Governments. Under this agreement Germany agrees to furnish France with goods for reconstruction purposes to the value of $7,000,000,000$ gold marks within the next $4 \frac{1}{2}$ years, provided that they are ordered by the "sinistrés" (French of the devastated regions). However, at the time of their delivery, Germany is to receive credit on reparations account for only a part of the goods delivered. According to the agreement, 35 to 45 per cent of the value of the goods delivered in the next $4 \frac{1}{2}$ years will be credited on reparations account in the year of delivery, but in no case is the amount credited to exceed $1,000,000,000$ marks. It is obvious that in order to receive a credit of a billion gold marks for goods delivered to France, it will be necessary for Germany to turn over goods to the value of at least $2,220,000,000$ gold marks in any one year. On the difference between the value of the goods delivered and the amount credited on reparations account, France is to pay 5 per cent simple interest. Deliveries under this agreement will cease in 1926. The balances which are not credited on reparations account currently are to be credited on that account in the future, and in each year from 1926 to 1936 Germany will be credited with a sum not to exceed France's share of reparations payments in that year. Thus the sum owed by France to Germany for 55 to 65 per cent of the deliveries made from 1921 to 1926 will gradually be diminished. In 1936 if there is still a balance due to Germany it will be settled in four half-yearly payments.

Although there may be some question as to whether France can absorb goods to this amount in the near future, it is obvious that, if she can, this arrangement is very advantageous from the French point of view. Under the terms of the May reparations agreement she would probably receive about $1,664,000,000$ gold marks each year during the next four years (supposing the tax on exports to yield $1,200,000,000$ gold marks a year): Under the Wiesbaden arrangement, supposing that deliveries of the $7,000,000,000$ gold marks' worth of goods were spread evenly over the $4 \frac{1}{2}$ years, France would receive from Germany each year $1,550,000,000$ gold marks' worth of goods, would credit her on reparations account with not more than $697,500,000$ gold marks ( 45 per cent), and would receive in addition 966,500,000 gold marks in other forms (that is, the difference between the total sum due France on reparations account, $1,664,000,000$
gold marks, and $4 \tilde{5}$ per cent of the value of the goods delivered).

Sir John Bradbury, the British. delegate on the Reparations Commission, in reporting to his Government on the subject, pointed out.that Germany has by this agreement assumed an additional burden, inasmuch as she has promised to make deliveries in excess of those laid down in the London reparations agreement. The report goes on to say:

Regard being had to what has been said and written in Germany, not merely by the general public, but by responsible members of the Government, of the difficulty anticipated in carrying out the obligations imposed by the schedule of payments themselves, it is somewhat remarkable that Germany should now be prepared voluntarily to assume this additional burden.

Doubtless among the reasons which have led her to do so are a genuine desire on the part of the present German Government to remove the open sore constituted by the ruins of northern France, and of belief-probably well founded-that the industrial and financial circumstances of Germany at the present time are such that it is advantageous to purchase a measure of relief from the burden of finding foreign currencies even at the expense of a more than equivalent obligation which can be discharged by the export of merchandise.

But when full weight has been given to these considerations, the fact remains that the potential dimensions of the additional burden are so great that it would be unwise to assume that it can be borne without prejudice to the performance by Germany of her obligations under the schedule of payments.
If there were reasonable grounds for anticipating that the obligations under the schedule of payments could be maintained, and would be discharged, in full, during the whole of the period contemplated by the Wiesbaden agreement, the excess deliveries to France being made in addition, it would be not unreasonable to allow to France the full advantage of the acceleration in the payment of her share of reparations for which she has been able to arrange.

The obligations of the schedule of payments were, however, fixed as recently as Mav last and they then represented, in the opinion of the Reparations Commission and of the allied Governments, the maximum burden which in the light of the indications \&vailable Germany could be expected to be able to bear.

In the event of the German Government finding itself in difficulties in regard to the installments due on reparations account for the current reparation year or on subsequent installments, it is inevitable (whatever may be its intentions at the present time; that the additional obligations undertaken to France would not only be pleaded as a ground for consideration, but would, in fact, constitute in favor of such consideration a plea which could not be ignored by the Allied Governments.

It results from these considerations that the contingency in which the additional deliveries to France would have, in substance, to be treated by the Allied Powers as a whole-notwithstanding the provisions for deferred credit contained in the agreement-as an integral part of the current effort of Germany to satisfy her treaty obligations is one which can not be left out of account.

If that contingency should arise, the effect of the agreement would be, not that, thanks to a special voluntary effort on the part of Germany, France would have secured, without prejudice to her Allies, a part of her share of reparation earlier than would otherwise have been possible, but merely that an alteration in favor of France and to the detriment of the other Allies would have been
brought about in the distribution as between the Allies of the available reparation receipts over a very considerable period. The other Allies would, in substance, be advancing to France on a 5 per cent basis, their shares of that part of the annual reparation payments of Germany with which France was not currently charged, on the security-not of the French Government-but of the French share of whatever may be the current receipts in respect of German reparation in the somewhat remote future.
Opinions may differ as to the precise value of this security, but unless the other Allied Powers are prepared to modify in favor of France the existing treaty provisions and inter-allied agreements relating to priorities and to the distribution of reparations receipts, it can hardly be regarded as in itself providing adequate protection for the rights of the other Allies, and further safeguards will be required * * *
The safeguards which are envisaged as necessary by my Italian and Belgian colleagues on the Reparations Commission and myself and for which we presume that our respective Governments will desire to stipulate are-
(1) That a limit of time should be laid down after the expiration of which no new deferment of debit should be permitted, and the liquidation of the existing deferred debits should commence to be made by regular annual installments. The precise length of this period should be determined upon an estimate of the time necessary to carry out the main work of reconstruction, regard being had to the time required by Germany to affect the necessary supplies. In view of the delays which are inevitable in regard to operations of the magnitude of those contemplated, the prescribed period might be reasonably somewhat longer than the $4 \frac{1}{2}$ years initial period under the agreement, but it should not exceed seven years.
(2) That in no circumstances should the aggregate amount for which debit against France for the time being stands deferred be allowed to exceed a prescribed amount, say, 4 milliards gold marks.
(3) That a provision should be inserted for the payment by France to the general reparation account from time to time (within the limits of the deferred debits for the time being outstanding) of any amounts which may be necessary to secure that the other Allies shall receive their proper proportions oi the amounts due from Germany under the schedule of payments.
Subject to the introduction of these safeguards, to which it would not appear that legitimate exception could be taken, the arrangements contemplated by the agreement may be expected to accelerate the solution of the reparation problem on practical lines in a manner advantageous to France without prejudicing the interest of other Powers, and it is upon this ground that the Reparations Commission has unanimously recommended them for favorable examination by the Allied Governments.
If the Allied Governments approve the general scheme, subject to whatever safeguards they may decide to be necessary, there will remain certain subsidiary points for the Reparations Commission to consider-among others:
(1) The proposed omission of the excess deliveries from the index figure determining the annual liability under the schedule of payments, until such time as these deliveries are finally brought to account for reparations purposes.
(2) The special arrangements for substitution in respect of articles of which France is entitled to restitution by identity involving in certain cases money payments; and
(3) The special arrangements in regard to the delivery of coal and the prices to be credited or debited which in several particulars affect the interests of other Powers.

## SCANDINAVIA.

The movement of wholesale prices in Norway, Sweden, and Denmark has followed the same general trend as the world-wide course of prices during the past three years. The slump in prices which occurred in most countries after the armistice was also to be noted in Scandinavia and was followed by a similar sharp upward movement in the latter months of 1919 , which reached its peak in the summer and autumn of 1920. Up to October, 1921, the precipitous decline, which set in after the turning point in the boom period, had carried prices down 53 per cent from the peak for Sweden, 50 per cent for Denmark, and 33 per cent for Norway

Prices in Sweden reached a crest in December, 1918, during the cycle of rising prices preceding the post-armistice decline. In the other two countries peak prices were attained in the second upward movement of prices which culminated in 1920 . The Norwegian price index registered its highest figure (425) in September, 1920, whereas the peak of Danish prices (403) was not reached till October. Price declines in all these countries began later than in the United States, where the climax was reached in May, 1920.

