## SUBSCRIPTION PRICE OF BULLEETIN.

'The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It is printed in two editions, of which the first contains the regular official announcements, the national review of business conditions, and other general matter, and is distributed without charge to the member banks of the Federal Reserve System. Additional copies may be had at a subscription price of $\$ 1.50$ per annum.
The second edition contains detailed analyses of business conditions, special articles, review of foreign banking, and complete statistics showing the condition of Federal Reserve Banks. For this second edition the Board has fixed a subscription price of $\$ 4$ per annum to cover the cost of paper and printing. Single copies will be sold at 40 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board.

No complete sets of the Bulletin for 1915, 1916, 1917, or 1918 are available

## TABLE OF CONTENTS.

General summary: Page.
Review of the month. ..... 1389
Business, industry, and finance, November, 1922 ..... 1398
Index of production in selected basic industries ..... 1414
The first three years of German reparation: Part II-Fixing Germany's liability ..... 1422 Official:
Law department-
Court decisions in the Atlanta and Cleveland par clearance cases ..... 1408
State banks admitted to system ..... 1407
Fiduciary powers granted to national banks ..... 1407
Charters issued to national banks. ..... 1407
Business and financial conditions abroad:
Survey for United Kingdom, France, Italy, and Germany. ..... 1428
Financial and economic conditions in Central America. ..... 1439
Economic conditions in Czechoslovakia. ..... 1445
Price movement and volume of trade:
International wholesale price index-United States, England, France, Canada, and Japan ..... 1453
Comparative wholesale prices in principal countries ..... 1456
Comparative retail prices and cost of living in principal countries ..... 1461
Indexes of industrial activity-United Kingdom, France, Germany, Sweden, and Japan ..... 1462
Foreign trade of principal countries. ..... 1464
Foreign trade index ..... 1467
Ocean freight rates. ..... 1468
Report of knit-goods manufacturers of America ..... 1468
Production and shipments of finished cotton fabrics ..... 1469
Physical volume of trade ..... 1470
Building statistics. ..... 1476
Retail trade ..... 1477
Wholesale trade ..... 1480
Commercial failures. ..... 1467
Banking and financial statistics:
Domestic-
Discount and open-market operations of Federal reserve banks ..... 1481
Condition of Federal reserve banks. ..... 1488

Vol. 8
DECEMBER, 1922.
No. 12

## REVIEW OF THE MONTH.

Economic conditions in Europe at the present time, and particularly the degree of economic revival that has occurred, are Industrial situation in Europe. matters upon which there is
great diversity of opinion. Lack of agreement among observers comes partly from the fact that conditions differ widely in various parts of Europe. Closely as the several nations of the Old World are related in certain respects, nevertheless there are to-day, economically speaking, several Europes rather than a single well-knit economic unit. Further cause for conflicting interpretations arises from the varying importance attached by observers to different aspects of the present situation. Conclusions based on figures showing productive output and employment usually have a more hopeful tone than those drawn from a study of inflated currencies and fluctuating exchanges. The fact is that neither industrial nor financial statistics taken alone, nor even a combination of the two, can measure the economic well-being of European countries. To be able to appraise clearly the degree of prosperity enjoyed by a country, it is necessary to have information, not only in regard to the productive output of its industries, but also in regard to the distribution of that output. The evil effects of disordered currency systems upon distribution and upon the processes of capital accumulation have been generally underestimated, more attention being given to statistics of output of leading industries than to the effect on consumption and saving. On the other hand, too exclusive insistence upon the distributive disorders caused by inflated currencies leads to an underestimate of the economic achievements that are possible in spite of such handicaps.

The purpose of this review is to survey fundamental economic conditions now existing in various European countries. Attention will be confined chiefly to Great Britain, France, and Germany, and the topics to be treated will center around the industrial situation, the object being, first, to set forth in quantitative terms, so far as possible, the condition of industry as indicated by prices, production, and foreign trade; and, second, to discuss certain banking and currency problems as they affect European business and industry.
Under all circumstances, price movements are intimately connected with business activity, but they have never been more
Prices since the armistice. controlling than during the period following the armistice, when the upward and downward movements have been exaggerated by currency disorders of an extreme sort. Before the war price levels in various countries followed a fairly uniform course and the markets of Europe were bound to one another and to world markets by the flow of commodities, credit, and gold, but under present currency conditions prices move in diverse directions and furnish no common basis for international trade. The influence exercised by these price movements has been so important that a brief review of them may be taken as a starting point for a wider survey of economic conditions. In Great Britain the movement of prices has been somewhat similar to that of American prices. After the peak was reached in both countries in the middle of 1920, a period of business liquidation, accompanied by rapidly falling prices, set in, which in the United States continued for about a year and in Great Britain until the end of 1921. Since the beginning of 1922 British prices have been comparatively steady, with a slight tend-
ency to decline, while prices in the United States have adranced over 10 per cent. French prices, after reaching a much higher level than cither British or American prices, also fell sharply in the latter half of 1920, and in the middle of 1921 became fairly stable at, or a little below, $300(1913=100)$, a level which has been maintained with only minor fluctuations. Prices in Italy, where currency expansion in 1920 was greater than in France, rose higher than French prices, and since reaching their peak at about 675 have declined comparatively little, fuctuating between 500 and 600 per cent of their pre-war level.

In Germany the mark has depreciated almost continuously since the armistice, and prices have advanced almost without interruption. It is true that between February, 1920, and May, 1921, the German price level actually fell somewhat, but since that time the index numbers for each successive month have shown increases. Since June, 1922, the rate of increase has been extraordinarily rapid, prices on more than one occasion doubling in the space of a single month.

Wholesale Price Levels in United States and Principal Euronean Countries.

At a time like the present, when currencies in different countries are fluctuating widely in value compared with one another, price levels must be considered in relation to rates of foreign exchange and not solely in terms of domestic currencies. For this purpose, prices
converted to a gold basis by roducing them in accordance with the rates of exchange of foreign countries on the United States provide a useful means of comparison. Such an allowance for rates of exchange has boen made in the following table of prices in England, France, Italy, and Germany, which shows the gencral price levels in these countries on a basis comparable with each other and with the United States. In these index numbers the effect of depreciation of currencies has been eliminated and price advances thus represent simply changes in the relation between gold and other commodities. In theory index numbers on a gold basis should be approximately the same for all the countries, and in fact differences between countries are much smaller on this basis than on the basis of prices expressed in local currencies. The differences that persist represent, in addition to imperfections in the index numbers themselves, such local market conditions as have not been reflected in exchange rates. The chief significance of the index numbers on a gold basis is in their bearing on international trade.

This table shows that among the five countries here considered prices in terms of gold are highest in the United States, somewhat lower in England, Italy, and France, and lowest of all in Germany. The decline
in the international value of the currencies as measured by foreign exchange rates has been greater than the decline in their purchasing power at home. This means that goods can, in general, be purchased with American dollars more cheaply in all these countries, but especially in Germany, than in the United States. Whether in a given instance it would be cheaper to purchase an article in this country or abroad would, of course, depend not merely upon the prices in gold in the two countries but also upon export and import duties, ocean freight rates, commissions, and other charges. It should be noted also that a price comparison based on commodities of international commerce alone would probably show less difference between the countries in the table than is indicated by thesc index numbers, which include additional commodities of only domestic importance.

In most of the important countries of Europe the lowest point of the recent business depression had been passed Changes in in- early in 1922. Since that time business has been gradually improving in Great Britain, France, Belgium, Italy, and Scandinavia, to mention only the leading countrics. The almost continuous rise of prices that has followed as a consequence of inflation in Germany has served as an artificial stimulus to business, but now that many other countries are emerging from business depression, signs are not wanting that the trade boom in Germany, stimulated by inflation, has about run its course.

As compared with the improvement of business that has occurred in the United States since the first of the year, the progress in Great Britain, France, and Italy has been slow. In all of these countries unemployment has been diminishing and production in basic industries has been expanding. Prior to the war an unemployment figure of 5 per cent was regarded in Great Britain as excessive, but at the beginning of the present year the proportion of tradeunion unemployment stood at 16.8 per cent. In the third quarter of 1922 the percentage had dropped to 14.5. The other available index of employment for the United Kingdom, the proportion of unemployed among $12,000,000$ insured persons, also shows an appreciable
improvement during the year-a decrease from 16.2 per cent in January, 1922, to 11.9 per cent in September, 1922. Although in France unemployment did not reach any such proportions, due in part to the work entailed by the reconstruction program and to the limited supply of French labor, the improvement of labor conditions in the past year has been noteworthy. In Germany, as has already been suggested, unemployment has been small on account of industrial activity stimulated by the fall of the mark. Furthermore, the large number of workers in governmental and public employment is a factor keeping down the rate of unemployment.

Reports of productive output in many of the principal industries in the United Kingdom and France show greater activity this year than in 1921. In the summer of that year England was in the midst of a strike which paralyzed not only coal mining but also very seriously affected the iron and steel industry. Although not affected by any serious industrial disputes, the French iron and steel industries were operating on a much reduced basis in 1921, in marked contrast to the steady expansion of operations this year. French pigiron production reached a low point of 244,000 metric tons in September, 1921, and the very definite improvement that has taken place since then is indicated by the figure of 462,000 metric tons a year later. The textile industries in both England and France are considerably busier than a year ago, and the figures for a number of other important industries, such as the leather industry in England, show improvement. A difference between the situation in Great Britain and France to be noted in the reports for the most recent months is that a change for the better in Great Britain was the greatest some months ago, whereas in France the improvement from month to month has been more noticeable recently.

One of the significant signs of industrial improvement in the United Kingdom is the substantial increase in the volume

## Foreign trade of United Kingdom.

 of raw materials imported in the second and third quarters of 1922. The demand of British manufacturers for such raw materials as cotton. wool, and hides has been decidedly better thisyear than last, which in turn reflects renewed buying on the part of wholesalcrs following the liquidation of surplus stocks of manufactured goods which took place on an extensive scale in 1921. The volume of manufactured goods exported from the United Kingdom was at a higher level in the third quarter of this yoar than it has been at any time since the post-war boom period ended in the middle of 1920, and the same is true of the total volume of all domestic exports. These developments are clearly revealed in the Board of Trade's quarterly compilation of the relative volume of British foreign trade by groups of commodities, an abbreviated statement of which is presented below :

Voncme of Trade of Unifed Kingdom, by Quarters, 1920-1922, at 1913 Prices.
[Expressed as percentages of corresponding figures for 1913.]

The chief single export of the United Kingdom is coal, and it is noteworthy that in the last few months the shipments of this com-
modity have expanded materially, partly, of course, owing to the coal strike in the United States, but also on account of increased demands from Germany, France, and the Netherlands. In September the exports of coal from Great Britain were more than double those of a year earlier and higher than the monthly average of 1913. Less striking, but more indicative of the industrial situation in the United Kingdom, are the changes in the value of British foreign trade from month to month. The value of manufactured goods exported has recently been a little higher than in the same months of last year, notwithstanding the fact that average valuations of goods have been somewhat lower.

In France the figures for the first nine

Foreign trade of France. $2,301,000,000$ francs, compared with $798,000,-$ 000 francs for the corresponding period of last year. These figures mean that about 86 per cent of this year's import trade of France is balanced by exports of morchandise, as against 95 per cent last year. This unfavorable balance is the result both of an increase in imports and a decrease in the value of exports. Poor crops in France this year have not only reduced exports of food products but have increased the amount of foodstuffs imported from abroad. On the other hand, the sharp decline in the total value of manufactured goods imported into France, taken in connection with larger imports of raw materials for use in manufacture, may be regarded as a favorable indication. Both of these changes give important evidence of the revival of French industry and at the same time make less burdensome the necessity of finding means to pay for goods purchased outside of France. Further light upon the foreign trade situation in France is afforded by the figures of volume or weight of the principal classes of commodities imported and exported. As the accompanying table shows, the volume of both imports and exports has been largely in excess of last year. Compared with 1913, the volume of exports is practically at the prewar level and the volume of imports is higher than pre-war, the imports being affected by
heavy recoipts of British coal. It should be borne in mind that foreign commerce is not the chief factor in the economic life of France, so that the position of her trade is not so good an index of her general economic condition as is the case in England.

The foreign trade situation of Germany has

Foreign trade of Germany. been growing steadily more unfavorable since the beginning of the year. This is true in spite of the fact that during the month of $A u$ gust a nominal excess of exports over imports of about $3,500,000,000$ marks was reported. It is probable that the reported export surplus for August is due to the fact that exports are valued at a later date than imports for the same month and that were the methods of valuing imports and exports similar the results would be less favorable than the reported figures indicate. In terms of weight German imports have been increasing, while exports have been declining. In August of this year imports amounted to $6,765,000$ metric tons-a larger volume of goods purchased abroad than the monthly average in 1913. In September the volume of imports declined to $4,829,000$ metric tons. Exports during August were only $1,407,000$ metric tons, which is less than onefourth the 1913 monthly average, and in September they totaled $1,587,000$ metric tons. This change in the volume of imports and exports is due in part to the movement of coal from and to Germany and is accentuated by
the fact that shipments of goods for reparation account are not included in the official export figures. Germany has recently been importing large quantities of coal from Great Britain and Belgium for domestic use, since coal deliveries in payment of reparation obligations have taken a very considerable part of her own production and have left ber industries short of fuel. The coal shortage that has thus developed in Germany is reflected in the drastic decline of coal exports, aside from shipments in payment of reparation. Exports of coal in recentmonths have been as follows:

Miptric tons,

М㐅у...........................................701, 941
June........................................ 52s, 766
July.......................................... 199, 861
August....................................... 121, 359
September................................. 110, 245
An analysis of total imports into Germany shows that for the first eight months of the current year about 62 per cent of imports (by value) represented agricultural products and 11 per cent such industrial raw materials as minerals and coal.

It is often assumed that the high degree of employment that has existed in Germany and

Austria and the activity of in-
Character of industrial activity in Germany. dustries working to meet export demand are proof that these countries as a whole are fairly well off. It is evident, however, that steady increases in nominal wages have failed to enable the workers of these countries to keep pace with rising living costs, with a consequent impairment of existing standards of living. It is equally evident that currency disorders and uncertainties as to the future value of money have checked the flow of investment funds into industry. More serious still, since business activity is based upon export demand, and since that demand has been stimulated by the existence of a lower level of internal than of external prices, it is essentially temporary in its nature. When the incvitable readjustment occurs it will be evident how serious are the industrial maladjustments that have resulted from the fact that capital and labor have been diverted into those industries for whose prod-
ucts a temporary external demand has been artificially created.

Any survey of the industrial conditions now prevailing in Europe has to be made with the fact constantly kept

> Effect of currency disorders upon production. in mind that the instability of internal price levels, the constantly fluctuating exchanges, and the financial and political uncertainties, give an artificial and tomporary character to much of the prevalent economic activity. In some countrics, falling exchanges are found in conjunction with price levels relatively stable, at least momentarily, as, for example, in France. Elsewhere, as in Gormany and Austria, violent falls in exchange rates have been succeeded by price increases of 100 per cent or more in the course of a single month, while in the case of Czechoslovakia exchange rates have advanced much more rapidly than internal prices have fallen. All such variations have immediate and profound effects. upon international trade and upon industrial activity within the countries affected, as well as in all other countrics with which they have trade relations. For example, the export premiums which have been a controlling factor in conditioning industrial activity in Germany and Austria are rapidly disappearing and there is therefore at present a lesser menace from the unregulated competition produced by disparities between external and internal price levels. There was, indeed, a rise of prices in Austria so extreme during the period from the middle of August to the middle of September that the increase in the prices of many important articles aroused the fear that there would be a very general stoppage of industries which were supported by an export demand. In Germany, likewise, the extreme rise of prices in recent months has tended to cut down existing export premiums, since this rise proceeded at a faster pace than the fall in exchange.

On the other hand, rising exchanges and falling prices, even if symptomatic of financial soundness, are not an unmixed blessing. A sudden improvement in exchange rates which either anticipates or exaggerates a fall in internal prices may have an immediate effect upon trade and industry quite as serious as,
even if different in character from, the results that follow steady.depreciation.
Rise of ex- The rise of the Czech crown change in Czechoslovakia. from a quoted value of 1.91 cents in June to 3.3 cents in August (a rate since fairly well maintained) affords an illustration in point. This upward movement was due to currency stabilization, to the improved condition of public finances, and to many incalculable political factors, speculative influences and rumors of various sorts (see article on p. 1445 for further discussion of these points). Consequently, the rapid improvement in the Czech crown, combined with the maintenance of high domestic expenses of production, caused a cessation of buying orders abroad which resulted in a serious retardation of industrial operations, reflected in the export statistics for the month of August, which were only three-fourths of the July volume. The contemporancous fall of the exchanges of neighboring countries to which Czcchoslovakia exports in quantity greatly aggravated the situation. Lately, however, both wholesale and retail prices in Czechoslovakia have fallen more rapidly than the crown has appreciated.

It is true that the exchange advance in Czechoslovakia finds partial explanation in the fact that the country has been able to bring about a deflation of its currency, whereas in Germany unfavorable trade balances, reparation payments, and inadequate governmental revenues force a steady increase of inflation and explain why the mark continues to fall. But neither the amount of the rise on the one hand nor the extent of the fall on the other can be measured solely by the degree of deflation or of inflation that has occurred. The contrast emphasizes tho essential instability under existing conditions of all industrial activity dependent upon exchange operations. The situation illustrates the need of a preliminary settlement of international difficulties as antecedent to the attempt by any single country, however strong, to carry through effective currency reforms.

In Germany, currency and credit shortage had come to be a subject of complaint as early as last February, and this shortage had grown especially acute by the summer. By that
time it began to be very generally perceived that there was a limit to the extent to which industry could be financed by means of paper-

Credit shortage in Germany. money issues. The rate of depreciation of the currency be-
came so rapid that the total purchasing power of all the money outstanding steadily diminished in spite of the creation of fresh issues at a constantly accelerated rate. In the early stages of inflation, however, the increase of currency issues was greater than the rise in prices, with the result that there was an abundance of money with which to do business at the current level of prices. Hence swollen bank deposits, easy grants of credit, and lowinterest charges characterized the banking situation. Later on, as prices continued to rise, the purchasing power of the surplus funds controlled by the banks was reduced to such an extent as greatly to restrict their ability to finance credit demands on the basis of the higher price level.

Since the credit shortage was the inevitable outcome of the steady price inflation which required vastly increased sums to finance a given volume of business, it can not be attributed to an outgrowth of unsound banking practices, even though such practices undoubtedly existed. Indeed, some of the unsound bank transactions which are regarded as having contributed to credit shortage in Germany are no doubt themselves effects of the situation created by inflation. Where incalculable price rises exhaust current capital and prevent the creation of savings funds, banks are compelled to extend credit both for long and for short terms to their hard-pressed customers and thus imperil the liquidity of their assets. Moreover, the banking crisis which developed during the summer was at least precipitated by the fall in mark exchange which, as has been often pointed out, was largely the result of political happenings. The collapse of the exchanges led to sharp advances in domestic prices, thereby further accentuating the insufficiency of private working capital and multiplying demands for credit. In this emergency the banks were forced to rely more and more heavily upon the Reichsbank by discounting treasury bills, and when supplies of these were inadequate they reverted to an increasing extent to the use of the
documentary bill of exchange. The net result of all these operations has been an increase in the circulation of Reichsbank notes between July 1 and November 30 amounting to 581,349,000,000 marks, while the index number of the Frankfurter Zeitung has risen from 9,140 on July 1 to 166,495 on December 1. The "monetary shortage" in Germany has become so acute that issues of currency are no longer confined to the Reichsbank, but large amounts are put in circulation by States, municipalities, and even industrial corporations.

In discussing credit shortage in Germany it needs to be remembered that the banks are concerned not only with the provision of funds to meet short-term requirements, but that they are actively engaged in financing the long-time capital requirements of specific industries. With the steadily increasing demand for current accommodation, they find it increasingly difficult to meet these capital needs of industry. Their customers become more disposed to sell investment holdings as a means of obtaining current funds than to buy fresh issues. The result is that the banks find their funds more or less tied up in securities which at an earlier period had afforded an outlet for excess funds. It is not surprising, therefore, that the value of new stock and bond issues placed upon the German market has shown an absolute decline for most months since March. In view of the price rise of over 1,641 per cent between March 1 and November 1, the actual contraction has been, relatively speaking, great. With the latest price advances there has, however, been a renewal of speculative activity within the country.

It is evident from this discussion of the industrial and financial conditions in Europe that though productive output in most lines is still far below the pre-war level, there has been an increase in industrial activity during recent months. This improvement gives some ground for encouragement, though there still remain fundamental economic difficulties, such as currency inflation, fluctuating exchanges, and unbalanced budgets. In Great Britain, France, and Italy there has been some recovery from the lowest point of the post-war period of depression, but problems of great magnitude
still remain to be solved. The problems of Germany, in view of her currency and financial troubles, are even more difficult and further from solution than those of other European countries.

## THE BANKING SITUATION.

Increased loan activity of reporting member banks, which started at the end of July and continued until the middle of October, when the refunding loan was allotted, has not been sustained during the following four weeks. On November 15 loans and discounts of reporting banks stood at $\$ 11,233,000,000$, marking a decline of $\$ 72,000,000$ from the total shown on October 18, though still $\$ 494,000,000$ above the low point of the year reported on July 26. The reduction was largest in loans secured by stocks and bonds, which declined by $\$ 75,000,000$, while commercial loans were reduced $\$ 16,000,000$, and loans secured by Government obligations showed a steady advance aggregating $\$ 19,000$,000 for the four-week period.

Loan liquidation was largest in New York City and Chicago, the member banks in these two cities reporting reductions of $\$ 89,000,000$ and $\$ 25,000,000$, respectively, mainly in their loans on stocks and bonds, this reduction being due in part to recent declines of security prices. Moderate loan reduction is also shown for the Cleveland district, while for most of the other districts nominal changes only are reported and advances are shown for the Boston, Atlanta, and Dallas districts.

Liquidation of the loan account was accompanied by a reduction of $\$ 44,000,000$ in Government securities and of $\$ 39,000,000$ in total investments, all the eastern districts, including Cleveland, showing smaller investment totals on November 15 than four weeks before. The net result of these developments is seen in a decrease of $\$ 111,000,000$ in total loans and investments of all the reporting institutions, and of $\$ 119,000,000$ in the loans and investments of the member banks in New York City. Investments in Government securities at the close of the period constituted 14.5 per cent of total loans and investments, compared with 9.2 per cent a year ago, while the corresponding share of commercial loans and discounts was
about 46 per cent, compared with 53 per cent on November 16 of the past year.
In keeping with the decrease in loans, partly also in consequence of substantial withdrawals of balances by correspondent banks, net demand deposits of the reporting institutions show a decrease of $\$ 179,000,000$, almost entirely in New York City, partly offset by an increase of $\$ 48,000,000$ in time deposits. Government deposits show a decline of $\$ 113,000,000$. Borrowings by member banks in leading cities constituted 61.8 per cent of the total discounts held by the reserve banks ion November 15, compared with 53.5 per cont four weeks earlier and 58.6 per cent about a year ago.
Principal changes in the condition of reporting member banks during the four weeks under review are shown in the following exhibit:

1 Including rediscounts with Federal reserve banks.
Changes in the condition of Federal reserve banks during the four-week period ending November 22 include a further increase of $\$ 144,-$ 800,000 in discounts and a reduction of $\$ 113,-$ 500,000 in Government securities. Acceptances purchased in open market show but little change for the period, remaining at about $\$ 257,000,000$. This figure, however, represents an increase of over $\$ 100,000,000$ since the middle of August. Open-market rates on bankers' bills, which constitute the bulk of acceptances held by the reserve banks, although showing some advances during recent months, are still below the rates on Government securities, which results in a slackness of demand for investment purposes and in a relatively large volume of bills finding their way into the portfolios of reserve banks.

Holdings of all classes of Government securities show substantial reductions-United States bonds and notes by $\$ 54,300,000$, Pittman certificatés by $\$ 12,500,000$, and other Treasury certificates by $\$ 46,700,000$. Pittman certificates, which are held on deposit with the Treasury to secure Federal reserve bank-note circulation, have been reduced to $\$ 28,500,000$, a reduction of $\$ 102,500,000$ in the holdings of these certificates since about a year ago.
Deposit liabilities, while subject to considerable fluctuations from week to week, show an increase of $\$ 48,200,000$, all classes of deposits showing moderate increases. Federal reserve note circulation followed an upward course during the first two weeks of the period, but declined to practically the October 25 level during the subsequent two weeks.

Gold reserves show a decline of $\$ 11,300,000$ for the first three weeks, offset in part by an increase of $\$ 9,500,000$ for the most recent week. Other cash reserves, composed of silver and legal tender notes, show an increase for the period of $\$ 3,500,000$. In view of the small decrease in total gold reserves, changes in the gold reserves reported for the period by the individual reserve banks are to be ascribed mainly to interbank shifting of gold through the settlement fund. San Francisco reports the largest increase in its gold reserves for the period, viz, by $\$ 14,600,000$, followed by Philadelphia and New York with increases of \$13,300,000 and $\$ 11,100,000$, respectivoly, while smaller increases, totaling $\$ 7,700,000$, are shown for the St. Louis and Minneapolis banks. By far the larger decrease in gold reserves, viz, by about $\$ 31,000,000$, is shown for the Boston reserve bank, smaller decreases aggregating $\$ 17,600,000$ being shown for the six remaining reserve banks. Since the beginning of the year the reserve banks have
gained a total of $\$ 208,300,000$ of gold, compared with $\$ 772,400,000$ for the corresponding period in 1921.

The reserve ratio showed a decline for the first three weeks from 77.6 to 75.2 per cent, but rose to 76.7 per cent during the last week under review, owing to the gain in reserves and the simultaneous decrease in deposit and note liabilities.

In the following table are shown the principal weekly changes in the condition of the Federal reserve banks during the four weeks under review:

## REQUEST FOR COPIES OF BULLETIN.

In order to make complete sets of the Federal Reserve Bulletin for 1915, 1916, 1917, 1918, and 1919, the Federal Reserve Board desires to secure additional copies of the following issues:

1915-May, June, August, November, and December.

1916-January.
1917-February, April, July, and August.
1918-April, July, September, October, and
November.
1919-March.
Those having copies of the Bulletin for these months which they wish to dispose of are requested to send them to the Secretary Federal Reserve Board, Washington, D. C.

## BUSINESS, INDUSTRY, AND FINANCE, NOVEMBER, 1922.

Substantial increases of productive activity were reported by basic industries during October. Due principally to increased activity at anthracite coal mines, mineral output was 19 per cent larger than in September. There was also a larger production of all other important minerals. Production of pig iron was greater than in any month since October, 1920, and the blowing in of additional blast furnaces during November indicates a further increase of activity. Mill consumption of cotton has continued to increase, and the October total is the largest in over two years, while operations of woolen and silk mills are approaching capacity. The total number of railroad cars loaded was nearly at a maximum, and the car shortage on November 1 was the largest ever recorded. The large movement of manufactured goods is indicated by the fact that loadings of miscellaneous freight by railroads were larger in October than in any month since 1920. Live-stock receipts continue to be exceptionally large, as drought conditions on the ranges during October necessitated unusually heavy marketing. During the first two weeks of November there was a decline in car loadings and some reduction in the estimated car shortage.

Increased production in October has been accompanied by continued increase in the volume of employment at industrial establishments. The average pay per worker was larger in many industries, due in most cases to increases in hours of work rather than to increases in rates of pay. Railroad repair shops and equipment factories made the largest additions to their forces. Steel mills, metal mines, and building contractors still report shortages of skilled labor. Anthracite coal mines, on the other hand, report a small surplus.

Wholesale trade showed comparatively little change during October. Sales of furniture, hardware, groceries, and drugs showed a general upward tendency. Seasonal declines occurred in sales of dry goods, shoes, and automobile supplies. Retail trade continues to be greater than a year ago and throughout the country was larger than last month. The volume of payments by check also increased in every Fedcral reserve district compared to last month. The total for 140 cities, not including New York, was 11 per cent larger in October than in September, and 13 per cent larger than in October, 1921. The increase over last October is partly due to the increase in wholesale prices during the current year.

The wholesale price index of the Bureau of Labor Statistics was 154 in October, as compared with 153 in September and 142 in October, 1921. Prices of farm products and clothing showed particularly large increases during October and reached the highest level for the year. Fuel prices continued to decline sharply and were about 17 per cent lower than in August.

The increased business activity has not been reflected in the movement of total loans of member banks in leading cities. In fact, during the period between October 18 and November 15 the loans and discounts of member banks in leading cities showed a decline of over $\$ 70,000,000$, of which about $\$ 32,000,000$ represented a reduction occurring in the last week. The reduction for the four weeks' period, howerer, has been much less than the expansion of $\$ 366,000,000$ occurring in the four weeks' period ending October 18. Slight loan increases were registered in the southern and western districts, and also in New England, but these increases were more than offset by reductions in other districts, especially in New York and Chicago. Rates on various classes of loans have remained firm or have shown a slight upward tendency.

Little change occurred in the position of the Federal reserve banks during the period from October 25 to November 22. Earning assets increased by $\$ 31,000,000$, while note circulation remained at substantially the same point as a month ago. There has been a considerable change in the character of earning assets, as investments in United States securities fell off by $\$ 114,000,000$ and bills discounted and purchased increased by $\$ 145,000,000$.

## AGRICULTURE.

The weather during the latter part of October and carly November was favorable to agricultural operations. Fall seeding, which was delayed in most districts by the protracted dry weather in early October, has been completed. There is not as great a reduction in the area planted to winter wheat as was anticipated, and district No. 8 (St. Louis) reports a slight increase over the 1921 acreage. Winter wheat is above ground, and despite the drought is going into the winter in good condition, according to reports from all the wheat-growing districts. Corn harvesting has progressed satisfactorily throughout the portion of the Corn Belt in district No. 10 (Kansas City) and returns indicate an excellent yield per acre, especially in the Missouri Valley territory. The crops of white and sweet potatoes are substantially larger than in 1921 or the average for the years 1916-1920. District No. 7 (Chicago) reports an unusually large crop of white potatoes, and both the white and sweet potato yield in Louisiana is well abore the average. The condition of the Louisiana sugar-cane crop continues to decline. Grain prices have advanced during the month and in general farm values of the crops show an increase as compared with last year.
Grain movements.
Receipts of grain and fiour at 17 interior centers totaled $134,148,859$ bushels, a decrease of 12 per cent as compared with September receipts, but an increase of 4 per cent over a year ago.

## Cotton.

Prior to November 14, $8,869,857$ bales of cotton were ginned, compared with 7,274,201 bales and $8,914,642$ bales during the corresponding period in 1921 and 1920. The price of middling upland cotton at New Orleans on November 15 was 25.87 cents, compared with 22.50 cents on October 18. Stocks on hand at mills and public warehouses on October 31 amounted to $5,709,672$ bales, a decrease of about 11 per cent from last year's figures.