## PRICES AND EXCHANGE RATES.

It is interesting to note that Norwegian prices, which had closely paralleled Swedish prices throughout the first few months of 1920, rose sharply above them following April, 1920. A sharp decline in Norwegian currency as measured in Swedish money began in March. Christiania kroner were quoted at 93.4 per cent of Swedish kronor in January, 1920, and kept at about this level through February. In March, 1920, they dropped to 88.7 per cent, and after a slight rally in April continued to decline to the low figure of 69.4 in September. It is thus seen that the advance in prices occurred two months later than the beginning of the decline in Norwegian exchange, attributable to the fact that the exchange market is the more sensitive one and reflects underlying changes sooner than commodity prices. No further marked peculiarities occurred in the price movements of these three countries, as compared with the world movement, until July, 1921. The interval from September-October, 1920, to July, 1921, shows approximately the same rate of decline as in England, followed by
a slowing down and slight stabilization in the summer of 1921. Beginning in August, however, prices in the three Scandinavian countries commenced to diverge from one another. In Sweden and Denmark there occurred at this time another very precipitous decline, while Norway, on the other hand, showed only a very moderate drop. In July there was an unusually sudden and sharp drop in Danish prices, as compared with the more gradual drop noted in the Swedish price level. This is probably to be accounted for in part by the fact that Denmark is a large reexporting center and that Danish merchants in the past two years have imported heavily with a view to carrying on an extensive transit trade with Germany and the eastern European countries. It is generally known that credit conditions in Germany have made it difficult to reexport commodities, and that as a result the free harbor of Copenhagen has become heavily congested with goods that could not be moved. The failure of this reexport plan has flooded Danish markets with these products, and it is very probable that the marked decline in prices in July is due in a measure to the fact that this surplus stock was being thrown on the Danish market for disposal. There is also a further factor to be taken into consideration in studying the difference between Norwegian prices on the one hand and Danish and Swedish prices on the other hand. Norwegian exchange in Stockholm declined from 67.3 per cent in May, 1921, to 57.5 per cent in September, and it is therefore natural that the general price level in Norway should have fallen more moderately than in Sweden. In the case of Denmark, however, an improvement in exchange was noted at this time. The Danish krone rose from 75.4 in July to 81.5 in September as compared with the Swedish krona. This rise is even greater if compared with Norwegian krone. It is therefore to be expected that the decline in Danish prices during the last two months should have been much sharper than the decline in Swedish prices during the same period, and much more precipitous than the drop in Norwegian prices for this same period.

It is believed in many quarters at the present time that the Swedish krona is overvalued in relation to other exchanges. This fact appears on the surface to be borne out by the results of calculations based on Prof. Cassel's method of obtaining the real parity of exchange as determined by the relation of price levels in various countries. The following table, excerpted from
the Okonomisk Revue, gives the wholesale price indexes of Norway, Sweden, and Denmark and the so-called "purchasing power parity," or theoretical rates of exchange, obtained by calculating the ratio of the purchasing power of Norwegian and Danish money to that of Swedish money.

The theoretical exchange rate is in every instance higher than the actual exchange quotations where a comparison is made between Sweden's currency and that of the other two countries. But in studying the relation between the actual and theoretical rates of exchange between Norway and Denmark, the agreement between the two is particularly striking in the last five months. Too much importance, however, should not be attached to the above calculations, as various statistical difficulties present themselves, particularly the fact that the price indexes are at the present time rather imperfect and can only approximately measure the actual currency values.

## PRICES AND NOTE CIRCULATION.

Another factor of importance in comparing the price level in different countries is the relative extent to which the currencies are inflated. In the following table the note circulations of the three Scandinavian countries in recent months are related to those of June 30, 1914. The figures through 1920 are obtained from the yearbook of Sweden's Riksbank.

Note Circulation of the Central Banks of the Scandinavtan Countries.

|  | Sweden. |  | Norway. |  | Denmark. |  |

| 1917. | 572.7 | 239.6 | 326.3 | 263.4 | 337.9 | 211.5 |
| 1918. | 813.5 | 340.4 | 436.3 | 352.1 | 450.0 | 281.6 |
| 1919. | 747.6 | 312.8 | 454.3 | 366.7 | 459.3 | 306.2 |
| 1920. | 759.9 | 318.0 | 478.4 | 386.1 | 556.7 | 348.4 |
| Sept., 1920 | 779.8 | 326.3 | 478.1 | 385.9 | 559.5 | 350.1 |
| Oct., 1920. | 772.8 | 323.3 | 478.5 | 386.1 | 578.0 | 361.7 |
| June, 1921 | 678.8 | 284.0 | 418.4 | 337.7 | 496.2 | 310.8 |
| July, 1921 | 629.4 | 263.3 | 428.4 | 345.8 | 481.6 | 301.4 |
| Aug., 1921. | 632.4 | 264, 6 | 421.0 | 339.8 | 480.6 | 300.8 |
| Sept., 1921 | 672.4 | 281.3 | 415.9 | 335.7 | 481.4 | 301.3 |
| Oet., 1921. | 650.3 | 272.1 | 411.4 | 332.0 | 468.1 | 292.9 |

It will be seen that the peak of note expansion came approximately at the date of the peak of prices. In Sweden the peak was reached in December, 1918, when the index of note circulation stood at 340, calculated on the basis of June 30, 1914, equal to 100 . This date witnessed also the peak of prices. In Norway note circulation reached its highest point in October, 1920, one month later than the peak of commodity prices. In Denmark the crest of note circulation was reached in October, 1920, again the peak point of wholesale
prices. This approximate coincidence of peak note circulation with peak prices in these three countries is unlike the situation in the United States, where the highest level of prices was reached in May, 1920, while the peak of note circulation came five months later, in October, 1920. Studying the above table of relative note circulation in the three countries, it is evident that the increase in note circulation was greatest in the case of Norway and least in the case of Sweden. The least progress toward deflation has been made in Norway, where the absolute decline in note issue from its high level amounts only to $67,000,000$ kroner. In the case of Denmark this decline has amounted to $109,000,000$ kroner and of Sweden to $163,000,000$ kronor. The table also shows that the note circulation in all the three Scandinavian countries has not shown the same percentage reduction as prices. In the case of Sweden an analysis has been worked out by Professor Cassel showing that a considerable amount of outstanding notes of 50 and 100 kronor denominations have been hoarded, thus retarding the withdrawal of notes from circulation which should have accompanied the fall of prices. Furthermore, owing to the fact that reductions in many wholesale markets have brought prices below the cost of production, it is not possible to have a general restoration of equilibrium between prices and note circulation until the maladjustments between production costs and sale price are corrected.

## State Banks and Trust Companies.

## ADMISSIONS.

The following list shows the State banks and trust companies which were admitted to membership in the Federal Reserve System during the month ending November 30, 1921, on which date 1,624 State institutions were members of the system, having a total capital of $\$ 581,517,142$, total surplus of $\$ 528,164,584$, and total resources of $\$ 9,946,170,045$.

Great Lakes Trust Co., Chicago, Ill. WITHDRAWAL.

Potlatch State Bank, Potlatch, Idaho.
Magna Banking Co., Magna, Utah.
CONVERTED INTO NATIONAL BANKS.
Alliance Bank Co., Alliance, Ohio.
American State Bank, Okmulgee, Okla.
The First State Bank, Clinton, Okla.
Guaranty State Bank, Ardmore, Okla.
IN HANDS OF STATE AUTHORITIES.
American Bank \& Trust Co., Savannah, Ga.
BANKS CLOSED.
Stockmens State Bank, Browning, Mont.
Bellevue Bank \& Trust Co., Bellevue, Idaho.
Union State Bank, Nezperce, Idaho.

## Acceptances to 100 Per Cent.

Since the issuance of the November Bulletin the following banks have been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

Merchants \& Illinois National Bank, Peoria, Ill.
Peoples Savings Bank \& Trust Co., Pine Bluff, Ark.
New Orleans Bank \& Trust Co., New Orleans, La.

## Fiduciary Powers Granted to National Banks.

The applications of the following banks for permission to act under section $11(\mathrm{k})$ of the Federal Reserve Act were approved by the Board during the month ending November 30, 1921:

District No. 2.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: Farmers National Bank, Allentown, N.J.

District No. 3.
Trustee, executor, administraior, registrar of stocks and bonds, guardian of estates, assignee, recelver, and committee of estates of lunatics: Ashland National Bank, Ashland, Pa.

## District No. 5.

Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics:
First National Bank, Durham, N. C.
Riggs National Bank, Washington, D. C.
District No. 7.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: Indiana National Bank, Indianapolis, Ind.

District No. 8.
Trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics: First National Bank, Murray, Ky.

Districe: No. 10.
Executor and administrator:
National Bank of Gallup, Gallup, N. Mex.

## Commercial Failures Reported.

The continued wide margin of increase in number of failures over last year's comparatively moderate mortality is evidenced by the 1,341 defaults reported to R. G. Dun \& Co. during three weeks of November as against 746 in the same period of 1920. The returns for October, the latest month for which complete statistics are available, disclose 1,713 commercial insolvencies in the United States, involving $\$ 53,058,659$ of liabilities. Aside from January, the number of October failures is the largest of any month this year, and the indebtedness exceeds that of all months except May, March, and February. Separated according to Federal Reserve districts, the October statement reveals an increased number of defaults, as compared with October, 1920, in every instance, while the liabilities are larger in 7 of the 12 districts, the exceptions being the fifth, seventh, eighth, eleventh, and twelfth districts.

Failures During October.

| District. | Number, |  | Liabilities. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1921 | 1920 | 1921 | 1920 |

## RULINGS OF THE FEDERAL RESERVE BOARD.

Funds derived from sale of collateral security held by national bank as trustee under corporate issue of bonds are trust funds within the meaning of section 11 (k) of Federal Reserve Act.

The Federal Reserve Board was recently asked to pass upon a question involving the interpretation of section $11(\mathrm{k})$ of the Federal Reserve Act; in particular, whether certain funds received by a national bank constituted trust funds awaiting investment or distribution within the meaning of section $11(\mathrm{k})$ of the Federal Reserve Act and Paragraph V of the Board's Regulation F, Series of 1920 , so as to require a deposit of proper collateral security in the bank's trust department as a condition precedent to the use or deposit of such funds in the bank's commercial department. The facts which the Board was asked to consider were stated to be as follows:

A national bank, which had been granted permission to exercise fiduciary powers, was named as trustee under an issue of bonds made by a corporation and, as such trustee, was made depositary and given control over certain securities and real estate pledged by the corporation as collateral security to the bonds. The trust agreement specifically provided that the national bank should, as trustee, hold the collateral, originally pledged, as security for the corporation's bonded indebtedness, but that in case of a sale of any of this collateral the trustee bank should either hold the proceeds of such sale as substituted security or use such proceeds in retirement of the bonds. Part of the real estate so pledged as collateral security was sold and the proceeds of the sale were deposited in the bank's domestic or commercial department, and the bank took the position that this deposit was not a deposit of trust funds awaiting investment or distribution within the meaning of section $11(\mathrm{k})$ of the Federal Reserve Act and the Board's Regulation F, so as to require a counter deposit of acceptable securities of equal value in the bank's trust department.

On these facts the Board ruled that the proceeds of the sale of the collateral security, held by the national bank as trustee, and which were themselves required by the trust agreement to be either held as substituted security for the corporation's bonded indebtedness, or used in retirement of such indebtedness, did constitute trust funds within the meaning of section $11(\mathrm{k})$ and the Board's Regulation F .

This ruling was based on the facts of the particular case and was not intended to mean that all funds which are deposited by a corporation with a national bank for the purpose of providing for the payment of the corpora-
tion's maturing bonds or coupons are necessarily trust funds. Whether or not deposits made for this or similar purposes are to be deemed trust funds must depend in each case upon the terms under which the particular deposit is made, and it is obviously impracticable to make a general ruling covering all possible situations. As a general rule, it may be stated that the provisions of section $11(\mathrm{k})$ of the Federal Reserve Act and of the Board's Regulation F, Series of 1920, regarding the deposit of approved securities in the bank's trust department against funds used in its commercial department, relate only to funds which are required by the agreement of deposit or otherwise to be held by the bank in trust.

Where a corporation having maturing obligations deposits, in its regular account or in an account opened for this special purpose, an amount sufficient to cover such obligations, and authorizes the national bank, which is not acting as trustee in holding collateral for such obligations, to pay the obligations and to charge the payments against the corporation's account, the funds so deposited would not ordinarily constitute trust funds within the meaning of section $11(\mathrm{k})$ of the Federal Reserve Act and Regulation $F$, sllthough there might be special provisions affecting the deposit which would necessitate a contrary conclusion. As indicated in the ruling, published in this same issue, on reserve requirements against funds deposited under a deed of trust, such a deposit would ordinarily give rise to a deposit liability against which the national bank would be required to carry reserves, as provided in section 19 of the Federal Reserve Act, but with respect to the funds thus deposited the bank would not be subject to the requirements affecting the use of strictly trust funds in a national bank's commercial department.

Liability for funds deposited with trust company and held under a
deed of trust is not a deposit liability against which reserves are required.
The Board has been asked to rule whether certain funds deposited in a trust company by an electric corporation, to be used for the redemption of the corporation's outstanding bonds, should be classed as demand deposits or as time deposits, against which reserves must be carried, or not as deposits at all.
It appeared that the trust company is acting as trustee under a corporate issue of bonds; that the deed of trust requires the corporation
to make periodic payments to the trustee to meet obligations maturing on specific dates; that the money so paid to the trustee is not credited to the corporation's account, is not subject to withdrawal by the corporation but can be used only in accordance with the terms of the deed of trust, which restrict the use of this money to the retirement of bonds.

The Board has already ruled that money paid to a bank by a customer in anticipation of the maturity of an acceptance made for his account is not a deposit liability within the meaning of the provisions of section 19 of the Federal Reserve Act, if the money deposited is not subject to withdrawal by check or otherwise, but is received in full or part payment of the customer's obligation to put the bank in funds at the maturity of the acceptance, or if the money is received as a special deposit for the purpose of meeting the acceptance when it matures and the customer can not demand the return of the money but can require only that the bank apply the money in payment of the acceptance of maturity.

The Federal Reserve Board is of the opinion that the principle enunciated in its former ruling is applicable to the present case, and that if the money deposited in the trust company is held subject to the provisions of the deed of trust, and the corporation which deposited the money can not demand the return thereof but can require only that the money be paid to the bondholders in redemption of bonds in accordance with the terms of the deed of trust, the liability of the trust company is not a deposit liability, within the meaning of the provisions of section 19 of the Federal Reserve Act, against which reserves must be maintained.

There may be, of course, and frequently are, cases where deposits made by corporate debtors to meet maturing obligations are to be con-
sidered deposit liabilities within the meaning of the provisions of section 19, Federal Reserve Act, and the ruling laid down above is to be confined to the state of facts upon which it is predicated. If a corporation, having maturing obligations, makes a deposit in its regular account with a bank or trust company sufficient to cover the obligations, or opens an account for this particular purpose and authorizes the depositary to pay these obligations as they come due, charging the payments against the corporation's account, but the deposit is not made under a deed of trust and its disposition is not restricted to paying the obligations, such a deposit would ordinarily give rise to a deposit liability against which the depositary would be required to carry reserves, as provided in section 19 of the Federal Reserve Act.

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from October 22 to November 25, 1921, inclusive:

1 Includes one increase in capital of $\$ 2,500,000$ ingident to a consolidation under act of Nov. $7,1918$.

# PRICE MOVEMENT AND VOLUME OF TRADE. WHOLESALE PRICES IN THE UNITED STATES. 

Wholesale prices decreased slightly during October. The index of the Federal Reserve Board, constructed primarily for international comparison, moved from 143 in September to 141 in October (prices in $1913=100$ ) and the index of the Bureau of Labor Statistics computed on the same base, decreased from 152 to 150.