## Tobacco.

The preliminary estimate places the tobacco crop at $1,330,275,000$ pounds, 254,857 pounds larger than the 1921 final estimate and 47,591 pounds less than the average for the years 1916-1920. The Kentucky burley crop, although unusually small, is of excellent quality. The Virginia markets in both the dark and light belts report satisfactory sales at prices well above those obtained last year.

Cigar manufacturers in district No. 3 (Philadelphia) state that October sales have been
larger than in any previous month this year. Holiday trade, added to the regular demand, has caused several large manufacturers to open up additional factories. However, the large manufacturers are still from a month to six weeks behind in deliveries and many jobbers are turning to the small manufacturers, who, as a result, are busier than for many months. Stocks in the hands of manufacturers continue to decline and are in general very light. Raw materials can be obtained in nearly any quantity at prevailing prices. Production of cigar tobacco is actually much smaller this year than last, in spite of the increased total output.
Fruit.
District No. 8 (St. Louis) reports that yields of late fruits were heavy and of exceptionally high quality. Shipments of most of the deciduous fruits have been practically completed. Shipments of grapes increased during October as compared with last month and with October, 1921, and the total for the current season to October 28 is materially larger than the total shipments for last season. Citrus fruit shipments from Florida show an increase over last year, both for the month and for the season to November 1.

## Live stock.

Movement of live stock to market during October was unusually heavy. Receipts of cattle and calves, hogs, sheep, horses, and mules at 15 western markets were larger than during last month or October, 1921. Receipts of cattle and calves totaled 2,239,602 head, an increase of 22 per cent as compared with September and of 31 per cent as compared with October a year ago. Receipts of hogs amounted to $2,393,668$ head, an increase of 18 per cent compared with last month and of 16 per cent compared with October, 1921. Receipts of sheep were $1,951,512$ head, increases of 48 per cent and 6 per cont as compared with last month and with the corresponding period a year ago. District No. 10 (Kansas City) continues to report a marked shifting of live stock in increasing numbers from the ranges to the Corn Bolt lots in the Missouri and Mississippi River territory. Recoipts at the six principal markets in the district were the largest since October, 1919, and receipts of cattle were the largest on record. The movement of stockers and feeders to the country broke all previous records. Live stock is reported generally in good condition in districts No. 8 (St. Louis) and No. 12 (San Francisco). Pastures in California and western Oregon and Washington have been much improved by rains. Recent reports from New Mexico indicate that November
rains have improved the condition of pastures and ranges sufficiently to check the movement of cattle to Mexico. Throughout the Panhandle and western Texas grass is still short and feed scarce and high, but in other portions of the State both live stock and ranges are in good condition. Prices of sheep and lambs advanced during the month, while prices of cattle and calves declined.

## MINING.

Coal.
Production of coal continues to increase, but consumption is so large that stocks have shown only a moderate accumulation since the settlement of the strike. October production of bituminous coal totaled $45,154,000$ tons, as compared with $40,964,000$ tons in September and $43,741,000$ in October, 1921. Shortage of shipping facilities is still the chief restricting influence on mine operations. District No. 3 (Philadelphia) reports that in many cases mines are receiving only a small fraction of the number of cars needed and operations do not average much more than 35 per cent of capacity. Loss of production on account of car shortage was much less in western fields than in the East, and district No. 10 (Kansas City) reports that production in. October was 60.4 per cent of capacity.

Commercial stocks of coal on October 1 amounted to about $28,000,000$ tons, which is sufficient to supply all consumers for 22 days. Stocks are heariest at coal-gas plants and amount to 38 days' supply, whereas reserves at by-product coke plants are only sufficient for 14 days. $\Lambda$ study of the geographical distribution of stocks at industrial plants shows that the supply in New England would last about 90 days, which is about three times as large as in other sections.

Anthracite coal stocks on October 1 were very small. The amount in the bins of householders is much less than usual at this season of the year, while retailers' supply is only enough to last seven days and producers' stocks have practically disappeared. The production of anthracite coal in October amounted to $8,530,000$ tons, as compared with $4,979,000$ tons in September and 7,580,000 tons in October, 1921. Practically all mines in district No. 3 (Philadelphia) are working at capacity, and there have been few reports of car shortage. A sufficient supply of labor is available at the mines, so that in most cases the production is only limited by the size of the mouth of the mine.

Coke production increased substantially during October. The output of by-product plants was 25 per cent larger than in September, while beehive output increased 45 per cent.

The price of Connellsville foundry coke declined from $\$ 10$ per ton on October 25 to $\$ 8$ per ton on November 22.

## Petroleum.

Production, shipments, and stocks of crude petroleum increased during October, but there was some curtailment in drilling operations. Production amounted to $47,255,000$ barrels, as compared with $45,246,000$ barrels in September and $35,539,000$ barrels in October, 1921. Stocks of oil only increased $1,174,000$ barrels in October, but are $100,289,000$ barrels greater than a year ago. The October well completions totaled 1,388 , as compared with 1,572 in Scptember and 752 in October, 1921.

The most noteworthy recent development has been that of the Smackover field in Arkansas, which is now producing over 70,000 barrels of oil a day. In district No. 10 (Kansas City) 656 new wells with an initial production of 104,028 barrels were completed in October, as compared with 831 wells with a production of 131,404 barrels in September. The number of new wells completed in district No. 11 (Dallas) declined from 517 in Sepiember to 400 in October, while the initial production decreased from 66,556 barrels to 59,058 . Daily average production increased very slightly in botin districts No. 10 (Kansas City) and No. 11 (Dallas). Prices are unchanged, but premiums of from 40 to 50 cents a barrel are paid for spot crude oil in the north Texas fields.
The daily average production of crude petroleum increased 6.4 per cent during October in district No. 12 (San Francisco). The number of new wells completed and the daily average now production were both somewhat smaller than in September.

## Metals.

Iron-ore loadings at Lake Superior ports in October were $6,081,000$ tons, which brought the loadings in 1922 to a total of $39,193,000$, an increase of 79 per cent as compared with the corresponding period of 1921.

Copper production was larger in October than in any other month during the past two years. Mine output totaled 103,273,000 pounds, an increase of 7.1 per cent as compared with September. The price of refined electrolytic copper delivered at New York declined from 13.875 cents per pound on October 20 to 13.75 conts per pound on November 2. The market tended to strengthen during November, and practically all producers were quoting 13.875 cents per pound on November 15. Domestic business is excellent and orders for future delivery are reported to be larger than is usual at this season of the year. European demand was small during October, but showed a distinct improvement during November.

Prices of zinc and lead both showed a marked upward tendency during the past month. The price of prime western zinc at St. Louis rose from 6.85 cents per pound on October 20 to 7.275 cents on November 15, while the price of common lead at New York rose from 6.50 cents per pound on October 20 to 7.05 cents. per pound on November 15. Production of slab zinc totaled 39,940 tons in October, an increase of 21 per cent, while stocks showed a further slight reduction. Lead production increased 18 per cent during October and was larger than in any previous month this year.
Silver production continued to decrease during October, and totaled $5,161,000$ troy ounces, as compared with $5,325,000$ ounces in September. Tin consumption, on the other hand, increased 11 per cent and reached a total of 5,603 long tons.

## MANUFACTURES.

Food products.
Flour production during October was 13,581,000 barrels, compared with $12,540,000$ barrels in September and 13,917,000 barrels in October, 1921. Increases in production were most marked in districts No. 7 (Chicago) and No. 9 (Minneapolis). October output in the former district was 380,035 barrels, an increase of 13.8 per cent compared with September. Sales, however, decreased during the month, resulting in increased stocks at the mills. Flour mills in the latter district produced 3,057,988 barrels in October, an increase of 8 per cent over last month, but a decrease of 4 per cent as compared with last October. A good demand for clears is reported, despite the fact that the largest bakers are considered to be fairly well stocked and that there is a general tendency to refrain from buying in view of the approaching inventory period. October production of 11 leading mills in district No. 8 (St. Louis) was 365,306 barrels, the largest for any month in more than a year. Demand, particularly from the South, is more active than earlier in the season. However, in the St. Louis district also, a disposition on the part of jobbers and retailers to hold off buying is noted. Output of the mills in district No. 10 (Kansas City) was only $2,067,575$ barrels, declines of 1.7 per cent and 6.2 per cent as compared with last month and with October, 1921. No district reports any important export demand for flour. Prices, in spite of inactive demand, remain firm and advancing in response to the increase in the price of wheat.

The heavy movement of live stock is reflected in substantial improvement in the meat-packing industry. Purchases of cattle and calves by packers in district No. 10 (Kansas City) were the largest since December and October

1919, and purchases of hogs and sheep the largest since last October. An improved export trade is reported and domestic demand is more active than during last month or October, 1921.

Textiles.
Increased activity in all branches of the textile industry during October was evidenced by the available statistics. Consumption of 533,950 bales of cotton exceeded the figures for all previous months since June, 1920. Mills in the cotton-growing States were particularly active, but production of goods in New England has been increasing more rapidly in recent months as labor problems become adjusted. Statistics from both yarn and cloth manufacturers in district No. 6 (Atlanta) show substantial increases in unfilled orders. As a result of improved demand and higher raw cotton quotations, prices advanced rapidly during October, but more recently they have tended to become stabilized. Reports from cotton finishers throughout the country indicate a material enlargement in the volume of their business.

Woolens and worsteds, too, were in strong demand during October. Worsteds particularly have improved recently, and more worsted spindles were active on November 1 than on any earlier date this year. The number is still less than it was a year ago, whereas woolen spindles are more active than on November 1 last year, but slightly less so than on October 1, 1922. The number of looms idle decreased materially during October and at the end of the month was smaller than at any time in over a year. The raw wool market was active during the early fall, but was quieter in November. Price advances have been marked since September, and in November reached the highest level attained during the past two years.

Imports of raw silk and deliveries to American mills during October surpassed all previous records. More bales were also placed in storage. Production schedules have been enlarged and loom activity in Paterson increased from a low point of 17 per cent of capacity on August 12 to 50 per cent on November 18. Output in other sections also was much larger. Cloth quotations have advanced from 10 to 20 per cent, but prices of raw silk have reacted since their rapid rise during October.

The demand for clothing is favorable in most districts, although warm weather slackened the buying in some lines to a small extent. Districts No. 4 (Cleveland) and No. 8 (St. Louis) report that buying of spring lines is brisk, but detailed statistics from district

No. 7 (Chicago) indicate that orders for readymade clothing for spring wear during the first month of the season were slightly less than they were last year. Tailors to the trade in the Chicago district have had excellent business this fall. In district No. 2 (New York) sales of women's clothing exceeded those of last October by 58 per cent, whereas men's clothing sales were 5 per cent less.

Comparative reports from 29 underwear manufacturers showed increases during October over September of 15 per cent in production, 50 per cent in new orders, and 32 per cent in unfilled orders at end of month. Shipments decreased 16 per cent. Production by 38 mills was at 76 per cent of normal. Detailed information is shown in the table on page 1468. Statistics from district No. 3 (Philadelphia) show substantial improvement as compared with September, but decreases in most of the important items since last October in both winter and summer lines.
Sales and production of hosiery were better during October than during September in districts No. 3 (Philadelphia) and No. 6 (Atlanta), particularly in the latter. Figures in the Atlanta district were also more favorable than last year, whereas those in district No. 3 were less so. The difference between the two districts is attributed to the fact that the figures for the southern district refer only to cotton hosiery, which has been in better demand than the silk, wool, and mixed lines which are included in the Philadelphia district reports.

## Iron and steel.

Production of iron and steel registered a very pronounced increase in October and reached its highest level since October, 1920. This expansion continued during the first three weeks of November, as was evidenced by the blowing in of about 12 additional blast furnaces and by increased oporations at steol mills. The October production of pig iron totaled $2,638,000$ tons, as compared with 2,034,000 tons in September and 1,247,000 tons in October, 1921, while steel ingot production amounted to $2,872,000$ tons in October, as compared with $2,374,000$ tons in September and 1,617,000 tons in October, 1921. Unfilled orders of the United States Steel Corporation increased from $6,692,000$ tons on September 30 to $6,902,000$ tons on October 31.

District No. 3 (Philadelphia) states that foundries report increased orders from automotive industries, railroads, mines, and building contractors, and that manufacturers of pipe, machinery, and screws are doing an active business. Pig-iron producers, however, note a decline in the volume of new orders.

The industry is somewhat hampered by a shortage of both skilled and unskilled labor and by delays in shipments of raw materials and of finished products. District No. 4 (Cleveland) reports that there are heavy accumulations of finished steel awaiting shipment in both the Pittsburgh and Youngstown districts. Shipments and orders of stove and furnace manufacturers in district No. 7 (Chicago) were both over 20 per cent larger in October than in September. Most recent orders have been for immediate shipment, but automobile manufacturers have commenced to place orders for delivory in 1923. Prices of pig iron, bars, and billets declined considerably during November.

## Automobiles.

Production of automobiles increased substantially in October. The output of passenger cars was 214,208 , an increase of 15 per cent, and the output of trucks aggregated 21,104, an increase of 14 per cent. This increase in factory operations was noteworthy, as it is customary for automobile manufacturing to be materially curtailed in the fall months. Shipments from factories showed moderate increases during October, except in the case of shipments by boat. District 4 (Cleveland) reports that the demand for closed cars continues to be active and that deliveries are being delayed by a shortage of shipping facilities. The volume of orders for trucks increased during October. Tire sales have increased in volume and production has recently been expanded. This is due partly to the increased use of closed cars, which are driven throughout the winter. The percentage of cord tires has increased and is now about one-half of the total output.

## Leather and shoes.

Demand for Chicago packer hides declined somewhat during November, but there was little change in the price quotations. Calf and goat skins maintained their October price advances during November, but the volume of purchases diminished.

Sole leather production totaled $1,551,000$ sides in October, an increase of 4 per cent. Tanners in district No. 7 (Chicago) increased their production during October and reported sales of leather larger than in September, 1922, or October, 1921. The price trend has been upward in the Chicago district and there is an improved demand for lower grades of leather. District No. 3 (Philadelphia) also reports an increase of leather prices, but states that buyers are hesitant and are reducing the size of their orders. Demand for belting leather continued to be strong during November. Orders for glove leather are being received in
satisfactory volume and prices are still advancing.

Shoe factories at all important centers have been increasing their operations and reported greater production in October, than in September. District No. 1 (Boston) reports that October production of New England shoe factories was at a rate of about 85 per cent of capacity, which was higher than in September, 1922, or October, 1921. Eight concerns in the Boston district report that production increased 1.7 per cent during October, while shipments decreased 11.2 per cent and new orders increased 8.4 per cent. In district No. 3 (Philadelphia) 42 firms report the following increases in activity during October: Production, 6.7 per cent; shipments, 5.6 per cent; and new orders, 49.2 per cent. Manufacturers in the Philadelphia district have booked considerable business for shipment during the first quarter of 1923, and at present have more orders for future delivery than for several months. Patent leather continues to be the most popular material for women's shoes, but calf and kid are also being used in large amounts.

Production of 30 shoe firms in district No. 7 (Chicago) increased 14.3 per cent during October, while shipments and unfilled orders increased 9.6 per cent and 36.2 per cent, respectively. October sales of 11 reporting interests in district No. 8 (St. Louis) were 21.6 per cent greater than in September and 7.6 per cent more than in October, 1921. Orders in the St. Louis district continue to be in excess of capacity to ship goods, although factory operations are being maintained at capacity. Shoe prices in all sections show an upward tendency.

## Paper.

Seasonal recessions in the production of the various grades of pulp and paper are shown by statistics for September, but demand has continued to be good for most lines. Newsprint production for October totaled 130,682 tons, as compared with $125 ; 402$ tons during September, and 101,884 tons during October, 1921. Output of paper board in September reached the highest point attained in two years, but reports from district No. 3 (Philadelphia) indicate orders received by producers of card and box boards fell off in November, and operations have been accordingly reduced. Dealers in both districts No. 1 (Boston) and No. 3 (Philadelphia) received a large volume of business during October and early November. Most of the mills in district No. 3 (Philadelphia) are operating at capacity on back orders. The demand for paper boxes
in the Philadelphia district improved during November. The general level of paper prices has been firm for some time, although slight fluctuations in certain grades have occurred. Pulp prices are advancing.

## Lumber.

Favorable weather during October and a large volume of unfilled orders on hand postponed the usual fall curtailment in the production of lumber this year. Figures compiled by the National Lumber Manufacturers Association indicate that the weekly cut has exceeded orders and shipments for some time, but not until November 11 did the cumulative total of feet cut during the year equal the total volume of orders which had been received during the same period. Largely because of limited transportation facilities during recent months, shipments are still lagging behind the other items. Total production during October by 564 mills amounted to $1,306,047,000$ feet, as compared with $1,207,220,000$ feet by 551 mills in September.

Figures from 125 members of the Southern Pine Association in district No. 6 (Atlanta) indicate that production was at 93 per cent of normal during October, as compared with 98 per cent by 115 mills during September. Shipments and orders showed little relative change, but stocks on hand increased. Lumber dealers in district No. 3 (Philadelphia) report that the demand continues strong, and in district No. 7 (Chicago) sales were larger in October than in Soptember, but in district No. 8 (St. Louis) the demand for building lumber is gradually decreasing.
Lumber cut and shipments by eight manufacturers in district No. 9 (Minneapolis) decreased during October, but orders placed were slightly larger in volume. All items, except stocks, were greater than they were last October. Sales by retailers in the Minneapolis district have improved since September.

Production of lumber in October reached the highest figure for two years in district No. 12 (San Francisco), and reports from four associations show substantial increases in production, shipments, and unfilled orders as compared with last year. Freight-car shortage cut down October deliveries and curtailed the acceptance of new business. Water-borne business continued to be heavy and foreign demand increased.

## bullding.

Construction operations decreased in October for the fifth consecutive month. The total value of contracts awarded in seven Federal reserve districts (compiled from sta-
tistics gathered by the F. W. Dodge Co.) amounted to $\$ 222,226,483$ during October, which was 9 per cent less than in September, but 9 per cent greater than in October, 1921. Decreases from September totals occurred in districts No. 1 (Boston), No. 3 (Philadelphia), No. 4 (Cleveland), No. 7 (Chicago), and No. 9 (Minneapolis). These decreases ranged from 13.5 per cent in the Boston district to 22.9 per cent in the Minneapolis district. Increases were reported from districts No. 2 (New York) and No. 5 (Richmond) amounting to 1.2 per cent and 1.4 per cent, respectively. Residential contracts let in these seven Federal reserve districts had an aggrogate value of $\$ 100,527,800$ in October, which was larger than in any month since June. A particularly large increase in this type of building occurred in district No. 7 (Chicago). Statistics of number and value of building permits issued in 168 cities are published on page 1476.

Prices of building materials showed further advances during October. Both production and shipments of cement increased as compared with September. Production of flooring was also large, but there was some decrease in the orders for various types of builders' hardware.

## TRANSPORTATION

Car loadings were extremely heavy throughout October, the total being 6.2 per cent greater than in Scptember and only slightly smaller than in the poak month of October, 1920. Loadings of all major groups of commodities increascd as compared with September, and loadings of live stock, coke, and miscellaneous freight were larger than in any previous month this year. All of the seven railroad operating groups, except the Pocahontas and Northwestern, reported more cars loaded in October than in any other month during the last two years.

In spite of the large increase in October loadings, reported shortages increased from 130,325 cars to 179,239 cars during the month. Two facts are worthy of note in connection with this car shortage-the fact that a shortage tends to be exaggerated, as most shippers at such a time order more cars than they expect to obtain; and the fact that the delay in shipping certain agricultural products helps to prevent an excessive supply and lowering of farm prices. Although it is easy to exaggerate the importance of the shortage of cars, it is of undoubted significance in so far as it limits the mining and distribution of coal and in so far as it shows a serious lack of reserve railroad facilities. This shortage of railroad equipment should be somewhat relieved by a large increase in operations of railroad car shops
during October and by the placing of numerous orders with car and locomotive factories. The number of bad-order cars decreased from 291,654 on October 1 to 249,960 on November 1. The shortage of cars and locomotives has also caused substantial increases in the average loading per car and per train.

TRADE.
Wholesale trade.
Wholesale trade during October was almost universally better than during September, except that in certain districts dry goods and shoes suffered seasonal declines, and in district No. 9 (Minneapolis) sales of all lines fell off. Trading in shoes, furthermore, was smaller than during October a year ago in all reporting districts except No. 3 (Philadelphia), No. 8 (St. Louis), No. 9 (Minneapolis), and No. 12 (San Francisco), and dry-goods sales were lower than last year in the southern districtsNo. 5 (Richmond), No. 6 (Atlanta), and No. 11 (Dallas). Drugs also declined materially in the Atlanta district and to a smaller degree in district No. 8 (St. Louis), both as compared with September and with October, 1921. In most other lines business was reported to be better than that prevailing a year ago, particularly in hardware and furniture, the demand for which has been favorably affected by the building activity.

It is significant that sales of machine tools in district No. 2 (New York) were 242 per cent above those of a year ago. Dealers in auto supplies received a smaller volume of business than during September in the three reporting districts, as did wholesalers of farm implements in districts No. 6 (Atlanta), No. 9 (Minneapolis), and No. 12 (San Francisco). All reports available for agricultural implements indicate much larger sales than during last October. Detailed statistics are provided in the table on page 1480.

## Retail trade.

The usual seasonal increase in retail distribution has been apparent during October, but the increase over the corresponding period last year is not as marked as in September. One explanation of this slowing down is the cool weather which stimulated buying in September and the warm weather in October, which had the reverse effect. In district No. 8 (St. Louis) substantial increases over September sales in all lines, especially clothing, are reported. Demand is particularly active in rural communities, reflecting the improved condition of the farmers, who have received more for their crops than they did last year. District No. 12 (San Francisco) reports an increase of 10.3 per cent over October, 1921, and
states that sales were greater in value than in any October since 1919. In district No. 7 (Chicago) sales of reporting department stores are approaching in dollar amounts the 1920 level. Increased sales as compared with last October were reported in all Federal reserve districts except districts No. 6 ( 1 tlanta), No. 10 (Kansas City), and No. 11 (Dallas). Increases ranged from 0.6 por cent in district No. 5 (Richmond) to 11.3 per cent in district No. 4 (Cleveland). Stocks increasod during the month in all districts, but were larger than on the corresponding date last year in only three districts, No. 1 (Boston), No. 3 (Philadelphia), and No. 5 (Richmond). The rate of turnover continues to increase but the ratio of outstanding orders to purchasos for 1921 remains unchanged from last month.

## PRICES.

There was a slight rise in the general level of wholesale prices in October. The index numbers of both the Federal Reserve Board and the Bureau of Labor Statistics showed an increase of one point, the former standing at 165 and the latter at 154.

There was a decided upward movement of all agricultural products, with grains, hides, cotton, wool, hay, and tobacco all showing price increases. Prices of live stock, however, tended to decrease. Food products showed varied trends-flour, butter, cheese, lard, sugar, and eggs increasing in price; mutton, hams, potatoes, and fruits declining; and beef, milk, and tea remaining steady.

The upward movement of raw cotton and wool was reflected in a similar movement in prices of yarns and cloths. Steel products are still increasing in price. The wholesale price index number of the Federal Reserve Board showed that while the general price level of goods produced in this country remained unchanged, that of goods imported rose 7 points.

The groups within the Bureau of Labor index showed the following changes: Both farm products and cloths and clothing increased 5 points; building materials and house furnishings increased 3 points each; foods rose 2 points; and metals 1 point. The largest change was in the fuel and lighting group, which decreased 18 points.

## COMMERCIAL FAILURES.

Total liabilities of commercial failures during October, as reported to R. G. Dun \& Co., were for the fourth consecutive month less than the total for the corresponding month of 1921. Furthermore, the October failures were fewer in number than were those of the same
month of the preceding year. This has not been true for any month since April, 1920. The number of defaults during October totaled 1,708, as compared with 1,446 in September and 1,713 in October, 1921. Liabilities for the same months were, respectively, $\$ 34,647,438$, $\$ 36,908,126$, and $\$ 53,058,659$. With the exception of June, 1921, when there was only a nominal difference, the above figure for October was smaller than that for any month since November, 1920. Further declines are indicated by figures for the first three weeks of November, when the number of insolvencies aggregated 1,225 , a reduction from 1,341 reported during the same period of 1921.

Contrary to the general trend, liabilities were larger than during last October in districts No. 1 (Boston), No. 4 (Cleveland), No. 5 (Richmond), and No. 8 (St. Louis). The number of insolvencies was larger than last year in districts No. 1 (Boston), No. 2 (New York), No. 7 (Chicago), No. 8 (St. Louis), No. 9 (Minneapolis), No. 10 (Kansas City), and No. 12 (San Francisco). The greatest declines within the past year in both number of failures, 22 per cent, and in liabilities, 67 per cent, occurred in district No. 6 (Atlanta). Comparative figures, by districts, are given in the table on page 1468.

## EMPLOYMENT.

Employment continued to increase during October in all sections of the United States. Twelve of the fourteen major industrial groups showed increases in number employed, while the only industry to show a substantial decrease was tobacco manufacturing. The most noteworthy gains occurred in the steel, automobile, and silk industries, and at railroad repair shops. Shortages of metal miners continue to be reported from Western States, and there is still a strong demand for skilled craftsmen in many localities. The supply of unskilled labor is reported to be insufficient in some States, while small surpluses are reported from other States.

Employment conditions continued to be very satisfactory in district No. 1 (Boston) during October. Operations of textile mills.are approaching capacity at some centers, but many New Hampshire operatives are still unemployed, as a result of the labor controversy which commenced in February. A number of granite plants and shipyards which have been closed were reopened in October. The jewelry and silverware business also showed much improvement, and the metal and machine industries gencrally report a shortage of labor. There is also a shortage of unskilled labor in many sections. The New York State Department of Labor reported an increase of 3 per
cent in employment during October. An increase occurred in every group of manufacturing industries except food products. The most marked gain was reported by railroad repair shops and equipment factories, which increased their forces by about 30 per cent, partly as a result of the settlement of strikes. Steel and machinery factories also added many workers. Some sugar refincries, however, were closed, causing some unemployment. In district No. 3 (Philadolphia) railroad equipment plants, textile mills, and cigar factorics report shortages of labor. There is also a shortage of bricklayers, plasterers, sheet-metal workers, and other craftsmen. A small surplus of workers, however, still exists in the clerical, machinery, paper, printing, wholesale and retail lines. Reports from district No. 4 (Cleveland) state that employment is increasing at iron and steel mills, machine shops, and rubber factories.

Textile mills and fertilizer plants in the southern part of district No. 5 (Richmond) expanded their forces during October. The chemical, paper, and printing industries also reported increased employment. There was a rather general reduction, however, in the number employed by lumber mills and metal factories. In district No. 6 (Atlanta) textile mills, railroad repair shops, lumber mills, and steel and metal factories added to their number of employees, while plants manufacturing building materials and chemicals repcrted some reductions.

District No. 7 (Chicago) reports that 216 firms increased their number of employees 2.8 per cent during October and their total pay rolls 11.4 per cent. This resulted in an increase of 8.5 per cent in the average pay per man, as compared with September. Shoe factories, packing plants, and confectionery concerns show substantial increases in employment and pay rolls, while seasonal expansion occurred at container, electrical goods, and musical instrument factories. Longer hours and overtime work were responsible for most of the gains in pay rolls. A shortage of labor exists in the building trades and in the leather and steel industries, according to reports from district No. 8 (St. Louis). The number employed at packing plants continued to increase. Demand for corn huskers and general farm hands was very strong in district No. 9 (Minneapolis) throughout October. Iron mines were running full time and steel mills were increasing their forces. In district No. 10 (Kansas City) demand for farm hands is rather light, but there is very little unemployment. Employment at packing plants, steel mills, and mail-order houses has substantially increased. The opening of sugar factories has afforded temporary employment to several thousand workers. There still continues to be a slight surplus of
unskilled labor in district No. 11 (Dallas). Agricultural employment has diminished, but railroad shops, metal working industries, and oil companies have slightly increased their forces: Reports from district No. 12 (San Francisco) state that there has been some temporary unemployment of farm labor, as many crops have been harvested, but most of the unemployed are quickly absorbed. There are still shortages of metal miners in several States, and local shortages of experienced bricklayers, plasterers, and carpenters. The supply of clerical and professional workers still exceeds the demand.

## FOREIGN TRADE.

The figures for the value of merchandise exports for the month of October show three distinctly encouraging facts. They are the largest for any month of the current year, the largest for any month since March, 1921, and for the first time in 1922 the figures exceed those of the corresponding month of last year. In fact, it is the first month since December, 1920, that the figures for any given month have exceeded those of the same month for the preceding year. Amounting to $\$ 372,000,000$, they exceed those of September by $\$ 58,906,714$ and those of October, 1921, by $\$ 28,669,185$.

## GOLD AND SILVER MOVEMENTS.

Net gold imports during October, $\$ 3,274,000$ represent the smallest monthly total for the present year, comparing with $\$ 27,917,000$ for September and $\$ 22,362,000$ the monthly average for the preceding nine months. Of the gross gold imports of $\$ 20,866,000$ for the month, $\$ 9,927,000$ came from England, $\$ 4,-$ 878,000 from the Netherlands, and $\$ 2,635,000$ from France. Gold imports from Engband were largely preparatory to the second installment of the $\$ 50,000,000$ interest payment on the British debt to the United States Treasury, while Dutch gold shipments, it is stated, were for the purpose of strengthening the Dutch central bank's gold holdings in this country and of supporting florin exchange. Nearly $\$ 1,000,000$ is shown to have been brought during the month from the Far East, and over $\$ 1,000,000$ from Central and South America. Of the October gold exports, over 95 per cent, or over $\$ 16,763,000$, were consigned to Canada, the then existing premium on the Canadian dollar making such shipments profitable. Net gold imports for the 10 months ending October of the present year totaled $\$ 199,688,000$, compared with $\$ 587,161,000$ for the corregponding period in 1921. Net imports of gold since August 1, 1914, aggregated $\$ 1,741,777,000$, as shown in the following exhibit:

| [In thousands of dollars.] |  |  |  |
| :--- | ---: | ---: | ---: |
|  | Imports. | Exports. | Excess of <br> imports. |

${ }^{1}$ Excess of exports.
Both silver imports for October, $\$ 3,940,000$, and silver exports for the month, $\$ 3,269,000$, present lowest monthly totals for the year. Mexico and Peru shipped the bulk of the silver received during the month from foreign sources, while silver exports were consigned largely to China, Hongkong, and British India. Net exports of silver since August, 1914, totaled $\$ 435,453,000$, as may be seen from the following exhibit:
[In ihousands of dollars.]

|  | Imports. | Exports. | Excess of exports. |
| :---: | :---: | :---: | :---: |
| Aug. 1, 1914 to Doc. 31, 1918. | 203, 592 | 483,353 | 279,761 |

## State Banks and Trust Companies.

## Admissions.

The following list shows the State banks and trust companies which were admitted to membership in the Federal Reserve System during the month ending November 30, 1.922, on which date 1,654 State institutions were members of the system:

|  | Capital. | Surplus. | Total resources. |
| :---: | :---: | :---: | :---: |
| District No. 2. |  |  |  |
| Springlield $\Lambda$ venue Trust Co., Newark, N.J. | .5200, 000 | \$100, 000 | 54, 959,464 |

Bank closcd.-St. Anthony Bank \& Trust Co., St. Anthony, Idaho; Huntley State Bank, Huniley, Mont.
Converted into nalional bank.' Farmers Bank \& Trust Co., WinstonSalem, N. C.

Withdrauals.--First-American State Bank, Golden Valley, N. Dak.
Thompson Savings Bank, Eudson, Mich.
Voluntary liquidations:-Central Bank \& Trust Corporation, Alanta, Ga.; Garden City Bank \& Trust Co., San Jose, Calif:; St. Anthony Iralls
Bank, Minneapolis, Minn., Security laank \& Trust Co., E1 T'aso, Tex. (absorbed by the Border National Bank of II Paso).

## Fiduciary Powers Granted to National Banks.

During the month of November the Federal Reserve Board approved applications of the national banks listed below for parmission to exercise one or more of the fiduciary powers named in section 11 (k) of the Federal reserve act as amended, as follors:

1. Trustec.
2. Bxecutor
3. Administrator.
4. Registrar of stocks and bonds.
5. Guardian of estates.
6. Issignee.
7. Receiver.
8. Committee of estates of lunatics.
9. In any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the bank is located.

The numcrals opposite the name of each bank indicate the power or powers it is authorized to exercise, as given below:

| Place. | District No. | Name of bank. | Powers granted. |
| :---: | :---: | :---: | :---: |
| Ilion, N. Y | 2 | Manufacturers National Bank. | $\text { I to } 9$ |
| Collingswood, N. J... | 3 | Collingswood National Bank. | $1 \text { to } 9 .$ |
| Hazleton, Pa | 3 | ITazlcton National Bank . . | 5 to 9. |
| Lock Haven, Pa | 3 | First National Bank....... | 1 to 9. |
| Athens, Ohio........ | 4 | Athens National Bank.... | 1 to 7 and 9. |
| St, Clairsville, Ohio.. | 4 | First National Bank | 1 to 7 and 9. |
| Mooresville. N. C.-. | 5 | do. | 1 to 9. |
| Winston-Salem, N. C. | 5 | Farmers National Bank \& Trust Co. | $1 \text { to } 9 \text {. }$ |
| Portsmouth, Va..... | 5 | American National Bank.. |  |
| Dalton, Ga............ | 6 | First National Bank....... | 1 to 5. |
| Greeneville, Tenn... | 6 | -.. do... | 1 to 9. |
| Knoxville, Penn. | 6 | Union National 3ank | 1 to 7 mad 9. |
| Bataria, Ill. | 7 | Batavia National Bank | 1 to 9. |
| Chicago, Tll. | 7 | Lawndalc National Bank. - | 1 to 9. |
| Racine, Wis . . . . . . . | 7 | Tirst National Bank | 1 to3,5 tos. |
| Seattle, Wash........ | 12 | do. | 5 to 9. |

## New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from October 28 to November 24, 1922, inclusive:

${ }^{1}$ Includos one increase in capital of $\$ 100,000$ incldent to a consoli dation under act of Nov. 7, 1918.

## LAW DEPARTMENT.

## Decision of Circuit Court of Appeals in Atlanta par clear-

 ance case.Below is the opinion of the Circuit Court of Appeals for the Fifth Circuit rendered November 2, 1922, by Hon. Richard W. Walker, circuit judge, in the case of American Bank \& Trust Co. $v$. Federal Reserve Bank of Atlanta, popularly known as the "Atlanta par clearance case."

The Circuit Court of Appeals affirmed in toto the decision rendered March 11, 1922, by the District Court for the Northern District of Georgia, holding that Fedcral reserve banks may collect all checks payable on presentation, including checks drawn on nonmember banks, but can not pay exchange charges, and may employ any proper instrumentality or agency to collect checks drawn on banks which refuse to remit without the deduction of exchange charges. The Circuit Court of Appals expressly affirmed the finding of the district court to the effect that the plaintiffs failed to substantiate the charges which they made in their bill that the Federal Reserve Bank of Atlanta had acted or intended to act illegally, or had exercised or intended to exercise its rights so as to oppress or injure the plaintiff banks.

In the United States Circuit Court of $\Lambda$ ppeals for the Fifth Circuit.
$\left.\begin{array}{c}\text { American Bank \& Trust Company et al., } \\ \text { appellants, } \\ v . \\ \text { Federal Reserve Bank of Atlanta et al., } \\ \text { appellecs. }\end{array}\right\}$ No. 3906.
Appeal from the District Court of the United States for the Northern District of Georgia.
Alex. W. Smith (Alexander W. Smith, Orville A. Park, Smith, Hammond \& Smith, and Theodore H. Smith on the brief), for appellants.
Hollins N. Randolph, R. S. Parker, John W. Davis, and M. B. Angell, for appellees.

Before Walker and Bryan, Circuit Judges, and Sheppard, District Judge.
Walker, Circuit Judge. Except as to a feature of the bill montioned below, nothing has occurred to require a revision of or departure from the conclusions stated in the opinion delivered by this court in this case when it was here on a former appeal. American Bank \& Trust Co. v. Federal Reserve Bank of Atlanta, 269 Fed. 4. What was beld by the Supreme Court to show the existence of a right to relief under the general prayer for relief was the part of the bill containing allegations to the effect, that, in pursuance of the alleged policy of the Fedcral Reserve Board to bring about the collectibility by banks of bank checks at par, the appellee resorve bank and its officers intended to accumulate, until they reach a large amount, checks upon banks of the class to which the appellant banks belong, and then to cause them to be presented for payment in cash over the counter, or by other devices de-
tailed to require payment in cash in such wise as to drive the drawees out of business or forco them, if able, to submit to the scheme of making bank checks collectible at par. American Bank \& Trust Co. $v$. Federal Reserve Bank, 256 U. S. 350 . The conduct which the Supreme Court decided to be wrongful and subject to be enjoined was the alleged threatened accumulation of checks for the purpose of using them in the manner alleged. It was not decided or intimated that the appollee bank would be guilty of any actionable wrong by merely presenting or causing to be presented bank checks held by it to the drawees for payment in cash over the counter. The alleged accumulation of checks for the purpose charged was an essential leature of the alleged conduct which was decided to be wrongful. We are not of opinion that a bank in receipt for collection of checks on other banks is guilty of an abuse of its right as such holder when, in due course, with reasonable promptness, without designed delay or accumulation, and in proper manner, it presents, or causes to be presented, those checks to the drawees for payment in cash. In so doing the collecting bank would be exercising its right as the holder of checks received by it for collection, and would not be guilty of an abuse of that right for an unlawful purpose. If the holder of the checks is guilty of no wrong, the fact that the payeo is inconvenienced by having to pay in cash would not give the latter a valid ground of complaint. Inconvenience resulting to one party from another's exercise of a right in a lawful way does not give the former a right of action. The most that the evidence relied on by the appellants tended to prove was that at and prior to the time of filing the bill the appellee bank intended or proposed to deal in the just stated manner with checks received by it for collection, when the drawees did not consent to remit at par, and that it was after this suit was brought that appellee bank manifested its willingness to allow payment of such checks to be made either in cash or in acceptable exchange. The trial judge specifically found that "the charge that the Federal Reserve Bank at Atlanta would accumulate checks upon country or nonmember banks until they reach a large amount, and then cause them to be presented for payment over the counter, so as to compel the plaintiffs to maintain so much cash in their vaults as to drive them out of business, or an alternative agreement to remit at par, is not sustained by the evidence." He further found "the evidence insufficient to sustain any charge in the bill that the Federal reserve bank was acting illegally or excrcising any right it had so as to oppress or injure the plaintiff banks." The record before us does not warrant the setting aside of either of those findings. We do not think that the evidence adduced justified the granting of any of the prayed for relief which was denied by the decree appealed from. By that decree the appellee bank was "enjoined and restrained from publishing, upon any par list issucd by the said defendant, the Federal Reserve Bank of Atlanta, the name of any nonmember bank being a plaintiff in this case unless such nonmember bank consents or has consented to remit at par."

Our attention has been called to an opinion rendered, after this case was argued and submitted, upon the granting of a preliminary injunction in the case of Farmers \& Merchants Bank of Cattlettsburg, Ky., v. the Federal Reserve Bank of Cleveland, Ohio, and Mary B. McCall, pending in the District Court of the United States for the Eastern District of Kentucky. That opinion shows that the granting of a preliminary injunction in that case was influenced by the showing made that the defendant bank, byitsauthorizedagents, adopted what well might be deemed to be unwarranted methods in collecting checks on the plaintiff bank. That case is plainly differentiated from the instant one by the above quoted explicit finding in the
latter to the effect that the evidence did not sustain any charge in the bill as to improper conduct by the appellee bank or its agents. We do not think that that opinion shows that our above-indicated conclusions in the instant case are incorrect.

In the absence of any showing that the appellee bank consented to or approved of the use of any unlawful means of enforcing or promoting the adoption or carrying out of the policy or plan of making bank checks collectible at par, the fact that the appellee bank was in accord with other Federal reserve banks in adopting that policy and attempting to bring about the gencral acceptance and adoption of it can not properly be given the effect of making the appellee bank responsible for unlawful acts done, in the effort to enforce that policy, by or at the instance of other Federal reserve banks. An express or implied agreement between the several reserve banks to promote the adoption of the policy mentioned does not import a common consent to the use by any party to such agreement of unlawful means to effectuate the common lawful purposes. Assent by one party to concert of action with others to accomplish a lawful purpose does not involve or amount to the former consenting to or approving the unlawful conduct of any one. There was no evidence tending to prove that the appellee bank authorized, consented to or ratified the use by or in behalf of other reserve banks of illegally coercive methods to bring about the general adoption of the above-mentioned policy. It follows that the evidence offered to prove the use by or in behalf of other reserve banks of unlawful means to accomplish the alleged common purpose was properly excluded.

The court disallowed a proposed amendment of the bill having the effect of adding as parties plaintilfs thereto banks located in Federal reserve districts other than the sixth. That ruling was not erroneous. The complaints made by the bill are based upon what it alleged the appellees did or proposed to do in transactions between the appellee Federal Reserve Bank of the Sixth Federal Reserve District and the appellant banks, which are located in that district. The banks unsuccessfully sought to be added as parties plaintiff are so far strangers to the transactions mentioned as to keep the alleged conduct complained of from giving to those banks a right of action based on that conduct, with the result that those banks are not entitled to be joined as parties plaintiff in this suit.
The same interrogatories were propounded by the appellants to several of the appellees. A separate answer was made to each of those interrogatories, each person interrogated making such answer his own. The court overruled objections to such answers on the ground that answers so made to interrogatories were violative of the provision of Equity Rule 58 that "each interrogatory shall be answered separately." What the quoted provision forbids is the making of one answer a response to more than one interrogatory. It does not forbid several persons to whom an interrogatory is propounded joining in the making of one soparate answer thereto. The provision does not require the duplication or multiplication of answers to an interrogatory when the parties interrogated desire to make the same answer thereto. The answers made to interrogatories were not subject to objection on the ground mentioned.
The conclusion is that the record does not show any reversible error. The decree is affirmed.

## Decision of District Court in Cleveland par clearance

 case.There is printed below the opinion of the United States District Court for the Eastern District of Kentucky, rendered October 14, 1922, by Hon. Andrew M. J. Cochran, district judge, in the case of Farmers \& Merchants

Bank of Catlettsburg, Ky., v. Federal Reserve Bank of Cleveland, popularly, known as the "Cleveland par clearance case."
This was a decision granting a preliminary injunction, and it may not be amiss to explain briefly the nature of a preliminary injunction. A proliminary injunction, as the name implies, is merely one granted pending the final hearing and determination of a case. Its object is merely to maintain the status quo and to protect the plaintiff from injury pending the trial of the case on its merits and the final determination by the court of the question whether or not the plaintiff is entitled to a permanent injunction. The granting of a preliminary injunction, therefore, does not constitute a final adjudication as to the rights of the parties.
The only cvidence submitted during the trial on the motion for a preliminary injunction in this case was in the form of affidavits, and the affiants or witnesses were not subjected to cross-examination. The evidence, therefore, has not yet been thoroughly presented and sifted; and before the court decides whether or not the plaintiff is entitled to a permanent injunction the case must be tried on its merits and the facts must be examined in the light of a more complete presentation of the evidence and a cross-examination of the witnesses.

United States District Court, Dastern District of Kentucky.
Farmers \& Merchants Bank of Gatlattsburg, Ky., $v$.
The Federal Reserve Bank of Ceqveland, Ohio, and Mary B. McCall.
This cause is before me on plaintiff's motion for a preliminary injunction.
The plaintiff is a Kentucky corporation doing banking business at Catlettisburg, a city with a population of about 4,500 in this district. It has a capital stock of $\$ 50,000$, surplus of about $\$ 40,000$, and deposits of about $\$ 500,000$. The defendant bank is a national corporation and is the Federal reserve bank for the Fourth District of the Federal Reserve System of the United States. It has a branch bank in Cincinnati. Ohio, and plaintifi is in the Cincinnati division of such district. The individual defendant is a resident of Catlettsburg and, at the time this suit was brought, to wit, July 15, 1921, was acting as the defendant bank's agent in the daily colloction in cash over plaintiff's counter of checks drawn on it by its depositors, payable to persons at a distance from Catlettsburg, which had come into such defendant's hands and had been sent to her by the branch bank at Cincinnati for that purpose, and in the transmission of such cash to such branch bank by express or registered mail, and she had been so acting continuously since March 23, 1920. The suit was originally brought in the State court, in whose territorial jurisdiction. Catlettsburg is situated, and it was removed thence to this court upon the joint petition of the two defendants upon the ground that it arose under the Constitution and laws of the United States. It is the plaintiff's practice where such checks are sent to it through the mail for payment by other than one of its correspondent
banks to remit exchange on one of such banks and to charge not exceeding one-tenth of 1 per cent of the amounts of the checks for so doing. By sending such checks as come into its hands for collection by an agent in cash over the counter the defendant bank though it incurs the expense of so doing avoids having to pay such charges. It had been advertising for a year and a half that it would collect all such checks on plaintiff free of charge. What plaintiff seeks to have enjoined is such conduct, i. e., the collection of such checks by defendants in this way and the advertisement by defendant bank that it will collect such checks free of charge. It claims that it is injurious to it in that it deprives it of such charges, requires it to keep a greater reserve in cash than it would otherwise have to do, scandalizes it, affects its credit and humiliates it. A temporary restraining order was granted by the clerk of the State court when the suit was brought and has been in force ever since. The case is of the same gencral character as that in the Northern District of Georgia covered by the decisions in American Bank \& Trust Co. v. Federal Reserve Bank of Atlanta, 269 Fed. 4; American Bank \& Trust Co. v. Federal Reserve Bank of $\Lambda$ tlanta, 256 U. S. 450; American Bank \& Trust Co. v. Federal Reserve Bank of Atlanta, 280 Fed. 940 ; and that in the district of Oregon covered by the decision in Brookings State Bank v. Federal Reserve Bank of San Francisco, 277 Fed. 430. Reference to these decisions relieves me in presenting the case here of doing more than calling attention to its particular facts and then proceeding to dispose of the question which it calls for decision. I will first state the facts as they appear from plaintiff's affidavit. As early as January, 1918, the defendant bank began by letter to solicit the plaintiff to enter into a written agreement with it to remit exchange in payment of checks of the character stated at par, i. e., free of such charges. This it continued to do at intervals until December, 1919. The'plaintiff not yielding to such solicitations, at that time, it sent its traveling representative, H. A. Magee, who had in charge the matter of personally soliciting nonmember banks, i. e., State banking institutions, to enter into such agreements, to Catlettsburg to interview plaintiff on the subject. He made four separate visits for that purpose. Ho first attempted persuasion and, this failing, he insisted and demanded that plaintiff agree and finally threatenod it with the consequences of a refusal to do so. He said that the American Expross Co. would be employed to collect tho checks in cash, which would be very embarrassing to plaintiff; that, though this would be expensive to the defendant bank, it did not matter, as there was a principle involved, and plaintiff would be mighty glad to sign up before long, as no bank could exist that did not; that the Federal Reserve System was like a mighty batileship coming up as it were from a smooth sea and all banks that did not affiliate with it could not stand its swells and must get in its wake for safety, and that in the next five years there would be no small banks.
The plaintiff remaining recalcitrant, on January 6, 1920, the defendant bank employed the American Express Co. to collect such checks as came into its hands, through its local agent at Catlettsburg. The checks wou'd be delivered to the company at Cincinnati by the branch bank, carried to Catlettsburg and there presented and payment in cash demanded by such agent and upon receipt of same would carry it back to Cincinnati. The express company continued so to act until February 26, 1920, when it refused to do so any further. During this time Magee was in Catlettsburg from time to time looking after the matter and irequently visiting the bank. As the express agent would collect large sums in cash he would, shortly afterwards, come in the bank and see whether or not the method used had broken the spirit of those in charge and suggest that they submit to the desire of his principal that plaintiff go on the par list. About the middle of January, 1920, he asked the plaintiff's.assistant cashier to use his influence with the cashier,
who was handling the matter on behalf of plaintiff, in an effort to have him agree to the par clearance method. He stated that if they did not consent to it the Federal reserve bank would continue its method of collection by the express company demanding cash at the counter and that it would be annoying and expensive to both banks and that plaintiff could not stand that method of paying items in cash. The reason for the express company's refusal to act further was that the task was too burdensome.

Thereupon Magee went to Catlettsburg and for several days, possibly until March 3, 1920, made the collections himself. Each day during this time he went to a drug store on the corner opposite plaintiff's bank, where there was a soda fountain, the most prominent place in the city, and remained there from three to five hours walking up and down in the storeroom and looking across the street at the bank as though he were on the watch for what was being done there. On that date he employed Frank K. Barbee, a resident of the city and night clerk in a hotel, to act as agent. Ife continued so to act until March 23, 1920, when he surrendered the job, and the, defendant, Miss McCall, was employed. Whilst Barbee was acting as agent, Jagee was in Cattletsburg the most of the time instructing him and overseeing the performance of his duties. The place of instruction was the corner drug store heretofore referred to. Magee spread the checks upon a retreshment table in front part of the store in a conspicuous place where those coming in and out of the store could readily see and hear what was going on, assorted and listed and indorsed them, and explained to Barbee the details of presenting the checks at the counter and demanding payment in cash. Frequently he accompanied Barbee to the bank. He stated to Barbee that the reason and necessity for such method of collection was that the detendant bank insisted that the checks be cleared at par and such was the only mothod whereby plaintiff would be forced to an agreement so to do, and that though the method of collection was far more expensive to the defendant bank than the payment of the clearance fees it was not the expense they cared about but was simply the principle of the matter, and that sooner or later the plaintiff would be forced to sign an agreement to clear all checks at par, or that it would be forced out of business. IIe gave Barbee a number of pamphlets containing an exposition of the merits of universal par clearance and instructed him to call upon as many of plaintiff's depositors as he could see from time to time and leave one of those pamphlets with them.

After Miss McCall's employment Magee remained in Catlettsburg for some time, possibly until April 10, instructing her and overseeing the performance of her duties. The place of instruction and the manner thereof was exactly the same as in the case of Barbee. He also accompanied her to the bank frequently. It should be said that both Barbee and Miss McCall, at Magee's instance, inquired of plaintiff whether it was agreeaple for them to act as such agent and were told that if any one was to be employed to render the services they might as well secure the position. Miss McCall was a maiden lady who had the respect of the people of Catlettsburg. Magee's manner whilst in and about plaintiff's bank, as heretofore set forth, was domineering, dictatorial, and boisterous. He sought opportunity to attract attention of those who might be in or near the bank by loud and quarrelsome conversation. He took occasion to create scenes and disturbances at times when there would be many customers in the lobby of the bank. At the time when he undertook to collect checks after the express company quit, plaintiff suggested that it had not received any letter designating him as agent. He made a row about this, intimating that it was refusing to recognize his authority. Much disturbance was caused in the bank by the colloquy over this matter. During Barbee's agency he
brought on a heated argument with plaintifl's assistant cashier over a certain check.
Whilst the express company was acting as agent plaintiff countered by stamping upon a great many of its blank checks furnished its depositors an indorsement in these words: "Payable in cash or exchange draft at the option of the Farmers \& Merchants Bank of Catlettsburg, Kentucky." Up to February 19, 1920, the defendant bank accepted checks so indorsed and when presented for payment exchange drafts were accepted. From February 19 to February 28, 1920, it refused to accept them. From February 28, 1920, to March 9, 1920, it again accepted them. Since then it has refused so to do. On February 28, 1920, Magee was acting as agent. He presented on that date 14 checks so indorsed, amounting to $\$ 573.80$, and demanded and reccived 14 separate drafts, one for each check in payment thereof.
On March 10, 1920, during Barbee's agency, Magee visited C. C. Magann, who had the exclusive agency to handle and sell Ford cars at Ashland, Ky., a neighboring city, in the same county, and who was one of plaintiff's depositors at his place of business, introducing himself as a representative of defendant bank and stated that he wanted to discuss some business with him. Magann took him into his private office and he then stated that his check to the Ford Motor Co. of date March 8, 1920, for $\$ 3,756.72$, on plaintilf, had been presented and payment thereof refused and exhibited a letter to him from the Cincinnati branch corroborating his statement. Magann immediately went to Catlettsburg in his automobile and ascertained that his check had been paid that day and that it had not been presented for payment before then and payment thereof had never been refused.
On March 26, 1920, düring Miss McCall's agency, Magee visited O. H. Salyern, another of plaintiff's depositors, who owned and operated a store in Catlettsburg. IIe stated in the presence of Salyer's customers in an abrupt, high-handed, and loud manner that he represented defendant bank and, presenting a check drawn by him on plaintilf for $\$ 108.29$ in favor of a Cincinnati party which possibly contained the indorsement as to payment heretofore referred to, demanded to know of Salyer why he had not filled the check out in the proper manner, and stated that he had presented it for payment and could not get any money on it.
On the same day he visited F. H. Carpenter, secretary of D. H. Carpenter \& Co., engaged in wholesale and retail dry goods and notions business in Catlettsburg and a depositor of plaintiff, introduced himself as a Federal reserve man, presented a check drawn by his company on plaintiff containing the indorsement referred to, inquired as to why his company permitted the bank to put such an indorsement upon the check, and stated that it was injurious to the credit of his company and that to save its credit it should do business with some other bank.
Magee whilst in Catlettsburg made inquiries of clerks in the drug store, post office, and express company office as to where the plaintiff was getting its cash from. He also made inquiries as to the worth and standing of plaintiff and the man in charge of its business.

As stated, Magee left Catlettsburg about April 10, 1920. The reason for his leaving was that an indictment was returned against him by the State grand jury in which that city is situated, charging him with making and circulating statements derogatory to the plaintiff contrary to the Kentucky statutes, and he has never been back since. He continued in the defendant bank's employ until July 17, 1920. Whilst he was in Catlettsburg he made reports of progress to the assistant cashier of defendant bank, who was overseeing the matter.
For a while after Miss McCall was employed it was her custom to go to the bank with a gocart in which to carry away from it the money received. Seemingly the plaintiff purposely gave her more coin than she could otherwise carry. One day she was given as much as 94 pounds in
silver. And at times it would wad the bills. Later on the gocart seems to have been abandoned, possibly because not needed. It took much time to wait upon her in counting the money and after she was waited upon she took much time in recounting it, in separating it into the separate denominations and in mailing a list thereof, which she was required to do. She carried an instrument bearing defendant bank's seal, which was used in sealing with lead a canvas sack in which the money was shipped. She always carried openly a pistol to protect herself from robbery and oiten was accompanied by one or two dogs.

After defendant bank refused to accept checks drawn on plaintiff bearing the indorsement as to payment in cash or exchange at plaintilf's option, it did not content itself with returning the checks to the banks from whom they came, but took pains to write to the payees of the checks giving its reason for not accepting them. That was that the checks by reason of the indorsement were nonnegotiable. The concluding paragraph of each letter was:
"We are writing this letter in order that you may be advised that items bearing notation similar to that set forth on the check mentioned above are uncollectible through a Federal reserve bank and for that reason as a medium of payment the usefulness of such checks are impaired."
About two weeks before May 18, 1920, defendant bank's branch bank at Cincinnati wrote plaintiff's main Cincinnati correspondent, a national bank and member of the Federal Reserve System, a letter in which it said:
"We are instructed by the head office to refuse to handle checks bearing the indorsement of the Farmers \& Merchants Bank of Catlettsburg. Accordingly in case any checks with their indorsement are deposited with us, by you, we shall return them. Please so instruct your transit department. This is effective at once and until further notice."

Whilst the American Express Co. was acting as agent in January and February, 1920, its general agent at Cincinnati, and local agent at Ashland, which had supervision of the Catlettsburg office, called upon the manager of the defendant bank's branch bank at Cincinnati to explain delay in two or three shipments of proceeds of checks collected by the express company. They inquired of the manager how long such method of collection would be kept up, and, according to the general agent, he replied:
"I do not know how long it will be continued, but it will be continued until the Farmers \& Merchants Bank agrees to handle our collections without charge to us."
According to the local agent, he replied that they would continue their method of collecting checks over the counter until they had forced the plaintiff to handle them at par, and intimated thatit would not be long until it would be forced to clear at par.
Such is the showing, in substance, made by the affidavits introduced on behalf of plaintiff. $\Lambda$ s against it, so far as Magee's conduct is concerned, defendants have introduced the affidavit of Magee and the oral testimony of Miss McCall. In his affidavit Magee states that in his various conforences with plaintilf's cashier he never endeavored to coerce the plaintill into agreeing to clear checks drawn on it at par, but at all times sought to point out to him that the par collection system was a great progressive movement in banking practice and that plaintiff as a representative banking institution in Catlettsburg should give its sanction to this practice, and that he never uttered to any person any statement derogatory to the reputation or solvency of plaintiff. Other than these general statements he makes no denial of the statements in plaintiff's affidavits as to his conduct. Possibly his affidavit is to be understood as stating that he was not in Catlettsburg any time whilst the express company was acting as agent. If so, this statement may be said to amount to an indirect denial of what is stated in plaintiff's affidavit as to his conduct in Catlettsburg at that time. Miss McCall testified
that Mr. Magee was never boisterous or ungentlemanly in any way and was always quiet and gentlemanly when she was thrown with him. There is no reason for not accepting this testimony as true. Possibly it can be reconciled with statements in plaintiff's affidavit by the fact that her presence had a restraining influence upon him. It is to be noted, however, that seemingly the indictment was not returned against him until over two weeks after Miss McCall began to act as agent. In the light of the showing made on both sides I am constrained to accept that made by plaintiff as to Magee's conduct as being substantially true. It is hard to believe some of it-that as to his conduct in relation to Magann, for instance. And a tendency to exaggerate seems to pervade plaintiff's affidavits. Yet with this said, in view of the number of them and the persons making them, all of whom are in good standing, I have not other recourse than that stated.

The defendant bank's assistant cashier, who has represented it in this matter, testified that the conduct of Magec complained of was never authorized by the defendant bank, and if he was guilty of any such conduct it was absolutely unknown to it and that he never intimated that he was doing anything at Catlettsburg except to carry out instructions which was to endeavor to persuade plaintiff to agree to remit at par and to treat it politely. At one time, however, a complaint of Magee was conveyed to defendant bank through the president of plaintiff's principal Cincinnati correspondent. Magee was instructed to see such president about it. He did so and explained the matter to his satisfaction. The defendant bank learned of Magee's indictment and inquired of him about the matter. He gave an outline of his actions whilst in Catlettsburg, and according to that outline there was nothing in his conduct which would indicate that the indictment was based upon well-established facts. But it made no independent invostigation in regard to the matter, sent no one to Catlettsburg to inquire into Magee's conduct, made no effort to have the indictment against him brought to trial, expressed no regret to plaintiff for his conduct if possibly he did go too far, and continued to keep him in its employ until July 17, 1920, the reason for his then quitting not appearing.

Seemingly the defendant bank would have the court, in disposing of this motion, turn its back on Magee's conduct as a thing long of the past when this suit was brought and view it in the light of the fact that at that time all it had to apprehend was Miss McCall's daily visits, with her pistol by her side, accompanied at times with one or two dogs. But that conduct is relevant, notwithstanding that such is all that plaintiff has reason to apprehend in the future. It gives color to defendant's bank's purpose in initiating and continuing this procedure directed against plaintiff. Possibly it may be true that it was not aware of Magee's conduct, at loast to the full extent to which he went. But how is such conduct on Magee's part to be accounted for? It can not be accounted for on any other basis than knowledge on his part of what defendant bank's purpose was in setting on foot the movement against plaintiff. It was begotten by such purpose and hence gives color to it.

The showing made by plaintiff's affidavits as to the other particulars than Magee's conduct and as to his conduct except as stated are uncontradicted.

The facts as to two other matters should be stated. One of them is as to the accumulation of plaintiff's checks by defendant bank. There was no other accumulation than such as was caused by its advertisement that it would collect plaintiff's checks at par. This necessarily resulted in an accumulation to some extent. It can be accepted that this undertaking was availed of by all in whose hands plaintiff's checks came who otherwise would have been compelled to pay for remittances in payment thereof. And because of this plaintiff was obliged to keep a greater reserve than would have been the case had the checks been allowed to straggle in one at a time as they did before
defendant bank set on foot the movement against it. The other is as to the effect on plaintiff of defendant bank's course of procedure. It deprived it of income from remittance to the extent of from $\$ 800$ to $\$ 1,000$ a year. It required it to keep a greater cash reserve and, therefore, affected its income from loans to a certain extent. It caused it to lose depositors. There was a shrinkage in deposits in the time between the initiation of the movement and just before the bringing of this suit of nearly $\$ 100,000$. But it can not be said from this mere fact alone that this shrinkage was caused by that movement. There was a greater shrinkage in the same time of the deposits of another banking institution of Catlettsburg. But the cashier's affidavit gives the names of seven depositors which plaintiff lost for this reason, and this statoment is uncontradicted. And the movement, especially whilst Magee was at Catlettsburg, was calculated to cause plaintiff to lose depositors. The movement scandalized plaintiff in Catlettsburg and was calculated to injure its reputation and credit. What was going on was a matter of public notoriety. No attempt was made to keep it from the public. And the procedure could not help being humiliating to plaintiff.