In the raw materials group there were appreciable reductions in the prices of agricultural commodities such as wheat, corn, oats, cotton, and hogs. Live stock other than hogs advanced in price and the total index of animal products was slighty higher in October than September. Forest products-i. e., lumber of various sorts-changed very little during the two months, while mineral products, including the nonferrous metals and petroleum, showed an increase of 4 points. Producers' goods showed little change during the month and consumers' goods decreased.

In the classification according to goods of domestic origin, imports and exports, the Federal Reserve Board index shows a small decrease in the prices of domestic goods, a slight increase in imports, and a reduction in exports.

The trend of the index during November has probably been toward lower levels. Although there have been increases in such commodities as petroleum, the nonferrous metals, raw wool, oats, corn, and a certain number of other important commodities, a larger number have shown decreases or no change at all. This applies to cotton and cotton manufactures, steel products, wheat and wheat flour, many highly manufactured goods, coal, and certain of the building materials.

## INDEX NUMBERS OF WHOLESALE PRICES IN THE UNITED STATES 1919-1921

CONSTRUCTED BY THE FEDERAL RESERVE BOARD FOR THE PURPOSE OF INTERNATIONAL COMPARISON

78092-21-5

INDEX NUMBERS OF WHOLESALE PRICES IN UNITED STATES-CONSTRUCTED BY THE FEDERAL RESERVE BOARD FOR THE PURPOSE OF INTERNATIONAL COMPARISON.
[Average prices in $1913=100$ ]

${ }^{1}$ The index number of the Federal Reserve Board has been constructed primarily with a view to international comparisons of wholesale prices. Due to the difficulties connected with the collection of foreign prices, the foreign index numbers are still incomplete, but in spite of this it has seemed advisable to publish the American number, since it contains certain classifications of commodities not otherwise available, namely, the prices of the important goods imported into this country, and of goods largely exported, and compares them with the general price level in the
nited States. The number has been published monthly since May, 1920, but is computed for the years 1913 , 1919, and the first of 1920 as well.
For detailed information regarding the makeup of the number, reference may be made to the FEDERAL Reserve Bulletin for May, 1920 , pages 499-503. The commodities included in the different groups are listed there with exact specifications and markets indicated. The "weights" assigned to the different commodities in constructing the index numbers are also given in detail. Revisions in prices or weights appear in Butietins for June, 1920, and June, 1921.

The index of "goods produced" consists of 74 quotations ( 30 raw materials, 24 producers' and 20 consumers' goods). These include agricultural products (such as grains, live stock, and textiles), minerals, and lumber, among the raw materials; yarns, leather, semifinished steel products, refined oils, chemicals, building materials, etc., among the producers' goods; and potatoes, meats, flour, rice, dairy products, cotton and woolen cloths, boots and shoes, and kerosene among the consumers' goods.

The index of "goods imported"' consists of 18 quotations ( 9 raw materials, 7 producers' and 2 consumers' goods). It includes Egyptian cotton, Australian and South American raw wool, Japanese and Chinese silk, South American hides, Straits tin, and Canadian lumber among the raw materials; plantation and Para rubber, Chilean nitrate, cane sugar, burlap, sisal, etc., among producers' goods; and tea and coffee for consumers' goods.

Leading American exports are included in the index of prices of "goods exported," which is made up of 40 quotations ( 17 raw materials, 12 producers' and 11 consumers' goods). Grains, tobacco, cotton, copper, coal, pig iron, petroleum, and lumber make up the list of raw materials; vegetable oils, leather, seminnished metal products, refined oils, and chemicals the producers goods; and wheat flour, refined sugar, pork products coffee, cotton cloth, boots and shoes, and kerosene the consumers' goods.

The index numbers of "raw materials," "producers' goods," and "consumers' goods," consist of the commodities mentioned above which fall into these classes, whether they are of domestic or foreign origin. The raw materials group includes 39 quotations, the producers' goods 29 , and the consumers' goods 22.

The "all commodities" index is obtained by combining the group indexes of domestic and foreign goods. It consists of 90 different quotations. Bureau of Labor Statistics in its larger compilation of prices and are furnished to the Board by that bureau.

INDEX NUMBERS OF WHOLESALE PRICES IN THE UNITED STATES FOR PRINCIPAL CLASSES OF COMMODITIES-BUREAU OF LABOR STATISTICS-REGROUPED BY FEDERAL RESERVE BOARD.?
[A verage prices in $1913=100$.

| August... | 123 | 112 | 200 | 175 | 145 | 132 | 162 | 152 |
| September. | 142 | 104 | 194 | 172 | 146 | 133 | 160 | 152 |
| October... | 134 | 105 | 193 | 176 | 145 | 133 | 158 | 150 |

${ }^{2}$ As the index number of the Bureau of Labor Statistics (which is based upon 315 quotations) has been reclassified by the Federal Reserve Board, the raw materials group consists of approximately 76 quotations, the producers' goods of about 80, and the consumers' goods of 158 . Raw materials have been subclassified into agricultural products (mainly grains, cotton, and tobacco), based upon 19 quotations, animal products based materials have been subclassined into agricultural products mainly grains, cotton, and tobacco), based upon 19 quotations, animal products based Bulletin for October, 1918, contains a list of the commodities in each group. The weights are the same as those used by the Bureau of Labor Statistics.

In order to give a more concrete illustration of actual price movements, there are also presented in the following table monthly actual and relative figures for certain commodities of a basic character. The prices shown in the
table have been obtained from the records of the United States Bureau of Labor Statistics, except in the case of bituminous coal, prices for which have been obtained from the Coal Age.

## FOREIGN TRADE INDEX.

There are presented below the usual indexes designed to reflect movements in foreign trade of the United States, with the fluctuations due to price changes eliminated. The commodities chosen for these indexes are those for which prices are compiled by the Federal Reserve Board in the preparation of its international price index. ${ }^{1}$

The total volume of exports for October varied only slightly from the figure for September and showed a small decrease when compared with October, 1920. While the total volume of raw materials increased over last month, exports of grain registered a substantial decrease, the largest decrease being in the case of corn. Although the amount of corn exported during October was less than 50 per cent of that exported in the month of September the amount exported for the ten months this year is far in excess of that for the corresponding period last year. This decrease in grain exports was counterbalanced by an increase of 70 per cent in cotton exports

[^9]over the amount exported last month. The total volume of consumers' goods declined considerably, being due in large measure to the decrease in wheat flour, refined sugar and lard. Exports of cottonseed oil advanced sharply in volume during October as compared both with last month and the same month a year ago. Sole leather exports increased considerably and were greatly in excess of the amount exported during October, 1920.

An increase was shown in the total volume of imports. The decline in the total volume of raw materials was due principally to the falling off of imports of raw silk and wool. Cotton and leaf tobacco registered a material increase when compared both with last month and the same month a year ago. The increase in the total volume of producers' goods was due mainly to the increased volume of India rubber imported and the resumption of larger imports of extract of quebracho. The imports of manila hemp continued to decline and were only about 13.5 per cent of the amount imported during October, 1920. Nitrate of soda decreased still further and was only 15 per cent of the amount imported during the corresponding period last year. In the consumers' group the volume of imports of cocoa, coffee, and tea increased, while bananas and olive oil registered a slight decrease.

INDEX OF Yalue of forkign trade in sexected commodities at 191: Prices.

## INDEX OF OCEAN FREIGHT RATES.

The accompanying table shows the monthly fluctuations in ocean freight rates prevailing between United States Atlantic ports and the principal European trade regions. The figures are derived from the actual rates quoted on the following commodities: Grain, provisions, cotton, cottonseed oil, and sack flour. For the methods used in constructing the index, see the August, 1921, Bullettin, pages 931-934.