Yet still another fact should be stated in order to a full presentation of this case. This is that when this suit was brought the checks which came into defendant bank's hands for collection and which were prosented by it for payment over the counter were dwindling in number. At the time the movement was begun plaintiff had reason to expect that checks amounting to as much as $\$ 8,000$ might be presented for payment at any time. It the time suit was brought the reasonable expectation did not exceed $\$ 3,700$. This shrinkage was due to the indorsement on its checks, which were increasingly being put there, to the effect that payment might be made in cash or exchange, which checks the dofendant bank refused to handle.

It remains to determine the law of this case. As to this there can be no question, as it has been scttled by the decision of the Supreme Court in the Atlanta case. It all depends on defendant bank's purpose in adopting this unusual and heretofore unheard-of procedure of seeking out plaintiff's checks for collection and presenting them in a body for payment over the counter, i: e., what was its immediate purpose in so doing? Was it for the purpose of breaking down the plaintiff's business as then conducted? If so, it was unlawful and subject to be restrained by a court of equity. It does not follow that because the holder of a check has a right to present it to the bank upon which it is drawn for payment over the counter, that one has the right to seek to become the holder of all the checks drawn on a bank as they are drawn, and then present them in a body for payment in cash over the counter. It such was defendant bank's immediate purpose in so doing, it was not justified by the ulterior purpose which it has in view, to wit, of freeing commerce from the burden of such charges. Here, as never, did the end justify the means. Such a course of procedure is a kind of refined highwaymanship. It is a holdup. It is one of the inalienable rights of a person to be unprogressive, selfish, and mean. This is said without intending to so characterize plaintiff's position. No other person has the right to coerce him into being otherwise. The idea that there is such a right was at the bottom of the Night Rider troubles in Kentucky some years ago, Those who were in the pool thought that those who were out were selish, and they undertook to coerce them into joining the pool by shooting them into their homes.

What then was the defendant bank's purpose in initiat ing this movement against plaintiff and keeping it up for over a year and a half, i. e., until stopped from further doing so by the temporary restraining order? There is but one answer to this question and that was to break down plaintiff's business as it was being conducted; not to put it out of business, but to compel it to do business in this
particular as it would have it do and not as plaintiff desired. Notwithstanding it was having its way in conducting its business it was not willing that plaintiff should have its way in conducting its business. It desired to impose its will on plaintiff. That such was defendant bank's purpose is the meaning of the course of procedure adopted. It can be accounted for on no other basis. Such a purpose was avowed by those acting on its behalf, and it was admitted on the witness stand by its assistant cashier that if the plaintiff at any time had signed an agreement to remit at par the agency would have been withdrawn. Each side appeal to the decision in the Oregon case as favoring its contention. It seems to me to favor that of plaintiff. In that case the reserve bank had been maintaining an agent at Brookings, but at the time of the application for preliminary injunction that agent had been withdrawn and the reserve bank had been forwarding to the State bank checks drawn on it indorsing them for collection only and remittance in full without deduction for exchange, and, upon the State bank returning them unpaid, had been returning them, its correspondents advising them that the State bank refused to pay and had not protested same and they must look to the State bank for their protection, which was in effect that the checks had been dishonored. A preliminary injunction was granted restraining the reserve bank from so advising its customers. That in the decision of Judge Wolverton on which the defendant bank relies, is his statement that the reserve bank was acting within its authority in maintaining an agent at Brookings for making collections over the counter of plaintili's bank and paying the expenses theroof. But in making this statement he was merely referring to the corporate power of the reserve bank, and he based this on the decision in the Atlanta case. Me was not considering the right of the reserve bank to so act as against the State bank. On the contrary, he seemingly condemns the action of the reserve bank in this particular as well as in the particular as to which the injunction was granted. He said:
"'The question remains for determination as it respects the motive that induced the defendant bank to pursue the course it did in attompting to make collection from the plaintiff bank. It appears by defendant's answer that it expended $\$ 1.915 .32$ in making collections over
the counter of plaintiff's bank of $\$ 102,850.33$ during the y ear from October 1, 1920, to October 1, 1921. The method employed, considering the occasion for it, or rather the lack of reasonable necessity, was to say the least extraordinary, extravagant, and unbusinesslike."
Again he said:
"I am persuaded, however, that the action of the defendant bank in adopting the methods pursued by it toward the plaintifi's bank, and in persistently adhering to them indicates most convincingly that it was for the purpose of coercing the latter bank into adopting the policy of the reserve bank to remit at par. Although the policy may be commercially sound, the plaintiff was entitled to pursue its own method, without being harrassed and annoyed because it persisted in so doing."

It is not unlikely that the withdrawal of the agent from Brookings was due to the decision of the Supreme Court in the Atlanta case and was an interpretation of that decision as condemning such action.

The decision of Judge Evans in the Atlanta case after its return consisted of certain findings in that case, based upon its particular facts. In so far as such findings may contlict with what I have held herein I am unable to follow it.
The only thing that has given me any concern in this case is plaintife's delay in asserting its rights. No explanation is given of this. Possibly it thought that it would be able to wear out the defendant bank in the long run. But it is not unlikely that under the influence of the decision of the lower courts in the Atlanta case it thought that the defendant bank had the right to make collections as it did and was not advised to the contrary until the Supreme Court reversed those decisions. It was shortly after such reversal that this suit was brought. I can not, however, make out from this delay any reason why defendant bank should be permitted to continue to make collections in this unlawful manner. The motion, therefore, is sustained. A preliminary injunction is granted restraining defendants from continuing so to make collections of checks drawn on plaintiff and the defendant bank from advertising that it will collect such checks free of charge and from doing anything else for the purpose of coercing plaintiff to remit at par.

## INDEX OF PRODUCTION IN SELECTED BASIC INDUSTRIES.

Accurate and current information concerning the trend of production is fundamental to an interpretation of business conditions and to the shaping of business policy. Such information, in order to have practical value, must be as nearly current as possible, and it is with special reference to this need that the construction of a new monthly index of production in the United States, described in this article, was undertaken. Monthly statistics of production
for a representative list of basic commodities are available since January, 1913, thus making possible a measurement of monthly industrial activity for almost a decade. The chart below shows graphically the course of production during this period, and Table I presents the index numbers upon which the chart is based.

This article is confined to presenting the results of the study and a description of the methods used in the construction of the index number. For an adequate interpretation of the changes in output measured by this index it is desirable to know the trend of production

TABLE 1.-INDEX OF PRODUCTION IN BASIC INDUSTRIES-COMBINATION OF 22 INDIVIDUAL SERIES CORRECTED FOR SEASONAL VARIATIONS.
[Monthly average, 1919=100.]

|  | 1913 | 1914 | 1915 | 1916 | 1917 | 1918 | 1919 | 1920 | 1921 | 1922 |

| November | 93.6 | 78.0 | 109.7 | 121.4 | 118.6 | 106.4 | 98.1 | 95.4 | 85.6 |  |
| December | 93.5 | 78.4 | 117.6 | 116.8 | 112.1 | 108.0 | 103.5 | 90.0 | 83.5 |  |

over a longer period of years and to compare the present index with an annual index of production which includes a larger number of commodities for which information concerning output is arailable annually. Studies of this character will be presented in later issues of the Bulletin. The description of the index here presented is divided into two parts-an outline of the final results and a somewhat more technical explanation of the method of constructing the index.

In the selection of data for this index several considerations were kept in mind. The purpose required that the data be available by months and not later than the 25th day of the following month and that the series should represent as many of the major industrial groups as possible. Twenty-two series showing the production of basic commodities were tinally combined into the production index. These commodities and the sources from which the information was secured are indicated in the following list:

| Data. | Source. |
| :---: | :---: |
| Iron and steel: |  |
| Pig-iron producion | Iron A ge. |
| Stecl-ingot production | American lron and Steel institute. |
| 'rextilos: |  |
| Fool machinery active | $\text { I } 0 \text { o. }$ |
| Food products: |  |
| Wheat flour | Russell's Commercial News. |
| Sugar meltings | Amorican Sugar Bulletin. |
| Animals slanghtered under | United States Bureau of Animal |
| Federal inspection. | Industry. |
| lumbor cat. | Zational Lumber Manufacturers' Association. |
| Ccal: |  |
| Rituminous production | United States Geological Survoy. |
| Anthracite production. | Do. |
| Nonferrous metals: |  |
| Coppor production at mines.. | American Bureau of Metal Statistics. |
| Sleb zine production.......... | Anuerican Zine Institute. |
| Sole leather production........... | United States Bureau of the Census. |
| Sewsprint production | Federal Trado Commission. |
| Coment production. | Unitod States Geological Surver. |
| Crude petroleum production....- | Do. |
| 'Lobacco production measured by sales of revenue stamps. | United States Commissionor of Internal Revenue. |

Before the several series could be combined into an index it was necessary to determine their relative importance. The individual commodities were treated as representing certain groups of industries and the weight attached to the main group was then divided among the individual series. Thus, for example, textiles have a weight of 22 on a scale of 100 , and of this weight 15 is assigned to cotton and 7 to wool. In the construction of the index the production of each commodity was weighted by both the value added to it in all processes of manufacture, and by the number of men working upon it in all stages of manufacture as shown by the census of 1919. The weights thus obtained follow with the groups of industries arranged in the order of their importance:

|  | Weights used in index. |  |
| :---: | :---: | :---: |
|  | Main groups. | Mndividual scries. |
| Tron and stcel. | 24.0 |  |
| Pig iron. |  | 18.0 |
| Steel ingots. |  | 6.0 |
| Textiles....... | 22.0 |  |
| Cotton |  | 15.0 |
| Wool. |  | 7.0 |
| Food products. | 11.5 |  |
| Wheat 0ur |  | 5.8 |
| Singar. | - | 1.2 |
| Ilogs slaughtered. | . | 2.4 |
| Cattle slaughtered. | . | 1.7 |
| Calves slanghterod. |  | . 1 |
| Sheop slaughtered. |  | . 3 |
| Lumber............... | 11.0 | 11.0 |
| Coal............. | 9.0 |  |
| Bituminous. |  | 7.0 |
| Anthracite. |  | 2.0 |
| Nonferrous metals. | 3.0 |  |
| Copper. |  | 3.0 |
| Zine... |  | 2.0 |
| Ieather.. | 5.0 | 5.0 |
| Newsprint. | 4.5 | 4.5 |
| Coment.... | 3.0 | 3.0 |
| Petroleum. | 3.0 | 3.0 |
| Tobacco.. | 2.0 |  |
| Cigars. |  | 1.0 |
| Cigarettes. |  | . 7 |
| Manufactured tobacco.. |  | . 3 |
|  | 100.0 | 100.0 |

In order to combine production of different commodities measured in different units, it is necessary to convert the various serics into relatives. The relatives are the percentages of the output in the various months to the output in some selected base period. This base period is considered as equal to 100 , but is not intended to represent normal production in the industry. The average production in the year 1919 was considered 100 for the purposes of this study, as 1919 was the first year after the war; was neither a year of excessively high nor unduly low production; and was a census year for which much detailed information was available. It is of interest that the production in 1919 for the industries included was larger than the output in 1913, 1914, 1915, and 1921, but lower than in 1916, 1917, 1918, and 1920. The 1919 production was about 13 per cent less than in 1917, the year of greatest activity, and about 24 per cent more than in 1921, which had the lowest production in the last decade. It is also of interest that production in 1919 was only 3 per cent larger than in 1913, the last year before the war.

In studying month to month fluctuations of production it becomos clear that output regularly decroases in certain months and increases in other months. For this reason the series of relatives were corrected to allow for regular seasonal changes, thus eliminating the effect of such movements from the final index. For example, February output is smaller than January in most industries on account of the
shortness of the month, and November output is usually smaller than October on account of the fewer working days. In certain industries there are also regular seasonal variations due
to the character of the demand or of the supply of materials. The table below shows the seasonal fluctuations for various industries in terms of an average month:

TABLE II-INDEX NUMBERS OF SEASONAL VARIATIONS.

It will be seen that there is only a small amount of seasonal fluctuation in the manufacture of steel, cotton goods, leather, and paper, or in the extraction of anthracite coal, copper, and petroleum. On the other hand, there are quite decided seasonal trends in the manufacture of flour, sugar, lumber, cement, and meat products.
The actual steps involved in combining the various series of data into the final index were: (1) A base was obtained for each set of data by averaging the monthly production in 1919; (2) corrective factors for seasonal variations were obtained by taking the median over a period of years of variations for any one month from the 12 months' moving average of data centered at that month; (3) these corrective factors were multiplied by the bases, thus securing an adjusted base for each calendar month; (4) the original data were then divided by the adjusted bases to obtain a series of relatives for each commodity; (5) each relative was multiplied by a weight in accordance with the comparative importance of the industry represented, and averages were obtained by the arithmetic method. These weighted averages constituted the final index numbers.

The method of weighting the individual series and the use of the year 1919 as a base period have already been explained, but a more detailed explanation is necessary of the method used in making seasonal corrections. The method adopted was developed by Mr. F. R. Macaulay, of the National Bureau of Economic Research. It consists of the following steps:
(a) A 12-month moving average of the monthly data is centered at the seventh month. (b) The percentage of actual data to the moving average is calculated for each month.
(c) The median of the variations for each calendar month is then determined from the percentages for that month. (d) The 12 medians are adjusted to total 1,200 . (e) The average production in 1919 is multiplied by these 12 medians to obtain a base for each calendar month. ( $f$ ) The actual data are divided by the base for that month, thus securing a series of corrected relatives. The tables below illustrate the treatment of data to eliminate seasonal fluctuations in the case of cotton consumption. The first two steps are shown in Table III, the next three steps in Table IV, and the final relatives in Table V.

| Total. | 1,202. 4 | 1,200 | 59,195 |

1 These figures are averages of the fourth and fith items when the ratios for corresponding months are arranged in order of size.

Monthly data from January, 1913, to December, 1921, inclusive, were used in making scasonal corrections, if available. All the series were corrected similarly to cotton consumption, except activity of wool machinery and zine production. As the data for wool and zinc are for a brief number of years and the scasonal variations do not cluster or give any evidence of regular seasonal fluctuation, relatives were obtained by dividing monthly figures by the 1919 average without any adjustment. The 22 series of relatives are shown in Table V.

The index of production was calculated in each month by multiplying the 22 relatives by their weights, adding the weighted total, and dividing by the sum of the weights, 100 . An index number was obtained for each month from January, 1913, to date. In the earlier ycars, when data were not available for all the series, adjustment was made in two ways. If the series was only one of several in a main group its weight was redistributed among the
other items of the group (e. g., weight of zinc prior to 1917 was added to that given copper). In the single case where a series was the only one representing a group of industriessole leather--the total sum of the weights was simply reduced by the amount of the weight of
that group. As a result of this method of compilation it is believed that the index gives a reasonably accurate measurement of the trend of production in basic industries by months from January, 1913, to date.

TABLE V.-RELATIVES FOR INDIVIDUAL COMMODITIES-CORRECTED FOR SEASONAL VARIATIONS.

## THE FIRST THREE YEARS OF GERMAN REPARATION. ${ }^{1}$

## PART II.-FIXING GERMANY'S LIABILITY (JULY, 1919-MAY, 1921).

For a period of about a year after the signing of the treaty of Versailles the question of reparation, apart from the deliberations of the commission, was almost completely neglected. The powers during that time were concorned mainly with ratification proceedings and other domestic affairs, and the disarming of Germany. This last matter was the immediate reason ${ }^{2}$ for the calling of the first of the long and complicated scries of official conferences and unofficial parleys with which this and succeeding chapters have to deal. The history of these negotiations--some confined to the Allies, some including German repre-sentatives-is difficult to follow, owing to overlapping of functions and to the lack, in several cases, of official pronouncements on the results of the conversations.

There were underlying the discussions three prominent points of view. The Italian delegates from the start favored a frank revision of the treaty. The French, on the other hand, held out for its strict fulfillment. The British adopted an elastic policy, best expressed by Mr. Lloyd George's words in the House of Commons, in replying to a question as to the work before the projected Spa conference, that the conference was to deal in no way with revision, but only with application. Hence it was not-and, indeed, could not be logicallyuntil after the promulgation of the decision of the Reparation Commission that any true modifications of the treaty were decided upon, except as regards immediate payments.

The first conference, April 19-26, 1920, at San Remo, attended by the allied premiers, was concerned mainly with the Turkish treaty and the German military establishments. It was notable, however, for a suggestion made by Mr. Lloyd George that Germany should be invited to send delegates to discuss with the supreme council matters arising out of the treaty. Accordingly, it was agreed to hold a joint conference at Spa in the following month. At the same time an allied manifesto was issued, pointing out that Germany had not seized the opportunity, presented to her during the

[^0]Versailles negotiations, ${ }^{3}$ of putting forward her own estimate of the reparation to be made, nor of sending experts to the devastated regions with this end in view, nor of offering a lump sum in settlement of her reparation liabilities.

Accordingly, the premiers met at Lympne, May 14-16, for the purpose of formulating plans as to the policy to be pursued at Spa. Here France obtained what might have been an important concession, for, though her priority claims were disallowed, it was agreed that the payment of her debt to England should be made pari passu with payments of reparation by Germany. The recognition of the vital connection between reparation and foreign debts is not, then, merely a recent development. As it happened, however, this particular understanding was set aside a month later, owing to America's unwillingness to make similar concessions.

There were now, then, two sets of deliberatiurs going on with regard to reparationthose of the Reparation Commission and those of the supreme council. To these the latter added a third-a commission of French and British experts to fix, prior to the Spa confrence, a minimum total of Germany's liabilities, to determine methods of payment, examine the possibility of capitalizing the debt, and to establish conditions for the division of the receipts between the Allies. In considering Germany's capacity to pay, this commission was to take note of several facts: First, that there appeared to be a deficit in Germany's current budget of $21,000,000,000$ marks; second, that the German merchant fleet had decreased in gross tonnage from $5,500,000$ in 1913 to 500,000 in 1920; third, that the production of coal, now that NlsaceLorraine and the Saar had been separated from Germany, had fallen 50 per cent from the 1913 figure; and fourth, that imports had diminished in weight by about three-fourths from their 1913 level.

The Spa confcrence having been postponed on account of the German elections, the premiers met again at Lympne on June 20 and at Boulogne on June 21 and 22. During these conversations a scheme was discussed under which a minimum annual payment, to be made in gold, would become the basis of an international loan, a part of which would be allotted to Germany. The idea of a minimum payment was adopted in order that, if Germany were to prosper, her payments could be increased accordingly. The minimum determined upon here was $3,000,000,000$ gold marks, and the

[^1]period during which it was payable was 35 years.
$\Delta$ further meeting was held at Brussels, July $2-4$, to discuss the matter of the division of the reparation payments among the Allies. Here a previous agreement, as between France and Great Britain (55:25), made earlier in the year, was revised, the new distribution being as follows (in percentages): France, 52; Great Britain, 22; Italy, 10; Belgium, 8; Greece. Rumania, the Serb-Croat-Slovene State, and others, a total of $6 \frac{1}{2}$; Japan and Portugal, threefourths each. Belgium's priority on the first two and one-half billions of marks paid, as agreed upon and announced by Clemenceau, Wilson, Lloyd George, and Sonnino in July, 1919, and the transfer to Germany of her liabilities or debts to the Allies, were confirmed. Furthermore, Italy was given priority, up to $£ 200,000,000$, on the payments received from Hungary and Bulgaria.

These proportions and priorities were finally agreed to at the Spa conference, July 5-16. It was further agreed that one-half of the receipts from Austria, Hungary, and Bulgaria should be divided in the same proportions as the German payments, while of the other half Italy should receive 40 per cent and Greece, Rumania, the Serb-Croat-Slovene State, etc., the remaining 60 per cent. Certain German credits in foreign countries were handed over to Belgium as covering for her prior claim of two and one-half billions of marks. These included $400,000,000$ kroner in Denmark received by Germany in consideration of the cession of the northern part of Schleswig-Holstein, and also the excess value of German property confiscated in the United States over American property confiscated in Germany. Immediately after the satisfaction of Belgium's prior claim the Allies were to be reimbursed for their loans to Belgium.

Apart from these secondary decisions, nothing was accomplished at Spa with reference to reparation, the chief matters under discussion being the disarmament of Germany and the conal deliveries. The latter will be dealt with in the next article. On the whole, the Spa conference proved disappointing in its results, but it marks a definite step forward, in that for the first time German representatives were permitted to take part in the deliberations.

The first gathering of major importance, however, was that of the allied and German experts at Brussels, December 16-22, 1920. Here definite progress was made, though no finall decisions could be arrived at. A good deal of information as to Germany's internal situation was supplied, and a definite preference
for payments in kind was voiced by the German experts. The proposal most generally favored was (according to the London Times correspondent) to domand an annual payment of $3,000,000,000$ gold marks for 5 years, with the provisional suggestion of $6,000,000,000$ for the next 5 years, and $7,000,000,000$ for the following 32 years. The Rcparation Commission would have power to postpone a part of the additional annuities of the last 37 years and to fix interest payments thereon. As guaranties of payment, it was proposed that Germany deposit with the commission industrial securities up to a value of $5,000,000,000$ gold marks, which could be sold incase of default; and that the Allies be given a claim upon the gross receipts of the German customs, with power to veto any modifications of the tariff which might tend to lessen the receipts. With these tentative conclusions the conference was closed, but not before a list of 41 questions had been submitted to the Germans, the answers to which were intended to supply, and did in fact supply, fuller valuable data as to the internal condition of the country.

The supreme council met again in conference at Paris January 24-30, 1921. At the outset of the conference, M. Doumer, a French delegate, suggested that reparation be fixed at $240,000,000,000$ gold marks, to be paid as an annuity of $12,000,000,000$ for 44 years. This, clearly, was far above the experts' proposal for an annuity of $3,000,000,000$ for the first five years. 1 t the same time it was claimed that under the Boulogne agreement France could receive only about $65,000,000,000$ gold marks. Finally a compromise was effected between the Brusscls and Boulogne plans, with the added clement of a levy on German exports. The annuities were to be as follows: Two of $2,000,000,000$ gold marks; three of $3,000,000,000$ gold marks; three of $4,000,000,000$ gold marks; three of $5,000,000,-$ 000 gold marks; 31 of $6,000,000,000$ gold marks-the total being $226,000,000,000$, payable in 42 years from May 1, 1921. In case of payment being made in advance, Germany was to receive a discount of 8 per cent on the first two annuities, 6 per cent on the next two, and 5 per cent on the remainder. Germany was to issue bearer bonds covering these annuities. In addition to these fixed annuities, however, Germany was to pay an amount equal to a tax of 12 per cent ad valorem on the whole of her exports, this tax being estimated to yield about $1,000,000,000$ marks per annum. A power additional to those named in the treaty was given to the Reparation Commission at this point, Germany being permitted to embark on no credit operation. abroad without the commission's approval.

The conference also enunciated the "sanctions" it was prepared to enforce should Germany default in her payments as set out in the above schome. These comprised seizure of all or a part of the German customs by the Reparation Commission; taking over of the administration and collection of the customs by the Reparation Commission; imposition of higher tariffs, at the instigation of the Reparation Commission; taking of "such mcasures as they think justified" by the allied powers, when notified by the commission of Germany's default. The terms here outlined were submitted to Germany for consideration, her delegates to present themselves at London in a month's time to give her reply.

Thus, on March 1 to 7, 1921, in London, for the first time since Spa, the German delegates met the supreme council and the other allied delegates. The Germans declared that fulfillment of the Paris proposals was impossible, and submitted a counterscheme of their own. Their experts, however, adopted the Paris proposals as the basis of their calculations, discounting the fixed annuities at 8 per cent, and arriving at a present value of $50,000,000,000$ gold marks. The payments already made they estimated at $20,000,000,000$, thus leaving $30,000,000,000$ remaining to be paid, a sum which, they claimed, was as much as Germany could possibly pay. Most helpful, perhaps, was the suggestion that some of the earlier installments be paid in kind and labor and the statement that Germany was prepared to assist in the physical work of reconstruction. In spite of Germany's unconditional agreement at Versailles to pay to the utmost of her capacity, ${ }^{4}$ the London delegation laid down conditions upon fulfillment of which she would agree to pay the proposed $30,000,000,000$ gold marks. These were as follows:
(1) Upper Silesia was to remain German. ${ }^{5}$
(2) Restrictions on commercial intercourse between Germany and the rest of the world were to be removed.
(3) Germany was to be released from all further payments or deliveries under the treaty.
(4) The Allies were to renounce their rights to liquidate German property. ${ }^{6}$

Furthermore, the means wherewith Germany was to commence payment was to be a loan of $8,000,000,000$ gold marks at a low rate of interest. An annuity of $1,000,000,000$, together with interest on the loan, would be paid for five years, and in the meantime a scheme would be drawn up for the liquidation of the outstanding balance.

[^2]The London Times quotes from an "authoritative analysis" of the proposals, the following summary, the main features of which will show their inacceptability to the Allies:
(1) The 8 per cent rate of discount was only applicable to the first two annuities.
(2) The German plan ignored the variable annuities dependent on exports.
(3) The Paris anmuities were proposed as an addition to payments already made.
(4) The Reparation Commission assessed the deliveries already made at a total ralue of less than $10,000,000,000$ gold marks. ${ }^{7}$
(5) While discounting payments at 8 per cent, Germany had reckoned on a loan at 5 per cent or less.
(6) The German proposals included the relief of the German securities from taxation in the country of issue.
(7) Assuming the payments after the first five years to be $3,000,000,000$ for 25 years, the present value would have been about $27,000,000,000,{ }^{3}$ whereas the present value under the Paris plan, exclusive of the variable annuities, would have been, at 8 per cent, $53,000,000,000$; at $\overline{0}$ per cent, $83,000,000,000$.

Hence it is not surprising that the Allies rejected this proposal, and allowed Germany four days in which to signify her agreement to the Paris plan. In Mr. Lloyd George's speech delivering the ultimatum he declared that the Allies had good reason to assume that the German Government was "deliberately in default;" and that therefore, in the event of an unfavorable reply, the Allies would proceed to occupy Duisburg, Ruhrort, and Düsseldorf; to pass legislation compelling allied nátionals to pay to their Governments, instead of to the German seller, on account of reparation, a proportion of the price of goods imported from Germany; to insist on payment to the Reparation Commission of customs collected on the external frontiers of the occupied territories, and to levy and collect customs at the Rhine bridgeheads occupied by the Allies.

During the four days' grace an alternative proposal to pay $3,000,000,000$ gold marks annually for 30 years, together, with a 30 per cent tax on exports, was presented to Germany and rejected. At the end of that time Germany made a counter-proposal to pay according to the Paris plan (including the 12 per cent export levy) for five years, during which a comprehensive scheme for 30 years of payment was to be negotiated. But the conditions that Upper Silesia remain German and that the restrictions on German trade be abolished were retained, and hence the proposals were

[^3]rejected. Accordingly, the three specified German cities east of the Rhine were occupied, and the Inter-Allied Rhineland High Commission took over the collection of customs in the occupied area. The Allies forthwith proceeded with the threatened legislation. The British reparation recovery bill, requiring importers of goods from Germany to pay up to 50 per cent of the price of the imported goods direct to the customs officials, passed its third roading on March 19.
The next move fell to the German Government, which, on April 24 , handed to the American chargé d'affaires at Berlin a set of proposals which, they declared, represented, "according to their convictions, * * * the utmost limit which Germany's economic resources could bear, even with the most favorable developments," and which, if it found thom acceptable, the United States Government was requested to lay before the Allies. The proposals consisted of 12 points, summarized as follows:
(1) Germany would recognize $50,000,000,000$ gold marks as her total liability, to be liquidated by suitable annuities totaling not more than $200,000,000,000$ gold marks.
(2) The raising of an international loan, in which Germany would participate.
(3) Germany to pay interest and amorlization on the amount uncovered by the loan, with a maximum of 4 per cent.
(4) Amortization payments to vary with German prosperity, as shown by an agreed index.
(5) Germany to assist in rebuilding work.
(6) Germany to supply other reconstruction materials and services.
(7) Germany to pay at once $1,000,000,000$ gold marks, in the shape of $150,000,000$ in gold, silver, and foreign bills, and $850,000,000$ in treasury bills, redeemable within three months in foreign bills and other forcign values.
(8) Germany, the Allies and the United States being agreeable, to take over a part of the Allies' $\Lambda$ merican debts, to the extent of her capacity.
(9) Determination of values of reparation deliveries by a commission of experts.
(10) Assignment of public propertics or income as security for the loan.
(11) Cancellation of all other German reparation liabilities and release of German property abroad. ${ }^{9}$
${ }^{9}$ Germany still retained this condition (el. p. 1424). Apparenlly the dropping of the Upper Silesia condition may have been due to the result of the Silesian plebiscite, which was, on its surface, farorable to Gormany. Eventually, the Allies being dirided, the League oi Nations partitioned the district beiween Germany and l'oland, according to the nationality of the voters.
(12) Abolition of the system of sanctions, frecing of German commerce, and relicf from "all unproductive expenditure."

Although this was by far the most favorable proposition Germany had yet made, the United States Government doclined to transmit it to the Allies, who, in informal communications, had found in it "no acceptable basis of discussion."

It seemed, then, that an impasse had been reached. But the situation was saved by the Reparation Commission, which, in accordance with the terms of the treaty, ${ }^{10}$ announced its decision on April 27. The allied premiers, therefore, assombled in London on April 29, together with the commission. The result of the deliberations was the sccond ultimatum presented to Germany on May 5, and accepted by them on May 11. The text of the protocol containing the decisions arrived at, which accompanied the ultimatum, is given in full in the Federal Reserve Bulletin, June, 1921. The terms of this ultimatum may be summarized as follows:
(1) Apart from her restitution obligations, ${ }^{11}$ Germany was to pay $132,000,000,000$ gold marks, less amounts already paid and amounts in consideration of ceded State properties and sums credited to Germany received from other ex-enemy powers, plus the amount of Belgium's debts to the Allies.
(2) In substitution for bonds delivered or deliverable, ${ }^{12}$ Germany was to deliver by July 1, 1921, 12,000,000,000 of "Series A" bearer bonds; by November 1, 1921, $38,000,000,000$ of "Scries B" bearer bonds; by November 1, 1921, $82,000,000,000$ of "Series C" bearer bonds, without attached coupons, which were to be supplicd as the commission saw fit, in the light of Germany's capacity, to issue the " C " bonds.

From the date of issue in each case Germany was to pay annually 6 per cent on the amount issued, out of which there should be paid 5 per cent interest on the bonds outstanding, the balance to go to a sinking fund for redemption by annual drawings.
(3) The series were to be a first, second, and third charge on the assets and revenues of the German Empire and States, ${ }^{13}$ particularly on (a) sea and land customs and duties; (b) a 25 per cent levy on all German exports, the equivalent in marks to be repaid by the German Government to the exporter.