Further important reductions in ocean freight rates to Europe occurred during November, as is shown by the index numbers in the accompanying table. The most recent figures indicate a level of rates well below that recorded for any month since the war, with the single exception of the French Atlantic trade, in which the November index number has not fallen below the point reached last March. Lower rates on cotton and grain largely account for the declines in November as compared with October, quotations on the other commodities included in the index remaining comparatively stable. Average rates in the different trades here represented are about one-half as high as they were a year ago, and in the case of the United Kingdom the reduction has been even greater. Compared with January, 1920, average rates in the different European trades show declines ranging from 66 to 76 per cent. In contrast to the lower trend of berth rates on various commodities during November, it should be noted that charter rates for full-cargo steamers
were distinctly firmer than in October. Charter rates, however, have declined more rapidly since the war than have ocean freight rates on individual commodities, and an index of charter rates commencing with January, 1920, would show a somewhat greater drop than does the index here presented.
Relative Ocean Freight Rates in United States and Europe Trade.
[January, 1920 , rates $=100$.

## PHYSICAL VOLUME OF TRADE.

Production of mines and factories increased moderately during October, and agricultural products continued to move to market in large quantities. The building and textile industries were very active during the month, and cement production reached a new high level.

Receipts of cotton and cotton seed continued to show a marked increase in October and were larger than in any previous month of 1921. Live-stock receipts were also very heavy, but this was partly due to the normal autumn movement to market. Grain receipts, on the other hand, were noticeably smaller than in September, due to a substantial reduction in receipts of wheat and rye. Receipts of citrus and deciduous fruit, sugar, turpentine, and rosin also declined. The increase in output of iron and steel noted in September continued at an accelerated rate during October. Pig-iron production was larger than in any month since March and the output of steel ingots greater than in any month since February. Unfilled orders of the United States Steel Corporation, however, once more registered a decline. Production of both copper and zinc increased slightly during October, and there was a large reduction in accumulated zinc stocks.

Fuel output showed a moderate improvement due to a large increase in activity of bituminous coal mines. Anthracite production also increased, but output of crude petroleum showed a further slight decline.

A considerable increase in wool consumption, together with a decrease in idle machinery, indicates a continued increase in activity of woolen mills. Consumption of cotton was about 2 per cent larger than in September, and shipments of cotton finishers increased for the third consecutive month. The silk industry, on the other hand, was depressed and October imports of raw silk were over 30 per cent less than in September.
Total production and shipments of five reporting lumber associations showed a substantial increase during October. Output of wood pulp, paper, and cement also increased, while locomotive production and automobile shipments were somewhat curtailed. Railroad-car loadings increased in all operating regions and for all important groups of commodities, except grain and ore. Tonnage of vessels cleared, however; declined about 12 per cent.

| New orders..... | 865,492 | 537,928 |  | 327,564 |
| Shipments... | 497, 854 | 477,810 |  | 20,044 |
| Cancellations | 5,617 | 5,921 | 696 |  |
| Production. | 445,825 | 487,096 | 42, 171 |  |

## RETAIL TRADE.

The following tables are a summary of the data obtained from 372 representative department stores in the 12 Federal Reserve districts. Data from districts Nos. 1, 2, 5, 6, 7, 9, 11, and 12 were received in (and averages computed from) actual dollar amounts. In districts Nos. $3,4,8$, and 10 the material was received in the form of percentages, and the averages for the cities and districts computed from such percentages were weighted according to the volume of business done during the calendar year 1920.

The changes in retail trade for the United States as a whole are obtained by combining
the district percentages, after multiplying them by a system of weights based partly on population and partly on banking resources.

The tables for the month of October are based on reports from 26 stores in district No. 1, 62 stores in district No. 2, 49 stores in district No. 3, 19 stores in district No. 4,25 stores in district No. 5, 31 stores in district No. 6, 59 stores in district No. 7,21 stores in district No. 8,15 stores in district No. 9, 12 stores in district No. 10,20 stores in district No. 11, and 33 stores in district No. 12.

Separate figures for Detroit and Little Rock are shown for the first time this month.

## CONDITION OF RETAIL TRADE IN THE FEDERAL RESERVE DISTRICTS.

[Minus sign (-) denotes decrease.]

CONDITION OF RETAIL TRADE IN THE FEDERAL RESERVE DISTRICTS—Continued.

## COMPARATIVE WHOLESALE PRICE LEVELS IN PRINCIPAL COUNTRIES.

The foreign index numbers published herewith are constructed by various foreign statistical offices, and are sent to the Federal Reserve Board by cable. ${ }^{1}$ Besides the index numbers which have been published regularly in the Bulletin for some months past, this issue contains ten further all-commodities index numbers which will appear currently in the future. Lack of space prevents the publication of the group index numbers for these countries, but they can be obtained at any time upon request. A brief description and analysis of these new index numbers follows.

The Frankfurter Zeitung index of wholesale prices in Germany has been published currently in the Bulletin since May, 1921, and the method used in its construction explained in detail. A second index of German wholesale prices has been compiled by the Government Statistical Department and appears each month in the official bulletin "Wirtschaft und Statistik." The two indexes are interesting from a comparative standpoint, inasmuch as their construction differs widely in certain essential details. The Statistisches Reichsamt index consists of quotations of 38 commodities, only half as many as are included in the Frankfurter Zeitung index. The Reichsamt divides its commodities into seven groups, as follows: (1) Grain and potatoes; (2) fats, sugar, meat, and fish; (3) hops, cocoa, coffee, tea, and pepper; (4) hides and leather; (5) textiles; (6) metals and petroleum; (7) coal and iron. Each of these groups is weighted according to the value of its commodity consumption during the period from 1908 to 1912. The Frankfurter Zeitung does not weight its four groups. In addition to the above grouping, the Reichsamt classifies the same commodities under two heads--goods produced in Germany ( 16 commodities), and

[^11]goods imported ( 22 commodities). Groups 1,2 , and 7 go to make up the former index number while groups 3, 4, 5, and. 6 are included in the latter. Prices in 1913 are taken as 100. A comparison of the two all-commodities index numbers during 1920 and 1921 reveals a general similarity in trend, though the level of the Reichsamt index has been consistently lower than that of the Frankfurter Zeitung since April, 1920. Prior to that date--that is to say, during March and April 1920 -there was a marked divergence between the two indexes. The figure for the Reichsamt index reached a high point in March, 1920, and subsequently declined with great rapidity, while at the same time the Frankfurter Zeitung figure rose correspondingly, until in May it touched the level at which the Reichsamt index had stood in March.

The index of wholesale prices in Switzerland, constructed by Dr. J. Lorenz, consists of 71 commodities, divided into three main groups-consumers' goods ( 33 commodities), materials necessary for agricultural production ( 12 commodities), and materials used in industry (26 commodities). Each of these groups is in turn divided and subdivided. Under the heading of consumers' goods the principal classifications are food and drink, clothing, and building materials. Materials used in agriculture fall into two classesfodder and fertilizer. The third main groupgoods used in industry-is divided into minerals, textiles and leather, and miscellaneous. The index is carefully weighted, a coefficient being assigned not only to each individual commodity. but also to each subgroup and main group. In the case of consumers' goods, these weights are determined, wherever possible, by the relative importance of the various commodities in the latest officially published household budgets. Where this is impracticable the approximate importance of the commodity in question is estimated and a corresponding weight assigned to it. In the two other main groups-agricultural and industrial materials-the weighting of each commodity and each subdivision is determined by its relative importance, according to export figures, agricultural statistics, and information obtained from about 35 correspondents in agricultural and industrial circles in different sections of the country. The three main groups are weighted on the basis of $2: 1: 1$, in view of the greater importance attached to goods produced for direct consumption. July, 1914, is taken as a base
throughout, and in each case the figures are given as of the first of the month.
The index of wholesale prices in Holland is published monthly by the Central Bureau of Statistics for the Netherlands and includes 52 commodities during 1920 and 53 commodities since that time. The only classification, in addition to the all-commodities index number, is a group headed "foods," containing 31 commodities during 1920 and 33 commodities since the beginning of 1921. Prices during the years 1901-1910 are used as a base, but for comparative purposes, 1913 has been taken as 100 and the index recomputed on that basis for publication in the Bulletin.

No wholesale price index for Finland is calculated by an official government organization in that country. The Kommerskollegium of Sweden has, however, constructed such an index from price quotations of commodities quoted in the International Statistical Institute's periodical. The index is weighted, but no information as to the method employed is given. The index consists of 35 commodities, including the most important producers' and consumers' goods.