[^4](4) Germany was to pay $2,000,000,000$ gold marks annually plus an amount equal to 26 per cent of her exports. Payment of the fixed annuity was to be made quarterly, on or before January 15, April 15, July 15, and October 15, and of the variable annuity, on or before February 15, May 15, August 15, and November 15.
(5) Germany was to pay within 25 days, as the first two installments of the fixed annuity, $1,000,000,000$ gold marks.
(6) A committee on guarantees, consisting of delegates from the powers ropresented on the Reparation Commission, was to be appointed, with power to cöopt not more than three representatives of other powers, when the commission should decide that they held sufficient of the bonds to be issued.
(7) This committee was to supervise the application to the debt service of the customs and duties, the 25 per cent export levy, and such taxes as the German Government, with the permission of the commission, should earmark as substitutes for or additions to the foregoing. The committee was, moreover, to undertake the periodic examination of Germany's capacity to pay; ${ }^{14}$ but "was not authorized to interfere in the German administration."
(8) Germany was to supply materials and labor for restoration as demanded, such goods and services to be valued jointly by one valuer each appointed by Germany and the country concerned, with final appeal to a referee appointed by the commission. But the valuation of the shipping, ${ }^{15}$ reconstruction materials, ${ }^{16}$ coal, ${ }^{17}$ and dyes ${ }^{18}$ was unaffected by this arrangement.
(9) Germany was to facilitate the operation of the British reparation (recovery) act ${ }^{19}$ and any similar acts of the other Allies, and was to pay the equivalent of the levy in German currency to the exporter.
(10) The Allies were to pay to the commission, in cash or current coupons, for all goods and services delivered to them within a month of their receipt.
The ultimatum reiterated the charge of Germany's default in the matters of disarmament, reparation payments, trial of war criminals, etc. Germany was therefore required to declare her resolve to "carry out without reserve or condition the obligations defined by the Reparation Commission," and to accept similarly the prescribed guarantees. Failure to do so would be met by occupation of the Ruhr

[^5]Valley. As previously stated, Germany submitted unconditionally to these demands on May 11, 1921.

In view of the decision as to the total amount due from Germany, it is of interest to quote from the report published by the Reparation Commission on February 23, 1921, some of the claims tendered to it by the leading allied powers for examination and adjudication. In order to bring these to a common denominator, they have been converted into dollars at a rate which is the average of the means of high and low rates recorded during the months of December, 1920, and January and February, 1921.

${ }^{1}$ Converted into dollars at par.
The total claims, of $\$ 44,793,000,000$, amount, approximately at par, to $188,000,000,000$ gold marks. ${ }^{20}$ Had the Reparation Commission accepted these estimates, the payments, omitting minor claims not included in the above table, would have been divided as follows:

${ }^{20}$ The Keynes estimate is as follows, conversion being directly into gold marks. The rate at which francs are converted is that used by the commission (2.20), thus causing a wide divergence betweon the french claims as calculated above and below:

As against this division, the actual proportions, as agreed at Spa and as applying to the whole of the German and one-half of the Austrian and Bulgarian payments, were:

|  | Per cont. |  | Pereent. |
| :---: | :---: | :---: | :---: |

In arriving at the final figure for reparation it is useful to recall some of the proposals as to the payments to be demanded of Germany. The figures are arranged chronologically:
[. mounts in billions of gold marks.]

${ }^{9}$ see $p .1420$.
It is difficult to compare the Paris and second London schemes. It is clear that even with a liberal allowance for the levy based on exports, the present value of the latter is higher than that of the former. The yearly payments under the former, however, would be in the
beginning smaller than under the latter (in point of size) but the former would gradually outstrip the latter as the fixed payments grew, probably more than the indeterminate payments. Under the circumstances any estimate of exports is so hazardous as to be practically useloss, but it seems fairly safe to suppose that the London program, if ever carried out, will take even longer in fulfillment than would the Paris program, even though that was scheduled to last considerably longer than Mr. Lloyd George's one generation.

The difference between the London and Paris programs is by some explained as a difference in function between the two presiding bodies, the supreme council and the Reparation Commission, the latter being concerned mainly with what Germany ought to pay, the former with what she can. Other authorities, however, regard this distinction as largely illusory, citing the fact that the Rcparation Commission, under the terms of the treaty, is required to give Germany "a just opportunity to be heard," and to hear arguments by Germany as to her capacity to pay.

The final decision may be characterized as resulting from two lines of development: The element of a variable annuity, based on some index of industrial prosperity, was suggested at Boulogne, abandoned in the Brussels proposal, rcincorporated in the Paris decision, and finally given a larger place on the London schedule, Germany's export trade being accepted as the criterion of industrial prosperity. The other line of development was in connection with the predetermined annuities. Apart from the variable items, at Boulogne the simple scheme of equal fixed annuities was adopted. At Brussels the principal of progressive annuities was incorporated; it was further adhered to in the Paris agreement, and finally abandoned in the London schedule, where the regular predetermined annuity was fixod at $2,000,000,000$ of gold marks. In the final scheme, therefore, the total payments were made to rely for their elasticity on the variable annuity alone, no provision being made for the lessening of the burden of the payments on the earlier years of fulfillment.

# BUSINESS AND FINANCIAL CONDITIONS ABROAD. 

## GREAT BRITAIN.

## INDUSTRIAL SURVEY.

A survey of industrial conditions in Great Britain indicates that, while in general home industries appear to be very slow in recovering from the depression, the export trade is advancing more rapidly. This statement is supported by an examination of the figures showing the volume of employment, the statistics of trade and transportation, and by such facts as are obtainable concerning the activity of particular industries.

Unemployment.-Though unemployment statistics are not an entirely satisfactory index of industrial activity, the figures indicate that the recent depression has been much more severe than in the case of earlier periods of business inactivity.
Before the war a trade-union unemployment figure of 5 per cent was cause for alarm, and 8 per cent was a figure rarely surpassed. The former mark was passed, however, at the end of 1920; uncmployment mounted to extraordinary heights in 1921, and has receded comparatively little. The trade-union figures for the second quarter of 1921, averaging 21 per cent, were exceptional, owing to the coal strike. The average for the fourth quarter, however, was 16 per cent, and for the third quarter of 1922 , 14.5 per cent. The corresponding quarterly average percentages of unemployed persons included in the national insurance scheme were 16.8 (strike period), 14.9, and 12.1. The decrease shown by the last two figures is probably not substantially affected by the exclusion of the Irish Free State between the two dates.

As measured by the degree of employment, the recovery of business in Great Britain within recent months has been less than in certain continental countries. In the first six months of 1922, for instance, the Dutch trade-union percentage was cut in half; the Danish and Belgian were reduced even more. French statistics indicated a reduction by about one-half, and Italian by a third. The noticeable improvement since June of the present year, however, is peculiarly significant, in view of the normal seasonal trend in the opposite direction.

Such facts give some realization of the enormous burden laid by the depression on British productive operations. On an avcrage, one-eighth of the productive population has received unemployment relief for the last two
years. Unemployment relief funds, raised largely through contributions from employers and workers rather than wholly from direct taxation, place a particularly inconvenient burden on industry. The outlook for the immediate future is by no means encouraging, and preparations are being made to cope with a repetition, if in somewhat lower degree, of the distress of last winter.

The flow of commodities.-In a country such as Great Britain the volume of imports and exports supplies a valuable index of industrial activity. Dealing first with imports of raw materials, the following table supplics a comparison between 1913 and 1922, and indicates the extent of recovery in this branch of commerce.

Privcipal Raw Materlals Imported for the Month of August and for the First Eight Months of the Years 1913 and 1922.

| Commodity. | Unit. | 1913 |  | 1922 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Aust. | First 8 months. | $\Lambda 11$ gust. | First 8 monthes. |
| Iron ore. | 1,000 tons. | 527. | 5, 24.5 | 295 | 2,161 |
| Copper, tin, and manganese | .-do..... | 39 : | 521 | 37 | 172 |
| Raw cotton................ | 100,000 lbs. | 390 | 11,354 | 808 | 8,50\% |
| Raw wool and rags | . .do. ..... | 399 | 7,203 | 1,107 | 8,899 |
| Flax, hemp, and jute. | 1,000 tons. | 17 | 384 | 12 | 152 |
| Hides, wet and dry.. | 1,000 cwt. | 113 | 1,006 | 117 | 642 |
| Wood pulp. | 1,000 tons. | 80 | 596 | 105 | 519 |
| Rubber... | 100,000 llss. | 113 | 1,040 | 115 | 946 |

It is obvious that 1922 has been far from a normal year. Only in the case of wool have imports during the first eight months exceeded those for the corresponding period of 1913. The decreases range all the way from 9 per cent in the case of rubber to 67 per cent in that of copper, tin, and manganese.

Comparisons for the month of August show large increases for important commodities, such as cotton and wool. In iron ore, however, the decrease is very serious, though this figure constituted a small increase over July. Imports of raw materials, on the whole, have been at a high level since the middle of the year.

Turning now to exports, the quantity figures are of doubtful value, inasmuch as highly manufactured goods, which occupy an important place in the figures, are not readily susceptible of comparison by weight or volume. Hence, except in the case of coal, a separate important export, the board of trade figures of the physical volume of exports are used, as follows:

Value of Principal Exports of United Kingdom Manufactures, 1922.
[On basis of 1913 prices. In thousands of pounds sterling.]

| Groups of articles. | Average of first three quar${ }^{\text {Lerrs, }}$ 1913. | 1922 |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | First quarter. | Second quarter. | Third quarter. |
| Iron and steel, and manufactures thercof. | 13,923 | 9,321 | 8,903 | 9,327 |
| Machinery. | 8,320 | 5,604 | 3,397 | 4,525 |
| Cotton yams and manufactures. | 31,636 | 18,387 | 19,734 | 23,463 |
| Woolen and worsted yarns and manufactures. | 9,230 | 6,938 | 7,576 | 7,984 |
| Apparel. | 5,342 | 2,273 | 2,333 | 2,958 |
| Chemicals, drugs, dyes, and colors.-.- | 5,006 | 2,948 | 2,898 | 2,694 |
| Vehicles (including locomotives and ships). | 6,268 | 6,137 | 2,935 | 3,742 |

It will be scen at once that, while exports are on a much lower level than in 1913, the present year has witnessed little improvement. Only in textiles and apparel have steady increases been registered, while machinery and vehicles have declined very considerably.

Transportation.-Statistics of the movement of goods by railways and ships give mixed indications, agreeing substantially, however, with those given by the figures of unemployment and trade. With regard to general trade, as suggested by railway traffic statistics, there has been little improvement so far, as appears from the following table:

Estimated ${ }^{1}$ Tonnage of Freight Carried on Railways, 1921-22.
[Monthly averages. 10,000 tous.]

[^6]The only clearly marked trend to be noted is the steady increase since the latter half of 1921 in "other minerals" moved, these consisting largely of iron. The increasing movement of the raw materials of the metallurgical industries is an encouraging sign.

Since these figures are indicative of conditions of both internal and foreign trade, it is important to see which is responsible for the apparent general stagnation. The following table is suggestive in this connection:

Tonnage of Ships with Cargoes Entering and Leaving British Ports (Seasonal Changes Eliminated. ${ }^{1}$ )
[Monthly arorages, 1921-22. 10,000 tons.]

| - | Entoring. | Leaving. |
| :---: | :---: | :---: |
| Tirst quarter, 1921. | 309 | 293 |
| Fourth quarter, 1921 | 316 | 402 |
| First quarter, 1922. | 323 | 458 |
| Third quarter, 1922. | 372 | ${ }_{5}^{460}$ |

${ }^{1}$ By adjustments made to actual figures by Prof. A. L. Bowley, based on 10 years pre-war expericnce.

The figures show a steady increase both in tonnage entering and leaving British ports, with the larger increase in the latter. The remarkable increase in outgoing tonnage, however, must be largely due to the recent improvement in the coal export market, which was so disastrously disrupted by the reparation deliveries. It is interesting to note, incidentally, that shipping freights, which attained their maximum in March, 1920, reached the point of only 28 per cent of the 1920 average in July and August of the present year. These considerations, all taken together, seem to give added weight to an encouraging view of the condition of foreign trade, while supplying additional eridence of the tendency of domestic activity to lag behind in the general upward movement.

Special industries.-British agriculture is in a most serious condition as a result of the disproportionate fall in the prices of farm products, notably cereals. The price of wheat is typical. In December, 1920, it was 86s. 9d. per quarter, as compared with 34 s . 3 d . as a normal pre-war figure. By December, 1921, it had dropped to 45 s . 3d., and in the week ending October 28, 1922, had reached 41s. 6d., that is, only 21 per cent above the 1914 level. Barley, which sold at 41s. 2d. per quarter in the week ending October 28, has suffered a similar fall, from 92s. 9 d . in the corresponding week of 1920. Analogous figures for oats are 26 s .7 d ., as compared with 54 s . 4 d ; that is to say, all these commodities have fallen in price by more than one-half during the past two years. Potatoes reached a price in October even lower than that general before the war. As a reflection of these conditions, both the National Farmers' Union and the Agricultural Workers' Union have formulated appeals to the Government "to sare the agricultural industry from ruin." Returns from stock, in contrast to crops, however, have been satisfactory, sheep proving particularly profitable. The excessive
fall in the prices of farm products is indicated in the Economist's index number of wholesale prices of cereals and meat, which was at the end of October 153 per cent of July, 1914, while the general number was 166.2 .
The situation in the coal industry is a useful index of general industrial conditions. The last fow months have witnessed a steady increase in output, the figure of $5,440,500$ tons being reached in the week ending November 11, as compared with $4,597,800$ tons in the first week of July. This represents an increase of over a million tons during the past 12 months. How far is this due to increased export demand, and how far to growing industrial activity at home? Undoubtedly the strike in the United States increased Great Britain's exports con-siderably-over $2,500,000$ tons were sent to this country during the Septomber quarterbut the increase of output has persisted despite the cessation of this demand. The following are the figures of coal exported, by quarters:
[Thousands of tons.]

| , | 1921 | 1922 |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Fourth quarter. | First quarter. | Second quarter. | Third quarter. |
| Exports. | 11,309 | 13,237 | 13, 944 | 18,293 |
| Sunkers. | 4,010 | 4,403 | 4,427 | 4,736 |
| Coke exports. | 358 | 522 | 403 | 747 |

The value figures are at first sight very encouraging. In the first nine months of the year coal exports valucd $£ 51,410,935$, as compared with $£ 27,856,159$ for the same period of 1921. The September figures for the two years were $£ 8,110,083$ and $£ 5,194,356$, respectively.

Even allowing for the spurt due to the American strike, there is seen a steady increase in the export trade. The September figures were about up to the 1913 level. Bunkers were much lower, however, owing to the increased use of oil as fuel. Fifty million gallons of fuel oil-a non-British product, be it notedwere exported during the third quarter of 1922.

This increased export of coal more than counterbalanced the increased output. The output for the third quarter (allowing liberally for a bank holiday) was not more than 2,500,000 tons greater than in the first, while exports were $5,000,000$ tons greater. So that it can not be supposed that domestic consumption is increasing with any considerable speed. On the contrary, support is given to the opposite view by the fact that imports, which reached a value of over $£ 12,000,000$ in the first nine months of 1921, amounted to only $£ 38$ for the same period of 1922. Thus, as an index of general indus-
trial conditions, the coal situation is not encouraging.

The iron and steel industry has been recovering very slowly in output during the past 12 months, as shown in the following table:
[Thousauds of tons.]

1 For quarter beginning with month at head of column.
The September pig-iron figure represented about one-half of the 1913 monthly output, the steel figure about 87 per cent.

In September there were 139 furnaces in blast, an increase of 13 over August and of 71 over September, 1921. Tin-plate and sheetsteel mills working were 467 in number in September, as compared with 486 in August and 361 in the previous September. The shifts worked per week were 5.1 per cent higher than in August, but 4 per cent lower than a year before. On the whole, employment has shown a slow but steady improvement since May.

Perhaps no trades have suffered as heavily from the depression as have engineering and shipbuilding. Of the membership of tradeunions reporting, 27.8 per cent were unemployed at the end of September, an increase of 2.4 during the past 12 months. In engineering and iron founding alone, 22.9 per cent of the insured workers were totally unemployed, and in shipbuilding 37.1 per cent. While varying widely from district to district (in Scotland 45.2 per cent of insured persons in the shipbuilding trades and 29.5 por cent in the engineering were wholly idle), there is as yet no general improvement to be noted.

Lloyd's Register fails to give any more encouraging returns regarding shipbuilding activity. At the end of September the gross tonnage of merchant vessels over 100 tons gross under construction in the United Kingdom was $1,617,045$, of which 419,000 was tonnage on which work had been suspended for some time. By comparison, the end of June figure was $1,919,504$, while the September, 1921 , tonnage was $3,282,972$. The average during the 12 months immediately preceding the war was $1,890,000$ gross tons. Tonnage commenced and tonnage launched, however, during the quarter, each showed
large increases over the returns for the June quarter. The plans passed for new vessels during the year ended June 30, 1922, were the lowest in 35 years.
The textile trades, while never having suffered so seriously as the equipment trades, present a somewhat more encouraging prospect. The returns made by employers to the Ministry of Labor showed that in the week ending September 24 the workpeople employed had increased since the corresponding week of the past year by 5.9 per cent in the cotton trade, 17.5 per cent in the woolen, and 16.3 per cent in the worsted trade. The total wages paid had decreased by 7.5 per cent in the first case, but had risen by 28.4 per cent and 13.9 per cent, respectively, in the second and third. These figures confirm the reports of little, if any, improvement in the cotton trade. Organized short time is widespread, covering in the week ending September 23, about 14 per cent of the workpeople included in the returns above mentioned, the average extent of the shortage being about 14 hours per week.

The wool and worsted trades, on the other hand, show decided signs of revival. In the latter short time has almost ceased, though it is still prevalent in the former.

The following statistics give an indication of the situation in the textile trades:

|  | $\begin{aligned} & \text { September, } \\ & 1921 . \end{aligned}$ | $\begin{gathered} \text { August, } \\ 1922 . \end{gathered}$ | $\begin{aligned} & \text { September, } \\ & 1922 . \end{aligned}$ |

## BANKING.

The most recent banking statistics give further support to the view of the industrial situation expressed above. For the first time in 19 months, the October averages of nine London joint-stock banks showed a substantial expansion of advances, by $£ 12,400,000$ ( 1.7 por cent) for the month. Acceptances, which had been declining since December last, rose by $£ 7,000,000$ ( 14 per cent). Deposits, after falling off for three months, increased by $£ 25,600,000$ ( 15.4 per cent). This increase, one-half of which was absorbed by the growth of advances, went also into discounts, which rose by $£ 13,200,000$ ( 4.4 per cent). A contraction of investments by some $£ 11,400,000$ ( 2.8 per cent) was almost wholly balanced by the expansion of the cash item, which includes
till money, balances at the bánk, credits with other banks, and checks in course of collection. These movements may be taken as evidence of increasing trade and industrial activity.

## FRANCE.

THE PUBLIC DEBT OF FRANOE.
Since the convening of Parliament in October, financial matters have furnished the chief topic of discussion. This has centered about the proposed ordinary budget for 1923, but the situation has occasioned thorough consideration of the entire field of French public finance, including reparations, taxation, and the public debt.

In the Bulletin de Statistique et de Législation Comparée, the Government presented in detail the public debt as of March 31, 1922, compared with that of May 31, 1921, the date of the last previous detailed public statement. The following table summarizes the public debt:

|  | May 31, 1021. | Mar. 31, 1922. |
| :---: | :---: | :---: |
| Internal debt: |  |  |
| Perpetual and term- | Francs. | Francs. |
| (a) Ministry of finance. | 128, $575,257,038$ | 147, 417, 403, 738 |
| (b) Other ministries.. | 7, 406, 479,473 | 7,640,922,115 |
| Total. | 136, 051, 736, 511 | 155,058,325, 893 |
| Floating dobt- |  |  |
| (a) Nonterest bearing.... | $\begin{array}{r} 84,727,822,800 \\ 1,403,855,960 \end{array}$ | $\begin{array}{r} 86,2555,322,300 \\ 494,989,800 \end{array}$ |
| Total. | 86, 131, 678, 700 | 87,050,312,100 |
| Total intornal | 222, 183,415,211 | 242, 108,637, 093 |
| External debt: ${ }^{1}$ |  |  |
| Term. | 41,603,621,000 | 41, 438, 404, 000 |
| Eloating | 30, 500, 574,000 | 33, 437,947, 040 |
| Total external. | 75, 164, 195, 000 | 74, 876,351, 000 |
| Total debt | 297,367,610,211 | 316, $98.4,988,953$ |
| ${ }^{1}$ The foreign debt is carried at the rate of exchange for the given date. |  |  |

The increase in the internal funded debt of the ministry of finance amounts to 18,842 ,146,700 francs. This arose principally under two heads-reconstruction and the 2 -year treasury bill issue of June, 1921, itemized as follows:

Firanes.
Credit national loans
7, 703, 400, 000
Capital of annuities due for war damages.. 4, 188, 600, 000
2-year treasury bills.
5, 665, 342,000
The last item must be repaid or refunded in June, 1923.
Discussion of the internal term or funded debt.-During the period, the internal funded debt increased by $13,986,589,342$ francs, carrying annual charges of $1,188,805,549$ francs. Since March 31, 1922, it has been increased by the Crédit National loan of July, amounting to $3,900,000,000$ francs, and by the $3-5$ year treasury bonds of October. In this last issue
final figures are not available, but the estimates run above $8,000,000,000$ francs. There is no prospect that the internal funded debt will decrease in the near future, but rather reason to anticipate that it will be largely increased for some years to come. The reconstruction of the devastated regions is by no means completed, and estimates of the amounts of capital yet to be expended are vague, that of M. Bokanowski being $55,000,000,000$ francs. But these sums, devoted to restoring to productivity an area which has always been the source of national income out of proportion to its size, increase the potential financial resources of the French Government. L'Economiste Français of November 4 shows the progress of rehabilitation to July 1 of this year. The total areas devastated amounted to $3,306,-$ 350 hectares, or almost $7,000,000$ acres. Of this, $3,177,958$ hectares had been cleared of projectiles and $3,015,120$ hectares had been cleared of projectiles, wire, and trenches. Almost one-half ( $1,533,402$ hectares) was under cultivation this year. The population has very largely returned. Out of a total of 4,690,062 inhabiting the region in 1914, 2,614,347 evacuated their homes on account of the war. Most of them have returned, the population being now given as $4,056,883$. As many of these refugees were obliged to depend upon friends or relatives, or even upon public funds during the period of their exile, their return, alone, lifts some burden from the rest of the country. House building has proceeded slowly. Out of 571,345 houses destroyed or damaged, 221,533 have been completely ropaired and 181,417 temporarily, the remainder of the population living in various types of makeshift dwollings. Out of 22,161 factories damaged or destroyed, 19,923 had been rostored more or less completely by April 1, 1922. The total cost of this reconstruction is difficult to discover, as it is usually reported in conjunction with other items, but it will probably exceed $60,000,000,000$ francs by the end of the year. But it most certainly has increased the resources of France by comparison with November, 1918, by many times that amount.

The ultimate solution of the internal funded debt of France involves two factors - the value of the franc and the terms of issue of several loans. Since 1915, the year of the first war loan, the value of the franc has undergone wide fluctuations but always at a serious dopreciation from its gold value, though this fact was not appreciated until the removal of artificial control of the exchanges. As a result the return of the franc toward its pre-war value would heavily increase the burden of the public debt, as the entire wealth of France
in 1912 was estimated at only a little over $300,000,000,000$ francs. Further complications arise from the terms of issue of the several loans. The four war loans were emitted considerably under par, the 5 's of 1915 at 88 francs, the 5 's of 1916 at 88.75 francs, the 4 's of 1917 at 68.60 francs, the 4's of 1918 at 70.80. These are perpetual and consequently no maturity is anticipated; on the other hand the 5's of 1920 were issued at par and are amortizable at 150. Many of the other loans issued or guarantecd by the Government are repayable at a premium.

The floating debt is almost entirely accounted for by the Bons de la Défense Nationale in circulation and the advances by the Bank of France. The former showed a net increase of $9,027,273,000$ francs, and the latter a decrease of $4,700,000,000$ francs. Both of these items, especially the latter, fluctuate materially from month to month. It is proposed to reduce the advances by the bank at the rate of 2,000,000,000 francs a year; which would require its reduction to $23,000,000,000$ franes on January 1 , 1923. On November 23, 1922, the figure stood at $22,600,000,000$ francs, compared with $21,500,-$ 000,000 on March 31. The remainder of the interest-bearing floating debt is composed of ordinary traasury bills, which declined from $2,837,734,000$ francs to $1,261,715,000$ francs, and of sundry smaller items, including on May 31,1921 , the sum of $618,115,600$ francs on the current account of the United States Treasury, which does not appear on March 31,1922. The total net increase under all headings of the interest-bearing intornal floating debt was 1,827,499,500 francs, compared with an increasc of $10,411,563,500$ francs during the period previously reported in detail from September 30,1920 , to May 31, 1921. The noninterestbearing floating debt is composed of small administrative items.

The external debt. - The foreign term debt of France was on March 31, 1922, entirely due the United States, with the exception of the Japanese loan of $100,000,000$ yen, carried at $545,170,000$ francs. It is itemized as follows:

|  | Amount, in dollars, Mar. 31, 1922. | Equivalent in francs. | Annual interest, in franes. |
| :---: | :---: | :---: | :---: |
| (1) Advances from the U. S. Treasury | \$2,950,762,000 | 33,635, 6886,000 | 1,681,933,000 |
| (2) Loan of $\$ 100,000,-$ |  |  |  |
| 000 (1920), 8 per cent. <br> (3) Loan of \$100,(000,- | 94, 605, 400 | 1,078, 497,000 | 135,500,000 |
| $000 \text { (1921), } 7 \frac{1}{2} \text { per }$ cent | 93,832,300 | 1,060,684,000 | 179,014, 000 |
| (4) Loan of Lyon,Bor deaux, and Marseilles. | 40,586,000 | 462,650,000 | 27,793,200 |
| (5) Obligations io American Government for war stocks | 407,341,145 | 4,643,687,000 | 232, 183,800 |

On these loans the total annual interest due the United States amounted to $2,256,424,000$ francs. Of this, $1,914,116,800$ would be due the American Treasury. On that date (March 31,1922 ) the franc was worth 9.03 cents. With the franc at recent levels the annual charge on this debt would be about 25 per cent higher.

The foreign floating debt is more widely distributed, and takes-two forms-treasury bills and bank credits. It is distributed as follows:

| Designation of debt. | Capital. | Convorted into franes. Mar. 31, 1922. | Annual charges (in francs) on Mar.31,1922 |
| :---: | :---: | :---: | :---: |
| Treasury bills with British treasury | ${ }^{1572,524,500}$ | 2*,626,225, 000 | 1,288, 180, 100 |
| Treasury bilis with Bank of England. | ${ }^{1} 65,000,000$ | 3,250,000,000 | 195,000,000 |
| 'Treasury bills sold in Japan..................... | ${ }^{2} 33,161,000$ | 179,060,000 | 10,300,000 |
| Bank credits: <br> Spain. | $3365,000,0000$ | 666,000,090 | 43, 952,000 |
| Argentina............ | +15,824, 117 | 567,000,000 | 9, $5 \times 2,000$ |
| Isolland. | 5 55,000, 000 | 236,502, 000 | 33, 115,000 |
| Fingland. | ${ }^{12,950,(009}$ | 147,500,010 | $5,400,000$ |
| Lruguay | ${ }^{\text {c }} 15,000,000$ | 136, 009, 000 | 6,750,000 |
| 'Total. |  | 33, 437,947,000 | 1,572,579, 100 |

[^7]Comparison with the figures of May 31, 1921, shows that France had reduced the term debt to the United States by $\$ 29,028,855$, effected principally by the retirement of the city of Paris loan carried at $\$ 47,587,000$ on the earlier date.

Analysis of the floating debt shows a number of interesting changes. Treasury bills placed with the British Government increased by $£ 36,794,500$; those with the Bank of England remained unchanged at $£ 65,000,000$, while treasury bills amounting to $£ 21,630,000$ placed in the United States had been rotired. In the matter of bank credits, the sums are smallor. The two largest creditors of the external floating debt are Spain and England, both of which accounts show marked decrease. A summary of the changes with respect to the United States shows the following total of repayments between May 31, 1921, and March 31, 1922 :
To Treasury of the United States (francs)... 618, 115, 600 On Government loans placed with American investors..............................
Treasury lill sold in the United States $\quad \$ 36,370,000$
Converted at the rates of exchange of March 31, 1922 (francs at 9.03 cents and pounds sterling at $\$ 4.38$ ), these repayments amount to $\$ 186,925,238$.

Against this is to be set an increase in sums due the American Government on account of war stocks of $\$ 7,341,145$, and the fact that
no payment of principal or interest was made on the item of the foreign term debt designated "Advances of the American Treasury."
The total increase in the public debt in the 10-month period between May 31, 1921, and March 31, 1922, was $19,617,378,742$ francs, with an increase in annual charges of 993,439, 149 francs.

## TILE PRESENT STPUATION OF FRENCH PUBLIC FINANCE.

The increasing figures of the public debt are, for the most part, due to the large loans necessitated for pension payments and for the reconstruction of the devastated regions, or to the deficits accumulated by the payment of interest on advances previously made for those purposes. Under the treaty of Versailles these expenditures are supposed to be met out of reparation payments. However, the detailed statement of the Reparation Commission, recently published, credits Germany with total payments on reparation account of 6,976,813,000 gold marks. Of these France had recoived a total of $1,345,077,000$ gold marks, to which must be added the share of the small undivided remainder and of payments, in cash or kind, made since April 30, 1922, and some credits on account of the Saar mines, etc.
From this may be deducted the expense to France of maintaining the army of occupation, amounting to $1,185,164,000$ gold marks, exclusive of costs of maintenance paid by Germany in paper marks. According to these figures the apparent net reccipts of France are 159,913,000 gold marks ${ }^{1}$ down to April 30 of this year. While such a balance is not to be regardod as final, owing to certain indefinito items, such as the Saar mines, it is sufficient to show that the reparation program has not beon of material assistance to France in meeting the two items of reconstruction and pensions. These are estimated in round numbers at $96,000,000,000$ francs to the end of the current year.

The temporary moratorium of August and the application for its extension for a prolonged period, together with the financial straits of Germany, do not offer much prospect for increased reparation receipts for the immediate future, and the volume of deliveries under such agreements as that concluded between M. de Lubersac and Herr Stinnes is problematical.