The Okonomisk Revue's index of wholesale prices in Norway, which has been published in the Bulletin for the past six months, consists of quotations for about 90 commodities, divided into 11 groups. The general index is worked out along the same lines as the Economist index, the commodities being only roughly weighted accordingly to their relative importance. The average of prices at the end of December, 1913 and the end of June 1914, is taken as 100.

The wholesale price index for Bulgaria is published currently by the Direction Générale de la Statistique in Sofia. The index is constructed with annual average prices in 1913 as 100 , the data for that year being obtained from 61 towns. In 1914 price quotations were secured from 58 towns and in 1915 from 66 towns, but since then- 1916 to date-only four cities, Sofia, Plovdiv, Varna, and Rousse, have been used as sources for this material. The number of quotations used in the index is not stated, but the commodities are divided into twelve groups, as follows: Cattle, sheep, hogs, etc.; poultry; animal foods; cereals; flour; other vegetable products; hides; textiles; tobacco; alcoholic beverages; lumber. These groups are all weighted.

The statistical department of the Ministry of Finance in Cairo publishes a wholesale price index currently. It consists of prices of 23 commodities, 20 of which are foods, unweighted. No group index numbers are com-
piled. Prices from January 1, 1913, to July 31, 1914, are taken as 100.

The Office of Census and Statistics in Cape Town publishes in its Quarterly Abstract of Union Statistics wholesale index numbers for the Union of South Africa. Prices of 187 commodities are used in the construction of this index, their quotations in 1914 being taken as a base of 100 . The commodities are classified in 11 groups, as follows: Metals; jute, leather, and hides; grains, meal, ete.; dairy produce; groceries; meat; building materials; chemicals; fuel and light; soft goods; miscellaneous. These groups are weighted, but the method employed is not stated.

The index numbers for wholesale prices in the Dominion of New Zealand are published currently by the Government in the Monthly Abstract of Statistics. The average of price quotations in four chief centers of the country is used in compiling the index, but the actual number of commodities included is not stated. The commodities used fall into eight groups which are weighted. Group 1 includes agricultural products; group 2 flour, bran, pollard, and oatmeal; group 3 wool, hides, tallow, butter, and cheese; group 4 general merchandise and crockery; group 5 building materials; group 6 leather; group 7 chemicals and manures; group 8 coal. The index is based on the average annual aggregate expenditure in four chief centers during the period from 1909 to 1913.

The Department of Statistics at Lima publishes a monthly wholesale index number, which is composed of quotations for 58 commodities, obtained from wholesale commercial and industrial concerns in Peru. This index is unweighted, being simply the arithmetic average of the relative prices of the commodities quoted. Group indexes are also published under the following headings: Group 1, meats, milk, and fats; group 2, cereals and vegetables; group 3, miscellaneous food and drink; group 4, fuels; group 5, building materials; group 6, textiles; group 7, metals; group 8, miscellaneous. The year 1913 is taken as a base throughout. An average for the month is given up to September, 1921. After that date quotations will be given as of the 15 th of the month.

At present no detailed information is available in regard to the method used in compiling the index for Shanghai. The index is officially published by the statistical department of the Government.
In the following table the all-commodities index numbers for the whole series of countries appear together to facilitate the study of comparative price levels.

INDEX NUMBERS OF WHOLESALE PRICES (ALL COMMODITIES).

${ }^{1}$ Index numbers for 1920 and therexter based upon prices of 76 commodities. Computations arrived at by the method described on p. 465 of the BuLLetin for April, 1921.

Average for the month.
1 Beginning of month but not always the first.
5 Middle of month.
6 End of year and end of month.
\% First of month.
${ }_{8}$ July 1, 1913, to June 30, 1914=100.
9 Middle of $1914=100$
${ }_{10}$ Dec. 31, 1913-June 30, $1914=100$.
${ }_{11}$ July 1, 1912-June $30,1914=100$.
12 July, $1914=100$.
13 End of July, 1914=100.

## 14 Last six months of 1917.

15 Prices as of first of month. $\quad 1914=100$.
${ }^{16}$ Based upon prices of 52 commodities during 1920 ; 53 during 1921. $1913=100$.
${ }^{17}$ December figure.
$181913=100$.
19 Jan. 1, 1913-July 31, 1914=100
${ }_{20}$ Average annual expenditure, $1909-1913=100$.
${ }_{22}^{21} 1914=100$. $1919=100$
${ }_{23}$ Average for month until September, 1921; thereafter prices as of 15th of month.

In the following tables the index numbers for fore impossible to compare present levels with individual groups of commodities are given for each country separately. In the case of the Italian group index numbers, Prof. Bachi's new computations only are given. These can not be prewar levels in these cases. No group index numbers are compiled by the Bank of Japan, and the Danish index published by the Finanstidende has only two group indexes, one referred back to the 1913 base and it is there- for food and one for "other commodities."

${ }^{1}$ A verage for the month.
${ }_{2}$ Beginning of month.

## FOREIGN TRADE-UNITED KINGDOM, FRANCE, ITALY, SWEDEN, JAPAN, AND GERMANY.

In the following table are presented figures showing the monthly value of the foreign trade of a group ${ }^{1}$ of important European countries and Japan.

[^13]Sweden. In France and Italy the value of foreign trade is estimated not in terms of current prices but in terms of those of some earlier dated usually the preceding year.
None of the figures presented below incluce the import or export of gold and silver. In the case of England and France, group figures are given as well as total values, while in the case of the other countries, total values only are presented. This does not mean that group figures are not obtainable, merely that they are either delayed in publication or appear not to be of such general interest as the French and English material.
Japanese figures for recent months are received by cable and subject to revision.

${ }^{1}$ Not including gold, silver, or the reexport trade.
${ }^{2}$ Calculated in 1913 value units.
${ }^{3}$ Calculated in 1919 value units. French foreign trade figures are originally recorded in quantity units only, and the value of the trade is calculated by applying official value units to the quantities imported and exported. Normally the monthly statements of trade appear computed at the rates of the year previous, and only at the end of the year is the trade evaluated at the prices prevailing during that year. Because of the disturbed price conditions in France during the past two years, 1919 price units are being applied to the 1921 trade.
${ }^{4}$ Calculated in 1920 value units.
FOREIGN TRADE OF ITALY, SWEDEN, AND JAPAN.

## BANKING CONDITIONS DURING OCTOBER AND NOVEMBER.

Changes in the banking situation during the five weeks ending November 16, as indicated by the weekly statements of reporting member banks, are characterized chiefly by substantial loan liquidation effected by both member banks and Federal Reserve Banks.

Announcement during the first week of November of a general reduction by the Federal Reserve Banks of discount rates apparently has not yet affected the general credit situation to any considerable extent, though its effect on the investment market, particularly on the bond market, can be easily traced. Government operations during
the period under review include the redemption of the balance of $\$ 382,500,000$ due on October 15 and the issuance on November 1 of $\$ 231,500,000$ of loan and tax certificates, also payment on October 15 of interest on the fourth Liberty bonds, and on November 15 of interest on the second Liberty bonds. These operations are reflected mainly in the figures showing member bank holdings of Treasury certificates and in the Government deposit account, both of which show large reductions in the October 19 statement and substantial increases in the November 2 statement. The Federal Reserve Bank statements show further

WEEKLY CHANGES IN

## PRINCIPAL ASSETS AND LIABILITIES

gains in gold and a practically continuous decrease in Federal Reserve note circulation.

Loans and discounts of reporting member banks secured by Government obligations show a moderate decline for the period, the November 16 holdings of this class of paper, $\$ 540,000,000$, being $\$ 44,000,000$ below the total reported five weeks before. Loans secured by corporate obligations, on the other hand, in consequence of the very active issue operations in the New York market show a gain of about $\$ 25,000,000$, a larger increase under this head shown for the New York City banks being partly offset by liquidation in Chicago and in other large cities. All other loans and discounts, comprising largely commercial and industrial loans, show a decrease for the period of $\$ 230,000,000$, liquidation being heaviest during the latter part of October.