In 1921 the receipts from taxes and other revenue amounted to $21,543,000,000$ francs, while expenditures were $52,023,000,000$ francs, making a deficit of $30,480,000,000$ francs,

1 On October 27 IL . de Lasteyrie stated in the Paris Chamber of Commerce that Franco had received $1,000,000,000$ gold marks, which was exactly the cost of the army of occupation.
covered by borrowing. The increase in the public debt during the current year emphasizes the gravity of the situation. According to M. Bokanowski, the reporter of the budget, the deficit this year will equal that of last. He estimates the revenues from taxation and other sources at $20,900,000,000$ francs. The ordinary budget provided for expenditures of $24,687,000,000$ francs; the recoverable budget (against which there have been no receipts credited to Germany) at $10,558,000,000$ francs, while additional credits voted to date (end of October) were $2,462,000,000$ francs. Credits proposed and likely to be passed this year amounted to $422,000,000$ francs. This gives a total expenditure for the year of $38,129,000,000$ francs, of which $17,229,000,000$ francs must be covered by borrowing. Further, the Crédit National has issued loans to the amount of $8,000,000,000$ francs for the settlement of claims, and groups of sinistrés have floated issues to the sum of $2,000,000,000$ more. Principal and interest of both these types of obligation must be met by the State, thus bringing the figure of Government liabilities to $27,229,000,000$ francs. To this figure M. Bokanowski adds other miscellaneous debits amounting to nearly $4,000,000,000$ more francs, as follows:

Francs.
Repayments due lanque de France....... 1,700, 000, 000
Interest on foreign commercial debt........ $1,000,000,000$
Payments on special accounts. ............. $500,000,000$
Payments on war claims (sinistrés)....... 1, 000, 000, 0c0
This would make a grand total deficit of over $31,000,000,000$ francs, with expenditures for the year totaling $52,329,000,000$ francs. Mr. Bokanowski computes that nearly as much money ( $30,000,000,000$ ) must be borrowed in 1923. Under his estimation the total expenditures of 1921, 1922, and 1923 will each be far in excess of twice the expected revenues of the Government from its regular or temporary sources. It must always be borne in mind that the budget at present under discussion for 1923, on which an estimated deficit of something less than $4,000,000,000$ francs is shown, is the so-called ordinary budget, ${ }^{1}$ while the expenditure for war pensions and reconstruction is carried on the recoverable budget, which has not yet come up for discussion. M. Bokanowski's figures are for total expenditures under all categories.

Senator Beranger, president of the finance commission of the Senate, presented similar estimates:

[^8]

The statistics of the situation candidly presented to the public are so formidable that it might have been expected that their publication would have occasioned some disquietude in public sentiment, especially as reflected in the exchange and investment markets. Exchange was, indeed, weak at the time, and it is possible that the discussion encouraged some speculation for the decline and also the shifting of bank credits out of the country. The security markets, however, remained firm, noticeable strength being registered in some departments. This phenomenon has been ascribed to various causes. The strength in Russian issues was explained by the prospects of improved relations. In the case of other foreign issues, such as American and Spanish, it was credited to a desire to acquire investments which would be secure against a further downward movement of the franc. In the case of industrial, or other issues not having a fixed rate of return, it was compared to what has been known as the "flight from the mark." It is usually impossible to discover the exact reason for any movement in speculative issues, and the prospect of increased business at advancing prices was also an eloment in the rise in industrial securities. In some instances such a rise in prices would result from a decline in franc exchange. That the riso in industrials may have beon linked to the decline of the franc is suggested by the fact that the prices of such securities declined when the franc rallied. Is a matter of fact, it would seem that, had these disclosures and predictions seriously disturbed public confidence, they would have been reflected in the prices of such securitios as the old 3 per cent rentes, which, though somewhat lower than last summer, have remained firm. The issue of new 3-5 year treasury bills, which were offered for subscription between. October 9 and November 10, was well reccived. It had been hoped that some $5,000,000,000$ or $6,000,000,000$ francs would be taken; the latest estimate is $8,232,124,000$ francs.

Evidently the public was reassured by the analysis of the favorable features of the situation, as presented by the Minister of Finance, M. de Lasteyrie, who issued a series of figures showing that while current expenditures are still formidable, the trend is distinctly en-
couraging. First of all, Government borrowing is declining on the following scale:

The last figure is disputed by M. Bokanowski in his detailed statement given above; but at its worst it shows that this years figures are not worse than last year's. At the same time, it will be recalled that perhaps half of the reconstruction has been paid for, and that the great sums disbursed in 1920 and 1921 were raised in years of depression, while the current year is one of fair business activity.

There have been important cconomies in Government expenditure, notably in military costs, as follows:

Franes.

| 1919 | 18, 185, 000,000 |
| :---: | :---: |
| 1920 | 7, $648,000,000$ |
| 192. | 6,312,000,000 |
| 1922 | $4,910,000,000$ |

Making adjustments due to the changed value of the franc, the figures for the current year are computed to be 7.9 per cent less than in 1913. Of course, a large part of this ceonomy is due to the utilization of war materials purchased in other years, and a part to the fact that 1913 was what, before the war, was regarded as a year of excessive military costs. But such criticism can not obscure the evident and encouraging fact of declining expenditure under this head, while the reduction of military service to 18 months is an important contribution to the productive capacity of a nation decidedly short of man power. It is also evident that military expenditure can be held responsible for but a small fraction of the total estimatod deficit of the yoar. Civil expenditures also show a marked decline.

But in spite of these economies, the fact remains that at present the annual income of the French Government is not sufficient, without borrowing, to meet current expenses, including interest charges on existing internal indebtedness and foreign commercial loans. This fact has given rise to the idea that France was undertaxed. Whether or not this is true, the revenue of the Government in recent years shows a most cncouraging growth, despite the fact that the resources of the country are weakencd by the war loss of at least $2,000,000$ men killed or seriously wounded.

Taxes and Opmer Revenues.
Francs.
$6,791,000,000$
11, 586, 000, 000
$19,821,000,000$
$21, \widehat{6} 43,000,000$
M. de Lasteyrie estimates that the total revenue for this year will run over $1,000,000,000$ francs higher than last year.

The problem of French expenditure was briefly summarized by M. de Lasteyrie on October 27 before the Chamber of Deputies, when he said that while there was a serious deficit in the ordinary budget, this would be covered within two or three years by the return from existing taxation; while the much larger deficit in the recoverable budget was more disquieting, as it could not be reduced without suspending the payment of pensions or the work of reconstructing the devastated regions.

## ITALY.

Improvements in Italian industry and finance which were noted in the spring and became more evident in the summer appear to be maintained. In this rocovery most industrics have shared, though the iron industry, owing to its want of natural advantages, is showing little rallying power.

One of the clearest evidences of this recovery is to be found in the index of security prices. In the following table the prices of December, 1918, are taken as the base.

| Business or activity | $\begin{gathered} \text { i Decem- } \\ \text { ber, } \\ 1921 . \\ \end{gathered}$ | March, June, $1922 .=1922 .$ | $\begin{aligned} & \text { Sey. } \\ & \text { tember, } \\ & 1922 . \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Banks. | 94 | 90.92 | 94 |
| Railroads | 50 | 52 \% 2 | 56 |
| Transportation: Land....... <br> Soa | 58 | 61 47 | 84 |
| Cotion. | r 54 | $\begin{array}{rr}47 & 53 \\ 115 & 136\end{array}$ | $\begin{array}{r}74 \\ 150 \\ \hline 18\end{array}$ |
| Juc. | 102 | 108 104) | 127 |
| Wool. | 118 | 118: 1.31 | 143 |
| Linem. | 155 | 124. 150 | 165 |
| Silk. | 153 | 128. 183 | 201 |
| Mining. | 53 | $50 \%$ 00 | 59 |
| Iron. | 17 | 14 14 | 16 |
| Machinery | 32 | 18.18 | 22 |
| Automobiles | 56 | 17 ; 57 | 64 |
| Enectricals. | 67 | 68 - 70 | 73 |
| Chemicals. | 59 | 54 : 61 | 70 |
| Sugar. | 101 | 97: 106 | 115 |
| Other food products. | 107 | $98^{\circ} 106$ | 125 |
| Warcrworks. . | 90 | 87: 84 | 84 |
| Realt | 100 | 93 - 92 | 103 |
| Spectalties. | 112 | 103 ! 103 | 121 |

The gencral index number is given as 63.84 for December, 1921; 60.54 for June, 1922; and $67 . \pm 7$ for September. The recovery has been most pronounced in the textiles, especially silk, but probably the most encouraging feature is the wide distribution of improvement.

The investment situation also points to a return of confidence. In June and July capital withdrawn from industry, whether by mergers, bankruptcies, or readjustments, exceeded the amounts of new capital invested. This situation was reversed in August and September, but recurred in October.

Increase of Capitai Investment in Italy.
[Thousands of lire.]

| Month. | Investments. | Withdrawals. | $\begin{gathered} \text { Net } \\ \text { invest- } \\ \text { ment. } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Jume |  |  |  |
| Jung. | 417,173 | 6:0, 131 | -178,958 |
| July. | 207,520 | 299, 033 | -92,003 |
| August | 184,522 | 91,193 | 93,329 |
| Soptember. | 298,757 | 37,00-4 | 261,753 |
| October. | 432,000 | 460,000 | -28,000 |

The situation of the banks of issue seems to be improved, as may be seen in the table on page 1507, carried down through October of this year. The statistics show an increase in total reserve to $2,039,000,000$ of lire, which is slightly over the average for $1921(2,020,000,000$ lire).

Circulation for the account of the State declined to $8,049,000,000$ in June, the lowest figure for the year, and $1,015,000,000$ lower than the average for 1921. Since June it has shown a gradual tendency to expand, but it is still materially lower than at any time last year. Commercial circulation, on the contrary, is considerably higher than in recent months, the September figure having been exceeded only three times--in December, 1921, and January, 1922, when it was ascribed to the Banca di Sconto crisis, and in July, 1922. The most probable explanation of the high volume of currency issued against commercial needs lies in the maintenance of a high price level. For, unlike prices in many countries, Italian prices never passed through a period of contraction. Commercial circulation reached its low pointfor the year in May, when it stood at $9,259,000,000$ lire, and in the same month the index of wholesale prices reached the lowest figure (524) since July, 1921. Since May prices have steadily mounted to 601 for October, which comparcs with the figure of 599 for the same month last year. Despite rising prices and increased business activity, the banks of issue show a declining tendency in both deposit and demand liabilities and in loans and discounts, though both of these items are higher than a year ago.

## GERMANY.

## THE EXCHANGE SITUATION.

The catastrophic decline in the value of the mark during the last few months has increased the difficulties confronting the German Govern-
ment and the Reparation Commission. Factors which control mark exchange, discussed in previous articles (see Fedmral Reserve Bullftin for September and October), continued to exercise their depressing influence, with the result that the mark, as expressed in -United States currency, decreased from 0.066 cent on September 11 to 0.0369 cent on October 11, a decrease of about 45 per cent in one month. This drop further demoralized industry and commerce. Wholesalers and retailers were willing to part with their goods only in exchange for forcign values, and in many instances the mark ceased to be a medium of exchange or standard of value. In addition, the "flight from the mark" assumed a velocity previously unprecedented. These conditions accelcrated the need for stabilizing the value of the mark to such an extent that the stabilization problem occupied first place in the deliberations of the Reparation Commission and has become the principal issue of the Social Democratic Party. Since, however, final stabilization of the mark can not be accomplished before the reparation question is settled, other preliminary measures were adopted to prevent the entire collapse of the mark and to curb speculation in foreign exchange. As the first step, the German Government, under date of October 12, issued a decree forbidding the billing and paying in foreign currencies for domestic transactions and the purchase of foreign currencies for purposes of speculation or capital investment. The seriousness of the situation and the great importance attached to this new forcign exchange decree can be gauged from the fact that it was based upon paragraph 48 of the constitution of the Reich, which states that in case the public order is being disturbed or scriously threatened, the President must take the neccssary steps "to reestablish a state of security." The internal insecurity arises from the fact that the precipitous drop in the value of the mark has raised the cost of living to such an extent as to leave the purchasing power of large masses of the population further and further behind.
The new law has aroused great interest all over Germany. While approved by many, especially by the socialists who asked the Government to adopt all means to stabilize the mark, it was bitterly attacked by almost all banking and morcantile interests of the country for reasons discussed later. This new act, together with the general problem of stabilizing the mark, played also an important rôle in bringing about the fall of the Wirth government.
The most important clauses of the decree are embodied in paragraphs 1 and 2 and are given in full below as translated from the origi-
nal German text. The rest of the decree will be briefly summarized.

Paragraph 1.-Payment in foreign currency in the domestic trade, as described in paragraph 1 , section 3 , of the law on dealings in forcign credit instruments of Felruary $2,1922,{ }^{1}$ shall not be demanded, tendered, stipulated, effected, or acceptod.

In the retail trade the fixing of prices in German money on the basis of a foroign currency is also prohibited. The German Government reserves to itself the right to issue corresponding regulations with respect to other domestic trade. "Foreign exchange," in the sense of this decree, includes specie, paper bills, bank notes, etc., remittances, orders to pay, checks, and bills of exchange.

Paragraph 2.-The purchase of foreign exchange is permitted only after authorization has been secured from the "Prüfungstelle" (office of verification) within whose jurisdiction the person giving the order has his industrial undertaking, or, in the absence of such, his domicile, or, in the absence of both, his place of sojourn. No permit is required it the order was given by the Reichsbank or by banks or bankers answering the description given in paragraph 1, section 1, of the law on dealings in foreign credis instruments of Fobruary 2, 1922. or by a person or association registered in the commercial or corporate register and to whom is issued by the competent chamier of commerce a statement to the effect that the nature of their enterprise invoives business transactions, the pertomance of which makes payments to foreign cointries necessary.

Prufungstellen are the subsidiaries of the Reichsbank and other offices designated for that purpose by the Federal Government in agrecment with the Reichsbank. Banks and bankers who are authorized to sell forcign exchange may carry out such transactions only after they have satisfied themselves as to the identity of the person giving the order, who also must state the purpose for which the foreign currency is intended (par. 3).
The Prüfungstellen are required to vorify the statements transmitted to them as to whether the foroign values are usod for purposes "essential to the interests of German cconomic life." Purchases of foreign exchange for purposes of speculation or investment of capital are regarded as "nonlegitimate" (par. 4). Persons who have purchased foreign exchange are obliged to furnish to the Prüfungstelle any data, documents, or other material essential to show how the foreign exchange has been utilized (par. 6). Imprisonment up to three years and a fine equal to one to ten times the value of the foreign exchange is provided for deliberate violation of this law. In the samo manner owners of banking institutions or their representatives are subject to the above punishment if they deliberately sell foreign exchange contrary to the procisions of paragraph two (par. 8).

A penalty up to 100,000 marks is further provided for carelessness on the part of bankers or their employees (par. 9), and a finc up to $1,000,000$ marks for persons who make false

[^9]statements or fail to furnish the necessary data (par. 11).

The executive regulations concorning this decree, issued a few days later, contain some additional provisions which declare that the terms of the decree do not apply to business transactions of the Federal and State authorities nor to transactions of the post and railway administrations. They further state that paragraph 1 of the law does not apply to transactions in which foreign currency is given by foreigners in payment for goods and services. Nor docs it apply to payments made in foreign exchange within the border zone (Grenzbezirk) or the occupied territory, provided the value of the foreign exchange does not exceed 20,000 marks at the current rate of exchange.
Since the decrec of October 12 left many questions unsettled, an additional decree supplementing the first one was issued on October 27. Its main clause reads as follows: "Payment in foreign currency for domestic purchases may be made where such payment has been agreed upon before the decree was enacted, provided such payment falls due not later than December 15, 1922. Where payment is to be effected after December 15 it must be made in marks at the rate of exchange of the day of payment."
The new foreign exchange decree embraces two different questions, namely, the billing and paying in foreign exchange for domestic transactions and the purchase of foreign exchange. The prohibition of payment of foreign currencies in domestic transactions, although it has been favorably commented upon by a large part of the Gorman press, is unjust to many retailers, since this law does not apply to wholesale transactions. Thus, while retailers pay for thoir purchases, especially those imported or based upon forcign raw materials mainly on the basis of a forcign currency, they are prevented by law from calculating their sales on this basis. The cotton trade especially was very hard hit by the new regulation, since for sometime it has been a general custom in Germany to deal in cotton only on a dollar basis. The Bremen cotton exchange was, thorefore, among the first institutions to take exception to the new regulation.

The second part, however, regulating the buying of foreign exchange is by far more important. In the first place, many owners of foreign exchange, knowing that it will be very difficult in the future to acquire foreign values, have been very reluctant to part with their holdings. The consequence is that higher prices must be paid for foreign currencies. The new bill also eliminated the mark to a large extent from international arbitrage transactions and thus induced many foreigners to
liquidate their mark holdings. In addition it inflicts serious damages upon the sarings of many German nationals not engaged in business, for it prevents private citizens from investing their savings in values which are not subject to depreciation and thus makes safe investments impossible. This undoubtedly will induce many Germans to inrest their mark holdings in commodities, by which an artificial demand for goods is created, followed in turn by an increase in prices. An artificial inland domand further tends to increase domestic consumption, and thus it not only decreases the quantity of goods arailable for export, but may ultimately result in an increase of imports. To cope with this situation and to provide safe investment sccurities, the Government was urged to issue gold certificates, and in fact it approved in principle the issuance of gold notes amounting to about $400,000,000$ gold marks bearing 4 per cent interest. As security for these notes the receipts from taxes on exports and on coal, and part of the gold of the Reichsbank were mentioned. Up to the present time, however, no definite decision has been reached. In many German circles it is believed that an issue of gold notes is inadvisable before the bigger questions of stabilization and reparation are settled.

The passing of the new foreign exchange act seems to have had very little influence upon the recent development of mark exchange. Though the dollar, which on October 10 stood at 3,000 marks, declined to 2,400 marks after the promulgation of the foreign exchange bill on October 13, it rose to 4,000 marks on October 20, and reached its highest point on November 7, when it amounted to 8,392 marks. Since then the dollar has been quoted at between 6,500 to 7,000 marks. It is, however, difficult to state whether the foreign exchange act retarded the downward movement of the mark or not, since important external and internal political events, such as the downfall of the Lloyd George Cabinet in Great Britain and the indefinite answer of the Reparation Commission, exercised a depressing influence on the mark. It may, however, be stated that Government restrictions with regard to foreign exchange transactions are in themselves unable to prevent the downward movement of a country's currency. The Austrian, Polish, and other central and eastern European Governments have issued many similar decrees, which, however, in almost all cases were unable to prevent a further depreciation of the currency.

Although it is thus seen that the now German forcign exchange act was unable to preyent a further docline in the value of the mark, it did eliminate speculation in forcign exchange almost entirely. This seems to indicate that speculation in mark exchange was not playing so prominent a part in the rise and fall of the mark as has been attributed to it and that the great demand for foreign currencies in Germany arises out of legitimate import transactions and the fiscal necds of the Government. The stady declino in the value of the mark since October 12 showed also to what extent the valuation of mark exchange depends upon domestic and foreign political events, and that the quotation of the mark is often determined, not in Berlin, but in other foreign exchange centers, especially in New York.

The discount rate.--Even the huge increase in the amount of paper notes outstanding, amounting to 120 billion in September and 153 billion in October, was insufficient to overcome the prevailing credit shortage. This is mainly due to the fact that prices and the cost of production increased more rapidly than the amount of notes outstanding. The rapid increase in the cost of production forced many enterprises to rely more and more on bank credit. The banks in turn, in ordexto accommodate their customers, rediscounted their bills to an ever larger extent with the Reichsbank. The latter's "holdings of commercial paper have increased very rapidly, as may be seen from the following figures:

Thus the Reichsbank is called upon not only to take care of the evor-increasing demand of the Reich, but also of the growing needs of industry and commerce. In its attempt to check this huge demand for credit the Reichsbank on November 13 increased its discount rate from 8 to 10 per cent. This is the fourth increase since July 28, when the discount rate was raised from 5 to 6 per cent, and is at the present time the highest discount rate charged by any central bank. In the present state of business, however, the new increase can have very little effect upon credit conditions in the country, since the rate of interest charged by private banks is much higher.

## FINANCLAL AND ECONOMIC CONDITIONS IN CENTRAL AMERICA.

In view of the specialinterestin Central American affairs due to the political conference, called by the Secretary of State for December 4, 1922, it is of importance to inquire into the finances of the Governments concerned. As a background to a discussion of fiscal policies, however, a brief description of the economic resources and trade relations of these countries is presented.

Central America comprises the Republics of Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica, which before 1821 constituted a Capitania General under the general name of Guatemala. The soil, climate, and geographical aspect of the five countries are similar. Their products are alike and ethnologically there is much similarity among them. It is perhaps due to these different reasons that the five Central American Republics have recognized to some extent their common origin and interests, and have, thercfore, at different times endeavored to establish themselves as a political unit. Up to the present time, however, all attempts have been unsuccessful. Geographically, Central America may be divided into three distinct regions-the central mountains, the valleys, and the marshy sections of the coasts. The principal cities are built on the highlands of the interior, which makes it difficult to provide for adequate means of transportation. The countries of Central America are primarily two-product countries. The highlands and the slopes of the mountains are particularly well adapted to coffee growing and the lowlands to the cultivation of bananas. The condition of the coffee and banana crops is of great economic importance to the Central American countries.

A large portion of the coffee output of Central America is shipped to England, but the United States is the largest market for bananas. In point of fact, the banana industry in Central America has been developed almost entirely with $\Lambda$ merican capital. $\Lambda \mathrm{t}$ the close of 1920 the largest fruit company had 40,000 acres of land under cultivation in Honduras and 20,000 acres in Guatemala and Costa Rica. The value of its investments was given as $\$ 13,100,000$ in Honduras, $\$ 8,200,000$ in Costa Rica, and $\$ 3,600,000$ in Guatemala. Two other companies have also under cultivation an extensive acreage in Honduras, and the steamship service, railroads, and other services on the Caribbean Sea are almost exclusively in the hands of the fruit companios. This, of course, does not apply to El Salvador, which is the only country without an outlet to the Caribbean Sea. The prosperity of Ceutral

America, with the exception of Honduras, dopends upon the coffee crop and the market price of this commodity. The soil and the climate are so well adapted to coffee growing that other crops which might also prove profitable have been neglected. The majority of the plantations of Guatemala are owned by foreigners, and in the other countries there has been a tendency to sell the best plantations to foreign planters. The reason for this is stated to be the inadequacy of local facilities for financing the crops, whereas foreign owners are able to finance themsolves in foreign markets at low cost. Imports of Central American coffee into the United States are not considerable, compared with our total imports of coffce. In 1921 they amounted to 11 per cent of the total coffec imports into the United States, of which Guatemala furnished $76,000,-$ 000 pounds, Salvador $36,800,000$, Nicaragua 17,700,000, and Costa Rica $16,200,000$ pounds. Exportation of other Central American products, such as gold, silver, hides, cocoa, sugar, coconuts, rubber, mahogany, and others, are of minor importance. In fact, in 1913 coffee comprised 63 per cent and bananas 18 per cent of the total value of Central Amorican exports. Imports into Central America comprise most of the articles necessary to human subsistence, which shows the extent to which coffee growing has led to the noglect of other crops, such as wheat, which can be successfully grown in several parts of Central America. The United States is in an advantageous position with regard to Central American trade, due to the proximity of the Caribbean ports to New Orleans and of Pacific ports to San Francisco and Los Angeles, and also to Now Orleans through the Panama Canal.

Transportation facilities in Central America are inadequate and the improvements effected by the fruit companies have been subordinated to special purposes. Only two of the capitals of the five countries have railroad connections with ports on the Caribbean Sea and the Pacific Ocean. Tegucigalpa is connected with the port of San Lorenzo by a highway, but no railroad reaches this city. In Guatemala the railroads have been more developed than in the other countries. One of the railroad lines of the country connects with the Mexican system. American interests in Contral American railroads are comparatively largo. The main line of Nićaragua has beon under American ownership until lately, when it was roturned to the government of that country. One of the American fruit companies owns about 440 miles of railways in Guatomala, Honduras, and Costa Rica, and about 190 miles have been leased to this company in addition.

The following table presents for purposes of comparison statistical data relating to the economic position of the five Central American coūntries:

14 colones to $\$ 1$.
2 Sterling amounts converted at $\$ 4.8665$.
3 Franes debt converted at $\$ 0.0828$.
Political instability has been for a long time one of the greatest difficulties which has confronted Central America in its economic development. Extraordinary expenses for military purposes have been in many cases the responsible factors for unbalanced budgets. The failure on the part of the Central American countries to balance their budgets has been due not only to excessive expenditures, but also to the inadequate collcction of revenues. Tax systems are not efficient and in many instances the amounts collected are not applied to the expenditures as originally proposed.

## CURRENCY AND FINANCIAL PROBLEMS OF GUATEMALA.

The monetary system of Guatemala is nominally based on the silver peso as standard, which is 0.900 fine and weighs 385.8 grains. In 1874 the value of the silver peso was approximately the
same as a dollar, but with the subsequent depreciation of this metal, which started in 1859, the value of the silver peso fell steadily. In 1859 the price of silver was about $\$ 1.39$ an ounce; by 1895 it had fallen to $\$ 0.654$, and the value of the peso was thereby reduced to about 50 cents. The constant issue of unsecured paper currency also contributed to lower the value of the unit of currency. In 1898 the Government, after borrowing from the banks a large part of their metallic reserves held against their note issues, relieved them of their obligation to redeem their notes in silver. The result was that silver coins disappeared from circulation and by 1900 the value of the paper peso had been reduced to about 15 cents. Five years later a peso was quoted at about 5 cents. The average quotation for a Guatomalan peso in 1921 was 2.003 cents. The opening quotation for the year was 45.03 pesos to $\$ 1$ and the closing average rate in December was 53.02 pesos to the dollar. According to the arerage value of silver in the year 1921, the standard Guatemalan peso would be worth $\$ 0.5257$. It is not possible at present to establish any value relationship between the paper and the silver peso. The lowest ebb in the value of the Guatemalan paper currency was reached in August, 1921, due mainly to a severe drop in the prices of coffee and sugar. The Gorernment undertook to control the exchanges and fixed the value of the peso at 2 cents in United States currency. This rate was maintained during the months of October and November, but later on, due to speculative operations and political uncertainty on account of the revolution in December, it dropped sharply. During the current year no improvement has been manifcsted, the last quotation in November, 1922, being 57 pesos to the dollar.

The floating debt of Guatemala on December 31, 1921, amounted to about $\$ 140,000$ and the external debt to Great Britain totaled $£ 1,940,643$, the amortization during. 1921 amounting to $£ 323,340$. Following is the statement of the debt of Guatemala to Great Britain as of December 31, 1921:

FOUR PER CENT EXTERNAL DEB'T.

| Issue of 1895 (amount st | , 482, 800 |
| :---: | :---: |
| Issue of 1913. | 29, 660 |
|  | 1,512,460 |
| Less amount redcemed. | 416, 420 |
|  | 1, 096,040 |
| Deferred certificate. | 844, 603 |
| Total. | 1,940,643 |

The following table indicates the receipts and expenditures of the Government of Guatemala for the year 1921:

It may be seen from the above table that the Guatemalan Government during the year 1921 incurred a deficit of $54,163,596$ pesos, and $\$ 1,908,736$. These amounts are much larger than the deficit for 1920, which amounted to $27,232,364$ pesos. It is erident that expenditures during the last two years have increased considerably on account of extraordinary expenses for the recent military activity of the country, and that the deficit for the current year will probably amount to larger figures. On January, 1922, the Minister of Finance reported that the current expenses of the Govermment totaled about $23,000,000$ pesos per month and that receipts amounted to only about $15,000,000$ pesos, thus showing a monthly deficit of about $8,000,000$ pesos. The war expenditures of Guatemala amounted in 1920 to $56,206,926$ pesos, whereas in 1921 this item was increased to $63,896,413$ pesos and $\$ 328,862$, as shown in the above table.

## GOVERNAENT FINANOES OF HONDURAS.

The monetary unit of Honduras, as of Guatemala, is the silver peso, with subsidiary silver and copper coins. The value of this unit is
regulated by the fluctuations of the market price of silver. In 1919 and 1920, due to the sudden rise in the price of this metal, practically all the silver coins disappeared from circulation and United States dollars were imported instead. Since the close of 1920, however, the price of silver has registered a severe fall, and Honduras is now again confronted with the silver currency problem, since considcrable amounts of coins of several LatinAmerican countries, of authorized circulation, have made their appearance lately in that country. The banks do not, however, accept silver at par for the purchase of exchange, and on the north coast merchants do not accept silver in their mercantile transactions. In the remainder of the country silver money circulates currently with American money at the rate of 2 for 1 , except in the purchase of foreign exchange, in which case the former is at a discount. Honduras has no Government paper issues. The Banco Atlantida and the Banco de Honduras enjoy the right of note issue.

There has been a rapid increase in the indebtedness of the country, although the peak of military expenses, resulting from recent political disturbances, has probably been reached. Following is a comparative statement of the budgets for the fiscal years 192122 and 1922-23.

Budgets for Years 1921-22 And 1922-23.
[In thousands of pesos silver.]

The above table shows that military expenditures comprise the largest percentage of
the total expenses of the Government. During the fiscal year 1920-21 the total war expenditures of Honduras totaled $3,417,475$ pesos, or 45 per cent of the total amount of Government expenditures. Since the fiscal year 1914-15, the Honduras budgets have resulted in continued yearly deficits. The largest deficit occurred during the fiscal year 1919-20, amounting to $1,081,609$ pesos, as against 72,437 pesos in 1920-21.

The internal debt of Honduras amounted to $3,777,000$ pesos on July 31, 1921. Not including certain loans on current account made to the Government by banks and other corporations in the amount of about $\$ 1,000,000$, this amount of the internal dobt shows an increase over the previous year of 221,018 pesos.

According to the latest statement of the Corporation of Foreign Bondholders, the foreign debt of Honduras amombs to $£ 28,188,047$. This sum is made up as follows:

| a per cent loan of 1867. | ${ }^{1} £ 78,800$ |
| :---: | :---: |
| Couponsin arrear 1921 | 193, 060 |
| Total | 271, 860 |
| 10 per cent loan of 1867 | 900, 700 |
| Coupons in arrea January, 1922).. | 4,458, 465 |
| Total | $5,359,165$ |
| $6 \frac{2}{3}$ per cent loan of 1869 | 2, 176,570 |
| Coupons in arrear September, 1921 | 7,037,577 |
| Total. | 9, 214, 147 |
| 10 per cont loan of 1870 | 2, 242,500 |
| Coupons in arrea January, 1922).. | 11, 100, 375 |
| Total. | 13, 342, 875 |
| Grand total. | 28, 188, 047 |

All foreign obligations of the Honduran Government have been in arrears since 1873. Various attempts at settlement have been made, but so far without success.

## GOVERNMENT FINANOES OH EL SALVADOR.

The monetary unit of El Salvador is the gold colon, with a par value of $\$ 0.50$ United States currency. The average current quotation of the United States dollar in El Salvador at present is 207 colones to $\$ 100$. There are three banks of issue in the country, the financial

[^10]condition of which at the close of the first semester of 1922 , as roported in the Diario Oficial, was as follows:
[In thousands of colones.]

| l 3anks. | Gold held. | National currency. | Credits in current account and sight deposits. | Circu- <br> lation. | Parcentage of cash resorve (legal 40 per cent) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Banco Salvadoreño. | 1,004 | 2,008 | 649 | 3,314 | 56.67 |
| Banco Occidental...... | 1,015 | 2,030 | 1,120 | 3,746 | 48.24 |
| Baneo Agricola-Comercial. | 278 | 506 | 822 | 929 | 42. 1.1 |

The following is a summary of the 1921-22 budget of El Salvador, as published in the Gaceta Oficial of August 30, 1921:

Budget for 1921-23.

Budgeted expenditures exceed estimated revenues by 22, ,040 colones. Since 1910, the Government finances of El Salvador have resulted in continued deficits, with the exception of the calendar years 1916 and 1920. The average annual deficit since 1910 has been 1,135,000 colones.

According to a statement of the Minister of Finance, the internal debt of the country as of Decomber 31, 1920, amounted to $15,793,913$ colones, and according to the Corporation of Foreign Bondholders the external debt of El Salvador, as per the new arrangement concluded in December, 1921, amounts to £958,288, as follows:

In addition to the above amounts, the Government owes the Salvador Railway Co. the sum of $£ 44,000$ on account of arrears in subsidy.

The December, 1921, arrangement for settlement, as above reported, originated after the February coupons of the 1908 and 1915 bonds had gone into default.

The loan contract of June 24, 1922, made between a representative of the Government of El Salvador and a banker of New York City, provides for a loan of about $\$ 16,500,000$, divided into three series in the amounts of $\$ 5,000,000, £ 1,050,000$, and $\$ 6,500,000$, respectively, with the right to increase the last to $\$ 11,500,000$. Accordingly, the bonds of the first series are to be purchased by the bankers at 88, bearing interest at 8 per cent, and to mature July 1, 1947. Several stipulations are made as to redemption before maturity at the option of the Government. The second and third series are to be issued at par and will bear interest at the rates of 6 and 7 per cent, respectively. Both scries are to mature July 1, 1956, but are redeemable before maturity at Government option. The purpose of the loan is to refund the existing floating and internal and external debts, and also to provide for funds to be used for public works. As security for the above bond issues, the contract calls for a first lien on 70 per cent of the total receipts of the net customs revenues. This percentage is to be raised in case the amounts collected are not suflicient to cover the service of the loan. Also, in accordance with the contract, a fiscal agent is to be appointed for the management of the loan.

## GOVERNMENT FINANCES OF NICARAGUA.

In 1911 Nicaragua had just emerged from a protracted revolution which had brought about a complete disorganization of the Republic's finances. The interest and sinking fund of the external debt was in arrears and paper currency had been printed in such amounts that exchange had fallen to 5 cents United States currency to the peso. In an effort to make possible the rehabilitation of the Republic's finances the Government entered into a treaty with the United States on June 6, 1911, pro-
viding for a foreign loan which was to be sccured by the customs duties. The customs service was to be reorganized under the direction of an American expert.

This treaty was nerer ratified by the Cnited States Senate. While it was still receiving considcration, howorer, a group of New York bankers had made the Government a temporary loan of $\$ 1,500,000$ in September, 1911, in ordor to make possible the reorganization of the currency. To afford better security for this loan the Republic undertook to appoint a customs collector nominated by the bankers with the approval of the Secretary of State. At the same time a national bank was established, o1 per cent of the stock of which was taken by the bankers making the loan.
Since 1911 the foreign debt of the Republic has been reduced, the internal debts have been refunded, and in large part paid off. The monetary reform and the reduction of Government expenditures have made it possible to place the finances of the Republic on a sound basis.
The National Bank has the exclusive privilege of note issue and acts as Government dopositary. One of the principal functions of the institution was to undertake the conversion of the irredcemable paper currency into a new monetary unit, the cordoba, which is equivalent to the United States dollar. In 1915 the bank became affiliated with the Mcrcantile Bank of the Americas and started to undortake commercial banking business. The National Bank is now controlled by the Bank of Central and South America of New York. According to the bank's statement for August, the total amount of its notes in circulation for that month was $\$ 2,026,915$. Another important step taken was the purchase by the same group of Now York bankers of 51 per cent of the stock of the national railroad. This road is at present in good operating condition and the earnings obtained are satisfactory. The control and management of the railroad have remained with the bankers, although the Government has owned the entire stock of the railroad since 1920. A project to extend the line to the Caribbean Sea is still in suspense.

The Nixed Claims Cormmission, composed of a Nicaraguan judge appointed by his Governmont and two trecrican judgos appointed by the Secretary of State, and later the Public Credit Commission, which was similarly composed, have passed upon and settled a great volume of claims against the Republic.

The Government of Nicaragua has been endearoring to obtain a loan of about $\$ 4,000,000$ to be used for the payment of the balance due
on the national railway, the construction of a road to the Caribbean coast, and for the refunding of certain debts.

The customs revenues of Nicaragua for 1921, amounting to $\$ 1,077,256$, compare unfavorably with those of 1919 and 1920, which totaled $\$ 1,370,264$ and $\$ 2,055,989$, respectively. According to the latest reports, this source of Government revenue has undergone a further reduction during the current year.

The following table shows the estimates of revenue and expenditure for the fiscal year 1921-22:

> Bubgex for 1921-9.9.

| Estimated revenue: |  |
| :---: | :---: |
| Internal revenue | 81,210,920 |
| Special taxes for public works, public instruction and service of guaranted customs bonds |  |
| Import duties | 1,074,000 |
| Export duties | 125, 000 |
| Consular and other ditas. | 179, 200 |
| Pacific Railway of Niraragua | 200, 000 |
| National Bank | 14, 000 |
| Total | 3,385, 528 |
| Estimated expenditure: |  |
| Legislature . . . . . . . . . . . . . . . . S16, 125 |  |
| Department of Government . . . . . 105, 193 |  |
| Department of Police. . . . . . . . . . 264, 413 |  |
| Department of Justice........... 75, 863 |  |
| Department of War and Navy . . . . 143, 82, |  |
| Department of Finance......... 185, 379 |  |
| Department of Interior and Pub- |  |
| Department of Foreign Affairs.... 86,71] |  |
| Department of Public Instruction 72,052 |  |
| Judicial power. . . . . . . . . . . . . . 101, 990 |  |
| Additional items of $\$ 26,666 \mathrm{per}$ month........................... 320, 000 |  |
| Department of Interior, additional expenditures . . . . ....... 301, 388 |  |
| General customs collection | 293, 150 |
| Public debt- |  |
| Service of external debt bonds of $1909 \ldots \ldots$......... 368, 084 |  |
| Service of internal debt bonds, etc. . . . . . . . . . . . . . 255, 900 |  |
|  | 623, 984 |
| Total. | 2, 798, 522 |

The above budget compares most farorably with the Government budgets of the other Central American countries. This holds especially true in the case of expenditures for army and navy, which only amount to about 5 per cent of the total expenditures, whercas in the budget for the same year tho war expenditures in Guatemala, Honduras, El Salvador, and Costa Rica amount to about 20 per cent, 27 per cent, 23 per cent, and 10 per cent, respectively.

The indebtedness of the Republic was much reduced, after the settlement of the internal and floating debts, by the issue of funding bonds, the cash payment made by the United

States of $\$ 3,000,000$ on the canal option, the reorganization of finances and the adoption of a limited budget. The Nicaraguan debt, according to the Corporation of Foreign Bondholders, amounted on January 1, 1921, to $\$ 8,425,935$, as follows:
Bonds of 1909 (£995,420) . . . ...................... $\$ 4,844,211$
Guaranteed customs bonds..................... 3,527,600
Bonds of 1904 . ..................................... 30,000
Emergency issue of currency (unredeemed). . . 24, 124
Total
8, 425, 935
For the safeguarding of the guaranteed customs bonds, a high commission was formed, which acts as trustee and fiscal agent.

## GOYERNMENT FINANCES OF COSTA RICA.

The legal par of exchange of the colon, which is the monetary unit of Costa Rica, is 2.15 colones to $\$ 1$. The value of this currency has depreciated, however, and at the present time the dollar is quoted in Costa Rica at about 4.40 colones. A law recently passed by Congress provides for the establishment of a conversion office for the purpose of fixing the rate of exchange at 4 colones to the dollar. A law, which was passed by the National Congress on May 17, 1922, provided for the unification of the paper currency, including the Government silver certificates, and the withdrawal from circulation of the notes of the Banco Comercial which failed in 1914 and Whose notes were subsequently guaranteed by the Government. According to this law the Banco Internacional de Costa Rica is authorized to increase its emission by $4,282,250$ colones, with the object of retiring from circulation the notes of the Banco Comercial and the silver certificates of small denominations. The idoa is to give the Banco Internacional the sole right of issue, declaring its notes legal tender. The bank will retire 4,282,250 colones in Government silver certificates and notes of the Banco Comercial, replacing the canceled notes with those of its own issue and receiving the silver deposit of 727,334 colones from the Banco de Costa Rica.

The note circulation of the country will then be reformed as follows:

> [In colones.]

Banco Internacional gold re-
serve................................. 1,
Government silver reserve. . . $\quad 727,335$
$\ldots 1,811,190$
Total unsecured circulation.............. 16, 632, 494

The finances of the Government of Costa Rica have resulted in a yearly deficit since 1912. The largest occurred in 1919, when expenditures exceeded revenue by $9,341,470$ colones. The deficit for 1920, however, totaled only 834,974 , the reduction being due principally to increased customhouse revenues, which amounted to $7,517,863$ colones in 1920, against $3,491,888$ in 1919. A now income-tax law has been sent to Congress, and, if passed, at least $1,000,000$ colones of additional revenue will be collected by the Government in the first year and about double that amount afterwards. The budget for 1922, with percentages for the different items, follows:

Budget for 1922.

The latest statement available with regard to the internal debt of Costa Rica is the report of the Minister of Finance for 1920, wherein the smount of $38,924,830$ colones is given as the internal debt of the country. According to the Corporation of Foreign Bondholders, the external debt of Costa Rica amounts to $£ 3,266,148$, as follows:

In July, 1922, opinions were expressed in Costa Rica to the effect that the Government was prepared to float a loan for about
$\$ 1,500,000$. Reports dated in October conveyed the impression that the Government had under consideration the negotiation of a loan of $\$ 4,000,000$ with a New York banking firm. Up to the present time no reports are available pointing toward the realization of these plans.

## ECONOMIC CONDITIONS IN CZECHOSLOVAKIA.

## INTRODUCTION.

The economic crisis through which Czechoslovakia is passing at the present time is one of the outstanding economic developments in central Europe. The present situation has often been compared with that of the United States during 1920 and 1921, and the result of the present Czechoslorakian crisis, it is commonly said, will be similar in its effects to the readjustment which took place here. While it is true that if the present currency reform is carried through it will place Czechoslovakia upon a sound financial basis, it is, however, fallacious to compare the conditions existing in the new Rcpublic with those of the United States or even of Great Britain, chiefly because of Czechoslovakia's economic position in central Europe and especially her relation to those States which formerly constituted the Austro-IIungarian Empire.

Present economic developments in Czechoslovakia and the effects of the deflation that has already taken place can be fully understood only if it is kept in mind that the new State was once part of an empire which was, economically speaking, at least fairly unified. Although many different factors have been at work to break up this unity and the various new States have tried successfully to establish other trade connections, the old economic structure upon which the Austro-Hungarian Empire was built is still of very great importance and still influences almost all branches of industry and commerce. This study will, therefore, briefly survey the economic position of Czechoslovakia in the old Austro-Hungarian Empire as a necessary preliminary to analysis of the present economic depression.

## CZECHOSLOTAKIA'S ECONOMIC RELATION TO THE SUCCESSION STATES.

The industrial importance in the Dual Monarchy of the territories which form to-day the Czechoslovakian Republic can be gauged from the following figures: Ninety-two per cent of the sugar, 80 per cent of the textile, 70 per cent of the porcelain, and about 60 per cent of the iron and steel industry of the Hapsburg

Empire having a population of $50.000,000$ were located in Czechoslovakia, with its $13,500,000$ inhabitants. Out of a total number of $4,941,-$ 000 spindles in operation in the Empire, $3,665,000$ were taken over by the new State, which also eontrols between 80 and 85 per cent of the total coal and about 60 per cent of the total iron ore deposits. The industrial character of the country becomes more evident if one considers that about 70 per cent of the total industrial population of the Empire earned their livelihood in the territories constituting this new State. The distribution of the chief industries of the Austro-Hungarian Empire may further be seen from the table below.

## Number of Workers in Certain Industries.

That the output of these industries was in excess of the nceds of the territories in which they wore located is self-cvident. They were the main source of supply of industrial products to the population of the Dual Monarchy. Only 30 per cent of the groods produced in Czechoslovakia were consumed there; the balance went mainly to other parts of the Hapsburg Empire and a small percentage was shipped to the Balkans, the Near East, and Russia.

The collapso of the Austro-Hungarian Empire changed this situation entirely. Czechoslovakian industries found their activities hampered by barriers which did not exist before. Formerly, within the borders of the old Empire there was free trade, and a Prague or Pilsen manufacturer could ship his goods free of any tariff to all parts of the Empire. Uniformity of the currency, a well-organized banking system, and a large network of railways connecting producer and consumer were the best aids to the industries of "Bohemia."

Through the territorial rearrangements, which followed the collapse of the Austro-Hungarian Empire, the Czechoslovakian industries were soparated by political boundares from the consumers of their products. Thus the "Bohomian" industries, which formerly were producing mainly for domestic consumption, found themselves largely dependent upon exports. The entire country was confronted with an
important export question upon which the prosperity of a large part of the population depended. The effects of the economic rupture and of the new political situation were not felt, however, during the period from 1919 to the middle of 1921. The great demand for manufactured goods, which existed after the war in all countries, and especially in the enlarged Balkan States, was a great stimulus to all branches of the Czechoslovakian industries. This industrial boom was further aided by the exchanges of the different countries, since the discrepancy in their value was not so pronounced as in 1922. Furthermore, during this entire period (1919 to middle 1921) crown exchange followed the trend of mark exchange, so that German manufacturers did not enjoy to the same extent as to-day the export advantages offered by depreciated currency. In addition, the cost of production during this time in England and in the United States was so high that the industries of these countries could not well compete with the Czechoslovakian industry.

During the second half of 1921 a great change took place. The Czechoslovakian crown struck out into a different direction from that taken by the currencies of the countries which were the largest consumers of Czechoslovakian products. While crown exchange showed a continuous upward movement, the currencies of the Balkan States, Poland, and especially Germany and Lustria, went rapidly down. This increase in the value of the crown made exports to the Balkans, Germany, Austria, and Ilungary, countries which in 1921 absorbed about 94 per cent of the total Czechoslovakian exports, almost impossible. But even if the exchange of the latter mentioned countries had remained steady, Czechoslovakian industrics would still have suffered from the appreciation of the crown, since internal prices could not adjust themselves downward as rapidly as the value of the crown advanced. It happened, however, that the exchanges of Germany and Austria, which two countries took in 1921 about 72 per cent of Czechoslovakia's total exports, declined more rapidly than crown exchange improved. Accordingly, Germany and Austria were not only less able to buy Czechoslovakian goods, but also were in a better position to underbid them whore thoy compoted in noutral markets. In addition, the opposite movement of crown and mark exchange created a great discrepancy in the prices between German and Czechoslovakian goods, so that many Czechoslovakian merchants found it more profitable to import goods from Germany than to buy them from domestic manufacturers.

Thus, as seen from the above analysis, the Czechoslovakian economic crisis has its initial explanation in the rupture of the old AustroHungarian economic unit, a sound readjustment of which has not yet taken place. It has been brought about by a too rapid appreciation of the crown and has been further accelerated by the tremendous drop in mark and Austrian crown exchanges.

## THE CURRENCY SITCATTON.

Since the appreciation of the Czechoslovakian currency is regarded as the main immediate cause of the present industrial crisis, it is necessary to survey the general currency situation and to analyze the factors which brought about this increase. The Czechoslovakian Government was first among the central European countries to place its currency on a sound basis. This was no casy task, for the Government had to consider not only conditions at home, but also those in countries which are the main outlets for Czechoslovakian goods. Thus, at the beginning the Government undertook no steps which would tend to increase too rapidly the value of the crown abroad, but contented itself with the prohibition of further inflation. The lack of an adequate gold reserve was also an important factor in the shaping of the currency reform.

Upon the collapse of the Austro-Hungarian Empire in October, 1918, Czechoslovakia had no other currency than the Austrian krone, at that time legal tender in all territories which formerly belonged to the dual monarchy. The Austrian krone, however, was a depreciated unit, for the gold reserves of the country, which in 1914 amounted to $1,655,000,000$ gold kronen, decreased in 1918 to $342,000,000$ kronen, while the notes in circulation increased from $2,172,000,000$ kronen in 1914 to $30,679,-$ 000,000 kronen in October, 1918. The first step of the Government with regard to the currency was the stamping of the old AustroHungarian bank notes, which took place between February 26 and March 9, 1919. After March 9, unstamped notes ceased to be legal tender. At the same time, the new Government took under its control the administration of the branch offices of the Austro-Hungarian Bank, and a new banking office "the banking department" with all the functions of a central reserve bank, was created under the jurisdiction of the Ministry of Finance (act of May 12, 1919). The stamping of the krone was combined with a forced loan. Of the sum of about $8,000,000,000$ kronen which were in circulation at that time and were turned in for stamping, $2,450,000,000$ were
retained by the Government as a 1 per cent loan, thus leaving in circulation about 5,500 ,000,000 kronen. In addition, all check accounts and treasury notes of the branches of the Austro-Hungarian Bank amounting to about $2,085,000,000$ kronen were taken over by the Government, and of these only one-half were returned to their owners in stamped notes. There was also left in circulation about $332,000,000$ kronen in 1 and 2 kronen notes, which were not stamped, and a sum of several million kronen of iron, nickel, and copper coins. After the currency reform was carried through the total notes in circulation amounted to 6,987,000,000 Czechoslovakian crowns. On April 10, 1919, an act was passed in Parliament prohibiting the issue of uncovered notes beyond this limit. The stamped notes were later replaced by newly-printed State notes payable in Czechoclorakian crowns.

To reduce the amount of uncovered notes outstanding, and those withheld at the time of the stamping of the krone, a property and capital tax was enacted on April 8, 1920. The notes withdrawn from circulation may be ultimately reissued through the banking department, but only when secured by commercial paper and thus under control of the institution. At the present time, however, the relation between the notes commercially secured and those unsecured is such that the banking department has not by its discount policy the actual control over the total currency in circulation, since the amount of uncovered notes outstanding is by far larger than that of notes secured by commercial paper.

Thus, from the very beginning of its existence the Czechoslovakian Government adopted a very rigid policy with regard to its currency. Further inflation through the issue of unsecured notes was made impossible, and the Government made a serious effort to strengthen the matallic reserve of the country. These measures, however, were not sufficient to prevent further depreciation of the Czechoslovakian crown. It declined steadily during the entire period of 1919, 1920, and the greater part of 1921. During this time the Czechoslovakian crown fell and rose almost in unison with the German mark. The two countries being in close commercial relationship, and many purchases and sales in Czechoslovakia being paid in German marks, the same factors which influenced the value of mark exchange influenced to a considerable extent the value of the crown. Since October, 1921, however, when the results of the London ultimatum and reparation payments began to exercise their depressing influence on the German mark, the two currencies have moved in opposite directions. From August, 1921, to August,

1922, the crown as expressed in United States currency increased from 1.20 conts to 3.30 cents, while the German mark declined during the same period from 1.16 cents to 0.07 cent.

The fluctuation of the crown since November, 1921, when its upward movement started may be seen from the table below:

Value of 1 crown in Vnited States cents.

It is interesting to note that the most striking increase occurred during July and August at the time when the German mark dropped from 0.26 cent to 0.07 cent.

Causes of the appreciation of the crown.-The increase in the value of the crown since June, 1922, has been so rapid that it is difficult to state with accuracy all the causes by which it has been brought about. The usual statement that the appreciation of the crown is due primarily to the currency policy of the Government does not seem to be a sufficient explanation. For, as indicated above, the limitation of the amgunt of unsecured notes in circulation was carried through during 1919, and the amount of notes withdrawn from circulation since then would not in itself account for such a tremendous increase in the value of the crown. Other factors of a fiscal, economic, and speculative character hare been at work whose effects on crown exchange are more important than the limitation of unsecured notes.

The different factors which have inlluenced the recent appreciation of the crown maybe grouped in four main classes: (a) Government finance; (b) foreign trade; (c) the collapse of the mark and of other central European exchanges; and ( $d$ ) speculation.
(a) Government finance-the budget. - The next important step toward the establishment of a sound currency situation, after limiting the amount of uncovered notes outstanding, was the balancing of the budget. From the inauguration of the new Republic the Government made the greatest effort to increase revenues and to decrease expenditures. Owing to necessary expenses incurred in connection with the establishment of the State, and the chaotic conditions of trade, industry, and finance which existed after the collapse of the Hapsburg Empire, the deficit of the budget amounted in 1919 and 1920 to $4,905,000,000$ crowns and $4,852,000,000$ crowns, respectively.

As may be seen from the following table the Czechoslovakian Government was later able to increase the revenues and to decrease the deficit of the budget to a very considerable extent.

Czechoslovakian Budgert.
[ln millions of Czech crowns.]

It also reduced the expenditures for unproductive items. Thus, expenditures for national defense decreased from 20 per cent of the total expenditures in 1919 to 16 per cent in 1922, and the extraordinary after-war expenditures from 40 per cent in 1919 to 4 per cent in 1922.

The budget of the railways which are largely state-owned ( $12,694,527$ kilometer are state and 968,924 privately owned) showed also a considerable improvement. The deficit of $625,000,000$ crowns in 1920 was converted into a surplus of $265,000,000$ crowns in 1921.

This improvement of the Government finances strengthened the credit standing of the Czechoslovakian Republic abroad. It was enabled to float successfully loans of $\$ 14,000,000$ in New York, $£ 2,800,000$ in London, and $£ 500,000$ in Amsterdam. Although the Government pays a comparatively high rate of intcrest, it was nevertholess the first central Luropean country to receive credit in these money centers. The floating of the $\$ 7,500,000$ loan of the city of Greater Prague in New York in May, 1922, was a further proof of Czechoslovakia's credit standing abroad.

The fiscal policy of the Government and its improved credit standing at home and abroad influenced the exchange value of the Czcchoslovakian crown which was further aided by the favorable development of the country's foreign trade.
(b) Foreign trade.-The balance of trade for the last two years, 1920 and 1921, showed an excess of exports over imports of about 5,000 ,000,000 crowns. This comparatively huge sum loses somewhat in importance if one considers that the invisible balance of trade is against Czechoslovakia, mainly due to the fact that large quantities of industrial and mining securities are held by foreignors. The fact however, remains that the large Czechoslovakian banks possessed a considerable amount of foreign bills, which could be thrown on the market to prevent a too rapid drop in crown exchange.

Export and import figures for the last two years are as follows:

The discrepancy between the quantity and value of the exports for the last two years is due to the docrease in the price level of export commodities in Czechoslovakia. The foreign trade for the first eight months during 1922 amounts to $6,569,404$ metric tons of exports and $2,265,967$ metric tons of imports. No valuation figures have as yet been published.

From the given trade returns for 1922 it is impossible to state whether they have been influenced by the recent increase in the value of the crown or not, since the rapid upward movement started only in July and no valuation figures are available. Exports, however, for August amounted to only three-fourths of the July volume. The loss occurred mainly in the export of coal and wood.

A brief analysis of the countries of destination of Czechoslovakia's exports is also necessary, as it shows from what sources the demand for Czechoslovakian crowns comes, and to what extent Czechoslovakian exports are liable to be influenced by a further decrease in the value of the mark and other Central European currencies.

Exports of the Czechoslovakian Republic.

| 'I'otal. . . . . . . . . . . . | 100.0 | 6,902,221 | 100.0 | 9,645,767 |

Influential as the factors above discussed may have been, they can not be regarded as the direct causes for the recent rapid
increase in the value of the crown, for the law limiting the amount of outstanding notes was put into effect in 1919 and a favorable balance of trade existed during the entire period of 1920 and 1921. During this period, the crown not only did not improve, but reached its very lowest point, being quoted in New York at the end of October, 1921 at 0.96 cent. The factors above mentioned were more in the nature of preventing a precipitous drop of the crown than of causing a tremendous appreciation such as took place during the past few months. In many circles in Central Europe, especially in Austria and Germany, it is believed that the present increase in the value of the Czechoslovakian crown is due to a considerable extent to foreign exchange transactions of the banking department of the Ministry of Finance. It is impossible to state to what extent this statement is correct.
(c) The collapse of the mark.-The collapse of the German mark and of the exchanges of other central European countrios has to a rery considerable extent influenced the present value of the crown. Whenever in the past few months the German mark or the Austrian krone decreased in value there was always a great demand for Czechoslovakian crowns in almost all large forcign exchange conters. The instability of the German mark brought about a situation whereby practically all transactions between Germany and Czechoslovakia are paid in crowns, a factor which tends to increase the demand for the latter currency. This demand has been further increased by the fact that exports from and imports into Rumania, Yugoslavia, and other Balkan States are largely transacted on a crown basis. The flight of capital from Germany and the "flight from the mark and the Austrian krone" have also influenced the present valuation of the crown.
(d) Speculation.-Speculation in exchange has also played an important rôle in the recent development of crown exchange. The successful floating of foreign loans in the most important money centers, the firm policy of the banking department with regard to exchange rates and the currency, and the often-mentioned rumor that Czechoslovakian banking officials intend to stabilize the crown at 20 Swiss centimes has induced many foreigners to purchase crowns for speculative purposes. In many instances holders of Germain and Austrian currency and securities exchanged them for crowns. The increased credit standing of the Czecho-Slorak Republic in the United States has created in this country a great demand for crowns for speculative purposes.

Effects of deflation.-The immediate results of the rapid increase in the value of the crown was
a depression in almost all branches of industry and trade in Czechoslovakia. As stated in the beginning of this article, the prosperity of Czechoslovakia depends to a considerable extent upon her ability to export. The rapid appreciation of the crown, however, caused a discrepancy between the internal and external value of the crown, which made exports to many countries almost impossible. It further caused a decrease in purchases on the part of domestic buyers, since everybody expected a drop in prices similar to the increase in the value of the currency abroad. The discrepancy between the external and internal value of the crown may be seen from the following table, which compares the indexes of retail prices of 37 commodities with that of the dollar as expressed in Czechoslovakian crowns.

Retall Price Index and Relative Value of the Domlar as Expressed in Crowns.

In making up this table the index of retail prices for January, 1921, and the value of the dollar at the end of January, 1921, were taken as a basis. Group No. I comprises 23 commodities, representing food, fuel, petroleum, and soap. Group II consists of 14 commodities, representing cloth, footwear, and men's hats. Thus, as seen from the above figures, while the value of the dollar as expressed in crowns decreased by about 58 points, prices decreased only by about 33 and 51 points, respectively. The difference in the decrease of prices between Groups I and II is due to the fact that the commodities under Group II are made up to a large extent of imports, which react much quicker to changes in the value of the crown.

The effects of the lower internal value of the crown upon the industry are plain. Thus the
price of a carload of Czechoslovakian coal at the beginning of October amounted to 4,844 crowns, while the same quantity and quality of coal could be bought in Upper Silesia and in England for 4,080 crowns and 3,360 crowns, respectively. Since coal is one of the important factors in determining the cost of manufacturing, one can easily see its influence on most industries. Other factors affecting the cost of production were also unfavorable, as neither taxes nor the cost of labor show a decrease commensurate with the increase in the value of the crown abroad.

## INDUSTRIAL SITUATION.

The industrial situation of the country may be seen from the following facts: During the last five months of 1921 the spinning mills of the country were employed at about 90 per cent and the weaving mills at 80 per cent of their full capacity. During June and July of 1922, however, the average operation of the spinning mills was estimated at 65 per cent, that of weaving mills at about 55 per cent of their full capacity. Accordingly, the consumption of raw cotton, which during the six months Lugust 1, 1921, to January 1, 1922, amounted to 158,495 bales, decreased for the six months February 1 to August 1, 1922, to 114,313 bales. The number of employees engaged in the cotton industry also decreased from 140,000 at the beginning of February to about 100,000 at the beginning of July.

As another striking example of the present trade situation may be mentioned the result of the recent fair in Reichenberg (Liberce), which showed a considerably lower turnover even at reduced prices. In 1921 the turnover reached $1,500,000,000$ crowns, whereas this year it amounted to only $350,000,000$ crowns. Converted into Swiss francs at the approximate rate of exchange at the two dates, the value of the two figures is about $105,000,000$ francs for 1921 and $56,000,000$ francs for 1922. The greatest falling off was registered by the glass and textile industries.

Industries depending mainly upon domestic raw products are in still a worse position. The paper mills controlled by the German Paper Manufacturers' Association, which comprises 55 enterprises, and represents one-half of the total Czechoslovakian paper industry, report that at the end of July only 17 mills, with 2,200 employees, were operating on full time. Twenty-six mills, with 4,900 employees, were working between two and five days a week, while 12 firms stopped operation entirely.

Conditions in the porcelain industry are the same. Twenty-one concerns discharged all their employees and ceased operations en-
tircly, while the rest of the firms are working between three and four days a week. The difficulty under which this industry operates can be seen from the fact that a laborer receives about 150 per cent higher wages than a similarly qualified workman in Germany. In the shoe and leather industry almost 60 per cent of all factories are idle. The coal industry has reached such a point that it is almost impossible to continue to operate the coal mines economically. Although the productive capacity has considerably increased, the output of coal has decreased, mainly due to a diminished demand at home and abroad. The total output of coal in June, 1922, amounted to 740,000 metric tons, as compared with $1,067,000$ metric tons in March of the same year and $1,186,000$ metric tons, the monthly average for 1913. This situation, which threatens the livelihood of 73,000 workers caused employers and employees to protest against the coal tax. As a result the Government reduced the tax on coal from 30 to 20 per cent of the market price and the tax on coke from 30 to $7 \frac{1}{2}$ per cent. In addition the export taxes amounting to 3 per cent of the official price, including the tax, have been abolished.

The slackening of the demand at home and abroad, coupled with a decrease in prices, put many firms in difficulties which resulted in an increased number of insolvencies, as may be seen from the following figures indicating bankruptcies and arrangements with creditors in Bohemia.

|  | Number of firms. |  |
| :---: | :---: | :---: |
|  | Bankruptcies in Bo- | $\begin{aligned} & \text { Arrange- } \\ & \text { ments } \\ & \text { with } \\ & \text { creditors. } \end{aligned}$ |
| January. | 13 | 27 |
| February | 15 | 47 |
| March. | 17 | 69 |
| April. | 23 | 52 |
| May.. | 23 | 67 |
| June... | 23 | 61 |
| July.... | 21 | 61 |
| Total | 136 | 384 |

In commenting upon the increasing bankruptcies of the country, the Minister of Finance ascribes this situation to an unreasonable holding back of stocks of merchandise. To judge from unofficial reports the number of failures during the last three months has increased.