As against a moderate increase in the holdings of United States Victory notes and a $\$ 17,000,000$ decrease in the holdings of United States Treasury notes, member banks report a continuous increase in their holdings of United States bonds, the total gain for the period being about $\$ 27,000,000$. Treasury certificate holdings, as mentioned above, show considerable fluctuations in connection with the redemption and issue operations of the Government, the net increase for the period being about $\$ 10,000,000$. Holdings of corporate and other securities fluctuated between a high of $\$ 2,093,000,000$ on October 19 and a low of $\$ 2,054,000,000$ on November 2, the November 16 total of $\$ 2,075,000,000$ representing an increase of $\$ 12,000,000$ over the October 11-12 total. In consequence of the changes stated, total loans and investments on November 16 were about $\$ 215,000,000$ below the total shown five weeks before. This decrease is accompanied by net withdrawals of $\$ 267,000,000$ of Government deposits and increases of $\$ 174,000,000$ in demand deposits and of over $\$ 60,000,000$ in time deposits. Borrowings of the reporting member banks from the Federal Reserve Banks likewise show a continuous decline, amounting to $\$ 198,000,000$ for the five weeks under review, or from 6 to 4.7 per cent of their total loans and investments.

In the following table are shown the principal changes in the condition of reporting member banks during the five weeks ending November 16. Corresponding changes since the beginning of 1920 are traced in the chart on page 1475.

i Inchuding bills rediscounted with Federal Reserve Banks.
Federal Reserve Bank figures, which cover the five-week period between October 19 and November 23, show for the first four weeks a continuous decline in discounts. For the last week under review, the amount of "Government" paper held by the reserve banks, which had declined by about $\$ 27,800,000$ during the first four weeks, shows an increase of $\$ 35,300,-$ 000, largely through the discount of member bank collateral notes secured by Liberty bonds, the member bank holdings of which had shown a steady growth during the weeks immediately preceding. During the same period Federal Reserve Bank holdings of other discounts declined by $\$ 132,100,000$. Holdings of acceptances purchased in open market, apparently in connection with the readjustment of $i$ market rates to the reduced Federal

Reserve rates, show a substantial increase during the early part of November, the November 23 total being $\$ 15,100,000$ in excess of the October 19 total. Pittman certificates on deposit with the Treasury to secure Federal Reserve bank note circulation continued their decline, the November 23 total being $\$ 25$,900,000 less than five weeks before. Other Treasury certificates, largely held under repurchase agreements by the New York Federal Reserve Bank, likewise showed a large increase during the early part of November, while other United States securities show a nominal decrease for the five-week period. Total earning assets of the Federal Reserve Banks on November 23 stood at $\$ 1,475,900,000$, a reduction of $\$ 102,000,000$ for the five-week period and 57 per cent below the peak figure of $\$ 3,422,000,000$ ?eported on October 15 of last year.

In the following table are given weekly changes in the principal assets and liabilities of the Federal Reserve Banks for the five weeks ending November 23, while similar changes since the beginning of last year are shown in graphic form in the chart on page 1475.

Bills rediscounted by the Richmond, Atlanta, Minneapolis, and Dallas banks reached a total of $\$ 43,800,000$ on October 26. During the sub-
sequent three weeks considerable liquidation of rediscounts was effected, the Minneapolis bank redeeming early in November all its outstanding paper rediscounted with the New York bank. On November 16 rediscounts declined to $\$ 13,900,000$, while at the close of the following week, because of increased accommodation obtained by the Richmond and Dallas banks, the total went up to $\$ 19,700,000$. Reserve deposits and total deposits fluctuated within comparatively narrow limits, the total deposits on November 23, $\$ 1,728,500,000$, being $\$ 11,100,000$ in excess of the October 19 total.

Federal Reserve note circulation, except for the week ending November 9 , shows a further continuous decline, the November 23 total of $\$ 2,389,900,000$ constituting a new low record for the year and a reduction of about 28 per cent from the total shown for the corresponding date last year. It is noteworthy that for the period since the last Wednesday in July of the present year Federal Reserve note circulation shows a decrease of $\$ 147,700,000$, as against an increase of $\$ 205,400,000$ for the corresponding period in 1920. A further reduction from $\$ 93$,000,000 to $\$ 74,800,000$ is shown in the reserve banks' aggregate net liabilities on Federal Reserve bank notes in circulation, this reduction being due largely to the deposit with the Treasury of lawful money. The amount of these notes outstanding, according to Treasury records, shows a decrease for the same period from $\$ 124,600,000$ to $\$ 118,300,000$.

Gold reserves show a further continuous gain during the five weeks of $\$ 62,500,000$, offset by a loss of $\$ 6,100,000$ in other cash reserves, the November 23 gold holdings of $\$ 2,835,200,000$ constituting a new high record. For the present year the reserve banks report a gain of $\$ 772,400,000$ in gold and a loss of $\$ 47,900,000$ in other reserve cash, i. e., legals and silver. The reserve ratio, chiefly because of the gain in gold and to a smaller extent because of the reduction in Federal Reserve note liabilities, shows a further rise from 70.3 to 72.3 .

In the following table are shown comparative figures of average daily cash reserves, deposits, Federal Reserve note circulation and reserve percentages for the months of October and November of the present and the two preceding years:

CASH RESERVES, TOTAL DEPOSITS, FEDERAL RESERVE NOTE CIRCULATION, AND RESERVE PERCENTAGES FOR NOVEMBER AND OCTOBER, 1921.
[Daily averages. Amounts in thousands of dollars.]

## BANK DEBITS.

Volume of business during the five weeks ending November 23 remained at about the same level as that reported for the preceding four-week period. ${ }^{1}$ Week-to-week fluctuations in the volume were considerable, but can be attributed to fairly well defined temporary causes. Larger figures for the week ending November 2, as compared with the preceding week, were due mainly to end-of-October payments. Comparatively small figures for the weeks ending November 9 and November 16 were caused by the occurrence during the first week of election day and during the second week of Armistice Day. The total for the most recent week shows a decided increase over the preceding two weeks, but is somewhat lower than the high total shown for the week ending November 2.

As compared with the corresponding period in 1920, the volume of business for the five weeks under review was about 16 per cent lower, which is approximately the same lag as was shown for the preceding four weeks. Apparent differences in trend between the two years are accounted for largely by the fact that election day fell in the second week of the period in 1920 and in the third week this year and that Armistice Day was not a holiday a year ago. Volume of business in

[^17]New York City was also on about the same level for the five-week period as for the preceding four-week period, and was about 14 per cent below the 1920 level.

## DISCOUNT AND INTEREST RATES.

In the following table are presented actual discount and interest rates prevailing during the 30 -day period ending November 15, 1921, in the various cities in which the several Federal Reserve Banks and their branches are located. A complete description of the several types of paper for which quotations are given will be found in the September, 1918, and October, 1918, Federal Reserve Bulletins. Quotations for new types of paper will be added from time to time as deemed of interest
During the period under review a further continuance of the downward
movement noted for some months past in rates for all classes of paper is remarked. This reduction is noted particularly in rates for prime commercial paper, both customers and open market, and paper secured by warehouse receipts.
Present rates continue lower for all classes of paper-and particularly for prime commercial paper, bankers' acceptances, and collateral loans-than rates during the same period of 1920 .
discount and interest rates prevailing in various centers during 30-day period ending nov. 15, 1921.

[^23]
## FOREIGN EXCHANGE.

The foreign exchange index in November recovered from its decline during the preceding month and stood again at 51, the same as in September, compared with 46 in October. The principal changes during the month are an advance of about 10 cents in the average value of the British pound, which was quoted at the end of the month at about $\$ 4$, and a further decline from an average of 68 cents per 100 to 39 cents per 100 in the value of the German mark. The rise in sterling exchange was accompanied by an increase from 208 to 249 in the weight for this currency (based on the volume of business during the preceding month), while the weight of the mark declined from 125 to 75 . These developments in sterling and mark exchange largely account for the rise in the general index.

The rates used in the compilation of the table are noon buying rates for cable transfers in New York, as published daily by the Treasury in accordance with the act of May 27, 1921.

[^25]GERMAN FINANCIAL SITUATION.
[Amounts in millions of marks.]

## ${ }_{2} 1$ End of month.

${ }^{2}$ Calculated by the Frankfurter Zeitung with prices of 25 stocks, 10 domestic and 5 foreign bonds at beginning of months (prices as of Jan. 1 , $1920=100$ ). Former calculations of securities prices published in the Federal Reserve Bulletin were based on 25 stocks and 10 domestic bonds only. The five additional foreign bonds are as follows: 4 per cent Austrian gold rentes; 5 per cent redeemable Mexican bonds (silver); 4 per cent Turkish (Bagdad) bonds, Series I; 4it per cent redeenable Rumanian gold bonds of 1913; 4 per cent Hungarian gold rentes.

8 As of Oct. 23, 1920.

- As of Sept. 9,1921
- As of Sept. 14, 1921.

## JAPANESE FINANCIAL SITUATION.

[Amounts in millions of yen.]

    2 are subject to revision.

[^9]:    ${ }^{1}$ The list ineludes 27 of the most important imports the vatue of which In 1913 formed 49.3 per cent of the total import raines, and 29 of the most important exports the value of whinh in lus formed ant per eem of the total export values. The classification of the originat list of commoditios tsed was given in the July, 1920 , Braterts. the clasifieation of eleven additional commoditio of inmorts we given in the Aprit,
     1921, BUTLETIN.

[^10]:    ${ }^{1}$ The National Association of Finishers of Cotton Fabrics, at the request of the Federal Reserve Board, has arranged for a monthly survey within the industry. The results of the inquiries are herewith presented in tabular form. The secretary of the association makes the following statement concerning the tabulation:

    The accompanying figures are compiled from statistics furnished by 35 out of 58 member firms of this association. It is probably fair to state that in the absence of having specific detail at hand, but, according to our best estimate, it is probably well within the fact that the figures given for the various classes of work would cover, approximately, the following percentages of the entire industry: White goods, 72 per cent; dyed goods, 62 per cent; printed goods, 30 per cent. The figures given represent reports from exactly the same finishers for the 1 wo monthis, both for the totals and for the subdivisions, and therefore are strictly comparable.

    Note.-Many plants were unable to give details under the respective headings of white goods, dyed goods, and printed goods, and reported their totals only; therefore the column headed "Total?" does not always represent the total of the subdivisions but is a correct total for the district.

[^11]:    ${ }^{1}$ The Bulletin for January, 1920 , contains a description of the Statist index for England, and the French, Australian, Japanese, and Canadian indexes. A description of the method used in the construction of the Swedish index number appeared in the BulLETIN for February, 1921, for the new Italian index number in the April, 1921,
    issue of the Bulletin, and the method used by the Frankfurter Zeitung in the case of the German index number was described in the Bulletins for February and March, 1921. Complete information regarding the computation of the index of the United States Bureau of Labor Statistics appears in the publications of that bureau, and a
    deseription of the index number of the Federal Reserve Board may be found in the Buluetin for May, 1920 . The Danish index has been constructed only recently, is based upon the prices of 33 commodities, and is roughly weighted according to consumption. The new British index number, compiled by the Board of Trade, was described in the March, 1921, issue of the BULLETIN. In the case of the two American index numbers, 1913 is used as the basis in the original computations. In most other cases in which 1913 appears as the basis for the computation, the index numbers have been shifted from their original bases. The comindex numbers in these cases are, therefore, only approximately correct. In putations in these cases are, therefore, only approximately certain cases July, 1914, or the year immediately preceding thased certain cases suly, 1914, or the year formeda the most part received by cable, as latest ones are subject to revision. In certain cases the index numbers for the war years were published in various issues of the numbers for the
    Bulletin in 1920.

[^12]:    ${ }^{1}$ Three of these index numbers-those for the United Kingdom, Paris, and Sweden-are constructed on the basis of prices in July, 1914= 100. In the case of the United States, the original base, that of the year 1913, has been shifted to the July, 1914, base. The German index uses the year ending July, 1914, as a base.
    The American index number, constructed by the Bureau of Labor Statistics, was based upon the retail prices of 22 articles of food, weighted according to family consumption, until January, 1921, when it was increased to 43 articles reported by dealers in 51 importani cities. The method of weighting continues the same, although the actual "weight" applied have been changed.
    The British index number of the cost of living constructed by the Ministry of Labor consists of the retail prices not only of foodstuffs but of other articles as well. Retail clothing prices, rents, and the cost of uel lighting, and miscellaneous household items are also taken into consideration. The index number is weighted according to the importance of the items in the budgets of working-class families
    portance of the items in the budgets of working-class families.
    The retail price index for Paris, compiled by the French General Statistical Office, consists of retail prices of 13 different commodities, weighted according to the average annual consumption of a workingman's family of four persons. Eleven of the commodities included in this index are foods, and the other two are kerosene and alcohol.
    The Swedish index number consists of the retail prices of foodstuffs, fuel, and lighting and is based upon the prices of 51 articles in 44 towns (in 1920,50 articles in 49 towns), weighted according to the budget of a workingman's family which before the war had a yearly income of 2,000 kroner
    The German index expresses upon a percentage basis figures compiled by Dr. R. R. Kuczynski of the Statistical Office of Berlin-Schöne-

[^13]:    ${ }^{3}$ Currencies have not been converted to a common unit, nor are methods of valuation the same in all countries. In England imports are given current c. i. f. values in England; exports and reexports, current f . o. b. values. The same method is followed in Japan and

[^14]:    ${ }^{2}$ Total purchases multiplied by ratio of average maturity of bills purchased by each bank to average maturity (25.77) for system.

[^15]:    ${ }^{1}$ Includes $\$ 798,841$ of acceptances purchased at 55 per cent.
    Note.-All Federal Reserve Banks use 360 days to the year in calculating interest on bills bought in open market.

[^16]:    ${ }^{1}$ Calculated on the basis of net deposits and Federal Reserve notes in circulation.

[^17]:    ${ }^{1}$ The volume of business is measured by debits to individual accounts reported to the Federal Reserve Board for banks in 154 clearing-house centers.

[^18]:    Note.-Figures for the following centers, while shown in the body of the statement, are not included in the summary, complete data for these centers not being available for each week under review: Harrisburg, Pa.; Johnstown, Pa.; Reading, Pa.; Cincinnati, Ohio; Charleston, S. C.; Greenville, S. C.; Wilmington, N. C.; Springfield, Ill.; East St. Louis and National Stock Yards, Ill.; Quincy, Ill.; Springfield, Mo.; Atchison, Kans.; Galveston, Tex.

[^19]:    ${ }^{1}$ Incorporated banks other than mutual savings banks.

[^20]:    ${ }^{1}$ Includes: Ore and base bullion, $\$ 30,986,000$; United States mint or assay office bars, $\$ 428,000$; other refined bullion, $8452,499,000$; United States coin, $\$ 36,996,000$; foreign coin, $\$ 104,828$.
    ${ }^{2}$ Includes: Domestic exports-Ore and base bullion, 876,000 ; United States mint or assay office bars, $81,249,000$; other refined bullion, $\$ 253,000$;
    coin, $\$ 15,656,000$. Foreign exports-Ore and base bullion, $\$ 1,000$; bullion refined, $\$ 2,005,000$; coin, $\$ 2,127,000$.

[^21]:    ${ }^{1}$ Includes: Ore and base bullion, $\$ 38,038,000$; other refined bullion, $\$ 6,479,000$; United States coin, $\$ 2,811,000$; foreign coin, $\$ 5,840,000$.
    Includes: Domestic exports-Ore and base bullion, $\$ 15,000$; United States mint or assay office bars, $\$ 152,000$; other refined bullion, $\$ 20,317$; coin, $\$ 846,000$. Foralgn exports-Ore and base bullion, $\$ 2,000$; bullion refined, $\$ 17,291,000$; coin, $\$ 3,968,000$.

[^22]:    ${ }^{1}$ Includes reserve funds held against issues of United States notes and Treasury notes of 1890 and redemption funds held against issues of national-bank notes, Federal Reserve notes, and Federal Reserve Bank notes, but excludes gold and silver coin and bullion held in trust for the redemption of outstanding gold and silver certificates and Treasury notes of 1890 .