The heavy losses suffered by manufacturers of the country and the unstable conditions in most industries induced the representatives of the textile industry, upon which about $1,200,000$ persons depend, to send a note to
the Government in which the following demands were made:
(1) Reduction of all railway and postal tariffs and the abolition of the coal tax.
(2) Total abolition of the turnover tax on export commodities.
(3) Conclusion of commercial treaties with countries which are large consumers of Czechoslovakian goods, such as Hungary, Yugoslavia, etc.
(4) Reduction of the discount rate and the granting of credit without interest by the Government.
(5) Free trade in foreign exchange.
(6) Reduction in wages in accordance with the increase in the value of the Czechoslovakian crown.

This note, which more or less represents the opinion of most of the industrial interests of the country, indicates that the chief difficulty of Czechoslovakia's industries is the impossibility of exporting, caused by the inability to reduce cost of production and especially the cost of labor in proportion to the rise in the value of the crown.

Effects upon labor.-The labor question especially is very serious, since the number of unemployed is steadily increasing. Official figures of unemployment are not available, but it was estimated by several independent sources that the total number of unemployed workers at the end of August ranged between 500,000 and 600,000 .
The inability to sell their goods forced many manufacturers to cancel their contracts with labor unions. The Union of Workers of the Clothing Industry and their related branches, including the hat, glove, and shoe industries received cancellations of all wage agreements from all the larger firms. The large metal industries in Brünn decided to revoke the collective agreement as of November 1, 1922, and to decrease the bonus, amounting to 165 per cent of the total wages, to 65 per cent, which means a decrease of 38 per cont of the total wages. Reduction of wages of between 20 to 30 per cent has taken place in the following industries: Glass industry, 20 to 25 per cent; textile industry, 20 to 30 per cent; alcohol industries, 18 per cent; breweries, 12 per cent; northern Bohemian metal industry, 20 to 30 per cent; Austrian metal industry, 30 per cent. This reduction in wages has often been followed by serious labor troubles, since in most cases the cost of living did not decrease to the same extent. Thus the Ministry of Social Welfare announces that during the month of May 51 stoppages of work occurred, of which 45 were strikes and 6 lockouts, by which 42,910 employees were affected. On October 9, 1922,
about 43,000 coal miners in the Moravska Astrova (Mährisch Astrau) black coal district went on strike because of an attempt on the part of the operators to reduce wages by about 30 per cent. It was later reported that the miners returned to work accepting a 25 per cent wage cut. The situation in the coal districts, however, is far from satisfactory, since there is no great demand for Czechoslovakian coal either in Germany or elsewhere where British coal and coke can be obtained at a lower price.

In many instances laborers were not willing to accept a reduction in wages, and factories were closed, thus increasing the number of un-* employed. In view of this difficult situation, and in order to defend itself against the various attacks on the part of organized labor, the Government has issued a proclamation to the general public in which it points out that the present crisis has been caused by the appreciation of the crown and the steady depreciation of the currencies in the neighboring States, and that the crisis can be overcome only by the adaptation of the internal purchasing power of the crown to its international raluation abroad. The Government promises to introduce in the next budget far-reaching economies with regard to taxation and states that within the existing laws it will take the following measures: "Control of prices of manufactured articles, energetic examination of causes which led to diminished production or closing down of works, execution of necessary public works, lowering the rate of interest on loans, and the amendment of the bill dealing with the coal tax." It further states that a proposal will be submitted to the National Assembly to raise unemployment doles, to regulate by law the period of notice to be given of lockouts, and to
establish an act directed against profiteering. Finally, the customs duty coefficients will be abolished, the railway tariffs lowered, and the postal charges gradually reduced.

## CONCLU̇SION.

The economic depression which the Republic faces to-day indicates clearly to what extent the prosperity of one central European country depends upon the purchasing power of the others. The problems which the industries of the new States face are not merely those of home markets, but to a large extent those of the markets of the surrounding States, especially of Germany and Austria. The proposed stabilization of the value of the crown will tend to exclude the speculative element and make business transactions between Czechoslovakia and other countrios less speculativa. A readjustment between the external and internal value of the crown will without doubt relieve the present effects of deflation. It will not restore normal conditions, however, since it can not increase the purchasing power of those countries which are the natural outlets of the country's surplus of commodities, and upon whose capacity to purchase Czechoslovakian goods the prosperity of many industries depends. A restoration of normal conditions in Czechoslovakia can not take place so long as Germany, Austria, Poland, Hungary, and the Balkan States are unable to buy Czech products. Only a financial and economic recovery of these countries will enable Czechoslovakian industries to work at full capacity. The reconstruction of Russia and the restoration of her capacity to buy industrial products will also be of no small importance in the return of normal conditions in the Czechoslovakian Republic.

## PRICE MOVEMENT AND VOLUME OF TRADE.

## INTERNATIONAL WHOLESALE PRICE INDEX.

The movement of wholesale prices during October was not uniform among the countries covered by the Federal Reserve Board's index. The United States index increased one point, the Canadian also increased one point, the French remained unchanged, while the British declined two points, and the Japanese five points.

The October decline in England caused the level of wholesale prices in that country to fall below that of the United States in terms of the respective currencies, and thus aligns it with Canada in that respect.

When the indexes aro converted to a gold basis, the price levels of the United States and Japan are very nearly the same. The drop in French exchange in October caused the French index in terms of gold to show a sharp decline.

Unlike last month, the trends of the group indexes were dissimilar. Raw materials in the United States declined because of the reduction of coal prices, although prices of agricultural products were on the increase. In England, also, raw matcrials declined for similar reasons. In Canada, agricultural prices caused an increase in this group, although other raw materials remained fairly steady. In France, the prices of practically all raw materials increased. Advances in raw silk prices and in most imported commodities caused raw materials in Japan to increase seven points.

Producers' goods in the United States continued the steady advance that this group has shown since April, 1922. Producers' goods in most other countries were only slightly affected. In Japan, however, there was a decided drop, due chiefly to lower prices of chemicals. Consumers' goods in France, England, and Japan continued downward, but the United States and Canada reversed the decline of the last fow months and showed sharp upward movements.

24 End of July, 1914=100.
${ }_{26}^{26}$ Jan. 1, 1913, to July 31, 191: $=100$.
${ }^{26}$ Average for year.

The foreign index numbers published on the preceding page are constructed by various foreign statistical offices, and are sent to the Federal Reserve Board by cable. The Bulletin for January, 1920, contains a description of the French, Australian, Japanese, and Canadian indexes. A description of the method used in the construction of the Swedish index number appeared in the Bulletin for February, 1921; the British index number, compiled by the Board of Trade, was described in the March, 1921, Bulletin; and the Italian index number was discussed in the April, 1921, issue. The December, 1921, Bulletin contains a description of the index published by the Federal Statistical Bureau for Germany, and the indexes for Switzerland, Netherlands, Norway, Bulgaria, Egypt, the Union of South Africa, the Dominion of New Zealand, and Peru. The index number for the Dutch East Indies was described in the Bulletin for March, 1922, that for Poland in the Bulletin for July, 1922, while a description of the Belgian index may be found in the October, 1922, issue. The revised index of the United States Bureau of Labor Statistics was first published in the July, 1922, Bulletin; and a description of the Frankfurter Zeitung's revised index was given in the issue for September, 1922. Lack of space prevents the publication of group index numbers for many of these countries except occasionally, but they can be obtained at any time upon request. Reference may be made to the September, 1922, Bulletin, pp. 1092-1100, for a more complete series of group index numbers than appears in this issue.
In only a few of the index numbers is 1913 used as the basis in the original computations. In most cases in which 1913 appears as the
basis for the computation the index numbers have been shifted from their original bases. The computations in such cases are, therefore, only approximately correct. In certain of the index numbers July, 1914, or the 12 months' period immediately preceding is used as the base.

A description of the international price index numbers of the Federal Reserve Board for the United States, England, Canada, France, and Japan may be found in the Bulletins for May, 1920; February, 1922; July, 1922; August, 1922; and September, 1922, respectively. A comparative summary table showing the Board's international index for these five countries appears on page 1457.

Index numbers showing the price levels of separate groups of commodities in the United States and a few foreign countries are presented on the following pages. The Board of Trade has revised and corrected its group index numbers for the United Kingdom. The principal changes occur in the group including iron and steel products. A table showing all groups from 1920 to the present time will be found on page 1460. Group index numbers computed by the Federal Reserve Board as part of its international series of price indexes will be found on pages 1454 and 1455 of this issue.
The revised series of group index numbers for the United States, showing the Federal Reserve Board's regrouping of the new index of the Bureau of Labor Statistics, based upon 404 quotations, was published for the first time in the September, 1922, Bulletin. A similar regrouping by the Federal Reserve Board of the old index of the Burcau of Labor Statistics first appeared in the October, 1918, issue.

## COMPARATIVE RETAIL PRICES IN PRINCIPAL COUNTRIES.

In the following table are presented statistics showing the trend of retail prices and the cost of living in the United States and certain other countries:

INDEX NUMBERS OF RETAIL PRICES AND COST OF LIVING.

The American index number, constructed by the The Berlin index, computed by Dr. R. Kuczynski, is Bureau of Labor Statistics, was based upon the retail prices of 22 articles of food, woighted according to family consumption, until January, 1921, when it was increased to 43 articles reported by dealers in 51 important cities. The method of weighting continues the same, although the actual "weight" applied has been changed. The original basis, that of the year 1913, has been shifted to July, 1914.
The index number for Czechoslovakia is based on the retail prices of 23 commodities including foodstuffs, fuel, petroleum, and soap.
The retail price index for Paris, compiled by the French General Statistical Office, consists of retail prices of 13 different commodities, weighted according to the average annual consumption of a workingman's family of four persons. Eleven of the commodities included in this index are foods, and the other two are kerosene and alcohol.
The Italian retail price index for the most important cities, computed by the Italian Ministry of Labor, consists of retail prices of 21 commodities. Of the commodities included, 20 are foods and the other commodity is charcoal.
The Swedish index number consists of the retail prices of foodstuffs, fuel, and lighting and is based upon the prices of 51 articles in 44 towns (in 1920, 50 articles in 49 towns), weighted according to the budget of a workingman's family which before the war had a yearly income of 2,000 kronor.
The Austrian index, computed by the Paritatische Kommission, includes food, clothing, fuel, lighting, and rent. Prices, collected from cooperative associations and firms, are those ruling on Vienna markets. La average is obtained for each article and weighted according to the theoretical weekly expenditure of a normal person.
The Belgian index number of cost of living, constructed by the Ministry of Labor, consists of the retail prices of 30 commodities, weighted according to a standard budget based on an inquiry into the expenditures of 848 families of the laboring and small middle classes.
The German cost of living index for 46 cities is furnished by the Federal Statistical Bureau and includes food, fuel, light, and rent.

The Berlin index, computed by Dr. R. Kuczynski, is
based on the minimum cost of subsistence for a workingclass family of four persons in Berlin. The groups included in the budget are food, clothing, heating, lighting, and rent.
The Polish Central Statistical Office furnishes an index including food, clothing, heating, lighting, rent, and miscellaneous expenditures. Official prices are used for State-controlled goods, but when the official ration is less than a standard budget the balance is reckoned at the trade price. The system of weighting is according to a theoretical budget for a working-class family of four persons in Warsaw.
The Swiss index number, computed by the social statistics service of the Bureau of Labor, is based on an investigation into household budgets made in 1920, and refers to about one-third of the entire cost of living of the family of a skilled worker.
The British index number of the cost of living, constructed by the Ministry of Labor, consists of the retail prices not only of foodstuffs, but of other articles as well. Retail clothing prices, rents, and the cost of fuel, lighting, and miscellaneous household items are also taken into consideration. The index number is weighted according to the importance of the items in the budgets of working. class families.
The Indian index, including food, clothing, heating, lighting, and rent, is computed by the labor office secretariat. Prices are collected twice a week from 10 retailers in Bombay. The index is weighted according to the average aggregate expenditure of the whole of India during five years before the war.
The South African index, computed by the Office of Census and Statistics, includes food, heating, lighting, and rent. Until December, 1919, it was weighted according to a standard budget, but since then the aggregate expenditure method has been adopted.
The index number for New Zealand includes food, rent, fuel, and lighting. It is computed by the census and statistics office, on the basis of average annual aggregate | expenditure, in four chief centers, 1909-1913.

INDEXES OF INDUSTRIAL ACTIVITY IN FOREIGN COUNTRIES.

${ }^{1}$ Not including reexport trade.
${ }_{2}^{2}$ Calculated on 1919 value units.
${ }^{3}$ Imports calculated on basis of actual deciared value.
4 Value of exports not available. Beginning with June, exports calculated on 1921 value units.

## FOREIGN TRADE OF GERMANY.

${ }_{2}$ Not including philanthropic gifts.
2 Not including deliveries on reparations account.
8 Average for 8 months. Figures covering first 4 months of 1921 are not available.
4 In gold marks.
Note.-Currencies have not been converted to a common unit, nor are methods of valuation the same in all countries. In England, Sweden, India, Japan, and Brazil imports are given c. i. f. values; exports and reexports current f. o. b. values. In France and Italy the value of foreign trade is estimated not in terms of current prices, but in terms of those of some earlier period, usually the preceding year. In the Netherlands imports are given in declared values for about 110 articles of the import schedule. In other cases official valuations are applied to both imports and exports. Canadian imports and exports are quoted at the fair market value at the point of origin. In the United States imports represent either actual foreign market value or the export value including any export tax imposed by the country of exportation, whichever is higher; exports are expressed in terms of their value at the time of exportation, with the exception of reexports from bonded warehouses, which are expressed in their import value.

${ }^{1}$ Italian yearly figures for 1921 based on average for six months only.
${ }^{2}$ Duteh igures for 1913 not comparable with later figures.
FOREIGN TRADE OF UNITED STATES.
[In thousands of dollars.]

${ }^{1}$ Including miscellaneous merchandise imported.
2 Including miscollancous and foreigu nuerchandise exported.
${ }^{3}$ Imports under old tarifì law September 1-21, 1922, only.

- Import figures delayed owing to change in tarifl.

## FOREIGN TRADE INDEX.

There are presented below the usual indexes designed to reflect the movements in foreign trade of the United States, with the fluctuations due to price changes eliminated. Delay in receiving import figures, due to the new tariff provisions, makes it necessary to omit the index of import trade in October.

## INDEX OF VALUE OF FOREIGN TRADE IN SELECTED

 COMMODITIES AT 1913 PRICES. 1

The list includes 27 of the most important imports the value of which in 1913 formed 49.3 per cent of the total import values, and 29 of the most important exports the value of which in 1913 formed 56.3 yer cent of the total export values. The classification of the original list of commodities used was given in the July, 1920, Becinern. The elassification of 11 additional commodities of imports was giren in the April, 1921, BtisseIN, and 2 additional commodities in the November, 1921, BELLETIN. Exports of gasoline have been altered to include naphtha.

The index of the volume of exports in October increased to 119.8, the highest figure since August, 1921. The greatest increase was in the group of raw materials which rose 35 per cent. Consumers' goods showed a 9 per cent increase. Producers' goods, on the other hand, showed a slight decrease.

The gain in raw materials was mainly due to extraordinary increases in exports of anthracite coal, which were twice those of any previous month of this year, and five times those of September, and of cotton, which more than
doubled the September figures. Other commodities in this group to show advances were corn, leaf tobacco, and bituminous coal. There were reductions in such items as wheat, barley, refined copper, pig iron, and crude oil, the last two items returning to their August level after unusual increases last month.

Among consumers' goods a decrease of over one-half in exports of sugar was sufficient to counteract in part the increases in exports of wheat flour, lard, and illuminating oil.

## SAVINGS DEPOSITS.

Comparison of savings deposits on November 1, 1922, with deposits on October 1, 1922, and November 1, 1921, are shown for 886 banks distributed throughout all sections of the United States. The figures for districts No. 1 and No. 2 are those of large mutual savings banks, but in all other districts reports of other banks are included to make the figures thoroughly representative. In all districts where reporting commercial banks subdivide their time deposits, statistics of savings deposits subject to notice (excluding time certificates of deposit) are used. This is in accordance with the definition given in the board's Regulation D, series of 1920.
During October the volume of savings deposits increased in ten Federal reserve districts. Declines of less than 1 per cent were registered in districts No. 2 (New York) and No. 3 (Philadelphia). District No. 5 (Richmond) again showed the most important gain during the month. During the year ending November 1 savings deposits increased in all districts. The most noteworthy increases were 11 per cent in districts No. 5 (Richmond) and No. 12 (San Francisco) and 12 per cent in district No. 8 (St. Louis).

## COMMERCIAL FALLURES DURING OCTOBER.

## REPORT OF ASSOCIATED KNIT UNDERWEAR MANUFACTURERS OF AMERICA.

The total production of winter and summer underwear for October is compared with previous months in the following table:

|  | Number of reporting mills. | Actual production in dozens. |
| :---: | :---: | :---: |
| 1922. |  |  |
| May. | 47 | 522,035 |
| June. | 47 | 518, 150 |
| July.. | 50 | 564, 893 |
| August. | 49 | 422, 872 |
| September | 52 | 519,511 |
| October... | 47 | 524,486 |
| Winter underwear (October) | 38 | 283, 242 |
| Summer undorwear (October) | 25 | 241, 244 |

Order and production report for the month ended October 31, 1922, follows. The number of reporting mills was 37 .

Thirty-five representative mills which reported for September and October, 1922, furnish the data for the following table:
[In dozens.]

## INDEX OF OCEAN FREIGHT RATES.

The accompanying table shows the monthly fluctuations in ocean freight rates prevailing between United States Atlantic ports and the principal European trade regions. The figures are derived from the actual rates quoted on the following commodities: Grain, provisions, cotton, cottonseed oil, and sack flour. For the methods used in constructing the index see the August, 1921, Bulletin, pages 931-934.
Relative Ocien Freiget Rates in United States and Europe Trade.
[January, 1920, rates $=100$ ]

## PRODUCTION AND SHIPMENT OF FINISHED COTTON FABRICS. ${ }^{1}$

${ }_{1}$ The National Association of Finishers of Cotton Fabrics at the request of the Federal Rescrve Board have arranged for a monthly survey within the industry. The results of the inquiries are herewith presented in tabular form. The secretary of the association makes the following statement concerning the tabulation

The accompanying figures are compiled from statistics furnished by 34 out of 58 member firms of this association. It is probably fair to state that in the absence of having specific detail at hand, but according to our best estimate it is probably well within the fact that the agures given ior the various classes of work would cover, approximately, the following percentages of the entire industry: White goods, 72 por cent; dyed goods, 62 per cent; printed goods, 30 per cent. The figures given represent reports from exactly the same finishers for the two months, both for the totals and for the subdivisions, and, therefore, are strictly comparable.

Note.-Many plants were unable to give details undor the respective headings of white goods, dyed goods, and printed goods, and reported their totals only; therefore the column headed "Total" does not always represent the total of the subdivisions, but is a correct fotal for the distriet

PHYSICAL VOLUME OF TRADE.

The indexes of business activity showed a general rise during October. This was especially marked in the case of agricultural movements, despite a seasonal docline in grain receipts. Wheat flour produced exceeded that for any month for a year. Receipts, shipments, and slaughter of all kinds of live stock increased over both September, 1922, and October, 1921.

Cotton sight receipts were higher than for any month since November, 1919, and consumption of raw cotton by mills has not been as high since June, 1920. Silk consumption during October was higher than for any month on record, with a total of almost 38,000 bales. Stocks of raw silk were also exceedingly high, amounting to 40,743 balcs.

Anthracite coal production during October was 71 per cent larger than in September, while bituminous output increased 10 per cent. Both classes of coke showed greatly increased output over September.

The pronounced improvement of the fuel situation was reflected in the pig-iron industry and the October output of pig iron was almost 30 per cent in excess of the Spetember tonnage. The production of steel ingots increased 21 per cent during October and was 78 per cent higher than for last October. In spite of this increase in steel production the unfilled orders of the United States Steel Corporation were 3 per cent larger at the end of October than at the end of September.

Copper, lead, and zinc were produced in greater quantities during October than in September and the zinc output was greater than for any month since July, 1920.

The number and value of building permits issued in 168 selected cities showed increases over September totals and were much in excess of figures for last October. Freight-car loadings for all classes of commodities, except ore, increased during October.

Commodity Movements-Continued.

## RETAIL TRADE.

The following tables are a summary of the data obtained from 508 representative department stores in the 12 Federal reserve districts. In districts Nos. $1,2,3,5,6,7,9,11$, and 12 the data were received in (and averages computed from) actual dollar amounts. In districts Nos. 4,8 , and 10 most of the material was received in the form of percentages, and the averages for the cities and districts computed from such percentages were weighted according to volume of business done during the calendar year 1921. The tables for the month of September are based on reports from 25 stores in district No. 1 (Boston), 64 stores in district No. 2 (New York), 145 stores in district No. 3 (Philadelphia), 28 stores in district No. 4 (Cleveland), 25 stores in district No. 5 (Richmond), 35 stores in district No. 6 (Atlanta), 72 stores in district No. 7 (Chicago), 20 stores in district No. 8 (St. Louis), 24 stores in district No. 9 (Minneapolis), 16 stores in district No. 10 (Kansas City), 21 stores in district No. 11 (Dallas), and 31 stores in district No. 12 (San Francisco). Figures for Chester, Lancaster, Williamsport, and York in district No. 3 (Philadelphia) and Akron and Canton in dis-
trict No. 4 (Cleveland) are shown separately, this month, for the first time.

A comparison of monthly changes in activity of different types of retail business since January, 1921, is shown in the second of the following tables. The 176 department stores are located in districts Nos. $1,2,3,5,6,9,11$, and 12, while the mail-order houses do business in all parts of the United States. The United States index for department stores is computed by weighting the districts according to the buying power, as measured by population and banking resources. Chain-store figures are based upon the total sales of the same reporting chains for each month, but the actual number of stores in these chains varies slightly.

Mail-order business for the month of October shows a great improvement over September and is higher than in any month since last March. Sales of grocery and 5-and-10-cent chains have largest increase during the month, while cigars have registered a decrease of 8.3 per cent. The greatest improvement over last year's sales is shown in grocery, 5 -and-10, and music chains.

CONDITION OF RETAIL TRADE IN THE FEDERAL RESERVE DISTRICTS.
[Minus sign ( - ) denotes decrease.]

| District and city. | Percentage of increase in net sales as compared with corresponding period previous year. |  |  |  | Per centage of increase in stocks at close of month compared with- |  |  |  | Percentage ofaverage stock at close of each month to averagemonthly sales for same period. |  | Percentage of outstanding orders at close of month to total purchases during previous calendar year. |  |

## BANKING CONDITIONS, BY FEDERAL RESERVE DISTRICTS.

Discounts of the Federal reserve banks show an increase of $\$ 144,800,000$ for the four weeks ended November 22. More than one-half of this increase, $\$ 75,100,000$, is reported for the New York reserve bank and $\$ 33,800,000$ for the Boston bank. The Chicago bank reports an increase of $\$ 14,600,000$, much smaller increases being shown for most of the other banks and small decreases for the St. Louis, Minneapolis, and Dallas banks.

The following table shows the holdings of discounted bills on December 31, 1921, July 31, 1922, and November 22, 1922, classified as rediscounts and collateral notes, each class being further subdivided as paper secured by Government obligations and other paper:

HOLDINGS OF DISCOUNTED BILLS, BY CLASSES.

This table was prepared in order to throw light on the increase in paper secured by Government obligations since last summer. It will be remembered that reserve bank holdings of this class of paper reached their peak in 1919 after the flotation of the Victory loan and declined almost continuously from that time, while other discounts continued to increase rapidly until December, 1920. This continuous and prolonged declino in paper secured by Government obligations appears to have come to an end last July, and the total of Government secured paper has increased since that time. The table shows that total discounts of reserve banks increased by $\$ 208,000,000$ between July 31 and November 22, 1922. Of this increase, $\$ 175,000,000$ was an increase in the volume of collateral notes of member banks secured by United States Government obligations. It thus appears that borrowings on collateral notes backed by Government securities have been the principal type of borrowings from reserve banks in recent weeks. During the last few months this increase in borrowings has occurred chiefly in the New York reserve bank, whose holdings of collateral notes secured by Government obligations increased from $\$ 24,000,000$ on July 31 to $\$ 135,000,000$ on November 22. The increase in Chicago amounted to $\$ 18,000,000$, and smaller increases are reported for practically all the other banks. The resumption of borrowing on a larger scale during the last two or three months has thus been chiefly in the New York reserve bank and on collateral notes secured by Government obligations.
Following is a table showing the increases and decreases in the principal items in the Federal reserve bank statement between October 25 and November 22:
CHANGES IN PRINCIPAL RESOURCES AND LIABILITIES OF EACH FEDERAL RESERVE
AND NOVEMBER $22,1922$.

| Fcderalreservebank. | Total reserves. |  | Discounts. |  | Government securities. |  |

CHANGES IN PRINCIPAL RESOURCES AND LIABILITIES OF GACH FEDERAL RESERVE BANK BETWEEN OCTOBER 25 AND NOVEMBER 22, 1922 Continued.

All the reserve banks, with the exception of Minneapolis, show reductions in Government security holdings, the decreases amounting to
$\$ 49,600,000$ in the New York bank, $\$ 21,800,000$ in the Cleveland bank, and $\$ 14,600,000$ in the San Francisco bank. It is to be noted that the holdings of Government securities, which began to increase in January of this year, reaching a maximum in the middle of June with a total of $\$ 629,700,000$, have declined steadily since that time and stood on November 22 at $\$ 295,100,-$ 000 , or only about $\$ 76,000,000$ above the lowest figure of the year reported for January 11. Federal reserve note circulation shows practically no change for the four-week period, decreases in Boston, Now York, Dallas, and San Francisco being slightly more than offset by increases in the other eight banks. With cash reserves increasing by $\$ 1,800,000$ and deposits by $\$ 48,200,000$, the reserve ratio shows a decline from 77.6 per cent on October 25 to 76.7 per cent on Norember 22.

Increases and decreases in the principal assets and liabilitios of reporting member banks in loading cities for the four weeks under revicw are shown in the table below:

CHANGES IN PRINCIPAL RESOURCES AND LIABILITIES OF REPORTING MEMBER BANKS IN RACH FEDERAL RESERVE DISTRICT BETWEEN OCTOBER 18 AND NOVEMBER 15, 1922.
[In millions of dollars.]

The decrease in loans and discounts of reporting member banks was the result of reductions of $\$ 89,000,000$ in New York City and $\$ 25,000,000$ in Chicago, offset in part by increases in most of the other cities. The only other Federal reserve district which shows smaller loans and discounts is the Cleveland district, for which a reduction of $\$ 5,000,000$ is reported. This reduction in loans has been accompanied by a decline in Government security holdings, while corporate security holdings show but little change. Demand
deposits declined by about $\$ 179,000,000$ for all of the reporting cities, $\$ 175,000,000$ being the decline for the member banks in New York City alone. Increases in time deposits are shown for all the reserve districts, with the exception of Boston, for which a small decline is shown, and Minneapolis, which reports unchanged figures. Accommodation of member banks at Federal reserve banks increased by $\$ 130,000,000$, larger figures being shown for all the districts, except Atlanta, Chicago, and Dallas.

CASH RESERVES, TOTAL DEPOSITS, FEDERAL RESERVE NOTE CIRCULATION, AND RESERVE PERCENTAGES FOR

## BANK DEBITS.

Bank debits for the four weeks ending November 22 were on an average level about 5 per cent lower than for the preceding four

weeks and about 12 per cent higher than for the corresponding period in 1921. The slight reduction in debits compared with the preceding four-week period is not indicative of a
material slackening in business activity, as November normally shows some decline compared with October, also in view of the fact that the only low week during the most recent four-week period was the week which included election day and, therefore, contained only five business days. The decline was about 8 per cent for New York City and about 2.5 per cent for the other reporting centers. The reduction in the volume of debits in New York City is no doubt due in part to the considerable decline in security values which has occurred during the last month.

Compared with the corresponding period in 1921, debits in. New York are 14 per cent higher, while those in other cities are about 10 per cent higher.

Debits to individual accounts are reported to the Federal Reserve Board for banks in about 250 leading centers, of which 165 are included in the summary by Federal reserve districts, bocause for these centers comparable figures for the four weeks and for the corresponding period in 1921 are available.

Weekly Average Debits to Individual Accounts.

## DISCOUNT AND INTEREST RATES.

In the following table are presented actual discount and interest rates prevailing during the 30 -day period ending Novembor 15,1922 , in the various cities in which the several Federal reserve banks and their branches are located. A complete description of the several types of paper for which quotations are given will be found in the September, 1918, and October, 1918, Federal Reserve Bulletin.

A comparison of discount and interest rates prevailing in various center during the 30 -day period ending November 15 and the 30-day period ending October 15 shows relatively little change. There is, however, some indication of an upward tendency particularly noticeable in prime commercial paper in the open market. Compared with the corresponding period last year, current rates are still uniformly lower.

DISCOUNT AND INTEREST RATES PREVAILING IN VARIOUS CENTERS DURING THE 30-DAY PERIOD ENDING NOVEMBER $15,1922$.

${ }^{1}$ Rates for demand paper secured by prime bankers' aceeptances, high, 6; low, 4: customary, 42-3

## FOREIGN EXCHANGE.

Sterling exchange advanced almost continuously throughout the month and stood at the end of November at about $\$ 4.52$, the highest point on record since July, 1919, four months after the official support of exchanges was discontinued. The rise in the pound sterling during the present year is due in part to the fact that prices in the United States advanced materially, while British prices remained stable. Continued gold movement from England to the United States and the payment of two $\$ 50,000,000$ installments on account of interest on the war debt also contributed to the strengthening of the pound. The average quotation of the pound for November was $\$ 4.48$, compared with $\$ 4.44$ the month before, the rise being from 91 to 92 per cent of par.

French and Italian exchanges, which showed continuous declines through October, rallied somewhat toward the middle of November. Continental neutral exchanges show advances for the month. The Canadian dollar, which was above par throughout October and the larger part of November, was quoted slightly below par toward the end of the month. This decline is due in part to the export of gold to Canada, which improved the position of the United States dollar. Argentine and Brazilian exchanges show advances for the month, while the Chilean peso declined. The price of silver dropped from an average of $\$ 0.68405$ in October to one of $\$ 0.65485$ in November, and Chinese exchange shows a corresponding de-
cline. In India the improved trade position has resulted in a rise of the rupee to slightly over 30 cents. The Japanese yen moved slightly upward. The foreign exchange index has remained unchanged at 67 , compared with 61 for November, 1921.

The German mark declined further and stood on November 29 at 1.2 cents a hundred, or about 0.05 per cent of par.

FOREIGN EXCHANGE RATES.
[General index for November, 1922, 67; for October, 1922, 67; for November, 1921, 61. Noon buying rates for cable trausfers in New York as published by Treasury. In cents per unit of foreign currency.]
